At a meeting of the Trustees of the Hospital Medical Staffs Defence Trust, held on April 4, with Mr. T. HOLMES SELLORS in the chair, consideration was given to a suggestion from the Trustees of the British Medical Guild that a special appeal for additional contributions might be made with a view to helping the Guild in the event of the withdrawal of general practitioners from the N.H.S., should this become necessary, and to assist those general practitioners who suffer financial hardship.

The CHAIRMAN said that a figure of 5% had been suggested.

Mr. J. R. NICHOLSON-LAILEY moved that the Trustees should recommend that all consultants and S.H.M.O.s employed in the National Health Service should agree to contribute to the British Medical Guild Fund a sum equivalent to the levy on general practitioners in the National Health Service.

The resolution was duly seconded and carried. Dr. WAND, Chairman of the Council, took the opportunity of thanking the Committee on behalf of the G.M.S. Committee.

TUNBRIDGE WELLS GUILD MEETING

DR. WAND ON DISPUTE

The Chairman of Council, Dr. S. Wand, addressed a meeting in Tunbridge Wells on April 7 of 150 doctors from all branches of the Health Service. The recommendations of the Council to the Special Representative Meeting (*Supplement*, April 6, p. 149) on withdrawal from the Service, on non-cooperation under present circumstances with the Royal Commission, and on a B.M.A. inquiry into the Health Service were approved by an overwhelming majority on a vote taken by secret ballot.

After referring to statements made in the debate in the House of Lords on April 4 on the Royal Commission (reported in "Medical Notes in Parliament" at p. 894 of this issue), Dr. Wand said: "I say—and I weigh my words very carefully—we have asked that the Government discuss what is in dispute between us. Whatever the outcome, the continuation of this dispute will harm for many years the relationship between the Government and the profession. Is this a good thing for the National Health Service? I say once again that we are only too willing as reasonable people to make every endeavour to settle our differences round a table. If the Government fails to accept this offer we must not be blamed further for any action we may take."

ASSISTANTS AND YOUNG PRACTITIONERS

SUPPORT FOR DEFENCE FUND

The Assistants and Young Practitioners Subcommittee of the G.M.S. Committee met on March 29 under the chairmanship of Dr. F. GRAY.

The DEPUTY SECRETARY (Dr. D. P. Stevenson) outlined the latest developments in the remuneration dispute and reported on the plan for progressive withdrawal from the Service. Various questions were raised on the plan, particularly as it might affect the young practitioner. Dr. P. B. BAILEY suggested that assistants should be invited to contribute to the defence fund, since, as future principals, they were as much concerned as their present principals in the issues at stake. The subcommittee was in agreement with Dr. Bailey's views, and it was resolved:

That, in the opinion of the subcommittee, assistants should be invited to contribute to the special fund being set up in connexion with the profession's remuneration dispute.

Future of General Practice

Dr. R. M. S. MATTHEWS brought forward certain principles which he thought might guide proposals for the reform of general practice, and which he thought the subcommittee might agree to now with a view to putting forward to the parent committee more definite proposals when the remuneration claim had been settled and the way was more open for reform.

After discussion the subcommittee resolved that it was in agreement with the following principles for the evolution of general practice:

- (1) The family doctor should remain the medical adviser and respected friend of the family.
- (2) With widening horizons in medicine, more education, and increasing facilities available, there will always be more that can be done for each patient.
- (3) The family doctor should be the agent for all the resources of the National Health Service, in so far as is practicable.
- (4) There is a welcome integration between family doctors, hospitals, and local authorities in some areas, and this should be encouraged.

It also agreed that further consideration should be given at its next meeting to the following principles:

- (5) Doctors should not have to act as custodians of public funds; particularly is this important with regard to pharmaceutical services.
- (6) Remuneration should be related to the quality of work done as well as the quantity.
- (7) Entry and retirement from general practice should be related to public requirements and, therefore, where necessary facilitated by public funds.

Correspondence

The Next Move

SIR,—The time has come to appeal to the law to adjudicate on the validity of the Spens Reports as the basis of our claim for increased remuneration. The Minister has explicitly rejected our claim based on the Spens recommendations: in his reply to the memorandum submitted to him on September 12 last he said (*Supplement*, December 1, 1956, p. 201), "Ministers remain of the opinion that no contractual obligation such as has been alleged by the Negotiating Committee exists and that no action based on such a claim could succeed." The same attitude is implicit in the Prime Minister's decision to appoint a Royal Commission to report on the question of doctors' pay; no doubt he hopes this will produce a new formula to replace the Spens recommendations, and one more favourable to the Treasury. The profession believes, and always has believed, that the Spens recommendations are the basis of the terms and conditions of service on which it agreed to enter the Health Service: all our claims have been based on this assumption.

We have reached an impasse. We are feeling dangerously frustrated; the general practitioners are planning to resign

from the Health Service *en masse*; the hospital staff are wringing their hands, wondering what dramatic gesture they can make which will not deprive ill patients of proper attention in hospital; meanwhile Spens, like the Cheshire cat, seems to be dissolving into thin air before our very eyes. The Government has cleverly taken the initiative by appointing the Royal Commission, granting a small rise to junior hospital staff, and suggesting that there is a possibility of the rest of us getting a little more in the near future. It would seem, then, we must either wait on the Minister's benevolence (he has turned down arbitration) or "strike"—that is, resign from the Service altogether. But even if we "strike" for an increase in pay, we shall have to negotiate eventually (setting aside for the moment the possibility of our setting up a rival concern), and our case is and must be based on the Spens recommendations; but the Minister denies their validity, so we are back where we started—a fundamental disagreement on the interpretation of Spens.

There is one solution to this which we should try at once before the opportunity is lost; it is a step which will give us the initiative and will enable us to lay our case before an impartial witness *in public*: it is to go to law and take a test case before the courts for adjudication. We must once and for all test the legal validity of the agreements entered into by the profession at the inception of the Health Service and find out whether we have any legal rights at all, or whether we have in fact been the victims of a giant confidence trick. What are the advantages of going to law? In the first place, we take the initiative. Secondly, in the face of a refusal by the Minister to go to arbitration, we demonstrate our good faith with the public by submitting to the only "peaceful" course open to us, before taking the drastic step of resigning *en masse*. Thirdly, we take the first step towards putting our contracts on a firm legal basis, free from ambiguity.

Let us consider the consequences of the verdict. If we win we shall have gained our point and we shall be entitled to a very substantial increase of pay. Here it is worth noting that the Spens recommendations for hospital staffs at the present time amount to something like a 50% increase, compared with the 24% they are claiming. If we lose we shall have lost nothing tangible; the Government is already determined that our case does not exist. We shall, however, have had the benefit of stating our case in detail before the public. We shall have demonstrated that we were lured into the Health Service under false pretences and that what we took for gentlemen's agreements were nothing more than spurious promises. The Minister may gain his legal point that there is no "contractual obligation" to raise our pay; but he will have to explain the very unscrupulous way in which the Government has seen fit to treat a loyal and trusting profession for nearly ten years. In the face of such double-dealing there is little doubt which side will gain the public's sympathy. The stage will then be set for the profession to proclaim its views on a sound basis for negotiation. Furthermore, we shall be able to contemplate further action not on the controversial basis of the Spens recommendations but on the demonstrated fact that we were persuaded to enter the Health Service by a subterfuge.—I am, etc.,

Uxbridge, Middlesex.

RICHARD I. BODMAN.

Withdrawal from N.H.S.

SIR,—We write in support of your correspondents who see clearly that the issue is no longer a claim for increased remuneration: the profession has so lost confidence in the good faith of the Government that the real issue is whether there now exists any basis for a stable relationship between them.

In the past ten years there have been three major clashes with the Government of the day; no one would wish to take any part in a future of which such conflicts were a recurring feature. Yet it is precisely such a future that confronts us; even if the Government were to concede the present claim in full that will not be the end; in two

or three years' time the report of a Royal Commission, whose terms of reference are clearly designed to provide an opportunity of discarding past agreements, will set off a fresh upheaval. If that upheaval be settled, how long will the settlement endure? What guarantees will the Government be able to give more precise or more binding than those they have long laboured to avoid honouring and now propose to disown?

We have to face squarely the fact that no government can give the sort of guarantees we need: no government can ignore political factors or the claims of expediency: no government can afford to examine any proposition of ours on its merits alone. We have also to face the fact that, by and large, governments are less interested in the well-being of the profession than in making use of the technical knowledge we possess at the least possible cost.

If we do not wish to look into a future in which there is no stability, no law or order, no prospect save a continuing debasement of professional standards, there can be only one solution: complete and irrevocable withdrawal from the Health Service as at present constituted, whatever the Government may now do. No one would wish to see the undoubted benefits of the National Health Service lost to the people as a whole, and we urge the General Medical Services Committee to study plans for an alternative service, financed from a fund derived from either voluntary or national insurance and based upon reimbursement of the patient rather than direct payment of the doctor. This, in our view, represents the only sure way, and we ask all who agree to bring it forward at their local meetings. We do realize that unity is more important than perfection, and we are resolved to support any reasonable action that commends itself to the profession as a whole.—We are, etc.,

B. A. ABBOTT.
STANLEY DILLON.
P. M. HIGGINS.

Rugeley, Staffs.

P. M. JAMES.
T. A. MCCLINTOCK.
P. J. MACMONAGLE.

SIR,—In 1948 I wrote a letter to the *Supplement* (December 25, p. 239). At that time I was strongly in favour of wholesale resignation from the Health Service, owing to the inadequate payment which was to be made to doctors who entered it. This "extreme measure" was not looked upon with favour, the general consensus of opinion then being "Let's get the scheme working" and the financial discussions can come later. In fact, our leaders and negotiators were then so busy discussing principles and urging doctors to take part in the scheme that the matter of finance was left to the very end, and appeared, even so, to be discussed in "hushed whispers," as if it were indeed indecent to discuss money. We now have the ironic situation in which Dr. Rogers (one of the chief exponents of "the Service first and money last" at that time) is now the leading protagonist in the present untimely and unseemly attempt to get doctors to withdraw from the Service, an attempt which, even if desirable, is bound to fail for the very reasons which caused the original negotiators to fail—namely, lack of unity and lack of sense of reality.

It is quite one thing to refuse to enter the scheme because the conditions of service and financial rewards are not enough, and another to threaten resignation from it after eight years because of failure to obtain a rise. The very people who are most hard hit by the inadequate system of payment—i.e., those with small lists and no outside appointments—will suffer most in any such withdrawal as is contemplated, for it is improbable that practitioners with full lists will be anxious to withdraw, even though several years of maximum income may have given them some capital which those with smaller lists have been unable to accumulate. Furthermore, most doctors' personal economy is geared to their quarterly cheque, for living and practice expenses, house and motor-car repayments, and, by no means least, school fees. How many can possibly afford to throw this overboard for some ethereal "strike pay" or collection of mythical private fees, and how many would want to? The present system has so put the doctors at the mercy of the

patient in many cases that he is forced to accede to extravagant requests for drugs and dressings for fear of wrecking his economy by losing a few patients, and he will, in my opinion, be most unlikely to antagonize his patients and prejudice his future income from them by withdrawing from the Service. Furthermore, the case for increase in remuneration has been expressed so badly that even those patients who are interested in their doctor's earnings are left with the impression that the average doctor is very well off. It is my opinion that the negotiators of eight years ago failed miserably in their duty to the profession in failing to obtain the proper rewards for service, and that the present attempts to put it right are ill-begotten, ill-timed, and, as before, ill-managed.

What is required now is a complete reconstruction of the whole Service, which can only be achieved by 100% support from the profession—i.e., consultants, hospital medical officers, general practitioners, and all ancillary services, including the nursing profession. Until such drastic and determined action is taken muddle and confusion as before will continue, and what little respect is still held by the public for the profession will be destroyed. It may, of course, be too late for such action, but in my view the deliberations of the Royal Commission should be awaited before resorting to action which, I am sure, can only cause great hardship to those who attempt to withdraw and will destroy whatever is left of the dignity of the profession.—I am, etc.,

R. E. NEWMAN.

Beckenham, Kent.

SIR,—The alternative plan is claimed to be workable. It is also "workaday"—which is the whole trouble. It displays the Maginot Line and pre-1918 "digging-in-along-the-Somme" mentality to perfection, alas! The profession cannot survive a struggle of attrition. The waverers in our midst will have precluded any hope of success in that kind of struggle, as your correspondence already bears witness. The fainthearts must be rallied at once, as otherwise our "selected" areas will resemble colanders. *Blitzkrieg* should be the order of attack, not "ye olde tea shoppe" tactics (it was not a partial eclipse of the sun which rescued the missionary from the aborigines' stewpot—it was total and instant). Attended by their own doctors for a whole month without charge (and what percentage of fees does one really think the masses nurtured on a welfare state for a decade will pay?), getting their private prescriptions honoured at their usual chemist, by ministerial instruction—will there be any incommode person in the land to rail against the Government save the doctors themselves, and they have been doing that for months without number already?

The target is a government that has dishonoured its obligations: we have almost used up all our ammunition, and the final weapon we are withdrawing from our armoury must be carefully aimed. But the wrath of the patient must be applied to its mechanism. The answer is no certification whatsoever—save the obvious—and a total and complete withdrawal of the profession on D-day. We will then be speaking the same language as the Government, and indeed the same as our patients do.—I am, etc.,

M. E. TAPISSIER.

Barnsley, Yorks.

SIR,—Since the Government understands trade union methods only, then obviously these are the methods we must use. Anyone who says otherwise is not being realistic. Having adopted trade union tactics, let us do so properly. Half-hearted measures will only cause us to fail. With regard to resignation, only the general practitioner can do so. The hospital doctor obviously cannot. But the hospital doctor will benefit equally in any pay increases gained. Therefore he must help. Moral support is not enough. Only action is of any value. Let him pay his share. A levy equal to that asked of the G.P.—i.e., 5-6%—should be contributed by every hospital man apart from the most junior. I, for one, am not keen to see the G.P. doing all the work, getting all the worry, and being the target of abuse from Government and patient (as will indeed happen),

while the hospital doctor sits on the sidelines and cheers his colleague to victory.

No mention has been made of action to be taken against those who remain in the Service and treat patients of those who have resigned. Can their action not be considered unethical and treated accordingly?

In the event of my area being chosen for withdrawal, my work will be greatly decreased, but even if it falls to less than half its present volume I will still make my usual income with the proposed scale of charges. Since this will mean more leisure, is it likely that I and my colleagues will want to return to the N.H.S.? I should think that the patients would not object provided the pharmaceutical service remained free, and the Finance Act will let me superannuate myself without Government help.

Finally, a practitioner may be on the lists of several executive councils, and in the event of withdrawal may find himself in private practice in one area and in the N.H.S. in another area. Has this situation been considered, and is it not the sort of situation that can only do us harm? Surely complete 100% withdrawal throughout the country is the only answer.—I am, etc.,

Rutherglen.

A. F. NELSON.

SIR,—As a general practitioner of many years' standing I am much concerned about the proposals which are being recommended to us. I do not hold any brief for the Health Service, which I have never liked, and there is no doubt we have been unjustly dealt with by the Government. But there are many reasons against the proposed withdrawal from the Service. In the first place, the financial situation of the country is critical, and this does not seem to be fully appreciated. Repeated appeals have been made to all sections to exercise restraint in pressing claims for increased remuneration, and surely the medical profession should set an example in placing the interests of the country before its own. Moreover, the scheme is impractical. It would be very difficult to get the proposed fees from our patients, who, rightly or wrongly, would feel that they would be paying twice over for their medical treatment. It is all very well to say that the proposed withdrawal from the Service is not a strike, but the general public will not make such fine distinctions and would certainly regard it as such, and very quickly we should have public opinion against us.

I sincerely hope the profession will seriously reconsider the position and not embark on a scheme the difficulties of which seem to have been underestimated. It is a scheme which is lowering to our dignity as a profession, and which I feel would be disastrous in its consequences.—I am, etc.,

Sheffield.

C. HAROLD WILSON.

Reform of Health Service

SIR,—For the first time since the inception of the National Health Service I am thrilled by the proposals of the B.M.A. Of course what is needed is all-round replanning and adjustment. Mr. Willink, now of Magdalene College, Cambridge, had a blueprint ready which the Labour Government of 1945 disregarded. I suggest that he would be a very useful "prominent citizen" for the proposed revising body.—I am, etc.,

Hove, Sussex.

LILIAS M. JEFFRIES.

Woman Consultant for Women's Hospital

SIR,—At the adjournment debate on Monday, March 25 (*Journal*, April 6, p. 826), Mr. James H. Hoy, Member of Parliament for Leith, drew attention to the serious position which had arisen over the proposed appointment of either a male or female consultant physician at the two women's hospitals in Edinburgh—Bruntsfield Hospital and the Elsie Inglis Memorial Maternity Hospital. Mr. Nixon Browne, Joint Under Secretary of State for Scotland, replying on behalf of the Government, made certain statements which require correction.

Mr. Nixon Browne conceded that the demand is there, but stressed that the work done is limited. He went on to

state that at Bruntisfield Hospital there are only 19 general medical beds available, but did not point out that this represents 5% of all the female medical beds in Edinburgh. In addition to the 19 general medical beds, there are 63 gynaecological and surgical beds which come under the over-all care of the consultant physician. It might be explained that prior to the take-over under the National Health Service there were plans to enlarge and improve the hospital. Mr. Nixon Browne also stated that the consultant physician is used "from time to time" at the Elsie Inglis Hospital. In fact, in a 73-bedded busy maternity hospital there are always at least five in-patients with serious medical complications under the care of the physician, and there are three special out-patient clinics attended by the consultant physician.

Mr. Nixon Browne referred to the regional hospital board as "a responsible statutory body" without mentioning the fact that the board of management of the Southern Hospitals Group, which originally appealed to the Secretary of State against the regional hospital board's decision, is also a statutory body with powers delegated to it under the Act. This appeal was also supported by two other statutory bodies—namely, the Edinburgh Health Executive Council and the local medical committee—as well as by the regional consultants and specialists committee. The fact that out of three statutory bodies one only is referred to as being "a responsible statutory body" would appear to require some explanation.

The arbitrary decision of the regional hospital board has caused widespread dismay in Edinburgh and, indeed, throughout Scotland, and in an endeavour to initiate legislative and/or other action a mass meeting has been organized by all the supporting bodies. The local medical committee strongly supports this effort, to the extent that it is contributing to the expenses of the meeting. Finally, Mr. Nixon Browne pointed out that a woman consultant surgeon was recently appointed to our group, and cited this appointment as evidence that there was no sex prejudice. I should like to make it clear, however, that this surgeon, who was my successor, was appointed to the post at Bruntisfield Hospital only, whereas at the time of my retirement I was also consultant surgeon at the newly established acute male surgical unit at the Longmore Hospital. This latter post went to a male surgeon.—I am, etc.,

Edinburgh, 12.

GERTRUDE HERZFELD.

BRITISH MEDICAL GUILD

Meetings to be Held

BATTERSEA AND WANDSWORTH.—At the Assembly Room, Wandsworth Town Hall, S.W., Tuesday, April 16, 8.30 p.m. Address by Dr. Frank Gray.

HEREFORD.—At Woolhope's Society Room, Public Library, Broad Street, Hereford, Sunday, April 14, 3.15 for 3.30 p.m. Dr. A. V. Russell (Member of Council, B.M.A.) will address the meeting.

Branch and Division Meetings to be Held

The following meetings, to which all medical practitioners in the area are invited, will be held to consider the reports of Council and the G.M.S. Committee on the remuneration issue.

COVENTRY DIVISION.—At Out-patient Department, Coventry and Warwickshire Hospital, Tuesday, April 16, 8.30 p.m. Address by Dr. D. P. Stevenson (Deputy Secretary, B.M.A.).

HARROW AND WEMBLEY DIVISIONS.—At Rest Hotel (Carlton Rooms), Kenton Road, Kenton, Monday, April 15, 8.30 p.m. joint meeting. Address by Dr. D. P. Stevenson (Deputy Secretary, B.M.A.).

HENDON DIVISION.—At Lower Welsh Harp Hotel, Edgware Road, N.W., Friday, April 12, 8.30 p.m. Dr. A. Macrae (Secretary, B.M.A.) will be present.

KINGSTON-ON-THAMES DIVISION.—At Nurses' Home, Kingston Hospital, Woburn Avenue, Kingston-on-Thames, Monday, April 15, 8.30 p.m.

NORTH GLAMORGAN AND BRECKNOCK DIVISION.—At Boot Hotel, Aberdare, Sunday, April 14, 3 p.m.

SOUTHPORT DIVISION.—At Assembly Rooms, Prince of Wales Hotel, Monday, April 15, 9 p.m. Dr. E. E. Claxton (Assistant Secretary, B.M.A.) will answer questions.

ALDERSHOT AND FARNHAM DIVISION.—At Northfield Hospital, Aldershot, Thursday, April 18, 8.30 p.m., meeting. Lecture by Mr. C. R. McCash: "Plastic Surgery in an Accident Service."

ASHTON-UNDER-LYNE DIVISION.—At Broadoak Hotel, Ashton-under-Lyne, Wednesday, April 17, 8.30 p.m., A.G.M.

BIRMINGHAM DIVISION.—At Council Chamber, Council House, Birmingham, Tuesday, April 16, 8.25 for 8.30 p.m., meeting. B.M.A. Lecture by Professor Ian Aird: "ABO Blood Groups and Disease."

BRADFORD DIVISION.—(1) At Midland Hotel, Bradford, Sunday, April 14, 6.30 p.m., special meeting to discuss the remuneration claim. (Members only.) (2) At Medical Societies' Room, Bradford Royal Infirmary, Wednesday, April 17, 8.15 p.m., meeting. Lecture by Mr. R. R. Simpson: "Shakespeare and Medicine."

CAMBRIDGE AND HUNTINGDON DIVISION.—At Lecture Room, Addenbrooke's Hospital, Cambridge, Tuesday, April 16, 8.30 p.m., meeting to consider report of Council on remuneration issue.

DONCASTER DIVISION AND DONCASTER MEDICAL SOCIETY.—At Danum Hotel, Doncaster, Tuesday, April 16, 7.30 for 8 p.m.; dinner. Professor C. J. Polson: "External Signs of Violence."

GREENWICH AND DEPTFORD DIVISION.—At St. Alfege's Hospital, Vanbrugh Hill, S.E., Wednesday, April 17, 8.30 p.m., clinical meeting. Members of Woolwich Division are invited.

HYDE DIVISION.—At Lake Section, Ashton-under-Lyne General Hospital, Saturday, April 13, 2.30 p.m., "At Home." Short clinical meeting, with tea, and visit to departments of hospital.

MONMOUTHSHIRE DIVISION.—At St. Mellon's County Club, Tuesday, April 16, 7.45 for 8.15 p.m., dinner-meeting. Speaker: Mr. Eric Robinson. Wives and friends of members are invited.

NORTH-EAST ESSEX DIVISION.—At Red Lion Hotel, Colchester, Monday, April 15, 8 for 8.30 p.m., annual general meeting.

OLDHAM DIVISION.—At Albion Club, Queen Street, Oldham, Monday, April 15, 9 p.m., meeting. Professor C. Fraser Brockington: "A Recent Visit to Soviet Russia."

SCUNTHORPE DIVISION.—At Board Room, Scunthorpe and District War Memorial Hospital, Wednesday, April 17, 8.30 p.m., annual meeting.

SOUTHAMPTON DIVISION.—At Royal South Hants Hospital, Wednesday, April 17, 8.30 p.m., annual general meeting.

STOCKTON DIVISION.—At Stockton and Thornaby Hospital, Monday, April 15, 8.30 p.m., meeting. Lecture by Mr. F. E. Stabler: "Some Experiences with Vaginal Aplasia."

SWANSEA DIVISION.—At Morriston Hospital, Swansea, Tuesday, April 16, 8.15 p.m., meeting.

WINCHESTER DIVISION.—At Nightingale Nurses' Home, Royal Hants County Hospital, Sunday, April 14, 2.30 p.m., meeting. Agenda includes report on remuneration claim, etc.

Meetings of Branches and Divisions

DORSET DIVISION

A meeting was held at the Chest Clinic, Dorchester, on February 1, 1957. Dr. T. V. Cooper was in the chair and 29 members were present. A clinico-pathological conference followed, at which cases presented by Drs. E. B. Jarrett and C. Hollins were discussed, and Dr. T. B. L. Bryan produced photographs of a case of inflammation caused by a garter.

Correction.—In the provisional programme for the Annual Meeting, Newcastle upon Tyne, July 10-19 (*Supplement*, March 30, p. 133), the Section of Occupational Health should have been given as meeting on Tuesday, July 16, not Thursday, July 18; and the Section of Neurology as meeting on Wednesday, July 17, not Tuesday, July 17.

GENERAL MEDICAL SERVICES COMMITTEE
REPORT TO ANNUAL CONFERENCE OF
REPRESENTATIVES OF LOCAL MEDICAL
COMMITTEES, 1957

The General Medical Services Committee is an autonomous committee of the B.M.A. empowered under the by-laws of the Association to deal with all matters affecting general practitioners providing general medical services in the National Health Service. A subcommittee, the General Medical Services Subcommittee (Scotland), considers and reports to the parent committee on all matters specially relating to general practitioners providing general medical services under the National Health Service Acts in Scotland. The G.M.S. Committee reports annually to the Conference of Representatives of Local Medical Committees, of which it is the executive, and, when necessary, at other times. The Committee's report for the session 1956-7, which its chairman, Dr. A. TALBOT ROGERS, will present to the conference on June 6, has now been sent to all general practitioners. It records a busy session in which steady progress has been made, apart from in the remuneration claim. This has been the subject of a report (*Supplement*, March 23, p. 123) to a special meeting of the Conference which will take place on April 30.

Representations have been made to the Ministry on all the matters which were referred to the Committee by the Annual Conference last year, in many cases with satisfactory results. Where the outcome has been unsuccessful, it was often because the Committee was satisfied by a frank explanation of the Ministry's difficulties in meeting the request, or because further discussion with the Ministry revealed insuperable disadvantages in the course proposed. The Committee thanks local medical committees for their help and encouragement, and, in particular, for their response to the many calls upon them for information and statistical data of one kind or another.

The report goes on to refer to particular items of the Committee's work, and an account of some of these is given here.

Claire Wand Award

The Annual Conference last year approved the proposals made by the trustees of the Claire Wand Fund for the institution of an award for outstanding services to general practice. Subsequently the Committee received a recommendation from the trustees that the presentation of the award on the first occasion should be made to H. Guy Dain. With the present session of the Committee, Dr. Dain will have com-

pleted 40 years' service on the General Medical Services Committee and its predecessor, the Insurance Acts Committee. In addition, he served in the chair of the latter Committee for 11 years.

This long period of service has contributed so much to the cause of the general practitioner and his work that the Committee feels that the trustees' recognition could not be more highly deserved.

Size of the Central Pool

Negotiations with the Ministry on the size of the Central Pool have continued and the final settlement for the financial year, 1954-5, which amounted to the substantial sum of £44m., was distributed to the profession at the end of last year.

The Committee reports that it is doing all it can to expedite the calculation and distribution of the final settlement moneys for subsequent years. Few of the necessary inquiries can be put in train until after the end of the financial year in question. Inquiries have to be made into practice expenses, income from hospitals, local authorities, and other Government departments; and agreement must be reached on the figure of the number of doctors in the Service.

Nevertheless, the Committee realizes that a lapse of some 21 months, as occurred in calculating the Pool for 1954-5, is far too long, and it reports that it has impressed upon the Ministry the need for dealing more expeditiously with these questions in the future.

Discussions are now proceeding on the size of the Central Pool for 1955-6.

Fees for Part-time Work for Local Authorities

The Council of the B.M.A. informed the Associations of Local Authorities of its wish to review the scale of fees for part-time sessional work undertaken by medical practitioners on behalf of local authorities. These fees were governed by arrangements made with the Local Authorities as long ago as 1947 and 1951.

The County Councils Associations suggested that any revision of these fees was properly a matter for Committee C of the Medical Whitley Council, but, since neither general practitioners nor consultants were represented on that Committee, it was felt that the negotiations should be undertaken on an *ad hoc* basis, as had been the case on previous occasions.

After a good deal of discussion, the situation was met by the appointment of a special subcommittee of Committee C of the Medical Whitley Council which included representa-

tives of both general practitioners and consultants. Agreement was reached in the subcommittee on all the items in the claim, and the Committee is satisfied that the new scale of fees (*Supplement*, December 29, 1956, p. 228) is more in line with present-day conditions.

Monthly Payments

Further discussions that have taken place with the Ministry of Health on the principle of monthly payments for general practitioners are reported. The Ministry, while not unsympathetic, is reluctant to adopt the suggestion unless it can be certain that the additional work involved will not entail any increase in the staffs of executive councils.

The Ministry has undertaken to consult with the Association of Executive Councils, and the Committee, for its part, has reminded the Department that in some areas where monthly payments are now operating no additional staff has been found necessary, and that, in any case, a number of proposals put forward by the Committee—in particular, the abolition of back debits and back credits—should more than compensate for any additional work involved.

Mileage

The Government Mileage Committee issued an interim report on the ordinary portion of the fund in December, 1956. The question of special mileage is to be dealt with in a final report, which will be published as soon as its further investigations have been completed. The views of the Rural Practices Subcommittee on possible methods of distributing special mileage have already been passed to the Mileage Committee.

The G.M.S. Committee states that it has repeatedly impressed upon the Ministry that there could be no question of implementing any major recommendations which the Mileage Committee might make affecting the principles of the present mileage scheme until they had been referred to and discussed by local medical committees and the Annual Conference. The Committee therefore attaches considerable importance to the view of the Mileage Committee that it would be wrong to treat the ordinary and reserved portions of the fund in isolation, and that, in fairness to the doctors concerned, no effect should be given to the recommendations in the interim report until the full report is available.

Subject to this major reservation, however, neither the Committee nor its Rural Practices Subcommittee takes any exception to the recommendations contained in the interim report. Nevertheless the Committee emphasizes that, in view of the limited nature of the report and of the fact that the full implications of the proposals cannot be assessed until the Mileage Committee's observations on special mileage are available, its agreement must be provisional. It was on this basis that the Committee sent the report to local medical committees.

Attention is called to the Mileage Committee's suggestion that, pending the implementation of its main recommendations, the Ministry of Health should take steps to adjust the allocations now made to executive councils from the mileage fund, and hence to rural doctors, in the light of up-to-date returns based on existing criteria. The present calculation is based on returns made by executive councils in 1949. Not only are these returns considerably out-of-date because of the many changes which must have occurred since that date, but the instructions given by the Minister at that time were wrongly interpreted by some executive councils. As it must still be some time before the major recommendations of the report can be put into operation, the Committee takes the view that these discrepancies should be removed and the allocations under the present distribution scheme revised at once. The Ministry of Health has been informed accordingly. The Committee stresses, however, that this decision in no way involves any alteration of the principles of the mileage distribution scheme now in operation, but only in the calculation of the actual payments on the basis of up-to-date and accurate returns.

Group Practice

The Group Practice Loans Committee received in the year ending December 31, 1956, a further 51 applications for loans from the Group Practice Loans Fund. The Committee approved in principle 27 loans totalling £122,220. A further £88,000 came into the fund in April, 1956, being the amount set aside annually for loans to group practices in England and Wales, and in addition about £24,800 was received during the year from groups in repayment of loans already made, making a total for 1956 of £112,800.

From the time the scheme was announced in January, 1954, until December 31, 1956, a total of 239 applications had been received. No application has been approved without a prior visit to the group. By the end of 1956, 100 of these applications had been approved in principle: 46 were for loans for building new group practice premises and 54 were in connexion with the conversion of existing premises to further group practice. The total number of applications which had been rejected was 92, while 26 applications had been withdrawn for various reasons, 9 applications were in abeyance at the request of the groups, and 12 applications were still under consideration at the end of the year.

The following statement sets out the financial position of the Group Practice Loans Fund as at December 31, 1956.

Total amount approved in principle ..	£ 451,942
Total amount advanced to groups ..	306,451
Total amount repaid by groups ..	35,395

The amount of money in the Group Practice Loans Fund at December 31, 1956, was as follows:

Contribution from Central Pool (4 × £88,000)	£ 352,000
Repayments from groups ..	35,395
	£387,395
Less amount advanced to groups ..	306,451
	£80,944

As the total amount approved in principle continued to exceed the amount in the fund, the Group Practice Loans Committee, it is stated, continued to warn applicants that there might be some delay before the money could be made available to them.

The G.M.S. Committee reports that it has examined a suggestion made at the A.R.M. last year that the scope of the interest-free loans for provision of surgery accommodation should be extended to single-handed practitioners and partnerships which are not at present covered by the Group Practice Loans Committee's definition of group practice.

The Committee has concluded that it would not be justified in seeking any extension of the Group Practice Loans Fund at the present time. The aim of the existing scheme is to encourage group practice, and to extend these arrangements to other types of practice could only be effected at the expense of the Central Pool. The yearly contribution of £100,000 to the Group Practice Loans Fund is a first charge on the Central Pool, and any increase in this amount could only reduce the amount remaining in the Pool for distribution in other ways.

Medical Practices Committee Certificates

At the Annual Representative Meeting last year the following motion was referred to the Council of the Association for consideration:

"That this Meeting recommends that Section 35 (9) of the National Health Service Act, 1946, be more clearly defined even to the extent of amending the Act, so that just as the granting of a certificate of valuation protects the practitioner at law, the refusal of such certificates should legally imply that the law has been broken. Furthermore, it recommends that the Medical Practices Committee should be answerable at law for failing to carry out their statutory duties."

The General Medical Services Committee, to whom the Council remitted the matter, reports that it has discussed the issues involved with the Medical Practices Committee.

The Medical Practices Committee takes the view that the particular case which gave rise to the proposals contained in the motion, and which finally ended in the Courts, had a number of unsatisfactory features. In the first place, the certificate had been applied for after the completion of the transaction, and this fact in itself prevented the Committee from issuing a valid certificate, since the Act provides that such certificates can be given in respect only of proposed transactions. Secondly, the valuation department of the Board of Inland Revenue could not agree with the value placed upon the premises concerned, which in fact were residential and which had never substantially been used for practice purposes. The valuation department had considered the question more than once but had nevertheless felt unable to increase its own original valuation. Thirdly, the Medical Practices Committee itself, when explaining why a certificate could not be given, had quoted from the letter from the valuation department and not restricted itself to the exact terms of the Act. Hence, the view expressed by Mr. Justice Vaisey that the Committee had directed its mind to something which was an entirely false point and had nothing to do with Section 35.

Nevertheless, even had it been possible for the M.P.C. to issue a valid certificate, and even if the exact words of the Act had been stated in its letter, that Committee is still not satisfied that it would have been justified in so doing. The M.P.C. does not give a legal decision. The refusal of a certificate carries no other implication than that the M.P.C. is not "satisfied" that one can be issued. Thereafter, no further action is taken by the M.P.C. but only by the Director of Public Prosecutions in the event of a complaint. In such circumstances the M.P.C. may be required to produce its files, but it does not itself initiate action of any kind after refusing to grant the certificate. It was pointed out by the M.P.C. that the refusal of a certificate is no bar to the completion of a transaction, and undoubtedly many such transactions may be unexceptionable. The parties, however, are left without the complete protection which a certificate provides.

So far as the M.P.C.'s own procedure is concerned the Committee understands that care is now taken to see that all refusals of certificates are worded in the precise terms of the Act, as indeed the vast majority have been in the past. In those cases where, because of the prior completion of the transaction, it is not possible to give a valid certificate, the M.P.C., in addition to using its standard letter, may add a statement that were it not so precluded it would or would not have granted a certificate in respect of that particular transaction.

So far as the latter part of the motion set out above is concerned, the M.P.C. expressed the view that, to the best of its knowledge, the Committee is answerable at law for failure to carry out its statutory duty but that that duty goes no further than to grant or refuse a certificate within the terms of the Act.

In view of the explanation given by the Medical Practices Committee, the Committee is satisfied that no further action is necessary.

Machinery for Filling Practice Vacancies

Having discussed this matter fully with the Ministry, the Committee has concluded that there may well be good reasons for not disturbing the existing arrangements. There has been some general improvement and it seems to the Committee that such delays as have occurred in filling practice vacancies are due not so much to any defect in the selection procedure itself but to delays in hearing and announcing the results of appeals against the decision of the Medical Practices Committee. This particular point has been discussed with the Ministry and an assurance obtained that every possible step will be taken to expedite the hearing of appeals and, in particular, to make the results known to all concerned at the earliest possible moment.

On the general issue, apart from the fact that amending legislation would be necessary, the Ministry put forward

certain criticisms which the Committee feels have some substance.

It was clear that early legislation on a matter of this sort was unlikely to be obtainable. The Committee is satisfied that the Ministry is seized of the importance of doing everything possible to speed up the present selection arrangements. The Committee has therefore decided not to pursue the matter further for the present.

Protection of Practices

Some years ago the Committee reached agreement in principle with the Ministry on the steps to be taken to safeguard the practices of general practitioners called up in an emergency. The implementation of the scheme remained subject to a Government decision on the general question of the making up of the balance of civilian pay in war-time. Largely because of the improvement in the international scene, the matter was not pursued at that time.

The arrangements now agreed with the Ministry provide that during an "emergency" recognized by the Minister, after consultation with the profession, a doctor who is absent from his practice will remain on the medical list and will be expected to make deputizing arrangements to enable his practice to be carried on during his absence.

So far as the Central Pool is concerned, since the absentee doctors will remain on the medical list, they will continue to be included in the annual calculation, while the total remuneration received from the Forces will be deducted from the global pool when the final settlement is calculated at the end of the financial year. In addition, the expenses of employing a locum or of making other deputizing arrangements is a practice expense which will be reflected in the overall practice expense ratio when the final settlement is calculated.

When a doctor joins the Forces his list will be frozen in the sense that for financial purposes the number of patients will, during his absence, be fixed at a number equal to the average during the two quarters immediately preceding that in which he joins the Forces. During the doctor's absence, transfers of his patients (other than those who have changed their address) to the list of other doctors will in effect be on a temporary basis. On the absentee doctor's return, executive councils will notify all patients (other than those who have changed their place of residence) who were on his list when he joined the Forces but who have transferred to another doctor during his absence that they will be returned to their own doctor's list unless they wish to continue on the list of the doctor who has been temporarily attending them. If they do not wish to return to their former doctor, the practitioner attending them temporarily will remain responsible for their treatment in all respects but will receive no capitation fees in respect of such patients for twelve months. During this period the fees will be paid to the doctor returning from the Forces.

It is believed that a scheme of this kind will greatly assist the absentee doctor, but it is emphasized that it is only designed for a temporary emergency and any large-scale call-up would call for measures of a different kind.

Emergency Call Service

Following the introduction of an emergency call service organized on commercial lines in the London area early last year, the Committee reports that it set up a special Subcommittee to examine the whole problem of deputizing arrangements, with particular reference to those organized on a commercial basis. After taking legal advice, and as a result of the investigations undertaken by the Subcommittee, the Committee issued a statement (*Supplement*, October 6, 1956, p. 147) that it was satisfied that such schemes did not necessarily run counter to the National Health Service Act and its regulations.

On the general issue the Committee feels that the interests of general practice and the public are best served by providing for proper off-duty and leisure time by means of the more-established and proved methods of group partnership and rota schemes. Nevertheless, in certain areas it may not

always be possible for the individual doctor to participate in such arrangements, and, in consequence, the Committee recognized in its statement that in some circumstances an emergency call service might constitute a suitable supplement to the more usual methods of practice.

The Committee takes the view, however, that they should always conform with the customary arrangements in the other forms of practice, and that they should not be used as an opportunity to escape a contractual obligation to provide a personal and continuing service or to enable a doctor regularly to avoid all emergency and week-end calls. It concludes that the most effective way of dealing with the situation would be for Paragraph 8 (2) (see below) of the Terms of Service to be amended so that a general practitioner would have to obtain the *consent* of the executive council to any standing deputizing arrangements, instead of merely informing the council of the arrangements that had been made.

Paragraph 8 (2) reads as follows:

"A practitioner shall make all necessary arrangements for securing the treatment of his patients where he is unable for any of the causes mentioned above to give treatment personally and shall inform the council of any standing arrangements for that purpose. He shall not absent himself from his practice for more than one week without first informing the council of his proposed absence and of the person or persons responsible for conducting his practice during such absence."

The Committee thinks that amendment of the paragraph would also provide a means for dealing with those cases where, without resort to the emergency call service, a doctor persistently contracts out of night and week-end calls. In addition, it would ensure that measure of professional control which is felt to be necessary.

General Practitioners and the Hospital Service

The Committee states that it has been disturbed for some time at the lack of general-practitioner representation on the boards of governors of teaching hospitals. Representations have been made to the Ministry. The Ministry was informed that the Association is inviting its Branches and Divisions, in consultation with local medical committees, to send to Headquarters the names of suitable general-practitioner representatives for appointment to boards of governors, which will then be submitted to the Minister.

The Ministry has undertaken to consider the Committee's views in making future appointments and to do what it can to increase the number of boards which include a general-practitioner member. In doing so, however, the Ministry made the reservation that it is limited by the fixed proportion of nominated members and the need to secure a proper balance between medical and lay membership. The Committee intends to review the matter again when the vacancies occurring in the early part of this year have been filled.

The Committee reports that the improvement in general-practitioner representation on regional hospital boards in recent years has been maintained, but here again the situation will be kept under review.

General-practitioner Hospital Beds

The Committee has discussed with the Ministry the need for an increase in the number of general-practitioner beds, and, in particular, general-practitioner maternity beds, and reports that the figures for 1955 again show some increase in the total of staffed beds allocated to general practitioners.

There is, however, still much room for improvement, the Committee thinks, particularly in areas where the number of consultant beds is high and patients are given undue encouragement to have their babies in hospital. In this connexion the Committee is doing all it can to secure an improvement in the Weymouth area, where general practitioners so far have no access to hospital beds.

Closure or Change of Usage of Hospitals

The Conference last year referred to the Committee a motion by London which proposed that regional hospital boards and boards of governors of teaching hospitals should

not be permitted to announce the proposed closure of a hospital or a change of use of a hospital unless and until an independent inquiry had been held. The implications of this suggestion are under consideration by the Liaison Committee, where it can be examined in the light of the views of those engaged in the hospital service. The Committee intends to discuss this suggestion with the Ministry as soon as the Liaison Committee has completed its review.

X-ray and Other Diagnostic Facilities

During the past year several instances are reported to have arisen in which, with little or no prior warning, general practitioners have suffered a complete withdrawal of diagnostic facilities normally available to them in local hospitals. The Committee appreciates that these events have been largely precipitated by staff shortages, but nevertheless it feels that such steps should not be taken without consultation with the local medical committees concerned. In addition, it takes the view that in these circumstances the reduced facilities available should be shared to some extent by all those who normally use them and that the general practitioner alone should not be singled out to suffer a complete loss of these important facilities. These views have been brought to the notice of the Ministry.

Trainee General Practitioner Scheme

The Ministry has accepted the recommendations contained in the Report of the Special Subcommittee on the Trainee General Practitioner Scheme, which was approved by the Conference last year. It has now been sent to executive councils with the suggestion that steps should be taken as soon as possible to implement its recommendations.

The Committee has drawn the attention of local medical committees to the regional appeals machinery advocated in the report, and, while the Committee believes that the number of cases of appeal will be small, it hopes that local medical committees will take advantage of this new facet of the scheme. The advisory committee suggested in the report has been constituted. Its personnel included a medical member of the staff of the Ministry of Health, who acts as an observer.

Charges for Prescriptions

Following the Government's announcement of its intention to extend the charges for prescriptions, a deputation from the Committee protested strongly not only against the charges themselves but about the complete lack of consultation on the new proposals. The Association is opposed to charges of any kind, states the report, and the Committee is particularly opposed to the Government's present scheme, which extends the existing charges in a manner which must discriminate against certain categories of patients. In spite of the Committee's protest and of representations made to the Minister by the Council of the Association, the Government has proceeded with its proposals.

Without prejudice to the major principle involved the Committee pointed out to the Ministry that certain aspects of the scheme put needless burdens on dispensing doctors—particularly in connexion with the issue of separate receipts. The Ministry, while taking full account of these criticisms, now maintains that the use of multiple receipt forms would give rise to abuse. The Committee is protesting most vigorously against this further imposition.

Discussions are to take place with the Ministry of Health on the provision of a number of multiple packs which would count as one item only for the purposes of the prescription charge. The Committee hopes that by these means it will be possible to alleviate to some extent the worst discriminatory features of the present scheme of charges.

Drugs for Private Patients

A joint deputation of representatives of the Private Practice and General Medical Services Committees has interviewed the Minister of Health and emphasized the importance which the Association attached to the principle of permitting private patients to receive drugs under the N.H.S.

The Minister—then Mr. Turton—whilst reiterating the view of his predecessor, Mr. Macleod, that such an innovation would not be repugnant to Conservative principles, nevertheless felt unable to commit the Government on this question at the present time. He suggested, however, that it might be possible to make further progress if the Association entered into discussion with his officers on a number of issues which are set out in the following extract from the agreed report of the meeting:

- (1) Working out the size of the problem—i.e., the present number of patients in the country receiving private treatment;
- (2) estimating the likely cost of the concession;
- (3) attempting to devise a suitable administrative procedure for disciplinary prescribing; and
- (4) considering what consequent adjustments might have to be made in the remuneration of general practitioners (and in particular in calculating the basis of the Central Pool).

The Committee has kept in close touch with the Private Practice Committee throughout and there is general agreement that the Minister's invitation should be accepted. The G.M.S. Committee, having regard to the repercussions of the major remuneration dispute, has recommended to the Council of the Association that the invitation be accepted at an appropriate time.

Investigation of Prescribing

The Ministry, it is reported, has agreed to inform the Committee in all cases where it is proposed to instruct pricing bureaux to refer particular substances to executive councils on the grounds that they are not drugs. The initiative taken by the Committee in this matter arises largely as a result of the fact that on many occasions in the past it appeared that pricing bureaux were questioning the prescribing of certain items indiscriminately. The Committee has been assured by the Ministry that the bureaux are normally guided by the reports of the Definition of Drugs Joint Subcommittee and that the fact that it appears that any one substance is being picked out for investigation at a particular time is purely coincidental.

The Committee has also approached the Ministry about the attitude adopted by some regional medical officers towards the prescribing of proprietary preparations. Allegations have been made from time to time that some regional medical officers seek merely to reduce the number of proprietary preparations prescribed irrespective of whether or not economy would be achieved in a particular case. The Ministry has accepted the Committee's point of view and has undertaken to inform regional medical officers accordingly.

Discount on Drugs

Although the Conference last year accepted an offer by the Association of British Pharmaceutical Industry to increase the rates of discount on proprietary preparations from 10% to 20%, it expressed the view that dispensing doctors' prescriptions for drugs on the special list should be priced and paid for on the basis of the cost to the practitioner and not on the cost to the pharmacist.

This matter has now been discussed with the Ministry, which takes the view that there is some justification for the difference in rates of discount largely because of the fact that the doctor does not incur some of the overhead expenses which the chemist must face. The Committee regards this answer as most unsatisfactory and further representations are to be made.

Prescribing Costs

In its report in 1956 the Committee referred to the Ministry's anxiety at the continued increase in the cost of the pharmaceutical services, and suggested that, if the present trends continued, the Minister might be forced to limit the cost which fell upon public funds. The Ministry indicated that it would greatly regret such a step, and suggested that an inquiry might be undertaken to see whether there was not some way in which doctors might be able to do still more to eliminate additional costs without detriment to

their patients. The Committee agreed to discuss the matter further, but made it clear that any search for economy should not be limited to the general-practitioner field. Equally, it emphasized that it was not prepared to enter into discussions on this subject under duress.

The Committee felt that there were serious objections to the proposal that such an inquiry should be carried out solely within the profession, and suggested that a working party consisting of representatives from the profession and the Department would be an appropriate body. The Ministry, however, felt that an inquiry of this nature must be wide in its scope and that it would place officials of the Ministry in an embarrassing position if they were called upon to comment on matters which had political implications. The Committee accepted this point of view and agreed that the inquiry should be undertaken by an independent committee.

It is understood that the inquiry will be concerned with all factors which might influence prescribing, including, for instance, medical education and training, the experience of doctors in hospitals, the influence of hospital practice, the effect of advertising techniques by manufacturers on the medical profession, pharmacists, and the public, and pressure by patients. The Ministry has announced that the personnel of the prescribing committee will consist of a dean of a medical school, two general physicians, a pharmacologist, a pharmacist, a statistician, and five general practitioners.

The Committee has now received an invitation from the Ministry to nominate the five general practitioners, but in present circumstances it feels unable to make the suggested nominations.

Prescribing Statistics

The Ministry, the report states, has for some time been seeking to improve the accuracy of the prescribing data which is circulated to general practitioners. The Committee had hoped that this scheme, which enables a doctor to compare his prescribing costs with those for the area, would greatly assist in economy in prescribing, but unfortunately the data prepared by the Ministry contained many anomalies due to the methods by which the figures were compiled.

In the course of revising these methods the Ministry put forward the proposal that prescription forms should be stamped with the name of each individual doctor. The Committee felt that this proposal might cause considerable difficulties in partnerships, and suggested that it should suffice if the pads of forms for use in partnerships were stamped with the collective name of the firm. Unfortunately the whole system of sorting and pricing prescriptions is based upon the name of the individual practitioner, and any modification in the manner envisaged by the Committee would make it extremely difficult, if not impossible, for the scheme to function.

The Committee with some reluctance agreed to the Ministry's proposal for individual stamping. It is, however, watching the position carefully and it will not hesitate to make a further approach to the Ministry should it become clear that general practitioners are suffering any undue burden as a result of these arrangements.

Revision of Service Committees and Tribunal Regulations

The revision of the disciplinary machinery has now been completed, and the revised regulations, together with an explanatory circular letter, were sent to executive councils on August 21, 1956. The Committee hopes that the amendments to the regulations will considerably improve the working of the disciplinary machinery. It emphasizes the desirability of all doctors against whom official complaints are made seeking advice at the first opportunity. Secretaries of local medical committees are asked to offer their help to any doctor against whom a charge is being brought as soon as they hear of the case.

Responsibility for the Acts and Omissions of a Deputy

The Committee has again considered the view of the Conference last year that the principle of immunity for the acts and omissions of deputies should be extended to locums.

and assistants and that the regulations should be amended to provide that a locum would enter into a contractual relationship with the executive council for a period limited to the absence of the principal from the practice. Legal advice on the implications of this proposal makes it clear that an assistant or locum could be subjected to the same terms of service as the principal only by insisting upon his admission to the medical list—a step which has many obvious and undesirable implications.

Again, in the case of both assistants and locums, the contractual relationship which exists is a personal and private matter and not the concern of any statutory body set up under the National Health Service. In the Committee's view, it would be both illogical and undesirable to impose upon that relationship certain conditions prescribed by an executive council.

By seeking admission to the medical list, the general practitioner enters into a contract by which he accepts overall and continuing responsibility for the patients who join his list. The Committee does not consider it reasonable that the principal, by choosing to delegate his duties to an assistant or a locum, can or should expect to lessen the personal and overriding responsibility to his patients which he accepts under the terms of service.

Finally, the Committee has discussed this matter with the Ministry on many occasions in the past and, apart from any difficulty in securing further amendments to regulations which have so recently been agreed, the Department has made it quite clear that it could not accept the principle that immunity should be extended to assistants and locums.

For these reasons the Committee has to report that—at any rate for the present—it does not feel able to take effective action along the lines put forward by the Conference.

Cranbrook Committee on Maternity Services

The Minister of Health has set up a special committee under the chairmanship of Lord Cranbrook to inquire into the maternity medical services, and the General Medical Services Committee reports that it has appointed a number of representatives to a special committee established by the Council of the Association to prepare a memorandum of evidence. The attention of the Evidence Committee has been drawn to the views expressed by the Conference that the Obstetric List should be abolished, and that there should be uniformity throughout the country of the criteria laid down for the payment of post-natal fees when the patient fails to attend.

Antenatal Care Related to Toxaemia

A memorandum by the Standing Maternity and Midwifery Advisory Committee of the Central Health Services Council on antenatal care related to toxaemia has now been issued by the Ministry. The chairman of boards of governors and of hospital management committees have been asked to arrange meetings of professional representatives from the three branches of the National Health Service to discuss the professional issues raised by the memorandum. It is intended that the views of the three branches of the profession should be conveyed to the administrative bodies concerned in the hospital service, who will then report to the Ministry on the need for any action to be taken centrally. Once this stage is reached the memorandum, which draws attention to the need for the fullest liaison between the hospital, the general practitioner, and the local authority, will be discussed with the Ministry.

Obstetric Emergencies

The Committee has agreed that in an extreme emergency a midwife should be permitted to call the obstetric flying squad at the same time as she calls the general practitioner. Medical officers of health are being asked to ensure that midwives are not given such rigid instructions about the calling of flying squads that they feel unable, even in very obvious cases, to call the squad before sending for the general practitioner.

Assistants and Young Practitioners Subcommittee

The Subcommittee's primary concern is with the problems associated with entry into general practice and the conditions of employment of assistants, and a number of recommendations have been submitted to the parent Committee.

The desirability of a written agreement between principal and assistant has been emphasized on a number of occasions and the Subcommittee has devoted considerable time to a study of the points which it considers should be covered in such an agreement. A model agreement incorporating the Subcommittee's views is being prepared and every effort will be made to publicize the Committee's policy that an agreement on these lines should be entered into in every case.

The Subcommittee has improved its own regional organization. The circumstances of the majority of its electorate make contact with their elected members on the Subcommittee difficult, but it has been found possible this year for local meetings to be held in a number of areas.

Compensation

The Conference last year asked the Committee to find some means whereby practitioners who had failed to establish their claims for practice compensation under the N.H.S. Act within the prescribed time could be recompensed from some special fund. The Committee feels that such a suggestion is not practicable. Steps were taken to ensure that those concerned were notified of the arrangements at the start of the Health Service. Announcements were made in the *British Medical Journal* on 14 occasions, while executive councils wrote to every general practitioner on their medical lists. In addition, no special fund exists which could be used for this purpose, and the Central Pool is the only source from which any payment of this nature could be made. In the circumstances the Committee is unable to suggest any way in which a special payment can be made.

The Conference also passed a number of resolutions on the inadequacy of the existing interest rates paid on compensation moneys and the effect which the declining value of money has had on the real value of the capital sums involved. The Committee has asked the Compensation and Superannuation Committee to look into the issues. It understands that both these questions are under active consideration by that Committee, but that, on the advice of Sir James Millard Tucker, it has been decided to defer further action pending the outcome of the remuneration claim, since to proceed at the present time might well serve to confuse the major issue of the betterment factor.

Superannuation

In a motion which the Conference referred to the Committee last year it was suggested that medical practitioners should be allowed the option of retirement after twenty years' service. This question has already been considered by the Compensation and Superannuation Committee. As the superannuation scheme must remain actuarially sound, the additional cost of earlier pensions would have to be met by increased contributions or by reducing the benefits. For instance, to obtain a pension of 1½% of remuneration at age 45 after 20 years' service a total contribution of about 22.8% per annum would be necessary. If the pension is to be the same as if service had continued for 40 years the contribution would be approximately 45% per annum. Alternatively, if contributions remain the same and a practitioner could retire on a pension at 45 after 20 years' service, the pension could not be higher than about 0.9% of his superannuable remuneration.

A further proposition put forward at the Conference was that the pension of the elderly doctor should be calculated on a minimum basis of fifteen years' service where ten to fifteen years of service had been completed. Here, again, an increased benefit of this sort could be introduced only if other benefits are reduced or contributions of all contributors are increased.

Facilities for Necropsies

Following representations by the Committee the Ministry has agreed that when a general practitioner requests a necropsy the cost of transport from the patient's home to hospital is an expense which may be met by the hospital, provided that the pathologist concerned is first consulted and gives his agreement. Further consideration is being given to proposals which were made at the last Annual Representative Meeting and which would considerably extend the circumstances in which a general practitioner could obtain a post-mortem examination at public expense.

GENERAL MEDICAL SERVICES SUBCOMMITTEE (SCOTLAND)

It is reported that Dr. C. J. Swanson (Aberfeldy) and Dr. Catherine Harrower (Glasgow) were reappointed Chairman and Vice-Chairman respectively for the session 1956-7.

Prescribing Costs

Following representations by the Subcommittee, it has been agreed to appoint a separate committee in Scotland to inquire into prescribing costs, and the remit to this Committee has been extended to include prescribing in the hospital service as well as in general practice.

Problems of Redevelopment Areas

The *ad hoc* Committee which was appointed to examine the question of the use of local authority premises by general practitioners is now concerned with the more complicated problem of redevelopment areas and the effect on general practice of the shift of population in the areas affected. It is proposed that the Committee should meet representatives of the Department of Health and the Scottish Medical Practices Committee to discuss the matter.

Mileage

The Rural Practitioners Subcommittee has resumed discussions on the question of mileage payments in the light of the views contained in the interim report of the English Mileage Committee and has held two meetings recently. Various points with regard to the distribution in Scotland of the mileage fund have been discussed and the Department has been asked to arrange for the Scottish Mileage Committee to resume consideration at an early date of this long-standing problem.

Prescription Charges

On being informed of the new charges for prescriptions, the Subcommittee expressed agreement with the action of the G.M.S. Committee in protesting against the proposals, and accordingly minuted its disapproval of the new charges.

Group Practice Premises (For which Loans have been Granted)

The Subcommittee has expressed agreement with a proposal by the Department to amend the model agreement by inserting a clause to provide that group practice premises could be used for such other purposes as may be provided for in the proposals approved by the Scottish Group Practice Loans Committee.

Medical Service Committees and Tribunal Procedure

The Subcommittee dealing with this subject has resumed its meetings and is examining the draft proposed amendments submitted by the Department. It is hoped to discuss these with the Department at an early date.

PRACTICE PROBLEMS OF NEW HOUSING AREAS

Report of Special Subcommittee

The G.M.S. Committee presents as an appendix to its report the findings of a subcommittee set up to "consider

the problems associated with movement of population and redevelopment generally." The Subcommittee's proposals for dealing with the matter have been approved by the Committee as a basis for exploratory discussions with the Ministry.

Extent of Problem

Replies received from inquiries to local medical committees showed that a number of areas in different parts of the country are affected in varying degrees—ranging from a wholesale displacement of existing centres of population to peripheral areas to schemes which, although involving only comparatively small numbers, yet have a marked effect upon the practices of individual doctors. The steps being taken to protect the interests of the doctors concerned and the degree to which hardship may be suffered vary widely from one part of the country to another.

In spite of these variations, the Subcommittee feels that the problems can, by and large, be dealt with on a common basis and by the use of measures which are of national application.

Measures Suggested for Discussion with Ministry

Instances in which the local housing authority has not confined itself to the provision of surgery accommodation on a particular estate, but has attempted to select the actual doctors who were to be the occupants of the local authority premises were known to the Subcommittee, and it emphasizes that it is not the duty of the housing authority to allocate the doctors who are to practise from those premises. The executive council, in consultation with the local medical committee and in co-operation with the medical practices committee, is responsible for deciding upon the number of doctors who will be needed for the medical needs of a new area. The selection of the doctors who are to practise from the accommodation provided rests with the Medical Practices Committee (in Scotland with the executive council). The Subcommittee feels that this should be made clear.

The Subcommittee thinks that many difficulties in the past have arisen largely because of the failure of the local authorities to give general practitioners, both individually and collectively, early notice of their replanning policy. In the Subcommittee's view the executive council should be informed by the local authority of its redevelopment plans at the earliest possible moment. Similarly, the executive council must at once consult not only the local medical committee but also the general practitioners most intimately concerned.

The Subcommittee also thinks it important that the Medical Practices Committee should be notified at the earliest possible moment of any substantial changes of population which are envisaged. Such information is vital to the Medical Practices Committee when dealing with additions or withdrawals from the medical list and other factors which may affect the classification of the area.

When redevelopment takes the form of demolition and rebuilding on the same site, the Subcommittee states that all possible steps must be taken to protect the existing doctors against encroachment by newcomers who may take advantage of rebuilding. Full protection can only be achieved by a total closure of the area by the Medical Practices Committee until the situation has become stabilized. Equally, where redevelopment takes the form of dispersing a centre of population, the old area must also be closed.

If there is any doubt that the housing authority will provide practice premises only to doctors selected by the Medical Practices Committee the new estate must be classified as a closed area to prevent any influx of "squatters." The Subcommittee understands that in Scotland, where similar problems have been under consideration, the G.M.S. Subcommittee (Scotland) has concluded that, much as it regrets the necessity in any circumstances to close an area, the entire peripheral area surrounding the new estate should also be closed. While not suggesting that similar action should be taken in England and Wales at this stage, the Sub-

committee feels that a large measure of protection can be secured by the close-co-operation of the local authority, particularly as in many instances the authority also owns all the property in the peripheral area. All reasonable steps will have been taken to protect the position of those appointed by the recognized machinery, if the local authority refuses to lease or sell accommodation in the surrounding area except in cases where the executive council and the local medical committee are in agreement, and the new area itself is closed by the Medical Practices Committee.

Doctors living in the old centres of population whose patients have been moved to a new estate have a special claim to be considered for the vacancies if they wish to apply, and the Subcommittee feels strongly that these doctors must be given preference in following their own patients into the new area. The Subcommittee emphasizes the importance of adequate provision being made for new surgery premises where existing surgeries may be demolished as a result of redevelopment. Premises, either permanent or temporary, must therefore be continuously available.

PRIME MINISTER AND PRESIDENT EXCHANGE LETTERS

PHYSICIANS TO CO-OPERATE WITH ROYAL COMMISSION

The following statement, dated April 11, has been received from the Royal College of Physicians.

The Royal College of Physicians at a special *comitia* to-day, after hearing the letters exchanged between Sir Russell Brain, their President, and the Prime Minister; and the President's account of his meetings with the Royal Commission and its Chairman, Sir Harry Pilkington, decided that they wished to co-operate with the Royal Commission on the remuneration of doctors and dentists.

President's Letter

According to *The Times* of April 12, Sir Russell Brain, P.R.C.P., wrote to the Prime Minister about the terms of reference of the Royal Commission on the remuneration of doctors and dentists. He asked for replies to certain questions, but made it clear that in doing so he was "not committing anyone to any particular line of action with regard to the Royal Commission."

Replying on April 11, Mr. Macmillan pointed out that "interpretation of the terms of reference is a matter for the Royal Commission and I cannot in any way formally commit it." Subject to that understanding, he answered the President's questions.

Questions

The President's questions on the terms of reference are recorded in *The Times* as follows.

(1) In clause A the term "other professions" is a vague one, since to-day there is no agreed definition of a profession. Apart from this it is difficult to see why the incomes of other callings should be treated as irrelevant to the economic and social status of the professions. Will the Royal Commission be free to take into account incomes earned not only in "professions," but also in commerce and industry, both as salaries and wages—a point of obvious importance in relation to recruitment to medicine?

(2) Clause B begins: "What, in the light of the foregoing, should be the proper current levels of remuneration?" This has been interpreted as meaning that the Royal Commission would have to limit itself to a consideration of the matters set out in clause A. The fear has been expressed that this is unduly restrictive, and that the Royal Commission having heard evidence on other matters would find that its terms of reference precluded its considerations. I have in mind the matters referred to the Spens Committees—namely, "the desirability of maintaining in the future the

proper social and economic status" of general medical practice and consultant and specialist practice, and their "power to attract a suitable type of recruit to the profession." Hours of work and the responsibility of the work undertaken are also important considerations. Would the Royal Commission be free to make recommendations "in the light" not only of clause A but also of any other evidence which the medical and dental professions might wish to present?

(3) It would seem that any recommendations about future remuneration should take into account how the present levels of remuneration have been arrived at, and this would include a discussion of the recommendations of the Spens Committees and the Danckwerts award. Would the doctors and dentists be free to put before the Commission their view that the remuneration of the professions, now and in future, should be determined on the basis of the Spens recommendations and the Danckwerts award?

(4) On March 11 in the House of Commons, Mrs. Jeger asked the Minister of Health "whether it will be within the terms of reference of the Royal Commission on doctors' and dentists' remuneration to consider the abolition of merit awards." The Minister replied: "The Royal Commission will normally be concerned with levels of remuneration, not with methods as such. Whether or not questions such as that referred to by the honourable member are within its terms of reference must rest with the Commission itself to decide." I should be glad to know whether the Commission has reached a decision on this point, and, if not, when it will have done so.

(5) There is a strong feeling in the medical profession that our colleagues in the Public Health Service should not be excluded from the scope of any review of remuneration. Do the terms of reference of the Royal Commission include them?

Answers

The Prime Minister's replies are reported as follows.

(1) It must be left to the Commission to decide what interpretation should be put on the words "other professions," but I feel sure that they would not wish to adopt any narrow interpretation or refuse to consider any callings which might be cited in evidence before them.

(2) The medical profession would be free to bring points of this kind to the notice of the Commission, and there is nothing in the terms of reference to prevent the Commission from considering them. Indeed, in order to satisfy their terms of reference they would have to consider some at any rate of them. As in the case of other evidence it would be for the Commission to decide what weight to attach to them.

(3) I feel sure that the Commission will be prepared to receive and to take into consideration any expression of views which the medical and dental professions put before them as being in their opinion relevant to the Commission's work.

(4) I cannot say what if anything the Commission have decided; if it becomes possible for them to make any statement on the matter which you raise, they will no doubt do so themselves. But I imagine that they would wish to hear evidence and to make substantial progress with their work before arriving at a view as to whether, and if so how far, their main task of recommending "proper current levels of remuneration" requires them to consider the particular matter which you mention.

Public Health Doctors Excluded

(5) The remuneration of doctors employed by local authorities is excluded from the scope of the Royal Commission's recommendations, but any claim on their behalf through the usual machinery would necessarily be considered in the knowledge of any recommendations of the Commission.

The Prime Minister concludes: "I have consulted Sir Harry Pilkington who agrees with these replies."

PUBLIC STATEMENT BY ROYAL COMMISSION

INTERPRETATION OF TERMS OF REFERENCE

Closely following on the exchange of letters between the President of the Royal College of Physicians and the Prime Minister, the Royal Commission issued a statement to the press, dated April 12, on how it intends to proceed. The statement was as follows.

In view of doubts cast on the interpretation of the terms of reference, the Royal Commission have given urgent consideration to this matter, and think it may be convenient if they announce publicly how they have decided to proceed. They have shown this statement to the sponsoring Ministers, and they understand that it is wholly consistent with the intentions formed by the Government when advising the appointment of the Royal Commission.

(1) The Spens Reports and the Danckwerts Award will be studied by the Commission, and also the Reports of any other Commissions and Committees in so far as they are relevant to the circumstances of the medical and dental professions and to the relationship of those professions to the community as a whole.

(2) The Commission will bear in mind the need for maintaining a proper level of recruitment to the medical and dental professions in competition with other callings, and will consider evidence as to conditions imposed by the nature of the work.

(3) The phrase "other professions" will be interpreted widely so as not to exclude, for example, science and other graduates in industry at all levels.

(4) The Commission are not asked to recommend remuneration for doctors and dentists employed by local authorities; but these doctors and dentists are among the "other members of the medical and dental professions" on whose remuneration evidence will be received for purposes of comparison.

(5) "Other connected occupations" cover a wide range of persons, including on the one hand hospital administrators, and on the other, nurses and medical auxiliaries, whose remuneration will be considered with special reference to differentials.

(6) The Commission will in the light of all this and any other relevant evidence recommend such "current levels of remuneration" as appear to the Commission to be justified.

(7) The Commission's duty to recommend current levels of remuneration calls for recommendations covering, for example, average incomes and the desirable spread between extremes; but it does not call for the construction of detailed schemes of distribution.

(8) After consideration of the desirable current levels of remuneration for doctors and dentists, the Commission will consider whether, and if so what, arrangements should be made to keep that remuneration under review.

In a separate notice the Royal Commission are asking all interested persons or organizations to offer evidence. Preliminary inquiries have shown that the preparation of this evidence will take some of the bodies concerned considerable time. The Commission are anxious to complete their task with the utmost speed consistent with thorough examination of all the relevant issues, and hope that all written evidence and submissions to the Commission will be in their hands within the next three months.

B.M.A. STATEMENT

The B.M.A. issued a statement on April 12, immediately following the publication of the exchange of letters between the President of the Royal College of Physicians and the Prime Minister and after receiving the Royal Commission's statement.

The Association pointed out that it had learned that day for the first time of the exchange of letters. It noted that the Prime Minister's words that "interpretation of the terms of reference is a matter for the Royal Commission, and I cannot in any way formally commit it," and the statement went on to say that the B.M.A. was advised that everything that followed in the Prime Minister's letter was conditioned by this principle. Furthermore, the mere interpretation by the Royal Commission of its terms of reference was insufficient to remedy the "omission from its terms of reference of matters vital to the profession's future." The Council would examine what the Commission had said. But

it appeared at first sight that the need—a most unusual one—for an exchange of letters and for the issue of an explanatory memorandum by the Commission emphasized the necessity for the sort of discussion between the Government and the profession on the terms of reference which the Chairman of the Association's Council, Dr. S. Wand, asked for in his letter to *The Times* (April 8) following the recent debate in the House of Lords.

Scottish News

SCOTTISH HOUSE, EDINBURGH

REOPENING AFTER RECONSTRUCTION

The Association's Scottish House at 7, Drumsheugh Gardens, Edinburgh, which has been undergoing extensive reconstruction, will be formally reopened by the President of the Association, Dr. Alexander Hall, on Tuesday, May 14, at 4.30 p.m. Tea will be served from 3.45 p.m. to 4.30 p.m. Apart from those officially invited to the ceremony there is accommodation for an additional 100 guests. Any members of the Association who would care to attend the reopening ceremony are therefore asked to apply for a ticket to the Scottish Secretary, B.M.A. Scottish House, 7, Drumsheugh Gardens, Edinburgh, 3 (telephone: Central 7184).

MEDICAL PRACTICES COMMITTEE

NEW CHAIRMAN APPOINTED

The Secretary of State for Scotland has appointed Dr. J. T. Baldwin, a former chairman of the Scottish Committee of the Association, as chairman of the Scottish Medical Practices Committee. Dr. Baldwin is at present chairman of the Lothians and Peebles Executive Council. He succeeds Dr. A. F. Wilkie Millar, who has been chairman of the Scottish Medical Practices Committee since its inception in 1948. The G.M.S. Subcommittee (Scotland) has expressed its appreciation of the services rendered by Dr. Wilkie Millar during his term of office, and of the guidance he has given to the Committee, particularly in the early days of the N.H.S.

GENERAL-PRACTITIONER REFRESHER COURSES

Information is being sent by the Department of Health to all general practitioners and assistants on the arrangements made by universities and medical schools for intensive refresher courses in 1957. Leaflets giving details of extended and short courses will be issued by universities from time to time. The conditions under which practitioners may apply for a grant for attendance at these courses, the amount of the grant and allowances, and the procedure for application are set out in the circular.

EAST SUFFOLK MEETING OF G.P.s LAST CHANCE PLEA

A meeting open to all general practitioners in East Suffolk was held recently to discuss the remuneration dispute. Dr. Alexander Brown spoke on the present situation. Reviewing the record of relations between successive governments and the profession, Dr. Brown said: "It is a sad thing that when it employs professional expert people the Government always tries to get them at cut prices. . . . There is a grave danger that if it persists in its present course medicine will cease to attract men and women of the right calibre. But perhaps it is too much to hope that a department, which in the old N.H.I. days attached greater importance to the number of ticks on record cards than to the quality and usefulness of the notes, has changed for the better. Perhaps,

saddest thought of all, it would prefer a second-rate service, controlled by Whitehall, to an independent-minded first-class service."

Coming to the present dispute, Dr. Brown said that it had arisen out of a perfectly justified request to the Ministry for the fulfilment of its promise to stick to Spens as the basis of remuneration. The actual percentage asked was not so important now as what the rejection of the claim implied. Doctors were now in the position of employees whose employer thought he could break promises with impunity. "This is our last chance to prove that we are strong and united enough to compel the employer to keep his promises. It is now a question of principle, not merely of cash." There was only one answer which could be given, concluded Dr. Brown, and that was to resign from a service "which has proved so unworthy of our devotion and not to return to it until we have an agreement which any government would find it impossible to break."

COUNTY BOROUGH OF MIDDLESBROUGH ARBITRATION ON M.O.H.'S SALARY

The County Borough of Middlesbrough refused to accept the regional appeals committee's recommendation made in October, 1955, on an appeal taken to it under the Whitley machinery by the B.M.A. on behalf of the medical officer of health of the borough. I was the only authority that refused to accept and implement a recommendation of a regional appeals committee on the salary of its M.O.H. (*Supplement*, April 7, 1956, p. 136). Not until the end of 1956, and after considerable pressure, did the authority agree to report the dispute to the Minister of Labour and National Service for arbitration. The Industrial Court to whom the difference was referred published its findings on February 22. It awarded the medical officer a salary identical with that recommended by the regional appeals committee in 1955, with similar retrospection to June, 1955, and thereafter according to the recent Whitley agreement set out in M.D.C. circular 27.

RURAL DOCTORS AND PRESCRIPTION CHARGES

COMMENTS ON RATE OF COLLECTION

In his report in the summarized accounts of the Health Service for 1955-6,¹ the Auditor General, Sir Frank Tribe, comments on the amount of prescription charges accounted for by dispensing doctors, numbering about 2,600, in rural areas. These doctors are required to collect and pay over to executive councils the statutory prescription charges. In a review of the returns of prescription charges collected by doctors in 1953, only 24 out of 47 executive councils were satisfied with the rate of collection, the report states. In 1954-5 remittances from all areas averaged about 1.8 prescription charges per patient on doctors' dispensing lists, compared with 3 per patient for the year from patients whose prescriptions were dispensed by chemists. Some cases where remittances have appeared markedly inadequate have been investigated by executive councils. The Ministry, while not satisfied that the average amount of charges per patient being remitted was adequate, had pointed out to Sir Frank Tribe, he reports, that there were various factors to be taken into account when comparing doctors' collections with those of chemists. Doctors, for example, had greater difficulties in contacting the patient. Sir Frank Tribe states that the Ministry has informed him that it proposes to remind executive councils of the need to investigate cases in which the surrender of charges appeared inadequate when some experience has been gained of the effect of the new scale of prescription charges introduced in December, 1956.

BUDGET, 1957

RELIEFS ON HIGHER INCOMES

The chief proposals for personal tax relief announced in the Budget on April 9 were:

- (1) An increase in the child allowance from £100 to £125 for a child aged 12 to 16 and to £150 for a child over 16.
- (2) The two-ninths earned income relief to be given on incomes up to £4,005 (instead of £2,025). Above that and up to £9,945 the relief will be one-ninth.
- (3) Certain income-tax allowances to be given on surtax—i.e., £100 for a wife, £100, £125, or £150 for each child, and £60 for a dependent relative or housekeeper.

The reliefs (2) and (3) will apply only to those with incomes over £2,000.

For those with incomes up to £2,000 and paying at the full rate of tax, the additional child allowance for each child aged 12 and over will mean a saving in tax of £10 12s. 6d., and for each child aged 16 and over a saving of £21 5s.

Examples of the savings in tax that will result from the Budget for those with earned incomes of over £2,000 are shown in the following table.

Income (Earned)	Tax Savings				
	Single	Married			
		No Children	2 Children Under 12 (£200 Allowance)	2 Children Over 12 Under 16 (£250 Allowance)	2 Children Over 12, 1 Over 16 (£275 Allowance)
£	£	£	£	£	£
2,250	21	31	47	67	78
2,500	45	55	75	101	114
2,750	68	80	104	130	143
3,000	92	105	130	155	169
3,250	116	133	165	193	207
3,500	139	157	192	222	237
3,750	163	181	216	245	260
4,000	186	205	240	269	284

Correspondence

Consultants and the Dispute

SIR,—In the belief that many general practitioners were critical of the inertia of the consultants and specialists, both centrally and locally, in their approach to the remuneration claim and that there was considerable risk of a widening gap between the consultants and the general practitioners, a meeting of Sheffield consultants and specialists was called on April 8, 1957. The object of the meeting was to ascertain the opinion of consultants and specialists, as it was felt that the local general practitioners would welcome such an expression of views.

The meeting was attended by over 60 consultants and S.H.M.O.s and the following resolution was passed unanimously:

This meeting of consultants and S.H.M.O.s of Sheffield wishes to identify itself with the general practitioners in their fight to maintain the proper social and economical status of the medical profession and will support them morally and financially in their proposed withdrawal from the Service.

It is hoped that the action of the Sheffield consultants and S.H.M.O.s will stimulate their colleagues in other parts of the country to be more vocal in support of the general practitioners and not to let them fight our battles for us.—I am, etc.,

Sheffield.
I. B. SNEDDON,
Honorary Secretary,
Area Consultants Committee.

Voice of Junior Hospital Staff

SIR,—In your leading article entitled "The First Decision" (*Journal*, April 6, p. 810) you expressed some disappointment because no voice was raised in protest against

the dictatorial method by which the salaries of junior hospital staff were recently raised. Surely it is because this sort of dictatorship is better than that which already exists. Most members of junior hospital staff know that if their salary adjustments had been negotiated through the Whitley Committee they would not have been represented at the discussions. Nor, if past experience is any guide, would they have even been consulted. If the B.M.A. and this *Journal* are to hold this view, it is time that internal adjustments are made in order to allow this group of doctors full and proper representation at the level of Whitley negotiation.—I am, etc.,

Wrightington, Lancs.

R. M. FORRESTER.

SIR,—The leading article entitled "The First Decision" (*Journal*, April 6, p. 810) chiding the lack of response of registrars to the Government's side-stepping of Whitley B in awarding a 10% increase in salary to junior hospital staff is highly provocative. Most junior staff recollect the results of the recent negotiations on pay and conditions of service negotiated on our behalf by the B.M.A. through Whitley B, in which an arbitrary scale of board-and-lodging charges was arranged without any safeguards as to the service to be provided. Registrars have no direct representation on the Whitley B or the joint negotiating machinery, so that the recent pay rise has not side-stepped any registrar machinery, because no such machinery exists.

The lack of protest can only be taken as a sign of the ill health of the B.M.A., not of the Health Service. Perhaps when we are allowed to conduct our own negotiations with the Ministry of Health rather than have them conducted for us by the Central Consultants and Specialists Committee we will be more vociferous.—I am, etc.,

London, W.C.2.

J. F. PATRICK.

Organization of General Practice after Resignation

SIR,—Having read the outline of the alternative scheme in the event of resignation from the N.H.S. (*Supplement*, March 23, p. 125), and attended the conference of Honorary Public Relations Secretaries at which this was explained, I would like to express my extreme disquiet at certain aspects of it.

The principal thing is the question of payment for prescriptions. Supposing an average working man or a member of his family were to require treatment with tetracycline for five days at home, say, for pneumonia, the patient would have to find £2 19s. 3d. immediately in order to obtain 24 250-mg. capsules from the chemist. It is extremely doubtful whether any chemist would hand over drugs of this value without having the money immediately. To say that the patient could attempt later to recover the cost from the Government is dodging the issue. The immediate question would be finding this amount of money, which I think all of us must realize would be an impossible task for very many of our patients and could fairly be regarded as almost a withholding of treatment by the doctor. The obvious way out of this would be for doctors who have resigned from the scheme to be permitted to supply such drugs at their discretion and recover the cost from the central defence fund. This question was raised at the conference of public relations officers, and the questioner was told that this would not be permitted. I doubt very much if our leaders can have considered adequately the implications of this decision. If they have, and this is their verdict, they are completely out of touch with reality.

My other criticism is of the scale of proposed charges. However uneconomic they may be to the doctor, I am sure they will appear high to patients, at least in the poorer areas. Since we are allowed to lower or even omit the charges at our discretion, it would surely have been a wise move to make the scale much lower, with a free hand to increase them in the case of patients whom we know can afford to pay a higher fee. There seems no reason why the levy of 3d. per patient per quarter in support of the central defence fund should not be increased to make up for the lower

charge. The gain in public support would more than compensate for this.

I think both these matters can be put right without any loss of face, and without them I cannot believe that we shall win the public to our side. It appears that in their anxiety to make a scheme palatable to doctors there has been a tendency for members of Council to forget the even more important question of duty to our patients.—I am, etc.,

London, W.11.

J. TUDOR-HART.

Consultant Appointments

SIR.—Since trade union practices are in the news, may I point out a closed shop that is developing in our own profession? I refer to geographic discrimination in appointing consultants, especially in the major specialities.

I am not seriously opposed to nepotism at the hospital level (I am in a position here to speak without bias). A preference for the devil you know underlies the whole community structure of mankind. What is more invidious is the tendency in some quarters to replace this type of nepotism, now frowned on officially, by a regional variety. The surgical consultant appointment at the Royal Somewhere Infirmary, for example, now tends to go to Sir Aloysius Pursestring's senior registrar at St. Mildew's, who is next in line in the region for a job. The others are easily disposed of (too old, too young, too academic, not academic enough, too meek, too aggressive, been to the States, not been to the States, they don't take our chaps why should we take theirs, etc.). I have no statistical proof, but a strong impression that this exclusiveness flourishes most in the neighbourhood of our capital cities.

If one works in a "liberal" region, one is additionally frustrated, to put it mildly, to find Sir Aloysius's other senior registrars (of whom he seems to have an inexhaustible supply) coming to one's own humble backyard and picking up jobs under the noses of the local teaching hospital registrars, not one of whom has even been short-listed in Sir Aloysius's region within living memory. This unfair one-way traffic should be stopped—not by closing the doors, but by opening them, so that there is genuine instead of merely nominal country-wide competition for every single vacancy. Seriously, I feel that such a policy would be beneficial, not only to frustrated candidates, but also in the long run to the regions themselves. Parochialism, even of the very highest standard, is always eventually stultifying. I should be grateful, Sir, if you would preserve my anonymity while I continue the search for employment.—I am, etc.,

"CONSULTANT CANDIDATE."

Reform of Health Service

SIR.—The present claim for a 24% increase in general-practitioner remuneration would meet with more public sympathy and support if it were linked with a scheme to improve present-day general practice. If patients were allowed longer and unhurried consultations much of the pressure on the hospital service would be eased and once more the status of the general practitioner would rise. Many ex-private patients and doctors blame the N.H.S. and the capitation system. I do not—I blame the system of distribution of the capitation fees which at present encourages the amassing of large lists of patients (head-hunting). If the maximum permitted size of lists were reduced and the payments heavily loaded in favour of lists of one to two thousand patients, doctors would have more time per patient, and the odd patient who at the moment is given certificates or prescriptions to prevent him leaving the practice would lose his power. The drug bill would fall as education supplemented medication and replaced placation—a result which would interest any Minister of Health in any scheme.—I am, etc.,

Basildon, Essex.

R. T. JONES.

SIR,—I was very interested in the letter from Dr. R. D. France, late of Kingsbridge, about the abuse by patients

its timing, on the opinion of the public. Having formulated the plan, let us postpone putting it into action for twelve months. This will give time for much further thought as well as being a good example to all citizens who are aware of the dangers of inflation. If there are cases of hardship let them during the next twelve months be dealt with by adjustments inside the British Medical Association.—I am, etc.,

Broadstairs, Kent.

MARTIN O. RAVEN.

SIR,—The recognized method of settling trade disputes affecting rates of pay or conditions of service is through the machinery of trade unions. If negotiations between trades unions and employers break down, or if the employers refuse to negotiate, meetings of branches of the unions are called, and on a majority vote strike action is decided upon. If a strike is recognized, and indeed recommended by a trade union, and accepted by a majority vote of the men, every worker has to abide by the decision of the majority even though he may not agree with the majority. Workers in allied trades usually strike in sympathy. No regard is paid to the hardship or dislocation caused to the general public, and the strikers believing in the justice of their cause are prepared to suffer hardship too.

We in the medical profession are not organized in trade unions, and therefore cannot go on strike. We can, however, resign from the National Health Service. Cannot we show the same spirit of solidarity, discipline, and comradeship as do ordinary workers? If the majority of doctors decide to resign, is it too much to ask the minority to resign too? Should not the specialists and consultants actively support their colleagues? I deprecate the "jelly-fish" attitude of our leaders, who are afraid to upset the general public or dislocate the medical services. There should be total and not gradual withdrawal from the Service. A complete stoppage of medical services on a contractual basis (apart from emergency work in hospitals) would end the dispute in a week or at the most two. Disciplinary action should be taken against those doctors who refuse to stand by their colleagues or who refuse to "freeze" their lists until the dispute is settled. Of course there will be hardship both to patients and to doctors. But you cannot make omelettes without breaking eggs.—I am, etc.,

London, N.10.

BRITISH MEDICAL GUILD

Meetings to be Held

A meeting of the Trustees of the British Medical Guild will be held at B.M.A. House on Wednesday, May 1, immediately following the meeting of Council of the B.M.A.

NORTH MIDDLESEX (HORNSEY AREA).—At Board Room, Hornsey Central Hospital, Park Road, N., Wednesday, April 24, 9 p.m.

Association Notices

Diary of Central Meetings

APRIL

- 24 Wed. Finance Committee, 2 p.m.
 25 Thurs. Central Ethical Committee, 2 p.m.
 25 Thurs. Joint Committee of the B.M.A. and the Magistrates' Association, 2 p.m.
 26 Fri. Venereologists Group Committee, 2 p.m.
 26 Fri. Welsh Committee (at Raven Hotel, Shrewsbury), 2.15 p.m.
 30 Tues. Special Conference of Local Medical Committees, 10 a.m.

MAY

- 1 Wed. Special Representative Meeting, 10 a.m.
 1 Wed. Council (to follow Special Representative Meeting).
 8 Wed. Council, 10 a.m.
 9 Thurs. Trustees of the Dain Fund, 1 p.m.
 16 Thurs. G.M.S. Committee, 10.30 a.m.

Branch and Division Meetings to be Held

BOURNEMOUTH DIVISION.—At Board Room, Royal Victoria Hospital, Boscombe, Friday, April 26, 8.15 p.m., meeting. Address by Dr. C. Justin Clark: "Steroid Treatment in Common Medical Disorders."

EASTBOURNE DIVISION.—At Princess Alice Memorial Hospital, Eastbourne, Tuesday, April 23, 8.30 p.m., meeting. B.M.A. Lecture by Dr. Ffrangcon Roberts: "The Influence of Medicine on Social Life."

EAST NORFOLK DIVISION.—At Museum, Norfolk and Norwich Hospital, Wednesday, April 24, 8 p.m., meeting.

GUILDFORD DIVISION.—At Board Room, Royal Surrey County Hospital, Saturday, April 27, 6.30 to 8.30 p.m., sherry party for doctors and their wives.

HUDDERSFIELD DIVISION.—At Huddersfield Royal Infirmary, Friday, April 26, 8.30 p.m., meeting. B.M.A. Lecture by Dr. Michael Ward: "Conquest of Everest."

NORFOLK BRANCH.—At Nurses' Lecture Hall, Norfolk and Norwich Hospital, Saturday, April 27, 6 for 6.30 p.m., meeting. Address by Mr. Ian Fraser: "Medical Practice in the Soviet Union." Ladies and guests welcome.

NORTH MIDDLESEX DIVISION.—At Committee Room, North Middlesex Hospital, Silver Street, Edmonton, N., Friday, April 26, 8.30 for 8.45 p.m., special meeting to discuss report of Council on remuneration issue.

NORTH-WEST WALES DIVISION.—At Royal Hotel, Caernarvon, Saturday, April 27, 7 p.m., annual general meeting, followed by a dinner, to which ladies and guests are invited. Discussion: "The Work of Her Majesty's Coroner." Guest speaker, Mr. E. Lloyd-Jones.

SOUTH BEDFORDSHIRE DIVISION.—At Board Room, Luton and Dunstable Hospital, Friday, April 26, 9 p.m., meeting to discuss Report of Council on remuneration issue.

SOUTH-EAST ESSEX DIVISION.—At Garon's Banqueting Hall, Friday, April 26, 8.30 p.m., buffet dance.

SOUTH ESSEX DIVISION.—(1) At Railway Hotel, Hornchurch, Tuesday, April 23, 9 p.m., special meeting. (2) At Nurses' Lecture Theatre, Oldchurch Hospital, Romford, Friday, April 26, 9 p.m., meeting. Lecture by Dr. Alexander Russell: "Some Endocrine and Growth Problems in Childhood and Adolescence."

TOWER HAMLETS DIVISION.—At St. Andrew's Hospital, Devons Road, Bow, E., Friday, April 26, 3 p.m., meeting. Mr. E. T. Bailey: "Backache."

WESTMINSTER AND HOLBORN DIVISION.—At Charing Cross Hospital, W.C., Saturday, April 27, 2.30 p.m., clinical meeting.

Meetings of Branches and Divisions

BIRKENHEAD AND WIRRAL DIVISION

A meeting was held on February 8, 1957, at the Arrowe Park Hotel. Dr. I. M. Lipsedge took the chair and 38 members and their ladies attended. The guest speaker, Mr. Hendrie D. Oakshott, gave an address on the constitutional history of Parliament and his own activities as Government whip and member of the House.

SPECIAL REPRESENTATIVE MEETING

SUPPLEMENTARY REPORT OF COUNCIL

THE DISPUTE ON REMUNERATION

At a special meeting held on April 17 the Council considered recent developments in connexion with the Royal Commission on doctors' and dentists' remuneration—the debate in the House of Lords on April 5 on the terms of reference of the Commission; the letter published in *The Times* of April 8 in which the Chairman of Council made a fresh appeal to the Government to engage in discussions about the matters in dispute with the profession; the correspondence between Sir Russell Brain and the Prime Minister, published on April 12; the subsequent decision of the Committee of the Royal College of Physicians to co-operate with the Royal Commission; and the public statement issued by the Commission and published on April 13. The Council received also a report of the decision of the Government, announced by the Prime Minister on April 16, to increase by 5% from May 1 the basic remuneration of senior hospital medical and dental staff and the aggregate net remuneration of general practitioners.

These matters, and certain later developments, are fully recorded in the supplementary report of the General Medical Services Committee to the Special Conference of Representatives of Local Medical Committees. The supplementary report of the G.M.S. Committee was not available when the Council met, but, by authority of the Chairman of Council, it is appended to this supplementary report of the Council in order that the Representative Body may have up-to-date information about the position.

Having carefully reviewed the situation as it existed on April 17, the Council considered that the changes which had occurred did not provide sufficient reason to alter its recommendations to the Representative Body. It welcomed the letter of the Chairman of Council in *The Times* of April 8, and expressed approval of the Chairman's continuing efforts to bring about conditions in which a satisfactory and peaceful settlement of the dispute might be achieved.

GENERAL MEDICAL SERVICES COMMITTEE

SUPPLEMENTARY REPORT TO SPECIAL CONFERENCE OF LOCAL MEDICAL COMMITTEES*

Recent Developments in Remuneration Claim

The General Medical Services Committee met on April 17 and 18 to consider certain new developments in the remuneration dispute which had taken place since its report to the Special Conference of Local Medical Committees (*Supplement*, March 23, p. 123).

These new developments are as follows.

Chairman of Council's Letter

On April 8 a letter from the Chairman of Council, Dr. S. Wand, was published in *The Times*. He wrote:

May I say, on behalf of the Council of the British Medical Association, how warmly we concur in Lord Jowitt's plea in the House of Lords yesterday that there may be acceptance "far more generally of the principle of arbitration rather than resort to force, pressure, and the like, to win desired ends" in the present dispute between the medical profession and the Government?

May I add that the medical profession is as anxious as the Lord President of the Council that it should be enabled to "move away very shortly from an atmosphere of distrust and accusations of bad faith." It is unfortunate that Lord Moran's appeal for arbitration machinery which could provide the necessary basis for a full examination of the problem went unheeded by the Government, and that he was compelled to say at the end of the debate, "I go away profoundly apprehensive about the future."

Lord Jowitt, in reference to the Royal Commission, pointed out that if the doctors were not reasonably satisfied with the terms of reference under which the arbitrators were going to sit they were not really being given the benefit of arbitration. He went on to say:

"I would beg the noble Earl the Leader of the House to use his influence, as has been done several times, in my knowledge, so that where the terms of the remit are found inadequate to embrace the whole dispute they may be enlarged. That should not be done by letters but regularly, enlarging the terms of the remit and putting the whole matter before the arbitration tribunal."

*The report, of which this is a slightly abridged version, was posted to chairmen and secretaries of local medical committees and to conference representatives on April 20.

He ended by expressing the hope that both doctors and Her Majesty's Government would set an example of reasonableness. I am confident that my Council would respond to such an example on the part of the Government. The matters in dispute are such as reasonable people would normally expect to discuss round a table. I once more ask that the Government should engage with us in such discussions.

Sir Russell Brain's Questions

The following report appeared in the later editions of *The Times* of April 12:

Sir Russell Brain, President of the Royal College of Physicians, wrote on April 5 to the Prime Minister about the terms of reference of the Royal Commission on the remuneration of doctors.

In his letter he said he would be grateful for replies to certain questions, but made it clear that in sending them "I am not committing anyone to any particular line of action with regard to the Royal Commission."

The questions put by Sir Russell Brain and the Prime Minister's answers were published in full in the *Supplement* of April 20 (p. 218).

Statement by Royal College

On April 12 the following statement was issued by the registrar of the Royal College of Physicians:

The Royal College of Physicians at a special Comitia to-day, after hearing the letters exchanged between Sir Russell Brain, their President, and the Prime Minister, and the President's account of his meetings with the Royal Commission and its chairman, Sir Harry Pilkington, decided that they wished to co-operate with the Royal Commission on the remuneration of doctors and dentists.

Statement by Royal Commission

On April 12 the Royal Commission issued a statement to the press indicating how it intended to proceed with its work. The Commission hoped that this would clear up some of the doubts about the interpretation of the terms of reference. The Commission's statement was published in the *Supplement* of April 20 (p. 219).

B.M.A. Comment

The exchange of letters between the President of the Royal College of Physicians and the Prime Minister, and the public statement by the Commission, were referred to in the following statement which was issued by the Association to the press.

The B.M.A. has learned to-day for the first time that there has been an exchange of letters between Sir Russell Brain, the President of the Royal College of Physicians, and the Prime Minister about the terms of reference of the Royal Commission on the remuneration of doctors and dentists.

The Prime Minister in his reply said:

"Interpretation of the terms of reference is a matter for the Royal Commission, and I cannot in any way formally commit it."

The Association is advised that everything which follows in the Prime Minister's letter is conditioned by that overriding principle. The mere interpretation by the Royal Commission of its remit is insufficient to remedy the omission from its terms of reference of matters vital to the profession's future.

The Association has just seen the Commission's statement of how it has decided to proceed with its task. The Council of the Association will, of course, examine this statement.

It would, however, appear at first sight that the need—a most unusual one—for an exchange of letters and for the issue of an explanatory memorandum by the Commission emphasizes the necessity for the sort of discussion between the Government and the profession on the terms of reference which the Chairman of the Association's Council, Dr. S. Wand, asked for in his letter to *The Times* (April 8) following the recent debate in the House of Lords.

Interim Adjustment

On April 16 the Prime Minister made the following statement in the House of Commons.

I wish to make a statement on the remuneration of doctors and dentists.

Before the Royal Commission was appointed I explained that its appointment did not preclude an interim adjustment in ad-

vance of and without prejudice to its recommendations. An adjustment was made in the remuneration of junior hospital staff, both medical and dental, at the beginning of this month, when their remuneration was increased by 10%. In announcing this increase I said that we were considering what should be done by way of an interim adjustment for the other doctors and dentists covered by the Commission's terms of reference. The Government have now decided to increase the basic remuneration of senior hospital medical and dental staff, including consultants and specialists, and all dentists engaged in general dental service, by 5% from May 1 next, and from the same date to add 5% to the aggregate net remuneration of general practitioners—that is, remuneration after the deduction of practice expenses. We propose to consult representatives of the profession as to the best method of distributing this sum between individual practitioners. In the meantime, the Royal Commission have been asked to regard their work as a matter of urgency and they have in fact already, I understand, held six meetings. I hope that the letters I have exchanged with the then President of the Royal College of Physicians, together with the statement issued by the chairman of the Royal Commission, will reassure those who have expressed concern about its terms of reference. I hope now that all concerned will turn their efforts to the task of working out a satisfactory basis for future remuneration and for keeping it under review.

Following the developments outlined above, the Council of the Association at its meeting on April 17 authorized its chairman to engage in discussions with the Minister of Health and the chairman of the Royal Commission in the hope of reaching a peaceful settlement of the dispute.

Latest Developments

In the last few days the Chairman of Council has met Sir Harry Pilkington, chairman of the Commission, on three occasions, once in consultation with the Minister of Health. As a result of this further exchange of views, the Committee is now able to give a clearer picture of what the Royal Commission has in mind and the way in which it proposes to proceed with its task.

In the first place, the chairman of the Commission has offered the following additional statement.

That part of the Royal Commission's task that consists of considering what should be the proper current levels of remuneration of doctors and dentists will include hearing submissions from those professions as to the remuneration which they are now claiming.

At the same time the chairman has made it quite clear that the Commission does not and will not regard itself as an arbitrating or adjudicating body.

Secondly, the chairman of the Commission is writing a letter to the Association of which the material part will be as follows:

It is in the mind of the chairman of the Commission that if it becomes unlikely that evidence can be obtained in time for a report to be published by Easter, 1958, he would so inform the Government and the other interested parties.

These further statements by the chairman of the Commission are to be regarded as having the same force as the public statement issued by the Commission on April 12.

The Committee has also been informed of a further exchange of views between the Chairman of Council and the Minister of Health about the position of doctors in the public health service as a result of which the following letter (April 17) has been written to the Chairman of Council by the Minister.

I told you yesterday morning that I had given much thought to the position of public health medical officers before deciding that their inclusion in the terms of reference of the Royal Commission would cause overwhelming difficulties for all concerned.

I am, however, satisfied that any settlement for National Health Service doctors following the report of the Royal Commission could not fail to be taken into account in considering the position of the local authority doctors. A claim on their behalf through the normal machinery would of necessity be considered in the knowledge both of the Royal Commission's report and of the subsequent settlement, and I am confident that due consideration would be given to both these factors.

Should you at a later date wish to make further representations, I would, of course, consider them.

Committee's Decision

The Committee, anxious as it is to find a peaceful solution to the dispute, has given most earnest consideration to all these new developments. It has taken legal advice on the implications of the statement issued by the Royal Commission and has re-examined its recommendations to the special conference in the light of the position as it now stands.

First, it must be emphasized that the claim has still not been discussed and the so-called adjustment of 5% in general-practitioner remuneration has been unilaterally decided and not negotiated. Arbitration is still refused.

So far as the Royal Commission is concerned, the recent statements only confirm that the Commission is concerned solely with the introduction of new rates of remuneration and in no way with the determination of the fundamental issues now in dispute.

For these reasons the Committee has concluded that the position is fundamentally unchanged and has reaffirmed its previous recommendations to the special conference, which will take place on Tuesday, April 30, as arranged.

Interim Adjustment

The Committee has considered what action should be taken with regard to the Government's decision to make an interim adjustment of 5% in the net remuneration of general practitioners, and makes this further recommendation to the special conference.

That the Minister of Health be informed that, pending a final and satisfactory settlement, it is the wish of the conference that the 5% net increase to the aggregate net remuneration of general practitioners, arbitrarily decided upon by the Government, should be placed in a suspense account.

Chair of the G.M.S. Committee

The Committee wishes to report to the special conference that, because of a sincere difference of opinion between the Chairman and the Committee on the future course of the medico-political policy, the Committee decided that, in the circumstances, it was better for Dr. Talbot Rogers to relinquish his chairmanship.

Dr. Rogers agreed that this was the right and proper course for him to take, and Dr. A. B. Davies has been appointed Chairman for the remainder of the session. A more detailed account of this matter appears in the report on the special meeting of the G.M.S. Committee in this *Supplement* (see next column).

Summary

The Committee regrets that it should be necessary to issue this supplementary report at such short notice, but it feels certain that local medical committees will wish to have an authoritative statement on the Committee's appraisal of the present position.

Above all, the Committee wishes local medical committees and representatives to the special conference to be left in no doubt as to its firm conviction that its previous recommendations must stand until such time as the Government shows its willingness to negotiate or arbitrate upon the matters now in dispute.

NEW CHAIRMAN OF G.M.S. COMMITTEE

At its meeting on April 18 the General Medical Services Committee elected Dr. A. B. DAVIES to the chair for the remainder of the session in succession to Dr. A. Talbot Rogers.

The Committee then proceeded to discuss the latest developments in the remuneration dispute. The conclusions it reached are set out in the supplementary report to the special conference which is published at page 225 of this *Supplement*.

GENERAL MEDICAL SERVICES COMMITTEE

SPECIAL MEETING

A special meeting of the G.M.S. Committee was held in the morning of April 17 to consider recent developments in the remuneration dispute. Dr. A. TALBOT ROGERS was in the chair.

At the outset of the meeting Dr. F. GRAY raised the question of the views expressed by the chairman in putting forward the Committee's policy to the Negotiating Committee at its meeting on March 26 and to the Council of the Association on March 27. Dr. Gray said he realized that the views held by the chairman were perfectly genuine and sincere, but they were not the views of the Committee, and at this grave hour it was essential that the Committee should have a chairman who fully supported its policy and who was prepared at all times to put the Committee's case forward in the most cogent terms.

The CHAIRMAN said he had made it clear at the previous meeting of the Committee that he would feel it his duty to inform the Council of his own views about co-operation with the Royal Commission, in so far as they were derived from his personal contact with the Prime Minister and the Minister of Health, and he in fact put forward the arguments on both sides so that the Council should have an objective account of the matter. If the Committee felt that he had done more than he was entitled to do he was prepared to vacate the chair. He had himself considered resigning the chairmanship, but he felt that this was not the time for the Committee to change its chairman in view of the public reaction, which could well damage the profession's case.

At this point Dr. Rogers vacated the chair to enable the Committee to discuss the matter in his absence. The chair was taken by the Chairman of Council. The Committee then proceeded with its business *in camera*.

At the end of the private session it was announced to Dr. Rogers that the Committee had decided to ask him to relinquish the chair, coupling with it a vote of thanks to him for his services to the profession and the Committee. The vote of thanks was carried with acclamation. Dr. Rogers expressed his regret at leaving the chair at such a moment, but said he felt that it was in the best interests of the Committee that he should do so. He thanked the Committee for its expression of appreciation.

Remuneration Dispute

The CHAIRMAN OF COUNCIL reported that he had been invited by Sir Harry Pilkington to meet him particularly for the purpose of explaining the reasons for the Council's recommendation against co-operation with the Royal Commission, and he had done so on March 29 with the Council's approval.

On April 8 *The Times* had published a letter from him in which he had stated that the matters in dispute were such as reasonable people would normally expect to discuss round a table. He was confident that the Council would respond to any example of reasonableness on the part of the Government, and he asked once again that the Government should engage with the profession in such discussions.

Subsequently Dr. Wand said he, in company with Dr. Rogers and Sir Russell Brain, had received an invitation to see the Minister of Health. Mr. Vosper had merely informed them of the Government's decision to give an interim increase of 5% in remuneration. They had been told that this decision was final and was not open to discussion (apart from its distribution). They had also been informed that the terms of reference of the Royal Commission would not be altered and that the Commission itself would be going ahead with its plans whether the profession decided to give evidence or not.

As regards the position of public health medical officers, the Minister had said that they would have an opportunity of negotiating through their Whitley Council procedure in

The conference accepted resolutions from Wandsworth and Battersea and York recommending that rehabilitation of disabled workers should, wherever possible, take place

within the industry where they were normally employed and urging the Ministry of Labour to encourage the setting up of places of work within industry to provide suitable employment for the disabled. Mr. NIX pointed out that a few large firms had set up rehabilitation workshops.

Dr. J. J. O'DWYER said that it was necessary to get away from the idea that all employers wanted a man to be absolutely fit. It was the constant endeavour of all to ensure that the patient came back to some kind of work as soon as possible, of a kind which gave him satisfaction. Dr. J. B. BLOMFIELD (Leeds) felt that more smaller firms should get together and form units to tackle the problem.

Mr. J. B. LONGMUIR (Institute of Personnel Management) said that the disabled worker should be "prodded" and given progressive work. There was no reason why the injured worker should not be persuaded to try the small firm, where he would have sympathetic understanding and a fair amount of attention. Mr. H. RAMSDEN (York) advocated financial assistance to firms to set up "teaching places" where a disabled person could be taught within industry.

Two difficulties were mentioned by Mr. C. C. HOLT (York): higher management prepared to recognize that, for establishment purposes, where there was a disabled person there might be only half a person; and who was to do the work when the handicapped person had to be away? He thought that the medical profession was doing a good job, and he wanted to see management and trade unions come up to the same standard.

Certificate of Partial Fitness

Wandsworth and Battersea asked for an expression of opinion that a person's return to work after disablement should not be dependent upon a medical certificate of fitness to resume full employment, but that the principle of certification of partial fitness for part-time employment should be adopted.

Dr. BOYES disclaimed any suggestion of an attempt to get a person back to work earlier than was desirable or reasonable, or any implied attempt to exploit the sick worker. He was concerned only with the welfare of the worker. In the case of an industrial rehabilitation unit the medical certificate required was not that the person was fit for work, but that the unit doctor considered he was likely to be fit at the end of the rehabilitation course. Were the difficulties of partial fitness certification for industry so great that they should be allowed to outweigh the advantages of gradual rehabilitation? There were many occasions when a G.P. would be willing for a patient to return part-time, and Dr. Boyes thought that many employers would accept people on that basis.

Mr. STEVENS thought that the Percy Report justified the stand which the T.U.C. had taken over this. It was dangerous to cut across the principles of the national insurance scheme. Mrs. M. ILLINGWORTH (Leeds) still felt that this was something which could come about. In a large organization employees who had been injured or had had an operation were taken back in a part-time capacity on their own job, if suitable, or a lighter one. She appreciated that it would be more difficult in the smaller firms.

Mr. J. H. F. LUDGATE (Ministry of Pensions and National Insurance) pointed out that there would be administrative difficulties over assessment, provision of medical supervision at work, and National Insurance. He queried whether the result would justify the additional administrative costs.

Dr. BLOMFIELD said that general practitioners were often faced with the person who was off work for a few weeks and who could very well go back if he could be employed part-time; it would be in the patient's interest to do so. Dr. RIDDOLLS (York) said that, with the co-operation of the industrial medical officer, in certain firms a man was taken on part-time at a job within his capacity. Mr. R. TYLER (Leeds) remarked that the Act was as hard to shift as the Rock of Gibraltar.

The motion was carried with one vote against. (Observers were precluded from voting.)

Education about Epilepsy

Moving a resolution from York and District, Dr. RIDDOLLS said that a more intensive effort was necessary to inform sufferers from epilepsy of the nature of their disability and to encourage them to secure medical treatment. Many could be controlled efficiently and perform ordinary jobs in industry. Dr. Riddolls called for education on the lines of the "Hurt Mind" programme on television by using modern techniques of radio and television and other methods of public propaganda.

In the discussion on the motion, which was carried, mention was made of the British Epilepsy Association's film *People Apart*, available for showing, and the Ministry of Labour's leaflet for employers and workpeople. It was pointed out that epileptics were employed in Remploi and had been found posts by the Ministry of Labour, but there were a large number of unemployed at the moment.

Summing Up

Dr. VAUGHAN JONES, chairman of the Occupational Health Committee of the B.M.A., summed up the deliberations of the conference. He expressed disappointment that more advisory councils on occupational health had not been set up. It had been stated that these suffered from being advisory and not executive. But in many ways he thought that their present status was an advantage. If they were executive it might become difficult so far as the employers and trade unions were concerned.

Mr. RAMSDEN moved a vote of thanks to the chairman; to the B.M.A. for their hospitality—those attending the conference were entertained to luncheon and tea by the Association; and to Dr. S. J. Hadfield (Assistant Secretary).

PUBLIC HEALTH COMMITTEE

The Public Health Committee met on April 12 at B.M.A. House, with Dr. JOHN B. TILLEY in the chair.

Remuneration Claim

The DEPUTY SECRETARY (Dr. D. P. Stevenson) referred to correspondence which appeared in *The Times* of the same date, between Sir Russell Brain and the Prime Minister (*Supplement*, April 20, p. 218). Sir Russell Brain asked a number of questions of the Prime Minister, one of which was as follows:

There is a strong feeling in the medical profession that our colleagues in the Public Health Service should not be excluded from the scope of any review of remuneration. Do the terms of reference of the Royal Commission include them?

According to the report in *The Times*, the Prime Minister's reply to that question was:

The remuneration of doctors employed by local authorities is excluded from the scope of the Royal Commission's recommendations, but any claim on their behalf through the usual machinery would necessarily be considered in the knowledge of any recommendations of the Commission.

Astonishment was expressed at the fact that Sir Russell Brain had written to the Prime Minister "off his own bat" upon a matter which vitally concerned the Committee's interests. Many members were concerned at the lack of reference to the position of medical officers in the public health service in the document sent to Members of Parliament (*Supplement*, April 6, p. 150).

Dr. TILLEY said that it might be as well to circulate a further document among Members of Parliament pointing out the inconsistency of the Government's attitude. The Government had quite carefully chosen a form of words and they were now disavowing their own words. The words of the terms of reference were now being given a different meaning.

After further discussion it was agreed to recommend to Council that further action should be taken forthwith to

ensure that the present position was appreciated, and Members of Parliament should be given a critical condemnation of the Government's interpretation of the terms of reference.

Notification of Infectious Diseases

Dr. TILLEY reminded the Committee that a resolution had been passed by the A.R.M., 1955, asking that a review of the legislation concerning infectious diseases should be carried out. The Committee had postponed action itself until it had received a formal expression of opinion from the Society of Medical Officers of Health. But no document had been received from that body.

After some discussion it was decided to appoint a sub-committee to go into the whole subject. The following members were appointed: The Chairman; Drs. J. Kelman, J. F. Warin, J. Alun Evans, H. D. Chalke, Llywelyn Roberts, and J. B. S. Morgan, with power to co-opt.

Draft Circulars

The Committee went on to discuss a draft Ministry of Health circular on immunization against diphtheria and whooping-cough. Dr. CHALKE felt it was premature to issue the circular in its present form. There appeared to be an element of panic in it, and, indeed, many of the statements were misleading. It was agreed that the Committee's comments should be sent to the G.M.S. Committee, which was also studying the draft circular.

The Committee also considered a draft circular on poliomyelitis vaccination.

Whitley Committee C

The Committee received reports on the implementation by 99.5% of local authorities of M.D.C. Circular 27, and by 94% of M.D.C. Circular 33. Five appeals had been successfully concluded under Whitley procedure: two at local level, two at regional level, and one was taken to Committee C. Four appeals were awaiting a hearing.

The Committee received reports from the Staff Side of Committee C on the remuneration of medical referees to crematoria, annual leave, subsistence allowances, and sick-pay schemes (M.D.C. Circulars 30 and 31).

Public Health Service Defence Trust

A meeting of the Trustees was held during the afternoon, and dealt with formal business.

MEDICINE IN THE BALANCE

DISCUSSION AT FELLOWSHIP DINNER

After a dinner at the Kensington Palace Hotel on April 12, with Dr. R. HALE-WHITE in the chair, the Fellowship for Freedom in Medicine discussed "Medicine in the Balance." Mr. GILBERT LONGDEN, M.P.; Mr. LINDSAY-FYNN, a member of the Board of Governors of the Royal Free Hospital; and Mr. R. MURLEY opened the discussion.

Freedom from Dictation

In the course of his introductory remarks the CHAIRMAN said that the Fellowship's view of the present dispute with the Government was that it went far deeper than remuneration. The bare fact was that the Government was jettisoning a part of an agreement made in 1948 because it was found to be inconvenient. Surely this was dictation. "If found to be inconvenient. Surely this was dictation. 'how can one partner in the agreement dictated,' he asked, 'how can the other be free?' This was where the Fellowship came in. It was utterly opposed to the methods the Government was adopting. There were some who said that squabbles about money were injuring the dignity of the profession. 'The N.H.S. has already robbed us of most of our dignity,' specially those in general practice, and surely," Dr. Hale-White said, "meek submissiveness to dictation would

scarcely tend to add to the little we have left. On the contrary, once we have submitted to this kind of treatment all our freedom and all our dignity would be gone for ever."

Dr. Hale-White announced that the Fellowship was shortly to publish its scheme for a reformed health service. It would be found that the scheme aimed to restore the highly contagious quality of enthusiasm to the doctor and his patient. It aimed to give the patient the feeling that once again he was an individual. It would also ensure that disputes, like the present one, could not arise in future.

Certain of the scheme's features would undoubtedly be criticized, Dr. Hale-White opined, but he found encouragement in looking back over the years of the Fellowship's life and recalling how it used to be regarded by most people as a body of stick-in-the-mud diehards. "And yet one after another of our policies has now become accepted as 'musts' for the future by the thoughtful among the public and the profession."

State's Business

Mr. LONGDEN said that the nation's bill of health was much cleaner but it was also much bigger. It was, however, a bill worth paying if it achieved its object of seeing to it that no one should get worse only because he could not afford to get better.

Was this admirable object being achieved? Was the medical profession in danger of losing its traditional unselfish integrity and coming to treat National Health patients as if they were privates in an Army sick parade? Was the State interfering too much? It was inevitable that he who paid the piper tended to call the tune, and, having made it the State's business to care for health, it must be conceded the right to mind its business. But that did not include the right to mind the doctor's.

Mr. Longden was sure the Fellowship was right in believing that the best possible safeguard against such a calamity was a healthy private sector in medicine which could act as a yardstick and as a spur. "You accuse the Government of giving no encouragement to private practice," he said. "You believe that one way to encourage it would be to let private patients enjoy the privilege of obtaining prescriptions on the same terms as National Health patients. Yet a year has now passed since a Conservative Minister of Health said that such an idea was not repugnant to Conservative political thought and invited the B.M.A. to take part in detailed discussions with his Department to examine it. That invitation still awaits a reply."

Mr. Longden hoped to be told that night precisely what else was expected of the Government.

Time for Reform

Mr. MURLEY, pursuing the theme of the discussion, said the greater the number of doctors in the National Health Service and the greater the amount of their income derived from it, the heavier was the load on the Exchequer, the greater the inflationary tendency of the Service, the more acute the sense of frustration among doctors, and the more political medicine must become. Anything which restored and encouraged private practice, and which made patient, doctor, and institution less dependent on the State, must make for greater contentment and economy. The Fellowship was certainly no less determined than the B.M.A. that the doctor should be adequately paid for the work he did in a State service. Where they differed, however, was in their advocacy of a type of organization which, by fostering independent practice, would relieve the burden on the Exchequer, enhance the sense of mutual responsibility of doctor and patient, more closely associate financial operational responsibility, and generally restore freedom in medicine.

By setting up a Royal Commission with the present terms of reference the Government had simply shelved the real issues and missed a great opportunity. The whole structure of the N.H.S. should be under critical review, and he personally was deeply disappointed that the B.M.A. seemed to have no alternative scheme to put forward.

Mr. Murley went on to refer to what some regarded as a highly unsatisfactory feature of examinations, such as that

of the Guillebaud Committee, of nationalized industries and services. Investigating committees of this sort were appointed by Ministers whose departments were interested parties; they commonly worked on Ministry premises; and it was not uncommon for them to have a Ministry official as secretary. It was intended as no reflection on the individual members of the Guillebaud Committee when he said that, instead of being pervaded by a healthy impartiality, their report bore all the signs of having been drafted within the Ministry of Health. Sir Fred Messer, for instance, deplored the absence "of people on the committee who were able to assess the value of the evidence it received."

In a Service which was crying out for reform this unenterprising committee had soft-pedalled almost every real criticism which was made in evidence to it, and this was especially true of criticisms of the administrative structure of the Service. The Guillebaud Committee, said Mr. Murley, had failed lamentably in its task, and, by declaring that any reforms would be premature at this stage, it had helped the Service to congeal in its present form, provided politicians of all parties with an excuse for inaction, and surely put the clock back for several years. In the public interest it should be made impossible to set up important committees of investigation in this way, for, as so often in recent times, a Ministry became judge in its own case.

