Stock Markets close June on Buoyant Note

Stock markets commenced the month on an undertone of optimism though most operators were still reluctant to extend their commitments mainly because of a widespread belief that the restoration of conditions conducive to active interest in equities could not be predicted confidently. The improvement in sentiment had stemmed from the small concessions shown by the Finance Minister. The exemption granted to new companies from wealth tax for the first five years the withdrawal of the increase in the duty on tea and coffee and the reference of the wealth tax and expenditure tax to select committees combined to impart some confidence to the markets. The fact that the Life Insurance Corporation had come out as a buyer of equities further helped to pave the way toward a recovery.

Upto the middle of the month the undertone continued to be steady. No appreciable expansion of business had, however, resulted. The announcement that the Finance Minister would be meeting a deputation of indian industrialists to discuss the taxation proposals early in the third week raised great expectations and marketmen were eagerly awaiting the outcome of the meeting for a positive lead. Though nothing new was revealed at the meeting, it was generally considered that it had gone a long way in dispelling some of the persistent doubts among private enterprise. It was pointed out that the Finance Minister's assurance that Government's attitude toward private sector had not undergone any change in the past 18 months was a very valuable piece of news. The further assurance that private enterprise could rest assured that everything possible to stimulate its growth would be done by Government also helped revive the drooping spirits. Above all, the fact that the worst in taxation had been seen at least for the rest of the present plan period gave great relief to businessmen.

The tonic effect of the meeting that industrialists had with the Finance Minister both in Calcutta and Bombay could be seen in the stock markets from the middle of the third week. Prices started moving up with attention centred on pivotal scrips. The upward movement gathered momentum in subsequent days and by the time the markets reached the end of the month, boomlike conditions were noticeable.

1, 2 & 3

Dull conditions were noticeable in Calcutta while the undertone was generally steady in Dalal street. A few bright spots, however, were to

be seen in both the markets. In Calcutta selected scrips in the Engineering and Miscellaneous section met with some support while in Dalal street, the list at close disclosed widespread moderate gains. Indian Irons opened at Rs 18.51 and closed unchanged at that level. Tata Irons on the other hand made some advance to Rs 18.50 from Rs 18.35. Bombay Dyeing gained four points to be finally placed at Rs 528.50.

4

An easier tendency prevailed in the stock markets in the absence of support. In Bombay textile mill shares were particularly weak on apprehensions that the textile industry might be the first to be asked to make arrangements for workers' participation in its management. Indian Iron opened at Rs 18.51 and closed quiet at Rs 18.45. Tata Iron was shaded at Rs 18.25. Bombay Dyeing dropped 5½ points to Rs 523.00.

5

Activity on the stock markets was confined to the more speculative issues which recorded moderate gains. The rest of the list ruled steady but dull. Indian Irons opened at Rs 18.54 and moved up to Rs 18.75. Tata Iron was done upto Rs 159 from Rs 158.25. Bombay Dyeing changed hands higher at Rs 526.50.

6

But for a further moderate improvement in the quotation of Indian Irons due to the support for this scrip from the Life Insurance Corporation, conditions in the Calcutta Stock Exchange continued to be quiet as interest elsewhere was at a low ebb. Indian Irons was done upto Rs 19.03 at one time but toward close encountered profit-taking to be finally placed at Rs 18.84. The lack of interest in equities in general seemed to have stemmed from apprehensions about the adverse repercussions on the working of indigenous industries of the proposed drastic cut in imports. Such a possibility had been outlined by Mr Morarji Desai, Union Minister for Commerce and Industry, in his address to the Import Advisory Council. Mr Desai said that the shortage of foreign exchange had compelled Government to adopt a very strict policy in granting import licences for the procurement of capital goods from abroad. In Dalal street sentiment was depressed by the sharp setback in Bombay Burmah resulting from apprehensions of fresh imposts on Plantations in Kerala. However, the undertone became somewhat steadier toward close on report of ins-

titutional support for Indian Irons and ACC. Tata Irons closed slightly higher at Rs 159.50. Textiles were easier with Bombay Dyeing receding to Rs 525 from Rs 526.50.

7

In the absence of fresh interest, equities in general and the speculative counters in particular lost ground on selling pressure. Indian Irons opened at Rs 18.81 but later on due to renewed offerings reacted to close at Rs 18.66. In Dalal street the disappointing dividend announcement by Simplex imparted a reactionary tendency in textiles. The rest of the market also ruled quiet in sympathy. Tata Iron lost 1½ points to come back to Rs 158.00. In the textile section Bombay Dyeing declined from Rs 525 to Rs 518.50.

8

While the Calcutta Stock Exchange remained closed, Dalal street continued to rule quiet, sentiment having been adversely affected by the sharp decline in Bombay Burmah consequent on the announcement of the Kerala Budget which envisaged additional imposts on Plantations. Toward close reports of purchases of steel shares by the LIC helped reverse the trend. The market closed the week with the list showing widespread small gains. Tata Iron was slightly higher at Rs 158.25. Bombay Dyeing improved to Rs 519.50 from Rs 518.50.

The extent of the damage done to the investment situation in the country by the budget proposals was set out in a statement issued by the Bombay Shareholders Association. It had been estimated that there had been a fall of 75 per cent in the business of brokers. The statement further estimated that the total fall in the market value of equities in the past 8 or nine months was around Rs 200 crores. It also submitted statistics in respect of 22 important companies in Bombay, Calcutta and Madras to show the actual suffering to the investors and stated that investors had suffered a loss of Rs 37 crores in the value on the paid-up capital of Rs 67.81 crores. The memorandum had pointed out that if conditions were allowed to continue unchanged the time would not be far off when a large number of brokers would have to close down their business. An interesting point to which attention was drawn by the memorandum was the absence of investment support despite the fact that yield worked out to 8 per cent in the case of equities and to about 14 per cent in preference. It was evident, therefore, that

reactionary trend was largely due to the loss of confidence in the stock markets.

9 & 10

A nervous undertone prevailed in the market in Calcutta as shares belonging to a particular group came under heavy selling pressure. The steep decline in prices of these scrips adversely affected sentiment in other sections as well. Indian Irons which opened at Rs 18.45 closed quiet at Rs 18.36. Among other engineerings, Jessop was marked down to Rs 19.87, Richardson to Rs 11.75 and Texmaco to Rs 16.60. Elsewhere BIC was marked down to Rs 5.05. Discouraging advices from the cloth market coupled with scattered selling pressure pushed down prices all along this line in Dalal street. Tata Iron weakened to Rs 157.25 while among textiles Bombay Dyeing receded to Rs 513.

11

The Council of Management of the Madras Stock Exchange Association at an emergency meeting on the 10th, resolved that with immediate effect the minimum prices of all ordinary shares of planting companies quoted in the official list be fixed at the opening rates of the day. The meeting was called to consider the "heavy decline in the price of planting shares, the situation arising out of the steep increase in the taxation affecting agricultural companies in Kerala and also the likelihood of a further fall in prices of shares." The Council said that the minimum prices fixed should continue until further notice.

In the Calcutta Stock Exchange, though the speculative Indian Irons recorded a moderate recovery, the rest of the list continued to rule quiet in the absence of fresh interest. After opening at Rs 18.18, Indian Irons closed better at Rs 18.24. In Dalal street, sentiment in later dealings showed some improvement on reports of institutional support for steel shares. Tata Iron was quietly steady at Rs 156.75. Bombay Dyeing was placed at Rs 512.50.

12

It was settlement day in Calcutta and consequently sentiment remained subdued. Though conditions were generally dull, selected Engineerings and Miscellaneous issues made some headway on moderate buying interest. Indian Irons after being done upto Rs 18.48 closed at Rs 18.36. Prominent among Engineerings

(a) After writing back Rs 40,000 from General Reserve.

(b) After transferring Rs one lakhs from General and Dividend Reserve.

(c) After transferring Rs 4,07,975 from General Reserve and Rs 55,000 from provision for taxation.

(d) After transferring Rs 36,518 from General Reserve; Rs 10,000 from Jute Stock Reserve and Rs 40,000 from provision for taxation.

(e) After writing back Rs 4,22,628 being provision against anticipated loss on raw jute stock and work in progress; Rs 29,068 being provision against anticipated loss on jute contract for and after transfer from Rs 40,000 from General Reserve and Rs 31,500 from Dividend Equalisation Reserve.

(f) After transferring Rs 1,00,000 from General Reserve and Rs 3,00,000 from Machinery Renewal Reserve.

(g) After transferring Rs 3,00,000 from Reserve for Machinery Renewal and Replacement.

(h) After transferring Rs 2,00,000 from General Reserve.

(i) After writing back Rs 3,04,000 being provision against anticipated loss on raw jute stock and work in progress and Rs 4,225 being provision against anticipated loss on jute contract for.

(j) After transferring Rs 4,28,000 from Reserve and writing back Rs 30,000 from Workers' Provident Fund shown as excess in previous half-year and Rs 61,000 from provision for possible loss on forward contracts.

(k) After writing back Rs 1,21,392 being provision against anticipated loss on raw jute stock and work in progress; Rs 29,161 being provision against anticipated loss on jute contract for; Rs 14,800 being excess provision for taxation and Rs 25,000 from Dividend Equalisation Fund.

(l) After transferring Rs 4,00,000 from General Reserve.

(m) After writing back Rs 2,39,998 from Reserve for Exchange Losses.

(n) After transferring Rs 1,808 from General Reserve.

(o) After transferring Rs 2,00,984 from General Reserve.

(p) After transferring Rs 2,65,555 from General Reserve, Rs 70,555 from Dividend Equalisation Reserve and Rs 25,000 from Taxation Reserve.

(q) After transferring Rs 5,00,000 from General Reserve.

(r) After including Rs 89,535 being refund of R.P.T. and after writing back Rs 40,000 from provision against difference between cost of Raw Jute Stock and estimated value.

(s) After transferring Rs 1,90,794 from General Reserve and Rs 1,26,000 from provision for taxation.

(t) Preference shares carry a dividend of 10 per cent of which only 8 per cent is cumulative.

(u) After providing Rs 1,50,179 for further taxation of previous years and transferring Rs 1,82,000 from Tax Contingencies Rs 75,000 from Jute Stock Reserve and Rs 33,385 from General Reserve.

(v) After transferring Rs 1,21,421 from General Reserve and writing back Rs 1,46,286 from provision for difference in exchange on Agency Fixed Assets.

(w) After writing back Rs 2,37,768 being provision against anticipated loss on raw jute and work in progress; Rs 7,350 being provision against anticipated loss on jute contract for Rs 19,500 being excess provision for taxation and Rs 80,000 from Dividend Equalisation Reserve.

(x) After writing back Rs 1,65,396 being provision against anticipated loss on raw jute and work in progress and Rs 16,800 being provision against anticipated loss on jute contract for.

(y) After transferring Rs 5,94,144 from Capital Reserve.

(z) For five half-years ended 30-6-54 at 4 per cent per half-year.

(a1) After writing back Rs 1,88,649 being provision against anticipated loss on raw jute stock and work-in-progress; Rs 73,521 being provision against anticipated loss on jute contract for; Rs 1,20,000 from General Reserve; Rs 24,500 from Dividend Equalisation Reserve and Rs 27,000 from provision for taxation.

(a2) After writing back Rs 2,46,812 being provision against anticipated loss on raw jute and work in progress and Rs 8,706 being provision against anticipated loss on jute contract for and Rs 40,894 being excess provision for taxation.

(a3) After transferring Rs 4,00,000 from General Reserve, Rs 2,00,000 from Dividend Equalisation Reserve and Rs 2,00,000 from Jute Stock Reserve.

(a4) After transferring Rs 2,80,000 from Contingency Reserve.

(a5) After transferring Rs 1,10,000 from Contingency Reserve and including Rs 1,47,639 being items relating to previous half-years.

(a6) After transferring Rs 5,18,426 from General Reserve and Rs 35,000 from provision for taxation.

(a7) After writing back Rs 60,000 being provision for possible loss on forward contracts.

(a8) After transferring Rs 1,00,000 from General Reserve.

(a9) After crediting Rs 14,84,926 being balance Rehabilitation Reserve.

(a10) After writing back Rs 61,986 being excess provision for depreciation adjusted on machinery.

(a11) After writing back Rs 73,264 being excess depreciation on fixed assets sold, Rs 97,000 from provision for taxation and including Rs 8,08,000 being Requisition claim realised.

(a12) After writing back Rs 1,57,500 being excess provision for depreciation adjusted on machinery and Rs 45,000 from provision for taxation.

(a13) After transferring Rs 1,20,000 from Dividend Equalisation Reserve and Rs 60,000 from General Reserve.

(a14) After transferring Rs 4,50,000 from General Reserve.

(a15) After writing back Rs 60,000 from provision for contingencies; Rs 30,000 from provision for possible loss on forward jute contracts; Rs 28,741 from provision for doubtful debt and Rs 12,002 from provision for taxation.

(a16) After transferring Rs 1,80,000 from General Reserve.

(a17) After transferring Rs 2,50,000 from General Reserve.

(a18) After transferring Rs 4,05,000 from General Reserve and Rs 24,500 from Dividend Equalisation Reserve.

(a19) After transferring Rs 5,25,000 from General Reserve and Rs 31,600 from Dividend Equalisation Reserve.

(a20) After transferring Rs 4,00,000 from General Reserve.

(a21) After transferring Rs 4,25,000 from General Reserve and Rs 35,000 from Dividend Equalisation Reserve.

(a22) After transferring Rs 3,90,000 from General Reserve and Rs 12,500 from Dividend Equalisation Reserve.

(a23) After transferring Rs 1,70,000 from Dividend Equalisation Reserve.

(a24) After transferring Rs 2,80,000 from General Reserve and Rs 25,000 from Dividend Equalisation Reserve.

(a25) After transferring Rs 50,000 from General Reserve and Rs 7,500 being over provision of liabilities in previous year.

(a26) After transferring Rs 1,00,000 from Reserve.

BOMBAY PORT TRUST.

(Continued from page 1)

were Jessop recovering to Rs 22.12 and Richardson to Rs 12.75. Elsewhere BIC was a bright spot at Rs. 6.50. Opening on a steady note, the Bombay Stock Exchange developed a sagging tendency in later dealings on selling pressure in ACC. Tata Iron, however, closed better at Rs 157.75. Textiles were well held with Bombay Dyeing done at Rs 512.50.

13

Trading was listless in Calcutta in the absence of fresh interest while Bombay suffered a set-back in later dealings due to profit-taking induced by settlement considerations. Indian Irons moved narrowly to close at Rs 18.36. Tata Iron was shaded at Rs 157.50. Bombay Dyeing was unchanged at Rs 512.50.

14

Conditions in the stockmarkets were subdued with prices tending toward lower levels in the absence of sustained interest. Indian Iron opened at Rs 18.39 and at one time in the day was done up to Rs 18.51. By close it came back to Rs 18.36. Tata Iron in Bombay closed better at Rs 158.75. Textiles were also higher with Bombay Dyeing marked up to Rs 515.00.

15 & 16

Speaking at a special meeting of the Indian Merchants Chamber, Bombay, Mr G. P. Kapadia, Vice-President, welcomed the observation of the Finance Minister that while there would be some adjustments in the tax structure from year to year, he expected that these adjustments would be relatively small and of a marginal character.

17

The stock market displayed a steady undertone with the volume of business tending to expand on emergence of investor interest. The speculative counters were particularly cheerful. Presumably operators were hopeful about the outcome of the meeting between leading industrialists and the Union Finance Minister. Indian Irons in Calcutta opened at Rs 18.63 and moved up to close at Rs 18.75. In Dalal Street Tata Iron advanced from Rs 158.75 to Rs 160.75 in textiles Bombay Dyeing moved up from Rs 515 to Rs 523.50. Other scrips that were active were Century, Bombay Burma, National Rayon and Scindia Steam.

18

The stock markets continued to rule steady though prices fluctuated within a narrow limit. Indian Irons after opening at Rs 18.87 met with profit taking to close at Rs 18.66. Due to the return of confidence consequent on the successful conclusion of the meeting between the Union Finance Minister and the industrialists in the city that day, Indian Irons recovered smartly in unofficial dealings to be done upto Rs 19. A quietly steady trend was noticeable in Bombay where profit taking pared off previous gains. Turnover was moderate and the undertone quietly steady. Tata Iron was shaded at Rs 160.50 Bombay

Dyeing closed 1½ points lower at Rs 522.00.

It was reported that in the meeting with leading industrialists of the country Mr T. T. Krishnamachari, Union Finance Minister said the Government's policy toward the

private sector had not changed during the past one and a half years. The difficulties which the country was facing was attributed by the Finance Minister to the large investment that had taken place in the past three or four years. He made it clear that Government would take suitable steps to ensure that the industrial development of the country did not suffer. The Reserve Bank and the State Bank were making constant efforts to ease the tightness of the money market. Mr Krishnamachari, however, made it clear that the broad structure of the tax proposals which were an integrated whole, would not in any case be affected though certain adjustments in regard to details of taxes could be made.

19

Firm conditions were noticeable in the Bombay Stock Exchange while brisk trading was witnessed on the Calcutta Stock Exchange. Evidently marketmen had been greatly encouraged by the Finance Minister's helpful clarification of the major points raised by the representatives of the private sector in the country at their meeting at Calcutta. Indian Irons opened higher at Rs 19.09 on over night support and moved up further to close at Rs 19.12. In Dalal street helped by the continuous support from Calcutta interests for Indian Irons, pivotal scrips made considerable headway. Tata Iron gained 2 points to be done at Rs 162.00, Bombay Dyeing gained 6 points to quote at Rs 528.00.

20 & 21

The Calcutta Stock Exchange continued to rule generally steady with most scrips well maintained around previous levels. The more speculative issues, however, lost some ground on profit taking. In Dalal Street also profit-taking was in evidence while fresh buying was conspicuous by its absence. It would appear that operators were reluctant to extend their commitments before knowing the outcome of the conference between the Finance Minister and industrialists scheduled to take place in Bombay on the 22nd. Tata Iron, however, was fully steady at Rs 164.00 but Bombay Dyeing was shaded at Rs 534.00.

22

Mr T. T. Krishnamachari assured leading industrialists in Bombay that Government would be prepared to consider any particular difficulties or hardships in the application of his new taxation proposals as and when they were brought to their notice. He pointed out that the main aim of his direct taxation proposals was to make wealth productive. He made it clear that the excess dividend tax and the compulsory deposits of reserve scheme were temporary expedients liable to change in the light of changing circumstances. Referring to the stock markets he said that a period of progressive prosperity was to be preferred to alternating booms and

slumps he assured that wherever corporate enterprise engaged in an activity of national significance experienced any difficulty as the result of the Government's taxation schemes, suitable steps would be taken to minimise the hardship.

Mr T. T. Krishnamachari announced in Bombay the Central Government's decision to raise a market loan for Rs 100 crores for the current year. The Finance Minister who was addressing a conference of State Finance Ministers to discuss the loan programmes of the Centre and State Governments, asked the State Governments to seek money through small savings rather than through market borrowing.

24

Contrary trends were witnessed in the Calcutta and Bombay Stock Exchanges. While the former, despite profit-taking operations, managed to rule generally steady, the latter recorded modest declines at the close of the day. In Calcutta, sentiment was particularly depressed by the disappointing dividend announcement from Indian Copper. As against 45 per cent distributed in the previous year, the company had proposed a distribution of 20 per cent for the year ended December 1956. After opening at Rs 3.66 the scrip receded to Rs 3.37. The rest of the market was also adversely affected by the weakness in Copper. Even otherwise the more speculatives were subdued. Indian Irons which were done upto Rs 20.30 closed quiet at Rs 20. Tata Iron in Bombay closed better at Rs 156.25 with Bombay Dyeing at Rs 544.

25

Bull support coupled with investor interest in blue chips imparted a cheerful tone to the stock markets. Various factors seemed to have combined to bring about the welcome change in sentiment. The Finance Minister's clarification of the Government's taxation policy together with his assurances that Government, far from impeding the working of the private sector, were very anxious to promote its rapid growth, was mainly responsible for the return of confidence in the stock markets. Once confidence was restored, yield and other considerations helped the recovery movement gather momentum. In Calcutta all engineering scrips were in good request with selected scrips all along the list attracting considerable attention. Indian Irons after opening at Rs 19.96 advanced to Rs 20.09. Jessop was done up to Rs 25.12. Selected tea shares also met with investment enquiry at advancing prices. A firm undertone prevailed in Bombay where after initial hesitancy pivotal scrips moved up in response to short covering and fresh buying. Tata Iron advanced to Rs 170 while in textiles, Bombay Dyeing gained four points to be placed at Rs 548.

26
Tea shares were in the limelight in Calcutta, while the rest of the market ruled steady despite clearing adjustments. Indian Irons which opened at Rs 20.42 sagged to Rs 20.06 by close. In kerb trading the scrip regained part of the lost ground to quote at Rs 20.20. Expectations of

bright prospects for northern Indian tea pushed up prices of selected shares in the tea section. In earlier dealings conditions were almost buoyant in Bombay as there were no fresh imposts in the Bombay Budget. With a prominent operator coming out as a seller of Tata Iron, the steel section turned quiet in later dealings. By close, however, sentiment became quietly steady and closing prices were generally higher on balance. Tata Iron was finally placed at Rs 171.25 against previous closing of Rs 170. Bombay Dyeing gained five points to be done at Rs 553.

27

The continued firmness of tea section imparted steadiness to other sections as well in the Calcutta Stock Exchange. In Bombay settlement adjustments resulted in a quiet undertone. Indian Irons after opening at Rs 20.12 fluctuated within a narrow range to close at Rs 20.09. Among teas Hantapara was an outstanding feature spurring to Rs 200 from previous marking of Rs 158. Tata Iron in Bombay receded to Rs 170 from Rs 171.25 while Bombay Dyeing dropped $\frac{3}{4}$ points to come back to Rs 550.50.

28

Boomlike conditions prevailed in Calcutta on the last working day of the month with both operators and investors evincing interest all along the list. Indian Irons opened steady at Rs 20.24 and after having been done upto Rs 20.69 closed fully steady at Rs 20.66. The scrip was done upto Rs 20.82 in kerb trading. Among other engineering, Texmaco at Rs 17.80 and Richardson at Rs 15 were prominent spots. In the miscellaneous section, India Steam was in request up to Rs 10.65 with Rhotas encountering buying support up to Rs 18.12. The most outstanding feature was the smart spurt in Howrah to Rs 17 in the jute section where several scrips were marked higher on revival of interest. Selected tea shares made further headway. Very heavy turnover was witnessed in Bombay where prominent scrips recorded sharp advances on short covering. It would appear that the steady buying support given by the Life Insurance Corporation from the beginning of the month had resulted in a sizable diminution in the floating scrips. This together with the fresh buying interest left bears with no other alternative but to rush to cover. Tata Iron gained $4\frac{1}{2}$ points to be placed at Rs 174.75. The improvement in textiles was well pronounced. Bombay Dyeing advanced to Rs 575.50 from Rs 550.50.

29 & 30

The stock markets remained colsed. Drastic reductions in imports were announced. A prominent feature of the new import policy was the abolition of OGL for the next three months. It was, however, pointed out that licences would be readily issued to projects which earned foreign exchange. Special consideration would also be shown to the import requirements of export industries.

Operators found in the new import policy grounds for optimism. They argued that the drastic cut in consumer goods would afford many indigenous industries a fresh opportunity to establish themselves firmly.

For the Investor

The Present Boomlet

Investment Gossip:

I really don't know what to make of the information that I have gathered during the last week. There came a man to see me—shall we call him Phatkaram?—who insisted that the improving trend in prices will not be sustained. He threw cold water on my suggestion that investment interest had revived. What investment? he asked. All that is happening, he said, is that there is a spurt of purchases in the scrip in which the Life Insurance Corporation evinces any interest; and it is in this fashion alone that cash scrips are coming in for greater inquiry.

I could not quite reconcile myself to Phatkaram's views. For, I have the distinct impression that, in fact, investor purchases are broadening. While I was thus mulling over in my mind Phatkaram's categorical debunking of my hunch in this regard, I was fortunate in meeting another acquaintance—call him I. Investment Broker. Mr. Broker, who says that his investor clients are innumerable, asserted, in reply to my question, that the buying orders he receives far outstrip instructions to sell. Certainly, he said, the market has taken a turn for the better; and the proof of this lies in the increasing transactions in cash scrips.

Now, there can be no denying that the scrip to mark the best improvement are those in which the LIC has made purchases; and there is also no doubt that such operations by the LIC have contributed to the firmer prices all along the line. Indeed, the sharp two-way fluctuations on Thursday—when prices fell in the morning, to recover in the afternoon on information that LIC was once more in the market—are in the way of evidence to lend strength to the view that price movements on the Stock Exchanges rely to a great extent on LIC activities.

But I refuse to accept as correct Phatkaram's asseveration that investor interest is totally absent. (Perhaps, this inaccuracy derives from the fact that Phatkaram moves with jobbers rather than with brokers). Be that as it may, there is a cause-effect relation between LIC purchases and revival of investor interest. This is essentially because the investor is at his most active in a climbing market: in a falling market, every one is a seller. I suppose Phatkaram's retort will be: maybe, the investor's interest is there, but he cannot possibly have any money, in these tight money conditions, and especially since banks will not generally extend new overdrafts against shares. However, this, too, I think, is a misconception on Phatkaram's part.

For, Phatkaram is making the mistake, in this context also, of basing his view on the solely speculative standpoint. True, money is hard to come by for a flutter. And that is as it should be, because violent speculative fluctuations do the country no good, and the funds financing such activities can be put to better use in productive enterprises. You may go one step further, and suggest that gambling orgies have in the past been responsible for the boom-slump cycles that the Finance Minister has stated he does not want.

So, you can say that it is deliberate policy on the part of the authorities to make money scarce for speculative purposes. Phatkaram will doubtless ask me at this juncture: How, then, is the market to sustain its improvement? The answer is simple: it is investment purchases that will vouchsafe the progressive prosperity that TTK has in view for Stock Exchanges. And the investor, let me add, is not overly dependent upon bank financing for his purchases. The investor is a reluctant borrower: he finances his purchases from savings and from reinvesting his dividend income. Today, he is particularly well placed to extend his holdings: in the past year and a little more, he has had no stomach for new purchases since the market has witnessed steadily declining prices. As a result, his investible balances have been allowed to accumulate. Of course, no estimate is possible of what these resources may amount to. This only is certain, that bluechips will not suffer the fate of lacking a buyer. This also is certain, that worthwhile new issues will enjoy the beneficial support of the investor.

A virtuous circle is in the process of being created. The LIC enters the market; it makes some purchases; speculative interest concentrates on the scrips found worthy of investment by the LIC; share prices generally are given an upward impetus; and the trend of higher prices induces revived and reinforced investment purchases.

What are prospects? Will quotations tend to lag, once the LIC

Around India with Brooke Bond

The world's largest dome—The Gol Gumbaz

Many visitors to Karnataka turn their steps to Bijapur, an age-old city containing many fine specimens of Muslim architecture. Of these, the most celebrated is the Gol Gumbaz or the Round Dome—the mausoleum of a 16th Century ruler of Bijapur. Architecturally, the Gol Gumbaz is remarkable for its combination of massiveness and delicacy. What, however, makes the Gol Gumbaz unique is its size. About 144 ft. in diameter and 200 ft. high, the Gol Gumbaz is the largest dome in existence. It is also a perfect whispering gallery—a matter of added interest to the visitor.

Around here, as everywhere in India, fresh Brooke Bond Tea is made available through a unique system of fast distribution from factory to shop. Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

abstains from the market for some time? Is the present boomlet but the inevitable precursor of a possible slump? (to coin a word). I shan't stick my neck out. But I will go along with a banker friend, who opined that (in the immediate future) there is little likelihood of resurgence of bear proclivities. I will even go so far as to believe that, by and large, the future for the Stock Exchanges will consist of the progressive prosperity that Mr T. T. Krishnamachari desires.

Investment Notes:

The production figures, released by the Indian Iron and Steel Company, show an alround decline during the quarter ended 30th June, 1957 as compared to the previous

quarter. Production of Pig Iron has gone down to 172,225 tons from 183,857 tons; Steel Ingots to 129,651 tons from 139,830 tons; Semi-finished Steel to 21,370 tons from 30,336 tons and Finished Steel to 83,726 tons from 90,242 tons. The decline in production may probably be due to adjustments in the expansion programme that is now being carried out.

There has also been a substantial fall in the production of the TISCO during June, 1957. Production of Pig Iron has totalled 84,500 tons as compared to 91,300 tons in May; Steel Ingots to 77,300 tons against 86,600 tons; Saleable Steel to 52,300 tons against 65,100 tons; Semi-finished Steel to 8,500 tons against 16,200 tons and Finished Steel to 43,800 tons against 48,900 tons. The fall in the output is attributed to a temporary break-down of certain machinery at the Works.

All Contents of this Issue Copyright 1957 by INDIAN FINANCE

The shareholders of the Scindia Steam Navigation Company have approved of a resolution seeking to raise the authorised capital to Rs 11.60 crores by the creation of 10 lakh new shares of Rs 20 each. Another resolution for capitalising Rs 1.87 crores from the Premium Account of Rs 1.98 crores by the issue of 9,33,981 shares at the rate of one share for every five of the existing 46,99,903 shares has also been approved. These two resolutions are preliminaries for seeking sanction from the Controller of capital issues. If the Government's permission is received before the declaration of the dividend for the year ended 30-6-1957, the new bonus shares will also be eligible for the same. Following this announcement, shares have firmed up to Rs 20.05 from 19.15 quoted last week.

It is learnt that 80 per cent of the shares of the Security Safe Deposit Company Limited, Karachi, is being held by Indians. An offer has been received from Messrs Lewis & Jones, share and stock brokers, Bombay, to buy the shares of the Indian holders of the company at Rs 12 per share, the original value being Rs 10. The shareholders have been advised by the directors to take advantage of this offer. All relevant documents are to be delivered to the brokers before the end of August. Indian shareholders will receive equivalent shares

of Indian companies held by Pakistani nationals.

It is also learnt that Atul Products Limited, Ahmedabad, has received permission from the Government of India for its Rs 25-crore expansion programme. The whole scheme is likely to be placed before the shareholders in the course of the next few weeks. The ICI, England, will be actively participating in the project.

India Cements Limited, Madras, has recommended a final dividend of 4½ per cent on the Ordinary shares for the half-year ended 31-3-1957. The final advisory dividend is payable on the capital increased by the issue of new shares. The interim dividend was 3½ per cent. A dividend of 8½ per cent was declared on the Ordinary and Deferred shares in 1956.

Excellent Results of TEXMACO

Balance-Sheet Reviews:

THE Textile Machinery Corporation Limited has produced excellent working results for the year ended 31st December, 1956, thanks to a record production and sales. In the Cotton Textile Machinery division, ring frame production has touched peak levels and even better results are expected during the current year, provided the Government of India permit expansion in the industry on a liberal scale. Carding Engine production, in collaboration with Messrs Howa Machinery Limited of Japan, has progressed satisfactorily and substantial orders are reported to have been booked. In the Boiler and Heavy Engineering division, production of Locomotive Boilers has shown good progress and production is maintained at the rate of one boiler per month.

As regards two major schemes under implementation, viz., manufacture of Water Tube Boilers in collaboration with Messrs Combustion Engineering Inc of USA and of Sugar Mill machinery in collaboration with Messrs Stork-Werkspoor of Holland, planning is proceeding apace. In this respect, the company is reported to have booked orders for both Water Tube Boilers and Sugar Plants and has proposed to execute them on part-manufacture basis in co-operation with its collaborators during the initial "build-up" period.

Wagon production has also improved and, after the shop extensions are completed during the current year, production is expected to touch yet higher levels. Fabrication of Radial Crest Gates for the Panchet Hill Dam has been taken on hand under contract with

The Commonwealth Conference

THE ninth post-war conference of Commonwealth Prime Ministers has the distinction of carrying for the first time representation of a native African Dominion. Mr Nkrumah's presence marks a new extension of Commonwealth territory and the absorption of a new race into an already multi-racial entity. Critical inquirers are inclined to ask if every such addition would mean a source of strength and harmony to the Commonwealth or, on the contrary, an indigestible material impairing the entire functioning of the delicate international structure.

In our view, it is the first business of the Conference to demonstrate the inherent resilience and adaptability of the Commonwealth, to produce internal and external conviction that the organisation can face a great deal of domestic differences and feuds, conflicting aspirations and even some exhibition of temper between the member-States, and still survive.

In the course of last year, the Commonwealth underwent more severe strains and heart-searching among members than at any time before. Britain's military action over Suez and the decision to carry out the hydrogen bomb test might well have led to permanent fissures. The vicissitudes of the Kashmir dispute exerted a similar pressure. Besides, there has always been the subtle but none-the-less forceful impact of the deadlock of political ideas and economic interests. Britain is still a colonial power, facing the challenge of Asian and African nationalism. Britain, Australia, New Zealand and Pakistan see in regional military pacts the surest way of self-protection. To India, these pacts appear pernicious and likely to lead to a hardening of conflicts and to war.

Then there are the mutual disputes between neighbouring Commonwealth partners, which have consistently defied solution. The result of all this is that the Commonwealth is comparable to an ill-knit joint family, where the property is divided, no head is recognised, each is free to criticise and even abuse the other, but still pulling together on the slender thread of a vague awareness of some common interests. This awareness will wither, unless once in a way all the members choose to sit round a common table, review their conduct in the sobering light of what the others think of it, discuss mutual needs and, if possible, to resolve mutual differences, all in an atmosphere of decorum, restraint and a certain measure of magnanimity and through these processes, spontaneously reaffirm their determination to hold together.

It is because of the existence of this dominating impulse to preserve the Commonwealth, somehow or other, that we are groping to discover concrete smaller common aims and the manner of meeting them. The biggest success of the Commonwealth Conference is that it has met. When differences among member-States have been more pronounced and they have been aired with greater emotion and fire than is usual, the Conference acquires correspondingly greater importance.

News-reports of the Commonwealth Conference are customarily scrappy and couched in highly guarded phraseology. Presumably, information passes through a close official sieve. The Joint Communiqué issued after every Conference embodies generalities such as the expression of the Prime Ministers' faith in the solidarity and stability of the Commonwealth and their keen desire to present united front on world issues, rather than indicating any concrete advance toward the solution of specific problems.

At the present meeting, disarmament, the Middle East, China's admission to the United Nations and the economic development of under-developed countries are reported to have figured as the major themes of discussion. It is unfortunate that the climate for disarmament which appeared somewhat friendly when the Conference started on June 26 deteriorated in the course of the succeeding week. The US is reported to be taking a less enthusiastic view of the prospects. In the Commonwealth Conference, nothing seems to have happened beyond a gentle clash of views, Pandit Nehru pleading for the complete and immediate suspension of nuclear weapons tests and the British Foreign Secretary, Mr Selwyn Lloyd, seeking to maintain that while there was agreement on fundamentals, the question of priorities led to differences. British and Canadian spokesmen expressed anxiety to link suspension of nuclear weapons with safe-guards against further production of fissionable materials. The small area of agreement on practical details arises from the recognition both by the Indian Prime Minister and the British leaders that disarmament could only be gradual and a step-by-step process.

On the most desirable means of ensuring peace in the Middle East, Britain and India appear to be moving a little closer. The competitive injection of arms and the spread of a bloc psychology do not impress Pandit Nehru as necessary or wise. His prescription is generous economic assistance, uninhibited by political motives. He is reported to have explained in undisguised language the folly of trying to retain Middle East loyalties on the side of the West with the help of bribery and cliques. After the disillusionment of the Suez war, Britain should now be in a mood to listen to this friendly counsel with greater trust and respect. Pandit Nehru is also reported to have expressed his belief that Israel has the legitimate right to use the Suez Canal. In that case, he will not be accused of chronic pro-Arab bias.

The admission of China to the United Nations has during the last two years got across to a stage at which most of the old hurdles have lost their respectability. The recent riot in Formosa, which must have shaken America's faith in the basic soundness of its Far Eastern policy comes on the top of an increasingly sharp cleavage between America and its Western allies, particularly Britain, on the question of liberalisation of trade with China. Economic facts have largely undermined Britain's capacity to toe the US line in the matter of East-West trade.

Indian Finance

Established 1928

July 6, 1957

The Wise Man in his Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius

The prospect of the political neutralisation of China from the Soviet group should also be making a better appeal to Britain whose survival in strength depends on a flexible world market for its goods. Numerically the pro-China group has gained in strength among the Commonwealth States. Of all the international issues on which Pandit Nehru could have expressed himself strongly at the Conference, there is none else which would evoke a genuinely cordial response from Britain. The next time Britain and US spokesmen meet to discuss China the impression carried from the Commonwealth Conference are bound to strengthen the hands of the former. This week's expulsions in Russia provide a friendlier setting.

While international questions are of paramount importance and a meeting of the Commonwealth Prime Ministers is inexorably compelled to give them priority, what is of more immediate interest to India is the possibility of finding finance for economic development. To a smaller extent, all the other under-developed States, Pakistan, Ceylon and Ghana, share this interest, though in point of urgency India's needs appear most pressing. The Prime Minister himself has made no bones about his intention to explore sources of foreign finance. There are fairly reliable reports that India has formally applied to Britain for a loan of about £ 300 million. On the eve of his departure to the West, Pandit Nehru issued a circular letter to his Cabinet colleagues, in which he referred to the difficult foreign exchange position, the internal price level and rising costs of the Second Plan and suggested that barring the hard core of the Plan consisting of the basic industries, the schedule was not unalterable.

There is also insistence on vigorous scrutiny of every Departmental proposal. This circular and the general drive for economy in administration which has lately taken momentum all over the country should dispel foreign misgivings about lavish expenditure by the State in India. For a number of reasons, post-war British investment in India is marked by extreme restraint. Though Britain's external payments position remains far from robust, the character of India's requirements and the special credit arrangements which India has suggested, would go a long way to ease the strain of more liberal releases of funds toward investment in India.

One of the suggestions recently heard in Britain is that if the foreign holders of sterling balances would prefer long-term securities to liquid assets, sterling's vulnerability to the seasonal and other vicissitudes would be reduced and a more confident foreign investment policy might be feasible. On these matters, the Commonwealth Conference could have no more than prepared the ground for further exploration to be undertaken by financial experts. The steps needed to strengthen sterling are reported to have received appropriate attention. For more concrete results, we may have to wait for the Finance Minister's sojourn, which is expected to cover Ottawa, Washington and London.

Unresponded Generosity

The River Ravi is reported to be changing its course at the cost of Pakistan villages. There is another point for feud on a frontier, whose waters have already given unending trouble. The present phase of the World Bank mediation on the Indo-Pakistan dispute over the sharing of the Indus basin waters, has found its echo in distant London on the eve of the Commonwealth Conference too. At a specially summoned meeting of Pakistani journalists, Mr. Suhrawardy announced his decision to reject the World Bank proposals.

Mr. Liff can now cut short the tenure of his assignment. Pakistan's non-compliance will be regretted in India. At the same time, it must open the eyes of the Government of India to the sadly inescapable fact that as far as the neighbouring Government are concerned any show of generosity is harmful. The original World Bank Plan, virtually accepted in full by India, ensured for Pakistan the entire waters of the three Western tributaries of the Indus and reserved for India the waters of the other three rivers; roughly Pakistan secured eighty per cent of the basin flow, though the area to be irrigated in Pakistan is only 30 million acres against 26 million acres in East Punjab.

Over and above this, India also promised to pay Rs 60 crores, toward the cost of the construction of link canals in Pakistan in place of those originally linked with the river falling in India. The new plan put forward by the World Bank's Vice-President is understood to be a slightly modified version of the above-mentioned arrangement.

As an alternative, Pakistan has suggested a Master Plan embody-

ing several long-term irrigation schemes in Pakistan which are calculated to consume probably the whole of the waters of the Indus Basin and costing about Rs 1000 crores. If India were to use any portion of the waters which, in Pakistan's view ought to serve the Master Plan, the cost of its replacement will have to be borne in compensation. In other words, if India has to utilise the river waters which naturally flow through its territory, Pakistan must receive a few hundreds of crores. A proposition so preposterous as this stands self-condemned. At any rate, it should be enough to convince India and the World Bank that to continue negotiations with Pakistan is a sheer waste of time. India has only one alternative—to declare the maximum concessions possible and to leave it to the neighbour soaked with avarice, to take or reject them.

Food Zone for South India

Some of the views reported to have been expressed by Chief Ministers in South India should queer the pitch for the forthcoming Zonal Council meeting, in one of its most important tasks. When a free food zone was proposed between Andhra, Mysore and Madras, it was felt that Kerala was kept out owing to strong political and economic reasons. The Kerala Chief Ministry has subsequently expressed general approval of the independent treatment of the State, with the Centre taking direct responsibility. Mr. Nambodiripad is wise in preferring to deal with the Centre, with its comparatively heavy reserves and powers over wagon movements. Among the remaining trio, only Andhra can be depended on for supplies and these would be unreliable when Madras and Mysore also pool their demand. The exclusion of Kerala is politically unsound, because what holds good for food might be cited as precedent, when it comes to relations in spheres where co-ordination among all the South Indian States would be indispensable. The direct approach to the Centre might well become increasingly embarrassing to the latter.

What is surprising is that the Andhra Premier should voice objection to the creation of a food zone even with the three States, Andhra, Mysore and Madras. His argument is that export of food-grains to the deficit districts of other States would raise prices in Andhra and have therefore to be discountenanced. Mr. Reddy seems to insist that Andhra must be treated as a separate food pocket. Amidst these narrow and ungenerous propositions the prospect of effective collaboration between these States on the food front looks dim. Unfortunately at the

State Ministers' Conference, when these views found expression for the first time, no one appears to have impressed the Andhra Chief Minister the financial advantage involved in the prevalence of reasonably high food prices in his State and the Government having a hand in the disposal of the commodity outside. At the Zonal Council, the more pleasing aspects of mutual coordination will have to be pressed on the participants. But it would have been better if the Union representative were spared of this delicate task and on the contrary he is presented with broadly agreeing viewpoints and demands, which for that very reason will be more impressive and irresistible.

A Crumbling City

Nagpur, which for several decades functioned as the leading metropolis of Central India is now threatened with ruin. Its pre-eminence was ensured by the City's status as the Capital of Central Provinces and a commercial centre for cotton, grain and fruit. The capital was removed to Bhopal. This step has naturally led to considerable shrinkage in the population of the City. Not all the frantic calls for the shifting of a few Central Offices have had any effect.

Lately, the textile mills are also reported to be contemplating a move. One mill has changed hands and more are understood to be under negotiations for sale. Many leading merchants have left the city in the wake of Reorganisation. If as is rumoured, the new owners of the cotton mills were to decide on shifting them to the suburbs of Bombay or Ahmedabad, Nagpur's fate even as a second-rate town will be sealed. The fate which overtakes the textile industry will soon be shared by the grain and fruit trades. These also will seek as much diversion to new centres as possible.

It is a situation in which the Central Government alone can do something to stem the rot. Quick decisions to remove a few suitable offices to the City which till three years ago was mentioned as a possible second Capital of India may lift the place from the present doldrums, stay the exodus of the mercantile community and stabilise the various trades, big and small. Delhi will only be relieved by the process. It is disheartening to see that Nagpur is not alone in this plight; and there is scarcely any other urban centre, where some state initiative will not be of use and is consistently grudging.

When to Retire?

Acharya Vinoba Bhave is concerned that too many old men are occupying high offices in India.

Many others share this sentiment. Government Officers, on the contrary, hold that the normal age of retirement should be raised from 55. They argue that at the present age of retirement, a large number of competent and experienced men are compelled to deny service to the Government at the height of their maturity and either to waste their talent and capacity or to place them at the hands of private employers.

Younger men in services are inclined to agree with Vinoba Bhave, a position dictated by indubitable self-interest. The longer their superiors survive in office, the lesser their own prospects for rise; and the grievance trickles down to the lowest cadres and even infects the unemployed. From this apparent dilemma, only strict adherence to unassailable criteria can show the way out. As a first step some of the blatant prevailing anomalies must be removed. Under one of these, a District Judge, when he attains 55, will have to retire then and there; but if two days before, he secures a promotion to the High Court, can function there for another five years. On behalf of politicians becoming Ministers or Ambassadors well beyond sixty, the analogy of Gladstone and Churchill is pressed into service.

It is no small mercy that similar analogies are not formally advanced in favour of the 'giants' among civil servants. Just now, the most convenient pretext for extensions to the favoured is readily found in the paucity of trained personnel, a phrase which in most contexts only means that certain persons will have to be kept in office, till their presence becomes an intolerable public scandal. It

Credit Squeeze? No!

Credit Regulation? Yes

THE circular letter addressed to Scheduled Banks by Mr. H. V. R. Iengar, Governor of the Reserve Bank, has been interpreted in some quarters as the orthodox beginnings of a credit squeeze. Such an interpretation would be wrong, as will be shown by a study of the various measures set afoot by the central banking institution since the commencement of the Second Plan. Not credit squeeze, but credit restraint as part of the Reserve Bank's selective monetary control is what is comprised in the Reserve Bank's communiques of this week. For a proper realisation of what selective monetary control is, it is necessary to be appraised of a brief resume of some of the measures instituted by the Reserve Bank in recent months.

At the outset, it may be stated that the Reserve Bank is showing a lively awareness of the duty that it will need to perform in the course of the Second Plan. Its vigilance and watchfulness have time and again been displayed since the beginning of the Second Plan. This selective monetary control first showed itself in the directive from the Reserve Bank, in May last year, that Scheduled Bank credit against foodgrains should, in view of the speculative interest directed to this commodity, be curtailed. A few months later, in September, there was again an occasion for the Reserve Bank to advise the banking system that its advances in another sector of the economy should be reduced. The pre-Puja rise in prices of cotton textiles led to the Reserve Bank directive in September last year that advances in this regard should be brought down. Meantime, flexible monetary control had also the aspect in which, not restriction, but liberalisation of credit was called for. To this end, on the eve of the 1956-57 busy season, the Reserve Bank made it known that the needs of the busy season must be within the capacity of the banking system to meet. Scheduled Banks were encouraged to replenish their resources by borrowing from the Reserve Bank against usance bills. The sign and symbol of the central banking institution's wideawakeness in this matter was the greater weight given, from that time, to the bank under whose auspices the advances against usance bills had been made. It consequently became possible for the Reserve Bank to approve credit lines to the amount of Rs 150 crores against usance bills. The effect of these prudent prepa-

rations was that the 1956-57 busy season proved less awesome in its rigours than had been anticipated.

Again, this year, speculative pressure on foodgrains came to be more pronounced. Swift action followed: the Reserve Bank directed that, according to a phased schedule, Scheduled Bank credit against foodgrains ought to be cut down. Thus, by June this year, selective monetary control as a policy was already on its way of having been tried and proved effective.

It has been known that Mr. H. V. R. Iengar has, since he took over the reins as Governor of the Reserve Bank, been in the process of clarifying for himself and for India's financial authorities the task and role which the Reserve Bank would be called upon to play in the emergent economic conditions of the Second Plan. That task, put simply, will entail some careful tightrope walking. To fall to one side would be to allow the country to be overcome by the forces of inflation. To lose one's footing and fall the other way would be to court the economic disaster entailed by any curtailment or abandonment of the Plan. Thus, Mr. Iengar's difficult chore has been to ward off inflationary pressures in the less resistant sectors of the economy, while, at the same time, ensuring that sufficient money was available to make a success of India's industrial progress. It would now appear that the Reserve Bank Governor is clear in his mind as to the line of action he will need to take over the period of the Second Plan.

The announcement came from Bombay early this week that sugar was a sector of the economy in which the Reserve Bank had sound reason to believe that bank credit was being utilised for speculative purposes. In stating that the price of sugar had risen unconscionably, particularly in view of the fact that the latest year's production has marked an increase of over 10 per cent, the Reserve Bank has directed that, as from July 26, advances against sugar should not exceed 110 per cent of the level in the corresponding week of the previous year. The 10 per cent cushion, it may be added, relates to the increased advances necessary for the higher level of production achieved.

We should add here that the Reserve Bank directive on sugar advances does not specify that, in working out the admissible level,

export financing is to be excluded. It cannot be the intention of the Reserve Bank to place a hurdle on sugar exports. We would suggest a categorical statement to the effect that export financing will not fall under the purview of the directive.

It has also become known that selective monetary control is part and parcel of the Reserve Bank's armoury of monetary weapons. A spokesman of the Reserve Bank stated: "It is our intention to make use of this credit control wherever it is found necessary". The spokesman added that the Reserve Bank would not hesitate to issue a directive calling upon Scheduled Banks to restrict credit in respect of any commodity in which the price rose beyond a reasonable level.

It may be emphasised that it is not the Reserve Bank's intention to prescribe a credit squeeze as the panacea for inflationary pressures in particular sectors of the economy. On the contrary, the central banking authorities will seek, by means of selective monetary control, to minimise the scope offered for speculative activity in those sectors by restricting the availability of bank credit against those commodities. Moreover, as Mr. Iengar has stressed in his circular letter to banks, it is not the Reserve Bank's policy to take any measures which will affect, retard, disturb or disrupt the progress of the industrial projects. In his circular letter, Mr. Iengar has stated, as a general proposition, that the level of bank credit must be reduced. This reduction is to be in respect of advances against agricultural commodities in the slack season and generally accommodation against all commodities likely to be in short supply. In this context the Reserve Bank Governor says:

"It seems particularly necessary to exercise caution in respect of imported goods, as, in view of severe licensing restrictions, these goods are likely to become scarce and to be hoarded in anticipation of rising prices".

Mr. Iengar has also explicitly stated that the Reserve Bank does not suggest a reduction in what may be called productive advances. As he put it, it should be possible for banks to reduce their volume of credit without diminishing their "assistance to the essential sectors of the economy, and, in particular without affecting the rising trend in industrial production".

In a word, the Reserve Bank's policy is: Discourage advances which might aggravate inflationary tendencies; be particularly wary of accommodation against commodities likely to be in short supply; and, by these means, sufficient resources will be available for providing the full quantum of advances needed for speeding up industrial production.

Sharp Decline in Bank Advances

Slack season conditions are responsible for another steep fall of Rs 17.07 crores to Rs 1542.17 crores in Active Notes, as disclosed in the returns of the Reserve Bank for the week ended June 28. Currency has been contracted for Rs 15 crores against Rupee Securities, with a transfer for this amount to Investments in the Banking Department. Rupee Coin has returned from circulation for Rs 1.02 crores. In the result, the Reserve Bank's cash in the till has risen by Rs 3.09 crores to Rs 39.50 crores.

Investments in the Banking Department are marked higher by Rs 29.34 crores. Since Rs 15 crores are accounted for by the transfer from the Issue Department, we may presume that the balance of Rs 14.34 crores must be due either to deficit financing or to open market purchases. Our own view is that, in the last week

Bank Liquidity Problem of Britain

By PAUL EINZIG

BY tradition the British people are reluctant to submit to rigid statutory regulations and prefer to depend whenever possible, on informal self-imposed rules. This is particularly true in respect of banking. There are no legal res-

trictions whatever on the proportion between deposits and other sight liabilities and cash and other liquid assets. In practice, however, a cash ratio of 8 per cent has for many years been regarded as the minimum limit among commercial

banks. In more recent years the importance of the cash ratio has been overshadowed by that of the liquidity ratio representing the proportion between liquid assets to total assets. The figure of 30 per cent has come to be regarded as the minimum limit, even though in this respect there is more flexibility than in respect of the cash ratio.

The reason why the importance of the liquidity ratio has overshadowed that of the cash ratio is that in possession of liquid assets in excess of 30 per cent banks are always in a position to increase their cash ratio by realising some of their liquid assets. It is for this reason that financial commentators nowadays hardly mention the cash ratio and concentrate on the liquid ratio. The latter has indeed received a good deal of attention in recent years. It became fashionable to attribute inflation mainly to the excessive issue of Treasury Bills by the Government because the increased holding of Treasury Bills of the banks tended to raise their liquidity ratio well above the minimum. This provided much temptation and much opportunity for expanding credit, regardless of the official policy of credit squeeze during the last two years.

More recently, however, liquidity ratio tended to give rise to different kinds of problems. In order to be able to meet growing demands for credit the banks endeavoured to maintain and increase their liquidity ratio by selling out their holdings of medium term and long term Government Loans at a time when the absorbing capacity of the gilt-edged market for such sales was far from adequate.

The banks were not alone in selling out Government Loans for the sake of increasing their holdings of Treasury Bills. Since the increase of the bank rate at the beginning of 1955 industrial and commercial firms too have acquired a taste for holding Treasury Bills. Hitherto little interest was taken in such Bills outside the financial community. During the last two years however, many firms came to realise that there is nothing mysterious or complicated about the acquisition and holding of Treasury Bills. The annual reports and accounts of a number of important firms show a striking increase in their holdings of Treasury Bills. The British Petroleum Company showed for the first time a holding of over £5 million at the end of 1956. Unilever increased its holding of Treasury Bills from £4 million to £17 million during 1955, and this latter figure was maintained during 1956. The holding of Associated Portland Cement increased almost fourfold in 1955, even though it declined somewhat in 1956. The instances could be multiplied, but those quoted above should suffice to indicate the extent of this entirely new demand for Treasury Bills.

Some of these increases were made through corresponding reductions of deposits and balances held by these companies with their banks. To the extent to which this was done the Treasury Bill requirements of banks for the purposes of maintaining their liquidity ratio also declined. On the other hand, the amount of Treasury Bills available for the banks has also declined. Should the private acquisition of Treasury Bills con-

Heavy Electricals Project

Lenin is believed to have remarked that in Russia, an underdeveloped country in 1917, communism was equal to socialism plus electricity. Though not expressed in such dramatic terms, India's Planning Commission in its Reports had laid no less stress on the necessity of electrical power generation.

The importance of electrical power in the execution of and in achieving the aims of the Five Year Plans is, of course, obvious. How important to India the production of electrical power is, can be judged from the fact that the per capita consumption of electricity—often cited as a measure of a country's industrial and economic advancement—is 14 Kwt only, whereas in the UK and the USA it is 1100 Kwt and 2207 Kwt respectively.

The second Plan aims at extending power facilities to all villages and small towns with a population of over ten thousand. In terms of energy the First Plan had set a 15 year target for additional power capacity of 7 million kilowatts. But the demand for electricity has gone up so sharply that the Second Plan aims an increase in the supply of power from 3.4 million kilowatts to nearly 7 million kilowatts by the end of 1961. Even then, it is estimated that the demand will be greater than supply.

The demand for electrical goods also shows, naturally, a similar rise and here also the demand will be probably greater than the available supply for some years to come. In November last year Mr Manubhai Shah speaking as the Union Minister for Heavy Industries, as he then was, before the Development Council for Heavy Electrical Industries, stated that production of electrical goods in the country would have to be raised to the value of Rs 60 crores which is the expected demand by 1960-61 and which is nearly three times the current annual production.

Whether the target will be achieved or not, the next few years will show, but the progress achieved in recent years and the prospect of the Bhopal factory going into production before the expiry of the Second Plan, fill one with hope and confidence that it will be.

The progress has indeed been rapid. The total production in terms of money value has gone up from Rs 7 crores in 1951 to Rs 17.3 crores in 1955. During the same period, the production of transformers has gone up from 1,94,000 kva to 5,64,700 kva and that of electrical motors from 1,43,000 HP to 2,52,000 HP. Similar has been the increase in the production of cables, wires, switch gears and control gears.

The Hindusthan Electricals (Private) Ltd, the first stage in the production plans of which was started

with the laying of the foundation stone for the workshop and the training school last week, will be the main centre in India for the production of electrical goods in the near future. This important unit in the public sector will construct the biggest factory in Asia for the production of electrical goods. After 1960, when the factory at Bhopal starts producing heavy transformers, industrial motors and switch gears, it is estimated that goods worth Rs 10 crores per year will be produced in the factory.

One important and welcome feature in the Agreement which the Government of India entered in 1956 with the Associated Electrical Industries Ltd and the English Electric Co. Ltd, making them Associates and Consultants in this Rs 40 crore project, is the provision made for the training of personnel. As part of the Agreement is the scheme for training a number of Indian technicians for supervisory position. The training school which forms an important part in the project will train 90 candidates in the first year and about 2000 trainees in the next four years. Already a batch of 27 candidates selected for specialised training has left for UK and another batch is expected to leave next month. The interesting point is that the trained personnel will be available for development not only at the Bhopal factory but also elsewhere.

The Second Plan does not specifically provide for a second unit similar to the Heavy Electricals Project at Bhopal. But there have been Ministerial pronouncements more than once to the effect that not only is there scope but an acute necessity

for a second factory in the public sector, for producing heavy electrical goods. If and when such a project is launched, India will be in a position to satisfy substantially the demand for electrical goods which will go on increasing along with the extension of the scale of electrical power generation in India.

Machine Screw Industry

One of the industries to be given protection in the post-war period, was the machine screw industry. Protection to this industry was given in 1951 and involved the conversion of the revenue duty into a protective duty at 31½ per cent ad valorem inclusive of surcharge. Subsequently in 1955, the protective duty was raised to 50 per cent ad valorem or 9 annas per gross whichever was higher. The period of protection is due to expire on 31st December 1957 and a new inquiry is now in progress to decide the question of continuance of or withdrawal of protection to this industry.

The progress of the machine screw industry during the five years of protection has been phenomenal. The installed capacity on single shift basis, which was 3.79 lakhs gross in 1954, increased to 13.83 lakhs gross in 1956. Simultaneously production registered a parallel increase from 2.24 lakhs gross in 1954 to 10.54 lakhs gross in 1956. This big increase in production was achieved more by the addition to the size of units than by starting new ones. For whereas in 1954 seven units were engaged in the production of machine screws at present there are nine units.

While the present level of production is on par with the current demand for machine screws which is placed at about 1.55 million gross, the demand is expected to increase to 4 to 5 million gross a year by 1960-61 and this indicates

the scope for further development of the industry.

If the industry is to forge ahead in future it must be assured of an adequate supply of mild steel wire of good quality, which is the principal raw material and the current domestic supply position of which continues to be difficult.

Further, there is also need to improve the quality of the product turned out by the indigenous industry. The manufacturers would do well to introduce quality control schemes.

Forest Wealth

The forests of India extend to an area of nearly 230 lakhs square miles and thus form about 22 per cent of the total geographical area of the country. But how small the forest area is in relation to the needs of the country will be evident from the fact that the per capita consumption of round wood is only 1.4 cubic foot in India against 58 cubic feet in USA while the per capita consumption of pulp products is only 1.6 pounds against 78 pounds in the UK. Thus the need to develop and conserve the forest resources of the country is great.

Lack of a clear forest policy contributed to large scale destruction of forest lands, by landless cultivators encroaching upon the forests of the country and using them for agricultural purposes. A national forest policy was first enunciated in 1952 by the Government of India and under the First Plan a sum of Rs 9.6 crores was earmarked for the development of forests. As a result green cover had been restored over 75,000 acres. Further match wood plantations had been raised at the rate of 3000 acres per year and over 3000 miles of forest roads were also constructed. An area of 20 lakh acres of forest land under private management had been brought under state control.

A TOWER OF STRENGTH in India's Economy

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

Outlook for Indian Burlap in US

While giving the ruling that there is no reason to change the present United States Tariff on imported jute fabrics, the Tariff Commission in Washington has given the figures relating to the total imports of jute fabrics into US in 1956. During the year a total of 50,129,000 pounds weight were imported. Of this quantity, India supplied 41.9 per cent, the United Kingdom 28.3 per cent, West Germany 16.8 per cent and Belgium 11.1 per cent with Italy, Austria, the Netherlands and other countries supplying less than one per cent each of the total imports.

It will be evident from the above figures that in the United States markets, Indian jute goods have only three main competitors, the UK, West Germany and Belgium. Recent reports indicate that the jute industry in these countries is encountering considerable difficulties due to the high price they have to pay for the raw material which comes to them from Pakistan. In the UK, the situation is becoming increasingly untenable because of the prospect of a European free trade area. It is also reported that the other two countries have recently been obliged to curtail their production. With India's main competitors thus pre-occupied with serious problems, it is quite on the cards that Indian jute goods may have a bigger share of the total

imports of jute fabrics into US in the current year.

After a steady opening the jute goods market turned easier in the absence of buying interest. Hessian 40"x10 oz Ready which opened at Rs 43.46 and B Twills at Rs 115.10 were quoting at the end of the week at Rs 42.80 and Rs 114.15 respectively. In early dealings prices displayed a hardening tendency especially in the sacking section due to reports of some enquiry for Heavy Cees Green. Shippers and speculators evinced fair interest.

On Friday the market continued to rule steady despite selling pressure from speculators. Hessian 40"x10 oz Ready moved up to Rs 43.50 while B Twills ready gained 30 nP to be finally placed at Rs 115.40. In the forward positions, Hessian 40"x10 oz July was placed at Rs 43.75, August-September at Rs 43.80 and October-December at Rs 43.40. B Twills July, August-September and October-December were placed at Rs 116.10, Rs 116.10 and Rs 116 respectively.

On reopening on Monday it was found that the reactionary trend had reasserted itself. The market opened on a quiet note and after a short while prices developed a sagging tendency in both the sections due to persistent selling from

speculators. Toward close prices recorded small recovery on some buying support at the lower levels. However, closing rates in the hessian section were lower on balance. Hessian 40"x10 oz Ready was placed 30 nP lower at Rs 43.20. In the sacking section, B Twills Ready was slightly better at Rs 115.55. Elsewhere Hessian 40"x10 oz July was done at Rs 43.45, August-September at Rs 43.45 and October-December at Rs 43.25 while B Twills July was placed at Rs 116.30 with August-September at Rs 116.55 and October-December at Rs 116.42.

Prices all along the line were marked lower in the absence of fresh interest on Tuesday. While the official market was idle for lack of business, a moderate selling pressure was witnessed in the Fatka. The market closed quiet. Hessian 40"x10 oz Ready eased further to Rs 43.16 while B Twills Ready dropped 35nP to come back to Rs 115.20. In the forward positions, Hessian 40"x10 oz July lost 10nP to Rs 43.45, August-September shaded to Rs 43.41 while October-December was pushed down by 21 nP to Rs 43.04. Among heavy goods, B Twills July lost 30 nP to Rs 116, August-September dropped 40 nP to Rs 116.15 and October-December receded to Rs 116.10.

In the continued absence of business speculators hammered down rates further on Wednesday. The bears seemed to have derived encouragement from the reported congestion in the Calcutta Port, as well as from the crop reports which showed that the new crop was making satisfactory progress in most growing areas. Hessian 40"x10 oz Ready declined to Rs 42.80 with B Twills Ready react-

ing to Rs 114.15. The rates for the forward positions also showed similar losses. Hessian 40"x10 oz July, August-September and October-December were Rs 43.11, Rs 43.16 and Rs 42.87 respectively. B Twills July, August-September and October-December were Rs 115.37, Rs 115.50 and Rs 115.25 respectively.

The following table shows price trends during the week:

	Week's Opening Rs.	Week's Closing Rs.
Hessian:		
40" x 10 oz.		
Ready	43.46	42.80
July	43.81	43.11
Aug.-Sept.	43.81	43.16
October-Dec.	43.42	42.87
40" x 8 oz.	35.10	34.62
40" x 7 1/2 oz.	32.75	32.50
Sackings:		
B. Twills—		
Ready	115.10	114.15
July	115.85	115.50
Aug.-Sept.	115.85	115.50
October-Dec.	115.75	115.25
Hv. Cees Green	116.75	117.00
Cornacks	116.85	117.25
Cubans	143.75	143.00
A Twills	139.00	139.50
L Twills	127.50	128.00
D. W. Flour	131.50	132.50
Sugar Bags	130.00	129.50

The raw jute market had generally ruled quiet though quoted rates showed little change from those prevailing at the end of the previous week. Except for some moderate interest evinced in the early part of the week, mills' purchases had been small. While the generality of sellers had been indicating rates slightly higher than those at which mills seemed to be interested, a few transactions had been reported at quarter to half-point below quoted rates. Assam Bottoms July-August delivery was quoted at the end of the week at Rs 31.50 per maund.

2.34 million pounds as compared to 5.97 million pounds in the corresponding month of last year, the largest increase being recorded by Indian Ports which absorbed 1.78 million pounds as compared to only 328,906 pounds in May last year. Total exports, in the first five months of the current year, are higher at 29.62 million pounds against 27.54 million pounds in the corresponding period of last year.

Meanwhile, firm conditions have continued to prevail in the tea auctions. At the Export Sale, held in Calcutta this week, offerings were 15,091 packages for which there was a strong and general demand. Bright Liquoring CTC teas were keenly competed for and the best sorts were sold at attractive prices. The other teas in this category also showed a dearer tendency. Clean Common and Medium Broken were 5 to 10 nP per pound dearer, while there was more support for plain Fannings which were often 10 nP per pound dearer.

Whole Leaf grades met with a good demand at slightly dearer rates, while flavoured Second Flush Darjeelings were sold at very high prices. The demand for the increased Tippy offerings was strong, being sold at high rates. Following rates were quoted:—Clean Black Pekoe Rs 2.50 to Rs 2.60; Plain BP Rs 1.95;

Plain Fannings Rs 1.75; Medium BP Rs 2.20; Medium Fannings Rs 2.20 to Rs 2.30; Best Assam CTC BP Rs 3.50 to Rs 4.00 and Best Assam CTC Fannings Rs 4.00 to Rs 4.20.

In the Internal Sale, offerings were 5,119 chests of Dusts. The great majority of them were of New Season's manufacture. Quality from from all districts showed an improvement and there was keen competition for all descriptions with prices appreciating considerably.

The strongest features of the sale were the CTC Assams, non-wither Dooars and black-leaved grades suitable for export. The orthodox Assams with improved liquors were strongly supported with the smaller powdery descriptions being the more popular. Following rates were quoted:—Medium Dooars Dust Rs 1.60 to Rs 1.70; Medium Assam Grainy Dust 1.70 to Rs 1.80; Medium Assam CTC Dust Rs 2.30 to Rs 2.70 and Best Assam CTC Dust Rs 2.90 to Rs 2.15.

There was a strong demand for the 286 chests of Leaf grades on offer. In the Export Quota section, rates moved rather irregularly between 23 and 25 nP per pound. At the close, there were buyers at 24 nP with sellers at Rs 24 nP per pound.

In the Cochin market, a total of just under 950,000 pounds was offered (Continued on page 68)

World of Insurance

Indian Insurance in 1955

Controller's Review

THE report by the Controller of Insurance for 1955, contained in the Indian Insurance Year Book, 1956, is the last of the series so far as life insurance is concerned, as 1955 constitutes the last complete year in which life insurance business was carried on by private insurers. On the 19th January 1956, nationalisation of life insurance was announced which, according to the Controller, is a "momentous development affecting Indian insurance." The Controller goes on to say that, from the 1st September 1956, all Indian insurers and provident societies—excepting two composite insurers under Administrators—ceased to carry on life insurance business anywhere, while all foreign insurers ceased to carry on life insurance business in India. The existing life insurance business—entire business of Indian insurers and provident societies, and Indian business of foreign insurers—has vested in the Life Insurance Corporation of India, which is carrying on life insurance business both in India and outside.

From 19th January 1956 till 1st September 1956 the entity of private insurers was maintained under the regime of Custodians; private management relinquishing to the Custodians all power of control, direction and management. Thus, 1955 constitutes the last complete year of life insurance business under private insurers. The Year Book, if any, for the period upto 19th January, 1956 will constitute the achievement of private insurers, and the period between 1st September 1956 and 19th January, 1956 the achievement under Custodians and the period from 1st September to 31st December 1956 under Life Insurance Corporation of India. Whether, under such a mixed and heterogeneous management, it will be possible for the Controller to make out a report of life insurance business in India detailing carefully the achievements and expenses under each sector is difficult to say. If at all attempted, that will be a complex undertaking.

The number of insurers registered under the Insurance Act 1938 on 31st August 1956, the day preceding the establishment of the Life Insurance Corporation of India, was 312 as compared with 317 on the 31st October 1955.

A review of figures presented in the Year Book reveals that, while compared to previous years new life business effected in India by insurers in 1954 registered a spectacular rise, in 1955 the figure was more or less stationary, marking

an increase by an insignificant margin. This will be apparent from the figures below:

Year	(In crores of rupees)		
	Indian Insurers	Non-Indian Insurers	Total
1946	140.9	12.9	153.8
1947	126.5	13.1	139.6
1948	121.7	12.9	134.6
1949	130.0	12.2	142.2
1950	125.8	13.7	139.5
1951	131.4	16.5	147.9
1952	130.3	16.4	146.7
1953	138.2	17.0	155.2
1954	220.1	16.2	236.3
1955	220.9*	17.4*	238.3*

*These figures are incomplete.

It would appear from a perusal of the above table that, in 1955, foreign insurers fared better compared to Indian insurers. Business of foreign insurers registered an increase from Rs 16.2 crores in the year 1954 to Rs 17.4 crores in 1955. The Controller of Insurance, however, observes that, if the returns of some of the insurers which were not received in time for inclusion of their figures in this Year Book had been taken into account, the new business of 1955 would have shown a noticeable increase over that of 1954. He also observes that it should be remembered, in this connection, that staff schemes under which several insurers actively wrote business were discontinued toward the middle of 1955. The total figures of new business indicate an increase by Rs 2 crores over that of 1954 and an increase of Rs 83.1 crores over that of 1953. As stated earlier, the increase was effected during 1954 and, although the figures for 1955 are incomplete, quite obviously the tempo could not be maintained.

The table below gives the figures of the net amount of life insurance business in force in India as at the end of each of the past ten years:

Year	(In crores of rupees)		
	Sum Insured and Bonuses	Indian Insurers	Non-Indian Insurers
1946	550	101	651
1947	603	103	706
1948	621	103	724
1949	662	103	765
1950	671	109	780
1951	755	118	873
1952	796	133	966
1953	833	137	1,086
1954	949	138*	1,232*
1955	984*	139*	1,123*

*These figures are incomplete.

It will be noticed from the figures that the increase was most marked in 1954. In fact, 1954 registers for Indian insurers an increase by Rs 116 crores, while the increase in 1955 over 1954 is only Rs 35 crores. A noticeable feature in these figures is that the progressive rate of business of nonIndian insurers compares unfavourably

with the progressive rate of increase of business of Indian insurers. Thus, while the Indian figures increased from Rs 671 crores in 1950 to Rs 984 crores in 1955, the figure for nonIndian insurers went up from Rs 109 crores to only Rs 139 crores, marking an increase of only Rs 30 crores over the last 6 years.

The comparison of income and outgo of Indian and nonIndian insurers during 1955 in respect of life insurance business reveals that, as against an income of Rs 64.07 lakhs of Indian insurers, the outgo was Rs 36.94 lakhs, representing an excess of income over outgo of 27.13 lakhs of rupees. This increase constitutes the rise in life funds. Likewise, for nonIndian insurers, as against an income of Rs 9.94 lakhs, the outgo was Rs 7.63 lakhs, the balance of Rs 2.31 lakhs being the excess of income over outgo and representing increase in life funds.

The net rate of interest realised on mean life insurance funds of all Indian insurers in each of the past five years reveals that, from 3.33 per cent in 1951, the interest earned in 1955 rose to 3.56 per cent. While it is evident from this that the net rate of interest realised in 1955 was favourable to Indian companies, the total expenses of management of Indian insurers expressed as a percentage of their premium income during the corresponding years, however, shows a large increase. Thus, from 27.2 per cent in 1951, the expense ratio increased to 33.4 per cent in 1955, although the earning rate of interest, as indicated, was more favourable.

If, however, half a dozen insurers having the large premium income are excluded, the corres-

ponding expense ratios for the remaining insurers would be 28.2 per cent in 1951, 27.8 per cent in 1952, 28.3 per cent in 1953 and finally going upto 33.5 per cent in 1955. Thus, 1955 witnessed a marked increase in the expense ratio of all Indian insurers. The renewal expense ratio for 1955 for all Indian insurers combined, calculated on the basis of Rule 25 (b) of the Insurance Rules, 1939, was 17.3 per cent as against 14.7 per cent for the previous year. The corresponding ratio for half a dozen insurers having the largest premium income was 15.6 per cent while that for the remaining was 19.8 per cent as against 12.7 per cent and 17.2 per cent respectively for the previous year.

The position, however, was favourable to nonIndian insurers. While the net rate of interest realised on mean life insurance funds of all nonIndian insurers registered an increase from 3.19 per cent in 1951 to 3.21 per cent in 1955, the total expenses of management of nonIndian insurers in respect of life insurance business in India expressed as a percentage of their premium income during each of the 5 years registered a fall from 23 per cent in 1951 to 21.3 per cent in 1955. This is a remarkable achievement of nonIndian insurers in management and expenses. The net rate of interest realised on mean life insurance funds in 1955 by Indian insurers, nonIndian insurers in respect of business in India and provident societies combined was 3.51 per cent. In respect of life insurance business, the total expenses of management of Indian insurers, nonIndian insurers in respect of business in India and provident societies combined for the year 1955 was 31.82 per cent of the premium income.

[July 6, 1957]

The assets of Indian insurers as on 31st December 1955 in respect of life business was Rs 325.75 crores and Rs 41.14 crores constituted assets of nonlife business. The total assets of Indian insurers, thus, totalled Rs 366.89 crores on

31st December 1955 as against Rs 348.11 crores on 31st December 1954 and Rs 318.09 crores on 31st December 1953. The table below gives the distribution of the assets of Indian insurers at the end of 1954 and 1955:—

Particulars.	1954		1955	
	Amount	Percentage	Amount	Percentage
Central Government Securities	1,34.30	38.6	1,37.29	37.4
Securities of Part A States	20.35	5.8	25.46	6.0
Securities of Part B States	4.38	1.2	5.13	1.4
British, Colonial and Foreign Government Securities	...	...	...	...
Municipal, Port Trust and Improvement Trust Securities	5.87	1.7	7.42	2.0
Mortgages on property	18.42	5.3	20.99	5.7
Loans on policies	15.66	4.5	15.08	4.1
Loans on stocks and shares	27.46	7.9	27.98	7.7
Other loans	16	...	15	...
Debentures of Indian companies, etc.	2.04	0.6	2.32	0.6
Preference shares of Indian companies, etc.	20.79	6.0	20.21	5.5
Ordinary shares of Indian companies etc.	12.16	3.5	13.98	3.8
Land and house property	23.15	6.7	25.33	6.9
Agents' balances, outstanding premiums, interest, etc.	18.73	5.4	17.49	4.8
Deposit, cash and stamps	16.50	4.7	18.55	5.1
Miscellaneous	20.94	6.0	20.53	5.6
	7.20	2.1	8.98	2.5
Total	3,48.11*	100.0	3,66.89*	100.0

*These figures do not include "Accrued interest", "Preliminary and organisation expenses" and contra items.

It will be seen from the above table that investments in Government and semigovernment securities constitute about 50 per cent of the total assets and those in debentures, preference shares and ordinary shares work out to 18.20 per cent and the rest of the assets is held mainly in the form

of mortgages on property, land and house property, loan on policies, agents' balances, deposits, etc.

NON-LIFE INSURANCE BUSINESS

The gross premium income written direct in India during 1955 in all classes of business registered a

sharp increase as compared with the previous year. Likewise, the net premium income shows an increase as compared with the previous year. The following tables give in respect of 1955 the gross pre-

TABLE I
(In thousands of rupees)
Gross premium written direct in 1955.

Class of insurance business	Inside India		Outside India	
	Indian Insurers	Non-Indian insurers	Indian Insurers	Non-Indian insurers
Fire	5,91.43 (+ 12.42)	4,36.01 (+ 7.55)	1,92.56 (+ 6.12)	1,83.79 (+ 2.57)
Marine	3,28.31 (+ 50.13)	2,67.15 (+ 24.05)	1,83.79 (+ 2.57)	1,83.79 (+ 2.57)
Miscellaneous	4,35.08 (+ 48.37)	2,15.24 (+ 2.71)	1,80.60 (+ 12.36)	1,80.60 (+ 12.36)
Total	13,54.82 (+ 1,08.92)	9,18.40 (+ 28.89)	5,36.95 (+ 8.81)	5,36.95 (+ 8.81)

TABLE II
(In thousands of rupees)
Net premium income in 1955

Class of insurance business	Inside India		Outside India	
	Indian Insurers	Non-Indian insurers	Indian Insurers	Non-Indian insurers
Fire	2,74.70 (+ 10.77)	2,80.51 (+ 20)	5,73.75 (+ 19.97)	5,73.75 (+ 19.97)
Marine	1,45.07 (+ 10.02)	1,93.26 (+ 19.83)	1,86.69 (+ 1.02)	1,86.69 (+ 1.02)
Miscellaneous	3,29.15 (+ 16.29)	1,96.64 (+ 1.68)	1,88.39 (+ 20.70)	1,88.39 (+ 20.70)
Total	7,48.92 (+ 37.08)	6,70.41 (+ 21.71)	9,48.87 (+ 41.69)	9,48.87 (+ 41.69)

The following table gives in respect of Fire, Marine and Miscellaneous classes of insurance business, (a) the total gross premium written direct in India by Indian and non-Indian insurers, and (b) the total net premium income inside and outside, of Indian insurers for each of the years 1951, 1952, 1953, 1954 and 1955.

TABLE III

Year.	Total gross premium written direct in India by Indian and non-Indian insurers.			(In Thousands of Rupees) Total net premium income. Inside and outside India, of Indian insurers.		
	Fire	Marine	Miscellaneous	Fire	Marine	Miscellaneous
1951	12,05.53	5,94.04	5,94.04	7,88.58	2,76.12	4,02.05
1952	10,33.17	5,51.74	6,09.18	7,87.82	2,82.87	4,12.90
1953	9,82.71	4,90.04	6,10.61	7,91.40	2,79.65	4,58.72
1954	10,07.47	5,21.28	6,06.66	8,17.75	3,20.72	4,80.55
1955*	10,27.44	5,85.46	6,50.32	8,48.49	3,31.76	5,17.54

*The figures for this year are subject to correction.

Thus, American companies are helping other nations raise their standards of living by supplying them or helping them produce—more of the goods and services they need. This becomes particularly important when it is considered that populations around the world are expanding at a phenomenal rate.

Economically speaking, this means first that the number of potential consumers is rising all the time. Then as more and more people are employed at good wages in expanding industries, purchasing power increases and growing middle-class markets are created. For some countries, this is a new—even a revolutionary—development. No wonder that American corporate executives are showing increased interest in business opportunities abroad.

Britain

BRITAIN'S IMPORTS OF FOODSTUFFS

By JOHN KINGSLEY

THE stress laid on Britain's position as a leading exporter of manufactured goods tends, inevitably, to overshadow the enormous scale of her imports. Yet this reverse side of the coin is one of vital importance to her trading partners.

In foodstuffs, in particular, she is many countries' "best customer", and the prosperity of large parts of the world depends to a great extent on Britain's ability to maintain her overseas purchases of agricultural produce.

With negotiations on a European free-trade area drawing special attention to the whole problem of agriculture, the latest data on this trade in foodstuffs acquire a new significance. Two salient facts, above all, derive from the statistics:

First, the Commonwealth is dependent on the United Kingdom market for a very large part of its exports of foodstuffs; for many countries these purchases do, in fact, represent the bulk of their export earnings.

Second—and this has an equally immediate bearing on the free-trade area negotiations—Britain also imports very large amounts of food from Western Europe at low tariff rates, and almost free from quota restrictions.

United Kingdom purchases from overseas Commonwealth countries last year accounted for 30 per cent of all their exports, and had a value of £1,760 million. Well over one-half of this—mostly foodstuffs—had some degree of tariff preference (mostly 10 per cent.).

This preference, which has been a feature of Commonwealth economic relations for over 25 years, by helping Commonwealth producers build up their exports has likewise helped them establish their economies on a secure basis.

By way of illustration: Britain takes over one-half of their exports of major foodstuffs, including about two-fifths of Canada's cereals and four-fifths of the independent sterling countries' meat and dairy products. She also purchases two-thirds of colonial terri-

FOR months now, I have been bewildered by the conflicting views I have encountered of the propriety of thermo nuclear tests. This bewilderment does not, as might be imagined at first sight, stem from the moral and political issues involved in the continuation of these experiments. These are comparatively amenable to sorting: and, since no personal decisions of an immediate kind are called for, easy of solution to the satisfaction of one's intellect and conscience. But any such exercise in political and moral imagination requires exact scientific data on the subject of the hazards that accompany these tests. It is precisely on this that I, along, apparently, with the rest of the world, have been so ill served by the scientists of the world. If one were to believe all that appears in print on the subject, nothing is too bizarre to be presented as authoritative views. On the one hand, you have the robustness of those who consider fears of danger from radioactivity caused by these tests as "nonsense". On the other, you have those who trace vagaries of personal behaviour to these diabolic activities. Dr Lawrence, the American physicist and nobel laureate, said the other day in London: "Fears of radiation injury following hydrogen bomb tests is a lot of nonsense. No one is going to be hurt by the tests being carried out by Britain and the USA".—(I do not think that his curious omission of USSR is significant!)

And yet, surprising as it may seem, such a reading of the current confusion is a less damaging one than another which is only too depressingly plausible. To many to whom intellectual integrity is the most precious virtue, the suspicion that current scientific utterances are not always scientifically motivated is a nightmare difficult to avoid. How else can one explain such flat contradictions about what ought to be a matter as easily distinguishable as cheese from chalk? Moreover, if, because of excessive scientific fussiness, they want to say that they do not know the precise point at which further radiation of the atmosphere is harmful, surely, there is little call to reassure the world that no harm can come by these tests. On the contrary, the compulsions of such ignorance ought to operate in that is the exact opposite of

Clive Street

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

Gossip

Dr Lawrence's. In a statement in 1955, Einstein along with seven other leading scientists said on this subject, "The men who know most, are the most gloomy".

For the student of human affairs, the phenomenon has its points of interest, not wholly connected with the truth or otherwise of particular assertions. In the first place, the current confusion in the scientific world has overt and not so overt undertones which go to the root of the integrity of scientific discipline. At its most harmless, this divided counsel is an ironic footnote to the strident assurance of nineteenth century science. Of course, the basis of that confidence was already undermined by the findings of early twentieth century physics itself. ("God said. 'Let Newton Be!' and all was light. The devil shouting, 'Ho, Let Einstein Be!' and restored the status quo"). But the present confusion is but a parody of the uncertainties that arise out of an attempt to grapple with the impenetrable fundamentals of nature and life. In a sense, these uncertainties were the essence of knowledge, since they are the closest approximation to a formulation of the final mystery of life. But the indeterminacy of the extent of dangers from nuclear fallout is not of the same status as that of Heisenberg's principle. It is the far simpler and far less flattering kind flowing from ignorance.

And yet, surprising as it may seem, such a reading of the current confusion is a less damaging one than another which is only too depressingly plausible. To many to whom intellectual integrity is the most precious virtue, the suspicion that current scientific utterances are not always scientifically motivated is a nightmare difficult to avoid. How else can one explain such flat contradictions about what ought to be a matter as easily distinguishable as cheese from chalk? Moreover, if, because of excessive scientific fussiness, they want to say that they do not know the precise point at which further radiation of the atmosphere is harmful, surely, there is little call to reassure the world that no harm can come by these tests. On the contrary, the compulsions of such ignorance ought to operate in that is the exact opposite of

favour of prudence and compassion. What but commitments that have nothing to do with scientific truth can explain complacency in this regard.

There is an aspect of popular psychology that I should like to deal with in this connection. Dr Lawrence in the interview I have already quoted was somewhat superior about "too many people who spend too much time worrying about these tests". Now, if there were, in fact, too many people exercised about the safety of mankind, it would be only as it should be. But, paradoxical as it may seem, precisely the opposite is the case. Not too many people, but too few people actually care; otherwise, this suicidal madness would have stopped long ago. Apart from the general apathy of the majority of mankind to political facts of any sort, the very enormity of the issues involved makes the man in the street shrug his shoulders and go his way. And when he finds that the backroom boys themselves don't seem to be agreed on what is likely to happen, his cynicism gets the better of his instinct of self preservation. He believes, if he at all bothers to figure the issues out, the man who tells him that the dangers are farthest both in time and space. And, while on the subject of spatial immunity, I hope I won't be considered particularly uncharitable if I say that, as far as the European is concerned, its assurance is an additional (though, alas, illusory) source of false security.

From the point of view of the layman, the situation is most unsatisfactory in view of the absence of a consensus of precise opinion on the subject of the extent of the hazards in store. A new element of confusion has been introduced by recent talks of clean bombs which have no radioactive fallout of any kind. (Even here, according to reports, the development of such bombs will take another four or five years and so, presumably, we have to put up with unclean bombs till then). All these days, the controversy has centred round the extent of radiation that actually takes place and whether we have already reached the stage when further increases

would be justified. There are people who consider that all this talk of clean and safe bomb is dangerous nonsense. And even the old and comparatively unclouded situation was unsatisfactory since the view that no genetic harm occurs until an undefined level of radio activity is reached is acknowledged by scientists themselves to be no more than guess work. In such circumstances, it is not only bad reasoning but the height of irresponsibility to lead the general public to believe that we are safe from radiation risks.

To the intelligent lay man, the one crying need of the hour was an unbiased account of what the scientists themselves think and discuss among themselves. Instead, he is daily served by the press with casual pontifications off the scientific record of interested scientists stepping into planes on their way to the test spots. One cannot blame the press for it, for, it may legitimately retort that a lucid and untechnical account of the exact state of scientific knowledge on the subject is beyond its technical competence and also its normal round of duties. (On the latter assertion, one may perhaps demur). But the lack is there—or rather was there until it has made good by the Government of India publication* which I should like to commend to my readers. It may be recalled that, some two years ago, Bertrand Russell suggested that a committee of Scientists belonging to the uncommitted nations should examine all the available data on the subject of nuclear explosions and come to definite findings regarding their consequences to the human race. He had even suggested that India should take the initiative in the enterprise. It was sensible advice; but, even if we were less modest than we are, it was impossible of acceptance in the prevailing atmosphere. Mr Nehru therefore did the next best thing. He asked his scientific advisers in the Defence Services and the Atomic Energy Commission to collate all available data and present them in a form that would be easily intelligible to the ordinary man. This task has been excellently discharged by this publication.

*Nuclear Explosions and Their Effects: Published by the Publication Division, Ministry of Information and Broadcasting, Government of India. Price Rs 3.50.

World Overseas

US Notes

American businessmen are paying ever greater attention to foreign markets these days, as United States exports and private investments abroad continue to grow. A report this week by the United States Census Bureau show that US exports amounted to more than 9,100 million dollars in the first five months of 1957, which is close to twentyone per cent above the comparable 1956 figure.

For 1957 as a whole experts expect United States commercial shipments abroad to be well in excess of the 1956 record of 17,300 million dollars. All in all, United States exports now absorb about eight per cent of the United States production of "movable" goods.

A measure of the importance of export sales is the fact that last year they were larger than the amounts spent in the United States on residential construction, one of the most important industries in the country. Indeed, for many United States companies export sales play a vital role. The tractor industry, construction and mining equipment makers for instance, exports one fourth of their production.

The rise in United States exports is largely attributable, of course, to the expansion of economic ac-

tivity throughout the world. According to a recent United Nations report, the productive capacity of the free nations now is twice what it was before World War II.

Significantly, capital goods, in great demand for industrialization projects abroad, have played an important part in the United States export total. At the same time, there has been increasing emphasis on American investment in manufacturing plants abroad. The outflow of United States capital into foreign plants last years exceeded 1,600 million dollars.

The total stake of American companies in foreign facilities probably amounts to more than 30,000 million dollars. Some experts estimate that by the end of 1957 these investments will reach the 32,000 million dollar mark, that the plants affected will be producing goods valued at 40,000 million dollars a year. These investments are bringing not only much needed capital, but American technology and know-how to countries desirous of stepping up their economic development.

In many nations seeking the help of foreign investments, governments favour companies willing to set up local plants. This is done through a variety of devices, including tax and exchange concessions.

I shall not try to summarise for you the conclusions reached by the experts who have produced this book. But one or two points they make seem worth repeating. The book deals with explosions of nuclear and thermo nuclear weapons not only under strictly controlled conditions as during the tests, but also when the nightmare war may

break out. It gives a simple account of the difference between the fission bomb (like the atom bomb) and the fusion bomb (like the hydrogen bomb) which requires a high temperature (in the range of millions of degrees of centigrade) for being set off. This is believed to be normally done by an atom bomb. Curiously, the radiological hazards

of which we have been hearing so much in the recent past are the consequence of the fission process, which has been with us since the days of atom bomb. (The "clean bomb" presumably will be a hydrogen bomb with some other device than an atom bomb for "detonation" since an "all-fusion bomb" produces little radiation).

COMPTOMETER — the world's fastest adding-calculating machine — does the work of more than four people!

Speed—floating touch for quick and easy operation.
Accuracy—Three-way control! Through sight, sound and touch.

GROWING ORGANISATIONS NEED COMPTOMETERS for fast, accurate, efficient accounting

TODAY, every business organisation is growing. Fast, accurate, low-cost accounting is essential to make your business move faster. Experience of progressive establishments throughout the world has proved that Comptometer is the world's fastest, most accurate, lowest-cost accounting machine. Let us prove this in your office, FREE!

P.N. Ganesan & Sons

Sole concessionaires in India for world famous Comptometer, Comptograph, Walther Calculator and Comptometer Dictation Machines hitherto marketed in India by Felt & Tarrant (India) Company

COMPLETE COMPTOMETER SERVICE

P. N. Ganesan & Sons who have taken over the Felt & Tarrant Offices in India are equipped to offer you the same quick, efficient repair and maintenance service as before. You'll get a spare machine when yours is taken for repairs. They'll train your staff free of charge to become skilled Comptometer operators. Every Comptometer you buy carries with it a guarantee, against any manufacturing defect, for one year. Write today to any of our following offices for demonstration:

MADRAS: No. 12/13 Angappa Naick St., P. O. Box No. 1257
BOMBAY: Kitab Mahal, Hornby Road P. O. Box No. 356
NEW DELHI: Lala Sriram Building, Connaught Place, P. O. Box No. 49
CALCUTTA: P-35, Royal Exchange Place Extension, P. O. Box No. 2372
KANPUR: 11/209, Sm. Parbati Bagla Road P. O. Box No. 78
SECUNDERABAD: 8062 A, Kingsway P. O. Box No. 27

COMPTOGRAPH

It records as it calculates. It's the fastest machine in its class, and yet so moderately priced. Anybody can work it.

COMPTOMETER DICTATION MACHINE

Dictate, listen, transcribe, erase and reuse...it enables you to get through your correspondence in half the time.

WALTHER CALCULATOR

Multi-purpose calculator that can calculate anything...percentages, cubic contents, area, volumes!

On the subject of the risks to the present and future of mankind from radiation released by nuclear explosions, the book gives a good deal of factual material from various sources. Consequent on an explosion resulting in fission, there may be a 'local fallout' and a 'global fallout.' The local fallout will be the result of a ground burst when fission particles held in the troposphere (the region below the stratosphere) slowly descend to the earth within a period ranging from a few hours to a few days. In a megaton explosion (one with an explosive energy of a million tons of TNT), the area of serious danger may be as high as 100,000 square miles. But this is a concomitant of ground burst which will be the characteristic of serious nuclear war. In controlled conditions of testing, this danger may be minimised.

The global fallout is another matter altogether. That is the deposit of radio active particles in an extremely fine state in the stratosphere. These may linger there for as long as ten years and descend in a slow uniform rate over the entire surface of the globe. The consensus of scientific opinion is that nothing practical or effective can be done about this global fallout increasing the radiation of the atmosphere, and that is why these tests cause such widespread concern among the thoughtful.

What really are the dangers from these radioactive materials? A radioactive substance is one whose atoms send out certain rays, which have been named alpha, beta and gamma rays. Of these, the first two are merely electrically charged particles whereas the gamma rays are waves of energy. One of the effects of this discharge of particles or waves is to change the atoms in their path into ions, which mean electrically charged atoms (normally, atoms are electrically neutral). This process is called ionisation. Since an electrically charged atom or "ion" is an "abnormal thing", there is bound to be change in the structure of a substance whose atom has been ionised. The first hazard of radiation is, therefore, the change in the structure of human cells, which may die or change in structure. The latter is called mutation and, according to geneticists, the majority of mutations are harmful. A rough and conservative estimate is that the global fallout originating in an explosion of a megaton bomb may cause about a thousand deaths over many generations. And, as for the apparently less serious consequences of these mutations, it has been estimated that those now exposed to global fallout will produce about 2000 million children about 80,000 of whom are likely to be born with some gross mental or physical defects. The genetic legacy of these defective people to a succeeding generation is too appalling to contemplate.

So far about dangers from external radiation which are caused mainly by gamma rays whose penetrative power is very great. But, if (Continued on page 70)

A Picture of Rural Credit

OVER five years have passed since the Committee of Direction of the All-India Rural Credit Survey appointed by the Reserve Bank of India carried out its investigations. Some of the data covered by the Survey related to the period between November, 1951 and July, 1952; others related to the financial year, 1950-51. Since then, the extension of rural credit facilities has taken a more systematic turn, with the Reserve Bank figuring in a more effective role.

On the recommendations of the Committee, the Imperial Bank was converted into the State Bank of India, primarily with a view to enable the organisation to spread itself increasingly in the rural areas and be of service to the cultivator in need. This process has only started. The Reserve Bank will also be shortly abdicating its rural credit functions in favour of the State Bank.

In the Second Plan, there is provision for substantially enlarged dimensions of State-sponsored credit for the peasantry. In the course of a few years, the entire picture of rural credit may undergo a radical change and willy nilly the State and the State-initiated organisations may become the most conspicuous media for the supply of finance.

Just now, however, though the proportions of rural credit emanating from different sources might have undergone some changes, the broad structure described by the All-India Rural Credit Survey should be held to be generally valid, particularly, for purposes of study and understanding of the general problems involved. The progress achieved in the subsequent half a decade in the direction of replacement of the traditional sources of credit is too insufficient to obscure the relative importance of the different sources as obtaining at the time of the Survey.

Part II of Volume 1 of the Survey Report, which has now been released cannot, therefore, be far from up to date in its findings. For practical purposes, the time lag can be ignored. Here is the picture presented by the Survey of the structure and operations of the various agencies of credit, based primarily on data covering the year, 1950-51.

The most outstanding fact is the relatively negligible role played by the Government and the co-operatives. Only 3.3 per cent of the total credit to cultivators, covered by the sample survey came from the Government; the

cooperatives gave less, at 3.1 per cent; land-lords and traders contributed 1.5 per cent and 5.5 per cent each. As much as 15.2 per cent of the credit obtained by cultivators represented borrowings from relatives. Higher up in the order, come the agriculturists themselves, advancing 24.9 per cent; the professional money-lenders top, with a quota of 44.8 per cent of the total borrowings by the cultivators.

Another significant fact is the heavy weightage which the big cultivators are found to enjoy in the matter of the supply of Government finance. It will be recalled that a recent survey of the Community Projects and National Extension Blocks by the Programme Evaluation Committee discovered the same short-coming, relating to the credit position as obtaining in the Community Development areas. The Committee has expressed its concern over the weightage enjoyed by the larger and more prosperous cultivators; the phenomenon appeared to be socially dangerous to the Committee.

Anyway, this feature constricts credit supply for rural areas, irrespective of the nature of the overall organisation. It is found that larger cultivators who constitute 30 per cent of the total number have accounted for nearly 60 per cent of the borrowings from Government. Even within this category, the big cultivators forming only 10 per cent of the total have taken 35 per cent of the total borrowings.

In striking contrast is the share of the small cultivators, who form 30 per cent; the latter have taken 10 per cent of the total borrowings from the Government. Another interesting revelation is that the proportion of families who have gone in for Government credit to the total number of families interviewed is also generally higher in the case of the large and big cultivators. It goes without saying that the average size of loans is also substantially bigger for this group than for those down the economic ladder.

The Survey dwells on details, most of which are not unfamiliar to those who are acquainted with the way in which the Government machinery moves in the matter of granting loans. Invariably there is great delay between the date of application and the date of disbursement of loan. This is not wholly the fault of the Government. Many applications do not stick to form; or they fail to give

sufficient details; or show no adequate security. Old loanes who have defaulted and who apply afresh contribute a good proportion of those who have received negative replies from the Government. A fairly good percentage of loan applications are rejected for no other reason than the drying up of the Treasury quota of loan for the season concerned.

These facts sum up the explanation for the larger cultivators walking away with the bulk of Government credits. The small ones will often lack the necessary security; form filling is more difficult, delay between application and disposal more intolerable and what the Committee probably fails to take note of, they are often unable to exert the necessary pressure on the authorities, which the large cultivators invariably succeed in doing.

Many of these circumstances hold good in the matter of borrowings from the cooperatives as well. Here too, the big cultivators have the lion's share, at an average of Rs 21 per family as against Rs 2 in the case of small cultivators. In almost all the Districts, the amount borrowed by cultivators represent not more than one-tenth of their total borrowings. Debts incurred for non-agricultural purposes, for consumption purposes, as also for repayment of old debts show wide variations between District and District and between States.

The Committee finds that the cooperatives in several States are not able to keep track of the money taken by the cultivators and see that it is spent for the purpose mentioned. A cross check reveals that in many Districts, the purpose mentioned in a loan application is fictitious and the borrowed funds are otherwise utilised. All the same, it cannot be overlooked that generally there is greater restraint in the utilisation of funds borrowed from Government and cooperative societies than from other agencies.

This will be a further reason for the village money-lender, landlord and the cultivator claiming a much larger share of the credit supply than the Government or the cooperatives. Though the village money-lender who is also often a cultivator, charges a comparatively higher rate of interest, the conditions he imposes and the formalities prescribed are less stiff. It is also remarkable that in spite of the fact that urban money lenders stipulating a definite period for repayment of loans and defaults are frequent, legal proceedings for the recovery of loans are not found necessary except in a small proportion of cases.

For the small cultivator, the land-lord is an important credit agency. In certain Districts, 70 per cent of the amount borrowed from the land-lord is obtained free of interest; personal security is the general rule in many Districts. At the other extreme, rates of interest exceeding 25 per cent per annum are also prevalent. Likewise in a large majority of Districts, the bulk of the debt owed to agriculturist money-lenders is without any security.

Borrowings from traders and commission agents, generally higher in the case of larger cultivators, is frequently found to be free of interest, though about 50 per cent carries rates of interests above 10 per cent. Borrowings in anticipation of sale of produce is widely prevalent. In most Districts, the price of the produce is settled at the time of delivery. Borrowings from traders and commission agents are also more often than not unsecured.

The facts narrated above testify to conditions in which the individual money-lender seems destined to play a vital role for some time to come in the future. For many cultivators, money- (Continued on page 62)

SOUTH EASTERN RLY TENDERS

The General Manager invites tenders for supply of the following items:—

Tender No. GM2/57/PD/9-CS(57) for supply of (1) Shroff cubicles with sliding door (made of expanded metal)—21 Nos., (2) Shroff Table C.P.T.W.—21 Nos., (3) Shroff chair C.P.T.W.—42 Nos., and (4) Cash Trays (Steel) 7" deep—42 Nos. as per drawings and samples to be seen in the office of the Chief Cashier, S. E. Rly., Garden Reach, Calcutta.

Tender forms are obtainable from the Controller of Stores, Garden Reach, South Eastern Railway, Calcutta-23 (P/D Section) on remittance of Rs 5/- per copy per tender (not refundable) by Money Order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, South Eastern Rly., Garden Reach, Calcutta-23 by local firms. Earnest money against the tender is Rs 1,000/-. Closing date of the tender is 24-7-57 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid income tax clearance certificate along with the earnest money receipt with the tender.

Bombay Review

Bombay Budget

The Bombay State's Budget for 1957-58 presented to the State Legislative Assembly by the State Finance Minister Dr Jivraj Mehta, reveals a deficit of Rs 3.17 crores. Against a revenue expenditure of Rs 112.61 crores, the revenue receipts amount to only Rs 109.44 crores. But no proposals for additional taxation, to cover the gap, have been made, pending the final recommendations of the Finance Commission. Evidently the Finance Minister is banking on at least the partial acceptance by the Finance Commission of the request made by the Bombay Government, for an annual grant of Rs 3.25 crores to meet the deficit of some of the component units of the State, the growing Plan expenditure of all the areas of the new State and the increased expenditure arising out of problems of integration. Hope is also placed on a higher yield from share in new central taxes. Dr Mehta also recalled the recommendation of the National Development Council to the effect that the State Governments should be assigned two thirds of their net collections as State's shares for financing the State Plans instead of the existing formula whereby each State was to get one-fourth of the average annual net collections for the three years 1953-54 to 1955-56 plus 50 per cent of the additional collections above this average.

The Budget provides for a capital expenditure of Rs 46.51 crores and this includes an amount of Rs 17.1 crores for irrigation, Rs 6.86 crores for the Koyna Project and Rs 11.95 crores for roads and buildings. The capital expenditure would be financed from the Government of India grants and loans, withdrawals from earmarked funds, State's share in small savings and by open market borrowing in consultation with the Government of India.

A considerable part of the budget speech was devoted to a survey of the progress of the various development projects in the Second Five-Year Plan.

The Second Plan outlay for the year 1957-58 amounts to Rs 73.42 crores of which agriculture and irrigation account for nearly half, while an aggregate of over one-fifth of the outlay was earmarked for industry and mining and for development of power facilities.

The agricultural schemes include the well known methods of intensive cultivation such as multiplication and distribution of improved seeds, distribution of manures and fertilizers, minor irrigation etc. The additional production of food grains aimed at by the end of the Second Plan is 15 lakhs tons.

A proper price policy with regard to foodgrains has also been kept in

view and in the context of the recent upward trend in prices of foodgrains entailed the introduction of a system of distribution of overseas rice and wheat through fair price shops. This was coupled with a ban on the movement of wheat in or out of Greater Bombay except under permit.

Referring to irrigation, Dr Mehta, pointed to the leeway that has been made up. The percentage of total irrigated area to the total cultivated areas in the former Bombay State worked out to 5.6 per cent as compared to over 17 per cent at the end of the First Plan period for India as a whole. Therefore it was pointed out that greater emphasis has been laid on irrigation in the Second Plan. As many as 35 major and medium projects new as well as those in progress had been included in the Second Plan of the former Bombay State excluding Karnataka areas. And a provision of about Rs 57.44 crores had been made in the Second Plan for the completion of the projects carried over from the First Plan as well as for new projects in old Bombay State areas. In addition the plan provides for an amount of Rs 21.28 crores for irrigation works in the other component parts of the State.

The Community Development Programme claims an amount of Rs 7.64 crores. Areas not covered by Community Development Programmes are served by local development works and towards this the Government have provided a sum of Rs 71.16 lakhs during the current year.

In the field of industries the establishment of an estate for heavy and basic industries like heavy chemicals, dye-stuffs etc at Atale near Kalyan is under the consideration of the Government. Such estates for small industries are also proposed to be established at a few important places in the State. The Finance Minister also briefly reviewed the progress made in the field of education.

* Housing Corporation

A new approach to the housing programme in the country is indicated in the proposal to set up a semi-autonomous high powered national housing corporation to which will be entrusted the responsibility to integrate finance and undertake all housing projects coming under the Second Plan.

The financial stringency of State Governments, and their inability to spare substantial sums, together with an awareness of the urgent problems of the lower income groups, seems to have been the factors, that have made for a change in the attitude of the Government of India in its housing

programme. Further the loans given to the middle income group and the subsidised housing scheme in the first Plan period proved that the advantage in catering to small sector was limited. The return by way of interest was found to be meagre. Besides there were uncovered risks from natural factors such as earthquakes, fires and other calamities.

By the establishment of the proposed corporation it is expected to be possible to canalize all state contributions and central allocations. This would help, to broaden the base of the programme and draw the maximum benefits from the resources available. Further its close association with the Life Insurance Corporation is expected to result in fulfilling largely the requirements of the proportionately more neglected sections of the community.

The changes in the housing pro-

gramme is also reported to imply some modifications with regard to allocations of the outlay between different sectors, emphasis being laid on the needs of lower income groups.

It is gratifying to note that at long last Authority has determined to tackle the housing problem in right earnest. But before setting up the proposed housing corporation, Government may with profit consider a valuable suggestion made by Mr M. V. Donde, Mayor of Bombay, at the ninth Greater Bombay Co-operative Conference. Mr Donde said that the Central Government should convene a national conference of various political parties, tenants' bodies and co-operative organisations to devise ways and means of tackling the housing problem in the major cities or an emergency footing.

GATEWAY MARKETS

Non-Ferrous Metal Markets React to Import Curbs

THE abolition of Open General Licences, announced by the Government of India, has stunned the Non-Ferrous Metals market since most of the metals were imported under the system for the past several periods. In addition to this blow, the trade is reported to have been seriously perturbed by the Government's decision to impose controls on metals under the Essential Commodities Act, which require the importers to submit monthly returns showing opening stocks and their value, sales during the month and the closing stocks.

In this connection, it might be recalled that the Bombay Metal Exchange drew the attention of the Government to the present critical situation and urged that the OGL should be extended. The Exchange suggested, in support of its plea, for free imports, as the country was largely dependent on foreign supplies. It also pointed out that supplies were contracted for several months ahead of requirements to secure a regular inflow from the national markets and that it was always beyond the capacity of the trade to stockpile these metals in view of the huge capital investment it would involve.

It is a known fact that this country is largely dependent on foreign supplies, the estimated annual requirements of Copper being 35,000 tons; Zinc 35,000 tons; Lead 20,000 tons and Tin 3,000 tons as against the domestic production of 7,500 tons; 5,000 tons; 4,000 tons and nil respectively. The Metal Exchange

suggested that the Government should allow the opening of letters of credit against July shipments on an ad hoc basis without delay in order to avert the discontinuance of supplies and the resulting adverse repercussions on industrial activity in the country, particularly in view of the present difficulties in obtaining shipping space.

According to the suggestions made by the Bombay Metal Exchange, the trade can import one year's requirements if the OGL is extended by one month and that any subsequent ban on imports will have no effect. The Exchange adds that, in view of the importance of non-ferrous metals as strategic industrial raw materials and the peculiar characteristics of the trade, importers do not lend themselves to any system of licensing or restrictions. However, considering the present difficult exchange situation, the Government can exercise sufficient control over arrivals and distribution of these metals.

Since the beginning of last year, metal prices have fallen substantially in international markets. Copper has come down from £437 to £218 per ton on June 30. Zinc has recorded a fall of £30 to £78; Lead from £126 to £91½ and Tin from £808 to £761. To meet the increasing industrial demands this year, imports have to increase by about 25 per cent over 1956. Shipping difficulties have affected import of copper from Rhodesia; Zinc from Europe; Lead from Burma and

World of Cotton

Crop Prospects

ALTHOUGH it is too early to estimate, Cotton-growers envisage bright prospects for a higher and better cotton crop in the 1957-58 season. With the completion of many water works in various States, the irrigated area under cotton is expected to go up by about 50,000 acres, while the intensive cultivation scheme has already started paying dividends. The maintenance of "floods" and "ceilings" has also induced many growers to switch over from foodgrains to cotton.

The first showers of the monsoon have enabled cotton-growers to start sowing operations in many areas. As a matter of fact, sowings have commenced in Gujarat, Khan-desh and Vidharbha and almost half the work is reported to have been completed. Weather reports have so far been favourable; but it is felt that the marketing season will be delayed by about three weeks on account of late sowing. This is reflected in a rise of Rs 7 per candy in the newly-started Jharilla March contract.

Thanks to the distribution of good variety seed by Government agencies, the production of longer-staple varieties is likely to go up although the total area under cotton is not expected to show a marked rise next season. The output is likely to exceed 50 lakh bales against about 47 lakh bales of this season. The production of superior long-staple varieties (1" and above) is expected to be 3.25 lakh bales; of long-staple (7/8" to 1") 15 lakh bales; of superior medium-staple (13/16" and 27/32") 15 lakh bales and of medium and short-staple varieties about 16 lakh bales. Attempts are being made to grow superior-stapled Andrews (sea island) variety in Kerala, Mysore and Assam on a commercial scale, while improved varieties have already been introduced in the newly-irrigated areas. While the indigenous crop is expected in the neighbourhood of 50 lakh bales, the carry-over with the mills and trade, on September 1, is estimated at 16.3 lakh bales.

Considering that the monthly mill consumption is about 4 lakh bales and that the new crop will not be available for consumption for at least two months of the new season, a tight supply position is feared in the beginning of the next season. Many mills are, however, inclined to defer their purchases, mainly due to tight money conditions and less conditions in the cloth market.

With the result, the long-awaited details of the import of 1.6 lakh bales of American cotton have gone almost unnoticed. The anxiety to cover Egyptian cotton has also receded despite current attractive prices. It is pointed out that the current spot rates of American cotton in Bombay are lower by about Rs 100 per candy than the new crop prices and hence the reluctance on the part of mills and importers to put through fresh business.

FUTURES MARKET:

The market for cotton futures seemed to have regained confidence following the assurance given by the Forward Markets Commission that it would not interfere in the working of the cotton market in "normal times". Some of the leading speculative magnates of the stock market turned their attention to the cotton market and made purchases on a large scale. This, together with the reports of delay in the new crop by a few weeks, unnerved the bears who rushed to cover their sales with the sequel that the rates forged ahead vigorously. In the absence of any promising operation at high levels, the rates closed at the best levels for the week. Sentiment was also

aided by the strong statistical position. After opening on a cheerful note around Rs 706, ICC Jharilla March advanced gradually to Rs 721.50, to finish at Rs 720.

SPOT MARKET:

The Spot section ruled steady with mills buying Dhollera, Jaydhar and Jharilla varieties. With the advent of the monsoon, however, the demand appeared to have slightly declined; and the general outlook had been one of "wait and watch". Prices, however, remained unchanged.

Meanwhile, the export trade had approached the Government of India with a plea to extend the validity of the export licences expiring on June 30. It appeared that about 30,000 bales were likely to remain unshipped on account of transport and other difficulties. Japanese importers found it difficult to open letters of credit for Indian cotton owing to shortage of sterling. It was reported that Japan had already taken the question of extending the validity of export licences at the Government level.

In the foreign cotton section, demand was reported for new crop American cotton. Some spot lots of Sudanese also changed hands. Earlier interest, witnessed in Egyptian cotton, however, appears to have receded even though the rate has declined to 53d per pound—about 2d below the level demanded by the Indian mills earlier. Mills have bought only 60 per cent of the contracted quantity so far and have pressed for a further reduction in prices.

STATISTICS:

Exports of cotton by rail from 1st September 1956 to 27th June 1957 were 360,038 bales. Estimated mill consumption in Bombay during the same period was 11.03 lakh bales as against 10.38 lakh bales in the corresponding period of the previous year. Stocks of raw cotton, held by exporters, dealers and mills in Bombay, as on the 27th June 1957, were 6.27 lakh bales as compared to 6.85 lakh bales on the corresponding date last year.

NEW YORK COTTON MARKET:

The New York cotton futures market was virtually dominated by the weather news. Fears of damage to the growing crop due to hurricane which later moved inland to near the Texas-Louisiana border stimulated renewed buying. The old July position, however, showed only a small movement although occasionally supported by the trade. Middling Spot was quoted at 35.50 cents per pound.

LIVERPOOL COTTON MARKET:

Trading was more active in the Liverpool cotton market with distant touching the highest levels of the recent upturn on some commission house buying. Near-month, however, eased under local realising, while new crops declined and both the contracts closed steady. The Sudan contract was quiet.

CLOTH AND PIECEGOODS:

Steady conditions prevailed in the Bombay Piecegoods market. Although offtake was not brisk, prices remained unchanged. As the supply position in the consuming centres is reported to be tight, replacement buying is expected to materialise shortly. Moreover, mills have continued to receive enquiries for forward delivery and some mills have booked business for July and August, although this business is confined to fine and super-fine qualities only. Stocks with the trade are also said to be steadily declining.

Conditions on the export front have remained more or less unchanged. Shippers are hopeful of concluding larger business with Burma. Only moderate enquiries are being received from East Africa and Sudan.

Meanwhile, it is learnt, that efforts are being made for the early installation of automatic looms allotted to the industry for the purpose of manufacturing cloth for export. It is hoped that measures will be taken to instal these looms as early as possible in a bid to boost the country's cotton textile exports.

Second Plan's Progress

OVER the week end was released here the official evaluation of the Second Plan's first year's performance. This review has confirmed earlier unofficial guesses that there have been significant shortfalls, both in physical and financial terms, in anticipated targets of achievements. But this does not mean that there has been no progress at all as compared to previous performance. The mode of describing this comparative progress would perhaps depend upon your basic attitude to the Second Plan. If you are a member of the Planning Commission, you would describe it, as this review has done, as "substantial achievements in some fields and a modest advance on the whole, despite not too favourable general conditions". If, on the other hand, you believe that Government have taken on too ambitious a job in the Second Plan, you would probably find in the results of the first year's working a confirmation of difficulties that arise when you bite more than you can chew. "The not too favourable conditions" would be put down by you to be inescapable in the nature of the Plan, though, of course, the Suez Crisis can hardly be so related. The utmost that you would concede would be that the progress was uneven and in significant respects, especially in the matter of Agricultural production, stagnant. You may also say that in terms of the price paid, the progress was meagre.

The report is only tentative and assessment of that part of the Plan which concerns itself with 'social services' like education, health, housing etc. is postponed to a later occasion when fuller data from the States will have been received. The report that is just issued concerns itself broadly with the productive aspect of the Plan.

Discussing the targets and performance in terms of financial outlay, the report notes that there was a shortfall of Rs 69 crores. As against the budgeted outlay of Rs 830 crores by the Centre and the States, the revised estimate of expenditure is only Rs 761 crores (the data on the actuals are not yet available). The shortfall is accounted for principally under the heads of social service (Rs 20 crores) agriculture and community development (Rs 15 crores) and transport and communication (Rs 14 crores) and industry and mining (Rs 10 crores). These shortfalls, especially on that in industry and mining and irrigation projects and transport were principally due to the Suez crisis, difficulties over foreign exchange and scarcity of

essential commodities like steel and cement.

Against this outlay of Rs 761 crores, the pattern of financing was as follows: (a) Domestic budgetary resources, Rs 427 crores, (b) external assistance, Rs 63 crores. These two add up to Rs 490 crores leaving a gap in resources of Rs 271 crores. Of the domestic resources, the Central Government found Rs 326.7 crores and the States Rs 100.5 crores. The break up of this Rs 326.2 crores is as follows: (a) surplus from current revenue Rs 102 crores of which Rs 53 crores were from additional taxes; (b) Railways' contribution for financing their part of the Plan, Rs 42 crores; (c) net market borrowings Rs 78.1 crores; (d) Centre's share of small savings, Rs 45.3 crores; (e) other heads, Rs 42 crores.

