The view that the present time is more opportune than ever before for a review of the attitude and policies of the central banking authority towards the Indian banking system and that it would serve a very useful purpose in the present difficulties of our economy was expressed by Mr. C. H. Bhabha, Chairman of the Indian Banks' Association, at the annual general meeting of the Association held in Bombay, on the 24th inst. He felt, and very rightly in our view, that, instead of thinking in terms of more controlling legislation and wider powers, cultivation of more cordial and intimate relations and establishment of mutual trust and confidence would go a great way in quickening the progress of banking in this country. At a time when there is need for more banking facilities in this country, it is disquieting to hear from the Chairman of the Indian Banks' Association that the scope for establishing new banking institutions has been reduced "on account of conditions, factors and regulations which are known to those in charge of our monetary, credit and fiscal destinies." The authorities concerned will, perhaps, take a more helpful atitude towards commercial banks if they realise that their present stand harms the public to a greater extent than the banks themselves. For, if the banks forge ahead with their plans and programmes to spread banking habit, it will lead to a speedy expansion of the monetised sector, bring more money into the system, help the implementation of development schemes, and thereby accelerate the economic growth of the country as a whole. If the powers-that-be are unable to see this simple point, it is evidently because their vision is clouded by the socialist fervour which dominates their mind.

Rise in Deposits

An indication of the Scheduled banks' success in attracting more money into the banking system is provided by the rise of Rs. 293 crores (to a peak of Rs. 1,405 crores at the end of 1957) in their deposits, as against an expansion of Rs. 40.72 crores in note circulation. Of this rise in deposits, the State Bank of India alone accounted for Rs. 123 crores, over 70 per cent. of which is said to be due to the rupee counterpart belonging to the U.S. funds, compulsory rupee accounts opened by certain countries as a result of several bilateral trade agreements and "extra pressure exerted on certain classes of organisations having direct or indirect connection with the Government." Despite the curbs and restrictions by the Reserve Bank, advances of Scheduled banks reached a peak of Rs. 750 crores, inland bills purchased and discounted Rs. 132 crores and foreign bills Rs. 65 crores. In this connection, Mr. Bhabha expressed a sense of confusion over the steps taken in the name of selective credit control. As an instance in point, he drew attention to the withdrawal of the directive in respect of advances against sugar within a week of its issue. Another instance is "the random cancellation," in recent months, of the limits under the bill market scheme. Expressing the Scheduled banks' reaction to this cancellation, Mr. Bhabha said:

"Scheduled banks feel somewhat perplexed at random cancellation of limits under the bill market scheme. This scheme, which had to be initiated with some efforts, seems to be becoming rather unpopular both from the banker's as well as the customer's point of view for reasons not unknown to the authorities concerned. In India, where at present there is no properly organised bill market and a long way has to be traversed to increase the velocity of circulation of money through such instruments, it is unfortunate that the good beginning that was made in this direction in the money market of the country seems to be losing ground now."

Control on Branch Banking

Another direction in which Indian banking has progressed with unshaken faith and zeal is in respect of branch banking inside and outside the country, despite all the difficulties referred to above. Mr. Bhabha conceded that a proper and regulated policy of expansion of banking needed every encouragement from the Central Banking authority. Nevertheless, he was constrained to remark that the method and manner of granting permission for opening new branches left much to be desired. He, therefore, made a plea for relaxation of the rigidity with which branch banking was being controlled. Thus he said:

"For the pursuit of this beneficial ideal of expanding banking services in India, it may be suggested that the rigidity of control exercised should be reconsidered and greater freedom should be ensured to banking institutions in India to enlarge their activities in centres considered to be suitable on their merits. One must not overlook the various difficulties that have to be solved and the measures that have to be planned in advance, such as ensuring proper premises, selecting suitable staff, arranging for various facilities, etc. In view of all that, any delay or unwarranted interference not only causes dislocation but also leads to the abandonment of the idea of starting branches in suitable centres."

Alluding to expansion activities outside the country also, Mr. Bhabha observed that the larger interest of the nation would be served, if the curbs on such activities of Indian banks were minimised and greater freedom was granted to them in the matter of opening foreign branches. Mr. Bhabha even suggested that an indirect subsidy be given to banks for their spirit of venture. Elaborating his point, the Chairman observed:

"It should not be overlooked that such activities, at the present juncture, not only help the trade, commerce and economic progress of India but also constitute a source of direct benefit in the shape of foreign exchange earnings for the nation. I would, therefore, suggest that the farsightedness of Indian banks in this respect should be supported by evolving a scheme of guaranteeing or insuring in some form or other the deposits that may be placed with Indian banks in foreign countries. Such an experiment would bring large benefits to the country in various ways."

Mr. Bhabha deprecated, very legitimately, of course, the unwarranted criticism of banks and bankers in India by those in authority. Instead of praising the laudable service rendered by banks, it was surprising, he said, that they were being dubbed as having clerical mentality and narrow outlook. Without any exaggeration, Mr. Bhabha claimed, Indian bankers had not only shown wonderful adjustability and resilience to changing concepts and conditions in the country but also stood solidly in times of difficulty and established for Indian banking a very high and honourable place in the sphere of international banking.

Reserve Bank's Role

Mr. Bhabha availed himself of the opportunity to refer to the role of the Reserve Bank in the nation's economy and the need for maintaining the sturdy independence of this key institution. Despite all official and ministerial assurances of non-interference, Mr. Bhabha said, there was a general impression that there was a certain amount of subservience of the Reserve Bank to the Finance Ministry. Such subservience was, in the opinion of Mr. Bhabha, not conducive either to the great stature associated with such an organisation or to the worthy role to be played by it in matters of currency and economy of the nation. Proceeding, the Chairman of the Indian Banks' Association observed:

"The Government is no doubt vested with statutory powers to give directives to the Reserve Bank and the exercise of these powers may strip this great organisation of its much-desired role of an independent apex body. A few correctives in its organisational set-up regarding the composition and appointment of its Board of Directors and a

(*Continued on page* 615)

INDIAN OVERSEAS BANK

DIVIDEND MAINTAINED ON HIGHER CAPITAL

AN increase of Rs. 3.84 lakhs to Rs. 32.49 lakhs is disclosed in the profit of the Indian Overseas Bank Ltd. (General Manager: Mr. C. P. Doraikannu, Madras) for the year ended 31st December 1957. This rise does not compare well with that of Rs. 12.09 lakhs recorded a year ago, when the profit jumped up from Rs. 16.56 lakhs (earned in 1955) to Rs. 28.65 lakhs in 1956, but it has helped the Bank not only to nearly double its profit in two years but set up a fresh record in its history. In consonance with this rise in profit, the provision for taxation has been stepped up from Rs. 14 lakhs to Rs. 16 lakhs. The transfer to the reserve fund has also been raised from Rs. 6 lakhs to Rs. 7.32 lakhs and the bonus to staff, too, from Rs. 3.50 lakhs to Rs. 3.75 lakhs.

The dividend is unchanged at 10 per cent. per annum, to which level it had been successively raised from 6 per cent. paid for 1954. The latest dividend is, however, on an increased capital of Rs. 56.23 lakhs raised during the year by the issue of Rs. 25,000 new shares of Rs. 100 each, at a premium of Rs. 10 per share.

The gross income of the Bank for the year under review amounts to Rs. 132.28 lakhs, having gone up from Rs. 114.67 lakhs earned in 1956. This increase of Rs. 17.61 lakhs in income, which compares with Rs. 29.81 lakhs recorded in the previous year, is mainly accounted for by the rise of Rs. 19.08 lakhs to Rs. 85.38 lakhs in interest and discount earned. Income from commission and exchange, which had gone up by Rs. 9.36 lakhs to Rs. 48.16 lakhs in 1956, has suffered a slight decline to Rs. 46.82 lakhs in the year under review. On the expenditure side, interest paid has risen by Rs. 10.03 lakhs to Rs. 40.65 lakhs. Other expenses also have maintained the upward trend, but the pace of increase (Rs. 3.51 lakhs) is much less than that (Rs. 8.71 lakhs) in the previous year. Even this rise is mainly due to the increase of Rs. 3.70 lakhs in salaries, allowances, bonus, etc., to staff.

Progress

The progress of the Bank during the last three years is well brought out by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Interest and discount earned	85.38	66.30	45.91	38.64
Commission and exchange	46.82	48.16	38.80	30.38

* After providing for depreciation on investments.

† After taking into account investments earmarked against borrowings from other banks.

‡ After taking into account foreign balances earmarked against borrowings from other banks.

In September last, the Bank issued 25,000 new shares of Rs. 100 each at a premium of Rs. 10 per share in the proportion of one share for every two shares. The number of shares taken up to the end of the year was 24,964, on which a sum of Rs. 35 per share, including the premium of Rs. 10, has been called up. The previous occasion on which the Bank issued fresh capital was in September 1941, when a like number of shares (namely 25,000) of Rs. 100 each were issued. The shares were, however, issued then at a premium of Rs. 20 per share and were called up in six instalments spread over a period of over 10 years. The reserves, including the share premium collected on these two occasions, aggregate Rs. 46.36 lakhs.

CHARTERED BANK MAKES GOOD PROGRESS

CHAIRMAN VIEWS FUTURE WITH CONFIDENCE

THE year 1957 was one of consolidation and good progress for The Chartered Bank, formerly Chartered Bank of India, Australia and China (Chief General Manager: Mr. H. F. Morford, London), in that it acquired during the year the whole of the issued share capital of the Eastern Bank Ltd., thus adding as many as 20 offices to its own list of branches. It also acquired two branches in Pakistan, following the taking over of the business of the Allahabad Bank Ltd., and six branches of the Ionian Bank Ltd. in Cyprus. It expanded its own branch organisation in Borneo by opening an office at Sarikei and proposes to open two more. With the aforesaid acquisition of two more offices in Pakistan, The Chartered Bank has been able to participate to a much fuller extent than was possible before in financing the upcountry trade and industry of Western Pakistan. The foothold which the Bank has secured in the Eastern Mediterranean with the acquisition of the Ionian Bank's business in Cyprus is expected to be of great value to the Bank and this move is part of its policy to widen its sphere of activity in the Middle East.

The broadening of the Bank's activity and the expansion of its business are duly reflected in the rise of the group profit from £804,641 to £100,890. The profit, as usual, has been arrived at after providing for taxation and after making allocations to inner reserves, out of which full provision has been made for diminution in value of assets. Together with the surplus of £432,068 (of which £409,308 relate to The Chartered Bank and £22,760 represent the amounts retained in subsidiary companies' accounts) brought in from 1956, the profit available for appropriation is £1,432,958, as against £1,228,943 in the previous year. The Directors have maintained the allocation to the officers' pension fund and widows and orphans fund at £125,000 and £20,000, respectively. The amount to be utilised for writing off Bank premises has been raised from £200,000 to £250,000 and the allocation to the contingency reserve from £150,000 to £220,000. The dividend is being repeated at 15 per cent. less income-tax, but this is on the increased capital of £4.4 million raised by the issue of £900,000 new stocks to the shareholders of the Eastern Bank Ltd. The dividend for 1957 makes an effective rate of 18.9 per cent. on the old capital and absorbs a larger sum of £379,500, as against £301,875 a year ago, leaving to be carried forward £438,458.

The following synopses of the parent Bank's balance-sheets as at the close of the past four years provide an idea of its recent progress:

(In thousands of £'s sterling)

	As on 31st December			
	1957	1956	1955	1954
LIABILITIES (Main)				
Capital	4,400	3,500	3,500	3,500
Reserve fund	5,700	5,000	5,000	5,000
Undistributed surplus	412	400	405	393
Current and other accounts	178,329	175,370	172,434	159,651
Fixed deposits	26,843	22,344	30,658	20,483
Notes in circulation	3,731	3,267	2,906	2,902
Bills payable	1,810	1,817	1,705	1,220
Acceptances (contra item)	10,143	10,983	7,109	10,391
ASSETS (Main)				
Cash	47,458	36,056	40,207	33,616
Investments—				
Government and other securities	47,454	48,590	58,411	62,309
Securities lodged against note issue	3,876	3,428	2,684	2,889
Advances	97,784	103,950	91,871	74,737
Bills of exchange	18,282	13,785	17,086	14,646
Bank premises	2,621	2,303	2,180	2,166
Remittances in transit	1,113	1,704	3,140	2,148
Balance-sheet total	231,623	222,988	223,969	203,636

The Bank's balance-sheet total at the end of 1957 shows an increase of £8.63 million to a fresh record of £231.62 million. This is in refreshing contrast to the slight decline of about £1 million noted at the end of 1956 and reflects the very useful role, which The Chartered Bank, as the largest and oldest of the British foreign exchange banks serving the East, continues to play in "sustaining the economic defences" of the underdeveloped countries. The increase of £700,000 in the reserve fund represents the share premium on the £900,000 stock in The Chartered Bank issued in exchange for the issued share capital of the Eastern Bank Ltd. The Bank's deposit resources show a sizable enlargement, current and other accounts recording an increase nearly £3 million.

On the assets side, the most notable change is the fall of £6.17 million in advances, which, at £97.78 million, are still higher than those at the end of any of the years preceding 1956. This contraction is, however, partially offset by the increase of £4.5 million in bills of exchange. The expansion in resources, accompanied by a fall in credit, has strengthened the Bank's liquid assets. Investments in Government and other securities (other than those lodged against note issue) are no doubt slightly lower, but cash balances have gone up by no less than £10.5 million to £47.46 million, at which they bear a ratio of 23.1 per cent. to the total demand and time liabilities, as against 18.7 per cent. a year before.

The Chartered Bank's acquisition of new interest in the Middle East does not mean that it takes a dim view of the scope for British exchange banks in the Asian countries where these banks have served for so long. Though the primary function of the Bank has been that of an exchange bank, it has, as Mr. V. A. Grantham, Chairman of the Bank, points out in his statement (published on pages 586-591 of this issue), operated during the past 20 years to an increasing extent within the domestic economies of the countries in which the Bank operates. "These credit operations," Mr. Grantham adds, "are financed by local money market facilities. In proportion to the extent to which the Bank is permitted to attract deposits, it can, of course, engage in the financing of sound business activities, but there are signs in many countries of a disposition to restrict deposit banking to the indigenous banks." The dependency of exchange banks on local deposits and money market facilities grew substantially last year, as a result of the sharp rise in money rates in London and the consequent high cost of getting funds from that Centre. It is well within the normal course of business, if, in such circumstances, the exchange banks offer keener competition in attracting funds in the local markets.

Mr. Grantham also makes a reference to the appointment of a Committee under the chairmanship of Lord Radcliffe to enquire into the working of the monetary system, with particular reference to the usefulness of British overseas banks to the U.K. economy in adding to the country's foreign currency reserves. It is argued by some that the advantages of these operations to the U.K. economy are more apparent than real. Dispelling any misconception in this regard, Mr. Grantham says:

"The effectiveness of organisations like The Chartered Bank in sustaining the external economic defences of the United Kingdom cannot be in doubt. The Bank finances a very large proportion of the trade in primary products between the Eastern countries and the rest of the world and it is a considerable earner of U.S. dollars and other scarce currencies in its own right; moreover, the Bank is enabled by means of its already extensive and growing overseas establishment to play an important part in the promotion of the export trade of the United Kingdom. To impose restraint upon the activities of the British overseas banks would be the last resort of the destitute and it is reassuring to know that changes in currency management and exchange control which might prejudice the unique position of the City of London in international commerce will not be made without the most searching enquiry."

Despite the marked changes in the economic situation and the political upheavals which have taken place in the various countries in which The Chartered Bank operates, the technique of management which the Bank has adapted to meet the changed situations, encourages Mr. Grantham to view the future of British banking in the East with confidence.

(*Concluded from next column*)

H.K.$303.09 million, while other investments are higher by H.K.$694 million at H.K.$38.96 million. Despite the fall in investments in Government securities, the liquidity ratio is higher, the ratio of readily realisable assets to the total liabilities having gone up by 4 per cent. to just under 49 per cent.

Despite the unfavourable economic conditions, the Bank has had a satisfactory year, but the immediate outlook is regarded by the Chairman as uncertain. It remains to be seen, he says, whether the current year will prove as profitable as the last one, but he regards it reasonable to hope that it may not be necessary to allocate any further sums for the purpose of writing down the Bank's investments in British Government securities, which has been such a disturbing feature of the last few years. That he is justified in hoping thus is evident from the reduction in the British Bank rate last Thursday from 7 to 6 per cent.

FURTHER RISE IN PROFIT OF HONGKONG BANK

LIQUID ASSETS STRENGTHENED

THE working of the Hongkong and Shanghai Banking Corporation (Chief Manager: Mr. Michael W. Turner, Hong Kong) during the year ended 31st December 1957 has proved to be satisfactory, in spite of the unfavourable economic conditions which prevailed in many of the Eastern countries where the Bank operates. There has been a sizable expansion in the Bank's deposit resources, but this has not been utilised to enlarge the Bank's credit portfolio; in fact the advances at the end of the year are slightly lower. The bulk of the increased deposits has been utilised to strengthen the liquid assets. Nevertheless, the Bank's profit has recorded a notable increase of H.K.$400.122 to H.K.$21.03 more at H.K.$17.01 million.

With this rise, the profit has established a fresh record, exceeding the previous high of H.K.$20.68 million established in 1930. With the undistributed surplus of H.K.$11.04 million brought in from 1956, the distributable sum, at H.K.$32.07 million, is H.K.$0.83 million more than that available a year ago. The Directors have during the year under review transferred a sum of H.K.$9 million to the reserve fund from the undistributed surplus of the previous year. As in the previous year, a sum of H.K.$4 million has been utilised from the year's profit to write off Bank premises. The interim dividend of £2 per share (same as that for 1956) paid in August last was on the old capital of H.K.$25 million, while the final one of £1 12s. 6d. per share is on the increased capital doubled during the year by the capitalisation of a sum of H.K.$25 million. Accordingly, the total dividend distribution requires H.K.$0.81 million more at H.K$17.01 million, leaving a surplus of H.K.$2.06 million to be carried forward to 1958.

The following comparative table, giving the synopses of the Bank's balance-sheets as at the close of the last four years, provides an idea of the Bank's progress:

(In thousands of H.K. $)

	As on 31st December			
	1957	1956	1955	1954
Capital	50,000	25,000	25,000	25,000
Reserve fund	128,000	128,000	128,000	128,000
Undistributed surplus	2,062	11,040	10,607	10,215
Note issue	691,742	675,742	675,742	675,742
Current, deposit and other accounts	2,695,185	2,564,288	2,557,376	2,672,641
Acceptances	21,860	16,130	20,356	56,521
Cash and money at call and short notice	430,345	350,953	450,048	907,645
Securities against excess note issue	661,883	645,883	645,883	645,883
Investments—				
In Government and other securities	342,049	349,084	415,347	406,760
In subsidiary and associated company	14,841	10,867	9,264	2,136
Advances	1,186,038	1,213,502	1,069,660	829,455
Trade bills discounted	490,219	600,015	560,740	494,655
British and other Government treasury bills	425,027	220,746	227,066	208,216
Balance-sheet total	3,599,794	3,430,300	3,427,200	3,571,195

The Bank's capital was doubled to H.K.$50 million in August last by the capitalisation of H.K.$25 million. This was the second occasion within the last three years that the Bank had capitalised a part of its reserves, the previous one being in March 1955 when the capital was raised by H.K.$5 million by such a process. The reserves have, however, been replenished by the transfer of H.K.$9 million from the previous year's undistributed surplus and of H.K.$16 million from the inner reserves. Consequent on this replenishment, the published reserve fund stands unchanged at H.K.$128 million.

The current deposit and other accounts show an expansion of H.K.$131 million and this is mainly due to the increase in fixed deposits. This follows the rise of H.K.$6.91 million noted in 1956. Acceptances on behalf of customers have gone up by H.K.$5.73 million, in contrast to the successive decline in the previous two years, and are at the highest level since 1954. The generally lower commodity prices and a slackening of trade in the areas in which the Bank operates are reflected in the decline of H.K.$27 million in advances and of H.K.$110 million in trade bills discounted. The enlargement in the resources accompanied by a fall in advances and trade bills discounted, has enabled the Bank to strengthen its liquid assets. Cash and money at call and short notice are higher by over H.K.$79 million and British and other Government Treasury Bills have risen by H.K.$204 million. Investments in Government securities have declined by H.K.$14 million to

(*Continued in previous column*)

PACKINGS OF MILL PIECEGOODS IN 1957

WEARABLES SHOW MARKED RISE

THE packings of mill-made piecegoods registered a substantial improvement during 1957, the aggregate quantity involved being nearly 5,377 million yards as against 5,197 million yards in the previous year. The improvement was shared by both wearables and non-wearables. It was particularly marked in the case of the former; the total packings during the year amounted to 5,173 million yards, a rise of as much as 163 million yards as compared with 1956. Packings of non-wearables were higher by 17 million yards at 203 million yards.

The rise of 163 million yards in the packings of wearable cloth during 1957 was accounted for chiefly by *saris, dhotis,* and prints (and chintz), the actual extent of increase being 68.98 million yards, 56.18 million, yards and 45.72 million yards, respectively. The packings of drills, jeans, satin drill and gaberdine were also higher by 30.48 million yards and of longcloth, sheeting, leopard cloth and markin by 26.67 million yards. There was also some rise in the packings of poplin, crepes, twills and haircords. The packings of shirtings and sucies, coating, tussores, etc., madapalam, cambrics and lawns, dupattas, etc., and other items, however, suffered a setback. Among non-wearables, except flannelette, lint cloth and polishing cloth and chaddars bedsheets, etc. which showed a decline, all the other varieties recorded an improvement.

Varieties Packed

The following table indicates the different varieties of mill cloth packed during the year 1957 as compared with 1956:

	1957	1956
Wearables:		
Longcloth, sheeting, leopard cloth and markin	1,678.69	1,652.02
Saris	633.47	564.49
Dhotis	584.62	528.44
Shirtings and sucies	595.54	589.23
Prints and chintz	496.20	450.48
Poplin, crepes, twills and haircords	317.45	308.99
Mulls, voiles and dorias	311.03	339.23
Drills, jeans, satin drill and gaberdine	244.70	214.22
Coating, tussores, corduroy and bedford corduroy	127.44	136.81
Madapalam, cambrics and lawns	24.35	32.04
Dupattas, khes, chola and uparana	7.85	8.24
Other items	181.93	195.41
Total	5,173.27	5,010.60
Non-wearables:		
Mosquito netting	13.31	11.28
Canvas, duck, filter cloth	30.38	25.38
Flannelette, lint cloth, polishing cloth	25.92	26.66
Umbrella cloth	8.46	5.66
Table cloth and domestics	9.95	4.24
Tapestry, furnishing fabrics and curtain cloth	11.42	8.05
Chaddars, bedsheets, etc.	103.94	105.35
Total	203.38	186.57
Grand Total	5,376.65	5,197.17

The substantial increase in the packings of mill-made piecegoods noted last year followed the maintenance of a high level of cloth production. The quantity of cloth that actually came off the looms of mills aggregated 5,317.42 million yards—an all-time record—as against 5,306.58 million yards in 1956. The high cloth output was rendered possible by expansion in yarn production which aggregated 1,780.10 million lbs., as against 1,671.20 million lbs. The rise in yarn output *is reflected in the increase in cotton* consumption, from 4,990,827 bales (of 400 lbs.) in 1956 to 5,261,930 bales in 1957. The increase was entirely accounted for by Indian cotton, the consumption of which rose from 4,371,762 bales to 4,694,750 bales. Consumption of foreign cotton, however, was lower at 567,180 bales in 1957, as against 618,865 bales in 1956. An abstract of statistics relating to cotton consumption, production and deliveries of textiles—yarn and cloth—capacity of mills utilised during the years 1956 and 1957 is given below:

	1957	1956
Raw cotton consumption (bales of 400 lbs.)	5,261,930	4,990,827
Cotton yarn (million lbs.)—		
Production	1,780.10	1,671.20
Consumed in mills for cloth production	1,222.98	1,191.55
Export	17.60	12.90
Delivered for other purposes	514.08	472.72
Stocks lying unsold*	43.38	10.98†
Cloth (million yards)—		
Production	5,317.42	5,306.58
Civil consumption	4,083.77	4,175.72
Export	915.68	801.60
Used for other purposes	25.37	26.65
Stocks*	676.05	411.89†
Workers on list (daily average)‡ —		
Spinning mills	102,669	92,265
Composite mills	840,723	840,598
Spindles run (daily average)‡—		
1st shift	10,931,286	10,634,134
2nd shift	10,508,915	10,204,903
3rd shift	4,807,527	4,908,029
Looms run (daily average)‡—		
1st shift	180,886	184,091
2nd shift	171,306	172,507
3rd shift	49,528	50,779

* End of December. † January 1957 ‡Monthly average.

It will be seen from the above table that the quantity of cloth delivered for "civil consumption" accounted for 4,083.77 million yards, which was lower by 91.95 million yards as compared with the figure of 4,175.72 million yards for 1956. The quantity of cloth used for other purposes was also less at 25.37 million yards, as against 26.65 million yards. Delivery of cloth for export, however, registered a noticeable expansion, from 801.50 million yards in 1956 to 915.68 million yards in 1957. The total stocks of cloth lying unsold with mills at the end of December 1957 amounted to 676.05 million yards, as against 411.89 million yards in the beginning of the year.

Thanks to the marked rise of nearly 109 million lbs. to 1,780.10 million lbs. in the production of yarn in 1957 as compared with 1956 the supply of yarn available for consumption by the decentralised sector of the textile industry—handlooms and powerlooms—was very comfortable. Excluding the larger quantity consumed in mills for weaving cloth and exported abroad, the delivery of yarn for 'other' purposes was higher at 514.08 million lbs., as against 472.72 million lbs. Nevertheless, the stocks lying unsold with mills at the end of 1957 were quite heavy, being 43.38 million lbs., those for January 1957 being only 10.98 million lbs.

Utilisation of Capacity

A striking feature revealed by the above table is that the year 1957 witnessed a more intensive utilisation of the spinning capacity, while the utilisation of weaving capacity was comparatively less intensive. Thus, the daily average number of spindles run in the first and second shifts during 1957 was 10.93 million and 10.51 million, as against 10.63 million and 10.20 million, respectively, in 1956. The daily average of spindles run in the third shift, however, was lower at 4.81 million, as against 4.91 million. In the case of looms, all the three shifts accounted for a decline in the daily average looms run which amounted to 180,886, 171,306 and 49,528 in the first, second and third shifts, respectively; the corresponding figures for 1956 were 184,091, 172,507 and 50,779 looms.

Consequent on the rise in spindles worked, the daily average number of workers employed in the spinning mills recorded an increase, from 92,265 in 1956 to 102,669 in 1957. Despite the reduction in the looms run, there was a slight rise in the daily average workers on list, the figure for 1957 being 840,723, as against 840,598 in 1956.

"SILK AND RAYON INDUSTRIES OF INDIA"

The silk and rayon industries are coming to play a more and more important part in the country's economy. They not only provide employment to quite a large number of persons but also meet the growing clothing requirements of the expanding population, not to speak of the importance of earning foreign exchange through exports. Viewed thus, the Silk and Art Silk Mills Research Association has, indeed, done well to bring out a journal, entitled *Silk and Rayon Industries of India* (Editor: Miss C. C. Ferreira), devoted to the study of man-made fibres and their uses. The February issue of this journal contains four interesting articles—"Hungary's Contribution to Textile Technology" by Dr. V. Dischka, "Rayon Yarn Manufacture in India" by J. G. Parikh, "Standardisation" by Prabhu V. Mehta, and "Nylon—Its impact on Modern Industrial Life" by J. M. Page. The utility of the publication is enhanced by the inclusion of who is who in silk and art silk industries, representations made by the industries on export and import policy, employee-employer relations, market reports, textile labelling and statistical survey.

In the course of an editorial on the task ahead, the Editor rightly emphasises the need for increased and better production, on the one hand, and improved marketing of wares, on the other. Another editorial is devoted to the study of rayon yarn situation. Referring to the continuously upward trend in yarn prices, the Editor urges the revision of import policy in such a way as not to "frustrate the progress of the industry or hamper economic production and full employment."

"SILK NEWSLETTER"

The Central Silk Board has brought out a neatly printed and well got-up *Newsletter*. The issue consists of two parts. The first part is devoted to the review of the trends in the Indian silk industry, the second part dealing with the world silk situation. The review contains, among others, a survey of the silk industry's performance during the year 1957, assessment of the progress made in the first Five-year Plan period, and a note on the steps now being considered to stimulate exports of silk fabrics. Also included in the *Newsletter* is a review of the trend of prices in the Bangalore silk market during 1957, as well as statistics relating to production of spun silk yarn and noil yarn and consumption of silk waste.

RESERVE PRICES OF SUDAN COTTON

DRASTIC CUT EFFECTED

THE drastic reduction in the reserve prices of the Sudan Gezira Board by one to six pence per pound and the slash in export duty by as much as 33 per cent. are welcome news to spinners of Sudan cotton in this country, especially because it comes on the eve of the Government of India's import policy announcement in respect of Sudan and Egyptian cotton. According to an announcement made by the Government of Sudan, the duty on 'S' and 'L' varieties of Sudan cotton has been reduced from 3.75*d.* per lb. (about Rs. 165 per candy) to 2.50*d.* per lb. (about Rs. 110 per candy) with effect from 19th March. The reserve prices of the Sudan Gezira Board, that is, the lowest prices at which the Board is willing to sell its cotton, have also been reduced, the reduction varying from 1*d.* to 6*d.* per lb. (Rs. 44 to Rs. 264 per candy). These are the latest of a series of steps taken by the Government of Sudan to boost its cotton sales for export. The marketing policy for the 1957-58 crop has not been announced till the time of writing. It is obvious that, following the reduction in duty and reserve prices, Sudan has emerged as a very serious competitor to Egypt. The full reaction of the world's spinners to this move is not yet known, but a revival of demand is quite probable, now that Sudan cotton has become an attractive buying proposition.

Although the 1957-58 Sudan crop is expected to be very much smaller than that of the previous season, due to the serious damage from pests in both the Gezira and private estates, the overall supply position would appear to be comfortable. This is because of the substantial unsold balance of the 1956-57 crop which is estimated at about 205,616 bales. This, together with the estimated crop of about 300,400 bales (of 420 lbs.), would give an aggregate supply of 506,016 bales. This compares with a crop of 675,674 bales harvested in the previous season. The following table gives the latest supply position of Sudan cotton.

(In bales of 420 lbs.)

Varieties	Unsold balance of 1956-57 crop	1957-58 crop (estimated)	Total supply
Gezira "S"	85,157	46,600	131,757
Gezira "L"	82,224	87,300	169,524
Private Estates	15,000	135,000	150,000
Gash "S" and "L"	4,167	14,000	18,167
AL/WL	19,068	10,000	29,068
Tokar	..	7,500	7,500
Total	205,616	300,400	506,016

Export sales so far in the season has been poor as foreign demand is weak. Interest has been mainly confined to 'S' and 'L' varieties. The quality of the new crop is also reported to be poor. These factors would appear to have been mainly responsible for the decision to cut the export duty and reduce the reserve prices.

Another welcome news is that the Sudan Gezira Board proposes to open a sales office in India, on the lines of the one which exists in London. The office will show samples of Gezira cotton, undertake market analysis and help in the solution of any difficulties which may arise in transactions with Indian firms. It may be noted here that the idea of opening a sales office in India was first mooted by the Sudanese Economic Mission which visited India last year. This is also an indication of the prominent place which India occupies among Sudan's customers. In the 1955-56 season, Indian mills consumed as much as 182,883 bales of Sudan cotton out of a total foreign cotton consumption of 603,251 bales. In the last season, namely, 1956-57, Sudan cotton consumption showed a decline to 84,063 bales, out of a total of 567,468 bales of foreign cotton consumed. In the first five months of the current season, that is, from 1st September 1956 to 31st January 1958, Indian mills consumed 31,597 bales of Sudan cotton, as compared with 42,636 bales during the corresponding period of last season.

Importers in India are anxious to see that the Government of India gives permission for import of Sudan cotton as early as possible, so as to take advantage of the attractive price of Sudan cotton. It may be mentioned here that stocks of Sudanese cotton with Indian mills as on 31st January last were 27,743 bales, as against 28,768 bales on the corresponding date a year before. Mill interests would seem to have already drawn the attention of the Government to the rapid depletion of stocks with them of both Sudanese and Egyptian styles.

COTTON INDUSTRY IN DIFFICULTIES

TENDENCY TOWARDS SMALLER MANPOWER CONTINUES UNABATED

From A Special Correspondent

MANCHESTER, *18th March*

OUTPUT of single yarn in Lancashire mills during the first five weeks of the year averaged 17,230,000 lbs., as against 15,820,000 lbs. in December and 17,540,000 lbs. in January last year. Contrary to recent trends, a gain was made in the quantity of man-made staple yarns produced, the weekly figure being 3,050,000 lbs., as against 2,800,000 lbs. in December and 3,040,000 lbs. in January 1957.

MANCHESTER LETTER

Although the quantity of cloth woven in January exceeded the December weekly average by more than 3,000,000 yards, the total of 44,070,000 yards a week, as compared with 45,460,000 yards in January last year. Similar falls in output were recorded in both cotton cloth and in goods from the man-made fibres section.

The decline in the number of operatives on the books of employers, which has been persistent since August last, continued during the first month of the year, the total at the end of January being 240,790, as against 241,160 in December. Once again, the chief drop came in the weaving branch where a net loss of 570 workers was recorded. In contrast, spinning mills actually gained more workers, the total increasing by 470 to 99,220.

Likely To Continue

This tendency towards a smaller manpower seems likely to continue unabated, as the number of mills in operation declines. Rarely a week goes by without some indication of firms deciding to close down or curtail output. Much discussion has been aroused by the decision of the directors of Atherton Mills Ltd. to shut two of their four mills, while the future of the remaining two is in the balance.

Although a move on such a scale is unusual, it demonstrates the attitude of some traders when important decisions of this kind have to be taken. There are those who believe in continuing the fight against very considerable obstacles to the bitter end, while some contend that the best policy is to shut down while still relatively prosperous and distribute the assets to shareholders. Firms such as Atherton Mills, whose spinning machinery is largely composed of mules, obviously face an uncertain future, and a wholesale transfer to ring spindles would be exceedingly costly. Under existing conditions it would be some considerable time before such expenditure could be recouped, if at all.

Publicity Campaign

Over and above the steady stream of advertisements and the publicity attached to the industry's participation in various trade fairs and exhibitions, the Cotton Board is carrying out a regular week-by-week plan of campaign to keep the assets of the trade in the public eye. The 'scheme aims at persuading the younger generation to make cotton their career.

One of the features of this continuing drive for recruits was the publication late last year of a revised version of the booklet *Processing Britain's Cottons.* This formed part of a set of teaching aids for schools, comprising boxes of cotton samples, charts, film-strips and films, all of which help to provide a picture for the student of what happens to cotton from field to fabric. As well as serving an educational function, these teaching aids keep the industry in the minds of the pupils as a possible source of their future livelihood. Also widely used as a promotional force are the five films sponsored by the Cotton Board, of which nearly a hundred copies are constantly in use. Already over thirty tours, each lasting a week, have been booked for the current year, covering all parts of the country.

Recognising the importance of keeping cotton's merits as a fibre always before their best customers, the organisers of these film tours aim at presenting about ten shows a week to audiences composed entirely of women who buy 75 per cent. of the cotton goods used as garments or in the home. Two new films of special interest to women will be ready for display by the autumn.

Last year, the Board's films were shown on 545 occasions to audiences of over 40,000. This year 569 shows, including 172 lectures, have already been booked and at least 250 more bookings are expected before the end of the year. A new development is a service of talks and film shows to large retail stores, both in London and the provinces.

From Excess To Shortage

Among the many disconcerting factors which persist in narrowing the offtake in cotton textile goods at the moment is the situation arising from the setback in the current Sudan cotton crop. Although Lancashire spinners have learned to do without supplies, which at one time were thought essential, and a wide variety of substitution has been encouraged by force of circumstances, the sharp change from a record output of Sudan cotton to a partial crop disaster must be a disturbing influence.

Already rumours are about that the cut in the export tax on Sudanese cotton may be reimposed due to the smaller revenue anticipated from the crop. If this action is taken, users will be back where they were, restricting their purchases because they consider prices for these growths too high. Meanwhile, no supplies are being received from Egypt, although quantities of the Egyptian staple are circulating in a number of European countries, often at uneconomic prices, having been released from the stocks held by Iron Curtain areas.

The annual report of the British Cotton Growing Association, dealing with the 1956-57 season, devotes much space to the record growth achieved in the Sudan, where output of 705,000 bales, almost entirely Sakel types, was 177,000 bales above the previous peak. If the Sudan is included in these "Empire" totals, excluding India and Pakistan, the aggregate output was nearly 1,500,000 bales, an expansion of almost 200,000 bales on the previous season. East Africa recorded a rise of 34,000 bales, due entirely to the record crop in Tanganyika, and hopes are expressed that the current growth in Nigeria will exceed the 1955 record of 188,000 bales by at least 40,000 bales.

Cotton Talks

Leaders of the textile workers' unions last week urged the President of the Board of Trade, Sir David Eccles, to implement the recommendations of the policy manifesto, *Plan for Cotton,* drawn up by Mr. Harold Wilson, "Shadow Chancellor." The discussion appears to have centred mainly on the problem of duty-free imports, and Sir David is understood to have expressed optimism about the prospect of reaching some agreement with Pakistan, India and Hong Kong.

The British Rainwear Manufacturers' Federation, representing 34 companies in the Manchester area, has offered a wage increase of 2*d.* an hour to men and 1½*d.* to women. The application by the National Union of Tailors and Garment Workers asked that the increase should be paid irrespective of earnings. This has been rejected.—*All Rights Reserved.*

NEW RECORD FOR WOOL

World wool consumption during 1957 is estimated by the Commonwealth Economic Committee at 2,855 million lbs. (clean weight), as compared with 2,853 million lbs. in 1956. This is an increase of 1 per cent. and sets up a new record for wool.

While the United Kingdom continues to use far more wool than any other country—its total for last year was 481 million lbs. (clean)—the estimates of the Committee show that the most outstanding increase last year was that of 27 per cent. achieved by Italy. A further substantial improvement of 9 per cent. was recorded by Japan and it is possible that final figures will show that country to have replaced Western Germany as fourth largest consumer in the non-communist world after the U.K., U.S.A. and France.

In France and the United Kingdom, usage last year rose by 7 and one per cent., respectively, but, in the U.S.A., there was a fall of 15 per cent. to the lowest annual total since 1938. There were reductions also in Belgium and the Netherlands amounting to one and seven per cent., respectively.

The 1957 totals for France, Japan and possibly Western Germany set up new records in each case. Consumption in the rest of the world in 1957 is tentatively estimated to have risen by about one per cent., as compared with 1956.

On the basis of available supplies of raw wool, consumption in the Soviet Union, China and Eastern Europe increased by less than one per cent., a rise in domestic wool production offsetting a decline in imports.

The Committee points out that the rate of increase in world wool consumption was slowing down during the first three quarters of 1957 and that, during the final quarter, aggregate consumption by the 11 major manufacturing countries of the non-Communist world was 10 per cent. lower than a year earlier.

GIFT TAX LEGISLATION ANALYSED

SOME CONSTRUCTIVE SUGGESTIONS FOR MAKING IT EQUITABLE

By Professor Russi Jal Taraporevala

A GIFT tax has been proposed by the Finance Minister in the budget of the Government of India for the year 1957-58, i.e., the assessment year 1958-59. The Finance Minister justified the introduction of this new tax as being necessary for plugging an important loophole in the structure of direct taxation in India. He claimed in his budget speech that "the transfer of properties through gifts to one's near relations or associates is one of the commonest forms of avoidance of not only the Estate Duty but also of Income-tax, Wealth Tax and even the Expenditure Tax. The only way of effectively checking this practice is to levy a tax on gifts." This argument may be logically correct. But "gifts from one person to another provide a convenient means of avoiding or reducing liability to Estate Duty, Income-tax, Wealth Tax, and Expenditure Tax" and have become specially attractive because of the sharply progressive rates at which the Government has levied the various direct taxes, resulting in a crushing and an unbearable burden of taxation being imposed on the middle and richer classes.

A gift tax exists in a few countries of the world like the U.S.A., Canada, Japan, Australia and New Zealand. The provisions of the Gift Tax Bill (1958) can now be analysed in relation to the existing legal framework and economic conditions in India and the experience of foreign countries in the working of gifts taxes.

Under the Gift Tax Bill, a tax on the value of gifts made after 1st April 1957 is to be imposed in India. The tax is payable by individuals, Hindu undivided families, firms, associations of persons, public limited companies of which the affairs and the majority of shares are controlled by less than six persons, the subsidiaries of such public limited companies, all private limited companies and charitable institutions or funds which are not covered by section 15B of the Indian Income-tax Act.

The tax is payable on the market value of the gift as on the date of the gift. The determination of such market value is left entirely to the discretion of the gift tax officials. Thus, the Bill provides that "the value of any property other than cash transferred by way of gift shall ... be estimated to be the price *which in the opinion of the Gift-tax Officer* it would fetch if sold in the open market on the date on which the gift was made."

Definition of Gift

According to the Gift Tax Bill, a gift is defined as "the transfer by one person to another of any existing movable or immovable property made voluntarily and without consideration." A special section provides for artificially including within this definition the gift element in four special types of transfers of property. These are: first, transfers of property made for nominal or inadequate consideration; second, transfers of property for consideration which although stipulated is not meant or likely to pass from the transferee to the transferor; third, release or discharge from one's debts or liabilities, and fourth, withdrawals or appropriations from property owned jointly by a joint-holder other than the one who made the original investment or deposit. Further, in order to make the application of the Bill as wide as possible, transfer of property is defined to include "any transaction entered into by any person with *intent thereby to diminish directly or indirectly* the value of his own property and to increase the value of the property of any other person." These excessively wide and sweeping provisions will enable gift tax officers to include every conceivable transfer of property within the definition of the term gift for the purposes of the Bill.

The various problems which this definition of gifts will give rise to will now be analysed. They can be divided into two parts. First, there are the problems connected with the subject matter of the gift. Second, there are the problems of consideration.

The main problems connected with the subject matter of the gift relate to forgiveness of indebtedness and joint ownership.

Under the Gift Tax Bill "where there is a release, discharge, surrender, forfeiture or abandonment of any debt, contract, or other actionable claim or of any interest in property by any person in favour of another, the value of the release, discharge, surrender, forfeiture or abandonment shall be deemed to be a gift made by the person responsible for the release, discharge, surrender, forfeiture or abandonment." It is provided that this clause shall not apply to "any debt which is proved to the satisfaction of the Gift-tax Officer to have become irrecoverable." These provisions will almost force creditors to take full legal remedies against their debtors. If a creditor settles or compromises a debt, he will run the risk of being forced to pay gift tax on the amount which he has forgone. This will happen if the tax officer is of the opinion that the amount forgone could, perhaps, have been recovered by the creditor through further steps and litigation against the debtor. Further, persons possessing rights under contract and actionable claims under law will be forced to indulge in litigation to the fullest possible extent to enforce their rights and claims. If they fail to do so, they may be deemed to have abandoned their rights and claims and, therefore, be liable to pay gift tax on the value of these rights and claims.

Great Hardship

These provisions of the Gift Tax Bill are likely to cause great hardship without any justification. They will tend to disrupt the normal relationship between debtors and creditors and between parties to contracts. Creditors and owners of rights under contracts or actionable claims will have an unpleasant choice before them: either to incur substantial costs of litigation, often with very little chance of success, or to abandon their claims and further pay gift tax on them. Commenting on these provisions, the editorial of *The Hindu* rightly stated that "anyone who generously forgoes his claim to principal or interest ... should be penalised for it seems to be obviously unfair."

It is recommended that these provisions of the Bill should be altered. They may perhaps be made applicable to such transactions as take place between relatives—in which cases the absence of such provisions may provide a loophole for avoidance of the tax. But these provisions should not apply to such transactions which take place between persons who are in no way related or to "arm's length business transactions" unless the tax authorities can prove that, in the particular case, there was a deliberate *intention of making a gift as shown by* special circumstantial evidence. The opinion of two famous American jurists, Professors Lowndes and Kramer, *on this point may be* noted. They correctly point out that:

> "Where a creditor as part of an arm's length business transaction forgives a debt, it seems clear that he does not intend to make a gift of any part of the debt for which he fails to receive consideration, but that he is really exchanging the debt on what appear to him to be the most advantageous terms possible under the circumstances. If a man forgives a debt with the intention of making a gift to the debtor, there is no reason why this should not be treated as a taxable gift. But to tell a man who has lost a substantial sum in an unhappy business deal that he must pay a gift tax upon the loss would be an absurdity..."

Joint Tenancies and Bank Accounts

Under the Gift Tax Bill, where a person who is absolutely entitled to property, has it vested in his own name and the name of another person jointly, any withdrawals or appropriations made by the other person out of such property for his own benefit would be deemed to be a gift from the person owning the property to the other person in whom it was jointly vested. This provision is likely to cause some grave administrative difficulties in relation to discovering the purpose for which such withdrawals or appropriations were made, especially from joint bank accounts. A simple example will illustrate the difficulties likely to arise here. If a man "A" deposits money into a joint account for himself and his wife "B," any withdrawals from such account made by "B" for her own use or benefit would be deemed to be gifts from "A" to "B." But if "B" withdraws from the account amounts required to pay the household expenses, such withdrawals would not constitute a gift from "A" to "B," because "A" is bound to maintain and support his wife. Payments made by "A" to "B" for running the household or withdrawals made by "B" from their joint account in lieu of such payments would, therefore, not be taxable gifts. In such a joint account, the administrative problems will be to discover which of the parties drew the various cheques out of the account and then to find out the purpose for which such withdrawals were utilised. In most cases, it will be extremely difficult and even impossible for an assessee to prove conclusively that a particular withdrawal from a joint account was used for a particular purpose. Thus, unless a husband and wife keep detailed records of their expenditure down to the last rupee and also preserve all bills and vouchers to support such records—and such cases must be most rare—how can a wife prove conclusively that a particular withdrawal from their joint bank account owned by her husband was used for the household expenses and not by her for her own pleasures or benefit?

The effect of these provisions will be that persons who may have maintained joint bank accounts purely for the sake of convenience and without any idea of making gifts through such accounts will find themselves in difficulty with the tax officials. They may be called upon to produce detailed records of the purpose for which each cheque drawn from such joint accounts by the joint-holder other than the original owner of the money was utilised. *It is most* unlikely that many persons will have kept such records for withdrawals made by them from joint accounts after 1st April 1957. Hence they may be called upon to pay gift tax on amounts which were not really given as gifts but of which they are unable to prove the purpose or use. This will be unfair. It is recommended that the Bill should be amended so as to make these particular provisions applicable from 1st April 1958, so that persons having property vested in joint names can at least take steps to meet the requirements of these provisions. For the future, persons having joint bank accounts for the sake of convenience would be well advised to dissolve such accounts and to hold the money in their individual names separately, in order to escape from the possibilities of considerable harassment from the tax officers in respect of these provisions of the Gift Tax Bill.

CONSIDERATION

The special problems arising out of the definition and nature of consideration may be analysed next. Under the Gift Tax Bill, a gift is made when property is transferred from one person to another voluntarily and without consideration or for inadequate consideration or for consideration which is not likely to pass from the transferee to the transferor. Hence transfers of property which are made involuntarily or for adequate consideration cannot be treated as gifts. The Bill does not define the term consideration. Therefore, the definition of consideration under the Indian Contract Act must be taken as applicable to the Gift Tax Bill. Under the Contract Act, the essence of consideration is that the promisee (or the transferee) takes upon himself some kind of burden or detriment which may consist in parting with something of value or in undertaking a legal responsibility or in forgoing the exercise of a legal right. That which is given up must be something which the law can regard as having some value, so that the giving of it effects a real, though it may be a very small, change in the promisee's position—this is good, sufficient or valuable consideration. Even compromise of a doubtful claim is valid consideration. Past consideration is also valid consideration under Indian law. However, the adequacy of consideration is not necessary for the purposes of the Indian Contract Act.

The problems likely to arise will relate to the determination of adequacy of consideration. Where the consideration takes the form of personal services rendered or the forsaking of a legal right or the settlement of a doubtful claim, it will be extremely difficult to prove that the consideration was adequate. It has been pointed out that valuation is left entirely to the discretion of the gift tax officers. It is possible and likely that the tendency of the officers will be to argue that the consideration paid was inadequate and to assess many transfers of *property to gift* tax—even in cases where there was in fact no gift made. Some particular problems of special importance are outlined below.

If a person enters into a business transaction, which later on appears to have been a bad bargain, he will run the further risk of being asked to pay gift tax on it. The gift tax officer will have the right to examine all business bargains and transactions. If the officer feels that an assessee did not get for a transfer of property what in the officer's opinion would have been adequate consideration, he may assess the party to gift tax on the difference between what he thinks would have been adequate consideration and the price actually realised. Thus, the provisions of the Gift Tax Bill may result in a gift tax being levied on business transactions and bargains which may, in retrospect, appear to have been bad but which were made without the slightest idea of making a gift. The Bill should provide for the exclusion of such transactions from its scope. It should be provided that there will not be a taxable transfer even though a transfer is made for what appears to be inadequate consideration when there is a sale, exchange or transfer of property in the ordinary course of business (*i.e.*, a transaction which is *bona fide*, at arm's length and free from donative intent). Such a provision exists in the American gift tax law.

Partnerships

There are many instances in which a person is admitted into partnership by an existing firm without paying any consideration in money terms. For example, many professional firms of lawyers, accountants and architects, admit into partnership men possessing the necessary professional qualifications and ability, whose services would be valuable to the firm, without charging the new entrant for goodwill or for the other assets of the firm. Under the Gift Tax Bill, the existing partners of such firms may be deemed to have made a gift of the share in the partnership to the new entrant. They may be charged a gift tax on it. Of course, it may be argued that the value of the services of the new entrant to the firm constitutes adequate consideration for giving him a share in the partnership. But it will be extremely difficult to assess the value of the personal services of the new partner in money terms. The tendency of some tax officers may be to put a low value on such services. Thus, the partners of the firm will be deemed to have made a taxable gift if the share of partnership earnings assigned to the newly created partner is in excess of the value of his services (*in the opinion of the gift tax officer*) to the firm and such surplus comes from some assets of the firm including goodwill.

The effect of these provisions will be that entry into partnership firms will have to be paid for by investing capital. Young men with talent but without financial resources will not be admitted into partnerships free, because, then, the existing partners may have to pay a gift tax. The setting up of this artificial barrier to the progress of young and enterprising men, especially professional men, who do not possess initial capital cannot be justified in the socialistic pattern of society in which it is sought by the Government to reduce the disadvantages arising out of inequality of wealth. The Bill should be suitably amended to remove from its scope entry into partnership firms—except in those cases, perhaps, where the gift tax officer can *prove conclusively* by circumstantial evidence that there was an effort on the part of the assessee to make a gift through admitting his relatives or associates into partnership without charging any consideration.

Bonus and Gratuity Payments

Bonus and gratuity or retirement benefit payments given by employers to their employees may be treated as gifts and taxed under certain circumstances where consideration appears to be lacking or inadequate. The position of workers drawing less than Rs. 500 per month can be considered first. These workers are covered by the laws relating to industrial disputes. They can press their demands for payment of bonus out of profits and gratuity or retirement benefits against their employers by raising industrial disputes which can be entered into official conciliation proceedings and thereafter be decided by industrial tribunals. If an employer pays bonus or gratuity to such workmen under an award of a labour court or an industrial tribunal or in settlement of their claims to receive such payments or under the provisions of any contract of service, there will be no question of including such payments under the definition of gift. But it is possible that an employer will be deemed to have made a gift if he voluntarily pays his workmen a bonus or gratuity or retirement benefits without receiving any demand for such payments from the workers. Of course, it may be argued that, under the existing labour laws and practices, the workmen have almost got rights to such payments under certain circumstances and so the satisfaction of such rights by the employer should not be treated as a gift. But such an argument may not be accepted by the gift tax officers.

In the case of executive or supervisory staff drawing over Rs. 500 per month, the payment of a bonus or gratuity or retirement benefit would not constitute a taxable gift only if it is made under the terms of a contract of service or employment. But voluntary payment of bonus or gratuity to executives by an employer will be treated as gifts under the Gift Tax Bill, because executive staff is not covered by industrial disputes and labour laws and they cannot demand bonus or gratuity as a right nor can they press any such demands before labour courts or industrial tribunals.

The provisions of the Gift Tax Bill are unfair and undesirable in so far as they will enable tax officers to tax as gifts normal and voluntary payments for bonus and gratuity by employers to their workers and executive staff—even though such payments cannot be looked upon as gifts in the usual sense. If the present provisions of the Bill are enacted, they will make employers extremely hesitant to pay bonuses and gratuity to their employees voluntarily. They will make it necessary for the employees to make repeated formal demands for the payment of bonuses and gratuity. This will increase industrial strife and strain labour relations. It is, therefore, recommended that payments of bonus, gratuity and other retirement benefits by employers to all employees should be specifically exempted from the scope of the Gift Tax Bill. It must, of course, be borne in mind that the provisions of this legislation apply only to public limited companies which are closely controlled, as stated at the outset. And there is a large number of them in this country.

EXEMPTIONS

Under the Gift Tax Bill, the tax is not to be charged on certain exempted items. Gifts of immovable property outside India and gifts of movable property outside India where the donor is not a citizen of India or where the donor, not being an individual, is a non-resident of this country are exempted from the gift tax. Gifts made under a will or in contemplation of death are also exempted from the tax, presumably because they would be covered by estate duties.

Gifts of savings certificates which are declared by the Government to be gift-tax free, gifts to Government or any local authority and gifts of policies of insurance or annuities to the assessee's wife, children or other dependants (subject to a maximum of Rs. 10,000 value of such policies for each donee) are exempted from the gift tax. This merely amounts to favoured treatment for the Government, its savings certificates and to its Life Insurance Corporation.

Charitable Gifts

The exemptions contained in the Gift Tax Bill for charitable gifts or donations are too narrow, inadequate and definitely niggardly. Gifts to charitable institutions and funds recognised under section 15B of the Indian Income-tax Act and gifts for other charitable purposes upto a maximum of Rs. 100 in respect of each gift are exempted from the payment of gift tax. There are many charitable institutions and funds in the country which are not covered by section 15B of the Income-tax Act. Thus, all communal or religious charities, i.e., institutions or funds "expressed to be for the benefit of any particular religious community" are excluded from section 15B of the Income-tax Act. There are thousands of such institutions and funds throughout the country which are doing excellent work in the relief of poor and destitute persons of various communities. It is not right to penalise gifts to such institutions and funds by imposing the gift tax on them. Indeed, as the Bill stands today, such charitable and religious institutions will not even be exempt from the gift tax in respect of amounts and benefits handed out by them for charity (except on amounts of less than Rs. 100). It is recommended that the discrimination against such institutions and funds—i.e., those not covered by section 15B of the Indian Income-tax Act—which exists in the Gift Tax Bill should be removed. The Bill should exempt from the tax all gifts made by an assessee for any charitable or religious purpose.

The value of gifts which can be made for charitable purposes direct to needy individuals by an assessee without attracting the gift tax is restricted to Rs. 100 per such gift. It is surely not correct to limit personal charity to such a low sum. Today Rs. 100 will not even pay the college fees of a poor student for one year—and there are many generous persons even today who help poor students to get their education by contributing their college fees on a personal basis. It is, therefore, necessary that the exemption for gifts made to individuals for charity be raised to Rs. 500 per gift if not a higher figure.

Marriage Gifts

The exemptions contained in the Gift Tax Bill for gifts made on the occasion of marriage are most inadequate. Gifts made by an individual only to a "female relative dependent upon him for the necessaries of life on the occasion of her marriage" are exempt from the tax upto a maximum of Rs. 10,000 in respect of each such relative. Gifts made by a Hindu undivided family only "to any female member of the family who under any law, order or decree of a court is entitled to maintenance from the joint family property on the occasion of her marriage" are exempt from the tax upto a maximum of Rs. 10,000 in respect of each such relative. These exemptions must be broadened considerably. Gifts made to both male and female relatives, whether dependent or not, on the occasion of their marriage should be exempt from the gift tax. To penalise gifts made to male relatives and to female relatives who earn their livelihood and so are not dependent on the occasion of their marriage as is done by the Gift Tax Bill is to offend against our age-old social customs and is a violation of social decency.

Gifts to a Wife

Gifts made by a husband to his wife upto a maximum of Rs. 1 lakh are exempt from the gift tax. This is a fair and proper exemption.

Basic Exemption Allowance

There is a basic allowance from the gift tax under which gifts upto Rs. 10,000 made in any one year are exempted. But this exemption is reduced arbitrarily to Rs. 5,000 if the taxable gifts made to any one donee in the year exceeds Rs. 3,000. The exemption of Rs. 10,000 per year can hardly be called generous in these days when the value of money has shrunk to a fraction of what it was 10 or 15 years ago. At best, this exemption gives a little relief from the burden of the new tax. But there is absolutely not the slightest justification for arbitrarily reducing this exemption to Rs. 5,000, merely because gifts to an individual exceed Rs. 3,000 in the year. The official notes on clauses of the Gift Tax Bill claim that "this reduction of basic exemption is meant to discourage large gifts being made to the same individual." Gifts of between Rs. 3,000 and Rs. 10,000 today would amount in terms of real purchasing power to gifts of between Rs. 600 and Rs. 2,000 under pre-war conditions. It is difficult to understand how such gifts can be termed as "large." It would have been more discreet for the Government not to have given this ridiculous explanation of this provision for the reduction of the basic exemption allowance. The provision for reducing the basic exemption allowance to Rs. 5,000 is completely arbitrary, without justification and must be removed from the Bill before it is passed.

Small Gifts Must be Exempted

Under the Gift Tax Bill, every rupee given away by an individual in excess of the exemptions outlined so far will have to be declared a gift and the tax will have to be paid thereon. It is surely not proper that the law should require citizens of this country to keep detailed records of and to declare small and petty amounts which they may give away generously during the year. It is most degrading that the small generosities of human beings should be brought under the detailed scrutiny of the State. It is, therefore, recommended that the Bill should exempt very small gifts—say of less than Rs. 100 per gift—made by an assessee.

To sum up, the exemptions provided under the Gift Tax Bill are far from adequate. The scope must be extended considerably.

CHARGE OF THE TAX

Under the Gift Tax Bill, the donor of the gift is liable to pay the tax. However, if the tax cannot be recovered from the donor, it may be recovered from the donee. Under this harsh provision, the donee will have to pay the tax attributable to the gift received by him but at the rates of tax applicable to the donor. The tax is to be charged on the value of gifts made by the donor.

The basis of charging the gift tax is wrong and inequitable. The liability for the gift tax, as also for the estate duty, should be placed on the donee and not on the donor. The ultimate incidence or burden of the tax falls on the donee or the person receiving the gift. To the extent that there is a tax on gifts the donee receives less than he would have received in the absence of such a tax. Today, the estate duty is wrongly levied on the donor on the false notion that the burden or incidence of the duty falls on the deceased person. But the true burden of estate duty falls on the heirs and surely not on the dead man. If a man's property is reduced after his death by the death duties, his economic power during his lifetime is not affected. Death duties only reduce the economic power and wealth of the heirs and so should be levied on the heirs.

The gift tax and estate duty must be levied on the persons who receive the gifts or the legacies. The rate of the gift tax and of estate duty should depend not on the size of the gift or legacy or on the wealth of the donor. The rates of tax should depend on the wealth possessed by the person receiving the gift or legacy. Thus, if a poor man receives a gift or legacy, he should pay tax on it at a much lower rate than if the same gift is received by a very rich man. This would be the ideal solution, because the tax would thus be related to the ability to pay the tax (as measured by his total wealth) of the person on whom the burden of the tax falls, namely, the donee or the person receiving the gift or legacy.

Method Unfair

The method of charging the tax on the donor as proposed in the Gift Tax Bill is inequitable and unfair. Since the ultimate burden of the tax falls on the donee, the present tax proposals will mean that the tax will fall equally on all persons receiving gifts from the same donor, irrespective of whether the donees are rich or poor. Thus, if a man gives away Rs. 5 lakhs as gifts, the tax will be the same whether the gifts are made to one rich person or to 50 poor persons. The donees who are poor will have to bear the same incidence of the tax as the donees who are rich. This is clearly inequitable. A gift tax on the donee in relation to his total wealth is the only fair solution. Such a method of charging the gift tax was recommended by the Kaldor Report. This is another important recommendation of Mr. Kaldor which the Government of India has conveniently ignored whilst it has put into effect many of his other recommendations which suited the purposes of the Government.

A method of charging the gift tax on the donee according to his total wealth may even encourage a more even distribution of wealth. Today a donor will have to pay the same gift tax whether the gifts are given to one rich man or to 50 poor persons. But, if the tax is assessed on the persons receiving the gifts in relation to their wealth, the total tax payable may be substantially less if the gifts are distributed amongst 50 poor persons than if it is given to one rich man. The idea that less of his gifts will be taken away by the Government through the gift tax if the gifts are made to more and poorer persons may encourage donors to distribute their gifts more evenly and preferably to poorer persons. Such a gift tax may, therefore, encourage a reduction in the inequalities of wealth and income in the country which should suit the present socialistic goals of the Government ideally.

RATES OF TAX

Under the Gift Tax Bill, the tax is to be levied on a sharply progressive scale in which the rates of tax rise from 4 per cent. to 40 per cent. of the value of the gifts. The rate of tax is to be determined by the total value of all taxable gifts made by the assessee during the preceding five years. However, gifts made before 1st April 1957, even though within the five-year period, are not to be taken into account for the purposes of the Bill and so are excluded from the gift tax.

The rates of tax appear to be not excessive at the moment. But it must not be forgotten that whenever a new tax is introduced its rates are always kept at reasonable levels initially, in order to secure the acceptance of the tax. Thereafter, the tendency of the Government will be to raise the rates of the tax, in order to increase its revenues. Thus, for example, when the income-tax was first introduced in various countries, it was levied at rates which may appear to be nominal by today's standards. The rate of income-tax was initially often less than 5 per cent. But, over the years, Governments of all countries have slowly raised the rate at which the tax is payable until today the maximum rate of income-tax is more than 60 per cent. in most countries and in India it is 84 per cent. The danger of the rates of gift tax being increased over the years to come is there and is great.

CONFLICT OF LAWS AND DOUBLE TAXATION

In the Statement of Objects and Reasons of the Gift Tax Bill, the Finance Minister claimed that "with the introduction of this tax, the integrated tax structure which the Government have been aiming at will be complete." But the present structure of direct taxation can hardly be called 'integrated' in the true sense of that term. The various tax statutes contain many conflicting provisions and display considerable confusion in their principles. Indeed, such is the lack of integration between the various tax laws that many items may be taxed twice and even thrice in the same year and in the hands of the same taxpayer.

Income-tax and Gift Tax

The Indian Income-tax Act and the Gift Tax Bill (when passed) will impose double taxation on a number of items. Thus, there may be a number of items like secret commissions paid, bonus and gratuity, a portion of travelling and entertainment expenses and even contributions to political parties, all of which may be disallowed as deductions in computing the profits of a business for income-tax purposes. Such items may also fall within the definition of a gift under the new Bill. Hence such items will first be treated as income or profit of the business and subjected to the income-tax. Simultaneously, they may be deemed to be gifts made by the business and be subjected to the gift tax in the same year and in the hands of the same assessee, i.e., the business. Such double taxation is manifestly unfair and probably not even intended by the Government. The Gift Tax Bill should be amended suitably to remove from its scope such cases in which double taxation may be imposed.

Expenditure Tax and Gift Tax

A comparison between the Expenditure Tax Act and the proposed Gift Tax Bill reveals many discrepancies and much confusion in relation to the exemptions granted under the two laws. Under the Expenditure Tax Act, premiums paid by an assessee on insurance policies for his dependants are exempt from the expenditure tax presumably because the maintenance of such policies is considered to be fair personal consumption expenditure which should be allowed to a person—and there is no limit to the amount of such premiums. But the Gift Tax Bill exempts such policies only upto the maximum value of Rs. 10,000 per dependant from the gift tax. This exemption limit should be removed from the Bill.

The Expenditure Tax Act exempts from the tax all expenditure incurred by an assessee "for any public purpose of a charitable or religious nature." A similar exemption for gifts made for such purposes should be introduced into the Gift Tax Bill in place of the proposed narrow and inadequate exemptions contained in the Bill. The Expenditure Tax Act exempts from the tax "any expenditure incurred by the assessee on the maintenance of his parents subject to a maximum of Rs. 4,000." The Gift Tax Bill has no such exemption. But such an exemption must be introduced into the Gift Tax Bill because in the context of our social conditions and customs, the maintenance of aged, old, unemployed or needy parents is a duty. It will offend social decency and values to treat such expenditure on the same footing as other voluntary gifts and to levy a gift tax on it.

Estate Duty and Gift Tax

The provisions of the Estate Duty Act and its amendments proposed in the budget overlap the provisions of the Gift Tax Bill in a manner

CANE PRICE FORMULA FOR COMING SEASON

GROWERS ASSURED OF A SHARE IN SUGAR PROFITS

THE Government of India has announced the policy governing payment of cane prices by sugar mills during the ensuing season, that is, 1958-59 (commencing from 1st November next). Under the policy, the basic minimum price for sugarcane is fixed at Re. 1.44 per maund for delivery at the gates of factories and at Re. 1.31 per maund for delivery at rail centres. There should be a deferred payment of an amount which may be found due under the formula prescribed by the Government for linking the price of cane with that of sugar realised by the factories concerned. Announcing the above policy, the Union Ministry of Food and Agriculture observes:

"The basic minimum prices are the same as have been in force during the last five years. An expert committee under the chairmanship of Mr. P. A. Gopalakrishnan, appointed to examine the price-linking formula adopted in the 1953-54 season and suggest modifications if any for its improvement, considered the formula sound in principle and recommended its application with certain modifications on a compulsory basis. The formula as recommended by the Committee has been accepted by the Government for adoption on an all-India basis unless any alternative scheme is applied in a State or region by the State Government concerned with the previous approval of the Central Government."

While the details of the formula suggested by the Gopalakrishnan Committee are not available—we are told that the formula is being published in the *Gazette of India*—this much can be said, namely, that the Government has gone out of its way to link the price of cane, not to the quality of cane, but to the price of sugar realised by mills. In other words, the cane growers are assured of a share in the so-called excess profit of sugar mills. This decision is very regrettable, considering that the growers are not at all under the obligation either to share the loss incurred by the sugar mills or to assure adequate and regular supplies of cane to the mills. This aspect must be specially stressed because the minimum price has been fixed for sugarcane at a level at which the grower is assured of a good return, though those who claim to speak for farmers may not concede this point.

More Rational Course

The Government's anxiety to better the lot of agriculturists is understandable. But could not the Government find a better and more rational course? It could have, for instance, fixed a minimum price for sugarcane at a level sufficient to ensure an economic return to the grower, leaving the maximum price to fluctuate in accordance with the law of supply and demand. The chief merit of this course will be to introduce an element of competition among cane growers and sugar factories. The absence of such competition is one of the factors responsible for the continued poor quality of cane grown, particularly in the States of Uttar Pradesh and Bihar.

By linking the cane price to the price of sugar the Government has only introduced more complications in the sugar economy, for the working of the formula will present some practical difficulties. As this journal pointed out when the formula was first adopted in the 1953-54 season, the scheme may lead to a conflict between cane growers and factories over the selling price for sugar realised by the latter. The growers may insist on examining the books of accounts of the factories, in order to know the exact price at which sugar has been sold by them in the market. Again, it provides scope for malpractices among sugar factory owners. It may tempt the not-so-scrupulous millowners to show in their books a lower realisation on the sale of their sugar than they actually got. The result of this will be that even the Government may lose a part of its tax revenue which it would have otherwise received.

Two Other Defects

Apart from these difficulties, the scheme suffers from two defects. First, it does not provide any incentive to sugar factories to raise their efficiency. Secondly, it does not impose any obligations on cane growers to increase the quality of their cane.

An even more regrettable aspect of the Government's decision is that the new formula should be applied on a compulsory basis, in contrast to the application on a voluntary basis during 1953-54. As a result of such compulsion, most of the sugar factories which depend entirely on the agriculturists for supplies of cane will be at the mercy of growers. The growers will thus be in a much stronger position than they are today.

There is, however, one good feature in an otherwise bad policy, namely, the formula will not be adopted in a State or region where the State Government concerned applies an alternative scheme with the approval of the Centre. In areas such as Bombay-Deccan where the sugar factories themselves grow practically all the cane needed by them in their estates, they need not follow the scheme, if they so desire. In the case of factories which buy some cane from outside their estates, the tendency will be to expand their own estates, in order to reduce the necessity of having to buy outside cane. This is a good thing, for cane growing by factories yields better results than that by individuals who do not have the resources to command all the facilities necessary for scientific farming.

Incidentally, it may be noted that, for some time, the Government of Bombay has been following a policy of fixing, with the consent of the factories, a higher minimum price for sugarcane supplied to mills by private cultivators. The price fixed for the 1957-58 season is Re. 1.69 per maund (Rs. 46 per ton), as against the all-India minimum price of Re. 1.44 (about Rs. 37 per ton). In return for this understanding, the factories are not asked to pay to cane growers additional amounts by way of a share in the profits of industry.

In the Madras and Andhra States, the payment for cane is based on the "SISMA" formula, evolved by the South Indian Sugar Mills' Association, a formula which has the approval of the Governments of both the States. The formula provides for payment of cane not only on the basis of weight but also by taking into account the sucrose content of cane. Accordingly, the price payable by factories for cane supplied to them is calculated on the net amount realised by individual factories from the sale of sugar and on the average recovery obtained by individual factories of the whole crop for the whole season.

It is thus seen that there are alternative schemes for paying for sugarcane in the States of Bombay, Madras and Andhra. The latest formula of the Central Government will, therefore, be applicable to all the States except these three States.

The Government's decision to continue the present high minimum price of Re. 1.44 per maund for sugarcane and to link the price to that of sugar realised by mills is also deplorable, especially as it will make the task of building up an export trade in sugar extremely difficult. With the exception of Japan, the price of sugarcane in India is the highest in the world. Indeed, one wonders if any other agricultural commodity pays the cultivator as much as sugarcane does. As was pointed out in these columns only recently—*vide* page 268 of *Commerce* dated 15th February 1958—the continued high prices of cane have resulted in a substantial rise in the production of cane, particularly in areas supplying cane to the sugar mills. The all-India second estimate of cane (1957-58) puts the aggregate yield at 63.50 million tons and area at 4,784,000 acres, as against the adjusted second estimate of 58.99 million tons and 4,475,000 acres, respectively, in 1956-57. Surely, if the price offered for cane had not been very profitable, the growers would not have devoted a larger area to the cultivation of sugarcane.

Pressure Tactics

In conclusion, it must be said that, when the prices of all agricultural commodities are allowed to fluctuate according to the free play of market forces, there is no reason why sugarcane growers alone should be given most favoured treatment, as though they are the pets of the powers-that-be. It is true that sugarcane is a perishable crop, that, unless it is quickly crushed after it becomes ripe, it will become worthless even as firewood, and that, therefore, those who cultivate it deserve some protection against exploitation by sugar millowners. But what has been done for cane growers is much more than is necessary for this purpose. And the latest step to ensure a still higher price for cane irrespective of its quality is tantamount to placing a further premium on inefficiency. It looks as though the Central Government has, once again, allowed itself to be a victim of pressure tactics adopted by a section of politicians in U.P. and Bihar. It will be recalled, in this connection, that, quite recently, the Bihar Legislative Assembly unanimously adopted a resolution favouring a straight increase in the price fixed for sugarcane. This move was followed up later by a large number of Members of Parliament representing U.P. and Bihar by extending strong support to the demand.

It would appear that the Government's object in reviving a four-year-old formula, which had been tried for only a short period and given up as unsatisfactory, is to satisfy the unwise agitation for a higher price by a section of politicians who try to keep their hold over sugarcane growers through such tactics. For reasons already mentioned, the latest step for appeasing the politicians will only land the Government in fresh difficulties and aggravate the anomalies that already abound in its agricultural policies. The Government's objective in these matters should be, not price support but price stabilisation. As the Union Food and Agriculture Minister, Mr. Ajit Prasad Jain, himself frankly admitted while inaugurating the F.A.O. Centre on policies to support and stabilise agricultural prices and incomes in Asia and the Far East at New Delhi last week, price support policies have resulted in creating an imbalance among the output of different competing crops; sometimes, in periods of acute scarcity of foodgrains, "the cultivators change over to the production of sugarcane or some other commercial crop which is more attractive." Viewed thus, it will be appreciated that, in fixing the price of sugarcane at a high level—it accounts for as much as 60 per cent. of the cost of sugar production—and, what is more, in allowing cane growers to get a share in the profits of sugar factories on top of it, the Government has provided an excellent instance of saying one thing and doing another which runs quite contrary to what it says.