The time, continued Mr. Murley, was clearly ripe for reform. The Fellowship had upheld private practice as a virtue in itself, as a valuable discipline for the doctor and as a yardstick with which to compare the State service. Secondly, it had sought ways and means of providing the G.P. with incentives—a more realistic relationship between payment made and services rendered, and the optional right to the sale of goodwill. The restoration of this right would facilitate entry into practice as well as the change from one practice to another. Thirdly, the provision of drugs and appliances to all patients (private and otherwise) on the same basis stood high in its estimation. It favoured, however, a system akin to the Australian one rather than our own present one. Fourthly, it favoured the stimulation of personal responsibility for some part of the cost of all but the long-term illness, rather than the encouragement of too heavy dependence on the State.

Discussion

Mr. LINDSAY-FYNN gave some instances of extravagance in the spending of hospital funds, and others among the many speakers who took part in the general discussion which followed also referred to the economic aspects of the Health Service. Dr. E. C. WARNER summed up. Mr. Longden had asked if the doctors felt the State was interfering too much in the freedom of the profession. Dr. Warner answered that quite clearly the profession did feel this. Mr. Longden had attributed the nation's improved health in recent years to the N.H.S., but Dr. Warner thought that he had forgotten the contribution of medical scientists in this. One example would suffice to illustrate the point—that of Sir Alexander Fleming. Dame Irene Ward, M.P., had mentioned that before the introduction of the N.H.S. many people did not like to go to their doctor with their complaints: this applied to-day in equal measure, said Dr. Warner, for many felt their doctor had not the time or the facilities to listen to their troubles in the privacy which they would like.

ANNUAL MEETING

ABERDEEN GRADUATES' DINNER

The Aberdeen Graduates' Dinner will be held in Tilley's Restaurant, Newcastle upon Tyne, on Friday, July 12, at 7.30 for 8 p.m. The dinner is open to Aberdeen graduates attending the Annual Meeting or resident locally, and their ladies. Tickets will cost 30s., and early application with remittance should be made to Dr. D. Middleton, 18, Cliffe Park, Sunderland.

TRAINING MEDICAL ADMINISTRATORS NEWCASTLE BOARD'S SCHEME

In seeking an administrative medical officer without previous administrative experience the Newcastle Regional Hospital Board believes it is doing something of a pioneering nature. It recently advertised a post on the staff of the senior administrative medical officer in which facilities for training will be provided by secondment and otherwise. Dr. R. H. M. Stewart, the Board's senior administrative medical officer, explains that it is hoped to secure applications from those whose experience is solely clinical or in public health. The sort of training programme envisaged will include attendance at suitable courses and secondment to general, special, and mental hospitals for varying periods. Very probably, too, the doctor appointed will be lent for periods of about a week to hospital management group centres to gain experience of their work. Opportunity for taking a higher qualification will be offered.

MEDICAL IMPLICATIONS OF NUCLEAR WARFARE METROPOLITAN COUNTIES BRANCH MEETING

The Metropolitan Counties Branch of the B.M.A. is to hold a meeting at B.M.A. House on May 5, at 2.30 p.m., to discuss the medical implications of nuclear warfare. Army specialists will deal with the subjects of organization for collection, screening, and disposal of casualties, and for safeguarding food and water supplies, shelters, etc.; the surgical treatment of casualties with burns and fractures; and the pathological processes of irradiation sickness. Civil defence aspects will be included where appropriate.

Members from Divisions on the fringe of the Metropolitan Counties Branch area will be welcomed.

Correspondence

Because of heavy pressure on our space, correspondents are asked to keep their letters short.

Royal College of Physicians

SIR,—That a meeting composed only of Fellows—10 being a quorum—should be empowered to dictate the policy of the whole Royal College of Physicians, in such an important matter as that which was published recently (*Supplement*, April 20, p. 218), is disturbing. When it is remembered that the 3,590 members and many thousand licentiates of this College—the two groups which contain all its general practitioners—are automatically excluded not only from attending such a special meeting but even from an annual general meeting, surely this reflects unfavourably on the capacity of the Royal College of Physicians to represent them in medico-political matters, or to help in the future development of the general practice side of the National Health Service. It underlines the great responsibility which rests at the present time with the British Medical Association to do both these things.—I am, etc.,

London, S.W.1.

JOHN H. HUNT.

SIR,—There are many of us who recall the urgency of the struggle when the N.H.S. came into operation in 1948. I believe I am right in saying that a sudden *volte-face* by the then President of the Royal College of Physicians did much to weaken our resistance. Lord Moran, however, in the House of Lords has done us good service this time, and no one can

quarrel with his views. The *Lancet* leading article,¹ amid its devious arguments, twistings, retreats, and adjustments of position, in fact was good enough to state that the same feeling was evoked last week by Lord Moran's statement that the profession has neither been treated justly nor courteously. But the same phased withdrawal is suspected again.

The negotiating body of the consultants and general practitioners has been unable to negotiate. The B.M.A., representing consultants and general practitioners, advises non-cooperation with the Royal Commission. In my area a highly representative meeting instructed our representative to vote for "phased withdrawal and non-cooperation." This is being carried out entirely through pressure brought by the general practitioners who are going to bear any distress, or, worse, any odium, that may arise from support of B.M.A. policy. May I repeat that the B.M.A. represents consultants, specialists, and general practitioners, is democratically elected, and the representatives are democratically instructed by both groups of the profession? Now we learn that Lord Moran's successor, Sir Russell Brain, a member of the Negotiating Committee, has agreed on behalf of the Royal College of Physicians to support the Royal Commission. I ask myself what is his mandate to do so. Neither I nor any member I have spoken to in this area, nor any licentiate, has been asked for his democratic support. And yet the general practitioners are to go into battle on behalf of both sections while the consultants, who have nothing to lose, hear their President (on behalf of whom, may I ask?) knock one of the planks away from the feet of the general practitioners. I remain baffled. Am I the only one? Can you or your readers enlighten me?—I am, etc.,

STANLEY KAYE.

Brighton.

The Real Issue

SIR,—It is to be hoped that some of the letters appearing in the *Supplement* of April 20 were written some while ago, for the writers seem unaware of what has happened recently. What began as a remuneration claim, put forward for negotiation or arbitration, has, through the refusal of the Government to do either, developed into a struggle to assert the principle that a mutually agreed basis of remuneration must not be unilaterally repudiated, even by a government. This is a matter of vital concern to every member of the community, for without it no wage or salary agreement is of value. It is, quite simply, arbitrary government.

We must keep in mind the basic facts. In view of the passage in the official *Handbook for General Practitioners*, which I quoted in my last letter (*Supplement*, April 6, p. 156), it is impossible for the Government to say that it did not—at March 31, 1955—wholeheartedly accept the Spens formula. Our claim for negotiation or arbitration about the present application of that formula was met by a flat "No" and refusal to discuss, let alone negotiate or arbitrate. Then the Prime Minister—again without discussion or consultation—announced a Royal Commission to devise a new basis of payment. Then, again without discussion—just as he put the extra shilling on prescriptions—he announced a 5% increase and suggested that in view of this gesture we should all get together happily to improve the Service.

Unfortunately no improvement can come until there is a renewal of confidence, and confidence cannot be restored until the Government has agreed to the reasonable and repeated request of Dr. Wand for discussion—for arguing a case before a Royal Commission is neither discussion, negotiation, nor arbitration in any acceptable sense of those words. On this principle doctors and public must stand fast, though the doctors, whose first duty is to their patients and not to the Treasury that collects and pays their fees, are in a very difficult position in fighting for it owing to this dichotomy of interests.

Whether we should undertake phased or total withdrawal or some other method of protest—e.g., refusal to pay income

tax—will presumably be decided at the Special Representative Meeting on May 1, but do let us be clear that the real issue is not 24% on Danckwerts but on how the claim should be considered, and whether governments shall be allowed arbitrarily to withdraw from agreements they have made. It is possible to argue, as *The Times* does, that no such agreement should have been made, but having been made no constitutional Government has the right to repudiate it. If this is the best thing the Government can do with an educated and, I hope, responsible profession it is just inciting employers and workers to be equally unreasonable and unreliable.

I do not know whether the S.R.M. will consider, as it well might, what shall be done with the 5% increase which will be paid on May 1, whether we like it or not; and for once the Prime Minister has said that he would like advice from the profession. If it should be discussed, may I repeat a suggestion I made in the *Manchester Guardian* some while ago—namely, that we should devote the first part of any increase in the central pool to doctors with children, as they are, by and large, those who are worst off? I suggested that we should allot £100 for each child under 12 and £200 for each child over that age. I calculated—without any precise data to go on—that this would probably take just about the 5% that has actually been given. (This has nothing to do with whether it is a proper award, about which I hold strong views.) Such a course would ensure that the award was used to the best advantage; it would show that as doctors we are mindful of human needs and wish to act socially and not selfishly. It would be of national benefit, as it is from these families that many of our best future citizens will come. It would reverse the present dysgenic effect of professional salaries in that—from the biological point of view—doctors and other professional people marry too late and have too few children, while, from the medical aspect, there are few things which help a G.P. to be understanding and kindly more than to have personal experience in his own family of the joys and difficulties of those whom he has to treat. The currency of a family man is, as it were, depreciated, as he has so many more mouths to feed, and this odious award gives us a unique opportunity, without any of us being worse off, to assert the importance of biological facts. Perhaps I should add that all my children are grown up.—I am, etc.,

W. N. LEAK.

Winsford, Cheshire.

Voice of Junior Hospital Staff

SIR,—Your leading article entitled "The First Decision" (*Journal*, April 6, p. 810) notes that there has been a lack of response in your correspondence to the Ministry's recent unilateral adjustment of the salaries of the junior grades of hospital medical staff. It may be that we were stunned into inactivity by the events of the last few weeks; in addition, we are in fact afraid to speak out for fear of incurring disfavour by disturbing our august leaders in their delicate negotiations. Your offer of anonymity for such as we will probably be eagerly seized.

I have sounded many of my colleagues of similar seniority on this subject, and add my view to theirs when I say that this 10% is contemptuously regarded by all grades from senior registrar down. We would be satisfied, were it left to us, with nothing less than the following: (1) An increase of at least 24% in current scales of salary. (2) The allowance, for income-tax purposes, as non-taxable expenses, of bona-fide payments for tuition, such as postgraduate courses; examination fees—everyone knows that entry for the appropriate higher and differential qualifications is a *sine qua non* of most hospital posts; and textbooks and instruments of most hospital posts; and their upkeep. Most registrars spend anything from 30 guineas a year on these wholly necessary adjuncts to their chosen hospital careers. (3) The institution of a continuation into the third and fourth years of annual increments for middle-grade registrars: at least two tenures of two years each are necessary for anyone these days who is seriously pursuing a career in the hospital service; usually one general

contributing to the special levy, giving as his reason that large practices have too high overheads; small practices can afford to subscribe better, he thinks. How idiotic can doctors become? Had the profession done what I have been pleading for in your columns since 1949—had a closed shop so that the majority could enforce obedience on the minority—how cosy we would now feel facing Mr. Macmillan (Mr. Vosper, apparently, no longer counts) from behind a solid wall of 100% obstruction to governmental interference or arbitrary action. Thus let us determine to go ahead, not being content with increased remuneration only, but seeking a better Service, run perhaps on Australian lines, and presided over, as a previous correspondent suggested, by a corporation like the B.B.C. In the meantime, if our withdrawal machinery breaks down, I very humbly suggest again that we become a trade union and be done with it. The old days of the gentlemen's profession and gentlemen's agreements are so patently over that our younger members laugh at the idea. After becoming a trade union we could quickly (many say our present withdrawal is far too slow) talk turkey very aggressively to the Government.

May I again express my appreciation of the work of our negotiators? It is exhausting, irritating work for which this G.P. is very thankful.—I am, etc.,

Dungannon, N.I.

CONN MCCLUSKEY.

Mileage Committee Report

SIR,—It was with some apprehension that I read the interim report of the Mileage Committee. A study of this has failed to convince me that there has been any large-scale expression of dissatisfaction from rural practitioners with their share of the mileage fund, or that, indeed, there would be grounds for such.

The rural practitioners classified as A already receive more than 60% of the fund, whereas class C practices attract only a meagre 7%—little enough when one recalls that, even in the latter type of practice, considerable mileage may be covered, and hence time expended, in travelling between patients who may dwell only two to three miles from one's residence. It is not uncommon to receive perhaps three late calls after the planned round of visits has been completed; and, should these lie in three different directions—as is very likely where a practice lies in the centre of surrounding villages, themselves perhaps only classified as semi-rural—ten or twelve miles can easily be clocked to visit these patients. The mileage received by class C practices in the opinion of many is wholly inadequate; and by elimination of the patients who live between two and three miles the greater part of this would be taken away. Surely this is most unjust.

It is to be hoped that the local medical committees, the G.M.S. Committee, and later the Conference of Local Medical Committees will not hesitate to reject this ill-conceived report. Its acceptance can only add to the burdens already borne by the small-list man. A study of the composition of the Committee does not impress with their qualifications to sit in judgment upon this matter, and it is not without significance that the three representatives of executive councils recorded in the report their "keen disappointment."—I am, etc.,

E. Horsley, Surrey.

B. S. GRANT.

Assurance Profits

SIR,—The short answer to your correspondent Dr. P. H. Sutton (*Supplement*, March 30, p. 145) is that the profits that accrue to life offices from reduced claims by death as a result of the wonderful progress of medical and surgical science and skill go to increase the bonuses to with-profits policy-holders. After all, it is the policy-holders who provide the money and it is to them that the bulk of the profits (in mutual offices the entire profits) go back in increased benefits.—I am, etc.,

London, E.C.2.

R. W. BOSS,

Secretary,
The Life Offices' Association.

Co-operation with the Royal Commission

SIR,—At the moment the medical profession is united to a very large extent, and deems co-operation with the Royal Commission to be out of the question under present circumstances. This view is supported by public health practitioners on the ground that the terms of reference of the Royal Commission do not cover an investigation of their conditions of service. It should therefore be clearly realized by those who advocate co-operation under present circumstances that they are furthering the cause of professional disunity, and incidentally doing a disservice to their public health colleagues.—I am, etc.,

Hamilton.

Branch and Division Meetings to be Held

- BROMLEY DIVISION.—At Royal Bell Hotel, Bromley, Wednesday, May 1, meeting.
CITY DIVISION.—At Committee Room C, B.M.A. House, Tavistock Square, London, W.C., Tuesday, April 30, 8.30 p.m., meeting to consider Annual Report of Council.
CITY OF DUNDEE DIVISION.—At Queen's Hotel, Nethergate, Dundee, Friday, May 3, 9.30 p.m., annual general meeting.
CROYDON DIVISION.—At Shirley Park Hotel, Croydon, Thursday, May 2, 7 p.m., annual dinner dance.
DEWSBURY DIVISION.—At Board Room, General Hospital, Dewsbury, Friday, May 3, 8.30 p.m., annual general meeting.
DUNDEE BRANCH.—At Queen's Hotel, Nethergate, Dundee, Friday, May 3, 8.30 p.m., annual general meeting.
EAST KENT DIVISION.—At Winter Gardens, Margate, Friday, May 3, 8.30 p.m. to 2 a.m., annual supper and ball.
LEWISHAM DIVISION.—At Lewisham General Hospital, (1) Friday, May 3, 8.30 p.m., annual general meeting. (2) Sunday, May 5, 10.30 a.m., clinical meeting.
MARYLEBONE DIVISION.—At Medical Society of London, 11, Chandos Street, W., Tuesday, April 30, 8.30 p.m., A.G.M.
METROPOLITAN COUNTIES BRANCH.—At B.M.A. House, Tavistock Square, London, W.C., Sunday, May 5, 2.30 p.m., in conjunction with the War Office, display on the medical aspects of nuclear explosions, with demonstrations of treatment of casualties. The demonstration will last from one and a half to two hours. The Branch Council welcomes members of other Divisions.

NORTH LANCASHIRE AND WESTMORLAND BRANCH.—At Banquet Chamber, Town Hall, Dalton Square, Lancaster, Wednesday, May 1, 12.30 for 1 p.m., lunch, followed by eighth annual meeting. Presidential Address by Mr. James McFadzean.

READING DIVISION.—At Library, Royal Berkshire Hospital, Reading, Thursday, May 2, 8.30 p.m., combined meeting with legal profession. Medico-legal Forum. Questions of mutual interest will be discussed. Panel, Medical—Dr. P. G. McGrath, Mr. Michael Squires, and Dr. W. G. Tait. Legal—Mr. G. F. Darlow, Mr. Colin Davy, and Mr. G. C. Jones. Chairman, Mrs. M. Salzmann. Guests invited.

ST. PANCRAS DIVISION.—At B.M.A. House, Tavistock Square, London, W.C., Wednesday, May 1, 8.30 p.m., meeting. B.M.A. Lecture by Dr. Roger Bannister: "Physiology of the Mile." Members of the City Division are invited.

SOUTH-WEST ESSEX DIVISION.—At Wanstead Hospital, Hermon Hill, Wanstead, E., Wednesday, May 1, 8.30 p.m., meeting. Mr. H. R. Thompson: "Cancer, Genes, Research, and All That."

SWINDON DIVISION.—At Swindon and North Wilts Victoria Hospital, Friday, May 3, 8.30 p.m., annual general meeting.

ANNUAL MEETING: NEWCASTLE UPON TYNE, JULY 10-19

SPECIAL CONFERENCE OF LOCAL MEDICAL COMMITTEES CONSTITUENTS TO BE CONSULTED

A special Conference of Local Medical Committees, called to consider the reports and recommendations of the G.M.S. Committee on the remuneration dispute (see *Supplement*, March 23, p. 123, and April 27, p. 225), met in the Great Hall of B.M.A. House on April 30. Dr. A. BEAUCHAMP was in the chair.

The Conference had before it a report on the latest developments in the situation which had occurred since the publication of the G.M.S. Committee's supplementary report (*Supplement*, April 27, p. 225). These developments consisted in a legal opinion on the effect of the public statements made by the chairman of the Royal Commission and a letter from the Minister of Health, Mr. D. Vosper, M.P., to Dr. S. Wand, chairman of Council of the B.M.A., following on conversations which they held on April 25. The letter was as follows:

Dear Dr. Wand,
I was glad of the opportunity of a long talk with you yesterday and I hope you feel—as I do—that it is that kind of informal and personal discussion which does most to clear away misunderstandings.

First, let me confirm what I said to you when I assured you that, following the report of the Royal Commission, there will be full consultation with the profession before implementation of any of its findings and that such consultation could be of course include any matters relevant to the report or the present dispute.

Second, you seemed to fear some inconsistency between the terms of reference of the Commission and the public statements issued by its Chairman. I can certainly reassure you here too. It is normal that the interpretation of the terms of reference of a Royal Commission should be a matter for its Chairman and the Commission, and you can certainly regard the public statements which have been issued as having full validity.

Finally, I have thought—as you asked—about the position of the public health medical officers. I cannot add anything of substance to what I said in my letter of 17th April on this, but let me repeat that I am sure that any settlement for others following the Commission's report, could not fail to be taken into account in considering the position of these officers and any claim through the normal machinery would of necessity be considered in the light of the report and of any settlement subsequent to it.

I do hope that these remarks, and our talk yesterday, will help to rid us of unnecessary apprehensions.

Yours sincerely,
DENNIS VOSPER.

Committee's Change of Mind
Dr. A. B. DAVIES, chairman of the G.M.S. Committee, in presenting his Committee's report, said that at an emergency meeting held that morning, immediately before the Confer-

ence, his Committee had considered these latest developments and had heard a report from Dr. Wand. As a result, the Committee, by a narrow majority (24 votes to 22), had decided to recommend to the Conference

That in view of the latest developments evidence should now be given to the Royal Commission and a decision on withdrawal from the Service should be deferred.

This recommendation was in substitution of the Committee's recommendation on the agenda

That, in the view of the Conference, in present circumstances it is undesirable that the General Medical Services Committee should co-operate in any way with the Royal Commission on the remuneration of doctors and dentists.

Dr. Davies told the Conference that the new recommendation represented the majority view of the G.M.S. Committee that the new developments shortened the bridge likely to lead to a resolution of the present difficulties.

Dr. WAND gave the Conference an account of recent happenings. He said the public statement by the chairman of the Royal Commission, that that part of the Royal Commission's task which consisted in determining what should be the proper current levels of remuneration of doctors and dentists would include hearing submissions from those professions as to the remuneration they were now claiming, was the first time it had been mentioned that the profession's claim would be before the Commission. Dr. Wand stressed what he felt was an important promise in the Minister's letter, that there would be full consultation with the profession before implementation of the Royal Commission's findings. The Minister, said Dr. Wand, would not promise negotiation because he felt it would be discourteous to the Royal Commission to assume that its report would not be acceptable. Dr. Wand also underlined the Minister's assurance that the public statements by the chairman of the Royal Commission were fully valid.

Turning to the question of the exclusion of public health medical officers from the terms of reference of the Royal Commission, Dr. Wand told the Conference that the Minister had said to him what he had repeated in his letter.

In Dr. Wand's opinion the Government would go no further than it had now gone in meeting the profession's wishes. One thing was clear: the Royal Commission would not act as an arbitration body on the present claim. The Chairman of Council concluded by saying that he would not give a personal opinion on the situation. It was up to "those who have knowledge of the periphery to decide."

Decision Deferred

An amendment by Edinburgh that the decision whether or not to co-operate with the Royal Commission should be reached by way of a referendum of all general practitioners in the N.H.S. was withdrawn.

Whereupon Dr. J. A. PRIDHAM moved, and Dr. F. GRAY seconded,

That the special Conference realizes that local medical committees and the profession generally have not had an opportunity of considering the statement of the chairman of the Royal Commission or the letter from the Minister of Health to the Chairman of Council of the B.M.A., and therefore defers decision on the recommendation to give evidence to the Royal Commission until the Annual Conference in June.

Dr. PRIDHAM, speaking to the amendment, pointed to the division of opinion in the G.M.S. Committee in a hurried meeting. There must be an interval for reflection. Dr. GRAY, seconding, said that the Conference had no need to come to a decision so hastily as the G.M.S. Committee had had to. There was time for representatives to consult their constituents. Dr. A. M. MAIDEN was sure that there was nothing to lose by continuing to say no for the time being, and nothing to gain by saying yes now. Democracy should be allowed to work. As a representative, Dr. D. R. SNELL-GROVE felt he was not in a position to vote for the G.M.S. Committee's recommendation to give evidence to the Royal Commission. He must ask his constituents. Drs. C. M. SCOTT, J. F. MILLER, O. C. CARTER, CATHERINE HARROWER, and ANNIS GILLIE were among those who spoke strongly in favour of Dr. Pridham's amendment, while Drs. A. T. ROGERS, B. CARDEW, J. C. ARTHUR, and ALEX BROWN were among those who spoke in favour of the Committee's recommendation. Dr. I. D. GRANT, chairman of the Representative Body, asked the Conference to vote in favour of referring the matter to its constituents before deciding to give evidence to the Royal Commission. To decide to give evidence, in Dr. Grant's opinion, would be tacitly surrendering to unilateral dictation. The Government had refused to negotiate or discuss anything with the profession. The Royal Commission was thrust on them. "Are we to be servants or equal partners in the Health Service?" Dr. Grant asked. The matter was now one of principle.

Dr. DAVIES earnestly asked the Conference to accept Dr. Pridham's and Dr. Gray's amendment.

The amendment was carried, and it was then carried as the substantive motion in place of the G.M.S. Committee's recommendation.

Interim Adjustment

During the afternoon session the Conference debated the G.M.S. Committee's recommendation that the Government be informed that it was the wish of the Conference that the 5% net increase to the aggregate net remuneration of general practitioners, arbitrarily decided upon by the Government, should be placed in a suspense account.

An amendment by Berkshire that the interim offer of 5% should be accepted without prejudice was eventually carried, together with a rider to it in the form of an amendment by Kent and Canterbury that immediate negotiations should be entered into with the Ministry upon the best way of distributing the 5% so as to give the most effective help to the greatest number of practitioners. The Berkshire amendment was then carried as the substantive motion, with the Kent and Canterbury amendment added as a rider.

Since the *Journal* went to press on the same day as the Conference, a further report of the Conference proceedings will appear in the *Supplement* next week.

CENTRAL CONSULTANTS AND SPECIALISTS COMMITTEE

CO-OPERATION APPROVED

The Central Consultants and Specialists Committee passed the following resolutions at its meeting on April 30:

(1) That in view of the changed circumstances arising from the explanation and amplification of the terms of reference of the Royal Commission on Doctors' and Dentists' Remuneration contained (a) in the letter dated April 11 from the Prime Minister to Sir Russell Brain, (b) the statement issued by the chairman

of the Royal Commission on April 12, and (c) the letter dated April 26 from the Minister of Health to Dr. Wand, the Central Consultants and Specialists Committee now approves of co-operation with the Royal Commission, and is glad to find itself in agreement with the General Medical Services Committee in this regard. (Carried unanimously.)

(2) That the Committee, while agreeing to give evidence before the Royal Commission, reaffirms its belief in the justice of its present claim for increased remuneration, and that in the meantime negotiation followed if necessary by arbitration remains the proper method by which this and kindred disputes between the profession and the Government should be settled.

(3) That although recognizing the complexity of the position of public health medical officers, the Committee regrets their exclusion from the terms of reference of the Royal Commission, and promises its full support for any action which can be taken to achieve improvement in their remuneration.

A report of the Special Representative Meeting held on May 1 will appear in the *Supplement* next week, since this issue went to press before the meeting.

CONFLICT IN SWEDEN

MEDICAL STAFF RESIGN

[FROM A CORRESPONDENT]

In a large number of Swedish cities and towns, doctors, architects, judges, and other professional workers have left their positions after due notification. In addition, a blockade has been proclaimed against employer appointment of replacements to fill vacancies due to pensioning, etc. On April 8, more than half the junior staff physicians and all the out-patient clinic doctors in Gothenburg resigned after giving the stipulated one-month period of advance notice.

All Learned Professions

These measures form a part of the present labour controversy between S.A.C.O. (the Central Organization of Academics in Sweden), representing university-trained manpower in the professions—and of which the Swedish Medical Association is an important affiliate—and the municipal employers of Sweden. The conflict is thus concerned with the working conditions of all those in the learned professions, and not merely with similar conditions in the medical profession. Its causes may be briefly summarized as follows:

(1) Since the end of the war employees in public service (central and local government) have suffered a deterioration in their employment benefits as compared with employees in private enterprise.

Where university-trained manpower is concerned, the deterioration in certain cases is not only relative but also absolute. In the autumn of 1956 the central government revised the pay scale for its employees in order to compensate them for a salary lag of several years' standing. Since central and local governments principally follow the same kind of salary-setting system, it was generally expected that municipal employees would receive similar increases. However, the municipalities were willing to grant certain professional categories at the upper end of the pay scale no more than negligible increases, which were far below those approved by the central government. Certain judges, architects, engineers, librarians, and doctors were hardest hit by this restriction.

(2) The local authorities want the organized professional workers to agree to the reduction of their regular salary by 20 to 25% whenever collective bargaining has failed to produce a pay settlement and a labour conflict is imminent. This reduction, which the professional workers are supposed to acknowledge as a legitimate weapon of the municipal employer in such a conflict, would affect all members of S.A.C.O. Yet at the same time the employer would require the same output of work from those who do not take a more

active part in the conflict by virtue of having resigned or given notice of resignation. S.A.C.O. is unwilling to accept these terms.

The present conflict is most strongly marked in Gothenburg, where the resignation of doctors is directed against both open (non-institutionalized) and closed (hospitalized) care. About 100 junior staff physicians and 40 out-patient clinic doctors have left their positions.

Service to the Patients

The medical side of the controversy naturally has its own aspects. For one thing, conflict measures cannot be permitted to endanger the lives and health of the sick. It has therefore been a concern of the medical profession and of S.A.C.O. to make arrangements for consultation and treatment facilities to replace the open care attached to out-patient clinics and hospitals, which of course have been practically shut down as a result of the conflict. The junior staff physicians involved have set up provisional offices where they can receive patients on a private basis. Another emergency arrangement is the private surgical clinic opened by 12 doctors, four of them roentgenologists, who are assisted by 18 nurses. This clinic handles between 300 and 500 patients a day and maintains round-the-clock shifts of doctors for the treatment of minor accident cases. Private consultation facilities in medicine, paediatrics, and psychiatry have also been set up by other doctors who have left their regular employment.

In addition to this shut-down of hospital open care under municipal auspices, closed-care services have been sharply curtailed. Only the most urgent cases are admitted to hospital. In conjunction with Gothenburg's leading hospital, Sahlgrenska, the doctors have set up their own "screening centre," which decides in each case whether a patient must be hospitalized or not. If hospitalization is not considered absolutely necessary, the patient is referred to private practitioners or to the private facilities of junior staff physicians. About half of the junior staff physicians, who ordinarily would have resigned with their colleagues, have been allowed to remain in service so as to perform this screening work, to assist senior staff physicians in treating hospitalized cases, and to take part in on-shift duty. Inasmuch as these duties come under the heading of safeguarding the public interest, S.A.C.O. has made it a condition that no deductions are to be made from their pay. Up to the present time the doctors continuing in regular service have been receiving full pay.

Public Reaction

Though the present conflict is an acute one, it has struck a neat balance between the taking of measures severe enough to put pressure on employers and yet not so severe as to endanger the lives and health of patients. As a result the community at large has not seen fit to impose compulsory settlements on the doctors through legislation—a step that has been threatened in previous conflicts.

PRIVATE PRACTICE COMMITTEE

A meeting of the Private Practice Committee was held at B.M.A. House on April 10, 1957. Dr. A. BROWN was in the chair.

Drugs for Private Patients

It was reported to the Committee that at its last meeting the Council had agreed that at an appropriate time in the future discussion should be initiated with officers of the Ministry of Health on the provision of drugs for private patients.

It was resolved to submit to the Council that the present time was particularly appropriate for representations to be made to the Ministry of Health on the subject of drugs for private patients.

Remuneration Claim

Though the present remuneration claim and dispute with the Government were strictly a matter for those doctors employed within the National Health Service, the Committee considered that there would be many medical practitioners not engaged in any way in the National Health Service who would wish to give tangible support to their colleagues in their present difficulties. It was therefore suggested that it should be made known that all members of the profession, whether engaged in N.H.S. work or not, could subscribe to British Medical Guild funds.

Fees for Examination of Prisoners

A report was received that the Treasury had confirmed that the Prison Commissioners would pay a fee of £3 3s. a session for the examination of prisoners for fitness for Borstal, preventive detention, or corrective training. In the event of examination in single cases only the fee would be 15s. per case, except when an examination and report was of particular intricacy or took an unusual length of time, when the fee would be within the range of £1 5s. to £2 2s.

Parking Difficulties

Following a meeting with officials of the Ministry of Transport it was reported that it seemed doubtful whether there would be agreement to special privileges for any particular section of the community. The Ministry officials' attention had been drawn to the difficulties experienced by doctors in carrying on their practices because of the restrictions on traffic. On the question of emergency calls, however, it was possible that some change in favour of doctors might be effected. The Ministry had undertaken to consider all the points made at the meeting.

N.H.S. Pre-employment Examination

The Committee considered correspondence which had taken place with the Ministry of Health on the fee for a medical examination and report on employees of the National Health Service. It was felt that the position was not satisfactory, and it was agreed that representatives of the Committee should go to the Ministry to take up the matter.

Certificates for Fitness under National Assistance Act

The growing practice of the National Assistance Board in requiring certificates for unfitness for work to support claims for National Assistance had led to criticism from a number of areas. It was proposed to ask the Board to refer these cases to appropriate independent medical boards.

Domiciliary Visits for Ministry of Pensions

It was reported that the Ministry of Pensions and National Insurance had agreed to pay half the normal fee for abortive visits from a date to be announced shortly.

Increased Fees

It was reported that an increased fee of £1 17s. 6d. would be paid for examinations of persons in the following categories: prospective employees, Ordnance Survey Office; candidates for probation training, Home Office; prospective employees, U.K. Atomic Energy Authority; temporary officers, scientific grades, Ministry of Supply; non-industrial staff, National Coal Board.

Arrangements have been completed for paying new allowances to seriously disabled war pensioners. The allowances affect some 77,000, mostly first world war veterans. Those aged 65 or over suffering from 40% or over disablement have an age allowance, depending on the degree of disablement, ranging from 5s. to 15s. a week. Comfort allowances have been raised in some cases from 10s. to 20s. a week, and are payable to some 13,000 pensioners previously ineligible but getting either the unemployment supplement or constant attendance allowance.

an experimental effort, but the Government appears indifferent, and has missed an opportunity to attract to the ranks of the family doctor ardent young men and to ameliorate the status of general practice, the recent decline of which is deplored by so many authoritative writers in medical literature.

Teaching is implicit in the doctor's title and should include instructing patients about health as well as healing. Sir James Walton, on the Medical Planning Commission during the war, was a warm advocate of this reform, stressing it to be our professional function to foster abounding health in an A.1 nation, not merely to patch up a C.3 one. The medical correspondent of *The Times* quoted² in the same vein from the report of the Goodenough Committee, "To the neglect of the promotion of health, medical practice, and consequently medical education, has been concerned primarily with disease, chiefly as it affects individuals." The most influential agent for the inculcation of healthy living is the doctor, who alone is welcomed to the intimacy of family life. He has the opportunity: will the Government ensure him the time for this salutary duty?

In addition to teaching his patients there is a second part to the G.P.'s educational role, a share in the training of the medical student, formerly apprenticed to him. After a lapse of many decades, this function is being restored in a small way, but the competent teacher, already overtaxed with patients, will tend to sacrifice their interests when students share his time.

Defective Conditions in Specialism

These result from the lack of beds and an up-to-date hospital setting for work which has rapidly extended its scope, complexity, and delicacy in the last few decades. The Government should realize that the science of healing, as well as that of destruction, evolves. Britain needs new hospitals as well as factories.

There is the scandal of the waiting-list, a scandal which is even greater than appears, for not only does it defeat a great professional objective, early diagnosis, but among those waiting for admission are many unfortunates who need prompt treatment the urgency of which was not realized at the preliminary consultation.

Paralysis in the development of new major hospitals, including the teaching ones, is a most deplorable brake on progress—on making the blessings of modern science fully available for patients. The obduracy of the Government in this respect is based on the plea for economy. The excuse is not valid, because, instead of complying with its inescapable obligation, it sees fit to disperse minor capital in schemes to modernize, so to say, the existing old-style buildings—an appalling waste of money. Their massive, rigid masonry cannot be converted into what is ideal to-day, nor can current engineering services, which have so vastly improved over the old, be incorporated. How unpardonable to expect nurses to be clean with one place for washing hands and two dozen or more patients in a ward. It may be a sop to the public to use modern paint on walls, new fabrics, furniture and minor equipment looking like a change from the Victorian era into the second Elizabethan, but to the informed users of these premises it is like dressing mutton up as lamb.

We expected advances, great advances, too, when the nation took over the hospitals. Instead, the old hospitals remain and have to find room for a vast increase in new staff, professional and lay: the Government continues to cramp the work of our precious nursing personnel and is hanging round the neck of posterity the costly burden of maintaining aged property unsuitable to radical alteration. Mr. Bagot Oldham, of Liverpool, revealed the disgraceful state of the major hospitals of London and the provinces in *The Times*³ when he compared their antiquated premises with the new ones being built all over the Continent. He says of one, "The whole building is planned to provide a

³ *Ibid.*, May 21, 1956.

standard of amenities, equipment, and research which is so far undreamt of in Britain." The day is over for multi-storied blocks in hospital architecture. Light structures of 2 or 3 stories are economically and rapidly assembled. They can be equipped with all that up-to-date technical skill now offers for domestic and scientific needs. They are of flexible construction, adaptable to varied wants of different specialties. As with passing decades such light structures become outmoded, it would be a practical, not a prohibitive, proposition to alter and replace them.

The B.M.A. needs to adopt a dominantly constructive attitude towards the elimination of the shortcomings of the N.H.S., and launch out courageously on enterprises worthy of our noble profession. A grudging spirit or diverting compromise by the Government must be clearly anathema to our leaders. The nation prides itself on fair play, and we must see that every individual gets it in the Health Service.

OCCUPATIONAL HEALTH COMMITTEE

The Occupational Health Committee met on April 17 at B.M.A. House with Dr. J. A. L. VAUGHAN JONES in the chair.

Remuneration Claim

The CHAIRMAN explained the request being made to industrial medical officers to back up the position of general practitioners and hospital medical staff in respect of the remuneration claim. The difficulties of the industrial medical officer were appreciated, but what was desired was an assurance that they would not do anything to prejudice their opposite numbers in other branches of the profession. It was understood that there would be freedom of conscience for the industrial medical officer as for the general practitioner.

The matter was referred to the Association of Industrial Medical Officers for its views.

Use of Antibiotics by Nurses

The Industrial Nursing Subcommittee was asked to have a general discussion with the Royal College of Nursing on the notes of guidance which the latter's occupational health section has been preparing for occupational health nurses. The matter arose out of the question of the administration of drugs and antibiotics by industrial nurses. A member of the Committee said that there was no reason why nurses should not administer many harmless drugs without a doctor's order, but what they should not do was administer antibiotics as a routine.

Term of Office of Chairman

The Committee debated the length of time chairmen of standing committees of the Association should hold office. Dr. L. G. NORMAN and Dr. J. J. O'DWYER thought that a limitation in the period for which the office was held stimulated interest. The Committee decided to express the view that a chairman should hold office, with annual election, for a period of three years and that there should then be an intervening period before he could be re-elected, unless there were exceptional circumstances, when the Committee, by a two-thirds majority, should make a recommendation to Council for the latter to extend the maximum period.

Another internal matter considered was a letter from the Association's Treasurer pointing out the cost of committee meetings and urging economy. Dr. NORMAN, while agreeing that some members needed financial help in order to come to meetings, thought that everything should be done to foster the idea of voluntary service. Subsequent speakers told how one member lost £500 in fees in a year which he would have earned had he not attended Association committees, and of another member whose practice suffered so badly that he had to give up his service to the Association.

Consultation on Regulations

It was agreed that it would be an advantage if statutory regulations and legislation on occupational health were made available for consideration by the Association in the draft stage.

Refresher Courses in Occupational Medicine

Any major expansion of the occupational health service, particularly for smaller establishments, would have to be provided to a large extent by general practitioners, stated a report of the Training Subcommittee, which recommended that adequate facilities should therefore be available to that adequate facilities should therefore be available to general practitioners to take short postgraduate courses not intended to replace the full postgraduate course leading to a diploma in industrial health. The Subcommittee considered that the type of instruction most likely to be helpful was an intensive course of one or two weeks. Government grants should be available for general practitioners to undertake such courses, in the same way that grants for refresher courses were allowed under the National Health Service Acts.

In reviewing this report the Occupational Health Committee had before it a statement that there were no government powers to finance refresher courses in occupational health, which was described as the most fantastic piece of bureaucracy.

The Committee decided to submit the report, which it approved, to the Council, and to ask Council to refer it to the General Medical Services Committee, who, it was hoped, might agree to discuss it with the Ministry of Health, to the Annual Representative Body, and to the Industrial Health Advisory Committee.

Certificates for Short Illnesses

In the light of replies received from Government departments, nationalized industry, and the British Employers' Confederation, it was accepted that there was an endeavour on the part of the employers to meet the situation over the necessity of obtaining medical certificates for short illnesses. In most instances the certificates were not required merely for record purposes but for sickness benefit. The Committee is continuing to investigate this matter.

Ophthalmic Clinics

The Committee decided to invite representatives of the Ophthalmic Group Committee to its next meeting to discuss the National Ophthalmic Treatment Board Association's suggestion that it would be valuable to establish medical eye centres in industry wherever possible. The Group Committee had supported the proposal subject to an economic rent being paid by the ophthalmologists taking part in a scheme and to the work not being restricted to eye-testing but embracing the wider aspects of ophthalmic work arising in connexion with the industry concerned. The Occupational Health Committee accepted these reservations but felt that there were difficulties over a third stipulation made by the Group, that all local ophthalmologists should be given an opportunity to work in the clinics.

Occupational Health Prize

It was reported that the Council had accepted a recommendation from the Science Committee that a prize of £50 be awarded to Dr. C. P. Chivers, of Northwich, for his essay on respiratory function and disease among workers in alkaline dusts, and that a second prize of £10 be awarded to Dr. H. Stott, of Nairobi, for his entry entitled "Pulmonary Disease amongst Sisal Workers." It was stated that the standard of entries for the Association's 1957 Occupational Health Prize had been good, and that in regard to the second award it was much easier to do research in Britain where there were all the facilities; to do a fairly intensive investigation in a factory in Nairobi called for commendation.

HOSPITALITY

A Spanish doctor's son, aged 20, from a seaside village near Barcelona would like to spend July and August in England. The son or daughter of a British doctor would be able to return to Spain during September and October or during the summer of 1958.

A French doctor's daughter, aged 17, would like to spend two months with a British family on an *au pair* basis during the summer holidays.

A German doctor living in Munich would like to arrange a holiday exchange for her son, aged 12. She would receive a British boy during holidays between July 20 and September 1, and would like her son to visit England next year.

A French doctor's daughter from Carhaix, aged 18, would like to arrange a holiday exchange with a British doctor's daughter.

French doctor's daughters, aged 13 and 14, would like to arrange holiday exchanges with British girls, who could visit Brittany in August.

Would anyone interested please get in touch with Brigadier H. A. Sandiford, International Medical Visitors Bureau, B.M.A. House, Tavistock Square, London, W.C.1.

Scottish News

APPOINTMENTS TO REGIONAL HOSPITAL BOARDS

The Secretary of State for Scotland has appointed the following new medical members to fill vacancies on the Scottish regional hospital boards arising from the statutory requirement that one-third of the members retire annually:

Northern Region.—Dr. J. Ronald, Inverness; Dr. M. M. Whittet, physician-superintendent, Craig Dunain Hospital, Inverness. *Western Region*.—Dr. J. C. J. Ives, Edinburgh; Major-General J. M. Macfie, Glasgow.

The following medical members have been reappointed:

North-eastern Region.—Dr. R. J. Duthie, Aberdeen. *South-eastern Region*.—Professor G. H. Percival, Edinburgh; Dr. G. C. G. Mercer, North Berwick. *Western Region*.—Dr. W. W. Galbraith, Monkton, Ayrshire.

SCOTTISH HOUSE, EDINBURGH

REOPENING AFTER RECONSTRUCTION

The President of the Association, Dr. Alexander Hall, will formally reopen the Association's Scottish House in Edinburgh on Tuesday, May 14, at 4.30 p.m. Tea will be served from 3.45 p.m. to 4.30 p.m. Any member of the Association who would care to attend the reopening ceremony is asked to apply for a ticket to the Scottish Secretary, B.M.A. Scottish House, 7, Drumsheugh Gardens, Edinburgh, 3 (telephone: Central 7184).

The Secretary of State for Scotland has reappointed the chairmen of the five Scottish regional hospital boards for a further period of three years from April 1 as follows: *Northern Regional Hospital Board*: Mr. Edward Macintosh; *North-eastern Regional Hospital Board*: Dr. May Baird; *Eastern Regional Hospital Board*: Lord Provost Hughes; *South-eastern Regional Hospital Board*: Sir Humphrey Broun Lindsay; *Western Regional Hospital Board*: Captain J. P. Younger.

Correspondence

Royal College of Physicians

SIR,—May I attempt to answer two letters by one? Dr. J. H. Hunt and Dr. S. L. Kaye (*Supplement*, April 27, p. 232) both criticize the Royal College of Physicians, apparently for daring to express an opinion before consulting the British Medical Association.

Dr. Hunt is quite right in stating that the government of the College is in the hands of its Fellows, and it should be made clear that it is the whole body of Fellows and not just a small clique. The College officers and the Council have to report to the general meeting of Fellows at least once a quarter. The opinion of the Royal College of Physicians is, therefore, the corporate opinion of its Fellows, who claim to be (as far as we can in human affairs) a body of responsible persons, whose opinion may be the more valuable because of the method by which they are elected. The meeting to which Dr. Hunt refers was very well attended and the vote was *nemine contradicente*.

The College has never professed to represent general practitioners, or to usurp the functions of the British Medical Association, or to be voicing a postcard vote from its Licentiates; neither does a university consult its graduates before deciding its policy. Nevertheless, Fellows are most concerned that any opinion they express shall be for the good of medicine in its widest possible sense, and shall not penalize one section of the profession in comparison with another.

The machinery of the British Medical Association has all the advantages, and disadvantages, of democracy. Surely there are times when one or the other will achieve the better result, and we should respect each other's opinions instead of descending to bickering and contumely. Or, if no one in the profession is to give an opinion without first discovering the official view of the British Medical Association, will Drs. Hunt and Kaye please devise for us some kind of coloured shirt which we can wear while shouting the appropriate slogans?—I am, etc.,

ROBERT PLATT,

President,
Royal College of Physicians.

London, S.W.1.

The Real Issue

SIR,—I hesitate to add another letter to the many that have been written anent what is called "the doctors' pay dispute," but so many issues have been raised and so many red herrings have been dragged across the trail that the profession, the public, and I fear the Government, have at times lost sight of the one major issue. This is the simple fact that we of the medical profession have been denied the fundamental right in any civilized society of negotiation. We have been presented with a blank refusal or a *fait accompli* and at no time have we been asked, as co-partners in the N.H.S., to sit round a table and discuss the future relationship of our profession with the State.

It is the denial of this simple right, a right common to all walks of society, which has raised the ire of the profession and prepared many thousands of us to fight if necessary for its restoration. I submit, Sir, that the Government could solve this problem to-morrow by an invitation to the profession to "talk it over together."—I am, etc.,

Aberfeldy, Perthshire.

CHARLES J. SWANSON.

SIR,—We, members of the executive committee of the Fellowship for Freedom in Medicine, represent over 2,000 doctors in all branches of medical practice. We wish to make plain the views of the Fellowship on the present dispute with the Government.

The underlying cause of this controversy is the fact that the profession is profoundly dissatisfied with the present National Health Service, which it has faithfully tried to operate for over eight years. The working of the N.H.S. Acts has caused the State to become a controlling third

party between the doctor and his patients: this, together with other factors, has led to a general lowering of standards. The family doctor is, for example, no longer the counsellor of his patients, and he is unable to give the medical attention which he believes to be their due.

The fact that the present dispute has been represented as centring around pay is highly misleading. Having promised arbitration over the terms of service, before the profession entered the N.H.S. in 1948, the Government (which is ultimately the employing authority) has once again refused independent arbitration. Without consultation with the profession a Royal Commission has been set up, with such restricted terms of reference that it cannot even consider let alone make recommendations on the many faults of the Service which are so obvious to those working in it.

We take this opportunity of pointing out that, unless the Government will at all times honour its promises and will allow free and unfettered arbitration in the event of a dispute, the so-called freedom of the profession will become a mere pretence. In these circumstances the quickest and most effective action will be for the doctors to withdraw from the Service and for the time being treat their patients individually. This step will clear the way for building up a new Service embodying the many drastic reforms that are needed.

The Fellowship believes that the profession must make its voice heard now in the clearest possible terms, in the interests of the public, which the doctors of this country have always made their first consideration.—We are, etc.,

E. C. WARNER.

SIR,—Having been, in succession, a combatant officer in the Army, general practitioner, consultant, and now superannuated, I can view the present dispute from a somewhat detached position. Being also secretary of my county local medical committee I am also reasonably well informed of what is going on.

My personal opinion, for what it is worth, is that the Government—or Parliament for that matter, as I suspect that all parties have much the same object—wishes to control the National Health Service in the same way as it controls the fighting Services and the Civil Service. The latter Services have no say in their conditions of service or remuneration. Any individual who joins them surrenders his freedom in these respects as soon as he enlists. No question of arbitration between representatives (of the fighting Services at least) and the Government ever arises. This, I think, is the reason why the Government refuses to negotiate, hands out an interim payment of its own devising, and sets up a Commission with no medical members.

If the medical profession is to retain its status, and its tradition of service to the individual sick—rather than to the State, which has neither heart nor soul—it must fight this battle now.—I am, etc.,

London, S.W.19.

F. T. BURKITT.

SIR,—In a dispute it is essential, surely, to realize quite clearly with whom you disagree. In this country Governments come and go relatively infrequently, Ministers of Health rather more frequently. These people, however, are all advised by the "permanent officials," and we therefore have to demonstrate that their advice is wrong if

a really serious dispute, such as ours, develops. The Government of the day must, of course, have the last word, and its decisions can only be influenced by public opinion. Until quite recently it is very probable that the medical profession had the public's sympathy, but the *Sunday Times* of Easter Sunday had an article in which it was stated that the public generally were now of the opinion that the "doctors were going to strike for more pay." Whatever may be said to the contrary, that, I believe, is the general opinion now, and, if so, will lose us this essential lever.

Many of your recent correspondents seem to have lost sight of the core of our case—namely, that we, the doctors, have been refused the right to go to arbitration, while in the same week the trade unions were urged to adopt this course. There is a Royal Commission in being who will have to report its findings publicly, and it seems that some sort of compromise is inevitable. I venture to suggest that the following ideas might meet with fairly general approval, both within and without the medical profession, and incidentally may expedite the work of the Royal Commission: (1) The Government agree to extend the terms of reference of the Royal Commission to include the "consideration of circumstances whereby the medical and dental professions have the right to go to arbitration when the normal negotiating machinery has proved insufficient." (2) If the Government agree to this reference to the Royal Commission, we would withdraw all threat of resignation, etc.

In conclusion, may I say I am in entire sympathy with our negotiators, who have obviously had an extremely hard and anxious time. We all know that the question of remuneration is not really the main issue.—I am, etc.,

R. S. MACHARDY.

Southsea, Hants.

Local Medical Committee's Decision

SIR,—We, the undersigned, are seriously perturbed following the report in the press recently and from information received from our representative on the local medical committee.

At a meeting of Kent Local Medical Committee on April 12 it was decided by an overwhelming majority to support a resolution asking for resignation from the National Health Service, and by a majority vote not to co-operate with the Royal Commission. This we feel truly representative of the views of the majority of the doctors in Kent, and this was in fact the mandate given to our representatives to the Special Conference. An ordinary meeting of the local medical committee was convened for April 25. The agenda circulated to members did not contain any items concerning the dispute, but at the meeting a supplementary agenda was produced with fresh resolutions on the dispute, on which Dr. Talbot Rogers spoke. By an overwhelming vote the local medical committee altered the previous decisions taken at the special meeting.

We, the undersigned, submit that our representatives had no opportunity to consult the electorate, and therefore had no authority whatsoever to alter a mandate previously given. In view of the press publicity given to the alleged changed views of Kent doctors, we feel that this information should be available to the conference before arriving at any decisions.—We are, etc.,

B. HOOGEWERF,

Chairman, Bromley Division.

J. EWART PURVES,

Honorary Secretary, Bromley Division.

C. R. BARRINGTON.

K. M. BARRINGTON.

Withdrawal from N.H.S.

SIR,—Much as I agree with the actions of the Negotiating Committee in the past, and the principle of mass resignation in the future, I fear that resignation this year would be hasty, ill-considered, and likely to meet with a poor response.

In this letter I will try to set out the reasons why I hold this conviction. Phased withdrawal would be satisfactory if it were not for the fact that each phase would have to be separated by three months. A blitzkrieg is essential.

In July, 1958, many of the older practitioners will have completed the ten years in the National Health Service necessary to qualify them for a pension, and will be sending in their notice. Some of them have continued in practice longer than they would otherwise have done to qualify for this pension. They have everything to lose and nothing to gain by premature resignation. They know that in dealing with the Government nothing as important as a pension can be left to charity or chance. Many of these older practitioners are in partnerships, and their junior partners cannot legally resign without them. In any case, no partnership can work unless all the partners do one thing or the other. This hanging on of the older practitioners has also had the effect of preventing a number of younger men from getting practices and partnerships. These doctors would be hard put to it to refuse vacancies created by protest resignations if they were offered.

I am sure, therefore, that the response to a call for resignations this year would be disappointing, and would result in considerable loss of prestige to the profession. Next year, on the other hand, would see the profession strained to breaking point, and much better able to approximate a 100% resignation.—I am, etc.,

NIGEL G. NICHOLSON.

Ashford, Middlesex.

SIR,—In threatening a medical strike in the near future our profession seems to ignore the importance of timing its strokes of policy, a subject of which President Nasser is such a master. *Fas est et ab hoste doceri*. Thanks to the loyal and efficient work of Health Service doctors since the Service began, the public has for it a great affection and in a corresponding degree the profession enjoys its sympathy and good will. A medical strike will change these feelings into furious resentment, to be nursed and fomented until the next general election gives an opportunity of revenge. Much as we may deplore the refusal of arbitration on the Spens claim, we should assist by our evidence the Royal Commission recently appointed, and await its report.—I am, etc.,

W. SAMPSON HANDLEY.

St. Olaves, Norfolk.

SIR,—The present Government seems to have been ill-advised in its relations with the medical profession, but that is no reason for the profession to accept equally poor advice. However one may indulge in word-spinning, the effect of a temporary withdrawal from the National Health Service by general practitioners would be that of a strike, since it is unlikely that many patients would pay directly for a service which they are already financing via the Government.

Withdrawal would more surely affect public opinion adversely at a time when a Royal Commission was in being, and the final antagonism, to my mind, would result from a boycott of this body. To paraphrase Mr. Butler, this is "the best Royal Commission we have," despite its dubious and hurried convening, and even its limited terms of reference seem likely to provide the profession with a better forum and a fairer hearing than we can hope to have as the tempers of official and unofficial spokesmen rise, to the delight of the sensational and less responsible newspapers.

Medical men already appear sufficiently divided to ensure the failure of any attempt to force the Government's hand prior to the Commission's report, so would it not be wiser to behave in a statesmanlike and co-operative manner, which would manifestly compare favourably with the attitude of our administrators?—I am, etc.,

C. K. McDONALD.

London, S.E.13.

SIR,—I am profoundly disturbed to read in your leading article (*Journal*, April 13, p. 873) the sentence that medicine "has sacrificed so much that it seems of little account to sacrifice one of the few things left to it—what is called

"dignity." If this were accepted as a general standard of behaviour where would this country end? I am reminded vaguely of a cartoon figuring King Albert of the Belgians in the first world war. To the remark, "So you see you have lost everything," he replied, "Not my soul." If this is indicative of the attitude of our leaders, then it will be no wonder if the doctor never regains his status in this country.—I am, etc.,

Birmingham, 30.

RUTH LOCKIE.

SIR,—It is, of course, obvious that the object of the profession's proposed withdrawal from the Health Service is to obtain a reversal of the Government's present attitude; but we feel that the B.M.A. scheme, in its present form, has no chance of securing this. In order to succeed, any action must be directed to embarrassment of the Government, and it is quite unrealistic to think otherwise.

There are three main reasons why the present scheme will fail: (1) A B.M.A. spokesman has said in the national press that, whether people pay fees or not, nevertheless they will obtain treatment. This obviously will not embarrass the Government. (2) The B.M.A. scheme says quite definitely that no more N.H.I. certificates will be issued, but that doctors will issue their own private certificates. The Government will then, as it does now in certain circumstances, accept those private certificates as evidence of incapacity, and will pay sickness benefit accordingly. Thus, again, the Government will not be embarrassed. (3) Prescriptions will no longer be written on forms E.C.10, but will be issued on private paper, and the Government will effect a regulation, which it is entitled to do at any time, authorizing chemists to accept these private prescriptions during the period of the emergency, as if they were forms E.C.10. In the process, a number of private patients' prescriptions will be honoured as N.H.S., but these will be so small as not to deter the Government. So, once more, the Government is not embarrassed.

It follows that what the B.M.A. scheme is doing is to run the Government's N.H.S. scheme for it, as before, not at increased remuneration, as we set out to do, but entirely free of charge. The real solution lies in (2) above, for, if all certification other than death certificates be completely stopped, then the maximum damage is done to the N.H.S., with no damage to the treatment of the patient. Then, and then only, will the Government be embarrassed and have to listen to the profession.

To carry the issue to its logical conclusion it is not necessary to resign from the Service. Let every doctor in the Service give notice on July 1 that, as from October 1, he does not consider certification as part of his terms of service, and the Government will be compelled to face the alternative of agreeing to arbitration, or of giving 20,000 doctors three months' notice to quit the N.H.S.—We are, etc.,

Newport, Mon.
Caerleon, Mon.R. J. S. DOHERTY.
W. H. REYNOLDS.

Reform of the Health Service

SIR,—While anxious to support our representatives, we feel that it is wrong that the profession should resort to mass resignation from the Health Service over what is primarily a pay claim. However, we view with distress the Government's failure to honour its pledges and the fact that so far it has done nothing except set up a Royal Commission with terms of reference which only serve to narrow the issue further.

There is widespread dissatisfaction with some aspects of the terms and conditions of service in the National Health Service. It has been pointed out in your columns many times that other countries are reluctant to take the British Health Service as a model, and this must be added to the evidence of your correspondence columns that it is high time we set out to try to provide a better service than the present one. We believe the leaders and representatives of the profession have been slow to appreciate or give ex-

pression to this wider issue. None the less, we greatly welcome the news that the B.M.A. is to set up a committee of inquiry into the National Health Service as a whole. But we submit that the extreme measure of mass resignation from the Service should be kept for any dispute over such wider and more fundamental issues.

We suggest that a possible solution to the present impasse lies in offering to accept the interim increase in remuneration (promised by the Prime Minister) but in making its acceptance subject to the Government's agreement to widen the terms of reference of the Royal Commission and later to meet the profession and discuss any report produced by the committee of inquiry set up by the B.M.A.—We are, etc.,

E. OFFLEY EVANS.
ALEXANDER MURRAY.
Stratford-on-Avon.G. W. SYKES.
H. M. EMRYS-ROBERTS.

SIR,—Your leading article (*Journal*, March 23, p. 690) points out that, in the present dispute with the Government, the future of the medical profession in this country is at stake. It is a general belief that the doctors seek only an agreement on the basis of the two Spens Reports. If this claim is successful and allays all disquiet, your fears for the future of our profession should indeed be increased rather than diminished. Would it not be more statesman-like for the B.M.A. Council to attempt to analyse the present defects of the National Health Service and to enter into discussions with the Minister of Health with the principal object of effecting all-round improvements for both patient and doctor? A planned withdrawal from the Service—if it be necessary at all—would have far greater moral backing if it were obviously based on a desire to reform or even replace the present system, irrespective of whether or not there is an increase in doctors' pay.—I am, etc.,

Brecon.

F. W. NASH.

Private Practice Group

SIR,—Last summer a number of private practitioners, intent on preserving and extending the institution of private practice, met in London. They decided to make themselves the nucleus of what they hoped would become a substantial group, and deputed to an acting executive the task of encouraging its growth. All known private practitioners in Great Britain were approached; many responded with enthusiasm, and these now form, with the original nucleus, a Private Practice Group.

The group believes that on the continuance and prosperity of private practice must depend, to a great extent, the well-being of the profession and the quality of medical service rendered to the whole body of citizens, whether through private or public channels. It further believes that, unless those in private practice defend its interests and speak up for it, no one else will, and doctor and citizen may one day wake to find they have lost by default one of those precious "free institutions"—that of seeking and giving medical advice and help privately, without the participation of the State. The group's immediate aims are: (1) to press for the right of private patients to receive drugs on the same terms as National Health patients; (2) to consider again the possibility of "opting out"; (3) to press for more, and less costly, private beds; (4) to inquire into and, it is hoped, to promote insurance schemes to cover general medical attention. These aims are intended to supplement, but in no way to conflict with, those of the profession as a whole.

It is obvious that the group would not exist unless its members felt that private practice had become something of a Cinderella. It has no wish to be or become a "splinter group," and it is approaching the Organization Committee of the B.M.A. with a view to receiving recognition. Meantime the group desires to increase its membership from among those who believe and have an interest in private practice, although, as general practitioners or consultants, they work also in the National Health Service. May we therefore, through your columns, invite all members of the profession who share our interests and beliefs to join by

communicating with me? There is no subscription, but secretarial expenses have so far been met by donations of a half to one guinea by members.

The members of the acting executive are: L. W. Batten, acting president; I. J. Brock, acting treasurer; A. E. J. Etheridge, acting secretary; W. Russell.—I am, etc.,

JOHN ETHERIDGE,
Acting Secretary,
Private Practice Group.73, Fitzjohn's Avenue,
London, N.W.3.

Public Opinion

SIR,—In letter after letter to this *Journal* one reads about the necessity for enlisting public support and sympathy for our case. Why do we become so craven when we consider the public and their opinion? If you ask the vast majority what they think about the doctors' case with the Government they cannot tell you because they do not know. In my view the opinion of the public is useless unless informed, and it is usually uninformed. And the same goes for the press.—I am, etc.,

Lancaster.

FRANK S. RICKARDS.

Tripartite Administration

SIR,—One is glad to see (*Supplement*, April 13, p. 173) that Council of the B.M.A., while not wholly rejecting tripartite administration, insists that the views of the hospital medical staff shall be dominant in clinical matters and that there shall be no interference by lay administrators in clinical or nursing matters. The concept in the Bradbeer Report to which the A.R.M. took exception in 1955 was "equal tripartite administration" (my italics). This must either mean three men in a boat with nobody at the helm, or three boats. Neither of these seems to be a very suitable means of carrying a patient through his illness.

In insisting on clinical control must we not make quite clear our interpretation of the term "clinical"? Just as the good family doctor gives his patient advice on what to eat and drink, on clothing, warmth, and ventilation, on sleep, work, and play, and even perhaps on his interpersonal relationships, so must all these aspects of the patient's environment remain under medical control when he is admitted to hospital. We are apt to forget the origin of the word "clinical," but few of those nurtured in a less liberal discipline than ours will think of it in terms far removed from the bedside. Therein lies the danger.—I am, etc.,

Morpeth, Northumberland.

C. GUY MILLMAN.

To Which Others?

SIR,—Have you heard about a recent meeting between Ministry officials and the B.M.A., presided over by the Minister himself? It was worth attending, though many things about it puzzled me—for example, the agenda. The first item on it—the size of the pay claim—had been deleted, as had the second, too—namely, details about arbitration. It was explained to me in confidence that these two points had already been decided by someone, so there was no need to discuss them.

The Minister opened the meeting by explaining briefly that it would be worth considering, first, an entirely new item—namely, "whether doctors' salaries should not in fact be reduced." If they reached another deadlock the Treasury might see their way to reduce salaries by a minus quantity, thus satisfying everybody. He went on to say that if by any chance they did manage to reach agreement, he would undertake to appoint an arbitrator who would be asked to determine which side had finally given way. A Ministry official then opened the debate with a quotation from the Spens Report which, he said, they felt to be important: "We leave to others the problem of the necessary adjustment to present conditions. . . . Many successive Ministers, in this and previous governments, in accepting the Spens Report felt that sentence formed at once the bedrock and a springboard for their policy. In their opinion it also covered the present item on the agenda—namely, whether doctors' salaries should not in fact be reduced." He moved to apply

the Spens formula. The B.M.A. spokesman agreed in principle that doctors' salaries should not in fact be reduced and asked for a minus 24% decrease, suggesting this should in future be known as the "non-deterioration factor." The Ministry asked for time to consider the new proposal and moved the next business. The Minister expressed his pleasure at the broad measure of agreement they had reached so far, and announced that the promised arbitrator would be none other than the President of the Royal College himself. In the meantime a Royal Commission would be set up to answer one question and one question only: "To which others?" As he did not expect they would be any more able than he had been to answer that question, and to save them embarrassment, the names of the Commission would not be announced until after they had reported.

This appeared to be a suitable moment to serve tea and pause for reflection. The first reflection came from a trade unionist. He did not think it was fair of the press to go on applying the word "strike" to what the doctors were proposing to do. During a strike no shipbuilder or engineer went on building ships or engineering anything (except another strike) while refusing to take their wages. The doctors' action would be "black" and would bring this noble word into disrepute. And what about the Ministry? Had they made adequate plans to picket doctors' surgeries? The Ministry official said they had got until September 30 to look into the matter. The only ones he had looked into so far had all been full, with a queue down the road. The second reflection was of myself, saying to the trade unionist: "Let's take the politics out of medicine and give doctors and their patients time to convalesce from the recent nightmare." Only then did I realize that we were through the looking-glass.

I got up at once, filled in my offer of resignation, wrote to the L.M.C. agreeing to pay my share to the Guild funds, and then made a vow. I swore by Apollo the physician that if the Government in their wisdom ever pushed me as far as resigning from the present Health Service, which they still look like doing, then I for one would never withdraw my resignation until the agenda for some future meeting, after October 1, was lengthened to include not only the pay claim but "the whole field of publicly administered medical services."—I am, etc.,

Peaslake, Surrey.

Association Notices

COUNCIL OF THE B.M.A.

Election of 40 Members by Grouped Branches in the British Isles, of 2 Public Health Service Members, and of 1 Woman Member

The following have been elected unopposed for the session 1957-8:

East Yorkshire and Yorkshire Branches: W. E. Dornan, Sheffield.
Ian G. Innes, Hull.
J. A. L. Vaughan Jones, Leeds.
F. M. Rose, Preston.

North Lancashire and Westmorland Branch: D. R. Owen, Chester.

Divisions in Cheshire—Birkenhead and Wirral; Chester; Crewe; Hyde; Macclesfield and East Cheshire; Mid-Cheshire; Stockport; Wallasey: David Brown, Liverpool.

Lancashire Divisions of Merseyside Branch—Liverpool; St. Helens; Stockport; Warrington. Isle of Man Branch: E. A. Gerrard, Manchester.

Lancashire Divisions of South Lancashire and East Cheshire Branch—Ashton-under-Lyne; Bolton; Bury; Leigh; Manchester; Oldham; Rochdale; Salford; Wigan.

[Continued overleaf.]

Derbyshire, Leicester and Rutland, Lincolnshire, and Nottinghamshire Branches:
Midland Branch:

Staffordshire and Worcester and Hereford Branches:
Berks, Bucks and Oxford and Northamptonshire Branches:
Cambs and Hunts, Norfolk, and Suffolk Branches:
Marylebone Division:

Hampstead, St. Pancras, and Westminster and Holborn Divisions:

Chelsea and Fulham, Kensington and Hammersmith, and Paddington Divisions:

Camberwell, Greenwich and Deptford, Lambeth and Southwark, Lewisham, Wandsworth, and Woolwich Divisions:

Bedfordshire, Essex, and Hertfordshire Branches:

Surrey Branch:

Dorset and West Hants and Southern Branches:

Bath, Bristol, and Somerset, Gloucestershire, and Wiltshire Branches:

South-Western Branch:

North Wales and Shropshire and Mid-Wales Branches:

South Wales and Monmouthshire Branch:

Aberdeen, Dundee, Northern Counties of Scotland, and Perth Branches:

Edinburgh and South-East of Scotland and Fife Branches:

Glasgow and West of Scotland Branch (Glasgow Division):

Glasgow and West of Scotland (County Divisions), Border Counties, and Stirling Branches:

Northern Ireland Branch:

The following candidates have been nominated for the Groups in which there are contests:

North of England and Tees-side Branches (two seats):

Divisions of Metropolitan Counties Branch in Middlesex (two seats):

City, South-West Essex, Stratford, and Tower Hamlets Divisions (one seat):

Kent Branch (one seat):

No nomination has been received in respect of Group 21 (Sussex Branch) (one seat).

Voting papers will be issued to the members in these Groups on April 27, 1957.

Public Health Service

The following have been elected unopposed:
H. D. Chalke (London, N.W.4); J. B. Tilley (Newcastle upon Tyne).

Woman Member

Catherine Harrower (Glasgow) has been elected unopposed.

A. MACRAE,
Secretary.

J. Cottrell, Grimsby.
E. C. Dawson, Derby.

D. S. Pracy, Atherstone, Warwickshire.

A. V. Russell, Wolverhampton.

S. F. Logan Dahne, Caversham, Reading.

Alexander Brown, Linton, Cambs.

R. Hale-White, London, N.W.1.

J. L. McCallum, London, W.C.1.

H. H. D. Sutherland, London, W.10.

H. Alexander, London, S.W.18.

A. Staveley Gough, Watford.

L. A. Gibbons, Reigate.

J. O. M. Rees, Guildford.

R. G. Gibson, Winchester.

J. R. Nicholson-Lailey, Taunton.

W. Woolley, Bristol.

S. Noy Scott, Plympton, Devon.

Leslie W. Jones, Anglesey.

Sir Tudor Thomas, Cardiff.

Mary Esslemont, Aberdeen.

J. G. M. Hamilton, Edinburgh.

W. M. Knox, Glasgow.

N. Douglas, Hamilton.

Alexander Scott, Ayr.

N. S. Dickson, Templepatrick, Co. Antrim.

Ian Fraser, Belfast.

J. C. Arthur, Gateshead.

I. M. Jones, Sunderland.

J. W. Ridley, Middlesbrough.

W. Morgan Evans, Hounslow.

A. N. Mathias, London, N.W.2.

J. B. W. Rowe, Harrow.

D. G. Berry, London, E.9.

J. A. Moody, Ilford.

A. Barker, Whitstable.

R. P. Liston, Tunbridge Wells.

B.M.A. FILM COMPETITION, 1957

FINAL REMINDER

Intending competitors are reminded that the closing date for receipt of entry forms for the B.M.A. film competition is June 30, 1957. The last date for the receipt of films is September 30, 1957. Further details may be obtained from the Secretary, B.M.A. House, Tavistock Square, London, W.C.1.

A.R.M. MOTIONS REQUIRING TWO MONTHS' NOTICE

The following motion submitted for consideration by the Representative Body at its forthcoming meeting requires two months' notice under Standing Order 30 of the A.R.M., as it would involve a rescission of Association policy:

Motion by Dumfries and Galloway: That the shortened form of Insurance Examination be abolished.

A motion by Manchester on the subject of the appointment of regional medical secretaries to Association regional offices also requires two months' notice under Standing Order 8 of the A.R.M., as it would involve special expenditure. The motion was published in paragraph 198 of the Annual Report of Council (*Supplement*, April 13, p. 192).

A. MACRAE,
Secretary.

Branch and Division Meetings to be Held

BARNET DIVISION.—At Hendon Hall Hotel, Friday, May 10, 8.30 p.m., Barnet General Hospital Ball.

BROMLEY DIVISION.—At Royal Bell Hotel, Bromley, Wednesday, May 8, 8.30 p.m., annual general meeting.

CAMBERWELL DIVISION.—At King's College Hospital, Denmark Hill, S.E., Sunday, May 12, 10.30 a.m., clinical meeting. All medical practitioners in the area of the Division are invited.

EAST HERTS DIVISION.—At Hertford County Hospital, Friday, May 10, 8.30 p.m., annual general meeting.

EAST KENT DIVISION.—At Chez Laurie Restaurant, Thanet Way, Herne Bay, Thursday, May 9, 7.30 p.m., dinner; 8.45 p.m., general meeting, followed by annual general meeting.

FOLKESTONE AND DOVER DIVISION.—At Esplanade Hotel, Folkestone, Friday, May 10, 8 p.m., meeting. B.M.A. Lecture by Dr. J. H. Cyriax: "Manipulative Medicine."

GUILDFORD DIVISION.—At Board Room, Royal Surrey County Hospital, Guildford, Thursday, May 9, 8.30 p.m., meeting. Lecture by Dr. G. W. Theobald: "Chronic Backache in a Woman."

HENDON DIVISION.—At Fellows' Restaurant, Royal Zoological Society, Regent's Park, N.W., Thursday, May 9, 7 for 7.30 p.m., annual dinner. Guests invited.

HUDDERSFIELD DIVISION.—At Huddersfield Royal Infirmary, Monday, May 6, 8.15 p.m., business meeting.

MONMOUTHSHIRE DIVISION.—At 20, Stow Hill, Newport, Monday, May 7, 8.30 p.m., annual general meeting.

NORTH MIDDLESEX DIVISION.—At House of Commons, Saturday, May 11, 7.30 for 8 p.m., dinner. (6.30 to 7.30 p.m., officially conducted tours of House of Commons and House of Lords.) Wives of members and guests are invited.

SOUTH-WEST WALES DIVISION.—At Ivy Bush Hotel, Carmarthen, Saturday, May 4, 8 p.m., annual meeting.

TUNBRIDGE WELLS DIVISION.—At Kent and Sussex Hospital, Tunbridge Wells, Monday, May 6, 8.30 p.m., 51st A.G.M.

WEMBLEY DIVISION.—At House of Commons, Saturday, May 11, 6.45 for 8 p.m., dinner to be held jointly with Willesden Division, for members and their ladies.

WEST MIDDLESEX DIVISION.—At Paul's Restaurant, New Broadway, Ealing, W., Thursday, May 9, 7.30 p.m., annual general meeting. 8.30 p.m., Divisional dinner.

WOOLWICH DIVISION.—At Woolwich Memorial Hospital, Shooters Hill, S.E., Tuesday, May 7, 8.30 p.m., meeting. B.M.A. Lecture by Dr. A. Talbot Rogers: "Current Affairs in Medical Politics." Members of Greenwich and Deptford, Lewisham, and Dartford Divisions are invited.

British Medical Association

SPECIAL REPRESENTATIVE MEETING DECISION DEFERRED

A Special Meeting of the Representative Body of the British Medical Association, held at B.M.A. House on Wednesday, May 1, decided after a long discussion to accept a Council recommendation to defer a decision on withdrawal from the National Health Service and to defer a decision on giving evidence to the Royal Commission which is to inquire into doctors' and dentists' remuneration. Dr. I. D. GRANT was in the chair.

The Council's recommendation was:
(1) That in the opinion of this meeting circumstances have so changed that the position has altered since the Council issued its recommendation to the Representative Body not to give evidence to the Royal Commission; but, realizing that Divisions and the profession generally have not had an opportunity of considering the statements by the Chairman of the Royal Commission or the letter from the Minister of Health to the Chairman of Council, this Special Representative Meeting defers a decision on the question of giving evidence to the Royal Commission until the next meeting of the Representative Body; (2) that the decision on withdrawal of service be deferred.

An amendment to delete the first part of the recommendation, "that in the opinion of this meeting circumstances have so changed that the position has altered since the Council issued its recommendation to the Representative Body not to give evidence to the Royal Commission, but," was defeated by 199 votes to 163.

Other decisions taken by the meeting were: that the Council should institute an inquiry into the whole field of the medical services; that the meeting was dissatisfied with the N.H.S. and desired reform; and that the Council should reinvestigate the introduction of an independent British Medical Service. A motion that the Government should be urged, in association with the profession, to set up a committee to undertake a fundamental review of the N.H.S. was rejected.

Protest Against Press Reports

Dr. S. WAND, Chairman of Council, moved the Council's new recommendation, in place of the original recommendation, which stood on the agenda.

Before speaking to the motion, Dr. Wand made the following comments on press reports of earlier meetings:

"There was a meeting of local medical committees yesterday, which was private, and a private meeting of the General Medical Services Committee. It has been said in the press that I am now in favour of giving evidence to the Royal Commission and that I told the meeting in the morning that that was so. That was not true. I gave a factual statement to the meeting in the morning. I gave no personal opinions at that meeting.

"A later statement refers to a 'refusal to approve Dr. Wand's new plan.' I put up no plan. I have been at great pains as Chairman of Council to indicate no personal views, except to express views of Council, in all my statements and not to anticipate any views of Council or this Representative Body."

Pledges Broken

The original motion of the Council was:

That, in the opinion of the Representative Body, in present circumstances it is undesirable that the Association should co-operate in any way with the Royal Commission on the Remuneration of Doctors and Dentists; (2) that, if at a later date circumstances should so alter as to enable the Representative Body to reconsider its attitude to the Royal Commission, any decision to participate be conditional on the inclusion of all public health medical officers within the terms of reference of the Royal Commission.

Reviewing the history of the dispute, Dr. WAND said they all knew of past Government pledges that the Spens Report was the basis of general-practitioner remuneration. Spens, brought up to date in terms of money, was the basis of the general practitioner's contract with the Government, but this was not written into a legal contract; it was a moral contract.

There had been no negotiations on the recent pay claim and arbitration had been refused by the Government. The profession had been refused discussion on the merits of the claim and was still paid on 1951 values. It had been told that the economy of the country was in such a state that no claim for such a large sum of money could be considered. "The statements of the Chancellor of the Exchequer and the effects of the Budget have disproved that statement fully,"

he said. "The sum of £100 million was put into the pockets of those who wish to spend that money."

"The reply to our claim," Dr. Wand went on to say, "was a Royal Commission and two other acts of dictation—a 10% increase imposed on junior hospital staff and, ultimately, a 5% addition for the practitioner, made subject to distribution factors. For the general practitioner the junior rank benefit will have to come from practitioners with larger lists, so that the amount received by a man with a larger list will necessarily be less than 5%."

"The pledges given to us have been broken and an honourable profession has been treated with contempt. We have been driven by this thoroughly bad treatment into defensive action which has been distasteful to every one of us. That action has been justified by the causes which have led to it and by the results which have been obtained so far."

Recent Events

Outlining the recent history, Dr. Wand said that on April 4 there was a well-informed debate in the House of Lords. Following this debate he wrote a letter which appeared in *The Times* on April 8. He said in his letter that he was sure the Council would respond to an attitude of reasonableness on the part of the Government, and he asked that the Government should engage in discussions about the matters in dispute.

On April 12 the exchange of letters between Sir Russell Brain and the Prime Minister was published. The following day there appeared in the press the explanatory memorandum of the Chairman of the Royal Commission. This was almost without precedent. The Council and the General Medical Services Committee, who had been informed of Dr. Wand's letter, gave their approval for him to endeavour to engage in talks with the Chairman of the Royal Commission and the Minister of Health in order, if possible, to effect a peaceful solution of the dispute.

"Since then," Dr. Wand said, "I have had talks with the Minister of Health and talks with the Chairman of the Royal Commission, but these started only on April 16, when the Minister sent for Sir Russell Brain, Dr. Talbot Rogers, and myself. A well-informed press had told us not only the 'when' but also the 'how much' of the interim adjustment. I used that occasion to open discussions with the Minister in order to try to find some way of effecting a solution. I was invited by Sir Harry Pilkington to see him and took that opportunity, too. As a result, I obtained from him these two statements: that that part of the Royal Commission's task which consists of considering what should be the proper current levels of remuneration of doctors and dentists will include hearing statements from those professions as to the remuneration which they are now claiming—this being the first time that we had had a public statement that our claim was before the Commission—and that it is in the mind of the Chairman of the Commission that if it becomes unlikely that evidence can be obtained in time for a report to be published by Easter, 1958, he would so inform the Government and the other interested parties. That is important in indicating the speed with which the Commission intends to work. If the Chairman indicates that the Royal Commission will take longer than Easter of next year, it would obviously not be inappropriate for us to seek a further interim adjustment in the meanwhile."

"On April 25," Dr. Wand continued, "I asked to see the Minister, after the Easter holidays. As a result of seeing him, he sent a letter which was received the following day, and that letter is before you" (see *Supplement*, May 4, p. 237). "It includes an offer of consultation before the implementation of the Royal Commission's report, adding, 'such consultation could of course include any matters relevant to the report or the present dispute.' That was the first time there appeared any suggestion that the present dispute will at some stage be the subject of consultations with the Minister."

"I took up the validity of the terms of reference. Our legal adviser had in a legal document given an appraisal of

the Royal Commission situation. Technically, the terms of reference remain unaltered, and, in so far as they are inconsistent with them, prevail over the statements made. But in the Minister's letter he said, '... you can certainly regard the public statements which have been issued as having full validity.'

No Further without Fight

"I took up the position of the public health medical officers," Dr. Wand said, "but the Minister stated that they could not be included in the Commission's Report. He told me that the inclusion of public health medical officers from local authorities would not only complicate the matter but would also very considerably prolong the time the Royal Commission would take to report. We received the Minister's letter late last Friday night. It had not been until after April 17 that I had authority to take action."

"Certain things are clear. The Royal Commission will continue. The terms of reference will not be altered. The interim adjustment is fixed and is not negotiable. The Royal Commission will not act as an adjudicating body; that was made perfectly clear to me by its Chairman. Finally, I am quite sure that the Government will now go no further until the Royal Commission has reported unless we engage in a fight, which means withdrawal."

"This dispute has been going on for over a year, but it is only fair to remind you that in the Danckwerts struggle we took a good deal longer than that. We had a number of similar situations during the preliminary to that adjustment. We had the inquiry of Mr. Bevan and we had Mr. Marquand's offer of £2m., but that was not an interim adjustment."

It was clear to Dr. Wand that the withdrawal issue and the Royal Commission were intermingled in such a way that they could not be separated. The present issue was now simple—give evidence or withdraw. The third alternative was to do nothing at all, and he did not think that was in the minds of most of the profession.

Losses and Gains

"Let us look dispassionately at the situation and see what we have gained so far," Dr. Wand continued. "Our claim has not been met. Spens is in the melting-pot. We have the Royal Commission. Against that we can set certain gains which are not inconsiderable. They are not a major victory but they are not inconsiderable advantages. What in February was a completely impregnable door, a firm no. has been broken down to this extent: we have had a broadening of the terms of reference in a way which is probably unprecedented. We have the formula of the Chairman of the Royal Commission, in which the claim is now before the Commission. We have the time limits set by the Chairman of the Royal Commission. We have had 10% adjustment for junior hospital staff and 5% for the remainder—in all £4½m. We have had the Minister's letter in which the validity of the terms of reference as defined by the Chairman of the Royal Commission has been approved. We have been told that we shall have full consultation before the implementation of the findings of the Royal Commission, and we have had a promise of full consultation on the present dispute when the Royal Commission has reported."

"Yesterday the G.M.S. Committee by a very narrow majority passed a resolution which is a recommendation to give evidence. The very narrow majority indicated clearly the disquiet and suspicion in the profession. The Conference yesterday further indicated its disquiet and suspicion by the resolution it passed. The Consultants and Specialists Committee met yesterday and decided that in the changed circumstances it would give evidence."

"Bearing in mind the seriousness of the situation and the need for careful thought, the Council at its meeting this morning determined that it will defer its decision, and that the matter should be deferred for consideration by the whole profession so that it may have an ample opportunity of considering the new situation."

"But whatever decision you make," Dr. Wand concluded, "I remind you that the claim has not yet been met, that the Royal Commission will report in any case, and that whether we give evidence or not there may be changes of our status. Whatever your decision on the question of giving evidence, it does not mean that the struggle is necessarily over. The need for a closing of our ranks and unification is as strong as, even stronger than, ever, and with that the need to increase the financial resources at the disposal of the various defence funds."

Form of Words

Dr. J. A. GORSKY (Westminster) asked what Dr. Wand regarded as reasonable assurances and whether the Council wanted Spens to go into the melting-pot. Dr. WAND replied that he regarded the fact that we came into the Service on Spens as paramount.

Speaking to the amendment to delete the opening words of the Council's recommendation, Dr. B. BURNS (Sheffield) suggested that the recommendation had been worded to get a certain answer. The central issue which the meeting and the profession had to decide was whether conditions had changed since the Council made its original recommendation. In fact, in the letter from the Minister all they had been given was a form of words, just as they had been given a form of words at the crucial moment in 1948. "You swallowed these forms of words whole," he said, "and you were delivered into a paradise where you are the door-mats of the Welfare State. The only criterion to test whether the recent correspondence has any value is, is it enforceable in the courts?"

"The Government had the Spens and Danckwerts Reports in print and the Negotiating Committee's memorandum on the legal aspects of the contract in print. What concession had the profession gained in the information that the Royal Commission would consider these Reports?" asked Dr. BURNS. "Of course it would. What else would it have consulted—a guide to the turf? These 'concessions' were not concessions at all, but phases in a carefully planned process of brain-washing. These promises were the type which had been the daily stock-in-trade of politicians since the technique had first been devised by Machiavelli."

"The purpose of our amendment is to stave off the evil day when the profession will be sold down the river," Dr. BURNS said. "If we give evidence to the Royal Commission, it can be only evidence it already has, and we shall then have discussed an alternative to Spens. Afterwards we will be told that we have abandoned Spens because we have discussed what is to replace it."

Dr. C. M. SCOTT (Barnet), referring to Dr. Burns's reference to a door-mat, said all the Royal Commission had done was add a foot-scraper. All the meeting should do was pass the question back to Divisions, without the opening lines of the recommendation.

Dr. C. P. WALLACE (Guildford) supported the amendment because he felt that the circumstances had not changed. The profession had no alternative employment short of emigration, and if they were denied arbitration they were on the path to serfdom.

Dr. O. C. CARTER (Bournemouth) said history was repeating itself. In 1948 the rout had been led by the then president of the Royal College. This time the Royal College had started a feeling of doubt on the wisdom of withholding evidence from the Royal Commission. He did not think the circumstances between the profession and the Government had changed in the slightest, but there had been a very serious change in the minds of some members of Council. The Divisions must be given an opportunity to reconsider the position, but he feared that they were substituting one phased withdrawal for another; they were preparing not for withdrawal from their resistance to Government dictation, but for withdrawal from the N.H.S. but for a phased withdrawal from their resistance to Government dictation. "If we give in now," Dr. Carter said, "I do not think we shall be able to form any sort of resistance to unilateral action by the Government in connexion with the practice of medicine or any of the features of the profession which we held dear. Of all the evils, the amendment is the least."

Dr. W. N. LEAK (Mid-Cheshire) agreed that the position had not changed. The Government had thrown over a fundamental agreement it had reached with the profession. The profession must have an assurance from the Government on its good faith in agreements entered into voluntarily. After having obtained such an assurance, perhaps the profession could give evidence to the Royal Commission.

He suggested that there were many alternatives other than those mentioned by Dr. Wand. Could they not go to law over the agreement? It had been suggested, too, that the profession should refuse to pay income tax. Why not petition Parliament?

At this stage in the discussion, an attempt was made from the hall to put the amendment to the vote, but the CHAIRMAN felt that there should be a longer discussion before any decision was reached. The meeting thereupon adjourned until the afternoon.

No Arbitration

The discussion on the amendment to the Council's recommendation continued after lunch. Dr. WAND, answering a question from Dr. W. A. HYSLOP (Leeds), said: "I am quite convinced that there will be no arbitration unless the profession is prepared to withdraw its services."

Dr. J. C. ARTHUR (Gateshead) thought that what change there had been in the situation was material. Though superhuman intelligence and Machiavellian cunning had been ascribed to the Government they were, in fact, just ordinary people trying to do their job. The chief strength of representatives was the wholehearted support of the Divisions. Passing the amendment would prevent them applying that strength at the right moment, which would be when the Royal Commission had reported.

Mr. J. R. NICHOLSON LAILEY (Council) suggested that the granting of the "much-maligned 5%" meant that the Government had admitted liability. That had been handed out without negotiation and was a most important aspect.

Dr. J. A. GORSKY (Westminster and Holborn) declared that, constitutionally, neither the Government nor any Minister—not even the Prime Minister—could bind a successor, and until the Government recognized that there was a legal, binding obligation which they had to honour no purpose was served in giving evidence before the Royal Commission. To give evidence would be to prejudice the Association's interests.

Dr. J. BAIRD FORRESTER (Glasgow) suggested that the most important thing was to present a solid front, and as the Consultants and Specialists Committee had decided to give evidence it was only right that the Divisions should reconsider the position, and a decision deferred for the time being.

Calls for a vote to be taken were becoming more persistent, until Dr. H. GUY DAIN (Council) appealed for support for the Council's recommendation. In his view there was little difference between the Commission's report and an arbitration decision, except that the Commission's report would not be binding. The Association would have an effective opportunity to state a case to the Commission. They had been quite determined to withdraw their services if refused arbitration, but the setting up of the Royal Commission went some way towards that objective, and to continue in the suggested course of withdrawal would not get the necessary support.

Dr. WAND said that to take Dr. Gorsky's constitutional point to its logical conclusion would mean that no body such as theirs could ever enter into any kind of a contract with any Government. The second paragraph of the Minister's letter had been severely criticized, but if, as had been alleged, the words were meaningless, then he himself was largely to blame. To say the situation had not changed was not true. The present terms of reference were "fantastically different from the original terms." Further, for the first time, they had the promise not of discussion but of full consultation before implementation of any part of the Commission's report. The wording of the Council's recommendation "is factual, accurate, and proper."

Suggesting that the meeting should pass to the next business—the second part of the Council's recommendation—Dr. WAND confessed to some confusion. First of all, they did not yet know what they were to have to do with the Royal Commission; secondly, they did not know what that Commission would find. Part of the terms of reference included the words "current levels," and they did not know where the "current" would start. Even if the Ministry took up the Royal Commission's finding, the profession did not know

Dr. D. H. ANDERSON (Sheffield), remarking that the stronger their financial position the better, suggested that

Dr. H. H. D. SUTHERLAND (Kensington and Hammer-smith) said he would welcome such a Government-appointed committee as a way to obtain amendments to the Act. Whenever he had spoken to a Minister of Health on the subject he had been told that there would not be Parliamentary time to amend the National Health Service Act for two or three years. This committee was a way to overcome that difficulty.

Dr. WAND, however, urged that the meeting should reject the motion. They had already agreed that the Council should set up a committee of inquiry. "If we do this in association with the Government it becomes one more Governmental committee," he said, "and the Government have already had committees looking into the question. The whole purpose of our earlier motion is that the investigation should primarily be in our hands. It would not be impossible to consider whether the Government should be invited to send observers to our own committee." He said the question of implementing any recommendations would be just as difficult whether the Government set up the committee or whether the profession set it up.

Dr. E. C. WARNER (Marylebone) moved an amendment to the Edinburgh motion making it read "the profession in association with the Government," rather than the other way round, and leaving the initiative in the hands of the profession, and Dr. R. HALE-WHITE (Marylebone) agreed that the motion, without amendment, might suggest that this would be another Government-sponsored committee when, in fact, it was important that the profession should be the controlling influence; but Dr. J. S. NOBLE (Morpeth) recommended the meeting to reject the motion entirely and leave the inquiry to the Council.

Dr. HAMILTON, in reply, said the purpose of the Edinburgh motion was that the Association should stimulate the Government into establishing another Government committee. More people were involved in the N.H.S. than the doctors, and if a fundamental examination of the Service were to be conducted it was vital that at least in part it should be conducted by the consumers who paid for it. One of the most important blocks of opinion submitted to such a committee would be the medical opinion, but that would not be the only opinion.

Dr. C. P. WALLACE (Guildford) suggested that what was important at this juncture was that they should approach the Government in order to get their co-operation in a united committee for the revision of the N.H.S. If the Government co-operated, that would be a step towards implementing any recommendations made.

Dr. W. WOOLLEY (Bristol) urged that both the Edinburgh motion and the amendment should be withdrawn and re-introduced later. The meeting had already agreed that the Council should set up a committee to investigate the services. Until it had reported, what was the purpose of having a joint committee with the Government? Dr. H. D. CHALKE (London) drew attention to a fundamental difference between the committee to be set up by the Council and that proposed by Edinburgh. "The latter deals purely with the N.H.S. and leaves out a large number of members of the public health services," he said. "Are you going to restrict the inquiry to a section of the B.M.A.? There have already been enough attempts to split the profession."

Both the amendment and the Edinburgh motion were defeated.

Dr. R. P. LISTON moved a motion on behalf of Tunbridge Wells instructing the Council to reinvestigate the introduction of an independent British Medical Service, and this was considered with a number of other motions urging that the Association should consider the formulation of an alternative scheme to the N.H.S. Barnsley asked that it should be managed by an independent authority and not directly by Parliament, and Gateshead asked that it should be administered by the doctors themselves.

Dr. LISTON said that in the recent crisis doctors had been asked to withdraw from the N.H.S. into a vacuum. Many practitioners would readily have withdrawn into an alternative scheme, had one existed which met their requirements.

"Within the N.H.S. there is no safeguard against a Government disposed to act either against the patient or the profession," he said. "By the imposition of prescription charges and other charges and by the repudiation of Spens the Government has shown that it can act against both. The controlling factor in the Service is now, and will be in the future, economic. It is in the interests of both the profession and the patient that an alternative service be provided." He added that there would probably be a year's delay in providing an alternative service, but its provision would safeguard the doctors against these recurrent crises.

Mr. G. P. CLELAND (Ayrshire) said there was no safeguard for doctors improving their ancient traditions or even maintaining them if they were tied to the strings of politics. At present, doctors were discouraging their sons from entering the profession. Mr. R. H. J. M. CORBET (Preston) said they wanted an independent body which would guarantee them some continuity of service. There must be an end to broken promises.

Dr. J. C. ARTHUR (Gateshead) said it had been realized that the staged withdrawal scheme was not fully satisfactory, but nothing more could have been done. Gateshead had a long experience of very successful public medical services and they felt that it might be possible to formulate a scheme on the lines of the old public medical services. If doctors left the N.H.S. permanently they would then have another scheme to fall back on. Some members had put forward figures suggesting that such a scheme was financially possible; the provision of lay staff would be a difficulty but it should not be insuperable.

After Dr. H. W. DONOVAN (Birmingham) had suggested that the motion should be passed as a reference to Council, and after Croydon asked to be associated with it, the motion to reinvestigate the introduction of an independent British Medical Service was approved as a reference to Council.

This concluded the business of the meeting. A vote of thanks to the Chairman, moved by Dr. W. N. LEAK, was carried with acclamation.

PROCEEDINGS OF COUNCIL

OPINION DIVIDED

A division of opinion was apparent at a meeting of Council held at 9 a.m. on May 1, an hour before the Special Representative Meeting was due to begin. As a result, the Special Meeting was deferred until 10.30.

The meeting was mainly occupied with the efforts of the Chairman (Dr. S. WAND) to persuade Council to give him guidance on what he should say to the Representative Body: he could make a factual statement only, or he could say that the Council felt that evidence should not be given to the Royal Commission, or he could say that circumstances had so changed that the Council felt that evidence should be given, subject to consultation with the profession. Which statement should he make?

Dr. A. V. RUSSELL, after congratulating the Chairman on his personal efforts in the dispute, which had been largely responsible for the progress made, urged that there should be consultation with the periphery before a decision was taken, and Dr. H. H. D. SUTHERLAND emphasized the difference between giving evidence to the Commission and co-operating with it. Dr. F. GRAY said unless they were careful the Representative Body would find Council standing on its head: Council must not make a hurried decision reversing its recommendation which at present stood on the Agenda for the Special Representative Meeting.

Dr. J. B. TILLEY reminded the Council that it had previously decided not to give evidence unless the public health medical officers were included in the terms of reference. If it were to be decided that they could not now afford to

refuse to give evidence, he asked that the Public Health Committee should have an opportunity of reconsidering the matter.

Dr. I. D. GRANT, Chairman of the Representative Body, urged the Council not to take a snap decision. "This is a very important matter and we cannot come to decisions which affect the whole profession in a rushed and hasty meeting like this," he said.

Dr. GRAY then moved the second half of the Council's recommendation, which ultimately appeared before the Special Meeting, and Dr. H. GUY DAIN moved an amendment adding the opening words, "That in the opinion of this meeting circumstances have so changed that the position has altered since the Council issued its recommendation to the Representative Body not to give evidence to the Royal Commission, but . . ." Dr. GRAY disagreed with the amendment, which he thought was expressing an opinion that circumstances had changed; and Dr. DAIN said he thought circumstances had changed sufficiently for them to ask the profession to look at the question again. Dr. I. M. JONES thought that on the single issue of the public health medical officers they should decline to give evidence unless those doctors were included in the Commission's terms of reference. Other members thought that to introduce the question of public health members, in view of the Government's attitude, would cause deadlock.

Dr. DAIN's amendment was carried by 34 votes to 27. The CHAIRMAN again raised the question of the advice which he should give to the Special Representative Meeting, and several members emphasized that they had not had time to decide whether to give evidence to the Commission. Dr. GRAY said that was the one subject they had not discussed. Dr. RUSSELL moved and Dr. I. M. JONES seconded a motion that at the moment the Council were not prepared to give an opinion on the giving of evidence to the Royal Commission; and the Council was equally divided, 31 votes to 31. The CHAIRMAN said that in the circumstances he would give a purely factual statement to the Representative Body.

Dr. DAIN's amendment was carried as a substantive motion, as was a motion to defer a decision on the question of withdrawal from the National Health Service.

SECOND COUNCIL MEETING

At a meeting of the Council which followed the Special Representative Meeting on May 1, Dr. WAND (in the Chair), asked for and was given authority to pursue Dr. Gorsky's suggestion by seeking the advice of counsel relative to applying for a declaratory judgment on the contractual validity of Spens. Dr. WAND thought that it might be desirable to take the opinion of more than one counsel, and that Dr. Gorsky's assistance should also be enlisted.

On the suggestion of the SECRETARY, it was agreed that a factual statement on the present position be prepared for publication in the *Supplement* and submission to the Representative Body.

It was agreed that the Special Representative Meeting to take the deferred decision on withdrawal from the Service should take place on June 12.

On the motion of Dr. F. GRAY it was agreed that divisional secretaries should be asked to co-operate with the secretaries of local medical committees in the calling of meetings in the divisions.

ROYAL COMMISSION MEETS IN EDINBURGH

The Royal Commission on Doctors' and Dentists' Remuneration has announced that it held a special meeting in Edinburgh on May 2 for preliminary discussions with the Joint Consultants Committee (Scotland) and the Institute of Chartered Accountants in Scotland. This meeting was the eighth held so far by the Royal Commission.

SPECIAL CONFERENCE OF LOCAL MEDICAL COMMITTEES

PROPOSAL FOR WITHDRAWAL DEFERRED

A report of the earlier proceedings of the Special Conference of Local Medical Committees held on April 30 appeared in last week's *Supplement* (p. 237). The Conference continued its debate until 6 p.m., with Dr. A. BEAUCHAMP (Birmingham) in the chair.

Securing Arbitration

Moving a request from Bath that the Government should be again approached with a request for agreed arbitration machinery, such arbitration to follow the request of either side, Dr. A. SUTHERLAND said that the alternative to permanent arbitration machinery was crisis after crisis. It was surely the job of a profession such as medicine to find an intelligent way of settling disputes. They could not be entirely happy about their own reactions to the unfair treatment meted out to them. The breathing space until June should be used by the Arbitration Committee to go again fully into the whole question, as a matter of urgency. Dr. A. V. RUSSELL (Wolverhampton) agreed that it was quite intolerable that there should be disputes of this kind every few years.

After Dr. A. B. DAVIES had pointed out that they had been trying to secure arbitration from the Government for 12 months, the Conference passed the amendment from Bath.

Withdrawal from Service

Dr. F. J. ROBERTSON (Newcastle upon Tyne) moved that withdrawal from the Service should be for the purpose of securing settlement of the pay claim, a legal contract for the future, and the right, by either side, to apply for arbitration. After nearly nine years it was becoming increasingly apparent, he said, that the medical profession had been the victim of the greatest confidence trick of all time.

Dr. DAVIES replied: "We do not wish to restrict ourselves to a 'sole' purpose, even though the 'sole' is in three parts." A motion to pass to the next business was agreed to.

Edinburgh asked that the withdrawal from the Service should be total and not phased. Dr. E. V. KUENSSBERG, moving the amendment, urged the sharp blow of a complete withdrawal and not a phased withdrawal, which might well turn out to be painless except to the doctors. Dr. J. C. ARTHUR (Gateshead) said his area felt that the impact of a total withdrawal would be so much more effective and that greater solidarity of the profession would be secured, and Dr. R. A. PEACOCK (Lanarkshire) agreed that phased withdrawal would be of no benefit at all to the medical profession. Dr. R. W. RAE (Staffordshire) said that it was up to the Committee to advise on the best method. Why should the Conference tie their hands?

Dr. C. W. MARSHALL (Devon and Exeter) reported that the South-West had not been able to muster a vote in favour of withdrawal, because the doctors there did not think that the public was behind them and therefore they felt that it was doomed to failure from the start. Also they could not see how any of these schemes could work without clinical detriment to the patients. Dr. A. V. RUSSELL said that no one intended that patients should suffer any clinical hardship. The doctors were saying that the Government had been a bad employer and after six months they would terminate their employment with this employer.

Dr. I. D. GRANT was of the opinion that phased withdrawal was appeasement. If one went into battle, people would be hurt. He would like there to be total withdrawal. Dr. C. W. WARNER (Liverpool) announced that Liverpool had decided to support phased withdrawal, although they recognized that the threat of complete withdrawal was the finest that could be used. But they did not like using a threat unless they were prepared to carry it out. One-third of general practitioners had known no other form of practice than that of the National Health Service; to secure their

support would be very difficult. The General Medical Services Committee's plan was the only practical one.

Dr. DAVIES pointed out that it was necessary to give three months' notice before leaving the Service. No one doubted that the threat of complete resignation would be the most effective weapon—"but can we do it?" asked Dr. Davies. "Have you the money to make it practical?" The Committee had been asked to draw up some scheme which would be practical and financially possible and had decided that a phased withdrawal was the best thing that could be offered. Complete financial security could be given in the areas where the phased withdrawal took place. The Committee could not give this cover for a complete withdrawal.

Dr. G. N. GROSE (Middlesex) supported the General Medical Services Committee.

The mover accepted an amendment from Gateshead to add the words "provided that an adequate number of doctors express their willingness to resign" to his proposal for a complete withdrawal. The amended proposition was lost.

Buckinghamshire asked that in the event of progressive withdrawal no practitioner should be asked to resign unless 80% of resignations had been collected from his area. Dr. P. J. DELAHUNTY explained that his committee felt that, unless this undertaking was given, a number of doctors would refuse to send in their resignation. It was also felt that to have less than 80% would be fatal.

The amendment from Buckinghamshire was carried.

Withdrawing from Obstetric List

Dr. I. M. DOVE (Blackpool) said that his committee felt that in a fight there should be no blunting of weapons. His amendment called for withdrawal from the obstetric list at the same time as withdrawal from the medical list.

Dr. DAVIES hoped the Conference would not accept this. Publicity had been given to the fact that the doctors would look after all pregnant women; whatever else happened, these women should have a full general-practitioner service. Further, if general practitioners refused, the expectant mothers would filter away into other services. "If you have any ambitions as to the future part which the general practitioner will play in midwifery, you will reject this," Dr. Davies concluded.

Dr. TALBOT ROGERS pointed out that doctors had contracted with a number of expectant mothers. Considerable needless anxiety would be caused to them. The Cranbrook Committee might suggest all sorts of changes in the arrangements for midwifery—general practitioners ought to retain their present position.

The amendment was lost.

The Conference then carried as a substantive motion that part of the General Medical Services Committee's recommendation which proposed that a decision on withdrawal from the Service should be postponed.

Interim Adjustment

Dr. DAVIES put forward the Committee's recommendation that the Government be informed that it was the wish of the Conference that the 5% net increase to the aggregate net remuneration of general practitioners arbitrarily decided upon by the Government should be placed in a suspense account.

An amendment by Sheffield asked that

in view of the arbitrary manner in which the 5% increase has been imposed without prior consultation or agreement with the profession, its existence should be ignored, and no representations concerning its disposal should be made to the Minister.

The amendment was moved by Dr. W. DONNELLY.

Dr. TALBOT ROGERS wondered how long the money could be kept in a suspense account with safety for the doctors. He thought it could not stay beyond the end of the financial year.

Dr. DAVIES suggested that the matter should be referred to the General Medical Services Committee for discussion.

Dr. B. BURNS (General Medical Services Committee) said that the purpose of the Government in the present dispute was to prevent unity of the profession—and it had succeeded very well, ably assisted by the Conference. The Spens recommendations were in full retreat, with the malodorous breath of the party politician on their neck, joined by that of the Conference. The Government, having divided the profession horizontally, were now dividing the general practitioners vertically. "We shall behave like cats in a sack, which is what the Government wants," said Dr. Burns. "Do not fall out at this juncture over money. We have been treated contemptuously by our employers. This pittance must be rejected."

Sheffield's amendment was lost. A further amendment by London to reject the 5% increase was also defeated.

Dr. J. G. L. HARTLEY (Lincoln) said that if this despicable offer was accepted, equally well a cut in salary could be accepted without negotiation. The whole thing should be turned down out of hand. Dr. J. LAWRENCE HENRY (Plymouth) said that it was not possible to refuse to take the 5% and still maintain that doctors were hard up. The money must be taken, and it must be specified that it was only a payment on account. Dr. F. G. TOMLINS (General Medical Services Committee and Young Practitioners Subcommittee) said that the increase should be refused as a matter of principle and not accepted because doctors were badly off. For the young practitioner it was 5% of virtually nothing.

Dr. A. M. MAIDEN (Lindsey) said that at a meeting attended by 67 out of a possible 100 in his area it was agreed that an increase without negotiation should be refused. He would refuse 10% or 15% if it was given without negotiation.

Dr. F. E. GOULD (General Medical Services Committee) said that to reject the money would be to break faith with those who needed it. The recommendation for payment into a suspense account should be accepted. Dr. A. BROWN (General Medical Services Committee) warned that if the question of a suspense account was put forward, there was a risk that general practitioners would not receive their money on the first day of the quarter.

The meeting carried an amendment from Berkshire to the Committee's recommendation, and agreed that the interim offer of 5% should be accepted without prejudice.

Failure to Honour Agreement

Dr. A. J. JOHNSON (Norfolk) thought that the Conference should put on record the feeling with regard to the way the Government had behaved. He moved:

That this Conference deplores the failure of the Government to honour its agreement with the profession in that it has repudiated the Spens Report for general practitioners without the usual consultations and refused arbitration which was promised to the profession.

This was passed unanimously. The Conference also adopted the following resolution from Middlesex:

That so long as Her Majesty's Government refuses to negotiate upon the reasoned claim for an adjustment in remuneration and, in the event of failure to reach agreement, to submit the unresolved dispute to an agreed form of arbitration, the general practitioners of the National Health Service can have no confidence in the Government as their employers.

This, said Dr. R. B. L. RIDGE, conveyed in simple terms the effect which the Conference felt that the Government's behaviour had had on the profession's confidence in it as employer.

Voluntary Levy

A motion from the City of Worcester asked the B.M.A. to arrange for specialists to contribute to the voluntary levy in a similar proportion to that asked from general practitioners. Dr. A. B. MILLIGAN explained that at the meeting where this motion had been passed over 40% of those present were specialists. The motion was carried.

Dr. C. D. MEADOWCROFT (Middlesex) said that all knew that it was the general practitioners who were fighting this battle and if it came to withdrawal they would be the ones

implicated. He felt that as the specialists and other sections of the profession would ultimately benefit from the general practitioners' fight, it was only fair that they should be asked to contribute to the fighting fund.

The Conference agreed to a Middlesex motion that all doctors be asked to contribute to the levy.

Dr. DAVIES hoped local medical committees would continue to contribute to the defence fund. He gave an assurance that any money from whatever source which was not used would be returned *pro rata* to the contribution. The better they were prepared financially, the stronger would be their position.

Dr. G. O. S. REID (Kent and Canterbury) said that 5% was a considerable amount for the young practitioner to contribute. It would be advantageous if this amount could be reduced. He felt that that would mean a bigger response. Dr. M. MUNDY (Middlesex) suggested a quota of 1d. for the doctor with a list of up to 1,000, 2d. for a list of 1,000 to 2,000, and 3d. for 2,000 and over. Dr. G. F. PETTY (Cardiff) reported that the clerk of his executive council refused to collect the levy. Dr. DAVIES pointed out that the clerk was the servant of the council. The medical members could easily obtain a majority to carry a resolution instructing him.

Dr. WAND suggested that in view of the decision of the Conference to defer the question of giving evidence and therefore by implication that of withdrawal, the Conference should defer a decision on the amount of the levy, or better still refer to the General Medical Services Committee the matter of how to increase the sums available in the trust funds. That would give the Committee an opportunity to make a recommendation in June, according to what was then decided. If it was decided to give evidence, it would be necessary to decide whether to have a levy over the next 12 months smaller than the 3d. but substantial. If it was decided to withdraw from the Service, a levy would be needed immediately.

Patients of Practitioners who Resign

Glasgow asked for an expression of opinion on a motion that

arrangements should be made through the machinery of the Guild for all medical practitioners (including assistants) to sign a covenant whereby, if they themselves were not prepared to resign or were not asked to resign, they would undertake not to accept, under the National Health Service, patients of practitioners who had resigned.

Dr. W. W. FULTON, in moving the resolution, felt that there should be a covenant; he felt it would encourage people to resign. Dr. DAVIES said that nothing must be done which impaired the patients' freedom of choice. Subject to that, the General Medical Services Committee accepted the proposal.

Dr. MUNDY said that those who refused to resign said that they did so as a matter of principle. This was one way of testing their principles. If they signed they would be shown gentlemen of principle. If they did not they would be shown up for what they were. Dr. J. M. B. DONALDSON (Belfast) agreed that this would give protection to those who resigned.

Glasgow's motion and others in similar terms were referred to the General Medical Services Committee.

Position of Assistants

Two motions from Birkenhead were carried. The first provided that, in the event of area resignation, payments to principals employing assistants should be at the full rate of the previous quarter only in consideration of their continuing to employ an assistant at the scale of remuneration previously paid. The second urged the profession to use moral suasion to the utmost to ensure that the position of assistants be protected in regard to enjoying a share of any benefits obtained in the present dispute.

Dr. E. G. WATSON said that he put the latter forward at the request of the co-opted assistant member on his committee, who said that there could be a problem in certain areas of the country. Dr. TOMLINS commended the motion.

Dr. P. B. BAILEY (representative of assistants on the General Medical Services Committee) stressed the need to do the right thing by the assistants, and urged the meeting to decide the matter rather than refer it to the Committee.

Obstructive Action

London asked for the organization of obstructive action in relation to the administration of the Health Service upon a progressive scale. Dr. M. SORSBY, speaking to the motion, thought that if there was to be phased withdrawal the rest of the country must do something as well. In areas where practice in the N.H.S. still continued, doctors should adopt measures which would damage the administrative machine. They should refuse to answer letters from regional medical officers or to attend committees. If necessary the medical members of the Medical Practice Committee should be asked to cease work. The administrative machinery could be damaged in this way and the Government would have to capitulate.

Dr. ARTHUR said in some ways this was almost suicidal. Nine was a quorum of an executive council. If the Medical members did not attend the others could appoint a medical man to come into the area. "We must retain as much administrative power as we can," said Dr. Arthur.

The motion was lost.

Dr. A. F. DUNN CARRIE (Manchester) moved, and the Conference agreed, that in the event of withdrawal the position of nominees of local medical committees serving on executive councils, allocation committees, and medical service committees should be clarified and clear instruction issued to ensure uniformity of action on a national basis. Dr. Carrie explained that it would strengthen the power of all members of executive councils.

Legal Action

Dr. MUNDY moved that the Conference instruct the General Medical Services Committee to institute legal proceedings to test the validity of the Minister's view that there was no contractual obligation between the Ministry and the medical profession. There would be little to lose and everything to gain by going to law, he said. "What we want to do is to inflict on the Minister a form of arbitration whether he likes it or not," explained Dr. Mundy, "and the way to do that is to go to law. It will regain us the initiative; it will give us a magnificent form of publicity."

Dr. H. GUY DAIN said: "We may want a decision binding on the Government, but that is not the way to get it. The idea of instructing the General Medical Services Committee to take legal action, whether your legal advisers think there is any chance of winning or not, seems to me sheer madness. If we had been advised that we were likely to gain anything, we would have taken it long ago." A Minister's letter could only be held as binding as long as that Minister was in power. It had to be realized that there was no continuity of influence.

On a count, the only one of the day, the motion was lost. 58 voted in favour and 73 against.

New Health Service Schemes

Walsall proposed a motion expressing the opinion that the only course open to practitioners was a complete withdrawal from the Service, whether or not the claim was conceded, and calling on the General Medical Services Committee to draw up plans for a self-financing service which would embody those principles which maintained the high standards of the profession. Dr. J. M. LEES (Walsall), proposing the motion, said it seemed to him that the Conference was a repetition of 1948. At a meeting in his area, attended by 90 practitioners out of a possible 120, it was felt the time had come when the profession must get out of the control of politicians. Doctors had lost their prestige. They were dictated to by politicians from the Prime Minister to every councillor on the executive council. Patients were not getting good treatment because the doctors were too hurried. If the

health scheme was a success, why had no other country copied it? Were doctors putting their own children into the profession? Ask the teachers at universities what they thought of the quality of the present recruits to the profession. Walsall was not asking for an immediate withdrawal, but that the Committee should plan for a withdrawal. They hoped the Committee would produce something better than the present service.

Dr. RUSSELL said this was not a thing perhaps for the immediate future, but it was certainly a good thing to have clear-cut ideas in their own minds of an alternative service in which they would like to work.

The motion was passed as a reference to the Committee, as was one from Birmingham asking for a plan for general medical services to be provided outside politics and the National Health Service.

Croydon asked the Conference to instruct the Committee to confer with Council on the advisability of setting up a corporation or similar body, composed of men of the highest reputation in all walks of life without political affiliation, to prepare and administer a complete health service so that it might be offered as an alternative to the National Health Service. Such a body, said Dr. J. NEWTON HUDSON, should not be composed of members of the profession. A body as suggested would be capable of formulating and administering a scheme which would be suitable to the doctor's way of thinking.

Dr. WAND said that the Council had recommended the setting up of a committee to look into the National Health Service in all its aspects and it had indicated that it wished to have the help of lay people as well as medical. This motion told a committee not yet set up not only how to go about its business but also what its findings should be. He thought there was no option but to turn it down in its present form and suggested a reference to the Committee. This was agreed.

Distribution of New Moneys

Dr. DONALDSON moved that any new moneys made available to general practitioners should be distributed in such a manner that the less favourably placed practitioners and assistants obtained a greater proportionate increase. The motion was referred to the General Medical Services Committee.

The Conference passed with acclamation a vote of thanks to its chairman, which was proposed by Dr. TALBOT ROGERS.

GENERAL MEDICAL SERVICES COMMITTEE

REPORT TO LOCAL MEDICAL COMMITTEES

The following report has been sent to local medical committees by the chairman of the General Medical Services Committee, Dr. A. B. DAVIES, for consideration before the Annual Conference of Local Medical Committees to be held on June 6.

THE REMUNERATION DISPUTE

As local medical committees will be aware, the General Medical Services Committee, following its meetings on April 17 and 18, issued a supplementary report setting out a number of developments in the remuneration dispute which had taken place since its report to the Special Conference was published on March 21.

Set out below is a summary of the events which have taken place since that report was issued.

Legal Opinion

The following opinion by Counsel on the public statement issued by the Royal Commission was received on April 25:

(1) I have been asked to advise as a matter of urgency on the public statement made by the Commission as to the manner in

which they intend to proceed, and in particular to consider this statement in relation to the Commission's original terms of reference.

(2) The comments which I shall have to make must inevitably suffer from the fact that the technical considerations which appeal to a lawyer are only one factor, and by no means the most important factor, in deciding the issues of policy which now lie before the medical profession. It is easy, as I hope I shall show, to find fault with the Royal Commission's statement, both in itself and in relation to the original terms of reference. But these faults are to some extent a by-product of the manner in which the Royal Commission was brought into being. If the Royal Commission's statement now represents a genuine attempt, inspired and backed by the Government, to secure that the work of the Commission develops into an impartial and comprehensive inquiry into the future basis of doctors' remuneration, there may be the strongest reasons of policy for advising the profession to co-operate with the Commission and make its work a success. The alternative is for the profession to decline co-operation with the Commission and insist on their rights under the Spens Reports and the promises made by the Government in 1948. It is obvious that this alternative means continuing deadlock, since the Government will neither accept the profession's interpretation of the meaning of the Spens Reports or permit the question of interpretation to go to arbitration. If it be the fact that the Spens Reports as interpreted by Mr. Justice Danckwerts are in themselves unreasonable and likely to lead to interminable friction between the profession and the Government, would it not be wiser to co-operate with the Commission, provided that the necessary safeguards are forthcoming, to secure that the Commission's work is truly comprehensive and impartial? That is the question of policy which only the profession and its leaders can decide.

