Viewed in the light of these uniformly non-violent relations between the various elements in Hindu Society in South India one is inclined to disagree most respectfully with the Prime Minister when he speaks of the unfortunate occurrences in the District of Ramanathapuram as the expression of casteism. Had the Prime Minister not been pre-occupied with an important conference in Bangalore he would surely have flown to the District and contributed his great mite to the restoration of peace. And had he done so, he would have also acquainted himself more deeply with the ultimate causes of the incidents there. It is, of course true that immediately two social groups were fighting each other.

But these two groups had never before resorted to force for the arbitrament of mutual problems, especially on a scale witnessed this month. The logical inference should, therefore, be that it is not caste but certain new factors which have come to impair mutual relations which are at the bottom of the recent bloodshed. One does

not like to analyse these problems at the moment, when there is a universal plea for a judicial enquiry into the background of the riots and for the application of measures calculated to meet economic and political requirements which have become urgent.

At the time of writing this despatch, the rioting has stopped. A report that the trouble has spread to Madura district was subsequently officially contradicted and the authorities claim that the situation is absolutely under control. Every one is feeling relieved over this happy news. But few think that the wide-spread ill feeling, of which the riotous violence was an unexpected culmination, could be removed by police action.

There is understandable dissatisfaction in many places that no member of the Madras Cabinet cared to visit the District, when it was in flames. Actually and potentially the situation was such as to attract to the spot the entire Cabinet within a few hours. The Ministers are themselves the best judges of what they should attend to at a particular time; but when an unusual and incalculable challenge to law and order takes place and spreads over a whole District, it is pardonable to regard it as a matter deserving of top priority.

Even now, it is not too late to make up for this omission. In fact it will have an electrifying effect on the highly disturbed population of Ramanathapuram, if all the all-India leaders who have come to Bangalore would make a detour to the District of Ramanathapuram, meet all the persons there whom the population will listen to and inspire a sense of confidence and faith in the administration through their personal presence. One certainly cannot think of a more effective emotional approach to the problem which has cropped up in this District, than the combined presence of the Prime Minister, the President, the Chief of the Congress Party and also of the various other parties assembled in Bangalore and Acharya Vinoba Bhave.

One gathers that more than one member of the Lok Sabha from Madras have conveyed to the President and the Prime Minister their view that the recent elections have a great deal to do with the incidents. Now that visible violence has stopped, it is possible for the leaders to go to the spot and exercise their personal influence and inspiration on behalf of peace. This will have to be treated not as a mere political obligation but as a personal duty which the President and the Prime Minister and other eminent men who are now luckily in South India, owe to a people from whom appeals from a distance will receive no more than a sullen response.

The District Superintendent of Police in Cuddappa says that a certain village within his jurisdiction with a revenue of not more than Rs 4000 had spent Rs 2 lakhs in futile, factionist activities and he wisely points out that not all the measures taken by the police could put an end to the factions and the crimes following from them. He has affirmed his faith in other means of curing the disease.

Ramanathapuram District was badly hit by the floods last year. Even otherwise, there is scope for more intense State attention to the economic needs of the population. It calls for great delicacy and tact on the part of the Government in their attempt to transform social groups, who were till lately subjected to special handicaps, to a status and outlook conforming to the requirements of a democracy where everyone is equal before the law and enjoy equal rights and obligations.

It is worth one's while to recall that the Indian Union has already achieved great things non-violently. Revolutionary reforms have been effected through the process of legislation and constitutional changes and without any serious violence or bloodshed. The integration of the States, the abolition of Zamindari, the reorganisation of Provinces, tenancy reforms and the nationalisation of Life Insurance were possible through legislation.

Considering the character and strength of the vested interests involved in each one of these steps, one cannot think that such changes could have been achieved through peaceful means in any other country. The Ramanathapuram riots need cause neither alarm nor despair. What is necessary is to understand the significance of the trouble in proper perspective and evolve a set of measures which will render recurrence of like situations nearly if not wholly impossible. But toward that state of assurance, there lies some distance.

Mr Kamaraj Nadar says that the causes of the Ramanathapuram holocaust could be traced to as far back as 1938. If so, it is indeed surprising that the two groups lived together in amity for the last eighteen years. Sinister germs might have been planted in the District long ago. It is difficult to believe that the social soil has also remained fertile for their growth throughout the period.

In fact, it is only in recent years that ill feeling and hatred between different social groups have been systematically preached by a few leaders who have also come to control political parties. The activities of these leaders have led to unseemly situations once in a way. Unfortunately, the Government have been giving them a long rope, choos-

The Peninsula

South Indian Notes

Plantation Industry

The one outstanding feature of the economy of Kerala State is the predominance of the plantation industry. This predominance consists in the fact that Plantation industry is the largest single employer of labour as well as the biggest contributor to the State's revenues among all the industries of Kerala.

It is an expression of this predominance that the State accounts for the major part of the area under the different plantation crops. For example, Kerala has more than half the share of the tea plantations in the South, the present acreage being about 97,000 acres. The State takes credit for more than three-fourths of the acreage under cardamom in the whole country. Kerala has practically a monopoly of both pepper and cashew-nut Coffee is extensively grown in the State. Finally rubber is exclusively produced in the State.

Though these industries are fairly well developed and organised they are faced with certain problems some of which are common to all, while certain others are peculiar to each.

These problems came up for discussion at the general body meeting of the Association of Planters Kerala, which was addressed by its Chairman Mr R. M. Howie.

The chief problem of the rubber plantations is the existence of old and unselected plantations to a preponderant degree. Mr Howie has traced the cause for this state of affairs to the absence of a satisfactory policy between 1946 and 1951. This has naturally militated against any sizeable increase in total production. Even the subsidy which was granted to induce growers to replant has according to Mr Howie failed in its objective, in view of the smallness of the subsidy when compared to that given in Malaya and Ceylon.

A second point of complaint which Mr Howie expressed was the low prices fixed for rubber which it was pointed out, left little margin to the growers. He pointed out that, the method of costing adopted by the Government had little relevance to the conditions of plantations crops, since in the latter, costs tend to vary from area to area and between producer and producer.

The price situation is in no way different with regard to tea, with this difference that the price is governed by market forces alone. The world wide increase in tea production in which India also shared had brought down price to an unremunerative level. Producers of common tea, had been hardest hit since in this case the fall in price has been greater. Mr Howie has therefore made the suggestion that

the Government should either consider a differential duty for the different types of tea or the total abolition of export duty in its application to common teas.

The problem common to all the plantation industries arises out of the taxation policy of the new State of Kerala. The graduated rate of the taxation on income of agricultural companies, recently introduced by the State Government Mr Howie pointed out, has only punitive value and rests on fallacious conception of corporate income as being equivalent to individual income.

Finally Mr Howie also drew attention to the anomalous situation created by the Award of the Madras Special Tribunal for Plantations, which was published before the emergence of the Kerala State. Malabar having been a part of Madras prior to State reorganisation, this has meant different level of wages between workers in the

present Malabar and workers in the other areas of the new Kerala State. This naturally calls for revision of the wage scales of workers in the latter area. This has been referred to a Select Committee.

★

Regional Language

The reaction of at least two States i.e. West Bengal and Madras to the report of the Official Language Commission was one of partial acceptance. The two dissenting minutes, one by Dr P. Subbarayan and the other by the representative of West Bengal, which the report carried, were in themselves, the anticipation of the reaction which awaited the report in these places. The exact points of disagreement between the dissenting members and the rest, are in regard to the total abolition of English as an educational medium and for official purposes and its hasty replacement by Hindi. In disapproving the views of the majority Dr Subbarayan has only voiced the sentiments of

SOUTH INDIAN MARKETS

Pepper Exports

ACCORDING to an official report, competition from Pepper-producing countries is the most serious problem facing India's export trade in the commodity. This has been so especially since 1952 when pepper production of Indonesia and Sarawak began to register an increase while prices tended to fall.

Despite its superior quality, Indian pepper is finding it hard to find export markets due to the high price of the commodity. Export during July was very small at 479 tons as compared to 852 tons in the corresponding month of last year. Exports to the end of July are, however, higher at 12,417 tons, showing an increase of 1,735 tons over those of the corresponding period.

The possibilities of increasing exports, especially to the USSR and other countries, appear to be bright, provided measures are taken to popularise its consumption. It may be mentioned here that export earnings from pepper fell from Rs 12.87 crores in 1953-54 to Rs 4.71 crores in 1955-56 and further to Rs 1.96 crores in the first nine months of 1956-57.

Meanwhile, pepper markets have continued to rule quiet with prices developing an easier tendency; and the deteriorating political situation in West Asia has failed to have any effect on the New York market where spot is marked down to 22½ cents per pound as demand from

grinders and dealers remain unsatisfactory. Proximity of new season, satisfactory crop reports, anxiety on the part of sellers to liquidate before harvesting, restrictions on credit, accumulation of stocks in Bombay without support from the interior and hand-to-mouth buying policy of foreign buyers—all these factors have contributed to the present state of affairs. The future of the market, therefore, depends upon new production and export demand, along with the policy of the Government.

★

Rubber

The accuracy of the Rubber Board's statistics relating to production of raw Rubber in India is questioned in certain quarters. Although it is admitted that bad weather, labour unrest and cutting down of trees for replanting might have had some adverse effects on production, they do not agree that they alone could be responsible for a drop of 1,400 tons within three months beginning from May. It is pointed out that crop figures, published by rubber companies, do not justify any such decline in production.

Their argument is, that the actual output must be higher than what the Board figures show; otherwise there would have been a greater scramble for the available supplies in Kottayam and there would have been more complaints regarding non-

availability of rubber. They contend that a portion of the rubber is going through improper channels to manufacturing centres in North India without the knowledge of the Rubber Board. It might be possible that a number of producers are underestimating their output with a view to evading the cess of Rs 6.25 per 100 pounds. Moreover, theft of rubber from estates and illicit trade in raw rubber are on the increase.

★

Groundnut

Business in the Madras Groundnut market continued to be restricted, although arrivals were small and averaged only 20 tons a day. The rate for superior oil-quality seed was quoted at Rs 162 per candy.

According to the latest reports, arrivals of summer crop are poor in the Southern districts. With nearly half the harvest over in the Pollachi area, the yield is reported to be only 40 to 50 per cent of the normal. It is estimated that about three lakh bags have been marked so far; and the remaining crop is expected to move only in small quantities.

In the Groundnut Oil section, the rate for the ready position fluctuated between Rs 320 and Rs 323 per candy. There were no keen buyers or sellers, while Calcutta interests took up only small quantities to meet their immediate requirements.

★

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were as usual; but clearances were slightly less. Locally, prices remained more or less unchanged although UK buyers were continuing to press for lower rates. With the increase in the Bank Rate from 5 to 7 per cent, it is felt that buyers there will continue to press for a reduction. It remains to be seen whether Madras tanners can resist such a reduction. It is, however, felt that, in the case of some of the top class premium marks, where the tanners are fully booked for the present, there may be no reduction for the time being. But other small tanners, not so well placed, may be unable to continue selling their goods at unchanged prices.

Arrivals of Buff hides were slightly less and some quantities were cleared at more or less unchanged prices. Arrivals of Cow Calf were limited and a moderate amount of business was reported to have been confirmed. There were very few arrivals of Buff Calf.

In the Tanned Skins section, market quality Goat skins showed no further change in prices. Fresh business with London was at a standstill and it may take a few days for the market to settle down. At present, the market can be described as hesitant with chances favouring lower prices.

Calcutta Electric Supply Corporation Limited

Process of Development and Expansion Continues

Sir Harry Burn Reviews Operations

The Sixtieth Annual General Meeting of the Calcutta Electric Supply Corporation Ltd., was held on September 26 at Victoria House, Vernon Place, Bloomsbury Square, London, W.C.

Sir Harry Burn, K.B.E., A.C.A., the chairman presided.

The following is his statement, which had been circulated with the report and accounts:—

It is with deep regret that I have to record the death on April 26 last of Sir James Donald who had been a member of our board since 1929 and was its chairman for the period 1943 to 1954. Sir James rendered outstanding services to the Company and to these I paid our tribute in the 1954 review when referring to his retirement from the chair. His experience and wise counsel have been of great value and as a friend he will be sorely missed by all of us who knew him.

Account Period

The report and accounts cover the period of 15 months ended March 31, 1957. Hitherto the annual accounts have been made up to December 31 of each year and the last accounts so present to stock holders were for the year ended December 31, 1955. The Government of India under Section 37 of the Indian Electricity Act of 1910 have brought into force rules which now make it obligatory for our accounts to be made up to March 31 of each year. To conform with these rules for the year now current and ending on March 31, 1958, it has been necessary to make up accounts covering the period of 15 months from January 1, 1956 to March 31, 1957. Thereafter the annual accounts will be made up to March 31 in each year. All stockholders were advised by a circular issued on April 12, 1957, of the change in the date of future annual accounts and of consequent changes in the dates of the dividend payments.

The period of fifteen months now under review furnishes evidence, in the increase in demand, of the process of development and expansion which has been the subject of reference in previous reviews. In order to make available comparisons in respect of units sold figures have been extracted covering the corresponding period of 1955-56.

The number of units sold was 1,710 million, an increase of 152 million units over the sales in 1955-56. Sales for power purposes refer principally to High Tension Industrial sales, but include low tension industrial power, public waterworks, and small power for domestic purposes, such as air-conditioning, refrigeration, and cooking.

High Tension Power

On the industrial side served by high tension power the demand for current continues to grow. The sales for 1956-57 were 1,029 million units as against 942 million units in 1955-56—an increase of 87 million units.

There were no major disturbances in the field of labour relations during the period under review. The jute mills, paper mills, steel works and rolling mills, engineering workshops and chemical works accounted for the major part of this increase in the demand for high tension power. The largest increase came from the jute mills, whose consumption rose by 32 million units, followed by the engineering workshops with an increase of 24 million units. Industrial consumers increased by 26 during the fifteen months ended March 31, 1957, as compared with an increase of three for the year 1955.

A further six jute mills came on to our supply during 1956-57. The total complement of looms in commission is now 87½ per cent. as compared with 95 per cent. in February, 1956. This reduction took place during the months of July and September, 1956, in order to adjust output with world demand. There was an increased demand from the domestic market in India for sacking goods which may be expected to continue as the outcome of the Central Government's plans for agricultural development and for increasing the production of commodities such as sugar, fertilizers, cement, &c.

For some time past the industry has been modernizing as rapidly as possible having regard to the availability of machinery and the need to ensure the minimum disturbance to the labour force. The best wishes of the board are with the jute mills—one of India's most vital industries—for a successful outcome of the steps now in train to place the industry on a firm and lasting basis, and thus enable it to meet competition in world markets. Engineering workshops have been working to capacity and nine new works were connected during 1956-57. The present demand for current is now almost double that for the year 1951. The paper mills have made good progress during the past year and look forward to increased production as the result of the implementation of the Second Five Year Plan. In the case of the steel works and rolling mills the consistent improvement in consumption gives evidence of the growing pace of industrialization which is taking place in India.

Six new consumers were added to our supply in 1956-57.

The demand for low tension industrial power reflects the increasing activities of small workshops and factories. The sales for 1956-57 were 106 million units as against 99 million for 1955-56. Restriction of imports designed to foster indigenous industries has led to expansion in this particular field. The establishment of large scale industries, envisaged in the Second Five Year Plan, will assist this trend towards the spread of small industries some of which receive their raw materials from, and work exclusively for, larger concerns in the manufacture of components.

The demand from public waterworks and sewage pumping has grown considerably. The figure of units consumed in 1956-57 was 79 as against 68 million in 1955-56, an increase of 11 million units which, in the main, is due to a higher demand from the Calcutta Corporation's Palta Waterworks, and an improvement in offtake from the Sonarpur-Arapanch Pumping Scheme.

Domestic and Commercial Load

The ordinary domestic and commercial load at the flat rate increased from 226 million units in 1955-56 to 241 million units in 1956-57. The central parts of the City are still in a congested state and to alleviate this situation old buildings are being demolished and replaced by residential flats and new markets. On the outskirts of the City the Central Government are erecting blocks of staff quarters, several of which are now occupied, and many blocks of flats for refugee settlement are ready for occupation. The areas where suburban expansion is most marked lie to the south and south west of Calcutta. The type of buildings in these areas is mostly that of private dwelling houses. To the east of the City development is also taking place. Several square miles of land have been cleared and drained. Roads have been laid out and work continues on road making. Blocks of flats for industrial workers have been completed and are in occupation.

Public lighting shows a steady increase in consumption. The Calcutta Corporation's programme to provide more and better street lighting continues to make good progress. Four adjacent Municipalities came on to our supply during 1956-57.

The Calcutta Tramways' demand for current remains steady and is likely to stay so. Until new routes are opened up it would appear that saturation point has been reached

with regard to the number of cars per track mile.

There has been a marked increase in the demand for bulk supplies to distributing undertakings. The sales for 1956-57 were 45 million units as against 28 million units in 1955-56, an increase of 17 million units. The major part of this rise came from the North Calcutta Grid of the West Bengal Government. Apart from normal growth an increased bulk supply to a supply company served by the grid contributed largely to this improved demand.

The special tariff under which we make available to owners of large buildings current at high voltage for conversion by them to low tension—thus relieving congestion on our D.C. network—has attracted new consumers and sales under this tariff amounted to 52 million units, an increase of 5 million units over the 1955-56 figure.

New Grid Substation

On June 9, 1957, in the presence of a large and distinguished gathering the Damodar Valley Corporation Grid Substation in Howrah was formally opened by the Honourable Dr. B. C. Roy, Chief Minister of West Bengal, who was accompanied by Mr. P. S. Rau, Chairman of the D.V.C., and Mr. I. A. Macpherson, our agent. In his address Dr. Roy stated that the substation was a unique example of cooperation between the private sector and national enterprise. This interconnexion with our system will make available within a period of less than three years 100,000 kVA of power. Four 132 kV circuits from the D.V.C. system will feed power into the Calcutta area. With regard to the utilization of this power a certain amount will be required in Howrah and some will be sent on overhead transmission lines at 33,000 volts down to the Bauria area, which is south of Howrah on the right bank of the River Hooghly. The remainder will be absorbed in the southern part of our system through our 33,000-volt cables which connect the receiving substation with our two generating stations at Cossipore and Garden Reach. Although the C.E.S. and D.V.C. systems have only recently been interconnected, the Company has worked very closely with the D.V.C. for some years now and I have great pleasure in saying that we have during this time come to have a high regard for their standard of construction, operation, and maintenance. We are proud to be associated with the D.V.C. project which is one of the largest schemes undertaken by Government for the building up of New

India. The Board wish to express to the Honourable Dr. B. C. Roy, Chief Minister of West Bengal, their deep appreciation of the support he has given and the keen interest he has taken from its inception in the scheme for linking up the Company's system with that of the D.V.C.

Electricity Supply Amendment Act, 1956

The Indian Electricity (Supply) Act, 1948, has been modified by the Electricity (Supply) Amendment Act, 1956, which took its place on the Statute Book at the end of last year. The main modifications as far as this Company is concerned relate to the standard rate of return permitted to the industry and to the reasonable degree of freedom given to the licensee to adjust his rates within the framework of the Act including, where necessary, an enhancement of rates. The standard rate is now linked with the Bank Rate, the rate being 2 per cent. over the Bank Rate ruling at the beginning of each accounting year. On April 1, 1957, the Bank Rate was 3½ per cent. making the standard rate 5½ per cent. instead of the previous figure of 5 per cent.

Revenue

The development and expansion which is taking place in the Company's operations is reflected in our revenues as may be seen from a comparison with the figures for the three previous years which are set out in the directors' report. In comparing the figures of previous years due allowance must be given to the fact that the accounts now under review cover a period of 15 months ended March 31, 1957. Receipts amounted to £8,101,785 (1955 £5,859,483). Expenditure, taking into account the depreciation charge of £999,579, amounted to £5,907,907 (1955 £4,334,257 including depreciation charge £770,990). Coal consumption for the 15 months a period of higher output, was 1,266,746 tons costing £2,341,700. In order to enable a comparison to be made of this major item of generating costs—which represents 78 per cent. of the total generation expenditure—figures have been extracted for the corresponding period of 1955-56 and are as follows:—Coal consumed 1,157,964 tons costing £1,939,600 showing increases in consumption and cost of 108,782 tons and £402,100. There was an increase in coal prices and railway freights during 1956 and the average cost of coal per ton delivered increased by approximately 10 per cent. In other respects increases in operation expenditure were primarily due to higher wages costs.

The net revenue account contains a transfer of £240,279 to a special reserve as directed by the Government of West Bengal—the fourth of five appropriations of this nature which fall to be made from net revenue. The circumstances which give rise to these appropriations were explained at length in the chairman's annual review for 1953 and I also made a

reference to this matter in the 1954 review. The creation of this special reserve, which now stands at the figure of £816,947, follows on the conditions laid down by the State Government in connexion with the special appropriations permitted by them—during the period 1949-52—under Section XVII (2) of the Sixth Schedule of the Electricity (Supply) Act, 1948, "to finance the expansion of the machinery of production."

Tax Position

The Company will be an Overseas Trade Corporation for purposes of income tax and profits tax. The Finance Act, 1957, exempts trading income (though not investment income) of an Overseas Trade Corporation from income tax and exempts profits from any trade or business carried on by an Overseas Trade Corporation from profits tax. Under the Finance Act an Overseas Trade Corporation will be liable for income tax (subject to double taxation relief) on the amount of its trading profits used to pay dividends. Non-residents shareholders in Overseas Trade Corporations will be entitled to repayment of income tax relating to dividends paid out of exempt trading income.

In making these general observations on the tax position of the Company as an Overseas Trade Corporation, I wish to point out that as the Finance Act only came into force at the beginning of the current fiscal year the Company was not an Overseas Trade Corporation for any part of the accounting period of 15 months to March 31, 1957.

The taxation charge for the 15 months period amounted to £82,900 and appears in the net revenue account. United Kingdom tax was confined to profits tax £47,500. The sum of £397,200 charged for income tax in the 1955 accounts covered the tax due on the profits of that year. Such profits formed the basis of the Company's income tax assessment for 1956-57 which was duly discharged. As an overseas trade corporation the Company will be on a new basis of income tax assessment for 1957-58 when income tax will be payable only on dividend distributions made out of exempt trading profits. This radical change in the United Kingdom tax position is, therefore, the reason for the much lower tax charge in the 1956-57 accounts. In so far as the Indian tax position is concerned there is still a balance of unabsorbed depreciation allowances in hand which for the time being defers any charge for Indian taxation.

The clear profit for the 15 months period, by reason of a lower taxation charge, shows an excess of £355,749 over the reasonable return permitted by the Indian Electricity (Supply) Act. This excess has been apportioned in accordance with the provisions of that Act and is shown in the allocations to the tariffs and dividends control reserve and the consumers'

benefit account. The Company's share of the excess has been included in the allocation to "Net Revenue Account—Special Appropriations (for plant expansion and replacements)."

The usual allocation for the contingency reserve, as required by the Act, the normal contribution to the retiring gratuity fund and Debenture interest and sinking fund charges are on the basis of the 15 month period. In order to conserve our finances for the continued expansion of the Company's operations we have deemed it advisable to appropriate a sum of £575,000 to "Net Revenue Account—Special Appropriations (for plant expansion and replacements)."

Dividends

The dividend on the Preference stock and two interim dividends on the Ordinary stock have been paid and we propose to pay a final dividend of 2½ per cent. (free of tax) on the Ordinary stock making 8½ per cent. (free of tax) for the 15 months ended March 31, 1957—which is equivalent to a rate of 6 4-5 per cent. per annum. The balance left to be carried forward on net revenue is £130,008.

I have stated earlier on in this review that the year now current will secure a benefit from the increase in the rate of reasonable return. The board, therefore, are hopeful—given normal working conditions and freedom from any untoward happenings—that the net earnings for the year ending March 31, 1958, will enable the Company further to strengthen its internal finances and also permit of the payment of an Ordinary dividend of not less than 7 per cent. per annum (free of tax).

Capital Expenditure

Expenditure on Capital Account for the period amounted to over £1,750,000. Extensions to our distribution system absorbed the bulk of this outlay. As a provision for this capital expenditure there was available the sum set aside for depreciation approximately £1m., and the allocations to net revenue—special appropriation and special reserve amounting to £815,000, thus making a total provision of £1,815,000. For the years 1951 to 1955 inclusive capital expenditure amounted to over £6m. and the depreciation provision together with reserves and special appropriations during the same period amounted to £5,640,000. I give these figures to demonstrate what has been done during recent years—within the limit of earnings permitted by the reasonable return on the capital base—to provide internal finance for the expansion of the Company's undertaking.

Area of Operations

A map of the area covered by the Company's Licence is attached to the accounts, from which it will be seen that the Company's operations, along both banks of the River Hooghly, extend some 20 miles to the north of Calcutta and a similar distance to the south

of the city. Within this area of our supply, which embraces 200 square miles, there dwells, according to recent estimates, a population of some eight million souls. Our earnest endeavour has always been to supply power to run the wheels of industry and transport, as well as the ever increasing domestic requirements of our area, and thus contribute towards the prosperity, comfort, and happiness of those who dwell and earn their livelihood in the City of Calcutta, its suburbs, and in the industrial areas and municipalities which lie adjacent to the city.

Sir William Lamond visited Calcutta and spent six weeks there during the months of January and February, 1957. He found everything in good order when he inspected the Company's organization. During his stay he took the opportunity of touring the development areas to see the progress being made, and was impressed with what was being done to expand and modernize the suburbs. He met Dr. Roy and discussed the affairs of the Company with him, and also met the leaders of commerce and industry in Calcutta. Dr. Roy continues to take a keen interest in the various phases of the Company's activities in Calcutta and district.

Training

Training in the United Kingdom continues to be given to young Indian graduates under our technical training scheme and also to certain of our permanent Indian staff to enable them to take over more responsible duties. Twenty-six men have so far been trained under these schemes, six men are at present under training in the United Kingdom, and two others will shortly be arriving to take up their training. We are grateful to the Central Electricity Authority, Area Boards, and the various manufacturing companies that provide facilities for this training.

Tribute to Staff

Our thanks are due to all our employees in Calcutta. The Company's continued progress and development reflects the interest and energy which members of the staff and our workmen devote to the Company's affairs. Mr. Macpherson, our agent in Calcutta, continues to manage the Company's affairs with great ability. I also wish to pay tribute to the valuable work carried out by Mr. F. W. Acheson, who retired from the position of chief engineer on March 31, 1957, after some 31 years' service with the Company. He has been succeeded by Mr. D. H. P. Henderson, who has been with the Company for many years and in whom the board has every confidence. I wish to record the board's appreciation of the able manner in which Mr. Colley continues to discharge his responsible duties as secretary.

The report and accounts were adopted.

"The above statement is not a report of the proceedings of the Annual Meeting referred to."

Dalmia Cement (Bharat) Limited

Production Well Maintained Company Proceeding with Expansion Plans

Mr V. H. Dalmia, the Chairman, Reviews Prospects of Cement Industry

Speech of the Chairman, Shri V. H. Dalmia, delivered at the FIFTH ANNUAL GENERAL MEETING of the Company, held on Saturday the 21st September, 1957 at the Registered Office of the Company at Dalmiapuram. (MADRAS)

Gentlemen,

It gives me great pleasure to welcome you on the occasion of the Fifth Annual General Meeting of the Company.

It is with regret, I have to inform you that Shri J. Dalmia, who, since the inception of the Company till lately was the Chairman of the Board of Directors of the Company resigned from that post and also from the directorship on 16-5-1957 due to reasons of health. On 17-2-1957 while supervising trials of the new Cement Plant at Rajgangpur of M/s. Orissa Cement Limited, a sister concern of this company, he met with a serious accident resulting in a compound fracture in his leg and a septic wound. Plaster over the fracture was removed recently and he is now able to walk a little. His wound has not yet completely healed and it will still take him quite some time to recover completely from the effects of the accident. I am very glad to tell you that though he does not take active part in the deliberations of the Board, it has not completely lost the benefit of Shri J. Dalmia's experience and wisdom as he has been readily giving his valuable advice even from his sick bed, for which the Board and the company are deeply indebted to him. I am able to assure you that even now company's interests are uppermost in the heart of Shri J. Dalmia and his advice will be readily forthcoming whenever required.

The Directors' Report and the Audited Statement of Accounts of the company for the year ended 31st December, 1956 have been in your hands for some time and with your permission, I will take them as read.

In spite of recurrence of power out from 1st April, 1956 to 30th June, 1956 production during the year under review was well maintained with the help of diesel generating sets. But, as will be seen from the comparative figure for the year 1955 given in the profit and loss account, expenses have registered substantial increase in various directions which is mainly responsible for the decline in the profits. During the year 1956 because of the introduction

of State Trading in cement on the selling side whatever we were able to save in the freight element included in the cement prices has been totally lost to the Company.

State Trading in cement was introduced in July, 1956 by the Government of India and the State Trading Corporation of India (Private) Limited formed with the objective of making good the "cement gap" by resorting to large scale imports of foreign cement and to make both indigenous and imported cements available at an equated destination price. Distribution of indigenous cement was sought to be rationalised by earmarking "marketing zones" for the various factories and to avoid cross movements with a view to reducing the burden on the Railway system. It was pointed out to Government by the Industry that it was unnecessary to resort to State Trading, as these objectives could well be realised within the frame work of the then existing distributive set up of the Industry. This suggestion was, however, unacceptable and your Company, along with the other Cement Manufacturers, agreed to co-operate with Government by accepting the scheme of State Trading in cement.

The necessity of rationalising movement of cement between the various factories with a view to lightening the burden on the Railways and to reducing the incidence of railway freight by supplying cement to the various consuming centres from the nearest factories had been pointed out to the Government of India by your Company a few years back. This scheme was supported by some other producers also but it was not accepted by the Government at that time.

As a result of the crisis of foreign exchange, which the country has been facing now for some time and which was recently described by Shri Morarji Desai, Union Minister for Commerce and Industry, as being "grim", it is obvious that the country cannot afford to bridge the "cement gap" by resorting to imports and must rely more and more on a rapid increase in the indigenous production of cement. The S.T.C. is having a large margin on the present equalised prices in force in the country, to which I shall presently refer, and which is not being utilised for subsidising costly foreign imports of cement in view of the present foreign exchange difficulties. The indigenous cement industry has a natural and reason-

able claim under the circumstances over the financial resources created by the State Trading Corporation and this fund should now be utilised for the expansion, rehabilitation and development of the indigenous cement industry.

With the exception of a few new Producers, the Government after the last Tariff Commission inquiry in the year 1952/53, fixed with effect from 8th February, 1954 Rs. 71/- per ton as ex-destination price for naked cement, exclusive of excise duty, for rest of the Producers in the country. This price of Rs. 71/- included Rs. 15/- per ton as an element of average freight between the different works and consuming centres and Rs. 3.9 per ton as rehabilitation charges. Out of the latter, after payment of Income Tax, producers are left with only Rs. 2/- per ton and that has to be deposited with a bank in a separate account. This account is jointly operated by the Government and the Producer and the amount deposited has to be utilised for the purpose it is set apart. In other words, the ex-works price for naked cement for Producers was Rs. 56/- per ton inclusive of rehabilitation charges and Rs. 52/- exclusive of rehabilitation charges. On supplies to the Government, the producers had to allow a further rebate of Rs. 2/- per ton.

The present price of packed cement of Rs. 117.50 per ton at a destination railroad give Rs. 56/- for unpacked cement to almost all the cement manufacturers ex-their respective works, which includes selling agents' and stockists' commission which the producers bear themselves, besides the rebate on supplies to Government. Only Mysore Cement Works and Travancore Cement Works are paid higher at Rs. 56/50 and Rs. 73/- respectively ex-their respective works. There is a difference of Rs. 61.50 per ton between the price of unpacked cement payable to most of the producers ex-works and the price of packed cement at which the consumers get it at their nearest railroad. Out of this Rs. 61.50, the producers are paid at present Rs. 13.72 per ton for packing charges and Rs. 20/- towards Excise Duty. This leaves Rs. 27.78 per ton out of which the State Trading Corporation meets the expenses of its own organisation, average transport expenses from different cement works to consuming centres and subsidy for equalisation of high cost of cement of Mysore and Travancore Cement Works. The balance is their

The Second Five Year Plan is an ambitious programme. There is a shortage in the country of trained personnel to manage and administer the various new Projects which are coming up in the Private and Public Sectors. Now that imports of cement are not likely to take place to any appreciable extent, it would be worthwhile for the Government to consider utilising the services of the personnel now guiding the fortunes of the S.T.C. in other spheres of National Activity where their wide experience, acumen and energies could be more fruitfully and usefully drawn upon. If it is Government's intention to use State Trading in cement merely to augment their resources for the successful implementation of the Second Five Year Plan, this objective can well be achieved by further raising the excise duty on cement.

In view of the rise in the cost of production of cement because of the increase in the price of coal, railway freight, cost of stores and spares, labour charges etc., the Government of India have made a reference to the Tariff Commission for the determination of the present cost of production in the cement industry and necessary recommendation for a fair price to the producer. The Tariff Commission has already taken up the matter in hand and it is hoped that it would be able to give its recommendations to the Government of India before the end of this year. I am glad that the Tariff Commission is not merely confining itself to examining of the production cost of various factories but has also extended the scope of its inquiry to expansion and/or rehabilitation programmes of the industry and the financial resources available with them to implement these plans with a view to determine whether it is justified to allow an element in the cement price, that it may recommend, for bridging the gap between the internal resources available and the estimated outlay on the expansion and rehabilitation programme of the Industry. Your company is going ahead with its expansion plans of the Cement Works at Dalmiapuram which is likely to be completed by the end of March 1960 raising the annual production capacity from 2.5 lakh tons to over 4 lakh tons. The company has placed before the Tariff Commission the deficit in its internal resources for the implementation of expansion programme and for the rehabilitation of its old 250 ton plant which was established in the year 1939 and has

September 28, 1957]

now nearly completed 18 years of its life.

As required by the Companies Act, 1956, the Scheme for conversion of the Deferred shares into ordinary, after its approval by the shareholders in their meeting held on 10-7-57, has been placed before the High Court of Judicature at Madras for confirmation. The High Court will, in the first instance, order meetings of different classes of shareholders to be held under its directions, notice of which will be sent to the shareholders in due course and they will thus have another opportunity of considering the matter.

I am happy to be able to report that the labour-management relations of the company have continued to be cordial. We are grateful to Shri R. Venkatraman, Minister of Industries and Labour, Government of Madras, through whose good offices an agreement covering a period of three years, 1957-1959, and relating to the two most important and basic issues like Bonus and wages which form subject matter of most of the industrial disputes anywhere, was concluded on 6th July, 1957 with our employees at the factory represented by the Dalmia Cement Workers' Union. By this Agreement existing disputes with regard to bonus for the years 1955 and 1956 were also settled.

Finally, I would again like to thank you shareholders, for the co-operation extended, and also thank the Management and the employees of the company at its Works and elsewhere with a note of appreciation for their hard work during the year and that connected with the expansion work.

The Agenda of the meeting will now be taken up serially for your consideration.

The above extract of the speech does not purport to be the report of the proceedings of the fifth Annual General Meeting of the Company held on 21.9.1957.

THE OSLER ELECTRIC LAMP MANUFACTURING CO., LTD.

Notice is hereby given that the Share Transfers and the Register of Members of THE OSLER ELECTRIC LAMP MANUFACTURING CO. LTD., will remain closed from 14th of October 1957 to 25th of October 1957 both days inclusive on account of the Annual General Meeting of the Company to be held at its Registered Office at No. 12, Old Court House Street, Calcutta, on Friday the 25th of October, 1957.

By Order of the Board,
S. B. INDUSTRIAL DEVELOPMENT CO. PRIVATE LTD.,
Managing Agents.

Calcutta,
6th September, '57.

NATIONAL CARBON COMPANY (INDIA) LTD.

NOTICE

Notice is hereby given that an Interim Dividend for 1957 of 75 nP per share equivalent to 7½% without deduction of income tax paid by the Company was declared by the Board of Directors of the Company on 25th September, 1957, payable on or after 18th November, 1957, to those shareholders on the Register of Members of the Company on 10th October, 1957, or their Mandatees.

The Share Transfer Register of the Company will be closed from 11th October, 1957, to 26th October, 1957, both days inclusive. Transfers to be deposited with the Company should be correctly executed and stamped, share certificates attached and accompanied by Power of Attorney where necessary if not already registered with the Company.

All Transfer documents must be deposited at the Company's Registered Office at 18A Brabourne Road, Calcutta-1, or at the Company's Share Transfer Department at FARADAY HOUSE, P-17 Mission Row on or before the close of business at 4-15 p.m. on 10th October, 1957.

By Order of the Board,
G. BOWLAND,
Secretary.

THE ALUMINIUM INDUSTRIES LTD.

KUNDARA

KERALA

Speech of Shri T. T. RATHNASABHAPATHY PILLAI, Chairman of The Aluminium Industries Ltd., Kundara, Kerala State, at the Eleventh Annual General Meeting of the Company on 25th September, 1957.

Dear Shareholder,

I have very great pleasure in welcoming you to the Eleventh Annual General Meeting of the company.

The financial results of the working of the Company for the year ended 31st March 1957 are already before you, along with the report of the Directors and their recommendations regarding the appropriation of the profits.

We have had another successful year and it is a matter of gratification to me that while we have maintained the usual tax-free dividend of 12½% we have, in spite of the increased provision for taxation, necessitated by the increase in Company taxes incorporated in the latest Finance Act, been able to transfer a sum of Rupees Two lakhs to the General Reserve making a total of Rupees Twenty lakhs and a sum of Rupees Two lakhs to the Dividend Equalisation Fund making a total of Six lakhs while the Deferred Taxation Reserve is maintained at the adequate level of Rupees Six lakhs twenty five thousand.

The new insulated Cable plant has gone into production at Kundara and the current year will see the introduction of continuous shift-working and increasing turnover in that field. We have pioneered in this venture and are placing on the market a consumer article in very great demand, which will enable cheaper electrification of homes and factories.

The Company's Hirakud Project is making satisfactory progress. The Government of India have licensed the importation of the requisite capital equipment without any deferred payment terms. This is surely an indication of the

importance Government attaches to this Industry and the cognizance taken of the considerable foreign exchange saving that will result from the expansion of this industry. Despite the prevailing shortage of essential building materials, it is expected that the Rod-rolling Mill at Hirakud will be in operation in the third quarter of 1958 and the Cable Mill early in 1959. Subsequent years will naturally see an increased turnover, better service to our customers and enhanced profits. The World Aluminium Metal Supply Position has improved considerably since the close of the previous financial year and the manufacturing and trading prospects for 1957-58 are definitely better. The output graph in the Balance Sheet gives you some idea of the steady increase in our cable production and there is reason to expect that the upward trend of production will be maintained in the coming years. We shall thus be able to maintain on the doubled Capital of the Company the dividend which has been stabilized at 12½% since we started paying it seven years ago, notwithstanding the fact that the Hirakud-plant will not be in commission till about the end of 1958.

The Kerala Government's policy, as you are no doubt aware, is one of continued support to all industries in the State. Every assistance and encouragement is being received by us for keeping the Kundara Plant operating at a high level of efficiency and on behalf of the Company I wish to tender my grateful thanks to the Kerala Government, for the same. We, on our part, re-dedicate ourselves to greater production of Aluminium Cables and accessories required so vitally for the electrification schemes of the Second Five Year Plan.

Now I request you to adopt the accounts already before you and to approve the appropriations for the year ended 31st March 1957 recommended by the Directors.

OLYMPUS

(Continued from page 602)

is the increase in the size of this foreign exchange content of the Plan, due largely to world wide inflationary pressures. Our intention is to make the necessary modifications in the Plan to meet the new situation, but our minimum requirements would still be large. Admittedly, there are very few countries who are in a position to export capital to India at the moment. They are, principally, the US and, possibly, West Germany. And, from the US, we have had some encouraging news in that the Administration is reported to be willing to discuss sympathetically the request for a loan from the Government of India. The precise shape this loan will take is very difficult to predict at this stage. There are obviously very many interests in the US to be reconciled

before the idea can be given practical shape. But there can be little doubt that the US Administration is completely briefed about the exact situation in India. Neither the crisis mongering at home nor the interested undermining of India's credit abroad has, fortunately, made any difference to the appraisal of the situation here by the US. In this, both India and the US Administration have been well served by the American Embassy here. So, there is every reason to hope that Mr Krishnamachari may be able to interest the US in concrete schemes of help. But their precise shape will not be known for some months to come. It is for this reason that I urge that this trip should not be used as psychological props for sustaining the morale of the people.

LIFE INSURANCE CORPORATION OF INDIA

★
Speech delivered by Shri G. R. Kamat (Chairman) at the
11th Meeting of the Corporation on September 1, 1957

BOMBAY

Four weeks ago we submitted an Interim Report to Government giving a detailed account of our activities and achievements during the first ten months. This Report has been placed before Parliament and has been published. As indicated in the Report, we devoted the greater part of our efforts during these months towards bringing about a smooth transformation of the life insurance industry. Even now, the change-over is by no means complete in all respects. Nevertheless almost all our new business offices are now working normally and after a brief initial shortfall, our new business, both as to proposals received and policies issued, has shown a progressive increase each month. Aggregate new business during the first six months of 1957, though somewhat lower than that for the corresponding period of 1956, compares favourably with the business underwritten by private companies during the first half of 1955. In the month of June, our new business offices in India surpassed the output of the earlier months by receiving insurance proposals of Rs. 21.64 crores and by underwriting new business of Rs. 21.68 crores, in terms of the sums assured.

This rate of progress has been maintained during the months of July and August. In July, the business introduced in India was as much as Rs. 24.5 crores, and the complete business was Rs. 19.5 crores. Although up-to-date figures for the month of August are not yet available, the performance during the first three weeks indicates that the output for the month of August should be similar to that in July.

July and August are often regarded as lean months for insurance business. This record for the months of July and August further confirms that our divisional and branch offices are working efficiently. We can now look forward with added confidence to their rising to greater heights during the forthcoming busy season and to their justifying our expectation that we shall close the year with a high level of new business.

The publication of our Interim Report has been followed by various comments. Generally speaking, these comments have shown appreciation of our achievements and of our difficulties. Nevertheless, in some places there has been a tendency to draw pointed attention to the short-fall in our new business during the first few months, and to insist that since nationalisation, the standard of policy servicing has deteriorated.

Persons who continued to criticise us in this way, have not appreciated what a revolutionary change this nationalisation has

brought about in the structure of the life insurance industry. It is not as if a going concern has been taken over by government. Before the appointed day, some 243 autonomous organisations had been functioning in the life insurance industry. Over years and decades, these organisations had evolved certain procedures and methods of work. Most of these offices were competing amongst themselves for a greater share of the insurance business within limited sectors of the population. Their procedures and methods were adapted to suit the particular needs of canvassing business in a highly competitive market, but within a narrow sphere. Frequently, the mismanagement and inefficiency of even a few units of the industry, affected the confidence of the common people in life insurance and placed further handicaps to the efforts of the well-managed concerns to expand their field of operation.

CHANGING PATTERN OF ORGANIZATION

It is the main objective of the nationalised life insurance industry to promote this confidence and to expand its business into those sectors of the population which the privately managed industry could not reach. Inevitably, the nationalisation of the insurance industry involved a transformation of the entire organisational structure. In place of so many units of the industry operating vertically, a single organisation was, therefore, brought into existence, dividing its work between Zones, Divisions and Branches on a territorial basis, so that eventually we reach all sectors of the population throughout the country. The relative responsibilities of each of these offices had to be carefully defined and the offices themselves had to be equipped with suitable personnel and equipment taken over from the private companies. New and uniform procedures had to be evolved for the effective discharge of the functions of these offices.

Considering the nature and magnitude of this structural transformation and of the accompanying re-adjustments, it is not surprising that at the outset there was some moderate dislocation in our business and some of the offices have taken time to reach an adequate level of efficiency.

Indeed, the fact that such an organisation has been brought into existence and is now functioning effectively within a short period of time, with relatively small inconvenience to policyholders and to persons seeking life insurance protection, is a tribute to the ingenuity and the resourcefulness of those who planned out this major operation.

The credit of this successful re-organisation of the life insurance

industry is due to Shri H. M. Patel our first Chairman (of the Life Insurance Corporation), whose untiring zeal was matched only by the loyal support that he received from all my associates.

NEW BUSINESS ENCOURAGING

You will have observed that so far as the level of new business is concerned the statistical figures of our growing business themselves answer any criticism of our work. Regarding the alleged inadequacies and inefficiency of our policy servicing offices, it has not been equally easy to provide a statistical measurement of their efficiency. However, certain broad facts may be stated to provide a right perspective. Our policy servicing offices continue to follow the same procedure that had been followed hitherto by the respective private companies. If any changes are made, those are merely to further simplify their existing procedures. Again, these offices are staffed with persons who have been discharging similar functions in the past, frequently in respect of the same types of insurance policies that they had been handling before. Therefore there is no prima facie reason why, in the matter of efficient servicing of existing policies, our personnel in those offices should not maintain the same standards that prevailed in the private companies.

If the number of complaints in respect of indifferent work that are received in the Central Office is any criterion, this number is relatively very small, as compared to the aggregate number of servicing transactions that are carried out in these offices in respect of some 50 lakhs of outstanding policies; and, of course, those who are satisfied with our service hardly care to write to us. Furthermore, the declining number of these complaints, the rare and occasional praise that we do receive for prompt service as well as the reports received from various sources lead me to believe that even in this respect there has been a gradual improvement and that the improvement continues.

This is not to say that I do not accept the need for better and greater service in regard to settlement of claims, issue of premium receipts, grant of loans and payment of agents' remuneration. On my part, I consider that much of this criticism proceeds from a very legitimate expectation that, as a public institution, our performance should be not only as good as that of the private companies, but it should be actually better than the best of these companies.

"EXPRESS SERVICE"

As an illustration of the procedural improvements, let me refer to the recent instructions that we have sent to our Divisional Offices for the introduction in those offices of an expeditious way of dealing with new insurance proposals, known as "Express Service". This procedure has been tried with considerable success by some Divi-

sional Offices in the Southern Zone, and all the other Divisional Offices have now been asked to adopt it without delay. This procedure applies to all proposals for life insurance below a certain amount which are received complete in all respects along with the payment of first premium and where medical examiners' report and other particulars indicate that the proposal requires no reference to any other office and can be accepted at standard rates. Such proposals would be dealt with expressly in the Divisional Offices and policies would be issued against these proposals within a period of not more than three working days. Some of the Divisions, in fact, might do better than this and issue risk note on the date of the receipt of the proposal and the policy on the next working day.

BUSINESS EXPECTATION

The level of new business that we reach in 1957 is only a starting point for further expansion. As I have stated the main objective of the nationalisation of the life insurance industry is to bring these insurance facilities within the easy reach of large sectors of the population. It is our aim to expand our business as rapidly as possible and amongst all sectors of the population and to offer insurance facilities to all those who stand in need of the insurance protection. We have a vast field open before us and it has been estimated by some persons that, even under present conditions and without taking into account the rising incomes brought about by the progress of economic development, the life insurance business could expand to something like Rs. 8,000 crores in terms of sums assured.

Keeping this aim and vast potential in view, it is now necessary that we should prepare ourselves for the orderly expansion of insurance facilities from 1958 onwards. The experience of the last twelve months provides a useful guide as to the nature and magnitude of the problems in this process of continued expansion. We may have to plan for opening more Branches and for employing more canvassers and organisers of the right kind. We have to impart sound training to these new personnel, as well as some of our existing personnel. We have to devise various measures and provide machinery for canvassing the large untapped potential amongst industrial employees, as well as amongst sectors of population in smaller towns and prosperous villages.

Amongst the many changes that have come about in the life insurance industry, there is one kind of change that I should like to mention. More particularly after nationalisation, life insurance is now become both a business as well as public service. For success in this new venture, it is essential that all of us working in the cause of life insurance demonstrate this new spirit and strive in every way to achieve this high ideal of public service.

THE NEW MONKHOOSHI TEA COMPANY, LIMITED

NOTICE

Notice is hereby given that an Annual General Meeting of the Members of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Tuesday, the 29th October, 1957, at 3-45 p.m., for the following purposes:—

AGENDA

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st December, 1956 and the Balance Sheet as at that date.
2. To declare a Dividend.
3. To appoint Auditors and fix their remuneration.
4. To elect a Director in place of Mr. W. B. H. Churchill.
5. As Special Business.

To appoint a Director in place of Mr. J. M. Parsons, who vacates office as a Director of the Company by virtue of Section 260 of the Companies Act, 1956 and who, being eligible, offers himself for re-appointment and, in this connection, to consider and, if thought fit, to pass the following resolution of which Special Notice dated the 9th September, 1957, of intention to propose it as a Special Resolution pursuant to the provisions of Sections 190 and 261(1)(f), (2) and (3) of the Act, has been received by the Company as Mr. J. M. Parsons is an "associate" of the Managing Agents within the meaning of the Act:

"That Mr. J. M. Parsons, an officer of Macneill & Barry Limited, the Managing Agents of the Company, and, accordingly, an associate of the Managing Agents within the meaning of Section 2(3) of the Companies Act, 1956, be and he is hereby appointed a Director of the Company whose period of office is liable to determination by retirement of Directors by rotation."

6. To appoint a Director in place of Mr. J. W. N. Baldock, who vacates office as a Director of the Company by virtue of Section 260 of the Companies Act, 1956 and who, being eligible, offers himself for re-appointment and, in this connection, to consider and, if thought fit, to pass the following resolution of which Special Notice dated the 9th September, 1957, of intention to propose it as a Special Resolution pursuant to the provisions of Sections 190 and 261(1)(f), (2) and (3) of the Act, has been received by the Company as Mr. J. M. Parsons is an "associate" of the Man-

J. W. N. Baldock is an "associate" of the Managing Agents within the meaning of the Act:

"That Mr. J. W. N. Baldock, an officer of Macneill & Barry Limited, the Managing Agents of the Company, and, accordingly, an associate of the Managing Agents within the meaning of Section 2(3) of the Companies Act, 1956, be and he is hereby appointed a Director of the Company whose period of office is liable to determination by retirement of Directors by rotation."

The Share Transfer Books of the Company will be closed from 16th to 29th October, 1957, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.,
A. H. FORSTER,
Secretary,
Managing Agents.

WORLD OF TEA

(Continued from page 593)

and varied qualities catalogued. Second flush teas from Assam were again actively competed for and, although good prices were obtained, they were nevertheless generally lower. One or two exceptionally standout invoices, however, fetched high prices. Offers from the Uva district in Ceylon are nearing peak

quality; and 13sh 6d and 12sh 6d per pound were realised for Fannings and Broken Orange Pekoe respectively.

Tea stocks in London, as on the 13th September, were unchanged at 125.63 million pounds. Total amount to be landed on the same date was 20.43 million pounds. Deliveries totalled 9.81 million pounds, while landings were 9.81 million pounds. Total afloat was 30.37 million pounds, including 22.06 million pounds from Calcutta; nil from Chittagong; 1.83 million pounds from Cochin; 5.28 million pounds from Colombo and 1.20 million pounds from other ports.

BRITAIN DEFENDS THE POUND

(Continued from page 592)

should disclose some weak positions leading to difficulties, but owing to the absence of large speculative positions any trouble arising from this direction is likely to be moderate. The depreciation of Government securities has inflicted heavy losses on banks, insurance companies and other institutional investors. But the present level of these securities is obviously temporary, since the maintenance of the Bank rate at 7 per cent for a long period is almost inconceivable. Moreover, the abandonment of the policy of full employment at all costs would strengthen Government stocks in comparison with equities. During recent years first-class industrial equities have come to be regarded as being practically "glit-tered." The possibility of a major recession accompanied by cuts in dividends may induce many investors to reconsider this attitude and to revert to Government loans.

The next few months will be a most interesting and critical period. Given a certain degree of goodwill on the part of the industrial workers, Britain is certain to weather the storm and would emerge from it with a considerably strengthened economy.—(Copyright).

THE INDIAN IRON AND STEEL CO. LTD.

NOTICE is hereby given that the Board of Directors have sanctioned payment of dividend on the Preference Share Capital of the Company at the rate of 5% per annum for the half-year ending 30th September, 1957.

The Preference Share Registers will be closed on the 15th October, 1957. Payment will be made on or after the 1st November, 1957, to those Preference Shareholders whose names are on the Company's register on the 15th October, 1957, or in accordance with their instructions.

By Order of the Board,
MARTIN BURN LTD.,
S. GUPTA,
Director,
Managing Agents.

Stock Exchanges

DEPRESSION DEEPENS

Watch-Dog Writes:

THE week under review has witnessed further depression in equities due to renewed liquidation, induced by various uncertain factors. The trend is easy; turnover is thin and values are moving down. Even the present attractive low levels have not evoked any support. This reflects lack of confidence in the future.

Due to the proximity of the Pujah holidays, activity on the Calcutta Stock Exchange was at a low ebb.

Although the Bombay Exchange ruled fairly steady early in the week, prices developed a moderate setback due to profit-taking towards the close.

The Madras Stock Exchange ruled quietly steady. Popular Planting scrips recorded fractional gains, while Textiles continued dull.

DUNCAN BROTHERS & CO., LD.

NOTICE is hereby given that the Fifty-eighth Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 31, Netaji Subhas Road, Calcutta on Thursday, 24th October, 1957 at 11-00 a.m. for the following purposes:—

1. To receive and adopt the Directors' Report, and to pass the Audited Accounts for the year ended 31st December, 1956.
2. To confirm the dividend paid on the Preference shares and to declare a dividend on the Ordinary shares.
3. To elect a Director.
4. To appoint Auditors for the current year and to fix their remuneration.
5. To transact such other competent business as may be brought before the Meeting.

The Share Transfer books of the Company will be closed from 16th to 24th October, 1957 both days inclusive.

Warrants for dividends, when declared, will be forwarded in accordance with registered instructions, or, if no such instructions have been received, to the registered addresses of all shareholders whose names appear on the Company's Register at the date of declaration. No application for payment is necessary, and holders on blank transfer are therefore recommended to submit their shares for registration immediately.

By order of the Board,
DUNCAN BROTHERS & CO., LD.
S. H. DAVIES,
Director.

Calcutta,
26th September, 1957.

Wall Street closed firm with the main body showing a fair representation of gains, ranging mostly to a point or so.

Calcutta

TRADING on the local Stock Exchange was again a dull affair. With activity further restricted by the bank strike and the approach of the Pujah holidays, operators were inclined to lighten their portfolios, resulting in a downward trend of prices. It was also felt that there was every possibility of the Indian commercial banks raising their lending rates by half to one per cent. The general comment of financial observers that "any hope of raising a sterling loan in the UK should now be ruled out" was also a depressing factor. Thus, the market was faced with a wave of selling pressure, resulting in prices touching fresh low levels for the week. The pre-Pujah session ended on a subdued note.

The Giltedged section ruled quietly steady. The success of the two State Loans, recently floated, had a tonic effect on sentiment, although business showed no marked expansion. 3 per cent 1986 Conversion Loan changed hands at Rs 70.97 to Rs 71.10.

Bank shares came in for lukewarm support on hopes that a period of higher interest rates would have a favourable effect on bank profits. United Commercial changed hands at Rs 56.50 to Rs 56.75 and Punjab National at Rs 57 to Rs 58.

Jute shares were practically neglected. Despite firmer advices from the jute goods market, operators were not inclined to enter into commitments in view of the firmer tendency of raw jute prices. With the result, prices, wherever changed, were easier. The only exception to the general trend was National which met with sustained speculative support upto Rs 18.25. Fort William were, however, on offer at as low as Rs 16.50 against Rs 18.12; Ganges at Rs 48 against Rs 51; Budge-Budge at Rs 65 against Rs 74 and Anglo-India at Rs 133 against Rs 135.

Coal shares were listless, pending the announcement of a remunerative price for coal. Burrakur were rather sticky at Rs 21.75, while East Indian changed hands at Rs 21.12 to Rs 21.25 and Western Bengal at Rs 5.56 to Rs 5.62.

Textile lacked any support. There was a feeling that, although there was an improvement in cloth offtake, it did not come up to the expectation of the trade. Moreover, there were persistent rumours about closure of one shift in certain mills. Kesoram and New Victoria were the only steady features, being enquired upto Rs 11.62 and Rs 1.47 respectively.

The Tea section was also neglected and dealings continued to be very restricted with prices developing an easier tendency on general profit-taking in view of the obscure outlook for the industry. Anxiety seemed to centre mainly on the slowness of buying from the UK despite a steady decline in her stocks. Bateli changed hands at Rs 25.75 to Rs 26.00; Brahmaputra at Rs 4.44 to Rs 4.56; Brooke Bond at Rs 17.94 to Rs 18.31; Hasimara at Rs 18.75 to Rs 19.12 and Jayshree at Rs 9.12 to Rs 9.37.

Sugar shares were inactive and prices tended to soften on weaker advices from the commodity market. Carew were on offer at Rs 6.00 to Rs 6.25 as against Rs 7.00 in the previous week.

In the week's dealings, forward scrip were the worst affected, being subjected to nervous selling under the influence of Indian Irons. Against the week-end closing of Rs 17.20, Indian Irons opened better at Rs 17.22 and improved at one time to Rs 17.34 on better Bombay advices, to recede gradually towards the close to Rs 17.08. In sympathy, TEXMACO were marked down to Rs 15.20 from Rs 15.60 and G. K. Williams to Rs 28.19 from Rs 28.50. Jessop touched a low of Rs 24.50 from Rs 25.81; Richardson Rs 9.62 from Rs 10.25 and Marshalls Rs 4.62 from Rs 4.75, to improve at the close to Rs 24.56; Rs 10.00 and Rs 4.75 respectively.

The only two bright spots in the Miscellaneous section were India Steamship and National Carbon. The former met with persistent support upto Rs 11.31 from Rs 10.50 on rumours of a higher dividend and the company's decision to issue bonus shares in the ratio of 1:10, while the latter remained very firm at Rs 25.25 following the announcement of an interim of 75 nP per share for the year 1957. Orient Paper moved irregularly between Rs

22.46 and Rs 22.80 for most part of the week, to finish easier at Rs 22.30, while Tiltagur had support upto Rs 31.12 from Rs 32.06 and Shree Gopal upto Rs 14.87 from Rs 14.44. Indian Cable changed hands at Rs 24.25 to Rs 24.50; Dunlop at Rs 18.87 to Rs 19.50; NICCO at Rs 22.87 to Rs 23.44; Indian Aluminium at Rs 12.25 to Rs 12.50; Rohtas at Rs 16.69 to Rs 17.00; BIC at Rs 4.65 to Rs 4.80; Osier at Rs 3.00 to Rs 3.38 and Hindustan Lever at Rs 20.69 to Rs 20.75. Indian Copper moved narrowly between Rs 2.70 and Rs 2.80, to finish the week at Rs 2.71. Hindustan Motor were cheaper at Rs 5.56 to Rs 5.72 against Rs 6.00 and Aluminium Corporation at Rs 8.87 to Rs 9.12 against Rs 9.56.

Bombay

After earlier steadiness, the Bombay stock exchange developed a sagging tendency due to rumours about increase in Banks' lending rates coupled with absence of support.

In the Textiles section Bombay Dyeing came under pressure and closed one point lower on balance at Rs 51. Among other Textiles, Century declined from Rs 387 to Rs 385. Kohinoor receded from Rs 256.50 to Rs 254.

Among Steels, Tata Ordy was finally placed at Rs 160.00 as against its quotation of Rs 163.75 a week ago. In the Engineering section TELCO after earlier steadiness eased to close at Rs 133.50, from Rs 137.50.

Premier Construction firmed up in later dealings on rumours of Bonus issue to close at Rs 145.50. Elsewhere Tata Chemical was on offer at Rs 16.36. India Steamship was rather quiet at Rs 11.00 with Scindia also lower on balance at Rs 18.72.

CLIVE STREET GOSSIP (Continued from page 598)

investment to any significant extent. To do so, would be to slide back inevitably into a groove of stagnation. In such cases, the objective of better balance between demand and supply must be satisfied by a steady and intensive effort to raise resources rather than by giving up the game even before the battle is joined."

In this context, it is worth remembering that no free country in the world, not even the United States, has succeeded in developing its resources entirely without aid from other people. Communist China has had to depend heavily on help from the Soviet Union. The essential condition of development is that sizable inflow of capital is necessary. Unlike colonial powers in their hey day, we have no continents to exploit. And, unlike the less enlightened days and totalitarian countries of today, we cannot develop at the expense of insupportable tyranny on the common people.

But we dare not postpone development. It is in this context that the American Government should view the Indian request for a loan of 500 million dollars.

One final word. In many of the contributions to the book I have been discussing, reference has been made to the need for seeing that the investment is absorbed by the country to which it is given, and that it has the necessary technical, managerial, political and administrative resources to use the aid intelligently. On this question, it is gratifying to note that, even in the book itself, India has been frequently held up as an example of a country which has all these resources. Not that there has ever been, in American quarters, any doubt on this point. But it is a thought that can influence decision, once the basic willingness to help manifests itself.

WORLD OF BUSINESS

(Continued from page 595)

Capital of Rs 5 crores to be subscribed entirely by the Government of India. The subscribed capital, to begin with, will be Rs 2.5 crores which will be increased from time to time depending on the nature and volume of liabilities the Corporation is called upon to handle.

The Corporation's final terms and conditions of acceptance of business and the classes of exports to which the Corporation will issue the guarantee policies have not yet been made public. It has been announced, however, that the Corporation's guarantee policies will cover the following risks, namely: diversion risk, import and export control risk with certain safeguards, insolvency and default risks, war and civil war risks, transfer risks, any other risks caused by factors outside the control of the exporter or buyer which arises from events occurring outside the exporter's country, C.I.F. risks and the risks of inability to recoup by sale the expense incurred on market surveys, publicity, stock holding and other promotional measures for the development of a market.

The Corporation will be controlled by a Board of Directors composed of

BALANCE-SHEET REVIEWS

(Continued from page 588)

Rs 1.00 lakh for Preference Share Redemption Fund, announced a dividend of 12½ per cent on the Ordinary shares.

Edward Textiles Limited, Bombay, has reduced the dividend from Rs 18 to Rs 15 per share for the year ended 31st December, 1956 following a decline in the net profit from Rs 12.99 lakhs to Rs 10.25 lakhs. Sales are shown higher at Rs 2.29 crores against Rs 2.11 crores. In respect of allocations to Funds, the Depreciation amount is raised to Rs 6.25 lakhs from Rs 3.80 lakhs, while the provision for Taxation is reduced from Rs 3.60 lakhs to Rs 2.00 lakhs.

The Colmbatore Spinning and Weaving Company has, however, reported good results for 1956. Sales of cloth, yarn and waste have risen to Rs 1.98 crores from Rs 1.91 crores, while the net profit amounts to as much as Rs 16,45,999 against only Rs 10,52,217 in the previous year. The Depreciation amount is nearly maintained at Rs 3.92 lakhs, while Taxation provision is raised to Rs 5.00 lakhs from Rs 2.50 lakhs. A sum of Rs 2.00 lakhs is also set apart for Contingency Reserve and Rs 1.60 lakhs for Bad and Doubtful Reserve. Even after these increased allocations, the directors have found it possible to raise the dividend from 16 to 20 per cent for the year.

The mills are at present, working on an installed capacity of 72,832 spindles and 407 looms. In view of the age of the major portion of the plant and machinery, an extensive programme for the modernisation and renovation of the same has been undertaken. With the completion of the same and the installation of the 8,000 spindles for the manufacture of Staple Fibre yarn, for which the company holds a licence, the earning capacity of the mills is expected to increase, consistent with the prevailing trading conditions.

ER\$

Jost's Engineering

Satisfactory results have been obtained by Jost's Engineering Company Limited for the year ended 31st March, 1957, justifying the stepping up the dividend from Rs 4 to Rs 5 per share. Sales have increased to Rs 26.86 lakhs from Rs 23.33 lakhs. As against a loss of Rs 15,929 in the previous year, the company has made a profit of Rs 1.97 lakhs during the year under review. Out of this, Taxation provision has been made at Rs 1.03 lakhs as against Rs 43,000 and Gratuities Reserve Rs 20,000 against Rs 5,000.

The company had record sales and orders for Electrical instruments during the year; but the directors have pointed out that the curtailment of import licences, due to the foreign exchange position, will have an adverse effect on the trading position for the current year.

ER\$

Sri Sarada Mills

Among the few mills that have not been able to earn sizable profits in earlier years, on account of peculiar difficulties or worn-out

plant and machinery, is Sri Sarada Mills Limited. This company has been able to report better earnings in the year ended December 31, 1956. As a result satisfactory results for 1955 also it has been possible to provide against arrears of depreciation to a great extent and yet pay a dividend. It is only in respect of 1956, however, it could be said that the dividend of 10 per cent on the ordinary shares, the same as previously, is payable fully out of current earnings. As there was a debit balance of Rs 4.55 lakhs brought in from the 1954 accounts, the dividend for 1955 could be paid only with a transfer of Rs 3.25 lakhs from the general reserve, after making other adjustments. The net profit for 1956 was actually Rs 4.35 lakhs against Rs 4.25 lakhs for 1955. The earnings for the last year have been arrived at after providing for Rs 1.01 lakhs for payment of bonus to staff. The charge on account of depreciation is Rs 90,969 (Rs 1,25,111) while Rs 60,000 has been set aside as provision against bad and doubtful debts and advances. A sum of Rs 84,018 (Rs 96,178) has been allocated besides towards arrears of depreciation. The depreciation in respect of 1952 and 1953 is still to be written off. The dividend, as stated above, has been maintained at 10 per cent on the ordinary shares. The amount carried forward is substantially higher at Rs 1,45,103 against Rs 621 brought in.

Even with the depressed conditions in the capital market efforts are being made by established units to raise capital for expansion purposes.

ER\$

Haileyburia Tea

It was indicated earlier in this column that there was a likelihood of Haileyburia Tea Estates Limited issuing bonus shares. It has now been announced that besides the intention to issue bonus shares, there is also need for raising additional capital in order to meet capital expenditure. Thus, it is proposed to issue 31,250 Ordinary shares of Rs 10 each, at par, to the shareholders as on October 5, 1957 in the proportion of one share for every four shares held. The new shares will rank for dividend as from November 1, 1957. It has also been decided after the right issue has been made, to apply for sanction from the Controller of Capital Issues to capitalise sums to the credit of the Share Premiums Reserve and issue 31,250 Ordinary shares fully paid-up free to existing shareholders.

ER\$

Jeypore Sugar

This company has taken over the Jeypore Mining Syndicate Limited as from March 1, 1957, according to a scheme of arrangement sanctioned by the High Court of Orissa. It is proposed to erect a ferro-manganese plant in the mining division and the requisite plant and machinery have already arrived in India. The company's sugar plant in Rayagada is being expanded and the increased capacity will be 600 tons

per day against 450 tons presently while a new unit is being erected in Nagaram, in Rapalle Taluk, Guntur. The capacity of this plant is expected to be 800-1,000 tons of cane crushing every day. A loan was obtained from the Industrial Finance Corporation for Rs 30 lakhs for this purpose. It is now proposed to issue 7 per cent cumulative tax-free preference shares of Rs 100 each for Rs 10 lakhs in the first instance to existing shareholders. Shares not taken up by them will be offered to the public. Promising prospects are held out by the management as soon as the ferro-manganese plant and the new sugar factory start production. The company has been regularly paying ordinary dividends since 1947.

ER\$

Malankara Rubber

As a result of higher taxation in Kerala and lower level of earnings, the Malankara Rubber and Produce Company, Limited has been obliged to reduce the dividend on the Ordinary shares to 2½ per cent from 3½ per cent, for the year ended March 31, 1957. The rubber crop harvested for the year under reference was smaller at 612,797 lbs at an estate cost of 59 cents per lb against 686,083 lbs at an estate cost of 51.72 cents per lb. The higher cost, it is stated, was due to the smaller crop as well as higher wages and the payment of an additional bonus in respect of the years 1953 and 1954.

The net profit, before providing for Taxation and Depreciation, for 1956-57 was Rs 4,94,852 as against Rs 5,94,886 for 1955-56. The amount set aside to depreciation is Rs 30,943 (Rs 26,979) while, even with lower profits, there is no reduction in the liability towards taxation. The provision under this head was actually slightly higher at Rs 2,25,062 (Rs 2,21,237). The dividend on the Ordinary shares, as stated above, has been reduced.

Consent for the issue of bonus shares by capitalising Rs 4.5 lakhs out of Reserves has been received and shareholders will receive one bonus share for every two shares held.

THE PENINSULA

(Continued from page 604)

ing to interfere with their short-sighted and anti-national activities only at the stage of immediate threat to law and order. In other words, a general climate of sectional antipathies was allowed to develop, spoiling mutual relations and fouling the currents of public life. As long as this climate lasts, no one can feel assured over the prospect of social peace in the State. There can be no doubt that the tension which arose between the rival groups in Ramanathapuram found such a climate extremely congenial for its sustenance and growth.

One political party makes no secret of the fact that its aim is to establish an independent State of Tamil Nad. This ambition is not confined to one area. Kasim Razvi who promptly migrated to Pakistan

General Paper Limited

With an increase in the total turnover to Rs 20.5 lakhs for the year ended March 31, 1957 from Rs 18.98 lakh in 1955-56, the General Papers Limited has been able to report an increase in the net profit for 1956-57 to Rs 1,02,454 from Rs 81,023 for 1955-56. The provision for Depreciation is Rs 3,017 (Rs 3,539) and Taxation Rs 43,858 (Rs 37,500). The General Reserve gets Rs 6,500 (Rs 6,899) and the Dividend Equalisation Reserve Rs 9,000 (Rs 2,500). The dividend on the Ordinary shares has been raised to 8 per cent from 6½ per cent. The company is carrying on business in entirely in paper and boards, Indian and foreign, and is the largest of its kind in Madras.

ER\$

United India Fire & General

The business of general insurance has been expanding with the increase in general industrial activity. The United India Fire and General Insurance Company Limited has been able to report a rise in the gross premium income of the Fire Department during the year ended December 31, 1956 to Rs 25.25 lakhs from Rs 22.19 lakhs. The net premium income was Rs 11.34 lakhs as against Rs 10 lakhs. There was a profit of Rs 2,86,063 after providing for unexpired risks at 50 per cent of the net premium income. The profit has been transferred in the profit and loss account. In the Miscellaneous department, there was an increase in the gross premium income to Rs 9.21 lakhs from Rs 7.89 lakhs and in the net premium income to Rs 4.10 lakhs from Rs 3.50 lakhs. There was however, a loss of Rs 97,343 on account of this department. In the Marine department, even though there was a drop in the gross premium income to Rs 14.93 lakhs from Rs 17.87 lakhs and the net premium income to Rs 9.13 lakhs from Rs 11.34 lakhs there was a profit of Rs 1,51,930. Including the income from other sources, it has been possible to set aside Rs 1 lakh against Rs 20,000 for bad and doubtful debts and Rs 22,000 (nil) to Investment Reserve. The dividend has been maintained at 50 paise per share.

As old as time

As industries go, the world's petroleum industry is quite new. Yet even the youngest deposits of crude oil originate from long before the dawn of Man. Scientists say our oldest reserves are more than 50,000,000 years old.

In prehistoric times much of what we now know as dry land was covered by warm seas. Giant trees and jungle plants and countless millions of tiny marine creatures flourished on the edges of the swampy, shallow waters. Their remains, when they died, fell to the bottom of the sea and were buried in layers of sediment.

As age upon age went by the original sea floors were folded or broken by tremendous movements of the earth's crust. Mountain ranges were pushed

up. Parts of the earth cracked and slipped down to become valleys and basins. Tidal waves invaded the land to form new seas. Old seabeds emerged as new continents.

These conditions—massive sedimentary deposits, decaying organic matter and gigantic earth movements—produced the crude oil we know today. The locations of the old sea beds are now fairly well known. They occur in almost every region of the world.

Parts of the continent of India have these marine sedimentary rocks beneath them. The waves of ancient seas once rolled over Assam, and here, close to the growing Himalayan and Naga ranges, the oil-pools of Digboi and Nahorkatiya began forming many millions of years ago.

Assam Oil

A full-scale petroleum industry

This is one of a series of informative advertisements about the petroleum industry.

Indian Finance

Investor's Supplement

Business at Low Ebb in September

1 & 2
Sentiment in the Stock Exchanges was steady and prices showed stable improvement over previous levels. Presumably marketmen had been encouraged to extend commitments by the Finance Minister's hint that there would be no fresh taxation in the next three years. Dalal Street was helped further by the support extended to Tata Ord from the LIC. With Tata Steel moving up, sympathetic interest pushed up prominent scrips both in the Textile and Miscellaneous sections as well. Tata Ord spurred to Rs 165.75 from Rs 161.25. Among Textiles Bombay Dyeing gained nearly two points to be placed at Rs 55.75. Calcutta Shares also recorded modest gains, sentiment having been helped by the higher advices from Dalal Street. Indian Irons advanced from Rs 17.90 to Rs 18.10. Elsewhere, Jessop at Rs 24.50 and India Steamship at Rs 10.56 were bright spots.

3
Partly due to profit-taking and partly due to renewed apprehensions stemming from the reported statement of the Finance Minister that credit check might be extended to other commodities as well, trading on the stock exchanges showed an irregular pattern. The undertone, however, continued to be steady. In Calcutta, Indian Irons which began the day's session higher at Rs 18.24 developed a sagging tendency to close at Rs 18.12. But for the firmness of Svadeshi in the Textiles section reportedly on LIC support the Bombay market moved in an irregular fashion. Tata Iron shaded to Rs 165.25 from Rs 165.75 while Bombay Dyeing was subdued at Rs 55.00. Svadeshi spurred to Rs 184.00 from Rs 177.50.

4
Narrow price movements characterised trading in the stock markets as sentiment was subdued by lack of support coupled with reports of possible closure of one shift in textile mills due to mounting cloth stocks. In Dalal Street after earlier steadiness prices developed a declining tendency. Tata Iron receded to Rs 164.75 while Bombay Dyeing was fractionally lower at Rs 54.80. Lower advices from Bombay depressed sentiment in Calcutta where settlement considerations accelerated the downtrend. Indian Irons came back to Rs 17.96 from Rs 18.10.

5
Except for some support for selected jute shares, the Calcutta stock exchange ruled dull with

business passing at a low ebb. Irregular price movements were noticeable in Dalal Street where after a steady opening sentiment was adversely affected by the demand for the nationalisation of TELCO. After a slight recovery around midsession prices again sagged for want of sustained interest in the proceedings. Tata Iron was fractionally lower at Rs 164.50 as was Bombay Dyeing at Rs 54.70. In Calcutta on overnight support Irons opened at Rs 18.04 but again came under pressure to close at Rs 17.96.

6
In the absence of incentives, conditions continued to be listless in the stock markets with prices giving way even under small scale selling. Perhaps the only redeeming feature had been the steadiness noticeable in jute shares which met with enquiry presumably in view of better prospects for the jute industry in current accounting period. In Calcutta Indian Iron was, however, slightly higher on balance closing the day at Rs 18.06.

7, 8 & 9
Reports of improved prospects of substantial U.S. Loan to India engendered enthusiasm in earlier dealings and prices, in Dalal Street especially, recorded sizable gains. Later on, sentiment was again depressed on selling pressure in pivotal scrips. As a consequence Bombay closed quietly steady. Listless conditions continued to prevail in Calcutta as prices drifted to lower levels on liquidation. Tata Irons reacted to Rs 163.75 from Rs 164.50 with Bombay Dyeing shading to Rs 54.60. In Calcutta Indian Irons shaded further to Rs 18.00.

10
Extremely dull conditions prevailed in Calcutta where in the absence of interest prices gave way under small selling. Buyers were conspicuous by their absence. In Calcutta, Indian Irons moved within narrow limits to close at Rs 17.90. The jute section, however, met with moderate buying interest for selected scrips. Business passing was at a low ebb in Dalal Street in the absence of buying interest. While most scrips displayed a sagging tendency, one or two shares in the miscellaneous section found some interest. Tata Irons dropped a half a point to be finally placed at Rs 163.25 with Bombay Dyeing also lower on balance at Rs 54.10.

11
The more speculative scrips on the Calcutta Stock Exchange continued to move in a downward direction on selling pressure and

lack of interest. It would appear that the reactionary trend had been accentuated by the disappointment caused by the absence of any definite reference to the future dividend outlook for Indian Iron shares in the Chairman's Speech at the annual general meeting of the company held on that day. After opening at Rs 17.94 Indian Iron receded to close lower at Rs 17.82. Elsewhere conditions were subdued with price levels showing small losses on balance. A similar trend prevailed in Bombay where in the absence of interest rates recorded modest declines all along the line. Tata Iron lost another half a point to close at Rs 162.75 while Bombay Dyeing receded further to Rs 53.60.

12
Stock markets continued to rule dull and quiet as both operators and investors kept away from the trading rings presumably in view of the numerous uncertainties in the investment situation. Settlement considerations were an additional bear factor in Dalal Street where the downward movement was more conspicuous than in Calcutta. Tata Iron dropped full one point to come back to Rs 161.75 with Bombay Dyeing marked down to Rs 53.10. In Calcutta Indian Iron opened at Rs 17.80 and moved down to close at Rs 17.76.

13
Prices were again lower as marketmen continued to show little interest in the proceedings. What with the threatened clamping of more restrictions on credit and uncertain dividend prospects for Indian Iron, sentiment was understandably quite unenthusiastic and operators were chary of extending commitments. Indian Iron in Calcutta was further pushed down to Rs 17.64 while Tata Iron in Bombay dropped yet another point to be finally placed at Rs 160.75. Among Textiles, Bombay Dyeing reacted to Rs 52.70 from Rs 53.10.

14, 15 & 16
The two development Loans of Bombay (Rs. 6 crores) and Mysore (Rs. 3 crores), aggregating Rs. 9 crores were closed on the first day of their opening for subscription, on being oversubscribed in 30 minutes.

Prices recorded an all round decline in Calcutta on fresh offerings caused by anxiety over the threatened Bank Strike. Indian Irons, after closing lower at Rs 17.40, lost further ground after hours to be quoted at Rs 17.30. A slightly better feeling was noticeable in Dalal Street in earlier dealings when bear covering lifted rates

somewhat. Toward close, however, prices again developed a sagging tendency on profit-taking coupled with lack of fresh support. The market closed quietly steady with pivotal shares showing little change on balance. Tata Iron was unchanged at Rs 160.75 while Bombay Dyeing was fractionally higher at Rs 52.80.

17
The report that the US Administration was studying a proposal to ask Congress for an emergency loan legislation to assist India's Second Plan, seemed to have engendered a feeling of optimism among marketmen. In Dalal Street operators, in later dealings, evinced some interest and as a consequence prices of most scrips recorded moderate advance. Tata Iron was prominent with a gain of nearly 2 points at Rs 162.50. Among Textiles, Bombay Dyeing improved to close higher on balance at Rs 53.10. In Calcutta Indian Irons opened at Rs 17.38 and after declining to Rs 17.34 recovered to Rs 17.50.

The Calcutta Stock Exchange Committee decided at an emergency meeting that, in view of the bank strike, members should give their statements to the Stock Exchange for clearing No. 247 according to the clearing programme. It had further been resolved that they would pay their difference in cash to the Stock Exchange or by bearer cheques on Allahabad Bank Limited to the Stock Exchange. There would be a compulsory carryover at the budia charges as follows: Indian Iron 9nP, Texmaco 8 nP, Indian Copper 1 nP, Burrakur Coal nil Orient Paper 10 nP National Jute 9nP. The rates at which the clearing would be settled were as follows: Indian Iron Rs 17.40, Texmaco Rs 15.00, Orient Paper 21.40, Indian Copper Rs 2.75, Burrakur Rs 21.75, National Jute Rs 18.00. The Committee also resolved that members be warned not to increase their commitments. Members were informed that anybody found dealing excessively would be severely dealt with by the Committee.

18
The bank strike imparted a depressed feeling among marketmen and with the restrictions imposed by the Stock Exchange Committee, business passing was at a low ebb in Calcutta. Indian Irons opened at Rs 17.44 and after improving to Rs 17.54 reacted again to close at Rs 17.42. Dalal Street opened steady with prices continuing their upward movement on bear covering induced by encouraging news from US regarding loan to India. Toward close,

The secret of Popular Poplin—Sanforized sells!

ADVERTISEMENTS take the public into the shops, make them ask for cloth with the trade mark 'Sanforized'. Experience teaches them always to look for the label...but your customers don't know the 'behind the scenes' story that ensures the complete reliability of cloth labelled 'Sanforized'.

Anytime, unannounced—our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to the rigorous international wash-test, and reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized' on every yard!

It's this kind of constant care which lies behind the success of cloth with the mark 'Sanforized'—which makes it such a seller. Such a profit-maker for you!

Look for

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95, Marine Drive, Bombay 2.

For the Investor

Stock Market *Hawa* Full of Verve and Zest

Investment Gossip:

THE Calcutta Stock Exchange has left behind, it seems, not only the Puja festivities of 1957, but also the long drawn out lassitude, lethargy and listlessness that I spoke of in my last Investment Gossip.

As far as Pathakaram Pagla is concerned, no matter that immediate results are not to be expected from Washington on a loan to India. What is of import—of personal, profitable significance—is that Mr T. T. Krishnamachari would appear to have undergone a magical transformation as far as his utterances on economic policy are concerned.

Lyons Range has greeted the end of TTK's visit to New York and Washington with an outburst of cheerful optimism.

This, of course, is as it should be. It is interesting to note that, while the Finance Minister's objective was to create a climate receptive to Indian requests for dollar loans, he has, in so doing, succeeded in imparting verve and zest to the Indian stock exchange hawa.

I asked a friend for his opinion on the reasons underlying this sudden change of outlook on the part of Dalal Street and Lyons Range. His answer was to the point: TTK has to act upon his Washington statements and, when he comes back, his utterances are bound to have a bullish connotation.

When I pointed out that no official statement has been forthcoming from America that we are likely to get any large scale assistance, my attention was drawn to the announcement made by Mr Jagjivan Ram that the Railway Plan was being increased by Rs 300 crores. So, I was told, unless the Government of India have a sound basis for believing that foreign exchange for requisite amount will be available, they would not have announced that the Railway Plan, involving as it would a larger foreign exchange outlay, was to be increased in size and magnitude.

Then, there is the fact that the bears have themselves got tired.

HIGHLIGHTS

A new era in world history has begun.

With the successful launching of an artificial satellite, inter-planetary travel is now within the realm of possibility.

A new situation consequently exists.

For, many scientists hold the view that Russia's achievement places the USSR in a

While I can think of some masochistic individuals who would derive cheer from gloom, too long a period of such cheer is apt to be unsettling, even for the bear species.

As a matter of fact, I hear tell that, with Calcutta's winter on its way, the bears have decided to hibernate.

The winter that we have before us, up to and including the Budget for next year, should prove a period wherein stock exchange prices will steadily record an improvement.

I may be pardoned for suggesting that, even if TTK's visit to America does not bring a sufficiently large dollar cheque, we still have good reason to say that his visit has been a success. For, directly as a result of what TTK has been saying while in America, the pre-Puja bear markets are now turned into a post-Puja bull stock exchange.

ERs

BRIGHTER PROSPECT?

Investment Outlook:

This feature, as the reader will readily understand, serves a useful purpose only when the trends point to a steady, stable market; the reason being that trading is brisk only in a period of rising prices. There can scarcely be any argument about the fact that, in recent months, all outlook—at least in the eyes of the stock exchange fraternity—was bleak. I am emboldened to think that, at long last, stock exchange prices have turned the corner. So, the time is entirely propitious for the purchase—for investment—of blue chips all along the line. I shall endeavour, in future weeks, to suggest the scrip that should properly engage the attention of the investor; but I do not propose giving specific suggestions until there is the unambiguous indication that stock markets will be stable. I content myself with observing that, all in all, the investor seems to be about to come into his own.

ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.

Head Office: Oriental Buildings, BOMBAY-1

Investment Notes:

Midland Rubber & Produce Company Limited, Madras, has made an application to the Central Government for the sanction to issue bonus shares in the ratio of 1:2. The Government's decision is awaited.

Rajalakshmi Mills have proposed to issue right shares in the proportion of one share for every Ordinary share held, to holders as on the 25th October. The first call of Rs 12.50 is payable on or after 30th November and the balance of Rs 37.50 payable in three instalments at an interval of two months.

Messrs. Tata Industries Private Limited, Managing Agents for the Tata Iron and Steel Company Limited, report that the total approximate production of iron and steel at the Steel Works at Jamshedpur during the month of September 1957 was:

	(Tons)	(Tons)
Pig Iron	...	88,600
Steel Ingots	...	92,500
Saleable Steel:		
Semis	18,400	...
Finished	53,300	71,700

Investment Briefs:

Rohtag Industries have maintained the dividend at 15 per cent on the increased Ordinary capital for the year ended 31-10-1956.

Katras Jherria Coal has maintained the total distribution of 65 per cent for the year ended 31-1-1957.

Nagalsuree Tea has doubled the dividend to 15 per cent for 1956.

Parry's Confectionery, Madras, has raised the dividend from 15 to 20 per cent for the year ended 31-3-1957.

New Glen Morgan Estates have recommended a dividend of 10 per cent for 1956 as against nil in 1955.

Peninsular Plantations have recommended a total dividend of 25 per cent for the year ended 28-2-1957 as against 30 per cent in the previous year.

Kemp company has maintained the dividend at Rs 15 per share for the year ended 31.3. 1957.

Mukund Iron and Steel Works Limited has announced a maiden dividend of Re 1 per share for the year ended 31.3. 1957.

position virtually to take possession of the world.

And, for once, America lags far, far behind. To the layman, the prospect is one of further unravelling of the world's mysteries; the alternative: utter destruction.

The world is now at the crossroads: one path leads to greater knowledge, the other to

complete annihilation.

Is Pralaya—the word that Hindu mythology has for the end of the world—our destiny in the immediate future?

The Leading Articles section suggests, rather, that the scientific advance could be the harbinger of the beginning of the end of the world's quarrels.

Life Insurance Corporation

By K. V. IYER

Investment Special:

THE Life Insurance Corporation is a mammoth concern constituted under Act. XXXI, 1956 and entirely owned by the Government. Its capital is Rs 5 crores. It took over the entire life business of companies both Indian and foreign which had been carrying on this class of business and now holds a monopoly of all life business. Its funds run into hundreds of crores of rupees and, save for any catastrophe, are bound to increase from year to year like a snowball and their investment is a great responsibility. Security of funds is the foremost consideration, earning of interest, dividend or profit being secondary.

With the above picture in view, it is worth while examining the figures disclosed in the interim report for the period commencing from the 1st September 1956. The balance of funds increased from Rs 361 crores to Rs 378.88 crores i.e., by nearly Rs 18 crores. The investments during the period amounted to Rs 19.61 crores of which Rs 8.62 crores was invested in debentures and shares, ordinary and preference of companies (purchases Rs 8.81 crores minus sales Rs 0.19 crores) and it will be seen that the investment in companies amounted to nearly 45 per cent of the total investments. While investment in companies was Rs 54.79 crores out of the total investment of Rs 326.00 crores at the commencement of the period i.e., 16.7 per cent, it was Rs 63.41 crores out of Rs 345.61 crores at the close of the period i.e., 18.3 per cent an increase of 1.6 per cent.

Under the recent Second Amendment Bill the responsibility for the investment of these huge balances will be entrusted to an Investment

Board to be assisted by three Advisory Committees. The latter are, be it noted, purely advisory and to what extent their advice is taken and investments made in accordance with the advice of each Committee is entirely at the discretion of the investment Board. The Board's powers are enormous and however wise and circumspect they may be there is the risk of their activities being suspect and open to question as happened in the case of the Industrial Finance Corporation of India. The Corporation has great powers to do good as also evil, all depending on in what kinds of companies the funds are invested in and to what extent.

We have read of falls in the quotations for Tata Irons, A.C.C.'s and Indian Irons being arrested by the Corporation making purchases and so on. Such manoeuvres cannot be a recognised function of the Corporation as dealings in Government paper are supposed to be of the Reserve Bank in order to have a steadying effect.

It is essential that the Corporation should not be heavily interested or involved in any company. It would be as well that a limit should be placed on the maximum holding of the Corporation in the shares of any company, say as a percentage of the share capital of the company; also a maximum limit as a percentage of the funds of the Corporation which may be invested altogether in the share capital of companies. Further, nothing will disarm suspicion so much as the publication along with the report of a statement of companies in which investments have been made and the extent thereof. To this end, the Government may make a set of rules or leave it to the Committee to do it subject to their approval.

National Tobacco Results

Balance-Sheet Reviews:

WHILE sales proceeds have increased over the preceding year, trading results of the National Tobacco Company of India Limited, for the year ended 31st December 1956, have shown virtually no change. Higher replacement costs for tobacco and stores have contributed to the narrower margins on which the company was compelled to operate. Additionally, the withdrawal of concession in Excise Duty on certain varieties of unmanufactured tobacco, increased freight charges and higher interest costs, attributable to the greater financing consequent to increased turnover, have offset the benefits of increased business. Larger sales of unmanufactured tobacco have contributed to the increased sales proceeds; but a far greater proportion of sales have been of medium and low grade tobaccos on which profit margins are low.

Despite a substantial increase in sales from Rs 3.99 crores to Rs 5.16 crores, the net profit for the year, before providing for Taxation and Depreciation, is only slightly higher at Rs 29,61,445 as against Rs 29,28,469 in the previous year. This is mainly due to the increase in miscellaneous expenses from Rs 46.50 lakhs to Rs 60.40 lakhs. Apart from providing a sum of Rs 17,064 for Development Rebate, the provision for Taxation has been raised to Rs 13.13 lakhs from Rs 11.38 lakhs. The Depreciation amount is reduced to Rs 5.04 lakhs from Rs 5.10 lakhs.

A programme of renewal and modernisation of equipment and additions in other directions are being implemented and the directors have favoured the continuance of a conservative policy which will add to the Reserves for current and future capital expenditure. They have, therefore, transferred a sum of Rs 3.50 lakhs to this Reserve as against Rs 4.00 lakhs. Consequently, a reduction in the Ordinary dividend by 1 per cent to 7 per cent is recommended.

£ R S

Borraea Coal

The Borraea Coal Company Limited has reported a decline both in raisings and despatches for the year ended 31st December, 1956. Raisings are shown at 1.46 lakh tons against 1.53 lakhs tons and despatches at 1.44 lakh tons against 1.55 lakh tons. Although sales are slightly higher at Rs 25.24 lakhs against Rs 24.41 lakhs, the net profit, before Depreciation and Taxation, amounts to only Rs 3,41,841 as against as much as Rs 5,37,375 in the previous year. In this connection, it may be added that the former figure includes Rs 75,000 transferred from Coal Washing Plant Reserve.

In respect of allocations to Funds, the Depreciation amount has been reduced to Rs 57,095 from Rs 80,439 and Taxation provision to Rs 70,000 from Rs 1.98 lakhs. Taxation Contingency Reserve is, however, raised to Rs 15,400 from Rs 5,500

and Development Rebate Reserve to Rs 42,500 from Rs 2,000. A sum of Rs 83,000 has been provided for payments under Appellate Award. The dividend on the Ordinary shares is reduced from 20 to 15 per cent.

According to the directors' report, the colliery is capable of a higher output; but, on account of the raisings being restricted by the pegging target imposed by Government, it has not been possible to develop the potentialities of the colliery to the extent desirable. Progress to open the new area in Aralgoria has, however, advanced according to schedule. Provided the Government relax the figure for maximum raisings, there is every reason to anticipate improved results.

£ R S

Duncan Brothers

Despite a decline in earnings, Duncan Brothers & Company Limited has maintained the Ordinary dividend at 11 per cent for 1956. Sales are shown at only Rs 1.62 crores as against Rs 2.00 crores, while the net profit, before Depreciation and Taxation, amounts to only Rs 22.76 lakhs as against Rs 24.72 lakhs in the previous year. The directors have provided a sum of Rs 1.03 lakhs (Rs 1.18 lakhs) for Depreciation; Rs 24.00 lakhs (Rs 24.50 lakhs) for Taxation; Rs 7.50 lakhs (Rs 5.00 lakhs) for General Reserve and Rs 3.00 lakhs (Rs 5.00 lakhs) for Investment Reserve.

According to the directors' report, the full impact of the restrictions, placed upon the company's earning capacity by the Companies Act 1956, is likely to be experienced during the current year.

£ R S

Seeyok Tea

This tea company has again passed over the dividend for 1956. Thanks to a crop output of 2,470 maunds as against only 1,992 maunds in 1955 and the increase in the average price realised from Rs 2-3-0 to Rs 2-13-1 per pound, the accounts for the year reveal a net profit of Rs 50,825 against a loss of Rs 99,008 incurred in the previous year. A sum of Rs 7,015 (Rs 8,320) is set aside for Depreciation and Rs 45,000 (nil) for General Reserve.

£ R S

Clive Row Investment

The working of the Clive Row Investment Holding Company Limited, for the year ended 31st March 1957, reflects the poor 1955 season for the tea industry and the difficult times through which the jute industry passed. In the Profit and Loss Account, the item "By interest and dividends on Investments" is shown at only Rs 12.37 as against as much as Rs 33.90 lakhs in the previous year, while the net profit, before providing for Taxation, has declined to Rs 10,61,532 from Rs 31,92,061. The directors have, after reducing the Taxation amount to Rs 4.80 lakhs from Rs 10.70 lakhs, recommended a total dividend of only 7½ per cent as against 13½ per cent paid in the previous year.

The directors have, in their report, stated that the Tea Industry had a satisfactory season in 1956; and the company's results for the current year will benefit from the better dividends now being received in respect of that season.

£ R S

Hindustan Motors

The Hindustan Motors Limited has reported satisfactory results for the year ended 31st March, 1957. Sales have risen from Rs 7.72 crores to Rs 10.02 crores. After meeting all working expenses and providing Rs 30 lakhs (Rs 37.35 lakhs) for Depreciation, the profit amounts to Rs 9.92 lakhs as compared with only Rs 96,576 in the previous year. A sum of Rs 1.40 lakhs has been provided for the adjustment of Income-Tax deducted at source towards assessments for the accounting years 1950/51 and 1951/52, while the proposed dividend on the Preference shares absorbs Rs 6.75 lakhs. The balance of Rs 7.92 lakhs is carried over to next accounts.

Considerable progress has been made in the manufacturing programme. The Press Shop has started working and the manufacture of body panel for Hindustan Cars has been taken in hand. This is the first time that body pressing is done in India. With this manufacture, the imported components in the cars have been reduced to only minor parts, while most of the

major components are made in India.

The directors have pointed out that the Tariff Commission, after investigating into the price structure of automobiles, recommended to the Government to allow adjustment of prices by individual manufacturers according to their costs. The Government have accepted the Commission's recommendations. With the approval of the Government, the price of Hindustan cars has been partially increased after the closing of the accounts. The future prospects cannot, however, be forecast with any degree of certainty.

Great Eastern Shipping

Spectacular results have been achieved by the Great Eastern Shipping Company Limited for the year ended 30th June, 1957. Besides maintaining a 15 per cent dividend, the directors have recommended a bonus issue of shares in the ratio of one Ordinary share for every six fully paid-up shares held and one fully paid-up share for every 24 partly paid-up shares, subject to the approval of the Controller of Capital Issues.

The company has set a new record with regard to gross freight

revenue and net profit. Freight earnings amount to Rs 3.63 crores as against Rs 2.11 crores. The net profit works out to Rs 67.77 lakhs as against Rs 24.95 lakhs. Depreciation has been provided at Rs 26.40 lakhs as against Rs 18.66 lakhs. The directors have allocated Rs 11.59 lakhs to Deferred Taxation Reserve and Rs 42.50 lakhs to General Reserve.

INDIAN FINANCE

October 12, 1957

ended 30th June 1957, has resulted in a sharp fall in the net profit from Rs 17.28 lakhs to Rs 1.24 lakhs. Despite the sales being maintained at Rs 4.26 crores, the disappointing results are attributed to adverse conditions in the cloth market and higher prices of Egyptian cotton. The amount set aside for Depreciation is raised to Rs 22.58 lakhs from Rs 15.93 lakhs and Taxation to Rs 14.15 lakhs from Rs 13.00 lakhs. The directors have recommended an Ordinary dividend of 10 per cent.

£R\$

Phoenix Mills

After providing Rs 8.45 lakhs for Depreciation and Rs 12 lakhs for Taxation, the Phoenix Mills Limited has reported a net profit of Rs 17.63 lakhs for the 15-month period 31st March, 1957. A sum of Rs 8.75 lakhs is provided for General Reserve. The directors have recommended a dividend of Rs 12.50 per share.

Sales total Rs 3.30 crores, while closing stocks are higher at Rs 99.15 lakhs as compared with the opening stock of Rs 66.73 lakhs. As against a paid-up capital of Rs 48 lakhs, the company's Reserves and surplus total Rs 70.92 lakhs.

£R\$

Dawn Mills

After providing Rs 5.71 lakhs for Depreciation and Rs 6.00 lakhs for Taxation, the Dawn Mills Company Limited has reported a profit of Rs 2.97 lakhs for the 15-month ended 31st March, 1957. A sum of Rs 70,000 is provided for Employees' Gratuity, while a balance of Rs 24,810 is carried forward. The directors have proposed a dividend of Rs 7.50 per share.

£R\$

Sales of yarn total Rs 1.55 crores, while those of hosiery total Rs 28.02 lakhs. Against a paid-up capital of Rs 28 lakhs, the company's Reserves and surplus are shown at Rs 26.50 lakhs.

£R\$

Midland Rubber

The Midland Rubber and Produce Company Limited has been able to report a definitely higher level of earnings in the year ended March 1957. But the higher level of taxation recently imposed in Kerala has seriously cut into the dispos-

able profits. With the result, it has been possible to maintain the total distribution on the ordinary shares at 20 per cent. The net profit, before providing for taxation and depreciation, for the year under reference, was Rs 17,25,614 against Rs 12,52,114 for 1955/56. The amount set aside to depreciation is Rs 72,519 (Rs 1,17,081) while the provision on account of taxation is considerably higher at Rs 9 lakhs (Rs 4.8 lakhs). The company is adversely affected by the higher rates of taxation as its earnings are above Rs 15 lakhs, at which level the maximum rate is attracted. The burden of taxation thus works out even more than industrial units especially as plantation companies do not have the benefit of liberal depreciation provisions. In fact, what little depreciation is claimed is only in respect of the factory buildings, machinery etc on which capital outlay is relatively lower. As a result of the heavier tax provision, it has not been possible to transfer large sums to reserves. Provision for replanting is Rs 68,259 against Rs 2 lakhs previously while the gratuity fund gets Rs 50,000 (Rs 35,000). There was besides a transfer Rs 11 lakhs to other reserves on the last occasion. The final dividend of 10 per cent, makes with the interim dividend of 10 per cent already paid, 20 per cent for the whole year.

The tea crop harvested was 14,43,900 lbs in the latest season against 12,46,600 lbs in the previous season and rubber 10,60,000 lbs against 11,36,116 lbs. A higher average price for tea and rubber enabled the larger profits to be made, especially as the tea crop was substantially higher.

£R\$

Nilambur Rubber

The Nilambur Rubber Company Limited has maintained the ordinary dividend for the year ended December 31, 1956 at 15 per cent. There was a slight increase in the profit after depreciation to Rs 82,661 from Rs 76,320 in the previous year. The rubber crop harvested was 1,85,222 lbs against 1,64,542 lbs in 1955. There was also an increase in the sale price to 149.95 cents from 136.39 cents in the previous year while the cost of production was more or less unchanged at 88.35 cents per lb.

IFC First Fruits

THE International Financial Corporation, the youngest of international financial organisations, represents a joint attempt by a large number of countries, every one of them non-communist, to promote the expansion of private enterprise. The President, Mr Robert L. Garner, is therefore amply justified in devoting a considerable part of his address to the first annual meeting of the Board of Governors to advocacy of this form of business organisation. Expressing his firm belief that the best services and the best profits result from a competitive system wherein skill and efficiency get their just reward, the IFC President recommends such this system to all the member countries, among whom there are those economically advanced and those which comprise the new frontiers of economic growth.

India, being one of the leading participants in the Organisation, is surely interested in the general ideas governing its attitude, though these ideas need not necessarily meet with its full approval. Born ten years after the birth of the International Bank for Reconstruction and Development, the IFC, from the stand-point of enlightened politics, might look relatively retrograde in outlook, lacking the sweep and catholicity of the earlier institutions. Though the bulk of the World Bank loans have been given to countries not wedded to Communism, there is a significant exception in Yugoslavia. Under the present constitution of the IFC, certain areas of the world will permanently remain out of bounds for its operations.

Staunchly wedded to private enterprise, the IFC has naturally to face the obligation of making this system more refined, better adapted everywhere to new concepts of human relations and thus acceptable to increasing numbers of people. Mr Garner admits this responsibility, when he describes model private enterprise as a good citizen of the community. IFC's contribution to the development of private enterprise in a more direct and more concrete manner is in evidence even during the first year of its existence. A number of innovations have been suggested on the organisational and procedural side of industrial enterprises.

There is something novel about the corporation's manner of financing. It takes the form neither of fixed interest loans nor of full-fledged share capital, but of a combination of the two, loans carrying some interest and some right to participate in the growth of the business. This participation can take the form of (1) a right to convert the loans to some part of the share capital or option to subscribe to share capital or (2) a right to some additional income related to earnings or (3) both. There is no standard rate of interest. IFC portfolios are intended to be transferred to private investors as soon as they prove successful and after giving the principals of the concerned enterprise the right of first refusal.

In other words, the Corporation puts money on enterprises with satisfactory promise and withdraws it when that promise is fulfilled. Reasonable risk-bearing seems the motto of the Corporation. There is also piece of great self-denial in relinquishing the permanent fruits in favour of other. The successive re-deployment of capital in different enterprises

makes for the largest coverage possible with the funds available. Mr Garner describes this process in a more graphic way:

"This role seems to me rather well set forth in the dictionary definition as 'the acceleration of a reaction produced by a substance, called the catalyst, which may be recovered.....The reaction in which IFC is involved is accelerating the spread of private enterprise, and we seek to recover our catalytic funds (naturally with appropriate rewards for their use) so that we can participate in more and more reactions."

Besides, the Corporation has also found opportunity to communicate ideas on more simplified procedures and legislation. It is fortunate that this kind of initiative has stemmed from an agency commanding international loyalty. Though the anomalies referred to by Mr Garner have existed for long periods time in several countries, a systematic all-round attempt to remove them even to focus attention on them, has, somehow other, been hitherto largely missed. In the first year's Report, we see no more than the

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the Side of what is Right."—The Analects of Confucius.

glimpses of efforts. The Corporation has set the ball rolling in the direction of economising the time and energy of the management in administrative procedures, of altering legislation governing the issuance of Corporate securities, and in the field of organisation, of encouraging international private participation in industrial ventures, taking due note of the emotional conditions under which they will have to function.

The Corporation's first year's investments amount to \$6 million. Four of the five ventures to which they have gone are in Latin America and the fifth in Australia; \$2 million for the manufacture in Brazil of heavy electrical equipment by one of the leading German companies; \$520,000 for Airplane engine overhaul in Mexico by an important Canadian and British aviation firm; \$600,000 for the manufacture of automotive and industrial equipment by a local Mexican company, owned jointly with United States nationals; \$2.2 million for copper mining, combined with a new smelting process in Chile, by a Latin American group; and \$660,000 for the expansion of a lumber business and the introduction of timber impregnation in Australia.

Unearthly Achievement

RUSSIA'S release of an earth satellite travelling round the globe at a height of more than five hundred miles and a speed of eighteen thousand miles per hour has evoked wonder and some degree of alarm; wonder over the tremendous advance registered in the field of scientific achievement and alarm over the colossal and ever-growing distance between the individual human being and the power represented by the new discovery. Professor Frederic Joliot-Curie, one of the greatest of the world's atomic scientists and President of the World Peace Council, hails the satellite as a turning point for civilisation and warns the human race that it might as well get ready to leave this planet, now that space has been opened up. Mr Jawaharlal Nehru is led to contemplate that the more we advance in the field of science, the less we seem to progress in the field of civilisation.

Immediately no direct military significance is attached to the release of the satellite. Interest is fastened exclusively to the scientific instruments inside the satellite transmitting information back to the earth on the physical properties and reactions of the outer space. About half of the earth satellite, said to be weighing roughly 180 pounds, is made up of such instruments; through these a great deal of basic data is expected to be made known about the shape and constitution of the earth, atmospheric density several hundred miles above the earth's surface, etc. The military significance of the phenomenon arises indirectly from the fact of Russia's possession of rockets having far higher power than could possibly have been conceived of hitherto.

It is also this fact no less than the laurels of the pioneer which Russia has so unexpectedly scored which should make the US, the great rival in atomic research, feel beaten in the race. The Scientific Correspondent of the Moscow Radio has no doubt that US would soon be able to launch an artificial moon. The

prospect will not fully compensate for the earlier failures with experiments admittedly less powerful than the one with which Russia has succeeded. In the atomic race, Russia now finds itself clearly ahead of the US, having gained the first lead through the release of the ICBM, to be soon followed by that of the baby moon.

It is tempting to look upon new developments and make comparisons, with reference to the post-war international cold war. Every big swing in the balance and every contributory factor to it have inexorable psychological consequences. The artificial satellite makes Mr Nehru think that military alliances have become out-moded. Military power, however, is only becoming more and more menacing. It is debatable if its present concentration in two or three places is more advantageous to humanity than a wider dispersal. The one non-controversial fact is the growing smallness of the individual in relation to his environment of knowledge and power, coupled with utter uncertainty over the future.

It might perhaps be more realistic and refreshing to interpret these marvellous discoveries as a turning point for the better. Only a week before the satellite was released, a Soviet scientist broadcasting over the Moscow Radio claimed the approaching realisation of an age old dream in the conquest of tidal energy. Almost simultaneously Russia announced a new anti-flu preparation credited with capacity to exterminate the flu virus and to reduce the time required for treatment. After all, when Khrushchev volunteered to share some great atomic revelations and work with the US, he must have been thinking genuinely in terms of the welfare of mankind and of the folly of conduct which will only have the effect of human extermination. From the great heights reached through scientific advance, it might become easier to view the quarrels between peoples, in a perspective of lofty detachment.

The Story of Oil — 2

A miracle of nature

Crude oil, or petroleum as it is often called, occurs in many parts of the world—chiefly in regions where sedimentary rocks once formed the bottoms of ancient seas.

No one is sure how oil originated. The most widely accepted theory is that it resulted from the decay and alteration of the remains of prehistoric animals and plants. This organic matter was washed from the land into the vast jungle of marine life under the seas. The deposits, mixed with mud and sand, formed layer upon layer on the bottom. As these became buried, Nature's mysterious chemistry got to work. It slowly transformed the organic matter into the compounds of hydrogen and carbon which we now know as oil, and at the same time the fine sediments which covered it

were compressed into rock strata. The newly-formed oil oozed into the nearest layers of porous rocks, which held it as if in a sponge, and here it remained.

Throughout the millions of years that oil was being formed, many changes were taking place in the earth's crust. It rose and fell, was crushed and expanded. Lands were drowned, sea-beds became dry land. In some places cracks developed and the land slipped, forming 'faults'.

During these violent changes, some of the imprisoned oil escaped and was lost. In other places it was so near the surface that it seeped through and was discovered and used by man from the earliest times. But the bulk has remained trapped in its porous rocks beneath the surface of the earth.

More than Goodwill

The Prime Minister's visit to Japan, though officially labelled as a good-will mission should serve to promote mutual interests of a concrete kind. Politically, Indo-Japanese relations are inhibited by Japan's close and continuing association with the US, disabling a pattern of foreign relations fully in line with India. On the issue of China's entry into the United Nations, there is a gulf between the attitude of the two countries, which can be bridged only if the existing division of Chinese territory ends and the two unequal regimes get fused into one.

The synchronisation of the elections to the Security Council with Mr Nehru's visit to Japan could have been extremely awkward if for quite understandable reasons India's vote had gone against Japan. A realistic assessment of the pros and cons resulted in India voting in favour of Japan against Czechoslovakia. Even the Prime Minister's unfriendly comment on the idea of an Asian Development Fund sponsored by Japan is guarded and tentative to the extent that it called for clarification and indicated existing anomalies. It may not be irrelevant to recall that it was Japan's famous victory over Russia in 1905 which opened the gates of nationalism in Asia in this century. Mr Nehru himself is prepared to welcome greater co-operation between the two countries without seeking a complete alignment of views on foreign affairs.