SUGAR PRODUCTION AND STOCKS

The sugar production during the month of February 1958 was 414,000 tons, bringing the total production up to 28th February 1958 to 1,336,000 tons. The corresponding figures for the 1956-57 season were 356,000 tons and 1,169,000 tons, respectively.

The offtake of sugar from factories during February was 195,000 tons, as against 176,000 tons a year before. This brings the total despatches up to 28th February 1958, including despatches for exports, to 636,000 tons, as against 635,000 tons on the same date last season.

The total closing stocks of sugar with factories as on 28th February 1958 was 1,129,000 tons, as against 1,061,000 tons a year before.

The twelfth annual general meeting of the Indian Confectionery Manufacturers' Association, Calcutta, will be held at New Delhi on 4th April 1958. Mr. Khanchand J. Pamnani, President of the Association, presiding. Besides a review of developments in confectionery industry in the past year, the meeting will consider certain important resolutions which have a vital bearing on the future development of the industry.

EXPORTS OF INDIAN TEA

S.T.C. NOT TO TAKE OVER—CUT IN EXPORT DUTY ON COMMON TEA LIKELY

THE reply of the Union Minister, Mr. Morarji Desai, to the debate in the Lok Sabha on the demands for grants for the Ministry of Commerce and Industry provided an occasion for the enunciation of the Government's policy towards the tea industry. As the main foreign exchange earner, it is but natural that the tea industry should have figured prominently in the debate. Some members of Parliament wanted the Government to exercise greater control over the industry in order to improve the exports of tea. One of the Congress members, Mr. H. C. Dasappa of Mysore, wanted the Government to take over the manufacturing side of tea business, leaving the plantation side to the private sector. A few other Congress, Communist and Socialist members went so far as to suggest that the State Trading Corporation should take up the business of tea export. This demand was rejected by Mr. Morarji Desai, who realistically admitted that the business was a complicated one requiring considerable experience and, if it was taken over by the S.T.C., it would "lead to a disaster." Another welcome feature of Mr. Desai's reply was that the Government had at long last realised the burden of export duty on common tea and that it was examining the question as to how best it could be reduced. Thirdly, Mr. Desai made a firm statement that the Union Government was not in favour of taking over the tea estates.

Declaring that the Government had not remained idle but introduced a number of measures to step up exports, Mr. Desai pointed out that the total value of exports during 1957 was expected to be of the order of Rs. 660 crores, representing an increase of Rs. 41 crores over those of 1956. The figures of tea exports during the last three years given by the Union Minister are as follows:

Year	*Quantity* (In million lbs.)	*Value* (In crores of Rs.)
1955	367	113.5
1956	523	143.3
1957	447	107.0

The sharp rise in exports of tea during 1956 was due to an "unusual combination of circumstances," which was not in evidence during 1957, and hence the fall in exports in that year. The quantity of tea exported during 1957 was, however, higher than that in 1955, though the value thereof was lower. Evidently, it was this setback to our foreign exchange earnings through tea which brought about a demand from a section of the House that the export trade in this commodity should be taken over by the State Trading Corporation. Some of the members, however, favoured the S.T.C. entering this trade on the ground that certain foreign firms had a virtual monopoly in the export of tea. Mr. Desai, in his reply, said that there might be monopolies, but they could not be avoided. Anyway, it was clear that he was against State trading in tea and categorically rejected the suggestion that the S.T.C. should take over export of tea. He added that, if it had been possible, the S.T.C. would have done it already. He had no doubt that, if the S.T.C. took up the export of tea, not only the organisation would have to be wound-up but also the whole Government would be in danger. Giving his reasons for the State not entering the tea export business, Mr. Desai said:

"There are certain situations in which only some people can do something. Export of tea is a highly expert business. It is also a delicate question. It is easy for members to say that this should be done or that should be done. But I am quite sure they will admit that we should not do anything which will reduce our export of tea and dislocate our business with various countries. If there are foreigners in this business, they are the pioneers and they are there. If they exploit us, there will be reason for us to take action. But, they are not exploiting us. They are helping us. Therefore, it is no use suggesting something on mere ideological grounds. I am glad that after getting responsibility in one quarter (State), they (the Communists) have given up the cry of nationalisation of the tea industry. I am glad to see they are wise."

It is gratifying that Mr. Desai has not minced words on this subject and has been bold enough to tell the opposition the limitations of the State to do everything. The stand taken by him is undoubtedly the correct one, as it is calculated to serve the larger interests of the public better. Mr. Desai's reply convincingly shows that he has a good understanding of the position of the plantation industry.

One of the factors which stand in the way of larger exports of tea is that the bulk of the tea output comprises common tea, the price of which in export markets is not found competitive with similar teas from other countries. This is because of the high level of export duty which the common teas have to bear on par with the quality teas. Representations had been made by the industry to the Government on this anomalous position, but the latter appeared to have turned a deaf ear to this plea. Even the Export Promotion Committee, in its report submitted to the Government of India in November last, had drawn attention to the keen competition which Indian common teas were facing from East African teas, the landed cost of which was somewhat below the cost of producton of many estates in North India. The main difficulty in fixing the export duty on variety-wise basis is that of fixing the correct value of each grade of tea. So far as common tea is concerned, there is no accepted definition of "common" tea. The Export Promotion Committee, however, suggested that, common tea being inferior tea, it should be possible to define it in terms of price. The Committee was given to understand that all teas selling below Re. 1.50 per lb. could be regarded as "common" teas. Accordingly, the Committee recommended that all teas sold in the Calcutta auctions below Re. 1.50 per lb. should benefit from a reduction in export duty to the extent of 12 nP per lb. The Government of India has not so far taken any decision on this recommendation of the Export Promotion Committee.

It is against this background that one must view the statement of Mr. Desai in the Lok Sabha on the 20th inst. It shows that the Government is really anxious to do something for "common" teas, though it has not yet come to any decision. Explaining the Government's stand on this question, the Commerce and Industry Minister observed as follows:

"We have been examining this question for the last two months, but we are finding it difficult to find out some way which will benefit common tea. We do not want common tea to lose the advantage given to it by this advantage being taken by the better teas. It has been suggested that the duty may be fixed regionwise. But there is no region where only common teas are produced and there is no region where only superior teas are produced. If the duty is to be levied on the price of the tea, that will require segregation of the common teas from the very first process to the stage of auctions and the point of export. This is not an easy matter. If any action is taken to segregate them, it may even clog the flow of trade. We have, therefore, to face these different difficulties and find out which way will help the common teas. I can assure the House that Government are trying to find a way out. We are hopeful that it will be found. If any time is taken over it, may I assure the House that it is not because of want of regard for it, but because of the inability to find out a suitable way to do it. But I am quite sure that too much time will not be taken over the question and a decision will be soon taken."

This is a reassuring statement. It is to be hoped that the experts engaged in tea industry will join hands and help the Government to arrive at a workable solution.

The Minister also made a reference to the possibility of the closure of some tea gardens in Assam. He disclosed that the Government of Assam was considering the question whether it could take up and manage some of these gardens. Mr. Desai was conscious of the various difficulties in taking over and running a tea estate. Thus, he said:

"It is easy to say that Government should take some of these estates and work them. But when Government takes them up and loses money, I do not know what will happen to the Minister who will be in charge of them. He will certainly have to go. I do not think any Minister will hesitate to go if he fails to do his duty. He will go. But I am quite sure that the House does not expect a Minister to take deliberately a wrong step from the very beginning. If that is expected the whole House will be responsible for the wrong step and there will be none to call the House to account."

The foregoing enunciation of the Union Government's policy indicates that the Government is well disposed towards the tea industry, that it is not allowing ideological considerations to stand in the way of tea industry's progress and that one can confidently expect that one of Mr. Morarjee Desai's first tasks as the new Finance Minister would be to give relief to the common teas.

SHARP FALL IN OUTPUT OF JUTE GOODS

DESPATCHES IMPROVE SIZABLY

THE jute goods market has been ruling steady, though business passing is dull, thanks to the fixation of minimum prices towards the close of last month and the announcement of lower production figures for the month of February. Despite the sizable fall in output during the month and larger despatches by mills, the stocks at the end of the month show only a slight decline. The aggregate production for the month of February shows a fall of 13,000 tons at 85,300 tons. With this decline, the upward trend in production noted during the previous three months has been reversed and the output has been brought to the lowest level since October 1957.

The decline in output has been shared by all varieties of jute goods, as will be seen from the following comparative table:

Production
(In tons)

	February, 1958	January, 1958	December, 1957	February, 1957
Hessian	30,100	34,400	32,100	35,000
Sacking	49,300	57,300	54,700	39,600
Others	5,900	6,600	6,000	5,600
Total ..	85,300	98,300	92,800	80,200

The sharpest fall is noted in sacking, the output of which, at 49,300 tons, shows a decline of 8,000 tons over the month and is the lowest in the last four months. Despite this decline, the production of sacking is 9,700 tons more than that in the corresponding month of 1957. There has been a shrinkage of 4,300 tons in the cutput of hessian too, which, at 30,100 tons, is the lowest for many months. This is in contrast to the rise of 2,300 tons recorded in January last. As against an increase of 600 tons in the previous month, the production of "other manufactures" has suffered a decline of 700 tons during the month under review.

The aggregate fall in production of all varieties is partly due to the shorter working period during the month, the number of hours worked being 192, as against 217.5 in the previous month.

The stocks of manufactured goods at the end of the month aggregated 95,100 tons, representing a fall of only 1,500 tons over the month. Nevertheless, it is in refreshing contrast to the substantial rise of 21,600 tons (that is, from 75,000 tons to 96,600 tons) noted at the end of the previous month. Barring the January figure, the latest stocks represent the highest level since the end of July 1957. The decline in total stocks during February occurred mainly under hessians which fell by 2,400 tons to 27,300 tons. Sacking stocks were also lower, but only by 300 tons, at 53,400 tons.

The comparative statement of stocks of the three main categories given below, shows that the stocks as a whole have declined over the year by 2,300 tons:

Stocks
(In tons)

	As on 28th Feb., 1958	As on 31st Jan., 1958	As on 31st Dec., 1957	As on 28th Feb., 1957
Hessian	27,300	29,700	25,200	25,200
Sacking	53,400	53,700	38,400	61,600
Others	14,400	13,200	11,400	10,600
Total ..	95,100	96,600	75,000	97,400

The despatches of manufactured goods by mills during the month under review have been encouraging, in that they show an increase of over 10,300 tons to 85,800 tons. The rise in despatches is mainly accounted for by goods for export purposes, particularly sacking, while those for internal consumption have suffered a slight setback. Despatches for export purposes amount to 67,400 tons, having gone up from 55,600 tons in January 1958. This increase of 11,800 tons is in refreshing contrast to the almost successive decline noted in the previous five months when the despatches fell from 87,600 tons in August 1957 to 55,600 tons in January this year. A break-up analysis of the despatches according to the three main varieties of goods shows that the offtake of hessian has gone up from 28,100 tons to 30,800 tons, sacking from 26,200 tons to 35,200 tons and other manufactures from 1,300 tons to 1,400 tons.

The despatches for internal consumption have declined from 19,900 tons to 18,400 tons and is in distinct contrast to the slight increase of 800 tons noted in January. Despatches of hessian have gone down from 1,900 tons to 1,600 tons, sacking from 15,300 tons to 14,600 tons and "other manufactures" from 2,600 tons to 2,100 tons.

Resident Field Engineer

The unique
HOLLERITH SERVICE

The accountant's visitor had come to see what sort of job Hollerith punched card machines were doing. "Tell me," he asked, "what sort of service did Hollerith give you?" This time the accountant looked surprised. "Did?" he queried, "Surely you know that one of the big things about Hollerith is the *continuous service.*"

The two reports

In Hollerith installations your equipment is, as it were, 'hand-tailored'. Your problems are very fully studied before the first careful report is presented to you. No fee is charged for this service. The second report is a detailed working plan in which the flow of work—every facet of the operation—is set out in full.

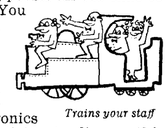
First careful report

Consultant, guide and friend

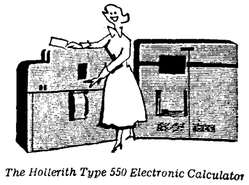
The Technical Service Man sees your installation in. Trains your staff. Stays with you till you are absolutely at home with your mechanised office. The maintenance of your machines is now in the hands of the Field Engineer who is always very quickly available.

Responsible advice

Modern business, because its control is based on figures, points all the time to mechanisation. You may only need simple punched card equipment. You might even be ready for an electronic computer. An electronics specialist is available to discuss this with you. Why not send for him? No fee is charged.



Trains your staff



The Hollerith Type 550 Electronic Calculator

Footnote

Hollerith is a vast organisation with immense research facilities, a network of offices throughout India, and a very long experience of Indian business needs.

RECESSION IN WORLD STEEL MARKET

LONG-TERM OUTLOOK BOUND TO REMAIN BRIGHT

A SOMEWHAT disturbing trend in the world steel market is the slight fall in demand and the consequent recession in prices. It is, of course, too early to say how long this trend will persist. But it is noteworthy that world steel industry, after having been continuously exhorted to produce more and more steel, should now find that surpluses are developing in certain varieties. It is true that there are still shortages in respect of many kinds and varieties of steel. The slight fall in demand, which has manifested itself in recent weeks, is perhaps only a temporary phase which must sooner or later come to an end. How soon this trend will cease depends upon the reversal of the deflationary policies which some countries like Britain have been compelled to follow and the success of the anti-recessionist measures which are now being adopted by the U.S. So far as the immediate future is concerned, it seems certain that international competition in steel will become keener than ever, leading to at least modest, if not sizable, decline in prices.

Increase in Output

A notable feature of post-war economy is the almost continuous increase in world steel output. Since 1946, world steel output has more than doubled. World steel production (in million tons) in each of the ten years ended 1956 was: 1946—109.54; 1947—133.80; 1948—153.30; 1949—157.86; 1950—186.45; 1951—206.68; 1952—208.06; 1953—230.85; 1954—219.83; 1955—265.01 and 1956—278.48. Crude steel production during 1957 in Europe, including the U.S.S.R., broke all previous records, rising to 157 million tons from 149 million tons in 1956. The rate of increase was, however, less than that in previous years. Thus, the 5 per cent. increase in 1957 compares with 7 per cent. attained in 1956 and 13 per cent. in 1955. The figures for the main producing countries with percentage increases in brackets are: U.S.S.R. 51.0 million tons (5); W. Germany 24.5 million tons (6); U.K. 22.0 million tons (5); France 14.1 million tons (5); Italy 6.8 million tons (5); Poland 5.3 million tons (6); Czechoslovakia 5.2 million tons (7); Luxemburg 3.5 million tons (1); Saar 3.5 million tons (3); E. Germany 3.3 million tons (6); Sweden 2.5 million tons (3); Austria 2.5 million tons (20). Belgium's production fell by 2 per cent. to 6.3 million tons, due to the steel strike in July. Steel production in the U.S. was 2 per cent. lower than in 1956, while in Japan, production reached a new record of 12.6 million tons, as compared with 11.1 million tons in 1956.

Reviewing the recent trends in the world iron and steel market, the *Index*, the monthly economic review of the Swedish Bank, *Svenska Hadelsbanken*, calls attention to the fact that "competition has hardened and prices have shown a weakening tendency." A paradoxical feature in the situation, according to the review, is that, while export prices have been reduced, domestic prices in a number of countries have been raised. Because of the setback in the demand for steel, the U.S. industry is running at only 60 per cent. capacity, as compared with 100 per cent. at the beginning of 1957. In the U.K. too, the latter half of 1957 was characterised by a "marked" stagnation in demand. British domestic consumption of iron and steel during the first six months of 1958, it is stated, will be some 5 per cent. less than last year. In the case of the countries forming the European Coal and Steel Community, the worsened conditions in the export markets, it is stated, have by and large been offset by a brisk demand in domestic markets. Nevertheless, signs of overproduction have become evident in these countries too.

Discussing the nature and extent of the recession in the world steel market, the *Index* observes:

"This recession in the steel industry is not surprising since it is known from experience that the trade is especially prone to changing business conditions. Every deterioration in building activity and the engineering industry has a direct effect on the sales of iron and steel. Consequently, a stagnation on the market for capital goods or for consumer goods is almost immediately followed by repercussions in the steel trade. The fact that the American recession has had such a marked effect on the steel market is due to the simultaneous fall-off in demand from both the investment and consumer side. At the same time as building work has slackened and the demand for machine tools has declined, requirements of durable consumer goods have tapered off. For example, motor car sales have not been as high as was expected and this has had an immediate effect on the steel industry since the American motor industry consumes about one-fifth of the steel produced in the U.S.A.

"The difficulties encourage self-criticism and it is quite natural that the steel industry the world over should reconsider its position. The crucial question is whether or not the industry has been extended too quickly in recent years so that there is now a danger of more permanent overproduction. However, the consensus of opinion in both America and Western Europe seems to be that the present marketing difficulties are of a temporary nature, and that a recovery in demand can be expected during the latter half of 1958. It is not considered that the industry has too great a capacity viewed on a long-term basis. On the contrary, the opinion in all the important steel-producing countries seems to be that the capacity of the steel industry must be further extended if the general rate of economic expansion maintained hitherto is to be continued."

Long-term Outlook

To India, the recession in steel prices is not an unwelcome development, for it is likely to remain an importer of steel and steel products at least till its own programmes for increase in steel production have been executed. So far as the domestic industry is concerned, Indian steel prices, as is well known, are well below world parity so that a slight decline in world prices might serve only to narrow the gap which may not, however, disappear entirely. As regards the long-term outlook, there is little basis for fearing an excessive glut in steel and a steep fall in prices. Defence and transport industries, not to mention other industries, are likely to remain large consumers of steel. Being a basic industry, steel industry is dependent for its fortunes on all other industries. And nothing short of a major trade depression, as the British journal *Iron and Coal* pointed out recently, can effectively reduce the need for steel. Nobody fears such a depression now, notwithstanding the world-wide concern over the continuing recession in the U.S. Further, as the pace of industrialisation in underdeveloped countries gains momentum, the demand for steel is bound to move up. To the world steel industry, therefore, the progress of development programmes in the underdeveloped parts of the world is a matter of utmost significance.

U.K. NUCLEAR POWER

The output of electricity from Britain's nuclear power plants in 1966, according to Sir John Cockcroft, member for scientific research of the United Kingdom Atomic Energy Authority, will be three times the amount originally anticipated for 1965. Sir John recalled that a Government White Paper three years ago looked forward to the development by 1965 of some 2,000 megawatts of electricity from the original plans for nuclear power plants in the United Kingdom. Since then, technical progress had overtaken estimates by a handsome margin. It had been possible so to modify the overall programme as to permit an output of up to 6,000 megawatts by 1966.

The improvement was due in the first instance to an increase of output from individual nuclear stations by straightforward engineering developments. This had affected the size of the reactor and the amount of uranium fuel, and had approximately doubled the volume of heat extracted from each ton of uranium. One result of this had been progressively to decrease capital costs per kilowatt. Even allowing for the expected increase in the price of fuels, overall expenditure on fuel would remain the same as it was for first-generation reactors, namely, about 0.16d. per unit. Sir John endorsed Sir Christopher Hinton's prophecy that by the late 1960s the total cost of nuclear-produced electricity should come down to less than a halfpenny a unit. That, anyhow, would be the target.

Because of the cost of deriving power from water-moderated reactors using enriched uranium fuel, the Atomic Energy Authority was now investigating two other lines of development, Sir John added. These were the gas-cooled graphite-moderated reactor and the possibility of changing to heavy water as the moderator. Sir John concluded that in the long-run fusion reactors might replace fission reactors, and that the final objective should be to use energy available from fusion reactions in deuterium. He said: "This, after all, has been a very satisfactory energy source for the sun and the stars for thousands of millions of years, and if we can emulate their performance on earth we shall not only have an inexhaustible supply of very cheap fuel, but should also have the satisfaction of solving one of the most fascinating scientific problems of our time. Towards this, ZETA is only a first step, though a most encouraging one."

• • • •

Nuclear power will be cheaper than "conventionally produced" power by 1962, and by 1982 it will cost only half as much, if the development of nuclear-power stations can be continued at its present pace and present trends in coal costs continue. This forecast was made by Sir Christopher Hinton, Chairman of Britain's Central Electricity Generating Board, in a recent lecture to the Royal Society of Arts, London. "If this can be achieved," he said, "not only shall we have made a great contribution to industry generally, but we shall induce a change of practice in domestic heating, and shall find that heat from nuclear energy will be used in the home." "It should not be imagined," he said, "that such a development will lead to a reduction in the overall demand for coal. This demand is rising far more rapidly than supplies are expanding, and the report of an O.E.E.C. committee which studied this problem showed that there would be a large and growing gap that could only be met by a growing use of oil and nuclear power." He added: "If in the long run there was a drop in the demand for coal as a fuel, this might be fortunate, for it is an important raw material in the chemical industry and it may be that we are wrong to use it simply as fuel."

ROAD TRAFFIC

Various solutions designed to ensure road safety were proposed by the United Nations Economic Commission for Europe's (E.C.E's) Working Party on the Prevention of Road Traffic Accidents during its ninth session, held last month at Geneva. These proposals, many of which were included in recommendations made to the E.C.E. Sub-committee on road transport, relate to level crossings, the signposting of roads, road markings; the marking of vehicles in general, the marking of special vehicles, traffic problems and the information centres established by the World Touring and Automobile Association (O.T.A.). The Working Party also studied the compilation of accident statistics.

The Working Party recommended several signs for signposting of roads, but emphasised that their number should not be proliferated. It examined the signposting of motor roads, roads reserved for automobile traffic, minimum speed-limits on sections of road, "end of prohibition" signs, reflex reflectors marking the edge of carriageways and traffic light signals. It also considered signal systems to be used for indicating alternating one-way traffic, transport cafes, motels and camping sites.

It should be pointed out that the Working Party, after noting that proliferation of signs should be avoided in the interest of safety, nevertheless suggested certain new signs to adapt the existing signposting system to new conditions. For example, owing to the increased popularity of camping and caravanning, it felt that advance and direction signs should be used to indicate certain camping and caravan sites. In this connection, particular attention should be drawn to the Working Party's adoption of a general "end of prohibition" sign, especially for stretches with a speed limit or a ban on overtaking.

MAMMOTH TYRES

The production of large earthmover tyres suitable for the heavier types of machines has now been undertaken by the Dunlop Factory at Sahaganj (near Calcutta). Earthmoving machines are coming into greater use in India, thanks to the large multi-purpose river valley projects included in the first and the second Five-year Plans. It is estimated that, since 1950, approximately Rs. 20-25 crores have been spent in the import of such machines, of which about 1,500 are in use in different parts of India. A Government-sponsored committee recently recommended a phased programme of manufacture of such machines in India in collaboration with foreign experts.

The steel moulds required for earthmover tyres, it is stated, are enormous, each of them weighing over six tons. The tyre itself—taking the 21.00-25 size as an example—weighs over nine maunds, uses up 400 lbs. of tough rubber compound as compared with 11 lbs. in the average car tyre and has 68 miles of special reinforced tyre cord. The load capacity of the tyre is 36 tons. Before designing this new pattern earthmover tyre, Dunlop engineers made on-the-spot surveys of tyre behaviour at project sites in many parts of the world. The particular conditions in India, such as terrain, the need to operate under very high temperatures as well as conditions of humidity, were taken into account. The resultant tyre pattern is stated to be completely new; the directional tread bars are designed for greater traction and to reduce power loss caused by wheel spin. The tread bars are of a self-cleaning pattern and have additional load-carrying areas in the centre for longer life.

From April, the B.O.A.C. will operate two of its Britannia services to London via Teheran, the capital of Iran. Subject to Government approval, one of these flights will provide a direct air link between Delhi and Teheran. The other service will connect the Iranian capital with Calcutta. In both cases, Karachi will be the only intermediate stop. The overall journey time to Teheran will be six hours from Delhi and nine hours from Calcutta. Other countries served by the Britannia services via Teheran will be the Lebanon and Germany in the West, and Burma, Thailand, Malaya, Hong Kong and Japan in the East.

NEW PRODUCTS AND PROCESSES

Portable Automatic Welding Machine

A PORTABLE, electric motor-driven, track-guided machine that can be equipped to do automatic welding, cutting and heat treating is to be produced on a commercial scale in the U.S. following the successful use of prototype models in defence work. It is said to be capable of handling most requirements of metal-working shops and of supplementing welding and cutting equipment in large fabrication plants. The new machine including the electric motor, controls an heavy aluminium housing, weighs 47 lbs. and can carry 750 lbs. of welding or cutting equipment. It is to be available in two speed ranges to handle the general run of welding and cutting assignments and is said to facilitate such jobs as the automatic welding, or cutting of steel plates; the cutting of steel billets, or "blooms" to length; the automatic welding of longitudinal tank and pipe joints, railroad car sidings and long sections of sheet steel; and the cutting of heavy scrap and heavy plate steel into scrips of specific sizes. The basic carriages can be equipped to do straight-line, level, and heavy-duty cutting and also "dual shield," argon arc and gas arc welding, as well as flame-hardening, flame-softening, flame-straightening and stress-relieving. One model travels at welding speeds of 9 to 127 inches per minute; the other at from 1 to 14½ inches per minute for cutting.

Aircraft Warning

An experimental commercial device, called an Aero-Warn, which warns a pilot of an approaching plane by detecting infra-red heat rays from the latter's engines and exhaust, is under test and may, it is hoped, prove helpful in solving the air collision menace for high-speed aircraft in increasingly heavy traffic. The new device which weighs about 30 lbs. is described as consisting of an infra-red scanner mounted on the aircraft's tail fin. Incorporated in it is a spinning mirror capable of detecting infra-red rays and deflecting them into an optical system which is connected to a dial on the aircraft's instrument panel. The device is said to be designed so that it can detect a plane up to eight miles away and can indicate, by means of a small flashing arrow on the dial, the direction from which it is approaching, thereby permitting the pilot to bank away in time. The extension of the range of the device beyond eight miles is said to be feasible. Testing of the unit in operational aircraft is currently under way.

Mobile Unit for Oil Processing

A mobile unit for oil processing and laboratory testing has been developed by the Manchester Oil Refinery. The unit is designed to process the oil used in electrical transformers on site. It can, for example, fill large transformers, which have been delivered to the site filled with gas, or under vacuum, with new oil, carrying out all the necessary de-gassing, dehydration and filtration operations. It can also be used to dehydrate and refilter the oil in existing transformers when the condition of the oil makes this necessary. Large transformers can also be dried out by circulating the insulating oil under conditions of high temperature and high vacuum. The processing unit contains a series of pumping units for circulating the oil, vacuum treatment and oil delivery, a coarse filter and a filter press and an oil heater. The filter units are designed to operate over a wide range of temperatures. A laboratory is built into the vehicle used to tow the processing unit.

New British High-speed Loom

A new precision belt high-speed loom for weaving silk and rayon fabrics, designed to compete with continental looms, was shown recently by George Hattersley and Sons of the U.K. This latest model is intended to produce a rayon fabric of high quality and at a higher rate of production. One of the main features of the design is the absence of overhead structure which prevents oil damaging the fabric, and particular care has been taken to eliminate working parts near the cloth, so ensuring clean fabric. There has been a persistent demand in Lancashire for a precision-built loom to take the place of expensive continental models; the firm claims that this new loom, which normally runs at 200 picks a minute will meet the need. The cost is between £500 and £600, regarded as a low price for a precision loom.

New Electric Cooker

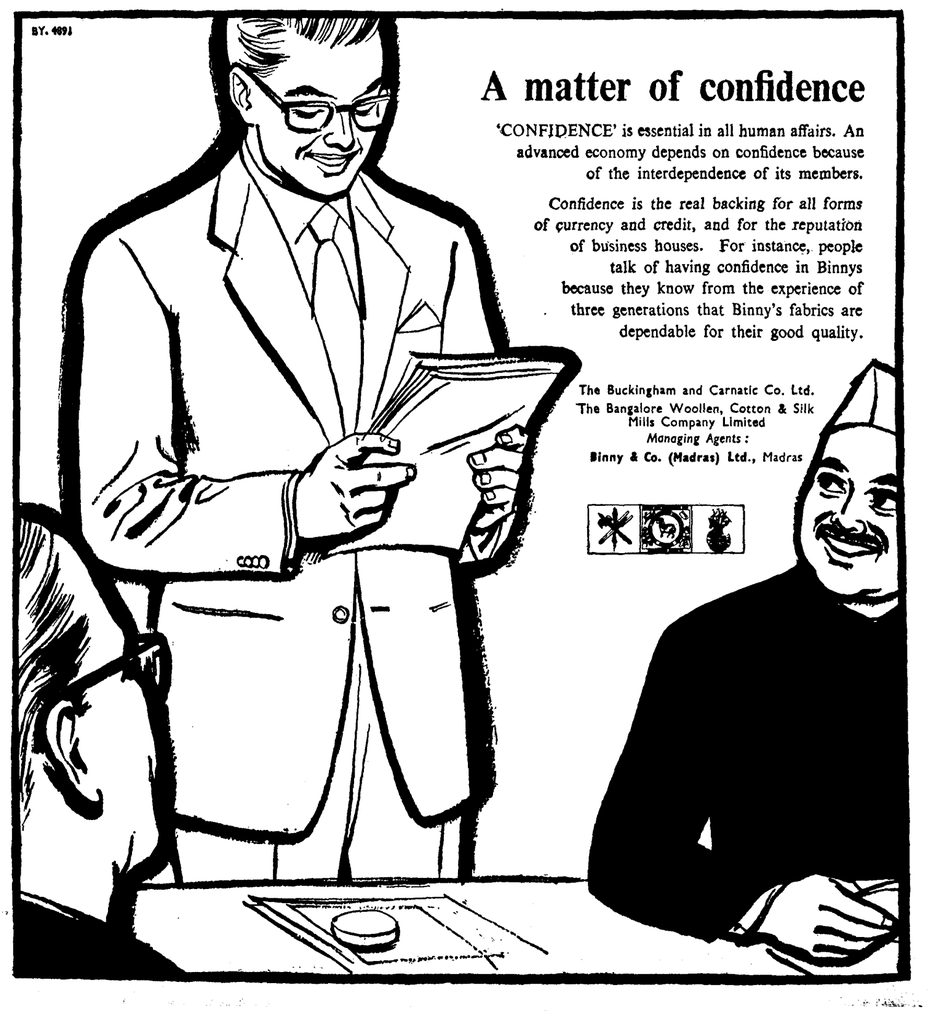
The company supplying the main cooking apparatus for the Britannia Inn at the Brussels Universal and International Exhibition this summer will also be exhibiting its latest domestic cooker on the British Electrical and Allied Manufacturers Association stand at the exhibition. The cooker is being made available for export soon. It is modelled on the manufacturers' current design series, but there are certain additional features. An eye-level electric grill, controlled by a three-heat switch has been included for the first time. Using aluminium foil, the manufacturers have devised a protection for the oven roof. They state that the most difficult part of any oven to clean is the roof, and the aluminium is removable and replaceable. The cooker incorporates six six-heat control plates.

Plastic-coated Steel

An entirely new and revolutionary material, produced by a well-known British steel company, is in the form of a plastic-coated steel, which, it is stated, will have numerous applications in engineering and industry generally. One of the main features of this material is that it can be worked and treated as ordinary steel sheet, while its outer surface retains all the characteristics of P.V.C. plastic, produced in a varied range of colours and embossed patterns. The outer plastic surface is a permanent, complete finish in itself, being extremely easy to clean and maintain. It is suitable for the manufacture of furniture, motor cars, building materials, electrical goods, and many types of domestic and industrial items, combining the strength and durability of steel with the finish and texture of plastic. An important point is that there is no need for surface finishing treatments, while the product is cheaper than stainless steel. Essentially the material is strip mill cold reduced steel with a specially formulated Velbex P.V.C. coating, and the reverse side of the sheet can be either a bonderised steel or electro-zinc-coated surface. It can be bent, formed, seamed, deep drawn, joined and welded without damaging the coating; it is warm and pleasant to the touch and has excellent electrical insulating properties, being resistant also to acids, alkalis, greases, detergents, weather, humidity and to abrasion. It does not support combustion, and is stable at higher temperatures than P.V.C. alone. The product is available in steel gauges from 26G (0.196″) to 16G (0.0625″), and in sheet lengths and widths of up to 144″ and 48″, respectively, the P.V.C. coating being 0.014″ thick. It can be supplied in almost any colour, in the firm's standard range of embossings.

Rubber Strips for Expansion Joints

Joints in concrete structures have often to be made watertight, and permanent watertightness must be guaranteed should any setting occur. The copper strings with filling material and profiled rubber strips hitherto used have not given complete satisfaction in this respect. For this reason a Netherlands rubber factory has, in co-operation with the Netherlands Administration of Waterways, developed a special jointing strip which has meanwhile been extensively used in the construction of an automobile and railway tunnel under the North Sea Canal. This jointing strip consists of a profiled rubber strip with sheet steel strips vulcanised into both sides to ensure firm adhesion to the concrete. They also enable the strips to be suspended in a simple manner from the reinforcement, so that the strips can also be incorporated in a bent state. Moreover, the steel strips can be welded together to make various special joints, e.g., angular joints, Tee joints, etc. The jointing strips can be supplied in eight standardised profiles and in various sizes, dependent on the purpose for which they are to be used. The rubber profiles can also be supplied without steel strips.



WEAKNESS OF TRADE UNION MOVEMENT

FACTORY-WISE UNIONS SUGGESTED

IT is common knowledge that one of the essential factors necessary for the development of a sufficiently comprehensive and efficient system of industrial relations is the establishment of strong trade unions. Despite the fact that the trade union movement in India has a record of more than half a century of existence, it has not yet grown into a dynamic and powerful movement fully representing the interest of labour and capable of bargaining with the employers for the legitimate rights of labour on a level of equality. Instead, labour unions continue to depend on the Government for protection and derive their sustenance and strength from political incitement of workers rather than on their informed and responsible support. The weakness of the movement is attributed to a variety of factors such as multiplicity of unions, political rivalries, lack of resources, disunity in the ranks of labour and the domination of outsiders. There is a large section of opinion in this country to the effect that the system of compulsory adjudication has cut at the root of the trade union movement and that the former should, therefore, be abolished so as to stimulate the growth of healthy trade unionism. These quarters point out that so long as workers find that there is a machinery for the settlement of disputes other than their unions they would hardly realise the necessity for strong unions or have faith in them. There are, however, others who point out that trade unions, in spite of the prevalence of adjudication, is growing stronger and that the latter could not be abolished until the movement is strong enough to bargain with the employer on equal terms.

While there might be differences of opinion on this point, it should not be difficult to single out the basic defects of the trade union movement. A correct diagnosis of the ills of the movement was made by Mr E. Parker in his presidential address to the annual meeting of the Bombay Chamber of Commerce and Industry, held in Bombay on the 18th inst. Mr. Parker laid his finger on the most important cause when he said that the main weakness was the prevalence of too many different types of trade union organisation, vying with one another for the loyalty of workers. Unless and until party politics are kept out of the trade union movement, there is little hope, according to him, of sound unions which would fight and work for the interest of the workers. This criticism applies as much to the Congress trade unions like the I.N.T.U.C. as to the Socialist and Communist unions. Lack of proper leadership, according to Mr. Parker, is another defect of the movement. Leaders from outside the ranks of workers tend to become political agitators with interest more concerned with themselves than the workers they claim to represent.

One-sided Legislation

The present unhealthy trend in the trade union movement is further supported and encouraged by what Mr. Parker calls "ambiguous and one-sided" labour legislation. The Industrial Disputes Act, according to him, is loaded with so many ambiguities and different interpretations of sections that whatever the employer does is likely to be considered illegal or unfair. The indiscriminate reference to adjudication courts of impossible demands put up by trade unions with small membership in the undertakings concerned, Mr. Parker added, had created unnecessary unpleasantness in employer-employee relations.

He, therefore, suggested that for the healthy growth of trade union movement in India, unions should be organised on a factory-wise basis. Factory-wise unions could devote their time and energy to the grievances of the workers of the factory. They could also develop their leadership from among their own workers and, since they have no political axes to grind, they could promote better understanding between workers and the management. A sound trade union movement should not be confined merely to asking for more wages, less hours of work, less workload and more bonus. It must promote co-operation and cordial relations between management and workers. A prerequisite for the success of trade unionism, Mr. Parker pointed out, was that the employers should be anxious and willing to deal with good, representative unions. The old idea of opposing and disregarding trade unions was happily becoming a thing of the past and it was indeed a healthy sign in industry, he added, that employers took a more friendly and correct view of collective organisation by labour.

Union Leadership

Mr. Y. B. Chavan, Chief Minister of Bombay, in the course of his reply, answered some of the points raised by Mr. Parker. He agreed with Mr. Parker that the trade union movement was weak. But he could not see eye to eye with him in respect of the reasons for such weakness. Nevertheless, he admitted that political affiliations might have influenced the outlook and development of unions but he added that it was not possible to keep politics out of trade unionism altogether. In the present-day conditions in India, it was difficult, he pointed out, to find trade union leaders from among the ranks of labour. Political leadership of unions, according to the Chief Minister, was not in itself a defect, provided the leaders worked for the welfare of the workers they represented. He cited, in this connection, the Ahmedabad Textile Labour Association as a model trade union and said that it was doing all that a good union should do, though its leaders were not drawn from the working class.

He added that workers in this country could not at present match the employers either in ability or in the material wherewith they could argue and negotiate. If, therefore, they took the help of others for bargaining with the employers, it was a reflection, according to Mr. Chavan, of the present state of education of workers. He, however, hoped that it would be a passing phase. He referred, in this connection, to the growth of trade unions in England where unions formed an integral part of the Labour Party. British labour unions, he pointed out, had their own political funds which were used for election propaganda.

Mr. Chavan also denied the charge of indiscriminate reference of disputes to adjudication courts. He maintained that, so far as Bombay was concerned, care was taken to see that every demand was fully examined and only those in which workers had an arguable case were referred to adjudication. He advised employers not to resist every demand of labour or be annoyed at some which they considered unreasonable, but to negotiate and concede those which were fair and reasonable. According to him, the lack of such an attitude on the part of employers was one of the reasons why an atmosphere of unrest still persisted in industry.

TRADE UNIONS IN BOMBAY

The steady increase in the number of trade unions registered in the State during the previous years continued to show further increase during the year 1955-56, according to the Annual Report on the Working of the Indian Trade Union Act, 1926, in Bombay State for the year. The number of trade unions registered during the year was 270, which was the highest, as compared with the corresponding figure for any other year, since 1945-46. The registration of 97 unions was cancelled during the year for non-submission of their annual returns for the year 1955-56. As a result, the number of trade unions rose from 912 to 1,068 at the end of the year. The increase in the number of trade unions is mainly due to a greater consciousness among the workers to organise themselves for improving their conditions of living and also due to the efforts made by the central organisations of labour.

Out of the 270 unions registered during the year, 84 unions were from the "manufacturing" group, 52 from the "services" group, 62 from the "miscellaneous" group, 24 from each of the "transport, storage communications" groups, and the "commerce" group, nine from the "electricity, gas, water and sanitary services" group, six from the "agriculture and allied activities" group and two unions from "mining and quarrying" group and seven from "construction" group.

Out of the 97 unions whose registration was cancelled for failure to submit their annual returns for the year 1955-56, 39 were registered during the year under report, 24 unions were registered during the year 1954-55, 11 during the year 1953-54 and 23 had more than three years' standing. It would thus appear that a large number of unions whose registration was cancelled for failure to submit their annual returns for the year 1955-56 were formed mainly for securing certain temporary advantages only and they were not interested in the continuance of their registration once their purpose was served. Of the 1,068 unions on register at the end of the year under report, 1,018 were State unions, including one federation, and 50 central unions, including five federations. Central unions are those whose activities are not confined to this State.

The total membership as reported by 607 unions (excluding six federations), included in the report was 404,568 at the beginning of the year 1955-56 and 404,072 at the close of the year. As many as 157,044 members joined and 157,540 members left the unions, during the year. The average membership of the unions included in the report, which stood at 2,602 in 1945-46, considerably declined during the last few years and was only 666 at the end of 1955-56. The total approximate membership of all the 1,068 unions (excluding six federations) at the end of 1955-56 was 773,460, as against 789,672 of 907 unions (excluding five federations) at the end of 1954-55. The total income of the 607 unions (excluding six federations) during the year under report was Rs. 20,11,719, with a balance of Rs. 16,37,295 at the beginning of the year while their total expenditure for the same period was Rs. 17,79,559 with a balance of Rs. 18,69,455 at the end of the year. The six federations (one State and five Central) had a total income of Rs. 3,32,134 during the year, with an opening balance of Rs. 2,91,348 while their expenditure during the same period was Rs. 3,33,334 with a closing balance of Rs. 2,90,148.

CODE FOR INDUSTRIAL DISCIPLINE RATIFIED

The ratification of the code for industrial discipline, evolved by a tripartite committee appointed by the Indian Labour Conference last year, by representatives of both employers and employees is a major step forward towards putting employer-employee relations on a strong and stable footing. The code has been adopted by three Central organisations of employers—the Employers' Federation of India, the All-India Manufacturers' Organisation and the All-India Organisation of Industrial Employers. On behalf of labour, four central trade union organisations, the I.N.T.U.C. (Congress), the A.I.T.U.C. (Communist), the Hind Mazdoor Sabha (P.S.P.) and the United Trade Union Congress (Leftist) have ratified the code. The four trade union bodies represent in all more than two million workers—I.N.T.U.C. 1,000,000, A.I.T.U.C. 700,000, Hind Mazdoor Sabha 250,000 and U.T.U.C. 100,000.

The code enjoins both parties to settle disputes and grievances through negotiation, conciliation and arbitration. It bans coercion, intimidation, victimisation, go-slow tactics, strikes or lock-outs. It provides that no unilateral action shall be taken by either of the parties in any industrial matter and that disputes shall be settled at the appropriate level through machinery provided for the purpose. Management also undertakes to respect recognised trade union activity among employees.

BHOPAL SUGAR INDUSTRIES LIMITED

MR. M. M. AMERSEY'S REVIEW

SUGGESTIONS FOR STIMULATING EXPORTS OF SUGAR

THE problem of export of sugar is not being tackled in a manner and from an angle in which it should be done. This was the view expressed by Mr. M. M. Amersey, Chairman of the Bhopal Sugar Industries Ltd., in the course of his speech at the Fourteenth Annual Meeting of the Company held at Sehore on 22nd March 1958. In this connection, he suggested several positive measures which could be adopted to reduce the manufacturing costs of the factories, so that sugar could be produced at a lower cost and exported more.

The following is a summary of Mr. Amersey's speech.

Mr. M. M. Amersey welcomed the shareholders to the fourteenth annual general meeting of the Company, and, after the preliminary remarks, proceeded to say that production during 1956-57 had reached the peak figure of 2,026,000 tons—a level that had never been touched before in the annals of the industry. This was encouraging indeed, and something of which the industry could justly be proud.

Exports and Likely Burden on Consumer

Discussing the export problem which faced the industry, Mr. Amersey stated that the Government of India, finding itself confronted with a depletion in its foreign exchange resources and problem of overproduction in the industry, on account of consumption remaining steady near the level of 1.9 million tons, permitted exports of 150,000 tons of sugar during the year 1956-57. Out of this quantity, business could then be only placed through in the international markets for approximately 130,000 tons at prices profitable to the country, mainly due to the Suez crisis and other international political complications; the balance of about 20,000 tons was sold at a loss. The Indian Sugar Mills' Association, which was the sole monopolistic body for exports, made a profit of approximately Rs. 50 lakhs by the sale of 130,000 tons, but it was wiped off by the sale of even a lesser quantity than that of the 20,000 tons which were sold at a loss. The foreign exchange earned as a result of these transactions was no doubt considerable; however, he regretted that the problem of export was not being tackled in a manner and from an angle in which it should be done. It was clear to the industry that the production cost of sugar was extremely on the high side, as compared to that of other countries. This was mainly because of the heavy import of taxes, Central as well as local, which the industry was being burdened with from year to year, and to some extent due to the control over the price of sugarcane.

During the year under review, there was a straight increase in the excise duty from Rs. 5.62 to Rs. 11.25 per cwt. The sales tax on sugar was also replaced by an additional excise duty of Rs. 3.31 per cwt., bringing the total excise duty to Rs. 14.56 per cwt. This high excise duty of Rs. 10.75 per maund, together with the local taxes, such as octroi, etc., accounted for as much as 34 per cent. of the selling price of sugar, and he estimated that, out of the As. 7½ the consumer pays for a pound of sugar, nearly As. 2½ was paid by him to the Central and State Governments in the form of various taxes. Moreover, the cultivator was still being paid a fixed price of Re. 1-7 per maund of sugarcane grown by him, irrespective of quality considerations, due to a system evolved which, to say the least, was both illogical and irrational, inasmuch as it absolutely left the cultivator complacent and without any initiative to produce better quality of sugarcane, as he was assured of a fixed price for his produce, whatever the quality.

Export of Sugar

Looking to our high production cost and the present world sugar prices which were at a low ebb, due to an increase in the European and the Cuban crops, Indian sugar could not be exported, Mr. Amersey cautioned, without the country losing approximately £25 per ton. In order to find out how this huge deficit could be met, the authorities would be treating the consumer very unfairly, if they were, going to call upon him to pay more than what he was doing today. Statistics proved that there had been no increase in consumption worth the name during the past months. All the same, the remedy had to be sought and it lay elsewhere. He also urged that positive steps be taken to reduce the manufacturing cost of the factories and that linking of the price of sugarcane with its quality must be insisted upon, in spite of the initial difficulties being faced in that direction. Government should also remit a part of the huge taxes collected from the industry; and concession in railway freights should be given when goods were being moved out of the country. As all communities of the country were interested in exporting sugar, it was but fair that all of them, viz., the Government, the industry, the cultivators and the consumers be called upon to make some sacrifices to that end. He further stated that the Government must realise that the consumer of today was in no mood to pay more for sugar, burdened as he already was with the high cost of living and a steep fall in his purchasing power.

Dwelling on the problems relating to the industry in Madhya Pradesh, Mr. Amersey desired to focus once again the attention of the authorities to some of the problems which affected his factory alone, namely: (*a*) agricultural income-tax and (*b*) higher rate of octroi levied by the municipality of Sehore.

As regards the agricultural income-tax, he regretted that, though the previous Bhopal State had been merged with the new enlarged State of Madhya Pradesh, this inequitable tax, which was payable at the rate of As. 5 in a rupee on the agricultural income of his Company, and which was introduced about four years ago, still continued in force only in the Bhopal region. It was beyond one's reasoning as to why even after the merger his factory alone was being called upon to pay this tax, whilst there was no agricultural income-tax on any of the other sugar factories in the new Madhya Pradesh State. Moreover, in that taxing statute, there was no provision for carry forward of losses and for depreciation of farm assets, such as tractors, etc., always required for cultivation of sugarcane. The municipality of Sehore levied an octroi duty of 3 pies per maund on sugarcane which was purchased, or brought from the Company's farms, from outside its limits, whilst other municipalities in the Madhya Pradesh State levy a duty of only 1½ pies per maund. He strongly urged the Government of Madhya Pradesh to abolish the agricultural income-tax, and the municipality of Sehore to bring the octroi duty levied by them on sugarcane in line with that of other municipalities in the State.

Mr. Amersey expressed his deep gratitude to the Government of Madhya Pradesh for their promptness in assuring that the Sugarcane Bill (Regulation of Supply and Purchase) which they wanted to introduce in their last session, would be postponed, on a suggestion from the industry that there should be a committee formed by each factory, representative of all parties concerned, to enable equitable supply of sugarcane to the factory.

Company's Results

He was glad to inform the shareholders that the Company had produced 95,491 bags of sugar, as against 68,581 bags of the previous year (1955-56). This was the highest figure of production by the factory since its inception. The profit and loss account showed a net profit of Rs. 14,58,568 after providing for Managing Agents' commission of Rs. 1,60,264 and depreciation and development rebate at Rs. 2,27,804. After adding to this amount, Rs. 33,609 brought from the previous years and Rs. 6,150 being the amount of provision made in previous years no longer required, the amount available for appropriation amounted to Rs. 14,98,327. Provision for taxation including liability under the Wealth Tax Act was made at Rs. 7,55,000. The Directors had recommended a dividend on preference shares at 5 per cent., free of tax, and a dividend on ordinary shares at Rs. 2 per share, free of tax, and that an amount of Rs. 3 lakhs be taken to the general reserve and the balance of Rs. 30,827 be carried over to next year's account.

Labour relations continued to be very satisfactory, Mr. Amersey observed. For the year, three months' basic wages was paid as bonus to

THE HONGKONG AND SHANGHAI BANKING CORPORATION

CHAIRMAN, THE HON. C. BLAKER'S SPEECH

THE Annual General Meeting of the Hongkong and Shanghai Banking Corporation was held in Hong Kong on Friday, 14th March 1958.

The Hon. C. Blaker, M.C., E.D., Chairman, addressed the meeting as follows:

"LADIES AND GENTLEMEN,

"As you will see from the accounts before you, the profit for the year amounts to $21,035,543, which is an increase of $400,000 over last year's figure. In accordance with our normal practice, this profit has been arrived at after making transfers to the credit of our Inner Reserves, out of which full provision has been made for the depreciation in value of our investments and all known doubtful debts and contingencies.

"It is proposed that a sum of $4,000,000 should again be written off Bank Premises and, after allowing for this transfer and the interim dividend of £2 per share, the Directors recommend the payment of a final dividend of £1 12*s.* 6*d.* per share, leaving a balance of just over $2,000,000 to be carried forward to next year. As approved by shareholders at the Extraordinary General Meeting held in August, the capital of the Bank was increased from $25,000,000 to $50,000,000 by the distribution to shareholders of 200,000 new shares of $125 each, credited as fully paid-up. This final dividend is, of course, payable on the increased capital and the actual amount which it is proposed to distribute by way of dividend is increased by $800,000 over the previous year. The reduction in the carry forward is due to the transfer during the year of $9,000,000 to the Reserve Fund as part of the operation to capitalise part of the Reserve Fund in connection with the new issue of capital.

"Turning to the Balance-Sheet, the Capital Account shows the increase which I have just mentioned, but the Reserve Fund remains unchanged at $128,000,000 due to the transfer of $9,000,000 from the Profit and Loss Account and $16,000,000 from Inner Reserves. Hong Kong currency notes in circulation show an increase of $16,000,000, due to a rise in the Excess Note Issue and this increase is reflected on the other side of the Balance-Sheet by a similar increase in Hong Kong Government Certificates of Indebtedness. Current, Deposit and Other Accounts show a rise of $131,000,000, mainly due to higher Fixed Deposits. Acceptances on behalf of Customers show an increase and the total has now exceeded the figure of two years ago.

"When we turn to the Assets side of the Balance-Sheet, we find the ratio of readily realisable assets to the total liabilities has risen by 4 per cent. to just under 49 per cent. Both Cash in Hand and Money at Call and Short Notice are higher than last year, but the main changes are to be observed in the British and other Government Treasury Bills and Trade Bills Discounted, the former increasing by $204,000,000, while the latter decreased by $110,000,000. Advances also show a slight decrease and it can be seen that a large part of our increased deposits have been utilised in Treasury Bills as opposed to the financing of trade. This is unfortunately a sign of the generally lower commodity prices and a slackening of trade in the areas in which we operate.

"On the whole, we can look back on a satisfactory year, but as shareholders will see from the printed statement, economic conditions in many of these eastern territories have been unfavourable and the immediate outlook can only be regarded as uncertain. It remains to be seen whether the coming year will prove as profitable as the last, but it would be reasonable to hope that we may not find it necessary to allocate any further sums for the purpose of writing down our British Government Securities, which has been such a disturbing feature of the last few years. Before I leave the Balance-Sheet I should like to say how pleased your Directors are that the arrangements for the abolition of the contingent liability of shareholders were satisfactorily concluded during the year. Due to the fact that the Bank is incorporated under a special Hong Kong ordinance and we are responsible for issuing such a large part of the Colony's currency, the necessary steps to abolish the contingent liability required authorisation by the Hong Kong Government and the Secretary of State for the Colonies. I should like to thank the various officials, who were concerned in these negotiations, for the ready response they gave to our application which resulted in the satisfactory conclusion of the operation, entailing as it did a certain degree of delicate timing.

"Our Californian subsidiary shows signs of steady growth and the new office in Los Angeles got off to a good start.

"During the year we opened a new office in Seria, in Brunei, and arrangements are being made to open an office in Kuching, in Sarawak. In view of the disturbed conditions in Indonesia, we have decided to close our office in Surabaja. Although this office was opened in 1896 and for a time, previous to the last war, was a valuable connection, business recently has been falling off.

"Ladies and Gentlemen,

"The Report and the Statement of Accounts having been in your hands for the required period I will now formally propose their adoption as presented."

REPORT OF THE AUDITORS TO THE MEMBERS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION

We have examined the above Balance-Sheet with the books of the Corporation kept in Hong Kong, with the audited Accounts of the London Office and with the Returns received from the other Offices. We have obtained all the information and explanations we have required for the purposes of our examination. The above Balance-Sheet gives the information required by the United Kingdom Companies Act 1948 in the manner prescribed for a Banking Company and on that basis, in our opinion, is a full and fair Balance-Sheet properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs at 31st December, 1957, according to the best of our information and the explanations given to us and as shown by the books kept in Hong Kong and the Returns received from the other Offices.

ALKALI AND CHEMICAL CORPORATION OF INDIA LIMITED

ALL-ROUND IMPROVEMENT IN RESULTS

MR. N. D. HARRIS, CHAIRMAN, ON ADDITIONAL REQUIREMENTS OF CAPITAL

ADDRESSING the Twenty-first Ordinary General Meeting of the Alkali and Chemical Corporation of India, Ltd., held in Calcutta on 19th March 1958, Mr. N. D. Harris, Chairman of the Company, referred to the success of the Company's recent rights issue, of which all but 6.5 per cent. was taken up by the shareholders. He added that the Company must find more money, as its requirements were not yet fully met. While the immediate needs would be met from bank loans, the Directors, he said, were giving much thought to this problem.

The following is the full text of Mr. N. D. Harris's speech:

"GENTLEMEN,

"The audited accounts and Directors' report for the year ended 30th September 1957 have been in your hands for some time. With your permission, I propose to take them as read.

"But I should draw your attention to the new form of our annual report. Its photographs and diagrammatic representation in the centre pages showing your Company's income and distribution of expenditure will, I believe, be of informative interest to all shareholders.

Accounts

"I do not propose to comment in particular on the balance-sheet as the main points of interest are dealt with in the Directors' report. Suffice it to say that your Company's financial position is sound and that the continued increase in turnover and net profit is satisfactory.

"A significant point is that the dividend equalisation reserve now stands at Rs. 24.8 lakhs. You will appreciate that this is a substantial sum which should enable the Company to maintain a satisfactory rate of dividend for many years.

Trading Results

"Once again we have had a most successful year and record levels of production and sales were attained. Sales increased from Rs. 192 lakhs in 1956 to Rs. 230 lakhs. It is of interest to note that since 1954, which was the first full trading year after the sale of the Khewra factory in Pakistan, the Company's turnover has nearly doubled.

"These results have been achieved by intense and loyal efforts on the part of all your Company's staff which are gratefully acknowledged. I should like also to record our appreciation of the good work done by our selling agents, Imperial Chemical Industries (India) Private Limited, whose staff of trained salesmen and technicians have been of invaluable service in expanding and developing the range of sales of your Company's products in the face of keen competition. We are glad to know that they will be handling our sales of Polythene when production starts next year.

"I think, it is my duty to make it clear at this stage that your Board view with concern the rising cost of raw materials and stores caused no doubt by the inflationary pressure now becoming evident in the country. While we recognise the realistic efforts which Government are now making to check this pressure, we do not believe that there will be any significant fall in these costs for some considerable time. We have given some assurance to Government that we shall endeavour to avoid increasing selling prices, but the time has come when we shall have to consider informing Government that price increases are necessary and, in fact, reasonable in fairness to our shareholders. This is particularly true for the chlorine plant where the return is uneconomic.

Production

"This has been a very busy year in the Rishra factory and record outputs have been achieved in almost every unit, paints and chlorine/caustic soda showing, in particular, gratifying increases. Extensions to our paints plant were completed in the latter part of the year enabling us to meet the increasing demand for our well-known range of 'Duco' and 'Dulux' products. At the same time, production of our metal pre-treatment products showed a substantial increase.

"Our 'Gammexane' formulations of benzene hexachloride also registered a satisfactory increase.

"I have seen our latest production figures which encourage me to predict that in the current year all previous records will be beaten.

Extensions and New Projects

"We are well ahead with our plans for extending our chlorine and caustic soda plant and arrangements have been made with Imperial Chemical Industries Limited for the sterling finance required.

Polythene

"I have little to add to what has been already said in the Directors' report. The plant will begin production early in 1959 provided nothing unforeseen occurs.

'Alfloc' Products

"A range of products under this well-known mark has been sold by Imperial Chemical Industries (India) Private Limited for many years for the treatment of industrial and locomotive boiler waters. There is, therefore, an established market and we have recently been licensed under favourable terms to manufacture them at Rishra.

Foreign Exchange

"Your Company has felt keenly the difficulties in obtaining foreign exchange both for essential imported plant and engineering stores for construction and maintenance, and for raw materials for production.

"Government's policy in present circumstances is naturally to restrict such imports to the minimum and, in order to play a full part in assisting the country's present foreign exchange difficulties, your Company has paid, and is continuing to pay, great attention to the use of locally manufactured plant and indigenous raw materials.

Productivity

"Your Company has recently set up a work study section under an experienced work study practitioner with the object of increasing productivity and thereby the effective use of capital employed on our plants. Already promising results have been achieved.

Finance

"Contrary to the pessimistic view taken by a shareholder at the last meeting our recent rights issue of Rs. 248 lakhs was a success in the market conditions prevailing at the time and a reflection of the confidence in the Company's future and its management. Only 6.5 per cent. of the issue was not taken up by shareholders. This represents in value Rs. 16 lakhs which Imperial Chemical Industries (India) Private Limited were called upon to pay —an additional British investment in India over and above the figure of Rs. 175 lakhs I gave you last year.

"I would like to repeat, for the information of those shareholders concerned, that Section 56A of the Indian Income-tax Act applies to this issue and companies are exempt from super-tax on the dividends received by them on the new shares.

"The Company must find more money, as its requirements of capital are not yet fully filled. Our internal resources which we hope will increase over the next few years will not suffice, and so your Directors are giving much thought to this problem. All I can say at the moment is that our immediate requirements will be met from loans from banks, including a loan of Rs. 100 lakhs already negotiated for the Polythene project.

Personnel

"Our relations with our employees have been maintained on a cordial basis. Recently, we have arrived at an amicable settlement with two unions operating in our factory on questions relating to wages, bonus, promotions and other terms. The Company has agreed to meet as reasonable a bonus liability for past years involving an additional amount of Rs. 74,000 and an increase in wages of Rs. 1,60,000. Negotiations took place in a friendly atmosphere and the eventual agreement reached is significant. There is encouraging evidence that workers and their representatives share the feeling that such differences as may arise are capable of solution by direct negotiation with management.

"Last year, I mentioned that we were endeavouring to introduce improved terms of service based on job appraisement. I am glad to say that despite initial scepticism we have been able to introduce the scheme with workers' approval.

"To meet a long-felt want a training school for tradesmen has been started. This will go some way to meeting the shortage of skilled men in our factory and particularly for the Polythene unit.

"In line with the Company's policy more and more Indians are participating at all levels. Several promising young Indians have already been sent to the United Kingdom for training in the factories of Imperial Chemical Industries Limited and more are to follow.

"In an industry so highly technical as ours it is essential that we attract the best men from the universities. A system of recruitment by a panel of judges including a representative from a university has assisted in the selection of suitable technical staff.

"I am happy to announce that your factory was recently visited by Sir Alexander Fleck, F.R.S., the Chairman of Imperial Chemical Industries Limited, London, and Mr. S. P. Chambers, the Deputy Chairman of that Company. They both expressed appreciation of the fine work being done by the staff and workers at the factory.

New Chairman

"This will be my last address to you as Chairman of this Company, as I shall soon be leaving India on retirement. I would like to take this opportunity of introducing to you my successor, Mr. J. M. Lall, who will be your future Chairman. In Mr. Lall, I am sure, you will have a very able and efficient executive who will steer the Company through the difficult years ahead to even greater prosperity. I have every confidence that this Company will prosper under his guidance.

"The Directors retiring by rotation are myself and Mr. B. R. Goodfellow. Mr. Lall who was appointed during the year as an additional Director vacates office. His election comes up as special business and Mr. Goodfellow and I offer ourselves for re-election in the ordinary way.

"The auditors also retire and you are asked to re-appoint them at a fee of Rs. 7,500, the same as that of the previous year."

Note:—*This document does not purport to be a report of the proceedings of the general meeting.*

BHOPAL SUGAR INDUSTRIES LTD.

(*Concluded from page* 580)

the workers and members of the staff, after mutual negotiations. He congratulated the labour leaders on realising that it was only with improved relations with the Management that the operations of the factory could run smoothly, resulting in great benefit to all concerned.

Regarding prospects for the current season, he stated that, though the rainfall during the season was far below normal, the condition of the crop was satisfactory and in all probability last year's production would be maintained.

Before concluding his speech, Mr. M. M. Amersey expressed his sincere appreciation for the co-operation of the staff, both at the factory and the office at Bombay, and also to the Government of Madhya Pradesh for their sympathetic consideration of the problems facing the industry, both of which had contributed in no small measure to the phenomenal progress the Company had made during the year under review.

Note.—This does not purport to be a record of the proceedings of the annual general meeting.

WORLD ECONOMIC ACTIVITY IN 1956 REVIEWED

SIZABLE INCREASE IN INDUSTRIAL PRODUCTION

IN 1956, world economic activity was greater than in any previous post-war year and vastly greater than in the years immediately preceding World War II. In 1956, the world's* factories and mines produced about 2¼ times as much as in the last pre-war year 1938, the world's railways hauled nearly 2½ times as much freight; the world's ships carried almost twice as much cargo; the world's† commercial airlines flew more than eight times as many miles (kilometres); on the world's* roads there were nearly 2½ times as many motor vehicles and the volume of world's* exports was 80 per cent. greater; and in mid-1956 the entire world had 20 per cent. more people than in 1940. This is the story of world progress told in figures by the 1957 issue of the United Nations *Statistical Yearbook*. This ninth issue of the U.N's *Yearbook* was prepared by the Statistical Office of the United Nations with the active co-operation of the statistical authorities of more than 150 countries and territories and with the assistance of the United Nations' specialised agencies and other intergovernmental bodies. The 191 tables of this 674-page bilingual (English and French) volume present authoritative international statistics on demographic, economic, financial, social and cultural subjects and generally cover a 20-year period ending 1956 or mid-1957.

World Population

The population of the entire world was estimated to have been about 2,737 millions in mid-1956, as compared with 2,495 millions in 1950, 2,246 millions in 1940 and 1,810 millions in 1920. Asia (excluding the U.S.S.R.) is the continent with the largest population, rather more than half the world total, while Europe (excluding the U.S.S.R.) is the most densely populated continent and Oceania the least densely populated continent. Over the period 1950-56, world population has increased at the annual rate of 1.6 per cent. The annual rate of increase was highest in Oceania (2.3 per cent.) and lowest in Europe (0.8 per cent.); for Asia, the rate was the same as the world rate. Only a few areas have experienced a decline in population in recent years (1953-56), notably East Germany at an annual average rate of—0.8 per cent., East Berlin —1.4 per cent. and Ireland—0.5 per cent. The continental distribution of the estimated mid-1956 population and the corresponding population density and annual rates of increase were as follows:

	Population in millions	*Density per sq. km. (a)*	*Annual rate of increase 1950-56*
World	2,737	20	1.6
Africa	220	7	1.7
America (North and South)	374	9	2.1
Asia (b)	1,514	56	1.6
Europe (b)	412	84	0.8
Oceania	15	2	2.3
U.S.S.R.	200	9	N.A.

(a) 1 square kilometre=0.386 square mile.
(b) Excluding U.S.S.R.
N.A.=Not available.

*"World" here excludes the U.S.S.R., Eastern Europe and mainland China.
†"World" excluding U.S.S.R. and mainland China.

According to the comprehensive indexes recently computed by the United Nations Statistical Office, world (excluding the U.S.S.R., Eastern Europe and mainland China) industrial production in 1956 was 4½ per cent. greater than in the previous year, 40 per cent. greater than in 1950 and no less than 127 per cent. greater than in the last pre-war year (1938); and in the second quarter of 1957 it increased further by about 3½ per cent. over the average level in 1956.

For the U.S.S.R. and Eastern European countries (not included in the "world" index), the *Statistical Yearbook* gives the official industrial production indexes published by those countries. From these indexes, it appears that industrial production in 1956 in the U.S.S.R. and Poland was about twice as great as in 1950 and around five times as great as pre-war, in Bulgaria more than twice as great as in 1950, in Czechoslovakia 87 per cent. greater than in 1950 and 2½ times as great as pre-war, and in Rumania more than twice as great as in 1950 and more than three times as great as pre-war. Due to the events in the latter part of 1956, the Hungarian industrial production index recorded a 10 per cent. drop in 1956, but it was still nearly 80 per cent. higher than in 1950 and exceeded the 1938 level by nearly 200 per cent.

The following table shows the percentage increases in world production of some of the more important industrial commodities between 1950 and 1956 and also between 1938—the last pre-war year—and 1956:

Major Industrial Commodities
Percentage increase in world production

		1950 to 1956	*1938 to 1956*
Coal (a)	A	13	34
	B	6	20
Crude petroleum	A	61	207
	B	56	211
Electricity	A	75	266
	B	72	254
Cement	A	72	169
	B	67	158
Sulphuric Acid	B	38	135
Steel	A	47	154
	B	42	151
Ships (b)	B	91	124
Motor vehicles (c)	A	10	186

A—Including U.S.S.R. B—Excluding U.S.S.R.
(a) Excluding mainland China, where production of coal is reported to have risen from 62 million tons in 1942 to 106 million tons in 1956.
(b) Tonnage launched.
(c) Passenger cars and commercial vehicles.

The two leading industrial countries, the United States and the U.S.S.R., accounted respectively for the following percentages of world production in 1956:

Coal, 30 and 19 per cent.; crude petroleum, 42 and 10 per cent.; electricity, 41 and 11 per cent.; cement, 25 and 11 per cent.; steel, 37½ and 17½ per cent.; and motor vehicles, 60 and 4 per cent.

Agricultural Production

The post-war gains in world agricultural production, while not so spectacular as those in world industrial production, have nevertheless not been negligible. Compared with the 1950 crops (with the average 1934-38 crops in parentheses), the world (excluding the U.S.S.R.) produced in 1956 (or crop year 1956-57) 16 (23) per cent. more wheat, 22 (48) per cent. more maize (corn), 42 (80) per cent. more barley, 4 (16) per cent. more oats, 32 (40) per cent. more rice, 6 (16) per cent. more potatoes, 31 (18) per cent. more cotton and 33 (26) per cent. more tobacco. While the 1956 world (excluding the U.S.S.R.) rye crop was 2 per cent. greater than the 1950 crop, it nevertheless fell 4 per cent. short of the average pre-war crop. The 1956-57 world (including the U.S.S.R.) wool clip surpassed the 1950-51 clip by 24 per cent. and the pre-war average clip by 33 per cent. The world (excluding the U.S.S.R.) in 1956 produced 11 per cent. more milk than in 1950 and 18 per cent. more than pre-war and 22 per cent. more meat than in 1952 and 45 per cent. more than pre-war.

For the U.S.S.R., the *Statistical Yearbook* provides little information on agricultural production other than that the 1956 output of tea was about five times, and that of raw wool 2½ times, as great as the pre-war average (1934-38). However, for the first time the *Yearbook* gives up-to-date data on the cereal and potato crops in all the Eastern European countries (included in the "world excluding the U.S.S.R." percentages cited above), namely, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland and Rumania. In these countries taken together, the average 1954-56 cereal and potato crops ranged from 20 per cent. more than the pre-war average, for maize (corn), down to about 20 per cent. less than the pre-war average for oats; in the rest of the world (excluding the U.S.S.R.) the corresponding 1954-56 average crops ranged from 79 per cent. more than the pre-war average, in the case of barley, down to 2 per cent. more for rye.

Of the 1956 (1956-57) world (excluding the U.S.S.R.) agricultural production, the United States accounted for 54 per cent. of the maize (corn), 41 per cent. of the cotton, 32 per cent. of the oats, 29 per cent. of the tobacco, 26 per cent. of the meat, 22 per cent. of the milk, 17 per cent. of the wheat, 6 per cent. of the potatoes and 1 per cent. of the rice; and for 6 per cent. of the world (including the U.S.S.R.) wool clip.

World Trade

The value of world trade (exports)—"world" throughout this section on trade excludes the trade of the U.S.S.R., Eastern European countries and mainland China—as measured in U.S. dollars, reached in 1956 a new record high level, 11 per cent. above 1955, 74 per cent. above 1948 and was close on 4½ times as great as in the last pre-war year 1938. The volume of world trade (exports), which is not influenced by price changes, was also of record size in 1956, 9 per cent. greater than in 1955, and nearly 80 per cent. greater than in both 1948 and 1938. World export prices (using dollar unit values) in 1956 were about 2 per cent. higher than in 1955, 7 per cent. lower than the peak in 1951 and 2 per cent. lower than in 1948, but 2½ times as great as those prevailing in 1938 (almost 4½ times as great using sterling values).

The dollar area countries (United States, Canada, Central America and some South American countries) accounted for over 31 per cent. of world exports (valued in U.S. dollars) in 1956 against less than 30 per cent. in 1955, 35 per cent. in 1948 and 22 per cent before the war (1938); their share in world imports was more modest, around 25-26 per cent. in 1955 and 1956 against only 16 per cent. in 1938. The United States' share of total dollar area imports has dropped from 58 per cent. in 1938 to 51 per cent. in 1956 while its share in the area's total exports in 1956 was about the same —66 per cent.—as in 1938.

In recent years, the countries of continental Western Europe (including Turkey, but excluding Finland, Spain and Yugoslavia) have succeeded in regaining their pre-war position, accounting in 1956 for 32 per cent. of the value of world's imports against 31 per cent. in 1938 and maintaining their share of world exports at the pre-war level of 29 per cent. The share of the sterling area countries (United Kingdom, dependencies, Commonwealth except Canada, and certain other countries) in world exports declined from 26 per cent. in 1938 to 24 per cent. in 1955 and to 23 per cent. in 1956, while its share in world imports declined drastically, from over 32 per cent. in 1938 to 26 per cent.

REPORT OF THE AUDITORS

TO THE RESERVE BANK OF INDIA.

We, the undersigned Auditors of the State Bank of Hyderabad, appointed under Section 30 (1) of the State Bank of Hyderabad Act, 1956, report on the Balance Sheet and Accounts of the Bank as at the 31st December, 1957.

We have examined the above Balance Sheet of the State Bank of Hyderabad as at the 31st December, 1957, and the Profit and Loss Account for the year ended upon that date with the Accounts and Vouchers relating thereto of Head Office and with the Returns submitted and certified by the Branch Managers, which Returns have been incorporated in the above Balance Sheet and Accounts, and report :

(i) that, in our opinion the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank ;
(ii) that, where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory ;
(iii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank ;
(iv) that, the Returns received from the Branches of the Bank have been found adequate for the purpose of our audit ;
(v) that, the Profit and Loss Account shows a true balance of profit for the year covered by such Account ;
(vi) that, in our opinion the Balance Sheet and the Profit and Loss Account are drawn up in conformity with the law and
(vii) that, in our opinion Books of Account have been kept by the Bank as required by law.

BALWANT SINGH,
Managing Director

THE CHARTERED BANK

STATEMENT OF CHAIRMAN, MR. V. A. GRANTHAM

"INDIA HAS A DIFFICULT ROAD TO TRAVEL"

THE One Hundred and Fourth Annual General Meeting of the Chartered Bank will be held in London on 2nd April 1958. In the course of his customary statement circulated to the stockholders along with the Directors' report and accounts for the year ended 31st December 1957, Mr. Vincent Alpe Grantham, Chairman of the Bank, says that, though the completion of the most essential part of India's Second Plan will in time effect a saving in the import bill, India has a difficult road to travel, despite the assistance promised by the American and West German Governments.

The following is the full text of Mr. Grantham's statement:

The Court of Directors

"Since my last statement was made there have been a number of changes in the Court of Directors.

"With great sorrow I have to record the death in July last of Mr. Archibald Orr Lang, our senior Director, who joined the Court in 1939 when the P. & O. Banking Corporation was absorbed.

"Early in September we were deeply grieved to learn of the sudden death of Sir William Cockburn, who joined the Court in 1955 on his retirement from the post of Chief General Manager. I have already recorded the gratitude and admiration felt by the Court for the highly distinguished and professionally competent services rendered by Sir William during his tenure of the chief executive office over a period which extended to 15 years.