(3) I now turn to the comparatively narrow issues which have been put to me in regard to the statement and the terms of reference. The first and obvious comment is that, from a purely technical point of view the statement is not a substitute for the terms of reference. Technically the terms of reference remain unaltered and, in so far as they are inconsistent with the statement, prevail over it. But this technical point would perhaps not be of great value if the profession were to receive adequate assurances that (whatever the technicalities of the matter) the terms of the statement would be regarded as prevailing over the terms of reference.

(4) The second comment of major importance is that, although the Spens Reports and the Danckwerts Award will be "studied" by the Commission, the Commission will not be bound to give effect to them in their recommendations. In effect, the statement throws Spens and Danckwerts into the melting-pot. The policy implications of this for the medical profession are referred to in paragraph 2 of this opinion.

(5) The fact that the statement purports to be an interpretation of the terms of reference gives rise to a number of ambiguities. Is the effect of paragraphs 1 and 6 of the statement, taken together, to enable the Commission to take account of all relevant evidence as to the proper social and economic status of the medical profession? If so, surely the Commission must be allowed to take account of all other occupations, and not merely of "other professions" and "connected occupations." But if that is the right view of the matter, why is it necessary to indicate, in paragraph 3 of the statement, how the expression "other professions" will be interpreted. The reference to science and other graduates in industry seems to have a limiting effect, and seems to cast doubts on the freedom of the Royal Commission to take into account all other occupations, so far as the Commission think them relevant. Similar observations might be made on paragraphs 4 and 5 of the statement.

(6) To some extent these inconsistencies and ambiguities are a legacy from paragraph (a) of the terms of reference themselves. If the true intention is to ignore the limitations in paragraph (a) of the terms of reference (and this seems to be indicated by the very wide language of paragraph 6 of the statement) then the inconsistencies in the statement itself are perhaps of minor importance.

(7) If the true intention of the Commission is really contained in paragraph 6 of the statement, many of the ambiguities and inconsistencies I have mentioned could be ignored. I think, however, that it would be desirable to obtain satisfactory assurances that the expression "any other relevant evidence" in paragraph 6 of the statement would be construed as meaning any other evidence, of whatsoever nature, relevant to maintaining the proper social and economic status of the profession.

(8) I have pointed out in conference that, both under the terms of reference and under the statement, the Commission are empowered but not bound to propose new arrangements for future

reviews. This is a matter of some importance. But, even if the Commission were bound to propose arrangements for future reviews, there is no guarantee that they would carry out this part of their terms of reference by making recommendations in specific terms. It is always possible for a committee or commission to shelve an awkward problem, however cogently they are directed to deal with it.

Addendum

(9) Since writing the above opinion, I have been informed that Dr. Wand has obtained from the chairman of the Royal Commission a further statement to the effect that the Commission will be prepared to receive submissions from the medical and dental professions in support of the levels of remuneration which they now claim. I understand, however, that the chairman has made it clear that the Commission will not act as an arbitral or adjudicating body on the present claim or on the question whether the claim is justified on the basis of the Spens Reports.

(10) I am asked to consider as a matter of urgency whether this development effects any material change in the situation.

(11) The chairman's new statement, together with the Royal Commission will not consider the essential basis of the present claim—namely, the binding promise of the Government to give effect to the Spens Reports. Presumably, therefore, the Commission will consider the present claim on its merits—but they will consider it as if the Government were under no obligation to implement Spens. This reinforces the fact (already sufficiently clear) that Spens is completely in the melting-pot. On the other hand, the chairman's new statement does give some additional ground for hoping that (Government promises apart) the Commission will have regard to all relevant circumstances.

Letter from Minister

Later on the same day, April 25, the chairman of Council, Dr. S. Wand, had a further discussion with the Minister of Health, who gave certain assurances which he later confirmed in writing in the following letter dated April 26:

Dear Dr. Wand,
I was glad of the opportunity of a long talk with you yesterday and I hope you feel—as I do—that it is that kind of informal and personal discussion which does most to clear away misunderstandings.

First, let me confirm what I said to you when I assured you that, following the report of the Royal Commission, there will be full consultation with the profession before implementation of any of its findings and that such consultation could of course include any matters relevant to the report or the present dispute.

Second, you seemed to fear some inconsistency between the terms of reference of the Commission and the public statements issued by its Chairman. I can certainly reassure you here too. It is normal that the interpretation of the terms of reference of a Royal Commission should be a matter for its Chairman and the Commission, and you can certainly regard the public statements which have been issued as having full validity.

Finally, I have thought—as you asked—about the position of the public health medical officers. I cannot add anything of substance to what I said in my letter of April 17 on this, but let me repeat that I am sure that any settlement for others, following the Commission's report, could not fail to be taken into account in considering the position of these officers and any claim through the normal machinery would of necessity be considered in the light of the report and of any settlement subsequent to it.

I do hope that these remarks, and our talk yesterday, will help to rid us of unnecessary apprehensions.

Yours sincerely,
DENNIS VOSPER.

Subsequent Events

The General Medical Services Committee met at 9 a.m. on the day of the Conference to receive a report from the chairman of Council on what had transpired since its last meeting on April 18—namely, the developments referred to above. The Committee, which had to make its decision before the Special Conference commenced at 10 a.m., decided by a majority of 24 votes to 22 to submit the following recommendation to the Special Conference:

That, in view of the latest developments, evidence should now be given to the Royal Commission and a decision on withdrawal of service deferred.

Subsequently, the Special Conference agreed that the above recommendation should replace the original recommendation made by the Committee—namely,

That, in the view of the Conference, in present circumstances, it is undesirable that the General Medical Services Committee should co-operate in any way with the Royal Commission on the Remuneration of Doctors and Dentists.

An amendment was then put to the meeting in the following form:

That this Special Conference, realizing that local medical committees and the profession generally have not had an opportunity of considering the statement of the chairman of the Royal Commission or the letter (April 26, 1957) from the Minister of Health to the Chairman of Council, therefore defers a decision on the recommendation to give evidence to the Royal Commission until the Annual Conference in June.

This was carried.
Subsequently, the Committee's other original recommendation to the Special Conference on withdrawal was withdrawn and, with the concurrence of the Conference, was replaced by the following motion:

That a decision on withdrawal be deferred.

This was carried.
At a later stage of the Conference, the Committee's third recommendation was placed before the meeting, viz.:

That the Minister of Health be informed that, pending a final and satisfactory settlement, it is the wish of the Conference that the 5% net increase to the aggregate net remuneration of general practitioners, arbitrarily decided upon by the Government, should be placed in a suspense account.

An amendment was then put to the meeting in the following form:

That the interim offer of 5% should be accepted without prejudice.

This was carried also as a substantive motion.
The following amendment was accepted as a rider to the substantive motion:

That immediate negotiations should be entered into with the Ministry upon the best way of distributing this disappointing and inadequate sum so as to give the most effective help it allows to the greatest number of practitioners.

The General Medical Services Committee met again on the termination of the Special Conference and authorized the issue of an immediate report to local medical committees. In addition, the Committee decided to make an immediate approach to the Ministry of Health seeking an early meeting with officers of the Ministry to discuss the question of the distribution of the 5% addition to the net aggregate remuneration of general practitioners.

It will be clear that the effect of the recommendations adopted by the Special Conference is to defer a decision on the question of giving evidence to the Royal Commission and on the G.M.S. Committee's plan for withdrawal until local medical committees and general practitioners have had an opportunity of considering these recent developments. The final decision will be taken by the Annual Conference on June 6.

OVERPRESCRIBING CHARGE DISMISSED

TREATMENT OF PREMENSTRUAL TENSION

The board of referees on March 9 acquitted Dr. Katharina D. Dalton of charges of overprescribing brought by the Ministry of Health. The prescribing concerned hormones for the treatment of patients with the premenstrual syndrome. She was one of the authors of what the board described as the first important paper on the subject in England.

The matter first came before the Middlesex Local Medical Committee last year as the result of an investigation into Dr. Dalton's prescribing during the month of September, 1955. The local medical committee decided that the case against Dr. Dalton had not been proved, but the Minister of Health, dissatisfied with this decision, referred the matter

to the board of referees. The members of the board were Mr. E. F. M. Maxwell (lay member), Dr. A. Beauchamp, and Professor T. N. A. Jeffcoate.

Mr. J. M. Keidan appeared for the Minister and Miss Rose Heilbron, Q.C., for Dr. Dalton. The Medical Defence Union instructed Messrs. Hempsons, solicitors, to act for Dr. Dalton.

Mr. Keidan contended that the hormone preparations ethisterone, progesterone, and methyltestosterone were drugs more expensive than was reasonably necessary. Less expensive treatment would have sufficed. In the event there was no evidence about the methyltestosterone, and no specific argument about it was addressed to the board.

Board's Conclusions

After taking oral and written evidence the board found that ethisterone and progesterone were in the main prescribed for women suffering from the premenstrual syndrome. In ten cases progesterone was prescribed for women suffering from ailments during pregnancy as a prophylactic against toxæmia of childbirth.

The premenstrual syndrome is an established ailment said to affect 40% of women of child-bearing age, and hormone preparations are now an established remedy for it. The first important paper on the subject in England was published in 1953.* Before that the treatment was known in the United States. It is now well known to gynaecologists here; it is described in several textbooks, including some intended for undergraduate medical students, but is not yet well known to general practitioners. It does not remove the cause of the disease: it only controls the symptoms. It is therefore a continuing treatment. Each dose is expensive. Milder symptoms can equally well be controlled by less expensive remedies—diuretics, sedatives, and psychiatry. Consequently the prescription of hormone preparations can be justified only when the symptoms are very severe and other less expensive remedies have been tried without avail.

The board then eliminated various errors that had come into the comparison between Dr. Dalton's and the areal prescribing costs.

Dr. Dalton calculated that 8.5% of the women who came to her for treatment of these symptoms were ultimately given ethisterone or progesterone. She had on her list 1,400 women, of whom 850 would have been of child-bearing age. Of these the number who complained of symptoms indicative of premenstrual syndrome must have been 400, or 47%. It was to be expected that Dr. Dalton would attract to her practice not only more women than the average, but also that the proportion of those women complaining of these symptoms would be higher than the average.

Dr. Dalton, being concerned at the high cost of ethisterone and progesterone, adopted a special method for determining whether or not to prescribe them. She gave to each patient complaining of the symptoms a chart on which were to be recorded the symptoms for the next three months. During this period the patient was given the less expensive treatment consisting in fluid and salt restriction, diuretics, and sedatives. Ethisterone and progesterone were given only in the light of information about both the symptoms and the effect of other treatment over a period of three months.

Since the medicinal art is largely experimental, the efficacy of a remedy has some bearing on the reasonableness of its cost. Dr. R. Greene, one of the witnesses, found that progesterone was effective in 80% of the cases, ethisterone in only 40%, but ethisterone or progesterone in 90%. The medical members of the board were satisfied that the cost incurred in prescribing for these patients was reasonably necessary for their proper treatment.

The board then considered Dr. Dalton's claim to have discovered a connexion between premenstrual symptoms during pregnancy and subsequent toxæmia. An experiment based on her theory had been carried on with her co-operation at the City of London Maternity Hospital since June, 1955, and a graph was produced showing that this

*Greene, R., and Dalton, K., *British Medical Journal*, 1953, 1, 1007.

experiment was followed by a sharp fall in the incidence of toxæmia at that hospital. Similar controlled trials were now being conducted at University College Hospital, London, but the results were not yet available. The board concluded that Dr. Dalton was entitled to use her discretion to prescribe a remedy which would not only relieve the symptoms but also avert the toxæmia of which, as she believed, they were a warning.

Mr. Keidan conceded that Dr. Dalton was neither extravagant nor reckless. But, he said, she diagnosed too many patients as suffering from premenstrual tension and was too ready to turn to progesterone. The board states that it drew the opposite inference from the evidence. Women who heard of progesterone treatment were no longer willing to submit to a disability which they formerly endured without complaint, and Dr. Dalton took great care in diagnosing their symptoms.

"Dr. Dalton's prescribing costs were three times as much as the average. It might appear that if all doctors followed her example the cost of the pharmaceutical services would be trebled, an increase of £100m. a year. But we think, first, the figure for Dr. Dalton's costs in the table would require a very considerable adjustment before it could properly be compared with the average. Second, if progesterone does come into general use there is bound to be a big fall in its cost. There was indeed some evidence that this fall had already begun. Third, if effective but expensive remedies are discovered for common ailments it must be expected that the cost of the pharmaceutical services will go up."

The board decided that the cost of the drugs and appliances ordered by Dr. Dalton in September, 1955, did not exceed what was reasonably necessary for the proper treatment of the persons concerned.

INTERIM ADJUSTMENT OF REMUNERATION

REGULATIONS FOR 5% INCREASE

The Ministry of Health and Department of Health for Scotland have issued regulations implementing the promise of an interim adjustment in remuneration given by the Prime Minister in the House of Commons on April 16. Under these regulations, the remuneration of senior hospital medical staff has been increased by 5% from May 1. The new rates per annum for whole-time appointments (with the old rates in brackets) are given below. Payment for part-time appointments is on a weighted *pro rata* basis.

Consultants: (1) appointed earlier than 31—starting salary £1,890 (£1,800); (2) appointed at 31—starting salary £2,047 10s. (£1,950); (3) appointed at 32 or over—starting salary £2,205 by £131 5s. to £3,255 (£2,100 by £125 to £3,100). The maximum salary with the addition of the maximum distinction award will now total £5,455 (£5,300).

Senior hospital medical officers: (1) appointed earlier than 31—£1,548 15s. (£1,475); (2) appointed at 31—£1,601 5s. (£1,525); (3) appointed at 32 or over—£1,653 15s. by £52 10s. to £2,126 5s. (£1,575 by £50 to £2,025).

General Practitioners

From May 1 5% has also been added to the aggregate net remuneration of general practitioners after the deduction of practice expenses. Special regulations are not required for this. The Ministry proposes that, as indicated by the Prime Minister, the best method of distributing the extra money should be the subject of consultations with representatives of the profession.

Corrections.—In paragraph 175 of the Annual Report of Council (Supplement, April 13, p. 161) Professor Constantine Choremis is erroneously described as Professor of Bacteriology. He is Professor of Paediatrics.

In the report of Mr. R. S. Murley's remarks at the dinner of the Fellowship for Freedom in Medicine (Supplement, April 27, p. 231) the sentence reading "Where they differed, however, was in their advocacy of a type of organization which . . . would . . . more closely associate financial operational responsibility . . ." should have read "more closely associate financial with operational responsibility."

MEDICAL PRACTICES ADVISORY BUREAU

PROBLEMS OF EMPLOYMENT

In his annual report for the year ending December 31, 1956, Dr. L. S. Potter, medical director of the Medical Practices Advisory Bureau of the B.M.A., states that the volume of work in all departments was well maintained during the year, with, if anything, an increasing number of personal interviews.

During 1956, 166 applicants obtained prospective partnerships (assistantships with a view), compared with 172 in 1955 and 139 in 1954; 478 obtained assistantships and traineeships, compared with 468 in 1955 and 449 in 1954. Dr. Potter reports that a significant number of practitioners refrain from offering a "view," even when seeking a partner, as a safeguard against the possible accusation of breaking a promise.

A second inquiry into the incidence of unemployment and under-employment (Supplement, September 15, 1956, p. 127) showed the position to be stable. Involuntary unemployment in the profession as a whole appeared negligible, but Dr. Potter comments that too many are in blind-alley appointments.

Re-establishment in Practice

In his report Dr. Potter mentions the difficulties facing middle-aged or elderly practitioners trying to re-enter practice. During 1956 the Bureau dealt with 170 cases of doctors over 45—roughly one-fifth of the total registered with the Bureau at any one time. There were two main groups: those already practising and wishing to find alternative practices or occupations; and those forced to seek re-entry into another form of practice, including those returning from an overseas career, ex-regular Service officers, those facing compulsory retirement from salaried appointments, and those partially incapacitated. Although the numbers in the age groups 45-54, 55-65, and over 65 are about equal, 80% in the lower group sought entry into general practice or work overseas, whereas in the higher age groups nearly 60% sought administrative work or other miscellaneous appointments. The Bureau has little opportunity to effect introductions to administrative or other appointments, which are normally advertised. However, Dr. Potter believes, since the number of older doctors registered with the Bureau remains fairly constant, that a substantial proportion find a satisfactory solution to their problems.

Emigration

There is little doubt, states the report, that the number of doctors looking for opportunities overseas is increasing. The number of doctors on the books of the Bureau seeking overseas posts or practices rose from 376 at the beginning of 1956 to 594 in February, 1957. Inquiries by letter about prospects overseas rose from 1,109 in 1955 to 1,354 in 1956. Two main reasons for this increase are given: dissatisfaction with conditions of practice and prospects in this country; and the wish to escape heavy taxation, falling standards of living, the cost of education, and to secure better prospects for children. In the Bureau's experience those going to definite posts or practices after proper investigation are usually well satisfied, whereas those taking a chance may well be disillusioned. During 1956 the Bureau dealt with 78 overseas openings, representing an increase of 40% over 1954 and 15% over 1955; 38 of these were filled by the Bureau.

Locums

The number of locums introduced remained fairly average at 2,275, not including arrangements made locally.

The position of doctors visiting this country for post-graduate work and seeking to supplement their resources by remunerative work is causing "some anxiety." Between April and July 92 practitioners from India and Pakistan registered with the Bureau while temporarily resident in this country, and only 17 of these could be placed in tem-

porary appointments. From this the question arises in Dr. Potter's mind whether doctors visiting this country for post-graduate work should not be warned that their chances of supplementing their resources from remunerative work are slender.

HOSPITALITY

German doctors' daughters, aged between 15 and 18, would like to arrange holiday exchanges with British doctors' daughters. A German doctor's son would like to spend five weeks during July/August in Britain. In exchange, a British doctor's son or daughter would be welcome in Saarburg during June/July. German doctor living in Kaufbeuren, between Munich and the Alps, would like to arrange holiday exchange for his daughter, aged 19, for a few months in order that she may study English.

A French doctor would like his two daughters, aged 16, to spend summer holidays with separate families in the same town on an exchange basis. A French doctor's daughter, aged 19, would like to stay with British medical family on an *au pair* basis from June 10 to July 30. A French doctor's daughters, aged 17, would like to visit British medical families in the North of England or Scotland from August 10 to the end of September, as paying guests or on an *au pair* basis.

Would anyone interested please get in touch with Brigadier H. A. Sandiford, International Medical Visitors' Bureau, B.M.A. House, Tavistock Square, London, W.C.1.

Correspondence

The Changed Picture

SIR,—Astonishment and resentment, to put it very mildly, were one's reactions on reading the account of the Special Representative Meeting. From being merely the discredited dog to be kicked around by all and sundry, we must now, surely, have become the laughing stock of the whole of England. Having decided, largely at the behest of our leaders, to act like an independent and self-respecting body of professional men and thrown down the gauntlet to a defaulting Government and to a Prime Minister who contemptuously offers us a 5% "rise" (like a bone to a dog or to just another bothersome group of workers—"give 'em 5% to keep 'em quiet and divide 'em up"), we now are to climb down, yet again. Why? Because the chairman has been talking to (had an audience with?) the chairman of the Royal Commission with which we were to have nothing to do. He came away with "assurances." It is almost beyond belief that we should once more be fobbed off with assurances, which no man in his senses nowadays will rely on if he can help it—and we can help it. A further precious bit of news is that that egregious Royal College of Physicians has again thrown a spanner into the works, once more to cause resentment and disunity. The issue at stake, Sir, is at the moment a financial one, and having joined the fight on this issue we should single-mindedly unite and fight to the death to win it, for it carries with it, and which is far more important than the money, the preservation of whatever independence we have left. Let us not allow this main object to be lost sight of or tampered with for a moment by tagging on side-issues about this and that which only confuse a lot of well-meaning but vacillating delegates. The financial result of it all affects me personally very little (though I am not one of the "haves"), but the prestige of my profession does concern me very deeply. I am quite convinced, Sir, that if we allow ourselves to be led astray, as we were before, by the, shall we say, peculiar *volte-face* behaviour of our shepherds in high places, the flock will have finally lost for ever, and, indeed, no longer be worthy of, the honour, integrity, dignity, and prestige of a once proud profession.—I am, etc.,

Thame, Oxon.

C. H. BARBER.

Royal College of Physicians

SIR,—Radiologists, pathologists, surgeons, gynaecologists and obstetricians, medical officers of health, editors of medical journals, officials at the Ministry of Health, and others have all played some part at general meetings of the Royal College of Physicians; general-practitioner physicians have not been admitted.

One lives in hope that the constitution of this College is not too rigid to allow family doctors, also, to be represented one day at these general meetings, in Professor Robert Platt's own words, "for the good of medicine in its widest possible sense" (*Supplement*, May 4, p. 244).—I am, etc.,

London, S.W.1

JOHN H. HUNT.

SIR,—The concluding remarks of the President of the Royal College of Physicians in his letter reveal the intellectual level to which the Royal College of Physicians has fallen in recent years.

Throughout the present dispute there has been a desperate appeal by the B.M.A. for unity within the profession, and indeed there can be nothing more damaging to any cause than schism. Yet the President of the Royal College of Physicians naively suggests that the best interests of the medical profession can be served by the Royal College pursuing an entirely independent course without condescending to consult the opinion of an organized body which sincerely strives to serve the whole profession, general and special. What evidence is on record of the Royal College ever having made any significant effort to further the cause of medical practitioners other than to obstruct the painstaking work of the B.M.A.? Did not a similar insularity of behaviour occur in 1948? How much more statesmanlike and diplomatic would its recent actions have been had it sought to serve professional unity rather than its own austere interests?—I am, etc.,

St. Helens, Lancs.

L. CRAWFORD.

SIR,—The letter of the President of the Royal College of Physicians is singularly unsatisfactory. It does not deal with the points of substance raised by Dr. J. H. Hunt (*Supplement*, April 27, p. 232) and it continues the intransigent attitude to informed criticism of the politically intolerable constitution. Dr. Hunt suggested that it is possible for a meeting of 10 Fellows to bind the Royal College of Physicians and to dictate policy on a political matter affecting not only inert and distant Fellows but also 3,590 disfranchised members, many of whom are consultants of mature age. That in fact more than the requisite 10 Fellows attended is immaterial to the issue. The gravamen of the charge is: (1) Can a quorum of 10 Fellows bind 3,590 Members in a political matter? (2) If so, is this tolerable? Any student of history is, of course, familiar with the complacent assumption by members of an oligarchy that they are particularly gifted in some way and thereby fitted to rule. Furthermore, they naturally choose, as the President of the Royal College of Physicians points out, persons like themselves for recruitment of their body. However, it must surely be rare to-day to witness the open derision of such dangerous engines of democracy as a postal vote, so foreign to the traditions of the Royal College of Physicians. Yet let Dr. Hunt take heart: the very publicity of the ingenuous contempt for established democratic institutions will bring its own remedy and this will be the more drastic the longer it is delayed, coming, as clearly it must come, solely from without. Acton's dictum applies to all institutions. The President of the Royal College of Physicians states—rightly in my view—that the B.M.A. has the advantages and disadvantages of democracy (though personally I would hesitate to affirm that it has them "all"). However, the Royal College of Physicians, I submit, has shown that it has most of the discredited disadvantages of narrow oligarchy and few of its advantages. While it is conceded, of course, that there is no completely satisfactory system of government,

yet the reform of the Royal College of Physicians, more nearly to be compatible with the constitution of its country to-day, is long overdue. The Royal College of Physicians has much to learn from the constitution of its younger and, politically at least, far wiser sisters. Dr. Hunt should also be encouraged to learn that the behaviour of the Royal College of Physicians has itself convinced at least one distinguished and politically very experienced person known to me that not only must the Royal College of Physicians be reformed but, furthermore, this reform can come only from without. Lastly, when an appeal for funds is in due course made, let us remember that "redress must precede supply."—I am, etc.,

Sheffield, 1.

JOHN L. EDWARDS.

Advance Payment of Compensation

SIR,—I have read with interest the report (*Journal*, April 27, p. 1011) on a discussion in the House of Commons concerning an appeal for an advance payment of compensation. The case for the applicant, ably presented by Mr. Ronald Bell, Member for South Buckinghamshire, is a good example of a principle for which my committee has fought for many years and on which it has made repeated representations to the Ministry of Health.

Here is a doctor who, because of ill-health, has to take a partner. In the old days he would have sold a share and could have used the capital he received for the purpose for which he now asks for a payment on account of his compensation—namely, the adaptation of his premises for the purpose of partnership practice.

Apart from the fact that this case might well have been dealt with under the concession grudgingly made in 1953, which it now appears was only conceded because in the Government's view it would mean nothing at all, the Parliamentary Secretary in his reply to Mr. Bell not only admits the principle but supports the B.M.A.'s claim that it should be the criterion for making advance payments. Mr. Vaughan-Morgan is stated to have said that "the real test for any advance payments under the proviso was whether, in the days before the Health Service, a doctor would have sold his goodwill to meet expenditure that was now alleged to involve hardship. He would obviously have done so only in very exceptional circumstances, as he would be parting with his means of livelihood."

It is misleading to suggest that a doctor would only part with goodwill in exceptional circumstances. Every time a doctor takes in a partner he is giving up a substantial part of his income, and, as in the days before the Health Service he would have received a capital sum to compensate him for this loss, so now he should receive the appropriate proportion of his compensation. It is no answer to suggest that he should borrow on the security of compensation, as many doctors have been forced to do, because of the unwillingness of the Government to be consistent and apply a principle which they have now publicly accepted.

As chairman of a committee which has had much experience of the way the Department has dealt with claims, I am truly amazed at Mr. Vaughan-Morgan's statement that "the Department had been generous in its interpretation of the provision" (to make advance payments on grounds of hardship). I emphatically dissent from this view, and will merely add that it is easy to make statements of this kind when there is no one present to challenge them.—I am, etc.,

London, W.C.1.

A. N. MATHIAS,
Chairman, Compensation and
Superannuation Committee.

Sanctity of Contract

SIR,—In this controversy between the Government and the medical profession, too many of us are looking over our shoulders. If we feel that a certain course is right, we should go forward unhesitatingly. There is such a course before us now, and, as the issue is purely a moral one, we should have the people behind us.

As a people we used to be proud of the fact that an Englishman's word was held to be as good as his bond all over the world. Latterly, I am told, it has not been valued so highly. It should be our aim to restore the confidence our promises once enjoyed, and in such a matter our Government, whatever its party composition, should set the example. Dictators have been condemned for tearing up treaties as "scraps of paper." We must not permit an English Government to do the same. In 1948 our profession signed a contract with the Government of the day by which, with many misgivings, we agreed on certain terms to try to make the Bevan's N.H.S. work. Out of the negotiations emerged the Spens clause on payment, which both parties to the contract agreed should be binding until, in the words of the Permanent Secretary to the Ministry of Health in 1950 (*Supplement*, March 23, p. 123), "such time as after the usual consultations some other basis is substituted." Now it may be that the Spens agreement was a bad agreement, or badly expressed: it may be that it was intended to be temporary only; it may be that to grant us any increase of pay would be wrong for various reasons. The Government was not forced to act dishonourably; all it had to do was to invite the profession to negotiate new terms, as we have said we are willing to do. The Government waives aside the whole clause, and dictates new terms of service. The deliberate debasement of the sanctity of a contract is quite indefensible; it undermines every promise our Government has made, both at home and abroad. It should rouse every right-thinking Englishman to protest, and we should all be in the van.

A second point which emerges from the Government's action will be appreciated more by the older than by the younger doctors. In spite of Bevan's efforts to look down his nose at our representatives, we did enter the Service on a partnership basis with the Government. To accept dictation now is to accede to a change of status—and we are very nearly accepting a full-time salaried service (except that we are still allowed to pay the full cost of our N.I. stamp), a type of service many of us regard as against the best interests of a national medical service.

I have tried to indicate why we must protest firmly and finally now, and why there should be no difficulty in securing the support of the people as a whole, and even of the doctors.—I am, etc.,

JOHN C. K. CHILCOTT.

Wormley, near Bristol.

Buying and Selling of Practices

SIR,—Before the introduction of the N.H.S. I wrote to the *Supplement* (December 6, 1947, p. 134) indicating my opinion of the danger and undesirability of surrendering our practices. This has now been fully proved, and surely it is time we negotiated for denationalization and the right to repurchase practices if we wish. This is essential if we are to avoid the certainty of becoming puppets of this or any subsequent Government, of whatever colour. This is an important consideration at the present time and would secure the following points: (1) permanent avoidance of a full-time salaried service which is the inevitable sequel to the present N.H.S.; (2) preservation of a sound, healthy doctor-patient relationship which is bound to suffer, sooner or later, in any State service; (3) freedom from bureaucratic control; (4) preservation of interest in and incentive to do good medicine; (5) ability to move to another practice; (6) right to choose a successor; (7) avoidance of medical unemployment and difficulty in entering practice.—I am, etc.,

E. C. OSTLER.

Birmingham, 14.

Voice of Junior Hospital Staff

SIR,—Many letters have been written recently about the attitude of the Government to the medical profession, and the dissatisfaction and lack of faith brought about by this attitude. But within the profession itself there is a great deal of ill-feeling which cannot be voiced properly for fear of "treading on somebody's toes." There are many

people who would rather have "peace at any price" than raise any protest at all. Now this forced suppression is unhealthy and the time is ripe to clear the air and speak some home truths.

Judging by the number of patients attending clinics and the length of some consultants' waiting-lists, there can be no one who would suggest that there are too many consultants. Yet the build-up of registrars continues with a seemingly amazing lack of concern among the hierarchy of the profession. This is perhaps natural but is in no way right. What, therefore, is needed? Integrity, clear thinking, and plain speaking. Nowhere has there been any real suggestion on the part of consultants that the registrars are being badly treated. It only needs these men to voice this opinion strongly and with conviction, and at least some of the battle would be won. It is fully realized that private practices would suffer if there were more consultant posts made, but this is no time for such thoughts. The future of the medical profession is at stake, and unless something is done very soon there will be a split in its ranks which could have catastrophic results for all concerned.

This letter is written with respect to my seniors, and is in no way bitter, but merely a protest against a gross injustice. I have no axe to grind, as at a future date I hope to enter general practice.—I am, etc.,

"A YOUNG DOCTOR."

SIR,—I have watched and waited for letters from newly qualified practitioners in vain. In consequence, I have reached the conclusion that the juniors expect little notice to be taken of their pre-registered voices. However, I still hope to read of their views on the phased withdrawal scheme in future *Journals*. In the meantime, I write to inform the more mature members of our profession, especially those who are satisfactorily well off and sit at home with a "blow you Jack" attitude, that there are the doctors of to-morrow who are far from comfortable. No wonder there is a "westward rush."

How many members of the Central Consultants and Specialists Committee know how junior hospital staff manage to survive? In fact, how many of these themselves can credit their own survival? Recently, in a medical publication, income figures have been quoted for an average general practitioner with 2,200 patients receiving only 2s. 6d. for each consultation. I have failed to calculate the ultra-microscopic amount I receive for each "job" I perform. I am fortunate, I know, in living in married quarters with my wife and son, for, although after the three deductions (N.H.S., superannuation, and emoluments) I only receive just under £3 a week, it would be impossible for me to keep my family if they were in fact living apart from me and I was receiving the extra amount which, at the moment, is being deducted for the roof over their heads, their essential foodstuffs, and linen service. Will the day dawn when the houseman may be forced to do an early morning newspaper "round" to supplement his income?—I am, etc.,

"M.B., Ch.B."

Royton, Lancs.

SIR,—May I wholeheartedly endorse "Registrar's" letter (*Supplement*, April 27, p. 233)? Having spent my two and a half postgraduate years trying to keep a wife and family on house officer's pay, I feel qualified to speak.

Most house appointments allow insufficient time for rest, let alone study, and the income will not permit saving for a course. This would not only require course fees, examination fees, and books, but also food and maintenance for oneself and dependants. There is also the hardship of no income between appointments and the frequency one has to move. One is forced to pay full residential emoluments when many meals are had at home and others are left to frizzle in the oven because one cannot get over to eat them on time. Everyone's answer is not to contemplate marriage until established. Under ideal conditions this is probably true, but, like numerous others in my position, I was involved in the last war and am passing through this

period in my thirties, not twenties. Apart from this, working as hard as I do for as long as I do, I expect a livable wage.

When comparing incomes with other professions, let the remuneration per hour, not per year, be considered. With present standards a house surgeon's remuneration for two appendicectomies is less than he pays for a haircut.—I am, etc.,

"HOUSE OFFICER."

Trainee Assistants

SIR,—After some eight or nine years of existence, the trainee assistant scheme may be said to be still on trial. Many were doubtful of its value even from the start; some still are. Placed before the profession at a time when it was torn by dissension over the merits of the N.H.S., it had a bad start and very few directions were given to those called upon to work it; and yet it appeared to fill a gap in the medical education of the new graduate, and it was a matter of faith as to the possible outcome of this new venture.

As university representatives called upon to assist the local medical committees in the difficult task of selection of trainers from the beginning of the scheme, we feel we are beginning to appreciate the possibility of evolving a useful and practical scheme. It all depends on the trainers. We have had failures, of course, varying from the man who regarded it merely as a method of accepting from the Government an assistant in a busy practice to help him (free of cost) through the heavy periods with a list that was much too long, to the man who had no aptitude for teaching, and no liking for the job.

When a selection committee feels that it has a good trainer available it should continue to use him as long as he remains keen. Trainers in their first year or two should appear before the committee, we suggest, twice a year to talk matters over. This is essential to find out how he is progressing, whether his interest is maintained, and to ascertain his personal relations with his trainee, and with those who may have passed through his hands formerly. It is important for the committee to know all this, especially as they may gather from his comments some idea of his sense of responsibility, and his views in dealing with the task he has undertaken. An experienced trainer will have learnt much from the trainees that have passed through his hands, and thus the committee will wish to retain his services for a reasonable length of time when once he has been found to do the work well.

We feel that too great a gap in years between the trainee and the trainer can be a disadvantage, and the most successful trainers are likely to come from the 35 to 50 group rather than from the older practitioners, but personality and aptitude come first in all cases irrespective of age, though if the gap in age is too great it may be more difficult to bridge it effectively. A committee responsible for selection should seek to build up a team of trainers, some experienced and known to be so, and some just beginning. Among the latter it is largely a matter of trial and error to select the right men, and failures will not be infrequent and must be eliminated when, after a trial or two, the mistake is discovered. This will prevent stagnation, give a wide range for selection of trainers, and at the same time avoid wastage of the most competent trainers.—We are, etc.,

SEYMOUR BARLING.
C. F. V. SMOUT.

Birmingham.

Supply of Oxygen

SIR,—The National Health Service makes heavy weather of the supply of oxygen to patients, and yet it is a simple matter if the Minister would use his power to integrate the three branches of the Health Service for this purpose. The source of supply should be the local hospital, for here the cylinders are under the constant supervision of expert technicians and the ancillary apparatus is ready for immediate use. The transport of this heavy equipment should be the duty of the local ambulance service.—I am, etc.,

Ambleside, Westmorland.

JOHN KERR.

Association Notices

SPECIAL REPRESENTATIVE MEETING

Notice is hereby given that on the requisition of the Council a Special Representative Meeting of the British Medical Association will be held in the Great Hall, B.M.A. House, Tavistock Square, London, W.C.1, on Wednesday, June 12, 1957, at 11 a.m. The business of the meeting is to resume consideration of the further action to be taken by the Association in the present dispute with the Government on medical remuneration.

A. MACRAE,
Secretary.

By Order of the Chairman of
the Representative Body.

Diary of Central Meetings

Branch and Division Meetings to be Held

BARNSELY DIVISION.—At Queen's Hotel, Barnsley, Thursday, May 16, 7.30 for 7.45 p.m., dinner. Members' wives and friends are invited.

BRISTOL DIVISION.—At Small Physics Lecture Theatre, Royal Fort, University of Bristol, Wednesday, May 15, 8.30 p.m., annual general meeting.

CROYDON DIVISION.—At 43, Wellesley Road, Croydon, Tuesday, May 14, 8.30 p.m., annual general meeting. Address by Dr. S. B. Dimson: "Bedwetting."

EAST HERTS DIVISION.—At Red Lion Hotel, Hatfield, Friday, May 17, 9 p.m., dinner dance.

EAST YORKSHIRE BRANCH.—At Quern House, Park Street, Hull, Wednesday, May 15, 7.30 p.m., annual general meeting.

KESTEVEN DIVISION.—At Nurses' Recreation Hall, Grantham and Kesteven General Hospital, Sunday, May 12, 10.30 a.m., annual meeting.

MID-HERTS DIVISION.—At Wellington Court Clinic, Brickett Road, St. Albans, Wednesday, May 15, 8.30 p.m., meeting to discuss the remuneration claim and the Royal Commission.

MONMOUTHSHIRE DIVISION.—At St. Mellons County Club, Friday, May 17, 8 p.m., summer dinner-dance. Guests invited.

NORTHERN IRELAND BRANCH.—At Bostock House, Royal Victoria Hospital, Grosvenor Road, Belfast, Thursday, May 16, 2.30 p.m., clinical meeting; 4 p.m., annual meeting.

READING DIVISION.—At Library, Royal Berkshire Hospital, Wednesday, May 15, 8.30 p.m., annual general meeting.

ST. PANCRAS DIVISION.—At Committee Room C, B.M.A. House, Tavistock Square, London, W.C., Monday, May 13, 8.30 p.m., annual general meeting.

SOUTH-WEST WALES DIVISION.—At Royal Gatehouse Hotel, Tenby, Friday, May 17, 7.30 for 8.30 p.m., B.M.A. dinner-dance.

STAFFORDSHIRE BRANCH.—At North Stafford Hotel, Stoke-on-Trent, Thursday, May 16, 5 p.m., annual meeting. 7 for 7.30 p.m., annual dinner. Ladies and non-medical guests are invited to the dinner.

STRATFORD DIVISION.—At Board Room, Queen Mary's Hospital, Stratford, E., Tuesday, May 14, 8.30 p.m., general meeting.

WANDSWORTH DIVISION.—At St. James' Hospital, Balham, S.W., Thursday, May 16, 8.30 p.m., annual general meeting.

WEMBLEY DIVISION.—At Board Room, Wembley Hospital, Monday, May 13, 9 p.m., annual general meeting. Film show, including "The Medical Witness."

WEST DENBIGH AND FLINT DIVISION.—At Marine Hydro Hotel, Rhyl, Thursday, May 16, 8 p.m., general meeting.

WEST SUFFOLK DIVISION.—At Everard's Hotel, Bury St. Edmunds, Tuesday, May 14, 8.30 p.m., meeting.

WILLESDEN DIVISION.—At Rehabilitation Department, Willesden General Hospital, Harlesden Road, N.W., Friday, May 17, 9 p.m., annual general meeting. All medical practitioners in the area of the Division are invited.

A meeting of Senior Hospital Medical Officers of the Oxford Region will be held at the Nuffield Maternity Home Lecture Theatre, Radcliffe Infirmary, Oxford, on Sunday, May 19, at 3.30 p.m.

SPECIAL REPRESENTATIVE MEETING WEDNESDAY, JUNE 12, 1957

REPORT OF THE COUNCIL

THE DISPUTE ON REMUNERATION

The Council's Original Recommendations

1. In the report (*Supplement*, April 6) which it issued to the Special Representative Meeting held on May 1, the Council fully endorsed the proposals of the General Medical Services Committee (*Supplement*, March 23) and submitted the following recommendation to the Representative Body:

Recommendation: That, as there has been no satisfactory settlement of the profession's claim or the submission of that claim to arbitration, (1) the resignations of N.H.S. general practitioners be collected forthwith and held; and (2) the plan for a progressive withdrawal of general practitioners from the National Health Service (as outlined in the Appendix) be put into effect until such time as a satisfactory settlement is achieved or the dispute is referred to arbitration.

2. At that time the Royal Commission on Doctors' and Dentists' Remuneration had been appointed with terms of reference which, on the face of them, required the Commission to make recommendations as to "the proper current levels" of medical and dental remuneration in the National Health Service solely in the light of a comparison of the professional incomes from all sources now received by doctors and dentists in the Service with the incomes received by members of other professions, by other members of the medical and dental professions, and by people engaged in "connected occupations."

3. The Council, after taking expert legal advice on the matter, had concluded that these terms of reference could not be so construed as to ensure the observance by the Commission of the principle enunciated in the terms of reference of the Spens Committees—the principle that the incomes of medical practitioners engaged in a publicly organized health service should be fixed with due regard to the financial expectations of medical practice in the past and to the desirability of maintaining in the future the proper social and economic status of medical practice and its power to attract a suitable type of recruit to the profession.

4. The Prime Minister, in reporting the terms of reference of the Commission to the House of Commons on March 12,

had announced the unilateral decision of the Government to grant an interim increase of 10% from April 1 in the remuneration of hospital junior medical staff—a matter which the Minister of Health on February 20 had proposed as one for negotiation in the appropriate Whitley Council Committee. The Prime Minister had announced also his intention of making a further statement in due course on an interim adjustment for the other doctors covered by the Commission's terms of reference.

5. In the light of the situation as it then existed, the Council on March 27 adopted a second recommendation in the following terms for submission to the S.R.M. on May 1:

Recommendation: (1) That, in the opinion of the Representative Body, in present circumstances it is undesirable that the Association should co-operate in any way with the Royal Commission on the Remuneration of Doctors and Dentists; (2) that, if at a later date circumstances should so alter as to enable the Representative Body to reconsider its attitude to the Royal Commission, any decision to participate be conditional on the inclusion of all public health medical officers within the terms of reference of the Royal Commission.

The Council's Supplementary Report

6. In its Supplementary Report to the S.R.M. on May 1 the Council referred to certain later developments which were recorded in the Supplementary Report of the G.M.S. Committee to the Special Conference of Local Medical Committees (*Supplement*, April 27). On April 4 the terms of reference of the Royal Commission had been criticized in a debate in the House of Lords. On April 8, referring to this debate in a letter published in *The Times*, the Chairman of Council had made the following appeal:

"The matters in dispute are such as reasonable people would normally expect to discuss round a table. I once more ask that the Government should engage with us in such discussions."

On April 12, after an exchange of letters between Sir Russell Brain and the Prime Minister, the Royal Commission had issued a public statement in which they had announced their intention to study the Spens Reports and the Danckwerts

2730

Award; to bear in mind the need for maintaining a proper level of recruitment to the profession, and to consider evidence as to the conditions imposed by the nature of the work; to interpret the phrase "other professions" widely so as not to exclude, for example, science and other graduates in industry; to include doctors employed by local authorities only for purposes of comparison; to interpret "connected occupations" as covering a wide range of persons, including hospital administrators on the one hand, and, on the other, nurses and medical auxiliaries (with special reference to differentials); and to recommend current levels of remuneration "in the light of all this and any other relevant evidence."

7. Four days later—on April 16—the Prime Minister had announced, again without prior discussion with the profession, the Government's decision to increase by 5% from May 1 the basic remuneration of hospital senior medical staff and the aggregate net remuneration of general practitioners.

8. On April 17 both the Council and the G.M.S. Committee had expressed approval of the Chairman of Council continuing his efforts to bring about conditions in which a satisfactory and peaceful settlement of the dispute might be achieved, but on that date the Council had not regarded the changes which had already occurred as providing sufficient reason to alter its recommendations to the S.R.M.

Further Developments

9. As a result of the further efforts of the Chairman of Council, permission was received from the Chairman of the Royal Commission (by telephone on April 20, with written confirmation on April 24) to publish the following additional statements:

(1) That part of the Royal Commission's task that consists of considering what should be the proper current levels of remuneration of doctors and dentists will include hearing submissions from those professions as to the remuneration which they are now claiming.

(2) It is in the mind of the Chairman of the Commission that if it becomes unlikely that evidence can be obtained in time for a report to be published by Easter, 1958, he would so inform the Government and the other interested parties.

The Chairman of the Commission added that these further statements had the same force as the public statement issued by the Commission on April 12. In connexion with the first of the additional statements, he made it clear that the Commission would not arbitrate or adjudicate on the present claim.

10. On April 25 Counsel's opinion (*Supplement*, May 11, p. 260) was received on the public statement of the Royal Commission. It will be seen that Counsel advised that adequate assurances should be obtained that the terms of the public statement would be regarded as prevailing over the terms of reference. Later on April 25 the Chairman of Council received certain assurances in a discussion with the Minister of Health, who confirmed them the next day in the following letter:

Dear Dr. Wand,

I was glad of the opportunity of a long talk with you yesterday and I hope you feel—as I do—that it is that kind of informal and personal discussion which does most to clear away misunderstandings.

First, let me confirm what I said to you when I assured you that, following the report of the Royal Commission, there will be full consultation with the profession before implementation of any of its findings and that such consultation could of course include any matters relevant to the report or the present dispute.

Second, you seemed to fear some inconsistency between the terms of reference of the Commission and the public statements issued by its Chairman. I can certainly reassure you here too. It is normal that the interpretation of the terms of reference of a Royal Commission should be a matter for its Chairman and the Commission, and you can certainly regard the public statements which have been issued as having full validity.

Finally, I have thought—as you asked—about the position of the public health medical officers. I cannot add anything of substance to what I said in my letter of April 17 on this,

but let me repeat that I am sure that any settlement for others, following the Commission's report, could not fail to be taken into account in considering the position of these officers and any claim through the normal machinery would of necessity be considered in the light of the report and of any settlement subsequent to it.

I do hope that these remarks, and our talk yesterday, will help to rid us of unnecessary apprehensions.

Yours sincerely,
DENNIS VOSPER.

The Events of May 1

11. Not all the information recorded above had been known to the Council when its Supplementary Report to the S.R.M. on May 1 was issued to the Divisions and Branches on April 20. When the Council met on the morning of May 1 it was informed of still more recent developments. On the previous day the Central Consultants and Specialists Committee had adopted unanimously a resolution approving of "co-operation with the Royal Commission." Earlier on April 30 the G.M.S. Committee, after a necessarily hurried discussion, had decided by a very narrow majority (24 votes against 22) to recommend to the Special Conference of Local Medical Committees "that, in view of the latest developments, evidence should now be given to the Royal Commission and a decision on withdrawal of service deferred." Since, however, the Local Medical Committees, and the general practitioners in the Service, had had no opportunity of expressing their views on the latest developments, the Special Conference had decided to defer decisions to the Annual Conference on June 6, both on withdrawal of service and on the question of presenting evidence to the Commission.

12. In the light of the situation as it existed on May 1, the Council adopted the following recommendations, which were approved by the S.R.M. on the same day:

(1) That in the opinion of this Meeting circumstances have so changed that the position has altered since the Council issued its recommendation to the Representative Body not to give evidence to the Royal Commission; but, realizing that Divisions and the profession generally have not had an opportunity of considering the statements by the Chairman of the Royal Commission or the letter (April 26, 1957) from the Minister of Health to the Chairman of Council, this Special Representative Meeting defers a decision on the question of giving evidence to the Royal Commission until the next meeting of the Representative Body. (2) That a decision on withdrawal of service be deferred.

Decisions Referred to the Representative Body

13. The Council submits no recommendation to the S.R.M. on June 12. It offers no opinion as to whether the recent change in the position is such as to justify a change in the policy which it originally recommended. It thinks it right that the profession at large should have an opportunity of studying the position as it now exists, and it invites the Representative Body to take decisions in accordance with the prevailing views of the Association's members as ascertained in the Divisions and Branches.

Position of Public Health Medical Officers

14. In accordance with a decision of the A.R.M., 1956, the Council has urged the Ministry of Health to set up a special committee—a Public Health "Spens" Committee—to inquire into the remuneration of doctors employed by local authorities. When the appointment of the Royal Commission was announced it appeared to the Council that, if it eventually became possible for the Association to give evidence to the Commission, this would provide the desired opportunity for the remuneration of public health doctors to be examined in relation to that of their colleagues in general and in hospital practice. It was for this reason that the Council adopted the second part of the recommendation quoted in paragraph 5 above.

15. Repeated efforts have been made to effect the inclusion of these doctors within the terms of reference of the Commission, but without success. It has been

explained that the fact that the public health doctors are not remunerated solely from the central Exchequer—one of the considerations which influenced the Negotiating Committee of the profession when it decided not to include them in the claim presented to the Minister of Health and the Secretary of State for Scotland—produces complications of such a nature as to make their inclusion impracticable.

16. Should the Representative Body be satisfied that, were it not for the exclusion of the public health medical officers, the right course would now be to present evidence to the Commission, it will be for the Representative Body to decide whether the inclusion of these medical officers should still be regarded as an indispensable condition of the submission of evidence by the Association.

17. The Public Health Committee will hold a special meeting on May 17, the result of which will be published in the *British Medical Journal* at the earliest possible date, and will be available to the Special Representative Meeting on June 12.

18. At its meeting on May 8 the Council reaffirmed its determination to use every endeavour to secure justice for the public health doctors, whatever decision might be taken regarding the submission of evidence to the Royal Commission.

PROCEEDINGS OF COUNCIL

The Council of the British Medical Association met at B.M.A. House on May 8, with Dr. S. WAND in the chair.

The Chairman reported with regret the deaths of John Armstrong and Walter Lidwell Harnett, former members of Council.

The General Medical Services Committee having appointed Dr. A. B. DAVIES as its chairman in place of Dr. A. Talbot Rogers, Dr. Davies became, *ex officio*, a member of Council.

Election of Council, 1957-8

It was reported that, in the contested elections, there had been the following results:

North of England and Tees-side Branches (two seats):

Dr. J. C. ARTHUR, Gateshead.

Dr. I. M. JONES, Sunderland.

Divisions of Metropolitan Counties Branch in Middlesex (two seats):

Dr. A. N. MATHIAS, London.

Dr. J. B. W. ROWE, Harrow.

City, South-west Essex, Stratford, and Tower Hamlets Divisions (one seat):

Dr. J. A. MOODY, Ilford.

Kent Branch (one seat):

Dr. A. BARKER, Whitstable.

Council decided that, though the nomination of Dr. W. B. HEYWOOD-WADDINGTON was late, it should be accepted in respect of the Sussex Branch, no other nominations having been received.

Representative of Army Medical Services on Council

It was agreed to recommend to the Representative Body that Major-General R. MURPHY, late R.A.M.C., be elected to represent the Army Medical Services on the Council in place of Major-General J. C. A. DOWSE, whose term of office ended at the conclusion of the present session.

Nomination of President

Considerable discussion took place on the motion of Dr. A. BEAUCHAMP and Mr. D. S. PRACY that in order to carry out the instruction of the Representative Body to elect the President on a national basis the Council should, before or at the time of accepting the invitation of a Branch or Divi-

sion, determine the method of selection and nomination of the President for the year under consideration. To this Dr. F. GRAY and Dr. W. WOOLLEY had tabled an amendment that Council should make a nomination before accepting such an invitation to hold the Annual General Meeting in a particular area. A further amendment by the Organization Committee was in similar terms, with the addition of the words:

In doing so the Council shall pay due regard to the nature of the regional area in which the meeting is to take place and any views expressed by those sending the invitation.

Dr. F. GRAY thought that the old system had worked well in the past, but it had been thought likely to operate unfairly in the future in view of the limited number of places where the meetings could be held. As had been pointed out in January, that a host area should have one of its members as President gave it great encouragement. Unless Council chose the President in the first place, it would be said by every likely area that a national President was being chosen because there was nobody worthy of the office in those areas. In his view, nothing could be more calculated to insult than the adoption of the Organization Committee's amendment.

Dr. A. V. RUSSELL said that it should be remembered that on many occasions the national figure chosen would turn out to be also a prominent figure in the host area, while Dr. F. M. ROSE pointed out that unless there was a stipulation that the provincial areas were also to be taken into consideration there would arise the danger of the Presidency being an office reserved to those places with adequate accommodation for the meetings.

In the opinion of Dr. E. C. DAWSON, the old method had been by far the best, and to alter it would certainly result in someone being insulted or hurt. Perhaps the Council could ask the Representative Body to reconsider its instruction. The difficulties arising from the giving of notice to implement that suggestion were mentioned by Dr. I. D. GRANT (chairman of the Representative Body), who, nevertheless, expressed sympathy with Dr. Dawson's views, as the President could almost be called the king-pin in making the meeting a success.

Dr. R. GIBSON (chairman of the Organization Committee) said that the difference between Dr. Gray and himself lay in each thinking the other's idea was a calculated insult.

In view of the cleavage of opinion existing the CHAIRMAN suggested that the Council might consider the second part of the original motion—that the Council should consider the nomination for the office in 1960. It might be that once it had been worked in one area the conflict might cease. In the meantime the rest could, perhaps, be put in "cold storage" for the time being, as whatever was done was sure to upset someone.

Dr. W. E. DORNAN supported Dr. Gray's amendment. The Representative Body had expressed itself in no uncertain terms, and had had the backing of considerable evidence of the tendency to have a President from, in particular, coast towns, leaving important centres such as Hull, Leeds, Nottingham, and Leicester "without the pale." In addition, London and the provincial teaching centres would be completely ignored.

After some further debate, Dr. Gray's amendment was carried as a substantive motion, it being decided to defer consideration of nomination for 1960 until the next session.

Royal College of Midwives Building Appeal

After Mr. L. DOUGAL CALLANDER (Treasurer) had pointed out that to make a contribution by covenant would cost the Association only 35 guineas a year, Council approved a recommendation of the Science Committee to contribute a sum of £250 to the Fund.

Finance Committee

Presenting his report and the draft financial statement, the TREASURER informed the Council that the membership had reached the record figure of 70,152, and added that without

the resultant improvement in receipts there might have been a loss on the year's working. Total income had been £288,000. The fall in net rent resulted from various causes over which they had no control, and fuel costs had increased because of the longer winter in the year under review. Interest on investments showed a rise as a result of the investment of surplus money in Treasury Bills instead of letting it lie in current account and letting the bank get the interest. Mr. Callander warned, however, that Treasury Bill interest had fallen considerably in the last few months, and had fallen to below 4% last week for the first time in a considerable period.

On the expenditure side most of the increase was represented by the cost-of-living bonus to the staff, while the Public Relations Department's cost had also greatly increased as a result of it not calling on the Defence Trust for some £3,000 to £4,000 as in previous years.

Turning to the balance sheet, the Treasurer drew attention to the increase in the accumulated funds from £635,000 to £644,000, to which had to be added the General Reserve of £30,000. As required by the Companies Act, fixed assets were shown at their written-down value, which, on the last revaluation of a minimum of £750,000, represented a considerable hidden reserve. The market value of their investments at the end of the financial year was £171,672, and the Sinking Fund policies would provide capital sums of £100,000 in 1966, 1974, and 1991 respectively.

The draft annual financial statement was approved, subject to audit.

The expense of the medical abstracts was raised by Dr. C. J. C. BRITTON, who described it as a drain on the funds of the Association.

The *Abstracts of World Medicine* had no prestige value at all, and gave no service not already provided by similar publications.

Dr. J. G. M. HAMILTON pointed out that in the past the Council had always taken a contrary view and he hoped it would continue to do so. That the Association provided a service of value to the world of medicine was confirmed by the increased sales and prospects in North America. The improvement in circulation there was by no means finished.

Mr. CALLANDER confessed that both he and the Journal Committee had been worried about the deficit, but, though the service had but a limited field, the trend was to reduce the loss by improved sales, which had increased appreciably in the last 18 months. He hoped that the service might be allowed to continue for at least another year before further consideration was given to the matter.

A plea that an overall view might be taken was made by Dr. E. A. GREGG, who reminded Dr. Britton that the publications must be looked upon as a whole.

It was agreed that further information on the subject should be provided at the November meeting, after which the remainder of the report of the Finance Committee was agreed.

Estates Committee

The chief item in this report was the Committee's recommendation concerning the Burton Street project, Mr. Callander telling the Council that it had to take one of the most important of decisions, involving the spending of many thousands of pounds. He recalled that the decision to develop Burton Street had been confirmed some years ago by the A.R.M., and when, in 1952, it was learned that the existing leaseholder was in difficulties over developing the site the Estates Committee had been instructed to ascertain from the Bedford Estate whether the Association could acquire the lease.

After negotiation, the Bedford Estate had offered a lease to determine in the year 2125, when the lease of the present building also terminated. Under that lease, the Association could partly develop the site made available when the existing houses on it were demolished, in a manner approved by the town-planning authority and by the Bedford Estate. The Committee at that time had been thinking of a building

with flats for members of the Association, a library, and general offices at an estimated cost of £150,000, and in 1954 an agreement was completed by which the Association was required to commence building by March, 1958. To that agreement there had been two "escape" clauses, one operating if the Association did not obtain the planning permission of the L.C.C., and the other operating if, after reasonable steps had been taken, the Association did not obtain vacant possession. After prolonged negotiation, planning consent was obtained, not for a five- but for a four-story building. There were now only four tenants left in Burton Street, and none of those tenancies presented difficulty or much delay.

The Estates Committee was now asking the Council to give the "green light" on the basis of the figures contained in the report, which would, however, be more favourable to the Association if the Bank Rate was reduced, as seemed to be highly likely now. Even on the present basis it would be possible to finance the Burton Street project without very much annual burden on the Association's normal funds. After taking the Council through a detailed analysis of the finance involved, the Treasurer said that their surveyor had advised that the total cost of the project should be not more than £200,000. When complete, the building would provide 20,000 sq. ft. of office room, including storage space in the basement which would also command a good rental.

With the present demand for office accommodation in the Bloomsbury area they need not fear not being able to let their space at considerable rentals, rentals which would give a return of 6½% with the present Bank Rate, and slightly more with a 5½% Bank Rate. That was a better return than was obtainable from trustee securities. The project meant investing in bricks and mortar instead of in such securities.

Apart from those set aside for specific reserves, the Estates Committee felt it unwise to sell the investments, but to obtain the balance needed by way of overdraft or loan. The Association held considerable Sinking Fund policies, the first of which fell in 1966, and the suggestion was to borrow the cost of the building from an insurance company. The interest on a loan of £200,000 could be more or less covered by income from rents, and at the end of seven or eight years the first Sinking Fund policy could be used to repay £100,000. That would halve the liability.

The Burton Street site could, therefore, be financed without endangering the financial position of the Association, while still preserving their investments as a protection against emergencies which faced them at present or which might face them in the near future. "What is required is vision," Mr. Callander told the Council, vision such as Sir Robert Bolam had shown in connexion with the present building.

Real Estate Business

Dr. I. D. GRANT, while congratulating the Treasurer on his excellent presentation of the report, was worried about the British Medical Association going into the real estate business. The initial idea had been to provide bedrooms for members and, possibly, a library extension. That had been "washed out" and for it had been substituted a building of four stories, not five—a block of flats and offices which would be let off on a purely commercial basis to whosoever would rent them. They were clearly and definitely taking the Association into the real estate business, which he did not think the right job for a medical organization.

It was evident that a definite commitment had been entered into with the Bedford Estate, but could not the Estate be approached to see how much it would cost in compensation to call the deal off? After all, if the site value was rising all the time there might not be great difficulty in getting an arrangement, and it would then be for the Council to decide whether or not money would be wisely spent in "crying off." In his opinion, such a body as the British Medical Association, which was not profit-making,

should have its funds in securities which could be utilized as and when required.

"The damages could be astronomical," he was told by the Treasurer. It all depended on how the Bedford Estate would react. The matter could be taken to court and damages awarded. The Association were paying £1,000 a year ground rent, and should it turn out that the Estate could get only, say, £750 a year from another lessee, the Association could be liable for the amount represented by 168 years at £250 a year. There would also be architects' fees of anything from £6,000 to £8,000 to pay in any case, plus legal costs of any action. Their legal adviser, while not being able to give a definite figure, thought that the sum involved would be anything "above five figures."

The project found a vigorous supporter in Dr. E. A. GREGG. Development of the site would be of great advantage to the Association, and, when completed, the building itself would provide sufficient income to meet its cost. "If you back out," he warned, "the alternative is that, adjoining this very fine block of buildings which we already have, there will be erected some abominable block of council flats—flats which could be built as high as the L.C.C. think fit." The only criterion was that it should be able to be done in such a way as not to throw any great burden on the Association's finances. "Once satisfied about that, there is every reason to go on with the project."

Further support came from Dr. D. BROWN, who thought that the new building would "complete Sir Edward Lutyens's concept." If the Association had not gone into the real estate business years ago, what would have been the present financial burden? The project was a method of saving, at the end of which they would have a building worth £1m. In addition to using the 1966 Sinking Fund policy, they should also use that maturing in 1974 and so reduce the amount of interest payable. Nor could he see any reason considered the scheme such a wonderful one that perhaps members of the Association—especially those to whom compensation was due—might like to invest in it. They would get 5½% on their money, secured by an asset worth £750,000.

Dr. J. G. M. HAMILTON's advice was "to back-pedal." It was neither part of the Association's aim to go in for real estate nor did he think it a good investment. If the present building was not sufficient to house their various activities they should either take over some of the space now commercially rented or else rent more space outside the building. He also deplored the proposed use of the Sinking Fund policies, and the financial policy in this regard seemed to be based only on an expectation of Government action—some day—in regard to leaseholds and freeholds. Unless those policies were used as originally intended they would never attain the objective of the Association of a reserve of £250,000. Even if the first Sinking Fund policy was replaced, the cost would be about £1,000 a year. He objected both to the form of the investment and the method by which it was proposed to finance it.

While not impressed "with the terrible picture that has been painted of council flats," Dr. Hamilton said that although at present there was an enormous demand for offices and flats in London a very great deal of such building was in progress and projected. As a result, they might find themselves with a "white elephant" on their hands in regard to letting.

Remarking that the Association had been in the real estate business for some years, Dr. ALEX. BROWN said that, sooner or later, accommodation had to be found for departments that were already overcrowded. To house them in frontal accommodation already tenanted would cost so much that an increase in subscriptions would be inevitable, whereas the Burton Street building would provide the necessary space for them as well as enhance the amenities of the present building.

Dr. F. M. ROSE also supported the plan. He had seen many instances where someone had not taken such an opportunity and had retrieved his mistake later only at

much greater cost. No mention had been made of garage accommodation in the new building, and he hoped this would be seen to. The present garage space was overtaxed. "We should go forward with the scheme cheerfully and hopefully, and not with the forebodings of our Scottish colleagues."

The scheme was described as "good business" by Mr. J. R. NICHOLSON-LAILEY. The Council had the responsibility of seeing that money was wisely spent, and in days of inflation they were always looking over their shoulder lest expenditure should first catch up with and then overtake income. The Association was constantly expanding, and many necessary services were not at present offered to members because of lack of space. If the site were given up and expansion later became necessary, they would find they were then encompassed by other buildings. They might then even have to leave their present site altogether, which would be even more expensive.

Dr. H. H. D. SUTHERLAND said that even if they went ahead with the scheme they had not, then and there, to make up their minds about the many alternative uses there were for the use of the building. They had the opportunity to do something suitable and useful with the land, which would add to the prestige of the B.M.A. and to its income.

Mr. A. DICKSON WRIGHT told the Council that he had had a lot to do with trustee stocks, and he instanced the fall in railway stock since it was issued on nationalization. Every argument was in favour of the present investment.

Dr. A. N. MATHIAS thought there was little ground for Dr. Hamilton's fears of a white elephant. It was true that much office building was and would be undertaken in London, but the first places to become white elephants would be those where communications were bad. In Tavistock Square and the immediate vicinity they were in a unique position, being within walking distance of three main-line termini, two of which were to be electrified under the railway modernization plan. The project was a most valuable business investment.

Dr. W. M. KNOX recalled that when the project was first discussed the B.M.A. had been much wealthier, and as it had been put forward then as something which would add to the members' amenities, and not as a purely financial building speculation, he had been in favour of it. There were many factors which could throw Mr. Callander's budget out of balance. The Treasurer had assumed that there would be full letting all the time, and that the office staff would increase so much in the next ten or fifteen years as to require more accommodation. Neither eventuality might come to pass. It was purely a real estate venture, and nobody dealing in real estate at present would look at a return of even 6½%. They considered that anything less than 12% would not be a paying proposition.

In the eyes of Dr. ANNIS GILLIE, the Association had an opportunity of offering accommodation to those engaged in medical and paramedical activities. A grouping of organizations with common interests was in the interests of such tenants and in the interests of the Association, as it meant there would never be a lack of tenants.

No Fears

Replying, Mr. CALLANDER said that the provision of garage space in the type of building envisaged was now a general condition for granting planning permission. It would be easy to arrange to take out another Sinking Fund policy when the first one matured—it was something which, perhaps, the Council might immediately consider—and the premium cost would be about £1,000 a year, as had been stated. Having gone into all the details he would say no more than that the Council need have no fears about the financial aspects of the scheme.

The Estates Committee's recommendation to proceed with the development of the Burton Street site in accordance with the plans for which planning consent had been received was carried by a large majority.

The Council also approved the Committee's second recommendation:

That approval be given in principle to the scheme for financing the building operations by means of a loan repayable in part or in whole from the Sinking Fund policies.

It was reported that the Birmingham Regional Office would be available in May, and the remainder of the Report was agreed.

Royal Commission—Public Health Services

At this stage Council dealt with a point arising from the Minutes which had earlier been raised by Dr. H. D. CHALKE, who had asked what, if any, action had been taken to implement the Public Health Committee's Resolution:

That as soon as possible a further letter be sent to Members of both Houses of Parliament . . . drawing particular attention to the arbitrary decision of the Government that the terms of reference of the Royal Commission exclude all doctors in the public health service.

Dr. MACRAE explained the reasons why no action had been taken.

Dr. CHALKE thought it most unfortunate, because he could tell the Council that the public health doctors were already very dissatisfied with the B.M.A., and this incident might well prove to be the last straw. The changed attitude of the B.M.A., and particularly of the Council, was most regrettable. He was doing his best to fight the dissatisfaction and only hoped that the general repercussions would not prove almost fatal to the good associations, and even the membership, of the public health services with the B.M.A.

The CHAIRMAN said that he had spoken to Dr. J. B. Tilley on the subject a few days previously, and had understood from him that there was to be a meeting of the Public Health Committee on May 17. Would Dr. Chalke like consideration to be deferred until after that meeting?

Dr. CHALKE replied that he had no authority to do anything except to warn Council of the possible consequences of the ignoring of the resolution. He was told by the Chairman that the "ignoring" had not been deliberate, and that, in any case, the terms of any letter sent now might be different from those of one sent after the meeting of May 17.

Dr. A. V. RUSSELL thought that, though the position might have changed somewhat, the Public Health Committee had been given a definite promise, and a promise should be kept. The public health doctors had every reason to be extremely disturbed about what was happening. The letter should be sent so that M.P.s, and the Government through them, would realize that the Association was by no means pleased with the Government's attempt to fragment the profession and exclude from the inquiry an important section of it.

Dr. G. W. IRELAND wished that their public health friends would look at the matter slightly differently. Their problem was a very real one, but if the present line was pursued it would spoil not only the B.M.A.'s case but their own. The public health section should not feel that the Association had broken a promise—the position was much more complicated than was realized.

Dr. W. E. DORNAN said that the imposition by the Government of a Royal Commission and of increments of varying percentages were both arbitrary acts. It had also been stated that the Commission would have nothing to do with the public health service remuneration except in so far as it could be used as evidence against the claim of the profession as a whole.

If an approach was made without their being fully informed, they exposed themselves to the adverse comments of many M.P.s. He proposed that nothing should be done until after the Special Representative Meeting.

Further discussion of the position of the public health section ended in the Council deciding, with four dissentient votes, to leave the matter in the hands of the Chairman of Council until after the meeting of the Public Health Committee on May 17, when, in consultation with the chairman

of that Committee, he should take whatever action he thought right, the Public Health Committee being assured, meanwhile, that the Council would use every endeavour to secure justice for the doctors concerned, whether or not it was decided to give evidence to the Royal Commission.

Science Committee

It was reported that the award of ordinary research scholarships worth £200 each to Charles Roland Leeson and Thomas Sydney Leeson, both of Cardiff, was the first known to have been made to identical twins.

Health Services in the Future

Initiating a short discussion on how best to implement the resolution passed at the S.R.M. of May 1, calling for a committee to inquire "into the whole field of medical services in the light of the experience gained of the National Health Service since 1948" (*Supplement*, May 11, p. 255), the CHAIRMAN suggested that perhaps he might be permitted to engage in such consultations as would enable him to present a document to Council showing a proposed constitution of the Committee. If they debated it in Council with "nothing to bite on" they might get involved in a decision which might later be regretted. For himself, he thought that a substantial number of laymen should be included.

Dr. GRAY agreed that the main thing would be the lay element—people whose names carried the greatest weight in the country. The committee should be such as would put the Royal Commission in the shade. He favoured the Chairman going ahead on the lines suggested.

Dr. GRANT thought that Dr. Wand should bring before Council on June 12 his suggestions as to the lay chairman and the rest. It would then be for Council to give him some guidance. To do otherwise would be asking too much of their Chairman. A further point to be considered, said Dr. WAND, was whether or not the Ministry of Health should be asked to send observers, or nominate a member, or give evidence to the committee. Dr. MATHIAS's opinion was that a chairman should first be chosen, whose advice would then be of immense help in the formation of the rest of the committee.

It was agreed that the Chairman should proceed on the lines which he had suggested.

The proceedings terminated at 6 p.m.

GENERAL MEDICAL SERVICES COMMITTEE

A meeting of the General Medical Services Committee was held at B.M.A. House on May 9. Dr. A. B. DAVIES occupied the chair.

Remuneration Dispute

The CHAIRMAN opened the meeting with an appeal to members to keep their observations on the remuneration question brief and to avoid going over old ground. At the last meetings it appeared that the Committee was completely torn asunder and a little heat and bitterness had been engendered. He hoped that that time had passed and if they could focus their attention on their common object it would be to the good of them all and their cause.

On the subject of how meetings should be addressed, it was felt that a recital of the facts as they stood at the date of the conference, leaving local medical committees to draw their own conclusions, would lead to sterile meetings. Two types of resolution could be discussed—one, that the position had so altered as to enable co-operation to take place, and the other that despite recent events there had been no substantial change.

Dr. HOWIE WOOD inquired what the reaction had been so far and if there was anything further to report on what might be called the "Wand front." Dr. B. BURNS presumed that if they remained neutral at meetings they were opposing the policy of the B.M.A. The resolution at the representative meeting on the day after the conference

clearly showed that the Association had decided that the position had changed. The CHAIRMAN suggested that they should be guided by their own previous decision by which, by 24 votes to 22, they resolved that evidence should be given to the Royal Commission.

Giving a Lead

Dr. H. G. DAIN felt that the Committee had had to decide whether or not it was in favour of evidence being given to the Commission, and by a small majority it had decided that it was. What was most important was that they should take a decision, not, he hoped by 24 votes to the 22, but unanimously, that evidence should be given to the Commission. The whole profession should be persuaded that it was right in present conditions for evidence to be given and that it should appear that they had a united profession in favour of that particular action. He thought it was their responsibility to give a lead.

Dr. F. GRAY, while agreeing on the need for unity, disagreed with the method proposed. The Council had decided that it could not give a lead, and Dr. Dain was proposing that the Committee should do so. What was the position of members of the Committee who were members of the Council? He could not think of anything calculated to do more harm than the course Dr. Dain had proposed. Dr. J. C. ARTHUR deprecated hysterical talk about the profession being split from top to bottom. The split was on such a narrow issue that it did not really matter.

Dr. DAIN formally proposed:

That this Committee is of the opinion that under the existing circumstances to-day, the profession should give evidence to the Royal Commission.

Dr. GRAY moved an amendment:

That this Committee decides to take the same action as the Council, namely, not to give a lead to the profession.

In a discussion on procedure, Dr. S. WAND thought that the forthcoming annual conference should be invited to come to a decision on the question of giving evidence to the Royal Commission which had been deferred by the special conference. Despite what had been said, there was a clear cleavage of opinion in the profession. There was a split; there was no doubt about it. Their objectives were to retain the status of the profession and to pursue their claim. The split was in the methods to be adopted to gain the objectives. They must be prepared to re-organize their forces according to the situations of the moment, and they might have to change their tactics with lightning rapidity. When the decision had been made it would indicate their future strategy and tactics, and once it had been made they had got to keep together as a united force and there must be no bitterness or recrimination. If the views on what were the right tactics were different each side should respect the other, but, having debated and decided what the form of the tactics would be, they should be absolutely united. They might have to face ultimately a challenge to their status as a result of the Royal Commission's findings, or a failure to get proper satisfaction for their claim. That might come in a year or in less time than that. They must use that breathing space to reunite the profession. When they spoke to those in the periphery they must make it clear that once a decision had been made there must be unification and a closing of the ranks. Nothing would be gained by saying, "If we had done so-and-so, it would have been different," because the situation was changing with lightning rapidity and they had to meet the challenge as it came.

Dr. BURNS, opposing anyone who supported giving evidence to the Royal Commission, said that it was the logical next step in the formation of a salaried service. It was incomprehensible to him that the Chairman of Council should believe that they were anywhere near arbitration. He did not believe that a shrewd negotiator such as Dr. Wand could believe that they had got anywhere. He felt it was necessary for the Committee to give a firm lead to the profession. He did not think they could

evade their responsibilities, and they should not necessarily adhere to a snap decision made in a few minutes at a previous meeting. They should have the same opportunity as those in the periphery of deciding what was to happen and not be bullied into any position. The Chairman of Council had said that the profession was split. He should know. The profession was split from top to bottom, and the Council had forfeited the confidence of half of those in the profession. Once they gave evidence to the Royal Commission they had taken the next logical step in the direction of a salaried service.

Dr. WAND said it still remained open to them to decide whether the amount of change was sufficient for evidence to be given or not, but he did not want confusion about the fact of the change. Whether the change had been sufficient to mean that evidence should be given or not was something on which he had not given a positive opinion.

Dr. F. M. ROSE thought they must come to a decision and give a definite lead on the question and not rely on the fact that they had given some sort of lead to the special conference. It was in the light of what happened at the Conference that they must look at the facts. It was quite obvious that things were going a certain way, and they would be foolish to tie themselves to their previous decision just because it was a previous decision.

Dr. M. SORSBY said that they must make some sort of decision to reunite the profession. Not only was the profession split but so were they. How much could they salvage from the wreck? The main issue was whether or not evidence should be given before the Commission. The question of the 24% had gone by the board for the time being. The profession was very angry about that. They had accepted the 5% proposal and the profession was angry about that. He wished to know if the advice of a constitutional lawyer had been sought, and what was his opinion on whether, if they gave evidence to the Royal Commission, they were, in fact, committing the profession to being a party to a revision of the Spens Reports and the Danckwerts award.

Dr. B. CARDEW did not think that the profession would be impressed by the unanimity of the Committee if voting on the question was, say, 30 to 15. Although he would have liked to see the Committee give a lead, he must support Dr. Gray.

Dr. TALBOT ROGERS commended the view that the question was in the hands of those in the periphery and also the suggestion of the Chairman that it was possible to debate the problem from one of two approaches. As a matter of fact, the two approaches were contradictory and it was for the meeting concerned to accept or reject.

Dr. HOWIE WOOD felt that they must find some means of unifying themselves before they went to the Conference. To have anything like a split vote again would be absolutely futile. Although many of them would like to support Dr. Dain they felt that he had not chosen the right method of securing their object. He would like them to get across to the Conference in some way, possibly through the Chairman, that there was no question of defeatism in the Committee if it was decided to give evidence to the Commission. They must take up the concession which had been obtained by Dr. Wand that there would be full consultation at the end of the Commission, and, if necessary, take up the point that the question of a withdrawal from the Service had only been postponed from now until later on. It was of cardinal importance that they should hearten their supporters.

Dr. C. M. SCOTT thought that they were split and would be split for a long time. His only concern was with the possible way out of the mess. He thought the Committee had a fine chance of retrieving some face if it considered going into the constitutional issue again. The difficulty was that no one knew if the Council was the big boy or whether the General Medical Services Committee was the big boy. A certain number of people sat on both bodies. They had got to find some way of trying to save face, and he thought the only possible way in which they could

retrieve anything was to make some kind of stand at the moment even if that were only to the extent of putting a considerable amount into lawyers' fees to take a case at law.

The CHAIRMAN asked for the exact wording of Dr. Gray's amendment. Dr. GRAY said that the amendment would be: "That this meeting agrees with the Council of the Association that it will not give a lead to the profession before the Conference." He put that forward in the interests of unity in the profession. It was obvious that if they had a straight vote on whether evidence should be given or not there would be a split in the Committee if nowhere else. Dr. C. J. SWANSON suggested altering the amendment to read: "That this Committee adheres to the decision of the Council and leaves it to the profession or the Conference to make a decision with regard to giving evidence."

Dr. Gray's amendment was carried and agreed upon as a substantive motion with three dissentients.

Legal Opinion

Dr. C. M. SCOTT proposed:

That this Committee now decide to seek the highest legal opinion with a view to a test case in the Courts on the validity of our contract.

Dr. WAND thought it could be accepted that the matter would be fully pursued in the light of Dr. Gorsky's speech at the Special Representative Meeting (*Supplement*, May 11, p. 254). There would probably be a consultation between counsel, and he could assure Dr. Scott that no stone would be left unturned. If they had a small chance of success they would go on.

Dr. SORSBY said that Dr. Scott was saying that they should find out whether what was contained in the Ministry's handbook—that the Spens Report and the Danckwerts award were accepted by the Government—meant that that was a legally binding contract with the Government. If that was correct and they then gave evidence to the Royal Commission, were they not in fact saying that they were a party to changing what the Government had accepted in Spens and Danckwerts? If they gave evidence and were party to a change in Spens and Danckwerts the Government had won hands down and had got them in a corner for ever.

The CHAIRMAN: Does the Committee agree to both these angles being approached? (Agreed.)

Distribution of Interim Increase

Dr. J. T. BALDWIN said that the three means suggested by the Ministry for distributing the 5% interim increase in remuneration were by no means exhaustive. It was felt that those with smaller lists should have some preference. Dr. DAIN suggested that a simple method of distributing the money would be to give every principal on the list £100. That would have the effect of giving the small-list man £100 as well as the big-list one.

Dr. GRAY said that Dr. Dain was proposing another basic salary. Dr. Baldwin's proposal was to benefit the small-list man. Dr. Gray suggested that they should give a very substantial rise in the initial practice allowance. For that special class he suggested that they should ask for the full 24% rise to be given. Those were the people starting from scratch, in designated areas, and the initial practice allowance, in the majority of cases, was all they had got to live on to start with. Dr. CARDEW thought it was impracticable to hand out money as a lump sum. He suggested that they might load the first 1,000 patients with 2s. Dr. A. BROWN said that if they altered the method of loading they were altering the policy of the Conference.

Supplementary Payments

A resolution from the Cumberland Local Medical Committee which had the support of the Rural Practices Subcommittee of the G.M.S. Committee was before the Committee. The resolution was as follows:

That in allocating supplementary payments to executive councils in future the sum shall be not on the total number of

persons on practitioners' lists in the executive council area, but in proportion to the total amount of annual payments to practitioners.

Dr. C. F. R. KILLICK said it was felt that the rural practitioner was restricted because there was not the population available for his list such as there was in urban areas. Those on a capitation basis for dispensing got 9s. 6d. per head against the chemists' tariff of £1 2s. The mileage payment was, in a sense, a compensation payment in place of patients. Dr. TALBOT ROGERS thought there had been no injustice to the rural practitioners. They had been dealt with not only fairly but generously.

Dr. BURNS considered that any decision arrived at should be based on arithmetic and not on emotion. Could they be told the figures of total payments in towns and in the country? He had a suspicion that there were many practitioners in the rural areas who were on a very good thing with mileage and dispensing. He did not think that when discussing the final settlement they should involve themselves in a private welfare State.

Dr. A. D. STOKER pointed out that the rural practitioner was faced with much greater expense than the urban one. The extra mileage grant had been swallowed up in the increase in motoring costs. It was manifestly unfair that the very men who supplied the evidence for the increased supplementary payments should be those who garnered the smallest harvest. He suggested that the dispensing capitation rates were a complete dead loss. He did not understand how anyone could afford to dispense on those rates.

The CHAIRMAN said that they were committed to their existing policy, which was determined by the working party in consultation with the Government side. Unless a resolution was carried by the Committee and confirmed by the Conference, and then taken up by the working party with the Ministry, the policy would stand.

Dr. KILLICK said that a resolution was down on the conference agenda on the subject. He was quite satisfied with that. Dr. CARDEW thought that the working party might well approach the Government to add 5%, if not 10%, to the trainee practitioner's salary. A precedent had been created by the offer of 10% to the junior hospital staff and 5% to all other doctors. He thought there was a moral commitment to look after the trainee practitioner, and he suggested that the working party should press for 10%. Dr. BURNS said that that was not the function of the working party.

It was agreed that this point should be pursued with the Ministry.

Term of Office of Chairmen of Council and Committees

Resuming in the afternoon, the Committee considered the proposal of the Organization Committee that the office of Chairman of Council should be held for a maximum of five years, election, in the first place, being for an initial period of three years; and that a chairman of a committee should be elected annually by that committee, with a maximum period of six years. The CHAIRMAN intimated that the Council had been informed that the Central Consultants and Specialists Committee had decided that this was a matter for each committee to decide for itself.

It would, thought Dr. TALBOT ROGERS, be unwise to define an exact limit to the period of office, and in any case it should be discretionary. Dr. GRAY wished to go further and to say that the Organization Committee's proposal was "wholly inappropriate." A committee was quite capable of looking after its own affairs without having regulations laid down for it in that way. He moved to that effect, and it was agreed.

Stock Orders

It was reported that the National Pharmaceutical Union was willing to discuss stock orders with the Committee, and it was decided that the Chairman, Secretary, and two other representatives to be chosen by the Chairman should enter into discussions with the union.

Specialist Treatment for Service Personnel

The Committee considered the following addendum which the Ministry wished to add to its previous instructions on the subject:

Except in an emergency, any specialist attendance or hospital treatment for Service personnel is to be obtained from Service resources, wherever possible. Arrangements should normally be made through the medical officer of the unit to which the patient is attached.

This was to apply in cases "more than two miles from the nearest Service medical facilities."

Dr. MATHIAS said that the Ministry was asking the profession to do the Ministry's administrative work. The average doctor did not know where a man's nearest Service hospital was, and the answer was that if the man was fit to travel he should be returned to his unit. If not, and if he required hospitalization, he should go to the nearest local hospital.

With this the Committee agreed.

Assistants and Young Practitioners Subcommittee

On behalf of the G.M.S. Committee the CHAIRMAN thanked Dr. R. M. S. MATTHEWS for a memorandum entitled "Prospects in General Practice." Dr. Matthews was congratulated on his efforts to throw light on this important problem.

Prescribing of Proprietary Preparations

Describing as "unfortunate" a letter from the National Pharmaceutical Union ascribing some errors in prescribing to illegible handwriting of the doctor prescribing, the CHAIRMAN said that it was the legal duty of a chemist, if in doubt about the interpretation of a prescription, to ring up the doctor in question, and the Secretary was instructed to reply in those terms.

Tuberculosis in Industry

As there were ethical, industrial, and other aspects to the problem, the Committee agreed that a request from industrial medical officers, made through the Ministry, that chest consultants should inform industrial medical officers direct when pulmonary tuberculosis was diagnosed at a chest clinic, should be referred to the Public Health and Industrial Health Committees.

Tranquillizer Drugs

A request from the Kingston-upon-Hull Local Medical Committee that these drugs should be obtainable on prescription only was referred to the Science Committee with the recommendation that the drugs should be put in Schedules 1 or 4.

Investigation of Prescribing

Referring to a letter received from the Ministry of Health pressing for nominations to a special committee to investigate prescribing, the CHAIRMAN said that the committee had expressed its willingness to co-operate in the investigation. It was agreed to send the following names to the Ministry: Drs. F. E. Gould, H. C. Faulkner, M. Sorsby, A. B. Stoker, and A. M. Maiden. It was also agreed to leave to the Chairman the selection of a nominee to represent Wales.

Clinical Assistantships—National Temperance Hospital

The decision of the Paddington Group Hospital Management Committee to terminate the employment of the present paid clinical assistants and, instead, to create a similar number of honorary posts was discussed by the Committee.

Dr. GRAY said that of the six assistants, four had not been "especially busy." Of the other two, one saw an average of over 40 patients at each session, and the other case was comparable. In any event, it was difficult to understand why the honorary appointments were to be made if the work was not there. His unofficial information was that the Management Committee was proposing to make a "paper saving" of £1,050 a year and to spend the money in other directions.

Dr. WAND advised an approach to the regional hospital board. They had been told on many occasions that the

Ministry was unwilling to interfere with the autonomy of regional or other boards, and it would be completely hopeless to approach the Ministry before going to the board.

The Committee agreed to take up the dispute with the regional hospital board.

Hospital Facilities for General Practitioners

Consideration was given to the action of the South-West Middlesex Hospital Management Committee in deciding:

That minor operations only can be undertaken by general practitioners in general-practitioner hospitals without reference to the appropriate consultant. Such minor operations to be only those which could be carried out in the general practitioner's own surgery.

Dr. TALBOT ROGERS called for resistance, as there were quite a number of minor operations that a general practitioner could adequately carry out in a hospital with which he had good relations and to which he had access. The tendency was for more and more minor surgery to be carried out in hospital, not because it was impossible to perform it in the surgery but because conditions and facilities in hospital were so much better.

The Committee decided to support the local view "in the first case," and to write to that effect to the Management Committee.

CO-OPERATION WITH ROYAL COMMISSION

EDINBURGH PHYSICIANS' DECISION

At a quarterly meeting held on May 7, the Royal College of Physicians of Edinburgh unanimously passed a resolution that the College agrees to co-operate with the Royal Commission on the remuneration of doctors and dentists and will submit evidence.

Correspondence

Because of heavy pressure on our space, correspondents are asked to keep their letters short.

Royal College of Physicians

SIR,—I am sorry if a little levity purposely introduced into my last sentence (*Supplement*, May 4, p. 244) has given offence or has run the risk of obscuring the essential seriousness of my message. I was concerned to point out that to a profession as to a nation there are other dangers than disunity. There is the danger that no man or minority may dare to speak his mind.—I am, etc.,

London, S.W.1.

ROBERT PLATT,
President,
Royal College of Physicians.

SIR,—Its president's letter (*Supplement*, May 4, p. 244) does nothing to allay the apprehension and resentment that the recent action of the Royal College of Physicians has aroused in many general practitioners. Until April 12 the whole profession was united, with the Joint Negotiating Committee as the expression of that unity, in its opposition to the Government's curt, evasive, unstatesmanlike handling of the remuneration claim. The bodies associated in that Committee, the Joint Consultants Committee and the General Medical Services Committee, and the Association were unanimous in their decision that, at that time, co-operation with the Royal Commission was inadvisable. By its representation in the Joint Consultants Committee the College was a party to that decision.

The then president of the College approached the Prime Minister, and secured from him assurances which were not wholly unsatisfactory, and communicated these to the College, which decided that co-operation had now become

advisable. Had it contented itself with trying to convert its allies to its way of thinking there would have been no cause for complaint. But it did not do so. It made public its changed opinion and its decision to co-operate with the Royal Commission without consulting or even informing its allies. It separated itself from the rest of the profession and destroyed the former unity. The College may have had the right to take independent action, but occasions may arise when the exercise of such rights can only be detrimental to the common cause. This, surely, was just such an occasion. The College's action has made us, at least, two general practitioners, dubious of the wisdom, in any future dispute with the Government, of entrusting our case to an alliance one member of which is so willing to make on its own decisions which would have been better taken and announced by the profession as a whole.—We are, etc.,

Rugby.
Preston.

H. G. FLOYD.
R. P. HENDRY.

Co-operation with Royal Commission

SIR,—Shades of 1948! And we get nearer to a State salaried medical service. The same cracks appear in an apparently solid front, with the same timing, and from the same sources. The Royal College of Physicians has been criticized (*Supplement*, April 27, p. 232), and in his reply (*Supplement*, May 4, p. 244) Professor R. Platt clarifies the government of that body and goes on to say that the Royal College never professed to represent the general practitioner. But how comes it that his predecessor was jointly concerned in negotiation with the Minister on what was basically a G.P. problem? Presumably Professor Platt's analogy of university and graduate concerns the Licentiates only, as experienced G.P.s would not accept that relationship to the College, however good Fellows they may be, or whatever their method of election.

If it is open to all to advise on shirt colours for the College, then, as it has been stated that its policy is that of co-operating with the Government of the day, the obvious colour is blue until the next election. I had thought that the *raison d'être* of the College was for the advancement of medicine, which does not involve being honorary civil servants.

In spite of the various comings and goings and letters between our representatives and the Ministers, the issue still is that the Government refuses to discuss Spens as interpreted by Mr. Justice Danckwerts, and further refuses to substitute reasonable arbitration machinery.

Confusion is added to the scene by Dr. Wand's statement to the Special Conference of Local Medical Committees (*Supplement*, May 4, p. 237). He apparently attaches importance to the Minister's promise of full consultation before implementing any findings of the Royal Commission, but surely Spens promised more than this, and what possible reason have we to trust the Government on any form of words which cannot be proved in open court? Then Dr. Wand goes on to say that the Royal Commission would not act as an arbitration body. What then are we waiting for? We are fighting for arbitration and we are not getting it. The opinion is held by many that to give evidence to the Royal Commission immediately jeopardizes Spens.

In brief, has the situation changed one iota? I maintain that it has not and we should spend a little less time in that unseemly scramble to accept and distribute a miserable 5% and devote ourselves to the realities of this serious situation in the next few weeks. The future of medicine may well depend on our courage. Dr. Wand—whose herculean effort for practitioners in the past must be acclaimed and applauded by all—surely has his tongue in his cheek when he says it is up to those who have knowledge of the periphery to decide. The periphery has little knowledge of what is going on behind the scenes, but it is a fact that, until the recent ditherings of Headquarters, by and large the great majority of the profession was for withdrawal from the Service as the only way of dealing with an employer that we dare not trust.

In our deliberations we should try and answer these few questions: (1) Is the Royal Commission (whatever its terms of reference) arbitration? (2) Has it been advised to give a ruling on the rightness or legality of Spens? (3) Does the promise of full consultation with the profession before implementation of the Royal Commission's findings mean anything at all, or is it merely another form of words?—I am, etc.,

Sheffield.

ANDREW STEPHEN.

SIR,—Although I am not in the Service and as a taxpayer I regret any increase in its costs, I had intended to subscribe to the Defence Fund; for the attitude of the Ministry of Health filled me with indignation. But the terms of reference, as now announced, are sufficiently wide, and the names of the Royal Commissioners make us confident of a fair hearing: I hope, therefore, that the B.M.A. will give all the help it can and will not call for any resignations, at all events until the report has been published. From our standpoint I believe this to be a good policy, and might it not be regarded as more patriotic? I know that other senior men think as I do, and I feel sure that if the B.M.A. decides to co-operate we shall have to a much greater extent the sympathy of the man in the street, who does not find it easy to understand or to agree with an intransigent attitude.—I am, etc.,

Beckenham, Kent.

W. MAXWELL PENNY.

Reform of the Health Service

SIR,—Owing to the present clash between the profession and the Government over our claim for increased remuneration it may be interesting to know about our colleagues on the other side of the world and how they faced a possible similar predicament. I have just returned from a most enjoyable and instructive visit to Australia and New Zealand. During the two weeks before the Olympic Games I was invited to several clinical meetings at the Royal Melbourne Hospital. These were very well attended, and I was impressed by the high standard and the keenness and enthusiasm of those present. Later I had an opportunity of meeting several of the general practitioners in Melbourne. The tendency now is to form themselves into a group practice, each group being practically self-contained and carrying out their work in the highest traditions of private practice.

The profession in Australia, as is well known, were averse to a National Health Service and preferred to keep their freedom and their independence. Their status is very high, and deservedly so, as they do very good work and command good fees—the ordinary charge for a visit is 17s. 6d. (Australian currency). Fees for confinements are in the region of £10 10s. to £12 12s. (Australian currency). War pensioners invalided out of the Services are treated under special Australian Government arrangements.

In New Zealand the picture is quite different. Each individual pays 1s. 6d. in the £ on their income for social security. The first endeavour to introduce benefits in respect of family doctor services was made in 1941. Doctors were offered a capitation fee of 15s. per head per annum together with a commuted payment for potential mileage calculated on the distance between the doctor's residence and the place of residence of the patient. The response to this offer was enlightening. No more than about 50 doctors agreed to work the capitation system, and the largest number of patients on the combined capitation lists did not exceed 80,000. This was not unexpected, as the profession had condemned the capitation system as unsuitable except for lower income-tax groups as provided in the old National Health Insurance Scheme. The Government was committed under the Social Security Act to provide medical services for all, and found it necessary to compromise on family doctor services on a fee-for-service basis, and on November 1, 1941, general medical services were introduced under one of the following systems: *The refund system*.—This involved payment of the doctor's fee (usually

10s. 6d.) at the time. On production of the doctor's receipt the patient could obtain a refund from the Health Department at the statutory rate of 7s. 6d. per visit or consultation. *The direct claim and token system*.—Under this system the patient signed the prescription form and the doctor claimed the statutory amount of 7s. 6d. from the Health Department—also mileage at 1s. 3d. per mile each way. Under this system, instead of accepting the statutory fee of 7s. 6d., the doctor charged 10s. 6d. Of this he collected 7s. 6d. from the fund upon the patient's signature under the direct claim arrangements, and in addition collected the balance of 3s. or 5s. from the patient personally. This additional levy became known as the "token" payment.

Night calls or Sunday calls were under all these systems charged at the rate of 12s. 6d. Of recent years most of the doctors are using the direct claim and token system. Even under these systems there have been a few instances of trivial and unnecessary calls on the doctors, which entails a certain amount of prescribing, but on the whole New Zealand may be congratulated on their general-practitioner arrangements, and the doctors are happy and interested, and their status is high, and there is no sense of frustration.

Here is indeed a situation where the mother can learn from the child, and perhaps the present impasse would be solved by adopting the New Zealand system or some modification of it. It is rather ironical to think that in Britain we accepted a capitation fee of 17s. per patient per annum in 1948, when in New Zealand it had been sharply rejected by the profession there, seven years earlier, when money was more valuable.—I am, etc.,

London, N.8.

G. H. WOOD.

SIR,—Amid the dreary squalor of the pay squabble (for it is none other, despite attempts to dignify it as a struggle for principles) there is a point of view which has received scant attention from the profession. It seems hardly to have occurred to anyone to ask why our demands for increased pay have been refused.

Presumably the Government is well aware that we were got into the Service by a combination of bribery and threats: also that our case, based on the promise contained in "Spens," is unanswerable. If this be so there must be very strong reasons which compel the Government to repudiate the pledge given by its predecessor. In the broadest sense the factors which influence the Government must lie in the difference between our case as seen in isolation and as seen in the context of the general economy of the country. What are these factors, and to what extent do our arguments bear on them?

It seems odd that a body of individuals trained in scientific thinking should be content to reach a decision, and to decide on action, after hearing only one side of the case. Yet by and large this would appear to be what we have done. To the intelligent layman our attitude must recall that of the trade union leader who, if recent report can be believed, declared boldly that he was not interested in the future of the country, he was only concerned to get the best terms for his members. Now comes the heartening prospect of a B.M.A. investigation of the N.H.S. Let us hope that in dealing with matters which do not immediately affect our pockets it will be manifest to all that we can be both objective and well informed.—I am, etc.,

Sherborne.

ALAN EDELSTEN.

Capitation Fee System

SIR,—I have been following the correspondence in your columns regarding the remuneration claim with great interest, and can only conclude from the number and vehemence of the letters that there is widespread discontent among many doctors about the National Health Service. My own view is that the Government merely whispered that immediately to heel if the profession merely whispered that it might prefer a full-time salaried service for general practitioners instead of the present completely fatuous capita-

tion system with all its attendant wrongs, such as overloaded lists, "head-hunting," inadequate and out-of-date surgery accommodation and equipment, and so forth. Obviously, if the country cannot afford the present set-up, how much less could it afford to provide surgery premises, receptionists, clerks, in addition to doctors' salaries? If the Government wished to employ the doctor's wife, too, it would have to pay the "rate for the job," not have her services thrown in with her husband's as at present because he cannot afford to employ a secretary.

What a pity that such a splendid idea as the National Health Service should be the cause of such bitterness among its most important participants.—I am, etc.,

Gateshead, 11.

T. L. C. DALE.

SIR,—Mr. A. Wilfrid Adams (*Supplement*, May 4, p. 241) attributes the ills of general practice in the N.H.S. to the large list. May I be permitted to express my profound disagreement? He implies that G.P.s with lists of 2,500 or less practise adequate medicine, whereas those with more than this apocalyptic number do not. Is there one jot of evidence for this generalization? It would be an unrealistic and impertinent G.P. who announced, in Mr. Adams's terms, that the busiest and most sought-after consultants were guilty of curt procedure, inadequate diagnosis, and atrophied talents. Surely criticism of standards in general practice is not limited to the few with large lists, but is levelled at N.H.S. general practice as a whole. I beg of Mr. Adams that he will be objective enough to seek aetiological factors common to the whole field, and not prejudice our hopes by lending his authority to ill-considered clichés.

We need not seek far for the common factors. The capitation fee method of payment has led to the progressive degradation of general practice since the days of Lloyd George. It ensures that income is inversely proportional to the quality of work, equipment, and premises, regardless of size of list. Why treat pneumonia and heart failure at home when time and petrol can be saved by sending them to hospital? Its effect on the doctor-patient relationship is equally disastrous. We all derive satisfaction from the handling of real emergencies, but a call at 3 a.m. to a child bitten by bed-bugs does not cement any bond. And, only last week, I paid an urgent visit at midnight to a man who had gone out for a walk before the doctor arrived. Can incidents such as these induce more than resentment and distaste? And there is no redress except to rid oneself of the patient and his contemptible capitation fee.

The ideal of "one patient, one doctor" is acceptable to everybody except the one doctor. Witness the mushroom growth of off-duty rotas. But undoubtedly it is a great convenience to the administrator—when the locum incurs a complaint, what easier than to deduct the fine from the cheque of the "one doctor," who was perhaps hundreds of miles away at the time? Can anyone with his hand on his heart claim that such responsibility for the acts and omissions of deputies exists except in the distorted reasoning of men who spend more time in committees than in medicine?

Experts travel from the uttermost ends of these islands to pontificate on whether five-shillingsworth of powder is food or drug. If a food—that is, the doctor has forgotten to mention low sodium—the G.P. has the cost docked from his cheque. Mr. Adams recommends it; the G.P., in good faith, prescribes it; the patient swallows it. Unthinkable to charge Mr. Adams or the patient for it, but the tyranny of the capitation fee provides the perpetual victim, and this by a pseudo-legal process which should stink in the nostrils of a nation which prides itself on justice.

There is only one other common factor—the freedom of the pharmacy. Would it not be sufficient to provide essential treatment free of charge? Must the nation be for ever incited to hypochondriasis and waste? Is it in

anyone's interest that the patient may blackmail the doctor to pander to greed and ignorance?

If, therefore, there is to be a sincere attempt to revive family practice, the G.P. must be remunerated in relation to the patients he attends, and not those he avoids: he must be protected against bureaucratic malevolence; he must be permitted to devote his time to the sick and not to defending the Exchequer against the more pertinacious beneficiaries of the Welfare State. And, since we are being frank, the hospital service must be rendered efficient, so that its vast expenditure is justified by the acceptance of emergencies as a duty and not a condescension.

Mr. Adams's solution, to reduce the maximum list to the average list, is synonymous with a salaried service; if this is what he wants, he should say so, and not beat about the bush. But let me remind him that Australia looked at our service, and produced something better. Payment for services rendered, necessary treatment, control of abuse by both doctor and patient—these are the hallmarks of a healthy and responsible nation.

It has at last dawned on the B.M.A. Council that it has the duty to investigate the disease which is afflicting British medicine, of which the present pay dispute is only the presenting symptom. If it pursues this course with courage, integrity, and speed, the Association may yet recover from the events of the past few days. But let it never be forgotten that any service in which the patient has rights but no responsibilities, and the doctor responsibilities but no rights, is doomed to failure, just as all but the ideologically obsessed must surely know that the present service has failed.—I am, etc.,

Sheffield, 10.

B. BURNS.

Private Practice Group

SIR,—As one of those attending the original meeting last summer, to which Dr. John Etheridge refers in his letter (*Supplement*, May 4, p. 246), I would like to support his appeal to those practitioners interested in the preservation of private practice to join the group. Now, once again, it would seem that the future of general practice is in the melting-pot, and many of us who are not too disillusioned to believe otherwise have hopes that a better N.H.S. may arise from the dispute now going on. I firmly believe that its success depends in part on the existence of a powerful "competitor" in the shape of private practice. The continued existence of the latter depends, in its turn, on the economic stability of the country as a whole, and partly on the achievement of those aims of the group set out in Dr. Etheridge's letter.—I am, etc.,

London, N.W.3.

OLIVER PLOWRIGHT.

Doctors and the Health Service

SIR,—An excellent little article by Mr. A. Wilfrid Adams (*Supplement*, May 4, p. 241). I strongly recommend that this article be printed in pamphlet form and made available to doctors. I should be delighted to post one of these to 20 or more of my intelligent patients. Only by an informed public opinion can we compel the Government to provide an adequate health service.—I am, etc.,

Old Cumnock, Ayrshire.

ALEX MACK.

Unemployment of Women Doctors

SIR,—The recent action of the Birmingham Public Health Authority in dismissing 27 part-time women doctors has caused considerable hardship. Many of these doctors are now unemployed. It is becoming increasingly difficult for married women, who are necessarily tied to their homes, to obtain suitable medical work. This leads to a great wastage of able medical personnel.

There are many aspects of public health work, in particular, which give opportunities for married women both to exercise their professional skill and give a service to the community which would benefit the country as a whole. If part-time medical work becomes more scarce it will

raise the question as to whether medicine is a desirable career for women in the future. It would be interesting to know whether the same difficulties are being met in other areas.—We are, etc.,

JUNE B. BROWN.
HELEN C. HUMPHREYS.
MARY GLOVER.
Birmingham.

MOLLY ST. JOHNSTON.
GLADYS E. STRANG.

Testing Opinion

SIR,—A plebiscite aimed at discovering the actual views of the profession is overdue. As matters now stand, those who have the greatest gifts of persuasive oratory sway meetings, and so cause a false impression of local unity to be sent to Headquarters. The average doctor is vocally un-demonstrative, but his opinion is none the less important. Let our leaders ascertain the viewpoint of us all by a carefully constructed, broadly based questionnaire. This is a truly democratic approach, and can only lead to strengthening the profession's hand in bringing pressure to bear on the Government.—I am, etc.,

Teignmouth.

GEORGE A. F. QUINNELL.

The Next Move

SIR,—I am writing to express my strong support of Dr. Richard I. Bodman's letter (*Supplement*, April 13, p. 207) urging an appeal to the law. There is nothing to lose, and it would at least, as he points out, provide an excellent opportunity of bringing our case more widely before the public and of exposing the underhand behaviour of the Government. It might also, perhaps, result in the legal enforcement of arbitration, and so provide an alternative way out of a situation which we all deplore but which has been none of our choosing.—I am, etc.,

Chichester.

BRIAN H. VAWDREY.

Item-of-service Payment

SIR,—In the present dissatisfied state of the medical profession it is often suggested that the National Health Service would be improved if it was based on an item-of-service remuneration, rather than a capitation system. There is, however, a serious danger in the "item-of-service" principle, in that the less discriminating, though sincere, members of the profession might be subtly encouraged to make more investigations than a given case would warrant, while the less scrupulous would do so in any case; for the dividing line between conscientious attention to a patient, and over-investigation of his case, is one which is easily crossed when it is to a doctor's advantage to do so.

The best practitioner is not necessarily the one with the largest number of items of service per patient, nor the one who is always up to date in the properties of the latest antibiotic, but the one who combines a good general knowledge of medicine with a great understanding of his fellow-creatures and their frailties, one who not only treats the sick, but by constructive advice also shows them how to keep well. In the course of time his practice will be freed from most of the trivial calls which are the bane of the present system, and he will also become instrumental in helping to construct a community which thinks more in terms of harmonious health than those of disease. It follows that, although he will be giving more of his time to each patient than the doctor who just issues a prescription and says, "Next, please," the total of his items of service will be considerably less.

It would therefore seem that the best practice of medicine would be encouraged in a capitation system where lists are limited to a maximum of, say, 2,500, giving a doctor sufficient time to devote to each patient. To make such a system economically sound while not encouraging large lists, the present arrangements could be modified so that the higher capitation rate after the first 500 would be extended to cover all those up to 2,000 instead of 1,500, while the

rate of the last 500 should be on a descending scale, coming down to a point somewhat lower than the rate for the first 500.

Although no system can be free from pitfalls, I think the above modifications would bring a considerable improvement into the present service, while still leaving a reasonable amount of scope for private practice, and would be more conducive to the practice of good medicine than an item-of-service system or a State-salaried service.—I am, etc.,

Slough, Bucks.

H. TUDOR EDMUNDS.

Mileage Fund

SIR,—While we are all very busy taking the Government to task for diplomatic wriggling or downright sharp practice I turn over my dossier referring to the allocation of mileage to rural practitioners collected over the last seven years, but indeed going back to National Health Insurance days. In my small scattered practice in 1950 I was getting £540 mileage per year. With the stroke of a pen this was reduced by £160—I became semi-rural, but the work and the expense remained the same. Since then has my expense remained the same? We all say it has not, hence our claims against the Government. But my claim is not against the Government, it is inside our profession. There must be a lot of disgruntled doctors like myself who would like a fairer share of that ghastly global sum, and who are not gunning for the Government.—I am, etc.,

Hexham.

RICHARD BELL.

Emergency Call Service

SIR,—Some little time ago the General Medical Services Committee expressed doubts on the legality of the Emergency Call Service which had been organized in the London area. Later the Committee issued a statement (*Supplement*, October 6, 1956, p. 147) that it was satisfied that such schemes did not run counter to the National Health Service Act and its regulations. In spite of this it would now appear that the G.M.S. Committee is intent on maintaining its dog-in-the-manger attitude by recommending (*Supplement*, April 20, p. 213) that our terms of service be amended so that a general practitioner would have to obtain the consent of the executive council to any standing deputizing arrangements for more than one week, instead of, as at present, merely informing it of such arrangements.

This hits at the very heart of the G.P.'s freedom to run his practice in whatever way he thinks fit while conforming to the regulations of the Service. If this recommendation is carried it would be difficult to exclude ordinary friendly rota systems lasting more than one week from the requirement of having to have the consent of the executive council. More rules and regulations would be made and, of course, we have to be complied with. It seems fantastic that our leaders should actually ask for our terms of service to be made more onerous—to the point of making us go cap in hand to the authorities for the right to organize our well-earned leisure-hours. I want to retain the right to inform the executive council that I shall be on holiday and have made the necessary locum arrangements for the period, and I trust that my fellow G.P.s feel the same way. I hope that the Annual Conference of Representatives of Local Medical Committees will turn down this thoroughly bad recommendation from the G.M.S. Committee.—I am, etc.,

Plymouth.

B. J. PECK.

Charge Dismissed

SIR,—A study of the smaller things in life will sometimes shed light on larger matters, and I submit that a careful perusal of your last issue will help us all to make up our minds on the grave principles and policies which we are discussing now.

You have, in the most admirable "dead-pan" way, printed some explosive material under the relatively innocuous heading "Overprescribing Charge Dismissed" (*Supplement*, May 11, p. 261), which refers to the accusations

against Dr. Katharina D. Dalton. Counsel for the Minister of Health, appealing against the local medical committee's dismissal of the charges, conceded that Dr. Dalton was neither extravagant nor reckless. "But," he said, "she diagnosed too many patients as suffering from premenstrual tension. . . ."

It is almost unnecessary to write more; where will these people stop? At present it looks as if they will stop when the Service is controlled hook, line, and sinker by the administrative side, and no nonsense about clinical responsibility from the medical side—one would be able no longer to refer to it as a profession. And yet the profession itself knows not its own mind when its "employer" breaks its word, and its leaders are satisfied by assurances from Ministers when the whole crisis has arisen because these same Ministers have broken previous assurances. Sir, one boggles! Thank God clinical work is a satisfying thing in itself; unfortunately my wife and children are unable to live on such insubstantial fare.—I am, etc.,

Bushey, Herts.

D. G. WILSON.

H.M. Forces

Major-General A. Sachs, C.B., C.B.E., R.A.M.C., T.A., has been appointed Honorary Colonel, 44 (H.C.) Infantry Division, R.A.M.C., in succession to Colonel (Honorary Brigadier) G. J. V. Crosby, C.B.E., T.D., whose tenure has expired.

Colonel W. H. Wolstenholme, O.B.E., T.D., R.A.M.C., T.A., has been appointed Honorary Surgeon to the Queen, in succession to Brigadier A. L. Crockford, C.B.E., D.S.O., M.C., T.D., who has been transferred to the T.A.R.O.

Colonel N. C. Oswald, T.D., R.A.M.C., T.A., has been appointed Honorary Physician to the Queen, in succession to Colonel F. R. Langmaid, O.B.E., T.D., who has been transferred to the T.A.R.O.

Air Commodore G. W. McAleer has been appointed Honorary Physician to the Queen in succession to Air Marshal Sir James MacC. Kilpatrick, K.B.E., C.B., who has retired from the R.A.F.

Colonel W. D. Hughes, C.B.E., Q.H.P., late R.A.M.C., has been appointed Commandant and Director of Studies, R.A.M. College, and has been granted the temporary rank of Major-General.

Captain F. A. S. Harris, R.A.M.C., has been awarded the Queen's Commendation for Brave Conduct in recognition of brave conduct in Tripoli.

ROYAL NAVY

Surgeon Commanders T. S. Osborne and G. M. Baird have retired.
Surgeon Lieutenant K. P. O'Byrne to be Surgeon Lieutenant-Commander.

REGULAR ARMY RESERVE OF OFFICERS

ROYAL ARMY MEDICAL CORPS

Lieutenant-Colonel (Honorary Colonel) H. J. R. Thorne, D.S.O., having attained the age limit of liability to recall, has ceased to belong to the Reserve of Officers, retaining the honorary rank of Colonel.

Lieutenant-Colonel S. G. M. Lynch, having attained the age limit of liability to recall, has ceased to belong to the Reserve of Officers, retaining the rank of Lieutenant-Colonel.

Major I. MacPhail, from Active List, to be Major.
Captain (Honorary Major) V. G. Radcliffe has ceased to belong to the Reserve of Officers, retaining the honorary rank of Major.

Class III.—Captain (Honorary Major) C. E. Brown, having attained the age limit of liability to recall, has ceased to belong to the Reserve of Officers, retaining the honorary rank of Major.
Captain (Honorary Major) R. W. Doy, from Reserve of Officers, to be Captain (Honorary Major).
Captains (Acting Majors) P. Freedman and B. Nolan, from Army Emergency Reserve of Officers, National Service List, to be Captains, relinquishing the acting rank of Major.

ARMY EMERGENCY RESERVE OF OFFICERS

ROYAL ARMY MEDICAL CORPS

Major (Acting Lieutenant-Colonel) J. A. Simons has been granted the acting rank of Colonel.

Captain (Acting Major) G. Clementson, from Army Emergency Reserve of Officers, to be Captain, relinquishing the acting rank of Major.

Association Notices

ELECTION OF COUNCIL, 1957-8

The following are the results of the election of members of Council in those Groups where there were contests:

Group 1 (North of England and Tees-side Branches)

J. C. Arthur (Gateshead) ..	594	Elected
I. M. Jones (Sunderland) ..	508	Elected
J. W. Ridley (South Bank, Yorks) ..	316	
No. of voting papers issued ..	1,965	
No. returned ..	818	
Spoiled papers ..	4	

Group 12 (Divisions of Metropolitan Counties Branch in Middlesex)

A. MACRAE,
Secretary.

The Council on May 8, under the authority given to it by By-law 62 (2), appointed W. B. Heywood-Waddington (Littlehampton) to fill the vacancy in Group 21 (Sussex Branch).

Diary of Central Meetings

MAY

21 Tues.	Amending Acts Committee, 2 p.m.
23 Thurs.	Central Consultants and Specialists Executive Committee, 10 a.m. and 2 p.m.
23 Thurs.	Central Ethical Committee, 10.30 a.m.
24 Fri.	Assistants and Young Practitioners Subcommittee, G.M.S. Committee, 2 p.m.
31 Fri.	S.R.M. Agenda Committee, 10.30 a.m.

Branch and Division Meetings to be Held

ALDERSHOT AND FARNHAM DIVISION.—At Northfield Hospital, Aldershot, Thursday, May 23, 8.30 p.m., special meeting. All medical practitioners in the area of the Division are invited.

BARNLEY DIVISION.—At Queen's Hotel, Barnsley, Monday, May 20, 8.30 p.m., meeting of all medical practitioners in the area of the Division.

BIRMINGHAM DIVISION.—At Botanical Gardens, Edgbaston, Birmingham, Thursday, May 23, 7.30 for 8 p.m., dinner; 9 p.m., annual dance.

BRADFORD DIVISION.—At Medical Societies' Room, Bradford Royal Infirmary, Wednesday, May 22, 8.30 p.m., special meeting of all medical practitioners in the area of the Division.

CITY DIVISION.—At Committee Room C, B.M.A. House, Tavistock Square, W.C., Tuesday, May 21, 8.30 p.m., annual general meeting. Dr. A. Talbot Rogers: "Controversial Issues in the N.H.S." Any B.M.A. Members, but especially those of St. Pancras Division, are invited, together with spouses or other guests.

CROYDON DIVISION.—At St. Peter's Hall, Ledbury Road, S. Croydon, Friday, May 24, 8.30 p.m., general meeting to be held in conjunction with Croydon Local Medical Committee. All medical practitioners in the area of the Division are invited.

DUMFRIES AND GALLOWAY DIVISION.—At Caley Hotel, Gatehouse of Fleet, Sunday, May 19, 3 p.m., annual general meeting. Address by Professor John Bruce: "Impressions of my Russian Visit, 1956." Members' wives and friends are invited.

KINGSTON-ON-THAMES DIVISION.—At Nurses' Home, Kingston Hospital, Wolverson Avenue, Kingston-on-Thames, Tuesday, May 21, 8.30 p.m., annual general meeting.

MAIDSTONE DIVISION.—At Old Barn, Sandling, near Maidstone, Wednesday, May 22, 8.30 p.m., clinical meeting. Dr. P. N. Swift: "The Acute Chest in the Child."

MANCHESTER DIVISION.—At the Fallowfield Hotel, Wilbraham Road, Manchester, Tuesday, May 21, 8.30 p.m., A.G.M.

NORTH MIDDLESEX DIVISION.—At Committee Room, North Middlesex Hospital, Silver Street, Edmonton, N., Tuesday, May 21, 8.45 p.m., annual general meeting.

NORTH STAFFS DIVISION.—At Grand Hotel, Hanley, Tuesday, May 21, supper meeting. Talk by Mr. B. S. Carter: "Deafness in the Pre-school Child."

OXFORD DIVISION.—At Ashurst Clinic, Littlemore, Oxford, Wednesday, May 22, 8.15 p.m., meeting. Symposium: "Preventive Psychiatry." Discussion to be opened by Dr. R. W. Armstrong.

SALISBURY DIVISION.—At Obstetric and Gynaecological Waiting-room, Salisbury General Hospital, Thursday, May 23, 8.30 p.m., annual general meeting, preceded by general meeting of all medical practitioners in the area of the Division.

SHEFFIELD DIVISION.—At General Lecture Theatre, No. 1, Sheffield University, Tuesday, May 21, 8 p.m., meeting of all medical practitioners in the area of the Division; 9 p.m., Divisional meeting.

SHROPSHIRE AND MID-WALES BRANCH.—At Board Room, Royal Salop Infirmary, Shrewsbury, Thursday, May 23, 8.30 p.m., joint meeting with Salop Local Medical Committee.

SOUTH STAFFS DIVISION.—At Medical Lecture Hut, Royal Hospital, Wolverhampton, Tuesday, May 21, 8.30 p.m., general meeting, jointly with Wolverhampton Local Medical Committee.

SOUTH WALES AND MONMOUTHSHIRE BRANCH.—At Gelli Aur (Golden Grove) Farm Institute, Carmarthenshire, Thursday, May 23, 3 p.m., social meeting for members and their ladies.