In the economic field, the two countries stand to gain a great deal by systematic co-operation. Japan has become the principal customer for Indian iron ore. A Rs 150 crore deal is in the air, under which Japan would take up the development of rail track and a port in Orissa State for the exploitation of and trade in iron ore on

a big scale. Another loan of 30 million dollars possibly as deferred credit from Japan is also among contemplated possibilities. Talks will shortly commence on the import of textile machinery from Japan on long-term credit.

When these proposals fructify, a beginning will have been made with inter-Asian financial co-operation on a scale and range far beyond that of the Colombo Plan. At a Press conference, Mr Nehru stated that India was interested in big credits and loans and would welcome them from any country, at the same time adding that no discussion on this subject had proceeded with Japan. It has to be surmised that the economic talks now being held in India and Tokyo are immediately more concerned with a trade agreement.

The two countries are in complete accord on the need for immediate cessation of nuclear tests, through which Japan is now the worst sufferer.

In Search of Industrial Peace

In spite of the assurances and undertakings given by trade union leaders at the Tripartite Labour Conference held in July, strikes continue to bedevil the country's economic life. There is a general feeling that the machinery for the settlement of industrial disputes is far from perfect; tribunal awards often do nothing more than set off prolonged legal bouts which in turn lead to further differences and demonstrations.

All the same, a sure alternative is far from sight; whatever changes are conceivable, there is hardly any which assures a fairly permanent acceptance of conditions. The fault also lies with fluctuating economic conditions which, incidentally, is a far bigger problem. Keeping this far apart, it would be profitable to pursue methods which hold the promise of more satisfactory results.

Addressing a meeting at Madras, Mr V. V. Giri, one of the most sober experts on labour problems now available, suggested two courses, one is to invest Personnel and Welfare Officers with greater powers which he courteously described as opportunities, and the other to set up joint standing machinery for the smooth conduct of industrial relations.

In other words, what Mr Giri envisages is a shift from extraneous guidance and pressure to autonomous methods within the industry itself. It is simple logic that the welfare of both the management and the workers is deeply affected by the rupture in mutual relations. The Welfare Officers are most congenial and convenient agencies for thinking and acting toward the most

Editorial Notes

effective ways of avoiding such rupture and in the event of its occurrence, of achieving a quick reconciliation.

In India, Welfare Officers are frequently looked upon either as a screen between management and the workers or as a glorified health visitor. The entire conception of the functions of this officer must change. Likewise, a standing joint committee, where controversial issues and incipient problems could be discussed then and there with frankness and realism can go a long way toward minimising open friction. At least, similar bodies have established a creditable record in other countries. Mr Giri points to the UK by way of example.

A Lesson in Accommodation

The vestigial border disputes between Andhra and Madras threatened at one stage to revive the acerbities which States Reorganisation had left behind. In Madras, an agitation was in full swing for the recovery of certain territories which were included in the Andhra State. There was some stiffening of attitude on the opposite side too, on the same issue.

Mr Pataskar had a delicate task for convincing both parties that neither could secure its demands in full. Fortunately the alterations suggested by Mr Pataskar and, after some last minute parleys, accepted by both parties roughly balance losses and gains. The rigid application of certain criteria such as the insistence on a continuous border line, the avoidance of isolated pockets, due consideration for geographical and economic features and the preservation of whole villages intact aided settlement.

The existence of trilingual areas provided perhaps the most obstinate point of difference. As the rival claimants could not agree on the future of such areas, the arbitrator naturally had to take decisions with reference to a common principle. The Governments of Andhra and Madras also deserve congratulation for not pursuing claims which were obviously far-fetched and which, if conceded, would have led to incongruous consequences. The settlement of the disputes in the manner done is a striking achievement and a no less striking example.

Indo-Yugoslav Trade

Dr. Vladimir Velebit, Under-Secretary of State for Foreign Affairs, Yugoslavia, claims that for the past several years the political outlook of Yugoslavia has been almost identical with that of India. Authoritative opinion in India may not quite agree. India is a democracy which is sincerely friendly with Communist countries. Yugoslavia is

a Communist country which professes friendship with democratic countries. Both have built up a tradition of foreign collaboration and assistance irrespective of political ideology.

These are unique points of resemblance and economic co-operation between the two countries may also secure extra stability on account of them. Already there has been a phenomenal increase in mutual trade in 1956 compared with the previous year. Yugoslavia's exports to India rose by about 15 times; imports from India also increased several fold.

The complementary character of the trade, which is of special significance in the present phase of Indian economic development, is underlined by the fact that Yugoslavia is in need of imports of which India has a genuine and substantial surplus and vice versa. Indian imports now consist of metal products ranging from rolled steel and non-ferrous metal articles to the most complicated machines, apparatus, capital equipment for hydro-electric stations, ports and heavy industries. Yugoslavia looks for iron and manganese ore.

Recent bargains for the import of machinery from Yugoslavia reflect that country's appreciation of India's difficulties. The Panjar hydro-electric plant was offered for long term credit as also 5000 high tension transformers. A cargo ship and a patrol craft were delivered against payment largely in Rupees. The Railway Board and the Central Public Works Department have contracted for material worth many crores of Rupees from Yugoslavia. As many more contracts are considered likely, a permanent Yugoslavia foreign trade mission in India is also in prospect.

Foreign Exchange: In a Flux Internal Economy: Stability?

THE larger problem of foreign exchange resources for the Second Plan is tending to obscure, in all economic discussion in the present day, features in the internal economy which are of heartening significance. We are not for a moment suggesting that foreign exchange is not the central and pivotal difficulty, but we do submit that we should shake ourselves free from our overweening preoccupation, to the exclusion of anything else, with the progress of Mr T. T. Krishnamachari's endeavours in the United States and Canada. For example, amidst the great debate on inflation, and, in particular, in the context of the pressures that have been felt in the economy since the beginning of the Second Plan, we should have thought that emerging signs of such pressure being not only held at bay but even reversed would have aroused wide interest. The index number of wholesale prices has been showing a very steady drop since the middle of August, and, as compared to last year, the advance registered in the index is of negligible proportions. Indeed, the consumer price index in America has shown a much greater advance than is the case in this country. Moreover, it seems to be becoming part of economic theory that "mild" inflation—that is to say, a rise of between 1 and 2 per cent every year—is inevitable. If, in this background, and in spite of the inflationary potential postulated by the Second Plan, the Indian monetary authorities have succeeded in putting a brake upon prices, it is surely no mean achievement.

Then, there is the matter of scheduled banking credit. The Governor of the Reserve Bank some months ago expressed the view that credit squeeze was no panacea, in the eyes of the Reserve Bank, for curing the malady of inflation. At the same time, realism demanded that the banking system should not find itself unequipped to take on the heavier duties and responsibilities which, it could be said with certainty, it would have to face in the near future. We are here referring to the demand that was made upon Scheduled Banks for credit during the last busy season. In November last year, the problem was one in which the accommodation given by Scheduled Banks was already at a high level; and means had to be devised whereby the fresh demand occasioned by the busy season could be met. So, the Reserve Bank indicated its willingness to help the banking system to replenish

its resources, by granting liberal facilities for central bank credit against usance bills. By the time the busy season had reached its peak, Scheduled Bank advances had mounted sharply to just under Rs 940 crores.

Determined not to be faced with a similar problem on the eve of the 1957-58 busy season, the Reserve Bank gently advised member banks to effect a reduction, during the 1957 slack season, in the "unproductive" Advances. In broad terms, it was suggested that Advances should be brought down to a level around Rs 800 crores by the end of the slack season. At that time, there was not much confidence in the ability of Scheduled Banks to achieve this target. This lack of confidence to some extent was derived from the apparent failure of Reserve Bank directives in respect of Scheduled Bank advances against foodgrains. The prospect appeared more bleak when it was confessed on the floor of the Parliament that even an entity such as the State Bank experienced difficulty in recalling Advances. We need scarcely add that, thereafter, the directives began to bear fruit; food prices began to respond, and, finally, Advances began to decline. So much so, by the end of September, Advances of member banks had fallen by rather more than Rs 100 crores from the busy season peak, and it is now possible to place entire confidence in the ability of Scheduled Banks to bring down Advances to Rs 800 crores by the allotted time.

In the meantime, the second favourable development has been the remarkable accretion to Deposit resources of the banking system. Between the busy season peak and the end of September, the addition to Deposits has aggregated Rs 107 crores. With one more month to go, it seems now well within the competence of member banks to record an improvement of Rs 150 crores during the 1957 slack season—a figure that was suggested by Indian Finance in April this year, but which, at the time, seemed a foolhardy prediction.

Thus, the position on the eve of the 1957-58 busy season is that Advances expressed as a ratio to Deposits may be at the very satisfactory level of 59 per cent; this is on the assumption of Advances being at Rs 800 crores, and Deposits at Rs 1350 crores. If we were to assume that the additional demand during the busy season will be for roughly Rs 200 crores,

and even in the contingency that, during the busy season, there is no addition to Deposits, the advances/deposits ratio would, nevertheless, at the busy season peak, work out only to 74 per cent. From the point of view of the capacity of the Scheduled Banks to meet the next busy season's demand, we may, therefore, say that the position is reassuring and confidence inspiring.

We now come to the question of interest rates. To be sure, the term money rates have shown little signs of slackening. On the other hand, there has been a remarkable readjustment in the call money rate, despite the contrary pressure exerted by the difficult situation encountered by banks in Calcutta. The focal point of discussion in this respect seems to be whether or not, in the ensuing busy season, the Reserve Bank will choose to raise the Bank Rate. Here, we have been given some paradoxical hints. On the one hand, Mr Krishnamachari was quite categorical in his belief that high Bank Rate would be largely futile. On the other hand, Mr H. V. R. Iengar asserted some time ago that the prospect was for any change in interest rates, if it took place at all, to be upward. Unfortunately, the decision by the UK Government drastically to raise the Bank Rate to 7 per cent may be given a weighty consideration by the Indian central banking authorities. The one telling argument, as we see it, against India following suit lies in the fact that raising of Bank Rate by this country is not going to succeed, for

that reason alone, to attract new or additional foreign funds. In these conditions, let it be recognised, the only justification for higher Bank Rate would be if, thereby, in fact, foreign funds are lured into India. If, as indeed seems inevitable, no foreign funds can be expected as a consequence of such a measure, then, we would emphasise that Government should eschew any such raising of Bank Rate in the busy season. Rather, the welcome development in the call money rate, the reduction in the level of Advances, and the sharp improvement in Deposit resources should all be construed as suggesting that the conditions are propitious for the evolution by Government of a sound and orderly structure of interest rates. We shall not, at the present, say more on the subject; but we would once again emphasise that dear money cannot by any means be counted upon as salvation for India's monetary difficulties.

Finally, there is the fact that selective monetary control has been found to be efficacious, if we may read, in the decline in wholesale prices, a response to Reserve Bank directives. This must encourage the Reserve Bank to place even greater reliance upon selective control as a proper policy for the present-day Indian economic conditions. In a word, foreign exchange is now in a state of flux; but it will be pessimism of the most abject kind on our part if we did not recognise the stability in the internal economy and if we did not derive appropriate cheer from that fact.

Impact of Calcutta Hold-up

The banking returns bear forceful witness to the monetary situation as affected by the holdup in the Calcutta banks. Member banks have been compelled to increase their borrowings from the central banking institution; and there is evidence also of their making the necessary arrangements to meet not only the emergency situation postulated by the holdup in Calcutta but also to cater to the Puja needs in the West Bengal area. As such, it may be said that the bank returns are almost contra-seasonal in character. What these changes are, and how the banking figures may be a distortion of the economic situation, it will now be our purpose to study.

We may first examine the Reserve Bank returns over the last two weeks. Active Note circulation showed a small drop of Rs 2.25 crores to Rs 1471.11 crores on September 27. In the returns for October 4, month early disbursements, as well as the Puja demand at the end of September, have occasioned a sharp increase of Rs 16.36 crores to Rs 1487.47 crores in active notes.

Rupee Coin, which returned from circulation for Rs 0.80 crores in the week ended September 27, went out into circulation for Rs 0.99 crores

in the next week. Consequently, the Reserve Bank's cash in the till, after rising by Rs 2.84 crores to Rs 44.33 crores, has declined in the latest week by Rs 17.35 crores to Rs 26.98 crores.

In the last week of September, there was a transfer of Rs 9.93 crores from Foreign Securities to Balances Held Abroad in the Banking Department. This was offset by a rise for a like amount under Rupee Securities. As we shall presently see, this change under Rupee Securities is indicative of deficit financing. There is no change under either Foreign Securities or Rupee Securities in the latest returns.

The Centre's balances improved by Rs 3.14 crores to Rs 52.19 crores on September 27, before declining to Rs 51.31 crores in the first week of October. It is to be presumed that Central Government disbursements have been heavy, since there is evidence of substantial deficit financing in both weeks.

In the last week of September, investments have been marked up by Rs 4.56 crores; and, in the Issue Department, Rupee Securities, as we have seen, were higher by Rs 9.93 crores. Since we can rule out the possibility of open market sur-

(Continued on page 706)

An Ill-advised Dollar Credit

By PAUL EINZIG

THE increase of the Bank rate to 7 per cent, together with the steps taken by the British authorities to establish a ceiling to capital expenditure and bank credits, conveyed the impression that the policy of taking the line of least resistance was over. Unfortunately, rejoicing over the hardening of the British Government's attitude was premature. For the first step following on the batch of firm measures constituted a relapse into the policy of taking the line of least resistance. The decision to utilise \$500 million of the credit arranged sometime ago with the Export-Import Bank showed that the Government itself did not altogether trust in the effectiveness of its resistance to wages inflation.

The announcement was no doubt intended to be a gesture to discourage speculation against sterling. But from that point of view it was utterly futile, because every foreign exchange dealer had already been aware of that of the existence of this credit, and that the British authorities were in a position to draw on it at a moment's notice. On the other hand, the announcement, which created no new situation, did draw the attention of the semi-literate masses in Britain to the fact that there was this additional protection to sterling, which will enable the trade unions to continue plundering the community for another two to three months with impunity. And it did foreshadow the Government's intention to use these credits, possibly in preference to applying any additional unpopular measures in defence of sterling.

The trade unions are well aware that, should speculative pressure on sterling continue to deplete the gold and dollar reserve, a stage is liable to be reached at which unemployment would develop as a result of Britain's inability to pay for raw material imports. This fear, together with the realisation of the possibility that this time the Government really means to encourage employers to resist wages claims even at the risk of major strikes, would have gone a long way towards putting the trade unions into a reasonable frame of mind. But the announcement of the dollar credit arrangement has materially mitigated such fears.

The reaction of the trade unions to the announcement was instantaneous. For several days after the increase of the Bank rate their spokesmen carefully refrained from disclosing their intentions. They were waiting to see whether the Government really meant business. But immediately after the announcement concerning the dollar credit the T.U.C. indicated that it was in a fighting mood, and one of the railway unions put forward a claim for a 10 per cent wages increase. If the dollar credit was intended for inducing speculators to cover their short positions in sterling, it failed deplorably in this object. Indeed it tended to produce

precisely the opposite effect. For the attitude of speculators is determined by the view they take on the prospects of the wages spiral. If they believe that the inflationary increase of wages will continue, no amount of temporary dollar credits would induce them to cut their losses by covering their short positions. And the gesture conveying the impression that even now the British authorities are not fighting with their backs to the wall but are adopting measures to facilitate yet another retreat certainly does not discourage speculators in this belief.

Ever since the end of the war dollar aid received by Britain has

largely contributed towards softening the character of both Government and people. The billions of the dollar loans and aids have financed twelve years of fool's paradise. They enabled the Socialist Government to indulge in the ideological dogmatism of nationalisation and inflation through cheap money policy and excessive welfare state expenditure. They also enabled the Conservative Government to indulge in the ideological dogmatism of the premature dash to laissez faire, and to buy temporary popularity by allowing wages inflation to continue.

The Government also deserves criticism for persisting in its attitude of ideological dogmatism which has greatly facilitated the speculative attack on sterling. Simultaneously with measures to resist infla-

tion, measures should have been taken to reverse the grossly premature progress towards convertibility. Under existing arrangements half the world is likely to finance its dollar gap through the free commodity markets in Britain. In such circumstances the surplus of £200 millions on the balance of payments of the United Kingdom is but a drop in the ocean of non-British claims on Britain's dollar resources. The re-introduction of some degree of exchange control, together with the adoption of selective ban on capital and credit for the production of luxuries, would deprive the trade unions of their main excuse in support of their excessive wages demands—that if there is a general "free for all" the trade unions are fully entitled to take their full

(Continued on page 706)

ACC HONOURS THE CODE

3

"Employers owe it to labour to recognise that welfare is not conceived in terms of philanthropy, but as a social obligation. Men and women engaged in production shall do so with dignity, honour and a sense of security. Fair wages should be paid for work done. Working conditions shall be as pleasant as possible."

Code of conduct—FORUM OF
FREE ENTERPRISE

As an employer of labour the ACC can well point with satisfaction to the salary/wages and other emoluments paid to its employees and to the many welfare activities voluntarily undertaken over the years.

To take salary/wages first, compare these figures of ten years:

	1945-46	1955-56
No. of employees	17,500	29,000
Salary/wages & amenities	Rs. 127.3 lakhs	Rs. 421.5 lakhs

Thus while the increase in the number of employees was 66%, the increase in the salary/wages, etc. for the same period was over 230%!

As for welfare activities, employees of the ACC's 17 factories and two collieries have for a long time been enjoying a large number of amenities for their security and social welfare, namely: provident fund and gratuity; schools, hospitals and dispensaries, creches, canteens, cinemas, clubs, playing grounds; welfare and benefit fund, and co-operative societies.

All these benefits have been provided out of a consciousness of social obligation. The ACC believes that a well-paid, well-looked-after, happy and contented employee is the best employee.

The Coming Industrial Clash in Britain

By PAUL EINZIG

JUDGING by the firm tone of sterling since the closing days of September, many speculators must have reluctantly realised that they have made a mistake. Many more are still carrying their short positions in sterling in the hope that, after all, it might be devalued. But the more sensible among them have come to the conclusion that the British Government is determined to maintain the present parities unchanged, and that it is in a position to defend sterling against any conceivable attacks, at any rate for the next year or so. The balance of payments position remains reasonably good, and the seasonal import surplus during the last quarter can be covered out of the \$500 million credit from the Export-Import Bank. Sterling is therefore perfectly safe in the near future. And it is too costly to

carry short positions for twelve months or more, in the expectation that sterling may not be able to resist during the autumn of 1958. Nevertheless, many speculators are unwilling to take their losses. They hope that a further spectacular advance of wages in Britain would undermine the stability of sterling. Everybody is awaiting with much interest the outcome of the wages disputes in progress, in particular of the claim of railway employees for a 10 per cent increase. If the practice of recent years, to concede about half of the demands, should continue to be applied, it would seal the fate of sterling. Devaluation would then be regarded as a mere question of time.

Judging by recent public utterances of trade union leaders and of Socialist politicians, industrial

labour is in a fighting mood. Evidently the increase of the Bank rate to 7 per cent and the other measures has completely failed in its object of inducing the trade unions to abstain from pressing their claims or even to moderate their claims. It now remains to be seen whether it will attain its second object that of inducing employers to resist these claims. This depends largely on the example set by publicly owned industries. The attitude of the British Transport Commission towards the claims of railway employees will constitute the supreme test. Four years ago, when the Transport Commission was prepared to face a strike just before Christmas 1953, it was ordered by the Government to concede the claims. This time the Government is hoped to adopt a firmer attitude, driven to it by the threat of sterling.

In any case, the Government's monetary measures, and even more its announcement that it is no longer bound by the policy of maintaining full employment at

all costs, have already changed the balance of power between employers and employees. So long as it was the official policy to prevent unemployment, the trade unions held all the trumps. They could afford to disregard the disinflationary measures, knowing very well that if those measures should result in unemployment the Government would feel obliged to call a halt in the credit squeeze. But now it is the Government's declared policy to defend the stability of sterling even at the cost of unemployment. This means that the trade unions can no longer dictate their terms. They run the risk of a weakening of their bargaining power as a result of an increase of the number of unemployed workers. To avoid this, they would be well advised in their own interest to be willing to make concessions and to strike a reasonable compromise with the Government and with employers who, after all, are far from keen on producing unemployment.

Unfortunately the trade unions seem to have lost their heads completely. They are so used to being able to dictate that it is difficult of them to realise that, once the policy of full employment at all costs has been abandoned, they will cease to be the lords of the universe. It is true, a large proportion of the rank and file of trade unionists is inclined to be reasonable. This sentiment manifested itself in the enthusiastic ovation given at the recent Trade Unions Congress to the American trade union leader, Mr Walter Reuther, who, when addressing them advised moderation and reasonableness. But the leadership of the trade unions has come under extremist influence, owing to the indifference of the large majority of their members. Quite recently the Amalgamated Engineering Union elected a senior official, and only 6 per cent of the members troubled to vote. As a result, the Communist-supported candidate was elected. The winning candidate received the active support of less than 4 per cent of the total members who are entitled to vote.

There is reason to believe that this aspect of the situation—the fact that trade union policy is determined by an insignificant fraction of the trade unionists, and that as a result it is under Communist influence—will receive much publicity. It is the Government's intention to choose a right moment to challenge trade union dictatorship at a general election. At present the electorate is strongly against the Government, largely owing to the way in which wage inflation has been allowed to proceed. But if an obviously unjustified major strike should inflict considerable hardship on the public, the Government may decide that the time may have come for a showdown. It would go to the country, with the slogan that the country has to decide whether to be ruled by a Government chosen by the electorate or by

(Continued on page 710)

World of Jute

Easier Trend in Jute Markets

IN marked contrast to the firm undertone with which the jute markets closed for the long Puja holidays, the undertone has turned easier since their reopening. There has been an around decline in prices in the goods section with Ready B Twills recording a decline of as much as four points. Raw jute prices have also fallen.

Though the present depression has been brought about largely by bear pressure in the Fatka, it would appear a decline in price levels would have occurred in any event. For, overseas buyers have not been quite keen to show much interest at the higher prices prevailing toward the close of last month. Latest reports from the US indicate that buyers there are taking only their immediate requirements in anticipation of lower price levels when the new jute crop begins to move in quantity.

In trade circles in Calcutta it is expected the raw jute arrivals in coming weeks may show a substantial improvement over those of past weeks. This anticipation is strengthened by the view expressed by Dr M. S. Randhawa, Vice-Chairman, Indian Council of Agricultural Research, in the course of his speech at the recent annual meeting of the Indian Central Jute Committee. Dr Randhawa said that it was expected that the output for the current crop might be the same as in the past year.

Prices in the jute goods market when it reopened after the Puja holidays displayed a sagging tendency due to selling pressure. Compared to the pre-Puja closing, rates at the close of transactions on 4th October were generally couple of points lower on balance. During the last one or two days of last month, sentiment had been buoyant on reports of a substantial order for Ready B Twills from the Central Government. In view of the prevailing shortage of ready goods, Ready B Twills shot up to Rs 121 while the October and Jan-March positions were placed at Rs 181.50 and Rs 114.60 respectively. In the hessian section 40" x 10 oz Ready was done at Rs 42.92, October at Rs 43.00, Oct-Dec. Rs 42.90 and Jan-March at Rs 42.35.

Selling pressure was in evidence when the market reopened after the holidays. Prices declined both in sacking and hessian under bear pressure. B Twills Ready receded to Rs 119.75 with the October, October-December and Jan-March positions placed at Rs 117.20, Rs 115.00 and Rs 113.00 respectively. Bear pressure continued unabated the next day also and the day's closing prices were further lower as follows: B Twills Ready Rs 119.10,

October Rs 116.60, October-December Rs 114.85 and Jan-March Rs 112.85. Hessian 40" x 10 oz Ready was done at Rs 42.80, October Rs 42.85, Oct-December Rs 42.80 and Jan-March Rs 42.25.

Conditions on Monday this week continued to be easy as prices again declined in both hessian and sacking under bear pressure. Toward close, however, there was some bear covering and that helped rates to recover part of their earlier losses. The market closed quietly steady. B Twills Ready receded to Rs 118.80 with October at Rs 116.55, October-December Rs 114.80 and Jan-March Rs 113.00. In the hessian section, Hessian 40" x 10 oz Ready was placed at Rs 42.70, October Rs 42.70, October-

December Rs 42.65 and Jan-March at Rs 41.95.

Reopening after the Lakshmi Puja holidays on Thursday, the market found itself under the influence of speculators most of the time. Toward close, however, prices recorded some recovery on bear covering and the market closed quietly steady as follows: Hessian 40" x 10 oz Ready October Rs 42.60, November Rs 42.55, December Rs 42.45 and Jan-March Rs 41.90. In the sacking section B Twills October was placed at Rs 117.10, November Rs 114.70, December Rs 113.70 and Jan-March Rs 112.70.

The raw jute market which ruled steady in sympathy with the goods section before the holidays turned quiet on reopening on lower advices from the goods section. Throughout the period under review mills evinced little interest and consequently sellers who were reserved in the beginning were inclined to discount rates in later dealings. Assam Bottoms which was quoted at Rs 29.25 came down to Rs 28.50 per maund by Thursday this week.

The following table shows price trends during the period under review.

	Week's Opening Rs.	Week's Closing Rs.
Hessian:		
40" x 10 oz.		
Ready	32.70	42.66
January-March	42.50	42.00
Sackings:		
B Twills:		
Ready	121.00	117.50
January-March	114.60	113.25
Heavy Ceas Green	117.00	116.25
Cornsacks	120.00	117.25
Cubans	141.00	139.00
A. Twills	146.00	142.00
L. Twills	131.50	131.75
D. W. Flour	136.00	135.25
Sugar Bags	133.50	133.50

US BURLAP CONSUMPTION IN AUGUST

US burlap consumption during August 1957 increased to 67,900,000 yards from 60,900,000 yards in July 1957. Burlap stocks in the USA at the end of August totalled 232,670,000 yards, comprising 135,700,000 yards spot and 98,970,000 yards afloat, compared with 216 million yards at the end of the previous month.

The green colour code

IN THE STEEL CITY OF JAMSHEDPUR, green is the colour code for top priority. At every desk, a green envelope or a green memo spells instant action for the stationery bears the legend: TWO MILLION PROGRAMME—IMMEDIATE.

Work goes on in an endless race against the clock with a daily stocktaking to assess progress. Every phase of operation is closely watched—from the manufacture

of plant and equipment in three continents to work at the plant site, the ore mines and the collieries. Delays are at once spotlighted, whether in a distant Tokyo factory or nearer home on the rail route from Calcutta.

The project has already begun to yield results—two new 200-ton furnaces are producing the first additional steel under the Second Plan.

Shovelling dolomite into a recently completed 200-ton furnace in the new Steel Melting Shop.

Appearances...and a pair of pears

PEARS, like appearances, are deceptive. You can't tell their quality by gazing at them. Moral: If you're buying pears, taste them first.

But testing by tasting gets you nowhere if, for instance, you are buying soap. For that (and most packaged goods, too), sensible shoppers have a surer guide to quality: they go by a name they can trust, a brand they have used and found reliable.

For nearly 70 years, people have trusted Hindustan Lever products because their high quality has been unvarying. And they trust because we test.

Hindustan Lever serves the home

At Hindustan Lever, we examine all our products at every stage of manufacture. We make sure that they stand up to storage: we 'create climate' in a laboratory to observe them under all weather conditions. We check their performance by using them as you do in the home.

All this means 1,200 tests a week on products like Lifebuoy Soap, Dalta Vanaspati and Gibbs SR Toothpaste—familiar products because they are so widely trusted, and trusted because they are tested.

[October 12, 1957]

World of Business

Titanium Dioxide Industry

The Tariff Commission seems to have made a departure from the usual practice of fixing the quantum of protection in having recommended a rate of protection for titanium dioxide industry which is well in excess of the percentage of the difference between the indigenous fair ex-works price and landed cost of the imported pigment. While the difference is only about 4.5 per cent, the rates of protection recommended by the Commission are 35 per cent ad valorem preferential and 45 per cent ad valorem standard. The present shortage in the world supply position of the material and the expected easing of this tight situation consequent on the increase in supply in the immediate future seem to have influenced the Commission in deciding in favour of such a course.

Continuance of protection to the industry is, according to the Commission, warranted by the projected expansion schemes of the Travancore Titanium Products the only firm manufacturing pigments in the country. That the industry is in a position to plan expansion schemes, besides providing justification for continuance of protection, is at the same time a tribute to the protection it had been enjoying in the past and a measure of the benefits that had accrued to it.

In 1954 just a year after the industry was granted protection, the position was such that production was well below the rated capacity,

the respective figures being 1363.5 tons and 1800 tons. Further the financial position of the Company at the beginning of 1954 disclosed a deficit of Rs 14.98 lakhs. But thanks to protection, the very next year the gap between production and capacity was so completely bridged that production was slightly in excess of rated capacity. The sales of the company, internal as well as exports went up. While in 1959, the internal market absorbed about 708 tons of the company's production, in the next two years, internal sales aggregated 1142.45 tons and 1620.42 tons respectively. The exports also were higher in 1955 at 662 tons against 437 tons in 1954. Naturally as a result of this the financial position of the company also improved so much that the deficit of Rs 14.88 lakhs was turned into a surplus of Rs 8.11 lakhs at the end of 1956.

In view of the increasing demand which is expected to rise to 3600 tons for anatase pigment from the present level of 2600 tons and to 1200 tons for rutile pigment from 400 tons, plans are afoot to bring the production potential to the self-sufficiency level. When the schemes materialise, the productive capacity for anatase pigment will rise to 2600 tons in 1959 and further the production of rutile pigments would also be started. These schemes will involve an outlay of Rs 73 lakhs, which the company expects to find from its internal resources to the extent of Rs 40 lakhs, the balance

being met from a loan from the IFC.

The industry is well set on the road to improvement and stability. The objective of protection is to enable the industry to outgrow the infant stage and stand on its own legs without the crutches of protection. How soon this comes to pass will depend on, besides protection, other factors like favourable supply position in regard to raw materials and growing markets. While the titanium dioxide industry is in the happy position of having an expanding market the product being in use in a wide variety of industries, the raw material position is by no means enviable. In fact, the supply of ilmenite sands leaves much to be desired. The recommendations of the previous Tariff Commissions to make available such supplies from the Government-owned deposits at cheap rates, are yet to be implemented. The latest Tariff Commission has again emphasised this matter, in the interest of reducing cost of production and capturing foreign markets.

Teachests and Plywood Industry

The plywood and teachests industry has been granted a fourth term of protection following the acceptance of the recommendations of the Tariff Commission to that effect. Protection is to continue upto 31st December 1960 at a rate of 35 per cent ad valorem which is slightly in excess of the percentage of the difference at 31.36 between the fair ex-works price and landed cost.

The progress of the industry since protection was first granted to it in 1947 has been significant. There has been around increase in production in which both teachest and commercial plywood shared. The production of the latter increased from 11.41 million sq. ft in 1953 to 25.84 million sq. ft in 1956. Similarly the production of teachests also touched a record level of 5.54 million in 1956 against a figure of 2.8 million in 1953. Side by side with quantitative improvement, there had been qualitative improvement also and diversification has made substantial progress. The capital invested in the industry is estimated at about Rs 3.40 crores while the industry gives direct employment to 6400 workers per day. The industry is concentrated in three States namely, West Bengal Assam and Kerala, West Bengal alone accounting 35 out of the 66 units comprising the industry.

The concentration of the industry in a few States especially in West Bengal had raised problems of raw material supply to the fore. While the supply of fresh and suitable timber is satisfactory in South India and Assam this is far from being the case in North Bengal and Calcutta area. North Bengal is dependent on Assam for its supplies and lack of adequate transport facilities on the Assam Rail Link and the bad condition of the roads have made the supply position difficult. Similarly the dependence of the Calcutta area on supply of timber from the Andaman Islands has also put it in a precarious position. The

supplies besides being irregular because of the long interval between felling of trees and their shipment are sent without proper prophylactic treatment being given with the result that logs suffer from various defects.

Further the prices charged by the Government for timber is unfairly high considering the fact that such high prices will adversely affect the demand for Indian tea abroad. The Tariff Commission has therefore in its report underlined the necessity for keeping such prices low. The Government could also assist the industry in another way by increasing the validity period of import licences for timber and wood to one year instead of six months since this would facilitate proper supplies.

There seems to be some room for improvement in the quality of the products turned out by the industry. The Commission has in this respect pointed to the necessity of a proper system of inspection of the goods. As quality has a lot to do with the volume of exports this is a matter which should be looked into without undue delay.

Indo-Czech Trade

The Trade Agreement concluded in 1953 between India and Czechoslovakia has evidently been found to be mutually advantageous by both the countries. It is estimated that the total trade between them is now of the order of about Rs 8 to 9 crores. In 1956-57 the value of Indian exports has been placed at about Rs 3 crores. There is a wide variety of exportable commodities in which the two countries are interested. In recent years, India's list of goods available for export has considerably been enlarged. The schedule now includes, apart from traditional items like ores, spices, skins, vegetable oils, cashew nuts, tea and coffee, manufactured products like cotton, rayon and woollen textiles, plastic goods, sports goods, coir products, jute manufactures, linoleum, leather goods, cigars and cigarettes, and handloom fabrics, handicrafts, and Indian films.

The schedule of goods available for export from Czechoslovakia includes machinery of various kinds, machine tools, diesel generating sets, marine type diesel engines, agricultural tractors, textile machinery, paper and newsprint, dye stuffs, cameras and appliances, domestic hardware, abrasive materials, narrow gauge diesel locomotives and Czechoslovak films.

A new trade agreement valid upto the end of 1960 has come into effect from 1st October 1957. A significant feature of the new agreement is that payments for commercial and non-commercial transactions between the two countries will be made in Indian rupees. For this purpose the State Bank of Czechoslovakia will maintain one or more accounts with Indian commercial banks dealing in foreign exchange. Any balance in the Rupee account maintained by the State

World Overseas

US Notes

IN this little town not far from New York City, one of the leading companies of the United States this week gave members of the Press a preview look at its latest endeavour a large and integrated research centre. With this move, the United States Rubber Company focussed renewed attention on the vitality of its own industry and the American economy as a whole. This 5 million dollar centre is a key element in the company's announced plans to spend at least 120 million dollars on research and development over the next five years. These plans represent a sizable step-up over the company's existing research programmes, indicative of the success of such programmes. Since 1948 the Company has developed at least 30 major new products which are expected account for more than 100 million dollars in sale this year. The United States Rubber Company is not alone in these efforts, of course. Virtually every American rubber company is engaged in large research and expansion projects. It was only a little more than two years ago that the US Government sold its synthetic rubber plants to private industry. The total price came to 285 million dollars. Yet since then the new owners already have put nearly 300 million dollars more into the infant industry, just about doubling its original production capacity of 737,000 long tons of synthetic rubber a year. This has helped to bring greater security and stability to American rubber companies. For one thing, they have been able to develop all sorts of new products and broaden their markets. For another, they no longer are bound as tightly to the world's natural rubber supply, which is highly inelastic since it takes up to seven years from the time a rubber tree is planted to the time it is tapped. For all the competition it is getting from the synthetic varieties, however, natural rubbers is far from dead. While expanding their synthetic capacity, American companies also have been planting new and higher yielding rubber trees on plantations in the Far East, Africa and Latin America. Behind this activity is the conviction that efficiently produced natural rubbers can actually be cheaper than synthetic rubber, although the present price differential favours the use of synthetics. It is noteworthy that the United States Rubber Company's new research centre contains not only several laboratories and engineering buildings and an electronic accelerator for atomic energy work, but also a large greenhouse where more than 300 rubber trees are grown for plant nutrition experiment. Through such experiments, scientists already have managed to double the yield of some trees. There are a number

of uses, of course, in which special purpose synthetic rubber has definite advantages—for instance, in passenger tyre treads, in full cells and hoses, and in insulation. On the other hand, natural rubber is preferred for such products as heavy duty tyres, motor mounts, medical equipment and even rubber bands and golf balls. This leaves a wide variety of applications in which availability and prices are determining factors. The expectation is that demand for all types of rubber will be rising steadily in the United States and throughout the world. Yet even with accelerated planting programmes, natural rubber may not be able to fill more than half of this growing demand. This is another reason for the American industry's largest outlays for expansion and modernization, and the emphasis it is putting on research and development.

Britain

IN workplaces all over Britain, the industrial consultant is becoming an increasingly familiar figure. Called in by management to apply his expert knowledge in the works, the consultant may make proposals which affect not only the way workers do their jobs, but also their wages and working conditions. As a consequence, he is a man with whom union representatives must frequently have contact in both private and publicly owned industry.

That is why Britain's Trades Union Congress (T.U.C.) chose "The Consultant in Industry" as the theme of the first in a new series of one-day conferences on production and management subjects.

These conferences, forming part of the broad pattern of the T.U.C. training programme in this important field of aspects of industrial efficiency, are specially designed to give busy union officials the chance to meet and talk things over with experts in particular fields.

Setting the scene for the first conference, Mr. Lewis Wright, general secretary of the Amalgamated Weavers' Association and one of the T.U.C. General Council's main spokesmen on production subjects, told the 60 union officials present that with the wide use of industrial consultants today it was up to trade unionists, and trade union negotiators in particular, to understand their role. He pointed out how in the United States of America, which he had visited as a member of a trade union productivity team, consultants had operated for longer and on a greater scale than in Britain and that the unions there had to work out an attitude towards them.

THREE VIEWPOINTS

To sketch in the background, the conference heard three differing

viewpoints on the industrial consultant. First came a manager who had employed consultants, then a consultant described his own role in industry, and, third, a consultant related his recent experiences on Britain's State-owned railways.

A trade unionist wound up the day's discussions. He was Mr. S. A. Robinson, general president of the National Union of Boot and Shoe Operatives—an organization which has done much to encourage its chief officials to understand modern management techniques and which has negotiated agreements based on their use. What he had to say, as well as the contributions from the floor, add up to a general appraisal of the methods of promoting efficiency inside the framework of good industrial relations.

The introduction of industrial consultants inside a firm is like any other innovation, trade unions believe. First, there must be full consultation with workers' representatives.

At the next stage the consultant must familiarize himself with the methods of payment within the firm, and on all issues with which he is dealing he must find out the workers' point of view through their trade union spokesmen.

Since the recommendations of a consultant could involve not only changes in ways of working but also changes in rates of earnings, trade unionists at the T.U.C.'s conference took the line that such alterations could only come about through the recognized processes of collective bargaining. Managements should not accept the recommendations of consultants which affected earnings without negotiations through normal machinery.

TRAINING WITH FIRMS

This one-day conference—the first of its kind to be held in the training-college wing of the new T.U.C. building—formed a complement to the scheme by which selected trade union officials can receive training with recognized firms of industrial consultants. Under this scheme the T.U.C. has already arranged for 36 officers to spend three or four months learning in detail about management and production techniques.

As T.U.C. has previously stressed, such training with consultants is not designed to produce fully-qualified specialists, but to ensure that trade union officers themselves are in a strong position to assess in their own industries the value and standard of applications of recommendations put forward by consultants.

With the commencement of the full-scale programme of courses in September, the T.U.C. hopes to expand even further the facilities it is able to offer to its affiliated unions. Since 1951 it has organized a programme of one-week courses and one-day and week-end conferences at which hundreds of officials and workshop representatives have been present. Subjects have included the structure and functions of management in industry, work study, wage systems, production and

control, costings and profit assessment.

ADVANCED COURSE

More recently, a second stage of course has been introduced to develop the basic training course in these production and management subjects. Now a more advanced level of course is still being offered while retaining the first two types. On this most advanced course students will concentrate on one of a number of subjects, such as work study, wage incentives, or industrial finance. These three stages will thus form a linked system of training, and it is hoped that over a period of, say, two or three years the students who start at stage one will graduate through stages two and three.

On all these courses of technical training, to be held in the new T.U.C. training college, students will be treated in the same way as those on other T.U.C. courses. After selection by the T.U.C. General Council from union nominations, they will be given scholarships to cover all their expenses while in London.

With their one-day conferences, training courses, and other facilities for technical training such as with consultants, the T.U.C. hopes to meet the needs of its affiliated unions in this important field of industrial efficiency, from the promotion of which trade unionists and the nation can gain so much.

FURTHER consideration of the possibility of setting up a free-trade area in the Baghdad Pact region has been recommended by a working party of the pact's Economic Committee which has been meeting in London.

The working party's final press communique says:

"The Baghdad Pact Council at its Karachi session of June this year approved the recommendation of the Economic Committee to establish a working party to report on the possibility of establishing a customs union, common market, and free-trade area in the Baghdad Pact region. The first session of this working party was held in London from September 16 to September 24, 1957. The session was attended by delegations from Iran, Iraq, Pakistan, Turkey, the United Kingdom, and the United States. Mr. A. D. Azhar, of Pakistan, was elected as chairman.

"The working party has submitted a unanimous report for the consideration of its superior bodies. In the light of the European background in this regard, the report sets out the most important issues that require to be studied collectively as well as at national levels. The working party has also recommended that, for the present, the study of either a customs union or an economic community on the lines envisaged by the Treaty of Rome and commonly described as a common market should not be proceeded with, and that attention henceforth should be confined to the possibility of establishing a free-trade area."

[October 12, 1957]

The total of over 37,000 cars exported from the United Kingdom last month represents a peak figure for any August. Announcing this in London, the Society of Motor Manufacturers & Traders stated that by reaching its recent level of car and commercial-vehicle exports, Britain had once again become the world's largest motor-vehicle exporter.

The figure included another record-breaking shipment of nearly 10,000 vehicles to the United States. Total exports of cars and commercial vehicles together earned over £160,000,000 up to the end of last month—more than in any previous January-to-August period.

Commenting on the success of the car industry, Mr Stanley Black, chief executive of the society, said: "The August trading figures—last to be issued before next month's Motor Show—underline the latest spectacular successes of the industry's drive in world markets. They make a grand prelude to the success of the Show itself".

Australia

NOTICEABLE features of motor registration figures in Australia are the growth of the popularity of the Australian built car, and the strong following for British-manufactured vehicles. Australian-made cars accounted for approximately 40 per cent. of the registrations for the six months ended June, having risen from 34 per cent. on the figures for the previous 12 months. Total number of cars registered for the six months was 70,037, compared with 143,131 for the 1956 year.

Registrations have fallen slightly this year. This is attributed to an increase in sales tax on cars and commercial vehicles which was imposed in March, 1956.

Most overseas automobile companies in Australia are not operating at full capacity, but output and sales of the completely Australian-built car, the HOLDEN (manufactured by General Motors-Holden's Ltd.), are showing a steady increase.

Major British companies have plants in Sydney and Melbourne. The British Motor Corporation has announced that it will produce a 100 per cent. Australian-built car. Standard, Rootes, Vauxhall and Ford are all progressing towards this objective. The new Ford Customline, announced on September 2, is more than 80 per cent. Australian in content.

Recently there has been some interest in Japanese motor cars in the trade. One, the Toyopet, competed in the 10,500 miles round Australia motor rally, and another, the Prince, was shown in Canberra recently. Another expected to compete in Australian trials is the small Datsun. It is estimated that the Toyopet would cost about £A1,300, and the Prince £A1,200 in Australia, and for the present these prices do not appear to make the cars competitive in the Australian market.

But as competition among nine manufacturers in Japan is said to be forcing down prices, some trade officials expect that in a few years prices will fall sufficiently to enable the cars to compete on the Australian market.

A new £A2,000,000 company which has been registered in Sydney will invest funds in Australian shares.

The company is London Australia Investment Co. Ltd. which will place its funds in industrial and commercial companies, and also in mining shares. It is planned not to invest in long-dated fixed interest securities.

The company represents British and Australian financial interests. Chairman is Sir Maurice Hutton, managing director of the Anglo-Australian Corporation Pty. Ltd. and director of other companies.

A movement is gaining impetus to allow retail shops in several of the Australian capital cities to remain open for later trading.

Before World War II, Friday night trading was usual in Australian cities, and a return to this arrangement is being actively canvassed.

In Victoria several shopkeepers in the Melbourne suburbs have

begun opening on Friday night, but they have been informed by Shops and Factories inspectors that in doing so they are breaking the law.

The State Government is to consider late trading, staggering of trading hours being among various proposals. The State's Shop Assistants' Federation is opposed to later trading.

However, in Perth (Western Australia,) the shop Assistants voted strongly for Friday night opening. The employers claim that the union's move in Perth is towards closing

and Adipocere looks ahead

(Pronounced 'adi-po-saire')

After successive stages of exploring, drilling and refining, I now take my final shape—guess what? I am transformed into various petroleum products (major products being gasoline, kerosene, fuel oils, lubricating oils and asphalt).

In other words, I am now refined and ready for the long haul. All that "crudeness" is no more. You won't recognise your old friend "Adipocere" about whom you first read in these columns.

They store me in the finished product 'tank farm'. Life here is serene...until the fast moving, action-happy marketing men come along.

Here they come in their sleek looking trucks and wagons with the Flying Red Horse painted all over. From now on I am forever on the move and help in the progress of everything that needs to move.

From here I go to market...

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

To most of us, the idyllic days when there was no income tax are not even a memory. When told about them, they appear as remote and sweet as the stories we were put to sleep with in our nurseries. We have, by long and grudging association, come to accept income tax as part of our social existence and to regard the Government's claim to a portion of what we earn as almost an immutable law of nature.

But, along with this acceptance has also grown the belief that taxation of what is not income is, somehow, not quite right. Income has, for such a long time, been the only measure of direct taxation that, for many, it is still something of a shock when the Government tax or propose taxing one or more forms of capital.

To a person, used as he has been to relate taxation to income, capital or wealth had come to assume a nearly sacrosanct character, free and somehow protected from the Government's avaricious hands. When the Capital Gains Tax was first introduced in 1946, most people raised alarmed eyebrows; and when it was withdrawn in 1948, they heaved sighs of relief, not so much at the prospect of a partial lightening of the tax burden as at the comforting thought that the Government had returned to the straight and narrow path from which they had strayed.

Yet, economists tell us that taxation of capital is historically older than taxation of income, and economically as sound. Whether that is so or not, Mr Nicholas Kaldor and Mr T. T. Krishnamachari have, in blitzkrieg fashion, knocked out all our pet notions about the inviolability of capital as a target of taxation.

What with the Estate Duty, the Capital Gains Tax, the Wealth Tax,—all coming into existence in the matter of a few years—the citizen can be pardoned if he has become somewhat unsteady and uncertain of a sense of direction. All his life, he has been led to think that taxing capital is something which is not done, something which is nearly unethical. Now, he suddenly finds that taxation of capital has become, al-

most overnight, an important part of the tax structure of India.

It is very necessary for him, therefore, to rearrange his thoughts, to unlearn a few things and learn a few others. In this process of re-education, I cannot think of a better guide than Dr I. S. Gulati's recently published book* on Capital Taxation. Barring Mr Kaldor's "Survey", it is the first, and so far the only, comprehensive study of capital taxation in the context of and with special reference to the developing economy of present day India.

The observation that there is, in the world of today, no more fascinating field of study in social economics than India, may be trite and platitudinous, but it is worth re-stating. Here is a country—a sub-continent, in fact—of 360 odd million people at varying stages of economic development, trying, in the space of a decade or two, to lift itself up by methods of voluntary co-operation and democratic persuasion, striving to get away from the stagnation of centuries and daring to catch up with the modern industrialised nations of the West. As can be imagined, the economics of it presents problems which can tax the ingenuity and boldness of the cleverest and the bravest.

The basic problem of an underdeveloped country trying to transform its economy from a stagnant to a developing one can, however, be stated fairly simply. It is this: in a country with a low general standard of living, the rate of increase in investment does not secure to the economy a rate of increase in national product which corresponds in an adequate way to the rate of increase in population. The economy does not, by itself, generate investment at a rate sufficient to ensure a rising standard of living. The problem is to break the vicious circle of low national income causing low investments and, therefore, lower incomes, and to make good the shortfall in investment and accelerate its rate.

How to do it? The normal market forces of a laissez faire eco-

*Capital Taxation in a developing economy (India) By I. S. Gulati: Orient Longmans: Price Rs 12.50.

nomies are, of course, quite inadequate to ensure the canalising of a large enough margin of the national product toward national development. The Government have, therefore, to go behind the market forces; and, by deliberate and purposive action, they have to divert the maximum amount toward investment. Since, in an underdeveloped country, the amount of national product, after the necessary consumption requirements of the community have been met, is necessarily limited, the Government are faced not only with the task of diverting the available resources toward desired channels but also with the responsibility for creating additional resources.

Of the three financial methods open to the Government to do these, namely, credit and currency creation, State borrowing, and taxation, Dr Gulati, though not primarily concerned with the former two, brushes them aside as being far more unsuitable than taxation. Many economists might not agree with him there, but most will concede that, provided the problem of administration is solved, taxation is the safest, though not the easiest, way of securing the maximum amount of savings from the community. It is safest because it enforces compulsory curtailment of consumption in a manner which credit and currency creation or borrowing is either unable to do in equal measure or, if made to do it, bring in their wakes undesirable economic repercussions.

Not that taxation is free from harmful effects. The disincentive effects of taxation are notorious and the beneficial results of curtailment of consumption can very well be offset by a fall in the national output. It is Dr Gulati's case, which he argues very effectively, that, only by combining taxes on capital with the tax on income, can the Indian tax structure be made to yield the maximum revenue while impinging the least on incentives. Taxes on capital, the author argues, have the least deleterious effect on incentives to work, because these taxes are not related to effort but to past accumulations.

That is true enough: but the point is, does capital taxation

encourage the next step? It cuts down purchasing power and does not reduce effort; but does it induce saving and increase the volume and rate of investment? It is by no means certain that it does. In fact, taxes on capital normally have the directly opposite effect of reducing the taxpayer's motives to save and increasing his propensity to consume. Dr Gulati is conscious of this, but argues that, if capital taxation is accompanied by a substantial reduction in the rates of income tax, the risk is considerably reduced.

In a developing economy, the Government's problem and their aim are to secure a transfer of resources to the public sector. In so doing through taxation, emphasis has to be placed on a tax which induces the maximum increase in saving in the private sector while exercising the minimum restraint on investment activity within the private sector.

Dr Gulati examines at length the three major forms of capital taxation,—an annual capital tax, a capital levy and death duties—and, applying to them the tests just mentioned, concludes that an annual tax on capital effectively does so. It is not necessary here to examine his arguments. The fact that the Government have embarked on capital taxation in a "going the whole hog" manner is sufficient commentary as to their validity.

At the time when the first draft of the book was written (it is a revised version of a thesis for a doctorate), there was no proposal for the Capital Gains Tax or the Wealth Tax. Now that they have been made integral parts of the tax structure of India, it might have been expected that Dr Gulati's book would have lost some of its usefulness. The merit of the book lies precisely in that it does not do so. The author's arguments, pleading for the introduction of capital taxation in India, flow out of his analysis and study of the nature and economic effects of capital taxation. And even if his arguments will not find unanimous support from economists, the methodical and exhaustive manner in which he has dealt with the role which capital taxes can assume in providing resources is

entirely praiseworthy and will be of lasting value.

★ Mr Kaldor's Survey of Indian Tax Reform, part of the ground covered in which is necessarily the same as in Dr Gulati's book, was concerned mainly with recommending immediate changes in the tax structure in India. It did not deal at length with the theoretical aspects of the question of capital taxation. Dr Gulati's book does so and thus serves to complement the "Survey" in a most useful manner.

Dr Gulati is not, however, taken up entirely with theory. He deals exhaustively with the practical application of capital taxes and examines the problems of administration, of evasion, of rates. In one of the best expositions of Estate Duty that I have read, the author in Part III of the book deals at length with the Indian Estate Duty, and in a postscript he touches on the current budget of the Government of India.

★ Dr Gulati is apparently unhappy because the Government of India,

while introducing capital taxation, have not at the same time given effect to all the recommendations in the Kaldor Report. It has to be remembered, however, that the changes introduced by the current Budget are not the final ones.

★ I should like to amplify what I mean by stating that the changes introduced by the current Budget should not be reckoned as final. In the first place, in the matter of the array of excise duties that have been imposed, it is obvious that their role is, in a manner of speaking, limited. As Indian production increases, and as, slowly, supply exceeds demand, we must expect, though perhaps not in the immediate future, readjustments from time to time. In the second place, there are the innovations which form part of the integrated tax structure that has been brought into being by the Finance Minister. In this context, by the very fact of the structure being such as to enable more elasticity from the point of view of Government, changes in rates are inevitable.

In the short term view, we have the assurance from the Finance Minister that there is not to be any increase in rates. Besides, I am not unhopeful of some concession being forthcoming, once the tax revenues of Government begin to improve as a result of the integrated tax structure. In the third place, we have to reckon with the taxes that have been imposed, not with a view to revenue, but on other considerations. These, clearly, are impositions which are outside the integrated tax structure. As such, we may expect the gradual elimination of such measures as the tax on dividends and the reserve deposit requirements. So, the changes both on account of the shedding of measures outside the integrated tax structure and in respect of rates within the integrated tax structure are likely to be such, in the future, as to induce cheer rather than gloom.

★ However, all this relates to the future. If we confine ourselves to the present, I am afraid that the

changes, for most of us, have been more than a measureful to stomach in the course of a brief year. In fact, all our notions of what constitutes fair canons of taxation have been disarranged. But this is not to say that the taxes that have been introduced by Mr Krishnamachari in the current year are not fair or just. On the contrary, a beginning has been made to render tax dodging a more difficult enterprise. In this light, indeed, it may be said that the new tax structure may presage a future in which, thanks to the collection of taxes from those who presently evade them, the honest tax payer is given an inkling of hope that he will not be unduly penalised for his brethren the sinner. I may add that Dr Gulati has written a book which should help not only to rearrange our thoughts but also enable us to view the new taxes and the general change that has been brought about in the field of direct taxation in India with a clearer and more appreciative mind.

Gateway Gossip

"A Quiet as of the Holding of Breath"

AN American Correspondent, filing a despatch from New Delhi, related that there was a strange quiet, "as of the holding of breath". I suggest that Mr Rosenthal would have found the atmosphere in this Gateway City as deserving of the picturesque description that he has given to the "hawa" in the nation's capital. One can sense a state of what I may call suspended animation about all aspects of the economy, whether it is planning or development, whether it is the issue of new capital or the search for sources of finance. There is an anxiousness about this almost hapless inactivity, an apprehension that the future of the Second Plan will depend upon the successful outcome of the visit of Mr T. T. Krishnamachari (as relating to projects in the public sector) on the one hand, and of the tour of the Birla industrial delegation (as affecting the destiny of plans in the private sector) on the other. I should like, if I may, to think aloud on what exactly may be presaged by the visits, what we have a right to expect on a short term reckoning, and what we may perhaps assume on a longer term basis.

I do not think it will be seriously contended, at any level of economic thinking in this country, that informed world press opinion has not been tending, of late, to be categorical in fostering the desirability of the industrially developed West helping out India in every possible manner and to the best of its means. Looking through my file of cuttings, I see, for example, that Thomas Balogh, writing in The Observer, comes out with a strong plea for British aid to India. He sees Britain as having "an opportunity for an imaginative act of statesmanship". This article, by the way, was written some time after the idea of a revolving fund of £200 million had been mooted in British economic circles. Such a figure as Mr Balogh points out, "represents less than a fifth out, of one per cent of the British national income, and less than a tenth of its increase in a normal favourable year". That it is not merely Indian development which is at stake, has been clearly recognised. The conclusion is that, in the event either of a cut in the Indian Plan or of India approaching Russian sources for help, it would mean "disaster to the aspirations of those who hope that economic development is not incompatible with the maintenance of democratic freedom".

For, the fact of the matter is that the discussions that have taken place in Washington and New York during the past two or three weeks have been strictly exploratory in character. And, in a very real sense, both the Finance Minister and the Birla Delegation have, quite correctly, envisaged their primary task as fostering the climate and atmosphere in which discussion on specific projects could be more fruitful. I am afraid that some of the press reports have, in this regard, been misleading. If one were to place reliance on some of the despatches datelined Washington and New York, one

would get the impression that the missions abroad under Indian auspices have been undertaken with what Newsweek described as "hat in hand". Nothing could be farther from the avowed intentions of either TTK or the Birla Delegation. Secondly, some of the messages that I have seen envisage private American participation in some of the projects of the private sector. This, too, I am afraid, is wishful anticipation. While, undoubtedly, some of the members of the Delegation carried with them plans for certain enterprises for which they might have desired to inaugurate negotiations with possible American financial partners, I have the feeling that the objective of the Delegation, both in public and in private, was to indicate to the American audience, firstly, that the scope for private enterprise in India was vast and, secondly, that the Indian Government were not, as apparently had been made out in a section of the press, inimical or antagonistic toward the private sector.

As far as Mr Krishnamachari is concerned, I should think that his task was broadly to apprise the American Administration with the economic situation obtaining in India and to indicate in general terms the volume of aid from American and other sources which would be necessary to see the Plan through. Let it be remembered that it would have been futile for the Finance Minister to ask for or expect an immediate statement from the American Administration to the effect that it

would be willing to advance the necessary foreign exchange for India's Plan. For, the American Congress is not in session, and, as things stand, it will be only some time in January that, at Congressional level, the matter could be taken up.

So, it is important to recognise that the limited objectives set for themselves by TTK and the Birla Delegation have been realised. That is to say, there is on the part of the US Administration an awareness of the Indian foreign exchange problem; and we may take it that, in view of the acknowledged American generosity, the proposal for a foreign aid loan for India will be considered with understanding and an anxiety to help. Secondly, in respect of the Birla Delegation, evidence of success attending its endeavours will be available if, in the next year or two, a much greater interest is shown by private American capital in this country.

We must now await the reactions of the UK and Continental Europe to the visits of TTK and the Birla Delegation.

CORRIGENDUM

It is regretted that, in Indian Finance of September 28, 1957, a footnote which was to be published at the end of the speech delivered at the eleventh annual general meeting of The Aluminium Industries Limited was omitted by error. The footnote in question sought to indicate that the extract printed did not purport to be the report of the proceedings of the annual general meeting. The omission is regretted.

Future of Electric Supply Industry

The Industrial policy of the Government of India has come for some strong criticism both in the country and outside. It has been maintained that the policy is designed to enlarge steadily the sphere of the public sector till nothing is left of the private sector. The fact, however, remains that private enterprise so long as it subserves the national good is given all the encouragement it needs. Prominent industrialists have themselves declared that the new policy leaves ample scope for private enterprise to flourish. The Electric Supply industry provides incontrovertible testimony to the sympathetic and helpful attitude of Government toward the difficulties of one section of private enterprise.

A number of important amendments to the financial provisions embodied in the Electricity (supply) Act, 1948 have been enacted last year. These changes in law have conferred a number of benefits on the industry. In the first place, the standard rate of return has been linked to the Bank Rate with a differential of 2 per cent so as to enable automatic adjustment with fluctuations in the money market. As a result of this amendment the industry will get 6 per cent at existing Bank Rate, instead of the previous fixed rate of 5 per cent. The industry has also been given the right to earn and appropriate to a statutory Reserve, entitled Development Reserve, the tax savings resulting from the Development Rebate under the Finance Act 1956, subject to the earning of the year not thereby resulting in a short fall of Reasonable Return. After the amending legislation the licencees are free to adjust their rates within the framework of the law, including enhancement where necessary. It is also to be noted that the industry has been exempted from depositing the whole of the Depreciation Allowances with the Reserve Bank of India.

Delivering the Chairman's speech of the Bombay Suburban Electric Supply Limited, Mr P.D.C.R. Clark pointed out that the net effect of the changes in the law from the point of view of the shareholders of the company was the prospect of a slightly better earning position. While referring to the effects of the various amendments he said that the industry was gratified to find that Authority evinced sympathy and understanding in the considerations of the problems confronting it. Mr Clark also drew attention to an encouraging factor which augured well for the

future of the industry. There was a growing realisation on the part of the authorities that the rich and varied experience of the licencees should not be lightly displaced.

One would be wrong, however, to conclude that the industry has no worries. As a matter of fact it has to contend with some difficult problems which have to be tackled successfully in order to derive the full benefits of the amended Electricity Act. An improvement in the earnings is largely dependent on so balancing the industry's tariffs to the consumers as to result in the clear profit equalling the Reasonable Return. There is also the still unsolved problem of providing for deferred tax liability. The new provision that loan capital is to be serviced from Reasonable Return has placed the industry in a disadvantageous position as regards credit. An additional liability has been imposed in the shape of wealth tax. It is to be hoped that Government will appreciate "the necessity of regulatory policy being attuned to sustain growth" in the case of the electricity industry.

Export Risks Insurance Corporation

The Second Plan has reached a stage where its successful implementation would seem to depend almost entirely on the availability of the requisite amount of foreign exchange. This has naturally served to focus Government's attention on the need to strengthen the institutional foundations of our export trade. The creation of the Export Promotion Council has been in recognition of this need. The establishment of the Export Risks Insurance Corporation is another link in the chain of measures that are being adopted to promote exports.

Inaugurating the Export Risks Insurance Corporation in Bombay, Mr Morarji Desai, Union Minister for Commerce and Industry said that to meet foreign competition Indian exporters had not only to export goods of quality at competitive prices but had also to compete in the matter of payment terms. It is to ensure such conditions that the Export Risks Insurance Corporation had been established. The Corporation would cover the obvious risks that were involved in the export of goods on credit terms. Governmental sponsorship of the Corporation was necessitated by the reluctance of private initiative and the natural inability of the private sector to cover political risks.

The Corporation would function on 'no-profit no-loss' basis and the premiums charged by the Corporation would be so fixed that the expenses of the Corporation and the claims which it had to pay would be met out of its premium income. Though the capital is wholly owned by the Government, the Corporation has in its staff four non-officials. In addition an Advisory Council consisting of exporters, representatives of banks which gave export finance facilities and representatives of export promotion councils would be set up. The Advisory Council would advise the Corporation regarding the insurance needs of the export trade, the changes taking place in the export trade and the steps to be taken to provide for new conditions.

The creation of the Export Risks Insurance Corporation would also enable the commercial banks to strike new ground in the promotion of exports by giving greater facilities for export finance. And Mr Morarji Desai expressed the hope that the banks in their interest, would advise their clients to insure their export transactions and make export finance facilities more freely and readily available.

Cooperation

In the publication entitled 'rural development' issued by the Agricultural Credit Department of the Reserve Bank of India, Prof. D. G. Karve, has shown the extent to which the co-operative form of organisation has grown in the countries of Europe and America. The fact underlined by Karve that such organisations in these countries, have outgrown the self-defensive stage so as to be able to earn profit for their members in a business sense, is a measure of the success achieved by these organisations. It is a distinguishing characteristic of these societies that, as a rule, the members go to the fullest limit of raising their own resources, and ask for and receive only such Governmental assistance as is consistent with their operation as business units, and as is capable of almost automatic retirement.

Co-operation is not confined to mere credit needs. The co-operative organisation is common in such fields as processing and marketing of agricultural produce. Some of these are of giant size. Prof Karve cites the village of St Anselme, in the county of Dorchester of Quebec in Canada as an instance where a network of cooperatives of every description operates. How the cooperative method succeeded in relieving dwindling business, is illustrated by the case of 25 men in Cornell who took over a private pasteurisation plant, which was

closed, and who built it into a thriving concern. They did it with their own resources supplemented by borrowings from outside.

Some of the most successful examples of cooperative business are to be seen in the field of marketing. Some of the societies, such as the Sunkist Orange Marketing Society, the Walnut Growers' Marketing Society, are institutions of nation-wide fame, and Prof. Karve points out that in these the methods of intensive business development are followed. These societies have survived and flourished chiefly on the strength of the excellence of the service they rendered and where this has been lacking the societies have invariably failed. In this connection Prof. Karve points out that the real problem involved in co-operative marketing is not so much the enunciation and acceptance of the superior social merits of co-operation as the actual mustering of enough capacity to make the organisation an efficient instrument of meeting the needs of producers on the one hand and of the consumers on the other.

Consumers' co-operation is another field where the co-operative principle has been turned to good account. Consumers' co-operation is run on the highest level of attractiveness and success in Switzerland. The Consumers' Federation of Zurich sold bread during war period at prices lower than the cost so as to be of help in keeping down the cost of living.

In the matter of rural finance the significant feature is the participation of commercial banks. In USA the familiar method is for commercial banks to buy the bonds of agricultural credit associations. This has developed to such a degree that Prof. Karve remarks that agricultural finance is woven into the whole structure of national finance from the country and co-operative banks to the Federal Reserve system. Almost everywhere commercial banks are the source of working capital, though fixed capital is found from members themselves. The Farmers' House Administration in USA, provides the outstanding example of the highly developed institution catering to the diverse credit needs of farmers. The type of loans made by this institution include (1) production and subsistence loans, (2) farm ownership loans, (3) soil and water conservation loans, (4) special livestock loans (5) emergency loans, and (6) insured loans.

Availability of credit is a problem in these countries only for the non-credit, worthy farmers. While in USA this is mitigated by State policy towards transforming their economic status, in countries where no such scope exists, the problem is

(Continued on page 707)

World of Cotton

Export and Import Prospects

THE Government of India's announcement, abolishing the export duty of Rs 50 per bale or 30 per cent ad valorem whichever is lower on Zoda cotton, yellow pickings and sweepings, has been welcomed by the trade. This announcement has removed the major obstacle standing in the way of freer and larger outflow of these unwanted varieties by making them more competitive. Reports in the market suggest that no large-scale demand is possible at the present high prices. Moreover, the largest traditional buyer, Japan, is stated to be postponing her purchases on account of the shortage of sterling, while the Continental countries expect a further fall in prices.

The export outlook for these varieties has, however, brightened since Karachi is not likely to be competing with India for some time on account of her limited stocks. Current rates are also attractive after the abolition of the duty and it is believed that world buyers, particularly France, will be in the Indian market for these varieties after some days. What is significant is that, with

the announcement of the abolition of the export duty, the Government of India have also announced an export quota of 50,000 bales of Bengal Deshi cotton. In this connection, the Joint Chief Controller of Exports, Bombay, has announced details of licensing procedure for the export of this variety. Export licences will be granted to established exporters and registered dealers as well as those established exporters and Indian dealers who had got their basic exports or turnover of internal sales registered in the past.

Out of the ceiling of 50,000 bales, a small quantity has been reserved for allotment to Co-operative Societies. Dealers, whose turnover exceeds Rs 45 lakhs, will not be entitled to receive a quota higher than that admissible to dealers whose turnover is Rs 45 lakhs. Export of this quota will be allowed to all permissible destinations excepting Tibet and the Portuguese possessions in India, and licences issued will be valid for shipment till January 31, 1958.

Meanwhile, the industry is awaiting the import policy for

Egyptian and Sudanese cottons. New crop prices in those countries are declining every week and the industry feels that the present is the opportune time to enter into those markets. No business can, however, be put through unless fresh import quotas for those cottons are announced.

There are indications that a large part of the import quota for East African and American cotton will lapse by the end of this month for want of sufficient interest in those growths on the part of mills and traders. Of the 50,000 bales permitted from East Africa, the business put through has hardly exceeded 20,000 bales, while 60 per cent of the American quota is yet to be utilised. The lack of interest in East African cotton is attributed to the Government's stipulation permitting imports of only lower-staple growths and not Bushoga, Bukhedi and other higher-staple varieties. In the case of American cotton, mills are found to be reluctant to import this variety on fears that prices may decline in the near future.

According to latest indications, the current cotton season is progressing satisfactorily. Except for certain regions like Saurashtra and Gujarat where there is paucity of rains, most of the cotton-growing areas have received beneficial rainfall so far and the condition of the crop is considered to be good. It is, however, premature to hazard a forecast about the crop output during the season.

Meanwhile, spinners' interest in new crop appears to have broadened, which is reflected in a somewhat increased turnover at Sewri. Good varieties like 320F, 197/3 and Jharilla of Khandesh are in good demand, but their prices have remained unchanged. In the forward section, prices were inclined to harden under short-covering, finding sellers only limited. The improvement was attributed to reports of dry weather spell. ICC Jharilla March delivery, after touching a new high of Rs 694.25, finished at Rs 693.75.

Exports by rail from 1st to 26th September 1957 were 24,710 bales. Estimated mill consumption in Bombay, during the same period, were 95,316 bales as against 94,090 bales in the corresponding period of last year. Estimated stock of raw cotton, held by exporters, dealers and mills in Bombay, on the 26th September, was 387,744 bales as compared with 541,732 bales in the corresponding date last year.

NEW YORK COTTON MARKET:

Values on the New York cotton futures market improved on scattered

trade and commission house buying in current crop months and some short-covering in October, prompted by the absence of transferable notice. There was little interest in the far distant months with virtually no transactions taking place.

A Memphis spot firm estimated the 1957 United States cotton crop at 12,600,000 bales, which was slightly under the estimate made by the Government in September, but 285,000 bales above the firm's forecast a month ago. Middling Spot was quoted at 34.90 cents per pound.

The Agriculture Department has announced the export sale of 9,603 bales of 1955 crop (United States Government-owned upland cotton) at an average price of 27.32 cents per pound. Net sales of this short-staple cotton, till October 3 from the time the 1957-58 disposal programme began in March this year, totalled 3,688,649 bales. Next bids for the short-staple cotton will be received on October 15.

LIVERPOOL COTTON MARKET:
Trading in the Liverpool cotton futures market was dull with a private Bureau estimate of current United States cotton crop below last month's official forecast having no influence owing to higher hedge selling limits overhanging the market. Light hedging was mainly absorbed by locals and the market closed quiet, but steady.

KARACHI COTTON MARKET:
The Pakistani Government have told the Karachi Cotton Association that, on account of the high prices of their cotton exports, it is increasingly difficult to induce foreign countries to enter into trade agreements. Foreign importers, specially from Hong Kong, Japan and France, are understood to have protested to the Pakistani Government that cotton prices have been ruling out of parity with United States cotton of comparative styles. Despite cheaper cotton available elsewhere, Hong Kong, however, was obliged to lift a certain amount from Pakistani under the imperial preferences scheme.

CLOTH AND PIECEGOODS:
Trading in the Cloth market were slightly better than in the preceding fortnight with an improved offtake, restricted though it may be to a limited range of varieties. The main consuming centres were Amritsar, Assam, Bihar, Delhi and Southern India.

Modest Improvement in
Non-Ferrous Metal Prices

THE Government of India's import policy for the October-March period in respect of Non-Ferrous Metals has been generally welcomed although certain ambiguities in the policy statement have raised grave doubts regarding the role of the actual users in the new set-up. The recognition accorded by the Government to the essential character of metal imports has caused considerable satisfaction to the trade with the provision for imports on the yearly basis providing particular relief. Had provision been made for the issue of import licences to actual users in addition to the established importers, prices would in all probability have dipped.

The actual users including scheduled industries will not be eligible to apply for quotas on the basis of their actual requirements. So far as the cut in imports quota from 100 to 80 per cent is concerned, importers are not much worried since overseas prices of non-Ferrous metals, especially those of Copper, have declined during the last few months. At the same, however, there is little possibility of any relief in the supply position.

As Calcutta prices for Copper are higher, there has been moderate demand from consumers in

North Indian centres. The present stock position is not considered excessive by market circles. With regular inflow of the metal, the market should depict a healthy stock position. Meanwhile, Copper ready has improved to Rs 160.50 from Rs 158.50 per cwt. In sympathy, Zinc has improved to Rs 67. Trading in the Lead section is, however, dull and featureless with the rate hovering idly around Rs 76 per cwt. Lower advices, both from London and Singapore, have an adverse effect on the Tin section where the rate is easier at Rs 132 per quarter.

On the London Metal Exchange, the trend in Copper prices indicated a sentiment of uncertainty. The rate, after touching a high of £194, finished at £192-10-0 per ton. American consumers are rather cautious in their commitments following the favourable trend in New York.

Zinc was quoted around £70½ per ton. The US stock-pile purchases during September were reported to be high than in August. Lead was quoted at £88½ per ton. In the USA, Government purchases were reported to be higher in September than in the previous month. The outlook for the metal does not, however, appear to be

bright. Tin, after touching £740 early in the week, receded at the close to £734½ per ton. France is reported to be short of supplies and may be in the market in the near future. With the fall in Malayan production, as also in Bolivia and Indonesia, no considerable surplus of the metal is expected.

*
Oils and Oilseeds

The markets for both Oils and Oilseeds, after ruling firm during most part of the week, developed a slightly reactionary tendency at the close. The initial firmness of the market was mainly due to renewed speculative buying, being influenced by lower crop ideas together with buoyancy of cotton futures. But reports of increasing tempo of arrivals at the terminals evoked selling at the close.

The Groundnut section displayed a consistently bullish fervour with the operators lending support to the new crop futures on increasing fears that the output would be adversely affected by the absence of rains in Gujerat, Saurashtra and Kutch. While the majority of the traders was inclined to expect a substantially smaller crop, those, who had gone short on the strength of the earlier optimistic forecasts, were obliged to effect a retreat in a rising market. It is largely agreed that the production in Saurashtra has suffered quite substantially for want of rain. The output in Hyderabad also appears to be smaller this year. Andhra is expected to produce a similar quantity, while the output in Madras, including the summer and Pollachi crops, is placed at 4 lakh tons. With the result, Groundnut February touched a high of Rs 156.87, to ease off at the close to Rs 155.25. In the ready section, Bold quality was quoted at Rs 32.50 and Groundnut Oil at Rs 18.75.

The Castorseeds section lacked a driving force of its own; but the strength in groundnut provided considerable encouragement to the operators. Castor May delivery, after touching a high of Rs 157, receded at the close to Rs 154.75. In the ready section, the rate was quoted at Rs 34 and Castor Oil, commercial quality, at Rs 19.87.

Trading in Linseed resulted in a moderate improvement, inspired by the strength of groundnut. Linseed May delivery changed hands at Rs 28.62 to Rs 28.69. Ready was quoted at Rs 28.25 and Linseed Oil at Rs 15.00.

Trading in the Cottonseed section reflected a sympathetic improvement in prices. February delivery, after being taken upto

Rs 99.25, finished a shade easier at Rs 98.50.

*
Gold & Silver

Prices on the Bombay Bullion Exchange fluctuated in a narrow groove. Silver continued to be quieter due to increased arrivals, while Gold was maintained in the absence of sellers.

Arrivals and offtake of Silver were estimated around 26 and 15 bars respectively. Operators from Calcutta were reported to have unloaded their holdings on reports of increased arrivals of Tibetan coins and, with the other bulls following suit, prices reacted rather sharply. Asouj delivery closed at Rs 183.31 and Kartik delivery at Rs 184.19, the highest touched being Rs 185.81 and Rs 185.62 respectively. Spot changed hands at Rs 183.00 to Rs 183.25.

The Law's Majesty

LAST fortnight saw two important confabulations of those in charge of framing our country's laws in the narrowest sense of the term. The first was the conference of Law Ministers of the States convened for the first time by Mr Ashoke Sen, the energetic Minister for Law at the Centre. The other was a more modest affair, the formal inauguration of the new Indian Legal Service, a new cadre of officials for coping with the vast amount of technical work that has grown around modern legislation.

Both occasions, important in themselves, were made even more memorable, because of certain home truths that were said on those occasions. Mr Nehru, who inaugurated the first conference, made a characteristically controversial contribution to the subject of administration of law and dispensation of justice in the country. Mr Pant, who spoke on the other occasion, stressed the need for clear and unambiguous draftsmanship. Thus, the observations of the two statesmen were complementary and between themselves covered very nearly the whole ground.

Mr Nehru's speech has been the subject of wide comment in the country and has even given rise to some misunderstanding. Mr Nehru prefaced his remarks by saying that he has great regard for the "dignity and majesty of the law" and he conceived its function to "protect the freedom of the individual, even against the executive, even against my own Government's actions". These are basic principles in a democratic society. Having said this, he made three important points: the first was the appalling load of arrears in our Courts, which no amount of additional appointments of Judges seems to be able to reduce to any significant extent. Basing his calculations on data available before the conference, Mr Nehru reckoned the total number of pending cases before the Courts at something like 164,000, a truly staggering number and, what is worse, some of these have been pending for years. Quoting the maxim that justice delayed is justice denied, he said that something drastic should be done about this accumulation of backlog. He also referred to the enormous waste of money and energy involved in such protracted litigation. No one can seriously quarrel with this part of Mr Nehru's criticism of the present state of affairs. Even those who have only the slightest practical experience

of the law's delays—a good of which is avoidable—will wish that Mr Nehru's criticism will go home and a change for the better will take place.

The second point made by Mr Nehru related to the cynical perversion of law by people who find in the provisions of a liberal constitution a safe haven from the importunities of statutes that impose fiscal and other liability. It is perfectly scandalous the way prerogative writs written into our Constitution to ensure certain guaranteed fundamental rights are made use of by wily tax dodgers. In a good many of such cases, the ultimate issue of the injunctions has been in favour of the State. But, by the time the process is allowed to work toward its logical conclusion and the courts decide that there has been no infringement of fundamental rights, the principal purpose of the dodgers has been served. The tax gatherer's efforts have been, at least for the time being, checkmated. Those who have been following the course of such writ applications in the various High Courts know how the normal administrative tasks are sought to be thrown out of gear at every stage by the invocation of these writs.

The impression created in the mind of at least the lay public is not far different from the description given it by Mr Nehru in his speech: "the law is being used as the refuge of the scoundrel". Mr Nehru was understandably warm on the subject. However much one may wish to assert the democratic right of a man to have his rights tested at all conceivable moments, it would appear that the major beneficiaries of the precious right are those who would, but for such rights, have placed themselves in jeopardy by offending some other statute. To say that such a state of affairs is intolerable is not to criticise either the value of the writ provisions or those whose duty it is to interpret the Constitution, but merely to point to a practical difficulty that must be resolved.

It is in this context that the idea of administrative tribunals has gained attraction as a possible way out of the unintended impasse in which we find ourselves. Mr Nehru discussed the idea at some length. Administrative tribunals are not a new idea by any means. In these days, when a good proportion of law is being made willy-nilly by administrators by the operation of delegated legislative power, to sit at administrative tribunals that will ensure

swift decisions without impairing equity and justice is to strain at a gnat after swallowing a camel. Moreover, law-making in a Welfare State is largely a matter of giving legal shape to socially and economically desirable ends. And, in a highly complex economic society, law-making has become more or less technical economics. It is true that it would be a bad day for democracy when concern with the fundamentals of jurisprudence and basic concepts of human behaviour as embodied in what might be called the philosophy of law ceases to matter. Yet, it is true to say that an increasing proportion of modern legislation has a direct and easily discernible social and economic purpose and their interpretation is, therefore, more an exercise in welfare economics and tactful mediation between affected interests than legal hair splitting. This does not mean that slipshod drafting of statutes should be encouraged or allowed to pass unscathed, but it does mean that less scope should be given to slick lawyers who smuggled palpable injustice through unintentional lacunae in the acts.

The third aspect of Mr Nehru's remarks related to his plea that "courts and judges should not function in 'ivory tower' and laws should be interpreted in a way which would bring out an understanding of the social forces of the day". In much of the comment on this particular plea of Mr Nehru, it has been assumed that Mr Nehru's doctrine is a revolutionary departure from accepted notions. On the contrary, the debate whether or not it is the Judge's duty to interpret the spirit or the letter of the law is as old as the notion of law itself. All through the ages, there have been those who have insisted that it is not the business of the Judge to read into the Statute anything beyond the plain meaning of the words used, and these men have had a wholesome scepticism about the "underlying social forces behind a particular piece of legislation". They have said, and said with some justice, that it is very diffi-

cult to determine precisely the social forces behind a particular piece of legislation which is very often a compromise of several contending forces. Since Mr Nehru has chosen to employ an image from dynamics, the Judges may legitimately say that at any given moment, social forces are not necessarily cooperatively oriented toward the same direction: more often than not, they are contending forces at war with one another. What, then, are the forces that the Judges ought to take note of? Should they take note of the dominant forces? And how does one determine that? Parliamentary majority may not always be a safe guide, since a great deal besides compulsive social forces is notoriously behind Parliamentary majorities. Again, it is not unknown in legislative history for decisions of a particular Parliament to be reversed by its successor. In any case, as a firm guide to interpret laws, dependence on intangible and inarticulate social forces is likely to be very treacherous.

And yet, through the ages, people have not ceased to ask, Portia-wise, to have a view of law that will not kill the spirit of it by too narrow an insistence on its letter. Indeed, the impulses that have broadly oriented themselves in the political attitudes of conservatism and liberalism have, on this question, taken the opposite standpoints. And there is substance in the liberal criticism that professional interpretation of law, dependent as it is on precedents and ancient rules, has not too readily acted on behalf of change. But, as Mr Nehru himself pointed out, there have been great judges who have made use of the authority of their high office to uphold the inviolability of the human spirit and to assert the importance of the compassionate brotherhood of man. These they have done as the normal incidents of their regular duty of interpreting the law of the land. Such judge-made laws have been among the most glorious treasures of the democratic way of life. But the

Progress Report by the IFC

I REMEMBER having read, though I cannot at the moment recollect where, something to the effect that the raising of new capital by the Indian corporate sector was for substantial amounts during 1956-57, a major contributory factor in this regard being the provision of aid by the Industrial Finance Corporation. Nevertheless, the general opinion seems to be that we have reached the stage where the private corporate sector will be experiencing considerable difficulty in gathering for itself fresh amounts by way of capital. Those who hold such a view point, in this connection, to the general tightness of the money market and, secondly, to the fact that the specialised institutions, such as the Industrial Finance Corporation and the Industrial Credit and Investment Corporation, have by now largely used up their resources. I may say that I do not find myself in agreement with such a view; and the recently held annual meeting of the IFC provided an opportunity for its Chairman, Mr K. R. K. Menon, to delineate the prospects before and the role of the IFC in the accelerated industrial economy.

First, we may see the extent to which the IFC's operations during the year ending June 1957 would have benefited the corporate sector in its unceasing search for funds to finance expansion, development, rehabilitation and modernisation. Over the past year, the total amount of loans and advances has shot up by more than 50 per cent from Rs 14.24 crores to Rs 21.90 crores. At this juncture, I may add that this helped to augment the IFC's gross profit by Rs 10.38 lakhs to Rs 43.06 lakhs; and, after providing nearly Rs 32 lakhs for taxation, doubtful debts and other contingencies, the balance of profit was adequate to pay the guaranteed dividend without recourse to a subvention from Government. Loan disbursements during 1956-57 increased more than fourfold to Rs 9.78 crores against Rs 2.20 crores in 1955-56. As Mr Menon remarks, this very satisfactory result "was achieved in spite of the fact that, due to the closure of the Suez Canal route and also the country's tight foreign exchange position, delivery of capital goods from abroad was subjected to considerable delays". So, it is clear that the remarkable increase in disbursements must be owing to certain special factors. As the IFC Chairman has put it, this speeding up process was helped by: (a) the completion of administrative reforms and, in parti-

cular, the cutting out of red tape in respect of formalities; (b) the extension of the system of having IFC lawyers to the Bombay and North India regions, which enabled expeditious consideration and disposal of applications; and (c) further liberalisation in respect of the grant of interim loans pending completion of the formalities as such.

Strangely, however, the total applications were marked somewhat lower at Rs 21.36 crores against Rs 27.70 crores; and loans sanctioned also fell by slightly more than Rs 3 crores from Rs 15.13 crores to Rs 11.91 crores. Mr Menon has, however, given a possible reason for this slackening in loan applications. Firstly, the virtual ban by Government on capital goods imports, unless these could be arranged on a deferred payment basis, may have reduced the demand for funds; and, secondly, the almost relentless rise in prices abroad may have induced "consumer resistance" which, in turn, will have diminished the pressure of demand upon IFC funds.

The IFC has, during the year, taken further steps to provide itself with technical experts. Advisory Committees have been formed, and the guidance received has, said Mr Menon, been "of immense help to the Board of Directors in dealing with the loan applications".

An experimental measure that the IFC embarked upon during the year was the nomination of non-officials to the Directorate of a limited number of companies to which the IFC had granted loans. This is because, "with the rapidly growing number of loanee concerns on our books, we have arrived at the stage where already it is becoming extremely difficult for our own officials to function as our representatives on the Boards of Directors of all, or even a majority of these concerns in addition to carrying on their normal duties, the volume of which has also grown considerably of late".

Mr Menon has given out an important policy attitude of the Corporation. This is in the matter of the dividends which companies, being indebted to the IFC, may declare. The loan agreement always postulates that, without the prior concurrence of IFC, dividends in excess of 6 per cent may not be paid so long as sums are due to the Corporation. Mr Menon reports that the Corporation continues "to give such concurrence in all cases where the financial position of the concerns

after careful examination by us struck us as satisfactory". Thus, there is no basis for the apprehension in certain quarters that an application for a loan from the IFC automatically restricts the dividend paying capacity of the company; the dividends that may be declared will be permitted to bear relation to the profits earned.

The IFC Chairman then turned his attention to the ways and means position of the Corporation. It has been known, over the last year or two, that the resources of the IFC had largely been utilised. So, Mr Menon has been busy with the task of augmenting the IFC resources. He mentions that, in spite of the "very difficult" money market conditions, arrangements have been made for an additional sum of Rs 15 crores, which will enable the IFC, if so called upon to do, to disburse "loans up to a total of as much as Rs 20 crores in the course of 1957-58 alone".

Linked with this search for additional resources is the need for revising the IFC Act, which at present restricts borrowings by the Corporation to five times the paid-up capital and reserve fund. It is now proposed to empower the IFC to borrow up to ten times the capital and reserve fund; and a Bill for this purpose has already been introduced in Parliament.

One more important point made by Mr Menon is that, in the light of the Government decision to permit capital goods imports only on a deferred payment basis, the IFC's good offices may be called upon for guaranteeing sums in this behalf. Consequently, Government have now decided that the IFC should be suitably empowered; and the IFC Act is to be amended by a Bill, which it is hoped will be considered by Parliament in its November session, vesting this power in the IFC.

It is clear, thus, that, under the energetic and resourceful direction of Mr Menon, the Industrial Finance Corporation has been quietly and efficiently girding itself for tackling the tasks that it will be the responsibility of the Corporation to fulfil during the Second Plan period.

Industrial Development in West Bengal

Some of the facts and figures given by Mr Kishorilal Dhandharia in the course of his presidential address to the half-yearly general meeting of the Bharat Chamber of Commerce, Calcutta, merit close attention from the Government of West Bengal as well as the Central Government. The statistics reveal a disturbing trend in the industrial and commercial development

of this important region of the country. Despite its natural advantages West Bengal has been lagging behind other States in economic activity. According to a survey of the West Bengal State Statistical Bureau the per capita income in the State during the period 1948-49 to 1951-52 increased by only 4 per cent while the per capita income in the country as a whole increased by as much as 11 per cent. The slow tempo of industrial progress is also brought out by the fact that the number of factories in the State increased by only 433 between 1951 to August 1956. Factory Labour has declined to 6.17 lakhs in 1955 from 6.68 lakhs in 1947. Increase in capital employed in industries during the four year period 1950-53 is also at the low level of Rs 13 crores. Conditions in the Bombay region on the other hand are quite in tune with the tempo of development in the country. In Bombay factory labour in 1955 numbered 8.63 lakhs against 6.02 lakhs in 1947, while capital employed in the four year period 1950-53 increased by 22 crores.

West Bengal has, however, earned the first place as regards increase in the earnings of factory workers. During 1950-53 earnings of factory workers went up in West Bengal from Rs 942 per head per annum to Rs 1110 i.e. an average annual increase of Rs 168. The annual increase during the same period in Bombay is only Rs 55, Rs 39 in Uttar Pradesh and Rs 141 in the major states of India.

Mr Dhandharia thinks that the comparatively high cost of labour in the West Bengal region is one of the inhibiting factors in the establishment of new industries in the State and expansion of the existing ones. A closer study of the somewhat disquieting trend in this region which has every reason to record the largest increase in industrial and commercial activity in the whole country may reveal other inhibiting influences. The orderly growth of industrial activity in West Bengal is a vital necessity because of the dependance of a high proportion of its population on industry. It is to be hoped that the Government of West Bengal will take active measures to eliminate the adverse factors so as to enable the unhindered growth of industries in the region.

Development of Small Industries

Speaking at the meeting of the Small-scale Industries Board, Mr Manubhai Shah, Union Minister for Industry, urged the States to pay

(Continued on page 707)

North Indian Markets

Outlook for Sugar

WITH hardly a week left for the start of the new season, the Sugar industry is reported to be busy, making preliminary arrangements for initial finance, employment of labour and disposal of old stocks. The carry-over for the new season is likely to be higher at 4.5 lakh tons which, together with an estimated output of about 22 lakh tons, will increase the total supply of the commodity to 26.5 lakh tons next season.

The acreage under sugarcane has already gone up by 4.8 lakh acres to 50.2 lakh acres this year and a regular supply of cane, till June 1958, can easily be visualised. There has been no significant damage to the crop in Bihar and Uttar Pradesh on account of heavy rains.

With the considerable expansion in the industry, the supply position, during the coming years, will be plentiful and India will certainly be in a position to allow free exports without any adverse effect on the domestic consumption. Chances of an early recovery in the demand do not seem, however, to be bright, at least for a few months to come, since buyers in the Continent are waiting for the ensuing crop report on Beet.

It is understood that the Export Promotion Committee has recommended to the Government of India to allow free exports of sugar even at the risk of domestic consumption; but export prospects are not now very bright as world sugar prices have been declining in recent weeks as the major producing countries like Cuba, Brazil and India are credited with huge stocks of sugar. Cuba is said to have with her a stock of the order of 120,000 tons, while there is in addition a quantity of as much as 2 lakh tons remaining unutilised in the world free quota.

It is learnt that India has exported over one lakh tons of sugar to foreign countries, for the first time after the Second World War, during the five months ending 31st August, 1957. Bombay and Calcutta Ports have cleared over 74,000 tons and 31,000 tons respectively to the UK, China, Malaya, Ceylon, Aden, East Africa and West Asian countries during this period.

Meanwhile, internal prices have come down by about a rupee per bag for medium grain and by Rs 2 per bag for bold grain. Seasonal demand, which normally remains brisk during the Pujah festival, is not satisfactory this year. All the factories are reported to be eager sellers and want to liquidate their stocks before the new season commences.

For obvious reasons, sentiment in the Hapur market remains depressed. Following rates (per maund) are quoted:—Jaswant Rs 33.31; Simbhauli Rs 33.62; Daurala Rs 33.75; Bijnore Rs 32.37; Amroha Rs 32.75 and Mansoorpur Rs 33.87 to Rs 34.75.

The Khandasari market also rules quiet despite good demand. Rates are moving between Rs 27.00 and Rs 31.50 per maund, according to quality. *

Gur

In the Hapur market, new gur arrivals have begun in small quantity, at an average of 50 maunds daily. But, the quality reaching the market is reported to be poor. Old gur stocks are estimated around 12,000 maunds. Old quality is quoted at Rs 11.25 to Rs 12.50 per maund.

In the Muzaffarnagar market, prices recorded a sagging tendency and stocks at this centre were placed at 25,000 maunds. New gur arrivals have not yet begun. Following are the rates quoted (per maund):—Chakku Kotha dry Rs 14.75 to Rs 15; wet at Rs 12.75 to Rs 13.00 and Shakkar dara at Rs 16.00 to Rs 18.50. *

Foodgrains

Mixed conditions were noticed in the Hapur Foodgrains market. While Wheat prices continued to

rule steady, Coarse grains tended to ease. Dara quality Wheat was steady at Rs 16 per maund, while farm quality appreciated modestly to Rs 17.12. Large quantities of imported wheat are being brought from Kanpur to be sold through fair-price shops. The market for Rice ruled quiet. Harvesting of new paddy crop has begun, and arrivals are expected shortly. Crop prospects in Bihar are, however, becoming bleak as a result of continued drought.

New crop Maize arrivals in larger quantities accounted for a fall in prices of this grain, while other Coarse grains declined in sympathy. As demand was poor, Gram prices drifted to lower levels. Sentiment in the Barley and Bejher sections remained depressed, while Jowar prices remained practically unchanged. The Government's withdrawal of the order, not allowing export of Gram from Rajasthan, had a dampening effect on the Pulses market. Thanks to better demand in the form of dal, the downward tendency in Arhar prices was arrested.

Quietly steady conditions were witnessed in the Delhi grains market. Farm wheat showed a gain of about 50 NP per pound due to increased buying activity against slack arrivals. Gram was also slightly steadier as a result of better enquiry. Barley, however, lost 37 NP per maund on account of better arrivals. There was a good demand for Basmati Rice which showed a rise

of about Rs 3 per maund on reports of lower arrivals. Following the commencement of the seasonal demand, Bajra recorded a small rise.

The Bombay grains market presented a steady appearance. After the continued easiness during the last fortnight, Rice revealed a measure of steadiness on reports of inadequate rains in Madhya Pradesh, Rajasthan, Gujarat and Kutch. In the Coarse grains section, Jowar provided a firm feature with prices hardening by Rs 8 to Rs 10 per candy. Bajra reflected a steady undertone. The Pulses section revealed a mixed tendency and the easiness in Pulses was attributed mainly to the subdued buying interest in the face of steady arrivals.

Shellac

The Calcutta Shellac market ruled steady with Pure TN quality improving to Rs 84 from Rs 82 per maund, quoted in the pre-Pujah session. Foreign buyers have, however, temporarily withdrawn from the market. Since many consumers are holding stocks, the higher Bank Rate in Britain may have put them off increasing their holdings. This factor is fully reflected in shipments, which have shown a sharp decline to 23,772 packages in September from 32,478 packages in August.

On the London market, the number of transactions declined to 14 lots. October delivery was quoted at 195sh per cwt, showing a drop of 12sh 6d over the week.

Southern Zonal Council

THE Second meeting of the Southern Zonal Council which met in Hyderabad a few days ago under the presidency of Mr Govind Ballabh Pant has given resounding proof of the usefulness of a common platform for a group of contiguous States to discuss and arrive at decisions, if need be. The decisions reached at the meeting disclose a growing tendency on the part of the representatives of the various participating States to view the region as a whole.

The chances of the Council functioning as an effective forum for discussions leading to cooperative effort have been greatly enhanced by the agreement reached between the Chief Ministers of Andhra and Madras on the border dispute. Both the Governments have now agreed to implement the recommendations made by Mr H. V. Pataskar's reports. According to Mr Pataskar's recommendations, 320 square miles of Tiruttani Taluk, including Tiruttani town will go to the Madras State, and

Andhra will get an area of 310 square miles from the Ponneri and Tiruvellore Taluks of Chengulput district including the headworks of Araniar project and 12 villages irrigated by it.

Mr Sanjiva Reddi, Chief Minister of Andhra Pradesh, has rightly pointed out that though the States in the South function as different political and administrative units, they are emotionally one. From time immemorial the people in this region have been in close touch with one another and are bound together by a common culture. It will be wrong to think that linguistic barriers will make them forget for long their common heritage. Mr Sanjiva Reddi's assurance that the waters of the Godavari will be made available to all the Southern State emphasises this underlying unity. According to him the two important problems facing the zone are the utilisation of water resources and power potential and the introduction of land reform.

The Council has already taken some steps toward the realisation of these aims. It has decided that measures for a coordinated development of power resources in all the four States of Madras, Andhra Pradesh, Mysore and Kerala should be examined by a committee, consisting of a representative of the Central Water and Power Commission, a representative of the Ministry of Commerce and Industry (Development wing), the Chief Electrical Engineer of the State Electricity Department and/or Electricity Board of the States concerned in the region and the Development Commissioners of the States. The Central Irrigation and Power Ministry has also suggested the establishment of technical committees at zonal level charged with the responsibility of ensuring the maximum utilisation of major projects. The Council's decision augurs well for the augmentation of power supply in the region in general and in particular in the Madras State where there is little scope for developing fresh sources of power.

It is to be hoped that the establishment of the power resources committee will pave the way for the early implementation of the scheme for the utilisation of the waters of the West flowing rivers in Kerala. The scheme will augment at once substantially the power supply in Kerala and bring much needed water for irrigation to the dry areas in the western part of Madras.

The vital problem of augmenting the water supply of the northern districts of Madras can now be tackled confidently, thanks to the active interest being evinced in this regard by the Andhra Government. Mr Sanjiva Reddi has informed the Council that the Chief Engineer of the State will be asked to submit a preliminary report on the utilisation of the waters of the Krishna and Godavari for the benefit of the Madras State. This report is expected to be ready for the next meeting of the Zonal Council.

Mr Govind Ballabh Pant who presided over the Council meeting, however, pointed out that though the chances of implementing a major scheme in the near future such as the more effective use of the combined waters of Godavari and Krishna were not very bright in view of the prior heavy commitments under the Second Plan, a comprehensive review of the waters of the two rivers would furnish essential data for use when the time became more opportune for embarking on the project.

The Southern Zone is even now witnessing the effectiveness of joint endeavour in tackling one of its most difficult problems. In the majority of the States in the region the Governments, till recently, were hard put to it to meet the demand for foodgrains. Serious thought on the food problem of the three States of Madras, Mysore and Kerala led to a study of the food situation in Andhra. The solution offered itself immediately. It was found that the surplus rice available from Andhra could be utilised to meet the requirements of the deficits in the other three States. The Southern rice zone came into being with the object of making the zone self-sufficient in food. Despite some initial setbacks due largely to the novelty of the arrangement, the scheme has achieved the desired results. Reviewing the working of the Southern Rice Zone since its inception last July, Mr Pant said that while the results so far obtained were encouraging there was need for constant vigilance. He also pointed out that the States concerned should work toward returning to the normal pattern of distribution and thus reduce their commitments in regard to the maintenance of a large number of fair price shops. He, however, did not omit to emphasise that a lasting improvement depended on increased food production.

The second meeting of the Council has also revealed a common desire to put to profitable use the States' cooperative endeavour in matters of administration as well. The four Chief Ministers

have now accepted a proposal to have a common police reserve force for the region. The Council has constituted a committee of Inspectors-General of Police of all the four States to examine the scheme in detail. The report will be available for consideration at its next meeting.

It has also been decided that the four Chief Ministers will formally discuss among themselves the question of increase in salaries of staff, particularly the non-gazetted staff and village officers. They will also keep each other informed about the proposal and progress made relating to fixing of ceilings on land holdings in their respective States. It would appear that three of the four States are quite anxious to fix ceilings on land holdings as early as possible. The Andhra Government have issued an ordinance enabling the collection of statistics of land holdings. In Mysore, the Committee on Tenancy and Agricultural Land Laws has submitted its report and it is understood that the State Government will shortly take it up for consideration. The Kerala Government is also urgently considering the question with a view to introducing early legislation. In his speech Mr Pant expressed the view that ceiling on land holdings should be uniform in all four States to the extent practicable. While it is to be noted that each State has to consider the problem in the light of local conditions, consultations amongst the various States should be of considerable help in tackling the problem.

The Council has also set up committees for implementing the decisions embodied in the memorandum on safeguards for linguistic minorities, and to gather data and examine the details of manpower planning. The fact that the linguistic minorities committee is composed of the two Chief Ministers of Mysore and Kerala, the Finance Minister of Madras and the Revenue Minister of Andhra indicates that the matter is considered to be of considerable importance. Even after all the adjustments of territory and borders on the basis of language, there are still pockets in Andhra and Madras with predominantly Tamil-speaking and Telugu speaking population respectively. It is, therefore, in the fitness of things that the matter should be entrusted to a high-level committee. It is essential that the people in the different States should rest assured that the interests of their brethren living in different linguistic regions are being looked after with all possible care.

South Indian Notes

Chemical Fertilisers

The problem of soil fertility in India had been admirably summed up by the Royal Commission on Agriculture as early as the thirties as being one of nitrogen deficiency. What chemical fertilisers therefore mean to Indian agriculture is too obvious to need stressing. The setting up of the Sindri fertiliser factory was the first step taken to popularise the use of chemical fertilisers in the country. The internal production is still far short of the domestic requirements and imports to the extent of more than 10 lakh tons annually are found necessary.

The present tight situation in foreign exchange has therefore enforced a state of short supply of fertilisers in the country. Against a requirement of 13.4 lakh tons last year, actual imports amounted to only 10 lakhs tons, leaving a gap of 3.4 per cent. But it is gratifying to hear the Union Minister for Food and Agriculture, Mr A. P. Jain declare at Hyderabad that the Government of India had realised the importance of fertilisers, and had gone a step further by revising the target for fertilisers in the Second Plan in spite of difficulties of foreign exchange.

Referring to the controversy over the relative value of chemical fertilisers and green manures Mr Jain said that in a vast country like India there was scope for the use of both. And actual experience with chemical fertilisers had proved it beyond doubt that the use of chemical fertilisers gives the most effective and immediate results. For optimum results a judicious use of both in a balanced proportion would be required. Mr Jain assured sympathetic consideration to proposals for setting up of nitrogen factories by the private sector when they are forthcoming.

Mr Rahimtula Chairman of the Fertiliser Association of India in the course of his speech emphasised the importance of such other soil nutrients as potash and phosphate. To popularise such fertilisers, Mr Rahimtula pleaded for measures like extension of takkavi loan facilities, demonstration of N.K.P. mixtures, setting up State fertiliser councils and granting of central subsidy irrespective of matching grants from the States.

Labour Relations

Addressing the students of the Madras School of Social Work Mr V. V. Giri Governor of Uttar Pradesh strongly pleaded for the immediate abolition of compulsory adjudication in industrial disputes which was introduced under the Defence of India Rules as he thought that it stood in the way of peace-

ful and good industrial relations. Adjudication, Mr Giri said, proved a danger to industry because it resulted in a position which was not generally accepted by those who felt defeated in the bargain with the result that it became the starting point for another and continuous strike.

Mr Giri argued for a joint standing machinery at all levels in the industry from the bottom to the top which could ensure successful industrial relations, and said that a settlement between the union and the employer would be far more abiding and permanent and that it was the only way in which industrial relations should be based. He further pointed out that a conciliation board, tripartite or bipartite bodies, and supreme court judge should be the agencies at the higher levels, to which a dispute should be referred in case it should fall of an amicable settlement at the lower levels. Mr Giri is so much convinced of the soundness of his proposals that he said if his suggestions were to be implemented they could have lasting industrial peace.

Mr Giri also appealed to the personnel officers to have a new outlook and said that only through constant contact and good feeling towards the employees they could minimise friction and promote industrial peace. But this can only come to pass if employers give greater initiative to the officers or welfare officers to think in their original manner and place their views before their employers.

Referring to the question of the participation of workers in the management of industries Mr Giri said that the employers and personnel officers must realise that this participation would not come into being and would not be successful unless the trade unions were organised in the soundest manner and had cent per cent membership so that they had one union only for every industry.

Implementation of Second Plan

Addressing the students of the Travancore University Mr C. D. Deshmukh Chairman of the University Grants Commission appealed to the students to work hard for the successful implementation of the Second Plan. He pointed out that India could not hope to achieve the position of either U.K. or U.S.A. and that all that she could hope for was that it would not be miserably poor for a long time.

Mr Deshmukh pointed out that the first task before the country

was that of organising the economic life particularly the way of increasing food in a better manner. If China could increase her food production with lands of poorer quality there was no reason why the same could not be achieved in our country also. It was pointed out that unless food production showed improvement the troubles would persist.

Mr Deshmukh also observed that we should not attempt to do what we could not achieve and that it was essential that we should cut our coat according to our cloth. But once this was done he said, the citizens including the students should cooperate with the Government in making the Plan a complete success.

Mr Deshmukh also referred to the work of the University Grants Commission and drew their attention to the law recently passed in the State which makes it necessary to review the position in regard to the capacity of the University Grants Commission to assist in the development of institutions of the University which had been transferred to the State. In this connection he said that he had discussed the matter with the authorities and that a solution satisfactory to all concerned would be reached. He expressed the hope that within the space of two or three months they would find a solution which would enable the Commission to pursue their common ends and help in the development of their University.

SOUTH INDIAN MARKETS

Record Rise in Rubber Production

THE production of natural Rubber in India has risen to a record level of 2,341 tons in August, 1957. The general trend of production this year is, to a certain extent, surprisingly high. Production was as low as 750 tons in June and, in July, went up to 1,499 tons. The August output is 591 tons higher than that of the same month in 1956. As a matter of fact, production was not so high as this in any previous August.

There is a general feeling that the actual output should be higher than what the Rubber Board figures have shown in view of the fact that theft and illicit trade in raw rubber are reported to be on the increase and that there are lots of complaints from the manufacturers regarding the non-availability of rubber even in lean production months of May, June and July.

Out of the crop of 2,341 tons, only 1,057 tons represent actual returns received in the Board office. The remaining 1,284 tons will probably cover a substantial share of that portion of the total output that may escape the notice of the Board. However, the Rubber Board's statistics relating to production do not get that unquestioned acceptance now as they used to get previously.

Consumption, to the end of August, amounts to 21,235 tons—highest for this period in any of the previous years—while production is only 12,882 tons, leaving a gap of 8,353 tons between manufacturers' requirements and the local supply. This is, to a great extent, covered with imports.

Pepper

Pepper markets have continued to rue quiet with more sellers than buyers in evidence. Also, in Singapore, rates have come down to Str. \$71 following the news that bank rate has been raised to 7 per cent at this centre. Rates in the New York also marked down to 25½ cents from 27 cents per pound under pressure of unsold afloat parcels of Lampung, which are reported to have been sold at as low as 23½ cents.

In the Kozhikode market, Wynaad quality is quoted at Rs 595 and the Country variety at Rs 575 per candy. The Alleppey market witnessed persisting inactivity in the absence of any enquiry from New York buyers. Rates are nominally quoted at Rs 562.60 and Rs 550 per candy respectively for Superior Palai and Thekkad varieties.

Groundnuts

The Madras Groundnut market ruled quietly steady. Arrivals last week were below 100 tons, while small crushers were taking up these around Rs 174 per candy for superior oil-quality seeds and Rs 164 for bold variety.

Reports from North Arcot district show that the Khandesh variety will be harvested by the end of this month and those from the Salem district reveal that the crop will be only 50 per cent of the normal.

In the Groundnut Oil section, the rate for the ready position is quoted at Rs 332 per candy. Only small quantities are being taken up by Calcutta interests.

General Assurance Society Limited

The Struggle for Economic Emancipation Inadequate Means for Expansion of Private Industry

Statement of the Chairman, Mr B. L. Jalan

The following is the Extract from the chairman's address delivered by Shri B. L. Jalan at the Annual General Meeting of The General Assurance Society Ltd. held on the 27th September, 1957:—

GOLDEN JUBILEE YEAR:

As you are perhaps aware, your company has already completed 50 successful years of its life. Today in the midst of the Golden Jubilee year, we have a reason to look back with pride and satisfaction. The Society had a chequered history as it emerged creditably from several vicissitudes.

Not unlike your company, our country and indeed the whole world has passed through fateful years. We have witnessed two international wars, unprecedented both in magnitude and devastation. The development of atomic power, both for peaceful and war purposes, is an ominous portent for the future and one knows not what will be the shape of the world 50 years hence.

The scientific and technological evolution has brought comparable political, economic and social upheavals in its wake. Old empires were shed, new nations were born. The agricultural society of yesterday has yielded place to a new industrial society of mass production.

Even in our own country we see a new world today. Only about a month and a half back we celebrated the centenary of the beginning of our freedom struggle and the ushering in of the second decade of our independence.

ECONOMIC EMANCIPATION:

Our new struggle for economic emancipation is best symbolised in our first, second and many more five year plans. The task is stupendous; time is limited. Our attempts to move one step forward is often matched by two steps by more advanced and industrial economies.

Our per capita income has been estimated at Rs. 272; of the United States in rupee equivalents at Rs. 9410, or 38 times. We produce about a million ton of steel, the comparable figure for the U.S.A. is over 100 million. The revenue budget of the Government of India is estimated at Rs. 660 crores. The Government of the United States spends Rs 32000 crores of about 48 times more although they have to provide for welfare and security measures only to less than half the

population. This gives in some measure the length of the journey we have to traverse on the road to economic advancement.

STRAINS ON ECONOMIC FRONT:

But the process of rapid economic evolution is not always a smooth operation. It is often accompanied by strains which require great ingenuity, patient deliberations and sagacious foresight in matters of social and economic engineering.

As you are already aware, in the wake of our Second Plan the same problems which beset our economy in the immediate post-war period, have revived. The revised index number of wholesale prices stood at 112.6 in the week ended the 10th September as compared to 102.1 in June, 1956. In the same period the food articles have witnessed a still steeper rise from 99 to 112.6 showing an increase of about 13 per cent. Further, whereas the wholesale prices of industrial raw materials have advanced by 18 per cent, those of manufactured goods have moved up by 5 per cent only. This has an obvious effect of producing greater burdens on industry. Nevertheless, demands of workers are rising although the consumer price index for working classes advanced from 107 to 109 points only.