"In July last, Mr. Clifford Waite, Chairman of Consolidated Tin Smelters Ltd., accepted our invitation to join the Court. His wide knowledge of the tin industry will be of great help to us.

"During 1957 The Borneo Company Ltd., with which the Bank has always had the happiest of business relations, commemorated the centenary of its incorporation and in September last I had the pleasure of moving the election to the Court of Mr. Ian Lilburn MacEwen, a Director of the Company.

"As part of our plans to co-ordinate the operations of The Chartered Bank and The Eastern Bank Ltd. we invited Sir Evan Jenkins, G.C.I.E., K.C.S.I., the Chairman of The Eastern Bank Ltd., to join the Court.

"Towards the end of the year Sir Kenneth Harper relinquished his directorship upon retiring from business in the City and to fill the vacancy in the Court we elected Mr. W. E. Eadie, C.A., who has succeeded Sir Kenneth as Chairman of The Burmah Oil Company Ltd.

"The Bank's new interest in the commerce and industry of the Middle East is reflected in the election to the Court of Sir Stephen Gibson, C.B.E., who was, until last year, Managing Director of the Iraq Petroleum Company Ltd.

"On 1st January 1958 Mr. E. J. Pakes, C.B.E., a Managing Director of British India Steam Navigation Company Ltd., joined the Court.

"At the approaching annual general meeting I shall invite the stockholders to confirm the election to the Court of Mr. Clifford Waite, Mr. I. L. MacEwen, Sir Evan Jenkins, Mr. W. E. Eadie, Sir Stephen Gibson and Mr. E. J. Pakes.

"For some time past it has been clear that the expansion of the Bank's activities and the growing complexity of its affairs have necessitated an enlargement of the Court. There are now fourteen Directors, three more than a year ago, and it is consequently easier to organise the work delegated by the Court to its committees. As a result of the absorption of The Eastern Bank Ltd. it may prove to be necessary to enlarge the Court still further and so that we may be in a position to do this it is proposed to seek the consent of stockholders to an increase in the appropriation to Directors' fees from £30,000 to £50,000. We have no present intention of increasing the fees paid to individual Directors.

The General Management and Staff

"In June last Mr. L. J. Blanchard, the senior General Manager, retired and Mr. David Beath and Mr. Stafford Northcote were promoted to be Joint General Managers. At the same time Mr. John Shewan, who has served the Bank with distinction in the Far East, was appointed an Assistant General Manager.

"The continued prosperity of the Bank reflects the highest credit upon the general management at head office, the branch managers and the staff at home and abroad. We are indebted to Mr. Morford for his help and leadership. In August last I visited Malaya, accompanied by the Chief General Manager, to attend the Merdeka celebrations, and I took the opportunity of making the acquaintance of a large number of members of the staff at all levels working in the Malayan circle of branches. It was a heartening experience and I was sorry that time did not permit my visiting other equally important spheres of activity.

"I take this opportunity of acknowledging with gratitude not only the professional skill displayed by the staff in preserving and extending the prosperity of the Bank but those personal qualities of toleration, forbearance and helpfulness which contribute so much to the survival of the historic links, forged under conditions very different from those which now exist, between Asia and the West. Three months ago Mr. W. G. Pullen undertook with Mr. Barden, General Manager of The Eastern Bank Ltd., a tour of the Middle East. At the same time Mr. David Beath visited the branches of the two banks in India, Pakistan, Burma and Ceylon.

The C.B.I. Development Corporation

"Credit restrictions imposed by the Capital Issues Committee of Her Majesty's Treasury have retarded the progress expected of The C.B.I. Development Corporation but it has been possible during the past twelve months to grant loans of relatively small amounts to finance promising development projects in India, Malaya and Borneo. The Corporation returned a satisfactory profit in 1957 and when conditions more favourable to the undertaking of medium-term credit operations obtain, our new organisation should rapidly expand.

"Mr. David Stewart, a former General Manager of the Bank who was elected a Director of the Corporation a year ago, has been appointed its Managing Director.

The Eastern Bank Ltd.

"On 12th July last I communicated to the stockholders the terms and conditions of an offer made by The Chartered Bank to acquire the whole of the issued share capital of The Eastern Bank Ltd. To enable The Chartered Bank to issue nine one pound units of its own stock in exchange for two £10 (each £5 paid) shares of The Eastern Bank Ltd. our authorised capital was raised from £3,500,000 to £4,400,000 by a special resolution passed at an extraordinary general meeting of the stockholders held on 7th August 1957. The response to the offer was highly satisfactory and the holders of approximately 96 per cent. of the share capital of The Eastern Bank Ltd. accepted our proposals. Early in December we invoked the provisions of Section 209 of the Companies Act 1948 to acquire the unassented shares and we now own the whole of the issued capital of The Eastern Bank Ltd. To complete the operation we issued as fully paid, new stock in The Chartered Bank to the extent of £900,000 and thereby increased our paid-up capital to £4,400,000. Since the offer closed on 21st August last the operations of the two banks have been progressively co-ordinated. To facilitate this Mr. H. F. Morford and I joined the Board of The Eastern Bank Ltd. and as I have previously mentioned, Sir Evan Jenkins was elected to the Court of The Chartered Bank.

New Branches

"A year ago I stated that The Chartered Bank had acquired by purchase the banking business transacted in Pakistan by the Allahabad Bank Ltd. The former offices of the Allahabad Bank Ltd. at Lahore and Lyallpur have now been fully incorporated within our branch establishment and The Chartered Bank has been enabled thereby to participate to a much fuller extent than was possible previously in financing the upcountry trade and industry of Western Pakistan.

"To our expanding branch organisation in Borneo there was added in April last an office at Sarikei and we are planning to open in the near future branches at Brunei Town and Kuala Belait. In order to enlarge further the services we extend to our numerous customers in Singapore a new branch has been opened at Bukit Timah, a thriving industrial suburb of the city, and we have lately leased premises for a new branch in the residential suburb of Tanglin.

Cyprus

"Stockholders will have learned from the Press that on 1st November 1957 The Chartered Bank acquired the goodwill of the banking business conducted by the Ionian Bank Ltd., at Nicosia, Famagusta, Kyrenia, Larnaca, Limassol and Paphos in the Colony of Cyprus. The customers of the Ionian Bank Ltd. readily agreed to entrust their business to us and the transfer was conducted very smoothly indeed. We are grateful for the co-operation and assistance received from the former staff of the Ionian Bank Ltd., all of whom seem to have been happy to join our service.

"We have succeeded to an excellent business with the merchant community of Cyprus, a form of banking activity with which we have been familiar throughout our history.

"A foothold in the Eastern Mediterranean should ultimately prove to be of great value and this move may be regarded as part of the policy which prompted us to widen our sphere by interesting ourselves in the Middle East.

The Bank's Balance Sheet

"During the year we acquired by an exchange of shares the entire share capital of The Eastern Bank Ltd., and for cash, the business which the Ionian Bank Ltd. conducted in Cyprus and there are consequential changes both in our balance-sheet and in the consolidated balance-sheet.

"Our own balance-sheet indicates the continued expansion of the Bank's business and reveals a high degree of liquidity. The total at £231,622,655 is the highest we have ever recorded, being some £8,600,000 up on last year's figure.

"Current and other accounts and fixed deposits show increases of £2,958,494 and £4,499,423 respectively. Our acceptances are again in excess of £10 million.

"On the assets side cash in hand at call and at bankers shows the substantial increase of £10,501,948 the ratio to our demand and time liabilities, excluding the notes in circulation against which security has been lodged, being 22.9 per cent. against 18.5 per cent. last year. Our investments in Government and other securities are slightly lower and, you will note, have again been brought in at market value. Advances and other accounts show a contraction of £6,165,632 which is partially offset by our increased holdings of bills of exchange amounting to £4,496,736. Our programme of expansion and modernisation of offices and houses in the East has given rise to an increase in the net figure for bank premises and furniture.

"The consolidated balance-sheet includes the figures of all our wholly owned subsidiaries and the inclusion of The Eastern Bank Ltd.'s figures brings the total to £271,898,015.

"For the information of stockholders a copy of The Eastern Bank Ltd.'s balance-sheet is appended to my statement.

Consolidated Profit and Loss Account

"I am glad to say that our earnings have improved. The results of The Eastern Bank Ltd., and of our new acquisitions in Cyprus and Pakistan, are included for the first time in our figures.

"The Bank paid an interim dividend in September last of 7½ per cent. less income-tax, absorbing £189,750, and it is now proposed that out of the balance available a final dividend of 7½ per cent. be paid, costing £189,750, making a total distribution of 15 per cent.

"The dividends cost more because of the new issue of capital we made last year but are more than compensated for by the increase in profits.

"We have allocated £250,000 to bank premises and furniture and £125,000 and £20,000 respectively to the Pension Fund and Widows' and Orphans' Fund. We have transferred £220,000 to reserves for contingencies and the balance carried forward is £438,458.

"Transfers to bank premises and contingencies include this year those made in connection with The Eastern Bank Ltd.

"For us, this year is one of consolidation and in view of the unsettled condition of the world in general, I am sure you will agree that it is wise that we should continue to build up the strength of the Bank.

Oversea Survey

"During 1957 there was no important change in what may be called the strategic disposition of the countries served by the Bank. Pakistan and Iraq continued to adhere to the Baghdad Pact while India remained the leader of the neutralist powers. The Peoples' Republic of China pursued a policy of non-intervention in the Far East and its leaders appeared to be preoccupied with domestic affairs, notably in the fields of industrial development and social reform. All the uncommitted Asian countries are clearly anxious to avoid embroilment with either of the two major power blocks based upon Washington and Moscow and it is evident that throughout the continent nationalism remains the most powerful political force.

"I am indebted to Sir Evan Jenkins for his assistance in the preparation of those sections of my statement which refer to economic and political conditions in the Middle Eastern countries served by The Eastern Bank Ltd.

Lebanon

"At the general election in June the Government of M. Sami Bey Solh was returned to office with an overwhelming majority. Threats to internal security have been firmly dealt with, and Beirut has recovered from the shock of the Suez crisis which continued to affect business during the early months of the year. A five-year development plan has been adopted, including projects for the improvement of agriculture, industry, communications and town planning. In particular the port and international airport of Beirut are also to be expanded and modernised.

"Inflationary conditions persist, with a fairly sharp rise in the cost-of-living and bank credit running at a high level. The Eastern Bank branch at Beirut is making satisfactory progress in a highly competitive market.

Iraq

"The Government of His Excellency Saiyid Nuri es Said resigned in June and a new Government was formed by His Excellency Saiyid Ali Jowdat. Some six months later this Government also resigned and at the end of the year His Excellency Saiyid Abdul Wahab Mirjan was Prime Minister. These cabinet changes involved no major changes of Government policy.

"Iraq surmounted the economic difficulties arising from the Suez crisis with great determination. The severance of the pipe-line in Syrian territory halted the pumping of oil from Kirkuk on 2nd November 1956. Repairs enabled pumping to be resumed on 11th March 1957, at the reduced flow of 7½ million tons per annum, since increased progressively to about 17½ million tons, against the pre-Suez rate of about 25 million tons. The pre-Suez rate is expected to be restored by April, 1958 and thereafter Kirkuk production will be gradually increased to 34 million tons per annum. Apart from the loss of production in 1956-57 and 1957-58, the stoppage involved a deficit of about I.D. 10 million in the budget for 1956-57 and a total loss to Iraq which has been officially estimated at as much as I.D. 56 million. The Iraq Government were determined not to interrupt their development programme. The temporary shortfall in oil revenue was made good by an arrangement with the Iraq Petroleum Company. A deficit of about I.D. 2 million in the budget for 1957-58 was covered by new taxation and a deficit of about I.D.3.25 million in the budget for 1958-59 will be covered by previous surpluses partly due to improved yields from taxation.

"In the meantime, development continues undisturbed. The second annual 'Development Week' last March marked the completion of projects costing about I.D. 26 million. The most notable of these projects were the two new bridges at Baghdad, the cement factory at Sarchinar and the cotton textiles factory at Mosul. The third annual 'Development Week' will be held this spring. Many large contracts were awarded in 1957 for a wide variety of works, including electric power generation and distribution, irrigation, roads and bridges, and housing; also a large grain silo at Basra. Two large projects shortly to be undertaken are a sewerage scheme for Baghdad (I.D.6 million) and a land reclamation scheme (I.D.4 million). As the major basic projects for flood control, irrigation and communications are completed there will be increased development of hospitals and housing. A six-year plan for industry agreed upon with the International Co-operation Administration will provide factories for the manufacture of textiles, paper, fertilisers and building materials. The total cost of this plan is estimated at I.D.40 million.

"Grain harvests were exceptionally good. There is an exportable surplus of wheat and an embarrassingly large surplus of barley, the disposal of which is proving difficult. The date crop was again small. Business was again reasonably good—surprisingly so in view of the strains of the Suez crisis—but a heavy fall in the price of sugar (from a peak of I.D.101 to I.D.78 per ton) caused losses, and in other lines there seems to have been some overstocking. Money was tighter than usual towards the end of the year and in December the Governor of the Central Bank of Iraq informed the banks that the permissible proportion of assets held abroad to deposits in Iraq will with effect from 21st February 1958 be reduced from 50 to 30 per cent.

"A new Companies Law was passed during the year.

Persian Gulf

Bahrain.—Bahrain had a quiet year, with no repetition of the disturbances of 1956. The Suez crisis had little effect on business, though the stoppage of Arabian crude oil reduced the output of the refinery. Import restrictions in Saudi Arabia, designed to conserve foreign exchange, caused some overstocking in the bazzaar, but business was on the whole quite good.

"Work continues on the new deep water jetty at Jufair—a project estimated to cost £2,866,000 and due for completion in 1960. Another important development is the construction of six new customs sheds at the Manama jetty. These sheds have a storage capacity of 60,000 cubic tons and open storage space is also available for a further 5,000 tons. This expansion has been made in preparation for the declaration of Bahrain as a 'free transit area'.

"Doha.—Doha had a peaceful year. Revenue seems buoyant and development continues. Merchant business continues to grow, though more slowly than could be wished. Public works completed during the year include several major roads. The machinery for the new power station has been installed and is expected to be operating by next summer. The bazaar recovered quickly from the Suez crisis but appeared to be somewhat overstocked in the middle of the year. Towards the end of the year there were signs of renewed activity and business on the whole was satisfactory.

"Sharjah.—During the year a new office of The Eastern Bank was under construction at Sharjah. This office was opened on the 15th January 1958.

Aden

"Our new building at Crater was opened for business in November and during the course of the year we occupied new premises at Steamer Point.

"The temporary closing of the Suez Canal subjected the colony to fewer stresses than might have been expected but during the first four months of 1957 foreign trade was drastically curtailed. After the reopening of the Canal, incoming cargoes were extremely heavy and there was considerable congestion in the port. The abnormal accumulation of imported goods coincided with a temporary contraction of exports to adjacent territories and in consequence importers suffered some inconvenience. Later in the year an improvement in trade with the countries surrounding the Red Sea and the running down of stocks restored commercial conditions to a more normal and sounder basis. This improvement was accelerated by the freedom from strikes and labour unrest which the colony has enjoyed in recent months.

"In November proposals for constitutional reform in Aden Colony were announced; if adopted they will come into force in 1959. It is proposed that the elected members of the Legislative Council shall be in a majority exercising supervision over the principal public services. These proposals, which are necessarily experimental, will offer to the people of Aden an opportunity to participate in the government of the colony.

India

"Last year, when discussing India's second Five-year Plan, I suggested that it was possible that the planners had set their sights too high. Vital and urgent as it undoubtedly was, to provide for a steadily increasing population and to achieve an all-round rise in the standard of living, it seemed that the Plan was being allowed to dominate the Indian economy almost to the extent of threatening it. The Plan's excessive dependence on deficit financing and foreign aid, gave rise to the assumption that it had been drawn up rather in the light of India's needs than on the basis of a realistic assessment of the country's available financial resources.

"Unfortunately the ensuing months have shown that there were grounds for these misgivings for the Indian exchange reserves fell from Rs. 529 crores at the end of 1956 to Rs. 297 crores a year later. The latter figure includes a drawing during the year of U.S. $200 million (Rs. 95 crores) from the International Monetary Fund to be repaid within three to five years. When it is remembered that India initiated the second Five-year Plan in April 1956, with exchange reserves equivalent to some Rs. 750 crores and that under the Plan it was intended to run these balances down by some Rs. 200 crores over a period of five years, it is possible to gauge the extent to which the position has got out of hand.

"The Prime Minister has continued to stress the need for the complete Plan and the Government's intention to complete it but there is now an awareness of the immediate dangers of the situation. A series of measures designed to arrest the progressive reduction of the exchange reserves have consequently been introduced. The official import list for the first half of 1957 was drastically pruned and these restrictions were intensified in July. At present there are no open general licences and imports of capital equipment are permitted only when they can be shown eventually to effect savings of foreign exchange or when the importer can persuade his oversea supplier to defer payment, a proceeding which, if agreed to, will conserve foreign exchange in the immediate future, but must substantially increase the ultimate cost of the goods supplied.

"In his supplementary budget after the elections the Finance Minister sought to lessen dependence on deficit financing by increasing taxation. The proposed fiscal measures included the lowering of the income levels at which liability to tax arises, the introduction of new taxes on wealth and expenditure and the raising of a wide range of excise duties. To some degree these new taxes are a deterrent to potential foreign investors of capital in India and they may well affect the competitiveness of India's exports. It is the intention of the supplementary budget to reduce the deficit during the current fiscal year to Rs. 275 crores. There has been a general rise in the cost of living recently and this rise has been aggravated by food scarcities in several areas. The contemplated deficit in the budget may accentuate this.

"In an endeavour to check the inflationary rise in prices the Reserve Bank followed up the raising of Bank rate to 4 per cent. last May with a request to the scheduled banks at the end of June to effect a considerable reduction in their advances within the following three months but without diminishing the assistance given to essential industries. Advances had expanded to the point where by normal commercial banking standards the banks had become heavily over-lent but were able to keep the wheels turning by using the discount facilities made available by the Reserve Bank. The banks will no longer be able to rely on an automatic and regular renewal of these facilities and it must be assumed that for an indefinite period credit stringency is in prospect. This stringency may be alleviated by the Government-sponsored Refinance Corporation, which is being set up to extend through the banks medium-term finance to smaller borrowers in the private sector. Part of the Corporation's capital has been subscribed by the commercial banks and its resources will be supplemented by American counterpart funds. It is of course desirable that medium-term credit should be afforded by special institutions of this type, rather than by the commercial banks.

"These matters, important as they are to us in our own business, are subsidiary to the country's main problem, the shortage of foreign exchange. Following the Finance Minister's autumn visit to North America and Europe, it has evidently been decided to concentrate on completing what are considered the essential features of the second Five-year Plan—the expansion of the steel and coal industries, railway and port development, certain power projects and in the agricultural sector, irrigation—and to modify or postpone other schemes. Nevertheless, after reducing the Plan to more manageable proportions and allowing for the country's normal export earnings of foreign exchange and for promised foreign aid and World Bank loans, the official estimate is that additional external assistance amounting to some Rs. 700 crores will be required before 1961 and mostly in 1958-59

"Part of the extra foreign exchange required is to be found by running down the exchange reserves and the Reserve Bank Act has been amended for this purpose. Apart from its exchange reserves the country has a gold reserve, which is to be left intact, but even if it is conceded that the essentials of the Five-year Plan should be preserved there is a limit to the extent to which the reserves can safely be reduced, for shortage of exchange might well prove calamitous if a monsoon failure were to necessitate large-scale imports of food. Certainly the completion of the most essential part of the Plan will in time effect a saving in the import bill, but despite the assistance which in response to the Indian request for help has been promised by the American and West German Governments, India clearly has a difficult road to travel.

Pakistan

"The past year has been one of difficulty for the Pakistan economy. Unfortunately the balance of payments, which must be regarded as the most reliable indicator of a country's external economic situation, has again been under pressure. This has disappointed the hope that the devaluation of the Pakistan rupee to parity with the Indian rupee in August 1955 followed by an increased payments surplus for the year 1955-56 would have restored a large measure of economic stability enabling Pakistan to begin to enjoy the benefit of the industrial development which had for some years imposed a heavy strain on the country's exchange reserves.

"The severe food crisis which developed towards the end of 1956 owing to deficiencies in both the rice and wheat crops necessitated the importation of about 1½ million tons of foodgrains into East and West Pakistan. Although part of these supplies was financed by assistance from abroad, the balance had to be purchased out of Pakistan's own exchange resources and this unexpected expenditure was a major cause of the payments deficit during the year ended in June 1957, the largest since 1952-53.

"Fluctuations in the volume of agricultural production are inevitable in the monsoon countries but whereas the territories which now comprise Pakistan formerly produced a surplus of foodgrains, the production of wheat and rice has hardly altered during the past decade despite official effort and expenditure upon schemes to expand cultivation. It is obviously important for Pakistan to match its growing population with a steady expansion of food production, if recurrent shortages and the consequent draining away of the exchange reserves are to be avoided in future years. For this reason it is fitting that priority should be given in the Five-year Plan (*1955-60*) to agriculture, irrigation, drainage and flood control, instead of an emphasis on industrialisation as in the past. In addition to stimulating food production the Plan will presumably encourage increased output of the cash crops, cotton and jute which as raw materials with good markets abroad, accounted for some two-thirds of the country's exchange earnings during 1956-57, although shipped in substantially lower volume than in the previous year. An increasing proportion of the output of cotton and jute is being utilised in Pakistan's own mills and these new industries are now gaining a foothold in oversea markets; exports of cotton yarn and manufactures in particular have risen substantially.

"Although industrial production has continued to expand, the rate of increase has slowed down, mainly because shortage of foreign exchange has necessitated restricted imports of spare parts and raw materials. An increase in the supply of goods from the new industries could assist greatly in checking the need to provide foreign exchange for imports. Industrial development in the private sector is likely to be stimulated by the new Pakistan Industrial Credit and Investment Corporation, to the capital of which The Chartered Bank has contributed. The Corporation is to receive assistance from the World Bank and from counterpart funds derived from the sale of commodities, such as wheat, received under American aid.

"The continued expansion of the money supply and the rise in the general level of prices are evidence of inflation arising in its turn from deficit financing but the present pause in the tempo of industrial development will provide opportunities to stabilise the monetary situation and consolidate the considerable progress which Pakistan has achieved in the face of immense difficulties during recent years.

Burma

"In the economic sphere 1957 was a disappointing year for Burma. Rice exports according to the latest figures available have been running at much the same level as in 1956 and the greater part of the rice shipped has gone to countries or buyers in the free world, where payment is made for these supplies in currencies which can be used to purchase much needed imports of industrial equipment. Unfortunately lack of internal security continues to impede the rehabilitation of the timber and mining industries, which under happier circumstances could make valuable contributions to the national export earnings, but the opening last March of the new refinery at Syriam will assure the country of a large measure of self-sufficiency in petroleum products and eventually effect an appreciable saving of foreign currency.

"Seeing that the value of rice shipped out of Burma provides three-quarters or more of total export earnings it seemed reasonable to assume that oversea sales would be sufficient to maintain the exchange reserves at much the same level as a year ago. The reserves have in fact declined substantially despite a loan from the Government of India and assistance from the United States and the World Bank. The payments deficit and the loss of reserves appear to have been due to a partial relaxation of import restrictions, for imports, although partly financed under Japanese reparations and United States Public Law 480, have still been substantially higher than in 1956. Measures now being taken to reduce imports have become the more necessary as the latest official forecast of the new season's paddy crop indicates the prospect of a material reduction in the harvest from that of last season, due to drought. If this expectation materialises, the exportable surplus, a proportion of which is already committed under barter arrangements with the Soviet bloc, will be correspondingly diminished. Seeing that Burmese rice prices for the new season have been fixed at their lowest post-war rates, there can be little scope at present for a significant increase in the country's export earnings.

"In the budget for the fiscal year 1957-58 the Government has given priority to an expansion of the police and the armed forces in an endeavour finally to eradicate the lawlessness and banditry which have threatened the security of the State for more than a decade. New development schemes will therefore be postponed and only essential projects completed to ensure that the maximum resources can be devoted to the restoration of law and order, without which further economic progress will be jeopardised.

"In common with other countries, Burma has found it expedient to establish a special institution to raise funds for economic development. The Government-sponsored Union Development Bank will be concerned with the promotion, expansion, and modernisation of industry, mining, transport and related enterprises and it will also provide the private sector of the economy with managerial and technical assistance. Its capital will be raised from Government and public sources, the Government's investment being provided out of United States loan funds.

Ceylon

"The recent disastrous floods have caused widespread distress among the people of Ceylon and have evoked world-wide sympathy and many offers of assistance from within the Commonwealth and elsewhere. It is tragic that in the country's hour of need the landing of food and other essential supplies required in the inundated areas has been seriously impeded by labour disputes in the port of Colombo. Indeed, strikes and go-slow movements in recent months have so deranged the normal working of the port that Ceylon's oversea trade has been badly affected and labour unrest has been by no means confined to the docks.

"Under these circumstances and in view of the fall in the prices paid for tea at the local auctions and of the rise in imports, particularly of rice and manufactured goods, it was inevitable that the country's balance of trade would be unfavourable. The deficit was doubled during the last two months of 1957, when stocks of tea awaiting shipment accumulated to such an extent that the authorities found it necessary to make bank credit more readily available to the industry. Earlier in the year export earnings had been fairly well maintained and reduced shipments of coconut products had been compensated by an increase in the volume of tea exported at the lower prices.

"The progressive fall in the exchange reserves which had continued since November 1956 was checked last July and resumed in the last two months of the year but, despite this, reserves remain at a level well above the low point to which they declined a few years ago. The bulk of these reserves is held in sterling and the authorities have introduced a number of measures designed to conserve them; in particular, a suspension for one year from last September of the release of exchange for buying sterling securities. This was intended to curb the purchase of foreign-owned companies and estates and at the same time the banks were directed not to grant credit facilities to finance such transactions. There was no suggestion of any restrictions on the remittance of profits or dividends from Ceylon, and indeed this has since been emphasised officially in an endeavour to attract foreign capital for development projects. The proposal to nationalise foreign-owned tea plantations to which I referred last year has apparently been postponed indefinitely and to rehabilitate the industry a five-year programme, financed by a levy on producers, has been initiated. The task of drawing up a new plan for economic development to replace the six-year investment programme devised by the previous Government, has been entrusted to the National Planning Council which was appointed in 1956. Meanwhile the Government has based its budgetary policy on a recommendation by the Council that preference be given to directly productive projects connected with agriculture, industry and land development, rather than to extensions of the social services. The Government intends to establish State-owned corporations in certain sectors of industry but private industrial development will be encouraged by tax reliefs to approved projects.

"In 1958 considerable Government expenditure will be necessary to repair the damage caused by the floods last December and unless a large measure of foreign assistance, financial and technical, is forthcoming there will be little possibility of making progress with development schemes. Paddy production has been seriously affected by the floods, so that substantial rice imports are likely to be necessary.

Singapore

"Sir William Goode, who has succeeded Sir Robert Black as Governor of Singapore, has already given many years of distinguished service in Malaya and Singapore. His appointment as Governor comes at a decisive time for the colony, because as a result of negotiations in London early last year, Singapore is to become a self-governing State within the Commonwealth and a new Constitution will come into effect after the beginning of 1958 as soon as new electoral rolls have been prepared. The Citizenship Bill which was passed by the Legislative Assembly during the latter part of the year has conferred voting rights on probably as many as 300,000 additional electors. The choice of representatives made by this enlarged body of voters at the General Election to be held next September may well prove crucial for Singapore's future and it is to be hoped that party controversy will not obscure from the electorate the hard facts of Singapore's unique economic situation. Only by virtue of the prosperity which its international status as an entrepôt and a commercial and financial centre has brought to it, has Singapore been able to develop in recent years an impressive range of services and amenities for the benefit of its population, who enjoy standards of housing, medical services and education that compare favourably with any to be found in South-East Asia today.

"The total trade of Singapore and the Federation taken together has again risen in value to a level only previously exceeded in 1951; this encouraging result owes much to the resilience and energy of the commercial community and also to a government which is and must remain alive to the importance of using its influence to create favourable conditions in which commerce and industry may thrive. The Singapore Industrial Promotion Board Bill which was passed during the year and provides for the establishment of an industrial credit corporation is an indication of the government's interest in fostering secondary industry in order to render the colony less exclusively dependent on its entrepôt trade.

"In his budget speech the Financial Secretary suggested that conditions for Singapore's trade in 1958 might be less favourable than in recent years and he anticipated some reduction in the level of profits generally as compared with the past two years. While some additional taxation has been levied in order to meet in part an estimated budgetary deficit of M$27 million during the coming year, the increases were smaller than might have been expected, a benefit which will assist the commercial community in the more competitive conditions which the authorities anticipate. Nevertheless it has been pointed out officially that in future years adjustments within the present fiscal pattern are not likely to yield sufficient revenue to finance the increasing cost of government services to the public, so that it will be necessary to find new sources of taxation.

"Notwithstanding the uncertainty which has been engendered by the impending constitutional changes, Singapore continues to prosper and the fact that there is no sign of a slackening in the extensive building programmes, both public and private, may be taken as an indication that whatever difficulties may confront the territory in the near future, there remains a reasonable prospect that conditions favourable to business activity will continue.

Federation of Malaya

"The outstanding event during the past year, and one which has been widely welcomed, was the achievement by the Federation of Malaya of its independence within the Commonwealth on the 31st August, an occasion which was marked by an impressive ceremony at Kuala Lumpur, which, as previously mentioned, I had the pleasure of attending. During the course of the ceremony which was conducted with great dignity, H.R.H. the Duke of Gloucester, on behalf of H.M. the Queen and in the presence of H.M. the Yang di-Pertuan Agong, handed over to the Prime Minister, Tunku Abdul Rahman, the constitutional instruments embodying the Federation's independence. Before the formal granting of independence, the Prime Minister and his government had shown a statesmanlike approach to the country's problems and a wise comprehension of their new responsibilities. The Federation is now joining such international organisations as G.A.T.T., the World Bank, the International Monetary Fund and the International Finance Corporation. The choice of Kuala Lumpur as the venue for the 14th session of the Economic Commission for Asia and the Far East held in March of this year is an indication of the enhanced status of the city as the capital of an independent State.

"Conditions surrounding the country's oversea trade were not quite so favourable last year as in 1956; increased imports and lower export earnings reduced the favourable trade balance. Some 85 per cent. of the Federation's export earnings are contributed by the rubber and tin industries and last year rubber shipments exceeded one million tons, the highest since 1951. This was particularly encouraging because for most of the year rubber prices tended to be weak owing to a variety of factors influencing the international market and the Singapore market in particular was depressed in the latter part of the year by unusually large shipments of rubber which were made from Indonesia against purchases of rice.

"As the prosperity of the Federation depends to such a large extent on the rubber industry, the Government is intensifying its efforts to encourage replanting with high yielding stock and, while progress in this direction is somewhat slow among the smallholders, a considerable acreage has been replanted on the larger estates. The sale and resulting fragmentation of rubber estates has caused sufficient concern for the Government to sponsor an enquiry into the probable consequences.

"Tin exports from Malaya last year were the lowest for three years, marked decreases being shown in shipments to the United States and to continental countries. Throughout the year the trend of tin prices was downwards towards the floor price fixed by the International Tin Agreement, at £730 a ton, to which figure it had been raised last March from the original fixing at £640. Since under the terms of the Agreement the buffer stock manager was compelled to buy all tin offered at the floor price, the provision of additional finance became necessary late in the year and further contributions to the buffer stock were levied on producers. Eventually the rise in the buffer stock holdings of the metal became so marked that in December the International Tin Council decided to restrict the export of tin from producing countries. The quotas fixed involve a reduction of 28½ per cent., subsequently raised to 40 per cent., in shipments and are in force until June 1958. A number of the Chinese mines operating on a marginal basis have been compelled to close down and a proportion of the labour employed in the industry has become redundant.

"The budgetary deficits which were anticipated during the fiscal years 1956 and 1957 have not in fact materialised because expenditure has been running at a lower level than originally estimated. This year the Finance Minister after allowing for a revenue contribution to the capital development programme and for slightly reduced expenditure on the emergency, has budgeted for a deficit of M$199 million but it has been decided that no increases in taxation are necessary for the time being.

"The capital development programme is being curtailed because the Government takes the realistic view that for the time being it would be unwise to run down reserves; nevertheless plans for the construction of the new wharves in the North Klang Straits are going ahead and the existing facilities at Port Swettenham are being improved and extended.

"The Federation embarks on its career as an independent State with substantial external assets and an economy which though mainly dependent on the rubber and tin industries, is sound and progressive. As the Finance Minister pointed out in his budget speech in December, the general level of wages and the standard of living in the Federation is probably the highest in South-East Asia. On the other hand, the emergency which still continues remains a drain on the country's resources. The Government is doing all that it prudently can to end the emergency and it is to be hoped that efforts in this direction will prove successful and so enable the country to finance larger expenditure on economic and social development.

North Borneo

"The latest figures available show that North Borneo's oversea trade last year may well have reached a record level, although the trade surplus for the year as a whole is likely to be less than in 1956. The expansion of imports is again to be attributed partly to the purchase abroad of capital equipment required in connection with the colony's development schemes. It is encouraging that on the other side of the account a wider range of export commodities is making a significantly increased contribution to North Borneo's earnings of foreign currency.

"Rubber continues to be the major export and the tonnage shipped during 1957 has been much the same as in the year before, but owing to reduced prices in the international market, aggregate export earnings from this source have been lower. Copra exports have increased in volume but more than half of the copra shipped from North Borneo is now derived from neighbouring territories.

"Timber exports have increased in volume and value but large shipments to Hong Kong made early in the year caused a temporary fall in prices there. Hemp exports have shown a marked increase, largely owing to improved methods of production and the fact that a virus disease which was reducing output has now been brought under control.

"Government finances in North Borneo are on a sound basis. After meeting all ordinary expenditure and devoting M$6 million of the revenue to development schemes, the general revenue balance in hand is estimated to have increased over the year 1957. Allowing for a further estimated budgetary surplus in the present year, this balance should reach a level at the end of 1958 which will constitute a satisfactory reserve for the general purposes. A further M$6 million from revenue is to be devoted to development in 1958, making the total M$44 million thus appropriated over a period of five years.

Sarawak

"Sarawak is progressing slowly but steadily towards self-government and last May there took place the first meeting of the Council Negri since the introduction of a new constitution providing for an unofficial majority. Following successful municipal elections in Kuching and Sibu, it is the Government's intention to hold similar elections at Miri during the course of the coming year.

"Again last year two of the colony's principal exports, rubber and pepper, fetched lower prices in the international market, with a consequent fall in export earnings. The pepper industry had a particularly unfortunate year, but on the other hand the fixing of export quotas controlling the production of timber, had a favourable effect on ramin prices. Although total imports are estimated to have been slightly lower, the reduction in export earnings has increased the trade deficit of the previous year.

"So far no new oil deposits of any size have been discovered in Sarawak, although prospecting still continues. However, the shipment of bauxite, which it is planned to commence this year, is a new and promising development. These deposits were discovered some years ago by the Government and have not previously been developed. The ore which is reported to be of good grade will go mainly to Japan and the royalties on the industry will be a valuable source of revenue.

"Considering the fall in the colony's exports, the Government's revenue has been satisfactorily maintained last year but it has been necessary to impose increased taxation in order to balance the budget. The estimates for 1958 provide for the spending of some M$42 million on development schemes and other capital works.

"Two constructive measures have been introduced during the year with a view to attracting capital and new industry to the colony. The Pioneer Industries (Encouragement) Bill allows to new industrial concerns which are officially recognised as pioneer industries, some measure of relief from income-tax and customs duty on imported equipment. The Sarawak Development Finance Corporation, a Government-sponsored credit institution, will undertake the financing of projects designed to accelerate economic development.

Indonesia

"No good purpose would be served by my attempting here to review the present economic situation in Indonesia and its kaleidoscopic political *miseen-scène*. It is difficult to discover in the political crisis which threatens the unity of the country whether the opposing factions are contending for different forms of Government or defending incompatible economic interests. Manifestly the situation is one of grave danger to the young republic but it can be resolved only by the Indonesian people and their leaders without interference, however well-meaning or gratuitous advice, from abroad.

"The constructive work in which the Indonesian branches of the Bank engage has necessarily been hindered by the political ferment which has now issued in a conjuncture the outcome of which cannot be foreseen. The situation and its uncertainties are causing us a good deal of anxiety but we can do no more than join with other friends of Indonesia in hoping that a peaceful way out of the present impasse may soon be found and that the Indonesian people may attain the higher standards of living that would accrue to all of them from the restoration of political stability, administrative probity and labour responsibility; a state of affairs which is indispensable to the effective development and economic deployment of the enormous natural riches with which the country is endowed.

Thailand

"Although the unsettled political situation has had a disturbing effect on trade, particularly since September, Thailand has again enjoyed a relatively prosperous year. The country enjoys a measure of economic stability, which is denied to many of its neighbours in South-East Asia, because of its self-sufficiency in rice, and of the consequent well-being and contentment of its peasantry. Rice normally accounts for approximately one-half of the country's export earnings; shipments which last year showed a substantial increase over those in 1956 and reached their highest level since 1952, contributed to the rise which took place in the exchange reserves.

"During the early part of the year owing to shortage of shipping space, exports of timber and rubber were on a much reduced scale. Later after the re-opening of the Suez Canal the situation improved and from the latest figures available it appears that rubber shipments for the year will have been much the same as in 1956. Export earnings from tin on the other hand are likely to have suffered some contraction owing to the steady fall in prices in the international market during the year. Inevitably in the coming months tin exports will suffer reduction owing to the quota restrictions imposed by the International Tin Council.

"Despite an expansion of the currency there has been a shortage of money in the market throughout the year, a situation which has caused particular difficulty in the import trades. Markets became substantially overstocked following the Suez crisis and slackening of consumer demand has caused some failures.

"Although Thailand has not formulated a national plan for economic development, several schemes are being undertaken under official

direction with financial and technical assistance from the United States and the World Bank. Much of the American aid provided is devoted to railway development and the construction of roads and airfields, while the World Bank has recently made available a loan to finance a hydro-electrical project and flood control in Central and Southern Thailand. If aid from abroad continues on the present scale and political stability is assured, steady progress can reasonably be expected during the coming year.

Vietnam

"There have been no major political developments in Vietnam during the past year and the country has therefore been able to consolidate to some extent the economic progress which has been made since President Ngo Dinh Diem succeeded in restoring law and order in territory which had been ravaged by many years of war. The fact that the President found it possible during the latter part of the year to visit a number of friendly States in Asia and elsewhere is an indication of the strength of his regime and of the improvement in the political stability of the country.

"The country continues to be largely dependent on American aid to pay for the bulk of its imports. Although there was a modest, but nevertheless welcome, revival of the export trade in rice last year and a higher tonnage of rubber was shipped abroad, export earnings amounted to only 28 per cent. of the value of imports.

"An excessive issue of import licences in the first half of the year caused the overstocking of markets and this, coinciding with the tight money conditions instituted by the financial authorities, made conditions difficult for importers to dispose of surplus stocks. Although the release of commercial bank funds deposited with the central bank has assisted in financing these stocks and in ameliorating the position to a certain extent, some time must elapse before stocks can be reduced to normal proportions.

Cambodia

"Cambodia is almost unique among the countries of South-East Asia in having a surplus of agricultural land and thus an abundance of staple foodstuffs for the whole population. A good harvest last year allowed of greatly increased exports of rice and other cereals, and since rice accounts for some 42 per cent. of the country's total exports, the trade balance, which had been substantially in deficit in 1956, yielded a surplus last year. Most of the country's imports continue to be financed by American Aid and although there is a danger that subsidised imports from China will lead to overstocking of the market with certain commodities, import control has worked satisfactorily. While the official system of permitting holders of foreign currency balances abroad to use them for financing imports has tended to encourage the purchase of foreign luxury goods at high prices, it has also permitted a wide range of consumer goods to enter the country without depleting the exchange reserves. In consequence of an increase in the value of exports and a reduction in imports exchange reserves have risen during the course of the year.

"The Government by accepting aid from China and the Soviet bloc, as well as from the United States and under the Colombo Plan, shows a firm intention of remaining independent of either political grouping and free to welcome investment and aid from any foreign source, if offered without political conditions. Most of the projects which are being considered in connexion with the country's projected five-year plan appear to be dependent, in varying degrees, on foreign aid, and the ambitious scheme which has been the subject of a recent study by E.C.A.F.E., for the harnessing of the waters of the lower Mekong river for the benefit of Cambodia and its neighbours will clearly require substantial foreign finance if it is to be successful. Meanwhile Cambodia has plans to develop light industries and a number of companies have been formed, in most of which foreign participation to the legal maximum of 49 per cent. of the capital has been backed by expert assistance from abroad.

"The future prospects of Cambodia, given peace and political stability, are favourable and the sound financial policy followed by the authorities augurs well for the progressive development of the country.

The Philippines

"Last March the Republic suffered a tragic loss in the death of President Magsaysay, whose great popularity enabled him to exercise a stabilising influence in political and economic affairs. The accession to power of his successor, President Carlos P. Garcia, was confirmed by the November elections and now that he is assured of office for a period of years, the new President will have an opportunity of tackling the serious problems which confront the country at the present time.

"A year ago it appeared that determination and realism on the part of the authorities had succeeded in adjusting the balance of trade and in defending the exchange value of the peso. The fall which had taken place in the international reserves during 1955 had been checked and it seemed that if it proved possible to modify the capital development programme by postponing some of the less essential projects and to reduce deficit financing, 1956 might well prove to be the turning point in the long struggle to put the economy of the Philippines on a sound and stable basis.

"In the event the past year has seen a serious reduction of the foreign exchange reserves and an increase in the money supply accompanied by the all too familiar and disturbing symptoms of inflation. This deterioration in the Republic's economic position has been due to a variety of causes. Although last year's budget was imaginatively conceived and visualised some limitation of the further expansion of the public debt, the estimates provided for increased bond issues to finance economic and social development schemes, a method of raising funds, which by expanding the money supply was inevitably inflationary. The excess purchasing power created within the country has caused a substantial increase in imports and the consequent adverse trade balance has seriously depleted the exchange reserves. As Central Bank spokesmen have pointed out, the situation has been aggravated by barter transactions and by such expedients as the overshipment and underpricing of exports and the overpricing of imports.

"In December, in an effort to check the loss of foreign exchange and to absorb part of the excess money supply, the Central Bank compelled commercial banks to exact large margins against the opening of letters of credit and to deposit those funds with the Central Bank. In addition the foreign exchange allocations for imports have been reduced and it is possible that quotas permitting what are considered inessential imports will be cancelled. Further measures may be necessary finally to arrest the deterioration in the Republic's payments position.

"There can be little doubt that the natural resources of the Philippines if efficiently developed and administered could within a relatively short period strengthen the national economy and assure the population of a reasonable standard of living. Investment from abroad can be of assistance in this direction and the Government proposes to introduce legislation to attract such investment. Foreign investors have hitherto been discouraged by the restrictions on profit, dividend and interest remittances and by claims for additional taxation. Although the bulk of the external trade of the Philippines is still conducted with the United States, trade with the United Kingdom and with Western Europe is increasing, a trend which I mentioned last year and which may be expected to continue now that under the terms of the Laurel-Langley Agreement tariff preferences favouring American goods imported into the Philippines are to be progressively reduced. Negotiations have been taking place during the course of the year with a view to facilitating the use of sterling by the Philippines, which, if accomplished would facilitate a further expansion of trade with the United Kingdom and the sterling area.

Hong Kong

"At the end of last year Sir Alexander Grantham retired after ten years of distinguished service as Governor of Hong Kong. Since he was first appointed Governor, Hong Kong has had to face fundamental political and economic problems arising from events of international moment involving its powerful neighbour, China, not the least of which has been the task of providing for the vast influx of refugees from the mainland. He has been succeeded as Governor by Sir Robert Black, who has already had experience of Hong Kong, where he is held in high esteem.

"Hong Kong's total trade increased last year with imports expanding and exports falling in aggregate value. Shortage of foreign exchange caused a considerable reduction in Indonesian purchases of Hong Kong goods, but on the other hand substantial increases were recorded in exports to the United States, particularly of locally manufactured garments, and to the United Kingdom which remains Hong Kong's principal customer. Rather more than a quarter of Hong Kong's exports are locally manufactured and the local industries in general have had a fairly good year, their sales oversea having been stimulated as a result of the colony's participation in trade fairs abroad. It is clear, however, in view of trade restrictions and shortage of foreign exchange in South-East Asia particularly, that the future success of Hong Kong's industries will depend to an increasing extent on their ability to sell their products in more distant markets, such as Europe and North America, where competition will be more severe. Efforts in this direction should be assisted by the trend which is apparent in many branches of local industry, towards producing and shipping finished goods, rather than semi-manufactured products. Progress in applying advanced industrial processes is necessarily dependent on the availability of skilled labour, and the new technical college should help to meet this pressing need.

"The pace of industrial expansion in recent years has intensified the problem of finding space for further development, as nearly all available factory sites have now been filled. Several new areas are being surveyed by the Government as sites for new towns and large-scale industrial development. Work on the expansion of Hong Kong Airport continues and the extended runway should be ready to receive increased and heavier traffic next year. The building and reconstruction which have been so much in evidence in recent years and which have caused land values throughout the colony to rise to ever higher levels, have continued unabated and many of the old landmarks of Hong Kong have now disappeared. Work on our own new building has progressed satisfactorily and it is hoped that it will be ready for formal opening next year.

"The resilience and adaptability of the business community in Hong Kong have been demonstrated with striking effect in recent years, when the handicaps imposed on the colony's entrepôt trade, hitherto its main source of income, have been largely offset by the rapid development of new manufacturing industries. The extreme flexibility of Hong Kong's economy owes much to the Government's sound policy of fostering conditions favourable to free and competitive business enterprise and of refraining from the imposition of vexatious and unnecessary controls. In the coming year it is likely that the colony's exports will encounter intensified competition, particularly from China, but I am confident that the Hong Kong mercantile community will continue to demonstrate its ability to overcome any temporary difficulties.

China

"The end of last year saw the conclusion of China's first Five-year Plan, which is reported to have been fulfilled according to schedule, despite revisions necessitated during the course of the year by a deficit in the State budget. Although, during the period of the plan more than three-quarters of China's total foreign trade has been conducted with the Soviet bloc, there are signs that the authorities are moving towards a multilateral trading policy and are showing a growing interest in a wider range of markets.

"Following the British Government's decision to relax restrictions which were imposed for strategic reasons, Anglo-Chinese trade has increased during the year. While the prospects should not be exaggerated, further expansion is probable. Commercial relations between China and the United Kingdom have benefited from the visit to this country of the Chinese economic and technical mission led by Doctor Ch'i Chao-ting and from the tour of China undertaken by the Parliamentary Secretary to the Board of Trade.

"Last year I mentioned that the authorities in Peking evidently considered it useful to have banking connexions throughout the world to supplement those afforded by the Bank of China and that with official encouragement The Chartered Bank was again participating, if only to a small extent, in the financing of China's oversea trade. The business suits us very well and there are good prospects of its continuing.

Japan

"The return of Japan to a position of authority in international affairs was signalised by its admission in 1956 to membership of the United Nations; this position was further advanced by its election for a term of two years to a seat on the Security Council.

"The successful negotiation of a reparations agreement with Indonesia has resulted from the Prime Minister's goodwill tour of South-East Asia. Japan by virtue of its geographical position and its high degree of industrialisation is favourably placed to assist the economic development of South-East Asia and this factor has featured prominently in the various reparations agreements which have been negotiated with countries in that area.

"The economic expansion which made 1956 Japan's most successful post-war year, continued unabated well into last year, but subsequently increased imports began to impose a serious strain on the country's balance of payments. Industrial and mining production continued to rise, but to sustain their expansion it was necessary to purchase increased quantities of raw materials from abroad. The monthly deficit on the country's balance of payments reached its peak in the middle of the year and was on such a scale that it was necessary for the Government to seek assistance from the International Monetary Fund and to introduce measures designed to restrict imports and to curtail domestic credit. It was expected that the raising of interest rates in March and again in May, would take some time to have effect, but by the end of the year it became apparent that equilibrium had been largely restored and in October Japan's balance of payments showed a surplus. The remedies applied have inevitably caused an increase in unemployment, and the problem of expanding exports sufficiently to ensure reasonable living standards for an expanding population persists. Nevertheless Japan is fortunate in possessing an industrious population and in remaining relatively free from labour unrest, despite the growing strength of the trades unions. The difficulties of the past year have been allayed to a significant extent by a good rice crop and the fact that there are no serious signs of inflation is evidence of the efficient administration of the country's monetary system, which is sustained by the capable management and the growing strength of the Japanese banks with whom we maintain friendly relations.

New York

"Our New York agency is an important link in our interregional organisation since many of the principal exports of the Asian countries in which we have branches find remunerative markets in the United States. We have many business connexions of long standing among exporters and importers in the United States and our relations with the American banks have always been cordial.

Hamburg

"Our Hamburg agency fulfils an important function in our organisation in acting as a link between our branch system in the East and merchants and manufacturers in West Germany, whose trade with Asian countries has continued to expand in recent years. The trade agreement between the Federal Republic and China, which was signed last September, provides for trade to be conducted on a Deutschmark basis and this may lead to the resuscitation of the extensive trade conducted before the Second World War by German firms with interests in China and in the financing of which this Bank participated to a large extent.

Manchester and Liverpool

"Our branches in Manchester and Liverpool continue to sustain the long-standing connexions which merchants and manufacturers in Lancashire and the North of England have developed with Asian markets. Our manager in Liverpool has been honoured by his appointment as Honorary Consul in the North of England for the Republic of the Philippines.

West End, London

"An increasing number of visitors who come to London from the East avail themselves of the services available at this conveniently situated branch, whose business has now expanded to the point where we are finding it necessary to move to new and more extensive premises nearby.

The Sterling Area and the United Kingdom Economy

"The appointment of a committee under the chairmanship of Lord Radcliffe to enquire into the working of the monetary system has evoked a good deal of discussion among economists concerning the merits of the sterling area system and the position of this country as its banker.

"Widely divergent estimates have been made of the extent to which foreign currency accrues to the United Kingdom Control from the operations of oversea banks based upon or represented in London and it has been argued that the advantages of those operations to the United Kingdom economy are more apparent than real. The effectiveness of organisations like The Chartered Bank in sustaining the external economic defences of the United Kingdom cannot be in doubt. The Bank finances a very large proportion of the trade in primary products between the Eastern countries and the rest of the world and it is a considerable earner of U.S. dollars and other scarce currencies in its own right; moreover the Bank is enabled by means of its already extensive and growing oversea establishment to play an important part in the promotion of the export trade of the United Kingdom.

"To impose restraint upon the activities of the British oversea banks would be the last resort of the destitute and it is reassuring to know that changes in currency management and exchange control which might prejudice the unique position of the City of London in international commerce will not be made without the most searching enquiry.

Conclusion

"The superficial observer of the contemporary international scene might suppose that few, if any, of the Asian countries hold opportunities for the British banks. There have been reactions against what is loosely and often mistakenly termed 'financial imperialism' but most Asian countries realise that an efficient international banking service can play a powerful part in sustaining the economic defences of an undeveloped country struggling to be free and prosperous and that foreigners practising banking in their territories can be trusted by their hosts.

"While our primary function is that of an exchange bank we have, during the past twenty years, operated to an increasing extent within the domestic economies of the countries to which our organisation extends. These credit operations are financed by local deposits and, where they exist, local money market facilities. In proportion to the extent to which the Bank is permitted to attract deposits it can, of course, engage in the financing of sound business activities but there are signs in many countries of a disposition to restrict deposit banking to the indigenous banks.

"One of the most striking features that has emerged during the year has been the extent to which the holdings of foreign exchange of so many of the Eastern countries have seriously deteriorated. Attention has been focused on India's position because of the extent to which she has drawn on her sterling balances but it is clear that her problem is common to other Asian countries. In nearly all of them there has been the urge towards rapid industrialisation which has caused excessive imports of capital goods and imposed further strain upon dwindling resources of foreign exchange.

"It is too soon to anticipate what may be the consequences to the Bank of the impending liberalisation of trade within the Western European community but the pursuit of such a policy would widen markets for the agricultural produce and raw materials which are still of vital importance to most of the Asian national economies. The Bank has a thriving agency in Hamburg and it enjoys mutually satisfactory correspondent relations with an extensive range of banks established on the European continent. Our international organisation is well equipped to take advantage of changes in the direction of trade which are likely to result from tariff revision in the United Kingdom and Western Europe.

"When addressing the stockholders in past years I have remarked more than once that The Chartered Bank has given many hostages to fortune but the success with which the affairs of the Bank have been conducted since the end of the war and the way in which the technique of management has been adapted to meet revolutionised economic situations resulting from changes of sovereignty and other political upheavals encourage me to continue to view with confidence the future of British banking in the East."

THE INDIAN MINING ASSOCIATION

SPEECH OF THE CHAIRMAN, MR. D. HOGG

FUTURE OF THE INDUSTRY RESTS WITH THE COAL PRICES REVISION COMMITTEE

THE following is the speech of Mr. D. Hogg, Chairman of The Indian Mining Association, delivered at the Sixty-sixth Annual General Meeting of the Association held in Calcutta on 20th March 1958.

"GENTLEMEN,

"The most outstanding feature of the year has been the fact that coal production has increased from 39.43 million tons in 1956 to 43.50 million tons in 1957. Of this increase of just over 4 million tons, 3.1 million tons were produced by the private sector. The year 1957 may be regarded, therefore, as the first year of achievement after the private sector of the coal industry had been given the 'green light' to go ahead to produce its additional 10 million tons of coal during the second Five-year Plan period.

"It has always been said that the goal of an additional 10 million tons in five years was well within the ability of the industry, provided that there was sufficient inducement, and incentive and various handicaps were removed. Last year has proved that the private sector has not been found to be lacking in its desire to achieve its objective. But is sufficient inducement and incentive present for progress to continue at this rate and have many of our handicaps been removed? The industry has tackled its problems realistically in an effort to produce the goods, but I would venture to say that our progress, in view of certain deficiencies, can only be regarded as 'short term.' There is, therefore, no room for a feeling of complacency on the part of Government and the many authorities to which the coal industry is subjected that this progress can be maintained unless urgent action is taken to remove many of the difficulties which stand in the way of long-term planning and security for the industry.

"It is tedious to recount our difficulties yet again, as these have been publicised over the past decade on so many occasions and voluminous memoranda have been prepared at various times by the Association on these subjects. However, I feel I must enumerate the more important items again. Briefly they are:—

1. A realistic price structure.
2. Security of tenure for leaseholders.
3. Adequate transport to remove coal from where it is raised, throughout the year.
4. Facilities for the provision of the required plant and machinery.
5. A little relaxation from the spate of legislation which has been imposed on this industry constantly throughout the last few years.
6. A realistic approach to both the controls which bind the industry and the labour problems with which it is constantly faced.

Price Structure

"With regard to a revision in the price structure, Government wisely appointed a Coal Prices Revision Committee about a year ago to examine and report upon the costs of production of coal and coke and to take into account all relevant factors which have a bearing on the coal production programme envisaged in the second Five-year Plan and to recommend whether any changes and, if so, what changes were necessary in the present price structures. The Committee is eminently composed but it is constituted of Government officials only, who are mostly concerned with consumers' interests rather than those of the producers. This Committee, therefore, may not hold such impartial views as are so necessary when consideration is being given to such a complex problem as the fixation of prices for a wasting asset where both technical and commercial problems are involved. However, this Association has extended its fullest co-operation by providing the Committee with various information and has had the privilege of formally meeting the Committee on one occasion, shortly after its formation. It is to be hoped that the industry will have another opportunity to participate in a joint consultation before the Committee makes its final recommendations or draws any conclusions. The complexity of the problem under investigation makes it desirable, if not essential, for further meetings to take place.

"In the meantime, the Coal Prices Revision Committee has investigated the production costs of selected collieries and has made a comparison of the costs obtaining during the second half-year of 1955 with the second half-year of 1956. While this will no doubt serve as a basis for their deliberations, it is considered that the information collected is now completely out of date as costs have risen considerably subsequently and other elements must now be taken into account. To mention a few, they are, increases in labour costs on account of implementing the Appellate Tribunal's decision, recurring increases due to annual increments which have to be introduced, the cost of issuing clothing and boots to workmen at concession rates, which are 50 per cent. of the cost, the supply of free rations to workers' children in the creches, the provision of canteens and many other welfare amenities and last but by no means least, the cost of implementing the new Coal Mines Regulations, necessitating the appointment of additional staff and other statutory obligations which result in a never ending increase in production costs.

Unfair Treatment

"The fate of the coal industry rests, no doubt, at present, with the Coal Prices Revision Committee and it is to be hoped that they will take into consideration the fact that credit facilities for future expansion are strained and large capital investments are required in mining to achieve the target. There must be an adequate margin of profit, therefore, to enable money to be ploughed back into the industry for future development since in mining, development is a continuous process which requires continual expenditure of a capital nature. The maintenance of coal prices at an absolute minimum really means that the coal industry is being utilised to subsidise manufacturing industries and national transport—the railways. Should a wasting national asset like coal be treated in this way to subsidise other industries, particularly when the nation's industrial future, steel production, is inextricably linked with the future of the coal industry? Should not others help to subsidise our future expansion?—particularly when the country's fuel research experts tell us that there is a terrific wastage in the utilisation of coal in industry in India, and when there is a need to make them feel efficiency minded. In other words, an increase in coal prices should not affect the general economy of other industries, but should help them to achieve greater efficiency and at the same time provide the necessary funds for capital investment in the coal industry where it is urgently required to provide the necessary resources for increased production.

Financial Position

"An analysis of the financial accounts of 19 coal producing companies of this Association which, between them, raise about one-third of the total output of the country, reveals some very interesting information. The profit remaining after providing for taxation averaged Rs. 1.21 per ton. Out of this, the shareholders were paid in dividends of Rs. 0.54 per ton. This represents return of 6.3 per cent. on the paid-up capital involved. It will be seen, therefore, that the share of profit distributed to shareholders was low compared with the general level existing for other industries, and this despite the additional risk involved in investing in mining enterprises. Now, the real value of the shareholders' investment must include amounts which are available for distribution but which are shown in balance-sheets under the heading 'Reserves and surplus.' In this analysis, the total dividends paid to shareholder are found to be 3.4 per cent. on the total value of the investment.

"It is the complaint of the industry that there are insufficient profits available to meet current needs and the analysis of these 19 companies' accounts certainly illustrates that this is true. It is found, after providing for taxation and distributing dividends to shareholders, the balance remaining is Rs. 57 lakhs, out of which, amounts have to be set aside for depreciation. Against this total retention, there was spent on capital expenditure a sum of Rs. 88 lakhs. It will be seen, therefore, that the financial resources of the 19 companies were depleted to the extent of Rs. 31 lakhs in one year only. Taking this to be the average for the remaining producers, the total for the industry is in the region of Rs. 1 crore—a staggering figure. Investigation also shows that this trend has existed for many years. It will be obvious that no industry can continue to suffer this serious depletion of its resources in this way. The coal industry is one which has to meet regular demands for capital expenditure due to its very nature. Underground plant and equipment require continual repairs and replacement and it is a fact that capital expenditure becomes heavier after complete development to the boundary. Then comes the additional capital costs for pumping and stowing operations.

"While, in theory, the amounts set aside for depreciation are intended to equal the original cost of an asset and to be available to meet the cost of replacement, it is well known that present-day costs for replacing identical assets are very much higher than the original cost. It was argued before the Tariff Board on behalf of several important industries that the cost of replacement was three to four times greater in 1948 than in 1939 and it is common knowledge how much prices have risen in the last decade. This deficiency in funds has, therefore, to be made up in some way out of the Companies' own resources. It is true that the Finance Act of 1955 recognised this need and with the object of providing funds to be retained in the business, reduced the liability for taxation by providing a free allowance of 25 per cent. of the cost of the new assets (development rebate). It would be interesting to consider an example of the position on the basis that a new and identical asset will cost four times more than the one replaced and taking into account the development rebate.

Selling Prices

"As the selling prices for coal are controlled, the onus is clearly on Government to fix these at such a level as to ensure that sufficient nett earnings, to meet present-day requirements, will be available for ploughing back. It is hoped that the Coal Prices Revision Committee will take this realistic view as a basis for its recommendations.

"To revert to the year's working, credit must be given to the railways for their increased wagon offerings. Unfortunately, however, wagon availability has not kept pace with production and coal stocks in Bengal and Bihar at the end of 1957 stood at over 3 million tons and were over a million tons higher than at the end of the previous year. While the railways' performance improved considerably during the year (an average movement of 3,667 wagons per day with coal from Bengal and Bihar compared with 3,405 wagons per day in 1956), they have a colossal task ahead of them if they are to move over 5,000 wagons per day from Bengal and Bihar by 1961. The industry's fears over sufficient improvement not being achieved by the South Eastern Railway during the second Five-year Plan period, appear now to be confirmed by the Railway Board themselves. Unfortunately, the South Eastern Railway system appears to have been strained to the extreme already in its efforts to meet its commitments under the second Five-year Plan. These are extremely heavy as it serves Bhilai, Rourkela and Tatas and is responsible for almost all the ore traffic both for export and internal consumption and serves a large percentage of the coking coal collieries and selected grade high volatile coal collieries from where expansion is required. The South Eastern Railway also service all collieries in Central India. There have been rumours that coal targets for the second Five-year Plan are to be revised and the private sector welcomes the thought that a larger share may be allotted to it. However, rumours that this increase is to be given to collieries in Central India cannot be received with much enthusiasm as production there is already much in excess of the railways' capacity. In fact, there was no increase in wagon availability in the Central India and Talcher fields in 1957.

Wagon Supply

"The minimum guaranteed supply of wagons for the movement of coal by the South Eastern Railway in 1957 was 950 wagons per day. The coal industry maintained that the figure should have been 1,050 wagons but even the lower target set was not achieved. Further increases in wagon offerings are required in 1958 and in the years to follow. An increase in coal production in the collieries served by the South Eastern Railway is now vitally required. With the present strain on its resources, it appears to be impossible for this railway to move the number of wagons required. I would, therefore, emphasise the necessity for a regrouping of certain sections of the railways to relieve this strain. The Eastern Railway appear to have the capacity to operate adjoining sections of the South Eastern Railway (some of which they already operated in the past) and I would humbly suggest that they should now take over these sections with the least possible delay.

"Another feature regarding transport which gives cause for great concern is the discrimination which is shown over the allotment of wagons between the public and private sectors. The industry has drawn Government's attention to this on many occasions during the year but controls are still being used to the advantage of one sector. While it may be expected that Government will wish to purchase its coal requirements from the N.C.D.C. as far as possible, it does not appear to be in keeping with equity that controls should so be used that in effect priority which is given to one sector of the industry is not shown to the other. The replies from the Secretariat on this vexed question of discrimination cannot be considered as satisfactory and there would appear to be a need for an impartial committee to enquire into this matter. Facts must be faced—why are heavy stocks held by one sector and not by the other?—should greater priority be given to the movement of coal to burn bricks for Government staff quarters in preference to industrial housing or a housing estate?

Benefits To Workmen

"The implementation of the Appellate Tribunal's decision in June last year has brought greater benefits to our workmen. In fact, they have probably received greater benefits in the last two years than workmen in any other industry. I have used the term workmen which also covers our female workers who are now in receipt of equal pay. We welcome these improvements, if they result in increased production, a more contented labour force and better relations. But, so far, there have not been noticeable changes in these directions and there is great scope and need for improvement. In fact, absenteeism has tended to increase since the All-India Industrial Tribunal's Award and the Appellate Tribunal's decision were implemented. One of the greatest problems which has faced the nationalised coal industry in the U.K. since wages increased so considerably there, has been absenteeism. It has been estimated that a reduction of 1 per cent. in absenteeism in the U.K. would probably result in an additional 2 million tons of deep-mined coal per year being produced. It is interesting, also, that a solution has been offered by the Lancashire mineworkers who have agreed, under the auspices of their local area National Union of Mineworkers, to set up 'Attendance Committees' to scrutinise attendances and ultimately withdraw protection from a consistent offender if the management were to resolve, after warning, to sack him. Their Area Secretary has said that 'there is no room in the industry' for a man who will not put in a full week's work.

"Our industry is by no means backward in its structure. Our workmen have their own bonus scheme. They have their own provident fund and welfare organisation with separate commissioners to look after their interests. We have our pithead baths, our creches where food and other facilities are provided for children—clothing and boots are to be provided to workmen at concession rates and canteens are being introduced on an increased scale. The welfare organisation has built hospitals. In addition, it has built multi-purpose institutes and miners institutes and while more could be built and are being built, in keeping with the availability of materials their construction is, unfortunately, in excess of our workers' ability to utilise these facilities to the full. We, for our part, wish them to be utilised to the full because we realise that they should bring about greater happiness and contentment, I cannot help but think sometimes that union leaders would be doing a great service to those whose interests they claim to represent and to the country as a whole if they were to concentrate more of their attention on encouraging and influencing their members to use the facilities which are offered at present and educating them for better things to come. It might be asking too much to expect union leaders to be social workers but surely we can expect them to have a more active social conscience. How many do we see encouraging such activities as sports or even attending sports meetings?

"Unfortunately, our workmen are divided by a multiplicity of unions which vie with each other for their support and which all claim, in their dealings with employers, to represent the workers' interests. Many union field workers are divided by differences in political ideology and, in many cases, self-interest. In order to gain popularity and even maintain their position, these union officials organise demonstrations to attract support which leads to indiscipline within the industry. The present activity of these leaders is not only destroying good relations between employers and employees but also between supervisory staff and workers and is also making the formation of responsible and properly constituted trade unions virtually impossible. In view of the unruly elements present, few collieries can afford to organise pit committees and sometimes the formation of such committees is even opposed by unions.

Steering Group

"While the Association welcomes the formation of a steering group to consider the question of safety in mines, the irresponsible nature of some union leaders, on occasions, must not be lost sight of. Mining is a hazardous occupation and while a miner is constantly faced with the immediate perils of nature, good leadership and discipline is essential. Where the safety of the miner is involved there is no conflict of interests between the unions, the employers and the employees. Petty difference of opinion or of viewpoint must be subordinated to the overriding interests of providing safe conditions for mine workers.

"I sincerely hope that the steering group will bring to light defects, if any exist, but our new Mines Regulations, based on past experience in India and the regulations existing in other countries, appear to be exhaustive and comprehensive. A most fundamental point is that education of our miners will require to be undertaken vigorously in order to achieve results and greater safety. Constructive help from the unions is necessary to achieve this. This Association is at present bringing out a series of safety posters but it is difficult to make them sufficiently simple for illiterate labour to understand. Unfortunately, the required standard of education cannot be achieved in one generation but I am pleased to be able to say that there has been a revitalisation of our labour welfare fund organisation and the appointment of a new commissioner has brought about greater interest in multi-purpose institutes where, among many other activities, adult literacy classes are held. It is hoped that our posters will be utilised to serve the dual purpose of teaching literacy and safety at the same time, at these multi-purpose institutes. In addition, several of our members have made their own safety slides which are shown at cinema performances in their collieries. I would emphasise the greater need for such activities and request Government to produce suitable safety films. Their Films Division are producing some very excellent films on other subjects and might well devote a few films to the subject of safety in mines. Such films would earn their real reward in the form of a reduction in the number of accidents in mines in India.

Rate of Accident Lowest

"Mines in India have recorded one of the lowest fatal accident rates in the world in recent years, but the recent disasters of Chinakuri and Central Bhowrah have brought home to us all once again the stark realities of mining. While we express our sincerest sympathy to the relatives of the victims and sufferers of these recent disasters, we must also record our appreciation of the very high standard achieved by our rescue station organisation which compares favourably with similar organisations in other countries. It is only at times like this that the public hears of their existence. They were present at Chinakuri and I understand did an excellent job of work. They are a brave band of citizens, largely voluntary, who turn out unfailingly, on such occasions not only to assist in rescue operations in emergencies but in mine recovery also.

"The spate of legislation, not only concerning mining, but seriously affecting the stability of the industry appears to be unending. I see from the Ministry of Labour and Employment's latest report that they had a total of only nine enactments under consideration during the year and five of them specifically concerned the mining industry and another one affected us. In addition, we are constantly affected by legislation brought out by other Ministries, not to mention the controls and regulations which are imposed upon us by our own Ministry.

"During the year, the Draft Mines and Minerals (Regulation and Development) Bill, 1957, was considered by the Lok Sabha and was then referred to a Joint Committee of both Houses. The Bill had been discussed with the industry at the Mineral Advisory Board meetings held since 1956 but, without reference to the industry, the Joint Committee made far-reaching amendments to the Bill, which was passed at the end of December last year. The most important amendment was that royalty would have to be paid at 5 per cent. of the f.o.r. value of coal, subject to a minimum of 8 annas per ton, immediately the Act became law. Also, the rights of intermediaries appeared to be liquidated without payment of compensation. The amendment concerning royalty rates meant that on an average collieries in Bengal and Bihar would immediately have to bear an increase of 12 annas per ton in the royalty payable and in some cases the increase would be as much as almost Re. 1 per ton. Royalties in Bengal and Bihar at present range from zero in some cases to about Re. 1 per ton and average about As. 4 per ton. It will be appreciated that royalty is a fixed charge for the privilege of exploiting natural resources and is an item in the cost of production. If the rate of royalty is increased by Statute, a Court of Equity, I would expect, would consider that selling prices, should be increased correspondingly. The industry has taken the opportunity of explaining to Government the far-reaching effects which the Mines and Minerals (Regulation and Development) Act, 1957, will have and it is to be hoped that amendments will be made to this Act before the effective date from which it will come into force, is gazetted.

"Under the Coal Bearing Areas (Acquisition and Development) Act, 1957, the State has been empowered to take over unworked land containing or likely to contain coal deposits. Although the Bill in draft form was never placed before the coal industry for comments, the industry has taken the opportunity to point out the difficulties with which it is now faced as a result of this Act. These are only two of the cases where drastic changes have been made affecting the industry without reference to or discussion with them. In addition to the many Advisory Committees on which the coal industry is represented, we have our own Coal Controller and also the Coal Council which has recently been formed to act as the future policy makers for the coal industry. I would strongly urge Government to make the fullest use of these various Advisory Committees and the Coal Council before formulating policies or amending legislation, in future.

Foreign Exchange

"The foreign exchange shortage which has hit all industries throughout the country has also been acutely felt by the mining industry as a large percentage of mining equipment and machinery has to be imported from abroad. I would, however, express our grateful thanks to our Coal Controller, who, at the end of 1956, started what is known as the Progress Review Committee, which has achieved results in some directions. This Committee held monthly meetings throughout last year and as a result of the presence of representatives from the Joint Chief Controller of Imports and Exports, the Regional Honorary Cement Adviser, the Iron and Steel Controller and other officials, a few of our shortages have been eased and we have at least had the opportunity of explaining our difficulties to the different representatives concerned. This has given the various Government Departments a greater insight into the problems which confront us. As far as the import of mining equipment and machinery is concerned, we have been allowed more scope to obtain essential items under Actual Users' Licences but we have lost or have had curtailed many facilities which existed previously, such as drawing our requirements through established importers. In many cases this has resulted in a loss of efficiency in those collieries which are no longer able to draw their requirements from established importers, who previously handled the items required, or from the stocks of spares normally held by them.

"There is, no doubt, particularly as far as spares are concerned, that the present import policy results in a wastage of foreign exchan

HOW TO GET AHEAD IN THE WORLD?

THROUGH SOCIALISM OR FREE ENTERPRISE?

CASE STUDY OF TWO COUNTRIES

[It is often emphasised by the powers-that-be that socialist pattern of society is the right road for speedy fulfilment of India's economic aspirations. A large section of the business community, however, feels that socialism as is now being preached and practised will retard the pace of economic growth rather than accelerate it. In the context o this controversy, the article on this page, taken from the March 1958 issue of **Monthly Bank Letter,** *the well-known publication of the* **First National City Bank of New York,** *is quite topical and revealing. It gives a case history of what has happened in two free countries in Western Europe—Britain, which took the Socialist road, and West Germany, which followed the path of free enterprise. It is common knowledge that, in many respects, the free enterprise economy of West Germany is well ahead of the socialist style Britain. It is true that this article was prepared a little before some of the latest economic troubles of West Germany, such as a rise in unemployment, fall in rate of production and labour unrest. But this does not vitiate the conclusion of the article, as Britain, too, is suffering from similar afflictions, perhaps of a greater order. A point which is not made in the article but which is quite relevant is that, if the Conservatives had not returned to power in 1952 and reversed some of the socialist policies pursued by the Labourites, Britain's comparison with West Germany would be far more unfavourable than is brought out by the study under reference.—*ED.*]*

CAPITALISM, according to its opponents, exploits the many to pile up wealth and income for the few. Socialism, according to its proponents, redistributes the wealth and income among the masses of the population and brings about "social justice and equality."