The report says that "the... significant advances in certain directions and a modest advance on the whole" were to be seen both in the base and superstructure of the economy. On the production side, taking Agriculture, first, it is noticed that it presents an uneven picture. Expectations were that 1956-57 would see an increase in production potential of food grains of the order of 2.5 million tons. Actually, however, it is expected to be only of the order of 1.4 million tons. (Total food production in 1956-57 is expected to be 66.2 million tons). The increase is principally accounted by rice and wheat (especially rice, with its increase of 1.3 million tons) which has more than offset the actual fall in production in pulses by about 0.2 million tons. Commercial crops have done better. Oilseeds show an increase of 0.23 million tons over the previous year's actuals of 5.66 million tons. Cotton production is estimated at 48 lakh bales against 40 lakhs of the preceding year. Sugarcane and jute also show increases.

As already indicated, all these increases do not add up to even half of what the Planning Commission had fixed as the target, and in view of the dangers of inflation even the original targets of the Planning Commission need revision. As in other contexts, the need for maximum utilisation of existing facilities and intensive drive to increase agricultural production has to be emphasised.

As regards organised industries, there were significant increases in production in almost all. (The principal exceptions are Aluminium and Vanaspathi). The revised index of industrial production for the year 1956 was 132.7 as compared

to 122.1 of 1955. Manufacture of radio receivers tops the list with an increase of 86 per cent with bicycles, automobiles, electric motors, transformers, registering increases of percentages ranging from 33 to 60. Eight other industries including cement and sugar and diesel engines registered increased production varying from 10 to 25 per cent. Steel has shown an increase of 4 per cent at 1.31 million tons of finished steel. Mill made cotton cloth showed an increase of about 4 per cent at 5281 million yards. Coal production increased in 1956-57 by about 1.2 million tons from 38.2 million tons. The targeted increase was, however, 2 million tons.

Handloom production from mill yarn increased to 1541 million yards, an increase of 68 million yards. The planned increase for the five year period is, however, 700 million yards. Switchover to power looms has also been unsatisfactory since sanction has been accorded to only about half of the proposed 1,50,000 power looms. Khadi has not done as well as planned for, though, it has shown an increase over the previous year's performance. The production in 1956-57 was of 34.5 million square yards against the previous year's 25.4 million square yards—an increase of about 10 million square yards. (The controversial ambar charka alone was planned to produce an extra 300 million yards during the Plan period). As regards the introduction of this charka itself, progress has been below expectation—a total of 60,000 having been put into use at the end of the year against an expected 75,000.

The Railways' progress along planned lines was reviewed by the Minister for Railways during the budget session and the Planning Commission's report is largely a repetition of the data then given. As indicated by the Railway Minister, there has been in this part of the Plan, as in the others, shortfalls in physical and financial terms. The railways' difficulties were particularly keen since shortage and difficulties over foreign exchange are a more serious obstacle to their plans than perhaps to any other department.

Progress in irrigation projects continued to be steady. An additional 1.5 million acres is estimated to have been irrigated in 1956-57, from large and medium works and another 1.8 million acres through the construction of minor irrigation works. About 90 large and medium projects are expected to be completed during the year. But the most important landmark in this particular field was the commissioning of the Hirakud project

which has as its irrigational beneficiaries a total of 1,57,000 acres of land in Orissa. Tubewells continued to be pressed into service for irrigational purposes but the utilisation has been uneven owing to local disputes over payment by ryots for their use.

As regards power, progress follows the same pattern as in others. Against a target of increase of 308,500 kilowatts of installed capacity for 1956-57 the actual increase was about 260,000 kilowatts. The installed capacity at the end of 1956-57 was 3.66 million kilowatts. Rural electrification (which is the surest way to activate the village economy) is also reported to have made some progress.

Besides these immediately measurable performances, the report discusses certain planned activities during the year which are of a long term nature. Training of personnel, for instance, has gone on apace during the year. The recommendations of the Manpower Committee and the Engineering personnel committee have been taken in hand for implementation and a beginning has been made both at the Centre and the States for expansion of training facilities. Of probably immeasurable significance to the not-so-near future, is the installation of the atomic reactor of the swimming pool type in the country during the year. Programmes in social and economic research, an inescapable adjunct of planned economy—has also made good progress. Fifty two out of the 69 schemes of such research schemes were completed by the end of 1956-57. It would help the general public appreciate the precise value of the research done if the results are made available to the public. The progress in this regard is disappointing. The report says that only two of the fifty two reports have been published and eight are in press. Obviously, in a rapidly changing economic climate, there is hardly any point in letting the public know of the results of a particular study years after it has been conducted. And its timely publication may help a livelier public appreciation of particular policies of Government and planners.

* GATEWAY GOSSIP (Continued from page 59)

lending is a lucrative side-business, probably without which he may not be able to make both ends meet. The fact that it is the large rather than the small cultivator who goes in for borrowings from traders and commission agents should compel restraint on any general conclusion that the borrowers could be fleeced indiscriminately.

North Indian Notes

Assam Financial Corporation

That the State Financial Corporations play a vital role in the planned progress of the regions concerned is prominently brought out in the report and accounts of the Assam Financial Corporation for the year ended 31st March 1957. It is common knowledge that cheap electricity is an essential prerequisite for the rapid growth of small and medium scale industries, to whose financial requirements the State Financial Corporation is intended to cater. In Assam the per capita consumption of electricity is the lowest in the country as the State is very poor in power supply. As is to be expected, this lacuna has been the first to receive attention at the hands of the Corporation and as a consequence a large number of electric supply companies have received financial accommodation. Out of a total loan of Rs 42.42 lakhs disbursed upto 31st March 1957, as much as Rs 21.62 lakhs have been granted to electric supply companies. The Directors point out in their report that as there is no immediate prospect of the State undertaking any river valley project of a sizable magnitude, except the Umrut Project, thermal power supply remains the main source of power for industrial purposes in the State.

That the next group which gets a sizable amount is manufacture of Black tea, with the loans amounting to Rs 10.41 lakhs. The Corporation has taken active interest in the affairs of the tea industry as the State is intimately connected with its fortunes. It has been recognised that unless the industry is rationalised, it will not be able to produce quality teas at a reasonable cost. Large finance is necessary, especially in the case of Indian owned tea gardens, to rationalise their process of manufacture, to extend their plantations and to meet the requisite working expenses. Though the Corporation, since its inception, has been anxious to render all possible assistance in this regard, practical difficulties have stood in the way of meeting all the requirements of the industry with the result that the Corporation has found that it will be beyond its limited resources to undertake tea finance both for block and working capital on a large scale.

Apart from these two major groups, the Corporation has rendered financial assistance to a variety of industries, viz., sawmills, plywood factories, furniture making, manufacture of steel goods and tea garden implements, brick kiln, refectory, flour mill etc. The report points out that though there is considerable scope for setting up new small and medium scale industries, there are certain factors militating against the speedy industrialisation of the State. Paucity

of finance, transport bottleneck, paucity of qualified and trained technical personnel and the difficulty of obtaining controlled commodities are some of the limiting factors.

A rise in income from interest earned on loans and judicious investment of surplus funds have enabled the Corporation to record an increase in the net profit to Rs 3,67,975 from Rs 2,73,103 made in the previous year. The total amount disbursed upto the end of last year was Rs 26,41,605. During the year under review a further sum of Rs 16,00,393 was disbursed. The aggregate of loans sanctioned upto 31st March 1957 stood at Rs 61,15,000. The total commitments have now risen to Rs 71,15,000 as a further amount of Rs 10 lakhs has been sanctioned to a mining concern.

* Improvement of Livestock

That there are tremendous possibilities in our country for increasing national wealth through the development of livestock has been brought into focus at the ECAFE meeting on Small Scale Industries held in Madras last week. Mr Ernest Gergely, Leather Consultant to the organisation, pointed out that though Asian countries were remarkably well endowed with livestock, they were not deriving com-

parable benefit. In the United Kingdom and the United States, the value of all cattle products was 12 times and 8 times more than in Asian countries. Considering the fact that there are more than 270 million heads of cattle, it will be evident that enterprises based on livestock have a bright future in this region. Mr Gergely revealed the interesting fact that when cattle gave high yields of milk and meat, the quality of the leather obtained from them was also high and said that Asian Governments should take active steps to improve the general productivity of their livestock in order that the leather industry could be based on high quality raw material.

It is, therefore gratifying to note that considerable development of livestock had already taken place in India during the past few years. Speaking at the recent meeting of the Animal Husbandry Wing of the Board of Agriculture and Animal Husbandry, Dr M. S. Randhawa said that ambitious schemes had been initiated for the development of sheep and poultry farming and for control of livestock diseases. Mr A. P. Jain, Union Minister for Food and Agriculture who inaugurated the meeting drew attention to the fact that India's animal wealth was only second to agricultural crops and emphasised the need for development of the three principal aspects of animal husbandry—feeding, breeding and disease control.

NORTH INDIAN MARKETS

Sugar Production

ACCORDING to the Indian Sugar Mills Association, Sugar production, during May 1957, was 154,000 tons, bringing the total production, up to May 31, to 19.76 lakh tons. The corresponding figures during the last season were 133,000 tons and 17.86 lakhs tons respectively.

The offtake of sugar from factories, during May, was 1.92 lakh tons as against 1.47 lakh tons during the corresponding period of last season. Total offtake of indigenous sugar, during the seven months of the current season, was 12.27 lakh tons against 9.54 lakh tons during the same period last season. The same period with factories, as on closing stock with factories, as on the 31st May 1957, was 12.70 lakh tons as against 12.41 lakh tons on the same date last year.

The Madras Government has planned for an annual production of 1.40 lakh tons of sugar during the Second Plan period against the State's present capacity of 53,000 tons. Licences have already been granted for the establishment of six additional sugar factories in the

State with a total cane crushing capacity of 5,100 tons a day. Besides, it is proposed to start, during the Second Plan period, three sugar factories with a daily total crushing capacity of about 2,400 tons.

Four factories, now actually functioning in the State, have a total crushing capacity of 4,300 tons per day and produced 53,000 tons of sugar during 1955/56. The planned production of 1.4 lakh tons will meet the entire requirements of the State and leave some margin for export too.

Meanwhile, sugar markets have continued to rule firm although demand is not encouraging from the consuming centres. In the Hapur market, following mill-delivery rates are quoted (per maund):—Meerut Rs 34.25; Simbhauli Rs 34.25; Bijmore Rs 33.50; Amroha Rs 33.62; Daurala Rs 35.12 to Rs 36.12; Mansoorpur Rs 35 and wholesale Rs 34.00 to Rs 36.50.

The Khandasari market has been ruling quietly firm in sympathy

with the crystal section. Production of Khandasari from wet quality gur is still taking place. Prices are moving between Rs 26 and Rs 31 per maund, according to quality.

* Gur

The Gur market in Hapur rules quiet as stocks are put at about 69,000 maunds, which are mostly of wet quality and are not much in demand. Daily arrivals are small at an average of 75 maunds. Rates are quoted at Rs 10.25 to Rs 11.50 per maund, while Kotha dry quality is quoted around Rs 10.25 per maund.

* Foodgrains

Following the formation of Uttar Pradesh as a separate wheat zone from which no exports except under Government permit can be made, Foodgrains markets have been ruling very quiet at Hapur. Wheat prices have recorded a slight fall, to be quoted at Rs 14.37 per maund for dara quality and Rs 16.12 for farm quality. Prices of Rice have also eased slightly. Basmati being quoted at Rs 26 to Rs 29.50 per maund, according to quality.

Despite heavy purchases on behalf of the Uttar Pradesh Government, Gram prices have declined slightly due to easy Punjab advices. Almost the entire quantity purchased by the State Government is brought here by the traders from the Punjab. Jowar and Guwar markets have, however, remained steady, thanks to good ready demand. Pulses are ruling quiet as advance from banks against stocks have been restricted. Outside demand is also slack, which also acts as a depressing factor.

The Delhi grains market also rules quiet. Wheat has recorded a fall of Re 1 per maund on increased arrivals and small offtake. The same is the case with Gram. The market for Rice rules quiet with rates showing a drop of Rs 2 per maund against better supply conditions. Barley rates have, however, slightly improved due to good buying activity. Bajra and Jowar prices remain firm on continued offtake.

In contrast, a steadier undertone has been in evidence in the Bombay grains market, with Cereals and Pulses registering a modest improvement on account of smaller arrivals. Rice has recorded a rise of Rs 2 to Rs 3 per candy, being aided by a substantial decline in the inflow from upcountry centres.

Trading in indigenous Wheat is small in view of the traders' reluctance to deal in unlawful arrivals. The limited arrivals have, therefore, weighed adversely on the market and pushed down the prices by Rs 10 per candy.

The Peninsula

Trayons

THE recent history of industrial development in the Peninsula reveals that there is no dearth of entrepreneurs who do not fight shy of embarking on entirely new projects. It is this characteristic which has won the South an honoured place in the industrial map of the country though from the point of the number of enterprises, the position it occupies may seem rather insignificant. Last week I dealt with the latest manifestation of such pioneering effort. An important point I omitted to mention is that all the four different units, the Tube Products of India Limited, the T. I. Cycles of India Limited, the Universal Carborandum and Ashok Leylands represent new lines which do not have the advantage of being able to draw from the accumulated experience of similar units in the country.

While reading the speech delivered by Mr AR Ramanathan, Chairman of the Travancore Rayons Limited at the Eleventh Annual General Meeting of the company held at Rayonpuram (Kerala State) last week, I was pleasantly reminded of the fact that Trayons is itself a shining example of the pioneering spirit in the South. Long before the possibility of setting up a rayon factory had been considered by others, the entrepreneurs responsible for the Travancore Rayons Ltd had begun to give the idea a concrete shape and at the commencement of the First Five Year Plan, Trayons was the only factory in the entire country producing rayon filament.

The manufacture of rayon filament is a highly complicated process. Apart from the modern machinery required, there is the problem of raw material which is to come entirely from abroad. A much more difficult problem for the nascent industry should have been the competition from imported yarn which was catering to the entire needs of our country in this regard at the time Trayons commenced production. As art silk weaving had developed in a substantial way even before the First Plan, there is a large demand for rayon filament in the country. The Planning Commission had placed the consumption of rayon filament by 1955-56 at 55 million lbs. As against this demand, there was only one unit, The Travancore Rayons, with an installed capacity of 4 million lbs at the beginning of the First Plan. The Commission had calculated that with the completion of the expansion sanctioned during the First Plan period by the industry as a whole, production of rayon filament would

reach the figure of 22 million lbs by 1955-56. The Travancore Rayons was granted a licence to expand its plant to a capacity of 5.6 million lbs. By December 1955 this expansion was completed by Trayons.

Taking into account the growing demand for rayon fabrics and the demand from the rubber tyre industry, the Planning Commission have placed the total demand for Rayon filament at 80 million lbs by 1960-61. As against this, the capacity of the indigenous rayon industry is expected to reach 68.3 million lbs leaving a gap of about 12 million lbs between production capacity and total demand by the end of the present plan. This gap is left uncovered in view of the several major issues pending consideration, such as the dependence of the industry on imported raw materials, the comparatively low priority the industry is given in the schemes of development, etc.

With the completion of the schemes sanctioned, the Travancore Rayons will have an installed capacity of 7.2 million lbs. The company is going full steam with the expansion scheme. The second set of Butterworth rayon spinning machines have already arrived and their erection is being taken up. The company expects to reach a rayon production capacity of 8.6 tons a day by the end of the current year. The Chairman of the company in his speech disclosed that further expansion on the rayon side was also under consideration.

Significant progress continues to be recorded in the company's cellulose film department as well. The production of Heat-sealing moisture proof cellulose film, which is in great demand from tobacco manufacturers to wrap their cigarette packets and tins, was taken up during the past year. It is to be noted that this variety has hitherto been largely manufactured only in technically advanced countries like the UK, Europe and the USA. The company proposes to set up a plant for the manufacture of cellulose adhesive type, a product which has not been manufactured in our country so far.

There is ample evidence in the accounts for the year ended December 1956 to show the efficient manner in which the company is being run. During the year, the full complement of the spinning machines was in operation and there was an increase in production by about 30 per cent over 1955. The company has now wiped off all its past commitments on capital account. A remarkable

feature in its working is that the entire expansion has been financed out of current resources.

The working of the company for the year 1956 has resulted in a net profit of Rs 32.50 lakhs after providing Rs 32.29 lakhs for depreciation. With the balance of Rs 2.64 lakhs brought forward from the previous year, there has been available a sum of Rs 35.14 lakhs for disbursement. Out of this a sum of Rs 20 lakhs has been appropriated for General Reserve. In response to the representation of shareholders, the ordinary dividend has been increased to 10 per cent. This together with the fixed dividend of 5 per cent on preference shares absorbs Rs 12.50 lakhs leaving a balance of Rs 2.64 lakhs to be carried forward to the current year. Had it not been for the slackness in demand for cellulose film in the Second half of the year as a result of which one of the cellulose film plants remained

closed for nearly six months, the profits would have been much higher. Toward the close of the year, the rayon yarn section has also begun to experience difficulties, due to accumulation of stocks. The accumulation has taken place in spite of the fact that the excise duty on rayon yarn imposed with effect from 1st December 1956 is borne by the company. To meet the situation the company has adopted the only alternative open to it, namely, slowing down of production. This procedure which has been adopted from 13th December 1956 is still in force. In the meantime other remedial measures are being taken. As there is a good demand in the country for pigment yarn, popularly known as spun dyed yarn, arrangements are being made to commence production of this variety. It is expected that production of pigment yarn will be taken up in the near future.

BANK LIQUIDITY PROBLEM OF BRITAIN

(Continued from page 52)

tinue to increase it would present a major problem both from the point of view of the management of commercial banks and also of monetary policy.

One of the reasons for the switch from deposit to Treasury Bills is that while Treasury Bill rates are usually only slightly lower than the bank rate, deposit rates are usually 2 per cent below the bank rate. The banks feel that they cannot afford to pay much higher rates owing to their increasing overhead charges. On the other hand, a large and increasing number of depositors see no reason why they should be content with the deposit rates if they can earn much more holdings of Treasury Bills.

Viewed from the angle of monetary policy, the new practice gives rise to contradictory tendencies. On the one hand it tends to keep down the liquid ratio of the banks. If a deposit of say £300,000,000 is converted into Treasury Bills the banks, being unable to maintain their holdings of Treasury Bills owing to the inadequacy of their supply, have to curtail credit to something like a million pounds in order to maintain a liquidity ratio of 30 per cent. So long as the supply of Treasury Bills remains limited this is a factor making for deflation. On the other hand, competitive demand for Treasury Bills by banks and outside buyers tends to lower Bill rates.

At the time of writing the Treasury Bill rate is 3½ per cent which is 1½ per cent below the bank rate. Should the practice of non-banking buying become intensified the

gap between Bill rate and bank rate would widen further. Even though the rates on bank loans are determined by the bank rate and not by Treasury Bill rates, a stage may be reached at which the authorities may feel obliged to adjust the bank rate to the bill rate which would make for inflation. The new practice has not been proceeding long enough to enable the authorities to make up their minds whether the inflationary aspect of the practice tend to exceed its deflationary aspects or vice versa.

A much more important problem is the effect of the self-imposed rules of liquidity ratio on the price of Government stocks. There would of course be a simple solution both to this problem and the problems arising from the new practice of private demand for Treasury Bills. A rule should be established under which Government Loans of every kind or at any rate those with relatively short maturities should be eligible for the purpose of calculating the liquidity ratio. There is no reason why the authorities should not be able to persuade the banks to adopt this rule of their own free will seeing that this is to the interest of every one of them. On the other hand, if this is not done on a voluntary basis the Government should be prepared in the interest of the stability of the gilt edged market to impose regulations on the banks concerning their practice of liquidity ratio. This would be a drastic departure from the informal ways dear to British tradition, but it might become inevitable.

—(Copyright)

South Indian Notes

Nagarjunsagar Project

The foundation stone of the Nagarjunsagar multi-purpose project was laid on December 10, 1955. In just over a year and a half since then, the progress of work in this gigantic project for taming the river Krishna and harnessing it for a variety of planned purposes has been uniformly steady; so much so, that it is one of the major projects which is expected to keep to the original time schedule.

The progress was reviewed at the meeting of the Nagarjunsagar Control Board held last week at Hyderabad under the chairmanship of the Andhra Chief Minister Mr M. Sanjiva Reddi. At the press conference after the meeting Mr S. Chakravarti, the Administrator of the Board gave a few details of the work done and of the cost incurred so far in the execution of this important multi-purpose project.

The central feature of the project is, of course, the construction of the 387 feet high dam across the Krishna near Nandikonda village. According to the Administrator, excavation of the foundation for the dam has been done up to 2100 feet out of 3100 feet and the masonry work will commence by the middle of next month. An idea of the massive build of the dam can be gathered from the fact that the quantity of masonry and of concrete involved in its construction will be 17,34,000 units and 1,84,400 units respectively, a unit being made up of 100 cubic feet of material.

Progress made so far in the other sectors of the project, as mentioned by Mr Chakravarti, has been similarly steady. The high tension line for the supply of power from Machkund to the dam site was extended and energised on May 31 last and the railway line is expected to be ready by October. All the piers for the road bridge across Krishna have been completed and the bridge will soon be opened to traffic. Work of excavation and investigation along the right and the left canal are proceeding apace.

The Administrator also mentioned the fact that 755 units of residential buildings have been constructed at the dam site against the target of 1200 units and more than 1300 houses have been built to accommodate departmental labour.

While the progress of work at Nagarjunsagar has been satisfactory, some anxiety is felt about the cost estimates. It is becoming clear that the final cost of the entire project will be more than originally budgeted for. In this,

Nagarjunsagar will be no exception. There is hardly any multi-purpose project, big or small, for which the planners have not been compelled to revise and raise their original estimates. In fact, the proportionate disparity in the case of Nagarjunsagar has probably been less than in other cases. But, all the same, the increasing demand for fresh allotment of funds is fast becoming a routine habit on the part of the management of big projects in the public sector—a habit which Mr Nehru was constrained to criticise in strong words a few months ago. The Nagarjunsagar Control Board will greatly enhance its already high prestige if it could avoid asking frequently for more funds.

There is one very unusual feature in the Nagarjunsagar multi-purpose project. When the entire project is completed in about seven years time, the Nagarjunsagar konda Valley will be submerged and with the inundation will go for ever an extraordinarily rich field of archaeological research and discovery. The valley had once been a flourishing seat of Buddhist culture and in the palimpsests of its soil lie embedded innumerable objects which are at once a delight and an invaluable source of material for the antiquarian.

The Government are alive to the loss and are doing their best to reduce it to the minimum. The Archaeological Department have been carrying on extensive excavation work for the last year and a half, and are recovering monuments and objects in large numbers.

The Nagarjunsagar Control Board is not directly concerned with or responsible for archaeological excavations or for safe storing and keeping of the recovered records of forgotten history. Nevertheless, with its large resources, if it lends a helping hand in the recovery of the objects before the flood (in a very literal sense of the word) comes and submerges the valley, it will earn the gratitude of all in our country.

Social Welfare

The problem of social welfare is essentially one of liquidating the age old problems of poverty and ignorance. Further, such schemes of social welfare are most needed and are more effective in the case of women and children.

While the problem in its present magnitude had been existing since ages past, a rational approach to solve it on a nation-wide scale began to evolve only in the post-independence period and the

determination to do so was embodied in the constitutional Directives of State Policy in Part IV of India's Constitution. The first step in the implementation of the policy laid down in the Constitution was taken when, in pursuance of the recommendation of the Planning Commission, in its report on the First Five-Year Plan, the Government of India set up the Central Social Welfare Board in August 1953. The Planning Commission, in the first instance, provided a sum of Rs 4 crores for the purpose of promoting activities in connection with social welfare to be administered by the Board.

The Central Social Welfare Board helps the promotion of welfare activities by establishing social service centres in villages and also destitute homes for women and children.

Speaking at Mysore, Srimathy Durgabai Deshmukh, Chairman, Central Social Welfare Board explained the schemes sponsored by the Committee under the Second

Five-Year Plan and said that a sum of Rs 30 crores had been allotted for expenditure on various schemes. Out of this allotment, Rs 12 crores has been provided for the establishment of social service centres in villages, while Rs 10.5 crores is expected to be spent for starting destitute homes for women, the object being the setting up of nearly 430 houses throughout the country during the Second Plan period. A big programme for training several thousands of gramasevikas, midwives and health visitors had also been undertaken.

Referring to the education of women, Srimathy Durgabai said that the situation as at present obtaining in the country was a matter for shame in view of the fact that nearly 92 per cent of women in India were illiterate and further pointed out that in tackling the problem more attention should be given to technical education of girls which could help them to earn and supplement the income earned by their husbands.

SOUTH INDIAN MARKETS

Coffee Exports

ACCORDING to official statistics, Russia is to become a potential buyer of Coffee; and it is stated that the quantity offered for export to this country is in the order of about 725 tons. In this connection, it may be added that West Germany is one of the principal countries importing Indian coffee. Holland, Belgium and the UK are coming next in order.

India's exports of coffee in recent years was about the highest in 1954-55 when it stood at about 10,000 tons. The figure dwindled to about 2,780 tons in 1955-56; but rallied round during the first nine months of 1956-57 when exports totalled about 6,900 tons.

To the end of May, the Coffee Board could sell for export 7,975 tons out of the 1956-57 crop, including 725 tons sold to Russia through the State Trading Corporation. The Board has reserved another 1,500 tons for export to the USA, Sweden, Finland and Australia. A quantity of 600 tons is set apart for monsooning. There will be yet another 4,700 tons to be disposed of from the exportable surplus of the current season's crop before the coming in of the next crop.

Meanwhile, the latest estimate places India's coffee crop for the current season at 41,556 tons; and almost the whole of it has been received in the Coffee Board's Pool. Next season's crop is expected to be lower on account of the unfavourable weather obtained in certain

coffee-growing regions during the blossom period.

According to the preliminary official estimate, the crop would amount to only 35,750 tons, made up of 23,170 tons of Arabica and 12,680 tons of Robusta variety. This will, however, be higher than the 1955-56 crop. A section of the planters are of the opinion that we can very well expect a crop of 50,000 tons in future provided the climatic conditions are favourable.

Coconut Oil

The Government of India have rejected the Central Coconut Committee's proposal for fixing a minimum price for Coconut Oil. The Government have felt that the present time is not opportune to take such a step.

THE SOUTH INDIA COOPERATIVE BANK LIMITED

134A, Rash Behari Avenue, Calcutta-29.

Members and constituents are requested to call on the undersigned at the Bank between 8 P.M. and 9 P.M. on 10th or 11th Jul 1957 for verification of their accounts as on 30th June 1956.

S. K. SINGHA,
Auditor of Cooperative Societies

Stock Exchanges

LIQUIDATION AT HIGHER LEVELS

Watch-Dog Writes:

SENTIMENT in stock markets continues to be cheerful and prices have forged further ahead, thanks to the announcement of higher steel retention prices payable to Tatas and Indian Irons. Higher levels have, however, attracted heavy bull liquidation, resulting in a substantial fall in prices at the close. It is considered likely that this may bring forth replacement buying, as the technical position is healthy.

An outstanding feature of trading on the Calcutta Stock Exchange was a broadening of enquiry in the Tea section and the sustained support at advancing levels.

Equities on the Bombay Stock Exchange moved rather irregularly on alternate buying and selling.

UPPER JUMNA VALLEY ELECTRICITY SUPPLY COMPANY LIMITED.

NOTICE is hereby given that the Fifty-third Ordinary General Meeting (not being an Annual General Meeting) of the abovenamed Company will be held at its Registered Office No. 12, Mission Row, Calcutta on Monday, the 29th July, 1957 at 11-05 a.m. for the following purposes:—

1. To receive and adopt the Audited Accounts for the half-year ended 30th September, 1956, and the Directors' and the Auditors' Reports thereon.
2. To declare a Dividend.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 23rd July, 1957, to the 29th July, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LTD.,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta 1.
The 4th July, 1957.

EXPLANATORY STATEMENT

N.B.—This meeting is being convened to consider the accounts for the half-year ended 30th September, 1956, in accordance with the provisions of the Company's Articles of Association.

On the Madras Stock Exchange activity broadened considerably and prices recorded further improvement.

The London Stock Exchange maintained its recent firm trend although activity was confined to selected scrips.

Wall Street closed barely steady with specialities making wider gains.

Calcutta

Calcutta, Thursday Evening.

THE local Stock Exchange continued to display a cheerful sentiment with prices making a further headway from last levels. The main inspiration was provided by the support given to the market by the Life Insurance Corporation, which was reported to be purchasing big lots of various categories and taking deliveries of same against cash payments. The prospects of getting substantial financial assistance from the USA in the near future, the assurance from the Finance Minister that the Government would go all out to encourage productive enterprise in the country and the feeling that the announcement of a drastic cut in imports would have a bullish effect on the domestic industries—all these factors also brightened up general sentiment, resulting in a steady advance in prices. But, sizable advances in prices were limited by obvious readiness to take profits. The only exception to the general trend of prices was the Tea section, where almost all scrips, despite intermittent profit-taking, recorded a steady advance due to higher prices of tea obtained in the last three auctions. The market finished the week on a quietly steady note.

The market for gilt-edged securities continued to be dull with business remaining at a low ebb. Institutional investors are now awaiting the Central Government's New Loan, the terms of which are yet to be announced. 3 per cent 1986 Conversion Loan opened at Rs 72.90 and, after improving at one time to Rs 73.50, receded again at the close to Rs 72.80.

Bank shares evoked little interest, but prices were well maintained around last levels. Punjab National changed hands at Rs 55.50 and United Bank of India "D" at Rs 4.00 to Rs 4.12.

After the lapse of many weeks, Jute shares steadied up following the emergence of support at the recent low levels on the feeling that the outlook for jute goods would be better in view of the slight fall in raw material prices on reports of rains in the jute-growing areas. The recovery in Howrah was more

marked and the scrip, after being taken upto Rs 17 on rumours of interest shown by the LIC, shaded to Rs 16.56 at the close on profit-taking. Nuddea changed hands at Rs 31.50 to Rs 33.00; National at Rs 19.45 to Rs 19.80 and Chitavalah at Rs 12.06 to Rs 12.31. Fort Gloster scored nearly 20 points at Rs 297 and Champdany Rs 8 at Rs 108.

Except Bengal which were taken upto Rs 240 from Rs 230.50 following the encouraging speech made recently by the Chairman of the company, Coal shares were generally listless. Apart from a general inclination to await the Coal Price Committee's decision, operators seemed to be worried over the statement of objects and reasons contained in the Coal Bearing Areas (Acquisition and Development) Bill, 1957. Equitable met with some enquiry upto Rs 25.00 from Rs 23.00, while East Indian changed hands at Rs 21.87 to Rs 21.94 and Western Bengal at Rs 5.56 to Rs 5.65. Burrakur were stagnant around Rs 21.69.

In the week's dealings, the pride of place went to the Tea section where enquiry was broad-based and shares changed hands at advancing levels, thanks to the announcement of the Government's decision on the Plantation Inquiry Committee's report. Another contributory factor to the marked improvement in

JUBBULPORE ELECTRIC SUPPLY CO. LTD.

NOTICE is hereby given that the Sixtieth Ordinary General Meeting (not being an Annual General Meeting) of the abovenamed Company will be held at its Registered Office No. 12, Mission Row, Calcutta on Monday, the 29th July, 1957 at 11-0 a.m. for the following purposes:—

1. To receive and adopt the Audited Accounts for the half-year ended 30th September, 1956, and the Directors' and the Auditors' Reports thereon.
2. To declare a Dividend.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 23rd July, 1957, to the 29th July, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LTD.,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta 1.
The 27th June, 1957.

EXPLANATORY STATEMENT

N.B.—This meeting is being convened to consider the accounts for the half-year ended 30th September, 1956, in accordance with the provisions of the Company's Articles of Association.

sentiment were the better results obtained in the auctions for the third week in succession. There was also a feeling of optimism amongst certain operators with regard to the prospects for the New Season's teas. In this respect, the annual report, released by a well-known firm of tea brokers, encouraged operators to go in for intensive buying.

Although profit-taking was in evidence at higher levels, most of the scrips scored substantial gains on balance. Baghmari forged ahead to Rs 22.50 from Rs 20.25; Brooke Bond to Rs 20.75 from Rs 19.44; Bishnauth to Rs 23.18 from Rs 22.12; Dhelakhat to Rs 23.37 from Rs 22.50; East India to Rs 25.25 from Rs 22.62; Hasimara to Rs 23.00 from Rs 21.75; Kilcott to Rs 19.75 from Rs 18.12; Methoni to Rs 23.37 from Rs 20.00; Teloljan to Rs 26.87 from Rs 22.19; and Tezporo to Rs 23.50 from Rs 22.50.

Textile scrips scored some ground following the emergence of support on optimistic forecast about export performance during the current year. Cawnpore were taken upto Rs 7.00 from Rs 6.25; Elgins upto Rs 23.37 from Rs 17.75; Kesoram upto Rs 13.62 from Rs 13.44 and New Victoria upto Rs 1.94 from Rs 1.62. Sugar shares came in for selective support. Belsund met with sustor (Continued on page 68)

FOR THE INVESTOR

(Continued from page 48)

the DVC. During the year, the company has successfully completed fabrication of structural parts of substantial sizes of plant and equipment for the Iron and Steel industry.

Though the Jute Machinery division started working during the year, the company has been unable to produce up to installed capacity due to paucity of orders. The position is, however, expected to improve during the current year.

In the Steel Foundry division, commendable progress has been achieved in making castings for Railway Equipment, most of which are being utilised for the company's production of wagons. There is considerable demand for steel castings from various industries and steps are being taken to secure higher outputs to meet this demand.

With the result, sales, during the year, have shown a substantial rise to Rs 3.68 crores from Rs 2.34 crores, while the net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 72,39,234 as against only Rs 50,76,184 in the previous year. Thanks to increased earnings, the directors have not only set apart a sum of Rs 11.00 lakhs for Development Reserve, but also raised the Depreciation amount to Rs 21.21 lakhs from Rs 20.00 lakhs and Taxation provision to Rs 20.00 lakhs from Rs 11.00 lakhs. No provision is, however, made for Rehabilitation Reserve against Rs 5.00 lakhs. Even after these increased allocations, the directors have found it possible to raise the Ordinary dividend from Re 1 to Rs 1.25 per share. The amount carried forward is slightly lower at Rs 98,372 against Rs 1.23 lakhs brought in from the previous year.

Metal Box

The Metal Box Company of India Limited has also produced excellent working results for the year ended 31st March, 1957. Sales for the year are again a record and are achieved by an increase in turnover at each of the factories; and these are shown at as much as Rs 5.67 crores as against only Rs 4.95 crores in the previous year. The net profit, before providing for Taxation and Depreciation, amounts to Rs 78,51,125 against Rs 74,11,089.

In respect of allocations, the Depreciation amount has been raised to Rs 12.47 lakhs from Rs 11.28 lakhs and Taxation to Rs 38.00 lakhs from Rs 31.00 lakhs. The amount set apart for General Reserve is, however, reduced to Rs 6.50 lakhs from Rs 10.00 lakhs. The directors have recommended a final dividend of 11½ per cent, making a total of 17½ per cent for the year as against 16½ per cent.

The assets of the company have been conservatively revalued and the resultant surplus of Rs 57 lakhs has been transferred to a newly-created Capital Reserve. The erection of the new manufacturing and office buildings at Calcutta, begun last

year, is expected to be completed during the current year.

Efforts are under way to step up internal production of Tinplate with the addition of a new rolling mill; but there was no significant change in the output last year, because of labour trouble. The company has been successful in increasing the range of containers. In Calcutta, equipment has been installed for the manufacture of aluminium tubes, while recently the extrusion of aluminium components for the radio industry has commenced.

Calcutta Steam

The Calcutta Steam Navigation Company Limited has reported a net profit, before providing for Taxation and Depreciation, of Rs 2,68,226 for the half-year ended 31st December, 1956. The directors have, after providing Rs 1.27 lakhs for Depreciation and Rs 70,000 for Taxation, maintained the dividend at previous half-year's level; but they have recommended a round sum of 65 p per share instead of 62 p.

Indian Wood Products

Although sales are nearly maintained at Rs 41.81 lakhs, the Indian Wood Products Company Limited has reported a slight decline in earnings for the year ended 30th September, 1956. This is mainly due to higher royalty charged on timber, resulting in increased production costs. Also, the percentage of Cutch and Katha extracted is lower due to the poorer quality of timber processed.

The net profit for the year, before Taxation and Depreciation, amounts to only Rs 15,41,016 as against Rs 18,10,583 in the previous year. The Depreciation amount is reduced to Rs 73,362 from Rs 82,545, while Taxation provision is raised to Rs 9.99 lakhs from Rs 7.31 lakhs. The total distribution is, however, maintained at 30 per cent.

Ajit Mills

The Ajit Mills of Ahmedabad has earned a profit of Rs 3.62 lakhs for 1956 after providing Rs 2.58 lakhs for Depreciation and Rs 1.98 lakhs for Development and Rehabilitation Reserve. Sales of cloth, yarn and waste have totalled Rs 1.23 crores. The Contingency Fund account has been allocated Rs 1.5 lakhs. The directors have recommended a dividend of Rs 28 plus a bonus of Rs 4, making a total distribution of Rs 32 per Ordinary share.

Simplex Mills

The working of the Simplex Mills Company Limited, for the year ended 31st March 1957, has resulted in a lower profit of Rs 5.16 lakhs against Rs 10.88 lakhs in the previous year, after providing Rs 4.30 lakhs for Taxation (Rs 8.07 lakhs) and pruning the provision for Depreciation from Rs 5.43 lakhs to Rs 2.78 lakhs. The directors have recommended a lower dividend of Rs 8.50 per share after transferring Rs 1.10 lakhs from the Dividend Equalisation Fund.

Sales of cloth and Yarn have dropped from Rs 2.76 crores to Rs 2.72 crores and those of waste have also

declined from Rs 11.42 lakhs to Rs 10.80 lakhs.

Work commenced in August 1956 for constructing a three-storeyed extension of the mills' buildings to house the additional spindles sanctioned by the Government. The extension is expected to be completed by September and should be in production by the end of the year.

Binod Mills

The Binod Mills Limited has more or less maintained the results for 1956. The gross profit shows a modest rise from Rs 24.93 lakhs to Rs 25.34 lakhs after providing Rs 3.25 lakhs for commission on sales against Rs 24.46 lakhs, and nil for commission on profit against Rs 4.22 lakhs.

Of the profit, Depreciation claims Rs 11.47 lakhs against Rs 9.88 lakhs; Taxation Rs 6 lakhs against 6.3 lakhs; General Reserve nil against Rs 2.02 lakhs; Investment Reserve Rs 1.25 lakhs against nil and Bad and Doubtful Debts Reserve Rs 25,000

against Rs 40,000. The dividend is proposed to be stepped up from Rs 10 to Rs 12 per share.

Sales have recorded a modest decline from Rs 2.56 crores to Rs 2.43 crores. The directors feel that the results for the current year will not be promising unless the cloth market shows a substantial improvement to counterbalance the rise in production costs.

EDITORIAL NOTES

(Continued from page 50)

is true that for a few types of jobs, the demand exceeds supply of men.

But generally, it is the other way about. The retirement age will have to be thought of in terms of the equitable distribution of opportunities and the average length of life in the country. Temporary imbalances between supply and demand can justify exceptions, rigidly conceived. It is when the exceptions begin to grow and multiply that the real problem takes shape.

CLIVE STREET GOSSIP

(Continued from page 58)

the source of radiation is inside the body, beta rays also will do their bit. Radioactive particles can get into the human body by a variety of ways, including simple inhalation. Radioactive strontium enters the body with calcium in food products and, since calcium is a bone builder, the radio strontium sets in the bone. The beta rays it emits can cause a variety of harms like bone cancer, malignant tumour and leukaemia (a blood disease).

On the question of the maximum radiation that is harmless and on the maximum radioactive strontium that one can have in one's system without danger, there is a wide variety of views. Some believe that we have already crossed the safety margin of the latter. Others, of course, say that we are a long way from the danger zone. On the external danger from exposure to gamma rays, there is likewise no firm conclusion available. Not even the most optimistic reading of the situation can get away from the fact that every explosion takes us, in however tardy a fashion, nearer the point of no return. In such a situation, it seems simple prudence to desist from further progress in the same direction. And, when one realises that all this risk is being taken in order to perfect weapons that none in his senses dare use when it comes to the sticking point, one does not know whether to laugh or cry.

When, a few weeks ago, I had a discussion with him on the prospective role of exchange banks in India's Second Plan economy, I little suspected that that was to be the last time I was to see Mr G. K. Macfarlane. He looked in the pink of health, he was setting about his tasks energetically and enthusiastically. And, when I talked to him, his agile mind was able swiftly to see clearly into the core of the pro-

blems besetting the exchange banks operating in India. Mr Macfarlane can take credit, next perhaps to the State Bank of India, for having popularised the Reserve Bank's usance bill scheme by the use he made of the facilities. He was aware, sooner than most Indian bankers, of the extent to which Scheduled Bank credit could be replenished for the purposes of meeting the enlarged demand flowing from the accelerated economic tempo of the Second Plan. He also had an intuitive awareness of the causes underlining the stagnant state of exchange bank deposits at a time when Indian Scheduled Banks were greatly augmenting theirs. And Mr Macfarlane, perhaps more than any other banker in India, was alive to the efficiency and helpfulness of the Reserve Bank of India. And he told me that he considered India's central banking institution to be excelled by none in any other part of the world. I say all this, because I want to impress upon the reader that Mr Macfarlane was an eminently desirable type of banker, who was cognisant of his duties vis-a-vis his constituents, on the one hand, and the national economy, on the other. Tragically, the influenza epidemic claimed him as its victim; and, in the complication of poliomyelitis following upon his influenza fever, Mr Macfarlane died last week. In him, the Chartered Bank has lost an efficient and conscientious Manager; and the loss will be the more keenly felt since the arrangements for the merger of the Eastern Bank will need to be completed. In Mr Macfarlane, the Reserve Bank has lost a banker that it could count upon for speedy and helpful co-operation. In Mr Macfarlane, Calcutta is the poorer for having lost a compassionate soul; and a compassionate banker is a very rare species indeed.

The secret of Popular Poplin—Sanforized sells!

ADVERTISEMENTS take the public into the shops, make them ask for cloth with the trade mark 'Sanforized'. Experience teaches them always to look for the label... but your customers don't know the 'behind the scenes' story that ensures the complete reliability of cloth labelled 'Sanforized'.

Anytime, unannounced—our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to the rigorous international wash-test, and reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized' on every yard!

It's this kind of constant care which lies behind the success of cloth with the mark 'Sanforized'—which makes it such a seller. Such a profit-maker for you!

Look for

Issued by Cluett, Peabody & Co. Inc. (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements. For information 'Sanforized' Service, 95, Marine Drive, Bombay 2.

For the Investor

LIC's Expanding Role

Investment Gossip:

In discussing measures for the restoration of health to the Stock Exchanges, I had suggested, over six months ago, that, analogous to the Reserve Bank's open market strategy in behalf of Government securities, the Life Insurance Corporation, with its programme of investing in industrials about 15 per cent of its accruing funds, could be appropriately entrusted with some kind of open market operations in behalf of ordinary shares.

For a number of months, the LIC has been known to utilise some of its funds for the purchase of bluechips like TISCO, ACC, Dunlop, Bombay Dyeing, etc. Purchases of this kind and of this magnitude, even if they be at frequent intervals, do not add up to open market strategy.

There are indications that something like such a strategy was adopted by the LIC in the course of June. Substantial purchases in TISCO and Indian Irons are reported to have been made during the period when prices were at attractively low levels. By this means, the catastrophic fall was arrested; and a moiety of the floating stocks in such scrips has found a permanent asylum in the LIC's vaults.

Additionally, the LIC is reported to have made purchases of considerable parcels of shares in the Mundhra group. Some of these shares, like Jessops and Richardson Cruddas, are certainly attractive at the recent and current price levels and are deserving of inclusion in a well assorted investment portfolio from the point of view of the available yields.

If the report is true that, in addition to the bluechips of the Mundhra group, other shares, not of such high standing, of the same group have also been purchased by the LIC, herein may be seen the beginnings of a deliberately executed open market strategy.

It is freely rumoured that, in respect of one or two of such shares reportedly taken up by the LIC, the concerned companies have not issued the balance sheet for a number of years. If this is true, the LIC would, ordinarily, have kept off from such shares.

It was known, for some time, that shares of the Mundhra group

bulked largely among the undigested and floating stocks of the market; and that the insecure position in this respect was an obstacle in the way of stock exchange recovery. As a matter of policy, which, presumably, could have emanated only from the highest official levels, the LIC has stepped in to absorb the floating stocks.

These operations on the part of the LIC have admittedly helped to improve the technical position of the market. At the same time, it is most important to remember that intervention of this kind may often lead to adverse public comment. The essence of open market strategy is that its bonafides must never become a topic of controversy.

The Reserve Bank has conducted open market operations in gilt-edged for over twenty years. Crores and crores of stock have been bought and sold. And be it said to the Reserve Bank's credit that never once has its bonafides in this regard been questioned.

An even more onerous responsibility rests on those who guide and direct the investment operations of the LIC. They may be trusted to evolve and build traditions which go to make up authority and unsullied status in the realm of equity shares analogous to the Reserve Bank's authority and status in the realm of gilt-edged.

It is a heartening sign that the Governor of the Reserve Bank is to have over all leadership in both the spheres.

ERS

Investment Notes:

Thanks to the announcement of higher profits by some of the banks for the past half-year, Bank shares are ruling very steady with selective support. There are indications that profits may show a rise of the order of 10 to 15 per cent as compared to the corresponding period of 1956. It is, however, unlikely that there will be a general move to raise the interim distributions, pending a clearer picture of the trend of costs in the remaining part of the year. Bank of India has maintained the interim dividend at 12 per cent on the increased capital, while Dena Bank has recommended an interim of Rs 1.25 per share.

HIGHLIGHTS

Is it treason to stress that India's credit is high and will continue to be high; and that this credit should be reflected in a progressively declining borrowing rate with respect to Government's programmes of New Loans?

Is it perverse economics to suggest that India, with its large need of market loans for the Second Plan, should not be driven to the verge of desperation in which the UK and the

USA find themselves after faithfully adopting the advice of the advocates of dear money?

Is it unpatriotic to urge that, if India could have raised Rs 200 crores a year by way of defence loans for a war which was not our war, it could raise at least that amount every year on at least similar terms for a Plan which is the People's Plan?

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policy-holders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

Dividend Maintained by Larsen & Toubro

Balance-Sheet Reviews:

THE reports and accounts, presented by Larsen & Toubro Limited for the year ended 31st March 1957, make impressive reading. Total sales have increased by Rs 47 lakhs to Rs 327 lakhs as against Rs 280 lakhs in the previous year. The net profit is higher at Rs 17.04 lakhs as against Rs 14.61 lakhs. Provision for Bonus has been made at Rs 2.75 lakhs. while Depreciation amount has been stepped up from Rs 2.25 lakhs to Rs 2.58 lakhs. Taxation provision absorbs Rs 9.40 lakhs against Rs 6.63 lakhs. A sum of Rs 33,000 has been set apart for Replacement Reserve for the first time.

The directors have maintained the dividend at 10 per cent on the Ordinary shares. After creating a Reserve for Gratuity Fund at Rs 1.90 lakhs and a Reserve for Dividend Equalisation Fund at Rs 1.00 lakh, the amount carried forward to next year is Rs 27,120.

The directors expect that high priority will be given to the continued import of machinery and spare parts which, in their opinion, are essential for the execution of a number of projects which are being carried out under the Second Five-Year Plan; but they anticipate that the difficult foreign exchange may, to some extent, retard the issue of licences.

Dealing with the outlook for 1957-58, the directors report that, with a satisfactory stock position and increased manufacturing activities, the company will be able to adjust itself to the changing conditions. They, therefore, view the future with confidence.

ERS

Hydro-Electric Group Results

The accounts of the Tata Power Company Limited, for the nine-months ended 31st March 1957, reveal very satisfactory results. After providing Rs 13.52 lakhs (Rs 16.59 lakhs) for Depreciation

If confident strategy could, so far as the financing of it was concerned, make possible a 3 per cent War, why not pursue similar techniques to make the Second Plan at least a 3½ per cent Plan?

The Leading Article and the World of Finance, in the current issue, both deal with these posers and furnish the answer: "Borrow from Strength".

and Rs 2.20 lakhs (Rs 22.10 lakhs) for Taxation, the profit for the period amounts to Rs 61.86 lakhs as against Rs 66.01 lakhs for the whole year 1955-56 or Rs 49.51 lakhs for the 3rd of the previous year. The directors have provided Rs 3.33 lakhs for Contingencies Reserve; Rs 3.70 lakhs for the proposed increase in taxes; Rs 3.78 lakhs for Wealth Tax; Rs 1.50 lakhs for Deferred Tax Reserve; Rs 5 lakhs for General Reserve; Rs 12 lakhs for Reserve for Special Repairs and Rs 3.41 lakhs for Gratuities Reserve. A dividend of Rs 56.25 per share has been recommended on the Ordinary shares including new shares (less interest payable out of capital at 4 per cent per annum on such new shares Rs 4.50 lakhs).

After providing Rs 5.00 lakhs (Rs 6.22 lakhs) for Depreciation and Rs 3 lakhs (Rs 10.50 lakhs) for Taxation, the Tata Hydro-Electric Power Supply Company Limited has made a profit of Rs 27.94 lakhs for the nine months ended 31st March 1957 as against Rs 28.39 lakhs for the full previous year or Rs 21.29 lakhs for 3rd of the previous year. The directors have provided Rs 1.37 lakhs for Contingency Reserve; Rs 2.55 lakhs for the proposed increase in taxes; Rs 1.88 lakhs for Wealth Tax; Rs 1 lakh for Deferred Tax Reserve and Rs 3.25 lakhs for Gratuities Reserve. A dividend of Rs 5.62 per share on the Ordinary shares has been recommended. Energy sales of this company, during the period under review, were 230.31 million units as compared with 206.97 million units in the corresponding period of the previous year.

The Andhra Valley Power Supply Company Limited has shown a net profit of Rs 34.75 lakhs for the nine months ended 31st March 1957 as against Rs 34.97 lakhs or Rs 26.23 lakhs for 3rd of the previous year. These figures are arrived at after providing a sum of Rs 7.79 lakhs (Rs 9.59 lakhs) for Depreciation and Rs 3.60 lakhs (Rs 17.90 lakhs) for Taxation. The directors have set apart Rs 1.82 lakhs for Contingency Reserve; Rs 94.873 for arrears of Depreciation; Rs 3.95 lakhs for the proposed increase in taxes; Rs 1.97 lakhs for Wealth Tax; Rs 6.00 lakhs for General Reserve; Rs 2.43 lakhs for Gratuities Reserve and Rs 34.121 for bonus. A dividend of Rs 56.25

per share on the Ordinary shares has been recommended including new shares (less interest payable out of capital at 4 per cent per annum on such new shares as sanctioned by the Government).

£RS

India Cements

THE accounts of India Cements Limited for the year ended 31, March 1957 make good showing. The benefit of a higher level of production was not reflected in higher profits because of a reduction in the retention price by Rs 4 per ton with effect from the third week of September. In any event, the working for the current year must be more encouraging especially as it is anticipated that the Tariff Commission, which are at present enquiring into the refixation of retention prices for cement, will make more satisfactory recommendations.

The company has an ambitious expansion programme and it is stated in the Directors' Report that 'all necessary steps have been taken for the implementation of the expansion'. The capacity of the Talaiyuthu unit will be increased to 400,000 tons per annum from 200,000 tons at present. The necessary sanction has been obtained from the Government of India. There is also a proposal for starting a factory in the Vishakapatnam district. Since conditions in the capital market are not considered propitious, the expansion schemes, which are expected to cost Rs 3.5 crores, will be financed by borrowings and long-term credit from the machinery manufacturers. An application has already been made to the Industrial Finance Corporation for a loan of Rs 2 crores which, it is thought, will be favourably considered. The shareholders have, therefore, been asked to give the necessary powers to the directors to borrow upto Rs 4 crores in excess of the paidup capital and free reserves of the company to finance these projects. The plans are ambitious.

As regards the working results for 1956-57, there was a 'decline' in sales to Rs 1.07 crores from Rs 1.24 crores. The decline, which could have been explained in order to avoid misunderstanding, was due to the change in the sales policy following the taking over of the 'distribution' of cement by the State Trading Corporation. The value of sales has been lower because it does not include the cost of packing and

(Continued on page 110)

Borrowing from Strength

THE imminence of the New Loan has stimulated a spate of forecasts by financial scribes and of speculation in financial circles with regard to the likely terms and conditions. There are three points on which guesswork has been rendered more or less unnecessary. Firstly, the target of the New Loan will be unchanged at the figure of Rs 100 crores visualised in the Finance Minister's Ways and Means Budget; and this total is inclusive of cash and conversion subscriptions. If, however, the 1958 and any other loan are also offered the option of conversion, the realisations therefrom will be over and above the target figure of Rs 100 crores.

Secondly, it is believed that the New Loan's announcement may take place toward the end of July or early in August; and that the list for subscriptions will open in the second week of August.

Thirdly, it is now assumed that most, if not all, State Governments will, in the present fiscal year, refrain from raising resources through market loans. A number of Governments have already made public their agreement with Mr T. T. Krishnamachari's suggestion that the States should divert their energies to stimulating the campaign for small savings and thereby making themselves eligible for a higher share of the collections in this respect. The indications are that the Centre will, thus, be able to have a monopoly of the market for its New Loan programme or programmes.

Forecasts on the New Loan have, therefore, been reduced to its terms—that is to say, what interest type will the loan be? Will the loan be short-term or medium or long? And what respective issue prices are likely? Soothsayers have generally followed the line of least resistance and based their predictions on current interest patterns and on the popular (but fallacious) belief that a New Loan has to provide a higher yield than the existing yields in order to induce a larger flow of subscriptions. Considerations of this kind have led to the suggestion that the New Loan may be a fifteen year 4 per cent stock at par.

It startles us that the orthodox thinking of the economic pundits, who advocate a higher yield to induce larger subscriptions, should be oblivious to the unambiguous lessons to be drawn from practical knowledge and experience of the money market. For, economic laws are not immutable and are not axioms for all time and are not unaffected by basic developments in the character of economic actions and reactions. We consider it to be our insistent duty emphatically to suggest to authority that proper cognisance be taken of the changing economic conditions and techniques. In particular, we think it vital to dispel all presently lurking thought that Authority might have about the link between larger subscriptions and higher yields on Government loans. Our thesis is, very simply, that the realisations from the New Loan are in inverse proportion to the rate of interest offered. That is to say, each successive increase in the yield on successive New Loans will mean that each successive New Loan will realise less for the Centre's Exchequer. Conversely, if each successive loan is offered at declining terms of interest, subscriptions to

each successive loan will be larger. We may add that this is a thesis which has its foundation and is borne out by practical experience in India's gilded history. First, however, we would like to point out why it is that the raising of the interest rate on a New Loan is a sign of weakness to be scrupulously avoided by Government.

Any banker will confirm that a banking company which offers more interest on its Deposits is likely to attract less of Deposits. Any banker will be chary of approving a loan in favour of a borrower who is prepared to pay a higher rate of interest. The credit standing of a constituent is measured by the interest charged on the overdrafts that he obtains. The stronger the constituent, the less the interest. It is the banks which offer the lowest interest on their Deposits that have the largest Deposits. It is the constituents who pay interest at the lowest rate who obtain the bulk of the advances granted by banks. If all these are true and cannot be contradicted, surely, commonsense would dictate that this line of argument is as true in relation to the Central Government's borrowings. The higher the interest that Government offer, the smaller the amount they can hope to attract. The higher the interest they offer, the more reluctant the prospective investor. The higher the interest offered, the lower the credit standing of Government. Conversely, the lower the interest, the larger the subscriptions; the greater the attractiveness to the investor; and the higher the credit rating of Government.

In the second place, we need to be clear in our minds that dear money policy has a ruinous repercussion on Government borrowing. In this context, also, Indian experience is available. Before, however, we study such Indian experience, it is noteworthy that both Britain and America have brought upon themselves a situation in which the affection of the institutional investor has been alienated from his traditional preference for gilded. Today, in the wake of a brief three year record of dear money, we have the embarrassing confession by the US Secretary of the Treasury that the American gilded market does not offer any scope for long term bonds. Similarly, in Britain, funding operations are in a negative rate of interest offered on Government loans! This last requires an explanation. The 2½ per cent "Daltonians", as they are referred to in the City, today are quoted around 50. Firstly, therefore, there has been capital depreciation accounting for 50 per cent of the holding. Next, there is the fact that the purchasing power of the pound has since declined, and this further depreciates the investor's holding. In other words, the investor who put in £100 when the 2½ per cent Daltonians were issued now has around £40 to show for it! In the light of such capital depreciation, is it any wonder that the investor now finds gilded repulsive? The traditional preference for gilded lay in the fact that there would be no capital depreciation. Since this consideration no longer holds true, British experience is that the institutional investor can no longer be relied upon to add to his gilded portfolio.

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

In the third place, we would like to warn the Indian financial authorities that India is today at very near that point when a further retrogression of conditions, such that the institutional investor will be eliminated, is imminent. Fortunately, we have not yet quite reached that point of no return. It is still possible to rescue Indian gilded from the travails and tribulations that have been experienced in America and in Britain. Briefly, it is still possible that gilded can be saved from becoming a casualty of the Second Plan and of orthodox economic thinking.

In the fourth place, we would refer to the fact of the Indian experience. Even a cursory study of the disastrous period between 1927-28 and 1931-32 will indicate that an ascending rate of interest offered by Government is ruinous to subscriptions. The 6½ per cent 1935, issued in 1931 and kept open for three long months, could fetch in only Rs 17 crores. And yet, five years earlier, a 4 per cent 1960-70 realised nearly Rs 25 crores in three hours. Gilded history since 1922-23 proves that a descending rate of interest—which may be described as borrowing from strength—has ensured the success of Government loans. In the course of 1932-33, for instance, the interest offered was rapidly brought down from 5½ per cent to 4 per cent; and Government borrowings were triumphant. Moreover, while the issue in 1931 was a 6½ per cent stock,—and this was a failure—scarcely 14 months later, Government issued a 4 per cent 1960-70 Loan, realising nearly Rs 34 crores. (Rs 74 crores in those days was a large sum of money). We would advocate a study of gilded in its four phases since 1922-23. The first lasted until 1926-27 and constituted a period of declining interest rates. Each successive New Loan was a greater success than its predecessor. The second phase was from 1927-28 to 1931-32, and constituted a period of ascending interest rates. Each successive New Loan was a greater flop than its predecessor. The third phase started from 1932-33 and extended to the beginning of the war. This, too, was an era of descending interest rates and allowed of a New Loan being issued in 1936-37—the 2½ per cent 1948-52. The subscription lists were closed in minutes. As against this, we would again remind the reader, the 6½ per cent 1935 issued in 1931 realised only Rs 17 crores in three months. The fourth and final phase which merits study by the financial authorities is the Defence Loan programme of Government. Gilded was not the first casualty of the Second World War. Instead, the war proved to be a triumphant 3 per cent war, with the terms of the loans being made more favourable to Government by stepping up the maturity date. The periods of declining interest rates, which we have here described, suggest that the Second Plan borrowing must be on the basis of borrowing from strength—that is to say, a New Loan programme on the basis of a declining rate of interest.

In the fifth place, we would urge authority to evolve a borrowing policy for the Second Plan as such. The New Loan for 1957 must not be considered in isolation. It must be borne in mind that the 1957 New Loan is the Government's borrowing programme for the

[July 13, 1957]

second year of the Second Plan. So, the New Loan of 1957 must bear relation not only to the New Loan of 1956, but also to the prospective borrowing in the last three years of the Second Plan. In our view, if this borrowing policy is to be a success, it must be on the basis that the starting point for that policy is the realisation that a descending rate of interest is to be offered. While the chaos in interest rates, especially as discernible in deposit rates and short-term money rates, needs to be tackled expeditiously by Government, there is no reason why form and substance should not be given to Government's Second Plan borrowing in their New Loan for 1957. The auspicious start to this programme that we suggest is that the New Loan for 1957 should consist of reissues of the 1956 medium

From Shortage To Sufficiency

THE announcement of negotiations in an advanced stage for a third wheat loan from the United States impels us to return to the rather overworked theme of India's food shortage. The new wheat loan, according to the Union Food Minister, would amount to roughly 3.5 million tons, valued at Rs 150 crores. The bulk of the amount realised from the sale of the wheat would go into India's domestic expenditure on the Plan, as the loan needs to be repaid only over a period of forty years. There is no doubt that the loan and the financial arrangements involved are the product of a deep and sympathetic understanding on the part of the US of this country's current difficulties.

The step is anti-inflationary in its consequence, and represents a prompt answer to the nearly critical food shortage which, on the admission of Mr A. P. Jain himself, is expected to linger for some time. The new loan becomes operative by the middle of next year till which time the supply of US wheat under the previous loan agreement is likely to continue. The chagrin of Canada and Australia over the US gesture is quite understandable; both the countries have surpluses to dispose of. India would have gone in for them had it not been for the condition of immediate payment.

With the assured prospect of another 3.5 million tons of wheat moving into India during the last three years of the Second Plan, the Union Food Ministry has closed the door against the recurrence of any further difficulty in respect of wheat supplies for the remaining period of the Plan. Already, following the formation of wheat zones in Northern India, prices have started climbing down. During the last month, the prices of Dhara wheat in the Punjab went down from a range of Rs 15 to Rs 16 to around Rs 13 per maund. In Delhi there is a general fall in wheat prices, of the order of Rs 2 per maund. In the Uttar Pradesh, no immediate impact is noticeable. But the very fact that the increase in prices has been arrested presages at least a gradual decline. With more arrivals of wheat from Bombay, for which wagon facilities have been augmented, the UP wheat price situation must respond. If nature displays some constancy for the next three or four years, the problem of the supply of wheat will not go out of hand and that is no mean achievement, particularly in the context of the commitments on the Second Plan.

The case of rice seems more arduous. Roughly, the problem of rice is the problem of South India and Bengal. To the extent that Bengal and parts of South India have their offtake of wheat, the arrangements for ample imports and their prompt distribution will keep prices under check. For rice, a zonal

and long-term stock. But the terms under which the loans should be issued this year must be made favourable to Government, so that the borrowing policy that we have suggested can be fashioned. We think that the 1957 New Loan should consist of a second issue of the 3½ per cent 1967—but with its issue price raised to Rs 99.50; and of a second issue of the 3½ per cent 1974—but with its issue price raised to Rs 99.50.

It would be at once folly and tragedy if orthodox advice were to hold sway, and the 1957 New Loan were issued on a 4 per cent basis. For, in that case, it would be no foolhardy prediction to state that Government's borrowing programme for the Second Plan is foredoomed to failure.

scheme similar to that of wheat in Northern India is engaging the attention of the Government. Some advance toward its implementation should be possible after the meeting of the Zonal Council of the Southern States. Though, initially, some of the Chief Ministers concerned were only too eager to advertise their hostility to a link-up of surplus and deficit States, the general climate of opinion seems to have improved during the last two or three weeks. Andhra is reported to be having a clear surplus of about 600,000 tons of rice. Orissa's surplus is heftier, being estimated to range between 150,000 tons and 200,000 tons. Madhya Pradesh is also known to be able to export a fairly large quantity.

These tantalising surpluses refuse to move out for two reasons. The State Governments concerned are dissatisfied with the price offered on the initiative of the Centre. This is a ticklish problem and can never be finally solved unless the surplus States look upon their deficit neighbours in the spirit of members of the same family rather than as those with whom no bargain could be thought of as too hard. As for the second, wagon shortage, the Union Food Minister no longer puts his faith in the capacity of the railways. The Government of India have started taking steps to organise rice movements through coastal vessels. Whether these measures would turn out to be adequate remains to be seen. At least in official thinking, dependence on a considerable quantity of imported rice is a settled fact. Nor would it be wise to despise the role of imports, when crops have a tendency to be whimsically irregular, as has happened between 1953 and 1956.

It is legitimate to ask how long is India to depend on imported food. The facts on which some kind of answer may be attempted are not disheartening. Usually, after a stage, with every substantial rise in per capita income, the proportion of individual expenditure on food gets smaller. In course of time the level of India's per capita income may become sufficiently high as to induce a general contraction in expenditure on food. But in relation to existing conditions, this prospect is remote and may not belong even to the next generation.

Expenditure on cereals is just reaching the saturation point. It will be found that over the First Plan period, the increase in food production has kept much ahead of the increase in population. Population rose from 367 million in 1952 to 386 million in 1956, roughly equivalent to 5½ per cent. Food production in the meantime increased from 50 million tons to 63.5 million tons, about 27 per cent. Leaving aside the intervening annual set-backs in production, the improve-

ment in domestic food output over the last five years should have eliminated completely the need for imports, provided the average per capita consumption of foodgrains remained where it was.

It is, therefore, clear, in the light of the continued necessity for imports, that per capita consumption has gone up by at least about 20 per cent. Judged by the requirements of the minimum diet, this improvement represents a solid gain on the national food front. Nutritional experts are of opinion that on an average an Indian must consume 14 oz of cereals and 3 oz of pulses. At the 1956 level of production, domestic supply alone will give 13½ oz of cereals and 2½ oz of pulses. In the absence of adequate supplementary food by way of proteins, vitamins etc, even this intake will have to be considered low and well behind the 2500 calories worth, which is the minimum considered necessary for an Indian, against 3200 calories worth in Western countries. Even so, the increase in per capita availability over the last five years is a matter for relief. Centuries of under-nourishment have also acclimatised the Indian people to a sub-normal diet. A sudden increase in offtake may not after all be all for the good.

In these calculations, it is assumed that official statistics do not exaggerate. The wastage in storage and through insects is also not taken into account. Actually what goes into consumption may be about 2 to 4 million tons less than what is produced; even at which level the per capita consumption will only be about one ounce less for cereals and not very much less satisfactory for that.

In this thesis, domestic food production emerges as nearly self-sufficient in terms of a fairly satisfactory cereal and pulses intake. Once this fact seeps into basic thinking on the problem, the whole outlook gets transformed. If, during the Second Plan, an increase in food output at least to the extent of 15 per cent is secured, it would enable a per capita consumption of 16 oz, allowing for the same rate for the growth of population as has occurred during the past five years. It would not be too optimistic to envisage complete self-sufficiency in food by 1960.

There is only one lacuna in this expectation. The overall estimates to some extent distort the actual position, when the rice-eating and wheat-eating populations are assessed separately. Unless wheat secures large-scale conversions, the imbalance in respect of rice will persist.

The old enthusiasm for spreading the wheat habit is now nowhere to be seen. Perhaps it would be better if the effort is renewed. Only, care should be taken to see that the quality of wheat supplied to prospective converts is attractive enough. In the past, failure has largely been due to propaganda backing unimpressive and often forbidding stuff. The notion that the average rice-eater, confronted with a shortage, will go in for any substitute, has to be given up. If wheat has to make headway in the predominantly rice-eating areas, the best quality stuff alone should be pushed in.

Equally urgent is the need to concentrate more on the production of subsidiary food, milk, vegetables, fruits, and fish. In relation to a balanced diet, the national output of these items is woefully short. Some beginnings are now being made toward augmenting production of these foodstuffs. Adequacy remains organised endeavour, both from the individual and the State. The problem of a full and balanced diet for the population, which is bigger than that of self-sufficiency in cereals and pulses, will be met when such an endeavour is forthcoming.

July 13, 1957]

When is a Strike not a Strike?

By M. SUR

WHEN is a strike not a strike? This is not merely an academic conundrum, but a very serious question for industry today, for, case law has so modified the law as laid down in the Industrial Disputes Act, that industrial management needs to be very certain of its ground before taking action in the case of a strike.

The basic legal provisions relating to strikes and lockouts, as laid down in the amended Industrial Disputes Act, are as follows:—

(1) In an industry* which has been declared a public utility service it is illegal for a workman to go on strike or for an employer to declare a lockout without giving 14 days' notice, and no strike or lockout is legal during the pendency of conciliation proceedings and seven days after the conclusion thereof.

(2) In all establishments, strike or lockout is illegal during the pendency of conciliation proceedings before a Board and seven days thereafter, or during the pendency of proceedings before a Labour Court, Tribunal or National Tribunal and two months thereafter, or on any matter covered by a settlement or award during the period of operation of the settlement or award.

(3) A lockout declared in consequence of an illegal strike, or a strike declared in consequence of an illegal lockout, is not illegal.

(4) A strike is defined as "a cessation of work by a body of persons employed in any industry acting in combination, or a concerted refusal or a refusal under a common understanding, of any number of persons who are or have been so employed, to continue to work or to accept employment"; and a lockout is defined as "the closing of a place of employment, or the suspension of work, or the refusal by an employer to continue to employ any number of persons employed by him."

(5) The penalty for illegal strike or lockout is imprisonment up to one month's duration or a fine of up to Rs 50 for a workman and up to Rs 1,000 for an employer.

This seems clear enough, and it would appear that, whether a strike or lockout is illegal, is only a question of fact in the particular circumstances of the case, but actually it is not so easy as that. To the best of our knowledge, Government have never prosecuted for illegal strike or lockout. Tribunals have pointed out that it is not within their jurisdiction to award punishment for an illegal strike, and it is the function of Government to take action under S. 26 of the Industrial Disputes Act. Government, when approached for action on an illegal strike, invariably reply that firms can prosecute under S. 26 if they wish. One or two such cases have been taken up and won, but the majority of firms do not wish to incur the odium of prosecuting their own workers. Therefore, the impression has been created that workmen can strike, even in a public utility service, or during the pendency of conciliation or tribunal proceedings, with impunity as far as the law is concerned; and the only sanction against illegal strikes or lockouts is an economic one, for, the employer may become liable in certain circumstances to pay for the period of strike or lockout, and the workmen run the risk of losing their pay.

*Industry, it must be remembered, includes every type of occupation, trade or calling, and 'workman' any person doing manual, clerical or technical work (including apprentices), and even a supervisor drawing less than Rs 500 p.m. and not employed in a managerial or administrative capacity.

An Indian Finance Special Study

Kerosene Oil Workers' Union v. Caltex (India) Ltd. Indian Factories Journal 1954-55 reports p. 151). Model Standing Orders drawn up by Government, it may be noted, do declare that participation in an illegal strike is a misconduct, but not all company Standing Orders have this clause.

Whether a strike is illegal or not thus becomes more and more a technical point which may or may not affect the issue in a particular dispute. Tribunal judges concentrate more on whether the strike is justified or not in the particular circumstances. This is specially the case when the question arises of dismissal for taking part in a strike. Does a strike put an end to the relationship of master and servant? was the question in the case of the Punjab National Bank (Labour Appeal Cases 1953 p. 16), and the Labour Appellate Tribunal held as follows:

"A strike, legal or illegal, does not automatically put an end to that relation (of employer and employee), but it cannot now be disputed that it affects some of the rights and obligations flowing from that relationship."

When the strike is not illegal, whether justifiable or not, the employer is not entitled to put an end to the employee's service.

"But the converse proposition does not necessarily follow when the strike is illegal. A strike may be illegal, on account of S. 22 or S. 23 of the Act, though it may be perfectly justified, or a strike, though illegal by reason of those provisions may be the result of provocation on the part of the employer, or such strike may last for a very short time. Modern concepts of social justice would be outraged if in such cases the employer could dismiss a workman for his mere absence due to his participation in such a strike.... If, however, the particular workman who joined the strike is guilty of violent acts or of subversive activities.... the position would be different."

Again, in the case of Smith Stanistreet and Co Ltd (Labour Appeal Cases 1953, p. 38) the Labour Appellate Tribunal observed:

"A strike, if not illegal, does not put an end to the relationship of employer and employee. So absence from duty of an employee on account of his having joined such a strike cannot put an end to his service, notwithstanding the provisions of Standing Orders for automatic termination of service for absence without leave for a stated period...."

In this particular case, the appellate court upheld the findings of the lower court that the strike was not illegal and not provoked, and that, though there was violence, there was no evidence to connect the discharged workmen with these acts of violence, and the Company had merely used this as an excuse for retrenchment. Compensation was therefore granted to the workmen.

A Full Bench decision in the case of Ramkrishnan Iron Foundry (Labour Appeal Cases 1954, p. 74) went further into the matter and considered what was the position when a strike was held to be unjustified. It drew the following conclusions:—

- (1) that a workman cannot be dismissed for joining a strike which is not illegal but which is simply unjustified;
- (2) that the employer, however, will have the right to dismiss a workman joining an unjustified strike;

The Effect of Case Law

The general effect of case law, as laid down by Industrial Tribunals and the Labour Appellate Tribunal, on the other hand, has been to offer a reasonable chance of workmen obtaining pay for a period of strike if it can be proved to the satisfaction of the court that the strike was justified. This has tended to cloud the issue of whether a strike is illegal or not, and increasingly it can be seen that trade union officials argue and convince their members that a contemplated strike is not illegal because it can be justified.

Numerous tribunal awards have now established the following:—

(1) A strike can be legal and justified—in which case the tribunal is sure to award strike pay;

(2) A strike can be legal and yet unjustified—in which case the tribunal will not award pay;

(3) A strike can be illegal, yet justified—in which case the tribunal is inclined to overlook the illegality of the workmen's action and award at least partial pay;

(4) A strike can be illegal and unjustified—in which case the workmen cannot expect any award in their favour.

With these modifications of the original position, it becomes inevitable that a large number of cases are referred to the courts, for, while the Conciliation Officer may be convinced that a strike is illegal according to the law, he has no power to declare it so, and can certainly not adjudicate upon the question whether the strike is justified or not.

To see how the present case law has developed, we need to study decisions of the Labour Appellate Tribunal in recent years. The basic principle is that the strike has "in certain circumstances been recognised as a legitimate weapon of the workmen for the purpose of ventilating their demands". (Bihar Firebricks and Potteries Ltd. Labour Appeal Cases 1953, p. 82). The judgment in the case of Mahalaxmi Cotton Mills Ltd is interesting (Labour Appeal Cases 1952, p. 378). The Appellate Tribunal held that the workmen had gone on an illegal strike, and on the question of pay observed that it "would be anomalous if, in criminal law a workman is punished for going on an illegal strike, (and yet) he would in civil law be required to be compensated by the employer for his identical conduct." The question of whether the strike was provoked or not was immaterial. "Therefore, although the strike may have been provoked, the character of the strike is not altered and it continues to be an illegal strike and consequently the demand of the workmen for strike pay for the period should not be acceded to."

The anomaly pointed out in this judgment was, however, soon lost sight of. In the case of Bharat Airways Ltd (Indian Factories Journal 15.9.53, p. 487) the Appellate Tribunal disallowed the claim for wages for a strike period on the ground that the strike was not provoked.

Justifiable Strikes

Industrial Tribunals now began to take the line that there should be no punishment for workers who took part in an illegal strike if the strike could be said to be justified, or provoked by the management, unless there was a specific provision in the company Standing Orders which would penalise participation in an illegal strike (e.g. Madras

[July 13, 1957]

An Indian Finance Special Study

- (a) when the strike itself was not bona fide;
- (b) when it was launched on other extraneous considerations and not solely with a view to better the conditions of labour.

But in all these exceptional cases, the facts whether the strike was justified or not and whether these exceptional circumstances were present or not must be left to the unfettered decision of the Tribunal... whenever the propriety of the dismissal is called in question."

The "extraneous considerations" mentioned in this decision relate to strikes on political grounds, or sympathetic strikes in which the employees have no direct economic interest.

Whether a strike is justified or not, therefore, depends on the facts of the case, and it is extremely difficult for a company to judge whether it can safely take action against the strikers, even under its Standing Orders. It has been held by the Labour Appellate Tribunal (Nizam Sugar Factory, Indian Factories Journal 1.8.55 p. 578) that, where management's reply to the demands of the workers was reasonable, a strike was not justified, but that, where management's attitude was provocative or they were guilty of victimisation or unfair labour practice, a strike was justified. (Swadeshi Industries Ltd. Labour Appeal Cases 1955, p. 267).

The Madras High Court has held that no appeal would lie from the findings of an Industrial Tribunal on the question whether a strike was justified or not, as this is a question of fact and not of law. (Spencer & Co. Ltd. Indian Factories Journal 1.4.56 p. 66).

Even when a strike is illegal, the employer is required to hold a proper enquiry and give the employee the usual opportunity to explain

his conduct before he can be dismissed according to Standing Orders. (G. Mackenzie & Co. Ltd. Labour Appeal Cases, 1955 p. 431). And, as shown in the Swadeshi Industries case mentioned above, the strikers must be proved guilty of specific acts of violence or subversive activity before action can be taken against them.

In another case, where a strike was held unjustified, (Spencer & Co. Fort St. George Gazette, 2-5-56, Sup. to Pt. I p. 8) the Labour Appellate Tribunal held that the employer was entitled to hire new men on a permanent basis during the strike and not obliged to reinstate strikers whose places had been filled up. This decision was based largely on a ruling given by the Supreme Court in a similar case in the USA.

Definition of Strike

It should be noted that a sit-down or stay-in strike is treated as any other strike by the tribunals. Thus, in the case of Caltex (India) Ltd. (Labour Law Journal, 1955, p. 693) the Labour Appellate Tribunal declared that staging a sit-down strike, even though illegal, if it were for a bona fide grievance and peacefully conducted, would not be a misconduct.

It will be seen from the earlier quotation from the Punjab National Bank case that even the Labour Appellate Tribunal had some doubt as to whether a cessation of work for a very short period could be considered a strike. This doubt was set at rest by the Supreme Court decision which reversed the Appellate Tribunal's findings in the case of Buckingham & Carnatic Co Ltd (Labour Appeal Cases, 1953 p. 210) and held that a cessation of work by workmen acting in concert, even for a short period, is a strike. Moreover, it added, the fact that the cessation is spontaneous and not premeditated does not make it any the less a strike within the meaning of S. 2 (q) of the Industrial Disputes Act. Satyagraha or hunger-strike has also been held to be a strike under S. 2 (q).

It has been held that refusal to work on a public holiday when required by the exigencies of work and when a compensatory holiday had been offered by management, amounted to a strike (Upper India Couper Paper Mills, Labour Law Journal, 1954, p. 347); and when management refused to close a factory to pay homage to a deceased political leader and the workers stayed away, this also was a strike (Goodlass Wall Ltd Labour Law Journal, 1954, p. 573). On the other hand, where the workers had demanded May Day as a holiday and offered to work on another holiday and this was refused (although Government had recommended a May Day holiday), and the workers applied for casual leave and remained absent, this was held not to be a strike.

"It is implicit in the definition of the expression 'strike' that the cessation of work or concerted refusal to work must be in defiance of the authority of the employers. Where there is no such defiance, there is no strike. The employers are expected to act reasonably and to fall in line, so far as possible with the social conscience of the workers. ... There was no intention on the part of the employees to paralyse the office. ... Their desire was only to celebrate May Day."

Go-slow, although it is recognised by tribunals as a form of misconduct, does not in the opinion of the Labour Appellate Tribunal constitute even a partial cessation of work and therefore cannot be held to be a strike. (Fine Knitting Co Ltd Labour Law Journal, April 1957, p. 409) The employer is not, therefore, entitled to declare a lockout in consequence of a slow-down.

In view of the introduction of a new section on Notice of Change in the 1956 amendment to the Industrial Disputes Act, it is important to note that, in Bombay, where the notice of change provisions have been in operation under the Bombay Industrial Relations Act, Labour Courts hold that a strike is illegal if it is commenced or continued only for the reason that the employer has introduced an illegal change (i.e., without the required notice), and that the proper procedure is for employees to make a complaint about illegal change to the Labour Court (Sassoon & Gazette, Feb. 1957, p. 595). At the same time, the Labour Court ruled that the weavers' refusal to mind two looms (as agreed with the union) and the minding of only one loom amounted to a partial cessation of work and was therefore a strike.

While recognising the fundamental right of labour to strike for a bona fide grievance, the Labour Appellate Tribunal has frequently deprecated the use of the strike weapon except as a last resort when all attempts at negotiation have failed (e.g., Vithabhai Nana, Labour Appeal Cases, 1956, p. 391); but, in effect, the non-application of the penalty under the law for illegal strikes, and the introduction of the idea of the "justifiable" strike, has meant the encouragement of illegal strikes. It was the intention of the legislature to provide for a calm atmosphere during the period of conciliation or tribunal proceedings by banning all strikes and lockouts; but this intention has been frustrated by the new ideas of "social justice" on which industrial illegal strikes have become a common occurrence. On the other hand, in extenuation of this practice it can be argued that the long delays in adjudication and appeal cases leave the workers with a sense of frustration which finds outlet in illegal strikes. Whatever the cause, it seems unwise in a democracy to allow illegal practices to develop without imposing the sanctions against them provided by law.

July 13, 1957]

State Bank's Progress

The nationalisation of the Imperial Bank of India can be traced back to the recommendation to this effect by the Committee of Direction of the All India Rural Credit Survey; and the recommendation was based on the premise that a strong integrated State-partnered commercial banking institution could, with an effective machinery of widespread branches, stimulate banking development especially in the matter of the provision of facilities to the mofussil and rural districts. It is to be noted that emphasis was laid by the Committee of Direction upon the proposed bank being a commercial institution. Thus, when the Imperial Bank was transformed into the State Bank of India, it had, firstly, to maintain its position as the leading commercial banking institution and, secondly, as expeditiously as possible to extend its working in such manner as to cater to the new banking needs of cooperative and similar organisations.

But, when the Government's decision to nationalise the Imperial Bank became known, there was apprehension in some quarters that Government intervention would detract from the commercial banking facilities; and the extent of this disquietude was seen to be reflected in a drain upon the Deposits. At its last annual general meeting, the then Chairman, Mr H. V. R. Iengar, took particular care to rebut the criticism made in this behalf. In particular, he stressed that Government were not interfering into the day-to-day functions and activities of the State Bank of India; and, he added, with public confidence restored in the continuance of the State Bank

Editorial Notes

as a commercial banking institution, Deposits have once more staged a remarkable rise.

Last week, Mr P. C. Bhattacharyya, who succeeded Mr Iengar, took the opportunity afforded by the completion of the second year of existence of the State Bank of India to present a brief resume of the progress that has been registered under the various heads. For example, the State Bank has added to its Deposits by Rs 85 crores since December 1954, when Government made their announcement in respect of the nationalisation of the Imperial Bank. This rise in Deposits works out to 40 per cent and compares with the improvement of 29.5 per cent recorded by other Scheduled Banks. This augmentation in Deposits has been utilised by the State Bank sizeably to increase the accommodation it offers to its constituents. From a level of Rs 116 crores on the eve of nationalisation, the Advances of the State Bank have risen to Rs 183 crores by the end of June 1957. Thus, the commercial character of the State Bank has been fully maintained; and, what is more, the tempo of commercial activity conforms to the heightened rate at which the Indian economy is in gear.

At the same time, Mr Bhattacharyya has revealed that satisfactory progress is being achieved in the State Bank branch expansion programme. The State Bank of India Act, we may recall, lays down that the bank should establish not less than 400 new branches within the first five years of its existence. It was to be expected that, in the first two years, the work done would necessarily be of a preliminary and preparatory nature. So, the actual number of branches opened works out to only 102. Selected centres number 234. The balance, therefore, in which the opening of branches may be said to be imminent is 132. Thereafter, we have to presume that the State Bank will go ahead with plans for the opening up of the balance of 266 branches.

However, we need to point out that the branch programme is proceeding slowest in the Bengal Circle. Out of the selected centres, branches opened work out to 50 per cent in the case of Bombay Circle and over 61 per cent in the case of Madras Circle; but, in Bengal Circle, branches opened are no more than 30 per cent. An indication of the special difficulties which are apparently being encountered in Bengal Circle would be helpful for the Indian banking system as a whole in its formulation of policy for branch expansion.

Land Revenue Vs. Land Income Tax

The Union Finance Minister's suggestion for the substitution of land revenue by agricultural income tax has had a poor reception. In Madras, the Finance Minister made it clear that the change was not possible as the State stood to lose heavily thereby. The Uttar Pradesh Revenue Minister is equally prompt in the dismissal of the idea as impractical. In U.P., land revenue yields about Rs 22 crores.

An agricultural income tax with the exemption limit placed on holdings with an annual income of Rs 3,000 is not likely to secure for the State more than Rs 3 crores a year. The UP Minister is willing to right off the difference, if the Centre will foot the bill in recompense. Neither by way of subvention or through increased shares from the divisible pool can the Centre hope to replenish the loss involved in the abandonment of land revenue. There are also other sound reasons why the change suggested by Mr Krishnamachari has to be kept off.

The State is now necessarily wedded to a policy under which more and more persons ought to come into the fiscal net. To introduce agricultural income tax, in place of land revenue, will be a step in the reverse direction. The bulk of the largest category of payers of direct taxes will be fiscally disfranchised. Whatever be the exemption limit, there will always be the tendency to split ownership through genuine or benami transactions to avoid payment of tax. In agriculture particularly, such tendency militates against production.

The substitution of Central aid or allotment on Central initiative which could be the only answer to the emaciated State Exchequers, is also not in line with current financial thinking, leaving aside its corrosive impact on the sense of dignity and independence of the State Governments. Due importance must attach to the latter point, at a time when even the comparatively harmless directives of the Centre are petulantly received by State Ministers and Assembly Members in many places. For purposes of taxation, it would be salutary to preserve a distinction between income from land and income from other sources. The rent theory of land revenue is not to be despised.

Flowers and Weeds

In spite of all the profound and illuminating comment heard from London and Washington on last week's expulsions from the Soviet Presidium, the real significance of the event, in relation to the future of international com-

munist, is not easily intelligible. The expulsions took place in the colourful background of the "flowers and weeds" prescription offered by the Chairman of the Peoples' Republic of China. The Chinese leader is for the moment ready to accommodate a hundred flowers blossoming together, meaning thereby several different shades of opinion. But he insists that the weeds have to be rooted out immediately they are discovered.

Thus, even in the alluring catholicity of Mao, no nonsense on fundamentals is to be tolerated. Whether a growth is a flower or a weed is entirely a matter for those who wield authority to decide. It is exactly this circumstance which keeps the foreign observer bewildered and guessing about the quit order served on the Molotov group. Suddenly with none of the processes of indictment or trial familiar to the non-communist world, four of the most powerful of men in Russia are made to step down, and possibly threatened with worse. Khrushchev, for the last one year, have been wearing the mantle of a crusader against Stalinist oppression and tyranny.

But the manner in which he disposes of inconvenient colleagues is blatantly ill-suited to that role. Is Khrushchev under the garb of a liberator, seeking to emulate Stalin and to establish a personal autocracy? Or is he only trying to remove from the field those who impede his comparatively humane programme? The true facts on which these questions can be answered are inaccessible.

If he is on the path to a dictatorship, circumstances are much less favourable than they were to Stalin. The attitude of the army

World of Finance

None but the Brave

CONTRARY to the expectation, generally held, of a fifteen year 4 per cent stock, our suggestion for this year's New Loan programme is that there should be, firstly a reissue of the 3½ per cent 1967 Loan and, secondly, a reissue of the 3½ per cent 1974 Loan, with the issue prices in both cases fixed at one rupee higher than the issue prices of last year. The onus is, therefore, on us to prove that the loans which are distinctly less favourable to investors will meet with a warm welcome and evoke a satisfactory response. The argument in favour of a slightly lower yield on the New Loan than on the corresponding existing stocks is convincing and conclusive. What happens when the terms of such a New Loan are announced? The immediate effect is to cause a rise in the whole range of existing securities to such effect that the yields on the latter get adjusted to the yield offered on the New Loan. The first reaction is, thus, in the form of all round higher gilt-edged prices greeting the New Loan. Improving quotations of currently quoted gilt-edged stocks provide a propitious setting and a confident climate for the flow of abundant subscriptions to the new issue. That, by this strategy, the right psychology is created and that, by this means, the success of the New Loan is guaranteed from the outset, has been proved again and again, whenever the Indian Government have, in the past, demonstrated their status and ability to borrow from strength.

We may content ourselves with citing the instance of the New Loan piloted in 1926 by Sir Basil Blackett to whom belongs the credit of being the first Finance Minister who evolved and demonstrated the technique of borrowing from strength. The New Loan issued in 1926 was the 4 per cent 1960-70 taxable stock at an issue price of Rs 88. This compared with the five year 6 per cent tax-free loan of but three years prior to it. The type of New Loan had been brought down, in three years, from a short-term six per cent tax-free loan to a long-term four per cent taxable loan. The 4 per cent 1960-70 loan was announced in the last week of May, 1926. The subscription list was to open on June 7. The yield offered by the New Loan was 0.25 per cent less than that forthcoming on the existing securities on the basis of their market quotations on the eve of the Loan's announcement. As soon as the terms were made known, the gilt-edged prices recorded substantial rises all along the line. The 1926 and 1927 six per cent loans, which were eligible for conversion into the New Loan,

shot up to one rupee premium over the maturity values. The gilt-edged market witnessed a spate of buying orders. In this climate, the list opened on June 7. The target was Rs 25 crores. In three hours, the list was closed owing to heavy oversubscription.

There need be no apprehension that a New Loan with terms slightly less favourable than the existing securities will be left high and dry; and that investors

Reserve Funds Strengthened

Government's intention to augment the Reserve Fund of the Reserve Bank by a sum of Rs 75 crores out of the surplus arising from revaluation of the gold held in the Issue Department, as disclosed by the Finance Minister last March, has been put into effect at the end of the Reserve Bank's accounting year, 1956-57. This is revealed in the returns of the central banking institution for July 5. Moreover, the latest returns bear the impress of a number of other transactions that take place as the year closes. These warrant a careful analysis by the student of money market affairs.

The first point to note is the disposition of the Rs 77.74 crores, arising as surplus from the revaluation of gold in the Issue Department. We may recall that Mr T. T. Krishnamachari announced in his interim Budget that the bulk of this would go to augment the Reserve Fund. Since the revaluation, the surplus had been kept in suspense under Other Liabilities in the Banking Department. During the week ended July 5, Rs 75 crores have been transferred from this head to the Reserve Fund, which, as a result, is placed at Rs 80 crores.

Secondly, in terms of the recommendations of the Committee of Direction of the Rural Credit Survey, the Reserve Bank was to set up two funds to be known as National Agricultural Credit (Long Term Operations) Fund and the National Agricultural Credit (Stabilisation) Fund. The Long Term Operations Fund was created in the first week of February 1956, with a transfer from profits of Rs 10 crores. At the end of the Reserve Bank's 1955-56 accounting year, a further transfer of Rs 5 crores was made to the Long Term Operations Fund, and the Stabilisation Fund was credited with an appropriation of Rs 1 crore. All these funds, we may note, have been established in terms of Section 46(a) and 46(b) of the Reserve Bank of India Act. The Reserve Bank statement for July 5

will refuse to "bite". Such diffidence is proved unworthy by the lesson of past experience and by the urge of commonsense. It stands to reason that a New Loan, whose debut is hailed by rising prices in the gilt-edged market, is assured of resounding success, while, conversely, a New Loan, which offers a higher yield than existing securities and, thereby, induces a downward adjustment of prices among quoted Bonds, can be made a success, if at all, only by the adventitious aid of pressure and cajoling. A confidence inspiring New Loan should not need the kind of pressure tactics which had been the normal feature in recent years and whose repercussions are to be seen in depressed values following the closing of the Loan's list.

discloses that there have been fresh transfers to these funds from 1956-57 profits. The Long Term Operations Fund has been marked higher by Rs 5 crores at Rs 20 crores, and the Stabilisation Fund has been increased by Rs 1 crore to Rs 2 crores. So, it can be said that the Reserve Bank's retained profits for 1956-57 work out to Rs 6 crores as against Rs 16 crores in the previous year. For, the transfer to the Reserve Fund is not strictly from profits, but from a surplus consequent to revaluation.

In the third place, the transactions relating to disposition of the balance of the Reserve Bank's profit payable to the Central Government have also taken place. In the statement for July 6, 1956, after provision was made for the two specific funds, Other Liabilities showed a decline from Rs 42.82 crores to Rs 25.16 crores. Again, in the week ended August 24, 1956, Other Liabilities showed a fresh decline from Rs 29.16 crores to Rs 13.18 crores. Ostensibly, then, the Reserve Bank profit payable to the Central Government was effected in two transactions adding up approximately to Rs 27½ crores. But it is known that the profit received from the Reserve Bank by the Central Government in the last Budget year was only Rs 20 crores. We are, thus, to infer that the balance of Rs 7½ crores relates to other year end transactions of the Reserve Bank which it is not possible to analyse in detail. The 57 profits—taken credit for in the Central Government's Budget for 1957-58—appears to be somewhat different. According to the Budget for 1957-58, the Reserve Bank's profit receivable by the Central Government is put down at Rs 30 crores, including Rs 2.74 crores as surplus from the revaluation of gold. In the latest Reserve Bank returns, the decline under Other Liabilities is one of roughly Rs 116 crores to Rs 7.90 crores. Of the decline, Rs 75 crores are accounted for by transfer to the Reserve

Fund; and Rs 6 crores represent retained profits comprised by the two funds. The balance is, thus, Rs 35 crores. It is to be noted that the Reserve Bank profit has been disposed of in its entirety in one tranche in respect of the 1956-57 earnings. Secondly, it would also appear that payment has not been made to the Central Government, but is being kept in suspense. For, Other Deposits show a rise of approximately Rs 30 crores to Rs 149.69 crores, while the Central Government Deposits do not show a substantial change. Two questions must be raised. On the one hand, why has the unusual step been taken of transferring Reserve Bank profits from Other Liabilities to Other Deposits? On the other hand, is the actual payment of the profit to the Central Government to be deferred until the audit of the Reserve Bank's accounts is completed? We have raised these questions, but we will have to wait for the answers until the Reserve Bank figures are more revealing. We would, however, essay an explanation of the increase under Other Deposits. Other Deposits, we may note, include all miscellaneous items such as deposits of quasi-government institutions, provident fund, pension fund, guarantee fund, deposits of the Reserve Bank of India Employees' Co-operative Society and balances of foreign central banks, International Monetary Fund and International Bank for Reconstruction and Development. We wonder whether this transfer has been effected as relating to the possible appropriation by Government of the amount payable to the Reserve Bank Corporation. The provision in this regard in the Budget for 1957-58 is, we may remember, Rs 15 crores.

We may now proceed to the other significant changes in the latest returns of the Reserve Bank. Month early disbursements are reflected in an outgo of Rupee Coin for Rs 0.91 crores and in an increase in Active Notes by Rs 9.32 crores to Rs 1551.49 crores. The Reserve Bank's cash in the till has consequently been run down by Rs 10.23 crores to Rs 29.27 crores.

The Central Government's Deposits show a small rise of Rs 1.38 crores to Rs 53.18 crores, apparently suggesting that the Centre was comfortably placed during the week. On the other hand, the State Governments felt the strain of month early disbursements, with their Deposits declining by Rs 3.78 crores to Rs 4.47 crores. At the same time, they have also increased their borrowings from the Reserve Bank by Rs 2.52 crores. Other Deposits have been marked higher by Rs 29.91 crores for reasons already explained. Similarly, the change under Other Liabilities has also been analysed.

The month early disbursements would appear not greatly to have strained the member banks. For,

Backdoor Nationalisation Plans

By PAUL EINZIG

BRITAIN has enough economic difficulties already from the inflationary wages spiral, the inadequacy of the gold reserve and the depreciation of Government loans. The Labour Party's latest official pronouncement foreshadows developments which are bound to weaken further the country's economy. It is the declared intention of the Socialists, if they should assume power of the next general election, to acquire the control of a very large number of industrial firms through gradually buying up majority holdings in their equities. The funds for this purpose are expected to be secured mainly through the operation of a projected large-scale superannuation scheme to which employers and employees would have to contribute considerable weekly amounts. Instead of investing the reserves of the proposed superannuation fund in trustee stock, the Socialist administration would invest them exclusively in equities. And since the amount involved would be very large, the possibility of the acquisition of Government control over a large number of important firms within a relatively short time cannot be ruled out.

In addition to the nationalisation of entire industries by means of their compulsory acquisition, the next Labour Government will engage in "backdoor nationalisation" on a large scale. There would be no need for Parliament's consent for this kind of nationalisation, beyond the adoption of an Act authorising the proposed superannuation fund to invest its reserves in equities. The electorate, which rejected the Labour Party in 1951 and in 1955 because of the unpopularity of its ideological dogmatism favouring nationalisation for political purposes, will not even be consulted before additional industries will be brought gradually under public ownership. In addition to purchases on the Stock Exchange, the public ownership of private firms is expected to be furthered also through accepting equities in payment of death duties. Executors of large estates will be tempted to avail themselves of this option, because the realisation of large blocks of equities for the purpose of raising funds to pay death duties is at times difficult and tends to cause a fall in the prices of equities.

Although no change of government is likely before 1959 or 1960, when the next general election is due, the anticipation of such backdoor nationalisations is already casting gloom in business circles. There are, it is true, a number of firms whose equity capital is firmly controlled by wealthy families. But in the case of the large majority of the firms the possibility of the Government acquiring control through purchases and acquisitions of equities in payment of death

duties cannot be excluded. The board and executives of most industrial firms have to envisage that possibility. They may feel impelled to adopt defensive measures in case of the advent of a Socialist Government. Some of the possible defensive measures would be apt to react unfavourably on the national economy. The managements of industrial firms will ensure that their equi-

ties should be overvalued rather than undervalued on the Stock Exchange. To that end they will be tempted to increase dividends to the utmost limit of possibility instead of ploughing back into the firm a large part of the profits. This would necessarily mean a decline in capital investment. There would be less expansion and modernisation in industry. Moreover, the evidence of high dividends and Stock Exchange profits through the rise in equity prices would further stimulate wages demands and would further accen-

tuate the inflationary wages spiral. More would be consumed and less invested.

Apart from the decline in the total of capital investment, there would be a change for the worse in the direction in which new capital would tend to flow. It seems reasonable to assume that the Government would confine its investments to industries producing essential goods and services and would avoid firms engaged in luxury trades entertainment, and gambling. It would also have to

(Continued on page 84)

Even the North Pole is getting warmer!

The comforts of life are spreading. And that is good news for everyone.

Rising standards of living are finding their way into the back of beyond and are coming within the reach of people with quite modest means.

Playing a big part in this welcome development is kerosine, a product from petroleum. Thanks to kerosine, light and power have come to the humblest home in the remotest Indian village. Thanks to kerosine, people with slender purses can enjoy good light, good warmth and good cooking, wherever they may live. Kerosine is one of the cheapest, most convenient and most readily

available fuels of which the modern appliance manufacturer is taking full advantage. Well-designed cookers, stoves and heaters are being produced which are completely self-contained and ready for instant use anywhere. Even when alternative fuels are available, kerosine is a valuable supplement. The population of the world increases rapidly. People must be fed, housed and—in colder climates—kept warm. They must all be able to enjoy the good things of life. Kerosine, marketed by Burmah-Shell, is one of the many products helping the good work along in this country.

BURMAH-SHELL... in India's life and part of it

World of Business

Oil Pressure Lamps Industry

In the course of a period of over six years, the oil pressure lamps industry has undergone a complete transformation. From a position of being able to meet only a fraction of the internal demand until as late as 1954, the industry has progressed so far that it is now in a position to meet the entire requirements of the domestic market. And what is more, the industry bids fair to develop an export market in the near future. This

is a measure of the benefits conferred on the industry by the grant of protection in 1950.

The continuance of protection which was granted to the industry in 1950 by the conversion of the revenue duty of 30 per cent ad valorem, on oil pressure lamps of 100 to 400 candle power, into a protective duty of the same amount beyond the first year was made conditional on improvement in the quality of the products turned out by the industry. The industry not only lived up to the expectation, but even qualified for a further period of protection in 1954 on a liberalised basis. For the protective duty was made applicable to all hurricane and hanging types of oil pressure lamps, without any distinction of candle power.

It was the liberalised terms of protection allowed since 1954, which enabled the industry to make bigger strides in improving its production. In 1954, the industry produced only 38589 lamps against a demand for nearly 100,000 while actual rated capacity was as much as 142200 lamps. But since then production had more than doubled, the production in 1956 being 86918 lamps.

The import of lamps had also moved in tune with the internal production trends, being high when internal production was low and small when internal production was high. For whereas in 1953-54 imports were heavy being 117,975 lamps valued at about Rs 47.25 lakhs in 1954-55 imports declined to 47134 lamps valued at Rs 19.83 lakhs and 4090 lamps valued at about 8.39 lakhs in 1955-56. Tightening of import control since 1954 was partly responsible for the diminishing rate of imports.

Having attained self-sufficiency in regard to domestic requirements, the industry must now address

itself to the problem of improving the quality of the products. Complaints in regard to leakage in burners, bad inner cases and mixing tubes and poor finish suggest the scope for further improvement in quality. With the industry facing prospects of an export market, this has become all the more urgent.

Finally, the fact, that internal production is confined to lamps of 300 candle power points to the need for diversification in production.

★

Compulsory Deposit and Gas Companies

Some time ago we had occasion to comment in these columns on the working of the Bombay Gas Company during the past year. We were surprised to find then that in spite of increased production, the company's profit had declined steeply. The reason for this was found to be the fact that the company had no freedom to adjust the selling price of gas in relation to its cost of production. During the past year the major items of expenditure had sizably gone up but the State Government who were the deciding authority had not granted the request of the company for a revision of the selling price of gas. It was evident to us therefore that unless a suitable price was sanctioned the company would find it

extremely difficult to make both ends meet.

The fact that the company has not been included in the categories of companies which have been exempted from the payment of compulsory deposits now threatens to place it in a precarious position. It is strange to find that while electricity undertakings have been considered by Government to be eligible for getting exemption, the gas companies which for all practical purposes are on a par with the undertakings supplying power, have been left out. It should not be difficult for Authority, in case they think that gas companies are not public undertakings to grant exemption to gas companies also. The sub-clause granting exemption to companies incorporated under any special Act of Parliament can be modified to include companies governed by an Act of the State Governments. It may be noted that the Bombay Gas Company is governed by an Act of the Bombay Government, the Gas Act of 1939, which was amended in 1950. Under this Act, the Accounts of the company are subject to audit by the Accountant General and the distribution of gas is controlled by the Bombay Government. It is, however, to be hoped that the omission of the Bombay Gas Company from the categories of companies granted exemption from compulsory deposits, is due to oversight and that the mistake will be rectified.

★

BACKDOOR NATIONALISATION PLANS

(Continued from page 83)

avoid speculative business, because heavy losses through the bankruptcy of firms in which public moneys are invested would give rise to a storm of criticism. The scandal of the loss of £36 million on the groundnut scheme operated by the publicity owned Overseas Food Corporation is still fresh in the minds of most people. Its frequent repetition might be politically disastrous to the Labour Party.

For this reason private capital seeking investment would be inclined to select firms which are not likely to be taken over by the Government. The recipients of increased dividends would invest their savings in firms producing luxuries, or firms in the entertainment or gambling industries, or in highly speculative firms. The essential industries would be starved of private capital. Their requirements would have to be met by the Government. Since by then the rate at which the Government could borrow is likely to be very high, part of the reserves of the superannuation scheme would have to be diverted to the provision of capital for firms controlled by the Government. To the extent to which this is done, the acquisition of additional firms by the Government would have to slow down.

On balance a larger proportion of the nation's capital resources would be used for the less essen-

tial industries, and a smaller proportion for the more essential industries.

The Stock Exchange quotation of equities of firms coveted by the Government would tend to rise as a result of official buying. But once the Government has acquired control many private holders would prefer to realise their holdings, for fear that their interests would not be adequately safeguarded by the majority holder. This, together with a change in dividend policy, would tend to cause a fall in the prices of such equities, involving heavy capital losses to the superannuation fund. The scheme has distinctly unsettling effect. It is liable to interfere with the long-term investment programmes of many private firms. Coming as it does on top of the progressive flight from Government securities, it is an unwelcome complicating factor in an already over-involved situation.

EDITORIAL NOTES

(Continued from page 81)

is unpredictable. For the army, there may be other idols nearer to its heart. Satellite States and even the domestic intelligentsia are more critical. Khrushchev is not sure of his flanks. At the same time, if he is seeking to exorcise the demon of Stalinism, his methods are misleading.

World of Jute

Sharp Rise in Sacking Stocks

The jute markets have ruled quiet during the past week. In the raw jute section prices have declined by nearly one point while in the goods section sentiment is weak with prices displaying a sagging tendency. Apart from the fact that current shipments have been adversely affected by the congestion in the Calcutta port, the publication of the stock figures for June has disclosed that overseas response in June has not been quite satisfactory.

Total jute goods stocks at the end of June at 115,900 tons are 6,500 tons higher than those at the end of the previous month. The largest increase has occurred in the case of sackings stocks which are placed at 64,500 tons—an increase of 6,500 tons. Hessian stocks have gone up by 2,200 tons to 42,600 tons. Stocks of other varieties of goods are however lower by 2,200 tons at 8,800 tons.

The big increase in sacking stocks is presumably due to the reduced offtake by Australia where the situation with regard to the wheat crop had been described as alarming.

The increase in hessian stocks is due to the continued small purchases by consumers who believe that prices will further decline. June-end hessian stocks are the highest in the past twelve months.

It is to be noted, however, that the jute year 1957-58 has begun with comparatively less stocks of jute goods as compared with the previous year. Total stocks at the end of June 1956 stood at 127,000 tons comprising 83,000 tons of sackings, 37,500 tons hessian and 6,500 tons other varieties.

★

An easier trend prevailed in the raw jute section during the past week. Assam Bottoms which was nominally quoted at Rs 32 per maund at the beginning of the week was on offer at Rs 30.25 by close. Conditions were dull on the opening day as mills showed no interest. Though some business was reported done on Friday in Assam and Indian Northern Bottoms at Rs 31 per maund, mills were generally indicating lower prices. Evidently due to lower rates quoted by sellers, mills evinced fair interest in the market on Monday. They were, however, inclined to show preference to the new crop. Moderate business was reported on the day in Assam at Rs 30.50 and Jungli at Rs 28.00 both per maund basis bottoms. Some business was also done in Pakistan N.C. Cuttings at Rs 109 per bale. Rates were marked down by another 25p on Wednesday when mills' interest was again limited to the new crop.

In the course of the day small mill business was reported done in Assam Bottoms at Rs 30.25 per maund August-September delivery.

In the meantime, news from the growing areas indicates that the new crop will be as big, if not bigger, as the last one. In most of the places sowings are reported to have been at a high level. Weather conditions have continued to be favourable. Harvesting is in progress in Assam and the quality and condition of the fibre are reported to be fairly good. It is, however, said that further rainfall would be beneficial in those areas where the crop is maturing.

Though the jute goods market opened the week on a steady note, sentiment turned quiet in subsequent days due to the continued absence of foreign enquiry. The increase in June-end goods stocks also had a depressing effect, and Hessian 40"x10oz Ready declined from Rs 42.97 to Rs 42.37 while B Twills reacted to Rs 114 from Rs 115, a week ago. Report of an allotment of a steamer for sackings to Africa imparted some steadiness to the sacking section on the opening day while Hessians continued to rule subdued. Hessian 40"x10oz Ready was placed at Rs 42.94 with B Twills quoting at Rs 115. In the forward sections, Hessian 40"x10oz August-Sept. was placed at Rs 43.25 and Oct-Dec. at Rs 42.94. B Twills August-Sept. was marked at Rs 115.90 and Oct-Dec. at Rs 115.65.

Friday was a dull day on the market as both buyers and sellers evinced little interest in the proceedings. In the absence of support B Twills ready on Saturday developed a reactionary trend with

the rate pushed down to Rs 114.10. Hessian, however, continued to rule quietly steady and the quotation for 40"x10oz Ready was placed at Rs 42.80.

Rumours of a sharp increase in jute goods stocks as at the end of June depressed sentiment on Monday when 40"x10oz Ready eased to close at Rs 42.66. B Twills Ready on the other hand closed better at Rs 114.48. In the forward positions, Hessian 40"x10oz August-Sept. was done at Rs 42.75 while Oct-Dec was placed at Rs 44.55. In the sacking section B Twills August-Sept was marked at Rs 114.58 with Oct-Dec at Rs 114.20. On Wednesday the announcement that mills stocks of goods at the end of June had disclosed an increase of 6,500 tons had little effect on sentiment presumably because the news had already been discounted. The market closed the week on a quiet undertone as follows: Hessian 40"x10oz Ready Rs 42.37, August-Sept Rs 42.32 and Oct-Dec Rs 42.20; B Twills Ready Rs 114.10 August-Sept Rs 114.10 and Oct-Dec Rs 114.

The following table shows price trends during the week:

Hessian:	Week's Opening	Week's Closing
40" x 10 oz.	Rs.	Rs.
Ready	42.94	42.37
August-Sept.	43.25	42.32
October-Dec.	42.94	42.20
40" x 8 oz.	34.80	34.25
40" x 7 1/2 oz.	32.50	32.00
B. Twills—		
Ready	115.00	114.10
August-Sept.	115.90	114.10
October-Dec.	115.65	114.00
Hy. Cees Green	117.25	116.00
Cornacks	118.00	116.00
Cubans	143.25	142.00
A. Twills	139.75	139.50
L. Twills	128.25	127.25
D. W. Flour	132.50	131.25
Sugar Bags	131.00	129.75

were buyers at 22 1/2 nP with sellers at 23 nP per pound. In the Cochin market, offerings were 900,000 pounds. Quality continued to show improvement amongst the medium and high-grown teas. Some low-grown were, however, rather fibrous. There was a strong general demand from both exporters and internal buyers. Prices for low-grown, low-medium and medium teas were irregularly 5 to 10 nP per pound dearer.

Buyers showed slightly more interest in Fannings grades. Best liquoring high-grown teas met with keen competition and considerable advances were registered. Whole Leaf grades met with fair support, but prices were barely steady. Following rates were quoted:—Plain BP Rs 1.55; Low-Medium BOP Rs 1.60; Medium BOP Rs 1.65 to Rs 1.70; Good BOP Rs 2.20; and well-made Black Leaf OP Rs 2.60 to Rs 2.65. About 7,000,000 pounds were offered in the Colombo market. There was a good general demand. Nuwara Eliya teas were in strong demand for the full selection on offer, Broken grades being dearer following quality. Corresponding Leaf grades were substantially dearer. Thin liquoring Broken

(Continued on page 108)

World of Tea

Buoyant Tone in Auctions

TEA prices at the auctions, during the past three weeks, have been getting dearer, being helped by the buoyancy at Mincing Lane, London, where the average price of all teas has moved up to the 44d per pound basis. Even so, it still gives blenders plenty of room to pay the higher prices for the good invoices.

In addition, stocks in London, including those about to be landed, have also been steadily declining by nearly 16.7 million pounds since about mid-May. Although the quantity of tea afloat to the UK from the main producing countries is admittedly higher at about 21.50 million pounds for the week ended June 28 against about 16.10 million pounds a week earlier, it is substantially lower than it was some time ago.

Besides, official rejection of most recommendations made by the Plantation Inquiry Commission is bullishly interpreted. Despite the optimism, there is an

undercurrent of uncertainty about the future outlook. It is feared in certain circles that, as the season advances, quality may deteriorate in the face of over-supply. Knowledgeable circles aver that, unless the crop is regulated, Common grades in particular may have to be sold at a loss.

At the Export Sale, held in Calcutta this week, offerings were 20,158 packages. There was a strong and general demand. CTC Assams were again well supported and the brighter liquoring kinds were sold at dearer rates. There was again keen interest paid in the Whole Leaf grades, which were fully firm and sometimes dearer. Tippy sorts continued to meet with good enquiry and flavoury Darjeelings were sold well.

Broken and Fannings of all descriptions were sold well at firm to dearer prices, while the brighter liquoring teas were 5 to 10 nP per

★

Free enterprising though he is, Mr Fairless emphasises that, certainly, he does not maintain that "the US should give help only to countries with systems of government identical to that of the United States." On the other hand "We recognise there are various paths by which nations can achieve political and economic freedom." This last is the most hopeful, auspicious and heartening sentiment to have emanated from the US in quite some time. After all, what sense is there in helping only those that are already converted? And if democracy is innate in every individual (as it certainly is), then why should there be such an all-mighty crusade at selling it? The American intention is neither more nor less than to keep the free world strong enough to withstand Communist aggression, on the military plane, and Communist blarney, on the economic plane. Enough has been said on the former; but, in the case of the latter, it is worth repeating that there is more to be gained (from the American point of view) from strengthening a country whose government is not identical with the American system: for, the American reasoning would suggest that this type of government is most susceptible to Communist inducements. And this is where I am sorry to say, Mr Fairless would appear to have been somewhat confused by the fact of military aid. As he sees it, a higher priority "should be given to those countries which have joined in the world's collective security system." While he hedges this statement by saying that "we do not recom-

[July 13, 1957]

cutting off aid to a country which does not join the collective security system", his conclusion is that a country which has joined the system "should not be put in a secondary position to a country which has not joined". Unless the American Government realise that economic aid must not be mixed up with military assistance, I am afraid that US foreign policy will be vitiated by considerations that are not germane to the issue. For, in effect, what Mr Fairless has done is to weigh down economic aid with strings. If I have said earlier that loans or charity is doubly

curst, then, economic aid with strings attached falls into the same category.

*

The China experience has proved that dollars alone—call it foreign aid, if you will—can never help a country to get over its economic problems. Mr Fairless has made the fine point that there is a consideration other than the US ability to make such colossal monies available; as he puts it, "There is a real question whether the recipient can afford to accept them, without stunting his own economic

initiative and efficiency." An example of how foreign aid has been unavailing is provided by the cement that, received from Russia, went to rot on the Rangoon quay-side. What I have just said is, of course, slightly different from what Mr Fairless intends to say. Foreign aid can never take the place of the internal determination to achieve progress. Foreign aid can help only when it is superimposed upon such striving for benefit on the part of the recipient country. Perhaps, after all, this is what Mr Fairless had in mind. For, if the question is one of the danger

to the recipient's economic initiative and efficiency, it is tantamount to saying that that country does not have a sufficiency of the innate urge for self development; and, I may repeat, foreign aid can never be a substitute for a self ameliorative attitude and resoluteness.