New difficulties in the form of exchange shortage and lack of financial accommodation are also increasing, restraining our industrial progress. During one year, from June, 1956 to June, 1957, the sterling assets of the Reserve Bank declined by Rs. 227 crores in spite of a credit of Rs. 95 crores from the International Monetary Fund. In fact we had to cross the limit of Rs. 400 crores of Exchange Reserve. The persistent rate of deficit in payments position threatens the small residue of our exchange holdings with an obvious risk that the international value of rupee will be undermined very much. Serious restrictions have been imposed on the use of exchange resources. Even import of machinery for industrial expansion has been curtailed and permission is granted only if deferred payment facilities can be secured.

FAMINE OF CAPITAL:

The chronic shortage of capital has attained new depths. It has become extremely difficult to obtain accommodation for legitimate needs of working capital for industry.

The bank rate was raised from 3½ to 4 per cent. It was followed by an advice of credit squeeze by the Reserve Bank. The measure was first limited to advances against stocks of foodgrains but eventually it was extended to industry as well.

The resources of industry have been further dried up by the levy of new and enhanced taxes. The stock markets of the country never witnessed more dull and dreary conditions since the Liaquat Ali budget. Certain prices of scrips, which were considered rock-bottom became, in fact, the ceiling prices of the next few weeks. In one year alone, between June, 1956 and June, 1957, index number of the prices of industrial securities has declined by 18 per cent. It has become very difficult to dispose off good industrial securities yielding fair dividends, excepting speculative counters. I wonder if this will not remain a paradox of our industrial history that while unprecedented rates of industrial expansion were being planned, the share and stock markets faced a collapse.

FOOD PRODUCTION & BUFFER STOCKS:

The principal cause underlying both the phenomena of exchange and rising spiral of prices must be sought in the agricultural sector of the economy. There has been lower production of food grains although the population has been steadily increasing. During the two-plan period alone, our population was estimated to increase by about 48 million souls. This compares well with the whole population of the U.K. at 51 million, of France at 44 million, of Canada at 16 million and of the whole Australian continent at 9 million. Furthermore, during the good crops in 1954-55 and a season earlier, the Government had liquidated all buffer stocks. This was done in spite of the unreliability of our agricultural statistics, which is acknowledged even by the Government. So long as we do not create definite surplus in food grains through permanent measures and not only by favourable monsoon, the basis of our food policy should continue to be open market operations through buffer stocks.

A permanent solution of the problem will have to strike at the root of our agricultural production. This can be done by fully harnessing every acre of land through

irrigation. It was estimated that only 18 per cent of our cultivated land possessed means of irrigation at the end of the First Plan. An addition of about 10 per cent is proposed to be made under the current Plan. Thus about 72 per cent of the land will still remain to be supplied with means of irrigation. One additional crop on this 72 per cent of the land will yield agricultural produce of the value of over Rs. 3000 crores based on the annual value of our agricultural income estimated at Rs. 5000 crores. It compares well with the total increase of Rs. 2600 crores in the National Income under the whole Second Five Year Plan. It will bring new prosperity to our rural masses, wipe out the deficit in foodgrains and foreign exchange and will create enormous demand for manufactured goods, necessitating manifold more industries. This will greatly help in the removal of unemployment and underemployment both in cities and villages. But the task of providing irrigation facilities to 72 per cent of our cultivated land cannot be taken up except on the basis of utilisation of voluntary labour in all the five-and-a-half lakhs of villages for constructing wells, ponds and tanks on self-help basis. It has now been demonstrated in West Bengal, by the foresightedness of Dr. B. C. Roy, that within first four-and-a-half months the people in flood-affected areas could manufacture 10½ crores baked bricks as a part of a programme of constructing 1,00,000 one-room houses on self-help basis.

Reverting back to our problem, since the causes of rise in prices are restricted to the rural sector, the policy of general credit squeeze should be abandoned.

BORROWING, NOT TAXES:

Notwithstanding the opposition from all quarters in the country, the Expenditure and Wealth taxes have been duly incorporated in the statute book. These two fiscal measures are bound to make serious inroads in our social and economic life and I still hope that the Government will find it possible to scrap the two pieces of legislation in not a distant future. These taxes, as I proposed, have atleast two more palatable and convenient alternatives. First, taxes as computed may take the form of public borrowings and called 'tax loans'. Thus every tax-payer may be given equivalent government secu-

rities against his tax liability in respect of expenditure and wealth taxes. The tax-payer will not feel the pinch of taxation and would thus be encouraged to invest and produce more; secondly, it would prevent lack of financial resources as the tax-payer can borrow against the government securities given to him. If, however, the Government was not prepared to accept this proposal for one reason or other, they could levy a graduated rate of surcharge on income tax in lieu of expenditure and wealth taxes, called 'wealth and expenditure tax surcharge'. This would have enabled the Government to raise the same amount of revenue under taxation without incurring further expenditure on the administration of new taxes. This would have also made our taxation system more simple, inexpensive and convenient to the people.

It appears now that at certain levels of income, wealth and expenditure the tax-payer will be required to pay more taxes than the income earned during the year. I am afraid no incentive would be left for further investments and

production beyond those limits owing to obvious reasons.

I will then sum up by saying that private industry has been faced with inadequate means and capacity to expand; further, the incentives to do so have also been withdrawn or negated. I hope it will be appreciated soon that it is not necessary for us to impose additional burdens while the country is already suffering from the birth-pangs of a new industrial economy.

It is, however, gratifying to note that the Government is not altogether oblivious of these developments. Our Finance Minister, Shri T. T. Krishnamachari, has gone abroad and especially to the United States to study the capital market and to secure a total financial assistance of about 1000 million dollars or Rs. 500 crores. As the success of the Plan and return to normalcy on our economic front depend in a large measure on this foreign assistance we wish him a tremendous success.

CODE OF CONDUCT:

Coming to our own general insurance industry, we should ap-

WORLD OVERSEAS

(Continued from page 668)

on Saturday mornings, when 30 per cent of the week's business is said to be done.

In Sydney (New South Wales) traders are also seeking permission to open on Friday evenings.

Canberra's national capital meanwhile, is experiencing a boom in trade as a result of the recently introduced policy whereby stores remain open until about 9 p.m. on Friday. There, shop assistants receive time off during the week for the night work.

A plastic raw material VINYL acetate monomer, is to be made in Australia for the first time in a £A500,000 plant being constructed by C.S.R. Chemicals at Rhodes, New South Wales.

Earlier this year the company also announced that it would build a polystyrene plant, at a similar cost, under an agreement with the Dow Chemical Company of the United States.

In this venture, the American company would supply full technical assistance, a similar arrangement having been made by C.S.R. Chemicals with British Celanese in relation to the Rhodes plant.

Derivatives of vinyl acetate have become important in many fields of plastic manufacture, including emulsion paints, and new types of adhesives. By producing the monomer in Australia, the plant will fill a gap in the manufacturing chain from local raw materials to end uses.

The recent steep fall in world copper prices is reflected in the reduced earnings of Mt Morgan Ltd., one of the three main Australian producers. Net profit in the past year from all sources was £A395,048. The previous year's profit was £A555,283.

The two other producers, Mt Isa Mines and Mt Lyell, are concerned at the fall in the price of copper. For some months the Australian domestic price has been held above the international price ruling on the London Metal Exchange, and it is more than likely that some consumers may desire to import stocks at the lower price.

The industry is awaiting a decision by the Australian Tariff Board to clarify the position.

The possibilities of export markets in Asian and other Eastern countries for Australian manufacturers are shown in the results achieved by a Sydney pharmaceutical company, the Nyal Company.

By March of this year, Nyal had increased its exports 518 per cent. above the total for the previous 12 months.

Nyal's products total 117 lines of proprietary medicines, and toilet goods. The markets found were in Fiji, Samoa, Hong Kong, Singapore, Thailand, Ceylon, Ethiopia, Pakistan, Burma, Aden and Afghanistan.

The company attributes much of its success to overseas visits by its executives, who make on-the-spot deals with agents and representatives.

The Nyal enterprise was founded in Detroit, United States, 101 years ago by a young chemist, Frederick Stearns, and the Australian organisation was established in Sydney, 56 years ago. It first imported from the United States, but for many years has been operating its own modern manufacturing plant.

A Sydney company, C. C. Die Castings Ltd., is flying Australian-made dies to the United States, where they are to be used to make a section of a motor carburettor.

The Australian company finds that it can make these dies 50 per

preciate the efforts of the General Insurance Council. As I spoke to you at length last year, the new code of conduct has been introduced. One of the principal features of the code is the realisation of premiums before assumption of risk. The measure has greatly succeeded and the industry has been immensely helped. But the conditions still remain to be fiercely competitive and it appears it will take a few more months to regulate the operations of the industry on a very businesslike normal basis.

The competition in marine insurance business takes the form of rate cutting in the absence of fixed tariff rates. This is reflected in the high loss ratio. According to the latest available figures, the claims ratio stood at 66 in 1954 for all Indian insurers against 72 in 1955. Now this is an alarming position. Marine insurance business as a whole of all these companies showed a net loss of about Rs. 19 lakhs in each of the years 1954 and 1955. Meanwhile, the position appears to have worsened further. I hope the General Insurance Council will now take care of this development and prevent further deterioration.

cent. cheaper than American companies, where tooling costs are very high. The dies are being sent to Lester Castings Inc. of Cleveland, Ohio.

The British company, Thorn Electrical Industries Ltd., claimed to be Britain's biggest producer of television sets and incandescent and fluorescent tubes, is to build a new £A370,000 Australian factory at Heidelberg, Victoria. It will employ 500 people in production of a wide range of electrical equipment. A subsidiary, Thorn Electrical Industries (Australia) Pty Ltd., has been manufacturing lamps for the past three years in Victoria, where its investment already exceeds £A600,000.

Founded 21 years ago, the British company has a capital of £A3,000,000 and assets exceeding £15,000,000. Last year its trading profit was £stg. 3,121,249.

The first of ten double-ended diesel-electric locomotives ordered by the New South Wales Government Railways has been delivered by the makers, A. E. Goodwin Limited, Sydney.

Known as the Goodwin-Alco, the locomotive is the most powerful of its kind in Australia. It was made in five months, believed to be an Australian record for this type of manufacture.

The company will deliver similar locomotives at regular intervals during the next 12 months. The ten will cost a total of £A110,000.

Alco Products Inc., the American company, designed the Australian-built units especially to meet local conditions. They can be used to haul any type of passenger or freight train, and also in marshalling yards.

Australian demand for tin is steadily rising and consumption will increase by about 1,000 tons to a

COMPANY AFFAIRS:

However, as you will find from the Final Accounts presented to you, all the three departments of your Company have shown surplus in revenue accounts without affecting our reserve position which has been maintained at the old level. As you are aware, in the prevailing conditions of the markets, which are extremely competitive, Fire Department is comparatively better placed as regards the loss ratio. It has, therefore, continued to be our policy to concentrate on this department while following the most conservative underwriting policy in the Marine and Miscellaneous sections of our business.

I recalled to you in the beginning that we are passing through our Golden Jubilee year. However, we suffered a serious blow last year in the dismemberment of our Life Department. Meanwhile, an attempt is now being made to rehabilitate the general insurance industry. In the wake of these attempts we will have to tighten our belts and adjust ourselves to the changing requirements of the situation. While I have no doubt about our capacity to do so, we should look to the next few years as a period of caution and restraint.

total of 3,500 tons in 1957. By 1970 total consumption is forecast at 4,500 tons per annum and production from known available reserves will fall short of this total by 1,000. In consequence, a vigorous prospecting campaign for tin deposits in Australia is called for in the official Quarterly Review of the Australian Mineral Industry released in September.

The current position of various minerals is also reviewed. Output of asbestos in the first three months of 1957 was double that of the same period of 1956, and is expected to increase further during the remainder of the year.

For the first six months of 1957 gold production totalled 518,000 ozs. or 18,000 ozs. higher than for corresponding period of 1956.

Production of iron and steel, and refined lead, zinc and copper was also higher.

Manganese ore production totalled 19,600 tons in the first quarter of this year, a considerable increase on the production for the corresponding period of 1956. Extensive prospecting in Western Australia has resulted in the discovery of several prospects, of which the largest may be that at Ant Hill, 40 miles south-east of Nullagine.

Exports of rutile during the first six months of this year totalled 62,726 tons, but with a fall in the spot price, this rate may not be maintained. Zircon exports during the same period totalled 51,688 tons, but the recent return to lower prices may affect exports slightly in the second half of the year. In Western Australia the rate of production of limonite had reached 100,000 tons annually by June 1957. Several smaller producers of tungsten concentrates have been forced out of production by low prices and 1957 production is likely to be below the record figure of 2,281 tons for 1956.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

Speech by the Chairman, Mr. G. H. J. Clarke, at the Forty-Sixth Annual General Meeting of the Company on the 26th September, 1957.

Ladies and Gentlemen:

I have much pleasure in welcoming you to this the Forty-Sixth Annual General Meeting of the Company.

With your approval, we shall take the Notice convening this Meeting, the Report of the Directors and the Accounts which have been circulated, as read and the Secretary will now read the Auditors' Report.

Mr. A. H. Davies, who had served this Company for over 30 years—9 of them as a Director—retired from the service of the Company early this year. We wish him health and happiness in a well-earned retirement.

The accounts in your possession show somewhat less satisfactory trading results than did those of the previous year, but I believe that you will regard the final results now disclosed as acceptable in the light of present-day circumstances, bearing in mind the increased rates of Company taxation operative during the year under review and the rising costs which I foreshadowed in my speech last year.

The accounts also differ in their form of presentation, to accord with the requirements of the Companies Act, 1956.

During the course of my speech, I shall make some further comment on both the trading results and the form of the accounts additional to that given in the Report of the Directors.

Turning first of all to the Liabilities side of the Balance Sheet, you will have noted that Fixed Asset and Stock Replacement Reserve now stands at Rs. 3½ crores, Rs. 34½ lakhs of the increase over last year representing, as explained in the Report of the Directors, that element in past Depreciation Provisions included to cover the higher replacement cost of fixed assets and the further accretion of Rs. 30½ lakhs having been transferred out of the profits for the year under review.

You will also notice that the small balance standing to the credit of Other Revenue Reserves has been transferred to General Reserve, which latter now stands at close on Rs. 4 crores 64 lakhs.

Security Deposits from Dealers and Contractors (Cash) show a reduction of some Rs. 34 lakhs. This, together with the reduction of some Rs. 29½ lakhs in Sundry Debtors (Secured), reflects the Company's policy of refunding cash deposits and withdrawing credit which was previously given against the security of those deposits.

On the Assets side, under Current Assets an increase of some Rs. 82 lakhs against Manufactured Goods is shown, which is the result of your Company's policy of holding increased supplies of goods available at or near points

of sale, especially where the points of sale are at a distance from the point of manufacture.

Fixed Assets show a substantial increase of some Rs. 80 lakhs indicating, as the schedule on pages 16 and 17 shows, an increased investment of the Company's resources in assets pertaining to production and distribution.

Cash and Bank Balances are lower by some Rs. 55 lakhs, partly accountable for by increased expenditure on fixed assets.

From the Profit and Loss Account you will note that the value of sales shows an increase of nearly 6% on the 1956 figure, but because of a tendency among consumers to turn to our lower priced cigarettes that increase in value does not match the increase in volume of sales.

However, increased costs and expenses, particularly in respect of indigenous raw materials, customs and excise duties, salaries, wages and manufacturing, freight and selling expenses generally, have more than outweighed that increase in sales value, with a consequential reduction in the balance of profit and loss available for transfer to the Appropriation Account.

The increase in volume of sales is, of course, an encouraging sign, but you will have observed that the ever-increasing burden of direct Company taxation, now inclusive of Wealth Tax, requires almost Rs. 16½ lakhs more in the year under review than in the previous year, and has had its serious effect on the net profits remaining available for appropriation and distribution to the shareholders.

I would like to enlarge briefly on Note 5 of the Report of the Directors. The Companies Act, 1956 requires the use in published accounts of heads of accounts which are not in all cases appropriate to your Company's type of business in that their use does not provide all the data required by those responsible for day to day management.

In order to be able to provide you with comparative figures for the year to 31st March, 1956 under the new heads of account required by law for the year now under review, it has been necessary to make certain re-allocations which, as you will have noted, are in some cases described as approximate.

In common with all industry in this country, our own industry is closely concerned with the effects on the national economy of the Second Five-Year Plan. An improved standard of living for all the people in this country is obviously greatly to be desired and is an aim which should be of ultimate benefit to our trade through the increased consumption of our products. For some time to come, however, it is fairly obvious that

we cannot expect the impact of the execution of the Plan to be immediately beneficial to our business.

A matter of immediate concern to your Company is the ever-increasing shortage of foreign exchange. This makes it very difficult to continue to keep abreast of modern developments in the various types of machinery which we use, and even to maintain that machinery in good working order. Furthermore, we may have to abandon, or at least to shelve, a plan for the establishment of a new factory, intended to enable your Company to meet the growing demand for cigarettes which we anticipate will, in a few years' time, be greater than our existing productive capacity will be able to supply. Factories are not built in a day, and there may be a serious shortfall in supply in the visible future if the exchange position does not improve within a year or two.

We have also to pay regard to the risk of further inflation, the effects of which, as I have already indicated, have made your Directors consider it advisable to transfer some Rs. 30½ lakhs from last year's profits to Fixed Asset and Stock Replacement Reserve in an attempt to maintain the real value of the capital employed in the business.

The execution of the Plan has also brought in its train increased taxation, both direct taxation on companies and, in the case of our industry, increased rates of customs duty on imported unmanufactured tobacco and of tobacco excise duty on unmanufactured tobacco other than flue-cured. Many of the other raw materials used by your Company, such as paper and board, have increased in price following increases in the duties applicable to them; consequential increases in rates of cigarette excise duties chargeable have further affected the cost of our finished products.

All such factors combine to make it more and more difficult, despite the increasing volume of sales, to maintain profits at a reasonable level and it will be obvious to you that the increased volume of sales could be put in jeopardy if any general increase in the price of your Company's products had to be put into effect.

Until, then, we can begin to see in greater measure practical results beneficial to the country's economy emerging from this present Five-Year Plan, I must tell you that your Board view with some concern the increasing pressure of higher costs of production and the effect of heavy taxes on our business.

In my speech last year I criticised the sales taxes levied by States on tobacco products both as being an undue imposition on an already heavily taxed product and on the ground that the rates varied widely from State to State. If our industry cannot be exempted from sales taxes at least we may welcome the proposal that these taxes should be centralised.

It is earnestly to be hoped however that a result of this re-organisation will not be the imposition of a still heavier burden on the consumer of cigarettes. I have mentioned already that a period of growing volume of sales has seen the consumer turning increasingly to less expensive brands, and in this mood he is particularly apt, in the event of price increases, to turn away from cigarettes to goods less heavily taxed. I need not enlarge upon the implications for your Company and for the national revenue of any such development.

During the year under review this industry together with a number of other industries was brought within the scope of the Industries (Development & Regulation) Act of 1951. This Act gives the Government extensive powers to intervene in a company's affairs, but it may be assumed that these powers will not be invoked as long as a business is properly and efficiently conducted in all its aspects.

We have noted with satisfaction and cordially welcome Government's suggestion that a period of freedom from upward changes in taxation should lie ahead, thus enabling industry to avoid the dangers of misdirected effort and waste, which benefit none but which are a natural concomitant of uncertainty as to the future taxation picture. Given a measure of stability in taxation matters over the next few years, I firmly believe that with the co-operation of all our Company's employees in striving for increased productivity, the long-term prosperity of your Company remains assured and that long-term prosperity is not only of benefit to you as shareholders, but to all who may in any way be connected with the Company and its activities.

During the first five months of the current trading year, despite a setback following the Budget in May, sales volume continues to show a satisfactory trend, and in consequence your Directors feel justified in declaring an Interim Dividend of 2 per cent, free of income tax, in respect of the year to 31st March, 1958. However, the various factors which I have mentioned continue to bear adversely on the profitability of your Company's activities, and I would ask you not to take the declaration of this Interim Dividend as a firm indication that the final results for the year will justify a total distribution at the same level as for the year ended 31st March, 1957.

I now beg formally to move the adoption of the Report and Accounts for the year ended 31st March, 1957, including the payment on the 28th September next of a Final Dividend of 3 per cent, free of income tax, on the issued Ordinary Shares of the Company.

I shall now ask a member to second the Resolution and when that has been done, if anyone has any question to put or comment to make on the Accounts, it will be a convenient time to do so.

(Note.—This is not a report of the proceedings of the Annual General Meeting.)

Orissa Cement Limited

Shri J. Dalmia's Review

Speech of Shri J. Dalmia, Chairman, Board of Directors of Messrs. Orissa Cement Limited delivered at the Seventh Annual General Meeting of the Company held at Rajgangpur on Saturday, the 28th September, 1957.

Ladies and Gentlemen,

I have great pleasure in welcoming you here on the occasion of the Seventh Annual General Meeting of your Company.

In the short period of time, the activities of your Company have considerably grown. The Cement Plant has been expanded to more than double the original capacity. The new plant started functioning from the beginning of this year. We have not yet completely overcome the initial difficulties, but we hope that within the next few months we will be able to do so.

The Company has been granted a licence by the Government of India to produce slag cement which is dependent on the suitability of the slag which would be available from Messrs. Hindustan Steel Private Limited, Rourkela. They have not yet been able to give the final composition of slag which would be available from their Steel Works. On account of this the Company has not been able to place firm orders with the suppliers for the machinery.

Due to increase in various items of cost of production of cement Government of India have referred the matter to the Tariff Commission for examining this question and to recommend fair selling price for the cement producers. The Tariff Commission has already taken up the matter in hand and it is expected that the producers will be suitably compensated by an increase in the selling price of cement on account of the increase in cost of production and a fair margin will be allowed to enable the producers to provide a reasonable and adequate return to the investors.

You are aware that a Refractory Plant with an annual capacity of producing 80,000 tons of Refractories and 8,000 tons of mortar is being established in collaboration with a renowned German Firm for technical advice, which is largest of its kind in India at present. This Refractory Works which is a most modern one is going to produce, along with other items, silica and basic refractories such as Magnesite and Chrome Magnesite Refractories etc. most of which are being imported so far from abroad. This will make the country self-sufficient to a very great extent and will save a good deal of fore-

ign exchange. Sufficient provision has been kept for expansion of the plant to increase its capacity to double and in due course of time, we may be able to export these refractories. It is expected that the production of refractories will commence in a few months' time.

For supply of the most important raw-material viz., dead burnt magnesite, for manufacture of basic refractories, your Company has entered into a partnership arrangement with The Magnesite Corporation of India Limited and Messrs. Dalmia Cement Limited for setting up a plant for the manufacture of dead burnt magnesite at Salem in South India. The partnership firm has been constituted under the name and style of Messrs. Dalmia Magnesite Corporation. The mineral property belongs to The Magnesite Corporation of India Limited and the expenses for setting up the factory are being met equally by Messrs. Dalmia Cement Limited and your Company.

The Company has also associated itself, as indicated in the Directors' Report for 1955, in the formation of Messrs. Dalmia Iron & Steel Limited and has invested—Rs. 15,00,000 in the shares of the said Company. The major portion of the remaining capital has been subscribed by Messrs. Dalmia Cement (Bharat) Limited. M/s. Dalmia Iron & Steel Limited are putting up a Steel Casting Plant in Calcutta in collaboration with a reputed Belgian Firm having wide experience in the line mainly for manufacture of grinding media and cast steel and manganese steel spare parts for the cement industry. These items are mostly imported at present and on account of foreign exchange stringency import of such items is becoming increasingly difficult day by day. When their plant goes into production, your Company will be able to obtain all the requirements of such parts through indigenous sources and thus will be assured of a regular, steady and high production and also the hard earned foreign currency of the country will be saved to an appreciable extent. M/s. Dalmia Iron & Steel Limited are also putting up Spun Cast Iron pipe Plant, for which there is a huge demand in the country. The Steel Casting Plant is likely to go into production in the beginning of 1958 and the spun cast iron pipe plant sometime in March-April, 1958.

The Second Five Year Plan calls upon the Industry to increase the annual installed capacity of cement production to nearly sixteen million tons, which appears to be on a very high side. However, it is expected that the Industry, by the

end of the Second Plan period, that is, in about 3½ years' time from now, will reach the figure of annual installed capacity from about 6 million tons at present to nearly 9 million tons which may be quite sufficient for the country's requirement for the time being and this would be no small achievement.

With the increase of steel production in this area and hydro-electric power being available from Hirakud, there are fair chances of new industries being set up in Orissa State. This is, however, very much dependent on the availability of cheap power. The charges for electric power at present generated at Hirakud are higher than even thermal electric charges, which is detrimental to the growth of new industries in Orissa State. Unless reasonable rates for electricity are ensured, it would not be easy for new industries to come up in Orissa. Even the small established industries would like to shift elsewhere due to the uneconomical rates of power fixed by the State Government but are restrained from doing so on account of the restrictions imposed under the Industries (Development & Regulation) Act, 1951. Unless therefore the State Government of Orissa takes an objective view, such industries will be unable to function and they may be forced to close down sooner or later.

In spite of the support given by the Life Insurance Corporation of India to the Stock & Share market, the values are gradually going down which is an indication of the loss of faith of the public at large in this type of investment. It is not due to lack of confidence in the management of the industries, particularly when with the introduction of the Companies Act, 1956, the control of the shareholders and the Central Government over the affairs of Joint Stock Companies has increased considerably. Besides this, Government of India has already set up a Committee to examine the various provisions of the Companies Act, 1956 with a view to remove practical difficulties that may have been experienced during the period this new law has been in force. This Committee has been inviting the views of all interested parties and it is expected that it would submit its report to the Government of India soon to enable them to remove and set right any defects which may be found. The loss of faith therefore in this type of investment is due to something else, which needs serious consideration by the Government of India before great harm is done.

The legislations for the welfare of the workers and for the protection of their legitimate rights are most welcome, but such laws must also foster a sense of discipline and responsibility in the working class. The most unfortunate part of the present labour laws is that the protection afforded to the working class has inspired a sense of indiscipline and irresponsibility

amongst them. Though the workers are getting "rights conscious" but the spirit of "duty consciousness" is far lacking.

Even the general standard of discipline in our country as a whole is fast deteriorating in all walks of life. No nation can rise without a disciplined living and the standard of discipline in other advanced countries can well be compared in contrast to our own.

In addition to this, we hear these days of strikes practically anywhere. One shudders at the news of strikes in hospitals by attendants on patients and by civic workers which endangers the life of the sick and disrupts the normal life of every citizen. In such institutions and other works of national importance where stoppage of work can paralyse the normal life of the citizens of the country, strikes are most unpatriotic and the Government of India should seriously consider this problem before it is too late.

Illegal strikes in industries both in the private as well as public sector have become common these days. Even Government appears to be helpless most of the time. The respect for law is going down day by day and such strikes may some day upset the whole national life and break the fabric of law and order of the country.

Such state of affairs is very harmful for the improvement of the general conditions in the country and raising the level of moral and economic standard of the masses as a whole.

Before greater harm is done, Government of India will be well advised to appoint a high power Commission to make investigations into the causes which have led to this deterioration in the situation and to suggest remedial measures.

The standard of skill is not keeping pace with the rapid industrial development. Arrangements are necessary for proper training of the skilled technicians. Mass production of technicians with little skill is not beneficial. It has been observed that the trainers, employed at many of such institutions, are not capable themselves. Instead of sending persons abroad for training under Bevan Scheme or otherwise, it is better to import good trainers, which will be more beneficial as well as economical.

In the end I express my feeling of gratitude to all the executives, staff and workers who took keen interest in the expansion work of the Company and worked hard for it.

N.B. The above extract of the speech does not purport to be the report of the proceedings of the Seventh Annual General Meeting of the Company held on the 28th September, 1957.

The Industrial Finance Corporation of India

Satisfactory Progress in all Respects

Impending Bill for Further IFC Facilities

Mr K. R. K. Menon, the Chairman, reveals an augmentation of IFC resources by Rs 15 Crores

Speech delivered by the Chairman, Shri K. R. K. Menon, at the Ninth Annual General Meeting of the shareholders of the Industrial Finance Corporation of India held on the 27th September 1957.

Gentlemen,

I have pleasure in placing before you the Accounts of the Corporation and the Report of the Board of Directors for the year ended the 30th June, 1957. Printed copies of the Accounts and the Report are before you. These have also been circulated to all the shareholders. I shall, if you agree, take them as read. I would, however, make some observations on a few points.

2. It is my painful duty, to refer to the sudden demise, in March 1957, of Shri Syamnandan Sahaya, our esteemed colleague on the Board of Directors of the Corporation. Shri Syamnandan Sahaya served the Corporation in this capacity as the elected representative of Co-operative Banks from November 1953 till the time of his death. His indefatigable energy and his judgment in financial and business matters were of immense value in the deliberations of the Board, and I am sure you will join me in expressing our deep sense of sorrow at his passing away and conveying our sympathies to the bereaved family.

3. Shareholders will observe from the Accounts and the Report that the working of the Corporation for the year ended the 30th June, 1957 was even more satisfactory than that for the previous year. Our gross profit rose from Rs. 32.68 lakhs in 55-56 to Rs. 43.06 lakhs in the year under report, and whereas there was no profit left for paying dividend last year, we have a net profit of Rs. 11,25,000 this year, which just enables us to pay in full the amount of the guaranteed dividend on our paid-up capital, without having recourse to any subvention from Government. This, you will observe, is after providing a sum aggregating Rs. 31.81 lakhs for estimated tax liability, doubtful debts and other contingencies. It may perhaps be of interest if I recall in this connection that, during the past nine years that the Corporation has been functioning, we have had to ask Government for a subvention every year, except once viz. in 1953.

4. The total amount of our loans and advances which stood at Rs. 14.24 crores last year has also shown a marked increase; it now stands at Rs. 21.90 crores. With this steep increase in our investments, I believe we should be in a position, hereafter, to stand on our own legs without calling upon Government for help to meet the guaranteed dividend on our share capital.

5. In the matter of disbursement of loans also we have forged ahead the year under report. Our disbursements during this year totalled Rs. 9.78 crores, as against the corresponding total of Rs. 2.20 crores in 55-56, Rs. 1.64 crores in 54-55, and Rs. 2.82 crores in 53-54. This very satisfactory result, it must be said, was achieved in spite of the fact that, due to the closure of the Suez Canal route and also the country's tight foreign exchange position, delivery of capital goods from abroad was subjected to considerable delays, and there was, therefore, corresponding delay in the drawal of the loan amounts sanctioned. Among the important factors which helped us to speed up disbursements to this extent may be mentioned (a) the completion of the administrative reforms that were initiated in 1955-56 to which I had made reference in my last year's speech, particularly the quickening in the pace of completion of the necessary formalities in the head office and branch offices of the Corporation (b) the extension of the system of having our own Law Officers to the two remaining regions viz. Bombay and North India (Madras and Calcutta having already been covered last year) and (c) further liberalisation of the procedure for granting interim loans pending completion of legal formalities.

6. There was a fall in the total volume of loan applications received from Rs. 27.70 crores for 1955-56 to Rs. 21.36 crores this year. It is to be noted, however, that this reduced figure of Rs. 21.36 crores represents a considerable advance on the total for 1954-55 viz. Rs. 11.27 crores, and Rs. 9.01 crores for 1953-54. There was a corresponding fall in the volume of loans sanctioned, which came down from Rs. 15.13 crores for 55-56 to Rs. 11.91 crores in the year under report, though both these figures compare very favourably with the corresponding figures viz. Rs. 7.34 crores and Rs. 5.27 crores for 54-55 and 53-54 respectively.

7. I surmise that one of the main factors which contributed to the diminution in the volume of applications this year was the difficulty experienced by Industrial concerns and entrepreneurs in the matter of securing adequate amount of foreign exchange for importing the necessary capital goods. The rise in prices of foreign machinery was also possibly another important factor which contributed to the contraction in the volume of loan applications.

8. You will notice from the figures given in the Annual Report that recoveries of interest and instalments of principal during the year were on the whole, very satisfactory. We have refrained from exacting our pound of flesh in the case of those defaulters who, we considered, after detailed examination of their financial affairs, deserved liberal and sympathetic treatment at our hands.

9. Our relations with the public and particularly with the various Chambers of Commerce and Industry, to which we had paid considerable attention in the previous year, as I said in my last year's speech, continued to be as close and friendly in the year under report, and I take this opportunity of thanking the representatives of the various Chambers for the valuable suggestions and assistance which we received from them as a result of the free and frank discussions we had with them on various problems of mutual interest.

10. In my speech last year I had mentioned that our Advisory Committees were in the process of being reconstituted so as to include a larger number of technical experts in each, and also so as to provide for a wider territorial representation. These Committees have now been reconstituted accordingly. As mentioned in the Annual Report, a fifth Advisory Committee for miscellaneous industries like Electricals, Paper, Cement, Glass, Aluminium, Non-ferrous metals, etc. was also constituted in the course of the year. The advice and guidance received from these Advisory Committees have been of immense help to the Board of Directors in dealing with the loan applications.

11. A noteworthy step that we took, as an experimental measure, in the year under report was to nominate non-officials to the Boards of Directors of a limited

number of companies to whom we had granted loans. Hitherto we had been confining such nominations to the officials of the Corporation. We decided, on the basis of the results of the experimental measure introduced last year, to expand the scope of the scheme, and, in the current year, we propose to nominate several more non-officials. A measure of this kind is fast becoming unavoidable as, with the rapidly growing number of loanee concerns on our books, we have arrived at the stage where already it is becoming extremely difficult for our own officials to function as our representatives on the Boards of Directors of all, or even a majority of, these concerns, in addition to carrying on their normal duties, the volume of which has also grown considerably of late.

12. Before I turn to other matters of general interest I should like to invite your attention to one item in the accounts presented to you. Our Auditors have remarked that it would be desirable to increase the provision made for doubtful debts (viz. Rs. 22.25 lakhs) by another Rs. 5 lakhs.

As matters stand at present, and based on our present anticipations, which are cautious and conservative, we are in a position to assure you that the provision available in our account viz. Rs. 15.25 lakhs should prove quite adequate for covering our doubtful debts. In fact, if the negotiations for the reconstruction of certain of the Companies concerned and the sale of lease of their assets which are now in progress, bear fruit—as we hope they will—we should be left with a surplus in the provision that has already been made in this regard.

13. The figures given in Appendix I to the Annual Report showing the state-wise distribution of the loans sanctioned by us in the year under review as well as in the previous years will show that as compared with the position as it obtained on 30th June 1956, there has been a marked increase at the close of our financial year in June 1957, in the total of loans sanctioned to concerns located in certain States. Excluding those States which, relatively speaking, may be described as industrially advanced, the figures relating to the progress in some of the other States are, I think, worth inviting

Your special attention to. These are—

(i) Andhra.—Increase from Rs. 1.29 crores up to the end of 1956	to Rs. 2.61 crores at the end of 1957.
(ii) Kerala.—From Rs. 3.19 crores up to the end of 1956.	to Rs. 4.23 crores at the end of 1957.
(iii) Punjab.—From Rs. 2.01 crores up to the end of 1956.	to Rs. 2.66 crores at the end of 1957.
(iv) Uttar Pradesh.—From Rs. 2.96 crores up to the end of 1956.	to Rs. 3.86 crores at the end of 1957.

14. In this connection I am glad to inform you that as part of a drive for increasing the volume of assistance rendered to industries in the relatively weaker States, and with a view to informing the Governments or these States regarding the functions and scope of activities of the I.F.C. I made it a point to hold personal discussions with the Chief Ministers of these States, and, in some cases, also with the Ministers in charge of Industries. They all evinced keen interest in the matter of accelerating the pace of industrial development in their States, and I was left with the impression that we may look forward with confidence to an increasing measure of participation by the I.F.C. in the financial assistance rendered to industrial enterprises sponsored by, or with the support of these State Governments, subject of course to our financial resources in the future permitting the expansion of our activities in this particular direction.

15. Turning to the general pattern of industrial units which were sanctioned loans during the year under report, Sugar came first with a total of Rs. 4.63 crores. Chemicals and Textiles followed with Rs. 2.51 crores and Rs. 1.85 crores respectively. This same pattern held good in the previous year also.

16. Co-operative Societies continued, in an increasing measure, to seek our assistance, and at the end of the year under report the total amount sanctioned to this class of concerns came to Rs. 10.73 crores as against the corresponding figure of Rs. 6.89 crores at the end of the previous year. All the 22 Co-operative Societies, distributed over six States, to whom we have sanctioned loans so far are engaged in the manufacture of sugar. The total cost of their Schemes comes to roughly Rs. 25.66 crores out of which Rs. 10.73 crores, as already stated, come from the I.F.C. as loan, and the balance Rs. 14.93 crores is accounted for to the tune of Rs. 4.23 crores by subscriptions raised from members, Rs. 4.16 crores by cash credits from Banks for working capital, Rs. 2.80 crores by subscription from the State Governments concerned, and the balance by deferred payments and other sources.

17. A fairly large number of our loanee concerns continued to earn during the year profits high enough to enable them to distribute dividends in excess of the usual 6%, with our prior concurrence. We continue to give such financial position of the concern, after careful examination by us,

struck us as satisfactory. It has been our policy to be fairly liberal in this matter, consistent with the security of our loans, and the well-being of the concern.

18. In this connection I should like to invite your attention to the fact that only a small fraction of the total amount of loans sanctioned by us is accounted for by loan sanctioned to concern which, at the time of such sanction, had already been declaring relatively high rates of dividend. In the large majority of cases our loanee concerns fall in the category of either those which, at the time of the sanction of their loans by us, were not declaring any dividend at all, or those which, though declaring a dividend at that time, were not declaring dividend at relatively high rates. It is also worthy of note that in the majority of the concerns that had been sanctioned loans by us and which have been paying relatively high rates of dividend we have made it a condition for the grant of our loans that they should raise fresh capital of a considerable amount in each case from the capital market. In a few of these cases the amounts that they have been asked to raise from other sources have exceeded the loans sanctioned by us, or nearly equalled them.

19. Conditions in the money market during the year under report were more tight than in the previous year, and we were obliged to raise the rate of interest on our loans by $\frac{1}{2}\%$, viz. from 6% to $6\frac{1}{2}\%$ with effect from 23rd April 1957. It is not unlikely that we may have to pay higher rates of interest than we do now on our borrowings in the course of the current year; this will naturally affect our lending rates too.

20. In my speech last year I had invited your attention to the fact that our ways and means position was engaging our anxious attention. With a view to ensuring that we have the necessary funds to enable us to fulfil the important role assigned to us in the Second Five-Year Plan we explored all possible avenues for raising additional funds in consultation with the Government of India. You will be glad to know that in spite of the very difficult conditions that have prevailed for some time in the money market we have been able, thanks to the good offices of the Government, to make arrangements for augmenting our resources to the tune of an additional sum of Rs. 15 crores, which will enable us to disburse, if we are called upon to do so, loans up to a total of as much as Rs. 20 crores in the course of 1957-58 alone. Our thanks are due to the Central

Finance Minister and his Ministry for making this possible.

21. Another important development in this connection that you will be glad to hear about is that Government have also approved of our proposal to amend the I.F.C. Act so as to enable us to borrow sums aggregating ten times our paid-up capital and reserve fund instead of five times that is allowed by the Act at present. A Bill, incorporating, *inter alia*, the above-mentioned amendment has already been introduced in Parliament.

22. So much for the bright side of the picture. There is, however, the inevitable cloud attaching to the silvery future that I have just outlined to you. Loan applications from various industrial concerns which we have not been able to consider so far have already swollen to an unprecedented volume, and they still continue to come in. To meet this huge demand we have to try and raise further additional funds again almost immediately. Conditions in the money market which were, as I said, difficult enough last year have yet shown no signs of appreciable improvement, and it is not, therefore, unlikely that we should be faced this year with the prospect of having to hold over consideration of the bulk of the pending applications until such time as conditions change for the better. We are, however, at the moment, engaged in consultations with Government with a view to finding some solution to this problem. Government have been extremely helpful to us in this matter already, and, in spite of the heavy odds, I would not rule out the possibility of some amount being found for us this year.

23. A new field of activity which we are likely to enter this year is the guaranteeing of deferred payments by the importers of capital goods who are able to obtain this concession from the foreign manufacturers. As you are aware, our foreign exchange position has compelled Government to impose severe restrictions on the import of all foreign goods—capital and other—and importers of machinery are now obliged to secure terms of deferred payments before import licences are granted to them by Government. Some of the foreign exporters have asked that the deferred payment arrangements should be guaranteed by an institution like ours. Government decided, in consultation with your Directors, that we should be enabled to do this in appropriate cases, and they have introduced a Bill in Parliament which seeks to amend the I.F.C. Act as to vest in us the power to do so. This Bill, it is hoped, will come up for consideration in the November session of parliament, and as soon as it is passed we shall formulate the procedure we will follow in regard to this new activity of ours.

24. Before I close, it is my very pleasant duty to convey my hearty thanks to my colleagues

on the Board of Directors, as well as to the members of the various Advisory Committees and the non-officials who have served as our representatives on the Boards of Directors of loanee concerns for their co-operation and wise counsels. I have also great pleasure in conveying my thanks as well as that of the Board to the General Manager and the entire staff of the Corporation for another year of loyal and devoted work on their part.

WORLD OF BUSINESS

(Continued from page 686)

Bank of Czechoslovakia with the Reserve Bank of India will be convertible on demand into pound sterling. The two Governments, under the agreement, have also decided to encourage triangular trade arrangements as a means for widening and developing international trade. The Exchange of goods and services between the two countries will be effected by means of contracts between Foreign Trade Corporations or other such bodies in Czechoslovakia on the one hand and the State Trade Corporation and other commercial organisations in India on the other.

THE BARNAGORE JUTE FACTORY, COMPANY, LIMITED
(Incorporated in England)
THE LIABILITY OF SHAREHOLDERS IS LIMITED.

DIVIDEND

No Dividend has been recommended by the Directors for the year ended 31st March, 1957.

The Share Transfer Books will be closed from the 24th October, 1957, to 6th November, 1957, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED.
D. SMALLEY,
Acting Secretary,
Agents.

4, Clive Row,
Calcutta, 4th October, 1957.

F. & C. OSLER (INDIA) LTD.

Notice is hereby given that the Share Transfers and the Register of Members of F. & C. Osler (India) Ltd. will remain closed from 10th of October 1957 to 23rd of October 1957 both days inclusive on account of the Annual General Meeting of the Company to be held at its Registered Office at No. 12, Old Court House Street, Calcutta, on Wednesday the 23rd of October 1957 at 11 A.M.

By Order of the Board,
S. B. INDUSTRIAL DEVELOPMENT CO. PRIVATE LTD.
Managing Agents.

Calcutta,
5th September, 1957.

WORLD OF FINANCE

(Continued from page 682)

chases for such a large amount, it is safe to assume that sales of ad hoc in favour of the Reserve Bank were for a sum around Rs 15 crores in the last week of September. Moreover, in the first week of October, Investments showed a further rise of Rs 14.59 crores; and it would seem to us that this also represents deficit financing.

Balances of State Governments fell by Rs 3.75 crores to Rs 7.53 crores before recovering to Rs 10.14 crores; and, meanwhile, the State Governments' borrowings from the Reserve Bank declined by Rs 2.42 crores to Rs 41.79 crores before going up once again to Rs 44.77 crores.

We now come to the figures of member banks. The Reserve Balances of Scheduled Banks showed an improvement of Rs 2.18 crores to Rs 100.01 crores in the last week of September; but, since the State Bank in the relevant week showed an improvement of nearly Rs 4 crores in Cash and Balances with the Reserve Bank, it is obvious that the other Scheduled Banks drew somewhat on their Reserve Balances. In the latest week, there is a sharp fall of Rs 5.86 crores in member banks' Reserve Balances, less than Rs 2 crores of this being accountable by the State Bank.

At the same time, it would appear that member banks' indebtedness to the Reserve Bank has gone up; after being largely unchanged at Rs 73.38 crores on September 27, the Other Loans and Advances of the Reserve Bank have shot up in the latest week by Rs 5.27 crores to Rs 78.65 crores. Thus, a measure of the pressure upon the banking system—partly because of month early disbursements, but, largely, it would seem to us, because of the Puja demand as well as the bank impasse at Calcutta—is available in the magnitude of the decline in the Reserve Balances and in the size of the increase in the Reserve Bank's Other Loans and Advances, the two together totalling more than Rs 11 crores.

Finally, the foreign exchange holdings of the Reserve Bank are once again at a level such as to hold out prospect of imminent action. In the course of the last two weeks, the decline exceeds Rs 15 crores, and the Reserve Bank's holdings of Foreign Securities, in the two departments, barely total Rs 345 crores.

As a postscript to the study of the Reserve Bank returns, we would refer to the steep fall of the figure under Government Treasury Bills purchased and discounted, in the statement for the Banking Department for September 27. It is possible that the bill in question matured, and the Central Government were compelled to meet this commitment from their proceeds from the sale of ad hoc in favour of the Reserve Bank during the week.

According to the return of the State Bank, Deposits have been marked up from Rs 347.66 crores successively to Rs 348.59 crores and

Rs 349.49 crores. In the last week of September, with Advances showing a drop of just under Rs 1 crore to Rs 156.75 crores from Rs 157.72 crores, cash balances improved by Rs 4 crores to Rs 54.86 crores.

In the week ended October 4, however, the special circumstances obtaining have caused a rise of Rs 4.63 crores to Rs 161.38 crores in the total of Advances—this being the first rise recorded since the week ended August 9, which was New Loan week. In the result, cash balances have had to be drawn upon for Rs 2.43 crores.

+

Deposits of Scheduled Banks have shown consistent increases of just under Rs 5 crores in each of the last two weeks of September. From a figure of Rs 1329.94 crores on September 13, Deposits have risen to Rs 1339.20 crores on September 27. In the return for September 20, it is to be noted that, in spite of a fall of Rs 7.15 crores to Rs 835.62 crores in the total of Advances—over and above the rise of Rs 4.85 crores in Deposits—Scheduled Banks, nevertheless, found it necessary sharply to increase their borrowings from the Reserve Bank, which were marked up by Rs 8.68 crores to Rs 36.98 crores. Moreover, cash balances fell by Rs 5.66 crores to Rs 179.40 crores. We should think that the decline under cash balances would have been due to a combination of factors: firstly, subscriptions to the State Government Loans on the part of the public; secondly, subscriptions of Scheduled Banks to the State Loans; thirdly, purchase of gilt-edged by the State Bank from the Reserve Bank; and fourthly, the demand for cash in Calcutta, which by now had started to feel the impact of the strike by bank employees. In this connection, the important point to note relates to the substantial rise of Rs 10.53 crores to Rs 386.03 crores in Investments of the member banks. Part of this—Rs 6.84 crores—is due to the purchase of gilt-edged by the State Bank from the Reserve Bank. The balance, we should think, is a measure of the subscriptions by the other Scheduled Banks to the two State Government Loans.

According to the return of Scheduled Banks for September 27, it is noteworthy that, for the first time since the week ended June 7, the total of Advances has marked a rise, having gone up by Rs 3.20 crores to Rs 838.82 crores. This is undoubtedly due to the pressure for funds from Calcutta, where constituents have been unable to deposit their cheques while, at the same time, experiencing a greater pressure for making cash payments in respect of the Pujas. Secondly, it is noteworthy that the Reserve Balances of Scheduled Banks fell sharply by Rs 4.57 crores, although the cash balances as such have moved up by nearly Rs 4 crores to Rs 183.33 crores. What would appear to have happened is that the Reserve Balances have been drawn upon for purposes of meeting

the cash payment; and, besides, the Scheduled Banks have made preparations for meeting the greater demand for funds during the last days of September by increasing the quantum of money at call and at short notice; for, the figure under this head has risen steeply by Rs 8.39 crores to Rs 47.34 crores.

Reading between the lines of the bank statements over the last week of September and the first week of October, there are certain observations that we should like to make. The first point is that, in spite of the impasse in Calcutta, Deposits are maintaining their upward trend and, at Rs 1339.20 crores, are within sight of Rs 1350 crore mark. We would like to suggest that, once the impasse at Calcutta is broken, Deposits will stage what may be a remarkable surge, going well past the Rs 1350 crore mark. Secondly, it is safe to assume that, had Calcutta constituents been in a position to deposit the cheques that they received, they would have utilised part of the proceeds therefrom to reduce their indebtedness to the banks. As such, thus, it may be said that, upon the resolution of the stalemate in the Calcutta banking situation, the total of Advances of

Scheduled Banks will register a sizable decline. In a word, the figures of Rs 1350 crores for Deposits and Rs 800 crores in the total of Advances, which have been mentioned in the leading article in this section, will certainly be attained—assuming that the stalemate ends before the end of October.

BALANCE-SHEET REVIEWS

(Continued from page 678)

Periakaramalai Tea

It has been officially announced that Periakaramalai Tea & Produce Company Limited has received permission for the issue of bonus shares and that there will be an extraordinary meeting of the shareholders on November 9, 1957 for the purpose. The authorised capital of the company is to be increased to Rs 60 lakhs from Rs 45 lakhs while Rs 23,17,952, being part of the reserves of the company, will be capitalised and 11,58,976 ordinary shares fully paid created and issued free to the existing shareholders in the proportion of two shares for every three shares held. The paid-up capital as a result will increase to Rs 57.95 lakhs.

*

OLYMPUS

(Continued from page 686)

scope for such judge-made laws is very limited especially in these days of prolix enactments, which seem to leave very little for judges to do one way or the other. And, where there is scope for such law, it is not social forces that ought to be offered as guides to judges; on the contrary, what ought to guide them is the passionate concern for the inviolable human spirit and all the corollaries that flow from such a concern. Two such corollaries are that exploitation of man by man is abhorrent and human happiness in increasing measure and spread in the widest commonality is a legitimate social purpose, and everything that is designed to achieve it is a worthy human

AN ILL-ADVISED DOLLAR CREDIT

(Continued from page 683)

share in it. Moreover, if in existing circumstances the Government were to adopt the controls which could be adopted without a return to rationing, food queues and black markets, it would greatly strengthen its chances at the next general election. For it could then claim convincingly that any further physical controls that a Labour Government would adopt would necessarily mean a return to the bad old days of the war and early post-war period. As it is, the Socialists are in a position to impress the electorate by claiming that the return to moderate physical controls would obviate the necessity of a 7 per cent bank rate and of unemployment through credit squeeze.

The Government attitude towards the wages demand of the railway unions will constitute the test of

the new policy. Should the Transport Commission be instructed to meet the claim even partially, private employers will follow the example. In that case the credit squeeze would be of no avail against the wages inflation. For the financing of higher wages payments does not require additional bank credits so long as the industrial firms are in a position to add the increase to the selling price of their goods. And if there should be indications that the wages spiral continues, private firms would be in a position to continue to pass on to the consumer the cost of higher wages. Sterling is secure for the present, but its fate in the long run necessarily depends on resistance to wages claims.—(Copyright).

ROHTAS INDUSTRIES LIMITED

NOTICE

The Twentyfourth Annual General Meeting of the Shareholders of Rohtas Industries Limited will be held at the Registered Office of the Company at Dalmianagar on Thursday, the 31st October, 1957 at 11-30 A.M. to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st October, 1956.
2. To declare dividends.
3. To elect a Director in place of Shri B. N. Chaturvedi who retires by rotation but being eligible offers himself for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, Messrs. K. N. Gutgutia & Co., being eligible, offer themselves for re-appointment.

The Share Transfer Books of the Company will remain closed from 22nd October to 31st October, 1957, both days inclusive.

5. As special business:

To consider and if thought fit to pass with or without modification the following Resolution which will be proposed as Special Resolution:—

"Resolved that the Articles of Association of the Company be altered in the manner following:

(a) For Article 28 the following shall be substituted, namely:

"28. The Company shall have a first and paramount lien upon all the shares (other than fully paid up shares) registered in the name of each member (whether solely or jointly with others) and upon the proceeds of sale thereof for all moneys (whether presently payable or not) called or payable at a fixed time in respect of such shares and no equitable interest in any share shall be created except upon the footing and condition that this Article is to have full effect. And such lien shall extend to all dividends from time to time declared in respect of such shares. Unless otherwise agreed the registration of a transfer of shares shall operate as a waiver of the company's lien if any on such shares."

(b) For Article 29 the following shall be substituted, namely:

"29. For the purpose of enforcing such lien the Board of Directors may sell the shares subject thereto in such manner as they think fit but no sale shall be made unless a sum in respect of which the lien exists is presently payable and until notice in writing of the intention to sell shall have been served on such member, his executors or administrators or his committee, curator bonis or other legal re-

presentatives as the case may be and default shall have been made by him or them in the payment of the sum payable as aforesaid for seven days after the date of such notice."

(c) For Article 30 the following shall be substituted, namely:

"30. The net proceeds of the sale shall be received by the company and applied in or towards payment of such part of the amount in respect of which the lien exists as is presently payable and the residue if any shall be paid to such member, his executors or administrators or assigns or his committee, curator bonis or other legal representatives as the case may be."

By order of the Board,
FOR SAHU JAIN LTD.,
A. K. JAIN,
Managing Agents.

Calcutta,
4th October, 1957.

N.B. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. Such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the meeting.

Explanatory Note:

The shares and debentures of the Company have been admitted on the official list of the Bombay Stock Exchange for cash dealings, and the alterations in the Articles of Association of the Company as proposed are desired to be made by them. The consent of the shareholders is therefore sought for the proposed special resolution. No particular interest is attached to the Directors and/or Managing Agents of the Company in the above resolution.

WORLD OF COTTON

(Continued from page 693)

Calcutta was also interested, but was unable to do so, due to the strike by the bank staff, while several of the Uttar Pradesh traders were unable to book their requirements as they were unable to obtain "C" Forms in time.

On the export front, trading conditions remain almost unchanged with scattered demand from one destination or another. Enquiries were received from Hong Kong, while Singapore was said to have booked some quantities. There was no demand of any significance from Ceylon, except for small lots of the usual varieties of interest for immediate requirements.

The output of textiles from January to July this year has been better at 3,168 million yards as against 3,050 million yards in the corresponding period of last year. The provisional figure for August places the output at 411 million yards as against 459 million yards in July.

NORTH INDIAN NOTES

(Continued from page 696)

increasing attention to the development of small industries and assured them of all help from the Central Government. It would appear that the importance of small scale industries is yet to be fully realised by State Governments. Reviewing the progress of the State schemes, the Board has found it necessary to emphasise that the rate of utilising assistance sanctioned by the Centre should be accelerated. The schemes should be submitted to the centre well in time and sanctions from the State secretariat should also be expedited. The procedure for disbursement of loans to small entrepreneurs should be made. Regarding the programme for 1958-59 the State has been requested to submit their schemes to the Central Government by January 1958 so that funds can be sanctioned by the beginning of the next financial year.

On the important question of credit facilities for small scale industries the Board is of the opinion that financing of the small industries by Government will be necessary in the initial stages of their development. In this regard it has suggested that 10 per cent of the loans granted by State Governments should be routed through the State Financial Corporation, that 10 per cent of the loans granted for working capital must be routed through the urban cooperative banks and that at least six such banks should be set up in each State by March 1958.

*

GATEWAY NOTES

(Continued from page 692)

very real one. This can only be tackled, according to Prof. Karve, in the process of lifting the economy to a higher level of productivity by means of total economic planning.

Extension work is also perfected to a high degree in some of these countries. The essential features of extension work are locating farmers' problems, conducting research in methods to solve these problems and to carry back to farmers the results of such research. In certain countries, Prof. Karve points out, extension work includes other activities also. For example in Puerto Rico extension programmes tend to take account of financial and management considerations affecting small-size farming. The success of extension work depends on the extent of education among farmers. If as in USA education is widespread the work of the extension agent becomes less onerous and more fruitful.

*

India Reinsurance Corporation

In the short period of its existence the Indian Reinsurance Corporation has given ample proof of its potentialities. It is estimated that the first year's trading will yield a net premium income of some Rs 70 to Rs 80 lakhs, distributed in the proportion of 45 per cent in Fire, 30 per cent in Miscellaneous and 25 per cent in Marine Departments.

The Corporation owes its origin to a suggestion of the sub-committee of the Executive Committee of the General Insurance Council, which studied the problem of net drain of foreign exchange out of the country, by way of reinsurance. A national reinsurance Corporation has also been considered essential in view of the rapid industrial development envisaged in the country and for making the functioning of the indigenous market complete and well integrated. The fact that the Corporation has to function in the International Reinsurance Market has rendered it necessary for Government to keep it as a purely private enterprise and constitute it as a cooperative venture of all insurance companies, both Indian and foreign working in the country. Accordingly India Reinsurance Corporation was registered on 29th October 1956 and commenced business from 1st January 1957.

In the short space of less than 2½ months the Corporation was able to finalise the underwriting pattern, to arrange the necessary treaty and other facilities and to obtain a good measure of reciprocity, thanks to the cooperation of foreign friends, especially of the London Market. It is a tribute to the efficiency of the management that the underwriting systems devised by the corporation have worked smoothly.

*

GATEWAY MARKETS

(Continued from page 694)

In the Gold section, arrivals and offtake were estimated at 2,000 tolas and 3,000 tolas respectively. Prices managed to remain steady despite increased unrefined metal arrivals. Asouj delivery finished at Rs 106.75 and Kartik delivery at Rs 107.31, the highest levels touched being Rs 106.78 and 107.34 respectively. Spot rate was quoted around Rs 107 and Sovereign at Rs 69.50.

*

Yarn

The Government's decision to abolish excise duty on yarn, heavy accumulation of stocks with producers and poor offtake in the consuming centres—all these factors had an adverse effect on the Bombay yarn market. Staple-fibre yarn came in for heavy selling, while conditions in the Art Silk Yarn section were comparatively steady, being attributed to rumours of restrictive import policy for the coming six months and likely reduction in the import quotas for the actual users.

The Cotton Yarn section showed a fresh break in prices, the losses being more pronounced in higher counts. Uncertain trend in raw cotton, good production of yarn by South Indian spinners and the absence of export demand, were all factors responsible for the easy trend in prices.

Stock Exchanges

IMPRESSIVE RECOVERY

Watch-Dog Writes:

EQUITIES have generally staged a fair-sized recovery during the short week under review, thanks to short-covering and some replacement buying at the recent low levels. Sentiment is largely aided by the success of the Birla mission and the good impression made by the Finance Minister in the USA. Higher levels have, however, attracted some profit-taking, which has caused a partial reaction from the week's best levels.

Reopening after the Pujah holidays, the Calcutta Stock Exchange showed no definite trend. However, speculative issues staged a remarkable rally under the lead of Indian Irons despite settlement considerations.

Values on the Bombay Stock Exchange moved rather irregularly on alternate bouts of buying and selling before closing on a fairly steady note.

There was moderate activity on the Madras Stock Exchange where prices were generally higher for popular scrips.

Wall Street, however, continued to give ground and touched another on-balance 1957 low, reflecting the impact of Russia's earth satellite as well as the recent Moscow statements on the Middle East.

THE NEW SAMANBAGH TEA COMPANY LIMITED

Notice is hereby given that the Fiftyfourth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Tuesday the 29th October, 1957 at 12 Noon for the following purposes:—

- (1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1956.
- (2) To declare Dividends.
- (3) To elect a Director.
- (4) To appoint Auditors and to fix their Remuneration.

The Transfer Register will be closed from the 23rd October, 1957 to 29th October, 1957 both days inclusive.

N.B. A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By order of the Board,
SHAW WALLACE & COMPANY LTD.
Managing Agents.

Calcutta,
24th September, 1957.

Calcutta

FRIDAY EVENING.

THE local Stock Exchange was reopened, after the Pujah holidays, for trading on Thursday. The week under review, therefore, covers only two working days. During this period, sentiment ruled better, being influenced by the improved prospects of an American loan and the success of the Birla mission. Moreover, the excellent technical position of the market and the feeling that a restrictive import policy might encourage industries to expand their production, induced the bulls to renew their support, resulting in a sizable recovery in prices. Although higher levels could not be retained till the close, the undertone remained fully steady.

Although business in the Gilt-edged section was restricted, the underlying tendency was well maintained. While the short-dated issues hardened further, the medium and long-dated issues tended to ease in the absence of support. 3 per cent 1956 Conversion Loan changed hands at Rs 70.70 to Rs 71.20.

Except Punjab National which met with special support upto Rs 64.00 from Rs 60.00, Bank shares ruled generally quiet in the absence of any improvement in the strike situation.

Despite firmer advice from the jute goods market following the news of a further sharp decline in stocks with the mills, Jute shares continued to be neglected. The only bright spot was National which were pushed upto Rs 18.45 from Rs 18.20 on speculative buying. Birlas were better at Rs 13.87 against Rs 13.50, while Kamarhaty were on offer at Rs 90 against Rs 102 and Kanknarrah at Rs 50 against Rs 51.

There was a general lack of buying interest in the Coal section as operators were inclined to await the Government decision with regard to the fixation of a remunerative price for coal. The only bright feature was South Karanpura which staged a sharp spurt to Rs 11.06 from Rs 9.62 due to cornering by an interested party and on expectation of a higher dividend. Burrakur moved narrowly between Rs 22.00 and Rs 22.12.

The Tea section was practically neglected and only few deals were reported. Operators were inclined to await further developments on the tea front.

Quieter advices from the commodity market had an adverse effect on the Sugar section where there was little or no enquiry.

Despite improved conditions in the cloth market, Textile scrips met with limited support in the absence of any substantial progress in disposing of the accumulated stocks with the mills. Bowreah were on offer at Rs 105 against Rs 107; Dunbar at Rs 130 against Rs 132; Kesoram at Rs 11.50 against Rs 11.62 and New Victoria at Rs 1.34 against Rs 1.40.

Of all the sections, Engineering was the most active and prices recorded sizable gains over the pre-Pujah levels under the lead of Indian Irons, thanks to renewed speculative support. Despite settlement considerations, operators were found to be active in their dealings, being encouraged by the Government decision to recognise the Calcutta Stock Exchange Association as only legal unit in the Calcutta and Howrah. Against the pre-Pujah closing of Rs 17.08, Indian Irons opened higher at Rs 17.68 and, after advancing steadily to Rs 18.24, finished the week a shade easier at Rs 18.18 due to modest profit-taking. The settlement rate was fixed at Rs 17.96 as against the last settlement

of Rs 17.40. The carry-over charge for the next settlement is fixed at 6 nP. TEXMACO were pushed upto Rs 16.50 from Rs 15.20, while Richardson changed hands at Rs 9.44 to Rs 9.56.

Following were the carry-over charges for the next settlement in the case of other forward scrips:—TEXMACO 5 nP; Orient Paper 7 nP; Indian Copper 1 nP; Burrakur Coal nil and National Jute 6 nP.

The Miscellaneous section provided a few firm spots on investment and other considerations. Prominent were Indian Cable being taken upto Rs 24.50 from Rs 24.37; Rohas upto Rs 17.62 from Rs 16.87; Dunlop upto Rs 19.37 from Rs 19.31; NICCO upto Rs 23.50 from Rs 23.25 and India Steamship upto Rs 11.06 from Rs 10.81. Orient Paper scored nearly a point at Rs 23.40. BIC changed hands at Rs 4.75 to Rs 4.85; Hindustan Motors at Rs 6.09 to Rs 6.25 and Aluminium Corporation at Rs 8.87 to Rs 9.00. Indian Copper hardened to Rs 2.78 from Rs 2.73, while Osler were a shade quieter at Rs 3.06 against Rs 3.12.

Calcutta Stock Exchange Association Granted Recognition

Terms and Conditions Laid Down

The Government of India have considered the application for recognition made under Section 3 of the Securities Contracts (Regulation) Act, 1956, by the Bengal Share and Stock Exchange Association Ltd., Calcutta, and the Calcutta Stock Exchange Association Limited, Calcutta. After careful consideration of these applications and hearing the representations by the stock exchanges, Government have decided that only one stock exchange should be recognised at Calcutta and that such recognition should be granted to the Calcutta Stock Exchange Association Limited, Calcutta, which is the older Association, on the following terms and conditions:—

- (1) Firms are not admitted as, or continue as, members of the Association. To enable the partners of the existing member-firms to become members of the Association in their own right the share of Rs 1,000 issued by the Association should be converted into four shares of Rs 250/- each and made available to them.
- (2) A membership deposit of Rs 20,000 is taken from every member.
- (3) The Board of Directors will consist of 18 Directors of whom 12 shall be elected on a general election basis, three Directors co-opted by the Governing Body with the prior approval of the Government of India to safeguard minority interests and three Directors nominated by Government.
- (4) (i) The members of the Bengal Share and Stock Exchange Association Ltd. will be

entitled to apply for membership of the recognised Calcutta Stock Exchange Association provided they fulfil or comply with the following conditions:

- (a) They have been active members of the Association for 12 months immediately preceding 6th September, 1957.

Explanation:

"Active members" for this purpose means members who have themselves transacted business regularly on the floor either on their own

(Continued on page 710)

JESSOP AND COMPANY, LIMITED

Notice is hereby given that the Directors have declared the payment, on 1st November 1957, of the interim Dividend on the 5 per cent Cumulative Preference Shares of the Company for the half year ending 31st October, 1957, without any deduction in respect of Income Tax payable by the Company.

The Preference Share Transfer Register will be closed from 30th October to 31st October 1957, both days inclusive.

Dividends will be paid only to Registered Shareholders or their Mandatees.

By Order of the Board,
A. K. THAKUR,
Acting Secretary.
63 Netaji Subhas Road,
Calcutta-1.
11th October, 1957.

SOUTH INDIAN MARKETS

(Continued from page 699)

The area under groundnut crop, up to July 25, 1957, in Andhra Pradesh is estimated at 1,489,700 acres as against 1,449,000 acres for the corresponding period of last year, representing an increase of 3 per cent.

Hides and Skins

In the Madras Tanned Hides market, transactions were very few last week. Nevertheless, prices were still higher than the UK level where the response from buyers continued to be very dull. In the case of Cow hides, UK buyers were trying to buy at lower prices; but were unsuccessful in forcing the market down further on account of the local demand. Conditions in the Buff, Buff Calf and Cow Calf sections remained practically unchanged.

In the Tanned Skins section, clearances were less than usual and prices remained nominally unchanged. At the lower prices now ruling for prime and semi-prime sheep, a certain amount of business was reported to have been confirmed. Some enquiries were received for tanned Goat skins and a small volume of business was done at a slight decline in prices.

In the Raw Skins section, Goat and white Sheep skins remained unchanged; but Black Sheep skins were easier by about Rs 15 per 100 skins.

Bangalore Silk

For the second week in succession, trading in the Bangalore Silk market was limited. The undertone, however, remained firm with prices remaining at slightly above the levels that prevailed towards the end of the previous week. Charka varieties, too, maintained a firm trend.

There was a further rise in the prices of Reeling Cocoons, emphasising once again the adverse influence of want of timely rains on cocoons. The price of first quality reeling cocoons, which ranged between Rs 1.94 and Rs 2.12, moved up to Rs 2.13. In the case of second quality, however, there was a decline in the price trend from Rs 1.87 to between Rs 1.56 and Rs 1.75.

Tobacco

The all-India final estimate of Tobacco for 1956-57 is 1,022,000 acres in area and 306,000 tons in production as against the partially-revised estimate of 1,013,000 acres and 295,000 tons for 1955-56. This shows an increase of 9,000 acres in area and 11,000 tons in production over 1955-56. The increase in production is due, partly to an increase in area and partly to favourable weather conditions during the growing period.

Cardamom

Just over 2,000 pounds of Cardamom were offered in Sale No. 4, held in Munnar, towards the end

of last week. Demand was restricted, but strengthened as the sale progressed. The more attractive qualities met with useful enquiry from exporters at dearer prices. For the lesser types, there was only fair support. The highest price paid was for an invoice from Biscn Valley Estate, which realised Rs 13.10.

At the auction held at Bodinayakanur, following rates were realised (per pound):—Shipment Rs 9.32 to Rs 11.00; Average Rs 10.60; Green Rs 11.02 to Rs 12.32 and Average Rs 11.61. Seeds inferior were quoted at Rs 11.40. In all, 4,666 pounds were sold and the general average price realised was Rs 11.08 per pound.

STOCK EXCHANGES

(Continued from page 708)

account or on account of their clients.

(b) They are eligible to become members under Rule 8 (1) of the Securities Contracts (Regulation) Rules, 1957.

(c) They purchase one new share of the Calcutta Stock Exchange Association Limited.

(d) They pay a membership deposit of Rs 20,000 with the application.

(ii) If an active member of the Bengal Share and Stock Exchange Association Limited, Calcutta, who complies with or fulfils the above conditions, is not admitted to the membership of the recognised stock exchange, he will have a right of preferring an appeal to the Central Government within a period of one month from the date of refusal of his application and the decision of Central Government on such appeal shall be final and binding.

The certificate of recognition to be issued to the Calcutta Stock Exchange Association Limited, will be effective from 10th October, 1957, and will cover the area included in the Calcutta and Howrah municipal limits. The certificate will be valid for a period of five years. If, however, the above conditions are not complied with within a period of one year from the date of recognition, the recognition will be liable to be withdrawn.

THE COMING INDUSTRIAL CLASH IN BRITAIN

(Continued from page 684)

trade union leaders chosen by Moscow.

Meanwhile the chances are that we shall witness some major strikes before very long. The trade unions are not likely to give up their power without a struggle. And Government and employers have come to realise the need for holding firm. The failure of major strike would produce a sobering effect on the unions and would prepare the way for a more reasonable attitude.

Industrial Information

NEYVELI LIGNITE PROJECT

Regular mining of lignite in Neyveli is expected about the year 1960. The amount spent on the Neyveli Lignite Project upto the end of July 1957 is about Rs 8.2 crores. Stripping of the overburden in the area selected for mining is in progress.

INCREASE IN NUMBER OF FOREIGN TOURISTS FIGURES FOR 1956

India drew twice the number of foreign tourists in 1956 than in the previous year, according to statistics compiled by the Tourists Division, Government of India.

The number of foreign tourists, other than Pakistanis, who visited India during 1956, was 68,880 as against 33,269 in 1955.

Country-wise, the largest number of these came from the United States 15,111, followed by the United Kingdom with 13,411. The corresponding figures for 1955 are USA, 11,028 and the UK 8,681.

Other countries from where large numbers of tourists came during 1956 are: Ceylon, 12,179; Burma, 5,060; Germany, 2,171; France, 1,716; Afghanistan, 1,549; China, 1,528; Japan, 1,426; Canada, 1,158; and Russia, 1,047.

The increase in tourist arrivals especially from North America and Europe, is indicative of the results following the tourist promotion drive launched in the various parts of the world by the Tourist Division, Government of India.

During the last four years, two Government of India Tourist offices have been opened in the United States of America—New York and San Francisco—and one each in the United Kingdom, France, Germany, Ceylon and Australia.

APPLICATIONS FOR PROSPECTING LICENCES AND MINING LEASES: NEW MEASURE TO ENSURE QUICKER DISPOSAL

The Government of India have further amended the Mineral Concession Rules for providing quicker disposal of applications for prospecting licences and mining leases. According to the modification any application that was pending with State Governments on September 4, 1956 and had not been disposed of till August 31, 1957, shall be disposed of by the State Governments within six months from the latter date.

If the State Government fails to dispose of the applications within the prescribed period, such a failure would be construed as rejection of the application and the party shall be entitled to apply to the Union Government for review.

Under the Mineral Concession Rules 1949, certificates of approval, prospecting licences and mining

leases are granted by the State Governments under the provisions of these rules. It was noticed that in some cases applications for grant of certificates of approval or prospecting licences or mining leases were pending for long periods with the State Governments. It was, therefore, considered necessary to prescribe a time limit for disposal of such applications by the State Governments.

The matter was also considered at the 4th Meeting of the Mineral Advisory Board held at Bangalore on June 11 & 12, 1956. The Board recommended that a period of six months commencing from the date of application should be fixed for the disposal of applications for Certificates of Approval and nine months commencing from the date of application for the disposal of applications for the grant of prospecting licences and mining leases.

These recommendations were adopted through amendments in the Mineral Concession Rules, 1949, from September 4, 1956 by the late Ministry of Natural Resources and Scientific Research.

It was also provided in the amendment that where a State Government failed to dispose of an application within the prescribed time, such a failure should be deemed to be a refusal to grant the Certificate of Approval or Licence or Lease as the case may be, and any person aggrieved by such failure might within two months of the expiry of the period aforesaid apply to the Central Government for reviewing the case.

The amendments issued on September 4, 1956, had no retrospective effect and they could not, therefore apply to applications made earlier than that date.

DEVELOPMENT OF COIR INDUSTRY

A proposal from the Coir Board for the establishment of licensed warehouses to handle coir yarn is being examined by the Government of India.

The Coir Board is examining a proposal to conduct a market survey for coir goods in Central and East Africa. Details of areas to be covered and the cost of survey and similar matters have not yet been worked out.

Reports about fall in the prices of coir yarn have been received. The Kerala Government has taken steps to purchase and stock coir yarn up to Rs 10 lakhs for disposal when the markets are favourable.

The Coir Board is examining the question of production cost of an improved model of coir spinning machine and the possibility of improving the mechanism and efficiency of the machine.

a pilfer-proof package for every product !

The manufacture of Metal Box's range of pilfer-proof containers and closures is backed by an active Research Organisation. The Central Laboratory in Calcutta assists suppliers in developing improved printing inks, surface finishes and protective lacquers, and maintains strict routine tests for all incoming raw materials to the Metal Box factories; on the spot control of operations is carried out by Branch Laboratories. This ensures pilfer-proof containers and closures of the highest quality, superbly printed and finished. Expert scientific advice from Associates throughout the world is available to assist in solving customers' packaging problems.

A METAL BOX
PILFER-PROOF CONTAINER

The MB Key Opening Can has both the top and bottom double sealed on for maximum protection.

The can is opened by winding off a strip round the can with a special key.

The lid fits back accurately after opening—an effective re-seal. It is impossible to disguise the fact that the can has once been opened.

For the Investor

Flash in the Pan?

Investment Gossip:

MARKETS have turned easy again, and the question that I have addressed myself to is whether in reporting last week that—at long last—the reign of the Bears had come to an end, I was too premature. This would mean that the recent spurt in prices, ephemeral as it was, was nothing more than a flash in the pan. Be that as it may, I shall not budge from the view that I expressed last week, and I will try to explain why, the return of listlessness notwithstanding, I am thus hopeful of brighter conditions on the stock exchanges.

The provocation for the reversion of stock exchange sentiment to a bleary eyed outlook on prices is, I should think, the news agency report from London which vouchsafed the information that the Finance Minister did not have hope in his heart.

If TTK felt no hope, the market argued; is there any scope for cheer on our part? This is a line of argument that one can scarcely rebut.

However, I think there has been some unintended mischief which is responsible for crediting to the Finance Minister a sentiment which, almost certainly, he did not voice. In the first place, TTK is by no means by outlook an individual who can be paralysed by pessimism. On the contrary there is a robust optimism in his make up. So, considered strictly in the light of TTK as an individual, I find it difficult to believe that the Finance Minister would have disavowed the presence of hope in his heart.

In the second place, it is out of place for a Finance Minister to utter such a sentiment, especially since this had been preceded by statements which showed that he was largely satisfied about the success of his discussions and endeavours. Moreover, the reported statement is out of tune with the iteration by Mr T. T. Krishnamachari that the crisis faced by India was not one of confidence but one of development; for, if he has no hope in his heart, the crisis is indeed one of confidence.

The blame will need squarely to be laid on the head of the journalist tribe. Interviews, especially press conferences, are always difficult to report; and the omission of a key word can make all the difference

between what was intended by its speaker, and what, in the published report, strikes the reader.

In this case, I suppose that the reporter must have asked TTK whether he held out any hope of large scale foreign assistance; and TTK must have replied—or at least intended to reply—that, in a person such as the Finance Minister, hope has no place.

So, we may in due course expect a clarification of the press report in question; and, when that clarification comes, stock markets should cast off their gloom and put on a cheerful hue again.

£ R\$

Investment Notes:

Tata Chemicals have been active for some time past on hopes of a higher dividend. This expectation has been fulfilled by the company's decision to raise the dividend from 75 pP to 80 pP per share for the year ended 30th June, 1957. The company is also proposing to raise additional capital in the form of Ordinary shares for Rs 1 crore.

The Import-Export Bank, New York, has given credit of \$3 million, on deferred payment over 7 years, to the National Rayon Corporation for expansion of the rayon plant in Bombay.

In Madras, Mysore Lamp Works Limited has a proposal to issue bonus shares in the ratio of one share for every three shares held. The necessary application has been made to the Controller of Capital Issues. Sanction is awaited.

After a protracted spell of sluggishness, Plantation shares, on the Madras Stock Exchange, have come to the fore with Coffee shares particularly claiming the limelight. The latest Press release from the Coffee Board sounds an encouraging note about the industry's export performance.

£ R\$

Investment Briefs:

North-West Coal has maintained the dividend at 15 per cent for the year ended 31-3-1957.

Kurchimala Plantations, Madras, have raised the dividend from 6½ to 7½ per cent for the year ended 31-3-1957.

Blue Mountain Estates and Waterfall Estates have recommended dividends of 12½ per cent each for the year ended 30-6-1957 as against 15 per cent each in the previous year.

HIGHLIGHTS

The Japanese are a very clever people. Of all the nations in Asia, they were the first to realise that it was possible for an undeveloped country industrially to advance. The Japanese are an adventurous people. Adventure it was which led them into the disaster of the Second World War.

The Japanese are a very resilient people. The only nation which can be compared with Japan in the industrial production achieved since the end of the war is Germany. The Japanese are a very friendly people. Especially is this friendliness tendered to

India, as the country which gave birth to Buddha. The Japanese are a very helpful people. How they can help themselves, while helping us, is disclosed by Eavesdropper in his Clive Street Gossip and by our Delhi scribe in Olympus.

Rohtas Maintains Dividend on Doubled Ordinary Capital

Balance-Sheet Reviews:

ROHTAS INDUSTRIES LIMITED has reported satisfactory working results for the year ended 31st October, 1956. The record shows, once again, an around improvement in production—cement from 325,032 tons to 330,276 tons, clinker from 312,171 to 319,938 tons, paper from 20,135 to 22,225 tons, asbestos cement from 6,156 to 7,626 tons sugar from 9,999 to 11,854 tons and vanaspati from 6,857 tons to 8,758 tons.

Sales for the year have naturally risen to Rs 10.08 crores from Rs 9.76 crores, but net profit, before providing for Depreciation and Taxation, is only slightly lower at Rs 1.21 crores against Rs 1.31 crores in the previous year. In respect of allocations to Funds, the Depreciation amount is raised to Rs 48.42 lakhs from Rs 47.29 lakhs and Taxation to Rs 32.00 lakhs from Rs 20.00 lakhs. General Reserve is, however, lowered to Rs 5.00 lakhs from Rs 15.00 lakhs. The directors have maintained the dividend at 15 per cent and this is on doubled Ordinary capital.

The directors have pointed out that two Yankee Paper Machines were switched into production in April this year. The company's expansion programme had progressed to a stage when their full effects would have been reflected in the company's working from the close of the current financial year, but for the recent illegal strike for one month. The improvement can be expected from early next year.

Gross block has increased by Rs 3.04 crores to 10.60 crores against which total depreciation amounts to Rs 3.96 crores, leaving a net block of Rs 6.64 crores. Investments are valued at Rs 28 lakhs and current assets at Rs 2.96 crores.

£ R\$

Katras Jherria Coal

Despite a rise in profits, Katra Jherria Coal Company Limited has maintained the dividend at 65 per cent for the year ended 31st January, 1957. Raisings are higher at 310,552 tons against 298,237 tons; and these would have been still higher, but for a strike which lasted for four weeks from the middle of September last year. Despatches are lower at 332,000 tons against 373,611 tons, reflecting in sales being shown at only Rs 59.01 lakhs against Rs 60.52 lakhs.

The net profit for the year amounts to Rs 11,70,362 against Rs 10,87,994 in the previous year. The directors have after providing

Rs 1.31 lakhs (Rs 1.23 lakhs) for Depreciation; Rs 6.10 lakhs (Rs 5.10 lakhs) for Taxation and Rs 1.00 lakh (Rs 2.00 lakhs) for General Reserve, maintained the dividend as stated earlier.

According to the directors, the company's application to the Government, for getting a sanction to issue bonus shares by capitalising Reserves, has been rejected.

£ R\$

Nagaisuree Tea

Thanks to a substantial increase in earnings, Nagaisuree Tea Company has doubled the dividend to 15 per cent for 1956. Although crop output is lower at 11,299 maunds against 12,237 maunds, average price realised per pound is higher at Rs 2-0-3 against 1-12-1 per pound. The directors have provided a sum of Rs 48,397 (Rs 31,700) for Depreciation and Rs 60,000 (Rs 1.00 lakh) for Taxation. After transferring Rs 46,000 from Taxation provision, no longer required, General Reserve is raised to Rs 1.00 lakh from Rs 65,000. Estimate for 1957 provides for a crop of 10,600 maunds.

£ R\$

Burrakur Coal

Burrakur Coal Company has raised the dividend from 31 pP to 37 pP per share for the half-year ended 31st December, 1956. Raisings are shown lower at Rs 466,303 tons against 500,931 tons and despatches at 472,023 tons against 517,428 tons. Sales have, however, risen to Rs 1.23 crores from Rs 1.10 crores. With the result, the net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 2,91,365 as against only Rs 12,42,637 in the previous half-year. In this connection, it may be added that the profit for the half-year under review includes Rs 10.40 lakhs transferred from Ropeway and General Reserves.

In respect of allocation to Funds, the directors have, after setting apart Rs 5.90 lakhs for provision for payments under Appellate Award, raised the Depreciation amount to Rs 5.77 lakhs from Rs 4.98 lakhs; Taxation to Rs 5.73 lakhs from Rs 3.20 lakhs and other Reserve Funds to Rs 1.13 lakhs from Rs 60,300. Taxation Contingency Reserve is reduced to Rs 45,200 from Rs 67,700.

The directors have, in their report, pointed out that there has been an increase in the subsidy per ton allowed by Government; but the increase has been insufficient to cover the rising costs in stowing

£ R₹

Mukund Iron

The Mukund Iron & Steel Works Limited has reported excellent results for the year ended 31st March, 1957, by announcing a maiden dividend of Re 1 per share. Sales have risen to Rs 2.71 crores from Rs 1.72 crores. After providing Rs 4.25 lakhs (Rs 5.55 lakhs) for Depreciation and Rs 6.75 lakhs (nil) for Taxation, the net profit amounts to Rs 16.72 lakhs as against only Rs 10.54 lakhs in the previous year. A sum of Rs 14.00 lakhs is also provided for Rehabilitation and Development Reserve.

The company's financial position is sound. As against a paid-up capital of Rs 30.48 lakhs, Reserves and surplus total Rs 19.36 lakhs. Current liabilities total Rs 42.50 lakhs. As against a gross block of Rs 73.19 lakhs, depreciation has been provided to the extent of Rs 29.25 lakhs, leaving a net block of Rs 43.94 lakhs.

Looking to the steadily increasing demand for steel and for wagons and steel castings, the company seems to have been assured of a good future. The company has already applied for permission to expand their steel rolling mills and foundries.

£ R₹

Sayaji Mills

The Sayaji Mills Limited of Kathwada has made a profit of only Rs 32.13 lakhs for the year ended 31st March 1957 as against Rs 47.57 lakhs in the previous year although sales have increased to Rs 4.59 crores from Rs 3.40 crores. Out of the profits, the directors have provided Rs 21.37 lakhs for Depreciation and Replacement Reserve as against Rs 30.12 lakhs. Provision of Rs 6.84 lakhs by way of Development Rebate Reserve has been made. Taxation Reserve absorbs Rs 3 lakhs. A dividend of Rs 15 per share on the Ordinary shares has been recommended.

£ R₹

Raza Textiles

The working of the Raza Textiles Limited, Rampur, has resulted in a profit of Rs 4 lakhs for the year ended 31st December, 1956. With the amount of Rs 1.47 lakhs brought forward, there is an available

balance of Rs 5.47 lakhs. Out of this, directors have provided Rs 5.35 lakhs for Depreciation and the amount of Rs 12.786 is carried forward.

Sales are lower at Rs 1.04 crores against Rs 1.26 crores. Arrears of dividends on the Preference shares now amount to about Rs 3.40 lakhs for three years ending 1956.

£ R₹

Hingir Rampur Coal

The Hingir Rampur Coal Company Limited has passed over the dividends, both on the Ordinary and Preference shares, for the year ended 30th June, 1957. The dividend on the Ordinary shares for the previous year was Rs 2.25 per share. The working results for the year under review, after setting aside a sum of Rs 1.78 lakhs for Depreciation and Amortisation Reserve, reveal a loss of Rs 55.35 lakhs as against a profit of Rs 1.49 lakhs after providing for Depreciation of Rs 2.51 lakhs in the previous year.

Adverse results are mainly due to lower output, labour trouble and shortage of wagons. Sales have amounted to only 164,360 tons as against as much as 192,338 tons, while values realised from these amount to Rs 32.87 lakhs as against Rs 30.50 lakhs.

£ R₹

Rajapalayam Mills Ltd.

Even though a purely spinning unit and yarn prices have tended to decline laterly, Rajapalayam Mills Limited has been able to report a higher level of profits in the year ended March 31, 1957. It is stated that the results would have actually made better showing had it not been for the interruption to production on account of the power cut in the summer months last year. In order to prevent such an occurrence in future, two generator sets have been installed as in the case of other mills in Coimbatore and elsewhere.

The net profit, before providing for Taxation and Depreciation, for the year under reference, amounted to Rs 9,61,800 against Rs 8,84,631 for 1955-56. Sales of finished goods were sharply higher at Rs 83,92,206 against Rs 66,10,413. The provision for depreciation is slightly lower at Rs 1,86,823 (Rs 2,06,341), but has

(Continued on page 746)

Friendlier Price Index

SINCE the end of July, agricultural prices in India have, on the whole, been on the decline. Barring a week or two, when the downward trend was either arrested or was slightly reversed, the decline has been steady. The Economic Adviser's Index of Wholesale Prices (with 1952-53 as the base) registered a net fall of 1.3 per cent during the month of August; food prices were down by 1.5 per cent over the month. At the end of August, the Index stood at 110.9. Through September, it dropped by over 2 points and about 2 per cent to 108.7. By the end of the third week of September, the General Index had receded to 109.8; in the course of the succeeding week, the Index fell further down to 108.7, a rate of decline unusually steep.

The monthly average of wholesale prices for September, 1957, works out to 109.5 as against 112.0 for the previous month, showing a favourable difference of 2.5 points. As on 28 September, 1957, the General Index was only 2.2 per cent higher as compared with the Index of a year ago. If the fall in August is also taken into account, the annual difference works out to about 3.7 per cent, an extremely heartening figure for those who refuse to concede that the national economy is paralysed by inflation and that scarcely any medical advice is effective except that of starvation. The more pessimistic diagnosis makes out a case for paralysis combined with chronic indigestion. In recent months, we have been hearing from quarters far and near appeals and advice to the effect that the economy should be rescued somehow or other from the inflationary grip, without which no stable advance could be possible.

There is, of course, a certain amount of awkward pressure exerted by unduly high price levels, which justifies this kind of advice, though not the supercilious manner in which it has frequently been tendered, particularly from quarters wherefrom co-operation in economic development could be expected or sought for. It would appear as if disturbingly high price levels were being taken for granted as a chronic feature of India's developing economy and an affliction against which short of arresting or curtailing the development programme, there was scarcely any remedy. How deep-seated and wide-spread this attitude has remained could be seen from the fact that even after a conspicuous decline in prices over several weeks in succession, no less a person than the Union Deputy Minister for Finance was employing language and narrating facts as if the upward trend was still in its full swing. Mr B. R. Bhagat addressing a Branch of the Delhi Study Circle on October 11, observes:

"The rise in prices since April 1956 has been of the order of 10 or 11 per cent, and food prices have risen particularly sharply. Prices of cereals went up by 14 per cent over the twelve months ending April 1957 and by a further 4 per cent in the period between April and August 1957. . . . The rising trend in prices and the persistent difficulties in the balance of payments indicate that the country is not finding from within itself resources sufficient to meet the requirements of the Plan."

These references suited his thesis centering on the difficulties of the Plan. But the Minister was unaware that facts had overtaken him, particularly of the latest installment of decline in the price indices as recorded in the last week of September. Even by the end of the third week of the month, a considerable fall had taken place. Any assessment of the overall economic situation in India as obtaining just now should not fail to take into account this agreeable fall in price levels over August and September. In this trend may also be found an unassailable argument against claims for additions to wages and the agitations arising therefrom. It is not unreasonable to say that the selective credit restriction measures which the Reserve Bank has adopted, coupled with increases in the output of food and other consumer goods, has led to a reversal of price trends, tending to restore to the economy the balance and equilibrium which it was in need of.

If this reading is tenable, the banking system on the whole can claim exoneration from the charge that it has not responded sufficiently warmly to the directives of the Reserve Bank. The suspicion that the Central Banking authority is incapable of applying correctives in the necessary measure would also be proved groundless. As it is, secured advances of scheduled banks on paddy and rice have declined from Rs 19.23 crores on June 14 to Rs 6.44 crores on August 30; on wheat, gram, other grains and pulses, the advances came down from Rs 20.89 crores to Rs 12.42 crores. In contrast, the advances on manufactures have invariably risen. In cotton textiles including yarn, they rose from Rs 87.93 crores to Rs 90.60 crores; in other textiles excepting jute, they rose from Rs 14.99 crores to Rs 16.97 crores; in iron and steel and engineering products from Rs 87.44 crores to Rs 92.22 crores. Sugar and gur, which from the standpoint of domestic consumption demand, may be classified with food articles, received only Rs 43 crores as on August 30 against Rs 59.34 crores on June 14. Some allowance has, of course, to be made for seasonal variations in advances. Such variations notwithstanding, these figures provide clear proof that the technique of selective credit restriction designed to tackle a somewhat unique price situation has started producing results.

The relation between prices and money supply, particularly bank credit, is not as

Indian Finance

Established 1928

October 19, 1957

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

precisely estimable in India as it is in many other countries possessing a banking structure of a more advanced state of perfection. Apart from the little loopholes which are still discernible even within the regular banking system of India, a wide sector of the economy remains virtually unmonetised. That in spite of these facts, a close link could be established between the course of bank credit and the behaviour of prices reflects well on those responsible for the direction of the credit mechanism. Conversely, the advocates of dear money as a solution for India's price problem should also feel impelled to re-examine their grounds in the light of the success achieved through alternative means.

It might be premature to read into the figures quoted in the commencement of this article a long-term stable trend, though on our part we hope they do represent a price recession, helpful in many ways. Among food articles, the Index for cereals has dropped 1 point between the third and the last week of September; pulses did likewise; fruits and vegetables fell from 121 to 105, which is 14 points less than the index for the end of September, 1956; milk and ghee lost 3 points and fish, eggs and meat 5 points. The outstanding performance of the indices of food articles is a highly encouraging phenomenon.

A 5 per cent improvement in food output in 1956-57 as against 1955-56 and the buffer stocks which are being assiduously built up, stifling speculation alongside, must have contributed to it. Industrial production generally has also been on the increase during the current year and the latest reports show that the accumulation in the stocks of cotton textiles has considerably outstripped intake and normal reserves. A vigorous pursuit of the policies which have yielded these results should carry the country further in the direction of lower prices. Crop forecasts are on the whole encouraging, though all regions do not seem to fare equally well. In Bihar, the authorities have proclaimed a deteriorating food situation in the wake of widespread drought. Parts of Eastern UP. have been badly hit. Isolated shortages have always been the bane of annual food situations. Their recurrence only underlines the need for prompt precautionary steps, of whose character and efficacy the State is now very well familiar with.

Another Green Signal

INDIA'S manufacturing industries should hail the import policy announced for the next six months as an excellent opportunity to go ahead toward new levels of production. Even now there is widespread superstition over the relative quality of Indian products. From some of the comments heard on the total ban imposed on razor blades, watches, musical instruments etc., it might be thought that many people were contemplating the inevitability of the advent of a semi-barbarous age. We were reminded of a former Chairman of the Indian Railway Board, who volunteered to eat every pound of steel produced in India. The instinctive condemnation of Indian

manufactures has far outlived its age. From locomotives to needles, Indian products have demonstrated their competitive status, in price no less than in quality. As for razor blades, there are Indian brands which are at least as good as many of the imported varieties and considerably cheaper. These brands have long remained victimised by the myth of the automatic and universal superiority of the foreign products. An opportunity is now offered to show their real worth. It is not altogether unwelcome that encrusted prejudice which has not responded to really good work is now sought to be effaced through compulsion.

Workers in Management

In Madras, a Joint Council of Management was formed first in the State Transport Department, to be quickly followed by another set up in the Simpson and Group Companies. These Companies are a leading industrial bunch in the State and has the additional distinction of being one with which the present Minister for Industry and Labour, Mr R. Venkataraman, has been closely associated in his capacity as an erstwhile Union leader. The precise jurisdiction of the Council has not been published. Presumably, the Council will have more or less the same scope as others already established in the State and elsewhere.

On the occasion of the formal inauguration of the Council, the spokesmen of the management, of labour and of the State Government congratulated themselves on this new experiment and hoped that it would prove to be a success and a model. Mr Venkataraman, who naturally has a personal interest in the success of the Joint Councils in the State, emphasised the difference between labour unions working for the improvement and welfare of workers and those motivated by political ambitions.

Joint Councils can succeed only if the workers' representatives are guided by the former spirit. The Councils and the class-war are mutually repugnant. In actual practice, this point could be pressed into view only if the Councils develop a concept of functions including the settlement of questions concerning wages, bonuses etc. For the time being, these are kept outside their jurisdiction, probably on the assumption that too much should not be taken on hand at once.

Editorial Notes

As against this consideration of safety, there is the risk that trade union activity, being robbed of a part of its customary field, is led to concentrate on conditions of service and consequently to become increasingly militant and uncompromising. The Joint Councils of Management are useful as half-way houses. More should not be expected of them.

*

An Anachronism

The recent riots in South India have aroused some constructive thinking on the socio-economic tasks involved. No one seriously believes that emotions could be rehabilitated without tackling the fundamental roots of the conflict. Mr P. Ramamurthi has come forward with the suggestion that special financial assistance and educational facilities hitherto given on the basis of caste should be related to other criteria in future.

Concessions to the Depressed Classes were conceived of, in relation to a social situation in which the groups concerned needed special treatment and help in order to elevate them economically and educationally to the levels attained by others in the community. That social situation has undergone great changes since the advent of new economic and social legislation, aimed at erasing inequalities of every kind.

Though this process has not proceeded at the same pace in every respect, it has proceeded far enough to bring down the economic status of innumerable sections, big and small. In many States the small zamindar dispossessed of his hereditary wealth has been offered a rehabilitation allowance. The same principle will have to be applied to the advantage of other sections who are finding themselves gradually discarded in the midst of contemporary changes.

The Ramnad situation is an irrefutable testimony to this kind of change and of the need for relief and positive assistance conceived on the lines suggested. It is also inconsistent for a State which seeks to scotch caste consciousness everywhere, to stick to policies exclusively based on caste divisions. Special State assistance in whatever form should now be related to the circumstances of the family or the individual concerned and not to the social group. Almost all over India altered situations would vindicate this change in policy.

*

A Disturbed Area

The entire group of countries, lying from Cairo to Karachi is again in a ferment. A few skirmishes have been reported on the Turko-Syrian border. While Turkey claims that from its side nothing more

has happened than a few goat-men's trespass, authorities in Syria have described it in more bellicose terms. Marshal Khrushchev has accused Dulles of having encouraged Turkey to get militarily involved with its eastern neighbours and has warned that in the event of any general flare-up Turkey itself would not survive more than a day. Egyptian forces are reported to have moved into Syria and urgent confabulations have taken place among leaders of States opposed to US or British influence in the Middle East.

Apart from the imponderable consequences which would follow an international mix-up developing out of this situation, India is concerned in a more direct way. Turkey is the advance post of Nato and is heavily armed. Syria now functions as a counter though not formally, from the Soviet side. Any of the two can indulge in little aggressions without the least knowledge of its big sponsors but with the hope that in distress help would not be denied.

In no way dissimilar is the situation obtaining in Pakistan. The disclosures by the approver in the Kashmir sabotage case cannot be dismissed as the ravings of a frivolous and irresponsible youth. Barring a small minority among Pakistan leaders, who incidentally may not be ready to assert their views, every politician in that country is wedded to a jihad in Kashmir. Mr Suhrawardy, just before his resignation pointed out with characteristic naivete how the disintegration of a one unit West Pakistan would jeopardise the chances of Kashmir's accession to it.

It will be very rash to think that Turkish inroads into Syrian territory, assuming that these are serious and planned, are at the instigation of the US. Domestic turmoil and the personal feuds for which Pakistan is tending to become a model, can inspire short-sighted power-hunters with similar means for side-tracking the people. Contemporary developments beyond the Western borders call for unflinching vigilance on the part of India.

*

Respect for Awards

At the Labour Ministers' Conference held in New Delhi early this week, it was agreed that non-implementation of Awards by Tribunals and other authorities should, without exception, be punished in a deterrent manner. Existing law does provide for punishment, but after paying a fine or serving a term in goal, which of course is seldom done, the guilty can get away without the obligation to respect the Award afterwards. This lacuna is sought to be removed by the suggestion that failure to im-

plement Awards should be made a continuing offence. What became of the suggestion at the Conference is not reported.

A modification of the legislation in the desired direction will surely help to make the Tribunal Awards look more respectable and actually get respected. But this will only be a starting point. Every Award should carry with it a stipulation regarding its minimum tenure and against interference through circumvention or subterfuge. It is possible now for any party to say that conditions have changed and demand concessions or abrogations of the other party's rights on that plea.

Against such conduct the law should provide a fairly dependable remedy; which of course is possible only if there is also the complementary provision for automatic adjustment to conditions which are normally likely to change. For instance, labour has a long-standing complaint against the absence of a national cost of living index. Such complaints will have to be attended to with greater sympathy and promptitude.

A sense of obligation to respect all the conditions of an Award with equal zeal could be generated only if labour leadership takes a long term view of its responsibilities. The fascination for utilising any chance coming by for starting a quarrel has to be undermined by more sober considerations of the economic factors which contribute to the advancement of labour as a sharer in national production. When the Government decide on investing Awards with full sanctity, the implication is that non-implementation would be penalised with equal severity toward all parties.

INDIAN FINANCE

World of Finance

State Bank Deposits:
Just over Rs 350 CroresBank Deposits:
Just under Rs 1350 Crores

THE continued pressure on the banking system, consequent to the lack of any change in the Calcutta banking situation, and the ebb tide of the slack season as such, are the noteworthy influences which are responsible for the changes to be discerned in the latest bank returns. Active note circulation has risen for the second consecutive week, a phenomenon that we have not known for some months. But the overriding importance of the impasse at Calcutta has to be studiously borne in mind if the interpretation of the financial statistics is properly to be made. Firstly, it is now exactly a month since normal banking business has been suspended at Calcutta. Cheques are not being cleared, and constituents' accounts have not been credited with the proceeds of cheques received by them. It speaks well of the banking managements in the Eastern capital that, in spite of the dislocation caused by the intransigence of the employees, they have been able to maintain facilities which prevented business from being paralysed. It may also be stated that the manner in which bank managements have coped with the situation bespeaks of the determination with which the pressures from bank employees are being resisted. Secondly, part of the period covered by the bank impasse relates to the time of the year when, normally, the pressure for funds in behalf of Puja expenses interrupts the even tenor of the slack season. Normally, not only is the Puja reflected in a drawing upon Deposits and in a decline in the cash balances of the banking system, but it also evokes a contra-seasonal increase in the accommodation given to constituents. Thirdly, with the coincidence of month early disbursements with the resumption of business by banks after the termination of the banking holidays on account of the Pujas, we may safely conclude that demand for funds—again, by way of drawing down on Deposits and an increase in Advances—would have been more than usually severe. In spite of a considerations such as these, a study of the bank figures will reveal that the changes recorded are not offer testimony of any intolerable pressure upon the banking system. It will be our purpose to study the extent and manner of these changes in bank figures; and,

if possible, we shall also indicate why, where and how the Calcutta bank strain has been mitigated.

(1) (a) Between September 20 and October 11, the total increase in note circulation has worked out to Rs 20.12 crores.

(b) Over the same period, the Reserve Balances of Scheduled Banks declined by Rs 7.22 crores to Rs 90.61 crores.

(c) Though the Other Loans and Advances of the Reserve Bank are slightly higher by half a crore of rupees, the Advances against usance bills are shown to be lower by Rs 4.30 crores at Rs 28.70 crores.

(2) (a) As far as the State Bank is concerned, Deposits have risen by Rs 7.38 crores.

(b) True, Cash Balances have been run down by Rs 5.10 crores.

(c) Moreover, the total of Advances is marked up by Rs 3.42 crores.

(d) But it needs to be noted that a very steep increase has taken place under the head of "Other Assets", which have gone up by Rs 12.13 crores in the latest week; this possibly betokens money paid in advance to the Reserve Bank for purchase of gilt-edged from the central banking institution.

(3) (a) As far as the Scheduled Banks are concerned, in the period till October 4, the total of Advances has been marked up by Rs 11.75 crores.

(b) At the same time, Deposits have risen by nearly Rs 15 crores.

(c) Borrowings both from the State Bank and the Reserve Bank have risen, from the former by Rs 2½ crores and from the latter by Rs 5 crores.

(d) Nevertheless, Cash Balances have been augmented by Rs 16.38 crores.

We may state, at the outset, that the expansion in currency circulation represents no more than the fair and normal increase to be expected on account of month early disbursements. That is to say, banks have been able to take in their stride the pressure upon currency circulation arising from the Calcutta impasse without in any way adding to the upward trend in active note circulation.

Secondly, the reliance of Scheduled Banks upon central banking credit has been, apparently, for

quite an insignificant amount relative to the pressure that might have been expected from Calcutta.

Thirdly, the State Bank, for its part, was able to meet the heavy withdrawals in Calcutta—and, at the same time, has reported an increase in Deposits.

Fourthly, but for the possible investment in gilt-edged of roughly Rs 12 crores, being now shown in suspense under Other Assets, the State Bank would be even more comfortably placed in regard to Cash Balances.

Fifthly, the changes in the Scheduled Banks' figures scarcely need any detailed analysis.

We wish to suggest that the banking figures as given should not be misconstrued as indicating that Calcutta banks have been feeling no pressure. How, then, can we reconcile the admittedly and acknowledged heavy cash withdrawals at Calcutta, as well as the undoubted increase in accommodation given to Calcutta constituents, with a set of bank figures which appears to be unaffected by such pressures? We should think that the distorted bank figures of the last three or four weeks have obscured what in the event might have been a resurgent augmentation to the Deposits of Scheduled Banks, on the one hand, and a heartening decline in the Advances of the banking system, on the other. By way of explanation, we would suggest that the accretions to Deposit resources in the other Indian cities may have been so heavy as to conceal the drawing down of Deposits in Calcutta. Similarly, the rise in Advances in Calcutta may have been mitigated by declines of substantial magnitude in the other banking centres. This hypothesis needs to be stressed, because there is the danger that, in official circles, the failure of the total of Advances to decline to the targeted level of Rs 800 crores may be misread as connoting an absence of co-operation from the banking system. On the contrary, we should think that the significant heading of Reserve Bank directives by the member banks is a fact to be recognised, welcomed and applauded.

We would stress our view that, but for the Calcutta bank impasse, Advances would by now have been very near the target; and we also believe that the Deposits of member banks may conceivably have been within sight of the Rs 1400 crore mark. If, before the end of the slack season, the Calcutta imbroglio is resolved, we may be able to obtain confirmation of the thesis thus presented here.

As far as the latest bank returns are concerned, active notes rose by Rs 6.01 crores in the week ended October 11; moreover, Rupee Coin also went out into circulation for Rs 0.55 crores. This has been met from the Reserve Bank's cash in the till, which has consequently gone down by Rs 6.57 crores to Rs 20.41 crores. There

would appear to be deficit financing for Rs 5 crores, with Rupee Securities rising by Rs 4.97 crores to Rs 940.84 crores. Against this expansion of currency, there has been contraction against Foreign Securities for a like amount by transfer to Balances Held Abroad in the Banking Department.

The Centre's balances, thanks to sales of ad hocs in favour of Reserve Bank, have improved by Rs 2.53 crores to Rs 53.84 crores.

On the other hand, the position of the State Governments vis-à-vis the Reserve Bank has worsened considerably. Over and above a decline in their balances with the Reserve Bank by Rs 6.53 crores, borrowings of State Governments have mounted by Rs 6.50 crores to Rs 51.27 crores.

The Reserve Balances of member banks have gone down by Rs 3.54 crores; but this is wholly on account of the State Bank which, in the relevant week, reports a drop of more than Rs 7 crores in Cash and Balances with the Reserve Bank. Moreover, member banks would also appear to have reduced their indebtedness to the Reserve Bank, since the latter's Other Loans and Advances have been marked down by Rs 5.15 crores to Rs 73.50 crores; the Reserve Bank's Advances against usance bills, it may be noted, have gone down by Rs 3.72 crores to Rs 28.70 crores.

Finally, Foreign Balances have marked yet another decline, though, again, one of small proportions. After transfer of Rs 4.97 crores from the Issue Department, Balances Held Abroad are marked higher by Rs 1.91 crores at Rs 20.55 crores; thus, the drain during the week must have amounted to Rs 3.06 crores.

Can Britain Check the Wages Spiral?

By PAUL EINZIG

DURING the second week of October, all eyes in Britain and a good many eyes outside Britain were directed toward the popular seaside resort of Brighton, where the Conservative Party held its annual conference. It was hoped that some indication will emerge from this conference showing the Government's intentions concerning

the wages spiral. Although the Bank Rate was raised to 7 per cent, and a maximum limit was fixed for the volume of money credit and public investment, it was widely felt that these measures in themselves would not be sufficient to induce the trade unions to abstain from pressing their excessive wages claims. Indeed, while speculators

in sterling showed themselves duly impressed, there have been no indications so far of any slackening of the pressure for higher wages.

The speech made by the Chancellor of the Exchequer, Mr. Thorneycroft, reaffirmed with strong emphasis the Government's decision not to provide any new money to finance wages increases. Apart from this, however, the conference disclosed no new measures to implement the policy of resisting the wages spiral. Indeed, the Minister of Labour, Mr. Macleod, made a speech in which he made it quite plain that the Government do not

intend to do anything that would be resented by the trade unions. He spoke the language of appeasement which is in fact the traditional language of the Ministry of Labour ever since the days of Sir Horace Wilson who, after his successes in settling strikes by conceding everything, made history by inspiring Mr. Neville Chamberlain's unsuccessful attempts to appease Hitler. Judging by the favourable reception of his speech by the conference, it seems that the Government need not fear any undue pressure by the rank and file of its supporters to be tough with the unions.

So, the fact that emerges from the conference is that the Government will rely entirely on the "plateau" of the volume of currency for keeping wages from rising. The Chancellor is convinced that this will be sufficient because he believes that, if no new currency is made available, industrial firms will be unable to finance wages increases. This assumption is, however, fundamentally mistaken.

It is true, if a business firm wants to increase its output, it has to ask for more credit facilities from its bank. A time lag is bound to expire between paying for the additional raw materials, transport, fuel and labour, and the emergence of the additional goods from the pipeline, their sale and the collection of the proceeds for the goods sold. During that period, additional funds are needed, and, if the banks, acting on the Chancellor's instructions, refuse to provide the funds, production cannot be increased. The state of affairs is totally different if the additional money is needed, not for increasing the output, but for increasing wages. No additional credits are required for the purpose so long as the firms are in a position to add the increased labour costs to the prices of their goods. If it can be done, wage increases are self-financing. Indeed, since the price increases usually apply to goods produced before the wages increase, the additional outlay in the form of higher wages is more than covered.

Admittedly, many firms sell their output in advance at prices determined by contracts. But most contracts nowadays contain an escape clause, providing for an increase of the price in case of wage increases. In any case, once the goods are delivered under existing contracts, the new contracts are made at prices on the basis of which the higher wages are covered without any additional credit.