Of course, the highest form of generosity is to give willingly. Modern socialism denies this opportunity: stirring the lust of the poor for the property of the rich, and doubting the charitable instincts of the individual, it redistributes forcibly through the tax system. Loss of opportunity takes the zest out of life for those who, in other circumstances, might have built great enterprises and made great gifts. Government meanwhile accumulates more and more dependents, removed from the labour force. The growing tax burdens shift inexorably toward the same masses whom the Socialist State is intended to help. In the end, everyone is poorer than he would have been, if rare and gifted individuals had been stimulated to go ahead and seek out new and better ways to produce and satisfy human wants.

There are sufficient differences in social arrangements in various countries, so that it is possible, out of the post-war experience, to test the principles of real progress. If, as some say, Russia is moving ahead of us in science, it may be that our system of taxation, and liberal social benefits, have some responsibility. Paradoxically, the Soviets give greater financial incentives to rarely gifted individuals than we do.

Professor David McCord Wright, of McGill University, has made a close study of comparative polices and results in West Germany and the United Kingdom since the war. In a pamphlet published in December by the American Enterprise Association, he notes:

"... We have a most interesting test case of the effect upon the condition of the poor of a relatively free market economy as against one heavily paternalistic, controlled and subsidised. . . .

"... Offhand, the deeper concern of labour socialists and to some extent of the present U.K. economy with the condition of the poor would seem to be the fastest way to raise the income level of the lower income groups. But it hasn't worked out that way!"

The "German Miracle"

The economic choice faced by West Germany, after the currency reform and granting of substantial autonomy in 1948, was a basic one. According to Professor Wright:

"Had she followed the prevalent European and U.K. labour pattern, she would have gone in for heavy control, rationing, State-directed investment, sharply progressive taxation, tremendous emphasis on equality.

"Instead, her policies were entirely different. Emphasis was placed upon incentive rather than literal equality, upon a free market rather than planning, upon modernisation rather than routine . . . ."

The decision to adopt the *Marktwirtschaft*—the free-market economy—has paid off handsomely. West Germany, phœnix-like, has risen from the rubble of World War II to economic and financial pre-eminence in Western Europe—a rise that has been aptly called the "German miracle."

This particular "miracle" lends itself to statistical measurement. West German workers' real wages (adjusted for price increases) advanced 99 per cent. between 1948 and 1957. In Britain, real wages went up only 11 per cent. measured from 1946, two years earlier, when its post-war expansion began. Industrial production in Germany in 1948-57 soared 254 per cent., while in the U.K. (1946-57) it went up only 70 per cent. *Per capita* output of goods and services (1949-57), in constant prices, rose 115 per cent. in Germany as against 15 per cent. in the U.K. In the early post-war years, of course, West Germany's level of production was small in relation to Britain's so its percentage increases would naturally be larger. But it is significant that Germany has kept right on progressing at a more rapid rate. Between 1954 and 1957, gross national product, in real terms, rose more than 25 per cent. in Germany—as against only 4 per cent. in the U.K.

Houses, Cars, and Ships

In the field of particular industries, there has been similar dramatic improvement. West Germany in the past seven years, has built more housing than the U.K. built in eleven. Since the population in both countries is the same—about 51,000,000—*per capita* housing output in Germany has also run well ahead. Starting from scratch in 1948, West Germany last year had moved up to third place among the world's shipbuilders. In 1948, some 328,000 autos rolled off assembly lines of British factories, while only 30,000 were produced in West Germany. Last year, German auto output amounted to 950,000 cars—some 100,000 above the U.K.'s.

In the field of world trade, German exporters, combining high quality with attractive prices, have been able to acquire a growing share of world commerce. While the U.K.'s share of world exports slipped from 12 per cent. in 1949 to 10 per cent. in 1956, Germany's share advanced from 2 per cent. to 8 per cent. The success of Germany's export drive enabled it to nearly triple its imports between 1950 and 1957 and still make solid additions to its gold and foreign exchange holdings. Starting from practically nothing in 1948, these reserves at latest count amounted to $5.7 billion—well over double those of the U.K.

The German mark has become one of the world's most respected currencies. An important reason for this has been Germany's application over the post-war period of orthodox financial policies to contain inflation—i.e., restraint on Government spending to produce an over-balanced budget and tight credit policies to limit borrowing and encourage saving. Moreover, German labour leaders, unlike their British counterparts, have exercised restraint in wage demands. Thus, while the cost of living has gone up 44 per cent. in the U.K. since 1950, it has increased only 18 per cent. in Germany.

Lower Tax Rates Speed Expansion

What made this economic "miracle" possible? Professor Wright gives a major share of the credit to a sharp reduction in West German personal income-tax rates.

In 1948, West German tax rates went as high as 95 per cent. However, an elaborate system of special exemptions for saved and invested income largely nullified the impact of these high rates. Beginning in 1950, the rates themselves were gradually revised downward until now the top rate is 55 per cent. This compares with a maximum rate of 92½ per cent. or higher maintained in Great Britain over this period.

Capital investment is the *sine qua non* of economic expansion. The amount of investment, in turn, depends on incentives and savings—both of which are heavily influenced by the tax system. High tax rates not only blunt the desire to work and to take risks for profit, but they siphon off funds that could otherwise be available to launch new ventures. The figures tell the story: investment in West Germany, in constant prices, nearly tripled between 1949 and 1956. In the U.K. in the same period, it increased only about one half.

Dr. Robert G. Wertheimer, of Babson Institute, recently completed a five-year study of the post-war German tax structure. His statement recently before the House Ways and Means Committee concisely spells out what was accomplished by the German tax reforms:

"Not only did the economy grow more rapidly than ever in a climate of stable prices but total public revenues also expanded and secured a balanced budget. Income-tax reductions set free entrepreneurial initiative which created a flexible economy providing full employment (in spite of the influx of ten million destitute persons), steadily rising standards of living and a rapidly growing domestic and foreign investment.

"Taxpayers again could show their incomes and profits without the fear of seeing most of them taxed away. The lowering of the tax rates rapidly increased the ability of all classes to save. Institutionalised saving, for example, increased from 4 per cent. of the disposable income in 1950 to 8 per cent. in 1955. Business saving in the form of retained profits and depreciation allowances rose even more rapidly. These savings made possible the financing of the German reconstruction without inflation. . . .

"The lesser dependence of the Federal Government on personal income taxation as source of tax revenues also solved the plight of the small businessman by permitting him to keep most of his gross profits as seed capital for expansion. The lower income-tax burden stimulated the general willingness and ability of people to take risks and to establish new business or to expand existing ones. Wage earners and the professions also became more productive and were eager to work longer hours, overtime, and on outside projects to expand incomes that would accrue to themselves."

Output and "Labour Attitudes"

The huge sums poured into new factories, machines, equipment, and processes (gross investment of $50 billion in Germany between 1949 and 1956, as against $43 billion in Britain) played a big role in the phenomenal increase in German worker productivity. Output per man-hour in Germany between 1948 and 1957 increased 116 per cent.—as against only 37 per cent. in Britain between 1946 and 1957.

Increases in worker productivity, while heavily influenced by the flow of investment, also depend on other factors—e.g., the rate of modernisation of tools and equipment and the general attitude of labour.

Professor Wright found sharp differences in worker attitudes towards modernisation and strikes in the two countries:

"With a few exceptions, union sabotage of new methods has been at a minimum in West Germany—in startling contrast with the frantic job consciousness and routine-mindedness of labour in the U.K."

Noting that West Germany has suffered but a fraction of the time lost from trade disputes that the British economy has since 1949, he added:

"The sense of crisis felt by the whole of West Germany and the intense desire of all classes to rebuild the country created a public opinion, both inside and outside the unions, that would not have tolerated anything like the degree of slackness . . . put up with in the U.K."

Armament Burdens

One objection often made to the comparison of West Germany and the U.K. is the presence for the U.K. of a great armaments burden. It should be noted, however, that Germany had more reconstruction to do, relatively speaking, than the U.K. Professor Wright's assessment of these burdens is closely tied in with the different labour attitudes in the two countries:

"While the presence of an armament burden would have made the West German economy start from a lower level, a nation whose labour force was so much more co-operative . . . and so much more willing to accept change would have had about an equally rapid *rate* of increase of output.

"Had the unions of the U.K. followed the behaviour pattern of those in Germany, the U.K. would have borne its arms burden and continued to expand relatively easily."

Peter Thorneycroft, who resigned in January as Chancellor of the Exchequer in a dispute over a continued rise in Government spending, lists the defence burden as only one of the reasons for Britain's financial troubles. The *New York Times* of 24th January 1958 carried this account of Mr Thorneycroft's penetrating analysis:

"First we have sought to be a nuclear power, matching missile with missile, anti-missile with anti-missile and with large conventional forces in the Far East, Middle East and Atlantic.

"At the same time, we have sought to maintain a Welfare State at as high a level, sometimes even at a higher level than the United States. We have been trying to do these things against a background of having to repay debts abroad during the next eight years at a total equal to the whole of our existing reserves.

"It was not a mean thing to have attempted these things but no politician should be under any illusions as to what it has meant.

"It has meant that for 12 years we have slithered from one crisis to another—sometimes a balance of payments crisis, sometimes an exchange

CEMENT DISTRIBUTION AND MANGANESE ORE EXPORTS

S.T.C. FAILS TO ACHIEVE ENDS

THE State Trading Corporation of India will be completing full two years of its existence in a few weeks—it was established in May 1956—and it is appropriate to assess the progress made during these years. Such an assessment will reveal that the Corporation has expanded its activities considerably but that such expansion has been at the cost of heavy sacrifice on the part of a section of industry and trade as well as the consuming public at large. That there is no exaggeration whatever in this statement is clearly evident from the observations made by Mr. E. Parker, O.B.E., the erstwhile President of the Bombay Chamber of Commerce and Industry, in the course of his speech at the last annual general meeting of the Chamber. Citing the examples of the Corporation's activities in cement and manganese ore, Mr. Parker showed how, on both these counts, the Corporation had not only failed in achieving the ends which it promulgated but "is, in fact, no longer acting on the principles for which it was claimed to have been formed."

When the S.T.C. took over the distribution of cement about two years ago—with effect from 1st July 1956, to be precise—it will be recalled, the reason adduced was that, as cement had to be imported to meet the current shortage, it was necessary to equalise the selling prices of indigenous and foreign cement by fixing a higher selling price for indigenous cement to subsidise an equivalent price of cement imported at a considerably higher cost. The industry proposed various alternatives to State Trading which, if accepted, would have served the purpose of selling indigenous cement at a price just high enough to subsidise the sale of imported cement at the same equalised price. The Government, however, turned down every one of the alternatives and issued a notification requiring all cement manufacturers to sell their entire production to the S.T.C. with effect from 1st July 1956. The existing sales organisation of producers was, of course, appointed agents of the S.T.C., but this was inevitable, since the S.T.C. had no selling organisation.

Price Goes Up Markedly

Apart from the basic objection to State Trading in cement, the price payable by the consumer has gone up markedly. According to Mr. Parker's calculations, within a year of the entry of the S.T.C. into the business of cement distribution, the price has increased by Rs. 27.50 to Rs. 117.50 per ton (excluding sales tax). The price included prior to 1st March 1958 an excise duty of Rs. 20 per ton. The disclosed profits of the S.T.C. of its first year's operations is Rs. 5.01 crores. At present, cement is not imported, but the selling price has not been reduced. Instead, the excise duty has been stepped up to Rs. 24 per ton, which is "not far short of 50 per cent. of the cost of manufacture." Drawing attention to this aspect, Mr. Parker observed:

> What, therefore, is the *raison d'etre* of the State Trading Corporation as far as cement is concerned from now on. The switch from profits of the Corporation to excise duty and the fact that it has been publicly stated that the profits on cement would be allocated to the cost of building roads would indicate that it is merely another tax-collecting agency. It is not surprising that the costs of project being built or to be built are increasing when one of the basic commodities such as cement is treated in this fashion."

It is thus evident that, in the sphere of cement distribution, the S.T.C. has made excessive profits in return for absolutely no new service it has rendered to the consumer. Another aspect of the S.T.C.'s activities which has come in for much criticism relates to export of manganese ore. Referring to this, Mr. Parker made the following remarks:

> "The recent decision of the Corporation to enlist the co-operation of several hundred private concerns to act as its associates is seemingly an admission of failure on its part in meeting the exacting demands of a ruthlessly competitive world market. This is also evident from the reported transactions entered into with foreign powers from which the Corporation has emerged second best, if not a loser. In 1953, India exported nearly 1.6 million tons of manganese ore, but in 1957, despite the entry of the Corporation into the trade, one of whose objects was to augment and expand the country's ore export trade, the figure dropped by nearly 25 per cent."

In the light of these remarks, a reference may be made to the assessment of the outlook for manganese ore exports as made by the Advisory Committee on Manganese Ores appointed by the Government. The Committee is reported to have drawn a rather gloomy picture. The prospects for the immediate future, it says, are none too bright and demand for low-grade ores in any case is almost non-existent, a situation which is likely to continue for some time to come. "The slackness in demand," to quote the Committee, "is apparent from the accumulation of stocks (approximately 500,000 tons) at the different ports, mostly of low grades, and the bulk of the quota for low-grade ores has remained unsold, and it is not unlikely that some shippers have not been able to utilise their quota for high grades also fully."

The aforesaid assessment would appear to be correct. The total quantity of manganese ore exported in the second half of last year (1957) was 431,952 tons (valued at Rs. 9.80 crores), which compares unfavourably with 522,880 tons (Rs. 9.45 crores) in the previous half year. The decline would have been more marked but for the improvement in export prices of manganese ore; the average value per ton of ore exported was Rs. 227, as against about Rs. 181. Taking the whole of 1957, the exports were, of course, higher than in 1956, being 954,832 tons (Rs. 19.25 crores), as against 700,922 tons (Rs. 10.93 crores), the average export price being as low as Rs. 202 per ton, as against Rs. 156.

Views of Bharat Chamber

The setback in the quantum of manganese ore exports during the second half of 1957 would appear to have persisted in the current calendar year also. The blame for it must lie more with the Government itself than with the trade. As readers are aware, the State Trading Corporation (S.T.C.) handles no less than 40 per cent. of the total manganese ore exports. The entry of the S.T.C. has prompted, as the Bharat Chamber of Commerce, Calcutta, rightly points out in the course of a statement issued to the Press, the foreign buyers unused to buy from State monopolies to look more and more to other sources of supply. The apprehensions among foreign buyers is that the S.T.C. may take over the entire export trade in manganese ore as in respect of iron ore. According to the Chamber, the principal buyers of Indian manganese ore are already looking more and more to other sources of supply—the U.S. to Brazil, France and the U.K. to Ghana and Belgian Congo, and Japan to China.

It is these factors which are standing in the way of an expanding export trade in manganese ore. Also, the failure on the part of some shippers to utilise their quota for high-grade ores has been due not to world situation but to lack of transport facilities and preferential treatment accorded to movement of iron ore exported by the S.T.C. It must be noted here that the performance of the private sector on the manganese ore export front has been quite satisfactory. During 1953-54, for instance, the exports aggregated as much as 1,568,000 tons. Even in the slump years of 1954-55 and 1955-56, exports did not fall below 900,000 tons. When such is the position and considering the harmful effects of the entry of the S.T.C. into the sphere of export trade in manganese ore, the plea for resuming complete freedom of export to the private sector, is, indeed, fully justified. The Bharat Chamber has done well to warn that, if once the traditional customers for India's manganese ore get used to the ores of competing countries, it may not be possible at any future time for India to enter these markets again. In its opinion, the trends in manganese ore exports from India and the reports about the diversion of buyers to other sources of supply should warrant a more concerted action by the experienced mineowners, shippers and the Government than what may be expected to be secured by placing reliance on the S.T.C. and the Advisory Committee like the one presently constituted.

The Bharat Chamber has criticised the reported suggestion of the Advisory Committee that the larger established shippers and mineowners, exporters whose numbers shall not exceed 20, must be given allotments based on their exports during 1955 or 1956, those not falling under this category being advised to group together into legal entities such as a co-operative society or a limited company to which quotas should be allotted. The Chamber states that the two years taken were lean years for exports of manganese ore and it is not clear why these years have been selected. It also states that the Advisory Committee has not taken into consideration the fate of small mineowners. Indeed, it apprehends that, unless specific provision is made for the disposal of ores produced by small mines, the establishments will have to be closed down.

There thus seems to exist a need for a thorough reassessment of the manganese ore export policy. It must be remembered that manganese ore is one of the staple earners of foreign exchange. Assuming that the export target of 1.5 to 2.0 million tons per annum fixed by the Export Promotion Committee were fulfilled, the total foreign exchange earned would be of the order of Rs. 30 to 40 crores every year. The export policy should be so designed as to give full freedom to the private sector which alone is the best agency for selling manganese ore most effectively, especially when there is growing competition from Ghana, Belgian Congo, Brazil, the U.S.S.R. and Chile. No less imperative is the need for reducing the transport cost of Indian manganese ore by beneficiating it as much as possible within the country before exporting. Incidentally, such beneficiation will solve, to a great extent, the problem presented by low-grade ores which are difficult to sell.

SYMPOSIUM ON VEGETABLE OILS

A symposium on vegetable oils and their products will be held at New Delhi sometime in October next under the auspices of the National Institute of Sciences of India. The scope and subject for discussion are expected to be quite broad, so that all those who are interested in the science and technology of vegetable oils may contribute to the success of the symposium. The symposium will cover the following subjects.

Importance of vegetable oils in Indian economy; general survey on the occurrence, production, distribution and consumption of vegetable oils;

application of edible as well as non-edible oils —soap, other detergents and emulsifiers, protective coating (raw materials and products), resins and lubricants, fatty acids and derivatives, by-products —oilcake, glycerin, and miscellaneous;

scope for newer and better utilisation of non-edible oils and their products;

improvement in production methods—milling, solvent extraction, refining, bleaching, hydrogenation, etc.;

physiology and biochemistry—fat in nutrition, absorption, metabolism;

chemistry of fats and oils—physical and chemical properties, deterioration, polymerisation, and hydrolysis, esterification, interesterification;

testing and analysis of oils and oil products; and

equipment and mechanical devices.

The forthcoming symposium would undoubtedly be of real benefit, if it were to give a lead in focussing attention on the immediate problems confronting the vegetable oils (and their products) industry and the general lines along which solutions could be found. There are many vegetable oils in India the exact potentiality of which has not yet been fully explored. Mention, for instance, may be made of finding new uses of tobacco seed oil and mowra oil, utilisation of cotton-seed oil as an edible oil, use of kardi oil in high grade paints, and putting of *neem* oil to a number of economic uses if methods can be found for its deodorisation. Further, the present method of oil milling by the *ghanny* or the expeller leaves much to be desired. Better and more efficient methods of extraction are also needed, so that the quantity of oil left in the cake may be considerably reduced. Again, solvent extraction will be greatly facilitated if some cheap non-petroleum solvent available in India can be worked out.

The Publications Division of the Government of India has brought out a journal of weights and measures, entitled *Metric Measures* (Editor: V. B. Mainkar, price: annual subscription: Rs. 2; single copy: 40 nP). The journal is published every two months. It provides information to the general public on the administrative, commercial, educational, industrial, historical and other aspects of weights and measures, with particular reference to the introduction of metric system in India.

The British Government has set up an Advisory Council on Middle East Trade with Mr. John Vaughan-Morgan, Minister of State, Board of Trade, as Chairman. The Council, which consists of the representatives of industry and commerce, will advise the Government on the steps to be taken to promote trade in the markets of the Middle East.

". . . . . reserves must be created for expansion and modernisation of the plant and machinery and in their utilisation the Management remains accountable to the investor. Money must also be provided for research."

Code of conduct — FORUM OF FREE ENTERPRISE

To ensure a continuous and growing supply of quality Portland cement to its customers, the ACC "ploughs back" every year a substantial portion of its earnings, to rehabilitate, expand and modernise its existing plants; to make its business grow and so to provide the country with the much-needed cement which goes into all types of construction, from the modest needs of the small village to the hungry demands of gigantic power and river valley projects, industrial development, housing schemes, hospitals, schools and the like.

This "ploughing back" of a portion of the ACC's earnings — though reduced last year owing to lower profits, resulting from higher costs and increased taxation — remains a vital factor in the production and supply of quality cement in increasing quantities to millions of satisfied users throughout India who have learned to depend on — ACC CEMENT.

BRAITHWAITE'S EARNINGS HIGHER

BUT TAXATION TELLS ON NET PROFIT

IT is gratifying to find that the results of Braithwaite & Co. [India] Ltd. (Chairman: Mr. J. D. K. Brown, Calcutta) for the year ended 31st December 1957 are encouraging. They show that the Company has fully maintained during that year the upward trend that was seen in its earnings as well as profit in the past few years. The value of contracts booked was substantially higher than in the previous year, having shot up from Rs. 2.22 crores in 1955-56 to as much as Rs. 3.32 crores. The enlarged volume of business reflects in part India's progress with its development projects, in which this Company, as one of the leading engineering firms, is having a substantial part. Both the structural and wagon shops achieved, we are told, record outputs during 1957, with capacity remaining at full load even at the year-end. Although, as is expected in such circumstances, there has been a further improvement in the Company's gross profit, the rise is not proportionate to the growth in the volume of orders transacted. This is obviously due to the higher expenditure involved. While this is the position in regard to gross profit, the heavy load of taxation has further narrowed down the net profit to a level even slightly lower than that in the preceding year. Nevertheless, it is sufficient to maintain the dividend to its shareholders at 20 per cent. per annum, that is, the same as that for the previous year, besides setting aside a modest allocation to the reserves.

The gross profit at Rs. 43.88 lakhs represents a rise of Rs. 8.12 lakhs over Rs. 35.76 lakhs for the previous year. It is also twice as much as that (at Rs. 21.81 lakhs) for 1954. The net profit amounts to only Rs. 14.02 lakhs, as compared with Rs. 14.38 lakhs in 1956 and Rs. 15.46 lakhs in 1955. A large part of the decline, as stated earlier, has been brought about by the heavier provision for taxation which has increased from Rs. 17.82 lakhs in 1956 to Rs. 25.55 lakhs. The latter amount covers the liability in respect of wealth tax, too, the exact incidence of which is not shown separately. It also includes Rs. 4.30 lakhs in order to meet the retrospective effect of the new and increased taxation imposed as part of the 1957-58 budget. The provision for depreciation has also been slightly raised from Rs. 3.56 lakhs to Rs. 4.31 lakhs.

In view of the decline in net profit, the transfers to reserves have had to be cut from as much as Rs. 13.70 lakhs to Rs. 2.87 lakhs. It must, however, be noted that, of the sum transferred last year, no less than Rs. 7.04 lakhs represent the sum brought to the surface from the secret reserves built up in the previous years. This had to be done in accordance with the provisions of the new Companies Act.

The following comparative table gives an idea of the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Contracts invoiced	3,32 29	2,22 54	2,15 06	1,79 64
Other income ..	7 32	5 36	3 91	3 71
Contracts-in-progress at year end	3,96 14	3,56 66	2,58 11	2,28 37
Expenses	3,25 21	2,90 69	2,18 26	1,72 37
Gross profit	43 88	35 76	30 47	21 81
Provision for—				
Depreciation	4 31	3 56	2 01	1 87
Taxation	25 55	17 82	13 00	9 00
Net profit	14 02	14 38	15 46	10 94
Excess provisions written back	..	7 04	1 50	..
Transfer to reserves	2 87	13 70	1 43	4 00
Dividend	11 22 (20%)	11 32* (20%)	12 03† (30-5/14 %)	6 37 (16-1/14 %)
Carry forward	1 82	1 99	5 60	2 10

* On the increased capital of Rs. 56.60 lakhs.
† Includes an additional dividend of six annas per share.

It will be seen from the table above that the value of contracts in progress at the year-end shows a steady rise for each year of working.

Referring to the Company's working during the year and its outlook for the current year, the Directors observe, in their latest report, as follows:

"Both the structural and wagon shops achieved record outputs during 1957 and capacity remains fully booked. Orders on hand are principally for the Company's largest customer, the Government of India, which, in the past, has imported raw steel in large quantities to meet the shortfall from indigenous mills. The present shortage of foreign exchange which has received much publicity has restricted the import programme and the industry, as a whole, is faced with a shortage of raw material which may adversely affect your Company's production. It is fortunate that being engaged on work of national importance carrying high priority, the Company may reasonably expect Government's support to maintain output at as high a level as possible."

During the year under review, Messrs. Jardine Henderson Ltd., who have been appointed the Company's registrars and share transfer agents from 15th January 1958, acquired from the original holding company, Messrs. Braithwaite & Co. Engineers Ltd., London, a major block of shares in this Company and, as such, the Company is no longer a subsidiary of the British Company, which, however, retains a substantial interest. The Directors report that, subject to the approval of the Reserve Bank of India, arrangements have been completed for Braithwaite & Co. Engineers Ltd. to be appointed as technical consultants to the Company for a period of 15 years. This arrangement will ensure for the Company continuity of benefits of technical advice and new developments made by the British Company in the field of modern engineering.

The Company's balance-sheet as at 31st December 1957 discloses a sound financial position. Its reserves and surplus at Rs. 63.24 lakhs are larger than the paid-up capital of Rs. 56.60 lakhs. The current liabilities amount to Rs. 106.64 lakhs. The gross block, as per revaluation on 31st December 1955 and thereafter at cost, stands at Rs. 59.79 lakhs and this has been written down to Rs. 52.77 lakhs. The net block includes capital work in progress of Rs. 1.27 lakhs. The current assets aggregate Rs. 173.71 lakhs and cover the current liabilities and provision for taxation by a large margin.

It may be pertinent to recall here the recent changes in the capital structure of the Company. As at the close of 1955, its paid-up capital was Rs. 39.62 lakhs, in 565,979 ordinary shares of Rs. 7 each. In December, 1956, the Company subdivided each of the 434,021 unissued ordinary shares as also of 565,979 issued ordinary shares of Rs. 7 each into seven ordinary shares of Re. 1 each. It then capitalised a sum of Rs. 16.98 lakhs out of its reserves by the issue of 1,697,937 new ordinary shares of Re. 1 each to the existing shareholders in the ratio of three new shares for every seven issued ordinary shares held. After this, the Company consolidated every ten ordinary shares of Re. 1 each into one ordinary share of Rs. 10 each.

These ten-rupee shares are currently quoted at Rs. 27.06 *ex-div.*, at which rate and on the basis of the latest dividend the yield works out to 7.39 per cent. per annum.

OSMANSHAHI MILLS SUFFER LOSS

The Osmanshahi Mills Ltd. (Chairman: Khan Bahadur C. B. Taraporvala, Hyderabad, Dn.) witnessed unsatisfactory working conditions during the year ended 30th September 1957. For, apart from the general depression in the cloth and yarn markets which has adversely affected the vast majority of mills in India, this mill had the misfortune of having to stop its boiler plant for some time for repairs, etc., and also of unsatisfactory labour relations. Consequently, the Company has sustained a trading loss of Rs. 8.46 lakhs for the year under review, in contrast to a gross profit of Rs. 5.68 lakhs in the previous year. After making allowance for Managing Agents' remuneration, the loss is enhanced to Rs. 8.55 lakhs. No provision for depreciation has been made this year.

The aforesaid loss has been squared up by transferring a sum of Rs. 8.42 lakhs from the general reserve and by adding to it the small amount of Rs. 12.593 brought in from 1955-56 accounts. The dividend for the year under review has been skipped over.

Lest the reader should form the impression that the Company's working in 1955-56 was encouraging, it has to be stated that the Company's performance during that year was equally unsatisfactory. For, after providing Rs. 30,000 for Managing Agents' remuneration and Rs. 6 lakhs for depreciation, there was a net loss of Rs. 62,129. The loss was, however, wiped out by the surplus of Rs. 74,722 brought forward from the preceding year. A sum of Rs. 2.62 lakhs was then drawn from the dividend equalisation fund to pay a modest dividend of 3 per cent. In the year 1954-55 also, the Company had to draw Rs. 2.19 lakhs from its dividend equalisation fund to pay a dividend of 2½ per cent. while, in 1953-54, the dividend had to be passed over. It will thus be seen that the Company has not been faring well for some time now.

The Company's sale proceeds during the year under review declined from Rs. 174.44 lakhs in 1955-56 to Rs. 141.07 lakhs. The cost of cotton consumed during the same period rose from Rs. 91.96 lakhs to Rs. 99 25 lakhs as also other expenses from Rs. 86.28 lakhs to Rs. 92.56 lakhs. The Directors report that, from 1st November to 25th November 1956, the mill was compelled to stop the Babcock and Wilcox boiler for cleaning and inspection purposes with consequent shortage of power. Again, in July 1957, the management was obliged to declare a lockout of the mill from the 15th to the 29th due to slow down tactics and stay-in-strike of the workers.

The Company's balance-sheet as at 30th September 1957 shows that its reserves and surplus aggregate Rs. 39.30 lakhs, as against a paid-up capital of Rs. 87.23 lakhs, all of which are in ordinary shares of Rs. 100 each. The gross block of Rs. 173.83 lakhs has been written down by depreciation provisions aggregating Rs. 67.87 lakhs, leaving a net block of Rs. 105.97 lakhs. The footnotes to the balance-sheet state that the estimated depreciation up to 30th September 1957 written off the fixed assets is inadequate to the extent of about Rs. 60.64 lakhs, excluding initial depreciation amounting to about Rs. 19.40 lakhs. The current assets aggregate Rs. 116.90 lakhs, against which there are current liabilities amounting to Rs. 96.33 lakhs. Of the latter, as much as Rs. 77.42 lakhs represent secured loans from banks.

AZAM JAHI MILLS' PROFIT DOWN

The unsatisfactory trading conditions in the cloth and yarn markets have adversely affected the trading results of the Azam Jahi Mills Ltd. (Secretaries, Treasurers and Agents: Industries (I.F.) Department, Government of Andhra Pradesh, Hyderabad-Dn.) for the year ended 30th September 1957. The gross profit at Rs. 8.33 lakhs is just half of that (at Rs. 16.10 lakhs) for the previous year. It is even slightly lower than that (Rs. 9.12 lakhs) for 1954-55. In view of the fall in the Company's profit, the Directors have been constrained to lower the dividend. Thus, they have proposed a dividend of only 3½ per cent., as against 5 per cent. in the previous year, to which level it had been stepped up from the same rate, namely, 3½ per cent. for 1954-55.

A sum of Rs. 5.82 lakhs has been provided for depreciation, as against Rs. 11.93 lakhs in the previous year. In fact, the Directors say that the year's provision on this account has fallen short of what must be set apart by about Rs. 5.90 lakhs. If this factor is taken into account, it will be seen that the profit for the year under review would be still lower. A sum of Rs. 47,000 has been provided for wealth tax, in addition to transferring Rs. 15,000 to reserve for investments.

Sale proceeds during the year fell from Rs. 209.07 lakhs to Rs. 166.98 lakhs. Stocks of cloth, yarn and waste shot up from Rs. 16.87 lakhs to Rs. 67.27 lakhs. Cost of cotton consumed went up from Rs. 107.85 lakhs to Rs. 118.02 lakhs and other expenses from Rs. 91.26 lakhs to Rs. 95.85 lakhs. The Directors say that the year under review "witnessed on one side poor demand at rapidly lowering prices and mounting stocks, and, on the other, upward cotton prices due to failure of cotton crop in the season."

The paid-up capital of the Company as at 30th September 1957 stands unchanged at Rs. 72 lakhs, all in ordinary shares of Rs. 100 each. As against this, its reserves and surplus are very small and aggregate only Rs. 17.89 lakhs. The gross block of Rs. 187.65 lakhs has been written down by Rs. 68.46 lakhs to a book value of Rs. 119.19 lakhs. The current assets aggregate Rs. 141.68 lakhs and are smaller than the current liabilities amounting to Rs. 170.97 lakhs.

The Rs. 100 fully paid-up shares of the Company are currently quoted at Rs. 58.50 *cum-div.* On an *ex-div.* basis, the yield amounts to 6.36 per cent. per annum.

NO CALL FOR DEPOSITS BY COMPANIES THIS YEAR

The Government of India has decided that for the financial year 1958-59, no deposits may be called for from companies either in respect of accumulated profits and reserves or of the current profits. This announcement was made in the Lok Sabha on 18th March, 1958 by the Finance Minister, Mr. Jawaharlal Nehru, in the course of his reply to the general debate on the budget.

Explaining the decision, Mr. Nehru said, the general object of the deposit scheme was to ensure that surplus money by corporate enterprise arising mainly from out of the liberal depreciation allowances and development rebates were utilised for purposes conducive to the industrial development of the country consistently with the objective of the Plan and were not frittered away in other ways. The experience of Government in the administration of this scheme during the last one year had been that, in actual practice, the bulk of the financial resources of companies were, in fact, being utilised in approved directions. Further in the Finance Bill 1958, which was at present before the House, the Finance Minister said a provision had been introduced for the regulation of development rebate allowance for its being utilised for the legitimate maintenance, development and expansion of the business and to prevent it from being frittered away. As development rebate constituted the major component of the tax free allowances granted to industries, the Finance Minister said this new provision would substantially serve the objective underlying the deposit scheme.

It will be recalled that, under an amendment to the Income-tax Act introduced in December 1956, a Company which claims depreciation allowance and development rebate in its income-tax assessment is required to deposit with the Union Government a certain portion of its accumulated profits and reserves and of its current available profits in accordance with the percentages to be notified by Government for each year.

The scheme came into effect from the financial year 1957-58. So far as the accumulated profits and reserves were concerned, no deposit was called for. In regard to the current profits, however, a deposit of 50 per cent. of the amount of available surplus was required to be made in that year.

During the current year, a sum of Rs. 3.638 crores was deposited by companies. This amount is exclusive of deposits deemed to have been made and refund granted to companies.

KIL KOTAGIRI'S PROFIT DECLINES

DIVIDEND ALSO LOWER

A SIZABLE diminution in production of coffee, accompanied by a sharp rise in the cost of production, has brought about a decline in the earnings of the Kil Kotagiri Tea and Coffee Estates Company, Ltd. (Managing Agents: Messrs. Peirce Leslie & Co., Ltd., Kozhikode, Kerala), for the year ended 31st October 1957. The output of coffee, which had recorded a sharp rise to 4,469 cwts. in 1955-56 from only 38 cwts. in 1954-55, declined to 1,555 cwts. in the year under review. Indeed, had it not been for a substantial rise in the tea crop, the financial results would have proved far worse. While the proceeds from sale of tea improved, those from coffee suffered a decline. The net result is a reduction in earnings and, therefore, a lower dividend distribution to shareholders.

The gross profit at Rs. 7.88 lakhs compares unfavourably with Rs. 9.62 lakhs for the previous year. The net profit, too, has fallen from Rs. 5.23 lakhs to Rs. 3.47 lakhs. The amount available for distribution has, however, been strengthened by the addition of Rs. 1 lakh, being the estimated surplus provision for taxation made in previous years. The dividend, as stated earlier, has been lowered to 15 per cent. from 20 per cent. for the previous two years. The transfer to general reserve has also been pruned to Rs. 3 lakhs from Rs. 3.25 lakhs in 1955-56.

The main features of the Company's results are given in the comparative table below:

	For the year ended 31st October			
	1957	1956	1955	1954
Sale proceeds of—	Rs.	Rs.	Rs.	Rs.
Tea	18,87 077	15,85,066	8,09,975	8,90,047
Coffee	5 16 254	7,22,534	25,342	1,42 062
Stocks of tea	2 33,363	1,45 748	1,42,780	1,14,378
Expenses	16,33,606	15,45,014	5 65,434	5,23,073
Gross profit	7,87,682	9,61,792	4,30,506	6,38 929
Managing Agents' remuneration	55,128	41,136	23 203	33,191
Depreciation	53,208	49,490	28,293	46,971
Taxation	3,32,000	3,48,000	1,47,000	2,14,000
Net profit	3,47,346	5,23,160	2,32,010	3,44,767
Excess provisions written back	1,00,000	..	..	..
To reserves	3,00,000	3,25,000	1,00,000	1,25,000
Dividends—				
6 per cent. preference ..	15,000	15,000	15,000	15,000
Ordinary	1,28,780 (15%)	1,71,708 (20%)	1,71,708 (20%)*	2,25,000 (30%)†
Carry forward	30,738	27,172	15,720	70,418
Tea crop (in lbs.)	760,044	342,560	374,800	302,400
Cost per lb. (in cents)	147.00 Rs.	144.30 Cents	129.29 Cents	114.64 Cents
Average price realised per lb. ..	2.42	262.69	252.08	261.19
Coffee crop (in cwts.)	1,555	4,469	38	701
Cost per cwt. (in Rs.)	228.50	122.92	1,840.07	137.77
Value per cwt. (in Rs.)	190.51	192.31	176.18	192.09

* On the further increased capital as a result of the issue of shares to the shareholders of Nilairi Neerugundi Estate, following the amalgamation of the two companies.
† On the increased capital of Rs. 7.50 lakhs raised by the capitalisation of Rs. 2.50 lakhs.

The crop of brown tea harvested from the Kil Kotagiri Estates during the year at 760,044 lbs. was up by 417,484 lbs., as compared with 342,560 lbs. in the previous year. In fact, the year's crop is a new record, having substantially exceeded the previous best of 374,800 lbs. secured in 1954-55. Despite the higher output, the cost of production was higher at 147 cents, as against 144.30 cents in 1955-56. The average price realised was Rs. 2.42, as compared with 262.69 cents in 1955-56. Thus, the profit margin was reduced by two influences, namely, a higher production cost and a lower price realisation.

From the Nilgiri Neerugundi Estate, 222,669 lbs. of green leaf tea were sold at an average price of 37 cents. per lb. This fetched a sum of Rs. 84,805 to the sale proceeds during 1956-57.

The Company's estate consists of 2,153.06 acres. Of these, 739.37 acres are under tea (mature 705.97 acres and immature 33.40 acres) and 761.44 acres under coffee (mature 732.62 acres and immature 28.82 acres). The area in reserve is 510.20 acres. The balance consists of fuel clearings (53.77 acres), nurseries (2.30 acres) and buildings, roads, etc. (85.98 acres).

The current season's (1957-58) tea crop is estimated at 800,000 lbs. of made tea to be harvested at an f.o.b cost of 136.19 cents per lb. and the coffee crop at 90 tons at a cost of Rs. 216.28 per cwt. The Company's estates are situated in the Nilgiris in Madras State.

The paid-up capital of the Company as at 31st October 1957 stands at Rs. 11.08 lakhs of which six per cent. cumulative preference shares account for Rs. 2.50 lakhs The balance represents ordinary capital in shares of Rs. 2 each. The reserves and surplus aggregate Rs. 14.04 lakhs. The gross block of the value of Rs. 28.33 lakhs has been written down to Rs 24.65 lakhs.

Points From The Chair

Transport of Coal

"THE minimum guaranteed supply of wagons for the movement of coal by the South Eastern Railway in 1957 was 950 wagons per day. The coal industry maintained that the figure should have been 1,050 wagons but even the lower target set was not achieved. Further increases in wagon offerings are required in 1958 and in the years to follow. An increase in coal production in the collieries served by the South Eastern Railway is now vitally required. With the present strain on its resources, it appears to be impossible for this railway to move the number of wagons required. I would, therefore, emphasise the necessity for a regrouping of certain sections of the railways to relieve this strain. The Eastern Railway appear to have the capacity to operate adjoining sections of the South Eastern Railway (some of which they already operated in the past) and I would humbly suggest that they should now take over these sections with the least possible delay. Another feature regarding transport which gives cause for great concern is the discrimination which is shown over the allotment of wagons between the public and private sectors. The industry has drawn Government's attention to this on many occasions during the year but controls are still being used to the advantage of one sector. While it may be expected that Government will wish to purchase its coal requirements from the N.C.D.C. as far as possible, it does not appear to be in keeping with equity that controls should so be used that in effect priority which is given to one sector of the industry is not shown to the other. The replies from the Secretariat on this vexed question of discrimination cannot be considered as satisfactory and there would appear to be a need for an impartial committee to enquire into this matter. Facts must be faced—why are heavy stocks held by one sector and not by the other?—should greater priority be given to the movement of coal to burn bricks for Government staff quarters in preference to industrial housing or a housing estate?"

D. HOGG,
Indian Mining Association

Trend of Prices

"Price stability is an important factor in attracting investment in Government and industrial securities and small savings schemes. The lack of such stability has inhibited productive investment in the country. During the first two years of the Plan ending in March 1958, small savings schemes yielded only Rs. 120 crores, as against the expectation of Rs. 200 crores, and Government loans yielded Rs. 213 crores, as against the expectation of Rs. 280 crores. Industrialists are experiencing considerable difficulty in issuing shares and debentures, especially for new projects. The threat of inflation and consequent depreciation in the real value of investments deters people from investing their savings in securities and small savings schemes. Heavy taxation makes investment in equity shares unattractive. The flight of savings away from such productive investment is indicated in the fall in the index of the prices of variable yield securities from 125.1 in June 1956 to 97.2 in February 1958. The rise in gold prices from Rs. 104 per tola in June 1956 to over Rs. 113 per tola in recent weeks is indicative of the lack of public confidence in the stability of the rupee. Official quarters are said to have become concerned about the inability of individual and corporate savings to keep pace with the economy. It must be realised that the extreme egalitarian bias in our fiscal system reduces the saving capacity of individuals in the higher income brackets. Individuals in the lower income brackets who receive a lift from planning policies tend to use their additional income for consumption purposes in order to satisfy their pent up urge to raise their sub-marginal living standards. Therefore, the shift in income from the higher to lower income brackets does not lead to an increase in the potential of individual savings."

TULSIDAS KILACHAND,
Bank of Baroda Ltd.

Additions during the year were of the order of Rs. 3.07 lakhs. Of the additions, the sum of Rs. 90,627 spent on plant and machinery represents the cost of machinery purchased during the year to deal with larger crops, following the amalgamation with the Nilgiris Neerugundi Estates. The current liabilities amount to Rs. 7.39 lakhs, as against which the current assets stand at Rs. 7.87 lakhs.

The Rs. 2 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 5.56 *cum-div.* On an *ex-div.* basis, the shares provide a yield of 5.7 per cent. per annum.

BURMA MINES LIMITED

The accounts of the Burma Mines Ltd. for the year ended 31st December 1957 show a lower profit of £129,459, as compared with £240,725 for the previous year.

The Board has recommended that a dividend of 1⅓*d.* per share, free of income-tax, (equal to 3.0434*d.* per share subject to income-tax at 8*s.* 6*d.* in the £), be declared at the annual general meeting of the Company to be held on 7th May 1958, payable on 14th May 1958 to shareholders registered as at close of business on 28th March 1958. The net U.K. rate applicable to the dividend is provisionally calculated at 2*d.* in the £. After making provision for estimated taxation and the recommended dividend, £25,967 is carried to the balance-sheet, increasing the revenue reserves to £137,475.

COMPANY MEETINGS AND DIVIDENDS

T. STANES & Co., LTD. Annual General Meeting, Coimbatore, 29th March 1958. Dividend: Rs. 2.00 per share or 20 per cent. (includes interim dividend of Re. 0.80 per share). Transfer books remain closed from 15th to 29th March 1958, both days inclusive.

BRAITHWAITE & Co. (INDIA) LTD. Annual General Meeting, Calcutta, 29th March 1958. Dividend: Rs. 2.00 per share. Transfer books remain closed from 17th to 29th March 1958, both days inclusive.

SITALPORE SUGAR WORKS LTD. Annual General Meeting, Calcutta, 31st March 1958. Dividend: *Nil.* Transfer books remain closed from 17th to 31st March 1958, both days inclusive.

MERCARA RUBBERS LTD. Annual General Meeting, Tamaracherry, Pudupadi P.O., Kerala State, 31st March 1958. Dividend: Re. 0.75 per share or 15 per cent. Transfer books remain closed from 23rd to 31st March 1958, both days inclusive.

RAMPOORIA COTTON MILLS LTD. Annual General Meeting, Calcutta, 31st March 1958. Transfer books remain closed from 17th to 31st March 1958, both days inclusive.

TIRRIHANNAH Co., LTD. Annual General Meeting, Calcutta, 31st March 1958. Dividend: Rs. 2.50 per share (being interim dividend). Transfer books remain closed from 17th to 31st March 1958, both days inclusive.

CAREW & Co., LTD. Annual General Meeting, Calcutta, 31st March 1958. Dividend: *Nil.* Transfer books remain closed from 21st to 31st March 1958, both days inclusive.

SIJUA (JHERRIAH) ELECTRIC SUPPLY Co., LTD. Annual General Meeting, Calcutta, 31st March 1958. Dividend: Re. 0.94 (7½ per cent.) per share. Transfer books remain closed from 20th to 31st March 1958, both days inclusive.

HINDUSTAN LEVER LTD. Annual General Meeting, Bombay, 7th April 1958. Dividend: Re. 1.40 per share, payable on 8th April 1958. Transfer books will remain closed from 31st March to 7th April 1958, both days inclusive.

INDUSTRIAL INVESTMENT TRUST LTD. Annual General Meeting, Bombay, 8th April 1958. Dividend: Rs. 5.50 per share. Transfer books remain closed from 24th March to 8th April 1958, both days inclusive.

KOHINOOR MILLS COMPANY, LTD. Annual General Meeting, Bombay, 10th April 1958. Dividend: Rs. 12.00 per share (final), payable on and after 11th April 1958. Transfer books remain closed from 22nd March to 10th April 1958, both days inclusive.

RYAM SUGAR Co., LTD. Annual General Meeting, Calcutta, 10th April 1958. Dividend: Re. 1.50 per share or 15 per cent., free of income-tax. Transfer books remain closed from 29th March to 10th April 1958, both days inclusive.

WALCHANDNAGAR INDUSTRIES LTD. Annual General Meeting, Bombay, 11th April 1958. Dividend: Rs. 21.00 per share, without deduction of income-tax, payable on and from 30th April 1958. Transfer books remain closed from 22nd March to 14th April 1958, both days inclusive.

CHAMPURAN SUGAR Co., LTD. Annual General Meeting, Kanpur, U.P., 15th April 1958. Dividend: *Nil.*

BOMBAY DYEING AND MANUFACTURING Co., LTD. Annual General Meeting, Bombay, 17th April 1958. Dividend: Re. 1.75 per share (final), payable on or after 28th April 1958. Transfer books remain closed from 25th March to 17th April 1958, both days inclusive.

JAY SHREE TEA GARDENS LTD. Annual General Meeting, Calcutta, 23rd April 1958. Dividend: Re. 1.00 per share. Transfer books remain closed from 25th March to 23rd April 1958, both days inclusive.

MYSORE CHEMICALS AND FERTILISERS LTD. Annual General Meeting, Mysore, 25th April 1958. Dividend: Re. 0.50 per share. Transfer books will remain closed from 10th to 25th April 1958, both days inclusive.

INDIAN ALUMINIUM COMPANY, LTD. Annual General Meeting, Calcutta, 28th April 1958. Transfer books will remain closed from 5th to 28th April 1958, both days inclusive.

BRITANNIA ENGINEERING COMPANY, LTD. Dividend of Re. 0.60 per share or 6 per cent. for the year ended 31st December 1956.

KATRAS JHERRIAH COAL COMPANY, LTD. Interim dividend of Rs. 3.00 per share, for the year ended 31st January 1958.

UNITED BREWERIES LTD. Interim dividend of Rs. 7.50 per share or 10 per cent. for the year ending 31st March 1958. Transfer books remain closed from 24th to 31st March 1958, both days inclusive.

EAST INDIA DISTILLERIES AND SUGAR FACTORIES LTD. Second interim dividend of 10 per cent., i.e., 2s. per share for the year ended 30th September 1957 (making a total 15 per cent. or 3s. per share). The Directors do not recommend payment of any further dividend on ordinary shares, for the year. Transfer books remain closed from 19th to 29th March 1958, both days inclusive.

METTUR INDUSTRIES LTD. Special dividend of 50 per cent. or Rs. 50 00 per share, free of tax, out of the accumulated profits of the Company, payable on 11th April 1958. Transfer books remain closed from 28th March to 11th April 1958, both days inclusive.

INDUSTRIAL CREDIT AND INVESTMENT CORPORATION OF INDIA LTD. Dividend: Rs. 4.00 per share. Annual General Meeting, Bombay, 7th April 1958. Transfer books remain closed from 15th March to 7th April 1958, both days inclusive.

BRITANNIA ENGINEERING'S PROFIT LOWER

STANDARD BATTERIES MAKES PROGRESS

Britannia Engineering Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

Trading.—The results of the Works Department show a profit of Rs. 13,05,959 compared with Rs. 17,72,755 for the preceding twelve months. The agency department shows a profit of Rs. 2,587 against Rs. 13,294 for 1955.

After charging interest, debenture interest, commissions, depreciation and taking into account the carry forward from 1955, there remains at credit of profit and loss account a balance of Rs. 6,63,199 (Rs. 9,45,762) from which there has been transferred to machinery reserve Rs. 3,00,000 (Rs. 4,00,000) and to provision for wealth tax Rs. 38,350 (*nil*) leaving a balance of Rs. 3,24,849 (Rs. 5,45,762). The directors recommend payment of dividend on 4,00,000 (1,00,000) ordinary shares, at 6 (15) per cent. per annum for the year, which absorbs Rs. 2,40,000 (Rs. 1,50,000) leaving Rs. 84,849 (Rs. 1,28,179 after transferring Rs. 16,73,675 to depreciation reserve, Rs. 1,00,000 to reserve for doubtful debts and Rs. 213 being forfeited dividends paid) to be carried forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	40,00,000	Block ...	44,18,171
Debentures	5,00,000	Stores-in-trade	5,21,872
Reserves ...	39,42,365	Stores and loose tools	45,15,603
Provision for taxation ...	7,33,919	Work-in-progress ...	38,12,777
Liabilities ...	1,26,70,127	Debts, deposits and advances ...	82,15,500
Profit and loss account ...	84,849	Investments	2,300
		Cash ...	1,91,263
		Miscellaneous expenditure and losses	2,53,774
Rs.	2,19,31,260	Rs.	2,19,31,260

Standard Batteries Ltd.

The directors of the above Company (Managing Agents: The Industrial Enterprises Private Ltd., Bombay) submitted the audited accounts of the Company for the year ending 30th June 1957.

The profits after providing for all expenses and depreciation amounted to Rs. 6,87,817 (Rs. 5,14,322) after adding amount brought forward from last year's accounts of Rs. 1,807 (Rs. 1,485), there is a total of Rs. 6,89,624 (Rs. 5,15,807). The directors recommend this amount to be utilised as under:—

To payment of dividend on 20,000 ordinary shares of Rs. 100 each at Rs. 8 (Rs. 8) per share, tax-free Rs. 1,60,000 (Rs. 1,60,000), to payment of dividend on 5,000 new ordinary shares of Rs. 100 each at Rs. 8 (*nil*) per share, tax-free for the period 1st September 1956 to 30th June 1957 Rs. 33,334 (*nil*), to provision for taxation Rs. 2,65,000 (Rs. 1,17,000), to payment of bonus to staff and operatives equivalent to one-fourth of their basic earnings for the year ended 30th June 1957 exclusive of dearness allowance and other allowances Rs. 135,000 (Rs. 98,500), to provision for re-payment of loan instalments on two loans availed from the Industrial Finance Corporation of India Rs. 45,000 (Rs. 75,000) and to gratuities reserve Rs. 50,000 (Rs. 63,500) leaving an amount to be carried forward of Rs. 1,290 (Rs. 1,807).

During the financial year under report, orders were placed for latest type of plant and machinery and equipment for re-placement of some of the existing ten year old machinery and balancing units for rationalising and improving production.

The plant for the manufacture of microporous rubber separators under our trade name "MITEX" was put into commission. The laboratory and testing department was thoroughly reorganised and latest testing equipments have been installed for testing, control and development.

During the year under report, the Company took up the manufacture of STANDARD "Spg" stationary batteries for telephones, telegraphs and carrier systems, power houses and receiving stations, switchgear control, etc., and Standard "Tpg" traction batteries for buses, flat trucks, fortlift trucks, electric cars and for starting of diesel motors, etc., under technical advice from Messrs. A. B. Tudor of Sweden. The prospects for marketing these types of special batteries are very bright and the Company hopes to secure bulk business for these types.

The Company has also introduced into the market for the first time in this country "Instant Power" dry-charged and reduced charge batteries for automobiles. These batteries have been received well by the trade and are in good demand.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,00,000	Block ...	27,46,580
Reserves ...	10,02,788	Stock-in-trade	20,99,786
Provision for taxation ...	6,71,958	Work-in-progress ...	3,66,653
Liabilities ...	30,35,116	Stores and spare parts	1,30,704
Profit and loss account ...	1,290	Other assets	364

Sitalpore Sugar Works, Ltd.

The directors of the above Company (Managing Directors: Mr. R. N. Datta and Mr. D. P. Ghosh, Calcutta) submit the audited accounts of the Company for the year ended 30th June 1957.

The result for the period shows a gross profit of Rs. 2,57,089 from which has to be deducted depreciation amounting to Rs. 83,854 and bonus Rs. 64,306 leaving a balance to be set off against the debit balance in the profit and loss account of Rs. 1,08,929. The directors report that the Company has made a net profit of Rs. 1,08,929 after providing for depreciation, bonus and arrear contribution to employees provident fund under a mutual agreement between labour, management and the Government. This profit will reduce the previous debit balance in the profit and loss account to Rs. 3,16,557.

The Company had a good supply of cane and crushed 24,33,200 maunds and produced 2,34,688 maunds of sugar with a recovery of 9.65 per cent. The quality of cane was poor and was mostly affected by pests and diseases prevalent in the zone. The working, however, of the Factory was satisfactory and there had been a marked improvement in the quality of sugar produced. As a result the Company was able to export 3,000 tons of sugar.

Since the daily crushing capacity of the Factory is one of the lowest in the State of Bihar, the directors have undertaken a five-year plan for thorough rehabilitation and extension of crushing capacity of the Factory. With this end in view a loan of Rs. 5 lakhs has been obtained from the Bihar State Financial Corporation.

Cane price during the year remained the same as that of last year but the sugar excise duty was increased by 100 per cent. to Rs. 8-4-4 per maund of sugar from 16th May 1957. Sales tax was abolished from 14th December 1957 and was replaced by an additional excise duty at Rs. 2-7-0 per maund of sugar which is much higher than the prevalent sales tax applicable in the State of Bihar. As a result of these taxes sugar price has gone up but the present level of price does not cover the above increase in taxes.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Kolhapur Sugar Mills Ltd.

The directors of the above Company (Managing Agents: The United Agencies Private Ltd., Kolhapur) submitted the audited accounts of the Company for the year ended 30th June 1957.

The accounts show a net profit of Rs. 9,11,565 (Rs. 11,17,385) after providing for depreciation of Rs. 5,50,137 (Rs. 3,85,342) managing agency commission Rs. 2,85,147 (Rs. 2,74,154) and Rs. 16,00,000 (Rs. 13,50,000) as provision for taxation including that for wealth tax. To this is added the balance brought forward from last year of Rs. 24,648 (Rs. 33,830) making a total of Rs. 9,36,213 (Rs. 11,51,215). The directors have transferred to reserve fund Rs. 2,50,000 (Rs. 3,75,000) leaving a balance of Rs. 6,86,213 (Rs. 7,76,215). From this amount the directors recommend payment of dividends on ordinary shares at Rs. 18 (Rs. 18) per share (free of tax) on shares of Rs. 100 each Rs. 5,08,410 (Rs. 5,08,410) and on deferred shares of Rs. 100 each at Rs. 599 (Rs. 589-2-0) per share free of tax Rs. 1,45,557 (Rs. 1,43,157) leaving a balance to be carried forward to the next year of Rs. 32,246 (Rs. 24,648 after providing Rs. 1,00,000 for reserve for charities, etc.).

During the period under report the total cane crushed was 1,13,141 (1,19,455) tons and 1,41,372 (1,50,780) bags of sugar were produced with a recovery of 12.61 (12.77) per cent.

The directors state that the Company has been able to obtain the necessary import licence for the machinery required for the substantial extension of the factory. Due to the difficult situation in respect of foreign exchange the Company had to accept the terms of deferred payment for the machinery as directed by the Central Government as a result of which there has been an increase of Rs. 25,00,000 approximately in the machinery prices. The directors also inform that after installation of the new machinery the daily crushing capacity of the factory will be increased to 1,700 tons.

Accounts in brief were as under:—

Mercara Rubbers, Ltd.

The directors of the above Company (Managing Agents: The Associated Planters Private Ltd., Mysore) present the audited accounts of the Company for the year ended 30th June 1957.

The result of the Company's working for the period under review shows a profit of Rs. 64,748 (Rs. 1,18,654). Depreciation written off on buildings, machinery, etc., of Rs. 4,194 (Rs. 4,284) and Company's contribution to provident fund of Rs. 2,316 (Rs. 1,828) absorbed Rs. 6,510 (Rs. 6,112) leaving a net profit of Rs. 58,238 (Rs. 1,12,542). Adding to this the amount brought forward from last year of Rs. 21,967 (Rs. 20,550), there is a total of Rs. 80,205 (Rs. 1,33,092). Provision for agricultural income-tax and Central income-tax absorbs Rs. 12,800 (Rs. 22,000). Out of the balance of Rs. 67,405 (Rs. 1,10,092) the directors recommend payment of a dividend of 15 (22½) per cent. free of tax on ordinary shares absorbing Rs. 48,750 (Rs. 73,125) and 6 per cent. dividend on preference shares free of tax Rs. 15,000 (Rs. 15,000) leaving a balance of Rs. 3,655 to be carried forward to next year.

Working.—Mainly due to serious labour strikes and general go-slow policy adopted by the labourers in the estates of the Company, the crop for the year is the lowest on record. As expressed by the Chairman of the Rubber Board at the meeting of the Rubber Board held on 14th February 1958 the general average of crop also has come down due to climatic condition. The directors consider that taking into account the difficulties the Company had to face during the year as stated above, the working results of the Company for the year ended 30th June 1957, are satisfactory.

Cost.—Estate delivery per lb.

	Cents
1956	68.80
1957	79.51
Estimated cost for 1958	85.16

Rubber crop realised in 1957 was 1,94,754 (2,32,178) lbs. The average price realised for 1957 rubber is 155.57 (149.45) cents. The estimate for 1957-58 is 2,50,000 lbs.

As per the Central Government notification, the employers have to contribute 6¼ per cent. of the average daily earnings of the labourers to the Central Government provident fund scheme together with the administrative charges.

During the year under review, the labourers were adopting go-slow-tactics in the estates of the Company. The serious unrest in the estates led to two serious strikes in the estates. The climatic condition also was not conducive to the high yield of rubber. Due to these factors, the crop of the estate for the year under review is the lowest on record.

The cost of production will be going up due to increase in labour wages. The other amenities to labourers, which the estates have implemented according to the provisions of the Plantation Labour Act, etc., have also increased the cost of production.

The prospects of the 1957-58 season looks better as the Company has realised 1,43,405 lbs. of rubber upto 31st January 1958 as against 1,09,217 lbs. realised for the same period last year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Palamalai Ranganathar Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. S. K. Rangaswamy Naidu & Co., Periyanaickenpalayam) submitted the audited accounts of the Company for the year ended 31st March 1957.

The year's working after deducting all expenses and interest and providing Rs. 65,704 (Rs. 10,223) for depreciation, has resulted in a net profit of Rs. 82,512 (Rs. 1,65,628). The directors have transferred the sum of Rs. 45,153 (*nil*) from general reserve, Rs. 35,000 (*nil*) from machinery replacement reserve and Rs. 6,008 (*nil*) from provision for taxes, to profit and loss account. The credit to profit and loss account after these transfers will be Rs. 1,68,673 (Rs. 1,65,628). Out of this, the directors have paid Rs. 591 (Rs. 3,350) by way of donations, and written off Rs. 1,46,000 as depreciation to make up short provision of depreciation on fixed assets in previous years, leaving a balance of Rs. 22,082 (Rs. 1,62,278) to the credit of profit and loss account. The directors recommend that this amount may be appropriated as follows:—

To pay a tax-free dividend of 6 per cent. for one year for the amounts paid up on shares upto 31st March, 196 and a tax-free dividend of 6 per cent. per annum for the amounts paid between 1st April 1956 to 31st March, 1957 from the dates of payments of the respective amounts till 31st March, 1957, to those persons whose names are registered as shareholders of the Company on 21st February, 1958 absorbing Rs. 20,743 (Rs. 19,492) and to carry forward to next year Rs. 1,339 (Rs. 1,42,786 which was adjusted against the debit balance of Rs. 3,92,483 as at 31st March, 1955 together with a transfer from general reserve account of Rs. 2,49,697).

The results of the year would have been better if the condition in the yarn market, especially at the close of the year, were not unsteady. During

ie year of account, the directors have installed additional 720 spindles and the installed capacity the mills at the end of the year was 10,736 pindles.

Accounts in brief were as under:—

utwah-Islampur Light Railway Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) ubmit the audited accounts of the Company for ne half-year ended 30th September 1956.

Gross earnings for the half-year were s. 3,01,302 which is Rs. 41,412 more than the arnings of the corresponding period ended 30th eptember 1955. There is an increase of Rs. 51,052 nder coaching and are decreases of Rs. 8,903 and s. 737 under goods and miscellaneous.

The working expenses for the half-year were s. 2,59,813 which is Rs. 33,093 less than the figure or the corresponding period ended 30th September 955. The net earnings for this half-year were s. 18,947.

Comparative Statistics—

Half-year ending	Gross earnings	Working expenses	Dividend per share
	Rs.	Rs.	Rs. a. p.
31-3-1955	2,45,251	3,47,862	1 0 0
30-9-1955	2,59,890	2,92,906	1 0 0
31-3-1956	2,74,542	4,13,277	1 0 0
30-9-1956	3,01,302	2,59,813	1 0 0

The net profit for the half-year is Rs. 8,990 to which is added the balance brought forward of Rs. 4,802 making a total of Rs. 13,792. The directors recommend that this amount be disposed of as follows:—

By payment of a dividend for the half-year at the rate of Re. 1 per share without deduction of tax absorbing Rs. 11,497 and leaving a balance to be carried forward of Rs. 2,295.

Accounts in brief are as under:—

Rs.	24,97,277	Rs.	24,97,277

Bhulanbararee Coal Co., Ltd.

The directors of the above Company (Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

The accounts have been drawn up in conformity with the requirements of Schedule VI of the Companies Act, 1956. The profit and loss account after providing Rs. 45,601 (Rs. 66,510) for depreciation, Rs. 83,000 (*nil*) for payments under Appellate Tribunal Award and including the debit balance of Rs. 1,87,446 brought forward from the previous year shows a debit balance of Rs. 4,92,536.

Raisings and despatches.—1,35,587 tons of coal were raised and 1,47,078 tons were despatched during the year. The figures for the previous year were 1,67,833 tons and 1,58,412 tons, respectively.

The colliery is capable of higher output, but on account of the sand stowing difficulties and closure of some of the working faces, it has not been possible to develop the potentialities of the colliery to the extent desirable. However, new development schemes have been undertaken now and signs of improvements are already noted and hence a bright future for this colliery is expected.

In comparison to previous year there was no improvement in the overall wagon supply. The relation with workmen of our colliery are still unsatisfactory, which, as well as, rivalry between their unions affect the progress of the raising.

Messrs. F. W. Heilgers & Co. (P.) Ltd. relinquished their managing agency of this Company with effect from 31st December 1956 and since that date the Company is managed by the directors. Resignation of the managing agents is to be considered by the shareholders at this meeting as set out in the accompanying notice. The accounts submitted with this report are also up to the date of their resignation.

Accounts in brief were as under:—

N.B.—Figures within brackets relate to the corresponding period of the previous year.

QUESTION HOUR IN PARLIAMENT

Uranium Processing Plant

THE proposed uranium processing plant is likely to go into operation by the end of this year. The approximate expenditure to be incurred on this plant is Rs. 27 lakhs. It will be located at the Atomic Energy Establishment, Trombay.

—Jawaharlal Nehru

Banking in Rural Areas

There has been an appreciable improvement in recent years in banking facilities in rural and semi-rural areas as a result of a number of steps taken by the Government. The steps are the opening of more branches by the State Bank of India, development of co-operative banking in accordance with the recommendation of the All-India Rural Credit Survey Committee, increase in the number of post office saving banks, and granting of licences liberally by the Reserve Bank to commercial banks for opening branches in rural and semi-rural areas. The State Bank of India is making rapid progress this year in the opening of branches. Last year, one branch was opened every week. This year, two branches are being opened every week. The State Bank is optimistic that it will open all the 400 branches programmed for by 1960.

• • • •

Compensation to Life Insurance Companies

Acquisition compensation has been offered to 18 insurance companies falling under Part B of the first schedule to the Life Insurance Corporation Act, 1956. While compensation has already been paid or settled in respect of 11 of these insurers, intimation of acceptance of the amounts of compensation offered is still awaited from the remaining seven insurers. The amounts of compensation to these seven insurers will be paid on receipt of their acceptance. Acquisition compensation in respect of the remaining Part B insurers is under calculation and will be offered as soon as the amounts are determined.

• • • •

Foreign Travel

It is a fact that surplus in foreign travel account occurred for the first time in 1956. The continuance of the favourable position on travel account will depend on a number of factors, among other things, such as the level of exchange restrictions affecting foreign travel in India and in foreign countries and the results flowing from the measures taken by the Government for attracting tourists to the country. Assuming that the number of tourists to India will continue to show a steady increase and that the restrictions on travel payments imposed by India in 1957 will continue in their present form, India's travel account should also show a surplus in subsequent years.

—B. R. Bhagat

Nangal Fertiliser Factory

The Nangal fertiliser-*cum*-heavy-water project is likely to go into production in 1960. The project is expected to cost about Rs. 30 crores. Three major orders for plant and equipment for the project on deferred payment terms have been placed with reputed foreign firms. Global tenders have been invited for the heavy water plant and order for its supply is expected to be placed shortly. Land for the factory and its associated township has been acquired. Development work on the factory site and the township is in progress. A construction colony has been established on the factory estate. Tenders for the execution of civil works inside the factory area have been invited. Work on laying the railway track for the siding of the factory has started. The railway authorities have also commenced the erection of girder spans over the Nangal dam bridge.

• • • •

Paper Factories

Twenty-two new paper factories have been licensed, the aggregate capacity involved being 600,000 tons. The construction of the proposed paper mill at Kesinga in Orissa has not yet been completed. The firm in question is facing difficulties in getting foreign credit for the purchase of machinery according to deferred payment terms approved by Government. It is, however, understood that negotiations in this behalf are about to be finalised.

• • • •

Ford Foundation Grant

The Ford Foundation has given $4,285,178 for the development of small-scale industries in India. There are offers of assistance from the Technical Co-operation Mission (U.S.) and the Government of W. Germany for two prototype workships and from the Japanese Government for an institute of small-scale industries.

—Manubhai Shah

Stainless Steel Plant

It is proposed to call for detailed project reports from some foreign firms who are willing and capable of rendering assistance to India for the setting up of a plant for the manufacture of alloy and special steels, including stainless steel. Preliminary reports received from certain foreign firms for the setting up of such a plant have been examined. A suggestion that a stainless steel plant should be located near the Bhadravati Iron and Steel Works has been made. But the facilities available at one of the integrated steel plants for the proposed factory appear to be better as compared to Bhadravati. The National Metallurgical Laboratory at Jamshedpur has evolved a process for the production of stainless steel. If this process is good for manufacturing stainless steel on a commercial scale, the Government will not hesitate to adopt it in the proposed factory.

• • • •

Amalgamation of Collieries

No final decision has yet been taken by the Government over the detailed recommendations of the expert committee on the amalgamation of small collieries.

—Sardar Swaran Singh

Ships from Japan

India may be able to get three ships from Japan out of the yen credit offered by this country and accepted by India. The cost of these three ships may be about £3 million. The terms on which the ships are to be purchased have not yet been finalised.

• • • •

Hindustan Shipyard

The French consultants of the Hindustan Shipyard had been served with a six-month notice terminating their services on 2nd January 1958. The question of replacing them is under the consideration of the Board of Directors. India will need the services of experts from outside who know the technical know-how. The French consultants had manufactured as many as 10 ships during the period 1952-57 and all the vessels are found suitable and in use. Apart from this, the consultants have done quite a good deal in regard to development and organisation of the shipyard. The question about the *Andaman*—one of the ships built at the shipyard which has been found to be defective —is separate. (The Government is in touch with two or three countries, including Japan, on this point, but I will not like to indicate just now whom we would choose ultimately.—Lal Bahadur Shastri)

—Raj Bahadur

Oil Drilling in Bombay

Drilling for oil near Cambay in Bombay State will commence next month, if a drilling party arrives from the Soviet Union, as is expected. Organisational and preliminary work is in progress. Pinpointing the drill site has been done and foundation work for installing the rig is progressing.

—K. D. Malaviya

Rice from Burma

The Burmese Government has expressed its inability to supply more than 250,000 tons of rice in 1958, in view of the shortfall in production.

• • • •

Minor Irrigation

A target of nine million acres have been fixed for the area to be brought under irrigation from minor irrigation schemes during the second Plan period. Of this, about half will be under agricultural development schemes and the other half under the National Extension and Community Development Programme.

• • • •

Jute Production

The average increases in jute production since 1947 in the different States has been 118,000 bales of 400 lbs. each in West Bengal, 55,800 bales in Assam, 37,500 bales in Bihar, 16,400 bales in Orissa, 12,400 bales in U.P. and 2,900 bales in Tripura.

—A. P. Jain

Sale of Burma Rice

Government loss incurred by subsidised sale of rice imported from Burma aggregates Rs. 8 crores. Out of a total of 827,000 tons imported in 1956-57 and 1957-58, about 685,000 tons have already been sold. (The arrangement is to import two million tons of rice from Burma during a five-year period.—A. P. Jain.)

—A. M. Thomas

Irrigation Schemes in Bombay

The additional irrigation schemes proposed by the Government of Bombay for inclusion in the second Five-year Plan, with the estimated cost in lakhs of rupees, are: Bagh river project 320.40; Dinanadi 113.00; Katepurna 180.00; Itiadoh 91.00; Pindrabodi Tank—not available; Ekburj Tank—not available; and Sabarmati 1,300.00. The inclusion of the first six projects will be considered after the examination of their project reports. The Sabarmati scheme is not being considered for inclusion, as it will add to the large spill-over that is going to occur in the third Plan on account of big irrigation schemes included in the current Plan.

—S. N. Mishra

Low-Income Group Housing

There is no bar to the grant of loans under the Low-Income Group Housing Scheme to people in the rural areas. With a view, however, to ensuring better utilisation of funds, loans are given for construction of houses in developed areas in Delhi, where essential services such as water-supply, street lighting, drainage, sewerage, roads, etc., are expected to be available. A proposal for acquisition and development of certain land in the rural areas of Delhi is, however, under Government's consideration in connection with the shifting to safer sites of some villages exposed to recurrent Yamuna floods.

—A. K. Chanda

Trade Unions

There is no proposal to enact any legislation regarding the recognition of trade unions. ....

GIFT-TAX LEGISLATION ANALYSED

(*Concluded from page 572*)

which will cause considerable uncertainty, anxiety and unjustified hardship to many assessees. Under the provisions of the Estate Duty (Amendment) Bill, 1958, gifts *inter vivos* or gifts made by a person in his lifetime during a period of five years before his death will be liable to estate duty. If a person makes gifts which are governed by the various exemptions contained in the Gift Tax Bill such gifts will be liable to estate duty if the person dies within five years after making the gifts. Thus, the provisions of the Gift Tax Bill in respect of the exemptions will provide only partial relief from taxation. In the interest of equity and in order to remove uncertainty in respect of the tax liability on such gifts, gifts exempted from the gift tax should be totally excluded from the provisions of the Estate Duty law.

Under a proposed amendment to the Estate Duty Act, no estate duty will be payable on property on which the gift tax has been paid if such property is also included in the estate of the deceased for estate duty purposes presumably by the assessee's death within five years of making such gifts. However, such property, on which the gift tax has already been paid, will be taken into account for aggregation purposes for determining the rate of estate duty payable. This is a rather harsh and unfair provision. It should be provided that gifts on which the gift tax has been paid should be totally excluded from the scope of the estate duty law.

If the Government wishes to have a proper integrated structure of taxation, it should take steps to remove the conflict in the provisions of the various tax laws on the line suggested.

ADMINISTRATION

The administrative procedure prescribed by the Gift Tax Bill is the same as that used for the other direct taxes like Income-tax, Wealth Tax and Expenditure Tax. The administrative machinery to be used for gathering the gift tax is the existing one used for collecting the other direct taxes.