*

The Life article comes to its conclusion in stating that America "must abandon the false hope that collective security costs are temporary". The reason is, economic development is a gradual process; it is essentially a long range endeavour. Mr Fairless suggests that, if it is soundly based, "it will help to bring the recipient countries more completely into the orbit of free society, to expand the economic activity of the free world, and to increase the capability of our allies to carry their own defence costs". All of this is unexceptionable. I am greatly tempted, at this stage, to introduce an analysis of the extent to which India would fulfil the criteria upon which US aid is dispensed. This, however, is scarcely necessary, since there is good reason to assert that America has shown a wideawake awareness of the manner of aid that India should get. In particular, emphasis has been rightly placed upon community development projects as a field in which cooperation is most fruitful between the two countries. There is no sense, as Mr Fairless has pointed out, in "supplying labour saving devices, such as those used in the most modern continuous strip steel mill, to a country where the major problem still is unemployment of millions of their population". Similarly, the agreements under Public Law 480 are as useful to India as they are to America. In a word, aid that helps both is the best aid.

*

Mr Fairless has said much the same thing in his article in Look. However, he has increased his emphasis on long range economic development which is to "make our allies more self-sufficient and thus gradually reduce the need for American aid". The second important conclusion is "the distasteful but inescapable fact that the US is going to have to keep on spending billions of dollars for a long time to come." Thirdly, he has remarked that not only must America give up any hope of the foreign aid being temporary, but that "even to act as if we thought otherwise would undermine our allies' determination to stay in the fight against the forces of Communism". How soon these ideas of the Fairless Committee will find expression in America's foreign aid policy, remains to be seen. But there is the distinct hope for the free world, and for India in particular, that we will soon have from America a newly oriented foreign aid policy which will more sharply accentuate assistance for long range economic development.

The search is on...

by Adipocere

(Pronounced 'adi-po-saire')

I am all over the world, but hidden well inside the earth's crust. They keep on looking for my various forms, particularly petroleum...and in fact, at this very moment, a search is going on in India. In West Bengal, STANVAC are trying to pin-point me in an area of 10,000 square miles. They have been at it for 3 years and their top geologists and scientists have brought along a whole stream of complicated instruments and equipment and are spending enormous sums of money (I overheard, way above me, some talk of their having spent fifteen crores of rupees already). They think they'll find me!

I never went to College, but years and years of experience with these tough oil-men crawling all over has taught me the methods they use to trap me. Broadly speaking, surveys are geological and geophysical. The first is like X-raying the earth below, and the second is an instrumental and scientific method of locating my actual hide-out. Such terms as Seismic, Gravimetric, Magnometric and other jaw-breaking words cover this process and mean a whole lot of highly complex and specialised instruments.

But I am still in hiding and all I say is "Come and get me, if you can!"

Gateway Gossip

Stock Exchange Recognition

ATTENTION was again riveted on the future working of stock exchanges by the annual general meeting held last week of the Indian Stock Exchange Limited. The matter which has come to the fore for renewed public discussion is the question of the recognition of stock exchanges as laid down under the Securities Contracts (Regulation) Act. All the complications arise because, in this Gateway City, there is more than one stock exchange which can justifiably claim to act as a clearing house for legitimate investment transactions. I understand that, to some extent, this is also true of the eastern commercial capital. But, whereas there is more than one stock exchange in these two hives of investment activity, it would appear to be Government policy to accord recognition to only one stock exchange in a single notified area. So, the problem arises as to the future in store for the stock exchanges other than those which will receive recognition, as well as the future of those gainfully employed in the markets which, as a result of the Act, may have to close down.

I am afraid the debate has been somewhat bitter. While it is not my intention, while it is not the purpose of this despatch, to fortify the case of the underdog, I think that a dispassionate review of the basic considerations is essential if the case of the small exchanges is not to go by default. As I say, I hold no brief for Bombay's Indian Stock Exchange or Calcutta's Bengal Stock Exchange. These are the two markets which are likely to be immediately and adversely affected by the relevant provisions of the Securities Act. But let me spend no more time and space in words of introduction; let us straightaway proceed to the facts of the situation.

Section 3 of the Securities Contracts (Regulation) Act lays down that, as from a date to be notified, transactions in shares can be conducted only by a recognised stock exchange; and every market conducting such business is required to apply to Government for recognition in this behalf.

Section 4 holds that Government will accord such recognition if they are satisfied that, firstly the rules and bye-laws of a stock exchange are in conformity with such conditions as may be prescribed with a view to ensure fair dealing and to protect investors; that, secondly, the stock exchange is willing to comply with any other conditions that Government may stipulate; and that, thirdly, it would be in

the interest of the trade and also in the public interest to grant recognition to the stock exchange seeking recognition. Inferentially, it is clear that the Act more or less envisages automatic recognition being accorded to any stock exchange which fulfils these conditions. Indeed, when Sir Chintaman Deshmukh was introducing the legislation in his capacity as Finance Minister, he gave the assurance that persons engaged in legitimate stock exchange activity would not be dislodged. However, although the Act does not explicitly lay down that recognition will be restricted to one stock exchange in a notified area, it would appear that Government have since decided that it would be desirable to restrict recognition in this manner. This was stated by Mr M. C. Shah, when he said that it would be Government's earnest effort to see that stock exchanges working in a notified area were amalgamated into one. Furthermore, since the promulgation of the Act, stock exchange authorities have been particularly active here; and, in the course of consultations with Government representatives, the Government's intention to restrict recognition has been clearly brought out.

It seems to me that the smaller and less powerful stock exchanges are reconciled to the fact that they will be going out of business. This would explain the emphasis laid on amalgamation in the memorandum prepared and submitted by the Indian Stock Exchange Limited some time ago. Sir Chunilal B. Mehta has very correctly realised that, in order to vouchsafe a continuance of gainful employment for such of those persons as are members of the stock exchange of which he is the president, he had to concentrate his constructive efforts upon the drawing up of a scheme in which the older and more powerful stock exchange in the City would absorb the brokers and other concerned interests in its organisation. To this end, the memorandum pithily describes the various mergers and amalgamations and arrangements that have taken place in various other forward markets wherein, in recent years, it became statutorily necessary for one alone of the exchanges to be accorded recognition. For example, in bullion, cotton, yarn, oils and oilseeds, and metals, the Gateway City has witnessed a consolidation of the existing exchanges. In his address at the annual general meeting of the Indian Stock Exchange Limited, Sir Chunilal points out that the

salient features of these amalgamations were that:

"firstly, all the members of the different trade bodies in the same trade, who were interested, were afforded an opportunity to become members of the main or the new body; secondly, where any members of the trade, who desired but were financially unable to comply with the terms prescribed for membership, they were taken over as Associate Members on easier terms."

I should explain the reason for this insistence upon past amalgamations successfully carried out. As soon as it became known that Government were thinking in terms of a single stock exchange in a notified area, I understand that Sir Chunilal lost no time in taking up the initiative for preliminary consultations and discussions with the Native Stock and Share Brokers Association. The burden of these discussions was that a working plan should be evolved for some sort of Associate Membership being made available to the members of the Indian Stock Exchange Limited by the Native Stock and Share Brokers Association. Unfortunately, these discussions did not prove fruitful.

The difficulty, of course, lies in the disparate strength of the two entities to be merged. For example, a card on the bigger stock exchange today costs anything like Rs 50,000. This is far beyond the capacity of those engaged in the Indian Stock Exchange. This is the stumbling block which has proved an obstacle to all these discussions. But I would remind the reader of Sir Chintaman's assurance that nobody engaged in legitimate business would be dislodged. It seems to me that Sir Chunilal, having been bogged down in the across the table talks with the Native Share and Stock Brokers Association, now feels that Government intervention and help alone can bring about the amalgamation he desires. Government, I think, have accepted the principle that members of the smaller stock exchanges should not be deprived of their vocation and should, therefore, be absorbed in the larger exchange. Perhaps, Government would help to effect this sort of merger by means of a high powered arbitration committee or some other similar procedure.

The case of the bigger stock exchanges may now be briefly examined. It is undeniable that the bulk of genuine investment business is transacted at the bigger exchanges. Business in the smaller exchanges is usually confined to a selected number of scrips. Again, the business has usually tended to be for forward transac-

tions. So, though not uttered publicly, the private whisper is that the smaller exchanges are more interested in speculative transactions than as acting as brokers. Then, there is the plea that the bigger stock exchanges are already numerically large in their members, and that the quantum of investment business will not allow of it being distributed over the larger number of members that would be postulated by a scheme of merger. You can almost say that it is the unspoken contention of the bigger stock exchanges that the continued existence of the smaller stock exchanges is not conducive to the public interest or to the interest of the trade as required by Section 4 of the Act.

I think that the smaller stock exchanges will not seriously question any statement that their activities tend to be concentrated on a smaller number of scrips. But where they are likely to raise an objection is to the charge that such a position inevitably means that their activities are largely speculative. Indeed, the evidence that they adduce to the contrary lies in figures relating to the stamp duty incurred in transactions on the exchange. As Sir Chunilal pointed out, the increasing acti-

Credit for Small Industries

With the importance attached to the development of village industries, as tending to activate the village economy, and promote employment in the rural areas, the problem of their development in the decentralised sector has been thrown into bold relief. While the importance of such factors as marketing and raw materials as determining the tempo of development cannot be gainsaid, availability of adequate and timely finance has much to do with the progress made by the village industries. This calls for efficient institutions for channelling credit to the millions of small units which are dispersed all over the country.

In the absence of previous experience on the basis of which a uniform pattern could be worked out, the problem is sought to be solved on co-operative lines. Over 25 representatives of State Apex Co-operative Banks from all over the country met in conference in Bombay to discuss the credit facilities to industrial co-operatives of artisans engaged in Khadi and Village industries production.

Speaking at the conference Mr V. L. Mehta, Chairman of the Khadi and Village Industries Commission pointed out, that the problem before the co-operatives was not one of assuming risk in financing the operations of the small producers, since the provision of funds was a matter of the commission, but one of proper distribution of the funds placed at their disposal. Explaining the main problems of such industries as ghani oil pressing industry, paddy husking etc., Mr Mehta pointed out the necessity for a new criterion in the administration of credit in the field of village industries.

Presiding over the conference Mr B. Venkatappiah, Deputy Governor of the Reserve Bank of India, said that village industries development programmes sought to strengthen the co-operative movement in the country and the co-operative agency at all levels. But at the same time, he wanted the co-operative banks to shed their conservative attitude and instead adopt a dynamic approach to the problem of credit.

The organisational and credit problems of village industries with particular reference to hand-pounding of rice and village oil industries were also discussed at a conference of the Co-operative Advisory Committee of the Khadi and Village Industries Commission. Mr D. A. Shaw Chairman of the Committee suggested a

federation of primary societies on a district or regional level with the partnership of the Government or the Khadi and Village Industries Commission which would provide as much share capital as may be required for enabling the Federation to borrow adequate amounts for construction of go-downs and purchase of paddy.

★

Renewed Apprehensions

Speaking at the quarterly general meeting of the Indian Merchants Chamber, Mr Naval H. Tata has made a fervent appeal to the Government to phase the Plan in a realistic manner. The critical position in respect of the country's foreign exchange resources and the over-strained state of the internal economy have made it imperative that urgent consideration is given to a rephrasing of the Plan. As the Union Finance Minister himself has indicated that some changes may become necessary in certain sectors, the case for a rational readjustment of priorities need not be overemphasised. Such a course will enable the spreading of the financial burden on the tax-payers without administering undue shocks.

Mr Tata has revealed that the business community in the country still remain doubtful about being allowed to discharge their responsibilities under the private sector. Such an apprehension seems to

Gateway Notes

have stemmed from a growing feeling among them that the system of direct taxation is a veiled attempt to reduce the scope, importance and the freedom of the private sector. With direct taxation siphoning off to the public sector a major portion of the available funds, the flow of capital into productive channels of industrial activity in the private sector will be intercepted. The progress of industry is also seriously jeopardised by the ever increasing labour costs. Mr Tata points out that the increasing burden "will not only seriously upset the Plan targets and calculations but will also accentuate the inflationary situation".

It is unfortunate that the business community are finding it rather difficult to believe despite repeated assurances from Authority, that the private sector has been given a vital role in the development of the country. The renewed apprehensions in this regard seem to have sprung mainly from the entirely new taxation proposals that have found a place in the latest Central budget. Mr G. P. Kapadia, Vice-president of the chamber, has pointed out that the wealth tax will make capital shy and will serve to act as a serious disincentive to the very existence of corporate undertakings in the country. It is, however, to be noted that the new taxes are to go to select committees before Parliament is to be asked to approve them. It is to be hoped that Authority will take due note of the apprehensions of the business community and take early steps to dispel lingering doubts.

GATEWAY MARKETS

Trading in New Crop Oilseeds

THE Board of the Bombay Oilseeds and Oils Exchange has decided to permit forward trading in new crop Oilseeds with effect from the 18th July. No change in the basis of trading has been effected. Business in Groundnuts will be done for 1958 February delivery; Castor seeds for May and Cottonseeds for February. As for Linseed, decision has been deferred in view of certain charges, which are to be effected.

With the scheduled start of the new contracts in less than a week, there has been considerable speculation in the market about the prices at which the distant positions will open. It is felt that the new delivery for groundnut will begin at a discount of about Rs 15 per candy over the current contract. The May 1958 delivery in castorseed is expected to com-

mence at a discount of Rs 10 to Rs 12, while the discount in the case of cottonseed February contract is likely to be Rs 5 or Rs 6.

The possibility of a comparatively heavy discount for the distant position in groundnut is attributed to the fact that the present as well as the forward prices of the commodity are much higher than the level usual at this time of the year on account of the strong statistical position. It is, however, admitted that the discounts, prevailing at the time of the opening of the new contracts, will be considerably influenced by the behaviour of the market in the next few days.

Meanwhile, prices in the futures section showed a sharp decline due to favourable weather reports, weakness in ready section, heavy liquidation by Gujarat operators

and speculative selling by local merchants. In the case of the Castor seeds, prices sagged under heavy liquidation, prompted by rumours that some of the recent export contracts with Russia had not finalised. September delivery opened at Rs 166.75 and declined to Rs 162.50 at the close. Ready was quoted at Rs 32.50 and Castor Oil, commercial quality, at Rs 18.50.

During the first half of this year, exports of castor oil from Bombay have amounted to about 21,500 tons; linseed oil to 4,300 tons; cottonseed oil to 600 tons and kardsed oil to 362 tons.

In the Groundnut section, August delivery opened at Rs 117.75 and, after improving to Rs 177.87, receded at the close to Rs 175.27. Ready bold variety was quoted at Rs 36.50 and Groundnut Oil at Rs 20.25.

Trading in the Linseed section was featureless. September delivery started at Rs 28.87 to finish at Rs 28.56. Cottonseed September began at Rs 108.75 and ended Linseed was quoted at Rs 28; Lin at Rs 108. In the ready section, seed Oil at Rs 14.62; Kardi at Rs 21.87 and Nigerseed at Rs 27.75.

The Government announcement with regard to the export quota of 5,000 tons each for kardi oil and niger oil for the July-December period failed to enthuse the operators in Bombay. It is felt that the grant of quotas has no practical importance in the present circumstances, since supplies of kardi oil and niger oil are not sufficiently large, both at the Ports and in the producing areas, to facilitate exports. Besides, the current domestic rates for both oils are higher than the overseas prices by a wide margin of nearly £30 per ton.

★

Gold & Silver

Prices on the Bombay Bullion Exchange showed a mixed trend. Activity was restricted. Gold commenced with appreciable gains, being induced by reports of seizure of contraband supply. Arrivals amounted to 5,000 tolas against an offtake of 3,000 tolas. Unrefined metal receipts totalled 7,000 tolas. Gold Ashad delivery closed at Rs 105.62 and Shravan delivery at Rs 105.34—the highest levels touched being Rs 105.72 and Rs 105.34 respectively. Ready hovered narrowly around Rs 105.44, while Sovereign was quoted at Rs 70.

Sentiment in the Silver section remained, however, subdued. Heavy supply of unrefined silver and re-

(Continued on page 108)

Bombay Review

World of Cotton

Impressive Recovery

OPENING lower on reports of heavy showers from leading cotton tracts, futures made an impressive rally towards the close on buying by jobbers and spot houses. The initial weakness of the market was due to selling pressure, induced by the news of good rains from Berar, Gujarat and Madhya Pradesh. Absence of buying even at lower levels kept sentiment weak for most part of the week. Rates, however, rebounded as leading spot houses supported the market. Preponderance of jobbing transactions further lifted up rates, with the result, the market closed at the week's best levels.

Knowledgeable circles point out that the delay in sowings, adverse weather conditions in some cotton areas and the improved trend in shares and commodities have helped the rising trend. Moreover, the delay in the marketing season has compelled the textile industry to review their purchase policy. Many mills now fear a shortage of good cotton between September and December this year and have, therefore, entered the spot market to augment their stocks.

If weather conditions favour, the indigenous crop next season will be in the neighbourhood of 50 lakh bales, only about 2 lakh bales higher than the current season. This, by itself, will not ease the supply position. While the carry-over for the next season is bound to decline to 15 lakh bales, the mill consumption of indigenous varieties is expected to show a further rise to about 4 lakh bales per month next season. The cotton supply position is, therefore, expected to be tight unless the Government propose to import more cotton.

×

FUTURES MARKET

In the futures section, ICC Jharilla March 1958, after showing a sharp rise to Rs 722, eased off at the close to Rs 715.25 due to profit-taking on reports of favourable weather conditions.

×

SPOT MARKET

The Spot market continued to rule steady. Stockists were reluctant to part with their good-stapled varieties save at their own prices. Traders are now watching carefully weather reports which indicate that sowings have been completed in Broach, Surat and Khandesh districts and will soon be completed in Khandwa circle of Madhya Pradesh and Moglai area of Bombay State.

Activity on the import and export fronts was limited. In regard to imports, the emphasis has now shifted from sterling to dollar area cottons. The shortage of sterling, the availability of the US cotton on a loan basis and the comparative cheapness of the American cotton have contributed to this change. On the export side, traders have been expecting extension of the shipping period of the licences, the validity of which has expired on June 30.

Following rates were quoted:—Amravati Yevatmahal 0394 Rs 921 to Rs 935; Basim Rs 765; Harij Kalyan Rs 845 and Malkapur Rs 835.

×

STATISTICS

Exports by rail from 1st September 1956 to 4th July 1957 were 369,988 bales. Estimated mill consumption in Bombay, during the same period, was 1,129,416 bales as against 1,060,330 bales in the corresponding period of last season. Stocks of raw cotton held by exporters, dealers and mills, on the 4th July 1957, were 598,000 bales as compared to 667,280 bales on the corresponding date of last year.

×

NEW YORK COTTON MARKET

In the New York cotton futures market, prices remained very firm, particularly in the distant deliveries. US Congress is unlikely to make any change in the farm legislation in the short span left in this session. Any new policy is likely to be shelved until next January. With the Soil Bank plan in operation next season, the general reduction in surpluses through CCC sales and the possibility of reduced production this season through adverse weather, the future prospects will appear to be for a return to a single price trading system. July delivery was quoted at 35.48 cents per pound.

×

LIVERPOOL COTTON MARKET

The Liverpool cotton futures market ruled rather quiet. Operators were inclined to await United States acreage statement before entering into new commitments. Values generally drifted lower on long liquidation and scattered hedge selling. Near-month delivery was, however, sustained by further transfer of hedges into the more forward deliveries.

×

CLOTH AND PIECEGOODS

Conditions in the Bombay Piecegoods market remained steady.

Although there was an improved demand from some of the consuming centres, the actual business was not large. It was felt that, for a brief period, the offtake would remain at a low ebb.

It is expected that activity will broaden after the completion of the formalities of registration, etc., by dealers in respect of the inter-State Sales Tax enactment, which has come into force since the beginning of the month.

Mills are reported to be booking business for forward delivery, while some of them have booked business up to September. Supplies in the South Indian centres are reported to be inadequate.

On the export front, conditions remained more or less unchanged. Ceylon booked only small lots to meet immediate requirements, while Burma showed some interest in superior qualities of printed voiles, etc. Inquiries from West Africa were reported to be slack, while some enquiries were reported to have been received from Sudan. Despite fair enquiries from the UK, actual business materialising was small.

Much importance is now attached to the conference of the cotton textile industry and trade, to be held in Bombay on July 14 under the auspices of the Federation of

British Savoire Faire

THE sonorous platitudes of the final communiqué of the Commonwealth Prime Ministers, who conferred in London last week, are the end product of frank and uninhibited exchange of views for over a week. These views, expressed in discussion, must have differed from one another both in substance and emphasis. But the agreed communiqué setting forth the large area of agreement is in no sense a document that tries to mislead the world into reading a greater unanimity than actually exists. In the first place, the spokesmen of different countries have indicated in other contexts their views in more detailed and precise terms on the various problems dealt with by the communiqué. So, none is likely to be deceived by this rendering of the greater common measure of agreements. Secondly, in a company as motley as the Commonwealth which contains India, Pakistan and South Africa, whose difference even on matters that are not in direct dispute interest is so notorious, no one seriously expects basic identity on all aspects of world problems. Thirdly, even while the agreed communiqué is issued, information on drafting changes is obligingly furnished, presumably with the abatement of what the newspapers referred to as "conference sources". Thus, it is reported that approving references to the Eisenhower Doctrine on the Middle East and a "blistering attack" on Russian intervention in the Hungarian rising of October last were both removed in the final draft at the instance of Mr. Nehru. Even without this gloss forthcoming, it should have been no difficult matter to guess that, on Hungary as on the Middle East, the participating Prime Ministers had views that differed in emphasis. And, with the information now given, the communiqué itself gets annotated by a glimpse of the exact shade of differences that preceded the final statement.

But, as has only too often and too tritely been repeated, the value of the Commonwealth does not consist so much in agreement on specific issues, as in a recognisable community of political ideas based on historical association of the participants. Its essence, unlike that of the East European community, (at least until the other day) was not complete unanimity, but a resilient accommodativeness to differing points of views—sometimes diametrically opposed views. From this point of view, the first achievement of this year's conference was that it was held at all. (Urge by some obscure fear of "a situation," some, even in Britain, notably The Times, suggested the postponement of the conference). Considering the

things that were said by the younger members of the family about Great Britain in the months following the Suez adventure, some wondered whether it will be able to summon up the necessary aplomb to preside over this "family gathering" as though nothing had happened.

It seems to me that the Times must be truly losing its grip, since its panic at the prospect of this encounter was "un-British". For as long as one cares to remember, heads of families in the mythology of British national life have never flinched at "family councils". Indeed, family councils have been summoned only to deal with unpleasant situations like the younger son threatening to run away with the chorus girl or the widower head of the household wanting to marry the housekeeper. And, sure enough, when the conference met, the savoire faire that has been the result of centuries of political training was equal to the occasion. Of course, Suez was discussed, but there were no distressing "scenes". Call it British hypocrisy, or British maturity, this ability to glide over an awkwardness like this is a remarkable social and political asset. To have even momentarily doubted Britain's equality to the occasion is the surest indication that The Times has lost its faith in "Brittishry".

The second remarkable and entirely pleasing thing about this year's conference was the presence of Ghana as a new member. There was, as far as one can see, no trace of condescension in the happiness of the members of the Commonwealth in welcoming this new member. Even the South African representative so far forget his philosophy of "apartness" as to meet Mr. Nkrumah separately and discuss problems that faced Africa as a whole. Mr. Nkrumah himself was very much at home in the Commonwealth atmosphere. It is the natural ease and unselfconscious friendliness with which the members of the Commonwealth meet and talk about common problems that make the Commonwealth such a force for fostering racial and political equality. Equally pleasing was the decision of the Commonwealth to welcome Malaya into its fold when the constitutional changes are completed.

Another element of piquancy added to the occasion was the change of Government in Canada which necessitated the replacement at the conference table of Monsieur St. Laurent by Mr. Diefenbaker. There was some doubt and even uneasiness on the question whether the new Government would pursue the same foreign policy as its prede-

cessor or whether it would have been unwelcome, particularly to India, who has in the past found in Canada an understanding "fellow conspirator" on behalf of peace and sanity. But such fears about the lack of continuity in Canada's foreign policy have been proved to have been unfounded by Mr. Diefenbaker's positive contribution to the conference. One of his suggestions was the holding of another Ottawa conference next September for discussing economic problems of common interest to the members of the Commonwealth. Though, as far as India is concerned, its problems in this regard are more immediate, the conference should offer opportunity for discussing problems of a long range character.

Reading between the lines of the communiqué, it should be possible, as I said, to see differences of emphasis and attitudes among the various members. For instance, in the pious expression of hope for constructive action to strengthen and improve the United Nations as an instrument of preserving peace is to be seen the shadow of Britain's heartsearching last autumn whether or not to flout the United Nations. We can also dimly perceive the quietus officially given to dark hints that Britain feels that the UN General Assembly is dominated by Asian and African representatives who do not always "play the game".

On disarmament, again, the recognition that even limited agreement is a gain is the result of uneasiness that the initiative over the question of disarmament is constantly slipping into Russian hands and the West is, all the time, finding itself cast in the role of a person who is merely picking holes. The blandness of the final conclusion of the Prime Ministers is deceptively camouflaging the energetic discussion on the divided counsel among the Western powers, and the unreasonableness of allowing suspicion of Russian motives to come to terms even on limited questions.

Any embarrassment that might have risen on the discussion of the Middle East must have been quickly dissipated by the recognition that the Suez is a closed chapter of a horrible error of judgment and that Britain has for all practical purposes abandoned the policy on which it was based. Something like the status quo ante has now been restored in that area. This is so especially since Shepilov's final discrediting in Moscow. In other words, the competitive wooing of the Middle East is being abandoned by Russia also. The logical extension of this reading would imply the abandonment of the "Eisenhower doctrine", but some members of the Commonwealth might

feel that it would be too early to come to final conclusions about Russian intentions in the Middle East. But on the need for competitiveness in economical uplift of the Middle East, there can hardly be any difference of opinion. Thus it is that the final communiqué states the unanimous view of the conference powers that the foundation of stability in the Middle East must be economic and social progress. On a short term basis, the need for reducing tension between the Arabs and the Israelis has been emphasised.

As far as India is concerned, this conference was of great value. In the first place, British opinion on India has been somewhat unfriendly because of our energetic denunciation of the Suez adventure.

The Indian attitude of Britain has likewise stiffened following Britain's deliberate attempt to queer the pitch of the Kashmir dispute at the United Nations. Circles usually friendly to Britain found another cause for anger in the continuation of nuclear tests by Britain despite protests. In the circumstances, Mr. Nehru's presence in London and his dispassionate assessment of the basis of Indo-British relations should go a long way in restoring a sense of proportion to the discussion of Indo-British relations and membership of the Commonwealth. Secondly, according to reports, Mr. Nehru has cleared a lot of misunderstanding in certain quarters (some of them in a position to influence opinion) about the extent of real difficulties that the Second Plan is encountering. In this connection, the tendentious propaganda in some quarters that India is putting needless strain on the sterling area's exchange and economic resources needs to be taken note of. According to reports, the British Government do not share this view. Moreover, they have taken a sympathetic view of India's Second Plan's needs and will be willing to consider concrete proposals for helping India with credit of a long term character.

One final comment about the activities of our neighbour Pakistan. It would seem that the one all-consuming desire of Pakistan's representatives is to discredit India on every conceivable international occasion. This is an endeavour to which its Prime Minister himself has set the tone. With such persistent unfriendliness on Pakistan's part, nothing useful can be expected out of the meeting of Mr. Suhrawardy, Mr. Macmillan and Mr. Nehru. The surprising thing about the "surprise meeting" was that Mr. Macmillan thought that the attempt to bring the two Prime Ministers together was worth while at all.

Madhya Pradesh Budget

The Budget for the year 1957-58 presented to the Madhya Pradesh Vidhan Sabha, by the State Finance Minister, Mr. Mishri Lal Ganwal, like that for most other States with the solitary exception of Kerala, reveals a revenue deficit of Rs 348.40 lakhs. Against an estimated expenditure of Rs 5436.94 lakhs the estimated revenue for the year stands only at Rs 5088.54 lakhs.

The deficit budget, according to the Finance Minister, is no indication of the unhappy financial position of the State, being more a reflection of the financial burdens imposed on the state by the reorganisation scheme, such as expenditure in connection with shifting the capital to a new place at Bhopal and the admission of two Part 'C' deficit States, into the new State. The Finance Minister saw in this adequate reason not to be obsessed with the extent of deficit which he considered reasonable.

In the context of the State reorganisation as a result of which new territories had been added to the State, it is but natural that rationalisation of tax structure should be uppermost in the mind of the Finance Minister. Such rationalisation has been proposed in respect of stamp duties, court fees, registration fees, electricity duties, entertainment tax, professional tax, tax on motor vehicles and sales tax. The proposed rationalisation is expected to bring an additional revenue of about Rs 1.50 crores in the current year.

Though no new taxes have been announced, a Committee has been set up by the Government to examine various recommendations made by the Taxation Inquiry Commission for raising funds for financing the Second Plan. Mr. Ganwal also expressed the hope that the Finance Commission would make such recommendations in regard to allocation of shares from central taxes and grant-in-aid as would meet the needs of the new Madhya Pradesh.

At the same time, drive for economy in non-plan sector has also been kept in view, and toward this two committees have been appointed, one to suggest ways and means of reducing expenditure in the non-plan sector and the other to assess the targets achieved in respect of the Plan expenditure. The total expenditure envisaged in the budget on Second Plan Schemes amounts to Rs 35,566.91 lakhs while the total for the non-plan sector including the committed ex-

penditure of the First Five-Year Plan is Rs 5470.60 lakhs.

Rationalisation without Retrenchment

At a Press Conference in Calcutta, the Union Labour Minister said that it was possible to have rationalisation without retrenchment. When expansion plans are to be fulfilled, and surplus labour could thus be absorbed, the replacement of old by up-to-date types of machinery need not lead to the displacement of labour. In such cases, Mr. Gulzarilal Nanda's contention is valid.

But normally, technological improvements are sought for, just because they would call for a reduced volume of net manual employment. In the cotton textile and jute industries, rationalisation is being held up, primarily because of its consequences in terms of unemployment of part of the labour involved. The

link between the two is too obvious to be missed. The Government themselves have recently suggested previous agreement between the workers and managements, as a condition of rationalisation.

It is, therefore, illusory to think of rationalisation without some workers losing their function. That they may be kept in their jobs does not matter. Instead of trying to push in unworkable theories, Government spokesmen will have to concentrate on what is possible under the circumstances. It is not possible to prevent unemployment resulting from technological improvements for industrial units.

The quick absorption of the retrenched men in suitable jobs elsewhere, through a system of priorities can, however, ensure that workers will not be generally disagreeable to rationalisation. If the yardstick of no retrenchment were to be applied, no proposal for rationalisation will get through. Unwelcome facts are better squarely faced than wrapped up in pleasing phrases.

NORTH INDIAN MARKETS

Divergent Trend in Grains Prices

DIVERGENT trend in foodgrains prices has been noticed in different parts of the country during the week under report. While prices have continued to rule steady in Uttar Pradesh, they have recorded a fall in the Punjab, Delhi and Madhya Pradesh. The Union Food Minister has already stated that Indo-US negotiations for a third Wheat Loan are about to be concluded and the new wheat loan, like the second, will be about 3.5 million tons.

Wheat prices have generally shown a downward trend following the formation of wheat zones. The Government are thinking of forming a Rice zone on the lines of the wheat zones; and this is likely to ease the rice position considerably. The southern part of the country, which had been practically cut off from all wheat markets, will now be fed from imported stocks; and the orders have been issued for the supply of unlimited quantities to trade from the Central stocks. In Northern India, Uttar Pradesh and Bihar are the two main States to receive stocks from Bombay and better loading facilities have been provided to those stocks. During the current month, more than one lakh tons of wheat will be reaching Bihar and Uttar Pradesh from Bombay.

Meanwhile, Wheat prices have developed a hardening tendency in the Hapur market, the main factor for the bullish trend being the failure of monsoon which is reported to have practically ruined the early-paddy crop in Uttar Pradesh. Average quality, which was quoted at the lowest level of Rs 14.25 in the previous week, has hardened to Rs 14.62 per maund. Rice prices have also increased due to gloomy crop prospects of paddy in the State, while firm Punjab advices have accounted for gains in Gram prices. In sympathy, Barley and Bajra have also registered some gains. Pulses, however, ruled quiet due to heavy local stocks in the face of slack outside support. Loading is still restricted.

In the Delhi grains market, Wheat prices have recorded a loss of 75 nP per maund following slackened off-take against better arrivals. Basmati superior quality has improved by about Rs 2 per maund. Among Coarse grains, Urad has recorded a rise of about Re 1 per maund as a result of small arrivals; but Bajra has eased slightly in the absence of marked buying interest, while stocks are reported to be better.

The Bombay grains market has presented a steadier appearance

with the prices of Rice, Bajra and a few pulses recording modest improvement on account of the broader buying interest. Rice has recorded a rise of Rs 5 per candy with the qualities grown in Andhra attracting a greater interest of the buyers. The improvement in prices is attributed mainly to the larger demand from the retailers and the reluctance on the part of sellers to sell in view of the recent fall in arrivals.

In the Wheat section, supplies of foreign variety are reported to be adequate; and that a large quantity is awaiting clearance. In the Coarse grains section, Bajra has increased by Rs 5 to Rs 10 per candy following a small inflow. The receipt of Jowar is, however, a shade larger with the bulk of the supplies coming from Hyderabad.

Sugar

Following a further release of 1.69 lakh tons for free sale, Sugar markets have turned a shade quieter. Outside buying enquiry is also slack, while the stock position is reported to be satisfactory. Following rates (per maund) are quoted in the Hapur market:—Meerut Rs 34; Amroha Rs 33.37; Bijnore Rs 33.25; Rampur Rs 34.75; Mansoorpur Rs 34.25 to Rs 34.75 and wholesale Rs 34.00 to Rs 36.00.

The total quantity of cane crushed in mills, during the season ending last month, is estimated at 20.7 million tons, which compares favourably with 18.9 million tons during 1955-56.

The Bombay Sugar Merchants' Association has complained that sugar mills are reluctant to sell and have been gradually raising mill-delivery prices. Likewise, other Bombay State mills have pushed up their prices and have been exploiting scarcity conditions in Bombay. With the operation of the inter-State Sales Tax and the increase in railway freight surcharge, Uttar Pradesh mills are reportedly offering competitive rates, about Rs 2 lower than Deccan sugar. This is also attributed to the absence of any pronounced purchases in Uttar Pradesh markets; and sugar mills in Bombay are naturally watching market trends. According to the sugar trade, prices will record a fall only if the Government requisition 25 per cent of Bombay mills' stocks and release them for open sale.

The Khandasari market has, however, continued to rule firm, thanks to good demand for marriage season and in line with prices in the crystal section. Rates are moving

The Peninsula

State Finances

THE sense of relief felt at the absence of fresh taxation in the Madras Budget for 1957-58 will be found to yield place to a feeling of misgiving after reading the full speech of the Finance Minister. Dealing with the ways and means position, Mr. C. Subramaniam said the requirements would be about Rs 35.63 lakhs as against the resources in sight amounting to Rs 22.25 lakhs. Thus there is an uncovered gap of over Rs 13 crores on the ways and means side. It is expected that the revenues will be augmented by about Rs 3 crores as a result of the recommendations of the Finance Commission. As the Government of India have advised "rather strongly" that the State should not float any public loan during the current year, the only alternative is to get as much as possible from Small Savings which according to Mr. Subramaniam cannot be expected to yield enough to cover the Ways and Means gap of this year. For the balance that will still be left, the State has to depend on further assistance from the Centre. There is as yet no assurance from the Central Government in this regard

and, therefore, "there is an element of uncertainty regarding the capital programme".

Mr. R. Venkataraman, Minister for Industries and Labour, while presenting the budget to the Legislative Council, has been quite frank about the financial difficulties of the State. He thinks that the large deficits in States' budgets are but the manifestation of the growing imbalance between their expenditure and their sources of revenue. Expenditure has gone up by leaps and bounds while taxable resources are practically the same as in the pre-independence days. Moreover, most of these have already been stretched "to the point of diminishing returns". As the States have little say in the matter of taxation of the growing wealth, Mr. Venkataraman declares that "unless we are given a fair share of this (taxation of growing wealth) we may not be able to discharge our growing responsibilities adequately".

Expressed in simple terms, it means that the pace of progress of development works in the States will depend to a large extent on the quantum of Central assistance.

If the assistance is as large as the States have demanded, it may be presumed that the development programme will proceed as scheduled. In case such assistance falls short of expectations, progress is bound to be slow. The States, however, seem to be quite content with this state of affairs. But keen observers in the country find in this an unhealthy development in our body politic. The logical consequence of the increasing appropriation of powers by the Central Government has been pointed out by Mr. C. Rajagopalachari who says that the present trend if left unchecked will result in reducing provincial autonomy to a farce. It is high time it is realised that the Centre's encroachment into the States spheres is in the interests of neither the Government of India nor the State Governments. The sooner this is realised by the powers that be, the better it will be for the good of the nation as a whole. It is evident that the Central Government cannot hope to remain the dominating force for any length of time. It will be only appropriate for them to work toward equipping the State Governments adequately so as to enable them to discharge efficiently their increasing responsibilities. Though this willing dependence on the Centre has its advantages it will not be considered to be consistent with the ideas of self government that the people have been encouraged to cherish. It will not be a matter for surprise, says Rajaji, if in course of time the Centre tell the States that they themselves will take up the responsibility of framing the State budgets as well.

It is, however, gratifying to note that the Madras Government have explained to the Planning Commission their case for a larger share in the divisible central taxes. It is in the hope that the Finance Commission will find it possible to accept the general trend of the State's recommendations that the Budget deficit has been left uncovered. Even so energetic steps have been taken to reduce the deficit as much as possible. It may be recalled that even in last December the Finance Minister anticipated a deficit of about Rs 5 crores. Mr. Subramaniam has disclosed that had it not been for the rigorous scrutiny which has been made of departmental estimates to eliminate non-essential expenditure, the deficit would have grown much larger.

The deficit of Rs 4.83 crores is sought to be reduced to Rs 3.33 crores by two proposals. Firstly, the general sales tax rate is fixed at two per cent in the case of commodities other than foodgrains. In the case of foodgrains the rate

is reduced to one per cent. Books are exempted from sales tax. The Government expect to get an additional Rs 170 lakhs from this change in a full year and Rs 125 lakhs in the current year. Secondly, it is proposed to raise the rate of agricultural income-tax on plantations by an additional five per cent on the third to sixth slabs and by 10 per cent on the seventh and last slab. An income of about Rs 25 lakhs is expected from this. The changes in sales tax have been generally welcomed though the consensus of opinion is that the Finance Minister could have given much needed relief by completely abolishing sales tax on foodgrains. The heavy increase in the income tax on plantations can only be defended by pointing out that it affects only a small section of the people.

A noteworthy feature of the budget is the relief it affords to the village officers. It is proposed to enhance the dearness allowance of village establishments from July 1, at a cost of Rs 30 lakhs in a full year. Mr. Subramaniam points out that the main cause of the large deficit in the budget is the enhancement of Rs 12 per mensem in the emoluments of non-gazetted officers and other low paid public servants at an extra cost of Rs 426 lakhs. The Central Government, however, have agreed to meet a portion of the cost amounting to Rs 194 lakhs. A loan of Rs 25 lakhs will also be available during the current year. The State Government have also told the Finance Commission that the Central Government should grant them a substantial measure of aid in order to enable them to reduce adequately the large disparities that now exist between the emoluments of State and Central Government servants doing comparable jobs in identical localities.

The growing imbalance in the budget should not, however, be allowed to cloud the salient features in the economy of the State. The State Government have so far invested about Rs 60 crores on Electricity and Rs 40 crores on irrigation works. These investments are bound to yield good dividends in course of time. In the Budget for 1957-58 the biggest allotment is again under power development which gets Rs 11.62 crores. The 30,000 K.W. generating set under the Madras Plant Extension Scheme will be commissioned by December this year and will relieve the power shortage of the grid in the summer months. On rural electrification the target set in the Plan for the first year has been exceeded. During the year power supply has been ex-

(Continued on page 108)

South Indian Notes

Andhra Pradesh Budget

The Budget of Andhra Pradesh for 1957-58 presented to the State Legislative Assembly by the State Finance Minister, Mr. B. Gopal Reddi, goes to confirm the trend in the State's Budget since its inception. The total deficit for the State during the last four and half years amounts to Rs 23.98 crores. The deficit revealed in the latest Budget is to the tune of Rs 5.48 crores, the estimated expenditure being Rs 58.62 crores against an estimated revenue of Rs 53.14 crores.

The Budget is split up into two parts, one for Andhra and the other for Telengana. The revenue receipts for these two areas for 1957-58 are Rs 32.22 crores and 20.92 crores respectively, while the estimated revenue expenditure for the two, are Rs 34.65 crores and Rs 23.98 crores respectively. The deficits separately for Andhra and Telengana are Rs 2.43 crores and Rs 3.05 crores respectively.

Though no taxation has been proposed, it does not represent an ultimate relief to the tax-payers, for the Finance Minister hinted at what could be done to improve the State's financial position and suggested as possible ways of increasing revenue, raising the water-rate in the delta districts, levy on commercial crops, agricultural income tax or a graded surcharge on land revenue in its place and a levy on mineral resources. In the light of the statement of Mr. Gopal Reddi that something positive must be done to improve the financial position of the State, the proposal not to tax just at present is in the nature of a suspense. Presently the rationalisation of the tax structure by bringing the Entertainment tax, Motor Spirit Taxation Act and Motor Vehicles Tax Act, uniformly applicable to all the districts of the State is engaging the attention of the Government.

The continuing deficits on revenue account is in spite of the improved revenue yields in Andhra. For where as in 1954-55 the yield of revenue was only Rs 19.82 crores the estimated yield for 1957-58 is about Rs 32.22 crores, suggesting an increase of 62.6 per cent. But expenditure under revenue has also shown an unchecked tendency to mount up and has outstripped the increased revenue leaving a gap of Rs 2.43 crores in 1957-58.

The principal increase in expenditure has been under such items as nationbuilding services and debt services. Whereas the former rose from Rs 12.15 crores in 1954-55 to Rs 17.62 crores in 1957-58, the increase in the latter is from Rs 1.17 to Rs 4.23 crores. The increase was unavoidable in so far as it represented expenditure in connection with the First Five Year Plan.

Further the inclusion of Telengana where a different fiscal structure operates has added to the financial burdens on Andhra Pradesh. For while the deficit so far as Andhra is concerned has shown a tendency to decline, that for Telengana has been rising from Rs 0.51 crores in 1954-55 to Rs 3.05 crores in 1957-58.

More than the revenue deficit it is the ways and means position which truly reflects the straitened financial position of the State. The State has overdrawn Rs 12 crores from the Reserve Bank of India, which it is finding difficult to repay. A request for a loan of Rs 10 crores had been turned down by the Centre, which has suggested the selling of securities of the erstwhile Hyderabad Government. Raising public loans is precluded by the fact that the Reserve Bank of India has strongly advised the State not to come into the open market. The response to small savings is also expected to be small in the light of its past record.

In view of the unhappy financial position of the State, the problem of finding the necessary funds to finance the Second Five Year Plan, has become rather difficult. The Second Five Year loan, envisages an outlay on revenue account to the tune of Rs 54.94 crores. If to this is added the cumulative effect of the revenue deficit of Rs 6.99 crores of 1955-58 which comes to Rs 34.95 crores, the total amount which it would be required of the State to collect, for its expenditure on revenue account on the Second Plan would come to Rs 89.9 crores. But present estimates of available revenue add up only to 68.3 crores leaving a gap of Rs 21.6 crores.

On the capital side the Plan outlay is of the order of Rs 120.42 crores. The capital outlay for the year 1957-58 on irrigation and power projects, roads and buildings has already shown a decline from Rs 18.21 crores in 1956-57 to Rs 15.63 crores in 1957-58. Mr. Gopal Reddi struck a pessimistic note when he said that the outlook for the successful implementation of the Second Plan is not very bright.

*

Kerala Financial Corporation

The Fourth Annual Report of the Kerala Financial Corporation, points to an impressive record in its functioning. The loans and advances outstanding as on 31st March 1957 stand at Rs 8390,231 and constitute about 84 per cent of the paid up capital of Rs 100 lakhs. The loans and advances of other State Financial Corporations are far below this level in percentage terms the nearest being that of the Bombay State Finan-

cial Corporation, whose loans and advances constitute 75 per cent of its capital. This is a measure of the drive and enthusiasm, evinced by the Kerala State Financial Corporation, in giving stimulus to the industrial development of the State. Any conclusion, that hasty and careless disposal of application might be responsible for such a high percentage of loans and advances to capital, will be dismissed by the fact, that nearly 110 equal instalments for a total sum of Rs 1067,462-11 have been collected back.

In matters other than the total of loans and advances made also the State Financial Corporation, has had a better showing than its counterparts in other States. The percentage of its gross profit to capital stands at 5.5 per cent while the percentage of net profit to capital stands at 4.9 per cent. These two figures are higher than elsewhere. Further, administrative expenditure and establishment charges have been kept at a minimum of 10.6 per cent and 6.6 per cent respectively of the gross profit, figures which are considerably lower than similar figures for other States. The figures for net profits show a rising trend from Rs 29886-2-10 in 1953-54, to Rs 488814 in 1956-57. Still this margin of profit is short of the amount required for payment of dividend at 3½ per cent by Rs 11,000 necessitating State subvention. Even so, the average amount of annual subvention on one crore capital, for Kerala Finance Corporation, standing at Rs 98507 is lower than for all the other States.

So far as the distribution of the loans and advances is concerned, it follows and is in accord with the pattern of the industrial distribution in the State. Of a total amount of loans sanctioned upto 31-3-1957 at Rs 11472,800, the tea industry and cotton textile industry together claim nearly half of it, the respective share being Rs 2930,000 and Rs 2149,300. The

rubber industry with a total of Rs 1310,000 comes third, while the cashew industry has the fourth place, with a total of Rs 961,000. The coir industry a well established industry of the State, accounts for Rs 845,000. No industry seems to have been outside the purview of the assistance offered by the corporation, and only 5 out of the 82 applications have been rejected.

The generous scale of help given by the State Finance Corporation has, brought it up against certain problems, likely to inhibit its future activities. Having almost exhausted its initial capital of Rs 1 crore, the Corporation is now faced with the problem of raising additional working funds. Though there are two alternative sources of raising funds, i.e., by the issue of shares on the one hand or by the issue of bonds or debentures in the open market, the Chairman, of the State Finance Corporation, Mr. P. K. Krishnakutty Menon ruled out resort to either since issue of shares with the guarantee of minimum dividend would impose an indirect burden by way of subvention on the State Governments, while the issue of debentures or bonds to be successful should carry high rate of interest, which it was pointed out, the State Finance Corporation could not afford. Therefore he pointed to the necessity to amend the Financial Corporations Act so as to enable the Corporation to borrow funds from the State Government and the Central Government. Deposit of funds from the Life Insurance Corporation and the State Insurance Department in the deposit Account of the State Financial Corporation would it was pointed out, also provide a welcome relief.

Finally the Chairman made a suggestion that the Financial Corporation should be taxed only on such portion of its profits as is in excess of the amount required to pay the minimum dividend guaranteed by the State Government.

SOUTH INDIAN MARKETS

Stability in Rubber

ACCORDING to the International Rubber Study Group, the statistical position for the coming year indicates continuing stability in Rubber market conditions. Many of the group's member Governments have attached great importance to measures designed to maintain and increase stability in the natural rubber market, while others believe that the expected continuation of demand for new

rubber at a high level will be sufficient to secure stability.

In view of the apprehensions of some countries over possible adverse price developments in the future, the Group has decided, in connection with its review of the rubber situation at its next regular meeting, to continue consideration of the need of possible action to reduce fluctuations in the

THE METAL BOX COMPANY OF INDIA LIMITED

Review by the Chairman—H. Chiswell Jones, O.B.E.

The Twenty fourth Annual General Meeting of the Metal Box Company of India Limited will be held on Thursday, 18th July, at 59C Chowringhee Road, Calcutta.

The following is a copy of the Review by the Chairman, Mr. H. Chiswell Jones, O.B.E., which has already been circulated to members.

SALES

Sales for the year were a record at Rs. 567 lakhs compared with Rs. 495 lakhs last year. All Branches showed commendable initiative in attracting and meeting the increased volume. Government spending continued at a high level and not unnaturally as the economy expanded considerable strains appeared; the prices of consumer goods advanced over a wide front and the foreign exchange situation deteriorated sharply. In fact, the last quarter of the year was dominated by foreign exchange considerations affecting the fortunes of our customers as well as our own raw material supply. Restrictions were imposed in January on the import of a variety of consumer goods calculated to save many crores of rupees in foreign exchange, creating a gap in the internal supply of packed consumer goods which must be bridged by increased local production. This is a challenge which your Company and its customers can readily meet provided sufficient raw materials particularly tinplate, are available.

We recently explored the more promising of the South East Asia markets and secured initial orders worth some Rs. 2½ lakhs. Substantial exports to these markets in the face of keen competition from U.S.A., Japan, Hong Kong and Europe could be realised through intensive sales promotion provided that a special allocation of tinplate for export was made available.

Also on the export front, goods packed in our containers are making an impressive showing. In the year to March, 1957, goods to the value of Rs. 4 crores were exported in containers of our manufacture, the quality of which was, in every case, an important selling point. Prepared spices, cashews, edible oils, paint, pharmaceuticals, foodstuffs and toilet goods went to all five continents and there is still scope for a considerable expansion of these exports. Additionally there is the opportunity to increase the value of exports of products which at present are exported mainly in bulk. India is well equipped to supply consumer-packed goods of the highest quality and it is the export of these that should be officially encouraged so that this potential can be fully exploited with benefit to the foreign exchange position.

PROFIT

In my last Review, I said that despite rising costs we hoped to maintain profits by increasing sales. Our efforts were successful and profits were held at the level of the previous year on a turnover increased by Rs. 72 lakhs. We began this financial year with a record order book and if we are not deprived of raw materials we should earn satisfactory profits.

RAW MATERIALS

For most of the past financial year we were free from major anxieties in the supply of raw materials, though steadily rising costs and the necessity to keep an adequate stock level have produced their own financing problems. The value of our stock policy in these days of international anxiety and crisis may be judged against the American Steel Mill strike of two months last year—the Suez Canal closure with consequent disorganisation and delay in shipping schedules—and now import cuts here. Our stocks saw us safely through the 1956 crises. Our later performance will be determined by Government's import policy.

The production capacity of indigenous tinplate was expanded towards the end of the year by one additional rolling mill. Output, unfortunately restricted by labour trouble, was almost unchanged from the previous year and provided us with about 60 per cent of our total needs—the balance came from imports. Further success has attended our efforts to achieve local production of other raw materials hitherto imported, and our dependence on imports is now near the irreducible minimum. Desirable as it is to conserve foreign exchange and support local enterprise, it is to be hoped that the policy will not be pressed to a point where quality and efficiency will suffer, as well they may, if consumers are forced to accept local substitutes without regard to quality or performance.

The past year has seen further substantial price advances in almost every raw material we use, either on account of higher manufacturing costs or increased freight charges following the Canal closure. Enhanced customs duties, and price increases through shortage of supplies resulting from import restrictions, have also contributed to raising our cost of production.

EMPLOYEE RELATIONS

The clamour during the reorganisation of the States and more recently, the General Elections, had an unsettling effect upon labour. Despite this, we have had another year of industrial peace at all factories. There was a steady increase in the consumer

price index throughout the year, and adjustments were made in the emoluments of our employees.

Training in all its aspects, and at every level, continues to receive a great deal of our attention. Qualified T.W.I. instructors are working at our two largest factories, and the continuous training classes there will shortly be extended to the other factories. Members of our staff have taken courses in scientific management at local Universities and the Company is working closely with Management Associations in four States. Our U.K. consultants, The Metal Box Company Limited, afford unique training facilities for our young Indian managerial, technical and scientific staff. More than thirty have now received training in this way, and many more are planned for the next few years. We have special apprenticeship schemes covering all skilled operations in our factories, and we have recently offered to train a number of skilled artisans for the Government Steel Plants.

All this adds up to an expression of our belief and faith, that given education, training and opportunity, workers will through their own efforts and initiative demonstrate their fitness to play an increasing part in management. All our full-time Directors, and the majority of our senior executives and technicians began their careers with us in junior positions. We are proud of their success and we believe it is a major factor in our good employee relations, and in the high level of production in our factories.

Last year we introduced a Long Service Award for employees who have completed twenty years continuous service with the Company. On the occasion of the first presentation no less than thirty-two employees received a Rolex watch and certificate. To all employees whatever their length of service, I send my thanks for another year of sustained effort.

DEVELOPMENT AND NEW PROJECTS

We made progress with our development items during the year. Our industrial component section was improved with the opening of a new self-contained manufacturing department. In Calcutta equipment was installed for the manufacture of aluminium tubes and we have recently commenced the extrusion of aluminium components for the radio industry.

To meet the demand for quality printed polyethylene bags a new three colour printing machine was installed and further equipment for producing pouches from laminated materials is due to arrive shortly.

The R.S. or Roll Seal Pilferproof and Non-pilferproof Closures continue to gain popularity and are now generally accepted as attractive, easily-applied and, in the case of the former, effectively tamper-proof seals. Our Technical Development Section have designed and produced two new closing machi-

nes with rotating heads which keep the bottle or can stationary to avoid spilling during the sealing operation. They are already popular with customers and in considerable demand.

In pursuance of our efforts to foster the canning industry we have engaged an expert from the U.K. who will assist in the solution of the problems of the industry. His services will also be available to those government organisations pursuing processed foodstuffs development. We have presented to the Central Food Technological Research Institute a mobile demonstration van in connection with a pilot scheme aimed at educating the urban population on the wholesomeness and use of canned foods. Government have been examining a proposal to subsidise the cost of cans for the processed food industry, to the extent of one-third of the cost of the tinplate used. This scheme aims at saving a considerable proportion of the present wastage of fruits and vegetables, estimated at between 15 per cent and 20 per cent of the total crop, stimulating horticultural production and providing the public with a round-the-year supply of fruits and vegetables at reasonable prices.

Our Research Division has made good progress in the task of improving finishes and developing indigenous materials to replace products hitherto imported.

CONSULTANTS

During the last year our consultants, The Metal Box Company Limited, London, have made available to us the services of a number of their Directors and senior staff in connection with revaluation of assets, training of staff in the U.K., research and the overhauling and recalibrating of all our printing ovens. I take this opportunity to express to them our appreciation of their continued valuable services.

GATEWAY GOSSIP

(Continued from page 89)

Activity of the Indian Stock Exchange is reflected in the fact that purchase by members of Government contract stamps rose by one third to Rs 2.10 lakhs from Rs 1.57 lakhs. This would serve to indicate that deliveries of the scrip which are transacted on the Indian Stock Exchange have been and are increasingly substantial in volume. Thus, it would not be incorrect to suggest that what may be happening on the smaller stock exchanges is a larger volume of investment business in the speculative scrips.

Ultimately, the whole controversy boils down to this: Will Government stand by their earlier statement that those gainfully and legitimately employed in stock exchange activity will not be dislodged? There are many in this City who have no doubts in the matter, and who expect Government intervention both in Calcutta and in Bombay to ensure that the mergers take place on a basis satisfactory to all concerned interests.

July 13, 1957]

Stock Exchanges

A CORRECTIVE REACTION

Watch-Dog Writes:

CONDITIONS in stock markets have been generally quiet during the week under report. The steady and sharp rise in prices, noticed during the past two weeks, has brought a corrective reaction, as operators are not inclined to follow the upward trend any further and are eager to book profits. The issue, confronting the markets at the moment, is whether the Life Insurance Corporation will again enter the market and, if so, at what levels. The tone of the market is, however good.

In the absence of fresh support and partly due to clearing adjustments, the Calcutta Stock Exchange ruled rather quiet with price movements confined to a narrow range.

The Bombay Stock Exchange experienced a featureless session with trading restricted.

The Madras Stock Exchange ruled fairly steady with Planting issues receiving decent support.

There was very little change in the trend of the London Stock Exchange. Business in the industrial section was restricted although prices continued to respond to selective buying.

Prices on Wall Street advanced to a new high for the year. Speculatives had much wider gains.

★

Calcutta

QUITE in contrast to the past two weeks, conditions on the local Stock Exchange, during the week under review, were quiet, mainly due to lack of fresh incentives. Operators were generally inclined to book their profits at the recent high levels, being induced by the decision of the Reserve Bank to pursue a cautious lending policy. Another vital issue, which was facing the market, was the forthcoming report of the Select Committee on Wealth Tax and Expenditure Tax. Operators were also feeling somewhat uneasy over the recurrent rumours that the TISCO would not be able to announce a dividend of more than Rs 8 per Old share in view of the latest tax proposals. Lower levels, however, attracted some buying support, particularly in the Engineering and Miscellaneous sections. The market finished the week with minor losses on balance.

The Gilt-edged market was listless. Institutional investors were still inclined to wait for the New Loan, the terms of which were a matter of speculation. Meanwhile, 3 per cent 1986 Conversion, after opening at Rs 73.50, receded at one time to Rs 72.94, to improve again towards the close to Rs 73.10.

Revival of buying interest was noticed in Bank shares, induced by reports of the possibility of higher profits for banks for the half-year just ended. Punjab National were quoted at Rs 55.50; United Commer-

cial at Rs 54.50 and United Bank of India "D" at Rs 4.12 to Rs 4.25. Jute shares came in for selective support on the belief that prices had fallen enough to be attractive. It was also felt that the outlook for jute goods was somewhat better as the fibre prices had eased with the reports of rains. Most prominent were Bally changing hands upto Rs 142 from Rs 137; Birlas upto Rs 15.12 from Rs 14.75; Howrah upto Rs 16.69 from Rs 16.44; Megnas upto Rs 82.50 from Rs 81 and Reliance upto Rs 7.19 from Rs 6.37. National, after touching a high of Rs 19.25 from Rs 19.00, eased off at the close to Rs 18.85.

Although Coal shares came in for selective enquiry, the general mood was one of cautiousness as operators, before entering into large-scale commitments, were awaiting two points to be clarified—findings of the Coal Prices Revision Committee and the Coal Bearing Areas (Acquisition and Development) Bill, 1957. The features in this section were East Indian having buyers at Rs 24.75 to Rs 25.12; Equitable at Rs 25.00 to Rs 25.12 and Central India at Rs 6.40 to Rs 6.56. Bengal were nearly maintained at Rs 231, while Burra-kur, after touching a high of Rs 22.00 from Rs 21.62, receded at the close to Rs 21.69 on lack of follow-up. Western Bengal hovered idly around Rs 5.50.

For the third week in succession, Tea shares attracted increased attention of the operators although higher levels could not be retained till the close due to profit-taking. Operators were found to be rather cautious in following the rise in view of the uncertainty about the future outlook and the fears entertained in some quarters that the quality of teas might decline with the advance of the season.

Most prominent scrips were Banarhat changing hands at Rs 335 to Rs 343; Bhatkawa at Rs 24.12 to Rs 24.62; Brooke Bond at Rs 20.00 to Rs 20.31; Dhelakhat at Rs 23.50 to Rs 23.87; Hasimara at Rs 23.50 to Rs 24.12; Baghmari at Rs 23.75 to Rs 23.87; Killcott at Rs 19.44 to Rs 20.12 and Tezpor at Rs 23.12 to Rs 23.25.

Except Kesoram having some support upto Rs 13.69 from Rs 13.62 and New Victoria upto Rs 1.50 from Rs 1.37, little interest was shown in the Textile section.

Firmer advices from the commodity market had a favourable effect on the Sugar section where selected scrips met with good support. Prominent were Belsund changing hands at Rs 10.62 to Rs 10.87; Carew at Rs 7.25 to Rs 7.31; Cawnpore at Rs 15.19 to Rs 15.44 and SKG at Rs 9.94 to Rs 10.00.

Price movements in the Engineering section were rather irregular due to alternate bouts of buying and selling. Indian Irons were sub-

jected to settlement adjustments and the scrip, after opening at Rs 20.54, receded gradually to Rs 20.09, to finish the week better at Rs 20.15. New shares were marked down to Rs 18.87 from a high of Rs 19.33. Jessop touched a low of Rs 23.75 from Rs 24.87; Richardson Rs 15 from Rs 15.25x.d. and TEXMACO Rs 17.50 from Rs 17.90, to finish at Rs 24.12; Rs 15.00 and Rs 17.60 respectively. Kumardhubi were quiet at Rs 9.12 against Rs 9.25, while Marshalls improved to Rs 5.25 from Rs 5.06. Braithwaite were a steady feature at Rs 26.18.

Trading in the Miscellaneous section was generally dull with prices developing a slightly easier tendency on profit-taking. Indian Copper turned ex-dividend, changing hands at Rs 3.31 to Rs 3.33. Orient Paper touched a high of Rs 25.50 and a low of Rs 25.00, to finish at the latter level. Titagur remained un-

changed at Rs 32.50 and so also Shree Gopal at Rs 15.62. India Steamship improved at one time to Rs 10.70 from Rs 10.55. Dunlop to Rs 20.87 from Rs 20.75; Indian Aluminium to Rs 13.81 from Rs 13.75 and BIC to Rs 6.75 to Rs 6.60, to ease off at the close to Rs 10.60; Rs 20.56; Rs 13.75 and Rs 6.55 respectively. National Carbon were done at Rs 24.62 to Rs 24.87; Osler at Rs 5.00 to Rs 5.75; Indian Cable at Rs 23.25 to Rs 24.12 and Hindusthan Motors at Rs 7.31 to Rs 7.37. Aikall Chemicals turned quiet at Rs 13.69 against Rs 13.81 and so also BBP at Rs 2.73 against Rs 2.81.

Madras

THE Finance Minister's Press Conference on Monday evening at his residence at Madras could not be said to have thrown any new light (Continued on page 107)

SHAW WALLACE & COMPANY LIMITED

NOTICE is hereby given that the Eleventh Annual General Meeting of the Members will be held at the Registered Office of the Company, 4 Bankshall Street, Calcutta, on the 8th day of August, 1957, at 3 p.m. for the following purposes:

- (1) To consider the Profit & Loss Account for the year ended 31st December 1956, the Balance Sheet as at that date and the Reports of the Directors and the Auditors.
- (2) To declare a Dividend on the Ordinary Shares.
- (3) To appoint Auditors and to fix their remuneration.
- (4) To elect Directors in the place of two Directors retiring by rotation. In this connection special notice has been received by the Company pursuant to Section 190(1) and 281(2) of the Companies Act 1956 of intention to propose the following resolution:—
"That it is hereby declared that the age limit specified in Section 280 of the Companies Act, 1956, shall not apply to Mr. P. C. Chaudhuri who has attained the age of 81 years and that he be and is hereby re-appointed a Director of the Company."

AS SPECIAL BUSINESS

- (5) To consider and if thought fit to pass with or without modification the following Resolution:—

"That the Board of Directors of the Company be and is hereby authorised to borrow for and on behalf of the Company money in excess of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose, as the Board may at any time and from time to time deem necessary for the purposes of the Company."

EXPLANATORY STATEMENT

Article 67 of the Articles of Association of the Company vests in the Board of Directors unlimited power to borrow moneys for the purposes of the Company. Sub-section (1)(d) of Section 293 of the Companies Act 1956 imposed a limit on this power which may be enlarged by a resolution of the Company in General Meeting. The statutory provision restricts the borrowing power of the directors where the moneys to be borrowed, after the commencement of the Act, together with moneys already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free Reserves, that is to say, Reserves not set apart for any specific purposes. Your Directors recommend, that the statutory borrowing power of the Board be enlarged and unrestricted as laid down in Article 67 of the Articles of Association of the Company, i.e. that the borrowing power exercisable by your Directors prior to the date of commencement of the Companies Act, 1956, viz. the 1st April, 1956, be restored.

- (6) The Share Transfer Register of the Company's Ordinary Shares will be closed from the 1st August to the 8th August 1957 both days inclusive.

N.B.—A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

BY ORDER OF THE BOARD

D. A. Houghton

SECRETARY

4, Bankshall Street, Calcutta, 19th June, 1957.

so far as the Stock Markets are concerned. In fact, the questions were not put in

[July 13, 1957]

SOUTH INDIAN MARKETS

(Continued from page 95)

natural rubber market. Member Governments are asked to study the matter in the intervening period and report their conclusions to the Group at its next meeting, which will be held in May or June, 1957 at a place to be decided later.

World production of natural rubber, during the year, is estimated at about 1,875,000 long tons—including 670,000 tons in Indonesia and 627,000 tons in Malaya—while output of synthetic rubber in member countries is placed at about 1,280,000 long tons—including 1,135,000 tons in the USA. Consumption of natural rubber is estimated at about 1,910,000 tons and of synthetic rubber at about 1,260,000 tons, excluding synthetic produced in non-member countries.

Meanwhile, production and consumption of raw rubber in India, during May last, fell to 1,645 tons and 2,573 tons from 2,072 tons and 2,907 tons respectively in the previous month. Stocks at the end of May, however, improved to 6,760 tons from 6,189 tons at the end of April due to larger imports, which totalled 1,499 tons in May and 649 tons in April.

Out of total stocks at the end of May, estates and dealers accounted for 3,878 tons and manufacturers for 2,882 tons. There was a stock of 1,324 tons of synthetic rubber in the country at the end of the same month.

*
Pepper

Inactivity is once again conspicuous on the whole hill-produce front. In the pepper markets, there is little business passing. Exporters are not willing to meet the foreign buyers since prices quoted by the growers are comparatively high. In the Alleppey market, sellers are seen at 593.75 per candy for superior Palai variety and Rs 587.50 for inferior Thekkan variety. At Kozhikode, Wynaad quality is hovering around Rs 640, while the Country quality is quoted at Rs 625 per candy.

Latest reports indicate that arrivals of Sarawak are still smaller as compared with the same period last year. Singapore exporters for Lampong, after selling at 24½ cents, now seem to have withdrawn. They are now quoting high, as there is no competition from Sarawak in view of the smaller crop. The latest estimate of Sarawak pepper is placed at 12,000 tons as against the earlier estimate of 16,000 tons.

*
Groundnuts

Conditions in the Madras Groundnut market ruled fairly steady. The rate for superior oil-quality seeds was quoted at Rs 170 and the bold at Rs 166, per candy. Daily arrivals averaged 25 to 30 tons and these were taken by small crushers.

Arrivals in South Arcot district centres are reported to be good.

The standing early-winter crop in the Pollachi-Coimbatore area is in good condition.

In the Groundnut Oil section, the rate for the ready position is quoted at Rs 335 per candy. Calcutta interests have been buying decent quantities in ready as well as forward.

*
Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were moderate with steady clearances at unchanged prices. There were no changes in other sections.

On the export front, enquiries were mostly for runs and fourths, which were impossible to obtain. Also conditions in the single tannages section ruled firm with very little stocks being available. There were good enquiries for both Buff Calf and Cow Calf single tannages. However, only small quantities were sold up to 35d.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were moderate, while clearances were fair. Prices of Sheep skins were about 12 nP per pound higher as compared to the previous week.

On the export front, trading in the Goat section was rather quiet and business was reported done at a reduction of 6d per pound. In the Sheep skins section, conditions remained firm as tanners were reported to be in a well-sold position. In Commons, there was good enquiry for fifties; but supplies were difficult to obtain.

The markets for both Raw Skins and Raw Hides ruled steady.

high-grown grades, however, declined by about 5 cents per pound.

Dimbula/Dickoya types were substantially dearer. There was a good demand for all descriptions of low-grown teas at about last rates. Fannings were in good request, high and medium sorts being sold at irregularly dearer rates. Black Leaf sorts were in less demand and declined by about 10 to 15 cents per pound with Tippy sorts being appreciably lower. In respect of Off-grades, all Dusts were lower except the best grainy sorts. There was a strong demand for Broken Mixeds at firm rates.

In Mincing Lane, offerings were 25,604 packages, including 16,504 packages of Northern India teas. There was a marked advance in the prices of all descriptions. The strongest competition was again for the better qualities and increases of up to 4d per pound were paid. The smaller quantities of low, medium and common teas, on offer, met with a very brisk market and prices advanced by

GATEWAY MARKETS

(Continued from page 90)

ports that duty paid for Tibetan imports amounted to about Rs 3 lakhs unnerved longs who liquidated heavily. Arrivals amounted to 7 bars, while unrefined metal receipts were heavy at 65 bars. Ashad delivery closed at Rs 180.19 and Shravan delivery at Rs 178.19. Ready moved between Rs 179.19 and Rs 179.50.

*
Yarn

The spurt in Art Silk Yarn prices, witnessed in the previous week after the announcement of the import policy, proved to be short-lived, thanks to the decision of the Bombay Yarn Merchants' Association and Exchange to fix up the minimum and ceiling prices for futures business in 120 Dull Cones. The minimum and maximum prices for August delivery are fixed at Rs 775 and Rs 875 respectively. The Association has not permitted any business in October delivery. No restrictions have been placed on trading in Staple Fibre Yarn.

The contract, therefore, declined from Rs 833 to Rs 824 per case. In Staple Fibre Yarn, there was no change; but spot rates of both Japanese and Italian art silk yarn went up by about As 3 per pound.

Conditions in the Cotton Yarn section continued to be listless. While the mill output of yarn is increasing every month, the demand is falling. Meanwhile, the Government of India have decided that shipping bills, submitted in terms of the announcement of June 14 for the export of cotton yarn, will be made valid for a period of one month from the date of passing instead of 15 days as indicated in the announcement.

*
WORLD OF TEA

(Continued from page 85)

about a penny to 2d per pound. Clean Common Broken Pekoe is quoted at 39d per pound.

Tea Stocks in London, as on the 28th June, were 145.95 million pounds as against 149.78 million pounds in the previous week and 107.34 million pounds a year ago. Landed between 22nd and 28th June 1957 were 6.90 million pounds and deliveries were 10.72 million pounds.

*
WORLD OF COTTON

(Continued from page 91)

Indian Chambers of Commerce and Industry. The object of the conference is to discuss the various problems of the industry and trade in the light of the Governmental policies affecting them. The question of modernisation of the industry and the installation of automatic looms will also come up for consideration. More than any of these, the problem of how to develop the export trade in cotton textiles will receive particular attention.

THE PENINSULA

(Continued from page 94)

tended to 1,300 villages and 13,000 agricultural pumpsets.

The inauguration of the lignite project has considerably improved the economic outlook for the State. The immediate programme is to set up a thermal plant of 200,000 K.W., a fertilizer unit for the manufacture of chemical manures with a nitrogen content of 70,000 tons per annum and a plant for the briquetting of 350,000 tons of lignite for use as motive fuel for other industries. These units are expected to come into commission by 1960. Mr Subramaniam has pointed out that with an assured supply of cheap fuel and power there are large possibilities for starting many new industries based on this project, such as paints, varnishes, synthetic oils, insulators, porcelain etc. Other major industries which are expected to be established in the state include an aluminium plant of 10,000 tons capacity based on the bauxite deposits of Salem to be located at Mettur, an iron smelting plant at Salem, two new paper mills, a rayon pulp plant, a cement factory and a rubber tyre factory. Besides these, the expansion programme of a number of existing units has been either already sanctioned or awaiting final sanction from the Central Government with the recommendation of the State Government. The textile industry in the State is expected to make a good showing with the addition of about 13½ lakhs of new spindles recently sanctioned. Many new sugar factories are also being organised mostly in the cooperative field.

On the side of agriculture, considerable progress has been made during the past year though self-sufficiency in rice is yet to be attained. Thanks to the fair seasonal conditions and the various measures of intensive cultivation, the index of agricultural production in the State (base 1947-50) has risen by 4 points from 115 in 1955-56 to 119 in 1956-57. Rice production has increased from 2.96 million tons to 3.10 million tons, millets from 1.47 million tons to 1.52 million tons, groundnut from 821,000 tons to 855,000 tons, cotton from 335,000 bales to 358,000 bales and gur from 341,000 tons to 373,000 tons. The Government are taking vigorous steps to step up agricultural production. One of the major schemes in the State's agricultural plan is the opening of about 360 seed farms for the supply of improved seeds to cultivators. Thirty-eight such farms had already been opened and a provision of Rs 49 lakhs has been made in the budget for starting 136 farms during the current year. During the current year the Government propose to undertake soil conservation on an enlarged scale and a provision of about Rs 32 lakhs has been made in the Budget. The total allotment for major irrigation is about Rs 234 lakhs.

July 13, 1957]

Industrial Information

Increase in Applications for Patents and Designs

The increasing interest evinced in India in evolving new patents and designs is reflected in the increased number of applications for patents and designs in 1955.

The number of applications for patents increased to 2,736 in 1955 from 2,497 in 1954 according to the Annual Report of the Patent Office for 1955, which has just been released by the Controller of Patents and Designs.

There was an appreciable increase in the number of applications for registration of designs. In 1955, the number of applications was 3,835 as compared with 3,303 in 1954. About 98 per cent of the applications originated in India and most of the balance came from the UK. Many of the Indian applications were in respect of textile designs.

The number of applications for patents, which originated in India was, however, 446, almost the same number as in 1954. The States of Bombay and West Bengal have together contributed 55 per cent of the applications from India. A major portion of the balance came from UP, Madras, Mysore and Bihar.

The inventions, for which the patents were sought, related to varied fields of industry and technology. Indian inventors were particularly interested in improved processes of clarifying and purifying sugarcane juice and saccharine liquids.

CHEMICAL INDUSTRIES

About 39 per cent of the total number of applications related to chemical industries. Quite a large number of inventions were received on phenothiazines, aminophenoxy derivatives and glycan derivatives. Interest was shown in hydroforming of naphthas for production of valuable gasoline like products.

Keen enthusiasm was shown both by foreign and Indian applicants in the field of related alkaloids and derivatives. Inventions in anti-biotics such as tetracycline, penicillin, streptomycin, erythromycin were fairly large. As in the previous year, many applications relating to insecticides and fungicides containing sulphur were filed.

In the field of iron and steel industry, applications for patents related to extraction of iron from fine iron ores, oxygen blowing plant and operating converter plant, shaft furnaces, pre-heating appliances in cupola furnaces and regenerative heating furnaces. Applications on tinning processes were more than three times the number in the last year.

ENGINEERING PATENTS

Inventions in the field of civil and mechanical engineering related among others to pre-stressed and reinforced concrete constructions, metal framework and structural components. Reciprocating type internal combustion engines.

rotary engines and pumps, gas turbines, railway and road vehicle bodies and frames, railway vehicle couplings and buffers, refrigerators, air-conditioners, vacuum cleaners, lathes, etc. were also subjects of invention.

In electric power engineering, inventions covered a wide range of subjects, such as, electric circuit breakers and switches, generators, arc welding equipment and insulating material. Also there were inventions relating to automatic telephone exchanges, magnetic information storage devices, remote control circuits, and electric pulse translating arrangements. Inventive activity was also displayed on calculating and counting machines, photography, phonograph and like instruments.

A good number of applications in the field of textile technology was filed dealing with drafting, carding, spinning and feeding fibres, winding yarns and recovery of cotton waste. Indian inventors also paid attention to handlooms and circular looms.

According to the Report, the Patent Office, had during the year, an income of slightly over Rs 8.17 lakhs and an expenditure of Rs 4.42 lakhs. This compares with an income of Rs 7.56 lakhs and an expenditure of Rs 4.78 lakhs in the previous year.

FOREIGN EXCHANGE FOR VISITS ABROAD

A review of the foreign exchange releases made during the last six months reveals that foreign visits are still undertaken which are not, strictly speaking, inescapable. With the abolition of the basic travel quota there has been a rush for securing foreign exchange under various other categories such as business, education and health. It has been decided, accordingly, to tighten up the restrictions. Government have directed that deputations and delegations, whether official or non-official, will be sent out in future only if it is absolutely essential that they should be sent. Business visits too will likewise be permitted only when they are clearly inescapable and then, too, for the shortest possible period. Wives of businessmen will not ordinarily be permitted to accompany their husbands. Visits for medical treatment abroad will be permitted only where the persons concerned are suffering from diseases for which there is no satisfactory treatment in India. In so far as students are concerned, exchange facilities will be granted to those who proceed abroad for university or high technical education, provided they have secured at least 50% of marks in the examination which qualifies them for entry in a foreign institution. Exchange will not be released to school-going children or persons

(Continued on next page)

Movement of Commodity Prices

Wholesale prices as measured by the official index (with the year ended August 1939 as 100) advanced by 2.1 per cent to 431.1 during May, 1957, as compared with 422.1 for April, 1957.

The index was higher by 10.5 per cent when compared with 390.3 for May, 1956.

During the month under review the indices for all the groups moved up. 'Food Articles' rose by 2.7 per cent to 419.3, 'Industrial Raw Materials' by 4.2 per cent to 536.3, 'Semi-Manufactures' by 1.6 per cent to 406.5, 'Manufactures' by 0.8 per cent to 387.5 and 'Miscellaneous' by 0.9 per cent to 572.3 (estimated).

FOOD ARTICLES:

The index for 'Cereals' advanced by 2.6 per cent to 559 (estimated) due mainly to an increase in the prices of rice notwithstanding a decline in the price of wheat.

A fall of 2.6 per cent to 407 in the sub-group index for 'Pulses' was caused by a decrease in the price of gram despite a rise in Dal Arhar.

Higher prices of sugar, gur and salt were responsible for an advance of 4.4 per cent to 260 in the index for 'Other Food Articles' although there was a decline in the price of tea during the month of May.

INDUSTRIAL RAW MATERIALS:

Due to an all round increase in the prices of fibres, the index for this sub-group went up by 3.9 per cent to 528.

sub-group went up by 3.9 per cent to 528.

In case of oilseeds also there was an increase in all the oilseeds except gingelly seed which showed a fall and the sub-group index rose by 4.1 per cent to 578.

An advance of 10.2 per cent to 564 in the index for 'Minerals' was caused by an increase in the price of manganese ore (average export price) during the month.

Lower prices of hides and lac brought down the index for 'Other Industrial Raw Materials' by 1.9 per cent to 408.

The following table shows group and sub-group movements of the indices during the month under review the preceding month and the corresponding month of 1956. (Base: Year ended August 1939=100).

Group and Sub-group.	May, 1956.	April, 1957.	May, 1957.	Percentage in. (+) or dec. (-) in May 1957 compared with April, 1957.		Percentage in. (+) or dec. (-) in May 1957 compared with May, 1956.

Oil from abroad costs valuable foreign exchange.
Oil from inside India saves it. And we must
have ever-increasing quantities to cope with the
expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil
industry working at full pressure to produce as
much oil as possible from our own oilfields. Additional
wells are constantly being drilled, yet even in an
established area they are not always productive; in spite
of modern knowledge and equipment, successful
drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the
fuel, lubricants and by-products which are so vital
to the progress and prosperity of India.

The Teahouse of the December Moon

It should have opened in August, but the tea didn't
get there! You've heard about a slow boat to China;
but there are some pretty slow ones from India, too.
There's no future in a tea party without any tea, so the
whole thing rather went to pot as you might say.

If only they had sent the tea as
CARGO BY AIR! It's the fast, economical
and sensible way of getting
things where you want them,
when you want them!

And A-I-I. flies twice a
week to Tokyo, via
Bangkok and Hong Kong;
with immediate connections
to cities all over the world.

So why have a storm
in your teacup,
since you can fly your
goods by A-I-I.

For the Investor

Curious Response

Investment Gossip:

STOCK Exchanges in India are functioning less and less as a barometer of the national economy, and more and more as an instrument for registering shocks.

Shocks are recorded in double quick time and their efforts exaggerated manifold. While the sensitivity to "flashes" has sharpened, the sense in the understanding of actual developments and in the interpreting of trends and prospects has been blunted.

Let us pause here for a retrospect and prospect. For a study of corporate performance in recent months, I refer the reader to the current issue of the Reserve Bank Bulletin. It is a cheerful tale statistically told.

Most companies are working to fuller capacity. Sales are bigger. Profits are considerably higher. Reserve allocations are substantial. Internal resources have been greatly strengthened. Bank credit has been constructively utilised. Capital formation is satisfactory. Fixed block shows dynamic expansion. The shareholders, too, have done better, though not as well as some might wish.

This period of all round expansion and improvement has evoked a curious response from the share market. While prices must have been on the rise, they have actually been on a headlong fall.

There is another important factor. Individual balance sheets released since the beginning of the year report, in most cases, larger profits and higher dividends. Banks have done uniformly well. Quite a number of banks have stepped up their distribution to their shareholders.

Cotton mills have done very well indeed. They, too, have paid larger dividends in a number of cases.

Sugar mills have had their best year ever. Profits are good, and dividends, too, are good.

Engineering shares are the most obvious beneficiaries from the conditions created by the Second Plan. They are working to capacity. Their order books are full. They are assured of continuing booming conditions.

Paper shares are to be coveted because paper companies are all in fine fettle.

HIGHLIGHTS

In America, the opinion is being mooted that the economic conditions of the recent past do not add up to classic inflation.

They are instead being described as the new inflation.

A Congressional Committee is examining the US tight money policy, but all that is so far known is that the "orthodox" measures are, in the present circumstances, futile.

What I have said of these industries is true of most other industries. The validity of this generalisation is not seriously disturbed if jute mills are biding their time, if collieries are only slowly emerging from darkness to light, and if tea estates are necessarily sensitive to the size of the current crop and to the prices fetched at the auctions.

Taken all in all, industries are doing superlatively well; and, while substantially adding to their capacity and prudently building up inner reserves, they are also paying better to shareholders.

What is more, most industries are assured of improvingly favourable conditions for arithmetical expansion of capacity and for geometrical progression in profits.

Cotton mills have, in the first year of the Plan, achieved the target fixed for the last year. Every cement company has added or is adding to its capacity. So is every paper company. Sir Shri Ram has put in a powerful plea for third shifts.

No further argument is needed to stress the obvious fact that, from the point of view of present and prospective performance in the corporate sector, the news is such as to gladden the hearts of investors and to spur their activities.

Did you say, what about taxes? Let me curly tell you that industries, with expanding capacity and with expanding profits, will well be able to take the taxes in their stride.

It is up to the Stock Exchanges to give up their role as shock recorders and to resume their function as the national economy's barometer.

£R3

Investment Briefs:

Shaw Wallace & Company has maintained the Ordinary dividend at 10 per cent for 1956.

Rohtas Industries Limited has maintained the dividend at Rs 1.50 per Ordinary share for the year ended 31-10-1956.

In Bombay, TELCO has raised the dividend from Rs 6 to Rs 8 per share for the year ended 31-3-1957.

Bharat Line has raised the dividend from Rs 5 to Rs 6 for 1956.

In the UK, there is growing apprehension of inflation; but, at the same time, there is the gathering certainty that bank rate increases are a weapon of limited utility.

Indeed, the commentator "Lombard" enumerates, in The Financial Times, the positive harm rendered by raising interest rates.

The view is being advanced that, inevitably, there must be a further reduction in Bank Rate.

TOMCO Results

Balance-Sheet Reviews:

THE working of the Tata Oil Mills Company, Limited, reveals a substantial decline in earnings for the year ended 31st March, 1957. Sales have shown a substantial rise to Rs 6.63 crores from Rs 5.63 crores in the previous year, thanks to larger sales of imported chemicals. The bigger turnover has not, however, resulted in improved profits, mainly due to the rise in the price of oils, particularly groundnut oil, the upward revision of customs duty on all perfumery materials, lower sales of soap and an increase in the

wage bill. Earnings are also adversely affected by the upward revision in the rates of Income-tax and Corporation Tax and by the introduction of Wealth Tax on companies.

The net profit, before providing for Depreciation and Taxation, amounts to only Rs 30,28,732 as against as much as Rs 41,79,610 in the previous year. In respect of allocations to Funds, the Depreciation amount has been reduced to Rs 10.30 lakhs from Rs 11.75 lakhs and Taxation to Rs 9.10 lakhs from Rs 14.86 lakhs. Due to lower profits, the directors have been compelled to

In India, the importance of selective monetary control has long since been realised.

So much so, reliance is primarily being placed on such a policy to combat inflationary pressures.

But authority is yet to realise the perils of high Bank Rate.

All of which is faithfully described in this week's World of Finance article.

INDIAN FINANCE

July 20, 1957

reduce the dividend from Rs 3.00 to Rs 2.50 per Ordinary share.

The directors have also set aside a sum of Rs 0.75 lakhs for Development Reserve and Rs 2.15 lakhs for Taxation Reserve the latter being created in view of the fact that the Finance Bill and the Wealth Tax bill are not yet passed by Parliament.

As proposed last year, the company applied to the Government of India for permission to issue 56,086 new Ordinary shares of Rs 25 each by capitalising a sum of about Rs 14 lakhs from the Share Premium Account, and to allot to the existing shareholders one fully paid-up Ordinary share as bonus for every five held by them. But the Government of India have refused to give their consent to this issue on the ground that free Reserves of the company, after capitalisation, will be below 20 per cent of the increased paid-up capital.

The directors have, in their report, stated that no major construction work is undertaken nor is there any substantial addition to machinery during the year under review. In Bombay, the Hydrogenation plant godown is extended and an additional godown is erected for storing seeds in order to cope with the increased production of vanaspati.

The company has acquired a small soap factory at Calcutta, which commenced manufacturing laundry Soap from last September. A plant for the production of crude glycerine, which was transferred from the Tatapuram factory, is expected to go into operation from this month.

₹ Rs

Swadeshi Cotton

The Swadeshi Cotton Mills Company Limited, Kanpur, has produced very satisfactory results for the year ended 31st December, 1956. The net profit, before providing for Taxation and Depreciation, amounts to as much as Rs 64,22,720 as against only Rs 53,71,838 in the previous year. The profits would have been still higher, but for the increase in the excise duty on cloth, particularly from 1st September 1956, which had an adverse effect on the offtake of cloth and the earnings of the company.

In respect of allocations, the Depreciation amount has been raised to Rs 11.44 lakhs from Rs

10.00 lakhs and Taxation provision to Rs 25.00 lakhs from Rs 16.00 lakhs. General Reserve is maintained at Rs 5.00 lakhs. The dividends, both on the Ordinary and Preferred Ordinary shares, have been maintained at 7½ and 11½ per cent respectively. The amount carried forward is higher at Rs 8.36 lakhs as against Rs 7.09 lakhs brought in from 1955 accounts.

The balance-sheet, as at 31st December 1956, shows a paid-up capital of Rs 2.10 crores—Rs 17.50 lakhs in Ordinary shares and Rs 157.50 lakhs in Preferred Ordinary shares, both of Rs 10 each, and Rs 35.00 lakhs in Preference shares of Rs 100 each. Against this, Capital Reserve is shown at Rs 1.75 crores and General Reserve at Rs 60.00 lakhs. The gross block of Rs 5.14 crores has been depreciated by Rs 1.82 crores to show a net block value of Rs 3.32 crores.

According to the Directors' report, the company has acquired, during the year under review, a textile mill in Pondicherry, which formerly belonged to a French company and was known as "Savana" Mills. This mill is equipped with 22,968 spindles and 675 looms out of which 428 are automatic looms. The company is putting up a spinning mill at Naini (Allahabad), which is under construction and is expected to go into production before the end of this year.

₹ Rs

Peria Karamalai Tea

THE balance sheet of the Peria Karamalai Tea and Produce Company Limited for the year ended March 31, 1957 has been well received. It is recognised that the decline in earnings has been due to the increase in working expenses, though the lower average prices realised on tea was also partly responsible. There is no doubt that, in the coming year, as a result of higher wages, working expenses will be generally inflated. It is stated that the provision made in the accounts for funds to implement the Award of the Special Industrial Tribunal for Plantations has been restricted to the amounts awarded as interim relief by the Supreme Court and the amounts provided under negotiated settlement with Labour Unions. The effect of these provi-

The Labour Conference

IN sweltering New Delhi, there was at least a climatic justification for the hundred and odd delegates assembled for the Tripartite Labour Conference to raise the all-round cry of "freeze." The requirements of the Second Plan provided another strong argument for this cry. The pity of it was each interest was keen on freezing something which touched only another's pocket. The spokesmen of employers demanded a wage freeze; workers' representatives asked for a price and profit freeze. For the Government, all the three, wages, profits and prices appeared deserving of this mono-syllabic formula. The most disappointing feature of the Conference also concerned this demand. Mr Gulzarilal Nanda, Union Labour Minister, frankly admitted the impracticability under present conditions of an effective check on prices or profits. The impracticability of a wage freeze became a natural consequence.

From the standpoint of the Plan, the failure of the Conference to come to any agreement even on the general desirability of preventing further increase in national expenditure through higher wages, higher prices and higher profits, is apparently a matter of regret. But on deeper view, the absence of a direct, positive agreement on this matter would be seen to be less disquieting. Profits are being controlled indirectly to some extent. On food prices, there is a competent Committee now sitting. Though this Committee is not expected to wield the magic wand, its labours can reveal in a clearer way where the major difficulties and lapses have been. Once these are located, the methods of dealing with them will suggest themselves. The latest restrictions on imports have set in motion an upward spiral of prices for consumer products. Though food prices and consumer goods prices are incapable of being mutually isolated, the Government appear to take a rather fatalistic view, drawing comfort from the hope that the social sense of the distributive trade and a quick response from the side of domestic production will sooner or later undermine the roots of the new boomlet.

A wage freeze, especially one on a national scale, is a much more complicated affair. For one thing, wages in different industries and between units in the same industry, sometimes even those located in the same area, reveal marked disparities. We are afraid that too many criteria have crept into current thinking on the determination of wages for industrial workers. What the industry or a unit can bear will often be much less or much more than what the cost of living and its associated concept, the minimum wage, would point to. It might be undesirable to resurrect this question of criteria for wage determination for Indian industry in general, when discontent is wide-spread; the aspirations of economic groups are caught in transitional uncertainties and no all round improvement is possible except under conditions of a substantial higher national output. Comparative productivity of individual workers, between industries, introduces another serious complication.

None of these objections, however, would meet the workers' contention that on the whole real wages continue to stagnate around pre-war levels and increased industrial pro-

ductivity has not given them benefits comparable to those secured by the salaried and the profit-earning groups. Even the Planning Commission do not seem to possess sufficient data which would refute this contention. Labourers' appetite for higher emoluments is also stimulated by the basic policies of the State, under which the State has to be a model employer, is committed to progressive labour policies and accepts labour as having an inherent claim on the community for its welfare, regardless of the profit-making capacity of this or that industry.

The Conference met when the whole country was in the grip of an ominous strike fever. Ironically, it was an epidemic purely concentrated on the State sector. Employees of the Posts and Telegraphs, of Bombay Docks, of the Indian Airlines, of the Central PWD and of the Central Tractor Organisation—the incipient threat offered by the subordinate staff of the Income Tax Department may also be mentioned in this connection—were all getting ready to abstain from work in the middle of July, spacing dates conveniently. The National Council of the Federation of the Central Government Employees' Union which claims support from 500,000 persons serving the State, had also announced its intention to call a country-wide strike, perhaps a little considerably postponing the date to August 9.

It was indeed a most depressing atmosphere in which the Labour Conference met. On the second day of the Conference the Bombay Port and Dock workers strike was to have commenced. Had that strike materialised the movement of food-grains and industrial raw materials from the already congested ports would have been thoroughly paralysed. In so disheartening a situation the authorities do deserve congratulation for having averted the Bombay Dock strike through a compromise agreement. The gain was not merely the relief over the event but the emergence of a green signal for the Conference to proceed without excitement and furore.

We are inclined to think that the deliberations in the Conference led to no major shift of ground for any of the parties concerned.

The Conference's achievement lies in the fact that even without the workers or the

Indian Finance

Established 1928

July 20, 1957

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the Side of What is Right."—The Analects of Confucius.

employers or for that matter the Government surrendering the basic attitudes to which each was known to be attached, a few broad points of agreement did emerge.

The Union Government were keen to ensure that there would not be a general clamour for all-round increases in wages. Mr Nanda claims that this purpose was substantially achieved at the Conference. It would be easier for the Government to tackle the demands of particular departments or industries independently rather than a colossal collective demand voiced by State employees of every description. Let us hope that the Government would be able to convince their employees that a Second Pay Commission was neither so urgent nor so clearly likely to be beneficial to them as they imagined.

The workers' representatives have undertaken not to resort to go slow or violence. They have given the assurance that all the Unions on whose behalf they could speak would confirm this undertaking through suitable Resolutions. All Parties have agreed to the setting up of a Tripartite Wage Board for fixing fair wages in some industries. Differences were not resolved as to the manner of selecting the industries, the labour leaders suggesting quite a few on the spot, while the employers expressing their desire to leave the matter to the discretion of the Government. A certain procedure was also accepted for the fixation of minimum and fair wages, as suggested by the Fair Wages Committee. Fifty efficient industrial units will be chosen for a beginning with workers' participation in management.

All these are concrete and substantial gains on the side of increased productivity and better labour-management relations. The decision that rationalisation devoid of a clear economic purpose has to be abandoned is also wise. But even when such purpose is unequivocally in view, to make rationalisation schemes conditional on mutual agreement between employers and the unions failing which through arbitration or adjudication, is a concession to one of the basic contradictions of the economy,—to increase output in record time and at the same time not to economise the use of manual labour.

Disappointed Neighbour

THE Pakistan Prime Minister has had a hearty reception at Washington. After his talks with President Eisenhower, he has undertaken a ten days tour of the States, during which he could do a great deal toward enlisting the sympathy of the American people on behalf of Pakistan on issues involving other nations, particularly India. It might not be an altogether futile effort either. Mr Suhrawardy openly thinks that "the United States ought, in the Security Council and later on in the General Assembly to use its weight and its influence and its persuasion to see that the other countries of the world also realise the justice of our case". He has also paid a fine compliment to the understanding and insight of the US President.

A radio and television programme gave an opportunity to Mr Suhrawardy, suitably led

by US newspaper Correspondents, to picture in fairly lurid terms Indian intentions over canal waters and subtly to implore timely foreign intervention. But, one of the cleverest politicians alive, still Mr Suhrawardy could not help betraying his disappointment over his talks with President Eisenhower. To all the categorical questions raised by Pressmen, he could answer only in terms of impressions, hopes and expectations.

The naked fact is that from the standpoint of Pakistan the US President was not found to be in any way obliging. The Joint Communiqué was either silent, carefully non-committal or obliquely disapproving of Pakistan's attitude on controversial issues with India. The positive welcome, expressed on the efforts of the World Bank to find a solution on the

(Continued on page 150)

Planning and the Banking System

By B. K. DUTT

India is today in a state of transition towards a pattern of socio-economic growth which envisages major changes in the existing set up—both functional and conceptual. Whereas the Second Plan has been drawn up with this in view, adequate thought does not appear to have been given to the banking requirements. A banking system capable of assisting and sustaining a planned growth of economy is not only indispensable but is perhaps a prerequisite. The question as to how the country's banking system can function in the most useful manner covering every individual who is economically active, therefore deserves an immediate and serious consideration.

Banking System is essentially the basic source for supply of credit to the economy in various forms for various purposes and to various income groups. At the same time it is the depository of the temporary resources of the people meant to be used mainly through 'cheque currency', a practice which is yet to develop fully in this country. It is also a depository of the savings of the people, awaiting investment or deferred use. Bank deposit, however, is not an equivalent of investment by the depositor, though it earns interest, a marginal inducement against the retention and use of money away from the banking system. As a depository of resources and savings the Banking system has to offer an effective assurance of timely fulfilment of the obligations when called upon and has to so operate that the manner of its use of money ensures matching of the requirements of reimbursement in time. So it looks more to the convertibility of the assets it acquires with the deposited funds, into the media of exchange. Such convertibility comprises either the 'extinguishability' through self-liquidation of the loans and investments and/or the 'shiftability' of the assets in their being eligible for discount at the Central Bank of the country, or being acceptable with the other banks and discounting houses, or both, or being fit for exchange in recognised markets. An implied responsibility devolves on the Banking system to assist, through its operation, the Central Bank of the country, in the maintenance of the purchasing power of money, if possible at the level where it was at the time the resources were placed in its hands.

In short, the Banking system has to endeavour, on the one hand, to offer certainty as to discharge of its obligation in time and equip itself to assist the maintenance of the internal value of money, on the other, it has to ensure useful supply of credit to the economy in appropriate measure and manner.

Service and Contribution

Apart from the Central Bank of the country, the Deposit Banking system in India comprises the State Bank of India and three other smaller State-owned banks with 586 branches, with total deposits of Rs 255,05,00,000; other 68 Indian scheduled banks with 2205 branches and deposits of Rs 639,22,00,000 and 367 non-scheduled banks with 1169 offices and deposits of Rs 68,47,00,000. In the Co-operative sector there are 572 Credit institutions with 1113 offices and a total deposit of Rs 144,95,00,000. There is another State-owned organisation, i.e., 'Postal Deposit' system with 11,898 offices and a deposit of Rs 256,49,00,000. In addition to these Indian enterprises there are 67 branches of foreign banks having a deposit of Rs 196,50,00,000. To

summarise, deposits with the State sector institutions comprising the banks in the State sector, Postal Savings Banks and the Co-operative Credit add up to Rs 656,49,00,000 while deposits in the private sector including the foreign and non-scheduled banks add up to Rs 904,19,00,000 indicating that the State sector banks may in the years to come be in a position to dispute the superiority in resources of the private sector banks unless of course the rate of progress in the private sector be faster than the experience in the other. There need be no doctrinaire aversion to the system of State ownership in any segment of the economy. But at the same time in the basic interest of a democratic form of society it is incumbent on the private sector generally and the Banking system in particular to assert aggressively, through service and contribution, for maintaining its rightful position, as a deterrent against the arising of any necessity for encroachment upon the privately owned sector of the system.

The abovementioned figures are as on 31-12-55. Since then the deposits of the scheduled banks (including the State Bank and the foreign banks) have, as on 28th June 1957, gone up to Rs 1,261,03,00,000/- but at the same time the advances have also reached a figure as high as Rs 919,07,00,000/-. The ratio that advances bear to deposits is rather high at about 73 per cent and the banks are not in a position to meet new demands as freely as they would like. Their outstanding borrowing from other banks including the Reserve Bank of India is also fairly high at Rs 81,86,00,000/-. It is true that a rise in advances, being indicative of higher economic activity, should lead to better growth of deposits. It is also true that a rise in notes in circulation should lead to a proportionate accretion to the resources of the banks. But unfortunately it has not been the case so far. If the Banking system be not continually on the alert and has frequently to plead its inability to find the necessary resources for both the sectors or resists justifiable call for functional changes, then it may, through this lacuna, invite larger encroachment by the State sector institutions. Till the people and the State get fairly wedded to democracy that may tend to the authoritative tendency ultimately having its grip on the entire economy in an irrevocably firm manner.

Specialised Institutions

Various functional aspects of the money market are being cared for today by a number of specialised institutions, considered suitable for specified purposes, such as Stock Exchanges, Life Insurance Corporation, ICIC, for the Government loans and the corporate scrips; Industrial Finance Corporations for long-term loans; Re-Finance Corporation, (which is coming into existence in the immediate future), to facilitate medium term finance through banks. Seemingly, this has partly narrowed the obligations of Banking system. But all of these institutions are Banking based, inasmuch as the balance between the supply of resources and demands of the industry, as well as their own, is expected to be maintained by the Banking system, through the enlargement of its concept and efforts. Certainly as to the responsive continuous financing in regard to the short-term requirements, which more often than not form the larger part of industrial finance, including the finance required for the distribution of the

produce, is the basic assumption on which these specialised organisations depend for their success.

The institutionalisation of the medium-term re-financing merits special mention. The medium-term loans as may be made by the commercial banks at their own risks, would hereafter be eligible for rediscounting with the proposed Re-Finance Corporation. So far there was a lacuna in the chain of specialised financing institutions and the Shroff Committee, with which the present writer was associated, recommended that the Reserve Bank should be statutorily authorised to discount bills for medium-term loans made by the commercial banks, if any. One of the objectives behind this was that an amendment of the Reserve Bank of India Act in that regard would induce the commercial banks to de jure acceptance of the medium-term finance as one of their functions.

Acceptance of the suggestion in the form it was made would not have introduced any quantitative limitation on the rediscount resources, which sponsoring of a separate institution apparently does. But there would possibly be the eligibility of the new institution to borrow from the market or from the Reserve Bank, if the genuine needs of the economy and industrialisation required. The limitation referred to will not then be there. In certain respects, however, the idea of a separate institution as sponsored by the Reserve Bank has been a very substantial improvement on the Shroff Committee recommendation. This institution will be the first forum of the kind, where the Central Bank of the country, commercial banks in the State Sector, a Government owned Investment institution and the privately owned commercial banks—Indian and Foreign—will be working in unison in the field of industrial finance. Though the scope of the institution would apparently be limited in nature, in reality this organisation may have to have under its continuous review the entire industrial finance, commencing from owners' Capital to borrowed Working Capital, and for the matter of that this body may have to keep under consideration all the aspects of industrial functioning and the phases through which the industry in general, or one in particular, may have to pass in the future. This sponsoring of a Corporation with a composition as proposed, is a unique event in the field of finance in the country. It may be the precursor to a co-ordinated action in the field of finance in other directions also. The Banking system itself may also largely benefit from it as to the concept of functioning. The Reserve Bank deserves full compliments for this.

Notwithstanding progressive development elsewhere, the basic obligations of the Banking system could not so far be duly discharged in this country. Because, till the other day, the development of Banking was confined to the servicing of an economy geared to suit the needs of the then social pattern. It is, however, now expected to engage itself wholly, not only in continuing the servicing of the economy to the extent the ordinarily growing resources permit, but also in equipping itself to engage in fast developing its resources, in extending the functional scope and in reviewing the concept of Banking itself.

The bringing into existence by the Reserve Bank of India of the Re-Finance Corporation emphasises the need for reviewing the concept of Banking and correct determination of its functional scope.

An Indian Finance Special Study

An Indian Finance Special Study

"Banking Plan"

To assist raising of a discussion a tentative plan has already been formulated by the present writer at the request of the Indian Banks Association to which attention of the country has been drawn by, amongst others, the Indian press in their comments and editorials. The details of the plan need not be gone into here, beyond saying that it comprises proposals for extensive territorial expansion of the commercial banking system within the country through branches and subsidiaries of the established banks; new growth; rehabilitation of the other reporting banks so far as is necessary; removal of the corpses of the banks which are not more operating. To expedite development of deposit banking and the rehabilitation, Insurance of Bank Deposits, another recommendation of the Shroff Committee, has also been urged.

In the context of price inflation, the question of credit control assumes a great importance. Today the credit control policy can effectively extend its scope to only about 2½ lac borrowers of the major Indian banks (State Bank included) and the foreign banks. It extends to the resources in the hands of the few major banks dealing only with about 18,00,000 deposit accounts and to only 646 places served by major banks. If, however, a successful expansion of Banking takes place, much larger part of the economy of the nation will come under the scope of the credit control policy of the State, a situation essential for the maintenance of the value of the Rupee in terms of goods and services at a justifiable level.

Such a planned development of Banking would tend to solve the problem of internal resources in both the sectors and create conditions for a better marketability of the Government Securities and corporate scrips. If the State agrees to use the privately owned banks on the same basis as those in the State sector, the commercial banks, there being a planned expansion, could pave the way for continuous repatriation of a larger portion of the Government loan issues, to the common man, making it easier for the State to market its securities relatively comfortably. That being effectively achieved, more certain borrowing prospects may partially take the edge off the need for disquieting taxation. Mention has also been made about the need for establishment of Unit Trusts, as recommended by the Shroff Committee, for the activation of the market for corporate scrips.

The Government are determined to execute the Second Plan without much curtailment or postponement. They, therefore, cannot escape an all out endeavour to raise the necessary resources. In this connection it may be relevant to quote from the tentative plan for expansion of banking facilities referred to above.

Attempts are being made to collect readily available resources, however possible, and since economic concepts allow creation of money in anticipation, that will also be resorted to. New ideas of taxation, again, are gaining in strength; and newer forms of control over the utilisation of such resources as are visible in the organised segment of the private sector are being devised. This aspect of the economy, as it is being moulded, imposes on the banks a very great responsibility. If the burden of collecting the resources is left to the Government alone, the necessity for such diverse

expedients to collect the readily available resources will be on the increase, and in case of failure to gather necessary resources, there may, in addition to all-out taxation of earnings in the organised sector, be repeated additions to created money resulting in steepening falls in the rate of capital formation and the value of the Rupee. Once imbalance develops in the individual's income in monetary and real terms, it will take a severe toll of human suffering and economic dislocation before the situation is adjusted to what may be deemed to be reasonable enough for the society to bear.

Machinery for Execution

It is, therefore, an urgency that a banking plan should be evolved without much delay, with the objective of collecting resources now tending to disappear in the unorganised segment of the economy. Evolving such a Banking Plan and execution of it will require the setting up of a machinery for the purpose. One of the most appropriate courses would, possibly, be to arrange a convention of all the reporting Indian banks including the State Bank of India and the other State owned banks, as also, if possible, the major Co-operative credit institutions, with a view to—

A. Establishing an 'All India Banks Association' or a 'Federation of Banks' Associations';

B. Sponsoring formally the idea, appointing a standing 'Banking Expansion Commission' authorised to—

(i) evolve a Banking Plan in close consultation with the Reserve Bank of India and the Banks;

(ii) activate execution and supervise performance thereof (subject to the compliance with the Banking Companies Act where it applies);

(iii) co-ordinate the functioning of the Banking system in the Private, State and Co-operative sectors;

(iv) act as the agent for liaison (a) with the other long-term financing organisations and (b) the Governments concerned with a view to, amongst others, obtaining financial and other assistance so far as justified.

C. Requesting the Reserve Bank of India to arrange for the appointment of the 'Commission' and to finance it.

Such a 'Commission' will possibly have to associate in its plenary organisation all sections of economic interests in the country headed by one having necessary enthusiasm for planned expansion of Banking and commanding respect of the Reserve Bank, Union Government and the private banking sector. A smaller body of its own, under a wholtime executive, could take up its day to day functions.

"Plan Committee"

Apart from sponsoring the idea of appointment of a 'Commission' the convention may, with advantage, appoint its own standing 'Plan Committee'—

(i) to formulate its proposals for submission to the Banking Expansion Commission, and

(ii) (a) to take upon itself the responsibility of executing that part of its own proposals, as may be carried out till the 'Commission' is appointed, (b) in case the appointment of a 'Commission', for any reason, does not

materialise, then to finalise a Plan itself and to proceed to execute the same to the extent possible.

Such a "Plan Committee", in that event, would not have any formal sanction behind it but given a bit enthusiasm for the Plan on the part of the leading Banks and the urge to submit voluntarily to a programme carved out by the "Plan Committee", the objectives could up to a point be achieved.

(iii) to be in continuous association with 'Commission', when formed, to ensure, amongst, that—

(a) the Plan is formulated in a manner that it may be carried out with the minimum of regimentation;

(b) attempts on the part of any bank to evade the obligations under the Plan remain within control;

(c) adequate enthusiasm is created and maintained in favour of the Plan (Continued on page 150)

celebrates its

GOLDEN JUBILEE

Next August

Started in 1907, in a modest way by men of courage and vision, its present stability and strength have been reached by a policy of prudent management and discriminating participation in trade and commerce. With a paid-up capital of Rs. 64,70,045; deposits of Rs. 32.26 crores and working funds of Rs. 54.91 crores and its network of branches in important areas, the Bank is fully equipped to render its constituents every kind of banking service.

Good work Abroad

Pandit Nehru had ample reasons to extend his visit to London for the Commonwealth Conference, into an itinerary covering two continents. The visits to the smaller countries of Western Europe were as much a matter of courtesy, obligatory on the part of a statesman of world rank, as an expression of this country's desire to extend industrial and commercial contacts. Beneath the surface, an even more vital purpose is discernible. A leader, wedded to dynamic neutralism in international politics, can benefit from a first-hand acquaintance with the impulses and hopes of peoples who are compelled to ensure their national freedom with or without the dependence on stronger neighbours.

The Prime Minister was also having uppermost in his mind the scope for foreign assistance on the Second Plan. He could clear whatever misimpressions existed on this rather delicate subject. He felt impelled to return to it even at the Press Conference at Khartoum. He made it clear that India would not refuse assistance from any one wanting to help in its economic development.

At the Commonwealth Conference and outside, Pandit Nehru had to press his views on some of the most formidable problems of the day. These views were not given out for the first time. The occasion of their reaffirmation and the persons to whom they were immediately addressed, should have aided a little more of conviction. On nuclear tests, on Western policy on the Middle East and regional military pacts, the traditional outlook of the West received a powerful sobering

Editorial Notes

Impact. It is debatable if the Eisenhower-Suhrawardy joint statement would have been couched in the same wording, if India's Prime Minister had not participated in the Commonwealth Conference and reiterated his views so unreservedly. The Commonwealth itself could draw fresh strength from the undisguised approval and support from India, expressed through the Prime Minister's active role at the Conference.

The State and Education

In two States, private educational institutions are having their days numbered. Private schools and colleges which are run with the help of Government grants have undoubtedly played a notable part in the extension of literary and perhaps to a greater extent higher education. But more often than not, they bear a tarnished record with under-paid teachers, fraudulent accounts and mismanagement of various kinds. The Government of Andhra have decided to take over the aided schools and to nationalise text-books, two steps which would bring primary education completely under the grip and control of the State. In Andhra, no one seems to question the usefulness or ethics of these proposals.

But when the Kerala Government declared their intention to achieve the same purpose, albeit more gradually, a State-wide opposition has sprung up. As far as the teachers are concerned, almost without exception, the nationalisation of schools will be sincerely favoured. In Kerala, compensation for buildings and equipment is also offered and there is no room for the fear that money invested by private individuals or societies will be lost to them. In the circumstance, the Opposition case is weakened and could be judged only in terms of the political situation in which change is attempted.

It is a war of parties. The status quo is defended by those who surreptitiously or otherwise make a living out of it and others who do not like to surrender the opportunity of educating the youngsters in the way in which they like. The Communist Party in power seeks to mould young minds differently. In other words, it looks more a competitive bid for minds than one for pelf or power and all the more dangerous for that.

From the Education Bill now before the Kerala Assembly, it could be seen that even without a change of hands, the aided schools would not be so alluring a possession for the managements as they used to be before. The semi-official Advisory Councils and a nearly independent body of teachers will rob the managements of virtually every worth-

while power and discretion. Voluntary surrender can become the rule.

Temple and Tax-gatherer

In the Madras legislature, an Opposition member made the suggestion for a tax on worshippers. It was not quite seriously offered, but in the present mood of Governments in India, no source would appear too impractical or elusive to invite scrutiny. We have outgrown the stage in which a tax on worship would be treated as an affront to religious faith. Some of the temple dues collected are a near kin to a regular tax on worshippers.

In South India, temple funds have become susceptible to utilisation for secular purposes, though initially these diversions are meant for fields in close proximity to religion, such as education and reading rooms. The member who offered the idea belongs to a Party which takes a cavalier attitude toward religion and which would not mind if general faith in religion gets suffocated through a price placed on its manifestation.

In Kerala, the proposal would secure more enthusiastic ideological acceptance. The Communist looks on religion as an opiate and any step calculated to restrain the use of this 'drug' would be welcome. As a source of revenue, it could be hoped that a levy of this character would yield plentifully, because in the current outlook in India, a little pecuniary sacrifice in the name of God will seldom be grudged. Where it is also linked with material good, the chances of success are further reinforced.

A Banker Speaks

In his address to the Bengal National Chamber of Commerce and Industry, Mr B. T. Thakur touched on present banking conditions in India and posed a number of questions concerning the future. With his long and distinguished experience of Indian Banking and its manifold problems, his thoughts ran on lines which would appear daring to others.

For instance, he asked whether it might be necessary to transform the Central Monetary Authority from a unitary to a federal type and whether a statutory relationship for consultation with the banks might not be advantageous. These are controversial matters and conservative opinion is likely to prefer "sleeping dogs lie". Sometime or other the implications will have to be examined and studied in full detail. Presumably, Mr Thakur is not quite satisfied with the role which the Indian Banks play in "selling India" to the outside world with

a view to secure adequate foreign capital and credit.

One of his suggestions is for a high-powered committee of banking and monetary experts to investigate on the various problems thrown up by the banking system and its relationship with the State and the Central Banking Authority. Mr Thakur is also anxious that the banks should improve their public relations and bankers and businessmen should take it as a duty to help the ordinary man to arrange his thoughts in an orderly fashion and to move from his mind the confusion and bewilderment which is the only result of the politician trying to plant his ideas. There is a great deal in the address to which both the professional banker and academician could look for stimulus and inspiration.

Hindu Joint Family

The Hindu joint family, which has survived the full blast of Western individualism, sustained and nourished under the benevolent roof of British political power, seems to be rapidly breaking loose in recent years. A Reserve Bank Survey finds that the number of Hindu joint families paying taxes has declined. The Union Finance Minister welcomes the trend, for both political and fiscal reasons. He is inclined to think that this system gave the Communists a chance to secure power in Kerala. His antipathy to the joint family springs from a more powerful reason, the notion that it breeds tax evasion. If these impressions are justified, the decadence of the Hindu joint family may be assisted further.

Credit Squeeze vs
Credit Regulation

WHILE, for over two years, in the USA, the UK and most West European countries, the monetary authorities have, for controlling inflation and for rectifying balance of payments maladjustments, relied on credit squeeze, putting their faith in the efficacy of the Bank Rate, India has been evolving techniques of credit regulation in the belief that selective monetary control is the only appropriate method in the conditions of a developing economy. From the point of view of the latter requirements, credit squeeze has been deliberately avoided; on the other hand, while, toward the end of the last year, vastly accelerated economic activities in industry, agriculture and commerce led to marked credit stringency, official policy was directed to positive and comprehensive measures (such as liberalisation of the bill market scheme and the purchase of Government securities directly from the banks) designed to cause credit relaxation. India, then, stands out as the one and only important country which has been practising, consistently, unwaveringly and successfully, techniques based on credit regulation as contrasted with credit squeeze.

Everywhere else, credit squeeze has been the order of the day. Mount Everest altitudes of the Bank Rate have been grimly accepted; and there has been no attempt to conceal the official intention to turn the screw and keep turning it till it hurts and hurts. The concerned interests have complained; but this has been interpreted as indicating that the desired effect was being achieved. Some measure of retreat has been noticeable in countries like Britain where the Bank Rate had to be reduced from 5½ per cent to 5 per cent, and short money rates have slipped to levels suggestive of yet more reduction in the official minimum. But this retracing of steps cannot be said to be out of solicitude for the damage inflicted on private enterprise; rather was it effected because of the problems posed by the high Bank Rate for State finances.