If industrial firms assume that they would be able to add the higher cost to the prices, they will be tempted to take the line of least resistance by conceding wages demands and adding the extra cost to the prices. There are no indications that the Government have realised this. Their policy is based on a most primitive conception of the quantity theory of money, according to which it is sufficient to keep down the volume of money to prevent a rise in prices. The Government advisers fail to

Sackings in Good Demand

THERE has been an unexpectedly large decline in stocks of jute goods as at the end of September. It is evident that the improvement in the traffic position in the Calcutta port has been largely responsible for the higher offtake recorded in the past two months. Even so, it is undeniable that jute goods, especially sackings, have been meeting with good enquiry in recent months.

It may be recalled that till recently the continued high level of sackings stocks has been one of the main causes of worry for the Indian jute industry. The news that at the end of September stocks of jute goods with mills have declined to 76,700 tons comprising 39,000 tons sackings, 30,100 tons hessians and 7,600 tons other varieties has, therefore, come as a pleasant surprise. The steep decline of 12,100 tons in sacking stocks as compared with the previous month has brought about a position which has been devoutly wished by the industry. For the first time in many months stocks of sackings are lower than one month's production of this category of goods. At the corresponding month of the previous year, stocks of sackings stood at 88,600 tons with the Grand total of stocks at 125,200 tons.

With the release of the figures relating to production of jute goods during September on Wednesday, it is now possible to find out how the jute industry and trade have fared during the month. Output has amounted to 86,000 tons, nearly 4,000 tons higher than in August. The higher output is easily explained. For as against 189 hours during August, mills have worked in September for 200.5 hours. A significant change in the pattern of production is the increasing attention bestowed on the production of sackings. Of the total of 86,000 tons representing output during September, as much as 47,300 tons are accounted for by sackings while hessian output is slightly lower at 33,700 tons. Production of other varieties has amounted to 5,000 tons. During August, production totalled 81,900 tons with hessian at 33,900 tons, sacking at 43,100 tons and other varieties at 4,900 tons. It is evident that during last month there has been a heavier switch-over by mills of looms to production of sacking.

It may be inferred that despatches have been heavy during the month. The month opened with a fairly large stock of 92,500 tons. Production has also been higher at 86,000 tons, and mills

have closed the month with a total stock of only 76,700 tons. It is evident, therefore, that despatches have been over 101,000 tons with sackings accounting for over 59,000 tons.

The jute goods market opened last Friday on a firm note with sentiment buoyed up by the news of the heavy decline in September-end stocks. The decline of over 12,000 tons in sackings thus bringing them to below one month's production was naturally considered a bullish factor. Consequently B Twills Ready met with spirited speculative support to be done upto Rs 118.25. January-March was steadier at Rs 113.50. The hessian section was well maintained with Hessian 40"x10 oz Ready quoting at Rs 42.70 and January-March at Rs 42.20.

Speculators continued to push up prices, especially in the Sacking section on Saturday. B Twills Ready moved up to Rs 119.00 with January-March at Rs 113.75. Conditions in the hessian section were steady with hessian 40"x10 oz Ready fractionally higher at Rs 42.90 and January-March at Rs 42.75.

Firm conditions prevailed throughout Monday when speculative interest received further strength from reports of a tender received from the Government of India. B Twills Ready spurred to Rs 12.75 with November position also quoting at the same rate. January-March, however, continued to be rather neglected at Rs 114.50. In sympathy with sackings, hessians 40"x10 oz Ready advanced to Rs

43.12 with November at Rs 43.75 and January-March at Rs 42.50.

In earlier dealings prices were generally unchanged as shippers evinced interest only in ready position while mills were sellers for forward positions. Toward close, however, reports of a foreign tender induced renewed firmness. Closing prices were as follows: Hessian 40"x10 oz Ready Rs 43.12, November Rs 43.06 and January-March Rs 42.44. B Twills Ready Rs 120.75, November Rs 118.25 and January-March Rs 114.50.

On Wednesday prices fluctuated erratically due to heavy speculative activity in the Fatka. In later dealings, with bear covering and bull support prices again advanced especially in the Ready positions. B Twills Ready was done upto Rs 122.00 with hessian 40"x10 oz Ready at Rs 43.19. Price levels for other deliveries were, however, generally unchanged as follows: Hessian 40"x10 oz November Rs 43.12 and January-March Rs 42.50. B Twills November Rs 118.50 and January-March Rs 114.75.

The raw jute market ruled steady partly in sympathy with the goods section and partly due to small arrivals. In the early part of the week, mills showed active interest and good quantity mill business was reported done on Monday in Assam and Indian Northern Bottoms at Rs 27.50 per maund and Pakistani cuttings at Rs 81 per bale for October-November shipment. On subsequent days the undertone continued steady though sellers and mills became alternatively reserved.

other equally efficient manner are to be evolved, exports can well be expected to improve.

In September 1956, the Government of India decided that, during 1956-57, a total quantity of 160 million pounds of tea could be exported from North India for auction abroad. In pursuance of the policy of progressive expansion of auctions held in India, the Government have given careful consideration to the prescribing of a similar restriction during 1957-58. After giving due weight to all available factors, internal as well as external, such as prospects of production and consumption, price trends, and the needs of other auction centres where Indian tea have traditionally found a market, the Government have decided that, for the current year, a total quantity of 155 million pounds of North Indian teas may be exported to auctions in foreign countries.

As in previous years, the Government do not propose, for the present, to impose a similar restriction on South Indian teas and intend to take up this matter at a later date if it appears that the quantity of teas from this region that is being sent abroad for auction is disproportionately high in comparison with what is being auctioned in Cochin.

Meanwhile, buyers have continued to show preference to only quality teas. The serious scarcity of

high quality teas in London has been considerably eased and a good deal of more colourful and flavoury tea is on its way from both India and Ceylon. The bulk of North Indian second flush tea is moving on to the London market; and tea from Ceylon's good August pluckings is also due. The North Indian second flush, this season, was not as good as usual, owing to unfavourable weather; but it should still offer plenty of better quality tea. As for Ceylon, excellent August weather produced a crop of 26 million pounds in which the standard of the Uva teas has been markedly good.

In the Export Sale held in Calcutta, offerings were 58,018 packages. There was a fair general demand, which improved as the sale progressed. "Teas for price" met with a fair enquiry, but at prices which generally tended easier. Plain liquoring descriptions, at the start, were about 6 nP easier, but strengthened later in the sale. Low Mediums showed a decline of 6 nP; but the brighter liquoring medium kinds were sold well and were often dearer. Medium BOPs were about 10 nP easier.

CTC Assams were the weakest feature of the sale, particularly the Fannings grades, and prices declined by 20 nP per pound with fairly heavy withdrawals. Non-withers Dooars were easier by

(Continued on page 745)

World of Tea

Fall in Exports

THE trend in Tea exports from India has not been encouraging as the total of exports from North India, during the year till the middle of September, has been only 114 million pounds as against about 151 million pounds in the same period last season. The poor performance of Indian tea in the world market is attributed mainly to uncompetitive prices. Furthermore, the quality of North Indian tea, in this season, has been disappointing despite concerted efforts on the part of the producers to improve it.

In this connection, Mr. Sinha, President of the Calcutta Tea Merchants' Association, has stressed the need for devoting sustained attention to the problem of export promotion in general and of tea in particular. He has emphasised that the old established connections with the UK and the other members of the Commonwealth as Canada, Australia and New Zealand should be tapped and developed, while the USA and West Germany will be a valuable field for active development.

Among measures designed to augment exports of the country, Mr. Sinha has mentioned a more active propaganda effort in countries in which India is presently unrepresented, arrangement for regular shipping facilities to Australia and the Middle East and making warehouse warrants negotiable as in the UK. Exporters can also be assisted by the avoidance of long and involved procedural formalities.

As the success of efforts taken in the country to augment its exports will be governed by the overall world production and consumption, not merely our export policy, but our sales policy as well should be carefully chalked out to meet the demands of a changing situation. With adequate stress laid on quality and manufacture, the aim must naturally be to produce as much as we can, to sell abroad as much as we can, but always at steady and competitive prices. If a suitable method of export subsidy as by a rebate of duty on quantities exported over certain level or in any

World of Business

The Aluminium Industry

The versatility of aluminium has earned for it an increasingly important place among the major industrial metals. Modern engineering trends suggest that in many a field aluminium may soon replace steel. The use of aluminium has increased to such an extent in recent years that its rate of consumption in a country has come to be taken as the index of its industrialisation. The growing importance of aluminium is brought out by the fact that in the USA as much as 88 per cent of the total consumption of the metal is accounted for by industry. If the quantity used for ACSR cables is included, the percentage will be still larger.

With the rapid progress of industrialisation in our country, it is but natural to expect that the demand

for aluminium will show a sizable increase from year to year. The Planning Commission have estimated that demand will reach 40,000 tons per annum by the end of the Second Five-Year Plan. The rising trend of consumption of aluminium is already evident. But as yet the rise is mainly accounted for by the ACSR cables and aluminium conductors industry which is by far the biggest consumer of virgin metal in the country at present juncture. The large demand for cables and conductors from the power generation projects and electrification schemes coupled with the fact that copper is in short supply has given a fillip to this industry.

It is estimated that the consumption of aluminium in the fields of transportation, building

and construction etc., will be about one-third of the total consumption. But though this pattern is yet to manifest itself, it is anticipated that with the continued progress of the engineering and other industries, the demand for aluminium from these directions will rise appreciably in coming years.

Speaking at the recent annual general meeting of the Aluminium Corporation of India Limited, Mr Lakshmi Pat Singhania has pointed out that the general pattern of development of increased use of virgin metal for industrial use is taking shape and that the demand for the metal is increasing as expected. Concrete evidence of the growing demand for the metal is provided by the higher sales of the Company during the past year. Referring to future prospects, Mr Singhania, has recommended cautious optimism in view of the increasing cost of production.

It is gratifying to note that the company has planned to go ahead with its expansion schemes as early as practicable. Government have

approved the scheme to expand its metal production capacity to 7,500 tons per annum and to instal plants for the fabrication of metal into industrial products. Mr Singhania has disclosed, that though the company has failed in its efforts to get power from DVC at a reasonable rate, it has been successful in its negotiations with the West Bengal Government to secure power from the Durgapur project at an equitable rate.

There are, however, problems like the continued inflow of duty-free scrap, tariff protection to ACSR Cables and all aluminium conductors and enforcement of standards for circles used for utensil manufacture, to be tackled if the indigenous industry is to progress from strength to strength. The Tariff Commission have already enquired into the first two and it is expected that favourable recommendations may result. As regards standardisation of quality, it would appear that, more than anything else, co-operation from the various Government departments will go a long way in achieving the desired result.

but are two sides of the same medal".

Admittedly, the anti-inflationary measures taken during the last few years have been without effect, as the achievement of the balance of payments surplus indicates; but they have not been strong enough to ensure the stability of the price level.

The Chancellor emphasized that confidence in sterling cannot be restored by leaning upon help from abroad. "If a nation has confidence in its own currency, the world will have confidence as well".

This point was also stressed by the Governor of the Bank of England, Mr C. F. Cobbold, at the same dinner: "Though sterling exchange is influenced by actions and judgments taken in other countries, the stability of sterling depends fundamentally on the soundness of our economy".

The Chancellor did not enter into an academic discussion of the causes of inflation; but he stressed that there was no doubt about what enables inflation to go on. It was "the supply of money, whether it be new money or existing money travelling rather faster". And he reiterated what the Government is prepared to see the necessary finance produced to match the upward spiral of costs, inflation will continue and prices will go up."

These simple facts are the basis of the Government's policy, whose purpose it is to halt the increase in the supply of money. The sharp rise in the Bank Rate to seven per cent. is meant as a clear signal of the Government's intentions. Public investment will be limited to £1,500 million—the same amount as this year—in 1958 and 1959. This figure represents a high level of investment, a level higher than in earlier years; and the Government has only refused to allow increased spending on public investment which would be partly absorbed by higher prices and, to this extent,

confer no real benefit. In the private sector, bank advances during the next 12 months will not be allowed to rise above the level they had attained in the past 12 months.

Though this restriction of money supply, the Government is ensuring that any overloading of the economy would not put a new strain on sterling but would result in reduction of activity and employment. But, in the long run, there is not really a choice between pound sterling and full employment.

There is little comfort in rising incomes if they are paid in terms (Continued on page 746)

S. E. RLY. TENDERS

Sealed tenders are invited for supply of the following items:—
Tender No. CS/PC/57/8882-R/C/22 for supply of M. S. Rivetted double end chimney in two sections 17" outside 42'-0" high made of 1/4" thick plate throughout complete with bottom door and joining ring etc. as per SWM's sketch No. 1885 to be seen in this office.

Tender forms are obtainable from the Controller of Stores, Garden Reach, South Eastern Railway, Calcutta—23 (PC Section) on remittance of Rs 5/- per copy per tender (not refundable) by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, South Eastern Railway, Calcutta—23 by local firms. Earnest money against the tender is Rs 500/-. Closing date of the tender is 4-11-57 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid income tax clearance certificate along with the earnest money receipt with the tender.

INDIA & PAKISTAN

I WAS gently steering the conversation round, as best as I could, to the future that lay before India. Those were the times when we were quite innocent of any substantial industrial advancement. The time was forty years ago, and Indian independence was yet a dream. Then, Sir John Woodroffe, I remember, stated his belief that reattainment of prestige and respect by India would, at some future date, be on the basis, not of industrial progress, but of a spiritual message which, after centuries, India would again be able to give to the world. It was around the same time that a Japanese friend told me of the reasons underlying the change in attitude of his countrymen when an Indian visited the Land of the Rising Sun. Once upon a time, every Indian was accorded the honour and respect due to a country which gave birth to the Buddha; but, said this friend of mine, when an Indian went to Japan to sell hides and skins, he could scarcely be held in similar high esteem. Time now appears to have turned full circle. I do not think that I am being presumptuous in suggesting that the basis for the rise of India to a stature out of all proportion to our might in industry or the generally accepted yardstick of power is traceable to a spiritual quality that we have been able to inject into discussion of so mundane a sphere of activity as politics. This phenomenon is best evidenced in the Japanese attitude to the Indian citizen once again being replete with respect and honour. Which, quite logically, leads to the triumphant tour of Japan by Mr Nehru.

The joint communique issued by the Prime Ministers of India and Japan at the end of Mr Nehru's ten day goodwill tour of Japan is a document of considerable interest. Great satisfaction is felt in political circles at the magnificent success that has attended Mr Nehru's tour and the spontaneous expression of affection and regard for both Mr Nehru and India. By all accounts, Mr Nehru was received by the people and Government of Japan with unprecedented enthusiasm; and, on many an occasion, touching gestures of love and affection were witnessed. Wherever he went, Mr Nehru was received as a man of peace and as

representative of a nation that was striving its utmost to restore to world politics a sense of urgency about moral values. There was also much evidence of a sympathetic interest in Indian attempts at planned development and a desire to help us in this undertaking. In the final communique that was issued jointly by the Prime Ministers, the identity of views between the two governments on a variety of international problems and the indication of Japanese desire to help actively in India's plans for development are clearly implicit.

Apart from indications of a friendliness between the two countries, the communique is interesting as representing a definite stage in the evolution of Indo-Japanese relationship. The new phase now beginning, apart from its intrinsic importance, is also likely to have interesting repercussions on world politics. Politically speaking, therefore, the document may turn out to be more important for what it implies than for what it actually states. As is well known, Japan's political history has been of somewhat dubious propriety. After centuries of feudal somnambulism, it emerged toward the end of the last century as a nation determined to achieve progress as a modern state. The defeat of Russia at the hands of Japan in 1905 was a moment of extraordinary emotional significance to Asia in general and to Japan in particular. From that time onwards, Japan has had visions of a highly industrialised state equal to the most advanced country of the West. This vision was translated into action and, as though to prove the worst prognostications of critics of modern industrialism, Japan found itself a victim of its own grandiose visions of expansionism. The war with China that started in the thirties was but a prelude to the more reckless adventure of the Second World War, and its tragic issue has been a bitter lesson to it. More than even the fact of final defeat, its manner was symbolic. Japan's defeat was the grim inauguration of the age of Atomic warfare, and Hiroshima was as decisively important to the Japanese people as the defeat of Russia was in 1905. It is, therefore, little wonder that, to the

Japanese, the question of nuclear tests assumes a nightmarish aspect. It is not only that they are horrified by the hazards in store: it is also a reminder of the final humiliation, a humiliation that they have no desire to have repeated.

There was, of course, some equivocation in the attitude of the Government of Japan in the immediate post war era to the question of atomic tests. But there is reason to believe that the ambivalence was more due to considerations of expediency than to an evaluation of the real issues involved. Latterly, with the gradual restoration of Japan to the status of a nation in full control of its own destiny, the real attitude of the people has found its free expression, as in the joint communique of the Prime Ministers which, thus, is not merely a political attitude that makes sense in the larger context of world politics, but also the expression of the true feelings of the Japanese people.

This is but an example of the coming nearer to the Indian attitude in international matters by Japan. For reasons of recent history, Japan has been obliged to take a stand on international questions that is somewhat at variance from that of India and the other uncommitted nations of Asia. There has been the historical background of Chinese-Japanese relationship. This has made it difficult for Japan to take an attitude toward China that would have made an enormous difference to Asian and world politics. Moreover, the question was queered out of focus by the attitude of the US to the Communist regime in China. And, in the immediate post war years, Japanese politics was inevitably conditioned by the preferences of the US. Though it is too early to predict any change in the attitude of Japan to China, it is not unlikely that geographical realities will assert themselves and that Japan will work out a more satisfactory relationship with China. After all, it looks as though even the US will, in the not distant future, find its present attitude farcical.

With the attainment of a more reasonable mutual relationship

between China and Japan, the stage will be set for a real and effective assertion of Asian counsels in international contexts. At the moment, Asian influence on the course of world events has not been of much significance, and world politics tends to be discussed and decided upon more or less from European points of view. To say so is not to be guilty of narrowness, since it is merely stating the obvious. Many may see the possibility of the emergence of such Asian solidarity as an unpleasant prospect: uneasy memories of Japan's war time, Napoleonic illusions of greater Asianism may stir many a European, American and even Asian mind. To such misgivings, the only guarantee that one can offer is that the association of India with the effort to make Asian opinion articulate and effective will never degenerate into a selfrighteous arrogance or a desire to carry the coloured man's burden.

As far as India's political relations with Japan are concerned, there has been an enviable record of mutual friendliness and understanding. India can legitimately take pride in the fact that it voluntarily gave up all claims of reparations from Japan at a time when even richer nations insisted on their pound of flesh. And India's sympathies with the tribulations of the Japanese people over the nuclear tests have been unwavering and expressed in the clearest terms.

So far about the political aspect of the Indo-Japanese relationship. Of more immediate interest and importance to us in the context of the Second Plan is the economic aspect of our mutual relationship discussed in the communique. As the foremost Asian nation from the point of view of industrialisation, Japan is in a position to help us in a number of ways. For one thing, Japan's example is a source of great inspiration to other undeveloped nations. In many ways, Japan is more ill provided by nature than India is; and, in the matter of resources, India is a country of abundance compared to Japan. Even so, Japan's determined effort at industrialisation yielded results even before the Second World War. But for its ill judged military adventurism, Japan

Britain

By JOHN KINGSLEY

AFTER persistent pressure against the pound in August and September, its quotation on the world's exchange markets rose again to parity (\$2.80) on October 7. This was the first success of the dramatic raising of the Bank Rate to seven per cent., and the accompanying measures to limit public and private spending which were announced barely three weeks earlier.

This quick result underlines the determination and ability of the United Kingdom authorities to maintain and defend the existing parity of the pound, and the present margins of 1 per cent. on either side of parity by which the pound may fluctuate in day-to-day dealings on the exchanges.

It is natural that the demand for a world currency like sterling should, from time to time, be influenced by developments abroad. Thus the recent pressure was largely due to French currency adjustment and the speculation on the Deutsche Mark which followed. But such matters are—as the Chancellor of the Exchequer, Mr Peter Thorneycroft, has said—"after all, the normal lift and fall of the financial sea".

Such developments should not throw Britain's economy into disarray, especially since the United Kingdom earned a current surplus of £200,000,000 on its external account in the year ended June 30 in spite of the Suez Canal crisis, compared with only £52,000,000 in

the preceding year. Exports are running at a level six per cent. above last year, and there is good reason to assume the balance of payments will further improve.

At home, production and consumption are expanding. Government finance is sound, and the Chancellor expects to realise the surplus on ordinary expenditure of £450,000,000 for which he provided in the last Budget.

These few facts leave no doubt that Britain is not faced with an acute crisis. But it cannot be denied that the pound has been under severe pressure abroad, and that determined and strong action has been required for its defence. Lack of confidence in sterling was not prompted by any short-term development in the British economy, but by the strain to which the economy has been expressed since the war. Mr. Thorneycroft performed a useful service by discussing this wider problem in his speech on October 8 at the Lord Mayor's dinner to the bankers and merchants of the City of London.

Although the pressure on sterling was touched off by currency developments on the Continent, its severity expressed lack of confidence in the pound. This lack of confidence has not been caused by the state of the current trade of the United Kingdom, but by the fear that the Government would not succeed in stopping inflation.

As the Chancellor succinctly pointed out, the facts are: "first, that sterling has been under severe pressure abroad; secondly, that prices have been rising steadily—almost without a break—over a period of 12 years at home. These two facts are not separate, unrelated things,

would have been perhaps the most influential nation in the world today. For, even after the crippling blow to its economy and prestige dealt by the Second World War, Japan today has emerged with added strength to its economy. Its progress has been comparable only to that of West Germany, another country that was in a state of abject collapse barely ten years ago. In 1956, the pace of Japan's industrial production has probably eclipsed even that of West Germany, with its index at the record figure of

366 with the base of 100 for 1948. Japan's success has been mainly due to its high standards of industrial efficiency and its skilful integration of various complementary sectors of production in which both technique and labour incentive methods are used to the maximum efficiency. This is a lesson of immense significance to us, since our problem is at once development and creation of employment. The proper dovetailing of medium and small scale industries with the major industries of a basic sort, and the fruitful mutual interaction

of these three sectors offer to us the greatest single managerial problem. Japanese experience in this regard is invaluable. From this point of view, the offer of the Prime Minister of Japan to explore ways of establishing technical training centres for the purpose of contributing to the development of medium and small scale industries is most welcome.

For the rest, the determination to explore all avenues of cooperation in the economic field between the two countries is also welcome.

India has many of the raw materials that Japan requires, the most notable of which is, of course, iron ore. As for our requirements of capital goods, Japan is also in a position to supply our needs: and the Prime Ministers' joint communiqué contains a most reassuring, though inevitably general, reference to agreement to explore the possibilities in this regard. Closely connected with this aspect of the matter is the other welcome feature of the agreement: Japan is willing to consider extended credit in yen for the import of capital goods. Of course, it is too early to speculate on details, but it is generally expected that the yen credit would be of the order of Rs 20 crores. This will be besides the capital goods that will be bought in exchange for iron ore to the tune of Rs 150 crores spread over a period of ten years. (Obviously, there is scope for increasing this amount of export of ore, especially if Japanese cooperation in the matter of transport from ore sites to ports is sought and made available). It is expected that the yen credit would be utilised toward purchase of textile machinery, thermal plants, mining equipment and miscellaneous machinery. The full picture of the benefits likely to accrue from this economic cooperation, agreed to in principle, will unfold itself in the near future. But there is cause for satisfaction that a firm basis has been given in the communiqué of the Premiers for the building of the closest economic cooperation between the two countries.

I came across a lulu in a recent issue of Lloyds Bank Review. The article was about inflation, and I sat down in my chair for an hour of thoughtful and sober reading. The first paragraph of this article offered a lesson for every academic economist. For, in it is explained what happens when a trade union presses for a wage rise. Let us say, the XYZ Union serves a notice upon its employers that, for such and such reasons, it demands an increase in wages. There is a lurking economist who advises the Union and, before the management agrees to the wage increase, the following discussion takes place.

Lurking Economist (to Union Leader): What do you think will happen, now that you are asking for a wage increase?

Union Leader: Why, we get the increase or else—we go on strike.

Lurking Economist: You are under-estimating your bosses, for, they will give you a rise. What happens next?

Union Leader: What?

Lurking Economist: Your bosses will be paying the workers more, therefore, their costs of production will rise. Because their costs rise, they will be compelled to increase prices. Because prices rise, the cost of living will rise. And since the cost of living index will go up, the purchasing power of

India delivers the goods- and Jute protects them!

And not only do those familiar gunny bags protect India's exports—but jute manufactures as a whole also remain one of our largest sources of foreign exchange.

That is why the jute industry is one on which so much of the strength of India's economy depends. And, like many other industries, jute looks to oil to protect its capital equipment and to play its part in the manufacturing process.

We supply to the mills of West Bengal a specialized petroleum product known as Jute Batching Oil. When emulsified with water, this oil softens the tough fibres of the raw jute and enables them to be split, shortened, drawn into a smooth ribbon and wound on a bobbin.

We also supply a range of lubricants which covers the complete requirements of the jute industry, and which has been developed after many years of careful study and research. So in the jute industry too—Burmah-Shell help to deliver the goods!

Unemployment in Textile Industry?

LEADERS of two of the most powerful trade union organisations in Bombay's textile industry have pictured the current situation in respect of employment as grave and threatening. Mr G. D. Ambekar, General Secretary of the Indian National Trade Union Congress affiliated Samnagh, which claims representation of more than two lakhs of cotton textile workers in Bombay has in the course of a recent Press interview, referred to the existence of large scale unemployment in the industry.

He puts it down to the retrenchment of substitute workers and laying off of permanent workers on the ground of over-stocking of cloth in the mills. He has also alleged that a few mills had put up notices of closures of certain departments and one had given notice to close its third shift. The Rashtriya Mill Mazdoor Sangh, claiming to represent about 60,000 workers, has appealed for the Union Government's intervention to arrest growing unemployment among textile workers.

The Bombay Mill Owners Association claims to know little about these things. As the Association is entitled to receive prior information on the closure of departments, shifts or mills and as it has not received any communication about such closures, the charge laid by the labour leaders had to be flatly denied.

Despite the non-committal attitude of the Mill Owners Association, one gathers that a small number of substitute workers have been discharged from some mills. These are persons who have put in less than 6 months of service. All told, the temporary cuts are known to involve not more than about 800 looms and all these belong to the third shift. Invariably a worker operates two looms, on the basis of which the retrenchment is expected not to affect more than 400 persons.

When it is recalled that the total number of workers in the cotton textile industry in the Bombay State rung to nearly 5.5 lakhs, this much of reduction in hands is no more than a flea-bite. In the State, the first shift employs about 260,000 workers; second about 170,000 workers and the third about 47,000 workers. It is usual with the mills confronted with any technical or commercial situation demanding a reduced number of workers, to lay the axe first on the third shift.

As no more than about 400 workers, even these substitutes, have been actually retrenched, it can scarcely be said that a problem of serious unemployment in the cot-

ton textile industry has arisen. Normally displacement of even larger numbers is not viewed with any degree of alarm. At present, both the working class leaders and the mill owners have cause to worry, not so much over what has already happened but over what might happen, if the Government failed to take certain steps.

Mr. Ambekar has made a hint of the deeper problem. According to him, current difficulties are caused by inefficiency in management and indiscriminate increase in production capacity at the cost of khadi and handloom. This may be so, though production figures up to June do not justify his contention. The average monthly production in 1957 up to June has remained around 452 million yards as against 442 million yards in 1956. The monthly average had risen by about 18 million yards between 1955 and 1956. With the expansion of textile production envisaged for the current year, actual production cannot be reckoned as having exceeded limits. The annual rate of increase works out only to 55 per cent of the previous year.

It is, however, undeniable that stocks have accumulated in the mills during the past few months, and the subject has been under discussion between the mill owners and the Commerce and Industry Ministry. It is the mill owners' contention that unless the Government came forward with special measures designed to stimulate demand, stock accumulation will continue calling for less agreeable steps.

In other words, the mill owners want a reduction of the excise duties particularly, as a means of stimulating sales. The Government after having made certain concessions already, may not be willing to respond at least for sometime. But the fact of stock accumulation lends strength to argument put forward by the labour leaders that the employment position might any day deteriorate.

One of the Union organisations has also requested the Union Government through a Resolution by its Executive Committee, to appoint an Enquiry Commission immediately so that the present state of affairs in the mill industry might be fully examined and the necessary correctives taken then and there. What is surprising is Mr Ambekar, in referring to the damage done to khadi and handloom, seems ready to encourage the contraction of mill labour. From the standpoint of overall employment in textile production this attitude

might be understandable, but seen in a leader of mill workers, propositions which will have the sure consequence of reducing employment among them bear a strange look. Mr Ambekar knows that the income of a handloom worker is sometimes not even a third of that of a mill worker. Even otherwise, he is the champion of an interest which is ultimately in conflict with handloom and khadi. One would like to see an elaboration of Mr Ambekar's stand on this particular point. It is even possible that he has been misquoted. If the two sectors of the cotton industry are really able to view problems in such magnanimous self-denial, it would be a matter for pride. Will it be, is the question.

CAN BRITAIN CHECK THE WAGES SPIRAL?

(Continued from page 720)

realise that, if wage incomes are allowed to rise, the rigidity of the volume of currency and credit will not prevent a rise in prices. All that will happen is that the velocity of circulation of the notes and of bank deposits will increase, so that the unchanged volume of money does more work.

It may take some time before the Government are likely to realise the inadequacy of their policy. Meanwhile, the inflationary spiral will continue, even if its pace may be moderated by curtailments of capital development schemes.

Food Production

Though there are varying opinions in the country about the prospects of the Second Five Year Plan and its practicability the fact that food production holds a pivotal place in it has been recognised by one and all. Naturally the general attitude to the Second Plan following the recent increase in the prices of food grains and near conditions of scarcity in food grains has been one of misgiving. If even after the First Plan at the completion of which self-sufficiency in food was supposed to have been reached, the country should be dogged by the food problem it only points to the conclusion that the self-sufficiency that was achieved at the end of the First Plan was a coincidental result of fortuitous circumstances and this underlines the need for concentrated attention to be given to the matter of increasing food supplies.

Speaking at Bombay Mr K. M. Munshi former Union Food Minister said that food production was a challenge to the Second plan, and that it could be met only by securing the highest increase in food production. Mr Munshi advocated a vigorous nationwide drive to increase food production and emphasised that all our policies and plans should subserve such a drive.

Mr Munshi also put up a vehement plea for a long term plan of food imports and pointed out that a long term contract with the wheat producing countries and for regular rice supplies from Burma was essential till our agricultural production programme was completed.

Mr Munshi expressed himself as in favour of decontrol in the country as a whole and argued for a kind of elastic control to be maintained in the urban areas. To this he would also add such other measures as ban on cornering of foodgrains, licensing of traders in grain and an elastic programme of monopoly procurement in certain extra-surplus districts.

Referring to the Second Plan Mr Munshi attributed the difficulties into which it has run to lack of emphasis on quick-yielding goods in the public sector, failure to fix targets of investments at a level warranted by the meagre savings of the people and finally failure to place concentrated emphasis on agricultural production.

*

Agricultural Marketing

The system of marketing agricultural produce in India has been distinguished by the multiplicity of middlemen besides being notorious for the nefarious practices prevalent.

The spread between the producers and sellers' price which has been invariably high is a measure of the extent of parasitic living which an unorganised marketing system has encouraged and led to, much to the detriment of the peasant who was in the process left with only a bare pittance.

The organisation of marketing societies on a cooperative basis has been held as the alternative and the Second Plan has laid great emphasis on the role of such societies. But co-operative societies are slow to grow and therefore measures to prevent and put down the illegal practices in the ordinary markets are a necessity. The objective of the market acts was to contribute to this end and promote the healthy growth of regulated markets.

Speaking in Bombay Mr A. M. Thomas Union Deputy Minister for Food emphasised the need for regulation of agricultural markets since the marketable produce that would find its way into the channels of the local markets even with growth of cooperative societies, as provided for in the Second Plan, would be great. He pointed out that the losses suffered by producer-seller in the marketing of their farm produce are colossal and that unless a part at least of these losses is saved, it would be futile to

look for improvement in their economic condition.

Though the objective of the market acts i.e. securing for the farmer a higher share of the price paid by the consumer, is yet to be realised the market acts have been successful to the extent to which they have eliminated unfair practices and reduced the market charges payable by the producer-seller.

In view of the success of the regulated markets, though only in a limited way, the growth of such markets throughout the country is a major desideratum. That they have been popular is borne out by the fact that their number had doubled from 265 in 1950-51 to 520 in March 1957 in the States of Andhra Pradesh, Mysore, Bombay, Madras, Madhya Pradesh and the Punjab. Mr Thomas expressed the hope that the other States would also fall in line with the pace set by these States and that by the end of the Second Plan the number of regulated markets would go upto 1000.

Mr Thomas also laid great stress on the importance of grading and standardisation in the transaction of business with the minimum of energy and maximum of efficiency and said that sale by inspection had to give place to sale by description. Grades and standards he pointed out, provided a common commercial language.

GATEWAY MARKETS

Groundnut Price to be Controlled

TRADING in Oils and Oilseeds markets was generally quiet last week when prices moved irregularly lower under predominance of sellers. Linseed and Cottonseed, which maintained a steady undertone under covering by a short were, however, exceptions. The Forward Markets Commission's warning in Rajkot against the protracted rise in Groundnut prices apparently halted the recent upward movement on the market.

The groundnut crop has just begun to move and it is necessary to ensure that the futures prices are not pushed to abnormal levels by unscrupulous trading activities. Including a carry-over of 1½ lakh tons, the current year's supplies of groundnut are placed at about 23 lakh tons. There is no reason why this quantity should not see the country through 1957-58 even after allowing for a small increase in indigenous consumption.

In this connection, the Chairman of the Forward Markets Commission has issued a warning that

the Commission will not hesitate to take steps and even to close some of the recognised markets if the present trend in the prices of groundnut futures continues and no attempt is made to control the prices. He has stated categorically that there will not be any export of groundnut oil and those traders, who are building up long positions in the expectation of release of export quotas for groundnut oil, are indulging in anti-social activities. He adds that the Commission is watching the movement of prices constantly and will not hesitate to take even more drastic steps to control the groundnut prices this year. For obvious reasons, Groundnut February delivery, after touching a high of Rs 159, receded to Rs 158, to finish better at Rs 158.12. In the ready section, bold quality was quoted at Rs 34.25 and Groundnut Oil at Rs 9.75.

Trading in the Castorseed section was largely of a speculative nature, the export outlook for castor oil remaining mostly un-

changed. May delivery opened at Rs 158.75 and, after improving to Rs 159, receded again to Rs 158 at the close. Ready was quoted at Rs 34.00 and Castor Oil, commercial quality, at Rs 18.75.

In contrast, the Linseed section presented a firm front with prices showing some gains over last levels, being inspired by the favourable turn in the export outlook for linseed oil. May delivery started at Rs 29.87, to finish firm at Rs 30.00. Ready was quoted at Rs 28.50 and Linseed Oil at Rs 15.35.

The Cottonseed section also displayed a firm tone in line with linseed. February delivery moved between Rs 103.25 and Rs 103.50.

*

Gold & Silver

The Bombay Bullion Exchange suffered a noteworthy setback with silver bearing the brunt of liquidation. With increased arrivals in both the metals as against less offtake and the news that the import duty for about 6½ lakh coins of Tibetan silver had been paid, there was heavy liquidation and fresh speculative sales.

Increased tempo of Tibetan metal arrivals and slackness in spot demand mainly induced offerings in the Silver section. Although prices attempted at rally, they slipped back again at the close due to lack of follow-up support. Arrivals and offtake were estimated at 23 and 28 bars respectively. Kartik delivery changed hands at Rs 182.31 to Rs 182.87 and Mangsir delivery at Rs 182.87 Rs 183.56. Ready was quoted around Rs 181.81.

The Gold section was quiet in sympathy and turnover was moderate. Arrivals and offtake were estimated at 2,000 and 3,000 tolas respectively. Kartik delivery changed hands at Rs 106.50 to Rs 106.65, while ready was quoted at Rs 106.12 to Rs 106.31. Sovereign hovered narrowly around Rs 69.62.

*

Non-Ferrous Metals

Conditions in the Non-Ferrous Metal market continued to remain quiet with prices developing an easier tendency on weaker London advices. Copper, which was quoted at Rs 168 per cwt a week ago, is now quoted at Rs 154. The present arrivals of the metal are reported to be higher-priced, while lower-priced material will arrive only sometime in November-December. Importers are not, therefore, getting any appreciable margin on copper. In sympathy, Zinc has declined to Rs 61 per cwt from Rs 68. In comparison to copper, zinc is a cheaper commodity where the effects of tighter financial conditions are to be quiet and featureless, with the rate hovering idly

(Continued on page 745)

World of Cotton

Prices Shed Top Gains

THE steady upward trend in Cotton futures, which had been noticeable till the end of last week, has now come to a halt. In view of expectations of a tight supply position during the current season, prices tended to harden due to consistent short-covering. A leading bear, who was sitting tight on his holdings, was obliged to cover his outstanding. The recovery, however, could not make further progress as speculative bulls preferred to liquidate their holdings to book profits.

The present setback in prices was mainly due to tired long liquidation, mainly prompted by technical considerations. Besides, the warning given by the Chairman of the Forward Markets Commission at Rajkot against high prices of groundnuts and the reported prevalence of option business in cotton chilled buying enterprise. Above all, the President of the EICA requested the members of the Association to stop the illegal transactions and asked for their full assistance and co-operation to eradicate the evil. This unnerved the speculative elements. With the result, rates slowly backed away. Though scattered short-covering tended to arrest the decline, the undertone was somewhat hesitant. ICC Jharilla March, after touching a high of Rs 709.25, receded towards the close to Rs 702.

The Spot market gave a steadier appearance with good business reported in new crop Berar and Khandesh. Local and upcountry mills bought spot lots of Kalyan, Jaydhar and Surti varieties.

On the export front, enquiry continued for Zoda and Yellow pickings. It is, however, feared that India will lose her export market if prices are not brought down in line with world parity. With the inception of the US export sales programme, international trade in cotton has become very competitive. It is also reported that Russia will be stepping up her cotton purchases from the Middle East countries as a result of her own cotton belt not yielding sufficient supplies during this year.

In the foreign section, Ahmedabad mills were reported to have brought a good quantity of spot lots of American, while Southern mills showed good interest in Sudanese and Egyptian styles.

Meanwhile, the outlook for crop in Gujarat and Saurashtra has undergone a change as a result of continued dry weather. It is feared that the overall production of cotton in the country will not exceed 49 lakh bales. Rains are urgently needed in Western India and Punjab. Moglai tract and

but the movement of the new crop will be delayed by about three weeks. Again, the trend of cotton consumption by mills is very encouraging. The textile industry has consumed 46.65 lakh bales of Indian cotton and 5.67 lakh bales of foreign growths during the 1956-57 season. The monthly average for Indian cotton has risen from 3.63 lakh bales in 1955-56 to 3.88 lakh bales in 1956-57 and may go up in

**The LEYLAND Comet
carries in two trips
what others do in
three or more!**

YES, Leyland Comet can carry 50% more goods every time than any other chassis made in India. Just think what this means to your operating costs. You save on time, save on fuel and save on maintenance. And you get more business from satisfied customers.

The Leyland Comet is built to carry heavy loads over long distances. Any Leyland operator will tell you that you can depend on it to give you trouble-free, low-cost operation year after year.

Leyland 'COMET'

The only 7½ ton payload chassis made in India

MAIN DEALERS:

For Jammu & Kashmir:
Jay Kay Automobiles
Residency Road, SRINAGAR (Kashmir)
For Delhi, Himachal Pradesh, Punjab & Rajasthan:
Globe Motors Private Limited
Saralidham, 1/2 Jhandewala, NEW DELHI
For Uttar Pradesh:
Dharam Singh Ram Singh (Motors) Private Limited
25 Bhopal House, Lal Bagh, LUCKNOW
For West Bengal, Bihar & Assam:
Associated Indian Enterprises (Private) Limited
206 Lower Circular Road, CALCUTTA 17
For Bombay State & Andhra Pradesh:
Automotive Manufacturers Private Limited
108 Bazaar Ward, Kurla, BOMBAY 37
For Madhya Pradesh & Orissa:
C. Eduljee & Company
Kamptee Road, NAGPUR
For Madras & Mysore:
George Oakes Private Limited,
36 D, Mount Road, MADRAS 2

Every chassis is designed to carry a specific load. The 'F' form specifies it. Too frequently, overloading is adopted to enhance revenue with consequent increases on the incidence of breakdown and in the cost of operation. You don't have to overload a Leyland Comet. It's built to carry 50% more than any other chassis made in India.

The Forward-Controlled Leyland Comet Chassis is designed specially to combine large body space with easy handling. The quick starting, long life Leyland Diesel engine, with its high torque output, combines pulling power with remarkably low fuel consumption.

Delhi Review

Indo-Japanese Co-operation

HINTS had not been wanting, even prior to the departure of Mr Nehru for his visit to Japan, that exploratory talks were likely in the matter of Indo-Japanese co-operation on projects, and particularly as regards the possibility of securing some sort of deferred payment agreement with our Asian friends. Now that the joint communique has been issued, there are some capital circles who profess themselves somewhat disappointed at the vagueness which has circumscribed the formal communique. But, surely, it was not to be expected that definite commitment would be agreed to or entered into the while that Mr Nehru was in Tokyo. It seems to me that we must look to the Prime Minister to create that intangible asset, the fostering of an atmosphere that would be receptive to the discussion and perhaps conclusion of specific projects. In this sense, I may even go so far as to say that the groundwork for such American help as we are now hopeful of obtaining was a chore that, though not deliberately so, was performed by the Prime Minister when he met President Eisenhower last year.

Even so, of course, the Finance Minister must be considered to have gone one step further, in the sense that he addressed himself to the task of clarifying the official Indian economic policies and attitudes. If Mr T. T. Krishnamachari did a "follow up" job in Washington and New York, we may presume that he will be engaging himself similarly in London and at Bonn. To some extent, the industrial delegation led by Mr Birla will be able to capitalise upon the goodwill and improved receptivity at the centres visited by TTK. Ultimately, however, measure of success of TTK's tours will be known only in another six months' time, or a year's time, or even perhaps more.

While, in respect of the American and continental confabulations, there is not quite a crystallisation of the plans or schemes which would be submitted to American or continental entrepreneurial and financial circles, no such disability handicaps whatever discussion Mr Nehru might have had at Tokyo. I must, however, qualify this last sentence with the fact that the discussions with the World Bank may have been with specific regard to some aspects of the Railway Plan.

But, as far as Tokyo is concerned, it is an open secret here that interest tended mainly to be concentrated upon the prospects of Japan obtaining increasing quantities of Indian iron ore. It has been obvious for some time that Japan will inevitably need to make sure of a regular supply of iron ore with which to feed the maws of its steel mills. Unfortunately, India has so far figured no more than as a potential source of such regular supply in substantial quantities. The limiting factor is not the availability of iron ore as such, but the inadequacy of port and transport facilities to handle iron ore export in bulk.

At the same time, Japanese interests have not neglected the fact of Indian potentiality, and have striven, as far as it lies in their power, to persuade the Indian authorities to take the measures necessary to enable the export of larger quantities of ore. In this light, there has been a great deal of discussion, especially in the last 18 months or so, about creating the new port facilities for taking care of Japan's iron ore needs. Various sectional interests in this country have, during this time, been busy pressing their case for the choice of particular ports as best fitted for development and improvement in this regard.

The first such port is Visakhapatnam. Consultations at the State and Central Government levels would appear to have resulted in a decision to draw up a specific programme for the development of Visakhapatnam Port. But ideas of proceeding with such development for the sole purpose of channelling iron ore exports through this centre have, however, been given up. My information is that an American team which was consulted on this matter gave negative recommendations, because, as I hear it, the railway track for fetching the ore to Visakhapatnam lies over stretches of "up grade"—which would unnecessarily raise the cost no less than the effort for shipping the ores.

Then, there was the claim of Paradip Port. The Orissa Government succeeded in instituting preliminary discussions with some Japanese interests and, not long ago, it appeared as if Paradip was actively being considered for ore shipments to Japan. Since then, however, the impression in New Delhi circles is that, although the development of Paradip Port will need to be taken in hand as a long term project, the extent of railway line to be laid out, etc., rule out the possibility of any quick transformation of Paradip into a port which could handle vast quantities of ore shipments. Since time is of the essence in this affair, the conclusion seems to be that Paradip, too, has been given up as a port for which schemes have to be drawn up and executed expeditiously.

The third entrant is Geonkhali. Here, every single circumstance is favourable. Nevertheless, discussions have bogged down more than once, and it is difficult to trace the root cause of obstacles in the way of a swifter consummation of the plans in this regard to any particular objection. I have heard such things as: Geonkhali must not be allowed to come into being, because it will reduce the importance of Calcutta Port; it would be un-

wise to concentrate port facilities within a stone's throw of a none too friendly neighbour; Geonkhali will need constant and costly dredging; even if it is brought into being, it will not relieve congestion at Calcutta Port.

I am afraid that most of these arguments are superficially based. Several expert consultants—whether the British for a second Indian shipyard or American for the development of another port—have generally favoured Geonkhali. For, the fact is that the advantages of Geonkhali as a satellite port for Calcutta far outweigh the relatively insignificant objections that have been voiced. Firstly, it should be possible for the new satellite port to take care of some of the heavy plant and equipment destined for the various steel plants that are in Calcutta's hinterland. Secondly, technical opinion is of the view that, whether for Calcutta or for Geonkhali, dredging is going to be perennially with us. Thirdly, the new railway track that has to be laid to join up Geonkhali is for by no means a considerable number of miles. Fourthly, Geonkhali is conveniently accessible not only for exports of iron ore but also for shipments of coal, manganese, etc. Fifthly, Geonkhali will enable ships coming to Calcutta to avoid bunk-

Development of Ports

If the shipping position at the various major ports in the country has changed in the course of a couple of months from one of acute congestion to one of normalcy it speaks volumes for the promptness and the sense of urgency which the Government have brought to bear on the problem. As a result, the Bombay port has become free of congestion, while the ports of Calcutta and Madras are very near a position of normalcy. Congestion continues only in the port at Visakhapatnam. In the latter the position is still rendered difficult by a large number of vessels waiting for ore shipments.

In Calcutta the position has so far improved that the number of ships waiting for berths has been brought down from the peak figure of 68 at the beginning of August to 19 in the third week of September. The maximum number of days for which any ship had been waiting has been reduced to eight days. Further improvement was prevented by the present Bank strike which has caused delays in documentation.

Speaking at a meeting of the Consultative Committee of Overseas Shipping Interests, Mr R. L. Gupta, Secretary, Department of Transport, Government of India, outlined the action taken by the authorities on the recommendations made at the last meeting of the Consultative Committee. It was pointed out that in the Bombay Port the number of free days allowed to importers for clearing cargo was reduced from five to four while the loading time allowed to exporting vessels never exceeded ten days. In Madras the question of reducing the number of free days for clearing cargo to three in the case of foreign and two in the case of coastal imports had been taken up by the Port Trust Board.

The Minister also reported improvement in the labour output as a result of the measures taken by the authorities. In Calcutta for example a whole time officer had been appointed as Director of Operations to assist the Chairman of the Port Trust. Further the wages of secondary labour was brought to a par with the wages of the primary gangs. Among other achievements the Minister listed the considerable improvement in coal loading, and speeding up of lighterage operations. Lack of technical personnel seems to present a major obstacle to speedier improvement.

In Visakhapatnam the situation is still far from improved and the average time taken by an export ship is seven to eight days. All the same the lightering fleet at Visakhapatnam is also being augmented with timber lighters and four steel

barges. With a view to avoid the waiting period for ships measures for shifting of ships within the harbour at night are also being introduced. Further both at Visakhapatnam and Madras Port working Committees had been set up.

With these measures adopted by the Government the port development scheme should be set on a good start. But the leeway that have to be made up, if we are to stand on a position of parity with countries in other parts of the world is still great. The fact that it now takes 14 days to load 9000 tons of iron ore at one of the major ports which could normally be done in 24 hours time is a measure of the gap that has to be filled.

*

Research in Farming

Inaugurating the second F.A.O. Development Centre on Farm Planning and Management in New Delhi Mr A. P. Jain the Union Minister for food, laid great stress on the importance of farm management research and explained how it could contribute to raise agricultural productivity and also be useful in the formulation of public agricultural policies.

Increase in agricultural production it was pointed out could be brought about only by improvement in agricultural efficiency. Referring to India's plan to increase agricultural production Mr Jain said that the main planks in it were the provision of more irrigation facilities, improved seeds, fertilisers and manures, land reclamation and the adoption of improved agricultural practices. By these methods he said, we are aiming at an overall increase in agricultural production of about 27% under the Second Plan. The object of the farm management studies should be to help in increasing the productivity of land and therefore such studies should be oriented towards this end.

Explaining the significance of farm management research in the formulation of agricultural policies Mr Jain said that it was only on the basis of the data furnished by the farm management investigations conducted in the different regions in the country that we could evolve satisfactory criteria for practical application of the concept of family holding.

With a view to extend the farm management studies in the country the Government have established a research division in the Directorate of Economics and Statistics in the Ministry of Food and Agriculture. This would also facilitate

the coordination of the investigation and also help in conducting further processing and analysis of the data collected.

Already farm management investigations have been completed in six selected centres in the country which extended over a period of three years. Further farm management studies are being extended to three more regions. Experts are also being collected from different parts of the world

to help the scheme with expert guidance. An expert in production economics has already been obtained from the United States through the courtesy of the T.C.M. The services of a Japanese expert is also likely to be secured under the expanded technical assistance programme of F.A.O. With the advice and guidance of these experts the scope of the farm management investigations would also be extended.

NORTH INDIAN MARKETS

Futures Trading in Sugar

THE Government of India have, after considering the recommendations of the Forward Markets Commission, have decided that the present time is not opportune for permitting the resumption of futures trading in sugar. The position will be reviewed later when conditions warrant the establishment of futures markets in the sweet commodity.

Among other things, the Commission has recommended that futures markets in sugar will be established in Kanpur, Muzaffarnagar and Bombay. It has also suggested that the present restrictions on the forward sales of sugar by mills in advance of the quota releases as well as the policy of periodic releases of sugar should be reviewed in order that futures markets in this commodity may function effectively.

The production of indigenous sugar amounts to 20.24 lakh tons up to September 30, 1957, during the current season as against 18.59 lakh tons in the corresponding period of last year. Total offtake, including quantities despatched for export, is 19.42 lakh tons. Stocks with the factories, as on the 30th September, were estimated at 6.20 lakh tons.

Meanwhile, conditions in sugar markets have continued to remain dull in the absence of buying interest. The seasonal demand, which is generally brisk at this time of the year, has been slack. All factories are reported to be keen on liquidating their old stocks before the advent of the new season. As against this, the supply position is quite comfortable. In view of the pressure on the part of mills to sell, floating stocks with the trade are dropping gradually as traders are not inclined to hold any more than the barest minimum.

Prices in the Muzaffarnagar market have shown a downward tendency as demand from the consuming centres is dormant although some business is reported to have

been done for Madras side, the Punjab and Saurashtra.

Sugar prices have also displayed a quiet trend in Kanpur. Supply position is reported to be easy following the release of the monthly quota by the Government.

Prices in the Khandesari market have recorded a sagging tendency although demand has been fairly good. Rates are moving between Rs 26.00 and Rs 31.50 per maund, according to quality.

*

Gur

In the Hapur market, new Gur prices have recorded a fall of Re 1 to Rs 16 per maund for the best quality. Daily arrivals have increased to an average of about 500 maunds and the demand is concentrated to Delhi and local consumers only. Arrivals are expected to increase substantially after "Diwali" when rabi sowings will be completed. Stocks of Old gur, mostly wet Kotha quality, are estimated at 10,000 maunds, which have failed to attract outside demand.

*

Foodgrains

Steady to firm conditions have prevailed in the Foodgrains markets. In the Hapur market, Wheat average quality has registered small gains, to be quoted at Rs 16.12 per maund. Daily arrivals from the rural areas have continued to be small. Meanwhile, the US Department of Agriculture has authorised India to purchase \$20,945,000 worth of wheat and wheat with Indian currencies. The India Supply Mission in Washington will arrange the purchase, which will be shipped to India during the period 1st November 1957 to 31st December 1958.

The market for Rice continues to rule steady. Harvesting of paddy crop in west Uttar Pradesh is in full swing. Gram also continues to rule steady following fresh demand.

Panchayat Raj

Though local self government had been the bulwark of the administration in India from ancient times, it has been seriously jeopardised ever since the country came under foreign domination. From the second half of the 17th century upto the 19th century there had been attempts from time to time to revive some form of local self government. But what with the half-hearted interest of the powers-that-be and the group rivalries that had emerged, very little progress had resulted. The next serious attempt came at the beginning of the third decade of the present century and though it did result in creating local bodies with large elected majorities, it failed to make any appreciable difference in the life of the people.

The question of restoration of local self government on a firm, uniform and democratic basis may be said to have been taken up seriously only after the achievement of independence. The Constitution of India provides that the State shall take steps to organise village Panchayats and endow them with adequate powers to function as units of self Government. It is now generally recognised that the Panchayats should once again be restored to their original status of being the bases of the nation's political and judicial systems as the country is essentially a land of villages.

For a variety of reasons progress toward the reorganisation of the local administration set-up in conformity with the new objective has been rather slow. For one thing the State and the Central Governments have been obliged to concentrate their attention on many pressing problems. Moreover, there are very many points to be settled before worthwhile action can be initiated in the direction of transfer of increasing responsibility and power to panchayats. Even so, persistent attempts are being made to realise the goal of rural self-government. The Government of India have set up a committee under the Chairmanship of the Union Minister for Health with a view to study the progress made in the various States in this regard. The Committee, which has so far met thrice, has made a number of recommendations.

The Madras Government have been actively considering the question of reorganisation of local self-government in the State for some time past. Even while they have been bestowing considerable thought on the question, they have been taking steps toward bringing about conditions that are calculated to make the realisation of the objec-

tive of Panchayat Raj without undue loss of time. The task has been as much the revitalisation of panchayats as the reformation or the scrapping of inefficient bodies. The Government have been taking steps on the one hand to bring about conditions conducive to the growth of panchayats and to curtail the powers and the responsibilities of the district boards in their present form, on the other.

It is said that the State Government have decided to take over the administration of the district boards in the state with effect from November 1, 1957, as a preliminary to a thorough reorganisation of the entire local self-government set-up. Addressing a conference of presidents of Panchayat Boards recently, the State Minister for Local Administration said that steps had already been taken to reorganise the Panchayats. One of the first steps was the formation of Panchayat Unions at the Block level in the Community project areas. The first union was constituted in September last in North Madurai

Block. The formation of new Unions, it was pointed out, would depend on the success of the one already functioning in Madurai.

The question of reorganisation of Panchayats has naturally imparted a sense of urgency to the question of the future of district boards in the State. The Minister pointed out that no decision would be taken by the Government without thoroughly examining the question. It was, however, noted that should it be decided to do away with the district boards, the Panchayats would become the sole agency of local administration.

It is understood that the State Government have drawn up a comprehensive plan for the reorganisation of local self-government set-up in the State. In this regard it is pointed out that in the Government plan the emphasis is laid on giving progressively increased power and responsibility to the panchayats. No indication, however, has been given as to how Government propose to find the necessary finance for the Panchayats in order that they may be enabled to function effectively.

It is to be noted that any feasible plan for the reorganisation of panchayats is certain to receive the blessing and generous help from the Central Government. Addressing the third meeting of the Council of Local Self-Government, Mr Karmakar, Union Minister of Health, pointed out that one of the urgent problems to be tackled in regard to the reorganisation of Panchayats was the question of providing adequate finance. He suggested, therefore, that State Governments should accept the recommendation of the Taxation Enquiry Commission that Panchayats should be entrusted with the collection of land revenue and that they should be given 15 per cent of their collections as commission. This was to be over and above other sources of revenue available to them.

Mr Karmakar has rightly pointed out that it will be idle to expect that the establishment of Panchayat Raj can be achieved overnight, as it were. For apart from the all important question of finance, there are practical difficulties which clearly indicate that hasty

Labour Participation in Management

One of the healthy developments in the field of industrial relations has been the new accent on labour participation in management in industries. The idea first came under official consideration at the last meeting of the State Labour Ministers. It was agreed at the meeting that the setting up of joint councils should be the machinery to implement the new scheme. The new experiment can be said to have blazed a new trail in the field of labour relations.

One of the staunchest advocates of joint management has been Mr R. Venkataraman the Labour Minister of Madras and it goes to the credit of his State to have given a lead in implementing the scheme. He has been striving passionately to popularise the scheme and as a result a leading commercial firm, the Simpson and Group Companies have come forward to give an experiment to the venture.

The joint council here would consist of 20 representatives 10 from the management and 10 from the workers. It would meet once twice or thrice a month according to need and the chairmanship would be held alternatively every half year by representatives of both sides.

Inaugurating the joint council Mr K. Kamaraj Chief Minister of Madras complimented the management as well as the workers on their pioneering experiment and expressed the confidence that the venture would be a complete success and said that in the country both labour and management had a great responsibility in increasing production which alone could ensure the goals they sought to achieve in the economic sphere. Laying great stress on the necessity for responsibility on the part of both labour and management, he said, that joint management had a great advantage in that it would infuse a sense of responsibility since it provided opportunity for both to sit together and examine the various relevant conditions and factors.

Mr Kamaraj also pointed out that denial of proper wages to workers would not safeguard the profits of the company since what was withheld in this way would be taken away by way of taxation by the Government and said that the management could choose between paying better wages to workers and paying more taxes to the Government. It was also pointed out that management could help labour in other ways by providing housing accommodation, medical

facilities and opening schools for the children of their workers.

Earlier Mr R. Venkataraman the Labour Minister explained the circumstances under which the Tamil Nad Congress Committee formed its labour section years ago and said that as against the Communist belief that conflict between labour and management was inevitable the Congress believed that all difficulties that might arise between the two should be settled through mutual discussion and agreement. Referring to the Trade Union movement in England he said that in that country they concentrated their attention on securing better wages and other service conditions to the workers.

*

Kundah Project

The Kundah Project in Madras is the biggest scheme ever to be started in the State by the Madras engineering system. The Civil Works involved some of the largest power tunnels in hydro-electric projects in the southern area. The project is a monument to the goodwill that exists between our country and Canada. For the single factor in Canada. For the success of the scheme was the Canadian contribution in terms of technical and financial help. The aid for the Kundah scheme was perhaps the largest that Canada had given for any single specific project in the country so far. The man responsible for this Canadian participation was Mr F. E. Pratt chief of the capital projects division, Colombo Plan Administration.

At a function got to felicitate Mr Pratt, Mr T. Krishnaswami, Superintending Engineer, Madras Electricity System pointed out that the Kundah Project was the first major project in the State to be erected with Canadian aid and explained the significance of the project in terms of its potential for the generation of power in the State. The demand for power was such in the State that even with the completion of the extension at the Madras and Periyar thermal schemes the total supply was expected to be only sufficient to remove the staggering and other restrictions on the supply of power to the industries and agriculture. At the present rate of increase in demand for power which is to the tune of 35 to 40 mw per year supply position would have been irretrievably acute had not the Kundah project been started.

On the quick completion of the Kundah project depends the rate of progress in the industrial and

agricultural sectors in the State. In this circumstance it was only fitting that the work in connection with the project should get top priority. And with this view both the first and second stages of the project as per the original report had been taken up simultaneously in the initial phase itself. The project, at the present rate of progress is expected to be commissioned in 1959. Mr Krishnaswami also

disclosed that the Canadian Government are being approached for additional aid for the 230 kw transmission lines.

Mr Pratt in his speech paid a tribute to the work done at the Project which he described as terrific and expressed his praise for the sense of dedication with which everybody connected with the job was working.

SOUTH INDIAN MARKETS

Rise in 1956-57 Coffee Crop

ACCORDING to a Coffee Board release, total receipts of the 1956-57 coffee crop have shown an increase of 7,679 tons, during the period up to 30th September 1957, over those of the previous season. Total amounts to 41,453 tons as against 33,774 tons.

Releases for the internal market, during September, totalled 2,141 tons. Total releases from January to September 1957 amount to 19,077 tons as against 18,061 tons for the same period last year. Total offtake for the home market still continues to be close to the estimate of nearly 26,000 tons as compared with the actuals of 23,807 tons in 1956.

The Board has sold, for export purposes, an aggregate quantity of 11,857 tons till the end of September cut of the export allocation of 15,155 tons from the 1956-57 crop. The enquiry from East Germany materialised in a sale of 400 tons. A further enquiry was received from the USSR in September and 500 tons are now under offer to this country through the State Trading Corporation. Out of the balance of 2,963 tons, 833 tons will be exposed for sale on October 30th next.

The internal market for coffee has increased by 1,000 tons in a nine-month period. If sales during the next three months maintain the average, total offtake in India will be under 25,500 tons. After the internal offtake and the export of 15,155 tons, there will be a carry-over exceeding 7,000 tons. There is a general feeling that India's export of coffee should fare well during the coming years, because of our earnestness to earn as much foreign exchange as possible. The new crop is expected to exceed 7,000 tons.

*

Pepper

Pepper markets have continued to rule quiet on weaker foreign advices. Sentiment on the New York market remains depressed. Spot is

quoted at 25 cents per pound with small interest by grinders as pressure of unsold parcels is rather heavy. The Singapore market also rules weak.

Sarawak has sellers at Str. \$69, but the demand both from Europe and the USA proves poor. In spite of smaller crop of Sarawak this year, prices have failed to look up even during the present off-season, since foreign consumers are buying hand to mouth and insist on buying at their own price.

In the Kozhikode market, Wynaad quality is quoted at Rs 595 and the Country variety at Rs 580 per candy. Feeling of nervousness is noticed among growers, who are anxious to sell off their old crop before the advent of the new one. Arrivals of light berries are likely to increase, though in a small way.

*

Groundnut

Conditions in the Madras Groundnut market remained firm last week on reports of smaller arrivals. There were small arrivals of new crop Khandesh from the Chingleput and North Arcot areas. It is stated that it will take a couple of weeks before arrivals gather momentum. These meagre arrivals are taken up by small crushers around Rs 176 per candy for superior oil-quality seeds and Rs 167 for the bold variety.

In the Groundnut Oil section, the rate for the ready position recorded a rise of about Rs 7 per candy over the week in the absence of free sellers. Moreover, millers were offering only limited quantities.

*

Hides and Skins

Conditions in the Madras Tanned Hides market remained quiet. Arrivals of Cow hides were moderate, while clearances continued to be restricted. There was fair demand for light weights, but other weights were neglected.

BRAITHWAITE PRESSED STEEL TANK ON STEEL STAGING

BRAITHWAITE PRESSED STEEL TANK

BRAITHWAITE & CO. (INDIA) LTD.
HIDE ROAD, KIDDERPORE, CALCUTTA.

The Aluminium Corporation of India Ltd., CALCUTTA

Extract from the Speech of Shri Lakshmi Pat Singhania at the NINETEENTH ANNUAL GENERAL MEETING held on Friday, the 11th October, 1957:

Welcoming the Shareholders to the Nineteenth Annual General Meeting of the Corporation, Shri Lakshmi Pat Singhania said, "you will be no doubt gratified to observe that this year's results have surpassed in every sphere last year's figures which themselves were a record. Sales have exceeded previous year's figures and the gross profit shows further improvement making it possible to provide larger amounts to reserves and depreciation and a better rate of dividend to the Ordinary Shareholders who have been sacrificing for the last seventeen years, without getting any return on their investment, for the establishment of this basic industry in the country. I also wish to draw your attention to the fact that the debenture liability of the Corporation has been reduced by Rupees 15 lacs and that the liquid assets position of the Corporation is strong. Your Managing Agents and scores of Indian graduate technicians trained by the Corporation, are to be congratulated for their unflinching courage and enthusiasm over a long period of twenty years for achieving the success of establishing this basic industry in India with Indian Capital, Indian technical skill and Indian Labour.

Because of the economic conditions in the country there is an increase in labour cost, cost of stores, spares, raw materials and this has already resulted in increase in the cost of production. Besides, the plants at Jaykaynagar have now been in operation for over fifteen years and replacements and renovations have been undertaken at considerable expense. And then there are also the new tax impositions. Therefore, I would recommend cautious optimism over future results."

On the question of estimated consumption of the metal in the country Shri Singhania added, "the general pattern of development of increased use of Virgin metal for industrial uses is also taking shape in India and the demand for the metal is increasing as expected. The estimated consumption of aluminium by the end of the Second Five Year Plan period in 1961 is expected to be about 40,000 tons. This is also the view of such bodies like the Tariff Commission, the Development Wing of the Ministry of Commerce and Industry and the Aluminium Committee set up by the Ministry of Commerce and Industry.

The total consumption of aluminium metal by utensil manufacturing industry which has been the main outlet for the metal until now, is estimated to be not more than 15,000 tons per annum and

out of this the primary metal is only about 9,000/10,000 tons. The balance of the requirement of utensil manufacturing industry, which is also developing as small scale and cottage industry, is met by the secondary metal.

The industry for manufacture of A.C.S.R. cables and all aluminium conductors is developing as the biggest consumer of virgin metal in India and is expected to consume about T.16,000 per annum. This is only natural in view of the large power generation projects and electrification schemes undertaken in the country, and also specially because India is very short of copper, and aluminium is the only alternative to copper. As the development of the country takes place, the use of large quantities of aluminium in this field of A.C.S.R. cables and all aluminium conductors will be progressive and permanent.

The consumption in the other industrial fields of transportation, building and construction and other miscellaneous uses is estimated to be about 1/3rd of the total consumption i.e., about 15,000 tons. But this pattern and quantum of consumption is yet to develop and take shape and in the future industrial development of the country especially of engineering industries, the proportion of consumption of aluminium in these fields should be greater. It would not be out of place to mention here that the proportion of consumption of aluminium in industrial uses other than utensil manufacturing and A.C.S.R. cables in America, is about 88% of the total aluminium consumed."

Shri Singhania said that the bad effects resulting from the withdrawal of import duty on scrap was again brought to the notice of the Government, who referred the matter to the Tariff Commission. An enquiry was made by the Tariff Commission, on 11th September, 1957 and their recommendations are awaited and it is hoped that a proper duty will be imposed on imports of scrap. He remarked "it would not be out of place to mention that the Indian Standards Institution are making good efforts to standardise the quality of circles used for utensil manufacturing but without authority to enforce standards such efforts may not meet with success. The various Government departments themselves many a time do not follow the standard specifications of the Institution but float enquiries quoting a private trade mark. It is very necessary that such action should be stopped immediately in the interests of the Institution and Industry as well."

The Tariff Commission have also conducted an enquiry on the continuance of protection to A.C.S.R. Cables and all aluminium conductors and their report is awaited.

On the expansion programme of the Corporation Shri Singhania stated—"the Government have approved our scheme to expand our metal production capacity to T.7,500 per annum and to instal plants for the fabrication of metal into industrial products. We made all possible efforts to secure power from the D.V.C. at a reasonable rate, but they have shown their inability to concede to our request. However, I have pleasure in reporting that we have been able to secure power from the West Bengal Government from their Durgapur Project. It is now planned to go ahead with the expansion scheme of the Corporation as early as practicable. The unfortunate foreign exchange position of the country might delay the plans to some extent but it is expected that we shall have the sympathy and support of the Government in developing this basic industry which is not only of national importance but also a large saver of foreign exchange." He assured the Shareholders that the "Managing Agents and Directors are exploring all possible ways and means to implement the expansion scheme as early as possible, because the expansion of the Jaykaynagar plant can be undertaken at a minimum cost with maximum speed."

He concluded, with the following general observations on the economic and labour situation in the country.

Everyone is familiar with the saying that "The army marches on its belly". I would add to that saying "so does the economy of a nation." The foundation of all economic progress is a well-fed population with strength to resist diseases and to work hard. All our present day economic difficulties have arisen because of the declining trend since 1953-54 in food production which necessitated import of food grains on a sizeable scale. The industrial production on the other hand has continued to record a steady increase, this increase being shared by most of the industries. It was, therefore, unfortunate that the Government in their Second Five Year Plan diverted the accent and resources to industrialisation in public sector. The big drain on foreign exchange through import of food grains has now gained momentum and unless stopped will always continue a threat to the economy of the country in all spheres of activities and all walks of life. Due to increasingly frequent demands by labour for higher wages on account of dearer food, a spiral of inflationary tendencies has been started. Money has become scarce, due to diversion of all funds to investment in industries in public sector. The taxation policy has further drained the market even of working capital let alone funds for long term investment. If the Government can avoid the flow of their funds at the expense of rural agriculture to state industries then much of the financial stringency may ease and there may not

be so much necessity for heavy taxation.

Coming to labour, there is a disquieting trend of the Trade Union movement becoming more and more political. This will ultimately harm everyone and Government must take immediate strong measures to prevent this undesirable growth, in the interests of the nation.

The rapid technological developments all over the world, always remind us of the necessity to train our own personnel. The Corporation at least have been fully conscious of this and we are proud of having trained a number of technicians in this basic industry, who are now working in important industries in the public and private sectors.

The problem facing everyone in the country is not merely to take a short cut to economic growth, but also to avoid the more hazardous way. Towards this end joint and willing effort is required on the part of everyone be he agriculturist, factory worker or office worker, businessman or trader or politician. But by far the most essential factor is wise and right guidance by the Government."

S. E. RLY TENDERS

Sealed tenders are invited for supply of the following materials:

Tender No. GM[Steel]Works/Oct/57 for supply of approximately 1050 tons R. S. Joists, M. S. Channels Plates, Angles, Flats, Rounds & Sheets and approximately 100 tons wire. Ex-stock offer will be preferred. Offers which are subject to grant of or recommendation of Import License will not be considered.

Tenders will be opened on November 14, 1957 at 12 noon.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta—23 on remittance of Rs 5/- (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E. Rly., Garden Reach by local firms.

Earnest money of Rs 1000/- is to be deposited with the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta—23 and the receipt obtained should accompany the tender without which the tender is liable to be rejected. Approved contractors who have already made a permanent deposit of Rs 1000/- with the Controller of Stores need not pay the Earnest money.

Firms not on this Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

GENERAL MANAGER

S73

SAUGOR ELECTRICITY SUPPLY COMPANY LTD.

NOTICE

NOTICE is hereby given that the Annual General Meeting (being the Fifty-first Ordinary General Meeting) of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Thursday, the 14th November, 1957, at 11-10 a.m. for the following purposes:—

1. To receive and adopt the audited Accounts for the fifteen months ended 31st March, 1957, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.
5. As special business to consider and, if thought fit, to pass the following resolution namely—

"Resolved that the consent of the Company be and is hereby accorded to the Board of Directors borrowing the sum of Rs. 6 lacs for and on behalf of the Company from the Madhya Pradesh Electricity Board, and that such sum be so borrowed notwithstanding the fact that, whether taken alone or in conjunction with other borrowings by the Company, it shall be in excess of the aggregate of the paid-up capital of the Company and its free reserves"

6. As special business to consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:—

(a) That the requirements of Articles 82, 83, 87, 121, 176, 180, and 181 of the Articles of Association of the Company be not complied with in respect of the half-years ended the 31st December, 1956 and 30th June, 1957.

(b) That the Articles of Association of the Company be altered in manner following:—

(i) Articles 82 and 83 shall be deleted and the following new Articles substituted therefor: "82. In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors". "83. The General Meetings referred to in the last preceding Article shall be called Annual

General Meetings; all other meetings of the Company shall be called Extraordinary General Meetings".

- (ii) Article 87 shall be deleted and the following new Article substituted therefor:

"87. The business of an Annual General Meeting shall be to receive, consider and adopt the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special".

- (iii) In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor:

(iv) Article 176 shall be deleted and the following new Article substituted therefor:

"176. At every Annual General Meeting the Directors shall lay before the Company a Profit and Loss Account made up to and a Balance Sheet as at the 31st day of March immediately preceding the date of the meeting and such Profit and Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the Companies Act, 1956, so far as they are applicable to the company".

- (v) In Article 180, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor:

(vi) In Article 181, lines 1, 2 and 3, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing shall be deleted and the words "Annual General" substituted therefor:

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 8th November, 1957, to the 14th November, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled

to appoint a Proxy who need not be a member, to attend and vote instead of himself.

By Order of the Board,
MARTIN BURN LTD.,
S. GUPTA,
Director,
Managing Agents.

12, Mission Row,
Calcutta, 1.
The 15th October, 1957.

WORLD OF COTTON

(Continued from page 727)

the coming months. The monthly average consumption of foreign cotton has dropped from 50,270 bales to 47,290 bales.

X

NEW YORK COTTON MARKET:

Prices in the New York cotton futures market moved down slightly under pressure of hedge selling and liquidation in most of the forward months. Commission house and local selling, partly influenced by a further setback in the security market and light hedging met with only limited trade support. Scattered liquidation depressed the nearby October delivery although there were no transferable notices issued.

The Bureau report for October has estimated cotton production, in the current season, at 12,401,000 bales, based on an yield per acre of 435 pounds. The September estimate as 12,713,000 bales, on an yield per acre of 446 pounds. Despite this estimate reduction, it will be appreciated that the crop is still large with the expected yield per acre of 435 pounds being a new record.

X

ALEXANDRIA COTTON MARKET

The Ministry of Agriculture has estimated that the cotton crop this season will be 8,150,000 Kantars (about 1,116,400 bales of 730 pounds) of ginned cotton, excluding Scarco. Production last season was 7,061,000 Kantars (about 967,300 bales).

A prominent shipper has made the following statements on the

new crop:—The average Karnak crop does not look too good. Menufis are plentiful and appear to be as good as last year, if not better. Giza 30 is more regular this year and staple seems better than last year. As for Ashmunis, high and low grades will be scarce, the bulk of the crop being between "good" and "good to fully good".

X

LIVERPOOL COTTON MARKET:

Trading on the Liverpool cotton futures market was quiet. In slow dealings, small hedging was absorbed by some trade covering. Sudan contract ruled quiet with traders awaiting the Sudan-Russian trade deal developments.

X

CLOTH AND PIECEGOODS:

Although enquiries from consumers were not encouraging, prices in the Bombay Piecegoods market were maintained around last levels. Dealers still entertained the hope that the offtake would improve after Diwali. The demand for coarse and medium varieties was comparatively better, while fair enquiries were reported in respect of superfine dhories and sarees. Demand was also reported for Poplins and shirtings in the fine category.

Conditions on the export front remained practically unchanged. Business with Sudan is likely to improve in the course of the next few weeks. There are reports that Indonesia will curtail drastically imports from Japan due to lack of sufficient foreign exchange. It remains to be seen whether India's exports to that country will improve as a result of this situation.

The output of cloth by mills, during September, is provisionally placed at 436 million yards and yarn production at 153 million pounds. During the first nine months of the current year, the industry has produced 4,025 million yards of cloth and 1,338 million pounds of yarn as against 3,954 million yards of cloth and 1,234 million pounds of yarn in the corresponding period of last year.

*

NORTH INDIAN MARKETS

(Continued from page 723)

Bareilly and Bejher have attracted good demand and prices have improved due to poor stocks. Fast dwindling stocks, due to good demand from the South, have accounted for a check in the falling prices of Arhar which, on balance, has registered small gains. Although buying support is dormant, Peas prices have improved in sympathy with other grains.

The Delhi grains market has presented a steadier appearance with the exception of farm wheat, Gram and Urad which have ruled quiet. Demand for Gram is slack, while Urad has lost about a rupee per maund due to small offtake. Rice rates have recorded a gain of Rs 1 to Rs 2 per maund. Owing to the

commencement of the seasonal demand, Malze and Bajra have improved by about 50 nP per maund.

A moderate improvement in Rice and Pulses has provided the main feature of trading in the Bombay grains market. After the recent spell of dullness, the tendency in indigenous Rice is steadier, mainly due to reports of a decline in the arrivals from upcountry centres. In the Coarse grains section, Jowar has become cheaper by about Rs 5 per candy and Bajra by about the same amount. The Pulses section has, however, revealed a firm undertone with prices recording an around improvement on a better trade demand in the face of the limited inflow.

Stock Exchanges

Recession on A Wide Front: Small Gains at Close

Watch-Dog Writes:

THE recovery movement in equities, that was noticed last week, has proved short-lived. Lack of follow-up support in the absence of any fresh incentive coupled with reallising pressure has caused again a setback in prices.

Various factors have contributed to this sudden change in sentiment. Mainly amongst these were, the bleak prospects of an American loan, the absence of any settlement with regard to the bank strike in Calcutta, unsatisfactory labour situation, the threatened strike by the railway employees and lower advices from the cloth market. At the close, however, equities tried to rally on bear-covering at lower levels. The market has finished the week with major losses on balance.

Extremely dull conditions prevailed on the Calcutta Stock Exchange where prices took a downward drift on tired liquidation.

Equities on the Bombay Stock Exchange lost substantial ground despite some bear-covering at lower levels.

The Madras Stock Exchange ruled quietly steady. Plantings met with some profit-taking, while Miscellaneous issues came in for selective support.

On the London Stock Exchange, there was a tendency to adopt a cautious attitude in view of the political uncertainties in the Middle East.

Wall Street closed easy. Led by Industrials, the market went to a new low for the week.

Calcutta

Friday Evening.

WITH buying interest at a low ebb, the local Stock Exchange witnessed

MACNEILL & BARRY, LIMITED

Notice is hereby given that the Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5½ per cent per annum for the half-year ended 30th September, 1957.

Payment will be made on 1st November, 1957, to those Preference Shareholders whose names appear on the Company's Register on that date or in accordance with their instructions.

By Order of the Board,
J. H. G. Whitfield,
Acting Secretary.

2, Fairlie Place,
Calcutta-1, 11th October, 1957.

ed a featureless session last week. After opening on a weak note, prices developed a sagging tendency due to bull liquidation, being influenced by the pessimism about the prospects of foreign assistance in the immediate future. Other factors, affecting the market sentiment were the unsatisfactory labour situation, the absence of any settlement with regard to the bank strike, the threatened strike by railwaymen from the 14th December and lower Bombay advices. The only redeeming feature of the week's trading was the comparative steadiness noticed in a few selected scrips thanks to investment support.

The Giltedged section continued to rule steady although activity was still confined to short-dated issues. The volume of business was, however, restricted due to bank strike. 3 per cent 1956 Conversion Loan changed hands at Rs 71.00 to Rs 71.19.

Bank shares maintained a steady front although no transactions took place during the week under review.

The news of a sharp decline in stocks of jute goods at the end of last month and the sharp rise in despatches failed to cheer up sentiment in the Jute section where transactions were only few due to limited activity. National, however, continued to meet with sustained support, changing hands upto Rs 18.50 from Rs 18.25. Champdany were better at Rs 102 against Rs 101; Ganges at Rs 50 against Rs 48 and Megna at Rs 85 against Rs 76. Nuddea changed hands at Rs 30.25 to Rs 31.00; Delta at Rs 113 to Rs 115 and Howrah at Rs 15.81 to Rs 15.94.

Coal shares continued to be listless although a few scrips tried to score some gains over last levels. Prominent amongst these were New Beerbhoom which, after improving to Rs 12.37 from Rs 11.94, receded again at the close to Rs 12.19 on profit-taking. South Karanpura, after being pushed up to Rs 13.00 from Rs 11.62 due to cornering by an interested party, finished at Rs 12.00. Burrakur ruled very steady at Rs 22 with Amalgamated quoting around Rs 14.06.

Little or no interest was shown in the Tea section where dealings continued to be restricted. Operators were awaiting further developments on the tea front. Brahmaputra were on offer at one time at as low as Rs 3.50 against Rs 4.56. Birpara at Rs 124 against Rs 127; Bhatkawa at Rs 19.12 against Rs

(Continued on page 746)

UPPER GANGES VALLEY ELECTRICITY SUPPLY COMPANY, LIMITED

NOTICE

NOTICE is hereby given that the Annual General Meeting (being the Fifty-third Ordinary General Meeting) of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Thursday, the 14th November, 1957, at 11-0 a.m. for the following purposes:—

- To receive and adopt the audited Accounts for the fifteen months ended 31st March, 1957, and the Reports of the Directors and the Auditors thereon.
- To declare a Dividend.
- To appoint Directors in place of those retiring.
- To appoint Auditors and fix their remuneration.

- As special business to consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:—

- That the requirements of Articles 82, 83, 87, 121, 176, 180, and 181 of the Articles of Association of the Company be not complied with in respect of the half-years ended the 31st December, 1956 and 30th June, 1957.
- That the Articles of Association of the Company be altered in manner following:—

- Articles 82 and 83 shall be deleted and the following new Articles substituted therefor:—
"82. In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors".
"83. The General Meetings referred to in the last preceding Article shall be called Annual General Meetings; all other meetings of the Company shall be called Extraordinary General Meetings".

- Article 87 shall be deleted and the following new Article substituted therefor:—
"87. The business of an Annual General Meeting shall be to receive, consider and adopt the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place

of those retiring, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special".

- In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor;

- Article 176 shall be deleted and the following new Article substituted therefor:—
"176. At every Annual General Meeting the Directors shall lay before the Company a Profit and Loss Account made up to and a Balance Sheet as at the 31st day of March immediately preceding the date of the meeting and such Profit and Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the Companies Act, 1956, so far as they are applicable to the company".

- In Article 180, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor;

- In Article 181, lines 1, 2 and 3, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing shall be deleted and the words "Annual General" substituted therefor;

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 8th November, 1957, to the 14th November, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy who need not be a member, to attend and vote instead of himself.

By Order of the Board,
MARTIN BURN LTD.,
S. GUPTA,
Director,
Managing Agents.

WORLD OF TEA

Industrial Information

EXPORT OF DUST TEAS

It has already been announced in the Press that the export of dust teas will be allowed to all destinations without being covered by export rights, and no debit will be made against the shippers' quota account, if applications for export licences are received in the Tea Board's office in Calcutta or Cochin, as the case may be, up to 31.12.57; and that such export licences will be valid till 31st March, 1958. The Tea Board has introduced a special export application-form for this purpose. These forms may be obtained from the Tea Board's office at 1/A, Vansittart Row, Calcutta-1, or Church Road, Cochin-1, up to 31st December, 1957. All intending exporters—both producers and buyers—should submit their export applications in that form.

It is further announced that the Tea Board will reserve the right to inspect consignments against these export licences at any stage before shipment, in order to satisfy itself that the tea in question is in fact dust tea. No shipment will, therefore, be allowed under the Guarantee Scheme, i.e. against the execution of a bond for filing with the Customs at a later date, a covering export licence. The export licence must be filed in all cases of export of dust teas under the new procedure, prior to actual shipment.

JUTE BAGS FOR PACKING SUGAR

The second meeting of the Jute Bags for Packing Sugar Sectional Committee of the Indian Standards Institution was held here yesterday under the Chairmanship of Shri T. Prasad, Chief Director, Directorate of Sugar and Vanaspathi, Ministry of Food and Agriculture, Government of India.

The meeting was attended, among others, by the representatives of the Kanpur Sugar Merchants' Association, the Bombay Sugar Merchants' Association, the Indian Jute Mills Association Research Institute, the Indian Sugar Merchants' Association, the Development Council for sugar industry Directorate of Sugar and Vanaspathi, Ministry of Food and Agriculture, New Delhi the Institute of Jute Technology, Calcutta, and the Indian Jute Mills Association.

Sugar is at present packed in "A" twill bag. By a Government notification the use of 'L' twill bags have been suspended and a limited use of these bags could be made only with the prior permission of the Government of India. It was contended by the representatives of Kanpur Sugar Merchants' Association and Bombay Sugar Merchants' Association that the L twill bags used for packing sugar were found to be unsatisfactory due to poor quality. The representatives of the Indian Sugar Mills Association on the other hand felt that the jute bags were not entirely at fault

and that the main causes responsible for complaint were severe handling in transit, in storage etc.

The Committee considered various aspects put forward by the trade and industry and it was finally decided that the formulation of Indian Standard Specification for 'A' Twill Jute Bags for Packing Sugar was necessary. It was also felt necessary that the specification should not only include trade descriptions such as porter, shorts, dimension and weight but also should include the more important characteristics such as breaking strength, bursting strength, seam strength and air permeability.

The test report on satisfactory and unsatisfactory 'A' twill and 'L' twill bags submitted by Dr. W. C. Macmillan of the Indian Jute Mills Association Reserved Institute was considered by the Committee and it was agreed that more samples of 'A' twill bags of standard quality should be tested for obtaining values such as bursting strength, breaking strength, etc.

For this it was decided that Dr Macmillan be requested to secure samples from about 50 mills in India and undertake the tests to determine the values for the above characteristics and place the data before the Committee which is expected to meet in the second week of December 1957.

SHIPPING PROBLEMS FACED BY EXPORTERS

A Coordinating Officer for Shipping Problems has been appointed in the Directorate of Export Promotion, in the Ministry of Commerce and Industry, with his headquarters at Bombay, to help exporters in overcoming shipping difficulties.

The services of Shri C. A. Buch, Commercial Adviser to the Eastern Shipping Corporation, have been made available to the Directorate of Export Promotion to help exporters in resolving these difficulties.

*

WORLD OVERSEAS

(Continued from page 722)

of a constantly depreciating pound. The Government knows that this policy cannot achieve full success overnight but "is a long, stiff haul", but it also knows that it "can and will succeed", and is determined to push it through to that success".

The soundness of the pound does not affect only the people of the United Kingdom; it is also of vital importance to the members of the Commonwealth, and is the basis on which one-half of international trade is conducted. The strong policy has demonstrated its first success: but this is the beginning of a difficult road. The achievement of a stable pound is not only a necessity for the United Kingdom, but a condition for further expansion of world trade.

STOCK EXCHANGES

(Continued from page 634)

19.25; Grob 'B' at Rs 11.37 against Rs 11.50 and Rydak at Rs 26.50 against Rs 29.62, to improve slightly towards the close to Rs 3.94; Rs 130; Rs 19.62, Rs 11.56 and Rs 26.62 respectively. Hasimara declined further to Rs 17.75 from Rs 19.12, while Hantapara were well maintained at Rs 158.

Sugar shares were practically neglected on quieter advice from the commodity market. The only scrip, which came in for some enquiry, was S.K.G., quoting Rs 9.50.

Textile scrips lacked any sustained support, mainly due to discouraging news from the industry. Operators showed anxiety about the continued accumulation of stocks despite the improvement in the conditions of the cloth market. Cawnpore were a shade better at Rs 5.31 against Rs 5.00—the lowest touched so far. Elgins were, however, offered further lower at Rs 14.75 against Rs 16.25 with New Victoria maintained around Rs 1.41. Kesoram changed hands at Rs 11.87 to Rs 12.00.

Of all the sections, Engineering was the worst affected. A powerful operator, who had earlier made heavy purchases of Indian Irons, unloaded his holdings, resulted in a sharp set back in the prices of all other shares. Against the week-end closing of Rs 18.11, Indian Irons opened steady at Rs 18.12 and, after improving further to Rs 18.14, receded gradually to Rs 17.36 due to selling pressure, to finish better at Rs 17.44. In sympathy, TEXMACO was pushed down at one time to Rs 16.10 from a high of Rs 16.60 and Jessop to Rs 24.50 from Rs 25.50, to finish better at Rs 16.40 and Rs 24.62 respectively. Richardson moved rather irregularly between Rs 9.50 and Rs 9.94 during most part of the week, to quote finally at Rs 9.50. Burn, however, recovered to Rs 314 from the recent low of Rs 308 with Britannia well maintained at Rs 12.25.

In an otherwise dull session, Miscellaneous issues fared comparatively better although buying was selective. Prominent were Orient Paper which met with persistent speculative support upto Rs 23.50 from Rs 23.00. Shree Gopal were a steady feature at Rs 14.88. India Steamship, after touching a low of Rs 10.87 and a high of Rs 11.18, finished steady at Rs 11.12. B.I.C.; Osler and Indian Aluminium remained practically unchanged at Rs 4.78; Rs 3.19 and Rs 12.75 respectively. Indian Copper, after opening steady at Rs 2.78, eased off gradually to Rs 2.73 towards the close on lower advices from the metal market. Dunlop Rubber changed hands at Rs 19.62 to Rs 20.00; Rohtas at Rs 17.94 to Rs 18.18; Hindustan Motors at Rs 6.19 to Rs 6.25; Metal Box at Rs 25.62 to Rs 26.00 and Karanpura Development at Rs 8.62 to Rs 8.69.

BALANCE-SHEET REVIEWS

(Continued from page 716)

been necessary to provide a larger sum towards Taxation, Rs 3.5 lakhs (Rs 3.05 lakhs). The transfer to Reserve for Replacement of Machinery is unchanged at Rs 2 lakhs, while the Ordinary dividend has been increased to 12 per cent from 10 per cent.

Progress on the expansion plans is reported to be satisfactory; construction of buildings to house additional spindleage is nearing completion, while some machines have already arrived and are under erection. The balance of machinery is expected to be received shortly. Against the paid-up capital of Rs 16.14 lakhs, reserves and surplus amount to Rs 14.15 lakhs. There were additions in the building during the year for Rs 1.44 lakhs.

ERS

Mysore Lamp Works

Another medium-sized industrial undertaking, the Mysore Lamp Works Limited, has also been doing well in recent years. In the year ended March 31, 1957, the company was able to report record production and sales as a result of the greater demand for high wattage lamps. It is indicated that this demand was due to the lamps being used in connection with several projects under the Second Plan. Sales were higher at Rs 14.15 lakhs against Rs 11.88 lakhs in 1955-56. The net profit, before providing for Taxation and Depreciation, was Rs 2,58,094 as against Rs 1,46,029 for the previous year. After setting aside towards depreciation Rs 48,163 (Rs 52,309), the provision for Taxation is sharply higher at Rs 1.1 lakhs (Rs 34,500). The ordinary dividend has, all the same, been raised to 12½ per cent from 9 per cent for 1956-57. It is necessary to point out, in this connection, that the dividend for the previous accounting period was paid after transferring Rs 15,000 from the Dividend Equalisation fund.

As a result of careful husbanding of resources, the company has built up a good Reserve position. The paid-up capital is Rs 9.6 lakh consisting of Rs 6.56 lakhs in Ordinary shares of Rs 10 each and Rs 2.5 lakhs in 4 per cent tax-free Redeemable Preference shares of Rs 10 each. An amount of Rs 2.26 lakhs was realised as a result of the issue of Ordinary shares in 1946 at a premium of Rs 10 per share. Perhaps, the proposal now to capitalise this amount is for the issue of bonus shares to the existing shareholders as, in that event, it will not be necessary to pay the heavy tax on the issue of bonus shares. It is stated that application has been made to Government for issuing one bonus share for every 3 Ordinary shares held. The authorised capital is also proposed to be increased to Rs 20 lakhs. There are other reserves amounting to Rs 7 lakhs. With the result, against the paid-up ordinary capital of Rs 6.56 lakhs total reserves including premium realised on shares is as much as Rs 9.27 lakhs.

CONSULT US ON YOUR FOREIGN BUSINESS PROBLEMS

Do you have any special problems connected
with your trade or travel abroad?
Do you wish to know more about the currency or
customs of foreign countries?

Do you require any specific information on trading
opportunities in overseas markets?

The State Bank of India has now established for
the benefit of its constituents a full fledged
INFORMATION SERVICE to provide answers
to these questions and many more—all free and
without obligation.

Here is an opportunity for expanding existing
connections and building up new ones in your
overseas trade. Your enquiries will receive
individual and prompt attention.

Why not talk things over with your nearest Bank
Agent or write for information?

The State Bank's local head
office at Calcutta, one of
more than 555 offices waiting
to offer you complete banking
facilities for overseas trade.

STATE BANK OF INDIA
INDIA'S LEADING BANK

actively yours

Cash in hand is idle money,
and idle money is the devil in
the price spiral. Money put
in a banking account, like
energy harnessed, is actively
in the service of the commu-
nity, yet all the time remain-
ing yours.

readily yours

Money lodged with a Bank
holds in reserve your purchas-
ing power readily available
for judicious spending.

faithfully yours

Money transactions through a
banking account are faithfully
recorded in all details, sparing
you a lot of worry and bother.

ALWAYS AT YOUR SERVICE

For the Investor

"Heads I Win"

Investment Gossip:

Stock markets have greeted the return of the Finance Minister with an appreciation in share prices.

They look forward with pleasurable anticipation to hearing nothing but favourable tidings for the rest of the plan period.

In particular, it is market expectation that official utterances during the next few weeks—if not next few days—will be calculated to brighten market sentiment.

The thought process underlying such confident expectations is simple to follow.

It is reasoned that TTK will have to live up to his statements abroad that the Indian Government are favourably disposed to private enterprise.

For, our foreign friends have to be persuaded by deed as well as word that India does not accord a stepmotherly treatment to the private sector.

It is by this means, so it is further reasoned, that the chances of securing foreign assistance will be bettered.

In the second place, the market hopes shortly to learn of perhaps specific arrangements that TTK may have made.

That is to say, they expect an official assessment of TTK's trip.

There are grounds for hoping that the visit was a success. And if there is good prospect of foreign assistance, that is a bull point for the market.

Even the contingency that the mission might have been a failure does not evoke anxiety.

It seems logical to argue that, in that case, there will be an even greater Government willingness and desire to seek the cooperation of the private sector.

Of course, all this may be greatly premature. For, TTK's talks have been largely exploratory; and discussions have to be followed up before agreements can be signed, sealed and delivered.

But stock exchanges—or at least a section in them—seem firmly to be convinced that, foreign aid or no foreign aid, the private sector's prospects are at their brightest since the beginning of the Second Plan.

HIGHLIGHTS

The Prime Minister is a past master at parrying mischievous questions.

The Finance Minister frequently mystifies friendly minded scribes by capsule remarks.

The Communist party chidingly pointed to apparently careless perorations by TTK in America.

Such people believe that the private sector is almost in the position of being able to assert: Heads I win, tails you lose.

Then, apart from foreign aid, good news is expected in the sphere of taxation.

It looks as if, India may, for the first time in many years, be able to look forward to Budget time, not with shuddering dread, but with a glimmer of hope.

£ R\$

Investment Notes:

In an otherwise dull trading on the Calcutta Stock Exchange, the shares of India Steamships have been ruling very firm, having buyers upto Rs 11.25. The main inspiration is derived from the reports that the company has proposed to increase the authorised capital to Rs 5 crores. In view of the increasing activity and the progress of expansion of the fleet of the company, the directors have proposed that the capital of the company be adequately increased in order to meet future financial requirements.

Th's increased capital will also enable the company to utilise the Premium Reserves for issuing bonus shares to the Ordinary shares, if sanctioned by the Government. Although no information is yet available with regard to dividend, rumours persist that the dividend will be maintained at Re 1 per share for the year ended 31-3-1957 and the company has the proposal to issue bonus shares in the ratio of one share for every ten shares held.

Scindia Steams, on the Bombay Stock Exchange, have also staged

a brisk rally to Rs 19.25 on expectation of encouraging corporate news. The dividend for the year ended 30th June 1957 is to be decided on the 8th November. Transfer Books, for the issue of bonus shares as well as for dividend, will be closed from the 18th November to the 28th December, 1957.

The New India Assurance Company has now received the permission of the Controller of Capital Issues to their proposed bonus issue of Ordinary shares of Rs 15 each, credited as fully paid, by the capitalisation of Rs 35,60,535 out of its Premium on Shares Reserve. The bonus shares will be allotted to such persons as are the company's shareholders in the proportion of one such new Ordinary share for every three Ordinary shares held by them.

The International Air Transport Association reports that international airlines business transactions, settled through the IATA Clearing House at London, increased by more than 30 per cent for the first six months of this year. Total turnover, for the period, exceeded £281,649,000 (£100,849,000) as against a turnover of £216,346,000 (£77,100,000) for the first half of 1956—an increase in interline revenue accounts that reflects a marked expansion in international air travel.

£ R\$

Investment Briefs:

Ahmedabad Electricity has recommended a dividend of Rs 3.25 per share for the six months ended 31-3-1957.

In Madras, Coorg Tea has recommended a total dividend of 30 per cent (same) for the year ended 31-3-1957.

T. Stanes & Company has announced an interim dividend of 8 per cent on the Ordinary shares for the year ended 30-9-1957.

£ R\$

Excellent Results of Great Eastern Shipping

Balance-Sheet Reviews:

THE Great Eastern Shipping Company Limited has produced excellent results for the year ended 30th June, 1957. The freight and charter hire earnings amount to as much as 3.63 crores, which are over one and half times the figure for the previous year, at Rs 2.12 crores. The gross profit, before providing for Depreciation and managing agents' commission, is Rs 1.02 crores as against only Rs 46.40 lakhs. With the provision of managing agents' commission of Rs 8.30 lakhs and

Depreciation of Rs 26.40 lakhs, the net profit amounts of Rs 67,61,872 against Rs 24,95,346. After taking into account Rs 3.60 lakhs, being excess amount of provision for Taxation made in the previous year which is no longer required now, and Rs 83,815 brought forward from the previous year, the amount available for appropriation is Rs 72.05 lakhs against Rs 26.43 lakhs.

The directors have, after setting apart a sum of Rs 11.59 lakhs for Deferred Taxation Reserve, have raised the General Reserve Fund to Rs 46.00 lakhs from Rs 15.00 lakhs.

No provision has been made for Taxation as there appears to be no tax liability for the year under report. The dividend on the fully-paid Equity shares has been raised to 15 from 10 per cent.

According to the directors' report, the year under review was a year of boom for international shipping. The company had, however, to operate under many limitations. The earnings have been possible, because the company traded old time-chartered vessels on the coast as substitutes for better-owned vessels, which were employed in overseas tramp trades. The higher earnings from other directions, such as agency, also contributed to the results and augmented the foreign exchange earnings. If the company had complete freedom of operation, the results would have been still better.

As on the 30th June 1957, the paid-up capital of the company is Rs 1.15 crores out of which Rs 90 lakhs is in equity shares and Rs 25 lakhs in Preference shares. Reserves and surplus amount to Rs 1.39 crores. Current liabilities amount to Rs 1.04 crores with the addition of Rs 1.59 crores to fleet amounting to Rs 4.87 crores.

£ R\$

Radio Lamp Works

Better results have been obtained by Radio Lamp Works Limited for the year ended 31st March, 1957. Sales have increased to Rs 86.27 lakhs from Rs 62.57 lakhs. After providing Depreciation of Rs 93,645 (Rs 58,081 lakhs), the profit is higher at Rs 5.59 lakhs as against Rs 3.77 lakhs in the previous year. A sum of Rs 3.00 lakhs (Rs 57,377) is provided for Taxation.

The directors have already paid arrears of dividends on the Cumulative Preference shares for 1954-55 and 1955-56. With the interim dividend of 3 per cent already paid, the total distribution on the Ordinary shares amounts to 7½ per cent for the year. In view of the distribution of Rs 20,364, holders of Deferred shares will get about 11.8 per cent.

The paid-up capital is Rs 29.10 lakhs out of which Rs 20 lakhs are in Ordinary shares of Rs 100 each; Rs 7.38 lakhs in Preference shares of Rs 100 each and Rs 1.72 lakhs in Deferred shares of Rs 10 each. As against fixed capital expenditure of Rs 10.04 lakhs, Depreciation, provided so far, amounts to Rs 2.58 lakhs.

£ R\$

Pulgaon Cotton Mills

The gross profit of Pulgaon Cotton Mills Limited, for the year ended 30th June 1957, amounts to Rs 5.31 lakhs as against Rs 5.94 lakhs in the previous year. The directors have provided Rs 5.06 lakhs for

The Communist party cried passionately, like a frenzied mob, for flinging mud at the Finance Minister.

The press conference particularly called for pillorying (TTK) cruelly in the event turned out to be a parrying contest.

The Prime Minister, pacifying magnificently, palavered mitigatingly.

The Finance Minister was finely praised and faithfully protected.

The Communist party, which was full of choleric pique, was completely pole-axed. Read Olympus.

INDIAN FINANCE

October 26, 1957

Depreciation as against Rs 4.20 lakhs. The dividend is maintained at 50 p per share.

The directors have, in their report, pointed out that the company was able to mitigate the adverse effect of the heavy increase duty by improving in its working and judicious purchases of cotton. Sales have fetched Rs 1.12 crores.

£ R\$

Nadiad Electric

After providing Rs 38,162 for Depreciation and Rs 32,500 for Taxation, the Nadiad Electric Supply Company has shown a profit of Rs 56,591 for the year ended 31st March, 1957. A dividend of Rs 5.25 per share has been recommended on the Ordinary shares.

Sales of energy have fetched Rs 4.75 lakhs. The directors have pointed out that the cost of purchase of energy has gone up due to increase in rates by Electricity Board; but the company has maintained the same rate to consumers.

£ R\$

Travancore Sugars & Chemicals

As a result of a longer season and a record crush of sugarcane, the Travancore Sugars and Chemicals Limited has been able to report a significant increase in the net profit, before providing for Taxation and Depreciation, for the year ended April 30, 1957. Sales were as much as Rs 1.10 crores as against Rs 58.76 lakhs in the previous year. The net earnings were as much as Rs 16,61,170 against Rs 9,77,675 for 1955-56. The provision for Depreciation is Rs 2,78,010 (Rs 2,63,812) while the change on account of Taxation was lower at Rs 2,60,100. This is due to the fact that the amount of depreciation eligible for tax purposes is considerably higher. It has, therefore, been considered necessary to allocate the large sum of Rs 6.75 lakhs (Rs 3 lakhs) to Taxation Equalisation Reserve. After transferring Rs 25,000 (Rs 10,000) being the equivalent of the tax relief on account of the development rebate, to the capital reserve, the Ordinary dividend has been maintained at 10 per cent. The amount carried forward is higher at Rs 77,353 as against Rs 45,098 brought in.

The season lasted 175 days and the quantity of cane crushed was 134,337 tons. The amount of sugar manufactured was 11,908 tons. The recovery percentage was slightly lower at 8.8.

The company has a good financial position as the excess of current assets over current liabilities and provisions amounted to Rs 30.16 lakhs as at April 30, 1957 as compared with Rs 22.54 lakhs at the end of the previous year.

£ R\$

Parrys Confectionery

Since this Company was formed as a separate unit in 1954, there has been a steady increase in sales. During the year ended March 31, 1957, sales were Rs 70.21 lakhs as against Rs 62.53 lakhs in 1955-56. The net profit, before providing for Taxation and Depreciation, for the latest accounting period was Rs 7,43,388 against Rs 5,76,284 in 1955-56. The provision for Depreciation is Rs 99,720 (Rs 90,597) and Taxation. Rs 3,75,173 (Rs 2,40,028). Obviously, the burden of fresh taxation has, to a great extent, offset the increase in earnings. The General Reserve gets Rs 1,68,886 (Rs 1.5 lakhs). The Ordinary dividend has been increased to 20 per cent from 15 per cent.

Goodwill, which stood at Rs 3.19 lakhs on April 1, 1956, increased by Rs 19,500 as a result of the purchase of the goodwill of the Deccan Sugar and Abkhari Company Limited confectionary concern during the year. An amount of Rs 1,38,886 has been taken from the General Reserve and utilised to write down this intangible asset to Rs 2 lakhs as at the end of 1956-57.

It is felt that the acquisition of this goodwill has provided the company with a secondary brand to meet competition in cheaper markets. Sales of "Deccan Sweets" now represent nearly 10 per cent of the total turnover and it is stated that this increase in sales has contributed substantially towards meeting the cost of the company's manufacturing and selling overheads.

£ R\$

Coorg Tea

The Coorg Tea Company Limited has earned a net profit, before providing for Taxation and Depreciation, during the year ended March 31, 1957, of Rs 2,70,115 against Rs 2,65,839 in 1955-56. The charge on account of Depreciation is Rs 27,635 (Rs 16,783). The provision for Taxation was very much higher at Rs 1.15 lakhs (Rs 82,653). The Ordinary dividend has been maintained at 8.8.

An Act of Faith

ANY streams of thought have lately combined to resurrect faith in decentralisation of administration in India. Pursuing the line of reasoning followed by Gandhiji, orthodox Congressmen and Acharya Vinoba Bhawe in particular have been advocating decentralisation of authority in as many spheres as possible. Socialist leaders have consistently supported the principle. The dread and dismay created by the growing red-tapism of a centralised State has not spared even the Prime Minister. It was left to the Community Projects and National Extension Blocks to demonstrate inescapably the failure of the normal administrative machinery to evoke sufficient public enthusiasm and enlist sufficient public cooperation in programmes which have the greatest direct and symbolic significance in raising civic consciousness and standards of living among the rural masses. After five years of the working of the Community Projects, the Union Minister in charge had to admit that "in getting the people's representatives into the programme, in getting them involved, we have failed." This failure supplied the most compulsive element toward decentralisation.

The Committee appointed to discover correctives, has suggested an altogether new type of administrative machinery based on the thesis that the people will be able to see through all development programmes, if they function with power and responsibility and not merely in an advisory capacity. The change envisaged by the Committee involves a complete reversal of roles between Government officers and popular representatives. Hitherto, the officers have monopolised the authority, initiative and direction, the people represented mostly by nominees, were just consulted, and their advice sought. The result was acknowledged failure. In the light of this experience, the representatives of the people are suggested to be the proper repositories of authority and initiative with the officers coming in as guides and advisers.

The framework built on this principle does not find much use for the local representative bodies now existing. The District Boards are considered as having too large an area of jurisdiction and the panchayats as having one too small. An intermediate level corresponding to the area of the National Extension Blocks has appealed to the Committee as the most suitable for the future administrative agency, called the Panchayat Samities. The District Boards, already disappearing in a few States, might be retained under a changed constitution, and entrusted with the task of a limited supervision of the work of the Samities and the co-ordination of the work of the different Samities within the same District. The existing Village Panchayats are to be linked to the Samities, through indirect representation.

The Samities, being conceived as "an instrument of expression of the local people's will in regard to local development," the Committee has carefully laid down their structure, powers, resources and relations with the Government. The composition of the Samiti provides for representation of Village Panchayats grouped into convenient units, two women experienced in social work, a member of the Scheduled Castes and of the Scheduled Tribes, wherever these form a sizable element in the population

of the area, two nonpolitical local residents, with experience in administration, public life or rural development and a representative each from municipalities enclaved in the samiti's jurisdiction. The inclusion of a person representing co-operative societies is also favoured. A body constituted on these lines, will surely go a long way to meet the apprehensions of those who feel that the whole experiment is a leap in the dark.

A well-balanced representation of interests conceived without prejudice to genuinely democratic principles, is reinforced by the infusion of relevant administrative experience. And where there is also the association of official personnel recruited by the State Government over and above the Government's broad supervision, there is no reason why the Samiti should prove unequal to its task or turn out to be a political cock-pit, putting bulky funds to misuse. The Committee, while conceding that to some extent, the reform has to be accepted as an act of faith, reassures itself with the reflection that "the country has found competent persons to take charge of its affairs at other levels; the needs and circumstances of the Panchayat Samiti will discover adequate personnel within its area." On this hope, the complete abdication by the State Government of its development functions is also envisaged. Within its sphere, the Samiti is to be all in all.

That sphere is none too narrow. It covers the development of agriculture in all its aspects, provision of local agricultural finance with the assistance of the Government and of the co-operative banks, minor irrigation works, the improvement of cattle, sheep, goats and poultry, the promotion of local industries, the supply of drinking water, public health and sanitation, medical relief, relief of distress caused by floods, earthquakes, scarcity, etc., arrangements in connection with local pilgrimages and festivals, construction and repair of roads which are of local importance (other than village panchayat roads), management and administrative control of primary schools, the fixation of wages under the Minimum Wages Act for non-industrial labour, the welfare of backward classes and the collection and maintenance of statistics. In those States where district boards have undertaken the management of high schools these can be transferred to the panchayat samiti concerned. In addition, it will act as the agent of the State Government in executing any special schemes of development or other activities in which the State Government might like to delegate its powers to this local authority.

The above is a massive list. The transference of so wide a range of administrative functions to an elected local authority involves a revolutionary change in the contemporary political outlook. Almost the entire burden of seeing through programmes designed to create a Welfare State will fall on the local body. Correspondingly the regular governmental machinery has to abdicate its functions. This abdication will not be regretted as it will largely be the outcome of incapacity and lack of success. Conceding that the development of agriculture in all its aspects, relief of distress in emergencies and similar activities

imply constant and unfailing support and guidance from State and national institutions, it might still be said that a certain gradualness in the assumption of functions by the Samiti should prove advantageous. There is, however, little cause for scepticism.