The Gift Tax Bill contains an interesting provision for encouraging prompt payment of the tax. The Bill provides for a rebate of 10 per cent. on advance payments towards tax liability made within 15 days of making the gift. A rebate of 10 per cent. on moneys paid in advance would be an attractive advantage for the assessees provided it related to a period of a year or so. However, it may take the tax officials much more than a year to complete the assessments. The tendency may be to take three to four years to complete the assessments, especially of those cases in which advance payments have been made—as is often done in the case of the other direct taxes. Under such circumstances, a rebate of 10 per cent. on amounts paid in advance towards tax liability would cease to be attractive. It would amount to a return of about 2½ per cent. to 3 per cent. on the moneys paid in advance and this would be far from attractive for the assessees. It is, therefore, recommended that the Bill should provide for a rebate of 10 per cent. *per annum* on advance payments made towards the tax. Such a provision will encourage the tax officers to complete assessments quickly and will also provide a definite attraction for assessees to make advance payments.

The discretionary powers vested in the tax officials by the Gift Tax Bill are enormous and excessively wide. Indeed, today tax officials in India enjoy powers under the various tax laws which are far wider and in excess of the powers vested in the tax officials of any other free country of the world. If the Government wants these powers of the officials to be used in a fair and efficient manner, it should take immediate steps to improve the morale and the working conditions of the officials. It should attract into the administration of the tax laws persons with first class ability, integrity and character. The most important and effective step to achieve this is to the raise the salaries of the tax officials, in order to make them commensurate with the greatly increased burden of responsibility and work which has been imposed upon them since May 1957 due to the introduction of various new direct taxes. The tax officials should be paid at least Rs. 1,000 per month. Their grades of salary should enable them to rise to at least Rs. 2,000 per month after some years. The salaries of senior tax officials should also be proportionately upgraded. This was recommended by the Kaldor Report which had noted that "if an extra crore of rupees were spent on raising the standard of salaries in the Revenue Department... the return to the State in terms of additional revenue collected is bound to be many times the additional cost." This is one of the important recommendations of the Kaldor Report which has so far been conveniently and unfortunately not implemented by the Government of India.

In the budget speech, the Finance Minister claimed that "the Taxation Enquiry Commission also had accepted the gift tax as theoretically an attractive proposition." But the Commission had in fact opposed the introduction of the gift tax on administrative grounds, which would appear to be valid even today. The wealth tax has been introduced only a few months ago. The tax officials have hardly any experience in handling the statements of assets and liabilities submitted by assessees for the wealth tax. The experience of administering the estate duty is also not sufficient for the officials to ensure a proper handling of the gift tax by them. The present administrative machinery appears to be inadequate for handling the gift tax and imposing it properly and efficiently.

As against an expected yield of Rs. 3 crores annually from the gift tax, the budget provides for an additional expenditure of only Rs. 8 lakhs for expansion of the staff at various levels in the administrative machinery, in order to handle the additional burden of work. But this provision for the expansion of the administrative machinery appears to be extremely inadequate. It will imply a further overloading of the present tax officials with the administrative burdens of the gift tax—with a probable decrease in their efficiency.

The provisions of the Gift Tax Bill as of the other tax statutes introduced recently, are excessively wide, harsh and inequitable. It is possible that the Government has deliberately taken vast powers with the intention of administering the laws leniently thereafter. This approach to taxation is not commendable. Bad laws which are leniently administered give rise to many injustices and hardships being imposed on some taxpayers whilst giving scope for favoured or preferential treatment being given to other taxpayers. It is far more desirable to enact good laws of taxation which are reasonable and properly drafted and then to administer such laws efficiently and fairly, so that all taxpayers are treated equally.

THE INDIAN MINING ASSOCIATION

(*Concluded from page 593*)

as it is abundantly obvious that it is preferable for spares to be canalised through one source, or a restricted number, rather than for each actual user to have to import his own requirements. Our grateful thanks are also due to the Deputy Coal Controller (Production) who is the sponsoring authority for licences required by the coal industry. Unfortunately, however, a sponsored application does not always mean that a licence will be issued in due course. In the case of certain items, there appears to be no provision in the present import policy. Also, our requirements so often are far in excess of foreign exchange allocations. Collieries have continued to experience serious shortages of iron and steel materials, particularly rails which are of such vital importance to the coal industry, but at least we have the consolation of knowing that while there is an acute shortage of both indigenously manufactured iron and steel materials and foreign exchange to import them, at least we have had an opportunity of bringing our shortages to the notice of the authorities on one occasion each month."

Notices

THE STANDARD-VACUUM REFINING COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN THAT THE Register of the Company's 5¼ per cent. Debentures 1964-68 will be closed for transfers from 16th April 1958 to 30th April 1958 both days inclusive.

P. A. ENGINEER,
Secretary and Treasurer,
State Bank of India
Agents for the Standard-Vacuum Refining Co. of India Ltd., for the management of the Debentures.

STATE BANK OF INDIA,
MUNICIPAL LOANS SECTION,
APOLLO STREET, FORT,
BOMBAY, *29th March* 1958.

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED

NOTICE IS HEREBY GIVEN THAT THE 32nd Annual General Meeting of the Company will be held at the Registered Office at "Dunlop House," 57B, Free School Street, Calcutta, on Friday the 18th day of April, 1958, at 11 a.m., for the following purposes:—

1. To consider the Profit and Loss Account for the year ended 31st December, 1957, the Balance Sheet as at that date and the Reports of the Directors and Auditors of the Company.
2. To declare Dividends.
3. To appoint Directors in place of those who retire by rotation.
4. To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS

To consider and if thought fit to pass, with or without modification, the following resolution which will be proposed as an Ordinary Resolution, namely:

"That Mr. Eric Henry Morris be and is hereby appointed a Director and Deputy Managing Director of the Company with effect from 18th April, 1958, upon the terms and conditions presently governing his employment and that he will continue to be entitled to the remuneration presently paid or authorised to be paid to him."

By Order of the Board,
P. B. SEN GUPTA,
Secretary.

DUNLOP HOUSE,
57B, FREE SCHOOL STREET,
CALCUTTA, *24th March*, 1958.

Note:—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

In terms of Article 4 of the Company's Articles of Association no Preference Shareholder as such is entitled to attend the meeting. A Debenture Stockholder as such is also not entitled to attend the meeting.

The Transfer Books and Registers of Members in respect of the Ordinary and Second Preference Shares of the Company will be closed from 7th April, 1958 to 27th April, 1958, both days inclusive. As any dividends that may be declared will be paid only to shareholders registered in the Company's Registers of Members, those holding shares on blank transfers are advised to register the transfers prior to 7th April, 1958.

THE MILLOWNERS' ASSOCIATION BOMBAY

NOTICE IS HEREBY GIVEN THAT THE ANNUAL GENERAL MEETING of the MEMBERS of the MILLOWNERS' ASSOCIATION, BOMBAY, will be held in the rooms of the Association (Second Floor, Elphinstone Building, Veer Nariman Road, Fort) at 10-45 a.m. (S.T.) on Thursday, the 10th April 1958, to transact the following business:—

(1) To receive and adopt the Committee's Report and Statement of Accounts for the year 1957;

(2) To appoint Auditors of the Association's Accounts for the current year and to fix their remuneration;

AND any other business that may be brought forward.

By Order of the Committee,
B. G. KAKATKAR,
Secretary.

BOMBAY, *31st March* 1958.

MONEY STRINGENT

(From Our Own Correspondent)

BOMBAY, *26th March*

The short-term money market continued to rule stringent during the week under review also, thanks to the growing demand for funds, in the face of an attenuated supply. Banks were keen borrowers in the market and could not get their requirements in full, without seeking temporary accommodation from the Reserve Bank. The cut of one per cent. to 6 per cent. in the British Bank rate on Thursday last week did not have any effect on the market. Though this makes borrowing in the London market a little cheaper than before, it does not make any difference so far as India is concerned as interest rates in India are still well below those in London.

Inter-bank call money continued to be bid at 3 per cent. among the Exchange banks and big Indian banks and at 3¼ per cent. among the smaller banks. House money at call was offered 4½ to 4¾ per cent. and short-term deposits 4⅝ to 4¾ per cent. for one to six months.

A contraction of Rs. 6.43 crores in notes in circulation is disclosed by the Reserve Bank of India's statement for the week ended 21st March 1958. Notes held in the Banking Department are higher by Rs. 7.36 crores, so that the total notes issued shows an increase of Rs. 93 lakhs. This is covered by a similar rise in rupee coin. There has been a sharp fall of Rs. 74.34 crores in foreign securities and a corresponding increase in rupee securities. In the Banking Department balances held abroad have gone up by no less than Rs. 66.38 crores, but the total foreign assets are nevertheless lower by Rs. 7.96 crores. The Central Government's deposits show a decline of Rs. 61 lakhs, while deposits of other Governments have gone up by as much as Rs. 55.91 crores. Loans and advances to Governments show a fall of Rs. 20.64 crores, while other loans and advances are higher by Rs. 1.45 crores, mainly due to the rise of Rs. 1.77 crores in advances to Scheduled banks against usance bills. There has been an increase of Rs. 4.42 crores in investments.

The Scheduled banks' statement for the week ended 14th March 1958 discloses a rise of Rs. 9.84 crores in demand deposits of banks and a contraction of Rs. 3.10 crores in their time deposits. Inter-bank borrowings also have gone up by Rs. 1.44 crores, while borrowings from the Reserve Bank have declined by Rs. 63 lakhs and those from the State Bank of Rs. 20 lakhs. A rise of Rs. 4.89 crores is noted in advances, but bills purchased and discounted are lower by Rs. 1.22 crores. Investments have been enlarged by Rs. 6.79 crores and money at call and short notice by Rs. 2.55 crores. Cash balances are, however, lower by no less than Rs. 16.49 crores.

The Gilt-edged market continued to rule steady, with demand confined to short and short-medium dated issues. The official gearing up of the market was continued, with a further rise in Reserve Bank's selling rate of some of the securities. For the fourth week in succession 3½ per cent. 1964 has been pushed up, the latest increase being 5 nP to Rs. 98.00. After a break of two weeks, the selling rate of 4 per cent. 1972 has been stepped up by 5 nP to Rs. 100.10.

3 per cent. 1986 Conversion was dull at Rs. 71 ex-voucher. 3 per cent. 1970-75 was steady at Rs. 86.20, while 3 per cent. 1966-68 gained strength by a further 5 nP to Rs. 92.35. 3 per cent. 1964 and 1963-65 moved up by 5 nP each to Rs. 94.40. 2½ per cent. 1962 moved up by 5 nP to Rs. 94.90 and 2¾ per cent. 1960 by 10 nP to Rs. 97.60. 2½ per cent. 1961 rallied by 10 nP to Rs. 94.90. 3½ per cent. 1961 was stagnant at Rs. 99.65, while 3½ per cent. 1964 moved up to the Reserve Bank's rate of Rs. 98. 3½ per cent. 1965 was unchanged at Rs. 97.70 and 3½ per cent. 1967 at Rs. 97.65. 4 per cent. 1972 rose to Rs. 100.10 following the increase in Reserve Bank's selling price.

The rupee ruled easy in the earlier part of the week under review, in consonance with the slight weakness developed by sterling abroad, but soon regained the lost ground, following sterling's recovery. After an increase from Rs. 475.25 to Rs. 475.50 per $100, banks' selling rate for ready dollars was restored back to Rs. 475.25 per $100. Likewise, their buying rate rose from Rs. 472.00 to Rs. 472.25, but declined to Rs. 472.00 per $100. In New York, spot sterling was marked down from $2.81.9/10-2.81.11/16 to $2.81.5/16-2.81-11/16. Three months' forward, however, gained over the week from $2.78⅞-2.79 to $2.79⅛-2.79⅛, while transferable sterling dipped from 279.50-279.60 cents to 279.35-279.45 cents.

HIDES ARRIVALS SMALL

(From Our Own Correspondent)

MADRAS, *24th March*

Arrivals of E.I. tanned cow hides and calves were small and shippers were slowly buying them, as U.K. response for shipment business was poor. Prices paid for 8/8½ lbs. and 10-12 lbs. cow hides were lower, while lighter weights ruled steady. As U.K. importers are unable to obtain increased prices for dressed kip leather, it is not likely that active trading will be resumed unless prices decline by 2*d.* or 3*d.* per lb. There was patchy demand for cow calf and buff calf skins.

Prices of tanned goat skins (commons) were lower by two annas per lb. and those of sheep skins (commons) were unchanged, while better classes ruled weak.

In the (March) London tanned skins public sales, prices of goat skins declined by 3*d.* to 9*d.* per lb. occasionally 1*s.* Demand from home trade was steady for better qualities and selections, but adulterated parcels realised poor prices. One-third of the offerings remained unsold, due to price limits imposed by consignors or lack of interest.

CURBS ON BULL SQUEEZE IN SILVER

(From Our Own Correspondent)

BOMBAY, *26th March*

The two sections of the bullion market showed divergent trends during the week under review. Despite the imposition of heavier penalties by way of margins on smaller outstanding purchases and smaller backwardation charges, silver moved ahead further, though the day-to-day trend was somewhat erratic, while gold ruled quiet on larger arrivals without any corresponding expansion in offtake.

At its meeting held on the 20th inst., the Board of the Bullion Association amended two of its by-laws, 33A and 33D, with a view to curbing excessive "bull" activity, by imposing heavier burden of margins on outstanding purchases in excess of the prescribed limit, the limit itself having been considerably reduced, and on *budla* charges in excess of half the present exemption limit. Under the amended by-law 33A, a buyer who has outstanding purchases in excess of 40 bars (instead of 200 bars as hitherto) in each of the two settlements running at present will have to pay a margin of Rs. 500 per bar. Under the amended by-law 33D, a margin of Rs. 500 per bar will be imposed on the buyer if the *budla* charges in his favour exceeds Re. 1, instead of Rs. 2 hitherto. The margin will be increased to Rs. 2,500 per bar, if the *budla* charges in his favour widens to Rs. 2, instead of Rs. 3 till now.

The decisions of the Board did not have any bearish effect on the market. On the contrary, forward silver (April settlement) rebounded to cross Rs. 196 on Saturday, as the Board's decisions had to be approved by the Bombay Government before being enforced. The sanction was, however, received on Monday and this had a sobering effect on silver prices and it was announced that the changes in by-laws would come into effect only today. Despite the coming into force of the heavier penalties, silver staged a recovery and finished well above the previous week's closing levels.

Forward silver (April settlement) advanced from Rs. 194-7 to Rs. 196-2 before declining to Rs. 194-11 on Monday. Towards the close, however, it again moved up to Rs. 195-4. The May settlement rose from Rs. 194 to Rs. 195-6. After a temporary setback to Rs. 194-4 it closed today higher at Rs. 194-9. The *budla* charges (from April to May settlement) fluctuated between As. 6 and As. 13, but over the week they have widened from As. 7 to As. 11.

Ready silver gained strength from Rs. 194-3 to Rs. 195-14, before closing at Rs. 195-8. The floating stocks of silver are estimated at 500 bars. The daily average arrivals were 20 bars, while the offtake was 10 bars on an average.

Gold for forward delivery (April settlement) gained from Rs. 112-5 to Rs. 112-10, but soon lost ground to Rs. 111 today. The closing was a fraction better at Rs. 111-3. The May settlement closed at Rs. 111-8, after touching a high of Rs. 112-12 during the week.

Ready gold declined over the week from Rs. 112-3 to Rs. 110-15. The floating stocks of gold are reported to be 20,000 tolas. The daily average arrivals were 4,000 tolas, while the offtake was no more than 3,000 tolas on an average.

In New York, silver was unchanged at 88.5/8c., while in London, there was a slight recovery in prices. Spot silver, after a decline from 76.1/8*d.* to 76*d.* improved to 76¼*d.* and the forward metal closed at 76*d.* after shading off from 75.7/8*d.* to 75⅞*d.* Gold rallied from 249*s.* 2¼*d.* to 249*s.* 4¼*d.*, but shed a part of the earlier gain yesterday, when it closed at 249*s.* 3*d.*

The following comparative table shows at a glance the trend of the market during the week under review:

	26-3-58	Highest	Lowest	19-3-58

LINSEED RALLIES FURTHER

(Messrs. A. Bradley & Co.)

CALCUTTA, *24th March*

A very firm tendency prevails in the linseed market, with a further rise in prices in all sections. The main causes are shortage of supplies and firmness in mustards as well as groundnuts. Movement of new crop seeds has been very slow in centres and local offerings are very meagre, while ready supplies are negligible. An advance of about a rupee in the price of seeds has resulted in a disproportionate rise of only As. 8 in the price of oil thereby upsetting crushers' parities. Some interest has been shown in linseed oil by local shippers, but sellers are very reserved and only small business has resulted. Linseed oil overseas has improved slightly to £107, with Indian shippers coming nearer into line now.

The latest available quotations are: Ready-March Rs. 23-4 and April-May Rs. 23-2 per maund.

COTTON FUTURES EASY AT CLOSE

(From Our Own Correspondent)

BOMBAY, *26th March*

Although the cotton futures market ruled distinctly firm during the earlier part of the week under review towards the close values eased. The firmness was particularly evident in the Jarilla March contract prior to its expiry. The contract spurted to a high of Rs. 708 on Monday, the last day for squaring up transactions, and dipped to Rs. 688 the next day at which rate it went off the Board. The firmness of the Jarilla May contract was mainly influenced by the expectation of an export quota for ¾" cotton. The reduction in the excise duty on cloth, announced last week, the anticipation of encouraging news from the yarn and cloth market, the downward revision of the crop and the scarcity of quality cotton were other factors which imparted strength to the market. However, when the export quota announcement actually came late on Monday the trade found to its disappointment that it did not cover ¾" cotton but only those varieties of stapling 23/32" and below. This disappointment was reflected in heavy bull liquidation yesterday which resulted in a sharp break in values. The easy trend persisted today also.

On the opening day of the week, that is Thursday, there was practically no business in the Jarilla March contract. The market remained closed on Friday due to *Jamshedi Navroz*. The contract opened at Rs. 693.50 on Saturday and, on large scale short-covering, rallied to Rs. 708. The contract went off the Board on Tuesday at Rs. 688. Total tenders against the contract aggregated 4,200 bales comprising 2,150 bales of Vijay, 900 bales of M.P. Jarilla, 200 bales of Cambodia, 150 bales of Laxmi A, 150 bales of 320F, 250 bales of Gaorani, 200 bales of Buri American, 100 bales of Khandesh, 50 bales of M.B. Jarilla and 50 bales of Rajasthan American. It may be noted here that the contract started its career on 23rd June 1957 at Rs. 690 and after rising to Rs. 723.50, the highest level on record declined to Rs. 652, the lowest on 26th December 1957. It again recovered subsequently to Rs. 708 prior to expiry at Rs. 688.

I.C.C. Moglai Jarilla (May 1958) opened the week at Rs. 689.50, as against the previous day's close of Rs. 688.50, and improved, on speculative support, to Rs. 694 on Monday, before closing at Rs. 683.75 yesterday. Commencing today's session at Rs. 681, the contract gathered Rs. 2.25 before finishing lower at Rs. 679.75. The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	26-3-58	*High*	*Low*	19-3-58
I.C.C. Moglai Jarilla (March 1958) ...	*688	708	693	691
I.C.C. Moglai Jarilla (May 1958) ...	679.75	694	682.75	688.50

* on 25-3-58.

The spot section ruled firm during the earlier part of the week, but towards the close, influenced by the easy trend of the forward section, values declined. Nevertheless, good quality cotton continued to meet with sustained demand. Due to the deterioration in the quality of Vijay and Surti styles, Jaydhar and Laxmi varieties were the centre of attraction. Spinner interest was also noted for Khandesh, Jarilla and Co. 2. Kala and Wagad also attracted the attention of mills.

The most important development of the week as far as the export section was concerned was the announcement by the Government of India on Monday of an export quota for 50,000 bales of cotton (other than Bengal *Deshi*) not above 23/32" in staple of any crop. Although the trade welcomed the quota, its enthusiasm was dampened by the exclusion of ¾" cotton from exportable varieties. Export inquiry was noted mainly for Bengal fine and below fine qualities. Prices of Kala and Wagad, after improving early in the week on expectation of a quota declined, following the quota announcement which did not include ¾" cotton. Although export demand is dull at present, the trade is confident of disposing of the low grade cotton, permitted for export in the next few months.

In the foreign section inquiries was noted for East African, Jinja and some business was reported to have been put through by a leading Ahmedabad mill group. Following the downward revision the Sudan Gezira Board's reserve prices and the cut in export duty Sudan cotton has become an attractive buying proposition. An import quota for this cotton and Egyptian styles is awaited at any moment.

Meanwhile, it has been officially announced that an agreement, which provides for import of Egyptian cotton by India in exchange for import of tea and jute goods by Egypt against payment in Egyptian pounds, has been signed by the two countries on the 25th inst. The announcement states that export and import of goods other than tea, jute goods and cotton would continue to be paid for in Indian rupees, and that the State Bank of India will open with the National Bank of Egypt an export account in Egyptian pounds to provide banking facilities to Indian exporters of tea and jute goods and importers of Egyptian cotton.

The Joint Chief Controller of Imports has notified that, as result of non-utilisation by importers of full amounts allocated to them by sub-authorisation issued so far for the import of American cotton under P.L. 665, some balances are available for re-distribution. The notification says that it proposed to cancel such balances from the respective sub-authorisation and reallocate them to certain specified categories of importers. Application for this purpose should reach the Joint Chief Controller of Imports on or before 7th April.

The latest available spot quotations—in rupees per candy of 784 lbs.—are given below:

Bengal *Deshi* 580; Berar Jarilla 765; Khandesh 800; Oomra *Deshi* 665; Vijay 920; Hubli Laxmi 1,030; Jaydhar 890. *Delivery Contracts*: Vijay 925; Bengal 575.

In the absence of any new development, Karachi cotton futures market ruled subdued. Values were generally easy. The March contract, however, spurted towards the maturity date and went off the Board on the 25th inst. at Rs. 73. The May position declined from Rs. 72-1-6 last week-end to Rs. 71-3. The spot section was also listless. Sind Deshi made a small gain of As. 4 to Rs. 64-8 while Punjab *Deshi* shed one rupee to Rs. 62-8.

Alexandria cotton futures market depicted an irregular trend during the week under review. While the long-staple Karnak contracts ruled easy the medium-staple Ashmouni contracts registered an improvement. The weakness of the former was due to selling based on the anticipation of keen competition from comparable Sudan cotton, following the cut in export duty and reduction in reserve prices of the Gezira Board. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: March 76.95; May 78.00; July 78.85. *Ashmouni*: April 66.80; June 67.40.

A firm trend was witnessed on the Liverpool cotton exchange during the week under review. The firmness was mainly due to sustained American buying in both the contracts, which, consequently, registered handsome gains. The firmness of the New York market was the main influencing factor. Trading in Sudan contracts was, however, inactive and values remained nominally unchanged. The reduction in Sudan Gezira Board's reserve prices and the cut in export duty did not stimulate fresh business. The following are the latest available quotation—in pence per lb.—from Liverpool:

American cotton one inch staple contract: March-April 25.30; May-June 25.23; July-August 25.63; October-November 26.25. *American cotton mixed growth contract*: March-April 25.59; May-June 26.26; July-August 26.53; October-November 27.05. *Sudan*: May-June 32; July-August 32.20; September-October 32.85.

New York cotton futures market ruled bullish during the week. The expectation of no increase in acreage, the approval by the Senate of larger funds for the Soil Bank programme and anticipation of higher loan rate for the current crop were the factors responsible for the strength of the market. The improvement would have been more marked but for the uncertainty in the minds of traders whether the proposed export subsidy scheme, in place of the two-price system of exports on competitive bid basis, would materialise.

It is reported that the U.S. Agriculture Department is considering establishing a system of direct export subsidy for cotton. The scheme, if materialised, would replace the Department's present policy of selling the cotton for export by competitive bidding. No change-over is, however, contemplated for the current season, but the Department is looking to Congress for a directive on how it should conduct the cotton sales in the next season beginning on 1st August 1958. The Department is also considering for cotton "a payment in kind" scheme, such as is now used to stimulate export sales of U.S. wheat.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	25-3-58	18-3-58	11-3-58
Spot	36.20	36.00	36.10
March	36.17	35.72	35.65
May	36.41	35.95	35.82
July	36.84	36.31	36.12

YARNS FIRM

(From Our Own Correspondent)

BOMBAY, 26*th March*

The easy trend noted in the yarn market towards the close of last week proved short-lived and the market picked up strength once again during the week under review. Cotton yarns, of course, continued to rule dull. The firmness of rayon yarn was aided by growing scarcity of imported yarn and expectations that the import policy for the ensuing half-year (to be announced by the end of this month) might not contain any measure of relaxation in import restrictions. In sympathy with rayon yarn and following better enquiries from important consuming centres, staple fibre yarn met with good buying support. There were reports of seasonal improvement in demand for staple fibre cloth. Taking advantage of this, several spinning units, including some in South India, were said to have put up prices of yarn. Cotton yarns were neglected, despite firmness of raw cotton prices, induced by further export quota for raw cotton and reduction in excise duty on cloth. For demand from consuming centres was none too encouraging, nor were export prospects bright. Even reports of an upward revision in prices of ten, twelve, and fourteen counts yarns to the extent of 2 nP to 37 nP per bundle effected by a few up-country mills, particularly in Delhi and the Punjab, failed to have any effect.

In the rayon yarn section, spot 120 Japan rallied 16 nP to Rs. 5.91. 150 Japan advanced by 12 nP to Rs. 5.62. 120 Italy increased by 7 nP to Rs. 5.69. 150 Italy spurted by 25 nP to Rs. 5.62. Indigenous yarns also rose in sympathy. National Rayons 150 bright cones first grade were marked up by 53 nP to Rs. 5.75. 120 bright cones first grade rose by 25 nP to Rs. 5.37. Snia rayon yarns (120 dull cones) April delivery was fully firm at Rs. 925.

Staple fibre yarns (40x2) June delivery elicited good support and advanced by Rs. 4 to Rs. 618. April delivery gathered Rs. 2 to Rs. 606. Spot (40×2) Citys gained 4 nP to Rs. 3.26 and Kohinoors 6 nP to Rs. 3.31. Centurys were fully steady at Rs. 3.31. New Greats, however, lost 2 nP to Rs. 3.12. Foreign sections, however, lacked support; Paramounts receding by 6 nP to Rs. 6.81 and Fujis by 3 nP to Rs. 6.66.

Among cotton yarns, ten counts Moderns were dull at Rs. 14.50 and Podars at Rs. 13.75. Twenty counts Indus were neglected at Rs 16.75, as also Moderns at Rs. 17.37. Among thirty counts, Indus were stagnant at Rs. 20. Forty counts Minaxis dropped 38 nP to Rs. 23.62. Moderns were unchanged at Rs. 24.50. Sixty counts were quiet. Moderns being quoted at Rs. 59, Raghuvamshis at Rs. 52 and Finlays at Rs. 59. Eighty counts Mahendras changed hands at Rs. 69.50, same as last week. Finlays were on offer at Rs. 75. Moderns, however, put on 50 nP to Rs. 70.50.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	26-3-1958	19-3-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Suja April	925·00	925·00
120 Japan (per lb.)	5·91	5·75
150 Japan (per lb.)	5·62	5·50
120 Italy (per lb.)	5·69	5·62
150 Italy (per lb.)	5·62	5·37
Staple fibre yarn (per case of 200 lbs.)—		
40×2 April	606·00	604·00
40×2 June	618·00	614·00
40×2 New Great (per lb.)	3·12	3·14
40×2 City (per lb.)	3·26	3·22
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	13·75	13·75
20s Modern	17·37	17·37
30s Indu	20·00	20·00
40s Minaxi	23·62	24·00
60s Raghuvamshi	52·00	52·00
80s Modern	70·50	70·00

PLEA FOR GROUNDNUT OIL EXPORT QUOTA

(From Our Own Correspondent)

BOMBAY, 26*th March*

The firmness of oilseeds and oils noted in the past two weeks continued unabated during the week under review. In fact, there was a fresh bout of buying induced by renewed hopes of reduction in export duty (of Rs. 175 per ton) on castor oil and expectations of groundnut oil export quota, following the recommendations of the Central Oilseeds Committee. The castorseeds section ruled particularly active, with enlarged purchases at higher prices. Today, there were rumours that the Government might soon announce complete abolition of the export duty on castor oil. Support was also lent by reports that enquiries for Indian castor oil from the U.S. would broaden as a result of the measures taken by the Government there to revive business and industrial activities. Groundnuts met with good demand in the wake of poor fresh offerings. Traders welcomed the Government of India's decision to allow established exporters to export groundnut oilcake (expeller variety) up to 20 per cent. of their basic year exports during any of the three calendar years from 1955 to 1957, subject to a maximum of 400 tons per shipper from all the ports. Linseed reacted favourably to reports that a leading export house had chartered a ship for exporting 2,000 tons of linseed oil to the U.K. next month. Slackness in arrivals in Hyderabad and low arrivals in the U.P. also imparted strength. In sympathy with the general trend, *kardi* seed and *niger* seed tended to move up. Cottonseed, however, ruled irregular. Thus, it was firm on Thursday and Saturday but reacted on Monday following decline in cotton prices. After recovering yesterday, it again eased today.

At its annual general meeting held at Hyderabad on the 20th inst., the Indian Central Oilseeds Committee requested the Government of India to allow export of groundnut oil and to reduce the export duty on castor oil, if it could not be abolished altogether. The Committee also put forward three other suggestions. These related to replacement of the existing sales tax or purchase tax on vegetable oils by an additional excise duty, as in the case of sugar, cloth and tobacco, to be collected at the source, exemption of vegetable oils and oilcakes exported from payment of sales tax, and levy of inter-State sales tax on oils and oilcakes at one point only.

Groundnut May contract opened the week firm at Rs. 160.50 and moved up to Rs. 162.37 on Saturday. There was some reaction on Monday following bearish advices from Saurashtra and the contract declined to Rs. 161.25. Subsequently, however, recovery set in, the price advancing to Rs. 162.62 today before finishing at Rs. 162. Over the week, bold ready hardened by 50 nP to Rs. 32.50. Coromandel and Khandesh quality both spurted by 75 nP to Rs. 33.25. Groundnut oil registered a gain of 25 nP to Rs. 18. Railway receipt gathered a like amount to Rs. 17.87.

Induced by strong buying support, castorseeds May contract firmed up from Rs. 147.25 last week-end to Rs. 150.25 today; at the close, however, it was lower at Rs. 149.37. Ready Madras rallied 50 nP to Rs. 30.12. Kanpur quality strengthened by 25 nP to Rs. 28.62. Castor oil B.S.S. put on 31 nP to Rs. 16.75 and Commercial 18 nP to Rs. 15.37.

Linseed May contract which stood at Rs. 30.75 last week-end evoked good support and improved to Rs. 31.37 on the 22nd inst. After easing to Rs. 31 the following day, it recovered to Rs. 31.50 today before finishing at Rs. 31.25. Bold ready picked up 75 nP to Rs. 31.25. April-May rose by a similar amount to Rs. 31.25. Linseed oil increased by 12 nP to Rs. 16.37.

Cottonseed May delivery began the week fully steady at Rs. 110 and moved up on good support to Rs. 111.25 on Saturday. It dropped to Rs. 108.25 on Monday following bearish advices from the cotton market. Recovery, however, set in yesterday when the price stood at Rs. 109.50. It rose further to Rs. 110.25 today before closing lower at Rs. 109.

Kardi seed bold ready had buyers and advanced by 38 nP to Rs. 19. *Niger* Madras improved by 37 nP to Rs. 23.25.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	26-3-1958	19-3-1958	12-3-1958
	Rs.	Rs.	Rs.
Groundnut—			
May 1958	162·00	160·75	160·62
Bold ready (per cwt.)	32·50	32·00	32·12
Khandesh quality	33·25	32·50	32·50
Linseed—			
May 1958	31·37	30·75	29·44
Bold ready (per cwt.)	31·12	30·37	29·62
Cottonseed—			
May 1958	149·37	147·25	143·87
Madras (per cwt.)	30·12	29·62	29·62
Cottonseed—			
May 1958	109·00	110·00	106·00
*Groundnut oil**			
Ex-mill ready (per quarter) ..	18·00	17·75	17·75
Castor oil†			
Commercial (per quarter) ..	15·37	15·19	15·00
Linseed oil†			
Ready	16·37	16·25	15·87

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

SUGAR DULL

(From Our Own Correspondents)

BOMBAY, 26*th March*

Dull conditions prevailed in the sugar market during the week under review. Demand from adjoining suburbs was slack, as there was continued trucking of large quantities of sugar there. The co-operative sugar mills in the Ahmednagar district were reported to be making distress sales at more frequent intervals. Meanwhile, the local sugar traders are awaiting the normal monthly release of sugar for sale in free market, expected to be announced early next week.

Arrivals of sugar into the market were very much lower than those in the previous week; they aggregated 10,900 bags, as against 23,100 bags.

Large grain sugar declined from Rs. 109-Rs. 112.50 to Rs. 109-Rs. 112 per bag. Small grain was unchanged at Rs. 105. Medium grain was done at Rs. 106-Rs. 108, as against Rs. 106-Rs. 107.50 last week-end.

* * * *

HAPUR, 24*th March*

Quietly steady conditions were witnessed in the sugar market during the week. There was a fall in demand from consuming centres. According to the latest Government estimates, the production of sugar in the current season would exceed the record of 2,029,000 tons attained in 1956-57. Cane supplies to factories were reported to be adequate. Ex-mill delivery prices were quoted slightly lower than previous week's levels.

Lack of buying interest from consuming areas accounted for a decline of 6 nP to 13 nP per maund in ex-mill delivery prices in the Muzaffarnagar market. Limited business was done for Punjab, Gujerat, Saurashtra and southern destinations. The latest ex-mill delivery prices are: Meerut (D-28) Rs. 35.69; Iqbalpur (C-29) Rs. 36.62; Rampur (A-29) Rs. 37.87; Mawana (B-29) Rs. 37.25; Amroha (D-29) Rs. 35.12; Bijnore (E-29) Rs. 34.87; Shamli (B-29) Rs. 37.37.

Sugar prices did not show any appreciable change in the Kanpur markets. Outside demand was on the wane, buyers from consuming centres were inclined to withhold their purchases, as an early announcement of a fresh quota was expected. Most of the U.P. factories were expected to cease crushing by the end of April.

After an early sharp gain to Rs. 15.75 per maund for best quality in mid-session, ready *gur* prices sought lower levels towards the week-end, following slack outside support and fall in prices in the future section. They were quoted today at Rs. 15.25 to Rs. 14.50 per maund for *pansera* quality. Arrivals averaged 1,000 maunds and local stock was about 140,000 maunds. The crushing season for *gur* is almost coming to a close.

Ready *gur* prices continued to rule steady in the Muzaffarnagar markets. There was good demand for *shakker* from Rajasthan side, resulting in an advance of Re. 1.25 per maund in prices.

Khandsari was reported to be in good demand from all over the country. Prices ranged from Rs. 27 to Rs. 33 per maund, according to quality.

BLACK PEPPER FORGES AHEAD

(Messrs. Parekh and Co.)

BOMBAY, 26*th March*

Malabar black pepper continued to forge ahead during the week, in sympathy with Singapore where black pepper shot up from Str.$63 to Str.$82, owing to covering by dealers who sold short for March shipment to the U.S.A. and white from Str.$110 to Str.$142 under pressure of aggressive European buying and following sizable purchases by the U.S.A. at rising prices. New York dealers paid for Malabar black as high as $0.27½ for nearby shipment, as spot there rose to $0.29.

A veritable boom after a long spell of dullness was noticed in Bombay, as well as in other primary markets like Cochin, Alleppey and Calicut. The forward trading ring at Cochin became a hub of activity and hundreds of tons changed hands alerratic. Prices fluctuated rapidly with alternate bouts of selling and buying. Ready moved from Rs. 103.75 to Rs. 115, while May from Rs. 107.50 to Rs. 124 and July from Rs. 108.75 to Rs. 125. Speculators were very active. The rise and fall of

Rs. 5 to Rs. 7 was the order of the day. Short positions created during a dull period in New York, London, Hamburg and Amsterdam were reported to be responsible for such a rapid rise.

Alleppey rose from Rs. 580 to Rs. 662½, while Calicut from Rs. 600 to Rs. 710. At the time of writing, the market is quiet and prices for ready garbled has reacted to Rs. 107½, May to Rs. 113.75 and July to Rs. 115. Ungarbled at Cochin went down to Rs. 637½ and Calicut to Rs. 680. Most of the short covering having been finished, the market now seems to be taking a pause and is awaiting new incentive.

Spice mills in Europe and grinders in the U.S.A. are reported to have refused to follow the rise, while speculators and dealers are buying heavily paying fancy prices for both nearby and forward. They are exploiting the present situation in Indonesia to their own advantage.

The future of the market appears uncertain, as, with the advance in prices, demand from consumers is shrinking. Proximity of Sarawak new crop is acting as a restraining factor. News of political situation in Indonesia are conflicting, but, so far, the white and black pepper growing areas in the islands are immuned from the present internal strife. Trade generally expects normal crop of Muntok and Lampong, though it is too early to forecast anything definitely. Nobody, however, knows what will happen next when conditions in Indonesia are so fluid.

In A.S.T.A. section, business for April was done up to $0.27½ and May-June at $0.27¾. At the time of writing, there are sellers for May-June at $0.27 but without buyers.

In delivery section, the highest price touched during the week for April and May was Rs. 645 and Rs. 650, respectively. There was lot of short buying by bears locally in both A.S.T.A. and delivery sections. The market at the moment is a bit quiet and is waiting for a new development.

Today's nominal quotations are: Ready delivery Rs. 92 per Bengal maund. April Rs. 615-Rs. 625 and May Rs. 625-Rs. 635 per candy of 5¼ cwts.

TEA PRICES IMPROVE

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

COCHIN, 18*th March*

The offerings in Sale No. 7, which was held on Tuesday, 18th March aggregated 1,345,548 lbs. Quality continued to show an improvement, and there was a very useful all-round selection on offer. The sale opened to a strong general demand for all descriptions, except low medium fannings which was the weakest feature of the sale. Commons and low mediums declined 5 to 10 nP. Mediums were 10 to 15 nP dearer, but good mediums were 5 nP up on last week's quotation. The improved quality teas from the Nilgiris district advanced irregularly 20 to 25 nP. Whole leaf teas met less competition, and were generally easier. The following are the quotations:—

	1958 Rs.
Plain B.P.	1.50 to 1.55
Low medium	1.60 to 1.95
Medium	2.00 to 2.30
Good medium	2.40 to 2.85
Quality	3.00 to 5.50

The average price realised in Sale No. 7 was Rs. 2.56 per lb., as against Rs. 2.54 in the previous sale and Re. 1.92 in the corresponding sale of 1957.

London Market—Sale of 17th March 1958.—Better Assams dearer. Plainest steady.

Sale of 18th March 1958.—Fully firm.

Colombo Market—Sale of 17th March 1958.—Quality maintained. Good quality and coloury mediums firm to dearer. Plainer sorts occasionally easier. Low grown declined 5c. Price tea firm.

Sale of 18th March 1958.—Strong demand. Dearer, particularly for useful quality fannings and dusts.

Calcutta Market—Export.—Fair general demand. Commons and medium 4 to 6 nP lower. Whole leaf and good liquoring sorts dearer. C.T.Cs declined 10 to 20 nP.

Internal.—20,200 packages dust. Met strong general demand. Improved as sale progressed. Prices generally dearer, except poor liquoring C.T.C. and dull plain types. Darjeelings irregular. 5,500 packages internal. Met good general demand at irregular and easier rates.

Export Quota.—There has been an easier tendency and business has been going through at 4 nP.

Forthcoming Auctions.—Sale No. 8 will be held on Tuesday, 1st April 1958.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Dust Sale G.*—525,000 lbs. Strong general demand. Prices have advanced irregularly 5 to 10 nP for everything."

FAIR DEMAND FOR EXPORT TEAS

(From Our Own Correspondent)

CALCUTTA, 25*th March*

There was a measure of disappointment in the market, when, contrary to earlier expectations, the tax concessions announced on Tuesday last did not include a reduction of export duty on inferior teas. It was, however, realised that, since Government's intention was to accord relief to only gardens producing common teas, it would take some time for the Government to find out an effective method, by which teas of inferior quality could be separated and the relief granted. This market view was subsequently duly confirmed by Mr. Morarji Desai in Parliament on Thursday last. The market also welcomed Mr. Desai's categorical rejection of the demand that the State Trading Corporation should take over the tea trade. The Minister's fear that, if the Corporation took over tea trade it would have to be wound up and that the Government would be in danger, was taken here as denoting official admission that the tea trade is a highly specialised business which should be left in experienced hands.

The keen demand in export auctions continues, and it is now more than likely that there would be nothing left of the 1957 crop when the auctions for the current season come to a close by the end of April. Offerings during yesterday's export sales aggregated 58,418 packages, which met with fair demand at irregular prices. Teas for price rose above valuations, stylish B.P.Ss were keenly sought, and keen competition was offered to bright liquoring mediums, B.O.Ps and O.Fs. Plain B.Ps were firm, as also mediums and fanning grades advanced. A steady trend was in evidence in best C.T.C. teas and brighter medium teas. However, the cheaper teas declined by 10 nP. The price for the plainer liquoring legg-cut Dooars gave way by 2 to 6 nP, although the brighter liquoring teas were sold above valuations. Among whole-leaf grades, the brighter and stylish lots were fully steady and rose. Flavoury Darjeelings met with good demand as did tippy teas. The quotations were: Best Assam fannings Rs. 2.70 to Rs. 2.90, best Assam C.T.C. B.P. Rs. 2.60 to Rs. 2.80, clean black pekoe Rs. 2.25 to Rs. 2.30, medium fannings Re. 1.74 to Re. 1.78, plain B.P. Re. 1.38 to Re. 1.42, medium B.P. Re. 1.52 to Re. 1.56, and plain fannings Re. 1.58 to Re. 1.62.

Export quota was done at Rs. 2.75. Sellers soon raised the rate to Rs. 3.50, but buyers offered only Rs. 2.50.

Dusts amounting to 20,229 chests met with a strong general demand at the internal auctions held last week. Middle East types were a particularly strong feature. Prices of all orthodox teas showing a clean black leafy appearance rose by 2 nP to 4 nP. A firm trend was in evidence in the best C.T.Cs and the better liquoring medium C.T.C. Assams having bright liquors, but the plainer and fibrous teas tended easy. The poorer liquoring teas were also easy. Darjeelings were irregular. The quotations were: Best Assam C.T.C. Rs. 2.85 to Rs. 3.15, medium Assam C.T.C. Re. 1.85 to Re. 2.05, medium Dooars Re. 1.54 to Re. 1.56, and medium Assam grainy dust Re. 1.56 to Re. 1.58.

The market for leaf grades amounting to 5,478 chests was irregular.

JUTE GOODS DECLINE

(From Our Own Correspondent)

CALCUTTA, 25*th March*

Earlier in the week under review, there was keen speculative activity in sacking goods, and for the first time since the introduction of minimum prices, B. twills not only touched the minimum rate of Rs. 100 on Tuesday last but reached a high of Rs. 100.85. However, the higher level could not be maintained, in view of the substantial offerings by mills. Also, manipulations in the *fatka* caused a depression in prices. The closing level for the week was, therefore, much lower on balance, and below the minimum rate. The movements in hessian prices were, however, very narrow, the price for hessian 40" 10 ozs. being below the minimum level throughout the week, and receding fractionally in sympathy with sacking goods as the week progressed and closed. Although a fair quantity in both the chief constructions changed hands, business with genuine buyers was considerably below levels as not to sustain the earlier uptrend. This coupled with mills' eagerness to take advantage of the rising prices cooled down sentiment of buyers. As already announced the futures market would officially commence on 29th March, and this was the main cause for the earlier uptrend.

The inauguration of futures trading, it was hoped, would put an end to the various malpractices and speculative manipulations which have come to stay in the last few years in the absence of a well-regulated futures trading. These have caused several headaches to the industry and trade, inasmuch as in an uptrend, following genuine buying, prices are taken to very high levels, which topple within a short time. In the result, prices are pushed down to such low levels as to make operation by mills in the market far from economic. A cause of great concern now, however, is the simultaneous prohibition of forward trading in jute goods and raw jute in other parts of the country according to the provisions of the Forward Contracts (Regulation) Act. If this were so, mills would no longer be able to put through specific delivery contracts between them and their recognised brokers. It is hoped here that these contracts, which are put through under the auspices of the I.J.M.A., would not be affected by the coming into being of the official futures market from Saturday next. Representations to Government in this regard have already been made, and it is hoped here that an official announcement would be made in line with the trade's expectations and freeing specific delivery contracts from prohibition.

On Tuesday last, ready B. twills rose to quote as high as Rs. 100.85, as against the minimum rate of Rs. 100. There was not only good bear-covering but genuine buyers also accorded their support. Ready hessian 40" 10 oz. was also fully firm at Rs. 39.35, although this was lower by 15 nP than the minimum rate specified by the I.J.M.A. Mills were keen sellers at the higher levels, and speculators also took fair quantities. However, follow-up business from genuine buyers was lacking, and this caused nervousness to speculators. In the selling that followed on Wednesday, B. twills receded to Rs. 100.40 and hessian 40" 10 oz. to Rs. 39.35. On the next day, the weak trend continued and took down prices to Rs. 99.40 and Rs. 39.05, respectively. On Friday, B. twills lost further to Rs. 99.20, while hessian received fair support to push up the rate of the 40" 10 oz. to Rs. 39.25. However, over the week-end, prices for both the constructions declined to Rs. 98.60 and Rs. 39, respectively, following bear selling. A similar trend was also in evidence yesterday when B. twills reached as low as Rs. 98.25, while the 40" 10 oz. hessian was slightly better at Rs. 39.05.

Earlier in the week raw jute prices rose. But mills were disinclined to support the rise, and as a result prices soon fell. Latest quotations for March-April delivery for the different varieties are:

	Middles Rs.	*Bottoms* Rs.
Pakistan:		
District	31.00	28.00
Northern	30.50	27.50
Indian:		
Northern	27.00	24.50
Assam	27.00	24.50
Orissa	29.00	26.50
Desal	25.75	23.25
Murshidabad	25.00	22.50
Jungli	—	20.50
Daissee	30.50	28.00
Daissee mesta	25.25	22.75
Bimli f.a.q.	Rs. 20.00	
Pucca bales 1st marks	Rs. 157.50 ready.	

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, 25*th March*

Prices of base metals were steady during the week under review. Trade and consumer demand was fair, but consumers preferred to go in for small quantities only in anticipation of a fall in prices. It was noted that Mr. Nehru stated recently that the foreign position having improved, the import policy might be revised. The announcement that the State Trading Corporation would import copper is viewed with concern by market circles, who feel that there is no justification for permitting the S.T.C. to enter the copper trade. There are established importers of copper, who by virtue of their experience are in a position to import copper at competitive prices. It is, however, hoped that larger quotas of base metals would be accorded for import by private traders. Electrolytic copper was quoted at Rs. 175 during the week. Whereas on the London Metal Exchange the forward quotation was higher than the ready, here it was just the reverse, the April shipment being priced at Rs. 152. This feature was due to expectations of a liberal import policy, effective from 1st April. There was only little demand for tin, and the ready metal, at Rs. 515, was lower than in Bombay. Electrolytic zinc was quoted at Rs. 53.75 and lead at Rs. 57.50, with small quantities changing hands in both the metals.

HIDES MOVE UP

(From Our Own Correspondent)

KANPUR, 24*th March*

There was keen demand for upper grade cow and buff during the week under review. In both cases, prices moved upwards. The main purchasers were the local tanners. The country tanners, too, were in the market. The Madras dealers were interested in lighter cow and buff goat. The supply position was easy.

The latest available quotations are: Wet salted cow 1st grade Rs. 385, 2nd grade Rs. 350 and 3rd grade Rs. 300 per score; wet salted buff 1st grade 1 lb. 5 ozs. and 2nd grade 1 lb. 8 ozs. per rupee; goat 1st grade Rs. 350 and 2nd grade Rs. 325 per 100 pieces; sheep 1st grade Rs. 325 and 2nd grade Rs. 300 per 100 pieces.

MIXED TREND IN FOODGRAINS

(From Our Own Correspondent)

HAPUR, 24*th March*

Wheat and coarse grains ruled quiet during the week, while pulses (including gram), peas and others recorded a hardening trend. The Union Food and Agriculture Ministry has claimed that, following various corrective measures taken by the Government, foodgrain prices have recorded a fall since July 1957. Import of foodgrains during 1957 amounted to 3.58 million tons, consisting of 2.84 million tons of wheat and 740,000 tons of rice. Of this, the quantity of wheat received from the U.S.A. was 2.67 million tons and that of rice received from Burma was 476,000 tons.

Wheat at Hapur registered a slight fall to be quoted at Rs. 15.37 per maund for average quality and at Rs. 17 for farm produce. Local stocks with trade are now left at two *khatties* only. The only depressing factor is that large stocks of imported wheat on Government account is being stored here for emergency. Harvesting of wheat here will begin after a week or so.

Rice recorded a steady trend. Prices were: *Basmati* Rs. 28.50 to Rs. 31.75; *mainpuri* Rs. 25; coarse Rs. 21 per maund. The State Government has enforced the U.P. Foodgrain Dealers Licensing Order by virtue of which all dealers having stocks of 100 maunds or more of wheat, barley, *bajra*, *jowar*, rice, paddy, maize or products thereof and all owners having rice mills are required to obtain licences.

Influenced by slightly adverse crop reports from Punjab, gram here recorded an advance of about 25 nP per maund during the week. Maize and *bajra* improved slightly, despite fall in seasonal consumer demand, while good gains were recorded in the prices of *jowar* and *guwar*, due to good demand. The prevailing rates on Monday (in rupees per maund) were: Gram 11 to 11.25; barley 9; *bejhar* 8.75; maize 11.25; *bajra* 11.62; *jowar* 10 to 10.75; *guwar* 14.

STOCK & SHARE QUOTATIONS

Abbreviations :—D. = Deferred shares. P.O. = Preferred Ordinary shares. Y. = Accounts published yearly. H. = Accounts published half-yearly. P. = Company has Preference shares. T. = Company has Debentures N. = Nominal quotations. x.d. = Ex. Dividend. c.d. = Cum. Dividend. i = Interim Dividend. f = Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. † Less income-tax. (z) Clive Mills have paid dividend at Rs. 104 on bonus shares for the year 1955. * Including bonus. (k) Investments.
‡ New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
X—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. ‡'—Bengal Coal Co. Dividend from 1954 to 1956 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

BANKING

(*Concluded from page 566*)

re-enunciation of its autonomy would prove of immense value in ensuring a free and frank expression of thought and suggestion from this controlling institution. With the trends prevailing today, one feels a great need for the same effectual and highly critical review of economic conditions and policies from an august body like the Reserve Bank as used to be forthcoming and so anxiously looked forward to, before the Reserve Bank became a State-owned organisation. What is necessary is the establishment of sound and healthy conventions and assertion of authority by a privileged organisation like the Reserve Bank of India, particularly because, in recent times, through the amendments to the Reserve Bank of India Act and the Banking Companies Act, various wide powers have been vested in this authority. It may be noted, in this connection, that in its review of the *Trend and Progress of Banking in India*, the Reserve Bank remains silent about the policies of the Government as well as the extent to which it was necessary for it to invoke the various wide powers vested in it. The psychological and other effects of these extensive powers and restrictive weapons on the economy of the country deserve to be fairly and impartially brought out in a valuable publication of the Reserve Bank of this nature."

In the light of Mr. Bhabha's observations and with the change in the Union Finance Minister, it is to be hoped that there will be a change for the better in the official attitude towards the central banking institution and that it will be allowed to enjoy, once again, such autonomy as will enable it to guide the Government rather than be guided by the latter.

One of the instances in which the Reserve Bank has failed to exercise its functions properly is, according to Mr.

MARKET GOSSIP

(Concluded from page 559)

negotiations between the Central Government, the Governments of U.P. and Bihar, and the Sugar Syndicate, the price of sugar (D24 quality) agreed to by the Syndicate was Rs. 28-8 per maund, but the price actually adopted by the Syndicate in its price chart was Rs. 28-12 and this was done without the previous sanction of the Sugar Commissioner. The extra As. 4 per maund was charged, according to the explanation given by the Syndicate to the former Tariff Board, with a view to collecting a fund for subsidising exports. A proposal for export of sugar was mooted as late as in June 1949, but it was not found feasible and was consequently dropped. The Syndicate had collected about Rs. 50 lakhs through the extra charge. A reference to this was made by the former Tariff Board in its report on the sugar industry submitted to the Government as early as in January 1950. More than eight years have elapsed since then and it is not known what has happened to the amount of Rs. 50 lakhs and the interest earned thereon. Mr. Maneklal Ujamshi has certainly done well in drawing the attention of the public to this amount. It will be interesting to know as to what the authorities have to say on this point.

In the course of his address, Mr. Ujamshi stated that, in view of increasing production, India could easily export a quantity of about 200,000 tons every year, provided, of course, the heavy loss on exports was shared by the mills, the cane growers and the Government. Incidentally, he estimated the current season's sugar output at less than two million tons. The sugar millowners in the North fear that the output will be lower still, at about 1.8 million tons. This fear is clearly exaggerated. It is true that there has been a large diversion of cane supplies to the manufacture of *khandsari* (and *gur*) following the rise in the prices of this commodity. But the diversion has not been so marked as to result in the production of *khandsari* to aggregate as much as 500,000 tons—the estimate made by some in the U.P. and Bihar—as against the average annual output of 100,000 tons in recent years. Knowledgeable quarters consider that the production of *khandsari* may not be more than 300,000 tons.

It is not correct to say that the crushing operations of sugar mills in U.P. and Bihar have been adversely affected by the upward trend in *khandsari* production. The figures relating to white sugar production in these two States during the first four months of the season reveal that the quantity actually produced was higher as compared with the corresponding period of the previous season, being 659,090 tons in U.P. and 207,642 tons in Bihar, as against 608,525 tons and 203,362 tons, respectively. There is, of course, some force in the sugar millowners' contention that, while crystal sugar is subjected to heavy fiscal burdens amounting to about Rs. 13.19 per maund and high cane price at Re. 1-7 per maund, the *khandsari* sector enjoys the advantage of exemption from payment of taxes and low cane prices, said to be no more than Re. 1 per maund. But this advantage is neutralised to a considerable extent by the highly uneconomic nature of production. As against the average recovery of 10 per cent. obtained by the white sugar factories, the recovery of marketable sugar in the *khandsari* sector is a bare 5 to 5.5 per cent. and, even with improved process of manufacture, the recovery is said to be not more than 7.72 per cent. Despite this wasteful process of sugar manufacture, there is no denying the fact that a large number of cultivators and middlemen, especially in U.P., derive their maintenance from this industry in certain rural areas which are far remote from factories and whose surplus cane finds an outlet in this industry. It is for this reason that the authorities consider that the *khandsari* industry deserves special treatment in so far as taxation is concerned.

In conclusion, it must be said that the apprehension of the *khandsari* factories jeopardising the whole programme of development of white sugar industry seems to be unjustified, or at least quite premature. Surely, *khandsari* production will not touch a level that will offer stiff competition to white sugar, especially when the sugar consuming capacity of the country is expanding. Moreover, the consumption of *khandsari* sugar is rather limited and, although it is available at lower prices than white sugar, the consumer preference is and will always be for white sugar. In view of this fact, as also of the uneconomic and wasteful nature of production, even the Karve Committee on Small-scale and Village Industries has not viewed with favour the development of the *khandsari* industry. The situation, however, needs to be carefully watched. If, on an impartial examination of the position, it is found that the growth of *khandsari* industry is at the expense of white sugar industry, suitable steps must be taken to remedy the situation, for none can deny that, as compared with *khandsari*, conversion of cane into white sugar is a more economic process.

* * * *

In what appears to be an attempt to outbid Sudan, which only a few days ago had cut the export duty on cotton by 33⅓ per cent. and drastically reduced its reserve prices, Egypt has decided to reduce the export duty on its cotton by 1.25*d.* per lb. The revised duty, which came into effect yesterday, is 5.65*d.* per lb. on Karnak and Menoufi and 2.20*d.* per lb. on Giza 30, Ashmouni, etc.

Importers in India have welcomed the news as there is now more scope for them to choose between Sudan and Egypt. Nevertheless, Sudan cotton is still considered cheaper. It is suggested that Egyptian cotton could be made more attractive to Indian buyers, if the 12½ per cent. discount offered to India by Egypt is made applicable to cotton imported under the Indo-Egyptian Agreement signed in New Delhi on the 25th inst. The agreement provides for import of Egyptian cotton for payment in Egyptian pounds, which does not carry any discount.

VOL. XCVI. No. 2455 BOMBAY, 5th APRIL 1958 PRICE: Re. 1.50

TAXATION OF MOTOR VEHICLES

THE essential justice of the motor transport operators' case for tax relief has at last won recognition from the Government at its highest level. For a long time now, nobody has been in any doubt about the need for fiscal relief for road transport. Only, it has taken years of patient and persistent effort on the part of road transport interests to convince the Government and the public that the present level of taxation is too high to permit even a modest expansion in road transport. It is also a tribute to the intellectual honesty of the Ministry of Transport and Communications, headed by Mr. Lal Bahadur Shastri, that the authorities have now conceded the need for an appropriate relief in taxation. Speaking in the Lok Sabha last week, Mr. Raj Bahadur, the Union Minister for Shipping, said: "I think it is high time—I think rather it is already late—that we should consider somehow or other to relieve the burden of taxation on motor vehicles." The level of taxation, he said, *had gone up to this pitch* because the motor vehicles came to be regarded as the "one cow from which we can get as much milk as we could." There *is no denying the fact that the* State Governments have been most unwise in subjecting motor vehicles to a level of taxation which has killed much of the incentive for further development of motor transport. This is true as much of passenger transport as of goods transport.

The root of all trouble with motor transport in this country could be traced to the fact that nothing has been done to correct a climate of opinion in which the lay public as well as certain sections of political opinion have come to regard a motor vehicle as a symbol of luxury. Unless the sociological implications of motor transport are brought home to the people, with particular emphasis on its efficacy as a means of national integration and employment potential, it is extremely unlikely that this climate of opinion will change in favour of either the automobile industry or the operators of road and passenger transport. It is, however, comforting to note that all bodies which set out impartially to investigate the causes of the relatively slow progress of motor transport in this country have inevitably arrived at the conclusion that it is high taxation and the threat of nationalisation that stand in the way of a more rapid development of vehicular transport. Anxious as the State Governments have always been to secure maximum revenue from politically less powerful interests, they have seen in motor vehicles the proverbial milch cow. The result has not been good, whether for the State Governments or for motor transport. In so far as high levels of taxation have impeded rapid development of motor transport, it has meant considerable national setback in the shape of bottlenecks in transport and loss of potential revenue.

There are two aspects to motor vehicle taxation in India. In the first place, it is very high, especially when it is compared with that in countries which could possibly afford a higher level of taxation. Thus, the taxation on a motor vehicle in India is about Rs. 2.070 per motor vehicle per year, as against Rs. 800 in France, Rs. 950 in Austria, Rs. 1,300 in the U.K., Rs. 1,500 in Italy and Rs. 1,200 in West Germany. Secondly, the burden of taxation has increased at a rapid pace in recent years. In 1944-45, it was no more than Rs. 611 per vehicle (including motor cycles). It increased to Rs. 1,115 in 1949-50, and in 1954-55 it rose further to Rs. 1,906. The present rate is perhaps even higher than Rs. 2,070, considering that additional levies have been imposed in some States. The subject of motor vehicles taxation has been studied by many bodies so far—the Motor Vehicles Taxation Enquiry Commission, the Taxation Enquiry Commission and the Study Group of the Planning Commission. All these bodies have felt that the level of taxation should be reduced. The Transport Advisory Council and the conferences of Transport Controllers from the States have also repeatedly stressed that not only the level of taxation should be reduced but a ceiling imposed on this level. The Estimates Committee of Parliament also recommended that efforts should be made to import uniformity into the taxes levied by the States and to bring down the incidence of taxation on motor vehicles. It added: "Now that the States have been reorganised into bigger units, there are more chances of their agreeing to a uniform rate of motor taxation and its realisation by the Centre through a single levy and its distribution to the States in an agreed ratio as in the case of inter-State sales tax."

Massive support to the case for relief in motor vehicles taxation was given by the Tariff Commission when it said: "We recommend that the attention of the State Governments should be drawn to the fact that the degree of expansion in road transport capacity which is essential for the effectual implementation of the second Five-year Plan will not take place unless they co-operate in removing the various factors which are today hampering the demand for commercial vehicles, in particular, the following: (1) inadequate road development and bad conditions of roads; (2) heavy and varying rates of taxation of commercial vehicles; and (3) restrictions on inter-State movement of commercial vehicles." It is noteworthy that Mr. Raj Bahadur, besides emphasising the need for lowering the tax burdens on motor vehicles, indicated that the remedy for the problem of taxation lay in the centralisation of the system and distribution of the tax revenue among the States on the basis of the revenue derived by them at present. It is to be hoped that the State Governments will, in the larger interests of national economy, accept a decision which will help centralise the tax on motor transport and also reduce the burden on it. In the long run, as and when motor transport develops as a result of lower taxation, the States will be enabled to participate in the larger revenue which must accrue from the development of road transport. Any slight loss in revenue from motor taxation which might take place as a result of reduction in tax levels would be a wise investment which would yield rich dividends for the States in future.

The present system of taxation comprises three types: (1) Central tax which consists of customs and excise duties on motor vehicles, tyres, tubes and accessories and on motor spirit, (2) State taxes which consist of a large variety of taxes such as the vehicle tax on passengers and goods, permit fees, cesses on routes, sales tax on motor spirit, motor vehicles, their parts and accessories, and (3) local taxes which consist of wheel tax, tolls and terminal taxes. The general level of all these taxes, it has been computed, amounts to about 20 per cent. of the cost of operation, rising to about 30 per cent. in one or two States. Without commiting himself to any specific quantum of relief in these taxes, Mr. Lal Bahadur Shastri averred: "I cannot conceive any State would, in the present context, think of raising it (the level of taxation) above the Madras ceilings. I also hope before long the principle of double taxation will be completely eliminated between one State and another." It would appear that all the States have now agreed to the principle of elimination of double taxation, except the States of Bombay, Madras and the U.P. It is not clear on what grounds these three States support the principle of double taxation which goes against all accepted canons of taxation.

In any case, without a sizable reduction in taxation, it will be extremely difficult for road transport to fill completely the gap beween the available supply of transport facilities and the demand for such facilities which is bound to develop at an increasingly faster pace in the next few years. It is of the utmost importance that the general principles of inland transport policy which have been accepted by the International Chamber of Commerce should be applied to the transport situation in this country. Among these principles, there is one to which attention needs particularly to be drawn. It is that the user should enjoy unrestricted freedom of choice among the means of transport. This may well be called the charter of rights for those who use transport, an important economic counterpart of the democratic way of life. Indeed, this is the only basis on which a sound transport system in a country can develop. The acceptance of this principle implies that no particular form of transport should be singled out for such penal taxation as will make it difficult for that system to exist and serve the public. Once this principle is accepted, it should be clear that road transport will come into its own, for we have no doubt that, if the road transport is freed from inhibiting restrictions, it will be able to make an effective contribution to India's transport economy.

Estimates about the quantum of vehicular transport that will be needed in this country vary among themselves. Mr. Raj Bahadur stated that, as against the estimated requirement of 120,000 goods vehicles during the remaining three years of the Plan, it had been planned to produce 136,000 vehicles up to the end of 1960-61. Irrespective of whether this is or is not an underestimate, it is noteworthy that the absorption of 120,000 goods vehicles would mean an investment of some Rs. 250 crores. One wonders whether an investment of this magnitude will be possible in the absence of a sizable reduction in taxation. And yet, the fact remains that, in the absence of such investment, road transport would not be able to meet all the demand for it. It is gratifying to note that, as a result of measures adopted recently by the Government, the

credit needs of transport operators are likely to receive the support of financial institutions.

The recent amendments to the Motor Vehicles Act and the setting up of the Inter-State Transport Commission are all steps in the right direction. The threat of nationalisation of goods transport which has hitherto prevented its more rapid development has been temporarily withdrawn. This is due to the farsightedness of Mr. Shastri, who, after emphasising that those who are engaged in goods traffic should know what the Government's policy is going to be in the near future so that the expansion of goods services would not be retarded in any manner, declared that he would like to tell the House that, "with the concurrence of the Planning Commission, it has been decided that the moratorium on nationalisation of goods transport should be extended till the end of the third Five-year Plan period." This announcement will be widely welcomed. Although it is true that the eight-year period which the announcement covers is by no means an unduly long period from the point of view of road transport operators, it should be sufficiently long to make those who are sitting on the fence to come down into the road transport field.

IMPORTANCE OF ENGLISH

WITH every passing day, the demand for the continuance of English is gaining more and more support. Besides being an international language and possessing a rich literature, the English language holds the key to vast stores of technical knowledge. It is this factor which makes it imperative that India should not give up English, which it has learnt for decades, in favour of any other comparatively underdeveloped Indian language. The demand for the retention of English as the Union official language deserves utmost consideration by the Government of India on grounds of both convenience and national necessity. It seems vital that this country should continue to use English at the highest levels of education, administration and the judiciary. It is deplorable that, at a time when most countries in the world are beginning to appreciate the value of English, both as a language and as a literature, India alone should allow its standards of English education to decline. There is no doubt that such a decline has taken place. That it has taken place without any corresponding increase in other spheres of educational attainments is a matter which must cause much concern to all sections of opinion.

There is a widespread feeling in this country that, in matters of language policy and educational administration, the Government is trying to do too much in too short a time. The replacement of English as a language of administration in the States, the unwise, however understandable, efforts at the substitution of regional languages in place of English as a medium of instruction in schools and colleges, and the institution of the basic system of education at the elementary school level are only a few of the experiments which are being tried without realising what each such transformation will mean to the pupils and the people at large. If these experiments are pushed through regardless of consequences, there is no doubt that the country will be in for a period of educational and administrative anarchy. It must cost the country heavily in the shape of all-round decline in national standards. There is nothing derogatory to India's national dignity that some of our languages are underdeveloped as compared with the languages of the West. Just as an underdeveloped economy has potentialities for development so the underdeveloped languages also have the potential for development. Only it takes many more years to develop a nation's language than to develop its economy. Historically, the English language came to this country at the instance of Indians themselves. Many eminent Indian leaders saw in English a language which would bring the benefit of science and technology to this country and help break up the medieval complex in which India then found itself. This historical process has not yet been completed. It will, therefore, be good for this country to retain English for a much longer period than is conceded by the Constitution. It may be remembered that it took decades for English to become part of India's intellectual apparatus. The question is whether it is right that English should be replaced at a time when other important questions demand the country's serious attention.

Those who think that the replacement of English could be accomplished overnight are inviting serious disappointment which must cause widespread resentment and despair. The replacement of English is bound to give rise to needless irritation, throw the executive and the judicial machinery into disrepair, and ultimately strengthen the already strong fissiparous tendencies in this country. English has served the country well in times of its deepest crises. There is no reason why it should fail us in the years to come. To relegate all other important national issues to the background and concentrate on the dislodging of English argues a peculiar want of wisdom, a disproportionate emphasis on false national pride. It is the height of folly to throw away a rich language in favour of a language of untested possibilities like Hindi. The best course is to allow the use of English beyond the period now stipulated by the Constitution. Mr. C. Rajagopalachari who has been campaigning for the retention of English as the Union language has rightly warned that its replacement will endanger the unity of this country. The West Bengal Chief Minister, Dr. B. C. Roy, declared the other day that, even if Hindi was to be accepted as the official language of the Union, it should be adequately developed and, until such time as this was done, Parliament should by law provide for the continuance of English as the official language; there should be no fixed time limit in this regard. This seems to be a sensible decision to adopt.

The case for the retention of English in higher education is even stronger than the case for its retention as a language of administration. Speaking on the importance of English, Mr. C. D. Deshmukh, the Chairman of the University Grants Commission, had some sage observations to make. Mr. Deshmukh who has imbibed, as is well known, all that is best in Indian thought and tradition cannot certainly be accused of any want of sympathy for the cause of an Indian language. Inaugurating a conference on "Problems of Teaching English" at New Delhi, Mr. Deshmukh said: "The development of our minds will be impossible without extensive and reinforced resort to one of the most advanced languages of the world, namely, English which opens the door to us of at least two-thirds of the current scientific and technical literature and *belles-lettres*. In this rapidly shrinking world of ours, intellectual and spiritual development must increasingly be a co-operative endeavour from which no nation, however gifted it fancies itself to be, can afford to remain aloof." The point which seems to have been overlooked in the present tirade against English is that it could play a special role in linguistic training. The genius of Indian languages consists in a certain ornateness, a certain over-elaboration. English, by its very nature, could be a valuable corrective to any lopsided intellectual development which must take place through excessive reliance on Indian languages.

Further, the fact that Indian languages do not at present possess adequate text-books in advanced subjects has not been given the consideration which it deserves. It is true that dictionaries are being compiled in order that this basic deficiency in Indian languages could be made up through translation of foreign words into appropriate Indian equivalents. We are afraid that this experiment does not take into account the fact that a language cannot be made to order. It cannot be produced in a philological factory. No amount of ingenuity on the part of lexicographers can create a language. A word, like a coin, acquires value through usage. And usage cannot be enforced by coining words. By striving to stimulate linguistic development through philological experiments, the Government is trying to achieve a result which is without any significant parallel or a precedent in world linguistic history.

IRRIGATION WATER

THE Union Minister for Irrigation and Power, Mr. S. K. Patil, revealed in Parliament last week that, although his Ministry had created additional irrigational potential to the tune of 6.5 million acres, actual utilisation of irrigation water was confined only to 4 million acres. It had been known for some time past that the utilisation of irrigation water was not keeping pace with the implementation of irrigation projects. Even so, not many may have realised how large was the gap between the irrigation potential created and its utilisation. Mr. Patil, in the course of a characteristically fighting speech, full of punch, humour and some bitter irony, hit out at the lapses on the part of the Ministries and Departments. He called attention to the fact that as many as five authorities are concerned in irrigation of land—the Planning Commission, the Ministry of Irrigation and Power, the Ministry of Food and Agriculture, State Agricultural Ministries and the Community Project Administration. He said: "Between all these five, sometimes there are lapses, there are omissions and sometimes loose ends are not tied together. ... For the larger good of agricultural production and food production, we must streamline and co-ordinate the activities of these five Ministries and authorities so that they will work like one machine and ultimately produce results."

Clearly, there is need for co-ordinated direction at the top. But it would be somewhat of an oversimplification of an admittedly complex problem to argue that mere co-ordination could immediately produce results. There must be a healthy awareness on the part of the authorities and at all levels of administration of the utter futility and waste involved in any delay in the utilisation of irrigation water. For such delay means not only that the huge capital investment in irrigation works remains idle but also a consequent loss of agricultural production which compels the country to import additional foodgrains at a heavy cost. In recent months, Mr. Nehru has repeatedly stressed that it is wasteful to spend large sums of money and fail to derive full benefit from such expenditure. It is perhaps no minor agricultural tragedy that the major irrigation works which are large consumers of domestic resources and foreign exchange reserves should have failed to make a significant difference to India's agricultural economy.

The complex issues which are involved in the utilisation of irrigation water were neatly summed up by the Foodgrains Enquiry Committee. Briefly, irrigation water is not utilised as fully as it should be, because water rates are high. Secondly, even if the major irrigation works are completed, subsidiary channels are not always ready to take the new supply of water. Thirdly, the conversion of dry to wet land cannot be attempted without fresh investments which the farmers are not always capable of undertaking on their own. It is not known whether the Committee's suggestion for appropriate reliefs in water rates has been considered by the State Governments. Some relief in the early years following the construction of a major irrigation project will go a long way towards inducing the farmers to use the water made available. Again, credit needs of the farmers in regions covered by the major irrigation projects must claim the special attention of the credit authorities. A far more intractable issue would appear to be waterlogging. How immense this problem is will be clear from the fact that, in Punjab alone, waterlogging has rendered some two million acres of irrigated land unsuitable for cultivation. This is a challenge to the country's agricultural engineers.

Efforts should, therefore, be made to see how best the demand for irrigation water can be stimulated as soon as the necessary supply has been created. At the same time, the authorities cannot afford to relax their efforts on the minor irrigation front. It has become abundantly clear that minor irrigation works yield quicker results. They are also less heavy consumers of foreign exchange resources. Indeed, the Foodgrains Enquiry Committee has estimated that, whereas only 50 per cent. of the additional production target of 3.02 million tons set under the second Plan as a result of major irrigation schemes will be achieved, it will be possible to achieve nearly 95 per cent. of the production target of 1.89 million tons from minor irrigation schemes. The Committee says: "While we do not advocate any diminution in the allocation to major irrigation, we recommend that a careful examination should be made of all major irrigation schemes and, if there is likely to be a shortfall for any region from the target of expenditure on them, the funds that may remain unspent should be reallocated to minor irrigation which promises quicker results." This is a suggestion which is well worth study by the Central and State Governments.