Official predilections for credit squeeze continue strong. But, public disquietude has been gathering volume. The man in the street as well as the not-so-orthodox economist and the average businessman have been increasingly disposed to doubt, let alone the wisdom, the very efficacy of credit squeeze as a cure for inflation. The question asked from the point of view is

simply this: Can Authority claim any effectiveness for a policy so ruthlessly pursued?

The answer is "No", according to an authoritative investigation the results of which were made known a fortnight ago. This investigation was a task taken up by the International Institute of Banking Studies. As "Lombard" writes in The Financial Times, the conclusion reached by the Institute is that the traditional instruments of credit control "have been found to suffer very severe limitations when they are used as economic regulators in the modern State". The Institute has, in particular, drawn attention to the inability of Bank Rate to evoke what were once the customary responses from the economy. The intention of a raising of the Bank Rate is, firstly, to attract short term funds and, secondly, to discourage domestic business expansion and accumulation of stocks. It may be noted that, under the former head, the intention is primarily to induce the flow of foreign funds so as to correct any distortion in the balance of payment position. The intention of the latter is to discourage business expansion by increasing the cost of money. Neither purpose is today served by the raising of the Bank Rate. The inducement postulated by higher Bank rate is more than offset by doubt as to the stability of the currency of that country. In the result, no foreign funds are attracted; but the cost of servicing foreign debts has, in the meantime, become higher. Secondly, dearer money does not appreciably reduce the volume of demand for the servicing costs increase. "Lombard" has no hesitation in writing that "the raising of interest rates is one of the least effective forms of economic control in the modern conditions"; and he adds that this "suggests that the Bank Rate weapon is one that should be used as little as possible by countries which, because of the existence of large external and internal debts, impose additional strains to their economies when they raise interest rates."

This is the negative approach to the question, this conclusion that Bank Rate is an outmoded weapon of limited utility. There is also the other consideration, the positive harm rendered to the economy by an increase in interest rates. Britain, as we have remarked, has already begun to retreat from dear money, and the short term money rates are suggestive of a further lowering of Bank Rate.

It is some time since the British financial authorities would seem to have realised that some form of selective monetary control is what, in the circumstances of the UK economy, is called for. But the picture is far from clear in America, where the policy makers in the financial sphere would seem to be almost fanatically in favour of so called tight money conditions. In the current deliberations of the Congressional Committee headed by Senator Kerr, a staunch supporter of tight money, FRB Chairman Mr Martin, is likely to have a gruelling time. Already, there is a school of opinion which maintains that tight money has set the economy rolling on a dangerous contraction.

Interestingly, the Democratic Party's attack on tight money is based on the view that current economic phenomena in America do not amount to "classic inflation" and that, consequently, the measures taken by the Administration are futile and wrong. It is not classic inflation because, it is urged, (1) Government Budgets are producing a surplus, and not a deficit; (2) money supply is expanding, not fast, but at the slow rate of 2 per cent per annum; and (3) there are no shortages in the economy, but, indeed, excesses in installed capacity. President Eisenhower apparently also shares the view that, because it is not classic inflation, Government measures alone are not sufficient. He has twice emphasised that, for stopping inflation, "statesmanlike action" is called for from both labour and management; that is, labour has to desist from wage demands which would be in the nature of a fresh twist to the spiral, and management must show restraint in increasing prices of products. So much so, the economic situation is being described as a "new inflation." This is because business, on the one hand, is in a position to push up prices independently of the extent of overall demand and because labour, on the other hand, has been so reinforced by the objective of full employment that it can secure wage increases without taking productivity into account. The conclusion derived by a writer in The New York Times is that, as a result of the commitment to full employment, "costs are bound to rise inexorably year by year"—unless these are offset by "equal increases in labour productivity."

Thus, whether it is classic or new inflation, it is clear that these industrially advanced nations have been so apprehensive of inflation that the financial and monetary measures they have taken have been clothed in a severe and unbending rigidity. So much so, at the present stage, there is controversy as to whether the problem before the financial authorities is one of combating inflationary pressures or one of resisting the perils of deflation.

Meanwhile, the dear money policy has made a mess of gilt-edged markets and Government borrow-

ings. It is beyond the capacity of even so powerful a Government as America to float long term bonds. In the UK, gilt-edged investors have suffered such capital depreciation that they have ceased to be interested in gilt-edged for investment. A Government which cannot raise resources by market borrowings needs to rely upon increased tax collections for balancing its Budget. The orthodox retort, of course, is that dear money should be considered only to be one of the instruments for combating inflation, and that, for the campaign to be successful, it is also necessary for Government expenditures to be cut down. Unfortunately, this reduction in Government expenditure seems to be almost impossible to achieve. In the result, it has meant that dear money and high taxes are inseparable.

We wish to emphasise that, in regard to India, the case against dear money is even more compelling. A credit squeeze in Indian conditions will not avert but on the contrary bring that day nearer when the economy could be overrun by galloping inflation. An underdeveloped economy, which is seeking to industrialise itself, faces the most complicated problem in inflation. Firstly, its tax collections, as expressed as a ratio of the national income, are low. Secondly, some part of the development has necessarily to find its resources in deficit financing. Thirdly, this deficit financing holds dangerous potential for releasing inflationary pressures. Fourthly, any orthodox credit squeeze then set in motion will irretrievably retard production and accentuate the inflationary pressures. It thus becomes necessary for the developing underdeveloped economy to balance these separate factors; and, at the same time, it has to mop up the inflationary potential arising from deficit financing. In this last context, since the development expenditure is widely diffused, the traditional method of redirecting most of it to the national exchequer through taxes is not available. Instead, reliance has to be placed upon market borrowings and small savings to mop up the additional floating money. But if the orthodox step were taken of raising interest rates, while some element of success might attend the small savings campaign, the gilt-edged market would be so far disrupted as to jeopardise Government's market borrowings. Therefore, the underdeveloped economy has to realise that the most potent and perhaps the only answer to inflation is additional production. Necessarily, then, funds must be freely available for productive enterprises; but, simultaneously, adequate care has to be taken to ensure that available funds are not utilised for speculative purposes which will aggravate the price situation. It is in this wise that India has evolved for itself the mechanism of selective monetary control. There is the awareness that the war

against inflation must be unceasing; but there is also the awareness that nothing must be done to place an obstacle in the way of increasing production.

The Indian monetary authorities have, we repeat, properly realised that the policy they must follow is one of credit regulation and not one of credit squeeze. The over

simplification of this idea lies in asserting that money must be readily available for productive purposes but that it must be scarce for speculative purposes.

We would, however, suggest that the Indian financial authorities have yet to realise that the present structure of interest rates is harmful to the country. If deficit

financing is to be reduced, and if substantial resources for planned expenditure are to be raised from market borrowings, Government must be clear in their mind as to the interconnection between descending interest rates on loans and subscriptions realised therefrom. This is a matter to which we have been giving repeated attention,

but we think that such reiteration is important and necessary. While, no doubt, Government and the Reserve Bank of India will now be in the process of finalising the New Loan for 1957, we consider it our duty to urge that a sound programme for Government borrowing can only be on the basis of a pattern of descending interest rates.

Half Year Results of Scheduled Banks

In the first half year of 1957, Scheduled Banks have done very well for themselves. Between the end of December 1956 and the end of June 1957, Deposits have shown a rise of Rs 162.72 crores. This is a remarkable rate of increase, the accretions in the half-year being considerably higher than the total increase of Rs 80.81 crores during 1956. It is, however, interesting to note that Time Liabilities register a bigger rise than do the Demand Liabilities. The increase under the former head is one of Rs 93.52 crores to Rs 553.02 crores, whereas in the latter instance the improvement works to Rs 69.20 crores to Rs 723.39 crores.

Over the period, there has also been disinvestment in Government securities to the tune of Rs 32.03 crores, the figure under the relevant head being placed at Rs 332.72 crores at the end of June 1957.

It has thus been an easy matter for the Scheduled Banks to handle the expansion in Advances, which have jumped up by Rs 130.62 crores to Rs 919.08 crores. The greater improvement in Deposits vis-a-vis the increase in Advances has enabled a reduction in Scheduled Banks' indebtedness. Borrowings from the State Bank are shown lower by Rs 3.71 crores at Rs 4.40 crores; and indebtedness to the Reserve Bank of India is sharply lower by Rs 16.97 crores at Rs 62.09 crores.

Scheduled Banks have apparently chosen to keep larger cash balances on hand. For, the figure under this head has risen by nearly one third to Rs 153.83 crores from Rs 114.60 crores.

The main point to note in this broad analysis of bank figures for the first half of 1957 is that the larger earnings consequent to the higher volume of Advances are likely to be partly offset by a rise in the expenditure on interest paid. The steep increase under Time Liabilities would indicate that the higher interest paid by banks will possibly have eaten into a substantial portion of the inevitably higher earnings for the first half of 1957.

It is against this background that the first releases of bank profits for the half year ended June 1957 may be studied.

Is Britain Facing a Crisis?

By PAUL EINZIG

A GROWING uneasiness prevails in Britain about the possibility of an acute deterioration of the economic situation in the near future. Inflation which was temporarily slowed down after the Suez crisis is gathering momentum once more. The number of unfilled vacancies once more exceeds that of the unemployed—a sure indication of inflationary overfull-employment. Instalment credit is expanding in spite of the recent reinforcement of the restrictions imposed on the terms of such transactions. In addition to the wages demands, many large unions have put forward demands for the 40 hour week. If this is conceded it will either reduce the output or it would increase the amount paid out in overtime. In either case it would powerfully reinforce the trend of inflation.

It may take months before this additional consumer demand will produce its inevitable effect on the balance of payments. Long before that stage is reached the rising trend of prices is liable to produce its effect on the market for Government loans. Yet even now, in spite of the daily headlines about the fall in Government loans, very few people seem to realise that this has become the most vulnerable spot in Britain's economy. The gap in the balance of payments may be met by drawing on the newly acquired dollar facilities, or by checking the outflow of capital. This latter device was recently applied against the acquisition of Canadian securities. But no such technical devices are available to check the adverse trend in the markets for fixed interest-bearing securities.

The depreciation of Government Loans has already gone far beyond what even extreme pessimists considered until recently to be possible. Until a month or two ago a decline of 3½ per cent War Loan below 70 or of 2½ per cent Consols below 50 was considered inconceivable. Whenever their quotation approached those figures the psychological factor resulted in a revival of demand. Today both quotations are well below that limit.

Few people realise it sufficiently that the decline in the gilt-edged market, if it should continue, would entail far graver dangers than another devaluation of the pound. After all it is well to remember that a large proportion of the investment of banks and insurance companies consist of the Government securities. It is true the average redemption date of their holdings has been reduced and short-dated or medium dated stocks are not affected by the fall to the same extent as long dated stocks. Even so, the decline in the gilt-edged market has materially reduced the reserves of most financial institutions.

In face of this situation the Government's attitude is criticised

the latest official pronouncements the Government still seems to rely mainly on exhortations as the means to check inflation.

Unfortunately in face of the recent Government decision to raise the salaries of Members of Parliament and of Ministers the preaching of self-denial stands very little chance of making an impression. The plundering of the community by organised labour will continue unless and until the Government and employers muster up their courage to call a halt. And there are no indications of any such heroic determination.

Originally it was believed to have been the Government's intention earlier this year to encourage employers to have a showdown with the Trade Unions by making a determined stand against unwarranted wages demands. It was partly in order to be able to withstand the effect of a major strike on the balance of payments that the recent arrangements for reinforcing the gold and dollar

reserves were made. When the decisive moment arrived however, on the occasion of the engineering and shipbuilding strike, the Government got cold feet and induced the employers to settle the wages demands. After that retreat it will not be easy to make another stand unless and until realisation of the imminent dangers of the situation will lend the Government and employers courage of despair.

In face of this situation the attitude of the Socialist Opposition is far from helpful. There would be ample scope for goading the Government into action by constructive criticism. Socialist leaders could establish reputation for statesmanship by calling on the rank and file to exercise self-restraint in their wages demand in the interest of avoiding a crisis. There is no evidence of such statesmanship in the Labour Party today. Its chief concern is to make political capital out of the difficulties in which the Government finds

(Continued on page 137)

We do business with the nicest people...

And we are deeply interested in these nice people: in you! That's why we have a special Market Research Department that devotes itself to finding out what you like and don't like, why you buy—or don't buy.

Our teams of interviewers travel all over the country, calling on families in city, town and village, and noting your growing needs and changing preferences. This fact-finding process enables us to introduce new products like Rinso, or change a familiar one in some way—the perfume of Lux Toilet Soap, for instance.

Many of our products are, perhaps, already your household friends, and you appear on the charts and reports compiled by our interviewers. But you are more, much more, to us than facts and figures... you are the very people we do business with. We spare no trouble in trying to meet your needs, in offering you the very best value for your money.

World Bank Loan to Indian Railways

THE following is the communique issued by the International Bank for Reconstruction and Development on July 12, 1957, on the subject of its loan to Indian Railways:

Eugene R. Black, President of the World Bank, today announced that the Bank has agreed to make four loans to India—one in Japanese yen, one in pounds sterling, one in Italian lire and one in United States dollars and other currencies—to assist a program for modernizing and developing the Indian Railways. The funds will be used to help meet payments on imported equipment which fall due in 1957 and 1958.

An agreement signed today by the Indian Ambassador in Washington, Mr G. L. Mehta, and Mr Black, embodies loans of 8,640,000,000 Japanese yen (equivalent to \$24 million); 8,825,000 pounds sterling (\$19.1 million); 7,000,000,000 Italian lire (\$11.2 million); and United States dollars and various European currencies equivalent to \$35.7 million.

The Indian railway system is the fourth largest in the world, comprising nearly 36,000 route miles. With the exception of a few miles of narrow gauge line, the system is owned by the Government, and managed and operated by the Railway Board, which is a part of the Ministry of Railways. The Board and its staff run the railways efficiently despite much over-age rolling stock and inadequate equipment.

The railways are by far the most important form of transport in India, where highways, river and coastal shipping cannot handle large volumes of long-haul traffic. Improvement of the railway system is vital to the success of the Second Five Year Plan now under way. During the five years of the first Plan, which began in April 1951, freight carried by railroads grew by one-fifth, reaching 115 million tons in the final year. Growing production and trade continue to exert increasing pressure on the railways: the handling of coal and mineral ores, which account for 40 per cent of freight, will expand further to feed new steel capacity now being built and to move iron ore for export.

The Railways are now carrying out a five-year program to increase freight capacity by 40 per cent, from 115 million to 163 million tons a year, and to increase passenger capacity by about 10 per cent.

The proposed expenditure on the railway program under the Second Five Year Plan is 11,250 million rupees (\$2,363 million equivalent).

of which some 4,250 million rupees (\$893 million equivalent) is required in foreign currencies for the purchase of essential goods, materials and equipment which are either not produced in India or of which the domestic supply is insufficient.

The most important objectives of the program are the acquisition of more than 2,300 locomotives, 11,500 passenger cars and 107,000 freight cars; the doubling of about 1,600 miles of mainline tracks; the renewal of 8,000 miles of track; the construction of about 850 miles of new lines to give access to coal and ore fields and to relieve congested areas; improvements in yards and signaling facilities; and the electrification of mainlines in regions of high density passenger and freight traffic, particularly the Calcutta area.

The Bank's loans will pay about half the cost of purchasing from abroad goods and equipment on which payment falls due in 1957 and 1958. These purchases include more than 500 locomotives, 10,000 freight cars, 100,000 wheelsets, 1,500 underframes, rails and other materials and equipment. These items have been ordered, on the basis of international bids, in various countries.

All the loans are for a term of 15 years and bear interest of 5-5/8 per cent including the 1 per cent commission which is allocated to the Bank's Special Reserve. Amortization will begin July 1, 1961. The loans were approved by the Bank's Executive Directors on July 12.

This is the second time the World Bank has lent funds for the Indian Railways. A loan of \$34 million made in August 1949 was used to purchase 418 locomotives, boilers and miscellaneous spare parts, and helped to remedy a serious shortage of motive power. In addition to the railway loans, the Bank has made other loans in India for the development of electric power, agriculture, iron and steel production, for the purchase of jet passenger aircraft, and to provide funds to a development corporation for investment in private enterprises.

Metal Box

The quickened pace of economic development in India makes it a safe prophecy that the indigenous canning industry will have a bright future. Owing to a variety of other reasons, the most important of which is the round-the-year availability of fruits and vegetables that the industry ensures, the demand for canned products is bound to show a sizable increase

A motor oil so good
it cuts petrol consumption
up to **15%**

CALTEX
RPM
20-40 SPECIAL
WORKS FOR
YOU LIKE THIS

when you start your car

you need the performance of a 20 oil

Every time you start, your engine needs a light, quick-lubricating 20 oil. Bearings are then instantly protected, petrol is not wasted overcoming friction caused by a heavier oil, excess power is not drained from the battery.

ten minutes later

you need the performance of a 30 oil

As your engine warms up it needs a SAE 30 oil—an oil with more "body" to resist the increase in engine temperature. At this stage, a lighter 20 oil would not give complete protection or maximum performance, a SAE 40 oil would be too heavy.

twenty minutes later

you need the performance of a 40 oil

Out on the open road your engine will operate more efficiently with the full-bodied protection of a SAE 40 oil.

RPM 20-40 SPECIAL meets engine requirements during all stages, gives extra protection at full throttle and ensures cooler, smoother running all the time.

RPM 20-40 SPECIAL gives you these important benefits:

1. Up to 15% increased mileage per gallon
2. Up to 33% less consumption of oil
3. Quicker, smoother engine response during warm-up
4. Less drain on battery
5. Minimises wear
6. Meets passenger car and truck manufacturers' specifications
7. Can be used in all weather, all seasons, all driving conditions

in coming years. The severe restrictions imposed now on the import of consumer goods have given added fillip to its rapid growth.

The canning industry is also fortunately placed in respect of one of its essential prerequisites. The existence of an efficient container manufacturing industry in the country makes it possible for it to embark upon its expansion programme with confidence.

No reference to the container manufacturing industry in India can be considered complete without a mention of the Metal Box

Company of India Ltd whose products enjoy great popularity with all those who require suitable containers to pack their goods. This is well illustrated by the fact that in the twelve months ending March 1957 goods to the value of Rs 4 crores were exported in containers manufactured by this company. Yet another indication of the popularity of the company's products is found in the fact that the company's turnover during the past year has increased by Rs 72 lakhs. According to Mr H. Chiswell Jones, the Chairman of

(Continued on page 148)

World of Jute

Jute Industry in 1956-57

FROM the data now available, it is possible to get a fairly clear idea of the conditions that have obtained in the jute trade and industry in India during the jute year 1956-57. Production of jute manufactures has totalled 10,25,200 tons as against 10,95,000 tons in 1955-1956. The fall in output is partly due to the fact that mills have been working with 12½ per cent of their looms sealed from September 1956 and partly due to the smaller hours worked during June presumably due to the influenza epidemic.

PRODUCTION.		(In '000 tons)	
		1956-57	1955-56
July	...	84.1	84.1
August	...	89.6	81.4
September	...	84.5	87.4
October	...	80.4	78.8
November	...	83.8	90.5
December	...	84.9	97.3
January	...	88.8	88.9
February	...	80.2	92.8
March	...	84.7	99.3
April	...	86.8	93.9
May	...	87.3	101.7
June	...	80.1	98.9
Total	...	10,25.2	10,95.0

Despatches are also lower at 10,31,900 tons as against 10,47,200 tons during the previous year. It is, however, to be noted that upto the end of last month despatches have been slightly higher than those at the comparable period of the previous year. The setback has been brought about solely by the low offtake in the last month. June despatches at 73,200 tons are the lowest in the past sixteen months. In this connection it must not be forgotten that the congestion and the consequent delay in the move-

ment of ships to and from the Calcutta port have been seriously affecting the export trade for the past two months.

DESPATCHES.		(In '000 tons)	
		1956-57	1955-56

June	...	73.2	90.7
Total	...	10,31.9	10,47.2

The industry has reason to feel encouraged by the trend of burlap consumption in US. As against 832 million yards during the 12 months ending June 1956, burlap consumption in US in 1956-57 has been placed at 884 million yards. As has been pointed out in these columns, the conditions in the world jute goods trade are more advantageous to India than to any other jute goods manufacturing country.

World of Tea

Prospects

ALTHOUGH the prices obtained in the Export auction, held in Calcutta this week, are slightly lower than those in previous weeks, there is still a belief in market circles that good prices will continue to be paid for quality teas, especially of the second flush. Shortage in supply coupled with improvement in quantity has induced keen buying from foreign countries, including Russia. An important feature is, that the Common grades have improved substantially in line with London where blenders are feeling the shortage of this category.

Another important factor contributing to the improved sentiment is the news of a shorter crop in North-East India in June, at 64.30 million pounds as compared with 71.60 million pounds in the corresponding month of last year. Thus, total crop for the season, up to June 1957, amounts to only 109.99 million pounds as against 126.37 million pounds in the corresponding period of the previous year and 118.70 million pounds, the average for the last three years.

But the disappointing production figure is more than offset by Ceylon's bumper May output. It is felt that production, during the next three months—the peak production period—will be a dominant factor in determining the price of tea. Also, anxiety prevails about the outlook for the 'rains' teas. Unless some corrective steps are taken in time, the supply, especially of Common grades, may exceed demand during the current season.

The Jute goods market ruled generally unchanged during the past week. Speculators pushed up prices on the opening day though neither the mills nor the shippers evinced any interest at the prevailing levels. Hessian 40" x 10 oz Ready was placed at the end of the day at Rs 42.52 with August at Rs 42.60 and October-December at Rs 42.44. In the sacking section B. Twills Ready was done at Rs 115.05 with August at Rs 114.90 and October-December at Rs 114.40.

Prices were marked up especially in the sacking section again by speculators who seemed to have been somewhat encouraged by the decline by 7200 tons in the production of jute goods in June over the previous month. That also seemed to be the explanation for the reluctance of sellers for ready delivery to discount rates. Hessian 40" x 10 oz Ready was well maintained at Rs 42.50 with August marked at Rs 42.56 and October-December at Rs 42.37. B. Twills Ready was marked up to Rs 115.25 while the August and October-December positions were placed at Rs 115 and Rs 114.50 respectively.

Conditions were unchanged on Monday with business passing at a meagre level. The day's closing prices were as follows: Hessian 4" x 10 oz Ready Rs 42.44, August Rs 42.61 and October-December Rs 42.47; B. Twills Ready Rs 115.35, August Rs 114.89 and October-December Rs 114.25.

Reports of overseas enquiry in sackings imparted steadiness to that section on Tuesday. Hessians also closed higher in sympathy. Hessian Ready advanced by 19p to be finally placed at Rs 42.63 while B. Twills recorded a gain of 40 p to be done at Rs 115.75. In the forward deliveries, Hessian 40" x 10 oz August was also higher at Rs 42.75 with October-December quoted at Rs 42.69. In the sacking section B.

Twills August was higher by 11 p, at Rs 115 while October-December recorded again of 25 p at Rs 114.50.

Presumably due to the announcement that burlap consumption in US during June had shown a decline at 71 million yards, the hessian section ruled quiet on Wednesday. Sackings, however, were well maintained. Wednesday's closing prices were as follows: Hessian 40" x 10 oz Ready Rs 42.47, August Rs 42.46, October-December Rs 42.50; B. Twills Ready Rs 115.70, August Rs 115.30 and October-December Rs 114.55.

The following table shows price trends during the week.

		Week's Opening	Week's Closing
Hessian:			
40" x 10 oz.			
Ready	...	42.52	42.47
August	...	42.60	42.46
October-Dec.	...	42.44	42.50

Sackings:

B. Twills:			
Ready	...	115.05	115.70
August	...	114.90	115.30
October-Dec.	...	114.40	114.55
Hy. Cees Green	...	117.00	116.50
Cornsacks	...	117.25	117.75
Cubans	...	143.00	142.00
A. Twills	...	140.00	140.00
L. Twills	...	128.00	128.50
D. W. Flour	...	131.50	131.00
Sugar Bags	...	130.50	131.00

The raw jute market ruled generally steady with sellers reluctant to discount rates. At the end of the week Assam Bottoms was nominally quoted at Rs 31 per maund.

Arrivals of raw jute into Calcutta and Mill stations during June 1957 were 3,55,000 bales of which 3,08,000 were of Indian origin and 47,000 bales Pakistani. Total arrivals of raw jute during the 12 months ending June 1957 were 62,55,000 bales of which 56,20,000 were of Indian origin and 6,35,000 bales Pakistani.

BP Rs 1.94; Plain Fannings Rs 1.78; Medium BP Rs 2.20; Medium Fannings Rs 2.20 to Rs 2.30; Best Assam CTC BP Rs 3.80 and Best Assam CTC Fannings Rs 4.50.

In the Internal Sale, offerings consisted of 9,296 packages of Dusts. There was a further improvement in the quality of offerings from Assam. There was a strong demand when the sale opened; but this weakened as the sale progressed. Powdery types were again in more demand than the larger Dusts.

CTC Assams were strong at the beginning of the sale; but at the close some were as much as 20 p per pound easier, while any teas with quality were in strong demand. Following rates were quoted:—Medium Doars Dust Rs 1.60 to Rs 1.70; Medium Assam Grainy Dust Rs 1.70 to Rs 1.80; Medium Assam CTC Dust Rs 2.40 to Rs 2.70 and Best CTC Assam Dust Rs 3.00 to Rs 3.10.

Of the 326 packages of Leaf grades on offer, 102 packages were of Green tea for which there was very little demand.

[July 20, 1957]

World Overseas

US Notes

American businessmen are paying ever greater attention to foreign markets these days, as United States exports and private investments abroad continue to grow. A report this week by the United States Census Bureau shows that United States exports amounted to more than \$9,100 million in the first five months of 1957, close to 21 per cent above the comparable 1956 figure. For 1957, as a whole, experts expect United States commercial shipments abroad to be well in excess of the 1956 record of \$17,300 million.

All in all, United States exports now absorb about 8 per cent of the United States production of 'movable' goods. A measure of the importance of export sales is the fact that last year they were larger than the amounts spent in the United States on residential construction, one of the most important industries in the country indeed, for many United States companies export sales play a vital role. The reactor industry, construction and mining equipment makers, for instance, exports one-fourth of their production.

The rise in United States exports is largely attributable, of course, to the expansion of economic activity throughout the world. According to a recent United Nations report, the productive capacity of the free nations now is twice what it was before World War II. Significantly, capital goods, in great demand for industrialization projects abroad, have played an important part in the United States export total. At the same time, there has been increasing emphasis on American investment in manufacturing plants abroad. The outflow of United States capital into foreign plants last year exceeded \$1,600 million. The total stake of American companies in foreign facilities probably amounts to more than \$30,000 million mark, that the plants affected will be producing goods valued at \$40,000 million a year. These investments are bringing not only needed capital, but American technology and know-how countries desirous of stepping up their economic development.

In many nations seeking the help of foreign investments, governments favour companies willing to set up local plants. This is done through a variety of devices, including tax and exchange concessions. Thus, American companies are helping

other nations raise their standards of living by supplying them—or helping them produce—more of the goods and services they need. This becomes particularly important when it is considered that populations around the world are expanding at a phenomenal rate. Economically speaking, this means first that the number of potential consumers is rising all the time. Then as more and more people are employed at good wages in expanding industries, purchasing power increases and growing middle-class markets are created. Of some countries, this is a new—even a revolutionary—development. No wonder that American corporate executives are showing increased interest in business opportunities abroad.

US efforts to reduce its productions of cotton seem to be meeting with some success. This week, the Agriculture Department reported that cotton land in cultivation on July 11 came to 14.2 million acres (5.7 million hectares), the lowest level in nearly 30 years. This is more than 15 per cent below the acreage under cultivation a year ago, and about 38 per cent below the annual average of the previous 10 years.

In fact, if normal land abandonment is taken into account, the actual total harvested this year could drop as low as 13.7 million acres (5.5 million hectares). An important element in this year's cotton acreage cut is the soil bank programme, inaugurated by the

Government last year as an inducement to farmers to reduce their plantings of surplus crops. The sharp cut in scheduled cotton plantings this year is due almost entirely to the removal of some 3 million acres (1.2 million hectares) under the soil bank plan. Government payments to farmers for retiring this land would come to more than \$150 million. Thus, this year's cotton crop may fall below both last year's 13.3 million bales and currently estimated 1957-58 requirements of 13 to 14 million bales. On this basis some further reduction could be anticipated in the reserve of 11.6 million bales accumulated in past years—most of it was acquired by the government under price-support programmes.

It may be too soon, however, to make any hard and fast assumptions as to the size of this year's crop. A preliminary government forecast of cotton production is not expected until next month. For one thing, yields per acre have been very high in recent years, and could conceivably go higher this year, largely because of improved irrigation and unprecedentedly high for fertilizer use. Last year, for instance, US cotton yields averaged about 400 pounds (180 kilograms) per acre, compared with approximately 170 pounds (77 kilograms) in other countries. The sharpest reductions in plantings, moreover, generally have occurred in those areas that normally have lower yields.

Cutbacks in the high-yield areas of Far Eastern United States, for instance, have been relatively small. On the other hand, the crop this year has its share of handicaps. Because of recent excessive rains, crops in a number of important growing areas are coming in late, and face a closer race than usual with the first autumn frosts. In addition, dry soils and cool weather retarded early crop development in some areas. To make matters worse, adverse weather conditions have made it difficult to control pests, with the result that infestation is said to be increasing. Regardless of the crop, however, the soil bank programme apparently will remain in force during the current fiscal year that began July 1. A Congressional Committee drawn from both the Senate and the House of Representatives agreed this week to allot a total of \$500 million this year for Government payments to farmers who put productive land into the programme's 'acreage reserve.' This could show up in further reductions next year in the planting of cotton and other major crops.

Britain

PROJECT FOR FREE-TRADE AREA IN EUROPE

The project which aims at creating a free-trade system in Europe has recently acquired new momentum. The treaty creating a common market or customs union between six countries—France, Germany, Italy, the Netherlands, Belgium, (Continue on page 147)

How banking serves the SPICES INDUSTRY

There is tremendous demand throughout the world for pepper and cardamoms, and South India produces the bulk of these spices. One-third of the entire world demand for pepper is grown between Karwar and Cape Comorin; and in 1951-52, India's exports earned more than Rs. 27 crores.

Within the last ten years there has been a remarkable increase in cardamom growing, particularly in the South Indian states of Mysore and Coorg, and the districts of Madras, Tinnevely, Malabar and Coimbatore.

The Indian spices industry has a happy future, and banking will naturally help to expand and improve it. The facilities and guidance of a good bank, such as the availability of ready funds when needed and the collection of dues from any part of the country, have become part of efficient organisation in every industry.

We at Palai are proud that many spice growers of South India employ the complete banking service we offer:

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investments—
Letters of Credit—Bill Collection—
Deposits—Loans & Overdrafts—
Confidential Credit Reports, etc.

PALAI CENTRAL BANK LTD.

Head Office: PALAI, KERLA STATE,
Branches at: Madras, Cochin, Quilon,
Trivandrum, Alleppey, Mangalore, Ban-
galore, etc. Also at: Delhi & New Delhi.

A LEADING BANK IN SOUTH INDIA

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office. Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns & have the amounts credited to their accounts at any of our branches.

I DO not know if Communist leaders allow themselves any minor pleasures in the midst of their ideological legerdemain and manoeuvrings for positions of power. But, if they did, they have reasons to be gratified at the flattering amount of attention that is being paid by the rest of the world to their merest whispers. Mr Mao Tse Tung, for instance, makes a speech in which, among much hedging, we find an admirable but exceedingly trite liberal sentiment, and the whole world is agog. If you or I had said it, no one, let alone Mao, would have taken the slightest notice of it. And Mao's speech is nothing but a carefully edited version of one that he delivered before his disciples behind closed doors months ago. All manner of people reading the speech for the first time in June talk of imminent changes in Communist China. All this is, of course, remarkably naive. In the first place, if the speech did herald an actual shift in policy, the changes should have been manifest even from February, when it was delivered, unless you make the extreme assumption that the exquisite sentiment about letting a hundred flowers blossom (alas, already on its way to the dustbin of clichés) was not in the original text. And yet, not till the speech was actually made public did any one hear of the possibility of a joyous harvest of a myriad tinted flowers. And such fugitive blooms as have made their appearance since, are such as we would much rather not have had: they are not only not new, but are actually specimens of a regressive mutation of the original red with which we are only too familiar; the grovelling confession of right deviation that we have had in some abundance in the last fortnight from China is an old anemic variation of pure Communism. For a world that expected great things from the new Chinese floriculture, this is poor recompense. The next harvest, let us hope, would be more cheering.

Much might conceivably have been made of Mao's speech. But Mr Khrushchev's contemporaneous denunciation of his erstwhile colleagues is altogether a different kettle of fish. The close scanning of ideological claptrap may be a futile exercise, but when political facts of significance take place in

the Communist camp, it is necessary to know what they portend. The very nature of the free world's relation with the Communist bloc makes it inescapable that it should know where exactly it stands vis-a-vis the Communist half of the world. Theoretically, this knowledge should be easy, because of the comparatively simple but apparently inviolable basic assumptions on which such regimes are built. Therefore, it may be argued, what actually goes on there is somewhat irrelevant, because nothing that goes on can make any difference to the basic attitudes, and strategy can safely proceed on those fundamental certitudes. This was a view once very popular, especially in the USA. The basic aim of Communism was thought to be world domination by violence, subversion and fraud and implacable enmity with the forces of freedom at home and elsewhere. There was no difficulty in finding confirmation of this doctrinal core in Communist scriptures; nor was it difficult, in some phases of Communist conduct, to discern evidence of its operation. But, nevertheless, to imagine that, in view of this certainty, there is no need to know what exactly is going on inside the Communist bloc, is dangerous folly. Firstly, the immense technological strides that the Soviet Union and its friends are making have direct bearing on the strategy of the other side. Indeed, such changes, especially in the military potential generated by technological advance, have made a significant difference to the prospects of peace and even to the character of the Soviet system itself. Secondly, one has to reckon with the minds of men, in howsoever abject a state of slavery. Not to keep in touch with what is happening behind the Iron Curtain, is to deny oneself knowledge of changes that may make possible the corrosion of the very basis of totalitarianism.

But, even as one accepts the position that it is necessary for the free world to know precisely what goes on in the Communist world, one is faced with another twist of paradox of this mutual relation. By the very absence of familiar channels of information and knowledge, it is not possible for us to know for certain what precisely is the significance of events over there. It is not merely

that there are conflicting versions of the true meaning of what is happening; the ulterior sources of these are easily recognisable and therefore, are capable of being dealt with with the inevitable qualifications. If, for instance, the Communist Party of India says that the only reason Mr Molotov was dismissed was his opposition to overtures of peace, we shall remember the occasions when the Party praised Molotov's efforts at securing world peace in the face of capitalist opposition. We shall therefore be able to make the necessary reservations in accepting this reading. And yet, even as we do so, we realise that, though the Communist party was wrong when it praised Molotov in the past, it may be right now. His dismissal may be by men who have seen the folly of jeopardising peace by old fashioned hatred of capitalism. But, then, we remember other things of men who now denounce Mr Malenkov and his friends for the alleged desire to perpetuate the Stalinist terror, and we begin to wonder whether this is genuine change of heart or just a handy excuse to get rid of inconvenient rivals. In the absence of any authentic version of the point of view of the dismissed leaders, and in the absence of any dependable data of how the Soviet people themselves actually reacted to the dismissals, it is quite impossible to arrive at any firm conclusions. These two disabilities are inherent in a totalitarian regime, and therefore inescapable in assessing events in such a set up. We are, thus, actually left groping in the dark, and all we can produce are plausible theories (some of them cancelling one another) which can

pass muster until a new set of events takes place to disprove them utterly. Too many 'experts' on Russian affairs have been tripped by subsequent events for any one to dare put forward a view without hedging it all round.

And so, if I now proceed to hold forth on the significance of the changes in Russia, I shall be doing so with the knowledge that it is only one of several hypotheses that, with varying degrees of awkwardness, fit with the facts. Moreover, a multiplicity of motives behind recent events cannot be ruled out. The recent changes may only be a clash of definable points of view on internal and external policies, but also an aspect of the struggle for personal power. There is no reason why Communist leadership should be considered free from the trivial and unifying personal squabbles to which politicians in democracies are supposed to be only too prone. It is one of the hypnotic effects of Communism that it makes us discuss Communist politics in terms of symbols and dogma, and never in terms of personalities. And yet, there is marked difference between Molotov and Khrushchev, between Mikoyan and Malenkov. All these are presumably ambitious people, as otherwise they would not be playing the 'power game'. And, in that game, if you don't come out on top, you go under. This is so everywhere, whether in totalitarian regimes (where, of course, you have to reckon with other factors) or in collective leadership. Thus, in terms of personal power pattern, there is a clear shift in the years since the death of Stalin. I shall indicate the changes by means of a rough chart of order of power:

January, 1953	On the death of Stalin	Spring 1955	Summer 1957
Stalin	Malenkov	Khrushchev	Khrushchev
Molotov	Bulganin	Bulganin	Bulganin
Malenkov	Molotov	Molotov	Mikoyan
Beria	Khrushchev	Kaganovitch	Zhukov
Bulganin		Zhukov	
Kaganovitch		Sabarov	
Shevenik		Pervukhin	
Khrushchev		Mikoyan	
Mikoyan		Malenkov	
Sabarov			
Pervukhin			
Zhukov			

Certain interesting facts emerge from the shifts in personal power. Firstly, some confirmation is given to the claim that the recently discredited leaders were favourites

of Stalin, since all of them were above Khrushchev in point of nearness to the dread presence. The death of Stalin saw the emergence of the first edition of the collec-

tive leadership, with Beria hanging on precariously. In a matter of months, Beria joined the shades of the thousand others he had despatched earlier. In the spring of 1955, Malenkov slipped down fairly steep while Molotov and Kaganovitch were still in the higher range of the Soviet ladder. Indeed, Molotov's resilience in the matter of clinging to power seems remarkable, and his getting the push now appears to be an uncharacteristic lapse. He had evidently calculated on succeeding in the meeting of the Presidium, and had not reckoned on the summoning of the Central Committee of the Party. (Readers may have read an account of the hectic plotting to avoid this in a version of the events given by the Italian Communist party paper). Another

interesting fact in the shifts of power is the key position of the army in the person of Zhukov. During Stalin's days, Zhukov was somewhat in disgrace since Stalin could not abide the obvious popularity of the general. In all the subsequent "palace revolutions", the decisive factor has been the support of the army in the person of Zhukov to the clique that succeeded. Today, he is still holding the balance even between Khrushchev and Bulganin, and if Khrushchev does not emerge as another Stalin, at least one of the reasons would be the army's determination not to permit it.

So far about personal factors. What exactly is the ideological significance of these changes? Of course, it is difficult to say for cer-

tain yet, since the 'zig' and 'zag' of Soviet policy (as it has been called) has a way of confounding the most subtle students. Extreme anti-Communists, even if they took these changes at their face value as a further instalment of liberalisation, would consider them as merely a temporary retreat from the avowed aim of world domination and further tyranny. A strong case can be made historically for this theory of a temporary thaw, before a more rigorous freeze to come. Even in the narrow span of time after that famous landmark in Soviet history, the 20th Congress of the Central Committee, utterances and actions that lend support to this view have not been lacking. For instance, after the spectacular denunciation of Stalin, there were indications of his rehabilitation and even of the

revival of his policies. And it is not only those who are now discredited that praised Stalin after the February Congress. Khrushchev himself has, in his own flamboyant way, made certain restitutions. And the policy in Hungary had all the hallmarks of true Stalinist oppression, and again it is by no means clear that it was something that was forced on the collective leadership by the currently discredited leaders. It may be so, but in the absence of any version of the events other than the one of those now in power, we shall never be sure.

One circumstance that makes plausible the theory that the recent changes are merely an opportunistic exploitation for personal purposes by Khrushchev is the inclusion among

Gateway Gossip

Corporate Finances

THE Reserve Bank's study of the accounts of a number of joint stock companies provides confirmation of the view that the rising tempo of bank credit is a heartening sign and symbol of significant expansion in industrial activity. An even more heartening indication is that the corporate sector has increasing recourse to self help what time it has resorted to increased help from banks. Judged by every criterion of healthy development and of appropriate financial policy, the concerned companies make excellent showing. The showing is least favourable from the point of view of shareholders, whose present benefit from the more profitable corporate performance is so meagre as to need considerable reinforcement from the reflection that the intrinsic value of their investment is being rapidly and substantially improved. Thus is every equity share of standing being invested with the attributes of a growth stock.

Till, say, a year ago, investors appreciated growth stocks and prized them as such. It was frankly realised that, on shares of this category, a modest return should suffice and is to be compensated by the prospect of considerable capital gain. The virtues of a growth stock seem to have ceased to be an important element in the assessment of investors. A principal reason for this change is the effect on yield pattern of the calamitous price decline in shares in the past six months. It is now obvious that these corrosive forces have been most active during a period when industry as a whole has been doing surprisingly well. Ordinarily, exactly opposite price trends should have been in marked evidence in this period. That corporate profits were on the ascendant and share prices were on the descendant, has brought about a yield structure in which as much as 10 per cent free of tax is available on the current quotations of quite a few companies. This process accounts for the short term greed of investors getting the upper hand over their long term judgment.

Moreover, the whole structure of interest rates is now in a topsy-turvy condition. Gone are the days when the interest pattern was orderly and rhythmic. Between the mid thirties and the end forties, this country was fortunate in having a sensible and sensitive interest pattern. The norm of those days was something like this:

Bank Rate: 3 per cent.
Treasury Bill discount was roundabout 1 per cent.

Call money and short credits were in the vicinity of one per cent.
For term money, banks used to pay roundabout 2 per cent.
Central Bank credit cost 3 per cent.
Imperial Bank's advance rate was also 3 per cent.
Bank credit for prime borrowers was 3½ per cent; and for others varied from 4 to 6 per cent.
High grade debentures were on the basis of 4 to 4½ per cent.
High grade preference shares were on the basis of 4½ per cent tax-free.
Bluechips (equity shares of well-known companies) were quoting on the basis of 5 per cent tax-free.
Growth stocks satisfied investors by a yield of 3 to 3½ per cent.

The position today is chaotic, with Bank Rate 4 per cent, call money rate 3½ per cent, term money rates 4½ per cent and even 4½ per cent, debentures placeable only at 6 per cent or over, preference shares at 8 per cent or over subject to tax or 6 per cent or over free of tax, and equity shares yielding between 8 per cent and 10 per cent free of tax.

This kind of interest pattern is not only chaotic but frenzied. That is why, in spite of bank deposits expanding by Rs 175 crores in the last twelve months, in spite of the Reserve Bank extending lines of credit for a potential total of Rs 150 crores, and in spite of the Reserve Bank injecting further credit by purchasing Government securities for over Rs 20 crores directly from banks, the feeling of credit stringency is persistent and the money market rates are still at high altitudes. That is also why expectations of high yields on bonds and equities act as a bearish factor on stock exchange prices. So far as interest rates are concerned, we have succeeded in creating and fostering a vicious circle. How is this vicious circle to be transformed into a virtuous circle?

The answer to this poser depends on the restoration of a healthy and constructive pattern of interest rates and of yield expectancy. On such a balanced and well proportioned pattern depends the success of the Plan to raise finance both for the State and private sectors in the context of the Second Plan.

This week's despatch has no space pose the question and has no space for the answer, as it must needs deal with the interesting figures revealed in the Reserve Bank's analysis of corporate results.

There are, in the June issue of

the Reserve Bank of India Bulletin, two notes on capital formation. The first, which is a study of 737 companies, is an assessment of assets formation in the corporate sector during 1955. The gross fixed assets formation during 1955 worked out to Rs 81 crores as against Rs 64 crores in 1954 and the 1951-1953 annual average of Rs 42 crores. It is interesting to note that, since the end of 1950, the gross fixed assets have increased from Rs 552 crores to Rs 823 crores. While all groups have shared in the improvement, particularly noteworthy is the rise of Rs 98 crores under the heading of processing and manufacturing industries. In this category, the gross fixed assets of cotton textiles have risen from Rs 129 crores at the end of 1950 to Rs 186 crores at the end of 1955, the increase over 1954 being one of Rs 16 crores. Another noteworthy feature is in respect of sugar, where the gross fixed assets have been marked up over the First Plan period by Rs 13.50 crores to Rs 42.62 crores. Thirdly, the silk and woollen industries have more than doubled their gross fixed assets from Rs 8.31 crores at the end of 1950 to Rs 16.92 crores at the end of 1955.

In the heavy processing and manufacturing industries, the rise in gross fixed assets is from Rs 120 crores to Rs 191 crores. This is mainly accounted for by a rise of Rs 38 crores to Rs 101 crores under

iron and steel and an increase of Rs 15 crores to Rs 37 crores under "Machinery—Others".

The expansion of the cement industry is indicated in the increase in the gross fixed assets by Rs 15 crores to Rs 37 crores; and the expansion under paper is also notable, with the gross fixed assets marked higher by Rs 8 crores at Rs 21 crores.

Among other industries, the gross fixed assets under electricity are sharply higher by Rs 22 crores at Rs 59 crores, while in the case of shipping, the rise is one of Rs 24 crores to Rs 54 crores.

It has been estimated that the 737 companies represent two thirds of the entire public limited sector; and, on this reckoning, the gross fixed assets formation over the Plan period is estimated at Rs 400 crores; of this, nearly a third—or Rs 120 crores—has occurred in 1955.

The study of the improvement in net fixed assets is also similarly revealing. The net fixed assets of the 737 companies have risen from Rs 299 crores at the end of 1950 to Rs 444 crores at the end of 1955. The sharpest increase is, of course, registered under iron and steel, whose net fixed assets have nearly doubled themselves to Rs 51 crores from Rs 26 crores. On this basis, it has been calculated that the net fixed assets formation for the whole of the public limited sector

Progress of Education

Reviewing the progress of education in the country in the first year of the Second Five-Year Plan, the Union Ministry of Education and Scientific Research has noted that there have been increased activity and expansion in all fields of education and culture during this period. A sum of Rs 42.54 crores has been sanctioned for the Ministry's budget for 1957-58 as against the provision of Rs 28.48 crores for 1956-57. This excluded the allotments for education in the budgets of the various states which come to Rs 144 crores as against Rs 65 crores in 1951-52. During the period under review the Ministry has worked out details of several projects designed to improve the quality and standard of educational level and to expand educational facilities on a large scale.

It would, however, appear that the impressive figures in the review cannot be taken to be sufficient guarantee that the anticipated improvements will be attained. For, the trend of discussions at the second meeting of the Panel of Education of the Planning Commission held in Poona early this week seems to indicate that the optimism of the Government in this regard is not shared by all the leading educationists in the country. Dr J. C. Ghosh, member of the Planning Commission, who presided over the meeting expressed grave apprehensions about the possibility of fulfilling the target fixed for the development of education in the Second Plan. With the education ministries both in the Centre and the States working as they did, it would be futile to hope that worthwhile progress could be made. The three ministries responsible for education, the Central Ministries of Education and Labour and the Industries Ministries in the States, seemed to place their independence of action above everything else. Dr Ghosh illustrated this isolationism by a telling example. The Labour Ministry in the Centre and the Industries Ministries in the States claimed that they were responsible for technical education at intermediate levels and the Central Education Ministry need have no say in the matter. The Central Education Ministry in its turn held the view that once a student joined a vocational school of the Labour and Industries departments he could not enter institutes of technology at university levels.

Dr Ghosh also pointed out that unless secondary education was immediately remodelled it would be difficult to meet adequately the requirements of the fast growing economy. The fact that nearly six lakh post matriculate educated youngmen were unemployed while there were jobs available for which they were not suitable, indicated

that the existing pattern of secondary education was incapable of meeting the requirements of the changed situation in the country. Dr Ghosh, therefore, suggested that energetic steps should be taken during the Second Plan to evolve a suitable pattern of secondary education so that it could be implemented with confidence in the third plan period.

*
Electricity from Atom

Though the potentialities of atomic power for peaceful and constructive purposes are realised and though the peaceful uses of it are many, most of them are still in the exploratory stage. But if the horror and fear associated with the atomic power in its hideous use as destructive bombs are to be banished, the research in connection with the harnessing of atomic energy for useful peaceful purposes will have to be speeded up so as to bring it to the point of practicality.

Generation of electricity from atomic power, appears to be one of the most profitable outlets for atomic energy and the best way of bringing it to the service of man. Since power generation holds the key to general industrial development, this has a great importance to countries, which are at present underdeveloped.

Talking to press men at the Santa Cruz air port, Dr H. J. Bhabha, Chairman of India's Atomic Energy Commission, pointed out that the technology of generating electricity was developing fast and that several Western countries were thinking in terms of large scale power generation from atomic sources. He also pointed out that the economics of atomic power generation appeared very promising in certain parts of India, and that this would have to be taken into consideration in the future planning in the country.

As India is very poor in power resources, this particular use should be of interest to the country. Vast resources of thorium, the main source of atomic energy are said to exist in India. If therefore, atomic energy hidden in the form of thorium deposits is to be transformed into electric power, it would be the major step taken on the road to industrialisation.

GATEWAY MARKETS

Ceiling for Yarn

The Yarn market in Bombay continued to rule firm with prices of many deniers of Art Silk Yarn registering a further rise in the ready section. Actual business put through was, however, limited as buyers were few and adopted a policy of 'wait and watch'.

Meanwhile, the Bombay Yarn Merchants' Association and Exchange have proposed to fix the maximum and minimum prices for the October 120/D dull cones delivery as a precautionary measure. According to the Exchange, the fixation has become necessary on account of the ban on imports of art silk for the July-September period.

Import difficulties have delayed commencement of business in October delivery. The consensus of opinion in trade circles is, that smooth trading in October delivery can be attempted with suitable safeguards. Evidently, the Yarn Exchange has, in clamping maximum and minimum prices, drawn inspiration from the experience of the Bombay Metal Exchange.

In the ready section, scarcity was particularly felt in finer counts like 75 and 100 and their prices went up by about As 2 per pound. Nylon

mic energy and the best way of bringing it to the service of man. Since power generation holds the key to general industrial development, this has a great importance to countries, which are at present underdeveloped.

Talking to press men at the Santa Cruz air port, Dr H. J. He also pointed out that the economics of atomic power generation appeared very promising in certain parts of India, and that this would have to be taken into consideration in the future planning in the country.

As India is very poor in power resources, this particular use should be of interest to the country. Vast resources of thorium, the main source of atomic energy are said to exist in India. If therefore, atomic energy hidden in the form of thorium deposits is to be transformed into electric power, it would be the major step taken on the road to industrialisation.

dealers began to cover their requirements in June shipment goods—goods shipped in June from Canada, USA and Europe.

In the ready Copper section, there was steady demand and the rate was quoted at Rs 180 per cwt. Zinc ready was quoted at Rs 87.50 per cwt. It is interesting to note that, since many months prior to the non-revalidation of the OGL, Zinc in India was fetching lower prices than landed costs. The importers of this metal, having thus suffered losses for a considerable period, had restricted the imports on their own accord. The present firmer tendency in prices appears to be due to very acute shortage of the material.

There is nothing much of interest to report on Lead, which hovered idly around Rs 89 per cwt. The Belgian Metal workers' strike, which still continues, is the only stabilizing factor at the moment.

Ready Tin is quoted steady at Rs 140 per quarter. With tin from Bombay having reached Calcutta, the rate in the latter centre has gone down to Rs 585 from Rs 600 per cwt, quoted a week ago. It is reported that Singapore labour trouble at the docks is likely to be settled before long.

*
Gold & Silver

On the Bombay Bullion Exchange, Silver failed to consolidate the early gains as profit-taking, towards the close, eroded into the advance. Continued influx of ready metal mainly acted as a deterrent. Arrivals amounted to 40 bars against an offtake of only 20 bars. Unrefined metal receipts were also heavy at 41 bars. Shravan delivery, after advancing to Rs 180.62 from Rs 179.31, finished at Rs 180.56. Ready hovered around Rs 180.12.

Gold consolidated the initial moderate gains with initial profit-taking easily absorbed by short-covering. The improvement in prices was aided by encouraging spot advices. Arrivals amounted to 2,000 tolas against an offtake of 4,000 tolas. Unrefined metal receipts were very closed at Rs 106.06 after touching a high of Rs 106.19 and a low of Rs 105.94. Ready was quoted at Rs 106.69 and Sovereign at Rs 70.25.

*
Oils & Oilseeds

Trading on the Bombay Oilseeds Exchange was dominated by Castor-seed where values showed a steady upward trend on persistent buying by export houses, being influenced by higher advices from the UK coupled with the shortage of castor oil stocks. The upturn, however, produced caution and, with buyers reluctant to follow the advance,

World of Cotton

Weather Reports Guide Sentiment

PRICE movements on the Cotton futures market have been irregular during the week; but the market is meeting with good resistance around Rs 712. Sentiment, at the moment, is guided by weather reports. Although weather reports from all cotton areas are satisfactory, expectations of a late indigenous crop have induced many mills to turn to foreign growths following fears of a tight supply position at the end of the year.

It appears that the emphasis has now shifted from sterling to dollar-area cottons. Firstly, the US cotton can be had in the form of a long-term loan and secondly, the drain on sterling may not allow the Government to allow liberal imports of sterling area cotton. With the result, enquiries for US cotton have been on the increase and a sizable business is reported to have been put through for November-December shipments.

It is, however, expected that liberal imports of only Egyptian varieties will be allowed and the payment for which can be made partly in rupees. As a matter of fact, a quantity of 20,000 bales of Egyptian cotton, available for import against the Special Payments port against the Special Payments Procedure, has been licensed; and that no further applications from importers and mills will be entertained. Top quality Sudans on 'guaranteed licences' have also been purchased by many mills from Ahmedabad.

Meanwhile, the decision of the Lint Marketing Board, Kampala, to offer for forward sales by auction 1.1 lakh bales of the 1957-58 AR Uganda crop next month has made the textile industry to be anxious to know the Government's cotton import policy. It is pleaded that the policy should be declared as early as possible to take advantage of the auctions of the Uganda crop.

According to the latest bulletin of the International Cotton Advisory Committee, the free world production of cotton will be reduced by 2 million bales in the 1956-57 season. Thus, the current year's total production is estimated at only 28.8 million bales as against 30.8 million bales in the last season. From the American point of view, this reduction in world production will be a welcome feature since it will help them to solve, at least partially, the world's cotton surplus. But, for country like India, which has to import substantial quantities of cotton and to keep her internal price line, this development may not be as welcome as for the USA.

As far as the crop is concerned, Madhya Pradesh reports rapid progress of sowing operations (70 to 80 per cent) which are expected to be

completed shortly. In Berar, sowings have been completed; bright clear weather is required in Eastern portion, while middle and Western parts require rains. Reports from the Broach and Surat areas are also satisfactory. In the Punjab, extremely warm weather prevails and immediate rains are necessary despite regular supply of canal water.

*
FUTURES MARKET

As mentioned earlier, price movements in the futures market were irregular. Reports of continued favourable weather brought about a fall in prices early in the week; but profit-covering finally aided a small rally at the close. Turnover was 10,000 bales. ICC Jharilla March opened quiet at Rs 714.50 and, after touching a low of Rs 710, advanced again to Rs 718.25, to finish the week at Rs 715.75.

*
SPOT MARKET

The Spot section continued to rule steady in restricted activity. Modest demand was noted in Dholera, Kalyan, Jaydhar and Luxmi varieties. New crop from the Punjab and Khandesh also attracted the attention of spinners. In the foreign section, good business was reported done in Sudan, while Americans remained subdued with mills inclined to wait, pending the reports over the latest crop movement.

*
NEW YORK COTTON MARKET

Values on the New York cotton market sagged under the leader-

ship of 1958 crop deliveries on New Orleans and commission house selling. The uncovering of stoploss orders and the lack of buying interest intensified the downward movement. Part of the pressure was also attributed to the belief among traders that cotton legislation might be enacted at this session of Congress. Additional depressing factors were liquidation in old crop July prior to its expiry and hedge selling. Spot was quoted at 35.40 cents per pound.

The US Department of Agriculture estimates area under cultivation, on the 1st July, at 14,224,000 acres, which is 15 per cent less than last year's planted area of 16,833,000 acres. Assuming the last five years' average acreage abandonment of 4.28 per cent, harvested area will be about 13,615,000 acres with an all-time high yield of 417 lbs per harvested acre. The crop is expected to be about 11,393,000 bales.

*
LIVERPOOL COTTON MARKET

Dull conditions persisted on the Liverpool cotton market. Although small trade-covering absorbed some offerings in the nearby position, any advance in later deliveries was checked by American selling at limits. American contract July-August delivery was quoted at 26.65.

*
ALEXANDRIA COTTON

Price variations on the Alexandria cotton market were small for current crop contracts, while new crop contracts showed firmness. In the spot market, high grade Karnak and medium grades Giza-30 continued to be in demand at advancing premium. Other qualities were neglected.

Crop reports from Upper Egypt are very satisfactory. Contrary to earlier expectations, an early crop movement by the third week of August is expected.

*
CLOTH AND PIECEGOODS

Conditions in the Bombay Piece-goods market ruled steady with the price trends unchanged. Dealers reported revival of demand from consuming centres and felt that offtake would broaden considerably after the formalities, required by the Central Inter-State Sales Tax Act, were completed by the dealers in the various States.

Mills have continued to receive orders for forward delivery and some units have reported business for delivery in October, business being more pronounced in superfine and medium qualities.

On the export front, conditions have not been quite encouraging (Continued on page 134)

Conferences Galore

IF meetings and discussions will by themselves solve our problems, then in the last week Delhi made an impressive contribution toward resolving our difficulties. There was the tripartite conference on labour which came to certain "agreed" conclusions after a two day session. There was the meeting of the Central Advisory Council of Industries, which discussed at length productivity problems. There was the conference on textile industry and trade sponsored by the Federation of Indian Chambers of Commerce. There was no lack of ideas in any of these conferences, though some of them cancelled each other out. But despite the plethora of ideas, there was a curious air of unreality about their discussion, since practice did not appear to match with professions made at the conference table. For instance, even while the labour conference was talking learnedly and interestingly about the impossibility of either a wage freeze or a general increase in wages and about the need for increasing production efficiency by making our resources yield greater result per unit, there were rumblings of labour unrest outside. The postal workers have announced their intention to strike; and close on the heels of their announcement came news of the intention of Central Government employees to stop work from mid August. Though the Bombay dock workers' strike has been averted, Calcutta's discontent is left to simmer for some time more.

So much for labour. On the other side, traders in Delhi have gone on an "indefinite hartal" in protest against the levy by the Centre of the inter State sales tax. The natural question that arises in the circumstances is: what precisely is the value of the "agreed views" of tripartite conferences in which representatives of trade and labour assure the Government of their cooperation in the interest of the Plan? It is true that none of the representatives who attended the conferences committed himself to views that would tie his hands in an emergency. But even so, the primary objective of these conferences is, one supposes, an agreed code of immediate conduct rather than an academic discussion of an ideal state of affairs. If, as every one professed, at all these conferences the Plan was paramount, then, surely, there is some need for every one to prove it by agreeing to some sacrifice to see it through. The demand for increased money wages from Government at a time when Government are seriously hampered for funds is not only not in accordance with this profession but is one which, if conceded, would only aggravate the problem by pushing up prices in the absence of production to match it. The more sensible demand, as is obvious and even trite, is to have some stricter control over the price situation so that the present wage buys as much as it did before. This is only another way of saying that there should be more production in real terms. There is

really no getting away from the iron law of economics.

Though there was, thus, a certain discrepancy between the discussion at the conference table and the activity of the affiliated unions outside, the labour conference was not entirely devoid of results. The principal subjects discussed were: wage policy, workers' participation in management, workers' education, rationalisation, discipline among workers and subsidised housing schemes. Cynics may aver that, except for wage policy and rationalisation and workers' discipline, the others were mere frills which neither labour nor "capital" takes very seriously as subjects of importance. The same set of cynics would consider that Government would try to divert attention from these real issues by talking at length about housing and education. As usual, the cynics would be wrong, since housing and technical efficiency are as pressing a need of the workers as the more immediately tangible money wage. On the question of wages, Mr Nanda indicated that there could, of course, be no general wage freeze, if for no other reason at least for the reason that such a step would involve simultaneous price freeze and profit freeze. The legal and administrative tangles in which these will involve the Government are too bothersome at the moment to be lightly undertaken. On the other hand, the conference agreed that there should be certain norms of fixing minimum wages for industrial workers. A standard working class family should be taken to consist of three consumption units for an earner, earning women and children being counted as earners. Minimum food and cloth, housing, fuel and light requirements would be taken into account in prescribing these norms. These norms are to be prescribed by a tripartite wage board. The workers' representatives mentioned the industries in which they wanted this tried where the representatives of the employers wanted the matter left to the Government.

As regards rationalisation, it was agreed that rationalisation which did not serve real economic interests in the present conditions should be avoided even where the process has started but has not been completed. It should be done only by agreement between employers and unions and, failing agreement, by arbitration or adjudication. Rationalisation should result in retrenchment or loss of earnings in existing employees and its benefits should be shared by all. This agreement, many may consider not an agreement at all,

but an evasion of the real issues posed by the idea of rationalisation.

As regards workers' discipline, there was heated debate during the discussion. Some interesting points of view emerged. One was that even labour representatives had to agree that much of the indiscipline was due to union rivalries which sometimes led to extremely reprehensible anti social acts. The legitimate interests of the men who do the actual work are often sacrificed by the managers of these unions. Mr Venkataraman, the Madras Labour Minister, who made a very useful contribution to the discussion, quoted the instance of the troubles at the Harvey Mills, Madras, where settlement was being impeded by these rivalries. Another interesting complaint was the law's delays, especially in regard to awards. It was freely mentioned that employers, with their comparatively vast resources, are able to make use of the machinery of prerogative writs to nullify, at least for the time being, the effect of awards. This point of view has a sympathiser in Mr T. T. Krishnamachari, who spoke the other day in Madras with some annoyance of the writ applications that impede tax gathering and labour awards and of the need for taking these matters outside ordinary judicial review. Final agreement on the question of discipline was of a general character in which go slow tactics were deprecated, violence deplored and a pious hope was expressed that awards and agreements should be speedily implemented. It was considered that works committees at the unit level would be a useful agency to tackle problems of discipline and it was recommended that such committees should be set up at various levels.

The conference agreed on the need for working out in detail a scheme for workers' participation in management. Mr Venkataraman announced that the Madras Government had a scheme for such an experiment, one in public and another in the private sector. As regards housing, the need for popularising subsidised housing schemes among workers cooperatives and employees was recognised.

At the meeting of the Advisory Council for Industries were heard echoes of discussion in the labour conference. Mr V. K. R. V. Rao felt that the labour conference had achieved little, since wage policy has still been left fluid. Mr Nanda joined issues with the professor on this point and stated that the only aim was to avoid an all round clamour for increased wages; and,

North Indian Notes

Community Development Programmes

The present policy in regard to Community Development Programme is one which is dictated by the imminent problem that faces the country namely that of increasing agricultural production all-round. The object that has been set before it, is that of intensifying the programmes of development, so as to make it subserve the needs of higher agricultural production. The essence of the new policy, which emerged at the Sixth Development Commissioners Conference at Mussoorie in last April, is the accent on minor irrigation, co-operation and agricultural research.

The irrigation policy not only aim at more works but also at proper co-ordination between the major, medium and minor irrigation works. The necessity for such co-ordination lies in the waste of water resources, that is likely to ensure otherwise. Minor irrigation works have particularly helped the development of irrigation in the newly constructed river valley project areas and in areas where water already stored in the past has not been fully utilised. One of the important planks of the minor irrigation programme is the encouragement given to co-operative irrigation society. Such societies have already started working in the Godavari district of Andhra Pradesh, in Gujerat and in Punjab.

The financial programming in respect of minor irrigation envisages 50 per cent of the irrigation funds being earmarked for encouraging and promoting private irrigation works, 25 per cent on repairs and restoration of minor tanks and 25 per cent on State-managed works.

In the field of co-operation, the aim is to spread and encourage the co-operative ideal so that by the end of the second Five Year Plan every village would be able to take advantage of the cooperative credit or the multipurpose society, also that every block will have at least one cooperative farming society and one cooperative marketing society. As a beginning, it has been proposed to start 500 co-operative farming societies during this year in the Community Development and National Extension areas.

The financial resources that would be required for development on such a scale would largely be met by the Reserve Bank of India. Already it has agreed to provide an additional amount of Rs 40 crores to 45 crores by way of agricultural loans, thus stepping up co-operative credit to the extent of Rs 80 crores.

The organisation of agricultural research, is drawn on lines, which

would ensure effective contact with the cultivator and familiarity with his problems. Experiments conducted at district levels, in new methods would give the cultivator an opportunity to judge the merits of improved practices. The reaction of the cultivators, would be conveyed to research students by Block Development Officers. Thus the scheme is in the nature of a two-way traffic.

Collaboration of Universities, in the matter of higher learning in Community Development Works, is also being sought. This would involve the introduction of a short course on Community Development in the syllabi for undergraduate and post-graduate students, as also provision of facilities for study and research in the Community Development areas.

★

Bright Prospects for Small Industries

Everything seems to be well set for a quickened tempo of development of small industries. The progress so far achieved has been quite satisfactory and should provide a good start for an intensified development. Already about Rs 6.3 crores has been sanctioned to the different States for their schemes by the Centre and block loans amounting to Rs 1.06 crores will be sanctioned shortly. Thus about 70 per cent of the total allocation for the year has been sanctioned. The remaining amount of Rs 1.3 crores would be released as soon as the schemes of the various States are ready. In fact the States are being pressed by the Centre for early submissions of the schemes, which would enable the centre to release the funds and thus speed up development.

The decentralised sector is in the happy position of a guaranteed supply of funds for development. Addressing a meeting of the Directors of Industries of State Governments, Mr Manubhai Shah Union Minister for Industry said that lack of finances would not be allowed to stand in the way of development of small industries. Now it remains for the various State Governments to speed up the development on a system of priorities.

But if the development is to be on stable lines, the small industries should develop as ancillaries to large manufacturing units and Mr Shah urged the directors to promote such development. The question of creating industrial estates for small industries was also taken up, and in this connection Mr Shah pointed

out the necessity for developing industrial estates as a co-ordinated programme for the entire second Plan period. To encourage production of standard goods the meeting decided that five quality marking schemes would be introduced in each state in the next quarter.

The terms for granting loans have also, been finalised. According to the scheme which was suggested by the Centre, loans would be given to small units at an interest of 3 per cent—2 per cent for co-operatives—up to a limit of Rs 50,000 for any single party. Loans would be given

to bona fide small industrialists upto Rs 1000, on a personal bond and upto Rs 5000 on the security of one or more personal sureties. Loans would be given both for capital expenditure as well as working capital and upto 75 per cent of the value of the security which would include assets created out of the loan.

Finally the procedure for supply of imported machinery and component had been simplified and small amount of foreign exchange had been set apart for the actual user requirements of small industries.

NORTH INDIAN MARKETS

Sugar Markets Quiet

SUGAR markets, which had been ruling very steady during the past many weeks, have turned a shade quieter during the week with prices showing a slightly easier tendency. This is partly due to poor outside demand in view of the inter-State Sales Tax difficulties. The main contributory factor is the Union Finance Minister's statement in Madras last week that the Government were considering some measures to bring down prices. The Government have also dismissed an unwarranted fear, expressed in some quarters, that sugar export may amount to 3 lakh tons.

In this connection, the Bengal Sugar Merchant's Association, Calcutta, has stated that the step, which the Reserve Bank has recently adopted in increasing the margin and restriction of the advance, may have an adverse effect on the price of sugar. Due to higher rates, many dealers will have to restrict their stocks in spite of stocks lying with the mills. Naturally, it is feared that the stocks will be lower which may cause a rise in rates, specially whenever there is short supply due to restrictions on the movement of wagons, while despatches are not regular. In their opinion, for lowering the rates of sugar, movement of sugar should be accelerated rather than imposing restrictions on advances.

In Bombay, sugar prices have eased by half a rupee per bag. This fall in price, though small, is significant in view of the statistical position. The stock position is said to be far from satisfactory, thanks to the reported reluctance of mills to sell and the difficult wagon supply position. With the result, compared to 36,000 bags a week ago, the floating stock, at the end of last week, is placed at 32,000 bags.

The Hapur market ruled quiet. Following mill-delivery rates (per

maund) were quoted:—Meerut Rs 34.12; Daurala Rs 35.37; Mansoorpur Rs 35.00 to Rs 35.37; Amroha Rs 33.35 and Bijnore Rs 33.12.

Meanwhile, total production of sugar in 1956-57 season is put at 2.05 million tons and this, with a carry-over of 5.3 lakh tons from 1955-56, brings total available supplies to 2.58 million tons. As such, sugar position is expected to remain comfortable; and the season is expected to close with a carry-over of 4 lakh tons.

Ceylon has decided to import sugar from India; and negotiations are reported have started between the two countries. It is reported that the first consignment of sugar from India will amount to 6,000 tons costing £46-16sh per ton.

★

Gur

Sentiment in the Hapur Gur market remained depressed. There was lack of outside demand, resulting in the stocks amounting to as much as 56,000 maunds as against only 20,000 maunds on the corresponding date of last year.

Stockists are reported to be still holding stocks, expecting better prices at the fag-end of the season when stocks in other centres are exhausted. Following rates are quoted (per maund):—Ready Rs 10.50 to Rs 11.75; Kotha wet-dry Rs 10.62 and dry selected Rs 11.50.

★

Foodgrains

The all-India final estimate of Wheat for 1956-57 puts the current year's area and production at 32,891,000 acres and 9,068,000 tons as against the partially-revised estimates of Rs 30,386,000 acres and 8,569,000 tons respectively for 1955-56, showing an increase of 2,505,000 acres and 499,000 tons.

The Peninsula

Southern Zonal Council

With the inauguration of the Southern Zonal Council last week in Madras by the Union Home Minister Mr G. B. Pant, four zonal councils have now come into existence in the country. Though these councils are to be purely advisory bodies, the proposal to constitute them, when it was mooted, received an enthusiastic reception throughout the country in view of the vast potentialities of such councils as highly useful forums for discussing common problems facing the groups of states constituting them.

The creation of a southern rice zone comprising Andhra, Madras, Mysore, Kerala a few days ago has been a happy prelude to the inauguration of the Southern Zonal Council. For, the new arrangement has demonstrated that inter-state co-operation can help reduce considerably the anxiety that has been felt over the food position in the three southern States. Hitherto, the food problem has been handled separately by each State with the result that while the surplus rice from nearby Andhra has been ex-

ported to far away Bombay and West Bengal, the three deficit states of Kerala, Mysore and Madras have been obliged frequently to invoke Central assistance. The problem has been further accentuated by the movement of large quantities of rice from surplus areas within Madras to Kerala. As a result of the discussions in Hyderabad between the Food Ministers of the Centre and the four States, it has been revealed that even after meeting the requirements of the deficit States, Andhra will be left with about 2 lakhs ton of rice for export to States outside the Southern Rice Zone. It will be evident that the new arrangement will, apart from reducing the dependence of the deficit States in the south on the Centre, result in reducing the strain on the transport system.

The need for a compact body to thrash out the problems which can be usefully tackled by the concerned states themselves has been brought into sharp focus especially in the South in recent times. In view of the benefits that can accrue to the

national economy from the co-operative endeavour on the part of the Southern States, the centre is also interested in its formation. While inaugurating the Southern Zonal Council, Mr Pant has pointed out some of the compelling reasons which will render the Council a highly useful organisation. In the first instance it should be clearly recognised that the reorganisation of States is a purely administrative measure. This is borne out by the fact that even now there are in Madras three lakhs of Malayalees, eight lakhs of Kannadigas and 32 lakhs of Telugu speaking people.

In this connection Mr Pant has drawn attention to the fact that many of the non-Tamil speaking people live in areas which are far away from the border separating Madras from the other States. Moreover, inter-State co-ordination is not something that is entirely new in this region.

One of the directions in which coordination between the three States forming the Southern Zonal Council can be made to yield great benefits is the fuller utilisation of the water resources available in the zone. The position today is that Madras is in need of water for irrigation in atleast four of its districts. Both Andhra and Kerala can go a long way in helping their neighbour in this regard without any inconvenience to themselves. The combined waters of the Krishna and Godavari can be utilised for the benefit of the northern districts of Madras. Likewise Kerala's West flowing rivers which are now flowing into the sea can be diverted to irrigate the parched lands in the Western part of Madras. The Buckingham canal which is one of the main channels of trade along the east coast is a splendid example of the co-ordination between Madras and Andhra. The agreement between Madras and Kerala over the utilisation of the waters of the Periyar has paved the way for similar agreements as regards the utilisation of the waters of the West flowing rivers also.

The fact that the Zonal Councils have not been vested with executive or administrative powers has rendered it possible for the frank exchange of opinion among the members. The general public will also feel assured that the sovereignty of the States is not jeopardised in any way by the coming into being of the zonal councils. Ordinarily there should not be any bar to the common problems than can be discussed in these forums. Though the spokesmen of the Madras Government seem to think that the Andhra border dispute cannot be usefully brought before the Southern Zonal Council, Mr Pant has made a reference to this problem in

his inaugural speech. He has, however, made it clear that it would be wrong and unfortunate to deal with any issues in a manner which might vitiate the atmosphere of harmony and understanding in the Zonal Councils. While it is true that at the present stage the dispute may not be ensured of calm discussion, there is every reason to hope that it will be accorded a better reception when the advantages of joint discussions are actually seen in other directions.

The Council is of particular importance to the peninsula because an organisation like this can go a long way in quickening the pace of industrial progress of this region. The absence of coal has been the biggest handicap for industrial development and it is generally felt that if this region is to make rapid progress in industrialisation there should be a coordination of effort. In other words, industrialisation has to be considered more and more on a regional basis instead of on a State basis. It is in this regard that the non-inclusion of Mysore in the Southern Zonal Council becomes somewhat unintelligible. It is, however, gratifying to note that the very first meeting has been attended by the Chief Minister of Mysore on special invitation. Mr Pant's clarification has also helped dispel the disappointment caused in this behalf. "I may say at once that it was not the intention at any time that Mysore should be barred from any meetings of this Council which are of interest or are likely to be of interest to that State, and I hope that in practice it will be possible to make use, as often as may be necessary, of the provision for inter-Zonal meetings which has been deliberately made for this purpose in the States Reorganisation Act. This should adequately serve the purposes which the Governments represented in this Council or the Governments of Mysore may have in view."

It is significant to note that the Council has also decided that Mysore be invited to all future meetings of the Southern Zonal Council.

*

WORLD OF COTTON

(Continued from page 131)

as fresh demands from abroad is subdued.

Meanwhile, -production of cloth and yarn has been rising. During the first six months of the current year, the industry has produced 2,703 million yards of cloth and 892 million pounds of yarn as against 2,583 million yards and 802 million pounds in the corresponding period of 1956. Production of cloth in June last is provisionally placed 414 million yards.

South Indian Notes

English and University Education

The fact that most State Governments are unable to arrive at a firm decision on the question of medium of instruction at the University stage of education emphasises the important role played by language in the lives of our people. It is generally felt that the regional language should be the vehicle of knowledge if the full benefits of the educational facilities are to be reaped. But the wide variety of tongues that are spoken in the country has rendered the problem of medium of instruction at the higher levels of education extremely difficult of solution. The need for a common language for the entire country has generally been accepted. But there is no unanimity of opinion as regards what should be that common language. Such of those States as have already introduced the regional language as the medium of instruction in the primary and secondary stages are finding themselves undecided in respect of the university stage. In the meantime, the demand for pursuing the policy to its logical conclusion is becoming persistent.

No responsible government can, however, afford to be hasty in matters of education because any radical change made now will affect the future generation. At least in matters of education, Government should not allow themselves to be influenced by regional considerations. It is, therefore, gratifying to find that the Andhra Pradesh Government have stated in unambiguous terms that it will be utter folly to substitute any other language in the place of English in the University stage. Mr Pattabhirama Rao, State Minister for Education, has earned the gratitude of parents and students for removing a major uncertainty. The Andhra Pradesh Government are of the opinion that any decision on a change from English has to be tackled on an all-India basis. In other words, the medium of instruction in the University will continue to be English till such time a common language for all the universities is found.

The reasons that have impelled the Andhra Government for voting for the retention of English in the higher stages of education may be noted with profit by those who are still in a wavering mind as regards the medium of instruction in the university stage. English cannot also be discarded altogether because without it, it will be difficult to keep in touch with the latest developments in various fields.

Deshmukh on Second Plan

Addressing a meeting held under the auspices of the Young Men's Indian Association in Madras, Mr C. D. Deshmukh Chairman of the University Grants Commission expressed doubts on the solvency of the Second Plan, and pointed out that revision or modification of the Second Plan was unavoidable in

view of what he felt to be the non-availability of resources required for implementing it. This it was explained would necessitate marginal adjustments of the Plan, unless sacrifices were made by the people.

While he expressed himself in favour of modification of the Plan so that the present standard of living would not be driven below the margin of subsistence, such modification it was pointed out should not be done at the expense of education, especially University education, for

the reason, that the implementation of the plan itself would depend on the man-power pool that was required both in the humanities as well as in the scientific and technological fields. And he firmly declared that nothing should be done that would deprive society of the scientists and technologists that they would need.

Explaining the provision made in the Second Plan for education, Mr Deshmukh pointed out, that in view

The secret of Popular Poplin — Sanforized sells!

ADVERTISEMENTS take the public into the shops, make them ask for cloth with the trade mark 'Sanforized'. Experience teaches them always to look for the label...but your customers don't know the 'behind the scenes' story that ensures the complete reliability of cloth labelled 'Sanforized'.

Anytime, unannounced—our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to the rigorous international wash-test, and reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized' on every yard!

It's this kind of constant care which lies behind the success of cloth with the mark 'Sanforized'—which makes it such a seller. Such a profit-maker for you!

Look for

Issued by Cluett, Peabody & Co. Inc. (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95, Marine Drive, Bombay 2.

Madras Review

Rise in Pepper Exports

PEPPER prices have staged a retreat after the recent steadier tendency. This is attributed to a slackening demand from overseas buyers. In general, foreign advances have been of a quiet nature; and, at the moment, USA and Russia are showing little interest in fresh purchases. In the Alleppey market, the rate is quoted around Rs 581.25 per candy for superior Palai and Rs 575 for inferior Thekkani variety. In Kozhikode, Wynaad quality is quoted at Rs 650

and the Country variety at Rs 625, per candy. Farm reports from Central Travancore are very discouraging as far as this year's crop is concerned. A substantial share of the flowers, that had their origin with the April showers, fell off with the heavy rains late in May. Growers are very pessimistic about the size of the 1957-58 crop. The current season's crop, almost 75 per cent of which has been marketed already, is estimated by the trade at about 22,000 tons.

Meanwhile, total exports, for the first seven months of the season (November 1956 to April 1957) amount to 199,177 cwt as against 174,091 cwt in the corresponding period of the previous season, showing an increase of 25,086 cwt. Exports of black pepper from Singapore, for the four months ending 30th April 1957, totalled 3,800 tons as against 4,179 tons, while those of White pepper this year were 2,214 tons as against 3,185 tons.

The trend of exports from this country may show a substantial rise this season. The present increase in exports is attributed, partly to the fact that the larger figure reflects shipments made during this season against commitments made earlier. But, the shippers point out that the broader buying interest, displayed by some of the small overseas buyers and the emergence of new buyers, have contributed substantially to the better performance.

It is, however, believed that total earnings from pepper exports will be comparatively small in view of the heavy fall in prices. So far as the performance in the remaining months is concerned, shippers expect hardly any change in conditions up to August after which India is likely to face competition from Indonesia and Sarawak. But, the competition may not be very severe since the Sarawak crop is feared to be not only late, but also smaller this year.

In the New York market, pepper prices continued to be soft as buying interest remained negligible with enquiry, when heard, at least half a cent per pound under sellers' ideas. Spot Malabar and Lampong is quoted at 26½ cents per pound and Sarawak spot at 26 cents.

Lemongrass Oil

The market for Lemongrass Oil is now passing through a slump with prices ruling at Rs 76 per dozen bottles on the Cochin market as compared with Rs 105 quoted

South Indian Markets

ted at this time last year. The present level is the lowest for the past four years. The main reason for the slump is the plentiful supply of oil. Within the last four years, production in India—the main source of supply—has doubled to 1,400 tons. Production, during the current year, is estimated at about 1,500 tons.

There is a report that, in the USA, a synthetic substitute for lemongrass oil has been evolved, which can be used profitably in the synthesis of Vitamin "A". As it can be produced at a lesser cost, it is likely to get a good reception from buyers and will ultimately affect the consumption of lemongrass oil. Shippers are, therefore, becoming less confident about the future of this essential oil, development of which entirely depends on foreign demand.

Groundnuts

The Madras Groundnut market ruled very steady last week. Daily arrivals were 20 to 30 tons per day and were mostly of summer crop from nearby areas. Buyers were generally small-scale rotary and chekku crushers. Business was reported done in superior oil-quality seeds around Rs 170 per candy. Bold quality was quoted at Rs 165 per candy.

In the Groundnut Oil section, the rate for the ready position improved from Rs 334 to Rs 337 per candy, thanks to active interest shown by Calcutta buyers.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were restricted last week and business done was also small due to the absence of buyers. There was no change in Buff hides, either in arrivals, clearances or prices. The market for Buff Calf and Cow Calf ruled steady.

On the export front, trading was subdued. Small business was reported done in 8-8½ lbs at 44½-40½-36½ for runs, fourths and fifths respectively. Light weights were reported to have been sold at 51½-52d basis for runs. In single tannages section, conditions were firm with good enquiry for light weights in the top selections. Sellers in Madras were reported to be quoting anything between 62d and 64d, depending on the mark.

In London auctions, first day's sale opened with a comprehensive demand. On the second day, there was active competition for all descriptions. On the third and fourth days, the market continued to be strong with no change in the average quotation.

The market for Raw Hides was steady. It was stated that the Pakistan Government had announced an export levy on raw hides, which would have a marked effect on the arrivals of light weight hides into the West Bengal market. The market for Raw Skins also ruled steady.

IS BRITAIN FACING A CRISIS?

(Continued from page 123)

itself. Pressure on the Government in favour of a further increase of social service expenditure continues unabated.

Conceivably if the Labour Party were in office they would act in many ways more intelligently in face of the present situation. But, having committed themselves to considerable additional expenditure the implementation of only fraction of their commitments would greatly aggravate the difficulties. Even the Conservative Government seems to be utterly incapable of cutting down or even keeping down public expenditure. Under the Socialists it would undergo a spectacular increase.

Possibly the Government may achieve temporary respite by a series of minor measures. The mere anticipation of firm action resulted in recently a rally in the gilt-edged market but it was followed by a relapse when it was found that a much-awaited speech by the Chancellor of the Exchequer contained little else but exhortations. Drastic action is urgently needed. Unfortunately the Government appears to be oblivious of the gravity of the situation and the urgency of the relief measures it calls for.

Zig Zag Price Movements: Encouraging TISCO Dividend

Watch-Dog Writes:

STOCK markets have generally displayed a subdued undertone during the week under review. Although price movements have been rather undecided, changes are small. The closing tone is, however, better, thanks to the TISCO dividend announcement.

The absence of buying interest from the main investor—LIC—and the cautiousness of operators in extending commitments in view of the proximity of the dividend announcement from the TISCO were the main factors contributing to the subdued conditions in the market till Thursday.

But, the support, extended at lower levels, was mainly due to the inspiration derived from the announcement of the TISCO dividend, although there was some disappointment over the absence of any extra payment by way of bonus to mark the Golden Jubilee Year.

At a meeting held on Thursday, the Board of Directors of the Tata

SOUTH EASTERN RLY TENDERS

The Controller of Stores invites sealed tenders for supply of the following materials.

Tender No. CON/COS/21/ENC/ BSP/WP/3661/2/F1/37 for supply of 20 Tons Fencing Wire G. I. 7-strand, 38WG x 14 SWG twisted locally from Imported or Indigenous wire in coil of 1-Cwt. each (sample to be submitted along with tenders).

Tenders will be opened on August 13, 1957 at 12 noon. Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta—23 on remittance of Rs. 2/- (not refundable) per copy by money order to him direct in case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Railway, Garden Reach, Calcutta by local firms.

Earnest money of Rs. 440/- is to be deposited with the Chief Cashier, S. E. Rly. and the receipt obtained should be attached with the tender without which tenders are liable to be rejected. Approved contractors who have already made a permanent deposit of Rs. 1000/- with the Controller of Stores need not pay the earnest money.

Firms not on this Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

CONTROLLER OF STORES

S42

Iron & Steel Company Limited decided to recommend a dividend of Rs 9.50 per share on the Ordinary shares for the year ended 31.3.1957. The directors have also recommended a dividend of Rs 1.74 per share on the new Ordinary shares plus interest out of capital at Rs 0.80 per share.

On the Calcutta Stock Exchange, extremely dull conditions prevailed and, in the absence of fresh support, an allround easier trend was noticed.

Barring a few selected scrips, equities on the Bombay Stock Exchange displayed an easier tendency due to renewed liquidation.

Activity on the Madras Stock Exchange slackened a little. Selected Planting and Textiles, however, continued in favour.

On the London Stock Exchange, there was a reluctance to extend commitments in the absence of incentives and small declines predominated among Industrials.

Price movements on Wall Street were irregular. Leading issues made gains or losses, ranging from fractions to around two dollars.

Calcutta

THE Calcutta Stock Exchange, started the week on an uninspiring note and, with interest at bare minimum, even small selling caused prices to recede to lower levels. There was generally a tendency to book profits at higher levels in view of the several uncertainties hanging around fiscal and monetary measures of Government.

Another consideration was the cautiousness of operators in extending commitments in view of the proximity of the dividend from the TISCO. But the encouraging dividend announcement had no marked effect on sentiment. Apart from the fact that operators were rather disappointed over the absence of an extra payment by way of bonus to mark the Golden Jubilee Year, there was a feeling that the concessions concerning the Wealth Tax, announced by the Finance Minister in the Lok Sabha, would not benefit the stock markets materially. Thus, conditions tended to become more subdued till Thursday when the market took a slight turn for the better.

The Gilt-edged market continued to be in doldrums due to lack of public interest. Sellers were in evidence in medium and long-dated issues and, in the absence of buyers, prices gave way further. State Loans were neglected and their

tendency towards lower levels persisted. 3 per cent 1986 Conversion Loan opened lower at Rs 72.75 and, after improving at one time to Rs 73.25, receded again towards the close to Rs 73.03.

Thanks to the slightly better results for the past half-year, Bank shares depicted a steadier tendency. Punjab National were taken up to Rs 57 from Rs 55.50 and United Commercial up to Rs 57.00 from Rs 54.50.

Jute shares came in for small enquiry on the feeling that, with the onset of the monsoon, prospects for the industry might improve. The turnover was, however, restricted due to the anxiety with regard to the delayed shipments of jute goods in view of the congestion at the docks. Scrips, which came in for good support, were Fort William having buyers up to Rs 18.31; Howrah up to Rs 16.50 and Reliance up to Rs 7.25, although the closing rates were a shade easier at Rs 18.12; Rs 16.44 and Rs 7.19 respectively on profit-taking. Megha scored Rs 2 at Rs 88 and Orient over Rs 10 at Rs 103. National, after touching a high of Rs 18.70, receded to Rs 18.20 on speculative selling.

Coal shares were generally listless as operators were awaiting the decision of the Coal Prices Revision Committee. Burrakur changed hands at Rs 21.50 to Rs 22.00; Amalgamated at Rs 16.00 to Rs 16.12; Equitable at Rs 25.00 to Rs 25.50; Central India at Rs 6.25 to Rs 6.31 and Western Bengal at Rs 5.44 to Rs 5.53.

Tea shares ruled comparatively steady although activity continued to be restricted. Two main factors, contributing to the sustained improvement in sentiment, were the reports of a shorter crop in June and the news that blenders in London were feeling the shortage of Common grades prices of which had, of late, been showing an improving tendency. The closing tone was a shade quieter due to slight profit-taking at higher levels. Scrips, which firmed up further from last levels, were Bhaskara quoting Rs 24.62 against Rs 24.12; Dhelakhat Rs 24.00 against Rs 23.87; Killcott Rs 20.00 against Rs 19.75 and Tellipara Rs 17.2 against Rs 17.0. Brooke Bond, changed hands at one time up to Rs 19.56 from Rs 19.25; Hasimara up to Rs 23.87 from Rs 23.62 and Bishnauth up to Rs 22.12 from Rs 22.00, to finish the week at Rs 19.37; Rs 23.37 and Rs 21.44 respectively. Methoni were, however, quiet at Rs 21.87 against Rs 22.25, while Patrakola were well maintained at Rs 17.6.

Sugar shares continued to receive good support although higher levels could not be maintained till the close due to profit-taking. Most prominent were Carew and SKG which, after being taken up to Rs 7.81 and Rs 10.12 from Rs 7.31 and Rs 10.00, eased off at the close to Rs 7.69 and Rs 10.06 respectively. Champarun were, however, marked back to Rs 20.50 from Rs 22.50 and Ramnugger to Rs 20.87 from Rs 21.81.

Textile scrips met with selling at bulges due to the prospects of the dividends being lowered. Operators were unable to derive any comfort

from the reported improvement in the cloth market. The only two exceptions to the general trend were Cawnpore and Elgins which spurted to Rs 7.25 and Rs 22.12 from Rs 7.00 and Rs 19.75 respectively, thanks to renewed buying from interested quarters. Kesoram, after touching a high of Rs 13.69 and a low of Rs 13.44, finished better at Rs 13.50. New Victoria were a narrow market around Rs 1.78.

Price movements in the Engineering section were rather irregular due to alternate bouts of buying and selling. Against the week-end closing of Rs 20.15, Indian Irons opened better at Rs 20.18 and, after improving further to Rs 20.36, receded gradually to Rs 19.84 on selling pressure, to finish the week better at Rs 20.06, thanks to better Bombay advice following the TISCO dividend announcement. New shares touched a high of Rs 13.12 from Rs 18.93 to recede at the close to Rs 18.63.

Among other Engineering scrips, Jessop were taken up to Rs 24.37 from Rs 24.12; Richardson up to Rs 14.75 from Rs 14.50 and TEXMACO up to Rs 17.70 from Rs 17.45, to finish at Rs 24.25; Rs 14.44 and Rs 17.45.

WORLD OVERSEAS

(Continued from page 126)

Luxemburg (called the European economic community)—was signed in Rome last March, and is now in the process of being ratified by the respective parliaments.

As soon as ratification is over, negotiations can begin in earnest for creating a free-trade area consisting of countries in Western Europe that would be prepared to associate themselves with the customs-union countries in a free-trade system without being full members of the union. If all goes according to plan, a free-trade system in Europe comprising the central core of the union and the associated free-trade area should be launched some time in 1958.

The free-trade-area proposals have aroused very considerable interest among the British public, so much so that the Government has recently had a booklet prepared and published giving an official account of the issues involved and the factual background.

People have asked, on the one hand, why Britain should have decided to have anything to do with the project and, on the other, why it should stop short of complete membership.

The first question was put with particular edge in recent days, when the Prime Ministers of the Commonwealth were meeting in London and when one of them—the new Canadian Premier, Mr. John Diefenbaker—publicly suggested that a Commonwealth trade conference should be held in the near future.

A point to note is that nothing the British Government has done in this matter of association with the European free-trade system is in any way inconsistent with its loyalty to Commonwealth trade ties. In fact, the British Government has gone out of its way to take part in devising, in the free-trade area, a means which is specifically intended to safeguard these preferences, while at the same time enabling Britain—and, incidentally, the whole Commonwealth—to share in the benefits which the European free-trade proposals undoubtedly promise.

The customs union between the six countries mentioned implies a gradual elimination of tariff and other barriers to trade between them. But it also—and inevitably—implies a common tariff between them, as a group, and the outside world.

If Britain had become a member of the customs union, it would have been called on to apply this common tariff against countries outside the free-trade system in Europe. This would have meant not merely abolishing her preferential arrangements with the Commonwealth but inverting them—putting up tariffs on many Commonwealth goods on which, at present, there is no tariff at all and, at the same time, admitting goods coming from Europe duty-free.

There was never any question of doing this—and this is the main reason why Britain decided not to be part of the customs union and a

member of the European economic community.

The means which has been devised to reconcile Britain's loyalty to, and interest in, the Commonwealth with its special interest in Europe is that of the industrial free-trade area.

First, trade in food, drink, and tobacco is to be excluded from these arrangements, at least as far as Britain is concerned. Since nine-tenths of the imports into the United Kingdom from the Commonwealth in that category, this exclusion will maintain the substance of Commonwealth preferences.

Second, the United Kingdom as a free-trade area country, while gradually eliminating its tariffs on manufactured goods with the customs union and any other free-trade area country, will retain its independence in negotiating its tariff arrangements with countries outside Europe, such as the United States, Japan, and the USSR. In this way, the United Kingdom will be able to continue charging a lower duty on Canadian and Indian goods, for example, than on U.S. and Japanese goods. That is how the free-trade area formula saves Commonwealth preferences.

But the question "Why go into this freer trade with Europe at all?" has not yet been answered. The reason is that the proposal to form a common market has been translated

OLYMPUS

(Continued from page 132)

on that, he felt that he had taken the labour representatives with him.

For the rest the Advisory Council's meeting was interesting for the general feeling of optimism about the Plan's success especially among the industrialists who attended the conference. This contrasted significantly with the pessimism of those who are not engaged in productive activity in the country. The participants in the conference had statistics to support their optimism, since industrial production is steadily going up. The difficulties over foreign exchange and inflation were felt by an overwhelming number of those present to be temporary. As was inevitable, it was suggested that agricultural production, especially of food-grains, should be considered as the one crucial weapon for combating inflation. The conference was not lacking in concrete suggestions. Lala Shri Ram had suggested the use of multiple shifts for increasing production and for providing additional employment. This suggestion, which was interestingly unopposed by Mr. Dange, the Communist MP, has the further virtue of getting the most out of existing plants and machinery and is particularly welcome from the point of view of conserving foreign exchange. Another suggestion was the creation of a

from a vague aspiration to a workable, realizable project.

It must be assumed that, with or without Britain's association, the common market—comprising a population of 162,000,000 and the most rapidly expanding economy in the world—will be formed. Imports of manufactured goods going into that area have increased by 70 per cent since 1952, while over the same period imports of manufactures into North America have gone up by 40 per cent and in the overseas Sterling Area by 30 per cent only.

If the United Kingdom has remained outside this project, it would have found itself handicapped by common tariff walls erected by the customs union against the outside world. Eventually, German cars, for example, would go duty-free to

Belgium, while British cars would have to pay duty. That would have been putting onerous handicaps on British exports to these countries.

Quite apart from these obvious economic arguments in favour of British association with free-trade Europe, there are equally substantial political reasons for moving in the same direction. To keep outside the project would have created another division in Europe—and at the very time when the British Government, through NATO, the Organization for European Economic Co-operation, and the Council of Europe, has been trying to cement the free European community and, thereby, offer the most solid, enduring kind of resistance to the forces of disintegration that originate on the other side of the Iron Curtain.

those discredited of that enigmatic figure, Malenkov. It is often forgotten that the first successor of Stalin and the inaugurator of collective leadership was Malenkov; and he is also the man from whom we had the first intimation of the great 'thaw'. Long before Khrushchev denounced Stalin (thus, some suggest, stealing Mikoyan's thunder), Malenkov had set about changing the drabness of Soviet daily life. And most importantly, Malenkov's fall was due to his advocating precisely the same policy for standing in the way of which he has now been dismissed: the relaxation of the rigours of an economy too exclusively geared to heavy industry. Of course, Malenkov's still earlier history is not very savoury, but whose was during Stalin's regime? (Khrushchev's certainly was not). It is quite possible that Malenkov may have changed his views since the days of his disgrace, but, then, there was no intimation of that before he was dismissed recently. It may be just a fancy, but, of all the Soviet leaders of recent time, it was Malenkov who gave the outside world the impression of a reasonable man with whom it is possible to arrive at a kind of *modus vivendi*. He also was one who gave the impression of being anxious about the common people of the Soviet Union. His popularity with the common folks of Britain, when he visited that country last year, was striking. It may be that all this is just a pose. But the impression persists that he may have been discredited merely because he was in Khrushchev's way.

All this need not mean that Khrushchev's claim that he is wanting a more liberal regime at home and more conciliatory policy toward the rest of the world is untrue. Despite the fact that we find it extremely distasteful that people, however hateful, should be called names without their being able to defend themselves, the present denunciation and dismissal are different from most such in the past in one important respect: the discredited leaders have still got their heads on their shoulders. Cynics may aver that there will be time enough to separate them, and therefore nothing need be read into that circumstance. But, though nothing is impossible, I think it is unlikely that anything drastic will be done to them. The reason is obvious. Despite the setback in Hungary, the convulsions of the last year or so in the Communist world have demonstrably weakened the bases of tyranny. And, either because there was not a Stalin about, or because forces of peace and compassion have asserted themselves in the hearts of the ruled and the rulers respectively, the chances of returning to the days of Stalin are rather remote. Moreover, the policies that Khrushchev says he wants to follow are policies that are inevitable in the situation. Disarmament is a basic compulsion for the Soviet Union

because it simply cannot support the appalling burden of a nuclear race. Internally, decentralisation was an inescapable solution to a managerial problem, which many even outside the Communist orbit have learnt. These are economic and technical compulsions that operate equally on Communists and capitalists.

Another way of looking at it would be that, for the first time, Khrushchev has realised how irrelevant ideology is in the modern context. Problems of organisation and diplomacy in a nuclear age have made nonsense of ideological fetishes. Running a steel plant, making an atom bomb, or raising wheat offer precisely the same kind of challenges, whether you are a Communist or a capitalist. Khrushchev does not suffer from

that kind of omniscience from which Stalin suffered, when he laid down the law on Communist medicine and Communist biology. Khrushchev's struggle with Molotov (if not with Malenkov, whom we shall presume to be a victim of personal rivalry conveniently got rid of at this moment) might have consisted in his attempt to make them learn this lesson. It is in this sense that he is the spearhead of attack against orthodoxy, for, in the Soviet Union, orthodoxy is a Stalinism.

How far this clear-sighted vision of the compulsions of the times would keep in check Khrushchev's personal ambition, is anybody's guess. But one thing is clear: his path to Stalin's throne will not be as easy as was Stalin's himself. Since Khrushchev is no fool, he knows it, and that is some comfort.

(Continued from page 133)

The all-India final estimate of Barley for 1956-57 puts the current year's area and production at 8,594,000 acres and 2,744,000 tons as compared with 8,382,000 acres and 2,749,000 tons respectively in the previous year. The all-India final estimate of Gram puts the area and production at 23,980,000 acres and 5,930,000 tons as against 24,157,000 acres and 5,331,000 tons respectively in 1955-56.

Meanwhile, quietly steady conditions have continued to prevail in the Hapur Foodgrains market. Wheat prices have recorded fractional gains. The market for Rice rules quiet; and the Government of India have created a rice zone in the South, comprising the States of Andhra, Madras, Mysore and Kerala; and the commodity will now move freely within the zones; but exports from and import into the zone will be restricted. Rice posi-

tion is likely to ease as a result of certain measures taken by the Government. Gram prices have continued to be steady and so also Barley and Bejher.

Good buying enquiry from O.T.R. destinations on Uttar Pradesh and Bihar and easy loading facilities accounted for steady conditions in Peas prices. Prices of other pulses advanced due to poor stocks and good consumer support.

Activity in the Delhi grains market is restricted. Wheat prices have showed a rise of about 50 to 75 nP per maund following higher advices from the Punjab. Gram has also moved up slightly on good enquiry. Owing to increased demand, the rate for Barley has risen by about As 8 per maund. There is good demand for Bajra and Malwa. Masoor is, however soft in the absence of buyers.

WORLD OF BUSINESS

the Company. Metal Box will be in a position to meet the requirements of its customers provided sufficient raw materials, particularly tinplate, are available.

Metal Box is also taking active steps to foster the indigenous canning industry. It has engaged an expert from the UK whose services will be available not only to the industry but also to government organisations connected with processed foodstuffs development.

With the Government evincing abiding interest in horticultural production and in view of the vast potentialities of the canning industry in our country—about 15 to 20 per cent of the total crop of vegetables and fruits is now wasted—Metal Box will be called upon to meet the major portion of the increased needs of the canning industry.

SOUTH INDIAN NOTES

(Continued from page 135)

of the increase in the cost of the Plan from Rs 4800 crores to Rs 6000 crores, the provision made for education at Rs 307 crores had gone down in percentage terms from 7 per cent to 5 per cent. This he contrasted with the sad situation in regard to education in the country when only 50 to 52 per cent of the boys and girls in the age group 6 to 14 were enrolled in the First-Year of the Primary school, while the proportion got shrunk very considerably, in the higher standards.

Though he expressed satisfaction with the increased provision made for university education at Rs 57 crores, he pointed out that further sums could usefully be spent for purposes which were not thought of when the original provision was made.

GATEWAY MARKETS

values lost some ground towards the close on profit-taking. Castorseed September delivery opened at Rs 187.25 and, after touching a high of Rs 172.00, finished at Rs 169.75. Ready was quoted at Rs 33.50 and Castor Oil, commercial quality, at Rs 16.75.

Sentiment in the Groundnut section remained rather subdued on reports of favourable weather. Sentiment was also influenced by the possible commencement of the new delivery on July 18. August delivery opened quiet at Rs 178.75 and, after touching a high of Rs 179.50, finished a shade quieter at Rs 177.75. Ready Bold quality was quoted at Rs 36 and Groundnut Oil at Rs 20.56.

Trading in the Cottonseed and Linseed sections was dull and featureless. Cottonseed September opened at Rs 109.75 and touched a high of Rs 110, to finish at Rs 109.75. Linseed September opened at Rs 29.50 and finished at Rs 29.69 after touching a high of Rs 30.00.

WORLD OF FINANCE

(Continued from page 122)

The Bank of Baroda Limited has increased its profits for the first half year in 1957 to Rs 15.65 lakhs from Rs 14.66 lakhs. The ad interim dividend is maintained at 12 per cent per annum, and absorbs Rs 6 lakhs. The carry forward is placed at Rs 14.41 lakhs as against Rs 12.01 lakhs being the carry forward from the first half of 1956.

According to the net profit statement of the Indian Overseas Bank Limited, the results for the half year ended June 1957, subject to audit, showed a profit of Rs 18.30 lakhs, including the carry forward from last year's accounts. This compares with the figure of Rs 17.21 lakhs, including carry forward from 1955, in the corresponding period of 1956.

The Andhra Bank Limited has increased its profits from Rs 5.79 lakhs to Rs 6.11 lakhs. This year, an interim dividend at 8 per cent per annum free of income tax is to be paid, as well as one month's average substantive salary as bonus to staff.

The following is a communique issued by the Calcutta office of the Hongkong & Shanghai Banking Corporation, and is the text of a cable received from the Head Office:

"The Directors of the Hongkong and Shanghai Banking Corporation announce that they have decided to pay an interim dividend of £2 per share on Saturday 10th August 1957 in respect of the year ending 31st December 1957. The Transfer Books will be closed from 26th July to 9th August both days inclusive. The Directors have also decided to transfer a sum of Hongkong Dollars 25,000,000 (41,562,500) to the published Reserve Fund by a transfer of Hongkong Dollars 9,000,000 from the balance carried forward in the Profit and Loss Account at 31st December 1956 and Hongkong Dollars 16,000,000 from Inner Reserves. Arrangements have now been completed with the Government of Hongkong to introduce the necessary legislation to abolish the contingent liability of shareholders. Subject to the consent of His Excellency the Governor of Hongkong to the relative increase in capital it is proposed to recommend to shareholders at an Extraordinary General Meeting to be held on 9th August 1957 that a bonus issue be made in the proportion of one share for each share then held by the capitalisation of Hongkong Dollars 25,000,000 of the Reserve Fund. Such new shares will not rank for the present interim dividend but will be entitled to all subsequent dividends. This proposed capitalisation is being made in connection with the cancellation of the reserve liability of share-

holders and should not be construed as an indication of intention to increase the total amount to be distributed by way of dividend in the future."

The net profit of the Bank of India Limited for the first half of 1957 has risen by Rs 2.68 lakhs to Rs 42.34 lakhs. The interim dividend is maintained at the rate of 12 per cent per annum, but it is being paid on an increased capital. So, the amount absorbed by the interim dividend is Rs 18 lakhs against Rs 15 lakhs. The carry forward from the first half of 1957 is nearly Rs 2 lakhs higher at Rs 39.88 lakhs as compared with corresponding figure for 1956 at Rs 37.93 lakhs.

Slack Season makes Progress

The returns of the Reserve Bank for the week ended July 12 reveal slack season conditions. Active notes have declined by Rs 8.57 crores to Rs 1,542.92 crores. Rupee coin has returned from circulation for Rs 0.57 crores. As a consequence, the Reserve Bank's cash in the till has improved by Rs 9.13 crores to Rs 38.40 crores. There is no change under Foreign Securities or under Rupee Securities.

The Central Government's Deposits are largely unchanged at Rs 53.45 crores. But the other Governments would appear to have felt some strain, since their balances have declined by Rs 3.06 crores to Rs 1.41 crores in spite of increasing their borrowings from the Reserve Bank by Rs 1.18 crores to Rs 27.58 crores. Other Deposits are slightly lower at Rs 148.91 crores.

The slack season impress upon the figures of Scheduled Banks is reflected in a rise of Rs 2.83 crores to Rs 78.71 crores in Deposits with the Reserve Bank in spite of a reduction in their liability to the Reserve Bank; the Other Loans and Advances of the Reserve Bank have declined by Rs 3.33 crores to Rs 81.34 crores.

Finally, Balances Held Abroad have suffered another steep fall of Rs 8.86 crores to Rs 28.55 crores—this, dangerously near the statutory minimum.

The return of the State Bank for July 12 discloses a decline of Rs 1.86 crores to Rs 311.18 crores in Deposits. For the first time since the week ended May 17, the State Bank figures as having borrowed from the Reserve Bank, although the borrowings are at a nominal figure of Rs 0.03 crores. Advances show a slack season fall of Rs 4.88 crores to Rs 177.19 crores. In the result, cash balances show an improvement of Rs 3.81 crores to Rs 40.09 crores; and this would indicate that the improvement in Scheduled Banks' balances with the Reserve Bank, as revealed in the Reserve Bank's returns, is wholly accounted for by the State Bank.

In the week ended July 5, Scheduled Banks have scarcely felt the strain of month early disbursements. Indeed, the total of Advances has been marked down by Rs 4.12 crores to Rs 914.96 crores. Since, in the relevant week, the State Bank Advances were practically unchanged, it is clear that the reduction has taken place in respect of the other Scheduled Banks. Similarly, month early disbursements withal, Deposits of Scheduled Banks actually show an increase, though a nominal one of Rs 0.49 crores to Rs 1276.90 crores. But, since, in that week, the State Bank lost Deposits to the extent of Rs 3.03 crores, the other Scheduled Banks would appear to have actually added to theirs. However, we must note that Time Liabilities have again benefited at the expense of Demand Liabilities. While Demand Liabilities have declined by Rs 10.25 crores to Rs 713.14 crores, Time Liabilities show an improvement of Rs 10.74 crores to Rs 563.76 crores.

Borrowings from the State Bank are unchanged, but borrowings from the Reserve Bank—despite month early disbursements—declined by Rs 6.33 crores to Rs 55.76 crores. Part of this was enabled by drawing down balances with the Reserve Bank by Rs 5.21 crores to Rs 73.51 crores. Cash balances as a whole show a fall of Rs 5.50 crores to Rs 148.33 crores; but the other Scheduled Banks would appear actually to have increased their cash balances, since the State Bank, in the week ended July 5, reported a decline of Rs 6.99 crores in cash balances.

Modification of Sugar Directive

The Reserve Bank has intimated to Scheduled Banks some modifications of the directive issued recently on advances against sugar. It may be recalled that the directive in question, as reflecting the Reserve Bank's view that there had been a speculative rise in the prices of sugar, called upon the Scheduled Banks to reduce the quantum of advances against sugar to a level such that, from July 26, sugar advances would be at the upper limit of 110 per cent of the figure in the corresponding week of 1956. At that time, while welcoming the Reserve Bank's action as being a significant implementation of the central banking institution's policy of selective monetary control, we pointed out that some relaxation would be necessary in respect of advances for sugar exports.

The Reserve Bank has now announced that, on representations received by it, it is satisfied that some difficulties might be experienced by genuine non speculative entities. It would appear that sugar manufacturers have pointed out that the Government's system of sugar releases and availability of wagons are both responsible for the mills carrying larger stocks than usual. Consequently, the Reserve Bank has directed that advances to sugar manufacturing concerns are not to be affected by the directive.

We also gather that the Reserve Bank has issued suitable instructions in regard to sugar exports and to advances in respect of sugar movements.

At first glance, it would seem that the modifications make a virtual dead letter of the sugar directive. However, a somewhat closer study may possibly indicate otherwise. For, while it is true that trade advances against sugar form a small percentage of total advances against sugar, the available figures on which such a reading is made may be misleading. According to an article published in the Reserve Bank of India Bulletin in its May issue, advances to the sugar and gur industry were placed at Rs 13.6 crores at the end of December 1954. At the end of the next year, the figure was Rs 25.34 crores; and, by the end of December 1956, advances to the sugar and gur industries had risen to Rs 32.45 crores.

There are two important things to note in this regard. Firstly, the substantial rise recorded is by no means indicative of funds being speculatively utilised, since these advances are to industry, and since they merely reflect the much higher volume of sugar production. Secondly, in respect of sugar, the advances at the end of December are not really significant; for, crushing would have been under way only for a short time, and advances would show a sharp rise only in the later months. Indeed, the figures for May 17 show that the advances against sugar had risen to Rs 60.42 crores.

So, it would be wrong to make too much of the fact that, in the detailed year end statistics, the advances to the sugar and gur trade are low. At the end of 1956, advances under this head were placed at Rs 3.85 crores and worked out to less than 11 per cent of the total advances against sugar. It is in this light that some banking circles describe the Reserve Bank's modification of this directive as being a tame withdrawal.

But this is to overlook altogether the fundamental basis of the Reserve Bank's selective monetary control. The basic objective is that industrial output should not be affected by any Reserve Bank action. So, it has been decided that the directive should not apply to the manufacturing concerns. But, the non application to manufacturing concerns does not necessarily mean that the directive has been, to all intents and purposes, been withdrawn. For, we cannot overrule the possibility that a moiety of the increase in sugar advances between December 31, 1956 and May 17, 1957—the rise is to tune of Rs 24.14 crores—might very well be accounted for by advances to the trade. Whether this reading is correct, will be known only from the figures of sugar advances as and from August 2, which is the revised date from which the sugar directive is to be effective. If sugar advances should show a significant decline, it will be a confirmation that, to an appreciable extent, bank advances have been utilised by traders for speculation in sugar.

[July 20, 1957]

GATEWAY GOSSIP

(Continued from page 129)

would work out to Rs 84 crores during 1955 and Rs 217 crores over the First Plan period.

A second study of 156 public limited joint stock companies shows the sources of funds for additions to gross assets. During 1955, the gross fixed assets formation of the 156 companies was placed at Rs 27 crores. Inventory was marked higher by Rs 7.47 crores. Lendings show an increase over 1954 figures by Rs 11.69 crores. Investments have been added to by Rs 3.71 crores. Finally, the increase in monetary resources was to the tune of Rs 10.59 crores. This grand total of Rs 60.49 crores was derived in the following manner: Rs 5.22 crores came from new issues of capital; an increase in borrowings accounted for Rs 16.98 crores; depreciation reserves provided Rs 7.80 crores and taxation reserves Rs 7.93 crores; savings—or undistributed profits—contributed Rs 15.97 crores; and miscellaneous receipts accounted for Rs 6.58 crores.

It was within the capacity of the 156 companies to proceed with such expansion during 1955, particularly because profits rose substantially. With main income rising by Rs 43 crores to Rs 284 crores, the profits before taxation improved from Rs 23.56 crores to Rs 36.63 crores. Although the tax provision was larger by Rs 4 crores, the net profit rose from Rs 14 crores to Rs 23 crores. With dividends rising only by a small margin from Rs 7.02 crores to Rs 8.60 crores, the retained profits were doubled to Rs 14.42 crores from Rs 7.08 crores in 1954. It is worth remarking that the retained profits as a percentage of profits before taxation worked out to 39.4 in 1955 as compared with 30.1 in 1954. Secondly, the ratio of gross profits to sales improved substan-

tially from 11.5 per cent in 1954 to 14.7 per cent in 1955. Thirdly, the ratio of gross profits to total capital employed improved from 9.4 per cent in 1954 to 12.0 per cent. Finally, the ratio of profits after taxation to net worth also improved substantially from 9.1 per cent in 1954 to 13.1 per cent.

It seems to me that these studies made by the Reserve Bank prove conclusively that the private sector is proceeding according to schedule in the expansion programme allotted to the private sector. Moreover, if the private sector's performance over the First Plan can be taken to be an index of what it will do in the Second Plan, there is justifiable reason to be confident that the allotted targets will be achieved. I must add a final word, that the small size of the increase in the dividend distribution, while indicative of industry's care to conserve resources (and particularly since retained profits have improved so substantially) is nevertheless a significant reason for the present lukewarm investment climate. Some small measure of liberalisation in dividends will, while not seriously eating into the autofinancing of industry, have the altogether wholesome effect of inducing a much better reception for new capital issues; in other words, capital formation for industry could greatly be facilitated by even a token increase in dividends.

I wonder whether it is a measure of the strain felt by bankers that, in the short space of less than a month, two who held high responsibility have had their life cut off by an untimely end. It was a distinct shock to denizens of this Gateway City, that the popular and respected Mr D. R. Thom died suddenly early this week. He was

only 51, and served from 1954 as General Manager of the Bank of India Limited. For all that his tenure was a brief one, his years as General Manager are memorable ones. It was during this period that the banking system as a whole was showing signs of strident development, and in which Bank of India participated to the full; and it was during this period that the Bank celebrated its jubilee. Efficient and courteous, Mr Thom is one for whom it is difficult to find a successor of the same calibre. Meanwhile, Gateway circles are wondering whether the Bank of India will, for the first time, appoint an Indian General Manager in the person of Mr Lalwaney.