TROWBRIDGE DIVISION.—At Roundway Hospital, Devizes, Sunday, May 19, 11 a.m., annual general meeting.

WEST HERTS DIVISION.—At Crown Hotel, Garston, Wednesday, May 22, 8.30 p.m., annual general meeting.

WIGAN DIVISION.—At Lewis's Restaurant, Wallgate, Wigan, Friday, May 24, annual general meeting.

YORK DIVISION.—At York Medical Society's Rooms, 23, Stonegate, York, Saturday, May 25, 8 p.m., joint meeting with York Local Medical Committee, to which all medical practitioners in the area of the Division are invited, followed by annual general meeting for members only.

Meetings of Branches and Divisions

MOMBASA DIVISION

A meeting was held at the Pandya Memorial Clinic on March 14, 1957. Dr. Haynes was in the chair and 16 members were present. Dr. Rosenwald gave an address on "Co-operation Between the Public Health Department and the Medical Practitioner."

SOUTH-EASTERN COUNTIES DIVISION

A meeting was held at Peel Hospital on March 10, 1957. Dr. A. Y. Adam was in the chair, and 48 members were present. A resolution was passed by 47 votes to 1: "(1) That this Division views with grave concern the Government's decision to set up a Royal Commission to examine the remuneration of doctors in the National Health Service. (2) That the publication of the conclusions of such a Royal Commission is likely to be delayed for a matter of years, during which time the financial hardships of many members of the profession will remain unrelieved. (3) That the conclusions of the Royal Commission, whether favourable or unfavourable to the profession, would not exonerate the Government from honouring its present obligations to the profession, based on the Spens Report, by which both the profession and the Government are morally bound. (4) That this Division will support any decisions of the British Medical Association aimed at expediting the present just claims of the profession."

Corrections.—The solicitors to the Emergency Call Service have informed us that the references (*Supplement*, April 13, p. 166, and April 20, p. 213) to "an emergency call service organized on commercial lines in the London area," and to "deputizing arrangements . . . organized on a commercial basis," have led people to believe that the Emergency Call Service is a body carrying on business for profit. By its constitution the Emergency Call Service cannot distribute profits to its members, and any surplus profits not required for reserves must go to charity. We take this opportunity of expressing our regret for any inconvenience which our reference may have occasioned.

In the report of the Special Representative Meeting (*Supplement*, May 11, p. 249), Dr. R. P. Liston's motion reported under the heading "Deferment of Decision" as "That this Meeting invites Council to call meetings of all Divisions . . ." should read "That this Meeting instructs Council . . ." The motion on behalf of Tunbridge Wells under "Review of National Health Service" instructing Council to reinvestigate the introduction of an independent British Medical Service was moved by Dr. C. Glaisher and not Dr. R. P. Liston.

PRELIMINARY

Service Representatives on the Council

243. The terms of office of the present representatives of the Army Medical Services and the Medical Branch of the Royal Air Force on the Council expire at the end of this session.

Recommendation: That the following be elected Representatives of the Army Medical Services and the Medical Branch of the Royal Air Force on the Council for the period 1957-60: the Royal Air Force on the Council for the period 1957-60: Army Medical Services: Major-General R. Murphy, C.B.E.; Medical Branch of the Royal Air Force: Air Vice-Marshal W. E. Barnes, C.B.E.

Representatives of the Association at Conferences of Other Bodies

244. The Council appointed the following to represent the Association at the conferences named: West German Medical Association Annual Meeting, June, 1957: the President (Dr. Alexander H. Hall); European League for Mental Hygiene Annual Meeting, Copenhagen, August, 1957: Dr. Doris Odum; Annual (Centenary) Meeting of the Danish Medical Association, Copenhagen, August, 1957: the President-Elect (Mr. Weldon P. T. Watts); Association of Public Health Inspectors Annual Conference, Eastbourne, September, 1957: Dr. K. O. A. Vickery.

Royal College of Midwives Building Appeal

245. The Council has made a donation of 245 guineas, payable under a seven-year covenant, to the Royal College of Midwives Building Appeal Fund.

COMPENSATION AND SUPERANNUATION

Compensation

(Continuation of para. 59 of Annual Report)

246. The Council has given further thought to the question of implementing resolutions 156, 157, and 158 of the A.R.M., 1956, in the light of the present situation with regard to the remuneration claim. The Council agreed that if the Representative Body decides that evidence is to be given to the Royal Commission there will no longer be any reason for deferring discussions on compensation. In that event, therefore, the Council will make immediate representations to the Minister of Health on the following points: (a) betterment of compensation; (b) increased rate of interest; (c) payment of compensation on demand; and (d) revision of criteria for advance payment on hardship grounds.

Attributable Illness

247. A memorandum dealing with the question of attributability in relation to the injury allowance payable under

the National Health Service (Superannuation) Regulations, 1955, is being prepared in connexion with the following resolution of the A.R.M., 1956:

301. **Resolved:** That the Council be asked to examine the question of attributable illness in reference to all members of the profession.

HOSPITAL AND CONSULTANT SERVICES

Geriatric Units: Treatment and Rehabilitation of Chronic Disablement

248. The Council has noted the following resolutions of the A.R.M., 1956, and will take appropriate action as opportunity permits:

288. **Resolved:** That while strongly supporting the views of the Association as incorporated in the recommendations of the Geriatric Joint Subcommittee, the Council be urged to keep these matters continually under review and to take further urgent action to seek to secure their implementation by the Ministry at an early date.

290. **Resolved:** That this Meeting considers that it is vitally important that there should be adequate geriatric consultants available in all areas.

Consideration has also been given to the following resolution of the A.R.M.:

291. **Resolved:** That the following motion be referred to the Council for consideration:

That this Meeting requests the Council to explore the possibility of the chronic sick and Part III accommodation being brought under the local health authority.

The Council considers it undesirable that hospital treatment of the chronic sick should be divorced from the hospital service, but reaffirms its view that there are considerable advantages in hospital beds for the chronic sick and Part III accommodation being in close proximity and sometimes in the same building, particularly in rural areas. This policy was advocated in paragraph 54 of the report of the Geriatric Joint Subcommittee, set out below, and in the view of the Council is the more practical way of dealing with the problem:

54. To serve the large number of "borderline" cases the establishment of joint-user institutions to be used together by regional hospital boards and welfare authorities is often advantageous: this avoids the unnecessary stress to the old people of moving into unfamiliar surroundings, and also eases staffing problems.

National Major Casualties Service

249. The Council has noted the following resolution of the A.R.M., 1956:

344. **Resolved:** That this Meeting considers that the Council should discuss with the Government the formation of a major "casualties service" covering the whole country, with special reference to the position of medical practitioners.

In 1954 the Ministry advised hospital boards of the desirability of formulating plans to deal with major casualties, such as those which might arise from air or railway disasters, and reports received from Regional Consultants and Specialists Committees indicate that in most areas such plans have been made on a hospital group and regional basis.

The Ministry has been asked whether it is satisfied that the scheme prepared by hospital authorities provides adequately for co-ordination with adjoining authorities, with general practitioners, and with other services, such as ambulance, police, and fire services.

Closure or Change of User of Hospitals

250. Instances still occur of hospital boards proceeding with plans for closing or changing the user of a hospital without making it apparent that they are prepared to give due weight to the views of the profession and the local community. The Ministry has accordingly been asked to remind hospital boards of the advice given to them in 1949 in Circular R.H.B. 49/132, and in particular of the necessity for early consultation with the profession, and of the wisdom of holding an open meeting at which the public could be

given an explanation of the proposals and an opportunity of expressing their views.

OCCUPATIONAL HEALTH

Short Postgraduate Courses in Occupational Health

(Continuation of para. 111 of Annual Report)

251. The Council has approved a memorandum on this subject drawn up by the Occupational Health Committee (see Appendix VII) and has forwarded it to the Government departments concerned, with a view to discussion on the implementation of the proposals in the document.

Certificates for Short Illnesses

(Continuation of para. 115 of Annual Report)

252. The Council has considered the replies from the bodies approached in connexion with Minute 72 of the A.R.M., 1956. It seems clear that the employers' side of industry is sympathetic to the Association's views on the abolition of medical certificates for short illnesses and is endeavouring to meet the situation so far as practicable. However, in general, these certificates are required to cover sickness payment and paid holiday benefit and not merely for record purposes. It has been decided to inform the Trades Union Congress of the observations received from the employers' side and to invite its comments.

Conference of Advisory Councils on Occupational Health

(Continuation of para. 120 of Annual Report)

253. Resolutions on the subject of "The Employment of Disabled Persons in Industry" passed at the Conference of Advisory Councils on Occupational Health, held at B.M.A. House on April 9, have been forwarded to the Ministries of Health, Labour and National Service, and Pensions and National Insurance, to the British Employers' Confederation, and to the Trades Union Congress. The Council has agreed that the Association shall again act as host for the next Conference, which will be held in the spring of 1958.

ARBITRATION MACHINERY

254. The Council has considered the following resolution of the A.R.M., 1956:

327. **Resolved:** That further efforts be made to secure a more satisfactory alternative to the Industrial Court as a means of settling disputes by arbitration.

The Industrial Disputes Tribunal does not at present provide an alternative to the Industrial Court for professional organizations which are not constituted as trade unions. The amendment of the Industrial Disputes Order, under which the Industrial Disputes Tribunal is constituted, is now under consideration by the Ministry of Labour and National Service, and representations have been made to the Ministry with a view to the inclusion of the Association among the bodies to be consulted in any review of the existing arrangements.

PUBLIC HEALTH

Remuneration of Public Health Medical Officers

(Continuation of para. 122 of Annual Report)

255. By the beginning of May, all except four of the local authorities in the United Kingdom had notified implementation of the agreement in Committee C on the remuneration of public health medical officers from April 1, 1956.

Remuneration for Part-time Work for Local Authorities in England and Wales

(Continuation of para. 125 of Annual Report)

256. By the beginning of May, 140 out of the 145 local health authorities in England and Wales (96.5%) had notified full implementation of the agreement in Committee C on the above subject. The Council has decided that advertisements

shall not be accepted for publication in the *British Medical Journal* after the end of April from authorities which have not fully accepted and implemented this agreement.

Integration of the Preventive Medical Service with the Hospital Service

(Continuation of para. 127 of Annual Report)

257. The views of the Council on the appointment of public health medical officers as honorary consultants on hospital staffs and as members of hospital medical advisory committees have been forwarded to the Ministry of Health. Under the agreed constitution of the Joint Consultants Committee, it was necessary to consult with that Committee before communicating with the Ministry of Health on this matter and the Council regrets that, in the meantime, the Minister reached a decision not to adopt the recommendation of the Guillebaud Committee on the matter.

Notification of Infectious Diseases

(Continuation of para. 131 of Annual Report)

258. A statement of suggestions for the revision of the legislation concerning the notification of infectious diseases has been received from the Society of Medical Officers of Health. The Council regrets the delay in action on the resolution relating to the subject which was passed by the A.R.M., 1955, but, knowing that the Society has had the matter under review for some time, it felt that the Society's appointment of a special Subcommittee of the Public Health Committee to consider and report on the whole question of infectious diseases, the resolution of the A.R.M., 1955, and the statement from the Society of Medical Officers of Health.

Annual Leave for Public Health Medical Officers

(Continuation of para. 137 of Annual Report)

259. The Staff Side of Committee C has reported that it does not regard the present as an opportune time to raise with the Management Side the question of revising the agreement on annual leave for public health medical officers. The Council has accepted the view of the Staff Side and considers it undesirable to press at this stage the matter raised in resolution 78 of the A.R.M., 1956.

Whitley Appeals Supported by the Association

260. Eleven Whitley Appeals have been lodged by public health medical officers during the past year with the support of the Association. Five were successful and none was lost, although one was ruled to be outside the proper scope of the Whitley Appeals machinery. Another appeal was withdrawn after being notified for hearing at the regional level as the aggrieved medical officer had been offered by his employing authority, and had accepted, a considerable increase in salary. At May 9, four appeals were still under consideration.

Status of Chief Public Health Inspectors

261. Representatives of the Association were appointed to co-operate with representatives of the Society of Medical Officers of Health in informal discussions with the Ministry of Health on the implications of the granting of chief officer status to chief public health inspectors. The question arose from a decision of one county borough council to make the public health inspector in charge department, with the chief public health committee for all duties directly responsible to the health committee for all duties performed by the inspectorate. The Ministry has agreed to take the matter up with the local authority concerned.

Subsistence Allowances for Public Health Medical Officers in England and Wales

262. The Council has received a report of the agreement in Committee C on increased rates of subsistence allowances,

etc., for public health medical officers. These increases were operative from April 1, 1956. Negotiations are still proceeding with a view to a national agreement in Scotland on subsistence and car allowances.

Sick Pay Schemes for Public Health Medical Officers

263. The Council has also received a report of the agreement in Committee C on revised sick pay schemes for public health medical officers in England, Wales, and Scotland. These were promulgated in letters sent to all local authorities in the autumn of 1956.

Appointment of Medical Officers of Health without Advertisement

(Continuation of para. 128 of Annual Report)

264. The Ministry of Health has indicated that, as the ultimate responsibility for the appointment of a medical officer of health rests with the local authority, the Minister could not properly undertake to consult a second body before reaching a decision on an application from a local authority to dispense with the requirement that the post should be advertised. However, the Minister is willing to keep the Association informed of the few instances where he dispenses with the requirement of public advertisement.

With regard to the specific instances raised with the Ministry where there was no public advertisement of mixed appointments as medical officer of health of a Metropolitan Borough and L.C.C. divisional medical officer, the Ministry explained that as it was suitable in arrangements of this kind to appoint an officer already in the service of one of the authorities concerned, no useful purpose would be served in such cases in seeking a wider selection of candidates.

The Council considers that, in accordance with the policy of the Association and in the interests of all concerned, medical officers over the whole country should be aware when any appointment in the public health service falls vacant and should be given an opportunity to apply. It has been pointed out to the Ministry that the Association is concerned not only because notification of the vacant M.O.H. appointments in London were limited to medical officers of the L.C.C., but were further restricted to one particular grade of such officers. These were not cases where a whole-time officer of one authority was taking over as part of his whole-time duties an appointment with another authority. New whole-time mixed appointments were being made and there seems no reason why they should not have been publicly advertised. The Ministry has been informed of the Council's views and has been asked to give further consideration to the Association's representations, having regard to the fact that in such matters it is the accepted principle that there shall be consultation with interested parties before a decision is reached.

Draft Ministry of Health Circulars on Diphtheria and Whooping-cough Immunization and Poliomyelitis Vaccination

265. The Ministry of Health requested observations on draft circular letters to local health authorities dealing with the above subjects. The circular about diphtheria and whooping-cough immunization referred to the advice which the Minister had received from the Central Health Services Council on the procedure which could be recommended for immunization against these diseases under the N.H.S. Act, following the publication of a report by the Committee of the Medical Research Council on Inoculation Procedures and Neurological Lesions. The view expressed to the Ministry on behalf of the Association was that undue emphasis was being laid on the minute risk of provoking poliomyelitis in using antigens in combination, and it was pointed out that this minute risk will be further reduced as the programme of immunization against poliomyelitis proceeds. It was suggested that the circular could have an unfortunate adverse effect on the diphtheria immunization campaign at a time when it was vitally important that the

prophylaxis of this and other diseases should proceed as widely as possible. The Ministry was advised to lay greater stress on the fact that local health authorities, on the advice of their medical officer of health, should make their own decision on the use or otherwise of combined antigens, and it was suggested that, in all the circumstances, it would be premature to issue the circular at this stage pending further consideration of the matter.

The circular on poliomyelitis vaccination outlined the proposals for the next stage in the Government's programme. The Ministry was informed that the Association considers it undesirable to announce plans for further stages in the poliomyelitis vaccination scheme until the end of the present stage is in sight. It was recommended that, in the meantime, special and immediate provision should be made for vaccinating those with a special risk—for example, persons going abroad.

MEDICAL ETHICS

"Ethical Code Relating to Consultations and Cognate Matters"

(Continuation of para. 141 of Annual Report)

266. The Council has completed its revision of "Ethical Rules Relating to Consultations and Other Matters" and submits the revised version in Appendix VIII. The following are the principal alterations:

Title

The title has been amended to "Ethical Code Relating to Consultations and Cognate Matters." Reference is made immediately after the heading to the ultimate responsibility of individual practitioners for their actions.

Medical Consultations in Practice

Para. 1. The following sentence has been added at the end of this paragraph: "In domiciliary consultations it is desirable that both practitioners should meet and in other circumstances similar arrangements should obtain wherever practicable."

Para. 6. The following words formerly appeared at the end of this paragraph: "He may give to the patient or to the patient's representatives such information as he judges appropriate to the position." These have now been replaced by the following: "He should exercise great discretion as to the information he gives to the patient or the patient's representatives and, in particular, he should not disclose to the patient any details of any medications which he has advised."

Para. 8. This paragraph formerly stated: "Except in emergency the arrangements for any future or other consultation or additional investigation shall be left to the initiative of the attending practitioner." The following new wording has been introduced: "Arrangements for any future consultations or additional investigation should be effected only with the foreknowledge and co-operation of the attending practitioner."

Other Intraprofessional Obligations

Para. 2. This section now includes the following statement: "Under the Code of Ethics of the profession a practitioner ought not to accept as his patient (except with the consent of the colleague concerned) . . . any patient or member of the patient's household whom he has attended within the previous two years in the capacity of assistant or locum tenens." The period formerly stated was five years. The Council takes the view that in the event of an assistant or locum tenent himself being appointed as successor to the practice, as principal he then becomes the "colleague concerned."

Guidance for Professional Conduct in Relation to Dentists

Agreement has been reached with the British Dental Association on the following changes:

New Paragraphs

"(3) Where the dentist has reason to believe that the patient has some constitutional disorder and considers some major dental procedure is necessary he should consult the patient's doctor before carrying out such treatment."

"(4) Where there is a conflict of opinion between a doctor and dentist concerning the diagnosis and/or treatment of the condition of a patient they should consult with each other to reach an agreement which is satisfactory to both."

"Where the conflict of opinion remains unresolved the patient should be so informed and invited to choose one of the alternatives or assisted to obtain other professional advice."

Old Paragraph deleted

"(3) Where for any reason the patient's doctor considers that the patient should be sent to a dentist other than his own or where a further dental opinion is sought the patient's usual dentist should be informed."

"Note: Apart from simple dental treatment—i.e., in the presence of a dental condition which might affect the general health of the patient or necessitate a major dental operation—the dentist should consult the patient's doctor before carrying out such treatment."

Recommendation: That the Revised "Ethical Code Relating to Consultations and Cognate Matters" be approved.

PRIVATE PRACTICE

Drugs for Private Patients

(Continuation of para. 142 of Annual Report)

267. In view of the changing circumstances since the publication of the Annual Report, the Council has decided that now is an appropriate time to initiate discussions with officers of the Ministry on the four points referred to in paragraph 142. The Minister is to be informed that the Council wishes to take advantage of his offer to initiate such discussions, on the understanding that they are on an exploratory basis.

In the selection of the Association's representatives for the talks with the Minister's officers, due regard will be paid to the instruction contained in Minute 55 of the A.R.M., 1956.

List of Fees

268. The Council has considered the following resolution of the A.R.M., 1956:

350. **Resolved:** That a small booklet, listing briefly all statutory, agreed or recommended "item-of-service" fees, be made available, for issue on request to any members of the Association.

The Council appreciates that a booklet listing fees for various services would, when first issued, be a useful addition to the Association's publications. Unfortunately, the continual revision of such fees would probably make the booklet valueless in a comparatively short time. This difficulty is already seen in the *Medical Practitioners' Handbook*, which, incidentally, contains a fairly comprehensive list of statutory, agreed, and "item-of-service" fees, as does the *Year Book*. Added to this is the need for economy; a separate booklet giving information on fees additional to that which may be found in the *Medical Practitioners' Handbook* and the *Year Book* would not be cheap to produce. In any case, as new fees are negotiated details are published in the *Supplement to the British Medical Journal* and information on individual agreements is already readily available on application to the Office. The Council has therefore decided not to publish a booklet such as that referred to in the above resolution.

Remuneration Claim—Support for N.H.S. Practitioners

269. There will undoubtedly be a number of private practitioners who will wish to give some financial support to N.H.S. practitioners in their dispute with the Government over remuneration. In the report of the proceedings of the Private Practice Committee in the *Supplement to the British Medical Journal* of May 4, 1957, attention was therefore drawn to the fact that it is open to all members of the profession, whether engaged in the N.H.S. or not, to provide such support.

Examinations for the British Red Cross Society and St. John Ambulance Association

270. The Council has decided not to seek an increase in the examination fees now paid by the British Red Cross Society and St. John Ambulance Association. Regarded solely as remuneration, the fees are inadequate, but in the opinion of the Council the payment made should be looked upon as an honorarium and not as remuneration.

Domiciliary Visits for Ministry of Pensions and National Insurance

271. As a result of representations made by the Council the Ministry of Pensions and National Insurance has agreed to pay half the normal fee for an abortive domiciliary visit.

Remuneration of Approved School Medical Officers

272. A scale for the remuneration of medical officers of approved schools on a capitation basis was agreed with the Home Office in 1949. In 1956 an increase in each step in this scale was requested by the Council. Subsequently the department decided to dispense with the capitation method and to adopt the scale for establishments maintained by local authorities which was approved in December, 1956, by the Committee B of the Medical Whitley Council. The Home Office has advised managers of approved schools that the new arrangements should be introduced as from January 1, 1957, or whichever later date may be convenient.

Admiralty Surgeons and Agents

273. At the request of the Council the Admiralty has revised the scale of fees for Admiralty Surgeons and Agents. The department's proposals have been approved and the increases will come into effect very shortly.

Increases in Fees

274. The following increases have been obtained as from February 1, 1957, in fees for medical examinations and reports on prospective employees for the authorities named: (a) Ordnance Survey Office, 12s. 6d. to £1 17s. 6d. (b) Home Office Probation Division, £1 5s. to £1 17s. 6d. (c) U.K. Atomic Energy Authority, £1 5s. to £1 17s. 6d. (d) Ministry of Supply, £1 5s. to £1 17s. 6d. (e) National Coal Board, £1 5s. to £1 17s. 6d. The Treasury has confirmed that the £1 5s. to £1 17s. 6d. The Treasury has confirmed that the examination of prisoners for fitness for Borstal, preventive detention, or corrective training. In a single case only the fee will be 15s. except when the examination and report are of particular intricacy or take an unusual length of time, when it will be within the range of £1 5s. to £2 2s. The old daily maximum of £3 15s. has now been removed.

Family Planning Association Sessional Fees

275. Following representations by the Council, the Family Planning Association has advised its local branches to adopt the "local authorities" sessional scale which came into effect as from January 1, 1957.

FINANCE

276. The Balance Sheet and Income and Expenditure Account for the year 1956, as audited by Messrs. Price, Waterhouse and Co., appear as an Appendix to this Report (Appendix IX).

ESTATES

277. After protracted negotiations and material revision of the original plans submitted, the Council has obtained town-planning consent of the London County Council to the Burton Street project.

The new plans envisage a building of a basement and four stories, the top floor set back in order to conform with the daylight code of the local authority. Office and storage accommodation of over 20,000 sq. ft. will be available, and major alterations to the garage block will be made, which will improve the amenities of the building generally, and, in particular, provide better car-parking facilities.

The Council has carefully considered the financial implications of the proposed building, and professional advice has been taken in regard to costs and the probable rental income from the accommodation available for letting. It is esti-

mated that the cost of a building for which planning consent has been received will be between £170,000 and £200,000, and the rental income will give the Association a return of over 6½%, before deduction of tax.

Approval in principle has been given by the Council to a scheme proposed by the Estates Committee which will make it possible for the building operations to be financed without throwing undue liability upon the day-to-day revenue of the Association and without diminishing the liquid reserves which, the Council has decided, should be held to meet any unforeseen emergency.

After vacant possession has been obtained of the remaining flats in the houses still occupied, the development of the Burton Street site will proceed on the plans approved. It is anticipated that the building will be completed by the later months of 1959.

SCIENCE

Association Scholarships

278. The following research scholarships, tenable for one year from October 1, 1957, have been awarded:

Ernest Hart Memorial Scholarship (£300).—Martin Avigdor Birnstingl, St. Bartholomew's Hospital, London, for research in the following subject: The pathological anatomy of the pancreatic ducts, with particular reference to the aetiology of chronic pancreatitis.

Walter Dixon Memorial Scholarship (£300).—Emanuel Tuckman, St. Mary Cray, Kent, for research into acute gastrointestinal disease as met with in general practice, including a study of the clinical features, of the value of treatment in individual patients, and also its value in the epidemiological control.

Four Ordinary Research Scholarships (£200).—Cyril Walter Crane, Surbiton, Surrey. To establish whether the negative nitrogen balance with hypoalbuminaemia often seen in steatorrhoea and other types of malabsorption is due to the failure of either (1) the breakdown of ingested protein or (2) the absorption of amino-acids from the gut.

Georges Henry Jantet, St. Thomas's Hospital, London. To continue with the Surgical Unit of St. Thomas's Hospital the investigation of the role and state of the lymphatics in different diseases.

Charles Roland Leeson, Cardiff, for research into the histochemistry and fine structure (electron microscopy) of salivary glands under physiological and experimental conditions.

Thomas Sydney Leeson, Cardiff, for research into the fine structure of the developing kidney of the rabbit.

Insale Memorial Scholarship (£250).—Pamela Jewell, London, for research into the cultivation of the *Treponema pallidum*, with a view to studying the host-parasite relationship and the action of antibiotics on the organism.

ORGANIZATION

Membership of Council—Vacancies

(Continuation of para. 196 of Annual Report)

279. Paragraph 196 covers a recommendation by the Council in respect of a vacancy arising among the "13" members of Council by reason of the appointment of one of them to the Chair.

A further point has occupied the attention of the Council—namely, the situation which would arise in the event of a "casual" vacancy occurring among the "13." As the By-laws now stand the filling of such a vacancy would involve the calling of a Special Representative Meeting for the purpose of the election—a cumbersome and expensive procedure. Various alternative methods of simplifying the procedure have been explored and the most satisfactory of these appears to be that nominations should be sought and the election be conducted by postal vote. In the framing of the necessary alterations of the By-laws to give effect to this proposal, further anomalies in connexion with the filling of casual vacancies among the "13" and other groups of members of Council elected by the Representative Body have been revealed. Accordingly, counsel has been consulted and he proposes that in order to regularize the whole position the By-laws should be so amended as to provide that the procedure for filling the vacancies should be such as "shall be prescribed by the Representative Body," leaving

the details of the procedure to be covered, as is now customary, in the Standing Orders of the Representative Body. This proposal has been accepted by the Council and the necessary amendments of the By-laws and Representative Body Standing Orders have been prepared by counsel. The Council recommends:

Recommendation: That the By-laws should be so amended as to provide that any election for the purpose of filling a casual vacancy arising among the members of the Council elected by the Representative Body shall be in manner prescribed by that Body; and that the Standing Orders of the Representative Body be so modified as to provide that the election shall be conducted by postal vote.

(The necessary amendments of the By-laws and Representative Body Standing Orders are contained in Appendix X.)

S. WAND,
Chairman of Council.

APPENDIX IIA

RESOLUTIONS OF A.R.M., 1956—SUMMARY OF ACTION TAKEN

Compensation and Superannuation

Subject	Action Taken
Advance payment of compensation and increase of rate of interest (Mins. 156, 157, and 158).	Representations to be made to the Minister of Health if the Association decides to give evidence to the Royal Commission. (Para. 246.)
Attributable illness (Min. 301).	A memorandum is being prepared. (Para. 247.)

Hospital and Consultant Services

Geriatric units: treatment and rehabilitation of chronic disablement (Mins. 288, 290, and 291).	Council will take appropriate action on A.R.M. Minutes 288 and 290 as opportunity permits. With regard to Min. 291 Council reaffirms its policy that hospital beds for the chronic sick and Part III accommodation should be in close proximity. (Para. 248.)
National major casualties service (Min. 344).	Ministry has been asked whether hospital board plans for dealing with major casualties provide adequately for co-ordination with adjoining areas, with general practitioners, and with police, fire, and other services. (Para. 249.)

Occupational Health

Certificates for short illnesses (Min. 72).	The employers' side of industry appears to be willing to co-operate so far as practicable. Comments of Trades Union Congress now being sought. (Para. 252.)
---	---

Arbitration Machinery

Improved arbitration machinery (Min. 327).	Council has sought opportunity of consultation on amendment of Industrial Disputes Order. (Para. 254.)
--	--

Public Health

Annual leave for public health medical officers (Min. 78).	After consultation with the Staff Side of Committee C, the Council considers it would be inopportune to raise the matter at this stage. (Para. 259.)
--	--

Private Practice

Statutory and "item-of-service" fees (Min. 350).	Council is satisfied that publication of a booklet is inadvisable. (Para. 268.)
--	---

APPENDIX VII

SHORT POSTGRADUATE COURSES IN OCCUPATIONAL HEALTH

Report by Occupational Health Committee

1. A considerable expansion of the occupational health service is highly desirable and may well come about in the relatively near future. It seems clear that any major expansion of the service, particularly for smaller establishments, will have to be provided to a large extent by general practitioners. Adequate facilities should therefore be available for general practitioners holding part-time occupational health appointments, or about to take up such appointments, to take short postgraduate courses. Such courses should not, and indeed could not, replace the full postgraduate course leading to a Diploma in Industrial Health.

2. The type of postgraduate instruction in occupational health most likely to be helpful to general practitioners is an intensive course of one or two weeks. Experience has shown that there is both a need and a demand for courses of this kind, but the expense involved in attendance remains a considerable problem. Not only has the general practitioner to pay the fee for the course but he has also to provide a locumtenent for his practice. Having regard to the interest of the Government in the establishment of a comprehensive occupational health service, it is considered that Government grants should be made available for general practitioners to undertake occupational health courses, in the same way that grants for refresher courses are allowed to general practitioners under the National Health Service Acts. These grants should cover the course fee, reasonable travelling and subsistence expenses, and payment towards the cost of a locumtenent.

3. As alternatives to an intensive course of a week or a fortnight, courses could be arranged of one half-day per week, or three or four week-ends, during a term. While courses of this character would to a large extent overcome the present financial obstacles to attendance, they cannot be considered to be as satisfactory as short intensive courses. Courses covering several week-ends would impose a heavy strain on teaching staff.

4. Suggestions regarding the content and teaching methods for short courses are set out below:

Duration 1-2 Weeks; Students 8-12

A. Objects.—To introduce doctors to medical work in industry so that they may use the time they devote to this work to the best advantage. In the one or two weeks available it is possible to give the newcomer a general idea of a doctor's work in industry. Techniques alone are not enough; an effort should be made to provide an essential background to the subject. In particular the opportunities for preventive work should be stressed.

B. Content.—The following general subjects are suggested: (1) Orientation: The aims of an occupational health service and its relation to the National Health Service and to other social services in the community. (2) The Factory: Its functions, its organization, its management, and its personnel. The place of the doctor. The legal requirements for health, safety, and welfare. How to examine the working environment and assess working conditions, in co-operation with other experts. Other places of work will be dealt with similarly. (3) Treatment at the place of work: Its nature and extent and the organizational and training problems involved. Accommodation and equipment. (4) The nurse's work in industry. (5) Medical examinations; their purpose and content. (6) Records: what to keep and how to keep them; their purpose and value. (7) Accidents in industry—industrial safety. (8) The principles of the prevention of industrial disease illustrated in detail from local industries. (9) Skin disease in industry. (10) The care of special working groups—that is, young people, women, the elderly. (11) The placement of the handicapped; the working of the Disabled Persons Employment Act. (12) Clinical lectures on common diseases designed to emphasize the place of work in their management—that is, coronary disease, peptic ulcer, epilepsy, diabetes, etc. (13) Sources of information—people, organizations, and literature.

C. Method.—(1) Lectures with questions and discussion. (2) An occasional seminar if the composition of the class warrants it—that is, if it contains enough men with some experience of industrial medicine. (3) Demonstrations—safety and rescue appliances. (4) Visits: These should be specially selected and compliances. (5) Dis- visits should be planned to illustrate specific subjects. (6) Discussions (perhaps at places of work) with works manager, personnel manager, shop steward, if suitable people are available.

D. Personnel.—Initially these courses should be organized by the heads of departments of industrial health in Glasgow, London, Manchester, and Newcastle. The following may be asked to assist in the teaching: (1) experienced industrial medical officers; (2) factory inspectors; (3) certain clinical teachers; and (4) others in the area (including laymen) whom the course organizer regards as having a special contribution to make.

APPENDIX VIII

ETHICAL CODE RELATING TO CONSULTATIONS AND COGNATE MATTERS

Ultimate responsibility in all these matters rests with the individual concerned, but practitioners finding themselves in any difficulty in deciding upon their course of action, or in doubt as to the safeguards necessary, are advised to seek guidance from the Secretary of the Association. Anyone departing from this code must be prepared, if challenged, to answer for his conduct before a professional tribunal.

I. Medical Consultations in Practice

1. A practitioner consulted is a practitioner who, with the acquiescence of the practitioner already in attendance, examines a patient under this practitioner's care and, either at a meeting of the two practitioners or by correspondence, co-operates in the formulation of diagnosis, prognosis, and treatment of the case. The term "consultation" means such a co-operation between practitioners. In domiciliary consultations it is desirable that both practitioners should meet and in other circumstances similar arrangements should obtain wherever practicable.

2. It is the duty of an attending practitioner to propose a consultation where indicated, or to acquiesce in any reasonable request for consultation expressed by the patient or his representatives.

3. The attending practitioner should nominate the practitioner to be consulted, and should advise accordingly, but he should not unreasonably refuse to meet a registered medical practitioner selected by the patient or by the patient's representatives, although he is entitled, if such is his opinion, to urge that the practitioner selected has not the qualifications or the experience demanded by the particular requirements of the case.

4. The arrangements for consultation should be made or initiated by the attending practitioner. The attending practitioner should ascertain in advance the amount of the fee, if any, to be paid to the practitioner consulted, and should inform the patient or his representatives that this should be paid at the time of the consultation.

5. In cases where the consultant and the attending practitioner meet and personally examine the patient together, the following procedure is generally adopted and should be observed, unless in any particular instance there is substantial reason for departing from it: (a) All parties meeting in consultation should be punctual, and if the attending practitioner fails to keep the appointment the patient, consulted, after a reasonable time, may examine the patient, and should communicate his conclusions to the attending practitioner in writing and in a sealed envelope. (b) If the consultation takes place at the patient's residence, the attending practitioner should, on entering the room of the patient, precede the practitioner consulted, and after the examination the attending practitioner should be the last to

leave the room. (c) The diagnosis, prognosis, and treatment should be discussed by the practitioner consulted and the attending practitioner in private. (d) The opinion on the case and the treatment as agreed should be communicated to the patient or the patient's representatives where practicable by the practitioner consulted in the presence of the attending practitioner. (e) It is the duty of the attending practitioner loyally to carry out the measures agreed at, or after the consultation. He should refrain from making any radical alteration in these measures except upon urgent grounds or after adequate trial.

6. If for any reason the practitioner consulted and the attending practitioner cannot examine the patient together, the attending practitioner should send to the practitioner consulted a brief history of the case. After examining the patient, the practitioner consulted should forward his opinion, together with any advice as to treatment, in a sealed envelope addressed to the attending practitioner. He should exercise great discretion as to the information he gives to the patient or the patient's representatives and, in particular, he should not disclose to the patient any details of any medicaments which he has advised.

In cases where the attending practitioner accepts the opinion and advice of the practitioner consulted he should carry out the measures which have been agreed between them; where, however, the attending practitioner finds he is in disagreement with the opinion and advice of the practitioner consulted he should by suitable means communicate his disagreement to the practitioner consulted.

7. Should the practitioner consulted and the attending practitioner hold divergent views, either on the diagnosis or on the treatment of the case, and should the attending practitioner be unwilling to pursue the course of action advised by the practitioner consulted, this difference of opinion should be communicated to the patient or his representatives by the practitioner consulted and the attending practitioner jointly, and the patient or his representatives should then be advised either to choose one or other of the suggested alternatives or to obtain further professional advice.

Note.—In the following circumstances it is especially desirable that the attending practitioner should endeavour to secure consultation with a colleague: (a) When the propriety has to be considered of performing an operation or of adopting some course of treatment which may involve considerable risk to the life of the patient or may permanently prejudice his activities or capacities and particularly when the condition which it is sought to relieve by this treatment is not itself dangerous to life; (b) when any procedure likely to result in death of a foetus or of an unborn child is contemplated, especially if labour has not commenced; (c) when continued administration of any drug of addiction is deemed desirable for the relief of symptoms of addiction; (d) when there is reason to suspect that the patient (1) has been subjected to an illegal operation, or (2) is the victim of criminal poisoning or criminal assault.

8. Arrangements for any future consultation or additional investigation should be effected only with the foreknowledge and co-operation of the attending practitioner.

9. The practitioner consulted shall not attempt to secure for himself the care of a patient seen in consultation. It is his duty to avoid any word or action which might disturb the confidence of the patient in the attending practitioner. The practitioner consulted should not communicate with the patient or the patient's representatives subsequent to the consultation except with the consent of the attending practitioner.

10. The attending practitioner should carefully avoid any remark disparaging the skill or judgment of the practitioner consulted.

11. Except by mutual consent the practitioner consulted shall not supersede the attending practitioner during the illness with which the consultation was concerned (see also Section II).

Financial Statement

Balance Sheet—December 31, 1956

	1956 £	1955 £
Accumulated Fund:		
Balance at January 1, 1956	635,711	617,543
<i>Add:</i> Provisions of prior years no longer required:		
Taxation	5,557	3,573
Stock Depreciation	—	3,000
Surplus for year (in 1955, after transferring £30,000 to General Reserve)	8,458	11,595
Balance at December 31, 1956	649,726	635,711
General Reserve	30,000	30,000
Reserve for future taxation	1,024	15,115
Current Liabilities and Provisions:		
Amounts and accrued expenses	81,081	53,038
1957 subscriptions (including Current Taxation)	63,759	69,507
Provisions towards:	21,006	1,818
Dilapidations and redecoration of premises	22,194	28,506
Pensions	12,312	10,373
Cost of Joint Annual Meeting, 1959	10,000	5,000
Special Legal Costs	5,000	—
	215,352	173,236
	<u>£896,102</u>	<u>£854,062</u>
		S. WAND, Chairman of Council.
		L. DOUGAL CALLANDER, Treasurer.

Notes:—(1) The Association is a company limited by guarantee, the liability of members being limited (except as provided in paragraph 6 of the Memorandum of Association) to one guinea each.
(2) The Association has entered into contracts for capital expenditure on premises under which £7,400 will become payable.

L. DOUGAL CALLANDER, Treasurer.

ended on that date.

In our opinion the above balance sheet and the annexed income and expenditure account give a true and fair view of the state of the Association's affairs as at December 31, 1956, and of its income and expenditure for the year with them and with the said information and explanations which we considered necessary. In our opinion the Association has kept proper books and received proper branch returns, and the said accounts, which are in agreement with them and with the said information and explanations, give in the prescribed manner the information required by the Companies Act, 1948.

PRICE WATERHOUSE & CO.,
Chartered Accountants.

S. WAND, Chairman of Council.

AUDITORS' REPORT TO THE MEMBERS OF THE BRITISH MEDICAL ASSOCIATION
We have obtained all the information and explanations which we considered necessary. In our opinion the Association has kept proper books and received proper branch returns, and the said accounts, which are in agreement with them and with the said information and explanations, give in the prescribed manner the information required by the Companies Act, 1948.

ANGUS MACRAE, Secretary.

S. WAND, Chairman of Council.

AUDITORS' REPORT TO THE MEMBERS OF THE BRITISH MEDICAL ASSOCIATION
We have obtained all the information and explanations which we considered necessary. In our opinion the Association has kept proper books and received proper branch returns, and the said accounts, which are in agreement with them and with the said information and explanations, give in the prescribed manner the information required by the Companies Act, 1948.

ANGUS MACRAE, Secretary.

Income and Expenditure Account for the Year ended December 31, 1956

	1956 £	1955 £
Secretarial and Financial Departments	126,277	114,774

Net Surplus on Publications (including "British Medical Journal," "Family Doctor," "Special Journals," "Abstracts of World Medicine," and Books)—subject to Taxation as below	1,405	30,090
		40,190
Provision towards cost of Joint Annual Meeting, Edinburgh, 1959	13,313	£203,058
Provision for Special Legal Costs	2250,580	5,000
Taxation—based on—	6,000	5,000
Surplus for year on publications (includes Profits Tax)	—	14,545
Income for year from properties and investments	13,452	14,033
		28,578
		30,000
Transfer to General Reserve	14,082	11,595
Surplus for year carried to Accumulated Fund (in 1955, after transferring £30,000 to General Reserve)	8,458	—
(Note—Depreciation (including Sinking Fund Instalment) amounting to £12,401 (1955—£12,477) has been allocated to the appropriate headings of expenses.)		
	<u>£287,140</u>	<u>£283,231</u>

II. Other Intraprofessional Obligations

Under the code of ethics of the profession a practitioner ought not to accept as his patient (except with the consent of the colleague concerned):

1. Any patient or member of a patient's household whom he has previously attended either as a consulting practitioner or as a deputy for a colleague.
2. Any patient or member of the patient's household whom he has attended within the previous two years in the capacity of assistant or locumtenent.
3. Any patient who at the time of the application is under active treatment by a colleague, unless he is personally satisfied that the colleague concerned has been notified by the patient or his representatives that his services are no longer required.
4. Any patient who so applies because his regular medical attendant is temporarily unavailable. In such case he should render whatever treatment may for the time be required, and should subsequently notify the patient's regular attendant of the steps he has taken.
5. Notwithstanding paragraph 3 above, when a practitioner in whatever form of practice is asked for advice or treatment by a patient and has reason to believe that the patient is already under medical care and that the request is made without the knowledge of the attending practitioner, it is the duty of the practitioner so approached to urge the patient to permit him to communicate with the attending practitioner. Should the patient refuse this proposal and if the circumstances are exceptional the practitioner is at liberty to examine the patient and to tell the patient his findings and conclusions, but, save for any emergency which exists, he shall not accept the patient for treatment.

III. Guidance for Professional Conduct in Relation to Dentists

(As agreed with the British Dental Association)

Consultations

1. Where a patient, in the opinion of his medical attendant, needs dental treatment, the patient should be referred in all but exceptional circumstances to his own dentist. In the event of the patient having no regular dentist, there is no objection to a doctor recommending a dentist of his own choice.
 2. When on behalf of one of his patients a doctor wishes to consult a dentist, the doctor should communicate in the first instance with the patient's own dentist. In the event of the patient having no regular dentist there is no objection to the doctor consulting the dentist of his own choice.
 3. Where the dentist has reason to believe that the patient has some constitutional disorder and considers some major dental procedure is necessary he should consult the patient's doctor before carrying out such treatment.
 4. Where there is a conflict of opinion between a doctor and a dentist concerning the diagnosis and/or treatment of the condition of a patient, they should consult with each other to reach an agreement which is satisfactory to both. Where the conflict of opinion remains unresolved, the patient should be so informed and invited to choose one of the alternatives or assisted to obtain other professional advice.
- Anaesthetics.**—Where an anaesthetic is advised by the dentist, it is competent for him to select the anaesthetist, but, if such anaesthetist is not the patient's doctor, no objection should be taken to the patient inviting his doctor to be present. Where the operation proposed is a major one, or if it is known to the dentist that the patient is under medical care, the dentist should consult the patient's doctor upon the operation proposed and should invite him to be present if the patient so desires. Similarly, where the patient is under dental care and the doctor advises opera-

tive or other major treatment arising from the patient's dental condition, the dentist should be consulted. On the completion of any dental operation, and especially if there is any reason to think that post-operative complications may ensue, the patient should be advised to consult the dentist immediately if such complications arise and the dentist should take all reasonable steps to facilitate such consultation.

IV. Examining Medical Officers

For the purpose of this code an examining medical officer is a practitioner undertaking the examination of a patient of another practitioner at the request of a third party with the exception of examinations under statutory requirements. Paragraphs 2 and 3 below do not apply to examinations in connexion with superannuation, pre-employment, or proposals for life or sickness assurance.

1. An examining practitioner must be satisfied that the individual to be examined consents, personally or through his legal representative, to submit to medical examination, and understands the reason for it.

2. When the individual to be examined is under medical care, the examining practitioner shall cause the attending practitioner to be given such notice of the time, place, and purpose of his examination as will enable the attending practitioner to be present should he or the patient so desire.

(Preferably such notice should be sent to the attending practitioner through the post, or by telephone, but in certain circumstances a communication might properly be conveyed by the patient.)

Exceptions to this are: (a) When circumstances justify a surprise visit. (b) When circumstances necessitate a visit within a period which does not afford time for notification.

Where the examining practitioner has acted under (a) or (b) he shall promptly inform the attending practitioner of the fact of his visit and the reason for his action.

3. If the attending practitioner fails to attend at the time arranged the examining practitioner shall be at liberty to proceed with the examination.

4. An examining practitioner must avoid any word or action which might disturb the confidence of the patient in the attending practitioner and must not, without the consent of the attending practitioner, do anything which involves interference with the treatment of the patient.

5. An examining practitioner shall confine himself strictly to such investigation and examination as are necessary for the purpose of submitting an adequate report.

6. Any proposal or suggestion which an examining practitioner may wish to put forward regarding treatment shall be first discussed with the attending practitioner either personally or by correspondence.

7. When in the course of an examination there come to light material clinical findings, of which the attending practitioner is believed to be unaware, the examining practitioner shall, with the consent of the patient, inform the attending practitioner of the relevant details.

8. An examining practitioner shall not utilize his position to influence the person examined to choose him as his medical attendant.

9. When the terms of contract with his employing body interfere with the free application of this code, an examining medical officer shall make honest endeavour to obtain the necessary amendment of his contract himself or through the British Medical Association.

APPENDIX IX**BALANCE SHEET AND INCOME AND EXPENDITURE ACCOUNT**

(Printed on pp. 288 and 289)

APPENDIX X**AMENDMENTS OF BY-LAWS AND A.R.M. STANDING ORDERS****By-laws**

1. By substituting in paragraph (c) of By-law 53 for the words "at the Representative Meeting being elected as to ten" the words "elected by the following bodies as to ten" (being persons who have been Members of the Representative Body for at least three years immediately preceding their respective elections).
2. By adding after By-law 56 the following new heading and By-law:

"Mode of Election by Representatives of Constituencies, etc."

"56A. The election of thirteen Members of Council referred to in paragraph (c) of By-law 53 shall take place between the time at which the Annual Representative Meeting commences and the time at which that meeting (including adjournments) terminates. The mode of nomination of candidates for election and of conducting the election shall be such as shall be prescribed by the Representative Body."

3. By deleting from By-law 59 the words "or by the Representatives of Constituencies".

4. By substituting in paragraph (1) of By-law 60 for the words "or the Representatives of Constituencies" the words "or the Members of Council elected by the bodies referred to in paragraph (c) of By-law 53".

5. By deleting from paragraph (2) of By-law 62 the words from and including "by means of an election by the body authorized to elect" down to the end of such paragraph and substituting therefor "as if it were a casual vacancy under the next following By-law, or may itself appoint a Member of the Association to fill the vacancy and the person filling the vacancy shall retain his office as if he had been duly elected at the proper time by the body which failed to elect".

6. By substituting in paragraph (1) of By-law 63 for the words "elected by the Representatives of Constituencies" shall be filled by the Chairman of the Representative Body" the words "referred to in paragraph (c) of By-law 53 shall be filled by the Chairman of the Representative Body by the appointment of a person who is and has been for at least three years immediately preceding his appointment a member of the Representative Body."

7. By inserting after paragraph (1) of By-law 63 the following new paragraph:

"(2) A casual vacancy occurring in the Council four months or longer before the Annual Representative Meeting amongst the Members of Council referred to in paragraph (c) of By-law 53 shall be filled by the body which appointed the Member of Council whose place shall have so become vacant. The mode of nomination of candidates and of conducting the election shall be such as shall be prescribed by the Representative Body."

8. By renumbering paragraph (2) of By-law 63 as paragraph (3) and inserting therein after the words "Public Health Service Member" the words "any casual vacancy (whenever occurring) on the Council amongst the Medical Officers representing the medical branches of the Armed Forces shall be filled by the said Chairman by the appointment of a person qualified under paragraph (e) of By-law 53".

9. By renumbering paragraph (3) of By-law 63 as paragraph (4) by deleting the word "so" from immediately before the word "occurred" in the said paragraph and by renumbering paragraph (4) as paragraph (5).

Proposed New Standing Order of Representative Body

Election of Members of Council referred to in By-law 53 (c) other than at the time of the Annual Representative Meeting:

(1) Nomination of candidates for election under By-law 53 (c) otherwise than at the time of the Annual Representative Meeting shall be in writing by not less than two of the Members of the Body entitled to elect upon the prescribed form and sent to the Returning Officer at the Head Office on or before an appointed day of which not less than fourteen days' notice shall be given in the *Journal*.

(2) If only one candidate is nominated he shall be deemed to be elected immediately after the said date.

(3) If more than one candidate is nominated voting papers containing the names of the candidates duly nominated shall be sent by post by the Returning Officer to each member of the Body concerned. Every paper shall be returned to the Returning Officer at the Head Office on or before an appointed day, of which not less than fourteen days' notice shall be given in the *Journal*.

CONFERENCE OF HONORARY SECRETARIES OF DIVISIONS AND BRANCHES

"You are the most important people in the Association," honorary secretaries of Divisions and Branches were told by Dr. S. WAND (Chairman of Council), welcoming them to their annual all-day conference at B.M.A. House on May 10. The meeting was presided over by Dr. V. COTTON-CORNWALL (honorary secretary, Merseyside Branch), the conference chairman, who was supported on the platform by Mr. L. DOUGAL CALLANDER (treasurer), Dr. RONALD GIBSON (chairman, Organization Committee), and Dr. A. MACRAE (secretary), in addition to Dr. WAND.

Continuing, Dr. Wand said that the honorary secretaries were the key men, and it was to them that Headquarters looked for proper action at the periphery whenever a decision was taken. It was very important that he should bring them up to date on some of the facets of the remuneration dispute. First, he would commend to them the *B.M.J.* reports of the meeting of the Special Conference of Local Medical Committees on April 30, and of the Special Representative Meeting of May 1. They gave a fair picture of what had happened.

Surfeit of Democracy

Wide differences of opinion had been inaccurately described as a split. It was true that at present there was a 50-50 division of opinion in the profession, but it was entirely at one in seeking to achieve its objective. Only on the method of achievement was there a difference of view. Keeping that clearly in their minds would enable them to reach decisions and get a unity in the profession that would not otherwise be possible. Those differences of opinion must not lead to bitterness. There must be a mutual respect for each other's opinions, and the immediate objective must be to marry the differing opinions and heal any breach that might have occurred.

In some quarters, the happenings of the last few weeks had been canvassed as defeat, but he could not agree with that. The situation had changed with such lightning rapidity that various lines of approach had had to be examined, but a democratic body could not always move with equal speed. "We, as an Association, suffer from a surfeit of democracy," the Chairman of Council told his audience. "We cannot move quickly, because we must get information and support from a periphery of 70,000 members."

In his own opinion, the Danckwerts award was achieved in great part as a result of authority being given to certain people to act as they thought best in changing circumstances. Decisions and tactics arrived at by a closed organization

like the Ministry of Health, meeting behind closed doors, could only with great difficulty be countered by a democratic machine that took months to work. He hoped they would bear that in mind when decisions had to be taken in the future, and that they would realize that the reasons prompting those decisions were good and proper and would be for the good of the profession.

Armed Truce

They were now faced with a clear-cut decision whether or not to give evidence before the Royal Commission. If it was decided to give evidence they would then enter into an armed truce; if the decision went the other way they must go on with the withdrawal scheme, as not to withdraw in such circumstances would be to occupy a position of weakness.

In the last few weeks, each side had gained tactical victories. The Government had won one by the setting up of the Royal Commission, which had succeeded in its purpose of dividing and confusing the profession, and Spens and Danckwerts were in the melting-pot. On the other hand, the Association had succeeded in creating the feeling that all was not well with the Health Service. Again, they had previously been told that there would be no consideration of their claim on its merits at all; there had since been an interim adjustment of £4½m. which, though small, had broken down the door to some extent. In addition, the Commission's terms of reference had been amended in such a way as to make them completely different in many respects.

Further, the Minister—and Dr. Wand was assured that from their point of view it was constitutionally correct—had confirmed the validity of the new terms of reference. Mr. Vosper had also given a written undertaking that, following the Royal Commission's Report, no change would take place until after full consultation with the profession. "There is a great difference between consultation and full consultation." Another point was that the Commission had said that the profession's claim would be before it and would therefore be in writing in the records of the Commission, and in its report. Therefore, for the first time they had their claim before that body, together with a promise of full consultation before implementation of that Report, and on the present claim. "As compared with the position only four or five weeks ago, these are very material advantages."

Dr. Wand admitted that secretaries were in some difficulty as a result of the Council's refusal to express an opinion, nor would any opinion come from the General Medical Services Committee. Wherever he had spoken, he himself had been careful to give a factual statement, because what was wanted was an honest opinion, and not one swayed by emotion, from those who, in the events of withdrawal, would bear the brunt—the general practitioners.

Struggle may Come

During the next few months, in particular, the secretaries had a very important job. First, they had to see that the Divisions and Branches remained unified, and that the doctors remained determined to see the dispute brought to a conclusion that they could accept. "An armed truce does not mean that the struggle is over," declared Dr. Wand. "Even if we decide to give evidence the struggle clearly might come in the next few months after the Royal Commission has reported." That struggle might be on an issue of even greater importance than any other—that of status. "The time is coming when we have seriously to consider not whether we withdraw from the Service for a short time, but whether we can continue to serve in such a service at all" (applause).

Dr. Wand went on to warn the secretaries that whatever happened at the next Special Representative Meeting (on June 12) there would be recriminations. "Someone in the middle will have to take the rap from both sides, and that will probably be the Council," he told them, adding somewhat wryly, "and, particularly, perhaps, the Chairman." Nevertheless, whatever the bitterness evoked by whatever

decision was reached, the secretaries had the extremely important duty of eliminating it. "No matter what the decision, the objectives will remain: first, status; second, the claim—and in that order."

In conclusion, he wished to pay them all a tribute for the great work which they did, and for their self-sacrifice. He knew how much self-sacrifice it meant to a busy doctor to give up his all too little spare time for the work. The Association was tremendously indebted to them, and "on behalf of the 70,000 members of the Association, may I thank you very much for your work."

Burial of Spens

Dr. K. W. BEETHAM (East Yorkshire) had three questions to ask. Would not the giving of evidence to the Royal Commission be "to attend the burial of Spens"? Would it not be taken as acceptance of Government dictation? As 60% of the membership never attended peripheral meetings, was not any plan for withdrawal likely to fail?

Dr. WAND thought that the answer to the third question could best be answered by finding out from local secretaries of the Guild just how the levies were coming in. That would give some indication of the views of the "unknown quantity." The Royal Commission was set up by Her Majesty, through the Government, and to say that the Association gave official approval did not enter into the question at all. Whether or not they thought Spens would be buried by the giving of evidence depended on what strength they gave to the words "full consultation."

Because of the Government's written undertaking, Spens remained the basis until the Government made representations to the Association that Spens was no longer valid. Nor would it be improper for the Government to set up a body to advise on whether or not Spens should remain the basis. The Association could, after all, found their evidence on Spens remaining the basis, and if the Commission declined to accept that view it would be necessary for the Association to struggle to establish that their view, and not that of the Commission, should be adopted. If they decided to give evidence it might be not the end but only the beginning of the struggle. It was because of that that it was so necessary to get unity within the profession.

Medical Officers of Health

Answering Dr. M. P. MARTIN (Worcester), who asked what was being done to safeguard the interests of medical officers of health, and to prevent their "inadequate remuneration being used as evidence against any increase for other members of the profession," Dr. Wand said that on each occasion that he had met the Minister and the Chairman of the Royal Commission he had mentioned those officers. The difficulty was that they were not remunerated from governmental sources. Those who had to deal with a single local authority knew what difficulties there were. When two or three local authorities were acting together the difficulties were greatly increased, and when it came to dealing with local authority associations the difficulties became extreme.

Local government autonomy was also involved, and he believed that the Minister had been quite uninfluenced by the dispute when he had said that the inclusion of the public health medical officers would not only make the deliberations of the Royal Commission more difficult but would so prolong its work as to make their inclusion impracticable. The Minister had written that when the Commission had published its findings it would be right and proper for the medical officers of health to go to Whitley.

Different Bodies

Dr. G. CORMACK (Newcastle upon Tyne) believed that their difficulties had been increased by decisions being taken by different bodies within the profession which were not in accord with B.M.A. policy. "It would appear to rise from the extraordinary, ramshackle structure of the Association,

which allows an autonomous body to exist within what should be a well-integrated organization." Had the Council any strong views on reorganization which would prevent that in future?

After outlining the history of the structure, Dr. WAND said that, although admittedly curious, it had been thought that common sense would avoid difficult situations. To have one side in a fight composed of a large number of people and different bodies made it much easier for the other side, but it was difficult to see how the ideal of a single body could be achieved.

To Dr. MELLISH-OXLEY (East Suffolk), who declared that it was wrong to compromise one's own principles when dealing "with a Government that had clearly shown itself to be without principles at all," Dr. WAND replied that the decision would rest with the Special Representative Meeting. He would rest with the Special Representative Meeting. He would not do so now. It was for the periphery to make up its own mind, without persuasion from anybody. By skilful rhetoric it was possible to sway the minds of people one way or the other, particularly those without full information. If, after they had made up their minds, they still wished him to pursue whatever line of action they thought best, he could assure them "that I will take it up with the vigour which I have always used in these matters. But, first, I want the opinion of the periphery."

He told Dr. J. S. MOFFATT (Border Counties), who referred to Dr. Gorsky's suggestion at the S.R.M. that the Association should seek a declaratory judgment in the high court on the validity of Spens as a contract, that the matter was already before their solicitor, who had in preparation a document, which must obviously be very carefully drawn, to present to counsel, who had been chosen. Dr. Gorsky would be invited to take part in the discussions.

There was loud applause when the CHAIRMAN thanked Dr. Wand for his address "and for the lucidity with which he has answered questions."

Brains Trust

A number of questions of special interest to secretaries were introduced, first of all by the members of the panel, Mr. CALLANDER, Dr. GIBSON, and Dr. MACRAE.

"All the work in connexion with the remuneration dispute needs money," said Mr. CALLANDER, and though he had told the S.R.M. that he would find the money for that claim the fact remained that the Association's funds were not as good as they had been twelve months previously.

The secretaries were the most important people in the drive for membership, to which, alone, he could look for funds, and he appealed to them once again to scrutinize the non-membership lists. Last year they had increased the membership by 1,200, which, with an average subscription of four guineas, meant a considerable addition to the Association's finances. A particularly watchful eye should be kept on the newly qualified men.

"I thank you very sincerely for your help, but there is still room for improvement. We are not at saturation point yet, and we can still get in two, three, or four thousand more medical members."

Dr. GIBSON, too, expressed, on behalf of his Committee, appreciation for the work done in the past, and hoped that they would let the Organization Committee know of any way in which it could help them in their work. Laying stress on the importance to his Committee of secretaries' annual reports, he pointed out that last year, out of 217 Divisions, 31 had not sent in a report, and that of the 31, 20 had not sent in a report in the previous year. The annual reports were of great importance to the Treasurer, and to the Organization Committee in its quest for overall efficiency.

The question of young members had concerned the Committee a lot during the previous year, and those members must be made to realize that the Organization Committee was there to help them in their individual problems. Though the general membership had gone up, that of young members

had decreased by 4%. This was not good, as the future membership of the Association depended on the young recruits.

The Committee was preparing a memorandum on the possibility of establishing a junior members' forum, but secretaries, too, could play their part by holding special functions for the young members, by putting them on executive committees, and by holding their own forums. Most important of all, they should be dealt with as individuals. He suggested that in each Division a member of the executive committee—say, the assistant secretary—should act as liaison officer.

Dr. MACRAE had only two matters to bring to the attention of the conference. First, there was a growing tendency for Division and Branch secretaries to dictate to regional offices, by telephone, notices of meetings, and also committee documents. When meetings were called at short notice that might be inevitable, but otherwise he suggested that there was less risk of error if the post was used. It was also less expensive.

Secondly, one divisional executive committee had adopted a resolution that notices of divisional meetings should be accompanied by stencilled copies of the minutes of the previous meeting. When perhaps only 10 or 20% of the membership attended the meetings in any case, that procedure hardly seemed necessary. Normally, the secretary produced handwritten minutes, which were read and then signed by the chairman as a true record. Dr. Macrae made it clear that his remarks did not apply to ethical inquiries, when it was obligatory in certain circumstances that a record of the meeting should be sent to every member.

Division Funds

The remarks of the three members of the panel elicited a number of questions. Dr. B. RAEBURN (South Lancashire) asking whether small sums could not be available from Headquarters to assist in entertainment that might help membership. He was told that Mr. Callander would be the first to agree to do it—if the funds were available. The present position was, however, that he might have to ask for more money from the membership very soon. Nevertheless, the point was important, though to carry it out was not at present financially practicable.

As Dr. Wand could not be present in the afternoon, a question was addressed to him about the British Medical Guild, which he described as the executive and not the policy-making body. Its function was to carry out Association policy in circumstances in which, were the Association to do so, it would be regarded as undertaking trade union activities. The Guild was the action body.

As a local Guild chairman, Dr. S. SMITH (Tower Hamlets) thought he could get a better consensus of opinion from the Guild than from Branch meetings. In view of the S.R.M. resolution about the future policy in regard to the National Health Service, would it not be a good idea, he asked, if, during the interim period when the Guild machinery was not otherwise being used, it could be used for discussions on the subject so as to enable local groups to formulate policy? In addition, it might lead to bringing non-members into membership of the Association and in that way be used to consolidate the profession.

In reply, Dr. Wand said that the Guild machinery must be kept going, first for discussion, and second—and more important—to promote unity among doctors in an area.

Hospital Gazetteer

The afternoon session began with a discussion on the need for the B.M.A. to compile a hospital gazetteer particularly for the use of applicants for junior hospital posts.

Dr. A. B. GILMOUR (house officer and formerly President of the British Medical Students' Association), opening the discussion, emphasized the need for a comprehensive document which would give applicants for junior hospital posts information on such things as size of hospitals, staff, specialties, special clinical facilities, the nature of clinical duties,

and experience in the posts quoted, residential and recreational facilities, and some indication of the quality of the jobs. Things had changed following the introduction of the N.H.S. and the 1950 Medical Act. There was now a rush by all new graduates for the arbitrarily restricted number of "approved" posts. He said that there was evidence that the establishment of such posts was guided not so much by the suitability of the post as by the authority's desire to fill it.

The status of hospital doctors had fallen immensely since nationalization. Administrators were not interested in the responsibilities and hours of work undertaken by junior doctors without corresponding privileges. It was often difficult for senior medical staff to support their assistants. Therefore some body should interest itself in the welfare of the newly qualified, and who better than their professional association? The American Medical Association published a list of approved internships: why should the B.M.A. member not be able to consult a "B.M.A. book"? Dr. Gilmour said that, to him, the most cogent argument for undertaking such a task was the fact that it would be definite evidence of the B.M.A.'s interest in its newest members. A likely effect on hospital authorities would be to cause those lacking in some respects to reform post-haste, and be kept up to the mark by frequent reprints of the gazetteer. Such action would help newcomers to the profession when they were most lonely and vulnerable.

Dr. J. H. E. MOORE (honorary secretary, Yorkshire Branch and Leeds Division) reminded the meeting that, whereas those who had held house appointments in the past had done so voluntarily and received no return except their board and lodging, younger practitioners who qualified since 1953 had been compelled to do 12 months' house-officer service. They received some pay, but they also contributed towards their board-and-lodging expenses. They were anxious to make the best use of their time, and felt that information on professional opportunities and residential amenities in hospitals should be easily available and published on a national scale. Dr. Moore pointed out that, although the G.M.C. published some information and both the Leeds and Manchester Regional Hospital Boards published lists of available appointments, indicating those which were recognized for higher qualifications, students were anxious to have some assessment of the professional prestige and amenities of these hospitals. The Organization Committee had carried out a pilot experiment with this in view. Surveys had been carried out in the Hull area by Dr. I. G. Innes, in the Gloucester area by Dr. H. G. Dowler, and by himself in the Leeds area. Dr. L. S. Potter had analysed results, and the Organization Committee was to consider extending the survey over the whole country.

In his own survey, Dr. Moore said, he visited hospitals in his area, and by talking to some of the residents at each had formed some ideas on what matters they regarded as particularly important. They looked first for hospitals offering good professional experience under chiefs and registrars taking an active interest in their work. The hospital should be large enough to carry a house staff of about 12 residents, and the medical staff should be accommodated in separate quarters away from the matron's and administrative offices, with separate dining-, sitting-, and guest-rooms. There should be a minimum standard for catering. It was important that married quarters (not necessarily in the hospital grounds) should be available in every area for registrars. Regular off-duty times were most important—two half-days a week and a full week-end from noon on Saturday to 9 a.m. on Monday every two or three weeks would be reasonable and could be covered by other residents. At present residents were often required to be in the hospital an average of 145 hours per week.

Dr. POTTER said that he was satisfied from experience of a number of informal meetings of junior hospital residents that there was a demand for a gazetteer. In compiling the pilot survey the help of honorary secretaries had been invaluable. Dr. Potter felt that if this was worth doing at all it was worth doing well, and this would require the co-

operation of honorary secretaries—he was sure he could count on this.

Dr. GIBSON told the conference that his committee was convinced of the need for a gazetteer.

Towards 100% Membership

Opening the discussion on this subject, Dr. J. S. NOBLE (honorary secretary, Morpeth Division) suggested that the problem of interprofessional relations between the craft groups and the salary grades of the profession should be explored as a method of stimulating interest and producing professional unity. The pay claim having failed to produce the latter, he felt that consideration of the future of medicine and of the profession might be a greater spur to many doctors. Dr. Noble traced the development of the present-day occupational schism and mentioned the resultant overlap, conflict, and frustration between the specialists, general practitioners, and public health doctors, and remarked on the possible tendency to wastage of medical manpower. This problem was not a personal one to the profession alone but was also obstructive to the satisfactory development of the Health Service. The answer could be found only by the B.M.A., but if the B.M.A. did not find it someone else would try to.

Much work of late had been passed to the autonomous bodies for the sake of efficiency, but the tendency to wait for their lead must be reversed, and this could be done only at Division level. Many Divisions already had committees representative of all branches of the Health Service. This must be extended and the profession made conscious of its internal relationships. The B.M.A.'s committee of inquiry into the Health Service must have guidance from the rank and file, Dr. Noble said. This could be really effectively given only from the Divisions and through the Representative Body.

Speaking of the minorities, Dr. Noble said that the small groups—registrars and young practitioners—must be given the impression as well as the fact that justice was done and that the B.M.A. was theirs. The idea of a "bosses' union" or a "G.P.s' club" must go, and he called for direct access for these groups to the Council and not through senior committees. The Health Service had reached the stage of stock-taking. It must either develop or regress. In the speaker's opinion the B.M.A. alone had the knowledge and experience to guide it. If it did not do this, the politicians would. He believed that an approach along these lines would catch the imagination of every interested doctor and reassert the B.M.A. in the eyes of the profession and the nation.

Roll of Fellows

Dr. J. E. MORRISON (honorary secretary, Stirling Branch) described the procedure it was proposed to follow and the criteria to be adopted in connexion with the new "Roll of Fellows of the Association." He stressed the fact that, though the approval of Council would have to be obtained and an official record maintained at Headquarters, this was essentially a local award—an honour conferred on a member by his colleagues for outstanding service to his Division or Branch. The initiative would ordinarily be taken by the executive committee or Branch council, but the nomination must be approved by a three-quarters majority in a meeting of the Division. It was anticipated that usually the award would be given to doctors while they were still in active practice, but there was no reason at all why those who had given notable service in the past should not be included. Service on central committees could be taken into account, but the important criteria were 10 years' continuous membership of the Association and the holding of office or offices locally for seven years. Dr. Morrison reminded the conference that the honour would be of less value if it were given lightly.

The conference concluded with a vote of thanks to the chairman, proposed by Dr. F. A. BELAM. Dr. C. VIPONT BROWN (honorary secretary, Manchester Division) was elected chairman of the conference for 1958.

Scottish News

SCOTTISH HOUSE OF THE B.M.A.

REOPENING BY THE PRESIDENT

For the past 30 years two adjoining houses in Drumsheugh Gardens, Edinburgh, have served as the headquarters of the B.M.A. in Scotland. Plans to modernize the office accommodation in these houses and to provide a common-room, dining-room, reading-room, and other amenities for members were not completed until 1951. Since then the work of adaptation has been proceeding by stages and is now very nearly complete.

Last week, on May 14, the President of the Association, Dr. ALEXANDER HALL, reopened Scottish House at a ceremony to which about 150 guests had been invited by the chairman and members of the Scottish Committee. The chairman of the Committee, Dr. W. M. KNOX, presided at

this gathering and introduced Dr. Hall, who heartily congratulated the Committee on the results of their work—"these handsome and well-equipped premises of which the Association may well be proud." The B.M.A., the President continued, with its members in every quarter of the Commonwealth and Colonies, could well claim to be the mouthpiece of the medical profession, even if it did often speak with a Scottish accent. Its functions could be simply stated as scientific and educational, medico-political and social. "These new premises will help us to discharge each of these functions more effectively. As the centre not only for medical men and women in Scotland, but for those from across the Border and from over the seas, for those making a brief stay in Edinburgh, and for those making a more prolonged stay for the purpose of postgraduate studies, the new Scottish House will afford amenities long desired."

Reconstruction

Touching on the dispute between the medical profession and the Government, Dr. Hall said that the practice of medicine and politics could never be married in anything but an unholy alliance. It was no secret that the medical profession recently had been profoundly shocked and disturbed to find that the agreement on its terms and conditions of service could be and had been set aside for no other reason than political expediency. "When we say we seek to maintain the honour and dignity of the profession we are not speaking in any selfish or concealed sense. We know that, unless the practice of medicine is in the hands of men and women thoroughly grounded in the basic principles of their science and free to express and apply their art zealously according to their individual interpretation of it, the best service will not be forthcoming and esteem and trust will vanish. . . . We ask from the Government, as the ultimate employing and controlling authority of the Health

Service in all its branches, such just and secure terms and conditions as will enable those already in the Service to maintain and improve their standards and, what is equally important, will attract recruits of talent, integrity, and enterprise."

The physical and mental health of the people would determine the standard of living which they could attain, said Dr. Hall, and in the maintenance of that health and vigour the medical profession had a major role to play. The Minister of Health and the Ministry should expound to the full the doctrine of health as a national investment and should be the champions of the profession when the health department came under the fire of the Treasury guns. "Give us the proper working conditions and we shall do the job," Dr. Hall declared. "By foresight, prudence, and perseverance the Association has adapted the structure of this building into a noble and valuable asset. It can offer these same qualities to the Government to help bring about the reconstruction manifestly needed of the Health Service."

Dr. E. A. CORMACK, chairman of the committee responsible for the rebuilding of Scottish House, proposing the vote of thanks to the President, paid tribute to all those who had a hand in the work, especially Mr. W. H. Kininmonth, the architect, and invited the guests to inspect the building.

Amenities for Members

The ground floor is now given over entirely to accommodation intended for day-to-day use by members. In one corner of the large and elegant common-room there is to be a bar. Meals are soon to be served in a small dining-room, and at the back of the house there is a quiet and comfortable reading-

room. The first floor has a large meeting-room and a smaller committee room, and the second floor provides the office accommodation needed by the Scottish Secretary, Dr. E. R. C. Walker, and his staff. Offices on the top floor are occupied by the Medical Insurance Agency. Modern decorative ideas have been most successfully applied throughout the house. Several of the public rooms are beautified by carved wooden mantelpieces, now for the first time seen in their true splendour after the removal of the coats of paint which had previously disfigured them.

Later in the evening of May 14 visitors who had come from afar to attend the reopening of Scottish House were the guests at a dinner at the North British Hotel given by Dr. and Mrs. W. M. KNOX—a most enjoyable ending to what Dr. S. WAND, Chairman of Council, described as "a very great day."

Mr. J. R. Hanan, New Zealand Minister of Health, in a recent address to the biennial conference of the New Zealand Branch of the B.M.A., referred to the sharp increase in the social security pharmaceutical bill from £1,558,000 in 1948 to £4,039,000 in 1956; it was expected to exceed £2 a head of the population in 1957. He foresaw the establishment of controls if doctors did not consider prescribing costs, having due regard to medical need first.

PUBLIC HEALTH COMMITTEE

RECENT EVENTS REVIEWED

A special meeting of the Public Health Committee was held at B.M.A. House on May 17, with Dr. J. B. TILLEY in the chair.

Letter to Members of Parliament

Dr. A. MACRAE, Secretary of the Association, explained why a further letter had not been sent to Members of both Houses of Parliament. The Committee at its meeting on April 12 had asked for this letter to be sent and the Council had agreed. Dr. Macrae apologized that action had been suspended on the resolution.

Dr. H. D. CHALKE repeated what he had said in Council that he thought that what had happened was most unfortunate. The question of their position in the B.M.A., and indeed a suggestion to dissociate themselves from the B.M.A., was in the minds of a large number of members of the public health service. Dr. W. G. HARDING pointed out that the public health service had been "forgotten" in the legal opinion on the terms of reference of the Royal Commission given to the Joint Negotiating Committee. He remembered reminding Sir Russell Brain and being told that the Joint Consultants Committee had "forgotten" about their public health colleagues. In the first letter to Members of Parliament there was no mention of public health practitioners. "We have been forgotten once again," said Dr. Harding. The Society of Medical Officers of Health could not make pronouncements on medico-political matters, and he felt the Committee had never once been able to have its views adequately considered.

Dr. J. F. WARIN thought that at the time the Ministry of Health were sympathetic to inclusion of public health doctors, and he was satisfied that the Committee did what it could. It passed two resolutions, one offering full support to the profession—that received full publicity—and a second expressing grave concern that there was any question of not including public health doctors. The Committee asked that the latter should receive immediate publicity, but the Chairman of Council decided that it was not advisable at that stage. "I am very concerned that in a matter of such importance it could be possible for one person to be in that sort of situation," said Dr. Warin. "If this Committee is going to act for the public health service in medico-political matters, I think there has to be a difference in the future."

The General Medical Services Committee had autonomous powers, which the Public Health Committee lacked. He hoped there would be a discussion on the position at a future meeting.

Dr. J. B. S. MORGAN felt that general practitioners in particular were very sympathetic to public health practitioners. Since 1948 the former had realized that public health was not a competitive but a complementary service. "Do not let us get this out of focus," said Dr. Morgan. "I feel that Dr. Wand and many others have done their best to get public health doctors included." Dr. K. S. MAURICE SMITH (General Medical Services Committee) assured the Committee that the General Medical Services Committee was very sympathetic. Dr. F. A. BELAM said that there had been serious sins of omission. For the Council to accept a recommendation and pass a resolution and then dishonour it seemed to him to be deplorable.

The CHAIRMAN thought that those who had spoken had voiced the sense of frustration of everyone that steps which the Committee had recommended and had hoped would be taken had not been taken. He was sure that the question of the machinery was something which should be considered. He was told that the Committee had not wanted autonomy in 1948. It might be that the Committee would wish to reconsider this.

The Committee decided to consider as a matter of urgency at a future meeting an alteration of the machinery for representing the public health service in the Association.

Mr. JOHN PRINGLE (Public Relations Officer) recalled that the resolution about sending a letter to members of both

Houses of Parliament was passed by Council 14 days before the Special Representative Meeting. It would have taken several days to get the statement printed. On the day on which the resolution was passed the Chairman of Council was engaged in discussions with the Chairman of the Royal Commission and the Minister of Health. Events were moving extremely fast, and they continued to move with extreme speed up to the very day of the Representative Meeting. The resolution had said that the letter should be sent "as soon as possible." There was no question of the resolution being ignored. But to have sent out the letter a few days before the Representative Body made a decision might have put the Association in an extremely embarrassing position, and therefore Mr. Pringle took the view that nothing was to be gained by it at that time. It seemed to him that when the Representative Body had met it would still be open, and indeed it was open now, to have another letter sent.

Dr. J. KELMAN said he had not supported the original resolution because he had thought that to send another letter was like saying: "P.S.—We forgot the public health service." The major blunder came when both the Committee's original motions, the first offering full support to their colleagues, the second asking for full support, did not get immediate publicity. It had been felt strongly that, unless the announcement was in the press immediately, the opportunity would be gone. He considered that had Dr. Wand fully appreciated the strength of feeling of the Public Health Committee he would not have done as he did, but it had to be remembered that what had happened had left a sense of dissatisfaction and frustration. Dr. Kelman read a resolution from the Scottish Branch of the Society of Medical Officers of Health on the desirability of breaking the link with the B.M.A. unless the Association gave autonomy to the Public Health Committee. If the Committee had had that autonomy, he commented, it could have made its announcement before the Government made theirs.

Royal Commission

The Committee held a long discussion on future action to be taken in relation to the Royal Commission. Dr. WARIN suggested that the Chairman of Council together with the chairman of the Committee should seek an interview with the Chairman of the Royal Commission, because, although the Prime Minister and the Minister of Health had said that the public health doctors were excluded, so far as Dr. Warin was aware the Chairman of the Royal Commission had not made any definite statement. The terms of reference had been interpreted as applying to general practitioners and consultants, but in plain English they really meant all doctors, including those in public health undertaking Part III duties. It would not do any harm to ask why the Commission refused to include the public health doctors. Assuming that no satisfaction was obtained, the two chairmen should discuss with the Minister of Health two possibilities—the extension of the functions of the Royal Commission to include consideration of the remuneration of public health doctors after completion of its present remit, or the immediate setting up of an independent inquiry into the remuneration of public health doctors, as requested long ago by the Association.

Having exhausted all the possibilities, the Committee would have to decide what course to take at the Special Representative Meeting. One course was to dig in and say: "This is a vital matter to us and we are not prepared to budge from the last resolution" (that any decision to co-operate with the Royal Commission should be conditional on the inclusion of all public health medical officers within the terms of reference). He felt that this would do great harm to the relationships between the branches of the profession and would undo a great deal of the good which the Committee had done in recent years. He felt it would be more helpful to say that as things had developed the Committee now felt that in the interests of the profession as a whole, if the only matter that was left between co-operation and non-cooperation was the inclusion of public health

doctors, the profession should co-operate. If they did that they would get a great deal of understanding and good will from their colleagues, but he thought that they would do more than that. If the profession gained something from co-operation, then ultimately the public health service would do so as well.

Dr. HARDING said that so far no senior representative of the public health section of the profession had had direct dealings with the Government. Dr. COLIN-RUSS warned that there was nothing the Government would like more than to see the profession split. A split would do the profession as a whole no good and the public health people a disservice. "We must avoid a split at all costs," he declared.

"Why am I always the bridesmaid, never the blushing bride?" quoted Dr. CHALKE. "We are always the bridesmaid," he continued. "We are never 'standing at the altar.' I am sick and tired of this. The wishy-washy and apparently turncoat attitude of the Council and this Committee is incomprehensible. The profession is becoming the laughing stock of the country—the Government knows it has got us. It seems very like the 'great betrayal' of 1911. The chameleon-like committees of the B.M.A. change colour. We are expected to follow their change of colour because unless we do it 'might split the profession.' What nonsense!" It was a vital matter for the public health service and the profession. He was certain that the public health doctors would not be thrown to the wolves by the Representative Body.

Dr. J. A. STIRLING said that the Royal Commission was dealing with two matters: the present betterment claim—and with that the public health section had nothing to do—and what should be done to keep the remuneration of doctors under review, with which the public health doctors were concerned. He thought that the Committee should adhere to its original resolution and let the matter be decided by the Special Representative Meeting. The CHAIRMAN pointed out that the Commission was considering proper levels of remuneration; that was nothing to do with the cost-of-living increase.

Dr. S. C. GAWNE said that if it was generally thought that it would be in the interests of the profession as a whole, including the public health section, to give evidence, that section could not say: "We are holding out." He thought that something should be said about the public health section's remuneration, past and present, in the evidence to the Commission. Dr. MORGAN thought that the B.M.A. had succeeded in changing the terms of reference over the whole ground, except the public health section. The Committee should take every possible step to see that the public health doctors were included.

Dr. KELMAN stressed that the public health section were asking the general practitioners to withdraw their services on the narrow point that the public health service was not included in the terms of reference. The Committee must act in a practical and statesmanlike way. If they went to the general practitioners, how much support could they produce as evidence? Less than 50% of the public health doctors had contributed to the defence fund—that was how much they cared.

After some further discussion three motions, proposed by Dr. WARIN, and seconded by Drs. Kelman, Gawne, and Morgan respectively, were agreed to. They were as follows.

- (1) That the Public Health Committee reaffirms the vital importance to the whole medical profession of the inclusion of public health doctors within the terms of reference of the Royal Commission.
- (2) That the Public Health Committee requests the Chairman of Council, together with the chairman of the Public Health Committee, to seek an urgent interview with the Chairman of the Royal Commission to discuss the interpretation of the terms of reference in so far as they affect public health doctors.
- (3) That if an approach to the Chairman of the Royal Commission is unsatisfactory, then the Chairman of Council, together with the chairman of the Public Health Committee, be requested to seek immediate interview with the Minister of Health in order to discuss two alternative possibilities: (a) the extension of the functions of the Royal Commission to include the consideration

of the remuneration of public health doctors after the completion of their present remit; (b) the immediate setting up of an independent inquiry into the remuneration of public health doctors, as is already requested.

Dr. STIRLING moved an amendment to a fourth motion by Dr. Warin. This amendment urged the Special Representative Meeting, consisting as it did of representatives of all branches of the profession, to adopt the resolution of Council of March 27 (*Supplement*, April 6, p. 149) not to give evidence unless public health doctors were included in the terms of reference, or as an alternative to affirm that the decision to participate in the Royal Commission should be conditional on the Government agreeing to set up an independent inquiry into the remuneration and conditions of service of public health medical officers concurrently with the sitting of the Royal Commission. Dr. Stirling thought that if this was not done at the present time the public health section would become the submerged tenth.

Dr. ELSPETH M. WARWICK said that she had had considerable contact within her area and had knowledge of what was going on elsewhere, and she did not think that there was the slightest doubt that the Representative Body would be in no mood for conditions which would postpone a decision further. In her own area the doctors were not in a temper to procrastinate further. Dr. PETER EDWARDS, referring to the Minister's statement about considering any claim from public health officers "through the normal machinery" in the light of the Royal Commission's report and any settlement subsequent to it, said that the Committee should press for a change in those normal channels. Dr. KELMAN said that circumstances had altered since the resolution had been passed which Dr. Stirling wanted the Committee to reiterate.

On a division, four members voted for the amendment and twelve against, and one abstained.

After further discussion the Committee agreed, by eleven votes to two, with one abstention, to a further amendment proposed by Dr. ALUN EVANS, seconded by Dr. COLIN-RUSS.

That the Council be informed that it is the view of the Public Health Committee that it should be left to the Special Representative Meeting, taking full account of resolutions (1), (2), and (3) above, to decide for or against the giving of evidence to the Royal Commission in the best interests of the profession at large.

This was carried unanimously as a substantive motion.

No Approach to M.P.s

Mr. PRINGLE then asked whether the Committee still wanted a letter to be sent to Members of both Houses of Parliament. He pointed out that the previous letter was sent at a time when there was a complete breakdown of negotiations.

It was agreed that a letter should not be sent.

Other Matters

A number of items on the Committee's agenda had to be deferred owing to the time taken in the remuneration discussions. Comments on a draft circular to local authorities on accidents in the home were referred to the G.M.S. Committee, whose attention was drawn to the B.M.A.'s publication on coal-gas poisoning. Proposals for the amendment of the Food Hygiene Regulations were referred to a subcommittee and a question on death certificates was referred to the Central Ethical Committee.

CIVIL DEFENCE
INCREASED FEES

The Home Office has authorized, as from January 1, 1957, certain increased fees to registered medical practitioners under civil defence arrangements. A fee not exceeding £2 2s. (instead of £1 11s. 6d.) is payable for a one-hour lecture on first aid or home nursing to members of the Civil Defence Corps, and a fee of £1 17s. 6d. (instead of £1 5s.) may be paid for the examination of a candidate instructor attending a rescue section instructors' course at one of the Home Office civil defence schools.

Correspondence

Royal College of Physicians

SIR,—The President of the Royal College of Physicians, in his letter (*Supplement*, May 18, p. 275), again ignores the damaging points raised by Dr. John H. Hunt (*Supplement*, April 27, p. 232). Experienced observers will inevitably conclude that this is because the points are unanswerable and the constitution indefensible. Gratitude is hereby expressed to the President for making these facts so clearly deducible. The spirited enunciation of the rights of minorities at first glance appears enlightened and liberal, but, in the context, is seen to be merely a succinct expression of the oligarchical views of the Council of the College—rightly termed by the President a “minority”—though he omits to mention their entrenched position. It is not doubted that minorities must be represented, but in the last 120 years successive Parliaments have ordained that majorities also require representation. It is accordingly submitted that the political rights of 3,590 members must eventually prevail.—I am, etc.,

Sheffield, 1.

JOHN L. EDWARDS.

SIR,—I am glad to read in the *Supplement* of May 18 (p. 275) that Professor Robert Platt has tried to explain the last sentence in his original letter (*Supplement*, May 4, p. 244). I would respectfully point out to him that the danger of disloyalty to our brethren is much greater than the inability of the minority to speak its mind. The profession is in its present plight because of the independent action of the Comitia of the Royal College of Physicians, apparently without the knowledge of the Council of the B.M.A.—I am, etc.,

Hampton, Middlesex.

G. C. L. WOODROFFE.

The Changed Picture

SIR,—You have already been good enough to allow space for both the writers separately to express their views in your columns. Both have recommended withdrawal in one form or other as our strongest weapon in negotiation. For a time it seemed that this view had general support, but now it is obvious that, without in our opinion any real change in the position, opinion is divided. From a simple claim for the implementation of the Spens recommendations involving the payment of an increase of 24% many side issues have evolved, many carefully arranged by the Government to divide us, and others introduced by our own kind who seem to have lost sight of the real issues. Why then has this deviation occurred?

In the first instance the profession entered the N.H.S. because it understood that its pay would always keep pace with the cost of living. Such an arrangement would apparently be to our disadvantage should the cost of living ever again fall. Now it would appear that both the main political parties refuse to accept this arrangement. We alone in the community claim the right of automatic exemption from the effects of any change in living costs. Small wonder then that both parties are unhappy about it.

Accepting, then, for the moment that the politicians alone in the community claim the right to disregard their promises, what right have we to make this claim? Certainly when we came into the Service we had the right, since had we not entered it we should have secured our own financial future by raising our fees. It would, however, appear to us that we have the same right now only while we have the alternative of leaving this Service and again securing our financial status for ourselves. In our opinion, therefore, it is imperative that we should make it quite clear to Government, Opposition, and country alike that we can and will continue to provide medical service to the community and continue to support ourselves and our families against this rising cost of living, even if the N.H.S. has to be altered, put under new management, or even abolished.

With this clearly established, it is immaterial whether we do or do not co-operate with the Royal Commission, or any other red herring that the Government may produce at a later date. If its findings support us we may accept them even if the Government refuses to do so. If not, then we should disregard them and take definite steps towards withdrawal, by which means, or by the threat of which means, alone we shall force the Government to give us our rights; or else we should establish them for ourselves. Always let us remember that the N.H.S. cannot manage without us, but we undoubtedly can manage without it, for all that we need is ourselves and our surgeries. Expensive and usually unnecessary drugs may have to go back to being used for real emergencies, but that is probably a good thing.

By all means, then, let us hear what the Royal Commission has to say, but let us regard the lapse of time as a period of grace during which we should strengthen our Guild, and collect the 3d. per patient which we may dearly need at a later date. If, as a result of the Commission's findings, we feel that we can then allow our representatives to open negotiations with the Government, let us then be sure that not only are our original demands met but that this situation may not arise again and leave us even less prepared to meet it. Further, we should be sure that if our work increases from any cause, including a diminution in our own numbers which would at present seem inevitable, we should be compensated for it. Under the present terms we should not be.—We are, etc.,

G. N. FOX.

C. A. PRAGNELL.

Newton Ferrers, Southall.

SIR,—As the representative of unestablished principals on the General Medical Services Committee, having been unable to attend the fateful meeting of the Committee held at 9 a.m. on April 30 (*Supplement*, May 11, p. 260), may I comment on recent events? The decision of the G.M.S. Committee by a very small majority (which incidentally would have been smaller had I been able to attend) to reverse its previous decision and recommend giving evidence to the Royal Commission, and that of Council on the next day, giving its opinion that “circumstances had changed,” are astonishing both in timing and in content. Both meetings were obviously far too hurried for proper consideration of such important issues, and in any case no decision reversing or recommending reversal of previous policy should have been taken immediately before the Conference and Special Representative Meeting, thus giving representatives no opportunity to consult their constituents on the new policy. In the event, the confusion among representatives is now well known, and they are to be congratulated on doing the only proper thing and deferring the matter for consideration by the profession as a whole.

Thus the main issues have yet to be decided. Surely the essential point is that the profession came into the N.H.S., in spite of many misgivings, because the Government of the time claimed that it was offering a binding contract (Spens) and the profession was persuaded into believing this. Moreover, subsequent Governments, including the present one, have regarded the contract as valid and have agreed that it shall remain so “until such time as after the usual consultations some other basis is substituted” (*Supplement*, March 23, p. 123).

We must separate the past and present from the future. As to the past and present, from 1948 until now the profession has been working for the Government under the Spens contract, and therefore remuneration for the past and present—i.e., for each year since 1951—must be based on Spens. We must insist that the Government fulfil their side of this contract. Preferably, we should take our case to the courts, but should the highest legal advice be against this, or should the legal claim fail, we must insist on arbitration on our moral claim. It is clear that the Royal Commission is not an arbitrating body, and in any case it will not decide how to interpret Spens but how to replace it. The Government's intransigence has shown that the only way we can

insist on this fundamental right to arbitration is by withdrawal from the Service, and this we must do, unless the Government agrees to our interpretation of Spens or to Government arbitration. This is quite irrespective of whether evidence is to be given to the Royal Commission as to the level of future remuneration.

The position with regard to the future is different. If the profession were to agree with the Government that there should be a change in the basis or level of remuneration, there might be a case for setting up a committee composed of persons agreed by both sides with agreed terms of reference. The profession has not expressed an opinion as to whether there should be such a change in remuneration, and the present Royal Commission does not meet either of the above requirements in spite of the recent “assurances.” We should not give evidence until we agree to such a change in remuneration and until these minimum requirements are met. Even if these requirements are met, unless a legally binding contract between the profession and the Government can be based on the findings of the Royal Commission, the profession should think very carefully both before giving evidence and before trusting any Government again for its remuneration or terms of service. No Government can bind its successor, and all Governments treat doctors as just another group of technicians whose services are to be obtained at the lowest possible cost. The promises of British Governments are now apparently not worth the paper they are written on. If the Royal Commission's findings prove inconvenient to the Government in ten years' time, what is to prevent another Royal Commission being set up to adjust our remuneration (downwards) again?

Would we not be wiser, for this and many other reasons, for which there is insufficient space here, to insist on obtaining our remuneration from the person who knows our worth and needs and values our services—i.e., the patient? In order that the highest standards of treatment shall be available to all sections of the people, including the poor, we must first work out a scheme whereby the patient reclaims most of his fee from some insurance body. There are several examples of such schemes in operation in other countries, notably Australia, and the Council, in carrying out its intended view of the Health Services, should consider these with a view to formulating a scheme for use in this country and, when approved by the profession, negotiating with the Government on the necessary amendments to the N.H.S. The Government will be far more willing to listen to us if it sees from our present conduct that we are prepared to use force when necessary to safeguard our essential rights and freedoms.—I am, etc.,

London, E.4.

F. G. TOMLINS.

SIR,—Surely it was unnecessary for Council to lose its dignity and join the unedifying scramble caused by the Government choosing to throw a few crumbs to the profession. The haste with which a special representative meeting has been called suggests that it also has fallen for the bait.

It was obvious that an attempt would be made to cause disunity by a few apparent concessions just previous to the meetings of April 30 and May 1. Having survived that division, albeit by the skin of our teeth, the position has altered in that the initiative has returned to us. Until then we had left ourselves no room for manoeuvre. We are now free again. The Government has no more crumbs to scatter without making a major concession.

Let us make no decision now. Let us stay away from the Royal Commission. Let the play go on without the star. We have had previous experience of the disasters that can arise by co-operating “without prejudice.” The recent happenings have discouraged the faint-hearted and confused the many who doubt the ability of the B.M.A. ever to give a consistent lead. Let us wait at least six months and use the interval to do that organization in the periphery and centrally that is so necessary. We are not likely to get any further concession unless we force it, so we have nothing to lose by delay and everything to gain. Unless we obtain the right

of negotiation now we will never do so in the future. Remuneration is not now the issue. The issue is whether we shall remain in the N.H.S. as a partner.—I am, etc.,

Wolverhampton.

R. S. V. MARSHALL.

SIR,—You do no good service either to the profession or to those whose duty it will eventually be to negotiate on its behalf by proclaiming in your leading article (*Journal*, May 11, p. 1106) that the “Spens Reports are now a dead letter so far as the Government is concerned.” This statement merely repudiates all the correspondence and negotiations which have recently taken place as meaningless nonsense.

Ever since this dispute began the profession have been waving the letter from the Ministry of Health in front of the Government in which it was laid down that Spens remains the basis of our remuneration until such time as after due consultation another basis is substituted. The Government is now taking the steps which that letter envisages. If you wave the letter you must not grumble if the Government acts on it. After informing itself by means of a Royal Commission the Government will proceed to the consultations. No better way of ensuring that these will be unfavourable to us can be envisaged than by making statements suggesting that all is lost before we start.

The Spens Report written in 1946 speculated on what medical practice was going to be like in the National Health Service which was going to start two years later. Reading it now, it is only remarkable that it is not even more out of date than in fact it is. It lays down valuable principles and others which are quite useless and in fact have never been applied. It obviously needs revision and renovation. But to suggest that a report which has been the basis of our remuneration for the last nine years is a dead letter to one party in the dispute before anything else is substituted is a gross distortion of fact. Spens has poisoned relations between the Government and the B.M.A. ever since the Danckwerts Award. By its rigid adherence to Spens in its present form the B.M.A. has lost enormously in prestige as the chief negotiating body of the profession. Spens needs to be pruned and improved, not killed. By supporting a new and better Spens the Association can work its way back into the confidence both of the Government and of its members.

Arbitration is not the answer. In January it was carefully explained to our Division by two members of Council that arbitration was contrary to the policy of Council; it was time-wasting; and it would need an alteration in the Act to make it available to the whole profession. Council only changed its policy on arbitration because it wanted to embarrass the Prime Minister after he had made a speech advocating its use.—I am, etc.,

London, N.W.1.

JOHN W. WIGG.

Testing Opinion

SIR,—Do you not think that the time has come to stop the farce of having any more local meetings on the problems which are immediately affecting us, and to get down to brass tacks and really find out what members think? At the last meeting held in this area to decide these vital issues there were some 60 members present out of a possible 250, and I should say that next time there will be considerably less. Surely the facts are now known to everyone, and they should be in a position to give their opinion without any further haranguing by committee or council representatives. The Association should immediately communicate with all members by post, and they should be asked to give their opinion on the vital issues. The Association would then be in possession of the real opinion of the profession at this juncture. It would have saved a great deal of trouble if this method had been adopted months ago. There is no doubt that the B.M.A. machinery has been far too clumsy to handle the affairs of the past few months, and obviously requires complete revision.—I am, etc.,

London, S.W.16.

D. G. ALLEN.

BRITISH MEDICAL GUILD

Meetings to be Held

COVENTRY.—At Out-patient Department, Coventry and Warwickshire Hospital, Tuesday, May 28, 8.30 p.m. Address by Dr. A. Beauchamp.

Association Notices

A.R.M. MOTIONS AFFECTING POLICY

The following Motions which, if adopted, will involve Association policy have been submitted for inclusion in the 1957 Annual Representative Meeting Agenda. Under By-law 47 they require six weeks' notice in the *Journal*.

Service Committee and Tribunal Regulations

Amendment by South Staffordshire: That Service Committee and Tribunal Regulations should be amended to permit legal representation to both complainant and respondent.

Amendment by South Staffordshire: That there should be a final appeal to the Courts from a decision of the Minister in disciplinary cases against medical practitioners.

Fee for Short Report Form for Life Assurance Examination

Motion by Dorset: That this Meeting considers that the fee for a short examination for Life Assurance should be £1 ls. (The present fee for this short form of report is 15s.)

Change of Division

Motion by Rugby: That the By-laws be amended as follows:

Firstly: By-law 5 (a) to be deleted *in toto*.

Secondly: By-law 14 (1) be amended as follows: (1) At the beginning, after the words "subject as hereinafter provided", add "in By-law 14 (a)". (2) Delete at the end from "provided always that any member . . ." to " . . . in which he resides".

Thirdly by inserting the following new By-law 14 (a):

"Change of Division. 14 (a) If owing to ease of access, professional association, or other reason, a member (whose address for the time being in the Register of Members of the Association is within Great Britain or Northern Ireland) would prefer to become a member of some Division other than that of which he is, by reason of his address, an Ordinary Member, he shall on written application to the Secretary of the Association forthwith be transferred to and become an Ordinary Member of the Division of his choice and of no other."

A. MACRAE,
Secretary.

Diary of Central Meetings

MAY

- 30 Thurs. Medical Staffing Subcommittee, Central Consultants and Specialists Committee, 11.30 a.m.
31 Fri. S.R.M. Agenda Committee, 2 p.m.

JUNE

- 6 Thurs. Annual Conference of Representatives of Local Medical Committees, 10 a.m.
12 Wed. Council, 9.30 a.m.
12 Wed. Special Representative Meeting, 11 a.m.
12 Wed. Council (at conclusion of Special Representative Meeting).
13 Thurs. Editorial Subcommittee, Joint Formulary Committee, 11 a.m.
13 Thurs. Joint Formulary Committee, 2 p.m.
13 Thurs. Ophthalmic Group Committee, 2 p.m.
14 Fri. Overseas Committee, 2.15 p.m.
20 Thurs. G.M.S. Committee, 10.30 a.m.

Branch and Division Meetings to be Held

BATH, BRISTOL, AND SOMERSET BRANCH.—At Bristol General Hospital, Wednesday, May 29, 8.30 p.m., clinical meeting in conjunction with Bristol Division.

BIRMINGHAM DIVISION.—At 36, Harborne Road, Edgbaston, Birmingham, Thursday, May 30, 8.30 p.m., annual meeting.

BRADFORD DIVISION.—At Medical Societies' Room, Bradford Royal Infirmary, Wednesday, May 29, 8.15 p.m., A.G.M.

BROMLEY DIVISION.—At Selsdon Park Hotel, Wednesday, May 29, 7.30 for 8 p.m., annual dinner and dance.

BUCKINGHAMSHIRE DIVISION.—At Griffon Hotel, Amersham, Friday, May 31, 8.30 p.m., meeting.

EASTBOURNE DIVISION.—At the George Hotel, Alfriston, Tuesday, May 28, 7 for 7.30 p.m., dinner; 8.30 p.m., meeting, to which all medical practitioners in the area of the Division are invited.

EAST YORKSHIRE BRANCH.—At Unitarian Church, Park Street, Hull, Thursday, May 30, 8.45 p.m., meeting to which all medical practitioners in the area of the Division are invited.

ENFIELD AND POTTERS BAR DIVISION.—At St. Michael's Hospital, Chase Side Crescent, Enfield, Friday, May 31, 8.30 for 8.45 p.m., 7th annual meeting.

GLASGOW DIVISION.—At Glasgow Regional Office, 234, St. Vincent Street, Glasgow, Thursday, May 30, 8.30 p.m., meeting.

GOOLE AND SELBY DIVISION.—At the White Elephant, Snaith, Thursday, May 30, 7.30 p.m., annual general meeting.

HAMPSTEAD DIVISION.—At Central Library, Finchley Road, Tuesday, May 28, 8.30 p.m., annual general meeting.

HARROW DIVISION.—At Tithe Farmhouse, South Harrow, Sunday, May 26, 3.45 p.m., general meeting to which all medical practitioners in the area of the Division are invited.

HASTINGS DIVISION.—At Nurses' Home, Royal East Sussex Hospital, Hastings, Tuesday, May 28, 8.15 p.m., A.G.M.

HERTFORDSHIRE BRANCH.—At Conservative Hall, Waddington Road, St. Albans, Sunday, May 26, 3 p.m., meeting with Hertfordshire Local Medical Committee. All medical practitioners in the area are invited.

HUDDERSFIELD DIVISION.—At Board Room, Huddersfield Royal Infirmary, Tuesday, May 28, 8.15 p.m., special meeting to which all medical practitioners in the area of the Division are invited.

ISLE OF WIGHT DIVISION.—At Unity Hall, Newport, Tuesday, May 28, 3.15 p.m., meeting to which all medical practitioners in the area of the Division are invited; 4 p.m., A.G.M.

LAMBETH AND SOUTHWARK DIVISION.—At Nurses' Lecture Hall, Lambeth Hospital, Brook Drive, Kennington Road, S.E., Tuesday, May 28, 8.15 p.m., annual general meeting. (Open to non-members from 9 p.m. Dr. H. Alexander will speak.)

LANCASTER DIVISION.—At Royal King's Arms Hotel, Lancaster, Tuesday, May 28, 8.30 p.m., annual general meeting.

LEWISHAM DIVISION.—At Committee Room, Lewisham General Hospital, High Street, Lewisham, S.E., Friday, May 31, 8.30 p.m., meeting.

LIVERPOOL DIVISION.—At Liverpool Medical Institution, Tuesday, May 28, 8.30 p.m., general meeting in conjunction with local medical committee, to which all medical practitioners in the area of the Division are invited.

MANCHESTER DIVISION.—At Central Hall, Oldham Street, Manchester, Tuesday, May 28, 8.30 p.m., meeting in conjunction with Manchester Local Medical Committee. All medical practitioners in the area are invited.

MARYLEBONE DIVISION.—At Medical Society of London, 11, Chandos Street, W., Tuesday, May 28, 8.45 p.m., special meeting to which all medical practitioners in the area of the Division are invited.

METROPOLITAN COUNTIES BRANCH.—At B.M.A. House, Tavistock Square, London, W.C., Tuesday, June 18, 3 p.m., annual general meeting. President's address by Dr. J. W. McCarthy.

NORTH STAFFS DIVISION.—At Pathology Department, North Staffordshire Royal Infirmary, Stoke-on-Trent, Tuesday, May 28, 8 p.m., annual general meeting.

REIGATE DIVISION.—At Reigate Hill Hotel, Monday, May 27, 8.30 p.m., annual general meeting.

SOUTH ESSEX DIVISION.—At Railway Hotel, Hornchurch, Tuesday, May 28, 9 p.m., special meeting to which all medical practitioners in the area of the Division are invited.

SOUTH LANCASHIRE AND EAST CHESHIRE BRANCH.—At Grand Hotel, Manchester, Wednesday, May 29, 12 for 12.30 p.m., luncheon; 2 p.m., annual meeting.

SOUTH MIDDLESEX DIVISION.—At Anchor Hotel, Shepperton, Monday, May 27, 9 p.m., general meeting to which all medical practitioners in the area of the Division are invited.

SOUTHERN BRANCH.—At Portsmouth Council Chambers, Clarence Parade, Southsea, Saturday, June 1, 2.30 p.m., 81st annual meeting.

SOUTH-WESTERN BRANCH.—At Oldway, Paignton, Saturday, June 1, 1 for 1.15 p.m., lunch for members and their ladies; 2.30 p.m., 112th annual meeting. Inaugural address by Dr. R. M. S. McConaghey: "Epidemiology in Devon"; 4 p.m., tea; 4.45 p.m., address by Dr. Hugh Clegg (Editor, *British Medical Journal*): "State Medicine in Ancient Greece"; 7.30 for 8 p.m., annual dinner (guests are invited).

TOWER HAMLETS DIVISION.—At Mile End Hospital, Bancroft Road, E., Friday, May 31, 3 p.m., clinical meeting.

TUNBRIDGE WELLS DIVISION.—At Mount Ephraim Hotel, Tunbridge Wells, Sunday, June 2, 3 p.m., meeting to which all medical practitioners in the area of the Division are invited.

WANDSWORTH DIVISION.—At Out-patient Department, St. James' Hospital, Sarsfield Road, Balham, S.W., Wednesday, May 29, 8.30 p.m., clinical meeting.

WARRINGTON DIVISION.—At Orthopaedic Out-patient Department, Warrington Infirmary, Friday, May 31, 8.30 p.m., joint meeting with local medical committee.

WEST SUFFOLK DIVISION.—At Everard's Hotel, Bury St. Edmunds, Tuesday, May 28, 8.30 p.m., meeting to be held in conjunction with local medical committee. All medical practitioners in the area are invited.

ANNUAL MEETING: NEWCASTLE UPON TYNE, JULY 10-19

GENERAL MEDICAL SERVICES COMMITTEE
SUPPLEMENTARY REPORT TO LOCAL
MEDICAL COMMITTEES

REMUNERATION—INTERIM ADJUSTMENT

It will be remembered that the Special Conference of Local Medical Committees on April 30 resolved that the interim 5% addition to the net aggregate remuneration of general practitioners be accepted without prejudice, and that immediate negotiations should be entered into with the Ministry of Health upon the best way of distributing it so as to give the most effective help to the greatest number of practitioners.

Discussions on this matter have now taken place, and details of the proposed distribution are set out in the following letter which has recently been received from the Ministry of Health.

Interim Adjustment for General Medical Practitioners

I am writing on behalf of the Minister—and of the Secretary of State for Scotland, who wishes to be associated in this—to confirm that he would be happy to agree to the arrangements we discussed with you at our meeting on May 15, for distributing the increase of 5% in the aggregate net remuneration of general medical practitioners.

Having considered together a number of possible methods of distribution which would fit in with the recommendations of the Working Party in 1952, you suggested, with our full concurrence, that the method of choice, for an interim adjustment, would be an increase of 6d. on the capitation fee (bringing it to 17s. 6d. per annum) and of 1s. 6d. on the loading (bringing it to 11s. 6d. per annum).

As some small groups of doctors might not get sufficient help from this method alone, we all came to the conclusion that in addition initial practice allowances should be increased by 25% and supplementary annual payments—and hardship where these are still in existence—by 20%. We also together concluded that the amount at present allowed for the salary of trainee general practitioners should be increased by £75, making a total (excluding the training grant and the car allowance, each of £150) of £850 instead of the present £775.

On this basis, we would be very ready to ask executive councils to make by July 31 additional payments to general medical practitioners in respect of these increases in the capitation fees and loadings for the months of May and June.

The detailed implementation of the increases in initial practice allowances, supplementary annual payments, and hardship payments and in the allowance for trainee practitioners is bound to take a little more time, though we naturally want to settle these matters as quickly as can be done. We would propose, if you confirmed that this would be your wish, to ask executive councils to include in the quarterly payments which are made to general medical practitioners at the end of September retrospective adjustments of these particular payments to cover also the two months of May and June. You appreciated, I know, that in the short time which is available it would not be possible for executive councils to include these detailed adjustments in the special interim payment which we would ask them to make as early as possible in July.

Without Prejudice

The General Medical Services Committee is anxious that these proposals, which follow the broad principles laid down by the Working Party in 1952, should be submitted to the Annual Conference on June 6 for approval in order that the interim adjustment may be distributed to practitioners by July 31.

The Committee wishes to make it quite clear that it is submitting these proposals on the understanding that they are without prejudice to any final form of distribution which may be agreed when the present remuneration dispute is finally resolved.

It will be noted that in the letter from the Ministry reference is made to an increase in the salary of trainee general practitioners. Other assistants are not of course covered by the interim 5% adjustment, as they are not in direct contract with executive councils. For this reason the

Committee believes it right that any adjustment of assistants' salaries should be left for consideration by individual principals.

The Committee believes that these arrangements do enable the most effective help to be given to the greatest number of practitioners, and it accordingly recommends:

Recommendation: That the 5% increase in the net aggregate remuneration of general practitioners be distributed as follows:

- (1) That the initial practice allowance be increased by 25%;
- (2) That the supplementary annual payments and hardship payments be increased by 20%;
- (3) That the present loading be increased by 1s. 6d., bringing it to 11s. 6d. per annum;
- (4) That the present capitation fee be increased by 6d., bringing it to 17s. 6d. per annum.

A. B. DAVIES,
Chairman.

REGISTRARS GROUP COUNCIL

NEW NAME ADOPTED

The constitution of the Group, hospital medical staffing, standards of accommodation, and the problems of transitional senior registrars were the chief items under discussion at a meeting of the Registrars Group Council held at B.M.A. House on May 10.

Constitution

Opening the discussion on the constitution, the chairman, Mr. R. BREARLEY, reported that the Central Consultants and Specialists Committee had approved the proposals of the Registrars Group Executive Committee which would ensure representation of all members of hospital junior staff and the proposal that the Group Council should be renamed the Hospital Junior Staffs Central Committee. The day-to-day work of this committee would be carried out by a hospital junior staffs central executive committee. The executive committee would receive from and appoint to the Central Consultants and Specialists Committee two representatives to facilitate adequate liaison between the two committees.

Dr. A. G. STEPHENSON (Birmingham) moved Birmingham's counter-proposal that the number of representatives to each should be four. Though this was doubling the number of Group representatives, said Dr. Stephenson, they would be representing 3½ times as many people as before. Mr. R. LOWE (South-east Scotland) opposed the increased representation on the grounds that it was a tacit acceptance of the present method, and he was supported by Dr. H. WATSON (Eastern Scotland), who thought that as long as there were two the council would have a mouthpiece. Four could no more force a vote than could two. In addition, Dr. Watson suggested that, as the members of the Central Consultants and Specialists Committee were very busy men, it might meet the purpose if their representatives were invited to attend the Hospital Junior Staffs Committee executive committee only when, and while, relevant subjects were under discussion.

It was agreed that there should be an exchange of two representatives as recommended, and the recommendation that the Hospital Junior Staffs Committee executive committee should retain the right of direct access to the Council of the Association in the event of disagreement with the Central Consultants and Specialists Committee was also agreed to.

The Group Council then discussed suggestions for the regional organization of the hospital junior staffs. It was proposed that each region should make its own arrangements for the election of a regional committee and the appointment of representatives to serve upon the Hospital Junior Staffs Central Committee.

Whitley Committee B

The Central Consultants and Specialists Committee's refusal to agree to a request that a registrar representative should be present in Whitley Committee B when matters concerning registrars were under discussion was considered. The Group Council unanimously adopted a motion proposed by Mr. Lowe:

That this Group Council instructs its executive committee to put before, first, the Central Consultants and Specialists Committee and, if necessary, the Council of the British Medical Association its resolution that it be represented on a subcommittee of Whitley B formed to deal with matters concerning hospital junior staff.

The view was also expressed that registrars should be represented in discussions between the Ministry and the Joint Consultants Committee on matters of special interest to them. Appreciation was recorded of the occasions when the Joint Consultants Committee had received registrars and had taken note of their views.

Royal Commission

The Group Council then turned its attention to resolutions from Wales and Birmingham that the interests of registrars would best be served if they were able to present their own evidence to the Royal Commission on the remuneration of doctors and dentists. They were in favour of evidence being given to the Commission, and decided that if the Association should not give evidence means would have to be found whereby their views could be expressed.

Hospital Medical Staffing

The CHAIRMAN reported that he and Drs. J. E. Forster and G. R. Venning had been received by the Joint Consultants Committee in April to put forward the Group Council's views on the present discussions on hospital medical staffing. They had told the Joint Consultants Committee that registrars were not in favour of the creation of any new grade, but urged, as an immediate measure, that time-expired senior registrars should be retained on a rising salary scale, and that there should be a review of hospital establishments. These views had received the support of the Joint Consultants Committee. The Group Council proceeded to pass a resolution noting that there is now no substantial difference of view between it and the Joint Consultants Committee on the problems of hospital medical staffing, and urging the early implementation of the steps outlined above.

Standards of Accommodation

Consideration was given to a resolution from the Liverpool Regional Group:

The Liverpool Group regrets that the Board and Lodging Subcommittee of Whitley Committee B has so far not invited a registrar representative to be present at its discussions on standards of accommodation.

Dr. J. E. FORSTER (Liverpool) said that at its February meeting he had told the Central Consultants and Specialists Committee that the Group Council wanted to send a representative to the subcommittee, but had still failed to receive an invitation. His fear was that something might be decided by the subcommittee without their representative being present. He suggested writing direct to the chairman of the subcommittee—without going through the Central Consultants and Specialists Committee—to see if he would like to see them on the subject.

Dr. W. J. ATKINSON (North-east Metropolitan) thought that that would be the simplest method, and Mr. Lowe suggested that with it could be coupled the previous motion calling for representation on a subcommittee of Whitley Committee B. Mr. Lowe described it as a matter that could be made a test case on the general principle of representation. The motion was carried.

Transitional Appointments

Anxiety was expressed about the fate of time-expired senior registrars who were holding transitional appointments. It was explained that the Ministry had given a general undertaking that so far as possible time-expired senior registrars should not be lost to the Service, and boards had power to continue their appointments in a transitional capacity. It was reported that in more than one region these transitional appointments were being looked on as supernumerary appointments, the original appointments being filled by new senior registrars. This appeared to be a dangerous trend.

The North-east Scotland Regional Group raised the matter of the difficulty registrars had in providing many copies of their applications when applying for consultant appointments. It was felt that a single application should be sufficient; hospital authorities having clerical facilities for reduplicating could well undertake this work and save the applicant the unnecessary and frequently repeated expense.

The draft annual report of the work of the Registrars Group for the year 1956-7 was agreed to. This will be circularized and available in the regions to all registrars. Dr. G. PALLIS was elected to fill the vacancy on the executive committee caused by Dr. Binks's appointment to a consultant post.

Following the meeting of the Group Council the registrars' annual dinner was held at Kettner's Restaurant. The guests of honour were Sir Harry Platt, P.R.C.S., and Dr. S. Wand, Chairman of the B.M.A. Council. Dr. R. M. Forrester, a former chairman of the Registrars Group Council, was also present.

GENERAL PRACTICE REFORM ASSOCIATION

ANNUAL MEETING

The third annual general meeting of the General Practice Reform Association was held on May 4. In his opening address the chairman of the executive committee, Dr. A. C. J. SAUDEK, hoped that the Royal Commission would consider not only levels but also methods of remuneration, and would give special attention to assistants and small-list practitioners.

The meeting passed resolutions welcoming the appointment of the Royal Commission and the fact that it would be prepared to consider evidence on remuneration of assistants in general practice. It also passed a resolution on the distribution of the 5% interim increase to general practitioners to the effect that those with lower incomes should receive a higher percentage; and another resolution that the minimum share for a junior partner in an N.H.S. practice should not be less than one-half of the largest share, and that an incoming partner's share should be required to reach parity or near parity with other partners in not more than five years.

TOO MANY DOCTORS IN KENYA

BRANCH COUNCIL'S WARNING

According to a report from the council of the Kenya Branch of the B.M.A., medical practitioners have been entering Kenya in such numbers that a situation has been reached where they are unable to find immediate employment. The Branch council advises all those wishing to practise in Kenya to make careful inquiries beforehand, and to have a definite promise of employment before entering the country. It is stated that the situation applies to all parts of the country, and to both Europeans and Asians; it applies particularly to general practitioners, but also to a lesser extent to specialists. The day of the "squatter" is considered to be past unless he has a large amount of capital to last him while he is getting established.