SHARE MARKET PICKS UP STRENGTH

COMPANY REGISTRATIONS—SPURT IN COPPER—A NEW ISSUE

WEDNESDAY, 5 P.M.

THE share market is in a cheerful mood. Almost all counters have staged a rise in values. The gain is quite substantial especially in scrips of companies which either depend largely on imports of raw materials for manufacturing purposes or deal in distributing the same to indigenous industries. Operators have welcomed New Delhi's move to ease the bottleneck of raw materials shortage which is impeding production. The latest import policy—that covering the six months ending September 1958—announced the other day, provides for some additional foreign exchange ceiling for industrial raw materials, other accessories and textile spare parts. The liberalisation of imports, albeit limited, relaxation of deferred payment conditions for purchases of essential goods from the U.S. to be financed out of the $150-million loan from the Export-Import Bank, and hopes of fresh American aid based on the efforts of some U.S. Senators to urge the Government to make a long-term economic aid pledge to India brought about a change in the market sentiment and lifted up prices.

MARKET GOSSIP

It is, of course, difficult to say as to how long the present upward trend of the market will continue. For this depends on the hold of the bulls who now seem to be sitting rather tight. Meanwhile, the attention of operators is focussed on the possible changes in new restrictions on the use of development rebate in the Select Committee.

• • • •

Do the commendable measures adopted recently by the Government, like the suspension of the compulsory deposit scheme, the reduction in excise duty on cloth and the extension of the period of moratorium on nationalisation of goods transport add up to a significant change in Government's economic policy? Do they imply that the Government is willing to see the economic reason in the many ably argued memoranda on fiscal and economic issues submitted by trade bodies? It is very much to be hoped that the Government is becoming slowly—even if painfully slowly—aware of the genuine stresses and strains to which the economy has become subject, not as a result of any international recession, but as a consequence of the Government's own unhelpful measures. In any case, from two entirely unrelated sources came, last week, a genuine reference to the Government's flexible economic thinking. Addressing the annual meeting of the Central Bank of India Ltd., the Chairman, Mr. H. P. Mody, pointed out that, in the last few months, there had been, on the Government's part, a "greater responsiveness to informed criticism" and went on to emphasise that he would earnestly urge the need for a closer understanding between the Government and the business community. Again, the Governor of the Reserve Bank, Mr. H. V. R. Iengar, although he was understandably neutral on the fiscal issues raised by the Chairman of the Madras Chamber of Commerce which he addressed, pointed to the need on the part of the authorities for "a flexible rather than a rigid or doctrinaire approach." He added: "I think signs of such flexibility are not wanting."

Mr. Iengar felt that there was no justification for taking a gloomy view of India's economic performance. In this connection, he called attention to two salient features of India's economy. In the first place, since 1952-53, although the money supply with the public increased by over 30 per cent., the wholesale price level has shown an increase of only about 5 per cent. He said: "This is a performance which I know several other countries would regard with a certain degree of envy and it has happened in spite of the fact that increase in money supply has to a considerable extent been caused by the central bank credit to the Government." Secondly, there has been a sizable increase in industrial production and also many new lines of manufacture have been established. Despite these two welcome manifestations of what may well be a genuine vigour in the body-economic, it cannot be disputed that there are unmistakable signs of weakness in several sectors of our economy. As against the increase in industrial production must be set down the depressing state of our markets. Over the year ended 15th March 1958, the index number of wholesale prices (base 1952-53=100) has no doubt been well held at 105.5. But, over the same period, the index number of security prices (base 1949-50=100) has declined from 111.5 to 96.8. Again, as Mr. Iengar himself recognised, the rate of increase in industrial production has declined perceptibly. Thus, such increase was only of the order of 3.2 per cent. in 1957, as against an increase of 8.6 per cent. in 1956, 8.1 per cent. in 1955 and 6.7 per cent. in 1954. Is the economy showing signs of exhaustion? If the answer is "yes," what will happen to the country before it passes the next three milestones of the second Five-year Plan?

Mr. Iengar, the able diagnostician, placed his finger on the right spot when he referred to the continuing race between the growth in population and economic development. He pointed out how India's birth rate had fallen from 33.7 per thousand during the decade 1929-30 to 25.7 per thousand and death rate had fallen still faster from 25.3 to 13.1. Recent statistical examination, he said, showed that the rate of growth of population would be as much as 1.75 per cent. or even 2 per cent., as against 1.25 per cent. assumed by the Planning Commission. The estimated population of the country by 1960-61 is likely to be over 408 million. Referring to this prospect, he said: "An extra 50 million in the period of one decade, almost the whole population of Great Britain or Western Germany; that is the magnitude of the demographic pressure operating on the country's economy." The impact of this pressure is becoming more and more evident with every passing year. For one thing, the targets of food production have had to be continuously raised and, in the event of any failure to touch the targets, imports have had to be arranged. In this race, it looks as though it is the population that has won. Clearly, if the country must leave its population behind in its race for prosperity, it must double up its speed.

Nevertheless, one may doubt whether it is necessary for the Government to engage itself in a different kind of race which is likely to prove too strenuous an exercise. Nobody disputes that the country's economy must run faster. But there is a limit beyond which it is unsafe to increase the speed. As Mr. Mody put it, "it is simply not possible to run too far ahead of the resources of the nation." He rightly suggested that "those who are confronted with the task of transforming our age-old economy cannot brush aside financial considerations and cannot go on indefinitely imposing a strain on the economy which it cannot bear." Surely, in the economic, as in the physical sphere, it is folly not to know how fast or how far one may run without inviting breakdown.

• • • •

A fairly reliable index of an economy in the process of growth and development is the number of new corporate enterprises that come into existence year after year. When this standard is applied, it is deplorable, though not perhaps surprising, to note that there has been a decline in company registrations in recent years. According to the *Annual Report on the Working and Administration of the Companies Act*, issued by the Department of Company Law Administration, Ministry of Commerce and Industry, Government of India, the number of public companies registered in 1953-54 was 204 with an authorised capital of Rs. 22.9 crores. The number increased to 211 in 1954-55 with an authorised capital of Rs. 169.5 crores. In 1955-56, the number declined to 186, the total authorised capital being Rs. 67.9 crores. In 1956-57, the number declined by more than 50 per cent. to 84, the authorised capital being Rs. 54.1 crores. The picture is somewhat different if one considers the growth of private companies. In 1953-54, 939 private companies were registered with an authorised capital of Rs. 132.4 crores. In 1954-55, 992 private companies were registered with a total authorised capital of Rs. 56.4 crores. In the following two years, viz., 1956 and 1957, the number of private companies was 1,262, and 764 and the total authorised capital Rs. 89.12 crores and Rs. 156.5 crores, respectively. Explaining the decline in the number of companies registered, the report observes:

"Exaggerated apprehensions about the provisions of the new Companies Act may have led to a rush of registrations during the last quarter of 1955-56, just before the enforcement of the new Companies Act. This naturally affected the number of subsequent registrations. Company promoters and others interested in corporate activities may have also wanted fully to understand the ramifications and implications of the new Company Law before forming companies under the present Act. Further, the limit set on the number of companies with which a managing agent or a director could remain associated may have also partially encouraged the recent tendency to set up new departments of existing companies rather than incorporate new companies."

These factors may have had their shares in the decline in the number of public companies registered in 1957. But the most important factor is undoubtedly the unfavourable, if not positively hostile, economic climate which has come to prevail in the last two or three years It has served to dry up savings, dampened initiative and prevented prospective sponsors of corporate enterprises from coming to the market with proposals for public participation in their ventures.

• • • •

The copper market has reacted bullishly to the import policy for the current half-year (April-September 1958) announced on Monday this week. The policy imposes a total ban on imports of copper scrap by established traders; only actual users will be given licences. The ban has given rise to apprehensions of shortage in supplies of copper which are already said to be scarce. Even the Government's disclosure that a small foreign exchange provision has been made for the issue of a few additional licences for import of non-ferrous metals in view of the reported shortages and the assurance that the question of granting advance actual user licences for the ensuing half-year (October 1958-March 1959) will be considered to enable them to make advance purchases and arrange shipment during the beginning of this period would appear to have had no effect. This is presumably because the quantity of copper scrap actually available for consumption will influence greatly the overall supply position of copper and, since the import of scrap by established traders is prohibited, it is felt that the rate of arrivals of scrap from abroad will be very much lower than that hitherto, namely, about 43,000 tons yearly. This view is based on the fact that, as many actual users are small-scale manufacturers, imports of copper scrap in small lots are somewhat difficult.

The restrictions on imports of copper scrap, coupled with strong advices from London which suggested a rise in copper prices on the Metal Exchange induced by replacement purchases following cut in Bank rate and upward revision in price by 0.5 cent to 23.50 cent per lb. by custom smelters in the local market. Consequently, prices have recorded a sharp advance. Electrolytic copper (ingots) for April shipment has spurted from Rs. 162 per cwt. before the import policy was announced to Rs. 168.50 after the announcement. March shipment has risen by Rs. 5.50 to Rs. 172.50 and ready delivery from Rs. 176 to Rs. 177. There would have been a more marked rise in prices but for two important factors. First, there are rumours of the Government of India contemplating to take some measures designed to ensure supplies of copper to utensils manufacturers at reasonable prices. It is, for instance, considered very likely that the State Trading Corporation which has recently been granted licences for the import of copper will be permitted to distribute the same among consumers. Secondly, a number of steamers carrying fire refined copper are expected in the next two weeks.

• • • •

India's engineering industry has a bright future before it, considering that it can count upon not only a growing domestic demand for its products but also a ready market for them in neighbouring countries. Among the engineering firms which have established a reputation for quality goods is Greaves Cotton and Company Ltd., which has now decided to invite fresh capital from the public. Twelve days from now—on Monday the 14th inst. —will open the subscription list of the new issue of the Company, the details of which are given on pages 646-648. It will be seen therefrom that the issue will consist of 46,600 equity shares of Rs. 100 each fully paid at par, Rs. 50 payable on application and Rs. 50 on allotment. Of these, the existing shareholders have agreed to take up 11,600 shares at par, the balance of 35,000 shares being offered for public subscription. Applications for shares must be for a minimum of five shares or for multiples of five shares.

The object of the new issue is to enable the Company to participate in the expansion programme of its associated company, Crompton Parkinson (Works) Private Ltd., by making a further investment of Rs. 50 lakhs. The latter Company, as is well known, is one of the leading firms manufacturing electrical equipment in India which includes fans, motors, transformers and switchgears. With the investment of Rs. 50 lakhs by Greaves Cotton and Company, its holding in the aforesaid associated Company will increase to 50 per cent., thereby achieving parity with Crompton Parkinson Ltd., London, and will finance the expansion of the second new factory at Kanjur, Greater Bombay. The additional investment by the British Company has served to cover the foreign exchange necessary for all the new machinery and import licences already received. The construction of the factory is already nearing completion and it is expected to commence effective operation before the end of this year. With the substantial rise in the Works' production resulting from the new factory, the turnover of Greaves Cotton and Company Ltd. will expand markedly in the next few years. In the meantime, the Company has negotiated substantial orders for heavy machinery on deferred-term basis on lines approved by the Government, as also enlarged distribution in lines manufactured in India both by its subsidiary and associated companies and by independent manufacturing firms with which connections have been established. In view of all these, one can hope for larger yield on the Company's investment.

The paid-up capital of Greaves Cotton and Company Ltd. is Rs. 138.40 lakhs. Of this, 5 per cent. cumulative preference shares of Rs. 100 each account for Rs. 25 lakhs, 6 per cent. cumulative redeemable second preference shares of Rs. 100 each for Rs. 25 lakhs and equity shares of Rs. 100 each for Rs. 88.40 lakhs. The Company has no debentures or other loan capital outstanding. The turnover of the Company during the year ended March 1957 aggregated over Rs. 3.65 crores. The profit after charging normal depreciation but before providing for taxation was Rs. 21.86 lakhs. A dividend of 7 per cent. was paid on ordinary shares in that year. The net assets of the Company as at 31st March 1957 amounted to Rs. 1,75,22,264.

• • • •

In the context of the serious foreign exchange position confronting the country, the accent of trade policy should naturally be on the need for stepping up exports. Although this aspect has been repeatedly stressed as the one positive solution to the problem of adverse balance of payments, the action actually taken in the field of export promotion is limited. As we had occasion to point out recently, the measures so far adopted have been of a halting nature and, what is worse, not all of them of the right type. This is, indeed, unfortunate, considering that many countries in the world, especially on the Continent, have spared no efforts to stimulate the export trade. It will be interesting to note here a new scheme for augmenting exports evolved by the West German Government. The Ministry of Federal Property has drafted a Bill which seeks to set up an additional revolving fund of DM. 250 million (about £21.25 million) for the long-term financing of German export orders. Credit will in the main be for periods of two to four years and they will combine with the credit facilities of the Frankfurt Export Credit Bank in order to lengthen the credit terms from the present 4-5 years up to 8-10 years. The fund will be constituted out of the money made available from interest and amortisation accruing from the counterpart funds of the former Marshall Aid.

EQUITIES RULE FIRM

SPURT IN TEXTILES

(From Our Own Correspondents)

BOMBAY, *2nd April*

THE Stock Exchange had only three trading sessions during the week under review, since it was closed on two days. This brief period witnessed handsome gains in equities. The main influencing factor was the import policy for the current half-year, announced by the Government of India on Monday. Liberalisation of imports of raw materials for industries and other accessories, enhanced quotas for textile spare parts and further restrictions on imports of several consumer goods were all interpreted very favourably. It was felt that the indigenous industries would be able to maintain higher levels of output, thereby increasing their earnings. Another helpful factor was that the rumour of a levy of fresh excise duties on steel, rayon, paper, etc., did not materialise. Prospects of further aid from the U.S. and encouraging advices from Calcutta also imparted strength. There were, of course, occasional profit-taking sales which erased a part of the gains. Nevertheless, the closing rates yesterday were substantially higher than those at the end of Thursday last.

In the steel section, Tata Ordinaries opened the week firm at Rs. 179, as against Rs. 178.50 and improved to touch a high of Rs. 183 yesterday. At the close, however, it was a shade lower at Rs. 182.50. Indian Irons opened at Rs. 21.16 and, after advancing to Rs. 21.68 yesterday, finished a shade easy at Rs. 21.56.

The textile section provided a bright spot, with a spurt in prices. Centurys firmed up by Rs. 12.00 to Rs. 438. Kohinoors advanced by Rs. 4.50 to Rs. 286 and Central Indias by Rs. 3.50 to Rs. 93. Bombay Dyeings improved from Rs. 55.60 last week-end to Rs. 57.00 yesterday before closing a shade lower at Rs. 56.40. Gokaks were marked up by Rs. 5 at Rs. 158. Finlays changed hands at Rs. 282.50, as against Rs. 281.00 on Thursday. Morarjis strengthened by Rs. 6.50 to Rs. 212.50. Sreenivas were bought a rupee higher at Rs. 149. Tata Mills were a shade better at Rs. 42.50. Simplex were fully maintained at Rs. 159.50. Swans, however, came in for selling and shed Rs. 7 to Rs. 353. Khataus eased by Re. 1.50 to Rs. 159 and New Greats by Rs. 2.50 to Rs. 205.

In the bank section, Barodas were higher by 25 nP at Rs. 111.50, Centrals advanced by Re. 1.00 to Rs. 52.00, Centrals (New) rose by a like amount to Rs. 53.50. Punjab Nationals improved by 70 nP to Rs. 53, Unions by 12 nP to Rs. 8.48 (*ex-div.*) and United Commercials by 80 nP to Rs. 61.00.

Among insurance shares, New Indias and New Greats received good investment support. The former hardened by Re. 1.50 to Rs. 44 and the latter by Re. 1.44 to Rs. 18.88. Jupiters, however, encountered selling and declined by 52 nP to Rs. 7.56.

Sugar shares were well favoured. Belapurs opened the week at Rs. 240 and increased to Rs. 241.50 but wound up the week lower at Rs. 240.50. Bhopals gathered 20 nP to Rs. 22. Phaltans rallied by Rs. 2 to Rs. 141.50. Walchandnagars spurted by Rs. 8.25 to Rs. 291.25.

In the electricity section, Ahmedabad Electrics elicited good enquiries and hardened by Re. 1.60 to Rs. 96.30. Bombay Suburbans fetched Rs. 4 more, yesterday's closing rate being Rs. 108. Tata Hydros moved up from Rs. 115.25 to Rs. 117.00. Tata Powers forged ahead by Rs. 47.75 to Rs. 1,181.25. Surat Electrics found buyers 50 nP higher at Rs. 106. Broach Electrics were maintained at Rs. 7.52. Poona Electrics, however, eased by 50 nP to Rs. 119.50.

Cement shares were better. Associated Cements crept up from Rs. 150.50 to Rs. 152.75, although it closed fractionally lower at Rs. 152.25. Digvijays were higher by 75 nP at Rs. 143.75 and Orissas by 4 nP at Rs. 12.52.

In the engineering section, Alcock Ashdowns made a strident advance of Rs. 30 to Rs. 282.50 on expectations that, in view of the good performance of the Company, last year's cut in dividend from 17.5 per cent. to 15 per cent. would be restored this year. Tata Locomotives made a further gain of Rs. 2.75 to Rs. 159.25. Premier Constructions changed hands Rs. 5 higher at Rs. 174.25. Mahindras gathered 3 nP to close at Rs. 19.32. Larsen and Toubros were fully steady at Rs. 14.20. Among mining shares, Shivrajpurs improved by Rs. 2.50 to Rs. 99.50 and Indian Coppers by 12 nP to Rs. 3.32.

Automobile shares recorded modest gains. Premier Automobiles put on Rs. 2 to Rs. 86.50 and Hindustan Motors 20 nP to Rs. 7.32. In the shipping group, Scindias and Great Easterns rose by 20 nP and 8 nP to Rs. 17.16 and Rs. 20.28 respectively. India Steamships were quoted 24 nP higher at Rs. 11.08.

Among miscellaneous industrials, Bombay Burmahs firmed up from Rs. 539.50 on Thursday last to Rs. 555 yesterday, but the closing was a shade easy at Rs. 552, showing a net gain of Rs. 12.50 over the week. Tata Chemicals improved by 72 nP to Rs. 14.36 and Tata Oils by Re. 1.25 to Rs. 40.25. Hindustan Levers gathered 20 nP to Rs. 23.48.

• • • • •

Madras Stock Exchange

MADRAS, *1st April*

Barring textile shares which ruled easy, a steady trend prevailed on the Madras Stock Exchange during the week under review. There was continued support for plantation shares, although in the closing sessions of the week, higher price levels attracted some profit-taking which led to a slight decline. Rubber shares were specially well favoured, thanks to expectations of an early upward revision in the controlled price of rubber. Textiles, as already stated, ruled easy. Buying enthusiasm was at a low ebb, owing to persistent disquieting reports of heavy accumulations of yarn stocks with several mills and cut of 25 per cent. in power supply in the South Madras area with effect from today.

Among rubber shares in the planting section, Midlands attracted good attention of operators and rallied Re. 1.12 to Rs. 16.12. Rajagiris spurted by a rupee to Rs. 15.50 and Highlands by 40 nP to Rs. 13.50. T.R. & Ts and Malankaras improved by 25 nP each to Rs. 7.15 and Rs. 16.25, respectively. Nenmenys gained a like amount to Rs. 15.75. Nelliampathys and Kailas rose by 15 nP each, the former to Rs. 3 and the latter to Rs. 4.20. Pullangodes were better by 10 nP at Rs. 1.80. Despite the cut in dividend to 6 per cent. for the year ended 31st December 1957, as against 7½ per cent. in the previous year, Gokul Rubbers put on 5 nP to Re. 1.60. Puthutottams were a shade better at Rs. 2.85. Mercaras, however, dropped 55 nP to Rs. 6.70. Among coffee shares, Coffee Lands gained 15 nP to Rs. 32.65. But Consolidated Coffees lost 20 nP to Rs. 23.75. Among tea shares, Peermades improved by 50 nP to Rs. 22. Neelamalais increased by 12 nP to Rs. 4.97. Blue Mountains gathered 5 nP to Rs. 3.20. Devasholas, however, declined by 75 nP to Rs. 18.40. Parksides receded by 45 nP to Rs. 16.80. Chembras eased by 7 nP to Rs. 3.63. Periakaramalais were a shade quiet at Rs. 4.08.

In the textile section, Ramakrishnas were hammered down by Rs. 15 to Rs. 175. Coimbatore Cottons slumped by Rs. 10 to Rs. 153. Dhanalakshmis dropped a like amount to Rs. 177 and Coimbatore Spinnings Rs. 3 to Rs. 58. Lakshmis eased by Rs. 2.25 to Rs. 112.75, Bangalore Woollens by Rs. 2 to Rs. 171, Rajalakshmis by Re. 1.50 to Rs. 72.50 and Ranga Vilas by a rupee to Rs. 64. Travancore Rayons shed 25 nP to Rs. 13.45, reflecting traders' disappointment over the continuation of the dividend at 10 per cent. for the year ended 31st December 1957, same as last year. Radhakrishnas, on the other hand, evoked special support and went up by Rs. 4 to Rs. 124. Buckinghams were higher by Re. 1.25 at Rs. 168.25.

U.S. AID TO PRIVATE SECTOR PROJECTS

The Export-Import Bank of the United States has agreed to make available to the Government of India a credit in dollars for purchases to be made in the U.S.A. for industrial projects in the private sector. These include engineering industry, chemical industry, cotton textile industry, automobile industry, and coal mining industry. As a result, it will now be possible for the Government of India to issue import licences without any conditions regarding deferred payments for projects which the Government of India consider to be of sufficient importance for financing out of this credit. In order to obtain Government's approval in principle to the inclusion of any project under this credit, the parties concerned should apply to the following authorities respectively, for the industrial groups named above.

Industrial Adviser (Engineering), Development Wing, Udyog Bhavan, New Delhi.

Industrial Adviser (Chemicals), Development Wing, Udyog Bhavan, New Delhi.

Textile Commissioner, Bombay.

Industrial Adviser (Engineering), Development Wing, Udyog Bhavan, New Delhi.

The Coal Commissioner, Calcutta.

In each case, a copy of the communication should be sent to the Deputy Economic Adviser in the Ministry of Commerce and Industry, New Delhi. The applicants should give (*a*) details of Industries Act licences held by the party, or of any other authorisation given by Government; (*b*) the total estimated f.o.b. value of the equipment to be purchased in the U.S.A. and the estimated cost of insurance and freight separately; (*c*) whether any part of the equipment for the completion of the project has already been installed or covered by import licence; and/or has to be purchased outside the U.S.A.; (details, particularly values, should be given); (*d*) date by which shipments are expected to be completed; (*e*) the value of output to be achieved from the project and the annual value of raw materials and/or components to be imported; and (*f*) whether arrangements for rupee finance not only to meet the cost of the imported equipment but also for local expenditure have been made.

The equipment referred to above includes not only the plant and machinery but also any constructional material required for completing the project including steel for structures, earthmoving equipment, electric fittings, essential supplies of spares that may be necessary as an initial reserve to start the operations, etc., which may need to be imported. In other words, the picture should be as complete as possible and include all items that would need to be imported in order to start production other than raw materials with an indication of the likely source of supply in each case. It should be understood that, in all cases, normal import licensing restrictions will be applicable and goods and equipment indigenously available in adequate quantities will not be allowed for importation.

NEWS IN BRIEF

THE Indian Airlines Corporation resumed the Srinagar-Pathankot and Srinagar-Leh services on the 1st inst. and 3rd inst., respectively.

A proposal for the bulk sale of manganese ore to the United States against import of wheat is under the consideration of the Government of India.

Canada has offered to India wheat worth $8 million under the $15-million programme of wheat gift to three Colombo Plan countries, India, Pakistan and Ceylon.

The Government of India has decided to allow drawback of duty paid on the imported silver used in the manufacture of silver jewellery or silverware exported. The drawback will be at the rate of 50 nP per ounce of on silver contained in the goods for export.

A Bill seeking to exempt the mining leases for coal granted before 25th October 1949 from certain provisions of the Mines and Minerals (Regulation and Development) Act 1957 was introduced in the Lok Sabha on 29th March by the Minister for Steel, Mines and Fuel.

The Union Government has decided to continue the rate of interest payable during the financial year 1958-59 on deposits and balances to the credit of subscribers to the general provident fund and other similar fourteen funds at 3.75 per cent.

The Central Ministry of Rehabilitation paid a sum of Rs. 28.35 crores as compensation to displaced claimants from West Pakistan during 1957. Of this sum, Rs. 14.70 crores were paid in cash, over Rs. 9 crores by transfer of property and Rs. 4.58 crores by adjustment of public dues.

An agreement is reported to have been reached between the Kerala Government and the Gwalior Rayon Silk Manufacturing (Weaving) Co., Ltd. for the establishment of a wood-pulp (rayon grade) plant in the Nilambur Baipur area of the State. The proposed plant will entail an outlay of Rs. 9 crores and will be set up in collaboration with a German firm which will act as technical consultants.

A Bill seeking to enact a comprehensive law on the subject of trade and merchandise marks was introduced in the Lok Sabha by the Union Finance Minister on 28th March. The Bill will amend the Trade Marks Act (1940) and the Merchandise Marks Act (1889), besides incorporating provisions relating to trade marks contained in the Indian Penal Code.

The newly constructed Rs. 18-lakh industrial estate at Indore to house small-scale industries was declared open by Mr. Morarji Desai, Union Finance Minister, on 30th March. This is the first to be constructed under a scheme of establishing 16 industrial estates in Madhya Pradesh envisaged in the second Five-year Plan at a total cost of Rs. 85 lakhs.

The Government of India has under consideration a scheme to establish a dredger-*cum*-survey launch pool consisting of two cutter-section dredgers, one ladder-bucket dredger, 15 survey launches and attendant craft. It is estimated that the total cost mainly for outer harbour dredging of minor ports will amount to Rs. 214 lakhs. The dredgers are to be based at Kandla, Bombay and Visakhapatnam.

Negotiations are in progress with certain countries for the sale of further substantial quanties of 58/60 and 60/62 grades of iron-ore, according to the Union Minister for Commerce. Substantial quantities of low grade iron ore are reported to be available near the Redi Port in Bombay State. Between June 1957 and April 1958, the State Trading Corporation has sold 120,000 tons of 60/62 grade ore for shipment from Redi Port to Japan.

Under the Indo-Egyptian Trade Pact signed between the representatives of the two countries, export and imports of goods other than tea, jute and cotton will continue to be paid for in Indian rupees. In order to provide banking facilities to Indian exporters of tea and jute goods and to Indian importers of Egyptian cotton, the State Bank of India will open an export account in Egyptian pounds with the National Bank of Egypt.

The Union Government has under consideration a series of schemes for the expansion of the telegraph services with other countries. The schemes include establishment of direct wireless telegraph services to Czechoslovakia, Ethiopia, Germany, Saudi Arabia and Iraq, direct radio phone services to Afghanistan and Czechoslovakia, a leased teleprinter radio-telegraph channel between Bombay and Paris, and a direct radio-photo service to Czechoslovakia.

The Government of India has granted recognition to the East India Jute and Hessian Exchange Ltd., Calcutta, under the Forward Contracts (Regulation) Act, 1952, for conducting futures trading in jute and jute goods for a period of three years. Forward trading in jute and jute goods except to the extent and in the manner specified above will accordingly be illegal. These arrangements have been brought into effect from 25th March 1958 and necessary notifications in this regard have been issued in the *Gazette of India*.

The rules governing grant of exemption from payment of income-tax to non-Indian nationals in respect of home leave passages have been withdrawn with effect from the 1st inst. The exemptions had been given subject to certain conditions and its operation was found to have increased unduly the administrative work. The free or concessional passages which can qualify for exemption under the statutory provisions are only those given by an employer in India to his foreign employee, his wife and children in connection with the employee's home leave outside India.

The Union Government has set up a Wage Board for the cement industry with Mr. M. R. Meher, I.C.S., President of the Industrial Court, Bombay, as Chairman. The other members of the Board are: Sardar Jogendra Singh, M.P. and Dr. D. T. Lakdawala (independent members), Messrs. P. K. Mistry and U. H. Dalmia (members representing employers), and Messrs. S. P. Dave, M.P. and Mr. I. N. Moinudeen (workers' representatives). The functions of the Board are to work out an appropriate wage structure and to lay down the principles for grant of bonus.

In pursuance of the Union Government's textile policy which envisages the setting up of automatic looms for production of cloth meant entirely for export, the Government of Bombay has decided to set up 500 powerlooms in the first instance. Under the scheme, loans and grants will be sanctioned to co-operative societies of handloom weavers for purchase and installation of powerlooms and accessories, as also for working and share capital. The terms and conditions governing the grant of loans stipulate, among other things, that the loan, which will be disbursed to members by the society in the form of powerlooms beams, flanges, motors, switches, and other accessories, will be limited to Rs. 2,900 per loom. They also lay down that the co-operative units of the looms to be formed should be small in size, located in rural areas, that is, at places having a population of 30,000 or less, and have their headquarters at places where electricity is available.

From Abroad

Thailand is expected to make a second request to the International Tin Council for a bigger tin export quota. Its request, made earlier, for a quota of 8.62 per cent. had been rejected.

The aluminium industry of West Germany has reduced the current output of its metal. Monthly production was cut from last year's monthly average of 13,000 tons to about 10,500 tons this year.

Production of crude oil in Canada in December last showed a drop of 20 per cent. to 13.37 million barrels from 16.66 million barrels in the corresponding month in 1956. Total 1957 production, however, rose by 5.7 per cent. to a record level of 181.84 million barrels, that is, from 171.98 million barrels in 1956.

The International Tin Council has fixed the permissible exports of tin metal from Malaya for the second quota period commencing from 1st April to 30th June at 8,625 tons. This is equivalent to 192,686 piculs of tin concentrates, representing 58.19 per cent. of the 1957 quarterly average production of 14,823 tons of metal content.

Crude oil production in the Consortium Agreement Area of Iran in 1957 at 34.8 million tons was a new all-time record, exceeding the 1956 output by one-third. The corresponding payments to Iran aggregated £76 million ($21.3 million). Refinery throughout at Abadan increased from 11.2 million tons in 1956 to 15.2 million tons in 1957.

The setting up of a Jute Marketing Expansion Board, designed to regularise all foreign sales, is under consideration by the East Pakistan Government. It is also learnt that the introduction of regulated markets in specified places in the province to ensure fair prices and a ready market to jute growers is under contemplation.

The execution of a comprehensive water-supply and sewage scheme at an aggregate cost of Rs. 64 million over a period of five years has been agreed to between the U.S. International Co-operation Administration and Pakistan. It is learnt that, by another agreement, I.C.A. has also agreed to participate in water-supply schemes, costing about Rs. 77 million for East Pakistan.

Further economic assistance to the tune of $15 million has been made available to Spain by the United States, bringing the total amount under the defence support programme to $356 million since conclusion of the Spanish-U.S. pact of 1953. The latest aid, it is learnt, will be utilised primarily for the financing of imports of industrial raw materials. It is stated that Spain will shortly purchase an additional $4 million worth of short-staple cotton (about 23,800 bales).

Promise of support to interests of British woollen manufacturers in the current Anglo-Japanese trade negotiations has been assured by Lord Mancroft, Minister without portfolio. The promise was a sequel to anxiety expressed over the possible trade bargains Japan might seek. It is said there is grave concern in Yorkshire among woollen piecegoods manufacturers over the Japanese threat to reduce the import licence allocation if the U.K. did not increase its imports of canned foods.

PERSONAL

MR. Lal Bahadur Shastri assumed the office of the Union Minister for Commerce and Industry on 28th March.

Mr. Madanmohan R. Ruia was re-elected President of the East India Cotton Association for the second year in succession.

Mr. George Wright, London Manager of the Incandescent Group of Furnace Engineers, Smethwick, is arriving in India shortly for an extended market investigation.

Mr. S. V. Rayan, Editor, *Commerce*, has left Bombay for the U.S. for studying the latest economic developments in that country. He will be away for a period of ten weeks.

Mr. N. D. Harris, Chairman of Imperial Chemical Industries (India) Private Ltd., left for the United Kingdom last week after his retirement from the Company. Mr. Harris has been succeeded by Mr. J. M. Lall.

Mr. V. Viswanathan, until recently Joint Secretary in the Union Ministry of Home Affairs, has taken over charge as the Special Secretary in the Ministry to deal exclusively with the problems of the Central Government services personnel.

Mr. S. B. Bapat, Joint Secretary in charge of the Vigilance and O and M. Divisions, Central Home Ministry, has been appointed Director of Public Administration in the United States Technical Assistance Administration. His services have been lent for a period of three years.

Mr. L. K. Jha, Special Secretary in the Ministry of Commerce and Industry, left New Delhi for Europe on the 1st inst. He will visit London, West Germany and Geneva. While in London, he will finalise arrangements in regard to the heavy electricals factory at Bhopal.

The Dunlop Rubber Company has developed a new type of synthetic foam. The new product claims to be the most rubber-like yet evolved. It is derived essentially from polyether and other raw materials, obtainable from the oil and coal tar industries and will serve as a complementary to latex foam and existing synthetic foams. The Company anticipates that the new product will have many applications, chiefly in the upholstery trade. It is said that, weight for weight, it will support a greater load than latex foam which is an important characteristic for the aircraft and transport industries.

The Chinese Manufacturers' Association in Hong Kong has declared its firm opposition to any form of quota restrictions on its textile exports to Britain. This was contained in a statement which was issued on the eve of the crucial meeting on the 31st ultimo between local textile interests and Sir Frank Lee, Permanent Secretary to the Board of Trade, who is trying to persuade them to accept a voluntary quota system. The manufacturers' statement said that the British Labour Party, India or Ceylon has not sufficient reason for Hong Kong accepting voluntary or any other type of limitation. It added that Hong Kong had also the question of unemployment like Lancashire and that the Labour Party, like the Conservative Party, should consider Commonwealth links.

"COMMERCE" 1933

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *8th April*

Dollar Wheat and the Rupee

Britain's contribution towards "dollar wheat" would be her readiness to lay in a store of wheat at a price something under a dollar a bushel. Her most effective contribution towards "dollar silver" would be her readiness to receive rupees or their silver content as a reserve against the currency, simultaneously with the reopening of the Indian mints to the unlimited coinage of silver. This in itself would not raise silver to a dollar an ounce, but it would raise it to over 70 cents. To give us "dollar silver" either the gold value of sterling would have to be raised or that of the U.S.A. dollar lowered. Then the rupee or its silver content could be received not only at the Bank of England but at the Treasury of the United States as well. In continuation of his argument Mr. Darling says: "I was a young man engaged in banking in India when the Indian mints were closed to silver in 1893. I protested against it in the leading columns of more than one newspaper. Up till then, practically the whole of Asia, containing more than half the population of the globe, measured values by silver which also was their principal medium of exchange. To compel Asia—for that was what the closure of the Indian mints meant—to seek, though as it turns out not to obtain, another standard of value has been terribly upsetting to both East and West. And now the gold standard itself has failed and the whole world is groping for something reasonably stable whereby values can be measured, contracts made equitable, and buying and selling encouraged. Give the Orient back its silver standard through the Occident accepting silver freely as money or as a basis for its money. It answered well enough for centuries and is well worth trying again."

ALCOHOL INDUSTRY

IT is regrettable that the Government of India should have taken as many as 16 months to release for publication the recommendations of the Committee on Alcohol Industry and the decisions thereon. The Committee, it will be recalled, was set up on 11th October 1955 with Dr. A. Nagaraja Rao, Chief Industrial Adviser to the Government of India, as Chairman, to study and examine the state of the alcohol industry and to make recommendations for improving and developing it. The Committee submitted its report in December 1956. Apart from the protracted delay in publishing the findings of the Committee, the Government has also not announced its decision on all the suggestions made by the Committee. The omission includes the more important subjects such as those relating to price, distribution, taxation, freight rates and rail transport facilities.

The Government has accepted four notable recommendations put forward by the Committee. First, the development of alcohol-based industries like synthetic rubber, acetate rayon/cellulose acetate, pharmaceutical products, D.D.T., and other organic chemicals and solvents such as acetone, ether and butanol, should be encouraged on a priority basis. On the basis of expected developments in certain alcohol-based industries and targets therefore by the end of the second Five-year Plan, the Committee has estimated that the annual industrial requirements of alcohol will increase from 3-4 million gallons at present to 31 million gallons. Secondly, even when alcohol-based industries develop, power alcohol should continue to be used in admixture with petrol so as to provide a flexible demand to cover any imbalance between anticipated production and gradual development of industrial demand for alcohol. In the opinion of the Committee, it will be necessary for several years to come to arrange for the utilisation of about 12 million gallons per year as power alcohol, although the areas under alcohol-petrol blend may vary from time to time, depending on the progress of other industries based on alcohol. Thirdly, suitable assistance should be given to prospective exporters in regard to excise procedure and availability of tank wagons as well as storage facilities at ports. It may be possible, we are told, to build up an export market for over a few million gallons of alcohol every year, provided the basic ex-distillery price is pegged at the level urged by the Committee, that is, As. 14 (87 nP) per gallon, as at present. Fourthly, a development council must be constituted for the fermentation industries, including alcohol and products based on it.

The Government has not, as already stated, announced its decision on the more important recommendations of the Committee. Among these, one stands out most prominently, namely, that pertaining to the price of alcohol and molasses. According to the Committee, in order to encourage the use of alcohol as a raw material for industries, the basic ex-distillery price of alcohol should not be higher than As. 14 (87 nP) per gallon, as at present. Since, however, the distilleries are not adjacent to sugar mills and may have to transport a part or the whole of their molasses requirement, the actual ceiling prices per gallon suggested are As. 12-9 (80 nP) for alcohol (99.5 per cent. strength) and As. 12-6 (78 nP) for alcohol (96 per cent. strength) plus an additional charge up to a maximum of As. 6 (37 nP) per gallon on account of the actual average transport charges incurred on molasses.

The Committee points out that, as molasses have been, and will continue to be, the principal raw material for producing alcohol, control over its price and distribution is essential, if the price of alcohol is to be maintained at a low level. While few would dispute the need for some controls, the point is that, in some States, especially in Bombay, the controls have been so vexatious and harsh as to put the sugar mills into utmost hardship and inconvenience. Consequently, huge stocks of molasses accumulate with mills year after year and their storage has been a standing problem to the mills ever since the Prohibition Act came into force. When faced with such excess stocks of molasses, the factories try to solve the problem by destroying them or by using them as manure wherever they are found suitable. Even for this, they have to take the permission of the Government. The fulfilment of this condition involves considerable delay and expenditure. Viewed thus, it will be interesting to know the details of the Committee's recommendations covering the following matters and the decision the Government will take thereon:

Mechanism of control over price and distribution of molasses;

mechanism of control over price and distribution of industrial alcohol;

tax structure and agency for taxation of industrial alcohol;

revision of excise laws for the control of distilleries and factories using alcohol in their manufacturing operations;

definition and scope of the terms "alcohol" and "spirit" for purposes of control;

collection of detailed statistics relating to industry-wise consumption of alcohol;

freight rates on various grades of alcohol; and

rail transport facilities for the movement of molasses and alcohol.

It is rather unfair on the part of the Committee to have recommended as reasonable the low price of As. 4 per maund for molasses containing not less than 50 per cent. total sugars. Considering the rigid cost structure from which the sugar industry is suffering at present, thanks to the heavy impact of taxes and high price of sugarcane, the need for raising the price of molasses cannot be stressed too strongly. Such an upward revision will not only enable the sugar mills to lower the price of sugar to some extent but also ensure adequate and regular supplies of molasses to the alcohol distilleries.

Be that as it may, the Nagaraja Rao Committee estimates that, after meeting the requirements of others, over 900,000 tons of molasses will become available for the manufacture of alcohol per year from 1959-60 onwards. The total production of alcohol from all the available molasses, including 1 million gallons produced from Mahua flowers, is expected to be of the order of 46.8 million gallons per year (100 per cent. by volume). In order to attain this level of production, distillery capacity of the order of 52 million gallons per year is necessary. The Committee has done well to indicate suitable locations for new distilleries and expansion of existing units. It is said that, in the present circumstances in India, the minimum capacity for a distillery of economic size is 1 million gallons per year. In special circumstances, the economics of production in units of smaller capacities may, of course, not be too disadvantageous.

The distillery capacity of 52 million gallons suggested by the Committee for the alcohol industry represents a rise of as much as 16 million gallons as compared with the target fixed for 1960-61 by the Planning Commission. It also represents an increase of 22 million gallons as compared with the anticipated requirements during the Plan period. Even so, the Committee feels that it will be advantageous to build up alcohol capacity somewhat ahead of the growth of industrial demand to the extent that it is facilitated by the availability of molasses, in view of export possibilities and alternative outlets for its use as motor fuel.

EXPORT OF ENGINEERING GOODS

A study of the South-East Asian markets for engineering goods undertaken by the engineering trade delegation which visited the countries of this region early this year has underlined the vast potentialities of the region as an export market for engineering goods. All the countries of this region are keen to industrialise themselves and the process has already started, but it will take some time before they will be in a position to meet their own requirements. Till then, they will have to continue importing engineering goods from abroad and India, according to the delegation, is in a position to supply a large part of the requirements. It is true that in certain countries of the region like South Viet Nam and the Philippines which depend heavily on the U.S., the latter exerts a powerful influence in economic matters. For instance, the import tariff on American goods is only 25 per cent. of those charged on foreign goods. In spite of this, the prices of Indian articles like diesel engines, electric fans, sewing machines, small tools, etc., are stated to be competitive with those of other countries and good business could be done, says the delegation, if licences were available to the parties for import from India.

Indian goods have nevertheless to face severe competition from Japan which, owing to a number of favourable factors, is able to offer very competitive rates for its goods. Despite heavy odds, India has been exporting quite a number of engineering goods such as electric fans, sewing machines, diesel engines, oil mill machinery and automobile parts. But in order to place Indian exporters on a basis of equality with their competitors, principally Japan, the delegation has suggested certain measures.

Engineering goods manufacturers in Japan enjoy several advantages. In that country, a significant role is played by small-scale units which supply standard parts which are only assembled in big workshops. Most of the engineering goods are entirely exported by small units, having low establishment costs. There is no difficulty in securing the necessary raw materials. Exporters get credit facilities—both short and long-term—from foreign exchange banks or export-import banks at rates normally three per cent. below the usual rate. Exporters have facilities for insuring their exports and investments abroad under the export-cum-investment risk insurance schemes. Manufacturers and exporters are given a rebate of income-tax on their total export turnover. Considerable help is extended by the Japan External Trade Recovery Organisation to exporters for conducting market research and surveys through its network of offices, centres, and representatives throughout the world free of cost or at very nominal charges. Further, Japanese exporters have no shipping problem at all since there are, besides regular lines, trampers which are available at very competitive rates. The Ministry of International Trade and Industry co-ordinates the various activities of the export promotion organisations and lays down the general policy.

With a view to expanding exports of goods from India, the delegation has suggested trade agreements or barter arrangement between India and countries of the region. According to it, most of the countries of the region will welcome such agreements for mutual exchange of goods. Due to the adverse balance of trade, which many of the countries have with India, they want that India should think of exporting engineering goods for things which they can offer in exchange.

The delegation has suggested that Indian exporters should be given all those facilities which their counterpart in Japan are at present having. It has also urged that steel and pig iron should be made available at concessional rates and that regular supplies should be ensured. Indian exporters should also be given shipping facilities at freight rates comparable with those paid by Japanese exporters. It is to be hoped that Government will consider how best these suggestions could be implemented.

RAJASTHAN CANAL PROJECT

The Rajasthan Canal Project, excavations work on which was inaugurated by Mr. G. B. Pant the Union Home Minister, on 30th March, is a major milestone in the States' road to prosperity. The project, comprising the construction of a 426-mile-long canal with a head discharge of 18,500 cusecs taking off from Harike Barrage across the Sutlej, when completed, will constitute one of the biggest single irrigation projects in the world. It covers a gross commanded area of 5.1 million acres with a total culturable commanded area of 3.36 million acres (by flow). The total cost is estimated at Rs. 66.5 crores, excluding the expenditure on storage dams. On completion, the project is expected to produce about one million tons of crops annually, valued at about Rs. 30 crores.

The main canal consists of two parts, the Rajasthan Feeder which is 134.2 miles long (110.8 miles in Punjab and 23.4 miles in Rajasthan) and Rajasthan Canal, 291.6 miles long, lying entirely in Rajasthan territory. It will be the longest in India and Asia. Its construction would require 6,700 million cubic feet of earthwork and 180 million sq. feet of lining and will create employment for over 50,000 people during construction period.

In addition to bringing under irrigation a large desert area and producing additional crop of one million tons, the project is expected to yield other benefits also. Apart from job opportunities during construction, employment facilities in agriculture will be available to over a half a million families on full development of the project. A large number of people will also find employment in other spheres such as railways, roads, social services, business and industry.

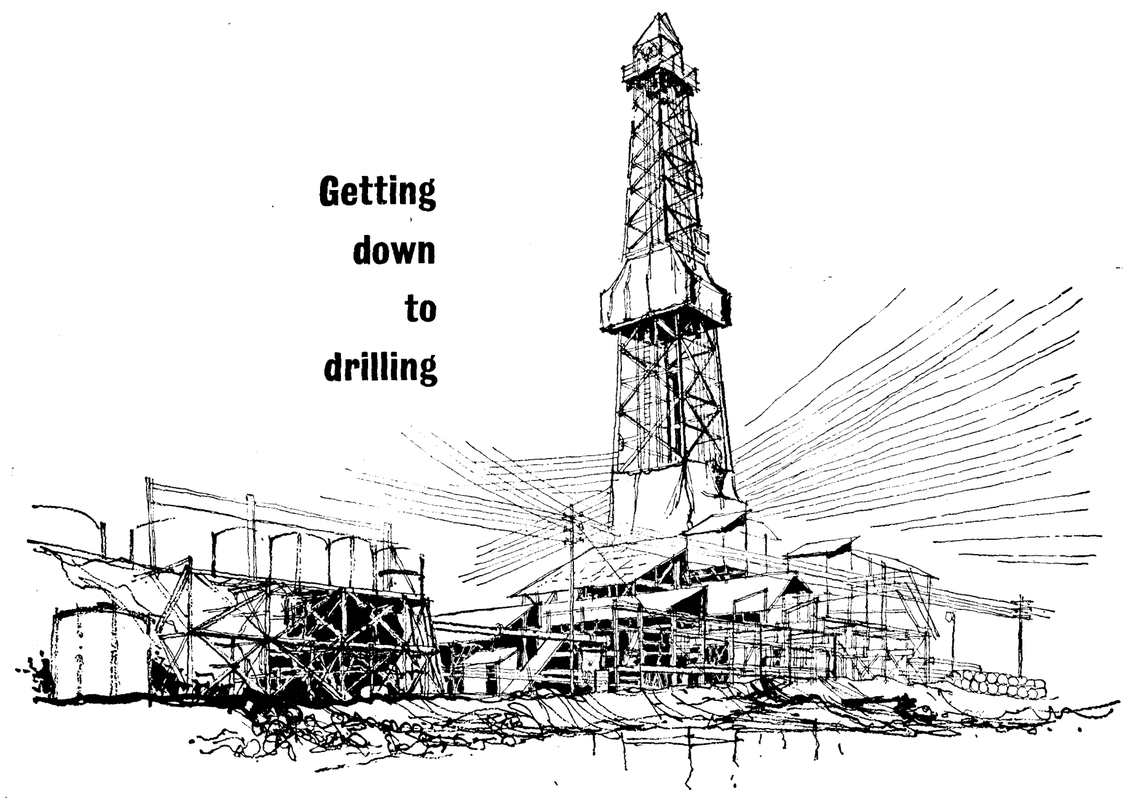
The Story of Oil—9



Getting down to drilling

The oil driller's derrick looks imposing and strange as it stands silhouetted against the sky, but it is merely a sturdy steel support for lowering and raising jointed lengths of heavy pipe into and out of the well during the drilling operations.

In modern drilling, a sharp-toothed bit is first attached to a length of steel pipe called the drill pipe. The drill pipe, held vertical by a giant block and tackle system in the derrick, is lowered into a pilot hole and revolved by means of a turntable on the derrick floor. The turntable is rotated by powerful engines behind the derrick. As the pipe is turned, the bit cuts a hole in the earth's rocks and lengths of drill pipe are added as the hole becomes deeper.

When the bit becomes worn the entire length of drill pipe must be removed, unjointed, and stacked in the derrick. After the new bit is attached the pipe is joined together and drilling begins again.

All during drilling, specially-prepared mud is pumped down inside the drill pipe. It passes through perforations in the bit and is forced back to the surface outside the drill pipe. This mud has many useful functions. It flushes rock cuttings back to the surface for examination, cools the bit and plasters the walls of the hole to prevent them from caving in. As drilling progresses the hole is lined with successive lengths of steel pipe called casing.

An oil well has been drilled to a depth of four miles, but a 10,000 foot well is still considered deep. Drilling at such depths is an extremely delicate operation, requiring great skill and long experience. Only by drilling, however, can the oil prospector prove the presence of mineral oil.

GOVERNMENT'S NEW IMPORT POLICY

MARGINAL ADJUSTMENTS MADE

From Our Own Correspondent

NEW DELHI, 1st *April*

DELHI LETTER

THE Government of India has just announced its import policy for the April-September period this year. The policy involves no more than a modest liberalisation of imports in a few lines in view of the continuing need "to conserve foreign exchange resources." Such concessions (by way of increased quotas for some items) as are now given are intended "to overcome the shortages which were beginning to impede production." Broadly speaking, they are in the nature of marginal adjustments. According to a Press note on the schedules of commodities affected, quotas are now increased mainly for items required for industries; these are textile chemicals and accessories, component parts of taper roller bearings, spare parts for machinery, chemicals not otherwise specified, industrial gums and resins, and certain abrasives. New quotas are given for printing machinery and agricultural tractors. Quotas are increased for a few essential consumer goods like photographic sensitised material and paper items. But quotas are reduced in respect of coal-tar dyes, some types of motor vehicle parts. P.V.C. compound, steel files, etc.; the shortages in these items are expected to be made good by indigenous industry. Quotas are also reduced in respect of such food items as fish, fruits and milk food. In the case of items like studio lamps, copra and selenium, the quotas have been withdrawn or drastically reduced; but here, there is a provision for the grant of licences to actual users.

There are eight schedules of commodities: (1) items for which quotas for established importers are enhanced; (2) items for which applications from actual users will be considered; (3) items for which face value provisions are liberalised; (4) items for which quotas for established importers are reduced or banned; (5) items for which face value restrictions are imposed or variations made in the existing face value restrictions; (6) new items brought under the Export Promotion Scheme; (7) items for which the basic period has been extended upto and including 1956-57; and (8) items for which licences within the group would be interchangeable during the period. In these schedules, (4) contains the largest number of items covering a wide range of metal manufactures, some types of centrifugal pumps and pumping sets, chemicals, some food items, drugs and medicines, etc. In schedule (6), the new items brought under the Export Promotion Scheme are boot and shoe grinders (for *chappals* and sandals) and asbestos (raw).

Raw Materials

Although a somewhat higher foreign exchange ceiling is now allocated for industrial raw materials (producer goods), it is stated that the additional foreign exchange expenditure as compared to the previous half-year may not be more than Rs. 10 crores. But it is also stated that this may not actually take place in the light of the circumstance that there is no upward revision of their targets of consumption but only a readjustment to make good the deficiencies shown up by the previous half-year's policy. The saving in foreign exchange that would result from the reduction or banning of quotas for a large number of items under Schedule (4) may mean that the new import policy will, in actual practice, continue to be one of severe austerity. But there are at least two major groups of imports—one on account of Defence and the other on account of foodgrains—which will continue to be outside import control, and the upsets these may cause in the foreign exchange sector can only be dimly visualised at this stage. It is not improbable that conservation of foreign exchange through austerity in imports is largely intended for imports of defence stores and armaments and of foodgrains inasmuch as capital goods imports and foreign exchange requirements of the hard core projects are largely covered by deferred payment credits and foreign loans.

Planning Commission's Note

It is in this context that the Planning Commission's recent note on the foreign exchange crisis acquires some special importance. The Commission has admitted that "the rise in imports and consequent drain on foreign exchange resources is itself attributable mainly to the attempt to carry out the second Five-year Plan." The factors which aggravated and hastened the crisis, according to the Commission, were: the heavy demands of defence; the need to import more foodgrains than was originally anticipated; the increased requirements of raw materials, components, spares, replacements, etc., for matching the higher levels of industrial production reached in 1955 and 1956; rather higher imports of consumer goods in the year 1955-56 and 1956-57 compared with earlier years; and increase in prices and in freight rates. The Commission has given, in an annexure to its note, supporting figures first regarding these aggrevating factors and then figures showing that the increase in imports and the heavy outstanding foreign exchange commitments have been the result mainly of the attempt to carry out the Plan. From the apologetic manner in which the Commission has referred to "the attempt to carry out the second Five-year Plan" the overambitious character of the Plan in terms of foreign resources required for it could also be inferred.

Five Factors

The Commission's comments on the five aggravating factors are interesting though they are not quite revealing in at least two respects. Regarding the first factor, that is, Defence, the Commission says that the annual average of foreign exchange expenditure on it during the first two years of the second Plan is about Rs. 30 crores higher than the average of the preceding three years and that the outstanding commitments are exceedingly heavy. But nowhere in the note is it even roughly indicated what the outstanding commitments on account of Defence are. It is just stated that "other Ministries (which include the Defence Ministry) and State Governments" have, as of 30th September, 1957, outstanding foreign exchange commitments of the value of Rs. 211.65 crores. A breakdown of this amount, it is surprising to note, is not given; where the total is available, it passes one's comprehension why the Commission has not tried to get the detailed figures comprising the total. The inference can only be that the Defence commitments are so heavy that there is no disposition to reveal them fully.

As regards the second factor, the Commission has given figures of imports of grain, pulse and flour in the first two years of the second Plan. In the first year such imports were valued at Rs. 102 crores of which only Rs. 35 crores was covered by foreign aid; in the second year the value of such imports was Rs. 150 crores of which a considerable part is covered by P.L. 480. The Commission admits that its assumption of Rs. 48 crores worth of foodgrain imports, on an average, per annum in the second Plan period has proved so far to be wide of the mark. As foodgrain imports in 1958-59 also will continue to be equally heavy, the likely upset by way of a drain on foreign exchange would have to be more precisely calculated. But the Commission has not done this even in respect of 1957-58 after allowing for the P.L. 480 wheat which involves no current or future foreign exchange commitment.

In a more or less precise calculation of how much foreign exchange expenditure there was actually in 1957-58 on account of foodgrain imports and how much there will be in 1958-59, three major items have to be taken into account. They are: India's share, in foreign exchange, of Ocean shipping costs on account of P.L. 480 wheat; foreign exchange expenditure on account of the purchase value and ocean shipping costs on acount of certain quantities of wheat which have been and will have to be imported, in terms of the P.L. 480 Agreement, from normal exporting countries like Australia, Argentina, etc.; and foreign exchange expenditure on account of rice imports which can not be had to any significant extent under P.L. 480. The latest agreement with Canada for the supply of four lakh tons of wheat will also involve some expenditure of foreign exchange on ocean freight although the loan, which is to be repaid in dollars, will involve no foreign exchange commitment in the near future. The vague public impression that because large quantities of foodgrains can be got on credit from the U.S.A. and Canada, there will be no substantial expenditure of foreign exchange in the years immediately ahead, is patently wrong.

ELECTORAL DEFEATS

From Our Own Correspondent

LONDON, 28*th March*

LONDON LETTER

A STRONG financial position and a recession in production are a traditional combination, and no one can complain of the trend in Britain's external fisc at present. The next gold reserve statement will undoubtedly show an improvement and, meanwhile, the pound stands at a substantial premium over the dollar, in spite of the cut in Bank rate. This week has also seen the price of gold at its peak level in the London market and the interesting suggestion is put forward that the strength of sterling against the dollar and the high gold price are closely connected through the policies of European central banks. These, like the Bank of England, keep their reserves in both gold and dollars and switch from one to the other according to the sentiment of the time. They are thought to be unloading dollars at present against gold purchases on a limited scale.

But the general interest in this country is concentrated on the internal repercussions of recession and the Government, which has been applying a disinflationary policy for a long time and is now meeting with success, has to put up with the blame for the attendant unpleasantness. This accounts for their reverses in a number of recent by-elections, including the dramatic one this week which resulted in a Liberal candidate beating his Conservative opponent and the Labour candidate at Torrington in the West Country. The Government also shares the odium for the Report of the Council of Prices, Productivity and Incomes. The Chairman, Lord Cohen, whose name is often pronounced Khan, is now being called Lord Genghiz Cohen and his two public appearances to justify his Report have in no way reduced the criticism given to it by the man in the street. Lord Cohen's most recent justification was made this week in the University of London to economists who were mostly in sympathy with him. The trouble is that, whereas the Government talk about a disinflationary policy in order to reduce prices and maintain the value of money, the "three wise men" of the Cohen Council went further and pointed out that this was going to mean unemployment. Of course, the Government's economic surveys have also forecasted from time to time given levels of unemployment, but their figures have not spoken with the same bluntness as the words of the Council.

Lord Cohen will have to put up with criticism, because his Council's attitude, however right it might be in assessing the results of the policy of disinflation, is indeed to approve that policy. Academically, however, desirable it may be to prevent a rise in prices and to maintain stable money, the public, particularly those affected by it, do resent unemployment. And the economist has not got the facility of the politician who would be quite happy to talk about disinflation in one breath and the maintenance of full employment in the other. Lord Cohen is too honest, he knows that the two things do not go together and says so, but, since he also goes on to advocate disinflation, he gets tarred with the brush of an advocate of unemployment!

The Government's electoral defeats are very hard on their new publicity activator Lord Hailsham who, however, not content with his political preoccupations, is now resenting last year's Cheques Act which is provoking quite a revolution in business methods in this country. The normal technique of settling accounts here has been for statements of accounts to be returned to the creditor with a cheque which the creditor endorsed and paid into his bank, returning the statement receipted to the debtor; or alternatively a receipt was provided on the back of the cheque. The Cheques Act made it unnecessary for creditors to endorse cheques made out to them before paying into their banks and by the same token made it unnecessary to give a receipt on a cheque. Thus, while a debtor is still entitled to insist upon a receipt if he wishes to, the business community have been quick to take advantage of the new provision and creditors are ceasing to give and debtors to demand receipts.

The saving to business of this simplification is immense and, in spite of the dissident voices there is no doubt that the reform has come to stay.—*All Rights Reserved.*

AMERICAN LETTER

CONFUSION OVER BUSINESS RECESSION

CONSUMER SPENDING DROPS SHARPLY

From Our Special Correspondent

NEW YORK, 25*th March*

THERE is a good deal of confusion in the United States about the actual state of the current business recession. There are two raging in this land, a statistical one and a psychological and emotional one. One supplements the other and the politicians have seized upon both to push through their local pet projects to increase employment through Government spending.

In the background, the monster of inflation is lurking. Unemployment is the most frequently cited figure. It is now about 8 per cent. of the labour force, as compared with more than 25 per cent. during the famous depression of the 1930s. Unemployment insurance, is a matter of State legislation. As an example, a fund was created in New York State, as in others, many years ago out of employer-employee contributions. It pays up to $36 a week for 26 weeks to any unemployed who applies for benefits.

Here as well as elsewhere, many have exhausted their 26 weeks. That is why there are discussions for the Federal Government to extend the benefits beyond these 26 weeks on a temporary basis. Practically all unemployment is centred in the manufacturing sector of the economy. In some service industries, there has been an actual gain in employment. Also, savings are still increasing quite satisfactorily, much to the dismay of the banking fraternity, while consumer spending has dropped sharply ever since October 1957.

Dismay of Bankers

The dismay of bankers is quite understandable. The rising curve of interests rates last year prompted commercial banks as late as 1st October 1957 to boost the rates paid to savings depositors to 3 per cent., the permissible maximum. Savings banks pay 3½ per cent. and some savings and loan associations even more.

These rates are still being paid and nobody dares be the first one to reduce them. But in the meantime, the rate charged for commercial loans to prime borrowers has dropped to 4 per cent. That 1 per cent. spread is very thin. However, the prime rate defies definition, except to say that it applies to such prime borrowers as U.S. Steel, General Motors and General Electric.

Concern over economic conditions in the U.S. is evidenced by the successive reductions by the Federal Reserve banks of reserve requirements and of the discount rate. This has accomplished very little in the way of creating new lendable funds, but it has created a better atmosphere. The bond markets, naturally, responded with higher prices in the face of declining yields. Even the stock markets have shown a better trend in recent weeks, perhaps in anticipation of an upturn, since, indeed, the rate of decline of some economic indicators has slackened. It all depends now on the March figures. If they show a continued downturn, a reduction in Federal taxes is likely to be enacted by the Congress in a hurry. That, too, would be strictly psychological. It would provide more money to spend, but there is no certainty that the consumer will spend it and create demand. Perhaps, he will still be inclined to save it and spend only a small portion.

There is no question that the average wage earner in the U.S. is over-extended. His future income is mortgaged for his home, his automobile and his electric appliances. So long as there was overtime work and several members of the family worked, this was no particular problem. To meet these weekly or monthly payments now, requires retrenchment somewhere along the line. This is precisely what is happening in a mild sort of way.

Recent stock market reaction was influenced by two developments which stirred the financial community. One was the report of a short position in stocks of 4,460,660 shares at mid-March, as reported by the New York Stock Exchange. It was the highest figure in 27 years. On the surface, it would seem to reflect quite a bearish attitude. But, since short sellers must eventually buy stock to cover their positions, more often than not, a short position is a cushion under the market. The other development was a proposal by the New York Stock Exchange to raise brokers' commission by an average of 13 per cent., effective from 1st May. There is going to be a membership poll to be completed on 3rd April. The proposal requires membership approval to become effective. There is strong opposition among the larger firms to this proposed boost, even though fees have not been increased since 1953, despite the sharp rise in costs. It is felt that, in times of recession, such a move could do more harm than good, since everybody is cost- and rate-conscious.

Even the British decided not to push their luck too hard and reduced the bank rate to 6 per cent. It's still more than double that of the U.S. An anomaly under the circumstances is that the consumer price index continues its fractional upward trend. It advanced in February to 122.5 per cent. of the 1947-49 average to a new high.

Price Structure

In other words, this is one recession when the price structure has not been downward. Also, there is little likelihood of such a downturn in prices. Wage negotiations are under way between the United Automobile Workers and the industry. If the past is any criterion, labour will certainly get additional benefits either in higher wages or fringe benefits. That will, as usual, establish a new pattern to follow for other industries.

The general business picture was not helped by a devastating snowstorm which hit the Eastern seaboard in the second half of March, just as spring was about to make its entry, calendarwise. Rivers are swollen to such an extent that there are flood dangers in many of the great industrial areas of the East. In other words, the weather kept people out of the stores which are anxiously awaiting the usual Easter shopping spree. Indeed, areas not hit by unfavourable weather have already shown a marked upturn.

The recession and the weather have overshadowed everything now that there are two U.S. satellites in orbit and there are still quite a few business sectors doing all right. Bituminous coal output hit its highest mark in six weeks. Freight carloadings in the week of 1st March were the highest in six weeks. Heavy construction awards are up for the first time in 14 weeks. Food sales are up and the beauty parlour business marched along prettily. International Nickel which has slashed output by about 10 per cent. is betting, nevertheless, $60 million in a new expansion programme.

Events in Indonesia have been disturbing to public opinion and the wrangling over a possible East-West summit meeting has reached the point where the entire subject matter borders on the ridiculous. The Democrats in Congress are just as uncertain of what should be done as the Republicans. Lacking strong central leadership, Washington is now government by committees debating an issue and finding ever so many more reasons for not doing something which is the safest way rather than doing something. Perhaps, it is the democratic way of procedure, but it is not very reassuring in turbulent times.—*All Rights Reserved.*

4½ PER CENT. 20-YEAR DEBENTURES.
Issue price Rs. 99 per cent.

4½ PER CENT. 15-YEAR DEBENTURES.
Issue at par (Rs. 100).

GUARANTEED BY THE GOVERNMENT OF MYSORE.

THE MYSORE CENTRAL CO-OPERATIVE LAND MORTGAGE BANK, LTD.,
BANGALORE-2.

4½% 1968-78 Debentures. Issue limited to Rs. 30 lakhs. The Issue price is Rs. 99 per cent.	4½% 1968-73 Debentures. Issue limited to Rs. 20 lakhs. The Issue price is at par (Rs. 100).

Applications will be received from 1st May 1958. The subscription list will be closed immediately the entire amount of Rs. 50 Lakhs is subscribed.

INCOME-TAX IS NOT DEDUCTIBLE AT SOURCE, FROM THE INTEREST PAID TO THE RESIDENTS OF THE WHOLE OF INDIA EXCLUDING THE STATE OF JAMMU AND KASHMIR.

The Debentures are:—

1. Negotiable by mere endorsement.
2. Trustee Securities under the Indian Trust Act.
3. Approved Securities under the Banking Companies Act 1949.
4. Government of India have recognised the Debentures issued by the Bank so far, as approved securities under the Indian Insurance Act. Government have been moved to extend similar recognition to this series also.

Separate Redemption Funds will be constituted to pay off the Debentures on maturity.
Other particulars and application forms can be had from the Bank.

R. ANANTARAMAN, *President.*

PLIGHT OF SMALL INVESTORS IN PORT CANNING

A CASE OF GRAVE INJUSTICE TO SHAREHOLDERS OF A COMPANY ACQUIRED BY STATE

By Dr. Rustom C. Cooper

AS readers are well aware, the Constitution (Fourth Amendment) Bill led to terrific public controversy. This Bill dealt with the subject of payment of adequate compensation to persons whose properties are acquired by the State for a public purpose. A large section of public opinion felt that, in the long run, this amendment would be used to the detriment of the average citizen of India. At that time, an important point was stressed by our Prime Minister during the debates in Parliament on this Bill. The Prime Minister made it clear that full compensation should be paid to small owners whose properties are acquired by the State for a public purpose. He said, "if we are to acquire property, I think we should pay just and equitable compensation. I am talking about individual properties. Normally, there may be a number of rich men interested—there are here and there—but many of these properties, big properties, are limited liability companies with a large number of small shareholders. We do not wish to deprive them. . . full compensation should be paid to small owners whose properties are acquired by the State for public purpose."

The extract quoted above and similar assurances given by other spokesmen of the Government, led the public to believe that in spite of the amendment of the Constitution, the Government will on the whole honour its assurances. It is, therefore, rather unfortunate that within a short spell of a few years we should come across a case of blatant disregard of solemn assurances made on the floor of the House of the People by no less a personality than the Prime Minister of India. The case in question is that of the Port Canning and Land Improvement Company, Limited, whose assets, namely, the *zamindari* properties, have been acquired under the West Bengal Estates Acquisition Act of 1953.

Gross Injustice

The salient features of this case when closely examined lead one to believe that it is a case of gross injustice not to the rich but to the average lower middle-class person. It appears that the Government is inclined to interpret the concept of socialist pattern of society, as meaning thereby a process of making the poor poorer. The way the Government has been tackling problems of nationalisation would lead one to believe that the Government is working for the distribution of poverty in the country, rather than improving the lot of the people. This Company was registered in 1873 and is, therefore, nearly 85 years old. It has a share capital of Rs. 60,00,000 divided into 60,000 shares of Rs. 100 each. On the day on which the Company went into liquidation some time in the middle of last year, it had on its register 1,947 shareholders of whom 1,028, that is, more than 50 per cent. held less than 10 shares of the Company and 1,353, that is, 75 per cent. held less than 20 shares. There could, therefore, be no doubt that the bulk of the investment in the Company came from people belonging to the lower middle-class as also poor office clerks, retired persons, widows and other old and disabled persons who have nothing else to fall back upon but their poor savings.

Port Canning and Land Improvement Company, Limited, was a *zamindari* company, having all its lands in West Bengal which have been acquired by the Government of West Bengal under its Estates Acquisition Act of 1953. Till today, no compensation has been received by the Company and its shareholders, although the law itself provided for payment of interim compensation. For the last three years, therefore, the shareholders have received no income on their investments nor any return of capital and they will perhaps have to wait for many more years before they can get even a small fraction of their original investment.

Ordinarily there is always a certain stigma attached to *zamindari* and the abolition of *zamindari* forms a very important item of the election manifesto of most political parties today. However, certain facts and the past record of the Company would be sufficient to convince anyone that merely because it was a *zamindari* company it should not be regarded as something to be despised. The Company was incorporated in 1873 by acquiring lands at the cost of Rs. 58,00,000. At that time, the area under cultivation was 97,934 *bighas* only. During the past 83 years the Company spent a further sum of Rs. 32,00,000 on development works *out of its annual net earnings*. On the date of acquisition, the land under cultivation was 3,14,472 *bighas*. Thus, it would be realised that the shareholders have put in nearly Rs. 90 lakhs into the Company during the past 85 years for which they now stand to get only about Rs. 6 lakhs or Rs. 7 lakhs.

No Capitalist Exploitation

Let us now examine what the shareholders have precisely received during the 85 years as dividends on their investment. This record is sufficient to refute the charge that *zamindari* would always result in exploitation of the ryot. Over a period of 85 years, the Company reinvested a major portion of its earnings in further development and distributed very small amounts by way of dividends to shareholders. During the entire history of the Company, the average dividend declared works upto only 2.84 per cent. per annum. At no time during the 85 years, the dividend exceeded 5 per cent. of the paid-up capital; even in periods when the Bank rate continued to be above 6 per cent. It would be further interesting to note that the maximum dividend of 5 per cent. on paid-up capital was paid by the Company only six times in 85 years. It, therefore, cannot be denied that although this was a *zamindari* company, it never exploited its position in order to distribute exorbitant dividends to the shareholders.

Real Injustice

The real injustice to the Company comes in when one considers the quantum of compensation and the method of the discharge. Practically all the lands and estates of the Company were acquired by the State of West Bengal on 15th April 1955. On the day of acquisition, at a price of only Rs. 125 per *bigha*, assuming the good land to be only about 300,000 *bighas*, the market price of lands acquired by the Government would be Rs. 3¾ crores. On that date, the book value of the lands as shown by the Company's balance-sheet was Rs. 68 lakhs. However, under the Estates Acquisition Act 1953, the Government of West Bengal would pay a compensation of only Rs. 6 lakhs to Rs. 7 lakhs. This compensation would be equal to about one year's revenue which the Government would receive from the lands acquired from this Company. On the basis of this compensation, the loss to the shareholder on his investment through nationalisation would be nearly 8/9ths of his original investment.

The hardship is even greater when one considers the mode of settlement of compensation. The compensation will be paid in non-negotiable bonds, bearing interest at only 3 per cent.; the prevailing rate of interest in the market today is much higher. The major portion of the compensation will be paid in non-negotiable bonds to be issued to the Company by the West Bengal Government repayable equally over a period of 20 years. This would mean that the shareholders will have to wait for 20 years in order to receive even 1/10th of their original investment. It also means that the liquidation proceedings will have to be continued over a period of 20 years incurring considerable further expenses.

Compensation

The appropriate law also provides for payment of interim compensation. Such interim compensation already became due for payment in the past two or three years but no part of it has so far been paid to the Company by the Government of West Bengal. In spite of repeated reminders, the Government has not done anything in the matter. Although the assets of the Company were taken over by the Government on 15th April 1955 even the settlement of compensation rules has not been completed till today, with the result that the Company is required to incur a considerable amount of expenditure every year on maintenance of skeleton staff, both at Bombay and in Canning, for the purpose of dealing with correspondence with the Government in this matter. There appears to be no provision in the Act for the Company to claim from the Government the expenditure which it will inevitably incur on account of delays on the part of the West Bengal Government.

Share Value

Even before the Estates Acquisition Act 1953 was passed, representations were made to the West Bengal Government pointing out the considerable inequity arising out of the compensation clause of this Bill. Besides the Company, such representations were also made to the Government by the Federation of Indian Chambers of Commerce and Industry, the Bombay Shareholders' Association, the Midnapur Zamindari Co., Ltd., and various other bodies and interests concerned. The Government seems to have taken no notice whatsoever of these appeals. Not long ago another attempt was made to persuade the Government of West Bengal to change its attitude in this matter. This was after the Company went into liquidation. It was pointed out to the Government that since the shares of the Company were always considered as good as gilt-edged securities, in spite of the low dividend yield, they were often quoted in the market above par. It was also pointed out that the large proportion of the shareholders happen to be widows, office clerks and other lower middle-class persons and retired persons. It was mentioned to the Government that some cases have come to light in which people put in their provident fund moneys into the shares of the Company at Rs. 100 or above for which they now stand to receive only Rs. 6 to Rs. 7. On 30th April 1944, the shares of the Company were being quoted in the market at Rs. 108-12, on 29th April 1945 at Rs. 103-8 and on 30th April 1946 at Rs. 110, as against Rs. 6 on 30th April 1957 and Rs. 4-8 in the beginning of 1957.