BALANCE-SHEET REVIEWS

(Continued from page 116)

sions has been reflected in an increase in working expenses to Rs 61.18 lakhs from Rs 52.68 lakhs. It is just probable that there is a special element about this increase, even though future earnings will be affected to the extent of the higher wages and the more or less compulsory bonuses that have to be paid.

Under these circumstances, the net profit, before providing for depreciation for 1956-57, at Rs 33.42 lakhs against Rs 40.11 lakhs for 1955-56 has been considered rather satisfactory. The amount set aside toward depreciation is Rs 2.50 lakhs (Rs 3.85 lakhs) and taxation Rs 14 lakhs (Rs 14.7 lakhs). Fortunately, the company is not adversely affected by the recent adjustments in Agricultural Income Tax in Kerala as the estates are mostly situated in the Annamalai hills and are, therefore, only liable for the Madras Agricultural Income Tax which has been raised by 10 per cent to 45 per cent. If the same estates had been located in Kerala, the burden of taxation would be 75 NP

in the rupee with disastrous consequences for the share-holders. The transfer to general reserve is lower at Rs 4 lakhs (Rs 6 lakhs). The Staff Pension Fund does not get anything against Rs 30,000 previously.

The final dividend of 25 per cent, with the interim dividend of 10 per cent already paid, makes 35 per cent for the whole year against 45 per cent previously. The market has received this announcement with satisfaction as the return is considered attractive. There has been improvement in the quotation to Rs 8.25 from Rs 7.70.

The company's financial position is very sound as there are ample reserves which amount to Rs 46.68 lakhs against the paid-up capital of Rs 34.77 lakhs. There is a clear case for capitalisation of reserves as fixed assets have been shown at Rs 6.57 lakhs. A saving in the dividend tax can thus be effected, but the bonus tax can have a deterring effect. The liquid position is also very sound as cash and bank balances amount to the large figure of Rs 24.81 lakhs.

The outturn of tea for 1956-57 was higher at 41.27 lakh lbs. In fact, it is the highest in the history of the company. Obviously, the acquisition of new estates in recent years has been responsible for the better outturn though the company's developmental programme also should be said to have been helpful. The crop realised in 1955-56 was 39.93 lakh lbs. The results would have, probably, been better if the coffee crop had also been sizable. But it was lower at 193 cwts against 278 cwts in the previous year. The cardamom crop was 2,447 lbs. The estimates for 1957-58 place the tea crop at 41.8 lakh lbs while the coffee crop is expected to be larger.

PLANNING AND THE BANKING SYSTEM

(Continued from page 119)

in the Banking system generally and in its private sector in particular;

- difficulties in the way of co-ordination amongst all the segments are easily removed;
- training programme for the Bank personnel in the private sector is carried out speedily;
- the responsibility of each bank for regional development is determined appropriately;
- the exercise of qualitative and purposive credit-control by the Reserve Bank is facilitated.

The finalisation of the Plan, (which to begin with, would be the primary task) being over, the activities of the 'Commission' would possibly be in more than one direction. Firstly to arrange for necessary statutory provisions (if the idea is approved) to bring into existence a Deposit Insurance and a Rehabilitation Corporation and to provide funds for those. The 'Commission' will then be left with, amongst others, the following obligations, viz.,—

- to see that the Banks and the 'Corpora-

tions' proceed to act according to the Plan objectives, expeditiously;

- to ensure necessary adjustments in the objectives, phasing and tempo of the Plan as may be required by any substantial change in the context;
- to co-ordinate effectively the activities of the financial organisations of all descriptions in the country;
- to associate closely with the Reserve Bank of India and take advantage of their advice and guidance.

The urgency of a Banking Plan cannot be overemphasised. This is not the sole responsibility of the banks themselves. Economists, industrialists and businessmen should all examine the necessity for it and do their best to expedite due consideration of the matter at all levels and assist in fulfilling the obligations of the Banking System. Banks in the country are doing their best in the circumstances and they should be assisted in doing still better.

(The article has been adapted from the speech delivered by the writer at the Indian Council of Economic Affairs on 4th June, 1957.)

July 20, 1957]

ACC HONOURS THE CODE

1

"Producers and distributors owe it to the consumers of their products that they shall always be of the highest quality and available at a reasonable cost."

Code of conduct—FORUM OF
FREE ENTERPRISE

Indian cement is required to pass the high standards laid down by the Indian Standards Institution. It is tested against these standards both in the laboratories of the producing factories as also at the Government Test House, Alipore. ACC cement passes these standards with a substantial margin of safety and is comparable in QUALITY with the best cement produced elsewhere in the world.

Since 1944, the selling price of cement has been fixed by the Government of India. Twice, in the past, the Company has voluntarily reduced the price of its cement. The price which the Company receives has remained unchanged since 1948. The current higher cost to the consumer is due to excise duty and the price equalisation surcharge levied by Government to subsidise imports through the State Trading Corporation.

Honesty, hard work, courtesy, continuous initiative and service to the community are the foundations on which the edifice of Free Enterprise rests. These are also the sure foundations on which the ACC edifice has been built to last.

When every minute counts

—there's nothing like a **ROYAL ENFIELD**

ENSIGN 150

TRAVEL AROUND ON YOUR OWN ROYAL ENFIELD Motor-cycle! It's the way to save time—no delays waiting for crowded trains and buses, no fear of missed appointments. You save money, too... ROYAL ENFIELD ENSIGN 150 gives you as much as 130 miles to the gallon!

And look at all the advantages a real, full-sized motor-cycle brings you: greater sturdiness, smoother pick-up, better shock absorption, higher road clearance, larger wheels for better manoeuvrability, better traction, more efficient braking...and a far, far higher resale value!

You'll agree that for a man who wants to go places there's nothing like a ROYAL ENFIELD ENSIGN 150.

ROYAL ENFIELD takes fatigue out of travel

Progressively manufactured by:

THE ENFIELD INDIA LTD.
Madras-19.

Sole Selling Agents:

THE MADRAS MOTORS PRIVATE LTD.
Madras — Bangalore — Delhi

Dealer Distributors in: AHMEDABAD, AJMER, BOMBAY, CALCUTTA, CUTTACK, DIBRUGARH, INDORE, JULLUNDHUR, KANPUR, LUCKNOW, MEERUT, CANIT, NAGPUR, POONA, RAJKOT, SECUNDERABAD, SRINAGAR AND TRIVANDRUM.

RE 78

For the Investor

Great Difficulties— But Greater Resolve

Investment Gossip:

IN times less out of joint, TELCO's results and TISCO's dividend, currently made known, would have engendered an all pervasive sentiment of confidence and stimulated purchases on a wide front. The immediate welcome accorded to the more than expected dividend of Tata Iron and Steel Company was a spurt of Rs 3 in kerb dealings. But, there has, conspicuously, been nothing like a spirited conditioning of Stock Exchange outlook.

The question, then, is: Why are the times out of joint? Having posed this question, I am inclined to think that a more pertinent question is: Why are Stock Exchange interests out of sort?

By and large, there is nothing wrong with the times. On the contrary, we are fortunate to be privileged to participate in a great adventure. These are stirring days, indeed. Great events are taking place; progress on a spectacular scale is unfolding before our eyes.

A great adventure, necessarily, involves difficulties here, and obstacles there. Our concern must be, not with the difficulties and obstacles, but with the resolve and ability to solve difficulties and overcome obstacles.

The question, therefore, is: Are we meeting difficulties in confident spirit and mastering them in convincing style?

The answer is an emphatic "Yes". By way of conclusive testimony to this affirmative answer, we may briefly deal with what is happening to three principal things we are up against.

The first is additional resources by way of new taxation. Within the first eighteen months of the Second Plan, the problems in this respect have been so resolutely and successfully tackled that the Finance Minister has been able to give the general assurance that so far as new taxes are concerned, there will be none in the rest of the Plan period. There may be, if at all, minor adjustments; but the main task from the point of view of the Plan's requirements has been accomplished. Stock Exchange circles have not, I regret to find, fully assessed the value of the assurance

so unambiguously given by Mr T. T. Krishnamachari.

When, with the enactment of the Wealth Tax Bill and Expenditure Tax Bill, controversy receives a quietus, Stock Exchange circles may be expected to appreciate TTK's assurance at its true worth and gauge its far-reaching character.

Secondly, the foreign exchange gap has been causing grave concern. Here, too, look at the way things are moving. The World Bank has already given a 90 million dollar loan for the Railway projects. It is added that a loan of this magnitude from the same source is likely in each of the remaining years of the Plan. That is to say, the prospect is for an external finance of 360 million dollars for the Railways.

The British Government have under consideration the granting of a £100 million loan to India. If this materialises, well and good. If it does not, all that New Delhi need to do is to authorise the Reserve Bank to run down, as a temporary measure, the currency reserve to Rs 300 crores. Thus is Rs 100 crores released for the Plan's requirements. The position is as simple as that.

If foreign securities held as currency reserve fall to Rs 300 crores, it is nothing to be gravely concerned about. For, if our reserves have so rapidly declined, it is just a measure of the pace of industrial development being faster than expected. The fact of the matter is that private enterprise looks like achieving, in the first half of the Plan period, the targets fixed for the whole quinquennium. To the extent that this hydra headed development of the earlier years has used up more of our foreign exchange reserve than we bargained for, the utilisation of this reserve in the later years of the Plan will be much less than now anticipated.

It is pertinent to mention, in this context, the likelihood of a second arrangement under the US Surplus Commodities scheme and of an increased US grant in pursuance of the strong recommendation made in this behalf by US Ambassador Bunker. The foreign exchange relief by these means may add up to the equivalent of

HIGHLIGHTS

The 1957 slack season is less furtive than was its counterpart last year, and promises to be truer to norm. In simple terms, the slack season this year is likely to be really slack.

One important reason for this is the impressive rise in bank deposits.

The latter are responding more directly to Government's large scale disbursements;

sharply to expanding note circulation; and, we think, significantly to bank Advances.

In countries with well spread banking systems and well appreciated banking habits, bank Advances create bank Deposits.

Not so in a country like India, where banks are few and far between, and the banking habit is in little vogue in the large non monetary sector.

over Rs 250 crores. This particular aid will be of significance both to the foreign exchange gap and to the gap in internal resources.

Deferred payments for machinery imports are more or less assured in respect of the more important projects in the private sector.

All of which is impressive and conclusive evidence that the foreign exchange conundrums are being successfully mastered.

Finally, there are the issues posed by market loans and the small savings campaign. Quite properly, the interest rates have been stepped up on savings certificates. This measure is to accelerate the flow from the non monetary sector. The interest rates in the latter being in a class by themselves.

As at present planned, only the Centre will come out with a New Loan programme. The target is Rs 100 crores. Rs 32 crores represent the maturing loan. The new money to be sought is of the order of Rs 70 crores. Which, between the Life Insurance Corporation, the State Bank, the Reserve Bank and

other government and quasi government sources, can be conveniently and competently made up.

Once the New Loan is out of the way, many a mickle emanating from expanding Provident Fund institutions will form the giant muckle of sustained and swelling demand on the gilded market.

That will be the turn for adroit open market strategy—the Reserve Bank disposing of Government securities by the recognised technique of gradually stepped up tap rates.

If the right confidence prevails and the right techniques are pursued, the Reserve Bank can hope to unload anything like Rs 100 crores of securities through tap sales; at the same time demonstrating the validity of the strategy which sells securities and, in that very process, firms up gilded prices.

As I have said, the adventure we have embarked upon is a great one. So are the difficulties great. But our resolve to meet and master them is greater.

Herein is the fundamental source of optimism for the future.

Bank branching is being encouraged and fostered by Government policies. So, we seem to see the beginning of the movement of bank Advances creating bank Deposits.

Such is the conclusion impressed by the Leading Article which, also, impresses upon banks the need for consequential readjustments.

[July 27, 1957]

Investment Notes:

The Dunlop Rubber Company (India) Limited's rights issue of 14,00,000 new Ordinary shares of Rs 10 each at a price of Rs 15 has been oversubscribed to the extent of 15 per cent. The rights shares taken up by themselves total nearly 13,74,000 leaving only 26,000 shares available for allotment against more

than 1,000 applications for a total of 2,40,000 additional shares.

Bank shares have been ruling very firm during the past few weeks. There is a disposition to view optimistically the future prospects for the Indian banking system. Expectations of higher dividends have naturally led to strong buying.

Reports are current that the National Rayon Corporation, Bombay,

has obtained the sanction from the Controller of Capital Issues for increasing the capital by a further issue of equity shares in the proportion of one new share for every two held, at a premium of Rs 25 per share.

A number of cotton textile mills have raised additional capital in the past one year and more and it is encouraging to note that large

funds have been raised by the issue of new ordinary shares at par to existing shareholders. The additional capital so raised can be said to be over Rs 3 crores. Among the more important mills which have raised additional capital are Lakshmi Mills for Rs 35 lakhs, Kothari Textiles Rs 24 lakhs, Coimbatore Cotton Rs 24 lakhs, Adoni

NEW WINGS TO SERVE INDIA!

INDIAN AIRLINES CORPORATION ADDS TURBO-PROP VICKERS *VISCOUNTS* TO ITS FLEET

ABOVE-THE-WEATHER SMOOTHNESS: Powered by four mighty Rolls-Royce turbo-prop engines, the *Viscount* flies above the weather at 20,000 feet...while you relax in the fully-pressurised cabin as comfortably as in your own home. The swiftest, smoothest flying you've ever known!

A PERFECT VIEW FOR EVERYONE: There's no vibration, no noise in a *Viscount* flight. You can speak softly, be heard clearly. Luxurious, adjustable armchair seats invite you to r-e-l-a-x; and the world's largest air windows ensure you a perfect view...no matter where you sit!

THE FIRST—AND THE FINEST: Makers of the world's first turbo-prop airliners, Vickers are proud to be supplying India with new wings to fly in her service. Fly by *Viscount*—and join the thousands all over the world who've discovered how wonderful air travel is!

FACTS ABOUT THE I.A.C. *VISCOUNT*

- The *VISCOUNT* has a cruising speed of 320 m.p.h.
- The *VISCOUNT* has a carrying capacity of 44 passengers over ranges of up to 1,250 statute miles.
- The *VISCOUNT* is powered by four Rolls-Royce Dart turbo-prop engines.
- The *VISCOUNT* is in service with 18 passenger airlines throughout the world.
- The *VISCOUNT* has logged over 500,000 airline hours.
- The *VISCOUNT* was the world's first turbo-prop airliner—and is still the world's most preferred.

TELCO Makes Good Progress

Balance-Sheet Reviews:

THE Tata Locomotive and Engineering Company, Limited has reported excellent results for the year ended 31st March, 1957. The company has earned a net profit, after providing for Depreciation and Taxation, of Rs 89.15 lakhs as against Rs 92.73 lakhs in the previous year. Although the net profit is lower, it actually reflects a substantial improvement, as the accounts for the previous year included two years' profits from the Locomotive division.

Sales of products and services have jumped up from Rs 11.98 crores to Rs 21.44 crores. Out of the profits, a sum of Rs 70.13 lakhs (Rs 1.05 crores) has been set aside for Depreciation; Rs 27.27 lakhs (Rs 32.00 lakhs) for Taxation; Rs 14.99 lakhs (Rs 14.93 lakhs) for Development Reserve; Rs 20 lakhs (Rs 18 lakhs) for General Reserve and Rs 9.06 lakhs (nil) for Reserve against anticipated increase in taxation. The amount available for final disposal has, however, been affected to the extent of about Rs 10 lakhs by the proposed increase in taxation in this year's Union Budget. The liquidation, last year, of all arrears of dividend on the Preference shares has enabled the directors to recommend an increased dividend on the Ordinary shares from Rs 6 to Rs 8 per share. A sum of Rs 1.18 lakhs against Rs 1.29 lakhs is carried forward.

There has been a marked increase in the volume of the company's business during the year under review, as evidenced by the value of the products sold. The output of locomotives and boilers showed an increase of 30 per cent and exceeded the target set by the Tariff Commission.

Excellent progress is also made in the Automobile division of the company. The output of Tata-Mercedes-Benz vehicles has exceeded the target of 6,000 units, while the progress of indigenous manufacture is maintained strictly according to schedule.

₹₹₹

Shaw Wallace

Despite a substantial decline in earnings, Shaw Wallace and Company Limited has maintained the dividend at 10 per cent on the Ordinary shares for the year ended 31st December, 1956. Sales have risen to as much as Rs 2.85 crores from only Rs 69.64 lakhs; but net profit, before providing for Taxation and Depreciation, amounts to only Rs 29.66,386 as against Rs 34,64,228 in the previous year. This is mainly due to the fact that the item "Purchases" is shown at as much as Rs 2.85 crores against Rs 63.84 lakhs; "Salaries and Wages" at Rs 37.31 lakhs against Rs 26.15 lakhs and "Miscellaneous Expenses" at Rs 12.08 lakhs against Rs 6.53 lakhs.

In this connection, it may be added that the accounts do not provide a true comparison with 1955. For, it was found expedient to

Taxation provision is reduced to Rs 13.96 lakhs from Rs 16.03 lakhs and Investment Reserve to Rs 3.00 lakhs from Rs 6.00 lakhs.

₹₹₹

India United Mills

The working of the India United Mills, for 1956, has resulted in a somewhat lower gross profit of Rs 76.18 lakhs as compared to Rs 92.23 lakhs in the previous year. This is mainly to be accounted for by the increase in excise duty from 1st September 1956, resulting in reduction in sales by Rs 2.25 crores to Rs

9.12 crores and increase in year-end stocks from Rs 1.98 crores to Rs 3.04 crores.

In respect of allocations, Depreciation absorbs Rs 15.00 lakhs (Rs 32.00 lakhs); Taxation Rs 10 lakhs (nil); Taxation provision for previous years Rs 12.00 lakhs (nil) and Bonus Rs 7.00 lakhs (Rs 25.00 lakhs). The larger provision for bonus is in respect of four years ended 31st December, 1955.

Against a paid-up capital of Rs 2.50 crores, Reserves and surplus stand at Rs 63.94 lakhs. As against the gross block of Rs 4.90 crores, Depreciation provided so far amounts

"Help—let me out!"

Many motorists may have wondered, seeing the rather technical look of some petrol advertisements, just what it's all about. Perhaps, blinded by science they even wonder whether there is very much in it after all.

This is a pity, for things have been happening to petrol. It is better—and different. Modern petrol is no longer obtained by simple distillation. First-class high power petrols—such as SHELL and B.O.C.—are produced by advanced refinery processes that lead to better fuels at an economic cost. But refining is only half the story. Additives play an increasing part in giving motorists the higher performance they need. You probably remember the first important additive—tetraethyl lead—which in 1922 sensationally reduced petrol 'knock'. The latest, and most important since tetraethyl, is I.C.A.—the ignition control additive—which, incorporating tricresyl phosphate, was developed by Shell Research to overcome problems of power loss through engine deposits. These deposits interfere with normal firing of the mixture, particularly in high compression engines, and were a serious brake on engine design. I.C.A. has proved the complete answer. It is a triumph of fundamental research as far removed as can be from an advertising 'stunt'. It is by products such as SHELL and B.O.C. petrol with I.C.A., available at Burmah-Shell sales points, that motoring becomes better, smoother and more economical.

to Rs 3.54 crores, leaving a net block of Rs 1.36 crores.

₹ 25

Bharat Line

The Bharat Line Limited has reported improved results for the year ended 31st December, 1956. Despite a fall in gross earnings from Rs 2.33 crores to Rs 2.20 crores owing mainly to reduction in the tonnage employed, the gross profit is higher at Rs 38.81 lakhs as against Rs 30.87 lakhs in the previous year.

After meeting all working expenses, and stepping the provision for Taxation from Rs 37,104 to Rs 2.74 lakhs and Depreciation from Rs 24.22 lakhs to Rs 27.66 lakhs, the net profit for the year has moved up from Rs 6.65 lakhs to Rs 11.14 lakhs. A sum of Rs 4.75 lakhs is provided for General Reserve. The directors have recommended a dividend of Rs 6 per share on the Ordinary shares.

Against a paid-up capital of Rs 1 crore, Reserves and surplus total Rs 83.94 lakhs. Against a total block of Rs 4.21 crores, Depreciation has been provided to the extent of Rs 1.45 crores, leaving a net block of Rs 2.76 crores.

₹ 25

Radhakrishna Mills

The Radha Krishna Mills Limited has an expansion programme for installing additionally 10,000 spindles. Of this, 8,800 spindles have been already installed and the remaining 1,200 spindles are expected to be erected shortly. There is also a programme for renovating one line of machinery in the blow room.

The required finances are partly available as the company has reserves of Rs 25.75 lakhs against the paid up capital of Rs 25.22 lakhs. Application has been made for the issue of bonus shares in the proportion of one share for every two shares held by capitalising Rs 12.6 lakhs being part of the reserves. It is also proposed to issue additional capital for Rs 25.22 lakhs in new ordinary shares at par. It is expected that the expansion and renovation programme will be completed during the current year.

The net profit, before providing for taxation and depreciation, for the year ended December 31, 1956 is Rs 19.78 lakhs against Rs 18.15 lakhs for 1955. The profits for 1955 have been inflated, because payments in respect of local taxes

have not been shown separately. The charge on account of depreciation is Rs 4.14 lakhs against Rs 3.44 lakhs previously while taxation accounts for Rs 3.43 lakhs (Rs 2.15 lakhs). The allocation to general reserve is Rs 3 lakhs (nil) and contingency reserve Rs 4.20 lakhs (Rs 2.75 lakhs). The dividend has been maintained at 20 per cent.

₹ 25

India Steel Rolling Mills

Another company, which is engaged in the execution of expansion plans, is Indian Steel Rolling Mills Limited. This unit is proposing to instal machinery for the manufacture of wire products. The requisite machinery has already arrived and is being erected. Actually, the production of wire nails is expected to be started some time next month. For financing the expansion plans, new ordinary shares for Rs 5 lakhs were issued toward the end of 1955 again early this year for a similar sum. Both these issues have been successfully subscribed. The Tata Iron and Steel Company, Limited, which is running the mills on a profit-sharing basis, has also agreed to take up debentures worth Rs 5 lakhs. It is, therefore, stated that the company has no difficulty in respect of finances.

The net profit for the year ended December 31, 1956, before providing for taxation and depreciation, was Rs 3.68 lakhs against Rs 3.42 lakhs for the previous year. The amount set aside to depreciation is Rs 58,803 against Rs 43,544 and taxation Rs 1.39 lakhs against Rs 1.20 lakhs. The repairs and renewals reserve get Rs 32,500 the same as before. Even though the dividend has been maintained at 7½ per cent, it is payable on a capital increased by the issue of new shares for Rs 5 lakhs.

The factory is working on two shifts as from August last year and there is a sufficient stock of billets to ensure uninterrupted working. The output of bars and rods in 1956 was 17,554 tons against 13,598 tons; and hoops production was placed at 891 tons against 815 tons.

₹ 25

Chembra Peak Estates

The accounts of Chembra Peak Estates Limited for the year ended (Continued on page 192)

Improved Banking Situation

WHAT time bank advances have touched new altitudes and rates paid by banks on deposits are suggestive of strain on resources and stress on the system, developments of a markedly favourable import to banks operating in this country have received little notice and even less appreciation. As the 1957 slack season is getting into stride, it is gratifying to be able to record that the 1956-57 busy season, which, on its eve, was looked forward to as a testing and even critical period for banks, has witnessed trends and wrought changes which are of far reaching significance and which should be hailed as auspicious omens. There is, in various ways, a great parallelism between the 1951-52 busy season and the 1956-57 busy season, as this journal has repeatedly stressed in this context. It may be recalled that, at a time when crisis mongering was the fashion, we suggested that the forewarning of the difficulties to be anticipated in the 1956-57 busy season would impel the monetary authorities to take such forecasting measures as would minimise the occurrence of intolerably stringent conditions. It may be stated that the 1956-57 busy season, as it has emerged, has conformed to the rough sketch we provided 8 months ago.

In December last year, we suggested that the expansion in advances during the ensuing busy season would be between Rs 150 crores and Rs 200 crores, adding that we thought that the figure would approximate to the higher rather than the lower level envisaged. Secondly, in spite of the asseveration in some circles that bank deposits were not showing satisfactory increase, we put down accretions during the busy season as between Rs 75 crores and Rs 100 crores. Thus, we felt that the extra resources that would need to be found by banks would range between Rs 100 crores and Rs 125 crores. On the assumption that the busy season peak was touched on May 10, the expansion in advances actually worked out to Rs 175.53 crores; and deposits improved in an even more heartening fashion than we had dared hope, the increase over the period being placed at Rs 132.77 crores. The remaining resources for meeting the advances were found partly from disinvestment in Government securities and partly from an increase in borrowings from the Reserve Bank. Under the former head, banks were able to secure Rs 27.47 crores, while that they increased their borrowings by Rs 31.83 crores. Thus, without fuss and without difficulty, the demands of the 1956-57 busy season were fully met.

The role of the Reserve Bank in thus enabling the banking system to discharge its busy season responsibilities cannot be exaggerated. The first step taken by the central banking institution was to encourage in every way possible the securing of advances against usance bills. The Reserve Bank prepared itself for meeting an "unprecedented" busy season by approving lines of credit against usance bills for a total of Rs 150 crores. Secondly, the Reserve Bank also made outright purchase of giltedged from member banks. Since there was a lag between the expansion of advances and the accretion to deposits, the peak of borrowings from the Reserve Bank was touched in the week ended March 29,

when they were placed at Rs 103.16 crores; and, of this figure, Rs 71.54 crores represented borrowings against usance bills. However, by the time the busy season achieved its peak, deposits had improved in such wise as to enable a reduction of over Rs 13 crores to Rs 89.64 crores in borrowings.

It is at this juncture that we have to draw emphatic attention to the manner in which the reliance upon the Reserve Bank for meeting the 1956-57 busy season needs was minimised. This reduction, as we have made clear, was primarily due to the remarkable increase in deposits. We think that there has been an insufficient recognition of this factor in the working of the banking system. We would therefore, urge a closer study of this phenomenon of bank deposits. We present below a table of notes in circulation and bank deposits from 1951. The table will be found extremely revealing: the 1950-51 figure is taken as base

Indian Finance

Established 1928

July 27, 1957

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

and the figures thereafter are indices. Thus, in the following table, 1950-51=100.

Date	Notes in Circulation	Deposits
1950-51 ..	100.0	100.0
29-6-51 ..	108.1	100.9
27-6-52 ..	97.0	97.9
26-6-53 ..	97.8	97.7
2-7-54 ..	101.2	100.5
1-7-55 ..	112.9	113.8
29-6-56 ..	126.8	124.3
28-6-57 ..	132.6	145.4

It will be seen that the relationship between deposits and notes in circulation was more or less unchanged until the middle of 1956; thereafter, the improvement in deposits is out of all proportion to the increase in active note circulation. This pinpoints the significant thesis that we advanced in the columns of this journal some months ago that, at long last, in India, the tempo of economic activity is such

STOP PRESS

NEW LOANS' SUCCESS ASSURED

THOUGH the subscription lists for the New Loans, the terms and conditions of which are announced as we go to press, are scheduled to remain open for three days at the most, we have every reason to believe that, with the conversion option exercised by the Reserve Bank, the State Bank, the Life Insurance Corporation and other Government agencies, and with such cash applications as may be made by some or all of these institutions, it should be possible to hope for instantaneous oversubscription. If this happens, it will generate the much needed optimism in gilt-edged outlook.

We may, however, confess at the outset that the Centre's New Loans for 1957 reveal a diffident and weakkneed approach to market borrowings. The issues announced yesterday are, in every one of their essential attributes and characteristics, a confession of Government's inability to borrow from strength.

The first retrograde step is that both issues have a shorter maturity than their counterparts of last year.

The second unfortunate decision is to raise the interest offered in both cases.

The third strange point is that, although (as envisaged by this journal) conversion facilities in advance are offered to holders of the 3 per cent 1958 loan, the target amount is unchanged from the budgeted Rs 100 crores.

We would be false to our slogan of writing without fear or favour, if we did not record here our deep sense of disappointment with the evolving borrowing policy, or if we did not make plain our apprehension that the Second Plan's borrowing programme has but dim prospects of success.

However, there is another aspect to the duties we have set for ourselves: and that lies in an interpretation of Government policy. In this light, we may now see whether, for their part, Government could have had good and sufficient reason for announcing, for 1957, a New Loan that is no loan at all.

First, we may briefly take note of what the new issues are. On the one hand, a medium 3½ per cent 1967 is being offered at Rs 99.50;

and this compares with the 3½ per cent 1967 issued last year at Rs 98.50. On the other hand, the medium long is a 4 per cent 1972 at par; this compares with the 3½ per cent 1974 issued last year at Rs 98.50. Subscriptions will be received in cash and in the form of 3 per cent 1957 and 3 per cent 1958; the lists are to be kept open between August 5 and August 8, but may close at any time earlier if realisations reach the approximate figure of Rs 100 crores.

It is the last two facts which are of the utmost significance. The target is Rs 100 crores: securities eligible for conversion total Rs 82 crores. Especially in view of the substantial open market purchases during the last twelve months by the Reserve Bank, it may be assumed that holdings of the two securities, for which conversion facilities are offered, by institutions of a governmental nature may be anything between Rs 50 crores and Rs 60 crores. Thus, at best, cash subscriptions could be as small as Rs 50 crores (It is intriguing to note that the New Loan communiqué does not indicate whether priority will be given to cash subscriptions, or vice versa). Of this Rs 50 crores, it is an open secret that the Life Insurance Corporation is holding itself in readiness with anything like Rs 30 crores in cash. Reliance on the public may thus be as insignificant as Rs 20 crores—both in cash and by conversion.

This could be the all important clue to the 1957 New Loans. Is it that Government desire not to put a strain upon the money market resources? And is it consequently that their target is modest? This is, at best, a charitable interpretation; and it alone could explain the fainthearted nature of the New Loans.

There is one more possible explanation. The monetary authorities might have thought that borrowing from strength could be proceeded with only after the basic imbalance in the structure of interest rates had been corrected. It may be that such a policy will be evolved after, in the immediate future, action is taken to rid the interest structure of its present chaos.

as to cause an expansion in deposits at a much faster pace relative to the increase in notes in circulation.

Secondly, a comparison may be made of bank deposits and bank advances with a view to discovering whether any relation can be noticed between them.

(In crores of Rs)		
Date	Deposits	Advances
1-7-55 ..	998.63	617.71
29-6-56 ..	1090.99	754.47
28-6-57 ..	1276.41	919.08

It will be noted that, while the expansion in advances exceeded the rise in deposits during 1955-56, the obverse is true in respect of 1956-57. We are reluctant to suggest it, but it occurs to us that, conceivably, this may be read as indicating that, as in the industrially advanced countries, new advances are creating new deposits.

We are disposed to think that the tempo of increases in deposits, in future years, may be even further quickened. For, the Second Plan's stress on industrialisation, and therefore its disbursements being more greatly concentrated in the money market proper, will result in speedy benefit being derived by the banking system. Furthermore, as we have just remarked, the mere fact of industrial development may have contributed to the establishment in this country of new advances creating new deposits.

Not only have the resources of the banking system sufficiently increased to enable the provision of expanded credit requirements postulated by the Second Plan, but it is also a fact that the accelerated tempo of activity has necessitated a sustained demand for funds. In the result, as against the experience of banks some years ago, when their funds were profitably utilised during the busy season and when, for the so called slack season, the ratio of idle funds was quite high, it happens today that the advances of Scheduled Banks, far from showing any slack season abatement, actually record an increase throughout the year; and the more fruitful utilisation of resources over the whole year has naturally added substantially to bank profits. So, whether on the score of banking resources or on the score of bank profits, we would suggest

that recent developments have been most heartening. But we are afraid that the banks have not understood these significant changes; for, they would otherwise have made the consequential adjustments. For one thing, it is incomprehensible that, at a time when bank deposits have risen so substantially, there should be a feeling that there is an acute paucity of resources and that, therefore, banks ought to try and outbid each other. We would go so far as to say that the failure on the part of the banks to recognise the essentially favourable trends in the national economy is going to boomerang upon the banking system. Already, as a result of the deposits war, there has been a movement from demand liabilities to time liabilities. The following table analyses the ratio of time liabilities to total deposits:

RATIO OF TIME LIABILITIES TO TOTAL DEPOSITS			
	1	2	
	Total of Deposits (In Crores of Rupees)	Time Liabilities (In Crores of Rupees)	Ratio of (2) to (1) (Percentage)
24-6-51 ..	885.82	289.65	32.7
27-6-52 ..	859.28	300.63	35.0
26-6-53 ..	857.82	327.56	38.2
2-7-54 ..	881.97	335.62	38.1
1-7-55 ..	998.63	397.91	39.8
29-6-57 ..	1090.99	452.88	41.5
28-6-57 ..	1276.41	553.02	43.3

Particularly in the course of the last few weeks, there would appear to be a switch from demand liabilities to time liabilities; in other words, more and more of deposits on which little or no interest is paid is being transformed into interest bearing liabilities. We would here refer to a study made by a banker friend, whose essential conclusion is that, with the raising of interest rates offered by banks, the cost of new resources to the banking system during 1956 worked out to the incredible figure of 15 per cent or thereabouts. We should hasten to point out that this study has worked out the ratio of the increase in interest paid to the increase in deposits. This, of course, is an over-simplification, since the higher level of interest charges also relates to the higher interest being paid on the then existing deposits as well. But, to this, the retort is that, had there been no such increase in the deposit rates, the increase in the expenditure under this head would have been very much less.

It seems to us a task of primary importance that some action is taken in respect of the rates of interest paid by Scheduled Banks. For, the high rates that have been obtaining are responsible for an artificial atmosphere of monetary stringency which is completely out of accord with the real increase in deposits. Such an aura of stringency is all too clearly detrimental to the national economy. The unconscionable rates for inter bank money and term money have fostered a chaotic structure of interest rates. Ultimately, such chaotic conditions have affected Government, since the Government's borrowings need to have some regard for the existing structure of money rates. If the Scheduled Banks do not themselves recognise that it is far from their interest—and, indeed, utterly suicidal—to wage a deposits war, we would urge Reserve Bank action in this behalf by directive of a ceiling on deposit rates. As we have remarked in earlier studies of Government's borrowing programme, the starting point for the evolution of a policy of borrowing from strength is in the money rates; and this is why, at the risk of being repetitious, we suggest that an essential aspect of the Reserve Bank's selective monetary control would lie in prescribing ceilings.

We would again refer to the fact that banks today are, by virtue of the pace at which their resources are being added to in various ways, in a position of strength. The banking system can, therefore, borrow from strength; and, as we pointed out in the Leading Article two weeks ago, borrowing from strength implies that interest offered is reduced.

We have thus far taken up one particular aspect of the banking system; and there are two other matters which, in our opinion, need also to be appreciated. The first of these relates to what we may call a new classification in the breakdown of assets and liabilities. Although the augmentation of deposits is, in comparison to the increased demand for funds, at a satisfactory pace, we must make allowance for the fact that the banking system will be, from time to time, in need of replenishing its resources by borrowings from the Reserve Bank. For, it is a recognised tenet of the monetary authorities that finances must be fully available for all productive ventures. Therefore, the expansion in advances may, at periods, be at a rate exceeding accretions to deposits. Thus, it may be that the advances-deposits ratio is shown much higher than what used to be the traditional 60 per cent or so. We would think that the banking system is reconciled to this ratio keeping above the 70 per cent mark. For purposes of a bank's balance sheet, sometimes the advances-deposits ratio even offers a distorted picture. To correct this, we would suggest one of two alternatives. On the one hand, advances in the form of bills purchased and discounted could be omitted for purposes of determining the advances-deposits ratio. On the other hand, where there have been borrowings against usance bills, such borrowings and the usance bills so pledged could be shown as contra items. A ratio so arrived at would not, as is the case now, present a distorted picture.

The second suggestion that we have has regard to the convention of liquidity ratio in the UK banking practice. While there is no such convention in this country, Indian banks are statutorily required to keep 20 per cent of their deposits in cash plus unencumbered securities. In actual practice, because remittance facilities are still not as good as they could be, most banks have holdings of unencumbered securities plus cash in excess of this statutory minimum of 20 per cent. But we feel that there is a good case for raising this minimum to 30 per cent or even 35 per cent.

(Continued on next page)

What is a Lockout?

By M. SUR

Our last article we considered statute and case law relating to strikes and only touched upon the question of lockout when considering what the law had to say about illegal strikes and lockouts. Chapter V of the Industrial Disputes Act deals with both strikes and lockouts, and declares the latter to be illegal in a public utility service unless 14 days' notice is given, and during the pendency of conciliation proceedings and seven days after the conclusion thereof. In all establishments lockouts are illegal during the pendency of conciliation proceedings before a Board and seven days after the conclusion thereof, and during the pendency of proceedings before a Labour Court, Tribunal or National Tribunal and two months thereafter, and during the period of operation of a settlement or award. But a lockout declared in consequence of an illegal strike is not deemed to be illegal.

Definition of Lockout

Lockout in the Industrial Disputes Act, as amended in 1956, is defined as

"the closing of a place of employment, or the suspension of work, or the refusal by an employer to continue to employ any number of persons employed by him."

It should be noted that this definition only applies to a number of workmen and not to individuals.

The Oxford Dictionary definition is a little more explicit:—

"a refusal on the part of an employer or employers acting in concert, to furnish work to their operatives except on conditions to be accepted by the latter collectively."

The Labour Appellate Tribunal has stated that:—

"Lockout is the counterpart of strike, the corresponding weapon in the hands of the employer to resist the collective demands of the workmen or to enforce his terms. It is sometimes used as a security measure, but even then it has connection with disputes with the labour force or a body of workmen." (Presidency Jute Mills, Labour Appeal Cases, 1952, p.87)

The Madras High Court held that "lockout is a means of exerting pressure on employees" (Sri Ramchandra Spinning Mills, A.I.R. 1956 Madras, 241).

The earlier Trade Disputes Act of 1929 had attached an intention to the definition of lockout, namely:

"where such closing, suspension or refusal occurs in consequence of a dispute and is intended for the purpose of compelling those persons, or of affecting employment."

As this was dropped in the 1946 Act, Industrial Tribunals argued that the omission must have been deliberate and "refusal to continue to employ any number of persons" must now include cases of termination of more than one person at a time.

The Labour Appellate Tribunal went into this point in detail in the Presidency Jute Mills Case (Labour Appeal Cases, 1952, p. 67), and declared that it would be absurd if 'lockout' were to be applied to ordinary termination of service, as this would mean that a public utility service could never discharge more than one worker at a time without complying with the lockout rules under S. 22.

"The phrase 'refusal by an employer to continue to employ' must, therefore, be given a restricted meaning. This phrase evidently corresponds to the phrase 'cessa-

tion of work' or 'refusal to continue to work or accept employment' occurring in the definition of strike. The meaning of the phrase must, therefore, be 'refusal by the employer to allow a number of his workmen to attend to their duties without terminating their services. Thus in a lockout, the relationship of employer and employee remains as before, only some links in the chain of that relationship are broken.... Lockout is the counterpart of strike.... neither of them automatically puts an end to the relationship of employer and employee. In both the cases the relationship continues and in the one (strikes) it is suspension of services by the employees themselves, whereas in the other (lockouts), it is suspension of their services by the employers. In neither case is the employment finally determined, the intention of the workmen in the one case and of the employer in the other being that employment would be continued as soon as a satisfactory settlement of the case is arrived at."

Similarly it was held that retrenchment could not come under the definition of lockout. (Raja Bahadur Motilal Poona Mills, Labour Appeal Cases 1954, p. 285).

Next arose the question of whether closure of an establishment constituted a lockout. The High Court of Madras in the case of Sri Ramchandra Spinning Mills held that closure, if it is for a bona fide reason cannot be considered as a lockout (A.I.R. 1956, Madras 241). The Supreme Court maintained the distinction between closure and lockout in the case of Banaras Ice Factory Ltd. (Labour Law Journal, 1957 I, p. 253), holding that termination of service on account of bona fide closure could not give rise to a dispute or contravention of S. 22 because the business was dead.

There remained the question of a closure which was not bona fide, i.e. not for economic reasons, but used as a means, for example, of avoiding implementation of an award, or exerting pressure on the employees. If a closure were proved to be mala fide, or not a genuine closure, then it would be a lockout and the industrial tribunal would have the jurisdiction to consider whether it was justified or not, said the Madras High Court. (M. K. Krishnamurthi, Indian Factories Journal 15-7-56, p. 457) A tribunal could not direct management to re-open in such a case, but compensation could be awarded, and it should be noted that, if permission for lockout was necessary in the particular case, the lockout would be illegal.

When is Lockout Justified?

Lockout in consequence of an illegal strike is allowable under the law without notice. The employer, therefore, only needs to make certain that the strike is illegal before he declares a lockout.

But not all lockouts are justifiable in the eyes of the industrial courts, and employers have to be careful before they take such action. A lockout has been held to be justified where the workmen had adopted a threatening attitude which led the management to a reasonable apprehension that life and property would be in danger if the factory were kept open (Scientific Ceramic Industries, Labour Appeal Cases, 1954, p. 473). But the employer must have pretty solid grounds for his apprehensions. In the Itakhoolie Tea Estates case (Labour Appeal Cases, 1954, p. 343), the Industrial Tribunal had held that the lockout was unjustified, but had not awarded pay because the men had not reported for work

An Indian Finance Special Study

during the period of lockout. The Labour Appellate Tribunal held that the workmen were not obliged to present themselves for work during a period of lockout and so awarded them full pay for the period.

In the case of Indian Machinery Co. (Labour Law Journal, 1956 II p. 408) lockout had been declared following a stay-in strike. The action of the employers was correct so far, but they then required the employees to execute a bond for good conduct which contained an admission that the strike was staged at the instance of others named. This condition for lifting the lockout was held to be an unfair labour practice and unjustifiable, so compensation was awarded to the workmen for the period of the lockout. This shows that the employer has to be careful to see not only that the lockout is justified but that the conditions of return to work are fair.

In the Talcher Coalfield dispute the union argued that the refusal of the employer to allow latecomers to work was really a lockout. This was not accepted by the Labour Appellate Tribunal, which held that such refusal could only be a lockout if the employer's "action was prompted by reason of a collective dispute." (Labour Appeal Cases, 1952, p. 599) It is important that the employer's action should not be vindictive. The wholesale suspension of 76 workmen for an unlimited period when the Standing Orders only allowed for a limited period of suspension, was held to be a lockout for which notice should have been given, and therefore an illegal lockout in the case of Luxmi Devi Sugar Mills Ltd. (Labour Appeal Cases 1953, p. 244)

Although deliberate slow-down has been held to be serious misconduct, the employer is not, apparently, entitled to declare a lockout in consequence of a slow-down. In the case of Dinesh Silk Industries Ltd. before the Labour Court, Bombay (Bombay Labour Gazette, June, 1956, p. 1088), although the employers had given notice to lay off all the workers until they gave an assurance of working normally, the Court held that such lay-off was a lockout and that since it was adopted with a view to compelling the workers to withdraw the slow-down, it amounted to an illegal lockout.

It should be noted that a declaration of lockout during the pendency of tribunal proceedings is not a contravention of S. 33 relating to change in conditions of service under the Industrial Disputes Act, even though it may be illegal under S. 23. (Kohinoor Rubber Works, Labour Law Journal, 1955 II p. 93, and National Coal Co. Ltd., Patna High Court, 1956-57, 10 FJR p. 255)

(Continued from previous page)

For, in spite of an increase in deposits to the extent of Rs 185 crores over the last twelve months, there has been no increase in banks' investments in gilt-edged. Normally, some 30 per cent of additional deposits would have found their way into gilt-edged. On the contrary, over the past year, there has been disinvestment in gilt-edged securities for Rs 15.35 crores. We are of the view that, even from the narrow standpoint of the banking system, it is desirable to ensure that a certain minimum proportion of new deposits finds sanctuary in Government securities. If, of their own accord, the banks are unwilling or unable to set apart some portion of their new deposits for gilt-edged, we should think that they must be required to do so by the evolution of a convention regarding liquidity ratio.

Old Age Pensions

The announcement by the Uttar Pradesh Finance Minister, of old age pensions for indigent individuals beyond seventy, marks a big step forward in the direction of a Welfare State in India. The decadence of the joint-family, the high cost of living and wide-spread unemployment combine to make the average man's superannuated life a bed full of pecuniary thorns; except for those enjoying a fat pension or with sons having income and affection, survival into a late age has become dreadful. The UP Government have slightly reduced the needy in this group by raising the age of retirement by three years, in itself a controversial measure. Honestly and discerningly administered, the pension scheme will turn out to be a great blessing.

No one with heart will say that it is a question of propping the aged by starving the young. Uttar Pradesh atleast has sufficient resources for keeping the entire population in fair comfort. For the low-income groups in general, there are other concessions, to boot. The multiple-point sales tax on food grains is to be replaced by a single point levy. This change will be effected only from April 1958. Free education for the children of low-paid employees is offered up to class sixth, along with half-free fees. Similar concessions exist in Madras and in Kerala, in the latter irrespective of the parent's profession or income. In Kerala, gestures in favour of the poor have now come to include free legal aid. Divested of political motives, such aid can work as an effective instrument of social justice.

Editorial Notes

Rice Mills Survive

The India Government's decisions on the Report of the Rice Milling Committee are considerate to all the interests concerned. The complete elimination of the mills is ruled out as unrealistic and impractical. After all, the bulk of India's consumption is milled rice. Cooperative hand-pounding has been tried to revive the decadent rural industry but the results have turned out to be dishearteningly meagre. The Committee suggested a cess on milled rice, the proceeds of which was to go toward subsidising hand-pounding. In spite of the fact that there is a precedent in cotton textiles, the Government have thrown out the suggestion. The same is the fate of another, asking for a six-hour day for the rice mills.

Once the existence of rice mills is found to be justified by reason of the capital invested, the employment provided and the market prevailing for the product, it would surely be unfair to penalise the industry for no fault of its own. In deference to sentiment on behalf of hand-pounding, the Government have decided not to issue any more licence for mills. In other words, if there is any scope for expansion, it can be taken up entirely by hand-pounding. In the event of the hand-pounding industry failing to take advantage of the possible field of expansion, that field is likely to starve. This is the risk attendant on the policy embodied in the present decisions.

It is common knowledge that hand-pounding, even as a subsidiary rural industry has long ceased to be attractive. The simple reason is that hand-pounded rice cannot compete with milled rice in the same market. The facilities for storage and transport which the mill industry can command are generally inaccessible to hand-pounding. It is difficult to offset these handicaps by little doses of financial aid.

The dietetic problem created by the dominant prevalence of milled rice survives. Milling removes all the vitamin contents of the rice and consequently deprives the population of one of the cheapest sources for an essential dietetic ingredient. If some technique could be discovered by which the bran is retained while milling, the principal objection against the use of milled rice would be met. It might not be beyond the intelligence of our experts in food technology to point out a method.

A Different Level

The Union Government cannot be congratulated on the manner in which they have started handling their employees' demand for a Second Pay Commission. This

particular demand was, of course, turned down, but in its place was offered something which if genuine, should prove to be as welcome to the employees as the Pay Commission itself.

A Ministerial Committee will have to explore the same facts and, in the absence of the procedural embellishments associated with a commission, is likely to arrive at the same findings in much quicker time. Till that stage, it does not matter if the enquiring body is called a committee or a commission. The employees are naturally afraid that the finding of a Ministerial committee can be biased. That in any case it cannot have the prestige of those of an independent commission.

The very offer of an alternative in the form of an enquiry committee is a substantial gain for the employees. Underlying the offer is the Government's recognition that prima facie, the employees' demands are not unreasonable, and that for some time to come, nothing much could be done to bring down consumer prices. Significantly, for the Posts and Telegraph, Railway and the Dock employees, the Government were inclined to extend some sectional benefits. If, during the pendency of the proposed enquiry, price levels are tamed down, the workers should surely feel satisfied even if their demands for higher emoluments are not squarely met.

Hard Fight Over Soft Coke?

The absence of any immediate increase in the price of soft coke as part of the out-of-court settlement in the coal industry appears to have created a situation in which what is settled is likely to be unsettled again. One Company is reported to be unwilling to pay the enhanced wages to its workers. The present settlement itself is tentative and is presumably based on rough-and-ready calculations of costs of production.

A Committee is now engaged in investigating the subject in all its aspects and unless the calculations on which the price increase was agreed upon in June are found to be accurate, a revision in prices will be inevitable. Recalcitrant parties would, therefore, be well advised to wait till the Cost Investigation Committee reports.

Even if losses might occur during the interval, the possibility of retrieving the decision is not distant. As for soft coke, a handsome increase in price was conceded last year, which in the opinion of the Government was quite generous. It is obviously in that spirit that soft coke is denied a further increase after the settlement. Any resurrection of the

[July 27, 1957]

price controversy, when the dispute is virtually settled, may turn out to be injurious to the very interests who hope to gain thereby.

Starved of Raw Material

The Indian rope industry is one of the worst affected by the changes in import control since September, 1956. Till then, Manila hemp and sisal were permitted to be imported under the Open General Licence. In September, the import came under licensing; in July, the restrictions were further tightened by limiting licensing to established importers up to 75 per cent of their past intake. For July-September 1957, neither actual users nor established importers are given licence.

Mr K. L. Jalan, who narrates this doleful tale in his Presidential address at the Annual General Meeting of the Indian Rope Manufacturers Association, recalls how the industry has a good domestic demand and a fairly satisfactory market abroad. It is possible to grow the fibres domestically but it is a much costlier alternative, though some steps are being made in a few States in that direction. For the time being, Mr Jalan thinks that, in the absence of a more generous import policy, the industry will get famished.

The procedure for importing raw material under the Export Promotion Scheme is also not congenial to this particular industry. The condition that imports of fibre would be permitted, only if finished goods corresponding to double the CIF value is exported within six months, does not take account of the fact that for rope, the value of exports rarely amounts to twice

Slacker Slack Season?

WITH the last week's steep decline of Rs 25 crores in active note circulation, the 1957 slack season may be said to have got well into its stride. In a sense, the monetary conditions are thus taking on a form which would be conducive to the announcement of the Centre's New Loan. (The New Loans have since been announced).

Indeed, we are apparently witnessing the astonishing phenomenon of a slack season that is much easier than we had bargained for. We may remember that the proposition is now officially accepted that the slack season has in recent years tended to be blurred by the fact that industrial demand for funds is sustained throughout the year. However, in the 1956 slack season, there was a considerable contraction in active note circulation; but this was widely—and quite correctly—interpreted as arising from the contractionist influence of a continued balance of payments deficit. In the current year, this phenomenon of slack season contraction in currency is once again discernible, but with this difference, that all money market indicators are suggestive of even easier monetary conditions than in the preceding year.

Between May 11, 1956 and July 20, 1956, active note circulation declined by Rs 65.87 crores; in the corresponding period of this year, the contraction is even larger and is placed at Rs 77.46 crores. It may be noted that, in the relevant period of 1956, the import surplus, as measured by the drawing down on foreign securities, amounted to Rs 53 crores; and this compares with a net decline of nearly Rs 80 crores in the current year. So, it may be said that, by and large, the impact of import surplus has been similarly felt in both the years, at least as far as active note circulation is concerned.

But it is the other changes in the monetary indices which are of compelling significance. As the table published elsewhere on this page reveals, Scheduled Banks'

Deposits with the Reserve Bank have jumped up by Rs 28.16 crores in 1957 as against a rise of merely Rs 3.61 crores in the corresponding period of 1956. Secondly, the Other Loans and Advances of the Reserve Bank have gone down steeply by Rs 43.73 crores as contrasted with a fall of Rs 5.26 crores last year. Thirdly, the Reserve Bank's advances against Usance Bills have declined by nearly Rs 25 crores as compared with Rs 4.36 crores in 1956. Fourthly, the cash balances of Scheduled Banks have improved by Rs 21.44 crores versus the increase of Rs 12.10 crores last year. Fifthly, indebtedness to the Reserve Bank and to the State Bank has been diminished by Rs 45.72 crores as against a mere Rs 14.65 crores in 1956. Sixthly, the total of Advances of Scheduled Banks is lower than the busy season peak by Rs 31.67 crores as compared with a decline last year of Rs 21.23 crores. Finally, the accretions to Deposits of Scheduled Banks since the start of the slack season is of the order of Rs 39 crores against Rs 36.49 crores last year.

Each one of the monetary indicators has changed in a manner categorically to suggest that the 1957 slack season is more slack than its 1956 predecessor. These trends find partial reflection in some easing of inter bank money rates; but, generally, bank interest rates continue to be at levels which are wholly out of tune with the very real slackness that has set in. For our part, we cannot help harbouring the suspicion that the relative intransigence of bank interest rates is the result of a suicidal bidding for deposits. We are sure that a comparison of the 1957 slack season, as it has progressed so far, with the corresponding figure for any of the earlier "normal" slack seasons would serve to reveal that monetary conditions this year are for the best part eminently comparable to the slack season easiness of yesteryears. Indeed, if we bear in mind the fact that the import surplus would have had a contrac-

*Refers to July 19 for Reserve Bank and July 12 for Scheduled Banks
†Refers to July 20 for Reserve Bank and July 13 for Scheduled Banks

tionist influence on the Deposits of Scheduled Banks as well, it would not be far wrong to say that the 1957 slack season has had more pronounced characteristics than in any recent years. The question that will naturally arise at this stage is this: Has the traditional slack season reappeared on the Indian economic scene? Another poser for the monetary authorities is: Or is it that the tempo of economic activity is not being quickened at the anticipated pace, but is instead indeed showing signs of slowing down? The answers that we suggest to these questions are necessarily hypotheses based upon an interpretation of such figures as are available.

Firstly, we would suggest that, in spite of the easier conditions relative to last year, the 1957 slack season does not represent the traditional tapering off of economic—and particularly agricultural—activity. At the same time, secondly, we would state that the easier conditions of the 1957 slack season should not be misread as indicating a falling off in the Second Plan tempo of economic activity. We should think that the primary reason for the contractionist influence is the import surplus. What has happened besides to accentuate slack season conditions is the much swifter return to the money market proper of Plan disbursements. This has had the effect of considerably augmenting the Deposits of Scheduled Banks; and member banks have, in turn, utilised such accretions to reduce

their borrowings from the high level that had been touched for stringent season financing. Moreover, it appears to us to be an entirely acceptable hypothesis that many constituents who had received payment from Government had utilised such receipts to reduce their bank overdrafts. Thirdly, we also have reason to believe that part of the diminution in Scheduled Banks' Advances—the decline has amounted to Rs 15 crores in the last two weeks—can conceivably be the result of the Reserve Bank's directive to member banks to reduce their volume of Advances. We must await the detailed figures before we can discover whether some part of the diminution relates to sugar advances.

In a sense, therefore, we would urge that the slack season characteristics of the 1957 slack season are, far from suggestive of a slow down in economic activity, directly the result of the higher tempo of economic activity. That is to say, the expansion in Deposits has made possible—or is responsible for—all the other important changes in the monetary indicators; and the accretions to Deposits have stemmed directly from the greater Plan disbursements. For, it cannot surely be held that the increase in Deposits is owing to no more and no less than the traditional release of funds that had been locked up in agricultural and crop financing.

We should add that we do not expect Scheduled Banks' Advances

GOVERNMENT OF INDIA

3½ PER CENT NATIONAL PLAN BONDS

FOURTH SERIES (3½ PER CENT 1967)

ISSUE PRICE Rs. 99.50 PER Rs. 100 (NOMINAL).

REPAYABLE ON 1st AUGUST 1967.

4 PER CENT LOAN 1972, ISSUE PRICE

Rs. 100 PER Rs. 100 (NOMINAL) REPAYABLE

ON 1st AUGUST 1972.

Subscriptions to the above bonds and loan will be received simultaneously and will be limited to a total of Rs. 100 crores (approximately). Subscriptions may be in the form of (i) cash/cheque, or (ii) securities of the 3 per cent Victory Loan 1957 or 3 per cent Loan 1958 which will be accepted for conversion at the following rates:—

3 per cent Victory Loan 1957 Rs. 100 for Rs. 100 (nominal)
3 per cent Loan 1958 Rs. 99.70 for Rs. 100 (nominal)

Interest will be paid on the 3 per cent Victory Loan 1957 and 3 per cent Loan 1958 tendered for conversion up to 31st July 1957 inclusive.

The new bonds and loan will bear interest from 1st August 1957. Interest will be payable half-yearly on 1st February and 1st August.

Subscription lists will open on 5th August 1957 and close on 8th August 1957 or earlier without notice.

Applications for the bonds and loan will be received at:

(1) Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi;

(2) Branches of the State Bank of India at other places in India except at places mentioned in (3) and (4) below;

(3) Branches of the State Bank of Hyderabad conducting Government business; and

(4) Branches of the Bank of Mysore Ltd., in Mysore State.

For full particulars apply to any of these offices or branches or treasuries.

to continue to show a declining trend. Indeed, by the end of the 1957 slack season, we expect Advances to be placed slightly higher than the peak touched in the 1956-57 busy season.

If it is conceded that the phenomenon of the 1957 slack season is largely the result of an unprecedented increase in Scheduled Banks' resources by way of accretions to Deposits, the present interest rate structure is even more reprehensible. We would point out here that the artificial level

at which inter bank money rates and deposit rates are being maintained has a ruinous repercussion on Government borrowings. If the banking system does not take the initiative in restoring normalcy to the structure of interest rates—a structure, that is, which is in consonance with the prevailing monetary conditions—we would urge Reserve Bank action in this behalf. In any case, what we want to impress upon the Reserve Bank authorities is the fact that the interest rates are out of joint with the times and conditions.

Member Bank Balances at New High

The 1957 slack season (as earlier described) has, according to the returns of the Reserve Bank for the week ended July 19, gathered substantial momentum. Active note circulation has dropped steeply by Rs 25.02 crores to Rs 1,517.90 crores. A decline of such magnitude did not take place in last year's slack season, and indeed has not obtained for some years.

Moreover, Rupee Coin has returned from circulation for Rs 1.82 crores. Currency has been contracted for Rs 12 crores against Foreign Securities by transfer to Balances Held Abroad in the Banking Department and for Rs 18 crores against Rupee Securities by transfer to Investments in the Banking Department. In the result, the Reserve Bank's (Continued on page 182)

European Free Trade Prospects

By PAUL EINZIG

The European Common Market scheme is making good progress, and the chances are that, as far as the six original participants—France, Germany, Italy, Belgium, Holland and Luxembourg—are concerned, the scheme will become reality in the near future. The question is, will other Western European countries join the scheme? The Scandinavian countries and Finland are engaged in devising a North European Common Market scheme of their own, and Britain has put forward the European Free Trade Area scheme providing for limited free trade between all members of the European payments Union. This scheme was recently re-named by Mr Macmillan who referred to it as 'European Industrial Free Trade Area' scheme, to emphasise the main difference between it and the Common Market scheme, namely, that agriculture would be excluded from it. While manufactures would become freely exchangeable between the participating countries, land products would remain subject to the existing arrangements.

Official British spokesmen have made it plain on many occasions that Britain would only be prepared to participate in European free trade under such reservation. This is due in part to the desire to maintain the preferential treatment for the benefit of Commonwealth countries, and in part to the economic and political necessity of ensuring the prosperity of agriculture in Britain itself. The second of these two considerations is by far the more important. The significance of the preferential rates adopted at Ottawa in 1932 has declined considerably as a result of the rise in the prices of land products, so that Empire preference today is a sentimental rather than economic issue. On the other hand, any British Government that would sacrifice British agriculture for the sake of European Free Trade would sign its own political death warrant.

In the circumstances it was rather ill-advised on the part of British Government spokesmen to declare in public that Britain would stand to lose more by keeping aloof from European free trade than by joining in. Such admissions were considered necessary in order to counteract the propaganda campaign of the Beaverbrook newspapers against British participation in the scheme. They were made for domestic consumption, but they produced more effect abroad than at home. It is true, some industrial interests which have hitherto opposed the scheme have become converted in its favour. Indeed the Federation of British Industries is now keener on European Free Trade than the Government itself. On the other hand, the official declaration that Britain could ill afford to keep out the scheme has encouraged the Governments of the six Common Market countries to stiffen their attitude towards the terms on which Britain is to participate. They now

insist that only full participation, including agriculture, would be acceptable.

The British Government, realising that it committed a tactical blunder, hastened to take action to restore its weakened bargaining position. Hence Mr Macmillan's recent declaration that if it should become necessary for Britain to choose between the Commonwealth and Europe, the choice would be in

favour of the former. Britain's determination not to give way in the matter of agriculture was emphatically reasserted. On the other hand, several continental statesmen committed themselves to declarations that on such terms Britain would not be admitted.

The question is, which of the two sides, if any, is bluffing? The Western European countries are very anxious indeed to ensure the closest possible collaboration with Britain. Britain's refusal to participate in the European Coal-Steel Community and in Euratom had caused much concern in Western

European capitals. It would be a bad day for European unity when it is definitely decided to have the Free Trade scheme without Britain. In the circumstances the view is held in London that the continental statesmen are bluffing when talking about Britain's exclusion from the scheme unless she is prepared to join on their terms. On the other hand, in continental capitals it is believed that Britain is bluffing, and that if it came to choosing between becoming a full partner or keeping away altogether, the former alternative would be (Continued on page 194)

ACC HONOURS THE CODE

1

"Producers and distributors owe it to the consumers of their products that they shall always be of the highest quality and available at a reasonable cost."

Code of conduct—FORUM OF
FREE ENTERPRISE

Indian cement is required to pass the high standards laid down by the Indian Standards Institution. It is tested against these standards both in the laboratories of the producing factories as also at the Government Test House, Alipore. ACC cement passes these standards with a substantial margin of safety and is comparable in QUALITY with the best cement produced elsewhere in the world.

Since 1944, the selling price of cement has been fixed by the Government of India. Twice, in the past, the Company has voluntarily reduced the price of its cement. The price which the Company receives has remained unchanged since 1948. The current higher cost to the consumer is due to excise duty and the price equalisation surcharge levied by Government to subsidise imports through the State Trading Corporation.

Honesty, hard work, courtesy, continuous initiative and service to the community are the foundations on which the edifice of Free Enterprise rests. These are also the sure foundations on which the ACC edifice has been built to last.

Finding me is costly business

says Adipocere (Pronounced 'adi-po-saire')

Finding oil—that's me in one form or another—is an expensive business. Shall I stagger you with figures? I am afraid I shall have to, so here goes...

On an average, and the West Bengal Basin is on the other side of hopeful averages, an exploration venture costs per month

1 Geological party.....Rs. 35,000
1 Gravity partyRs. 80,000
1 Seismic partyRs. 3,25,000
1 Drilling partyRs. 6,00,000
making the impressive total of Rs 10,40,000 per month.

Add to this a whole line of other

expenses and you can imagine what it costs to find me. In the Barco Concession of Columbia it took 17 years and Rs. 10,50,00,000 to make the first discovery; in Iraq ten years went by along with Rs. 31,00,00,000 before the first oil was marketed. And what's more—the search for oil is one of the world's riskiest businesses! In areas where oil has not been found before, as in West Bengal, only 1 out of 10 wells drilled ever produced oil. The other 9 are costly dry holes. See what I mean when I say that finding me is a costly business?

World of Insurance

General Insurance in India

Review of 1955 Results

AFTER nationalisation of life insurance, general insurance is the only sector left to private enterprise in insurance in which it can show its initiative. The next report of the Controller of Insurance, which must necessarily be mainly devoted to general insurance, will thus be studied with interest. The trend in 1955 will be the pattern on which results of 1956 are likely to be based, and thus 1955 figures constitute the structure which requires to be carefully studied.

In fire insurance business, premiums less reinsurances of Indian Insurers amounted to Rs 8,48,49,000 as against Rs 2,07,68,000 of UK insurers operating in India and Rs 2,80,51,000 of all foreign insurers operating in India. Indian claim ratio is, however, 35 per cent as against 18 per cent of UK insurers, thus underlining the underwriting capacity and selective business of UK insurers. The highest claim ratio goes to the credit of Pakistan insurers operating in India, the ratio being as high as 63 per cent.

Commission and expense ratio combined together account for 49 per cent of the outgo of Indian insurers as against 48 per cent of UK insurers in India. With a premium income more than four times that of UK insurers, Indian cost ratio should have been lower. That shows Indian procurement cost to be much higher. The total outgo of Indian insurers is thus 84 per cent as against 66 per cent of UK insurers. This is unsatisfactory for Indian companies and shows substandard underwriting at higher commission cost. It must be said, however, that the good results of UK insurers are largely attributable to their firm control over the cream of the business in India following from their economic agelong supremacy. In management expenses, they account for 41 per cent as against Indian 30 per cent showing excessive salary bills and top heavy administration.

The combined results of Indian and non-Indian insurers (including UK insurers) account for an outgo of 81 per cent (claims 31 per cent, commission 16 per cent, and management expenses 34 per cent) against a total net premium income of Rs 11,29,00,000.

In marine insurance business premiums less reinsurances of Indian insurers amounted to Rs 3,31,76,000 against Rs 1,10,89,000 of UK insurers and Rs 1,92,26,000 of all foreign insurers combined. Indian claims account for 72 per cent of the outgo as against 51 per

cent of UK insurers. The highest claims ratio goes to the account of French companies operating in India, the ratio being as high as 177 per cent. Expenses and commission outgo of Indian insurers amount to 30 per cent as against 38 per cent of UK insurers. This shows that, whilst Indian underwriting is poorer compared to UK companies, procurement cost of UK companies is higher than that of companies in India.

The total outgo of Indian companies is thus 102 per cent as against 89 per cent of UK underwriting loss. In the year 1954 the result was slightly better, claims being 66 per cent as against 72 per cent in the year 1955. The total outgo was thus somewhat better being 97 per cent as against 102 per cent in the year 1955.

Combined result of Indian and non-Indian insurers shows a total outgo of 91 per cent (claims 67 per cent, commission 7 per cent, management expenses 27 per cent) as against 92 per cent in 1954 and as against a premium income of Rs 5,25,02,000 in 1955.

The Miscellaneous Insurance business premiums less reinsurances of Indian insurers amounted to Rs 5,17,54,000 as against Rs 1,62,50,000 of UK insurers and Rs 1,96,64,000 of foreign insurers combined in India. Indian claims ratio is 50 per cent as against 37 per cent of UK insurers. Expense and commission account for 43 per cent of the total outgo of Indian insurers as against 45 per cent of UK insurers. Thus whilst Indian underwriting is poorer and substandard, British business is expensive. The total outgo of Indian insurers is 93 per cent as against 82 per cent of UK insurers. In 1954 the total outgo of Indian insurers was 94 per cent whilst that of UK insurers was 89 per cent making an improvement of 7 per cent in 1955.

Combined result of Indian and non-Indian insurers shows a total outgo of 90 per cent compared to 93 per cent in 1954 the premium income in 1955 being Rs 7,14,18,000.

The total net premium income of Indian insurers was thus Rs 16,97,79,000 and that of UK insurers Rs 4,81,07,000. Indian claim ratio was 52.3 per cent as against 35.3 per cent of the UK companies. The outgo in commission and management expenses of Indian companies amounted to 40.6 per cent as against 43.6 per cent of UK companies. The total outgo including claims of Indian insurers was thus 92.9 per cent, whilst that of UK companies was 78.9 per cent.

Thus, with a far less quantum of business and footing a handsome salary bill the UK companies could make a much larger profit than their Indian counterparts, although business and premium income of Indian companies was more than four times. The lesson is evident and needs no elaboration. For Indian companies scramble for business must cease, despite Section 40(c) and the risks made thereunder. The figures once more vindicate the irrationality of fixing and measuring expenses by gross direct premium income written in India. The emphasis on direct business is spelling ruin for indigenous general business in India.

Lack of adequate underwriting knowledge and want of training and experience on the part of management account for higher claims all round of Indian insurers. The figures also reveal that it is better, in some form, to do lesser business than to go all out for business regardless of costs and consequences. Participation in foreign reinsurances and treaties without adequate knowledge of them may also have a large bearing in higher incidence of claims.

	1951			1952			1953			1954			1955		
	Indian	Non-Indian	Total	Indian	Non-Indian	Total	Indian	Non-Indian	Total	Indian	Non-Indian	Total	Indian	Non-Indian	Total

No. of Insurers who were administered warning in respect of that year	13	6	19	12	1	13	9	4	13	8	1	9			

After analysing various figures, the Controller of Insurance reports that the deterioration as regards expenses in general insurance business has been arrested to some extent in the year 1954. He expresses the hope that insurers will take steps to improve the position further by trying to restrict the expenses. Number of insurers who spent in excess of the basic limits in terms of Rule 17E in 1954 was 78 as against 83 in the year 1953. The basic limit in 1954 was exceeded to the tune of Rs 25 lakhs as against Rs 33 lakhs in the year 1953. Despite all these, after comparing various figures for life and non-life business, the Controller observes that the proportion of contravening insurers is highest in the case of purely life insurers, less for composite insurers and least for purely general insurers.

The expense and higher procurement cost and significant channeling of outgo to claims rather than to free reserves led the Executive Committee, General Insurance Council, to formulate the "Code"—an elaborate norm of conduct in which an undertaking from the Board forms an integral part. The Committee has recommended that the Insurance Act 1938 should be amended inter alia to empower the Government to carry out periodical inspections of all general insurers and to require insurers to maintain specified minimum departmental reserves, maintain a minimum security margin and amongst

The larger management expenses of UK companies is an issue requiring careful examination. No doubt, they foot comparatively larger salary bills. The figures indicate that they possibly have higher procurement costs. In what way they have adjusted themselves within the rules of limitation of expenses will therefore be an interesting study.

Section 40C of the Act seeks to limit the expenses of management that can be lawfully incurred by an insurer in respect of its general insurance business in India. The basic limits for expenses are prescribed in Rule 17E of the Insurance Rules 1939, whilst the proviso to Section 40C(1) empowers the Controller to fix in respect of any year, in consultation with the Executive Committee of the General Council, the extent of relaxation of the basic limits.

Table below is in respect of the years 1951, 1952, 1953 and 1954, showing the number of insurers who contravened Section 40C of the Act and the number of those who were administered warnings under Section 64M(2) of the Act.

others, collect premium before assumption of risk. Pending necessary legislation, the above decisions should be given effect to on a voluntary basis by the insurer.

Unless the basis for measuring expenses by quantum of direct premium income within India is radically altered, scramble for direct business will not cease. Scramble for business inevitably leads to substandard acceptances giving rise to claims that could have been avoided. Measured in terms of outgo, nothing has been

The Bicycle Industry

That the Bicycle Industry in our country has a bright future is not a prophecy but a logical inference based on tangible evidence. In the first place, there is Government's abiding interest in the growth of indigenous industries. Few people will dispute the statement that but for the active help of Authority, the bicycle industry in our country would not have been able to make such rapid headway as it has done. The industry is enjoying tariff protection for the past ten years and during this period Indian entrepreneurs have been given all the necessary facilities both in regard to setting up of units entirely on their own and in conjunction with reputed manufacturers from abroad. It is this latter factor that has been largely responsible for the rapid progress of the indigenous industry. Whereas at the commencement of the First Five Year Plan, there were only two units with a combined capacity of 120,000 cycles, there are now 17 large units with an installed capacity of 954,000 bicycles. Four other units with a rated capacity of 234,000 bicycles have been given licences. Some of the 17 units which have commenced production

have provision either for working double shift or for further expansion. Over and above these, there are 49 small scale manufacturers with a licensed installed capacity of 219,000 bicycles. The grand total of licensed installed capacity up-to-date is thus estimated at 1,715,900 bicycles per annum.

The rapid depletion of our foreign exchange resources in recent months and the consequent decision of Government to cut down imports drastically in disguise by the cycle industry in the country. For, the present offers it a splendid opportunity to strengthen itself on all fronts. While the manufacturers of complete bicycles can go ahead without the anxiety to meeting the competition from overseas, manufacturers of components can look forward to a period of prosperity provided they are able to maintain a high quality for their products. The general policy of Government that every indigenous industry should work toward progressive self-sufficiency in its raw materials can be expected to be strenuously implemented in view of the urgent need for conserving foreign ex-

change to pay for the import of the much needed capital goods.

The recent decision of the Government to continue protection to the industry for a period of three years will further aid the process of its consolidation. Besides this proposal, the Tariff Commission have made a number of valuable recommendations which merit the closest attention both from Government and the industry. Government on their part have taken note of all the items that directly concern them and have invited the attention of the concerned parties in respect of others.

There are a number of suggestions in the Commission's Report which should be carefully noted by the industry if it wants to utilise the further period of protection granted to consolidate and strengthen its position. Such a consummation is possible only when the different parts comprising the industry work in unison. In this connection, it is to be firmly borne in mind by all concerned that the planned development of the bicycle industry in our country has been formulated in such a way as to ensure not only an increase in the number of bicycles produced, but also maximise the use of indigenous components, parts and accessories. The fact that there are over five hundred units in the country engaged in the manufacture of bicycle parts cannot be ignored by any assessment of the working of the industry as a whole. It is also not to be forgotten that the emphasis in new India is equally on small

scale and large scale industries. In no event Government will consent to the growth of the large scale units at the expense of the small scale ones. The Tariff Commission have gone into the question of indigenous manufacture of components in some detail and have arrived at the conclusion that at least in one instance increased imports and unreasonable prejudice have adversely affected the working of the indigenous manufacturer, though the quality of the indigenous product is comparable to those of reputed brands. The Commission's remarks in this regard deserve to be carefully noted by the large-scale manufacturers in the country. 'We have carefully considered the problem and feel that the important principles involved before arriving at a solution are twofold: firstly, that prejudice against an indigenous product, when it is an important major component, will be quickly eradicated only when the product is increasingly used (and proved in usage) in ORIGINAL equipment; and, secondly, that prejudice should not be allowed to operate as a deterrent factor in the healthy development of ancillary units established under licence specifically for the purpose of achieving self-sufficiency'.

The Commission's findings as regards export prospects are not very encouraging. Though the Development Council (Bicycles) has laid down a progressive export target for bicycles from 25,000 in 1956-57 to 150,000 by 1960-61, actual per-

NOW
Oil flows from Visakhapatnam

By rail, road and sea, high-grade petroleum products are now flowing from the Caltex Refinery on India's fast-developing East Coast, making a vital contribution to the country's nation-building activities.

This new Caltex project is one of the most modern refineries in the world, incorporating many advanced features and backed by the wide experience of Caltex in building refineries. It took two years to build on its 515-acre site and 6,000 Indians worked on it. Caltex thanks these able men and women, and also the Governments of India and Andhra Pradesh for their co-operation and encouragement.

CALTEX

PETROLEUM PRODUCTS
OIL IS THE LIFESTREAM OF PROGRESS

World of Jute

Protection and Price

THE prospects for the export of Indian jute goods to the UK may be said to have improved somewhat from the middle of this month. For, with effect from July 18, the Government of the UK have reduced the Jute Control's selling price for the principal types of hessians imported for making sacks by 10 per cent. In other words the mark-up for these hessians will be 30 per cent instead of 40 per cent.

The UK has perforce to import a sizable quantity of jute goods from abroad because the production of the Dundee jute industry is not sufficient to meet the domestic demand in full. But in view of the fact that Dundee has no effective control over the prices of its raw material which it has to get from far away Pakistan, it has been found necessary to impose some sort of restriction on the entry of jute goods into the country from overseas. The problem has been sought to be tackled by a unique method of State trading in imported jute goods. The Jute Control which is the sole importer of jute goods sells these goods at prices "comparable with those at which an efficient cross-section of the domestic industry can put equivalent goods on the market". In practice, however, it has been found that these prices are often higher than Dundee prices. The mark-up which was about 20 per cent in 1948 had been successively increased to 40 per cent which was in force upto July 17 of this year.

In recent years the protection given to Dundee has had an adverse effect on consumers of jute goods in the UK. High hessian prices have rendered the usage of jute goods almost a luxury and the inevitable consequence has been a sizable increase in the use of substitutes. And it has been rightly apprehended by impartial observers in the UK that a continuance of an artificial barrier against imported jute goods will, in the long run, have an adverse effect on Dundee itself because when once consumers take to substitute packaging materials, it will be extremely difficult to win them back for jute goods.

Dull conditions have continued to prevail in the jute goods market during the past week. The lack of interest seems to have stemmed mainly from the difficulty that is being experienced in the movement of ships from the Calcutta port due to the inordinate delay in the loading and unloading of cargo. Hessian 40"x10 oz Ready which opened at Rs 42.50 closed the week at Rs 42.25 while B Twills Ready closed at Rs 115.25 as against

the week's opening rate of Rs 115.87.

Trading commenced for the week on a dull note and very little activity was noticeable both in hessian and sackings. The undertone, however, was steady. Due to due date considerations, only nominal business was done on Friday. Mills sold small quantities of Hessian 40"x10 oz and B Twills for ready delivery. At the close of transactions for the day prices were as follows: Hessian 40"x10 oz Ready Rs 42.33, August Rs 42.50 and October-December Rs 42.34; B Twills Ready Rs 115.87, August Rs 115.25 and October-December Rs 114.50.

Prices especially in the sacking section declined rather sharply on Monday on renewed apprehensions that the congestion in the Calcutta port would not show much improvement as quickly as anticipated earlier. The ready positions, however, were well held around previous levels. As against previous closing of Rs 115.25 B Twills August closed the day at Rs 114.25 B Twills October-December was more than a point lower at Rs 113.35. A quiet tendency prevailed also in the hessian section in sympathy with sackings and closing rates were as follows: Hessian 40"x10 oz Ready Rs 42.38, August Rs 42.57 and October-December Rs 42.50. B Twills Ready was almost unchanged at Rs 115.86.

Due to heavy speculative activity prices on Tuesday recovered most of their lost ground. Genuine business, however, continued to be conspicuous by its absence. Hessian 40"x10 oz Ready was steadier at Rs 42.40, while August and October-December positions were placed at Rs 42.55 and Rs 42.40 respectively. In the sacking section B Twills ready was quiet at Rs 155.15 but August and October-December were better at Rs 114.65 and Rs 114.

The market closed the week on an easy note with regard to hessians and steady as regards sackings, with the latter receiving speculative support. Closing prices were as under: Hessian 40"x10 oz Ready Rs 42.25 August Rs 42.45 and October-December Rs 42.35; B Twills Ready Rs 115.25, August Rs 114.75 and October-December Rs 114.15.

The announcement early this week that the Government of India have constituted a central supervisory body to promote jute production in the country has been welcomed by one and all in the Indian world of jute. It is now generally accepted that so long as

For those you leave behind

DO you realise that you expose those who depend on you to grave risks, by failing to make immediate arrangements for their welfare, when you are no longer there to look after them yourself?

If you haven't yet done so, please make a will — or execute a Trust in their favour — now!

The administration of estates is a highly complicated matter these days, and it would be difficult to find a better Executor or Trustee than a bank which is always accessible, and which can be depended on to act with prudence, sympathy and impartiality. A bank is human — but it never dies.

The State Bank of India accepts appointment as Executor and Trustee, solely or jointly with any other person — and its services are at your disposal.

Why not call on your nearest Bank Agent or send for a copy of the Bank's Booklet on Executor and Trustee business?

The State Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India

STATE BANK OF INDIA
Largest of the Indian Joint Stock Banks

India does not attain self-sufficiency in raw jute, the uncertainty as regards the prospects of the industry as a whole will continue to persist. As raw jute constitutes the major portion of the cost of production of jute goods, it has been rightly said that the industry can prosper only when it is assured of plentiful raw material at cheap prices. By constituting a supervisory body Government have demonstrated their abiding interest in this important foreign exchange earning industry.

The newly constituted supervisory body will from time to time review the progress of the programme of jute production already initiated. The setting up of such a body had been recommended by the conference on promotion of jute production held earlier in the year.

The following table gives the week's opening and closing prices:

	Opening	Closing
	Rs	Rs
Hessian:		
40"x10 oz Ready	42.50	42.25
" August	42.87	42.45
" Oct-Dec.	42.50	42.35
Sackings:		
B Twills Ready	115.87	115.25
" August	115.25	114.75

World of Tea

Trend of Prices

PRICES ruling at the auctions in Calcutta, Cochin, Colombo and London have generally shown a mixed trend. In the export auction held in Calcutta this week, there was less enquiry than in the previous week and, as the sale progressed, demand weakened. With the result, prices were quoted 50 nP per pound easier; and there were even some withdrawals. Similarly, in the Cochin market, Common teas have fetched under Rs 1.70 and, in many cases, below Rs 1.50, which is probably the break-even point in tea these days. In the Colombo market, prices are quoted lower except for the best invoices.

In London, the trend of prices has, however, continued to be better. Blenders regard current prices as being quite favourable to them, and are keen to get hold of any good offerings, since the amount of tea on its way to Britain is now falling low. It is reported that there has been even some drawing from stocks to meet demand. Stocks, which were at 145.33 million pounds on the 5th July, have now fallen to 141.49 million pounds.

Considering that overseas buying has become selective, it is expected that good prices will continue to be paid only for quality teas. But, there is a hard core of Medium and Common tea producers, representing some 3/5ths of the whole, who will depend on the demand for ordinary teas, being more in relation to supply than it appears likely to be later in the season.

For, the uprooting and replanting programmes adopted in this country can throw another 50 million pounds on to the market in the space of one year. So, production may rapidly outstrip consumption and one can even forecast a lower level of prices than last year. If the average price level is reduced by only a few naye paise per pound, a large number of estates must be faced with a loss.

Again, it is only a matter of time before the Ceylon export duty is lowered, and the competition between the two countries will become even fiercer than it is today. Moreover, Indonesia has recently given the lead in this respect by removing all duties on her exports; and this is obviously the most sensible approach to increase exports.

Meanwhile, offerings in the Export Sale, held in Calcutta this week, amounted to 32,487 packages. Most CTC teas met with a rather restricted demand at prices which were only 20 to occasionally 50 nP per pound easier; and there were some withdrawals. The very best teas of this description were,

however, quite well supported; but prices were generally below valuations. Plain teas were from 4 to 8 nP per pound easier, while Medium Assam Broken and Fannings were 10 and sometimes 15 nP lower, depending on quality.

Brown-leaved Dooars with bright liquors received fair support; but the plainer kinds were a weak feature. Flavours Darjeelings were sold well, while Tippy teas and stylish Leaf grades were strong. Following rates were quoted:—Clean Black Pekoe Rs 2.50; Plain BP Rs 1.90; Plain Fannings Rs 1.74; Medium BP Rs 2.10; Medium Fannings Rs 2.15 to Rs 2.20; Best CTC Assam BP Rs 3.60 to Rs 3.80 (nominal) and Best Assam CTC Fannings Rs 4.00 to Rs 4.50 (nominal).

In the Internal Sale, offerings were 11,475 packages of Dusts. There was less general demand; and the market opened at a lower level, prices easing further with the progress of the sale. There was again more demand for the powdery Dusts and these did not show the same decline as the more leafy types, which were sometimes up to 12 nP per pound easier, except for a few Assam teas with quality.

CTC Assams were a weak feature of the sale and, at the close, were as much as 30 nP easier although there was fair demand for the few best bright liquoring invoices. Darjeeling teas were generally neglected. Following rates were quoted:—Medium Dooars Dust Rs 1.55 to Rs 1.65; Medium Assam Grainy Dust Rs 1.65 to Rs 1.75; Medium Assam CTC Dust Rs 2.40 to Rs 2.50 and Best CTC Assam Dust Rs 2.75 to Rs 3.10. Also, 360 packages of Leaf grades were offered for which there was a limited demand.

In the Export Quota section, rates moved narrowly between 20 and 21 nP per pound and business was reported done at these levels. At the close, there were buyers at 21 nP with sellers at 22 nP per pound.

At the auction held in Colombo, offerings were 6,991,420 pounds. Demand for Nuwara Eliya teas was fair, but prices of all grades were lower following the decline in quality. Among high-grown teas, there was active demand for the best quality. Among medium-grown teas, a few of the best coloury Broken were firm. Among low-grown types, stylish Persian Gulf types were in strong demand at firm rates; but small Leaf Broken declined by about 5 cents per pound. Well-made Orange Pekoes were considerably dearer.

Ceylon's tea production in June was higher at 34.06 million pounds as compared to 27.78 million

pounds in the corresponding month of last year. Total production for the first six months of the year was 229.74 million pounds as against 203.25 million pounds in the corresponding period of last year.

According to the figures released from Chittagong, output of tea in Pakistan, during June 1957, was lower at 3.8 million pounds as compared to 5.5 million pounds in the corresponding month of last year. The lower production is

attributed to hot and dry weather conditions in the producing areas at the beginning of the season. Total output, during the current year up to the end of June, is placed at 8.3 million pounds as compared to 13.5 million pounds in the corresponding period of 1956.

In London auction held this week, 41,667 packages were catalogued of which 21,321 packages were offered. There was a good demand and prices were fully firm and sometimes dearer.

World Overseas

US Notes

RECENT economic achievements have led more than a few economists to wonder whether the United States is on the threshold of a kind of "new era"—indeed, whether it may not already have entered such an era. Now a major study has come along that offers an affirmative answer to this oft-debated point.

The study is no superficial or hasty conjecture. On the contrary, it is a carefully documented report by the Twentieth Century Fund, one of the most respected private research organizations in the country.

Titled "U.S.A. in New Dimensions," it is based on a massive 1,150-page treatise, "America's needs and resources: A new study" prepared for the fund two years ago.

As evidence of the kind of growth that is causing revisions in the nations' economic thinking, the study cites such developments as these: In the past century average productivity—200-output per hour of work—has tripled consumer spending, supported by spectacular gains in income and purchasing power, has more than tripled average yields per acre of important farm crops. Accompanying these accomplishments has been a population growth

from 75 million to 170 million. One of the outstanding long-term trends in the United States, the study observes, is the upgrading of income.

The average yearly income per family now has reached more than 6,000 dollars and is still going up. This is reflected in the way families have moved from lower to higher income ranges. Figured in fixed 1950 dollars, the number of families earning less than 2,000 dollars a year dropped from 48.7 per cent of the total in 1953 to 22.7 per cent. In 1950, while the number earning 5,000 dollars a year or more climbed from 11 per cent to 19 per cent. The record indicates a further upward shift in income distribution since 1950.

The study points to rising productivity as the principal reason for this remarkable economic advance. Its findings in this regard parallel those of a congressional report on productivity and wages put out two weeks ago. That report found that the annual productivity gain for the non-agricultural sectors of the economy has averaged 2.2 per cent since the early years of this century, and went as high as 3.6 per cent in the 1947-53 periods. This increased productivity has been translated into two kinds of benefits. Some two-thirds of it has gone into the higher wages associated with greater production of goods and services at lower cost. The rest has been

taken in the form of fewer hours on the job and more leisure time.

As an example, working time has gone down from an average of 70 hours a week in 1850 to the 40-hour week of today. But the Twentieth Century study is not content with measuring past performances. "The United States has not merely climbed to a new plateau," it suggests, "but is ascending heights whose upper limits are not yet measurable."

Thus, it looks for an average workweek 'perhaps as low as 37.5 hours in 1960.' It even holds out the possibility that as productivity increases continue, the nation will be able in another century to turn out as much in the 7-hour day as it does now in a 40-hour week. Whether this prospect will be realized or even approximated will largely depend, as the study notes, on continuing advances in technology—the application of accumulated knowledge and skills to the creation of useful goods and services.

Britain

One of the main projects of the Natural Rubber Development Board last year was devoted to developing the "vast potential outlet for rubber" in road construction. This is revealed in the Board's annual report, recently published in London.

The report records "steady commercial demand during the year", but adds: "It is obvious that no really large consumption of rubber can be expected until the economic advantages are proved conclusively over a wide field of application

than is the case to date. The Board looks for this mainly to the road experiments carried out in conjunction with the Road Research Laboratory and also to the cumulative results of many independent sections laid in various parts of the world".

In this context the report notes with satisfaction that in new road projects in the United Kingdom and abroad many orders were due to previous successes. For instance, results from one trial have already led to the choice of rubber for a number of bridges and other sites where deflection is a problem. Similarly, the success of bitumen on runways at Essendon airport, near Melbourne, has resulted in its use on other Australian aerodromes and has aroused keen interest among airport authorities.

The research activities were mainly concerned with rubberized bitumen, but the report also mentions work on the problem of producing stable mixtures of rubber and tar, and comments: "The problem posed is a difficult one, but success would be of considerable significance to road engineers and should open up to rubber an appreciable new market". The use of rubber in soil stabilization for low-cost roads—a development which may be of great interest to underdeveloped countries—was also included in the investigation.

During the year a "notable advance" was made in the Board's engineering programme, designed "to persuade the engineer that, as a result of scientific investigations, articles in which rubber plays a part can be designed with the same

(Continued on page 192)

THE last few weeks have been simmering with a plenitude of news reports about prospective foreign aid of diverse kinds for India. Mr A. P. Jain, the Union Food Minister, let slip the hint that a third wheat loan—and the second arrangement for India under the US Surplus Commodities Scheme—was likely to be finalised at an early date. Since then, however, no further information has been vouchsafed; but one may permit oneself the reflection that, in this context, no news is good news. In fact, I may suggest that the seeming lack of developments quite possibly indicates that negotiations in this respect have, far from encountering difficulties, been proceeding smoothly. So, we must presume that such delay as there is has been occasioned by the multifarious formalities involved.

The second source of foreign aid news was London; and Mr Nehru's presence in that city for the Prime Ministers Conference evoked a spate of prominent—and definitely hopeful—mention of the prospect of £100 million loan from the British Government. Besides, the impression was also fostered that some manner of revolving fund to the amount of £25 million was likely to be set up. But, in this second instance, the hint here and the indication there are in the nature of a cold douche to the expectations raised by earlier messages. I am afraid that, in this respect, we do not have the consolation that no news is good news; and I cannot help the feeling that the first flush of generosity is being overpowered by sobering thoughts of Britain's own economic plight.

I have, as it were, juxtaposed these two developments in the US and in the UK; and my purpose is thereby to emphasise that both the transactions—should they fructify—combine the elements of good friendship and good business. In particular, I think it is necessary to recognise that here we have no instance of an India going round the international money markets with a begging bowl in hand. The overtures that have been made, may I point out, are likely to have emanated no less from the British and American financial authorities than from India. If, for example,

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

Mr H. M. Patel was conveniently available in London for confabulations, it is only because, I should think, preliminary discussions had already suggested the British interest in evolving some scheme for aid* to India. Similarly, if Mr B. K. Nehru had an extended sojourn in Washington, his specific task was to further the negotiations with the World Bank and to conclude the first tranche of assistance for the Railway Plan; and it was entirely incidental if, as we may presume, Mr Nehru utilised his Washington stay to seek some further understanding with the US Administration on assistance to be derived under Public Law 480. Here, too, one does not require to delve too deeply into the matter to realise how assistance under the Surplus Commodities scheme is as helpful to America as it is to this country.

Take, for example, the negotiations with Britain. There has for some time been an apprehension on the part of the British financial press that the undertaking by India of the ambitious Second Five Year Plan would put a severe strain upon the sterling area gold and dollar reserves. The past is conveniently forgotten; and the Indian objective of a determined attempt at lifting up the national economy by its boot straps is given no more than a cursory examination. We have had the rather peculiar experience of being admonished that we were trying to do too much in too short a time with too little resources. We are naively advised that the Five Year Plan should be elongated into a seven year plan—and the consequence of such a change, we are assured, will not be serious. But this is exactly where the rest of the world and the Indian critics are wrong. The basic thing to remember about India's Second Plan is that the hard core cannot suffer any elongation or curtailment. The widely publicised premeditation on the part of the Indian Government to rephrase the Plan has been mistakenly understood as a willingness on the part of India to jettison some of the projects that were first included. But, no. As I understand it, all that is meant by rephrasing is that certain projects—whose foreign exchange element may be high and in whose behalf no commitment has been entered into—will be deferred to

later years of the Plan when our foreign exchange position is more comfortable. This rephrasing is not a jettisoning, but is merely evidence of the flexibility in planning which is the basic tenet of the Second Plan. Thus, the rephrasing is not a departure from, but is actually fully in accordance with, the tenets laid down by the planners. I do not know whether this aspect of the matter was, in London, emphasised and reiterated by Mr Nehru and Mr Patel. It would, however, seem so, for the fact of the matter is that it was only subsequently that one began to hear of a possible loan from Britain of £100 million.

As I have already remarked, still later, second thoughts—which are usually wrong—would appear to have darkened the prospect of any such aid. Frankly, I am at a loss to understand why the British financial authorities are shirking from what must quite clearly be good business for themselves. For, in the event of such aid not forthcoming, it is not as if India will throw up its hands in despair and confess that the Second Plan endeavours will be brought to a rude and abrupt end. Far from such a prospect, India will turn to the alternative available of drawing down its sterling balances. It is not as if it would be wrong to do away with the statutory requirements for a minimum quantum of sterling securities as currency cover. Indeed, in Britain's own case, the central banking institution does not possess any reserves of gold or foreign securities as currency cover, since, with the establishment of the Exchange Equalisation Fund in the early thirties, the Bank of England no longer possesses among its assets any such holdings. All that we can be told is that, in our own interest, India should have a certain minimum of foreign balances. Who is to judge what should be the minimum in this respect? And, if a comparison were made with the reserve of other countries, do we fare so badly? With our present sterling balances at a figure around Rs 440 crores, our reserves are the equivalent of roughly five months' imports. In Australia's case, 1955 imports are placed at £853.7 million (Year Book of International Trade Statistics, 1955, United Nations); but its gold and foreign exchange re-

cannot do without such British help. The agreement in respect of withdrawals from our sterling balances has expired and there is no bar on India utilising all of its reserves if it so desires or needs. I do not know where the British negotiations went wrong; but I shall personally feel that British

has let us down if this aid is not forthcoming.

It is an entirely different matter when we consider the American loan prospects. As I have often said before, American generosity is unparalleled in the annals of history. The American record of

giving is an incredible attestation to the assistance that has been rendered to the whole world. While, thus, there can be no question or debate of America's unstinted generosity, I feel impelled to remark that such help as it gives is of benefit to America as well. I wish to emphasise that, moreover,

there is a moral debt which America owes to India. During the war years, India was the only country which was not the recipient but the offerer of aid to America. Leaving apart the silver that was given to us on Lend-Lease basis—and which we are honourably returning on the due date—the American experience in India was one of receiving, and not of giving, assistance. Had India had a national Government in those days, we would more powerfully have realised the value of Indian currency. However, all that happened was that rupees were readily made available; and it is an undoubted fact that the plethora of rupees circulating in the Indian economy was responsible for an inflation from which we have yet to recover. I will not blame America for that, since the demands of war infuse a world wide inflationary spiral; but I do maintain that, morally, America owes it to itself to repay India by lending out of its plenitude in recompense for the rupees that India made available from its poverty.

★

Moreover, if we today are feeling the dearth of foreign exchange, it is partly due to circumstances compelled upon us by American military assistance to Pakistan. The arming of a hostile Pakistan inevitably required larger expenditure on defence by this country. So, in a sense, some part of the additional foreign exchange expenditure that we have recently had to incur is a result of American action; and it may be said that American economic assistance serves, to some extent, to offset this. Finally, I should like to point out that the Surplus Commodities Agreements that America is concluding with India under Public Law 480 are not without their pronounced aspect of self help. America, in this respect, gives from its embarrassment of riches: Wheat and cotton, butter and milk powder—America has these in enormous quantities, and cannot dump them on the international markets. An easy manner of getting rid of these surpluses is to render assistance to nations such as India which, for purposes of their reserve stocks, would welcome a purchase of these commodities under an arrangement which, for them, does not involve any foreign exchange liability.

★

I fear I may have let my feelings run away with me. But I cannot help a final reiteration of what I have said in this Gossip, that it is both good business and a moral commitment for Britain and America to provide the assistance that India requires.

★

I am indebted to The Manchester Guardian for the following gem from its column, "Miscellany". It is the text of a letter received

(Continued on page 192)

**ASSAM OIL
COMPANY**

A TOWER OF STRENGTH

in India's Economy

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

Gateway Gossip

Satisfying without Satiating

THE Gateway news this week is largely about the House of Tatas. First, we have had all speculation laid to rest in the matter of the dividend on Tata Ordinaries. Ordinary shareholders in TISCO are, for the old shares, to get Rs 9.50 a share; and this is described as being satisfying without satiating.

For, the proposed dividend is higher than what had been anticipated in the so called conservative circles; though, of course, it does not measure up to the expectations of the diehard optimists. But, in order to appreciate properly the significance to the shareholder of the dividend as proposed, it is necessary to have an inkling of the background.

The which, if I may, I shall now proceed to provide. I am afraid that there are bear interests in Stock Exchanges, both at Calcutta and in Bombay, who never lose an opportunity to spread rumour of ill tidings. In recent weeks, not surprisingly, the stock exchange interest has centred around the TISCO dividend; and I had often been told that it would be foolhardy to expect any increase, especially in the light of the IISCO experience. That is to say, though the company might desire to raise the distribution, Government would abjure management to desist from any such course, and instead to build up the internal resources for meeting the cost of TISCO's TMTP (Two million ton programme).

I tried to point out that 1957 marked the company's golden jubilee; and suggested that the directors would, doubtless, do their best to provide shareholders with a little something extra that would be cause for jubilation. But, no: I was bidden to give up any false hopes I might have had, of beneficial news to the investor.

So, we have on the one hand the Jeremiahs who contended: Rs 9.19, and not a naya paisa more. At the other extreme, there were the fond expectations that the Jubilee Dividend could be as good as Rs 10.50. Somewhat tritely, it was pointed out to me that a Golden Jubilee comes only once in a lifetime; that the company was doing surpassing well; that the TMTP was progressing according to schedule; that the steel retention prices had recently been increased; and that, consequently, the company would without a doubt be proposing Rs 10.50.

In the event, of course, both schools have been proved wrong. Nevertheless, the general and immediate response of the market has been good, with Tata Ordinaries marked up by Rs 3.00 to Rs 178.50. Now, we may consider whether the proposed distribution is sufficient

commemoration for an event like a Golden Jubilee.

I personally have no doubt that the directors would have favoured a bountiful Rs 10.50, in place of the Rs 9.50 proposed. But, for various reasons, we are to infer that such an enhanced distribution was beyond the capacity of TISCO. This, indeed, is implicit in the whisper going around Dalal Street that the company is to request a fresh revision of retention prices to make good further increases in costs.

Moreover, the disposable or available profits are likely to be sharply eaten into, though the company may not have any liability for tax for 1956-57. For, though the profit before tax and depreciation is sure to be, at the minimum, on the same scale as in 1955-56, the substantial accretions to block in the latest year will have necessitated larger provisions for depreciation and for the special funds; this latter, as the reader may remember, the company is under commitment to set apart in terms of the Government acceptance of Tariff Commission recommendations.

As it is, I understand that the company has decided to "spread" the depreciation permitted under Income-tax laws, so that the impact of this provision on profits may not be unduly severe. If we add the liability under Dividend tax, and if, furthermore, we do not lose sight of the company's need to disburse enormous sums on the expansion programme, it is obvious that the "available" profits may not be large enough to permit of Rs 10.50 a share.

In this light, it seems to me that, if Government approve, and if Tariff Commission so suggest, fresh increase in retention prices, the company would then be enabled to do justice by the shareholder for the Jubilee year. I may point out, here, that the Jubilee bonus need not be paid now, since the Jubilee for Jamshedpur is due to be celebrated only some time in March next year. Strictly speaking, therefore, the Jubilee's commemoration falls into the company's 1957-58 financial year. I would suggest that the shareholder could be rendered his due in March next year, in the form of an interim dividend; and such interim dividend would unambiguously indicate the company's intention of and Government's acquiescence in a higher distribution for the Jubilee year.

The context is correct for me to digress a bit, and touch upon the affairs of IISCO. Compare the TISCO and IISCO shareholders: In the former case, (1) the capital structure was rationalised with the elimination of deferred shares; (2) a bonus issue has been made; and

(3) the ordinary shareholder certainly has partially and immediately benefited from his company's improved earnings. In the latter case, (1) the agitation for a bonus issue evokes no sympathetic response from Government; (2) in the face of the company's request to the contrary, Government insisted upon a premium on the rights issue at 35 per cent; and (3) the ordinary dividend has more or less been frozen. Why this discrimination against IISCO shareholders? Is there any reason for Government's stepmotherly treatment to Hirapur? There is, however, some hope entertained in knowledgeable quarters that, for 1956-57, IISCO shareholders will receive a slightly larger dividend.

The second bit of Tata news is about TELCO. In this respect, the cheer comes not from an increased dividend (since this was announced three weeks ago) but from the considerable evidence of progress as recorded in the latest accounts. (I have to be careful, and see that I don't poach upon Watchdog's preserves; what follows avoids the strictly balance-sheet approach to TELCO, and seeks merely to present a broad, overall picture of the composite industrial unit that is

styled the Tata Engineering and Locomotive Company Limited).

First, from the point of view of the company's interest in locomotives. Besides Government-run Chittaranjan, TELCO is the only other manufacturer of locomotives. In past years, there has been controversy as to the costs of production; but, mercifully, we have this year been spared such distasteful and acrimonious debate. What matters is the performance; and herein it can be recorded that TELCO has exceeded the target set by the Tariff Commission. The improvement over 1955-56 is of the order of 30 per cent in production; and complete locomotives turned out numbered 67 as against the target of 50, though the production of spare boilers was necessarily 6 short of the target at 44. The "indigenous content" of TELCO locomotives exceeds the 75 per cent minimum stipulated by the Railway Board. Finally, the expansion programme is showing satisfactory progress.

A second aspect of TELCO working is the phased programme for the manufacture of trucks in conjunction with Mercedes Benz. The existence of a "grey" market in

Gateway Notes

Sales Tax

Perhaps no measure of Government has been so persistently discussed in the country as Sales Tax. The reason is simple. Sales Tax is a comparatively new device and it affects almost all the people. The commercial community in particular has found in it a source of unending worries because the tax is not uniform in all States.

It is, however, evident that there is no escape from this tax. Since it has proved to be one of the most lucrative sources of revenue available to the States, it is idle to expect them to relinquish it in a hurry. The mercantile community have also realised that the sales tax has come to stay. This has

been made clear by Mr B. M. Chinnai, President of the Federation of the Indian Chambers of Commerce and Industry, in his presidential address to the All India Sales Tax conference. "On behalf of the mercantile community, I confidently assert that we are not against the levy of sales tax." It is also realised by them that in view of the urgent need of funds for implementing the schemes under the Second Plan, there is also the possibility that the States may even think of increasing the rate of the levy. The FICCI President has assured the Government that the business community are always ready to co-operate with

them in the administration of the tax. The difficulties encountered both by the traders and Government at present can be largely eliminated if there is "goodwill nurtured in the place of distrust". There is also scope for simplifying the administration as well as the regulations. The fact that the regulations are frequently changed or altered has often resulted in imposing heavy extra burdens on the traders. According to Mr Chinnai most of the complexities which now arise because of differences in interpretation and in procedural affairs, can be eliminated by the framing of a model Sales Tax Act by the Centre for the guidance of the States. He has further pointed out that it is quite possible to arrive at uniformity in fundamentals in the basic structure and in procedure by all the States without sacrificing their constitutional rights.

It is gratifying to note that some of the States have already initiated action to devise ways and means of solving the practical difficulties in the working of the tax. The Madras Government have engaged the services of a prominent economist in this connection. Mr Y. B. Chavan, Chief Minister, of Bombay, who inaugurated the Sales Tax Conference, disclosed that the Bombay Government had decided to appoint a committee to go into the entire question of Sales Tax and suggest measures to remove difficulties experienced by traders. The role of the general public in the efficient administration of the Sales Tax is no less important. As Mr Chavan has pointed out, every citizen should consider it his patriotic duty to insist on a proper bill with the tax shown on it whenever he makes his purchases.

*

Price Situation

Though Mr Gadgil's suggestion that the Government should take over food distribution throughout the country may appear to be the only way out of the present difficulties on the food front, it is unlikely to receive much support either from the Government or the people at large. Authority can take up the additional responsibility only when other measures fail, for the very idea of the State taking over the entire distribution of food is repugnant to the majority of the population. Further, Mr Gadgil's main argument in favour of his suggestion—that the mercantile community's anti-social and unpatriotic behaviour has been responsible for the present predicament cannot be fully substantiated. It would be unfair to condemn the community as a whole merely because a few traders have been found to be engaged in profiteering in food.

Few will dispute Mr Gadgil's statement that food is the pivotal point in our economy at the present juncture. Government are fully aware of the importance of the food problem to the successful implementation of the development programmes now under way in the country and have accordingly given it a high priority in their schemes. Steps have been taken to maintain a sufficiently large buffer stock of food-grains from imports. Supplies from this are being made available to all parts of the country in times of need. Fair price shops have been opened wherever prices have shown a tendency to rise. Recently steps have been taken to meet the food requirements of a group of States in the South by the creation of the Southern Rice Zone, and a committee has also been appointed by the Central Government to enquire into the question of food prices. In short, Authority is fully prepared to meet any emergency.

*

Cotton Cultivation

In spite of the pleasing performance of cotton over the period of the First Five Year Plan, the cultivation of cotton, is yet to proceed along lines where it could serve the indigenous industry better and more fully. One of the drawbacks of cotton cultivation in India, has been its slow response to the demand for superior variety, for which the industry is heavily dependent on imports from foreign countries. The price which the country pays for this delay in stepping up production of superior types of cotton is the sum of Rs 52 crores which is drained out of the country to pay for imports of such cotton.

The scope for immediate action to remedy the present situation is indicated by the figures of acreage under improved varieties in the various States. The area under improved varieties is high only in Bombay being 95 per cent of the total cotton acreage. In other States vast areas are yet to be brought under improved varieties. For example in Mysore only 67 per cent of the cotton acreage is under improved varieties while in Punjab and Rajasthan the respective figures are 63 and 43 per cent.

It was natural therefore that this matter should have come up at the meeting of the Indian Central Cotton Committee in Bombay last week. Presiding over the meeting, Dr M. S. Randhawa, Vice President of the Indian Council of Agricultural Research and Additional Secretary to the Union Ministry of Food and Agriculture pleaded for concerted efforts by the States to increase the production of superior types of cotton and suggested wider use of improved varieties of cotton (Continued on page 194)

World of Cotton

Tight Statistical Position

FOR the first time since the Korean crisis, world consumption of Cotton has been larger than production. Estimates of supply in the 1956-57 season ending July 31 remain unchanged at 50.8 million bales, made up of a production of 28.8 million bales and open stocks of 22 million bales. The estimate of consumption has been raised slightly to 29.2 million bales which, with export to the Communist countries and cotton destroyed, will result in a total disappearance of around 30 million bales.

As far as India is concerned, the season 1956-57 commenced with a reduced carry-over of Indian cotton of 19.30 lakh bales and of foreign cotton of 2.33 lakh bales as against 24.33 lakh bales and 2.48 lakh bales respectively in the previous season. At the beginning of the season, the crop was estimated to turn out as high as 50 lakh bales; but it has now been finally placed at 47.50 lakh bales. As against this crop position, domestic mill consumption has not only been maintained, but shows signs to reach a record level of a little more than 47 lakh bales during the season if the present monthly average of 3.93 lakh bales continues undisturbed during the remaining months of the season.

In this respect, the Government of India's permission to import 50,000 bales of cotton of staple length 1" to 1 1/16" from soft currency countries has given some relief to textile mills who apprehend a tight cotton supply position by the end of the year. Moreover, the contracting and delivery periods in regard to shipments of raw cotton from the USA, under the Indo-Burma-USA tripartite agreement 1956, have been further extended up to 31st July and 31st August respectively.

The announcement with regard to the new import quota is generally welcomed by the trade, as this will help relieve the tight statistical position. But the question is, whether mills will at all be able to cover their requirements from East Africa of the qualities which qualify for import under this announcement, as this covers most of the lower-staple varieties. Even so, the landed cost of this cotton works out to Rs 1,300 per candy as against Rs 1,000 quoted for the indigenous growth. Both mills and importers have, therefore, rushed in to secure licences, which are to be issued on a first-come-first-served basis. The last date for shipment is September 30. Higher staples are not allowed, presumably because of Government's earlier decision to import a large quantity of American cotton, which is equivalent to East African growths. The new permis-

sion will enable the mills to buy only the current crop from East Africa.

Meanwhile, trading in the Cotton futures market continued to be dull and values moved rather irregularly on small orders confined to jobbers. Turnover was only 6,000 bales. ICC Moglal Jharilla March opened quiet at Rs 713.50 and, after touching a high of Rs 718.25, terminated at Rs 717.25.

The Spot market, however, continued to be active although enquiries from shippers were few. Mills bought Surti, Jaydhar, Luxmi, Vijay and Dholera varieties.

In the foreign section, some business was reported done in spot lots of Karnak and Sudan varieties. Mills also showed good interest in East African cotton.

Following were the prices quoted:—Bengal Rs 680 to Rs 750; Oomra Rs 765 to Rs 780; Dholera Rs 810 to Rs 820; Jharilla Rs 835 to Rs 870; Sudan average Rs 2,100 to Rs 2,400; Karnak Rs 2,400 to Rs 2,450; AR/Jinga spot Rs 1,360 to Rs 1,380 and Mwanza Rs 1,340 to Rs 1,350.

*

NEW YORK COTTON MARKET

Prices on the New York cotton market, after ruling steady early in the week, reacted under hedge selling towards the close. The decline in prices reflected the lack of buying interest together with generally favourable weather and crop news. Should weather conditions continue favourable, some traders expect the Government report on August 8 to show a crop of 12,000,000 bales. Spot closed at 35.60 cents per pound.

*

LIVERPOOL COTTON MARKET

Trading in the futures section was very quiet under American selling, liquidation by local longs and occasional hedging which was only partly offset by scattered mill fixations. Intermonth switching was again prominent on local account.

*

KARACHI COTTON MARKET

The Karachi cotton market continued to rule easy. Overseas enquiries were few and far between, while domestic spinner demand was slack. Following rates were quoted:—Sind Deshi Rs 82-8; Punjab Deshi Rs 78-8; 4F Roller Rs 73-4; 289F NT Roller Rs 77-12 and Punjab Saw Gin Rs 87-12.

*

STATISTICS

Exports by rail from 1st September 1956 to 18th July 1957 were about 9 per cent from the level of 397,567 bales. Estimated mill consumption in Bombay, during the

same period, were 1,187,267 bales as compared to 1,105,387 bales in the corresponding period of last year. Estimated stocks of raw cotton, held by exporters, dealers and mills in Bombay were 560,269 bales on the 18th July 1957 as against 670,648 bales on the corresponding date of last year.

*

CLOTH AND PIECEGOODS

Thanks to fresh enquiries, conditions in the Bombay Piecegoods market remained steady. Dealers were hopeful that the offtake would improve in the course of the next few weeks. Demand was more pronounced in respect of seasonal goods. In fine category, there was modest enquiry for well-established qualities.

Conditions on the export front remained unchanged. It was felt that, unless there was a better performance in the second half of the year, the export target of 1,000 million yards would not be reached during the year.

It is, however, encouraging to note that India has maintained her second place in the world cotton textiles trade during last year. Total exports in the year were 744.2 million yards, showing a decline of about 9 per cent from the level of the previous year. In the first four months of the current year, however, exports have risen by about 34 per cent as compared to those in the corresponding period of 1956. Exports of handloom cloth, during 1956, were nearly 59.8 million yards, as against 55.8 million yards in 1955.

Of course... it's wrapped in

Gateway Markets

Oils and Oilseeds Quiet

THE market for Oils and Oilseeds ruled generally quiet during the week under review. Trading in the new crop contracts, which commenced on Thursday last week, provided an indication of the underlying bearish sentiment in the market. The new crop May 1958 contract in Castorseed began at a comparatively heavy discount of about Rs 15 per candy, while the discount in the case of Groundnut February 1958 contract was even heavier at Rs 24-4 per candy. The new position in Cottonseed opened lower than the current contract by Rs 15-50 per candy; but, in the case of Linseed, the discount of

Rs 10 was in line with the usual performance.

The substantial discounts for the new crop contracts have been attributed mainly to the satisfactory progress of monsoon in most oilseeds-growing areas in the country. The general opinion in the market is that the output of major oilseeds will show a substantial increase this year provided weather conditions are favourable throughout the monsoon, especially since the growers have been well-rewarded last year.

For obvious reasons, prices in the futures section ruled quiet and closed with only minor changes

over last levels. Despite better demand in the ready section, operators were very cautious in extending fresh speculative support following favourable weather reports from the interior. Castorseed September delivery opened at Rs 169 and closed at Rs 173. May opened at Rs 154.50 and finished at Rs 155.75. In the ready section, rate was quoted at Rs 33.75 and Castor Oil, commercial quality, at Rs 19.12.

Business in the Groundnut section was rather restricted. August delivery opened at Rs 176 and improved to Rs 117.37. February started at Rs 156 and terminated at Rs 156.75. Ready bold was quoted at Rs 35.50 and Groundnut Oil at Rs 20.25.

In the Linseed section, September began at Rs 29.06 and finished at

Rs 29.37. May opened at Rs 28.25 and terminated at Rs 28.37. Linseed ready was quoted at Rs 29.00 and Linseed Oil at Rs 14.87.

Cottonseed September delivery moved between Rs 112.75 and Rs 113.50, while February was done at Rs 96.50.

Gold & Silver

After early hardening tendency, values in the Gold section quietened under profit-taking at the close, largely prompted by slackening spot enquiry at higher levels. Arrivals and offtake were estimated at 2,000 tolas and 5,000 tolas respectively. Stock in the market was estimated at 25,000 tolas. Shravan delivery was quoted at Rs 107.25 and Bhadon at Rs 106.75. Ready, after touching a high of Rs 108.41 from Rs 108.12, finished at Rs 108.19. Sovereign ruled steady at Rs 70.25.

Silver also attempted, early in the week, to harden on option buying, but failed to consolidate the gains. Arrivals were heavy at 20 bars as against an offtake of only 12 bars. Unrefined metal receipts were also higher at 20 bars. Floating stock in the market was estimated at 1,000 bars. Sharvan delivery started at Rs 181.81 and, after moving up to Rs 182.56, receded to Rs 181.81 at the close. Bhadon delivery closed at Rs 181.37 after touching a high of Rs 181.87. Ready was quoted around Rs 181.31.

Metals

In contrast to the general trend of prices on the London Metal Exchange, prices on the Bombay market have been ruling comparatively steady. At present, a softer tendency prevails in the international market as demand appears to be lagging behind supply. But, a number of artificial factors have contributed to the steadiness here. Although rats have come back slightly from the high levels touched immediately after the announcement of the cut in imports, it is difficult to say whether the decline is only temporary.