The honorary secretary of the Kenya Branch (Mr. Andrew Hicks, P.O. Box 20022, Nairobi, Kenya, E. Africa) would be pleased to answer personal queries.

GENERAL MEDICAL SERVICES COMMITTEE ELECTION OF DIRECT REPRESENTATIVES, 1957-8

The following direct representatives upon the General Medical Services Committee have been elected unopposed for the Groups mentioned:

- Group A1**
Dr. J. T. Baldwin (Penicuik, Midlothian).
- Group A2**
Dr. C. J. Swanson (Aberfeldy, Perthshire).
- Group A3**
Dr. W. M. Knox (Glasgow).
- Group A4**
Dr. R. C. Hamilton (Kilmarnock).
- Group C**
Dr. G. D. W. Adamson (Loxley).
Dr. B. Burns (Sheffield).
- Group E**
Dr. Miles Parkes (Crewe).
- Group G**
Dr. E. W. Goodwin (Leicester).
Dr. A. D. Stoker (Winstar, Derby).
- Group H**
Dr. A. B. Davies (Walsall).
- Group I**
Dr. F. A. Smorftt (Southam, Warwick).
- Group L**
Dr. S. Noy Scott (Plympton).
- Group M**
Dr. K. S. Maurice-Smith (Ely).
- Group N**
Dr. H. S. Howie Wood (Isle of Wight).
- Group O**
Dr. J. C. Cameron (Wallington).
- Group P**
Dr. R. Green (Hurstpierpoint, Sussex).
- Group Q**
Dr. A. Talbot Rogers (Bromley, Kent).
- Group R**
Dr. W. Morgan Evans (Hounslow).
Dr. A. N. Mathias (Cricklewood).
- Group S**
Dr. H. N. Rose (Ilford, Essex).
Dr. C. M. Scott (New Barnet, Herts).
- Group T**
Dr. M. Sorsby (London, E.5).
Dr. H. H. D. Sutherland (London, W.10).
- Group U**
Dr. J. M. B. Donaldson (Belfast).

In the contested Groups—namely, B, D, F, J, and K—the results were as follows:

- Group B**
Dr. T. S. Blaiklock (Morpeth). *Elected.*
Dr. F. Lishman (Crook, Co. Durham). *Elected.*
Dr. F. J. Stevenson (Carlisle).
- Group D**
Dr. I. Affleck (Kearsley, Lancs). *Elected.*
Dr. F. S. Catto (Manchester). *Elected.*
Dr. J. J. Devlin (Fleetwood). *Elected.*
Dr. W. E. Bowden (Warrington).
Dr. I. M. Dove (Blackpool).
- Group F**
Dr. T. J. Hargest (Clydach, Swansea). *Elected.*
Dr. G. P. Williams (Holyhead). *Elected.*
Dr. W. D. Williams (Burry Port, Carm).
- Group J**
Dr. C. F. R. Killick (Wilton, Somerset). *Elected.*
Dr. W. B. S. Crawford (Bath).
- Group K**
Dr. R. W. McConnel (Wendover, Bucks). *Elected.*
Dr. A. Wilson (Northampton).

Dangerous Drugs Act: Withdrawal of Authority

The Home Office announces that Dr. Robert Archibald Herschell Morison (Barrow-in-Furness) is no longer authorized to be in possession of or to prescribe those drugs to which the Dangerous Drugs Regulations apply.

HOSPITAL BOARD APPOINTMENTS

The Minister of Health has appointed or reappointed the following medical members to boards of governors of teaching hospitals and regional hospital boards, mainly to fill vacancies caused by retirement in rotation of one-third of the members, until March 31, 1960.

London Teaching Hospitals

St. Bartholomew's.—Reappointed: Dr. C. F. Harris, Mr. J. B. Hume, Mr. E. G. Tuckwell.
London.—Reappointed: Dr. J. Graham, Dr. G. T. Hankey. New: Dr. W. Evans, Professor Dorothy S. Russell.
Royal Free.—Reappointed: Miss Gladys Hill, Miss K. G. Lloyd-Williams, Miss A. M. C. MacPherson. New: Mrs. Una C. Ledingham.
University College.—Reappointed: Sir G. R. MacRobert, Professor W. Smith. New: Sir James Kilpatrick.
Middlesex.—New: Dr. A. J. B. Goldsmith, Professor C. A. Keele, Mr. B. R. M. Johnson, Mr. D. H. Patey.
Charing Cross.—Reappointed: Dr. D. H. Campbell, Dr. E. Grundy, Mr. H. G. E. Williams. New: Mr. N. C. Tanner.
St. George's.—Reappointed: Dr. C. B. Henry, Mr. E. R. Smith. New: Dr. H. W. Gordon.
Westminster.—Reappointed: Mr. A. L. Abel, Mr. H. E. Harding, Mr. E. S. Lee, Professor R. J. V. Pulvertaft.
St. Mary's.—Reappointed: Mr. A. G. Cross, Professor R. Cruickshank, Dr. G. B. Mitchell Heggs, Dr. S. L. Simpson. New: Dr. D. H. Brinton, Dr. W. D. W. Brooks.
Guy's.—Reappointed: Dr. M. Campbell, Sir William Kelsey Fry. New: Mr. G. F. Gibberd.
King's College.—Reappointed: Brigadier H. L. Glyn Hughes, Sir Cecil Wakeley.
St. Thomas's.—Reappointed: Professor T. P. Kilner, Sir Max Page, Mr. A. J. Wrigley.
Hammersmith, West London, and St. Mark's.—Reappointed: Dr. R. Cove-Smith, Sir Allen Daley, Dr. C. E. Dukes, Sir Francis Fraser.
Hospital for Sick Children.—Reappointed: Dr. G. H. Newns, Dr. B. Schlesinger, Mr. D. I. Williams. New: Dr. R. E. Bonham Carter, Dr. J. A. Scott.
National Hospital for Nervous Diseases.—Reappointed: Sir Russell Brain, Dr. J. St. C. Elkington, Dr. M. Kremer.
Royal National Throat, Nose, and Ear.—Reappointed: Mr. J. C. Hogg, Mr. G. H. Howells. New: Dr. T. V. L. Critchlow.
Moorfields.—New: Mr. G. G. Penman.
Bethlem Royal and Maudsley.—Reappointed: Dr. C. P. Blacker.
St. John's Hospital for Diseases of the Skin.—Reappointed: Miss J. K. Aitken, Dr. S. C. Shanks. New: Dr. L. Forman.
Hospitals for Diseases of the Chest.—Reappointed: Sir Russell Brock, Dr. J. L. Livingstone, Dr. K. Robson, Dr. V. C. Thompson.
Royal National Orthopaedic.—Reappointed: Dr. C. H. Lack, Dr. R. Nassim.
National Heart.—Reappointed: Dr. H. A. Bulman. New: Dr. T. F. Cotton.
St. Peter's, St. Paul's, and St. Philip's.—Reappointed: Mr. A. R. C. Higham. New: Mr. H. G. Hanley.
Royal Marsden.—Reappointed: Dr. P. E. T. Hancock.
Queen Charlotte's and Chelsea.—Reappointed: Mr. H. G. E. Arthur, Mr. J. B. Blaikley, Dr. C. Newman.
Eastman Dental.—Reappointed: Brigadier R. A. Broderick, Sir William Kelsey Fry. New: Professor C. F. Ballard.

Provincial Teaching Hospitals

United Newcastle upon Tyne.—Reappointed: Dr. C. N. Armstrong.
United Leeds.—Reappointed: Professor D. Chamberlain. New: Professor A. S. Johnstone.
United Sheffield.—Reappointed: Dr. J. Wilkie. New: Mr. J. C. Anderson.
United Cambridge.—Reappointed: Miss J. E. Bottomley, Mr. A. S. H. Walford.
United Oxford.—Reappointed: Colonel L. K. Ledger, Dr. A. R. H. Williamson. New: Mr. R. G. Macbeth, Mr. J. A. Stallworthy.
United Bristol.—Reappointed: Professor R. J. Brocklehurst, Professor T. F. Hewer. New: Dr. C. D. Evans, Mr. A. Miller.
United Cardiff.—Reappointed: Dr. L. H. Howells. New: Mr. H. R. Harley.

United Birmingham.—Reappointed: Mrs. B. M. W. Dobbie, Professor F. A. R. Stammers.
United Manchester.—Reappointed: Professor W. I. C. Morris, Professor Sir Harry Platt. New: Dr. J. F. Wilkinson.
United Liverpool.—Reappointed: Professor W. M. Frazer, Professor C. A. Wells. New: Dr. E. Wyn Jones.

Regional Hospital Boards

Newcastle.—Reappointed: Dr. C. N. Armstrong, Dr. R. E. Jowett, Mr. R. S. Venters.
Leeds.—Reappointed: Dr. W. A. Hyslop, Mr. G. W. Watson.
Sheffield.—Reappointed: Dr. G. H. Gibson, Mr. J. L. A. Grout, Dr. C. S. O'Flynn.
East Anglia.—Reappointed: Professor A. L. Banks, Dr. K. J. Grant.
North-west Metropolitan.—Reappointed: Dr. E. C. Warner, Miss K. G. Lloyd-Williams. New: Professor F. C. Wilkinson.
North-east Metropolitan.—Reappointed: Dr. T. Rowland Hill, Dr. J. A. Moody, Mr. R. W. Reid.
South-west Metropolitan.—Reappointed: Sir William Kelsey Fry, Dr. V. F. Hall, Dr. W. G. Masfield. New: Mr. H. W. L. Molesworth.
South-west Metropolitan.—Reappointed: Mr. A. L. Abel, Sir Geoffrey Todd.
Oxford.—Reappointed: Mr. C. Gledhill.
South-western.—Reappointed: Professor R. J. Brocklehurst, Dr. L. C. Hill, Professor A. V. Neale.
Wales.—Reappointed: Provost A. T. Jones, Dr. E. W. Jones, Mr. E. K. R. Thomas.
Birmingham.—Reappointed: Dr. J. H. Sheldon, Professor A. P. Thomson.
Manchester.—Reappointed: Professor V. F. Lambert, Dr. R. W. Luxton, Dr. M. Parkes, Professor Sir Harry Platt.
Liverpool.—Reappointed: Professor W. M. Frazer, Professor H. L. Sheehan.

APPOINTMENT OF CHAIRMEN OF
REGIONAL BOARDS AND BOARDS OF
GOVERNORS

The Minister of Health has made the following appointments or reappointments as chairmen of regional hospital boards and boards of governors of teaching hospitals. The appointments, which date from March 31, 1957, are for three years.

Leeds Regional Hospital Board.—Major J. C. Hunter.
South-west Metropolitan Regional Hospital Board.—Mr. A. G. Linfield.
Oxford Regional Hospital Board.—Sir George Schuster.
Birmingham Regional Hospital Board.—Mr. E. W. Thompson.
United Newcastle upon Tyne Hospitals.—Sir Walter Drummond.
United Leeds Hospitals.—Sir George Martin.
United Sheffield Hospitals.—Alderman A. Ballard.
United Cambridge Hospitals.—Mr. Roger H. Parker.
United Oxford Hospitals.—Sir David Lindsay Keir.
United Cardiff Hospitals.—Alderman Thomas Evans.
United Birmingham Hospitals.—Mr. Evan A. Norton.
St. Bartholomew's Hospital.—Sir George Aylwen.
London Hospital.—Sir John Mann.
University College Hospital.—Sir Alexander Maxwell.
Middlesex Hospital.—Lord Astor of Hever.
Charing Cross Hospital.—Lord Inman.
St. George's Hospital.—Viscount Ingleby.
Westminster Hospital.—Lord Nathan of Churt.
St. Mary's Hospital.—Mr. Edgar E. Lawley.
Guy's Hospital.—Lord Cunliffe.
King's College Hospital.—The Marquess of Normanby.
St. Thomas's Hospital.—Sir Arthur J. P. Howard.
Hammersmith, West London, and St. Mark's Hospitals.—Sir Desmond Morton.
Royal National Throat, Nose, and Ear Hospital.—Mr. Ernest Edward Taylor.
St. John's Hospital for Diseases of the Skin.—Mr. J. A. M. Ellison-Macartney.
Hospitals for Diseases of the Chest.—Sir John Little Gilmour.
Royal National Orthopaedic Hospital.—Sir Henry R. K. Floyd.
National Heart Hospital.—Mr. J. M. Oakley.
St. Peter's, St. Paul's, and St. Philip's Hospitals.—Mr. Laurence E. D. Bevan.
Royal Marsden Hospital.—Mr. J. M. Wallace.

MEDICAL PRACTICES COMMITTEE

AMENDMENT OF CLASSIFICATION OF AREAS

The following areas have been reclassified by the Medical Practices Committee as "designated":

Durham.—*Durham Rural District. *Bishop Auckland (except Bishop Auckland Town).
Lancashire.—*Fyldeley.
London.—Borough of Camberwell: *Coburg, Addington, St. George's, North Peckham and Marlborough Wards. *West and Town Hall Wards. Borough of Lambeth: *Prince's and Oval Wards.
Middlesex.—Borough of Wood Green: *Noel Park and Town Hall Wards. *Urban District of Ruislip-Northwood.
Northamptonshire.—*Rushden.
Wiltshire.—*Swindon (except Walcot).
Stoke-on-Trent.—*Smallthorne and Norton District.
Glamorganshire.—*The Townships of Treorchy, Llwynypia, Ferndale, Tylorstown, Wattstown, and Ynyshir (Rhondda Municipal Borough).

The following areas have been reclassified as "intermediate":

Cheshire.—Little Sutton, Borough of Ellesmere Port and Whitby (Chester District).
Durham.—Urban District of Hetton.
Kent and Canterbury.—Borough of Maidstone: Urban District of Sevenoaks.
Leicestershire and Rutland.—Melton Mowbray (except Bottesford and Somerby).
London.—Borough of Battersea: Bolingbroke, Thornton and Broomwood Wards and the Nightingale Ward (combined). Borough of Islington: St. Mary and St. Peter's Wards.
Middlesex.—Borough of Uxbridge: Urban District of Sunbury-on-Thames.
Norfolk.—Rural District of Marshland.
Northamptonshire.—Oundle District. Wellingborough District. Corby (including Great Easton), Higham Ferrers and Raunds.
Birmingham.—Perry Barr.
Kingston-upon-Hull.—South District.
Smethwick.—Whole of County Borough.
Southampton.—Whole of County Borough.
Southend-on-Sea.—Southend and Thorpe Bay.
Denbighshire and Flintshire.—Rhosllanerchrugog.
Glamorganshire.—Rhondda Municipal Borough (except Trehafod, Treorchy, Llwynypia, Ferndale, Tylorstown, Wattstown and Ynyshir). Urban District of Maesteg.
Monmouthshire and Newport.—Urban District of Bedwellty. Municipal Borough and Rural District of Monmouth.
Pembrokeshire.—Fishguard and Goodwick.

The following areas have been reclassified as "restricted":

Buckinghamshire.—Iver.
Devon and Exeter.—Cullompton (Tiverton Rural District).
Essex.—Rural District of Maldon.
Hampshire.—Mudford. That portion of the Borough of Christchurch immediately east of "Stanpit" which is within a radius of approximately half a mile from the point on the sea-front known as "Sandhills".
Kent and Canterbury.—Rural District of Maidstone.
London.—Borough of St. Pancras: Whitfield Ward.
Salop.—Ellesmere.
Somersetshire.—Rural District of Long Ashton. Urban District of Burnham-on-Sea.
Suffolk (East).—Stoven (Wainford District).
Sussex (East).—Rural District of Chichester.
Wiltshire.—Walcot area of Swindon.
Croydon.—Addiscombe Ward (South Parliamentary Division).
Glamorganshire.—Resolven (Neath Rural District).

The Ministry of Health has issued a revised edition of the booklet of lists of proprietary preparations classified in categories 1, 5, and 6, following further decisions by the Joint Committee on Prescribing and the Standing Joint Committee on the Classification of Proprietary Medicines. The list replaces that issued in November, 1954, and the alterations and additions issued in April, 1955, and April, 1956. Copies have been sent to executive councils for distribution to doctors and chemists.

PUBLIC HEALTH MEDICAL OFFICERS

REVISED CAR ALLOWANCES

In view of the recent decrease in the price of petrol Committee C of the Medical Whitley Council has agreed on a revision of the increased motor-car allowances for public health medical officers which came into force in January as a result of petrol rationing and the increased price. The revised lower rates come into force as from May 1 and are set out in M.D.C. Circular No. 34 to local authorities in England and Wales.

DRUGS FOR PRIVATE PATIENTS

APPROACH TO MINISTRY

At its meeting on May 8 the Council of the Association unanimously agreed to a recommendation of the Private Practice Committee, presented by its chairman, Dr. ALEXANDER BROWN, that the Minister of Health should now be informed that the Council wishes to take advantage of his offer to initiate discussions between the Association and officers of the Ministry on the question of drugs for private patients. The Minister's offer was on the understanding that the discussions should be on an exploratory basis. The Private Practice Committee made its recommendation after considering the arguments put before the Council at its meeting on March 27 for and against the G.M.S. Committee's recommendation "that at an appropriate time in the future discussions be initiated with officers of the Ministry of Health on the provision of drugs for private patients." The Private Practice Committee remained convinced that the appropriate time was now.

The following have been invited by Dr. S. WAND, Chairman of Council, to accompany him to the Ministry: Dr. ALEXANDER BROWN, Dr. A. B. DAVIES, Dr. LINDSEY BATTEN, and Dr. A. N. MATHIAS. The Ministry has been asked to arrange a date for the meeting.

BUREAUS' CHANGE OF TITLE

EMPIRE TO COMMONWEALTH

At the meeting of the Council of the B.M.A. on May 8 it was decided that the title of the Empire Medical Advisory Bureau should be changed to Commonwealth Medical Advisory Bureau, and that of the International Medical Visitors Bureau to International Medical Advisory Bureau.

Questions Answered

We publish below a selection of those questions and answers which seem of general interest. It is regretted that it is not possible to supply answers to all questions submitted.

Treatment for Road Accidents

Q.—I am sometimes called to give emergency treatment to victims of road accidents. The local police tell me that no claim can be made for fees for attending such accidents. Is this so?

A.—The position is clearly stated in the B.M.A. *Medical Practitioners' Handbook*.¹ A doctor is not precluded from charging for attendance, and therefore the statement attributed to the local police is not correct.

REFERENCE

¹ *Medical Practitioners' Handbook*, 1954, p. 155. British Medical Association, London.

HOSPITALITY

A German's doctor's son, aged 18, would like to exchange visits with a British boy between the end of July and the end of August. The British boy would have an opportunity of shooting with the doctor while staying in Munich.

A French doctor's son, aged 15, from Marseilles, would like to visit a medical family in August in the London area. A British boy could visit France in June or July.

A French doctor (from Strasbourg) and his wife would like to arrange an exchange or stay as a paying guest with a medical family in the London area for two weeks from June 25 while visiting hospitals in London.

Would anyone interested please get in touch with Brigadier H. A. Sandiford, International Medical Advisory Bureau, B.M.A. House, Tavistock Square, London, W.C.1.

Scottish News

EXAMINATION OF PERSONS SUSPECTED
OF BEING DRUNK IN CHARGE OF
MOTOR VEHICLES

Following representations from the Scottish Committee, the Crown Agent has agreed that as from June 1 procurators-fiscal will pay doctors who carry out examinations of persons suspected of being drunk in charge of motor vehicles the following fees: (1) For an examination which takes place in the daytime up to 8 p.m., a fixed fee of £2 2s. (2) For an examination which takes place between 8 p.m. and 9 a.m., a fixed fee of £3 3s.

Correspondence

Because of heavy pressure on our space, correspondents are asked to keep their letters short.

Weakness of Multiple Representation

SIR,—The state of confusion and disunity into which the profession has fallen over the remuneration issue has shown again the lamentable weakness of multiple representation. Apart from various other bodies, including the royal colleges and the Medical Practitioners' Union, which presume to represent some or all of the profession, the B.M.A. itself has not less than three heads: the autonomous General Medical Services and Consultants and Specialists Committees, as well as the Council, or rather the Representative Body, for the Council must defer determination of policy to the R.B., an assembly which meets only annually or for a special purpose. Even that is not the end to the division of authority, for the G.M.S. Committee is responsible to the Conference of Local Medical Committees which are statutory and outside the Association; and the Central Consultants and Specialists Committee is subordinate to the Joint Consultants Committee, which is also outside the Association and composed mainly of nominees of the colleges, while the Public Health Committee is in part drawn from the Society of Medical Officers of Health.

It would be difficult to imagine a more confused and impractical state of affairs. It cannot be said that though illogical it works, because it is obvious that it does not. It lays the profession wide open to defeat on any issue. While it continues, the doctors of this country might as well reconcile themselves without further argument to dictation by the State as to their terms of employment in the N.H.S. and to disregard of any reforms they may propose. As a result we have witnessed recently the same sad sequence of events as in 1948: the brave assertion of rights and principles; the compromising unilateral action of a college president obsessed with belief in a traditional duty to advise

the Government; uncoordinated declarations of various bodies; wilting of the will of leaders before Ministerial assurances; throwing over of principles in the name of "statesmanship"; confused debates in the Council and committees, the Conference, and the R.B.; withdrawal of leadership; and doubtless we will see defeat of the original intentions, and ultimately the dismay and disgust of the rank and file.

Unfortunately, the Constitution Committee of the Association, after four years of deliberation, has proposed only to leave this state of disunity as it is. Yet the need to remedy it is urgent and the remedy appears to be obvious in reconstitution of the structure and authority of the Council. If the G.M.S., Central Consultants and Specialists, and Public Health Committees were brought into full representation in the Council and the Council given the ultimate power in policy and in action on all matters affecting the whole profession, authority would be co-ordinated and canalized so that the Association could act effectively and promptly, as the conditions of to-day require. Further, the Association should assert its authority, based on its democratic character and its membership of 80% of the practising doctors in Britain, alone to represent the profession, for joint committees with the undemocratically constituted royal colleges have clearly proved to be a source of weakness, not of loyalty and strength. In the light of recent events no less than those of 1948, is it too much to hope that reform of representation in this kind of way may be made without further delay?—I am, etc.,

Bournemouth.

N. ROSS SMITH.

Organized Pressure

SIR,—Organized labour year after year succeeds in getting increased remuneration to compensate for rises in the cost of living. It is only too clear that unorganized labour, such as we doctors, must organize ourselves similarly to ensure protection against the effects of inflation so long as that is allowed to endure.

Many doctors maintain that, being superior to the ordinary citizen, it is beneath us to support our trade union and to be prepared to strike. They cannot have it both ways. If we are so superior we should be remunerated accordingly without argument by an admiring nation; but the Health Service has shown no sign of recognizing this. If not, and we are like other men and women, we are merely being obstinate not to adopt effective tactics to protect our interests as doctors are doing, I believe, in Sweden.

The Government says it will not, as some employers do, automatically adjust our remuneration to inflationary change: the implication is that it is prepared to yield only to pressure exerted through the usual channels—namely, periodic organized pressure backed by the will to strike.—I am, etc.,

Workop, Notts.

M. HAYDON-BAILLIE.

Reform of Health Service

SIR,—There are probably many people who would agree that a contributory scheme organized by the medical profession, whether covering only general-practitioner services or extending to specialist services, would be preferable to the present National Health Service in many ways. As an economist, however, I feel that some of your correspondents who have put forward suggestions for such a scheme recently have underestimated the difficulties.

Dr. R. P. Hendry (*Supplement*, April 6, p. 157) suggests that at present the ordinary person is paying only 10d. a week through his National Insurance stamp towards the cost of the National Health Service and only 1d. a week to the general-practitioner pool. This is misleading, for he is paying other taxes that fully cover the cost of the Service, only a small part of which is financed by the contribution from the National Insurance fund. Nevertheless, I think there would be those who would be willing to join such a scheme, even though it meant paying twice, just as many parents now make great sacrifices to have their children educated at the

schools of their choice. Many, however, would have to think very carefully before joining such a scheme when they are already heavily taxed to pay for the National Health Service.

To allow general practitioners a capitation fee of 30s. per patient would involve a family of four in a cost of £6 a year (more in fact if allowance is made for administrative and practice expenses) without drugs. Such a scheme could only work on a large scale if withdrawal were to wreck the present National Health Service, or if the Government chose to amend the latter or granted special tax concessions, which those not using it. Given appropriate tax remissions, which are possible, there is no reason why the ordinary worker in this country could not pay directly for his medical services, and the existence of an alternative to the National Health Service would ensure that the latter provided efficient service.—I am, etc.,

London, N.W.1.

J. JACKSON.

Withdrawal from the Health Service

SIR,—From the tumult and the shouting of the last few months three fundamental points emerge: (1) We have a genuine grievance in the amount we are paid, in the method of payment, and the means whereby an increase can be effected. (2) There is a widespread sense of dissatisfaction among general practitioners on the whole structure and working of the Service, and there is a case for radical reform. (3) The Government has handled the whole matter very badly. The term gross mismanagement could well be applied.

We have made it clear to the Government that we will not accept summary treatment, and in this we have had the backing of the public and the press. The Government has acknowledged its mistake in the granting of an interim increase and the setting up of a Royal Commission with wide terms of reference. We would do well to accept this as a victory and a starting-point for further negotiation. The militant action envisaged in the thoroughly bad plan for a phased withdrawal can only result in loss of public support, and, under the present circumstances, loss of professional dignity. Let our leaders eschew further talk of withdrawal, consolidate the ground they have gained, and co-operate to the full with the Commission. Toughness can very easily become obstinacy.—I am, etc.,

Leicester.

LOGAN MITCHELL.

Present Position

SIR,—It is being bandied about freely that our leaders have let us down again, that the Royal College started the rot again, and that our chosen representatives have softened and weakened. Instead, is it not true to say that we are amateurs in political manoeuvre, our knowledge of business management is slender, and our trade union discipline is non-existent? We can be thankful that we are not politicians and grateful that we are not trade-unionists, but it is desperately unfortunate that our business organization is not considerably stronger. Would I.C.I., Lever Brothers, or B.W. have been content to have reports from secretaries that those who attended local meetings had agreed, albeit almost unanimously, to support the recommendations of the central committees? We submit that the answer is "No," and that each of these business organizations would have required evidence of good faith in the form of a good

Our lack of financial backing, in the form of a good fighting fund, produces our greatest weakness. The voluntary levy forms, on which we promise to pay 5% of income, have not been signed and delivered in adequate numbers for our purpose, and this has not been due entirely by any means to the apathy of the individual. Our business organization appears to us to have failed centrally and locally. It failed centrally at the beginning, because confusion was caused by the original letter to each general practitioner including only one levy form, when it should have been realized that very many of us would require two or three such forms. The central failure continued because one man

does not appear to have been given the single job of obtaining information about the number of levy forms signed and handed to the local secretaries, of reminding constantly the local secretaries that they had jobs to do—more and more frequently and urgently to the unsatisfactory areas—and eventually perhaps of asking whether the supporting motions were valueless or whether it was the local officers who were worthless.

As the general practitioners were expected to fight both for themselves and for the consultants, it was evident centrally and locally, to general practitioners and consultants alike, that the latter would need to make their practical contribution, but the effort to obtain this financial support does not appear to have been determined, though we know that individual consultants, as ever, are contributing willingly and generously. Our organization appears to have failed likewise locally, if reports be true that one borough local medical committee has had delivered three voluntary levy forms and that a county local medical committee has collected 10% of forms; for it is evident that, where some trouble has been taken to get the forms signed and collected, considerably better results have been obtained, as in Lancashire with 50%, Warrington, where we have a reputation for solidarity, with 90%, and the excellent Bolton's 95%. We are a liberal profession and take time to make up our minds; having made up our minds and agreed to support a certain line of action, we need then to be reminded, if necessary again and again, that we must support that line of action in a practical and financial way.

In spite of the failures of our business organizations centrally and locally, it must be remembered that the leaders of the B.M.A. came to the top because of their abilities in matters of administration, medical politics, negotiation, etc., while on the other hand we had fondly hoped that the leaders of the Royal Colleges reached their lofty pinnacles for different reasons and would therefore be more willing to leave medical politics to more democratic bodies. The Royal College of Surgeons appears to have accepted this view and the infant College of General Practitioners has eschewed politics from its start. It may be therefore that the Royal College of Physicians is not blameless, but reports of a 30% practical support by general practitioners and only individual support by consultants reaching the chairman of Council are hardly likely to maintain his confidence and strength of purpose or encourage our representatives to prop and stay him and our other leaders against the shifting sands of political manoeuvre.

Time is running on and confusion and dissension are creeping in, but the rot may yet be stopped by getting the remainder of the levy forms signed and collected and by a fresh appeal to local medical committees to swell the central fund. There is no weapon more respected by politicians than a good fighting fund, especially when it comes from the rank and file. There is a rumour that the Government might forbid executive councils to collect and hand over the levy. Would they dare? If they were so foolhardy, nothing would do more to harden our resolve, but the mere knowledge that we were holding these completed forms would be an indication to them of our determination and the best weapon in our armoury.—We are, etc.,

Warrington.

W. E. BOWDEN.
P. O'BRIEN.

SIR,—The medical profession seems to be so confused as to forget the main issue over minor ones. The fact still remains that the fundamental contract, may it be legal or moral, between the Government and the profession has been one-sidedly and unreasonably broken by the Government. The Royal Commission was suddenly sprung upon us by the Government without any prior consultation and in a way calculated to confound and surprise the doctors. Certain minor concessions, none of them legally binding, far less binding on the Government than the Spens Report, have been obtained to sweeten the pill and lull us into apathy. Let us be quite clear that if the Government chooses to

break a major agreement with an important profession without any valid reason, what possible trust could be placed on any further promises from, or agreements with, such a Government?

The sad fact is that, in the face of such obvious injustice and contemptuous treatment, it has not been possible to arouse the medical profession to unified action, and even our leaders do not seem to agree. Is it not the deplorable truth that fear of financial difficulties, meanness in paying their voluntary levy, and lack of courage in general have driven the medical profession against their better conscience to act without character and rather following the poor dictates of expediency? Courage and unity among us would have aided our profession far better, and incidentally helped the nation greatly. Are any steps being taken to prepare for unified action when the inevitable results of our folly will arise? I have never felt more humiliated as a member of the medical profession than at this juncture.—I am, etc.,

W. Wickham, Kent.

R. COLBY.

Hospital Spens

SIR,—There can be little doubt that Sir Russell Brain's action at a critical time in the profession's dispute with the Government has precipitated a sequence of events that can only lead to complete submission of a great profession to dictation. The only ray of hope is the fact that the G.M.S. Committee is still fairly evenly divided on the matter of giving evidence and might yet be bold enough to cut its losses and break away from an alliance which has produced such embarrassing and distressing results.

It has been apparent throughout that most hospital medical officers have been uneasy about the original recommendations of Council, and I submit that the explanation lies in the fact that the Spens recommendations for hospital staffs were buried three years ago. The 1954 remuneration award, accepted by the Whitley Staff Side under the chairmanship of the same Sir Russell Brain, in one stroke dealt a lethal blow to the 30-page document still said by some to be the remuneration bible of hospital medical staffs, from A award consultants down to junior house officers. Reading the report again to-day it is interesting to note that the senior registrar—to name one example—is tied to a 1938-9 (non-resident) salary scale of £900 to £1,200, to be adjusted with changes in the value of money, etc., and additionally he should enjoy tax-free expenses necessarily and reasonably incurred in the performance of his duties. As a result of the 1954 award, said to be a Spens "adjustment" to bring hospital staffs into line with the 100% betterment of Danckwerts, the senior registrar (non-resident) scale became £1,100 to £1,400; in other words, a betterment, ignoring superannuation, of 22% to 17.5%. So far as expenses are concerned, the senior registrar to-day is still unable to get anything even for his subscription to a defence society. The basic scale of the whole-time consultant shows much the same sort of thing. The 1938-9 Spens scale of £1,500 to £2,500 became in 1954 £2,100 to £3,100, or a betterment, again ignoring superannuation, of 40% to 24%. Furthermore, fees for domiciliary consultations, provided for in Spens, were permitted for a matter of months, then mysteriously stopped and resumed again eighteen months ago as a result of a fantastic agreement in Whitley which excluded payment for the first eight in any quarter.

It is therefore hardly surprising that many hospital medical officers are anxious to join the queue to give evidence to the Royal Commission; "Pilkington" must be better than nothing at all. Perhaps it is not too late for the general practitioner to realize that in joining this undignified queue he surrenders something very much alive—his Spens as interpreted by Mr. Justice Danckwerts. I would suggest that the correct move now would be for the G.M.S. Committee to advise continued resistance to giving evidence, to withdraw from the joint claim, which in any case has not been looked at, and to submit a new claim for an increase of 30% with effect from April 1, 1957,

based on the Danckwerts interpretation of the G.P. Spens. Accompanying the claim there might be an ultimatum that, unless the Government agreed to negotiations within 14 days, steps would be taken to advise withdrawal of all general practitioners from the Service at short—repeat, short—notice. Resignations could then be collected without any fear of a stab in the back from any quarter and put into effect with short notice at a time favourable to the profession. The phased withdrawal plan already outlined merely gave our shrewd employers six months' notice of a blow with a feather, ample time indeed to mess up all our plans and keep us fighting among ourselves.—I am, etc.,

Hull.

K. W. BEETHAM.

Living Wage

SIR,—In medicine, contract practice is of very long standing. In mining districts there was the colliery doctor, paid by a few coppers deducted from each wage packet, and friendly societies appointed their club doctor at 2s. 6d. per member per annum. Mr. Lloyd George took this figure as the index for medical remuneration on the introduction of the National Insurance Act. He was oblivious of the fact that the doctor was stepping off the poor man's back into the rich man's pocket—a secret of the trade. The best of doctors were eager to work without any remuneration in the hospitals.

The object of each Government has been to secure the best possible medical service at the lowest possible cost. The main factor in this service is the general practitioner, who, by his training, is rather altruistic than economic and so much the more liable to suffer injustice. Mr. Macmillan is an artful dodger who, ignoring orthodoxy even in dealing with the appointment of a Royal Commission, offers us a 5% increase in the hope of dividing our ranks. Let us not be deceived. In industrial areas most of us collected our accounts from our poorest patients by weekly instalments of not less than 1s. per week. Till the Danckwerts award we were receiving, not 1s. per week from our poorest patients, but 4d. per week from all.

In a leading article of the *Bolton Evening News*, with a circulation of 86,100, an editor under the heading "How to Treat Doctors?" writes: "The whole plan to walk out of the service always looked more like a piece of propaganda than a practical proposition. The shock treatment has worked." The price of this paper was 4d. till 1917, then 1d. till 1940, 1½d. till 1951, and 2d. till June, 1956, when it increased by 25% to 2½d. Since 1951 it has increased by 66.6%, and this is typical of the attitude of the general public whom we serve towards us who serve it so well. Many of us were excluded from the superannuation scheme and also from the N.H.I. pensions. We have spent large sums on the education of our families and need more than a living wage to provide for the future, however short that time may be.—I am, etc.,

Bolton, Lancs.

W. HARVEY BENNETT.

The Fourth Course

SIR,—As I see it, we have before us two separate and distinct problems: (1) whether or not to give evidence to the Royal Commission; (2) whether or not to withdraw from the N.H.S. this year.

In your otherwise excellent leading article (*Journal*, May 11, p. 1106) you say three courses seem open to us. Surely there is a fourth—that we give evidence, albeit reluctantly, to the Royal Commission, and at the same time continue to organize an early withdrawal of general practitioners from the N.H.S. The Royal Commission will go on, whether we like it or not, and in the fullness of time will present a report; the Royal College of Physicians and the Central Consultants and Specialists Committee will give evidence; the Government will consider, though not necessarily implement, its findings. Our evidence may not enable the Commission to reach sound conclusions, but it could hardly be ignored altogether. Giving evidence, in the circumstances,

does not imply a welcome for the Commission, nor approval of its terms of reference, nor bind us to accept its findings. We should go on pressing for our public health colleagues to be included. We must make it abundantly clear that, in our view, the Commission's findings will be of possible relevance only to future remunerative problems; the Spens recommendations (and Danckwerts interpretation) quite clearly remain appropriate for resolving the present (June, 1956) claim, for there have as yet been no consultations regarding any alternative basis. Our withdrawal should be in sorrow, not in anger—though, goodness knows, we have cause enough for that. We will not strike; we are merely giving ample notice to a thoroughly discourteous, untrustworthy, arbitrary employer, and exercising our ordinary rights as citizens to switch to a similar job under new employers—the British Medical Service and private patients. Our action is not to enforce 24%, nor to enforce anything at all for that matter; it is merely taking the only way we see out of an impasse not of our making. We sincerely believe we should receive 24% more, but we are not dogmatic about it. We are anxious to negotiate, the Government refuses—it will not even follow its own excellent advice and submit the dispute to arbitration, which even at the eleventh hour we would accept. We fight for the principle, not for the pounds.

The Prime Minister has intimated that he thinks the 5% increase should take care of the present, and the Royal Commission of the future; we think that this arbitrary increase of our 1951 remuneration by only 5% in 1957 smacks of the contemptuous dictation; we have no enthusiasm for the Commission.

Until recently, we were firmly united with a clear goal. Since the recent "confessions" we seem hopelessly divided and confused. Let us try to evaluate our concessions: (1) The Royal Commission itself is no boon to the profession; we never asked for it, we do not want it, we would cheerfully forgo it—any juggling, with the strings attached, can therefore cut no ice at all, and how trivial the juggling anyway. The terms of reference remain unchanged, though they are to be ignored with official blessing. The Commission will listen to (but not adjudicate or arbitrate on) our present claim. We will receive advance notice of that fact if the Commission is going to drag on for well over a year. We will be fully consulted before the findings are implemented—no concession here, as this had already been specified in the oft-quoted letter of 1950. (2) Most fically promised in the oft-quoted letter of 1950. (2) Most of us get a 5% increase; did even the most pessimistic feel we would be offered so little, after so long, or so grudgingly? Does anyone seriously think our financial advisers were 380% out in their calculations? The Government would certainly have pointed out this trifling error long since.

I feel very strongly that we general practitioners in not withdrawing in the near future; our self-restraint in not submitting a justifiable claim in 1953-4-5 failed materially to help our country then; it has seriously handicapped our pay claim now. To await the Royal Commission's report and subsequent "full consultations," maybe in 1958, 1959, or even 1960, is to invite—nay, almost to ensure—further financial disasters, and also, by inference, to admit our present claim was ill-founded. The date will probably need changing perhaps to November 4, 1957 (Monday seems a better day to start our new freedom), and various amendments to the original withdrawal scheme, including all those on the agenda of the S.R.M. of May 1, will need careful and confidence have sideration. Undoubtedly our unity and confidence can profit from our lessons of 1948, and now show firmness of purpose and the courage of our convictions, or we can continue to drift haplessly into Harold Macmillan's locker. "There is a tide in the affairs of men, which, taken at the flood, leads on to fortune." Time and tide wait for no man; here is our opportunity; let us seize it whilst yet we may, for none can tell what new crises may befall ere the Royal Commission has run its course.

In conclusion, may I suggest we need feel no qualms of conscience nor fear for the future? We answered our

country's call for a wage freeze for five years before staking a carefully compiled claim, and then requesting negotiation or arbitration. The Government stalled for eight months before attempting the time-tested tactics of the tyrant—confuse, divide, conquer, a Royal Commission, and a 5% interim adjustment—as great a red herring, and as derisory an increment, as ever there was. Let us give evidence to the Royal Commission, notice to the executive council, thought to the British Medical Service, and facts to the man-in-the-street, and leave him to judge whose action has been the more honourable.—I am, etc.,

Rugby.

R. P. HENDRY.

Doctors and the Health Service

SIR,—I was rather astonished in reading an article on doctors and the health service, by Mr. A. Wilfrid Adams (*Supplement*, May 4, p. 241), to find the phrase, "The Government allots up to 3,500 patients per doctor." I am not quite sure what kind of world Mr. Adams is living in if he really does believe that any government has power under the National Health Service to allot patients to a doctor. It is presumably for the doctor himself to secure the patients. I would, however, agree that there is a need for a reduction in the existing lists and I would very much hope that out of the current discussions on doctors' remuneration some reduction can be achieved, but, after all, this is very largely a matter for the profession itself. If they insist upon a flat rate increase in their pay there would be little encouragement to doctors to reduce the size of their lists.

Mr. Adams also refers in this article to the load of work on general practitioners. I feel it would be of very real interest to know rather more about the effect of the National Health Service on general practitioners as a whole so far as their working load is concerned. Possibly the British Medical Association have information from some of the inquiries they have carried out that would let us know, for example, whether there has been on the average any increase in the number of calls made by a patient upon a doctor. As a layman I do find it rather difficult to relate many doctors' complaints about the number of calls made upon them by patients with their continual and very proper insistence that patients should not hesitate to get in touch with them at an early stage or any illness.—I am, etc.,

London, S.W.1.

ARTHUR BLENKINSOP, M.P.

Royal College of Physicians

SIR,—Professor Robert Platt's attempt (*Supplement*, May 4, p. 244) to answer two letters by one must be regarded as a total failure. He has answered neither. The point at issue can be simplified by separating it into two parts, first, common courtesy, and, secondly, common sense.

The remuneration claim was initiated by representatives of G.P.s, and consultants and specialists, hearing of the claim, asked to be associated with it. When a critical stage in the furtherance of this claim was reached, Sir Russell Brain chose to take independent action without even formally informing the G.P. representatives prior to the press announcements. This is lack of common courtesy. Secondly, it has been obvious that the most vital asset the profession could have was unity, and that if any fracture of this unity was to occur it might do so on the line between consultants and G.P.s. It was perfectly clear that the most strenuous efforts should have been made to avoid any semblance of this. Sir Russell Brain chose to imperil our vital unity at a critical time. This, Sir, is lack of common sense.—I am, etc.,

London, W.13.

R. E. OLIVER.

Dr. Doris Pindar was elected first woman chairman of the Sheffield Division of the B.M.A. at the annual general meeting of the Division on April 5. She joined the Sheffield Division in 1922 on qualification. She is a former secretary of the Division, and present secretary of the local medical committee.

Branch and Division Meetings to be Held

BARNSELY DIVISION.—At Queen's Hotel, Barnsley, Monday, June 3, 8.45 p.m., annual general meeting.

BOLTON DIVISION.—At Gymnasium, Bolton Royal Infirmary, Tuesday, June 4, 8.30 p.m., meeting in conjunction with Bolton Local Medical Committee.

CUMBERLAND DIVISION.—At County Hotel, Carlisle, Sunday, June 2, 3 p.m., meeting to which all medical practitioners in the area of the Division are invited. Dr. J. G. M. Hamilton will answer questions.

DERBY DIVISION.—At Wilderslowe, Derbyshire Royal Infirmary, Thursday, June 6, 8.15 p.m., general meeting.

DONCASTER DIVISION.—At Danum Hotel, Doncaster, Monday, June 3, 8.45 p.m., annual general meeting.

DORSET DIVISION.—At the Clinic, Glyde Path Road, Dorchester, Tuesday, June 4, 8.30 p.m., special meeting to which all medical practitioners in the area of the Division are invited. The annual general meeting will follow.

EAST KENT DIVISION.—At Chez Laurie Restaurant, Thanet Way, near Herne Bay, Thursday, June 6, 8.30 p.m., special Divisional meeting. There will also be a discussion on Health Education about Cancer to be opened by Dr. M. S. Harvey.

GUILDFORD DIVISION.—At Royal Surrey County Hospital, Guildford, Thursday, June 6, 8.30 p.m., annual general meeting.

HENDON DIVISION.—At Hendon Hall Hotel, N.W., Tuesday, June 4, 8.45 p.m., annual medico-political meeting.

KENSINGTON AND HAMMERSMITH DIVISION.—At Large Hall, Kensington Town Hall, W., Tuesday, June 4, 8.30 p.m., general meeting to be held jointly with Chelsea and Fulham Division. Address by Dr. H. H. D. Sutherland. All medical practitioners in the area of the Divisions are invited.

LANCASTER DIVISION.—At Lancaster Moor Hospital, Saturday, June 8, 8 p.m., meeting. B.M.A. Lecture by Mr. A. Lawrence Abel: "Carcinoma of the Rectum" (illustrated).

LEEDS DIVISION.—At Littlewood Hall, General Infirmary at Leeds, Wednesday, June 5, 8 p.m., annual general meeting.

LEICESTERSHIRE AND RUTLAND BRANCH.—At Grand Hotel, Wednesday, June 5, 8.45 p.m., annual general meeting.

LIVERPOOL DIVISION.—At Liverpool Medical Institution, Tuesday, June 4, 8.30 p.m., special meeting.

METROPOLITAN COUNTIES BRANCH.—At B.M.A. House, Tavistock Square, London, W.C., Tuesday, June 18, 3 p.m., annual general meeting. President's address by Dr. J. W. McCarthy.

MID-HERTS DIVISION.—At Wellington Court Clinic, Bricklet Road, St. Albans, Thursday, June 6, 8.30 p.m., annual general meeting. Address by Dr. J. C. Sleight: "Anterior Poliomyelitis and other Immunization Procedures in this Divisional Area."

NORTH WALES BRANCH.—At Colwyn Bay Hotel, Saturday, June 1, 3 p.m., annual meeting. Presidential address by Dr. K. W. Evans: "The Art of Medicine."

NORWICH DIVISION.—At Museum, Norfolk and Norwich Hospital, Tuesday, June 4, 8.15 p.m., meeting to which all medical practitioners in the area of the Division are invited.

SHROPSHIRE AND MID-WALES BRANCH.—At Board Room, Royal Salop Infirmary, Shrewsbury, Tuesday, June 4, 8.30 p.m., general meeting.

SOUTHAMPTON DIVISION.—At Out-patient Department, Royal South Hants Hospital, Southampton, Tuesday, June 4, 8.30 p.m., special general meeting in conjunction with local medical committee to which all medical practitioners in the area of the Division are invited.

WEST MIDDLESEX DIVISION.—At Nelson Room, Ealing Town Hall, W., Friday, June 7, 8.30 p.m., extraordinary general meeting.

WEST NORFOLK DIVISION.—At Globe Hotel, King's Lynn, Thursday, June 6, 12.30 p.m., annual general meeting. Lunch will follow.

Meetings of Branches and Divisions

DUMFRIES AND GALLOWAY DIVISION

A meeting was held on March 10 in the Cresswell Maternity Hospital. Dr. R. N. Rutherford took the chair and 41 members were present. Professor D. M. Dunlop spoke on "New Drugs." Dr. R. N. Rutherford again took the chair at a special meeting of the Division called on April 14 to discuss the remuneration crisis. Thirty-three members attended. Drs. A. Scott and Neil Douglas answered questions.

GLASGOW DIVISION

The annual meeting was held in the Glasgow Regional Office on March 22, 1957. Mr. John Dunbar was in the chair and 32 members were present. The following officers were elected for 1957-8:

Chairman.—Dr. J. S. McLaren Ord.
Vice-chairmen.—Drs. W. S. Gardner, J. Inglis Cameron, and R. L. Cormie.
Honorary Secretary.—Dr. J. Baird Forrester.
Deputy Honorary Secretary and Honorary Treasurer.—Dr. M. M. Garrey.

Dr. I. D. Grant gave a summary of the remuneration negotiations to date, and Drs. W. M. Knox and Kate Harrower added their comments. A general discussion followed.

MALTA BRANCH

The annual general meeting was held on February 6, 1957, at St. Luke's Hospital, Malta. Twenty-six members were present. The retiring president, Professor V. G. Griffiths, in his review of the events of the past year spoke of the stand of the Maltese medical profession against the introduction of a full-time State-salaried medical service, and of the help—both moral and financial—received from B.M.A. Headquarters. He hoped that the report of the resulting Medical Services Commission would serve as a charter for the profession.

The following officers were elected for 1957:

President.—Professor G. P. Xuereb.
Vice-president.—Dr. V. Tabone.
Honorary Secretary and Treasurer.—Dr. Ph. Micallef.

TANGANYIKA TERRITORY BRANCH

The annual general meeting was held on February 27, 1957, at the Women's Service League Headquarters. The following officers were elected:

President.—Dr. G. M. Daya.
Vice-president.—Dr. W. G. Kerr.
Honorary Secretary.—Dr. M. Q. Khan.
Honorary Treasurer.—Dr. V. Blackman.

ANNUAL MEETING—NEWCASTLE UPON TYNE, JULY 10-19, 1957

President-Elect: WELDON WATTS, A.F.C., M.S., F.R.C.S.Ed.

Local General Secretary: G. W. ANDERSON, M.B., B.S., 21, Lyndhurst Road, Benton, Newcastle upon Tyne, 12.

Science Secretaries: IAN RANNIE, M.B., Ch.B., B.Sc., Department of Pathology, Royal Victoria Infirmary, Newcastle upon Tyne, 1; J. I. MUNRO BLACK, M.D., M.S., F.R.C.S., 47, Clayton Road, Jesmond, Newcastle upon Tyne, 2.

Executive Clerk: Miss B. E. MIDDLEMISS, B.M.A. Regional Office, 7, Windsor Terrace, Newcastle upon Tyne, 2.

Tel. 812527.

PROGRAMME

The 125th Annual Meeting of the British Medical Association will be held in Newcastle upon Tyne from Wednesday, July 10, to Friday, July 19, inclusive.

The Annual Representative Meeting will be held in the City Hall; it will begin on Wednesday, July 10, and will continue on Thursday, Friday, Saturday, and Monday, July 11, 12, 13, and 15.

On the evening of Tuesday, July 9, there will be a Cocktail Party for Representatives and their Ladies, arranged by the Newcastle upon Tyne Division and the North of England and the Tees-side Branches. This will be held in the Old Assembly Rooms.

A combined Dinner for Representatives and their Ladies will take place at the Old Assembly Rooms on Thursday, July 11, followed by a Dance.

The Overseas Luncheon has been arranged for Friday, July 12, at 1 p.m. in the Old Assembly Rooms.

On Sunday, July 14, there will be three excursions: (1) All-day excursion to the Roman Wall which will be accompanied by guides from the Department of Roman-British Archaeology, King's College, University of Durham. (2) All-day trip to the Farne Islands. (3) Half-day excursion to Durham Cathedral. In the evening a Symphony Concert, sponsored by Abbott Laboratories Ltd., will be given in the City Hall.

The Adjourned Annual General Meeting and President's Address will take place in the City Hall on the evening of Monday, July 15, and the President's Reception which follows will be held in the Old Assembly Rooms.

The Annual Scientific Meeting and associated functions occupy the period from Monday, July 15, to the evening of Friday, July 19.

The Official Religious Service will be held in St. Nicholas' Cathedral on the afternoon of Tuesday, July 16. The address will be given by the Right Reverend the Lord Bishop of Durham.

There will be a Roman Catholic Service at 11.30 a.m. on Saturday, July 13, at St. Mary's Cathedral.

A Jewish Service will be held on Saturday, July 13, at 10 a.m. at the Leazes Park Road Synagogue.

The Annual Dinner of the Association will be held in the Old Assembly Rooms on Tuesday, July 16.

There is to be a full social programme, including a Civic Reception on Wednesday evening, July 17, and a University Reception on Thursday evening, July 18.

The Annual Breakfast of the Christian Medical Fellowship will be held on Tuesday, July 16, at 8.15 a.m.

Several special visits and excursions are being arranged for ladies accompanying members.

The usual Golf Competitions will take place on July 17 and 18.

The Overseas Conference will be held in the afternoon of Wednesday, July 17.

The Reception Bureau for Registration will be open in the Stephenson Building, King's College, on Monday, July 15, at 9 a.m.

From July 15 to 19 there will be a programme of surgical operations and clinical demonstrations in the Royal Victoria Infirmary shown by colour television on a closed circuit. The technical arrangements will be sponsored by Smith, Kline and French Laboratories Ltd. (see p. 317).

Three Plenary Scientific Sessions have been arranged as follows: Wednesday, July 17, at 10 a.m., subject "The Management of Hypertension"; Thursday, July 18, at 10 a.m., subject "The Management of Hypertension"; Friday, July 19, at 10 a.m., subject "The Management of Hypertension".

2.30 p.m., subject "The Present Status of Prophylactic Immunization"; Friday, July 19, at 9.30 a.m., subject "Care of the Dying."

In addition, three Round-Table Conferences will be held concurrently on Wednesday, July 17, from 9 to 9.45 a.m.

The nineteen Scientific Sections will hold meetings, including a special session of the Sections of Obstetrics and Gynaecology and of General Practice on "Obstetrics and General Practice" to be held on Monday, July 15, at 3 p.m. (Details are given below.)

The Scientific Exhibition will be held in the Stephenson Building and will be open daily on July 15 to 19; a wide field of medical interests will be covered.

The Annual Exhibition of Pharmaceutical Products, Instruments, Appliances, and Medical Publications will also be in the Stephenson Building. The Exhibition will be open from 9 a.m. to 6 p.m. on July 15 to 19.

The Ladies' Club will be situated in the Medical School, King's College, and will be open throughout the Meeting.

HOTEL ACCOMMODATION

The following is a list of hotels in Newcastle upon Tyne and district at which accommodation is still available for the period of the Annual Meeting. Members wishing to reserve accommodation are asked to write direct to the hotel, stating that they are attending the B.M.A. Meeting. The Association cannot accept responsibility for any of the prices stated below. These are the tariffs ruling at the moment and are subject to alteration without notice. Applicants should therefore verify the tariffs when making their reservations. Members who have not already done so are strongly advised to make their reservations without delay.

For hostel accommodation all requests should be made to the Executive Clerk, B.M.A. Regional Office, 7, Windsor Terrace, Newcastle upon Tyne, 2, and not direct to the hostel.

BRITISH RAILWAYS: SEAT AND SLEEPER RESERVATIONS

Members travelling to Newcastle by rail are advised to make their reservations as soon as possible. The District Passenger Manager, British Railways, Newcastle upon Tyne, will be pleased to assist.

CARAVAN PARK

Arrangements have been made at Newcastle for a special caravan site for members attending the annual meeting with their caravans. The site will be at King's College Athletic Union Ground, Cochrane Park, Newcastle upon Tyne, 6. Apart from a limited amount of hard standing and some on rough grass, there will be facilities for obtaining water and disposing of refuse. Hot and cold washing facilities and showers, with dressing-rooms and drying-rooms, will be available in the pavilion, where there will be a children's playroom and light refreshments can be ordered. The site, which is near Henderson Hall, one of the hostels of the University of Durham, is close to shops and a frequent bus service into the centre of the town.

Applications for space should be made in advance to Dr. W. Hunter, c/o B.M.A., North of England Branch Office, 7, Windsor Terrace, Newcastle upon Tyne, 2, stating name and address, registration number of car, and date of arrival and departure. The charge is 6s. a night, which must be paid at the time of application. Alternative accommodation is available for Caravan Club Members at Whitley Bay Club site on the sea front at Old Hartley, 10 miles from Newcastle.

REGULATIONS REGARDING DRESS

Academic Dress is to be worn at the President's Address, the President's Reception, the Official Religious Service, the Roman Catholic Service, the Civic Reception, and the University Reception.

Robes may be hired from Messrs. Ede & Ravenscroft, Ltd., 93, Chancery Lane, London, W.C.2, or Messrs. Gray & Son (Robemakers), Ltd., Saddler Street, Durham. Early application is advised, as the supply of gowns is limited, and it is suggested that the gowns be sent to the home address of the individual concerned. It is hoped to have a representative of the local robemakers available at the University during the Annual Meeting.

Evening Dress (Tails or Dinner Jacket), with Decorations, is to be worn at the President's Reception, Civic Reception, University Reception, and Annual Dinner. Evening Dress without Decorations should be worn at the Representatives' Dinner and the Representatives' Dance.

REGISTRATION

Although there is now no registration fee charged, it is still necessary for members attending the Annual Meeting to register.

Members of the Representative Body should register at the A.R.M. Inquiry Office, City Hall Entrance. Ladies (except women members) should register at the Ladies' Club, Medical School, King's College. Members and overseas visitors should register at the Reception Bureau, Stephenson Building, King's College, on or after July 15.

TICKETS

No tickets for functions or excursions can be issued in advance, with the exception of the Annual Dinner (details of which are given below).

All tickets for functions up to Sunday, July 14, will be available for Representatives at the A.R.M. Inquiry Office, City Hall Entrance, on July 9, 10, 11, 12, and 13, and for ladies at the Ladies' Club, Medical School, King's College.

Tickets for all other functions after Sunday, July 14, will be available from Monday, July 15, at the Reception Bureau, Stephenson Building, or at the Ladies' Club.

Badges

Members will not be admitted to Plenary Sessions, Round-table Conferences, Scientific Sections, Colour Television, or Exhibitions unless wearing badges. They should therefore visit the Reception Bureau, Stephenson Building, as soon as possible after arrival in Newcastle, to obtain their hand-book, badges, and tickets.

Officers of Scientific Sections and other office-holders should inquire for special badges at the Reception Bureau.

ANNUAL DINNER

Special Notice

The Annual Dinner at Newcastle upon Tyne this year will take place on Tuesday, July 16, in the Old Assembly Rooms, Westgate Road. This follows the successful innovation made at Brighton last year, when the Dinner was held on the Tuesday instead of the Thursday as had been customary. The maximum number which the room can take is 350.

Members are strongly advised to book their seats as soon as possible, in order to avoid disappointment later. The price per ticket is £2 10s., including cocktails, wines, and liqueurs.

Applications, with the appropriate payment, should be made to the Financial Comptroller, B.M.A. House, Tavistock Square, London, W.C.1, and will be dealt with in the order in which they are received. In the event of applications exceeding the capacity of the room, money sent will be returned.

If any tickets are still available at the time of the meeting they will be obtainable at the Registration Bureau, Stephenson Building.

Members wishing to be seated with any friends should give particulars when applying. Cheques should be made payable to "The British Medical Association."

CATERING ARRANGEMENTS

A three-course luncheon (price 5s.) will be served daily in the Grand Assembly Rooms (King's College Dining Hall), College Road, from 12.30 to 2 p.m. from July 10 to 13 and from 12.15 to 2.15 p.m. from July 15 to 19. In addition, during the Annual Representative Meeting there will be a buffet luncheon available from 12.30 to 2 p.m. in the Library of the Sutherland Dental School, Northumberland Road (opposite the City Hall). Morning coffee and afternoon tea will also be served there for Representatives.

Coffee-rooms will be available in the Stephenson Building, King's College, for visitors to the Exhibitions and those attending the scientific meetings.

Light refreshments will also be available in the Ladies' Club throughout the Meeting.

THE MEDICAL INSTITUTE

Honorary membership of the Medical Institute (a doctors' social club), at 7, Windsor Terrace, Newcastle upon Tyne, 2, has been kindly offered to members attending the Annual Meeting. Members wishing to avail themselves of these facilities are asked to wear their badges.

REPRESENTATIVES' SUNDAY EXCURSIONS

Visit to Farne Islands

An enjoyable sea trip to a rare-bird sanctuary and a home of seals: its associations with St. Cuthbert and Grace Darling give it an added interest. Intending visitors would be well advised to bring a mackintosh and strong footwear.

Visit to Roman Wall

The tour will include a visit to Chester Fort and a Roman fort at Housesteads. The Roman country lying between the North Tyne and South Tyne is very beautiful and interesting. Archaeology students of the University will act as guides.

Visit to Durham Cathedral and Castle

In addition to looking round the Cathedral, there will be a special opportunity of visiting the Dormitory, which is of historical interest. Those who wish will be able to attend Evensong in the Cathedral at 3.30 p.m.

EDINBURGH GRADUATES' DINNER

The Edinburgh Graduates' Dinner will be held in the Royal Station Hotel, Neville Street, Newcastle upon Tyne, on Saturday, July 13, at 7 for 7.30 p.m. All Edinburgh graduates attending the A.R.M., or resident in the area, together with their ladies and guests, will be welcome.

Tickets (25s. each, exclusive of wines) may be had on application, with remittance, to Dr. E. R. C. Walker, 7, Drumsheugh Gardens, Edinburgh, 3.

GLASGOW GRADUATES' DINNER

The Glasgow Graduates' Dinner will be held in the Britannia Rooms, Tilley's Restaurant, Newcastle upon Tyne, on Saturday, July 13, at 7.45 for 8.30 p.m. The dinner is open to Glasgow graduates who are attending the Annual Meeting, their ladies, and guests. Tickets will cost 30s. each, including cocktails, but excluding wines. Numbers are limited to 120, and early application, with appropriate remittance, should be made to Dr. J. T. McCutcheon, British Medical Association, Glasgow Regional Office, 234, St. Vincent Street, Glasgow, C.2. (Dress—Dinner Jackets.)

WELSH DINNER

The Welsh Dinner will be held at the Royal Turk's Head Hotel, Grey Street, Newcastle upon Tyne, at 7.30 p.m. on Friday, July 12. All Welsh Representatives, Welsh graduates, and others with Welsh associations, accompanied by their ladies, will be welcome at this dinner. Tickets, 25s. per head (exclusive of wines), may be obtained on application, with remittance, to Dr. I. M. Jones, 3, Parkside, East Herrington, Sunderland.

ABERDEEN GRADUATES' DINNER

The Aberdeen Graduates' Dinner will be held in Tilley's Restaurant, Newcastle upon Tyne, on Friday, July 12, at 7.30 for 8 p.m. The dinner is open to Aberdeen graduates (attending the A.R.M. or resident locally) and their ladies. Tickets will cost 30s. Early application, with remittance, should be made to Dr. D. Middleton, 18, Cliffe Park, Sunderland.

IRISH GRADUATES' DINNER

The Irish Graduates' Dinner will be held in the Medical Institute, 7, Windsor Terrace, Newcastle upon Tyne, on Wednesday, July 10, at 7.30 for 8 p.m. All Irish graduates are welcome. Tickets (25s. each, including cocktails but excluding wines) may be had on application, with remittance, to Dr. P. J. M. Van Miert, Royal Victoria Infirmary, Newcastle upon Tyne. (Limited to 30.)

CHRISTIAN MEDICAL FELLOWSHIP ANNUAL BREAKFAST

The Annual Breakfast of the Christian Medical Fellowship will be held in the Banqueting Hall of the Royal Station Hotel, Newcastle upon Tyne, on Tuesday, July 16, at 8.15 a.m. The Chairman will be Mr. Weldon Watts (President-Elect of the B.M.A.). Dr. Robert G. Cochrane, Adviser in Leprosy, Ministry of Health; Consulting Leprologist, Tropical Diseases Hospital, St. Thomas's Hospital, and St. John's Hospital; formerly Principal and Director of Christian Medical College, Vellore, will speak on "Changing Standards in Medical Practice." The proceedings will terminate at 9.15 a.m. Those intending to be present are asked to notify Dr. W. Condie, Pierremont, 36, Sunderland Road, Heworth, Gateshead, 10, Co. Durham.

GUILD OF SS. LUKE, COSMAS AND DAMIAN

There will be a Mass for Catholic doctors attending the B.M.A. Meeting at St. Mary's Cathedral (opposite the Central Station), Clayton Street, Newcastle, at 11.30 a.m. on Saturday, July 13. An address will be given by the Very Rev. G. P. Dwyer, D.D., Ph.D., Catholic Missionary Society. Academic Dress will be worn, and robing will take place in the County Hotel. Following this there will be a reception and luncheon in the County Hotel (also opposite the Central Station). Members and wives will be welcome. Tickets, price 8s. 6d., may be obtained from the A.R.M. Inquiry Office.

ANNUAL BALL OF DURHAM COUNTY BRANCH OF BRITISH RED CROSS SOCIETY

The Annual Ball of the Durham County Branch of the British Red Cross Society will be held in the Great Hall

of Durham Castle on Friday, July 12, from 9 p.m. to 2 a.m. Tickets, 25s. each, including supper, or 15s. each for the dance only. Any B.M.A. members wishing to attend are asked to apply for tickets by July 5 to Mrs. S. Annand, Springwell House, Whitesmoks, Durham.

CAR-PARKING FACILITIES

Car-parking facilities in the neighbourhood of the City Hall are limited; there is a large British Legion car park on the north side of the City Hall, which should provide reasonable accommodation. It is not anticipated that there will be any difficulty in parking cars near the Stephenson Building. Members are advised that Claremont Road is a main bus route, and car-parking there is strictly prohibited. Windscreens labels may be obtained at the Reception Bureau, and members bringing their own cars are advised to use these labels to facilitate car-parking.

SCIENTIFIC MEETING, JULY 15-19

PLENARY SESSIONS IN CHEMISTRY BUILDING, LECTURE THEATRE I, KING'S COLLEGE

Wednesday, July 17, 10 a.m.: "The Management of Hypertension"

Chairman: Professor MAX L. ROSENHEIM (London).
Speakers: Dr. ROBERT COOPE (Liverpool); Professor JOHN McMICHAEL (London); Mr. E. G. TUCKWELL (London); Dr. JOHN H. HUNT (London).

Official Reporter: Dr. S. C. TRUELOVE.

Thursday, July 18, 2.30 p.m.: "The Present Status of Prophylactic Immunization"

Chairman: Sir JOHN CHARLES (London).
Speakers: Professor R. CRUICKSHANK (London); Dr. J. GRANT (Gateshead); Dr. T. FRANCIS, jun. (Michigan, U.S.A.); Professor C. H. STUART-HARRIS (Sheffield); Dr. P. M. D'ARCY HART (London).

Official Reporter: Dr. W. C. COCKBURN.

Friday, July 19, 9.30 a.m.: "Care of the Dying"

Chairman: Dr. T. H. BATES (Newcastle upon Tyne).
Speakers: Dr. I. D. GRANT (Glasgow); Professor A. G. R. LOWDON (Newcastle upon Tyne); Mr. C. J. L. THURGAR (Newcastle upon Tyne); Dr. R. BODLEY SCOTT (London); THE LORD BISHOP OF DURHAM.

ROUND-TABLE CONFERENCES

Wednesday, July 17, from 9 to 9.45 a.m. in the Stephenson Building

I. INJURIES RESULTING FROM ROAD ACCIDENTS

Meeting-place: Room F10.

Chairman: Mr. J. I. MUNRO BLACK (Newcastle upon Tyne).

Panel: Mr. G. F. ROWBOTHAM (Newcastle upon Tyne), Mr. FENION BRAITHWAITE (Newcastle upon Tyne), Mr. W. GISSANE (Birmingham), Professor JOHN BOYES (Newcastle upon Tyne), Professor T. Pomfret Kilner (Oxford).

II. ARRANGED BY THE SECTION OF OBSTETRICS AND GYNAECOLOGY

Meeting-place: Room F13.

Chairman: Professor HARVEY EVERS (Newcastle upon Tyne).

Panel: Mr. C. K. WARRICK (Newcastle upon Tyne), Dr. WILLIAM WALKER (Newcastle upon Tyne).

There will be a free discussion on the following subjects: Some Causes of Public Alarm and Anxiety: Irradiation in the Antenatal Period, Rubella and Virus Infection, Rh Interreaction.

III. ARRANGED BY THE SECTION OF PHYSICAL MEDICINE: LOW BACK PAIN

Meeting-place: Room F1.

Chairman: Dr. HUGH BURT (London).

Panel: Dr. D. R. L. NEWTON (London), Mr. N. W. ROBERTS (Liverpool), Dr. S. JOSEPHS (Newcastle upon Tyne), Mr. I. N. MACIVER (Newcastle upon Tyne), Mr. W. MILLS (Birmingham).

SCIENTIFIC SECTIONS

All sessions will be held in the Stephenson Building or Chemistry Building, King's College. Morning sessions are from 9.30 a.m. to 12 noon, and afternoon sessions from 2.30 to 5 p.m., except on July 15.

MEDICINE

President: Professor F. J. NATTRASS, M.D., F.R.C.P. (Farnham).

Vice-Presidents: C. N. ARMSTRONG, M.D., F.R.C.P. (Newcastle upon Tyne); H. G. MCGREGOR, M.D., M.R.C.P. (Brighton); J. G. SCADDING, M.D., F.R.C.P. (London).

Hon. Secretaries: GORDON F. EDWARDS, M.B.E., M.B., M.R.C.P., 1, Park Crescent, Roundhay, Leeds, 8; R. B. THOMPSON, M.D., M.R.C.P., The Medical School, King's College, Newcastle upon Tyne, 1.

Official Reporter: Dr. S. C. TRUELOVE.

Chemistry Building, Lecture Theatre I.

Tuesday, July 16.—9.30 a.m. Combined session with Sections of Surgery and Cardiology, on Arterial Embolism. General introduction, Dr. WILLIAM EVANS (London); Diagnosis of Limb Embolism, Sir JAMES LEARMONTH (Edinburgh); Cerebral Embolism, Professor CHARLES ROB (London); Cerebral Embolism, Dr. H. A. DEWAR (Newcastle upon Tyne); Mesenteric Embolism, Dr. ALAN A. KLASS (Winnipeg, Canada); Long-term Anticoagulant Therapy, Dr. CATHERINE C. BURT (Edinburgh).

Room F10, Stephenson Building.

Wednesday, July 17.—2.30 p.m. Symposium on Cortisone in General Practice. Speakers will include Professor S. J. HARTELL (Leeds), Professor G. A. SMART (Newcastle upon Tyne), Dr. I. W. B. GRANT (Edinburgh), and Dr. R. B. THOMPSON (Newcastle upon Tyne).

SURGERY

President: A. DICKSON WRIGHT, M.S., F.R.C.S. (London).

Vice-Presidents: Professor DIGBY CHAMBERLAIN, Ch.M., F.R.C.S. (Leeds); HAROLD C. EDWARDS, C.B.E., M.S., F.R.C.S. (London); JOHN GILMOUR, M.S., F.R.C.S. (Newcastle upon Tyne); GEORGE A. MASON, V.R.D., F.R.C.S. (Newcastle upon Tyne).

Hon. Secretaries: DAVID TIBBS, M.C., F.R.C.S., 128, Moorside North, Fenham, Newcastle upon Tyne; J. F. R. WILHYCOMBE, M.Chir., F.R.C.S., 22, Parkside, Cambridge.

Official Reporter: Mr. R. E. HORTON.

Chemistry Building, Lecture Theatre I.

Tuesday, July 16.—9.30 a.m. Combined session with Sections of Medicine and Cardiology on Arterial Embolism. Room S21, Stephenson Building.

Wednesday, July 17.—2.30 p.m. Combined session with Section of Radiology on Radiological Investigation of the Biliary Tract: Dr. SCOTT PARK (Glasgow), Mr. DUDFIELD ROSE (Newcastle upon Tyne), Dr. J. D. DOW (London), Mr. DICKSON WRIGHT (London). 5 p.m., Treatment of Burns; Professor W. E. M. WARDILL (Bagdad), Dr. KHALID NAJI (Bagdad), Mr. J. HERBERT JOHNSTON (Liverpool).

Room S17, Stephenson Building.

Thursday, July 18.—9.30 a.m. The Diagnosis and Treatment of Carcinoma of Stomach: Clinical Aspects in Diagnosis, Mr. JOHN GILMOUR (Newcastle upon Tyne); Radiology, Dr. G. A. S. LLOYD (London); Gastroscopy, Mr. HERMON TAYLOR (London); Exfoliative Cytology, Dr. R. O. K. SCHADE (Newcastle upon Tyne); Treatment, Professor DIGBY CHAMBERLAIN (Leeds).

OBSTETRICS AND GYNAECOLOGY

President: Professor H. HARVEY EVERS, M.S., F.R.C.S., F.R.C.O.G. (Newcastle upon Tyne).

Vice-Presidents: Professor W. I. C. MORRIS, F.R.C.S.Ed., F.R.C.O.G. (Manchester); Professor W. C. W. NIXON, M.D., F.R.C.S., F.R.C.O.G. (London); FRANK STABLER, M.D., F.R.C.S., F.R.C.O.G. (Newcastle upon Tyne); JOHN STALL-WORTHY, F.R.C.S., F.R.C.O.G. (Oxford).

Hon. Secretaries: WILFRID MILLS, T.D., F.R.C.S., M.R.C.O.G., 99, Harborne Road, Edgbaston, Birmingham, 15; LINTON SNAITH, M.D., M.S., F.R.C.S., F.R.C.O.G., 2, Osborne Villas, Newcastle upon Tyne, 2.

OPHTHALMOLOGY

President: J. S. ARKLE, O.B.E., M.B., F.R.C.S. (Newcastle upon Tyne).

Vice-Presidents: GEORGE BLACK, M.B., F.R.C.S. (Leeds); ALEX G. CROSS, M.D., F.R.C.S. (London); H. VERNON INGRAM, O.B.E., T.D., M.B., D.O.M.S. (Newcastle upon Tyne); A. E. P. PARKER, M.B., F.R.C.S. (Middlesbrough).

Hon. Secretaries: DEREK AINSLIE, M.D., F.R.C.S., D.O.M.S., 87, Harley Street, London, W.1; JAMES M. L. HOWAT, M.B., D.O.M.S., D.O., 3, Tankerville Terrace, Newcastle upon Tyne, 2.

Official Reporter: Mr. REDMOND SMITH.

Room S 20, Stephenson Building.

Tuesday, July 16.—9.30 a.m. Chiasmal Disease. Openers: Professor NORMAN DOTT (Edinburgh); Dr. A. MOONEY (Dublin). Invited Speakers: Dr. J. McLELLAND (Edinburgh); Dr. C. F. ROLLAND (Carlisle); Mr. J. SLOAN ROBERTSON (Glasgow); Recent Advances in the Diagnosis and Treatment of Glaucoma, Mr. R. J. H. SMITH (London); Ocular Changes in the Leukaemias, Mr. P. D. TREVOR ROPER (London); Cataract Surgery under Chlorpromazine Hydrochloride, Mr. H. VERNON INGRAM (Newcastle upon Tyne).

ORTHOPAEDICS

President: C. GORDON IRWIN, M.B., F.R.C.S. (Newcastle upon Tyne).

Vice-Presidents: JOHN BASTOW, M.D., F.R.C.S. (Bath); JOHN CHARNLEY, M.B., F.R.C.S. (Manchester); J. KENNETH STANGER, M.B., F.R.C.S. (Newcastle upon Tyne).

Hon. Secretaries: L. W. PLEWES, C.B.E., M.D., F.R.C.S. (Ed.), Blake Hall, Kensworth, Dunstable, Beds; JOHN V. TODD, M.Ch.Orth., F.R.C.S., 20, The Grove, Gosforth, Newcastle upon Tyne, 3.

Official Reporter: Mr. L. W. PLEWES.

Room T 10, Stephenson Building.

Wednesday, July 17.—2.30 p.m. Pain in the Arm, Mr. ROBERT ROAF (Liverpool), Mr. J. KENNETH STANGER (Newcastle upon Tyne), Dr. MICHAEL KREMER (London); Reconstructive Surgery of the Upper Limb Following Poliomyelitis, Mr. ALEX MILLER (Glasgow); Fractures of the Patella, Mr. JOHN V. TODD (Newcastle upon Tyne).

OTO-RHINO-LARYNGOLOGY

President: W. I. DAGGETT, M.A., F.R.C.S. (London).

Vice-Presidents: R. E. JOWETT, M.D., M.R.C.P., D.L.O. (Sunderland); R. G. MACBETH, D.M., M.A., F.R.C.S. (Oxford); F. MCGUCKIN, M.D., F.R.C.S. (Newcastle upon Tyne).

Honorary Secretaries: J. D. K. DAWES, B.Sc., M.D., F.R.C.S., 10 Kingsland, Newcastle upon Tyne; L. R. S. TAYLOR, F.R.C.S., 55, Harley Street, London, W.1.

Official Reporter: Mr. C. M. JOHNSTON.

Room S 20, Stephenson Building.

Thursday, July 18.—9.30 to 11 a.m. Chairman, Mr. W. I. DAGGETT; The Scope of Surgery in the Management of Deafness. Opening Speaker, Mr. I. B. THORBURN (Blackpool); Invited Speaker, Mr. F. MCGUCKIN (Newcastle). Film of Otosclerosis by Dr. GEORGE F. SHAMBAUGH

(Chicago). 11.30 a.m. to 12 noon, Film by Professor PIETRANTONI (Milan): Les Otites Chroniques.

Friday, July 19.—2.30 to 3.30 p.m. Chairman, Mr. R. G. MACBETH (Oxford). Epistaxis. Opening Speaker, Mr. J. P. STEWART (Edinburgh). Invited Speaker, Dr. H. A. DEWAR (Newcastle upon Tyne). 4 to 5 p.m., Chairman, Mr. R. E. JOWETT, Sunderland. Presenting Symptoms and Signs of Malignant Disease of the Upper Respiratory Tract. Opening Speaker, Mr. W. A. MILL (London). Invited Speakers, Mr. R. D. OWEN (Cardiff); Mr. J. I. MUNRO BLACK (Newcastle upon Tyne).

An Exhibition on the Comparative Anatomy of the Larynx by Dr. O. GRAY (Haslemere) will be shown on Thursday and Friday adjacent to the meeting room of the Section.

PHYSICAL MEDICINE

President: HUGH BURT, M.B., F.R.C.P. (London).

Vice-Presidents: GUY BEAUCHAMP, M.B., Ch.B. (London); JAMES CYRIAX, M.D., M.R.C.P. (London); J. B. STEWART, M.B., D.Phys.Med. (Marlborough); A. ZINOVIEFF, M.R.C.S., L.R.C.P., D.Phys.Med. (Durham).

Hon. Secretaries: A. T. RICHARDSON, M.B., M.R.C.P., D.Phys.Med., the Royal Free Hospital, Gray's Inn Road, London, W.C.1; M. THOMPSON, M.D., M.R.C.P., Department of Physical Medicine, the Royal Victoria Infirmary, Queen Victoria Road, G.P.O. Box No. 141, Newcastle upon Tyne, 1.

Official Reporter: Dr. D. R. L. NEWTON.

Room F 1, Stephenson Building.

Wednesday, July 17.—9 a.m. Round-table Conference: Low Back Pain.

Room F 13, Stephenson Building.

Friday, July 19.—2.30 p.m. Symposium on Steroid Therapy in the Rheumatic Diseases. Opener, Dr. G. R. FEARNLEY (Gloucester), Systemic Steroid Therapy in the Chronic Rheumatic Diseases. Invited Speakers, Dr. JAMES CYRIAX (London), Hydrocortisone in Lesions at the Shoulder and the Elbow; Dr. M. THOMPSON (Newcastle upon Tyne), Intra-articular Steroid Therapy. Occasional Paper: Dr. A. ZINOVIEFF (Durham), Results of Rehabilitation of Injured Miners. Symposium on Painful Feet: Joint Openers. Dr. A. T. RICHARDSON (London), The Painful Heel; Dr. GUY BEAUCHAMP (London), The Painful Foot.

PLASTIC SURGERY

President: Professor T. POMFRET KILNER, C.B.E., D.M., F.R.C.S. (Oxford). *Vice-Presidents:* D. N. MATTHEWS, O.B.E., M.D., M.Ch., F.R.C.S. (London); MORTIMER H. SHAW, M.B., F.R.C.S. (Leeds).

Honorary Secretaries: F. I. HERBERT, M.B., F.R.C.S., 23, Linden Road, Gosforth, Newcastle upon Tyne, 3; W. GROSSMANN, M.D., L.D.S.R.C.S., 79, Harley Street, London, W.1.

Official Reporter: Room F 10, Stephenson Building.

Thursday, July 18.—9.30 a.m. Occasional Papers: (1) Haemangiomas, Mr. D. N. MATTHEWS (London); (2) Repair of Hand Injury, Mr. MORTIMER SHAW (Leeds); (3) Investigation of Children with Speech Defects, With Particular Reference to Nasality, Mr. J. S. CALNAN (Oxford).

PREVENTIVE MEDICINE

President: J. B. TILLEY, M.D., D.P.H. (Newcastle upon Tyne).

Vice-Presidents: Professor E. M. DUNLOP, M.C., M.A., M.D., F.R.S. (Newcastle upon Tyne); J. F. WARIN, M.D., D.P.H. (Oxford); ELSPETH WARWICK, M.B., D.P.H. (Nottingham).

Hon. Secretaries: J. ALUN EVANS, M.R.C.S., L.R.C.P., D.P.H., 5, Crossfield Avenue, West Winds, Porthcawl, Glam.; R. C. M. PEARSON, M.D., M.R.C.P. (Ed.), D.P.H., Health Department, Town Hall, Newcastle upon Tyne, 1.

Official Reporter: Dr. J. F. WARIN.

Room S 17, Stephenson Building.

Wednesday, July 17.—2.30 p.m. Combined Meeting with Sections of Obstetrics and Gynaecology and Child Health. Puberty and its Problems.

Room F 16, Stephenson Building.

Wednesday, July 17.—2.30 p.m. Joint Session with Section of General Practice. Illness of the School Child.

PSYCHIATRY

President: Professor ALEXANDER KENNEDY, M.D., F.R.C.P., M.R.C.P. (Edinburgh).

Vice-Presidents: LOUIS MINSKI, M.D., F.R.C.P., D.P.M. (Sutton, Surrey); Professor MARTIN ROTH, M.D., M.R.C.P., D.P.M. (Newcastle upon Tyne); IAN SKOTTOWE, M.D., M.R.C.P., D.P.M. (Oxford).

Hon. Secretaries: ROBERT ORTON, M.D., M.R.C.P. (Ed.), D.P.M., Royal Victoria Infirmary and King's College Medical School, Department of Psychological Medicine, Queen Victoria Road, Newcastle upon Tyne, 1; D. A. POND, M.D., M.R.C.P., D.P.M., Yew Trees, Dover House Road, Roehampton, S.W.15.

Official Reporter: Dr. J. L. CRAMMER.

Room F 16, Stephenson Building.

Tuesday, July 16.—9.30 a.m. Symposium on Tranquilizers, Dr. D. R. LAURENCE (London), Dr. L. C. COOK (Dartford), Dr. E. H. KITCHING (Manchester).

RADIOLOGY

President: S. WHATELY DAVIDSON, M.D., F.R.C.P., F.F.R. (Newcastle upon Tyne).

Vice-Presidents: PAIGE ARNOLD, M.D. (Sunderland); R. A. KEMP HARPER, M.D., F.R.C.P. (Ed.), F.R.F.P.S., F.F.R., D.R. (London); W. S. SHEARER, M.B., F.R.C.S. (Ed.), D.R. (Edinburgh).

Hon. Secretaries: B. D. HOUSTON, M.B., B.S., D.M.R., "Roanhead," Melbury Road, Newcastle upon Tyne, 7; ARTHUR JONES, M.D., M.R.C.P., D.M.R.T., Radiotherapy Department, St. Bartholomew's Hospital, London, E.C.1.

Room S 21, Stephenson Building.

Wednesday, July 17.—2.30 p.m. Combined session with Section of Surgery on Radiological Investigation of the Biliary Tract.

COLOUR TELEVISION

- Nuffield Department of Industrial Health, King's College and Royal Victoria Infirmary, Newcastle upon Tyne. (a) The causes and costs of hand injuries; (b) Atmospheric pollution from diesel omnibuses.
- Ministry of Supply, Chorley, Lancs. Universal en-training unit for use in the determination of air contaminants.
- Newcastle Regional Hospital Board. Proposed new general hospital for West Cumberland.
- King's College and Royal Victoria Infirmary, Newcastle upon Tyne. The cytodiagnosis of gastric carcinoma.
- College of General Practitioners, North-East England Faculty. (1) Relative incidence of certain diseases in groups. (2) Bornholm disease. (3) Suggestions on desirable modifications in lectures to students to ensure some introduction to general practice.
- Royal Navy Medical School, Royal Navy Physiological Laboratory. Physiological problems associated with diving and underwater swimming.

17. Royal Air Force Medical Branch: (a) Scaled model of the human centrifuge. (b) An apparatus for research into the breakdown of highly skilled performance. (c) Anaesthetic apparatus incorporating a new vaporizer. (d) Eye vision—test type R.A.F. pattern internally illuminated.

18. Institute of Dermatology, St John's Hospital for Diseases of the Skin, London. Pigmented lesions of the skin.

19. Departments of Pathology and Physical Chemistry, University of Durham. Electron microscopy and Medicine.

20. Department of Gynaecology, Durham University. Gynaecological teaching display.

21. Department of Surgery, King's College, University of Durham, and Royal Victoria Infirmary, Newcastle upon Tyne. Vascular insufficiency in human calf muscle.

22. St. Thomas's Hospital, London. Aortic stenosis.

23. Manchester Royal Infirmary. The "slipped" disk.

24. Manchester Royal Infirmary. Pernicious anaemia—a changing picture.

25. Medical Groups of the Royal Photographic Society and the Institute of British Photographers. Some aspects of photography in medicine.

26. Nuffield Department of Plastic Surgery, the Churchill Hospital, Oxford. An advance in surgical technique—the provision of skin cover.

27. Vacant.

28. Royal Victoria Infirmary, Newcastle upon Tyne. An electromagnetic foreign-body locator.

29. Institute of Clinical Research, The Middlesex Hospital, London. Sarcoidosis.

30. Charing Cross Hospital, London. Comprehensive management of children with cerebral palsy.

31. Medical School, King's College, University of Durham, and Royal Victoria Infirmary, Newcastle upon Tyne. Fractures of the calcaneum.

32. Institute of Psychiatry, Maudsley Hospital, London. Diagnosis and treatment of temporal lobe epilepsy.

33. Victoria Hospital, Swindon, and Odstock Hospital, Salisbury. (1) Rehabilitation flat for disabled housewives.

(2) Thermo-electric clothing for post-traumatic vasospastic conditions.

34. Princess Mary Maternity Hospital, Newcastle upon Tyne. Flying squad (Newcastle upon Tyne obstetric emergency service).

35. The Gordon Hospital, London. Diverticulitis.

36. Institute of Cancer Research, the Royal Marsden Hospital, London. Haematuria.

37. Welsh National School of Medicine. Chronic pulmonary beryllium disease.

SPECIAL EXHIBITION

4. The Pharmaceutical Society of Great Britain. Poliomyelitis vaccine.

EXHIBITION OF PHARMACEUTICAL PRODUCTS, INSTRUMENTS, APPLIANCES, AND MEDICAL PUBLICATIONS, STEPHENSON BUILDING, KING'S COLLEGE

List of Exhibitors	Official Stand No.
Abbott Laboratories Ltd., 3, Wadsworth Road, Perivale, Greenford, Middlesex	1
Ames Co. Ltd., Nuffield House, Piccadilly, W.1	5
Bayer Products Ltd., Neville House, Eden Street, Kingston-on-Thames	20
C. L. Bencard Ltd., Minerva Road, Park Royal, N.W.10	41
Board of Registration of Medical Auxiliaries, Tavistock House North, Tavistock Square, W.C.1	42
Boots Pure Drug Co. Ltd., 37, Station Street, Nottingham	6
British Medical Journal	12
British Oxygen Gases Ltd., Bridgwater House, Cleveland Row, St. James's, S.W.1	33

TIME-TABLE OF MEETINGS

- R.—Events available for members of Representative Body and Ladies accompanying them.
L.—Events primarily arranged for Ladies.
U.—Events for all Members and Ladies accompanying them.
*—Academic Robes should be worn.

Tuesday, July 9

- 4.30 to 6.30 p.m.—Annual Representative Meeting Inquiry Office open at City Hall.
4.30 to 6.30 p.m.—Ladies' Club open, Medical School, King's College.
8.30 to 10.30 p.m.—R. Cocktail Party (by invitation of the Newcastle upon Tyne Division and North of England and Tees-side Branches) at the Old Assembly Rooms, Westgate Road.

Wednesday, July 10

- 9.00 a.m.—Annual Representative Meeting Inquiry Office open at the City Hall.
9.00 a.m.—Ladies' Club open, Medical School, King's College.
9.30 a.m.—Annual Representative Meeting starts at the City Hall.
10.15 a.m. to 1.00 p.m.—L. Visit to Washington Old Hall and Church of the Venerable Bede, Jarrow. (By private car.)
11.00 a.m.—Welcome by the Lord Mayor of Newcastle upon Tyne at the City Hall.
2.00 to 6.00 p.m.—L. Excursion to Delaval Hall and Tyne-mouth. (Tea at Bath Assembly Rooms by invitation of the Tynemouth Division.) (For 60.) Inclusive ticket, 6s.

7.30 for 8 p.m.—Irish Dinner, Medical Institute, 7, Windsor Terrace. Ticket 25s. (including cocktails but excluding wines).

Thursday, July 11

- 9.00 a.m.—Annual Representative Meeting Inquiry Office open.
9.30 a.m.—Ladies' Club open.
9.30 a.m.—Annual Representative Meeting.
10.00 a.m. to 1.00 p.m.—L. Visit to Durham Cathedral. (Coffee by invitation of the Durham Division.) (For 30.) Inclusive ticket, 6s.
11.00 a.m. to 4.30 p.m.—L. All-day excursion to Otterburn, with visit to Otterburn Mills (picnic lunch). (For 40.) Inclusive ticket, 17s. 6d.
7.30 p.m.—R. Dinner for Representatives and Ladies, Old Assembly Rooms, Westgate Road. (For 350.) Ticket 27s. 6d., including aperitifs.
9.30 p.m. to 12.30 a.m.—R. Representatives' Dance, Old Assembly Rooms. (For 500.) Ticket 7s. 6d.

Friday, July 12

- 9.00 a.m.—Annual Representative Meeting Inquiry Office open.
9.30 a.m.—Ladies' Club open.
9.30 a.m.—Annual Representative Meeting.
10.00 a.m. to 2.00 p.m.—L. Excursion to Works of Thomas Hedley and Co. Ltd., Soap and Detergent Manufacturers. (Lunch by kind invitation of the Directors.) (For 60.)
1.00 p.m.—Overseas Luncheon, Old Assembly Rooms (by invitation).
3.00 p.m.—L. Exhibition of Durham quilting; tea by invitation of Mrs. Munro Black.
3.30 p.m.—L. Garden Party by kind invitation of Mrs. Kenneth Stanger at Ettridge Lodge, The Grove, Gosforth. (For 50.)
5.30 p.m.—Cocktail Party for Women Representatives and medical women accompanying Representatives, Northern Women's Hospital, 1A, Osborne Avenue (by invitation of the North-eastern Association of Medical Women's Federation).
7.00 p.m.—R. Theatre. (Tickets will be arranged for the Theatre Royal.)
7.00 for 7.30 p.m.—Aberdeen Graduates' Dinner, Tilley's Restaurant. Ticket 30s.
7.30 p.m.—Welsh Dinner, Royal Turk's Head Hotel. Ticket 25s.

Saturday, July 13

- 9.00 a.m.—Annual Representative Meeting Inquiry Office open.
9.00 a.m.—Council Meeting, Royal Station Hotel.
9.30 a.m.—Ladies' Club open.
10.00 a.m.—Annual Representative Meeting.
10.00 a.m.—Jewish Service, Leazes Park Road Synagogue.
10.30 a.m. to 6.30 p.m.—L. All-day excursion to Alnwick, visiting Alnwick Castle (picnic lunch). (Tea by invitation of the North Northumberland Division at White Swan Hotel.) (For 40.) Inclusive ticket 17s. 6d.
10.30 a.m.—L. Conducted Tour of Laing Art Gallery for special exhibition of local silver, glass, etc.
11.30 a.m.—* Roman Catholic Service, St. Mary's Cathedral, Clayton Street; Reception and Luncheon to follow at the County Hotel.
7.00 for 7.30 p.m.—Edinburgh Graduates' Dinner, Royal Station Hotel. Ticket 25s.
7.45 for 8.30 p.m.—Glasgow Graduates' Dinner, Tilley's Restaurant. Ticket 30s.
8.30 to 11.00 p.m.—L. Evening Reception at Ethel Williams Hall, Longbenton, with display of Scottish and Irish dancing. (Men also invited.) (For 100.)

Sunday, July 14

- 9.30 a.m. to 6.00 p.m.—R. All-day excursion to the Roman Wall. (For 200.) Ticket 30s., inclusive of lunch and tea and transport.
10.00 a.m. to 6.00 p.m.—R. All-day excursion to the Farne Islands. (For 40.) Tea by invitation of the North Northumberland Division. Ticket 32s. 6d., inclusive of lunch and transport.
2.00 to 6.00 p.m.—R. Afternoon excursion to Durham Cathedral and Castle. Tea by invitation of the Durham Division. (For 60.) Ticket 6s.
8.30 to 10.30 p.m.—Concert at the City Hall by the London Mozart Players: conductor, Harry Blech; soloists, Muriel Smith and Campoli (concert sponsored by Abbott Laboratories Ltd.).

Monday, July 15

- 9.00 a.m.—Annual Representative Meeting Inquiry Office open.
 9.00 a.m.—Scientific Exhibition opens in Stephenson Building, King's College.
 9.00 a.m.—Exhibition of Pharmaceutical Products, Instruments, Appliances, and Medical Publications opens at the Stephenson Building.
 9.00 a.m.—Reception Bureau for registration opens at the Stephenson Building.
 9.30 a.m.—Ladies' Club open, Medical School, King's College.
 10.00 a.m.—Annual Representative Meeting.
 10.30 a.m. to 1.00 p.m.—L. Visit to Trinity House, Bessie Surtees' House, and Guild Hall. (For 40.) Ticket 2s. 6d.
 11.00 a.m.—L. Visit to Washington Old Hall and Church of the Venerable Bede, Jarrow. (By private car.) Luncheon by invitation of Mrs. Kidd.
 12.30 p.m.—Annual General Meeting at the City Hall.
 p.m.—Council Meeting, Royal Station Hotel. (On conclusion of A.R.M.)
 12.15 to 2.15 p.m.—Colour Television, Gymnasium, King's College.
 2.30 p.m.—L. Visit to Infantile Paralysis House, Osborne Road. (Tea by invitation of Mrs. F. J. W. Miller.)
 3.00 p.m.—Special Session of Sections of Obstetrics and Gynaecology and General Practice: "Obstetrics and General Practice," in Chemistry Building, Lecture Theatre I, King's College.
 3.30 p.m.—L. Garden Party at Blagdon Hall (by kind invitation of Lady Ridley). (For 25.)
 5.00 to 6.00 p.m.—B.M.A. Films, Stephenson Building (Room F13).
 8.15 p.m.—U.* Adjourned Annual General Meeting and President's Address at the City Hall.
 9.30 p.m.—U.* President's Reception, Old Assembly Rooms, Westgate Road.

Tuesday, July 16

- 8.15 a.m.—Annual Breakfast of the Christian Medical Fellowship, Royal Station Hotel.
 9.00 a.m.—Reception Bureau open for registration, Stephenson Building.
 9.00 a.m.—Scientific Exhibition open, Stephenson Building.
 9.00 a.m.—Exhibition of Pharmaceutical Products, Instruments, Appliances, and Medical Publications open at the Stephenson Building.
 9.30 a.m.—Ladies' Club open, Medical School, King's College.
 9.30 a.m. to 12 noon.—Scientific Sections, Stephenson Building and Chemistry Building.
 10.00 a.m. to 2.00 p.m.—L. Excursion to Works of Thomas Hedley and Co. Ltd., Soap and Detergent Manufacturers. (Lunch by kind invitation of the Directors.) (For 36.)
 10.30 a.m.—L. Exhibition of Durham quilting; and Coffee Party by invitation of Mrs. Munro Black.
 12.15 to 2.15 p.m.—Colour Television, Gymnasium, King's College.
 2.30 p.m.—U.* Robing for Official Religious Service, Cathedral Library (Mosley Street entrance).
 3.00 p.m.—U.* Official Religious Service, St. Nicholas' Cathedral. Address by the Rt. Rev. the Lord Bishop of Durham.
 5.00 to 6.00 p.m.—B.M.A. Films, Stephenson Building (Room F13).
 7.30 p.m.—U. Annual Dinner at the Old Assembly Rooms, Westgate Road. (For 350.) Ticket £2 10s., including cocktails, wines, and liqueurs. (See note on p. 313.)

Wednesday, July 17

- 9.00 a.m.—Reception Bureau open for registration, Stephenson Building.
 9.00 a.m.—Scientific Exhibition open, Stephenson Building.
 9.00 a.m.—Exhibition of Pharmaceutical Products, Instruments, Appliances, and Medical Publications open at the Stephenson Building.
 9.00 a.m. to 9.45 a.m.—Round-table Conferences, Stephenson Building.
 9.30 a.m.—Ladies' Club open, Medical School, King's College.
 10.00 a.m. to 6 p.m.—L. All-day excursion to I.C.I. Nylon Factory at Wilton Park. (Luncheon and Tea by kind invitation of the Directors of Imperial Chemical Industries Ltd.) (For 60.) Transport ticket 10s. 6d.
 10.00 a.m.—Leinster and Childe Golf Competition, Northumberland Golf Club, Gosforth, Newcastle upon Tyne.

- 10.00 a.m.—Notts Ladies' Challenge Golf Competition, Benton Park Golf Club, Arcot Hall, Cramlington.
 10.00 a.m. to 12 noon.—Scientific Plenary Session—Chemistry Building, Lecture Theatre I, King's College: "The Management of Hypertension."
 10.30 a.m.—L. Conducted Tour of Laing Art Gallery for special exhibits of local silver and glass.
 12.30 to 2.15 p.m.—Colour Television, Gymnasium, King's College.
 2.30 p.m.—Scientific Sections, Stephenson Building.
 2.30 to 3.30 p.m.—President's official tour of Scientific Exhibition, Stephenson Building.
 3.00 p.m.—Overseas Conference, Council Room, King's College. Annual Report of the Secretary of the Overseas Committee, followed by general discussion.
 3.30 p.m.—L. Afternoon Tea and Chamber Music by invitation of Mrs. W. G. A. Swan, 6, Jesmond Park West.
 5.00 p.m.—"At Home" for Overseas Representatives and Delegates, Sutherland Hall, Medical School, King's College (by invitation).
 5.15 to 6.00 p.m.—B.M.A. Films, Stephenson Building (Room F13).
 8.30 p.m. to 12 midnight.—U.* Civic Reception and Ball, Old Assembly Rooms.

Thursday, July 18

- 9.00 a.m.—Reception Bureau open for registration, Stephenson Building.
 9.00 a.m.—Scientific Exhibition open, Stephenson Building.
 9.00 a.m.—Exhibition of Pharmaceutical Products, Instruments, Appliances, and Medical Publications open at the Stephenson Building.
 9.30 a.m.—Ladies' Club open, Medical School, King's College.
 9.30 a.m. to 12 noon.—Scientific Sections, Stephenson Building.
 10.00 a.m.—Treasurer's Cup Golf Competition, Northumberland Golf Club, Gosforth, Newcastle upon Tyne.
 12.15 to 2.15 p.m.—Colour Television, Gymnasium, King's College.
 1.30 p.m.—L. Small parties to visit gardens in the district, Stocksfield, Corbridge, etc. (By private car.)
 2.00 to 5.30 p.m.—L. Excursion to Hexham, visiting Hexham Abbey. (Tea by invitation of the Hexham Division.) (For 30.) Inclusive ticket 7s. 6d.
 2.30 to 5.00 p.m.—Scientific Plenary Session, Chemistry Building, Lecture Theatre I, King's College: "The Present Status of Prophylactic Immunization."
 4.00 p.m.—L. Tea Party by invitation of Miss Pybus, White Knights, Bellgrove. (For 20.)
 5.00 to 6.00 p.m.—B.M.A. Films, Stephenson Building (Room F13).
 8.00 to 8.15 p.m.—U.* Congregation of University of Durham to award Honorary Degrees, Sutherland Hall, Medical School, King's College.
 8.30 to 10.30 p.m.—U.* University Reception, King's Hall, King's College.

Friday, July 19

- 9.00 a.m.—Reception Bureau open for registration, Stephenson Building.
 9.00 a.m.—Scientific Exhibition open, Stephenson Building.
 9.00 a.m.—Exhibition of Pharmaceutical Products, Instruments, Appliances and Medical Publications open at the Stephenson Building.
 9.30 a.m.—Ladies' Club open, Medical School, King's College.
 9.30 a.m. to 12 noon.—Scientific Plenary Session, Chemistry Building, Lecture Theatre I, King's College: "Care of the Dying."
 12.15 to 1.15 p.m.—Colour Television, Gymnasium, King's College.
 2.30 to 5.00 p.m.—Scientific Sections, Stephenson Building.

HOSPITALITY

A Norwegian doctor's son and nephew aged 13 would like to visit Britain for six weeks from about June 20, the British boys returning to Norway for six weeks and staying partly in the mountains and partly in Oslo. They would like to visit separate families in the same neighbourhood.

Would anyone interested get in touch with Brigadier H. A. Sandiford, International Medical Visitors' Bureau, B.M.A. House, Tavistock Square, London, W.C.1.

NEWCASTLE UPON TYNE
METROPOLIS OF THE NORTH-EAST

BY

S. MIDDLEBROOK, M.A.*

Strangers who expect to find Newcastle upon Tyne a typical industrial town are pleasantly surprised, especially if they approach from the south. The city stands on a sloping site which falls abruptly to the river, and the first view of it as it springs suddenly into sight from any of the cluster of high-level crossings which bridge the trough between Newcastle and Gateshead can be quite breath-taking. Below are the ships at the Quayside and a sea of roofs in the Sandhill and the Close, while standing out boldly on the crest of the escarpment are the blackened four-square Norman keep, the fifteenth-century flying spire of the cathedral, the stepped renaissance spire of All Saints Church, the dignified Georgian south front of the Moot Hall, and the austere concrete mass of the County Hall behind. Here, in this jumble of old and new, is the core of the original walled borough, the lower part on the escarpment and riverside, the upper part hidden by the skyline.

Metropolitan Air

The Central Station, perhaps the finest single work of the local architect John Dobson, with its sweeping curves and striking portico, is equally impressive. The main streets to which it gives access have a civic dignity and unity of style which remind one of Bath and Edinburgh. The city also has a metropolitan air, in spite of its comparatively small population of 300,000, for nowadays it is mostly given over to commerce, and has become the chief shopping and entertainment centre not only for the million or so people who live on industrial Tyneside but for the "geordies" and countryfolk in the two adjoining counties. The centre has a fresh, clean look, and there are

*Author of *Newcastle upon Tyne: its Growth and Achievement*, 1950. Kemsley Press.

more trees than one usually finds in a northern town. More open spaces too, notably at Barras Bridge and its environs, from which the tree-lined Great North Road runs across the thousand-odd acres of the Town Moor, where the freemen have enjoyed rights of herbage "time out of mind."

Strategic Site

The importance of Newcastle in history is due to its command of the Tyne crossing, its nearness to the frontier, its easy access to the sea, and its central position in the northern coalfield. The strategic advantages of the site were the chief factor in the earlier stages of its growth, and the

economic in the later. The town began as a frontier post, when the Romans built a bridge where the present swing bridge crosses the Tyne and a fort on the site covered by the present castle. *Pons Aelius*, as the post was called, formed part of the Roman Wall which extended from Wallsend to Bowness - on - Solway. Both bridge and fort fell into ruin in Saxon times but were rebuilt by Robert Curthose, eldest son of William the Conqueror, about 1080. His *novum castellum* or "new castle" gave the town the name it has retained ever since. The mediaeval borough grew up about the bridge and the castle, its heart being the Sandhill close to the bridge-end.

The town walls were not built until the time of the Scottish wars. From 1400, when Newcastle became "a county of itself," with the right (which it still has) to have a sheriff of its own, Newgate became the town gaol, whence condemned criminals

were led in carts along Gallowgate to the scaffold on the Town Moor. Comparatively few historic buildings and monuments have survived from these early centuries, but among those of special interest are the twelfth-century keep, the thirteenth-century Black Gate, and part of the castle wall; the churches of St. John, St. Andrew, and St. Nicholas (a cathedral since 1882); one or two stretches of town wall with a few towers and turrets; and the mutilated remains of the Black Friars.

Growth of Industry

A unique feature of the growth of Newcastle is the long overlap of its military and its industrial history, for, although

The Medical School.

The Black Gate and Keep.

the town continued to play an important role as fortress and supply base till the time of the Jacobite rebellions, the local coalfield was worked as early as the twelfth century, and before the end of the Middle Ages was beginning to supply the London market. The Reformation gave a big impetus to the industry, and in the seventeenth and eighteenth centuries led to the establishment on Tyneside of a variety of coal-using industries. Evidence of the town's increasing prosperity during this period can be seen in Surtees House in the Close; in the Guildhall and Trinity House, both rebuilt in the seventeenth century and much altered or extended since; in the Old Assembly Rooms in Westgate Road (1776); in All Saints Church, rebuilt by David Stephenson in 1796; and the Moot Hall (1810). From 1763 the town began to burst through its mediaeval limits, the town wall and gates which had remained intact till then being for the most part gradually demolished during the next sixty years.

A landmark in the replanning of the town's commercial heart, and part of its battle against disease, was the filling in of the Lort Burt Dene, which for centuries had cut the town in two. By the eighteenth century the dene had become little better than an open sewer, described by one contemporary as "a vast nauseous hollow" and by another as "a place of filth and dirt." Between 1784 and 1789 Dean Street and Mosley Street were constructed on the filled-in lower part of the dene, and between 1834 and 1839 Richard Grainger, a builder, with John Dobson as architect, constructed Grey Street on the levelled upper part. Grey Street, crowned by Grey's Monument, with its stepped skyline, harmoniously designed blocks, and its long falling curve broken by the portico of the Theatre Royal, is the finest street in the city. Grainger and Dobson also co-operated in other works, and the stamp of style these two public-spirited men gave to central Newcastle, though later badly blotched at the shop level, is clearly evident to-day.

Many public parks have been opened, and, more significantly still, in the present century the Corporation has made a serious attack on the housing problem, though slum areas remain. At the same time the increasing industrial integration of Tyne, Wear, and Tees is already opening a new chapter in the history of the city by transforming the former capital of Tyneside into the metropolis of the whole North-East coast region.

Public Health

One of many consequences of the economic revolution which began on Tyneside in Tudor and Stuart times was that it compelled the Newcastle Common Council to tackle the problem of public health from a relatively early date. The congestion of population in the maze of "narrow, dark stinking alleys" which filled the lower part of the town became steadily worse, until in the eighteenth century it was probably denser than in any other borough in the kingdom outside London. As in other towns, dirt, tainted water, lack of sewers, uncleared dunghills and overcrowding brought recurrent epidemics of smallpox, and later of cholera, while typhus took a heavy annual toll in "the fever districts," as the townsfolk fatalistically called the

poorer quarters. Even as late as 1873 the death rate was higher than that of any other provincial English town except Manchester and Liverpool.

Progress was at first tragically slow. Repeated outbreaks of pestilence in the later years of Elizabeth's reign led to the appointment of "a town physician," a post which was maintained till 1701. The first small reservoirs were constructed at the end of the seventeenth century, but complaint of "the want of water" persisted for another 170 years. It is, however, only since 1873, when the first medical officer of health was appointed, that a really radical improvement in public health has been achieved, in spite of a fourfold increase in population during the last hundred years. Water supplies are now drawn from as far afield as the Cheviots.

Hospitals

Hospitals (almshouses) of the mediaeval type continued to be founded until the early nineteenth century—for example, the Holy Jesus Hospital (1682) and the Keelmen's Hospital (1701), both of which have survived—but it was not until midway through the eighteenth century that the first hospitals of modern type were opened. Several of the best-known medical institutions in modern Newcastle date from this time. The Infirmary (now the Royal Victoria Infirmary) was founded in 1751, the third oldest in the north of England; the Princess Mary Maternity Hospital, a combination of a lying-in hospital and a lying-in charity, in 1760-1; St. Nicholas Hospital, originally a "madhouse" in Bath Lane for pauper lunatics, in 1767; the Dispensary where vaccination

was introduced for the first time in 1801, after an unusually severe outbreak of smallpox, in 1777; and the hospital for infectious diseases now at Walkergate, as the direct successor of a typhus hospital in Bath Lane, in 1804. It should also be noted that it was a first terrifying "visitation" of cholera in 1831-2 that led to the foundation of the School of Medicine and Surgery now incorporated in the King's College division of the University of Durham. Most of the earlier buildings occupied by these various institutions have gone—the old infirmary and the old lunatic asylum only in the last few years—but the former typhus hospital can still be seen in the courtyard of the Rutherford College of Technology.

Other hospitals have been established more recently, including Hunter's Moor, the Dental School and Hospital, and the important and extremely well-equipped Newcastle General Hospital in Westgate Road, which has developed from the former workhouse infirmary.

The clinical school of the Medical School, King's College, consists of the Royal Victoria Infirmary with 680 beds and an annual out-patient attendance of nearly 400,000, the Princess Mary Maternity Hospital with 106 beds and an annual attendance of over 16,000 cases, and the Babies' Hospital (24 cots and 11 mothers' beds). Students also have admission to the Newcastle General Hospital (838 beds) and the hospitals for mental and infectious diseases.

The illustrations of the Medical School and the Black Gate and Keep are by courtesy of Messrs. Andrew Reid and Co. Ltd., and that of Grey Street by courtesy of Messrs. Philipson and Son Ltd., both of Newcastle upon Tyne.

GENERAL MEDICAL COUNCIL

194TH SESSION

The General Medical Council held its 194th session in London on May 28. The President, Sir DAVID CAMPBELL, presided.

PRESIDENT'S ADDRESS

The proceedings opened with an address by the PRESIDENT. Sir David Campbell began by referring to the report of the curriculum committee,* which the Council would be considering that afternoon. If adopted, its recommendations would supersede those adopted in 1947.

The President said that the memorandum issued by the Minister of Health and the Secretary of State for Scotland on a provisional scheme for registration of medical auxiliaries appeared to cover the points raised by the Council in its observations on earlier proposals made by the Department, and therefore the executive committee had not thought it necessary to make any further comment.

Relations with Commonwealth

The remainder of the President's address dealt with the relations of Great Britain to the other countries from the Commonwealth in the sphere of medical education and registration.

In member countries of the British Commonwealth, said Sir David, a number of bodies had been constituted on the lines of the General Medical Council. One of the most important in the past quarter of a century had been the Medical Council of India, which was established by the Indian Medical Council Act, 1933. On December 30, 1956, this Act was repealed and a new Act took its place. The Indian Medical Council Act of 1956 followed the same general lines as the original Act, but a number of new powers were conferred on the council. Perhaps the most important of these was the power to keep a register of medical practitioners, which would contain the names of all persons who for the time being were enrolled on any State medical register and who possessed any of the recognized medical qualifications indicated in the Act. By a new provision the Medical Council of India had power to prescribe standards of postgraduate medical education for the guidance of Indian universities, and to advise universities in the matter of securing uniform standards for such education.

South Africa

The President reported that in March he and Dr. E. R. Boland had visited the medical school of Makerere College, Uganda, in response to a request from the principal of the College. The College had previously been inspected by Council visitors in 1951. "We found," said Sir David, "that the deficiencies pointed out by the former visitors in staff, teaching facilities, and accommodation, as well as the lack of status of the qualifications in the Territories and the lack of status of the diplomates, had nearly all been remedied. We were impressed by the spirit and atmosphere of the school as a whole, and we reported to the executive committee that the qualification granted by the College was worthy of recognition for the purposes of provision and full registration in the United Kingdom." The executive committee had accepted that recommendation.

From East Africa the President proceeded to Capetown on what he described as a "good-will mission" to visit as its guest the South African Medical and Dental Council. He went on to Durban, where he spent some time in the new medical school of the University of Natal, and then on to visit the South African Institute for Medical Research in Johannesburg and the University of Pretoria. The President told the Council that he was impressed by the medical school of the University of Natal, which was founded to give a medical education to students of non-European stock, and by "the energy, ability, and enthusiasm of the full-time teaching staff, who were doing their utmost to make the school a success. When the South African Medical and Dental Council invite us to recognize the degrees granted by that medical school, I would have no hesitation in advising the executive committee to accede to that request."

Singapore and Hong Kong

From South Africa the President travelled to Singapore and Hong Kong. It would be impossible, he said, in a brief address to give an account of the major developments that had taken place in the Faculty of Medicine of the University of Malaya since it was reopened in 1946 after the Japanese occupation. New departments had been provided for anatomy, parasitology, surgery, and orthopaedic surgery; an urban health centre was nearing completion which would house the department of social medicine and public health; and a new department of pathology was in process of construction. A number of new chairs had been founded. A fine children's hospital and new maternity hospital had been built, and a new residential college to accommodate 300 medical students had been opened. The University of Malaya had instituted a diploma in public health, and also provided postgraduate courses for those intending to specialize in surgery. It had a scheme to train specialists in midwifery and gynaecology, but although the new maternity hospital had 300 beds and an adequate staff the Royal College of Obstetricians and Gynaecologists had not thought fit to consider any of the posts in the hospital as suitable for this purpose, a decision causing great disappointment in the University.

Sir David Campbell said that the courses of instruction in the Hong Kong University Faculty of Medicine continued to fulfil the requirements of the General Medical Council, but there were gaps to be filled and defects to be remedied, although improvements had been made. There was a fine new maternity hospital, and a new department of pathology was being constructed, but there was urgent need for better provision for teaching biochemistry, pharmacology, and paediatrics, for a new out-patient department, and for increased staff generally. If the establishment laid down for each department was at full strength, the staff would be adequate, but the financial arrangements made by the Government based on an annual budget made this almost impossible. The greatest need, therefore, was for increased financial provision based on a quinquennial or at least a triennial budget.

The President concluded by saying that in some of the countries he visited there was a striking gap between men holding senior medical posts and the junior staff. It was imperative, if the medical service in these countries was to develop on modern lines, that the gap should be filled by doctors trained locally as specialists in medicine, surgery, and midwifery, yet willing to submit themselves to any standard of examination demanded in this country. They were desperately anxious to do so. Sir David said it would be a good thing for this country and for the Commonwealth if bodies which granted higher qualifications were to follow the example of the General Medical Council and approve the medical schools of the Commonwealth countries with whom reciprocity was held as places where the candidates for their examinations could be trained.

CURRICULUM COMMITTEE REPORT: REVISION OF RECOMMENDATIONS AS TO THE MEDICAL CURRICULUM

In May, 1955, the General Medical Council established a curriculum committee for the purpose of considering the revision of the recommendations on the medical curriculum adopted by the Council in February, 1947. The PRESIDENT, Sir David Campbell, as chairman of the Curriculum Committee, introduced its draft recommendations to the Council at the afternoon session on May 28. These were adopted by the Council and we print them in full at page 327 of this Supplement. Below we report the Council's debate on the committee's draft document.

*A leading article on the committee's recommendations, which were adopted by the Council, appears at p. 1351 of the Journal.

General and Pre-Medical Education

Commenting on the first part, Professor H. R. DEAN said it was striking that it took schools two years to teach the required standard in physics, chemistry, and biology, whereas boys who took the preliminary examinations at medical schools very often got through them in a year. That was unfortunate in the sense that it lengthened the medical curriculum and cut short the period of general education.

The PRESIDENT agreed with Professor Dean, but pointed out that it was necessary to face up to the situation as it existed at the present time.

The recommendations on general and pre-medical education were approved.

Professional Education

Dealing with the second part—professional education—Professor J. H. F. BROTHERSTON congratulated the Curriculum Committee on a very thoughtful document, and welcomed its form as “an enabling statute which gives freedom to experiment.” At the same time, he wondered whether it was still necessary to specify a period of not less than two months for residential clinical instruction in midwifery. He accordingly suggested that the words “not less than two months” be deleted and the words “sufficient time” substituted. The specification of the exact period of time was out of keeping with the general spirit of the document. He noted with some regret the disappearance of a specific mention of therapeutics in association with pharmacology. Therapeutics should be brought into the curriculum as playing an important part in the education of students.

Dr. J. G. MCCRIE associated himself with Professor Brotherston's welcome of the document, and also with his doubt whether the specification of “not less than two months” was necessary. He would have suggested replacing it by the words “a part of the time devoted to . . .” At the same time he suggested that there was no need even to specify a period of not less than 15 months in the aggregate for clinical clerkships in medicine, surgery, and paediatrics.

Mr. V. J. F. LACK said that obstetric departments had always found it difficult to persuade universities or hospitals to house their students for the necessary two months. “We have fought for a long time to get a decent period of residence so that obstetrics students can see the work of the obstetrics department which takes place largely at night,” he said. If a loophole were made and obstetrics students were not housed, in his view their obstetric education would be in danger.