Apart from the expedition in the conduct of work inevitable through the cutting out of several tiers of authority, there is a close and ever-present link between responsibilities and results. Acquaintance with the special needs and problems of different places, the lack of which has often heavily handicapped Government officers, would give the Samiti a full measure of confidence and efficiency. Public criticism, arising as it does mostly from those who have to contribute their energies and who have also to reap the rewards, will be more sure, factual and responsible. The considerable measure of dependence on the regular Government services for both executive work and for general supervision should be sufficient to ensure fair freedom from the distractions which the intrusion of political feuds might sometimes breed.

As the State Government have less to do directly either by way of governance or by way of development work, the raid on revenues by the Samitis should not give rise to difficulties. A portion of the land revenue, subject to a minimum of 40 per cent, and a share of the motor vehicles tax are among the sources of revenue recommended by the Committee for the Samities. Besides, the Governments may also be called upon to make regular or ad hoc grants. The sacrifice of resources involved will more or less correspond to the transfer of functions and as such be devoid of strain.

Other sources such as rents and profits accruing from property, a surcharge on duty on the transfer on immovable properties, a tax on employment, a pilgrim tax and a primary education cess, envisaged by the Committee, would lead to further additions to the volume and variety of national taxation. Some of these may militate against current conceptions of what is just and equitable. But if the principle of no welfare without taxation is maintained, its nearly universal application is justified.

One of the assured incidental consequences of the transference of the development functions to the Panchayat Samities will be minimisation of waste in expenditure and possibly of corruption as well. Every elected representative is bound to function as a watch-dog of the Samiti's finances and in association with and supervised by trained administrators, will acquire a habit of sobriety and integrity in his attitude to public expenditure which will not only encourage a tradition of correct spending but stimulate a wholesome general change in the outlook of the people, rich and poor alike. The composition of the Committee, viewed from this angle is admirably conceived, as it embodies checks and balances of a subtle and at the same time most effective kind. Even if the male members succumb to temptation, secretive deals will become virtually impossible with the presence of two women in every Samiti! On the whole it might be hoped that the change will augur a process of refinement in the country's public life, which is badly required.

"The Wise Man in his Attitude towards the World has neither Predilections nor Prejudices. He is on the Side of what is Right."—The Analects of Confucius

Standing Orders

By M. SUR

MR S. A. Dange, speaking on behalf of the AITUC at the recent Indian Labour Conference, on the subject of discipline in industry, drew a distinction between what he called "social discipline" and "capital discipline." He said that only the former was acceptable and workers would only observe those standing orders relating to safety, hygiene and the like, and declared that what employers were demanding in the name of discipline was the loss of self-respect and human dignity. This rather exaggerated statement was, of course, intended to drive home a point about discipline, but it is worth while to examine the history of standing orders in industrial establishments and to consider what faults there are, if any, in the present system which could account for this outburst.

Industrial Employment (Standing Orders) Act

The present Industrial Employment (Standing Orders) Act came into force in 1946 and was the result of a decision of the Tripartite Labour Conference which had discussed the matter three years running and come to the conclusion that standing orders defining conditions of service would tend to minimise friction between workers and their employers and enable the former to know where they stood. The Act, therefore, had the backing of the trade union organisations represented at the Conference. A schedule to the Act lists the matters to be provided by employers in standing orders, which are briefly: classification of workmen into temporary, permanent, etc.; manner of indicating periods and hours of work, holidays, pay days and wage rates; shift work and attendance; conditions of and procedure for applying for leave; entrance to premises and right of search; closing and temporary stoppages of work; termination of employment, suspension, dismissal and misconduct; means of redress against unfair treatment or wrongful exactions. Some of these matters link up with the requirements of the Factories Act, e.g., posting of notices regarding hours of work, holidays, pay days and wage rates.

The Act requires all industrial establishments employing one hundred workmen or more to draw up standing orders, and gives the appropriate Government the right to draw up a Model which employers should follow as far as possible. In some States, the size of the establishment covered by the Act has been reduced to 50. Employers are required to draft standing orders covering the matters listed in the schedule and to submit them for certification to the Certifying Officer (usually a Labour Commissioner), who before certifying the draft has to satisfy himself that it is in conformity with the provisions of the Act, and pass the draft on to the trade union, or where there is no trade union to the workmen, so that they can raise objections if they wish. The Certifying Officer then has to hear the employer and the workers' representatives before deciding "whether or not any modification or addition to the draft submitted by the employer is necessary to render the draft Standing Orders certifiable." It was stated in the original Act that it was not the function of the certifying officer or the appellate authority set up by the Act "to adjudicate upon the fairness or reasonableness of the provisions of any Standing Orders." This, however, was amended last year by removing the negative so that it is now the function of the certifying officer to decide upon fairness or reasonableness of standing orders. Moreover, the functions proposed for Workers Management

Councils by the special sub-committee set up by the Indian Labour Conference include the revision of standing orders. This being so, it seems difficult on the face of it to understand the severe criticism of standing orders by the Leader of the Opposition.

Should Standing Orders be Extended?

The first thing to notice about the Act and the Model Standing Orders issued by the Central and State Governments is that the subjects covered are strictly limited. At first, certifying officers were prepared to certify standing orders containing a number of rules covering other matters, but in the last two or three years the tendency has been to cut out any rules on matters not covered by the Model, so in this way pressure has been put on companies to limit standing orders and to bring them more in line with the Model.

At the same time, a contrary pressure for widening the scope of standing orders has been operating for various reasons and from various directions. First, industrial tribunals have laid stress on the procedure for termination of service and for discipline, emphasising that management's action must be in conformity with "natural justice." Although no one can define the term, there has on the whole emerged a fairly clear picture of what the industrial tribunals mean by "natural justice," namely, that the procedure for dealing with misconduct and termination of service should follow the pattern laid down in Rules for Government Servants. (The very name "departmental enquiry" now commonly used for enquiries into misconduct comes from the rules for Government Servants working in their various Departments.) It obviously strengthens a company's case before an industrial court if it can be argued that its action was in conformity with standing orders, and so there has been a natural move toward elaborating standing orders on disciplinary procedure among the better informed managements.

Model Standing Orders are not very precise on the question of procedure in disciplinary cases. The Central Model, for instance, lays down that "no order of dismissal shall be made unless the workman concerned is informed in writing of the alleged misconduct and is given an opportunity to explain the circumstances alleged against him. The approval of the manager of the establishment, or where there is no manager of the employer, is required in every case of dismissal, and when circumstances appear to warrant it the manager or the employer may institute independent enquiries before dealing with charges against a workman." But industrial courts require much more than this and their awards have made it essential to hold an enquiry before dismissal in all cases. The proper procedure for departmental enquiries into misconduct has been set out in very great detail in the recent judgment of the Calcutta High Court in the case of Choudhury (A.R.S.) vs. Union of India and others (*Labour Law Journal*, 1957 I, p. 494), and this goes very much further than the Model Standing Orders.

It seems, then, that the industrial courts are partly to blame for the tightening up of standing orders on discipline, which Mr Dange must have had in mind when he spoke of "capital discipline." But it is not at all the fault of the courts. Lawyers defending their clients and trade unions arguing cases have sought to attack the decisions of management on technical grounds, finding loopholes in standing orders so that they can plead that

An Indian Finance Special Study

action taken against workmen was wrong or malafide. It is natural enough that employers should seek to fill these gaps. For instance, the Central Model Standing Orders drawn up in 1946 list only 11 forms of misconduct and deal with disciplinary action in two clauses, while the model drawn up by the Indian Engineering Association about two years ago for the guidance of its members lists 16 minor misdemeanours and 34 major misdemeanours and has an appendix running into several pages on misconduct. While trade unions may complain of a tightening up by management of disciplinary procedure and an increasing list of forms of misconduct, it seems that they are partly themselves to blame. Certainly, it has become so common an argument, that an alleged case of misconduct is not covered by standing orders and is therefore "illegal", that managements often doubt whether they have any rights of discipline outside the narrow limits of the standing orders. It was the Appellate Tribunal in the case of Shalimar Rope Workers (*Labour Law Journal*, 1953 II p. 876) which had to point out that standing orders could not be exhaustive, and that it was not necessary for the particular act of misconduct to be mentioned in standing orders before a company could take action. Again, in the case of Express Newspapers Ltd (*Labour Appeal Cases*, Feb. 1957), they pointed out that there was no provision in the Act which could make illegal a company's action because it was not strictly in compliance with the procedure laid down in standing orders.

Changes in the Industrial Disputes Act have also made employers aware of the need to extend standing orders. Retrenchment is now defined as termination of service for any reason whatsoever except continued ill health, voluntary retirement or retirement "on reaching age of superannuation if the contract of employment between the employer and the workman concerned contains a stipulation in that behalf." It is not usual to give details of retirement terms in letters of appointment, so the age of superannuation, if it is to be contractual, must go into the standing orders. Here, companies have been up against an obstacle, for, certifying officers have refused to accept a rule on retirement because it is not in the Model. The Industrial Court, Bombay, has upheld the certifying officer (*Labour Law Journal*, 1956 I p. 116), and the High Court, Allahabad, (*Labour Law Journal*, 1957 I p. 442) has stressed that, in case of departure from the Model, the framers of standing orders must satisfy the certifying officer that the Model was not practicable in their case.

Other matters which companies have tried without success to include in standing orders are transfer, withholding of increments for unsatisfactory work, overtime, closure for shortage of raw materials, strike or lockout, occupation of company quarters, intimidation or violence outside the premises. Industrial tribunals and High Courts have confirmed the rights of management in all these cases, and there seems no good reason why they should not go into standing orders. The present difficulty could be overcome, as the Employers' Federation has represented to Government, by the addition of some general heading to the schedule to the Act.

But this, it seems, would not necessarily have the approval of "the other side" of industry, and those concerned with the wider aims of industrial relations may also have some doubts about it. The increasing lega-

An Indian Finance Special Study

lism in industrial relations is disturbing many managers and personnel officers. They are not trained lawyers, and yet they are forced more and more to take their stand on legalistic and technical points. Moreover, you cannot make people good by law, nor can you force sound labour relations by legislation.

What is the Purpose of Standing Orders?

With the increasing pressure for the extension of standing orders, we might pause and consider again what their purpose is. Any organisation must have rules, if it is to function properly; and it is fairer to those working in it if these rules are put into writing. On the other hand, people do not like to be hedged about with a multiplicity of rules and would normally prefer to keep them to the minimum. Rules can always be supplemented by conventions about procedure and so on. Thus, while a new employee wishes to know how much leave he is entitled to in his terms of employment, the method by which he should

Industrial Relations

THERE is scarcely another subject which could claim as many spoken and written words from the business world in recent months as that of labour unrest and indiscipline. Only in July a Tripartite Conference met at Delhi and drew up a code of discipline for employers and workers alike to follow. According to this code, both should bind themselves to settle every dispute by negotiation, consultation and voluntary arbitration. Practices which impair production like go-slow, lock-outs and strikes without notice, are to be eschewed. A suitable machinery was also contemplated at different levels to enforce this code. But by the time the Conference of the State Labour Ministers met at the Capital in the third week of October, quite a number of strikes had occurred, besides innumerable cases of individual and group indiscipline, not excluding murders. In Kerala, even the Government are being charged by a section of industrial employers, with indifference if not connivance at indiscipline among the workers.

In this state of affairs, he would be a bold man who would come forward and say that here is a magic wand with which the economy could be rid of strikes, lock-outs and demonstrations of violence. In its own way each interest has been suggesting how to deal with the problem, without of course the self-assurance that the remedy is potent and dependable. At the recent Labour Ministers' Conference at New Delhi, official faith seems to have been divided equally between more rigorous legal penalties for the defiance of the law and the agreed sanctions which labour and management together evolve.

At the All India Labour and Welfare Officers' Conference held at Calcutta, the President of the Bengal Chamber of Commerce and the Union Law Minister both heartily deplored the infiltration of politics into trade unionism. Mr W. H. S. Michelmores exhorted his audience "to banish politics from industrial relations and develop direct and cordial non-political contacts between employer and employee." Mr Asoke Sen condemned party politics in no less emphatic terms. Every leading industrialist in this country condemns it, whenever an occasion is found for the ventilation of his views.

We whole-heartedly endorse the view that trade unionism and party politics should be kept leagues apart. But is the separation possible?

apply for leave may be left to convention, which can be varied, if necessary, with a change in internal organisation. It is important that changes in procedure should be notified to the employees, but it is not necessary that they should be incorporated in standing orders. We may, therefore, divide the rules of an organisation into fundamental rules concerning rights and obligations, and conventions on procedure which may vary from time to time without unduly disturbing anyone. By putting the latter into standing orders, we are giving them the rigidity of legal procedure. Do we want, in each organisation, a kind of domestic Criminal Procedure Code?

In the West, it is normal practice for progressive managements to issue, for the guidance of employees, Works Handbooks containing notes on their rights and obligations and on procedure which it is important that they should know. Usually, these booklets are placed in the hands of new employees on their first day. There is nothing legalistic about them; many are friendly publications in everyday language, and some are illustrated with sprightly and amusing sketches. No one quotes

them in industrial courts, but they serve their purpose admirably in informing employees on the "dos" and "don'ts" of the organisation; and, when well planned, they help to build up a sense of belonging to a team, which is the first step toward contentment and cooperation.

Here, in India, we cannot now get away from standing orders. They are there by law, and they provide certain necessary safeguards against arbitrary action, but the writer would like to see them confined to rights and obligations, and to supplement them with simple handbooks in the vernacular telling employees what to do when they need first aid, what leave they are entitled to and how they apply for it, to whom they should go with their questions and complaints, what recognition is given for long service, and so on. An increasing number of workers are now literate in their own language and could follow a simple booklet. Surely, this would be more helpful toward understanding than the present tendency toward rigidity and legalism? It is rather horrifying to think that the average worker is more familiar today with such phrases as ultra vires, status quo and mala fide than with the language of cooperation.

The Conference has made two important recommendations calculated to improve labour-management relations and make it invulnerable as far as possible to sheer mischief from extraneous quarters. One is for adequate steps for the training and education of workers and of supervisors; the other is for defining and affixing responsibilities and authority for conducting negotiations on behalf of employers. In the event of the Personnel or Welfare Officers being entrusted with these responsibilities, they must also carry suitable authority. As we had occasion to observe earlier, these officers often find themselves in undefined roles, and the victims of antipathy on both sides. It is clear that by virtue of their personal contacts and habitual good relations with the workers on the one side and the confidence they enjoy at the hands of the employers on the other, these officers are invariably the best media for first negotiations in disputes; and it is equally clear that as long as authority does not correspond to responsibilities, they cannot afford to view this particular function with any degree of confidence. Between the two factors of production they form an institutional link which will have to be strengthened in every possible manner.

Both the General Chairman and the Chairman of the Section on "Women in Industry" deplored the elimination of women from industrial employment. The jute industry seems to have been conspicuously guilty from their standpoint. The Conference made several recommendations on behalf of protection of women's right to equality of opportunity in matters of employment and requested the Government to examine further the employment opportunities in the light of some of the new trends.

A slightly different note was sounded by Mr J. E. Atkins in his Paper on "Women in the Tea Industry". Mr Atkins pointed out how in the tea industry women were being recruited liberally but in the face of various difficulties such as increased cost and vexation. Where unsupported women or women with dependents and no other means have to seek employment, there is no reason why they should not be given preference even at the risk of some inconvenience to the management. But to seek to establish an inviolable link between the obligation to women in distress and woman's right or need to work in factories as an indisputable condition of her happiness looks rather premature, in the present outlook of Indian society.

he helps to safeguard your health, Bhai Sahib...

You may be surprised, Bhai Sahib, to learn that over 300,000,000 lbs. of tea are sold in Calcutta every year and most of this is sold in public auctions.

Each lot that falls under the auctioneer's gavel has its own particular characteristics. Even teas from the same garden vary in quality week by week, depending on climatic conditions.

That, Bhai Sahib, is just where the tea taster comes in. He selects the different qualities and varieties to blend together. Leaf appearance, 'body' and flavour are the major considerations when blending to give you the 'cup that cheers'.

It is always advantageous to buy blended tea in packets; thereby assuring yourself of the same all-round good brew each time you buy your packet of tea.

Above all, Bhai Sahib, the tea taster guards you against inferior qualities and can be said to be a true guardian of the nation's well-being.

**HERE ARE SOME FACTS ABOUT
TEA TASTING AND BLENDING, BHAI SAHIB:**

Each garden usually makes about 12 grades of tea which include the well-known types—O.P., B.O.P., Fannings and Dust.

In North-East India there are over 1,100 tea gardens, situated in Assam, Darjeeling, Dooars, Cachar, Terai and Tripura. In this area alone the annual crop averages over 500,000,000 lbs.

Each week in the Calcutta auctions approximately 65,000 chests of tea are sold. A large proportion of these are for Export.

In the Calcutta auctions lots are sold at the rate of four per minute.

An experienced tea taster may taste and value about 600 pots a day.

In an average Brooke Bond blend there may be teas from 40 to 50 gardens.

In Brooke Bond's five blending and packing factories over 2,10,00,000 packets per week are produced.

Editorial Notes

Helpmate or Rival?

Addressing a meeting of the Delhi Management Association, Mr K. B. Lall, Chairman of the State Trading Corporation, has disclosed that the Corporation would be selecting "business associates" to help in its efforts to find new markets and develop exports. In explaining the decision, he pointed out that the Corporation was set up with a view to assist private trade and to secure for it better conditions for functioning and was not motivated ideologically.

Ideological motives, it will be universally agreed, are not conspicuous among the stimulants behind the Corporation. It is to be wondered if the business community will accept the view that this agency functions to promote their interest. Every sphere which the Corporation walks into is so much lost to private business. The State Trading Committee wanted the Corporation to set an example. This purpose the Corporation claims to have served. And it is quite plausible to maintain that the bigger the example grows, the better for every one.

Private business understandably interprets this growth in a different and less sympathetic light. The monopoly in cement imports and iron ore exports particularly, are looked upon as easy roads to reputation and gain, as these belong to a category of goods, where buying and selling are fairly devoid of problems. The advantages of bulk deals are claimed by the Corporation; but these would undeniably be there under monopoly conditions.

Generally it must be welcome, if the State Trading Corporation adds its own to the innumerable helping hands, for India's export

promotion. How exactly the Corporation proposes to share functions with the Export Promotion Director, the Foreign Trade Board and the various Export Promotion Councils, has to be made clear at the outset. When too many agencies are in the field, coordination becomes all-important.

There is already a Liaison Committee in which businessmen have a place, attached to the Corporation. What has become of this Committee? Is it that the Committee is now being sought to be more broad-based? Private business should not be unwilling to associate with the Corporation, provided its interests are served thereby. Mr Lall is reported to have said that the Corporation would make use of the initiative, knowledge of particular commodities and shrewd sense of businessmen in advancing trade. The businessmen can well ask "whose trade"?

East-West Trade in Europe

One of the most pleasing aspects of European economy during 1956 was the expansion of East-West trade, a trend which according to the latest UN Economic Bulletin for Europe, has been developing in the early months of the current year at an even faster rate. The volume of exports from Western Europe has yet to reach pre-war levels; the new post-war peak touched in 1956 amounted to four-fifths of the 1938 level. Exports from Eastern Europe, however, attained only a much lower level, equivalent to a little more than two-fifths of what obtained before the war.

The most powerful stimulant to Eastern European imports from the West was provided by the growing volume of investment in Eastern Europe which necessarily called for higher imports from outside. This demand found its reciprocal element in the need for exports to Western Europe.

The increasing financial assistance extended by Soviet Russia along with more liberal facilities for repayment, enabled other Eastern European countries to accelerate production and increase the volume of trade with the West. The relaxation of quantitative controls, provision for wider transferability of currencies and similar measures by Western European countries reinforced the two-way traffic in goods.

The increase in mutual trade was not shared on an equal basis by the various countries. Both in exports and imports, Western Germany and Yugoslavia (grouped as part of the West) recorded the largest percentages of increase; while on the Eastern European side, the Soviet Union, Poland, Czechoslovakia and Bulgaria shared nearly the whole. Rumania alone

resistered a decline in its trade with Western Europe.

In terms of commodities, rolled steel, copper and engineering products from West Germany in return for live-stock and crude steel, Eastern European manufactures to Iceland, greater quantities of Soviet wheat and coarse grain going to Finland and Netherlands were worth special mention. In the export pattern of Eastern European countries, grain, coal and timber till recently on a big lead, started giving way to steel and engineering products.

Language or Languages!

The Report of the Language Commission has provoked a new turn in the controversy which may sooner or later, show up more inflammable political material than is generally suspected now. An association has been formed to promote the growth of India's national "languages." By implication, this aim cuts at the root of the claim of any one language, to aspire for the exclusive status of a national language. The term 'national language' is to be understood as a rather imprecise synonym for a common official language.

From Bengal and from Madras, protests have become more numerous and assertive against any fixed date for the introduction of Hindi as the official language of the Indian Union and even as a medium for all High Courts. Many have started saying that Hindi should never be given this status, exclusively or otherwise. There is also an ingenious suggestion that the place of Hindi as any kind of medium for the non-Hindi speaking population should be left entirely to the choice of the latter.

This suggestion too carries the implication that the question of a common language cannot be commonly settled, let alone on the strength of a national majority. It is not pleasant to anticipate the next step, in this process of argument. It lies within the wisdom of the Union Government to discern the real spirit and strength of the dissent, in time, in order to ensure that the question of official language does not create a new division of opinion, adding powerfully to the strain on national unity.

Flesh Vs Vegetable

Some indication of what the Fifteenth World Vegetarian Congress to be shortly held at New Delhi, would advocate in the direction of human dietetic reform, was given by Sardar Mohan Singh, one of the organisers in India. He has sought to explain how vegetarianism is superior to its opposite, as it is more economic and more healthy.

In striking contrast with Mr S. K. Dey, who recently appealed to Indians to take increasingly to non-vegetarianism, Mr Singh deplores the present tendency toward the latter, which he ascribes largely to an outdated imitation of the West, when the West itself is slowly swinging over to vegetarianism. A certain amount of reversal of preferences in the East and West may cancel each other, leaving the world's total demand for food stuffs in the two categories eventually unaltered. But that by no means, is sufficient, is Mr Singh's contention.

The reason is simple and straightforward: the world does not have enough natural resources to feed the flesh which man demands, in the present proportion of non-vegetarianism. For every 100 lbs of dry substance which an animal consumes, man gets only 4 lbs of flesh for food. In this calculation fish does not evidently enter and from the economic argument based on economy of land, made out in support of vegetarianism, fish has to be kept out. The reservation, however, doesn't disturb the validity of the thesis that a much greater acreage of land is required to raise flesh food in comparison with vegetable food.

A world which cannot even now provide enough nutrition for as much as 78 per cent of its inhabitants and confronted with a steadily growing population must no longer view this problem of comparative land utilisation, as a matter of sentiment or custom: economic production is the most inescapable criterion. Why in the face of well-established and irrefutable facts, India's Food and Agriculture Ministry should attempt to convert people to the less economical diet passes comprehension.

World of Finance

Distribution and Utilisation of Bank Deposits

WHILST the proposition is generally accepted that, over the past year, there has been a phenomenal increase in the Deposit resources of the banking system, no attempt has so far been made to trace out this upsurge in Deposit resources in any detail; and the only particular comment that is made from time to time is that this development is in the main derived from the windfall receipts of the State Bank of India in respect of Deposits against US counterpart funds in terms of the agreement with America under Public Law 480. It may be stated, at the outset of this essentially broad analysis of Deposits, that, in fact, the State Bank claims a sizable proportion of the very substantial accretions to the Deposits of member banks. But, as we shall see,

there are some other points to be noted as well as to the manner, size and direction of the newly accruing Deposits.

As far as the overall picture is concerned, in the 12 months ending August 1957, the Deposit resources of all Scheduled Banks rose by Rs 194.75 crores to Rs 1310.59 crores. Moreover, borrowings from the Reserve Bank also increased by Rs 9.28 crores to Rs 40.27 crores. The utilisation of the new Deposits shows that a major portion was diverted to an increase in the accommodation given by the Scheduled Banks, Advances including bills rising by Rs 117.54 crores to Rs 852.51 crores. The extent of new money that found its way into gilt-edged investments was negligible, the portfolio showing a rise of only Rs 8.17 crores to Rs 369.59

crores. The Scheduled Banks have preferred to keep their position liquid by adding to their cash balances, which are marked higher by Rs 48.42 crores at Rs 148.84 crores. Lest it should be thought that the fresh Deposits have been disproportionately availed of to expand Advances, it may be noted that the Advances Deposits ratio was, at the end of August 1957, actually placed lower at 65.0 per cent against 65.9 per cent at the end of August 1956. The unattractiveness of gilt-edged stands revealed by the decline in the ratio of such investments to Deposits from 32.4 per cent to 28.2 per cent. Cash, excluding money at call and short notice, expressed as a ratio of Deposits, marks a notable improvement from 9.0 per cent to 11.4 per cent.

The points to note are: (1) The increase in Deposit resources is of handsome proportions; (2) this has enabled the rising demand for funds to be met without much strain or difficulty; (3) gilt-edged has been treated with disdain; and (4) cash balances have improved sharply.

The second set of figures that we may examine are those relating to the Exchange Banks. The impression fostered by an examination of tables elsewhere on this page would be that the Exchange Banks have fully participated—and benefited—from the recent phenomenon of increase in Deposits. This, however, is not quite the correct position. For, the figures given in the tables relate to gross Deposits and include borrowings from banks. If the net Deposits alone are taken into account, the rise in Deposit resources of the Exchange Banks is found to be slightly smaller. Largely speaking, however, it may be stated that the Exchange Banks have not been untouched by the expansion in Deposits. But the magnitude of the improvement under this head has been inadequate to cover the enlarged demand for funds. Advances, including bills, have been marked up by Rs 17.66 crores at Rs 207.15 crores; it may be unkind to put it in such bald terms, but the fact that Exchange Banks' borrowings from the Reserve Bank have risen by Rs 16.24 crores would suggest that the bulk of the expansion in Advances has, as it were, been financed by the Reserve Bank. The gilt-edged portfolio shows a small decline, and cash balances register a modest increase. The changes in the ratios are negligible in size.

We now come, thirdly, to the most important entity included in the description, the Scheduled Banks. The State Bank reports an incredible increase of Rs 112.00 crores in Deposits to Rs 341.07 crores. The general tendency is to shrug this off as indicative merely of the windfall transactions of the US Consulate in Delhi. But this is to take the uncharitable view that, while all other banks experienced an expansion in business, the State Bank alone did not attract any new Deposits, besides the US counterpart funds. As we have written on an earlier occasion, we believe that the special transactions may be

taking place in the last week of each month; and, in the period covered by the review, the accretions on account of such Deposits may be somewhat along the following lines:

On the basis that Public Law 480 funds started accumulating only from the beginning of the year, and on the hypothesis that the bulk of these special transactions take place in the last week of each month, the following table gives a rough idea of the magnitude of 'windfall' accruals to the Deposits of the State Bank:

Increase in Deposits in last week of	Rupees Crores
January	6.27
February	6.54
March	20.06
April	5.33
May	2.81
June	8.43
July	13.28
August	12.18
September	1.33
	65.57

Thus, it may be stated that the increase in the so-called 'normal' Deposits may have been around Rs 47 crores. This is fully in line with the trend and experience of the rest of the banking system. The State Bank would appear to have allocated these fresh resources almost equally between the three major heads of Advances, Gilt-edged Investments and Cash Balances. However, it must be borne in mind that, since August 1957, the State Bank has increased its holdings of gilt-edged, so that the present position is that, by and large, the ratios obtaining at the end of August, 1956 continue to obtain. It needs, furthermore, to be added that, undoubtedly, the State Bank is keeping a much more liquid position in respect of its cash balances than it has in recent years done.

We now come to the residual Scheduled Banks, by which we mean member banks other than the Exchange Banks and the State Bank. This category of banks reports an increase of Rs 61.28 crores in Deposits; but, since this was insufficient to cover the expansion in Advances—which rose over the period by Rs 64.87 crores—the Reserve Bank's good offices have been utilised to effect the sale of gilt-edged to the central banking institution. We would draw particular attention to the fact that the augmentation to Deposit resources is, by any manner of reckoning, considerable. This emphasis is necessary because, in some circles, the trend in Deposits of member banks is facetiously shrugged away as being due primarily, if not solely, to the special circumstance of US counterpart funds.

It is interesting to note that it is the ratios of the other Scheduled Banks which most closely approximate to the ratios of all Scheduled

Banks. For example, the ratio of Advances to Deposits, in the case of the other Scheduled Banks, is 65.5 per cent as against 65.0 per cent for all Scheduled Banks; the ratio of gilt-edged to Deposits for the other Scheduled Banks is 27.3 per cent against 28.2 per cent for all Scheduled Banks; and the ratio of cash to Deposits for other Scheduled Banks is 9.4 per cent against 11.4 per cent for all Scheduled Banks. So, it would seem that the uniquely high level of Advances of Exchange Banks is cancelled out by the relatively low level of Advances of the State Bank; and, similarly, the paucity of the gilt-edged portfolio of the Exchange Banks is counteracted by the bountifulness of the State Bank's portfolio. So much so, it may even be suggested that the figures for all Scheduled Banks largely give a true reflection of the state of affairs of the other Scheduled Banks—both the special entities, the Exchange Banks and the State Bank, cancelling each other out.

Conflicting Influences

AFTER more than a month, the stalemate in Calcutta has been broken; bank employees have returned to work, but the hangover effects of the dissipated month continue to be in evidence. Cheques are being accepted for deposit, but no indication has been given as to the date on which the first clearing after resumption will take place. Presumably, the accumulated backlog of book entries and other routine matters is considerable; and so, until the arrear accounts are brought up to date, we cannot expect a clearance of cheques to take place. The interesting point, however, arises as to whether—since cheques have, in fact, been accepted for deposit—such cheques presented by constituents will be reflected in the Deposit resources of Scheduled Banks in the week ending October 25. But, until there is clearing, it is difficult to see how such credit can be given. The alternative course of action is hinted at in the weekly statement of the position of Scheduled Banks which, since the week ended September 27, contains a note to the effect that "figures are provisional since complete returns have not been received from some banks". It is true that such a footnote is affixed to every weekly press communique, but the qualification did not apply, until the week ended October 4, to the figures of the earlier week. It is, therefore, possible that "corrections" will be carried out in Scheduled Banks' figures since September 27, after taking account of temporary overdrafts then permitted to constituents and after giving antedated credit for cheques deposited.

The bank statements continue to bear the impress of the Calcutta impasse, though it needs to be remarked that much of such pressure appears to be camouflaged by slack season influences that are quite virile.

According to the Reserve Bank returns for October 18, Active Notes have dropped sharply by Rs 9.67 crores to Rs 1483.81 crores. Rupee Coin has returned from circulation for Rs 0.44 crores. Notes held by the Reserve Bank have, consequently, risen by Rs 10.13 crores to Rs 30.54 crores.

Heavy Government disbursements have occasioned a large dose of deficit financing. Rupee Securities in the Issue Department are marked up by Rs 9.94 crores to Rs 950.78

crores; and Investments in the Banking Department have risen by Rs 3.90 crores to Rs 219.80 crores. The extent of deficit financing during the week appears, thus, to be around Rs 14 crores. At the same time, both in order to offset the expansion against Rupee Securities and, perhaps, to augment Balances Held Abroad, a transfer of Rs 9.94 crores has been effected from Foreign Securities in the Issue Department.

At this point, it may be noted that there is again a distressingly large fall in the Reserve Bank's holdings of foreign securities. In spite of the transfer of Rs 9.94 crores, Balances Held Abroad show a drop of Rs 1.76 crores; the net drain thus amounts to Rs 11.70 crores. Conceivably, special payments could have been responsible.

The Centre's balances, despite sales of ad hoc in favour of the Reserve Bank for roughly Rs 14 crores, are marked down by Rs 3.82 crores at Rs 50.02 crores. It may be suggested that there could be a link between the known heavy fall in foreign exchange holdings and the large magnitude of Government disbursements during the week.

Balances of State Governments have improved by Rs 3.24 crores to Rs 6.85 crores; their indebtedness to the Reserve Bank continues to be high at Rs 51.08 crores. Other Deposits are more or less unchanged at Rs 111.54 crores.

Member banks are apparently in a much more comfortable position. For, their Reserve Balances have improved by Rs 9.86 crores to Rs 100.47 crores, but this is due entirely to the State Bank. Where, however, it may be said that a real improvement has taken place is in respect of borrowings from the Reserve Bank. The Other Loans and Advances of the Reserve Bank are lower by Rs 4.67 crores at Rs 68.83 crores; and this is largely traceable to the other Scheduled Banks, since the Reserve Bank's advances against usance bills are lower by nearly Rs 2 crores at Rs 26.81 crores.

The continuing impact of the Calcutta impasse is to be seen both in the State Bank and the Scheduled Bank return. The State Bank has reported an unseasonal increase of Rs 1.50 crores in Advances to Rs 162.64 crores; and, besides, Deposits have shrunk by Rs 1.63 crores to Rs 353.35 crores. At this juncture, we

the **EXTRA PERFORMANCE** that makes Champions...

Just as a champion high jumper calls on his reserves for extra performance—so it is with the truck or bus operator who uses Caltex products. There's a reserve of power in Caltex fuels for greater haulage, better climbing and, to bring out the best in any engine and chassis, there's nothing so good as Caltex lubricants. For extra performance, extra economy—

give your truck or bus

the **CALTEX** 1 2 3

★ CALTEX IC-PLUS PETROL or HI-SPEEDOL... for Haulage and Climbing

★ CALTEX RPM MOTOR OIL or RPM DELOS for Dependability and Economy

★ CALTEX MARFAK CHASSIS LUBRICATION for longer wear

may note that the sharp rise, recorded in the previous week's return, under Other Assets did not, as surmised, relate to purchase of gilt-edged from the Reserve Bank. For, the latest return registers no change under gilt-edged investments, and reports a drop of Rs 12.52 crores in Other Assets. Presumably, a special transaction outside our ken was responsible for this change.

The Scheduled Banks report, for the week ended October 11, a fresh upsurge of Rs 5.24 crores in the total of Advances to Rs 852.61 crores. This, however, was matched by a

somewhat lower rise of Rs 3.89 crores to Rs 1353.57 crores in Deposits. But, since the State Bank registered a rise of over Rs 5½ crores under this head in the relevant week, it is clear that the other Scheduled Banks have experienced a fractional drain upon their Deposits. Nevertheless, indebtedness to the Reserve Bank has been reduced by Rs 5.54 crores. This has been enabled by drawing down cash balances, which record a decline of Rs 12.21 crores to Rs 183.57 crores; and, of this decline, the State Bank accounted for roughly Rs 7 crores.

Conflicting Currents on the Stock Exchange

By PAUL EINZIG

FINANCIAL writers, stockbrokers, solicitors and others whose task is to advise investors are having a particularly difficult period. During recent years their job was comparatively simple. It appeared to be reasonably safe to advise their clients or readers to switch from Government loans into equities. Temporary fluctuations apart, the former showed a persistent declining trend, while the latter rose from strength to strength. The prophets proved almost invariably right as far as the general trend

was concerned, and even if they were liable to make mistakes in their choice of individual investments, the difference between good and bad choice was usually merely a difference between the extent to which the equities they had recommended moved with the tide.

Again during the summer of 1957 it was easy to forecast a decline for the autumn. Investment counsellors who advised their clients to realise everything could hardly fail to go wrong. It was quite obvious that the Stock Ex-

change was in for a sharp setback in the autumn. The situation was full of explosive elements. There was bound to be an attack on sterling, necessitating drastic defensive measures. There was a strong probability of an acute crisis in the Middle East. Major strikes or further major wage concessions appeared to be a mere question of time. The downward course of commodity prices foreshadowed trouble, and the possibility of a recession in the United States could not be ruled out. In such situation no investment could be regarded as being immune from a major depreciation.

That depreciation did materialise both in London and in Wall Street. Having reached this stage,

the outlook has become incomparably more obscure and uncertain than before. It has become a most unenviable task to try to advise investors.

The possibility of a gradual reduction cannot be ruled out. In fact the Governor of the Bank of England foreshadowed such a possibility. Should sterling continue to be firm, and should the flow of gold become reversed in consequence, it is difficult to see how the Bank rate could be maintained at its present abnormal figure. And Bank rate reductions are bound to be accompanied by a recovery of the Gilt-edged market and, to a less extent, of the markets in equities.

It is true, wage inflation continues unabated. But it may take several months before the major wage claims will reach a decisive stage. Meanwhile there is a fair chance for a substantial strengthening of sterling and of the sterling area gold position. In the long run such an improvement is liable to be unfavourable from the point of view of checking inflation. While under the acute menace of a sterling crisis the Government felt impelled to turn tough, its attitude in face of the wage inflation has already weakened as a result of the improvement of sterling. And the trade unions are more likely to hold out for big increases if there is no imminent menace of a sterling crisis.

The Syrian crisis has introduced an additional element of complication. So long as it continues it overshadows every other influence on the Stock Exchange and on the foreign exchange market. It is beyond the competence of investment advisors and economic consultants to express an opinion about the course and duration of this political crisis.

Another complicating element is the continued weakness of the commodity markets. It has proceeded far enough to give rise to much concern about the possibility of serious economic repercussions. Resistance to inflation necessitates curtailment of production, which again reacts unfavourably on demand for raw materials. The purchasing power of raw material producing countries is liable to suffer considerable reduction, which again paves the way for a depression in industrial countries. While until recently equities of mining and other commodity producing firms were regarded as a safe hedge against inflation, today they are under a cloud.

The London Stock Exchange is far from happy about dollar securities which were until recently a favourite hedge against devaluation. Today the devaluation risk has receded into the distant future, while the setback in Wall Street has become immediate reality. The possibility of a business recession in the United States is receiving more attention than it had received for some time past. And

(Continued on page 777)

This may shrink

This will not shrink

That's why people look for 'Sanforized' on the label!

The Trade Mark 'Sanforized' inspires such confidence that people all over the world pick fabrics trade marked 'Sanforized'—knowing they bear this assurance: *This garment will not shrink out of fit—even after many, many washings!*

It adds value and prestige to your own label—enables you to sell with confidence—and assures the public that you take trouble to give them value.

People rely on you to serve them well—so serve them cloth labelled 'Sanforized'.

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements

World of Business

Progress of Paper Industry

The paper industry has taken rapid strides in past few years and its production in 1956 is the highest for the previous five years. That the upward trend is maintained is evident from the fact that the industry's output has amounted to 1,01,800 tons during the first half of the current year as compared with 94,684 tons in the corresponding period of the previous year. As against the installed capacity of 2,12,000 tons in 1956 there has been an increase of 40,000 tons since April 1957 bringing the total installed capacity to 2,52,000 tons. The target set for the industry under the Second Plan is an installed capacity of 4,50,000 tons to attain a production of 3,50,000 tons. In order to enable the industry to fulfill its targets, Government have granted licences for the setting up of a large number of units and for the expansion of existing units. Though the industry has already taken steps to implement the programme of expansion, it would appear progress is being retarded by the lack of adequate foreign exchange for the import of machinery from abroad.

Speaking at the annual general meeting of the Indian Paper Mills Association last week in Calcutta, Mr. A. K. Jain, mentioned that the industry had not been able to achieve the installation of all the licensed units due to lack of internal finance as well as foreign exchange.

He pointed out that if the industry was to achieve the target set for it under the Second Plan, active steps had to be taken by Government to obviate the handicap caused to the industry by the general scarcity of foreign exchange in the country. Apart from this inhibiting factor, expansion of the industry was retarded by the insistence on the part of the States rich in raw material on the putting of the new units within their boundaries. Mr. Jain averred that in the current context of the urgent need for increasing production in the country, it would be much more advantageous to allow the expansion of existing units.

Referring to import of paper products Mr. Jain drew attention to the contention of the industry that instead of importing finished products utilising valuable foreign exchange, the required capital machinery should be imported so that the various items of papers and boards, obtained from abroad could be made in the country itself.

★

Coal Industry

The Coal industry is still largely in the hands of private enterprise as will be evident from the fact that about 92 per cent of the current coal production in the country is

accounted for by the private sector. Even under the Second Plan the position assigned to it is by no means insignificant as the target set for it is as much as 10 million tons of additional production. The industry has amply justified the nation's confidence in its ability to meet its increasing needs. During the past six months raisings have been running at a high level with the result the output during the six months January-June 1957 at 21,649,207 tons is higher as compared with the corresponding period of the previous year when production amounted to 19,659,082 tons. Despatches have also recorded an increase to 18,523,096 tons from 16,945,451 tons.

In a joint statement issued last week-end, the Joint Working Committee of the Indian Mining Association, Indian Mining Federation and the Indian Colliery Owners Association, is justifiably proud of the commendable performance of the private sector of the coal industry. It also draws pointed attention to the fact that this sector has made this achievement despite various handicaps. The statement lists five main inhibitory factors that are hampering the industry's programmes. In the first place, it has to grapple with the control organisation the moment it starts thinking of a new area, a new seam or even a change in the system of mining. This inevitably results in delaying expansion activity. Secondly, the transport position continues to be unsatisfactory and consequently many collieries continue to hold heavy stocks of coal with the result production is slowed down. Thirdly, it has not been always possible for this sector to get imported plant, machinery and spares vitally needed

by the industry due to shortage of foreign exchange. Fourthly, iron and steel supplies are not available in adequate quantities. Fifthly, collieries mining coal which is almost exclusively used for the manufacture of soft coke are seriously handicapped financially as no price increase has been given to soft coke when prices were revised in July 1957.

The statement maintains that coal production statistics for the private sector of the industry afford incontrovertible proof that output has always been running ahead of wagon supply. One of the reasons for the large accumulation of stocks, especially in collieries which usually supply coal to the brick industry, is the discriminatory policy followed by Government in placing orders for coal required for brick burning. It has been found that Government place their high priority orders for this category of coal only with collieries in the public sector. As the collieries in the private sector do not get such priority for the orders placed with them by others, they are always faced with big stocks and consequently slowing down of production.

Government are no doubt aware that the increased availability of coal in the country is vital for the proper implementation of the development programmes under the Second Plan. They are also equally aware that the private sector of the coal industry has been given a big part to play in this regard. It will be unfortunate, indeed, if they fail to realise that so long as this sector is not given the necessary facilities to carry out its allotted task, the entire country will suffer as a consequence.

World of Jute

Outlook for Raw Jute

Conditions in the jute markets have turned quiet during the past week. The fall in the price levels is particularly prominent for the near delivery positions in the sacking section of the goods market. This reactionary tendency in heavy goods is attributed to rumours about an impending decision of jute mills to put into commission once again that portion of their looms which now remains sealed. It has evidently been taken for granted that if and when the looms are unsealed they will be switched over to the production of sacking goods which are at present in short supply. On the basis of this presumption, bears have concentrated their attention, on B Twills.

It would appear that the figures pertaining to arrivals of raw jute into Calcutta and mill stations during September, which were made available early this week, have also been partly responsible in bringing about the present quiet trend in the jute markets. For arrivals during last month had recorded a substan-

tial increase over August. As against only 3.04 lakh bales during August, arrivals during September had totalled 3.85 lakh bales. One may be justified if one derives the inference that the new crop has begun moving in quantity and that the current month and the succeeding months may witness heavier arrivals. With raw jute arriving in increased quantities into Calcutta and mill stations, raw jute prices may develop a declining trend.

The jute goods market developed an irregular tendency during the past week with hessians ruling fairly steady while the sacking section, particularly the near delivery positions, gave way under selling pressure. In earlier dealings sentiment had been buoyed up by the despatch figures for September which showed that offtake during the past month had been quite high. Around midweek the undertone especially in the sacking section was adversely affected by rumours of unsealing of looms by IJMA mills. Though such reports lacked official confir-

mation, they did get into the discussions of marketmen, some of whom were not prepared to dismiss them as wholly improbable. The low level of sacking stocks with mills at the end of September coupled with the fact that sackings continued to be in good request as was evident from the shipping figures so far during the current month, seemed to suggest that the industry might be thinking of augmenting the supplies of heavy goods provided it had reasonable grounds to believe that the demand for sackings would continue to be as good as it had been in the past few months.

The jute goods market opened the week on Friday last on a steady note but in later dealings developed a sagging tendency as bears began to depress prices all along the line in view of the settlement next day. Hessian 40" x 10 oz Ready was done at Rs 42.90 with December and Jan-March prices placed at Rs 42.75 and Rs 42.25 respectively. In the sacking section B Twills Ready was finally placed at Rs 121.25 while December and January-March were done at Rs 115.25 and Rs 113.50 respectively. Saturday found the market in a slightly steadier condition with prices in both hessian and sacking showing fractional improvement mainly on speculative support. Hessian 40" x 10 oz Ready closed at Rs 42.95 while the December and

January-March positions were quoted at Rs 42.75 and Rs 42.25 respectively. In the sacking section closing prices were as follows:—B Twills Ready Rs 120.50, December Rs 115.25 and Jan-March Rs 114.00.

The market opened on Monday this week on a quiet note in view of the coming holidays. In later dealings sentiment especially in the sacking section turned easier as there were rumours that jute mills were likely to unseal looms to increase production to meet the high demand for sackings. B Twills Ready declined to Rs 118.75 with December and January-March positions placed at Rs 114.25 and Rs 113.00 respectively. Hessians were, however, steady with Hessian 40" x 10 oz Ready at Rs 42.80, December at Rs 42.50 and January-March at Rs 42.05.

On reopening after the Diwali holidays on Thursday the sacking section of the market continued to rule quiet with prices displaying a sagging tendency. Reports of enquiries from the UK and USA helped hessian put up a steady front. In the sacking section B Twills Ready shaded to Rs 118.25 with December and January-March positions placed at Rs 115.00 and Rs 113.50 respectively. In the hessian section closing prices were as follows: Hessian 40" x 10 oz Ready Rs 42.75, December Rs 42.70 and Jan-March Rs 42.20.

World of Tea

Production Prospects

THE North Indian Tea crop has shown a further decline of 2.5 million pounds in September, bringing the total short-fall, to the end of September, to nearly 30 million pounds as compared with 1956. In South India, production amounts to 9.8 million pounds as compared with 9.5 million pounds in the previous month and 8.8 million pounds in August, 1956. Total tea crop, for the first eight months of 1957, is to the tune of 92 million pounds as against 81.5 million pounds in the corresponding period of 1956. September crop is estimated at the peak figure of 12 million pounds as compared to 9.6 million pounds in the corresponding month of last year.

Ceylon has also improved its crop, up to the end of August, by 33 million pounds over its high production figure for last year. Again, Indonesia has produced 7 million pounds more up to the end of July. Pakistan, in line with North India, has suffered a loss in crop to the extent of 7 million pounds. There are indications of an early advent of coal weather in North India which may be responsible for a

further decline in the crop from this area during the remainder of the season. Unless, however, the decrease is quite substantial, the 1957 season is almost certain to close with a slight surplus over 1956.

There is a rumour in the market that there will not be a further release of export quota before early January next year. It does not have any appreciable effect on the market, largely because of Government's relaxing of export restrictions on Dust teas. Export of Dusts will now be allowed without export right until the end of March 1958 in cases where the necessary licence is drawn before 31st December, 1957.

In the Export Sale, held in Calcutta this week, offerings were 61,721 packages. There was a good general demand. 'Teas for price' were sold well, while plain liquoring sorts were 4 to 6nP easier. Low Mediums and Mediums showed a decline of 5 to 10 nP except for the brighter liquoring sorts which were sometimes dearer. CTC Assams depreciated by about 10 to 20 nP with some withdrawals; but the few useful liquoring invoices were generally sold above valuations, particularly the Broken grades. Non-wither Dooars met with fair support, but at prices which were about 4 to 8 nP per pound lower.

Tippy sorts and Darjeeling teas were again sold well, while Whole Leaf grades received good support and advanced by about 10 nP. Following rates were quoted:—Clean Black Pekoe Rs 2.24; Plain BP Rs 1.60; Plain Fannings Rs 1.64; Medium BP Rs 1.68; Medium Fannings Rs 1.70; Best Assam CTC BP Rs 2.80 and Best Assam CTC Fannings Rs 2.90.

In the Internal Sale, offerings were 21,553 packages of Dusts. The strong demand, noticeable at last week's sale, continued and, in particular, keen competition was again shown for the black leafy exportable grades. The small orthodox Commons, Dooars and Assams did not receive the same support as in the previous sale; but the cleanly-sorted black leafy descriptions were again a strong feature and were dearer. Non-wither Dooars were sold well at about valuation or above.

There was less export interest in the better grainy CTC Assams and prices were sometimes as much as 20 nP easier; but the smaller mixed descriptions met with competition and frequently sold above valuation. Following rates were quoted:—Medium Dooars Dust Rs 1.64 to Rs 1.68; Medium Assam Grainy Dust Rs 1.68 to Rs 1.74; Medium Assam CTC Dust Rs 2.20 to Rs 2.40 and Best Assam CTC Dust Rs 2.60 to Rs 2.90.

Also, 3,291 packages of Leaf were offered for internal consumption.

Prices for the orthodox grades were generally slightly easier. The CTC teas, on offer, which were mainly of a fibrous description, received only limited support.

In the Export Quota section, business was reported done at 19 nP per pound with buyers over at this level.

In the Cochin market, offerings in the Internal Sale amounted to 650,000 pounds. There was a good demand. Enquiry was strong for best Nilgiris, which were generally dearer. Good Mediums were well supported at fully firm to dearer rates, while Mediums from Travancore advanced by 5 to 8 nP per pound. Wynaad descriptions were in less demand, but sold at firm rates. The weak feature of the sale were Milled and Residual Dusts, which declined by 5 to 8 nP and were often difficult of sale. Black grainy descriptions were sold well.

At the auction, held in Colombo last week, offerings were 4,412,248 pounds. There was a good demand for useful liquoring teas. The quality of Nuwara Eliya teas was irregular and prices were on either side

of valuation for Broken grades. There were some good flavoury teas from Uva with liquors tending to become thin owing to the drought. Competition was keen and prices were considerably dearer. Quality from Dimbula and Dickoya was barely maintained.

Among medium-grown teas, Uva types were generally dearer. Low Medium Broken were, however, a few cents per pound easier. Among low-grown teas, demand was considerably quieter and prices fell sharply. Orange Pekoes were, however, fully firm, while Pekoes ruled steady. There was a good demand for off-grades at about last rates.

The tone of the London market was generally better last week and demand for the bulk of the offerings was on a broader basis with prices for some types dearer. An important contributory factor was the reduced quantity on offer. Total offerings were only 57,000 packages as compared with over 70,000 packages a week recently.

World 'Overseas

US Notes

The US Congress economic experts have added their voices to the chorus of confidence emanating from official Washington staff members of the Congressional Joint Economic Committee—often described as the 'watchdog' on Administration's economic policies. They believe that the immediate outlook for the United States economy is good, that there is no undue cause for pessimism despite the fact that the full upswing has yet to demonstrate its expected vigour. In a study released a few days ago, the committee staff emphasized that the widely publicised dips in business outlays for new plant and equipment and in net foreign investment should be largely discounted in sound appraisal of economic trend. Both these factors, the report states, 'were foreseen earlier and should not, therefore, be regarded as new or surprising developments, calling for a revision of previous estimates.'

The study does not deal with a possible increase in defence spending if missile programmes are stepped up. But it does note that with the volume of new defence orders now being held in check, an actual increase could take place without putting a heavy strain on the economy or on production capacity. On the other hand, regardless of the trend in US Government spending, the committee staff sees several invigorating factors which should not be overlooked. It points, for instance, to another substantial rise in consumer spending during the third quarter of the year, and the expectation of a further increase in the fourth quarter, despite the uncertainty over passenger car sales. It also anticipates a continuing rise in state and local government outlays for public facilities—a rise which could be accelerated if there is any loosening in financial markets. Moreover, the staff notes that business inventories already have been cut to the point where renewed liquidation appears unlikely during the remainder of 1957, at least. Taking these various factors into account, the report foresees that the gross national product—the total output of goods and services—will reach an annual rate of \$443,500 million in the fourth quarter of 1957, and will average out about \$436,700 million dollars for the year as a whole. These would represent rises of 4 and 5 per cent, respectively, over the records achieved during the corresponding 1956 periods, and would reflect 'moderate increases' in real terms, and not merely on account of higher prices. In light of these projections the committee staff will not believe that any immediate change is required in the Administration's anti-inflationary tax and spending policies, based on purely economic factors, it says any question of policy

area—that of credit and money supply.

The World Bank today announced publication of a study titled "Development Banks" by Williams Diamond, a bank staff member.

The book is the first publication to result from the work of the Economic Development Institute, established by the Bank in 1955 to help train government officials in the economic development of nations.

The World Bank has helped to organise, and in some cases, to finance, development banks in seven-

ral of its member countries, including Ceylon, Ethiopia, Nicaragua, Pakistan and Trukey.

The role of development banks is the subject of several seminars at the Economic Development Institute. The book published today provides a basic text of the course, on which little material in printed form has been available.

Development banks have been active for more than a century, particularly in Western Europe, but they have come into use in newly developing areas of the world only in recent years.

AS a mathematician who had a touch of whimsy about him, Lewis Carroll would be best fitted to study and write a dissertation on the contradictions and paradoxes offered by the word than which no other is more dreaded, inflation. Last week, I related how inflation brings in its wake so utterly delightful a situation as the decision by the Swedish Federation of Labour to ask for a supplemental wage increase to make up for the rise in the cost of living that would arise if, in the first place, labour's demand for a wage increase were conceded. Not so long ago, in a study of the Report on Currency and Finance, an article in the World of Finance section showed how inflation itself was apparently caused, in different countries, by influences that were quite contradictory. I now find I have a wealth of material to throw fresh light, not on inflation itself, but on the contradictions of inflation.

★

For my source material, I must first go to the Lloyds Bank Review in which two writers have posed and sought to answer the intriguing question: "How much more inflation in the US?" Before we discuss the article as such, it is interesting to note that the conclusion is that the American inflation during 1956 was of a brand which "could not be held completely in check by monetary and credit restraints". Why? Because, say the joint authors of this article, the 1956 inflation was the result of an unusual combination of circumstances. Even more intriguing, it has been suggested that 1956 is merely the year in which inflation, which had been in America ever since, say, 1953, came to have outward and recognisable symptoms. That is to say, in the period 1953-55, there was inflation in the sense that the average of industrial prices inched up by 6 per cent. Unfortunately, a concurrent decline of sharper magnitude in agricultural prices—17 per cent over the period—concealed the already existing inflation by rendering the price situation somewhat stable. But, in 1956, there was a recovery of sorts in agricultural prices, such that inflation came "to the centre of the stage as a major national problem". Secondly, industry had embarked on large scale development pro-

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please!"
—As You Like It.

grammes. While the expenditure incurred on this head was heavy, productivity as such showed no appreciable increase. Reference is also made to the efforts of the Federal Reserve Board, through a tight money policy, to keep the inflationary pressures at bay. Tight money policy is intended to make it difficult for businessmen to obtain finance, whether for readily acceding to labour's demand for a wage increase or for the implementation of a development programme. But it is recognised that restraint of this sort is insufficient to prevent "wage-cost-price inflation from riding for a disastrous fall". In this context, President Eisenhower is quoted as saying:

"The full burden of avoiding price inflation, which is an ever present hazard in an expanding economy operating close to capacity, cannot be successfully carried by fiscal and monetary restraints alone. To place this burden on them would invite the risk of producing effects on the structure and functioning of our economy which might, in the years ahead, impair the vitality of competitive enterprise."

★

But the note on which the authors conclude is that the future is much more hopeful in that there are influences at work in the American economy which could overcome the inflationary pressures. The four factors cited in this regard are:

1. The resumption of rapid increase in the productivity of industrial labour.
2. The attainment of ample capacity in almost all lines of industrial production.
3. The creation of confidence that the Federal Reserve authorities have considerable powers to temper inflation, and have the disposition and political independence to exercise them, if necessary.
4. Increasing intensity of competition in almost all lines of American business.

★

As far as I can see, this is an extremely thoughtful contribution to the study of inflation. But two other articles that I have read left me as confused at the end of

reading them as I had been before I chanced upon them. An article, which is promisingly headlined "The causes of inflation: A Basic Enquiry", published in the New York Times reports that there were six main suspects as being the culprit to blame for "the present somewhat puzzling inflation". The first suspect was business, where the charge was that the concentration of power enabled the marking up of prices without regard to the laws of supply and demand. Moreover, business, confident of being able to pass on added costs to the consumer, was thereby rendered less resistant to wage demands from labour. So, in both these ways—by marking up prices and by accepting without demur demands for higher wages from labour—business could be said to be adding to the inflationary pressure. Secondly, labour is charged with pressing for wage increases out of proportion to increases in production. So, with wages running ahead of production, labour is accused of being culpable for aggravating inflationary tendencies. Thirdly, private spending is in the dock because, by being extravagant in the utilisation or distribution of higher income, it aggravates inflationary forces. Fourthly, the Government are held responsible for giving more zoom to the inflationary spiral by heavy spending. Fifthly, it is suggested that taxation accounts for a further impetus being given to inflation in two ways. On the one hand, such levies as sales taxes immediately raised prices paid by consumers. On the other hand, the higher the taxation, the greater the psychological bias in favour of spending such money as is retained. Finally, from the academic point of view, money supply is held out as the villain of the piece. Although the money supply has not increased in America over the last year or two, the velocity of money in circulation has gone up sharply—and this has the same effect as an increase in money supply. The conclusion is: "The most worrisome problem to many an analyst is that, given the current power of business and labour, the classic Government cures directed at the spending side of the inflation equation can succeed only at the cost of a severe slump and unemployment". Frankly, from what I can make of this article, the hunt in America is not

so much for a culprit as for a scapegoat.

★

I then expectantly settled down in my chair to read what Mr Alan Day, writing in The Observer, has called "The ABC of Inflation". I was reassured to read at the outset that "the layman has good reason to feel baffled by conflicting answers". For example, Government may announce that prices are to be raised in order to mop up surplus purchasing power; the next thing that the layman hears is that "prices are being subsidised in order to maintain a plateau of stability". It is equally frustrating to hear an assertion, on the one hand, that the strain on resources must be minimised by reducing output, only to be followed by another statement that output must be raised to meet existing demand. "Ah!" I said to myself, "Mr Day is making sense." But then, as I read on, I found the classical strain coming up. Mr Day has suggested that the whole trouble stems from the fact that, akin to a motor engine which undergoes a great deal of strain if it is driven at relentless speed, even so, an overstrain in the economic machine evidences itself as inflation. Mr Day goes on to add that the only solution is "to run the economy rather less than flat out". As far as I can make out, this is merely another way of suggesting that economic policy, in inflationary circumstances, must not only be disinflationary but deflationary as well. But Mr Day himself confesses that "no one knows how far below capacity we should have to run in order to avoid inflation completely". Just as I began to get disheartened, I found Mr Day once more on the right track. All he urges is that "capacity to produce rises as much as possible each year, so that it always keeps a little ahead of the demand upon it". Suddenly, the thought occurred to me: Right, it is a good idea to have capacity for production always slightly ahead of demand; but in order to achieve such increase in productive capacity new investment would be necessary; the new investment would not immediately have an output to offset the expenditure incurred; and what are we going to do with the time lag during which the money disbursed in adding to productive capacity

parts chasing the stationary number of goods? It seems to me that his sort of discussion merely keeps us going in circles. But I agree entirely with Mr Day when he says that "the best way to deal with inflation is to make sure that our capacity to produce keeps growing as fast as possible". I personally do not see why all our thinking faculties should be enumbed by the fact that investment for creating new capacity itself releases inflationary pressures.

★

For, let us face it, the economic phenomena that are being experienced by most of the countries of the world today are what we recognise as being inflationary pressures as we have known them in the past. But, can we be sure

that the new economic phenomena and old style inflation are one and the same thing? On the contrary, it seems to me that the failure of the classic antidotes to inflation points strongly to the possibility that, strictly speaking, what the world is experiencing is not quite classic inflation. For one thing, one important circumstance has changed. Today, the countries that most greatly fear inflation are those which, whether by accident or by purpose, have achieved a state of full employment. While it is recognised that this factor of full employment, imbuing as it does labour with a much greater bargaining power, might be a prime factor in causing or aggravating inflationary pressures, nobody seems to have made a study of how this power can be offset.

To say that exhortations to labour unions will do the needful, is to be foolishly optimistic. Secondly, as America experienced during 1953-55, inflation need not necessarily affect the whole economy—it may make its appearance felt only in particular fields. In this light, there is sufficient proof to show that the classic measures of high bank rate, etc., are a resounding failure. I shall not now address myself to the task of analysing or studying the new economic phenomena, nor shall I suggest a policy by which these phenomena can be tackled. I shall content myself with observing that we need our economists to work out new laws on inflation, laws which will have regard for the altered circumstances of the world's economy. And I am tempted to

add that I think that the ultimate answer will be found to be an amalgam of an all out attempt to increase production and the judicious use of selective monetary control.

Gateway Gossip

No Zing in the Moorat

HAS the zing gone out of the Moorat sessions in this Gateway City? The days when Dalal Street was not merely crowded—it is, if anything, more chockful of human beings than ever before—but when it also presented a scene of bonhomous happiness and celebration—where are they? Gone, I suppose, with prohibition. There was once a time when, for the mere sake of lending more colour and excitement to this auspicious day, investors and other stock exchange interests made it a particular point to have their names set down in the new kathas taken down from the shelf. But, today, the very atmosphere seems changed. There are all sorts of angles and considerations, factors and policy statements, which are being borne in mind. So much so, the Moorat session nowadays has neither cheer nor activity, neither brightness nor colour. The zing, as I said, has gone out of the Moorat sessions.

Since it is human that reason must be found for any course of action, Dalal Street has been at pains to explain that the absence of cheer is the fault of "the uncertain economic outlook" as envisaged in the Prime Minister's recent speech. I am afraid that this facile scapegoat on which the blame has been foisted is no more than a sophistic attempt on the part of the stock exchange operators to satisfy themselves that a real reason exists for their own failure to evince optimism at Moorat. For, if one were to be levelheaded in one's assessment of prospects, one would find a great many grounds for what I may best term guarded optimism. I refer to such things as the speech made by Mr H. V. R. Iengar at San Francisco, communiques on the prospect of a Japanese line of credit for India, indications of possible Canadian help and the official assertion by West Germany that the Federal Government have every sympathy for India's Plans—and that they intend to do what they can to display this sympathy in concrete terms. I should now like, if I may, to run over these four developments.

In addressing the delegates to the International Industrial Development Conference, Mr Iengar was as emphatic and categorical as he could be on the place and role of the private sector. One word sums up Mr Iengar's view of the private sector's past and future role: "Dominant".

Then, in referring to the so called emphasis that has been given to the public sector, the Reserve Bank

Governor made the point that fields of industry were taken up by Government which not only postulated the marshalling of finances for a magnitude beyond the capacity of the private sector, but also comprise units of endeavour which would be "unprofitable" for several years to come. So, the essential thing to note is that Government were not seeking to reserve for themselves profitable ventures which could just as easily be undertaken by the private sector.

Mr Iengar went on to define Indian socialism as being neither Communism nor State capitalism, but a system which, by eliminating social barriers and ensuring certain fundamental rights, sought to vouchsafe and preserve the dignity and personality of the individual.

I think I shall not be contradicted when I suggest that Mr Iengar's speech should have constituted Bull Point No. 1 for the Moorat session.

Then, we have the discussions in Japan which, in the form of the joint communique of the Prime

Ministers, have borne fruit in the sense that there is an implicit promise of a loan of Yen credit. The latest reports are that an Indian Government mission with Mr B. K. Nehru, the Finance Secretary, heading it is shortly to proceed to Tokyo, to follow up on the Prime Minister's confabulations.

In this context, it is also noteworthy that Mr Iengar planned his return itinerary via Tokyo. We may be sure that the latest developments in Japan will have carried one step further the task of negotiating Japanese aid for India.

Will any one contradict me if I say that this should have constituted Bull Point No. 2 for the Moorat session?

Thirdly, we have the talks with pressmen of the Canadian Minister without portfolio, Mr W. J. Browne, while he was passing through Santa Cruz airport on his way to Saigon. What time we have been getting reports that it will be difficult for India to conclude any substantial new agreements under Public Law 480 with America for the purchase of surplus wheat, it comes as a pleasant surprise to learn that Canada, which has on its hands a embarrass

de richesse in wheat, is now anxious to follow in the footsteps of America. Mr Browne has revealed that TTK in his talks with the Canadian Government had discussed the possibility of purchase of wheat from that country. Mr Browne added that the deal, if finalised, would, as in the case of Public Law 480 agreements, stipulate that the Canadian Government would extend to India as a long term loan the proceeds from the sale of the wheat thus purchased from Canada. And this money, of course, would be available for and utilised in India's development projects.

Can there be any doubt that this should have represented Bull Point No. 3 for the Moorat session?

We come, finally, to the official communique that was released on the visit paid by TTK to West Germany.

The communique states that both the Government and representatives of German industry have "evinced sympathetic, understanding and deep interest in the economic problems which face India". The Federal Government are "most anxious" to assist India and are

(Continued on page 790)

The importance of banking to the COFFEE INDUSTRY

COMMERCIAL cultivation of coffee in India dates from about 1830, and is still almost entirely confined to South India. The yearly crop varies between 20,000 and 30,000 tons, most of which is consumed in India. When a surplus of Indian coffee is available for export, it finds ready buyers in fastidious foreign markets.

Without banking, the growth of the coffee industry would have been impossible. The availability of ready funds when needed, the collection of dues in any part of the country, and the other facilities and guidance offered by a good bank—these are an integral part of the structure of the coffee industry.

We at Palai are proud that so many leading coffee plantations, and indeed important firms in every field of business and industry in South India, employ the complete banking service we offer.

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investment—
Letters of Credit—Bill Collection—
Deposits—Loans & Overdrafts—
Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Multi-pronged Export Drive

The fact that the outflow of our foreign exchange during the First Year of the current Plan has been faster than has been anticipated has necessitated urgent consideration of ways and means to restore the equilibrium in our balance of payments position. Authority has taken action, therefore, along the two lines, open to it. Imports have been drastically curtailed in a bid to slow down the rate of depletion of foreign exchange resources to the maximum extent practicable. Simultaneously, steps are being taken to increase earnings from exports. Even so, as our requirements of

foreign exchange for the successful implementation of the Second Plan are so large that it is accepted on all hands in the country that a substantial portion of foreign exchange has to be obtained from outside sources in the shape of loans.

A lasting solution to the foreign exchange problem can, however, result only from our ability to step up our exports at a rapid pace. For import cuts and even foreign assistance are, at best, temporary palliatives. The need for increasing our exports has been emphasised by the Planning Commission also. But

the quantum of export earnings estimated to be reached by 1961 in the present context of the high rate of outflow of foreign exchange is found to be quite inadequate. It is evident that our exports have to take care of a much larger portion of our foreign exchange requirements than had been allotted to them in the Plan.

Government have not been slow to realise the vital importance of export earnings to the national economy. A vigorous drive to stimulate exports is being made by setting up Export Promotion Councils and other organisations such as the Export Risk Insurance Corporation. It is to be noted, however, that hard and sustained effort has to be put forth before any sizable increase in our export earnings can result.

According to Mr Naval H. Tata, if the steps so far taken by Government to stimulate exports are to be effective, Authority has to bestow urgent attention on the problems facing the export industries in the country. Speaking at the second quarterly general meeting of the Indian Merchants' Chamber, Mr Tata declared that only by bestowing concerted attention on ways and means of stimulating exports could the country hope to avoid recurrent anxiety over foreign exchange. The measures taken by Authority were no doubt steps in the right direction but the desired results would take a long time to come if Government were slow to understand and remedy the disabilities that the indigenous industries were suffering from. In this regard Mr Tata suggested that Authority could give a fillip to exports by granting a rebate of import duty on exported commodities in respect of their import ingredients, remission of income tax at a reasonable rate in respect of income from exports, export subsidies, and elimination of the incidence of sales tax on commodities meant for export. There was also urgent need for simplifying the procedure and formulae for the grant of rebates as prevailing regulations were such that the industries would forego the rebate of import duty rather than undergo the tortuous procedure to get it.

bright for the simple reason that the State has come to rely more and more on the cooperative movement for the implementation of its development programmes. The Rural Credit Survey Committee has also emphasised the need for active State participation in the share capital of cooperative credit institutions. Mr Saraiya indicated that the recommendations of the Committee in this regard would be implemented before long.

The steep fall in deposits of the State Cooperative Bank seems to have stemmed largely from the present stringency in the money market and the consequent increase in the interest rates. As the bank is obliged to provide production credits at the cheapest possible rate, it has not been able to retain or attract deposits which can get higher rates of interest from the commercial banks which have no such obligation. Even though the bank has also raised the interest rates on short-term deposits in conformity with the upward trend of the money market, it has been found that the interests on similar deposits offered by joint-stock banks are much higher. Mr Saraiya disclosed that the Board of Directors of the bank had decided to raise the deposit rate further but he also laid emphasis on the fact that there was an inherent limitation to the bank's ability to compete with joint-stock banks.

Outlook for Cooperative Movement

Presiding over the annual general meeting of the Bombay State Cooperative Bank in Bombay last week, Mr R. G. Saraiya disclosed that the inflationary pressure in the country had been one of the main causes for the significant fall in the deposits resources of the bank. It would appear, however, that the outlook of the Cooperative movement will continue to remain

World of Cotton

Better Enquiry on Export Front: Domestic Demand Moderate

OFFTAKE in the Bombay Piece-goods market continues to be at a low level, while better enquiries are reported on the export front. So far as foreign enquiries are concerned, it may be said with some confidence that there is likely to be an active revival of trade in the near future. Fairly satisfactory business is reported to have been concluded with Indonesia, Australia and the UK. There are prospects of a larger business with Sudan in the near future. Exports to Burma are also expected to pick up in the near future. There are indications that Indian exports of cloth to Burma will be maintained at a high level in the next few months. Shipments to this country, during the first eight months of the current year, have been higher at 31.67 million yards as against only 9.99 million yards in the corresponding period of last year.

Better enquiries from overseas buyers are fully reflected in the export figures which show an impressive recovery in September. Exports at 72.08 million yards record

an increase of as much as 22 million yards over August. From 95.14 million yards in January, there has been a progressive tapering off in the monthly export figures, and August was the lowest at 50.18 million yards. Increases were pronounced in medium, fine and super-fine varieties.

During the nine months of the year, total exports have amounted to 648.22 million yards, showing an increase of 85 million yards over the corresponding period of last year. At the present rate of export progress, it appears clear that the Indian textile industry may not be able to fulfil the annual target of 1,000 million yards, though the industry has hopes to exceed the last year's export figure; and a conservative estimate places the yardage at 850 million yards.

In contrast, trading conditions in the domestic market have not shown any change and the demand has been only on a moderate scale. The pre-Diwali demand has not been on the customary scale and the figures of cloth stocks, avail-

able for the latest months, reflect the gravity of the situation. Stocks, which were of the order of 2.97 lakh bales in June last, rose to 3.19 lakh bales in July. Stock figures for August and September have been still higher at 3.38 lakh bales and 3.56 lakh bales respectively. Apart from these, stocks sold, but not taken delivery of by the trade, are also considerable.

But, there are indications that the problem of growing accumulation of stocks with the industry and trade is under close study by the Government. Trade circles are on the belief that some relief to the industry will be forthcoming after the return of the Finance Minister from the foreign tour. It remains to be seen what form the relief measures will take. It is felt that the rates of the duty on medium varieties, which account for the bulk of the overall output, should be adjusted in such a way that the production of this category is not affected. It is, therefore, felt that there is a good case for a fair reduction in the duty on medium cloth.

Meanwhile, the Cotton futures market has cried a halt to the recession witnessed in the previous week. The recession was attributed to rumours of official intervention in the event of a rapid advance in prices. Speculators, therefore, preferred to be cautious and unloaded a part of their holdings. But, the present recovery in prices is the result of brisk bear-covering following rumours of the Government reducing the excise duty on cloth. Moreover, developments on the Syrian border have changed the pattern of trading; and the rise in prices, that has now taken place, is mainly due to extensive purchases made by spot houses.

In the spot market, demand from spinners continues unabated for domestic styles.

On the export front, shippers have shown more interest in Bengal and Zoda, thanks to increasing overseas enquiries.

In foreign cottons, mill interest is at a low ebb, limited only to spot lots of US styles and Sudans. Fresh shipment business has also taken place in Jinja for October delivery. It is understood that the Government of India are considering the question of allowing imports of 20,000 to 25,000 bales of Egyptian cotton stapling 1-3/16" and above. The mode of payment will be on the basis of the Indo-Egyptian Payment Agreement under which payment has to be made for 60 per cent in sterling and the balance 40 per cent in rupees.

Meanwhile, the cotton statistical position has remained unchanged

and needy mills have entered the market to meet their requirements. From the complete figures of the stock position of raw cotton with the mills and the trade, as on the 1st September 1957, it appears that the position of carry-over of stocks, at the commencement of the current season, is not encouraging.

The carry-over stock of Indian cotton is placed at 11.2 lakh bales as compared with 14.1 lakh bales in the previous season. In terms of mill consumption, the quantity will be just sufficient for three months. With the anticipated reduction in the crop output coupled with depleted stocks, the supply position of Indian cotton, during the current season, is likely to be more difficult than for many years in the past.

NEW YORK COTTON MARKET

Prices on the New York cotton futures market, after showing initial easiness, recovered partially at the close. More favourable weather in the main cotton belt induced some early selling. Increased spot house buying and short-covering by professional traders, however, caused a partial rally in the late trading.

The distant months displayed a steady undertone on the belief that, if Congress passed new farm legislation at the next session, it would be too late to affect the 1958 crop. Middling Spot was quoted at 35.25 cents per pound.

LIVERPOOL COTTON MARKET

Trading on the Liverpool Cotton market was generally dull with small American selling and some hedging limits being reduced. Local short-covering provided the only offtake. The Sudan contract continued to rule quiet.

Gateway Markets

Oils and Oilseeds Quiet

A note of caution was discernible on the Oils and Oilseeds markets in Bombay last week. With fears of imposition of stringent margins and reports of increased groundnut arrivals, buyers appeared reluctant to increase their commitments. Linseed and Cottonseed were also quiet in thin dealings.

Trading in the Castorseed section was largely of a speculative nature in the absence of any major deve-

lopment in respect of oil exports. Overseas prices of castor oil remained generally easy and business continued to be difficult with the USA and UK showing little response. Castorseed May delivery, after touching a high of Rs 155.75, finished quiet at Rs 154. Conditions in the spot section remained, however, generally steady. Madras quality was quoted at Rs 33.37 and Castor Oil, commercial quality, at Rs 18.44.

The Groundnut section failed to make any headway and followed a downward course on rumours that the Forward Markets Commission might impose ceilings and margins on groundnut oil futures. February delivery, after opening at Rs 153 and touching a low of Rs 156.87, finished better at Rs 157. In the ready section, bold quality was done at Rs 32.25 and Groundnut Oil at Rs 19.62.

The Linseed section presented a comparatively cheerful front on the belief that the outlook for overseas buying of linseed oil had

improved substantially. May delivery changed hands upto Rs 30.37, to finish a shade quieter at Rs 30.25. In the ready section, bold quality was quoted at Rs 29.50 and Linseed Oil at Rs 15.62.

Trading in the Cottonseed section was rather quiet with February delivery closing at Rs 102.50 against Rs 103.50, the higher touched during the week.

Gold & Silver

The Bombay Bullion Exchange was featured by a sharp rise in spot Gold where buoyancy was attributed to broadening seasonal demand. Futures also commenced on a cheerful note in unison with the ready section; but higher levels produced caution. Silver, however, failed to consolidate initial gains on lack of follow-through support.

In the Gold section, arrivals and offtake were estimated at 2,000 and 4,000 tolas respectively. Kartik delivery moved between Rs 107.31 and Rs 107.47 and Mangir delivery between Rs 107.31 and Rs 107.62. Ready touched a high of Rs 107.78 and a low of Rs 107.87. Sovereign remained very steady at Rs 70.75, thanks to "Diwali" demand.

In the Silver section, Kartik delivery changed hands at Rs 182.37 and Rs 182.75 and Mangir delivery at Rs 183.19 to Rs 183.62. In the spot section, the rate was quoted at Rs 181.94—the highest touched being Rs 182.31.

Non-Ferrous Metals

After the lapse of two weeks, steadier conditions were noticeable in the Non-Ferrous Metals market, thanks to good demand from North Indian centres. Copper ready was quoted at Rs 154 per cwt. Zinc steadied up to Rs 61 from Rs 60 per cwt and Lead to Rs 75 from Rs 73 per cwt. The market for Tin remained unchanged at Rs 130 per quarter.

On the London Metal Exchange, Copper spot was quoted at £181 per ton. Sentiment was rather uncertain. Zinc was steady at £68. No encouraging feature was in evidence. Lead was quiet at £84 on lack of consumer demand. Tin hovered idly around £730 per ton as no appreciable purchase activity was in evidence. The tone of the Singapore market was also quiet, quoting Str. \$357.

Yarn

Barring a slight improvement in Staple-Fibre yarn, prices of other yarns declined further in the absence of support. In the spot section for Art Silk yarn, prices recorded a drop of about 5 NP per pound in all varieties, including indigenous goods. The financial stringency, absence of demand from up-country weavers and subdued con-

What has **steel** to do with Life Insurance? The answer has far-reaching implications.

The Life Insurance Corporation is a repository of the savings of millions of people. As such it has a responsibility to see that these funds are safely **and** gainfully invested in enterprises (both public and private) which benefit the country.

Such an enterprise is the Steel Industry. It is vital to our progress. Homes and factories, ships and trains, dams and tractors—they all need Steel and lots of it.

Indeed, investing its funds in Steel the Life **Insurance** Corporation is investing in the future of India.

Life Insurance Corporation of India

PM on the FM

BACK home from his tour of Japan, Mr Nehru took the earliest opportunity of meeting the press at a conference at which he answered a variety of questions on events at home and abroad. Though he covered a wide field, from the Middle East situation to drought conditions in parts of the country, the real interest of the assembled pressmen centred round what Mr Nehru had to say about certain reported statements of Mr T. T. Krishnamachari in the US. It is an open secret that, for some weeks now, the Communist party and its allies have been working themselves into a synthetic frenzy over certain remarks of Mr T. T. Krishnamachari in an interview with the New Delhi correspondent of the New York Times. They have systematically attempted to work up public passion over certain alleged distortions of India's foreign policy; and the Communist party had officially avowed its intention of having the Finance Minister hauled over the coals when he got back. Not unnaturally, therefore, Mr Nehru was plied with questions on the subject at the press conference. Mr Nehru, who is an old hand at the game of managing loaded questions, elucidated Government policy without giving anything away on the extent of Mr Krishnamachari's alleged departure from Government's basic policy.

The episode of Mr Krishnamachari's interview with the New York Times is in many respects a cautionary tale on the semantic hazards of political utterances. It has morals of another sort, too; those, for instance, that call in question the all too naive modern assumption that government is merely a question of public relations.

In the course of the last ten years, politics has been sought to be made an adjunct of publicity, and an impressive apparatus for a two way traffic of views, feelings, prejudices and predilections has been built up. Governments have erected public relations offices and publicity bureaus; and the institution of press conferences and press interviews has played its part. All these have their useful functions, but they have imperceptibly changed from the position of useful tools to that of a tyrannous machine. None dare do without it these days and, in an age of appalling credulousness, it has imposed its own humourless humbug on a naive public. There is hardly any government that dares frame its policies without taking counsel from the public relations

angle. Public relations expertise and jargon have invaded Government as it has trade. It is no longer true in politics, as it is no longer true in commerce, that a good wine needs no bush. You have to sell your policy as much as your brand of shaving cream.

There need perhaps be no serious objection to this, were it not for the fact that you are obliged to simplify a great deal that cannot possibly be simplified in your effort to put it across. (I am assuming here that what is being sought is merely to simplify and not, as is the habit of some ads, to boost your ware. The latter, of course, is a more pernicious evil.) Really complicated political and economic facts cannot, by the nature of things, be explained in words of one syllable. This is particularly so of the complicated, often self-contradictory motivations behind national policies. These motivations, like the complex of a vast railway terminus, have a criss-cross of lines that have the most amazingly precise apparatus of remote signal and control. And yet, when you try to explain it in a few words to a layman, you will find that you are not succeeding in rendering it properly. The New York Times interview was, both on the part of the Finance Minister and the correspondent, a well intentioned attempt to "sell" the Indian Plan to the American people. There is no question, as Mr Nehru conceded, of Mr Krishnamachari having been wrongly quoted; but the vast cluster of contemporary and historical motivation behind Indian policy has been sought to be simplified and in the process has been distorted. Take, for instance, the question of non alignment. Mr Krishnamachari stated that India has been forced to choose a policy of non alignment out of economic necessity. When questioned on that, Mr Nehru was obliged to explain that it was not correct to relate our non alignment exclusively with economic necessity. Mr Nehru related it to other compelling factors and went to the extent of saying that the policy was derived from the thinking of the past two generations on the subject. As an after thought, he even claimed that it dates back to Asoka, and that it was, in fact, of the essence of our way of life.

But all this may be true and yet not contradict other reasons for our non alignment. Mr Krishnamachari thought of economic necessity as a factor that determines our non involvement. I myself can think of geophysical reasons for such a policy. But neither geophysical reasons nor the economic reason excluded the historical reasons for our policy. Indeed, a marxist would argue that the economic reason had historically determined the other rationalisations of this policy and a military expert, on the other hand, would probably claim that geopolitics has put on the more respectable garb of national spirit. Thus, none need seriously quarrel over Mr Krishnamachari's derivation of the source of our policy of non alignment.

Moreover, a policy that is the consensus of a whole nation does not have approbation for identical reasons from every one acquiescing in it. Again, contexts, too, have their say in the matter of relative emphasis. Mr Krishnamachari was not holding forth in a debating society on the bases of our foreign policy; he was making certain observations in the context of securing finances from America for our economic plan. And, in an attempt to brush aside irrelevances like India's political attitudes and as an answer, nevertheless, to such objections, he mentioned one aspect of our international stance. That should not be taken as a solemn enunciation of foreign policy, which, in any case, is not his job.

When one sees all this muddle caused by a necessary act of democratic explanation and maintenance of "public relations," one almost wishes for the days when things were in camera without all this fanfare and publicity. The pity of it all is that even today the real things have to be done the old way of hard negotiations; but you cannot apparently do without these "democratic gestures" which are supposed to mould public opinion one way or the other, but which only seem to incommode the real tasks.

Of the semantic difficulties that arise from capsule presentation of ideas, you find an instance from Mr Krishnamachari's interview and Mr Nehru's comment on it. Mr Krishnamachari is reported to have said in the US that "India is really closer to the United States despite superficial appearances to the reverse". Commenting on this, Mr Nehru said in his press conference: "Yes, not politically, but on the economic plane that is true". I must confess, I am rather puzzled by Mr Nehru's gloss. I have not before me the exact context in which Mr Krishnamachari said that we were nearer the US in certain respects; but it seems to me that our nearness to the US, despite appearances, is in the matter of ultimate political values,

in our common concern for the value of liberty and individual self expression. But Mr Nehru says that our nearness to the US is not on the political plane. And, again, he goes on to imply that economically we are nearer the US. In what sense are we closer to the US economically? Surely, it cannot be in any of the obvious senses I can readily think of. Does Mr Nehru mean that we have a free private sector unlike the Communist countries? But it would appear that this commonness in the matter of having a free private sector (the extent of which is sure to be hotly disputed) is implicitly contrasted by Mr Nehru with the absence of a similar common ground in politics. If Mr Nehru was referring to ultimate political ideals, surely he is wrong. For, the extent of unanimity and the nature of such political unanimity are far more decisive than our commonness in the matter of either economic ideals or actuality. It occurs to me that Mr Nehru may have meant the attitudes to particular aspects of the present international situation in which India and the US find themselves at opposite ends. If that was his meaning, and it is not very apparent, it has in fact to be extracted in this painful fashion; this very necessity indicates the verbal hazards of talking about complicated subjects in the atmosphere that is a paradoxical combination of smoking-room and a hostile meeting.

Mr Nehru, however, effectively scotched Communist hopes of a rift in the Cabinet and consequential confusion. He made it abundantly clear that the fact that he did not agree with certain overtones of Mr Krishnamachari's speeches did not make the slightest difference to his admiration for him as one "who has done a fine job of work and has carried a heavy burden." And, except on the question of foreign policy and on Mr Krishnamachari's somewhat scarifying references to China and Russia rushing in to aid a hypothetical Communist revolution in India, Mr Nehru stoutly defended his colleague. On the question of nationalisation, for instance, he agreed with Mr Krishnamachari and made short shrift of arguments of those who, like the Communists, disingenuously equated Socialism with mere nationalisation of existing units.

What was more fascinating than the content of Mr Nehru's replies was the adroitness with which he dealt with what was undoubtedly a ticklish situation. It was

DEBENTURES GUARANTEED BY THE GOVERNMENT OF ANDHRA PRADESH

THE ANDHRA CO-OPERATIVE CENTRAL LAND MORTGAGE BANK LTD.

Post Box No. 257, GUNFOUNDRY, Hyderabad-1 (Dn.)

President : SRI BHOGARAJU VENKATARATNAM.

Paid-up Capital and Reserves Rs. 37.37 Lakhs.

Subscriptions are invited for:

4½ per cent 1953-65 Debentures Rs. 45 Lakhs Par
 4½ per cent 1967-72 Debentures Rs. 55 Lakhs Par

The issue is open for subscription till 25.11.1957 and will be closed earlier when subscriptions to the 4½ per cent Debentures amount approximately to Rs. 45 Lakhs and subscriptions to 4½ per cent Debentures amount approximately to Rs. 55 lakhs.

The Debentures are Trust Securities under the Indian Trusts Act and are also approved Securities under Insurance Act 1938 and the Banking Companies Act of 1949. A Redemption Fund will be constituted to pay off the Debentures on maturity.

Full amount to be remitted with the application. Other particulars and application forms can be had from the Secretary or from any Banker or Broker.

M. DATTATRAYULU,
Secretary.

... hard iron lay dead in slumber deep
 And we stirred it to life, ho !
 In the dark depths of a million years it lay hid
 And we stirred it to life, ho !
 Tamed by our strong hands
 It sings to the tune we call.
 Its silence of long years have we broken, ho !
 The dead doth stir with new life today
 And rushes forth the wide world to conquer.
 Fearless with our two hands today
 Its reins we hold strong, ho !

North Indian Notes

Foreign Exchange Resources

Lack of perspective has been at the root of bringing the general reaction about the present foreign exchange position on the verge of crisis-mongering. It is little realised that they are the inevitable manifestations of the drive to build the firm foundations of the industrial economy in the country. The emphasis that has been placed on industrial development in the Second Plan, has necessarily involved the import of capital goods and machinery in the country on a scale which has precipitated the decline in the reserves of foreign exchange. Figures of such imports would bear out this point. While in 1952-53 the value of capital goods imported, aggregated Rs 102 crores it shot up to Rs 253 crores in 1956-57. Similarly the import of producer goods increased from Rs 313 crores in 1952-53 to Rs 438 crores in 1956-57. The import of machinery alone amounted to Rs 178 crores in 1956-57 while import of iron and steel manufactures amounted to Rs 148 crores. Against this the import of consumer goods declined from Rs 256 crores in 1952-53 to Rs 149 crores in 1956-57.

If at all the present troubles have any lesson it is that of exercising greater vigilance on the import programme and paying more attention to develop our export trade. And the Government's trade policy has been in line with these requirements. Speaking at Delhi Mr Manubhai Shah, Minister of State for Industry, outlined the policy of the Government which he said was aimed at reducing imports to the bone, increasing the indigenous production as fast as possible to the maximum, promoting exports, working out a deferred payments basis for import of machinery and equipment and negotiating the necessary foreign credit lines.

Promotion of exports is by far the most fruitful from the long-term point of view. And several measures have been taken for the promotion of exports such as relaxation of export restrictions, setting up of 14 export promotion councils for different industries and items, sending of delegations to various countries to make on the spot studies, participation in international fairs, market surveys in foreign countries and appointment of a foreign trade board.

Mr Shah also referred to certain fiscal measures which the Government have in view for implementation such as refund of import duties collected on imported components of the manufactured products sought to be exported from the country, quality control, removal of bottlenecks in shipping and railway transport.

Mr Shah claimed good success for the deferred payment scheme. Upto the end of August, 137 deferred payment projects had been sanctioned to the tune of Rs 59.27 crores including Rs 16.95 crores in cash payment and Rs 5.94 crores in foreign capital investment.

Discipline in Industry

The outbreak of strikes in recent times in different parts of the country and threats of strikes have tended to make the labour situation a source of increasing concern and embarrassment to the Government. Such breaches of the industrial peace have served to underline the necessity for a code of conduct which could be enforced by means of sanctions against infringement.

In this connection the Standing Labour Committee has recommended measures to be taken by both employers' and workers' organisations against their constituents who have committed breaches of code. The penalty in cases of continuous infringement extends to disaffiliation from the central organisations. For the implementation of the code the Committee has in view the setting up of machinery at various levels.

Addressing the 16th session of the Standing Labour Committee Mr G. L. Nanda, Union Labour Minister pointed out that mutual settlement of disputes was in the best interest of labour and that adjudication should be availed of only as a last resort. Such a prac-

tice could evolve only on the basis of mutual goodwill and faith between employers and workers. In such a setting the need for a proper machinery for redressal of grievances in a prompt and fair way becomes all-important. Expedient implementation of awards and agreements is imperative if labour relations are not to deteriorate to the point where they become a game of trial by strength.

The contribution of the respective parties will be judged by what they do to prevent breaches of awards and agreements. Governmental sanctions will certainly strengthen the legal machinery against such breaches. But it is far more preferable if such sanctions are evolved by the parties on a voluntary basis. Mr Nanda therefore appealed to the members to consider ways of evolving such voluntary sanctions.

The employers' role in promoting a peaceful industrial climate in the country would lie in the speedy and prompt implementation of the awards. Though the general response from the employers in this respect has been encouraging attempts to circumvent such awards by appealing to the Supreme Court have not been infrequent. A lot of friction would be avoided if the employers realise their responsibility and observe the spirit behind the awards once they have been settled. The standing Committee is also in favour of discouraging such frequent resort to law courts and has stressed the need for a settlement before having recourse to law courts.

NORTH INDIAN MARKETS

Fixation of Cane Price

THE Government of India have fixed Rs 1.44 per maund as the minimum price for gate deliveries and Rs 1.31 per maund for deliveries at rail-centres for sugarcane to be purchased by vacuum pan factories during the 1957-58 season and are subject to the formula for linking the price of sugarcane with the price of sugar.

The Government of Bombay have already decided that the system of linking the price of sugarcane with the price of sugar does not suit the conditions peculiar to the factories in the Bombay State. Most of these factories own extensive farms of sugarcane, which are their main sources of supply. Such factories are disuaded from purchasing sugarcane

from the cultivators due to the fact that they do not know what additional price they may have to pay in future. Instead of having this uncertainty, they prefer not to buy and to rely on their own resources.

Meanwhile, conflicting views in regard to the desirability of resumption of futures trading in sugar are being conveyed by the sugar-producing States to the Forward Markets Commission. While Uttar Pradesh has favoured the resumption of futures trading, Bombay, Andhra, Madras, Hyderabad and the PEPSU have expressed the view that the time is not opportune.

The country's sugar industry is also divided on the issue. It is

Delhi
Review

learnt that, while the Indian Sugar Mills' Association and its western Uttar Pradesh branch have expressed fears that resumption of futures trading may interfere with sugar production targets, the Deccan Sugar Factories' Association has expressed the view that the time is opportune for resumption of forward trading in sugar.

Despite good buying enquiry, Sugar prices have eased further due to selling pressure by factories in view of comfortable supply position following the recent release for free sale. Some demand from Madras, Saurashtra and the Punjab is reported. Following are the latest mill-delivery rates (per maund) quoted in the Hapur Market:—Meerut (D-28) Rs 33; Simbhauli (E-29) Rs 33.25; Amroha (D-29) Rs 32.06; Bijnore (E-29) Rs 32.12; Mansoorpur (C-28) Rs 33.25; Daurala (C-29) Rs 33.50 and Shamli (B-28) Rs 33.75.

The Khandasari market rules very steady due to good demand. Rates are moving between Rs 27 and Rs 32 per maund, according to quality.

Gur

The Hapur market for new Gur continues to rule steady, thanks to good demand locally and from Delhi. Daily arrivals have gone up to an average of 1,000 maunds. Stocks of old quality gur are estimated around 7,000 maunds, the corresponding figure last year being 14,000 maunds. Prevailing prices (per maund) are:—Old gur Rs 11.25 per maund for Kotla quality and new gur Rs 13.50 to Rs 16.00, according to quality.

Foodgrains

Steady conditions have continued to prevail in the Hapur Foodgrains market. Wheat average quality has registered a small rise, to be quoted at Rs 16.19 per maund. Daily arrivals from the rural areas are slightly better at an average of 100 maunds. The market for Rice continues to rule steady. Harvesting of paddy crop in west Uttar Pradesh is nearing completion. Gram prices have also appreciated following good demand in the face of poor stocks, while the prices of Barley and Bejra have improved slightly. Despite good stocks, Arhar rules steady following good trade enquiry.

Mixed conditions are noticed in the Delhi grains market. Wheat prices are unchanged, while there has been a good demand for Basmati Rice. With the commencement of arrivals of new Bajra in the producing centres, rates have shown small losses.

(Continued on page 790)

The Peninsula

Inter-State Relations

THIS week has brought yet another indication that the southern States are slowly discovering to their great relief, that no dispute between them is so difficult as to defy solution. The Conference of Kerala and Madras Ministers which discussed at Trivandrum on October 19 the utilisation of river waters in Kerala decided that the matter should be further referred to the engineers of both the States and for a more intensive study both as to the assessment of water resources and the reasonable requirements and utilisation thereof. It has also been decided that the Conference should meet again to take further

decisions in the matter when the engineers' reports become ready.

The most significant part of the joint statement issued after the conclusion of the discussions is that which reiterates the faith of both the States in the amicable settlement of inter-state disputes by the States themselves. The Statement says, *inter alia*, "In coming to a final decision, the representatives of both the States felt that in the interests of good relationship, it would be most advantageous to reach agreed solutions, rather than rely upon arbitration by a third party".

In recent weeks the Chief Ministers of Andhra, Madras, Mysore and Kerala have given ample evidence of their readiness to settle all outstanding inter-State problems by themselves. It is, of course, to be admitted that the commendable manner in which Andhra and Madras have arrived at a settlement of the border dispute has greatly enhanced the chances of amicable settlement of disputes in the whole of the Southern Zone. By accepting Mr Pataskar's recommendations in toto both Mr Sanjiva Reddy and Mr Kamaraj have exhibited rare courage in tackling a problem which has bristled with numerous difficulties. Simultaneously, they have also enhanced the prestige of their Governments in the comity of States in India.

The second meeting of the Southern Zonal Council held recently in Hyderabad at which the settlement of the border dispute between Madras and Andhra was officially announced, also laid the foundation not only for mutual agreements on all disputes among the States comprising the Zone but also for joint action in mutually advantageous directions. Shortly after the Zonal Council meeting, Mr Sanjiva Reddy announced that Andhra and Mysore had arrived at a satisfactory agreement on the utilisation of the waters of the Tungabhadra.

Of the States in the Southern Zonal Council, Madras has ample reason to feel gratified at the developments that have taken place as a result of its discussion with other States under the aegis of the Council. The border dispute has now ceased to divert the attention of the people in the State. Madras has got the assurance from Andhra that that Government will have no objection to making available to the northern districts of Madras the surplus waters from the Godavari and Krishna. In this regard Andhra has already instructed its Chief Engineer to prepare a report on the feasibility of the utilisation of the waters of these rivers.

The Trivandrum Conference on the utilisation of the waters of the Parambikulam and other rivers in Kerala has also revealed that the Kerala Government will not place any unreasonable obstacle in the way of an agreement. From the joint statement it would appear that so long as Kerala is assured of a sufficient flow of water to meet its requirements of irrigation, navigational and other needs, it will not have any objection to the utilisation of the waters from its rivers by Madras. Both Mr Kamaraj and Mr Nambudiripad have pointed out that talks of rights of the two States over the waters of the rivers will be detrimental to an early agreement on the question. There is an impression in some quarters in Madras that as a considerable portion of the catchment area of the rivers lies in Madras State, Madras has an inalienable right over the waters of the rivers. Similarly there are some in Kerala who argue that since the rivers flow in their State, Madras can possibly have no claim over their waters. Mr Kamaraj has rightly pointed out that such misapprehensions have to be cleared.

Speaking at a public meeting recently at Madurai, Mr E. M. S. Nambudiripad, declared that when he dealt with problems like the utilisation of the west flowing rivers in Kerala he was primarily concerned with the question of using the waters to the best advantage not for this or that State but for the country as a whole. In this view there was no room for any agitation. The main point that had to be clarified was whether no damage would be done to the plains of Kerala by the diversion of the waters of the west flowing rivers to Madras. Mr Nambudiripad seemed to think that the apprehension that with the diversion of the waters the plains of Kerala would

turn into arid deserts were baseless. He also noted that by agreeing to the diversion of the rivers, Kerala stood to gain indirectly because his State which was deficit in foodgrains could get part of the increased production in Madras.

Referring to inter-State disputes in general, Mr Nambudiripad emphasised that while dealing with such matters it was imperative to keep in mind the fact that all the States were inseparable parts of a big whole. Only then it would be possible to arrive at amicable settlements. Instead if people began to think of each State as an independent entity, problems would only multiply.

The joint discussions of the Chief Ministers in the Southern Zonal Council have helped to bring about the realisation that parochial considerations and their offshoots such as inalienable rights of one State or the other, should strictly be eschewed from joint-talks on inter-State problems. Therefore, in dealing with the utilisation of Parambikulam waters, the main consideration should be, as the Kerala Chief Minister has pointed out, the utilisation of the waters to the best advantage. At the same time it is to be borne in mind that the question of diversion of the waters of the west flowing rivers will arise only when it is settled beyond any shadow of doubt that by such diversion the irrigation and other needs of Kerala will not be jeopardised. By the same token, there should be equally no difficulty in coming to an agreement over the utilisation of the waters of rivers which now flow uselessly into the sea and which cannot be put to profitable use in the State in which they flow. The larger interest of the nation demands that such waters be put to good purpose by people in the neighbouring State, if that is feasible.

South Indian Notes

University Education

Delivering the Convocation address of the Annamalai University at Chidambaram, Mr C. D. Deshmukh, Chairman of the University Grants Commission, stated that the basis of a sound and worthwhile university life is a proper understanding of the relationships between the individual and society. Deploing the lack of a real sense of fraternity, he pointed out that it was this which posed the greatest danger to civilization. The multiplicity of fraternities that exist are so many forces that are hostile to the true interests of the students. The proper role of the students would lie in rectifying this phenomenon.

Explaining the functions of the University Grants Commission, Mr Deshmukh said that their aim was to encourage the growth of unitary and residential universities in the country. But considering the many difficulties and obstacles, the conversion of the existing universities into unitary and residential types is a very remote ideal. In this connection he deprecated the tendency to start new universities. But the most undesirable development is that political pressure should be brought to bear on such issues while even elementary courtesy by way of consultation, is denied to the University Grants Commission. This has put the Commission which is finding it difficult to finance even existing universities, in the sad predicament of having to refuse aid to the newly started ones.

Making a plea for the establishment of University bookshops in the various universities, Mr Deshmukh remarked that only this would help to rectify the disadvantages of both the urban and rural universities. The danger of urban universities was that they were likely to be cut of tune with the moods and special needs of the rural areas while the rural universities ran the risk of becoming intellectual backwaters

out of touch with the main currents in applied science and technology.

Mr Deshmukh praised the work done by the Annamalai University in providing post graduate and research courses in agriculture and said by doing this the university has performed one of the functions which a university should fulfil, namely that of providing leadership in developing a contemporary culture bringing the best that is thought and said in the world within the range not only of the students and University but also of the surrounding community. Mr Deshmukh also expressed satisfaction with the remarkable progress made by the University in other fields.

Social Welfare

Addressing a joint meeting of the members of various Women's welfare Organisations of Mangalore, Mrs. Durgabai Deshmukh stated that the Central Social Welfare Board had changed the old conception of social welfare and had now raised a new slogan 'not charity, but work with full wage'. This is only as it should be, for the true spirit behind any scheme of social welfare is the feeling of oneness and equality with the helpless victims of cruel social and economic circumstances. The object of social welfare is to restore social justice and not to dispense charity. The success of welfare institutions will be judged by the measure in which they provide opportunities of employment and such other schemes for their advancement.

True to its motto the Central Social Welfare Board has started a number of Industrial Production Units for providing employment to women not only in orphanages but also in their homes. Their scope for giving permanent employment has been guaranteed by making them ancillary units to industries, for thereby the marketability of the products turned out in the welfare centres is also assured. Mrs Durgabai claimed that in some of these units women are able to earn as much as three to four rupees a day. She also pointed out that such schemes for creating employment facilities for women were being pushed through in several States in the country.

The Board had started many socio-economic projects in some important centres. In the centre at Hyderabad nearly 1800 women including a number of women of police families had been provided employment. It is highly desirable that such employment facilities should as far as practicable be made available at their homes so

that their family life suffers the least interference.

Outlining the schemes for Mysore, Mrs Durgabai said that out of 22 districts in New Mysore State 30 Welfare Extension Projects had been started. Under the Second Plan a sum of nearly Rs 1.01 crore had been allotted for social welfare activities in Mysore. Grants in aid to voluntary welfare organisations had been allotted to Mysore to the tune of Rs 18 lakhs and out of these an amount of Rs 11.75 lakhs had already been sanctioned to 273 institutions.

Mrs Durgabai regretted that Mysore had not attempted to take up even one socio-economic project while even backward States such as Rajasthan and Orissa had been working such units. In this connection she pointed out that in the case of some of these schemes like Rescue Homes and Industrial Production Units the State Governments would only have to act as liaison with no financial liability attached, the entire funds being borne by the Central Social Welfare Board.

S. E. RLY. TENDERS

Sealed tenders are invited for supply of the following materials:

Tender No. GM/Ad-hoc/Steel/Wire/Maintenance/Sept/57 for supply of approximately 2000 tons R. S. Joist, M. S. Channels, Plates, Angles, Flats, Rounds and Sheets and approximately 160 tons wire. Ex. stock offers will be preferred. Offers which are subject to grant of or recommendation for Import License will not be considered.

Tenders will be opened on November 18, 1957 at 12 noon.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta—23 on remittance of Rs 5/- (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E. Railway, Garden Reach, Calcutta by local firms.

Earnest money of Rs 1000/- is to be deposited with the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta—23 and the receipt obtained should accompany the tender without which the tender is liable to be rejected. Approved contractors who have already made a permanent deposit of Rs 1000/- with the Controller of Stores need not pay the Earnest money.

Firms not on this Railway's list of approved Contractors must enclose a valid Income Tax Clearance Certificate with the tender.

S79 GENERAL MANAGER

S. E. RLY. TENDERS

Sealed tenders are invited for supply of the following materials: Tender No. CON/GM/33/P & M/265/B for supply of 3 Nos. Self Priming Centrifugal Pumps output 250 gallon per minute at 50 ft. head from all causes with suitable internal combustion engine and accessories.

Offers subject to Import Licence being granted or recommended will not be considered.

Tenders will be opened on November 22, 1957 at 12 noon. Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta—23 on remittance of Rs. 5/- (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E. Rly., Garden Reach by local firms.

Earnest money of Rs. 1000/- is to be deposited with the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta—23, and the receipt obtained should accompany the tender without which the tender is liable to be rejected. Approved contractors who have already made a permanent deposit of Rs. 1000/- with the Controller of Stores need not pay the Earnest money.

Firms not on this Railway's list of approved Contractors must enclose a valid Income Tax clearance certificate with the Tender.

S76 GENERAL MANAGER

S. E. RLY. TENDERS

Sealed tenders are invited for supply of the following items:—

Tender No. PD/4877-R/28-CS/FI for supply of 200 Nos. Everite Asbestos Cement pressure pipe 13½" x 6" dia. 'B' Class to BSS 486/1933.

Tender forms are obtainable from the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta—23, (PD Section) on remittance of Rs. 2/- per copy per tender (not refundable) by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier South Eastern Railway, Garden Reach, Calcutta—23, by local firms. Earnest Money against the tender is Rs. 275/-. Closing date of the tender is 19-11-57 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid income-tax clearance certificate along with the Earnest Money deposit receipt with the Tender.

Madras Review

New Export Markets For Pepper and Cashew

PEPPER markets have been ruling quiet during the past few weeks in sympathy with New York where spot is quoted down to 24½ cents per pound. In the Alleppey market, the rate is hovering idly around Rs 568.50 per candy. In Kozhikode, Wynaad quality is quoted at Rs 500 and the Country variety at Rs 580 to Rs 590 per candy. At Singapore, the rate, after touching a low of Str. \$64, has improved to Str. \$68.

According to the latest reports, recent rain in Kerala State is likely to delay the arrival of the new crop; but the present showers are considered beneficial to the growing crop and are likely to increase the overall production.

At Singapore stocks of white and black pepper are reported to be rather heavy; but Chinese stockists are holding in anticipation of demand from the USA and Europe where inventories are, in many cases, low.

Meanwhile, new export markets for Indian pepper have been found in Czechoslovakia, Poland, Bulgaria, Rumania, East Germany, Denmark and Switzerland. Over 1,100 tons of the commodity, valued at over Rs 30 lakhs, have been exported to these countries. Of late, the USSR has been importing sizable quantities

of Indian pepper. It imported 3,950 tons in 1955-56 and 1,100 tons in the first ten months of the 1956-1957 season.

The production in India has increased to 32,000 tons in 1955-56 from 26,000 tons in 1954-55. This production is maintained during 1956-57. The target of production by the end of the Second Plan period is put at 36,000 tons.

It is estimated that 8,000 to 9,000 tons is consumed in the country and the rest is exported. Next to Indonesia, India is the biggest pepper-growing country in the world. Total exports of Indian pepper in 1956-57 were 14,840 tons as compared with 13,127 tons in 1955-56 and 14,778 tons in 1954-55.

New markets for export of Indian Cashewnuts also have been found in Russia, East Germany, Switzerland, Sweden and France. Over 536 tons of the commodity, valued at about Rs 25 lakhs, were exported to these countries during the first quarter of 1957. Total exports of cashewnuts in 1955-56 amounted to 30,863 tons, valued at Rs 12.92 crores, as compared with 34,011 tons valued at Rs 10.7 crores in 1954-55.

The estimated production of raw cashewnuts is of the order of 60,000 tons for 1957 as against 55,000 tons for 1956. The target of production

by the end of the Second Plan period has been revised and fixed at 106,000 tons.

India is one of the largest producers of raw cashewnuts in the world. So far, the chief buyers of cashew products have been the USA and the UK to whom nearly 75 per cent of the Indian produce is exported.

Groundnut

The warning given by the Forward Markets Commission to speculative interests to desist from manipulating the market and marking up prices coupled with the increase in the arrivals caused an easier tendency in prices in the Madras Groundnut market.

Arrivals of the new crop improved to 55 tons per day and these were taken up by local crushers, both big and small, around Rs 163-166 per candy. Arrivals of the old qualities were, however, small and prices were nominally quoted at Rs 177 for superior oil-quality seeds and Rs 166 per candy for the bold variety.

Reports from the producing centres indicate widespread rain in most of the areas in Madras coastal districts. New crop is reported to be moving in Andhra State and leading buyers are concentrating their attention in these areas.

Hides and Skins

Although arrivals in the Madras Tanned Hides market were restricted, clearances were fair. There was a good demand from North Indian buyers for inferior Cow hides and a good clearance, especially of heavy weights, was made at 1d to 2d per pound higher than the London levels. There was some demand for Cow Calf fourths and inferior fifths of mixed tannages. There was also some American demand for 2/2½ lbs averages. In Buff hides, business was reported done with London in 12/13 lbs at 30d.

On the export front, turnover was limited. There was demand only for fourths and inferiors in light weights. Although there were some enquiries for 8/8½ lbs inferiors, business was difficult in view of the attractive local demand and prices.

In the Tanned Skins section, arrivals and clearances were restricted. There was enquiry for light weight Goat skins; but it was not known whether my business was done. There was no change in Sheep skins.

Coffee

The current season's Coffee crop is estimated at about 42,000 tons out of which 41,453 tons were received in the Coffee Board's Pool to the end of September. The receipts, during the same period in 1956, amounted to 33,774 tons. The Board's revised estimate for the

next season's crop stands at 37,150 tons, comprising 23,685 tons of Arabica and 13,465 tons of Robusta. A further revision may be made when the Board meets next for its half-yearly conference on November 29 and 30.