The Government's attention was drawn to the fact that those who bought these shares on the stock exchange at Rs. 110 in 1946 stood to lose 94.5 per cent. of their investment as a result of Government action. As a result of the interviews which the Company's officials had with the Chief Minister, other Ministers and officials of the West Bengal Government, the Government's attitude is reported to be that it is amply empowered by the Constitution to carry through any such measure, irrespective of the quantum of hardship caused to the public. When the Government's attention was drawn to the assurances made by the Prime Minister of India and others on the floor of the House, the brief reply was: "If the Prime Minister has given any assurances, you should approach him and not the West Bengal Government." It is hardly proper for responsible Ministers to take shelter under the letter of the law in complete disregard of the solemn assurances made by the Prime Minister and other spokesmen of the Government of India. It is a matter of regret that even the Ministry of Home Affairs, Government of India, to which the matter was referred by the Federation of Indian Chambers of Commerce and Industry as early as June 1955, has failed to take any action so far. The Federation rightly felt at that time that this was an important principle of all-India significance regarding the grant of compensation to small owners of properties.

Basis of Compensation

The real hardship in this case arises from the working of section 17 of the Estates Acquisition Act which provides for the method of computing the compensation. In computing the compensation payable to the Company under section 17, the development expenditure incurred by the Company to the tune of Rs. 32 lakhs is not taken into account at all. This section provides for the amount of compensation being worked out on a graded scale merely depending upon the net income of the estates acquired. The section does not take into consideration also the original capital investment of the Company of about Rs. 58 lakhs. Under the section the entire Company is treated as one entity. The scale of compensation is laid down as under:—

Net income	*Amount of compensation payable*
For the first Rs. 500 or less of net income.	Twenty times of such net income.
For the next Rs. 500 or less of net income.	Eighteen times of such net income.
For the next Rs. 1,000 or less of net income.	Seventeen times of such net income.
For the next Rs. 2,000 or less of net income.	Twelve times of such net income.
For the next Rs. 1,000 or less of net income.	Ten times of such net income.
For the next Rs. 15,000 or less of net income.	Six times of such net income.
For the next Rs. 80,000 or less of net income.	Three times of such net income.
For the balance of the net income.	Twice of such balance of net income

(Continued on page 667)

NATIONAL BANK'S PROFIT NEARLY MAINTAINED

DEPOSITS SHRINK FURTHER

THE 12 months ended 31st December 1957 constituted the last year of working for the National Bank of India Ltd. (General Manager: Mr. W. Kerr, London) under this old familiar name. With effect from 1st January 1958 its name has been changed to National Overseas and Grindlays Bank Ltd., consequent on the amalgamation of the National Bank of India and its wholly-owned subsidiary, Grindlays Bank Ltd., with effect from that date. All the assets and liabilities of the latter as on 31st December 1957 were taken over by virtue of the scheme of arrangement dated 8th July 1957 and by the order of Court dated 7th November 1957.

The past year proved to be a difficult one for the Bank as to any other British overseas bank, with a wide disparity in interest rates between London and other countries where the Bank operates. While, on the one hand, there was a keen competition for deposits, there was, on the other, a tendency for industries and commerce to borrow as much as possible where money was cheap and as little as possible when it is considerably more expensive and much harder to obtain. Despite these difficult conditions, the National Bank of India Ltd. has had a satisfactory year of working. Its consolidated profit (including its subsidiaries) for the year shows only a fractional setback from £432 835 to £427,490. Though the decline is negligible, it reverses the upward trend noted in the previous two years. As usual, this profit has been arrived at after making full provisions for taxation, bad and doubtful debts and other necessary reservations. After bringing in a sum of £354,046 from the previous year, the Directors have set aside, as in the previous year, a sum of £100,000 for premises account and have raised the provision for contingency reserve from £75,000 to £80,000. The distribution to the shareholders is unchanged at 15 per cent., after deduction of income-tax, absorbing £245,947.

The progress of the parent Bank can be judged from the following synopses of its balance-sheets as at the close of the last four years:

(In thousands of £'s sterling)

	As on 31st December			
	1957	1956	1955	1954
LIABILITIES (MAIN)				
Capital	2,852	2,852	2,852	2,852
Reserve fund	3,105	3,105	3,105	3,105
Unappropriated surplus	272	275	275	273
Current and other accounts	94,179	101,488	100,831	97,214
Fixed and short deposits	31,920	27,040	29,203	31,110
Bills payable	2,076	2,833	2,141	1,722
Loans payable			4,000	
Acceptances for customers	897	447	904	1,032
ASSETS (MAIN)				
Cash balances	18,349	16,547	16,844	15,756
Investments	22,105	23,716	27,091	25,348
Bills of Exchange (including Treasury Bills)	21,461	28,853	29,747	30,077
Advances and loans	73,304	65,583	66,439	63,626
Fixed assets	2,904	2,679	2,375	2,131
Balance-sheet total	141,297	140,129	145,529	139,845

The most notable change on the liabilities side of the latest balance-sheet is the drop of £7.31 million in the current and other accounts to £94.18 million, thus reversing the upward trend noted in the previous three years, when they rose from £80.63 million at the end of 1953 to £101.49 million at the close of 1956. It must, however, be noted that the pace of expansion had slowed down considerably in 1956. The shrinkage in 1957 has, no doubt, been offset to some extent by the rise of £4.88 million in fixed and short deposits to £31.92 million.

The Bank's advances and loans show a sharp rise of £7.72 million to £73.30 million, at which level they constitute 58.1 per cent. of the total current accounts and deposits, the ratio having gone up from 51 per cent. at the end of 1956. As against this rise in advances, bills of exchange (including Treasury Bills) have suffered a sharp drop of £7.39 million to £21.46 million, the lowest level since 1951. Investments (which, as usual, are shown at under market value) are lower by £1.61 million. The market value of Government securities fell considerably during the year, but the depreciation has been fully covered by the inner reserves. Cash balances have been enlarged by £1.80 million to £18.35 million, which together with the investments and bills of exchange represent 49.1 per cent. of the total current accounts and deposits, the corresponding ratio for 1956 being 53.8 per cent.

CANARA BANK LTD.

PROFIT AT ALL-TIME RECORD LEVEL

THE Canara Bank Ltd. (General Manager: Mr. P. S. Nayak, Bombay) continued to fare quite well during the year 1957. The profit of the Bank registered an expansion of Rs. 2.98 lakhs to touch an all-time record of Rs. 15.29 lakhs, thus maintaining the upward trend noted in the past nine years. The improvement in profit followed an impressive increase in the Bank's business, the total working capital rising from Rs. 20.55 crores in 1956 to Rs. 23.97 crores in 1957. Thanks to this increase, interest and discount earned were higher by Rs. 12.52 lakhs and commission and exchange by Rs. 3.65 lakhs, or a total rise of Rs. 16.17 lakhs. A good part of this rise—Rs. 13.88 lakhs, to be precise—was, of course, offset by enhanced interest charges and expenses, to the extent of Rs. 10.61 lakhs and Rs. 3.27 lakhs, respectively.

Despite the expansion of Rs. 2.98 lakhs in profit earned during 1957, the dividend has been maintained at the last year's level of 10 per cent (excluding the special dividend of 5 per cent paid on the occasion of the Golden Jubilee of the Bank in 1956). For the bulk of the rise in profit, amounting to as much as Rs. 2.70 lakhs, has been taken up by the provision for taxation which for 1957 stands at Rs. 7.30 lakhs as against Rs. 4.60 lakhs in 1956. A larger sum of Rs. 4.00 lakhs has been allocated to reserves, that for the previous year being Rs. 3.00 lakhs.

The following comparative table shows the progress made by the Bank in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Interest and discount earned	62.06	49.54	36.34	30.09
Commission and exchange	23.78	20.13	15.92	13.47

Investments	30.6	35.8	32.5	37.4
Cash	25.8	16.8	23.7	26.2

* Including Golden Jubilee bonus Rs. 65,000.
† Including 5 per cent. interim paid on the occasion of Golden Jubilee.

The above table reveals that the reserve fund of the Bank has been strengthened by Rs. 8 lakhs to Rs. 40 lakhs. Of this rise, transfer from the current year's (1957) profits accounts for Rs. 4 lakhs and that from contingency account for the balance of Rs. 4 lakhs. There has been an appreciable increase of Rs. 3.52 crores in deposits which during the year under review aggregated over Rs. 17.84 crores, as against Rs. 14.32 crores in 1956 when the increase was only of the order of Rs. 2.37 crores. The improvement was shared by all the constituents, fixed deposits having gone up by Rs. 187.41 lakhs, current accounts, contingency accounts, etc., by Rs. 139.54 lakhs, and savings bank deposits by Rs. 25.38 lakhs. The pace of rise in advances accelerated further during 1957, although the actual expansion was less than in the previous year, being Rs. 105.94 lakhs, as against Rs. 164.77 lakhs. The expansion of Rs. 105 94 lakhs in advances is shared by both loans, overdrafts, cash credits, etc., and bills purchased and discounted, the respective increases being Rs. 58.48 lakhs and Rs. 47.46 lakhs. Investments are also higher by Rs. 32.68 lakhs. Cash stands considerably strengthened by Rs. 236.22 lakhs.

The Bank recently issued 42,000 equity shares of the face value of Rs. 50 each aggregating Rs. 21 lakhs at a premium of Rs. 15 each. Of this issue, 34,800 shares were offered to the existing shareholders of the Bank and 7,200 shares to the confirmed employees of the Bank, thereby giving an opportunity for the employees to participate in the capital of the Bank. The issue has been oversubscribed.

CANARA BANKING CORPORATION

PROFIT SLIGHTLY HIGHER

TYPICAL of the several medium-sized scheduled banks which have been rendering a useful service to the economy of the country by garnering the savings of small industrial enterprises and individuals in and around the not-so-big towns and putting such savings to useful work is the Canara Banking Corporation Ltd. (General Manager: Mr. V. R. Kamath, Udipi), which experienced yet another year of all-round improvement during 1957 in its business activities. Started 52 years ago in the out-of-way town, Udipi, the Bank has slowly but steadily expanded its operations with the result that it can now boast of as many as 49 branch offices in the Deccan and a balance-sheet total running to Rs. 7.50 crores compared with Rs. 4.36 crores four years ago. That the progress of the Bank has been all round is indicated by the fact that during 1957, income, profit, deposits and advances have all increased, compared with the previous year. The profit, at Rs. 3.75 lakhs, is a fresh record for the Corporation. Because of the higher profit, the provision for taxation has also been higher. The Directors have also stepped up, albeit slightly, to Rs. 80,000 the transfer to the reserves of the Bank and also paid a bonus to staff amounting to Rs. 23,000. The return on the ordinary capital has been maintained at the usual level of 10 per cent., comprising 8 per cent. dividend and 2 per cent. bonus. It may be mentioned here that for the year 1955, shareholders had an extra one per cent. as cash bonus to commemorate the Golden Jubilee.

The following comparative table shows clearly the steady progress made by the Bank during the last four years:

(In lakhs of rupees)

	For the year ended December			
	1957	1956	1955	1954
Interest and discount	28.38	23.18	18.05	15.99
Commission, exchange and brokerage	6.66	5.71	4.57	4.32
Interest paid	17.46	13.28	9.70	8.39
Expenses	13.58	11.81	9.46	8.47
Depreciation	0.37	0.40	0.33	0.33
Profit	3.75	3.55	3.34	3.29
Provision for taxation	1.60	1.47	1.00	1.25
To reserves	0.80	0.73	0.94	0.75
,, bonus to staff	0.23	0.72	..	..
Dividends—				
Preference	0.58	0.58	0.58	0.58
Ordinary	0.75 (D. 8% +B. 2%)	0.75 (D. 8% +B. 2%)	0.82 (D. 8% +B. 3%)	0.75 (D. 8% +B. 2%)
Carry forward	0.06	0.04	0.02	0.02
	As on 31st December			
	1957	1956	1955	1954
Capital	20.00	20.00	20.00	20.00
Reserves	13.55	12.75	12.00	11.25
Deposits	5,85.76	5,18.20	4,23.51	3,42.79
Borrowings from other banks	35.47	74.22	25.73	0.37
Advances	3,43.48	3,07.76	2,23.27	1,57.79
Investments	2,29.55	2,55.35	1,75.46	1,60.62
Cash	94.03	76.63	93.67	71.46
Balance-sheet total	7,49.53	7,04.25	5,45.09	4,36.38
Ratio to deposits of—	%	%	%	%
Advances	58.6	59.4	52.5	46.0
Investments	39.2	49.2	41.4	46.8
Cash	16.1	14.8	22.1	20.8

A study of the statement of accounts of the Bank shows that as far as the income of the Bank is concerned, the improved rate of progress established in 1956 has been fairly well maintained in 1957. Thus, gross income has increased from Rs. 29.04 lakhs in 1956 to Rs. 35.16 lakhs in 1957—a rise of Rs. 6.12 lakhs which compares with the rise of Rs. 6.21 lakhs in the previous year. Again, as in the previous year, the increase is shared by the two main sources of income of the Bank, namely, interest and discount and commission, exchange and brokerage.

The balance-sheet of the Bank shows a satisfactory position. Deposits have increased by Rs. 67.5 lakhs to Rs. 585.76 lakhs and borrowings from banks have been reduced by nearly half to Rs. 35.47 lakhs. As against this, the increase in advances has been to the extent of Rs. 36 lakhs, which, at Rs. 343.48 lakhs, works out to 58.6 per cent. of the deposits. Further, 78.5 per cent. of the total advances are fully secured. Investments and cash total Rs. 323.58 lakhs or 55.3 per cent. of the deposits, as compared with Rs. 331.98 lakhs a year before, the ratio showing a decline of 8.7 per cent. compared with the previous year.

The Corporation opened three new branches during the year under review and proposes to open shortly four new branches, one of which will be in Calcutta.

WORLD COTTON SPINDLEAGE EXPANDS

CHINA ACCOUNTS FOR A BIG SLICE

THE cotton year ended July 1957 witnessed a notable rise in the world cotton spinning capacity, the net addition to the spindleage in that year being 551,000. The aggregate number of spindles in place as at 31st July 1957 was 129,422,000, as against the revised figure of 128,871,000 on the corresponding date in 1956, according to the latest issue of *International Cotton Statistics*, published by the International Federation of Cotton and Allied Textile Industries, Manchester. Besides this net addition, as many as 3,069,000 spindles were in course of erection during the year, as against 2,825,000 in the previous year. The bulk of this, numbering 2,299,000, represented an increase and the balance of 770,000 was replacement to existing machinery. Assuming that the entire erection has now been completed and excluding the spindles lately being installed, the total number of spindles in place stands at present at 132,491,000.

The expansion in the world spinning capacity during the cotton year 1956-57 was accounted for, as in previous years, by the Asian, Oceanic, South American and African Continents, while the declining trend in Europe and North America continued unabated. The cotton mills in Asia and Oceania added more than 2.34 million spindles (mostly ring spindles) to their existing plant, the total number of spindles rising to 31,347,000 at the end of July 1957. In addition, a further 2,893,000 spindles were in course of erection. The increase in the number of spindles installed was higher as compared with the previous year by 208,000 at 1,248,000 in Africa and by 148,000 at 5,584,000 in South America. The persistent expansion in the cotton spindleage in these regions indicates the renewed efforts on their part to develop the cotton textile industry with the twin objects of providing more employment opportunities to people and of reducing dependence on foreign textiles. There was, however, a reduction in spindleage from 66.75 million to 65.28 million in Europe and from 24.30 million to 23.62 million in North America. The fall in Europe was due, to a large extent, to the scrapping of over 1.72 million mule spindles; the loss was not offset by an increase in ring spindles which was of the order of only 252,000.

Spindles in Place

The estimated total world cotton spinning spindles actually in place at the close of the cotton years 1956 and 1957 are given below:

(In millions)

	For the year ended July	
	1957	1956
U.K.	22.49	23.97
U.S.A.	21.20	21.90
India	12.38	12.07
U.S.S.R.	10.15	10.10
Japan	9.02	8.50
France	6.26	5.55
W. Germany	5.86	5.95
Italy	5.57	5.73
China	7.50	6.29
Brazil	3.45	3.39
Czechoslovakia	1.89	2.48
Spain	2.36	2.36
Belgium	1.60	1.66
Pakistan	1.73	1.68
Other countries	17.96	17.24
Total	129.42	128.87

It will be seen from the above table that there was a remarkable expansion in the spinning capacity in China during 1956-57, the number of spindles in existence being 7.50 million, representing a rise of as many as 1.21 million as compared with the previous year. The other countries where the spinning capacity also registered a handsome improvement were France and Japan, the number of spindles increasing from 5.55 million and 8.50 million to 6.26 million and 9.02 million, respectively. The number of spindles in India, too, rose from 12.07 million to 12.38 million. This negligible improvement must be attributed to the restrictive official policy based on the consideration of giving encouragement to the less efficient decentralised sector. In contrast, there was a drop in the number of spindles in the U.K., the U.S.A., West Germany, Italy and Czechoslovakia.

The net addition to the world cotton spindleage during the year under review was, as already stated, 551,000. The figure would have been very much higher but for the scrapping of over 1.7 million mule spindles in several countries of Europe. The scrapping was more than counterbalanced by a marked rise of 2.29 million in ring spindles. Consequently, the percentage share of ring spindles in the world total improved from 88.33 in 1955-56 to 89.78 in 1956-57, whereas that of mule spindles declined from 11.62 to 10.22. The change in the character of spindles thus indicates that, as the outmoded mule spindles are being scrapped, the world today has more modern spindles than before. The number of spindles spinning Egyptian type cottons suffered a fall, the total at the end of 1956-57 being 15,696,000, as against 16,806,000 a year before, but that of spindles spinning rayon staple fibre was higher at 3,964,000, as against 3,255,000.

Distribution of Spindles

Ring spindles constitute the major portion of the spindleage of practically all countries, barring the U.K., as is evident from the following table which gives the distribution of the different kinds of spindles in various countries as at 31st July 1957:

(In thousands)

	Ring spindles	Mule spindles	Spindles spinning Egyptian cotton	Spindles spinning rayon staple
India	12,206	170	1,511	1,002
U.K.	10,310	12,177	7,631	2,323
U.S.A.	21,196	..	500	1,271
U.S.S.R.	10,147	..	N.A.	N.A.
Japan	9,018	..	..	0
France	5,961	296	749	460
W. Germany	5,851	4	N.A.	N.Al
Italy	5,566	8	950	550
China	7,500	..	600	..
Brazil	3,453	..	..	4
Czechoslovakia	1,693	200	800	N.A.
Spain	2,259	105	300	N.A.
Belgium	1,690	1	N.A.	..
Pakistan	1,731	..	3	64
Other countries	17,698	272	2,654	1,636
Total	116,189	13,233	15,698	7,219

N.A.—Not available.

The expansion in the world cotton spinning capacity during 1956-57 as noted above was accompanied by a striking improvement in the utilisation of capacity. This is indicated by the appreciable rise in the quantity of cotton consumed which aggregated 42,438,000 running bales (of 478 lbs. each) in 1956-57, as against 38,937,000 bales in the previous year. Expressed in percentage, the rise comes to nearly 9 per cent., as against the increase of only 0.5 per cent. in the number of spindles installed. Cotton consumption per 1,000 spindles, therefore, increased from 302 bales to 328 bales. This means that there was a more intensive utilisation of spinning capacity in several countries through increased shift-working. Consumption of American cotton during the year under review shows a considerable increase over the previous year, being 14,394,000 bales, as against 11,552,000 bales.

The statistics relating to the number of spindle-hours worked during the 12 months ended 31st July 1957 show that the spindles in Hong Kong were working at an average of 6,158 hours. The average number of spindle-hours worked was 5,932 in India, 6,468 in Pakistan, 4,867 in Japan, and 2,124 in the U.K.

(*Concluded from next column*)

very cautious in permitting imports in view of the foreign exchange difficulties. In deciding upon a policy it should be borne in mind, Mr. Ruia added, that the textile industry, which is not passing through a good period, should be able to meet its raw cotton requirements at reasonable prices so that its finished product could compete in world markets. It was also necessary to see that the growers got a reasonable price for their produce so that they might be induced to produce more cotton. Mr. Ruia welcomed the recent reduction in export duty on Bengal *Deshi* cotton from Rs. 100 per bale to Rs. 50 per bale. It was, according to him, an indication of the changing export outlook.

A mission from the International Federation of Cotton and Allied Textile Industries will visit Egypt shortly in order to discuss current problems regarding raw cotton exports with Egyptian Government officials and industry representatives. The mission will be composed of two cotton spinners, Herr Hans Otto from Germany and Signor Tomaso Piccardo from Italy, and of Mr. Mario Ludwig, Director of the International Cotton Federation, who will act as *rapporteur*. The mission will pay particular attention to the new administrative set-up at the Egyptian Testing House and the new Spinning Test Mill at Alexandria, two testing establishments under international management for the testing of moisture content and spinning properties of exported Egyptian raw cotton. The members of the mission will also be received in audience by the Minister of Agriculture and the Minister of Commerce and Industry in Cairo, and pay an official visit to the International Fair for Egyptian Cotton, which is to be held at Cairo.

COTTON TRADE IN THE PAST TWO SEASONS

E.I.C.A CHIEF REVIEWS DEVELOPMENTS

THE major developments affecting the cotton trade during the last two seasons were briefly reviewed by Mr. Madanmohan Ruia, President of the East India Cotton Association (E.I.C.A.), in his presidential address to the 35th annual general meeting of the Association, held in Bombay on 27th March. Mr. Ruia referred in particular to the termination of Mr. Purshotamdas Thakurdas' association with the E.I.C.A. and expressed the deep gratitude of the trade for the invaluable services done by him as the President of the Association since its inception until his resignation in April 1956.

In view of the peculiar circumstances under which the Association had to complete arrangements for complying with the various mandatory provisions of the Companies Act, which came into effect on 1st April 1956, a considerable time elapsed between the present annual general meeting and the previous one which was held in 1955. Necessary provision in the Articles of Association had to be adopted and approved by Government. The question of re-election of Directors of the E.I.C.A. strictly in consonance with the provisions of the Companies Act presented practical difficulties. In view of the unsuitability of certain provisions of the Act to commercial bodies like the E.I.C.A., it was necessary to have the Forward Contracts (Regulation) Act 1952 suitably amended so that the franchise for election to the Board might not militate against the relevant pattern of the Companies Act.

Mr. Ruia characterised the year 1955-56 as the most eventful year in the history of cotton trade as it witnessed many developments of far-reaching consequences. In the last season, that is 1956-57, the most notable development was the introduction of the system of two hedge contracts, namely, Fine M.G. Jarilla Contract 25/32" staple and Fine M.G. Vijay Contract 27/32" staple. The working of the two contracts under various forms of control to which trading therein was subjected, was fully examined by a special sub-committee and, in the context of the circumstances under which hedge trading had to be carried on, the Board decided to revert to one contract, the Indian Cotton Contract with Fine M.G. Moglai Jarilla 25/32" staple as the basis, for the current season (1957-58). In the light of past experience and with a view to working this contract smoothly, certain safeguards have been provided. Mr. Ruia said that, for the next season also the Association would watch the working of the present system of hedging and try to make, if necessary, further changes to improve the contract so that it might satisfy all sections of trade and be a true hedging medium.

Another development of major importance to the trade, Mr. Ruia said, was regulation of trading in delivery contracts for permitted descriptions, stipulating clearance of differences through Settlement Clearings as in the case of hedge contract, but on fortnightly basis instead of weekly. The introduction of the system of certification of cotton tendered against the hedge contract according to the final award in arbitration was, he added, a further measure of improvement towards better regulation of the trade.

Mr. Ruia also referred to the progress of cotton production in the country. The attainment of the target of 6.5 million bales of cotton fixed under the second Plan, according to Mr. Ruia, was hedged in with uncertainties and difficulties to which Indian agriculture were traditionally subject. He noted, however, that the necessary measures were being taken by the Indian Central Cotton Committee for improving production with the help of research and extension schemes.

Reviewing the supply position of cotton during the current season, the President of the Association said that the season's crop estimate was scaled down from 5.3 million bales to 4.9 million bales. The quality and quantity of the crop, especially in North Gujerat, Vijay and Surat crop, was adversely affected by the irregular trend of monsoon and untimely rains. Mill consumption of raw cotton, which was about 5.2 million bales last season, comprising 4.66 million bales of Indian cotton and 568,000 bales of foreign cotton, was expected to be higher this season but, due to adverse conditions, it is now expected to be more or less in line with last season.

As regards the foreign trade in cotton, Mr. Ruia observed that the Government had to be

REDUNDANCY PROGRAMME IN MILLS

BOARD OF TRADE SECRETARY TO VISIT HONG KONG FOR CLOTH IMPORT TALKS

From A Special Correspondent

MANCHESTER, *25th March*

MANCHESTER LETTER

TRADING conditions in the Lancashire textile industry may be extremely slack, but there is no shortage of topics of conversation wherever business men gather. Most of the subjects for discussion have a direct bearing on the industry and their influence may be highly important in the months ahead. In the past week, the headlines have included the decision to send a leading civil servant to Hong Kong to confer on the cloth import problem, cut in Bank rate, indications that the American cotton surplus has now been reduced to manageable proportions, further cuts in export tax on Sudanese cotton, and renewed pressure from the Master Spinners' Federation for a complete overhaul of Government policy on behalf of the trade.

Nor was this all; a new and vital phase in the industry's attempt to bring productive capacity more into line with current demand has been taken by the weaving section. Proposals have been put forward to establish a redundancy programme sponsored by the chief trade organisations concerned to assist in the voluntary closing down of mills. All these important matters must be considered in their context and their possible implications before decisions can be taken to enable forward trading to be carried out. No wonder the average trader is perplexed about his individual position in the industry and his future status.

Redundancy in Weaving

Criticism has frequently been aimed at the weaving section of the industry for what many people have regarded as lack of enterprise in organising the affairs of this branch in relation to other sections. Manufacturers have faced a more uncertain future, due to their awkward position between the effective price regulation schemes of spinners and doublers and the finishing trades. Within recent years, however, signs have been evident that the position has not been overlooked by those in control; the first move in this direction was the abortive cloth price maintenance scheme, which failed through lack of support among the general body of weavers.

Now a new attempt is being made to create order out of semi-chaos. The establishment of Weaving Reorganisation Limited offers the opportunity to those owners of weaving sheds who wish to quit the industry to reduce the existing surplus capacity under supervision and in an orderly manner. Details of the arrangements have not yet been published, but it has been stated that the terms on which the Company proposes to take over firms which may volunteer to close down are designed to appeal mainly to those which have not re-equipped. The chief object is to assist the industry rather than make a profit.

The whole scheme will be conducted in strict confidence and any companies interested will deal with a Manchester firm of solicitors which has for many years been at the heart of cotton trade affairs. The sponsors of the plan stress the essential necessity of finding means of putting the industry on a sound footing by reducing its equipment in quantity and improving its quality. In the belief that there are a number of firms which would be ready to close down if they could do so on reasonably advantageous terms, the Company has been formed with this object. It is significant that the Chairman and Managing Director of the organisation will not themselves be directly engaged in the industry.

A Move At Last

If at first sight the Government's intervention in the hotly-contested arena of cloth imports struck traders as being somewhat tardy in appearance and insignificant in conception, second thoughts brought a slightly more favourable attitude. The Permanent Secretary to the Board of Trade has had his critics in the industry in the past, but few would deny his strength of purpose when engaged in a mission.

That the Government has seen fit to send such a representative to Hong Kong at this time seems to herald the onset of a fresh series of inter-industry talks, with perhaps a different background. In the light of past experience, a journey of this kind would be entirely fruitless unless the millowners at Hong Kong are told that their long campaign against Lancashire will no longer be assisted by Government inaction.

Whatever the outcome of the initial talks, further negotiations must follow, if any settlement is to be reached. In the meantime, uncertainty as to the details of such a pact, if any, must continue to play its harassing role in curbing activity throughout the market. The sooner all the trade leaders involved can get to grips, the better for all concerned.

The disclosure of the new Eastern journey coincided with some straight talking by Mr. S. S. Hammersley, of the Cotton and Rayon Spinners group, a chairman who is never afraid of speaking his mind. "It seems clear that exports of cotton cloth will, in the future, play a much diminished part in the country's balance of payments," he said bluntly in his annual report. "The textile industry is ceasing to be as important to Britain as it was, because not all the re-equipment in the world will make Lancashire's single-shift working other than non-competitive."

Sequel to Imports

As if to add point to the continued agitation by the industry on the imported cloth situation reports of more big mill closures have been confirmed. Following quickly on the decision of the Directors of Atherton Mills Ltd. to close two of their four spinning units, the Ocean spinning mill at Bolton is the latest casualty. The Board attributes its action entirely to the ruinous arrivals of foreign yarn and cloth and their threat to the future. Another Bolton mill, the Grecian, owned by a branch of the Fine Spinners and Doublers group, is also shutting in a reorganisation scheme.

Presiding over the annual meeting of the Master Spinners' Federation, Mr. Ernest Hirst recounted the history of recent contraction and the efforts made to fight the menace of foreign competition. Modernisation, which had been proceeding at a faster rate than in any other established cotton industry had, he contended, been slowed down by the threat of increasing and unlimited duty-free imports from Commonwealth areas.

No one has yet disputed the accuracy of the Federation's 17 points, on which Lancashire's case against imports is based. It must be stressed again that the industry is not calling for complete exclusion of these goods, but only a reasonable ceiling, after which it will be possible for producers in this country to plan their future programme on the assumption that a certain quantity of foreign goods will be purchased for distribution at home each year.

Bank Rate Cut

Financial *pundits* have spent quite a few Wednesdays lately writing articles which they hoped would coincide with a change in the Bank rate on the following morning. Last week, their predictions were rewarded. The cut of one per cent. was perhaps larger than expected and marks the end of the current period of extremely dear money. Whether it will be necessary to reinstate such a high rate in the future can only be the subject of speculation but for the moment traders must be thankful for small mercies.

It is still too early to assess the full reaction to this development, but it can hardly help but assist the freer movement of goods after the natural hesitation among distributors, which has been prevalent ever since the sharp rise in the rate last year. Holders of goods at all stages of production have been loth to keep stocks of any weight for any longer than necessary and hand-to-mouth purchasing became inevitable. Time will show whether the trend has now been sufficiently reversed to bring increased trading in textiles, no less than other products.

According to the latest quarterly analysis of advances issued by the British Bankers' Association, the situation was just about being held in February this year. Total borrowings then amounted to £1,940,850,000, an increase of less than £10,000,000 on the November figure, but £60,000,000 below the advances made a year ago. Cotton's share in this indebtedness was almost identical over the quarter, being £26,376,000, as against £26,384,000. The comparative total in February 1957 was £24,129,000. Very little variation occurred in the borrowings of other industries, although advances to the woollen trade dropped from £44,331,000 to £39,955,000, while other textiles were indebted to the bankers to the extent of £45,970,000, as against £40,852,000 in November.—*All Rights Reserved.*

INDIAN OVERSEAS BANK LIMITED

SPEECH OF MR. M. CT. MUTHIAH, CHAIRMAN, AT ANNUAL MEETING

IMPLICATIONS OF SECOND PLAN TO BANKING

ADDRESSING the Annual General Meeting of the shareholders of the Indian Overseas Bank Ltd., held in Madras on Monday the 31st March, 1958, the Chairman of the Bank, Mr. M. Ct. Muthiah, emphasised that if Indian banking has to take its rightful place in the context of the implementation of the second Five-year Plan, it must be actuated by a "measure of dynamism and refreshing thought." He added: "While the moorings of sound banking should remain, a re-orientation of approach with accent on a positive role of accelerating productive growth will greatly raise the stature of the banking system."

The following are extracts from Mr. M. Ct. Muthiah's speech:

"GENTLEMEN,

The Year's Operations

"You will see from the comparative statement that the Bank has made all-round progress during the year. Deposits have gone up by about Rs. 335 lakhs, while advances and investments in Government securities show an increase of Rs. 62 lakhs and Rs. 147 lakhs respectively. Gross earnings at Rs. 132 lakhs represent an increase of 16 per cent. over the previous year. The net profit amounted to Rs. 32 lakhs, as against Rs. 29 lakhs in 1956 and your Directors recommend a dividend of 10 per cent., the same as last year.

Capital Structure and Reserves

"With our increased business activities at the various centres and our expansion programme well under way, your Directors have felt the need for increasing the share capital of the Bank and have accordingly called up, as a first step, further share capital of Rs. 25 lakhs which when fully realised, will raise the paid-up capital to Rs. 75 lakhs by next year. Simultaneously, the reserve fund is being augmented at a fair pace, and inclusive of the share premium, it now stands at over Rs. 46 lakhs.

Employment of Resources

"We continue to maintain a high degree of liquidity in the employment of our resources as disclosed by the following figures:

		Lakhs of rupees	*Percentage to total deposits*
A.	Cash and balance with banks	339	17.1
B.	Bills	655	33.1
		994	50.2
C.	Investments (against which no borrowings have been made)	661	33.3
	Total of A to C	1,655	83.5
D.	Advances	488	24.6

Opening of New Branches

"Under our scheme of planned expansion, we opened four branches last year at Mylapore, Puraswalkam, Karur and Munnar. This year, we have opened so far three branches, at Matunga, Kottayam and Klang (Malaya).

Overseas Branches

"All our overseas branches continue to progress satisfactorily.

Banking, Monetary and Economic Trends

"The year 1957 was a study in contrast to that of 1956 as far as banking trends were concerned. Owing to accelerated tempo of industrial activity, there was considerable expansion of credit in 1956, total advances of Scheduled banks rising from about Rs. 615 crores in December 1955 to about Rs. 780 crores in December 1956 and deposits recording a modest rise of only Rs. 77 crores. On the other hand, the resources of Scheduled banks shot up by about Rs. 267 crores to Rs. 1,367 crores over the year 1957 while advances stages a small rise of about Rs. 70 crores only, thus affording a large flow of funds into the banking system. This enabled banks to scale down borrowings from the Reserve Bank of India, augment their investment portfolio, strengthen their cash reserves and bring down the percentage of advances to deposits from 71.63 per cent. to 62.74 per cent.

"The Reserve Bank of India rate was raised from 3½ per cent. to 4 per cent. on 16th May 1957 in keeping with the tight money policy pursued. The volume of funds available to the public was also kept fairly under check, the total of the note issue rising from about Rs. 1,475 crores at the end of 1956 to about Rs. 1,523 crores only at the end of 1957.

Industrial Production

"Industrial production continued to expand, though at a more modest rate than in the previous year. The index of industrial production for the ten months ending October 1957 was higher at 149, as compared to 144.9 for the corresponding period of the previous year. Agricultural production increased by 6.1 per cent. over the previous year.

"The general index number of wholesale prices (Base year 1952-53—100) in December 1957 was 106.3, as against 106.9 a year before. The price index for food articles at 102.9, however, recorded no change. This is due to the policy of selective credit control followed by the Reserve Bank of India by the imposition of a ceiling on aggregate advances of each bank against foodgrains and to the prompt action taken by the Government to eliminate the tendency on part of some dealers to hoard foodgrains. The 'Essential Commodities Act' was amended in order to enable the Government to requisition food stocks of the country not at the prevailing price but at an average price prevailing at the area for the previous three months.

Major Crisis

"The major crisis in the economy was, however, the threatened collapse of the second Five-year Plan, which from all accounts was considered an over-ambitious one, particularly in relation to the country's available resources, both internal and external, though not in relation to the needs of the people. The planners were banking on many assumptions including a substantial increase in the country's savings and the stability of the world prices to meet fully the requirements of the Plan but subsequent events had belied their expectations. Bad monsoons at certain areas necessitated heavier import of foodgrains, prices of machinery for the various development programmes had risen in foreign countries and the closure of the Suez had in its wake necessitated increased expenditure of foreign exchange.

"The volume and the value of foreign trade were bigger, with imports being heavier than exports, leading to a deficit in the country's balance of payments. At the beginning of 1957, the foreign assets of the Reserve Bank of India stood at Rs. 530 crores but at the end of the year they had fallen to Rs. 297 crores, thus recording a drop of Rs. 233 crores. As the Government was forced to draw on that part of the reserves which had traditionally come to be held as backing to the currency, an ordinance was issued in October 1957, empowering the Reserve Bank to reduce the minimum currency reserve from Rs. 400 crores to Rs. 200 crores, with a stipulation that the gold holding should not be less than Rs. 115 crores. This was subsequently incorporated in the Reserve Bank Act by an amending Bill in November last.

Curb on Imports

"Thanks to the foresight and the alacrity of our financial authorities who noticed the red light even at the commencement of the year, unwanted imports were ruthlessly slashed, foreign exchange allowances to Indian nationals were strictly rationed and all forms of foreign exchange expenditure came under very close scrutiny. The import of capital goods, wherever possible, came to be negotiated on the basis of long-term credits. As no underdeveloped country could ever raise itself by its own bootstraps, the Finance Minister, along with the various trade missions, travelled abroad and quickly tapped the world's markets for trade credits.

"We have since reassuring news of generous loan aid from several friendly countries such as the U.S.A. (Rs. 107 crores), West Germany (Rs. 75 crores), U.S.S.R. (Rs. 60 crores), France (Rs. 28 crores), Japan (Rs. 24 crores) and the continuation of the generous assistance from Canada. This is apart from the valuable assistance we continue to receive from the International Bank for Reconstruction and Development, with whom India is the largest borrower. What is noteworthy is the reported decision, in principle, by the U.S. Government to support the second Plan, and what has been obtained is but the first instalment.

"The Government have been making a determined bid to check inflationary pressures and to restrict deficit financing to the lowest possible level both by increased taxation and a sustained savings drive. Last year's budget introduced two new taxation measures, the Wealth Tax and the Expenditure Tax. The 1958-59 budget provides a total Plan outlay of Rs. 1,017 crores which would leave, on current assessment, an overall deficit of Rs. 205 crores after reckoning foreign loans of Rs. 285 crores.

Size of Plan

"The size of the Plan itself, as anticipated by me in my last report, has been revised downwards and a strict order of priorities is being evolved based on the urgency and the availability of resources. New commitments, outside the 'hard core' which comprises improvement of transportation facilities, the three new steel works, mining projects and to some extent ancillary power, are to be undertaken only with external assistance in the form either of foreign investments and/or deferred payment schemes. This slow-down in the tempo of the implementation of the Five-year Plan is indeed heartening and is expected to ease to some extent the 'crisis of development,' in which both the Government and the country have been caught up.

"The long-awaited currency reform, namely, decimal coinage, was introduced in April 1957.

Staff Training

"As indicated in my last report, a Staff Training School for the Bank's clerical staff was inaugurated in April last at Madras, providing for intensive theoretical and practical training over a period of three months. To foster community life, the trainees are provided free lodging and boarding in the school campus and they are encouraged to have discourses in general subjects. Quiz programmes and lectures by prominent men in different walks of life are being arranged. So far, three batches of trainees have completed their courses and the fourth batch has just commenced taking the training.

"Two officers were deputed to the Midland Bank Ltd., London, last year for training and they have returned greatly benefited by this special study. We also deputed several officers to the Bankers' Training College, Bombay, and I would like to avail myself of this opportunity to thank the Midland Bank and the Reserve Bank of India for the facility they have given us in this regard. Arrangements are on hand for starting a refresher course for senior officers and this will greatly help to improve their competence to meet the demands of a growing bank.

Role of Banking in the Second Plan

"Before concluding, I like to share with you my thoughts on one aspect which I regard as of utmost importance to Indian banking. In the past decade the groundwork for a broad-based economy has been laid in India, and our second Five-year Plan holds out considerable promise. The implementation of the Plan will release powerful stimulus to the various segments of our economic life. The impact on banking will be of magnitude and presents both an opportunity and a challenge. Economic activity of such dimensions has created vastly differing financial climate, and if Indian banking is to take its rightful place, it has firstly to be actuated by a measure of dynamism and refreshing thought. While the moorings of sound banking should remain, a reorientation of approach with accent on a positive role of accelerating productive growth will greatly raise the stature of the banking system. The standards applicable to a well developed economy may not fully meet the creative requirements of a country which is on the threshold of a gigantic economic uplift. The banking system has to irrigate pastures anew and has to so direct its policies as to promote the overall pattern of rapid development. This way Indian banking will facilitate and be facilitated by the planned progress."

NOTE.—This does not purport to be a record of the proceedings of the annual general meeting which will be sent separately to shareholders.

Incomparable power weight ratio and matchless drilling penetration speed, put the Wolf 'WD' range of electric drills miles ahead of others. Possessing unrivalled stamina, you can rely on them 100% to beat all production targets—with important all-round economies in labour and overhead costs.

Operators prefer Wolf tools because of their perfect balance and easier handling qualities, which banish strain and undue fatigue. It costs no more, often less, to install Wolf tools and enjoy all these unique advantages that increase output and lower costs.

DECCAN SUGAR MILLS AND LEASE LANDS

CONDITIONS GOVERNING EXEMPTION FROM TENANCY ACT EXPLAINED

THE Government of Bombay has clarified the position with regard to the exemption granted to sugar factories in the Deccan under section 43A of the Tenancy Act. The exemption, it will be recalled, relates to the duration of tenancy, fixation of rent, ceilings on acquisition of land, compulsory purchase, restrictions on transfer of lands to agriculturists and non-agriculturists, and maximum price to be charged on such transfers. Recently, the Government issued a notification prescribing the conditions subject to which the sugar factories enjoy such exemption. The notification would appear to have created certain apprehensions in the minds of landlords who have leased their lands to the sugar factories. Since the apprehensions are based on a misconception of the intentions underlying the original exemption and misconstruction of the notification issued, the Bombay Government has now come out with a clarification. The Government hopes that "those who have misunderstood or misapprehended the intentions of the notification will, in the light of this clarification, realise the necessity of these regulations and the fact that the interests of the parties are fully safeguarded on considerations of fairness, equity and justice."

The exemption of lands held by the sugar factories under section 43A of the Tenancy Act is, indeed, a gratifying feature of an otherwise unhelpful policy adopted by the authorities. Thanks to the exemption, the limitations imposed by the provisions of the Tenancy Act have not affected the production operations of sugar factories. But for the exemption, there might have been dislocation or uncertainties created by disputes relating to the renewal of leases, by the maximum limit of rent prescribed under the Act, or by the landlord resuming the lands for cultivation from the sugar factories, and by restrictions on transfer of lands and the price prescribed in the Act for such transfers. The Government has, of course, not left the exemption unregulated, for it has prescribed the conditions governing it. Explaining this aspect, the latest Press note of the Government says: ".... if the exemption remained unregulated, the position would have been even worse, because the transfer of lands could have been regulated by negotiations and agreement between the parties and, the position of tenancies and rents would have been in a state of flux. It was, therefore, incumbent on Government to frame regulations which would secure the main objective and, at the same time, safeguard the legitimate interests of both the parties, namely, the landlords and the sugar factories."

Two Important Regulations

There are two important regulations. First, the *mamlatdar* fixes the reasonable rent for the lands leased to sugar mills without reference to any maximum at all and having regard to the various factors, including the profits earned by the factories from the manufacture or sale of articles made out of sugarcane. Secondly, the leases are for a fixed period; if no exemption had been given, these leases would have been of an indefinite duration. Under the notification issued by the Government, it will be open to the sugar mills and the landlords to settle the duration through negotiations. Where, however, there is any divergence of opinion, the Collector can intervene in order to secure a fair and equitable adjustment. Surely, such adjustment is as much in the interests of sugar mills as in that of the landlords and the community at large. As the Press note rightly points out, "it is clear that, in a case like this, the intervention of the Collector is intended to secure the interests of both parties with due regard to the necessity of safeguarding the working of these factories in the wider national interests. It can hardly be ignored that such working is essential even in the interests of prosperity of the population in the area covered by these factories and in the interests of landlords themselves whose land would not otherwise fetch the income which they would do under these leases."

The Government of Bombay has made it clear that the sugar factories cannot be allowed to enjoy exemption in respect of lands the retention of which with them is not necessary for their *bona fide* requirements. A provision has accordingly been made in the notification for the resumption of such lands as are held in excess by the sugar mills and for their disposal by the Collector. Similarly, it has been provided that, for default of sugar factories, a lease can, in certain circumstances, be terminated. It is, however, not known what these circumstances are.

While few would dispute the need for, the aforesaid regulations, one will ask: Why should the Government stipulate the condition that the sugar factories cannot purchase, without the permission of the Collector, any land through either negotiations with the landlords or mediation of the *mamlatdar*? The reasons adduced by the Government for imposing this restriction are as follows:

The intention is to prevent sugar factories from utilising the provisions relating to exemption from ceilings for the purpose of enlarging their holdings held as owners by unrestricted purchases from landlords whom they might be able to win over by attractive offers. It is also the intention to ensure that purchases are made only for the *bona fide* needs of the sugar factories; it is obvious that such needs cannot include a mere acquisition of occupancy in place of the present tenancy.

Reasons Not Convincing

The aforesaid reasons are not convincing. No sugar factory will be interested in the purchase of lands which are not useful to it in any way. Even for purchasing land for such *bona fide* needs as construction of additional buildings, installation of plants, etc., provision of amenities to labourers, storage and godown facilities, installation of waterworks, etc., and construction of canals, the factories have first to obtain the permission from the Collectors. The imposition of such restriction entails a lot of delay. This is especially so when the Collectors have been asked to make a reference to the Government where a factory needs more than ten acres of land. Further, it is somewhat difficult to understand as to why, when the Tenancy Act has fixed the maximum price for the transfers of lands, there is need for a separate provision which requires that such transfers should be not on the basis of maximum price but "on the basis of a reasonable price which would take into account the market value." Since the concept of the word "reasonable" is very wide, much time will be wasted on discussions over prices with the landlords who will try their best to pitch the value of their lands unduly high. It is also difficult to understand as to why the Government has assumed powers to enforce any award on continuance of lease made by the competent authority either in the past or in future. For the question should be left to mutual settlement between the parties concerned, that is, the sugar factories and the landlords. And if no agreed solution is arrived at and if any recalcitant party—whether sugar factory or landlord—deliberately fails to comply with the award, there is, after all, the judiciary to which the issue can be referred.

SUGAR EXPORTS

Apropos our references to exports of sugar and Mr. P. Hadfield's observations in *Commerce* dated 15th March 1958 (*vide* page 500), a "Small Industrialist" from Poona writes as follows:

"It is a well-known fact that there is surplus production of sugar in the country. The surplus would increase in the years to come when additional sugar factories which have been licensed start crushing. If this surplus is exported, we can get fairly large foreign exchange, which is so badly needed. The only handicap is that there is a wide gap between the world price of sugar and the price of Indian sugar. The question as to how to narrow the price disparity is being hotly considered.

"This problem, however, should not be considered insurmountable. A review of the balance-sheets of most of the sugar factories having a crushing capacity of over 1,000 tons will disclose that these factories are showing huge profits as compared with other industries. Such a happy position is the result of the artificial scarcity of sugar in the market created by Government policy governing release of quota for internal consumption. If the Government removes all the restrictions and if sugar is made a free trading commodity as in pre-war days, the price of sugar is bound to come down considerably, resulting in the cutting down of profits of factories. Realising this, would it be going out of the way to suggest that all the sugar factories having a crushing capacity of over 1,000 tons should voluntarily come forward to export at least 10 per cent. of their production

(*Continued on page 671*)

TRANSPORT OF COAL

NEED FOR MASTER PLAN

THE Government's awareness of the importance of increasing coal output became clear when it decided, in November last, to investigate India's requirements of coal in the third Plan period 1961-65. It is not known whether any exhaustive survey has been undertaken in pursuance of that decision. If it has not already been taken up it is necessary that the Government should immediately undertake such a survey. It should arrive at a realistic estimate not only of the total requirements of coal but also of a division of the total output between the public and private collieries. Besides investigating the ways and means of increasing the output of coal, it is of the utmost importance that the Government should simultaneously examine the transport requirements for the coal industry so that before the blue-print for the overall transport programme is drawn up the planning authorities could have an estimate of the wagons which the coal industry would need. It cannot be too strongly emphasised that transport is vital to the development of the coal industry.

Although the spokesmen for the coal industry have been unanimous in recognising the improvement in the allotment of wagons made by the Railway Administration to the coalfields, the fact remains that such allotment falls short of what the industry needs today. Thus, in the course of his speech at the recent annual meeting of the Indian Colliery Owners' Association, Mr. D. Samanta, the Chairman of the Association, said: "I admit that the railways can claim some credit for having increased the daily average of coal loading in West Bengal and Bihar fields in 1957 by about 270 wagons over the average of 1956 and for having despatched 2.7 million tons more coal in 1957 but there is nevertheless no getting away from the fact that the improvement is not commensurate with the increase in coal output, and the pit-head stocks still remain at 3 million tons, having increased by about a million tons in 1957 over those in 1956." Mr. Samanta computed that, in order to clear the stocks, an additional 375 wagons a day would be needed. He warned that if this were not done, the stocks would increase further this year which was bound to have adverse effect on production. In view of the great importance of transport to the coal industry and of the danger that in the absence of a specific programme, the transport requirements of the coal industry might not receive the attention they deserve, it seems imperative that the authorities should implement Mr. Samanta's suggestion for a Master Plan for coal transport. In this connection, he observed:

"To reach the final output target of 60 million tons by 1960-61 coal working will receive increasing momentum from this year, when some of the public sector mines are expected to be ready to go into operation. Coal loading in the various fields must keep pace with this increased output at an accelerated rate from year to year. Requiring a great deal more of coal during the second Plan period, the railways themselves will absorb a large part of the transport available. The task is colossal and in this context, the present performance of the railways, in respect of keeping coal transport hard on the heels of the overall demand, is certainly disappointing and leaves, I feel, much room for further improvement."

Two issues relating to the problems of transport for the coal industry are the provision of sidings to collieries and increase in road transport facilities. Mr. Samanta deplored that railways policy towards the grant of loading and siding accommodation to collieries continued to be "rigid and illiberal." He added: "Unless collieries are granted siding and loading accommodation, in accordance with their respective requirements for enhanced outlet of their increased output, it would not be possible for them to go ahead with their development programmes." Emphasising that "sidings are almost the life-lines of collieries," he urged that immediate steps should be taken for a more liberal grant of such facilities to the coalfields. Referring to transport of coal by road, he recalled that the whole issue was a subject of discussion between the Minister for Steel, Mines and Fuel and the representatives of the coal industry which was followed by a liberalisation of the existing system. Since the problem of mounting pit-head stocks persisted, he emphasised the need for "complete relaxation of restriction on movement of coal by road in respect of all classes of priorities." There is no doubt that road transport could be a valuable adjunct to railway transport in reducing the pit-head stocks which are a continuing threat to the coal industry.

CANARA INDUSTRIAL AND BANKING SYNDICATE LIMITED

CHAIRMAN, DR. T. M. A. PAI'S SPEECH

NEED FOR ELIMINATING WASTEFUL COMPETITION FOR DEPOSITS

EMPHASISING that foreign loans and aid, though they were of considerable assistance to the country, were no substitute for a national effort and sacrifice, Dr. T. M. A. Pai, M.B., B.S., Chairman of the Canara Industrial and Banking Syndicate Ltd., in the course of his speech at the Thirty-second Annual General Meeting, held at Udipi (South India), on Wednesday, 19th March 1958, observed that the only way that the loans could be repaid was by stepping up exports. Referring to the progress of the Bank, of which he is the Chairman, Dr. Pai quoted statistics to show how deposits, advances and the number of branches have all increased in the past year.

The following is the full text of Dr. Pai's speech:

"LADIES AND GENTLEMEN,

"I am glad to place before you the results of further progress that the Bank has been able to achieve during the year 1957. This progress has been all round and has added to the strength and continued stability of the institution improving the size and utility of its resources.

Capital Structure

"The paid-up capital of the Bank increased from Rs. 27,80,579 as on 31st December 1956 to Rs. 28,47,071, as on 31st December 1957 and the uncalled capital is Rs. 3,63,916 and in my expectations, with all the advance calls coming in during the year, it should be possible for the entire subscribed capital of Rs. 32,10,987 to be fully paid-up shortly. A proposal to increase the capital of the Bank is under the consideration of your Directors. With the transfer of Rs. 4 lakhs from the current year's profits to the reserve fund, the reserves have improved from Rs. 18 lakhs to Rs. 22 lakhs. The total figure of capital and reserves stands at Rs. 50,47,071, as on 31st December 1957. There has been a further rise in the deposits from Rs. 8,46,17,907 to Rs. 10,31,06,670 during the year. The following table will indicate the progress that the Bank has made in the last three years:—

	31-12-1955	31-12-1956	31-12-1957
	Rs.	Rs.	Rs.
Paid-up capital	26,75,668	27,80,579	28,47,071
Reserves	15,00,000	18,00,000	22,00,000
Total of paid-up capital and reserves	41,75,668	45,80,579	50,47,071
Total deposits	6,67,03,420	8,46,17,907	10,31,06,670

"The interest rates on bank deposits have shown a tendency of hardening up. There has been progressive competition among banking institutions for these funds, but with limitations on the profitable utilisation of the funds, and the increasing expense ratio. I have been often wondering whether a voluntary restraint on the part of all of us would not be conducive to the healthy development of our activities. After all, as I pointed out last year, this avoidable and wasteful competition would not add to the resources available to the banking system, but would only mean a transfer of funds from one institution to another and will not add to the national objective of tapping the savings of the community, particularly at a period when this habit should be allowed to develop and all available resources are harnessed and canalised towards the economic progress of the country. It would be well worthwhile therefore for the banking institutions to have a voluntary restraint on the deposit rates by agreement, but continue to attract all types of people who do not ordinarily have much to do with the modern bank today. Considering the size of the country and its potential, the scope here seems to be considerable and we have been trying our utmost through our various schemes of deposits and advances to achieve this objective in all places where we are now functioning.

"The total number of deposit accounts have improved from 1,71,811 to 1,80,229 last year and the total number of borrowing accounts have increased from 68,199 to 77,784 and the total advances inclusive of bills discounted have increased from Rs. 5,11,91,988 to Rs. 6,34,40,707 which represents 60 per cent. of the total deposit liability, out of which 82 per cent. was fully secured. 36 per cent. of the deposits were held invested in Government securities and shares of the Investment Corporation and National Savings Certificates. The bills for collection and acceptance and endorsements for customers improved from Rs. 75,24,877 to Rs. 1,00,92,322 and the total resources of the Bank which stood at Rs. 10,64,10,312 on 31st December 1956 increased to Rs. 12,81,65,913 on 31st December 1957, with over 2,58,013 customers. As against the gross income of Rs. 49,38,581 in 1956, the gross income of the Bank increased to Rs. 63,21,392 while the net profits increased from Rs. 9,14,031 to Rs. 10,78,676.

New Branches

"During the year, branches were opened at Manipal, Sringeri, Badami, Guledgud, Ilkal, Jamkhandi, Kopbal and Guntakal. Most of these places did not have banking facilities. It has been the endeavour of this Bank to reach a larger section of the public through a conscious effort to reach all classes both in respect of their savings as well as other banking needs.

"You are well aware of the hard times that we were up against during the year in this country with the falling foreign exchange balances. Adversity has its own rewards and the complacent attitude that we had in our international trade was rudely shaken and the need to make a conscious and persistent effort in developing a market abroad for the produce of this country has come to be recognised and the steps that have been taken by the Government in this direction, if supplemented by our leaders in trade and industry, should enable us to achieve a position of stability and progress in this direction. Undoubtedly, considerable assistance by way of loans and gifts from other countries have gone a long way in saving at least the hard core of the Plan and bridge the gulf which looked bleak and wide even a couple of months ago. But it is necessary to realise that the only way that the loans taken from abroad can be repaid is by stepping up our exports, and foreign loans are no substitute for a national effort and sacrifice.

"The gifts received from other countries represent the sacrifices that the nationals of those countries are making because, after all, those respective Governments could give these away to us only by raising taxation in those countries. But it is only a nation that makes a conscious effort to deserve these and only a nation which is willing to work hard enough to pull itself up by its shoe-strings that will continue to deserve this external assistance. The gifts and loans that have come timely to us, therefore, should act as a spur for greater activity and drive us to achieve the great objectives that have been placed before us rather than make us feel that our difficulties are over and induce us to inactivity. No nation on earth has been able to get the goodwill and assistance from all the countries of the world irrespective of the conflicting camps to which they might belong, as India has been, and with universal goodwill towards us, thanks to our Prime Minister; if we fail to make good with this assistance, it will indeed be a tragedy.

"In spite of a very heavy programme of industrial development, the country cannot possibly alter its very basis of existence. For generations together, India continued to be an agricultural country. Its importance and greatness lies in its continuing to be so. No doubt, it has to make every effort to raise its standard of life and solve its problems by an ever-growing and expanding industrial programmes; but if the basis of economy is to disappear, it would be tragic if we should think of importing foodstuffs and raw materials. While proper appreciation of industrial development is necessary, the importance of agricultural development and particularly food self-sufficiency cannot possibly be minimised. Considered from this aspect, the improvement in the food sector has been disappointing. Undoubtedly, great capital construction has gone on by way of putting up of dams across huge rivers. But a conscious effort on the part of the farmer to make use of every possible avenue of water sources and improve his own field has been impeded for various reasons. A great national movement in this decentralised field of activity appealing to millions of our countrymen engaged in agriculture cannot possibly be motivated by the frequent and repeated appeals to grow more food. A time has come to call for greater attention to the thought that our efforts towards food sufficiency has not succeeded. A sense of urgency has got to be instilled and an increasing and stable price level which would make agriculture a profitable business for the farmer, perhaps, is the only incentive that would be sustaining.

Governmental Expenditure

"So far as expenditure is concerned, expenditure on State and Central Government level is continuing on a level unprecedented and our planners, if they are to be satisfied with how much money has been spent without the qualitative and quantitative assessment of the work in terms of the real welfare of the people and improvement in the standards of employment and earnings of individual families, it would be only taking a shortsighted view of the success achieved. Compared with the problems solved, it has to be remembered that the problems yet to be solved are of a far greater magnitude and a nation cannot be asked to continuously sacrifice itself without the people feeling that these sacrifices have some meaning. A strict check on the Governmental expenditure by an educated public opinion is called for because, in a poor country, we have to try to achieve the maximum results with limited resources in the limited time. Most of the Governmental expenditure will have to come through taxation and loans. While taxation is legitimate for this purpose, unless the return to the people in terms of economic welfare is real, it will become harassing and heavy in its incidence. The Government will have to come out into the market for raising loans. It has been possible in the past to raise these loans mostly through financial institutions. It is regrettable indeed that no conscious effort has been made to broad-base the investing habits of the people by making investments in Government securities attractive. Many of the small investors who under pressure from the State Governments made these investments, had to lose on account of the depreciation that took place in the securities in the market and this might have induced the Government to feel that they have to rely heavily on National Savings Certificates and other schemes of savings which will ensure a stable return and would not be liable for depreciation. And yet, the need for a stable Government security market, particularly to the small investor, continues, as otherwise, only the financial institutions would be able to raise these loans.

"The setbacks and the shortcomings in the national economy have shown the long way that the country has to plod on. No nation has made any progress without sacrifices and hard work. The progress achieved so far, should spur us on to greater efforts and every individual and institution will have to play its part in this great task.

"Our General Manager, Mr. T. A. Pai, was deputed to the Tenth International Banking Summer School, held in Germany, and had an opportunity to go round visiting and establishing contacts and studying at first-hand the various methods of operation and working of big banking institutions on the Continent and England. It has been decided to send some of our officers for training abroad during the year. A Staff Training College has been established to train up the staff. Efforts have been made to provide some kind of training or other covering, in due course, the entire staff which numbers about 1,200 at present. All this, I trust, will lead to the increased efficiency of the staff and better service to the clientele. I must express our sense of thanks to our General Manager and the staff for the way that they worked during the year and I have no hesitation that this tradition of service and efficiency will be maintained. With their co-operation and yours, and the growing clientele at all our branches and with the progressive policies our Directors have been pursuing, I trust, your Bank will make a further landmark during the current year. Jai Hind."

GOVERNMENT'S DECISIONS ON COFFEE AND RUBBER INDUSTRIES

SOME SUGGESTIONS OF PLANTATION COMMISSION ACCEPTED

THE assumption of greater control by the Coffee Board in respect of extension of area under coffee and the institution of stricter regulations for replanting of rubber are some of the decisions which the Government of India has reached on the basis of the report of the Plantation Enquiry Commission. Before reaching these decisions, which were announced last week, the Government, it is stated, held consultations with the State Governments concerned, the Coffee and Rubber Boards and the representatives of industry and trade. The Government's decisions on the tea report have already been announced.

It may be recalled that the Plantation Enquiry Commission was asked to make a comprehensive enquiry into the economic conditions and the problems of tea, coffee and rubber plantation industries and to recommend measures regarding fair price, marketing, finance and development of these three industries. The Government has accepted the Commission's recommendation that the extent of area under coffee cultivation should be regulated by the Coffee Board in the interests of the orderly development of the industry. All new planting and replanting of coffee in future will be done only after taking out licences from the Coffee Board. This, it is stated, will ensure that only suitable areas are taken up for plantation and that approved planting materials would be used.

Export Trade in Coffee

The Commission had proposed that the export trade in coffee should be undertaken directly by the Coffee Board as the number of registered dealers in export sales is too small to enable the Board to get the best possible price. It has been decided that the Coffee Board will modify the system of export sales to allow the foreign importers also to participate in these sales along with the registered dealers in the country. As an experimental measure, it has also been decided that the Board should arrange to dispose of a portion of the exportable surplus by direct sales to foreign purchasers. To promote the export of coffee powder, the premium collected by the Board on the export of roasted and ground coffee has been suitably scaled down, as proposed by the Commission.

As regards the question of the release of coffee to co-operative societies, the Government does not propose to discontinue the supplies to these societies at a concessional price. The Commission's recommendation was that coffee should be sold to co-operatives at the pool-auction price which is generally higher than the release price. As the price at which coffee is available to the domestic consumer is far below the world price of coffee, the Government does not consider it necessary to create a separate consumers' subsidy fund. The Commission's proposal to create a price assistance fund has not found favour with the growers. The Commission had suggested that these two funds should be created from out of the excess price realised in the export auction and the sale proceeds of coffee represented by the gain in weight due to absorption of moisture while in storage.

The arrangements instituted by the Coffee Board for processing and sale of coffee powder at several centres will be continued and enlarged to the extent possible. It is, therefore, not necessary to start a separate organisation under the Coffee Board for the manufacture and sale of coffee powder, as suggested by the Commission. As recommended by the Commission, the co-operative societies will be utilised to the fullest possible extent for internal distribution of additional production of coffee.

Propaganda

The Coffee Board has already taken suitable measures to reorient propaganda activities on the lines recommended by the Commission. The Commission had observed that there was no need for the continuance of coffee houses in the coffee-growing areas. Propaganda through mobile vans and cinema shows, visiting rural areas, advertising campaign in urban areas and industrial communities and participation in fairs and exhibitions, the Commission had suggested, would fulfil the needs better than running coffee houses. The Government has decided that, as recommended by the Commission, a committee should be appointed to examine the existing rate of curing charges for coffee and of the commission paid to pool agents. The committee will recommend, where necessary, reasonable rates of remuneration. It would not be advisable to separate the curing and pool agency function.

Levy of Duties

The Commission had recommended that an export duty equal to the Central excise duty should be levied on coffee. At present, there is no duty on exported coffee. In the Government's view, the export duty is levied on considerations which do not apply to the levy of excise duty. It will consider the levy of an export duty when circumstances warrant such a course of action. The Commission's suggestion that the excise duty on coffee should be levied at a different rate for arabica and robusta has not been found practicable.

Rubber

The Commission's recommendation that the replanting and new planting of rubber should be allowed only with high yielding seeds approved by the Rubber Board has been accepted by the Government. On the subject of extension of rubber cultivation, the Commission's recommendation was that small growers, having individual holdings of 50 acres and less, should be permitted to extend the area of cultivation by 25,000 acres and the Estate group by another 25,000 acres. Already, the Rubber Board has issued licences for new planting to small holders covering an area of over 46,000 acres. There has been little expansion of rubber cultivation by the Estate group. It does not seem necessary to lay down any fixed proportion between small and big growers.

It is not also considered feasible by the Government to allocate rigidly the proportion of the area to be replanted by the small growers and large growers. The Rubber Board is trying to carry out the replanting programme in a phased manner and there is no need at present to introduce an element of compulsion in the scheme. The small holders, it is stated, are taking advantage of the scheme of assistance for replanting in an adequate measure.

The Commission had observed that the scheme for the production of synthetic rubber should be co-ordinated with that for natural rubber. The Government has given the assurance that it will take adequate care to ensure that, in developing the production of synthetic rubber, the legitimate interests of the plantation industry are not adversely affected.

Co-operatives

The Government has accepted the Commission's recommendation that special officers should be appointed by the Coffee and Rubber Boards for encouraging the setting up of multipurpose co-operative societies to help particularly the small growers. The Commission had recommended the setting up of a co-operative supply organisation, each for the rubber and coffee plantation industries, under the ægis of the respective Boards, for distributing chemical fertilisers and mixtures to the growers, particularly the small growers. In the Government's view, co-operative organisations being set up by the State Governments under the Community Development and National Extension Programmes can be expected to look after the needs of coffee and rubber growers also. The State Governments concerned are being requested that in setting up co-operative organisations for agriculturists the needs of the coffee and rubber growers should also be borne in mind. There would be no particular advantage in giving a monopoly right of sale to one organisation, as the object is to increase existing facilities for the supply of manure.

The Government does not consider that there is any necessity for setting up a separate body to advise it on matters concerning the tea, coffee and rubber industries, as recommended by the Commission. The control over these three industries is at present exercised by the Ministry of Commerce and Industry, in the interests of their development as well as of the workers, growers and consumers. This ensures co-ordination in the working of the three statutory Boards, namely, the Tea, Coffee and Rubber Boards. A few of the recommendations of the Commission including the one relating to the creation of a replanting fund for coffee and rubber, it is announced, are still under consideration. Some of the recommendations have been brought to the notice of the State Governments concerned.

THE
CHARTERED BANK
(Incorporated in England by Royal Charter, 1853)
(Liability of Stockholders Limited)
Capital (Paid up) - - - £4,400,000
Reserve Fund - - - - £5,000,000
Branches throughout India, Pakistan and the East
Branches of
THE EASTERN BANK LTD.
a wholly owned subsidiary of the Chartered Bank are established in Iraq, Bahrain, in the Persian Gulf at Qatar and Sharjah, Lebanon and Hadramaut and in India, Pakistan, Ceylon, Aden, Singapore and Malaya.

RUBBERISED BITUMEN

A report received from Australia states that Western Junction Airport, at Launceston, Tasmania, is the latest Australian airport to adopt rubberised bitumen for sealing airstrips. This follows the successful use of this material at Melbourne Airport, at Sale, Essendon and elsewhere. The decision to seal the surface was made by the Australian Government, which controls all Australian airports. The surface was in a bad condition before treatment. Both latex and a fast dissolving rubber powder were used. The mixture used at Melbourne consisted of 80/100 bitumen cutback with asphaltic oil, together with 1½ per cent. and 2½ per cent. of rubber powder, used in two separate experiments. The work was carried out by the Victorian Country Roads Board on behalf of the Commonwealth Department of Works. Sections of the strip were resealed with ordinary bitumen for comparison. Two years later, the rubberised bitumen sections were still in excellent condition whereas those without rubber had badly cracked, allowing water to penetrate and weaken the underlying pavement.

After two years the Commonwealth Department of Works publicly stated its satisfaction with the work, and commented with interest on the way the rubberised mixture had stretched across previous cracks whereas the plain bitumen had cracked again.

Additional sections of the 79 degrees airstrips and aprons at Melbourne Airport were resealed with rubberised bitumen to protect them against the heavy stresses caused by hundreds of Australian and international aircraft arriving and departing with visitors and competitors to the Olympic Games in 1956. The use of rubberised bitumen for airstrips and roads in Australia is comparatively new. First experiments on roads began in 1951 when sections of State highways and suburban roads in Victoria, New South Wales, Queensland, South Australia and West Australia were laid down with the new mixture. More than 60 of these types of roads throughout the Commonwealth have since been made or repaired with natural rubber, either in latex or powder form.

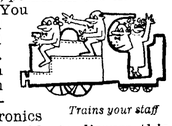
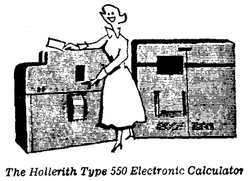
The unique
HOLLERITH SERVICE
The accountant's visitor had come to see what sort of job Hollerith punched card machines were doing. "Tell me," he asked, "what sort of service did Hollerith give you?" This time the accountant looked surprised. "Did?" he queried, "Surely you know that one of the big things about Hollerith is the *continuous service.*"
The two reports
In Hollerith installations your equipment is, as it were, 'hand-tailored'. Your problems are very fully studied before the first careful report is presented to you. No fee is charged for this service. The second report is a detailed working plan in which the flow of work—every facet of the operation—is set out in full.

First careful report
Consultant, guide and friend
The Technical Service Man sees your installation in. Trains your staff. Stays with you till you are absolutely at home with your mechanised office. The maintenance of your machines is now in the hands of the Field Engineer who is always very quickly available.
Responsible advice
Modern business, because its control is based on figures, points all the time to mechanisation. You may only need simple punched card equipment. You might even be ready for an electronic computer. An electronics specialist is available to discuss this with you. Why not send for him? No fee is charged.


Trains your staff


The Hollerith Type 550 Electronic Calculator
Footnote
Hollerith is a vast organisation with immense research facilities, a network of offices throughout India, and a very long experience of Indian business needs.

PROGRESS OF ENGINEERING INDUSTRY

MR. K. J. CLEETUS ON IMPORTANCE OF TECHNOLOGY

THE overall picture of the healthy progress of the engineering industry during 1957 concealed "certain dangers and weak points in particular sectors" which might, if unchecked, easily lead to serious dislocation in production and unemployment, according to Mr. K. J. Cleetus, President of the Indian Engineering Association. In his presidential address to the 47th annual general meeting of the Association held at Calcutta last week, he pointed to the decline in production of electric motors, automobiles, bicycles and other items in the latter half of 1957. According to him, the fall in the level of bank advances to the iron and steel, and engineering industries from October 1957 onwards provided confirmation that production was slowing down as a consequence of acute raw material shortages. The fall in advances, he added, was in marked contrast to the progressive increase from 1953 to 1956, extending even up to the first half of 1957.

Proceeding, Mr. Cleetus observed that the outlook for raw materials, particularly steel, during 1958 was causing grave concern and the partial closure of many engineering works was becoming "inevitable and imminent." One hesitates, he said, to contemplate the serious consequences that the shortage of steel would produce in the Calcutta area, where the employment situation in the engineering industry was deteriorating slowly and steadily. Drawing the attention of the West Bengal and Union Governments to the warning signals, he urged them to take timely action so that the unpleasant consequences of partial and even complete closure of engineering establishments may be avoided. Describing West Bengal as a particularly vulnerable State, Mr. Cleetus regretted that the extent to which its prosperity and unemployment depended upon heavy, medium and light engineering industries was not often realised. Reiterating that the principal reason for the decline in production was the shortage of raw materials, Mr. Cleetus cited the examples of two major firms which had been granted import licences covering in one case only 25 per cent. and in the other 13 per cent. of their requirements of steel. At the same time, it was surprising to note that the licensing components, consumable stores and other raw materials continued on the anomalous basis of a much higher level of production than the allotments of steel warranted. Another factor contributing to the decline was increasing consumer resistance to high prices. "Indian cost of production," he said, "has been going up due to factors beyond the control of the manufacturers." The consumer's ability to buy had not, however, kept pace with these rising costs.

Very Satisfactory

The engineering industries, taken as a whole, Mr. Cleetus observed, had made very satisfactory progress during 1957 with the index of production for the first ten months rising to 236.5 against 219.0 in 1956 and 183.3 in 1955, assuming 1951 as the base. He pointed out that the general and electrical engineering industries had more than doubled their output since 1953. These were, indeed, encouraging figures, and would give an indication of the tremendous effort that was being made by the private sector in increasing industrial production.

Referring to the problem of modernisation and rationalisation, he felt that that there was no economic future for India if the country hung on to outmoded techniques and methods of production. Although mechanisation and rationalisation might result in temporary dislocations here and there, he described these as inescapable growing pains. "Did we hesitate to build railways because they were likely to replace bullock carts," he asked. It was only by increased production through more and better machinery that costs could be brought down and consumption increased. That was the only way to ensure increased employment, and more of the good things of life to every citizen.

While many firms had succeeded in removing the heavy backlog of renewals and replacement of machinery, the high costs obtaining at present were thwarting all efforts to keep abreast of technological progress. The industry realised that only the best machinery and equipment would suit in the years to come; yet, the Government's taxation policies, Mr. Cleetus pointed out, had deprived it of the ability to finance expansion and modernisation out of internal resources. If, as a result of efficient management and careful husbanding of resources, reserves have been built up from past profits to provide for expansion, "we are required to pay a stiff tax when we take money out for actual utilisation." Stating that, the industry felt like a nut caught in the jaws of a nut-cracker, Mr. Cleetus said that a series of Government enactments had been doing their best to convince the prudent businessmen who conserved his resources that he was a "social pest and not an asset to a community that is woefully deficient in capital."