Professor H. R. DEAN said he approved the recommendation that instruction in pathology and bacteriology should be given in association with clinical studies, because medicine and pathology were, after all, really one subject. But he pointed out the great danger which would ensue if close correlation between anatomy, physiology, and pathology were not secured. At Cambridge there was a course in pathology and bacteriology which, although not compulsory, was taken by almost every medical student before taking the examination in anatomy and physiology. Close correlation was of great advantage to the student. It was not until many students were asked to see the changes in a diseased kidney or lung that they suddenly realized they did not know what a normal organ looked like. He also emphasized the great importance of having an elementary knowledge of general pathology and bacteriology, because it was necessary for an understanding of preventive medicine.

Professor P. J. MOIR expressed disappointment that no consideration had been given to the pre-registration year. The way in which that year might be used could have a considerable influence in undergraduate teaching. In the University of Leeds it was felt that it eliminated the need for long clerkships in medicine and surgery. It must be the responsibility of the licensing body to see that the pre-registration year was really fulfilling the function it was supposed to do. Courses could be so arranged that less influence would be given to certain of the more practical parts, and the time

would be used in the teaching of more fundamental matters. Dr. G. A. CLARK said he was glad to hear the suggestion that the pre-registration year should be the responsibility of the medical schools. So many people recently had endeavoured to thrust the responsibility on the Ministry of Health. It could be correlated with undergraduate teaching, but in his view the writ of the General Medical Council did not run to the pre-registration year. It was not the Council's responsibility.

Professor T. N. A. JEFFCOATE said that he, together with other members of the Curriculum Committee, had been opposed to mentioning any specific periods of time to be spent on subjects if it could be avoided, but many members of the Committee felt that one of the important features in training was the old system of apprenticeship. He had a certain sympathy with those who suggested that the specific period of not less than two months, so far as midwifery was concerned, should be dropped. At the same time, it had to be recognized that when an individual was qualified he was entitled to practise midwifery, and there was a duty to the public to see that practitioners were safe in the obstetrics art. Obstetric teaching had been reduced to simple proportions, but most people who had anything to do with obstetrics would agree that it was impossible to teach even the simple matters of safety unless the student was resident for a reasonable period of time. He submitted that it would be dangerous if no minimum period were stipulated in that respect.

Dr. J. G. MCCRIE said that a number of people with whom he had discussed the problem seemed to be satisfied that a shorter period than two months would suffice in which to learn a sufficient amount of midwifery, and the University of Sheffield had had in mind the introduction of a shorter period than two months. Mr. R. A. STONEY expressed the view that it was useless to take a student as a resident in a hospital for a period of less than two months. Professor J. H. F. BROTHERSTON moved the deletion of the words “not less than two months” and the substitution of the words “sufficient time.” Professor D. J. A. KERR seconded the amendment.

Sir HAROLD BOLDERO said that he was one of the members of the Committee who desired the removal of the set periods, but in his view it should be a two-stage process. The number of cases required had been removed, and he suggested that the wise course would be to wait for some years until the freedom had been shown to be quite safe before deleting the words “not less than two months.” Some bodies might interpret “sufficient time” as no residence at all. He was opposed to the amendment. The amendment was defeated.

The PRESIDENT referred to Professor Brotherston's point on therapeutics, and said he was in sympathy with it, but under the heading pharmacology it was stated that instruction should be given in the mode of action of drugs, their distribution and fate in the body, their possible toxic effects, and their therapeutic uses. Therefore it would appear to be adequately covered. In reply to the point raised by Professor Dean, there was nothing to prevent a school teaching the elements of pathology and bacteriology along with or before anatomy and physiology. So far as the pre-registration period was concerned, that was not the business of the Council. It was a matter for the licensing bodies.

The recommendations on professional education were approved.

Professional Examinations

Dr. J. G. MCCRIE drew members' attention to the recommendation that “no part of the final or qualifying examination should be taken before the end of four academic years, and the examination should not be completed before the end of five academic years of professional education.” While, he said, the recommendation would be appreciated in so far as it was designed to prevent a completely piecemeal approach, there was a body of opinion which was worried about the effect on the student of the terrible obstacle of one examination at the end of the fifth or sixth year. It

had been suggested by his own university (Sheffield) among others that there might be three sessional examinations, one at the end of the fourth year, one at the end of the fifth year, and one at the end of the sixth year. The earliest would consist largely of pathology, bacteriology, and pharmacology, but it was felt that even that might contain something called “clinical science.” The marks would be taken into account when the student came up for the final. Similarly, at the end of the fifth year a similar procedure would be adopted. In his view the Council could reasonably leave the question to the Licensing Bodies themselves as one of the experiments which they might carry out.

Professor A. P. THOMSON pointed out that the recommendation to which Dr. McCrie objected referred to the final or qualifying examination in medicine, surgery, and midwifery and gynaecology. He was perfectly free to do exactly as he suggested. The PRESIDENT agreed, and added that pathology was a branch of medicine but was not a part necessarily of the final examination. Dr. MCCRIE said he was glad to have that reassurance.

The recommendations on professional examinations were approved.

On the motion of the PRESIDENT the draft recommendations on the Medical Curriculum were adopted by the Council.

MEDICAL DISCIPLINARY COMMITTEE

The Medical Disciplinary Committee of the General Medical Council met on May 29, with the President, Sir DAVID CAMPBELL, in the chair.

Applications for Restoration

There were two applications for restoration to the Register. The Committee acceded to the application of CHARLES KINGSLEY COLWILL, and directed that his name be restored, but rejected the application of WILLIAM ARTHUR NASON.

Cases Adjourned for Judgment

In the case of WILLIAM FRANK CRUICKSHANK, registered as of Broxy Cottage, Westmuir, Brechin, Angus, M.B., U. Glasgow, 1936, who had had judgment postponed in U. Glasgow, 1936, May, 1955, May, 1956, and July, 1956, following a conviction for being drunk and disorderly, findings of failing without reasonable cause to attend his surgery and disregarding his duties as a medical practitioner under the National Health Service over a considerable period, and (in respect of the postponement in July, 1956) of a charge in January, 1956, of driving a motor-car when under the influence of drink. The Committee postponed judgment until May, 1958.

JOHN MILLAR MATTHEW, registered as of 176, Farley Road, Selsdon, Surrey, M.R.C.S. Eng., 1931, M.B., U. Camb., 1932, appeared for postponed judgment. Last May he had been found to have been convicted, in 1948 and 1954, of two series of charges concerning dangerous drugs, and, in February, 1956, of driving a motor-car when under the influence of drink or drugs. The Registrar was not directed to erase Dr. Matthew's name from the Register, and this closed the case.

JAMES WATSON RICHMOND, registered as of Rosskeen, Kelt, Fife, M.B., U. Glas., 1929, made an interim appearance, judgment having been postponed for two years in May, 1956, following convictions in that year of assault and conducting himself in a disorderly manner and committing a breach of the peace. Three testimonials were presented. The PRESIDENT announced that the Committee noted with satisfaction the letters and would await Dr. Richmond's further appearance before them at their meeting in May, 1958.

Adultery Arising out of Professional Relationship

KENNETH LEOPOLD GEORGE NOBBS, G.M., registered as of 3, Cotman Gardens, Edgware, Middlesex, M.B., U. Lond.,

1936, M.R.C.P.Ed. 1950, was charged that, being registered under the Medical Acts, he, in or about March, 1954, entered into professional relationship with Mrs. Joan Phyllis Drágmár Hills; that on August 27, 1956, he committed adultery with her, and that he was found guilty of adultery with her by decree of the Divorce Court, and that in relation to the facts alleged he was guilty of infamous conduct in a professional respect. Dr. Nobbs was represented by Mr. N. L. Taylor, of Messrs. Hempsons, solicitors to the Medical Defence Union.

Mr. Widgery said that the charge arose out of Dr. Nobbs's adultery with Mrs. Hills, who was one of his patients. Mr. Hills brought divorce proceedings on the grounds of his wife's adultery and obtained a decree which was made absolute on January 29. Mr. Hills was a police constable. He married in 1951. In June, 1953, he and his wife went to live at 41, Gainsborough Gardens, Edgware. In March the following year they became patients of Dr. Nobbs, but did not transfer to his National Health Service list until February, 1955. In a letter to the Council Dr. Nobbs said that Mrs. Hills transferred off his list on August 23, 1956, so it might well be that the executive council did not receive notification from the new doctor until September 3. Since March, 1954, Dr. Nobbs had treated Mr. and Mrs. Hills on a number of occasions. Mr. and Mrs. Hills became friendly with Dr. Nobbs. They met him socially. Throughout this time Dr. Nobbs was separated from his wife.

In August, 1956, Mrs. Hills told her husband that she wanted to take a position as receptionist to Dr. Nobbs. Mr. Hills raised no objection. It was because of this, she told her husband, she wanted to transfer from Dr. Nobbs's list, and her name was in fact transferred on September 3, although she made application on August 23. Mr. Hills filed a petition on September 15, 1956, on the grounds that his wife committed adultery with Dr. Nobbs, in particular on August 27. The case was undefended. Mr. Widgery produced the confession statement made by the doctor and Mrs. Hills.

In a letter to the Registrar, Dr. Nobbs said that Mrs. Hills was transferred off his list on August 24, 1956. He admitted that he was found guilty, but he now sought to say the first time adultery was committed was on January 18, 1957. Mr. Widgery submitted that it was not open to Dr. Nobbs to argue before the Committee that he did not commit adultery on August 27. The Medical Act, Section 33 (2), stated that a finding of fact by a court in matrimonial proceedings should be conclusive evidence of the fact found, and the Divorce Court found that Dr. Nobbs had committed adultery on August 27.

Mr. James P. F. Hills, the husband of Mrs. Hills, gave confirmatory evidence of the social relationship which developed between him and his wife and Dr. Nobbs. He did not object to his wife becoming Dr. Nobbs's receptionist in August, 1956. On the night of August 26-27, his wife told him she was in love with Dr. Nobbs and in spite of his persuasions she went off with Dr. Nobbs. Subsequently he heard that his wife was ill with phlebitis and Dr. Nobbs told him he was looking after her.

Dr. Nobbs, giving evidence, was asked by Mr. Leigh Taylor: “It is alleged that you committed adultery with Mrs. Joan Hills. That is correct, is it not?” Dr. Nobbs replied: “In the long run, yes.” He told how he was awarded the George Medal in the Air Force and how he became medical specialist to the Far East Air Force. He was invalided out in 1953. It could be said that his marriage became a war casualty. There came a time early in July, 1956, when he realized that he was in love with Mrs. Hills, and it did not take long to realize that she reciprocated. He applied for jobs overseas, but none of these came off. Asked about the transfer of Mrs. Hills from his list Dr. Nobbs said that the reason was not that she was to become his receptionist; it was in fact that he thought she should no longer be on his list.

In further examination Dr. Nobbs was asked to what extent he personally gave treatment to Mrs. Hills when she had phlebitis, and he replied that it was purely first-aid, when he was on the spot.

In cross-examination Dr. Nobbs denied committing adultery before August 26-27. In regard to Mrs. Hills's transfer from his list, Dr. Nobbs said: "It was not that we had any intention of adultery. Our whole idea was to prevent any such occurrence. It was purely that I was not treating her properly. I could not treat her objectively."

Mrs. Nobbs, the wife of Dr. Nobbs, who had asked that she might give evidence on his behalf, told the Committee that her husband was very lonely when he lived at the Edgware house and he was unable to get full employment. Every morning he read from his bible. The fault was entirely hers for living at Tring.

Mr. Leigh Taylor read a number of testimonials to Dr. Nobbs's character, submitting that these made it plain that he was the best type of medical man, and was not the sort of person that one could lightly cast out from any society. That which occurred arose in no way out of the professional relationship but out of a social relationship which was, the evidence showed, unusually close in this case. That was admitted by Mr. Hills, said Mr. Taylor. He submitted that in the nature of things friendship sometimes would go too far. If that happened between a doctor and his patient the doctor would have sinned, but what was the professional sin in those circumstances? There was not one jot of evidence that Dr. Nobbs had ever at any time at all abused the professional relationship in its narrower sense, that was to say on the occasion on which he had treated Mrs. Hills, or that he used his position as a doctor to make any advances to Mrs. Hills or influence her in any way. Mr. Taylor asked the committee to consider whether this was not a case of a man with great potentialities for good within the profession who could be permitted to live down what had occurred.

Mr. Widgey said that the best that could be said was that there might have been a gap of four days when Mrs. Hills was technically not Dr. Nobbs's patient, at any rate for the purpose of the Health Service regulations, before the proved adultery took place. He submitted that this could not be any answer to a charge of this nature.

The PRESIDENT announced that the Committee had determined that the facts alleged against Dr. Nobbs had been proved to their satisfaction. The Committee found him guilty of infamous conduct in a professional respect in relation to these facts and directed the Registrar to erase his name from the Register. Dr. Nobbs had 28 days in which to appeal to the Privy Council.

Allegations of Canvassing

The Committee considered the case of NANCY WINIFRED HOLLOWAY, registered as of Curridge, Newbury, Berks, against whom it was charged that at various times between October, 1954, and March, 1956, she had canvassed for patients. In three of the six charges, Mr. Leigh Taylor, of Messrs. Hempsons, solicitors, who appeared for the complainant, Dr. J. A. Richards, of the same district, did not offer any evidence. Dr. Holloway, who was represented by Mr. E. B. McLellan, instructed by Messrs. Le Brasseur and Oakley, solicitors to the Medical Protection Society, denied the charges.

Evidence in the first charge was given by Mrs. Joyce Strong, who said that soon after she, her husband, and two children had moved to their present address in Hempstead Norris, Berks., Dr. Holloway had called, saying she had known a Mrs. Strong, also with two children, and had wondered if it was the same family. Dr. Holloway had then asked if she was registered and whether the baby had been immunized. Mrs. Strong replied that she was registered with Dr. Richards, who was dealing with the immunization.

Questioned by Mr. McLellan, Mrs. Strong said that Dr. Holloway had known immediately that Mrs. Strong was not her former friend, and that thereafter the two women had talked of the children and the question about immunization had cropped up in the course of that friendly conversation.

Mrs. Violet Alice Burgess, of Orr, Berkshire, said that soon after moving from two cottages at Orr Common with her husband and nine children Dr. Holloway had called

and had at once said that she thought Mrs. Burgess was again pregnant. She had asked, "How many kids have you got?" Mrs. Burgess replied that she had not got any "kids" but that the children about the house were hers. Dr. Holloway had then left.

Mrs. Burgess agreed with Mr. McLellan that she was annoyed both by the reference to a pregnancy and to the use of the word "kids." Dr. Holloway had identified herself as soon as she arrived but had not at any stage suggested that Mrs. Burgess should become her patient. The call had been made only five or six days after the Burgess family had moved into the house.

Evidence was given by Mrs. Helen Bennett Grossert that Dr. Holloway had called on her about a fortnight after she had gone to her present address and had said, "I would like to see your cards." Mrs. Grossert introduced her husband, who was asked by Dr. Holloway to sign them. She had then taken them away with her. Dr. Holloway informed them that she had been the doctor to the previous occupiers. A fortnight before Christmas, 1956, Dr. Holloway had telephoned to say that she was bringing a document for Mrs. Grossert to sign, to the effect that her previous statement of complaint was wrong. Mrs. Grossert had not signed.

She denied the suggestion that as a result of the recent loss of a child in tragic circumstances she and her husband had "medical matters" very much on their minds, and that as soon as Dr. Holloway had announced herself they had said "they might as well get fixed up" with her. She admitted that, as newcomers to the district, they would have wished to have registered with a doctor. The Grossert family were still registered with Dr. Holloway.

Denying all the charges, Dr. Holloway told the Committee that she had been registered since 1923 and had practised for 34 years. During the past 15 years she had practised in and around Newbury and had never previously had complaints made against her. It had been the identity of name and size of family that had led her "out of curiosity" to pay a visit, but as soon as she had seen Mrs. Strong she had realized she was not the Mrs. Strong she had known. It was quite possible that, as a matter of habit, she had said something about immunization, but after a short conversation she had withdrawn.

She had called on Mrs. Burgess in an effort to help some people who were trying to buy "some rotten old cottages on Orr Common" which she knew the Burgesses had previously occupied. She emphatically denied having said anything about pregnancy to Mrs. Burgess. She had remarked that the bungalow must be very crowded when she had asked Mrs. Burgess how many "kids have you got," and being told there was nine. She already knew that the Burgesses were registered with Dr. Richards, but had neither suggested nor intended to suggest that they should change to her.

She had been paying a visit near to the Grosserts and had called to say good-bye to the former occupiers of the house, not knowing they had already left. Immediately on seeing her, Mrs. Grossert had said, "Oh, you're the doctor—we might as well get fixed up," and on returning with the cards had told Dr. Holloway about the drowning of her child. The telephone conversation was the consequence of Dr. Holloway having heard that the Grosserts had said she had annoyed them. She had naturally wanted to know if they still wished to be registered with her. She had never canvassed any of the witnesses or anyone else. She had a substantial practice "all she could cope with," and proposed to retire in about a year, at the end of the ten-year qualifying period for pension under the N.H.S.

After consideration *in camera* the PRESIDENT announced that the Committee found Dr. Holloway not guilty of the charges laid against her.

Names Not Erased

In the following cases of postponed judgment the Committee decided not to direct the Registrar to erase the names from the Register:

ANDREW FRANCIS AMERHERST GALLIEN, registered as of 20, Orchard Drive, Giffnock. Postponed from June, 1956,

following convictions at the Glasgow Sheriff Court in 1954 and 1956 of driving under the influence of drink or drugs. ROBERT LINDSAY, registered as of 8, St. Ninian Drive, Inverness. Postponed from May, 1955, and June, 1956, following convictions at Inverness and Sheffield of breach of the peace, resisting arrest, and being found drunk. JAMES MCKENZIE, registered as of 255, Rochdale Road, Middleton, Manchester. Postponed from May, 1955, following convictions at Middleton Magistrates' Court and at Manchester Assizes of unlawfully procuring drugs. ROBERT PHILIP STRANG, registered as c/o Messrs. Hempsons, 33, Henrietta Street, London, W.C.2. Postponed from May, 1955, following conviction at the Central Criminal Court of causing grievous bodily harm by shooting.

Judgment Postponed

Judgment was further postponed, to November, 1957, in the case of JOSEPH JOHN MCMENEMY, registered as of Burnside, Bargeddie, Glasgow, convicted in 1954 and 1955 at Airdrie and York of driving and of being in charge of a motor vehicle while under the influence of drink. It was stated that Dr. McMenemy's present whereabouts were not known. He was last known to be working in a hospital overseas.

Judgment was further postponed, to May, 1958, in the case of PATRICK FRANCIS MACDONALD, registered as c/o A. MacDonald, solicitor, Main Street, Granard, Co. Longford, convicted in 1950, 1952, and 1956 at Heywood, Manchester, and St. Helens Magistrates' Courts of being drunk and incapable, of disorderly behaviour in a highway while drunk, and of being in charge of a motor-car when under the influence of drink.

GENERAL MEDICAL COUNCIL RECOMMENDATIONS AS TO THE MEDICAL CURRICULUM

I. RECOMMENDATIONS AS TO GENERAL AND PRE-MEDICAL EDUCATION

The following examinations should be passed by every student before admission to the course of professional education:

(1) A recognized preliminary examination in general education.

The minimum standard of general education required of an applicant should be that attested by the possession of a certificate bearing evidence that he has passed a matriculation or entrance examination of a university of Great Britain and Northern Ireland, or of the Republic of Ireland, or other examination recognized by such a university, or by a medical corporation, as equivalent thereto.

(2) An examination or examinations in the following subjects conducted or recognized by the licensing body concerned: (a) Physics (theoretical and practical). (b) Chemistry (theoretical and practical). (c) Biology (theoretical and practical).

Note.—Applicants may offer themselves for examination in biology either before or after admission to the course of professional education.

II. RECOMMENDATIONS AS TO PROFESSIONAL EDUCATION

The period of professional study should be a period of not less than five academic years and should include instruction in the subjects specified below.

It is desirable that interdepartmental teaching should be encouraged throughout the whole period of professional study.

The memorizing and reproduction of factual data should not be allowed to interfere with the primary need for fostering the critical study of principles and the development of independent thought.

SUBJECTS

1. *Human Anatomy, Physiology, and Biochemistry.*—Instruction in human anatomy, physiology, and biochemistry should include instruction in histology and embryology.

Notes.—(1) It is desirable to emphasize the interrelation of structure and function, to provide adequate experience of dissection of the human body, and to demonstrate the anatomy of the living body. (2) Every effort should be made to secure close correlation in the teaching of anatomy, physiology, and biochemistry, and to stress wherever opportune the importance of these subjects in their clinical application. (3) Instruction should be given in the elements of normal psychology. (4) In order to ensure that students are fit to continue the work which they have undertaken, there should be an adequate test or examination in normal structure and function not more than two academic years after the student has entered on the period of professional education.

2. *Medicine (including Child Health and Paediatrics, Social and Preventive Medicine, and Psychological Medicine) and Surgery.*—Instruction in medicine and surgery should include: (a) Systematic instruction in the principles and practice of medicine and surgery, especially in relation to the prevention, diagnosis, and treatment of disease and to the maintenance of the highest standards of health. (b) Clinical clerkships in medicine, surgery, and paediatrics for a period of not less than 15 months in the aggregate.

Notes.—(1) It is desirable that for a part of the time of clinical clerkship the student should reside in hospital or conveniently near by. (2) It is desirable that the student should be given opportunities to learn something of the work of the general practitioner. (3) During his study of all clinical subjects the attention of the student should be continuously directed by his teachers to the importance of the interrelation of the physical, psychological, and social aspects of disease. (4) Though instruction in the various specialties in medicine and surgery should be directed in the main to the attainment of sufficient knowledge to ensure familiarity with common conditions, their recognition and treatment, the value of utilizing a specialty to demonstrate general principles should be borne in mind. (5) Instruction should be given in the principles of preventive medicine, and on the influence of heredity and environment in its widest sense on health and disease. Where appropriate the various agencies established by local authorities as part of the public health and social welfare services should be utilized for this purpose. (6) Instruction in psychological medicine should be carried out mainly in a psychiatric department, where neuroses and psychoneuroses can be studied, and should include demonstrations at a mental hospital and at a mental deficiency institution.

3. *Midwifery and Gynaecology.*—Instruction should include: (a) Systematic instruction in the principles and practice of midwifery and gynaecology. (b) Clinical instruction in midwifery and gynaecology, and attendance on the practice of a maternity hospital or of the maternity wards of a general hospital, and on in-patient and out-patient gynaecological practice. (c) Not less than two months of the time devoted to clinical instruction in midwifery should be spent by the student in residence either in a maternity hospital, or in a hostel attached to a maternity hospital or the maternity wards of a general hospital, during which period the student should personally conduct an adequate number of cases of labour.

Note.—Instruction should emphasize antenatal and postnatal care, the management of normal labour and of its minor complications, the impact of pregnancy on general disease and of general disease on pregnancy, and the care of the newborn infant. The management of major abnormalities of labour should be taught in principle rather than in detail.

4. *Pathology and Bacteriology.*—Instruction in pathology and bacteriology should be given in association with clinical studies. In addition to the systematic study of pathology and bacteriology, and to a short period as assistant in the conduct of autopsies, the student should be given ample opportunity to attend clinico-pathological conferences.

5. *Pharmacology*.—Instruction, which should include practical laboratory work, should be given in the mode of action of drugs, their distribution and fate in the body, their possible toxic effects, and their therapeutic uses.

Note.—It is desirable that students should be acquainted with the principles governing the design and interpretation of clinical trials.

6. *Legal and Ethical Obligations of Registered Medical Practitioners, and Forensic Medicine*.—Instruction should be given in the statutory obligations of registered medical practitioners, in the principles of medical ethics, and in forensic medicine.

III. RECOMMENDATIONS AS TO PROFESSIONAL EXAMINATIONS

A. General Conduct of Examinations

1. Candidates in all their examination work should be carefully supervised.
2. The examination in each subject should include written, oral, and (where appropriate) practical and clinical tests.
3. The written answers of each candidate should be marked by at least two examiners.
4. In all oral and clinical examinations at least two examiners should take part in the examination of each candidate, and the marks should be a joint adjudication.
5. Examiners should be empowered to take into account the duly attested records of the candidate throughout his course of study.

B. Appointment of, and Circulation of Information to, Examiners

6. It is desirable that examiners should serve for at least three consecutive years.
7. Every examiner should upon his appointment receive from the body or board by whom he is appointed a copy of these recommendations, and every examiner in medicine, surgery, or midwifery and gynaecology should upon his appointment receive a copy of the latest general report of the inspector in the relevant subject.

C. Scope of Examinations

8. Candidates should be examined in anatomy, physiology, biochemistry, medicine, surgery, midwifery and gynaecology, pathology, bacteriology, and pharmacology.
9. Examinations in the subjects included under Medicine in the recommendations, and in the various specialties in Medicine and Surgery, may be separate examinations, or may form part of the examinations in medicine and surgery.
10. The final or qualifying examination should be in medicine, surgery, and midwifery and gynaecology.

D. Final or Qualifying Examination in Medicine, Surgery, and Midwifery and Gynaecology

(i) Admission to Examination

11. No part of the final or qualifying examination should be taken before the end of four academic years, and the examination should not be completed before the end of five academic years of professional education.

(ii) Conduct of Examination

12. All clinical examinations should be held in properly equipped hospitals or examination halls. There should be provided for all clinical examinations a sufficient number and variety of patients.
13. In the clinical examinations an uninterrupted period of at least one hour in medicine, and at least half an hour in surgery, should be allowed to the candidate for the examination of, and report on, his principal case. In all clinical examinations the examiners should observe the candidate make his examination, or require him to demonstrate his methods and findings.
14. In medicine, in surgery, and in midwifery and gynaecology, no candidate should be allowed to pass who is rejected in the clinical examination.

15. A candidate rejected in any subject of the final or qualifying examination should, before he is readmitted to examination therein, be required to produce satisfactory evidence that he has during the interval pursued the study of the subject in which he was rejected.

ASSISTANTS AND YOUNG PRACTITIONERS SUBCOMMITTEE

A meeting of the Assistants and Young Practitioners Subcommittee of the General Medical Services Committee was held at B.M.A. House on May 24. Dr. F. GRAY was in the chair.

A letter was received from Dr. D. Hines offering his resignation from the Subcommittee owing to his appointment to a permanent post.

Distribution of 5% Interim Adjustment

The question of the distribution of the 5% interim adjustment was considered by the subcommittee, and on the motion of Dr. F. G. TOMLINS, seconded by Dr. QUEST, it was resolved that in the opinion of the subcommittee there should be an additional loading of 2s. for the first 1,500 patients.

The CHAIRMAN said that the decision would be reported to the General Medical Services Committee.

Dr. TOMLINS also moved:

That this subcommittee deplores the Government's arbitrary and inadequate interim award of 5% increase in net remuneration to all general practitioners, and regrets that an invidious distinction has been made between general practitioners and hospital staff.

"I deplore this arbitrary giving out of an increase," Dr. Tomlins said; "I am sure it is inadequate, and I, personally, consider it is an insult." Dr. R. M. S. MATTHEWS seconded the motion, which was carried.

Finally, Dr. TOMLINS moved "that this Subcommittee desires a review of general-practitioner remuneration with a view to the more equitable distribution of that part of the pool which is intended to cover expenses." The chief trouble with general-practitioner remuneration, he said, was the failure to distribute the expense factor in an equitable manner. Dr. R. A. A. R. LAWRENCE seconded the motion, which was carried.

Distribution of Patients in General Practice

The CHAIRMAN thanked Dr. Matthews for the trouble which he had taken in preparing lists showing the distribution of patients in general practice. Although, as Dr. H. ROSE pointed out, without qualification some of the facts might be misleading, Dr. Matthews showed that two-thirds of all patients were on lists of over 2,500; doctors over 45 years old, approximately half the total, had 11/20 of the total patients; and on lists of over 3,600 there were ten million patients, approximately a quarter of the registered population.

Evolution of General Practice

The subcommittee considered the principle submitted by Dr. MATTHEWS that remuneration should be related to the quality of work done as well as the quantity.

Dr. Matthews said that he personally did not want a full-time salaried service, and he desired to dispel the myth that young doctors were clamouring for a whole-time salaried service. The first way to improve the quality of the service, suggested Dr. Matthews, was by the reduction of maximum lists. Over and above that he would advocate an expense allowance. "I would raise the capitation fee according to the doctor's age," he continued, "and I should like to hear discussed the loading of the capitation fee on a doctor's degrees. I should have payment for items of service, payment for work out of hours, extras for minor surgery, and extras for hospital attendance."

Dr. I. M. QUEST said he was in favour of a fee per item of service. Dr. TOMLINS moved that a recommendation should

go to the General Medical Services Committee (1) that the subcommittee considered that there should be a representative of the assistants and unestablished practitioners on the committee which the Council had been instructed to set up to examine the working of the N.H.S.; and (2) the principle that remuneration should be related to the quality of work done as well as the quantity be placed on the agenda for the next meeting of the subcommittee to be held on June 28, and members be asked to send in practical suggestions.

Dr. LAWRENCE seconded the motion, which was carried.

Trainee General Practitioner Scheme

The subcommittee considered a letter from Dr. P. B. BAILEY reviewing the report of the subcommittee on the trainee general practitioner scheme and suggesting points which required clarification. Dr. Bailey suggested that there was nothing to be gained from the trainee scheme which could not be gained from the ordinary assistantship scheme. That was, he said, the main issue. It was difficult to see the purpose of the scheme, which was, in his view, open to abuse. Dr. MATTHEWS, supporting Dr. Bailey up to the hilt, said: "I think that the trainee assistant scheme needs to be abolished."

Dr. QUEST suggested that experience was the best teacher a young practitioner could have, and supported Dr. Bailey. Dr. KATHLEEN ADAMS suggested that it was difficult to generalize. "I did a trainee assistantship," she said, "and I was very grateful to the principal, who could not have been fairer." Dr. C. W. GRANT said that he also did a trainee assistantship with a very good principal. Although he did not, perhaps, learn any more than he would have learned had he taken an ordinary assistantship, at least the scheme had increased the number of assistantships available. Dr. LAWRENCE said that in its present form he was against the trainee scheme because it was open to abuse. He also pointed out that in almost every case where a trainee spoke in favour of his trainer he still had a relationship with his former employer.

Dr. TOMLINS said that the scheme ought to be supported because it provided extra assistantships. Dr. LAWRENCE said that from a survey which he had made in Derbyshire it appeared that it was always the large-list practices which took trainees. Therefore, in present circumstances he emphasized that it left far too much open to abuse in practices of that size. Dr. GRANT said it was not the case in Perthshire that the large-list doctors had trainees. It was rather the small-list practitioners who had trainees.

The discussion was deferred until the next meeting.

FORENSIC MEDICINE

The Forensic Medicine Subcommittee of the Private Practice Committee met on May 15 under the chairmanship of Dr. R. D. TEARE.

Fees Payable by Coroners

It was reported that the relevant associations of local authorities were proposing to draw the attention of their constituents to the desirability of considering the preparation of a schedule of fees and disbursements for payment by the coroner. In this connexion they also proposed to recommend an allowance of 1s. a mile beyond a radius of two miles when a medical practitioner travels at the request of the coroner to view a body where it has been found. The Subcommittee recommended that the model schedule already approved by Council should be sent to the Divisions and Branches concerned as a basis for negotiations with the local authorities.

It was decided to recommend to the parent Committee the acceptance, subject to certain safeguards, of an offer by the Home Office to make amending rules to allow medical practitioners carrying out necropsies at the request

of the coroner to receive travelling expenses at the rate of 1s. for each mile beyond a radius of two miles.

"Drunk-in-charge"

It was reported that in some parts of the country it was now the custom for the police to rely predominantly on the evidence of police officers in cases of persons charged with being drunk in charge of a motor vehicle, medical opinion being required only to ensure that the prisoner was fit to be detained and that his symptoms were not due to illness. A member had reported that he had been told by the police that in order to decide these two points it was not necessary for him to examine the man. The Subcommittee wished to stress that in all these cases a comprehensive examination should be made. It would be extremely unwise for a medical practitioner to attempt to say whether a man was ill or whether he was fit to be detained unless he had first taken a careful history and made a full examination. The Subcommittee considered this matter of such importance that it proposed to bring it to the notice of all concerned.

Other matters which were considered included the place of forensic medicine in the medical curriculum; medical certificates required for purposes of cremation; and the status of mortuary attendants.

Total (for 3 wks) 185

C. B. Clarke (Guy's Hospital), P. Fawcner-Corbett (St. Thomas's Hospital), T. Mathews (Middlesex Hospital), T. McEwan (London Hospital), H. E. R. Chew (London Hospital), and J. Dew (London Hospital) did not bat.

At the request of the profession's representatives the Minister of Health has asked executive councils to arrange for general practitioners in the N.H.S. to recover on application the medical records of their own deceased patients if they wish to use the records for research purposes. Doctors must undertake to keep the envelopes and cards safe during the three-year period in which they would normally have been kept by the executive council, to keep such records separate from those of living patients, and to return them immediately if the executive council asks for them.

general practitioners should have a powerful policy, a removal of the apathy and fear of loss of practice and finances, the only practical solution is to form a federation (if the words trade union are unpleasant) registered with the Registrar of Friendly Societies, with a proper constitution, a direct levy, disciplinary powers, and with objects of one or more of the statutory objects. In this way I believe there can be unanimity and strength at a general practitioner level. If any dispute reaches deadlock for various reasons and is reported in writing to the Minister of Labour, then such disputes must be referred to the Industrial Disputes Tribunal, without the *impasse* of a Royal Commission, under the Industrial Courts Act, 1909, and the Industrial Disputes Order, 1951.

I feel this is the only way to remove the apathy and general feeling of disquiet aroused by the threat of withdrawal, the stillbirth of the Medical Guild, and the reversal of policy which we have witnessed within the last two months.—I am, etc.,

Bradford.

G. HIPPS.

SIR.—Colonel C. H. Barber's letter (*Supplement*, May 11, p. 263) is very true, but too late by ten years. We know now that we should never have allowed Aneurin Bevan to stampede us into the present N.H.S. The profession was unanimous against it at first, but, alas, as now, our leaders had "second thoughts." It is too late now; the position is irreversible. We are now actually in a State service—thoroughly Government-controlled. The one thing which determined this was the loss of the goodwill of our practices, just as it is also at the back of the apathy and consequent lack of success of the whole system; but I fear this is also irreversible. This too has made it necessary for the newly qualified man to come humbly, cap in hand, and beg for a practice. Strange that men previously found assistantships and partnerships with ease.

I am a senior man, and I was able to go on while in general practice to higher degrees and practise a specialty at the same time. This also is no longer possible, for the whole population has become, and the medical profession has now practically become, entirely hospital-minded. Thus we are not now much different to the medical officer of health; there is not much left for us to treat save the most trivial things, which probably would do just as well without us, only that the patient requires his certificates.

Sorry for being so pessimistic, but we have read articles on the changing face of medicine, and I suppose we shall just have to adapt ourselves to the march of events, but it would be a pity if at the same time our pecuniary reward dwindled too far.—I am, etc.,

Chigwell, Essex.

N. BEATTIE.

SIR.—Once again the distant rumble of log-rolling and the faint unmusical twang of wire-pulling is heard in the land, but the poor gullible G.P. hardly cocks an ear. It seems a long time ago now, though it is only a few months, when the profession were united in demanding the full implementation of Spens or else. Now 5% and a kind letter from Mr. Vosper have changed us from fiery revolutionaries to docile sheep.

There are only three ways in which the G.P. can improve his status, financial and otherwise: (1) Return to private practice. (2) Withdraw from the N.H.S. in favour of a health insurance scheme not under the control of the politicians. (3) Form his own trade union with compulsory membership for all in general practice, and with a salaried layman as secretary to negotiate for him. Many unkind remarks are made about the T.U.C. leaders, but at least they get results for their members, and in double quick time.

I do not expect any of these courses to be adopted, now or in the future. I anticipate a steady and inexorable fall in our status to the level of the elementary schoolteacher, the bank clerk, and the unestablished civil servant.—I am, etc.,

Bromley.

KIRKLAND WEIR.

Present Position

SIR.—May I ask what the profession is doing with this most valuable time that has been given it—that is, till the Royal Commission makes its report? Then we will have to face the big guns again—guns that have routed us twice in nine years. Using this precious time properly, we could save the profession; if we idle, then without a doubt all will be lost, and lost irrevocably.

What does the profession want? I know, more money; but the monetary question will be settled by the Royal Commission or the courts, so that it is useless to concentrate further on it. We must realize that salary cannot indefinitely be divorced from status. If our status dwindles—as it is doing—then inexorably our income will drop. Let us have a clear idea about all these things, and purge our thoughts of all sophisms, wishful thinking, and contradictory ideas.

Do we realize that our leaders went to parley with the Government without knowing the desires, feelings, and opinions of the corpus of the profession? Nor do they yet know them. How then can our leaders voice our opinions? They may not be too clear of their own. Further, there is a danger here—human nature being as it is—that they may plump for what suits their own particular circumstances. None of us can be entirely disinterested, nor can we completely suppress our own ego, with the best will in the world and all honourable intentions.

But what do the doctors in general want? De Jouvenel has said: "The mind of man needs, like his heart, objects of affection; they land him in the same evasions; all that he wants to see in any phenomenon are those aspects which flatter and exalt him, not those which offend and mortify him. He dissociates what life has made inseparable, praises the cause and condemns the consequences, applauds the end and repudiates the means, affirms an idea and denies its corollary." These illogicalities are more marked than ever to-day, the age of common man, hall-marked as it is by the twin vices of envy (so clearly prophesied by Nietzsche as the distinguishing mark of this century, the prospect of which filled his noble soul with gloom) and sentimentality (Belloc characterized sentimentality as the attempt to reconcile the contradictories)—to-day when clear thinking has been made almost an impossibility. The man in the street wants his Welfare State, but jibs at paying for it; wishes to hand over to the State the very responsibilities that make him a man, and yet expects to retain the dignities of man; equates equality with freedom. But in our learned profession we fare no better: we wish a State medical service, but no bureaucracy; we affirm the idea of a completely free Service for all, but deny the corollaries that flow therefrom; we enjoy the security of regular cheques from the Government, but expect to be free at the same time. We all heard in our childhood the proverb: "You cannot eat your cake and have it at the same time": alas, we have forgotten all the wisdom of our fathers.

En passant, I would like to note here the ugly vice envy, and hope that we keep it well in mind when we talk so glibly at our meetings about relying on the public to see us through, and expecting them to fight our wars for us. I wonder how many of the public we would have behind us if they were asked to pay directly (by addition to their stamp charge) the 24% we hoped to get. I suggest that our leaders set out, concisely and briefly, the alternatives before the profession and the consequences—as far as can be gauged—of the several choices. Then let the rank and file debate them—preferably in groups of not more than thirty doctors—and send their decisions to the leaders.

In closing I would like to appeal to my colleagues to hold fast to whatever is decided, having the courage of their convictions. Let us cease from humbug, pusillanimity, and self-degradation. We talk in hushed tones with raised eyebrows about what somebody or other paid for a consultation or operation in some foreign country—e.g., America—but show no surprise at what so many pay for television sets in England. We have done enough crawling in the past

ten years. Finally I would point out that in the order of nature everything dies which is not sustained by an intense and brutal love of self; tenderness of heart, going to the length of self-denial, spells self-inflicted death to any profession or social institution. De Tocqueville (writing of the end of the *Ancien Régime*) has shown us the monarchy turning into its own prosecutor for its crimes, and calling down on itself a wrath from which it has no wish to protect itself. It lacked the will to live: "Go and tell the Swiss not to fire."—I am, etc.,

Feltham, Middx.

R. C. ROONEY.

Drug Capitation Fee

SIR.—I note that the recent G.M.S. Committee report (*Supplement*, May 18, p. 274) makes no mention of raising the drug capitation fee as part of the interim increase, and should be glad to know that these dispensing practitioners are not forgotten. Furthermore, if it should be decided in due course to give evidence to the Royal Commission, I trust that the case for a large increase in the dispensing capitation fee will be presented separately, on its merits, and not as part of our general argument.

Incidentally, in the disbursement of the final settlement for each year, it has always seemed to me very odd that these rural dispensing practitioners, who by their grossly inflated drug bills help to produce the surplus, receive no extra share of the same; nor are mileage payments considered in the sharing-out of the final settlement. As Dr. C. F. R. Killick stated in the same report, the mileage payment is, in a sense, a compensation payment in place of patients. How, then, can these payments be excluded in the name of justice, then, can these payments be paid out as a percentage of the capitation, plus mileage, plus dispensing fees.—I am, etc.,

Aylesford, Hants.

JOHN S. HAPPEL.

Parking Restrictions

SIR.—In view of the proposed restrictions on parking, and the introduction of parking meters, I would like to know how this will affect the practising doctor or surgeon on call in the metropolis. To date, I have been fined thrice for leaving my car outside my own premises, despite drawing the magistrate's attention to the ambiguous statement by Mr. Dalton to representatives of the B.M.A.'s Private Practice Committee (*Supplement*, December 4, 1954, p. 212).

I find it almost impossible to attend the urgent cases in London, without being seriously hampered by the restrictions now in force, and would suggest that the Association brings the matter again before the Commissioner of Police in order that a special recognition might be granted to the practising physician, and this to be done by a sign on his car, or the licence, such methods of recognition to be issued by the metropolitan police to those entitled to its use, and thus save any likelihood of its abuse.

I would like you to publish this letter so that doctors in practice in the heart of London may express their views on this matter.—I am, etc.,

London, W.2.

E. SUTHERLAND-RAWLINGS.

Constitution of B.M.A.

SIR.—At a meeting recently held in this area there were some 30 members present out of a possible 170, and I agree with Dr. D. G. Allen (*Supplement*, May 25, p. 299) that the B.M.A. machinery requires complete revision. After talking with many individual doctors I am convinced that the small percentages attending Divisional meetings are not due to apathy. These meetings are so often held at a time when the average busy doctor is engaged in earning his living, and even if it is possible for him to attend an occasional meeting he has not the time to serve on the numerous committees which organize our affairs. In consequence our representation is limited to retired practitioners, or those specially favoured in that they do not have to devote their whole time to earning a living.

The recently published report of the Committee on the Constitution of the B.M.A. (*Supplement*, February 23, p. 73), which was accepted by the Council, reveals a complete unawareness of modern trends, and a tendency on the part of the Council to cling to an organization conceived in the Victorian era to meet circumstances completely different from those which exist to-day. As a result negotiations have dragged on over a period of years. The Council produced such an ill-conceived plan as the "phased withdrawal," which it then attempted to persuade the rank and file to accept. This was a complete reversal of democratic procedure. We should now be discussing in the Divisions the evidence which may have to be given to the Royal Commission, and certainly plans for the reform of the National Health Service. If the Council follows its usual procedure these matters will be presented to the members of the B.M.A. as a *fait accompli*.

It would surely be to our advantage to have whole-time paid representatives who could discuss with individual members not only such matters as pay, but act as a co-ordinating link between the various branches of the Service. There are perhaps 40,000 doctors participating in the Service, and if every doctor was prepared to pay £5 a year we could be served by 80 representatives, who could be either doctors, lawyers, or accountants. Each would represent 500 doctors, whom, in a crisis such as the present, they could visit individually in less than two months. In this way a much quicker assessment of the feelings of the profession could be made, and, further, they would have the time to produce plans and take speedy action to put these into effect.—I am, etc.,

Sittingbourne, Kent.

K. W. HARDY.

H.M. Forces

Colonel W. J. Officer, O.B.E., late R.A.M.C., has been appointed Director of Medical Services, and has been granted the temporary rank of Major-General.

Surgeon Captain R. S. Rudland, V.R.D., R.N.V.R., has been awarded a Clasp to the R.N.V.R. Decoration.

The following appointments and mentions in dispatches have been announced in recognition of distinguished services in Malaya for the period July 1 to December 31, 1956:

M.B.E. (Military Division).—Major M. A. C. Dowling and Major (Temporary) A. M. Wiley, R.A.M.C.

Mentioned in Dispatches.—Major L. F. Q. MacLaine, R.A.M.C.

A *Supplement* to the *London Gazette* has announced the following awards:

Third Clasp to the Territorial Efficiency Decoration.—Major E. C. Ellis, T.D., R.A.M.C., Retired.

Second Clasp to the Territorial Efficiency Decoration.—Colonel F. H. Blackburn, T.D.; Lieutenant-Colonels H. Leiper, T.D., and M. I. Silverton, T.D., R.A.M.C.

Territorial Efficiency Decoration.—Colonel J. H. Prain; Majors (Honorary Lieutenant-Colonels) F. J. S. Bowman (Retired), R. L. Holt, O.B.E. (now T.A.R.O.), Major (Acting Lieutenant-Colonel) M. F. Ronayne, O.B.E., Captain (Honorary Major) J. Rowatt (Retired), R.A.M.C.

ROYAL NAVY

Surgeon Commander E. E. Malone has retired. Surgeon Lieutenant H. J. A. Hahn to be Surgeon Lieutenant-Commander.

ROYAL NAVAL VOLUNTEER RESERVE

Surgeon Lieutenant-Commander (D) F. G. Hardman has been transferred to the Medical Branch in the rank of Surgeon Lieutenant-Commander.

Surgeon Lieutenant-Commanders M. D. Edwards and E. G. Shaw have retired.

Surgeon Lieutenants J. N. Anderson, B. C. Morson, G. W. Hickish, and A. Bell to be Surgeon Lieutenant-Commanders.

ROYAL ARMY MEDICAL CORPS

Lieutenant-Colonel R. D. Menzies has retired on retired pay (Reserve Liability).

Majors R. M. Johnstone, M.B.E., M.C., and P. C. Mitchell, M.C., T.D., to be Lieutenant-Colonels.

Short Service Commission.—Major L. W. H. Bertie has relinquished his commission on completion of service, and has been granted the honorary rank of Major.

Branch and Division Meetings to be Held

CITY DIVISION.—At Fellows' Restaurant, Zoological Society, Regent's Park, N.W., Thursday, June 13, 7.15 for 8 p.m., annual dinner. Guest of honour, Mr. A. Dickson Wright.

GUILDFORD DIVISION.—At Royal Surrey County Hospital, Guildford, Friday, June 14, 8.30 p.m., annual general meeting. Election of officers, etc.

HAMPSTEAD DIVISION.—At Board Room, Hampstead General and North-west London Hospital, Haverstock Hill, N.W., Tuesday, June 11, 8.30 p.m., annual general meeting. Non-members are invited to attend.

MERSEYSIDE BRANCH.—At Messrs. Pilkington Bros. Ltd., St. Helens, Wednesday, June 12, 12.30 for 1 p.m., lunch; 2 p.m., annual general meeting.

METROPOLITAN COUNTIES BRANCH.—At B.M.A. House, Tavistock Square, London, W.C., Tuesday, June 18, 3 p.m., annual general meeting. President's address by Dr. J. W. McCarthy.

SURREY BRANCH.—At the Guildhall, Guildford, Surrey, Tuesday, June 11, 2.30 p.m., 40th annual meeting. Presidential address by Dr. J. O. M. Rees: "Professional Independence."

Meetings of Branches and Divisions

ABERDEEN AND KINCARDINE COUNTIES DIVISION

The following officers have been elected for 1957-8:

Chairman.—Dr. J. H. Wardrop.
Vice-chairman.—Dr. I. M. Scott.
Honorary Secretary.—Dr. J. M. Gill.

ASHTON-UNDER-LYNE DIVISION

The annual general meeting was held on April 15. The following officers were elected:

Chairman.—Dr. A. T. Wilson.
Vice-chairman.—Dr. A. M. Gallagher.
Honorary Secretary.—Dr. J. A. Fiddian.
Honorary Treasurer.—Dr. D. Malloch.

BIRKENHEAD AND WIRRAL DIVISION

A meeting was held at the Arrowe Park Hotel on April 12, 1957. Dr. I. Lipsedge took the chair, and 34 members attended. The guest speaker, Mr. Ralston Paterson, spoke on "Medicine in Russia," and afterwards showed coloured slides of Russian cities, and answered questions.

BLACKBURN DIVISION

The annual general meeting was held on April 9, 1957. The following officers were elected:

Chairman.—Dr. R. Pendlebury.
Vice-chairman.—Dr. F. C. Simpson.
Honorary Secretary and Treasurer.—Dr. F. C. Reidy.

BOLTON DIVISION

The annual meeting was held on April 9, 1957, in the Bolton Royal Infirmary. Forty-six members were present. The following officers were elected for 1957-8:

Chairman.—Dr. E. P. Johnson.
Vice-chairman.—Dr. I. Affleck.
Secretary and Treasurer.—Dr. M. S. Rowley.

BUCKS DIVISION

At the annual general meeting the following officers were elected for 1957-8:

Chairman.—Dr. R. M. Solomon.
Vice-chairman.—Dr. D. Paton.
Secretary and Treasurer.—Dr. M. F. Gillison.

CAMBERWELL DIVISION

The annual general meeting was held in Dulwich Hospital on April 11, 1957. Thirty members attended. Professor Milnes Walker, aided by Mrs. Milnes Walker, gave a lecture on a trip round the world illustrated with slides and films. The following officers were elected:

President.—Dr. H. J. Andersen.
Vice-president.—Dr. R. J. Rosborough.
Honorary Secretary.—Dr. W. B. J. Pemberton.

EAST DENBIGH AND FLINT DIVISION

The annual meeting was held at the Blossoms Hotel, Chester, on April 4, 1957. The following officers were elected:

Chairman.—Dr. B. D. Chowdhury.
Vice-chairman.—Dr. M. Quinlan.
Secretary and Treasurer.—Dr. J. B. Dobson.

RUGBY DIVISION

The annual general meeting was held at the Grand Hotel, on March 27, 1957. Mr. F. J. C. Matthews was in the chair, and 26 members attended. The following officers were elected:

Chairman.—Mr. F. J. C. Matthews.
Vice-chairman.—Dr. F. R. Brebner-Smith.
Immediate Past Chairman.—Dr. D. J. Jones.
Honorary Secretary and Treasurer.—Dr. R. P. Hendry.

ST. HELENS DIVISION

The annual general meeting was held on March 27, 1957, at the Providence Hospital. Dr. N. J. W. Thompson was in the chair and nine members were present. The following officers were elected:

Chairman.—Dr. N. J. W. Thompson.
Honorary Secretary and Treasurer.—Dr. L. Crawford.

SOUTHAMPTON DIVISION

The annual general meeting was held on April 17, 1957. The following officers were elected for 1957-8:

Chairman.—Dr. P. G. Todd.
Vice-chairman.—Dr. R. S. Russell Smith.
Secretary and Treasurer.—Dr. J. G. McDowell.

SUTHERLAND DIVISION

At the annual general meeting the following officers were elected:

Chairman.—Dr. E. Lindsay.
Vice-chairman.—Dr. K. A. Macrae.
Honorary Secretary and Treasurer.—Dr. E. J. R. Primrose.
Immediate Past Chairman.—Dr. A. D. Macleod.

TROWBRIDGE DIVISION

At the annual general meeting the following officers were elected for 1957-8:

Chairman.—Dr. J. A. Falk.
Vice-chairman.—Dr. S. N. Varian.
Honorary Secretary.—Dr. P. A. H. Rivett.

WAKEFIELD DIVISION

The annual general meeting was held at Clayton Hospital on March 21, 1957. The following officers were elected:

Chairman.—Dr. J. D. Bottomley.
Vice-chairman.—Dr. H. Knowles.
Honorary Secretary and Treasurer.—Dr. J. D. Sutcliffe.

ANNUAL CONFERENCE OF REPRESENTATIVES OF
LOCAL MEDICAL COMMITTEES

The Annual Conference of Representatives of Local Medical Committees was held at B.M.A. House on June 6 at 10 a.m. and concluded at 6.30 p.m. Dr. A. BEAUCHAMP (Birmingham) was in the chair. During the course of the meeting Dr. A. N. MATHIAS (London) was elected unopposed to the Chairmanship of the Conference for the next session.

Report of the General Medical Services Committee
on Remuneration

Dr. A. B. DAVIES (Chairman of the General Medical Services Committee), in moving that the reports of the General Medical Services Committee on remuneration be received, said that it was really an adjournment of the received, said that it was really an adjournment of the Special Conference held on April 30. It would be recalled that the General Medical Services Committee met at 9 a.m. on April 30, and after hearing a statement from Dr. Wand, the Chairman of Council, after considering the Minister's last letter to Dr. Wand, and counsels' legal opinion, and after a necessarily short debate, the General Medical Services Committee decided by a narrow majority of 24 to 22 to submit an altered resolution to the Conference. An amendment which he had then supported was passed by the Conference deferring the decision until June 6, in order to give local medical committees and the whole profession an opportunity of considering the new situation. A decision on withdrawal was also deferred.

The sudden developments must have been confusing to representatives, and a dense fog seemed to descend. Five weeks had elapsed and much thought and consideration had been given to the problems. There was now, perhaps, a period of greater calm, and, whatever might be decided, everyone could see the target more clearly—the target 24%. Actually it was now 25%. Together with that target was the necessity to consider a satisfactory method for the future of settling claims.

"Let us now reunite where we have been divided," said Dr. Davies. "Let us consolidate and build up our fighting funds and go forward as a united profession with a renewed determination to achieve ultimate justice."

Royal Commission

Dr. H. GUY DAIN (Birmingham) moved that, in view of the statements made publicly by the Chairman of the Royal

Commission and assurances given to the Chairman of Council by the Minister of Health in his letter of April 26, the meeting was satisfied that advantage had been gained and that evidence should now be given to the Royal Commission.

He drew attention to the fact that whereas a year ago, and as late as the beginning of the year, the problem was merely a monetary problem—that of making up the diminished value of the pound since the remuneration was fixed in 1951—and the reaction of the Ministry was a blank refusal to look at the claim. It was a completely unreasonable position to take up with a body of responsible people such as the medical profession, and it not unnaturally excited a great deal of anger amongst doctors. Their anger was increased by the Government's decision to set up a Royal Commission, again without consultation with the profession, as a means of dealing with the situation and as a means of preventing the profession having arbitration.

The first remit of the Royal Commission was entirely unsatisfactory. From the moment when it became evident that the profession was prepared to take action, and had gone to the length of recommending doctors to withdraw from the Service if something reasonable were not done, steps were taken towards some modification of the Commission's terms of reference. The Chairman of the Commission and the Prime Minister had given undertakings that certain things would be done which were not within its original ambit. It was due largely to the persuasion of Dr. Wand that that position was attained. Again due to the efforts of Dr. Wand, it had been indicated by the Minister of Health that, whatever the Royal Commission found, it would not be implemented until the profession had been properly consulted.

It was to be hoped that the Conference would now feel that the circumstances were such that it would be right for the profession to give evidence. There were still a number of doctors who were not satisfied that the changes were such that the profession ought to alter its position, but there were, on the other hand, so many who were satisfied that the changes were sufficient for the profession to modify its attitude and to give evidence. It was hoped that the former would therefore stand down from their view if the majority were in favour of giving evidence so that the

profession could go forward with its job, which was only now beginning, as a united profession.

Public Health Doctors

There was the difficulty regarding public health doctors. Now that the situation and circumstances had altered, they were claiming the right to come in and be dealt with by the Commission. Since they were not paid by the Treasury they did not come into the same category as general practitioners in the Service, and if their problems were to be considered—and the Association would insist that they were at the proper time—it would delay the finding of the Royal Commission for a very long period. Therefore, Dr. Dain said he hoped that their friends in the public health service would not talk about being thrown to the dogs if the Association did not press for the consideration of their case at the present time.

Dr. L. F. EVANS (Bolton) moved an amendment to the effect that the Conference would not support any action which led to the acceptance of the position whereby the Royal Commission considered the status and remuneration of only one part of the profession. In that and all other respects public health doctors were essentially a part of the profession. In excluding them the Government was driving another wedge into the profession. A wedge had already been driven in between the consultants and general practitioners, and he asked the Conference seriously to consider the position before throwing out the public health medical officers.

Dr. S. WAND (Chairman of Council) drew attention to the report of the meeting of the Public Health Committee in the *Supplement* to the *B.M.J.* (May 25, p. 296). He drew particular attention to the resolutions which were passed at that meeting and said it was important that members of the Conference should read those resolutions before they voted.

The amendment was lost.

Advantage Gained

An amendment to delete the words "this meeting is satisfied that advantages have been gained and that" was moved by Dr. C. M. SCOTT (G.M.S. Committee). He suggested that there were still a considerable number of practitioners who did not believe that advantages had been gained. In his view the profession had lost the round and in honesty it should say so. Dr. A. V. RUSSELL (Wolverhampton) supported the amendment. He asked whether the evidence which it was proposed to give had already been prepared. Dr. DAVIES replied that the General Medical Services Committee had made no preparations at all to give evidence.

Dr. RUSSELL asked whether it was possible to give the Conference any idea of how long it would take to prepare such evidence. Dr. DAVIES, in reply, said that any answer to that question would be in the nature of guesswork. It must be borne in mind that there were the summer holidays and the Annual Representative Meeting coming shortly. Conservatively it would take four months at least to prepare evidence. Dr. RUSSELL said that the two answers showed clearly that there need be no rush to co-operate with the Royal Commission, as seemed to be the idea at the Special Conference. There was little doubt that the majority of people in the periphery felt that conditions had forced the profession into the position of giving evidence. The majority of people in the periphery also felt that, although it might be necessary to give evidence, no advantage had been gained.

Dr. A. M. MAIDEN (G.M.S. Committee), in seconding the amendment, said that many practitioners were doubtful about what precise advantages had been gained, and it was felt that the deletion of the words suggested would clarify the motion. Dr. DAIN accepted the amendment in the hope that it would lead to a unanimous vote.

The amendment was carried.

Legal Contract

A motion by Sheffield, that until the validity of Spens as a legal contract be determined by the courts a decision on the question of appearance before the Royal Commission should be deferred, was considered at the same time. Dr. W. DONNELLY (Sheffield) said that since the Special Conference the profession had become more convinced than ever that the validity of Spens as a legal contract was a matter on which no one seemed to be very clearly informed. Since the beginning of the present dispute the leaders had time and time again reminded the profession that it was fighting to maintain the Spens recommendations as the foundations on which remuneration should be calculated. Counsel's opinion was obtained on the correspondence from the Chairman of the Royal Commission and the Ministry of Health, and the opinion in each case was that the function of the Commission was to put the Spens recommendations "into the melting-pot." Yet the *Handbook for General Practitioners*—a Government publication purporting to lay down the terms of service—stated that the central pool from which the remuneration was derived was calculated according to the Spens recommendations of 1946. Many members of the profession now felt that the abandonment of the Spens recommendations would be a breach of the terms on which they entered the Service, and that it would be foolish indeed to abandon them without at least making certain that the recommendations of the Spens Committee were not legally enforceable. The appearance before a Commission which was set up for no other purpose than to find an alternative to Spens was automatically a retreat from their only form of security and must, of necessity, be construed as an abandonment by the profession of its position. "Spens may be in the melting-pot," he concluded, "but do not let the medical profession put the lid on."

Dr. WAND reported that, on the advice of solicitors, a consultation had been held with Sir Andrew Clark, Q.C., Mr. Gerald Gardiner, Q.C., and Mr. S. B. R. Cooke. Although a full legal opinion was awaited, the following was a general statement of their opinion:

The matter has been very carefully considered in consultation with leading counsel, who have advised us that it would not be in the best interests of the medical profession to descend into the arena of the Courts of Justice and that it is much better that the matter should be handled on a political level or, now, before the Royal Commission.

The Birmingham motion moved by Dr. Dain, as amended by Drs. Scott and Maiden's amendment, was carried.

Withdrawal Deferred

A motion by Worcester that a decision on withdrawal of service be deferred was opposed by Dr. P. J. DELAHUNTY (Buckinghamshire), who moved that the arrangements for a progressive withdrawal of service commencing on October 1, 1957, be proceeded with and that in the meantime evidence be given to the Royal Commission. The confidence of the periphery—the practising and hard-working doctors—had been shattered by the action of their leaders, he said. Members of the profession were stunned by the action taken on April 30, but a clear-cut decision at the Conference followed by immediate action might revive that enthusiasm shown a month ago. "I warn you," continued Dr. Delahunty, "that putting off the fight will destroy any hope of recruiting another force next year or the year after." If evidence were given to the Royal Commission and action were postponed, it was tantamount to co-operating with the Government and recognizing the Government's right to decide the case.

Dr. J. C. ARTHUR (Gateshead) said he could not too strongly deprecate the defeatist talk. "We are not betrayed or beaten," he said, and asked Representatives to look at the matter from a realistic point of view. He did not regard the Government as being especially evil. It had shown pig-headed obstinacy, a good deal of discourtesy, and a lot of stupidity; but it had not been very clever. He did not

desire to play down the opponents of the profession, but, provided the profession held together and kept up its spirits, it could not fail; and the time to hold together was when the Royal Commission had reported. If that report contained anything which cut across Spens, then he felt sure the profession would fight.

Dr. A. V. RUSSELL said that he had a great deal of sympathy with what Dr. Delahunty had said; on the other hand, if the profession decided to give evidence before the Commission it could not at the same time withdraw from the service. It was an armistice in a war. "If we could collect and hold resignations in case of a possible flare-up of hostility next year, I think we should be very wise to do so," he concluded.

Dr. J. LEAHY TAYLOR (Northampton), in supporting Dr. Delahunty, said that a decision was taken to withdraw from the service because the profession was denied the normal machinery of democracy—negotiation and arbitration. The profession was still denied that. Instead it was offered something else, without consultation—something which, irrespective of what it might lead to, neither side was bound to observe. Until such time as there was arbitration it was difficult to see any reason for altering the plans for withdrawal. The profession should give evidence as regards future remuneration, but insist on arbitration for the past and present. Dr. N. NELSON (Dundee) suggested that Easter next year might be a good date to consider notice of withdrawal.

Dr. B. BURNS (G.M.S. Committee) said that an important event had taken place since the last meeting—namely, that the Socialist Medical Association had met in conjunction with representatives of the Labour Party and had announced their intention of imposing a salaried whole-time service when returned to power. He asked Representatives to mark the word "impose." The question was whether the profession had learned the lesson of 1948 and 1911 or whether it was just as ready as ever to move into a false position. "What we want to know is whether you have the will, not to mention the wit, to fight against the imposition of a salaried service," he said, "because that is what you are going to be presented with in the near future." There were dangerous years had been working resolutely towards a salaried service. There were the foolish men who thought far more of their next quarterly cheque than of their freedom. There were the cowardly men who would not answer the call for courage—and they were even more dangerous than the first group. Then there were always the men who would come to the microphone and state that the profession was wavering. They did it in 1911 and they did it in 1948. What was more, the profession always managed to waver. "I have never seen a body of men so keen to waver," said Dr. Burns, "and it does not do you credit. You have this opportunity to-day to refuse to waver. You may not have another opportunity." Dr. F. G. TOMLINS (G.M.S. Committee, Assistants and Young Practitioners Subcommittee) supported the amendment. The Government, he said, must make good its promise as an earnest of good faith. If it was allowed to get away with it the profession was not likely to fight it again. The work had been done and the profession must be paid on the basis of the promise made.

The Worcester proposition was agreed to.

Legal Action

Dr. P. HOLLIDAY (Wiltshire) formally moved that the Association should more fully explore possibilities of taking legal action against the Government. Dr. M. MUNDY (Middlesex), seconding the motion, said that in his view the opinion of counsel should be disregarded and the Association should go ahead with legal action. Dr. J. L. HENRY (Plymouth) supported the motion. If the Association succeeded it would put an end to bickering every few years, he said. If, on the other hand, the Association failed, it would be a question of paying costs, but at least the profession would know that Spens was of no value.

The motion was carried.

A motion was considered, submitted on behalf of Stirling and Clackmannan, that the time to test the validity in the High Court of the general practitioner's contract under Spens be dependent on the chance of success. Dr. A. S. BIGGART, in moving it, said that if the Association had a very good case it should go ahead straightaway and try it out. If the case were not good it might perhaps be better to put it before the courts just before the Royal Commission's report was due. If there were then no agreement with the Government, the case could stand. If, on the other hand, there were agreement, then the case could be dropped.

The motion was lost.

Dr. W. W. FULTON moved on behalf of Glasgow that as there was a difference between Scots and English law, and in particular in the law of contract, the opinion and advice of Scots legal authorities be obtained on the contractual validity of Spens as applied to Scots practitioners. He assured Representatives that it was not an example of Scottish nationalism. A more favourable position existed in Scotland, and if it could be exploited it would affect over 4,000 doctors, apart from having great prestige value. In Scotland a contract could not be evaded because the form was incorrect. If its substance were sensible it could be enforced. A successful action in Scotland would doubtless affect practitioners in England and Wales.

The motion was carried.

Negotiating Machinery

Dr. WAND, opposing a motion by Dunbartonshire to the effect that all future negotiations on the present remuneration should be conducted by the General Medical Services Committee only, said that the issue had widened considerably beyond the remuneration claim. As the motion was worded it could only mean that the G.M.S. Committee had to keep all other bodies out of the dispute when it came to discussion on the present remuneration claim, and that included the Council of the Association. The Council had other responsibilities; it was concerned with people other than general practitioners, and he suggested that if such a motion were carried it would not mean disunity but rather disintegration. The important thing at the present time was to clear the ground so that the profession could reorganize its forces. Dr. DAVIES supported Dr. Wand. The motion had, he said, been submitted with rather superficial thoughts if it were intended to be flattering merely to the G.M.S. Committee and its leaders. There were times when the G.P.s required the whole weight and authority of the Association behind them.

The motion was lost.

Dr. J. C. MACARTHUR (Lanarkshire) moved:

That this Conference recommends that the negotiating machinery be revised with a view to establishing effective co-ordination between the several branches of the profession, and the prevention of unilateral action by any one branch.

The motion was intended, he said, to preserve the unity of the profession and of the Association. One of the factors which had struck him at recent meetings was how strongly the practitioners in the periphery felt the results of the failure of the negotiating committee to speak with one voice.

Dr. DAVIES pointed out that it was surely the responsibility of the Council of the Association. He was prepared to accept the motion as a reference to the G.M.S. Committee and ultimate consideration of the Council. (Agreed.)

Chairman of Conference

At this stage the SECRETARY, Dr. A. Macrae, announced that Dr. A. N. MATHIAS had been returned unopposed as the Chairman of the next session.

Dr. A. N. MATHIAS, in a brief response, thanked Representatives for the honour which had been accorded him, and assured them that he would do his best to follow the example which had been set by his predecessors.

Distribution of 5% Interim Adjustment

Dr. DAVIES moved:

That the 5% increase in the net aggregate remuneration of general practitioners be distributed as follows:

- (a) That the initial practice allowance be increased by 25%;
- (b) That the supplementary annual payments and hardships payments be increased by 20%;
- (c) That the present "loading" be increased by 1s. 6d., bringing it to 11s. 6d. per annum;
- (d) That the present capitation fee be increased by 6d., bringing it to 17s. 6d. per annum.

He recalled that at the Special Conference on April 30 the Committee was instructed to enter into immediate negotiations with the Ministry upon the best way of distributing the disappointing and inadequate sum so as to give most effective help to the greatest number of practitioners. Those instructions had been carried out, following the broad principles laid down by the original working party, and the recommendations were submitted without prejudice to any final form of distribution at the end of the dispute. Within those limits the Committee had little elbow room, but decided in common justice to give the maximum amount to those who obviously needed it most. Therefore 25% was handed to those in receipt of the initial practice allowance. That 25% was regarded as some indication to the Government of how the profession assessed the claim for the whole profession. In addition it was suggested that those in receipt of the supplementary annual payments and the hardship payments should receive 20%.

As regards the remaining money, it was considered right and proper that everyone should get something, and, following the instructions given at the Special Conference, the distribution set out in the motion was suggested. At the same time representations were made concerning the trainee assistants' salary, and the Ministry was persuaded to increase their remuneration by 10%—that is, increasing the salary of assistants by £75 to £850. Representations were also made that car allowance in respect of trainees should also be increased. No answer had yet been received on that, but it was thought that the Ministry was considering it sympathetically. Dr. Davies appealed to principals to consider the fairness of making an increase of an equivalent nature in the salaries of assistants.

Executive councils were being asked to make the additional payments on July 31 for the two months of May and June. Payments on initial practice allowances and supplementary annual payments would take a little longer, but on October 1 executive councils were being asked to pay five months' arrears under the new distribution of the proposed interim payments to the recipients of I.P.A. and S.A.P. The recipients of the I.P.A. and S.A.P. combined were a relatively small proportion and would not consume a great proportion of the money. In response to cries of "How much?" Dr. D. P. STEVENSON, the Deputy Secretary, was asked to produce such information as was available after the luncheon adjournment.

An amendment by Worcester that the possibility be examined whereby the recent interim 5% increase in remuneration be collected from practitioners and paid into the Defence Funds until the present dispute was settled was defeated. Dr. N. NELSON (Dundee) moved that the 5% increase which had already been accepted by the Special Conference should be added to the central pool and distributed to the profession under the present distribution scheme. He suggested that the profession should wait and see what the ultimate award would be before settling the distribution. There should be no argument about the distribution of such a small sum.

Dr. DAVIES agreed that there should be no argument about such a small sum. But he claimed on behalf of the G.M.S. Committee that it had complied with instructions within the limits of the size of the amount of money and of the regulations. Dr. H. H. D. SUTHERLAND (G.M.S. Com-

mittee), opposing the Dundee amendment, said that such a disappointing sum should not be divided into minute amounts, but should be used to support the claim for the 24%. Dr. A. S. BIGGART (Stirling and Clackmannan) withdrew an amendment standing in the name of his Committee and supported the Dundee amendment. The top-paid hospital medical staff had been given a 5% increase and the junior hospital staff an increase of 10%. Why should not the top-paid general practitioner get his 5%? He was giving far more of his income to the levy and to the Defence Trust than the lower-paid practitioner. He agreed that the poorer general practitioner needed more than the top-paid practitioner, and if the Government also thought that, it should provide some extra money for the poorer general practitioner.

Dr. F. GRAY (G.M.S. Committee) said that some doctors were feeling the pinch more than others, and the proposition endeavoured to give them what they needed. If all the money was put on capitation fees the top-list man would get £175 instead of, under the proposed scheme, £162; a difference only of £13. It was, in his submission, a very fair way of dealing with the problem to take that small amount from the top-list man and give something really substantial to those who were in need.

Dr. NELSON asked whether money was being used other than that covered by the 5% interim payment. Dr. DAVIES said that in order to make the distribution it had been necessary to use a very small amount of the final settlement money as a cushion. It was difficult to work in farthings, and the G.M.S. Committee and the Ministry had agreed that rounded figures were appropriate. To get round figures it had been decided to use a very small proportion of the final settlement money. In reply to Dr. SUTHERLAND, who asked whether, if the Conference turned down the G.M.S. Committee's proposition it would delay payment of the money, Dr. DAVIES said in that event the interim payment of 5% would not be paid on July 31. It would be deferred.

A suggestion by the CHAIRMAN that a vote on the amendments and the main motion might be deferred until Representatives had had an opportunity of hearing the figures was adopted.

Special Levy

Dr. G. N. GROSE (Middlesex), in moving that all possible steps should be taken centrally and locally to strengthen the Guild organization and to increase the numbers contributing to the special levy, said he felt strongly that the Guild organization had not been functioning as well as it ought in the last few months. If the profession found it necessary to fight next year, it was necessary to have the means with which to do so.

Dr. R. SELBY (Cheshire) moved by way of amendment that the levy of 3d. per patient per quarter be abandoned, and agreements thereunder be declared null and void and returned to the doctors concerned. He said he did so for three reasons: (1) the urgency had passed; (2) many practitioners were not anxious to give what they felt was a blank cheque; and (3) the relatively poor response to the appeal.

Dr. CATHERINE HARROWER (G.M.S. Committee) pointed out that the 3d. levy was tacked on to the question of phased withdrawal. Phased withdrawal was not now probable, but it was desirable that the Defence Trust should go on. It was decided that the levy of 3d. per head per quarter per patient would be kept in a separate fund, and used only for the one purpose—namely, for subsidizing doctors who were selected to withdraw in the phased withdrawal. The money not used for that purpose would be returned. The Defence Trust Funds were completely different. If the 3d. levy were continued the proceeds would go into a separate fund.

Dr. W. W. FULTON (Glasgow) suggested that the conference should decide straightaway the question of the special levy. If money were needed for a future fight, then it should be asked for under the conditions obtaining at that time. Dr. P. J. DELAHUNTY suggested that the matter

should be deferred until the question of whether the profession would enter another fight was settled. Dr. DAVIES supported Dr. Harrower. The policy of the G.M.S. Committee was to stimulate and to increase normal contributions to the Defence Trust. As regards the special levy, no present recommendation was made, but it would be recalled that at the Special Conference and at the Special Representative Meeting he moved that authority should be given to the Council to take appropriate action, at any time thought fit, to increase both the normal funds and any special funds which were regarded as necessary at the time.

The amendment by Cheshire was carried.

The amendment, as a substantive motion, was carried.

The CHAIRMAN accepted a motion from Lanarkshire to the effect that the Conference, while agreeing to give evidence to the Royal Commission, was determined to pursue by all practical and effective means a settlement of the present remuneration claim. In moving it, Dr. D. L. KERR said his Committee felt that the methods by which the claim might be pursued were vague. It was desirable to explore ways and means whereby the Government might be influenced in some way.

The motion was carried.

An amendment moved by Dr. J. D. F. NORMAN (Leicestershire and Rutland) that all possible steps should be taken centrally and locally to strengthen the Guild organization was carried as a substantive motion.

Alternative Service

A motion by Croydon was tabled in the following terms:

That in view of the profession's complete loss of confidence in the handling of the medical service by the Government and in its intention to implement its pledges to the profession, this Conference instructs the General Medical Services Committee, in consultation with the Council of the British Medical Association, to invite a body of men and women of the highest national reputation, without political affiliation and of pre-eminently lay composition, to elaborate a complete medical service for the nation, to be ready to be offered as an alternative to the present service, if, as a result of the findings of the Royal Commission or for any other cause at some later date, the profession decides to withdraw from the National Health Service.

Dr. J. NEWTON HUDSON, in moving it, said that if an alternative service were ready, and the Government together with the public knew about it, the profession would be in a strong position. At the same time, if the profession generally knew that such a course was being adopted, it would be a strong factor in strengthening the Guild. A predominantly lay body was proposed because it was desirable that no suggestion should be made that the profession was favouring its own interests.

Dr. P. HOLLIDAY (Wiltshire), in supporting the motion, suggested it would help if the recommendation were linked in some way with the agreement to co-operate with the Royal Commission. If the findings of the Royal Commission were unsatisfactory, the scheme would then be ready to put into operation.

Dr. WAND pointed out that the Council had already approved a body more or less of the character of that suggested to look at the National Health Service, but the purpose of the motion appeared to be somewhat different. It was to provide the alternative medical service in the event of a withdrawal from the National Health Service, and he suggested that lay men and women of national reputation could not be asked, and if they were would decline, to serve on a Committee whose purpose was to assist the profession in a matter which was bound to have political implications.

Dr. WAND asked whether Croydon would be satisfied if the principle behind the motion were referred to the G.M.S. Committee for consideration. Dr. HUDSON accepted the suggestion in that spirit. Dr. DAVIES adding that he was prepared to accept it on behalf of the G.M.S. Committee.

A motion by Essex that publicity in regard to the profession's remuneration claim should be directed to the

public in simple terms and on simple issues was moved by Dr. H. N. ROSE. It did not, he said, imply any great criticism of the Association's publicity department, but it did suggest that the methods employed were rather complicated. It was felt that some of the publicity put out was above the heads of the ordinary public.

The motion was carried.

Defence Trusts

On the motion of Dr. CATHERINE HARROWER, Deputy Treasurer of the National Insurance Defence Trust and General Medical Services Defence Trust, the report on action taken by the trustees since the last report to the Conference was received and approved. A motion that the report of contributions received from local medical committees up to March 30, 1957, be received and approved was also carried. She added that 67 committees had now reached 100% contributions.

A motion moved on behalf of Sheffield by Dr. W. DONNELLY, that steps should be taken in all areas to ensure that all members of the profession subscribed to the Defence Trust, was carried.

Interim Adjustment Debate Resumed

The Conference reverted to consideration of the distribution of the 5% interim adjustment upon which a decision was deferred until after the luncheon adjournment.

Dr. DAVIES made it clear that there could be no question of pursuing any policy without the approval and confirmation of the Conference. It was not possible to calculate the exact amount of new money to come from the Exchequer until the number of doctors on the lists of executive councils was available, but it was probable that it would be actually in excess of £2.5m. Very approximately, for Great Britain and for a period of 12 months, the initial practice allowance would cost £11,000; hardship payments and supplementary annual payments together would cost £22,000; the Exchequer superannuation figure would be £142,000; the capitation fees would cost £1,200,000, and the loadings would cost £1,500,000—bringing the total to £2,875,000. There was a difference, therefore, between the two amounts of something up to £375,000. The proposal was that that amount should be paid out now from money set aside from the current year's pool. There was no question of taking out any money which had been spent in the past, nor was money from the present final settlement (1956-7) involved, and, as the final settlement for the current year (1957-8) was likely to be at least £5m., there was plenty to spare. In other words, there was no question of the Committee spending money already owing to the doctors. They were getting a little more in advance.

The amendment by Dundee (see p. 338) was lost.

A motion was accepted from Plymouth, moved by Dr. J. L. HENRY, that, since the scheme proposed involved the use of money not included in the 5% increase and was of doubtful legality, voting thereon should be deferred. Dr. Henry said there were a number of people who felt dissatisfied about the way in which the money was distributed. When the matter was considered by Plymouth it was thought that the voting would be unanimously in favour of the scheme, because they did not know there was any controversial sum involved. Important matters such as the one now under discussion should always be disclosed beforehand, so that local medical committees did not instruct their representatives how to vote in ignorance of vital factors. Dr. A. MCGLASHAN (Manchester) seconded the motion. It seemed peculiar, he said, that a sum to make up £375,000 could be picked out of the kitty two years in advance.

Dr. F. GRAY (G.M.S. Committee) said that the Conference on the previous occasion stated emphatically that it did not want to defer distribution. He said he wondered whether any member was prepared to say that his constituents would like the loading to be not 1s. 6d. but 1s. 0.253d. They would surely prefer an even figure. That meant taking the

sum of £370,000 and getting it paid in advance. It was better to have the sum in round figures, and if the Conference wanted to make an adjustment later it could still do so. Dr. J. T. BALDWIN (G.M.S. Committee) said the 5% was money which was added to the pool. The pool then became increased by that amount and was distributed in accordance with the arrangements made under the distribution scheme. If there was any left over it was distributed as the final settlement.

Dr. A. TALBOT ROGERS (G.M.S. Committee) said that when agreement was reached on the method of paying out the final settlement equally on loadings and capitation fees the Committee never expected the sum to be distributed to be anything like the figures now shown. There was evidence that the Ministry was agreeing that the sum which would not otherwise be available for two years could be paid now if the profession so desired. Of the £375,000, only £33,000 was going to the special groups. The remaining £340,000-odd was being distributed to the same doctors in much the same proportions as they would get it if they waited for two years for it to come in the final settlement. They were being offered money now rather than in two years' time.

The amendment was lost.

Dr. F. G. TOMLINS (G.M.S. Committee, Assistants and Young Practitioners Subcommittee) moved that in place of proposals (c) and (d) of the distribution plan there be paid to each principal providing unrestricted general medical services a new loading on the lower range of the list. He said that the essence of the matter was the question of expenses. The small practitioner had a high expenses ratio, and that ratio had become even higher since the Danckwerts Award. Spens recommended that there should be some extra payment to cover expenses where they formed an unusually high proportion of the sum involved. That was the case with the small-list practitioner.

Dr. R. M. S. MATTHEWS (Assistants and Young Practitioners Subcommittee), in seconding the motion, reminded the Conference that his Subcommittee gave loyal support to the G.M.S. Committee in the action which they took in the remuneration dispute. The questions of unity, dignity, and status were, in his view, interwoven, and his Subcommittee was determined that the status of the profession would not suffer. Any increase available should be divided by the total number of doctors on the list and the average given to every doctor. The proposals were very generous in intention to principals whose lists were in the lower ranges and to the young self-establishing practitioner with an initial practice allowance. There was, however, a third group comprising doctors under 60 years of age in 1953 who had previously received fixed annual payments. Those annual payments would expire in 1958. A quarter of the doctors on the list were in the lower ranges, and only 700 doctors had benefited by recommendations (a) and (b) on the I.P.A. and S.A.P. Dr. N. NELSON (Dundee) suggested that it might be easier to take the total sum which went to every executive council and divide it equally between all doctors.

Dr. DAVIES replied that that proposal was made to the G.M.S. Committee and it was found to be quite impracticable. The G.M.S. Committee was very grateful for the support given by the Assistants and Young Practitioners Subcommittee and commended its enthusiasm to the rest of the profession. The G.M.S. Committee would be happy to meet its proposals, but it was quite impossible under the present regulations.

Dr. J. T. BALDWIN supported the amendment. It had been widely held throughout the profession, he said, that one complaint with regard to the distribution of the central pool was that it did not take proper cognizance of the fact that the practitioner with the small list had a higher percentage of expenses than the practitioner with the large list.

Dr. TOMLINS, in reply, stressed that his proposal was that the net remuneration should be distributed on the number of patients and that expenses should be more fairly distributed. It was an interim measure to meet an interim situation.

The amendment was lost.

The motion of the General Medical Services Committee was carried.

Annual Report of the General Medical Services Committee

Dr. DAVIES, in moving that the annual report of the General Medical Services Committee be received, said that during the session the chief items had been remuneration, the publication of the report on the disciplinary machinery, and the Government's interim report of the Mileage Committee. A new committee on practice accommodation in redevelopment areas had been set up, and a report had been published on trainee assistants which had received the approval of the Ministry. Throughout the session normal close co-operation had been maintained with the Medical Practices Committee, the College of General Practitioners, and the British Dental Association, and, through the Liaison Committee, with the Consultants and Specialists, Public Health, and Private Practice Committees.

Dealing with the central pool, on December 31 last year a final settlement of £4½m. was received for the year 1954-5. For the current year he was pleased to report that the Committee had persuaded the Ministry to advance the time for the final settlement by one-quarter, and it was hoped that the final settlement for the year 1955-6 would be received on October 1, 1957. He could not give the actual amount, but it would certainly be as much as £4½m. As a rough guide it meant, in effect, that on October 1 the average practitioner with the average-size list would receive about £200. The Committee was concerned about large amounts apparently lying idle for long periods, and the attention of the Ministry had already been called to the matter.

The Committee had been pressing for monthly payments for a number of years, and he was pleased to be able to report that at last they had been secured. Executive councils would shortly be advised. Another point concerned travelling subsistence in the case of interviews. For general practitioners it was at an inferior rate compared with members of the hospital services. That had been corrected. The lower fee for temporary residents had now been raised as a result of representations at the Ministry from 5s. to 8s. 6d., and it was hoped that this would remove many of the difficulties in regard to holiday camps. Dr. Davies reminded representatives that the interim report on mileage was that of a Government committee. It had been received at long last after sitting for several years. The G.M.S. Committee had its own special committee on the problems of rural practitioners. The total amount of money available for mileage remained the same as before. The Committee considered it best to allow its Rural Practitioners Committee to decide its own policy, and the G.M.S. Committee had therefore accepted that committee's recommendations.

The Committee had continued and repeated its efforts to get general-practitioner representatives on all regional boards and boards of governors of teaching hospitals. Although some disappointment had been experienced, representations were being pursued as regards future appointments. General-practitioner clinical assistants in the hospital service comprised the only section of the Health Service which had received no increase since the beginning of the Act. It was gratifying to report that an increase of 5% had now been obtained for them without prejudice to the full claim at the end of the dispute. Figures showed that there was some improvement in the number of general-practitioner beds in the year 1956 over the previous year. There was still room for improvement.

On prescribing and dispensing the official attitude of the G.M.S. Committee remained the same—namely, absolute opposition to all charges for prescriptions. There was a special difficulty raised by the rural practitioners which was considered sympathetically—namely, the obligation to put on large numbers of separate receipts where numbers of separate items were supplied at the same time. At a meeting the previous week at the Ministry the G.M.S. Com-

mittee had persuaded the Ministry to consider an alternative method of writing one receipt.

The Committee had agreed to go jointly with the Private Practice Committee and the Chairman of Council to have an exploratory meeting with the Ministry on the matter of drugs for private patients. The Committee was asked to make nominations for a new committee set up by the Government on prescribing costs. During the conflict on the claim a decision was taken to have nothing to do with this committee, but at the last meeting of the G.M.S. Committee it was decided to co-operate with the Ministry to the extent of submitting several nominations for inclusion on the special committee.

As to the Service Committees and Tribunal Regulations, an exhaustive survey had taken place which had lasted several years. The recommendations which the Conference approved last year were also approved by the Ministry and had been embodied in the regulations. The Committee had co-operated with the maternity services by preparing evidence for submission to the Cranbrook Committee. The Assistants and Young Practitioners Subcommittee formed a valuable part of the G.M.S. machinery, and had produced for the consideration of the Committee some splendid memoranda and documents.

Dr. Davies then referred to a matter which was not in the report. It concerned the *National Formulary*. The G.M.S. Committee, together with other branches of the profession, played its part in preparing that book. It was the official *National Formulary*, together with the *British Pharmacopoeia* and the *British Pharmaceutical Codex*. A new publication was about to be issued—it took two and a half years to prepare a new edition—and it would be in Latin titles and Latin subtitles. In compliance with requests a new venture in the form of a pharmacological classification had been prepared. It would be in English, and very largely in the metric system. Its financial success, he was informed, was already assured, because there had been large orders from overseas.

Final Settlement

A motion by Birkenhead was moved by Dr. E. G. WATSON that, since the final settlement had become such a substantial proportion of total remuneration (the last payment being approximately 8% of remuneration), the expense factor should be distributed to a greater extent with the capitation fee: by raising the capitation fee by 1s. or 1s. 6d. per year, the final settlement would be reduced to a much more reasonable figure and doctors would be paid a greater proportion of their expenses nearer the time at which they were incurred. He contended that a much greater proportion of practice expenses should be distributed in the capitation fee quarterly. In seconding the motion, Dr. M. MUNDY (Middlesex) said there was real hardship among many members of the profession, and the motion would go a long way to mitigate that hardship. Dr. DAVIES said that the G.M.S. Committee was fully cognizant of the difficulty and had already made representations to the Ministry on it. Dr. WATSON, in reply, said that the amount of money was so large that the Government had no excuse for deferring payment for nearly two years.

The motion was carried.

Dr. H. DICKIE (Northumberland) moved that in allocating supplementary payments to executive councils in future the sum shall be not on the total number of persons on practitioners' lists in the executive council's area but in proportion to the total amount of annual payments to practitioners. He said that in his area there were a number of doctors who lived in the wilds, and they did a great deal of doctoring and travelling. Their income was by no means derived entirely from capitation fees. They had very heavy expenditure, and it was felt that if the supplementary grant were given to doctors, not as a percentage of capitation fee but as a percentage of the total moneys paid to each general practitioner by each executive council, it would make a fairer method of distribution.

Dr. A. TALBOT ROGERS moved by way of amendment that the Government be informed that the present method of distribution of the final settlement appeared to the Conference to be no longer satisfactory, and that the G.M.S. Committee be instructed to prepare in advance of next year's Conference and in the light of the best evidence then available an equitable scheme for the future. The amendment was seconded by Dr. C. F. R. KILLICK (G.M.S. Committee).

Dr. F. GRAY (G.M.S. Committee) agreed that there was a case to be looked into. The rural practitioners had made one case and the Young Practitioners Subcommittee had another—namely, that, of the total pool, over £20m. was paid for expenses, but that money was not distributed according to the expenses. The young practitioners had passed a resolution asking the G.M.S. Committee to examine the question and not to come to a hasty decision, and he commended their wisdom to the Conference. The amendment seemed to prejudice the position by saying the present method was unsatisfactory. That was one of the things to be inquired into. Dr. DAVIES agreed that the assumption that the present method was no longer satisfactory was debatable. Apart from that there was no reason why it should not be accepted by the G.M.S. Committee.

Dr. TALBOT ROGERS said that the words used had been chosen carefully. If it did not appear to be no longer satisfactory there would be no need to look into it at all. It was necessary to say now to the Government that the profession did not feel that it could continue indefinitely under the present scheme, otherwise another year would be lost.

The amendment was carried.

The amendment, as a substantive motion, was carried.

In moving that interest should be paid on all moneys relating to the Central Pool in any one financial year which are still unpaid six months after the end of that year, Dr. P. J. DELAHUNTY (Buckinghamshire) said that 21 months was a long time to wait for the balance of annual income. A large number of doctors worked on a bank overdraft. Why should they pay interest to a bank on money which should have been in their account 21 months earlier?

The motion was carried.

A motion by Caernarvonshire, that it was considered that small-list practitioners were unfairly penalized by the loading of capitation fees from 500-1,500, as so many were well below the upper figure and were genuinely prevented by external factors from increasing their lists, and that therefore loading should be on patients from 1-1,000, provided that the total list was not less than 500, was considered.

The motion was lost.

Dain Fund

Dr. H. GUY DAIN presented the annual report of the Trustees of the Dain Fund, which is published at page 345 of this *Supplement*. It was, he said, an excellent report showing a year of great usefulness.

Claire Wand Fund

Dr. WAND presented the report of the Trustees of the Claire Wand Fund.

The first Award would be made, following the presentation of the report, to Dr. Dain. That was, he said, most appropriate. With regard to the Essay Competition, the quality of the essays was of a very high standard and the judging was not yet complete. The Conference agreed that the Council should be asked if it was willing for the prizes to be given at the adjourned annual general meeting of the Association in Newcastle upon Tyne.

No suggestions had been received on what other activities the Fund might sponsor. Dr. Wand felt sure that among general practitioners there must be some thoughts which would lead the Fund to make very good use of the moneys available.

procedure for filling practice vacancies was accepted as a reference to the G.M.S. Committee. That also covered an amendment by Denbighshire and Flintshire.

Emergency Call Service

Dr. F. M. ROSE, on behalf of Lancashire, expressed concern at the introduction of an Emergency Call Service and requested the General Medical Services Committee to give urgent consideration to the adequacy of deputizing arrangements throughout the country with a view to the preparation of a model scheme for the implementation of local rota systems in all districts. He suggested that the growth of the Emergency Call Service in London was a symptom of some failure on the part of the G.M.S. Committee. It would not have grown so rapidly as it had if it did not meet a need, and that need was present in many parts of the country. It was the duty of the G.M.S. Committee to prepare a model scheme which could be issued to local medical committees for their consideration.

The motion was accepted as a reference to the Committee.

General Practitioners and the Hospital Service

Dr. DAVIES accepted as a reference a motion by Oxford that the reduction of medical representatives on hospital boards and hospital management committees to 25% was to be regretted, and that the G.M.S. Committee should be requested to ask the Minister to reconsider the recommendations of the Guillebaud Committee.

A motion by Gateshead, moved by Dr. J. C. ARTHUR, that the matter of closure or change of usage of hospitals be regarded as one of extreme urgency was carried.

Trainee General Practitioner Scheme

A motion moved by Dr. J. B. FULTON (Cheshire) opposing the setting up of appeals machinery in any form was considered. He said he did not believe that any reviewing committee could possibly better the committee's views on the people for whom the request was made. Dr. DAVIES replied that in the past there had been cases where applicants had been rejected without any reason, and there had been no appeal. The present appeals machinery was working very well indeed.

The motion was lost.

Another motion by Cheshire that a trainer should be allowed trainee assistants for a maximum period of two years continuously, followed by an interval of one year without a trainee after which training might be resumed following review, was moved by Dr. J. B. FULTON. He said it would seem that certain practitioners who had a number of trainee assistants appeared to hold a rather special position *vis-à-vis* the rest of the medical community. Dr. P. J. DELAHUNTY (Buckinghamshire) called for a rejection of the motion, pointing out that the men were selected by local medical committees and their practices were examined. Dr. F. GRAY (G.M.S. Committee) expressed the hope that the motion would be rejected. "If you have a good teacher he should go on teaching," he said. "If he is not a good teacher he should not be allowed to teach at all."

The motion was lost.

A motion by Devon and Exeter that the remuneration of trainees, and in particular their car allowance, should be increased *pari passu* with the increases in general was agreed.

In moving on behalf of Essex "That this Conference considers that any general practitioner who applies to be a trainer should, on the first application, have his premises inspected and demonstrate his practice organization to a suitable visitor appointed by his local medical committee," Dr. H. M. ROSE said that often the practitioner's premises were not well known. Therefore it might be an advantage to the committee to have such information before making

the selection of the trainer. Dr. DAVIES said that it was a matter for local decision and discretion by local medical committees.

The motion was lost.

A second motion by Essex to the effect that a trainee should be expected to complete his training appointment was accepted by the G.M.S. Committee.

Prescribing and Dispensing

The report of the General Medical Services Committee dealing with prescribing and dispensing was approved, and a motion that the Conference pass to the next business was carried.

Service Committees and Tribunal Regulations

The Conference agreed that 13 motions standing in the name of Kent and Canterbury should be referred to the G.M.S. Committee.

Responsibility for Acts and Omissions of Deputy

Dr. W. DONNELLY (Sheffield) moved by way of amendment that the Conference rejects the General Medical Services Committee's explanation of its failure to act in the matter of immunity against the acts and omissions of deputies.

Dr. H. GUY DAIN, opposing the amendment, said that it was not true that the G.M.S. Committee had failed to act. It had acted and had obtained the same position for the doctor, his deputy, assistants, and locums as would be held in a civil court.

Dr. B. BURNS (G.M.S. Committee) said that the G.M.S. Committee had failed to bring in a single new item. If the Conference was to have precise instructions neglected in that fashion there would seem to be little purpose in having a conference.

The amendment was carried, and the amendment, as a substantive motion, was carried.

Vaccination and Immunization

A suggestion by Worcester that the Ministry should be approached to request hospital authorities to use notepaper of a size suitable to fit into Form E.C.5 unfolded or with a maximum of one fold was accepted as a reference to the G.M.S. Committee.

Maternity Medical Services

That the Maternity Medical Services payment should be increased, and that the amount of work to qualify for that payment be also increased, was the subject of a motion moved by Dr. C. W. MARSHALL (Devon and Exeter). The minimum amount of work laid down for qualification had never been considered to be realistic by obstetricians. Dr. DAVIES pointed out that if the midwifery fees were increased they would have to come out of the central pool at the expense of capitations and loans. While his attitude broadly was sympathetic, it would be more appropriate to defer the question until the remuneration claim was completed and when the Cranbrook Committee had reported. Dr. W. H. HAYES (Bristol) said that it was necessary to fight immediately for an increase in the fee, and it should not come out of the central pool.

The motion was carried.

A motion by Oxford, that, whenever a patient booked for confinement under the care of a general practitioner was admitted to a maternity hospital as an emergency, the full fee should be paid, regardless of whether the patient was in labour or not, was accepted as a reference to the G.M.S. Committee.

Certification

An amendment moved by Dr. J. C. ARTHUR (Gateshead) that the matter of four-weekly certificates be further pursued was carried as a substantive motion. Similarly, a

motion by Gateshead that "vague" certificates should be supplied in a form which would facilitate posting was accepted as a reference to the G.M.S. Committee.

Superannuation

Dr. J. C. ARTHUR (Gateshead) moved that the question of pension or early retirement merits further consideration and requires clarification. His committee considered that it would be possible for something to be drawn up in the shape of what insurance companies called an "attractive proposition." Dr. DAVIES said it sounded desirable, but a superannuation fund must remain solvent. If new benefits were desired it would be necessary to increase contributions or reduce existing benefits. Dr. H. J. GILBERT (Durham) agreed that the suggestion should be pushed ahead and supported the amendment.

Dr. ARTHUR said he realized that the proposition must be actuarially sound, but it was desirable that it should be in the form of a scheme so that its worth could be assessed.

The amendment was carried as a substantive motion.

Remainder of Annual Report

The remainder of the annual report of the General Medical Services Committee was approved.

Matters not Referred to in Annual Report

Function of Representatives

The Conference rejected a motion by Bath that it should be made clear that representatives of local medical committees at conferences were representatives and not delegates. Local medical committees should be given *carte blanche* to decide how they wished their representatives to act, said Dr. DAVIES.

Consultation with the Profession

Dr. W. G. MURRAY-BROWNE (Gloucestershire) moved that a uniform policy be adopted in limiting the electorate between adjacent executive council areas when expressions of opinion of all general practitioners were being sought. There were, he said, 350 members, and of that number no less than 100 were able to exercise anything up to four votes because they lived on the edges of the county. That was wrong and did not give proper representation.

Dr. DAVIES said it would be wrong to limit a practitioner to having a vote in one area only.

The motion was carried.

Elections to Committee

The SECRETARY announced that the following six candidates had been elected members of the General Medical Services Committee: Drs. J. C. ARTHUR, A. BROWN, I. G. INNES, A. M. MAIDEN, J. A. PRIDHAM, and F. M. ROSE. A hearty vote of thanks to the Chairman, Dr. A. BEAUCHAMP, proposed by Dr. W. M. KNOX, was carried with acclamation, and the Conference terminated at 6.40 p.m.

CONFERENCE DINNER

At the conclusion of the Conference representatives adjourned to the Savoy Hotel, where they entertained the Chairman and members of the General Medical Services Committee, the officers of the Association, and other guests to dinner. Dr. A. BEAUCHAMP presided. The toast of the General Medical Services Committee was proposed by Dr. R. B. L. RIDGE, and Dr. A. B. DAVIES, Chairman of the Committee, responded. Dr. C. J. SWANSON proposed the toast of the Chairman of the Conference, and Dr. BEAUCHAMP replied.

The collection taken for the Dain Fund realized the sum of £208.

THE DAIN FUND

REPORT OF THE TRUSTEES

The trustees of the Dain Fund report that during the year ended April 30 assistance has been given in sixteen cases, the grants amounting to £1,458 15s. Of these, thirteen were cases which the Trustees have been helping over a period of years. All the children are making good progress at their schools or universities.

New Cases

Three new cases have been undertaken by the Trustees and it is anticipated that help will be required for several years for each child. The grants totalled £308.

A doctor's widow with three children of school age asked for help with educational expenses. A local fund has been set up, but meanwhile it has been possible, in co-operation with the Ladies' Guild of the Royal Medical Benevolent Fund, to meet the school fees for the year 1956-7 for the eldest child, a boy, in his last year at preparatory school.

A doctor's widow required help with the university fees and expenses of her youngest son. A grant was made available for the academic year 1956-7 and assistance is also being given by the Royal Medical Foundation of Epsom College and the Sir Richard Stapeley Fund.

A grant to meet the summer term fees and expenses was made to a doctor's widow for her son who is in his last year at preparatory school. This allowed her time to make arrangements to send him to a senior school in September and to sort out her financial position.

Cases Concluded

Three of the cases which the Trustees have been assisting should be concluded this year. Satisfactory arrangements have been made in each case for their future education. The first is a student who has been undergoing a two-year polytechnic course before going to medical school. Subject to gaining exemption from 1st M.B. in the July examinations she has been accepted by the medical school and has been promised a county scholarship to cover expenses. Grants from the Dain Fund amounted to £60. The second case is that of a schoolboy who was assisted with a grant of £150 to enable him to complete his final year at school. He has now commenced medical studies and his expenses are covered by grants from the education authority and the local medical committee. The third is a schoolgirl who has been assisted by the Fund for the past two years and who is sitting the entrance examination to a school which is State-aided and endowed. The child's headmistress is confident that she will pass the examination. Gifts from the Fund have amounted to £100 and assistance has also been given in this case by the local medical committee.

Local Medical Committees' Help

The report shows that practically every case assisted by the Dain Fund is likely to require help over a number of years. It is for this reason that the Trustees earnestly hope that subscribers to the Fund will continue their valuable support. The Trustees are very glad to report that local medical committees have again given most generous donations to the Fund and have on many occasions assisted individual cases with special and direct additional grants. During the year 67 committees contributed £1,844 between them. The Trustees express their warm appreciation of this help.

The Trustees also express their best thanks to the Royal Medical Benevolent Fund and their Ladies' Guild and the Royal Medical Foundation of Epsom College for the help and advice which has been extended to the Dain Fund during the year.

The Trustees remind individual members of the profession that valuable help can be given to the Fund by completing a form of covenant for seven years or by sending a donation to the secretary.

APPEAL WON FOR MEDICAL OFFICER OF HEALTH

The British Medical Association successfully appealed to a Regional Whitley Appeal Committee against the decision of Coventry City Council to place its medical officer of health on the minimum scale of the appropriate range of salaries laid down by agreement in Committee C of the Medical Whitley Council.

The B.M.A. contended that the duties of the appointment warranted a considerably higher salary than the minimum. Among the duties are those of medical referee of the local authority's crematorium and a scheme for the provision of welfare facilities which had been recently included in the administrative responsibilities of the health department.

After hearing the case the Regional Appeal Committee recommended an increase in the medical officer's remuneration which would place him more than half-way up the scale in the appropriate range.

CENTRAL HEALTH SERVICES COUNCIL AND STANDING ADVISORY COMMITTEES MEMBERSHIP

The Minister of Health has made the following appointments and reappointments of medical members of the Central Health Services Council and Standing Advisory Committees for the period ending March 31, 1960:

Central Health Services Council.—New: Dr. T. M. Cuthbert; Professor R. Platt (during office as President of the Royal College of Physicians). Reappointed: Professor R. V. Bradlaw; Professor Digby Chamberlain; Mr. O. M. Duthie; Dr. F. M. Rose; Dr. J. G. Scadding.

Standing Medical Advisory Committee.—New: Sir Arthur Gemmell; Professor R. Platt. Reappointed: Professor Digby Chamberlain; Mr. O. M. Duthie; Dr. F. M. Rose; Dr. J. G. Scadding; Dr. G. W. H. Townsend.

Standing Dental Advisory Committee.—Reappointed: Professor R. V. Bradlaw; Dr. A. M. Horsnell; Dr. J. A. Moody; Dr. T. G. Ward.

Standing Ophthalmic Advisory Committee.—New: Mr. A. B. Nutt. Reappointed: Mr. J. H. Doggart; Mr. O. M. Duthie.

Standing Nursing Advisory Committee.—Reappointed: Dr. A. Elliott.

Standing Maternity and Midwifery Advisory Committee.—Reappointed: Mr. Arnold Walker.

Standing Mental Health Advisory Committee.—New: Dr. F. E. Pilkington. Reappointed: Dr. E. J. M. Bowlby.

Standing Tuberculosis Advisory Committee.—Reappointed: Dr. F. Ridehalgh; Dr. J. G. Scadding; Dr. G. W. H. Townsend.

Standing Cancer and Radiotherapy Advisory Committee.—Reappointed: Sir Harold Boldero; Dr. C. E. Dukes; Professor R. Milnes Walker; Mr. J. A. Stallworthy; Sir Clement Price Thomas; Mr. C. J. L. Thurgar; Professor B. W. Windeyer.

HOSPITALITY

Three Swiss doctors' daughters, each aged 17, wish to arrange holiday exchanges with British doctors' daughters between August and September.

A Swiss doctor's daughter, at present attending a language school in Bournemouth, would like to stay with a British medical family on an *au pair* basis, helping in the house or with children, from August 5 until December 15.

A French doctor and his wife would like to stay with a British medical family in the London area as paying guests for the months of August and September. A French doctor's son, aged 18, would like to visit Scotland in October on an exchange basis, the British boy spending September in Dordogne.

Would anyone interested please get in touch with Brigadier H. A. Sandiford, International Medical Visitors' Bureau, B.M.A. House, Tavistock Square, London, W.C.1.

Correspondence

Because of heavy pressure on our space, correspondents are asked to keep their letters short.

Rural Practitioners and Interim Increase

SIR,—The Danckwerts Award gave doctors certain increases in their remuneration, and retrospective payments for the three years prior to the award, but it is not generally realized that it was agreed by our own representatives with the Minister of Health that, when those retrospective payments were made, they should be based on capitation and temporary resident payments only, and that drug capitation payments and mileage payments should be ignored. This resulted in all rural practitioners receiving far less than they should. Thus, for the year ending March, 1950, the average urban practitioner received a retrospective payment amounting to 11.3% of his remuneration, while the class "A" rural practitioner received only 7.9%, and still less than this if drug capitation payments had also entered into the calculation (see G.M.S. Committee Report 1956-7, Appendix B, Sub-appendix C, para. 8). Under the above scheme of distribution rural practitioners have already lost a considerable sum of money, and though our representatives were aware of this iniquity in 1953, they acquiesced in the same method of distribution of the "additional remuneration" which was paid in 1956. So we have lost some more. There is now an offer of a 5% increase in the global sum paid to doctors in general practice. Shall we rural doctors get 5% on 100% of our N.H.S. income? Or will it be perhaps 5% on 70% of our income as it has been in the past?

There seems to me to be no good reason for increasing the salaries of urban general practitioners at the expense of their country colleagues, and I trust that our representatives will now take the necessary steps to correct the injustice.—I am, etc.,

Leysburn, Yorks.

DAVID R. L. PEILL.

Private Practice Group

SIR,—In the *Supplement* of May 4 (p. 246) Dr. J. Etheridge announced the formation of a Private Practice Group, which aims to defend the interests of those who are engaged in private practice: the first of the objects of this Group is to press for the right of private patients to receive drugs on the same terms as National Health patients.

I am writing on behalf of this Fellowship to say how pleased we are to see the formation of this very active group of doctors who are interested in the welfare of private practice: many of us are disappointed that the Private Practice Committee of the B.M.A. has done so little to help in the objects which have stimulated the formation of this new Group.

The Fellowship is concerned with the preservation of the highest standards of medical practice, both inside and outside the National Health Service, and is not concerned with private practice alone. We hope that this new Group will have as one of its functions the formation within the B.M.A. of a group of those who are determined to see that the Association does realize the importance of independent practice—outside the N.H.S.—I am, etc.,

London, W.1.

E. C. WARNER,
Honorary Secretary,
Fellowship for Freedom in Medicine.

Appoint a Negotiator

SIR,—Very recently all G.P.s in this area were invited to a meeting to consider the co-operation of the profession with the Royal Commission and deferment of the resignation policy. Although some 130 doctors were notified to attend, only 20 were present. No negotiators could be expected to act with any degree of authority or confidence when this extraordinary lack of enthusiasm is revealed.

JUNE 15, 1957

Bargaining with politicians and civil servants is a tough and specialized job, and, with the utmost respect for the good intentions of our leaders, I would submit that they have not the training, experience, or toughness to compare with the shrewd, dynamic business-executive type, who is capable of negotiating with ministries with considerable success. Examples of the success of this type of negotiator in spheres other than medical are not unknown.

I therefore put forward the suggestion that the medical profession (most particularly the G.P.s) should take immediate steps to engage on a part-time basis a person of the highest ability and of strong personality, who would, for a most attractive remuneration (in the region of £10,000 for a most attractive remuneration (in the region of £10,000 per annum—a mere 10s. per annum for each G.P.), be prepared to fight for us on equal footing with politicians and civil servants. That such persons are available there is no doubt. Very many of my colleagues agree with this idea. I hope the profession as a whole will support and indeed insist on this as early as possible, since the only real hope for unity in our profession lies in skilful and inspiring leadership of the highest order. Perhaps the greatest crisis in our profession has yet to come when we enter into full discussion with the Government regarding the report of the Royal Commission. We should lose no time in selecting and briefing our negotiators.—I am, etc.,

L. E. LUCAS.

Huddersfield.

The Battle of the N.H.S.

SIR,—The battle of the N.H.S., in which you find yourselves at present engaged, has really been lost before the opposing forces moved into battle position—the Government force into a position of strong defence, the profession's force into one favourable for attack. A stalemate with a promise peace is indeed the only possible solution, and the outlook for the future can only be an indifferent one, for factors almost beyond control have made certain this conclusion.

Such factors include the one mentioned by Dr. F. T. Burkitt (*Supplement*, May 4, p. 244)—namely, the traditional control of pay and conditions in other branches of the Governmental service, a form of control which brooks no rank and file say in these important matters. Another such factor is that process of socialization which results in a levelling down and will in time reduce the former "haves" towards a median point, while at the same time raising the former "have nots" toward that same point. This process has been going on practically unheeded for years. Indeed it goes on within the profession itself. Thus, even although things are now "bad" for the medical profession, compared with teachers and policemen things are not so bad, and indeed even yet the members of the profession are, relatively speaking, well off (in the Soviet Union, I understand, physicians are nowhere near the top in so far as pay is concerned).

Quite apart from these two considerations, that process of equalization goes on also at the international level. Thus colonial or "have" powers are constantly being scaled down, while former colonies acquire new status and importance. Thus a Nasser can with impunity tweak the noses of the British lion and the French eagle, and get away with it. This very process has reduced the Empire (in spite of a recent hydrogen blast) to a shadow of its former self. This process will continue, resulting in an overcrowded land, a land of sagging opportunity, to a land where the deluded are being led by some to believe that there exists for them a welfare-State paradise of some kind, which can afford the best health protection in the world, the finest hospitals, and enough of them, as well as a well-paid, well-manned, and well-trained profession. The article by Mr. A. W. Adams (*Supplement*, May 4, p. 241) emphasizes how far short of this paradise you actually are.

It may well be then the best compromise to recognize the truth, and realize the odds, and then to shrug the shoulder and accept the weary load—or do as others have done, and many still are doing, try to get out, while there is yet time

and the means left. It is unfortunately true that at times of hardship for sections of the people, Great Britain's concern, as evidenced by practical countermeasures, has fallen far short of what it might have been. How much worse it is for the individual! The group may get more consideration in proportion to its power. Thus as a former Highlander I know how the Highlands and Islands have been dealt with by successive Governments. As a child at school, I remember hearing discussed the woeful plight of the crofters and fishermen in the Highlands and Islands. I believe people in power are still talking about solutions, but where are the people? They have gone, or are going, to parts unknown. It is a very old story. Is it any wonder that the individual realized that few really cared? My own former county of Ross and Cromarty has lost thousands upon thousands in the years that have passed, and indeed to-day its population is much less than it was a hundred years ago. If these people had not been the cream of the crop it would still have been bad for Britain. The fact that they were the finest of people makes it the worse for the motherland. But other countries, now in the ascendant, have gained their worth. In those lands they receive the recognition, a well-paid job, and a chance in life they deserved "at home." Why were such not considered? The answer of course is complex, but the core of truth is that the then "haves" who are now rapidly becoming the "have nots" controlled that fair land for self-interest, and in the case of the Highlands and Islands for the sporting society from the south. To such as those the people were less important than the deer and the sheep which now people the hills and the glens.

Until communities in Great Britain exercise their corporate right as communities in that larger community of the nation on behalf of all, and in helping not the least of them, this process of decay will continue inevitably, inexorably—yet another reason why the battle of the N.H.S. will not solve the inherent problem for victor or loser.—I am, etc.,

Worcester, Mass., U.S.A.

KENNETH I. E. MACLEOD.

Waste of Paper

SIR,—The latest letter from the Minister of Health concerning dispensing doctors tells us that Form E.C.57 has been revised. There are now to be three forms, in different colours, to cover amounts up to 3s. So far so good. The Minister is obviously anxious to save paper and to use only one form as a receipt for 3s., whereas hitherto we have had to use three 1s. forms. But paragraph 4 says: "You are requested to use the revised forms as soon as you receive them and *not* [his italics] to give receipts on the old form. *Any stocks you hold of the old form should be destroyed*" (my italics). When I read this I weighed our stock of the old form: it came to nearly 10 oz. (283 g.).

Now if we assume that there are 20,000 general practitioners in the country, and that a tenth of them are dispensing doctors, and if we assume, further, that each of these doctors has 10 oz. (283 g.) of the old forms in hand, it means that the total weight of these forms in doctors' surgeries all over England amounts to nearly 1½ tons (1,524 kg.). To this must be added the total weight of these forms with the dispensing chemists all over the country, and also the total weight of such forms in the various Government stationery offices and storage depots. I feel sure that the final figure would be about six tons (6,096 kg.): it may well be very much more.

I know that when compared with the oceans of paper which are used daily in Whitehall these six tons (6,096 kg.) must seem but a tiny drop, but to simple people like myself it seems a colossal figure. I would agree that it is probably uneconomical to put this paper to any other use: but why not put it to the use for which it was intended? What is the hurry to use the new forms before using up the existing stocks of the old ones?

What makes one so angry is that successive Chancellors of the Exchequer frequently make complacent statements that government expenditure has been cut to the utmost and that nothing more can be saved. How little do they

know! And yet this example of senseless and brutish waste occurs at a time when the Health Service is costing so much that it is unable to pay its doctors an adequate wage.—I am, etc.,

Duffield, Derbyshire.

STEPHEN WIGHT.

The Changed Picture

SIR,—The prolonged gestation of the B.M.A. negotiations has ended in a pseudocyclic anticlimax. If the profession in this country is ever to recover its prestige from this farcical situation, there will certainly be no credit due to our negotiators. At the very time when we, in this Division, were being exhorted to stand firm and support the avowed policy of the Association, Dr. Wand was negotiating a *volte face* with Mr. Vosper.

There is indeed a "changed picture," and the rank and file of the B.M.A. are determined that the change must be radical. In future the right hand of the Association must know what the left hand is doing. It is imperative that democracy should be allowed to work and that there should be no more hole-and-corner negotiations or interviews. If the B.M.A. is to give evidence before the Royal Commission we must be assured that the case presented is fair and just to all sections of the medical community.—We are, etc.,

R. CUBITT. J. W. SCHOLEY.
C. W. BIRKS. E. G. WILSON.
A. A. HALL. H. WILSON.
D. LONSDALE.

Sleaford, Lincs.

Pro Infantibus

SIR,—I am a retired G.P. and occasionally have acceded to requests to do a few surgeries for fellow practitioners. Sometimes, after a parent and child have passed from the surgery and through the outer door on to the road, I have had to ask myself, "Did I put that child's age and 'pro infant' on the scrip?" and have felt a little uneasy about it. The appearance of the blue-grey section of the *Formulary* has suggested to me that it would be a good idea if pads of blue-grey forms E.C.10 were issued for "pro-infant" prescriptions. The distinctive colour would be a safety measure against forgetfulness. Perhaps the suggestion merits more than mere consideration.—I am, etc.,

Bradford, Yorks.

ALLEN GLENN.

International Medicine

SIR,—While conducting a village surgery, a Hungarian refugee who had been in this country since February came to me and wished me to let her have a prescription for "serpasil." She thereupon showed me an ancient prescription, the only word of which was legible being the name serpasil. I could find no suspicion of blood pressure and with great difficulty made her understand that she was not getting the prescription. She then showed me an old photograph, which I guessed correctly was that of her mother, who in fact needed the serpasil. I then got hold of her husband, who spoke a few words of English, and with his help elicited the following information.

The woman and many others like her had, since their arrival in this country, found our National Health Service a minor gold mine. She had got her mother to send her Hungarian prescription over here, hence the difficulty in deciphering it.

This prescription was written in our script as the Hungarian physician had written it. She had with the aid of this been able to send monthly supplies of the drug at a shilling a time to her mother. Also three pairs of elastic stockings and other items. They told me that there was nothing unusual in this. Many refugees did it. I think it is even possible that she told the doctors whom the prescription was for, if they could have understood her. I may add that she was not even registered with any doctor.

I wonder how many others have had similar experience? If it is many, it is small wonder the Health Service does not pay.—I am, etc.,

Oundle.

VINCENT GRANTHAM.

General Practice in Hospitals

SIR,—In the June issue of the *Practitioner* there appears an excellent brief article analysing the treatment of sunburn given to 171 patients in the casualty department of Torbay Hospital during the three-month period July to September, 1955.