This year, new markets in Europe are in sight and the prospect of a crop of 37,150 tons for 1957-58 sustains the belief that coffee exports will be kept up. The removal of the export duty of Rs 62.50 per cwt has certainly stimulated exports and the provision of an export quota of 15,155 tons from the 1956-1957 crop helped to enlarge the trade.

Jay Engineering Works Ltd.

Steady Progress of the Company

Sir Shri Ram's Speech at The Annual General Meeting

The following is the text of the speech delivered by Sir Shri Ram, Kt., Chairman of The Jay Engineering Works Ltd., at the Annual General Meeting of the Shareholders of the Company held at Calcutta on the 16th October, 1957.

Gentlemen,

The Balance Sheet and Profit & Loss Account and the Directors' Report have been in your hands for some time and with your permission I will take them as read.

The year under report was one of steady progress as in the past, which is evident from certain figures given below:—

Particulars	Year ending 31-3-56	Year ending 31-3-57
Sales	3,05,31,784	3,89,49,989
Profit before providing for Taxation	27,26,497	35,78,491
Number of Workers	2934 Nos.	3508 Nos.
Number of Usha Motors	150	198
Number of Students in Schools	11,000	15,000

As mentioned last year, we have been able to put on the market a Table Fan for Rs. 65/- and a Ceiling Fan for Rs. 105/-.

We are continuously making efforts to improve the quality and reduce the costs of our products and with success.

The erection of the factory at Bansdhani of which I made a mention last year, has been completed, and most of the Fan Section has been shifted to the new factory and is running satisfactorily. I can say with some pride, that it is one of the best laid out factories in the country.

The Needle Plant was put up during the year under report, and its production is steadily going up. The quality is absolutely satisfactory.

I am glad to say that we have been able to produce a satisfactory Heavy Industrial Machine also and we hope the same will go in production by early next year, and thus we will be meeting the country's needs in yet another class of Sewing Machines.

We are also making efforts to design Zig-Zag type of Sewing Machine, and we hope to succeed in this effort soon.

The difficulty for obtaining various raw-materials, particularly Steel, Pig Iron and Hard Coke is greater now than what it was last year.

I am glad that the Government of India have, to some extent, made it easier to get draw-back on goods exported, and will also supply a certain quantity of Steel at controlled rate on the basis of goods exported.

FOREIGN EXCHANGE

Last year I drew the attention of brother industrialists, to the

importance and necessity of taking steps towards increasing exports, and earning foreign exchange. The position has not improved, and we all know the difficult foreign exchange position in which the country finds itself today, and I feel that Indian Industry as a whole owes a duty to the country in this hour of need.

Indian Industry has arrived at its present stage of expansion and development, as a result of various reasons—the Swadeshi Movement of 1905, the spirit of Swadeshi as manifested in the boycott of foreign goods, the protection given from time to time to industries, due to the pressure of the nationalist movement, and more recently, the restriction of imports of manufactured goods.

It is true that private industry has expanded very considerably, and has exceeded its quota of performance during the first Five-Year Plan. Probably, this will be repeated during the Second Plan as well.

It is also true that the rate of contribution towards the increase in national income is higher, in the case of industry, than it has been in any other major sector of economy.

It is also creditable that the prices of industrial products have increased at a lower rate, as compared to either food products, or industrial raw-materials, as may be seen below:—

	Rise in Price Index between Oct. 1956—Sept. 1957
1. Food Products	+29.2%
2. Industrial Raw Materials	+21.6%
3. Manufactures	+9.9%

This, it might be emphasised, has been so in spite of sizable additional burdens, on account of various excise duties, or increases in excise duties levied recently, and sales taxes, etc., etc.

Nonetheless, in these difficult times, attainment of targets—even exceeding of targets—and maintenance of lower and stabler price levels are not enough in themselves. Indian industry owes more than this to the country, at this difficult time. I am convinced that if we fully make up our minds, and make determined and sincere and honest efforts, Indian industry can export goods of the additional value of about Rs 50 Crores a year.

I realise that there are difficulties in the way, and that often the return in foreign markets is much smaller, than the return from

sales within the country. But this is not the time for industry to concentrate on its immediate gains, or on its self-centered purposes.

I am glad that in this connection the Export Promotion Board recently set up, has made some valuable suggestions. I hope that the various Ministries will take early action, and implement the suggestions.

CO-OPERATIVE EFFORT

So far as the industry itself is concerned, they could very well join, on a voluntary basis, in a co-operative effort at propaganda and publicity, development, study of markets, inspection of goods prior to export, and take such other steps as would help in exporting larger volumes than has been the case in the past. It is equally important that those who are not exporters at all today, should also take part in the drive towards attaining greater exports.

Naturally, the greater responsibility in this matter would attach to the bigger industries. The case of the Cotton Textile Industry, faced with huge stocks and poor demand, comes readily to my mind. It is tragic that in the largest Indian industry, there

should be talk today about closing down factories, or reducing shifts when greater and greater production is necessary in the national interest. Besides Cotton Textiles, Rayon Weaving factories, Sugar Mills, Vanaspathi factories, and various Engineering Industries like, Bicycles, Sewing Machines, Fans and many others could join hands for achieving larger exports in this time of the country's need.

On our part, I am glad to state that the Directors of The Jay Engineering Works have made up their mind, to steadily increase their exports and thus earn, in whatever measure they can, additional foreign exchange for the country.

And I hope that my friends in various industries will forgive my presumption in giving this advice to them.

Last year I closed my remarks by expressing the hope that it will be possible for us to give better account of the working of the year under report, and I am glad to say that due to the efforts and hard work put in by my colleagues at all stages, right from Mr. B. S. Agarwal and Mr. T. R. Gupta to the juniormost worker, the results are quite satisfactory for which I am extremely grateful to them.

CONFLICTING CURRENTS ON THE STOCK EXCHANGE

(Continued from page 760)

it is widely considered possible that this time it would be less moderate than on previous post-war occasions.

In the circumstances a large proportion of investors prefers to await developments before reinvesting the proceeds of recently realised stocks. In any case banks pay 5 per cent interest on deposits, and this is a higher yield than was obtainable until recently on most good securities. When and if the situation will be considered to have become sufficiently consolidated, the chances are that investment demand will be directed towards Government loans rather than equities. The yield on Government loans is now abnormally high.

There is now less confidence in equities than there has been for some years past. The possibility of fairly serious recessions, accompanied by dividend cuts and even by insolvencies or painful capital reconstructions is no longer ruled out. Those seeking safety are once more inclined to try to find it in Gilt-edged securities. The Bank rate cannot be maintained forever at 7 per cent, so the argument runs, and sooner or later there is bound to be a recovery in Government loans. On the other hand, it is by no means impossible that the Bank rate will be raised to an even higher figure before it is substantially lowered.

Mr Thorneycroft intends to refuse to increase the fiduciary issue above its present figure. In given circumstances this may mean a

sharp decline in the note reserve in the Bank of England's banking department, leading to an increase of market rates of interest to the close vicinity of the Bank rate. This is liable to force up the Bank rate to an even higher figure. With such a possibility in mind, many investors prefer to mark time before returning to the Gilt-edged market.

—(Copyright)

WORLD OF TEA

(Continued from page 762)

Another factor was unconfirmed advice stating that Ceylon's crop has made excellent strides and her surplus to date has more than offset North India's shortfall. Yet another factor to the buoyancy of the market is the rumour that Russia may buy upto 40 million pounds at Colombo. In this connection, traders in London have stated that this amount or even part of it, if taken up, will completely transform the world supply and demand situation.

Tea stocks in London, as on the 11th October, were 127.40 million pounds as compared to 127.15 million pounds in the previous year. Total amount to be landed, on October 11, was 19.21 million pounds. Deliveries were 10.55 million pounds, while landings were 10.80 million pounds. Total afloat was 43.00 million pounds, including 32.83 million pounds from Calcutta; nil from Chittagong; 4.49 million pounds from Cochin; 4.39 million pounds from Colombo and 1.29 million pounds from other Ports.

INDIA STEAMSHIP COMPANY, LIMITED.

ANNUAL GENERAL MEETING

NOTICE is hereby given that the Annual General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, "India Steamship House", 21, Old Court House Street, Calcutta, on Friday the 6th December 1957, at 11-45 A.M. in order to transact the following business:—

1. To receive the Directors' Report and audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1957.
2. To sanction payment of dividend on Preference Shares as recommended by the Directors for the year ended 31st March, 1957.
3. To sanction payment of dividend on Ordinary Shares as recommended by the Directors for the year ended 31st March, 1957.
4. To appoint a Director in place of the Rt. Hon'ble Lord Sinha of Raipur, who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, The Rt. Hon'ble Lord Sinha of Raipur, who has attained the age of 70 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.

5. To appoint a Director in place of Sir Padamji P. Ginwala, B.A., Bar-at-Law, who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir Padamji P. Ginwala, B.A., Bar-at-Law, who has attained the age of 82 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is

hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.

6. To appoint a Director in place of Dr. S. C. Law, M.A., Ph.D., who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, Dr. S. C. Law, M.A., Ph.D., who has attained the age of 65 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.

7. To appoint Auditors and fix their remuneration.

SPECIAL BUSINESS.

To consider and if thought fit, to pass the following resolutions with or without modifications, if any.

As Ordinary Resolutions:—

- (a) RESOLVED that the Authorised Capital of the Company be increased to Rs. 5 Crores divided into 42,50,000 Ordinary Shares of Rs. 10/- each and 75,000 Preference Shares of Rs. 100/- each.
- (b) RESOLVED that the following words appearing in Clause 5 of the Memorandum of Association of the Company—"the Capital of the Company is Rs. 3,00,00,000/- divided into 22,50,000 Ordinary Shares of Rs. 10/- each" be substituted by "the Capital of the Company is Rs. 5,00,00,000/- divided into 42,50,000 Ordinary Shares of Rs. 10/- each."

As Special Resolution:—

- (c) RESOLVED that the following words appearing in Clause 3 of the Articles of Association of the Company—"the Capital of the Company is Rs. 3,00,00,000/- divided into 22,50,000 Ordinary Shares of Rs. 10/- each" be substituted by "the Capital of the Company is Rs. 5,00,00,000/- divided into 42,50,000 Ordinary Shares of Rs. 10/- each."

The Share Transfer Register of the Company will be closed from 15th November 1957, to 6th December 1957, both days inclusive.

By Order of the Board,
T. V. RATHNAM,
Secretary to the Board,
INDIA STEAMSHIP COMPANY LTD.
CALCUTTA,
17th October, 1957.

The dividend if sanctioned will be made payable to those Shareholders whose names stand on the Register of the Company, on the 15th November 1957, and the Dividend Warrants will be posted from 23rd December 1957, onwards.

N.B.:—Member entitled to attend and vote is entitled to appoint a proxy and the proxy so appointed need not be a member of the Company.

EXPLANATORY STATEMENT AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956.

1. In respect of Item No. 4 of the Notice of the Annual General Meeting, The Rt. Hon'ble Lord Sinha of Raipur, who retires by rotation and is eligible for re-appointment, has attained the age of 70 years and hence this needs your approval by a resolution in respect of which a Special Notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such Special Notice from a Member, notify his intention to move the resolution as set out in the said item. The Rt. Hon'ble Lord Sinha of Raipur joined the Board of Directors of the Company in 1947. During the long period of his association with the Company he has rendered valuable service to it and it is in the interest of the Company that it should continue to avail itself of his valuable services and advice by retaining him as a Director of the Company.

2. In respect of Item No. 5 of the Notice of the Annual General Meeting, Sir Padamji P. Ginwala, who retires by rotation and is eligible for re-appointment has attained the age of 82 years and hence this needs your approval by a resolution in respect of which a Special Notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such Special Notice from a Member, notifying his intention to move the resolution as set out in the said item. Sir Padamji P. Ginwala joined the Board of Directors of the Company in 1947. During the long period of his association with the Company he has rendered valuable service to it and it is in the interest of the Company that it should continue to avail itself of his valuable services and advice by retaining him as a Director of the Company.

3. In respect of Item No. 6 of the Notice of the Annual General Meeting, Dr. S. C. Law, who retires by rotation and is eligible for re-appointment has attained the age of 65 years and hence this needs your approval by a resolution in respect of which a Special

Notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such Special Notice from a Member, notifying his intention to move the resolution as set out in the said item. Dr. S. C. Law joined the Board of Directors of the Company in 1944. During the long period of his association with the Company he has rendered valuable service to it and it is in the interest of the Company that it should continue to avail itself of his valuable services and advice by retaining him as a Director of the Company.

4. It is proposed to increase the Authorised Share Capital of the Company to Rs. 5,00,00,000/-. In view of the increasing activity and the programme of expansion of the fleet of the Company, it is desirable that the capital of the Company be adequately increased in order to meet future financial requirements.

This increased capital will also enable the Company to utilise the premium reserve for issuing bonus shares to the Ordinary Shareholders, if sanctioned by the Government.

The increased authorised capital will require the change of the relevant Sections of the Memorandum and the Articles of Association of the Company where the authorised capital is mentioned.

CLIVE STREET GOSSIP

(Continued from page 766)

turned with eyebrows raised to share the joke with the class teacher who said defensively: "I know that little boy very well, and I know both his parents, and if he says he didn't do it, I'm sure he didn't!" Determined to share with someone, the Inspector told the tale to the headmaster. "Well," replied the head, "of course in a school of this size I can't know every individual child, but that girl has been on my staff for ten years. If she's prepared to vouch for the young man I am prepared to take her word for it." Obviously it was no use going further in that school. Returning to headquarters the inspector told the story to the Director of Education, a busy man, who broke in: "Well, look here, old man, don't let's have any fuss about it. I know a man in the repairs department. I'll have a quiet word with him and we'll get the old wall built up again without any more bother."

★

A post script: Just like the School Inspector, I also wished to share the joke. I read this piece aloud to a friend of mine who roared uproariously. "What a laugh!" he said. "Fancy not knowing about Humpty Dumpty!"

EAVESDROPPER

Stock Exchanges

STEADY UNDERTONE

Watch-Dog Writes:

REOPENING after the "Diwali" holidays, stock markets have generally displayed a steadier trend, although sentiment is still wavering. The general assessment, however, appears to be that the long-term outlook for share markets is good in view of the growing industrial production.

Equities on the Calcutta Stock Exchange ruled generally steady although more attention was directed towards Jute and Miscellaneous sections.

Trading on the Bombay Stock Exchange was not brisk and prices moved both ways within a limited range in purely jobbing activity.

Activity on the Madras Stock Exchange was only on a small scale. In slow dealings, Plantings met with absorption at steady rates, while other sections came in for small attention.

Wall Street closed strong, showing a broadfront of gains ranging mostly to three points or more. Rally was prompted by technical considerations and the President Eisenhower's plans to boost American confidence in the domestic economy.

Calcutta

THE week under review covers only two working days in view of holidays till Wednesday for the "Diwali" festival. During this period, activity remained restricted as operators were inclined to be rather cautious in their commitments, while investors were wondering as to whether there would be any change in the Government's policy after the return of the Finance Minister from his tour abroad.

Prospects of getting any immediate loan from the USA till January were considered somewhat remote, although the response from West Germany was considered to be favourable. However, operators tried to resist any further decline in prices as they felt that the long-term outlook for equities was good in view of the growing industrial production. This might probably be the reason that a slight improvement in sentiment was noticed towards the closing stages of the week.

The Gilt-edged market ruled fairly steady with demand still concentrated on short-dated loans. Small sellers were, however, in evidence in long and medium-dated issues. 3 per cent 1986 Conversion Loan, after touching a high of Rs 72.00 and a low of Rs 70.81, finished the week at Rs 71.00.

A quiet tendency continued to prevail in the Banking section

where price movements were confined to a narrow range. Punjab National, after touching a high of Rs 60.75, turned quiet at the close at Rs 60.00. Hind were enquired at Rs 33.

Jute shares continued to fare well as operators entertained the belief that the outlook for jute goods had greatly improved in view of the strong statistical position. Hopes were also held that the mills might be making better profits during the current half-year. Alliance were taken up to Rs 80 from Rs 75; Budge-Budge up to Rs 68 from Rs 65.50 and Nuddea up to Rs 31.50 from Rs 31.00. National were pushed up to Rs 18.70 from Rs 18.45 on speculative support, while Anglo-India and Fort Gloster were maintained 135 and Rs 295 respectively.

Coal shares were listless and operators were inclined to restrict their commitments on reports that the decision of the Coal Prices Enquiry Committee would not be made before the end of the year. Burrakur, after being pushed up to Rs 22.12 from Rs 22.00, eased off at the close to Rs 21.70 on profit-taking. New Beerbhoom met with some enquiry up to Rs 12.62 from Rs 12.37, while South Karanpura receded further to Rs 10.94 from Rs 12.00 on renewed profit-taking. Bengal were, however, a steady feature at Rs 216.

Tea shares were practically neglected in view of the obscure outlook for the industry, although a few scrips emerged with some gains on balance. Operators were inclined to await further developments on the tea front in view of the reports that, unless the decrease in North-Indian tea production was quite substantial in the coming months, the 1957 crop was almost certain to close with a slight surplus over 1956. The only bright spot was Birpara which met with some support up to Rs 136 from Rs 130. Brahmaputra changed hands at Rs 3.81 to Rs 4.00; Brooke Bond at Rs 17.00 to Rs 17.25; and Patrakola at Rs 127 to Rs 128.

Except United Provinces which partially recovered to Rs 12.50 from Rs 12.25 and Belsund ruling very steady at Rs 10.37, little interest was shown in other Sugar shares as operators were inclined to await further developments on the sugar front.

Despite the rumours about the prospects of a reduction in the excise duty on cloth, Textile scrips lacked any support in view of the heavy accumulation of stocks with the mills. Jayshree moved narrowly between Rs 6.31 and Rs 6.37, while Kesoram and New Victoria hovered idly around Rs 11.87 and Rs 1.44 respectively. Dunbar were on offer at Rs 125 against Rs 130.

(Continued on page 790)

BAREILLY ELECTRICITY SUPPLY COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting (being the Fifty-sixth Ordinary General Meeting) of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Saturday, the 16th November, 1957, at 11-0 a.m. for the following purposes:—

- To receive and adopt the audited Accounts for the fifteen months ended 31st March, 1957, and the Reports of the Directors and the Auditors thereon.
- To declare a Dividend.
- To appoint Directors in place of those retiring. In this connection notice is hereby given that a special Notice as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Section 281 of that Act to move the following Resolution at the meeting:—

"That Sir Josna Ghosal, who has attained the age of 86 years, be and is hereby appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him".

- To appoint Auditors and fix their remuneration.
- As special business to consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:—

- That the requirements of Articles 82, 83, 87, 121, 176, 180 and 181 of the Articles of Association of the Company be not complied with in respect of the half-years ended the 31st December, 1956 and 30th June, 1957.
- That the Articles of Association of the Company be altered in manner following:—

- Articles 82 and 83 shall be deleted and the following new Articles substituted therefor:—

"82. In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors".

"83. The General Meetings referred to in the last preceding Article shall be called Annual General Meetings; all other meetings of the Company shall be called Extraordinary General Meetings".

- Article 87 shall be deleted and the following new Article substituted therefor:—

"87. The business of an Annual General Meeting shall be to receive, consider and adopt the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special".

- In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor:

"176. At every Annual General Meeting the Directors shall lay before the Company a Profit and Loss Account made up to and a Balance Sheet as at the 31st day of March immediately preceding the date of the meeting and such Profit and Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the Companies Act, 1956, so far as they are applicable to the Company".

- In Article 180, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor:

- In Article 181, lines 1, 2 and 3, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing shall be deleted and the words "Annual General" substituted therefor:

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 11th November, 1957, to the 16th November, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy who need not be a member, to attend and vote instead of himself.

By Order of the Board,

MARTIN BURN LTD.

S. GUPTA,

Director,

Managing Agents.

OLYMPUS

(Continued from page 771)
admirable the way he got the better of his questioners by a variety of what can only be called wiles (without any pejorative implications). He was, for the most part, perfectly frank, and explained the way differences were submerged and not eliminated in a cabinet decision. He made his excuses for Mr Krishnamachari where they were required to be made—and there were certainly at least two occasions when he had to make them—without seeming either to be holding the Finance Minister's brief for him or to be extenuating him blindly. He reduced the whole thing to its proper proportions of a decorous variation in opinion on detail and thus completely frustrated Communist effort to convert it into an irreconcilable basic rift. And, where humour would help, he employed it effectively; for instance, he referred to Mr Krishnamachari as one who was not "if he may put it mildly, favourably inclined towards Communists". After that quip, he would be too resolute and too humourless a correspondent, who would harp on Mr Krishnamachari's gaffe over China and Russia. And when, after this, Mr Nehru imperceptibly slipped into discussing Indian Communists and their infantile clinging to slogans, any chance of having Mr Krishnamachari impaled on the stake of his own words had gone for ever.

BALANCE-SHEET REVIEWS

(Continued from Page 752)

tained at 30 per cent. The final dividend is 20 per cent, while an interim dividend of 10 per cent was paid earlier.
The outturn of tea was 3,25,870 lbs against the estimate of 3,16 lakhs lbs., while the average price

realised was 234 cents against 217.75 cents per lb in 1955-56. The estimates for the current year provide for a crop of 3.15 lakhs lbs. Against the ordinary capital of Rs 4 lakhs, reserves amount to Rs 5.5 lakhs.

GATEWAY GOSSIP

(Continued from page 767)

"prepared to take appropriate and effective steps to this end". Accordingly, the Federal Government propose "to follow up" the discussions held during TTK's visit "by an expeditious examination of the various related questions".

Detailed discussions to be held thereafter "will be concerned in particular with the possibility of ensuring the completion of certain projects which are already in hand and in the timely and satisfactory completion of which the Government of India is specially interested".

Finally, the two Governments are "confident that it will be possible to carry forward these discussions to a fruitful conclusion rapidly and to their mutual satisfaction".

The communique, I think, is an unambiguous indication of the interest of the Federal Government speedily to work out a scheme of help to India. If this interpretation is correct—and it surely is not wrong—am I not right in thinking that this should have constituted Bull Point No. 4 for the Moorat session?

Let us hope that, by the time the next Diwali comes, the stock exchanges will have shaken off the diffidence and defeatism that today they are plagued by. Let us hope that, prohibition notwithstanding, the next year's Moorat session will be as cheerful and as active as in years of yore.

NORTH INDIAN MARKETS

(Continued from page 773)

Maize is also soft for want of buyers, while Moong and Masoor have improved slightly as a result of buying activity from the pulses-mills.

In the Bombay grains market, Rice prices have registered a marked improvement, mainly due to the total absence of arrivals. In the Coarse grains section, Jowar has presented a steady appearance with the Sholapur quality finding buyers at Rs 148 to Rs 160 per candy and the Madhya Pradesh variety at Rs 115 to Rs 130. Bajra prices have remained practically unchanged. In the Pulses section, Moong has presented a steady appearance with the prices moving up by Rs 5 to Rs 7 per candy.

STOCK EXCHANGES

(Continued from page 780)

Prices movements in the Engineering section were mainly influenced by the speculative activity in Indian Irons which, in turn, were subjected to settlement adjustments on Thursday. Against the week-end closing of Rs 17.70, Indian Irons opened lower at Rs 17.56 and, after improving to Rs 17.72, receded again to Rs 17.58 on settlement considerations. On Friday, however, heavy purchases made by a prominent bull operator, on expectation of boosting up the private sector, caused the scrip to recover gradually, to finish the week at the "kerb" trading level of Rs 17.92. In "kerb" trading on Friday, there were even buyers upto Rs 18.00 with sellers at Rs 18.02.

In sympathy, TEXMACO were pushed upto Rs 17.95 from a low of Rs 16.40 and Jessco to Rs 24.25 from Rs 23.50. Richardson moved rather irregularly between Rs 9.06 and Rs 9.44, to finish at the former level. Burn haq buyers at Rs 314 to Rs

GATEWAY MARKETS

(Continued from page 770)

ditions in the rayon cloth market compelled traders to dispose of a part of their stocks.

The market for Staple-Fibre yarn was, however, fairly active as reports from upcountry centres indicated that weavers were inclined to enter the market as they considered current price attractive. Buyers, therefore, came forth to augment their stocks.

The market for Cotton Yarn continued to be sluggish. Many mills and traders complained of heavy accumulation of stocks of yarn with them. Handloom weavers were also reluctant to buy more yarn, because they had to curtail production of cloth on account of the absence of demand.

Miscellaneous issues moved in sympathy with the general trend of the market. The most prominent scrip was Orient Paper which were gradually pushed upto Rs 24.25 from a low of Rs 23.50 on speculative buying. Another feature was Indian Steamship which met with sustained demand upto Rs 11.25 from Rs 11.02 on the announcement of a bonus issue and expectation of the dividend being maintained. Titagur Paper changed hands Rs 32.00 to Rs 32.12; Dunlop Rubber at Rs 19.89 to Rs 19.87; Osler at Rs 3.12 to Rs 3.19; Indian Aluminium at Rs 12.87 to Rs 12.94; Hindustan Motors at Rs 6.12 to Rs 6.25; Aluminium Corporation at Rs 9.06 to Rs 9.37; B.I.C. at Rs 4.85 to Rs 4.90 and NICCO at Rs 23.50 to Rs 23.94. Indian Copper moved narrowly between Rs 2.77 and Rs 2.79.

Clause II (1) of Sixth Schedule and Rs 3,000 from Deferred Taxation Reserve.

a pilfer-proof package for every product !

The manufacture of Metal Box's range of pilfer-proof containers and closures is backed by an active Research Organisation. The Central Laboratory in Calcutta assists suppliers in developing improved printing inks, surface finishes and protective lacquers, and maintains strict routine tests for all incoming raw materials to the Metal Box factories; on the spot control of operations is carried out by Branch Laboratories. This ensures pilfer-proof containers and closures of the highest quality, superbly printed and finished. Expert scientific advice from Associates throughout the world is available to assist in solving customers' packaging problems.

A METAL BOX
PILFER-PROOF CONTAINER

The MB Key Opening Can has both the top and bottom double sealed on for maximum protection.

The can is opened by winding off a strip round the can with a special key.

The lid fits back accurately after opening—an effective re-seal. It is impossible to disguise the fact that the can has once been opened.

VIA
JAMSHEDPUR

Four hundred young engineers
who will man the three new
State steel plants will spend
six weeks at Jamshedpur before
they go abroad for training.

Here at the steel city, an
orientation course will acquaint
them with the first essentials
of steelmaking in India. And
they will undoubtedly get a
friendly tip or two from Tata
Steel veterans.

Jamshedpur is proud to welcome
these steelmakers of tomorrow.

Silver-Clouded Brightness

Investment Gossip:

UNMISTAKABLE signs of recovery
were available this week on Indian
Stock Exchanges for those who had
eyes to see. This is in fine contrast
to conditions hardly a week ago,
when the Stock Exchange, whose
sky was overcast with the dull grey
clouds of uncertainty, had almost
forgotten what activity was or
transactions were.

It was then fashionable to talk
up a crisis. On every side, and with
the sole exception of that indefatigable optimist, Watch-dog, stress
was being laid on the difficulties
encountered by the Plan; it logically
followed that all discussion empha-
sised the impossibility of seeing it
through.

I do not say that the difficulties
did not exist; nor is it true that
none obtains today. But, surely,
when we took up the Plan for im-
plementation, it was in the know-
ledge that problems would continu-
ously face us; and we implicitly set
ourselves in preparedness for meet-
ing the challenges thrown up, when
we decided to go ahead with a Plan
the resources for which had not
been fully secured.

Today, suddenly, the Stock Ex-
change appears to have improved,
change appears to have improved,
and the barometer points to 'Fair'.
But I will not accept as the causes
of this improvement the reasons
adduced in this behalf by Stock Ex-
change operators.

To me, each new achievement is
what is most important. In this
light, certainly, what has—or should
have—revolutionised our attitude to
the Second Plan is the attainment
of the tax objective. For, this means
that we have squarely and unflin-
chingly tackled the first problem or
challenge of the Plan.

The raising of Rs 800 crores odd
for the Plan is by itself no mean
achievement. True, the new taxes
have evoked considerable criticism.
But the complaints have in the
main related to the precociousness
of the Finance Minister in evolving
taxes which have not been tried
out elsewhere. True, also, some of
the imposts have raised apprehen-
sions of harassment. But here,
again, it is premature to anticipate
that the administration of the new

acts will be ruthless rather than
sympathetic. It may be added that
incentive has not been completely
lost sight of; indeed, the Finance
Minister views his Budget as one
in which, deliberately, incentive has
been given to current earnings.
Since the reserve deposit require-
ment and the super tax on divi-
dends are expected to be tempo-
rary measures, further incentive
may be expected to be restored on
the repeal of the former and the
scaling down of the rates on the
latter.

The second point to which I would
invite something more than the
condescending interest that has so
far been shown relates to figures of
industrial production in the private
sector since the beginning of the
Second Plan. In our preoccupation
with difficulties, and as a result of
our exclusive concentration on such
matters as an abnormal increase in
the index of wholesale prices, we
have tended to overlook the very
real advances registered in indus-
trial production. The revised index
of industrial production, with 1951
as base, is placed at 155.9 at the end
of May 1957 against 130.7 at the end
of March 1956. While the substan-
tial increase in the output of
sugar is a major contributor to this
improvement, it is nevertheless a
fact that increase in the general
index is a reflection of the upsurge
in industrial activity on the part
of the private sector. As an ins-
tance, I might refer to the conside-
rable improvement in the output
of coal in the private sector. What
all this means is that the so-called
incentive eliminating tax measures
have nevertheless not interfered
with the smooth and steady pro-
gress of development in the pri-
vate sector. So much so, it is now
accepted as a truism that, for its
part, the private sector will almost
certainly attain the targets that
have been set for it in terms of the
Second Plan; and, accordingly,
thoughts now turn to the possibility
of increasing such targets.

This, therefore, is the combina-
tion of factors on the basis of which
the Stock Exchange should have
come to life much earlier this year.
For, take a tax system which is in-
tended to maximise incentive; com-

bine with it the knowledge that the
targets set for the private sector
have been largely completed; and,
finally, add to it the certainty
that the targets will be raised for
the private sector; then, we have
the conditions in which the Stock
Exchange should be poised for a
boom.

Instead, as I have already rema-
rked, the preoccupation has been
with the difficulties. In a sense, it
is the Government's efforts to tack-
le a problem on a new front—the
question of foreign exchange re-
sources—which have been responsi-
ble for transforming the investment
climate, within the last few days,
from one of overhanging gloom to
silverclouded brightness.

When Mr T. T. Krishnamachari,
some six weeks ago, left for his
official visits to the North American
continent, the United Kingdom and
West Germany, the situation was
still one in which prospects were
reckoned bleak. Now that he has
returned, it continues to be the view
of the stock exchanges that hopes
are meagre of any large scale fore-
ign assistance. Paradoxically, that
which, three months ago, was res-
ponsible for a pessimistic view point
on the part of the stock exchanges
—inadequacy of foreign exchange
resources—is today, in the form of
doubt about our ability to lay our
hands upon the full quantum of our
needs in this regard, taken to pre-
sage an auspicious omen for the pri-
vate sector and for stock exchange
activity. The reasoning is, as I re-
ported last week, basically simple. If
India wishes to secure foreign aid,
the Government will have to prove
to the satisfaction of the countries
whom we have approached that the
official attitude to the private sec-
tor can by no means be termed in-
imical. In this sense, it is argued
that the Government will perform
a policy that shows greater encou-
ragement to the private sector. In
the second place, even if foreign aid
on the requisite scale does not turn
up, it is suggested that this very
inadequacy will be a bull point since
it will automatically mean that
Government will need to place
greater reliance upon the private
sector in the attainment of the
targets of the Second Plan.

Look at it which way you will;
the conclusion is the same; the
sphere of internal resources, we
have achieved a considerable mea-
sure of success to the extent that
the tax effort has been completed.
Basically, the second important
point is that, whatever the reason
or the cause, the private sector will

inevitably be called upon to should-
er greater responsibilities. Basi-
cally, therefore, the investment out-
look is for brighter stock exchange
conditions.

Investment Notes:

AN Indo-Ethiopian Textiles S. A. has
been formed to build, equip and
operate a textile mill in Ethiopia.
This is a concrete example of
Indian industrialists' preparedness
to take active part in projects abroad.
The office of the company will be in
Addis Ababa. The first managing
agents of the company are Messrs
Birla Brothers (Private) Limited.

The entire capital of the enter-
prise is issued and, out of the 45,000
shares of 100 dollars each (Rs
190.48), the Imperial Ethiopian Gov-
ernment is subscribing 51 per cent
and the balance 49 per cent shares,
i.e. 22,050 shares of 100 dollars each,
is offered for subscription in India
and Ethiopia.

The Metal Corporation of India
Limited has reported that, a result
of forfeiture of shares, 1,667 Ord-
inary shares of Rs 10 each (Rs 2.50
per share paid-up); 256 Deferred
shares of Re 1 each (25 nP paid-up)
and 14 Preference shares of Rs 100
each (Rs 25 paid-up) are now open
for re-allotment. The application
for Deferred shares should be in the
ratio of one Deferred share for
every three Ordinary shares. Any
intending purchaser can apply, pro-
vided the offers, stating the prices,
are not less than the unpaid
balance.

Atlemb Chemical Works have
decided to issue bonus shares to the
holders of Ordinary shares in the
ratio of one share for every five
shares held. The bonus issue will be
made by capitalising the requisite
amount from the Share Premium
Account. The consent from the Con-
troller of Capital Issues is reported
to have been obtained.

Andhra Cement Company Lim-
ited, Madras, has proposed to in-
crease the authorised capital from
Rs 1 crore to Rs 2 crores by the
creation of 5 lakhs Ordinary shares
of Rs 10 each and 5 lakhs unclassi-
fied shares of Rs 10 each. The pre-
sent 5 per cent tax-free Cumulative
Second Preference shares of Rs 10
each, subject to the approval of the
general body.

Investment Briefs:

Burn & Company has maintained
the Ordinary dividend at 20 per
cent for the year ended 30th April,
1957.

(Continued on page 804)

HIGHLIGHTS

Is India's foreign exchange position a des-
perate one?

Is it desperate action on the part of Govern-
ment that, by Ordinance, the minimum for
foreign exchange holdings has been reduced?

These are the two questions that should be
engaging the attention of the student of the
Indian economy.

If the basis for his conclusions were to be
the ordinary run of press comment, the student
would, we are afraid, decide that the position
and the action are both desperate.

But a dispassionate assessment should point
otherwise.

For instance, there is sufficient data on
foreign assistance to enable a shrewd tabula-
tion of inferences as to the magnitude of aid
that India is, over the next few months, likely
to secure.

US economic aid, World Bank loans, West
German deferred payment arrangements,
Japanese Yen credit, Canadian surplus wheat—
these are but some of the sources that are
almost certain of being productive and fruitful.

Gateway Gossip assesses the foreign ex-
change position, admits that it is difficult,

pooh-poohs the idea that it is desperate and
foresees the resolution of our difficulties.

Then, in the matter of the Ordinance, it is
now generally recognised that the principle of
linking exchange reserves to currency cover
is a relic of the past.

So, what is important is the practical useful-
ness of exchange holdings.

From this point of view, the Leading Article
asserts that the Ordinance, far from under-
mining confidence, should add to the status
of the currency and to the stature of the
country.

INDIAN FINANCE

November 2, 1957

Brooke Bond Raises Dividend

Balance-Sheet Reviews:

BROOKE BOND ESTATES INDIA LIMITED has produced excellent working results for the year ended 30th June, 1957. The accounts reveal a substantial rise in profits, thanks to the higher prices realised for the tea sold during the year. Crop outturn is shown only at 3,437,309 pounds as against 3,607,458 in the previous year, mainly due to a very poor start to the 1957 season. The average sale realised, after deducting all sale charges and cost of export rights, is higher at Rs 2.12 nP as against Rs 1.94 nP per pound. The reason for the higher market level was the dislocation of the movement of teas to the United Kingdom and other world markets caused by Suez crisis.

Sales for the year have risen to Rs 94.66 lakhs from Rs 81.66 lakhs, while the net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 19,34,383 as against only Rs 16,29,358 in the previous year. Apart from setting aside a sum of Rs 17,560 for Capital Reserve, Taxation provision is raised to Rs 7.85 lakhs from Rs 6.20 lakhs and Contingency Reserve to Rs 3.28 lakhs from Rs 2.85 lakhs. Even after these increased allocations, the directors have found it possible to raise the dividend on the Ordinary shares to 17½ per cent from 12½ per cent.

According to the directors' report, there are indications that, for the current season, there will be a short-fall in the North Indian crop. The company's strong financial position is a matter for satisfaction in view of the future capital expenditure programme. New machinery and additional withering space will be required in order to handle the increased crops which the company will be manufacturing; and Government legislation also requires substantial expenditure on various labour welfare schemes.

Against a paid-up capital of Rs 71.05 lakhs, Reserves are shown at Rs 16.36 lakhs. Current liabilities are Rs 38.91 lakhs. Net block is shown at Rs 52.79 lakhs, while total Depreciation and amounts written off to 30th June, 1957 amount to Rs 29.08 lakhs.

Machinery Manufactures Corpn.
The Machinery Manufacturers Corporation Limited has maintained

ed the progress in the various spheres during the year ended 31st March, 1957. Sales have risen to Rs 68.06 lakhs from Rs 65.16 lakhs, while the net profit, after providing for Depreciation, is higher at Rs 2,41,841 as against Rs 1,13,900 in the previous year. The Depreciation amount is reduced to Rs 5.96 lakhs from Rs 9.28 lakhs. Despite the rise in profits, the directors have been able to recommend only the arrears of dividends on Special Cumulative and Ordinary Cumulative Preference shares and passed over the dividend on the equity shares.

The company's order book position reveals that confirmed orders for 662 Cards were registered during the year, while there were cancellations of 48 Cards. Uncertainty regarding the licensing policy affected the bookings towards the end of the year; and this has continued upto July 1957.

After a study of the various factors involved, the directors have presented a detailed scheme of expansion to the Government who had asked the company to expand its capacity for the manufacture of Carding Engines as well as to consider the manufacture of certain other items of textile machinery, not produced in this country. The first phase of expansion is the completion of the foundry in order that the Works become self-sufficient in the matter of light and heavy castings. The second phase of the programme is to expand production of Carding Engines to 100 units per month. The third phase involves heavier financing for extension of manufacturing activities to other spinning mill equipments.

£ R S

Loobah Tea

The Loobah Tea Company has again passed over the dividend for the year ended 31st December, 1956. Crop outturn is substantially lower at 3,836 maunds as against 4,615 maunds in 1955, mainly due to hail damage in March 1956 followed by an early closing of the plucking season. The average price realised, however, is higher at Rs 1/9/5 against Rs 1/4/9 per pound.

The accounts reveal a loss, after Depreciation, of Rs 23,163 as against a loss of Rs 53,597 incurred in the previous year. A sum of Rs 25,109

Determination to Honour Obligations

THE Ordinance to reduce the minimum holdings of gold and Foreign Securities as currency cover, inevitable as it was, should not arouse any suspicions or apprehensions about the strength of the Indian Rupee. Indeed, seen in its proper light, the Ordinance is calculated to inspire foreign confidence in India in the sense that commitments are reaction to the news, even though it was expected, is likely to take the form of renewed calls for pruning the Plan.

Such criticism, however, is likely to foist on the measure as indicative of such acute foreign exchange shortage as to compel vigorous Government measures to "import content" from the Plan projects whose "import content" is high. Fortunately, we seem likely to be spared a debate on what was thought to be, academically and traditionally, cover against currency issue as such. We presume we have by now left behind us the notion that foreign exchange is at all required as currency cover. We may recall that the Reserve Bank, in "Trend and Progress of Banking" in 1956, described the principle of linking foreign exchange reserves to note issue as being, in one sense, "a relic of the past".

Once the principle of delinking foreign exchange reserves from currency cover is accepted, it should be possible to assess the need and usefulness of foreign exchange reserves in the altered circumstances. It should be clear that the primary purpose of foreign exchange reserves is and should be to provide for the rainy day when, due to unavoidable and exceptional circumstances, a country experiences a sharp, and may be a

long drawn out, deficit in its balance of payments. If, then, the primary purpose of foreign exchange reserves is to meet such expected deficits of large magnitude in balance of payments, the next point that we must address ourselves to is to find out whether the reserves are of a sufficient size to cushion the unavoidable turn in the balance of trade over a foreseeable period of time. In this light, we may remark that the foreign exchange reserves held by India at the beginning of the Second Plan represented the equivalent of the value of more than eight months' imports. Since then, there has been a tendency to connect the size of foreign exchange reserves with the average monthly import bill. Clearly, such a linking is not the correct way of gauging the practical usefulness of foreign exchange reserves. For, the purpose of foreign exchange reserves is not to meet the import bill in full, but merely to take care of the deficit in payments—that is, the import bill minus the foreign exchange earnings from Indian exports. It is in this light that we must study the ramifications of the Ordinance which reduces the minimum statutory holdings of foreign exchange to an aggregate of Rs 200 crores for gold, bullion and foreign securities.

The present weekly drain of foreign exchange has been at a rate of Rs 8 crores. From this point of view, the minimum reserves which will be held by the Reserve Bank would be equivalent to the deficit for 25 weeks, or nearly half of a calendar year. Reserves of such magnitude are surely adequate.

The second point that we may consider is the immediate benefit that accrues by way of

Stifled Democracy

praise for China or was ready to forgive him on his retracting.

When so much incense is being consistently burnt at the door of the US by the Karachi Government and India being treated inevitably as an inimical neighbour both by the Government and the Muslim masses of Pakistan, leaders in Opposition have naturally to cook up or clutch at any irrelevant issue to get a public hearing and to manoeuvre themselves into positions. Thus what appeared to remain settled issues such as joint electorates and a single unit for West Pakistan have now been resurrected and thrown into the arena of party and personal controversies.

The splits within the Muslim League, the Republican party and the Awami League are also the inexorable outcome of the impermanence of genuinely political issues and their incapacity to hold party men together, wedded to any consistent allegiance. Within the Muslim League, the attitude to the Baghdad Pact has shown sharp fluctuations, some leaders trying to be ferocious critics of Britain, others denouncing the Pact as having created an American Colony of Pakistan, and at the end of it all, when Mr Chundrigar managed to get elevated to the Prime Ministership, every body in the League has either quietly swallowed his wrath against the Pact or has become its docile devotee. The Republican Party which was once a strong advocate of a one-unit West Pakistan, seems now to have crossed sides.

Indian Finance

Established 1928

November 2, 1957

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

freeing foreign exchange reserves for meeting the balance of payments deficits. As at the end of October, the gold, bullion and foreign securities held by the Reserve Bank worked out to a total of Rs 444.81 crores. This means that Rs 244.81 crores are now available for Government with which to meet the anticipated deficit in trade, on the basis of an average drain of Rs 8 crores, for a period of nearly 8 months. In that contingency, it is clear that the present available reserves, on the basis of the current rate of depletion, will enable India to tide over its foreign exchange problem till very late in the "hump" period, which has been officially calculated to last until March 1959. Meantime, we may also note that there are reasonable and even confident grounds for expecting that foreign assistance, from a variety of sources, would have swelled our resources of foreign exchange. So, together with the likely foreign assistance that we may obtain, the significance of the ordinance is that, by and large, foreign exchange has been "freed" for meeting the payments deficits over the hump period of the Plan.

Finally, it stands to reason that a reduction in the minimum for foreign exchange reserves should, far from undermining the strength or confidence of the Indian Rupee, actually command greater foreign esteem in the sense that it shows a preparedness on India's part to meet its foreign exchange obligations in full. Surely, practical economics would suggest that action taken to honour commitments would add to the status of the currency and the stature of the country.

In East Bengal, the Awami League which enabled Mr Suhrawardy to seize the reins of power developed disharmony soon after the event and has not recovered its compactness since. Joint electorates which for all appearances and purposes were another issue with an air of finality have gone with Mr Suhrawardy. There is undoubtedly a general bias in East Bengal in favour of joint electorates though fanatic Muslim opinion has not reconciled itself to it. The manner in which this question has again been thrown up for debate can only be explained by the absolute predominance of personal ambitions over principles. The majority which just a year ago stood behind Mr Suhrawardy and joint electorates has crumbled in the wake of the developments which augured his eclipse.

Mr Chundrigar, the new Prime Minister, is possessed of sufficient understanding to realise that the only sure guarantee behind his Premiership is the favour of the President. The Ex-Premier also concedes the towering influence and authority of Mr Mirza, when instead of seeking to gather back majority support, he has started a campaign of recrimination and attack against the man who has thrown him out.

It is no use disguising the fact that between two widely separated geographical entities, each with its own distinct cultural and economic background, a fair measure of stabilised understanding would be possible only if the leaders are capable of a large amount of self-

denial and of willingness to put the national cause mercilessly above personal and regional ambitions. Unfortunately the healthier example in India, of a sister democracy with no less difficult problems carrying on fairly successfully, has failed to inspire Pakistan because of the continuing pressure of mutual differences.

It may take a little more time for Pakistan to live down the antipathy to India. In sheer self interest, India wishes all its neighbours well, particularly Pakistan. Economic distress in East Pakistan has often been the cause of accentuated influx of refugees. The Pakistani Rupee is now unofficially deflated to the extent of 20 per cent, a circumstance which is far from welcome from the standpoint of the commercial links between the two countries. Inability to impart a sound and balanced foundation to its economy in spite of various natural advantages keeps the illiterate masses of Pakistan unduly vulnerable to irresponsible pleadings and persuasions of every political adventurer. More sober thinking on the Kashmir issue could be expected, if public emotions are not distorted by the unending political manoeuvres.

Presumably, the springs of democracy in Pakistan have been somewhat diluted by extraneous impacts of various kinds. It is silly to attribute to the United States, as some sources are inclined to do, any desire to interfere actively with the domestic affairs

of Pakistan. The US is too much occupied with more serious international questions to discover any charm in poking its nose into the politics of a country thousands of miles away. The allegations against the US take their clue from the consistent presence of high US officials in Pakistan in times of Ministerial crises. This can as well be a mere coincidence.

All the same, it is not an unfair surmise that colossal US military aid has upset the balance of forces in Pakistan, necessary for the emergence of a correct political perspective and of a habitually sound relationship between the different sources of authority functioning under the Constitution. It has also led, through an inevitable chain reaction, to the inflation of military expenditure in India and possibly in other neighbouring States as well. The Indian Finance Minister politely mentioned this point when he was in the US recently. A sense of false threat and perhaps of equally false security in Pakistan and unconsciously heavy military budgets on a wider front are a direct consequence of the US arms aid to Pakistan. As the basic strategy on which this aid is based has been drastically outmoded, it rests with the US to examine how far it is necessary and useful to continue assistance to a friendly State in this form. It needs hardly be repeated that the material wellbeing of Pakistan and India immediately owes a great deal to such a reappraisal and the decisions which follow.

International Currency Problems

By PAUL BAREAU

THE season of the year when the Ministers of Finance and Governors of Central Banks gather together for the Annual Meetings of the World Bank and the International Monetary Fund, is usually the time when one can expect interest in the international currency problem to rise to a peak.

Quite apart from the particular timing of these meetings in September, this is also the period of the year when the seasonal pressure on non-dollar currencies reaches its peak because of the seasonal flow of such imports as wheat, cotton, tobacco from the New World to the Old. The major currency crises in the past—the devaluations of 1931, the convertibility crisis of 1947 and the worldwide re-adjustment of exchange rates in 1949, all occurred at or about that period of the year.

This year provides no exception to this general rule. The exchange markets have again been in ferment. Two currencies have recently been devalued, the French franc and the Finnish mark. There have been many rumours of other changes in exchange relations which could affect many other currencies, including the German mark and sterling itself.

This year the problem of currency relations gains special interest from the fact that the world at large, and Europe in particular, is groping towards greater liberalisation of international trade. It is becoming increasingly realised that tariffs, quotas, import licensing and other obstacles to international trade, are becoming an anachronism in this 20th century and that if we are to make the maximum use of the enormous opportunities which new technical processes and the promise of nuclear power offer to mankind, it must be in the realm of really large markets where all the advantages of mass production can be secured.

Here in Europe we are in fact moving towards great projects for creating a Common Market and a Free Trade Area between what may ultimately number 17 countries and

250,000,000 people. If those plans are to yield their full potential advantages, it can only be in a system where currencies stand in reasonable relation one to another and bear some resemblance to their true economic parities. If this condition is not satisfied, then obviously the countries with over-valued currencies will find it impossible to pull down their tariffs since they will be unable to compete with goods produced in other countries whose currencies are perhaps under-valued. There is, therefore, a special interest in this year 1957 in the problem of securing and maintaining a genuine and natural equilibrium in international exchange rates.

That equilibrium was fundamentally disturbed during the second World War. War always disturbs a state of economic balance. The normal mechanics of the market place go into cold storage from the moment war is declared. During the second World War tremendous changes occurred in the relative economic strength of the countries involved. The industrial power of the United States, and of North America as a whole, increased considerably.

Britain, which fought from the first to the twelfth hour, did so without counting the cost, sold the most marketable and valuable of its overseas investments and accumulated vast external debts. The second World War had the effect of changing Britain from an international creditor to an international debtor nation—a transition the importance and significance of which has not yet fully dawned on all concerned.

These disturbances to international equilibrium accentuated by the second World War led to, and were in part recognised by, the devaluations of 1949, a process in which sterling took the lead but which in due course spread to the greater part of the world of international exchanges. The alignments of 1949 were a partial adjustment to the forces of disequilibrium unleashed by the war.

Those forces, however, have continued to operate. In these days the tendency to dis-

equilibrium in international exchange arrangements is a more persistent, and even continuous process than it used to be. We have left behind us the external discipline of a gold standard which most nations of the world used to accept without question. In those earlier days stability of exchanges was the dominant requirement and when it was threatened the necessary remedial action was taken in domestic and economic policy. It had advantages but also grave disadvantages which were revealed in the inter-war years when the attempt to serve the gods of exchange stability seemed to condemn large parts of the world to the miseries and disasters of massive unemployment.

A revolution in economic thinking led by Lord Keynes, and since then accepted by every civilised nation in the world, has done away with this. New gods have appeared, including social security and full employment. In serving these we have perhaps reacted too far against the old discipline. Most nations of the world are now prone to inflate rather than deflate and since they no longer have an external symbol, namely the gold parity, which they will obey in framing their economic policy, it is hardly surprising that their economic policies should not keep in step and should create international exchange problems with which we have become so monotonously familiar in the post-war years.

Among recent events which have led to the climate of uncertainty in the international currency situation, the reappearance of a sizeable dollar gap in the world must be given a high place. The United States is running a substantial surplus in its payments with the rest of the world and in the last few months has been re-accumulating gold at a rate which had not been seen for many years. There are many reasons for this unfortunate change in one of the basic elements of the world's currency situation. The fall in commodity prices has assumed considerable proportions over the past year, means that fewer dollars are now being paid out for such articles as rubber, copper, and other base metals, of which the United States are normally substantial importers.

A modest economic recession is beginning to appear in the United States and although it would be an exaggeration to suggest that it is communicating itself to the rest of the world, what is certainly true is that the levelling off in the demand for industrial goods in the United States is giving American industry an altogether keener edge of competition in world markets.

As tends to happen when business becomes more difficult, there has also been a noticeable growth of the protectionist forces in the United States. American producers of base metals, faced with dwindling prices and increased competition from such countries as Canada, have induced the administration to raise tariffs on these commodities. Threatened with a surplus of oil, the American oil industry has by devious means achieved the establishment of a quota on imports of oil. The United States has not fulfilled in this respect the hopes aroused by repeated statements in favour of multilateral trade.

The flow of dollars to the rest of the world has also been stemmed by the economy drive which has achieved appreciable cuts in foreign aid. It is true that the United States remains the most important capital exporter in the world, but the net outflow is becoming smaller, partly because capital repayments on loans so generously made by the United States in the years immediately following the war, are now beginning to flow back to that country in ever increasing volume.

The dollar problem, which the world thought it had beaten a few years ago, is reappearing.

One significant piece of evidence of this is that the International Monetary Fund, during the latest year of its operations, has sold to its members more dollars than it had sold in the whole ten previous years of its existence. This, however, is essentially temporary and very short-term assistance. It does not gainsay the fact that the dollar shortage is with us again and must bear part of the responsibility for the nervousness and feeling of anxiety that have stolen over the international exchange markets in recent months.

What the dollar is doing in world currency relations as a whole, the German mark has recently been doing in the more restricted sphere of intra-European trade and payments. The German mark has become the dominant currency of Europe and Germany by its surpluses in commercial payments and, as a result of a substantial flow of speculative money to that country, has built up a gold reserve second only to that of the United States.

The reasons for this strength of the German mark are many and fairly obvious. Let us give honour where honour is due and state in the first place that the main contributory factor to the strength of the mark has been the hard work of Germany's workpeople and the enterprise of its merchants and industrialists. German industry at the end of the war was destroyed or dismantled. At the time it presented a disastrous picture; but there are certain advantages in starting with a clean slate, especially when the United States is there to finance the reconstruction of their former enemy.

German industry has been re-equipped with the latest techniques. The second collapse of the mark freed many German firms of the larger part of their fixed interest bearing capital obligations. Germany, moreover, has only just been called upon to make any appreciable contribution to the defence of the Western world. Until now its industry has been able to concentrate on civilian work both for the domestic and for the export markets.

The fact that Germany has had to endure two collapses of its currency in the course of one generation has also created a vehement determination not to be caught a third time and, therefore, a willingness to endure the hardships of dear money, high taxation, and the other orthodox weapons of deflation in a measure that is not shared by any other country of Western Europe, and probably of the world. Germany, moreover, has succeeded in maintaining its wages at a comparatively low level because of the inflow of refugee labour from Eastern Germany. That is now coming to an end and Western Germany is beginning to experience the pangs of really full employment, with which other countries of Western Europe have been familiar for some years.

The general effect of all these forces has been to give Germany a substantial balance of payments surplus. The German authorities have not reacted to that situation by following the policy which is open to a creditor country. Interest rates have been kept high. Budget surpluses have been accumulated year after year. The main reason for this may be understandable enough, namely, the already mentioned determination not to run once again on to the slippery path of inflation. But the surplus and its suggestion that the mark is somewhat undervalued at its present rate of exchange, has led to many rumours that sooner or later the mark must be revalued in an upward direction.

This in its turn has unleashed a speculative movement of hot money which has gone to Germany, attracted it must be said partly by the high level of interest rates, but mainly by the prospect of the gains to be made if the mark is in fact revalued. It is this movement

of capital which has dragged with it gold and dollars into the German reserve and which has been the main factor in causing the German surplus in the European Payments Union to rise, month after month, to new high records. These events have brought most unfavourable consequences to Germany's neighbours and however justifiable the reasons for so orthodox a policy, it cannot be denied that unless remedies are found for the situation, there is the danger of a breakdown in the payments system of Europe, from which Germany itself might will be, in the end, one of the primary sufferers.

Most of the currencies of Europe can be ranked among the victims of the strength of the mark. The Netherlands in particular has been hard hit. The most evident blow, however, is that which has fallen on the French franc, whose 20 per cent devaluation, veiled though it was for a time, was announced towards the end of August. The franc has been over-valued for some years and had only been maintained at its previous parity by means of various measures, including the imposition of additional import tariffs, export subsidies and black or grey markets for various types of French francs, including franc notes, in most of the financial capitals of Europe.

This artificiality could not be maintained indefinitely and the need for remedial measures became pressing when the expense of operations in North Africa became such as to put in danger the French balance of payments and exhaust the reserves held in the French Government's stabilisation fund. While admitting this, it should, however, be stressed that the strength of the mark and the movement of capital to Germany, fell with special severity on the franc, because speculators who were operating on the assumption of an up-valuation of the mark tended to combine this with sales of francs, thus hoping to make two killings of birds with one stone.

Another undeniable fact is that the devaluation of the franc caused the speculators to "taste blood" and encouraged them to intensify their operations against other currencies.

Among these other currencies sterling has, needless to say, taken the brunt of the pressure. There are many aspects of the sterling situation which suggest strength and confidence. The balance of payments of the United Kingdom closed last year with a surplus of £233,000,000—a remarkable figure for a year which witnessed all the uncertainties of the political situation in the Middle East.

That surplus was running at a much reduced rate in the first half of 1957, but there are strong indications in the published trade figures that the balance of payments for 1957 will still show an appreciable surplus. The evidence of these trade figures is also proof that United Kingdom exports remain competitive and that prices in Britain are by no means out of alignment with those quoted in other countries.

How then do we explain the pressure on sterling which has persisted for so many months and has made such severe inroads into the reserves of gold and dollars? The answer in the main derives from the fact that this is the price which sterling pays for being a world currency. Whenever political conditions deteriorate anywhere in the world, the repercussions of that development are felt in sterling exchange. There has been no lack of incidents during the past year, in the Middle East and elsewhere, to cause such deterioration and inevitably much of the resultant monetary pressure has fallen on sterling.

In more specific terms this pressure has derived from two directions. The first is from sterling's position as a reserve currency, that is, as the currency in which the bulk of the external reserves of all countries in the sterling area is maintained. Whereas Britain itself

has been in considerable balance of payments surplus, the same cannot be claimed for other members of the sterling area, who have incurred deficits in importing capital goods from many countries in the world, including the United States, Germany and Switzerland. Where those imports have not been financed by credit arrangements, payments have been made by drawing on sterling balances in London, by cheques drawn in sterling and it has been left for the banker, namely Britain, to honour those cheques in dollars, Deutsche-marks, Swiss francs and other currencies. Part of the strain on sterling, therefore, has come from these other countries in the sterling area.

The other types of strain on sterling has been of a somewhat more speculative character. Since sterling is the currency used to finance about half the world's trade, most countries in the world maintain sterling working balances. When, as has recently been the case, there are wide expectations that the mark will be appreciated and that other currencies, including sterling, may depreciate, there is a natural tendency for these working balances to be drawn away from London and to be sent to Germany.

When, moreover, these conditions obtain, there will be a natural tendency for every trader who has sterling and will need foreign currency in the future, to cover his exchange needs immediately and conversely, for every foreign merchant who is to acquire sterling in the future to sell that sterling as soon as he gets it, and before he gets it if he can.

These semi-speculative, semi-commercial operations in a currency in which so large a part of international transactions are expressed, can have a tremendous effect on reserves behind the currency. It has been estimated that the swing of this pendulum in the timing of sterling commercial payments, can mean as much as £400,000,000 sterling to the reserve. That pendulum during the past year has swung against sterling and in this fact must be found a very substantial part of the explanation of the pressure on the currency.

How should such pressure be met? When the issue is merely one of capital and semi-speculative transactions, the ideal way to meet this kind of pressure is to have adequate reserves of gold and foreign exchange, reserves which are meant to be used in exactly this kind of situation. This is in fact what Britain has done. The reserves have been reinforced by recourse to the International Monetary Fund, and have been used. It should furthermore be noted, to the great credit of Britain, that at no time during this period of stress has any recourse been made to further restriction in imports or to a tightening of exchange control on current transactions. On the contrary, the trend during this period has been towards still greater liberalisation of trade.

If, however, the reserves are not adequate other measures may have to be taken and it is in this context that some thought should be given to a discussion which has waxed very fiercely in Britain and many other countries in recent months, namely, whether in the prevailing circumstances flexible rates of exchange are not preferable to fixed rates. There are many logical arguments which can be used in favour of greater flexibility of exchange rates. These arguments, however, cannot prevail against the objections which to-day must be set against them. In the first place flexibility is a move which, if it is made at all, should come from strength and not from weakness. Secondly, it is very doubtful whether a world currency such as sterling can gain appreciably from a wider measure of fluctuations in its rate of exchange. It may encourage speculation which is already too prevalent to-day.

The most essential thing to do in the circumstances is to re-establish sound conditions

Iron Ore for Japan

Even if the Prime Minister had not gone to Japan and forged new links of goodwill, Indo-Japanese commercial relations would have expanded considerably in future. The agreement between Japanese steel interests and the State Trading Corporation for the supply of a specified quantity of iron ore over a period of five years signified a prospect much wider than the terms of that deal.

Japan's annual production of steel is now running at a rate of about 10 million tons and as many other steel producing countries Japan is overwhelmingly dependent on imported iron ore. The breach with China, one of Japan's leading erstwhile suppliers of iron ore, has aggravated its dependence on other sources. Currently Japan has been coming up against difficulties in the supply of foreign scrap as well. It is therefore, not surprising that close on the heels of one trade mission, another is now in India for negotiating long-term supply of iron ore from this country.

These negotiations probably involve Indo-Japanese collaboration for the development of Railway lines and Ports, necessary for the domestic transport of iron ore in desired quantities. A Rs 150-crore project which has been under discussion for sometime may possibly have advanced further to a stage of more concrete details.

*

Ayurveda to the Fore

Opening a Clinical Research Centre at the Delhi University, Dr Rajendra Prasad commended what he described as the Ayurvedic approach to the problem of public health. He explained that the word

'Ayurveda' meant the science of life and not merely a science of cure. The next day, Dr A. Lakshmapathi, President of the Andhra Pradesh Ayurvedic Board speaking at a function in Hyderabad revealed how he himself has cured obstinate cases of cancer through Ayurvedic treatment.

As long as the self-liquidation of the medical profession which Dr Rajendra Prasad dreams of is impossible of attainment, the revelations of every system of medicine irrespective of its present status in the eyes of those acquainted only with the more modern systems, will have to be examined with due faith and sympathy. Ayurveda is unscientific only in the sense that the way in which the medicines work has not been analysed by modern methods. For that reason and especially in the light of age-long overwhelming evidence of its superior and sometimes miraculous efficacy, the system cannot be brushed aside as undependable.

Even those who do not choose to accept faith in God as an aid to the cure of disease may agree that thousands of herbs in India possess curative and rehabilitating properties, often succeeding where alternatives fail. After generations of neglect this system is again being brought into the favour of the State. A complete resurrection is possible only through an uninhibited approach which, we are afraid, is not generally obtained.

With proper research and sufficient State support, this system will be able not only to hold its head high above every other in India but to compete successfully in other countries, where many modern drugs have been found to be causing deferred damage. The fact that Indian hair oils are lately being exported to foreign countries may be a remote shadow of a powerful future trade trend.

*

Larger Food Imports

The crop situation in large parts of Eastern and Central India is very likely to add to the worries of food and foreign exchange. Official estimates are guarded and calculated to avert panic, though there is no disguising the fact that on the whole a vast area has been affected by drought. In Bihar, even the Government are perturbed; a few districts in Eastern UP are reported to have lost considerably. Likewise, the Chattisgarh region of Madhya Pradesh and portions of Orissa. The Deccan and South India are immune.

The Union Government are known to have nearly 1 million tons of foodgrains in reserve and beyond the 1.5 million tons of imports already planned for, negotiations for the supply of grains from USA,

Canada and Burma are now in process. The exact additional amount of food imports could be determined only when the domestic food situation becomes more precisely estimable. Mr A. P. Jain has warned that a revision of food import policy has become necessary and that the Government would be obliged to arrange for much larger imports during the course of next year.

Disputed Waters

Inter-State negotiations for the sharing of river waters from Kerala appeared to be well set for a fruitful end, when the Joint Conference of Kerala and Madras representatives finished its sitting. That some of the irrigation projects envisaged in the two States are mutually inter-linked provides additional urgency to an agreeable culmination to the talks. The Conference must undoubtedly have drawn the two State Governments nearer through a deeper appreciation of one another's needs and difficulties. All on a sudden, a newspaper report has appeared that the assertion of proprietary rights by Madras over the waters collected in the catchment areas situated in the State has quered the pitch again. A Kerala Government spokesman is attributed a statement refuting the claim based on such rights. Kerala's Minister for Law and Irrigation, however, recognised the reality of the existence of the catchments, while he carefully denies any agreement on rights for Madras arising from that circumstance.

While the question of the sharing of waters could better be settled with reference to needs rather than to the legalities of the situation, any principle which might gain official approval on an all-India level should take account of possible international repercussions. If rights are to be related to the existence of catchment areas in a particular territory, diversions of flow from other bigger rivers having an international course will have to be envisaged. India has already a similar problem on hand.

To the layman, it would appear that one possible solution lies in the form of seasonal as against a permanent and continuous sharing of the waters of the Kerala rivers. While for the major part of the year, there may not be a surplus to spare, for four months these rivers would be providing a flow, which can be systematically tapped for extra use outside the State. Such utilisation may also mean a good riddance for the Kerala State.

Colombo Plan Economies

The Communiqué issued at the end of the Colombo Plan Conference

Salmon and the section of the Plan Report called "The Task Ahead" embody ideas which arise from unmistakable over-simplification of the economic requirements of the region. It is true that, as the Report claims the South Asian countries seeking capital from abroad are in an advantageous position to the extent that they are able to offer agricultural produce and raw materials in return.

It is also true that the pace of development is tending to outrun availability of resources. But neither is the advantage so secure nor the difficulty equally deserving of consideration. Intra-regional trade both in agricultural produce and industrial goods has tended to grow often at the expense of the region's trade with other parts of the world. If all the countries lying within the Colombo Plan orbit were equally placed in respect of export potential, the foreign exchange problems would have been in many cases far more manageable.

It is necessary to draw a distinction between the semi-industrialised countries whose export pattern has changed and others where industrialisation has not proceeded to any considerable extent, and consequently showing the traditional pattern of export trade. In view of these differences, the warning held out by the Report that all developments Plans should be kept flexible seems a little too harsh. Some countries like Burma and India have always adhered to flexibility but with consequences highly uncertain. For others like Indonesia, Thailand or Vietnam, such appeals are clearly premature. It might even be said that in these countries the place of development must rather be speeded up further, of course along with greater political stability, where it does not obtain, than sustained at a lower rate.

World of Finance

On the Busy Season's Eve

THE latest banking returns are featureless, although we have reached what is officially considered to be the end of the slack season. As we have remarked on earlier occasions, bank statistics have been distorted by the month long Calcutta strike, and it may even be suggested that the first or the second week of November should be considered as the beginning of the busy season. For, the effect of the bank strike has been to exert an upward trend in Advances, on the one hand, and to obscure the full extent of the increase in the Deposit resources of the Scheduled Banks, on the other. But it is unlikely that the Reserve Bank will arbitrarily choose to depart from its decision, earlier this year, to reckon upon the beginning of November as the start of the busy season. However, it is by no means unlikely that the 1957 slack season should last a little longer than has been normal, in spite of the first signs of demand for financial crops. That is to say, it is possible that the decline in Advances generally, which, in response to the Reserve Bank directives, has been pronounced since June this year, may offset the demand for new funds consequent to the start of the busy season. In this view, the busy season may evidence itself in banking figures somewhat later than usual, an expansion in Advances and an increase in note circulation being likely to be pronounced only from, say, the middle of November. For the official purposes, nevertheless, the end of October marks the end of 1957 slack season. So, always bearing in mind the slight distortion to which we have already referred, we may proceed to study what exactly has been achieved during the 1957 slack season.

The busy season peak, it may be recalled, has been fixed, at least for purposes of distinguishing the busy and slack seasons, at the end of April 1957. Thus, the figures that we will study will be as between the end of April and the end of October.

The extent to which the 1957 slack season has been a pronounced one can best be seen if, for comparative purposes, we take the figures for the 1956 slack season. At this stage, we may also remark that our study of the slack season will be restricted to Reserve Bank figures since the statement of the Scheduled Banks for the last week in October will be available only next week.

The slack season indicators may be said to be five in number. These are: Active Note Circulation, Rupee Coin, Banks' Reserve Balances, the Other Loans and Advances

of the Reserve Bank and the outstanding of advances against Usance Bills.

It is to be noted that, in respect of Active Notes, the decline during 1957 slack season works out to Rs 75.71 crores, and appears to compare unfavourably with the previous year when contraction in Active Notes amounted to Rs 106.99 crores. Furthermore, since the loss of foreign exchange during 1957 slack season, at Rs 212.71 crores, is very much higher than the figure for the previous year (Rs 135.24 crores), it might have been expected that, the contractionist influence of the balance of payments deficit being heavier, the magnitude of decline in Active Note circulation would also have been larger. How, then, can we explain the fact that the contraction during 1957 has been smaller? Two possible reasons may be suggested. In the first place, the 1956 depletion in foreign exchange was substantially on what might be called "private sector" account. So, the payment for such imports by the private sector was reflected both in the Deposit resources of Scheduled Banks and in Active Note circulation. But, during the current year, with the drastic import restrictions announced during the end of 1956, it is likely that the balance of payments deficit has been more on Government account. In the second place, since, for the purpose of meeting such import payments, Government were compelled to have increasing recourse to deficit financing, the expansionary impact of deficit financing exerted an opposing pressure to the contraction in Active Note circulation. Thus, between the end of March 1957 and the end of August 1957, deficit financing amounted to Rs 77 crores, even after the cancellation—or reverse ad hoc—of Treasury Bills for an amount around Rs 76 crores consequent to New Loan receipts. Then, in the period between August and October 1957, there has been further deficit financing for an amount around Rs 71 crores. Thus, if we exclude reverse ad hoc during August, deficit financing since the end of March this year amounted to Rs 148 crores. On the other hand, deficit financing in the period March/October 1956, worked out to no more than Rs 61.63 crores. Thus, the first point that we may note about the 1957 slack season is that, but for a rate of deficit financing that is nearly 2½ times the rate in 1956, the contraction in Active Note circulation may have been much sharper. We repeat, the import surplus on Government account and the larger dose of deficit financing are the

first noteworthy elements in the 1957 slack season.

The next point that we may consider is the return of Rupee Coin from circulation. The return of Rupee Coin during 1957 slack season works out scarcely to Rs 6½ crores against nearly Rs 16 crores in the 1956 slack season. On the face of it, the superficial interpretation, as in the case of the Active Note circulation, is that the small sized return of Rupee Coin discloses the 1957 slack season to be less marked than that of the previous year. But this is to overlook the fact that, by now, the phenomenon of Rupee Coin returning from circulation, which began to be pronounced from 1951-52, has by now largely spent its force. In each of the financial years since 1951-52, except during the unusual period between April 1954 and March 1956, return of Rupee Coin has exceeded Rs 10 crores. It now seems unlikely that we shall see, in the future, as large a "surrender" of Rupee Coin as in the past; and, consequently, the usefulness of Rupee Coin as a gauge for measuring the slack season may decline; but this is not to say that Rupee Coin will cease to be an important yardstick for assessing the busy season, since its outflow may continue to be impressive during the busy season.

We come, thirdly, to the Reserve Balances of Scheduled Banks. These show a very sharp rise of Rs 39.31 crores—which is, in the period since 1951-52, by far the largest increase recorded during a slack season. This item is largely self explanatory, since it reflects the accretions of Deposits, on the one hand, and the decline in Advances, on the other, which both

together have enabled member banks to add to their Reserve Balances. The relative figure in 1956 slack season was, we may note here, Rs 1.66 crores.

Similarly, in the fourth place, the decline in the Other Loans and Advances of the Reserve Bank is placed at the considerable figure of Rs 28.37 crores against Rs 4.73 crores during the 1956 slack season. Even this figure, we may note parenthetically, is likely to be larger than it should have been; as a result of drawing upon the Reserve Bank by Calcutta banks during the impasse. We may also note that this is the sharpest fall in Other Loans and Advances since the 1954 slack season.

Finally, we come to Scheduled Banks' borrowings against usance bills, which have fallen by Rs 25.61 crores to be placed at Rs 27.63 crores. This compares with a decline of Rs 11.79 crores last year to Rs 40.29 crores. The fall under usance bills, again, does not require extensive explanation; but it may be noted that the figure could have been lower still, were it not for the perennial use made of usance bills facilities by the Exchange Banks.

We have tried to show that, appearances to the contrary notwithstanding, the 1957 slack season has witnessed conditions easier than in 1956. We hope to be able to show, when the figures of Scheduled Banks for the last week in October are available, that the 1957 slack season will go down on record as having witnessed, in a period of uninterrupted economic development, conditions that have reflected neither undue strain nor intolerable pressure.

Substantial Dose of Deficit Financing

According to the return of the Reserve Bank for October 25, Active Note circulation has gone up by Rs 2.39 crores to Rs 1486.20 crores; no doubt this reflects the impact of the demand for funds on account of the Diwali. Besides, Rupee Coin has gone out of circulation for Rs 0.33 crores. This expansion in currency circulation has been met from the Reserve Bank's cash in the till, which is consequently lower by Rs 2.77 crores at Rs 27.77 crores.

The Centre would appear to have had recourse to deficit financing for a substantial amount, since Investments are marked higher by Rs 22.04 crores at Rs 241.84 crores. That the Centre's disbursements have been heavy is indicated in the fact that, in spite of deficit financing, the Centre's balances are higher only by Rs 2.53 crores at Rs 52.55 crores. Receipts from the Centre might account for the improvement of Rs 4.17 crores to Rs 11.02 crores in the Balances of State Governments, who have besides reduced their indebtedness to the Reserve Bank by Rs 1.16 crores.

Other Deposits are largely unchanged at Rs 111.73 crores. Scheduled Banks' Reserve Balances are marked up by Rs 6.44 crores to Rs 106.91 crores; however, since the State Bank in the relevant week showed an improvement of nearly Rs 8½ crores in Cash and Balances with the Reserve Bank, it is clear that the other Scheduled Banks have drawn upon their Reserve Balances. There is a nominal decline of Rs 0.96 crores to Rs 67.87 crores in the Other Loans and Advances of the Reserve Bank. Outstandings against usance bills are marked higher at Rs 27.63 crores against Rs 26.81 crores.

Finally, the decline in foreign exchange reserves is small at Rs 3.40 crores, Balances Held Abroad having declined by this amount to Rs 15.39 crores.

The return of the State Bank for October 25 reveals a sharp increase of Rs 13.65 crores to Rs 366.00 crores in Deposits. If our hypothesis, which we have advanced on earlier occasions, is correct, the sharp increase in De-

Are Recessions a Necessary Evil?

By PAUL EINZIG

IF our globe were a perfect world it would be possible to envisage a state of affairs in which there would be perpetual economic progress uninterrupted by recessions. Many economists in all countries were until recently inclined to believe that we have practically achieved this ideal state during the post-war period. The disquieting decline in world commodity prices, and the sharp if temporary slump in Wall

Street have given rise to doubts, however, whether their optimism was justified. The number of those who believe that major recessions are a matter of the past has declined materially in recent weeks.

There is a sharp division of opinion whether it is possible for the western countries to avoid recessions altogether. But, absurd as it may sound, there is also room for

two opinions whether it would be an unqualified blessing if recessions could be avoided altogether. Britain's experience, and to a less extent that of other industrial countries, during recent years seems to show that an occasional recession is a necessary evil. In the complete absence of fairly substantial recessions economic developments are liable to produce results that are to the grave disadvantage of the community. The only question is whether such disadvantage would be outweighed by the cost of recessions.

It is becoming increasingly evident that non-stop prosperity and expansion is inevitably accompanied by non-stop inflation. It is arguable that if the price of progress is a rise in prices by, say, 3 per cent per annum—which would halve the purchasing power of savings in less than a generation—the sacrifice is worth making. But if the rise is steeper than a stage is bound to be reached at which the advantages of stability outweigh those of progress. Indeed a stage may be reached at which progress itself becomes endangered by the extent of inflation.

A moderate inflation of say 3 per cent per annum, if continuous, is liable to be accompanied by disadvantages in addition to the obvious disadvantage of the depreciation of the purchasing power of money. It is liable to change the industrial balance of power by unduly strengthening the bargaining position of the trade unions. Non-stop prosperity means chronic shortage of manpower which would make it impossible for the unions to be moderate even if they wished to be, owing to the ever-present Communist agitation to stir up trouble. High and increasing dividends on equities mean growing reluctance of investors to acquire and hold Government loans, except in return for a yield that is ruinous for the Treasury and for the taxpayer.

In such circumstances the rate of inflation cannot remain moderate. It is likely to become accentuated, and with it would increase all the difficulties indicated above. Such trouble could be avoided by avoiding expansion altogether. But that could mean standstill instead of progress. With the Communist countries forging ahead, the free countries could not afford to renounce progress for the sake of stability. On the other hand, nor could they afford non-stop inflation in the long run.

What is needed is moderate inflation interrupted from time to time by recessions. Such setbacks are necessary in order to reverse the rise in prices after a prolonged excessive rise. Psychologically the realisation of the possibility of temporary declines of prices would go a long way towards moderating inflation-consciousness which tends to accelerate the pace of inflation. The more people take it for granted that the rise in prices could not be reversed the faster prices are likely to rise.

It is necessary that some degree of unemployment should develop from time to time. Otherwise workers come to take it for granted that their employment is a 100 per cent secure, and will behave accordingly. Such a mentality leads to a loosening of industrial discipline, absenteeism, frequent changes of jobs for trifling reasons, and permanent shortage of manpower in occupations which cannot afford to pay too high wages but which attracted labour before the war because they held out the prospects of permanent employment and pension. All these evil effects are very much in evidence in Britain. In-

To market, to market

goes refined Adipocere (Pronounced 'adi-po-saire')

After being refined into various petroleum products, stored in tanks and taken for a ride in trucks and wagons, I am brought to the market. But this is not the type of market you are thinking of. The word is used by oilmen to describe my movement from the refinery to you, the consumer. My destiny is worked out by a highly organised group which has been supplying India with quality petroleum products for well over sixty years.

Stanvac have distributed to Indian consumers millions of gallons of Kerosene, Gasoline and Industrial fuel.

And how do they market me? Well, I'll tell you later in the columns of this paper.

STANVAC—the name that stands for progress

World of Jute

Need for Increasing Jute Production

ALTHOUGH there has been an improvement in the arrivals of raw jute into Calcutta and mill stations during September, there seems to be some apprehension that the raw jute supply position during the current jute year may turn out to be less satisfactory than last year. Evidently reports about poor arrivals in upcountry markets during the past few weeks have been responsible for such an inference. It is to be noted, however, that it has generally been accepted that in view of the delay in the onset of the monsoon, the new crop will consequently not become available in sizable quantities two or three months later than usual. Moreover, competent observers have averred that in any event the 1957-58 Indian jute crop will not be less than that of the previous year.

The prevailing uncertainty as regards supply of raw jute is a reminder that there is urgent need for increasing our jute production. Speaking at the annual meeting of the Jute Brokers' Association, of the Jute, Mr. D. Kuthari, has pointed out that vigorous efforts should be made in India to increase the production of raw jute as well as to improve its quality. In support of his argument he has drawn at-

tention to the fact that though production of raw jute in 1956-57 has increased to 42.21 lakh bales from 41.97 lakh bales in the preceding year, the increase has not been substantial as compared to the requirements of the Indian jute industry.

Dull conditions prevailed in the jute goods market during the past week as foreign enquiry was conspicuous by its absence. Only casual references to the looming unsealing rumour could be heard in the market place as many believed that unsealing would not only be a big risk but a practical impossibility at least at the present juncture. The continued uncertainty as regards supply of raw jute was said to be one of the main deterrents.

The jute goods market opened the week on a quiet note. In the absence of genuine business, speculators influenced prices with different versions of the rumour regarding unsealing of looms. Hessian 40" x 10 Oz Ready was done at Rs 42.75 with the November and Jan.-March positions placed at Rs 42.75 and Rs 42.31 respectively. B Twills Ready was quoted at close at Rs 118.15 with November at Rs 113.75. In the continued absence of business

prices declined further on Saturday as follows: Hessian 40" x 10 Oz Ready Rs 42.70, November Rs 42.85 and Jan.-March Rs 42.25. B Twills Ready Rs 117.70, November Rs 115.80 and Jan.-March Rs 113.70.

Though foreign enquiry continued to be conspicuous by its absence prices recovered on Monday as shippers began to evince interest in ready delivery goods due to proximity of Due Date. With mills not keen for business, rates improved as follows: Hessian 40" x 10 Oz Ready Rs 42.90, November Rs 43.00 and Jan.-March Rs 42.50. B Twills Ready Rs 118.75, November Rs 117.25 and Jan.-March Rs 115.00.

Settlement considerations was the main influence in the market on Tuesday which again failed to produce anything in the shape of foreign business. There was a keen tussle between bears and bulls in earlier dealings. Toward close, however, sentiment turned easier due to persistent selling pressure. Hessian 40" x 10 Oz shaded to Rs 42.70 with November at Rs 42.80 and Jan.-March at Rs 42.35. In the sacking section B Twills Ready dropped 35 nP to be finally placed at Rs 118.40 while the November and Jan. March positions were done at Rs 116.62 and Rs 115.50 respectively.

Except for a moderate interest shown by shippers, the market continued to rule unchanged on Wednesday. With mills showing little interest at prevailing rates the market closed steady. Hessian 40" x 10 Oz Ready gained 14 nP to be done at Rs 42.84 with November at Rs 42.80 and Jan.-March Rs 42.70. In the sacking section B Twills Ready advanced 10 nP to Rs 118.50. November position was done at Rs 117.37.

while Jan.-March was finally placed at Rs 115.75.

Steady conditions prevailed in raw jute section with mills showing fair interest at prevailing price levels. It would appear that reports of poor arrival in upcountry markets were encouraging holders to turn down demands for price discounts. A contributory factor had been the not too good raw jute stock position of mills. Earlier in the week good quality mill business was reported done in Assam and Indian northern basins bottoms at Rs 29.25 per maund for October-November shipment. The market ruled unchanged on Monday and again fair mill business was reported done at previous levels. Only small quantity mill business was passing on Tuesday but in view of the reserved attitude of sellers prices showed a slight improvement. Assam Bottoms advanced to Rs 29.50. Prices declined by ½ point on Wednesday in the absence of mill interest. Assam Bottoms was placed at Rs 29.00 per maund.

In the Export Sale, held this week, offerings were 59,205 packages. There was a good general demand. "Teas for price" and clean black Fannings were often 4 nP per pound dearer, but prices were sometimes up to 6 nP per pound easier. The smaller orthodox kinds from Assam with useful liquor met with keen competition and were frequently dearer, while Commons and Dooars tended to be easier.

The better liquoring CTC Assams were well supported, especially the best grainy kinds; but the plainer liquoring, unattractive types were generally easier, particularly the larger grainy grades. The few invoices from Darjeeling with flavour were a strong feature and sold well. Medium Dooars Dust was quoted at Rs 1.64 to Rs 1.68; Medium Assam Grainy Dust at Rs 1.68 to Rs 1.72; Medium Assam CTC Dust at Rs 2.25 to Rs 2.40 and Best CTC Assam Dust Rs 2.60 to Rs 2.90.

A total of 2,291 chests of leaf grades was also offered. Although the leaf appearance continued to be of a fibrous description, there was a betted demand and prices were generally dearer. In the Export Quota section, the rate developed a hardening tendency from 18½ nP to 21½ nP per pound at which level some business was reported done. The firmness in price is mainly attributed to the (Continued on next page)

World of Tea

Mixed Trend in Prices

ALTHOUGH there has been a good general demand with the UK and the Middle East figuring as chief buyers, prices obtained at the export auction in Calcutta have been showing a mixed trend. There is still keen competition for quality teas. In Mincing Lane, however, demand has been keener with all the sections of the trade participating and prices are generally dearer.

Labour troubles in the Port of Colombo and at the London Royal group of docks are considered primarily responsible for the stronger tone. Buyers, sensing the threat of supplies, bid more vigorously in order to have that little bit or extra spot teas in hand in case of a disruption of the supply pipe line for a while. But, these two developments have come too late to affect the market sentiment though it can be presumed that it will tend to restrain the present firmness.

Meanwhile, tea exports from North India have again suffered a severe setback in September. To-

tal exports, during the month, were only 39.3 million pounds as compared with 51.91 million pounds in the corresponding month of 1956. The UK, the largest consumer, has mainly accounted for the fall in exports; but the loss suffered by the North Indian tea in other markets is also considerable. Total shipments, in the first nine months of the current year, at 237.18 million pounds, have shown a decline of as much as 57.17 million pounds over the corresponding period of 1956.

According to the figures released by the Board of Trade, London, tea imports into the UK from India have received a severe setback in August. Total imports have remained practically unchanged at 40.24 million pounds, supplies from India having disclosed a fall of 4.45 million pounds. Total imports into the UK, in the first eight months of the current year, amount to 408.54 million pounds as compared with 356.03 million pounds in the corresponding period of last year.

World of Business

Machine Screw Industry

Though the present strict and rigorous import policy of the Government of India seems to have taken the edge off the argument for protection with regard to some industries, long term considerations of national industrial development, rule out any alteration or change in the tariff policy to bring it in line with every change in the import policy. It is in this light that the Tariff Commission has considered the case of the machine screw industry for continuance of protection. For though protection has been rendered superfluous by the severe restriction on the imports of machine screws, the leeway that the industry has to make in the direction of diversification of production, manufacture of specialised and precision screws, certainly warrants the preservation of the existing structure of protection. Accordingly the Tariff Commission has recommended continuance of protection to the industry at the rate of 50 per cent ad valorem or 60 Naye Paise whichever is higher.

The progress of the industry under protection since 1951 has been remarkable. In the course of the last three years, production of machine screws has increased by 600 per cent, from 2.24 lakh gross in 1954 to 13.99 lakh gross in 1956. There has been a corresponding increase in the installed capacity from 378,500 gross on single shift basis in 1954 to 1,368,960 gross in 1956. Further expansion to capacity is programmed which when completed, would take the total to 21,51,860 gross on single shift basis.

The phenomenal progress in production notwithstanding, import of machine screws is still of a sizeable order. The imports during the last three years averaged 4.50 lakh gross which is about 1/3 of the national production for the latest year, and 25 per cent of the internal demand. The internal demand is further expected to increase by about 25 per cent every year. This is a measure of the leeway the industry has to make in future.

Shortage of mild steel annealed wire threatens to be the limiting factor in the future growth of the industry. While imports of such wire had been drastically curtailed, nothing has been done to ensure sufficient supplies from domestic sources. As pointed out by the Tariff Commission the Steel Processing Industries Regulations, which preclude supplies to steel processing factories established after 31st March 1953 needs amendment in the light of the situation arising out of the new import policy of the Government. The Commission has further urged the need to utilise new capacities for manufacture of steel wire which is at present confined to one unit, namely the Indian Steel and Wire Products Ltd.

The machine screw industry is an important ancillary industry, its product being in great demand in a wide variety of industries. Self-sufficiency is therefore a compelling requirement.

Jay Engineering Works

In a thought provoking address to the shareholders of the Jay Engineering Works Limited at the recent Annual General Meeting of the Company, Sir Shri Ram, Chairman, envisaged a bright future for the private sector in the country and appealed to industrialists to make strenuous efforts to increase exports. He said: 'I am convinced that if we fully make up our minds, and make determined and sincere and honest efforts, Indian Industry can export goods of the additional value of about Rs 50 crores a year.'

As far as the Jay Engineering Works is concerned, Sir Shri Ram's fervent appeal has already found ready response. The directors of the company have decided to increase steadily their exports. It is no wonder that the company is also receiving co-operation from Government who have made it easier for the company to get drawback on goods exported. Government have also given an assurance that they will supply a certain quantity of steel at controlled rate on the basis of goods exported.

With its products in good demand within the country and in overseas markets the company has been able to record excellent results during the year ended March 1957. Sales have increased to Rs 3.89 crores from Rs 3.05 crores in the previous year. Profit before taxation shows a substantial increase at Rs 35.76 lakhs as against Rs 27.26 lakhs in 1956.

"Alkathene"

The Imperial Chemical Industries (India) Private Limited last week organised a demonstration of the uses of 'Alkathene' brand of polythene in the tea industry at their Tiljala Laboratory. Over and above the demonstrations pertaining to the applications of 'Alkathene' in the tea industry, visitors were enabled to know many other uses to which this versatile film could be put.

'Alkathene' film as the I.C.I. brand of polythene is known, is particularly noted for its extremely low water vapour permeability in comparison with all other comparable packaging materials and packaging film.

Alkathene is already extensively used in the tea industry for lining tea chests by a number of tea gardens in North East India. It is understood that the Railway Board is in the course of issuing an am-

endment to the Traffic Regulations to permit the despatch of 'Alkathene' film lined tea chests at Railway risk. In view of the fact that 'Alkathene' film lining of tea chests is at once economical—and simple, the tea trade and industry as well as others who have similar packaging problems will find in Alkathene the ideal packaging and lining material they have been looking for.

Allahabad Bank Limited

A branch of the Allahabad Bank Limited has been opened at 224-5 Cornwallis Street. The College Street Market branch will offer full banking facility and service. With the opening of this branch, the bank has now five branches in the city. We have no doubt that the new branch will make its mark soon in its area as its counterparts elsewhere in the city.

The Allahabad Bank Limited is the oldest of the Indian Joint Stock banks and it has a unique record in the banking business of the country. Mr Alex Izat is the General Manager.

WORLD OF FINANCE

(Continued from page 801)

posits would presumably relate to transactions of the US Embassy in respect of counterpart funds. Advances have been marked up by Rs 3.00 crores at Rs 165.64 crores. Investments in gilt-edged are marked higher by Rs 2.36 crores at Rs 143.93 crores. Cash Balances have benefited to the extent of Rs 8.11 crores at Rs 63.65 crores.

The return of Scheduled Banks for October 18, shows a further increase of Rs 4.03 crores to Rs 137.60 crores in Deposits; in the relevant week, the State Bank had reported a decline of Rs 1.69 crores in Deposits. The total of Advances has risen by Rs 0.62 crores to Rs 853.23 crores, the State Bank having shown a rise of Rs 1.50 crores in that week. Borrowings from the Reserve Bank have been reduced by Rs 5.38 crores to Rs 31.19 crores. Cash Balances register an improvement of just under Rs 14 crores to Rs 197.53 crores from Rs 183.57 crores; and here, the State Bank accounted for roughly Rs 10 crores of the increase in Cash Balances.

FOR THE INVESTOR

(Continued from page 795)

India Paper Pulp has announced a final dividend of 70 p per share for the year ended 31.3.1957.

British Burmah Petroleum has passed over the dividend for the year ended 31-3-1957.

Indo-Burma Petroleum has recommended an interim dividend of Re 1 per share on enquiry shares for the year ended 31.12.1957, payable on or after 28th November.

Cooper Engineering (Satara) has maintained the dividend at 7 per cent for the year ended 30.6.1957. Chandramalal Estates, Madras, have maintained the dividend at 15 per cent for the year ended 30.6.57.

United Breweries have recommended a final dividend of 10 per cent, making a total of 20 per cent for the year ended 31.3.1957, same as in the previous year.

WORLD OF TEA

(Continued from previous page)

news that the Government have authorised the Tea Board to make a second interim release of export quota for 1957-58 to tea estates to the extent of 5 per cent of their crop basis, pending final notification of the export allotment for the year. The total release of 1957-58 export quota thus comes to 55 per cent of the crop basis.

In the Sale No. 10, held at Chittagong, offerings were 13,195 chests of Leaf grades and 2,822 chests of Dusts. Excepting the best liquoring types which were sold almost at valuation, prices of Leaf grades were about As 2 per pound easier. There was keen demand for Tippy types at about last rates. The market for Dusts was, however, strong. Plan Sylhet Dust was quoted at Rs 2-3-6, showing an advance of Rs 0-1-9 per pound over the previous rate. Among Green teas, the polished grades were one anna per pound easier. The next sale will be held on November 8.

So far, ten tea auctions have been held in Chittagong and some ten more are expected to take place before the season closes. Prices, so far, have been above those prevailing in London and hence export was not allowed by the Government. But, it is now decided to allow export 4½ million pounds even if prices here are above those of London. According to the latest reports, prospects for Pakistani tea are bleak due to drought and there has been a fall in production to the tune of 600,000 pounds.

BALANCE-SHEET REVIEWS

(Continued from page 796)

(Rs 17,804) is set aside for Depreciation. Estimates for 1957 provide for a crop of Rs 4,200 maunds.

₹₹₹

Talayar Tea

The results of the Talayar tea Company, in the Parkings group, has been adversely affected. The Talayar Tea Company Limited, whose estates are located in Kerala, earned a net profit of only Rs 3,28,552 in the year ended March 31, 1957 as against Rs 4,56,441 in 1955-56. The amount set aside to Depreciation is Rs 23,245 against Rs 20,339 previously. The tax provision is unchanged at Rs 1,70 lakhs in spite of a lower level of taxable profits. The distribution on the Ordinary shares has, therefore, had to be reduced to 10 per cent from 12½ per cent. Even for this purpose, it has been necessary to transfer Rs 15,000 from the Dividend Equalisation Reserve whereas there was a transfer of Rs 50,000 to the Development Reserve, on the last occasion.

The tea crop was satisfactory at 8,07,664 lbs, but the coffee crop was lower at 641 cwts. There was a sharp increase in the cost of production in respect of the coffee crop. The estimates for the next year provide for a crop of 7.75 lakhs lbs and coffee crop of 60 tons. Against the ordinary capital of Rs 12.50 lakhs, Reserves were Rs 12.75 lakhs.

OBEROI HOTELS
INDIA & PAKISTAN

ON the Kashmir question, the old game of passing the buck is with us once again. The reader will recall that, despite preoccupation with the Syrian crisis, the Security Council resumed, on Pakistan's nagging, its debate on Kashmir. At the resumed debate, the British delegate, Sir Pierson Dixon, came forward with the suggestion that Dr Frank Graham, the former mediator on Kashmir, should be requested to go again to the Indian subcontinent in an effort to solve the issue. His suggestion was endorsed by Mr James Wadsworth, on behalf of the US. The Soviet Union has not given any indication of its view on the matter. As for the attitude of the two countries concerned, Pakistan's consent seems certain: for, firstly, the major assumptions made by sponsors of the suggestion do not, to put it at the lowest, hinder its effort at re-agitating closed issues. Secondly, agitating closed issues, the suggested step bypasses the one issue most embarrassing to its self-esteem and international good faith, namely, the question of its aggression in Kashmir. As far as aggression in Kashmir, no precise indication of the line it will take is available at the moment of writing. The uncertainty is understandable in view of the fact that the exact terms of reference on which Dr Graham is going to function are not yet available, as no formal resolution embodying the British suggestion has yet been put forward. When that is done, India will be in a position to appreciate the scope of Dr Graham's usefulness, particularly the extent to which his hands are tied in advance by interested onlookers. It is possible that, despite its basic insistence on a decision on the question of Pakistan's aggression, India may be willing to have discussions with Dr Graham, provided he is free to discuss the whole question, instead of being tied down to the question of demilitarisation. It is precisely this comparative freedom to manoeuvre that the formal resolution may, despite appearances to the contrary, at the moment, embody. In that event, there should be no particular objection to India's welcoming Dr Graham's efforts to help the two countries resolve a long standing dispute between them.

In extenuation of the British and American desire to have the

Clive

Street

Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please!"
--As You Like It.

matter handed over to Dr Graham, it must be said that they are heartily sick of the whole dispute. If it were not for goading and insistent blackmail of Pakistan as an overprotecting ally, (in itself an embarrassment of great acuteness), they would have left the Kashmir dispute well alone. As it is, they are pulled up by the collar whenever they pretend to the looking the other way. And Pakistan itself, torn by internal instability, can only fasten on the Kashmir dispute to keep the morale of its people up. Thus, when the Security Council is bothered with the new threat to peace in the Middle East, Pakistan needs must have its little indulgence. And so, the British delegation sponsors a resolution that will, at least temporarily, quieten the nagging and incidentally put the matter as far away from the Security Council as is possible in the circumstances.

Having said this, I have said all that can be said in extenuation. On the terms on which they want the matter considered by Dr Graham, the British and American Governments act as loyal friends of Pakistan. It may be that they are embarrassed secretly by Pakistan's outHeroding Herod in the acclamation of the virtues of the military alliances; they may also be bothered by goose flesh by the somewhat exaggerated terms in which Pakistan protests its friendship with the West. (Some of Mr Suhrawardy's more flamboyant utterances in the US make even his compatriots at home blush). But when it does come to actuality, Pakistan finds in its military allies a staunch friend.

This explains Sir Pierson Dixon's bland shirking of the central issue raised by Mr Menon in his speeches before the Security Council. India's recent stand on the Kashmir issue—whatever its earlier attitudes—has crystallised beyond the possibility of evasion. It is that its complaint that Pakistan has committed the most flagrant aggression on the territory of India should be adjudicated at once. Dealing with this, Sir Pierson contends: "The Jarring report says that the Indian Government felt aggrieved that the Council has so far not expressed itself on the question of what in their view was aggression committed by Pakistan on India. I do not feel that would contribute to

progress if the Council were to go over the ground again on the subject. This much I must say: Since neither Her Majesty's Government nor the Security Council has felt able to pronounce on the Indian case on this aspect of the question, and since this is so to speak the major premise in the Indian arguments developed by Mr Menon, it follows that we are unable to accept many of the deductions which have been drawn, however logically they might seem to ensue, if the major premise were accepted."

This confession of the British delegate, slipped in casually in a long speech dealing with a number of other matters, raises several issues of importance. In a sense, the whole thing verges on the absurd. Imagine a judge before whom you have complained of trespass on your property by your neighbour; you address learned arguments on the complaint for nine years and more recently, you have concentrated on nothing but this crucial issue of trespass. At the end of it all, the judge tells you: "Look here, I am sorry I am finding myself unable to pronounce on your complaint and since it is the major premise in your case, I cannot accept your very logical request that your neighbour should be asked to clear out of your property. But what does that matter? I have a bright idea: Why don't you ask him and Mr X to tea and discuss the weather?" We would consider such a judge quite literally unfit to hold his job. It is really breathtaking that the Security Council, whose principal job it is to determine when and where aggression takes place in this world and then take steps to vacate it, should be considered by the British delegate as unable to determine whether or not aggression has taken place in Kashmir. If this were indeed the case, the logical thing for the Security Council is to dissolve itself.

To say this is not to be too narrowly legalistic about the functions of the Security Council. It is to point to frightening practical possibilities. If aggression is so difficult to determine in a comparatively straightforward case like that of Pakistan in Kashmir and about which there are clear findings by no less a person than Sir Owen Dixon, how can the Security Council determine it in

cases where the facts are far from clear? And yet, most cases of international trespass and interference are sure to be a confused medley of cause and effect. How can the Security Council come to any firm decisions on them? Would it refuse to act because it cannot make up its mind? If Sir Pierson was correctly indicating the Security Council's mind, such would be the logical consequence of its inability.

But, of course, that is not the real state of affairs. After all, the Security Council has, in the past, branded certain nations as aggressors. And the inability to pronounce on the merits of the present case cannot, therefore, be due to any difficulty in securing the data necessary for the purpose. It can only be that, for some unknown and unavowed reason, the Security Council—or rather some members thereof—thinks it inexpedient (to put it mildly) to pronounce on the question. If that is the case, there is no reason why India should spare the Security Council any embarrassment, especially since what is now sought to be imposed on it is something that is opposed to its submissions on the other points.

I shall put the point this way: Let us assume, for the sake of argument, that we are willing to assist the Security Council by bypassing the issue of Pakistan's aggression. Then, having liberated the Security Council of an onerous obligation, we are entitled to similar consideration on certain alleged commitments we have made in the past. But this is precisely what the Security Council is seeking to deny us by postulating that a plebiscite is the inescapable mode of determining the future of the State. In the first place, there has been no commitment on the question to anyone except the people of Kashmir. In the second place, why should we be asked to give up a claim for a finding on the question of aggression and all the consequences flowing therefrom, and at the same time be tied to a course of action which, in our judgment, is not only inappropriate after all these years, but positively harmful? Sir Pierson concedes that Mr Jarring also agreed with the possible harmful repercussions of a plebiscite now. He also refers

to British proximity to the communal frenzy in India and admits that there is a real possibility of their repetition. And yet, he insists on plebiscite.

★

According to Anglo-American proposals, Dr Graham is to have as his starting point the resolution of 1948 and the negotiations are to be resumed by Dr Graham where they broke off in 1953. These negotiations related to the demilitarisation on both sides of the ceasefire line, and what is now

sought to be done is to argue endlessly on the size and disposition of the forces on either side. After vain attempts to insist on complete withdrawal of Indian forces from the State, Pakistan is now apparently willing to concede the point. Seizing on this tenuous agreement—India's early readiness to discuss proposals in this regard and Pakistan's belated agreement to consider the point on which negotiations broke off—the British delegate seeks to make the two discuss the matter further as a prelude to the creation of

conditions propitious for a plebiscite. On the face of it, it seems a virtuous desire to salvage some point of agreement and to proceed from there. But the whole thing is a mare's nest. In the first place, India is no longer willing to consider any proposals that bind it to a plebiscite. This stand it takes for excellent reasons to which Mr Jarring and even Sir Pierson obliquely refer. So, if we are to have the offer of a plebiscite flung at us, then we would insist on a finding on Pakistan's aggression.

Secondly, assuming that negotiations should be started where they left off, have things stood still since the days of 1948? Pakistan's membership of the regional military alliances has completely altered the case. And, from the trend of the discussion on the question of demilitarisation in the Security Council, there are indications of mental reservations on the part of the sponsoring powers. There is a lot of quibbling about the quantum of the reduction of the troops on the two sides of the ceasefire line to the level of 1949 and the reduction of the augmented military potential since then. The British delegate referred to the latter aspect of the matter also, but the American delegate significantly referred merely to the reduction of the number of troops on either side. One of the points made by Mr Krishna Menon was the massive increase in the military potential of Pakistan consequent on its membership of military pacts. Pakistan is even supposed to be having atomic missiles of a tactical kind. To talk in this context of only the troops on the area concerned being reduced is surely to be hopelessly out of touch with reality.

★

It seems to me, therefore, that the Security Council has only one alternative to the unpleasant task of pronouncing on India's complaint on Pakistan's aggression on India. And that is, to free the whole issue completely from the past and allow discussion to take place afresh. No one can accuse India of being narrowly legalistic on the question of aggression and at the same time be itself equally legalistic by wanting to bind India to its alleged concessions embodied in the 1948 resolution. If the Security Council finds itself unable to pronounce on the question of aggression, then the practical alternative is to have a solution based on present reality. You cannot have it both ways, by having a portion of the past forgotten and, at the same time, imposing on India the obligations, real or imaginary, of the other half of the past. It seems to me—though I do not know the mind of the Government of India on the question—that it should be possible to arrive at a solution of the problem on a basis that takes note of the present conditions. Offers had been made on behalf of India in the past to have the present situation more or less frozen, not because such a solution would be a just one, but because it would put an end to a long standing dispute. But such offers were rebuffed by Pakistan, and therefore withdrawn. It is, however, just possible that inhibitions of various sorts are preventing people in both countries considering again openly such a possible way out. In my judgment, there will be many on both sides of the ceasefire who would acquiesce in a solution of this sort. In any event, unless the terms of

Gateway Gossip

Unofficial Appraisal

WITH the return of Mr T. T. Krishnamachari to New Delhi and of Mr H. V. R. Iengar to Bombay, the country is expecting to be vouchsafed data for an assessment of their measure of success which their foreign mission has achieved. Beyond a few remarks on the controversial interview which appeared in The New York Times—remarks which it was the part of discretion to have avoided and which, therefore, cannot be said to have improved matters or reduced misunderstanding—the Finance Minister has not publicly said anything which may be construed as his estimate of the immediate, near and distant prospects of relief for our foreign exchange predicament. Up to the time of writing, the Governor of the Reserve Bank of India has said nothing in Bombay, though, on his arrival in the Eastern Capital, he summoned a press conference in which general rather than precise statements were made by him.

The impatience on the part of the public for precise information is understandable; but no less understandable is official reticence. For, the stage at which definite details could be confidently released to the press will be reached only after the proposed further talks at Washington and Bonn are completed. It should, from this point of view, suffice if, in present conditions, a confirmation is available for a hopeful outcome for the negotiations which have been so impressively launched by TTK. There is unanimity among all foreign observers that, in removing misunderstandings and in allaying misgivings, the Finance Minister has achieved remarkable success; and that, on the positive side, he has inspired in the concerned quarters a vivid appreciation of the significance of India's democratic planning to the interests held dear by the free world. The issue, thus, is much more than a concern for this country's progress; it is a challenge to the mighty powers in the Western world: Is their solicitude for the democratic way of life sufficiently alert to make them realise that by contributing to the success of India's Plan, they are doing nothing more—and nothing less—than translating their professions into practice?

While this question has been posed in the most compelling fashion, and while the answer which the USA and West Germany are likely to give may be expected, with some measure of confidence, to be in the affirmative, it is possible, on the basis of inferences that can now be drawn, to attempt some kind of concrete estimate of the minimum foreign aid that is likely to be forthcoming.

At the outset, we may make two assumptions. The first is that the Union Government will take early or even immediate steps to reduce the statutory currency cover from the equivalent of Rs 300 crores to, say, Rs 100 crores. The present limit of foreign securities at Rs 300 crores may be reached in the space of a few weeks—last weeks depletion was particularly ominous. In the light of the practice of leading central banks like the Bank of England, the maintenance of a foreign exchange reserve in the particular context of a cover for paper currency is outmoded. The responsibility for the reserve on its bearing on balance of international payments has become that of the Treasury operating through an Exchange Fund. So, the reduction of our currency reserve in the form of foreign securities has a historical, and not a contemporary, significance. As for the apprehension that a lower reserve will spell disaster to the status of our currency in relation to foreign currencies, let us study this issue more closely. It is known, and it is admitted, that we are passing through a phase of foreign exchange difficulties. This knowledge has been with the world for some considerable time. So, the damage that this could cause has already been done. That is to say, such bankers and speculators as doubt the integrity of our present exchange rate have already sold rupees to the extent practicable and bought foreign currencies to the corresponding extent. This oversold position in rupees is there; and, if the Reserve Bank's control of foreign exchange is effective, further sales of rupees are not possible on any large scale. There need not be any great fear of adverse repercussions from the statutory limit being reduced from Rs 300 crores to Rs 100 crores.

The point to note is that we are making strenuous efforts to effect reimbursement. Meantime, we shall have Rs 200 crores available for immediate and near foreign exchange requirements. This should take us comfortably to the middle of 1958.

The second assumption is that, while the US Administration will, with conviction and expedition, bring up, before the Congress, the question of substantial aid to India, the mood of the Congress is uncertain, and what it will do is unpredictable. We shall be wise in not counting these chickens before they are hatched. Among the known data from which inferences are permissible with regard to the magnitude of foreign aid, we may not include any loan that depends upon the whim and mood of the US Congress.

Data of other kinds in this respect add up to a comforting, if not confident conclusion. Let us first deal with the prospects in the USA. India has, for some years, been receiving \$60 million a year as appropriation from the US economic aid programme. I understand that, without going to the Congress and with easily achievable adjustments, the Administration could raise this allocation to \$100 million a year. The additional provision here referred to can be made effective from the current fiscal year and will be determined by the will and pleasure of the US President and his top advisers and cannot be impeded by the whim and caprice of the Congress.

There is, further, a discretionary fund of \$300 million at the disposal of the President. If India could make out a good case for any specific purpose or project, a moiety from this fund can be made available. In my soundings, I have gathered the impression that if, for example, ten to twenty million dollars were required for setting up iron ore export facilities in Geonkhali, the President may well consider this plan suitable for the discretionary fund.

This leads me to an examination of the possibilities from the World Bank. The projects connected with the expansion of transport and port facilities have been engaging the continuing and constructive attention of the World Bank, whose representatives detailed for this study have evinced sympathetic understanding and shown significant appreciation of what is being achieved and of what is being attempted to be achieved. This understanding and appreciation may be expected to be shown in a substantial increase in the next tranche of the loan sanctioned by the World Bank for transport and allied projects. It will not be over optimistic to estimate this impending aid at \$150 million.

In this connection, it may be stressed that, right now, the World Bank team is in Bombay, studying the port requirements. It is also not without significance that the World Bank is taking active steps to maintain closer interest in the what and whither of our Plan. In the Calcutta Press Conference, Mr Iengar made pointed mention of the developments in this respect.

It may be recalled that Mr Iengar disclosed that the World Bank intended to station one of its representatives, Dr Basch, permanently in India. Mr Iengar went to the extent of saying that the presence of Dr Basch in this wise would be helpful in the sense that discussions will be facilitated and, consequently, the Indian anticipation of new loans from the World Bank would fructify with less fuss.

We may also note that World Bank assistance is likely to be forthcoming for a variety of projects besides the Railway Plan. For example, the Tata Iron and Steel Company has already received a supplemental \$35 million, although part of this is to be secured from American banking interests. I shall content myself with indicating such prospects, but I shall not for the moment take credit for further such assistance being obtained for projects in the private sector.