The slight easiness in prices is attributed to rumours that the import authorities have issued some ad hoc licences in Calcutta. While the trade has been eagerly awaiting the issue of ad hoc licences, fears are general that the grant of licences will touch off a strong downward trend in the prices of all metals. Although the extent of the fall is likely to be influenced by the quantity that the Government will allow to import, a downward readjustment in prices is considered possible by the traders in view of the fall in overseas rates.

Moreover, official estimates about stocks being adequate have helped the decline in prices. According to trade circles, imports of copper in 1956-57, were only slightly over

The Temperature of Canal Waters Dispute

THE close proximity of the World Bank Vice-President's visit to this sub-continent for a further study of the Indus waters question and Mr Suhrawardy's visit to Britain and America resulted in this Indo-Pakistan controversy reaching a new level of excitement. Had disputes between members of the Commonwealth been allowed for discussion in the Commonwealth Conference, the Pakistan Premier would have found the most delightful opportunity of his life to paint India black. A sound convention denied him that opportunity.

But being unable to suppress himself, he summoned a Press Conference in London, inviting only journalists from Pakistan, where amidst a surfeit of anti-Indian outbursts, he announced that Pakistan would reject the World Bank's proposals. Mr Illif, the World Bank Vice-President who was then in India, should have felt embarrassed by that premature and ill-considered exhibition of temper and discourtesy.

From London, Mr Suhrawardy went to America. The language he employed in presenting Pakistan's case in this matter before the American President has not been disclosed. His statement to the Press Club was extremely fiery, aggressive and looked like one which would normally be associated only with situations inviting war and deadly enmities. Mr Suhrawardy was reported saying that India was in a position to turn off the flow of the canal waters to Pakistan and that, before the Pakistani people were thus forced into starvation, they would prefer to fight.

All this was obviously far from sober or congenial to the settlement of a dispute over which workable solutions were already in sight. Perhaps, Mr Suhrawardy must have thought that, unless he talked and behaved like a fire-eater and pictured India as a demon anxious to devour its neighbours, the American public would not be impressed with the merits of his own case. The irony of it is that all his hyperboles failed to carry conviction. They ended as a sheer cry in the wilderness. US statesmen, who seem to have imbibed, of late, a distinct bias for long-range considerations of national and ideological interests, must surely have admired Mr Suhrawardy's imagination and sense of humour, while coolly separating facts from fiction, from the confusing mixture he gave for their consumption.

Subsequent events indicate that the canal waters' dispute has

suddenly lost the tempo it reached when the Pakistan Premier was in Washington. It may be inferred that US spokesmen have counselled patience and a calmer approach. If so, the development must be welcome, as further discussion would be smoother, in an atmosphere devoid of excitement and mutual recrimination.

The real points of difference between Pakistan and India are not so many or so big as Mr Suhrawardy and his friends in Pakistan have lately endeavoured to impress the world. Though at London Mr Suhrawardy talked of national riparian rights, he knows fully well that the World Bank's formula on the division of rivers between the two countries cannot be circumvented at any cost. According to this formula, the Ravi, Sutlej and Beas will be utilised fully by India and the Indus, Chenab and Jhelum by Pakistan, with the extra condition that India will meet a portion of the cost which Pakistan would be incurring for the construction of link canals, intended to replace the waters lost from the three Indian rivers.

India accepted this formula, which was also the basis on which the continued flow of the canal waters was being made available to Pakistan all these years. Pakistan could manage to keep silent on its attitude to the World Bank formula, as long as India was inclined to permit the flow of waters as usual. Only recently some Pakistan spokesmen indicated that the World Bank formula was generally agreeable to their country, barring certain details. It is these details which have now provided the bone of contention. In the original proposal of the World Bank, there was a suggestion of an appropriate procedure for adjudicating or arbitrating disputes concerning the allocation of costs of the link canals. India forthwith agreed to such arbitration.

Possibly the dispute would have been closed without further fuss had Pakistan felt content with the payment India would have made toward the cost of these canals as adjudged by an impartial body. Instead of doing that, Pakistan started thinking in terms of a Master Plan for the economic development of the Punjab and surrounding areas; the Plan contains a number of reclamation schemes through irrigation and is estimated to cost about Rs 1,000 crores. It has been claimed that India should foot the larger part

of this bill. The argument is that the link canals originally proposed to replace the full quantity of water which would be exclusively utilised by India would be inadequate for the purpose; link canals would also interfere with the normal flow of the Pakistan's rivers from North and South; and for that reason new schemes should be thought of.

In this reasoning, Pakistan is willing to forego completely the canal waters, but on condition that India pays an amount sufficient to meet not just the replacement costs, but a more ambitious scheme covering the development of the bulk of West Pakistan—a proposition frankly unacceptable to India. The latest World Bank proposal which in broad outline does not differ from the original one is reported to contain a provision which represents some accommodation for Pakistan's demand for a larger amount than the cost of the link canals.

Under the present proposal, the arbitration over costs should extend beyond the original field, (the cost of the link canals), thus leaving open the possibility of a compromise under which India might be persuaded to pay a little more. How far India would agree to this extension of the scope of arbitration will naturally depend on the manner of Pakistan's response to the World Bank proposal and the

extent of its extra claim. After all, in the interest of good neighbourliness, India may not grudge a small amount in addition to the Rs 60 crores or so which is estimated to be the cost of the link canals.

A satisfactory settlement on the basis of a new proposal of the World Bank presupposes Pakistan's giving up its bellicose and grievance-ridden attitude. It may be true that some areas watered by the canals before partition are lying waste or are not yielding as well as before. It may also be true that, for reasons unconnected with politics, the water supply controlled by India becomes irregular once in a way. The irregularity is a matter beyond human control, caused by failure of the seasons or some technical trouble in the headworks.

It is, of course, tempting for Pakistan to attribute delays or irregularities caused by natural circumstances, to mischief and bad intent on the part of India. The comparative low yield which might have occurred in the canal-fed areas in Pakistan should mainly be accounted for by the difference in the character of the peasants and possibly to the fact that the rehabilitation of the population on refugee lands still remains tentative.

Unfortunately, a completely objective presentation of facts on

UP Budget

In presenting a deficit budget for the State for 1957-58, the Finance Minister of UP has fallen in line, with his counterparts in the other states. The expenditure and revenue for 1957-58 are estimated at Rs 108.33 crores and Rs 96.66 crores respectively leaving a deficit of Rs 11.67 crores.

The budget reveals some progressive features. First of all, it contains a scheme, for old age pensions to persons of 70 years and above who are in indigent circumstances. Secondly education would be made free throughout the state up to class six. Thirdly, low paid Government employees whose total emoluments did not exceed Rs 95 per month would receive an increment of Rs 5. The State Finance Minister has drawn from the example of Madras, where a similar concession in pay was announced in the latest budget.

There is a second point of comparison with the Madras Budget and this refers to the new taxes announced by Mr Mohammad Ibrahim to reduce the gap. The new taxation measures announced by the UP Finance Minister, include a 50 per cent increase in the rates of entertainment tax, a three anna per gallon increase in sales tax on motor spirit, 100 per cent increase in the fees for registration of documents and a single point sales tax on food grains. Over and above this an additional sum of Rs 30 lakhs to Rs 40 lakhs is expected to accrue to the Government by amending the legislation covering this tax.

The only tax concession announced is in respect of electricity consumption. While, in the case of industrial undertakings, the duty on electricity consumption has been reduced from 25 per cent to 20 per cent, in respect of domestic consumption, the duty will apply only to cases where the price of electricity consumed, exceeds six annas per unit, instead of the present limit of nine annas.

Speaking on the budget deficit Mr Mohammad Ibrahim said, that the deficit was mainly attributable to the Second Five Year Plan. Agricultural production had been given high priority in the Second Plan the target being to increase food production by 22 lakh tons, taking the total food production to 147 lakh tons by 1961.

In the field of industries, starting of a Cement factory, three heavy industries in the public sector and also new lines of production such as the manufacture of pressure gauges and medical and surgical instruments, are envisaged.

The capital expenditure during 1957-58 is expected to be of the order of Rs 38.68 crores. The Minis-

ter also announced a cut of Rs 100 in the monthly salary of each minister. This together with other economy measures proposed, is expected to result in a saving of Rs 1 crore.

Standardisation

Quality in the goods produced is one of the pre-requisites for the success of an industry and this can be guaranteed by conforming to particular standards prescribed, in accordance with consumer preference. In India, the Indian Standards Institution had been prescribing standards for the goods produced in the country so as to safeguard the interests of the consumer and to counteract the fastidious preference for foreign goods. But if the manufacturers are to be encouraged to produce standardised goods, they would need to be assured of at least that part of the market where the Government operates as a buyer on a big scale.

It was with this view that, the Committee formed by the Panel of Scientists to deal with statistics, standards, quality control and technical manpower in the Planning Commission and earlier the Directors of Industries, recommended that all agencies of Central Government, State Governments, local bodies and public corporations should adopt the standards laid down by the Indian Standards Institution. But the State Governments and many local bodies have been lagging behind in this matter.

This was brought to light by Mr Morarji Desai, the Union Minister for Commerce and Industry when he addressed a conference convened by the Indian Standards Institution, and therefore he made an appeal to State representatives to impress upon the municipal corporations and other bodies the advantages accruing from standardisation. He also deplored the tendency on the part of some organisations, to make their tender enquiries on the basis of some foreign standards.

Referring to the Certification Marks Scheme evolved by the ISI to reduce consumer resistance to indigenous goods, by giving a guarantee to the consumer that the products are of the quality as required in accordance with the Indian Standards, Mr Morarji Desai said that the difficulty in extending its use has been the absence of any preference for certified goods. But the popularisation of this scheme will succeed only if the manufacturers, strictly and honestly adhere to the quality prescribed.

The ISI has also been lately examining the question of evolving standards for small scale industries, and it has moved the Small Scale

Industries Organisation to put up special inspection centres where facilities would be made available for testing the products of small scale industries either free or at a nominal cost. Mr Desai also referred to the Codes of practice prepared by the ISI for the economic use of steel and cement. In the present context of shortage of these two products, popularisation of this code would help optimum use of these scarce materials.

Third Class Accommodation

During the Lok Sabha debate on the demands for grants of the Railway Ministry, the expression of grievances concerned mainly the amenities for third class passengers and the demands of areas without railway lines. An Opposition Member from Bombay went to the extent of envisaging some direct action, if over-crowding and other evils were not tackled forthwith.

Mr Jagjivan Ram certainly could not have been frightened by the threat. His grasp of facts and the anomalies they revealed should have helped him to offer some immediate ideas in return. One such is to cut out dining cars in many trains. Each car removed represents a saving of 100 to 125 additional third class seats. This step would go a considerable way in the direction of increasing third class accommodation. A survey of the incidence of over-crowding in particular sections is also promised. There does not appear to be any big scope for transfer of coaches between trains. Wherever adjustments are possible, they will be made without delay. Further manufacture of air conditioned coaches is also to be stopped. Within the limit of existing capacity, these few changes are perhaps the utmost that could be expected of the authorities.

NORTH INDIAN MARKETS

Sugar Production and Stocks

ACCORDING to the Indian Sugar Mills Association, Sugar production in June 1957 was 38,000 tons, bringing the total production up to 30th June 1957, during the current season, to 20.15 lakh tons as against 18.46 lakh tons in the corresponding period of the previous season. Offtake from factories, during June, was 2 lakh tons as against 1.42 lakh tons in the corresponding month of last year. Total offtake of indigenous sugar, during the eight months of the current season, comes to 14.27 lakh tons as against 10.96 lakh tons during the same period last season. Stocks with the factories, on the 30th June 1957, were 11.10 lakh tons as against 11.57 lakh tons on the same date last year.

Production of sugarcane has also shown an increase. The all-India final estimate for 1956-57 puts the current area and production at 5,019,000 acres and 66,890,000 tons as against the partially-revised estimates of 4,564,000 acres and 59,317,000 tons for 1955-56, showing an increase of 435,000 acres in area and 7,573,000 tons in production. Expressed in terms of gur, the current year's production is placed at 6,745,000 tons as against 5,982,000 tons for the previous season.

Meanwhile, the firmness in sugar prices has continued to cause concern among the consumers, while rumours that the Government may introduce some kind of control to check the rising trend have caused

concern to the traders. But, it is felt that, if prices should ease, further exports of sugar against prior sales should be banned even at the sacrifice of earning foreign exchange. It is also felt that, unless the export policy is reviewed by the Government in the light of domestic developments, the situation on the sugar front is bound to deteriorate in the coming months.

In the Hapur market, wholesale rates moved between Rs 34 and 36 per maund, according to quality, while the retail rate is quoted at Rs 37.50 per maund.

Shellac

Conditions in the Calcutta Shellac continued to remain quiet with Pure TN quality hovering idly around Rs 74 per maund. The market is suffering from the absence of foreign buyers and the tight conditions prevailing in the money market which make it expensive for dealers to carry substantial stocks.

Both the American and the Chinese buyers seem to have withdrawn from the market for the moment, while the Continental buyers continue to show very little interest. Moreover, consumers in London have a good reserve of commercial stocks to fall back, which are estimated around 24,500 packages. Though this is a high level, traders do not consider it a danger to prices. For obvious

Planning for Power and Irrigation

THE 27th annual session of the Research Committee of the Central Board of Irrigation and Power held in Mysore last week has focussed attention on a problem, on the efficient tackling of which depends the very success of the Plans for the rapid development of the country. It has been rightly recognised by our planners that the utilisation of our water resources to the maximum extent possible will quickly create conditions conducive to the desired progress in other vital sectors. For, water is to be our mainstay for generating power without an adequate quantity of which industrial development in the modern sense of the term is practically impossible. In short, power generation has become synonymous with progress. The enormous leeway to be made up in India in this regard will be evident from the fact that the per capita consumption of power is only 25 kilowatt hours in our country compared with 3,536 in Canada, 2,400 in Sweden, 2,290 in the USA, 2,024 in Norway and 16,188 in Switzerland.

It is of primary importance, therefore, that a nation which wants to make up for lost time in industrial development, should first bend its energies toward sizably increasing the generation of power. With oil and coal, two of the important sources of power, neither in plentiful supply nor evenly distributed so as to ensure economic utilisation, attention has, perforce, to be diverted toward other directions. Nature which has not been apparently generous in giving us coal and oil, has however, been quite kind in endowing us with a bountiful supply of water power resources. It has been estimated that the hydro-electric power potential of our country will be about 50 million kW. Of this, only about 1.4 million kW has so far been harnessed.

The fuller utilisation of our water resources has become an essential prerequisite to our planned progress in view of the predominantly agricultural character of our economy. The provision of adequate irrigation has been the main objective of the First Five Year Plan. The position in the country before the inauguration of the First Plan was that assured irrigation was available for about 50 million acres only out of 270 million acres under cultivation. A large portion of this acreage is still mainly dependent on the monsoon which is notoriously uncertain in our country. Therefore, the problem is one of ensuring assured water supply to as vast an area as possible.

The fact that the population is growing at the rate of 4.5 million annually has imparted a new urgency to food production in which we have yet to reach self-sufficiency. The acute shortage of foreign exchange has further emphasised the need for increasing food production.

It will be doing a great injustice to the genius of our forbears if we talk of irrigation as a modern idea. The main outlines of the irrigation systems in vogue in ancient India were closely similar to the most scientific systems of the present day. The irrigation and flood control works built hundreds of years ago by our artisans in South India are still faithfully serving the region.

The sizable achievement in the last five, six years only indicates that given the motive force, which for some reason or other, has remained dormant in the past, the requisite skill needed for implementing irrigation schemes will be forthcoming. Taking for instance, power generation, one will be pleased to find that considerable progress has been made in the first Five Year Plan period. During the past five years, installed capacity has increased by 1.1 million kW to 3.4 million kW. The per capita consumption of electricity has also risen from 14 to 25 units. As against 3,687 towns and villages

electrified early in 1951 the number at the end of the First Plan is about 6,500.

Referring to power development, the Planning Commission point out that since power requirements frequently tend to outpace even optimistic estimates in a rapidly developing economy, the targets set for the installed capacity for the next 15 years will be achieved much sooner. The rapid growth of power generation is also an important prerequisite to the implementation of the programme of development in the rural sector of the economy. In view of the decentralised basis on which industry has been planned to develop and because of the important role assigned to underground water resources in the development of agriculture, it has become imperative that electrification should be extended to small towns and rural areas as quickly as possible. Accordingly the Second Plan aims at providing electric supply for small towns with population between 5,000 and 20,000 which are centres for the development of the adjoining rural areas. In this group, there are about 4,000 small towns, of which only 40 per cent have been electrified so far. During the second plan 80 to 90 per cent of these towns are expected to be provided with electricity.

As has been noted above, developmental activity with regard to irrigation has to be mainly in the direction of ensuring secure irriga-

tion which will remain effective in years of low rainfall. Simultaneously, steps have to be taken to extend irrigation facilities to fallows and cultivable waste lands that may be brought under the plough. Irrigation can be classified into two broad groups: major and minor irrigation projects. In our country the area irrigated by minor works such as wells and tanks is in excess of that irrigated by major works. It is evident, therefore, that future development has to take note of the major role played by minor irrigation works.

It is only too well realised that there are a number of subsidiary problems to be solved before the nation can reap the full benefits of the projects as regards power development and extension of irrigation envisaged under the Second Plan. Some of these problems have been noted in his presidential address to the Mysore conference by Mr U. N. Mahida, Chief Engineer (Irrigation) and Joint Secretary to Government, PWD, Bombay. After briefly referring to the important role played by the Central Board of Irrigation and Power in the development of power resources and in the advancement of the art and science of irrigation, Mr Mahida, laid special stress on the need for extending research work specially in the field of hydraulic engineering and allied subjects. It is, however, to be noted that already various research stations under the

Role of Private Sector

Addressing the Mysore Chamber of Commerce, Mr. Nijalingappa, Chief Minister of the State, asked the business community not to have any suspicions about the actions of Government but to have an open mind and do their best for the country. Though the co-operation of the business community had never been one of the uncertainties that beset the Five Year Plan, the spokesmen of the private sector have of late come to entertain a suspicious attitude in regard to the economic policies and measures of the Government. This has necessitated frequent clarifications of the stand of the Government in regard to the private sector.

In clarifying the policy of his Government, Mr. Nijalingappa, sought to emphasise the role of the private sector, in the perspective of the problems of the new and enlarged state. One of the advantages to accrue to Mysore consequent on State reorganisation has been the shifting of its boundaries to cover part of the West coast line. And this has enabled it to command possession of a few ports. The State has in Karwar one of the three best ports in the world. But most of these ports have been left uncared and unattended. Their development would turn out to be profitable only if general industrial and agricultural development is pushed up, without which, the ports would remain out of service. The role of the private sector in such a context is great. Therefore Mr. Nijalingappa assured the business community that far from neglecting it, his Government would encourage the private sector in the development of industries and trade in the new State, and reassuring a fair deal declared that he would not grudge them their profits. He left no doubt about the place of the private sector in the development of the new State, when he said that the private sector was the backbone of the economic structure of the State. At the same time he reminded them of their obligations to the workers and agriculturists who constitute the backbone of society.

Referring to the Second Five Year Plan, the Chief Minister pointed to the unhappy financial position of the State, and said that in view of the difficulty in going to the financial market, the only alternative left to them was to tap the resources of the people by way of small savings and appealed to the people to rise to the occasion and contribute liberally.

*

New Superphosphate Factory

Madras has been the scene of increased industrial activity in recent times, and new industries have been

springing up, mainly due to the initiative of the private sector in that part of the country. The latest and by virtue of its character the most important of the new enterprises are the superphosphate factory and sulphuric acid plant set up at Avadi, by Messrs Shaw Wallace and Company.

The two units are complementary to each other, sulphuric acid being one of the materials used in the production of superphosphate. Their separate siting was explained by Mr. Bathurst, Madras Director Shaw Wallace and Company as being required by the fact that the steam which the sulphuric acid plant would produce could be utilised by the Glue factory.

The starting of this new unit of production fills up a vital gap in the manurial resources of the country. Phosphorous is a valuable fertilizer next in importance only to nitrogen. And the most effective medium for the supply of this element is through superphosphates. Though superphosphates have been

produced in the country by other firms also, in the face of the growing requirements in the country, internal production hitherto had not been sufficient to meet the entire needs. The new factory started at Avadi is expected to fill the shortfall in internal production.

Declaring open the new factory Mr. M. Bhaktavatsalam Minister for Agriculture, Madras paid a tribute to the promoters of the new factory for their enterprise and said that the Government looked to the private sector to make its worthy contribution in the task of reconstructing the country.

Stressing the need to raise the yields in the country Mr. Bhaktavatsalam, said that, in view of the limited area of land available for cultivation more could be produced by better methods of cultivation so that the standard of living of the peasant would be raised. The need for fertilizers was greater in villages and unless the full requirements are met the ambitious target of 20 per cent increase in food production set for the areas covered by Community Development Programme, is not likely to be realized.

and inferior Thekkan quality at Rs 581.25 per candy. In the Kozhikode market, Wynaad quality is quoted Rs 640 and the Country variety Rs 610 to Rs 620 per candy.

According to the Indian Pepper and Spice Trade Association, shipments of pepper, for the first half of this year, have totalled 9,730 tons. The break-up of this figure is as follows:—UK 80 tons; USA 3,675 tons; Russia and East European countries 3,690 tons; Europe 980 tons; Canada 410 tons and others 895 tons.

Internal consumption, during the period under review, amounts to 5,000 tons. Of this quantity, 4,665 tons were despatched to Bombay.

*

Cashew

The State Trading Corporation is reported to be making bilateral arrangement with the trade representatives of East Germany, Yugoslavia and Hungary under which Cashewnuts figure as an item of export from India.

According to an announcement, the arrangement will be, that the rupee credit arising out of State Trading Corporation's purchase from these countries is to be utilised for purchase of certain listed commodities from our country. In case the deal is effected, cashewnut can be exported in large quantities to these countries.

Meanwhile, Iran is reported to have removed cashew from the prohibited list of imports under her new import regulations for 1957-58.

*

Groundnuts

The Madras Groundnut market continued to rule firm with the rate for superior oil-quality seeds quoting Rs 171 and the bold variety at Rs 165, both per candy. Arrivals averaged 25 to 30 tons per candy. Arrivals of summer crop in the South Arcot district centres are large, especially in Villupuram and Panruti with a slight fall at Virdhachalam. Crushers are reported to be concentrating in this district and are making heavy purchases.

In the Groundnut Oil section, the rate for the ready position is quoted around Rs 338 per candy. Calcutta interests are buying heavily. There is not much activity in forward positions.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals and clearances of Cow hides were moderate last week. There were, however, no changes in the arrivals and clearances of Buff, Buff Calf and Cow Calf hides.

On the export front, business continued to be restricted. Enquiry

(Continued on page 194)

Coffee

According to latest reports, Coffee stocks in the Pool were about 27,000 tons by the middle of June—6,000 tons higher than what they were during the same period in 1956. Assuming the internal need to be 16,000 tons up to the end of February next, there will be a surplus of about 5,000 tons, part of which may be allocated to export by the Coffee Board. The present policy seems to favour the maximisation of exports.

At the monthly auction held in Palayamkottai towards the end of last week, following were the range of prices (per cwt):—Plantation Peaberry Rs 228.10 to Rs 230.10; Robusta PB Rs 161.50 to Rs 163.40; Robusta PB Rs 161.50 to Rs 163.40, and Robusta Flats Rs 155.80 to Rs 157.10.

*

Pepper

Pepper markets have continued to rule quiet in the absence of any enquiry from overseas buyers. In the Alleppey market, superior Palai variety is quoted around Rs 587.50

SOUTH INDIAN MARKETS

Windfall for Coconut-growers

A windfall has come to the Coconut-growers in India in the form of a restriction on imports of coconut products from July 1. They are now harvesting the benefits of the foreign exchange device of the Central Government. Naturally, a demand has set in by the non-availability of the imported material. As a matter of fact, there is a rush of orders from upcountry markets like Calcutta and Bombay; and some of the dealers on the West Coast are not able to accept these orders due to their holding of meagre stocks. Indigenous supply of copra is also poor as this is the lean production period in Kerala, not to speak of the fact that production is affected by the inclement weather.

In general, the supply position of copra is very tight now and it is expected that prices are not likely to come down until the supply is increased by imports or as a result of an increase in indigenous production with the change of the season. In the Alleppey market, copra arrivals are thin around 150 candelas and these are absorbed by mills for crushing purposes.

For obvious reasons, prices of Coconut Oil have scored noteworthy advances as spot stuff experiences sustained demand, while millers appear to hold off, anticipating

Stock Exchanges

DULL PHASE IN EQUITIES

Watch-Dog Writes:

DESPITE good corporate news, stock markets have continued to rule sluggish on account of lack of support and stale liquidation. Even bulls do not seem to be bold as they were in previous weeks in view of the withdrawal of support from the Life Insurance Corporation. With the announcement of the Central Government loan, speculation is now rife as to whether the State Governments will also go in for market borrowings. The technical position of the market is, however, favourable for taking small risks by those who are bullishly inclined.

Extremely dull conditions characterised the week's trading on the Calcutta Stock Exchange where

S. E. RLY TENDERS

Sealed tenders are invited for the supply of the following materials:

Tender No. CON/GM/25/F1/57 for supply of (1) 100 tons Galvanised corrugated Iron sheets 22SWG 10'-0" long; (2) 100 tons Galvanised corrugated Iron sheets 22SWG 8'-0" long; (3) 50 tons Galvanised Corrugated Iron Sheets 22SWG 6'-0" long and (4) 50 tons Galvanised corrugated Iron Sheets 20SWG 8'-0" long.

The materials are required to I.S. Specification 277/1951 but commercial quality will also be acceptable. Quotations which are not subject to grant of or recommendation for Import License will be preferred.

Tenders will be opened on August 13, 1957 at 12 noon.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 5/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of Cash Receipt for depositing the amount with the Chief Cashier, S. E. Railway, Garden Reach, Calcutta by local firms.

Earnest money of Rs 1000/- is to be deposited with the Chief Cashier, S. E. Railway and the receipt obtained should be attached with the tender without which tenders are liable to be rejected. Approved contractors who have already made a permanent deposit of Rs 1000/- with the Controller of Stores need not pay the Earnest money.

Firms not on this Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

S44 GENERAL MANAGER

price movements were insignificant. The Bombay Stock Exchange presented a rather subdued tone and prices moved downward on profit-taking and lack of fresh support.

A slightly easy tone prevailed on the Madras Stock Exchange where the general price trend indicated profit-taking.

Wall Street closed Steady with fractional gains predominating.

*

Calcutta

APART from a few firm spots provided by the Engineering and Miscellaneous sections, conditions on the local Stock Exchange remained generally dull during the week under review. Continued anxiety over the developments in the Calcutta Port, uncertainties hanging around fiscal and monetary measures of the Government and the withdrawal of support from the Life Insurance Corporation—all these factors contributed to a depressed sentiment in the market. Operators, therefore, thought it prudent not to extend commitments beyond reasonable limits and were inclined to take quick turns.

The Giltedged market continued to rule quiet with the medium and long-dated issues showing a further recession in prices. With the announcement of the Central Government loan, it is expected that the market may react favourably as the terms of the loan were in line with market expectations. 3 per cent 1986 Conversion Loan started lower at Rs 72.80 and, after improving at one time to Rs 73.12, receded again at the close to Rs 72.87.

Thanks to the higher trend of profits for the first half of the current year, Bank shares attracted some investment enquiry, resulting in a hardening tendency in prices. Punjab National were taken upto Rs 60 and United Commercial upto Rs 58-50 from Rs 59 and Rs 57.75 respectively. Bank of Bikaner came in for business at Rs 18.25.

Jute shares relapsed into dullness on fears of shipments being hampered due to the continued congestion at the Calcutta Port, not to speak of the renewed firmness of raw material prices. Even brokers reported difficulties in the execution of the selling orders. Howrah were offered at as low as Rs 16.06 against Rs 16.37; Reliance at Rs 6.75 against Rs 7.19; Fort Gloster at Rs 288 against Rs 237; Megna at Rs 82 against Rs 87; Orient at Rs 98 against Rs 103 and Budge-Budge at Rs 84 against Rs 90. National, after touching a high of Rs 13.35 and a low of Rs 17.75, finished better at Rs 18.10, thanks to some speculative support. Birlas moved

WORLD OF FINANCE

(Continued from page 164)

cash in the till shows a small decline of Rs 3.15 crores to Rs 35.25 crores.

In the Banking Department, it is to be noticed that Balances Held Abroad, in spite of the transfer of Rs 12 crores from the Issue Department, show a rise of only Rs 2.64 crores. It is, thus, clear that foreign exchange has been lost for another Rs 10 crores during the week; and India's foreign exchange balances are scarcely Rs 31 crores in excess of the statutory minimum of Rs 400 crores.

Investments in the Banking Department are marked higher by Rs 27.91 crores at Rs 246.37 crores. While Rs 18 crores of the rise is accountable by transfer, it is to be presumed that the balance of Rs 10 crores relates to deficit financing; that is to say, Government felt the need of replenishing their balances: ad hoc were sold in favour of the Reserve Bank for Rs 10 crores; Rupee Securities in the Issue Department went up by this amount; but, in view of the currency contraction, the Reserve Bank felt obliged to transfer marketable securities from the Issue Department to the Banking Department.

Deposits of the Central Government, however, are higher only by Rs 0.57 crores at Rs 54.02 crores, thus indicating that their disbursements have been quite heavy, since they would appear to have received Rs 10 crores against deficit financing.

In the case of the State Governments, there is no notable change; their Deposits are higher by Rs 1.68 crores at Rs 3.09 crores and their borrowings from the Reserve Bank are practically unchanged at Rs 27.79 crores.

The slack season conditions as reflected in figures of Scheduled Banks find testimony in the steep increase of Rs 9.11 crores to Rs 87.82 crores in the Deposits of member banks with the Reserve Bank. Moreover, Scheduled Banks seem to have reduced their borrowings from the central banking institution, since the Reserve Bank's Other Loans and Advances registered a fall of Rs 11.36 crores to Rs 69.98 crores. Advances against usance bills have been marked lower by Rs 8.13 crores at Rs 37.26 crores.

According to the return of the State Bank for July 19, a small increase of Rs 1.07 crores to Rs 312.25 crores in Deposits has been recorded. With the total of Advances registering a fresh decline of Rs 2.62 crores to Rs 174.57 crores, the State Bank's cash balances have risen further by Rs 6.44 crores to a new high of Rs 46.53 crores. This indicates that the State Bank accounts for roughly two-thirds of the increase in the balances of Scheduled Banks with the Reserve Bank.

The statement of Scheduled Banks for July 12 records a decline of Rs 1.32 crores to Rs 1,275.58 crores in Deposits; but, since the State Bank, in the relevant week, lost Deposits to the tune of Rs 1.86

crores, it is clear that the other Scheduled Banks have actually increased their Deposits. Borrowings from the State Bank are lower by Rs 0.93 crores at Rs 3.55 crores; and indebtedness to the Reserve Bank has been reduced by Rs 4.46 crores to Rs 51.30 crores. Cash balances show an improvement of Rs 2.25 crores to Rs 150.58 crores; but the State Bank, in the relevant week, had shown an improvement of Rs 3.81 crores in cash balances, thus indicating that the other Scheduled Banks have run down their balances somewhat. Finally, there has been a slack season decline of Rs 10.75 crores to Rs 904.21 crores in the total of Advances. The State Bank's share in the decline in Advances was Rs 4.88 crores.

Bank Profits

The Dena Bank's net profit for the half year ended June 1957 has jumped up from Rs 6.28 lakhs in 1956 to Rs 8.45 lakhs in the first half of 1957. The ad interim dividend is again maintained at 5 per cent per annum and absorbs Rs 1.25 lakhs. The carry forward into the second half of 1957 is also substantially higher at Rs 9.33 lakhs against Rs 6.73 lakhs carried forward into the second half of 1956.

The net profit of the Central Bank of India for the half year to June 1957 has moved up by over Rs 3 lakhs to Rs 47.50 lakhs from Rs 44.36 lakhs in the first half of 1956. The ad interim dividend is maintained at the rate of 12 per cent per annum, absorbing Rs 18.7 lakhs. The carry forward is also nearly Rs 3 lakhs higher at Rs 46.86 lakhs against Rs 43.88 lakhs carried forward to the second half of 1956.

The following telegram has been received from its London Office by the Mercantile Bank of India Limited:

"Interim dividend 12½ per cent less income tax payable 20th August."

The Indian Bank Limited has reported a profit of Rs 23.60 lakhs for the first half of 1957 as compared with Rs 22.43 lakhs in the corresponding period of last year. The Directors have resolved to pay an ad interim dividend of 5 per cent and a bonus of 1½ per cent both free of income-tax for the half year ended 30th June 1957.

The Punjab National Bank Limited has reported a steep increase in its profits for the first half of 1957. The half year's earnings are placed at Rs 56.72 lakhs and compare with the figure of Rs 46.88 lakhs in the corresponding period of 1956. The Directors have, therefore, decided to increase the ad interim dividend to Rs 2.50 per share, free of income tax, from Rs 2.00 per share last year. Deposits of the Bank are reported to have shown a smart increase of Rs 11 crores to Rs 117 crores as at the end of June.

INDIAN INSURANCE COMPANIES' ASSOCIATION

General Insurers Urged to tap vast Potential Market

The view that the progressive implementation of schemes for the economic development of the country was bound to result in a gradual improvement in the general living standards of the people, thereby providing ample opportunities for insurers to add to their premium income, develop new lines of business and improve further the lines they were engaged in, was expressed by Shri R. M. Desai, Chairman of the Indian Insurance Companies' Association, while presiding over the 29th Annual General Meeting of the Association, held on Tuesday, the 23rd July, at Bombay. Shri Desai emphasised that in order to explore and utilise the vast potential market, they required strong indigenous units with high administrative standards, capable of rendering efficient service.

a growing demand for trained personnel, both in the Office and on the Field, qualified to give efficient service to the insuring public. He said it was very heartening to note that the Insurance Institutes in India were providing the requisite training facilities to insurance personnel and he hoped that the insurance staff would take full advantage of the facilities available. Finally, Shri Desai felt another matter which deserved their earnest consideration was proper publicity designed to spread the "gospel of general insurance" among the people.

S. E. RLY TENDERS

Sealed tenders are invited for supply of the following materials: Tender No. CON/GM/27/WP/P&M/45/HA for supply of 6 Nos. Centrifugal Pumping set 820 gallons per minute capacity at 50' head coupled to 20 H.P. electric motor for power supply of 440V/50 Cycles/3 Phase AC, complete with accessories such as cable, starter ammeter, switch etc. for motor and armoured suction and delivery hose pipes, foot valve strainer etc. with couplings.

Tenders will be opened on August 28, 1957 at 12 noon.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 5/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of Cash Receipt for depositing the amount with the Chief Cashier, S. E. Railway, Garden Reach, Calcutta by local firms.

Earnest money of Rs 1000/- is to be deposited with the Chief Cashier, S. E. Railway and the receipt obtained should be attached with the tender without which the tender is liable to be rejected. Approved contractors who have already made a permanent deposit of Rs 1000/- with the Controller of Stores need not pay the earnest money.

Firms not on this Railway's list of approved contractors must enclose valid Income Tax Clearance Certificate with the tender.

S48 GENERAL MANAGER

FOREIGN EXCHANGE

At the outset, Shri Desai stated that a disquieting feature of the national economy was the decline in foreign exchange resources, necessitating the imposition of severe, and in some cases total, restrictions on imports and foreign travel. It would be necessary to step up our exports—both visible and invisible—if this problem was to be tackled effectively and on a long-term basis. In this connection, he mentioned that Indian insurance companies, through their operations abroad, had proved a valuable source of foreign exchange earnings. He added: "There is an excellent scope for our companies to extend their activities still further, particularly to the various neighbouring countries with whom, thanks to our Government's policy, friendly ties have been established. Greater facilities and added incentives should be provided to Indian insurers in order that they could avail of these opportunities and help materially in augmenting our foreign exchange earnings."

NEED FOR STRONG UNITS

The future growth of general insurance, said Shri Desai, was bound up with the progress of industrialisation and the diffusion of insurance consciousness among the mass of the people. Implementation of economic development schemes would result in a gradual improvement in living standards. This, he said, should give "ample opportunities to insurance companies to add to their premium income by developing new lines of business as well as by improving further the lines in which they are already engaged". In this connection, he emphasised the need for a well-organised and integrated market formed of strong indigenous units, with high administrative standards, capable of rendering efficient service.

The Chairman pointed out that with the expanding scope of insurance in India, there would be

ORISSA CEMENT LIMITED,
RAJGANGPUR

NOTICE IS HEREBY GIVEN THAT THE SEVENTH ANNUAL GENERAL MEETING OF THE MEMBERS OF THE COMPANY will be held at the REGISTERED OFFICE OF THE COMPANY AT RAJGANGPUR on Saturday, the 28th September, 1957 at 11-45 A.M. to transact the following business:—

- To receive and adopt the audited Balance Sheet, Profit and Loss Account and Appropriation Account for the year 1956, the report of the Directors and the Auditors thereon, and to declare a dividend. (The Directors have recommended a dividend of 4½% on preference shares and 12½% on ordinary shares free of Income Tax).
- To elect a Director in place of retiring Director Shri V. H. Dalmia.
- To elect a Director in place of retiring Director Shri Kamalnayan Bajaj.
- To appoint Auditors for the current year and to fix their remuneration.
- To consider and pass the following ordinary resolution:

"RESOLVED THAT it be and is hereby confirmed that the dividend declared on the 29th September, 1956 for the accounting year 1955, was intended to be free of Income Tax, and the payment of dividend as such for the said year is confirmed."

- To consider and pass the following resolution as a special resolution, with or without modification, as thought fit:

"RESOLVED BY WAY OF SPECIAL RESOLUTION THAT—

- the opening of a current account with Dalmia Cement (Bharat) Ltd., a company under the same management, be and is hereby authorised subject to the condition that the amount due to this company on the said account at any time shall not exceed Rupees Twenty Lakhs;
- the transactions with Dalmia Cement (Bharat) Ltd., a company under the same management, till date, under which this company received temporary loans on a few occasions be and are hereby approved;
- approval be and is hereby accorded to the

supply to and receipt from Dalmia Cement (Bharat) Ltd., a company under the same management, of services, spare parts and other equipment, whenever required, whether by way of transfer or loan, and the transactions of such nature till date are confirmed."

- To consider and pass the following ordinary resolution with or without modification, as thought fit:

"RESOLVED THAT the Directors be and are hereby authorised to borrow moneys whenever required, provided that the moneys so borrowed together with the moneys already borrowed by the company (apart from temporary loans obtained from the company's bankers in the ordinary course of business) do not exceed the aggregate of the paid up capital of the company and its free reserves, that is to say, the reserves not set apart for any specific purpose, by more than Rupees Fifty Lakhs".

- Any other business that may ordinarily be transacted at an Annual General Meeting.

The Share Transfer Books of the Company will remain closed from 2nd September to 28th September, 1957, both days inclusive. The dividend when sanctioned, will be made payable to those shareholders whose names appear on the Register of Members on 28th September, 1957.

Every shareholder entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of him/her and such proxy need not be a Shareholder. The proxies should, however, be deposited at the Registered Office of the Company not later than 42 hours before the commencement of the Meeting.

By Order of the Board of Directors,
For ORISSA CEMENT LIMITED,
For DALMIA AGENCIES

PRIVATE LIMITED,
J. DALMIA

Director,
Managing Agents.

Dated: 16th July 1957.

EXPLANATORY NOTES:

Item No. 5 of the agenda: The auditors have pointed out that at the declaration of dividend for the accounting year 1955, it has not been made clear that the dividend is free of Income Tax, as it was paid. Even though the inten-

FOR THE INVESTOR

(Continued from page 156)

Spinning Rs 25 lakhs, Sarada Rs 26 lakhs and Dhanalakshmi Rs 24.3 lakhs.

Many more mills have announced their intention to raise additional capital and are contemplating further additions to their spinning capacity. For some reason or other, many of the units in Madras have been content to be medium or small sized and there was not, until recently, much anxiety to instal new spindles. As internal consumption has tended to increase and the working results have been encouraging, there is some anxiety to add to capacity. As the ownership of shareholdings in many of the companies is somewhat concentrated, the requisite capital has been found more easily. The growing stature of South Indian mills is an encouraging feature from the regional angle.

Dhanalakshmi Mills, Coimbatore, have decided to issue new equity shares of Rs 100 each for cash, at par, in the proportion of one new share for every share held as on August 1, 1957.

The shares of Steamship companies have been rulling very steady during the past few weeks. The main inspiration for the sustained support is provided by the fact that these companies have been exempted from the application of compulsory deposit rules for current profits.

Orissa Cement Company has maintained the dividend at Rs 1.25 per share on the Ordinary shares for 195

BALANCE-SHEET REVIEWS

(Continued from page 158)

March, 1957 have been well received by the market. The increase in the ordinary dividend to 20 per cent from 10 per cent for 1955-56 has come as an agreeable surprise. A larger tea crop, higher prices and lower costs were responsible for the sharp increase in the net profit, before providing for taxation and depreciation, for 1956-57 to Rs 8.73 lakhs from Rs 3.87 lakhs for 1955-56. The provision for depreciation is Rs 55,778 against Rs 86,855 while the allocation toward taxation is appreciably higher at Rs 4 lakhs against Rs 1.13 lakhs. After transferring Rs 2 lakhs to general reserve against Rs 1.50 lakhs on the former occasion, the dividend has been doubled to 20 per cent. The amount carried forward is higher at Rs 59,138 against Rs 28,622 brought in.

The tea crop realised in 1956-57 was higher at 13,80,470 lbs against 12,03,192 lbs in 1955-56 and the average price realised was Rs 1.80 per lb against Rs 1.69 per lb; and the cost of production was Rs 1.32 per lb against Rs 1.41 per lb. The estimates for 1957-58 provide for a crop of 13.50 lakhs lbs. The coffee crop was higher at 158.5 tons against 112 tons.

Reserves amount to Rs 12 lakhs against the paid-up capital of Rs 9.33 lakhs. The value of the estates is given at the net figure of Rs 15.96 lakhs in the balance-sheet. There is, therefore, a case for the issue of bonus shares. Cash balances are rather ample, in relation to the size of the company's business, at Rs 4.13 lakhs.

★

Travancore Chemicals

The Travancore Chemical and Manufacturing Company Limited during the short period of its existence has been able to make rapid progress. The chemicals that are manufactured by this company are of a pioneering nature and the quality is considered good. During the year ended March 31, 1957, there was an increase in production and sales of potassium chlorate and the Kundara factory was able to show good results. Meantime, it was thought advisable to start a factory in Alwaye for the manufacture of copper sulphate for which there is a great demand. The factory was completed in March this year and regular production commenced in May last. The cost of constructing the new factory was found by the issue of additional capital for Rs 5 lakhs—Rs 2 lakhs in ordinary shares and Rs 3 lakhs in 6½ per cent preference shares which were fully subscribed. A loan of Rs 2 lakhs was also obtained on the security of the company's assets from the Kerala Financial Corporation. This small accommodation from the Corporation, however, has meant undue interference with the policy of the directors in regard to the payment of dividend on the ordinary shares for the year ended March 31, 1957. As it is anticipated that the results for the current working year will

prove to be satisfactory, the directors thought that a decent dividend might be paid on the increased capital. Even so, the amount involved in the payment of the ordinary dividend, as recommended by the directors, will be less than in the previous year, being only Rs 50,000 against Rs 60,000. It was stated at first that a dividend of 10 per cent on the ordinary capital may be paid against the dividend of 20 per cent on the former occasion on a paid-up capital of Rs 2 lakhs. The paid-up ordinary capital now ranking for dividend is Rs 5 lakhs. The Kerala Financial Corporation, however, has stated that a dividend of 6 per cent only can be paid. This has upset the market to a certain extent. It is even suggested that ways and means might be found to repay the loan taken from the Kerala Financial Corporation. It will not be surprising therefore, if there is shortly a fresh issue of capital for Rs 2 lakhs. In that event, higher dividends can be paid for 1957-58.

The net profit, before providing for taxation and depreciation for the year ended March, 1957 was Rs 1,63,302 against Rs 1,37,403 for the previous year. The sum set aside to depreciation is Rs 22,591 (Rs 21,018) and taxation Rs 70,000 (Rs 55,000). The dividend of 6 per cent will require only Rs 30,000 against the provision of Rs 50,000 made in the accounts for the payment of an ordinary dividend of 10 per cent. The carry forward will, therefore, be higher by Rs 20,000 at Rs 33,131. The results for the last accounting period were entirely on account of the Kundara factory. The profits for the current year are expected to be appreciably higher on account the copper sulphate factory coming into production.

★

CLIVE STREET GOSSIP

(Continued from page 172)

from a bricklayer in Barbados by the firm for which he worked:

"Respected Sir,

When I got to the Building, I found that the hurricane had knocked some bricks off the top. So I rigged up a beam with a pulley at the top of the building and hoisted up a couple of barrels full of bricks. When I had fixed the building, there was a lot of bricks left over. I hoisted the barrel back up again and secured the line at the bottom, and then went up and filled the barrel with extra bricks. Then I went to the bottom and cast off the line. Unfortunately, the barrel of bricks was heavier than I was, and before I knew what was happening the barrel started down, jerking me off the ground. I decided to hang on and half-way up I met the barrel coming down and received a severe blow on the shoulder. I then continued to the top, banging my head against the beam and getting my fingers jammed in the pulley. When the barrel hit

narrowly between Rs 15.00 and Rs 15.12.

Coal shares remained practically unchanged in the absence of any fresh support. Operators, before extending commitments, were inclined to await the decision of the Coal Prices Revision Committee. Burrakur were a shade better at Rs 22.00 against Rs 21.75 on settlement considerations. Bengal eased off further to Rs 227 from Rs 231. Western Bengal were on offer at Rs 5.31 against Rs 5.44, while Equitable and Central India hovered idly around Rs 23 and Rs 6.00 respectively.

Sentiment remained subdued in the Textiles section on pessimism regarding current earnings of mills and their effect on distributions. The only steady features were Cawnpore having sustained support upto Rs 7.31 from Rs 7.12 and Elgins upto Rs 22.25 from Rs 22.00. Dunbar recovered partially to Rs 146.50 from Rs 144 with New Victoria rather sticky at Rs 1.75. Kesoram, after touching a high of Rs 13.56 from Rs 13.50, receded at the close to Rs 13.25 on lack of follow-up support. Jayshree turned quiet at Rs 6.19 against Rs 6.25.

A halt was cried to the rising trend in the prices of Tea shares which had been noticed during the past few weeks. The two main factors for the sudden change in sentiment were the disappointing auction results for the second week in succession and the continued anxiety over the Port congestion which, it was felt, might delay shipments intended for the UK. Anxiety was also shown with regard to the outlook for the 'rains' teas. Bhakawa changed hands at Rs 24.25 to Rs 24.50 against Rs 24.62 in the previous week; Bishnauth at Rs 21.12 to Rs 21.37 against Rs

STOCK EXCHANGES

(Continued from page 181)

21.62; Dhehalkhat at Rs 23.62 to Rs 23.87 against Rs 24.12; East India at Rs 22.37 to Rs 22.60 against Rs 25.25; Hasimara at Rs 22.87 to Rs 23.50 against Rs 23.37 and Tezpur at Rs 21.50 to Rs 21.75 against Rs 22.00.

Quieter advices from the commodity market and rumours of control over prices caused a slightly easier tendency in the Sugar section. Only two firm features were Carew and Belsund having sustained support upto Rs 7.75 and Rs 10.87 respectively. Balrampur were, however, cheaper at Rs 5.44 against Rs 6.50. Champarun recovered partially to Rs 21.37 from the recent low of Rs 20.50 with SKG ruling practically unchanged at Rs 10.12.

Engineering shares moved rather irregularly on alternate bouts of buying and selling. Prices movements in Indian Irons and TEXMACO were, however, subjected to settlement adjustments till Wednesday after which the scrips tended downward on lack of support. Against the week-end closing of Rs 20.15, Indian Irons opened lower at Rs 20.06 and, after improving at one time to Rs 20.16, receded again to Rs 19.93, to finish the week better at Rs 20.09. In sympathy New shares, after touching a high of Rs 19.06 from Rs 18.96, receded to Rs 18.81, to finish at Rs 18.96.

Among other Engineering scrips, G. K. Williams were a very firm feature, having buyers upto Rs 27.87 from Rs 27.62. Burn changed hands at Rs 314 to Rs 317; Braithwaite at Rs 27.37 to Rs 27.62; Briannia at Rs 12.75 to Rs 12.87; Jessop at Rs 24.25 to Rs 24.81 and Richardson at Rs 14.25 to Rs 14.37. TEXMACO, after touching a high of Rs 17.95 and a low of Rs 17.60, finished at Rs 17.70.

Following were the settlement rates, the figures shown within brackets being the last settlements: Indian Irons Rs 20.06 (Rs 20.09); New shares Rs 18.96 (Rs 18.85); TEXMACO Rs 17.60 (Rs 17.50); Orient Paper Rs 25.00 (Rs 25.00); Indian Copper Rs 3.30 (Rs 3.42); National Jute Rs 18.05 (Rs 18.15) and Burrakur Coal Rs 22.00 (Rs 22.00). The carry-over charge for next settlement in Indian Irons is 6 p.

Except for a few firm spots, the Miscellaneous section ruled generally dull with prices developing an easier tendency on tired liquidation. Prominent were NICCO having sustained buyers at Rs 21.90 to Rs 22.44; Indian Aluminium at Rs 13.50 to Rs 13.62; National Carbon at Rs 24.44 to Rs 24.62; Rohtag at Rs 18.25 to Rs 18.56; Dunlop Rubber at Rs 20.81 to Rs 21.12 and India Steamship at Rs 10.20 to Rs 10.40. Indian Copper were a steady feature at Rs 3.30 and so also BIC at Rs 6.70. Indian Cable, after being taken up to Rs 24.25 from Rs 24.06, were marked down to Rs 23.69, to finish better at Rs 23.87. In the Paper section, Orient moved rather irregularly between Rs 24.75 and Rs 25.25, to close at Rs 24.80. Titagur were, however, better, at Rs 32.81 against Rs 32.56 with India Pulp ruling very steady at Rs 20.00. Shree Gopal were nominally quoted around Rs 15.20.

★

WORLD OVERSEAS

(Continued from page 170)

confidence as with metal and other established materials".

Due to the Board's efforts, rubber rail pads were tried out in various Commonwealth countries, and railway authorities became keenly interested in their possibilities.

NORTH INDIAN MARKETS

(Continued from page 178)

reasons, shipments from Calcutta in the current month up to the 19th were only 16,373 packages as against as much as 23,255 packages in the corresponding period of June.

★

Gur

Better buying enquiry from the Punjab, despite heavy local stocks at 56,000 maunds against 20,000 maunds last year, has accounted for a slight improvement in Gur prices in the Hapur market. Pan-sera quality is quoted at Rs 11.37 to Rs 12.50 per maund and Kotha dry-wet at Rs 11.25.

★

Foodgrains

Steady to firm conditions have prevailed in the Foodgrains market during the week. In Hapur, Wheat prices have recorded an advance of Rs 1 per maund as daily arrivals are small and stockists are reluctant to sell their stocks, expecting better prices in the lean period. The market for Rice, however, rules quiet. Gram has recorded a strident advance on firmer Punjab advices and poor stocks. Barley and Bejher have also improved slightly in line with the general bullish trend in prices of other grains. Due to heavy off-take by Eastern Uttar Pradesh and Bihar and continued outside buying support, Peas prices have recorded sharp advances. Arhar prices have also hardened in sympathy. Meanwhile, the all-India final estimate of small Millets for 1956-57 puts the current year's area and production at 12,209,000 acres and 2,010,000 tons as against the partially-revised estimates of 12,713,000 acres and 1,937,000 tons for 1955-56.

In the Delhi grains market, prices have shown a mixed trend. Wheat has recorded a rise of 50 p per maund on reports of a decline in arrivals, while Gram rules steady following encouraging advices from the Punjab. Rice prices have shown an improvement of about Rs 3 per maund on account of shortage of stocks. Sowing of Bajra is almost finished; and this has induced only small demand resulting in an easier tendency in rates. Pulses have, however, exhibited a rising trend.

The Bombay grains market has presented a quietly steady appearance. After an initial rise in prices, Rice reflected a slightly easy tendency, mainly due to buyers' resistance to high prices. Trading in indigenous Wheat is small with the prices ruling steady. In the Coarse grains section, Jowar prices have remained steady, while the trend of Bajra prices is unchanged.

Among Pulses, Gram presented a firm spot with the prices rising by Rs 4 per candy for the Punjab quality. The advance in prices was attributed to higher advices from the Punjab. Other pulses ruled quietly steady with the prices ruling around the levels of the previous week.

OLYMPUS

(Continued from page 177)

either side has become impossible, in view of the strained relations between the two countries for more reasons than one. While India has always been anxious to isolate the canal waters dispute from other issues like Kashmir, Pakistan seems to delight in bundling up everything, big and small, and throwing the pile at India's face. That is an attitude which can scarcely help. It is also regrettable that Pakistan, consciously or unconsciously, takes up a position in which India is required to give first priority to Pakistan interests as against those of India itself, in the matter of utilisation of waters which run through Indian territory.

Any other country in Pakistan's position would have completed the alternative link canals by this time. As it is, Pakistan is content to maintain the status quo, which, incidentally, does imply a faith in India's sense of a moral obligation. The very fact that India has been without break supplying the waters intended to feed the fields of the Western Punjab all these years is sufficient testimony to its desire to see Pakistan prosperous and free from economic difficulties. Once this simple fact is recognised for what it is worth in influential foreign capitals, the hollowness of Pakistan's malicious propaganda and tall claims against India will stand self-refuted.

But instead of cooperating to prepare a suitable atmosphere for further negotiations, Pakistan leaders are again raising war cries against India and trying to push India into a position in which some kind of resort to force might become unavoidable. The Kashmir Premier, who had come here last week, has openly charged that the series of bomb explosions in Jammu and Kashmir were engineered by Pakistan with the object of creating panic and disorder in the State. A couple of weeks ago, there were rumours of split in the Kashmir Cabinet. Bakshi Gulam Mohammad claims that every thing is well with Kashmir and Pak attempts to incite disaffection have been nipped in the bud. One likes to believe that the Kashmir Premier knows everything and does not hide anything.

Akbar Khan, one of the leaders of the Kashmir invasion in 1947 and who was dismissed from the army in connection with the Rawalpindi Conspiracy Case, has now taken up the leadership of a movement calculated to foment an internal rising among the Kashmir population and getting India involved in an armed clash with Pakistan. He describes his strategy in the following terms:

Although this movement will be internal, it will necessarily involve a risk of war, because India will go from repression to hurling threats of war at us. If the Government of Pakistan does not succumb to these threats and does not prevent the people of Kashmir and those of

us that assist them, the movement will go on until India's position in Kashmir becomes so precarious that she will either have to negotiate or commit open aggression against Pakistan. In either case, that and only that will be the time when the world will no longer be able to remain complacent and the United Nations may have to step in.

This means two things; first that there must be a strong internal freedom movement in Kashmir and second that we (Pakistan) must accept the risk that this movement might lead to war. I call it only a risk because I feel that when finally brought to the verge, India will

not commit aggression against us—and if she does we shall be able to defend ourselves.

Mr Feroze Khan Noon is glad that China has proclaimed its neutrality on the Kashmir issue. He quotes a reported statement of Mao as proof of China's attitude. And, with astounding disregard of facts, he attributes Indo-Pakistan tension to "Russian support of India".

Though all this Quixotic exuberance will not upset India, it may queer the pitch for further negotiations on the canal waters. Unless Pakistan places itself in the proper mood for serious talks, no progress could be achieved. The only silver lining in the sky is the restraining influence induced by the more realistic counsels of Pakistan's Western friends.

★

WORLD OF BUSINESS

(Continued from page 167)

formance in this regard has been very disappointing. Not only no exports have taken place so far but it is said that the potentialities of promoting exports to nearby countries are slender. A number of factors have been found to be retarding progress in this direction. In the first instance, the price of Indian bicycles is too high to enable them to compete with other manufacturers. Secondly the Indian product, being a new entrant, has to contend against reputed brands which have been in the field for a considerably long time. Perhaps the greatest stumbling block is the inability of some of our major manufacturers to send their products to these markets.

In the course of the Tariff Commission Enquiry, it has been revealed that this disability has occurred because of existing agreements between three of the manufacturers and their foreign collaborators which prevent the Indian companies from selling their products outside certain specified territories. It is, however, gratifying to note that two manufacturers of indigenous bicycles are investigating the possibility of exporting five to ten per cent of their production at reduced prices, and the Government have already agreed to give drawback of customs duty to exporters to the extent of 7/8 of the average duty on imported materials used in the manufacture of cycles which are exported. It is to be hoped that Authority will simplify the rules governing the refund so as to make the concession really effective. It would, however, appear that the programme of bicycle exports can be realised to some extent at least only if the three manufacturers take active steps to modify the relative terms in their existing agreements so as to enable them to sell their products in India's natural overseas markets.

The question of export promotion has to be tackled sooner or later for the simple reason that even at the present sanctioned level of installed capacity, there will be a surplus after meeting the anticipated increase in demand in the next four years. present position of the

industry is briefly as follows: Production (1956) 691,257; demand about eight lakhs; total sanctioned installed capacity 17.16 lakhs; anticipated demand by end of 1960 fourteen lakhs.

It will be evident from the figures given above that when the entire sanctioned installed capacity is attained, there will be a surplus of 3 lakhs bicycles over domestic demand. A point to be noted when talking about installed capacity is that the estimate refers to only single shift working in most of the units, as only four of them have so far been permitted to work double shift. It is estimated that when all the units work double shift, the organised sector alone will be able to produce nearly 20 lakhs bicycles per annum.

★

The Caltex Refinery at Vizag

The Caltex Oil Refinery at Visakhapatnam is now in full operation. Since the last unit went on stream on July 14, tests confirm that the entire refinery is operating satisfactorily and will be able to maintain its designed capacity.

Costing Rs 15 crores, the Refinery took approximately two years to build. It is situated on a site of 515 acres leased from the Visakhapatnam Port.

The Caltex Refinery's yearly output of quality products is 74,000,000 gallons of petrol, 21,257,000 gallons of superior kerosene, 8,177,300 gallons of inferior kerosene, 31,631,000 gallons of diesel oils and 26,495,000 gallons of fuel oils.

★

EDITORIAL NOTES

(Continued from page 162)

the value of the imported fibre. Here, an imaginative revision of this particular condition seems called for. But against these temporary difficulties are cited the increasing demand particularly through the expansion of the shipping industry, improvement in the quality of Indian rope and the confidence that the industry can meet the full requirements of the country.

WORLD OF INSURANCE

(Continued from page 166)

achieved, for, the forced savings in expenses are offset by outgo in claims. This has been, for the past six years, the major problem for Indian general insurance. The "Code" is a police measure calculated to police the affairs of the companies. The law is thus more to blame than the companies themselves.

Direct business in India is controlled in the matter of expenses, not direct business outside India. This has given the companies opportunity to loan a large part of the expenses to business outside India. Not that they deliberately wanted to do so, irrational rule in India has forced their hands. Thus, first class insurers of very high standing had to take recourse to

this procedure. Perusal of ratio of expenses to gross business written direct in India and outside India contained in a table in the Year Book makes for interesting reading. Almost in all the cases, outside expense ratio is heavy. Making all allowances for expenses involved in foreign business, there can be little doubt that expenses have been loaded to business outside India as far as possible to ensure that in India there is no breach in regulations.

This is, if correct, a direct consequence of the Act. Indian general business cannot be arrested from drift by codes and regulations unless the law is radically amended. It is to this that the mind of the Executive Committee requires to be focussed.

EUROPEAN FREE TRADE PROSPECTS

(Continued from page 165)

chosen. It would be in accordance with traditional British economic liberalism. The quasi-religious belief in free trade that developed in Britain during the 19th century dies hard. There are still millions of people in Britain who would cheerfully sacrifice agriculture at the altar of their dogmatic free trade creed.

There is much criticism of the official British attitude on the continent. Italian and French critics bitterly complain that, while Britain is anxious to secure for British industries the benefits of the Common Market, she is unwilling to pay the price for such benefits by allowing continental agriculture freer access to the British market. Such criticisms overlook the fact that, even if the Common Market is confined to manufactures, there are bound to be industries in Britain which would stand to lose through intensified continental competition. Moreover, continental countries intend to retain the protection provided to their industries by various 'invisible tariffs.'

To give a concrete example, even the Common Market France and Belgium would remain fully protected against unwanted imports of drugs by their elaborate system of registration of drugs. At present it is more effective in preventing the import of drugs than the relatively moderate customs tariff. Foreign exporters often find that to overcome the unfriendly attitude of French or Belgian officials would be more trouble than it is worth. As for Italy, there is no indication that under the Common Market scheme she would be prepared to relinquish the advantages secured by her refusal to recognise foreign patents and trade marks. Italian industries are in a position to 'pirate' foreign inventions, and this secures them considerable advantage over their foreign rivals. There can be no genuine economic unification of Western Europe so long as such a state of affairs is allowed to continue.

There are many other similar instances to show that those who

believe that the adoption of the Common Market scheme would mean the establishment of a United States of Europe are guilty of unwarranted optimism. Nevertheless, progress in the desired direction is uncouthly gratifying.

—Copyright.

THE PENINSULA

(Continued from page 179)

Central Board of Irrigation and Power have formulated a number of hydraulic theories which are of universal application.

An important direction in which research must come to the help of irrigation engineers is in the matter of solving the problem of 'siltation of reservoirs'. Mr Mahida pointed out that unless effective remedial measures were taken from the very inception of our dams and reservoirs, which were designed to be permanent works, siltation would limit their usefulness to a few scores of years.

The preminent role of research in the field of utilisation of water resources has been forcefully brought to the fore in recent years by the occurrence of disastrous floods in several parts of the country. The problem of flood control forms part of the main problem of harnessing of water resources because in effect it is a question of conservation of the waters that will otherwise go to waste. It is estimated that out of about 1356 million acre-feet which flow down India's rivers annually about 94.4 per cent runs to waste often causing extensive damage in their course toward the sea. Though it is true that the percentage that is used for purposes of irrigation and power will be considerably increased, it is to be noted that there will still be left a major portion which will continue to be wasted.

His Highness Sri Jayachamaraja Wadiyar, Governor of Mysore, who inaugurated the meeting, has stated the problem succinctly thus: "If all our experience points to one need, it is the need for research and study of all aspects of water and its optimum utilisation for man's purposes".

GATEWAY MARKETS

(Continued from page 176)

twice those in the previous year. The quantity imported in 1952-53 is said to have been 19,472 tons; in 1953-54 7,844 tons; in 1954-55 18,737 tons; in 1955-56 17,094 tons and in 1956-57 36,357 tons. The increased demand for the copper, consequent on the expansion in industrial activity, has also been in no small measure contributed to the heavier imports during 1956-57. As larger imports have been made, it looks as though hoarding is contributing to the rise in prices.

Copper ready is quoted at Rs 183 (per cwt); Zinc at Rs 90 (per cwt); Lead at Rs 90 (per cwt) and Tin at Rs 141 (per quarter). On the London Metal Exchange, Copper ready is quoted at £210½ per ton; Tin at £746; Zinc at £74½ and Lead at £90.

Yarn

Steady improvement in Staple Fibre Yarn was the only outstanding feature in an otherwise dull Yarn market in Bombay. Conditions remained mostly unchanged in Art Silk Yarn. Traders were awaiting the Government's policy about the conversion of unutilised import licences.

There are strong indications that the Government of India are seriously considering the fixation of a ceiling on the selling prices of Art Silk Yarn, produced by indigenous manufacturers, with a view to check the rising tendency in prices as a sequel to the drastic cut in imports during the current licensing period.

The market for Cotton Yarn continued to be listless with no improvement in export as well as internal demand. Although the Government have decided to continue to allow for export limited quantities during the July-September period, it had no effect on market sentiment.

SOUTH INDIAN MARKETS

(Continued from page 180)

was mostly confined to runs and fourths. There was fair enquiry for light weights runs and fourths on the basis of 63d and 56d respectively.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were moderate, and there was a balancing clearance. Prices were a shade easy as compared to pre-auction levels.

On the export front, the tendency of buyers seemed to be one of 'wait and see' in view of the nearness of the August-holiday period.

The markets for Raw Hides and Skins remained unchanged.

GATEWAY NOTES

(Continued from page 174)

and fertilizers to achieve this goal. Plant protection measures have also to be stepped up as cotton crop is highly susceptible to insect attack and attack by fungi and bacteria. In this connection Dr Randhawa referred to the Committee's decision to appoint an entomological assistant in each state.

The acreage under improved varieties has been increasing over the years and in 1956-57 the acreage was 14.4 million acres. Distribution of improved seeds is also tending to move up and in 1956-57 about 805,924 maunds were distributed against 718,670 maunds in 1955-56. This would need to be stepped up to catch up with the increasing consumption of cotton by mills in India.

Dr Randhawa, also referred to the wide difference between the official and trade estimates of cotton crop in the country and observed that the Directors of Economics and Statistics of the Ministry of Food and Agriculture had considered the feasibility of applying certain corrective factors to official estimates.

GATEWAY GOSSIP

(Continued from page 173)

TMB trucks is itself evidence of the sustained demand for them. What is more, this was in spite of the output exceeding the target figure of 6,000 units. The directors state that the programme for indigenous manufacture of components is proceeding strictly to schedule, though recent tightness in the nation's foreign exchange position threatens to retard future progress.

The third aspect relates to foundry work. The steel foundry is likely to go into full production before December; the alloy iron foundry is making good progress; the foundry buildings have been erected, and two electric melting furnaces will go on production this month. So, expansion in this sphere is also up to expectations.

But all this means money. So far, resources for capital expenditure have been found from retained profits and from borrowings from banks (this latter proving the contention of this journal that short term banking accommodation

is being put to medium term use by industry). While this has sufficed for the past, the present anticipation is that costs of further expansion over the next two/three years will be greater than the quantum of retained profits. The directors are believed to be studying the question of how best the necessary funds can be raised.

I am sure Watchdog will excuse this last, brief paragraph. But I needs must mention in passing that TELCO's net profit in 1956-57 works out to Rs 89.15 lakhs, which compares with the previous year's Rs 92.73 lakhs—but this included two years' profits of locomotive working. Sales have skyrocketed to Rs 21.44 crores from Rs 11.98 crores. Depreciation receives less at Rs 70.13 lakhs against Rs 1.05 crores; and tax gets Rs 27 lakhs against Rs 32 lakhs. The transfer to Reserve Fund is raised by Rs 2 lakhs to Rs 20 lakhs.

In brief, wonderful TELCO news for the shareholder.

July 27, 1957]

world

To and fro fly the shuttles in the 70,000 looms of India's 105 jute mills. Each travelling at a speed of 9,000 picks an hour (the length of a pick averages two yards), these shuttles together cover a distance equivalent to about 70,000 trips round the world, weaving 1,000,000 tons of jute cloth each year. The jute industry is India's most important foreign exchange earner; jute products form over 60% of India's dollar exports. Texmaco, pioneer manufacturer of cotton textile machinery in India, also supplies this important industry with the complete range of jute mill machinery, designed and built to established international standards, in technical collaboration with the world renowned British company, Fairbairn Lawson Combe Barbour Ltd.

The Indian Iron Dividend

Investment Gossip:

Another year has passed, another year in which the shareholders in the Indian Iron & Steel Co. Ltd., despite the best efforts of the Management, has been denied a proper participation in the resoundingly improved earnings of the company. The IISCO dividend, it became known last Tuesday, was to be maintained at Re 1 per share, because the Directors' approach to Government for permission to increase the dividend had been "without avail". The news accordingly had a bearish impact upon stock exchanges.

Advisedly, I say that repercussions flowing from Government's refusal to approve an increase in the IISCO dividend affect, not only Indian Irons, but the whole gamut of stock exchange quotations. I am afraid it passes my comprehension that Government should be so obtuse about sanctioning an increase. It is apparently a proposition beyond the Government's capacity or willingness to appreciate that what affects Indian Irons touches upon the investment climate as a whole. In America the saying is: What is good for General Motors is good for the country. In the Indian Stock Exchanges, what touches Indian Irons has an immediate impact on all stock exchange behaviour.

In this light, surely, it should have been possible for Government to unbend so far in their attitude as to permit, say, an increase of 25 paise a share. The additional liability of the company for such increased distribution would have been a scant Rs 13 lakhs. When it is borne in mind that every other entity concerned—Government in their taxation receipts, labour in its bonus and emoluments, and the managing agents in their remuneration—has shared in the expansionary earnings of the company, the injustice done to the shareholder in being denied an increased distribution becomes more clearly apparent.

Anyhow, there is no use crying over spilt milk. The small consolation that the shareholders can derive is in the very satisfactory working performance of the company and in the real strengthening of the balance sheet position.

Market reports indicate that the provision for depreciation is Rs 1.35

crores. The transfer to reserves is understood to be Rs 2.28 crores. The amount available for distribution—or the net profit—is said to be Rs 69.98 lakhs against the corresponding figure of Rs 65.18 lakhs for 1955-56.

Meantime, Dalal Street had to contend with the prospect of an in-road into future profits of TISCO on account of deferred taxation. The results for 1956-57 are, while in themselves satisfactory enough, interpreted as suggestive that the pressure of tax on profits will be greater in the succeeding years. The gross profit is said to be Rs 21 lakhs lower at Rs 11.45 crores. But the key point is that, while the saving

on account of depreciation allowances, etc., is estimated to be in the neighbourhood of Rs 75 lakhs, the 1956-57 profits would allow of a provision for deferred tax reserves at no more than Rs 15 lakhs. So, there is the distinct prospect that, with the vast additions made to block, the demands of depreciation will also gather in volume.

Nevertheless, Dalal Street, too, can discern some silver linings. With the fixed assets showing a sharp rise of nearly Rs 24 crores, the balance sheet total, at Rs 98.28 crores, is in sight of the Rs 100 crore mark. The financing of the expansion programme necessitated a sharp rise in secured loans as well as an increase under unsecured loans; under these two heads, the rise exceeds Rs 9 crores. Moreover, bank balances have been drawn down from Rs 6.44 crores to Rs 3.73 crores.

Such are the broad outlines of the accounts of the two Steel Companies. A detailed study must await the receipt of the balance sheets.

Face Value of Shares

By K. V. IYER

Investment Special:

Rarely does a person look at a problem from several angles. It is not therefore surprising that the President of the Madras Stock Exchange Association should have, in his recent address, stated that shares with a paid up value of Rs 1 to Rs 5 account for a large turn over and pleaded that companies with shares of higher denominations should split them into smaller units. The bias is obvious and his recommendation should be taken with more than a pinch of salt.

We have now shares of values ranging from Rs 1 to Rs 100, those of larger denominations having long since fallen into disuse. In actual practice companies do not entertain applications for less than 100 shares nor otherwise than in multiples of hundred in the case of shares of small denominations and for 25 or 50 shares and multiples thereof in other cases. In effect nobody can apply for a small number of shares in such cases.

In the final analysis, the total value of shares held by the very small share-holders is trifling and is but an insignificant contribution to the capital of a company as statistics have proved. Another argument is that in the present day levy of taxes on dividends declared by companies, the market values of shares are not likely to become

several times their face value and thus place them beyond the reach of persons of moderate means. There is thus every reason for discountenancing issues of shares of less than Rs 10 in the case of equity shares and Rs 100 in the case of preference shares, considering that the capitals of companies are now inclined to run into crores of rupees.

Further with the face value of Rs 2 or Rs 5, the number of shares in a company gets to astronomical dimensions which is not desirable. A large number of share-holders having but a nominal stake in a company is a mere burden involving a large amount of clerical work in the despatch of notices, reports, dividend warrants for trifling amounts etc, fairly large expenditure on stationery etc and adding largely to expenses not worth while.

The real objective of the Companies' Act, 1956, is that the shareholder should take an active interest in the affairs of his company and exercise a larger control over the management. This object cannot be achieved when the number of share-holders is very large, for the feeling of a small share-holder in such circumstances is likely to be that he is but a drop in the ocean and that he may as well not attend a meeting or being present not raise his voice. For a share-holder to take an interest in a company, he

must have a appreciable stake in it. This, what must be encouraged and cannot be achieved by merely reducing the face value of the share. Low face values may encourage persons who desire to collect reports of companies but not dividends.

There is another point worth consideration. Whereas stamp duty depends on the total value of a transaction as disclosed in a transfer deed, the broker's remuneration is per share. Why should it not be fixed on the same basis as stamp duty?

Another point is the minimum charge levied by a company for the registration of a transfer deed. Some companies levy the charge according to the number of shares dealt with in a transfer deed. This is not correct; the same standard fee should be levied. For the registration fee is not a recognised source of profit to a company but is intended to recoup incidental expenses in connection with the registration and this work does not vary with the number of shares included in a transfer deed.

ER§

Investment Notes:

The shares of Larsen & Toubro are ruling firm at Rs 15.50. There are indications that the company's sales, during the current year, may be higher than in the past year. The workshops are reported to be working to full capacity and there is a considerable demand for the company's services.

The directors of the Modern Mills have decided to capitalise Rs 13,27,500 out of the Premium account and issue Bonus shares in the proportion of two shares for every five held. This is subject to the approval of the Controller of Capital Issues.

It is learnt that the Bombay Burmah Trading Corporation has decided to postpone the decision with regard to the Interim dividend. This is presumably due to the sanction of the Government not having been received so far with regard to the scheme of capital reconstruction. It appears that fresh efforts are being made to obtain the Government approval.

Rane (Madras) Limited has recommended a dividend of 9 per cent to the holders of shares Nos. 1 to 45,960, on 5th August 1957, out of the profits for the year ended 31-3-1956 in terms of the provisions of Section 23A of the Income Tax Act.

India Cements Limited has proposed to sub-divide the Rs 25-paid Ordinary shares into five shares of Rs 5 each. The company will be

industry and the magnates of commerce are experts in borrowing.

Modern life, then, is based upon borrowing and lending. Polonius would see this clearly enough, and his advice to Laertes today would be: Lend with grace, borrow from strength. That is to say, neither a graceless lender nor an abject borrower be.

Eavesdropper's warning to the official and non-official delegations shortly proceeding to the USA, the UK and other countries is: Let there be no hat-in-hand parade.

when they lend, they call it Advances; but, frankly, it is just borrowing and lending, pure and simple.

On the other hand, thrice puissant Governments lend a little and borrow a great deal more. When they take money from you and me, they use such names as Treasury Bills and Bonds. Again, it is nothing else but borrowing and lending.

On every hand, industry is expanding and commerce is thriving. Why? The captains of

HIGHLIGHTS

Neither a borrower nor a lender be, was the advice tendered by Polonius to his son, Laertes.

What will that worldly wise parent say to his off-spring if he were living at the present day? He is sure to take note of proclivities and practices exactly opposite to his preaching.

On the one hand, puissant banks are engaged in simultaneous operations of borrowing and lending. They give grandiose names: when they borrow, they describe it as Deposits, and

Investment Briefs:

Indian Iron & Steel Company Limited has maintained the dividend at Re 1 per share for the year ended 31-3-1957. The dividend is payable on or after the 24th September to those shareholders whose names are registered as on the 11th September, 1957.

Dalmia Cement (Bharat) Limited has maintained the dividend at 12½ per cent, on both the Ordinary and Deferred shares, for 1956.

Kohinoor Mills have recommended an interim dividend of Rs 6 per share for 1957, same as in the previous year.

Azam Jahi mills have raised the dividend from Rs 3.50 to Rs 5 and Osmanshahi Mills from Rs 2.50 to Rs 3, for the year ended 30-9-1956.

In Madras, Buckingham & Carnatic and Bangalore Woollen have recommended interim dividends of 4 per cent each, on the Ordinary shares, for the year 1957.

Excellent Results of Indian Copper

THE Indian Copper Corporation has produced excellent working results for the year ended 31st December, 1956, thanks to an around increase in production and higher prices realised for its products. Net proceeds of sales and adjustment of stocks have risen to £2,949,649 from £2,744,763 and profit on sales of Kyanite to £256,328 from £236,231. The gross profit for the year at £1,507,184 has recorded a slight improvement over the previous year's figure of £1,474,804; but the increased provisions required for Taxation and Dividend Tax, in accordance with the 1957 Budget proposals, coupled with the additional provision of £157,019 for tax on the Bonus Share Issue and Wealth Tax, have more than offset the gain.

In respect of allocations to Funds, Depreciation has been maintained at £175,000, while Taxation provision is raised to £885,027 from £683,046. The sum set aside for General Reserve is lowered from £200,000 to £175,000. The dividend is maintained at 20 per cent; but no bonus has been recommended as in the case of the previous year when 25 per cent was declared. In this connection, it may be added that the present dividend is on the increased capital by the issue of bonus shares, in the ratio of 1:2, made last year. With the result, the present capital amounts £1,371,300 as against £914,200 as on the 31st December, 1955.

According to the directors' report, 35,577 short dry tons of concentrates, of an average value of 24.925 per cent copper, were produced as against 34,127 short dry tons of an average value of 24.942 per cent in 1955. The quantity of refined-copper

produced was 7,628 long tons as against last year's record of 7,281 long tons. The output of rolled products is 6,788 long tons as compared with 5,763 long tons in the previous year. The Rolling Mill has again restricted the output of Brass Sheets and Circles to conform to the requirements of the market.

In respect of the sale of the company's products, 9,787 long tons were despatched as compared to 10,791 long tons. Following were the average selling prices (per ton):—Copper Ingots £330 against £309 in the previous year; Rolled Brass £273 against £245; Yellow Metal Circles £305 against £266 and Rolled Copper £388 against £357.

During the year, despatches of Kyanite for sale amounted to 16,617 tons, showing a decrease of 2,617 tons over the previous year. Kyanite ore, throughout the year, enjoyed a free licence for export.

The directors have stated that the two civil suits with the Bihar Government, for which judgment in favour of the company was announced by the Subordinate Judge, Patna, in May 1956, are now pending under appeal in the Patna High Court.

Ships in Queue

WHEN the Minister of Transport and Communications addressed a Press Conference in Calcutta some two weeks ago, he described the prevailing congestion in Indian ports as extraordinary but not critical or grave. As the topmost authority in the country answerable for developments of this kind, Mr Raj Bahadur is justified in using adjectives calculated to stifle alarm. But when within a few days, one of his colleagues in the Union Cabinet felt obliged to refer to the bottlenecks in ports as causing delay in the construction of steel projects, the softening effect of the Transport Minister's description should have worn thin. When Government are asked to pay compensation for the delayed movement of time-chartered ships, when innumerable parties are incurring heavy demurrage, the progress of important national projects is being held up and relief from the congestion could be sighted only after four months, the situation is not only extraordinary but critical and grave as well.

At the outset, anyone would be tempted to ask if a congestion of this order—in Calcutta 30 to 40 ships have been on the daily queue outside the port for the last several weeks—could not be anticipated by those in authority. An impressive analysis of the causes of the congestion is now forthcoming from all responsible quarters. We are told that the closing of the Suez Canal has led to an unprecedented bunching of ships; that heavy capital equipment intended for the Second Plan Projects has been coming in, much of which is incapable of being handled except with the aid of giant mechanical unloading machines. These two circumstances together account for the prevailing situation. By their very character, both these circumstances were clearly foreseeable; whether adequate provision could have been made in time to neutralise the difficulties arising from them is another matter. That remedial steps were discussed only after congestion had touched the peak does not speak highly of the capacity for foresight or co-ordination. Even in May, when the Suez ships had not started arriving, there were forewarnings from those who knew what was coming up.

The indictment, however, should not be harsh; because, in a general way, higher imports were anticipated and the whole scheme of port development was intended to meet them. In Calcutta, a mechanical coal loading plant was recently installed; a two-hundred tons electric crane is now being set up. Bombay has 34 new electric cranes. Kandla and Cochin have started sharing the load hitherto concentrated on the other major ports. In Bombay, the piece-rate system has been introduced, to which should be attributed the larger part of the credit for the excellent performance of the port since 1955. The major ports alone are now confident of handling about 28 million tons of cargo this year, as against 24 million tons in 1955-56 and 27 million tons in 1956-57. In Bombay, a naval berth is being commissioned for berthing food-ships. As many ships as possible are being diverted from ports where congestion is most acute.

The Consultative Committee of Shipping Interests met at Bombay last week, with the

Secretary of the Department of Transport in the chair, and drew up a list of suggestions calculated to relieve the present congestion and to obviate any such recurrence. It was suggested that food-ships should be unloaded at minor ports, though government spokesmen pointed out the advantage in clearing food imports at ports nearest to the consuming areas. Even under this criterion, substantial

Strongest Government Borrows from Weakness

THE latest gilded news from America serves as gloomy evidence of the topsy turvy conditions which are the inevitable result of a relentlessly pursued dear money policy. Whether or not dear money succeeds in discouraging inflationary investment by business is still a matter of controversy. But there is no doubt whatsoever that the principal casualty of dear money policy is Government bonds.

The US Treasury, as part of the business it had to attend to in the last quarter of 1957, had to take care of two maturing loans with the amount involved at the gigantic level of \$ 24 billion. In the conditions of dear money, the US Treasury has been compelled to announce refinancing loans whose terms and conditions are suggestive of a gilded market as it might be found in Alice's Wonderland. The refinancing issues consist of 4 per cent one year certificates, 4 per cent four year notes and 3 5/8th per cent four month certificates. It is revealing enough that the interest offered by the world's richest and strongest Government should have reached its highest levels since 1933. Secondly, the short maturity of the refinancing loans reflects the increasing difficulty faced by Government in inducing subscriptions for gildedged.

If all this were not distressing enough, we find an innovation introduced which is a shocking testimony to the crisis in confidence generated by dear money. The US Treasury has announced that the four year notes will be redeemable after two years—at the option, not of Government, but of the investor. Gildedged must indeed have come to a strange pass, if Government borrowings can only be on the basis of a position of such weakness, that the option to redeem should rest with the investor.

The latest gildedged developments in America are a forewarning sign and symbol of the dangers attendant on dear money policy. We trust that the Indian monetary authorities will take due note of these developments, and read in them the shape of things to come in this country, if India pursues a dear money policy.

diversions are possible. It is clear that the Consultative Committee puts the principal emphasis on mechanisation; it has recommended a purchase mission to be immediately sent abroad for securing as much equipment like cranes as possible within a short time. It is gathered that the Government are actively considering this step.

The Government are naturally reluctant to concede that the Administrations of the ports

Established 1928

August 3, 1957

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

confronted with congestion are blameworthy. This is a proper attitude. For one thing, officers whose competence is not openly questioned would be more reliable instruments for better administration in the future. For another, the broad strategy of shipping movements is a matter for the Centre rather than the Port authorities to guide. Even so, Mr Raj Bahadur has found it necessary to appeal to the staff of the Port administrations to give of their best to ease the present emergency. In Calcutta, it is gathered there is a feeling that the number of senior officers is inadequate. The Port Coordination Committees are found to be useful and wherever they do not exist, they are to be set up.

With the settlement of the Bombay Dock strike, it is possible to assume that the labour situation is satisfactory. The Minister of Transport is not disappointed with the workers' output. However, in Calcutta, there seems to lie beneath the surface a fairly deep layer of ill-feeling between powerful sections of the workers and the Port authorities and undoubtedly much discord among the workers themselves. Relations between the stevedores and workers are also none too happy.

The Dock Labour Board is intended to be a clearing house of complaints and a forum for understanding between the Port Commissioners, the stevedores and workers' representatives. All the three sections are equally represented on the Board. More often than not, the workers' representatives are found to be unable to speak with one voice; and that leaves a trail of bitterness behind every important decision taken. Because of the disunity among the workers, steps taken by the Administration are sometimes grossly misunderstood and resisted, when unanimity would have led to automatic approval. Multiple unions for workers of the same establishment are, however, not purely a local or an economic problem and could be tackled only on a national scale.

Just now, charges are being heard from the workers' side that in the midst of growing congestion, more than a hundred gangs were broken up, causing widespread dissatisfaction and that a gentleman's agreement arrived at on the recommendations of an expert committee over the relation which should be maintained between the number of gangs and the weight of particular loads to be lifted is being violated by stevedores. The two shift working under which, apparently, a number of men are employed for as long as sixteen hours a day is generally disapproved by the workers. It is argued that those who get employed in two continuous shifts cannot but show a relatively poor output and are more susceptible to accidents and injuries. Once in a way, an unimaginative selection of gangs for handling particular cargoes seems to add to the stock of workers' grievances, real or imaginary. The other side of the story consists mainly of a sharp fall in the daily output of the workers in post-war years, growing indiscipline and the infusion of political rivalries into the union organisation.

A Committee has gone into these questions and its findings are likely to be published in

(Continued on page 228)

A New Criterion

As a member of the Planning Advisory Board in Kerala, Dr John Matthai pleads for the revision of the Second Plan financial allotment for Kerala, with reference to the contribution the State makes to the country's total earnings in foreign exchange. Foreign exchange earnings can be one of the criteria in determining the allocation. But to make it the exclusive one will be unfair and impractical.

As an earner of foreign exchange, Uttar Pradesh, for instance, will be entitled to only a fraction of its present allotment; West Bengal which directly accounts for a very substantial proportion of the total exports will claim at least twice as much as the scheduled outlay. All this would be fantastic. In Kerala the food deficit and the State's absolute dependence on imports of many of the essential consumer goods should offset the claim advanced on the strength of foreign exchange earnings.

Population, industrial resources and similar considerations have been taken into account in determining the State allocations. The special difficulties of each State are also not ignored. Though the distribution of outlay as now contemplated may not be impeccable it cannot be condemned as generally inequitable between one State and another. Perhaps Dr Matthai was voicing the sentiment prevailing in Kerala today. The great authority and prestige he holds as an economist of international renown should be utilised to tame that sentiment in favour of a more reasonable understanding of the various considerations which should inspire the allocations.

Editorial Notes

Rural Medical Service

Addressing the Medical Conference recently held at Hyderabad, Major K. N. Rao, Director of Medical Services, India, recounts some of the basic facts of India's health services and calls for a quick expansion in the output of medical men. Just now, there is one doctor for 6,000 persons; what is held to be required is one doctor for 2000 persons. As qualified medical men crowd in urban areas to the neglect of rural, the problem implied in these figures is one of not only putting out more doctors from the colleges but distributing them in the right proportion between the rural and urban areas. It goes without saying that more medical colleges are necessary.

Beyond this point, we enter into a realm of doubt and controversy. The reason for the reluctance of doctors, particularly allopaths, to go and serve in rural parts is easily found. Compared to the earnings in urban areas, what the villages hold out is unattractive. In several States, the situation is met by subsidised practice, the Government offering a regular monthly grant to the practitioners in the rural areas. This subsidy can become a universal feature in India.

Meanwhile, it has also to be investigated in greater detail, how far the current and prospective encouragement to the indigenous systems of medicines and the consequent reinforcement of the scope for these systems will neutralise the need for allopathic practitioners. An expensive education and a permanent subsidy make allopathy too costly for the villages. Alternative systems are comparatively cheap.

Again, the general improvement in hygienic conditions all over the country may upset the calculations mentioned by Major Rao. When the import of foreign drugs is discouraged and their replacement by indigenous products is not proceeding at a sufficiently rapid pace, the case for a more prominent and better-recognised role for indigenous systems is indisputable. Future expansion must therefore await the formulation of clear-cut policies in several fields.

The Ceylon Settlement

What threatened to develop into an incipient civil war in Ceylon was averted almost at the last moment by a settlement arrived at between the Prime Minister of the State and the Federal Party representing the island's Tamil-speaking population. The Federal Party had been assembling strength for the purpose of a satyagraha campaign scheduled to start on August 20th; it believed that

nothing short of such a campaign was likely to achieve its aim of securing for the Tamil-speaking people the rights and privileges they were entitled to as a linguistic group forming about one third of the total population.

Behind the Party's resolve lay accumulated resentment of official policy, held to be sustained on unfulfilled commitments and broken promises. Had the satyagraha taken place, communal clashes would have become inevitable and quite possibly law and order forfeited beyond the prospect of repair for a long time. A conference between the members of the Ceylon Cabinet and the Federal Party leaders fortunately ended in certain compromises, apparently satisfactory to both sides.

The Federal Party's demand for parity of status of Tamil as an official language was politely turned down on the ground that nothing could be done which would abrogate the Official Language Act. In the alternative, it was agreed that Tamil would receive statutory recognition as the language of a national minority and that it would be used in a reasonable measure as the language of the administration in the Northern and Eastern provinces. The Cabinet has also conceded the point that the question of citizenship of Indian settlers was linked up with the domestic problem of race and language; the Prime Minister gave an assurance that an agreement on the issue of citizenship would be reached before the end of the year.

The Cabinet does not appear to have an undivided mind on the way in which the language question has to be settled. Whatever opposition there might be to the agreement announced will have to be kept back, if the domestic politics of Ceylon are not to be thrown again into the melting pot.

Why They Fail?

Despite all the fanfare and publicity enjoyed by the Community Projects in India and abroad, their actual working has not satisfied critical observers. Where and how the projects have turned out to be disappointing is, by now, mostly well-known. The Evaluation Reports are masterly documents. But somehow or other, certain points seem to be still evading expert recognition, at least in the measure they deserve.

When the question came up before the current session of Parliament, the Minister in charge did not try to magnify the achievements or to conceal disappointments; what he did was to throw the blame for whatever failure there is on members of the legislature and others similarly placed in public life for not having taken

sufficient interest in the projects. Though this charge is an ingenious way of explaining away the lack of public interest and cooperation, it does not serve for an answer or a remedy. The real question is why the public do not cooperate or feel enthusiastic about the programmes.

There are two major reasons. Very often the work done does not promise impressive material results. Just now, the majority of the population want more income and better standards of living. This particular aspect has not received the overwhelming priority it ought to. The second reason lies in the faulty approach to the villagers and in the inherent preference for the well-to-do in the matter of financial and other assistance against the poorer classes.

Perhaps, these two points would sum up all the factors which render the Projects not sufficiently impressive. It may also be to the good, if work in the various Projects is conceived more with reference to the particular local conditions than on the basis of a general pattern of ideas which does not take account of the varying local needs and their relative urgencies.

Climate for Credit Control

Does there exist a favourable climate for credit control and bank liquidity in India? Different answers are implied in the policies being pursued by the Reserve Bank of India and in the analysis of banking conditions made by spokesmen of private banking. Mr B. K. Dutt, Managing Director of the United Bank of India Limited, speaking on the occasion of the opening of the Safe Deposit Vault of the Bank's Jorasanko branch argues for an answer in the negative. His thesis is developed in the following manner.

In recent years, the operating costs of the scheduled banks have been steadily rising. While in 1947, the total operating cost of the scheduled banks was less than Rs 21 crores, for a total deposit resources of about Rs 10.43 crores, in 1955 the operating cost amounted to Rs 34 crores for a total deposit of about Rs 995 crores. Net profits of scheduled banks declined over this period from over Rs 9 crores to about Rs 7 crores.

Mr Dutt points out that to meet the time scale increases for bank employees will call for additional expenditure every year and that a better rate of profit is also essential for the execution of the development programmes which are obligatory under present economic conditions. The interest paid for the deposit resources has shown an even sharper increase between 1947 and 1955. In the former year, it was Rs 773 lakhs, while in the latter it was 1178 lakhs for a lower volume of deposits. These circumstances, it is argued point to the need for a progressively higher ratio of ad-

(Continued on page 229)

World of Finance

Welcome : Strengthening of Propitious Conditions

AS the date for the opening of the New Loan's list approaches, conditions in the money market are progressively far more propitious than we dared hope for, say, six weeks ago. The slack season is promising to be more pronounced than in the past year or two; and banks are in fine fettle, with cash in abundance and with indebtedness to the Reserve Bank at a low level. Institutions and agencies, over which Authority can exert some manner of decisive influence, are poised for responding substantially to the New Loan. All circumstances taken into account, there is further support for our initial view that the subscription list may remain open only for a few hours, or for a day at the most.

The money market has recorded a roundabout turn in sentiment. Where, but a short while ago, it was difficult to find any lenders in the inter bank call money market even if one searched in broad daylight with a lantern in hand, borrowers are now scarce, and lenders keen on business. The rate for inter bank call money has slipped to 3 per cent; and, except for the likelihood of a disturbance on account of the flow of funds toward the New Loan, the signs indicate further easing in the call money rate.

This development is, without a doubt, a direct result of the rapid expansion of resources in the banking system. Bank Advances are declining; and bank Deposits are rising.

We may now try to make an assessment of the kind of impact that the 1957 New Loans will have upon the money market. We may say at the outset that the New Loans as announced have set a target for cash subscriptions well below the amount envisaged in the Budget. It may be recalled that the Budget made allowance for reduction in debt only in respect of the 3 per cent 1957 Victory Loan. While it has subsequently been decided to offer conversion facilities in advance for the 3 per cent 1958 as well, the target for the New Loan has not been raised from the Budget figure of Rs 100 crores. On the earlier footing, with provision being made only in respect of the maturing 3 per cent 1957 Loan, the minimum of cash subscriptions sought was in the neighbourhood of Rs 68 crores. To the extent that Government may be expecting conversion of the 3 per cent 1958 Loan, the amount sought in cash may be said to have declined to a corres-

ponding extent. The question that arises is, what has motivated Government in thus reducing their expectation of and therefore target for cash subscriptions?

The second aspect of the 1957 New Loans may be said to lie in the impact of subscriptions upon the resources of the banking system. A study of the 1956 New Loan's results would suggest that the New Loan this year will almost certainly cause a less severe strain upon the banking system than was the case last year. At least, this is the conclusion apparently to be inferred from the fact that the 1956 New Loan realised Rs 157.7 crores, of which Rs 77.2 crores were in cash. Against this, even on the basis that conversions will amount only to Rs 50 crores out of the Rs 85 crores of eligible securities, the cash subscriptions need not be higher than, say, Rs 50 crores. Here, the question that we have to answer is whether such conclusions are correct and whether, in fact, the 1957 New Loans will be less of a strain upon the banking system.

The third point that we have to consider is what we might call the appeal of the New Loans. Of the three issues that were made in 1956, the one that was least popular was the ten year 3½ per cent 1967. Realisations to this stock aggregated only Rs 33.82 crores. The shortterm issue, the 3½ per cent 1962, realised Rs 57.27 crores; and the longterm 3½ per cent 1974 proved to be the most popular issue with subscriptions totalling Rs 66.64 crores. The general view is that the popularity of the short-term issue was directly accounted for by Scheduled Banks. However, a study of the Scheduled Bank statements covering the 1956 New Loan issue period would suggest that investment in the New Loan by Scheduled Banks amounted scarcely to Rs 16 crores; this, of course, is net of conversions. While it is not possible to indicate the extent to which Scheduled Banks would have had holdings in the 3 per cent Victory 1957 Loan, for which conversion facilities were offered, we must remember that, ever since the increase in Bank Rate in November 1951, the tendency of the banking system has been as far as possible to concentrate its gilt-edged investments on the shortterm maturities. For our part, it would appear to us to be strongly indicated that Scheduled Bank interest last year was more or less restricted to the 3½ per cent 1962; and we may add that new cash from banks was for the scant amount of Rs 16 crores.

At the other extreme, it is also known that the longterm issue was favoured by the other traditional institutional investors, like the Life Insurance Corporation, Provident Funds, Finance Corporations and such bodies as the Bombay State Road Transport Corporation. The weakest support, thus, remained for the medium term 3½ per cent 1967. The next question that we have to ask ourselves is this: why have Government, in the face of the poor response last year to the medium term loan, nevertheless planned another medium term 1967 issue?

The last aspect of the 1957 New Loan to which we must address ourselves is the extent and manner of the adjustments that may take place in the existing gilt-edged issues in order that the yields offered thereon may conform to the yields obtaining upon the New Loans. A traditional post New

Loan phenomenon has been, we may point out, the ensuing readjustments all along the line. This was inevitable, whether in a period wherein Government successively reduced the rate of interest offered or in a period wherein there was a successive rise in the interest paid. In the former case, the readjustments were in the nature of an impetus given to rising gilt-edged prices; and, in the latter instance, the correction was by way of a decline in gilt-edged prices. However, in respect of the 1957 New Loan, the general view is that the terms are on a "realistic" basis; that is to say, the interest offered is in line with the yields presently obtaining. So, in this view, the last question that we have to answer is: will there be any readjustments of magnitude in response to or as a result of the 1957 New Loans?

Has Britain Surrendered to Inflation?

By PAUL EINZIG

THE statements by the Prime Minister and the Chancellor of the Exchequer during the course of the debate on inflation in the House of Commons on July 25th disposed of any lingering hopes, that may have been entertained until then in optimistic quarters, of a firm action to check the rise in prices in Britain. It had been widely expected that the Government would at least go through the gestures of reinforcing its existing disinflationary defences, now that it has become evident beyond any shadow of doubt that these defences are unable to stem the tide, or even to prevent its accentuation. But the Government flatly rejected all suggestions, whether put forward by friend or foe, of additional measures. The "credit squeeze" will continue, but, judging by the latest banking figures, it is quite ineffective, and both Government spokesmen emphatically rejected the idea of making it effective.

Of course, there will be the usual annual scrutiny of public expenditure, but in spite of the prospects of cuts in defence costs the Chancellor is not prepared to promise more than keeping the grand total at its present level. Even capital expenditure by nationalised industries and by the Government itself is not going to be cut this time. All that will be done is to co-ordinate the existing investment programmes so that they should not reach their peak at the same time. The only innovation announced by the Government is the setting up of an independent advisory council. But the leaders of the trade unions and of the labour movement have already announced that they would not trust the independence of that body.

Considering that the names of the chairman and of the members of the committee have not been announced, this condemnation appears to be somewhat premature.

But it stands to reason that if Socialist views should be represented on the committee it could never reach an unanimous decision on anything that really matters, and if its membership is recruited exclusively from among Conservative economists its findings could never inspire confidence among the workers. It will no more contribute towards the solution of the situation than did a similar body set up by the Labour Government in 1930, which was utterly useless in face of the crisis of 1931, even though it included Keynes among its members. His suggestions were rejected by the majority, and when the opposite measures suggested by the Socialist Professor G. D. H. Cole were also rejected Keynes exclaimed "For goodness' sake, let us decide on something! If you don't like my suggestions decide at least on the opposite measures, so long as we decide on something!"

There are three reasons only why the government of Mr Macmillan has decided virtually to surrender to inflationary pressure. The first is that ever since the end of the war no Chancellor of the Exchequer, whether Socialist or Tory, has done anything against inflation unless and until he was forced to take action under pressure of balance of payments difficulties. And unfortunately from the point of view of the internal stability of sterling, in the present instance the accentuation of the inflation has not so far resulted in a deterioration of the balance of payments. The main reason for this is probably because in most other countries there is also some degree of inflation, so that British prices have remained reasonably competitive.

Another excuse for inaction is that Mr Roy Harrod has conveniently produced a theory justifying inaction. In two articles appearing in "The Financial Times" he said

that the inflationary position could and would correct itself through a full utilisation of Britain's expanded industrial producing capacity. There is no need, according to him, to worry about high and rising wages, for an increase of the output will provide all the additional goods needed for matching the increased purchasing power. His theory is most welcome, both to trade unions who are certain to quote it each time their wages demands are resisted, and to the Government to which it provides a very convenient excuse for doing nothing for the next twelve months.

But, as Mr Gaitskell rightly pointed out in the course of the debate on inflation, the Government is fundamentally wrong in assuming that in existing circumstances an increase in output would produce a disinflationary effect. That would be the case if the increase were due to the adoption of more efficient production methods. But if it is due to an increased utilisation of existing capacity, the result will tend to be inflationary rather than disinflationary. What Mr Gaitskell omitted to explain—and perhaps it would have been well above the understanding of the average Member

of Parliament—is that if the increase of the output entails the payment of an increased total of wages, the fact that the additional wages get into circulation long before the additional goods appear results in an inflationary time lag. There will be an additional buying pressure on foodstuffs and their price will rise. Increased raw material purchases, too, are liable to produce an instantaneous effect on a sensitive market. And even when, after a delay of several weeks or months, the additional goods emerge from the pipeline, the increased demand for them that is

liable to arise through the payment of additional wages will remove the necessity for manufacturers to lower their prices. So on balance there will be a tendency towards an increase in the price level instead of towards a decline as assumed by Mr Harrod and the Government.

Last but by no means least, the Government's decision to abstain from governing in face of the inflationary menace is due to the realisation that the only effective means of checking the flood of wages demands would be through creating a certain amount of unemployment. If

ACC HONOURS THE CODE

2

"Customers are entitled to courtesy, promptness and good service, and every endeavour shall be made to see that they receive them."

Code of conduct—FORUM OF
FREE ENTERPRISE

The ACC distributes cement through an organization which reaches down to the small consumer, and in accordance with the over-all allotments made by Government. Every mode of transport is pressed into service—rail, road, river, canal, sea—to see that the cement is delivered to the customers with promptness and courtesy.

This is not all. The ACC does not remain content with delivering a high quality product to the entire satisfaction of its customers. It also provides through its technical department, the Concrete Association of India, free technical service and information to cement users throughout the country.

This is Free Enterprise at its best,
honouring the Code both in letter
and spirit.

World of Jute

Marketing of Jute

Raw jute naturally gets by far the most important place in discussions about the ways and means of rehabilitating our jute industry which has come to find itself in an unenviable position for some considerable time now. An indication of the growing realisation of the fact that an essential prerequisite to the prosperity of the industry is plentiful supply of raw jute at equitable prices, is the recent establishment of a supervisory body by Government to keep a close watch on the progress of schemes initiated for the promotion of jute production.

While it is true that this and other steps taken by Authority are bound to result in an increase in jute production in course of time, it would appear that the full benefit of these new endeavours can be obtained only when action is simultaneously taken in other direction as well. One important aspect of the raw jute supply problem is the return the jute cultivator gets for his labour. For, the size of a particular season's crop is often determined by the price raw jute had fetched for the grower during the previous season.

In this regard the findings recorded in the Indian Central Jute Committee's Report on the Marketing and Transport of jute in India (revised and enlarged) just published will be of considerable help in tackling the raw jute supply problem. The report concludes that the establishment of regulated markets with warehouses for storing grower's jute will enable sellers to get a fair proportion of the Calcutta landed price. For, over three quarters of all jute produced in the country are sold by the growers within the first four months of a marketing season. It has been found that this is mainly due to the lack of staying power of the jute growers most of whom are in the clutches of moneylenders in the absence of adequate credit facilities.

The jute goods market ruled easier as buyers evinced little interest. In the absence of genuine business, speculators manipulated prices according to prevailing sentiment day by day. The market opened the week with mills showing limited interest in forward sales at current price levels. Hessian 40" x

100z Ready was placed at the end of the day at Rs 42.13 with B Twills done at Rs 114.85. In the forward positions, Oct-Dec changed hands at Rs 42.25 with B Twills at Rs 113.35.

With an increase in the volume of sales by mills, prices on Friday declined further. A contributory factor to the easier tendency had been the sale of fair quantities of B Twills and Hessians by a prominent bear operator in the fatka. Hessian 40" x 100z Ready receded to Rs 42 and B Twills Ready to Rs 114.65. Elsewhere, Hessian 40" x 100z Oct-Dec declined to Rs 42.15. B Twills Oct-Dec was marked down sharply to Rs 112.50.

The easier trend gathered further momentum on Monday due to the cumulative effect of bear pressure and mills' selling. Hessian 40" x 100z Ready came down further to Rs 41.70 while B Twills lost 40 nP to be placed at Rs 114.25. In the forward deliveries, Hessian 40" x 100z Oct-Dec was sold down to Rs 41.80 with B Twills losing half point to Rs 112.

Settlement day considerations induced an irregular trend in the market on Tuesday. Genuine business was however conspicuous by its absence. Hessian 40" x 100z Ready lost 14 nP to come back to Rs 41.56. Due to speculative manipulations B Twills Ready closed higher at Rs 114.55. The prices for forward deliveries were as under: Hessian 40" x 100z Oct-Dec Rs 41.70 and B Twills Rs 112.

The market closed the week on an easier note due to selling pressure both in hessian and sackings by a prominent speculator. The week's closing prices were: Hessian 40" x 100z Ready Rs 41.50, Oct-Dec Rs 41.75; B Twills Ready Rs 114.40, Oct-Dec Rs 112.10.

The following table gives the week opening and closing prices:

	Opening Rs	Closing Rs
Hessian		
40" x 100z Ready	42.13	41.50
40" x 100z Oct-Dec	42.25	41.75
Sackings		
B Twills Ready	114.85	114.40
Oct-Dec	113.35	112.10
Hy. Cees Green	115.00	114.25
Corn sacks	116.65	116.25
Cubans	141.00	138.25
A Twills	139.00	137.00
L Twills	127.00	126.25
DW Flour	130.50	129.75
Sugar Bags	130.25	129.50

Prices in the raw jute market remained generally unchanged though volume of business passing continued to be at a meagre level. Though at times sellers appeared to be keen for business in fair quantities they were not interested at prevailing levels and even when they showed interest in small quantities they indicated lower than current levels. The nominal quotation for Assam Bottoms was placed at the end of the week at Rs 30 per maund.

World of Tea

Demand Confined to Quality

IN the auctions at all centres—Calcutta, Cochin, Colombo and London—buyers have continued to show preference to quality teas. Even qualities, which attracted keen demand in the beginning of this season, have lost substantial ground. This change in the market sentiment appears to be based on the general fear that the world supply of tea this year may exceed the record level of 1955. In this respect, production figures for the major tea producing countries, during the first six months of the year, have already shown that these fears are, by and large, not altogether unfounded.

Even in London, where all offerings were generally strongly competed for until the end of last week, less demand is now noticeable and prices of most grades are irregularly lower with African teas generally shedding one penny per pound. By the end of this week, the last of the Old season's North Indian teas will have been sold. The August bank holiday this week will see the traditional peak in the London tea auctions and when they are resumed on the 12th August, a small quantity of first-

flush teas will be included in the catalogue.

In the Export auction held in Calcutta this week, offerings were 47,587 packages. There was a fair general demand and buyers followed quality closely. There were some withdrawals; but bright liquoring teas of all categories were well supported and were generally firm. The very best CTC types were sold well; but the more ordinary kinds were 30 and sometimes up to 50 nP per pound easier.

Plain and Low Medium descriptions met with a fair enquiry, but at prices which declined by 10 to 15 nP per pound, depending on cup quality. Whole Leaf grades and Darjeelings received quite fair support although they participated in the general decline in prices. Tippy sorts were again sold well although prices were irregular and sometimes easier. Following rates were quoted:—Clean Black Pekoe Rs 2.40; Plain Broken Pekoe Rs 1.80; Plain Fannings Rs 1.68; Medium BP Rs 2.00; Medium Fannings Rs 2.05; Best CTC Assam BP Rs 3.50 (nominal) and Best CTC Fannings Rs 4.00 to Rs 4.25 (nominal).

In the Internal Sale, offerings consisted of 19,207 packages of Dusts. There was less demand and prices of almost all descriptions were easier. There was an increased weight of CTC Assams on offer and these met with much less demand and, with the exception of the very best, prices were often 30 nP per pound below valuations.

Towards the close of the sale, demand further weakened and there were some withdrawals. Bright liquoring teas from this district together with Commons and Dooars were up to 10 nP per pound easier. Following rates were quoted:—Medium Dooars Dust Rs 1.50 to Rs 1.60; Medium Assam Grainy Dust Rs 1.60 to Rs 1.70; Medium Assam CTC Dust Rs 2.10 to Rs 2.40 and Best CTC Assam Dust Rs 2.60 to Rs 3.00. There was only a fair demand for the 682 packages of Leaf grades on offer.

In the Export Quota section, the rate, after touching a high of 22 nP per pound, finished the week at 18 nP at which level some business was reported done.

In the Cochin market, offerings were 1,421,000 pounds. Quality from all districts again showed a falling away. Competition was lacking for best liquoring Nilgiris and prices shed 15 to 20 nP per pound with quality. Lesser high-grown were irregular, but generally eased by 5 to 15 nP. Coloury Mediums met with useful enquiry at a drop of up to 5 nP per pound,

but all other Medium Broken declined by 8 to 10 nP, while their Fannings were a weak feature. Low-grown Broken and Fannings were up to 10 nP easier.

Black Leaf Broken met with a useful support at barely steady rates; but Fannings, suitable for the Middle East, met with a drop of 10 nP. Whole Leaf grades were irregular, but tended easier. Following rates were quoted:—Plain BP Rs 1.45; Low Medium BOP Rs 1.55; Medium BOP Rs 1.70 to Rs 1.75; Good BOP Rs 2.15 to Rs 2.25 and well-made OP Rs 2.60.

Except for poorest liquoring stalky teas, a strong demand prevailed at generally dearer rates in the Colombo market. Improved Uva invoices were particularly firm, while best Dimbula/Dickoya Broken Orange Pekoes also scored a good advance. Offerings totalled 6,992,102 pounds. Following rates (cents per pound) were quoted:—High-grown BOP 330; Good Medium BOP 148; Medium Liquoring BOP 115; Low Medium BOP 136; Low Medium BP Fannings 190 and Low Medium OP 220.

Sale No. 4 was held in Chittagong where offerings amounted to 11,002 packages of Leaf grades and 1,941 packages of Dusts. In the Leaf section, Orange Pekoes were mostly As 2 per pound dearer, while BOP types were one to one and a half annas down. All Fannings were irregular by As 2 per pound, while Fannings were fre-

(Continued on page 211)

World of Business

Piston Assembly Industry

The Government of India, by a resolution in the Ministry of Commerce and Industry, have agreed to renew the protection granted to the piston assembly (pistons, piston rings and gudgeon pins) industry for a second term ending with 31st December 1960, at the rate of 42½ per cent ad valorem preferential and 50 per cent ad valorem standard on trunk piston assemblies of diameter 6" and below, trunk pistons of diameter 6" and below, trunk piston rings (excluding chromium plated rings) of diameter 6" and below and gudgeon pins for trunk pistons of diameter 6" and below.

The rationale for the continuance of protection, which was investigated by the Tariff Commission, was the disadvantages suffered by the indigenous units against the foreign competition. This could only be due to the very short period for which the industry was given protection in the first instance. The industry was admitted

into the protective wing only in 1955 and being an industry which has made its appearance in the recent past, the progress, which could enable it to dispense with fiscal aid could of necessity, be only slow and halting.

Two dominant units comprise the industry. They are India Pistons (Private) Ltd., Madras, and Goetze (India) Private Ltd., Punjab. The authorized capital of India Pistons is Rs 30 lakhs, while the subscribed capital which is fully paid up is Rs 25 lakhs. The authorized and paid capital of Goetze India are Rs 65 lakhs and Rs 13.30 lakhs respectively. The rated capacity of India Pistons on single shift basis is 3 lakhs, for pistons 22.80 lakhs for piston rings and for gudgeon pins 3.60 lakhs. On double shift basis the figures are 5.25 lakhs, 39.90 lakhs and 6.30 lakhs respectively. The rated capacity on single shift basis for Goetze (India) Ltd is about Rs 15 lakhs for piston rings and on

double shift basis 30 lakhs. The rated capacity for pistons on single shift basis is 1.5 lakhs and on double shift basis 31 lakhs.

There are, besides these two units, three other small engineering units which manufacture pistons and other component parts of piston assembly according to orders. There are also about 10 small scale units in the Northern Region engaged in the manufacture of liners and piston assembly. The production of the various items by the India Pistons in 1956 was 160,238 pistons, 2080,528 piston rings and 142,187 gudgeon pins. This level of production does not represent the full utilization of the rated capacity of the unit, the idle capacity in respect of pistons and gudgeon pins being nearly half. The second unit namely Goetze Ltd is yet to start production.

Moreover the internal production is far below the annual demands which has been estimated at 804000 for pistons and gudgeon pins each and 5688000 for piston rings—The demand is further expected to increase at the rate of 20 per cent every year during the next three years. Therefore self-sufficiency in production would require the gearing of the production machinery to the full rated capacity in both these units.

Diversification of production, is an important line in which the industry must proceed in its future development. The production schedule of the indigenous units even now excludes many items which are in demand in the country. The Tariff Commission in taking note of this need, has at the same time pointed out that such diversification should be subject to the feasibility of economic production and should not result in uneconomic use of productive capacity.

The speed at which diversification schemes are introduced would depend on the cooperation of the consumers in allowing the indigenous producer a delivery period. For orders involving short runs of its machinery, have the effect of blocking the production of items in continued demand.

Finally the coordination of import policy with the production schedules of the indigenous units is a matter which has to be looked into by the authorities so that it shall not happen, that items which are being manufactured in the country should be imported in quantities, which results in accumulation of stocks of indigenous products of the industry. Such a coordination is imperative if the interests of the indigenous producer and the importers are to be reconciled.

This latter sum, however, went only a little way to offset the demands made on these reserves by oversa holders of sterling. The reserves would, in fact, have fallen by nearly £200,000,000 but for Britain's drawing on the International Monetary Fund. A larger annual surplus is obviously desirable if Britain is to fulfil her role as banker for the Sterling Area and exporter of capital. In the first half of 1957, there was a further improvement of £88,000,000 in the reserves.

The deficit in visible trade—which is normally more than offset by the income from overseas investment and by invisible earnings and financial resources—was slightly larger in the first half of 1957 than in the corresponding period of 1956. Over six months as a whole this increase can be almost entirely accounted for by the late deliveries of mineral oil and other goods delayed by the effects of the Suez crisis. In May, while there was a marked rise in the volume of imports associated with a rise in production, this was compensated for by the return to more normal levels in June.

Most raw materials used in Britain come from overseas, and every additional £100 of national product is likely to need an additional £25 of imports. Moreover, increases in imports are bound to antedate increases in output. It follows that the faster the rate of industrial expansion, the larger the proportion of industrial output which has to be exported if the balance-of-payments surplus is to be adequate.

Markets as well as industrial capacity for increasing exports exist (the value of United Kingdom ex-

ports in May, for example, exceeded £300,000,000 for the first time). World trade in manufactures expanded by 14 per cent in 1956, and is likely to continue expanding in 1957.

The long-term prospects of such an increase are good, as the productivity of British industry has been rising by about three per cent a year over the past decade, in spite of various checks. Technological progress is accelerating, fixed capital formation is being expanded, and some very large development plans are in hand. There is, therefore, every indication that in the next decade the increase in productivity will be no slower, and that substantial increases in personal incomes can take place without corresponding increase in export prices.

In the short run, however, some very careful husbanding of resources will be needed. Increases in home demand, whether for investment or consumer goods, must be kept in check, so that they follow rather than precede a rise in production and exports.