I wonder what the Torquay G.P.s think about this? How many of these cases were referred to hospital by a G.P.? And why? Is it possible that all or most of them attended the hospital in the first instance? They are certainly casualty cases, but did the casualty officer give them first-aid and then advise consulting a G.P.? How many cases, if any, required admission to hospital? And how many would have been more comfortably treated by a G.P.—being visited in their homes or hotels if necessary? There used to be a recognized rule that hospitals would not treat minor injuries or diseases except in real emergency or on reference by a G.P. Is this rule obsolete? If not, how many hospitals throughout the country are unaware of it or ignore it?

The interests of the individual patient are of course always paramount, but I venture to suggest that true answers to the above questions would be of interest to the committee to be set up by the Council of the B.M.A. to inquire "into the whole field of medical services in the light of experience gained of the National Health Service since 1948" (see report of S.R.M., *Supplement*, May 11, p. 255).—I am, etc.,

London, N.W.8.

Doctors and the Health Service

SIR,—Mr. Arthur Blenkinsop (*Supplement*, June 1, p. 309) wants to know more about our "working load." Perhaps the records of one single-handed country doctor may interest him.

I have a list of a little over 2,000. In the period January 1 to May 31, 1957, a period without a major epidemic, 869 individuals consulted me; I paid 1,250 visits and held 2,392 consultations in the surgery, a total of 3,642 items of service. Many of my colleagues with big lists in smoky cities must have done twice as much. How would other professions feel about this sort of "work load"? I cannot imagine a solicitor conducting 3,642 interviews in five months, being continuously on call and liable to a complaint and a fine if his clients were not satisfied with his efforts. Yet in medicine, as in law, good advice is not given by tired men in a hurry.

Under the N.H.S., to make a living general practitioners must take on more work than they can properly do. It is not merely that there is no incentive to better work; we are forced to do second-rate medicine so that we can afford to bring up and educate our families. This is the prostitution of an honourable profession. I like to feel that my patients can consult me with no financial barriers between us, and gladly suffer the ninety-nine trivial complaints that must be heard so that the one serious condition is brought to me in an early stage while it is still curable. But the system breaks down when the doctor is too busy to give the time to those that need it. The British public is getting its family doctors on the cheap and the public suffers from the system as much as do the doctors. Good medical care is not bought at cut prices. If the Government cannot afford to pay us the proper rate for the job it is not fit to employ a learned profession into whose hands is entrusted the health of the people.—I am, etc.,

Haddenham, Bucks.

R. P. C. HANDFIELD-JONES.

Multiple Representation

SIR,—I have read with interest what I must describe as Dr. A. L. Victor Russell's circumlocutory letter (*Supplement*, June 8, p. 330). How can anyone be responsible for anything until he knows what is required of him? We are ever ready in the B.M.A. to blame others for our own deficiencies. In my district during the last year there have

JUNE 15, 1957

been a number of B.M.A. and Guild meetings, but at not one of these meetings has an attendance of even 25% been achieved. How can any body be considered as representative while this apathy prevails? It is like asking an army to fight not knowing how many will turn up on the day, or even on which side it proposes to fight.—I am, etc.,

F. E. GRAHAM-BONNALIE.

Cheriton Bishop, Devon.

B.M.A. LIBRARY

The Library service is available to all members of the Association resident in Great Britain and Northern Ireland (and by special arrangement to members of the Irish Medical Association). A copy of the Library rules will be forwarded on application to the Librarian at B.M.A. House.

The following books have been added to the Library:

- Adams, J. C.: Outline of Fractures: Including Joint Injuries. 1957.
Barnes, J.: Care of the Expectant Mother. 1956.
Cameron, J. C.: British Paediatric Association, 1928-1952. 1955.
Chlorpromazine and Mental Health: Proceedings of the Symposium held under the auspices of Smith, Kline, and French Laboratories, June 6, 1955. 1955.
Chusid, J. G., and McDonald, J. J.: Correlative Neuroanatomy and Functional Neurology. Eighth edition. 1956.
Ciba Foundation Symposium: Paper Electrophoresis. 1956.
Color Atlas of Oral Pathology. Prepared under the auspices of the U.S. Naval Dental School. 1956.

A reciprocal agreement on social security between the U.K. and Sweden came into force on June 1. Under the agreement (the first fully reciprocal one with a country outside the Commonwealth) Sweden makes its health services available for all British nationals, including tourists. The agreement also covers cash benefits for unemployment, sickness, maternity, old age, widowhood, orphanhood, and industrial injury. A social security convention between the U.K. and Belgium was signed on May 20 and will come into operation when it has been ratified by both Governments. Under the convention contributions paid under both countries' social insurance schemes would be taken into account when claiming benefits in either country. Belgium will provide medical benefits for citizens of the U.K. and the Colonies either employed or receiving British retirement pensions in Belgium.

H.M. Forces

ARMY

Major-General F. C. Hilton-Sergeant, C.B., C.B.E., Q.H.P., late R.A.M.C., has retired on retired pay (Reserve Liability).
Brigadier (Temporary Major-General) F. McL. Richardson, D.S.O., O.B.E., late R.A.M.C., to be Major-General.
Brigadier R. A. Bennett, Q.H.P., late R.A.M.C., to be Major-General (Supernumerary).
Colonel L. R. H. Keatinge, O.B.E., late R.A.M.C., to be Brigadier.
Colonel J. H. G. Hunter, late R.A.M.C., has retired on retired pay.
Lieutenant-Colonel D. T. Swift, O.B.E., from R.A.M.C., to be Colonel.

TERRITORIAL ARMY

ROYAL ARMY MEDICAL CORPS

Lieutenant-Colonel (Acting Colonel) T. F. Redman, T.D., has relinquished the acting rank of Colonel.
Lieutenant-Colonels A. Willcox, T.D., and E. F. Baines, T.D., have been granted the acting rank of Colonel.
Majors A. S. Bookless and D. W. Mayman have been granted the acting rank of Lieutenant-Colonel.
Majors J. Wood-Wilson, T.D., and S. Freeman, T.D., having attained the age limit, have retired, retaining the rank of Major.
Major G. D. Thompson, T.D., has retired, retaining the rank of Major.
Majors C. G. Rob, M.C., and H. Dickie, T.D., have resigned their commissions, retaining the rank of Major.
Major P. Jacobs, from T.A.R.O., to be Major.
Captains (Acting Majors) J. H. H. Oliver, N. B. Crisp and T. N. Reynolds to be Majors.
Captains R. A. Goodhead, L. G. R. Wand, F. J. Dunn, W. B. Ashby, and W. E. Hurford to be Majors.
Captains R. A. N. Petrie, J. A. R. Parker, T. W. A. Glenister, C. C. Crampton, A. C. Coulthard, and J. S. Barrett, M.C., have been granted the acting rank of Major.
Captain J. S. Inkster, from Reserve of Officers, Class III, to be Captain, and has been granted the acting rank of Major.
Lieutenant (War Substantive Captain) P. F. Boreham, from Emergency Commission, to be Captain, and has been granted the acting rank of Major.

ROYAL AIR FORCE

Wing Commanders J. R. Cellars, A.F.C., R. H. Pratt, C. C. Barker, A.F.C., J. C. Taylor, O.B.E., W. T. Buckle, and E. S. Sidney to be Group Captains.
Flight Lieutenants D. J. Muller, E. Stokoe, A. L. C. Packham, and R. H. Brown have been transferred to the Reserve, retaining the rank of Squadron Leader.
Flight Lieutenant P. Cauthery to be Squadron Leader.
Barbara D. Wilberforce and C. M. C. Smelt to be Squadron Leaders.

ROYAL AUXILIARY AIR FORCE

Flight Lieutenant R. Summers to be Squadron Leader.

ROYAL AIR FORCE VOLUNTEER RESERVE

Squadron Leaders J. C. McC. Browne, W. D. Doey, and E. A. K. Hoppins have relinquished their commissions, retaining their rank.
Flight Lieutenants W. D. Davey, A. G. Edwards, J. Guthrie, R. P. Parkinson, G. R. Steed, R. W. Stevenson, G. B. Barbour, and J. Taylor have relinquished their commissions, retaining the rank of Squadron Leader.

HER MAJESTY'S OVERSEAS CIVIL SERVICE

The following appointments have been announced: A. G. M. Davies, M.B., Ch.B., D.M.R.D., Specialist Radiologist, Uganda; P. W. Hutton, M.D., M.R.C.P., D.T.M.&H., Senior Specialist, Uganda; W. C. D. Lovett, M.D., D.P.H., D.T.M.&H., Senior Medical Officer, Tanganyika; R. C. Nauth-Misir, M.B., B.S., D.P.H., Venereal Diseases and Dermatologist, British Guiana; M. P. C. Brun, M.S., F.R.C.S., Surgeon Specialist, Mauritius; M. R. Potter, M.B., B.S., Medical Officer, Federation of Nigeria; G. Wolfenden, M.B., B.Ch., Medical Officer, Kenya; S. G. Gordon, M.B., B.S., D.T.M.&H., Deputy Director of Medical Services, Eastern Nigeria; Bernice M. Hulse, L.M.S.S.A., Chest Physician, British Honduras; S. E. Onwu, M.B., Ch.B., D.T.M.&H., Director of Medical Services, Eastern Nigeria; R. A. Browne, M.B., Ch.B., D.A., Assistant Anaesthetist, Barbados; R. J. Coogan, L.R.C.P.&S.I., and L.M., D.P.H., Medical Officer of Health, Medical Department, Jamaica; Antoinette I. Hallett, M.B., B.S., D Obst.R.C.O.G., Lady Medical Officer, Somaliland; C. A. M. Procope, M.R.C.S., L.R.C.P., Medical Officer, Trinidad.

Diary of Central Meetings

JUNE	
17 Mon.	S.H.M.O.s Group Executive Committee, 2 p.m.
18 Tues.	Planning Subcommittee, Occupational Health Committee, 10 a.m.
19 Wed.	A.R.M. Agenda Committee, 2.30 p.m.
20 Thurs.	General Medical Services Committee, 10.30 a.m.
25 Tues.	Psychological Medicine Group Committee, 2 p.m.
26 Wed.	Medical Staffing Subcommittee (Central Consultants and Specialists Committee), 10 a.m.
26 Wed.	Medical Education Committee, 2 p.m.
27 Thurs.	Journal Committee, 2 p.m.
28 Fri.	Central Ethical Committee, 10.30 a.m.
28 Fri.	Assistants and Young Practitioners Subcommittee, General Medical Services Committee, 2 p.m.
28 Fri.	Infectious Diseases Subcommittee, Public Health Committee, 2 p.m.

JULY

3 Wed.	Welsh Committee (at Shrewsbury), 2.15 p.m.
10 Wed.	Annual Representative Meeting (at Newcastle upon Tyne), 10 a.m.
11 Thurs.	Annual Representative Meeting (at Newcastle upon Tyne), 9.30 a.m.
12 Fri.	Annual Representative Meeting (at Newcastle upon Tyne), 9.30 a.m.
13 Sat.	Council (at Newcastle upon Tyne), 9 a.m.
13 Sat.	Annual Representative Meeting (at Newcastle upon Tyne), 10 a.m.
15 Mon.	Annual Representative Meeting (at Newcastle upon Tyne), 10 a.m.
15 Mon.	Annual General Meeting (at Newcastle upon Tyne), 12.30 p.m.
15 Mon.	Council (at Newcastle upon Tyne), at conclusion of A.R.M.
15 Mon.	Adjourned Annual General Meeting and President's Address (at Newcastle upon Tyne), 8.15 p.m.
18 Thurs.	G.M.S. Committee, 10.30 a.m.
25 Thurs.	Ingleby Evidence Committee, 11.30 a.m.
25 Thurs.	Joint Committee of B.M.A. and Magistrates' Association, 2 p.m.
26 Fri.	Staff Side, Committee C, Medical Whitley Council (at 14, Russell Square, W.C.), 10 a.m.
26 Fri.	Full Committee C, Medical Whitley Council (at 14, Russell Square, W.C.), 11.30 a.m.
29 Mon.	Industrial Nursing Subcommittee, Occupational Health Committee, 2.30 p.m.

Branch and Division Meetings to be Held

CAMBERWELL DIVISION.—Thursday, June 20, summer outing. Visit to Dorking by motor coach from St. Olave's Hospital, Rotherhithe, S.E., at 12 noon. Visit to Bencard Laboratories.

CARDIFF DIVISION.—At B.M.A. House, 195, Newport Road, Cardiff, Monday, June 17, 8 p.m., annual general meeting.

EAST SOMERSET DIVISION.—At Swan Hotel, Wells, Thursday, June 20, 8 p.m., annual general meeting. Preceded by the usual informal dinner at 7 p.m.

GLOUCESTERSHIRE BRANCH.—At Wheatstone Hall, Brunswick Road, Gloucester, Thursday, June 20, 6.15 p.m. Address by Mr. Robert V. Cooke: "Thyroid Disease in Medical and Surgical Practice."

HARROGATE DIVISION.—At Royal Bath Hospital, Harrogate, Wednesday, June 19, 8.30 p.m., annual general meeting.

METROPOLITAN COUNTIES BRANCH.—At B.M.A. House, Tavistock Square, London, W.C., Tuesday, June 18, 3 p.m., annual general meeting. President's address by Dr. J. W. McCarthy.

MID-ESSEX DIVISION.—Sunday, June 23, 10.30 a.m., visit to new Public Health Laboratory, Chelmsford and Essex Hospital, London Road, Chelmsford. Talk by Dr. R. Pilsworth: "New Virus Diseases in Great Britain," followed by demonstration of methods used in their diagnosis.

SOUTH ESSEX DIVISION.—At Railway Hotel, Hornchurch, Friday, June 21, 9 p.m., annual general meeting.

YORKSHIRE BRANCH.—At Public Library, Vernon Road, Scarborough, Wednesday, June 19, 3 p.m., annual meeting.

Meetings of Branches and Divisions

CITY OF DUNDEE DIVISION

The annual general meeting was held on May 3, 1957. The following officers were elected for 1957-8:

Chairman.—Dr. F. B. Proudfoot.
Vice-chairman.—Mr. J. F. O. Mitchell.
Immediate Past Chairman.—Mr. W. D. Giffen.
Honorary Secretary.—Dr. J. M. Langlands.
Honorary Treasurer.—Dr. G. M. Grant.
Honorary Public Relations Secretary.—Dr. Marjory Hogg.

CROYDON DIVISION

At the annual general meeting held at Wellesley Road on May 14, 1957, the following officers were elected:

Chairman.—Mr. V. Wilkinson.
Vice-chairman.—Dr. Edith Newling.
Chairman-elect.—Dr. P. O'Flynn.
Honorary Secretary.—Dr. G. Hirst.
Assistant Honorary Secretary.—Dr. J. T. Hanna.
Honorary Treasurer.—Dr. W. H. Hardy.

DARTFORD DIVISION

The annual meeting was held on May 2. The following officers were elected:

Chairman.—Dr. G. R. Ford.
Honorary Secretary.—Dr. C. Bolton.
Honorary Treasurer.—Dr. W. Reverson.
Vice-chairman.—Dr. H. C. Calvey.
Immediate Past Chairman.—Dr. G. B. Stratton.

DUNDEE BRANCH

The annual general meeting was held on May 3, 1957. The following officers were elected for 1957-8:

President.—Dr. M. M. Stewart.
President-elect.—Dr. D. C. Clark.
Immediate Past President.—Dr. R. S. McKenzie.
Vice-presidents.—Mr. A. Buchan and Dr. I. B. L. Weir.
Honorary Secretary.—Dr. A. F. Catto.
Honorary Treasurer.—Dr. G. M. Grant.

GLOUCESTERSHIRE BRANCH

At the annual general meeting held on May 9 the following officers were elected:

President.—Dr. R. Harvey.
President-elect.—Dr. C. de Vere Shortt.
Honorary Secretary and Treasurer.—Dr. H. G. Scott-Kerr.
Honorary Assistant Secretary.—Dr. R. H. Ellis.

METROPOLITAN COUNTIES BRANCH

A lecture demonstration was held at B.M.A. House on May 5 on "Medical Implications of Nuclear Warfare," by courtesy of the Director-General, Army Medical Services. Major-General W. D. Hughes introduced the speakers. Colonel T. M. R. Ahern discussed organization for disposal and screening of casualties; Lieutenant-Colonel R. E. Watson demonstrated immobilization of fractures; Lieutenant-Colonel R. Hunt discussed treatment of burns, and Lieutenant-Colonel P. D. Stewart effects of radiation; Lieutenant-Colonel D. H. D. Burbridge discussed implications of food and water contamination, sanitation, etc. It is stated that the War Office is prepared to hold similar demonstrations in other Branches if requested.

MIDDLE EAST BRANCH

A meeting was held in Beirut on May 13, 1957. Sir Russell Brock lectured on "Basic Principles in the Diagnosis of Lung Diseases" to an audience of 70, and then answered questions for half an hour. The lecture was followed by a cocktail party which was attended by the British Ambassador to the Lebanon.

PORTSMOUTH DIVISION

The annual meeting was held at the Queen Alexandra Hotel on May 7, 1957. The following officers were elected for 1957-8:

Chairman.—Dr. H. K. Childs.
Vice-chairman.—Dr. J. R. Rickett.
Honorary Secretary.—Dr. V. H. Martindale.
Honorary Treasurer.—Dr. P. W. Wells.

SOUTH-EASTERN COUNTIES DIVISION

The annual meeting was held at the Station Hotel, Newtown St. Boswells, on April 21. Twenty-one members were present. The following officers were elected:

Chairman.—Dr. G. W. Balfour.
Vice-chairman.—Dr. P. Henderson.
Honorary Secretary and Treasurer.—Dr. E. H. Duff.

TUNBRIDGE WELLS DIVISION

The annual general meeting was held on May 2, 1957. The following officers were elected for 1957-8:

Chairman.—Dr. R. P. Liston.
Vice-chairman.—Dr. J. W. Crawford.
Honorary Secretary.—Dr. J. L. Donnelly.
Honorary Treasurer.—Mr. H. McN. Symons.
Honorary Assistant Secretary.—Dr. P. A. Crowley.

SPECIAL REPRESENTATIVE MEETING

A Special Representative Meeting was held in the Great Hall, B.M.A. House, on June 12 at 11 a.m. Dr. I. D. GRANT was in the chair.

The CHAIRMAN reported that the Agenda Committee had in three cases arranged in groups a number of motions which covered substantially the same ground, and had selected in each group one motion on which it proposed that discussion should take place. Representatives of the constituencies concerned had been informed of the proposals.

A report by Dr. A. BEAUCHAMP, chairman of the Conference of Representatives of Local Medical Committees, on the Conference held on June 6 (*Supplement*, June 15, p. 335) was received.

Dispute on Remuneration

In moving that the report of the Council on the dispute on remuneration be received, the Chairman of Council, Dr. S. WAND, said that, following a resolution moved by Dr. Gorsky at the Special Representative Meeting on May 1 (*Supplement*, May 11, p. 254), the question of taking legal action on the contractual validity of Spens had been considered by two leading counsel and another counsel in conference. Dr. Gorsky was present at the conference. The outcome was that in present circumstances counsel regarded it as not being in the best interests of the profession that such form of action should be taken, and that was a firm decision.

With regard to public health practitioners, the Public Health Committee met on May 17 and passed four resolutions (*Supplement*, May 25, p. 297). Interviews with the Minister of Health and the Chairman of the Royal Commission had taken place and had been completely fruitless. Neither of the two suggested alternatives was obtained. The Minister indicated that the fact that public health doctors were paid from local authority funds made the position very difficult, and even if it were found possible to include the public health practitioners it would greatly prolong the time which it took the Royal Commission to report.

Evidence to Royal Commission

Dr. G. S. R. LITTLE (Greenwich and Deptford) moved that the meeting approve the previous recommendation of

the Council that in present circumstances it was undesirable that the Association should co-operate in any way with the Royal Commission on the remuneration of doctors and dentists. He said that his Division took the view that first thoughts were the best, and the first thoughts of the Council were that evidence should not be given to the Royal Commission. There were very good reasons for so thinking. No Government need accept the findings of any Royal Commission, and the Commission did not in any way resemble an arbitration body. The profession came into the Service on the basis of Spens, and if it were not legally valid it had taken the Government eight years to discover it. Whatever came out of the Royal Commission would not resemble Spens and would be very much less attractive. Any question of clarifying the terms of reference, approaches to the Prime Minister and other Ministers, although well-meaning no doubt, were not moving the matter forward. They were clouding the real point at issue.

Dr. J. S. HAPPEL (Winchester) formally moved by way of amendment that the Association should give evidence to the Royal Commission. Suggesting that attempts to secure unity within the profession could be bought at too high a price, Dr. R. P. LISTON (Tunbridge Wells) said that lip service had been paid to it over the years, but it had turned out to be a mirage which so many people always thought it would be. "But surely in the past months our vision has become clearer, and we now see affairs in their true light," he said. "We demand and call out for fearless and resolute leadership in Association affairs," he concluded. We should assure our leader to-day that he had our complete confidence and trust in presenting a factual presentation of our unanswerable case to the Royal Commission.

Dr. C. P. WALLACE (Guildford) agreed that the Association was facing a situation which called for resolute leadership, and he paid tribute to the magnificent work which Dr. Wand had done for the Association. Dr. Wallace said he was not, however, quite so happy about the Council over which Dr. Wand presided. There were those who had been critical of the autonomous committees because it was feared that in time the Council of the Association, instead of being an independent and authoritative body, would become a rubber stamp. It was the duty of a committee such

as the General Medical Services Committee, which boasted autonomy, to arrive at a decision and to express that decision. If there were a minority who felt that they could not continue to serve on that committee, it was their duty to resign; but the committee should never refuse to give a lead. Those remarks applied infinitely more to the Council of the Association.

Dr. J. W. TAYLOR (Aberdeen and Kincardine Counties) expressed the view that it was advisable for the Association to give evidence before the Royal Commission. Apart from anything else, it would be discourteous not to give evidence. If no evidence were given by the profession the Royal Commission would ultimately present findings on incomplete knowledge. Dr. A. V. RUSSELL (Council), supporting the amendment, said that the decision to give evidence to the Royal Commission had now become inevitable. He disagreed with what Dr. Wallace had said on the question of leadership to the extent that a month earlier there happened to be a fifty-fifty division in Council, and any Chairman who gave a lead in those circumstances would in his view have been acting quite improperly. There was little doubt that the vast majority of constituents in the periphery were in favour of giving evidence, and, that being so, there was no alternative. But he urged the meeting to remember three things. Sir Harry Pilkington had stated that the Royal Commission was not an arbitration body nor a judicial tribunal; Mr. Macmillan had publicly stated that the Government would not necessarily be bound to accept any recommendation of the Commission; and, finally, whatever came out of the Commission it had no bearing on the present outstanding dispute with the Government.

Mr. H. H. LANGSTON (Winchester) suggested that, if evidence were to be given, "we should give it, having firmly made up our minds that it is highly desirable that we should do so, and that we have really a good case to make," he said. Dr. J. A. GORSKY (Westminster) said that if Scottish practitioners agreed to take a test case in the Scottish courts any decision to give evidence before the Royal Commission at the Special Representative Meeting became invalid, because a case before a judicial body must inevitably put any decision to give evidence before the Commission in abeyance. Whether or not he succeeded in persuading representatives not to give evidence, Dr. Gorsky appealed to them to forget the issue of remuneration. The appointment of a Royal Commission was a device on the part of the Government to stop a particular issue, that issue being that Spens had never been repudiated and had in fact been accepted. If evidence were given before the Royal Commission he felt certain that the profession would be a party to repudiating Spens. No evidence should be given before the Royal Commission until a decision had been arrived at in Scotland, and on that basis the question could again be considered.

Dr. J. A. PRIDHAM (Council) said that, despite what had happened, he was still unconvinced that the profession ought to give evidence. He hoped that representatives would inform their constituents that recent events had surely shown that the power of the Government over the profession was very nearly complete. "Could we hear less about autonomy and more about unity? Could not doctors and branches begin to sink their differences and unite, in view of the common danger? This is our 'Dunkirk.' We have not won a victory and we have not yet been defeated; but danger looms ahead."

Dr. G. CORMACK (Newcastle) said he supported the amendment that evidence should be given. He was perturbed by the unfortunate position of public health practitioners. It seemed deplorable that any Government should drive a learned profession such as medicine into a position in which one section of its membership was to be left out in the cold. The excuse had been given that it would be difficult because local authorities were involved. If local authorities constituted the real difficulty it was all the more reason for having an integrated national health service in which the

public health doctors played their part. Dr. W. N. LEAK (Mid-Cheshire) asked whether the profession could not agree to give evidence, but state, at the same time, that it reserved its rights under Spens. Dr. C. R. G. BARRINGTON (Bromley), speaking against the amendment, suggested that no other profession or union would put up with the treatment which had been meted out to the medical profession. If the profession agreed to give evidence it would be another step down the ladder.

Dr. WAND, Chairman of Council, in reply to an earlier question, said that counsel had said that they could see no reason why, in the circumstances, evidence should not be given, but that it must be clearly stated that it would be without prejudice to the profession's rights to require the Government at a later stage to fulfil its moral obligations in the matter.

Dr. LITTLE, in reply, said that there seemed to be an attitude on the part of some Representatives that the profession did not want to give evidence but that it had better give evidence. Why? There was no reason at all. He asked the meeting to say that its considered opinion was that in the circumstances the profession did not desire to give evidence before the Royal Commission. Dr. HAPPEL (Winchester), in reply, referred to Dr. Gorsky's point advising delay while the position of contract law in Scotland was considered, and said that evidence should be given before the Royal Commission started making up its mind. Delay might prove disastrous.

The amendment was carried and adopted as a substantive motion.

The following amendment, handed in at the meeting, was carried without discussion: To add at the end of the substantive motion, "On the understanding that it is given without prejudice to the profession's right to press for fulfilment of the Government's moral obligations inherent in the public and private assurances given by it and its predecessors to doctors taking part in the National Health Service."

Public Health Doctors

Dr. R. P. HENDRY moved on behalf of Rugby that evidence should be given to the Royal Commission, provided a suitable agreed procedure is adopted (not later than December 31, 1957) for reviewing the remuneration of doctors in the public health service. In his view the Royal Commission could be turned to very great advantage. Public health doctors had always wanted some reasonable basis for their remuneration, and now there was a chance to do something about it. "We must not rat on our public health colleagues," he said.

Dr. J. C. ARTHUR (Gateshead) supported the amendment. Some speakers appeared to have taken the attitude that the profession was giving evidence because it could not do anything else. It was doing nothing of the kind. Far from being beaten the profession had not yet even fought. The profession was in a position to make conditions, and in his view one of those conditions should be to support public health colleagues. There should be some inquiry promised which would satisfy the public health practitioners and the remainder of the profession before evidence was given before the Royal Commission. Dr. R. W. MCCONNEL (Bucks) also supported the amendment.

The following amendment, handed in at the meeting, was moved by Dr. J. A. STIRLING (Public Health Service):

After the words "Royal Commission" add "only on condition that either (a) all doctors in the public health service be included within the scope of the terms of reference of the Royal Commission or (b) that an undertaking is given by the Government to the British Medical Association that an independent inquiry into the remuneration and status of all public health medical officers will be set up immediately."

Dr. Stirling said that the council of the Society of Medical Officers of Health a short time ago expressed the view that unless something definite was done for public health practi-

tioners they would irrevocably be classed as local government officers and not as part of the medical profession. Every time the public health practitioners had gone to the Industrial Court one more nail had been put into their coffin tying them to local government. Secondly, there had been refusal to bring public health doctors within the province of the Royal Commission; and, thirdly, no independent inquiry had been set up to investigate the questions of status and remuneration of the public health medical officers. At the Annual Representative Meeting at Glasgow a B.M.A. committee was set up which, broadly speaking, was to deal with the unification of the profession, and at Brighton the Meeting unanimously passed a resolution asking the Government to set up a committee of inquiry into the status and remuneration of the public health service. That was submitted months ago and was doubtless lying somewhere in Whitehall. The Council of the Association passed a resolution to the effect that evidence should not be given to the Royal Commission unless its terms of reference were altered to include public health medical officers. The Council, to be a thinking body, surely realized the implication of that resolution when it passed it. The logical conclusion was to carry the amendment which he had moved.

Dr. J. S. G. BURNETT (Public Health Service) said a doctor was penalized in being classed as a local government officer. The Government's decision in respect of the local authority medical service and the Royal Commission was announced after a spontaneous and unsolicited intervention by local government associations. Finally, he believed that the threat of a salaried service was now imminent, and he had tried to indicate what were the implications of a salaried service. He suggested that, in the political and economic set-up of the country at the present time, neither social medicine nor curative medicine were fundamental issues. The factor before the Government was how cheaply could this country provide a national medical service.

The CHAIRMAN expressed the view that the amendment went further than the amendment moved on behalf of Rugby. In those circumstances when the debate was concluded he would seek the opinion of the Meeting on the amendment moved by Dr. Stirling.

Dr. A. V. RUSSELL (Wolverhampton), supporting the amendment, reminded the meeting that a decision had been taken to give evidence to the Royal Commission on the understanding that certain things would happen. They should not break a promise given to another section of the profession. Dr. W. MORGAN EVANS (Middlesex, South) said that the amendment now made the position of the public health doctors perfectly clear, and he asked the meeting to support it. Dr. J. MADDISON (Public Health Service) said that the findings of the Royal Commission, without evidence from the British Medical Association, would receive little respect and consideration when published. If the Association made the inclusion of the public health service a condition of giving evidence, the Government would be hard put to refuse.

Dr. J. E. MILLER (Glasgow) pointed out that a most regrettable factor was that the terms of the present amendment were almost identical with those of the resolution passed by the Public Health Committee and on which the Chairman of Council acted in seeking an interview with the Minister of Health. The very requests being made had already been rejected by the Government. It had refused to include public health medical officers within the terms of the Royal Commission, and had refused to commit itself to setting up an independent inquiry into the remuneration of public health officers. With that information before it, it seemed obvious that the meeting must decide whether the decision of the Government should be accepted, and to go ahead leaving the public health officers behind. He submitted that no respectable professional people would consider such action. He asked Representatives to remember that in the past various sections of the profession had been wooed from different angles by the Government, and, if the

profession now gave evidence without the public health practitioners, who knows what other part of the profession would be the next to be chopped off?

Dr. J. G. M. HAMILTON (Edinburgh) expressed the hope that the meeting would not pass the amendment. There was a considerable degree of confused thinking being expressed. To tie in the question of the remuneration of public health doctors with the giving of evidence to the Royal Commission was, in his opinion, quite ridiculous. The Government could not care less whether the profession did or did not give evidence, therefore any conditions imposed by the profession would be ineffective. A different approach must be made. The attainment of the profession's objectives—namely, a review and a proper adjustment of the remuneration of public health practitioners and the question of status—did not, he suggested, go along the line of attempting to attach conditions to the giving of evidence before the Royal Commission.

Dr. W. N. LEAK (Mid-Cheshire) endorsed the remarks of Dr. Hamilton. He had not so far heard any reason why the Whitley Council machinery should be superseded by special investigation. Dr. J. S. M. ORD (Glasgow) supported the amendment and pointed out that the Royal Commission would be so conversant with the figures that they would be used in comparison against the remainder of the profession. Dr. A. M. GOLDTHORPE (South-east Essex) said it did not matter whether the profession gave evidence before the Royal Commission or not, but it mattered greatly whether they let down their colleagues in public health.

Dr. I. M. JONES (Council) said that for some time now there had been three courses open to the profession. The first was to give evidence before the Royal Commission; the second was to withdraw from the service; and the third was not to withdraw from the service. There had been no real disagreement that the last course of doing nothing was quite impracticable. Why, then, must the profession put itself in an untenable position by trying to attach conditions to the giving of evidence which it knew it was quite impossible to fulfil? Did Representatives really believe that the profession would withdraw from the Service on the issue under discussion? The amendment did not point the way to helping public health doctors. Dr. A. BROWN (Cambridge) supported Dr. Hamilton and Dr. Jones. Dr. A. BARKER (Council) said he hoped the amendment would be rejected. He was in great sympathy with the public health doctors, but was not sure that the amendment expressed the view of the Public Health Committee. At the last meeting of the Public Health Committee, held on May 17, an amendment to the effect that the profession should not give evidence to the Commission unless the public health medical officers were included was rejected by twelve votes to four votes with one abstention. Surely if the Public Health Committee members themselves were in doubt about the wisdom of such action it would be most unwise for the meeting to pass the amendment. Dr. G. CORMACK (Newcastle) said that whether or not the profession gave evidence was not a matter which would directly determine the terms of service of the public health practitioners. Furthermore, he doubted whether it would be possible to make an issue of it within the profession.

Introduction of Dr. S. C. Sen

Before adjourning for lunch the CHAIRMAN introduced to the meeting Dr. Sen, Past-President of the Indian Medical Association and a member of the Council of the World Medical Association. Dr. SEN, in a brief response, said the most cordial relations existed between the British Medical Association and the Indian Medical Association. He had listened with great interest to the debate and could confirm that the problems facing the profession in India were similar to those in Britain. He desired sincerely to thank the Association for its kindness.

The meeting adjourned for lunch.

Resumed Debate

Dr. H. D. CHALKE (Public Health Committee) said he was astonished to hear Dr. Hamilton's remarks concerning confused thinking and threats. Many Representatives would recall how Dr. Hamilton spoke at Glasgow and Brighton on the question of unity of the profession. Here was an opportunity to show that the profession was united. If the profession went ahead on its own, casting adrift the public health practitioners, the latter would then go forward on their own; but it was an opportunity for the profession to do something as a whole.

Dr. J. B. TILLEY (Chairman, Public Health Committee) said he desired to make it quite clear that those in the public health section of the profession would welcome a united front, for therein lay the salvation of the profession. No one should think that the Public Health Committee would not be delighted if the amendment were carried. But it was necessary to put the points of view which prevailed in the meeting of the Public Health Committee. When agreement was reached on the Committee's resolution it was realized that to make a statement of that sort alone was not sufficient, and Dr. Wand and he went to see the Chairman of the Commission and the Minister of Health. In the amendment it was suggested that evidence should be given only if one or other of two possibilities were tied to the giving of evidence. Great efforts had been made to get the Chairman of the Royal Commission and the Minister to agree to either of these possibilities, and he desired publicly to state how much those in the public health service were indebted to the Chairman of Council for the way in which he presented the case both to Sir Harry Pilkington and to the Minister. However, neither he nor Dr. Wand, with all his skill, could get a shadow of a promise from either of them that they would include the public health doctors in the Royal Commission. Thus a decision had been taken to leave the matter to the Special Representative Meeting. The Public Health Committee had not met since Dr. Wand and he saw the Minister and the Chairman of the Royal Commission, so no decision had been reached on what action, if any, the public health doctors could take. It was for the Meeting to decide whether it was in the best interests of the profession to give evidence, omitting one branch, or whether it should stand united and possibly achieve nothing.

Dr. WAND, Chairman of Council, pointed out that general practitioners and hospital medical staff were engaged in a dispute with the Government. The dispute of the public health officers was primarily with local authorities. That was recognized as long ago as March, 1956, in a statement issued by the Negotiating Committee, which was handling the dispute until recently. The situation was clearly set out and was not challenged at that time or since. Representatives had heard that the Public Health Committee itself refused to accept the amendment now before the Meeting. The profession at large had the public health medical officers' interests at heart, and everything possible would be done to help them. It might be possible to help them in some other way. Dr. Tilley had stated that it was his intention to present to the Royal Commission the sort of evidence which would have been presented to a court of inquiry had it been set up. The Minister made it clear that the payment of the public health medical officers by local authorities was a very great difficulty, and that, if the local authorities and the medical officers of health came and asked him for a court of inquiry, he would give it sympathetic consideration. The medical officers of health wanted it, but local authorities did not want it. The dispute therefore must be aligned more towards local health authorities than towards the Ministry of Health. Those were the facts.

The amendment, if passed, would mean that evidence would not be given to the Royal Commission, because he was sure that the Minister felt powerless, in the absence of any agreement by local authorities on the point, to include the public

health medical officers in the remit of the Royal Commission.

Dr. STIRLING, in reply, said that surely the purpose of the Royal Commission was to review the levels of remuneration of the profession in the future and not just the present claim. It was appreciated that local authorities were responsible for the payment of public health practitioners' salaries, but it should be borne in mind that the Government paid a 50% grant. With regard to the Whitley Council, the public health doctors had been to industrial courts on four occasions and had been classed as local government officers. He saw no hope of that position changing. The question raised concerning withdrawal from the service was in his submission a red herring. Withdrawal from the service was not being discussed, and the question did not arise.

Dr. Barker had referred to the Public Health Committee's resolution. The first part of the resolution made it clear that the Committee considered it imperative that public health doctors should be included in the Royal Commission's terms of reference, and in its wisdom it simply left the decision to the Special Representative Meeting; but the Council of the Society of Medical Officers of Health, representing all branches of the public health service, wanted something more positive, so it suggested that a positive proposal should be submitted to the Meeting—namely, that public health practitioners should either be included in the remit of the Royal Commission or be given an independent inquiry. A great deal had been said about sympathy and resolutions which was not practical. If unity were desired in the profession sympathy was not enough. Finally, he could not recollect the Council of the Association having repudiated its promise to the public health practitioners that evidence would be given only if all members of the service were included.

Dr. Stirling's amendment was lost.

The Rugby amendment was also lost.

Validity of Spens

The Meeting proceeded to consider an amendment by Gloucestershire, moved by Dr. H. G. DOWLER, that Council be instructed to give evidence before the Royal Commission only provided that proceedings were first initiated to test the validity of the Spens Reports in the courts. Dr. Dowler said there was a feeling amongst some people that the Association and the profession had to some extent lost the initiative. The Royal Commission had been imposed upon the profession against its will, and a demand for arbitration had been turned down. Giving evidence to the Royal Commission to some people carried the implication that the profession was prepared to drop Spens. The Chairman of Council had stated that, in the opinion of learned counsel, taking legal action would not be in the best interests of the profession. It would be interesting to know what was meant by "best interests." If it meant that there was a very poor chance of the profession winning its case, it was relatively unimportant. Whatever the outcome of taking legal action might be, it would be to the advantage of the profession.

Dr. B. BURNS (Sheffield) said that Sheffield was not satisfied that the last word had been said on the validity of Spens. Everybody must realize that no settlement with the Government was worth a moment's consideration unless it included the right to arbitration. Dr. Gorsky and others had been telling the profession that for years but it had been preoccupied with money. The policy of every Government had clearly been consistently to deny what was assumed as an automatic right by every other section of the community and which was the essence of the dispute. The job before the profession was to bring about a situation in which it was able by law to extract justice from a defaulting employer. At the last Special Representative Meeting speakers stated that the Royal Commission was a form of arbitration, and the fact that they took the trouble to make

that statement meant that they realized that it was a very important point. When the Meeting heard from authoritative lips that it was a form of arbitration they cheered. They were tranquillized and no doubt felt warm inside. "Do you really think that if the Government had the slightest intention of submitting to arbitration it would have gone to so much trouble to refuse it?" he asked. The Royal Commission was the Government's method of avoiding arbitration, and even if the Commission recommended arbitration the Government would not accept it, otherwise it would have agreed with it before. Dr. Burns suggested that the public had very good reason to be grateful to the medical profession, yet when the politicians brazenly broke faith with the profession by means of a sequence of shady tricks, was there a public outcry on behalf of the profession? There was not a murmur. "I feel that we have earned a greater measure of loyalty from our patients than this," he said. "It seems that the welfare state breeds a type of mentality in which there is no room for anything but self-interest." "Please do not be stampeded into helping the Royal Commission to write off Spens too quickly," urged Dr. Burns. "If Spens is valid we can afford to discuss the future at our leisure. If it is not valid, then we were enticed into the Service by a confidence trick and the Government has forfeited any right to our co-operation."

Dr. G. E. MOLONEY (Oxford) appealed to Representatives not to abandon any legal rights which they knew they possessed and sell their birthright of Spens for a mess of pottage in the form of the Royal Commission. Dr. GORSKY said he was still unrepentant. The Government had appointed a Royal Commission to prevent the profession going to the courts. Nothing could be lost by going to the courts and asking for a declaration on the validity of the agreement both in England and in Scotland. Dr. J. AUBREY IRELAND (Shropshire and Mid-Wales) said that, unless the validity of Spens was tested in the courts, the great danger was that Spens would be allowed to go by default.

The CHAIRMAN asked at this stage for all matters relating to Spens and counsels' opinion to be treated as confidential. Dr. WAND said that because they had to debate such matters in full daylight they might show their hands in a way which could embarrass those who acted on behalf of the profession. That was the reason for the Chairman's request that the matters should be treated confidentially.

Following the debate *in camera* the Gloucestershire amendment was lost, as was an amendment by Sheffield in similar terms. The original amendment by Winchester as amended was carried as a substantive motion.

Dr. J. H. STRANGER (North Glamorgan and Brecknock) felt that, in view of the assurance that the validity of Spens could be challenged at some later date, no useful purpose would be served in taking further his Division's motion, which stressed that a declaration of validity should be contested in the courts, but not to the exclusion of giving evidence to the Royal Commission.

Dr. A. M. MAIDEN (Lincoln) moved:

That this Representative Meeting requests the Council of the Association to have the validity of "Spens" as a legal contract with respect to the general practitioner in the National Health Service determined by the courts.

There were similar motions by the Oxford and City Divisions.

It was agreed on the suggestion of Dr. WAND that the discussion should be taken as being *in camera*.

Replying to the discussion, Dr. MAIDEN said he had not heard any valid reason for not putting the case to the courts. If nothing came of it, they would have got a great deal of publicity for the fact that there had been a shameful abrogation of doctors' rights.

The motion was lost.

Safeguarding Public Health Doctors' Interests

The meeting accepted a motion from Sunderland urging Council to ensure that the interests of all doctors engaged in

the public health service were safeguarded. Dr. I. M. JONES said that it enabled representatives to express the sympathy which all felt for the plight of the public health doctors. Dr. L. LAMONT (Edinburgh) moved that the Association should, in any discussion connected with the findings of the Royal Commission, and by all available means, press for the safeguarding of the position of public health doctors relative to that of other members of the profession.

The following motion by South Bedfordshire was also carried:

That, if the findings of the Commission are accepted, immediate steps be taken to ensure that public health medical officers should receive comparable improvement in their terms and conditions of service.

Salisbury withdrew its motion, which stated that while being prepared to give evidence before the Royal Commission the meeting regretted the exclusion of public health medical officers and would not be prepared to negotiate a settlement that did not include medical officers of health. Dr. WAND said that this was something about which the meeting had no knowledge; they did not know whether the report of the Commission would make it possible to do what was suggested.

Dr. A. W. RIDDOLLS (York) moved:

That the remuneration of public health doctors should be considered as being under review, and so should not be regarded by the Royal Commission as a criterion for decisions on general-practitioner remuneration.

He explained that the motion was framed on the assumption that the terms of reference would not be widened to include public health doctors and that the Association agreed to give evidence. Dr. H. D. CHALKE (Council) warned that others would be judged by the low salaries given to public health doctors.

The motion was carried.

Right to Arbitration

Dr. WALLACE (Guildford) said that it was essential that they should re-express their claim for arbitration. "In a position such as we find ourselves in," said Dr. Wallace, "in a monopoly service where the Government is our taskmaster and our pay-master, it is essential, if we are to remain free, that we should get the right to arbitration. Be under no delusion—the Royal Commission is poles apart from arbitration."

Dr. H. GUY DAIN (Council) said that he was as keen as anybody that they should have the right to arbitration. But the profession was in a peculiar position. It was employed by the House of Commons. In the past the Government had made a mistake—it allowed the doctors to go to arbitration with Mr. Justice Danckwerts, and that judgment was accepted by the House of Commons. No Government was prepared to allow that anybody should ever again take the House of Commons to arbitration.

Dr. Dain suggested that the Representative Body should consider what kind of action it would support in order to see that in future doctors got some security if they were to continue in Government service. They had no security. The profession was not bound in any way to accept the report of the Royal Commission, nor was the Government. A new way must be found out of this impasse. It was practically impossible, constitutionally, for any Government, whatever its politics, to go to arbitration. The problem of the direct employment by the House of Commons of a large profession was a new one which should be solved in a way which offered security and fair terms for the future.

Dr. RUSSELL (Council) said that doctors were not employed by the House of Commons. General practitioners were in contract with local executive councils. Consultants and specialists had a contract with regional hospital boards. Dr. Russell remembered Dr. Dain, as far back as 1950, saying that if they did not get arbitration they must be prepared to leave the National Health Service, because arbitra-

tion was the most important thing. "Before Danckwerts we were prepared to come out, and that was why we got arbitration," said Dr. Russell. "We can do nothing but good in passing this resolution." Dr. WALLACE (Guildford) denied that arbitration was constitutionally impossible. He did not know of any change in the constitution of this country since the Danckwerts Award.

The following resolution from Guildford was carried:

That the Royal Commission should not be regarded as arbitration in any way, but that evidence should be given while insisting on arbitration as the final court of appeal.

Another motion, from Torquay, which was accepted, stated the profession should agree to give evidence, especially stressing the need for negotiation in all disputes and arbitration in all cases where negotiation failed.

Dispensing Fee and Mileage

Dr. J. S. HAPPEL (Winchester) moved that the Royal Commission be invited to consider the dispensing capitation fee and mileage fund entirely on their merits. He pointed out that since the dispensing capitation fee was fixed at 9s. 9d. the cost of drugs had shot up and the value of drug stock had increased. Time had now to be spent collecting the 1s. charge and giving receipts and rendering accounts to the executive council, and doctors had been advised to insure against loss by theft of the money while it was in their possession. The mileage fund had remained at £2m. for over five years. The cost of a gallon of petrol in 1950, the year on which the fund was based, was 3s.; it was now 5s.

Dr. WAND warned that this was dangerous ground. If this motion was carried it would mean that the Royal Commission would begin to consider distribution of the moneys. They might even consider ways in which doctors were to be paid, whether by capitation fees or in other ways. This was not a matter for submission to the Royal Commission.

The motion was lost.

Government's Dictatorial Attitude

The meeting adopted the following motion from Hyde:

That notwithstanding the decision to give evidence, this Meeting deplores the dictatorial attitude of the Government and its failure to arbitrate or negotiate.

Full Consultations

Moving a motion from Herts, seeking an assurance that full consultation would take place immediately between the Minister and the profession when the Royal Commission reported, Dr. D. L. GULLICK posed a situation in which the Government decided that it was not expedient to implement the report in five or ten years. His Division wanted to tie the Government to meeting the profession whether it decided to implement the report or not.

The motion was carried.

Belfast's Special Circumstances

Belfast Division asked that on account of its special circumstances it should give evidence independently to the Royal Commission. The Division's representative, moving the motion as a reference to Council, explained that Belfast and Northern Ireland was a partially independent area in which a high proportion of the doctors were B.M.A. members. They were under a separate Act, but their remuneration and terms of service were similar in many ways to the English and Scottish Acts.

The motion was adopted as a reference to Council.

Public Health Remuneration

A motion from Harrow, carried as a reference to Council, expressed the conviction that the Royal Commission could easily recommend proper remuneration for local authority

medical officers by taking their present salaries as a base rate and indicating what sum added thereto from the national exchequer would raise their salaries to a level comparable with the remuneration of other doctors in the National Health Service. Dr. ROWE explained that the object of the motion was to bring the fact to the attention of the Commission so that it might consider what ought to be the remuneration of public health doctors.

Withdrawal Decision Deferred

A motion from North-east Suffolk stated that a decision on withdrawal from the Service should be deferred.

Dr. J. D. D. BOSWELL (North-east Suffolk), moving it, said: "We in Suffolk may be 'silly Suffolk' or we may be realistic Suffolk. We find our local meetings are not well supported. We find our levy is not as well supported as it should be. And we are dubious of the effect of a withdrawal with the changing circumstances." Mr. S. F. LOGAN DAHNE (Council) said that deferment would give a chance to promote that unity which was essential and a chance also to perfect the Guild organization and increase its funds, which again was essential. It would also give the Association a chance to prepare better alternative health schemes. The vital battle would not take place until after the report of the Royal Commission. "I should like the press to stop using the word 'strike,'" continued Dr. Dahne. "It is an abominable word—and they know that we shall not strike. We shall continue to work for our patients and not work for the Government. That is not a 'strike.'"

The Representative Body agreed to defer a decision on withdrawal.

Statement by Chairman of Council

Dr. WAND then made a statement. He said that he had again been in consultation with the Minister of Health and had asked him to consider a further interim adjustment should the Royal Commission decide that it could not report before next Easter. Dr. Wand read to the Meeting the following letter that he had had from the Minister.

When you came to see me on May 23 we talked about my letter to you of May 15, and you asked whether I could elaborate what I said in the third paragraph as to the Government's attitude in the event of the Report of the Royal Commission being unduly delayed. I fear it is hardly possible for me to go much beyond what I have already said. I could, however, add that, should the Chairman of the Royal Commission announce that it is unlikely that evidence can be obtained in time for the Commission's report to be published by Easter, 1958—and I believe he has promised to do this should the circumstances arise—then I would certainly consider any representations your Council might make, including a claim for a further interim adjustment. But you will, I know, understand that it is impossible for me to commit myself in any way at this stage, when neither we nor you can have any idea what might happen in the interim or what such a claim might amount to.

Dr. Wand described the letter as a very thin opening of that particular door, but added that it did indicate that the Government would consider a further interim claim from the profession at that moment at the latest. He thought it would be appropriate to tell the representatives, now that the meeting had given a lead, his view on how he thought matters stood. "It may be that this decision will be interpreted as the end of hostilities," continued Dr. Wand. "That is not so. Our dispute with the Government remains unresolved. Our objectives remain: our status, our relationship with the Government, and our claim. In my view," said Dr. Wand, "you have declared an armed truce." The profession had shown its willingness to avoid unnecessary conflict, but that must not be regarded as a decision of weakness. They must still be prepared to take the most vigorous action. There was still the danger of a full-time salaried service.

The breathing-space must be used to strengthen themselves and to achieve unity. They had always been in a difficulty

in these particular matters because, with their democratic machinery, they had to bring things out into the open, which other bodies did not have to do. The Government could make decisions quickly and behind closed doors. There had been differences of opinion in the past, but what was wanted now was not recrimination but unification. "With your help and trust your Council will not fail you," concluded Dr. Wand.

Withdrawal from Service

Dr. M. W. EDDINGS (Portsmouth) moved:

That the question of withdrawal from the National Health Service should be deferred until after the preliminary report of the Royal Commission or not later than May, 1958.

Dr. N. NELSON (Dundee City) wanted the Meeting to discuss the position at Easter, 1958. Dr. WAND said that this was an anticipatory resolution which could cause embarrassment to those at the centre. He suggested that the matter could be left to those who dealt with the matter on the profession's behalf.

The motion was lost.

Rugby called for withdrawal not later than January 6, 1958, unless the present claim was referred to arbitration or a realistic interim adjustment of (say) 14% was granted forthwith, and it was agreed by the Government as a binding legal contract that the final settlement should be retrospective at least to the date the present claim was notified to the Minister. The Rugby motion further stated that if a final settlement was not reached by January 1, 1959, the interim adjustment should then be increased to 18% and by 4% annually thereafter. Speaking to the 18% and by 4% annually thereafter. Speaking to the motion, Dr. HENDRY said that the Royal Commission was set up to consider future remuneration. The present claim should be considered on the current basis of agreement. The fact that the profession had held off for something like five years and then staked a large claim instead of staking a small claim every year had caused the difficulties. Asking that the Association should press for a realistic interim award, Dr. Hendry pointed out that 14% was half what it had asked for. It was the profession and not the Government which had made all the concessions over the years.

The motion was lost.

The CHAIRMAN suggested that as the time was getting late the Meeting would not wish to discuss motions on the relative merits of a mass or progressive withdrawal. From among the motions on this subject it was agreed that one from South Warwickshire should be debated.

That the machinery and method of withdrawal be kept under constant review.

Dr. C. E. G. GILL (Cardiff) said that there were many "angry men" among them, and not without cause. They had been dismayed at the action of the Government. It had forfeited the confidence of doctors, and it was the Government's responsibility to the country to restore that confidence by fair dealing. The profession must organize its shift service basis, but for a remodelling of the whole health service.

The South Warwickshire motion was carried.

A motion from Newcastle upon Tyne calling for an *ad hoc* committee to be formed at once to review the proposed withdrawal scheme was withdrawn. A similar motion, pressed by Rugby, was lost.

Alternative Health Service

A motion from Blackpool and Fylde stated:

That, pending the report of the Royal Commission and the outcome of the promised full consultation between the Government and the profession, the B.M.A. Council should continue with plans for a withdrawal of service and also proceed urgently with preparations for an alternative health scheme.

Dr. A. M. TOMLINSON explained that his Division wanted to be sure that there would be an alternative health scheme

into which doctors could withdraw if the occasion arose in the future. Dr. R. G. GIBSON (Council) said that the Winchester Division thought that a plan should be formed for the alternative health service, but more important was that both centrally and in the periphery they should get down to some action which would bring about a united profession. At the moment the Association's democratic machinery had left them at the mercy of the autocratic machinery of the Royal Colleges. Dr. R. W. McCONNEL (Buckinghamshire) said that a skeleton plan would give them a lever if the report of the Royal Commission was very bad. Dr. A. B. DAVIES, Chairman of the General Medical Services Committee, said that it was already an instruction to Council to prepare an alternative health service. He thought the motion could be referred to Council without further discussion.

Dr. TOMLINSON, replying, said that there should be some alternative scheme ready for the time when the Royal Commission reported.

His Division's motion was carried.

Special Levy

Dr. B. BURNS (Sheffield) moved:

That a special levy be maintained for the purpose of establishing an adequate defence fund for general practitioners, and that steps be taken to establish comparable funds for the other branches of the profession.

He explained that the aim of the Sheffield motion was to divorce the special levy from the plan for withdrawal. They felt that it would be the height of folly to wait until a few weeks before withdrawal was contemplated and then ask for large sums. The fund must be adequate to assure the more timid and also to destroy the timid arguments which were used. He suggested that contributions could be in the form of loans. Dr. Burns felt that if the consultants intended to stick to the Joint Negotiating Committee he wanted to know why. The profession had learned in 1957 the lesson which it should have learned in 1948. "We should not run any more risk of having our unity destroyed by the Royal Colleges at a crucial moment," said Dr. Burns. If necessary the general practitioners must go forward alone. Mr. S. F. LOGAN DAHNE (Council), supporting the motion, pointed out that if every member of the profession gave the cost of one packet of cigarettes a week it would be £270,000 a year. Dr. W. E. DORNAN (Council) said that many members of the Representative Body and the profession were conscious of the fact that if they desired to practise decent medicine the profession must be prepared to withdraw from the National Health Service. The profession had shown clearly that it was not ready at the moment to do this, and Dr. Dornan thought that one of the main reasons was that some of the waverers were not satisfied that there was enough money to ensure that the Guild would be a fighting machine. He was dismayed at the proposal (by the Conference of Local Medical Committees) that the present scheme should be abandoned.

Dr. DAVIES, Chairman of the General Medical Services Committee, said that his Committee was in entire agreement about the intention behind these trusts, but only last week the Conference—the body which subscribed the bulk of the money—decided that the special levy should be abandoned. Dr. RUSSELL (Council) said that whether they eventually had phased or mass withdrawal, they would need money, and it seemed that now would be a suitable time to collect it.

The motion was carried.

Policy-making Body

A motion from Northamptonshire asked the meeting to state that it was imperative that decisions of policy should be taken by the profession as a whole, as expressed by the Representative Body. Mr. E. E. T. TAYLOR thought that the separate interests of the profession could indicate their

views to the Association and let the Representative Body decide on matters of high policy. Dr. J. S. NOBLE (Blyth; Morpeth) considered this a very important problem. It was regrettable that it should come up so late in the day. Every morsel of policy was prepared and handed out to Representatives by one or other sectional committee, working it out in its own sectarian line. Every member of the meeting should go back to his Division and put this matter across. The motion was carried.

Dr. I. M. JONES (Sunderland) moved that all future negotiations on remuneration problems should be conducted by Council on behalf of the profession. Recalling that recently there had been wide differences in the profession on the course of action that should be pursued, Dr. Jones agreed that it was of course right and proper for these divergencies of opinion to be aired. But democracy also demanded that the will of the majority should be done. More and more people in all walks of life were against multiple organizations in matters of remuneration. Dr. Jones criticized the action of the Comitia of the Royal College of Physicians, a body in which only Fellows could vote and in which a quorum was only 10, and raised the matter of the relationship of the Central Consultants and Specialists Committee to the Royal Colleges. Dr. Jones said that the motion was not concerned with the wider issue of autonomy, but was concerned only with remuneration. Ten years ago to suggest any other course than that which he was suggesting would have been regarded as unthinkable. The Council was the executive of the Association.

Mr. H. H. LANGSTON (Winchester) sounded a note of caution, while Dr. J. BALLANTINE (Coventry) said that the B.M.A. was one body and therefore should speak with one voice.

Dr. J. W. COOK (Dunbartonshire) moved an amendment that in all matters affecting general practitioners any future negotiations on the present remuneration claim should be conducted on their behalf by the General Medical Services Committee only. His Division felt that so long as the consultants and specialists were likely to be represented by Presidents of the Royal Colleges, they could not co-operate with them in any matter affecting general-practitioner remuneration. His Division had more faith in the General Medical Services Committee than in the Council as a negotiating body, as the former was more closely in touch with general-practitioner thought and feeling in the matter of remuneration. Dr. A. V. RUSSELL (Council) pointed out that the General Medical Services Committee was a standing committee of Council. The Representative Body was the policy-making body—or should be. The work of the General Medical Services Committee for the profession was above praise, but he still considered that the Representative Body was the policy-forming body and the Council the executive. A committee of Council consisting of representatives of all sections of the profession would be the best way of tackling any problems which might arise in the future. He hoped the meeting would turn down the amendment. Dr. CORMACK (Newcastle upon Tyne), pointing to the implications, suggested it would be better to refer the matter to Council. The policy of the Royal College of Physicians, he added, was representative of a very small handful of London consultants.

Dr. A. SMITH (Lanarkshire) thought that if there were faults in this dispute these were not entirely the faults of the consultants and specialists. He believed that even minorities had a right to their opinion. If the proposal was pressed it would disintegrate the Association in such a way as it had never been disintegrated before. This kind of talk would do neither the Association nor its autonomous bodies any good at all.

The amendment was defeated and Sunderland's motion was carried.

The meeting rejected a motion by Rugby calling for an expression of opinion that it was improper for any of the constituent bodies associated together to form the autonomous committee to take any action except through that committee or with its prior knowledge and consent, and

that acceptance of this principle by such bodies should be a condition precedent to admission to these committees. Dr. HENDRY said that there should be a "no sabotage" clause; bitter experience had shown the necessity for it.

Revision of Negotiating Machinery

A motion from Lanarkshire stated:

That prior to future negotiations with the Government, the Council be instructed to revise the negotiating machinery, with a view to establishing effective co-ordination between the various branches of the profession, and preventing unilateral action by any one branch.

The Lanarkshire representative who moved this reported that it was unanimously supported by all branches of the profession at the meeting of his Division.

The motion was carried.

Pressing the Claim

Dr. P. S. STEEN (South Essex) moved that the remuneration claim should be proceeded with regardless of the terms of reference of the Royal Commission. Although they had agreed to give evidence, he said, their remuneration claim still stood.

The motion was adopted, as was one from Barnsley, that the Association should continue to press for the implementation of the Spens Reports until such time as another arrangement was made.

British Medical Guild

The meeting passed two motions moved by Dr. F. M. ROSE (Council) on behalf of Preston. The first asked Council to authorize the British Medical Guild to take special action throughout each Division with a view to stimulating action by way of meetings, etc., in the Division. The second instructed Council to request the Guild to institute an inquiry to learn whether there was evidence of financial hardship amongst members of the profession as a whole. Dr. Rose said that the Guild was in contact with doctors who were genuinely in distress and could obtain information which would not otherwise be got.

Dr. R. M. WARREN (Southampton), moving a motion which instructed Council to investigate closely all practical steps by which the interests of the profession might be defended in the event of an impasse with the Government following the report of the Royal Commission, said that there was ample time to discuss and, he hoped, agree on the plans. The motion was carried.

Health Service Reform

Perth proposed that as a report of a committee of inquiry into the National Health Service sponsored by the Government was likely to meet wider acceptance than one solely sponsored by the B.M.A. and thus likely to yield more fruitful results on a long-term basis, the Association should urge the Government to set up a committee to examine the future of the National Health Service. The Perth representative suggested that this motion was a practical means of stopping those exacerbations of financial pathology which assaulted the body politic every five years.

An amendment from the floor proposed that the terms of reference of the Royal Commission should enable, as the time was appropriate, a reappraisal and if necessary reform of the whole Service. Dr. L. J. STOLL (Hampstead) said they would like the public to know that doctors were not only concerned with the question of remuneration. Dr. LEAK (Mid-Cheshire) said that the Royal Commission was only concerned with remuneration. If they agreed to the amendment it would mean that they thought the Commission was a fit body to go into this question.

The amendment was lost and so was the motion.

Interim Award

Bishop Auckland asked the meeting to consider that the 5% interim award should be paid on the entire superannuable income. Dr. F. LISHMAN said that his Division

felt that the present proposed distribution was unfair to the rural practitioners with small lists.

The motion was defeated.

A motion from South Shields expressed the opinion that the interim payment of 5%, compared with the claim for a 24% gross increase, was entirely inadequate and that the Council should strive to initiate negotiations or, failing this, arbitration, with a view to increasing the interim payment forthwith.

Dr. J. N. SWAINSTON said that the purpose of the motion was to point out that doctors were hard up at the moment, that they wanted the money now, not next Easter or some time later.

The South Shields motion was carried.

The meeting also endorsed a motion from Leeds that efforts should be made to secure a more adequate interim adjustment pending the report of the Royal Commission.

A further motion accepted from Bradford stated:

This meeting, whilst noting with some satisfaction the changes announced affecting the scope of the Royal Commission, which should now make it possible to co-operate with the Commission, recognizes that these improvements and the proffered financial gain of 5% have only been achieved by fighting, and this meeting reasserts its decision to go on fighting until an adequate pay award is actually made.

A motion from Newcastle upon Tyne proposed that a committee be set up "to inquire why the B.M.A. has never lived up to its reputation of being 'the strongest trade union in the world'" and to suggest what changes should be made. The mover said that his Division thought there was something wrong when a Minister of the Crown could treat the representatives of the profession in the way he did—and the truth was that the Association was not ready for a trial of strength.

The motion was lost.

Vote of Thanks

The Meeting concluded with a vote of thanks to Dr. I. D. GRANT for his conduct in the chair, proposed by Dr. H. D. CHALKE.

PROCEEDINGS OF COUNCIL

A meeting of the Council was held at B.M.A. House on Wednesday, June 12, at 9 a.m. preceding the Special Representative Meeting at 11 a.m. The Chairman of Council, Dr. S. WAND, was in the chair.

The CHAIRMAN announced with regret the death of Dr. George Buchan, who was a member of Council from 1924 until 1931, and had held office as president and as chairman of the council of the Society of Medical Officers of Health.

Remuneration Dispute

At the suggestion of the Chairman the Council agreed that the discussion on the remuneration dispute should not be reported.

The resolutions passed at the Annual Conference of Representatives of Local Medical Committees on June 6 (Supplement, June 15, p. 335) were considered. Dr. J. A. L. VAUGHAN JONES asked whether Council was supposed to approve the resolutions or simply receive them. In his view they should merely be received and nothing else done about them, otherwise it would be binding the Special Representative Meeting in advance to decisions on which they alone should decide. The CHAIRMAN, in reply, said that the resolutions would be received as information.

The Council agreed that legal opinion should be obtained on the fourth resolution—namely, "That, as there is a difference between Scots and English law, and in particular in the law of contract, the opinion and advice of Scots legal authorities be obtained on the contractual validity of Spens as applied to Scots practitioners."

Dealing with the opinion of counsel already obtained on the contractual validity of Spens, the CHAIRMAN reported that leading counsel were firmly of the opinion that no legal

action should be taken by the Association. It was agreed that this opinion should be accepted and that it should be kept as a confidential document.

Dr. J. L. MCCALLUM moved that Council should seek another legal opinion. Dr. H. H. D. SUTHERLAND seconded. The CHAIRMAN pointed out that the opinion to which he had referred was not the first opinion which the Association had taken on the matter. Dr. E. A. GREGG said there was no advantage whatever in collecting counsels' opinion. He suggested that the profession had sufficient grounds on the questions of honour and decency to ask the Government to carry out that which it had led the profession to believe it would carry out.

The motion was lost.

On the question of public health practitioners, Dr. WAND reported on an interview which Dr. Tilley and he had with the Minister of Health. His own feeling was that absolutely nothing was gained, because the Minister could concede nothing without the agreement of the local authorities. His impression was that the Minister had not been unsympathetic but rather bound.

Dr. I. D. GRANT suggested that the Representative Body should be told that the Royal Commission was not recognizable as an arbitrating body. The CHAIRMAN said that in his view this had been made clear in public speeches. The Government was not bound by the findings of the Royal Commission, therefore it was obvious that the profession could not be. Dr. A. BEAUCHAMP suggested that if it were stated categorically that the profession was not bound by the findings it would alter the climate of the Royal Commission when evidence was given. Surely an effort should be made to create the right climate.

The CHAIRMAN said he had it in mind to make a short personal evaluation of the position to the Representative Body indicating that the fight was not yet over. (Agreed.)

Request for Autonomy

The following letter from the Secretary of the Society of Medical Officers of Health was placed before Council:

I am desired by the council of the Society, which met to-day, to request that the British Medical Association create an autonomous section which would be responsible for negotiations and for public statements on public health matters.

The CHAIRMAN expressed the hope that the matter would be deferred until he had had an opportunity of talking it over with Dr. C. Metcalfe Brown and Dr. Chalke. "If you have three horses pulling something you get somewhere," he said. "But the moment you get three horses pulling in different directions you get complete disintegration—and here is the possibility of the third horse."

Dr. H. D. CHALKE said that the request was the culmination of many things. He also wanted the three horses to pull together, but so far they had not. He expressed the hope that the matter would not be deferred very long, because public health doctors were seething with discontent.

Dr. J. B. TILLEY said that the Public Health Committee of the Association, apart from the Society of Medical Officers of Health, proposed to consider the question of autonomy. He was the first to agree that one body should negotiate on behalf of the three branches of the profession, but if one branch were to be left with less powers than the others, then the matter must be very carefully considered. The Society was asking the Association to consider giving the public health branch of the profession working in the National Health Service the same status as that enjoyed by the General Medical Services Committee and the Consultants and Specialists Committee. The Public Health Committee would consider it.

Dr. J. C. ARTHUR asked whether, if public health doctors obtained autonomy, they would be prepared to use it in what seemed to him to be the only effective way—namely, by resigning, if necessary, as a body from their jobs. If they were prepared to do so, he felt sure they would get support.

Dr. TILLEY said there had been no suggestion that general practitioners should resign on behalf of public health doctors. That, of course, would be ridiculous. The request came as the result of a desire of a minority branch of the profession to have the same privileges within the Association as the other two major branches. Dr. A. BARKER asked how necessary it was to defer the problem. In his view the Public Health Committee had a real problem which was similar to that which led to the autonomy of the other two committees—namely, that in their present status it was not able fully to act on behalf of public health medical officers. It would seem that there was no argument by which the autonomy could be opposed, and it was a matter which could quickly be decided.

Dr. G. W. IRELAND suggested that so important a matter should not be discussed at a short meeting. He hoped that his public health colleagues would not regard his suggestion that consideration of it be postponed as in any sense antagonistic.

The CHAIRMAN asked Council whether the matter could be left to the Public Health Committee. (Agreed.) Both Dr. Tilley and Dr. Chalke well knew that Council and himself had been at great pains to do everything possible to get the public health position resolved. Dr. TILLEY acknowledged that the Chairman of Council, at the interview with the Minister, did all that any man could have done to put the case of the public health practitioners. Mr. H. H. LANGSTON suggested that the time was appropriate for the Council to ask each of the autonomous bodies to consider in what way greater unity of action could be achieved between them, other committees, and the Council.

The CHAIRMAN said that the matter would probably arise later in the day.

Public Health Committee

Dr. TILLEY presented the report of the Public Health Committee. The Committee, he said, felt that it was and still remained in the best interests of the profession that public health doctors should be included in the terms of reference of the Royal Commission. The Association had stated that the level of remuneration in the public health service was not adequate, and that there should be an independent review.

Dr. Tilley reported the resolutions on the question of giving evidence to the Royal Commission that his Committee had passed at its recent meeting (*Supplement*, May 25, p. 296). The remainder of the Public Health Committee's report was of a formal nature.

Dr. J. B. W. ROWE suggested that the Public Health Committee should now get down to the task of finding some way in which public health doctors might divorce themselves totally from local authority control, because that would give substance to the policy that public health practitioners should be remunerated as doctors and not as local authority servants with a medical qualification. Dr. CHALKE said that an independent inquiry was desired into the whole background of public health.

The Council adjourned at 10.50 a.m. until the end of the Representative Meeting.

RESUMED COUNCIL MEETING

Following the Special Representative Meeting, the Council resumed its sitting.

Evidence to Royal Commission

The Chairman, Dr. S. WAND, asked the Council whether, in view of the decision taken by the Representative Body to give evidence to the Royal Commission, he should be prepared to see its Chairman. Dr. Wand recalled that Sir Harry Pilkington had approached him with a view to a discussion on certain ways in which the Commission should go about its work. Dr. Wand had told Sir Harry why the Association at that time was not going to co-operate. It was agreed that the Chairman of the Royal Commission

should be informed that the Chairman of Council would now be pleased to see him if he still wished.

General Medical Services Committee

In presenting the report of the General Medical Services Committee, Dr. A. B. DAVIES said that his Committee was a standing committee of the Association. It was also the executive of the Conference of Local Medical Committees and must act on the instructions of that body. But it always presented its decisions to Council and asked for Council's support. If there was any disagreement Council sent the matter back. "And so we work in harmony." The Committee's report described the action it took on the remuneration dispute and other matters. The report was adopted.

Other Health Schemes

The Amending Acts Committee was authorized to continue its study of other national health services. The Committee's report, presented by its chairman, Dr. H. H. D. SUTHERLAND, stated that the Committee was studying the schemes in operation in Australia and New Zealand, and proposed to study others in operation in European countries. It believed that as a result of this study it would be possible to evolve an alternative scheme or schemes, which would be free from party political control, would give greater freedom to the public and profession in the provision of medical attendance, and would appeal to the Government by reason of reduced cost.

Mileage for Post-mortem Examinations

Council approved a recommendation from the Private Practice Committee to accept the Home Office offer to include in the Coroners (Fees and Allowances) Rules an allowance of 1s. a mile outside two miles for practitioners undertaking post-mortem examinations for coroners, subject to this acceptance being without prejudice to any claim through the Whitley Council for the removal, in exceptional circumstances, of the 20s. limit, and that agreement on the proviso that this higher rate of mileage would not be made a ground for changes in the rate of travelling expenses payable to medical witnesses at inquests and would not preclude representations on some future occasion.

Death Certificates

The report of the Central Ethical Committee was approved. Dr. R. FORBES, chairman of the Committee, said that a proposal was considered from the General Register Office that the medical certificate on cause of death should include a voluntary question to the doctor regarding recent pregnancy. The Committee agreed with the view expressed in the General Medical Services Committee that the Registrar-General should be reminded that, when information about the cause of death was required, it was already the practice to ask general practitioners for further information, and it would seem to be the proper procedure for the question about pregnancy to be included in this information if required.

Co-ordination

Mr. H. H. LANGSTON moved that, in order that action by the various sections of the profession should be better co-ordinated and unified, the Council should agree to set up a committee to examine and report. Mr. J. R. NICHOLSON-LAILEY seconded. Dr. H. D. CHALKE stressed that the question was not confined to the remuneration issue. The tendency was increasing for certain committees to make pronouncements without consultation with Council as a whole. He thought it high time that some committee should be set up to consider not only co-ordination in negotiation but also the state of the whole fabric, which was getting rotten.

Mr. LANGSTON explained that he had tried to produce a form of words that really could cover all aspects of intra-sectional relationships, and this seemed as broad as it could be.

The motion was carried.

B.M.A. Member Honoured

The Council sent its congratulations to Major Marcus Arthur Clark Dowling, R.A.M.C., who had been awarded the M.B.E. for distinguished services in Malaya.

Special Council Meeting

The Council agreed to hold a special meeting on June 26 to consider various matters, including the machinery for giving evidence to the Royal Commission.

CENTRAL CONSULTANTS AND SPECIALISTS COMMITTEE

A meeting of the Central Consultants and Specialists Committee was held at B.M.A. House on Thursday, June 13. Mr. T. HOLMES SELLORS was in the chair.

Report of Executive

Evidence to Royal Commission

In presenting the report of the Executive Committee, the CHAIRMAN said that it had discussed in outline the evidence suitable for presentation to the Royal Commission. The aim was to present a draft memorandum of evidence to the Committee on July 25.

Dr. T. ROWLAND HILL added that the basic draft evidence was now all complete.

Remuneration of Full-time University Medical Teachers and Research Workers

The two following recommendations were approved: That the Full-time Non-professional Medical Teachers and Research Workers Group Committee be informed (1) that, while sympathizing with the views expressed in relation to remuneration in clinical and non-clinical departments, the Central Consultants and Specialists Committee remained of the opinion that there should be some differentiation of the opinion that there should be made clear, in that part clinical posts; (2) that it should be made clear, in that part of the memorandum which dealt with the question of financial recognition of increased responsibility, that where an individual was receiving an N.H.S. merit award he should not also be eligible for additional responsibility payment from the university.

Overseas Medical Services

The Committee considered a memorandum by Professor Charles Wells relating to proleptic appointments, and the CHAIRMAN reported that the Executive Committee, having heard Professor Wells, agreed that there were many good points in the memorandum. At the same time there were a number which were rather impracticable, and it was felt that the Committee should consider the matter further. Professor P. C. P. CLOAKE proposed that the memorandum should be sent to the Joint Consultants Committee for consideration and advice. Mr. R. BREARLEY suggested that the scheme should be viewed as another way of helping to run down the senior registrar figure to a proper level. Mr. LAWRENCE ABEL proposed that the scheme be given approval in principle. Mr. H. H. LANGSTON said he was not satisfied that two years overseas would give the valuable training envisaged for a man ultimately taking up an appointment in the National Health Service.

The proposal to seek the advice of the Joint Consultants Committee was adopted.

House Officer Appointments

The CHAIRMAN reported that the Executive Committee had considered a resolution of the annual general meeting of the British Medical Students Association, submitted by the Organization Committee, pressing for the universal synchronization of the date of commencement of house appointments throughout the country so that full registration might be obtained with the minimum of delay. In view of the fact that where hospital authorities had tried to synchronize their house appointments with qualifying

dates it had proved to be impracticable, it was recommended that the Organization Committee be informed that on those grounds the Committee did not support the proposal. The recommendation was agreed to.

Hospital Residents' Hours of Work

The Executive Committee considered views expressed by the Medical Students and Newly Qualified Practitioners Subcommittee of the Organization Committee dealing with hours of work and off-duty time for hospital resident medical staff. These included a recommendation that sufficient hospital residents should be appointed so that each hospital resident doctor should work less than 168 hours a week, and expressed the view that the Central Consultants and Specialists Committee was not sufficiently seized of the urgency of the problem. The Executive Committee noted with regret the view held by the Medical Students and Newly Qualified Practitioners Subcommittee, and considered that it was ill-founded. The Executive Committee also suggested that, in considering the question of the hours of duty and off-duty times of hospital resident staff, the subcommittee should recognize the impracticability of dealing with the situation without regard to the whole hospital staffing problem. The hospital staffing problem must be related to the requirements of the profession in other branches.

Professor CLOAKE said it was monstrous if a man was confined to hospital officially from Monday evening until Saturday midday. It should be laid down as one of the principles of service for housemen that they should be allowed two hours off duty for exercise each day or be allowed to accumulate it for two days. Mr. BREARLEY suggested that the whole of the matter might be referred back to the Executive Committee for further consideration, and he also suggested that the Executive Committee's response to it should be more factual, more constructive, and more sympathetic. Professor G. I. STRACHAN said it would be a pity if trade union matters of that sort were brought into hospitals. Anything which interfered with the present elasticity would be regrettable. With regard to the suggestion that it should be referred to the Executive Committee, he felt that it might be more appropriate if it were referred to his Staffing Subcommittee.

The CHAIRMAN agreed, and suggested that Professor Strachan might care to invite some representatives of the newly qualified practitioners to supply some facts and figures.

It was agreed that the question of arrangements for leave and locums for housemen should be referred to the Joint Consultants Committee for consideration.

Whole-time Consultants: Payment for Teaching Duties

The CHAIRMAN reported that, arising out of the request of the Welsh Regional Consultants and Specialists Committee that the question of payment of whole-time consultants for teaching duties should be investigated, the Executive had obtained information from a number of boards of governors on the existing practice. The information made it clear that it was normally implicit in the contracts of whole-time consultants that they should undertake teaching duties, but that, while teaching was borne in mind in assessing the duties of a post, no specific time was allowed for teaching duties as distinct from other duties. In a majority of cases fees were paid for formal lectures, but the Executive was informed that that practice was not universal.

Dr. SMITH pointed out that consultants were paid for teaching before the Health Service, but they were no longer paid. It would be of assistance if the position could be fully explored to see whether any token payment or recognition could be made. Dr. I. RANNIE said the attention of the Committee should be drawn to the other side of the problem—the whole-time university teacher who was doing hospital work. He was paid at a much lower rate of remuneration than the whole-time N.H.S. consultant, and received nothing extra for doing hospital work. Mr. W. S. LEWIN said that in Oxford all systematic lectures were paid whether the lecturer was whole-time or part-time. The whole-timer was not paid extra for teaching in out-patients

and on ward rounds. The explanation given was that it was a teaching hospital appointment, and when working out whether a man should be whole-time or not it was assumed that part of the whole time was used in teaching. On the other hand, when the part-timer was assessed it was assumed that it was for clinical work in hospital, and that if in addition he did teaching rounds then he was paid extra.

Professor CLOAKE said that two or three years ago at his university payment for part-time clinicians was taken away on the grounds that, in the assessment of hours under the National Health Service, teaching was known to be part of the duties of the officer, and therefore to be taken into consideration in allotting him the number of sessions.

In response to a suggestion by the CHAIRMAN, Dr. RANNIE said that it should be possible to obtain the information necessary to provide a full picture through his Committee.

Liaison Between S.H.M.O.s Group and C.C. and S. Committee

Having considered a suggestion by the S.H.M.O.s Group Executive Committee that closer liaison between the Group and the Central Consultants and Specialists Committee should be effected by the appointment of an S.H.M.O. representative or observer on the Executive, the Committee decided that it was unable to accept the principle that special groups should be entitled to direct representation on its Executive. However, as hitherto, representatives of the S.H.M.O. Group would be invited to attend meetings of the Executive when items of particular concern to S.H.M.O.s were under consideration. The Central Consultants and Specialists Committee would be willing to appoint representatives to the S.H.M.O.s Group Council should that council so desire.

Joint Consultants Committee

The Chairman's report on the work of the Joint Consultants Committee was considered and approved.

Hospital Medical Staffing

Representatives of the S.H.M.O.s and Registrars Groups attended the last meeting of the Joint Committee to discuss the Ministry's latest proposals on hospital medical staffing. The S.H.M.O. Group representatives voiced their strong objections to the Ministry's proposal to create a new assistant grade into which the existing S.H.M.O.s and "time-expired" senior registrars should be assimilated. The S.H.M.O. Group representatives emphasized that the grade proposed by the Ministry would in effect extend the S.H.M.O. grade to all specialties and perpetuate its anomalies and injustices on a larger scale than at present. The S.H.M.O. representatives also urged that the Joint Committee should now repudiate the agreement upon the scope of the S.H.M.O. grade and inform the Ministry that it could not consent to the creation of any new S.H.M.O. posts pending a solution of the existing problems associated with the S.H.M.O. grade. The Registrars Group representatives deplored the suggestion that there should be yet another intermediate grade of hospital medical staff.

Memorandum on Study Leave

Professor CLOAKE presented a memorandum by the Study Leave Subcommittee, and the CHAIRMAN expressed thanks on behalf of the Committee to Professor Cloake for the memorandum, which, he said, had been produced in almost record time. Mr. LANGSTON suggested that, in view of the great variation, the Ministry should be asked for a new and more precise circular in order that those concerned could see what were their rights in connexion with study leave. Secondly, the Ministry should be pressed to allocate to boards a far greater sum towards expenses. In his experience it was often the same people who took study leave, and there should be some encouragement to those who had not taken any.

Mr. LEWIN said it would be interesting to hear what Professor Cloake felt should be the financial basis in the future. He understood that at present there was no allocation of money at all for study leave as such, and that

all that existed was permission for a board to spend some money out of the annual grants. It was difficult to see how the position would improve until such time as there was agreement with the Ministry that a certain sum of money should be allocated for study leave and for no other purpose and, if possible, that the unexpended portion could be carried on from year to year. Dr. ROWLAND HILL suggested that the matter ought to come before the Royal Commission in due course, and should be considered by the Committee dealing with the preparation of evidence, because it ought to influence the Commission in its judgment.

Professor CLOAKE agreed that the Ministry ought to be asked to consider the whole question of study leave and to issue a detailed document. The Ministry's previous document threw cold water on the study-leave problem as a whole. He also agreed that the Ministry should be pressed to return to the earmarked grant for study leave. Until it did so on substantially more generous lines, the problem would undoubtedly continue in all hospitals.

It was agreed that the memorandum, which was approved with slight modification, should be submitted to the Joint Committee.

Chairman and Deputy Chairman for Session 1957-8

On the motion of Professor STRACHAN, Mr. T. HOLMES SELLORS was unanimously re-elected Chairman for the Session 1957-8; and on the motion of Mr. LANGSTON, Dr. T. ROWLAND HILL was unanimously elected Deputy Chairman for the Session 1957-8.

Executive

The following members were appointed to the Executive: Mr. A. Lawrence Abel, Professor P. C. P. Cloake, Mr. A. Staveley Gough, Mr. H. H. Langston, Mr. W. S. Lewin, Mr. J. R. Nicholson-Lailey, Dr. S. Cochrane Shanks, and Professor G. I. Strachan, together with the Chairman and Deputy Chairman and two members to be appointed by the Central Consultants and Specialists Committee (Scotland).

Joint Consultants Committee

The members of the Executive elected to serve on the Joint Consultants Committee for the session 1957-8 were the Chairman and Deputy Chairman, with Mr. H. H. Langston, Mr. J. R. Nicholson-Lailey, and Professor G. I. Strachan.

Evidence to Royal Commission

The CHAIRMAN reported that the Annual Conference of Local Medical Committees was held on June 6, and read the decisions which were reached at that conference (see *Supplement*, June 15, p. 335).

Comments from regional consultants and specialists committees regarding points to be included in evidence to the Royal Commission were considered, and it was agreed that they should be referred to the Executive, together with any other opinions which were submitted. Commenting on the suggestion from Birmingham that there had been a lack of co-operation between branches of the profession involved in the recent claim, and inadequate consultation by the central negotiators with the main body of consultants at the periphery, Professor CLOAKE said it was felt that such important issues should at least go for information and expression of view to regional consultants and specialists committees.

Reconstitution of the Registrars Group

Proposals for the reconstitution of the Registrars Group were considered. The proposals were substantially the same as those submitted to and provisionally approved by the Central Consultants and Specialists Committee on February 7. In accepting a recommendation that the Hospital Junior Staffs Central Executive Committee should receive from and appoint to the Central Consultants and Specialists Committee two representatives to facilitate adequate liaison between the two committees, it was agreed that Professor

Strachan and Mr. Hanley should be appointed, with Mr. Langston and Dr. Cullinan as deputies.

Title of Central Consultants and Specialists Committee

After a short discussion, and having considered the views of regional committees, the Committee agreed that the present title should remain unchanged.

National Insurance Certificates for Out-patients

A resolution from the Birmingham Regional Consultants and Specialists Committee disapproving of the posting of notices in out-patient departments to the effect that National Insurance certificates would be given to patients was referred to the G.M.S. Committee. Dr. A. TALBOT ROGERS pointed out that the matter should be looked at from the point of view of the patient rather than from the point of view of the hospital. Professor CLOAKE said that the resolution referred to putting up notices in out-patient departments which encouraged patients to ask the consultants for the certificate. The consultant did not know whether the doctor whom the patient saw originally had declined to give a certificate.

Part-time Services for Government Departments

The CHAIRMAN reported that, as a result of representations made on the instructions of the Committee, the Civil Service Commission had agreed that the fee payable to consultants for the medical examination of candidates for establishment in the Home Civil Service and the Foreign Service—where the examination was difficult or lengthy—should be increased to ten guineas.

ANNUAL MEETING, JULY 15-19

The Newcastle upon Tyne Hospital Management Committee has invited members of the Neurology, Ophthalmology, or the Radiology Sections to visit the radiological wing of the new department of neurological surgery at the Newcastle General Hospital on July 16 at 4.30 p.m. Tea will be provided. The wing is specifically designed and equipped for neuro-radiological investigations and forms the first completed part of this new department. Members concerned are asked to give their names to the Reception Bureau, Stephenson Building, by 2 p.m. on that day. Transport will be arranged from St. Nicholas' Cathedral immediately following the church service.

The Prudhoe and Monkton Hospital Management Committee has invited members to visit the Prudhoe and Monkton Hospital, Prudhoe Hall, Prudhoe-on-Tyne, Northumberland, one of the leading mental deficiency hospitals, situated about 10 miles from Newcastle on the Hexham road (via Blaydon), at 2 p.m. on July 15. Interested members are asked to get in touch with the medical superintendent, Dr. G. McCoull (telephone No. Prudhoe 471), before July 15.

ASSOCIATION OF POLICE SURGEONS OF GREAT BRITAIN

The sixth annual convention of the Association of Police Surgeons of Great Britain was held at Lytham St. Annes, from May 23 to 25.

The speakers were Mr. W. J. H. Palfrey, Assistant Chief Constable, Lancashire Constabulary; Mr. J. di V. Nahum; Dr. G. B. Manning, area pathologist; Dr. T. H. Blench, group secretary; and Dr. H. Rosenberg, police surgeon, West Sussex. Dr. Walter Hedgcock, Assistant Secretary, British Medical Association, showed a film, "The Medical Witness."

At the annual general meeting the following officers were elected for 1957-8:—President: Dr. R. D. Summers; Honorary Treasurer: Dr. V. J. O'Toole; Honorary Secretary: Dr. C. H. Johnson.

TRIBUTE TO CHAIRMAN

OVERSEAS COMMITTEE'S LUNCHEON

On June 14 the Overseas Committee of the B.M.A. gave a luncheon in honour of its retiring chairman, Mr. J. L. GILKS. Those present included the President, the Chairman of Council, and the Secretary. In proposing the health of Mr. Gilks the CHAIRMAN OF COUNCIL recalled that Mr. Gilks had been a member of the Overseas Committee since 1935 and its chairman for 19 years. Dr. Wand said that this must be almost unique in the annals of the B.M.A. Mr. GILKS replied briefly and thanked the Chairman of Council, the members of the Committee, and the secretariat for their kindness to him during his long chairmanship, which he had much enjoyed.

HOSPITAL MEDICAL STAFFS DEFENCE TRUST

MEETING OF TRUSTEES

A meeting of the Trustees of the Hospital Medical Staffs Defence Trust was held at B.M.A. House on Thursday, June 13. Mr. L. DOUGAL CALLANDER (treasurer) reported that the Trust Fund stood at £19,604, and agreed to a suggestion that a reminder should be sent out to those who had not contributed since the new rate of subscriptions. It was agreed that regions should have the names of all subscribers to the Trust, and should encourage non-subscribers to subscribe possibly by handing them a copy of the original letter which was sent out. At the same time pressure should be exerted through the regions to get the Defence Trust a larger degree of contributions.

HOSPITALITY

A German doctor's son and daughter, aged 18 and 17, would like to arrange a holiday exchange with a British doctor's children from July 20 to August 25. A German doctor's son, aged 17, would like to arrange exchange with a British doctor's son for 6-8 weeks.

A Swiss doctor's son, aged 16, would like to visit Britain for the month of July as paying guest or on an *au pair* basis. He would prefer to stay by the sea or help on a farm doing odd jobs, otherwise would help teach French or German. A Swiss doctor from Zurich would receive British girl on an *au pair* basis to look after three children.

An Austrian doctor's sons, aged 19 and 15, would like to arrange exchange with British doctors' sons. They would like to visit Britain from July 1 to September 1 and receive British boys at their summer home at Atter See, near Salzburg, in 1958 (a Protestant family).

An Italian doctor's daughter, aged 18 (from Rome), would like to arrange a holiday exchange.

A French doctor living partly in France and partly in Morocco would like a British girl to stay *au pair* and look after three children, helping with their studies, particularly their English. He would like the British girl to stay a year.

Would anyone interested get in touch with Brigadier H. A. Sandford, International Medical Advisory Bureau, B.M.A. House, Tavistock Square, London, W.C.1.

TRADE UNION MEMBERSHIP

The following is a list of local authorities which are understood to require employees to be members of a trade union or other organization:

Metropolitan Borough Councils.—Fulham, Southwark.
Non-County Borough Councils.—Crewe.

Correspondence

The General-practitioner Obstetrician

SIR,—About this time last year (*Supplement*, June 9, 1956, p. 347) you assisted the London Regional Obstetric Committees by giving publicity to a letter of mine to the effect that, save in exceptional circumstances, practitioners who qualified after January 1, 1951, and who wished to be included in the London list of general-practitioner obstetricians would, as a condition of admission to that list, be required to have held a resident house job in obstetrics for a period of six months. It was then indicated that any applications received prior to May 1, 1957, would be considered in the light of the conditions which obtained prior to that date. At the instance of the London Obstetric Committees I would again ask for the hospitality of your columns to remind all prospective applicants that the new requirements are now being put into effect.—I am, etc.,

London, S.E.1.

J. A. SCOTT,

Chairman,
London Local Obstetric Committee.

Item-of-service Payment

SIR,—In your full report of the last meeting of the Assistants and Young Practitioners Subcommittee (*Supplement*, June 8, p. 328) under the heading "Evolution of General Practice" there is a slight error giving an impression of irresponsible extravagance. While wishing to retain the capitation fee, loaded according to the age of doctor and possibly to professional degrees, I suggested an expense allowance (probably best given as a loading on the lower ranges), and only over and above capitation fees and loadings would I press for payments for some items of service—i.e., work out of hours, for minor surgery, and for hospital attendance.—I am, etc.,

Romford, Essex.

R. M. S. MATTHEWS.

Status of the Profession

SIR,—Curiously, stupidly, the medical profession is employed not by patients concerned with the quality of the service rendered but with a Government concerned with obtaining the service as cheaply as possible. In the circumstances we need an artificial control of the employer to substitute for the normal mutual controls of contented payment for contenting service. While the profession strives to give of its best to the patient our employer is striving to do his worst. Our councils are flouted, our over-enthusiastic prescriptions fined, our pleas for arbitration ignored. Furthermore, a whole-time service wherein all will be worse is a strong possibility.

There can be no doubt that if we do indeed think of the status of the profession, both now and in the clearly foreseeable future, the desperate need for finding a measure which will give our negotiators "teeth" stands out with alarming clarity. This measure must be (1) coercive against the Ministry; (2) harmless to the patient; (3) applicable by all branches and members of the profession.—I am, etc.,

Derby.

R. LUNT.

Influenza Pandemic

SIR,—The general public seems to be under the impression that nothing can be done to prevent the calamity that is threatened by the advance of influenza from the Far East. On the contrary, there is a great deal that the Government could do; by acting at once they might save hundreds of thousands of lives.

The facts to be faced are, first, that in all influenza epidemics all the family doctors have far more patients on their visiting lists than they can possibly see, and they have very long queues outside their surgeries. And it is quite impossible to distinguish the cases among those wait-

ing that are serious from those that are trivial, and from those who do not want to see a doctor at all but only want a certificate. In those circumstances a great many patients who ought to be examined put off consulting their doctor, and in many cases where the patient does attend at the surgery the examination has to be postponed, often with fatal results six months later. Secondly, in an epidemic the doctors are working extremely long hours; they have to work all day even if they have been up all night; and they are doing work that wears their nerves to shreds. Sooner or later they go down with influenza or are broken by overwork and the situation then becomes desperate because it is quite impossible to get any locums. All that the surviving practitioners can do is to take the calls as they come in, and they and the patients who are seriously ill are at the mercy of unscrupulous people who jump the queue by sending urgent messages, and half-wits who send for the doctor not because they need treatment but because they want a certificate. The inevitable result of all these delays and frustrations is that a great many lives which might have been saved are lost.

An influenza epidemic of the same virulence as in 1918 would kill far more patients now than it did then—and the public have quite forgotten how many it did kill. It would be worse now, partly because there are far more patients wanting National Insurance certificates, and partly because the number of patients who consult a doctor for trivial complaints—and even send for him—is a hundred times greater now than it was in 1918. There are, therefore, three urgent requirements. First, the Government should work out a scheme to send locums to take the place of doctors who are ill and to provide assistants to take the night work in districts where the doctors are working night and day. Secondly, it must be explained to the Government that for many years certificates have been costing lives, and that in epidemics they cost a great many lives. The Government could avoid this danger and save a great deal of the doctors' time by giving the health visitors and district nurses authority to sign National Insurance certificates—at any rate, the intermediate certificates. Unless somebody can sign certificates on behalf of the doctor the whole National Insurance scheme will break down in the next bad epidemic; that is quite certain. But of course that is a very minor matter compared with the loss of life that would be caused in an epidemic by enforcement of the present regulations. The only people who know what happened in the 1918 epidemic are the doctors who went through it, and the only doctors who can say what would happen under present conditions are those survivors who are still in practice. There have been no bad epidemics for thirty years or more, so perhaps an old practitioner may be allowed to make one more suggestion. The third and very urgent requirement is to organize the reserves of doctors, health visitors, and other trained nurses. There are large reserves in the factory and school medical services, and elsewhere, and the Government ought to work out a scheme to mobilize them in an emergency in their district so that they could help the family doctors.—I am, etc.,

Wetherby, Yorks.

R. L. KITCHING.

Remuneration Claim

SIR,—With reference to the present deplorable split in the medical profession with regard to the remuneration claim, much has been said in Parliament, in the press, and even at B.M.A. meetings about not embarrassing the Government in view of the present financial situation of the country. It is amazing that anyone can swallow this as an excuse, if one considers that, according to official figures, £2,500,000,000 were spent in this country last year on drink, gambling, tobacco, and entertainment, and that over a million television sets were sold.

Much more than 30 years ago I remember my father and his fellow civil servants applying for an increase in their pre-1914 pension rates and being told that, while there was every sympathy with their case, in view of the increased cost

of living the Treasury felt that the economic situation of the country did not warrant an increase, and so it has always been during my lifetime unless the aggrieved body was backed by a powerful trade union.

At most B.M.A. meetings much was said about winning the support of the public and setting a good example. I do not believe the greater proportion of the public are in the very least interested in the finances of the medical profession so long as they receive the certificates and bottles of medicines they require. Nor do I believe, as was suggested, that our example of forbearance would carry any weight at all. In Parliament and in the press emphasis is always laid on the fact that the average doctor receives £2,222 a year and the fact that the average doctor receives £2,222 a year and a mysterious £1,200 for practice expenses. The press and the public understand from these figures that the majority of doctors receive this alleged average. I think the B.M.A. of doctors receive this alleged average. I think the B.M.A. might have done more to challenge these very dubious figures. Figures that cannot be challenged are that the majority of doctors have up to now received only a miserable 17s. a year for the care of each patient for 24 hours a day, 365 days a year, and out of this sum has to come all practice expenses, cars, assistants' and secretary's salaries, telephones, postage, upkeep of surgeries, etc. Very few of the public are aware of this. It seems to have been deliberately concealed.

In New Zealand I believe a consultation costs 10s. 6d., of which the patient pays 2s. 6d. In Australia I believe 17s. 6d. a visit is charged, plus mileage, while in New York a doctor charges far more. Eighty years ago my maternal grandfather in Dublin paid one guinea a visit. His doctor occasionally paid a second visit without extra fee and occasionally even a third visit, but the fees were always reckoned in guineas. Lettson, the famous eighteenth-century Quaker doctor, is reputed to have made £5,000 a year.

According to the figures given by Mr. Vosper, the Minister of Health, there are 5,500 general practitioners with lists of under 1,500. This number exceeds the number of doctors with between 2,500 to 3,500 (the maximum), their number being 5,385. Another 5,218 have lists of between 1,500 and 2,500. One of my friends and colleagues informed me recently that he had 1,200 patients on his list and his gross income was £1,600, but practice expenses amounted to £1,200. He does a very full day's work and recently he was called out of his bed three times in one night. Fortunately for him, he has a pension and other sources of income.—I am, etc.,

Rainham, Kent.

W. U. DESMOND LONGFORD.

Medical Ethics

SIR,—I write in a mood composed (though the last seems hardly the right word) of mingled irritation and bewilderment, and would ask this question: Do medical ethics still exist among the specialist-consultant class of our colleagues? I have just had the following experience, and, while I am aware that there are ethical committees, I feel that the publicity of your columns may have more effect.

My wife was rung up this morning by a National Health Service patient, an obviously ignorant young woman, who asked her to ask me to leave out a prescription for her which her husband would collect. She had been seeing an eye specialist (a university lecturer and attached to a large teaching hospital), who had been treating her for some symptoms of her condition might be a "sinus." The patient had been told by "sister" (the maternity nurse) that she should per- haps see the doctor (myself). My wife told the patient that I would certainly not leave a prescription without seeing her —such has been my rule whenever possible—and that in any case I would be getting a report from the oculist. The patient's reply was that that would not be so, as she had seen the oculist in his capacity as a "private doctor" (what- ever that may mean). I am not blaming the patient—she is shielded by her ignorance.

I may be old-fashioned in some of my ideas—I have been in general practice now for over thirty years—but I have always understood that, emergencies apart, a consultant

only saw a patient with or on the recommendation of the family doctor, and sent him a report afterwards. I may be wrong, but I have the feeling that there has been a certain slacking off in this procedure since the National Health Service started. Is it because consultants, who formerly depended on the patients we general practitioners sent them for their living, now receive the bulk of their income as a salary from the National Health Service? Some of them certainly took a new lease of life when it began. We have heard a lot these days of the lowering of the "status" and "dignity" of our profession. Such conduct as I have instanced above certainly does not to my mind raise either, but this I leave to you, Sir, and my colleagues to judge.—I am, etc.,

St. Boswells.

EDWIN CLARK.

Peripheral Events

SIR,—When we go up to London we who live outside that great city are sometimes referred to by those who sit in authority at B.M.A. House as "the periphery." If peripheries, like abysses, have edges, then we in Devon and Cornwall may be said to be at the very edge of the periphery. May one who thus resides in the outermost pale beg humbly for a few lines in your admirable *Journal*, in order to express a very strong feeling which we have down here?

Sir, we feel it would be an added attraction to your *Journal* if each issue gave a page of your valuable space to current events of importance which are occurring in the Branches and Divisions. For example, such events as annual meetings of Branches, when attended, as they sometimes are, for the instruction at the periphery by those from the hub, are often worthy of record and would certainly prove of interest to large sections of your readers. Such news items might also give a modicum of lightness to a journalistic effort which at present seems to some of us rather sombre. I am sure you would welcome the opinion of others on this suggestion.—I am, etc.,

Torquay.

B. VENN DUNN,
Past President and Honorary Secretary,
South-western Branch, B.M.A.

Doctors and the Health Service

SIR,—The letter from Mr. Arthur Blenkinsop (*Supplement*, June 1, p. 309) seems to me to be illustrative of the politician's unwillingness or inability to see what the other fellow is getting at. This is an attitude all too familiar to those of us who hear political debates on the radio, or read about them in the daily press. Surely he does not think that Mr. Wilfrid Adams (*Supplement*, May 4, p. 241) and the rest of us believe that the Government "allots" us patients. Any charity on Mr. Blenkinsop's part would have made it clear to him that Mr. Adams made a typing error and wrote "allots" for "allows."

This particular point, however, has not been the cause of my writing. I am driven to comment on his last phrase, the sense of which is in no way altered by its removal from its context "... their [the doctors'] continual and very proper insistence that patients should not hesitate to get in touch with them at an early stage of any illness." I would be interested to hear other practitioners' comments on this. At present I consider myself fortunate that the vast majority of my patients have sufficient sense of personal responsibility not to act as the planners would have them do.—I am, etc.,

Four Oaks, Warwicks.

F. R. GOODWIN.

Interim Adjustment

SIR,—I was amazed and disgusted to read the acrimonious remarks made by Dr. J. Tudor Pembleton in his letter concerning the 5% interim adjustment for general practitioners (*Supplement*, June 8, p. 330). His invidious reference to small-list practitioners as "the unsuccessful" and "the mediocre" showed a complete lack of understanding of their problems and was an ignominious attack on their pro-

fessional abilities. Dr. Tudor Pembleton is to be congratulated if he is a diligent and successful full-list practitioner, but his "Damn you, Jack" inference is to be condemned as a most unprofessional, selfish attitude.

Dr. Tudor Pembleton is to be reminded that those who do not do a full day's work are sometimes influenced by factors outside their control. Nevertheless, a full day's practice expenses are incurred.

In conclusion, I would point out one fallacy in Dr. Tudor Pembleton's specious argument of the moral survival of the fittest—that is, it is often the apparently "successful" practitioner who is the mediocre.—I am, etc.,

London, E.17.

B. S. BENDETH.

Association Notices

G.M.S. COMMITTEE

ASSISTANTS AND YOUNG PRACTITIONERS SUBCOMMITTEE

Elections will be held in August to appoint representatives of assistants and unestablished principals to the Assistants and Young Practitioners Subcommittee of the General Medical Services Committee for the session 1957-8. The newly appointed Subcommittee will come into office on September 1, 1957.

For the purposes of election England and Wales are divided into five regions: (1) South-west and Wales, (2) South-east, (3) North-west and Midlands, (4) North-east, and (5) London and Home Counties. The General Medical Services Subcommittee (Scotland) appoints two representatives for that country as a whole.

Each region is based upon a regional office of the Association and elects two direct representatives to the Subcommittee—one assistant and one unestablished principal. The G.M.S. Committee appoints six of its members to serve on the Subcommittee. One assistant and one unestablished principal from the Subcommittee are co-opted to the G.M.S. Committee.

The electorate and membership of the Subcommittee, apart from the representatives of the G.M.S. Committee, are restricted to the following classes of practitioner:

- (i) Assistants in general practice.
- (ii) Practitioners engaged predominantly in general practice as principals (including those in partnership) whose total gross professional income does not exceed £1,500 per annum.

Assistants

The electoral roll for assistants is compiled from the Association's records, and each eligible assistant should by now have received a letter from the secretary of the Committee advising him that unless he signifies to the contrary his name will be automatically included in the new roll. Any assistant who does not receive such a letter but believes himself to be eligible for inclusion in the roll should communicate with the Secretary, B.M.A. House, Tavistock Square, London, W.C.1, not later than Wednesday, July 3.

Unestablished Principals

Applications are invited from principals whose total gross professional income does not exceed £1,500 and whose names are not already included in the electoral roll. Such applications should be made not later than Wednesday, July 3, on the form set out below.

Nominations

"Electoral rolls will, as indicated above, be closed on July 3. On July 10 a copy of the revised roll for his area will be sent to each eligible assistant or unestablished principal, asking for the submission of nominations not later than July 31. If there is a contest in any particular area, voting papers will then be issued.

For the use of unestablished principals only

GENERAL MEDICAL SERVICES COMMITTEE ASSISTANTS AND YOUNG PRACTITIONERS SUBCOMMITTEE UNESTABLISHED PRINCIPALS

I
(Block letters, please)
of
hereby apply for inclusion in the electoral roll of unestablished principals.

I declare that I am engaged predominantly in general practice as a principal with a total gross professional income not exceeding £1,500 per annum,

and I undertake to inform the secretary of the Committee at B.M.A. House of any change in my status which affects my eligibility for membership of the electorate.

Signed

Date

TO BE RETURNED NOT LATER THAN FIRST POST ON
JULY 3, 1957.

Diary of Central Meetings

JUNE

- 24 Mon. Registrars Group Executive, 2 p.m.
- 26 Wed. Council, 2 p.m.
- 25 Tues. Psychological Medicine Group Committee, 2 p.m.
- 26 Wed. Medical Staffing Subcommittee (Central Consultants and Specialists Committee), 10 a.m.
- 26 Wed. Medical Education Committee, 2 p.m.
- 27 Thurs. Compensation and Superannuation Committee, 2 p.m.
- 27 Thurs. Journal Committee, 2 p.m.
- 28 Fri. Assistants and Young Practitioners Subcommittee, General Medical Services Committee, 2 p.m.

JULY

- 10 Wed. Annual Representative Meeting (at Newcastle upon Tyne), 10 a.m.
- 11 Thurs. Annual Representative Meeting (at Newcastle upon Tyne), 9.30 a.m.
- 12 Fri. Annual Representative Meeting (at Newcastle upon Tyne), 9.30 a.m.
- 13 Sat. Council (at Newcastle upon Tyne), 9 a.m.
- 13 Sat. Annual Representative Meeting (at Newcastle upon Tyne), 10 a.m.
- 15 Mon. Annual Representative Meeting (at Newcastle upon Tyne), 10 a.m.
- 15 Mon. Annual General Meeting (at Newcastle upon Tyne), 12.30 p.m.
- 15 Mon. Council (at Newcastle upon Tyne), at conclusion of A.R.M.
- 15 Mon. Adjourned Annual General Meeting and President's Address (at Newcastle upon Tyne), 8.15 p.m.

Branch and Division Meetings to be Held

- BARNET DIVISION.—At Old Fold Manor Golf Club, Hadley Green, Barnet, Thursday, June 27, 8 p.m., annual meeting.
- BOURNEMOUTH DIVISION.—At Board Room, Royal Victoria Hospital, Boscombe, on Friday, June 28, 8.15 p.m., meeting. Address by Dr. P. K. Robinson: "Complications of Cervical Spondylosis."
- BRISTOL DIVISION.—At Bristol General Hospital, Wednesday, June 26, 8.30 p.m., clinical meeting.
- HERTFORDSHIRE BRANCH.—At Old Fold Manor Golf Club, Hadley Green, Barnet, Thursday, June 27, 8.30 p.m., annual general meeting, followed by films.
- READING DIVISION.—At Phyllis Court, Henley-on-Thames, Friday, June 28, 7.30 for 8 p.m., summer dance.
- SOUTH MIDDLESEX DIVISION.—At Casino Hotel, Tagg's Island, Hampton Court, Wednesday, June 26, 8 p.m. to 12 midnight, cocktail party. Members, their wives, and friends are invited.
- SOUTH WALES AND MONMOUTHSHIRE BRANCH.—At Lecture Room, B.M.A. Welsh House, 195, Newport Road, Cardiff, Thursday, June 27, 3 p.m., 87th annual meeting. Presidential Address by Dr. M. G. Williams: "Incidents in General Practice."
- SUSSEX BRANCH.—At Warne's Hotel, Worthing, Wednesday, June 26, 1 for 1.30 p.m., luncheon, followed by annual meeting.

Correction.—In the Annual Meeting programme (*Supplement*, June 8, p. 311) the price of tickets for the Welsh Dinner is given as 25s. This should be 27s. 6d.

AGENDA OF ANNUAL REPRESENTATIVE MEETING, JULY 10, 11, 12, 13, AND 15, 1957, IN THE CITY HALL, NEWCASTLE UPON TYNE

CHAIRMAN: Dr. I. D. GRANT, Glasgow

PRELIMINARY BUSINESS

Items 1 to 7 relate to preliminary business.

REPORT OF AGENDA COMMITTEE

Grouping of Motions and Amendments: Order of Business

8. The Committee has arranged in groups certain Motions and Amendments which cover substantially the same ground and has selected in each group one Motion or Amendment (marked with an asterisk) on which it proposes that discussion should take place. The Representatives of the Constituencies concerned have been informed of these proposals in accordance with Standing Order 21(iii).

The Council decided that an extra day should be added to the Report of the Constitution Committee, and that this Report should form the first item of the business of the preliminary Meeting. Before this business is taken certain preliminary items of the Agenda should be completed. The Committee proposes, therefore, that the debate on the Report of the Constitution Committee should be taken after Item 13 under "Preliminary" and that the remaining items of the Agenda under this heading—namely, items 14-18—should be taken immediately after the completion of the debate on the Constitution Committee Report.

The Committee Recommends:

Recommendation: (1) That the business under "Constitution of the Association" be taken immediately after Item 13 of the Agenda;

(2) That the business under "Overseas," "Commonwealth Medical Advisory Bureau," and "International Medical Advisory Bureau" be taken at 11 a.m. on Friday, July 12;

(3) That "Other Motions by Divisions," if not previously dealt with, be considered as the first business on Monday, July 15, after the Official Vote of Thanks;

(4) That, with these exceptions, the order of the business be as set out in the Agenda.

STANDING ORDERS

9. **Motion** by the Chairman: That the Standing Orders (Doc. A.R.M. 5) as circulated with this Agenda be adopted as the Standing Orders of the Meeting.

10. **Amendment** by St. HELENS: That, from the commencement of this A.R.M. and for its duration, Standing Order 31 be amended so as to reduce the time limit of speeches to ten minutes, five minutes, and three minutes respectively.

PRELIMINARY

11. **Motion** by the Chairman of Council (S. Wand) on behalf of the Council: That the Annual and Supplementary Reports of Council under "Preliminary" (Docs. A.R.M. 2, paras. 1-21, and A.R.M. 3, paras. 243-245) and the Summary of Action Taken on the Resolutions of the A.R.M. 1956 (Appendices II and IIA) be received.

Election of Vice-President

12. **Motion** by the Chairman of Council: That Thomas Clarence Routley, C.B.E., LL.D., D.Sc., M.D., F.R.C.P.(C.), of Toronto, be elected a Vice-President of the Association in recognition of his distinguished services to the Association.

Annual Meeting, 1958—Election of President

13. **Motion** by the Chairman of Council: That Arthur Peregrine Thomson, M.C., M.D., F.R.C.P. (Birmingham), be elected as President of the Association for 1958-9.

Remuneration Policy

14. **Motion** by GLOUCESTERSHIRE: That, as moral obligations have evidently ceased to be obligatory, every effort shall be made in future negotiations on terms of service in the N.H.S. to ensure that only such terms as are enforceable in law shall be accepted on behalf of the profession.

15. **Motion** by EAST YORKS: That in view of the need for constant vigilance on matters relating to salaries and conditions of service, the Council be instructed to set up a whole-time department for the provision of advice upon

drawing up of terms of service and negotiation of salaries for all branches of the profession.

Reports to Divisions Concerning A.R.M. Resolutions

16. **Motion** by the Chairman of Council: (1) That Minute 237 of the A.R.M. 1954 (quoted in para. 19 of Annual Report of Council) be rescinded; (2) That when a resolution is passed at a Representative Meeting, the Division or Divisions concerned be informed when a final decision on the subject-matter of the resolution has been reached.

Service Representatives on the Council

17. **Motion** by the Chairman of Council: That the following be elected Representatives of the Army Medical Services and the Medical Branch of the Royal Air Force on the Council for the period 1957-60: Army Medical Services, Major General R. Murphy, C.B., C.B.E.; Medical Branch of the Royal Air Force, Air Vice-Marshal W. E. Barnes, C.B.E.

Remainder of Report under "Preliminary"

18. **Motion** by the Chairman of Council: That the remainder of the Annual and Supplementary Reports of Council under "Preliminary" be approved.

CONSTITUTION OF THE ASSOCIATION

19. **Motion** by the Chairman of the Constitution Committee (H. H. Langston) on behalf of the Council: That the Annual Report of Council under "Constitution of the Association" (Doc. A.R.M. 2, para 206) and the report of the Constitution Committee to the Representative Body (Appendix I—Doc. A.R.M. 2A) be received.

20. **Motion** by LIVERPOOL: That this Meeting feels that, owing to so much time having been spent on the question of remuneration, most doctors will not have been able to give sufficient attention to the consideration of the Report on the Constitution of the Association. It therefore urges that discussion of the Report be deferred until the A.R.M. of 1958.

*21. **Motion** by ENFIELD AND POTTERS BAR: That the Report of the Constitution Committee be debated at the Annual Representative Meeting but that final decisions on the recommendations therein be deferred.

22. **Motion** by HAMPSHIRE: That the Report of the Constitution Committee should be discussed but no decision taken until the Annual Representative Meeting of 1958.

PERIPHERAL ORGANIZATION

The Basic Unit—The Division

23. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 1: That the Divisions as at present constituted should form the basic unit of the Association's constitution and that no change of area should be effected except on the initiative or with the consent of the Divisions themselves.

24. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 2: That while ease of access for members is of paramount importance in determining Division areas, the importance of maintaining a close relationship with local statutory or functional bodies and other local professional groups should not be overlooked.

The Branch

25. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 3: That in order to maintain the unity of the profession within the Association in the changed circumstances created by the establishment of a National

Health Service, the second tier unit—that is, the Branch—should be reconstituted on a regional basis. The regions should, as far as possible, follow those of the Regional Hospital Boards under the National Health Service.

26. **Amendment** by ENFIELD AND POTTERS BAR: That the choice of regional hospital board boundaries to determine the areas of the new Branch Councils will not best serve the interests of the Association.

27. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 4: That the Branch, as reconstituted, should have as its main object the fostering and maintenance of the unity of the profession within its area. Its functions should, in effect, be those of the present Branch Council, modified and extended to meet present-day conditions. For this reason the Branch would not ordinarily hold meetings of the individual members in its area. Its main duty would be to call together its constituent Divisions, or the professional groups within its area, for an exchange of views. It would reserve the right to call a meeting of individual members on a particular occasion if deemed necessary or expedient.

28. **Amendment** by NORTH LANCASHIRE AND WESTMORLAND: That the Recommendation be amended by the deletion of the third sentence and the substitution for the final sentence of "The Branch would continue to hold an Annual Meeting of the individual members in its area and would reserve the right to call a meeting of individual members on other occasions if deemed necessary or expedient." (The recommendation would then read:

"That the Branch, as reconstituted, should have as its main object the fostering and maintenance of the unity of the profession within its area. Its functions should, in effect, be those of the present Branch Council, modified and extended to meet present-day conditions. Its main duty would be to call together its constituent Divisions, or the professional groups within its area, for an exchange of views. The Branch would continue to hold an Annual Meeting of the individual members in its area and would reserve the right to call a meeting of individual members on other occasions if deemed necessary or expedient.")

29. **Amendment** by WINCHESTER: That the words "For this reason the Branch would not ordinarily hold meetings of the individual members in its area" be omitted and that there be inserted "For this reason the Branch need not necessarily hold an Annual General Meeting but may continue to hold meetings of its individual members", and that the last sentence of the recommendation be deleted. (The recommendation would then read:

"**Recommendation 4:** That the Branch, as reconstituted, should have as its main object the fostering and maintenance of the unity of the profession within its area. Its functions should, in effect, be those of the present Branch Council, modified and extended to meet present-day conditions. For this reason the Branch need not necessarily hold an Annual General Meeting but may continue to hold meetings of its individual members. Its main duty would be to call together its constituent Divisions, or the professional groups within its area, for an exchange of views.")

30. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 5: That the functions of the Branch, as reconstituted, should be as follows, and that the necessary amendments to the By-laws be made to give effect to these proposals:

- (1) To foster and maintain the unity of the profession within its area by means of exchange of views.
- (2) To take appropriate and immediate action in support of any section of the profession within its area when requested to do so.

(3) To report such action to Headquarters with a view to active measures by the whole profession if necessary.

(4) To co-ordinate the work of the Divisions within its area.

(5) To manage the affairs of inactive Divisions and promote their activity.

(6) To organize special groups of Divisions for special purposes.

(7) To provide the Divisions with funds, out of grants from Headquarters.

(8) To undertake responsibility for the establishment and the maintenance of efficient public relations machinery in the Divisions within its area; and if necessary to establish Branch machinery.