I now find, in order to imbue this Gossip with a self-sufficient completeness, that I have to go over some of the ground that I covered last week. I shall endeavour to minimise repetitive statements but, in an extension of any duplication in this Gossip, I might point out that a recapitulation does serve a useful purpose.

So, the third source of foreign assistance that I may here discuss comprises the arrangements which India may hope to conclude with America and Canada for the purchase of surplus wheat. As I pointed out last week, the scope for any further substantial purchase of surplus commodities from the USA now appears to be limited, but this is fortunately offset by much better prospects in this context as far as Canada is concerned. Now, it is extremely difficult to work out the saving in foreign exchange which might accrue to India as a result of further arrangements akin to ones already concluded with America under public Law 480. But I should like to draw iterated attention to the fact that such agreements for the purchase of surplus wheat are important not only for the solution that they offer for our food problem or for the foreign exchange that we otherwise would have to lay out on the import of foodgrains, but, most significantly, for the fact that the proceeds from the sales of such foodgrains are expected to be made available to India in the form of long term loans. Thus, effectively, such arrangements for purchase of surplus wheat in a very real sense add to the internal resources available for implementing the Second Plan. I might here remind the reader that the foreign exchange saving in terms of the arrangement concluded last year with America was calculated to be around Rs 137 crores. On a very rough estimate, I may suggest that current negotiations may conceivably benefit us to the extent of a saving in foreign exchange of, roughly, Rs 100 crores or \$200 million.

The next point that I should like to refer to is the intensification of discussions by Japanese authorities on a scheme for the regular supply of iron ore from this country. It is known that Japanese interests are willing to put up the money for the

North Indian Notes

Food Production in Bihar

If in spite of the steady progress the country is making in adding to the irrigation facilities, agriculture in several parts of the country should remain a gamble in the monsoon as is painfully evidenced by draught conditions in Bihar, it only points to the great leeway the country has to make in harnessing the water resources of the land. The vicissitudes of the weather has reduced the production of food in the State to a dismally low level. While the yield of paddy has suffered a 50 per cent reduction on account of draught conditions; untimely rain in winter coupled with hailstorm damaged the rabi crops reducing the outturn of wheat and gram to 41 per cent of the normal outturn.

The State Government have now launched a two-pronged drive to fight the distress caused by the situation. While, on the one hand relief is being organised on a planned basis, stress is also laid on saving as much of the standing crops as possible as also on increasing the winter production. Therefore Mr Bichand Patel Food Minister for Bihar assured the people of the State in the course of a radio broadcast from Patna, that they should have no misgiving or apprehension about any scarcity supposed or real, and pointed out that the entire Governmental machinery of relief and distribution has been geared to maximise all efforts.

Explaining the food situation in the State Mr Patel said that the stock of food grains in the State, which itself was fairly sufficient would be augmented by subsidies from the Centre. The assurance of the Union Government that they would allot any quantity of food grains that may be required to make up the deficit, should alone remove any fear that would have been caused in the minds of the people by the present situation.

In a drive to ensure the coming rabi crops most of the planned targets in the different sectors under the Second Five-Year Plan are being revised. Seeds after a thorough check-up and test of the potential, value are being rushed to various parts of the State to be made easily available to the farmers.

Referring to the relief programmes of the Government Mr Patel stated that instead of giving gratuitous relief they have in view what he called productive relief, through implementation of light or hard manual labour schemes and pointed out that manual labour schemes imparted to the recipients of that relief a sense of dignity of labour and all that went with it. It would

also build their purchasing power
and instil a sense of confidence in
them.

Development of Handicrafts

The establishment of the All India Handicrafts Board in 1952 signalled the first attempt, on a national scale, at the revival of the handicrafts. Development of handicrafts has become one of the accepted methods for the rehabilitation of the rural economy in the country, in view of the scope which they provide not only for adding to the meagre earnings of the people but also for giving more opportunities for useful employment.

The Second Five Year Plan has made a provision of Re 9 crores for the development of handicrafts in the country. The development of handicrafts is conceived as part of the movement for developing the cottage and small-scale industries in the country. The All India Handicrafts Board advises the Governments on the development of handicrafts and examines the schemes for improvement of handicrafts received from State Governments and recommends financial assistance from the Centre. Besides the Board also formulates plans and implements them.

The Board has set up nearly eighteen pilot centres for training and research in traditional Indian handicrafts, to foster their development on modern lines. Of these six are for training, three for training

NORTH INDIAN MARKETS

Sugar Markets Depressed

SENTIMENT in Sugar markets has continued to remain depressed and prices have been showing an easter tendency due to selling pressure by the factories before the commencement of the new season by the first week of November. A substantial increase in production during the current season is another contributory factor. Production of indigenous sugar has amounted to 20.25 lakh tons up to October 15 in the current season as against only 18.59 lakh tons in the corresponding period of last year. Total offtake, including quantities despatched for exports, is 20.24 lakh tons. Stocks with the factories, as on the 15th October were 5.44 lakh tons.

Meanwhile, plans are under way to increase India's annual export of white sugar from 1.7 lakh tons to at least 2 lakh tons. If the proposed level of export can be reached

and production, seven for research and experimentation and two for production. The centres have been so chosen as to suit the needs of the handicrafts peculiar to different areas. Further six more centres are being opened during the current financial year. To popularise the handicrafts the Board has set up design centres and operates such other schemes as exhibitions of handicrafts in India and abroad, publicity, provision of marketing service for handicrafts and research.

During the current financial year about Rs 1 crore would be spent on different schemes for the promotion of handicrafts out of which about 66 lakhs would be distributed as grants to State Governments and the Handicrafts Board and Rs 34 lakhs would be given as long-term loans. Plans for the building of a network of marketing depots all over the country are also under the consideration of the Board. These depots will purchase the handicrafts from craftsmen as well as sell them to the public.

With a view to popularising the handicrafts abroad the country participated in a number of international fairs in 1956-57 including Frankfurt, Prague, Zagreb, London, Paris, Nairobi etc. Within the country a mobile exhibition unit has been formed to popularise handicrafts. Further four design centres have been opened at Calcutta, Bombay, Bangalore, and Delhi to redesign old forms and create new ones to guide the craftsmen. Another such centre is being set up at Srinagar and the U.P. Government has established one at Lucknow.

The Khandsari market is also running quiet. Manufacture of khand-sari has not yet begun, while that, for the season just ending, is estimated at 60 to 70 per cent higher than previous year. The industry has the advantage of getting cane at lower prices as compared to factories. Prevailing rates are:—Rs 28.00 to Rs 31.50 per maund, according to quality.

Gur

New Gur arrivals, which were small last week due to rains, improved during the week and were about 1,500 maunds. Buying enquiry is fairly good and prices have continued to be steady at Rs 14.00 to Rs 16.50 per maund.

Old gur stocks are estimated around 6,000 manuds and are quoted at Rs 11 per maund for Kotha quality. As 'rabl' sowings are nearing completion, arrivals of new gur are expected to increase shortly.

Shakkar continues to be in good demand and the new quality has appreciated by about Rs 1 per maund.

Foodgrains

A rising tendency in the prices of Pulses was the main feature of trading in the Hapur Foodgrains market. Wheat prices for average quality recorded a modest fall due to increased arrivals in the market, most of the stocks being supplied by the Government for seed purposes. Despite the beginning of arrivals of the new crop, the Rice market ruled steady on reports of overall deterioration in food situation in the country.

Gram prices ruled steady following good demand in the face of falling stocks. Barley and Bajra, however, recorded modest declines on reports of slight rains, which were expected to increase the sowings of 'rabi' coarse grains. Although arrivals of new Maize increased, prices recorded some improvement, thanks to good demand from East Uttar Pradesh and Bihar. Prices of other coarse grains ruled generally steady.

A mixed sentiment prevailed in the Delhi grains market. Wheat prices remained practically unchanged, while Gram showed a loss of about 25 nP per maund in the absence of enquiry against better arrivals. Basmati Rice rose by about a rupee per maund due to paucity of stocks coupled with encouraging upcountry advices. Owing to decreased demand, the rates for Maize and Bajra ruled quiet. Other grains were quietly steady.

The Bombay grains market presented an easy appearance with Rice and Pulses declining modestly on selling, induced by the reports of rains in some parts of the country. It was believed that the latest

(Continued on page 815)

Olympus

Messengers of Mercy

NEW DELHI has become, in the last few years, the inevitable venue of important international gatherings devoted to constructive endeavour for the welfare of mankind. Only a short while ago, the UNESCO met here in a plenary session, and the problems that bedevil the human community as a whole were reviewed by men and women whose close intimacy with the most gifted spirits of mankind made them peculiarly aware of the agonising complexities of such problems. Now, it is the International Red Cross holding its 19th Congress. Whereas the UNESCO's

equipment was, by definition, that of intellectual and imaginative apprehension of the world's problems, the qualifications of the members of the Red Cross are principally derived from extensive exercise of practical compassion. It would be a nice point in abstract reasoning as to which of the two is the better, provided to deal with human predicament. But such a discussion would be at all times sterile (as quantities of pseudo-philosophical writings would show), and more so in the context of the present day world. For, whichever way you set about it, you arrive at the same kind of solution for our ills. Such a solution is easily enough stated: unless a profound sense of compassion and fellow feeling is permitted to overcome mutual fear and suspicion among the members of the human family, mankind will forever be doomed to a life of perpetual insecurity punctuated every now and then by orgies of war and destruction. And, as a post script to this enunciation, we of the atomic age may add, the next time we allow ourselves the indulgence of a war, we shall perhaps succeed in putting an end to the misery of man, but only at the cost of putting an end to man himself.

It is characteristic of the Red Cross fellowship that such a catastrophic view of the possible fate of mankind does not paralyse their will to practical piety. More than anything else, this is what has made this quiet dispenser of mercy an object of admiration. Throughout its long and honourable history, it has made a point of going wherever distress manifests itself, and trying to mitigate it to the extent possible. More squeamish mortals would have found the kind of sight that usually greets Red Cross workers too much for their stomach, and their idealism would have hardly survived in any other form except that of a profound despair about the future of mankind. On the other hand, less sensitive folks would perhaps have become so enured to the sight of misery that the sources of their compassion would have become dried up. A somewhat allied difficulty in all such idealistic endeavours is the accommodation within an individual as also within the organisation both of idealistic impulses and practical ability to carry them out. It is not often that impractical idealism finds organisation demands too exacting, and conversely, too insistent a preoccupation with organisational matters

may well make one lose contact with the original impulses behind the organisation. In the overcoming of this difficulty, too, the Red Cross organisation has been eminently successful.

At the Conference at Delhi, deserved tributes were paid by the President and by Mr Nehru to the splendid record of service of the Red Cross organisation. Mr Nehru, who made a characteristic speech, asked the Red Cross to extend its services to include the wounds not only of the body but also of the spirit. He said that the "Red Cross being rather specialists in dealing with suffering humanity" should deal with the "spiritual torment of today."

There are two possible answers to this request, and possibly the Red Cross organisation is in the throes of an effort to find the right one. In fact, that much of the discussion at the Conference bordered on controversy was due to this difficulty in assessing the precise function of the Red Cross. No doubt, there is a profound change in the world situation as a consequence of the implications of a nuclear age. There are the problems created by nuclear tests, which have nothing to do with actual war and the suffering consequent thereon. Should the Red Cross, as Red Cross, take action to put an end to their continuance? In view of the profound crisis in human conscience as a consequence of the moral issues involved in these tests, should the Red Cross step out of its self imposed limits of non political humanitarianism, and assert itself on this question? It is true that the issues raised by nuclear tests are fundamentally moral—indeed, all political questions are. But if the Red Cross pronounces itself on these questions, will it not be expressing it politically? Supposing the answer is in the affirmative, would it matter? Do not the compulsions of the times and the issues involved indicate that the Red Cross must change its original restraint over avoiding overtly political stands?

These are all questions more easily posed than answered. As far as the Red Cross organisation is concerned, it cannot, and should not, throw away the substance of its usefulness for the momentary thrill of a gesture for the future. It would be a very fine thing for the Red Cross to be able to concern itself with the broad question of the agony of mankind in all its aspects. But can the Red Cross do it at the moment, without grave jeopardy to its continued usefulness? It obviously cannot. The reason for this is only too notorious: at the moment, even moral issues have taken on the

hues of cold war politics, and humanitarianism is bedevilled with rival ideologies of a narrowly political kind. It is not only that this antagonism rears its ugly head in procedural wrangles like who ought to represent China. By now, we have become used to the absurd preliminary unseemliness of the quarrel over this issue in every international gathering. By now, we have also evolved a kind of technique in dealing with this awkwardness. At the Delhi conference, there was a repetition of this farce, but the matter was allowed to blow over.

But it is not only procedural matters that are poisoned in this fashion. On more substantial questions, too, there are barely concealed political polarisations. For instance, the Humanitarian Law Commission of the Red Cross Conference took up the discussion of the draft rules submitted by the International Committee for the protection of the civilian population during war. Almost at once, the various delegations were involved in familiar arguments about total ban on nuclear war and tests, and the competence of the Red Cross to discuss it. Arguments panned out exactly on familiar ones, as indeed they could hardly help doing: Russian, Chinese and East European delegates insisted on this ban being incorporated in the rules. The Western delegates pointed out that it was hardly their province to decide questions like this. After a good deal of discussion, the matter had to be compromised: the Swedish delegate, supported by the Indian delegate, suggested that the draft rules should be referred back to the International Committee to elicit the views of the various Governments on the question. In other words, the question was left inconclusive.

Thus, it is seen how difficult it is for the Red Cross Society as such to act as healer of the human spirit, unless Governments of the world let it do such a chore. There cannot be the slightest doubt that there is a profound desire on the part of the majority of mankind to see the lifting of the monstrous cloud of fear generated by the existence of massive and terrible engines of destruction. But they are helpless in the face of a paralysis of will on the part of those in power. The Red Cross, along with the rest of mankind, is a victim of this stalemate. And, unless that stalemate is resolved, the Red Cross Society, however deeply it may sympathise with Mr Nehru's desire to enlarge its usefulness, will have to confine its activities to those consecrated by convention as its own chosen ones.

Madras Review

Industrial Relations

One of the aspects of our national life which are causing considerable anxiety in recent months is the state of industrial relations in the country. It has rightly been said that good industrial relations are even more important for the successful implementation of the Second Plan than the securing of adequate finance. For in the rapid industrialisation now in progress labour is gaining an increasingly important position in national life. This vital role of labour stems from the fact that in the ultimate analysis it is the workers who form the link between planning and the attainment of the targets thereof.

The need for securing the unstinted cooperation of labour in the national task has been receiving the special attention of the powers-that-be ever since the attainment of independence. During the 'First Five Year Plan period several measures have been initiated to ameliorate the condition of workers. The Employees Provident Fund Act and the Employees State Insurance Scheme have been implemented. With the declaration of a socialistic pattern of society as the national objective, the question of industrial relations has received fresh emphasis. The Second Plan has pointed out that increased association of labour with management is essential for the successful implementation of the development schemes envisaged. It has therefore recom-

mended that in each undertaking there should be a Council of Management consisting of an equal number of representatives of management and workers.

It is to be noted, however, that the answer to the question whether the measures so far taken have secured the desired cooperation of labour, is still in the negative. What is worse, the situation on the labour front has recently shown marked deterioration. The loss of working time continues to be of such proportions as to cause anxiety as regards the smooth progress of the Plan. For instance, during July the number of man-days lost had been placed as high as 715,939, and Madras had topped the list with the highest time-loss (222,852 man-days) among all the State.

There is every indication, however, that industrial relations in Madras will record a sizable improvement in coming months. For the State Government are taking concerted measures to establish an atmosphere of goodwill and understanding between capital and labour. Already they have made labour's participation in management a reality. The scheme has been introduced in the Government Transport Coach Building Factory in the public sector and the Simpson and Group Companies in the private sector. Madras is thus the first State to implement the recommendation of the Plan-

ning Commission that labour policy in the country should be increasingly directed toward giving workers representation in the management of industries.

Speaking at the State Labour Advisory Board meeting last week Mr R. Venkata-aman, Minister for Industry and Labour, expressed the hope that more industrialists would come forward to associate their workers in their managements. Giving a resume of the steps taken and contemplated by the Madras Government toward the establishment of good industrial relations, he said that Government were considering proposals for re-issuing the Madras Industrial Disputes Rules, after revising them suitably in the light of the experience gained in the working of the rules so far. The main aim of the revision was to minimise the delay in the settlement of disputes.

Considerable progress has, also been made in the State toward settling industrial disputes at the bipartite levels as recommended by the Planning Commission. A Standing Committee has been working successfully for some time now in the Coimbatore Textile Industry as a result of an agreement between the Textile workers' unions and the Southern India Mill Owners Association. Recently a similar Standing Consultative Body has been set up for the Madura Mills.

The agreement signed early this week in the presence of Mr R. Venkata-aman, by the representatives of the United Planters' Association of South India and of the Estates Staff Unions of South India bringing to an end the pending disputes with regard to the salaries and other terms of service of the Estates Staff is also indicative of the growing popularity of internal settlement of disputes between capital and labour. This agreement covers about 7000 members of the staff of about 600 Plantations situated in Madras, Kerala and Mysore States. The agreement which will be in force from October 24, 1956 to March 31, 1957, provides for a complete revision of basic salaries and groupings, ensuring long-term scales and increase of 20 per cent or Rs 20 whichever is higher to all the staff as on October 23, 1956, besides other benefits.

It is a good augury for the maintenance of good industrial relations that there is a growing realisation in the State that internal settlement is the best method for solving differences between employers and the workers. In this regard it will be profitable to take note of the suggestions recently made by Mr V. V. Giri, Governor of Uttar Pradesh. Addressing the Merchants Chamber UP, Mr Giri has pointed out that "so long as compulsory adjudication

is present in the picture as a machinery for the settlement of disputes, the voluntary system can hardly succeed". In the course of his presidential address at the recent annual conference of the All India Council of Labour and Welfare Officers, Dr U. Krishna Rau, Speaker of the Madras Assembly, has also warmly supported the "Giri Approach" to industrial relations.

The State Government's abiding interest in labour welfare is also borne out by their energetic tackling of the important problem of housing for industrial workers. Finding that a sufficient number of private employers have not availed themselves of the assistance offered by the Central Government in the matter of housing of industrial workers, the Madras Government have decided to initiate the projects themselves, by utilising the provision of Rs 55.10 lakhs provided in the Second Five Year Plan. Work on a housing colony is fast progressing and eight more schemes for the construction of 1,156 houses have been finalised. Mr Venkata-aman disclosed that arrangements were being made to take up other schemes also as early as possible. As the Minister has pointed out the problem of housing for workers, as any other labour problem, requires the cooperation on the part of employers, employees and Government.

On their part employers should realise that the proper housing of workers is a matter that concerns them also. If, however, employers continue to be lukewarm in this regard, it would appear that the State Government will after all be obliged to specify the number of houses that employers should provide for their workers. Self-help by workers can also go some way toward solving this problem. Adequate facilities are available to them under the cooperative housing schemes. Mr Venkata-aman revealed that the Central Government were considering the question of increasing the extent of financial assistance to cooperative societies from 50 per cent loan and 25 per cent subsidy to 60 per cent loan and 30 per cent subsidy.

For good industrial relations to obtain it is also equally important that over and above mutual goodwill the industrial life is kept free from political influences. At the present juncture in the country there are unmistakable indications that attempts are being made to use the trade unions as an instrument of party politics. Such tendencies if not nipped in the bud will render all the endeavour of Government and those interested in the welfare of workers largely useless because workers owing allegiance to extraneous forces will not be influenced strictly by matters pertaining to their interest.

South Indian Notes

Local Administration

The long awaited White Paper on the reform of Local Administration has been laid on the table of the State Legislative Assembly by the Government. The proposals mentioned in the White Paper represent the revised provisional conclusions with these plans the territorial divisions would be increased from 50 to 100, each division being a single member constituency. Contiguous divisions would be grouped to form ten municipal circles. Adequate representation of women and scheduled castes is also included.

The salient features of the White Paper are: (1) It envisages a planned programme of reform and development of village panchayats, (2) provides for the abolition of the District Boards, (3) provides for the constitution of District Development Councils and finally (4) has made recommendations for the reform of the Madras Corporation.

The development of the village panchayats is expected to start in 1958-59 and when completed in 1960-61 every village in the State would have a panchayat. A Panchayat Union at the Block level representing a co-operative association of the panchayats of all the villages situated in the Block is also recommended. As thus reformed and mended, the village panchayat developed the village panchayat organisation would be entrusted with such functions as elementary education, maternity and child welfare which are at present exclusively performed by the District Boards. The reformed panchayat organisation could have the benefit of reducing the evil of factions in local administration.

When the District Boards are abolished their entire functions would devolve upon the Panchayat Unions at the Block level. As a preliminary to their final abolition their functions would be entrusted to special officers forthwith. While the management of the District Board high schools would be vested with the Panchayat Unions, the care of the major district roads would pass on to the State Government.

The constitution of District Development Councils is, in supersession of the present agencies for village planning such as District Planning Boards. Though the functions of the Council would be purely advisory they would be given statutory status. At local level the panchayat unions are expected to perform an advisory role in respect of all those matters of local development.

As regards municipalities the existing administrative set-up has been found satisfactory and is therefore expected to continue with certain improvements which would ensure their proper working.

The reform of the Madras Corporation is drawn on lines so as to ensure an adequate set-up suitable

to the present condition. An electoral system with a view to simplifying and giving larger and more representation to the people living in different parts of the city has been recommended. In accordance with these plans the territorial divisions would be increased from 50 to 100, each division being a single member constituency. Contiguous divisions would be grouped to form ten municipal circles. Adequate representation of women and scheduled castes is also included.

* Cooperative Credit

The cooperative principle had its pioneering experiment in the State of Madras. The movement was at first confined to the field of agricultural finance, especially short-term finance. But since then various other aspects of economic life have been brought under its operation. The Second Plan itself is intended to be fulfilled largely through the medium of cooperative societies.

The State of Madras has been forging ahead in extending cooperation into new fields and also intensifying it in others. The State Cooperative Advisory Council has recommended the formation of a central institution for the State to finance primary house mortgage banks with a view to providing long-term loans to the members. The purposes for which such loans would be given are repairs and renewals of the houses of members, purchase of houses in special cases, discharge of prior debts and redemption of mortgages on houses. The loans would be repayable in 10 or 15 years. For these purposes the central institution would float debentures guaranteed by Government and backed by the mortgages of the houses.

The Council has also in view the expansion of the full finance scheme to two more N.E.S. blocks during the current year and to four more blocks during the next year. Under this scheme full finance of both the short and medium types would be provided so that other agencies including even takkavi loans would be superseded. Governmental guarantee upto 10 per cent of the loans issued by the societies is being sought by the Council.

The Council has recommended the introduction of cooperative farming as an experimental measure in each block in the National Extension Service and Community Development areas wherever there were possibilities. A pattern of financial assistance to cooperative farming societies in respect of share capital of members, supply of seeds manure, agricultural implements, reclamation of land and provision of irrigation facilities is being worked out.

With a view to tapping the savings of the rural people the Council has recommended the appointment of special savings organisers on a district basis to organise propaganda meetings and start campaigns for the promotion of savings, the cost of the organisers

being met by the Government in the initial stages. The Council pleaded for taking steps in consultation with the Life Insurance Corporation of India to popularise Janata Insurance policies among the members of cooperative societies particularly in the rural areas.

SOUTH INDIAN MARKETS

Exports of Malabar Produce

ACCORDING to the statistics given in the address by the President of the Travancore Chamber of Commerce, exports of black Pepper from the Alleppey and Cochin Ports have registered an increase to 344,614 cwts in 1956-57 from 280,100 cwts in 1955-56, showing an increase of 23 per cent. But, the total earnings have recorded a fall of about 15 per cent from Rs 4.7 crores to Rs 4.0 crores.

There has been a small increase in the quantity and value of Coir Yarn exported; but just the opposite in the case of coir-manufactured goods. In 1956-57, about 1,288,810 cwts of coir yarn valued at Rs 6.6 crores were exported from these two Ports against 1,167,430 cwts valued at Rs 6.00 crores in the previous year. In the case of coir goods, only 404,250 cwts costing Rs 3.1 crores were exported in 1956-57 as against 422,771 cwts costing Rs 3.4 crores.

Exports of Cashew kernels, likewise, have registered a fall both in quantity and value. Against 511,674 cwts worth about Rs 10.9 crores in 1955-56, only 437,055 cwts costing Rs 10.5 crores were exported in the succeeding year. Prices of all these commodities, during the year under review, have been reasonably steady at lower levels; but the market has been listless.

Meanwhile, the pepper market in Alleppey continues to rule dull with sellers at Rs '550 and Rs 537.50 per candy respectively for superior Palai and Thekkan varieties. In the Kozhikode market, Wynaad quality is quoting Rs 630 and the Country variety at Rs 600 per candy.

* Groundnut

Conditions in the Madras Groundnut market remained quiet with prices developing an easier tendency. Arrivals were not large due to rainy weather conditions and averaged only 20 to 25 tons a day. These were taken up by local small crushers. Stocks of the old crop were reported to be not available. The new crop arrivals were mostly from the

North Arcot, Chingleput and Chittoor districts and these were sold at Rs 155 as against Rs 161 per candy quoted in the previous week.

In the Groundnut Oil section, business was restricted as both buyers and sellers were not keen and preferred to wait till arrivals of the new crop assumed larger proportions. The rate for the ready position declined to Rs 328 from Rs 335 per candy.

* Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides continued to be restricted, while those of Buff Calf and Cow Calf were moderate. Prices remained practically unchanged.

On the export front, there were good enquiries for fourths and runs in light weights; but there were only stray enquiries in medium and heavy weights. There were, however, some enquiries for inferior Cow Calf 1-1½ lbs ordinary at 53½. In Buff Calf, there was good demand for 2-2½ lbs thirds around 48½. As stocks available were only little, business done was very small.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were restricted, while clearances were small. Sellers' prices were maintained at last levels.

In the export section, bids were reported to be generally at lower levels. There were enquiries in 5½-6 lbs Goat skins at 14sh 3d to 14sh 6d. In sheep skins, business had not developed as the London auctions had just concluded.

Out of 609,000 Goat skins offered in London, 443,000 skins were reported to have been sold. Out of 600,000 sheep skins offered, only 250,000 skins were sold.

* Rubber

The Ceylon Government have proposed to increase the export duty on Rubber from 55 cents to 82½ cents per 100 pounds, from January next. The enhanced levy will go to expand the Rubber Research Institute's Special Plant Breeding division. Legislation enabling the increase will be taken up for consideration by the House of Representatives on November 5.

Calcutta Tramways Company

Expenses Increase More Than Earnings

Need for Alteration in Fare Structure

Mr. D. R. Webb on Cost of Improvements

The annual general meeting of the Calcutta Tramways Company, Ltd., was held on October 22 at 30, Cursitor Street, London, E.C.

Mr. D. E. Webb, chairman of the company, who presided, said: Gentlemen,—Before starting my review of your Company's activities for the past year, I would call your attention to the presence on our Board to-day of Sri Anandi Lall Poddar M.L.A. On your behalf I extend him a hearty welcome as the first Indian Director of our Company and also as a most helpful colleague. I will tell you more of Mr. Poddar when we come to the re-election of Directors. At the same time, I must refer to the absence of Mr. Cecil Webb. Advancing years have unfortunately, started to curtail Mr. Webb's activities and it was with real regret that your Board agreed to his wish that his name should not go forward for re-appointment. He has been a Director for 24 years and the Company has never had a greater friend or wiser counsellor. I know that you would all wish him great health and happiness in his retirement.

The accounts before you cover the twelve months to the 31st December, 1956. The period was one of comparative calm, although traffics were affected to a small degree by various stoppages of short duration for one reason or another. Traffic receipts fell short of the record figure of the previous year by only four thousand pounds, whilst advertising and sundry receipts were up by five hundred pounds.

If a study of the accounts were confined to the credit side of the Revenue Accounts one might consider that the Company had had another successful year, but when the expenditure is examined it becomes apparent that all is not well with the Company. Increased expenses amounting to some £50,000 have not been offset by a proportionate increase in earnings. Of the increase in expenses the staff in India received an additional £24,000. It seems probable that wages, materials and cost of Power will continue at a high level.

As a result of the above the working surplus was down from £312,000 to £257,000. After charging Office Expenses, Development Expenditure, and setting aside £80,000 for Renewals and Replacements, there is a balance of £157,000 to be carried to the Appropriation Account

compared with £206,000 in the previous year. Provision for Indian Income Tax absorbs £61,000 and Debenture Stock Interest requires £23,000. A sum of £87,457 has once more been placed to the credit of Shareholders' Account, and the deficit of £14,257 has been charged to the Special Reserve Account. From the balance on Shareholders' Account after charging Debenture Stock Redemption allocations and the dividend on the Preference Shares, the Directors once more recommend the payment of a dividend on the Ordinary Shares of 8½% free of tax.

DECREASING LIQUIDITY

Turning to the Balance Sheet, there is little that calls for individual comment. It is, however, the overall picture of decreasing liquidity that is disturbing. Shareholders will recall that our liquid resources were seriously depleted in 1953 as a result of the unrest in July of that year. From that time your Board has made great efforts to restore the position and, until this year, had met with a fair measure of success. The reversal of that trend which is now shown is the result of the continuously increasing costs in a year when receipts have not increased, and emphasises once more the necessity for increasing fares.

Since the close of the year, the running of the undertaking has followed very much the same pattern. More people are travelling by tram than ever before and, as a result, receipts have increased. At the same time expenditure is still increasing more rapidly.

A COINAGE COMPLICATION

There has been an additional complication this year. In April Government implemented a decision to convert the Indian currency to a decimal coinage. For the future there are to be 100 naya paise to the rupee where, in the past, there have been 64 old pice. Moreover, for the next five years both naya paise and old pice will be legal tender. It can well be imagined that few of our fares could be converted into the new currency exactly and it was necessary to decide whether the fractions should be adjusted up or down. As we were unable to reach agreement the matter was referred by Government to an independent tribunal appointed to decide upon the conversion table.

In the meantime an interim basis is being worked and great credit is

due to our staff, both the executives and the actual conductors, that the introduction of the new currency has worked so smoothly. One can well imagine the problems of a conductor being offered old pice for a naya paise fare and the resultant calculation on the question of how much change, if any and in what currency. Our staff have co-operated wholeheartedly and have dealt with a situation which might well have led to ill-feeling with the public in a thoroughly sensible and competent manner.

TRIBUNAL EXAMINING FARES

The same tribunal has been instructed to examine and advise on the whole question of the fare structure, not only of the trams but of the State-run and privately-owned buses. The Company has claimed before this tribunal the right to increase its fares to provide funds for the constantly increasing cost of running and maintaining the undertaking.

It must seem strange to the people of Calcutta that the only expense they have to meet with has shown no increase since pre-war is the cost of local transport. Whilst one cannot comment on the facts of the case before the tribunal, it may nevertheless be opportune to reflect on the past attitude to a rise in fares.

FINANCE FOR IMPROVEMENTS

In brief, there is a view that where improvements or extensions to the undertaking are contemplated, the money required for such projects should be raised outside the Company and should not be forthcoming from the reserves of the Company.

If it is intended that money should be borrowed from government or the banks to finance an extension at present-day costs of materials, then unless an increase in fares is put in at the same time, the surplus arising from the operation of that extension will be insufficient to meet the interest charges of the new money raised, and any allocation for replacement or obsolescence will be impossible. If, again, new money be raised to improve our fleet of cars, or the capacity of our substations or the layout of our track, any increase in revenue would be negligible and, once more, there would be insufficient additional receipts to meet the interest charges.

Such propositions are neither sound finance nor even intelligent

speculation. They may well have been born in the aftermath of war when it was essential to re-equip industry with modern plant in order that it should stand a chance in the competitive post-war world. There was no time for companies to accumulate reserves out of which such re-equipment could be financed. Moreover, in many cases, the profits earned were sufficient to make such expenditure worthwhile. It was the age of the overdraft and credit trading. Any Company putting off modernisation schemes for lack of funds was looked upon with apprehension in that it would not survive in the competitive battle.

Governments have encouraged this attitude by retaining the high rates of wartime taxation and removing from industry the sums which were required for re-equipment. These sums should have been returned to industry where the necessity for them could be shown. Instead they were spent largely for revenue purposes.

And so, once more, industry was thrown back on the public, the banks or, in the last resort, governments, to finance them when before the war they would have regulated the speed of expansion to the capacity of the individual company to accumulate reserves.

As long as these schemes of modernisation and expansion earn profits sufficient to cover wear and tear and a reasonable return on the capital employed, all is well. But as soon as production falls or production costs rise without a corresponding increase in the selling price, the capital invested in that project loses its value. Whether that capital has emanated from a credit granted by a bank or from the savings of the public, the result is a reduction in the wealth of the country and a step taken along the road of inflation.

In the case of this Company, it is suggested that we should borrow for our modernisation schemes and for our extensions, and yet, as stated above, unless our fare structure is radically altered, both could only end in financial loss. Moreover, when a company such as ours resorts to borrowing for the financing of modernisation schemes which will merely bring up to date what was there before, then every rupee so borrowed is assuredly spent in the pursuit of inflation.

NEED FOR INCREASE IN FARES

We seek a reasonable increase in fares so that this Company may

pay its way as it has in the past and give to Calcutta the transport system it requires. The public of Calcutta must indeed be amazed at still being able to travel on public transport at pre-war cost. There is no other item in the cost of living that I know of which has a like record. Our wages have increased by approximately 300 per cent, the cost of power by 80 per cent, and the cost of steel rails by 328 per cent.

I hope sincerely that, when the result of the tribunal is known, we shall be in a position to carry on with the modernisation of this great undertaking.

In the meantime we are satisfied that the system is well maintained and our staff are well looked after. I visited Calcutta with Mr. Perkins last December, and we were both impressed by the enthusiasm and keenness shown on all sides in endeavouring to find ways and means of helping the travelling

public and making our undertaking work still more efficiently.

We are fortunate, indeed, in our executive staff, both European and Indian, and, although some have only been with us a comparatively short time, they all work together as a seasoned team. Our Agent, Mr. Bleas is to be congratulated wholeheartedly on his running of the undertaking.

In proposing the re-election of Sri Anandi Lall Poddar, M.L.A. to the board the chairman said that he had known the company for many years and had also had great experience in the transport world. The board looked forward to many years of close association with him.

The report and accounts were adopted.

The above statement is published for information and does not purport to be a report of the proceedings of the Annual General Meeting referred to.

"That the age limit specified in Section 280 of the Companies Act, 1956, shall not apply to Mr. T. Leslie Martin and this meeting hereby approves any appointment of Mr. Martin as a director of the Company which may hereafter, whilst this Resolution remains in force, be made by the Managing Agents pursuant to Article 109 of the Company's Articles of Association."

The Ordinary Share Register of the Company will be closed from the 15th November, 1957 to 22nd November, 1957, both days inclusive.

A Member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
S. Gupta,
Director,
Managing Agents.

Calcutta,
28th October, 1957.

NORTH INDIAN MARKETS

(Continued from page 811)

wet spell in the growing areas would help the standing paddy crop and hence traders were inclined to dispose of supplies at slightly lower rates. It was, however, felt that the demand would broaden again in the beginning of November.

In the Coarse grains section, Jowar ruled steady as arrivals were small. Trading in Bajra revealed a steady undertone with the new crop from the Deccan fetching prices ranging from Rs 150 to Rs 175 per candy. In the Pulse section, Mansoor recorded a decline of about Rs 5 per candy on better arrivals in the face of limited off-take. Gram lacked strength with the Punjab variety hovering around Rs 118 per candy.

GATEWAY GOSSIP

(Continued from page 807)

creation of such transport and port facilities as will be necessary to enable the export of iron ore from India on a larger scale. Here, again, no firm figures but only approximations are possible. On the basis that the final scheme for development of port and transport facilities will be on the lines of the suggested plan, given in detail by Indian Finance, we may presume that the total cost involved in foreign exchange may be around Rs 30 crores—or \$60 million. Also, it needs to be borne in mind that Japan is quite likely to tap the American President's Special Fund for taking care of the foreign exchange expenditure in this behalf. Be that as it may, for the purpose of our present discussion, what matters is the fact that foreign exchange is likely to be made available for a total around \$60 million.

While on the subject of iron ore exports, the interesting information has been vouchsafed that East European countries are professing themselves to be greatly interested in schemes which will ensure for them a regular supply of India's rich iron ore. Yugoslavia, Poland and Czechoslovakia are said to be prepared to collaborate on the development of the ore mines with a view to regular shipments. Czechoslovakia, in particular, would be in a position to provide us with the machinery required at the ports; and, with further assistance forthcoming for machinery at the mine heads and for the railway facilities, it should now be possible for India to think in terms of developing not one port, but perhaps even two, for iron ore trade. Although I have made mention of this interest on the part of the East European countries, I shall not take any credit for foreign assistance under this head.

Inferences to be drawn from discussions in Japan suggest that we can be more or less certain of obtaining Yen credit for purchase of textile machinery for Rs 30 crores, or \$60 million.

Again, it would appear that India will secure a deferment of its West German commitment in respect of the Rourkela steel plant, a saving in foreign exchange that works out to roughly \$130 million.

This, then, is the position; and I here summarise the prospects of foreign exchange loans that should be available to us until, say, the end of March 1959:

	Millions
US economic aid (for two fiscal years) ...	\$200
World Bank assistance for the Railway Plan (during the period) ...	150
World Bank assistance to Tata Iron & Steel Co. (already secured) ...	35
Japanese Yen credit for Textile Machinery ...	60
West German deferment of Rourkela Payments ...	130
Wheat surplus agreements with Canada and America ...	200
Port and transport development for iron ore exports ...	60

All this adds up to \$835 million. Although this is short of our re-

quirements, coupled with the running down of sterling balances by another Rs 200 crores, foreign exchange assistance on such a scale should enable us to get over the hump period lasting till March 1959. By that time, the bulk of our commitments in respect of plant and machinery for the Second Plan would have been met. Moreover, the iron ore scheme will begin to bear fruit by way of an intensification of and increase in the volume of exports. So, in the final analysis, the scheme of self help comprised in iron ore exports is likely to lead us safely out of the foreign exchange woods.

To paraphrase the sentiment that was voiced by Sir Chintaman Deshmukh when he assumed office as Finance Minister, the foreign exchange position that India currently faces is, as I have tried to show, by no means desperate. Admittedly, it is difficult; but we are in sight of the solutions for the plight that presently seems to paralyse us.

KUMARDHUBI FIRECLAY & SILICA WORKS LTD.

NOTICE is hereby given that an Annual General Meeting of KUMARDHUBI FIRECLAY & SILICA WORKS, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta on Friday, the 29th November, 1957, at 10-30 A.M. for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1956, and to receive the Directors' and Auditors' Report thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint a Director in place of the retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 15th November to 29th November, 1957, both days inclusive.

By Order of the Board,
BIRD & CO. PRIVATE LTD.
Managing Agents.

Chartered Bank Buildings,
Calcutta, 25th October, 1957.

Note: (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 5th December 1957, to those Shareholders so entitled whose names appear in the Company's books on the 29th November 1957, or to their mandatories. No application for Dividend Warrants will be necessary.

NASKARPARA JUTE MILLS CO., LTD.

NOTICE

NOTICE is hereby given that the 47th Annual General Meeting of the Members of the Company will be held at the Registered Office of the Company No. 8, Dalhousie Square, East, Calcutta, on Thursday the 28th November, 1957 at 4-30 P.M. for the following purposes:

(1) To receive and adopt the Directors' and Auditors' Report and to pass the Accounts for the year ended the 31st October, 1956.

(2) To appoint Auditors for the year 1956-57.

(3) To appoint and/or approve the appointment of Sri N. K. Jalan pursuant to Section 261 of the Companies Act, 1956 who was appointed a Director at the Ordinary General Meeting held on 24th January, 1955 and if thought fit to pass the following resolution as Special Resolution. The relative explanatory Statement concerning which as required by Section 173 of the said Act is annexed hereto.

"Resolved that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, the appointment of Sri N. K. Jalan a Director of the Company, as well as a Partner of Messrs. Soorajmull Nagarmull who is an associate of the Managing Agents of your Company, be and is hereby made and/or approved as required by the provisions of the said Section."

(4) To appoint and/or approve the appointment of Sri K. L. Jalan pursuant to Section 261 of the Companies Act 1956 who was appointed a Director at the Ordinary General Meeting held on 30th August, 1956 and if thought fit to pass the following resolution as Special Resolution. The relative explanatory Statement concerning which as required by Section 173 of the said Act is annexed hereto.

"Resolved that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, the appointment of Sri K. L. Jalan a Director of the Company, as well as a Partner of Messrs. Soorajmull Nagarmull who is an associate of the Managing Agents of your Company, be and is hereby made and/or approved as required by the provisions of the said Section."

(5) To consider and if thought fit to pass with or without modification the following as an Ordinary Resolution.

"That Messrs. Howrah Trading Co, Private Ltd., be re-appointed the Managing Agents of the Company as from the 15th January, 1957 for a period of 10 years thereafter and the terms and conditions upon which the said Messrs. Howrah Trading Co, Private Ltd., to hold office as

the Managing Agents of the Company shall be set forth in the draft Agreement produced to this Meeting and for the purpose of identification signed by the Chairman thereof and that, accordingly, the Directors be and they are hereby authorised to enter into an Agreement in terms of the said draft."

(6) To consider and if thought fit to pass with or without modification the following as a Special Resolution:

"That this Meeting approves of a Contract being entered into by the Company with Messrs. Howrah Trading Co, Private Ltd., for lending of money by Messrs. Howrah Trading Co, Private Ltd., to the Company and the guaranteeing by Messrs. Howrah Trading Co, Private Ltd., of loans made to the Company by any other person, the material terms of such contract being as follows:

(i) Messrs. Howrah Trading Co, Private Ltd., shall from time to time, when requested by the Company notify the Company of the rate of interest at which it will lend money to the Company or the rate of guarantee commission in consideration for which it will guarantee a loan made to the Company by any other person specified by the Company as the case may be, of any limit on the amount which it will so lend or guarantee and of any special terms and conditions as to security or otherwise upon which it will so lend or guarantee and will specify the date upto which it will lend or guarantee on the terms so notified.

(ii) Messrs. Howrah Trading Co, Private Ltd., will then lend to the Company or guarantee the loan of the Company by such other person specified as above, as the case may be, on the terms so notified at any time upto the date so specified, such sum or sums as the Company shall specify within the limit, if any, notified as above.

(iii) The Agreement shall be without prejudice to the right of the Company to borrow money from any person other than Messrs. Howrah Trading Co, Private Ltd., and to secure the guaranteeing of a loan made to by some other person willing to guarantee the same."

(7) To consider and if thought fit to pass with or without modification the following as a Special Resolution.

"That the Company hereby approves and consents to the continuance of the tenancy arrangement with Messrs. Howrah Trading Co, Private Ltd., the Managing Agents of your Company with effect from the 1st April 1956 for occupying the space required for the purpose of Factory and Staff accommodation on monthly rents noted against."

(8) To consider and if thought fit to pass with or without modification the following as a Special Resolution:

"That the remuneration of the Messrs. S. R. Batliboi & Co., the Auditors of the Company for the year ended the 31st October, 1956, be increased from Rs. 1,500/- to Rs. 3,000/- in view of the increase in the volume of Audit work under the Companies Act, 1956."

(9) Any other business that may be brought forward.

EXPLANATORY NOTE

ITEM NO. 3

Section 261(1)(f) of the Companies Act, 1956 requires the re-appointment of any Director retiring by rotation who is an associate of the Managing Agents to be made by a Special Resolution.

And since it is desirable for the benefit of the Company to avail of the valuable advices of Sri N. K. Jalan at present a Director of the Company who is an associate of the Managing Agents to be made by a Special Resolution.

And since it is desirable for the benefit of the Company to avail of the valuable advices of Sri K. L. Jalan at present a Director of the Company who is an associate of the Managing Agents to be made by a Special Resolution.

ITEM NO. 4

Section 261(1)(f) of the Companies Act, 1956 requires the re-appointment of any Director retiring by rotation who is an associate of the Managing Agents to be made by a Special Resolution.

And since it is desirable for the benefit of the Company to avail of the valuable advices of Sri K. L. Jalan at present a Director of the Company who is an associate of the Managing Agents to be made by a Special Resolution.

ITEM NO. 5

The existing Managing Agency Agreement of the Company with Messrs. Howrah Trading Co, Private Ltd., having expired the Company had approached the Government of India for re-appointment of Messrs. Howrah Trading Co, Private Ltd., as Managing Agents of the Company for a period of 10 years with effect from 15th January, 1957. We are glad to inform that Government has been pleased to accord its sanction for re-appointment of Messrs. Howrah Trading Co, Private Ltd., as Managing Agents of the Company for a further period of 10 years with effect from 15th January, 1957 on a remuneration of 10% commission on the net profit of the Company computed in the manner laid down in Section 349 to 351 of the Companies Act, 1956 subject to a minimum remuneration of 40,000/- per annum in the event of absence or inadequacy of profits in any financial year. The Managing Agents will not be entitled to receive any office allowance but will simply be entitled to be reimbursed in respect of the expenses incurred by them on behalf of the Company in accordance with the provisions of Section 354 of the Companies Act, 1956. The Draft Managing Agency Agreement containing inter alia the above terms and conditions is open to your inspection at the Registered Office of the Company any day during the business hours.

ITEM NO. 6

This resolution is designed to comply with provisions of Section 360 of the Companies Act, 1956 in the event of its being held that a loan by the Managing Agents to its managed Company and the guarantee given by the Managing Agents of a loan by some other person to a managed Company constituted services within the meaning of Section 360 of the said Act. If this resolution is duly passed the Directors will enter into an Agreement with the Managing Agents in terms of the resolution.

ITEM NO. 7

It is necessary that the existing arrangement of the Company with Messrs. Howrah Trading Co, Private Ltd., the Managing Agents of your Company mentioned in the resolution for accommodation of space for the purpose of Factory and Staff accommodation should continue. Under the Companies Act, 1956, it is necessary that such contracts should receive the approval of the Company in General Meeting and as such this resolution should meet with your approval.

ITEM NO. 8

It is necessary to increase the fee of the Auditors of the Company, Messrs. S. R. Batliboi & Co, for the year ended the 31st October, 1956 in view of the increase of the volume of Audit work on account of introduction of Companies Act, 1956. The usual fee of

the Auditors is Rs. 1,500/- and they were re-appointed on the same remuneration in the last Annual General Meeting held on the 30th August, 1956. It is therefore necessary to obtain the sanction of the Members of the Company to enable the Company to pay the increased remuneration.

The Register of Members and Share Transfer Register of the Company will be closed from the 21st November, 1957 to 28th November, 1957 both days inclusive.

By Order of the Board,
For & on Behalf of
NASKARPARA JUTE MILLS CO.
LTD.
HOWRAH TRADING CO.
PRIVATE LTD.
Managing Agents.
S. B. Jalan,
Director.

Dated the 24th October, 1957.

N.B. You are entitled to attend and vote at the Meeting by a Proxy who need not be a Shareholder of the Company. If it is desired to use the Proxy the same should be completed in manner prescribed by Section 176 (5) of the Companies Act, 1956 and delivered at the Registered Office of the Company at least 48 hours before the time fixed for the Meeting.

ARE RECESSIONS A NECESSARY EVIL?

(Continued from page 802)

increase of unemployment from time to time would go some way towards improving these conditions.

In itself a setback in the prices of equities would not be sufficient to restore some of the lost popularity of gilt-edged securities. After all, the latter too have been fluctuating very widely during recent years. But if the recession is sufficiently pronounced to cause a number of firms pass or reduce their dividends, many conservative investors are likely to come to the conclusion that, by holding Government loans they can at any rate be certain of the amount of dividends that reach them every six months.

Such a reversal of sentiment is essential from the point of view of enabling the Treasury to fund maturing debt on reasonable terms. Had non-stop prosperity and ever-increasing dividends on good equities continued, sooner or later the bulk of the debt would bear ruinously high interest. Even the moderate setback that occurred in Britain since the increase of the Bank rate to 7 per cent has already gone some way towards checking the flight from the gilt-edged market, and most investment experts consider today the prospects of Government loans much brighter than those of equities. Needless to say, if the recession goes too far then it spells ruin in every direction. But it would be a good thing if we had just sufficient recessions to make it evident that prices, employment, and industrial dividends are capable of moving in two directions.—(Copyright).

Stock Exchanges

MARKETS IN HAPPY MOOD

Watch-Dog Writes:

STOCK markets are now generally in a happy mood with prices staging a sharp recovery from the recent low levels, thanks to the healthy technical position and the expectation of some favourable developments on the economic front. Hopes are held that the Government will amend their policy and take the private sector into confidence by pursuing a realistic attitude. Despite fairly heavy profit-taking, prices have been forging ahead in active dealings.

Sentiment on the Calcutta Stock Exchange showed a remarkable improvement. Jute shares changing hands at substantially improving levels highlighted the week's trading.

Firms conditions continued to prevail on the Bombay Stock Exchange, although profit-taking erased some of the gains at the close.

The Madras Stock Exchange exhibited a brighter sentiment. Coffee shares were highlighted in the Planting section, while Textile scrips were mostly quiet.

The London Stock Exchange presented an irregular appearance in the absence of any follow-up support. Gold shares had, however, the busiest week with prices advancing on a broad front.

Wall Street closed firm, showing a fair distribution of advances ranging mostly to around two dollars.

Calcutta

Calcutta, Friday Evening.

THE local Stock Exchange exhibited cheerful conditions last week and, with Jute and the speculative scrips changing hands at advancing levels, handsome gains were recorded on a broad front. The main contributory factors for the sudden turn in market sentiment were the hope entertained in some quarters that financial assistance would be forthcoming over the next few months to salvage the Plan and that the Government's attitude towards the private sector would be softened by the necessity to attract foreign capital.

Operators were also enthused over the reports that the prospects for the jute industry had greatly improved and that the mills were now making better profits. There were also rumours that the Government was busy considering a scheme to clear the heavy piling up of cloth stocks with the mills and that an immediate reduction in the excise duty might be inevitable. Thus, the general assessment among the market circles appeared to be, that the long-term outlook for the share markets was good.

The Gilt-edged section, displayed a steadier tendency. Although business done was not large, increased interest was shown in certain directions and prices showed further improvements in some cases. 3 per cent 1986 Conversion Loan, after opening at Rs 70.65, improved steadily to Rs 71.30, to recede again at the close to Rs 71.06.

In sympathy, Bank shares ruled steady. Punjab National changed hands at Rs 61.50 to Rs 62.37 and United Commercial at Rs 55.50 to Rs 55.75.

Jute shares provided the best section of the week and prices staged a sharp recovery from the recent low levels, although a few scrips lost some ground towards the close due to profit-taking. The main inspiration was derived from the reports that the industry was doing better now. It was felt that, with the present relationship between the prices of raw material and of manufactured goods, most mills should be making a profit. Most prominent were Alliance,

being taken upto Rs 95 from Rs 81. Barnagore upto Rs 95 from Rs 80; Belvedere upto Rs 83.00 from Rs 70.00; Budge-Budge upto Rs 83 from Rs 68.50; Champdany upto Rs 150 from Rs 110; Delta upto Rs 127 from Rs 115; Ganges upto Rs 84 from Rs 50; India upto Rs 120 from Rs 113; Megna upto Rs 91 from Rs 86 and Union upto Rs 140 from Rs 102. National and Howrah, after touching higher levels of Rs 20.05 and Rs 17.37 from Rs 18.75 and Rs 16.25, eased off at the close to Rs 19.90 and Rs 16.10 respectively.

In contrast to the past many weeks, Coal shares turned rather active on the belief that the Government might be obliged to raise the 10m tons target for increased production from private collieries. Bengal were a bright spot having forged ahead to Rs 242 from Rs 214, while Equitable were sought after upto Rs 23.81 from Rs 22.50. Burrakur improved to Rs 22.00 from Rs 21.75, while Central India changed hands at Rs 6.12 to Rs 6.31 and Western Bengal at Rs 5.94 to Rs 6.12.

Tea shares revived in sympathy with the higher prices realised for the commodity at the Calcutta and London auctions. There was also a feeling that, if internal consumption continued at the present high level, it would absorb a large proportion of the supply of Common grades, especially when the plucking season in North-India gardens was expected to cease earlier following the advent of cold weather. Banarhat changed hands at Rs 298 to Rs 300; Brahmapootra at Rs 3.69 to Rs 4.18; Birpara at Rs 134 to Rs 138; Bhakawa at Rs 19.25 to Rs 19.50; Brooke Bond at Rs 17.00 to Rs 17.25 c.d.; Dholakhat at Rs 21.87 to Rs 22.44; Ghot "B" at Rs 11.95 to Rs 12.50 and Methoni at Rs 18.12 to Rs 18.56.

Easier advices from the commodity market had an adverse effect on the Sugar section. The only exception to the general trend of prices was Balaramore which met with some special support upto Rs 6.70 from Rs 6.25. Belund were, however, offered at Rs 10.25 against Rs 10.37; Cawnpore at Rs 14.62 against Rs 15.50 and Ramnugger at Rs 20-12 against Rs 22.60.

Textile scrips lacked any consistent support in view of the inordinate delay in the announcement of the reduction in the excise duty on cloth. Kesoram were done at Rs 11.75 to Rs 12.25 and New Victoria at Rs 1.50 to Rs 1.72. Cawnpore closed a shade better at Rs 5.37 against Rs 5.31, while Jaysree turned quiet at Rs 6.31 against Rs 6.37.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons. Against the week-end closing of Rs 18.10, Indian Irons opened steady at Rs 18.07 and, after touching a low of Rs 17.98, advanced gradually to Rs 18.92, to finish the week at Rs 18.84. (In "kerb" trading on Thursday, the rate was even quoted upto Rs 19.02). In sympathy, TEXMACO were pushed upto Rs 17.50 from Rs 16.50 and Richardson upto Rs 9.62 from Rs 8.25, to finish at Rs 17.40 and Rs 9.50 respectively. Jessop changed hands at Rs 24.00 to Rs 24.50 and Britannia at Rs 12.19 to Rs 13.06. G. K. Williams were quoted around Rs 28.40 against Rs 28.25.

Miscellaneous issues moved in sympathy with the general trend of the market although the closing rates of some scrips were a shade lower due to profit-taking at higher levels. Indian Copper developed a hardening tendency and, after touching Rs 3.04 from Rs 2.82, closed at Rs 3.03. Orient Paper touched a high of Rs 24.50 from Rs 23.50, while Titaгур closed better at Rs 32.12

against Rs 32.00. Indian Cable had buyers at Rs 24.12 to Rs 24.50; Rohtas at Rs 18.44 to Rs 18.50; Dunlop at Development at Rs 9.50 to Rs 10.19; Rs 19.62 to Rs 20.19; Karanpura National Carbon at Rs 23.06 to Rs 23.30; Indian Aluminium at Rs 12.75 to Rs 13.06; Hindustan Motors at Rs 6.12 to Rs 6.25; Some Valley at Rs 5.25 to Rs 5.62 and Hindustan Lever at Rs 20.12 to Rs 20.31. B.I.C. closed a shade quieter at Rs 4.78 and Osler at Rs 3.51 after touching Rs 4.85 and Rs 3.37 respectively. India Steamship met with sustained upto Rs 11.68 from Rs 11.25.

THE INDO-BURMA PETROLEUM COMPANY, LIMITED.

NOTICE is hereby given that the Board of Directors of the above Company have declared an Interim Dividend of Re. 1 (Rupee one) free of Income-tax per Equity Share for the year ending 31st December 1957 payable on 28th November 1957 to those members whose names appear on the Register of Members as on 14th November 1957.

The Register of Members of the Company will remain closed from 14th November 1957 to 27th November 1957, both days inclusive.

By Order of the Board,

INTERNATIONAL CURRENCY PROBLEMS

(Continued from page 799)

in Britain's economy. That is what the United Kingdom Government is endeavouring to do through the severe measures which it put into effect on September 19. The sharp increase in Bank rate, going hand in hand with substantial cuts in Government capital expenditure and with a further tightening of bank credit, are intended to arrest the forces of inflation, which have been prevalent for some time in Britain's economy, as in many others.

Together with these measures there has come from the Chancellor of the Exchequer a clear declaration that the existing parity of sterling of 2.80 dollars will be defended and that there is no intention of widening the dealing margins. Since, as I have argued in this article, we are in Britain dealing with an essentially marginal problem, since the balance of payments is in surplus and sterling prices are by no means out of line with competitive world prices, the severe measures which have now been taken should prove successful.

Investor's Supplement

Late Rally in October

1, 2 & 3

The stock markets opened the month of October on a steady but dull note. The fact that the Calcutta Stock Exchange would remain closed upto the 9th instant coupled with the fact that Dalal Street also would close for two days during the first week was largely responsible for the reluctance on the part of operators to extend their commitments. The indications were that given incentives the Stock market would record sizable improvement. In the first place the technical position of the stock markets was said to be good. Secondly, most of the industries were doing well and it was generally believed that the drastic cut in imports would help indigenous industry to establish itself in many directions in which it had not ventured so far. It would however, appear that the main reason for the steadiness in the more speculative counters was the healthy competition between the LIC and some prominent operators. Continued rumours about increase in Ind. an Bank Rate was one of the restraining influences.

The Bombay Stock Exchange opened on October 1, on a dull note with marketmen evincing little interest in the proceedings. Lack of buying orders coupled with pre-holiday liquidation (the next two days were holidays) in later dealings pushed down price levels by close. Tata Iron closed quarter point lower at Rs 158.75 with Indian Iron placed fractionally better at Rs 17.16. Among Textiles, Bombay Dyeing receded to close at Rs 50.10.

4

Widespread fair gains were noticeable in the Bombay Stock Exchange during the day's trading which had been enlivened by improved prospects of an American Loan. Presumably, operators had come to the conclusion that in view of the optimism expressed by the leader of the Indian Industrialists Delegation to the US, private sector would have no difficulty in getting its requirements of foreign exchange for its expansion and rehabilitation. The more speculative scrips were in good request and prices recorded improvement on heavy short-covering. Tata Iron advanced sharply to Rs 161.50 from its previous closing of Rs 158.75. In the textiles section, Century was a bright feature moving up to Rs 383.00 from Rs 377.00.

5, 6, 7 & 8

The Stock markets remained closed on 5, 6 and 7 October. Reopening on Tuesday Dalal Street displayed an irregular trend, due to alternate

bouts of selling and buying. Toward close, however, a steadier undertone was noticeable. Tata Iron was unchanged at close at Rs 161.50 as was Bombay Dyeing at Rs 50.80. Indian Iron was quiet at Rs 17.48. A topic of eager discussion in the market place was the prospects of Tata's \$17½ million loan from US Commercial Banks. Rumour had it that TISCO's financial agents in US had expressed the hope that the loan would be forthcoming.

9

In a Press Note the Government of India announced that after careful consideration of the applications for recognition made under Section 3 of the Securities Contracts (Regulation) Act 1956, by the Bengal Share and Stock Exchange Association Ltd., Calcutta and the Calcutta Stock Exchange Association Ltd., Calcutta, they had decided that only one stock exchange should be recognised in Calcutta and that such recognition should be granted to the Calcutta Stock Exchange Association Ltd., which is the oldest Association.

Prices in the Bombay Stock Exchange displayed an irregular trend. At the opening, prices were generally higher but in later dealings rates sagged due to selling pressure. The lower levels, however, attracted attention toward close and under the lead of Century prices all along the list recovered to close steady. Tata Iron advanced to Rs 162.25 from Rs 161.50. Textiles were also better on balance with Bombay Dyeing recording Rs 51.20 as against previous closing of Rs 50.80. Indian Iron was also in better request at Rs 17.68 against Rs 17.48.

10

The Calcutta Stock Exchange reopened after the long Puja holidays. Trading, however, continued on a dull note largely because of lack of interest. What with the continuance of the Bank Strike and the uncertainty enveloping prospects of US loan to India, operators in Calcutta were not inclined to extend their commitments. A slight improvement in sentiment with regard to the more speculative scrips was noticeable towards the close of the day. Indian Irons opened at Rs 17.68 recovered slightly to close at Rs 17.96. In Dalal Street prices ruled steady especially in the speculative counters like Indian Irons and Century. The former met with good Calcutta enquiry while the latter met with sizable local support. With the two prominent scrips in the forefront others also followed with the result the closing was steady. Tata Iron

Price Trends during October, 1957.	872

11

Prices in the Stock markets displayed a steadier trend due to bear covering and buying interest in selected miscellaneous and engineering shares. It would appear that marketmen had been favourably influenced by the trend of talks of the industrialists and the Finance Minister in the US, as well as by higher output figures in September for TISCO. In Calcutta Indian Irons opened higher at Rs 18.10 moved up further to Rs 18.18 before closing at Rs 18.14. Brisk buying in pivotal scrips characterised trading in the Bombay Stock Exchange on the day which was the final day in the current account period. Tata Iron advanced further to close at Rs 164.75 as against Rs 163.25 the previous day. Among Textiles Bombay Dyeing moved to Rs 51.90 from Rs 51.50 while Century gained 6 points to be placed at Rs 398.00.

12

The Calcutta Stock Exchange worked on a Saturday after a long interval. It was announced that the resumption of official work on Saturdays was a sequel to Government's announcement granting recognition to the Calcutta Stock Exchange Association. During the day's brief session, sentiment continued steady though activity remained meagre. Indian Iron opened at Rs 18.14 and after moving narrowly around that level closed at Rs 18.11. The Bombay Stock Exchange remained closed.

13 & 14

In the absence of fresh incentives and follow-through support the stock markets developed an easier trend. In Dalal Street prices eased due to lack of support as well as absence of bear covering. Tata Iron dropped one point to be placed at Rs 163.75. The more speculative issues developed a reactionary tendency in Calcutta where Indian Irons after opening steady at Rs 18.12 receded to close lower at Rs 17.98.

15

Prices in the stock markets developed a sagging tendency in the absence of investment interest. Sentiment was depressed in Dalal Street on account of discouraging

16

The reactionary trend gained momentum on adverse reports. The Bombay Stock exchange continued depressed on the report that Diwali cftake in cloth markets had not been upto expectations. News of fresh issue of equity capital was also a contributory factor. Tata Iron dropped one point to be finally placed at Rs 162.25 and Bombay Dyeing decided to Rs 49.70 from Rs 50.10. In Calcutta Indian Irons after a steady opening moved narrowly to close slightly lower at Rs 17.64.

17

Further around recession in price levels was recorded during the day's session in the stock markets. In Dalal Street, however, prices moved both ways with the result that sometimes the list showed a fair sprinkling of small gains and sometimes a predominance of small losses. Closing prices in that centre were lower on balance as they were in Calcutta. Tata Iron lost further ground to Rs 161.00 while Bombay Dyeing was marked at Rs 49.50. Indian Iron opened and closed at Rs 17.36.

18

Both the Calcutta and Bombay Stock markets were steadier due to some fresh buying and short covering. Reports about improved cloth exports and expectation of some relief in excise duty on cloth were largely responsible for the improvement in sentiment. Tata Iron recovered to Rs 162.50 while Bombay Dyeing closed slightly better at Rs 49.80. In Calcutta Indian Irons after opening steady at Rs 17.48 steadily moved up to close at Rs 17.68.

19

The Bank strike in Calcutta was called off. Partly as a result of the end of the bank strike and partly due to sustained support, the undertone in the Calcutta stock market continued to be steady. Indian Irons after opening at Rs 17.72 was done upto Rs 17.75 before closing at Rs 17.70. Dalal Street remained closed and Tata Iron was quoted in the kerb at Rs 162.75.

(Continued from page 829)

20, 21 & 22

The Moorat session was an extremely dull affair with turnover meagre. Toward the close of the session, however, reports of LIC buying pivotal scrips at the lower levels imparted some enthusiasm and consequently closing prices were slightly better on bear covering. Tata Iron was quit at Rs 162.00 while Bombay Dyeing was fractionally better on balance at Rs 50.00. Indian Iron was shaded at Rs 17.64.

23 to 24

A steadier trend was noticeable in the Calcutta Stock Exchange when it reopened after the Diwali holidays. Indian Irons opened at Rs 17.60 and after having been done upto Rs 17.72 closed at Rs 17.58.

25

Sentiment in stock markets continued to be optimistic as fresh assessment of prospects of foreign loan as a result of the visit of the Finance Minister and the Indian Industrialists Mission appeared to be good. It was generally pointed out that in view of his statements

abroad, Mr T. T. Krishnamachari would find it necessary to avoid further shocks to the private sector in India. Indian Irons opened in Calcutta at Rs 17.68 and steadily improved to be done at Rs 17.92. Though the undertone was steady, business passing in Dalal Street continued to be meagre. Tata Iron closed easier at Rs 161.50 while Bombay Dyeing remained unchanged at Rs 50.00.

26

In the day's short session conditions remained steady with prices continuing their upward movement. In the Calcutta market Jute shares attracted sustained attention at advancing prices. Indian Irons opening higher on overnight support at Rs 18.03 and gained further ground to close at Rs 18.10.

27 & 28

After a steady opening stock markets developed a sagging tendency on profit-taking. In Bombay sentiment showed marked improvement aided by higher advices from Calcutta especially in Indian Irons. Despite profit taking at higher levels, the list closed with a sprink-

ling of small gains. In Calcutta the closing trend was quiet. Indian Irons after opening at Rs 18.07 fell back to close at Rs 17.96. Tata Iron, however, was steadier at Rs 162.25 as was Bombay Dyeing at Rs 50.70.

29

While several sectors participated in the upsurge in the Calcutta Stock Exchange, Bombay shares continued their steady course. In Calcutta the undertone was firm with selected scrips all along the list showing sizable improvement. Indian Irons opened higher at Rs 18.28. Several shares recorded substantial improvement in the Jute section while Texmaco and India Steamship in the Engineering and miscellaneous sections were notable counters. In Dalal Street Bombay Burma spurred by 14 points to close at Rs 542.00. Bull support lifted Tata Iron to Rs 164.25 from Rs 162.25. Bombay Dyeing gained more than a point to be finally placed at Rs 51.90.

30

Reports that financial assistance from US, West Germany and Japan would be forthcoming to meet the

entire need of private sector for its expansion and rehabilitation programmes under the Second plan were mainly responsible for keeping up bullish fervour in the stock markets. Gains were recorded on a broad front with the more speculative in the fore front. In Calcutta Jute shares were very prominent. Indian Irons opened at Rs 18.54 and closed slightly lower at Rs 18.52. In Dalal Street Bombay Burma gained another 14 points to be placed at Rs 556.00. Tata Iron advanced further to Rs 165.50 while Bombay Dyeing moved up to Rs 52.20 from Rs 51.90.

31

The month ended on a cheerful note for the Calcutta Stock Exchange where the Jute section was in the lime-light with quite a few scrips changing hands at substantially improved levels. Indian Irons remained fully steady at Rs 18.86 most of the time to close at Rs 18.74. Bombay shares ruled firm in earlier dealings but developed a sagging tendency toward close. Tata Iron receded to Rs 164.25 while Bombay Dyeing came back to Rs 51.90 from Rs 52.20.

It's 1,000 miles across the room...

RATTLE, clatter, thump goes the toy engine at the little boy's heels... rattle, clatter, thump across the room. And, to him, it's a thousand-mile trip! So what's vital to him is movement and speed.

To us, at Hindustan Lever, speed and distance are no less important. For you, we cover thousands of miles every day — every inch of India's 35,000 miles of railroad, for instance.

But before our products are despatched, we must consider how they will travel. Plane or train? Road or waterway? Handcart, head-load or mule-train? The answer depends on a great many factors — for instance, on the kind of territory those goods must cross and how soon they must arrive.

But arrive they must — and arrive in the best condition. For people have come to trust the goods we make — things like Sunlight Soap and Vim, Rexona and Dalta Vanaspathi. The need for these products is growing — everywhere, all the year round.

We take trouble to satisfy this need — and so add another service to the service that the goods themselves perform. We add the service of regular supply.

Hindustan Lever serves the home

IISCO Expansion by March 1959

Investment Gossip:

Workers greeted with applause the formal lighting of a new coke oven plant by Sir Biren Mookerjee at Burnpur.

Stock Exchanges have greeted with applause the statement made to journalists by Sir Biren in connection with the function.

Sir Biren revealed that he was confident of the company reaching the target capacity of 1,000,000 ingot tons of steel by March 1959.

The stock exchanges are reasonably sure that Government will show themselves to be increasingly reliant upon the private sector for carrying the Second Plan through to success.

IISCO's achievement, in this regard, will mark one of the more important contributions from the private sector to the Second Plan.

Then, in the matter of our foreign exchange position, the Export Promotion Committee has come out with recommendations for a number of measures intended to provide incentive for augmenting Indian exports.

While it is generally recognised that some of the suggestions may not be acceptable to Government, the hope is nevertheless being entertained that, with export promotion quite vital in India's interests, the private sector will have to be encouraged in every reasonable way.

Then, there is also the fact that, as an astrologer friend said to me, a planetary change augurs for the private sector coming into its own.

All of which was more than reason enough for Indian Irons to be taken across the Rs 19 mark.

£R\$

Investment Special:

Investors have good news in store for them next week. One of the best known names in Indian business, which had formerly been a private limited company, has been converted into a public company, and an offer of shares is to be made to Indian investors.

Remember Guest Keen Williams? National Carbon? Hindustan Le-

ver? The new issue will be of a class with them.

The subscribed capital is to be around Rs 2½ crores; and roughly twenty per cent of this is to be offered to Indian investors, in the form of Rs 10 shares at a premium of Rs 2.50 each.

I may state here that the company, affiliated (or owned?) as it is to a giant Dutch combine, could quite easily have brought in the extra Rs 62½ lakhs on its own; but the company's intention is that Indian should have a stake.

Radio components, lighting fittings and accessories, public address equipment and other electrical articles—yes, the company is Philips.

I gather that, as compared with 1952, sales in 1956 showed an improvement of an incredible 148 per cent.

The prospectus is to be released early next week; and I shall, therefore, reserve more detailed comment. Need I say that Philips will prove to be a worthy addition to the bluechip section on the Indian Stock Exchanges?

£R\$

Investment Notes:

The shares of the Punjab National Bank have firmed up gradually to Rs 66.50 from Rs 62.25 on renewed buying support. The main inspiration is derived from the news that the bank has obtained the sanction from the Controller of Capital Issues to capitalise a sum of Rs 37.50 lakhs from the Share Premium Account and issue Bonus shares in the proportion of three shares for every seven shares held.

The Tata Iron & Steel Company Limited has reported a substantial fall in production for October. The total output of saleable Steel is shown at 59,000 tons against 71,700 tons; Semi's at 9,200 tons against 18,400 tons and finished Steel at 49,800 tons against 53,300 tons. The production of Pig Iron is better at 95,100 tons against 83,600 tons and that of Steel at 96,500 tons against 92,500 tons.

Atul Products are likely to raise new equity capital in the near future.

HIGHLIGHTS

Three years ago, banking circles were complaining that, with the existence of a large "unmonetised" sector, First Plan disbursements were not being reflected in an increase in Deposits.

Two years ago, Bank Deposits showed signs of improvement, but monetary stringency continued to be experienced throughout the year, since there was no slack season.

A year ago, there was evidence of substantial accretions to Deposits, but the complaint was being voiced that the additional resources, nevertheless, did not keep pace with the expansion in demand for finances consequent

to the industrialisation envisaged in the Second Plan.

Six months ago, a busy season which it had been anticipated would be intolerably stringent drew to its close with much less severity partly because of an even larger flow of new Deposits.

Twelve months ago, nobody would have imagined that, in the year to come, Bank Deposits would rise by much more than 25 per cent.

Six months ago, nevertheless, Indian Finance predicted that, in the following half year, Bank Deposits would show a rise of Rs 150

Burn Maintains at 20 Per Cent: Kesoram Reduces Distribution

Balance-Sheet Reviews:

THANKS to better all round working, Burn & Company Limited has reported excellent results for the year ended 30th April, 1957. But, the benefit to the shareholders is negligible due to the increase in taxation. The dividend is just maintained at 20 per cent for the year.

Sales have risen to Rs 8.50 crores from Rs 8.32 crores, while the net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 1.37 crores as against only Rs 1.07 crores in the previous year. Apart from maintaining the Reserve for Works Reconstruction and Expansion at Rs 10.50 lakhs, the Depreciation amount has been raised to Rs 13.34 lakhs from Rs 12.34 lakhs; Taxation provision to Rs 70.65 lakhs from Rs 40.00 lakhs and Taxation Contingency Reserve to Rs

9.68 lakhs from Rs 2.67 lakhs. The Development Rebate Reserve is, however, reduced to Rs 1.03 lakhs from Rs 5.15 lakhs.

A new Reserve of Rs 14.00 lakhs, styled "Niwar Project Reserve" has been created. According to the directors' report, the company has been engaged in the preliminary surveys connected with developing a new Works site in Madhya Pradesh for the manufacture of silica brick. Land with rail, road, water and raw materials advantages has been secured at Niwar, about 40 miles from Jabalpur; and the directors have proposed to proceed with this venture as finance and conditions permit.

Kesoram Cotton

The working results of the Kesoram Cotton Mills Limited, for the

crores, or 12½ per cent.

Today, it is now known that, during the last year, Bank Deposits have, in fact, shot up by nearly Rs 300 crores; and, in the last six months, the rise has been even more impressive than was anticipated by this journal.

It is time that the significance of this remarkable phenomenon was recognised by the monetary authorities.

What the significance is, and the manner in which it helps to fashion monetary policy, are matters which are dealt with in a comprehensive study published in the World of Finance section.

a pilfer-proof package for every product !

The manufacture of Metal Box's range of pilfer-proof containers and closures is backed by an active Research Organisation. The Central Laboratory in Calcutta assists suppliers in developing improved printing inks, surface finishes and protective lacquers, and maintains strict routine tests for all incoming raw materials to the Metal Box factories; on the spot control of operations is carried out by Branch Laboratories. This ensures pilfer-proof containers and closures of the highest quality, superbly printed and finished. Expert scientific advice from Associates throughout the world is available to assist in solving customers' packaging problems.

The Metal Box Company of India Ltd

CALCUTTA • BOMBAY • MADRAS • DELHI • MANGALORE

year ended 31st March 1957, reflect the prolonged labour trouble and the impact of the heavy excise duty. The net profit shows a drop from Rs 39.15 lakhs to Rs 20.46 lakhs. This has been arrived at after pruning the provision for Depreciation from Rs 16.12 lakhs to Rs 9.17 lakhs and Taxation from Rs 30 lakhs to Rs 13.00 lakhs.

With Rs 1.88 lakhs brought in and adding thereto a sum of Rs 5 lakhs transferred from the Dividend Equalisation Fund, the sum available for distribution is Rs 27.35 lakhs. From this, the directors have written off Rs 2.60 lakhs to the issue of the Second Preference shares, while a sum of Rs 5 lakhs is allocated to Reserve for tax. Investment Reserve gets Rs 4,000. The Ordinary dividend has been reduced to As 12 from Re 1 per share. Sales of cloth, yarn, etc., have declined from Rs 5.92 crores to Rs 5.02 crores.

The disappointing performance is attributable to the deterioration in the labour relations during the year. Although lately there has been some improvement in the situation, it is still considered far from satisfactory.

To meet the further financial requirements of the Rayon project, the directors have proposed to increase the borrowing power of the company from Rs 50 lakhs to Rs 2 crores. Arrangements have been finalised with the State Bank of India, Calcutta, to borrow up to a limit of Rs 1 crore against hypothecation of stocks. The contracts for the supply of necessary machinery are being entered into with foreign manufacturers.

£ R\$

Barnagore Jute

The difficult conditions generally experienced by the jute industry during the year ended 31st March 1957 is fully reflected in the working of the Barnagore Jute Factory Company Limited. The accounts reveal a loss, after providing for Depreciation, of £204,876 as against a loss of £171,444 incurred in the previous year. The sum set aside to Depreciation is raised to £68,053 from £44,824. The dividend is, naturally, passed over again.

To take the fullest advantage of the new machinery now installed, the directors have decided to close down the South Mill entirely and concentrate all production in East Mill by triple shift working of mill machinery there with double shift working of the Weaving Department. No decision has yet been reached as to the future of the South Mill buildings.

£ R\$

Bokakhat Tea

Thanks to a net profit of Rs 68,013 as against a loss of Rs 11,088, the Bokakhat Tea Company Limited has been able to recommend a dividend of 5 per cent for 1956 as against nil in 1955. The profit is arrived at before providing for Depreciation of Rs 24,570 (Rs 17,938).

The crop outturn amounts to only 4,450 maunds against 4,655 maunds; but the average price realised is higher at Rs 2-8-1 against Rs 2-2-0

per pound. The estimate for 1957 provides for a crop of 5,000 maunds.

£ R\$

Krishnabehari Tea

The Krishnabehari Tea Company Limited has reported a slight increase in the net profit, before Depreciation and Taxation, of Rs 69,332 as against Rs 87,076 in the previous year. The directors have, after providing Rs 35,013 (Rs 25,181) for Depreciation; Rs 10,010 (Rs 23,104) for Taxation Reserve and Rs 10,000 (Rs 15,000) for General Reserve, maintained the dividend at 10 per cent for the year.

The crop outturn is shown slightly lower at 284,023 pounds against 314,374 pounds in 1955, while the average price realised is higher at Rs 2-2-9 against Rs 1-12-10 per pound.

£ R\$

Rewa Coalfields

Rewa Coalfields Limited has maintained the dividend at 7½ per cent for the half-year ended 31st Dec., 1956 despite an increase in the net profit from Rs 3,46,889 to Rs 4,36,791. Raising are higher at 208,513 tons against 176,705 tons and despatches at 207,326 tons against 180,614 tons in the previous half-year. Sales have risen to Rs 34.37 lakhs from Rs 26.33 lakhs.

In respect of allocations to Funds, the Depreciation amount is reduced to Rs 72,896 from Rs 1.13 lakhs. After transferring a sum of Rs 2.20 lakhs from General Reserve, the directors have set apart a sum of Rs 2.24 lakhs for provision for Labour Appellate Tribunal Award and Rs 15,474 for Depreciation on Investments. The Taxation provision is raised to Rs 1.16 lakhs from Rs 1.02 lakhs.

£ R\$

Dishergarh Power Supply

Thanks to increased earnings, the Dishergarh Power Supply Company Limited has raised the dividend on the Ordinary shares from Rs 6.00 to Rs 6.50 per share for the year ended 31st March, 1957. Units sold amount to 83.76 million as compared to 78.73 million, while sales have risen to Rs 47.30 lakhs from Rs 41.09 lakhs.

The net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 8,21,706 as against only Rs 6,76,058 in the previous year. A sum of Rs 2.29 lakhs (Rs 2.41 lakhs) is set aside for Depreciation. After transferring a sum of Rs 67,759 from Contingency Reserve, the directors have allocated Rs 1.80 lakhs (Rs 65,000) to Taxation; Rs 1.28 lakhs (nil) to General Reserve and Rs 23,239 (Rs 24,233) to Contingency Reserve.

£ R\$

West Inerndia Vegetable Products

The Western India Vegetable Products Limited has earned a higher profit of Rs 2.04 lakhs for the year ended 31st March 1957 as against Rs 1.03 lakhs in the previous year, after providing Rs 1.67 lakhs (Rs 3.90 lakhs) for Depreciation. Sales have risen from Rs 1.20 crores to Rs 1.68 crores. The directors proposed a dividend of 7 per cent, tax-free.

KL 33

Tata Chemicals

Thanks to a substantial rise in sales from Rs 238 lakhs to Rs 266 lakhs, the Tata Chemicals Limited has been able to report slight rise in earnings for the year ended 30th June, 1957. The sales would have been still higher, but for transport difficulties and congestion at the Ports. The net profit, after providing for Depreciation, Taxation, managing agents' commission, etc., amounts to Rs 16,94,672 as against Rs 16,24,488 in the previous year. While the prices of chemicals were maintained at the previous year's level, increases in fuel prices, railway freights and wages, affected the profits for the year.

In respect of allocations to Funds, the Depreciation amount has been raised to Rs 26.57 lakhs from Rs 25.00 lakhs, while the Development Reserve is maintained at Rs 3.00 lakhs. A sum of Rs 7.97 lakhs is set apart for Taxation. Even after these increased allocations, the directors have found it possible to

raise the dividend on the Ordinary shares from 7½ to 8 per cent.

The directors have, in their report, stated that the expansion schemes will involve an estimated expenditure of Rs 424 lakhs, to be raised partly from retained earnings, partly from borrowings and partly from an increase in the issue of capital. At the last annual general meeting, the shareholders did not favour an increase in the Preference share capital. The directors have, therefore, decided to recommend an issue of 11.20 lakh Ordinary shares at par, to be offered in the first instance to the existing ordinary shareholders.

The increase in the equity capital necessitates an increase in the authorised capital of the company, which stands, at present, at Rs 2.50 crores of Preference shares and Rs 2.50 crores of Ordinary shares. It is proposed to increase the authorised capital to Rs 10 crores, consisting of Rs 2.50 crores of Preference shares, Rs 5 crores of Ordinary shares and Rs 2.50 crores of un-

November 9, 1957

classified shares. An application has been made to the Controller of Capital Issues for the increase in capital. The shares will be offered in the ratio of 4:5.

₹ 25

Acme Manufacturing

The gross profit of the Acme Manufacturing Company Limited has amounted to Rs 3.58 lakhs for the year ended 30th June 1957 as against Rs 3.07 lakhs for the fifteen months ended 30th June 1956. Sales have amounted to Rs 32.90 lakhs as against Rs 38.20 lakhs. As against the carry-forward loss of Rs 9.23 lakhs, the above profit has been adjusted, leaving a deficit balance of Rs 5.69 lakhs, which is carried forward. Arrears of Depreciation amount to about Rs 10.25 lakhs.

The company's working, during the year under review, has appreciably improved. The company will be undertaking the manufacture of automobile components and valves for which a licence has been obtained.

₹ 25

Sathe Biscuit and Chocolate

The Sathe Biscuit & Chocolate Company Limited has made satisfactory progress during the year ended 31st March, 1957. Sales have shown a substantial rise to Rs 34.37 lakhs from Rs 24.09 lakhs, while the net profit, before Depreciation, amounts to Rs 3,51,798 as against only Rs 1,99,859 in the previous year. The sum set apart for Depreciation is raised to Rs 2.58 lakhs from Rs 1.20 lakhs, although no allocation is made to Taxation as in the previous year when a sum of Rs 6,500 was provided. Thanks to increased profits, the dividend on the Ordinary shares is raised to 6 per cent from 5 per cent.

₹ 25

Bengal Bhatdee Coal

Despite a rise in sales as well as profits, the Bengal Bhatdee Coal Company has reduced the dividend from As 10 to As 2 per share for the half-year ended 31st December, 1956. Raisings are lower at 43,040 tons against 46,616 tons, while despatches are higher at 45,876 tons against 40,221 tons.

Sales have risen to Rs 8.10 lakhs from Rs 5.87 lakhs; but the net profit, before providing for Depreciation and Taxation, amounts to only Rs 48,233 against as much as Rs 93,342 in the previous half-year. The Depreciation amount is lowered

to Rs 8,748 from Rs 9,248. After transferring a sum of Rs 17,000 from Special Reserve, the directors have provided Rs 63,600 (Rs 37,000) for Taxation.

₹ 25

Khthari Textiles

A rather difficult situation exists at the present moment in the yarn market with the South Indian mills having mainly spinning capacity, the margin of profit is determined by the prices that can be obtained for the various qualities of yarn. For some time now, the output of yarn has been increasing at a fast rate and it can no longer be complained that the handloom industry is not properly fed. In fact, the complaint is to the effect that the handloom weavers are not able to increase their production of cloth to such an extent as to be able to absorb the whole of the increased yarn production. Even with the permission to export 75,000 bales during the latter half of this year, it is feared that, in the absence of any increase in the offtake for internal consumption, the various mills may not be able to derive the benefit in full of a higher level of production. It has also been pointed out that there is need for regulation of output as, paradoxically enough, there is a glut of the higher qualities of yarn and the accumulation in stocks of coarse varieties is not so keenly felt.

Even with labour troubles and a quieter yarn market, Kothari Textiles Limited has done rather satisfactorily in the year ended 30th June, 1957. The net profit, before providing for Taxation and Depreciation, for this accounting period, amounted to Rs 11,37,246 as against Rs 12,23,720 for 1955-56. Earnings for the last year have, however, been arrived at after allowing for a donation of Rs 1 lakh to C. M. Kothari Charitable Trust. The amount of Depreciation is again fairly large at Rs 5,78,916 (Rs 5,99,160). There is no liability on account of Taxation. It has been necessary, however, to provide Rs 30,000 towards the Wealth Tax. On the last occasion, a sum of Rs 3 lakhs was transferred to reserves. The Ordinary dividend has been maintained at 10 per cent, though it is necessary to pay a larger amount of Rs 3,78,750 on account of a higher ordinary capital ranking for dividend purposes. During the year, the balance of Rs 5 per share was called on both 'B' preference and Ordinary shares and

Self-help Through Exports

WITH the foreign exchange problem embarrassingly staring us in the face, any development which augurs for the securing of additional resources in this regard tends to be looked upon as being of overweening importance in India's Second Plan endeavours. Of late, all such new developments were the aspect of foreign aid and external assistance. Indeed, from the moment that Mr T. T. Krishnamachari's itinerary, when he left for the annual meetings of the International Monetary Fund and the World Bank, became known, our exclusive preoccupation seems to have been with the prospect of the Finance Minister succeeding in striking a responsive chord in the officials he was slated to meet. It is two weeks since Mr Krishnamachari has returned, but there has been significant silence as to whether he returns with an empty hand or an amply filled briefcase. It has been reported that Mr Krishnamachari has apprised the Cabinet of the discussions that he had while he was abroad. It is to be presumed that an official statement will be forthcoming when Parliament meets next week. But it would be unfortunate if our legislators should be taken up exclusively with the success or failure of what we may call the Krishnamachari Mission and if, besides, they acquiesce in opposition efforts to rake up a bitter controversy over some embarrassing remarks that Mr Krishnamachari appears to have made in a newspaper interview. For, the opportunity made available for discussion of foreign aid or loan prospects may conceivably obscure what should be the primary duty of our legislators. We are here thinking of measures which would enable us to implement the Second Plan with or without foreign aid, and of specific lines of action which would show that India is determined to see the Plan through with self-help. We believe that the Second Plan will be better served by thoughtful and constructive consideration of ways in which we can increase our earnings from exports. In this light, the Report of the Export Promotion Committee is of special significance in that we may hope for Government to bestow study and energy to the important question of an export drive.

Let it be said, at the outset, that the Report of the Export Promotion Committee needs to be looked upon as filling a lacuna which unfortunately existed in the Second Plan as framed by the Planning Commission. It may be recalled that the sub-chapter devoted to financial resources makes what we think is an almost superficial reference to the place of exports in the scheme of foreign exchange resources. Briefly, credit was taken for an annual average of exports to the amount of Rs 593 crores for 1955. No doubt, the Planning Commission have given reasons why we could not expect any substantial improvement to be recorded in Indian exports. In confessing that the "increase in exports that we envisage over the Plan-period is not very striking," the Second Plan based its pessimism on the view that increased indigenous production would not "be reflected in larger export earnings" until such time as industrialisation had proceeded some way.

While we admit that there were certain acknowledged limitations on India's export

prospects, we should have thought that such a position should have impelled the Planning Commission to think in terms of export promotion. Unfortunately, as we had remarked in a Leading Article earlier this year, the Planning Commission have, in projecting targets for exports, "shown themselves to be lacking in ambition". At the time, with the availability of foreign trade figures for 1956, this journal drew up a revised Export Plan. Cognisance was taken of the various factors which would serve either to improve or to reduce prospects of export of particular commodities. After taking into account all these factors, it was suggested that the annual average for the Second Plan should be raised to Rs 693 crores from the Planning Commission's target of Rs 593 crores annually. We envisaged an increase in exports of tea, jute goods, cotton textiles, oil seeds, raw cotton and waste, metallic ores and sugar. While raising the targets, we also indicated that they would be capable of attainment only after certain prerequisites were met. It is interesting to find, in the Report of the Export Promotion Committee, a broad reiteration of the suggestions that were given by this journal. In that sense, as we have already remarked, the Report fills what has been lacking in the Second Plan—a courageous, but for that reason not unrealistic, approach to the question of exports. While we hope, in the

Calcutta banks deserve a word of praise no less than a word of congratulation for the extremely efficient manner in which they prevented business coming to a standstill consequent on the strike by employees.

Calcutta banks rose to the occasion, and enabled the strike-bound month to elapse without undue disruption to Calcutta's trade and business.

To the Calcutta banks, a vote of thanks from Calcutta business interests would be in order.

course of the next few weeks, to analyse the export prospects of specific commodities, we may here consider some of the more important conclusions and recommendations of the Export Promotion Committee.

At a very early stage in the Report, the Committee states that, in the present circumstances, "India's exports will have to be stepped up substantially to Rs 700 to Rs 750 crores a year from now on". This, let it be recognised, is materially the same target that was suggested by Indian Finance in the issue of June 22, 1957. The Committee is emphatic in its view that this "is certainly not an over-ambitious target". But the targets can be attained only by provision of aids and incentives which will enable export promotion. We may now take up for study the suggestions in this regard.

"To help exports, the most modern methods of production should be allowed even in our present lines."

There can be little doubt that, in the two key export industries, the emergence of increasing competition overseas necessitates

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

the adoption by the industries concerned of production not only on the basis of rationalisation, but also of modernisation. The need for modernisation in the jute goods and cotton textile industries has been in the forefront of public discussion over the last two, three years. The difficulty has been, of course, the equally important problem that this country has had to tackle of doing nothing which will reduce employment opportunities. In the case of the jute goods industry, it is gratifying that, with suitable assistance from the National Industrial Development Corporation, substantial modernisation has been completed without any undue disruption of the labour situation. On the other hand, in respect of the cotton textile industry, Government were compelled to limit the expansion that might be permitted by the organised sector; so that, through the medium of handloom, greater employment potential might be created. Then, last year, in recognition of the need for achieving reduction in costs of production, so that Indian textiles could compete in the export markets, Government approved the installation of a certain number of automatic looms. In our view, if there is a reasonably good chance of Indian cotton textiles being able to secure an export market for, perhaps, a quantity even exceeding one thousand million yards, then, consistent with the availability of foreign exchange resources, further installation of automatic looms should be encouraged, notwithstanding any "deprivation" of job opportunities in the handloom sector.

"When raw-material availabilities are insufficient to work existing industrial units at two or three shifts, production should be concentrated on the more efficient ones and the uneconomic units closed down by mutual agreement among parties concerned".

This, if we may say so, is a particular need of the jute goods industry. As it is, some of the uneconomic units have been closed down, and it should be possible to offer jute goods on the world markets at more competitive prices if units which even modernisation may not help are closed down. There need be little apprehension of labour being redundant, since the IJMA could agree to longer hours of working, so that the displaced labour could be absorbed. If we have regard for the fact that the IJMA mills are working short hour weeks as well as with a proportion of the looms sealed, it will be realised that installed capacity for jute goods is, at present, substantially in excess of demand. It is in the best interests of the country, not merely from the point of view of foreign exchange earnings, that optimum production be encouraged by the gradual closing down of the economically weak units.

"The grant of concessional railway freights to export commodities should be examined in detail on an urgent basis."

The suggestion, presumably, is that, after rationalisation of the railway freight structure has taken place, consideration should be given to some manner of "drawback" on goods consigned for export. While we are in agreement with the view that a fillip should be provided to exports in every way, we are somewhat doubtful about the desirability of upsetting the calculations on the basis of

which the freight rates are presently to be rationalised.

"Barring exceptional circumstances, the aim should be to keep the level of export duties fairly stable over given periods of time."

We are not quite sure whether the Committee, in using the phrase "given periods of time", is recommending that, in advance, Government should announce that they do not intend to effect any change in the export duty until a specific time. Although there is a rider to this recommendation that export duties could be thus fairly stable if they are fixed at a level "which allows a margin in favour of the exporter rather than against him", we are afraid that we consider export duties to be imposts which have to be entirely flexible. Particularly in the Indian context, when the availability of goods for export may fluctuate sharply, it would be imprudent and undesirable to circumscribe export duties by postulating definite periods of time for which they will be effective. At the same time, it needs to be recognised that there should not be too frequent tampering with or change in the rates of duties.

"A flat rate of refund of excise duty should be applicable to all manufactures exported using duty-paid raw materials, semi-processed goods and packing material." "Drawback of customs duty should be admissible not merely to goods manufactured in India out of imported materials, but also to imported goods processed, blended, sorted or packed in India."

Both these are recommendations which do not require much comment. That, in both

the cases, costs will be reduced enabling export prices to be more competitive, there can be no doubt.

"Exporters should be given a measure of relief from income-tax, such relief being related to their total business turnover, the total income-tax they have to pay and the increase they have been able to effect in the export of non-quota items."

At a time when the Indian people generally are surfeited with new tax measures, it could certainly be proper policy for Government favourably to consider any proposal which, though a concession in itself, is nevertheless in the important national interest. A rebate on income-tax is a small price to pay for providing an incentive for an increase in the exchange earnings from exports which are not India's "traditional" commodities purchased by the rest of the world.

"The proposal to develop a port at Geonkhali as a satellite to Calcutta should be actively pursued."

The comment on Geonkhali can be pithily expressed in two words: Of course.

Lest it should be thought that all the recommendations of the Committee will be found suitable by Government, we should hasten to point out that, on the contrary, there may be no more than a few which will be capable of practical implementation in the immediate future. Nevertheless, the Committee's Report is an important contribution, if it will serve to focus official energies on the ways in which it is indeed possible for India to increase its earnings from exports.

ECAFE Geological Map

A FEW conspicuous failures in the political field have had the unfortunate effect of obscuring the great and remarkable achievements of the United Nations in the economic and social spheres. The current meeting of the Working Party of Senior Geologists of the ECAFE at Calcutta represents a fairly advanced stage in an endeavour which is of overwhelming significance to the economic future of this vast and undeveloped region. To describe this endeavour as the preparation of a Regional Geological Map may not indicate adequately to the lay man the extent of the work involved or its range of ramifications in terms of material production potential and of human welfare.

Agricultural and mineral production is the foundation of any economy. The geologist takes charge of the second; and what the earth is made to yield by way of minerals is exclusively dependent on the expertness, enthusiasm and persistence of his tribe. It is not the discovery of the minerals alone which matters, though it is most important and an indispensable starting point. Questions such as, the most economical and expeditious methods of exploitation, trade in minerals and mineral products, classifications with reference to various uses of particular minerals, methods of utilisation and the training of the experts come within the purview of the ECAFE Party. In view of the necessarily high place which mineral exploration and development receives in the planned economic development of Asian countries, particularly India, the work of the present Conference receives more than ordinary urgency.

A complete and detailed geological map is also a pre-requisite for proper planning in agriculture, irrigation, soil survey, development of ground-water sources and the designing of engineering projects. Though in recent years, Indian geologists have succeeded in tapping new belts and seams of various mine-

erals in different parts of India, about half the country seems to remain virtually unexplored. The Geological Survey of India which can claim credit for the highly satisfactory measure of progress recorded during the last one or two decades is one of the best equipped institutions of its kind. Not every other country in this region can boast of an equally well-organised department of geology. This is one of the reasons why in spite of the fact that the International Geological Congress appointed a committee several years ago mainly for the compilation of an international geological map, a unified geological map of Asia and the South Eastern Region is yet to be completed. Since this work was entrusted to the ECAFE Sub-Committee on Mineral Resources Development, the work had gained momentum.

The First Regional Map of Asia and the Far East is scheduled for publication in another year. Just now, according to Mr V. P. Sondhi, Director, Geological Survey of India, who is also the Coordinator for the regional map, Borneo, Hongkong, Ceylon, India, Indonesia,

Philippines, Thailand, Burma, Korea, Malaya and Japan have sent their maps. A couple of days before the Conference commenced, the Geological Survey of Taiwan sent a blue print of a map of China, a piece of information which provided a breezy interlude to the Calcutta discussions, agreeably ending with a general request to the USSR delegate for the supply of the latest information available on the People's Republic of China. What remain to complete the regional map are the maps of Afghanistan, Nepal and Pakistan. In respect of these three countries, sources open to the Geological Survey of India have given access to a great deal of information. From what we could gather, finishing touches have yet to be given to the data available for several of the Asian countries; these would naturally form the immediate work ahead.

The preparation of a map does not necessarily mean that everything worth doing has been done in the entire region. Even in India where techniques and organisation are more advanced than in most of the other countries of the region, our geologists are coming across new finds, every year, of oil, copper, coal and several other minerals. Present gaps in areas surveyed are many and extensive. In China, though, thanks to the help of the USSR experts, explorations have been proceeding on a wide and systematic scale, the potential undiscovered mineral wealth should be much more than what is already known to exist.

It might be stale but still worth mention that the exploration of minerals in Asia has hitherto been slanted to the requirements of a colonial economy and the pattern of trade associated with it. The advent of political and economic independence for the countries of South East Asia has augured a new outlook and consequently a new momentum. As one of the delegates at the Calcutta Conference pointed out, there is a large element of inherent coordination in the survey and assessment of mineral wealth over particular regions, because the mineral bearing tracts do not always respect natural boundaries. Here is where intra-regional coordination assumes importance. When techniques are also fast developing, sharing of experience has undoubted value.

Just now, India is on the whole favourably placed, in respect of the occurrence of minerals. India exports considerable quantities of ilmenite, kyanite, mica, rutile, sillimanite, iron ore, bauxite, chromite, magnesite, etc. On long-range calculations the export of coal is now restrained; iron ore is being looked upon as a growing foreign exchange earner; for a few minerals such as copper and tin, the country is wholly or largely dependent on imports. As large scale industrialisation proceeds, a new pattern is bound to evolve in the region's foreign trade in minerals, as has already emerged in respect of manufactured goods.

Improving Productivity

A SEMINAR held at New Delhi on November 1 and 2, under the auspices of the Union Minister of Commerce and Industry, has outlined a programme and certain principles for a national productivity movement. Low productivity is the curse of Indian agriculture and, as has been painfully pressed home on more than one occasion since the transfer of power, a poor performance by the crops can create a shocking upset for all plans of economic development.

We draw attention to this fact because in most discussions on productivity, agriculture seems to be kept out. The separation is inexcusable also for the reason that agricultural productivity will largely determine not only

the balance of the economy but the competitive status of many of the leading industries such as cotton, jute, tea and sugar. Of late comparatively minor produces like tobacco, spices, pepper and cashewnut have also assumed greater importance among India's exports. The productivity of every crop thus assumes a national significance which must be reflected in any organised endeavour which the nation has in view to improve the outturn of the worker and the other factors of production.

The interest and enthusiasm displayed by the small producer in agriculture and in industry to increase his output in every possible manner is indicative of the elementary truth

(Continued on page 900)

Suspension

By M. SUR

IT IS a common assumption that an employer may suspend an employee if he thinks it is in his interest to do so, but this is by no means the case even at common law, and industrial court rulings have now made very clear what rights the employer has in this respect. It may, therefore, be useful to study the present position.

No one seems to know the origin of the use of the word "suspension" in the sense of temporarily preventing a servant from performing his work and withholding all or part of his wages for the period of prohibition. Originally, the term must have applied to the contract of service, but nowadays it is loosely applied to the individual, so that it is common to see the phrase: "You have been suspended from your employment pending enquiry" in charge sheets issued to employees—conjuring up visions of puppets dangling on the end of strings! Messrs Barwell and Kar, in *The Law Relating to Service in India, Pt. I*, after a study of the English and Indian authorities, come to the conclusion that "the power to suspend in the sense of a right to forbid a servant to work, is not an implied term in an ordinary contract between master and servant" and can only arise if it is given by statute or is an express term of the contract of employment.

This is also the view taken by industrial courts, and it was recently confirmed by the Full Bench of the High Court of Punjab in an appeal under the Payment of Wages Act in the case of *Mukand Lal vs the Divisional Superintendent, Northern Railway*. After considering certain conflicting views expressed in previous High Court decisions in the States of Punjab and Bombay, the Full Bench gave the following ruling:

"Where two parties agree to a contract of service and the contract of service provides for suspension in certain cases, the suspension when it takes place has the result of holding the contract of service temporarily in abeyance, and during the period of abeyance the relationship between the master and servant is determined by terms which have also been mutually agreed upon.... Since there can be no unilateral suspension of a contract an employee can only be suspended where he has accepted as part of his contract terms which authorize his employer to suspend him in certain given circumstances." (LLJ 1957 II p. 456)

In this case, the employee was governed by the Railway Establishment Code, which makes provision for suspension of an employee in certain circumstances and payment of a subsistence allowance during the period of suspension. There are similar statutory rules for suspension in other Government Departments and also under municipalities. Presumably, private industry has taken the idea of suspension from Government service conditions.

The Punjab High Court pointed out that there was nothing novel in a contract being suspended, but that it did not entirely absolve either side of its obligations, for, otherwise suspension would be equivalent to total termination of employment. A tenuous connexion still continued between the master and servant, for, the servant could not seek employment elsewhere and the master could not employ some other servant to fill the vacancy.

In drafting legislation on standing orders in industrial establishments the Government naturally had in mind their own service conditions, and therefore the Industrial Employment (Standing Orders) Act lists

"suspension or dismissal for misconduct" as one of the items which must be included in an establishment's standing orders. The Model Standing Orders attached to the Central Rules under the Act provide that a workman may be suspended for a period not exceeding 4 days at a time if found guilty of misconduct, and, if on enquiry the order is confirmed, "the workman shall be deemed to have been absent from duty for the period of suspension and shall not be entitled to any remuneration for such period." Many companies have adopted this model rule, but there seems to be a slight confusion in it between suspension as a punishment and suspension pending enquiry into alleged misconduct. Industrial tribunals have now made a clear distinction between these two. Suspension as a punishment is in effect a fine, for the employee loses so many days' pay. As a punishment, it is clearly governed by S. 33 of the Industrial Disputes Act which lays down when permission or approval to punish or dismiss must be applied for during conciliation and adjudication proceedings.

But, while suspension as a punishment is limited normally to four days under standing orders, suspension pending an enquiry into alleged misconduct or pending permission to punish or dismiss is quite another matter, for, it is bound to be of uncertain duration. Such suspension has been held in a number of cases before the Labour Appellate Tribunal not to be a punishment and so not covered by S. 33. (see LAC 1954 I p. 80; 1954 II p. 328; 1956 I p. 72; 1957 I p. 554); and, finally, the Supreme Court (LLJ 1957 I p. 17) in the case of *Lakshmi Devi Sugar Mills Ltd* has given its decision as follows:

"It has been rightly held by the Labour Appellate Tribunal that suspension without pay pending enquiry as also pending permission of the tribunal under the relevant section could not be considered a punishment as such suspension without pay would last only be an interim measure and would last till the application for permission to punish the workman was made and the tribunal had passed orders thereupon. If the permission was accorded, the workman would not be paid during the period of suspension but if the permission was refused he would be paid for the whole period of suspension. There is nothing like contingent punishment of a workman and therefore such suspension could not be deemed to be a punishment of the workman at all. Such suspension would of necessity be of an indefinite duration because to get a written permission of the tribunal would mean delay."

Suspension pending enquiry has also been held not to be a change in conditions of service so long as it is provided for in the standing orders of the organisation; but, where workmen were suspended for more than the maximum period under the rules as a punishment, this was held to be an alteration in conditions of service (LLJ 1957 I p. 426). Permission to dismiss has been refused in some cases because the suspension has exceeded the period laid down in the standing orders. Wholesale suspension has been held to amount to a lockout (LAC 1953 p. 244).

During suspension pending enquiry, the employee is naturally expected to remain on the station, so that he can be informed when he is required to attend the enquiry, but he is not expected to report daily. In a case where the employer required the employee to report daily at his place of employment during suspension, the High Court of Bombay held that the contract could not be considered to be suspended in these circumstances and the employee was entitled to his wages (LLJ 1951 II p. 584).

This brings us to the question of wages during suspension. (The Appellate Tribunal

has laid down that, unless otherwise expressly provided in standing orders, an employee is entitled to wages during suspension (LLJ 1957 II p. 295), but if suspension without pay or on subsistence allowance is part of the contract of employment, then the employee cannot raise a dispute under the Industrial Disputes Act (LLJ 1954 II p. 468). The Madras High Court has also ruled that, in these circumstances, an employee cannot claim wages under the Payment of Wages Act (LLJ 1957 II p. 449).

We can sum up by saying that standing orders must expressly provide both for suspension as punishment and suspension pending enquiry; otherwise the employer cannot claim any inherent right to suspend an employee. The former type of suspension should be for a limited period, normally not more than 4 days, but the latter may be for an indefinite period. Standing orders must also state whether the suspension is to be without pay or on subsistence allowance. If the matter is properly covered by standing orders, then the employer can suspend without pay pending enquiry or pending reference for permission or approval of punishment or dismissal during conciliation or adjudication proceedings without contravening either the Industrial Disputes Act or the Payment of Wages Act.

This, then, is the legal position, but what about suspension when viewed from the wider angle of industrial relations? It is too often taken as automatic that when a charge sheet is issued the employee is also suspended. It should not be so. In certain cases, the offence may be of so flagrant a nature that the employer can no longer have any confidence in the employee and may even fear to allow him to continue his work. Such would be the case of a cashier chargesheeted for an alleged defalcation or a workman suspected of serious theft or of assault. Where the employer's property is endangered or where there is possibility of danger to others, it is obviously only reasonable that the employer should suspend the suspected man pending proper enquiry. In other cases, however, there is no real reason for suspension, and it is a cause of considerable hardship, particularly when the company is covered by adjudication proceedings and permission is required for punishment or dismissal. Rulings of tribunals have forced managements to turn enquiries into miniature courts of law. It is not uncommon for a departmental enquiry to take several weeks to conclude due to absence of witnesses, adjournments to suit the accused or his representative and so on. Then, the enquiry officer has to make a full report with his findings. This may take a few days to prepare and then it has to go to the higher management for a decision. A busy manager or director may delay the case still further, or a conscientious study of the case may reveal the need for some further evidence.

All this may be in the interests of "social justice", as understood by industrial courts, but, meanwhile the unfortunate employee remains without any means of support unless he has a financially strong trade union to back him, and once the case goes to the tribunal or labour court for permission or approval, there may be further endless delay. On a wider view, it is not sound industrial relations or human relations to keep an employee indefinitely under suspension—in a state of suspense, one might say, as to the outcome of the enquiry—and it seems strange to the writer that industrial courts have been so complacent about this. Of course, they are accustomed to the delays of the law, but it is one of the soundest principles of industrial relations that decisions on individual cases should be given with speed as well as justice.

(References: LLJ=Labour Law Journal; LAC=Labour Appeal Cases).

Housing Plans

The Conference of Housing Ministers recently held at Mysore has come to some useful conclusions. The very recognition of the fact that by 1961 the total shortage in urban housing would be of the order of 11 million units and the scope for improvement and rebuilding of rural housing would be equal to about 50 million units, should help a proper fiscal and financial assessment of what is on the one side necessary and on the other practical.

The task of providing enough houses satisfying minimum requirements of health and comfort is stupendous and may involve an outlay of no less than Rs 5,000 crores for rural housing alone. According to Mr K. C. Reddi's calculation the private sector is expected to spend about Rs 800 crores on 8 lakhs urban houses during the Second Plan period. In the same period, the Central Government propose to spend Rs 105 crores on Government aided urban housing. If the expenditure attributed to the private sector covers the houses built with this amount of Government aid, the balance of 11 lakhs houses remains the responsibility of the State Governments. Out of these 769,000 houses are to be for Government employees and for coal, mica and plantation workers. The residual population will have to share the remaining 331,000 houses.

Even at the modest rate of Rs 5,000 per house, the 1.1 million houses to be financed outside the private sector will absorb Rs 550 crores. Thus, against a contribution of Rs 105 crores by the Central Government, the States are expected to put in considerably more than Rs 400 crores. These are only rough estimates. All the same, they do indicate the extent of financial burden which the States

Editorial Notes

are being called upon to shoulder. Amidst the prospect of drastic prunings of the Central and States plans, the expectations will have to be treated as highly tentative. For the Central Government themselves, even the present provision faces the risk of being cut down.

It is on the organisational side that the Mysore Conference seems to have made a more real contribution. Linking the programme of rural housing with the Community Development and National Extension, the setting up of State Housing Corporations, rural housing cells, the concentration on the use of local materials and the co-ordination with Public Health and other Departments are ideas which, suitably implemented, would lead to economy and expedition. As for the actual programme of construction, we are yet a good distance away from the stage of reliable estimates and allocations.