Consumer purchasing power has risen in the past year, but retail prices have remained fairly steady. They were, in fact, almost the same in May as in January, and were only two per cent above the level of a year earlier. The wage-rate index, after a period of stability, rose following wage increases in the engineering, shipbuilding, coal mining, and building industries by one point in April, and in May to 110, which is five per cent higher than a year earlier.

This is a high rate of increase, but some of the recent settlements

I TRUST we shall be spared a hat-in-hand parade; unfortunately, there is, if one were to go by newspaper reports, reason enough for the apprehension that we might be staging such a distressing spectacle. Crisis mongering is very much in fashion, and there is almost a sinister harping on the thesis that Indian spokesmen will shortly be preoccupied with the task of trying to tap all available sources of foreign aid. Lucre has appositely been termed filthy, but I am at a loss to understand why we seem to have a continuous stream of insinuation and advice that India is today in such sore straits as to compel it to pass round the hat. This reduction of India's status to that of a beggar is the more surprising since this campaign is being waged in the face of emphatic reiteration to the contrary. However, it is easy to see the provocation for the current interest in India cast in the role of a mendicant on the stage of the world money markets; gathering momentum to such speculation has been given by the imminence of, firstly, the departure for foreign shores of the Industrial Delegation led by Mr G. D. Birla and, secondly, the impending visit of Mr T. T. Krishnamachari to Washington for the annual general meeting of the International Monetary Fund. It has been taken for granted (erroneously, I should point out) that the avowed but unstated mission of the Birla delegation will be to secure foreign aid for projects in the private sector. Secondly, it has been presumed (also mistakenly) that the Finance Minister will be utilising his foreign trip to follow up negotiations conducted, on the one hand by Mr H. M. Patel in London, and, on the other hand, by Mr B. K. Nehru in Washington. Such scribes and circles as have been advancing the view that the Birla delegation's mission and the Finance Minister's visit are confirmatory evidence of India's outstretched begging bowl would appear to have chosen to disregard completely the vehement assertions to the contrary. In the first place, Mr Birla made it a particular point to assert that the main purpose of the Industrial Delegation will be to foster goodwill, and that an incidental purpose will be to build up new contacts. In the second place, Mr Krishnamachari gave the advance information in Madras that he

Gossip

would be no party to a begging expedition. Why, then, this harping on India's alleged preoccupation with begging for foreign aid?

The answer lies partly in the fact that the phrase used, "foreign aid", is ambiguous and indeed offers a mischievous connotation. As I shall presently show, the last thing that this country would be anxious to secure is charity. While the proposition that charity is twice cursed could alone be reason enough for India's reluctance to seek foreign aid, a correct understanding of India's evolving, dynamic neutralist policy must surely indicate the probable context in which India will actually have to refuse foreign aid. We have been making so much of our policy of non alignment, we have been at such pains, at no small sacrifice, to prove that the Indian neutralism is backed up by integrity, that it would be foolish to expect that India, in present circumstances, would be prepared to jettison such robust independence in foreign policy in exchange for economic succour. No, India does not seek, India does not want charity. But this does not mean that this country—does not mean that this country—as the elder statesman from Madras suggested—should go one step further, and refuse foreign aid of all sorts. The complication of all sorts. The complication arises, I think, because there has been a tendency to look upon 'foreign aid' and 'gift' or 'charity' as being synonymous. There is an aspect of foreign aid—the loan—which is entirely unexceptionable and which, far from involving political or any other strings, can in practice work out to the benefit of both lender and borrower. In this respect, I would add that India does not hold with Polonius, who admonished his son to be neither a borrower nor a lender. If this precept were to hold sway today, much of the world's economic activity would cease forthwith. In Hamlet's day, perhaps, the lender or the borrower made an enemy for himself; perhaps, the interest rates were usurious; perhaps, the prospect for repayment of the loan was limited. But we are not living in the past; and, in the dynamic present in which we live today, a loan makes, not an enemy, but a friend. The lender is in business partly because of what he can earn therefrom, but partly also because of the altruistic aim of helping another. Thus

is friendship fomented. And, because we live in times of prosperity, the borrower has soon earned enough to make repayment; and this, again, fosters friendship. The safeguards to be adopted here are normally the business precautions. To some substantial extent, the integrity of the borrower is the primary consideration. And then there is the scheme for which the loan is sought: is it practicable, is it productive? If the integrity of the borrower is above question, if the practicability of the scheme is found to be satisfactory, and if the lender has free resources, there is no reason why the lender and the borrower cannot transact some business.

So, as I said, there is no need for India to turn its back upon foreign aid of the loan genre. And if India is today busy negotiating loans, it does so not from the status of a mendicant importuning for alms, but from the standing of a businessman who has quite a few worthwhile projects to interest the lender. All this, I am sure, is simple enough to follow. But the atmosphere has been spoilt, and some considerable blame for this must rest with such of our Indian citizens as have, in American parlance, been shooting off their mouth. Why has the atmosphere changed? It was not long ago that Mr Eugene Black, head of the World Bank, described India as a good credit risk. It was only last year that Dr Franz Pick, whose annual international currency review is considered authoritative, paid fulsome compliments to the appositeness of this country's management of its finances and the remarkably strong attributes of its currency. And yet, the same Dr Pick, within the brief space of a short year, so completely revised his estimation of the Indian rupee as to term it a sick currency. The reasons adduced by Dr Pick are not, for the purpose of this article, significant. What matters is that the criticism should at all have been possible; and what matters is why such criticism can gain such wide currency and even acceptance in some quarters.

I am afraid, as I have already said, this state of affairs is partly the making of Indian citizens. I am all for introspection, and I have nothing against even blood-curdling or agonising reappraisals.

But there is a recognisable danger in such endeavours at introspection. The manic depressed is driven to suicide; the inflated egotist can be impelled to overreach himself. That introspection alone will help which is backed up by basic commonsense, resolute levelheadedness, and the will to fight to improve oneself if that were found necessary. I shall show two kinds of introspection, in the matter of our foreign exchange difficulties. And I shall leave it to the reader to discover which of them shows levelheadedness and which of them is Jeremiah like in its gloom and confused as to its conclusions.

In the 16 months that have elapsed since the Second Plan commenced, India's foreign exchange reserves have been drawn down by the net amount of Rs 419 crores. This is the basic, fundamental, irrefutable fact. Dr Jeremiah D. (for Depressed) Manic no sooner has this fact registered on the little gray cells of his cerebrum, than he immediately begins to be introspective. And this is an unfortunate habit that he has. For, his line of reasoning goes something like this: "When the Second Plan was first drawn up, the balance of payments deficit over the Plan period was put down at Rs 1100 crores. We intended that Rs 300 crores of this should be covered by drawing upon our foreign exchange reserves. And we looked to external assistance for meeting the remaining Rs 800 crores. But, already, the drawing down of our foreign securities has aggregated Rs 419 crores. Since it is true that, as a result of the Suez Canal closure and the inclusion of new projects, the balance of payment deficit is expected to be revised to a figure around Rs 1500 crores, and since, also, the Planning Commission expected the peak imports to be touched in the second and third year of the Second Plan, the inevitable conclusion is that we have been drawing too freely on our reserves. It is also true that India has its back to the wall. For, all too clearly, the extra resources that we need are for a very substantial amount. And there is but gloomy prospect of covering the gap. There are only two alternatives in front of us. On the one hand, we should be sensible and realistic and cut the coat according to the cloth.

World Overseas

Britain

UK INDUSTRIAL OUTPUT RISING SHARPLY

Industrial production in Britain has been rising sharply in the last few months, after a standstill of over a year. In May it was already almost at the peak levels of the last quarter of 1955—some 40 per cent higher than in 1948.

The biggest rise in output has been in passenger cars. The May production record (19,094 cars a week) was nothing less than 84 per cent higher than in January.

Among basic industries, coal output so far this year, at 125,700,000 tons, is over 3,000,000 tons up on last year. Steel output exceeded the annual rate of 23,000,000 tons for the first time in May, and cumulative output is four per cent up on 1956. Chemical output has been increasing steadily, and in March was already twice as high as the 1948 level.

This resumption of the upward trend in production was not unexpected. Throughout 1955 and 1956, industrial capacity continued to expand rapidly, with one-sixth of the national income devoted to fixed capital investment. The effects of Suez have turned out to be small and impermanent. The check to output in 1956 came almost entirely

from a temporary reduction in internal demand—partly a reaction to the boom in 1955, and partly induced by credit restriction and additional taxes.

In 1955 there had been considerable stockpiling and a large increase in hire-purchase. Imports rose and home demand diverted goods from export, so that at the end of the year there was a £79,000,000 deficit in Britain's account with the rest of the world.

In 1956—partly because of the unloading of stocks and the amount of consumers' incomes required for hire-purchase and other existing commitments, partly because of credit restriction and increased taxes on cars and other consumer durables—consumption and production stopped rising, and some temporary pockets of unemployment developed in the car, radio, and furniture industries.

But these were soon absorbed as exports rose and the labour force in certain capital-goods and export industries continued to expand. Imports fell substantially, and over the whole year there was a surplus of £233,000,000 on Britain's current account with the rest of the world.

This surplus was sufficient to cover the outflow of long-term capital (mainly to other Commonwealth countries) of £191,000,000, and to contribute £42,000,000 to the gold and foreign-currency reserves of the sterling Area.

The cloth, as any tailor will tell you, is far too sparse for a garment the size of the Second Plan. So, it would be prudent on our part to cut down the Second Plan. After all, this is merely to be realistic. However, there is the second alternative; we lose nothing at all by sending emissaries abroad whose task it will be to plead for a few dollars here, some sterling there, and foreign exchange everywhere. If we are successful in these efforts in the role of mendicant, why, we would have a little more material and the garment we could fashion would be a little larger. Let us leave it at that. But, the immediate task that we have is to sound the retreat; cut down the Plan; elongate it; and what matters if the revised Second Plan is but a caricature of the document that was originally drawn up? In the name of realism, we can do all this. However, while we are about it, let us send

out SOS messages on all wave lengths; then, at least, there is the chance that someone or other, of all those who are listening to their receiving sets, may rush to our aid." Yest, Dr Manic is gloatingly satisfied: Sound the retreat! And don't allow any respite in the transmission of SOS messages!

★

So much for Dr Manic. Mr I. M. Levelheaded is not greatly put out by this same fact, that the depletion of foreign exchange has been as large as Rs 419 crores in sixteen months. He does some research, to find out why the drawings have been much steeper than had been anticipated by the Planning Commission. He is, of course, more than a trifle worried about the foreign exchange position, and he envisages the difficulties as continuing for some time; but he does not panic. Then, he

begins to put in a bit of study: "Imports during 1956-57 amounted to Rs 1076 crores, registering a rise of Rs 326 crores over the previous year. Exports were well maintained at Rs 637 crores against Rs 641 crores. The Planning Commission envisaged the annual average of imports at Rs 868 crores, and that of exports at Rs 593 crores. Thus, the actuals for the first year of the Second Plan have exceeded the Second Plan figures in respect both of exports and imports. So, it is possible to suggest that the larger volume of imports during 1956-57 may mean that, to corresponding extent, the size of imports will go down in the remaining years of the Plan. Indeed, if we bear in mind the fact that Government have taken prompt measures to arrest the fall in foreign exchange reserves, the Import Plan (as revised by Indian Finance) may be cut down to Rs 4105 crores. In that case, the

import bill, in the future, may be less heavy. Furthermore, the improved performance of exports vis-a-vis the Second Plan estimate gives cause for hope that Indian Finance's revised Export Plan may also be successfully fulfilled. In that light, the foreign exchange shortfall may be reduced. Moreover, there is a silver lining to the storm clouds said to be presaged by the steep decline in foreign exchange reserves. If imports have been heavier than anticipated in the first year of the Plan, it can only mean that a larger volume of investment imports will yield new production, also earlier than planned. While a study of foreign exchange needs and prospects suggests that the gap will be covered, we have an immediate problem on our hands; that is because our exchange reserve has, after providing for the currency cover, shrunk to small proportions. So we need some short-term remedies. Surely, the Indian financial authorities should be able to conclude satisfactory negotiations. If, for example, we approach the United Kingdom for, say, £100 million credit, it would be good business for Britain to approve the proposition. Britain would have good security—sterling securities, for an amount more than three times the loan involved. And, if Britain is unable, because of its own economic problems, to help us out, we can approach the Import-Export Bank, even as the UK has. A lot depends on Mr Krishnamachari's ability to negotiate; but, for success to attend his efforts, he must negotiate from strength; and this he is in a position to do, since we have ample security. Also, the Birla delegation may win new contacts and influence fresh goodwill. In that case, it is possible to hope for some manner of instalment plan for the private sector's imports. Summing up the situation, it is certainly cold and hard reality that our present foreign exchange position is difficult. But, certainly, we have tenable grounds for believing that it is by no means desperate. Finally, if India is to negotiate from strength, it must forthwith cease its crisis mongering."

★

Choose what reading you will. As for me, incorrigible optimist that I am, it is the brighter side of the picture that appeals. As for this tendency to crisis mongering, I would remind the reader of the age old story of the banker, who is supposed to be one who will lend an umbrella when all's right with the world and the sun is shining in the heavens, but who will demand it back at the first sign of rain or storm. This is, I grant, a cynical joke. There is, however, a useful lesson to be learnt from it. That is, that the more we talk of crisis, the less chance we have of getting the loan of an umbrella to weather the storm.

"Moral Suasion"

TRADITIONALLY the authoritative review of monetary and economic conditions, the Annual Report on Currency and Finance published by the Reserve Bank can now claim an even added importance. For, in the circumstances of planned development, there is more than ever before the need for a careful watch over every facet of the economy, so that quick action can be taken to correct imbalances. Indeed, in the context of the Second Plan, I may suggest that the Report on Currency and Finance is complimentary to the work done by the Planning Commission in their annual evaluation of progress. We might say that the purpose of the latter is to assess objectives achieved and targets attained; and also to indicate the sectors in which a greater effort is called for in order that the Plan could be successfully fulfilled. I should think that the Currency and Finance Report is in the nature of a chronicle of the emerging and evolving economic conditions as well as of the measures set in train from time to time for the purpose of keeping the economy on an even keel. It is in this background that we should take up for study the Reserve Bank analysis of the first year of the Second Plan.

As usual, the Report begins with a survey of Indian conditions within the broader framework of world trends. Thus, it has been recorded that there was general prosperity sustained at a high level in the world. Nevertheless, as this journal has often remarked, the fashioners of financial policies these days would appear to be more afeared of prosperity than they are of depression. For, monetary restraint was again the order of the day, the intention being "to keep domestic investment within limits and to restore balance of payments equilibrium". The measures taken in this behalf mainly comprised increases in discount rates, reinforced by open market operations and by variations in reserve ratios as well as selective credit controls. In 1956, no less than eleven countries revised their discount rates. In India's own case, as we know, the effective rate for borrowings by Scheduled Banks was raised to 4 per cent some ten weeks ahead of a de jure increase in Bank Rate to 4 per cent.

In a wide range of countries, the central banking institution decided not to support giltedged; and the result was that yields rose substantially. What was intended was that the banking system would perform have to hold on to its

giltedged investments; and credit restraint was the end result. In India, however, the open market operations of the Reserve Bank took the form, not of a refusal to support prices or of an unwillingness to purchase securities; but, indeed, of an emphatic preparedness to help out the banking system by outright purchase of securities during the stringent season. Over the year, the net decline in Scheduled Banks' investments in giltedged was of the order of Rs 12½ crores to Rs 347.41 crores; but the Reserve Bank's purchase of securities from member banks must have been for a considerably larger amount since, in the interim, the Scheduled Banks bought securities both of the Central and State Governments, their giltedged portfolio touching a peak of Rs 375.61 crores on 28th September, 1956. The Reserve Bank's purchase of Rs 28 crores of securities from Scheduled Banks surely indicates that India did not share the zeal for credit restraint that obtained in almost every other part of the world.

The third direction in which central banking institutions sought to ward off incipient inflationary pressures was in their variation of reserve deposit requirements of commercial banks. In New Zealand, for example, the reserve requirements in respect of demand liabilities and time liabilities were raised from 26 per cent and 7½ per cent to 34 per cent and 12½ per cent respectively. In Peru, the minimum reserves required of commercial banks were at the high altitude of 69 per cent against demand deposits and 57 per cent against time deposits that exceeded their February 28, 1957 levels. This compares with the Indian reserve requirements of 2 per cent against time liabilities and 5 per cent against demand liabilities. However, the Reserve Bank of India Act has been amended, such as to enable the Bank to raise the ratio from 2 per cent to 8 per cent in respect of time liabilities and from 5 per cent to 20 per cent in regard to demand liabilities. The Report notes that "the Bank is also empowered to require Scheduled Banks to maintain with it additional cash reserves, computed with reference to the additions to deposit liabilities accruing from any specific date, at a rate not exceeding 100 per cent of the addition, subject to the overall limit of 20 per cent of demand and 8 per cent of time liabilities."

The policy of credit restraint was of course, adopted consequent

to the continued inflationary pressures. In Japan, the rise in the index of wholesale prices worked out to over 8 per cent in 1956. This compares with India's own experience of a rise of 8 per cent in 1956-57. Secondly, the index of cost of living also showed a rising tendency, with an increase of 6 per cent recorded in the UK; in Australia and New Zealand, the rise was 5 per cent; in the US, Canada and West Germany, the rise was 2 per cent; and the increase in India amounted to 7 per cent. (I should like to point out that there is an apparent contradiction in the Report: on page 1, the Report notes that the index of wholesale prices rose over the year by about 8 per cent; on page 4 of the Report, the statement is made that, in India, "the rise in wholesale prices during 1956 was 16 per cent". But the point is, the former figure relates to the rise over the financial year, and the latter to the increase over the calendar year). If it is suggested that, ultimately, the only answer to inflation is an increase in industrial production, 1956 proved to be a satisfactory year. In Japan, industrial production rose by 18.5 per cent, in France by 9.1 per cent, in West Germany by 8.6 per cent, in Canada by 6.5 per cent and in Belgium by 6 per cent. Strangely, the USA showed an increase of only 2.9 per cent as compared with 11.8 per cent during 1955; and, in the UK, no improvement was noticeable as against the rise of 5.6 per cent in the previous year. India compares favourably with an increase in industrial production of 9 per cent.

Many countries chose to supplement the orthodox weapons of monetary restraint by what is called "moral suasion". The Report notes that "a directive method" is now recognised as an essential part of the monetary policy in the UK, Australia, New Zealand, Canada, the Netherlands, Norway and Sweden". It is clear, of course, that the Indian monetary authorities also place reliance upon directives as an essential aspect of selective monetary control. Indeed, except for the fact that, toward the end of the financial year, the de facto rate for Reserve Bank credit was raised to 4 per cent, there was very little in the way of orthodox measures taken by the central banking institution.

In this brief review of the Indian economy in the setting of international trends, there are quite a number of interesting points which emerge. Firstly, the rise in prices in this country falls into the pattern of a world rise in prices. So, it can be maintained, to some extent, that the higher Indian

indices are merely the result of the higher import prices. Secondly, it cannot be denied that the closure of the Suez Canal added somewhat to the inflationary pressures.

Moreover, the Indian record of increase in industrial production is very satisfactory. Normally, such increase in production could have prevented any rise in prices. Thus, if the indices have risen in spite of higher production, the inescapable conclusion must be either that there has been relatively greater increase in demand or consumption or that prices were given an upward spiral by, on the one hand, speculative interests or, on the other hand, higher import prices. While we have no doubt that, in fact, internal consumption has been showing a rising trend, we are also of the view that, to an even greater extent, the inflationary pressures have been aggravated by speculative activities.

Finally, I would like to take this opportunity of emphasising that, just as the rest of the world is increasingly utilising moral suasion, India will find that its economy can best be kept on an even keel, not by orthodox measures of monetary restraint, but by the judicious use of directives in a policy of selective monetary control.

Financing the Plan

Discussions over the Second Plan have revealed that there are quite a few people in our country who are not very confident about our ability to obtain all the resources that would be needed for a successful implementation of all the development schemes. This view has been shared by some economists and prominent members of the business community as well. It has been often suggested, therefore, that the Plan should be spread over a longer period.

It is, however, gratifying to find that the spokesman of an important organisation has taken an optimistic view of the prospects of financing of the Plan. Speaking at the First Quarterly meeting of the Central Committee of the All India Manufacturers' Organisation in Bombay recently, Mr S. N. Haji, Chairman, has pointed out that indications are Government will be able to obtain all the required finances both in regard to internal needs and in respect of foreign exchange. It will be evident that even at the present level of taxation, a minimum of Rs 1500 crores can be got. Secondly, past experience shows that the borrowing programme will also meet with success. Even small savings which have not come up to expectations during the past year can be confidently expected to fulfil its target in view of the various incentives provided by the Finance Minister. The Railways and the Provident Fund will be giving an additional Rs 150 crores. It would appear, that in regard to foreign exchange also, the apprehensions are largely exaggerated.

Mr Haji has shown with the help of statistics that "there need not be, therefore, any undue apprehension at present that foreign aid will not be forthcoming to the extent required." In support of his thesis, he first of all points to the fact that from the published statistics exports in 1956 have been higher than anticipated. As against estimated exports of Rs 573 crores, the actuals have been Rs 589.2 crores. As imports have been placed at Rs 794.2 crores, the deficit is only Rs 205 crores; and the Second Plan has estimated the deficit to be Rs 210 crores. It will be, therefore, wrong to say that the deficit has come as a surprise. The Government, however, have calculated the deficit to be Rs 347.6 crores. The improvement noticed in the 'invisible' account will also be of considerable help in bridging the foreign exchange gap.

The position as regards foreign aid is also quite encouraging. Already Rs 463.85 crores out of the

total requirement of Rs 1200 crores have been accounted for. It is confidently expected that the world Bank will grant yearly loans to the Railways in the next three years also. Apart from the aid already obtained—most of them are likely to be continued during the remaining years of the Plan—the prospects of financial aid from the UK are also said to be good.

Turning to the private sector in the Plan, Mr Haji finds that Authority is not evincing the same interest as it seems to bestow on what is called the public sector. This is evident from the fact that though the private sector's outlay under the Second Plan is placed at Rs 2400 crores,—it is to be noted that the private sector like the public sector will require much more than this amount to fulfill the tasks allotted to it—"very little has been done to enable the private sector to save more and invest more." Fresh burdens have been imposed in the last two Budgets and Authority has not even hesitated to levy double taxation in the form of wealth tax.

It is no good pointing to the statistics pertaining to industrial production and assert all is well with the private sector. While it is undeniable that there has been an increase in production, it is to be realised that if the nation is to attain its dreams of rapid development, the rate of progress should be much higher. Such a consummation is possible only if the private sector is given adequate facilities for auto-financing which is to be its mainstay in its expansion programme.

★

Larsen & Toubro

The large number of development projects which are under way and are envisaged for implementation in our country require a wide variety of plant and equipment, and as a consequence enterprises which supply and service them are having a busy time. In view of the large leeway to be made up in many fields, it is to be expected that firms specialising in supplying and servicing plant, equipment and parts will continue to play an important role in our country.

Speaking at the general meeting of Larsen and Toubro Limited, Mr Holck-Larsen, Chairman, expressed cautious optimism as regards the future prospects of the company. The fact that the company is eminently equipped to cater to the needs of industries

both in the public and private sector has given it an assured future. Apart from the imported equipment it supplies, Larsen and Toubro operates workshops for the manufacture of earth compacting machinery which are in great demand. The expansion plans of the company include the manufacture of dairy machinery and petrol pumps in collaboration with foreign manufacturers.

That the company has placed special emphasis on service after

sales is borne out by the fact that its workshops have made arrangements to manufacture items which are complementary to its imports of plant and machinery. These workshops also manufacture, whenever necessary, spare parts which can be relied upon to keep machines running until genuine parts become available. The company also expects to expand its indigenous manufacturing activities further in cooperation with its principals overseas.

GATEWAY MARKETS

Rayon Yarn Dearer

PRICES, especially of Rayon and Art Silk yarns, in the Bombay market, have developed a firmer tendency during the week under review. Spot and forward rates have risen by about six to eight annas per pound, thanks to the ban on imports by established importers. Italian yarn 120 denier has moved up from Rs 3-13 to Rs 4-4 per pound and 100 denier from Rs 4-1 to Rs 4-10. The indigenous yarn has also followed suit with 120 denier bright becoming dearer from Rs 3-11 to Rs 4-2 and 150 denier from Rs 3-5 to Rs 3-12 per pound.

Rayon mills are considerably worried about the prospects of an acute shortage of Art Silk Yarn during the approaching busy season. There is a feeling that the broadening of the weavers' demand after August will aggravate the supply position and push up prices further. It is felt that the impact of the absence of imports by established importers, in the current quarter, will be felt more keenly after some time in the absence of substantial unutilised licences with the importers.

With regard to the trade's plea for ad hoc licences for Art Silk Yarn imports, the Union Minister of Commerce and Industry has stated that it will be preferable to take measures to encourage indigenous production instead of wasting foreign exchange. He has also added that stocks in the country are adequate. Despite the fact that the Government have made provision for imports on an ad hoc basis, manufacturers believe that this measure will be of some relief only if licences are issued without much delay. It is also pointed that the Government should expedite the issue of licences in view of the possible loss of time in making purchases abroad and in receiving shipments.

The market for Staple-Fibre Yarn remained, however, unchanged as the demand from handloom and powerloom factories was at a low

ebb in view of mounting stocks at the producing centres.

In the case of Cotton Yarn, the Government have decided to raise the ceiling of the export, under the free licensing scheme, from 5,000 bales to 17,500 bales. It has also been decided to extend the shipment validity by three months to December 31, 1957. This announcement has, however, no effect on the market as the export demand is very limited due to increasing competition in the trade by Pakistan.

Meanwhile, the Government have decided not to permit resumption of forward trading in cotton yarn. In this connection, the Union Minister of Commerce and Industry has stated that yarn production is a continuous process and as such that there is no need of forward trading in cotton yarn whose production is not at all a burden. He has also added that the Government prefer to encourage exports of finished goods, such as cotton cloth, instead of cotton yarn.

★

Gold & Silver

Prices on the Bombay bullion market, after touching high levels early in the week, receded slightly towards the close on lack of follow-up support. Gold arrivals amounted to 1,000 tolas as against an offtake of 2,000 tolas. Unrefined metal receipts totalled 3,500 tolas. Shrivani delivery started at Rs 106.75 and, after touching a high of Rs 106.81, finished at Rs 106.75. Bhadon delivery closed at Rs 106.62, the highest and the lowest levels touched being Rs 106.69 and Rs 106.53 respectively. Spot hovered around Rs 106.94, while Sovereign was quoted at Rs 70.

Sentiment in the Silver section remained subdued with increased tempo of arrivals. Arrivals amounted to 7 bars as against an offtake of 9 bars. Unrefined metal receipts were heavy at 49 bars. Stocks in

(Continued on page 219)

World of Cotton

Listless Conditions

TRADING in the Bombay Cotton futures market has been featureless during the week under report and price movements have been confined to a narrow range. Higher levels have continued to attract profit-realising, with the result the market is not able to forge ahead despite good spot enquiry. In general, operators are rather cautious in their commitments, being inclined to await the fuller idea of the crop and also the detailed picture of the import programme.

It is felt that a timely announcement of the import programme will enable the industry to plan its purchases of new cotton, including "aid" cotton from America. As the emphasis has now shifted from sterling to dollar area cottons, only about three lakh bales are expected to be permitted from sterling countries next season.

Trade circles envisage, in the near future, an announcement permitting further 20,000 bales of Egyptian cotton under the Special Payments Agreement as the export tax on Egyptian cotton is to be increased from the beginning of the new season. The prevailing prices for Egyptian cotton are considered attractive with the discounts offered. There is already a move for barter deal between Egypt and France in exchange of Egyptian cotton for flour. Exports of cotton from Egypt have totalled only 568,093 bales till the 17th July as compared with the corresponding figure of 850,119 bales.

So far as exports are concerned, the Government have always adopted a cautious attitude and will not allow more than 3 lakh bales. The trade is expected to press for the abolition of the export duty of Rs 50 per bale or 30 per cent ad valorem, whichever is lower, on Zoda, yellow pickings and other varieties which have no spinning value. These varieties are stated to be out of parity on account of the heavy export duty. Shippers will also ask for the revalidation of their export licences remaining unutilised and subsequently cancelled; but the Government are unlikely to revise their decision on this front.

Meanwhile, weak conditions persisted in the futures market on favourable weather reports from the interior. The turnover was only 10,000 bales. ICC Jharilla March, after touching a high of Rs 712.25 and a low of Rs 706.50, finished at Rs 707.50.

In the ready section, activity was only moderate with mills and spot houses seeking qualities of only high-grade staples. Ahmedabad mills were reported to have purchased Elpaso 1 3/16" at Rs

1,475 on ready delivery terms. Business was also done in Hubli Jaydhar at Rs 935; Bhagalkot Jaydhar at Rs 830; Dhadhuka Kalyan at Rs 875; Porbunder at Rs 818 and Hansi H-14 at Rs 980.

STATISTICS:

According to the latest statistics, Indian mills have consumed, during May this year, 4.01 lakh bales of domestic and 49,090 bales of foreign cotton. Total consumption, for the first nine months of this season, is 35.35 lakh bales of indigenous and 4.28 lakh bales of foreign cotton. The figures for the corresponding period of last season are 32.60 lakh bales of domestic and 4.45 lakh bales of foreign cotton. This indicates that Indian mills will require about 48 lakh bales of Indian cotton and 5.5 lakh bales of foreign cotton for the current season.

Despite the prospects of a bumper indigenous crop, the country will require about 6 lakh bales of foreign cotton for the 1957/58 season. Traders have, therefore, suggested that the Government should announce their cotton import policy as early as possible with a view to helping mills to plan their purchase programme.

NEW YORK COTTON MARKET:

On the New York cotton market, prices moved lower in quiet trading due to liquidation and selling pressure on the new crop and more distant position, reflecting the more favourable weather and crop reports and the disappointment over the failure to introduce legislation to amend the present Farm Act. Middling Spot was quoted at 35.45 cents per pound.

×

LIVERPOOL COTTON MARKET:

On the Liverpool cotton futures market, trading in the American contract was steady, but relatively quiet in the absence of any new development to stimulate increased activity. A moderate amount of hedge selling, particularly in the new crop positions, found only a limited trade offtake. Trading in the Sudan contract remained idle.

×

KARACHI COTTON MARKET:

The Karachi cotton market presented a steady front, being influenced by hedge purchases against shipments to China, Japan and Germany. The encouraging trend in domestic mill consumption was another contributory factor. Sind Deshi was quoted at Rs 84-4; Punjab Deshi at Rs 80; 4F Punjab Roller at Rs 74-6; NTRG at Rs 78-6 and 289F Punjab at Rs 83-5.

CLOTH AND PIECEGOODS:

Conditions in the Bombay Piece-goods market ruled a shade steadier, thanks to moderate demand. Hopes were entertained that the offtake would broaden in the next few weeks. Enquiries from South Indian centres were better and, to some extent, interest was evinced from Calcutta. Demand was more pronounced in respect of coarse and medium qualities due to seasonal factors. Prices ruled steady and some of the mills were reported to have received orders for forward delivery.

On the export front, however, conditions remained unchanged. Only scattered enquiries were reported from Sudan and East Africa. Shippers were, however, hopeful that foreign demand would improve in the next few weeks.

Exports of cotton piecegoods from Bombay, during the first quarter of the year, aggregated 248.79 million yards as against 161.09 million yards in the corresponding period of last year. This figure represents an improvement to the extent of 87.70 million yards over the exports during the first quarter of 1956. The rise in exports is shared by all the zones except the American zone.

WORLD OF TEA

(Continued from page 205)

quently sold at 3 to 4 annas below last rates.

Prices of Dusts ruled somewhat easier. Plain Sylhet Dust was quoted at Rs 1-14-6. A line of Chandpore realised up to Rs 2-10-6 per pound.

In London auction, offerings were 24,230 packages. There was a good demand. Although there was some irregularity, prices were generally fully firm at last rates. Owing to August bank holiday, only one sale will be held this week.

Tea stocks in London, as on the 19th July, were 140.15 million pounds as compared to 141.49 million pounds in the previous week. The total amount, to be landed on the same date, was 11.12 million pounds. Deliveries, during the week, totalled 11.33 million pounds and landings 9.99 million pounds. Total afloat was 13.01 million pounds including 7.41 million pounds from Calcutta; nil from Chittagong; 2.72 million pounds from Cochin; 6.54 million pounds from Colombo and 1.34 million pounds from other Ports.

Delhi Review

Industrialisation and Exports

NEXT week an influential business delegation will be leaving India on a fairly long foreign tour. One is unable to recall another delegation consisting of so many top-ranking businessmen and representing so wide a range of industrial and commercial interests leaving Indian shores. Though sponsored by the Government the delegation headed by Mr G. D. Birla may function as one speaking for private industry alone and without any involvement in the views or policies of the public sector.

Mr Birla says that being a non-official delegation, it is outside its scope to seek or arrange for any monetary credits. He explains the main object as making a first-hand study of the international market, establishing contacts, seeking collaboration and cooperation of foreign industrialists wherever possible and trying to secure technical know-how. Among these, one can unmistakably discern the lurking presence of the purpose which the delegation leader has denied. In the collaboration and cooperation of foreign industrialists can be included monetary credits; quite possibly this is not a direct purpose and the delegation will not proceed beyond the point of exploring avenues and opportunities. Significantly, the members would be assembling in New York on September 10, which is about the time the Union Finance Ministers' Conference which lies ahead. Under the tentative programme now an-

The value of this important delegation has to be judged in the setting provided by the simultaneous visit of Mr T. T. Krishnamachari to the US and the Commonwealth Finance Ministers' Conference which lies ahead. Under the tentative programme now an-

nounced, the delegation will visit Washington, New York, Canada, UK, West Germany, France and possibly Belgium and Holland. At Washington, the programme includes discussion with the officials of the World Bank and the International Monetary Fund. It is also interesting to recall that the members represent diverse industries, from heavy engineering, rayon, cotton textiles, heavy chemical, and dye stuffs, electrical equipments and transformers, caustic soda, machinery, tools, cement and sugar to banking.

In the light of these facts, it can usefully be assumed that this delegation will make a detailed study of opportunities for securing assistance for the development of Indian industry and trade and try to lay the foundations of many more stable contacts in different countries for these purposes. In other words, the sojourn is being undertaken with a view to see to what extent India can look for in the matter of external financial and technical cooperation in the matter of industrial and commercial development and the potential scope for furthering India's export trade. It cannot be said that these are entirely new endeavours. The delegation will have to be regarded as attempting to give the finishing touches to a task already on hand and to secure an up-to-date and complete picture where only incomplete and fragmentary ideas have been available. It goes without saying that the present foreign exchange difficulties in India will remain permanently in the background of the discussions and investigations which this delegation will be having and will form a special immediate inspiration to their efforts.

Olympus

A valuable part of the study of foreign markets which this delegation has undertaken will surely consist of the broad trends in international trade whose impact is necessarily felt on India's foreign exchange position also. Apart from certain handicaps and difficulties peculiar to India in the matter of balancing the outgoings on import trade and the earnings on export trade, these international trends should also be taken into account in any serious calculation of future prospects. The Report on International Trade in 1956 published by the Contracting Parties to the General Agreement on Tariffs and Trade, Geneva, therefore comes timely. Amidst the many salient features described by this authoritative Annual Review, there are a few which are of special interest to India and the semi-industrialised countries in general.

The Report for 1956, the latest put out by the GATT, makes an innovation in the grouping of countries for the purpose of analysing trade trends. Hitherto, non-industrial areas came under a single group. For the first time, these areas have been split into two country groups: (1) eight semi-industrialized countries, namely Argentina, Brazil, Mexico, Australia, India, the Union of South Africa, Finland and Yugoslavia, these eight countries account for roughly 80 per cent of the manufacturing activity outside the industrial areas proper; and (11) the rest of the non-industrial world.

This subdivision is found to be of assistance in explaining a phenomenon for which the reasons given hitherto have been found to be inadequate. During 1956, both the value and volume of international trade established a record level as in the previous year. The value was 11 per cent higher than in 1955 and the volume higher by 9.5 per cent. As in 1955, the proportion of world trade that flows between the industrial areas and non-industrial areas declined. The exports of industrial areas were rising much faster than those of the remaining parts of the world. Of the total increase in the value of world exports by \$ 9,300 million, the exports of the industrial countries accounted for \$ 7,500 million, which represented an increase by 14.2 per cent over 1955. On the other hand the rise by \$ 1,800 million in the exports of the non-industrial countries represented an increase by only 5.9 per cent.

The exports of the industrial countries to each other again rose more rapidly than to non-industrial destinations—by 15.8 per cent as against 11.7 per cent. As a result

of these changes, the share in world exports of trade among industrial countries rose from 38.6 per cent in 1955 to 40.3 per cent in 1956; the share of trade between industrial and non-industrial countries fell from 50.3 to 49.2 per cent; the share of trade among non-industrial countries declined from 11.1 to 10.5 per cent.

In 1956, a further relative decline in the exports from the non-industrial areas, while the share in world trade of their imports from industrial countries remained unchanged, led to a larger deficit in their total balance of trade. In 1956, the deficit was of the order of \$ 12,000 million against a surplus of \$ 2,800 million in 1950 and a nearly even trade balance in 1954 and 1955.

In recent years, the share of the non-industrial areas in the total supplies of primary products to the industrial countries has also declined; against a pre-war share of 58 to 59 per cent, the 1956 share stood at 56 per cent. After examining how far industrialisation has contributed to these trends, how far the long-term prospects in the import requirements of North America and Western Europe would be favourable to them and how far the growth of trade among industrial countries particularly intra-European trade is also responsible for the decline of exports from the non-industrial areas, the Report enumerates the following conclusions. Of these, the first three are already known, the last is a conclusion derived from the study on the basis of a break-up of the old non-industrial areas into semi-industrialised areas and the rest of the non-industrialised areas.

The conclusions are as follows: (1) There has been a drastic fall in the requirements of raw materials and fuels per unit of manufacturing output in industrial countries. (2) Agricultural protection in industrial areas and industrial protection in the primary producing areas (3) growth in the production of domestic raw materials within the industrial areas themselves, the intensified use of manufactured raw materials such as synthetic rubber, synthetic fibres, plastics and aluminium and the relative decline of the textile industries (4) the failure of semi-industrialised countries to produce sufficient primary export commodities to meet domestic requirements at the same time to maintain an adequate volume of export supplies. Elucidating this point, the Report states that, given limited investment resources, the comparatively slow growth of primary production is closely connected with the rapid growth in industrial activity.

North Indian Notes

National Council for Training in Vocational Trades

One of the features of the underdeveloped economy which India is, is the lack of technical personnel of the size required to man the industries which are being developed and expanded. One of the pre-requisites for the success of planning in such a context is the training of skilled personnel adequate to the needs of the growing tempo of development. But mere expansion of training facilities, without proper coordination and standardization of the various training schemes throughout the country, will result in immobility of technical man-power and defeat the very objective of such training.

The setting up of the National Council for Training in Vocational Trades, which was inaugurated by Prime Minister Mr Nenu in New Delhi is in fulfilment of the need for such coordination of the technical training given by the institutions scattered over various parts of the country. The training so far given by these institutions run by Union Ministries, State Governments and industrial undertakings, was marked by a lack of uniformity in their syllabuses.

The Council will establish and award national certificates for craftsmen and prescribe the standards and curricula for training. It will also advise Government regarding craftsmen training policies and programmes. The Council consists of 54 members, including experts representing organisations like the All India Council for Technical Education and the Engineering Association of India. The constitution of the Council provides for the representation of various ministries of the Central Government, State Governments, employers' and workers' organisations etc.

Addressing the inaugural meeting of the Council, Mr Gulzari Lal Nanda, Union Minister for Labour and Employment, said that the creation of the Council was an important step in removing the deficiencies which have so far hindered the country's progress towards full employment and optimum production. The difference in performance between the Indian craftsmen and his counterparts in Western countries it was explained was more due to the handicap of the former in regard to training facilities. He pointed out that shortage of suitably trained candidates has resulted in the anomalous situation of jobs calling for a variety of skills remaining vacant in spite of the existence of large number of people without jobs and said that it was an essential feature of planning that the requirements of skilled person-

nel should be estimated as precisely as possible keeping in view the perspective of ten to fifteen years.

Explaining the difficulties in making such assessments Mr Nanda said that such difficulties arise from the side of demand as well as supply, the former due to the lack of proper definition or description of the job and the latter because of the large unknown area consisting of on-the-job training of unskilled workers for semi-skilled or skilled operations. It will be one of the functions of the Council to advise the Government regarding all these matters so that the utmost precision could be given to the estimates in the light of practical experience.

★

Social Welfare

While the welfare programmes of the Central Social Welfare Board, are in need of wider extension without which, millions of people, would have no means of improving their lot, it is a pity that such programmes, should have made tardy progress in some States, because of the difficulty felt by the voluntary organisations to follow the procedures prescribed for applying for grants and for spending them. The Central Social Welfare Board, to which this was disclosed, by some of the members at its meeting in New Delhi, seems to be of the view that such simplifications though being constantly tried, could not be carried beyond the point, where they do not satisfy the requirements of audit and the rules of financial procedure.

NORTH INDIAN MARKETS

Outlook for Shellac

THE uncertain outlook for Shellac has been mainly responsible for an irregular trend in the prices of the commodity during the past few weeks. Apart from the fact that prices have declined substantially during the past two months, what is worrying is that, even at the current low levels of prices, not much foreign interest is forthcoming. For instance, Pure TN coming, has already touched a low quality, has already touched a low level of Rs 70 from the high level of Rs 105 quoted on the 9th January. The rate has now improved to Rs 82 per maund, thanks to a small enquiry from overseas buyers.

There is a general feeling that the fall in enquiry may be due to

Moreover insufficiency of qualified and trained workers, in the welfare projects, is also a problem which has to be tackled with expedition, if uniformly greater progress in the welfare programmes in all the States is to be ensured.

Discussing this problem the Board, pointed out that about 14,000 Gram Sevikas, would be required for employment in the welfare projects under the coordination scheme. The Board expects to meet this demand by training as many as possible in the Kasturba training centres as also by recruiting women who are being trained in the Home Economics Wing of the Ministry of Food and Agriculture. It was also decided that Mukhya Sevikas (Chief Organizers) also should receive the same training as social education organisers under the Ministry of Community Development.

Non-officialisation of the Project Implementing Committees which are to be in charge of Women's and Children's welfare programmes in Community Development Blocks, and enlisting the cooperation of voluntary organisations in constituting the project committees in the Community Development Blocks to be started in Tribal Areas were also matters in regard to which agreement was reached by the Social Welfare Board.

In regard to the question of matching contributions to be raised by project committees, in the new project areas, it was agreed that matching contributions should be a pre-requisite in the case of the projects, to be newly started though relaxations could be made in the applications pertaining to it in particular cases recommended by the State Welfare Boards.

against the annual average production of 1,103,000 maunds, based on the period of ten years preceding 1955. Exports of all kinds of lac, during the period under review, were 773,814 maunds valued at Rs 11.71 crores, which were better than the previous two years. The average annual exports, on the basis of ten years preceding 1955, work out to 777,597 maunds valued at Rs 9.28 crores.

★

Sugar

Sugar markets have contained to rule quiet following slack outside buying enquiry with the break of monsoon. Rumours, that the Government are contemplating some sort of control in order to check the rising trend of prices, have also caused nervousness in the minds of traders. The release of a further quantity of 1.70 lakh tons of the commodity for free sale is another contributory factor.

Following ex-mill delivery prices (per maund) are quoted in the Hapur market:—Meerut (D-28) Rs 33.75; Daurala (B-29) Rs 35-12; (B-28) Rs 34.87; Bijnore (E-29) Rs 33; Amroha (D-29) Rs 33.19 and wholesale Rs 33.50 to Rs 36.00.

The Khandasari market is also ruling quiet due to slack outside demand and the rates are moving between Rs 26 and Rs 32 per maund, according to quality.

★

Gur

In Hapur, the Gur market has continued to rule steady despite heavy stocks, thanks to the expectation of better prices by stockists in the lean period. Some demand is also reported from the Punjab.

Stocks at Muzaffarnagar are put at about 75,000 maunds and prices have improved slightly on good support from Gujarat; but despatches are hampered for want of adequate loading facilities. Rates are moving between Rs 10.50 and Rs 12.75 per maund, according to quality. Kotha dry-wet quality is quoted at Rs 10.50 to Rs 11.50 per maund.

★

Foodgrains

Prices in the Foodgrains market have developed a slightly easier trend, following clear weather which has bright brightened prospects of the coming "kharif" crop.

In the Hapur market, Wheat is quoted at Rs 16.12 for the average quality and Rs 17.37 for farm quality as against Rs 16.37 and Rs 17.50 per maund respectively quoted in the previous week. The market for Rice has however, recorded slight gains, rates moving between Rs 28 and Rs 30.52 per maund, according to quality. Gram rules firm, while Barely and Bejher have advanced due to paucity of local stocks. Jowar

The Peninsula

Visakhapatnam

MR RAJ Bahadur, Minister of State for Communications, disclosed in Parliament early this week that as provided in the Second Five Year Plan, Government would take preparatory steps for the location and training of personnel for the establishment of a second shipyard in the country. The first advance team of shipyard experts from Britain under the Colombo Plan had already visited nine sites on the East and West Coasts with a view to make a preliminary survey of the possible sites and to collect data for study by the full mission which will arrive in September. The final selection of the site will follow the discussion of the mission with the Government of India on the recommendations of the advance party.

Though it is recognised that our country needs not one or two but several shipyards, practical difficulties have made it inevitable that the expansion programme is to be spread over a number of years. Even so commendable progress has already been made and with the establishment of the second shipyard further fillip will be given to the shipping industry. While it is true that only one of the nine sites can be taken up for development, now it may be safely assumed that in course of time all of them will become flourishing centres of shipbuilding activity of one kind or

another. Those who may feel doubtful about the prospects of an early establishment of a second shipyard in view of the paucity of foreign exchange even in the first year of the present plan, may take note of the fact that Government have received some offers for capital investment from one country for the building of the proposed shipyard.

The establishment of the second shipyard will be a comparatively smooth job for we have already gained valuable experience in this regard at Visakhapatnam where the first shipyard is located. The major problems that will be encountered are all known factors and the task can be embarked upon with confidence. The working of the Hindusthan Shipyard has revealed that trained personnel are an essential prerequisite. In order to ensure that the work in the second shipyard is not handicapped as in that of the first, it has been decided to train a nucleus of skilled artisans and supervisory personnel at the special training school recently opened at Visakhapatnam. Those who expect that with the mere establishment of more shipbuilding yards, ships will begin to come out in a rapid succession would do well to remember that we are not yet manufacturing the principal raw material for shipbuilding, steel, in sufficient quan-

tity. Moreover, the special size required is yet to be fabricated by our steel works. It is expected that the difficulty in this regard will be solved to some extent when the two steel plants at Rourkela and Bhilai are put into commission. At present, the bulk of the steel requirements of the Hindusthan Shipyard is imported.

Much remains to be done in the first shipyard though satisfactory headway has been made in the past five, six years. The Rs 2 crore development project is now nearing completion. A scheme for the construction of a dry dock at a cost of Rs 215 lakhs has now been sanctioned. Under the second Five Year Plan it has been envisaged that the production target would be raised to 64,000 to 96,000 tons DWT per annum. At present the production capacity is about 20,000 DWT per year. There are four large berths with the requisite number of workshops and jetties. Ships up to 550 ft in length and about 15,000 tons DWT can be built in these berths. This shipyard has so far produced 16 ships, the last one being a 8000 DWT motor ship of the most modern design. It is particularly gratifying to note that all these ships have received the highest classification. The shipyard can now be practically completely manned by Indian technical personnel.

Besides technical personnel and steel, there are many other items that are required in the manufacture of a modern ship. The Indian content of the Visakhapatnam built ships is rather insignificant at the moment. The Planning Commission has stated that efforts should continuously be made to utilise the indigenous capacity fully for the manufacture of different parts hitherto imported. In accordance with the recommendation of the Commission, Government have now decided to set up a factory for the manufacture of marine diesel engines. The Planning Commission have also taken note of the fact that enough scope exists in a number of workshops in the country for the fabrication of a large number of components and parts required for the construction of ships. Informed opinion is of the view that given adequate facilities these workshops can go a long way in helping the indigenous shipbuilding industry achieve self-sufficiency.

Authoritative sources aver that once the major problems such as the supply of raw material, auxiliaries and components etc are satisfactorily solved, the Indian industry can soon reach a position in which it can compete with foreign manufacturers. For, even at the present moment when our shipbuilding industry is so heavily dependent on imports for its raw

materials its cost of production is not very high compared to those of most countries.

Visakhapatnam has hit the headlines a few days ago as the Caltex Refinery went into full operation. It was announced last week by the company that since the last unit went on stream on July 14, tests had confirmed that the entire refinery would be able to maintain its designed capacity. The Caltex refinery's yearly output of quality products is 74,000,000 gallons of petrol, 21,257,000 gallons of superior kerosene, 8,177,300 gallons of inferior kerosene, 31,631,000 gallons of diesel oils and 26,495,000 gallons of fuel oils. This Rs 15 crore project took nearly two years to complete and the refinery is situated on a site of 515 acres from the Visakhapatnam port. With the commissioning of the Caltex Refinery, there are now four oil refineries in the country with a total installed capacity of 4.3 million tons in terms of crude processed per annum.

For obvious reasons, it has been more or less settled that the Caltex refinery should be sited on the east coast. The technical party of the company after extensive surveys in 1952 selected Visakhapatnam as it satisfied all the desired requirements for the location of a refinery. The actual work on the refinery began in 1955 and within two years, the entire plant has come into full operation. The Caltex Refinery has been designed to process both Persian Gulf crude oil and the very waxy Minas crude oil from Indonesia. The refinery is considered to be one of the most modern and efficient installations of its kind.

An interesting feature about the Caltex Refinery is that in it is processed for the first time in our country crude oil from the Minas fields. It is said that superior quality petroleum products can be manufactured from Minas crude oil because of its excellent base properties.

In the smooth handling of the new tanker traffic, the construction division of the South Eastern Railway has played a vital role. The Railway has built at an approximate cost of Rs 2 crores a new oil wharf consisting of two berths, 600 ft each, at the Visakhapatnam port.

A few words about Visakhapatnam port will not be out of place here because the port has also played a large part in the establishment of the oil refinery. The development plans for the port under the first plan had taken into account the need for providing adequate facilities for the smooth functioning of the refinery. During the past five years various development schemes at a cost of Rs 131 lakhs were completed. As a result the traffic capacity of the port has increased to

(Continued on page 218)

South Indian Notes

Rural Higher Education

The most glaring defects of higher education in India, had been its bias towards the needs of urban areas and its excessive pre-occupation with mere academic studies. The education at no point tried to take into account the practical problems inherent in a predominantly agricultural and under-developed economy. It was a monstrous incongruity that the requirements of 80 per cent of the population which lived in rural areas formed no part of the objectives of higher education. If education was to have a practical value, obviously it had to be linked with a purpose, derived from the immediate needs of the country and the people.

The University Education Commission saw in the establishment of Rural Universities the only way to free education from its academic grooves. And later the Committee on Rural Higher Education recommended the establishment of Rural Institutes. And it was further emphasized that the approach to education in such institutions should not be merely academic but through work extension and research.

The Government of India have therefore selected ten institutions already working under Gandhian ideals for conversion into Rural Institutes of higher education. This represents an important step in giving a new orientation to the system of education in India.

Speaking on the occasion of inaugurating the college of Rural Higher Education at the Sri Ramakrishna Vidyalaya, Perianaicken palayam Mr T. S. Avinashlingam Chettiar explained the nature of the new Institutes. The Institutes will have three sections namely a four year course in Rural Services equivalent to the Bachelors Degree courses in Universities, a two year course in Agriculture and a three year course in Engineering corresponding to Diploma courses in Engineering.

The subjects that would be taught at the Institutes include besides English, Hindi and the regional language a course of studies relating to various aspects of rural problems, with reference to Agriculture, Economics, Health, Education and Engineering. Another important feature of the course was that it provided certain subjects providing job opportunities namely Co-operation Social Education, Public Administration etc.

Inaugurating the college, Dr S. Radhakrishnan, Vice President of India expressed the hope that those who were going to be educated in agricultural science, rural hygiene and engineering in the Institute

would take to villages new ideas, and give villagers new faith, pull them out of fear, want and stagnation and make them proud of being citizens of the country.

Dr Radhakrishnan, pointed out that the education given in the country has tended to divide rural population which was nearly 80 per cent from urban population on the lines of what Disraeli remarked about two nations in England i.e. rich and poor. Deploping the tendency of villagers to be lured into cities and of Agricultural graduates seeking Government jobs, Dr Radhakrishnan said that this had the effect of drawing away the best talent from the villages, without any reverse movement.

Rural Institutes, he pointed out were an outgrowth of the idea for re-establishing the close relationship of villagers with the environment from which they came. At the same time he pleaded for making education in the Basic schools as liberal as possible consistent with its vocational character.

Finally Dr Radhakrishnan, stressed the need for improving agricultural productivity in the country without which it was pointed out, no industrial development could prosper.

Industries in Andhra

The Government of Andhra, are one of the biggest employers in the State, the Government having an active interest in many industrial undertakings of varying character. Such industries fall into three groups; first those in which the Government have a majority of shares, secondly those having 20 to 30 per cent Government shares, and thirdly those who received only loans from the Government. As such it is upto the Government to see that a certain standard of efficiency is maintained in the general working of these units.

The discussions in the State Legislative Assembly have brought to light the present trend towards stagnation and inefficiency in some of the units. Excepting two big factories the others seem to be running at a loss. High cost of production in the Singareni collieries and the high price of sugarcane grown in the sugarcane farm of Nizam Sugar Factory, speak of the unhealthy condition of these units. Some other concerns have deteriorated to the point where they are unable to repay the loan granted by the Government.

Inefficient management and maladministration seem to have crept into the working of some of

these units, and in the course of his speech the Chief Minister Mr N. Sanjeeva Reddi himself admitted the existence of defects in the working and management of these units and has promised some measures, such as the appointment of an officer to keep a strict watch over the affairs of the Nizam Sugar Factory and the conversion of the unrepaid loans made to some units into share capital. The Chief Minister also announced that the Government propose to appoint a Committee consisting of industrial and business experts and members

of the Assembly to advise it on industrial matters.

In the matter of general industrialisation, the State is forging ahead and has embarked on new schemes, the most important of which refer to the production of cement. Speaking on this the minister announced that licences had been granted to seven cement factories. Schemes are also afoot to start a factory to produce newsprint from bagasse provided by the Nizam Sugar Factory, and also for doubling the production of coal from the Singareni collieries.

SOUTH INDIAN MARKETS

Export Promotion Proposals for Hides and Skins

IT is understood that the Export Promotion Council has proposals for the promotion of exports of tanned Hides and Skins, finished leathers and leather goods from India to the USSR. At present, Russia is purchasing only raw skins from India. The Secretary to the Indian Embassy in Moscow has promised to do his best to expand the country's exports to Russia with particular reference to East India tanned hides and skins, finished leathers and leather goods.

Meanwhile, there has been a brisk clearance of hides and skins from the Madras market. Sellers are maintaining their level of prices despite the fact that the UK buyers are bidding half to one pence per pound lower as compared to the prices that prevailed during the early part of the month. Prices are quoted on the basis of 51d to 52d for 5-5½ lbs with fifths at 41d, depending on the mark. Stray cases of sales of 8-8½ lbs are reported on the basis of 44½d with fifths at 36½d. In single tanaage, prices are reported to be firm in light weights.

Trade circles are firmly of the view that there is no change of any decline in the prices of Kips in spite of the narrowing down of demand. Difficulty in securing raw hides from Pakistan and in meeting the normal requirements of tanning materials due to import restrictions is the main contributory factor. It is even stated that arrivals in the market will be very much restricted from the beginning of September in view of the total stoppage of production in the tanneries.

In the Tanned section, arrivals of both Goat and Sheep skins are moderate, while prices are ruling steady. On the export front, Prime class Goats have given a better show. In Sheep skins, prices of

Primes and semi-Primes have continued to be on a higher level, while rates for others remain unchanged. Demand from Japan is reported to have fallen off due to currency difficulties.

Groundnuts

The Madras Groundnut market exhibited a steadier tendency following reports that arrivals had dwindled to 20 tons a day due to rainy weather. Small crushers were the main buyers and business was reported done in superior oil-quality seeds at Rs 172 per candy and the bold variety at Rs 166. The standing crop in the Pollachi area is reported to be in good condition.

In the Groundnut Oil section, the rate for the ready position was quoted around Rs 340 per candy. Calcutta interests evinced keen interest in buying.

Pepper

Price movements in the Pepper market are still confined to a narrow range in the absence of firm foreign enquiries. Whatever little activity there is, is due to covering by exporters against their previous commitments. In the Kozhikode market, Wynaad quality is quoted at Rs 630 to Rs 645 and the Country variety at Rs 610 to Rs 620 per candy.

In general, enquiries from overseas have continued to be poor. Dealers in the USA seem to have neglected India and their offers have proved lower than the price asked for. Moreover, they have prepared to buy direct from Indonesia than from Singapore as new export regulations of the Indonesian Government have made Lampong cheapest at the moment.

DALMIA CEMENT (BHARAT) LIMITED (DALMIAPURAM)

NOTICE IS HEREBY GIVEN THAT THE FIFTH ANNUAL GENERAL MEETING OF THE SHAREHOLDERS OF THE COMPANY WILL BE HELD AT THE REGISTERED OFFICE OF THE COMPANY AT DALMIAPURAM (DISTT. TIRUCHIRAPALLI) on Saturday the 21st September, 1957 at 11-30 A.M. to transact the following business:—

1. To receive and adopt the audited Balance Sheet, Profit and Loss Account and Appropriation Account for the year ended 31st December, 1956, the Report of the Directors and the Auditors thereon, and to declare a dividend. (The Directors have recommended a dividend of 7% on Preference Shares, 12½% on Ordinary shares and 12½% on Deferred shares free of income tax).
2. To elect a Director in place of retiring Director Shri B. D. Goenka.
3. To elect a Director in place of retiring Director Shri V. H. Dalmia.
4. To appoint Auditors for the current year and to fix their remuneration.
5. To consider and pass the following Resolution: "RESOLVED that it be and is hereby confirmed that the dividends declared at the General Meetings of the Company held on 20th July, 1953 and 30th September, 1954 for the accounting years 1952 and 1953 respectively, were intended to be free of income tax and the payment of dividends as such for the said years is confirmed."
6. To consider and pass the following Special Resolution with or without modifications, as thought fit:

RESOLVED by way of a Special Resolution that—

- (i) financial transactions between Orissa Cement Limited and this Company on a few occasions in the year 1956 by way of payments by this Company to Orissa Cement Limited in New Delhi and receiving payment from it in Calcutta be and are hereby approved;
- (ii) the opening of a current account with Orissa Cement Limited, a company under the same management, be and is hereby authorised subject to the condition that the amount due to this Company on the said account at any time shall not exceed Rupees Twenty Lakhs; and

(iii) approval be and is hereby accorded to the supply to and receipt from Orissa Cement Limited, a company under the same management, of services, spare parts and other equipment whenever required, whether by way of transfer or loan and the transactions of such nature till date are confirmed.

7. To consider and pass the following Special Resolution, with or without modifications, as thought fit:

RESOLVED by way of a Special Resolution that the payment on behalf of the Managing Agents of printing and postage expenses in connection with the notice issued by them concerning the new issue of capital by this Company and the subsequent recovery of such expenses from the Managing Agents be and is hereby approved and ratified.

8. To consider and pass the following Special Resolution, with or without modifications, as thought fit:

RESOLVED by way of a Special Resolution that approval be and is hereby accorded to transactions being made with The Shevaroy Bauxite Products Co. Private Ltd., an associate of the Managing Agents, for the supply of any materials and rendering of any services even though the value of such materials or cost of such services might exceed Rs. 5,000/- in the aggregate in a year and RESOLVED further that transactions of such nature till date are confirmed and ratified.

9. To consider and pass the following Special Resolution, with or without modifications, as thought fit:

RESOLVED by way of a Special Resolution that the occupation by Hari Brothers Private Ltd., of a portion of 2, Hardinge Avenue, New Delhi on rental basis till date and the continuance of the said arrangement be and is hereby approved.

10. To consider and pass the following Special Resolution, with or without modifications, as thought fit:

RESOLVED by way of a Special Resolution that the payment of royalty to Dalmia Jain Trust at Annas Ten per ton (as reduced by tax thereon) of limestone and clay received by the factory from quarries and consumed, be and is hereby approved.

11. To consider and pass the following Special Resolution, with or without modifications, as thought fit: RESOLVED by way of a Special Resolution that the arrangement with Orissa Cement Limited regarding common secretarial facilities at Calcutta and Delhi Offices under which it has agreed to contribute half of the nett expenses of the said offices of the Company, be and is hereby approved.

12. To consider and pass the following Ordinary Resolution, with or without modifications, as thought fit: Approval of the Central Government having been received vide letter No. 41 (377-A)—CL/56 dated 18th July, 1956 of the Department of Company Law Administration, RESOLVED that with effect from 1st October, 1957, the fee payable to a Director of the Company for attending a Meeting of the Board or any Committee thereof be and is hereby revised and fixed at Rs. 150/- per meeting attended.

13. Any other business that may ordinarily be transacted at an Annual General Meeting. The Share Transfer Books of the Company will remain closed from 26th August to 21st September, 1957, both days inclusive. The dividend when sanctioned, will be made payable on or after 30th September, 1957, to those shareholders whose names appear on the Register of Members on 21st September, 1957.

Every shareholder entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of him/her and such proxy need not be a shareholder. The proxies should, however, be deposited at the Registered Office of the Company not later than 48 hours before the commencement of the Meeting.

By Order of the Board of Directors,

For DALMIA CEMENT (BHARAT) LIMITED,
S. C. AGGARWAL,
Secretary.

Dated: 29th July, 1957.

EXPLANATORY NOTES.

Item No. 5 of the agenda: The Auditors have pointed out that at the declaration of dividends for the accounting years 1952 and 1953, it was not made clear that the dividends were free of income tax, as it were paid. Even though the intention was clearly to declare the dividends free of income tax, this was not specifically stated and the matter is, therefore, being clarified by seeking confirmation of the shareholders. The position in regard to this matter has been explained in detail in para No. 17 of the Directors' Report also.

Item No. 6 of the agenda: Orissa Cement Limited and this Company are under the same management within the meaning of the term

under Section 370 of the Companies Act, 1956. Various restrictions have been placed on transactions with companies under the same management under the said Act. In para 12 of the Directors' Report, a detailed explanation has been given regarding the transactions with Orissa Cement Limited during the year 1956, which were considered by the auditors as requiring regularisation in accordance with the Companies Act, 1956. It is considered desirable that a current account be opened between the two Companies as this would enable them to render financial assistance to each other to tide over temporary need for funds required for working capital. Such an arrangement would obviously be to mutual advantage. Besides, considering that various plant and machineries at the factories of the two Companies are similar in many respects, it becomes expedient from time to time for them to extend assistance to each other by supply of services, spare parts and equipment required by one and which could be provided by the other. Sarvashri V. H. Dalmia and Kamalnayan Bajaj, Directors, are interested being also Directors of Orissa Cement Limited.

The approval of the shareholders is sought in respect of such transactions to comply with the provisions of the Companies Act, 1956.

Item No. 7 of the agenda: Shareholders will remember that when the Company recently issued fresh capital, the right to subscribe to the fresh ordinary capital was restricted to the members holding ordinary shares of Rs. 2/8/- in accordance with the Scheme relating to the conversion of these shares into fully paid up ones. As a result, the members holding ordinary shares of Rs. 10/- did not get an opportunity to subscribe to the new capital issue. The Managing Agents offered to renounce the Rights, to which they were entitled, on payment of certain premium, in favour of those members holding Rs. 10/- ordinary shares who wished to avail themselves of the offer. The offer made by the Managing Agents was with a view to giving some participation in the subscription of the fresh capital to the holders of Rs. 10/- ordinary shares. The circular containing the offer of the Managing Agents was posted from the Registered office and the expenses incurred were debited to the Managing Agents' account and subsequently recovered from them. The auditors have suggested that this might be regarded as an infraction of the provisions of the Companies Act, 1956. The matter is, therefore, being placed before the member and they are requested to accord their approval by a special resolution.

Item No. 8 of the agenda: The Shevaroy Bauxite Products Co. Private Limited is an associate of the Company's Managing Agents, Hari Brothers Private Limited and is a leading supplier of bauxite in South India. The Shevaroy Bauxite Products Co. Private Limited and

this Company help each other in various ways from time to time by supply of materials and by rendering of service to each other. As the value of these supplies and cost of such services ordinarily exceed Rs. 5,000/- in a year, the approval of the members is sought under Section 360, of the Companies Act, 1956 by way of a Special Resolution and it is also being requested that the transactions of this nature which have taken place till date may be approved and ratified. The Managing Agents are interested as The Shevaroy Bauxite Products Co. Private Limited is its associate and Shri V. H. Dalmia, Director, is interested being also a Director of the said Company (The Shevaroy Bauxite Products Co. Private Limited).

Item No. 9 of the agenda The Company owns a building in New Delhi which is located at 2, Hardinge Avenue, a portion of which was given to the Managing Agents for occupation on rental basis. This arrangement has been in effect since a long time. In view of the various provisions of the Companies Act, 1956, as suggested by the auditors, the approval of the members is sought to the continuance of this arrangement.

Item No. 10 of the agenda: Royalty is being paid on limestone and clay drawn by the Dalmiapuram Works from the quarries. The liability for such royalty payment exists under an agreement since the very establishment of the Dalmiapuram Works and a mention thereof was made in the prospectus issued by Dalmia Cement Limited at the time of commencement of its business. When this company acquired the Dalmiapuram assets from Dalmia Cement Limited, under the scheme approved by the High Court of Madras, it was one of the conditions that all obligations and liabilities of Dalmia Cement Limited in respect of Dalmiapuram Works would devolve on this Company. One of these liabilities is the payment of royalty to Dalmia Jain Trust on limestone and clay. Shri J. Dalmia, one of the Trustees of the said Trust was until recently a Director of this Company. Shri V. H. Dalmia, Director, has been appointed a Trustee in the said Trust in the place of Shri J. Dalmia, who has resigned from the trusteeship. As such, the Company has been advised to get approval and ratification of the arrangement for payment of royalty by a special resolution in view of the provisions of the Companies Act, 1956 and accordingly a special resolution for this purpose is being placed before the shareholders.

Item No. 11 of the agenda: Instead of setting up its own secretariat, Orissa Cement Limited, a Company under the same management, requested the Company to agree to common secretarial organization at Calcutta and New Delhi and offered to contribute towards the expenses of these offices. Similar request was received recently from Dalmia Iron & Steel Ltd., who has agreed to pay 10% of the expenses of the Calcutta Office and a sum of Rs. 500/- in lump sum towards the expenses of the Delhi Office. These sums were fixed keeping in view the volume of work involved. The arrangement with Orissa Cement Ltd., has also been finalised and as against a contribution of 1/3rd in the past, with effect from 1st January, 1957, it is contributing half of the nett expenses of these two offices after adjusting contribution received from Dalmia Iron & Steel Ltd., or which may be received from any other Company in future. Sarvashri V. H. Dalmia and Kamalnayan Bajaj, Directors, are interested being also Directors of Orissa Cement Limited.

Item No. 12 of the agenda: The Companies Act, 1956 has imposed considerable responsibilities and liabilities on the Directors of Limited Companies. In view of this, the Directors have to exercise greater caution and to devote more time and energy upon the work of the Company and follow its various activities. Vide letter No. 41 (377-A)—CL/56 dated 18th July, 1956 of the Department of Company Law Administration, the Central Government has approved an increase in the sitting fees payable to the Directors of the Company from Rs. 100/- to Rs. 150/- each for every meeting attended. Under the Resolution, it is proposed to fix the sitting fees at Rs 150/- with effect from 1st October, 1957. As the proposal involves an increase in the meeting fees of the Directors, all Directors may be regarded as interested.

By Order of the Board of Directors,
For DALMIA CEMENT (BHARAT) LIMITED,
S. C. AGGARWAL,
Secretary.

HAS BRITAIN SURRENDERED TO INFLATION?

(Continued from page 204)

either Mr Thorneycroft or Mr Macmillan had said:—"If full employment is abused by organised labour for holding the community to ransom, the Government may be reluctantly compelled to abandon its policy of full employment." But this would have been dynamite. It would have required more political courage than the Government was in a position to muster up in existing conditions. Possibly if and when the situation should become

desperate the Government will dare to resort what it undoubtedly knows to be the only possible solution. But in the meantime it is doing its best to burn its boats by re-emphasising its determination to maintain full employment. After its latest pronouncements the crisis will have to be much graver before the Government will feel justified in going back on its renewed pledge against unemployment.

WORLD OVERSEAS

(Continued from page 106)

were linked with wage-standstill guarantees, and the index may now stay steady for several months. Present indications suggest that this increase will, in part, be matched by higher production and productivity, so that its effects on the availability and competitiveness of exports should not be marked.

According to estimates of the country's spending and output prepared by the Central Statistical Office, exports and investment took a big share of the increase in United Kingdom output in the first quarter of this year.

These estimates are of interest as one of the first examples of an attempt to compile an improved set of economic tables—the aim outlined by Prime Minister Harold Macmillan when he was Chancellor of the Exchequer. Compared with previous performance, say London observers, it is certainly early to have, at this time of year, official estimates of national expenditure for the first quarter.

Further points of interest are that the volume of gross domestic product in the first quarter of this year was nearly two per cent higher than in the same period of 1956, and the volume of fixed investment was also up by three per cent. The value of exports increased by seven per cent much of it being an increase in volume.

While gross fixed investment by both the public and the private sector continued to increase in the first quarter of this year, the rate of increase was well below that of the past year. This confirms recent estimates that the investment curve has flattened out, while remaining at a high level.

It is interesting, however, that the volume of spending on plant and machinery as a component within the investment sector was in the first quarter of this year higher by two per cent than a year ago.

These estimates, in sum, enable a much more up-to-date chart of the progress of the economy to be drawn than has been possible in previous years. They should be of considerable service for purposes both of economic intelligence and of policy.

BRIDGE & ROOF CO. (INDIA) LTD.

The Board of Directors has decided to recommend to the forthcoming Annual General Meeting of the Company a dividend of 20% for the year ended 31st December, 1956.

By Order of the Board,
BALMER LAWRIE & COMPANY LTD.,
D. MANSON,
Secretary,
Managing Agents,
21, Netaji Subhas Road,
Calcutta.
31st July, 1957.

S. E. RLY TENDERS

Tender forms are obtainable from the Controller of Stores, Garden Reach, South Eastern Railway, Calcutta-23 (PD Section) on remittance of Rs 2/- per copy per tender (not refundable) by money order to him direct in the case of outside firms and on production of cash receipt for depositing the amount with the Chief Cashier, South Eastern Rly., Garden Reach, Calcutta-23 by local firms. Earnest money is Rs 200/-. Closing date of the tender is 26-8-57 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid income-tax clearance certificate along with the Earnest money deposit receipt with the tender.

S51 CONTROLLER OF STORES

S. E. RLY TENDERS

Sealed tenders are invited for supply of the following materials.

Tender No. CON/GM/28/Tie Bar/D/57 for supply of 1,00,000 of Tie Bars for CST9 Sleeper for 90 'R' Rails to IRS Drg. No. T404 Alt. 2 and to IRS Specification No. T8.

Alternative quotation may be offered as follows:

(i) Tenderer using his own indigenous steel; (ii) Tenderer using his own imported steel; (iii) Tenderer to re-roll flat footed scrap rails to be supplied by the Railway free of cost into Tie Bars and fabricate them.

Tenders will be opened on August 28, 1957 at 12 noon.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 5/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E. Rly., Garden Reach, Calcutta by local firms.

Earnest money of Rs 1,000/- to be deposited with the Chief Cashier, S. E. Rly., Garden Reach, Calcutta and the receipt obtained should be enclosed with the tender without which tender is liable to be rejected. Approved contractors who have already made a permanent deposit of Rs 1000/- with the Controller of Stores need not pay the Earnest money.

Firms not on this Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

S53 GENERAL MANAGER

SOUTH INDIAN MARKETS

(Continued from page 215)

Prospects for the new crop are, however, encouraging owing to good rain and favourable weather conditions in the pepper-growing belt. It is too early to give any definite estimate for the new crop; but, if the present good weather conditions continue, the crop may exceed 25,000 tons.

*

Cashew

Reports have been received that Cashew production is likely to fall below last year's level. Of the 60,000 tons of cashew imported from Africa this year, about 20 per cent is reported to have suffered spoilage. Against the background of shortfall in production, prices in the US market have risen to over 50 cents per pound, while sellers are holding for 52 cents.

Cashew factories are likely to close down in October-November—a month later than last year—due to the late start this season. The total output, this season, may be in the region of 12 lakh cases and, together with the carry-over from last season, the actual quantity to be exported may not be much below last year's.

*

NORTH INDIAN MARKETS

(Continued from page 213)

prices have eased for want of demand. Despite slack outside buying enquiry, Peas have recorded further gains following some demand from Madras.

A mixed trend in prices has been noticed in the Delhi grains market. Wheat prices have shown a rise of about Re 1 per maund, while Barley is slightly steadier on account of good enquiry. Rice has recorded a rise of Re 1 to Rs 1.50 per maund, following short supply against better off-take. Prices of other food-grains have eased by about 25 np to Rs 2 per maund.

The Bombay grains market presented an easy appearance with Cereals and Pulses recording a modest decline on account of the month-end drop in the local off-take. The setback in the price of Rice by Rs 3 to Rs 5 per candy is mainly attributed to the issue of export permits in Andhra. The tendency in the Wheat section has been weak.

*

THE PENINSULA

(Continued from page 214)

about 1,250,000 tons per annum, excluding liquid cargoes. A large proportion of this is accounted by ore exports. In view of the new importance attached to ore exports which are a large earner of foreign exchange, the port facilities at Visakhapatnam have to be increased further. With the rapid growth of industries whose pace of progress will be quickened further by the easy availability of petroleum products from the Caltex Refinery, Visakhapatnam is bound to become one of the most important centres of industrial activity in the country.

SEN-RALEIGH INDUSTRIES OF INDIA LIMITED

NOTICE is hereby given that the Seventh Annual General Meeting of the members of Sen-Raleigh Industries of India Limited will be held at the Registered Office of the Company, Mercantile Buildings, Lallbazar Street, Calcutta, on Saturday the 31st day of August, 1957, at 12 noon for the following purposes:—

1. To receive and pass the Directors' Report and Audited Accounts for the accounting year ended 30th September, 1956.
2. To declare dividends.
3. To elect Directors.
4. To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS:

To consider and, if thought fit, to pass, with or without modification, the following resolutions:—

5. "That, the Company do hereby approve of the appointment of Mr. S. K. Sen who has attained the age of 68 years as a Director of the Company and declare that the age limit of 65 years specified in Section 280 of the Companies Act, 1956, shall not apply to him."
6. "That, the Company do hereby resolve that the accounts of the Branch Office of the Company at New Delhi be not audited under the provision of Sub-Sec. (1) of Section 228 of the Companies Act 1956 by a person qualified as an Auditor."

7. "That, the Company do hereby resolve that where, under any provision of the Companies Act, 1956, any member or person, not being a member of the Company, is entitled to inspect any minute books of general meetings, registers, returns, certificates, deeds, instruments or documents required to be kept or maintained by the Company, the member or person so entitled to inspection shall be permitted to inspect the same between the hours of 10-30 A.M. and 12-30 P.M. on such business days as the said Act requires them to be open for inspection."

8. "That, in compliance with Sub-Section (1)(a) of Section 293 of the Companies Act 1956, the Company do hereby consent to the Board of Directors of the Company selling, leasing or otherwise disposing off the whole or substantially the whole of the undertaking of the Company as the Board may at any time and from time to time, deem necessary for the purposes of the Company."

9. "That, in compliance with Sub-section (1)(b) of Section 293 of the Companies Act, 1956, the Company do hereby consent to the Board of Directors of the Company remitting or giving time for the repayment of any debt due by a Director of the Company as the Board may, at any time and from time to time, deem necessary and expedient for the purposes of the Company."

10. "That, in compliance with Sub-section (1)(c) of Section 293 of the Companies Act, 1956, the

Company do hereby consent to the Board of Directors of the Company investing, whether in trust securities or in stocks, shares or debentures of any body corporate or otherwise the sale proceeds resulting from the acquisition, after the 1st April, 1956, without the consent of the Company in general meeting, of the whole, or substantially the whole, of the undertaking of the Company or where the Company has or acquires more than one undertaking of the whole, or substantially the whole, of any such undertaking or of any premises or of properties used for any such undertaking and without which it cannot be carried on or can be carried on only with difficulty or only after a considerable time as the Board may, at any time and from time to time, deem necessary."

11. (As a Special Resolution)—"That Article 81 of the Articles of Association of the Company be altered by deleting therefrom the proviso commencing with the words 'provided that the amount for the time being remaining undischarged' and ending with the words 'the limit hereby imposed had been exceeded.'"

12. "That, in compliance with the requirements of Sub-Section (1)(d) of Section 293 of the Companies Act, 1956, the company do hereby consent to the Board of Directors of the Company borrowing moneys (excluding temporary loans from time to time obtained by the Company from its bankers in the ordinary course of business) in excess of the aggregate of the paid up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose as the Board may at any time and from time to time, deem necessary for the purposes of the Company."

13. "That, in compliance with Sub-Section (1)(e) of Section 293 of the Companies Act, 1956, the Company do hereby consent to the Board of Directors of the Company contributing to charitable or other funds not directly relating to the business of the Company or the welfare of its employees any amounts the aggregate of which, will in any financial year, exceed Rs. 25,000/- or 5% of the average net profits of the Company as determined in accordance with the provision of Sec. 349 and 350 of the Companies Act, 1956, during the three financial years immediately preceding, whichever is greater, as the Board may, at any time and from time to time deem necessary for the purposes of the Company."

Share Transfer Books and the Register of Members of the Company will be closed from the 17th August 1957 to 31st August 1957, both days inclusive.

Payment of any dividend, if declared, will be made only to those members whose names are registered in the Books of the Company on the 17th August 1957 or to their mandatees. No appli-

cation for warrants will be necessary. Claims on behalf of holders of shares held on blank transfers will not be entertained. Payments will be made on and after 30th September, 1957.

By Order of the Board,

K. D. GANGULI,

Secretary.

Mercantile Buildings,
Lallbazar Street,
Calcutta—1.

Date: 30th July 1957.

NOTES:

- (1) A member who is entitled to attend and vote at the meeting is entitled to appoint a proxy to vote on his behalf and a proxy need not be a member of the Company.
- (2) Special notice has been received by the Company of the intention to propose resolution no. 5.
- (3) Extension of time upto 30th September, 1957 for holding the Annual General Meeting of the Company for the year ended 30th September 1956 has duly been obtained from the Registrar of Companies, West Bengal under Sec. 166(1)(c) of the Companies Act 1956.

SEN-RALEIGH INDUSTRIES OF INDIA LTD.

EXPLANATORY STATEMENT.

To
The Members,
Sen-Raleigh Industries of India Ltd.

Dear Sir (s)/Madam,

The Companies Act, 1956, which became law with effect from 1st April, 1956, specifies various matters which require the approval or the direction of the Company in general meeting. Certain of these matters are now being dealt with and this statement explains the reason for the resolutions which are being placed before you for approval as special business at the Annual General Meeting.

RESOLUTION NO. 5:

As you are aware, Mr. S. K. Sen has been a Director of the Company since its incorporation and, being an ex-officio Director, is not liable to retirement by rotation of Directors. Special notice pursuant to Section 190 and Sub-Section (2) of Section 281 of the Act has been received by the Company stating that Mr. Sen has attained the age of 68 years and giving notice of a resolution to propose that his appointment as a Director of the Company be approved and that the age limit prescribed in Section 280 of the Act shall not apply to him. Section 280 of the Act prohibits the appointment of a person as a director of a public company if he has attained the age of 65 years. Where a director has attained the age of 65 years before the 1st April, 1956, his appointment terminates at the conclusion of the third annual general meeting held after the 1st

April, 1956. The company in general meeting is, however, empowered to appoint or approve of the appointment of a director who has attained the age of 65 years and specifically to declare that the age limit shall not apply to him.

Mr. Sen has had many years experience in the particular business that is being carried on by the Company and the Board of Directors recommends the passing of the resolution as being in the best interests of the Company.

RESOLUTION NO. 6:

This opportunity is being taken to propose a resolution to satisfy also the provisions of Sub-Section (1) of Section 228 of the Act. This section requires that the accounts of a Branch Office of a company shall be separately audited by a local auditor appointed for that purpose, unless the company otherwise resolves. The Company has a Branch Office at New Delhi (for purposes of liaison with the Central Government and its agencies), the accounts of which are controlled from the Registered Office of the Company and audited by the Company's Auditors. Your Directors do not consider it necessary for a local auditor to be appointed to audit the accounts of the Branch Office and, therefore, recommend that the appropriate resolution, numbered 6 in the convening notice, be passed. The accounts of transactions effected by the Branch Office will continue to be audited by the Auditors of the Company who have a statutory right to visit the Branch Office and to inspect all books and accounts thereat.

RESOLUTION NO. 7:

Under various provisions of the Act, the Company is required to maintain minute books of general meetings, registers, returns, certificates, deeds, instruments or documents and members of the Company and, in some cases persons who are not members of the Company, are entitled to inspect the books and registers etc. The Act, however, empowers the Company in general meeting to impose such reasonable restrictions so that not less than two hours in each day are allowed for inspection. The Board of Directors feel that the period of inspection should be restricted to the hours between 10-30 O'clock in the forenoon and 12-30 O'clock in the afternoon on normal business days and the resolution prescribes these hours.

RESOLUTION NO. 8:

Sub-Section (1)(a) of Section 293 of the Act prohibits the Board of Directors of a company from selling, leasing or otherwise disposing off the whole or substantially the whole, of the Company's undertaking except with the consent of the company in general meeting. It is considered desirable that the Board of Directors should have the power of so disposing of the undertaking of the Company if it is deemed necessary to do so

in the best interests of the Company, but there is no present intention to exercise this power.

RESOLUTION NO. 9:

Sub-Section (1)(b) of Section 293 of the Act prohibits the Board of Directors of a company from remitting or giving time for the repayment of, any debts due by a Director except with the consent of the Company in general meeting. It is considered desirable that the Board of Directors of the Company should have this power. At present none of the Directors is indebted to the Company and any such indebtedness can only lawfully arise subject to compliance with Sections 295, 297 and 299 of the Act.

RESOLUTION NO. 10:

Sub-Section (1)(c) of Section 293 of the Act prohibits the Board of Directors of a Company from investing, otherwise than in trust securities the sale proceeds resulting from the acquisition of the whole, or substantially the whole of the undertaking of the Company. It is considered desirable that the Board of Directors of the Company should be able to invest in any manner they think fit the sale proceeds referred to above but there is no present intention to sell any part of the Company's undertaking.

RESOLUTION NOS. 11 & 12:

Article 81 of the Articles of Association of the Company empower the Directors at their discretion, to borrow moneys for the purposes of the Company up to a limit of the nominal amount of the issued share capital of the Company without the previous consent being received of the Company in general meeting. Sub-Section (1)(d) of Section 293 of the Act imposed a statutory limit which may be enlarged by a resolution of the Company in general meeting. This Section restricts the borrowing powers of the Directors where the moneys to be borrowed, after the commencement of the Act, together with moneys already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose. At present, the paid-up capital of the Company amounts to Rs 1,00,00,000/- and its free reserves as at 30th July 1957 to Rs. 2,00,000/- making a total of Rs. 1,02,00,000/-. The Company is entitled to borrow Rs. 1,02,00,000/- and, as at the present time, the borrowing of the Company is much less than the permissible limit. The bankers of the Company require, and your Directors recommend, that the statutory borrowing powers of the Directors be unlimited and should not be restricted to the extent as not be restricted in Article 81 of the Articles of Association of the

Company or in sub-Section (1)(d) of Section 293 of the Act so that the Directors could borrow according to exigencies of the circumstances. In order to be able to put this into effect it will also be necessary to amend Article 81 which resolution No. 11 proposes to do.

RESOLUTION NO. 13:

Sub-Section (1)(e) of Section 293 of the Act places a statutory limit of Rs. 25,000/- or 5% of the average net profits of the Company during the three financial years immediately preceding, whichever is greater, on the amount which the Board of Directors may contribute to charitable and other funds not directly relating to the business of the Company or the welfare of its employees. Under its Memorandum of Association the Company has unlimited discretion to subscribe to charitable or benevolent objects and the Directors recommend that the statutory limit on their power to do so be enlarged to accord with the provisions of the Memorandum of Association of the Company.

Mr. S. K. Sen is interested in the passing of Resolution No. 5 and Mr. A. Sen and Mr. S. Sen, Directors of the Company, are relatives of Mr. S. K. Sen and may, to that extent, be deemed to be interested in the Resolution.

By Order of the Board,

(K. D. GANGULI),

Secretary.

Calcutta,
The 30th July, 1957.

To all Shareholders of Sen-Raleigh Industries of India Ltd., with particular reference to:

Md. A. Hasan, Mr. E. E. Baker, Mr. K. P. Chakravarty, Mr. P. K. Chakravarty, Mr. L. C. Clarkson, Mr. A. J. Coelho & Mrs. I. V. W. Coelho, Mr. G. K. Dutta, Mr. J. M. Dhar, Mr. B. Giria, Mr. P. K. Kuruvilla, Mr. F. J. V. deMonezes, Mr. A. N. Manandhar, Mr. S. V. Mahatma, Mr. T. N. Manasdar, Mr. B. K. Naik, Mr. K. C. Pal, The Raleigh Cycle Co. Ltd., M/s. Union Sils, van de Loo & Co., Mr. A. A. A. Viegas, Dr. H. Van de Loo, Mr. G. H. B. Wilson, Mr. J. N. Henry.

GATEWAY MARKETS

(Continued from page 210)

the market were estimated at 900 bars. Shravan closed at Rs 182.94 and Bhadon at Rs 182.75, the highest levels touched being Rs 183.25 and Rs 183.06 respectively. Spot was quoted at Rs 181.87 to Rs 182.12.

Meanwhile, the production of gold in India, in 1956, is estimated at 209,000 fine ounces—one per cent less than that in 1955. The world production (excluding the Soviet Union) of gold, during the year, has risen by 3.6 per cent to 28 million fine ounces.

India's production of silver is placed at 105,000 ounces, which is 20.5 per cent less than that in 1955. World production, during the year, has risen by 3.8 per cent to 230 million ounces.

Oils & Oilseeds

The markets for Oils and Oilseeds ruled generally quiet, mainly due to discouraging advices from overseas countries and the beneficial weather conditions. There was, therefore, heavy speculative selling in new crop futures from upcountry operators. In the Castor seeds section, September delivery opened at Rs 171.50 and, after touching a low of Rs 169.00, closed better at Rs 169.75. May delivery finished at Rs 153.75, the lowest level touched being Rs 153.50. In the ready section, the rate was quoted at Rs 34.50 and Castor Oil, commercial quality, at Rs 19.37.

Prices in the Groundnut section eased on reports that a leading vanaspathi producer was to reduce the selling price of his product by Rs 1 for a tin of 35 pounds. February delivery closed at Rs 154.25 after touching a high of Rs 155.50 and a low of Rs 153.50. Ready bold quality was quoted at Rs 36.50 and Groundnut Oil at Rs 20.25.

Linseed was steady with irregular price movements. September delivery closed at Rs 29.25 and May at Rs 28.56, the highest levels touched being Rs 29.31 and Rs 29.58 respectively. In the ready section, the rate was quoted at Rs 29.00 and Linseed Oil at Rs 14.87.

Cottonseeds were quietly held despite weaker advices from cotton futures market. February delivery closed at Rs 93 after touching a high of Rs 94.25.

THE INDIAN IRON & STEEL CO., LIMITED.

12, Mission Row,
Calcutta—1.

30 July, 1957.

NOTICE.

Approach has been made to the Government of India without avail for permission to an increase in the rate of dividend for the year ended 31st March, 1957, on the Ordinary Share Capital of the Company ranking for such dividend. At a Meeting of the Board of Directors held to-day the Directors have accordingly recommended payment of a dividend of One Rupee per share free of Indian Income Tax being at the same rate as the preceding year. This dividend awaits sanction by the Shareholders at the Annual General Meeting to be held on the 11th September, 1957.

The Ordinary Share Register of the Company will be closed from the 4th September, 1957, to the 11th September, 1957 both dates inclusive, and the dividend, if sanctioned, will be paid on or after the 24th September, 1957, to those Shareholders whose names appear on the Register of Members on the 11th September, 1957.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

Ships in Queue

(Continued from page 201)

another few days. The administrative problems of the port are too technical and too diverse to admit of a layman's judgment. It is a happy sign that the workers as well as the authorities look forward to this Committee's findings as an augury of better all-round relations.

Meanwhile, the piece-rate experiment in Bombay and the Bombay Port authorities' undertaking not to entertain casual labour have already made an impression and immediate future steps in Calcutta are likely to run on the same lines. No one seems to deny that a united, well-led set of workers, fed by suitable incentives, would be the best guarantee of the maximum possible output. As in Bombay, this realisation is bound to improve matters in Calcutta too.

It must be mentioned here that mechanisation has only a limited scope and on no account can it be looked upon as a long-term remedy for difficulties as of the present. It is universal experience that human labour is most congenial if not always also the cheapest, for the handling of cargoes. In India, there are other strong arguments too against the use of mechanisation. That special handling equipment is required for loading and unloading certain types of cargo does not amount to a general preference for mechanisation. In Calcutta, replacement of old equipment seems as urgent as the installation of additional special equipment.

Labour relations apart, it may not be very much off the mark to describe the problem of this port as one of never-changing cranes and fast-changing chairmen. Many of the cranes have become too old and undependable. The chairmen, on the contrary, come and go too frequently. Lately, they are also heavily overworked.

Stock Exchanges

MEDIOCRE PERFORMANCE: INDECISIVE TREND

Watch-Dog Writes:

FOR the fourth week in succession, stock markets have staged a mediocre performance. The general feeling is somewhat diffident and hence higher levels have been bringing forth pressure, while small setbacks have been attracting buying support.

Operators are still unable to see their way clearly ahead in view of various uncertain factors such as, the threat of strike in the country, an inclination to await the fate of the proposed Wealth Tax on companies and fresh contraction in currency.

Above all, operators have not received well the announcement of the dividend of Rs 1 per share by the Indian Iron & Steel Company. Sentiment is also affected by the rather unsatisfactory working report from the TISCO. For obvious reasons, there has been no significant change in the hesitant tone that had been witnessed in previous weeks. The technical position of the market is, however, healthy.

Conditions on the Calcutta Stock Exchange continued to remain dull and the absence of buying support caused prices to slide down further from last levels.

Equities on the Bombay Stock Exchange were listless in the absence of any fresh influence. Sentiment was also affected by the unsatisfactory working results of the TISCO.

Trading on the Madras Stock Exchange lacked animation and business was confined to only a few selected scrips.

Wall Street closed heavy, with the main body showing a pattern of mostly fractional changes either way, which evenly divided.

Calcutta

THE local Stock Exchange, after starting the week on a subdued note, displayed an easier tendency in prices following weaker Bombay advices. The maintenance of the dividend at Re 1 per share by the Indian Iron & Steel Company caused some disappointment to operators, while sentiment was also affected by the unsatisfactory working report from the TISCO.

There were also other factors which made both professional operators as well as investors hesitant in their commitments. Mainly amongst these were, the fresh contraction in currency, anxiety over the foreign exchange position, the threat of strikes in the country and an inclination to await the Select Committee's decision over the Wealth Tax Bill. In general, confidence in the market was completely lacking and there was a tendency

to liquidate holdings at higher levels.

An interesting feature in the Gilt-edged market was the withdrawal of support to the 3 per cent 1986 Conversion Loan, which eased to close at Rs 72.00 against Rs 73.25 quoted in the previous week.

Bank shares, by and large, held their own. United Commercial changed hands at Rs 57.25 to Rs 57.50; Hind at Rs 31.50 to Rs 31.75 and Bank of Bikaner at Rs 18.87.

Jute shares continued to be a neglected counter where prices recorded a further decline from last levels due to renewed selling pressure following anxiety over the developments at the Calcutta Port which, it was felt, would delay shipments. Even the easier tendency in raw jute prices failed to enthuse operators as overseas enquiries were practically nil. The only three comparatively steady features were Howrah, National and Birlas having support upto Rs 16.31; Rs 18.00 and Rs 15.12 from Rs 16.00; Rs 17.80 and Rs 15.00 respectively. Belvedere

[August 3, 1957]

WORLD OF FINANCE

(Continued from page 203)

We may now answer, as best we may from the available data, the four questions that we have posed.

In the first place, we would suggest that, for reasons that we need not delve into, Government found themselves in no position to institute the policy of borrowing from strength repeatedly urged by this journal. Perhaps, Government felt that there was such chaos in the prevailing structure of interest rates that they would be unable to embark on a sound gilded policy until, as a prerequisite, they had created order where disorder stood. At the same time, they could not resist from their obligation, as laid down in the Budget, to approach the money market with a New Loan. Consequently, Government have done the next best thing, by working out a New Loan which at least in its results would prove the strength of Government borrowings. Such strength would lie in instantaneous oversubscription. The testament of such zealous response to the New Loan—with the lists closed in hours, if not in minutes—might be counted upon by Government to inaugurate a new and hopeful gilded psychology. So, in such consideration, Government may have utilised the instrument of what in effect is a "marking time" loan to create that gilded psychology which could be the foundation for the edifice of a strongly constructed borrowing policy. While on this context, we may add that, thanks to the powerful increase in the resources of the banking system, the fundamental interest rates have lately showed signs of declining to more normal levels. If so, it should be within the capacity of Government swiftly to restore normalcy in the structure of interest rates. If they take on these endeavours, and if they succeed in them, there would be every reason to anticipate a second series of Government borrowings before the end of the current slack season.

In the second place, our considered view is that the 1957 New Loan, although implying a smaller volume of cash subscriptions, may nevertheless have a greater impress upon the banking system. For, in 1956, of the Rs 77 crores of cash subscriptions, it is practically a confirmed fact that the Reserve Bank was responsible for Rs 50 crores. On the one hand, as we have seen, the cash subscriptions of Scheduled Banks may have amounted roughly to Rs 16 crores. On the other hand, we would put down the other public cash subscriptions at an amount in the environs of Rs 12 crores. As far as the impact upon the Deposits of Scheduled Banks is concerned, all that happened last year was a decline in Deposits, in the relevant week, by Rs 12 crores; and the cash subscriptions of the banks themselves were reflected in some decline in their cash balances. In the current year, however, we do

not expect the Reserve Bank to apply in cash. Consequently, the public cash subscriptions may be anywhere between Rs 40 crores and Rs 50 crores. We are disposed to think that it will be Rs 40 crores rather than the higher figure, if only because it is our view that conversions will total Rs 60 crores against the Rs 85 crores of eligible securities. Of the balance, we anticipate that Scheduled Banks' investment in the New Loan may be for an amount under Rs 20 crores; and a moiety of this would perhaps be accounted for by the State Bank, especially in view of its very high level of cash balances and low ratio of Advances to Deposits. The other cash subscriptions may be in the neighbourhood of Rs 25 crores to Rs 30 crores. We, thus, think that the Deposits of Scheduled Banks may, in the relevant week, be affected to the extent of such a figure. This will mean that the drain on Deposits of the banking system will be nearly double the extent of last year. However, in view of the strident and week to week increase in Deposit resources of the banking system, it may be that the net decline in Deposits of Scheduled Banks will be substantially smaller at, say, Rs 10 crores to Rs 15 crores.

In the third place, we have it on good authority that, contrary to the general opinion in money market circles, Scheduled Banks last year did show, if not considerable, at least sufficient interest in the medium term 1967 Loan. While Government may have toyed with the idea of a loan with short-term maturity directed especially at the banking system, the pattern of maturities indicates that the earliest year in which Government could conveniently fit in a maturity is 1967. Maturities in each of the years from 1960 until 1966 exceed Rs 100 crores. The earliest "available" or "free" year is 1967. While, therefore, Government were unable to entertain the proposal of a short-term loan, they have tried to make the terms more attractive for the banking system by departing from their recent practice of an eleven year maturity for medium term issues. So, it can be anticipated that bank subscriptions—both cash and conversion—will be

Banks Deposits: In Sight of Rs 1300 Crores

Money conditions, as described earlier, have turned even easier and offer a more propitious setting for the 1957 New Loan; and these conditions are reflected in the returns of the Reserve Bank for the week ended July 26. Active note circulation has dropped sharply by Rs 19.07 crores to Rs 1498.83 crores; and this is on top of currency contraction during the previous week for Rs 25 crores. Rupee coin has returned from circulation for Rs 2.12 crores.

directed to the 3½ per cent 1967. While Government may hope to secure a larger volume of subscriptions for the 4 per cent 1972 loan, it seems possible that the New Loan realisations will be divided roughly 50-50 between the two new issues.

Finally, we come to the matter of the impact of the New Loans on the existing issues. In order that we may correctly assess this, it is necessary to study the following table:

Loan	Market Price (Rs)	Current Redemption (per cent)	Yield (per cent)	Yield*
3 per cent 1970-75	85.60	3.50	4.47	
3 per cent 1963-65	93.30	3.21	4.27	
2½ per cent 1961	93.65	2.87	4.25	
3 per cent 1959-61	97.85	3.01	4.10	
3 per cent 1966-68	90.85	3.30	4.09	
3 per cent 1964	93.70	3.20	4.05	
2½ per cent 1962	93.90	2.94	4.02	
3 per cent 1976	83.00	3.31	4.02	
2½ per cent 1960	96.50	2.85	4.00	
4 per cent 1972	100.00	4.00	4.00	
3½ per cent 1964	97.50	3.60	3.92	
3 per cent 1965	97.30	3.60	3.89	
3½ per cent 1974	98.30	3.82	3.89	
3 per cent 1962	97.40	3.34	3.83	
3½ per cent 1967	99.50	3.77	3.81	
3 per cent 1967	97.70	3.87	3.75	
4 per cent 1960-70	100.80	3.97	3.75	
3 per cent 1961	99.30	3.52	3.70	
4 per cent 1959-68	101.25	4.44	3.14	
3 per cent non terminable	72.50	4.14	...	
3 per cent conversion	72.70	4.18	...	

* On the basis of the earlier date.

The yields available, as given in the table, indicate that the 3½ per cent 1967 is likely to be adversely affected, and might decline to a level around Rs 96.50. On the other hand, short dated securities will be seen as offering a higher yield than the basis of the New Loan; and some improvement in prices is to be anticipated in 2½ per cent 1961, 2½ per cent 1960 and 2½ per cent 1962. It is also possible that 3½ per cent 1964, on which the redemption yield is 3.92 per cent, might show some appreciation to bring it in line with the 3.81 per cent available on the new medium term 3½ per cent 1967. In respect of long term securities, both 2½ per cent 1976 and 3½ per cent 1974 are likely to show some price losses. Otherwise, generally, the yields available on most of the gilded stocks would appear to be in line with the terms offered on the New Loans.

■

Currency has been contracted against Rupee Securities for Rs 20 crores by transfer to Investments in the Banking Department. Consequently, notes held by the Reserve Bank show a small rise of Rs 1.19 crores to Rs 36.44 crores. In the Banking Department, Investments have risen sharply by Rs 34.44 crores. While Rs 20 crores of this is due to transfer from the Issue Department, it would appear that there has been deficit financing for Rs 15 crores; and this would

account for the balance of the rise under Investments.

In spite of probable deficit financing for Rs 15 crores, the Centre's balances are fractionally lower at Rs 53.90 crores. In the case of the State Governments, while their Deposits have been marked down by Rs 0.90 crores at Rs 2.19 crores, this has been accompanied by a fall of Rs 1.60 crores to Rs 26.19 crores in their borrowings from the Reserve Bank. Other Deposits are largely unchanged at Rs 149.04 crores.

A measure of the slack season is afforded by the sharp rise of Rs 16.01 crores to Rs 103.83 crores in Banks' Deposits with the Reserve Bank. Moreover, member banks have clearly reduced their borrowings from the Reserve Bank, since the latter's Other Loans and Advances are lower by Rs 6.69 crores at Rs 63.29 crores. The Reserve Bank's advances against usance bills have touched their lowest level since September 7, 1956, and are placed at Rs 29.47 crores, recording a decline of Rs 7.79 crores over the week.

The return of the State Bank for July 26 reveals a sharp increase of Rs 13.28 crores to Rs 325.53 crores in Deposits. It must be conjectured whether this rise, at least in part, is due to counterpart funds under Public Law 480 and held on account of the US Embassy. Advances registered a fall of Rs 2.85 crores to Rs 171.72 crores. The net result is a very steep rise of Rs 14.65 crores to Rs 61.18 crores in cash balances. This would indicate that the State Bank is responsible for the bulk of the increase in Banks' Deposits with the Reserve Bank during the relevant week.

The statement of Scheduled Banks for July 19 attests to a substantial rise of Rs 12.41 crores to Rs 1287.99 crores in Deposits. This rise went to the benefit almost exclusively of the other Scheduled Banks, since the State Bank, in its return for July 19, reported a rise in Deposits of only Rs 1.07 crores. The gathering strength of the slack season is seen in the considerable fall of Rs 11.74 crores to Rs 892.47 crores in the total of Advances; and here, too, the State Bank accounts for no more than Rs 2.62 crores. Scheduled Banks were thus enabled to effect a sharp reduction in their indebtedness to the Reserve Bank, the decline amounting to Rs 11.79 crores; and, at Rs 39.51 crores, borrowings from the Reserve Bank are at their lowest level since the week ended August 31, 1956. The twin occurrence of increase in Deposits and decline in Advances has contributed to a further augmentation of cash balances, which have moved up by Rs 7.04 crores to Rs 157.62 crores; but the bulk of it was due to an increase in the State Bank's cash balances, which had gone up in the relevant week by Rs 6.44 crores.

Pay Office:—Sendhwa and Jaora (Madhya Bharat).

SAFE DEPOSIT LOCKERS are available at Head Office, Siyaganj, Cloth Market, Indore, Branch Offices Dhar, Mhow, Ujjain, Ratlam, Sanawad and Tarana on favourable terms.

BANKING BUSINESS OF EVERY DESCRIPTION TRANSACTED.

N. D. JOSHI, Manager.

You couldn't be
in better hands!

I.A.C. gives its staff an extensive and carefully planned training so that you may enjoy air travel to the utmost!

The Hostess who looks after you is a perfect example of I.A.C.'s excellent service to air travellers. Noted for her charm and willingness to be of service, she always has a pleasant smile, a friendly and reassuring manner which puts you at ease immediately. Her training teaches her to be highly proficient in an unobtrusive way; and while she is willing to participate in passengers' conversations, she never intrudes.

The I.A.C. Hostess works efficiently and cheerfully. She is taught to serve food with finesse for five or forty-five. And wherever her duties with I.A.C. take her, she is at all times, in all places—helpful, knowledgeable and completely at your service.

She is typical of the staff of I.A.C.

You couldn't be in better hands.

Investor's Supplement

July—A Dull Month for Stock Markets

THE stock markets began the month on a firm undertone with prices all along the line recording sizable gains in active dealings. It would appear that the generality of marketmen were of the view that the investment situation in the country had become conducive to a broadening of interest. In the first place most equities were quoting at very attractive levels considered from the criterion of yield. Secondly, businessmen and industrialists could go ahead with their plans for the establishment of new units and the expansion of existing units without any further anxiety as regards fresh taxation. For, Authority had made it clear that the taxation proposals in the budget for 1957-58 represented the general pattern of taxation for the rest of the Second Plan period. Thirdly, the Union Finance Minister had assured the business community that Government's attitude toward the private sector had not undergone any change in the past one and a half or two years. Fourthly, Mr Krishnamachari had repeatedly indicated that while Government would put down with an iron hand unbridled speculation in shares, they would do their best through the Life Insurance Corporation to bring about a period of progressive prosperity to the stock exchanges.

In the Calcutta stock exchange sentiment was quite cheerful with the more speculative counters receiving considerable support. Sectionwise teas were prominent with several scrips recording sizable gains on active buying support. Indian Irons opened at Rs 20.42 and closed higher at Rs 20.75. Selected scrips encountered fresh support in Dalal Street. Tata Irons after initial setback recovered to close better on balance at Rs 176.75. Among Textiles Bombay Dyeing advanced by nearly three points to close at Rs 573.00.

2

Presumably due to the decision of the Reserve Bank of India to regulate bank advances to the sugar industry, sentiment was rather subdued in Bombay where equities met with profit taking. In earlier dealings, however, Tata Iron met with bull support following the announcement of steel retention price increase. The Government of India accepted the Tariff Commission recommendation that the average retention price payable to Tatas and the Indian Iron and Steel Company for the period 1955-56 to 1959-60 and for all categories of steel taken together should be increased by Rs 12 per ton. The Government had also accepted the Tariff Commission recommendation

that the 1945-55 retention price for TISCO should be increased by the same amount and the retention price for Tatas for the same year should be increased by Rs 14 per ton.

In later dealings profit taking erased earlier gains and Tata Iron closed at Rs 176.00 as against Rs 181 touched in the kerb following the announcement of the retention price increase. Profit-taking also pushed down rates in the textile section where Bombay Dyeing reacted sharply to Rs 561.50.

In the Calcutta stock exchange tea shares were in the limelight following the announcement of the Government of India's decision on the recommendations of the Plantation Enquiry Commission on the tea industry. The Press Note in this regard said that the Government of India did not consider it justified to single out the tea industry or any section of it for a treatment different from that applied to other industries. Accordingly, Authority had declined to impose any specific restriction on the tea industry. The Commission's recommendations such as the abolition of the managing agency system in Indian-owned tea gardens restrictions on withdrawal from reserve funds for paying dividend etc. were rejected.

Elsewhere in the market Indian Iron receded to Rs 20.63 from Rs 20.90 on profit taking. Selected miscellaneous and coal shares were, however, steady.

3

Speculative counters continued to lose ground on profit-taking in the Calcutta stock exchange. The rest of the market, however, ruled steady though the volume of business passing was moderate. Indian Irons opened lower at Rs 20.45 and after having been down to Rs 20.21 closed at Rs 20.30. In Dalal Street alternate bouts of selling and buying imparted an irregular trend. The undertone at close was quietly steady. Tata Iron lost more than two points to be finally placed at Rs 173.75. Textiles were also shaded where marked with Bombay Dyeing one point lower on balance at Rs 560.00.

4

Both the Bombay and Calcutta Stock exchanges displayed a quiet undertone in earlier dealings mainly due to discouraging production figures from both the steel companies. Production in Jamshedpur in June was lower than in the previous month. TISCO production for the quarter ending June was also lower as follows: pig iron 172,225 tons, Steel ingots 129,651 tons, semifinished steel 21,370 tons.

and finished steel 83,726 tons. However sentiment quickly improved on rumour of higher dividend for Tata Iron and revival of support from LIC. In Calcutta while most sections recovered to close higher on balance, the tea section encountered profit-taking induced by apprehensions of larger than expected crop. Indian Irons after opening at Rs 20.35 closed slightly better at Rs 20.42. In Bombay, Tata Iron recovered to Rs 176.25 with Bombay Dyeing marked up to Rs 176.25.

5

In the absence of fresh incentives prices moved in a narrow groove. In Bombay Tata Iron was depressed in earlier dealings but recovered on revival of support. As a result the scrip closed one point higher at Rs 177.25. Textiles closed better with Bombay Dyeing at Rs 565.00. In Calcutta, Indian Irons opened at Rs 20.54 and was done up to Rs 20.60 before closing unchanged on balance at Rs 20.54.

6, 7, 8 & 9

Trading in the stock exchanges was on a dull note with the volume of business passing at a meagre level. In the absence of support from investors, the more speculative counters gave way under selling pressure. After opening at Rs 20.42, Indian Irons shaded to Rs 20.39. In Dalal Street, a quiet tendency prevailed and Tata Iron lost nearly two points to come back to Rs 175.00. Textiles, however, were steady with Bombay Dyeing quoting at Rs 568.00. The stock markets remained closed on the 9th.

Mr A. P. Jain, Union Food Minister, disclosed in a speech at Lucknow that under the third wheat loan from the USA about 3.5 million tons of wheat would be obtained. The value of the wheat which came to about Rs 150 crores would be available to India as a long-term loan payable in over 40 years.

10

The continued congestion in the major ports of the country, and the threatened strike by Central Government employees including the P & T Workers, seemed to have imparted a subdued tendency in the stock markets. It had been apprehended that apart from the adverse effect on industries like jute and tea, the port congestion would retard the pace of progress of indigenous industries many of which were dependent on machinery imports from abroad. The inordinate delay in the arrival of such machinery would upset development programmes.

An easier tendency was noticeable in Calcutta where Indian Irons

opened at Rs 20.21 and was pushed down to Rs 20.09. Bombay shares were quiet with Tata Iron shaded at Rs 174.50. Textiles were generally unchanged.

11

Dull conditions continued to prevail in the stock markets. In Calcutta, business was at a low ebb and prices idled round previous levels. Conditions in Dalal Street were very much similar to those at Calcutta with the difference that operators were inclined to liquidate holdings at the higher levels. Indian Irons opened at Rs 20.21 and shaded to Rs 20.12. Tata Iron closed somewhat better on balance at Rs 175.50. Among Textiles Bombay Dyeing also closed better at Rs 570.00.

12

Extremely dull conditions prevailed in the stock markets as both operators and investors seemed to be reluctant to extend their commitments. The absence of interest would seem to have stemmed from apprehensions about the repercussions of the wealth tax on industrial activity in the country. Many prominent businessmen were of the opinion that the wealth tax would retard capital formation. For some inexplicable reason the extremely encouraging news of the World Bank Loan to the Railways which was coupled with the confident expectation of similar annual loans in the next three years and Government's exemption of steamship companies from the operation of the regulation regarding compulsory deposit were ignored by marketmen.

Indian Irons was sticky around previous levels. The scrip opened and closed at Rs 20.15. Tata Iron closed steady at Rs 175.50 while Bombay Dyeing gained one point to be done at Rs 571.

13 & 14

The stock markets remained closed. In kerb trading in Bombay sentiment was rather cheerful mainly on account of prevailing rumours that the TISCO dividend would be higher. The scrip was unofficially marked at Rs 178.50. Indian Irons also ruled steadier in sympathy at Rs 20.35.

15

Contrary trends were noticeable in the two principal stock exchanges of the country. While Bombay displayed a steady trend with almost all the pivotal scrips recording sizable improvement on buying interest, Calcutta remained dull and easier. Tata Iron in Dalal Street gained 2½ points to be finally placed at Rs 178. Even textiles were in good shape

(a) After writing back Rs 40,000 from General Reserve.

(b) After transferring Rs one lakhs from General and Dividend Reserve.

(c) After transferring Rs 4,07,975 from General Reserve and Rs 85,000 from provision for taxation.

(d) After transferring Rs 36,518 from General Reserve: Rs 10,000 from Jute Stock Reserve and Rs 40,000 from provision for taxation.

(e) After writing back Rs 4,22,628 being provision against anticipated loss on raw jute stock and work in progress; Rs 29,068 being provision against anticipated loss on jute contract for and after transferring Rs 40,000 from General Reserve and Rs 31,500 from Dividend Equalisation Reserve.

(f) After transferring Rs 1,00,000 from General Reserve and Rs 3,00,000 from Machinery Renewal Reserve.

(g) After transferring Rs 3,00,000 from Reserve for Machinery Renewal and Replacement.

(h) After transferring Rs 2,00,000 from General Reserve.

(i) After writing back Rs 3,04,000 being provision against anticipated loss on raw jute stock and work in progress and Rs 4,225 being provision against anticipated loss on jute contract for.

(j) After transferring Rs 4,25,000 from Reserve and writing back Rs 30,000 from Workers' Provident Fund shown in excess in previous half-year and Rs 61,000 from provision for possible loss on forward contracts.

(k) After writing back Rs 1,21,392 being provision against anticipated loss on raw jute stock and work in progress; Rs 29,161 being provision against anticipated loss on jute contract for; Rs 14,000 being excess provision for taxation and Rs 25,000 from Dividend Equalisation Fund.

(l) After transferring Rs 4,00,000 from General Reserve.

(m) After writing back Rs 2,39,696 from Reserve for Exchange Losses.

(n) After transferring Rs 61,808 from General Reserve.

(o) After transferring Rs 2,00,934 from General Reserve.

(p) After transferring Rs 2,65,555 from General Reserve.

(q) After transferring Rs 70,555 from Dividend Equalisation Reserve and Rs 25,000 from Taxation Reserve.

(r) After transferring Rs 5,00,000 from General Reserve.

(s) After including Rs 69,535 being refund of M.P.T. and after writing back Rs 40,000 from provision against difference between cost of Raw Jute Stock and estimated value.

(t) After transferring Rs 1,30,784 from General Reserve and Rs 1,25,000 from provision for taxation.

(u) Preference shares carry a dividend of 10 per cent of which only 5 per cent is cumulative.

(v) After providing Rs 1,60,179 for further taxation of previous years and transferring Rs 1,52,000 from Tax Contingencies to Rs 75,000 from Jute Stock Reserve and Rs 33,385 from General Reserve.

(w) After transferring Rs 1,21,421 from General Reserve and writing back Rs 1,45,286 from provision for difference in exchange on Agency Fixed Assets.

(x) After writing back Rs 1,65,396 being provision against anticipated loss on raw jute stock and work in progress and Rs 16,800 being provision against anticipated loss on jute contract for.

(y) After transferring Rs 5,94,144 from Capital Reserve.

(z) For five half-years ended 30-9-54 at 4 per cent per half-year.

(a1) After writing back Rs 1,88,649 being provision against anticipated loss on raw jute stock and work-in-progress; Rs 73,521 being provision against anticipated loss on jute contract for; Rs 1,20,000 from General Reserve; Rs 24,500 from Dividend Equalisation Reserve and Rs 27,000 from provision for taxation.

(a2) After writing back Rs 2,48,812 being provision against anticipated loss on raw jute stock and work in progress; Rs 8,708 being provision against anticipated loss on jute contract for and Rs 40,894 being excess provision for taxation.