(9) To report to Council as to local conditions, without prejudice to other existing channels of communication.

(10) To maintain an effective liaison with the member(s) of Council representing the constituency.

(11) To elect members of the Association when, and only when, referred by a Division within its area.

31. **Amendment** by GLOUCESTERSHIRE: That it be not a function of a Branch to provide the Divisions with funds (as stated in sub-paragraph (7) of the recommendation), but that such funds be made by direct grant from Headquarters.

32. **Amendment** by NORTH LANCASHIRE AND WESTMORLAND: That the recommendation be amended by the deletion in sub-paragraph (11) of the words "when, and only when."

33. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 6: That Article 3 and By-laws 5, 6, and 7 be altered to provide that the election of new members shall ordinarily be by Divisions with the right of reference to Branch Councils, save that in the case of newly qualified applicants election shall be by the Council.

34. **Amendment** by WINCHESTER: That pending the necessary alteration of the Articles and By-laws, Council be instructed to implement without delay the recommendation of the Constitution Committee that members of the Association should ordinarily be elected by the Divisions.

35. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 7: That the scheme for regrouping of Divisions to form Branches on a regional basis set out in Appendix B to the Committee's Report be approved.

36. **Amendment** by EAST KENT: That the recommendation be referred back for further study with particular reference to the desirability of separating the Metropolitan Divisions from Group 7 of the revised arrangement.

*37. **Amendment** by WANDSWORTH: That the area of the Metropolitan Counties Branch, and the present grouping of the Divisions within the area of the Branch, should remain unchanged.

38. **Amendment** by METROPOLITAN COUNTIES: That the area of the Metropolitan Counties Branch should remain as it is at present.

39. **Amendment** by FIFE: That the Representative Body approve the desire of the Fife Branch to retain its identity as a Branch.

Constituencies for Election of "Forty" Members of Council

40. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 8: That the revised grouping of Home Branches to form constituencies for the direct election of members of Council (Appendix C of Report) be approved; and that By-law 53 be amended so as to increase the number of such directly elected members from 40 to 41.

41. **Amendment** by DERBY: That the Council be requested to devise a scheme to ensure that members of any reconstructed Council be representative of the geographical distribution of the Branches.

42. **Amendment** by SWANSEA: That, because of the peculiar geographical difficulties in the South Wales and Monmouthshire Branch, the number of elected members of Council be increased by one, who shall be elected by the Aberystwyth, South-west Wales, and Swansea Divisions.

THE REPRESENTATIVE BODY

Constitution of Representative Body

Size of the Representative Body

43. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 9: (a) That the number of Representatives of Home Divisions in the Representative Body be reduced by an amount which will ensure an overall membership of that body of approximately 350. (b) That the scheme for the formation of Home Constituencies for the appointment of Representatives to the Representative Body, set out in Appendix D to the Report, be substituted for that laid down in By-law 39; and (c) That By-law 39 be amended accordingly.

44. **Amendment** by BOURNEMOUTH: That this Representative Body believes that disadvantages outweigh any possible advantage in cutting the size of the Representative Body, and wishes that other means be first tried to make the working of the Representative Body more efficient.

45. **Amendment** by MANCHESTER: That inasmuch as it is proposed to cut the size of the Representative Body by approximately one-quarter, this Meeting considers that no Division should have its representation cut by more than that amount.

46. **Amendment** by DORSET: That this Meeting considers that where a constituency has 100 members or more there should be at least two representatives.

47. **Amendment** by BRISTOL: That the Recommendation be amended by the addition of the following sub-paragraph: (d) That the effects of (a), (b), and (c) shall not take place until the A.R.M. of 1960.

48. **Amendment** by ENFIELD AND POTTERS BAR: That the Constitution Committee be instructed to consider whether the Representative Body should be reconstituted to embrace the Conference of Local Medical Committees and the Conference of Regional Consultants and Specialists Committees, with provision for both sectional and plenary sessions.

Card Vote

49. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 10: That By-law 49 be amended to provide that if, on a vote having been taken, a vote by card is demanded by one-third of the Representatives present, the vote shall be taken by card.

(By-law 49 provides that a vote by card shall be taken if "demanded by a majority of the Representatives present.")

50. **Amendment** by RUGBY: That Recommendation 10 be amended by the insertion of the words "and voting" after "Representatives present."

Representation of Special Interests in the Representative Body

51. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 11: That By-laws 38-44 (which deal with the composition of and election to the R.B.) should be amended to provide for the election of four members of the Association by the Central Consultants and Specialists Committee as Representatives in the R.B.

Quorum of the Representative Body

52. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 12: That the quorum of the Representative Body (at present "at least one-half of the number of Representatives appointed to attend the Meeting") should be reduced to 75 such Representatives.

53. **Amendment** by SOUTH STAFFORDSHIRE: That the quorum of the Representative Body should be at least one-third of the number of Representatives appointed to attend the Meeting.

54. **Amendment** by BOURNEMOUTH: That this R.B. is not prepared to agree that a quorum of 75 members could safely and efficiently reflect the view of the profession, and it adheres to the figure of 50% if recommendation 9 of the Committee is adopted, but would accept one-third if the size of the R.B. remains as at present.

The Conduct of Business at Representative Meetings*Functions and Powers of the Agenda Committee*

55. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 13: That the existing constitution of the Agenda Committee, as laid down in S.O. 21 of the Representative Body, is satisfactory and should be retained.

Meetings of Agenda Committee

56. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 14: That S.O. 21 of the Representative Body be amended to provide that the Agenda Committee shall meet during each day's session of the Representative Body, at a time to be arranged, to review progress and the business outstanding, and to advise the Chairman.

Grouping of Motions

57. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 15: That the powers of the Agenda Committee under S.O. 21 of the R.B. in respect of the grouping of motions or amendments be extended to enable it to submit a motion in a common form in cases where it considers that the principle covered by the motions in the group is not adequately stated in any single motion; such extension of power to be without prejudice to the right of any Representative to speak to his original motion as an amendment to the common form motion.

58. **Amendment** by LIVERPOOL: That the words "subject to such motions being listed thereafter" should be inserted after "any single motion" so that the recommendation reads:

That the powers of the Agenda Committee under S.O. 21 of the R.B. in respect of the grouping of motions or amendments be extended to enable it to submit a motion in a common form in cases where it considers that the principle covered by the motions in the group is not adequately stated in any single motion, subject to such motions being listed thereafter; such extension of power to be without prejudice to the right of any Representative to speak to his original motion as an amendment to the common form motion.

59. **Amendment** by SOUTH STAFFORDSHIRE: That the recommendation be amended by the substitution of the word "suggest" for "submit" in line 4; and the substitution for the last sentence of the words: "If all the Representatives agree the composite motion shall replace all the original motions."

(The recommendation would then read:

"That the powers of the Agenda Committee under S.O. 21 of the R.B. in respect of the grouping of motions or amendments be extended to enable it to suggest a motion in a common form in cases where it considers that the principle covered by the motions in the group is not adequately stated in any single motion. If all the Representatives agree the composite motion shall replace all the original motions.")

Priority Motions

60. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 16: That the Agenda Committee be empowered, as necessity arises, to give priority to motions on questions of outstanding importance and to arrange for these to be debated at specified times.

Pruning of Agenda

61. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 17: That elimination from the Agenda of the Representative Meeting of motions submitted by Divisions on matters which have already been the subject of action by Central Committees is not advisable; and that Divisions should retain the right to submit to the Representative Body motions on any matters which they consider of sufficient importance for debate.

Order of Agenda

62. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 18: That the procedure laid down in S.O. 21 of the Representative Body should be strictly observed.

63. **Amendment** by BOURNEMOUTH: That this R.B. is not satisfied that the order of business, as normally set out in the Agendas, is arranged in the most fair and convenient way, and instructs the Agenda Committee to consider setting out a time-table for the presentation of Committee Reports, or alternatively considering the desirability of placing the two largest reports, General Medical Services Committee and Central Consultants and Specialists Committee, after other Committee Reports have been dealt with.

Time Limit of Speeches

64. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 19: That the Chairman of a Committee may on request to the Chairman before presenting his Report, and with the permission of the Meeting, be granted an extension of time up to half the period allowed under S.O. 31 for presentation of the Report, save that in exceptional circumstances he may be granted such further extension of time as the Meeting itself shall predetermine.

Presentation of Reports by Chairmen of Committees

65. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 20: That the procedure laid down in S.O. 24 of the R.B. for presentation of Reports should be adhered to strictly and that the practice of moving the adoption of individual paragraphs of the Report of Council to which amendments are proposed, before the amendment is moved, should be discontinued except in the circumstances indicated in the Standing Order.

GENERAL MEETINGS OF THE ASSOCIATION*Extraordinary General Meeting*

66. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 21: That the Articles of the Association be altered by adding at the end of Article 24 the following words: "for the purpose of considering any matter other than a matter which affects the general control and direction of the policy and affairs of the Association."

(As amended the Article would read:

"24. The Council may whenever it thinks fit, and (without prejudice to the provisions of the Companies Act, 1948) it shall upon a requisition made in writing as herein after provided by any one hundred or more Members convene an Extraordinary General Meeting for the purpose of considering any matter other than a matter which affects the general control and direction of the policy and affairs of the Association.")

THE ANNUAL SCIENTIFIC MEETING

67. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 22: That modification of the existing arrangements for holding the Annual Meeting of the Association having been examined and found impracticable, the existing arrangements be retained.

A Second Scientific Meeting

68. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 23: That a Second Scientific Meeting of the Association be held at an appropriate time during the year; and that the Council be empowered to draw up and to put into operation a scheme for such a meeting.

69. **Amendment** by SOUTHAMPTON: That Recommendation 23 be amended by the insertion after the word "year" of the words "in one of the smaller provincial centres."

THE COUNCIL*Constitution*

70. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 24: That no change should be made in the constitution of, and the methods of election to, the Central Council of the Association.

71. **Amendment** by EAST HERTS: That all members of Council (excepting those elected by Overseas Branches, by the Public Health Service, and by women members) should be elected by Representatives of Divisions, and not largely by members of grouped Branches as at present.

72. **Amendment** by SOUTH STAFFORDSHIRE: That members of Council should be returned by single member constituencies.

73. **Amendment** by RUGBY: That this Meeting considers that one young practitioner should be appointed to the B.M.A. Council annually to hold office for two years (the method of election to be determined by the young practitioners).

74. **Amendment** by BOURNEMOUTH: That consideration should be given to the reconstitution of Council so that it should have the ultimate authority, on behalf of the Association, in all matters of policy and action affecting the whole profession.

PRESENTATION OF COMMITTEE REPORTS TO THE COUNCIL

75. **Motion** by the Chairman of the Constitution Committee: That paras. 119 and 120 of the Report of the Constitution Committee be approved.

76. **Amendment** by RUGBY: That Chairmen of Committees (Standing or Special) who are not members of the Council should be allowed, if they so wish, to present their Committee Reports to Council in person.

COMMITTEES AND STANDING COMMITTEES

77. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 25: That steps be taken to amend the Schedule to the By-laws in respect of the following Standing Committees in the manner indicated:

Charities Committee: To add to the membership two representatives of the younger members of the profession nominated as to one each by the Central Consultants and Specialists and General Medical Services Committees; and the duly appointed representative of the B.M.A. on the Joint Committee of Epsom College.

Private Practice Committee: To substitute for the first sentence in the existing reference the following: "To consider and report on matters affecting the profession in the field of private general or consulting practice."

Public Health Committee: To substitute for the first sentence in the existing reference the following: "To consider and report on questions relating to preventive medicine and the public health services."

Central Consultants and Specialists Committee

78. **Motion** by MANCHESTER: That the Central Consultants and Specialists Committee should be reconstituted so as to give adequate representation to all grades of hospital medical staffs, and that it be referred to the Council to prepare the necessary amendment to the Schedule of the By-laws to give effect to this proposal.

Finance and Journal Committees

79. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 26: That steps be taken to amend Standing Order 52 of the Representative Body by the deletion of the reference to the Finance and Journal Committees.

Scottish Committee

80. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 27: That the proposed change of title from "Scottish Committee" to "Scottish Council" be approved and that the Schedule to the By-laws be amended accordingly.

Liaison Between Committees

81. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 28: That By-law 80 be amended to provide that every Committee shall, in respect of any matter before it which is of special interest to another Committee of the Association, consult that other Committee. In the event of disagreement no action shall be taken without reference to the Council.

THE POWERS OF THE AUTONOMOUS BODIES

82. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 29: (a) That the existing relationship of the autonomous bodies to the Association should be

continued, subject to ratification annually by the Representative Body of the powers of these bodies. (b) That the arrangement under which the Joint Committee between the Central Consultants and Specialists Committee of the B.M.A. and the Royal Colleges and the Scottish Royal Medical Corporations acts as the negotiating body with the Government in respect of those engaged in the hospital and specialist service under the N.H.S. should be continued.

83. **Amendment** by ST. HELENS: That the Constitution Committee be instructed to investigate the possibility of replacing the present system of autonomous bodies by one which will more efficiently safeguard the unity of the profession.

84. **Amendment** by BOURNEMOUTH: That this R.B. is of the opinion that as the R.B. has given the General Medical Services Committee and the Central Consultants and Specialists Committee authority not only of discussion, but also of action, the proceedings of the Representative Body are unnecessarily clogged and time wasted by discussing details in these Committee Reports, or matters on which action has already been taken.

CONSTITUTION AND ORGANIZATION OF SPECIAL GROUPS

85. **Motion** by the Chairman of the Constitution Committee: That the following Recommendation of the Committee be adopted:

Recommendation 30: (a) That no new Group should be formed, but if the need should arise for consideration of problems relating to any special interest the need should be met by the formation of a Subcommittee of the appropriate Standing Committee. (b) That the constitution of the Senior Hospital Medical Officers and Registrars Groups be amended to provide that the Executive Committees of these Groups should function as Subcommittees of the Central Consultants and Specialists Committee; and that these Subcommittees should include members of the Groups elected on a regional basis, together with a minority of members appointed by the Central Consultants and Specialists Committee.

*86. **Amendment** by SWANSEA: That the recommendation be amended by the deletion of sub-paragraph (b).

87. **Amendment** by MANCHESTER: That this Meeting rejects the proposal that the Senior Hospital Medical Officers and Registrars Group Executive Committees become Subcommittees of the Central Consultants and Specialists Committee.

88. **Amendment** by SOUTH STAFFORDSHIRE: That the constitution of the Registrars Group be amended as follows:

(1) That the Registrars Group Council be renamed the Hospital Junior Staffs Central Committee, and (a) that its day-to-day work be carried out by a Hospital Junior Staffs Central Executive Committee; (b) that the H.J.S.C. Committee should receive from, and appoint to, the Central Consultants and Specialists Committee two representatives to facilitate adequate liaison between the two Committees; (c) that the H.J.S.C. Committee (being a B.M.A. Committee) should retain the right of direct access to the Council of the Association in the event of disagreement with the Central Consultants and Specialists Committee.

(2) That the Regional Registrars Group be renamed the Hospital Junior Staffs Regional Group and that (a) all grades of hospital junior staffs be entitled to attend and take part in regional meetings; (b) so far as possible, regional group committees should include representatives of all grades of hospital junior medical staffs, provided that the number of house officers should not exceed two.

(3) That officers below the grade of registrar be entitled to serve on the Hospital Junior Staffs Central Committee if so elected by regions.

(4) That officers below the grade of registrar be entitled to send a deputation to the Hospital Junior Staffs Central

Committee when matters of particular concern to them are under consideration.

Approval of Report

89. **Motion** by the Chairman of the Constitution Committee: That the Report of the Constitution Committee, as amended, be approved.

Congratulations on Committee Report

90. **Motion** by RUGBY: That this Meeting congratulates the Committee on the Constitution of the Association on the thoroughness of their investigation, the clarity of their report, and the soundness of their conclusions.

A.R.M. Procedure

91. **Motion** by NEWCASTLE UPON TYNE: (a) That Representatives at Representative Meetings of the B.M.A., when considering resolutions or amendments affecting essentially one section of the profession, should pay full respect to the views put forward by Committees representing those individual groups. (b) That, in order to avoid splits within the profession, machinery should be introduced in order that recommendations made by interested Committees should not be reversed at Representative Meetings without giving opportunity for further discussion, at periphery level, by those sections of the profession most concerned in the outcome of controversial resolutions or amendments.

ORGANIZATION

92. **Motion** by the Chairman of the Organization Committee (Ronald Gibson) on behalf of the Council: That the Annual and Supplementary Reports of Council under "Organization" (Docs. A.R.M. 2, paras. 193-205, and A.R.M. 3, para. 279) and proposals for Amendments of By-laws and A.R.M. Standing Orders (Appendices VI and X) be received.

Date of Annual Representative Meeting

93. **Motion** by the Chairman of the Organization Committee: That the following Recommendation of the Council (para. 195 of Annual Report) be adopted:

That the existing procedure under which the date of the A.R.M. is determined be retained.

Membership of Council—Vacancies

94. **Motion** by the Chairman of the Organization Committee: That the following Recommendations of the Council (paras. 196 and 279 of Annual and Supplementary Reports) be adopted:

(1) That in the event of one of the "13" members of Council elected under By-law 53(c) by the elected Representatives at the Representative Meeting being appointed to the Chair of the Council, a vacancy among the "13" shall be deemed not to have arisen, and that By-law 70 be amended accordingly.

(2) That the By-laws should be so amended as to provide that any election for the purpose of filling a casual vacancy arising among the members of the Council elected by the Representative Body shall be in manner prescribed by that Body; and that the Standing Orders of the Representative Body be so modified as to provide that the election shall be conducted by postal vote.

95. **Amendment** by WORCESTER AND BROMSGROVE: That in the event of a vacancy arising among the "13" members of Council elected by the Representative Body, the vacancy be filled without further ballot by the unsuccessful candidate obtaining the greatest number of votes at the last previous election.

Resident Medical Secretaries to Association Regional Offices

96. **Motion** by the Chairman of the Organization Committee: That para. 198 of the Annual Report of Council be approved.

97. **Amendment** by MANCHESTER: That notwithstanding the decision of Council, and the arguments set forth in Section 163 of the Annual Report of Council for 1955-6, this Meeting requests Council to appoint Resident Medical Secretaries, acceptable to the members of the region concerned, to those areas possessing a Regional Office.

98. **Amendment** by LIVERPOOL: That notwithstanding the decision of Council and the arguments set forth in Section 163 of the Annual Report, this Meeting requests Council to appoint Resident Medical Secretaries, acceptable to the members of the region concerned, to those areas possessing a Regional Office, where so desired.

Autonomous Bodies

99. **Motion** by the Chairman of the Organization Committee: That the following Recommendation of the Council be adopted:

That the autonomous powers of the General Medical Services Committee and the Central Consultants and Specialists Committee be renewed in respect of the year 1957-8.

That the Representative Body looks to these Committees to ensure (1) that no action be taken by either which may prejudice the interests of another part of the profession without full prior consultation with the appropriate interests, and (2) that their autonomous powers will be used so as to expedite and not delay the work of the Association.

100. **Amendment** by RUGBY: That the first para. of the Recommendation be amended to read, "That the autonomous powers of the General Medical Services Committee and the Central Consultants and Specialists Committee be renewed ONLY in so far as they affect the purely domestic affairs of those Committees and NOT in respect of activities in which other branches of the profession are concerned."

101. **Amendment** by TORQUAY: (1) That in order to preserve the unity of the profession and to present as far as possible a united front, all decisions of the autonomous bodies affecting the national policy of the profession be communicated to the Representative Body or its Council before they are implemented. (2) That the Royal Colleges and the College of General Practitioners be asked, without prejudice, to co-operate in the same way.

102. **Motion** by GUILDFORD: That in the opinion of this Meeting it is improper for any individual member of a joint negotiating committee of the Association to take independent action on matters under discussion without the prior consent of the whole committee.

103. **Motion** by DERRY: That this Meeting expresses once again the earnest hope that in future any medical committee or council (or similar body) which advises, or acquiesces in or council (or similar body) which advises, or acquiesces in any major change in medico-political policy, will either take steps to ascertain the views of the profession as a whole, or else to make it clear beyond peradventure that the opinion expressed is solely that of the individuals forming the committee, etc., and by no means necessarily that of the profession as a whole.

Compounded Subscription to Association of Newly Qualified Practitioners

104. **Motion** by the Chairman of the Organization Committee: That the following Recommendation of the Council (para. 201 of Annual Report) be adopted:

That By-law 16(1) be so amended as to remedy the present inconsistency in respect of the compounded subscription payable by newly qualified practitioners.

Amendments to By-laws

105. **Motion** by the Chairman of the Organization Committee: That the following recommendation of the Council be adopted:

That the By-laws of the Association be altered in the manner shown in Appendix VI.

Remainder of Report under "Organization"

106. **Motion** by the Chairman of the Organization Committee: That the remainder of the Annual and Supplementary Reports of Council under "Organization" be approved.

Assistance from Central Funds for Social Activities

107. **Motion** by CLEVELAND: That any Branch or Division which is not in possession of an established Voluntary Fund should be precluded from assistance from central funds for social activities the cost of which cannot be met from the annual capitation grant allocated by the Council.

Change of Divisions

108. **Motion** by RUGBY: That the By-laws be amended as follows:

Firstly: By-law 5(a) be deleted *in toto*.

Secondly: By-law 14(1) be amended as follows: (1) At the beginning, after the words "subject as hereinafter provided," ADD "in By-law 14(a)." (2) Delete at the end from "provided always that any member . . ." to " . . . in which he resides."

Thirdly: by inserting the following new By-law 14(a): "Change of Division. 14(a) If owing to ease of access, professional association or other reason, a member (whose address for the time being in the Register of Members of the Association is within Great Britain or Northern Ireland) would prefer to become a member of some Division other than that of which he is, by reason of his address, an Ordinary Member, he shall on written application to the Secretary of the Association forthwith be transferred to and become an Ordinary Member of the Division of his choice and of no other."

(By-laws 5(a) and 14(l) read:

"5(a) (1) Any Member whose address as registered for the time being in the Register of Members of the Association is within Great Britain or Northern Ireland may apply to become an Ordinary Member of a Division other than that in whose area he resides on one of the grounds hereinafter mentioned. Every such application shall be forwarded to Head Office accompanied by a statement of the reason or reasons therefor and shall (together with such reason or reasons) forthwith be notified by Head Office to the Secretaries of the Divisions concerned. If within one month from the receipt of such notification either such Division shall send to Head Office any objection to such proposed change of Division or if there be doubt whether adequate reasons exist for such proposed change the matter shall be decided by the Council but subject as aforesaid such proposed change shall become effective at the expiration of the said period.

(2) The grounds on which any such application may be made are:

(a) that for any reason the member concerned can attend meetings of the Division of which membership is sought with greater convenience than meetings of the Division in which he resides, or

(b) that the member concerned has a greater community of professional interest with other Members of the Division of which membership is sought than with Members of the Division in which he resides.

(3) The result of any such application shall be notified forthwith by Head Office to the Secretary of each of the Divisions concerned and (where appropriate) the necessary entries shall forthwith be made in the Register of Members of the Association."

"14(1) Subject as hereinafter provided for all the purposes of the Regulations and the By-laws the persons for the time being named in the Register of Members of the Association whose respective addresses are situated at places within the area of any Division, Corporate Branch, or Corporate Group and no others shall be deemed to be the Ordinary Members of that Division, Corporate Branch, or Corporate Group, and the persons for the time being Ordinary Members of the Divisions comprised in a Branch and no others shall be deemed to be the Ordinary Members of that Branch and the persons whose names are for the time being distinguished in the Register of Members of the Association as Public Health Service Members and no others shall be deemed to be the Public Health Service Members. Provided always that any Member who has become a member of a Division other than that in which he resides in manner provided in By-law 5(a) hereof shall be a

member of such first mentioned Division and shall not be a member of the Division in which he resides.")

Motions Requiring Alterations of Articles and By-laws

109. **Motion** by RUGBY: That if a motion adopted by the Representative Body requires for its implementation an alteration to the Articles and/or By-laws, a draft of the proposed alteration should be forwarded to the sponsoring Division for comment before publication. After publication thereof in the Annual Report of Council, it should be possible for any Division, after due notice, to move an amendment thereto which, if carried, would not delay implementation for a further year.

Pre-registration Year Appointments

110. **Motion** by BLYTH: That the A.R.M. request the General Medical Council to include a period of work with an approved general practitioner as one of the appropriate appointments during the pre-registration year.

Membership Subscription during Pre-registration Year

111. **Motion** by GLASGOW: That the subscription for membership of the British Medical Association during the pre-registration year or portion thereof should be 10s. 6d.

Subscriptions for Whole-time Salaried Officers

112. **Motion** by DERBY: That the annual subscription to the B.M.A. for whole-time salaried officers be reduced from 6 to 4 guineas because of the anomalies that arise over income-tax payments.

(Foregoing Items 111 and 112 were not received in time to give the notice in the B.M.J. Supplement necessary under Article 39(2) for motions involving amendments of By-laws. If passed they will need formal notice and confirmation by a future Representative Meeting in order to become effective.)

WALES

113. **Motion** by the Chairman of the Welsh Committee (A. Maddock Jones) on behalf of the Council: That the Annual Report of Council under "Wales" (Doc. A.R.M. 2, para. 217) be received.

114. **Motion** by the Chairman of the Welsh Committee: That the Annual Report of Council under "Wales" be approved.

SCOTLAND

115. **Motion** by the Chairman of the Scottish Committee (W. M. Knox) on behalf of the Council: That the Annual Report of Council under "Scotland" (Doc. A.R.M. 2, paras. 207-216) be received.

116. **Motion** by the Chairman of the Scottish Committee: That the Annual Report of Council under "Scotland" be approved.

MEDICAL BENEVOLENCE

117. **Motion** by the Chairman of the Charities Committee (H. M. Golding) on behalf of the Council: That the Annual Report of Council under "Medical Benevolence" (Doc. A.R.M. 2, para. 218) be received.

118. **Motion** by the Chairman of the Charities Committee: That the Annual Report of Council under "Medical Benevolence" be approved.

Ladies Guild

119. **Motion** by EAST AND MID-LOTHIAN: That the Council be asked to refer in its Annual Report to the very helpful work of the Ladies Guild of the Royal Medical Benevolent Fund.

MEDICAL FILMS

120. **Motion** by the Chairman of the Film Committee (R. P. Liston) on behalf of the Council: That the Annual Report of Council under "Medical Films" (Doc. A.R.M. 2, para. 219) be received.

General Film on Rehabilitation

121. **Motion** by the Chairman of the Film Committee: That para. 219 of the Annual Report of Council be approved.

122. **Amendment** by TORQUAY: That, in view of the Report of the Piercy Committee and the apparent lack of knowledge by members of the medical profession of the potentialities of aftercare and rehabilitation, this Meeting regrets that the Council is unable to report progress on the production of the general film on Rehabilitation.

Remainder of Report under "Medical Films"

123. **Motion** by the Chairman of the Film Committee: That the remainder of the Annual Report of Council under "Medical Films" be approved.

HOSPITAL AND CONSULTANT SERVICES

124. **Motion** by the Chairman of the Central Consultants and Specialists Committee (T. Holmes Sellors) on behalf of the Council: That the Annual and Supplementary Reports of Council under "Hospital and Consultant Services" (Docs. A.R.M. 2, paras. 68-103, and A.R.M. 3, paras. 248-250) and the Memorandum on the Future of the Chest Services (Appendix IV) be received.

Medical Membership of Hospital Boards

125. **Motion** by MARYLEBONE: That this Meeting deplores the recent reduction of medical members on Hospital Boards and Management Committees, as this deprives the public of adequate medical opinion.

126. **Motion** by TORQUAY: That the number of medical members on regional hospital boards and hospital management committees should not exceed 33% and should not be less than 25%.

Senior Hospital Medical Officers and Registrars

127. **Motion** by STRATFORD: That this Representative Meeting is concerned with the prospects and future of registrars and S.H.M.O.s, and the supply and distribution of consultants. It asks Council to look at the problem afresh in consultation with doctors of the grades concerned and to report back to the Representative Body.

Internal Administration of Hospitals and S.H.M.O.s

128. **Motion** by the Chairman of the Central Consultants and Specialists Committee: That paras. 71 and 77 of the Annual Report of Council be approved.

*129. **Amendment** by LIVERPOOL: That, with reference to paragraphs 71 and 77 of the Annual Report of Council, this Meeting is of the opinion that Council, when it has received resolutions from the Representative Body deciding the policy of the Association, must, if it receives contrary advice from any of the Committees to which the resolution has been referred for comment, ask the R.B. to reconsider the matter and not make statements of contrary policy in the Annual Report of Council.

130. **Amendment** by RUGBY: That, with reference to paragraph 71 of the Annual Report of Council, if for any reason Council is unprepared to accept a resolution of the Representative Body as official policy of the Association, it should seek a reversal of such policy by constitutional means and not simply by expressing its disapproval in the report of Council.

131. **Amendment** by SOUTH SHIELDS: That, with reference to para. 77 of the Annual Report of Council, this Meeting confirms the policy previously adopted in relation to S.H.M.O.s and instructs the Council to take active steps to secure implementation, particularly of the following resolutions of the A.R.M., 1956:

251. **Resolved**: That a review of S.H.M.O.s is now overdue. It should be undertaken by a newly constituted central committee of agreed composition. The criteria should be known and accepted in advance.

258. **Resolved**: That this Meeting recommends that the salary of the S.H.M.O. grade should be raised to 80% of the consultant salary throughout the whole scale.

261. **Resolved**: That all S.H.M.O.s engaged in consultant work unsupervised should be remunerated at consultant rates.

132. **Amendment** by READING: (1) That, with reference to para. 77 of the Annual Report of Council, in view of the fact that over 800 S.H.M.O.s have been fully supported by their consultant colleagues in their claim for consultant rates of pay, the question of a general review of all S.H.M.O.s' personal grading be taken up with the Minister as a matter of urgency. (2) That this Meeting remains dissatisfied with the present arrangements for scrutinizing new S.H.M.O. posts before these are advertised, and therefore resolves that no further S.H.M.O. appointments be made pending the new hospital staffing structure. (3) That negotiations be reopened forthwith with the Minister to implement the principle that S.H.M.O.s' salary should be 80% of the consultants' maximum.

133. **Amendment** by SOUTHAMPTON: That, with reference to para. 77 of the Annual Report of Council, this Meeting strongly recommends that the salary of the S.H.M.O. grade, or of any other grade equivalent thereto which may be perorpetuated under any other new medical staff structure, should be fixed at 80% of the consultant salary throughout the scale.

134. **Motion** by DERBY: That this Meeting notes with approval the expressed opinion of the Central Consultants and Specialists Committee (Supplement, April 13, 1957, page 207) that senior hospital medical officers be paid a salary of 80% of that for consultants throughout the scale, and requires the Council to take all possible steps to bring this into effect.

Shortage of Medical Auxiliaries

135. **Motion** by WILLESDEEN: That this Meeting regrets that the pay of medical auxiliaries in the hospital service is so low that they are leaving the N.H.S., so that it is impossible to give adequate facilities to practitioners for the investigation of patients, and existing facilities are being withdrawn; and calls on Council to do all that is in its power to remedy this situation.

*136. **Motion** by WINCHESTER: That Council continue to press upon the Ministry the urgency of improving the conditions of service and pay of radiographers.

137. **Motion** by LEWISHAM: That this Meeting views with concern the national shortage of radiographers due to the present levels of remuneration, this matter to be discussed as a matter of urgency with the responsible authorities to prevent further deterioration in the radiological service.

Distinction Awards

138. **Motion** by the Chairman of the Central Consultants and Specialists Committee: That para. 78 of the Annual Report of Council be approved.

*139. **Amendment** by MANCHESTER: That apart from very exceptional cases, no further merit awards should be made, but that instead there should be substituted a system of responsibility payments.

140. **Amendment** by SOUTH ESSEX: That the following Minute 239 of the A.R.M., 1956, be referred back to the Council for further consideration:

239. **Resolved**: That in the opinion of this Meeting, the Council should consider the desirability of abolishing the Merit Award Scheme for members of hospital staffs, unless in very exceptional cases, and replacing it by a system allowing for responsibility payments.

141. **Motion** by GUILDFORD: That in any revision of the publicly administered medical services there should be no secrecy about any special payments made for merit or other grants.

Remuneration of Hospital Medical Staff

142. **Motion** by MANCHESTER: That this Meeting considers that, taking into account the board and lodging charges, the 5% award to senior hospital staff and the 10% award to junior hospital staff, this latter section of the profession still remains absolutely and relatively underpaid.

143. **Motion** by SOUTH STAFFORDSHIRE: That hospital junior staff should have representation on the Staff Side of Whitley B when matters concerning their terms and conditions of service are being negotiated.

Domiciliary Consultations by Whole-time Consultants

144. **Motion** by the Chairman of the Central Consultants and Specialists Committee: That para. 81 of the Annual Report of Council be approved.

*145. **Amendment** by GREENWICH AND DEPTFORD: That this Annual Representative Meeting urges that the payment of fees to whole-time specialists for the first eight domiciliary consultations in a quarter be further pressed.

146. **Amendment** by SWANSEA: That this Meeting regrets that the resolutions of the A.R.M., 1956, under Minutes 272 and 273 have not been implemented.

147. **Motion** by LANCASTER: That extra allowances for domiciliary consultations over 10 miles in rural areas should be reviewed.

Board-and-Lodging Charges

148. **Motion** by the Chairman of the Central Consultants and Specialists Committee: That para. 85 of the Annual Report of Council be approved.

149. **Amendment** by MANCHESTER: That this Meeting recommends that when residence is a condition of service, and especially in the case of pre-registration house officers, board and lodging should be provided for.

150. **Amendment** by MANCHESTER: That this Meeting deplores the board-and-lodging charge agreement which was reached without proper consultation with the representatives of hospital resident staff, and recommends as a matter of urgency that the Staff Side should initiate such consultations before agreement is reached on standards of accommodation.

151. **Amendment** by LIVERPOOL: That this Meeting deplores the long delay of the Ministry in carrying out its promise to review those cases in which the actual cost of board and lodging has been assessed by the Hospital Management Committee and the Regional Hospital Board at a lesser sum than that which is being charged under the provisions of the circular dealing with board-and-lodging charges.

152. **Amendment** by EAST YORKS: That this Meeting recommends (a) that charges for hospital residents' board and lodgings should not exceed 21s. per week; (b) that in the case of a married hospital resident who has to provide a home for his family outside the hospital, board and lodgings should be provided free of charge.

Mileage Rates

153. **Motion** by CITY OF DUNDEE: That, with reference to para. 88 of the Annual Report of Council, in view of the present level of running costs and in comparison with the costs at the time when the present rates were established, a permanent increase should be made.

Constitution of the Central Consultants and Specialists Committee

154. **Motion** by the Chairman of the Central Consultants and Specialists Committee: (1) That the constitution of the Central Consultants and Specialists Committee be amended to provide for the appointment of two members by each of the following: (a) the General Medical Services Committee, (b) the Registrars Group Committee, (c) the S.H.M.O.s Group Committee; and (2) that the Schedule to the By-laws be amended accordingly.

Acute Mental Illness

155. **Motion** by SOUTHAMPTON: That when the Mental Health Act is amended the position of the duly authorized officers should be re-examined.

Geriatric Units: Treatment and Rehabilitation of Chronic Disablement

156. **Motion** by WORCESTER AND BROMSGROVE: That in order properly to co-ordinate the hospital service to the chronic sick and the welfare service to the infirm, representations be made at the highest level to facilitate the assumption by Hospital Management Committees and Local Authorities of joint financial responsibility for borderline cases.

National Major Casualty Service

157. **Motion** by MID-CHESTER: That this Meeting is not satisfied with the co-operation between the hospital and general practitioner in regard to medical casualty service.

Remainder of Report under "Hospital and Consultant Services"

158. **Motion** by the Chairman of the Central Consultants and Specialists Committee: That the remainder of the Annual and Supplementary Reports of Council under "Hospital and Consultant Services" be approved.

Remuneration Claim

159. **Motion** by EAST YORKS: That any future increase in moneys for hospital medical staffs in consequence of either the Pay Claim or the findings of the Royal Commission should be so distributed that Resolutions 258, 272, and 273 of the A.R.M., 1956, are fully satisfied. Also, part of such additional moneys be set aside for the purpose of providing a tax-free allowance to whole-time hospital medical officers who (a) provide a private telephone partly for the use of the National Health Service and (b) pay subscriptions to recognized medical societies and learned societies for the purpose of keeping up to date in the arts of medical practice and (c) attend scientific meetings and conferences for the purpose of improving their knowledge of the specialty they practise.

(Resolutions 258, 272, and 273 of the A.R.M., 1956, read as follows:

258. **Resolved**: That this Meeting recommends that the salary of the S.H.M.O. grade should be raised to 80% of the consultant salary throughout the whole scale.

272. **Resolved**: That the Association should press for the payment of domiciliary consultation fees to whole-time specialists up to the permitted maximum.

273. **Resolved**: That the B.M.A. deplores that the Ministry of Health differentiates between domiciliary visits done by whole-time and part-time consultants. The non-payment clause for the first eight visits in each quarter should be abolished and the differential payment for distant visits should be paid to whole-time and part-time consultants.)

Consultants and Specialists and Central Defence Fund

160. **Motion** by BLACKPOOL AND FYLDE: That this Annual Representative Meeting instructs Council to devise a scheme whereby consultants and specialists can make their financial contribution to the Central Defence Fund.

Domiciliary Chiropody under N.H.S.

161. **Motion** by NORTH-EAST ESSEX: That domiciliary chiropody should become a facility under the National Health Service.

Standard Charge to Patients for Food

162. **Motion** by NORTH-EAST ESSEX: That there should be a standard charge made for all patients above school age when in hospital towards the cost of their food.

Blood Transfusions and Private Patients

163. **Motion** by BUCKINGHAMSHIRE: That blood for transfusion should be made available for private patients, wherever they are situated.

Consultants in Training and General Practice

164. **Motion** by CAMBRIDGE AND HUNTINGDON: That consultants in training should be encouraged to spend a period in general practice during their training.

Constitution of Joint Consultants Committee

165. **Motion** by SHEFFIELD: That the representatives appointed by the Central Consultants and Specialists Committee to the Joint Consultants Committee should always include one whole-time consultant, one consultant from a provincial non-teaching hospital, and one S.H.M.O.

Staff Side of Whitley Committee B

166. **Motion** by LIVERPOOL: That this Meeting is dissatisfied with the present unrepresentative constitution of the Staff Side of Whitley Committee B. In the past negotiations have been undertaken on behalf of sections of the profession of which none of the Committee is a member. It recommends that in future Whitley Committee B should always consult or co-opt representatives of any group whose terms and conditions of service are being negotiated.

OCCUPATIONAL HEALTH

167. **Motion** by the Chairman of the Occupational Health Committee (J. A. L. Vaughan Jones) on behalf of the Council: That the Annual and Supplementary Reports of the Council under "Occupational Health" (Docs. A.R.M. 2, paras. 107-120, and A.R.M. 3, paras. 251-253) and the Report on Short Postgraduate Courses in Occupational Health (Appendix VII) be received.

Remuneration of Whole-time Industrial Medical Officers

168. **Motion** by the Chairman of the Occupational Health Committee: That the following Recommendation of the Council (para. 107 of Annual Report) be adopted:

That the section on the remuneration of whole-time industrial medical officers in the statement on "Remuneration and Terms of Service for Industrial Medical Officers," approved by the Representative Body in 1955, be revised to read as follows:

	Range
Assistant medical officers ..	£1,400 to £1,700
Medical officers ..	£1,600 to £2,500
Senior medical officers ..	£2,250 to £3,250
Chief medical officers or directors of medical services	From £3,500 according to the size of the undertaking and the responsibilities involved.

The salary in each grade should be reviewed at intervals not exceeding two years, and a practitioner in each grade would normally be expected to reach the upper limit of the range after about ten years of satisfactory service. A practitioner giving outstanding service would be expected to receive more rapid advancement.

The Association regards these salary ranges as suitable for pensionable appointments. Where no pension scheme is in operation the salary should be adjusted accordingly.

Remuneration of Part-time Industrial Medical Officers

169. **Motion** by the Chairman of the Occupational Health Committee: That the following Recommendation of the Council (para. 107 of Annual Report) be adopted:

That the recommended salary scale for part-time industrial medical officers in the statement on "Remuneration and Terms of Service for Industrial Medical Officers," approved by the Representative Body in 1955, be revised to read as follows:

Hours per Week	Minimum Annual Salary	Hours per Week	Minimum Annual Salary
Up to 1 ..	£100	9 to 10 ..	£700
1 " 2 ..	175	10 " 11 ..	750
2 " 3 ..	250	11 " 12 ..	800
3 " 4 ..	325	12 " 13 ..	850
4 " 5 ..	400	13 " 14 ..	900
5 " 6 ..	475	14 " 15 ..	950
6 " 7 ..	550	15 " 16 ..	1,000
7 " 8 ..	600	16 " 18 ..	1,050
8 " 9 ..	650	18 " 20 ..	1,100

Remainder of Report under "Occupational Health"

170. **Motion** by the Chairman of the Occupational Health Committee: That the remainder of the Annual and Supplementary Reports of Council under "Occupational Health" be approved.

Industrial Managements and Medical Examinations

171. **Motion** by BUCKINGHAMSHIRE: That this Meeting condemns any contract entered into by industrial management which gives absolute right to a "lay person" to be present at a medical examination, including re-testing of colour vision.

INTERNATIONAL RELATIONS

172. **Motion** by the Chairman of the International Relations Committee (J. A. Pridham) on behalf of the Council: That the Annual Report of Council under "International Relations" (Doc. A.R.M. 2, paras. 226-232) be received.

173. **Motion** by the Chairman of the International Relations Committee: That the Annual Report of Council under "International Relations" be approved.

BRITISH MEDICAL JOURNAL

174. **Motion** by the Chairman of the Journal Committee (J. G. M. Hamilton) on behalf of the Council: That the Annual Report of Council under "British Medical Journal" (Doc. A.R.M. 2, para. 156) be received.

175. **Motion** by the Chairman of the Journal Committee: That the Annual Report of Council under "British Medical Journal" be approved.

FAMILY DOCTOR

176. **Motion** by the Chairman of the Family Doctor Committee (O. C. Carter) on behalf of the Council: That the Annual Report of Council under "Family Doctor" (Doc. A.R.M. 2, para. 157) be received.

177. **Motion** by the Chairman of the Family Doctor Committee: That the Annual Report of Council under "Family Doctor" be approved.

FINANCE

178. **Motion** by the Treasurer (L. Dougal Callander) on behalf of the Council: That the Annual and Supplementary Reports of Council under "Finance" (Docs. A.R.M. 2, paras. 158-165, and A.R.M. 3, para. 276) and Appendix IX and the Financial Statement for the year ending December 31, 1956 (Doc. A.R.M. 3A), be received.

179. **Motion** by the Treasurer: That the Annual and Supplementary Reports of Council under "Finance" be approved.

ESTATES

180. **Motion** by the Chairman of the Estates Committee (L. Dougal Callander) on behalf of the Council: That the Annual and Supplementary Reports of Council under "Estates" (Docs. A.R.M. 2, paras. 166-167, and A.R.M. 3, para. 277) be received.

181. **Motion** by the Chairman of the Estates Committee: That the Annual and Supplementary Reports of Council under "Estates" be approved.

PUBLIC HEALTH

182. **Motion** by the Chairman of the Public Health Committee (J. B. Tilley) on behalf of the Council: That the Annual and Supplementary Reports of Council under "Public Health" (Docs. A.R.M. 2, paras. 121-137, and A.R.M. 3, paras. 255-265) be received.

Married Women Doctors and Public Medical Appointments

183. **Motion** by GATESHEAD: That, with reference to para. 135 of the Council's Report, further consideration should be given to the question of maternity leave for married women doctors.

Remainder of Report under "Public Health"

184. **Motion** by the Chairman of the Public Health Committee: That the remainder of the Annual and Supplementary Reports of Council under "Public Health" be approved.

Review of Remuneration of Public Health Medical Officers

185. **Motion** by GLASGOW: That in view of the fact that public health practitioners have been excluded from the terms of reference of the Royal Commission, the full consultation that has been promised after the Royal Commission has reported shall include a review of the remuneration of public health doctors.

Health Visitors

186. **Motion** by GREENWICH AND DEPTFORD: That this Annual Representative Meeting urges that health visitors should work in closer co-operation with general practitioners and should not give advice to patients except with the family doctor's knowledge and consent.

SCIENCE

187. **Motion** by the Chairman of the Science Committee (J. R. Nicholson-Lailey) on behalf of the Council: That the Annual and Supplementary Reports of Council under "Science" (Docs. A.R.M. 2, paras. 168-183, and A.R.M. 3, para. 278) and the Recommendations of the Special Coal-Gas Poisoning Subcommittee (Appendix V) be received.

The Library

188. **Motion** by the Chairman of the Science Committee: That the following Recommendation of the Council be adopted:

That, in view of the financial position of the Association, the payment by the Association of outward postage on library books borrowed by members be discontinued as a temporary measure.

189. **Amendment** by DORSET: That, with reference to para. 172 of the Annual Report of Council, this Meeting considers that the action taken by Council on Item 95 of the Agenda of the A.R.M., 1956, is unsatisfactory, and requests Council to reconsider its opinion.

190. **Motion** by FURNESS: That this Meeting deplores the fact that postage is charged both ways on books borrowed from the Central Library and calls upon the Council to give immediate consideration to reducing the postage charge to members to one way only.

Remainder of Report under "Science"

191. **Motion** by the Chairman of the Science Committee: That the remainder of the Annual and Supplementary Reports of Council under "Science" be approved.

GENERAL MEDICAL SERVICES

192. **Motion** by the Chairman of the General Medical Services Committee (A. B. Davies) on behalf of the Council: That the Annual Report of Council under "General Medical Services" (Doc. A.R.M. 2, paras. 22-58) be received.

The Remuneration Claim

193. **Motion** by LIVERPOOL: That this Meeting is of the opinion that the policy of penalizing small lists should cease and that the interim award should be applied towards loading the first 500 capitation fees on all lists, whatever their size.

Protection of Practices Scheme

194. **Motion** by the Chairman of the General Medical Services Committee: That para. 25 of the Annual Report of Council be approved.

195. **Amendment** by NORTH-EAST ESSEX: That the Protection of Practices Scheme should be extended to provide protection for general practitioners when there is a massive call-up of them, as in wartime.

Practice Accommodation

196. **Motion** by NORTH-EAST ESSEX: That in the exploratory discussions with the Ministry of Health on the question of practice accommodation, particularly in redevelopment areas, the question of the tenancy terms for *suites in health centres* on new housing estates should be included.

Loans for Provision of Surgery Accommodation

197. **Motion** by CAMBRIDGE AND HUNTINGDON: That the following motion, referred by the A.R.M., 1956, for consideration by the Council, be approved with the addition of the words "when funds from the Group Practice Loans become available":

That the Minister of Health be pressed to increase the scope of interest-free loans for the provision of new surgery accommodation, to include all practitioners, either in single practice or in partnership, where such application is endorsed by the local medical committee and executive council.

Mileage

198. **Motion** by the Chairman of the General Medical Services Committee: That para. 28 of the Annual Report of Council be approved.

199. **Amendment** by MORPETH: That the A.R.M. deplores the delay in the completion of the work of the Mileage Committee, in view of the hardship caused in certain areas.

Emergency Call Service

200. **Motion** by the Chairman of the General Medical Services Committee: That para. 29 of the Annual Report of Council be approved.

201. **Amendment** by BLYTH: That the A.R.M. condemns the emergency call services organized on commercial lines, in view of the interference in the free choice of doctor and the obvious encouragement of a full-time salaried service.

202. **Amendment** by WANDSWORTH: That this Meeting strongly disapproves of any resolution which empowers the Minister to impose further restrictions for making deputizing arrangements of general practitioners.

203. **Amendment** by CUMBERLAND: That this Meeting opposes the conclusion that consent of the executive council be required for a general practitioner's standing deputizing arrangements, except where the deputizing service is a commercially organized service.

204. **Amendment** by SWINDON: That the terms of service should be so amended as to make it incumbent upon the general practitioner to obtain the advice of the local medical committee on, and not the consent of the executive council to, any standing deputizing arrangements he proposes to make.

205. **Motion** by GATESHEAD: That with reference to para. 29 of the Council's Report the suggestion to amend the regulations be approved.

206. **Motion** by NORTH MIDDLESEX: That this Meeting requests Council to consider the formation of a B.M.A. Scheme for an Emergency and Relief Service for General Practitioners in the National Health Service.

Obstetric Beds for General Practitioners

207. **Motion** by MID-CHESHIRE: That the Council should continue to press for provision of more obstetric beds for general practitioners.

Trainee General-practitioner Scheme

208. **Motion** by the Chairman of the General Medical Services Committee: That para. 33 of the Annual Report of Council be approved.

209. **Amendment** by ABERDEEN AND KINCARDINE COUNTIES: That this Meeting is dissatisfied with the decision of Council regarding Minute 200 of A.R.M. of 1956, and instructs Council to press for the adoption of this resolution.

210. **Motion** by BLYTH: That the A.R.M. considers the Council should press the general adoption of the recom-

mendations of the Special Subcommittee on the Trainee General-practitioner Scheme as accepted by the Minister of Health.

Charges for Prescriptions

211. **Motion** by MID-CHESHIRE: That a further protest should be made to the Minister with a view to getting prescription charges removed.

General-practitioner Beds

212. **Motion** by MID-CHESHIRE: That, with reference to para. 42 of the Annual Report of Council, this Meeting emphasizes the view expressed in Minute 183 of the A.R.M., 1956, and requests the Council to pursue the matter as one of urgency.

Diagnostic Facilities

213. **Motion** by NORTH GLAMORGAN AND BRECKNOCK: That this Meeting stresses the need for the provision of ancillary diagnostic services for the general practitioner, so as to reduce pressure on hospitals, and as a means of reducing hospital costs.

National Insurance Certificates

214. **Motion** by the Chairman of the General Medical Services Committee: That para. 50 of the Annual Report of Council be approved.

*215. **Amendment** by GATESHEAD: That further efforts be made to implement the 1956 resolution as to four-weekly certificates.

216. **Amendment** by SOUTH ESSEX: That the following Minute 218 of the A.R.M., 1956, be referred back to the Council for further consideration:

That medical practitioners should, at their discretion, be permitted to issue first or any subsequent National Insurance Certificates for a period of up to four weeks.

National Service Medical Boards

217. **Motion** by the Chairman of the General Medical Services Committee: That para. 51 of the Annual Report of Council be approved.

218. **Amendment** by CITY OF DUNDEE: That the chairman of the National Service Medical Board should communicate with the general practitioner concerned when a man is found to be unfit for National Service, giving the reason.

Service Committee and Tribunal Regulations

219. **Motion** by the Chairman of the General Medical Services Committee: That para. 55 of the Annual Report of Council be approved.

220. **Amendment** by SOUTH STAFFORDSHIRE: That Service Committee and Tribunal Regulations should be amended to permit legal representation to both complainant and respondent.

221. **Amendment** by SOUTH STAFFORDSHIRE: That there should be a final appeal to the Courts from a decision of the Minister in disciplinary cases against medical practitioners.

222. **Motion** by NORTH STAFFORDSHIRE: That this Meeting reaffirms that it should be a requirement of the Regulations that proceedings against a doctor before a Service Committee should only be in respect of a breach of the Regulations and the doctor be notified, in advance of the inquiry, of the Regulation of which he is alleged to be in breach.

223. **Motion** by NORTH STAFFORDSHIRE: That this Meeting inform the Minister of Health that grossly undue delay is occurring in the notification of appeal tribunal findings to the interested parties and demands that such delay should be cut to a minimum.

224. **Motion** by NORTH STAFFORDSHIRE: That this Meeting is of the opinion that costs should be awarded against unsuccessful applicants to appeal tribunals, as provided for in the Regulations.

JUNE 29, 1957

General-practitioner Refresher Courses

225. **Motion** by GREENWICH AND DEPTFORD: That this Annual Representative Meeting deplores the inadequacy of payments made to general practitioners attending refresher courses, and urges that these be increased to at least 25 guineas per week.

Remainder of Report under "General Medical Services"

226. **Motion** by the Chairman of the General Medical Services Committee: That the remainder of the Annual Report of Council under "General Medical Services" be approved.

Capitation Fee for Persons over 65

227. **Motion** by EXETER: That a higher capitation fee be paid for persons over the age of 65.

Remuneration: Loading of Capitation Fee for London Area

228. **Motion** by HENDON: That the Council be invited to give consideration to the effecting of an arrangement for the loading of the Capitation Fee to meet the higher cost of living in the London area.

General Practitioners and Antenatal Care

229. **Motion** by HARROW: That it be a principle of Association policy that general practitioners who wish to undertake the antenatal care of their own patients shall be entitled to do so and that regional hospital boards be requested to ensure that the staffs of their constituent hospitals do not make the booking of the confinements of those patients in hospital conditional upon antenatal care being provided at their own or local authority clinics.

Fees for Maternity Medical Services

*230. **Motion** by BATH: That this Meeting is of the opinion that the fees for maternity services are inadequate and that they should be substantially raised forthwith.

231. **Motion** by LONDONDERRY: That in view of the arduous nature of the work and its importance in maintaining public esteem for general practice this Meeting urges the Council of the British Medical Association to bear in mind the need for adequate remuneration in the maternity medical service.

Pharmaceutical Literature

232. **Motion** by SOUTH ESSEX: That the co-operation of the pharmaceutical industry be sought in the preparation of standardized literature of a concise nature in respect of products prescribable on Forms E.C.10.

233. **Motion** by LEWISHAM: That this Meeting deprecates the quantity of pharmaceutical advertisement sent to doctors, and requests the Council to approach the pharmaceutical manufacturers to consider means of limiting this and channeling the available advertising in a more useful method; and all unsolicited samples should be banned.

Medical Records

234. **Motion** by LEWISHAM: That this Meeting recommends that Council set up a committee to consider how to improve Forms E.C.5 and E.C.6 (N.H.S.), and to make recommendations.

Envelopes for Medical Records

235. **Motion** by KENSINGTON AND HAMMERSMITH: That the Ministry of Health be asked to provide a modified form of medical record envelope for filing continuation form of medical record envelope for filing the per-cards and hospital reports, pending the receipt of the permanent envelope from the executive council. A blank manent envelope from the top left-hand corner removed record envelope with the top left-hand corner removed would be suitable.

Blood Transfusion and Rh Factor

236. **Motion** by MID-CHESHIRE: That in view of the apparent wastage of rare blood, such as O negative, there should be a uniform system for obtaining blood grouping and Rh factor in cases of pregnancy.

Insulin Syringes

237. **Motion** by LANCASTER: That insulin syringes should be made available, 5 ml. graduated in 0.1 ml.

COMPENSATION AND SUPERANNUATION

238. **Motion** by the Chairman of the Compensation and Superannuation Committee (A. N. Mathias) on behalf of the Council: That the Annual and Supplementary Reports of Council under "Compensation and Superannuation" (Docs. A.R.M. 2, paras. 59-67, and A.R.M. 3, paras. 246-247) be received.

Compensation

239. **Motion** by HARROW: That if negotiations for payment of compensation in a lump sum fail, the Government be pressed to pay off all practice compensation due by allowing remission of all tax on income until the total compensation has been paid.

Earlier Pensions

240. **Motion** by the Chairman of the Compensation and Superannuation Committee: That para. 61 of the Annual Report of Council be approved.

241. **Amendment** by SWANSEA: That Minute 163 of the A.R.M., 1956, be referred back to the Council for further consideration.

242. **Amendment** by HARROGATE: That pension benefit should be available to practitioners at any time after ten years' service, the pension being proportionate to the amount contributed.

Remainder of Report under "Compensation and Superannuation"

243. **Motion** by the Chairman of the Compensation and Superannuation Committee: That the remainder of the Annual and Supplementary Reports of Council under "Compensation and Superannuation" be approved.

Compensation and Partnerships

244. **Motion** by GATESHEAD: That further efforts be made to secure to doctors payment of that part of their compensation to which they can be shown to be entitled on taking another doctor into partnership.

Pension Arrangements for Consultants

245. **Motion** by MARYLEBONE: That the present pension arrangements for consultants should be re-examined.

PRIVATE PRACTICE

246. **Motion** by the Chairman of the Private Practice Committee (Alexander Brown) on behalf of the Council: That the Annual and Supplementary Reports of Council under "Private Practice" (Docs. A.R.M. 2, paras. 142-155, and A.R.M. 3, paras. 267-275) be received.

Drugs for Private Patients

247. **Motion** by the Chairman of the Private Practice Committee: That para. 142 of the Annual Report of Council be approved.

248. **Amendment** by MARYLEBONE: That this Meeting calls on the Government to put an end at an early date to the breach of faith whereby drugs are withheld from private patients.

Medical Examination of Elderly Drivers

*249. **Motion** by LANCASTER: That, with reference to para. 144 of the Annual Report of Council, the question of the medical examination of elderly drivers should be reopened.

250. **Motion** by MID-CHESHIRE: That this Meeting reaffirms the view expressed in Minute 65 of the A.R.M., 1956, and instructs the Council to reopen the matter with the Accident Offices Association.

Certificates in Respect of Absent Voters

251. **Motion** by the Chairman of the Private Practice Committee: That para. 147 of the Annual Report of Council be approved.

252. **Amendment** by RUGBY: That this Meeting is still dissatisfied with Form R.P.F.7 as now amended, and presses for full implementation of Minute 71 of A.R.M., 1956.

Accidents Compensation

253. **Motion** by MID-CHESHIRE: That the Council be requested to arrange with the Medical Insurance Agency an appropriate insurance policy covering injury or loss of life incurred by doctors in attending accidents.

Remuneration of Medical Officers of Private and Public Schools

254. **Motion** by the Chairman of the Private Practice Committee: That the following Recommendation of Council (para. 154 of Annual Report) be adopted:

That where practitioners are appointed to undertake special routine medical examination of scholars at private or public boarding schools, and to advise the school authorities generally on matters of health and hygiene, the remuneration should not be less than £1 15s. per scholar per annum for duties outside the National Health Service.

Remainder of Report under "Private Practice"

255. **Motion** by the Chairman of the Private Practice Committee: That the remainder of the Annual and Supplementary Reports of Council under "Private Practice" be approved.

Shortened Form of Insurance Examination

256. **Motion** by DUMFRIES AND GALLOWAY: That the shortened form of insurance examination be abolished.

257. **Motion** by DORSET: That this Meeting considers that the fee for a short examination for life assurance should be £1 1s.

Fees for Certificates for Notifiable Diseases

*258. **Motion** by HENDON: That in the opinion of the Representative Body the fees payable for the notification of infectious diseases, vaccinations, and immunizations should be increased forthwith and that the Council be requested to take appropriate steps to secure this object at an early date.

259. **Motion** by HARROW: That negotiations be instituted to increase the present fees payable by local authorities for the notification of infectious diseases, vaccinations, and immunizations.

Poisons List

260. **Motion** by RUGBY: That synthetic oestrogens be included in the Poisons List in Schedule 4.

Parking of Doctors' Cars

261. **Motion** by KENSINGTON AND HAMMERSMITH: That this Meeting is concerned at the difficulties of parking a car in present-day traffic conditions when a doctor is using a car in the course of his professional commitments, and, bearing in mind that additional problems will arise on the introduction of parking meters, instructs the Council to make urgent representations to the Ministry of Transport to assist doctors in their ever-increasing traffic problems.

MEDICAL ETHICS

262. **Motion** by the Chairman of the Central Ethical Committee (R. Forbes) on behalf of the Council: That the Annual and Supplementary Reports of Council under "Medical Ethics" (Docs. A.R.M. 2, paras. 138-141, and A.R.M. 3, para. 266) and the Revised Ethical Code relating to Consultations and Cognate Matters (Appendix VIII) be received.

Ethical Code Relating to Consultations and Cognate Matters

263. **Motion** by the Chairman of the Central Ethical Committee: That the following Recommendation of the Council be adopted:

That the revised "Ethical Code Relating to Consultations and Cognate Matters" (Appendix VIII to the Supplementary Report) be approved.

Remainder of Report under "Medical Ethics"

264. **Motion** by the Chairman of the Central Ethical Committee: That the remainder of the Annual and Supplementary Reports of Council under "Medical Ethics" be approved.

Members of Profession and Evidence in Courts of Law

265. **Motion** by EAST YORKS: That this Meeting deprecates the increasing tendency for members of the profession to appear in the Court of Law and give evidence which is prejudicial to the competence and prestige of other medical practitioners, when the evidence is a matter of opinion which is not based on personal knowledge of the case.

General Practitioners and Dentists' Premises

266. **Motion** by MARYLEBONE: That the following resolution adopted by the Central Ethical Committee in December, 1950, be referred to the Council for consideration with a view to its rescission:

That in the interest of maintaining high ethical standards, general practitioners and dentists should, wherever practicable, avoid sharing the same premises for professional purposes.

OVERSEAS

267. **Motion** by the Chairman of the Overseas Committee (J. L. Gilks) on behalf of the Council: That the Annual Report of Council under "Overseas" (Doc. A.R.M. 2, paras. 220-223) be received.

268. **Motion** by the Chairman of the Overseas Committee: That the Annual Report of Council under "Overseas" be approved.

COMMONWEALTH MEDICAL ADVISORY BUREAU

269. **Motion** by the Chairman of the Committee of Management of the Commonwealth Medical Advisory Bureau (A. M. A. Moore) on behalf of the Council: That the Annual Report of Council under "Commonwealth Medical Advisory Bureau" (Doc. A.R.M. 2, para. 224) be received.

270. **Motion** by the Chairman of the Committee of Management of the Commonwealth Medical Advisory Bureau: That the Annual Report of Council under "Commonwealth Medical Advisory Bureau" be approved.

INTERNATIONAL MEDICAL ADVISORY BUREAU

271. **Motion** by the Chairman of the Committee of Management of the International Medical Advisory Bureau (A. M. A. Moore) on behalf of the Council: That the Annual Report of Council under "International Medical Advisory Bureau" (Doc. A.R.M. 2, para. 225) be received.

272. **Motion** by the Chairman of the Committee of Management of the International Medical Advisory Bureau: That the Annual Report of Council under "International Medical Advisory Bureau" be approved.

PUBLIC RELATIONS

273. **Motion** by the Chairman of the Public Relations Committee (H. Guy Dain) on behalf of the Council: That the Annual Report of Council under "Public Relations" (Doc. A.R.M. 2, paras. 184-191) be received.

Remuneration Claim

274. **Motion** by WORCESTER AND BROMSGROVE: That this Meeting notes with appreciation the efforts of the Public

Relations Officer (Mr. John Pringle) in connexion with the recent remuneration claim.

275. **Motion** by WEST SUFFOLK: That a public press campaign be planned to show the doctor's position in the present dispute, and, if necessary, space should be bought in the popular press for this purpose.

276. **Motion** by NORTH GLAMORGAN AND BRECKNOCK: That the negotiating body be instructed to initiate a wider public campaign to explain and organize support for the doctors' remuneration claim.

Remainder of Report under "Public Relations"

277. **Motion** by the Chairman of the Public Relations Committee: That the remainder of the Annual Report of Council under "Public Relations" be approved.

REFORM OF THE NATIONAL HEALTH SERVICE

278. **Motion** by the Chairman of the Amending Acts Committee (H. H. D. Sutherland) on behalf of the Council: That the Annual Report of Council under "Reform of the National Health Service" (Doc. A.R.M. 2, paras. 104-106) be received.

Code of Conduct for Patients

279. **Motion** by the Chairman of the Amending Acts Committee: That para. 104 of the Annual Report of Council be approved.

280. **Amendment** by MANCHESTER: That complaints against doctors be not accepted by executive councils unless accompanied by a deposit, which may be forfeit if the complaint proves to be unjustifiable.

Remainder of Report under "Reform of the National Health Service"

281. **Motion** by the Chairman of the Amending Acts Committee: That the remainder of the Annual Report of Council under "Reform of the National Health Service" be approved.

ARBITRATION MACHINERY

282. **Motion** by the Chairman of Council: That the Supplementary Report of Council under "Arbitration Machinery" (Doc. A.R.M. 3, para. 254) be received.

283. **Motion** by the Chairman of Council: That the Supplementary Report of Council under "Arbitration Machinery" be approved.

284. **Motion** by MARYLEBONE: That this Meeting recommends the appointment of an impartial, independent, non-political body to deal with disputes when Whitley and Ministry decisions are unacceptable to the profession.

ARMED FORCES

285. **Motion** by the Chairman of the Armed Forces Committee (J. C. A. Dowse) on behalf of the Council: That the Annual Report of Council under "Armed Forces" (Doc. A.R.M. 2, para. 192) be received.

286. **Motion** by the Chairman of the Armed Forces Committee: That the Annual Report of Council under "Armed Forces" be approved.

OTHER ASSOCIATION ACTIVITIES

287. **Motion** by the Chairman of Council: That the Annual Report of Council under "Other Association Activities" (Doc. A.R.M. 2, paras. 233-242) be received.

Catering

288. **Motion** by WINCHESTER: That Council be instructed to undertake alterations to the dining-room to bring it up to the standard worthy of the Association and of its guests, particularly from overseas.

Remainder of Report under "Other Association Activities"

289. **Motion** by the Chairman of Council: That the remainder of the Annual Report of Council under "Other Association Activities" be approved.

OTHER MOTIONS BY DIVISIONS AND BRANCHES*Traffic Problems and Accident Risks*

290. **Motion** by MARYLEBONE: That this Meeting urge the Government to accelerate its plans to deal with major traffic problems with a view to reducing the hazards of life and limb.

Committee of Inquiry into Medical Services

291. **Motion** by EXETER: That the B.M.A. Committee appointed to institute an inquiry into the whole field of medical services should obtain the views of the profession by a postal questionnaire.

292. **Motion** by READING: (a) That in the view of this Meeting the Council, in conducting its inquiry into the whole field of medical services as instructed by the S.R.M. on May 1, 1957, should consider as a possible method of improvement the forms of health services in operation in other countries. (b) That this Meeting believes that in order to prevent constantly recurring crises of confidence between the medical profession and the Government in the future, there must be permanent machinery for arbitration and review of terms and conditions of service when needed. (c) That the removal of medicine from being the pawn of party politics and vote catching is essential by the setting up of a permanent Medical Guild, Corporation, or Commission to organize medical services.

Intraprofessional Understanding

293. **Motion** by WINCHESTER: That Council be instructed to establish a Central Department to promote and foster intraprofessional relationship and understanding.

Personal Medical Card

294. **Motion** by INVERNESS-SHIRE: That the Council consider proposals for the introduction of a "personal medical card," such card to be suitable for carrying on the person and to contain important medical data such as blood group, liability to diseases such as diabetes, epilepsy, and haemophilia, and sensitivity to drugs such as penicillin and sera.

Inflammable Clothing

295. **Motion** by LEEDS: That the manufacture and sale of dangerously inflammable clothing should be prohibited as soon as possible.

Report on Cruelty to and Neglect of Children

296. **Motion** by DORSET: That the Representative Body is of the opinion that the recommendations in Sections 130 and 131 of the Report of the Joint Committee of the British Medical Association and the Magistrates' Association on "Cruelty to and Neglect of Children" should be deleted from B.M.A. policy.

(Paras. 130 and 131 of the Report read:

"130. Some degree of family case work necessarily falls to a local authority in carrying out its duties under the Children Act, particularly in the ordinary course of dealing with investigation and inquiry about applications for care. At this stage, local authorities should do everything in their power to help the family to solve its own problems. There is, however, no express provision in the Children Act which empowers local authorities to incur expenditure specifically on preventive work. Such preventive work as is undertaken is carried out by visiting officers in the normal course of their duties under the Children Act, the Children and Young Persons Act, the Children and Young Persons (Amendment) Act, and in co-operation with other services as recommended in the joint circular of July, 1950, already referred to.

"131. It is therefore recommended that the provisions of the Children Act should be extended to empower the children's department of the local authority expressly to incur expenditure on preventive work, and encouragement should be offered to them to use this power. Their

officers would then be able to spend a definite proportion of their time on this important aspect and their early efforts might well mean a cut in expenditure by the local authority in connexion with its other responsibilities, for as a result of intensive case work it might be possible to keep a family together and prevent the necessity of taking a child into the care of the local authority.")

ELECTIONS

297. **Elect:** Chairman; Deputy Chairman; Treasurer; 10 Members of Council by R.B.; 2 Members of Council by Representatives of Scottish Constituencies; 1 Member of Council by Representatives of Constituencies in Wales (including Monmouthshire); and Members of Standing Committees and of A.R.M. Agenda Committee.

MINUTES

298. **Motion:** That the chairman be empowered, on behalf of the Meeting, provisionally to approve the Minutes of this Meeting.

299. Any other business.

ANNUAL MEETING

EDINBURGH GRADUATES' DINNER

The Edinburgh Graduates' Dinner will be held in the Royal Station Hotel, Neville Street, Newcastle upon Tyne, on July 13 at 7 for 7.30 p.m. All Edinburgh graduates attending the A.R.M. or resident in the area, together with their ladies and guests, will be welcome. Tickets (25s. each, exclusive of wines) may be had on application with remittance to Dr. E. R. C. Walker, 7, Drumsheugh Gardens, Edinburgh, 3.

OPHTHALMIC GROUP COMMITTEE

The Ophthalmic Group Committee met on June 13 with Mr. O. GAYER MORGAN in the chair.

Sessional Fee for School Ophthalmic Work

It was reported that the agreed fee for ophthalmic work in the school health service as notified to local education authorities in Ministry of Education Administrative Memorandum No. 303 of October 21, 1948, was £6 6s. for sessions of three hours and *pro rata* for shorter sessions. Following the new agreement with the local authority associations which came into effect as from January 1, 1957, and which increased the fee for consultant work for local authorities from £4 4s. to £5 5s. for sessions of 1½ to 2½ hours, the Ministry of Education was asked to make a proportionate adjustment in the fee of £6 6s.

The Ministry of Education had replied that, since there was now proper Whitley machinery for the consideration of the remuneration of medical practitioners under contract with local authorities, consideration of the revision of the fee should take place through the Whitley Council and not direct with the Department.

The Group Committee considered an extract from the agreement with the local authority associations, and decided that the matter should not be pursued for the present.

Future of the Ophthalmic Services

Consideration of a report on the future of the ophthalmic services as finally approved by the Chairman of the Group Committee and the President of the Faculty of Ophthalmologists following the last meeting of the Committee was deferred until the next session to enable reports to be received from regional meetings which had discussed the report and a précis to be prepared of the points raised.

Sight-testing Fee

Consideration was given to a letter from the Ministry of Health stating that it was for the Royal Commission to interpret its terms of reference, but, subject to this point, the Ministry thought that ophthalmic medical practitioners were not excluded from consideration by the Commission and that it was open to the profession to draw the Commission's attention to this group and ask for a recommendation to cover it.

It was agreed to write again to the Ministry and to defer further consideration of the matter until the next meeting. A document reviewing the position should be prepared, and, if necessary, a special meeting called.

Use of General Practitioner's Surgery

The Group Committee considered an extract from the minutes of the Central Ethical Committee which stated that it was quite usual for an ophthalmic medical practitioner to examine patients who wished to be seen at their own doctor's surgery. The practice was particularly prevalent in country districts where the only convenient alternative might be for the patient to go to an optician. It was, of course, necessary to ensure that there was no breach of the regulations and that the freedom of choice of the patient was maintained. If a general practitioner made his consulting-room available to an ophthalmic medical practitioner he should similarly make it available to all other ophthalmic practitioners within a given radius who might wish to take advantage of such facilities. The Central Ethical Committee reaffirmed its strong disapproval of a dispensing optician attending a general practitioner's surgery.

The Group Committee agreed that so long as the principle of freedom of choice was preserved there was no objection to the practice referred to, and it was further agreed to recommend the Central Ethical Committee to amend its final resolution to read "That the Committee reaffirm its strong disapproval of any optician attending a general practitioner's surgery."

N.O.T.B. Clinics in Industry

The Occupational Health Committee had considered the views of the Ophthalmic Group Committee on the letter from the National Ophthalmic Treatment Board Association inviting co-operation in extending the facilities for ophthalmic examinations at industrial establishments, the Ophthalmic Group Committee having expressed support for the proposal, subject (1) to an economic rent being paid by ophthalmologists who took part in the scheme; (2) to the work not being restricted to sight-testing but embracing the wider aspects of ophthalmic work arising in connexion with the industry concerned; (3) to an opportunity being given to all local ophthalmologists to work in the clinics.

The Occupational Health Committee expressed its support for the first two provisos, but felt that there would be both administrative and clinical objections to giving all local ophthalmologists an opportunity to work in a clinic of the kind proposed. Such clinics could normally be held only at infrequent intervals in the very largest industrial establishments. In those industrial concerns where there was a particular eye hazard and more frequent eye clinics might be justified, there would be considerable advantages if the same ophthalmologist attended all clinics.

The Group Committee decided to defer consideration of the matter to enable a report to be prepared on discussions on the subject which took place about seven years previously.

Blindness Certification

The Committee further considered the case of a member who, on returning from the Commonwealth, wished to undertake blind certification on behalf of the local authority, but, because he was not regarded as of consultant status, the county medical officer of health was not prepared to make use of his services. A letter had been received from

the Ministry of Health stating that there was no legal definition of consultant status, but the only clear evidence that an individual doctor had that status was that he held or had held a consultant post. The Ministry suggested that the Group Committee might like to inform the county council that it regarded the member's past appointment as equivalent to a consultant post in this country. The letter added that the Ministry would not seek to maintain that no one could be of consultant status unless he held or had held a consultant post in this country, but only that a man's hospital appointment, present or past, must have been at consultant level.

The Group Committee decided to write to the county council informing it that it regarded the member's past appointment as equivalent to a consultant post in this country, and to send the county council a copy of the Ministry's letter.

Licensing of Civil Aircraft Pilots

The Group Committee further considered the matter of eye examinations in connexion with the licensing of civil aircraft pilots. It was suggested that the Ministry of Transport and Civil Aviation might be prepared to accept an optician's report as satisfactory when deciding that a person's visual qualities were adequate for piloting an aircraft.

The Group Committee decided to draw to the attention of the Ministry the fact that its requirements contained no reference to whether a candidate for a licence had any disease of the eyes.

Pay-bed Accommodation

The Group Committee considered a letter from a member, who said that when ophthalmologists entered the National Health Service the B.M.A. advised them to cross out item 4 on the contract which had to do with attending patients under Section 5 (i). He wondered whether consultants entering the Service after the appointed day had been warned or whether they unwittingly signed without deleting the paragraph. If so, they had laid themselves open to having to treat patients who had all the facilities of private patients but paid no surgeon's fee. The Group Committee felt that the question was wider than just an ophthalmic one, and referred the matter to the Central Consultants and Specialists Committee for its comments.

Pupils at Fee-paying Schools

The Group Committee considered, and, with amendments, approved, a draft letter to be sent to the Society of School Medical Officers, the Incorporated Association of Headmasters, and the Association of Headmistresses.

Statutory Registration of Opticians

Following its inquiry whether an indication could be given of when a Bill would be introduced for the statutory registration of medical auxiliaries, the Committee considered the reply from the Ministry of Health, which said that it was not aware that any medical points were outstanding following the discussions which had taken place, but that if the Ministry was informed of any it would consider them in drafting the Bill. The Group Committee deferred consideration of the subject until the next meeting, when it would be given priority on the agenda.

Range of Spectacles for Hospital Out-patients

A letter from the Ministry of Health stated that it would not be reasonable to expect hospitals to provide a wider choice of frames than the Supplementary Ophthalmic Service, since the latter supplied about ten times as many pairs of glasses as the former, and that it was proposed to consult the Standing Ophthalmic Advisory Committee on the suggestions made in the Group Committee's letter and acquaint the Group Committee of the result in due course.

Measurement of Spectacle Frames

The Group Committee decided to make no comment on a letter from the British Standards Institution which stated that the preparation of a British Standard for spectacle frames had been authorized by the Ophthalmic Standards Committee of the British Standards Institution and asking for views on the methods which had been used for the measurement of spectacle frames.

Leaflet for Issue to New Graduates

The Group Committee considered a draft leaflet on the subject of eye examinations for issue to new graduates. It was decided to forward a copy to the N.O.T.B.A. asking for its views upon it, the N.O.T.B.A. having originally suggested the idea.

Supplementary Ophthalmic Services Handbook

The Group Committee decided to refer to a sub-committee appointed to compare the draft revised handbook with the old handbook a letter from a member asking for special consideration to be given to the paragraph relating to reference back to the general practitioner of patients who do not reach a satisfactory standard of vision or in whom some abnormality of the eyes is present or suspected.

Reminder Notices

A letter from a member enclosed copies of correspondence between the clerk to the Hull Ophthalmic Services Committee and the Ministry of Health relating to reminder notices sent by ophthalmic opticians to hospital eye service patients. The letter said that the Ministry letter of May 16 embodied so definite and surprisingly unequivocal a statement as might merit wider publication. The letter from the member referred to ophthalmic opticians who received forms H.E.S.1 for dispensing—e.g., those issued from the school clinics—for patients whom they had not previously sight-tested and were in the habit of sending "reminder notices" to those patients for sight-testing. It invited the Group Committee to consider whether it should ask the Ministry to discontinue the issue of "reminder notices" in respect of such patients.

The Ministry letter referred to stated: "... a patient under the care of the hospital eye service should continue to receive ophthalmic treatment from that source if in the view of the hospital ophthalmologist this is the proper course. The Minister has been advised by his Standing Ophthalmic Advisory Committee that while a patient who had been referred to the hospital eye service might be returned to the Supplementary Ophthalmic Service for the supply of glasses at the discretion of the hospital ophthalmologist who examined him, in all other cases he should remain within the hospital eye service for any treatment, glasses, or observation necessary." The Group Committee agreed to write to the Ministry expressing its full support for this and the hope that more official action would be taken on it.

Supply of Glasses

Attention was drawn to the fact that in a revision of form O.S.C.3 the Ministry of Health used the old phraseology "take it to any ophthalmic optician or dispensing optician who has undertaken the supply of glasses under the National Health Service." It was stated that the same phrase appeared on form O.S.C.2. It was agreed to ask the Ministry to use wherever applicable the phrase "any optician who provides dispensing services under the Act."

TRADE UNION MEMBERSHIP

The following is a list of local authorities which are understood to require employees to be members of a trade union or other organization:

Metropolitan Borough Councils.—Fulham, Southwark.
Non-County Borough Councils.—Crewe.

METROPOLITAN COUNTIES BRANCH PRESIDENT'S ADDRESS

The newly elected president of the Branch, Dr. J. W. MCCARTHY, chose "The Problem of Pain" as the subject of his address, delivered on the occasion of the 99th annual general meeting of the Metropolitan Counties Branch held at B.M.A. House on June 18.

In answer to the question, "What is pain?" Dr. McCarthy suggested that a broad division might be to classify it as psychic and somatic. Somatic was the type of pain which originated as an impulse from a noxious stimulus in the skin, subcutaneous tissue, muscles, bone, and viscera, and psychic might be said to originate in the frontal lobes of the brain. Somatic pain might be subdivided broadly into superficial pain, deep pain, and mixed pain. Pain was, then, in general a warning that things were not all right with the body, and was a stimulation that something should be done about it. It was in most cases the reason that medical aid was at first invoked, and the general practitioner was nearly always the first to be approached.

Interpretation of Pain

The correct interpretation of pain must be the aim and the goal of every doctor, but particularly the general practitioner, because his decision in the beginning must have a vital bearing on the course of the disease. He was helped, of course, by his knowledge of the patient, because no two races, no two families, no two individuals reacted in the same way to pain, and previous knowledge of the individual and his or her particular reaction was extremely useful. In effect, the patient said to the doctor, "I have a pain here, doctor, and I want it cured." It sounded easy and in many cases it was easy—easy, that is, to cure the pain, but that of course did not solve the problem. Before attempting to cure the pain it was necessary to find out or endeavour to find out the cause, and that is where the true clinician with his experience and knowledge was seen at his best. He had to investigate every aspect of the pain, its distribution, its character, its duration, its relation to previous pains, its reaction to food, exertion, position, its mode and time of onset. Most important, he had to decide at once whether it was serious or trivial, whether it was urgent and something that required perhaps immediate operation. He could not always allow himself to give the patient relief at once, for he might mask a perforation or an acute appendix. Having made his diagnosis, he was at the present time armed as he never was before with remedies. Dealing with the question of intractable pain, Dr. McCarthy said that in approaching that difficult subject the patient could of course be kept drugged, and practitioners were well armed with drugs for so doing; but he suggested that a little more attention might be paid to the surgical relief of intractable pain. In the United States there were clinics which dealt with that branch of surgery.

Turning to the question of psychic pain, Dr. McCarthy asked whether it was as real as somatic pain. In his view it was just as real and just as painful and much more difficult to treat. Where did it begin and where did it end? It was not possible really to assess the part which was played in pain by the mind. Referring finally to the moral aspect of pain, some patients and perhaps some doctors, he said, had been troubled from time to time about the good that it did to their souls to suffer pain in this life. That was all very noble and much to be admired, but it was not necessary to undergo pain to save one's soul. That position had been made very clear to many people this year by the answers which the Pope gave to questions submitted to him by the Italian Society of the Science of Anaesthetics.

Election of Officers of the Branch for 1957-8

Dr. Annis Gillie was elected unopposed president-elect for the session 1957-8, and Drs. Joan Chappell, R. B. L. Ridge, Samuel Smith, and R. H. Moore were elected vice-presidents. Dr. Lena W. Williams was elected, unopposed, honorary treasurer, and Drs. L. J. Stoll and J. Wiseman were elected joint honorary secretaries.

Questions Answered

Preliminary Trip to U.S.A.

Q.—I intend to emigrate to the U.S.A., and must make a preliminary trip to find out the situation with regard to employment and to try to get fixed up. Could I claim this trip as an expense against income tax?

A.—Expenditure on a journey of this nature cannot be said to be incurred for the purposes of an existing practice or in the carrying out of the duties of an employment. It can be regarded only as a personal expenditure prior to the acceptance of any future employment, and as such is not the subject of any form of income-tax allowance.

Scottish News

PART-TIME LOCAL AUTHORITY WORK IN SCOTLAND REVISED FEES

Committee C of the Medical Whitley Council has agreed on a new scale of fees for medical practitioners undertaking part-time work for local authorities in Scotland. It recommends that general practitioners should receive £3 12s. 6d. per session (normally one and half to two and a half hours) for regular weekly individual, occasional, or additional sessions and emergency attendances, a reduced fee of £2 7s. 6d. to be payable for sessions not normally exceeding one hour. Revised fees are also set out in the enclosure to M.D.C. circular No. 35 for certification of persons of unsound mind and mental defectives, examination of boarded-out children and boarded-out mental defectives, examinations and reports by medical officers to fire brigades, medical examination for superannuation, elementary lectures to the public on first-aid, home nursing, etc., and vaccination and immunization records. For other services the rate should be arranged after consultation between the local authority and the local Branch or Division of the B.M.A. The revised scheme should take effect from January 1, 1957.

Fees payable to visiting medical officers to establishments maintained by local authorities and mileage allowances in respect of duties referred to in the circular are still under consideration by Committee C.

DEPUTATION TO SECRETARY OF STATE

A deputation from the Scottish Committee of the B.M.A. (Dr. G. W. Ireland, Dr. Wilkie Millar, and Dr. E. R. C. Walker) met Mr. John S. Maclay, the Secretary of State for Scotland, on June 19 in order to give their views on the staffing of the Bruntsfield and Elsie Inglis Hospitals for women. Mr. Maclay promised to communicate with the Association shortly regarding the matter discussed.

The Australian Federal Minister for Health, Dr. CAMERON, has forecast a more comprehensive Australian health insurance scheme. On his return from the General Assembly of W.H.O. at Geneva he stated that Canada and the U.S.A., which he had also visited, were improving their health insurance schemes. As more people joined, it was easier to make health insurance more attractive, and improvements could be made in the Australian scheme as a result of information gained overseas.

Correspondence

Because of heavy pressure on our space, correspondents are asked to keep their letters short.

Jamaica Medical Service

SIR.—The Jamaica Government is seeking to recruit British doctors on contract terms, so as to prevent the breakdown of their medical service. The terms, in summary, are: £900 by £50 to £1,050; £1,250 by £50 to £1,400; £1,500 by £50 to £1,600. The point of entry depends on the experience of the applicant. There is also a gratuity in lieu of pension rights, and furnished quarters at a rental of 10% of salary. These terms are the same as those paid to general duty medical officers of the permanent medical service, with the exception (1) as the permanent service is pensionable the above gratuity is not paid; (2) quarters on rental are not usually provided for locally recruited general duty officers. Some officers of this category in country hospitals do, however, get this facility.

Some weeks ago the press announced that 25 posts (about one post in four) of the establishment were vacant. If the resignations continue at the previous rate, soon it will be one post in three. At the time of the press announcement the Minister of Health was quoted as saying that he intended to advertise for ten doctors abroad—the rest of the posts would be "kept" for Jamaicans. This latter pious resolve recalled the fact that the Jamaicans had been in these posts—which were now being "kept"—and had left them because the Government would not pay them an adequate salary. Indeed, had they not left them there would now be hardly one vacancy and no necessity to advertise abroad, using, curiously enough, as inducement, the very same scale of salaries which has led to the hazardous condition of the service. As the numbers of doctors diminished, the Minister's medical administrators' skill of doing much with little increased to meet the emergency, but, skilful as they are, there is a limit to this prestidigitation. Of the position of the patient during this display of administrative technique, it is not profitable here to inquire.

It may be illustrative of conditions in Jamaica now to quote the experience of another department—that of agriculture. About two months ago the press announced that in six weeks five veterinary surgeons had left the service—one-third, the second third, of their effective veterinary staff. The press gave the impression, on what authority was not made clear, that £1,200 would be offered as the minimum salary for recruits instead of £900.

A doctor who thinks of coming to Jamaica would wish to know, among other things, the cost of living and the rate of income tax, compared with those of the United Kingdom. The answer is given most succinctly in an information leaflet sent by the University College Hospital (in Jamaica) to applicants from Britain who apply for medical staff appointments here. It reads as follows:

The cost of living is somewhat higher than in the United Kingdom, but income tax is on a slightly lower scale. Secondary education in Jamaica is extremely expensive, and in fact almost every necessity of a normal urban existence costs more here than in England—except petrol and cigarettes.

The Government of Jamaica admits that the salaries it is offering are inadequate, for a letter received by the B.M.A., Jamaica Branch, May 4, 1957, from a Ministry official had this penultimate paragraph:

With respect to salaries, I am informed by the Honourable Minister that it is deemed to be impracticable to consider revision of doctors' salaries separately from other technical and professional branches of the Government Service—and that the Ministry of Finance is being asked to undertake a comprehensive examination of the salaries of all Government technical personnel.

In October, 1956, Dr. Ian Grant, Chairman of the Representative Body of the B.M.A., London, visited Jamaica. He

led deputations of the Jamaica Branch to the Chief Minister and also to the Minister of Health. The text of his argument was that the Jamaica Government does not pay adequate salaries to the doctors in its service, and, that being the case, the service was in danger of collapsing. That danger is at last obvious to the Government, and to meet it, having failed in one market, they are trying to get what they seek in another market. Doctors in Britain, therefore, ignorant of the circumstances, are offered terms so wretchedly unrelated to local conditions that even now the "revision [of the terms] is under comprehensive examination." The B.M.A., Jamaica Branch, suggests to doctors who would like to come to Jamaica to wait until the results of the "comprehensive examination" are known. We do not think they would have to wait many weeks. The situation in the medical department is too precarious to admit of long delay to a solution of the crisis, one way or another.—I am, etc.,

VERNON F. ANDERSON,
Honorary Secretary,
Jamaica Branch, B.M.A.

Whitfield Town, Jamaica.

Reform of Health Service

SIR.—One of the fundamental forces which guides and stimulates human activity is incentive. Let us not pretend that doctors differ from other humans in this respect. I believe that almost all the weaknesses of the National Health Service stem from the methods by which remuneration is distributed and that a total reform and revitalization of the N.H.S. can be achieved through this medium alone. The present system was agreed by our leaders in 1948 at a time when they may have considered that its disadvantages were outweighed by the protection provided by Spens against inflation. Such an agreement is no longer valid, and the time is ripe for us to open negotiation on new methods of distribution while the Royal Commission considers the general level of remuneration for the profession as a whole.

Under the present system the incentives are to provide the minimum service to the maximum number of patients, using the smallest amount of equipment and operating from the poorest possible premises. If in addition, to avoid the repeated observation of patients with self-limiting illnesses, remedies of excessive potency are prescribed, and all other patients are referred to hospital, the field is clear to get out and earn more from part-time appointments, and one is left with little worry or responsibility. Avarice, incompetence, laziness, and unscrupulousness are rewarded; diligence, skill, and interest spell longer hours for less reward. The fact that this devitalizing system has not reduced the profession to the moral depths speaks well for the doctor as an individual. The answer is surely to invert the whole structure and rebuild it. The keystone must be reward of diligence, skill, and service to the patient, with incentive to be well equipped and to increase in ability.

I suggest that the following steps should be taken at the earliest opportunity to save the tottering structure and encourage the doctor to regain his self-respect: (1) Advanced G.P. services paid for on a fee-for-service basis on the lines of the present maternity service should be introduced at intervals to cover the type of case which could reasonably be treated either by the G.P. or by the hospital service; the decision in each case would depend on the doctor's assessment of the particular problem, as it does now. A suitable list of services for the first year would be: (a) acute infections of the lung in adults; coronary thrombosis; cerebral vascular accidents; congestive cardiac failure; acute rheumatic fever; acute nephritis—the fee could be arbitrarily fixed or paid per visit up to an agreed maximum; (b) minor surgery with a fixed scale of fees. (2) Coincidentally the basic capitation fee would be reduced. This reduction would be based on the anticipated cost of the fee-for-service scheme, less a proportion of the saving in cost to the hospital service. (3) The actual expenses incurred by each doctor or partnership, based on the figure accepted by the Commissioners for Inland Revenue, would be paid, with an upper limit fixed

in proportion to the previous year's income. (4) Earnings from sources outside the N.H.S. would have no place in the calculation of remuneration within the Service. (5) There would be no prescription tax on essential drugs, but the tax on other drugs would be increased to offset this. The criterion would be whether the drug prescribed is of value in the management of a scheduled organic disease from which the patient is suffering.

I suggest that these measures alone would so profoundly alter the N.H.S. that it would become the envy of other nations rather than an object of scorn and ridicule, with inestimable benefits to the sick person; the competent doctor, and the national Exchequer.—I am, etc.,

Grenoside, Yorks.

IAN A. WOOD.

Senior Registrars in Dermatology

SIR,—Undoubtedly senior registrars in dermatology have had a difficult time during the past five years, and too many have waited too long for consultant posts. As a consequence applicants are not coming forward to fill senior registrar posts as they fall vacant, and, in teaching hospitals in particular, this is seriously embarrassing the service to the patient and the teaching of the undergraduate. It is particularly disappointing that men holding senior registrar posts in general medicine, for many of whom the prospect of a consultant appointment must be small, should not turn to a specialty like dermatology where their general medical training would give them definite advantages. Many of us would be pleased to have such recruits to dermatology, even without previous dermatological experience.

Fortunately in the past year, and at an increasing rate, consultant posts in dermatology are becoming vacant, and in the next five years vacancies, together with new posts, should make the prospects for such men good. It will be sad if we have not trained men ready to take these posts, and I feel that a little foresight is necessary now, a looking forward rather than backward to the bad old days.—I am, etc.,

Leeds, 1.

JOHN INGRAM.

General Practitioners and the Hospital Service

SIR,—At the Conference of Local Medical Committees a motion by Gateshead that the matter of closure or change of usage of hospitals be regarded as one of extreme urgency was carried (*Supplement*, June 15, p. 344). The need for urgent action is illustrated by the present dispute in Edinburgh over the staffing of the Bruntsfield and Elsie Inglis Women's Hospitals, which were founded specifically for the care of women and children by women doctors. The South-Eastern Regional Hospital Board has advertised a vacancy for a consultant physician, either male or female, and has also recently appointed a male surgical registrar.

This change of policy is strongly opposed by the medical profession and by the public, and the dispute should never have reached its present acute stage if the board had acted in accordance with the advice given in the Ministry of Health circular R.H.B. 49/132 (referred to in para. 250 of the Supplementary Report of Council, *Supplement*, May 25, p. 282). Unfortunately, it appears that no such circular was issued to regional hospital boards by the Department of Health in Scotland, who did however publish in 1952 a report by a joint subcommittee of the Medical, Hospital, and Specialist Services and General Practitioner Services Standing Advisory Committees on the general practitioner and the hospital service,¹ from which the following statements are quoted: "Those responsible for the organization of the hospital and specialist services should . . . constantly have in mind the repercussions which their policy may have upon general practice" (para. 22); "The regional hospital boards should also make the fullest use of local medical committees . . . for purposes of consultation (para. 23); and "policy must be constantly governed by a full and unqualified recognition of the fundamental importance of efficient general practice to the whole structure of the health service" (para. 24).

It is therefore a valid criticism of the regional hospital board that it has not at any time consulted the local medical committees regarding a change of policy of real concern to general practitioners and their patients in relation to the women's hospitals in the region. The board cannot have been unaware of its obligations in this respect, as the chairman of the joint subcommittee responsible for the report quoted is the present chairman of the regional hospital board. The Edinburgh Local Medical Committee has, since becoming aware of the board's intention, made strong representations both by letter and by deputation to the board, with no apparent effect. The committee's representatives also took part in a deputation received by the Secretary of State for Scotland on Friday, June 14, the outcome of which is awaited with interest.

The issue involved is of more than local significance, and the dispute is another symptom of "the faulty structure of the N.H.S. and of the consequent unsatisfactory relationship between doctors working in it and those who administer it" to which you refer in your leading article entitled "To-day and To-morrow" (*Journal*, June 8, p. 1349).—I am, etc.,

Edinburgh, 12.

E. A. CORMACK,
Vice-chairman, Edinburgh Local
Medical Committee.

Drugs for Private Patients

SIR,—Having read with interest the dispute with various Governments on the question of supply of drugs to private patients, the following simple solution comes to my mind. Possibly it is too simple to be followed. The average amount spent per patient per annum for drugs and dressings under the general-practitioner service of the National Health Service could easily be worked out on a national basis. This figure could then be allowed as an allowance to those members of the public who wish to be treated as private patients. This allowance could easily be withdrawn monthly, six-monthly, or as otherwise arranged, from a bank or post office. Some enterprising insurance company might even be persuaded to convert this allowance into a policy which enables the patient to claim the actual expense of the drugs when, and if, they are prescribed. This figure could be reviewed yearly and increased or decreased as, if, and when required. This repayment in hard cash should stop the complaint that those that subscribe to the health scheme in taxes are getting nothing back in return with which to pay for their drugs and dressings. This scheme could go even further and make an allowance for services of the doctor, etc.—I am, etc.,

Hessle, Yorks.

A. B. FIELDSEND.

Public Health Doctors and Royal Commission

SIR,—Your leading article in the *Journal* of April 13 (p. 872), referring to the terms of reference of the Royal Commission, stated:

The profession has been informed with customary curtness that they exclude medical officers of health, although according to the words used they should be included. This arbitrary dismissal of a section of the medical profession is surely in itself enough to convince doctors that they should not—in present circumstances—co-operate with the Royal Commission. To do so would be to betray some of our colleagues.

The circumstances at that time were the same as at present—namely, that public health medical officers could wait for the findings of the Royal Commission which had no reference to them, and in the light of the Commission's findings for others have another go in Whitley Council C.

It is useless to indulge in recrimination. It is fairly obvious who let the whole profession into it in 1948, and are still at it to-day—those who play the local authority and Minister's game in refusing to accord even *honorary* status to public health medical officers. Some of my colleagues threaten to resign from the B.M.A., which would suit the

local authorities who are trying to get out of Whitley Council C. Personally, I think that this is the best thing that could have happened, in that it provides us with a golden opportunity to go it on our own within the accepted formula but without the unreal and unilateral allegiance to the interests of specialists and general practitioners. The Management Side has been delighted to argue that we cannot be compared with G.P.s and specialists—which is true.

We should now shift to the much surer ground in law that we are required by statute to be not only doctors but to hold special qualifications. Indeed, as compared with our colleagues in medicine and in local government, we are in an especially privileged position in our own right. The positioning is perfect at the present moment for a direct claim in Committee C on such premises. Neither the Minister, in the Management Side, nor the B.M.A. (other interests) is in any position to stop us.—I am, etc.,

Kirkcaldy.

JAMES R. W. HAY.

Doctors and the Health Service

SIR,—I admit the misuse of "allots" kindly exposed by your correspondent, Mr. Arthur Blenkinsop (*Supplement*, June 1, p. 309), in my article under the above heading (*Supplement*, May 4, p. 241). "Allots" would have expressed what was intended. More still, I wish to thank him for his compliment to our profession in writing to the Editor of the *British Medical Journal*, and, with his influential position as a Member of Parliament, expressing the opinion that the present maximum of a doctor's list is too high. This endorses my contention that more time is one of the essentials needed to enable doctors to give the attention they would like to their patients. He, doubtless, is conscious of the exacting nature of medical work, the result of no two cases being alike either in the manifestation of a disease or in its victim. Each is an individual problem. In dealing with such, experience proves that the patient derives most good who gets careful diagnosis, a well-founded forecast of the illness, and thorough treatment; but these take their toll on the doctor's time. "Spot" diagnosis may have its occasional place, but a sound and deliberate approach to subtle and complex matters is widely preferred; and short-circuiting of complete examination invokes disasters, which, where human life is concerned, may be irrevocable.

Further, Mr. Blenkinsop pertinently inquires for statistical evidence of the effect of the National Health Service on family doctors as a whole in regard to their working load. Pending more accurate data from the British Medical Association, may I submit the following? Some remember that, before the war, doctors found it hard to cope with their work adequately. Since then the population has increased (in 1937 46 millions, and in 1956 49 millions), and the doctors have decreased (in 1937 25,930, and in 1956 21,445). The fact that 97% of the population is now legally entitled to a doctor's services imposes considerably increased demands on them. It is true that, before the Act, few citizens were without succour of some sort; indeed, many "panel" doctors, though well aware there was "no money in it," readily included responsibility for treatment of the lesser members of a family. But the significant difference between pre- and post-1948 in regard to the burden of practice is that, in a considerable minority, the doctor's relation to his patients was far less exacting, and even in serving the majority he had to comply with fewer regulations, less form-filling, etc. Further, Mr. Blenkinsop is curious as to why medicals these days complain about excessive calls by patients and yet always stress the importance of early diagnosis. Conditions developing under the National Health Service, however, may suffice to explain the apparent inconsistency. They are often tired from exacting overwork, conscious that much of it goes to patching up a C3 population and too little time remains for instilling the principles of healthy living. Incidentally, as is common knowledge, there has arisen in recent months a special monetary grievance aggravating their general uneasiness about defects in the Service. Is it, on reflection, a matter

for surprise if occasionally their self-restraint gives way to irritability over extra calls?

But it is most encouraging to the profession to have a layman writing to the *Journal*, and, while answering the points he raised, we would enlist his further interest because the British Medical Association is resuming the work of the Medical Planning Commission, incomplete since 1942. Quackery has been ousted, notably thanks to the amazing triumphs of scientific medicine over infective disease; but now another group of disorders has become prominent, the largely avoidable ills. Their elimination is a new goal for medicine. The logical, effective, and, in the long run, economical doctoring of these is not by the costly, customary remedies curing, or, all too often, only palliating, but by eradicating predisposing causes, the outcome of this era. Those who suffer, especially the younger generation, are mostly the victims of their own ignorance, and need indoctrinating in the cultivation of health which fosters self-respect and morale. *En route* to this ideal, increased recruitment of doctors will be an intermediate need, though once a health conscience has been developed nationally the call on doctors and on hospitals will automatically lessen.

In upgrading the status of family practice, planners will do best who postulate doctors of average ability serving patients of fair appreciation. The competent doctor soon "spots" the odd impostor and so can the law. It may be left to tactful administrators to watch the interests of the brilliant or the less forthcoming and give them scope. Specialties have come, and some go, fast; but the family doctor will remain, an indispensable figure in human society.

While praising the admirable advances in the means of succour since 1948, we are at the same time confronted by discreditable defects. Grave dissatisfaction both of patient and doctor remains and tends to destroy the faith of the one and full-hearted performance by the other. A fully efficient National Health Service calls for completion of the conditions necessary for good work by a noble profession for the common weal, in which enterprise we beg the supporting interest of Mr. Blenkinsop.—I am, etc.,

Bristol, 2.

A. WILFRID ADAMS.

Constitutional Issue

SIR,—At the Special Representative Meeting on May 1 I stated that the issue between the profession and the Government was a constitutional one. My opinion has been strengthened by a statement made by a member of the Cabinet, Mr. Harold Watkinson, Minister of Transport, when addressing the Surrey Branch of the B.M.A. at Woking on June 11. "Don't assume," he said, "that this Royal Commission is a sort of delaying tactic or a means of putting a barrier between you and your rights. I think you have a very powerful case." He added that the doctors should not be afraid to put it to the test of a very impartial Royal Commission. Warning doctors not to overplay their hand, the Minister said: "Governments are strange kittle-kattle. You can drive them a certain distance, but if you drive them into a corner they can be stubborn."

May I analyse the Minister's statement? The first part states that the medical profession has a very powerful case, from which it can be implied that the case has been considered. The Minister then advises us to put it to the test of the Royal Commission, the findings of which the Government is not bound to accept. Since we have a powerful case we should not be afraid to put it to the test of an impartial judiciary whose decision both sides would be bound to accept.

If the Minister had merely made his appeal to the profession to put its case to the Royal Commission and had left it at that point there could be no cause for concern. The last part of his statement nevertheless causes grave misgiving because it appears to contain a threat. The *Shorter Oxford Dictionary* defines "kittle-kattle" as people difficult to manage. What a strange remark to be made by a Cabinet Minister.

What does the Minister mean to convey to the profession when he warns doctors not to overplay their hand? Does he mean that if we do not give evidence before the Royal Commission the Government will become stubborn? Will it be driven into a corner if we seek access to and the protection of the courts in respect of our common law rights? The words of Mr. Watkinson on June 11 add emphasis to your statement in your leading article (June 22, p. 1463): "Whatever the Government may think it has achieved, it cannot congratulate itself on the grave and widespread dissatisfaction it has provoked among doctors working in Britain's much-vaunted National Health Service." To which I would add the last lines from the essay *On Liberty* by John Stuart Mill: "A State which dwarfs its men, in order that they may be more docile in its hands, even for beneficial purposes, will find that with small men no great real thing can really be accomplished; and that the perfection of the machinery to which it has sacrificed everything will in the end avail it nothing, for want of that vital power which, in order that the machine might work more smoothly, it has preferred to banish."—I am, etc.,

London, W.8.

J. ARTHUR GORSKY.

Association Notices

TITLE OF GOLD COAST BRANCH

Notice is hereby given by the Council to all concerned that the title of the Gold Coast Branch has been changed to the Ghana Branch.

A. MACRAE,
Secretary.

Diary of Central Meetings

JULY

- 1 Mon. Medical Education Committee, 4 p.m.
- 3 Wed. Welsh Committee (at Shrewsbury), 2.15 p.m.
- 5 Fri. Central Consultants and Specialists Executive, 10.30 a.m.
- 10 Wed. Annual Representative Meeting (at Newcastle upon Tyne), 10 a.m.
- 11 Thurs. Annual Representative Meeting (at Newcastle upon Tyne), 9.30 a.m.
- 12 Fri. Council (at Newcastle upon Tyne), 9 a.m.
- 12 Fri. Annual Representative Meeting (at Newcastle upon Tyne), 10 a.m.
- 13 Sat. Annual Representative Meeting (at Newcastle upon Tyne), 10 a.m.
- 15 Mon. Annual Representative Meeting (at Newcastle upon Tyne), 10 a.m.
- 15 Mon. Annual General Meeting (at Newcastle upon Tyne), 12.30 p.m.
- 15 Mon. Council (at Newcastle upon Tyne), at conclusion of A.R.M.
- 15 Mon. Adjourned Annual General Meeting and President's Address (at Newcastle upon Tyne), 8.15 p.m.
- 24 Wed. Non-professional Group Committee, 2 p.m.
- 25 Thurs. Central Consultants and Specialists Committee, 10.30 a.m.
- 25 Thurs. Ingleby Evidence Committee, 11.30 a.m.
- 25 Thurs. Joint Committee of B.M.A. and Magistrates' Association, 2 p.m.
- 26 Fri. Staff Side, Committee C, Medical Whitley Council (at 14, Russell Square, W.C.), 10 a.m.
- 26 Fri. Full Committee C, Medical Whitley Council (at 14, Russell Square, W.C.), 11.30 a.m.
- 29 Mon. Industrial Nursing Subcommittee, Occupational Health Committee, 2.30 p.m.

Branch and Division Meetings to be Held

- BURTON-ON-TRENT DIVISION.—At the Stanhope Arms, Bretby, Tuesday, July 2, 7.30 p.m., annual general meeting.
- CHELSEA AND FULHAM DIVISION.—At Fulham Town Hall, S.W., Tuesday, July 2, 8.45 p.m., annual general meeting.
- CHESTERFIELD DIVISION.—At Board Room, Chesterfield Royal Hospital, Tuesday, July 2, 8.45 p.m., general meeting.
- DORSET DIVISION.—At Askers Roadhouse, near Bridport, Tuesday, July 2, 8.30 p.m., general meeting.
- EASTBOURNE DIVISION.—At Princess Alice Memorial Hospital, Eastbourne, Friday, July 5, 8.30 p.m., annual general meeting.
- EAST SUFFOLK DIVISION.—At Board Room, Angelsea Road Wing, Ipswich and East Suffolk Hospital, Thursday, July 4, 8.30 p.m., meeting.
- KENT BRANCH.—At Embassy Rooms, Welling, Thursday, July 4, 12 noon, annual general meeting, 1 p.m., lunch.

MID-HERTS DIVISION.—At St. Michael's Manor, St. Albans, Wednesday, July 3, 8 for 8.30 p.m., meeting. B.M.A. Lecture by Dr. F. E. Camps.

NORTH STAFFS DIVISION.—At Hospital Management Committee Board Room, North Staffordshire Royal Infirmary, Stoke-on-Trent, Tuesday, July 2, 8 p.m., meeting.

REIGATE DIVISION.—At Reigate Hill Hotel, Tuesday, July 2, 8.30 p.m., meeting.

SOUTH MIDDLESEX DIVISION.—At Casino Hotel, Tagg's Island, Monday, July 1, 9 p.m., general meeting.

SOUTHAMPTON DIVISION.—At Royal South Hants Hospital, Wednesday, July 3, 8.30 p.m., general meeting.

STRATFORD DIVISION.—At Board Room, Queen Mary's Hospital, Stratford, E., Tuesday, July 2, 8.45 p.m., special general meeting.

WEST SUFFOLK DIVISION.—At Everard's Hotel, Bury St. Edmunds, Tuesday, July 2, 8.30 p.m., meeting.

WEST SUSSEX DIVISION.—At 2, Longfellow Road, Worthing, Sunday, July 7, 4 p.m., annual general meeting.

WINCHESTER DIVISION.—At the Guildhall, Winchester, Saturday, July 6, "At Home," 7 p.m., Reception: 7.45 p.m., Professor W. T. Williams: "Medical Aspects of the Life of Sherlock Holmes"; 8.30 p.m., Supper. Ladies and guests invited.

The annual meeting of the Welsh Group of S.H.M.O.s will be held at B.M.A. House, 195, Newport Road, Cardiff, on Saturday, July 6, at 2.30 p.m.

Meetings of Branches and Divisions

BARNSTAPLE DIVISION

At the annual general meeting the following officers were elected for 1957-8:

Chairman.—Dr. R. E. King.
Vice-chairman.—Dr. J. A. Ritchie.
Honorary Secretary.—Dr. S. G. Brook.
Treasurer.—Mr. K. G. W. Saunders.

DEWSBURY DIVISION

The annual general meeting was held on May 3, 1957. The following officers were elected:

Chairman.—Dr. S. M. Newman.
Vice-chairman.—Dr. M. W. Artherton.
Immediate Past Chairman.—Dr. C. E. Stuart.
Honorary Secretary and Treasurer.—Dr. G. F. Green.

FIFE BRANCH

The following officers were elected on May 12:

President.—Dr. D. Macdonald.
Vice-president.—Dr. Agnes I. Greig.
President-elect.—Dr. P. Aitken.
Honorary Secretaries.—Dr. A. M. Girvan and Dr. H. B. Muir.
Honorary Assistant Secretary.—Dr. W. B. Preston.

LAMBETH AND SOUTHWARK DIVISION

At the annual meeting the following officers were elected for 1957:

Chairman.—Lieutenant-Colonel G. K. Graham.
Vice-chairman.—Dr. W. K. Targett.
Honorary Secretary.—Dr. S. Brest.
Assistant Honorary Secretary.—Dr. J. A. Gavin.

MALAYA BRANCH

The annual general meeting was held on April 19 at the Institute for Medical Research, Kuala Lumpur. Dr. B. R. Sreenivasan was in the chair and 31 members attended. The following officers were elected for 1957-8:

President.—Dr. E. S. R. Alfred.
Immediate Past President.—Dr. B. R. Sreenivasan.
Honorary Secretary.—Mr. W. Gordon.
Honorary Treasurer.—Dr. R. J. Grove-White.

A resolution was passed confirming the decision of the Branch Council that a liaison committee between the Alumni Association and the Branch should work for the formation of a unified association this year. Dr. Sreenivasan spoke on "The Integrity of Medicine."

NORTH LANCASHIRE AND WESTMORLAND BRANCH

The eighth annual meeting was held at Lancaster on May 1. Over 50 members received a civic welcome by the Mayor of Lancaster when they assembled for lunch in the Banqueting Chamber of the Town Hall. The following officers were elected for 1957-8:

President.—Mr. J. McFadzean.
Vice-presidents.—Drs. G. D. Thompson and H. Southworth.
Honorary Secretary.—Dr. J. Wilkie.

REIGATE DIVISION

The annual general meeting was held on May 27. The following officers were elected:

Chairman.—Dr. L. A. Gibbons.
Vice-chairman.—Mr. N. E. Pitt.
Honorary Secretary and Treasurer.—Dr. J. R. Partridge.

INDEX TO VOLUME I FOR 1957

Entries for original articles, leading articles, annotations, and correspondence are indicated by the use of the symbols (O), (L), (A), and (C), respectively. Some subjects dealt with under various main headings in the *Journal*—e.g., "Annotations," "Leading Articles," "Parliament," etc.—are also set out under these headings.

A

ABBAS, T. M.: Clinical trial of glutethimide in labour, 563 (O) (correction, 778).
Abdomen, acute conditions: value of serum amylase estimation in differential diagnosis, 1483.
—perforated duodenum (A. G. Norman and P. S. Wilkins), 445; 587 (C).
—recurrent pain in children, 1240.

ABDULLAH, S.: Calcium chloride for scorpion bites, 1366 (C).

Aberdeen University. See Universities, Aberdeen.

Abortion, induced, psychiatric indications for, 457.
—induction on psychiatric grounds (J. Arkle), 558 (O); 764 (C), 883 (C).

ABRAMS, H. L., and KAPLAN, H. S.: Angiographic interpretation in congenital heart disease, 272.

Academic worker, prestige in Rumania, 1299.

Académie de Chirurgie de Paris, joint meeting with Royal College of Surgeons of England, 1252.

ACCIDENTS:
The Accident Syndrome: The Genesis of Accidental Injury, A Clinical Approach (M. S. Schulzinger), 689.

Deaths from (vital statistics), 835.

On roads: Research on Injuries Sustained in Road Accidents, 144.

—research work in America, 753 (L); 1008 (C).

Acetarsol vaginal pessaries, systemic reactions to, 340 (C).

N-Acetyl-para-aminophenol as an analgesic, 47 (C).

Achlorhydria, oral test for, 600.

ACKLEY, C. See MAGILL, P. L., 1167.

Acne, treatment, 416 (C).

—vulgaris; comedo formation, physiology, 693 (A).

Acroparasthesia; relationship to compression of median nerve in carpal tunnel (H. Garland, J. P. P. Bradshaw, and J. M. P. Clark), 730 (O).

ADAMS, A. W.: Women's footwear, 1306 (C).

ADAMS, D. K.: Multiple sclerosis, 884 (C).

ADAMS, John Bodkin, trial on murder charge (medico-legal note), 712, 771, 828, 889, 954; commitment on other charges, 1307.

Adder bite, 1362 (C).

—antivenin for, 961.

Addison's disease in a nine-year-old girl (R. G. Welch), 980 (O); 1241 (C).

—prognosis of pregnancy and value of cortisone (M. M. Singh), 503; 1302 (C).

Adenoidectomy and tonsillectomy, necessity for (J. Fry), 124 (O); 284 (C), 341 (C), 644 (C), 820 (C).

Adenovirus vaccine, 222.

ADLER, S., elected Fellow of the Royal Society, 756.

Adolph Basser Research Fellowship, 178.

Amodiaquine treatment of "camofom" causing agranulocytosis (L. Glick), 932.

Amoebiasis; treatment with "camofom" causing agranulocytosis (H. F. Hahndel and L. Preger), 387.

AMOROSO, E. C., elected Fellow of the Royal Society, 756.

Amphenone inhibition of adrenal function, 754 (A).

Amphetamine, comparative effect of inhalation and systemic administration, 1374.

Amphetamine poisoning, acute; account of 3 cases (R. Greenwood and R. S. Peachey), 742 (O); 946 (C), 1121 (C), 1303 (C), 1531 (C).

—psychosis, 582 (C), 1121 (C).

Amyloidosis: Congo red, intravenous injection, fatal reaction following (R. K. MacCuish), 1403.

—primary; presenting with confusing clinical picture (L. N. Lee), 804 (O).

ANAEMIA:
Addisonian anaemia, treatment, 1475 (C).

Heinz-body anaemia in newborn (S. Varadi and E. Hurworth), 315 (O).

In old age, 1315.

In rheumatoid arthritis, 509, 701 (C).

Iron-deficiency; Ross Institute bulletin, 1337.

—treatment, 230 (C).

—with liver extract or cyanocobalamin, 1374.

Macrocytic; differential diagnosis, 778.

Pernicious; clinical picture prior to introduction of liver therapy in 1926 and in Edinburgh subsequent to 1944 (Sir Stanley Davidson), 241 (O).

—treated with vitamin B₁₂; prognosis, 297.

Sickle-cell; study of survival rate (G. F. Jacob), 738 (O).

Sickle-cell-thalassaemia disease in S. Turkey (M. Aksoy and H. Lehmann), 734 (O).

Sickling and anaemia, 762 (C).

ANAESTHESIA AND ANALGESIA:
N-Acetyl-para-aminophenol as an analgesic, 47 (C).

Anaesthetic accidents (V. Keating), 505.

Analgesia in hospitals (parliamentary note), 411.

Anesthesia for Surgery of the Heart (K. K. Keown), 809.

Asphyxia due to faulty apparatus, 400 (C).

Buthalitone sodium in out-patient anaesthesia (A. G. Henderson and J. Mackett), 1095 (O).

Cardiac arrest with trichlorethylene (W. Norris and P. Stuart), 860 (O); 1062 (C), 1123 (C), 1243 (C), 1474 (C).

Dipipanone hydrochloride as adjunct in obstetrics and surgery (D. J. Coleman, J. Levin, and P. O. Jones), 1092 (O).

Faculty of Anaesthetists, ninth annual dinner, 774.

Fatal reactions to local anaesthetics, 276 (A); 401 (C), 521 (C), 643 (C).

For aortic reconstruction (H. L. Thornton), 253 (O).

Lignocaine in pudendal block for low forceps, 298 (C).

Local analgesia and Kielland's forceps (J. S. Scott and R. L. Gadd), 971 (O); 1184 (C).