Savings Trends

A Government spokesman complains that of late withdrawals of savings bank deposits from Post Offices have increased. He has not mentioned the trend of new deposits. If, as is emphasised, the higher rates offered by commercial banks are drawing money away from the postal savings accounts, it is possible that new deposits will also react likewise. It is, however, arguable if the difference in the rates offered by the banks and the postal departments is the only consideration governing whatever shifts in preference have developed.

A fairly wide margin in interest rates between the two has always prevailed. Nor is it in any way regrettable that the small saver should prefer the more remunerative bank deposit to post office savings. The interest rates offered on national savings certificates and on the ten year bonds are by no means less alluring than the best that any commercial banks can offer. A mere preference between the bank and the post office may be immaterial, as it cannot indicate any liquidity preference as well. But, if the small saver is influenced mainly by liquidity consideration as against that of the return on investment, there is reason for disquiet.

Survey of Tea Drinkers

A sample survey conducted by the Statistics Branch of the Tea Board in the two towns of Malda and Cooch Behar in West Bengal has led to many findings on which the future propagandist can capitalise. In both towns habit is the strongest reason for tea-drinking and summer an important reason for families and individuals not taking to tea. A considerable percentage of non-drinkers are found to abstain merely out of poverty and quite an impressive proportion for reasons of health.

The proportions under all these categories differ between the two towns, a circumstance on which further inquiries might well be pursued. Why at all 30 per cent of non-tea drinking families in Malda are restrained by summer, while not more than 19 per cent are similarly placed in Cooch Behar deserves investigation. Again, 52.9 per cent of Cooch Behar children drink tea, while in Malda only 40.5 per cent have taken to it.

Perhaps there might be a link between these figures and the percentage given of those who refrain on considerations of expense. The latter form 6.7 per cent of the non-drinking families in Malda, but only 4.8 per cent of the group in Cooch Behar. A like difference is also seen between those who refuse to form the habit. The analysis does not seem to have diverted itself to the relation between literacy and the habitual acceptance of tea in the daily diet.

The classification of consumers between those who do it in the home, in the shop and in both might assist efforts in the most economic direction. The level of family income does not seem to be of much help as a clue, except for the more or less obvious pointer that families with very meagre incomes do not take to tea in as large a proportion as others and that families with an income of more than Rs 500 a month are without exception habituated to tea. As could be said of necessities of life in general, poverty is found to be the worst enemy of the market for tea. Interesting data have also been made available of the incidence of tea-drinking among different occupations.

Inviolable Commitment

The suggestion to put a time limit on the offer of rehabilitation assistance by authorities in India to refugees coming in from Pakistan is undoubtedly an abrogation of a great moral commitment involved in Partition. It is no use bemoaning the lack of imagination and foresight with which certain post-partition problems were tackled in India. Very belatedly, Mr V. K. Krishna Menon has reminded the world that India had a refugee problem far more colossal than what any other country had to face and yet shouldered without any international assistance.

Past mistakes will not, however, be a justification for putting an arbitrary time limit on help owed to people who were in the forefront of India's struggle for freedom and who were left high and dry in what has virtually become an enemy State overnight. It is significant that one East Pakistan leader, expressing himself against the move for separate electorates, has raised the uncomfortable vision of the minority

community in East Pakistan demanding a separate State.

Even as it is, the problem of refugee rehabilitation in India will by no means be solved by saying that nothing could be done to those who came after a particular date. About half the population which has already migrated has not found its feet yet. The scheme of Dandakaranya seems to have become a prenatal casualty. After long years of delay and waste, it must be possible for the Governments of India and West Bengal to arrive at some conclusions on how the refugee population could be integrated into the national life fully.

If the remaining Hindu population in East Pakistan is not to be offered help when they are forced to migrate, there is the alternative obligation on the part of India to see that they are able to continue in their native homes with a sense of security and elementary human freedom. If neither this indirect protection nor the help understood to be involved in Partition is given, the result can be humiliating and calamitous.

Unremunerative Routes

The domestic enquiry into the working of the Indian Air Lines Corporation is expected to bring out the weaker spots. According to Mr Humayun Kabir, losses are being incurred on the freight routes, as for instance, the one from Calcutta to Assam. On such routes, the non-scheduled air lines are found to fare better. He has also referred to traffic with Nepal where again the private air lines are attributed certain advantages, which the Minister describes as technical.

It is rather baffling how private air lines make money by exclusive reliance on traffic where the IAC

World of Finance

On the Busy Season's Eve-II

THE 1957 slack season has drawn to its close on a triumphant note, thanks to the unprecedentedly steep rise recorded in the Deposit resources of Scheduled Banks in the last week of October. Indeed, the magnitude of the increase—which is Rs 38.34 crores—might be read in some circles as being a distortion of the slack season increase as such. Such an argument, however, is untenable. For, the fact of the matter is that the Scheduled Bank figures from the middle of September have been obscuring the full extent of the rise in Deposit resources; this, of course, was consequent to the bank strike in Calcutta. So, it may be suggested that the very sharp rise in Deposits during the week ended October 25 actually constitutes a corrective to the figures in this regard in the previous four weeks. But this would mean that part of the Deposits in suspense, as it were, were cleared and credited during the week ended October 25. But we know that the first clearing was effected only after that date. Therefore, the only explanation we can offer is that the increase reflects large scale inter-bank swapping of cheques, which apparently took place prior to the routine clearing of cheques. If this, indeed, is the case, the return of Scheduled Banks for November 1—which will bear the impress of the first official Calcutta clearings since the middle of September—should reveal a further, perhaps, substantial increase in Deposits. In this context, we may draw the attention of readers to the report that, on the first two days of official clearing, cheques that were exchanged were for an amount of Rs 160 crores odd as compared with the average of around Rs 60 crores during normal times. But we are digressing here, since our primary purpose is merely to indicate that the sharp increase in Deposit resources during the last week of October is really part and parcel of what we may call the slack season accretions. Having made this point, it is now possible for us to go ahead with the study of the State Bank and Scheduled Bank figures from the point of view of the achievements of the slack season.

Taking first the State Bank, it is to be noted that its Deposits have risen by Rs 67.85 crores to Rs 367.00 crores between April 30, 1957 and October 25, 1957. Part of this—Rs 40 crores—may be taken to represent Deposits on account of the US Counterpart Funds. But, even then, the rise in Deposits, at Rs 67.85 crores, is the highest recorded during a slack season since the beginning of the First Plan. The previous best year, from the point of view of a slack season

increase in Deposits, was 1954, when the rise worked out to Rs 19.22 crores. Secondly, the State Bank figured but nominally as a borrower from the Reserve Bank at the beginning of the slack season. So, the extent of decline in borrowings is small, since the starting point was itself a small figure. Thirdly, nearly 75 per cent of the accretions to Deposits has been utilised by the State Bank in adding to its gilt-edged portfolio, which marks a remarkable increase of Rs 49.86 crores to Rs 143.93 crores. This is by far the largest new investment by the State Bank in gilt-edged in any single year, least of all in any single slack season. Fourthly, there has been a contraction in Advances of Rs 17.74 crores. Strange as it may seem, since the beginning of the First Plan, this is the smallest contraction except for the 1956 slack season. To a certain extent, the smallness of the decline, comparatively speaking, reflects the criticism made in the last session of Parliament that the State Bank was finding it difficult to recall Advances. However, we are disposed to the view that, presumably, State Bank funds locked up in the commodities affected by the Reserve Bank directives have been comparatively smaller. If, then, State Bank Advances have been greatly concentrated in industry, we have to conclude that the State Bank, in fulfilling its objective of continuing to function as an important commercial bank, has been extending Advances unstintingly. Finally, in respect of the State Bank figures, we may note that cash balances have increased by Rs 35.27 crores to Rs 63.65 crores. So much so, cash balances work out to more than 20 per cent of Deposits, and the State Bank's high ratio in this regard has the effect of offsetting the low level of cash balances held by Exchange Banks. From the slack season point of view, the important points to note about the State Bank are:

- (1) Even allowing for the wind-fall Deposits against counterpart funds, the accretions have exceeded the increase recorded in any previous slack season;
- (2) such augmentation of resources enabled the State Bank to increase its gilt-edged portfolio by an unprecedented amount;
- (3) true to the slack season, Advances have recorded a decline, but productive enterprises are not being starved for funds; and
- (4) the augmentation of resources has been of such a magnitude as to enable cash balances to swell to an extent

that raised the ratio to Deposits from the beginning of the slack season level of less than 10 per cent to over 20 per cent by its end.

As far as the figures of the other Scheduled Banks are concerned—figures relating to the State Bank have been deducted from the Scheduled Bank return—the increase in Deposits has been for an even larger amount, Deposits rising by Rs 96.10 crores to Rs 1,028.94 crores. This compares with the best previous year of 1955, when the increase worked out to Rs 72.33 crores; and, in the 1956 slack season, the relevant figure was only Rs 33.53 crores. Since the State Bank figures have been eliminated, this increase shows that, contrary to the general view, the US Counterpart Funds by no means constitute the dominant or the only reason for the strident uptrend in Deposit resources of Scheduled Banks. Secondly, borrowings from the Reserve Bank have been reduced by Rs 42.83 crores—by far the largest decline since the beginning of the First Plan. Of course, we have to bear in mind the fact that the starting point, at the beginning of the 1957 slack season, was unduly high at Rs 72.50 crores. On the other hand, it also needs to be borne in mind that, ever since tight money policy in the UK became a tough money policy, Exchange Banks operating in India have been having free, liberal, extensive and substantial recourse to borrowings against usance bills. So, if, at the end of the slack season, borrowings from the Reserve Bank are still at a high level of Rs 29.77 crores, it is indicative, not of any inadequacy of resources on the part of the Scheduled Banks as such, but of the dependence of the Exchange Banks upon the Reserve Bank as an ultimate source. But the magnitude of the decline in borrowings is an index of the slackness of the 1957 slack season. In this regard, we may refer to the 1956 slack season, when the decline in borrowings amounted to only Rs 4.15 crores. This was in spite of an increase in Deposits of Rs 33.54 crores. Thirdly, it is an incredible fact that, in a year in which the increase in Deposits has been of phenomenal proportions, the gilt-edged portfolio of the other Scheduled Banks for the first time since the beginning of the First Plan, shows a decline instead of a rise. It would be churlish to read in this decline an unwillingness on the part of the Scheduled Banks to invest new money in gilt-edged, though there can be no doubt that the central banking authorities were, with good reason, disappointed, if not displeased, at the lack of response from the other Scheduled Banks to the 1957 New Loan. But a substantial modicum of the blame for this disinterest in gilt-edged must be traced to a Government gilt-edged policy which, each year, causes earlier loan issues to suffer depreciation. This is not the way of conducting a successful borrowing policy; but this is not

the place where we intend to discuss this particular matter. Fourthly, the total of Advances of the other Scheduled Banks has marked a decline of Rs 22.27 crores to Rs 702.29 crores. This is the largest contraction to have taken place in Advances since the 1953 slack season. We may add, in this context, that the decline in Advances would have been even sharper but for the Calcutta bank impasse, and the additional accommodation that was then extended by the banking system in the Eastern Capital. Lastly, cash balances have improved by Rs 38.06 crores to Rs 140.78 crores. The points to note in respect of the other Scheduled Banks are:

- (1) The other Scheduled Banks have participated fully in the general trend of increasing Deposit resources;
- (2) the decline in borrowings from the Reserve Bank is of true slack season proportions;
- (3) gilt-edged did not attract any of the new money;
- (4) some contraction in Advances has taken place which, but for the Calcutta bank strike, may have been sharper; and,
- (5) a considerable portion of the increase in resources has gone to improve the cash position.

CALL MONEY RATE (From Banks)

Last Friday of	Bombay	Calcutta	Madras
April 1956	3-1/8	3-1/2	3-1/4
October 1956	3-1/4	3-7/8	3-1/4
April 1957	3-7/16-4-7/16	3-4-4	3-4-3/16
October 1957	3-3/16-4-7/16	4-1/2	3-3-7/8

If all this were not sufficiently indicative of the slackness of the 1957 slack season, call money rates offer compelling proof in this regard. While, in the last year, rates remained abnormally high even during the currency of the slack season, trends in 1957 have conformed to the norm of a slack season, and supply of funds was abundant at ruling interest rates, with borrowers finding no difficulty in securing their requirements. (Calcutta rates for October 1957 are high because of the bank impasse).

At this stage, we may consider whether the 1957 slack season was an inspired one, in the sense that the Reserve Bank's directives, calling upon the Scheduled Banks to reduce Advances to a level of Rs 800 crores, might have been primarily responsible for the easiness in the money market. The 1957 slack season could indeed be so termed, if the most distinguishing characteristic had been a contraction in Advances. But this is far from the known state of affairs, since the two most important phenomena of the 1957 slack season have been the substantial recourse to deficit financing, on the one hand, and the remarkable increase in the Deposit resources of Scheduled Banks, on the other. These two are, of course, to a certain extent interrelated. But it is also possible to suggest that the

World of Jute

Raw Jute Shortage?

THE report that the jute crop both in Pakistan and India during the current year has been seriously damaged by drought so far seems to have failed to create any panic among buyers. It may be noted that for some time now there have been hints about the possibility of a smaller-than-expected 1957-58 world jute crop. The continued small monthly arrivals at mill stations are said to denote that the size of this year's crop is not as large as expected earlier.

A report from Dacca this week says that due to drought, the yield from the Pakistani jute crop may be considerably reduced. Such an inference, says the report, has been derived from the fact that this year's jute crop in the five-mile border belt is expected to be only 2½ lakh bales as against 4½ lakh bales in the previous year.

If the above reasoning turns out to be correct, the raw jute supply position will certainly become very unsatisfactory. As far as India is concerned, it may also become necessary to allow for the havoc of drought in Bihar on the jute crop there. In this view, the outlook for raw jute supply to our mills during the current jute season cannot be

considered to be quite bright. As pointed out earlier, the absence of any violent price fluctuations in the raw jute market seems to indicate that the scarcity story has not been taken seriously by the jute industry and trade.

Prices in the jute goods market have developed a slightly easier tendency during the past week. It would appear that the main reason for the lack of enthusiasm was the absence of foreign enquiries. It was evident that overseas buyers were reluctant to enter the market in anticipation of a further decline in prices. A contributory factor had been the general belief that October-end stocks would not disclose a large decrease over those of the previous month. The inference had been derived from the trend of shipments during the month.

The market opened the week on Thursday on a quiet note in the absence of foreign enquiries. Toward close, however, B Twills Ready moved up sharply due to due date considerations. B Twills Ready was finally placed at Rs 118.85 with the December and Jan-March position quoted at Rs 115.85 and Rs 114.45 respectively. Hessian 40"×10 oz Ready was done at Rs 42.35. De-

cember at Rs 42.45 and Jan-March at Rs 42.00 Friday found the market again in a quiet mood as foreign enquiries continued to be conspicuous by their absence. In the sacking section, however, B Twills Ready slightly recovered toward close due to speculative activity. The day's closing prices were as follows: Hessian 40"×10 oz Ready Rs 42.15, Dec. Rs 42.25 and Jan-March Rs 42.00 B Twills Ready Rs 117.25 December Rs 114.50 and Jan-March Rs 113.50.

An irregular trend was noticeable on Saturday. While the hessian section was steadier, the sacking section continued to move down. Toward close there was some buying interest at the lower levels with the forward positions attracting especial attention. Hessian 40"×10 oz Ready gained fractionally to be placed at Rs 42.20 while the Dec and Jan-March positions were also better on balance at Rs 42.30 and Rs 42.15 respectively. In the sacking section, however, prices declined. B Twills Ready was pushed down to Rs 116.85 while Dec and Jan-March were placed at Rs 115.10 and Rs 113.85.

Prices drifted around previous levels most of the time on Monday but the undertone of the market had been, however, steady. The sacking section recovered on speculative buying interest while the forward positions in the hessian section recorded some improvement. Hessian 40"×10 oz Ready was unchanged at Rs 42.20 but the December and Jan-March positions were better at Rs 42.40 and Rs

42.20 respectively. In the sacking section B Twills Ready was done at Rs 118.00 while Dec and Jan-March were placed at Rs 116.00 and Rs 114.75 respectively.

The raw jute market ruled almost unchanged during the past week though the undertone was by no means steady. At the beginning prices displayed a sagging tendency in the absence of buying interest. In the first three days business passing was at a low ebb and though sellers were offering freely at around Rs 29.25 per maund for Assam Bottoms, only small business was put through from day to day.

Though the market opened on a steady note on Monday, higher price levels could not be maintained as buyers did not evince much interest at prevailing levels. Assam Bottoms have quoted at Rs 29.25 per maund throughout the week.

Price trends during the week:

Hessian:	Week's Opening Rs.	Week's Closing Rs.
40"×10 oz.		
Ready	42.30	41.70
Jan-March	42.12	41.75
December	42.62	41.75
Sackings:		
B Twills:		
Ready	120.00	116.25
December	115.50	114.12
Jan-March	114.25	113.25
Heavy cees Green	117.00	115.00
Cornsacks	117.50	115.25
Cubans	141.50	141.50
A. Twills	140.00	138.50
L. Twills	131.00	130.00
D. W. Flour	137.00	136.50
Sugar Bags	132.50	134.00

Fannings Rs 2.85 to Rs 2.90 (nominal).

In the Internal Sale, offerings amounted to 18,266 packages of Dusts. There was a fair demand for CTC teas, but this weakened as the sale progressed. At the close, prices were sometimes 25 nP per pound easier and there were some withdrawals. The plainer and fibrous descriptions were a weak feature, although clean brighter liquoring sorts showed little decline. There was a strong and active demand for all black leaf teas. Smaller Dusts from Assam continued to be sought after, while leafy sorts from all districts were sometimes as much as 8 nP per pound dearer. Following rates were quoted:—Medium Dooars Dust Rs 1.70 to Rs 1.74; Medium Assam Grainy Dust Rs 1.74 to Rs 1.78; Medium Assam CTC Dust Rs 2.20 to Rs 2.30 and Best CTC Assam Dust Rs 2.60 to Rs 2.90.

Also, 2,948 packages of Leaf grades were offered for internal consumption. Prices for these were about firm on last rates except for CTC Assams, which met with an improved demand and were sometimes dearer.

In the Export Quota section, rates moved narrowly between 18½ and 19 nP per pound.

In the auction, held at Colombo, offerings were about 5.45 million pounds. There was active and general demand with the Russian buyer operating for the first time. There was fair selection of Nuwara Eliya teas with quality showing a decline. Prices, however, were ge-

nerally dearer; and Russian interest was noted in the Broken grades. Demand for high-grown teas was very general and competition was keen. Prices showed an irregular advance of 10 to 30 cents per pound with many lines showing a considerably greater advance.

There was very strong demand for medium-grown teas with Australian buyers particularly keen. Coloury Broken advanced by 20 cents per pound. In low-grown teas, small leaf Broken were 10 to 15 cents per pound dearer. Good liquoring Fannings were very strong although no Russian interest was observed. Prices were 40 to 60 cents higher. At the off-grade auction, prices were generally 5 to 10 cents per pound dearer.

A good tone again prevailed this week at Mincing Lane. Demand was strong and prices generally were dearer. Medium descriptions among the Ceylon's catalogued were distinctly dearer, recording gains of from 2d to 6d per pound.

Tea stocks in London, as on the 25th October, were 127.67 million pounds as compared to 128.48 million pounds in the previous week. The total amount to be landed on the same date was 18.30 million pounds. Deliveries during the week totalled 10.45 million pounds, while landings were 9.71 million pounds. Total afloat was 32.26 million pounds including 25.51 million pounds from Calcutta; nil from Chittagong; 982,410 pounds from Cochin; 5.22 million pounds from Colombo and 543,000 pounds from other Ports.

World of Business

Oil Pressure Lamps Industry

The performance of the oil pressure lamps industry under the shelter of protection has been remarkable in that not only it had brought the internal production near a level of self-sufficiency but had done it in a way which deserves emulation by other industries. For it had been scrupulously particular about the real test of efficiency and had so managed its affairs that the cost of production had been substantially brought down to a level which is far below that of the landed cost ex-duty of imported products. Naturally protection has lost all its significance for the industry and therefore the Tariff Board in its report recommended withdrawal of the protection which the industry had been enjoying since 1950.

At present there are ten units comprising the industry. The total capacity of the ten units on single shift basis as approved by the Development Wing is 153,600 lamps. This represents increase of about 8 per cent over the figure for 1954. Production had also been on the increase since 1954 and as a result the industry had been utilising more of the productive capacity. Whereas in 1954 the industry was able to utilise only 26 per cent of its capacity in 1955 it was utilising a little more than 50 per cent. Actual production had increased from 38,589 in 1954 to 86,918 in 1956.

There is a monopolistic element in the working of the industry in that three firms practically make up for about 75 per cent of the total capacity. In 1956 the production from these three units constituted about 85 per cent of the total production. While two of these firms are in Calcutta the third one is at Bombay.

With the increase in internal production the imports had shown a tendency to decline. While the imports stood at 117,975 in 1953-54 and was valued at Rs 47,24,502 it had gone down to 4030 valued at Rs 1,39,338 in 1955-56. Side by side with the decline in imports attempts had also been made to find out export markets for the indigenous products. The export trade is yet to be stabilised. Severe competition from Germany and Hongkong have to be reckoned with if our export business is to be built on firm foundations.

★

Sheet Glass Industry

After a detailed inquiry into the question of continuance of protection to the sheet glass industry, the Tariff Commission had recommended continuance of protection to the industry for a further period of three years at the rate of 70 per cent ad valorem.

If the industry should still be dependent on protection it is not a little, due to the apathy and indif-

ference shown by the British rulers in their times to the interests of the industry. For as early as 1931 the claims for protection as recommended by the Tariff Board was turned down by the Government of India. It was only after the transfer of

power to the national government that the industry's need for protection was sanctioned after a tariff inquiry in 1950.

In the brief period of seven years when the industry had been enjoying protection, it has made rapid strides by adding to its capacity and increasing internal production. While the installed capacity in 1954 was 86.6 million sq. ft. by 1956 it had increased to 106.60 sq. ft. Similarly internal production had also increased from 22.78 million sq. ft. in 1953 to 46.88 million sq. ft. in 1956. Progressive expansion in the utilisation of capacity had been

one of the noteworthy features of the industry in recent years. The number of units constituting the industry at present is 4. With the increase in domestic production the imports of sheet glass had tended to decline.

The major problems that confront the industry all converge on one point, that of transport. Freight charges are an important part of the total cost of production. This in itself argues for concessional rates to be allowed for the transport of the raw materials required by the industry. Coupled with this high

US Notes

THE vitality of the General Agreement on Tariffs and Trade (GATT) as an instrument of multilateral tariff reduction and expanded world commerce was underscored by a State Department announcement here this week.

It was that an important protocol amending several sections of the agreement had been accepted by 26 of the member states. Including the United States, the two-thirds majority needed to bring it into effect, the protocol is designed to improve GATT operations and to give them greater stability and flexibility. It sets up new checks on import restriction imposed for balance-of-payment reasons, provides standards for the use of certain export subsidies, establishes reporting procedures for staff-trading enterprises which could create obstacles to international commerce, allows developing countries more leeway in invoking non-discriminatory tariffs or import quotas to help establish new industries and provides for automatic renewal of tariff concessions, with authorization to renegotiate individual concessions. These amendments actually were recommended at the ninth GATT meeting two years ago and they happen to become effective just as the contracting parties meet in their twelfth session at Geneva, Switzerland. It was entirely fitting that the State Department announcement should have come at this moment. For it was 10 years ago this week that the General Agreement was first approved. Effective January 1, 1948, some 23 countries attended that first meeting in Geneva a decade ago, and only eight important trading nations, including the United States, undertook to put the first multilateral tariff reductions into effect. Since that time many more countries have become parties to the agreement with the recent addition of the newly independent states of Ghana and Malaya, the number of GATT participants now stands at 37 nations who conduct about 80 per cent of the world's trade. Also since then, several other multilateral tariff-cutting sessions have been held. The most important were at Annecy, France in 1949, at Torquay, England, in 1950-51 and at Geneva two years ago. Today 60,000 items accounting for more than half of the total value of international trade are covered by GATT concessions. As GATT has grown and achieved an increasingly important stature on the world economic scene the problems it has had to face have become clearer and more extensive. The revisions announced this week, for instance, stem from the contracting parties' practical experience with the General Agreement in its early years. In fact, they are much in line with suggestions for GATT improvements made more than three years

ago by the Randall Commission in the United States. It was the commission which in 1954 recommended to President Eisenhower many of the liberalizing policies that have become part of his Administration's foreign economic programme. One of the most urgent problems GATT now faces is the proposed European Common Market to be made up of six nations that already are parties to the General Agreement. At the twelfth session now under way in Geneva representatives of the 37 contracting nations are appraising the probable impact of the Common Market on international trade in general and on GATT in particular. Their main concern is to assure that in its practical application the Common Market will accord the principles of trade liberalization that are the common objective of all GATT participants—objectives which have been attained to a notable degree by this cooperative association of sovereign states.

Britain

Will the establishment of a six-nation common market in Europe result in more trade among the member countries, and between them and their overseas territories, at the cost of less trade with the rest of the world? This question was posed by the President of the British Board of Trade, Sir David Eccles, speaking at the GATT (General Agreement on Tariffs and Trade) ministerial conference at Geneva on October 28. The conference has been called by GATT to discuss the establishment of a European common market.

Sir David said: "We accept and sympathize with the desire of 'The Six' to assist, by investment and by any other means consistent with the principles of GATT, the development and industrialization of their overseas territories—we have similar objectives for our own colonies. But we cannot welcome any plan which seeks to achieve such ends at the expense of the trade of other underdeveloped countries through arrangements which do not appear to us to fall within the scope of GATT provisions."

"Expansions in trade deliberately sought by governments between any pair or group of countries should not be at the expense of other members of GATT, and all should hold firmly to the principle of getting rich together. . . . The members gathered here are right to ask whether this basic philosophy also animates the common market. We cannot pretend that this question does not exist. It can only be completely answered by events—that is, by the way in which the common market develops and is administered."

"Others, including our friends in the Commonwealth, will no doubt speak about the agricultural provisions, and if for the moment I do not elaborate on these, I can assure

our friends that we fully appreciate their anxiety over such a substantial trade."

In London, Britain's Paymaster-General, Mr. Reginald Maudling, said on October 28 that the British Government hoped the European free-trade area could be brought into being parallel with the Treaty of Rome—that is, in January 1959—and that it was possible that tariff reductions would begin then and be completed over a period of 12 years.

Mr. Maudling, who is the British Minister in charge of negotiations for the free-trade area, was addressing a sales conference.

The basic policy, the Minister

said, was to ensure the greatest possible flow of trade in the world. He was sure it was wrong to assume that a conflict existed for Britain between her ties with the Commonwealth and her ties in Europe. "They are complementary and are not in conflict," he added.

The basic result of the free-trade area would be more competition at home and more opportunity abroad. Although there would be more competition at home from Continental competitors, on the other hand there would be greater opportunities for Britain in a market of 250,000,000 people—a bigger market than even the United States:

IN any manner of reckoning, the launching of Sputnik II by the Soviet Union is an event of momentous significance. The bare facts relating to it have been such as to elicit from scientists all over the world such uncharacteristic reactions like "amazing and incredible". Professor Harris Massey of the Royal Society described it as a "most fantastic development". Its mere weight is astounding. The first Sputnik weighs a mere 183 lbs. whereas the second weighs, according to the latest reports, more than half a ton. (Earlier reports had given the weight as less than half a ton, but it has been claimed by Soviet scientists that equipments and instruments inside the satellite alone weigh more than half a ton). This fantastic mass has been shot into outer space and is at the moment circling the globe once in every 102 minutes. This rate of locomotion is apparently less than that of Sputnik I (which circled the earth once in every 95 minutes) but the actual speed of both the satellites is the same at about 18,000 miles an hour. The greater time per cycle taken by the second Sputnik is due to the fact that it is doing its rounds in a higher orbit—about 930 miles above the earth, whereas the first Sputnik was nearer home at a distance of less than 600 miles. And most interesting of all, Sputnik II carries the first space traveller, albeit of the canine species. The fortunate creature is a much pampered bitch called variously Damka (meaning, it would seem, the Little Lady), and Libonchik (Russian for "the little lemon") whose comfort is taken care of to the minutest possible detail. There is enough food left to last her little jaunt and she, reportedly, is cute enough to eke it out should accidents occur, as they doubtless do even in such a beautifully regulated house as Sputnik II. And, on the ground, stargazing scientists are fussing about with such things as her pulse rate, blood pressure, and so forth. Above all, she is to be "catapulted back home" when she is fed up with outer space by a device that still has in it the elements of the fantastic. There is, we are told, a "good chance" of her being recovered alive, in which case, she will live to tell a tale that no mortal or dog has heard before. Lucky dog!

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

Meanwhile, the capitals of the world are buzzing with exciting talk about possible further tricks the Russians have up their sleeves. It is being freely suggested that the Mecca of science fiction—the moon—is as near us as the next filling station. It is indicated that we can now visit the moon and be back home in a matter of ten days, unless, of course, the man in the moon is a pressing host. And, in fact, there seems to be a widespread impression, especially in the US, that the Soviet Union is holding behind the Ace and will produce it triumphantly on the 7th November, the fortieth anniversary of the Revolution. Dr. Edward Teller, a leading American scientist and popularly known as the father of the Hydrogen Bomb is reported to have said that he would not be surprised if the Russians hit the moon on November 7th. It is excitedly speculated that, on Thursday, the Red flag may be hoisted on the Moon to the greater glory of the Revolution and to the memory of Marx, Engel, Khrushchev, etc. (The last minute hitch, if any, it seems to me, may not be scientific, but difficulties about the "etc" in the dedication: Somebody may have to tar the name of Zhukhov off the dedicatory plaque in the rocket at short notice, since his disgrace is only a week old). So, by the time this issue is in your hand, you would, if one were to believe all the rumours floating about, have heard of the Soviet conquest of the moon. Meantime, even if that vicarious thrill is denied you, the known and proved achievements of the Soviet Union are such as to bowl you over completely. It is not only that it has won the race in the conquest of space, it is that the launching of the second satellite involves new technical triumphs. It is almost certain that the Russian scientists have got hold of a new propelling system, possibly of a nuclear sort. For, the weight of the rocket used for launching the second satellite should have been at least 500 tons, if a "conventional" fuel was being used. This is something on which there can be, in the words of Mr. Gatland, of the British Interplanetary Society, "no cheating". For, according to calculations, for each pound of "payload" the weight of the launching rocket should be 1000 lbs on the assumption that

some "conventional" fuel was being used. This would imply a fantastic weight for the rocket. If, indeed, this new fuel has been discovered, then, all that the Russians have to do to send something to the moon is to have a payload of much lesser mass than that of the Sputnik II. This is what makes all this speculation about the Soviet flag in the moon so plausible.

The second revolutionary aspect of the achievements connected with the claim is that the Russians know how to bring the dog back home. It is claimed that there is a special arrangement in the Sputnik: the "hermetically sealed kennel" can be detached from the Sputnik, and, when that happens, the Sputnik will "announce" the departure of the dog from the satellite. There is, it would seem, a "special braking arrangements" to prevent the dog's house from becoming a minor satellite and cruising on its own in the outer space. When the container comes down, after breaking through the outer space, the dog itself would be "pushed out" of it, a few thousand yards from the surface of the earth and brought down by a parachute. Since it will take about two to three hours for the dog to "arrive" on the earth, it would be possible to calculate in the interval where the dog would arrive and make arrangements to "receive" her.

There is some doubt about all this because the latest reports are rather confusing. The Daily Mirror of London quotes a rather intriguing telephonic conversation between its Science Editor and Professor Blagonravov, head of the Soviet Satellite Project. It seems, in reply to the Science Editor's questions, the Professor said that the dog is "doomed to die" and that the dog "will not return to earth". To add to the confusion, it is reported that the Professor, who was thus far speaking in Russian, suddenly broke into English and said: "There are three dogs. . . ." and broke off. Later efforts to get on to the Professor did not succeed, as on all the later occasions the Professor was "out".

It is not at all unlikely that the Professor was having his little joke at the expense of those who

might have seemed to him bothersome busybodies. It is the kind of leg pull we associate with an academic of a less grimly determined land—say, England. But, then, we may be prejudiced. There is no reason why a Russian scientist should not have indulged an odd sense of humour, especially when he was giving nothing away. After all, the spectacle of a whole world solemnly puzzling over the number of dogs on the Sputnik may certainly provide some private amusement to him. If the Professor was only "selling a pup" to the correspondent—or should it be three pups?—then, the original assertion of the possibility of the dog's eventual return to earth remains. It is this possibility that opens up new vistas of speculation, not all of which pleasant. For, if the dog can return to earth, after "breaking through" the critical barrier separating the earth from the outer space, then, how much easier for an intercontinental missile to go places as directed from Moscow and come back home to roost? For, in the case of the ICBM, there is no problem of break through. It is this aspect of the matter that is worrying the military specialists in the Western camp. In other words, if the dog (dead or alive) is brought back to Russian territory, then Soviet Scientists would have achieved far more than what is necessary to have with them what the US has always described as the "ultimate weapon". One could not only send the ballistic missile to whichever place on the globe one wished, but one could also control its movement and bring it back home, if one chooses to. It is this complete control over the deadly missile that makes the West worry anew.

US comment so far has been a mixture of reluctant admiration, bewilderment and even panic. Mr. John Loosbrock, editor of the Air Force Magazine, the official publication of the US Air Force, is reported to have said: "They have taken us again—both psychologically and technologically in that they did it first". There is already the usual hubbub about alleged mishandling of the US programme, and the usual sharpening of knives for slaughter of scapegoats. There have been demands for a special session of the Congress and investigation by special committees of the Congress

and so forth. These are, one hopes, momentary reactions which will yield place to a more sober assessment of the situation and a sensible plotting of policy. The military significance of the achievement consists not so much in the fact that the Russians possess a weapon that the US does not. For, it is only a question of time before the US stumbles on to the secrets of Russian achievement. After all, if the Russians were the first to get on to the secret of the satellite, the Americans were the first to get on to that of the Atom Bomb

and the Hydrogen Bomb. And just as the Russians caught up with the US on the latter, the Americans will wrest the secret of the new fuel and the new device to control movement soon enough. In the interval, the deterrent power of the Hydrogen bomb would perhaps be enough to make the Soviet Union avoid the possibility of a trial of strength with the West. And, once the US catches up with the Russians in the matter of satellite programmes and ICBMs, the chimerical equality would once again have been

achieved and all, according to the crazy logic of absolute equality in strength, will be well.

Thus, as far as relative preparedness for a possible war is concerned, the new developments do not make the slightest difference in the situation. And yet, there is a barely concealed desperation in many American reactions to them. The fact is, though for some reason most Americans seem to be reluctant to face it, avoidance of war is no longer, and has not been (since the Soviet Union came into

possession of its own Atom bomb) dependent on absolute equality in destructive power. Since that fateful date, the law of diminishing returns has been steadily corroding what little logic there was in the theory of superior might. Possession of the hydrogen bomb and the intercontinental missile does not make you a more powerful person than a person who has only the hydrogen bomb, and, in the event of an actual war, such an "edge" over your opponent does not "avail" you in any sense that is worth debating after the "unequal contest" had taken place. This is the grim logic of the impotence of the supreme power.

One fails to understand, therefore, all this pulling of long faces and the even more obviously panicky breast beating that is all too evident in Western capitals. Some of the comments verge dangerously on the insane. For instance, the Chairman of the British Inter-planetary Society is credited with this bit of priceless twaddle: "The Soviet achievement on the technical level puts America in the position of a third rate power, probably a decade behind in development and engineering rockets". On the purely technical aspect of the matter, especially of the leeway that the US has to make to achieve equality with the Russians, I am not competent to pronounce. But, in view of the stalemate in nuclear power I mentioned earlier, the linking up of the technological circumstances with "power politics" seems to me to be entirely pointless and unnecessary chilling of spine. (Who, by the way, is the second class power?)

Moreover, this way of looking at the Russian success is not wholly fair to the Russians also. After all, in happier and less suspicious times, the Soviet achievement would have been hailed as a significant triumph of man's unconquerable spirit. It is to be remembered that the satellite project is at least nominally part of collectively sponsored scientific endeavour connected with the International Geophysical Year. Whatever may be our view of the real Soviet motivation behind the endeavours to acquire this new dimension of power, and whatever may be its military byproducts, none of the avowed purposes of the two satellites can be considered as even remotely harmful to human kind. On the other hand, from a purely scientific point of view, and apart from the magnificence of the achievement of the launching of the satellites, the data that are sought to be collected are of the most valuable kind. The first satellite is expected to yield, among other things, valuable information about the surface of the earth. The second, with its animal passenger, is to give us even more valuable knowledge. On board the second Sputnik are, we are told, apparatuses for studying solar radiation in the short wave, ultra

Private Sector

MANY explanations are now offered for the lack of ready response on the part of foreign Governments and entrepreneurs to India's appeal for financial assistance to implement its Second Five Year Plan. Perhaps the most widely held belief is that with a socialistic pattern of society as its objective, India can hardly hope to get a different result. It is pointed out that with Nationalisation hanging like a Damocles Sword over its head private enterprise in our country has been reduced to a state of suspended animation. The foreign investor, therefore, can find little to attract him in an area which is being steadily rendered unsafe for private enterprise to flourish.

It is to be noted, however, that this picture of the state of private enterprise in India has been conjured up by those who profess to speak on behalf of the business community. These persons have made it a point to shout from the housetops that the Government's industrial policy has been formulated with a view to liquidate ultimately private enterprise as a whole. Some real and many imaginary handicaps have been listed as instances of the growing difficulties of the private sector.

The midyear budget last November followed by the full-fledged budget in May this year with its entirely new taxes and novel regulations for mopping up surplus funds with corporate enterprise gave added strength to the scare mongers among businessmen and the stock markets, the barometer of the nation's economic activity, reflected faithfully the prevailing mood of private enterprise. Equity prices tumbled down and not a few thought that the end of the private sector was not far off.

Private enterprise has not only survived but today one year after the midyear budget it is looking forward with confidence to shouldering greater and greater responsibilities. For, though the monetary and fiscal measures imposed in the past year or so have no doubt been drastic, Government have, at the same time, been careful to ensure that these measures constituted as little hindrance as possible to the smooth functioning and growth of private enterprise. This is not to say, however, that some of Authority's measures have not had some adverse effect on capital formation.

The foreign exchange crisis that has overtaken the nation has revealed that the Second Five Year Plan as envisaged cannot be fulfilled without a substantial quan-

tity of foreign aid. With the rapid depletion of our foreign exchange resources, emergency measures have become necessary and an ordinance has recently been promulgated to enable the reduction of the foreign exchange cover for our currency to a new low. Government spokesmen have not also been slow to realise the importance of foreign assistance. The Union Finance Minister has recently returned from a tour of USA, UK and West Germany. The main object of the visit has been to seek financial aid for the Second Plan from both the Governments and entrepreneurs in those countries. During his tour abroad and especially in the US, Mr T. T. Krishnamachari has made it clear that foreign entrepreneurs can rest assured that their investments in India will be given all reasonable facilities including despatch of profits.

This assurance has been interpreted in India as a forerunner of a more realistic attitude on the part of Authority toward the private sector. In this connection it is pointed out that in so far as it is the Union Finance Minister's endeavour to demonstrate to the American businessmen and Government that foreign private enterprise will flourish in India, it is incumbent on him to prove that domestic private enterprise is in good health.

If the Indian Industrialists Delegation which has also recently visited the US and other countries has been able to obtain firm promises of financial assistance from entrepreneurs and commercial banks in America, it is largely because of the Finance Minister's clarification of the place of private enterprise in our country.

One will be quite justified if one finds fault with private enterprise also for the present predicament in which the nation finds itself today. If Government has been too hasty about bringing about the socialistic pattern of society, private enterprise is equally guilty of crying itself hoarse that its end has come. The foreign entrepreneur who has read about India's socialistic pattern has also heard the frenzied shouts of some of our industrialists that all is lost for private business.

What some industrialists have refused to recognise is that the Government of India are wedded to a mixed economy and that their industrial policy is governed mainly by a keen desire to improve the standard of living of the people as much as possible, in the shortest practicable period of time. The

emergence of the public sector and its rapid expansion are the direct outcome of this urgent need. But in this vast country of ours with large resources still untapped, private enterprise has ample room to flourish and expand. This scope has not been denied to it as will be evident from the targets assigned to private enterprise under the Second Plan.

Both prominent Government spokesmen and of industry have long realised the futility of engaging in a controversy over the respective roles of private and public sectors. For, there is only one sector as far as the national economic development is concerned. What matters is the rapid industrialisation of the country. In this common purpose the State takes up tasks that, by virtue of their huge financial outlay and urgency, are beyond the capacity of private enterprise. A large field is, however, left open for the private sector to exploit.

It is pertinent to query whether it is not proper on the part of Authority to afford all reasonable facilities to private enterprise to function smoothly. There can be

no difference of opinion on the answer to this question. There are a number of compelling reasons why private enterprise should be meted out an equitable treatment. In the first place, private enterprise has a vital role in the national economy as without its efficient functioning national production cannot reach the desired level. As it is, it is private enterprise that is making a large contribution toward keeping the price situation in hand. It stands to reason, therefore, that Authority cannot afford to ignore the genuine grievances of private sector. The recent decision of Government that private parties will be granted mining leases for minerals listed in Schedule 'A' of the Industrial policy Resolution of 1956, is an instance of the readiness on the part of Government to ask for the cooperation of private enterprise whenever national interest demands it.

Even so it would appear that there are some real handicaps which now make it difficult for private enterprise to make its full contribution to the national economy.

Bombay Review

India's Export Trade

Continuing disequilibrium in the balance of trade, is one of the most disquieting features, which the economy, under the strains and stresses of planning, has disclosed, and which has to be contended with if the economy is to be put on an even keel in its march towards higher productivity and efficiency. Export promotion offers the only solution to this problem of reducing the gap between imports and exports.

Addressing the Central Committee of the Indian Council of Foreign Trade, in Bombay Mr. Murarji J. Vaidya pointed out that the trade figures for the first half of the year showed that while imports expanded, our exports also continued to indicate a tendency to grow. But in spite of this the trade gap was as wide as ever and this underlined the necessity to expand our exports to the maximum even while imports of unnecessary items were cut.

Mr. Vaidya suggested, as a way out of the difficulties, the arrangements of barter deals with other countries which he hoped would reduce the gap in our trade with other countries. Thus the import of the essential capital requirements could be offset by the export of goods from our country. In this connection he also pointed out that there would not be much difficulty in arranging such deals since the foreign countries also were not without foreign exchange difficulties of their own. He also welcomed the recent triangular agreement negotiated by the State Trading Corporation, involving simultaneous exchange of commodities between Indonesia, Czechoslovakia and India.

Mr. Vaidya also suggested other measures to boost up exports such as the setting up of a special wing in the Export Promotion Directorate for the study of foreign mar-

kets and broadbasing the scheme of linking import licences with the export promotion scheme. The standard formulae for linking import licences with export scheme should be laid down by the Government. These formulae according to Mr. Vaidya should be in terms of past imports and exports and exports of manufactured products.

Mr. Rasiklal Parikh, Bombay's Minister inaugurating the meeting said that the stalemate in foreign exchange only reflected the high tempo of economic activity in the country. He urged the people to realise the risks and the stakes involved in the present situation and to create a climate in which every one would play his role in the interest of democratic development of the country's economy. Explaining the severe cuts in imports Mr. Parikh said that the implications of the present curbs on imports should be assessed to ensure that the country's imperative needs were not sacrificed.

Role of Sadhus

Inaugurating the annual conference of the Bharat Sadhu Samaj Dr. Rajendra Prasad President of the Union made a fervent appeal to the members of the Samaj to lend their support to the task of reconstructing the nation. Stressing the point that it is not possible to achieve anything in the other world, without setting things in order, in this world, he said that even the scriptures did not enjoin indifference towards this world.

Emphasising the spiritual aspect of life Dr. Prasad said that man can know the path of true happiness only with the recognition of the spiritual values of life. The material prosperity and the scientific advances, it was pointed out, had

Gateway Notes

brought humanity to the cross-roads of destiny from where branch off the roads to true happiness and total destruction. The duty of the sadhus in such a context is to enlighten others and help the common people to lead a life of morality.

Tracing the spiritual tradition of India Dr. Prasad said that what the people in ancient times did was, to evolve a synthesis between the material and spiritual aspects of life and he further pointed out that there was no mutual incompatibility between these two ways of life. If this spirit is to be revived in the country now, it could only be through the cooperation of the sadhus.

Dr. Prasad also drew their attention to the opinion prevalent among a certain section in the community that sadhus perform no useful functions in society and that they should be suppressed. Without passing any remark of his own on this view, he said that any wing of society which has outlived its utility and which leads a para-

sitic existence is bound to disappear. But in view of the fact that this particular community still wield powerful influence with the common people, they are in a position to strengthen the forces of good and thus lead to an awakening among the people, in a constructive way.

Referring to the public criticism about the management of temple property under the custody of the sadhus Dr. Prasad said that being religious trusts they should be managed in the service of the people in advancing the cause of religion and that they could not be looked upon as private property by the sadhus.

Expressing satisfaction at the venture of the Sadhu Samaj, Dr. Prasad said that the organisation should be so well and effectively organised that in the field of raising the morale of the people it comes to occupy the same place in our body politic which engineers and technologists occupy in the sphere of building dams and setting up heavy industries.

GATEWAY MARKETS

Bullish Tendency in Oilseeds

THE markets for Oils and Oilseeds presented a buoyant appearance during the major part of last week although the closing tone was a shade quieter due to some speculative selling. The initial rise in prices, which was accompanied by a significant turn in the trading sentiment, was attributed to export concessions announced by the Government in respect of Kardi Oil, Niger Oil and Groundnut Oilcake. Hopes were also entertained that the Government might revise downward the present export duty on Castor Oil with a view to accelerating exports. In this hopeful atmosphere, the belief strengthened that the Government might decide to allow sizable exports of groundnut oil despite the current high prices in the country.

But, fears of imposition of margin made deep inroads into values at the close of the week. Moreover, there was a feeling that the removal of the export duty on Kardi Oil was likely to serve little useful purpose since the country did not have an exportable surplus at present. Again, it was felt that the abolition of the export duty on Niger Oil was likely to provide only a bullish prop to the market at a time when the arrivals of the new crop had just begun. The relief in respect of Groundnut Oilcake was also considered meaningless as the export policy itself was scheduled to expire at the end of October.

Marketwise, Castorseed May delivery opened quiet at Rs 156 and, after touching a high of Rs 158.50 and a low of Rs 154.75, finished better at Rs 156.75. The ready was quoted at Rs 33.75 and Castor Oil, commercial quality, at Rs 18.50.

In the Groundnut section, February delivery opened at Rs 162.75 and, after touching a high of Rs 164.12, receded gradually to Rs 161 on speculative selling, to finish better at Rs 162.62. In the ready section, Boid quality was quoted at Rs 33.44 and Groundnut Oil at Rs 19.37.

Linseed closed on a better note, reflecting hopes of export business. May delivery touched a new high of Rs 31.62 and a low of Rs 31.06, to finish the week at the former level. Ready was quoted at Rs 30.25 and Linseed Oil at Rs 15.81.

In the Cottonseed section, February delivery moved between Rs 106.25 and Rs 108.50, to finish at Rs 107.00.

Gold & Silver

Trading on the Bombay Bullion Exchange continued to remain at a low ebb. Silver fluctuated narrowly for a major part of the week; but declined towards the close on increased arrivals and lower Calcutta advices. Arrivals and off-take were estimated around 29 and 18

Bombay Review

Internal Cloth Offtake Restricted: Export Front Better

ACTIVITY in the Bombay Piece-goods market has once again become sluggish in view of the persistent rumours of a reduction in the excise duty on coarse and medium varieties. Uncertainties relating to the amalgamation of the Sales Tax and the excise duty have also resulted in a diminution in the off-take by the consuming centres. The prices of several qualities, have, therefore, witnessed a moderate recession due to lack of adequate demand, while the upcountry buyers are also reluctant to enter the market at the moment. Although mills are able to sell a fair quantity of goods to the wholesale trade, wholesalers have, in their turn, not been able to pass on any substantial part of their purchases to the consuming centres. Trade circles are, therefore, of the view that, once the uncertainty in regard to the reduction in the excise duty is removed, the consuming centres will re-enter the market.

The only redeeming feature is an improved demand from overseas destinations. Inquiries are reported to have been received from Hong Kong, while Singapore has booked some business. It is also expected that import licences for a substantial quantity of cloth may be issued by the Burmese authorities. It looks as if the buying season is now on in several of the overseas countries. What is needed at present is the stabilisation of the domestic sector to impart strength to the trade as a whole.

FUTURES MARKET

The Cotton futures market gave a disappointing performance following reports that there was no possibility of relief in the excise duty on cloth. After a discouraging start, values fluctuated narrowly but declined further on increased tempo of arrivals. ICC Mogial Jharila March, after touching a high of Rs 705, sagged gradually to Rs 697.50, to finish better at Rs 699.

SPOT MARKET

The Spot market, however, presented a steady appearance with mills covering bare requirements in new crop. Some demand was also noted for old crop Jaydhar, Laxmi and Surti styles. However, many operators were inclined to wait for some till the outcome of the rumours with regard to the excise duty on cloth was known.

Among exportable styles, superfine Bengal Deshi met with a good demand, reflecting some business with France and the USA, while Yellow

explores possibilities of selling cotton by trying to establish contacts with established parties in the country. Obviously, the Government of Uganda are worried over the sharp fall in the off-take of her cotton by India. During the last season, Uganda sold to India a mere 70,000 bales as compared with this country's normal absorption of anything between 150,000 to 180,000 bales annually.

NEW YORK COTTON MARKET:

Prices on the New York cotton futures market moved rather irregularly in thin dealings. Selling, however, subsided towards the close and prices rallied on improved trade demand and New Orleans buying, which induced covering by local shorts.

The Bureau of Census of the Department of Commerce, in their sixth ginning report of the season, have placed ginnings at 4,179,000 running bales, prior to the 18th of October. The figure is small indeed as compared with the previous season's and reflects the lateness of the crop. At the same period

last season, ginnings totalled 8,179,000 bales—nearly double the figure reported for this season.

LIVERPOOL COTTON MARKET:

Prices on the Liverpool cotton futures market presented a firmer tendency despite occasional irregular fluctuation. Traders were reluctant to open new commitments; but the general opinion was that prices were at present too low.

ALEXANDRIA COTTON MARKET

Prices on the Alexandria cotton futures market remained firm with fluctuations confined to a narrow range in spite of the increasing crop movement and consequent hedge pressure. In the spot market, conditions were, however, slack and the daily turnover diminished. Inquiries from abroad were limited to demand. Exports, during the season till the 23rd October, were only 19,529 bales (730 lbs) as against as much as 44,433 bales exported during the corresponding period last season.

How banking serves the SPICES INDUSTRY

There is tremendous demand throughout the world for pepper and cardamoms, and South India produces the bulk of these spices. One-third of the entire world demand for pepper is grown between Karwar and Cape Comorin; and in 1951-52, India's exports earned more than Rs. 27 crores.

Within the last ten years there has been a remarkable increase in cardamom growing, particularly in the South Indian states of Mysore and Coorg, and the districts of Madurai, Tinnevely, Malabar and Coimbatore.

The Indian spices industry has a happy future, and banking will naturally help to expand and improve it. The facilities and guidance of a good bank, such as the availability of ready funds when needed and the collection of dues from any part of the country, have become part of efficient organisation in every industry.

We at Palai are proud that many spice growers of South India employ the complete banking service we offer:

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investments—
Letters of Credit—Bill Collection—
Deposits—Loans & Overdrafts—
Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office. Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns & have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK

Head Office: PALAI, KERALA STATE,
Branches at: Madras, Cochin, Quilon,
Trivandrum, Alleppey, Mangalore, Pan-
galore, etc. Also at: Delhi & New Delhi.

A LEADING BANK IN SOUTH INDIA

Export Promotion

ON the subject of our present difficulties over foreign exchange, the unexpressed preference of public discussion is in this order: possibilities of foreign aid, possibilities of foreign loan, possibilities of extended credit for particular imports, possibilities of import restrictions and, finally, possibilities of increasing our foreign exchange earnings by exports. Such an ordering of the priorities of effort shows the clear tendency to take the line of least resistance. It also shows how much more difficult it is to have constructive ideas and action on things that make a real demand on our own initiative and endeavour. In all discussion of foreign aid and allied matters, discussion is made easy by the simple expedient of making large assumptions about imponderables, which are at the same time recognised as such. Consequently, no one feels that he has cheated in the argument, since admittedly he was speaking of things of which he could never have been sure. On the other hand, export earnings are entirely a matter left to our ingenuity, effort and resourcefulness and, therefore, we have to come out with ideas and acts that offer no escape by the backdoor.

Not that there has not been general discussion of export promotion. Indeed, every other month, the Export Advisory Council meets about the time the Import Advisory Council does, and the problem is discussed. In other official contexts, too, the subject crops up. The industry and trade themselves are understandably exercised about it and the Federation of Indian Chambers of Commerce brought out a useful brochure on the question last December. Among possible acts in this behalf is to be listed the creation of export promotion councils for some of the more important commodities. There has also been the recent important step of creation of the Export Risks Insurance Corporation. But, despite all this, and despite impressive performances of certain industries (mostly, traditional earners of foreign exchange), the impression remains of stagnation in the field of export efforts.

But this apathy must disappear if we are to get anywhere, since increase of export earnings is the only positive way in which we can escape from difficulties of balance of payments. Import restrictions are, at best, a negative effort and, at worst, something that comes directly in the way of our plans for rapid industrialisation by making crucial imports impossible. Already, many an important project is in

the process of being pruned away because of this difficulty. Moreover, circumstances beyond our control, like failure of crops or inflationary pressures, may make imports of even consumer goods inevitable, and, in all such events, the balance of payments position will get awry. It is, therefore, necessary that more reliance is placed on export earnings for the purpose of making our balance of payments position as comfortable as possible.

This, of course, is a counsel of perfection more easily given than practised. On the ways and means of practising, again, nothing much that is new can be said. What is really needed is a determined examination of all the suggestions that have been canvassed from time to time and putting them into practice at the earliest possible moment. In this connection, the Report of the Export Promotion Committee set up by Government in February last, and released to the public here last Sunday, offers an useful starting point.

As I said earlier, it was not likely that the Committee could have had anything startlingly new to say on the subject of export promotion. But the Report is useful from two points of view: firstly, it serves as an authoritative compendium of all the ideas on the subject; and secondly, the Report is timely in the sense that it comes at a juncture when final formulations on the whole subject of the foreign exchange budget of the Plan are being attempted. Now that Mr T. T. Krishnamachari is back from his mission to the various Western capitals, he must have some idea of the extent of foreign help India is likely to get. Therefore, with the further definition of the "core of the Plan", which alone will be undertaken for the rest of the Plan period, it should be possible to indicate precisely what is expected of the export trade. That done, it should be possible to fix firmly the targets for various export earners and then put through all the measures that will make possible the realisation of those targets.

The Export Promotion Committee puts the overall target of exports at Rs 700 to Rs 750 crores a year as against the original target of the Plan at Rs 615 crores a year by the end of the Second Plan. This increase in the target may seem, in the present mood of defeatism in the country, unrealistic, but the Committee feels "confident that this should not be difficult of attainment, if appropriate steps are taken". Besides increased production, the Committee lists three things as necessary steps for suc-

cess in export promotion. As prerequisites of maximising exports, the Committee lists "sustained increase in production, particularly of agricultural production, maintenance of prices at competitive levels, encouragement of export even at some sacrifice of domestic consumption, diversification of goods and markets, and research in new uses for goods traditionally exported and adaptation of internal production to those new lines".

Under these broad classifications, specific and detailed suggestions have been indicated in the Report. Of course, the emphasis on increased agricultural production is inevitable, as, in an underdeveloped country, agriculture sets the tone to the economy and the price factor is determined by food and agricultural prices. Domestic inflation caused by scarcity of food and primary products will put up the prices of goods for import as well as export; and, in a competitive export market, the chances of success are dim unless our prices are attractive. But, quite sensibly, the Committee rejects devaluation as a mode of making export prices cheaper because of its effect on import prices and because of the other well known consequences. Instead, it suggests greater efficiency of production and cut in cost and reduction in overheads and a productivity drive that would give greater value for each unit and factor of production that has gone into the manufacture of a commodity. Transport costs are also to be reduced by adjustment in freight structure (which is under inquiry by another committee) and removal of transport bottlenecks.

As regards export incentive, a whole series of suggestions have been made and it remains to be seen how many of these the Government will find acceptable. Export duties should, in the view of the Committee, not only be low, but have a fair degree of permanence (in the sense of stability) so that the exporter may plan a little ahead. The Committee has also suggested complete exemption from excise duty and sales tax on goods meant for export. Here, the Central Government may find themselves in conflict with the States, but a way should be found to accommodate this very important incentive to export. The suggestions include: relief from income tax for better export performance, grants of drawbacks of Custom duties at flat rates to exporters using imported raw materials, semi-processed goods or components, and liberal concessions for imports for a person making use of the imports for manufacture and re-export. Certain other con-

cessions would entitle the exporter to reap the benefit of his increased export earnings by way of permission to import machinery and equipment needed for his industry. The textile trade is an instance in point. Another important suggestion is that export quotas should not be allowed to lapse by obstacles in the way of pooling of quotas. Other suggestions are: the creation of single agency for export where such an agency will help, and encouragement of entrepot trade.

As regards credit facilities, the Committee welcomes the establishment of the Export Risks Insurance Corporation and suggests that commercial banks in the country should be enabled to obtain credit from the Reserve Bank and the State Bank to rediscount bills of exchange. The rediscount rate, it is suggested, should be well below the bank rate and the benefit of this low rate should be passed on to the exporters. The Committee also wants the modification of the rigours of the general law regarding receipts in trust so that banks may be able to advance funds under a system of trust receipts.

On the subject of bilateral pact, the Committee commends the Government for the idea of governmental agreements between countries for the export of goods by India and the payment therefor in Indian rupees. Barter arrangements are also commended, and in this connection the need for streamlining the machinery of trade commissions at various foreign capitals is emphasised. It also asks for simplification of procedural and administrative formalities.

Many of these suggestions have been and are being acted upon. For instance, part of the present roving assignment of Finance Ministry officials, consequent to TTK's mission, is to discuss details of bilateral trade in commodities we have to spare in return for commodities we need. The discussion with Japan for the export of iron ore by India is an instance in point.

Government have not yet indicated their decision on the recommendations of the Committee. The Report is being circularised to various chambers of commerce and others interested in the subject. Of course, there is perhaps very little that can be said again on the subject. Obviously, Government will take time and counsel before they will announce their decision. But since export is a matter of crucial importance for the success of the Plan, it is perhaps reasonable to suppose that Government will be very reluctant to reject any suggestion unless it entailed serious difficulties elsewhere.

North Indian Notes

Trade with West Germany

It is only a reflection of the current foreign exchange problem that our country's trade with some of the developed countries should reveal a lack of balance as between imports and exports. This has been particularly so with regard to the trade with West Germany. Trade with West Germany has been purely one-sided in that the enormous imports from that country has not been matched by an equal flow of exports to that country. In 1956 the value of imports from West Germany totalled Rs 81.8 crores against exports worth Rs 15 crores. In 1955 India exported goods worth Rs 15.8 crores, against an import valued at Rs 53.8 crores. This calls for sustained efforts and enterprise if something approaching an equilibrium is to be restored in our trade relations with these countries.

Ignorance on the part of the Germans with the products of India has been one of the factors which has prevented increasing exports of Indian goods to Germany. The trade delegation sponsored by the Government of India has also pointed out that the trade and public in Germany are generally unaware of the type of goods India can offer. With a view to remove this handicap the delegation has urged the need to start a permanent organisation in West Germany by different Indian organisations interested in the export of special commodities. The proposed organisation should in the words of the delegation provide a useful channel and offer representative sample in respect of principal items of exports, provided necessary commercial intelligence, promote business and help build a network of agencies for Indian products.

To acquaint the Germans with the products of India the delegation has further suggested that the Government of India should invite representatives of large departmental stores in West Germany to this country and has stressed the great potentialities of the departmental stores as an effective agency for propaganda for Indian products.

But the greatest barrier against the exports of Indian goods to West Germany is the protective wall raised against the goods going from India. Obviously in the interests of mutual benefits this would need revision. The delegation has impressed on the West Germany Government the wisdom of scaling down the rates. Prospects for increase in exports lie in such fields as manganese, iron ore, handicrafts, tea, coffee, tobacco, cashewnuts and black pepper. Provided the necessary drive and energy are forthcoming other items like handmade fabrics, both silk and cotton, as well as mill-made piece goods could also be use-

fully exported. But improvement in quality and finish are needed if such exports are to be put on stable foundations.

Appeal to Youth

Addressing the fourth Inter-University Youth Festival at New Delhi Mr Jawaharlal Nehru Prime Minister of India, appealed to the youth of the country to keep themselves abreast of events and realise that a new India had to be built free from the "iron curtain" of caste prejudices, narrow-mindedness and conservatism that had shrunk the minds of the people and developed in them the mentality of the "frog in the well". Mr Nehru pointed out that the people were at present standing on the threshold of a "third India" emerging from the "second India" of casteism, orthodoxy, narrow-mindedness, superstition and closed minds.

Contrasting this with the India of earlier times Mr Nehru pointed out that the spirit of adventure that had pervaded the minds of the people then, had led them to venture abroad in the face of difficulties and danger to spread the message of the country, the message of peace and fellowship. Monuments of the work done by these people are still extant in the country from which the present generation could draw inspiration.

NORTH INDIAN MARKETS

Foodgrains Steady

FOODGRAIN prices have ruled steady during the week under review. The disquietening food situation in some States has caused considerable concern in Government circles; but the Central Government appear confident to meet the situation. A generous and immediate shipment of Wheat is expected from Canada under the Colombo Plan. Although the details regarding the period in which the Canadian Wheat will be shipped are still being worked out, it is expected to arrive in time to replenish the reserves, which are being drained by supplies to deficit areas. It is learnt that the present allocation is of the order of one lakh tons.

The Central Government have applied the amended provisions of the Essential Commodities Act in respect of wheat to Uttar Pradesh and Bihar in order to arrest the upward tendency in prices. The Government can now require any

Tracing the subsequent developments Mr Nehru pointed out that the caste prejudices and closed outlook of the people contributed to raise a kind of iron curtain in the minds of the people so that they came to live in narrow mental cells. This created in the mind a kind of fear for new ideas which prevented the people from coming into contact with the people elsewhere. The loss of freedom with the conquest of the country by the British, he ascribed to this degeneration of the mental outlook.

Mr Nehru advised the youth to develop a new perspective so as to fulfil the task that Europe accomplished in the late 19th and early 20th centuries. He stated in this connection that the new world faced the gamble of either of committing suicide in the whirl of its own swift advances in technology or conquering space and the skies.

Earlier inaugurating the festival President Rajendra Prasad summed up the achievements of the generation of nation-builders to which he himself belonged and enumerated the tasks that lay ahead for the present day youth. Stressing the importance of character building the President pointed out that this could only be done by imbibing the spirit of sacrifice and developing faith in themselves. Explaining the role of the students in the national task of economic and social uplift the President pointed out that they could lend a helping hand in furthering these activities in the cities and villages.

is quoted 25 to 50 nP per maund lower on advices from the producing centres, Stocks are also better, while demand is small. There is a good demand for Gram from the Pulses mills due to which rates are ruling slightly better. Among Pulses, masoor is quoted higher by about Rs 1.50 per maund, thanks to shortage of stocks.

In the Bombay grains market, prices have shown a mixed trend. Prices of indigenous Rice have moved up by Rs 10 to Rs 12 per candy in the midst of a fair demand and the continued small arrivals. The continued strength at terminal markets in Madhya Pradesh and railway booking difficulties have also imparted a firm trend to the section. In the Coarse grains section, prices of Bajra have moved down about Rs 10 per candy with the new crop from Deccan finding sellers at Rs 140 to Rs 170 per candy. Traders also expect the receipt of the new crop from Uttar Pradesh after a few days. Prices of Jowar have also declined by about Rs 5 per candy. The limited consumer interest and the weakness in Bajra have also exercised an adverse influence on this commodity. Among Pulses, prices of Moong and Urad have hardened by Rs 3 to Rs 5 per candy.

Sugar

Continued selling pressure by the factories on the eve of the beginning of the new season has accounted for the easier conditions prevailing in Sugar markets. Old stocks with the factories, as on the 15th October, were reported at 5.44 lakh tons. The Government of India have planned to export at least 2 lakh tons of sugar annually. Crushing for new sugar has not yet begun in West Uttar Pradesh; but it is expected in some factories by this week-end.

In Hapur market, small grain quality is quoted around Rs 32.50 and the bold quality upto Rs 35, per maund. Following mill-delivery prices (per maund) are quoted:—Rampur special (B/29) Rs 34.62; Khatauli (B/28) Rs 33.81; Mansoorpur (B/29) Rs 33.75; Lakshar (B/29) Rs 32.50; Daurala (C/29) Rs 33.37; Mowana (B/29) Rs 34.00; Amroha (D/29) Rs 31.81; Bijnore (E/29) Rs 31.69; Meerut (D/28) Rs 32.62 and Simbhauli (E/29) Rs 32.87.

Gur

In the Hapur market, new Gur arrivals have mounted to an average of 4,000 to 5,000 maunds daily. Thanks to good demand from Delhi and other consuming centres, prices have been ruling very steady. Old stocks are estimated around 7,000 maunds, which are not in request. Prevailing prices (per maund) are: Old Kotha Rs 11.25 and New Rs 14 to Rs 16 per maund, according to quality.

Madras Review

Secondary Education

CONSIDERABLE progress has been made in Madras in the matter of reorganisation of Secondary Education. Apart from the urgent need for correlating the education imparted in this vital stage of development of the youth of the nation with the changed conditions in the country, the problem of reorganisation has been rendered

extremely difficult of solution by the language issue. While it has been unanimously accepted that the regional language should be the medium of instruction, its actual introduction at all stages of education has not been found to be a practicable proposition. In this regard the rival claims of Hindi and English have been responsible

for creating a good deal of confusion.

Taking Hindi first, one finds that there is strong opposition to the introduction of Hindi as the official language of the Union. That the State Government also are not in favour of the introduction of Hindi is clear from their evidence before the Official Languages Commission.

In a communication to the Prime Minister, thirty-five prominent citizens of Madras including Mr C. Rajagopalachari, have pointed out that there are no advantages in replacing English as an official language. The communication draws attention to the legitimate misgiving in the South that in the event of Hindi becoming the national language, the people in the Hindi speaking areas will get an unfair advantage in official and other fields. For another important reason also, the introduction of Hindi as the national language is wasteful effort. The communication avers that it is an impossible hope that in course of time Hindi will become the spoken language of all classes in all parts of India.

In support of the plea that English should remain as the official language it is pointed out that in any event English has to continue as the medium of learning in the highest levels, especially in the fields of science and technology and all other branches of modern knowledge so far as India is concerned. Secondly, it is the major language of international intercourse. Thirdly, it is the world's premier language for trade and business. Fourthly, it is already functioning usefully in our country in all walks of life.

In their note on Secondary Education, the Madras Government have admitted that the complete change over from English to the mother-tongue as the medium of instruction in colleges will take time and even when the medium of instruction is changed there will be continued need for an adequate knowledge of English for acquiring scientific technical and other professional knowledge. Consequently it has been deemed necessary to take suitable measures for improving the teaching of English in schools. The present status of English as a compulsory language in Secondary schools in the junior secondary course and the SSLC (Academic) course is to continue unchanged. It has been recommended that when the course is reorganised, the integrated course of Elementary education may contain suitable provision for enabling the pupils in Standard V to get acquainted with the English alphabet and a few of the most familiar English words.

The pattern of teaching of the languages as evolved by the Government is as follows: The Regional language will be taught from Standard I to Standard XI. English will be taught from Standard V to Standard XI. Hindi will be taught from Standard VIII to Standard XI. Government have decided that the total duration of Higher Secondary Education should be 11 years and that the school course should consist of two units, the first being an integrated course of seven years and the Second unit, a Higher Secondary course of four years. During the first seven years the mother tongue or the regional language will continue to be the medium of instruction and will also be a compulsory language. In addition English will be introduced in Standard V and taught compulsorily. The Higher Secondary course will consist of two parts (1) Academic course and (2) the Diversified course. The main objective of the Academic course is to impart academic knowledge of languages—Mathematics Science, and Social studies, so that pupils ordinarily attain the standard of the present pre-University course so as to be eligible for admission directly into the 3-year course. The objective of the Diversified courses is to impart along with general instruction scientific and technical knowledge which would enable the student at the end of the course to be eligible to enter straightaway the pre-professional courses or the second year of the Polytechnic. South Indian Notes

Motor Transport

The heavy strain that the various developmental schemes have imposed on the railways has underlined the necessity for bestowing concentrated attention on the development of motor transport in the country. Co-ordination of rail and motor transport, especially the transfer of short distance traffic, both passenger and goods, to motor transport is what is required if any kind of relief is to be provided to the railways.

Stressing the need to develop motor transport in the State, Mr K. Santanam former Union Transport Minister urged that a comprehensive review of the policy regarding motor transport was necessary and pointed out that the Motor Vehicles Act of 1939 could not be expected to serve the purpose, in view of the changes that had happened since the passing of the particular act. The chief considerations which had shaped the contents of the act, namely necessity to safeguard the revenues of the railways, recognition of the place of the private sector and also the role of the small operators, had lost their significance in the changed situation that obtains at present in the country. Far from being threatened by motor transport, the railways are hard put to it to bear even the existing volume of traffic, so that the motor transport can easily co-exist with rail transport.

The entrance of State in the field of transport has also changed the role of the small operators. Unless they are to merge into big concerns they are likely to be swamped out of existence by the big operators including the State. Mr Santanam pleaded for proper recognition of the place of the private sector in motor transport. He is in favour of some areas being assigned to big operators. It was also

pointed out that State transport should be run as autonomous concern on strictly business principles.

Paying a tribute to the high efficiency of the Madras State transport Mr Santanam said that the State could boast of many first class transport concerns and further pointed out that the high level of taxation obtaining in the State was responsible for this. Emphasising the need for expansion of motor transport in the country Mr Santanam stated that railway's participation in State transport corporations could do much to quicken the pace of development. He also argued for extension of this partnership to well organised private organisations and for handing over of minor railway stations to motor transport concerns.

Community Development Projects

The survey conducted by the Andhra Pradesh Government into the working of the Community Development Projects has disclosed a few defects which have militated against the quick progress of the movement in the State. In the first place the content and quality of training of the social village level workers, block development officers, project officers and the social education officers seem to admit of room for improvement. The shortage of trained technical personnel has also been a limiting factor in the growth of the movement in the State. The existing personnel seem to be lacking in the knowledge to form responsive and responsible local groups and mobilise whole villages. This

could only be remedied by intensifying training programmes for such officers. The Government have recognised this need and the organisation of village leaders' training camps and other steps are being taken to rectify the defects.

Concentration on amenity programmes as contrasted with development programmes has been another source of weakness with the movement in the State. To counteract this, steps are needed to educate the people and change their outlook and help them to produce more and lead a better life. Proper direction of the movement has also been conspicuously absent due to lack of correct leadership.

Though the village panchayats have been associated with the movement the powers that are vested with them do not seem to be sufficient to enable them to discharge their functions effectively. The question of bringing them more fully into local planning and giving them greater representation on the block planning and development councils is being examined.

In spite of these defects, the movement had needed in at least preparing the climate for the change and once this change becomes visible the change is bound to become fast. In this connection it has been pointed out by the Government that so long as the composition of the block planning and development committees remains as it is, it is difficult to enthuse the members to take real interest and identify themselves more actively with the programme. But the pace of the movement would clearly depend upon the availability of the trained personnel. This gap could only be filled by starting more agricultural and technical colleges.

SOUTH INDIAN MARKETS

Rubber Output and Offtake

ACCORDING to the figures released by the Rubber Board, production of Rubber has shown a substantial increase in September, while consumption is nearly maintained at the

previous month's level. Stocks with the estates and those with the manufacturers have risen substantially. Following are the comparative figures (in tons):—

	September	August
Production	2,712	2,341
Consumption	2,666	2,664
Stocks with the Estates	4,439	3,269
Stocks with the manufacturers	3,456	2,555
Opening stock as on 1-9-1957	...	...
Production during September	2,712	...
Imports during September	2,025	...
Total	10,561	...
Less:		
Consumption by manufacturers	2,666	...
Stocks with estates, dealers and manufactures	7,895	...
Stocks of Synthetic rubber as on 30-9-1957	967	...
Total	8,862	...

Production, during the remaining three months of the year, is not expected to catch up with the initial loss. Even then, the year-end output in India may be slightly higher than last year's. This will leave a normal deficit of rubber, since manufacturers are consuming at a rapidly increasing rate.

Pepper

Conditions in Pepper markets have remained dull in the continuous absence of foreign buying. In the Alleppey market, the rate hovers idly around Rs 550 per candy for superior Palai variety. In the Kozhikode market, Wynaad quality is quoted around Rs 630 and the Country variety at Rs 600 per candy. The main factor, contributing to the weakness of the market, is the proximity of the new season. Moreover, arrivals of light berries are reported to be on the increase, though, in some quarters, the delay in harvesting is expected due to the present rain.

The future of the market depends upon the Russian buying during the new season. It is assumed, in some quarters, that, during 1958, this country may not buy as much as what she bought during the last year, for two reasons. One is, that Russia is now showing varied interest in other Indian produce and manufactures, and the other is that most of the buyers in East European countries, who were drawing their requirements from Russia, are now purchasing direct from India. If Russian buying does not develop during the peak of the season, prices may go down.

Groundnuts

Conditions in the Madras Groundnut market firmed up last week following the news of the removal of duty on groundnut oilcake and the removal of the export duty on deoiled groundnut meal. Sellers became reserved and prices were pushed up even in small dealings. The rate was quoted upto Rs 165 per candy from Rs 157 quoted in the previous week. Arrivals of the new crop Khandesh variety averaged 50 to 60 tons a day, while stocks of the old crop were not available.

In the Groundnut Oil section, the rate for the ready position was marked up to Rs 342 from Rs 328 per candy. Only a few mills of the South Arcot district were, it is reported, prepared to sell small quantities for ready and early November delivery.

The conditions of the standing crop in Andhra Pradesh is reported to be satisfactory. Normal yields are expected in the districts of Sri-kakulam, Visakhapatnam, East Godavari, Krishna and Guntur. Drought conditions have, however, continued to exist in many part of

Kurnool district, resulting in reduced yields.

Hides and Skins

Arrivals of Cow hides in the Madras hides market were small, while clearances were a shade better than in the previous week. Local prices remained firm although enquiries from the UK were not encouraging. In Buff hides, arrivals were moderate with steady demand and prices were unchanged. Arrivals of Cow Calf and Buff Calf continued to be small and were of a poor section. In consequence, clearances were made at firm prices and a certain amount of business was reported to have been confirmed in Prime Cow Calf fifties.

In the Tanned Skins section, market quality Goat skins remained unchanged in price. In the export section, a certain amount of business was confirmed in both goat and sheep skins. Buyers continued to try and buy at lower prices with Madras sellers doing their utmost to resist such reductions.

Bangalore Silk

In the Bangalore Silk market, conditions, last month, reflected a further extension of the firm trend noticed in the previous two months. While prices in the Filature section, as a rule, tended to show gains of about 2 points, those in respect of Charka Silk were maintained at around the same levels recorded in September. It may be noted here that the price of Charka superfine was pushed down to as low as Rs 28.50 in September as against the lowest for October, viz., Rs 30.

The price of Cosmetic Basin quality improved by over 4 points as against the lowest quoted in September, to Rs 34. In contrast, the price of Spun silk yarn came down from Rs 21 to Rs 20.50.

The continued strength in respect of Reeling Cocoons underlined the paucity of cocoons on account of the unfavourable weather conditions. In the case of Seed Cocoons, while Mysore tended to rule around the previous month's levels, foreign shed two points, to be placed at Rs 13.00. There was no marked change in the price ranges of Silk Waste.

EDITORIAL NOTES

(Continued from page 882)

with far flung scheduled services fail to achieve satisfactory results. Mr Kabir's invitation to private companies to take up new lines involving risks, though apparently unfair to the latter, stands on the sure ground of comparative experience. If feeder and freight routes can economically be managed only by the non-scheduled companies, it is better that the IAC keeps off.

But the demarcation has to be conceived on a long term basis. No risk will be taken unless compensatory rewards are assured. In the matter of developing prospective new lines, an assurance of tenure is a pre-requisite minimum condition. Meanwhile, it should be possible for the IAC to discover the means with which any line could be run competitively. Meanwhile, we are hearing protests against de-nationalisation.

BRITAIN'S CRISIS APPROACHING CLIMAX

(Continued from page 885)

The moderate credit restrictions applied by the Government would not prevent industrial firms from conceding wage demands, unless they should come to the conclusion that they would not be in a position to add the higher wages to the prices of their goods. It would have been very helpful from this point of view if the Government had foreshadowed some drastic measures by which to prevent firms from being able to sell their goods at higher prices. From this point of view Mr Thorneycroft's statement on October 29 was disappointingly vague. "I believe that these measures will work," he said, "We do not intend to let them fail. If more is needed more will be done. We are by no means at the end of our resources either of monetary or fiscal policy and we intend to hold the value of the pound."

That is all very well for a declaration of principle. But in order to impress businessmen and trade union leaders the Chancellor ought to have specified the measures he had in mind. He ought to have declared that if the maintenance of the volume of bank loans at its present level should fail to prevent firms from granting credits, the Treasury would instruct the banks to reduce the maximum below its present level. He ought to have foreshadowed the possibility of increasing purchase tax and tightening instalment credit regulations in order to restrict consumer demand.

Any Such announcement would have been understood and appreciated. It might have produced an effect, which would obviate the necessity for applying those measures. As it is, the railway employees are rightly or wrongly convinced that wage increases in manufacturing industry will proceed unabated. They envisage a widening of differentials between their wages and those of industrial workers. For this reason alone they are likely to press their demand for higher wages.

Another respect in which the Government is open to criticism is its amazing lack of understanding for the psychology of the British people. Simultaneously with the announcement of the Government's

firm attitude towards railway wage claims the Treasury borrowed \$250 million from the Export Import Bank to supplement the gold reserve. It represents half of the credit arranged previously. Having regard to the fact that the trend of gold movements has turned and that the Treasury was gaining gold in October instead of losing more, it is difficult to see what the object of this arrangement was. The evidence of such an increase in the gold reserve, even though it represents borrowed gold, will make it more difficult for the Government to arouse public opinion to the realisation of the imperative need of stopping the wage inflation.

Even in the absence of this artificial and fictitious increase, the inflow of gold that is likely to take place during the next two months as a result of the covering of short positions in sterling, would make it more difficult to induce trade unions to exercise self-restraint. This cannot be helped. But why in the name of reason and commonsense, the Government should further weaken its chances of avoiding a head-on clash with the unions by generating unwarranted optimism through such artificial increase in the gold reserve, is beyond human comprehension.

The Government's attitude is characterised by bad psychology also another respect. Mr Thorneycroft categorically rejected the idea of adopting any physical controls whatsoever. Even if he is right in claiming that such controls would not stop inflation, the adoption of some of the more harmless among them might go a long way towards putting the unions in a more conciliated frame of mind. The Government could claim to have abandoned the policy of unmitigated "free for all" and its moral right to demand that the trade unions should not unduly exploit their strong bargaining position would have become much stronger. As it is the Government's ideological dogmatism provides an excuse for the unions to claim that since the principle of "free for all" is upheld in full, it should be applied also to organised labour. In the circumstances nothing short of a miracle could avert the head-on clash with the unions.

THE PENINSULA

(Continued from page 896)

specialised course will be taught in the last three years.

In order to facilitate the upgrading of the level of attainments at all stages of education, it has been decided to increase the number of working days from 180 to 200 per year. Draft syllabuses have been prepared and circulated widely in the State to elicit public opinion. These will be finalised after a careful consideration of the various suggestions received. The note points out that the fundamentals of the reorganisation, the duration and the general pattern of the

school course have been accepted by all. There is also general approval of the proposals for teaching English from Standard V as a compulsory language throughout the school course. In marked contrast to the emphasis on the need for improving the teaching of English in schools, Hindi is relegated to a comparatively minor position. The Legislature Committee have recommended that it would be sufficient if Hindi is taught during four years as part of the new course of Secondary Education.

WORLD OF BUSINESS

(Continued from page 887)

freight rates on the movement of raw materials, there is also the problem of shortage of wagon supply for the movement of both the raw materials and the finished products. Over and above this the practice of the Railway Administration in allowing transport of thick glass only at the railway risk rate which is higher than the owner's risk rate is also a matter which could be revised, to the benefit of the industry. The industry's requirements of high grade coal also warrants a more considerate policy on the part of the authorities. Another line of rigid policy which needs revision is in regard to the supply position of refractories. The Tariff Commission has in this connection recommended that the industry should be given priority in respect of its requirements for refractories. Finally more remains to be done in the way of diversification of production by the manufacturers.

Textile Industries Fair

The Textile Industries Fair which is to be held in Bombay from 7th December 1957 to 6th January 1958, promises to become distinctive in many ways. There have been many textile shows in the past both in Bombay and in the rest of the country, but in most of them the centre of attraction was display of cloth.

A choice collection of fabrics in all their picturesque variety will certainly form an important feature of the forthcoming fair, but other sections will also receive equal, if not greater, prominence. Indeed, the object of the exhibition is to stimulate a wider public interest in the growth of the nation's premier industry, comprising as it does cotton, silk, rayon, jute mill etc. to enable textile producers to assess the progress made by the country in the manufacture of textile machinery, and to demonstrate the progress made towards the goal of self-sufficiency in regard to the various requirements of the industry. The textile machinery industry is still in its infancy in India, although it received a great impetus during the last war. It is estimated that the value of the different items of textile machinery produced in the country has increased from Rs 4 crores during 1951-56.

There is however, still considerable scope for the expansion of this important producer goods industry. This is best borne out by the fact that imports of textile equipment in 1956 alone amounted to more than Rs 13 crores. Thanks to the Government of India's policy of safeguarding the interests of domestic producers, the textile engineering firms in the country are making strenuous efforts to expand their output. It is understood that full opportunity will be taken by both the Indian and foreign manufacturers to display their machinery at the Bombay exhibition. The producers of mill stores will also be given full scope to exhibit their products at the Fair. Khadi and other handicrafts will also be well represented.

Stock Exchanges

Initial Setback on Profit-Taking: Sizable Recovery at Close

Watch-Dog Writes:

STOCK markets have, on the whole, fared better during the week under review. Although profit-taking caused a reactionary trend early in the week, prices staged a remarkable recovery towards the close due to bear-covering and replacement buying at lower levels.

Tea shares, changing hands at improving levels, provided the main feature of trading on the Calcutta Stock Exchange. Forward scrips were subjected to settlement adjustments till Wednesday and influenced by Bombay advices during the latter half of the week.

Steady conditions were obtained on the Bombay Stock Exchange with Sugar shares ruling firm on continued buying.

On the Madras Stock Exchange, enquiries were spread among select issues.

Business on the London Stock Exchange was rather restricted by the uncertain labour outlook.

Calcutta

CALCUTTA, FRIDAY.

ALTHOUGH activity on the local Stock Exchange was somewhat restricted, a steady trend persisted, selected Tea shares moving up further providing the only notable feature of the past week's trading. In general, an attitude of caution among operators was evident from the fact that they were inclined to book profits at the recent high levels.

THE TITAGHUR PAPER MILLS CO. LIMITED.

NOTICE OF FINAL DIVIDENDS.

At a Meeting of the Board of Directors held on the 30th October, 1957, the following FINAL Dividends were recommended to be paid in respect of the Company's financial year ended 31st March, 1957, without any deduction for Income Tax payable by the Company:—

- On 1st Preference Shares—8% per annum.
- On 2nd Preference Shares—4½% per annum.
- On Preferred Ordinary Shares—10% per annum.
- On 'A' and 'B' Ordinary Shares—Dividend 0/88 nP. Per Share and Bonus 0/37 nP. Per Share.

By Order of the Board,
F. W. HEILGERS & Co.
(PRIVATE) LTD.
Managing Agents.
Chartered Bank Buildings,
Calcutta, 4th November, 1957.

resulting in a reactionary tendency in prices early in the week. Some quarters entertained fears that the Government's decision regarding the grant of licences for the import of capital goods on deferred payment basis would further aggravate the difficulties of the Indian industries in carrying out the essential schemes of expansion. Some others felt that the prospects of getting foreign assistance would not improve unless measures were taken to revive confidence in the domestic capital market. With the result, there was a general inclination to await further developments. But, the sizable recovery in prices, noticed towards the close of the week, was mainly due to bear-covering following encouraging Bombay advices. Rumours, that bankers were in favour of extending more credit to industries, were also a contributory factor. Above all, the market was in a healthy technical position.

Conditions in the Gilt-edged section ruled generally steady although some selling at higher levels was noticed in the long-dated issues. 3 per cent 1966 Conversion Loan, after touching a high of Rs 71.50 and a low of Rs 70.80, finished the week at Rs 70.92.

Except Punjab National which were keenly sought after upto Rs 66.25 from Rs 62.50 following the news of the bonus issue in the ratio of 3:7, Bank shares ruled generally quiet. Hindustan Commercial met with some business at Rs 8.25.

A halt was cried to the steady rise in the prices of Jute shares noticed during the past two weeks. The sudden change in sentiment was mainly due to reports that the prospects of obtaining raw jute supplies by mills at reasonable rates might not be bright and, as a consequence, the profit position of the mills would be affected. Some circles, however, felt that the present shortage in raw jute supply was only temporary and arrivals would increase in the coming weeks; and this caused a slight recovery towards the close of the week. Bangalore receded at one time to Rs 90.50 from Rs 95; Howrah to Rs 16.50 from Rs 16.62 and National to Rs 19.65 from Rs 19.90, to finish better at Rs 95; Rs 17.00 and Rs 19.95 respectively. Anglo-India, however, changed hands at Rs 147 to Rs 152; Birlas at Rs 15.19 to Rs 15.25 and Megna Rs 86.50 to Rs 87.50.

The improvement in the Coal section was well maintained on the hope that the expansion in the private sector would have to be increased. Bengal received sustained support upto Rs 229 from Rs 224; New Beerphoom upto Rs 13.75 from Rs 12.75; Central India upto Rs 6.37

from Rs 6.06 and Equitable upto Rs 24.00 from Rs 23.25. Western Bengal changed hands at Rs 5.94 to Rs 6.12 and Burrakur at Rs 22.00 to Rs 22.37.

An outstanding feature of the week's trading was the renewed support lent to Tea share at improving levels, although profit-taking erased some gains at the close. Encouraging advices from Mincing Lane were the main contributory factor. There was also a feeling that the present excessive supply for Common teas would easily be absorbed by internal consumption in view of the early closure of the plucking season. Baghmari changed hands at Rs 18.00 to Rs 19.12; Banarhat at Rs 292 to Rs 295; Brahmapootra at Rs 4.00 to Rs 4.12; Bharkawa at Rs 20.50 to Rs 22.37; Brooke Bond at Rs 16.81 to Rs 18.25; Bishnauth at Rs 19.31 to Rs 20.12; Grob "B" at Rs 12.94 to Rs 13.12; Hasimara at Rs 21.62 to Rs 22.56; Hattikhira at Rs 10.12 to Rs 11.68; Methoni at Rs 18.27 to Rs 19.25 and Rungamattae at Rs 59 to Rs 62.

Sugar shares ruled generally quiet on lower advices from the commodity market. The only two bright spots were Carew and United Provinces having some enquiry upto Rs 6.81 and Rs 12.87 from Rs 6.00 and Rs 12.62 respectively. Beisund were on offer at Rs 10.19 against Rs 10.25.

Textile scrips lacked any sustained support as the expected relief in the excise duty on cloth had not yet materialised. Kesoram moved narrowly between Rs 11.69 and Rs 12.00; Jayshree between Rs 5.19 and Rs 5.44 and New Victoria between Rs 1.47 and Rs 1.53.

Engineering shares moved in sympathy with Indian Irons which, in turn, were subjected to a good deal of speculative activity. Price movements till Wednesday were mainly influenced by settlement considerations, while the latter half of the week witnessed a sharp recovery in prices following encouraging Bombay advices. Against the week-end closing of Rs 18.84, Indian Irons opened higher at Rs 18.93; but receded at one time to Rs 18.44 at which level bear-covering caused the scrip to improve again towards the close to Rs 19.21, to close finally at Rs 19.02 on profit-taking. The settlement rate was fixed at Rs 18.48 as against last settlement of Rs 17.58 and the "satta" was fixed at 6 nP.

In sympathy, TEXMACO was pushed down to Rs 17.00 from Rs 17.40; Richardson to Rs 8.25 from Rs 9.19 and Marshalls to Rs 4.94 from Rs 5.00, to improve at the close to Rs 17.10; Rs 8.87 and Rs 5.00 respectively. Jessop were, however, on offer at as low as 24.06 against Rs 24.50, while Indian Standard Wagon met with good support upto Rs 166 from Rs 162.50. Britannia changed hands at Rs 12.75 to Rs 13.12.

Miscellaneous scrips showed small gains on balance due to lack of follow-up support and profit-taking at higher levels. Orient Paper touched a new high of Rs 25.30 from Rs 24.30, to recede towards the close to Rs 24.85. Tifagur changed hands at Rs 32.12 to Rs 32.25; India Pulp at Rs 19.69 to

Rs 20.00 and Shree Gopal at Rs 14.87 to Rs 14.69. Indian Copper, after touching a low of Rs 2.95 from Rs 3.04, recovered towards the close to Rs 3.02. Indian Cable were enquired upto Rs 25.18 from Rs 24.75, thanks to some investment demand. Dunlop had buyers at Rs 20.00 to Rs 20.19; India Steamship at Rs 11.50 to Rs 12.00; National Carbon at Rs 23.25 to Rs 23.62; Aluminium Corporation at Rs 9.53 to Rs 10.12; Hindustan Lever at Rs 20.12 to Rs 20.37; Hindustan Motors at Rs 6.12 to Rs 6.30 and Alkali Chemicals at Rs 12.69 to Rs 12.94. Rohtas turned quiet at Rs 17.94 after touching a high of Rs 18.50, while BIC and Osler were rather quiet at Rs 4.70 and Rs 3.37 respectively.

In Brief

The shares of the New India Industries have been enlisted in the cash section of the Bombay Stock Exchange. Dealings will be done in lots of 5 shares.

Glen Morgan Estates have convened a general meeting on the 30th November to consider the winding up of the company voluntarily and the appointment of the liquidators.

Following Tea companies have recommended dividends for 1956:—Dauracherra 15 per cent (20 per cent for 1955); Gungaram 10 per cent (7½ per cent); Borpukhri 15 per cent (10 per cent); Chamong 7½ per cent (nil); Gohpur 35 per cent (30 per cent); Soom 40 per cent (30 per cent); Tellapara 15 per cent (25 per cent); Dufflaghur 40 per cent (40 per cent) and Djamakusi 30 per cent (20 per cent).

Kumardhubhi Fireclay has reduced the dividend from Rs 1.50 to Re 1.00 per share for 1956.

Belapur Sugar has raised the dividend from Rs 16 to Rs 18 per share for 1956-57.

S. E. RLY TENDERS

Sealed tenders are invited for supply of the following item:—

Tender No. CS/PC/571625. R/R/21 24 for supply of 540 Nos. Clip inside Lock Bar comp: for 90 lbs. rails as per I.R.S. Drg. No. SA. 3247 and 270 Nos. Clip outside Lock Bar comp: for 90 lbs. rails as per I.R.S. Drg. No. SA. 3246.

Tender forms are obtainable from the Controller of Stores, Garden Reach, South Eastern Railway, Calcutta-23 (PC Section) on remittance of Rs 2/- per copy per tender (not refundable) by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta-23 by local firms. Earnest money against the tender is Rs 500/-. Closing date of the tender is 2-12-57 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid income tax clearance certificate along with the earnest money receipt with the tender.

S82 CONTROLLER OF STORES

GATEWAY GOSSIP

(Continued from page 891)

mony. Some of these seem to require urgent attention from Government. Speaking at the first quarterly meeting of the Association of Indian Industries in Bombay, Mr S. M. Dahnukar, President of the Association, has drawn attention to the fact that since the success of the Second Plan depends also on the completion of the targets assigned to the private sector, it is incumbent on Government to remove the factors that are adversely affecting private business. Authority should note that as compared with the monthly rate of increase of Rs 5.8 crores in the paid up capital of all companies during the 8 months of 1956-57, the monthly increase from December 1956 to March 1957 was of the order of only Rs 1.6 crores. The levy of capital Gains Tax, increase in Income and Corporation Tax on companies, levy of Wealth Tax and the scheme of compulsory Deposits have cumulatively contributed toward destroying confidence in the future of Private enterprise. Mr Dahnukar has entered a fervent appeal to the Finance Minister to reexamine the new taxes including the scheme of compulsory deposit in the context of the urgent need for providing direct incentives for saving and for investment in industries.

Referring to the import policy, Mr Dahnukar has expressed general agreement with the basis of approach of the Government in laying down their policy. The drastic restriction on imports is a blessing in disguise for the indigenous industries. There is no need for the apprehension that industries depending on imported raw materials will suffer. For it has been pointed out by Government that the restrictions will not be allowed to interfere unduly with the import of essential raw materials and components. A

great opportunity has come for the indigenous industries to establish themselves in fields they have hitherto not made their position secure. There is also immense scope for embarking upon new lines of manufacture.

Speaking about the overall economy of the country, Mr Dahnukar has emphasised that the production of food and cloth should receive the first priority even in the Second Plan. As far as food production is concerned it must be realised that the target of 80 million tons can be obtained only by intensive cultivation and by the use of artificial manures. The target for fertilisers is too low and should be stepped up considerably. Attention should, therefore, be bestowed on increasing the number of fertiliser plants which should be located in widely dispersed centres.

Urgent attention has also to be bestowed on cloth production. Mr Dahnukar thinks that since nearly after 15 months of its working, the Amber Charka programme has not been able to show any definite indication that it can fulfil its target, it will be only prudence to relax the restriction on the target for production of the organised sector. Moreover as there is practically no competition between the handloom and mill industry, it will be only proper to allow the organised industry to increase its production.

BALANCE-SHEET REVIEWS

(Continued from page 878)

paid on December 15, 1956, increasing the capital to nearly Rs 60 lakhs.

It is indicated in the speech of the Chairman of the Company, Mr D. C. Kothari, circulated along with the balance-sheet, that the expansion plan now under implementation will cost Rs 73 lakhs against Rs 60 lakhs originally expected, on account of the rise in prices of ma-

chinery and various constructional materials. It is, therefore, thought advisable to issue additional capital for Rs 25.2 lakhs in Ordinary shares in the proportion of 3 new shares at par for every 5 shares held. This amount is required for installing 24,000 spindles. Additional land in Coimbatore has been acquired and the construction of the buildings is going ahead. It is pointed out that the necessary orders for the machinery have been placed and foreign exchange requirements also found, and deliveries are expected shortly. It is even anticipated that at least 12,000 spindles will be in production by the middle of next year.

As production is running normally at the present moment, it is said that the profits from the present 41,000 spindles and 300 automatic looms will be sufficient to maintain the current rates of dividend on the existing as well as on the proposed increased capital of Rs 25.2 lakhs

CLIVE STREET GOSSIP

violet and Roentgen region of the spectrum, and for studying the cosmic rays. There are also instruments for studying temperatures and pressures in the outer space. In the hermetically sealed kennel, there is a dog whose "experience" of the cosmic space should tell more about the possibility of man's conquest of the universe. None of these objects will be considered as anything but laudable, except perhaps by those who abhor the activities of "meddling intellect". These last may, to judge by reported reactions, have a case. For, it would seem that many inside and outside the Soviet Union are looking at the whole thing as merely a bid to make the moon a Soviet satellite. Such a view of what is one of man's most magnificent achievements shows that man is sadly lacking in a measure of his own achievement.

EAVESDROPPER.

IMPROVING PRODUCTIVITY

(Continued from page 880)

conscience, suggested that the State should seek to augment its revenues by suitable pricing policies.

To fix the share between workers and employers is another laborious process. At the outset, a mutually acceptable and generally intelligible principle will have to be adopted. This principle should also be applied in all industries. It is heartening to see that the Union Minister for Industry realises the need for a gradual evolution of criteria for determining how the sharing of the benefits between the employers, labour and consumers can be ensured. The complexities of this task cannot be escaped.

An expert team had been to Japan on a study of productivity. How the Japanese people survive in tolerable comfort with a vastly shrunk area is indeed somewhat surprising. Low wages and colossal US financial support coupled with a rare national doggedness must probably explain Japan's economic resurrection after the war. The striking similarity of some basic conditions between India and Japan might make the national experience of either valuable to the other.

In India, the reeducation of the employers and labour into a more congenial attitude is

bars respectively. Kartik delivery moved between Rs 182.00 and Rs 182.31 and Mangsir delivery between Rs 183.00 and Rs 183.21. Ready changed hands at Rs 182.12 to Rs 182.50.

Prices in the Gold section failed to hold early improvement due to profit-taking. The turnover was small. Arrivals and offtake were estimated at 2,000 and 3,000 tolas respectively. Kartik delivery changed at Rs 107.87 to Rs 108.06 and Mangsir delivery at Rs 108.22 to Rs 108.37. Ready was quoted at Rs 108.12 to Rs 108.31, while Sovereign ruled quiet around Rs 70.25.

*

Non-Ferrous Metals

Conditions on the Bombay Non-Ferrous Metal market ruled generally steady, thanks to better London advices. Operators tried to resist any further decline in prices following the clarification of the issues involved in the import policy for the current period. Copper was quoted at Rs 153 per cwt; and the demand was fairly good from the consuming centres. Zinc was quoted at Rs 58 per cwt. Trading in the Lead section was featureless with the rate hovering idly around Rs 73 per cwt. The Tin section continued to rule weak. Although there was moderate offtake, the rate was quoted down to Rs 127 per quarter.

On the London Metal Exchange, the price of Copper firmed up to £188 per ton from £185 quoted a week ago, mainly attributed to a talk of a possible rise in US Customs Smelter and higher Belgian prices and favourable conditions on Wall Street. In sympathy, zinc improved to £68 3/8 per ton from £68, thanks to reports of the revival of demand from New York. Lead was quoted at £85 per ton against £84 as the demand for the metal in the UK was reported to be running at a high level. Tin, however, ruled quiet at £730 against £738 per ton on lower Singapore advices.

that in the absence of some form of external compulsion, nothing stimulates productivity as much as the pride of ownership and the visible rewards of individual effort. It is also on the basis of this truth that a great deal of scepticism has arisen over the eventual advantages of State ownership of industry and of unduly large industrial organisations in any form.

Mr Manubhai Shah shows a clear awareness of this fact when in his address to the Seminar he says that an important plank of the co-operation and understanding between the employers and workers indispensable for any effort to increase productivity, will be the acceptance of the principle by all concerned that the benefits of the increase will be shared by the workers, consumers and employers alike. What is so easily said is not likely to be put into practice with equal effortlessness. The consumers' interest, for instance, lies in as low a price as possible for the goods concerned. In an economy, where owing to various reasons, competition is kept under restraint, the interests of the consumers so defined often comes up against the interests of the producer, whether it be the State or a private monopolist. The Taxation Commission have, in all

considered a starting point for the new programme. Apart from the cost accounting departments of industrial concerns, the All India Management Association, the Bombay Productivity Centre, the Indian Statistical Institute and a few other institutions have been making a study of productivity problems a part and parcel of their regular work. However, for authoritative and comprehensive data on national productivity trends we have to await the establishment of the Central Productivity Council and its all-India organisation.

While from the workers' side, the claim is made that the output per man hour in several industries has been going up in recent years, complaints are also heard from the managements of a reverse trend in respect of certain industries. The consequences on employment of a national programme to increase output around, Mr Manubhai Shah predicts, will not be adverse. As yet no decisive experience seems to have been assembled in support of this view. At least in the Central Government what has come to be known as Parkinson's Law is found to be in operation on a fairly extensive scale. Private industry too is not immune.

The Story of Oil—2

A miracle of nature

Crude oil, or petroleum as it is often called, occurs in many parts of the world—chiefly in regions where sedimentary rocks once formed the bottoms of ancient seas.

No one is sure how oil originated. The most widely accepted theory is that it resulted from the decay and alteration of the remains of prehistoric animals and plants. This organic matter was washed from the land into the vast jungle of marine life under the seas. The deposits, mixed with mud and sand, formed layer upon layer on the bottom. As these became buried, Nature's mysterious chemistry got to work. It slowly transformed the organic matter into the compounds of hydrogen and carbon which we now know as oil, and at the same time the fine sediments which covered it

were compressed into rock strata. The newly-formed oil oozed into the nearest layers of porous rocks, which held it as if in a sponge, and here it remained.

Throughout the millions of years that oil was being formed, many changes were taking place in the earth's crust. It rose and fell, was crushed and expanded. Lands were drowned, sea-beds became dry land. In some places cracks developed and the land slipped, forming 'faults'.

During these violent changes, some of the imprisoned oil escaped and was lost. In other places it was so near the surface that it seeped through and was discovered and used by man from the earliest times. But the bulk has remained trapped in its porous rocks beneath the surface of the earth.

Assam Oil A full-scale petroleum industry

This is one of a series of informative advertisements about the petroleum industry.

For the Investor

Market Holding Back?

Investment Gossip:

ALTHOUGH Stock Exchanges have been dismayed at the Government contention that there is nothing abnormal in the present level of cotton textile stocks, the depression that thereupon was induced has been mercifully shortlived.

For, Parliament had much more cheerful news to offer: the formal statement by the Finance Minister, in an assessment of his recent tour, has been construed as indicating that prospects are for substantial aid forthcoming for India.

This, in turn, is taken to have a bullish connotation for the private sector. It is, therefore, scarcely surprising that prices once again staged an upward march.

What, however, is surprising is that there should be discernible something akin to feebleness in the uptrend. Stock Exchange circles, or at least those rare sections which are not characterised by the traditional bear propensities of Calcutta operators, do not hide their disappointment at the failure of share quotations to "respond" to what they consider to be very favourable news.

What, then, is holding the market back? Some say that the tightness of money market conditions is to blame. It is true, money is no longer as easy to secure for speculative purposes. On the other hand, as I have been told, the upward movement in prices should have derived its strength, not from speculative activities, but from the resurgent re-entry of the investor into the markets.

Again, it would be unrealistic not to credit even the so called speculative elements with an adequacy of cash resources. So, we must look elsewhere for the (relative) lack of enthusiasm. I should think that the simple fact of the matter is that no crystallised picture of Indian prospects is now available. If it is foreign aid, we have to await developments. If it is tax concessions, we have to wait for the Budget. And, in the final analysis, if we consider the role of the private sector, and the question whether it is to be enlarged in terms of the Second Plan, we have again some wait ahead of us. In short, there is reason to believe that it is the better part of shrewd-

ness to mark time, at least for the present.

How long will this period of waiting last? I suppose you could say, until this process of crystallisation takes place. I fancy this should not be too long, and I expect that good news about foreign assistance will materialise sooner than most of us expect. For this reason, as also for the fact that the tiniest scrap of favourable news will be taken advantage of to push up prices, it seems to me that now is the time For the Investor to buy selected blue-chips.

Investment Special:

Philips

And, as blue-chips go, there are two good ones on offer. One is the issue by Philips of equity shares for Rs 50 lakhs. The Rs 10 shares, which are being issued at a premium of Rs 2.50 a share, are (I understand) already hawked around at a premium of Rs 2 over the issue price. This is a measure of the esteem with which the name Philips is regarded, and at the same time an index of the keenness of the investor to secure an allotment for his subscription.

When I wrote the short note last week, I had intended that I should follow it up with an analysis of the prospectus as such. But I find that the work has already been done for me, and the announcement published elsewhere in this issue gives all the relevant and pertinent information. Profits over the last few years, programme for production, rates of dividend in the past—all this is vouchsafed.

So, rather than cover repetitive ground, I will content myself with the observation that, in Philips, investors know they are on to a good thing. In knowledgeable circles, I might add, the talk is not whether the issue will be subscribed; the speculation is to the extent to which it will be oversubscribed.

₹ ₹

National Rubber

Then, there is the other choice fare For the Investor. National Rubber Manufacturers are also on the market; and, here, too, it is a moot point whether the company is wooing investors, or the inves-

tors the company. For, of the present issue of 6 per cent Taxfree Cumulative preference shares and ordinary shares, half has already been taken by directors and other entities. There is bound to be a scramble for the balance on offer to the public.

I would refer the investor to the prospectus announcement, which is published elsewhere in this issue. It gives detailed information on the purposes of the issue and on the plans that the company has on hand. If the prospect for rubber manufactures in this country is any criterion—and it surely is—then there can be no doubt that the new issue by National Rubber is one that the investor would like to add to his portfolio.

The magnitude of subscriptions will, I think, be found interesting—and revealing. If, as I expect, there is substantial oversubscription, it will prove my contention that there is no lack of investment funds, from investors, for any worth while enterprise.

₹ ₹

India Steamship to Issue Bonus Shares

Balance-Sheet Reviews:

THAT the Shipping companies, operating to the UK and the Continent through the Suez Canal, had to face some serious problems consequent on the closure of the Canal for some months is a known fact. Ships had to be diverted round the West African Coast, both on the westward and eastward journeys. The fleet of the India Steamship Company had a special problem which concerned only the Indian Lines and did not affect other shipping companies. In this respect, the working results of the company, for the year ended 31st March 1957, are gratifying and, despite all handicaps, the freight results are the highest on record.

The income by freight is as much as Rs 6.00 crores as against Rs 5.26 crores, while the net profit, before providing for Depreciation and Taxation, is substantially higher at Rs 1.46 crores as against only Rs 80.23 lakhs in the previous year. Apart from setting aside a sum of Rs 23.75 lakhs for Dividend Equalisation Reserve and Rs 7.27 lakhs for Fleet Replacement Reserve, the directors have raised the Depreciation amount to Rs 48.36 lakhs from Rs 41.50 lakhs; Taxation Reserve to Rs 15.00 lakhs from Rs 1.42 lakhs and General Reserve to Rs 35.00 lakhs from Rs 15.00 lakhs. The dividend on the Ordinary shares

is, however, maintained at Re 1 per share.

With the approval of the shareholders, the company has proposed to utilise the Premium Reserve for the issue of Bonus shares after obtaining the sanction of the Controller of Capital Issues. This will require an increase in the authorised capital of the company and it is proposed to increase it to Rs 5.00 crores.

The company's fleet has been maintained in Lloyd's highest class. The fleet was insured at £8,510,000 for both Marine and War Risks at £2,127,500 for Freight Disbursements.

The balance-sheet, as at 31st March 1957, shows a paid-up capital of Rs 2.75 crores against which Reserves and surplus are shown at Rs 1.75 crores. Current Liabilities are at Rs 1.05 crores. Gross block is shown at Rs 12.79 crores, which is depreciated by Rs 2.63 crores to show a net block value of Rs 10.16 crores.

₹ ₹

Tea Results

Eleven Tea companies—seven in Williamson Magor, three in Duncan Brothers and one in Octavius Steel groups—have presented their reports and accounts for 1956. The working results of most of the companies are encouraging, thanks to the higher average prices realised. The following tables show the full

HIGHLIGHTS

Mr. T. T. Krishnamachari has, in his first official statement since his return, painted a bright picture of foreign aid prospects.

TTK has, however, circumscribed this statement with an assertion that it will take some time before we know the magnitude of the assistance that we will be able to obtain.

We do not, as Rajaji has done, consider that it is immoral to accept foreign aid.

But we do consider that it is both immoral and spineless, if our reliance for the success of the Second Plan is solely on foreign aid.

This journal suggests that it is time to display the attributes of constructive and courageous thinking.

Particularly is this so, in respect of the Export Plan, in which it should be possible substantially to increase India's earnings of foreign exchange.

To this end, this journal has taken up the appraisal of export prospects of Indian commodities.

The first such commodity that is taken up is Iron Ore.

Read the Leading Article to find out why Iron Ore Exports could be the salvation of our Plan.