(a3) After transferring Rs 4,00,000 from General Reserve, Rs 2,00,000 from Dividend Equalisation Reserve and Rs 2,00,000 from Jute Stock Reserve.

(a4) After transferring Rs 2,86,000 from Contingency Reserve.

(a5) After transferring Rs 1,10,000 from Contingency Reserve and including Rs 1,47,639 being items relating to previous half-years.

(a6) After transferring Rs 5,18,425 from General Reserve and Rs 35,000 from provision for taxation.

(a7) After writing back Rs 60,000 being provision for possible loss on forward contracts.

(a8) After transferring Rs 1,00,000 from General Reserve.

(a9) After crediting Rs 14,84,926 being balance Rehabilitation Reserve.

(a10) After writing back Rs 61,966 being excess provision for depreciation adjusted on machinery.

(a11) After writing back Rs 73,264 being excess depreciation on fixed Assets sold, Rs 67,000 from provision for taxation and including Rs 8,05,000 being Requisition claim realised.

(a12) After writing back Rs 1,87,900 being excess provision for depreciation adjusted on machinery and Rs 45,000 from provision for taxation.

(a13) After transferring Rs 1,20,000 from Dividend Equalisation Reserve and Rs 60,000 from General Reserve.

(a14) After transferring Rs 4,50,000 from General Reserve.

(a15) After writing back Rs 60,000 from provision for contingencies; Rs 80,000 from provision for possible loss on forward jute contracts; Rs 28,741 from provision for doubtful debts and Rs 12,562 from provision for taxation.

(a16) After transferring Rs 1,30,000 from General Reserve.

(a17) After transferring Rs 2,50,000 from General Reserve.

(a18) After transferring Rs 4,05,000 from General Reserve and Rs 24,500 from Dividend Equalisation Reserve.

(a19) After transferring Rs 5,25,000 from General Reserve and Rs 31,500 from Dividend Equalisation Reserve.

(a20) After transferring Rs 4,00,000 from General Reserve.

(a21) After transferring Rs 4,25,000 from General Reserve and Rs 35,000 from Dividend Reserve.

(a22) After transferring Rs 3,90,000 from General Reserve and Rs 12,500 from Dividend Equalisation Reserve.

(a23) After transferring Rs 1,70,000 from Dividend Equalisation Reserve.

(a24) After transferring Rs 2,80,000 from General Reserve and Rs 25,000 from Dividend Equalisation Reserve.

(a25) After transferring Rs 60,000 from General Reserve and Rs 7,550 being over provision of liabilities in previous year.

(a26) After transferring Rs 1,00,000 from Reserve.

This may shrink

This will not shrink

That's why people look for 'Sanforized' on the label!

The Trade Mark 'Sanforized' inspires such confidence that people all over the world pick fabrics trade marked 'Sanforized'—knowing they bear this assurance: *This garment will not shrink out of fit—even after many, many washings!*

It adds value and prestige to your own label—enables you to sell with confidence—and assures the public that you take trouble to give them value.

People rely on you to serve them well—so serve them cloth labelled 'Sanforized'.

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid, anti-shrinkage requirements

ACP. 4/62 (Rev.)

For the Investor

TISCO Accounts

Investment Gossip:

LESS than two weeks away is the Golden Jubilee of the Tata Iron & Steel Company Limited; less than two weeks ago, TISCO published its accounts for 1956-57; and both these are in the nature of a heartening stimulant to the investor. This is scarcely the occasion for me to acknowledge or dilate upon the mighty oak which has sprung from a little acorn. And, moreover, by some two weeks, such a tribute would be premature. What I can do, and what I do owe to the investor, is a comprehensive report on the TISCO accounts for 1956.

Shall we start with the profit and loss account? Right. Sale of products realised Rs 41.79 crores against Rs 40.16 crores in 1955-56. Other miscellaneous income showed a sharper rise, so that the total income has gone up by Rs 2.31 crores to Rs 44.04 crores. We would here for a moment, let our attention be distracted by production statistics. This table shows that the output of saleable steel during 1956-57 was fractionally lower at 799,000 tons against 800,000 tons. This level is still substantially lower than the record production during the war of 839,000 tons in 1941-42. But, significantly, there is a new item of production: the output of skelp and strip for the first time makes its appearance with a figure of 35,000 tons.

Reverting to the profit and loss account, we find that the purchases of finished and semi-finished products rose substantially from Rs 1.92 crores to Rs 3.23 crores. All the major heads of expenditure show a rise. Payments to and provisions for employees are placed at a net of Rs 6.71 crores against Rs 6.46 crores. At this stage, a glance at Schedule G discloses that there is a rise both under Wages and Salaries and under Bonus to Employees. The gross amount taken up by wages and salaries has gone up to Rs 10.06 crores from Rs 9.47 crores; and bonus absorbs Rs 1.11 crores against Rs 1.02 crores.

Next, materials consumed show a rise of nearly Rs 1½ crores to Rs 13.77 crores. Schedule H reveals that there has been a small

increase in the stock of raw materials, and that raw materials consumption went up by Rs 1.63 crores to Rs 11.75 crores.

Works expenses are also somewhat higher at Rs 8.10 crores against Rs 7.61 crores. This is mainly accounted for by the higher charge on repairs to machinery, which are placed at Rs 3.59 crores as compared with Rs 3.43 crores. These four major heads of expenditure aggregate Rs 31.80 crores, showing a rise of Rs 3.63 crores over the previous year. But expenditure under these heads transferred to capital and other accounts has been deducted, and, after this adjustment, the expenditure is shown to be Rs 2.15 crores higher at Rs 28.33 crores.

Other expenses have declined a bit to Rs 4.09 crores from Rs 4.20 crores. The main saving was in respect of freight and handling charges, which are marked down by Rs 0.24 crores at Rs 2.90 crores. The Managing Agents' commission is higher by Rs 3.34 lakhs at Rs 31.77 lakhs. Contributions to political parties—for enabling which the Articles of the Company were amended last year—have absorbed Rs 10.30 lakhs; and the Congress is the sole beneficiary.

A small provision has been made for bad and doubtful debts at Rs 8.49 lakhs against nil. The net profit, before taxation, depreciation and other provisions, is Rs 11.37 crores against Rs 11.70 crores.

We may now take up the provisions from profits. Tax receives substantially less at Rs 2.72 crores against Rs 3.45 crores; and this, no doubt, is due to the depreciation allowances on the new plant and equipment that are going into production. Depreciation gets Rs 2.47 crores against Rs 2.43 crores. The provision for Plant Rehabilitation and Development has also declined to Rs 2.60 crores from Rs 3.28 crores.

The transfer to Development Reserve, which is the tax saving on development rebate, is Rs 17 lakhs higher at Rs 95 lakhs. The company has provided a reserve for the proposed additional taxes, to the extent of Rs 70.44 lakhs. Moreover, Rs 15 lakhs have also been provided for a Deferred Taxation Reserve. The proposed dividends absorb Rs 2.01 crores,

RECORD OF ACHIEVEMENT

Transacting Fire, Marine, Motor, Accident and all other classes of non-life business ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.

Head Office: Oriental Buildings, BOMBAY-1

entailing a rise of Rs 10 lakhs over the previous year. The balance sheet carry forward is slightly higher at Rs 4.15 lakhs against Rs 4.05 lakhs brought in.

We need also to note that, in the appropriation account, credit has been taken for a receipt under net increase in retention prices for 1955-56 toward increases in cost for the years 1957-58 to 1959-60; after setting aside Rs 51 lakhs to tax, the amount transferred to Retention Prices Equalisation Reserve is Rs 48.54 lakhs.

We shall now turn to a study of the balance sheet. The share capital has, with the last year's rights issue, gone up from Rs 17.34 crores to Rs 25.94 crores. This is inclusive of the Share Premium account of Rs 2.46 crores, as revealed in Schedule A. We may also note that the amount called up on the new ordinary shares of Rs 75 each is Rs 50; calls unpaid are to the extent of Rs 16.06 lakhs. Secondly, of the premium on the new shares of Rs 30 per share, only Rs 20 per share has been called up; and calls unpaid are to the tune of Rs 6.42 lakhs.

The reserves and surplus mark a rise of Rs 3.06 crores to Rs 20.20 crores. That is to say, the addition to reserves during the year—and excluding the Share Premium Account—is of the order of 18 per cent. Let me summarise, in tabular form, the reserves and surplus of TISCO:

	(Rs. Crores) 31-3-56	(Rs. Crores) 31-3-57
General Reserve	4.71	4.87
Plant and Rehabilitation Development Reserve	7.03	9.53
Development Reserve	0.88	1.83
Retention Prices Equalisation Reserve	...	0.49
Mines & Collieries Reserve	1.75	1.82
Repairs and Renewals Reserve	0.34	0.45
Contributions from Other Parties for Capital Expenditure	0.15	...
Deferred Taxation Reserve	0.18	0.33
Investments Depreciation Reserve	0.15	0.14
Reserve for proposed Additional Taxes	...	0.70
Dividends Reserve	1.91	...
Profit & Loss Balance	0.04	0.04
	17.14	20.20

and assimilate the First Plan's message of self-reliance and self-reverence.

Eavesdropper, with his known aversion to pious platitudes, explains the practical directions in which self-help must be channelled for the Second Plan's purposes.

Why grumble about internal resources, when market loans could, by appropriate strategy, be made to give as good a showing as in the War years?

Why this helpless preoccupation with foreign exchange resources when there are, in

the country, crores and crores worth of gold hoards (which should be coaxed to come into the open as they did in the thirties) and when we have infinite reserves of rich iron ore (which may prove even more precious than gold)?

The spirit of self-help cum self-confidence is the spirit which scorns the one hundred reasons why a thing is difficult to be done, and foists its attention on the one supreme reason why a thing must needs be done.

[August 10, 1957]

The third item of liabilities, secured loans, has quintupled to Rs 10.94 crores from Rs 2.20 crores. This is solely due to the drawing upon the loan from the World Bank, which is shown at Rs 8.83 crores against nil.

Unsecured loans have gone up from Rs 9.76 crores to Rs 10.59 crores; and this is due to the full drawing upon the special advance from Government, which is now at Rs 10 crores against Rs 9.19 crores in the previous balance sheet.

The other current liabilities are also higher by Rs 2.17 at Rs 30.61 crores. This, of course, is largely because of the change in accounting procedure, with the proposed dividend of Rs 2.01 crores being shown under Current Liabilities.

The balance sheet total is very near the Rs 100 crore mark at Rs 98.29 crores; and the increase over the year is to the extent of Rs 23.41 crores, the rise expressed as a ratio of the previous year's balance sheet total working out to over 31 per cent.

Turning to the assets side of the balance sheet, we find that the fixed assets have risen sharply by Rs 22.19 crores—or 68 per cent—from Rs 32.60 crores to Rs 54.79 crores. Schedule C shows that, of the additions, plant and machinery have been added to by Rs 6.62 crores. However, the works in progress, representing buildings, plant and machinery, etc., under erection, are shown to have involved additions to the tune of Rs 20.67 crores during the year. With all these additions, the gross block was worth Rs 93.45 crores—again, the figure is within shooting distance of the Rs 100 crore mark; the total depreciation provided is Rs 38.66 crores, and the net block, as we have seen, has a value of Rs 54.79 crores.

Investments have been marked down by Rs 0.61 crores to Rs 5.38 crores. This is largely in respect of disinvestment in Government securities, which are placed at nil against Rs 1.26 crores in the

previous balance sheet. Part of this, however, is offset by an increase in trade investments; in particular, shares in the Indian Tube Company are marked up from Rs 1.47 crores to Rs 1.96 crores.

Under the head of current assets, there is a substantial increase in the figure relating to sundry debts. Sundry debts are shown at Rs 4.99 crores; as the Note points out, the comparative figures are not available.

Loans and advances are higher by nearly Rs 1½ crores at Rs 15.71 crores.

Cash and bank balances have had to be run down from Rs 6.44 to Rs 3.74 crores to enable capital expenditure being met.

£ R \$

Investment Cleanings

(The following are extracts taken from the Directors' Report on the 1956-57 results of the Tata Iron and Steel Company Limited)

The dividends recommended to be paid by the Directors on the equity capital are equivalent to the maintenance of the previous dividend of Rs 10-8 on the old shares and a return of a little over 5 per cent on the amount paid up during the year on the ordinary shares. As the new and old shares rank pari passu for dividends, the total amount of dividend to be paid has been allocated between the two classes of shares in exact proportion to the amount paid up on each class of shares during the year.

The provision for depreciation made in the Company's accounts in previous years more or less corresponded to the depreciation allowances under the Income-tax rules. As, however, the Company's extensive programme of modernisation and expansion results in considerable additions to the block each year, the depreciation allowances under the Income-tax Act for the current year and the two following years are, and will be, extremely heavy. For the current year the

allowances are about Rs 395 lakhs. As these additions to the block will not earn any income until additional steel is produced after the completion of the new plants, it will not be possible to provide for the heavy additional depreciation on such plants from current profits. Accordingly, the accounts of the year provide a sum of Rs 247 lakhs only, representing the normal depreciation for tax purposes including the extra shift allowance but excluding double normal depreciation. The Directors consider that this sum is a fair and reasonable provision for depreciation.

In order to equalise as far as possible the incidence of taxation over a number of years, the Company has in recent years adopted the practice of setting aside from profits provisions for deferred taxation. Rs 18 lakhs were so provided in the years 1953-54 and 1954-55. Owing to the exceptionally large additions to the block in the year under report the total tax saving this year as a result of the double normal depreciation allowance is estimated at Rs 75 lakhs. In view of the large allocations to the Rehabilitation and Development Reserve and to the Development Reserve, the Directors have found it possible to set aside only Rs 15 lakhs to the Deferred Taxation Reserve out of the profits for the year under report. It is their intention to make up the deficit as far as possible by additional allocations in the coming years out of the additional profits produced by the expanded plant.

The creation of a Retention Price Equalisation Reserve with the resulting entries in the accounts for the year, and the transfer of Rs 8.56 lakhs from the Plant Rehabilitation and Development Reserve to the Appropriation Account, require explanation. As several increases in manufacturing costs had taken place during the year, including increases in railway freight, wages and raw materials, the Company made representations to the Government of India requesting a corresponding increase in retention prices. The Tariff Commission determined that the increase in the Company's costs over the five years of the current price period beginning from 1st April, 1955, amounted to an average of Rs 14 per ton. They, however, recommended that Government should increase the retention prices by Rs 12 per ton equated over the five-year period beginning from 1st April, 1955, and directed the Company, retrospectively from that date, to reduce the prescribed allocation to the Plant Rehabilitation and Development Reserve by Rs 2 per ton. The Government of India issued a notification dated 1st July, 1957, embodying the recommendations of the Tariff Commission. With a view to giving effect to this revised scheme of retention prices and allocation to the Plant Rehabilitation and Development Reserve and in order that the accounts may reflect each year the true position, the Directors have decided that such proportion of the increase in the price granted for the years 1955-56 and 1956-57 as is in excess of the actual increase in

costs in those years should, after deduction of tax, be carried forward and credited to the revenue accounts in the years to which they actually apply. Accordingly, a sum of Rs 48.54 lakhs, representing the net excess of the increase in retention prices over the actual increase in costs in the years 1955-56 and 1956-57, has been set aside in a Retention Price Equalisation Reserve. As regards the reduction in the allocation to the Plant Rehabilitation and Development Reserve, the excess amount of Rs 2 per ton after deduction of tax credited to the Reserve in the previous year has been written back to profit through the Appropriation Account, while the allocation to the Reserve for 1956-57 has been made on the reduced basis.

Satisfactory progress was made during the year on the Two Million Ton Programme and the Modernisation and Expansion Programme.

Orders have been placed for the major part of the equipment for the refractories plant being put up at Belpahar in Orissa jointly with Messrs. Dider-Werke A. G. and for the rotary calcining kiln to be installed at Salem in Madras State for supplying dead burnt magnesite to the refractories plant. The plants are expected to commence production by the middle of 1958. The annual capacity of the refractories plant has been increased from 60,000 tons reported last year to 77,000 tons.

The installation of the plant by Messrs. Hekett Engineering Inc. of U.S.A. for the recovery of steel scrap from slag accumulated in the past or currently produced is nearing completion.

Satisfactory progress has been made with the construction at Joda in Orissa of the electric ferromanganese plant which is now expected to be completed by October 1957.

The new ferro-sulphide washing plant manufactured and erected near the Coke Ovens by Messrs. F. J. Collin, AG, for the recovery of sulphate of ammonia and other by-products from coke oven gas was completed by the middle of May this year and is expected to commence regular operation shortly.

Orders have been placed for the major part of the equipment required for the mechanisation of the Noamundi and Joda East iron mines. While, at present, a part of the coal raised at Jamadoba and West Bokaro is washed at the coal washing plants located at these collieries, the Company is expanding the Jamadoba coal washing plant so that by 1959 all the coal raised at the Company's collieries may be washed.

Orissa Cement Maintains Dividend

Balance-Sheet Reviews:

THE Orissa Cement Limited has reported satisfactory working results for 1956. The gross profit, after providing Rs 3.75 lakhs (Rs 5.02 lakhs) for managing agents' commission, amounts to only Rs 43.98 lakhs as against Rs 55.03 lakhs for the previous year. The amount set aside for Depreciation has been lowered from Rs 9.77 lakhs to Rs 8.99 lakhs, while Taxation provision is maintained at Rs 15.50 lakhs. Despite lower profits, the dividend on the Ordinary shares is maintained at 12½ per cent on the increased capital. Sales of cement have fetched Rs 1.25 crores as against Rs 1.27 crores, while Cement Pipes brought in Rs 6.90 lakhs against Rs 4.83 lakhs.

The directors have, in their report, pointed out that the expanded capacity of the Cement Works at Rajganpur came into production as from the 25th January, 1957. The construction and erection of the refractory plant has made good progress. Experimental production has already been started by commissioning a pilot plant. While production of the main Refractory plant is expected by the middle of 1958, some of the sections are expected to start production by the end of this year. The delay is due mainly to the late delivery of the Gas Producer Plant.

The paid-up capital of the company has increased to Rs 1.40 crores from Rs 107.86 lakhs in view of the issue of one Ordinary share at par for every two shares. While the Preference share capital remains unchanged at Rs 40 lakhs, the Ordinary capital has gone up from Rs 67.86 lakhs to Rs 1 crore. Reserves and surplus amount to Rs 43 lakhs.

The company has received a loan of Rs 75 lakhs from the IFC for the expansion of the cement works, while negotiations have been completed for a further loan of Rs 25 lakhs for the Refractory project. Current liabilities and provisions amount to Rs 99 lakhs.

£ R \$

Sri Krishnarajendra Mills

The competitive and slump conditions prevailing in the textile business are fully reflected in the working results of the Sri Krishnarajendra Mills Limited for the year ended 31st March, 1957. Sales have declined to Rs 99.08 lakhs from Rs 1.17 crores, while the net profit, before setting aside for Depreciation and Taxation, amounts to only Rs 18,04,153 against as much as Rs 24,41,096 in the previous year. Apart from providing a sum of Rs 3.16 lakhs for Development Reserve and Rs 40,000 for Depreciation on Investments, the directors have reduced the Depreciation amount to Rs 4.83 lakhs from Rs 5.46 lakhs and Taxation to Rs 5.40 lakhs from Rs 10.00 lakhs. No provisions have been made for

erected out of 12,180 licensed under the expansion scheme. The remaining 2,940 spindles are under erection and efforts are being made to work these spindles also as early as possible.

The Government of India have granted a licence for the installation of 96 automatic looms by way of expansion. It is proposed to instal the above looms at a total cost of Rs 6.60 lakhs. The Government have also issued a licence, permitting the installation of a Spinning Unit of 12,000 spindles at Chitaldrug.

Dhrangdhara Chemical

After providing Rs 91,258 for managing agents' commission as against Rs 2.80 lakhs, the gross profit earned by the Dhrangdhara Chemical Works Limited, for the year ended 31st March 1957, is lower at Rs 21.83 lakhs as against Rs 26.97 lakhs in the previous year. Sales have, however, increased to Rs 1.19 crores from Rs 1.16 crores.

In respect of allocations to funds, a sum of Rs 9.86 lakhs (nil) is set apart for Depreciation; Rs 9.00 lakhs (Rs 20.60 lakhs) for General Reserve; nil (Rs 1.50) for Taxation

“Additives, Sir,
are things
that are added
to things . . .”

the boy's a genius

It sounds simple enough. To add special qualities to a motor oil, you just...well...add things to it.

Simple? It was revolutionary! When SHELL X-100 MOTOR OIL was first introduced, cymbrows were raised in query. Here was a new kind of oil altogether, an additive oil, claiming to do things no motor oil could do before and completely refuting existing ideas on engine wear.

It's not friction, we said, which causes most wear in engines. It is corrosion from acid products of combustion. Research has proved it. A modern oil must therefore be able to fight acid action. Again, conventional lubrication is no longer enough. A modern oil must have a detergent action, to keep working parts clean and free from clogging deposits. Again, standards of stability must be raised to resist the higher temperatures and pressures of modern engines. How could these things be achieved? Shell research found the answer... by remarkable chemical additives. SHELL X-100 MOTOR OIL, with its three special forms of protection, was a major advance in car lubrication. Its success was immediate. To-day it is the leader amongst detergent oils whose superiority is now universally recognised. It is yet another instance of how Burmah-Shell are continually distributing the better products which a changing situation demands.

and Rs 3.20 lakhs (Rs 3.74 lakhs) for additional payment and Provident Fund to labour. The directors have proposed to pay the dividend from the Dividend Equalisation Fund as in the previous year, at 6 per cent.

The Industrial Finance Corporation has sanctioned a fresh loan of Rs 1 crore for the new undertaking of Caustic Soda unit at Tinnevely. The balance of 12,971 Preference shares still remains to be subscribed.

ER\$

Standard Motor Products

Standard Motor Products of India Limited has been able to report a significant increase in sales, for the year ended 31st December 1956, to Rs 2.56 crores from Rs 2.06 crores in the previous year. The net profit, before providing for Taxation and Depreciation, amounts to Rs 12.33 lakhs as against Rs 7.85 lakhs. The charge on account of Depreciation is Rs 4.27 lakhs (Rs 2.32 lakhs) and Taxation Rs 2 lakhs (Rs 2.25 lakhs). The Dividend Equalisation Reserve gets Rs 2 lakhs, while the transfer to General Reserve amounts to Rs 1.50 lakhs. The dividend on the Ordinary shares is maintained at 6 per cent.

The directors have stated that the company is continuing to make progress in its manufacturing programme in regard to the Standard Vanguard and the Standard Ten. The manufacture of gear-box components for the Standard Vanguard is being taken on hand, while the manufacture of the Standard Ten engines has commenced. The programme for the progressive manufacture of Ferguson Tractors, which has been already approved by the Government, was had to be postponed due to the late receipt of the new models. It is expected to start the first stage of the programme early next year.

ER\$

National Machinery Manufacturers

This company has been able to report a significant increase in sales, during the year 1956, to Rs 1.99 crores from Rs 1.53 crores for 1955, thanks to increased production of ring frames and spares. The manufacture of complete ring frames has been fully established

and 324 wholly-manufactured ring frames were delivered during the year to various mills.

The net profit amounts to Rs 33.84 lakhs as against Rs 26.81 lakhs in 1955. After providing for regular Depreciation of Rs 15.26 lakhs (nil), the arrears of depreciation are wiped out to the extent of Rs 18.92 lakhs against Rs 12.36 lakhs previously. There are still arrears of depreciation for about Rs 28 lakhs in respect of 1954 and 1955.

ER\$

Cannanore Spinning

As a result of a sharp increase in earnings of the Cannanore Spinning & Weaving Mills Limited in the year ended March 31, 1957, it has been possible to pay a higher dividend of 20 per cent on the ordinary shares against 15 per cent for 1955-56. Sales were higher at Rs 80.09 lakhs against Rs 63.80 lakhs previously while the net profit, before providing for taxation and depreciation, was Rs 12,73,746 against Rs 9,10,559 for 1955-56. The charge on account of depreciation is Rs 2,73,949 against Rs 2,36,121 and taxation Rs 5.10 lakhs (Rs 4.25 lakhs). There is no transfer to general reserve against Rs 60,000 on the former occasion, but the amount carried forward is substantially higher at Rs 1,92,701 against Rs 8,994 brought in.

It will be clearly necessary for the company to raise additional capital if sanction is received for the installation of 4,000 spindles. The application is pending with the Government. Even now, available resources have been fully employed as the net block amounts to Rs 25.95 lakhs against the paid-up capital and reserves amounting to Rs 22.04 lakhs.

ER\$

Pankaja Mills

At a time when cotton mills in general have been declaring good dividends and the increased output of yarn of South Indian Mills is being freely absorbed, Pankaja Mills Limited has not been doing quite well. It is complained that, on account of the worn-out machinery, it has not been possible to run the mills efficiently. As a result of the heavy losses incurred in earlier years, a debit balance is being carried forward. For 1955, a dividend of 4 per cent was paid out of the

(Continued on page 305)

Thirsty Land and Hungry Men

BELATEDLY, the authorities have come to realise that there has been complete lack of coordination on some vital aspects of planning; and even now there is scarcely the evidence of a thorough grip on all the problems. In the utilisation of canal waters made available through the river projects undertaken during the First Plan period, this lack of coordination was conspicuous. The result was that though an area of about 8.5 million acres was expected to be brought under new irrigation by 1955-56, only a little over 4 million acres could actually be irrigated.

In the DVC, though irrigation potential of 100,000 acres was attained before the end of the First Plan, the entire water remained unused for a long time. In Hirakud, water was let into the canals for irrigation for 1956 kharif crop; the actual quantity used is not mentioned in the Report. In Bhakra Nangal, 1.18 million acres of land came under irrigation against the Plan target of 1.40 million acres. In Tungbhadra, the reservoir and the dam were completed in 1955, but the programme relating to development and irrigation was taken up leisurely, much later. Against an area of 75,000 acres brought under command for irrigation in Andhra before the end of the Plan, the actual irrigated area came to 25,000 acres. A part of the excess supplies was being used temporarily for raising a second crop in the Krishna Delta area.

Bombay, which had a number of medium-sized irrigation projects, figures among the most disappointing records; the target in the First Plan was 474,000 acres. The achievement was 43,000 acres. In Bihar, the corresponding figures were 114,000 acres and 10,000 acres. In Madras the position was more satisfactory, with the achievement covering 221,000 acres against the target of 435,000 acres. West Bengal's record is 223,000 acres irrigated against the Plan target of 250,000 acres. There was hardly any State which met the irrigation target in full or even showed a near approximation.

Even at an early stage, the Planning Commission could foresee that the quickest and most economic results would be obtained, if the big multi-purpose projects progressed hand in hand with smaller irrigation works; adjustments were made on the original pattern from time to time to include new projects and new agencies, so that the balance and economy aimed at could be fully secured. On the question of utilisation, similar forethought was not forthcoming; and it is rather disturbing to note that even in respect of many irrigation and power projects sponsored by the State Governments for inclusion in the Second Five Year Plan, adequate investigations have not been made and the task of detailed review has to be thrown on a Central Advisory Committee.

An official review of the First Plan explains why the irrigation facilities could not be utilised in full. The main reason could be found in the defective phasing of works. Stored water did not find prompt outlets through canal and distribution systems. State Governments underestimated the time required for redesigning major drainage works of large rivers and canals. The settlement schemes which were suggested for certain centres were not carried out. On the top of all these, cultivators in many areas were also not found

enthusiastic in availing themselves of the facilities kept ready.

The betterment levy on which the Planning Commission laid great hopes, both as a return on investment on the projects and as a medium for instilling a sense of public obligation on the part of the beneficiaries, still remains largely a will-o'-the-wisp. Though in the course of the First Plan, twelve States passed legislation and nearly all others introduced Bills for the purpose, no recoveries were made even in States which had the law on the Statute Book for over two years.

The broad analysis of the causes for the disappointing performance in the field of new irrigation under the First Plan period which the official review provides should be made the basis for further scrutiny into this all-important subject. It is clear that the Planning Commission themselves have not found it possible to go into the details of a situation obtaining in respect of every medium sized project. The statistical efforts are admittedly half-hearted. Not all the State Governments are even now zealous about work on the distributive system though there is a universal clamour for Central approval and assistance for construction projects. What is needed is nothing short of a completely transformed outlook on the problem of irrigation and its varied manifestations.

It is stressing the obvious to say that the future of the economy and the success of the Five Year Plans very largely depend on the measure of confidence which could be imparted to the food situation from time to time. Irrigation holds the key to increased food production. The galloping strides on the food front between 1951 and 1954 were in effect delusive, to the extent they were the outcome of fortuitous or undependable circumstances. The later setbacks have been an eye-opener and have underlined the need for a larger proportion of irrigated area as a factor for stability in domestic production.

The projects started under the First Plan are alone capable of opening up 33 million acres for irrigation. More projects have been approved and have commenced work since the beginning of the Second Plan. It may be pointed out that the irrigation potential available from the innumerable small rivers all over the country has not come into the calculations of national planning. Again, there is the proposal to carve the Dandakaranya, a prospective refugee settlement, from the forest regions of the Deccan. This area, covering about 80,000 square miles, will have to depend entirely on irrigation. All told, an estimate of about 45 million acres worthy and capable of being newly irrigated would not err on the side of exaggeration. Leaving out the 4 million acres actually covered during the First Plan period, there remains over 40 million acres. Out of this, 10 million acres may be set apart for the production of commercial crops. A net 30 million acres will be available for food-grain production. Even on a modest calculation, this much of land represents a production potential of the order of 10 million tons of wheat and rice, the only permanent and practicable answer to the country's food shortage.

The conversion of this potential into actual production involves concentrated and metho-

dical attention. The first step should be a study of the prospects in complete detail. In this study may be included the scope of benefit arising out of diversion of the canal waters now flowing into Pakistan. The Union Minister for Irrigation has taken a sound stand in indicating a dead-line, beyond which the supply from the Indian side will have to be stopped once and for all. Western India, particularly Rajasthan, is thirsty and when national needs are so pressing, self-denial must have a limit.

The next step should naturally be the drawing up of plans for new projects, big and small, wherever new opportunities are indicated. These projects are entitled to the highest priority. The lesson of the First Plan will have to be reflected in impeccable co-ordination between the construction side and the utilisation side of the work. One important aspect, which the Planning Commission have apparently failed to emphasise, rests on the traditional incapacity of the population of certain States to take the irrigation facilities spontaneously, at the first glimpse of opportunity.

Wherever this problem occurs, the Government will have to bring in settlers from States where the population is traditionally sensitive to irrigation facilities and is accustomed to utilising them promptly and fully. At the initial stages, the organisation of work would be facilitated if the Government directly come in with whatever assistance possible. That helpful initiative will produce marvellous results is demonstrated in the reclamation of the Terral area, where the Central Tractor Organisation worked in collaboration with a net-work of co-operatives, to convert within record time a few thousands of waste into fine cultivable land.

Having incurred enormous invisible drain through vast irrigation resources running to waste, it would be criminal to be complacent in the future. When the facilities afforded are not normally made use of, the authorities should feel thoroughly justified in taking emergency steps and achieving full utilisation through every possible means. In the Lok Sabha, one member from the South suggested the creation of irrigation zones, on the lines of the electricity grids. Unfortunately, the River Boards Act and the Inter-State Water Disputes Act remain virtually inoperative. We do not think that the Union Government have exhausted their powers of persuasion and pressure to win round the recalcitrant States concerned. Anyway, a fresh endeavour, inspired by a new sense of urgency, would be worthwhile.

It is a pity that the betterment levy is either not enforced or is meeting with severe opposition. Possibly, the rates demanded by some of the State Governments are unduly high. Otherwise, there could not have been the universal outcry raised in the Lok Sabha last week. Several members mentioned cases of peasants refusing to make use of irrigation waters, to avoid the betterment levy or to divert their land off food production. Allowing for the fact that the peasants are not wholly uninfluenced by Opposition parties, this is a subject which deserves sympathetic scrutiny.

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

Timely Compromise

The last-minute withdrawal of the strike notice by the Council of Action of the Posts and Telegraphs Employees' Federation is a matter of universal relief in India. Despite disunity among the Unions, the joint appeal of about one hundred and fifty Parliament Members and the appeal of the Prime Minister and his colleagues and many other esteemed men outside the Government, the few men who dominate the P & T Federation might not have raised the red signal against the strike, had not the Prime Minister made an assuaging statement on Thursday. Of the three demands which were kept pending and on the basis of which the strike would have been carried out, that of interim relief was obviously the most important and the most pressing.

Actually, the Prime Minister did not say anything new in his latest statement. He, however, gave the categorical assurance that the question of interim relief would not only be referred to the Pay Commission but the Commission would consider it as expeditiously as possible. The wording used imparted a little more precision and clarity to an undertaking already given. This small difference seems to have turned the scale definitely against the possibility of a strike. Both the Government and the P & T Employees' Federation leaders deserve the nation's thanks.

For the Government, however, immediate relief is also the beginning of a new set of worries. Even a small per capita rise in the emoluments of Central Government employees will involve expenditure running to crores. Any increment falling substantially short of the present demand is not

Editorial Notes

likely to satisfy them either. Once the Central Government employees establish their eligibility for increase in pay, it will stimulate agitation in the States. Much higher and very wide-spread disbursements especially to classes from whom a corresponding rise in savings is not likely to accrue, will further assist inflationary trends.

The economy measures the Government have lately taken are likely to be more than neutralised, leaving a net budgetary position more inconvenient than before. But these consequences have to be set against a possible paralysis of the Government and economic life through what might eventually turn out to be a general strike. All the same, it behoves the State authorities to analyse in a sufficiently realistic manner the forces which have sought to hold the Government and the public to ransom, in spite of the overwhelming parliamentary majority for the Union Government and the extraordinary prestige which the Prime Minister commands among the population.

A Dilemma in Education

The view put forward by Sir Chintaman Deshmukh, at the Vice-Chancellors' Conference, in favour of a rigorous sieving of admissions for higher education will not go unchallenged. All the political armoury and jargon of the Welfare State will be assembled against it. It is possible to describe the step suggested as reactionary, undemocratic and utterly against the spirit of the times; and it is not easy either to brush aside this kind of criticism as silly or irrelevant. What Sir Chintaman wants is to cry halt to the present drift, which only results in extravagance, waste and lowering of standards and creates innumerable social problems in its train.

In China, a country which by no means can be treated as unprogressive, the number of persons selected for University education is determined by the opportunities for suitable employment. In other words, economic requirements form the principal criterion. There is a strong case for the same test to be applied in India. Instead of a state of indiscriminate admissions, over-crowding of colleges, a steady deterioration of standards and wide-spread unemployment, the Chinese method would result in the most deserving students alone securing higher education, restoration of proper standards and little or no unemployment for those who leave the University.

If, alongside, the structure of technical education is made more broad-based and balanced, the risk of educational waste will be re-

duced to a negligible minimum. The most powerful objection to restricting College admissions arises from the existence of a social pattern in which leadership and more coveted jobs mostly go to particular groups, while others are virtually kept out. Even with liberal free scholarships, it will take a long time to correct this position. It is here that we come across a dilemma for which no solution is yet in sight. Sir Chintaman argues the case for one alternative. The other, though full of hazards, is socially no less pressing.

Future of UN

A full meeting of the United Nations recently decided that the question of reviewing the UN Constitution could be tentatively postponed for another two years. Mr Hammarskjöld, the General Secretary, recounted the principal achievements of the United Nations, endeavouring to prove that the body has turned out to be a genuine and effective instrument of international peace and orderly progress.

He does not deny that the organisation is not devoid of weaknesses but pointedly adds that public opinion tends to be influenced by the national attitudes and the extent to which action by the United Nations seems to coincide with national aspirations. In the Suez, the fact of national sovereignty could not be over-ruled; in Hungary, as in many other situations, the fact of the international cold war had also to be indirectly recognised.

That the United Nations has to function within the limits set by a strong and generally impregnable sense of national sovereignty is as much its strength as its weakness. Criticism which takes sympathetic account of this over-riding fact will not be hard or condemnatory. Sir Winston Churchill has, however, raised a point which throws up implications which he himself may not quite approve of. Sir Winston regards it as an anomaly that the vote or prejudice of any small country should affect events involving populations many times its own. This great leader of British conservatism also recalls with unconcealed condescension that Britain created many of these small nations and has done its best to ensure their integrity and prosperity.

As long as representation in the United Nations goes by status as an independent State, the phenomenon which strikes Sir Winston as anomalous is bound to persist. But then, will he prefer representation on the basis of population, in which case, India can claim as many seats as the United States,

Britain with its Dominions and the majority of Western European countries put together? In this logic, the UN deserves a complete transformation in structure, which, incidentally, may not be in a manner agreeable to the great British leader and those who think like him.

Toward Less Crowded Travel

The All-India Federation of Transport Users' Associations has suggested a few steps to relieve third class congestion on the Railways. These are the introduction of multiple shifts in the manufacture of passenger coaches at Perambur and Bangalore, the displacement of air-conditioned coaches, which have a lean traffic record by third class coaches, the addition of two third class coaches on over-crowded lines, the elimination of the need for dining cars and saloons by convenient halts at meal times and the introduction of motor coaches for suburban runs. The Railway Board has already taken some decisions on these lines. Willy nilly, the air-conditioned coaches will have to yield place to much less comfortable accommodation, in the interest of economy in space. The most important among the suggestions made by the Federation is for the introduction of multiple shifts in coach manufacture. The remarkable increase in engineering production recorded since 1955 is in a large measure due to the factories working more than one shift, which, incidentally, has also led to a radical revision in the estimates of capacity. In the Integral Coach Factory at Perambur, output results have exceeded schedule. With more shifts, the position will improve even further. There is, of course, insufficiency of material for the manufacturing programmes. Those intended for transport should naturally receive the highest priority.

Tapioca Foods

Tapioca products prepared by the Central Food Research Institute, Bangalore, have secured a big and influential customer in the Government of Kerala. At a recent meeting of the Macaroni Propaganda Committee, sponsored by the Government, it was announced that State parties held by Government would always include one or two items of tapioca macaroni dishes. The Kerala Government have placed an order for 30 tons of macaroni from the Bangalore Institute; and the product will be sold through fair price shops at 20 naye paise per lb, which is considerably less than the current price of medium quality rice.

The advent of tapioca food products in the form of popular dishes, is undoubtedly good news at a time of national food shortage. These products bid fair to take an abiding place in the Indian menu.

World of Finance

Success as Expected

IT SHOULD occasion no surprise that the subscription lists for the 1957 New Loan were closed on the second day. When the New Loan announcement was made in the last week of July, there was not the slightest doubt either about the successful attaining of the target or about the time within which the realisations would approximate to the amount sought. Indeed, it was confidently expected in some circles that it should have been possible for the lists to be closed on the very first day. The reasoning underlining the belief that the New Loan would be quickly and fully subscribed was somewhat on the following lines.

The target for the New Loan was, as vouchsafed in the Budget for 1957-58, Rs 100 crores. But a departure from the basis on which this figure was arrived at at Budgettime lay in the fact that conversion facilities were to be offered for the 3 per cent 1958 Loan as well. That is to say, securities eligible for conversion, including the 3 per cent Victory Loan 1957, were of the order of Rs 85 crores. This clearly meant that Government had revised downward, quite considerably, their target for cash subscriptions. In the light of such revision, it was obvious that the New Loan would present no difficulty. It could be reasonably assumed that, of the eligible securities, anything like Rs 50 crores were being held by the Reserve Bank, the State Bank, the Life Insurance Corporation and other agencies on which Government exercised influence. Even in the contingency that the whole of the eligible securities held by the public at large would choose not to exercise its option to convert, it was logical to proceed on the basis that the maximum of cash subscriptions necessary to achieve the target of Rs 100 crores would be around Rs 50 crores. Again, the cash aspect of the subscriptions could also be said to be a matter easy to achieve. The State Bank of India and the Life Insurance Corporation, between the two of them alone, could have mustered a minimum of Rs 30 crores for the New Loan. Of the balance of Rs 20 crores, the other Scheduled Banks could at the least take up Rs 10 crores. The remainder—Rs 10 crores—would barely suffice to meet the requirements of Provident Fund Institutions and other entities who, denied State Government Loans in which to invest their accumulating funds, would inevitably need to subscribe to the Centre's New Loan.

But, as we have said, the lists were closed only on the second day.

The Reserve Bank's communique which gives out this information is unusually reserved, stating only that the loans were "fully subscribed". We are in the dark as to the extent of cash subscriptions and as to the size of the conversions. Nor do we know how much of the 3 per cent 1957 Loan was offered for conversion and how much of the 3 per cent 1958. In the absence of detailed data as regards these particulars, comment on the successful outcome of the New Loan has to be limited to the expression of gratification that the target has been achieved.

However, there are a few general points on which conjectural discussion may be permitted. In the first place, it would not be wrong to suggest that half of the offer could have been in the form of conversion. Secondly, of the cash portion, it is reasonable to suppose that Rs 30 crores emanated from such sources as the Life Insurance Corporation and the State Bank of India. This means that, after allowing for, perhaps, Rs 10 crores of subscriptions from Provident Fund Institutions and miscellaneous applications, the investment in the New Loan by the other Scheduled Banks could have been for scarcely Rs 10 crores. This last fact is difficult to understand, especially in view of the substantial reduction in gilt-edged holdings by Scheduled Banks over the past year, on the one hand, and of the considerable cash balances that Scheduled Banks have built up, on the other. We would like to attempt a broad analysis of the reasons that could have precluded Scheduled Banks from subscribing in more handsome manner.

If the criterion of appropriate timing for a New Loan issue may be said primarily to lie in the position of Scheduled Banks' finances, credit must go to the Reserve Bank for a correct assessment in this behalf. As at the end of July, cash balances of Scheduled Banks were at the high altitude of Rs 168.71 crores; and this contrasts with the figure of Rs 114.07 crores in the corresponding week of last year. Over the same period, the gilt-edged investments of member banks fell by nearly Rs 21 crores to Rs 332.56 crores. Moreover, Deposits at the end of July, at Rs 1,310.64 crores, had risen by Rs 214 crores over the 12 month period; and, of this increase in Deposits, only Rs 145 crores were required to meet the expansion in Advances. So, it should be stated that, in every way, the position of Scheduled Banks was such as to induce, if not altogether ensure, a high level of subscriptions from member banks.

We think a possible explanation for the apparent failure on the part of Scheduled Banks to subscribe in a big way for the New Loan lies in the uncertainties that made their appearance with the threat of countrywide strike in Government departments and institutions. Perhaps, the Scheduled Banks felt that it was their responsibility to keep a high level of cash balances, so that the complications arising from the then anticipated Posts and Telegraphs strike could be catered for. Secondly, it might also have been apprehended among the Scheduled Banks that, with the prospect of restrictions on the movement of letters and, therefore, the transmission of cheques, the demand for finance as reflected in the level of Advances would show a sharp rise.

Banks' Deposits

It is now possible, with the availability of banking figures for July 26, to assess what, as recently defined by the Reserve Bank in its Report on Currency and Finance, can be reckoned to be the first half of the slack season. It may be recalled that, while the actual busy season peak has usually been touched in the second week of May, the Report on Currency and Finance indicated that, for purposes of distinguishing between the slack and busy seasons, it was convenient to regard the period between May and October as the slack season. Largely speaking, we would be disposed to think that, though it is arbitrary, the decision to "fix" the slack season's tenure from the beginning of May has some advantages. In this context, it may also be stated that the overflow of busy season trends into the first week or two of May might, in the past, have been partly, if not substantially, been due to the superimposition

The explanation notwithstanding, in view of the fact that the strikes have been averted, the position of Scheduled Banks now is that they are affluent as regards cash balances and underinvested in respect of Government securities. Furthermore, if our assumptions as to the source of subscriptions to the New Loan are more or less correct, it means that the banking system would have experienced neither a drain on its Deposits nor a strain upon its cash balances. This leads us on to a consideration of what in the immediate future may obtain.

If the present trends of rising Deposits and falling Advances continue, as we think they will, we may even reach the stage where Scheduled Banks would be faced with an embarras de richesses. (Continued on page 305)

TABLE I
SLACK SEASON—FIRST HALF.

	April 27, 1956.	July 27, 1956.	Change.	April 26, 1957.	July 26, 1957.	Change.
Reserve Bank:						
Active Notes	1505.01	1444.28	-60.73	1561.91	1498.83	-63.08
Banks' Deposits	50.84	53.35	+ 2.51	67.60	103.83	+36.23
Other Loans and Advances	69.71	65.54	- 4.17	96.24	63.29	-32.95
Advances on Usance						
Bills	37.52	34.85	- 2.67	53.24	29.47	-23.77
Rupee Coin	107.20	111.94	+ 4.74	127.30	130.18	+ 2.88
Foreign Securities	725.65	659.43	-66.22	504.81	420.21	-119.60
Currency Contraction			60.47			65.96
Scheduled Banks:						
Deposits	1072.21	1096.64	+24.43	1231.99	1310.61	+78.65

Borrowings from SB	9.19	5.76	- 3.43	7.86	3.23	- 4.63
Cash Balances	95.35	103.89	+ 8.54	131.10	168.72	+37.62
Total of Advances	787.22	740.22	-47.00	907.94	885.10	-22.84
Increase in Resources			41.43			101.49

*After allowing for Rs 35 crores purchase of currency from IMF.

It will be seen that the decline in Active Notes has been more or less for the same figure in both the years. That apart, however, there is a wide range of changes in all the other money market indicators. For example, Banks' balances with the Reserve Bank have risen by Rs 36.23 crores against a rise of Rs 2.51 crores last year; the Other Loans

and Advances of the Reserve Bank fell by nearly Rs 33 crores as compared with only Rs 4.17 crores; the decline in the Reserve Bank's Advances against Usance Bills is placed at Rs 23.77 crores against Rs 2.67 crores; Scheduled Banks' borrowings from the Reserve Bank have been reduced by Rs 40.69 crores against a reduction of Rs 8.63 crores

last year; and cash balances of member banks have risen substantially by Rs 37.62 crores against a rise of Rs 8.54 crores in 1956. All these changes can be traced to one fundamental difference between the 1957 and 1956 slack seasons. This basic difference lies in the fact that Scheduled Banks' resources have been augmented in a really more strident fashion this year. While currency contraction, as measured by the decline in Active Notes and the return of Rupee Coin from circulation, is more or less unchanged at Rs 65.96 crores against Rs 65.47 crores; and while a much higher fall in the foreign exchange holdings of the Reserve Bank would have suggested a greater contractionist influence during the current slack season, Scheduled Banks have—almost paradoxically—experienced a remarkable increase in their Deposits. The Deposits are, in the present slack season, increasing at three times the 1956 rate. Moreover, the contraction in advances has also been somewhat steeper. The resultant increase in resources—on the one hand, by augmentation of

Deposits and, on the other, by the liquidation of advances—has amounted to Rs 101.43 crores against Rs 41.43 crores last year. We would suggest that the clear conclusion is that the greater slackness of the 1957 slack season is due entirely to this phenomenon of beneficial and remarkable increase in Deposits of Scheduled Banks. Moreover, it needs to be pointed out that the expansion in Deposits has been largely independent of windfall receipts under such heads as US counter-part funds. The State Bank's Deposits over the period rose by Rs 26.38 crores; but not more than Rs 10 crores to Rs 12 crores of this perhaps represents Deposits of the US Embassy.

The pivotal role of the increase in Deposits of Scheduled Banks in the context of the present monetary conditions is even more clearly indicated if the progress of the slack season were recorded from its actual starting point, that is, the busy season peak. The following table assesses the slack season from its start on May 10 up to the last week in July:

	May 11, 1956		July 27, 1956	Change	(In Rs Crores)		May 10, 1957	July 26, 1957	Change
	1956	1956			1957	1957			
Reserve Bank:									
Active Notes	1525.88	1444.28	—81.60		1595.36	1498.83	—96.53		
Banks' Deposits	49.40	53.35	+ 3.95		58.66	103.83	+ 44.17

Increase in Resources	...	...	61.37		...	...	124.97		

*After allowing for Rs 35 crores purchase of currency from IMF.

It is noteworthy that the decline in Active Notes from its busy season peak is steeper by nearly Rs 15 crores than the corresponding figure of the preceding year. Secondly, the drain in foreign exchange reserves is also much sharper. Thirdly, currency contraction is not, as suggested by Table I, of the same order in 1957 as in 1956, but substantially higher by Rs 12½ crores. Thus, despite foreign exchange drain that was placed nearly Rs 43 crores higher at Rs 101 crores, and despite currency contraction for Rs 101.63 crores, Scheduled Banks' Deposits have registered an increase of Rs 73.89 crores as compared with Rs 32.40 crores last year. It is also worth mentioning that the contraction in Advances has been for a much larger amount, at Rs 50.78 crores as compared to Rs 28.97 crores in 1956.

We would like to draw the emphatic attention of all banking interests to the fact that the expansionary trend in banks' Deposits has recognisably assumed remarkable proportions. Furthermore, we would invite a study by the monetary authorities of the impact upon Deposits of the balance of payments deficit. That is to say, what is the size of the "hidden" rise in Deposits, which has gone to meet the import bill? Incredible as it may seem, the inevitable conclusion must be that, in the period between

May 1957 and July 1957, the increase in banks' Deposits could have been for a figure as high as Rs 128 crores; and this means that the increase in Deposits during this quarter worked out to a rate of 40 per cent per annum. For the future, the prospect is one of even more substantial increases in Deposits, particularly in view of the steps taken by Government to stem the rot in foreign exchange reserves. If the contractionist influence of the import surplus is thus minimised, it stands to reason that the rise in bank Deposits will be found more marked.

We would, therefore, urge a reassessment of the banking situation as appertaining to what we might call the money market sector of the Second Plan; such reassessment may possibly result, with the realisation that Scheduled Banks' new resources will be more than sufficient to cover the financial needs of the private sector, in a refashioning of monetary policy. It is also possible that the much more comfortable position of Scheduled Banks vis-a-vis their resources for meeting the demand for finance, should lead to the declaration of armistice in the Deposits war; thereafter, with conditions propitious for the return of interest rates to normalcy, it should be well within the capacity of Government to evolve a policy for glitgedged based on borrowing from strength.

We may add a postscript; interest rates in Australia are officially controlled; so, there would be a precedent for the Reserve Bank to lay down minima for rates on Advances and maxima on rates paid for Deposits.

Bank Deposits Cross Rs 1300 Crore Mark

As anticipated, the emergency suspension of the minimum of Rs 400 crores of Foreign Securities as cover for currency has received the approval of the Central Government; and the returns of the Reserve Bank for the week ended August 2 disclose that holdings of Foreign Securities in the Issue Department have fallen below this level, though the total holdings, inclusive of Balances Held Abroad as shown in the Banking Department, still amount to something more than Rs 400 crores.

There is the suggestion that the step in respect of the minimum cover for currency has been precipitated for a reason other than purely Indian needs in regard to balance of payments. It was, we may recall, announced last week that the Government of Burma intended to utilise, during the current year, the loan of Rs 20 crores made available by India; it was also indicated that Burma would soon commence operations on this account; thirdly, it is gathered that India had signified its preparedness to make the credit available, if so desired, in sterling. For a proper understanding of the latest Reserve Bank figures, these facts have to be kept in mind.

The returns reveal that there has been a transfer of Rs 25 crores from Foreign Securities to Balances Held Abroad in the Banking Department; but the figure under the latter head has risen only by Rs 6.63 crores; the apparent inference is that the net import surplus, as measured by the drain in exchange holdings, has been for an amount around Rs 18½ crores. On the face of it, a decline of such large magnitude would appear improbable.

The conundrum becomes simplified, if the figure relating to Other Deposits is next studied. In this context, it needs to be remembered that, in the first week of July, contrary to usual practice, the whole of the Reserve Bank's profit payable to the Central Government was apparently made over; but this payment was not reflected immediately in an improvement in the Centre's balances. Instead, other Deposits showed an unusual rise of roughly Rs 30 crores. At that time, we had suggested that this receipt was possibly being kept in suspense, pending the payment, for example, of Rs 15 crores to the Refinance Corporation, which was a commitment that Government had to bear. It is now reasonable to presume that Government had kept under suspense another amount relating to the loan made available to Burma. Consequently, the current week's decline of just under Rs 10 crores under Other Deposits may possibly indicate the completion of the first tranche of the loan to Burma; and the steep size of the fall under

Balances Held Abroad would suggest that part at least of the Rs 10 crores is in the form of sterling.

In their more routine aspects, the Reserve Bank returns show that slack season trends have largely offset month early demand for finance. Active Note circulation is higher only by Rs 0.66 crores at Rs 1499.49 crores; and there has, in fact, been return of Rupee Coin from circulation for Rs 0.14 crores. The Reserve Bank's cash in the till is more or less unchanged at Rs 35.92 crores against Rs 36.44 crores in the previous week.

To offset the decline in assets arising from the transfer from Foreign Securities to Balances Held Abroad, adjustments have taken place under Rupee Securities. In the first place, there has been a transfer from Investments in the Banking Department; in the second place, there would also appear to have been deficit financing for Rs 10 crores. For, Investments in the Banking Department are lower only by Rs 15.21 crores at Rs 265.60 crores, whereas the rise under Rupee Securities in the Issue Department is for Rs 25 crores. Clearly, the balance of the increase is accounted for by sales of ad hoc Treasury Bills in favour of the Reserve Bank; and month early disbursements would have necessitated such recourse being taken by the Central Government.

In spite of deficit financing for Rs 10 crores, the Centre's balances are lower by nearly Rs 2 crores at Rs 51.96 crores against Rs 53.90 crores. On the other hand, the State Governments have improved their position, with a rise of just under Rs 1 crore to Rs 3.17 crores in their Deposits and with a fall in their indebtedness to the Reserve Bank by Rs 2.65 crores to Rs 23.54 crores. Other Deposits, for reasons already explained, are lower by Rs 9.91 crores at Rs 139.13 crores.

Figures relating to Scheduled Banks, however, show that month early disbursements have entailed some strain for them. Firstly, the Other Loans and Advances of the Reserve Bank are marked up by Rs 5.89 crores to Rs 69.18 crores; the advances against Usance Bills are also higher by Rs 2.40 crores at Rs 31.87 crores; but we must await the return of Scheduled Banks before concluding that all of the increase is accounted for by them. Secondly, balances of member banks would seem actually to have improved by Rs 4.49 crores to Rs 108.32 crores; but the statement of the State Bank for the relevant week shows that the other Scheduled Banks must, in fact, have drawn somewhat upon their balances with the Reserve Bank.

According to the return of the State Bank for August 2, Deposits have marked a further improvement of Rs 2.76 crores to Rs 328.29 crores. In spite of month early demand, Advances have, owing to slack season influences, receded by Rs 2.11 crores to Rs 169.61 crores. In the result, cash balances are sharply higher by Rs 6.02 crores at Rs 67.20 crores; and this proves that the other Scheduled Banks

drew upon their balances with the Reserve Bank for an amount of Rs 1½ crores.

The Rs 1300 crore mark in Deposits has been passed, as disclosed in the return of Scheduled Banks for July 26, with a sweeping increase during the week of Rs 22.65 crores to Rs 1310.64 crores. Of this rise, Rs 13.28 crores can be traced to the State Bank. Slack season influences are responsible for another decline of Rs 7.37 crores to Rs 885.10 crores in the total of Advances; and a third of this amount is accounted for by the State Bank. This twin favourable development, of increase in Deposits and decline in Advances, has been utilised partly to reduce indebtedness and partly to augment cash balances. Borrowings from the Reserve Bank are shown Rs 7.49 crores lower at Rs 32.02 crores, while indebtedness to the State Bank is practically unchanged at Rs 3.23 crores. Cash balances are substantially higher at the very comfortable level of Rs 168.72 crores; the increase during the week was for Rs 11.10 crores; but, since the State Bank showed a rise of Rs 15.15 crores in that week, it would seem that the other Scheduled Banks ran down their balances by Rs 4 crores during the period.

Government Promissory Notes of the following loans (Central and State Governments) interests on which fall due for payment during the months of September and October 1957 will be accepted by the Public Debt Office, Reserve Bank of India, Calcutta for preparation of interest warrants from the 14th August and 16th September 1957 respectively.

Interest falling due in September

Fears of Trade Union Dictatorship in Britain

By PAUL EINZIG

Interest falling due in October

- 3 per cent 1966-68
- 3 per cent 1970-75
- 3 per cent Mysore 1956-61
- 3½ per cent NP Loan 1964
- 4 per cent Hyderabad State Dev. 1963

Holders of the loans are advised to lodge their securities well in advance of the due dates to facilitate delivery of the securities and interest warrants on the due dates. In view of the heavy work involved, the period for delivering securities tendered for payment of interest on the above loans may be extended to five clear working days.

Britain's ancient system of Parliamentary democracy is in grave danger of being replaced by the dictatorship of trade unions. This menace is becoming increasingly evident. But the method by which the trade unions seek to achieve political domination is so subtle that it may take some time before the British public, or even the majority of British politicians, will come to realise what is happening. Most people are already aware that even a Conservative Government is increasingly reluctant to adopt any course that is firmly opposed by the Trade Unions Council. Admittedly, since 1951 when the Conservative Party took over from the Labour Party,

I'm in harness

by Adipocere

(Pronounced 'adi-po-saire')

They tell me that once I have been found, it takes 30 years for those who have spent their time, money

and energy to equate their investment. What an important person I appear to be!

An enormous structure, called a Drilling Rig is now the centre of all attention, and the operation of drilling commences. They say that drilling oil wells is a highly technical business requiring complex expensive machinery and men of specialised skills.

Day by day, and hour by hour the oil-finders come near me, until at last I gush out and make a lot of noise at the taste of fresh air and try to escape... but these men are persevering and I am channelled into a maze of pipe-lines as they feel that I should now be "Refined," in other words, become a Gentleman. So, I undertake a journey to a huge gigantic structure called an Oil Refinery.

STANVAC — the name that stands for progress

STANDARD-VACUUM OIL COMPANY—Incorporated in the U.S.A., with Limited Liability

MSV-4000

[August 10, 1957]

many things have been done against the wishes of organised labour. Iron and steel and long-distance road haulage have been denationalised. Prices have been de-controlled, and most subsidies have been abolished. Legislation has been adopted to de-control rents. Some slight taxation relief has been provided to the middle classes and the upper income groups.

Such measures were allowed to proceed until now, because the trade unions were busily cashing in on the scarcity value of labour by obtaining higher and higher wages. But now it has become evident that this wages-inflation is getting out of control and the situation has the makings of a runaway inflation. Faced with the situation, the Government did not dare to antagonise

the trade unions by resorting to really effective disinflationary measures. Instead, it now pretends to believe that an increase in the output would correct the effect of rising wages on prices. Judging by the relatively favourable response of the Stock Exchange to the Government's decision to do nothing effective about inflation, it appears that the arts of self-deception and

wishful thinking are still very popular in Britain. But the inevitable acceleration of the pace of inflation is bound to bring soon a rude awakening.

The head of the all-powerful Transport and General Workers Union, Mr Cousins, recently rejected the idea of self-restraint in wages demands. The political wing of the labour movement has dropped very distinct hints that the attitude of the trade unions would become much less uncompromising if the Conservative Government were replaced by a Socialist Government, or at any rate if the Conservative Government were to adopt Socialist policies against inflation—price control, subsidies, dividend limitations, heavier taxation of the higher incomes, suspension of the Rent Act that provides for rent de-control from October 1958, etc. In reality it seems highly doubtful whether even the adoption of such policies would induce the trade unions to renounce their excessive wages demands. They would have less excuse for their present ruthless attitude—but, then, the time when wages demands were influenced by the weight of arguments for and against their justification has long passed. It seems more than probable that even under a Socialist Government the trade unions would take full advantage of their strong bargaining position. But this is not self-evident, and the Labour Party has an undoubtedly very effective electioneering weapon in the argument that, thanks to its close relations to the trade unions, it would be in a better position to moderate the inflationary wages spiral.

The British public is told it has to choose between runaway inflation and the adoption of Socialist policies that would appease the trade unions. It is argued that, while a Conservative Government could only check the excessive rise of wages by risking widespread strikes as a result of a challenge to trade union supremacy, a Socialist Government would be able to achieve the desired end by reversing the various policies adopted under Conservative regime since 1951.

If the Socialists should be successful in persuading the majority of the British electorate that their argument is valid, another Labour Government would assume power. The reason why they would thus obtain the support of the majority would not be, however, a realisation of the soundness of their arguments but the realisation by the electors that the trade unions are only prepared to co-operate with a Socialist Government. This would mean that the result of the general election would be determined by the threat, actual or implied, by the trade unions to force inflation on the country unless a Government of their choice were to be returned. The policies of the Administration would no longer be dictated by the genuine choice of the electorate but by the pressure of trade unions. While the outward forms of democracy would be maintained, for all practical purposes the trade unions would dictate the choice of the

[August 10, 1957]

Government and of the policies to be pursued.

Trade unions are in a position in Britain today to exert their influence not only in the industrial and political field, but to some extent also in respect of the administration of justice. During the recent strikes pickets resorted to innumerable acts of violence and intimidation, in defiance of the law which strictly defines the scope of "peaceful picketing". A number of law-breakers were brought before the Magistrates, but the sentences passed on them were amazingly lenient. In no cases were sentences

of imprisonment passed, much to the relief of the Government. It was feared in official circles that, should some of the offenders be sent to prison, the trade unions would refuse to call off the strikes until these men are released. This would have meant either prolonged strikes or a humiliating admission by the Government that it could be forced by the trade unions to interfere with the administration of justice by pardoning offenders. The leniency of the sentences spared the Government from this awkward dilemma. Presumably the fear from such awkward situations subconsciously influenced the Magistrates to temper justice with mercy.

Sooner or later the Government will have to face an even more awkward dilemma. In the course of the next twelve months, or possibly much sooner, it will become evident that the increase in the output will not even moderate the acceleration of inflation, let alone check it. A stage will be reached when the Government will have to decide whether, for the sake of avoiding both inflation and widespread strikes, it will adopt Socialist policies under trade union pressure. It seems much more likely that the

Government will take the line of least resistance by allowing inflation to continue, even if this will necessarily mean political suicide.

The outcome of the present situation in Britain is liable to influence the situation in all industrial countries of the free world. If the British Government should muster up enough courage to resist trade union pressure its example is likely to be followed in other countries. And its failure to stand up to the unions is likely to weaken the will to resist them also in other countries.

Sago Industry

THE Government of India have, by a resolution in the Ministry of Commerce and Industry, agreed to continue protection to the sago industry for a further period of two years ending with 31st December 1959 at the existing rate of 36 per cent ad valorem plus 5 per cent of the total duty preferential and 46 per cent ad valorem plus 5 per cent of the total duty standard.

The progress of the industry under the shelter of protection since 1952 has been phenomenal. The number of units in the industry had increased from 40 in 1950 to 135 in 1956. The capital invested in the industry has been estimated, by the Director of Agriculture, Madras, to be of the order of Rs 50 to 60 lakhs, and the number of labourers employed on a permanent basis at about 6250. The rated capacity has gone up from 19500 tons to more than 30,000 tons while actual production had more than trebled, from 6,000 tons in 1950 to 20,000 tons in 1956.

The industry is localised in Salem District in Madras State, which accounts for 120 of the factories out of a total of 125 in the Madras State. But a major por-

tion of the raw material is obtained from Kerala, where tapioca tubers are grown extensively. In 1955-56, the acreage under tapioca in Kerala was 534,000 acres, and production 1494,000 tons, while in Madras, for the same period, the acreage and production were 22,000 acres and 83,300 tons respectively.

In spite of the progress made, there are many defects in the existing structure of the industry. The Tariff Commission in its report has pointed to the lack of co-operation on the part of the proprietors in giving relevant information about the working of their units. Further, the price of tapioca tubers shows a wide range of fluctuation. The formation of co-operative organisation by the producers, would help in imparting stability to the prices. Though such a step had been recommended by the earlier Tariff Commission, it has so far not been given effect to. Therefore the latest Commission has particularly emphasized the need for such co-operative organisation of both purchasing and distributive types. It would also help solve the financial needs of the industry.

THE INDIAN BANK LTD.

Estd.
1907

HEAD OFFICE :

"Indian Bank Building"
North Beach Road, Madras-1.

"Kamla Bhavan"

P-8, Brabourne Road, Calcutta.

Branches throughout the south and in the major cities of India, Ceylon, Malaya and Singapore, besides 19 local offices in Madras city

Authorised Capital	...	1,00,00,000/-
Subscribed Capital	...	72,00,000/-
Called and Paid-up Capital	...	64,74,625/-
Reserve & other funds	...	90,50,000/-
Deposits as on 31-12-'56	...	32.56 crores.

All kinds of banking business including foreign Exchange business transacted.

D. P. Parthasarathy
Secretary

In regard to quality of the product though improvement has been made, there seem to be room for further improvement. Therefore the Tariff Commission has recommended that the factories producing sago should be brought under the administration of pure food laws in the country, and also that a laboratory should be established at Salem for testing samples of batches, of sago produced at the various factories, in accordance with the standards laid down by the Indian Standards Institution.

The industry is self-sufficient, imports having been completely banned. It has also started to explore foreign markets and exports which until July 1955 were prohibited, are being allowed since July 1955. In June 1956 it was decided to license freely export of sago from the beginning of July 1956 by all exporters without any quantitative restrictions from all ports upto the end of December 1956 and later upto December 1957.

*

Grinding Wheels Industry

When the grinding wheels industry was first given protection in 1946, the industry was a one-firm show, the Grindwell Abrasives Ltd., being the only firm engaged in manufacturing grinding wheels. But during the period of the last ten years, when protection had been continued in various forms, the industry has grown horizontally, and at present includes five units, three of which are situated in Bombay and one each in Delhi and Madras. This is as much due to the growth of engineering industries in recent years as to the favourable effects of protection. For grinding wheels are in demand mainly in engineering industries, and until 1954, production of grinding wheels was confined to one firm, with the rated capacity at 1000 tons. It was only in 1955 that new units entered into the industry and this happened in spite of a reduction in the protective duty. When the industry was first given protection, the duty was fixed at 80 per cent ad valorem on all grinding wheels and segments, and this was followed by a restriction on imports of all grinding wheels except those which could not be produced in the country. Later in 1949, the protective duty was increased to 100 per cent ad valorem and this continued until 1951. But since 1954, the rate of the duty had been kept at a low of 25 per cent ad valorem.

Despite this, the number of units had gone from one to five, installed capacity had risen from 1000 tons to 2050 tons and actual production had doubled from 506.4 tons in 1954 to 1131.9 tons in 1956.

The industry is more or less self-sufficient in regard to internal requirements. Present demand is estimated at 1500 tons and though production in 1956 was short of this, the production in that year received setback due to breakdown in the powerhouse of the Grindwell Abrasives Ltd., which accounts for nearly 80 per cent of the total internal production.

As for future demand, it is expected, to rise to about 2500 tons by 1960. On the basis of the projected increase in the capacity of some of the existing units, the installed capacity is also expected to touch the mark of 3100 tons by 1960. Carbonrundry Universal Ltd has plans to increase its present capacity of 600 tons to 1000 tons by the end of this year, while Grindwell Abrasive Ltd., hopes to achieve a capacity of 1320 tons instead of the present level of 1000 tons. Further a new firm—Krishnaiah Thirani and Co Ltd., has been added to the list of units, and is expected to go into production before the middle of next year.

In view of the importance of the industry as tending to promote the development of engineering industries, the grinding wheels industry has been granted protection for a further period of two years ending with 31st December 1957 at the rate of 25 per cent ad valorem following the recommendation of the Tariff Commission.

*

Automobile Leaf Spring Industry

The automobile leaf spring industry, had its claim to protection sanctioned in 1954 on the ground of contributing to the development of road transport industry in the country. The protection granted to it at the rate of 50 per cent ad valorem, is due to expire on 1st January 1957.

Within the short period when the industry had been enjoying protection, it has made satisfactory progress. The number of units has increased from 5 to 6. Two more units have been licensed for the manufacture of leaf springs. The installed capacity on single shift basis has gone up from 4100 tons to 6700 tons and actual production from 2024 tons in 1953 to 4848 tons in 1956 thus showing an increased utilisation of capacity from 49 per cent to 72 per cent. But this level of production is far below the present demand, which has been estimated at 13000 tons by the Development Wing. Though demand is expected to reach about 17,000 tons by 1960-61, plans are afoot to expand the installed capacity to 15400 tons.

There is an unorganised sector, consisting of a large number of small scale units—27 small scale and 70 cottage scale units—contributing in a small way to the total production. The problems of the industry have therefore the severest impact on these small units. For instance, the shortage of spring steel flats, the principal raw material, has hit them very hard, and unlike the large units they are not in a position to meet their requirements by imports.

In the absence of internal self-sufficiency in production, imports of leaf springs have continued. In 1955-56 such imports totalled 2148 tons valued at Rs 2683,750 while in 1956-57 the imports amounted to 1605 tons valued at Rs 2248,957.

World of Jute

Gunny Stocks Decline

THE news that stocks of jute goods at the end of July 1957 were 7800 tons lower than those at the end of the previous month has come as an agreeable surprise. The jute goods market which opened quiet on Thursday, steadied up on the release of the July-end stock figures.

Though a decline had been generally anticipated, few thought that it would be as large as 7,800 tons. Presumably, marketmen had been influenced in their calculations by the continued congestion in the Calcutta Port.

The most encouraging feature in the July-end stocks is the sizable decline recorded by hessians. For, at the end of June, hessian stocks at 42,400 tons were the largest in the past several months. They have now declined by 4,100 tons to stand at 38,300 tons. As a result, stocks of hessian are only slightly higher than the average monthly production of such goods by mills.

Stocks of sackings have declined by only 1,500 tons to be placed at 63,300 tons. There is, however, some consolation that they are considerably lower than those at the corresponding day of the previous year when they were placed as high as 93,200 tons. The fact that stocks of sackings are still nearly 1½ times the average monthly production of such categories of goods by mills indicates that foreign demand for

sackings has not been quite encouraging.

The jute goods market opened the week on a steady note on reports of overseas enquiries. In the next three or four days the undertone became quiet mainly in view of the threatened postal strike. Toward close due to the cumulative encouraging effect of a sizable decline in jute goods stocks at the end of July and the calling off of the postal strike, sentiment improved and the market closed the week on a steady note.

Reports of overseas enquiry and some speculative buying helped the market open the week steady with Hessian 40" x 10 oz Ready at Rs 41.70 and B Twills at Rs 114.85. Elsewhere, Hessian 40" x 10 oz Oct-Dec was placed at Rs. 42 with B Twills for the same position down at Rs 112.25.

With bear covering in the fatka on continued reports of hessian business with USA, the market ruled steady in all sections on Friday. Hessian 40" x 10 oz Ready improved to Rs 42.45. B Twills also steadied up in sympathy to be finally placed at Rs 115.40. Oct-Dec 40" x 10 oz hessian gained 45 nP to Rs 42.45 while B Twills also advanced to Rs 112.65.

Dull conditions prevailed on Monday in the absence of reports of overseas enquiry. Hessian 40" x 10 oz Ready remained steady at

Rs 42.50 but B Twills Ready encountered selling pressure to decline to Rs 114.25. In the forward section, Oct-Dec Hessian 40" x 10 oz was placed at Rs 42.14 with B Twills at Rs 112.50. A quiet tendency continued to be in evidence on Tuesday when sentiment was further depressed by the proximity of the deadline of the postal strike. Speculators sold hessian and B Twills in the fatka. In later dealings on Thursday, sentiment considerably improved on the news of a sizable decline in the stocks of jute goods at the end of July.

The following table shows the week's opening and closing prices:

Hessian:	Opening	Closing
40" x 10 oz. Ready ...	41.70	42.25
40" x 10 oz. Oct-Dec.	42.00	42.12
Sacking:		
B Twills Ready ...	114.85	115.20
B Twills Oct-Dec. ...	112.25	112.75
Ky. Ceas Green ...	114.50	114.50
Corn sacks ...	116.50	117.00
Cubans ...	140.00	140.25
A Twills ...	137.00	137.00
L Twills ...	128.50	127.50
D. W. Flour ...	131.00	131.50
Sugar Bags ...	130.25	130.25

The raw jute market ruled quietly steady with closing prices generally half a point lower on balance. Though jute on offer and demand were on fairly high levels actual business put through, however, had been small. This is due to the fact that while sellers were freely offering at prevailing levels, mills were indicating generally quarter to half point below those levels for any sizable business from them. The following business was reported done during the week. Bimil F.A.Q. at Rs 26.25, Indian Northern Bottoms at Rs 29.75, Assam Bottoms from Rs 29 to Rs 29.75, all per maund. Business was also reported in Pakistani Cuttings between Rs 101 and Rs 99 per bale.

SLUMP IN BELGIAN JUTE INDUSTRY

A marked deterioration in the financial conditions of the Belgian jute industry during 1956 features the Annual Report of Jutibel, a national co-operative organisation of jute spinners, reports the latest issue of the Indian Central Jute Committee's Jute Bulletin.

Belgium, a member of the Association of European Jute Industries, was the most adversely affected by the drop in export sales because the industry there more than any other in Europe is export-oriented. Over 50% of the Belgian output of jute manufactured products are exported annually. Exports of other members of the Association in 1955 were: Austria 1.60%, Denmark 1.31%, France 9.94%, Germany 9.13%, Italy 2.14%, Netherlands 4.25%, Portugal 1.75%, Spain 0.01%, Sweden 0.12%, Switzerland 0.51% and UK 16.97%.

Total present spindleage of the industry has been put by Jutibel at 77,554 against 83,238 before the war. In the weaving mills nearly all the looms have been converted to automatic or replaced by automatic looms. The automation effort has led to a reduction in the number of working men and girls employed in the industry.

STOCKS OF JUTE GOODS AT THE END OF JULY, 1957.

	31st July 1957	30th June 1957	(000 tons) Increase over + or decrease from last month (—)
Hessian Cloth and Bag	38.3	42.4	-4.1
Sacking Cloth and bag	63.3	64.8	-1.5
Others	6.6	8.8	-2.2
Grand Total (000 tons only)	108.2	116.0	-7.8

World of Tea

Increase in Export Duty

THE increase in the Tea export duty from 25 to 38 nP per pound, announced by the Government of India, was not unexpected; but this is expected to have a damaging effect on prices, especially of Common and Low Medium qualities. Indian teas may also be put at some disadvantage in overseas markets.

The season for exports has just started. Moreover, arrivals into Calcutta warehouses are reported to be steadily increasing as a result of which there will be a considerable expansion of offerings in the coming sales. As a matter of fact, as against 47,587 packages offered in the previous week, offerings in the export sale held in Calcutta this week, amounts to as much as 65,320 packages. Offerings in the coming weeks are expected to be more with the increase in arrivals. Naturally, the weight of such a steady increase

in offerings may result in a generally easier market, aided, of course, by the present increase in export duty, particularly for Common teas. Quality teas may, however, be expected to attract keen enquiry.

It is, however, encouraging to note that, contrary to the declining trend in other commodities, export earnings from tea have risen to a record figure of Rs 149.3 crores during the financial year 1956-57 from Rs 110.6 crores in the previous year. The volume of tea exports was estimated at 4,922 million pounds as compared with 3,995 million pounds in 1955-56 and 4,500 million pounds in 1954-55. The increase in exports was attributed to the big demand for tea for stock-piling purposes, which followed the closure of the Suez Canal.

Tea exports from Ceylon, in the first four months of the current

year, have risen sharply to 134.15 million pounds from 109.45 million pounds in the corresponding period of last year. Of the total increase, the UK alone accounts for more than 13 million pounds, taking 52.35 million pounds during the period under review as compared with 39.16 million pounds in January-April, 1956.

In the Export Sale held in Calcutta this week, offerings amounted to 65,320 packages. The sale opened to a good general demand, but this weakened towards the close. Bright liquoring CTC types were sold well, but those with ordinary liquors were sold at generally easier rates. Mediums with useful liquors were well supported, but the more ordinary Broken in this category were 10 to 15 nP per pound easier with Fannings a weak feature.

Plain Broken were 5 nP easier, but similar Fannings were 10 nP easier. Non-wither Doors met with a fair enquiry, but, apart from those which were bright in cup, shared the general decline in prices. Darjeelings received rather less support and were generally sold at easier rates. Tippy sorts were sold well, but Whole Leaf grades met with less demand.

Following rates were quoted:—

Clean Black Rs 2/30; Plain Broken Pekoe Rs 1/75; Plain Fannings 1/56; Medium Broken Pekoe Rs 1/90; Best CTC Assam Broken Pekoe Rs 3/80 to Rs 4/00 and Best CTC Fannings Rs 4/50.

In the Internal Sale, offerings were 18,469 packages of Dusts. Quality showed little change. Demand was again restrictive and prices showed a further decline. Orthodox Assams were 4 nP and occasionally 8 nP per pound down. Common teas, particularly Doors, did not always decline by as much and were sometimes firm. CTC Assams were again the weakest feature of the sale, demand weakening at the sale progressed. Some were up to 20 nP per pound at the close although the bright liquoring descriptions did not always show the same decline. Following rates were quoted:—Medium Doors Dust Rs 1.50 to Rs 1.55; Medium Assam Grains Dust Rs 1.58 to Rs 1.66; Medium Assam CTC Dust Rs 2.10 to Rs 2.30 and Best CTC Dust Rs 2.50 to Rs 2.90. Offerings of Leaf grades consisted of 713 packages. Prices declined accordingly.

In the Export Quota section, business was reported done at rates varying from 18½ to 20 nP

World Overseas

US Notes

The number of passport applications reaching the State Department here indicates that American travel abroad this year will probably set another near record, continuing the steady post-war rise. Exactly how much Americans travelling abroad in 1957 will contribute to the earnings of other lands is difficult to estimate right now. But the U.S. Department of Commerce has recently released final figures for 1956. These show that Americans spent a total of \$1,814 million on foreign travel last year, compared with \$1,612 million in 1955 and only \$716 million in 1947.

Of this total, only \$301 million went for fares paid to U.S. carriers. The remainder \$1,513 million represented dollar income earned by foreign countries as a result of American tourism. Some 238 million was paid to foreign carriers, while \$1,275 million—a rise of \$122 million over 1955—went for the purchase of goods and services while abroad. The \$1,513 million spent abroad accounted for more than 7 per cent of total U.S. outlay for the dispensation of goods and services. It represented a larger sum than was spent abroad by the United States for coffee or petroleum, its two largest import items. Every part of the world benefited from last year's rise in American travel.

American tourist expenditures in Mexico and Canada rose \$24 million and \$10 million respectively. Europe and the Mediterranean area accounted for nearly \$43 million of the increase. The West Indies and Central America for \$27 million, the Far East for \$11 million, and South America for \$7 million.

In all, an estimated 1,239,000 Americans travelled abroad last year, compared with 1,075,000 in 1955. This does not include trips by government personnel and their dependents, or by travellers on cruises.

It is interesting to note that, continuing the general post-war trend, air travel last year increased more than travel by ship, and that people travelling by air stayed abroad a shorter time than those travelling by ship. From this, Commerce Department experts infer that the recent growth of overseas travel reflects an expansion of the market by persons who have less time at their disposal.

Another factor may be the increase in business trips, reflecting the general expansion of U.S. commercial relations with other countries. For instance, 13 per cent of all American trips to Europe last year were primarily for business purposes. And business travellers have shown a marked preference for airplanes. But a far more important reason for the rise in foreign travel could be the steady rise in U.S.

living standards. It has made it possible for millions of Americans to use a larger proportion of their earnings for recreation.

Not only is domestic tourism brisk, foreign travel is among the consumer expenditures that have shown an exceptional expansion in recent years. No longer is it confined principally to the well-to-do, with their leisurely and lengthy trips to distant places. In fact, last year's 12.5 per cent increase in foreign travel outlays by Americans was about twice as great as the increase in their total disposable income—income after taxes.

Britain

A White Paper entitled *The United Kingdom's Role in Commonwealth Development*, putting the achievements and patterns of United Kingdom investment in the Commonwealth in proper perspective and setting out the lines on which the British Government considers progress can best be made in the future, was presented to Parliament on July 30.

The White Paper makes particular reference to the way in which Britain has contributed to economic development in the Commonwealth through the provision of capital or of technical assistance.

For example, it recalls that for the Durgapur (West Bengal) steel-works—which is being built by consortium of British companies and will cost just over £100 millions—the United Kingdom Government is advancing to the Government of India a loan of £15 million, and that British banks are making loans of £11.5 million. And by helping to make India self-sufficient in steel the plant will save foreign exchange.

In the field of explosives, dyestuffs, and polythene, the White Paper notes that Imperial Chemical Industries (ICI) is contributing to three new industrial projects involving a capital expenditure by the company of about £5 millions out of a total cost of £7.5 millions. In partnership with the Indian Government, ICI is building an explosives plant in Bihar with a capacity sufficient for all India's needs. At the same time an Indian company in which ICI has a substantial interest, is erecting a polythene manufacturing plant near Calcutta at a cost of £3 millions, and another Indian company in which ICI holds a big interest has constructed and is operating a dyestuffs plant.

The White Paper also gives details of British assistance in the economic progress of Pakistan. The United Kingdom has contributed £2 millions towards the cost of exploiting the reserve of

natural gas found at Sui. The piping of this natural gas to Karachi and Multan, it is explained, reduces Pakistan's dependence on imported petroleum products and so saves foreign exchange.

These contributions, it is pointed out, are in addition to the aid provided by Britain in the form of technical assistance under the Colombo Plan. For the Durgapur steel works alone, arrangements are in hand for 300 Indian steel workers to visit the United Kingdom for training to prepare them to take up managerial and technical appointments.

In the field of water and power, a British consultant powerstation engineer has since 1952 been carrying out a complete survey of the hydro-electric potential of India, in company with the power and irrigation engineers of the various states and in connexion with the planned development of India's water-power resources.

In Pakistan, Mr T. C. McNeil, an educator from Portsmouth, England, has been engaged since 1955 as consultant for technical high schools in East Pakistan and as headmaster of the Dacca Technical High School. Since then another specially chosen teacher, Mr W. F. Hawkins, has been made available as technical high school consultant in West Pakistan. In addition, equipment worth £93 thousands has been supplied for technical high schools in Pakistan.

For three years a senior officer of Britain's General Post Office has been advising the Pakistani Government on modernization of the telecommunications training centres in Karachi, Lahore, Dacca, and Haripur, and GPO officers have been made available as tutors and lecturers at training centres. So far Britain has supplied training equipment to the value of £75 thousands, and further equipment costing £38 thousands is on order.

Training equipment costing £1.20 lakhs is being provided by the UK for each of the two textile training centres at Lyallpur and Dacca.

Assistance to Ceylon has included the loan of a team of five GPO experts to help in the replanning of the Colombo telephone system so as to double its capacity. Ceylonese students have been given a five-month practical training course in crop protection in Britain, and a Government official has begun a seven-month course in public administration and local government which will take him to the UK Administrative Staff College and various parts of England and Scotland.

Another senior student from Ceylon, with others from India, is receiving special instruction in the work of the British Ministry of Labour & National Service. And applied-research equipment costing £85 thousands is being supplied from the United Kingdom for the Ceylon Institute of Scientific & Industrial Research.

Analysing Britain's role, the White Paper points out that while each member country plays a part in Commonwealth development for historic as well as economic reasons, the United Kingdom is the keystone of the Commonwealth economic structure. And in determining the pattern of the contribution made by the United Kingdom, the British Government attaches importance to the following guiding principles:

(1) The ability of the United Kingdom to play an effective role depends on maintaining the strength of sterling and on the successful development of the United Kingdom's own economy;

(2) All members of the Commonwealth also have a vital interest in sustaining policies which will strengthen sterling;

(3) Since the Commonwealth does not possess within its own boundaries all the capital required for adequate development, it is right that additional capital should be sought from outside, both in other world capital markets and from international institutions;

(4) Since it is through the investment of privately owned funds that the United Kingdom has made its most valuable contribution to Commonwealth development, the British Government considers this should continue;

(5) In addition to the provision of capital, provision of all forms of technical knowledge is of parallel importance, and the United Kingdom is determined to make a special effort to meet the needs of less developed Commonwealth countries.

Average United Kingdom investment in the whole Commonwealth over the years 1953-56, plus special assistance to various colonial territories, has been running at nearly £200 millions a year, the White Paper says. This represents some 1½ per cent of the average United Kingdom gross national product in that period, or between seven and eight per cent of United Kingdom gross fixed investment at home. And in the 10 years 1946-55, 70 per cent of the external capital invested in the sterling Commonwealth came from the United Kingdom.

Certain special aspects of Commonwealth development receive attention in the White Paper—notably the special problems arising from the achievement of independence by colonial territories. While retaining the closest interest in their well-being and economic development, the British Government does not envisage government-to-government loans as a normal means of assistance. It considers their interests can be better served by building up their own credits and making use of facilities in the London market and elsewhere, but arrangements have been made enabling the stocks of such governments to continue to enjoy trustee status in the United Kingdom.

OBEROI HOTELS
INDIA & PAKISTAN

At a time when there is serious diffidence expressed in some circles as to India's ability to raise the necessary resources, both internal and external, for the Second Plan, the Planning Commission's appraisal of the First Plan, in the chapter on planned outlay and its finance, offers to the discerning reader a timely assurance as to the adequacy of the resources that can be secured by self help and as to the gratifying results that have been achieved by self confidence. This message of self generating and self respecting effort has a timely significance in the context of our admiration against a hat-in-hand parade, which is not only unedifying but futile as well. That we cut a sorry figure in soliciting help from all and sundry, is a patent fact; and that it is also futile is the reminder furnished by the United Kingdom's lukewarm reception to the suggestion of a £100 million loan—this, in spite of an implicit agreement to maintain India's currency reserve at £300 million. The Planning Commission's appraisal provokes me to a study of the other avenues of self help. This study will show that, if the Government go about their business in the right way, the response from the public in the shape of confident cooperation could be truly remarkable. Let me first deal with the Planning Commission's Report from this point of view.

The Plan as originally drawn up envisaged development expenditure totalling Rs 2068 crores; and this was later revised upward, with the inclusion of schemes to foster new employment, to Rs 2377 crores. The totals for the first four years, and the provisional figures for 1955-56, revised the estimate of expenditure to Rs 2012 crores. However, the Planning Commission have indicated that the "actual" expenditure on the Plan is likely to be somewhat lower at Rs 1960 crores. It would be wrong to place an undue emphasis upon the shortfall in the target of expenditure. What really matters is the manner in which the necessary resources were raised. Firstly, the contribution of current revenues was placed by the First Plan estimates at Rs 740 crores. The Central Government, for their part, were able to secure Rs 145 crores more than their target; but the State Governments failed to achieve their

target by an amount more or less of this size. Since the contribution of the Railways proved to be Rs 55 crores short of the target, current revenues fetched Rs 690 crores against the target of Rs 740 crores. Secondly, in respect of market borrowings, the planned target was exceeded by Rs 89 crores. Thirdly, small savings also effectively exceeded the target by Rs 12 crores. However, in the fourth place, other capital receipts fell short of the original estimate by Rs 53 crores. Fifthly, external assistance that was utilised over the Plan period amounted to Rs 203 crores as against the credit taken in the First Plan at Rs 521 crores. It is the significant shortfall under this last head which increased the size of the overall deficit. Briefly, the following table shows how the planned outlay of Rs 1960 crores was financed.

	(Rs crores)	Percentage Total
(a) Taxation & the surpluses of railways	752	38
(b) Market borrowings	205	10
(c) Small savings & unfunded debts	304	16
(d) Other capital receipts	91	5
(e) External assistance	188	10
(f) Deficit financing	420	21
Total	1,960	100

I am afraid that there is a good deal of conjectural discussion on the extent of the use made of the Nasik Printing Press. It has been taken for granted that the overall deficit is synonymous with the printing of currency notes. This is by no means the case. The overall deficit is no more than the shortfall between the total of expenditure and the total of resources as comprised by the budgetary contribution and external assistance. The gap in resources over the five year period, in this light, is Rs 532 crores. This was met to the extent of Rs 128 crores by withdrawal from cash balances and to the tune of Rs 35 crores by sale of securities held in the various cash balances investment accounts. It is the balance only, that was to be made up by deficit financing in the sense of the printing of currency notes. On the basis of the revised outlay on the Plan, the balance of overall deficit to be met by sales of ad hoc Treasury Bills in favour of Reserve

Bank was placed at Rs 368 crores over the Plan period. But, as we have already seen, the Planning Commission expected the actual expenditure to fall short of the revised estimate, and to stand at around Rs 1960 crores. Automatically, the extent of created money would have declined by Rs 52 crores to a level around Rs 316 crores. From what I can make out of the figures relating to Treasury Bills, I would put down deficit financing during the First Plan at Rs 237 crores; that is to say, the shortfall over the revised estimates is to the extent of Rs 131 crores. This is partly borne out by the fact that created money during 1955-56 actually worked out to Rs 124 crores against the revised estimate of Rs 247 crores.

I would like careful note to be taken of the following facts: (1) In the garnering of funds for the Plan, the disposition to pursue the line of least resistance was avoided to the utmost extent and the hard way of ensuring the maximum revenue surplus was preferred; (2) the target for budgetary resources—which may be said to constitute zestful self help based on self confidence—was largely fulfilled; (3) but there was a serious shortfall in what I may call the non self help sector of external assistance; (4) however, even then, the dependence on created money was minimised by running down cash balances, on the one hand, and the sale of securities from special accounts, on the other. So much so, we may sum up by stating that our reliance on self help without effort—which is what is constituted by created money printed off in Nasik—was no more than Rs 237 crores on a total outlay of Rs 1960 crores. Created money, thus, accounted for just 12.1 per cent of the resources for the Plan.

I utterly fail to understand why a mountain is made of this mole-hill shortfall in developmental expenditure. Instead, I should rather think that there should be a proper recognition of the courage and resoluteness that have characterised Government's formulation and successful implementation of the First Plan. That, within five years of independence, while yet the Government were still faced with problems arising from millions of displaced persons, India had the

will, determination, resources and administrative and technical agencies to frame a Rs 2377 crore Plan and to bring it to triumphant conclusion is an achievement from which the country should derive great cheer; and, if this viewpoint is sufficiently brought to their notice, friendly countries may also be expected to be impressed by the results. I think that, for our part, the Planning Commission's appraisal should spur us on increasingly to view the Second Plan from the standpoint of what we ourselves can do in terms of self help. Mainly speaking, the debate on resources for the Second Plan can be subdivided into two fundamental aspects. Firstly, will we secure the necessary quantum of internal resources? Secondly, particularly in view of the disappointing size of external assistance during the First Plan, can foreign resources be marshalled for adequate amount in respect of the Second Plan needs? I should like to devote the rest of this Gossip to a broad analysis of these two questions.

Dealing first with internal resources, we have to take account of the very real apprehension in this country that the two main directions in which Government seek to secure their revenues are both pitted with danger. There is the fear that the main reliance of Government will be on taxation; and, already, the rates have reached levels where they have a distinct disincentive connotation. Indeed, if Government were not able to secure their resources in other ways, there is the prospect that the higher tax collection will be selfdefeating in the sense that the incentive for productive endeavour may be sharply corroded. The second fear is that Government may instead make good any shortfall in internal resources by created money; and the inflationary danger innate in deficit financing does not, I am sure, need any reiteration. It seems strange to me that the Planners have glossed over what should undoubtedly be a significant source of finance. I refer here to market loans. As far as the First Plan is concerned, it is our categorical view that the loan policy followed in this period was timid and defeatist. There is no reason why such timidity and defeatism should continue in what, after all, is an exercise in self

confident and self-reliant endeavours at ameliorating our own lot. Already, I am glad to say, there is evidence of Government's determination to make a success of the small savings scheme; and the added attractiveness that has been placed on small savings is a step in the right direction. It pains

me, however, to say that, so far, Government's efforts in respect of public borrowings are headed in the wrong direction. No amount of increase in the interest offered will vouchsafe higher subscriptions to Government loans; this is a basic, fundamental fact about market loans. This journal has

often referred to the basis on which a policy of borrowing from strength can be evolved. Now that the 1957 New Loan programme has been completed, and especially since the banking situation is showing distinct signs of having recovered in substantial manner from the stringency with

which it was afflicted in the last year or two, I would suggest that Government should take up for urgent consideration a well-planned and carefully thought out policy for Government loans. To the extent that such policy is a success, an undue dependence either on taxes or on deficit financing can be avoided.

★

In the external resources sphere, I should like to touch upon what my readers know to be two of my particular pet topics. In the first place, it is now, I understand, more or less an accepted fact that a satellite port for Calcutta at Geonkhali is indispensable. As it is, port congestion presents a tremendous headache to Government. There is no prospect of early easing of this pressure. Moreover, the inadequate port facilities are also affecting adversely our earnings from exports. For example, it seems likely that India will be unable to ship the agreed quantity of iron ore to Japan in the current year. Port delays were recently adduced as reason for the breaking of contracts in respect of sugar. It would appear that, at long last, not only the advantages but the inescapable necessity of mechanical loading facilities have been recognised. To such end, if Geonkhali should swiftly be translated from blueprints to reality, we should gain bountiful foreign exchange earnings from exports of iron ore. In this context, I would add that it would be entirely proper for Mr T. T. Krishnamachari to utilise his Washington visit for a discussion with the US administration in respect of aid from the President's Fund for the setting up of Geonkhali. And, if the Birla delegation were to find warm response to its suggestions for export to America of iron ore on a large scale, our foreign exchange problem would be a further step nearer resolution. I need hardly say that Geonkhali will represent self-help in the field of foreign exchange.

★

Finally, I would like to say a word or two about Gold Bearer Bonds. In the early thirties, when we went off the gold standard and when the price of gold shot up sharply, India's exports of gold reached astounding proportions. If, to the lure of higher prices, there should have been such abundant response, I should think that the call of patriotism—buttressed and backed up by more practical considerations—could evoke at least a like response. The appeal of Gold Bearer Bonds would be as follows: Easy negotiability will conduce to dehoarding; the assurance of security should make attractive bonds of this kind; and the promise to repay in kind will be a hedge against inflation. A properly conceived scheme for Gold Bearer Bonds could realise such large subscriptions in the form of gold as to solve our foreign exchange problem altogether.

(Continued on page 298)

Oil from abroad costs valuable foreign exchange. Oil from inside India saves it. And we must have ever-increasing quantities to cope with the expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

Trends in Banking

THE surprising conclusion—although there is a minor qualification—that the rise in Deposits of Scheduled Banks slowed down somewhat during 1956 is adduced in the "Trend and Progress of Banking in India" for 1956 published by the Reserve Bank. This is a point on which I should like to devote some detailed attention, but it would perhaps be useful broadly to review the introductory chapters to the publication before we embark on such a discussion.

1956 has been pithily summed up as a year in which, in some countries, there obtained a "business boom of unprecedented proportions occasioned by the rapid increase in fixed capital investment and consumer outlays". Quite expectedly, this was reflected in a larger pressure on bank credit for finance; and most countries were faced with the task of coping as best they could with the repercussions flowing therefrom on the national economies.

In America, the inflationary bugbear was responsible for a policy of positive restraint. The discount rate of the Federal Reserve Banks was twice raised; but I may add that, in spite of the other disinflationary help rendered by a Budget surplus, the problem of inflation continues to plague America.

In the United Kingdom, the preoccupation with inflationary pressures was reflected in firmer action taken by the Authorities; the Bank of England rate was raised, the investment allowance to industry was discontinued, the hire purchase controls were tightened, consumer subsidies were reduced and capital expenditure in the public sector was pruned down. But, I may again add, Britain's condition continues to be inflationary.

Then, there are the intriguing references to West Germany, where "inflationary pressures stemmed from the persistent surplus in the balance of payment"; to Belgium, where "inflationary pressures arose from conditions of overfull employment and the surpluses in external payments"; to the Netherlands, where inflationary forces had reappeared, which "had resulted in a sizeable depletion of foreign exchange reserves since the second quarter of 1956"; and to Australia, where "inflationary pressures persisted despite import restrictions imposed during 1955 resulting in a loss of foreign reserves."

Another way of looking at these statements is that West Germany's

inflation is due to excessive exports; the same is the case with Belgium; inflationary forces caused an import surplus in the Netherlands; and restriction of imports—and therefore crying halt to the balance of payments deficit—did not prevent the continuance of inflationary pressures in Australia. In India's own case, while I suppose it may be said that inflationary pressures occurred in spite of an import surplus during 1956-57, the position for 1957-58 may be that, in spite of import restrictions, inflationary pressure continued.

All this serves, may I suggest, to underline and emphasise the emergence of what in America has been termed the "new inflation". The link between a country's balance of payments and inflation is no longer as rigid as has been made out in orthodox economics. If what I have just said is not true, then, I fail to understand why the operating word, in Australia's case, should be the continuance of inflation "despite" import restrictions. I am not sure whether the world will not, in the foreseeable future, veer round to the view that the only real answer to inflation is additional production. The link, surely, should be between the demand for goods and availability; in the context of conditions in which there is a spiralling tendency in wages, the only answer to inflation, again, would lie in increased productivity to offset the higher wages. Production, where the inflation is caused by shortage of goods; and productivity, where spiralling wages have to be offset by increased output—these, I should think, are the only real answers to inflation.

It would appear that there is sufficient realisation by the monetary authorities of this country of the paramount importance of increasing production. Time and again, the Reserve Bank has emphasised that the Indian economic conditions do not merit credit restraint or credit squeeze, but call instead for credit regulation and selective control.

In the present publication, for example, it has been noted that the selective credit control adopted by the Reserve Bank is intended "to restrain expansion of credit to certain sectors of the economy during certain periods without simultaneously affecting an increasing demand for productive credit." Again, the Reserve Bank remarks that its credit policy during the year may be described as a policy not of restriction, but

one of controlled expansion. By and large, the Reserve Bank can justifiably claim that the policy it has adumbrated and implemented during 1956 fulfilled the twin objectives of restraint upon speculative credit and liberalisation of facilities for productive credit.

It is interesting to note that "the principle of linking the foreign exchange reserves to note issue" is described as being "a relic of the past". Of course, once the gold standard was given up, the primary function of foreign exchange reserves was to meet temporary deficits in balance of payments. The publication points out that a number of countries, including Canada, New Zealand, Australia, Israel, Ceylon and the Philippines, do not prescribe any requirement in the form of gold or foreign exchange against the issue of currency. However, this does not mean that, with the jettisoning of the notion of foreign exchange reserves being utilised as currency cover, Government do not have a responsibility as to the stability of currency. It is here that appropriate economic, fiscal and monetary policies are called for from governments to maintain overall stability of currencies.

At this stage, we come back to the vexed question of inflation. In Germany's case, as we have seen, the export surplus is believed to be responsible for inflation; and augmentation in imports is relied upon to rectify the position. In India, an import surplus is eminently desirable, so that the risks of inflation can be minimised; on the assumption that production is the only answer, it is clear that India must needs import more of capital goods, so that production can be increased. But these remarks are very much by way of being "asides".

In the recognition that there is nothing sacrosanct about a minimum level of foreign reserves as cover for currency, the Reserve Bank Act has been amended, so that, if necessary, the minimum requirements for foreign securities at Rs 400 crores can be suspended; but, in terms of the Reserve Bank of India Act, the maximum drawing down on the balances will be to a level of Rs 300 crores. All that is necessary to free another Rs 100 crores of foreign securities for meeting the import surplus would be an application in this behalf by the Reserve Bank Governor to the Central Government; and, after six months, fresh sanction would be required from Government for continuing to hold a level of foreign securities below Rs 400 crores. (The minimum has since been suspended.)

In the concluding chapter, it is mentioned that, quite evidently,

"banks would have to face a still more difficult position in the years to come", if banks' resources were so much stretched even in the first year of the Second Plan. It is here that we revert to the sentence with which I started this despatch. Earlier, it is stated that there was "severe financial stringency in 1956 as represented by a rapid rate of credit expansion in conjunction with a slower rate of deposit formation." Moreover, it is added that the rate of deposit expansion "slowed down in the face of rising credit needs of the expanding economy." The qualifying remark about the 1956 experience is that "the widening deficit in the balance of payments tended to restrict the growth of Deposits through its impact on domestic money supply". The extent of balance of payments deficit during 1956 was of the order of Rs 205 crores; but there is no indication as to the size of the import surplus which could be said to have had a direct impact upon banks' Deposits. I am afraid that—and this is merely a personal view—there has been an underestimation of the magnitude of the repercussions on banks' Deposits flowing from the import surplus. So, I think it is an oversimplification to assert, as the publication has done, that the rate of deposit expansion has slowed down. Indeed, it is worth mentioning that the press communique, issued together with the publication, has confessed (and I do not find a statement to this effect in the book itself) that, "since the end of the year, the pace of deposit expansion has undergone a significant increase." My own view, which coincides with the stand of this journal, is that the emphasis on industrialisation of the Second Plan will inevitably and appreciably lead to a gathering momentum in the augmentation of deposit resources of the banking system; and I should add that the experience in 1956 from the point of view of Deposits must have pointed impressively to this trend; but the fortuitous coincidence of the import surplus has concealed the real increase in Deposits. (An article in the World of Finance section has suggested the need for such a study by the monetary authorities.—Editor).

Whatever may be the experience in regard to Deposits, stress has properly been placed upon branch expansion as a means of mopping up resources which are presently outside of the monetised sector. As the publication puts it: "The main line of approach towards the solution of the problem faced by banks should be in the direction of extensive branch expansion which alone will enable them to augment their deposit resources through

Industrialisation of Bombay

Speaking in Poona recently Mr M. A. Master complained that the Powers-that-be in the country were fast encroaching upon the domain of the private sector. Between the First and the Second Plan period, Government's industrial policy had undergone a fundamental change. What little scope that was still left was being undermined by the ever increasing number of 'controls, regulations and restrictions'. He was of course referring to the present level of taxation which, according to him, was beyond the capacity of the private sector to bear.

While it may be true that the high taxation is having an adverse effect on capital formation, it will be an exaggeration to say that the Government are bent upon stifling private enterprise. Addressing the Association of Indian Industries, Mr S. K. Wankhede, Bombay's Minister for Planning and Development, declared that the scope for private enterprise after the State Reorganisation had vastly improved in Bombay. He also made a fervent appeal to businessmen and industrialists in the state to take the initiative in making the industrial structure of the State more broad-based.

The new Bombay State has considerable potential mineral wealth and this coupled with the fact that additional cotton and oilseeds growing areas have been included, is bound to enhance its industrial importance. As against 6,700 registered factories in the old Bombay State, there are now 10,800 factories. During 1956-57, 134 licences have been issued by the Ministry of Commerce and Industries for industries in the State. When these schemes are implemented, the investment in the State on industries will rise by Rs 22.24 crores and nearly 16,000 additional workers will get employment. The licences cover a wide variety of industries including engineering, chemical and pharmaceutical industries.

In the course of his speech, Mr Wankhede made some valuable remarks which deserve to be carefully noted by our businessmen and industrialists. He considered that at the present juncture in our country, the cooperation of all concerned—consumers, workers, industrialists and businessmen—with the Government was extremely important to further the cause of industrialisation. In this regard he was only reiterating the appeal made by the president of the Association. He pointed out that already there were indications of the cooperation of industrialists with Government as was borne out by the fact that the wholesale prices for manufactured articles had not gone up as markedly as in the case of food articles and industrial raw materials. The laud-

able work should be continued. In view of the great encouragement given to them, the small scale industries should also take note of the need for maintaining quality and an equitable price level for their products. If they failed to achieve the two objectives, they would in course of time, be again relegated to the background.

Power Supply in Bombay

Steady progress is being made in the matter of augmenting power resources in Bombay State. Even so there is a leeway to be made up as the load in the Bombay-Poona region is calculated to grow at the rate of approximately 11 per cent per annum. There is every indication, however, that within the next five years the State will attain self sufficiency in electricity.

The important part that is being played by the Tata system of combined hydro and thermal generation stations in this regard cannot be overemphasised. The installed capacity of the system totals 400,000 kW and with the installation of the third Unit, for which plans have been drawn up, the capacity will be further increased. In the course of

his speech at the recent general meeting of the Tata Power Company Limited, Mr J. R. D. Tata said that when the Koyna project was commissioned, that together with the Tata System would be able to supply in full the power needs of the Bombay-Poona area.

The third unit of the Tata System is expected to be put into commission by the middle of 1960, instead of at the end of 1959, as originally expected. The revised time schedule has become necessary because of the delay in getting the required machinery from overseas. The company has been successful in obtaining a loan amounting to about Rs 4½ crores from the World Bank for the installation of the third unit. It is stated that for the completion of the project an additional Rs 180 lakhs will be required. Thanks to a provision in the Electricity (Supply) Amendment Act which permits appropriation to a Development Reserve annually of an amount representing the tax saved at current rates on the Development Rebate in the year, the company will be able to get Rs 150 lakhs in the next three years. In order to eliminate the need to raise additional equity capital, the company proposes to utilise this reserve to finance the third Unit at Trombay.

came down to Rs 107.34 from Rs 107.81. In sympathy, ready moved down to Rs 107.37 from a high of Rs 197.87. Sovereign, however, ruled firm at Rs 70.50.

Arrivals of Silver amounted to 4 bars as against an offtake of 11 bars. Unrefined metal receipts were heavy at 59 bars. Shraavan delivery started at Rs 182.91 and, after touching a low of Rs 182.31, finished better at Rs 182.37. Bhadon moved down to Rs 180.61 from Rs 181.44, to finish the week at Rs 180.87. In sympathy, ready was marked down to Rs 181.19 from a high of Rs 182.37, to close better at Rs 181.75.

Yarn

The market for Art Silk Yarn took a sudden downward trend on reports of heavy stocks with the traders and liquidation by tired bulls. 120D August delivery declined to Rs 807 from a high of Rs 824 and October delivery to Rs 822 from Rs 835 per case.

The Staple-Fibre yarn section, however, showed a steady tendency following reports of an improvement in enquiries from the consuming centres, thanks to the Government's permission to extend the validity of shipping bills from 15 days to a month in regard to exports.

Although prospects for established importers getting ad hoc import licences of art silk yarn for the July/September period, were not bright, prices in the ready section declined to the extent of 4 nP to 15 nP per pound in all varieties. This was attributed to the possibility of rayon mills soon getting their actual users' licences and also to report that the Government did not favour any rise in prices by indigenous manufacturers.

Trading in the Cotton Yarn section continued to be listless despite a rise in export ceiling. The internal demand also continued to be poor as handloom weavers were reluctant to augment their requirements in view of the easier tendency in raw cotton prices.

Metals

A small recession in the prices of base Metals was in evidence during the week under review. This was due to the present belief in the market, judging from ministerial pronouncements, that the import control authorities would grant ad hoc licences speedily. Note was also taken of the Government of India's assurance that adequate raw materials, both imported and indigenous, would continue to be provided to industries. Copper ready was quoted lower at Rs 177 against Rs 180 in the previous week. The higher trend in the price of zinc was arrested.

(Continued on page 306)

World of Cotton

Increase in Production

ACCORDING to the figures released this week, the all-India final estimate of Cotton for 1956-57 puts the current year's area and production at 19,843,000 acres and 47.23 lakh bales (of 392 lbs each) of cotton lint as against the partially-revised estimate of 19,978,000 acres and 40.01 bales respectively for 1955-56, showing an increase of 722,000 bales in production. The production of cottonseed is estimated at 1,653,000 tons as against the partially-revised estimate of 1,400,000 tons for 1955-56, thereby showing an increase of 253,000 tons over last year.

Despite decrease in area, there has been a substantial increase in production during the current year. The increase in production is shared mainly by Bombay, Madhya Pradesh and the Punjab and is attributed to better seasonal conditions prevailing during the growing period of the crop. Following are the details according to descriptions and staple-lengths:

PRODUCTION (In '000 Bales).			
Descriptions:	1956-57	1955-56	
Bengals	320	306	
Americans	1,397	1,095	
Jharilla	730	428	
H-420	163	20	
Oomras	340	260	
Hyderabad Gaorani	189	173	
Malvi	283	223	
Broach-Vijay	340	445	
Surti-Suyog	169	219	
Dholeras	408	487	
Southerns	358	329	
Comillas	17	16	
Total	4,723	4,001	

STAPLE LENGTHS (In '000 Bales).			
	1956-57	1955-56	
Long-Staple	1,938	1,610	
Medium-Staple	2,007	1,692	
Short-Staple	778	699	
Total	4,723	4,001	

As between the different varieties of cotton, the increase in production has occurred mainly in Americans, Jharilla, H-420 and Oomras and a decline in production has occurred in the case of Broach-Vijay, Dholeras and Surti-Suyog. The increase in production has been shared mainly by long and medium-staple cottons. Past experience has shown that the official estimates of production are generally lower than the estimates of the crop arrived at by the Indian Central Cotton Committee on the basis of data regarding the actual utilization of the crop. These estimates in respect of 1956-57 will, however, become available only about December, 1957—about four months after the close of the 1956-57 cotton season ending August 31, 1957.

The Planning Commission is reported to have accepted the recommendation of the Indian Central Cotton Committee to raise the production of cotton under the Second Five-Year Plan to 65 lakh bales. The State-wise allocation of the target for attainment by 1960-61 shows that about 29.34 lakh bales will be produced in Bombay State; 12.50 lakh bales in the Punjab; 6.7 lakh bales in Mysore and 5.67 lakh bales in Madhya Pradesh.

Meanwhile, the Government of India have decided to permit import, with immediate effect, of a further quantity of 10,000 bales

of Egyptian cotton of staple length over 1 3/16" against the special payments procedure. The method of licensing and other procedural details will be the same as for the 20,000 bales of Egyptian cotton recently permitted for import.

The quantity of foreign cotton, licensed for import during the current season till July 20, is estimated at 4.64 lakhs bales. The US cotton is licensed to the extent of 2.04 lakh bales; East African 68,007 bales; Egyptian about 86,000 bales and Sudanese about 96,000 bales. Actual arrivals, in the same period, are, however, higher at 5.63 lakh bales; because these include the quantity licensed in the previous season. Actual arrivals from the US are 3.39 lakh

bales and from East Africa 1.15 lakh bales. Shipments from Egypt and Sudan are about one lakh bales.

FUTURES MARKET

The cotton futures market reacted to favourable weather reports and excellent crop prospects. Despite reports of heavy rains in some areas, the new cotton crop is stated to be progressing well in Bombay, the Punjab and Madhya Pradesh, which account for about 70 per cent of the cotton production in the country. Slow conditions in the textile trade have also an adverse effect on sentiment. Reports of accumulation of stocks at some centres and the reluctance

We do business
with the nicest people...

And we are deeply interested in these nice people: in you! That's why we have a special Market Research Department that devotes itself to finding out what you like and don't like, why you buy—or don't buy.

Our teams of interviewers travel all over the country, calling on families in city, town and village, and noting your growing needs and changing preferences. This fact-finding process enables us to introduce new products like Rinso, or change a familiar one in some way—the perfume of Lux Toilet Soap, for instance.

Many of our products are, perhaps, already your household friends, and you appear on the charts and reports compiled by our interviewers. But you are more, much more, to us than facts and figures... you are the very people we do business with. We spare no trouble in trying to meet your needs, in offering you the very best value for your money.

The Shadow of the Strike

By the time this despatch appears in print, the anxious question which is now on the lips of almost everyone in the country will have been answered either in a sorry affirmative or a relief-ful negative. Will the Posts and Telegraphs Employees launch the strike, after all? The Joint Council of Action of the National Federation of the Posts and Telegraphs Employees has decided that the strike notice must stand.

The Government, on their part, are also making brisk preparations to maintain a skeleton service, with a view to minimise the disturbance to economic and social life, which would result in the event of the strike taking place. Formally, the situation does not warrant the hope that the Federation will withdraw the strike notice or in the alternative, the Government will offer more concessions than they have already announced. There are also two versions on the magnitude of the possible strike; official sources claim that Posts and Telegraphs workers in the two States, Bihar and Madhya Pradesh, have refused to join the strike and that there are a number of other districts too such as Lucknow, Jodhpur, Cuttack and Dharwar where the employees would continue to work, whatever might be the attitude of the Federation.

The Confederation of Central Government Employees which met at Delhi, early on Wednesday, has apparently failed to take a determined stand or a firm decision. While the Chairman of the Confederation has refuted rumours that the Posts and Telegraphs Federation and other constituents of the Confederation might come to divergent decisions, it is still difficult to say whether the Confederation will endorse the strike notice issued by the Federation. The faltering attitude of the Confederation is certainly a point which must influence that of the Posts and Telegraphs Federation.

The Union Government have declared that they have gone to the farthest limits possible, in the matter of meeting demands of the workers, and nothing more was possible or justified at the moment. The Prime Minister, particularly, seems to take a strong and inflexible stand, as he feels that after having done their best in meeting the demands, the Government can do nothing else than deal with the situation as effectively as possible, if the threat is carried out by the workers.

At the meeting of the Executive Committee of the Congress Parlia-

mentary Party, Pandit Nehru, it is understood, emphatically ruled out the possibility of offering an interim relief of Rs 15 per head, as demanded by the Posts and Telegraphs Federation. The suggestion to fix a time limit for the interim report of the Pay Commission is considered equally impractical for the reason that the Government could not interfere with the Commission's freedom in such matters, nor could they dictate what the Commission should recommend.

At this meeting, Pandit Nehru is reported to have stressed the obligation of the Government to consider the interests of all sections of the citizens of the country; it was for this purpose that the Pay Commission were asked to take into consideration the salaries of State Government servants also in recommending changes in the structure of emoluments for Central Government employees. The increase of Rs 15 per head for Central Government employees, barring those on the railways, would cost the Government at least Rs 10 crores. But that is not the only forbidding feature. A raise of this magnitude will set in motion a new wave of demand from State Government employees and the end of all this was nowhere to be seen.

The Essential Services Maintenance Ordinance, prohibiting strikes in the Post and Telegraph Services, has added a new grievance to those who have given the strike notice. In the Lok Sabha, even a few Congress Members did not quite approve of this Ordinance though they could think of no escape from it, as a means of meeting an extremely awkward situation. Mr Dange, who is the General Secretary of the All India Trade Union Congress, described the Ordinance as dictatorial and highly provocative. He held out the threat of serious repercussions, in the event of the Ordinance being enforced.

The Government's answer is not in the least apologetic. Along with the Ordinance which had to be got signed by the President through a special aerial messenger, a Presidential Order has also been issued amending the Government Servants Conduct Rules. The amendment forbids any Government servant participating in any demonstration or strike, in matters pertaining to his conditions of service. An official Circular carrying the Amendment, announces the prospect of disciplinary action including dismissal against those violating this order; it is made clear that during the period of the strike which has been declared