Straight Jacket

Mr. Cleetus felt that some at least of the Government's policies had the effect of putting industry in a straight jacket. Straight jackets, he added, were not comfortable wear for a growing and healthy child like the engineering industry. He regretted the fact that although official Government pronouncements had assured private enterprise of an important role in the economy, there were often intemperate outbursts from certain quarters in obvious contradiction to official policies. Mr. Cleetus urged that the irresponsible sniping, sometimes indulged in by political leaders, must stop. The private sector, the President of the Association added, sought only the assurance of that amount of initiative and freedom of planning which was essential to progress.

As regards the labour situation, Mr. Cleetus attributed the improvement in 1957 to the helpful measure of firmness towards labour shown by Government, making a significant departure from the traditional, politically motivated policy of weakness and appeasement. Another healthy development was an increasing appreciation on the part of labour that higher and better production alone could bring about an improvement in living standards. There was also a heartening tendency on the part of organised labour to settle disputed issues by direct negotiation.

Workers' Participation

Mr. Cleetus welcomed the concept of workers' participation in management, and suggested that form of participation should be kept flexible so that joint consultation could grow from within. He said that the true object of the joint councils should be to provide a healthy channel of communication and to build up the feeling that both parties were engaged in a common endeavour. To ensure the success of workers' participation, Mr. Cleetus felt that "the first essential was to banish politics from industrial relationship." He also welcomed the launching of the productivity movement and the setting up of a National Productivity Council and added that it would be wrong and unfair to assume that the drive for productivity was designed to intensify the burdens of labour for the benefit of employers.

The rail transport position, Mr. Cleetus said, had improved but there was acute shortage of special types of wagons to move awkwardly-shaped plant and equipment, long-length materials, oils and acids. "We know efforts are being made to remedy the situation but the general belief is that railways will not be able to catch up with the increasing traffic that is being offered," he added. At the Calcutta port, there was a similar lack of facilities for the handling of heavy and awkwardly-shaped cargo in which the engineering industry was interested.

NON-FERROUS METALWARE

Inadequacy of indigenous production of non-ferrous metals and Government's restrictions on imports are among the major problems faced by the manufacturers of non-ferrous metalwares in India. The shortage of supplies of such metals as copper, zinc, lead and tin and the consequent spurt in the prices of the available limited supplies have made the question of proper distribution of supplies an urgent one. Mr. Vithaldas H. Shah, President of the All-India Non-Ferrous Metalware Manufacturers Association, in his presidential address to the twelfth annual general meeting of the Association has, therefore, urged the Government to take immediate steps to control and distribute equitably the available supplies of non-ferrous metals and to keep down their prices. The chief metals affected by the severe import restrictions, according to Mr. Shah, are copper, zinc, lead, and tin. Up to 30th June 1957 these metals were on Open General Licences (O.G.L.) but from 1st July 1957 they were removed from the O.G.L. and placed among licensable articles and established importers were granted licences on a restricted quota basis. Prior to 1st July 1957, the majority of actual users were able to get all their requirements from established traders at reasonable prices and, therefore, the actual users did not find any necessity to resort to imports. Owing to the imposition of restrictions on import, the supply position worsened with the result that prices rose by as much as 15 to 30 per cent. over the actual landed cost.

The Government introduced a system by which actual users could be placed on a priority basis for getting their supplies from established importers at reasonable prices. Except that certain actual users were placed on such a priority list, nothing further resulted out of this. Further, the Government, it is said, is now trying to introduce a well chalked-out scheme for the distribution of non-ferrous metals to all actual users at reasonable prices, allowing a profit margin of not more than 3½ per cent. In the meantime, the high prices are expected to continue; sales of metals due to arrive in April-May 1958, according to Mr. Shah, have already been completed at high rates.

Regulation of supplies can, however, be only a temporary expedient. The long-term solution is, of course, higher indigenous production. The annual requirements of some of the important non-ferrous metals are: aluminium, 40,000 tons; copper: 45,000 tons; zinc: 50,000 tons; lead: 20,000 tons. As against this, the indigenous production of aluminium is 7,500 tons only, although it is expected to go up to 17,500 tons. Production of zinc, copper and lead is expected to rise in the near future to 10,000 tons, and 6,000 tons respectively. This indicates that the country will have to depend on imports for the major portion of its requirements of copper, zinc and lead for many years to come.

Mr. Shah referred, in this connection, to the proposal for setting up a large aluminium plant with an annual capacity of 20,000 tons at Kholapur in Bombay State where, the existence of large deposits of high grade bauxite has been reported by geological experts. He observed that, as the Government might not undertake the venture, it was a splendid opportunity for the private sector to consider the scheme. The Government of Bombay is stated to be willing to extend every possible help to private *entrepreneurs* to start the scheme. According to Mr. Shah, it is an attractive proposition, especially because aluminium is a key metal, having manifold uses.

During the year 1957 the Industries (Development and Regulation) Act, 1951, was made applicable to the manufacture of utensils from non-ferrous metals, thus placing the metalware industry among the essential industries of the country. The industries will, therefore, receive special attention and care from the Government. The Tariff Commission investigated the question of reimposition of duty on imports of aluminium scrap and the continuance of protection to non-ferrous metals industry. As a result of the recommendation of the Commission, the Government imposed a customs duty of 15 per cent. on aluminium scrap and extended the period of protection on certain non-ferrous metals such as lead, zinc strips, copper and brass sheets, tubes and pipes up to 31st December 1959.

NEW PRODUCTS AND PROCESSES

Fire-proof Hose for Aircraft

THE successful development of a new fireproof flexible metallic hose, said to meet the stringent requirements of the British Air Registration Board and the American Civil Aeronautics Authority, has been announced by a British firm. The hose has been designed to ensure reliability of fire extinguisher systems in civil and military aircraft and is claimed to offer a considerable saving in costs as the necessity for frequent replacements will no longer arise. Its development has resulted from exhaustive experiments with various combinations of materials and examination of different methods of fixing unions and other fittings to the end of the hose. Among tests carried out was subjection of the hose for 15 minutes to the blast of three gas burners at a temperature of 2,200 degrees F. During this period the hose, which was also subjected to vibration, was empty and had no cooling fluid flowing through it. A fire extinguisher was then discharged through the hose and, despite the thermal shock of a sudden flow of cooling fluid, it remained intact. Later tests showed the hose to be fully fit for further service and able to withstand an air pressure of 1,000 lbs. per square inch.

A New Baby Car

What materials are the best to be used in building a baby car? This problem haunts all car builders engaged in the production of low-powered car. Soviet car designers face it, too. Several years ago they developed the "Belka," a midget made of wood and steel. The "Belka" was followed by a bantam car with a thin metal body. And quite recently a car with a plastic body reinforced with thin but highly durable glass-fibre veinlets has been built at the wheeled vehicles chair of the Bauman Higher Technical School of Moscow. The length of the car is a little over two metres, the height, 135 centimetres and the weight, only 350 kilograms. The car is claimed to be comfortable, reliable and cheap. The 11 h.p. car "Chaika" ("Sea-Gull") develops a speed of 75 km. per hour on a highway. The car's engine is in the back and its small wheels have independent suspension. The broad windows afford a good view. The rear window, slanted inwards, will remain dry even in strongest rain. The doors open upwards, lifting with a part of the top. When opened, they resemble the wings of a sea-gull. Hence the car's name.

Free Flowing Table Salt

A process for producing high grade table salt has been developed at the Central Salt Research Institute, Bhavnagar. Sambhar or marine salt is refined to a purity of 99 per cent. or above by one of the conventional methods, fractional crysallisation, chemical treatment or centrifugal washing. The purified brine is crystallised under controlled conditions in a specially designed evaporator. The crystals after centrifuging are dried in a rotary drier at 110°C and given a thin coating of paraffin wax followed by a fine coating of basic magnesium carbonate. The mass is then sieved and oversizes and fines are reprocessed. The proper sized material is packed in polythene lined bags for storage. The novelty of the process consists in producing round shaped crystals which minimises the caking tendency and enables the crystals to be uniformly coated. Absorption of moisture is negligible as shown by tests at high humidity. The product compares well with the imported material in all respects. Machinery required consists of a boiler, filter press, centrifuge, rotary drier, stainless steel tanks, double jacketted vessels and a sieving set. The process is simple and is equally applicable to lake and marine salts. Parties interested in undertaking the commercial development of the process may contact the Secretary, National Research Development Corporation of India, New Delhi.

Hardware from Aluminium-Magnesium Alloy

A British firm is producing quality hardware from an aluminium-magnesium alloy combining strength and durability. The alloy is a non-corrosive compound suitable for tropical conditions and has already been used in the buildings of Malta airport and certain fittings in the hall of residence of the new university at Kingston, Jamaica. The compound contains between 10 and 12 per cent. magnesium, which produces hard-wearing robust alloy suitable for all marine and tropical conditions. Successful tests have been made on the metal by aircraft companies, shipyards, and universities. The company produces a wide range of hardware from the alloy, including coat hooks, door handles, hinges, handrail brackets, and bathroom fittings. The metal weight is approximately one-third of brass. It is immune to oxidization, and the silver anodized finish is a permanently lasting colour.

Better Flash Bulbs

Smaller and better flash bulbs for photographic purposes can be produced, it is claimed, as the result of substituting zirconium metal in place of other metals as the filling material. Zirconium has previously been used almost solely for atomic energy purposes. The shredded zirconium is said to produce considerably greater quantities of light per cubic inch than other materials. Indeed, it is claimed that this enables flash bulbs using the zirconium filling to produce the same light output as conventional flash bulbs four times their size. Despite the relatively high cost of zirconium metal, the cost of using the shredded zirconium will be, it is expected, cheaper in terms of flash bulb light output than that of using more conventional materials.

T. STANES & COMPANY LIMITED

AND

WHOLLY OWNED SUBSIDIARIES

THE UNITED COFFEE SUPPLY CO., LTD., AND STANES MOTORS (SOUTH INDIA) LTD.

WITH the Directors' 47th Report, and in addition to separate Statutory Balance Sheets and the various Account Statements which go with it, the Company has published a condensed Group Consolidated Balance Sheet and Trading Account as at 30-9-1957 of the Parent Company, combined with its subsidiaries and adjusted for different closing dates, which is a very revealing statement, and is to be commended.

The Trading Turnover for the Group has exceeded Rs. 200 lakhs (Rs. 170.66 lakhs). After providing for all usual working charges and Depreciation the Group Profit is Rs. 11,99,742 (Rs. 9,52,472). The Provision for Taxation is higher at Rs. 6.35 lakhs (Rs. 5.87 lakhs). The dividend on Ordinary Shares has been stepped up to 20 per cent (17½ per cent.) absorbing Rs. 2.41 lakhs while Reserves are strengthened further by Rs. 4.24 lakhs (Rs. 2.76 lakhs). The figures in brackets represent corresponding figures of the previous year.

A summary of the combined Balance Sheet of the Group as at 30-9-1957 and a consolidated Profit and Loss Account for the year ended that date is given below:

(In lakhs of rupees)

CAPITAL, LIABILITIES AND RESERVES	As on 30th September 1956	1957
Capital:		
Preference	1.50	1.50
Ordinary	11.56	11.56
Capital Reserves	4.21	4.70
Revenue Reserves including Surplus in Profit and Loss Account	28.65	33.70
	45.92	51.46
Minority Interest	0.44	0.28
Liabilities	38.54	40.89
Difference in consolidation	1.14	0.87
	86.04	93.50

ASSETS	As on 30th September 1956	1957
Fixed Capital Expenditure	29.63	33.06
Less Depreciation to-date	15.18	17.20
	14.45	15.86
Investments	7.88	7.98
Current Assets	57.70	63.94
Cash and Bank Balances	6.01	5.72
	86.04	93.50

PROFIT AND LOSS ACCOUNT	For the year ended 30th September 1956	1957
By Sales	170.66	202.79
Miscellaneous Income	9.36	10.60
Closing Stock	24.23	35.60
	204.25	248.99
To Opening Stock	23.00	32.53
Purchases	132.96	161.27
Administrative Charges, Directors' Fee, Working Expenses and Provisions	36.75	40.84
Depreciation	2.02	2.35
Group Profit for the year carried down	9.52	12.00
	204.25	248.99
Group Profit for the year brought down	9.52	12.00
Less difference in consolidation due to variation in dates of subsidiaries	0.24	0.09
	9.28	11.91
Balance brought forward from last year	0.76	0.76
Provisions withdrawn	1.47	1.44
	11.51	14.11
Less:		
Provision for Taxation	5.87	6.35
Other Provisions	..	0.29
Transfer to Reserves	2.76	4.24
Dividends	2.12	2.41
Carried forward	0.76	0.82

A strong financial position is revealed by the Group Balance Sheet as at 30-9-1957. The Reserves and Surplus aggregate to Rs. 38.40 lakhs excluding Minority Interests as against a Paid-up Ordinary Capital of the Parent Company Rs. 11.56 lakhs. The Investments in subsidiary companies stand at Rs. 10.25 lakhs while the Issued Paid-up Capital of the subsidiaries is Rs. 12.91 lakhs and the difference is credited in the Consolidated Reserves shown above. The Investments in other Companies stand at cost Rs. 7.98 lakhs, the market value of which on the date of the Balance Sheet is considerably higher. The current liabilities including taxation stand at Rs. 40.89 lakhs while the current assets aggregate to Rs. 69.66 lakhs. The Gross Block of the value of Rs. 33.06 lakhs has been written down to Rs. 15.86 lakhs.

The various Directors' Reports appended show an expanding business. The Assets backing to Rs. 10 Ordinary Shares of the Parent Company have increased to Rs. 43.60 per share, the current market quotation being Rs. 19.50 C.D. to yield on the 20 per cent. dividend to be paid, a return of over 10.9 per cent. Free of Income-tax on an ex-dividend basis. Share quotations on the Madras Stock Exchange in 1957 have been Rs. 25.00 High and Rs. 19.20 Low.

The Trading Business of the Company, with headquarters at Coimbatore, covers through the United Coffee Supply Co., Ltd., the manufacture and sale of Stanes Coffee and Tea, a Brand well known throughout India. To this has recently been added a Plant for the manufacture of Stanes Instant Soluble Coffee, the plant being the only one in India producing this commodity, which has already a wide distribution, backed by the expert experience of the company in the production of quality coffee over the past 50 years.

The second wholly owned subsidiary, Stanes Motors (South India) Ltd., are dealers in Hindustan Cars and Studebaker Trucks in Coimbatore, Standard Cars in Kerala and for Ferguson Tractors over the same areas, with their head office in Coimbatore and 3 branches. In addition they operate 5 factories in South India and one in Calcutta for what is probably the best known tyre retreading process of "TyresoleS". A recent addition in the factory in Coimbatore is the "Vaculug" process for the reconditioning of Tractor and Earthmover tyres and is the only factory dealing with the reconditioning of this class of tyre in India and for which there is a largely increasing potential demand in the present Five-year Plan. Stanes Motors also operate a Town Bus Service in Coimbatore through Stanes Transports (Private) Ltd.

The Parent Company operates two Fertilizer factories, a Coffee Curing Factory and a general business largely connected with the Southern India Plantation Industry. The two well-known Rupee Planting Companies, started by T. Stanes & Co., Ltd., and under their Managing Agency are Messrs. United Nilgiri Tea Estates Co., Ltd., and Stanes Amalgamated Estates Ltd., which together last year produced over 20,00,000 lbs. of Tea, as well as some 54 Tons of Coffee. With development and expansion the Tea crops have doubled over the past 10 years. The Parent Company and subsidiaries own together 43.4 per cent. of the Share Capital of Stanes Amalgamated Estates Ltd. The Estates are all in the Nilgiri District of South India.

It is of interest to note that the Founder of the business in Coimbatore, Mr. (later Sir Robert) Stanes left the U.K. for India in March, 1858, a 100 years ago. He died in Coonoor in 1936, age 96, having spent nearly all his life in India; and was always intimately connected with the Plantation Industry in the South. His son, Mr. F. J. Stanes, who retired in 1939, is now on a visit to India. The present Managing Director, Mr. E. H. Stanes, as also the Visiting Agent for the Estates, Mr. N. J. Stanes, are grand-nephews of the Founder, Sir Robert Stanes.

The Company became a Public Company in 1956, when also, on re-organisation, Messrs. The United Coffee Supply Co., Ltd., and Stanes Motors (South India) Ltd., became wholly Owned Subsidiaries. The Directors are Mr. E. H. Stanes, M.C., Mr. C. E. Wootton, B.Sc., F.R.I.C., Mr. M. S. Ramaswamy, B.A., G.D.A., A.C.A., and Mr. N. J. Stanes.

EXPORT RISKS INSURANCE CORPORATION

PRELIMINARY BUSINESS FIGURES ANALYSED

THE establishment of the Export Risks Insurance Corporation (Private) Ltd. was one of the series of measures taken by the Government of India last year to promote exports. The Corporation came into existence on 4th October 1957 and actual business commenced on the 14th inst. Although six months (approximately) is too short a period to judge the performance of the Corporation, especially because export credit insurance is an entirely unchartered field as far as this country is concerned, it may be useful to have a look at what is being done by the Corporation which is generally considered as capable of playing a significant role in the export trade of the country.

It may be recalled in this connection that the Corporation is a private limited company wholly owned by the Government. Its authorised capital is Rs. 5 crores, entirely subscribed by the Government. The Corporation has a Board of Directors of seven members with Mr. R. M. Gandhi as the Chairman and T. C. Kapur as the Managing Director. Its sole object is to help exporters to increase their exports by guaranteeing the creditworthiness of foreign importers. The Corporation works on a "no-profit no-loss basis" and covers all risks involved in exports on credit terms, the only exception being risks which are normally covered by general insurers. The Corporation, in other words, keeps itself out of the field of general insurers and is meant as complementary and supplementary to them. Under the Government resolution, the Corporation is permitted to issue policies to those who insure all their shipments of commodities of allied nature to all destinations. Exporters are not allowed to pick and choose the transactions they will insure.

Proposals and Policies

Since the commencement of business on 14th October 1957, the Corporation has received so far 165 proposals of the face value of Rs. 11,23,73,000 for covering anticipated exports of Rs. 46,20,49,000. Out of these, 78 proposals have resulted in policies and 27 proposals have been dropped because the proponents did not pay the initial premium and the remaining proposals are pending either because the initial premiums have not been paid or the acceptance letters could not be issued because of incomplete information in the proposals. The seventy-eight policies issued are of the face value of Rs. 3,83,95,000 and will cover anticipated exports of Rs. 17,34.01,800. The twenty-seven proposals that have been dropped were for Rs. 4,62,40,000 for covering anticipated exports of Rs. 17,61.68,000.

Out of the 78 policies, 30 are for amounts not exceeding Rs. 1 lakh, 15 are for amounts exceeding Rs. 1 lakh but not exceeding Rs. 2 lakhs, 21 are for amounts exceeding Rs. 2 lakhs but not exceeding Rs. 5 lakhs. Only 12 policies are for amounts exceeding Rs. 5 lakhs. The smallest amount for which policies have been issued is Rs. 10,000. There are three such policies. These figures show that the services of the Corporation are currently being utilised mainly by small and medium-sized exporters. It is indeed for helping the small and medium-sized exporters, who do not possess the business contacts and credit arrangements which a big, established exporter has, that the Corporation was set up. But large exporters also stand to benefit by insuring with the Corporation because, howsoever established and vast their connections abroad, it is not possible to cover adequately the political risks, such as transfer risks, war and civil war risks, import control risks, diversion risks, repudiation of contract by Government buyers etc., insurance against which is possible with the Corporation. In fact, some big exporters also sent in their proposals to the Corporation. Three of such proposals were for Rs. 1 crore each and another proposal for Rs. 55 lakhs. These proposals have, however, not resulted into policies. One of the main reasons for dropping them is the complaint by the proponents that the premiums quoted by the Corporation were on the high side.

According to the Corporation's Managing Director, Mr. Kapur, those who consider the Corporation's premium rates high judge the premiums not on the basis of the risks involved but from the point of view of the profit margin they expect on the exports. If the profit anticipated is high they won't mind paying a higher premium but if it is low they consider the premiums too high. The Corporation, in quoting the premium for a particular proposal, does not take into account the profit that might be earned by the goods insured. The only relevant factor is the risks involved and the premium varies according as the risks, in the Corporation's estimate, is high or low. In view of the fact that the Corporation has been in existence for only a very short period and also because of the difficulty of obtaining information regarding the premium rates and other conditions fixed by export credit institutions in other countries, it is difficult to say whether the premium rates charged by the Corporation is low or high. In the absence of any statistical data on which to fix the premium rates, the rates are fixed for the present purely on *ad hoc* basis. Experience alone can reveal whether they are high or low. Nevertheless, the Corporation has drawn the attention of the Government to the complaint of exporters that the premiums are high. Some arrangement by which the premium rate could be made more attractive should be considered. The question of a subsidy to the Corporation by the Government to bring down the premium or make good the loss that might arise should premiums be reduced seems out of question, because the Government, it is said, would not accept the suggestion on the ground that it contravenes the provisions of the G.A.T.T. of which India is signatory. Another possible alternative is the provision of a rebate which, in effect, means a reduction of premiums. Any decision on this question, however, can probably await until a clear picture of financial results of the working of the Corporation on the present premium rates can be had. It may be noted here that the Corporation is already in for its first claim.

In view of the fact that export credit insurance is new to this country and there is no past experience to go by, the Corporation's performance can be termed satisfactory. Its success will, however, ultimately depend equally on the co-operation of exporters and on its working on sound lines.

UNEMPLOYMENT INSURANCE IN THE U.S.

President Eisenhower last week called on Congress for prompt action to extend weekly unemployment payments until such time as business recovers from the current recession. His proposal, according to Mr. John Kerigan, amounts to a temporary but nevertheless important improvement of the social security system which since the mid-1930s has been a proven bulwark, for individuals as well as for the economy as a whole, against protracted decline. And Congress responded by scheduling immediate consideration of the President's plan.

While longer-range projects are being developed and work on federally-sponsored construction projects are being accelerated, the President evidently wanted first of all to take care of the human problem that is the product of diminished employment. Under the President's plan each State would temporarily extend by one-half the number of weeks during which unemployment compensation is now being paid. In most States, this would mean 39 rather than, as at present, 26 weekly payments. Congressional action is necessary because unemployment insurance is jointly administered by the States and the national Government. The Federal Government (under the Social Security Act) also contributes funds to the operation of each State's unemployment compensation system. The funds—State, as well as Federal—are raised through payments, on a payroll basis, by employers (and in two States also by workers). Immediate beneficiaries of Mr. Eisenhower's proposal would be individuals who have exhausted their benefits. "I believe," the President told Congress, "that these workers and their families should be enabled to receive weekly benefits for a longer period than is now in effect so that in the current economic situation they and their families can obtain a greater measure of security."

Unemployment benefits vary from State to State between $25 and $31 maximum per week for anywhere from 16 weeks (Florida) to 30 weeks (Pennsylvania) with most States paying compensation for half a year. Under Mr. Eisenhower's proposal, the dollar rate of benefits would remain the same, but the number of weekly payments would be increased. Thus, an individual in New York State, for instance, who now receives the maximum of $32 a week for the maximum duration of 26 weeks, would receive $32 for an additional 13 weeks, should he fail to find employment. About 43 million of the nation's civilian labour force of 67 million are covered by the unemployment compensation systems.

The amount of weekly benefits paid is determined on the basis of the worker's past earning. With wages sharply increased over the past decade, a great many unemployed today receive the maximum rate. The average weekly pay cheque comes to about $30. The States maintain reciprocal arrangements, which permit unemployed persons to move freely about the nation and to receive payments practically in whatever State they happen to be.

Mr. Eisenhower's proposal provides for federal advances to States for financing the extended benefits until 1st April 1959. But there is actually no financial problem before the States now. Their reserve funds, built up since the mid-1930s, today aggregate close to $8,500 million. Payments into the pool continue monthly at such a rate that even in February, when compensation to unemployed workers amounted to $320 million, the net decrease of the collective fund was only $173 million. Under the new plan, individual States would therefore remain free to decide whether they want to borrow from the Federal Government, use their own reserve funds, or make a direct State appropriation. The temporary extension of benefits, it is said, in no way affects the President's plans for a lasting improvement of the unemployment system. His present proposal is in no sense a substitute for extending the coverage of unemployment compensation (or for) extending the duration of benefits and increasing benefit amounts which he has previously urged.

ANDHRA PRADESH LIFE INSURANCE FUND

As a result of the actual valuation of the Andhra Pradesh Life Insurance Fund for the period of three years from 1st April 1951 to 31st March 1954, the State Government has sanctioned the declaration of bonus to the policyholders at the following rates: (1) A bonus at the rate of Rs. 10 per thousand sum assured for every policy year entered upon during the valuation period from 1st April 1951 to 31st March 1954 to policies in force on 31st March 1954, the date of valuation. (2) An interim bonus at the same rate will also be paid on the policies which have gone off the books during the period from 1st April 1954 to 31st March 1957 on account of death or maturity. (3) Bonus for the period from 1st April 1951 to 31st March 1954 will be paid on all policies which have gone off the books by way of P.V. or S.V. during the triennium 1st April 1954 to 31st March 1957. (4) Bonus certificates in cases of current policies for the two valuation periods from 1st October 1947 to 31st March 1951 and from 1st April 1951 to 31st March 1954 will be issued in due course.

GROUP INSURANCE FOR RAILWAYMEN

Replying to questions in the Lok Sabha, Mr. Jagjivan Ram, Minister for Railways, disclosed that his Ministry was examining the feasibility of a group insurance scheme for railway employees out of contribution from the provident fund so that, in case of their premature death, they would leave a reasonable amount for their family. A proposal to pay a portion of the pension of deceased railway employees to their dependents for a specified period was also under consideration. Some M.Ps. stressed the desirability of instituting some social security measures under which monetary assistance could be given to dependents of railway employees who had very short service to their credit and who died suddenly without providing for their dependents. The Minister said that he had suggested to the Federation of Railwaymen certain proposals for its consideration. He was of the view that, with the introduction of the pension scheme, the families of employees who had rendered service for a specified number of years should be entitled to a portion of the pension. He also proposed to make it compulsory for employees to contribute to the provident fund irrespective of the pension scheme.

PENSION SCHEMES IN BRITAIN

The effects of an extension of national pensions on all types of private pension schemes in Britain were discussed recently by Mr. G. V. Bayley at the Institute of Actuaries, London. Mr. Bayley stressed the fundamental differences between a State pension scheme providing benefits up to a level of "basic need" and one going beyond that level into the realm of "private saving." If in the latter case, according to him, there was going to be material subsidisation of one set of individuals by another, or automatic adjustments to State pensions with rising price levels, then the whole structure of private savings would be undermined. In financing for a State scheme, Mr. Bayley thought the country should either provide adequately in real terms for any prospective substantial growth in State pension commitments, or should keep future commitments within the level of what the present generation themselves were willing to pay. This, he said, had an important bearing not only on the size but also on the shape of any extended State scheme and on the extent to which present pensioners and older workers should receive pensions beyond what they had paid for.

NOTES:

1. The Balance Sheet shows the position of the Bank immediately prior to amalgamation with Grindlays Bank Limited and the transfer therefrom of all assets and liabilities as at the close of business on 31st December, 1957, by virtue of the Scheme of Arrangement dated 8th July, 1957, and by the Order of Court dated 7th November, 1957, under Section 208 of the Companies Act, 1948. Consequent upon the amalgamation the name of the Bank was changed as from 1st January, 1958, to National Overseas and Grindlays Bank Limited.
2. There are commitments in respect of Confirmed Credits, Forward Exchange Contracts and Guarantees, including Guarantees to the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the above Balance Sheet which is in agreement with the books of account and returns. In our opinion and to the best of our information and according to the explanations given to us the said Balance Sheet gives the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and, on such basis, the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1957.
3. Liabilities have been incurred in respect of building contracts for new premises amounting to approximately £275,000 (*1956—£265,000*).
4. The rupee in India, Pakistan and Ceylon and the kyat in Burma have been converted into sterling at 1/6d. and the East African shilling at par. Other currencies have been converted at the rates of exchange ruling on 31st December, 1957.

REPORT OF THE AUDITORS TO THE MEMBERS

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the above Balance Sheet which is in agreement with the books of account and returns. In our opinion and to the best of our information and according to the explanations given to us the said Balance Sheet gives the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and, on such basis, the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1957.

We have also examined the annexed Consolidated Balance Sheet and Consolidated Profit and Loss Account of the Bank and its Subsidiaries dealt with thereby with the audited accounts of those Companies. In our opinion such Consolidated Balance Sheet and Consolidated Profit and Loss Account have been properly prepared from such accounts in accordance with the provisions of the Companies Act, 1948, in the manner thereby authorised for Banking Companies and, on this basis, give a true and fair view of the state of affairs and of the profit ascertained in the manner therein indicated of the Bank and its Subsidiaries so far as concerns members of the National Overseas and Grindlays Bank Limited.

LONDON, 3rd March, 1958.

NOTES:

1. The Balance Sheet shows the position of the Bank immediately prior to amalgamation with the Holding Company and the transfer thereto of all assets and liabilities as at the close of business on 31st December, 1957, by virtue of the Scheme of Arrangement dated 8th July, 1957, and by the Order of Court dated 7th November, 1957, under Section 208 of the Companies Act, 1948.
2. Investments to the nominal value of £88,770 (*1956—£100,063*) in Indian and Pakistan Government Securities have been lodged as security for special accounts.
3. There are commitments in respect of Confirmed Credits, Forward Exchange Contracts and Guarantees. There are also contingent liabilities in respect of Bills re-discounted by Holding Company and by other Banks amounting to £126,287 (*1956—£223,178*) and £8,486 (*1956—£24,036*) respectively.
4. The Subsidiary Companies, being for Nominee holding purposes only, do not trade and have, therefore neither profit nor loss. In view of the insignificant amounts involved, group accounts have not been prepared.
5. Contracts for Capital Expenditure in respect of Premises amounted to approximately £852,000 (*1956—£7,850*).
6. The rupee in India, Pakistan and Ceylon and the kyat in Burma have been converted into sterling at 1/6d. and the Rhodesian pound at par. Other foreign currency balances have been converted at the rate of exchange ruling at 31st December, 1957.

NATIONAL OVERSEAS AND GRINDLAYS BANK LIMITED

STATEMENT BY THE CHAIRMAN

MR. J. K. MICHIE FORESEES ANOTHER DIFFICULT YEAR FOR BANKING

THE Annual General Meeting of the National Overseas and Grindlays Bank Ltd. was held in London on 1st April 1958. The following is the statement of the Chairman, Mr. J. K. Michie, relating to the accounts of the Bank for the year ended 31st December 1957, submitted at the meeting:

"The physical amalgamation of the National Bank of India Ltd. and Grindlays Bank Ltd. into the National Overseas and Grindlays Bank Ltd. took effect from 1st January 1958. So while this is the first report to the shareholders under the new name, the Accounts for 1957 perforce are presented in the previous form.

"Despite the enormous amount of detailed work involved, thanks to the organising ability of those specially seconded to the task and to the co-operation of the staffs of both Banks, the fusion was accomplished with remarkable smoothness and I hope without inconvenience to our customers. In a complex operation of this kind, to foresee and anticipate every difficulty would be superhuman, but I am satisfied that any outstanding problems will be disposed of with the sympathy and understanding which were the keynotes of the whole operation.

"We have established a 54 Parliament Street Committee of five members, all of whom were on the Board of Grindlays Bank Ltd. This Committee will assist the Management to deal expeditiously with the large number of accounts which they hold and so maintain the very high standard of service associated with the name Grindlays.

"I have to report a change in your Board since our last meeting. Sir Robert Reid, who had been a member since 1943, retired on 31st December last. Sir Robert had a distinguished career in the Indian Civil Service, finally as Governor of Assam, and his intimate knowledge of the sub-Continent was of great value to us. Incidentally, his father was a member of the Board for 31 years, from 1878 until 1909.

"To fill the vacancy we invited Mr. E. H. Owen to join us, which he did early in January. Mr. Owen had been a member of the Board of Grindlays Bank Ltd. since October, 1955, so already had knowledge of our business. He also has wide interests in the City and I recommend him to you with every confidence.

"I also have an impending loss to report. Mr. W. H. Miles, who has very special knowledge of Ceylon and who has been on the Board since April, 1946, has intimated that he wishes to reduce his business commitments and his resignation will take effect after the annual general meeting. We accept his decision with much regret and shall miss his wise advice not only on matters concerning Ceylon but on the wider aspects of our business.

"Before leaving the subject of the Board I am sure you would wish to join in congratulating Sir Toby Low, K.C.M.G., C.B.E., D.S.O., M.P., on the honour of Knighthood conferred on him by Her Majesty the Queen in the 1957 Birthday Honours List for his distinguished services as a Minister of the Crown over a period of six years.

"Turning to figures, the total of our consolidated balance sheet, at £162,105,220, shows a small reduction and our net profit is £5,345 lower at £427,490. As usual this figure is arrived at after full provisions for taxation, for bad and doubtful debts and other necessary reservations. Two interim dividends each of 7½ per cent. have been declared, making a total unchanged distribution of 15 per cent.

"During 1957, Government securities again fell considerably in value—a process which fortunately has recently been reversed—but I am glad to be able to report that these temporary reductions in value as in the past have been provided against internally.

India

"1957 was a difficult year and at the moment prospects for 1958 promise little, if any, alleviation of her financial problems; in fact, due to a poor monsoon, the food situation is less favourable than in recent years and that means more imports and a greater drain on monetary reserves.

"When a country is in process of an industrial expansion at a rate far in excess of its own savings, this, combined with a fall in the values of its basic exports, i.e., jute products, tea and cotton goods, is doubly hurtful. The new investments absorb sterling balances which previously yielded interest; alternatively, they are being built with the help of borrowed money on which in some form, or other and at some time or other interest will have to be paid. Therefore, temporarily there is a large element of inflation in the phase through which India is passing.

"Internally money is tight and too cheap and Government has asked banks to reduce their lendings. This process would be easier, if Government itself paid its dues somewhat more promptly and recognised that money, too, is a commodity which should only be cheap if it is plentiful.

"Another major aggravation of India's difficulties has been the lack of public confidence as evidenced by a continued fall in Stock Exchange values, accentuated, of course, by the Mundhra incident. In view of the wide publicity being given to this affair you will be glad to know that our Bank is involved only to a limited extent and full provision has been made in these accounts for any possible loss. It is most regrettable that the involvement of the Life Insurance Corporation in the Mundhra affair has led to the resignation of India's able Finance Minister, Mr. T. T. Krishnamachari.

"At this stage it is impossible to avoid comment on India's immediate economic difficulties, but on the other side of the picture there is no question of the energy and realism with which she is now facing them. Imports are being cut, long credit is to some extent being arranged and a certain success is being achieved in raising further loans and aid. Equally, there is no doubt of the goodwill towards India of the countries and organisations from which funds and other assistance may be secured and I am certain they will strain themselves to help India over her difficulties.

Pakistan

"The economy of Pakistan is also under strain. The year 1957 ended with a deficit of over £19,000,000 in the balance of payments, as compared with £675,000 in 1956.

"There have been falls in both prices and production of tea and jute, the cotton crop yield was about the same as the previous one, but exports are running at a much lower level.

"The food situation in East Pakistan has recently improved considerably and prices have fallen to reasonable levels. In October Mr. Suhrawady resigned the Premiership and after a short period under Mr. Chundrigar was replaced by Malik Firoz Khan Noon, who has previously held office in a variety of capacities.

"Internally, money is in fair supply in Pakistan but, as is now much more generally realised, it is trade balances and external reserves that really matter and Pakistan has a stern fight ahead of her. Nevertheless, prospects for 1958 are more favourable, but much depends on food production and the slowing down of purchases of capital goods from overseas. The Sui Gas Scheme is also increasingly helpful by saving imports of fuel.

Ceylon

"Last year, I was able to report a buoyant economy; good prices for tea and an increased balance of trade, the only clouds being labour relations, particularly in the port of Colombo, and the continued talk of nationalisation of tea estates.

"Since then, tea prices have been volatile and generally lower and rubber prices also are lower, while recently conditions in the port of Colombo have been chaotic and have caused a severe and crippling hold-up of exports.

"It has been stated officially that tea estates in Ceylon would be nationalised only when it became necessary in the interests of the country's economy and that time has not yet arrived.

"To add to the troubles there was a disastrous flood up-country in December which has disrupted communications and slowed down exports even further. The country's most immediate problem is port labour and how it is to be handled. At the moment it seems to be largely out of hand. Other labour is also restless and widespread strikes are threatened. Whatever the causes of this unrest the results are certainly embarrassing and extremely damaging to the economy of the country.

Burma

"Last year, rice exports reached a post-war record of over 2,000,000 tons, timber exports were maintained and with the coming into operation of the new oil refinery, imports of oil were reduced. There was, too, an encouraging improvement in what is called 'law and order.' In fact, portents were distinctly encouraging.

"Unfortunately, 1957 brought the poorest monsoon since 1920 and Burma's rice crop will thrash out 30 per cent. short of the previous year, which means the exportable surplus of around 1,000,000 tons only and a loss of foreign exchange of nearly £30,000,000. Foreign exchange reserves are already falling and economies will have to be the order of the year. There is a regrettable movement afoot to restrict and even ban internal overdraft facilities to foreign or foreign-controlled companies and firms and this will affect many of our constituents. It is also very doubtful if it will benefit Burma's trade. The difficulties over remittances, both personal and of accumulated profits, I regret, continue.

East Africa

"During the past year, branches were opened at River Road, Nairobi, and at Gulu in Uganda.

"In Kenya, Fort Hall, which had formerly been a sub-branch to Thika, became a full-time branch on 1st July 1957, and on that date a sub-branch to Fort Hall was opened at Embu. In the same month a sub-branch to Nyeri was opened at Karatina.

Kenya

"Grain crops were reasonably good, while the coffee crop reached an unexpectedly high figure of 22,000 tons and fetched quite good prices. Tea production continues to expand, although prices were not as good as in 1956.

"The resettlement of Kikuyu and Meru tribesmen involved in 'Mau Mau' continues and during a brief visit to Kenya in November I was able to see a part of what is being done.

"From my observations the building boom in Nairobi and elsewhere is over, and particularly as the flow of capital into East Africa is declining it would be a good thing if less money were now to be put into bricks and mortar and more devoted to increasing liquidity.

The Government and other public bodies are finding it increasingly difficult to raise loans either in London or locally and this both has an effect on and is a reflection of the availability of money generally.

Uganda

"The two main cash crops, cotton and coffee gave average to good yields last year, although neither reached the figures hoped for. Due to a prolonged drought in August-November prospects for this year are far from good and will mean a great deal less spending power in the Protectorate. The cotton crop, which partly because of better agricultural methods was at one time expected to reach a record yield of 450,000 bales, is now estimated at 310,000, the one satisfactory feature being that but for the improved methods adopted the yield would have been even lower. There is, therefore, good hope for future years. The yield of clean coffee is now estimated to be 45,000 tons, as against 67,000 tons last year. Uganda suffers less variation in her rainfall than do her immediate neighbours and given reasonably peaceful political conditions her economy will undoubtedly continue to expand.

Tanganyika

"Sisal prices continue depressed and during 1957 went as low as £69 per ton. A satisfactory feature of the industry and a proof of its vitality is that yield is being maintained in spite of the low price.

"Tanganyika's cotton crop in the Mwanza area is steadily growing in importance and value and in 1957 150,000 bales were marketed, as against 120,000 bales in 1956. In 1951, the crop was 41,000 bales only.

"Coffee yields in the Kilimanjaro area continue good and acreage is expanding.

Zanzibar

"Zanzibar and cloves are automatically associated in one's mind and last year's crop of 21,500 tons was an all-time record. Coinciding with the troubles in Indonesia, which is one of the major markets, this vast crop is proving something of an embarrassment as the carrying of a large part of it is falling on the Clove Growers' Association, a quasi-Government body created to assist in the financing, storing and orderly marketing of cloves. Madagascar also has a large crop and is marketing actively with a naturally depressing effect on prices. It is most unlikely that there can be two exceptional crops in succession, so it is hoped the situation will be adjusted.

"The Federation of Rhodesia and Nyasaland features in our survey for the first time. We now have six branches in Southern and Northern Rhodesia and one agency in Bulawayo. Two further offices, one in Salisbury, and one in Belmont, Bulawayo, are in train.

"During 1957, we were well pleased with our progress, despite the fact that certain credit restrictions were placed upon banks when it was seen that copper prices were still on the way down.

"Since the close of the year, because of a large reduction in the sterling balances of the Federation and the continued depression in the price of copper—the price has fallen by over £100 per ton since 1st January 1957—further restrictions on lending have been imposed on the banks and generally we must expect a period of relative stagnation.

"Tobacco did well in 1957, but because of unseasonable rains prospects for this crop are not so good.

"Last October, accompanied by Sir Toby Low, I made a fairly extensive tour of Southern and Northern Rhodesia to inform ourselves at first-hand about these, to us, new territories and about our business there. In spite of the difficulties I have already mentioned, we brought away an impression of a young and virile country which is determined to develop a part of the world in which there is not only plenty of room but also great possibilities of agricultural and industrial expansion.

"At time of writing, the Deputy Chairman, Mr. Stuart, and Mr. Kerr, our General Manager, are visiting our Rhodesian branches and this additional first-hand experience will be of undoubted benefit to our local management and to the Board.

"On the assumption, which I think is a reasonable one, that the present recession in copper and other prices is temporary and that a somewhat higher plane can be expected, there is no reason to be pessimistic of the economic future of the Federation.

Aden

"The reopening of the Suez Canal gave the trade of Aden a very definite fillip and it has remained on a fairly high level of activity, although there are now signs of overstocking.

Somaliland Protectorate

"Rainfall has been plentiful this season and exports of livestock, which is the territory's chief product, have been running at a high level.

"A considerable expansion of the harbour facilities at the port of Berbera is now under way.

Grindlays Bank Ltd.

"The last year of the Bank as a separate unit was a successful one and the volume of deposits again showed an increase.

Finance and Development Corporation

"The year's operations again showed a profit, which is being retained in the business.

"The reduction of the Bank of England rate to 5 per cent. in February 1957 proved to be an overoptimistic step and on 19th September last circumstances demanded that it be again raised, this time drastically to 7 per cent. This unpalatable medicine seems to be working, although the Governor of the Bank of England has just warned us against being too complacent about our progress. There is indeed no panacea in monetary policies by themselves. If they have the desired effects of making us as a country not only tighten our belts but also gird up our loins then all will be well—otherwise no.

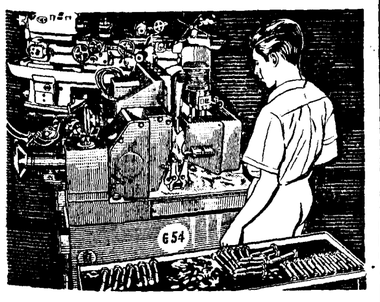
"I have commented in each of my last two statements on the disparity between money rates in countries where it is certainly as scarce as it is here and those prevailing in London.

"One result of this disparity is a very natural one—for industries and businesses to endeavour to borrow as largely as possible where money is 'cheap' and as little as possible when it is not only considerably more expensive but much harder to come by. This fact is not making our role as overseas bankers any easier, particularly as competition for deposits is growing in every sphere of our activities. It is, therefore, with interested sincerity that I hope for an easier money market in this country and its reopening on a larger scale to overseas borrowers."

"It is impossible to foresee other than a difficult year for commerce, industry and their handmaiden, banking, but that is no justification for pessimism and I look forward, albeit not immediately, to a resumption of progress.

Staff

"As always, we are beholden to our staff, and I wish to thank an enthusiastic and able body of men and women for their loyal service."



all works managers know

That efficient production begins with good tools. It's not worth taking chances with cheaper but inferior equipment and stores. That's why for accurate *finishing*, *forming*—and maintenance of cutting tools, they use Grinding Wheels and Bonded Abrasive specialties manufactured by Carborundum Universal, which are equal to the best quality in the world.

NEW PUBLICATIONS

India's Economic Relations with the Far Eastern and Pacific Countries in the Present Century. By Dr. B. N. Ganguli. Published by Orient Longmans, Bombay. Pages 348. Price: Rs. 9.50.

INDIA is certainly behind other countries in developing and encouraging bodies which undertake research projects. The Indian Council of World Affairs is, therefore, to be congratulated on its having taken the initiative to complete and publish, in collaboration with the Institute of Pacific Relations, a valuable study, *India's Economic Relations with the Far Eastern and Pacific Countries*. The study has been completed by Dr. Birendranath Ganguli of the Delhi School of Economics who, by reason of his wide and varied knowledge of international trade and his experience as a representative of this country in international conferences like the Conference on World Trade and Employment, held in London, Geneva and Havana (1946 and 1947), is eminently qualified to deal with the subject.

The subject has been dealt with in six parts, apart from the introduction which gives the background and also contains a good statistical perspective. The countries comprehended in this survey are not only India's traditional and immediate neighbours, but also countries in the peripheral region which have been playing a dominant role in the post-war economic readjustments in the Far East. For the purpose of the study which is with special reference to India's trade, the countries have been grouped into five categories, namely, Burma, Ceylon, Malaya and Hong Kong (Part I); Thailand and non-British colonies of South-East Asia (Indo-China, Indonesia), Japan, China and the Philippines (Part II); the British Dominions of New Zealand, Australia and Pakistan (Part III), and other Pacific countries, namely, Canada and the U.S.A. (Part IV).

Dr. Ganguli points out that powerful reagents of the historical process in the Far East have been drawing together not only these countries, but also countries which form the core of the Far Eastern region. He says: "Mere space relations have become static, and, therefore, irrelevant in the new context: the frontiers of natural regions recognised by geography have become blurred and indistinguishable in the rapidly developing dynamic situation on which the hopes and fears of teeming millions in Asia are centred today." Historically, the economic development in the area was articulated by the pull of rival imperialist regimes, each having its own characteristics. Again, it is pointed out that apart from the basically competitive character of the colonial economies, a major cause which has hampered intra-regional trade in the past has been the pull exerted by the trade of this region through their shipping lines.

With the resurgence of nationalism, all these countries no longer prefer to remain at the level of primitive self-sufficiency. The Japanese economic penetration and export drive in the Far Eastern countries assisted the incipient process of industrialisation in the Far East. In this process, owing to lack of local capitalistic enterprise and capital formation, Governments have been resorting to economic planning for the purpose of development of capital resources and modern economic organisation. In this context, the author points out that "to the extent that private enterprise is either absent or cannot grow, Governments in the Far East are bound to develop a collectivist trend. The stronger the opposition that they face from vested interests, both internal and external, and the more violent the stresses and strains of the difficult economic transition in these countries, the more pronounced will be the trend towards collectivism."

As regards India, he points out that "the character of India's exports to the Far Eastern countries has not been the same as it was before the war." He adds: "Even after the war, the variety and resourcefulness of supply of India's exports have ensured adaptation of exports to changing requirements in the markets of the neighbouring countries." Since the process of industrialisation is gaining momentum and there is the imperative necessity to earn foreign exchange, there is need for nursing the neighbouring markets.

Dr. Ganguli rightly emphasises the economic importance of the region which forms the subject of his study. He says: "We are very much in the region of conjecture when we try to appraise the fluid situation in the Far Eastern and Pacific countries. Nevertheless, whatever happens in this part of the world, its large rice supplies and its vast market for low-income consumer goods are bound to make it a vital centre of world trade." Dr. Ganguli concludes his study with the following observations: "In 1950, the total turnover of the trade of this region was of the order of $15,000 million. Shipping and commercial services involved in such a large volume of trade must be considerable. It would be clearly wrong to assume that South-East Asia will always remain a region divided against itself, the rival colonies will merely make room for rival nationalisms and that instead of only colonial powers sharing the vast market of this region, countries of Europe, America and Oceania together with India, China and Japan will share this market on an equal footing. India has no interests in this region except those which are concerned in the best interests of the poverty-stricken disillusioned masses."

This is an interesting and specialised contribution to the literature on the economics of a region to which has attracted considerable international attention in recent years.

The Economic Weekly—Annual Number. Editor: Sachin Chaudhuri, 104, Apollo Street, Fort, Bombay, 1. Price: Rs. 2.50.

The *Economic Weekly* Annual Number contains several interesting articles of topical economic importance written by experts. Special mention must be made of the articles on income elasticity of demand by Dr. K. N. Ranj, working capital and the rate of surplus by Mr. Amartya Kumar Sen, pricing of industrial goods and the Plan by M. George Rosen, and energy in national economy by Mr. Jaywant Dubashi. Also included in the Number are articles on other subjects like what is caste? and inter-caste marriage in Maharashtra.

There are three editorials—focus on social change, state of the Republic and narrowing exchange gap. In the course of the last-mentioned editorial, the Editor has sought to emphasise that depleted reserves have robbed us of the cushion which could absorb the pressures and ensure smooth day-to-day operations. In his opinion, it is this difficulty of synchronising expenditure with the availability of foreign exchange which has demoralised the Government and undermined all our development efforts. He also emphasises that the problem is further aggravated by the heavy commitments outstanding about which the Finance Ministry, for reasons of its own, is reluctant or unable to take the public into its confidence.

Economic Review—Gauhati Session Number. Chief Editor: Shriman Narayan. All-India Congress Committee, 7, Jantar Mantar Road, New Delhi. Price: Rs. 2.

The factors influencing the progress on the social and economic sides of the country are well brought out in the course of a series of articles contributed to this special issue. Mr. Morarji Desai has made an interesting study of the resilient nature of the Indian economy in which he claims that the economy is essentially sound, despite the current stresses and strains felt in certain directions. Mr. Sunil Guha has analysed credit control in retrospect. The other important articles cover development of water and power resources, integrated scheme of credit and marketing, iron and steel industry, ports and shipping, road development, and industrial discipline in plantations. The utility of the issue is enhanced by the inclusion of a statistical supplement relating to trend of agricultural and industrial production, foreign trade, transport, finance and revenue, etc.

DIRECTORY OF FRENCH FOREIGN TRADE

With the establishment of the European Common Market, 1958 will be the turning point in the economic life of the member nations. It is but fitting that the *Repertoire National Du Commerce Exterieur*, the Directory of French Foreign Trade, which has just brought out its 1958 edition, should devote a great deal of space to the Common Market. A special section has been added to it. Under a preface by Mr. Maurice Faure, State Secretary for Foreign Affairs, it includes articles on West Germany, Belgium, Italy, Luxemburg and the Netherlands signed by the most competent authorities. All these writers underscore the new possibilities that are now open for French products in Community countries.

In their introductory articles, Mr. Emile Roche, President of the French Economic Council, and Mr. Emile Hugues, State Secretary for Economic Affairs, also underline the absolute need for France to export. It is also the subject matter of all the texts submitted by French industries. And this need prompted M. Bourges Maunoury to write in his introduction: "More than ever, maintaining our position depends, to a large extent, upon the will and the success of our exporters for whom this Foreign Trade Directory is to be an essential tool."

Classified by trade as before, the lists of leading export firms in French industry have been brought up-to-date by the trade organisations. Some chapters have been completed or rewritten, so that they will be more readily understood by foreign buyers. The subject index has been simplified, so that products looked for can be found more practically and rapidly.

AUDITOR'S REPORT.

I have audited the foregoing Balance Sheet of The Canara Banking Corporation Limited, as at 31st December 1957 and also the Profit and Loss Account of the Bank for the year ended on that date with the Books of Accounts and certified returns from Branches and visited some of the major Branches of the Bank during the year and examined the books of accounts and cash and securities as at the time of my visit and report that:

(a) I have obtained all the information and explanations which to the best of my knowledge and belief were necessary for the purpose of my audit;
(b) Such information and explanations have been found to be satisfactory;
(c) The returns received from the branches have been found adequate for the purpose of my audit;
(d) The transactions of the Bank as have come to my notice have been, in my opinion, within the powers of the Bank;
(e) In my opinion, and to the best of my information and according to the explanations given to me, the said accounts give the information required by the Companies Act, 1956, in the manner so required;
(f) In my opinion,
(i) the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1957;
(ii) the Profit and Loss Account gives a true and fair view of the Profit or Loss for the year ended that date and shows a true balance of profit for the period covered by the audit; and
(iii) proper books of accounts as required by law have been kept by the Bank so far as appears from my examination of those books; and
(g) The Bank's Balance Sheet and the Profit and Loss Account dealt with by the Report are in agreement with the books of accounts and Returns.

CENTRAL BANK OF INDIA LIMITED

CHAIRMAN, MR. H. P. MODY'S ADDRESS TO SHAREHOLDERS

PLEA FOR CLOSER UNDERSTANDING BETWEEN GOVERNMENT AND BUSINESS MEN

ADDRESSING the shareholders of the Central Bank of India Ltd., at their Forty-seventh Annual General Meeting held on 28th March 1958, Mr. H. P. Mody, Chairman of the Bank, welcomed the greater responsiveness on the part of the Government to informed criticism in the last few months, and urged the need for a closer understanding between the Government and the business community.

The following is the full text of Mr. Mody's speech:

"LADIES AND GENTLEMEN,

"I have pleasure in presenting to you once again the annual statement of accounts and the Directors' report.

"The year under review was marked by increased economic activity in India. Both agricultural and industrial production was generally on the upgrade. At the same time, serious difficulties were experienced in the implementation of the second Five-year Plan. The growth of inflationary pressure, the shrinkage of internal resources, the depletion of foreign exchange reserves and the continuing increase in Government's non-developmental expenditure brought about a serious strain on the economy and threw out of gear the programmes of development in the public and private sectors.

"In my speech last year, I referred to the rapid deterioration that had taken place in our foreign exchange resources. The situation became particularly acute during the year under review. It compelled Government to adopt stringent measures of import control which, whatever their justification, were bound to cause a great deal of hardship and dislocation. The Plan estimated that the total foreign exchange requirements over the five-year period would amount to Rs. 1,120 crores; it is now calculated that the actual amount needed would be of the order of Rs. 1,600 crores. Owing to the gaping deficit in the balance of payments, India had to draw heavily on her foreign balances and borrow substantial amounts from the International Monetary Fund. Even after taking credit for the loan of Rs. 95 crores from the Fund, the foreign assets of the Reserve Bank of India declined from Rs. 749 crores at the beginning of the Plan to Rs. 280 crores at the end of February 1958. After taking into account the external assistance promised so far, including the American aid recently announced, the gap yet to be bridged is estimated to be in the neighbourhood of Rs. 600 crores.

No Short Cuts to Foreign Exchange

"The full extent of the difficulties can be appreciated from the figures which Pandit Jawaharlal Nehru, as Finance Minister, placed before Parliament in the course of the Budget debate. They relate only to loans already taken, and when we take into consideration the heavy demands which the future is going to make upon us, we have to be prepared to face, as far ahead as we can see, conditions of acute stringency and ever-increasing controls. There are no short cuts to foreign exchange; it has to be earned by hard work, enterprise and efficiency.

"There are other aspects of the economic situation, of equal concern to the public. One of them is the alarming growth in the revenue expenditure of Government. In the ten-year period ending with the Budget estimates for 1958-59, there has been a rise in such expenditure from Rs. 317 crores to Rs. 796 crores, of which the allocation for defence is Rs. 278 crores. Civil expenditure as such amounts to Rs. 517 crores, as against Rs. 168 crores in 1949-50. Not all of this can be called unproductive, but the rate of increase in non-developmental expenditure is sufficiently high to cause concern. As the Chairman of Barclays Bank has observed, 'little babies have a way of growing into ugly old men.' We are aware that modern Governments with their greatly expanded sphere of activities are costly affairs, but it is a question for serious consideration whether India can afford to step up her non-developmental expenditure at such a rapid pace. In a growing economy many things are urgent, and in a Welfare State there is bound to be a gathering momentum for all manner of nation-building activities, but ultimately it must all come down to a question of resources and priorities. Those who are confronted with the task of transforming our age-old economy cannot brush aside financial considerations and cannot go on indefinitely imposing a strain on the economy which it cannot bear. It is simply not possible to run too far ahead of the resources of the nation.

Taxes Exceed Income

"Already, in these ten years, in the range and incidence of direct taxation, we have achieved the unenviable distinction of being among the most heavily taxed countries in the world. We are the only country in which there is a direct tax on personal expenditure and where the combined rate of taxes on individual earnings and wealth can exceed 100 per cent. of income. So far as individuals, firms and companies are concerned, nowhere else are people called upon to bear so many different taxes and imposts. Can India, in her present stage of development, afford the pace which is being forced upon her, without gravely imperilling her capacity for the production of goods and services? No one can possibly question the concept of social justice and the compelling necessity of a wider diffusion of well-being throughout the community. But it is axiomatic that wealth has to be produced before it can be distributed. If the incentive to earn, to save and to spend is increasingly to be denied, where is it ultimately going to end up? If the answer is that, whatever happens, there can be no retreat from the Plan, it may well be asked whether the Plan is to be the master or the servant of the economy? In these last few months, there has been a greater responsiveness to informed criticism, and I would earnestly urge the need for a closer understanding between Government and the business community. The so-called vested interests may be conservative and their outlook may sometimes be suspect, but they have learnt a great deal in the last few years and have a real desire to employ their experience and resources for the general good; and they can inject a sense of realism into our planning which is sorely needed.

"Turning to events in the field of banking, the Reserve Bank adopted, during the year, a series of measures in order to keep under control the inflationary pressure generated by the heavy capital outlay and by the large volume of deficit financing, which was expected to increase from Rs. 250 crores in 1956-57 to Rs. 366 crores in 1957-58. The technique of 'selective control' introduced in the previous year was continued and reinforced by other steps. In February 1957, the stamp duty on usance bills was drastically stepped up so as to raise the effective cost of borrowing under the bill market scheme to 4 per cent. Lending rates against Government and other securities were also brought into line. Finally, in May 1957, the Bank rate itself was raised to 4 per cent. In addition the Reserve Bank issued a directive to the Scheduled banks to cancel the unutilised portion of their overdraft advances, so as to bring down the level of bank credit to Rs. 800 crores before the start of the busy season. The volume of advances and bills dropped accordingly from a peak of Rs. 933 crores in May 1957 to Rs. 858 crores in the last week of December.

Credit from Non-banking Sources

In spite of these measures against inflationary trends, economic activity in the country remained brisk throughout the year and the demand for credit was pressing. When bank credit is controlled, customers are to some extent compelled to obtain credit from non-banking sources at a higher cost. This trend is noticeable even in countries where the money market is well organised. Referring to the credit squeeze in the U.K., the Chairman of Martin's Bank at its annual meeting observed: 'This has caused the determined borrower to go outside his normal banking sources, often paying a high rate of interest, but still obtaining the funds he required.' Whether or not customers of Indian banks are in a position to resort to non-banking sources of credit, the pressure of the demand was fully reflected in the operations of Scheduled banks. The Economic Survey, issued along with the Budget, admits that the high level of investment in the economy and the large step-up in imports have strained the resources of the banking system.

"The deposit liabilities of Scheduled banks at the end of 1957 reached an all-time high of Rs. 1,406 crores, as compared with Rs. 1,114 crores in the previous year, the increase in time deposits being more marked than in demand deposits. The rupee counterpart funds and the compulsory rupee accounts with the State Bank of India contributed not a little to this upward swing. Notwithstanding an increase in the volume of advances, the rise in deposits brought down the ratio of advances from 71 per cent. to 61 per cent. towards the end of 1957.

Borrowings from Reserve Bank

"This sharp increase in deposits considerably altered the structure of the Scheduled banks' liabilities and assets. In 1956, banks had to approach the Reserve Bank for increased accommodation, liquefy their gilt-edged portfolio and draw upon their till money. By contrast, the increase in advances in 1957 was less than the expansion of deposits. While the latter increased by Rs. 292 crores, advances went up by only Rs. 70 crores. The Scheduled banks were, therefore, able to reduce their indebtedness to the Reserve Bank from Rs. 79 crores to Rs. 24 crores. Simultaneously, they were able to increase their investment portfolio from Rs. 365 crores to Rs. 433 crores. The proportion of investments to deposits, however, went down from 33 per cent. to 31 per cent.

"The reduction announced last week in the Bank of England discount rate is welcome as indicating a lessening of the pressure against sterling and a general easing of money rates. It should not affect the discount rate in our country, but it might have some effect on our economy in the field of export trade. However that may be, a high Bank rate is generally restrictive in character, and the recent change, which may possibly be followed by further reductions, can be taken as signifying a return to a healthier economic climate.

Balance-sheet

"I shall now turn to the balance-sheet and the statement of accounts presented to you. There has been a further growth in our earnings and resources as a result of larger deposits and more active conditions in trade and industry. Gross earnings at Rs. 780 lakhs recorded an increase of about 19 per cent., but with the rising cost of working funds, the increase in gross profits was only a little over 6 per cent.

"With the rise in the Bank rate from 3½ per cent. to 4 per cent. during the first half of the year, there was a general stepping up of our rates of interest on advances, but the advantage gained thereby was to a large extent nullified by the higher rates that had to be paid for deposits. In the result, the net earnings under interest and discount increased by only Rs. 10.36 lakhs over the previous year. In consonance with the rise in the rates paid by other banks and the suggestions made by our shareholders at the last meeting, we put up our rate of interest on savings deposits accounts. Even though the increase ranged from ½ to 1 per cent. only, it added substantially to the cost of our working funds, in view of the fact that the average amount held in this account throughout the year was over Rs. 28 crores.

Shift in Deposits

"Apart from the rise in the Bank rate and the expanding demand for money, higher rates for deposits were also due to Governments, both Central and State, coming into the market for large borrowings at 4 to 4½ per cent. and for small savings on still more attractive terms. This helped to accentuate the shift from demand to time deposits, that is, from low interest to high interest bearing deposits, and that, without an all-round corresponding increase in the rates for advances, resulted in reducing the margin of profits of banks.

"There was a further increase of Rs. 16.72 lakhs in establishment charges. These charges stand at a very high figure, and their adverse effects on our working can be minimised only if the staff at some of the centres were to show a greater awareness of their responsibilities and a greater devotion to the interests of the Bank. In this connection, I would particularly refer to a disturbing factor in our working, namely, overtime. Despite increases in staff, payments under this heading have been mounting up and they nearly doubled themselves during the year. They amounted to over Rs. 8 lakhs. I appeal to our staff for its co-operation in cutting down establishment charges, which already account for as much as 61 per cent. of our gross profits.

"By reason of the rise in salaries and allowances, the figure of bonus to staff has also appreciably gone up and amounted to Rs. 30 lakhs, showing an increase of Rs. 2½ lakhs over the previous year.

Labour Relations

"The Industrial Dispute (Banking Companies) Decision Act, 1955, imposed a heavy burden on most of the banks, but it was hoped there would be some return for it in happier relations with the staff and more efficient working. It is extremely unfortunate that that expectation has not materialised, and pen-down strikes and go-slow tactics are still in evidence. It is time the staffs of banks realised that their interests were bound up with those of the institutions they were serving, and that increases in their emoluments and amenities could only come from greater stability and higher profits. There should be no room for any antagonism between staffs and managements, which can only result in impairing the fortunes of both.

"I must make special mention of the increase in our resources which took place during the year. Shareholders will have been gratified to note that, for the first time, our total deposits crossed the Rs. 150-crore mark. They recorded a significant increase of Rs. 16 crores, the highest rise in any one year, and this, in spite of the fact that our rates were often somewhat lower than those offered by other banks. Increased resources arising out of this growth in deposits, coupled with the liquidation effected in our investments, and the comparatively easy money conditions towards the close of the year, made it possible, despite an increase in advances, to keep down our borrowings from banks, which at the end of the year stood at Rs. 7 crores less.

"On the assets side, despite an expansion in business, the ratio of liquid resources to deposits was maintained at the level of 42 per cent.

"In view of the higher cost of working funds and the more remunerative rates obtainable for advances, our investments in Government and other securities were further liquidated, and in spite of the support we continued to extend to the new loans floated by the Central and State Governments, we could reduce our holdings by Rs. 3.5 crores during the year. Owing to a further setback in values, the gap between the book and market values of securities unfortunately widened further and stood at the close of the year at the figure of Rs. 254 lakhs. There has, however, since been a fairly substantial narrowing down as values have been rising.

Advances

"The higher price levels arising from the expanding economy of the country, the sluggish conditions in the trade in piecegoods and some other commodities, and the demand for working capital needs, all created conditions which kept up a sustained demand for advances throughout the year, which at one time, reached a peak of Rs. 115 crores, representing a ratio of 78 per cent. to total deposits. At the close of the year, though the busy season had not set in, advances recorded an increase of Rs. 10.73 crores over the figure of the previous year.

"In pursuance of our policy in respect of non-remunerative offices, eight of those showing consistently poor results were closed down during the year. In the past two years, as many as 30 such offices have been discontinued, and though new offices have been opened in centres considered more promising, the total number has gone down and stood at the end of the year at 286.

"It is now my pleasant duty to make the customary acknowledgments. Our Vice-Chairman, Mr. C. H. Bhabha, has continued to devote himself to the interests of the Bank with a single-minded zeal. His knowledge and experience have been of inestimable value, and I am sure shareholders will join me in conveying to him our warmest appreciation of all he has been doing for the Bank. We are fortunate, also, in having as our General Manager Mr. N. K. Karanjia. His long association with the Bank, his ability and his thorough knowledge of every aspect of banking have been not a little responsible for the progress maintained by the Bank in spite of some adverse factors, and I hope we may look forward to having him with us for many more years. To Mr. F. C. Cooper, the Deputy Manager, to members of the staff at the head office and the branches, and to the Local Advisory Committees at the various centres, I would also like to convey our grateful thanks. Ours is a vast and widely spread business, and it is not possible to maintain the close personal contacts which are so essential to the success of an organisation, but I have every hope that, more and more, in the years to come, from the General Manager down to the humblest member of the staff, everyone may come to feel a sense of pride in his work and satisfaction in seeing it well done."

HISTORY AND DEVELOPMENT OF BUSINESS

(*a*) GREAVES COTTON & CO., LTD.

The firm of Greaves Cotton & Co. was founded in India in 1859 and handled a wide range of business interests, viz., export of cotton, establishment of Ginning and Pressing Factories in Western India and operation and management of Cotton Mills in Bombay ; after the first World War and by 1922, when the firm was converted into a private Limited Company, the Company mainly concentrated on the sale, erection and servicing of engineering equipment of all types. The Company has been carrying on business continuously since the date of its incorporation on 29th March 1922. The Company was converted into a public company on 8th May 1950.

Even before World War II the Company explored the possibilities of indigenous manufacture of some of the imported machinery and equipment. From the beginning it has been the Company's policy to make the fullest possible use of experience and technical knowledge acquired over generations by manufacturers abroad. About 20 years ago the Company entered into arrangements with two leading manufacturers in the U.K. to experiment with the manufacture of their equipment in India.—Messrs. Ruston & Hornsby Limited of Lincoln joined the Company in establishing a pilot plant in 1939 for the manufacture of diesel oil engines and pumps, and Messrs. Crompton Parkinson Limited of London set up a Works in 1937 for the manufacture of electrical motors and fans. Appreciating that the Company's strength lay in its knowledge of the Indian markets and in the sales and service organisation built up in India, the Company was more interested in rapid development of manufacture than in acquiring control of the manufacturing units. However, with the growth of these units beyond the initial experimental stage, it has been necessary to undertake substantial investments in order to equip them to meet the growing demand for their products. This additional finance had to be raised mainly by the Company, and on this account the Company's financial interest in the manufacturing concerns increased very substantially.

The Company did not expect the new ventures to produce any immediate substantial return on its investments and in the initial stages of development of each manufacturing unit, the Company had to rely largely on the profits made by it from its trading in imported machinery and equipment. The soundness of the Company's policy has been proved by events, and today the Company is in the fortunate position of not only obtaining a reasonable return on its investments in the manufacturing units but of being able to rely on those manufacturing units for a substantial portion of its trading turnover. Similarly, the Company's Associated Company, Greaves Cotton & Crompton Parkinson Private Ltd., is able to rely on the Crompton Parkinson Works for the major portion of its trading turnover.

In addition to supplies of horizontal oil engines and pumps available from Ruston & Hornsby (India) Private Ltd., the Company is able to obtain Inter-Stranded Ropes and Bandings from Kenyon Greaves Private Ltd., and Paper Cones and Tubes from its own plant. Further, arrangements have been made for the manufacture of Foundry Fluxes in association with Foundry Services International Ltd., of Birmingham, Emery Fillet in association with Dronsfield Brothers Ltd., of Oldham, and Worm Reduction Gears in association with David Brown Corporation Ltd. of Huddersfield. Negotiations are in progress in respect of the manufacture of several other lines successfully handled by the Company for the past many years.

In addition to the manufacturing projects initiated by itself, the Company is fortunate in securing selling agencies for other essential products like Road Rollers, Woven and Leather Belting, etc., now manufactured by other Companies in India.

The availability of these indigenous manufactures should serve substantially to maintain the Company's trading through the difficult period ahead during which imports must necessarily be restricted in order to conserve foreign exchange. In addition, the very substantial investments made by the Company in its associated and subsidiary Companies are, as has been stated, now beginning to show satisfactory returns and the Company expects that the improvement in its investment income coupled with the advantage of growing supplies of indigenous products will compensate for the inevitable reduction in its import trading.

The authorised capital of the Company was increased from Rs. 25 lacs to Rs. 1.25 crore in 1950 and was further increased to Rs. 1,50,00,000 in 1953. These additions in capital were for the purpose of financing the Company's investments in the manufacturing projects established or expanded during the last ten years.

As against Rs. 7,94,650 invested by 1947 in associated and subsidiary Companies, all concerned with the manufacture or sale of products already handled by the Company, investments have today increased to Rs. 1,06,03,388 at cost. The present issue is being made in order to enable the Company to make a further investment of Rs. 50,00,000 in its associated company, Crompton Parkinson (Works) Private Ltd., which has been very successful in establishing the manufacture of fans, motors, transformers and switchgears and is today the leading manufacturer of electrical equipment in India. This investment will serve to raise the Company's holding in this associated company to 50 per cent. thereby achieving parity with Crompton Parkinson Ltd., London, who first commenced manufacture in India in 1937 and it will further serve to finance the expansion of the Works at their second, new factory, at present nearing completion, at Kanjur, Greater Bombay. In this context it is worthy of note that additional investment by the British Company has served to cover the foreign exchange necessary for all the new machinery and import licences already received would ensure early installation of the plant and effective operation of the new works well before the end of this year.

(*b*) SUBSIDIARIES

(1) RUSTON & HORNSBY (INDIA) PRIVATE LTD.—was incorporated in 1939 with a paid-up capital of Rs. 1,50,000 which has now increased to Rs. 50,00,000 divided into 50,000 shares of Rs. 100 each. 74 per cent. of the capital is held by Greaves Cotton & Company Ltd. referred to under this heading as the holding company and the balance of 26 per cent. by the English Company, Messrs. Ruston & Hornsby Ltd., Lincoln.

This subsidiary was formed in the pre-war period as a pilot plant to develop indigenous manufacture of 'Ruston' Diesel Oil Engines and Centrifugal Pumps which were then imported from U.K. This plant was formerly located in a small workshop at Sayani Road, Bombay. After the war, demand for these products steadily increased and to meet this increased demand it was considered necessary to expand the production capacity of the plant by housing it in a more suitable location and equipping it with modern machinery and appliances. Accordingly, a site at Chinchwad near Poona was selected and a new Factory put up there by 1955. Chinchwad is in an area selected by the Bombay Government for industrial development and the land was acquired with the assistance of Government.

During 1955, when the Plant moved into the new factory at Chinchwad and during 1956 when the initial difficulties inevitable to the establishment of a new Works had to be faced, production suffered considerably resulting in a loss in 1955 and a small profit in 1956. These initial difficulties have been successfully overcome and during 1957 it was possible to step up production considerably. The demand for the Subsidiary's products continues to increase and as a result the turnover has been more than doubled during 1957. With this subsidiary now on its feet to meet the increase in demand there is every reason to expect that its operation will contribute substantially to the profits of the holding company in the future both by way of return on the investment as well by the contribution to the turnover of the Mechanical Engineering department of the Company.

(2) GREAVES COTTON & CO. (PAKISTAN) LTD.—was incorporated in 1947 after partition with a paid-up capital of Rs. 2,50,000 which has now increased to Rs. 13,00,000 divided into 1,300 shares of Rs. 1,000 each. 76 per cent. of the capital is held by the holding company and the balance by the residents in Pakistan.

The subsidiary was formed with the principal object of dealing in lines formerly handled by the holding company for the whole undivided India. Except during 1954-55 when the Pak rupee was devalued the subsidiary has maintained satisfactory progress and has paid a dividend of 10 per cent. for the last two years. There is every indication of the growing demand in Pakistan for the goods handled by the subsidiary and in consequence of a substantial improvement in the subsidiary's trading results in the future.

(3) KENYON GREAVES PRIVATE LIMITED—was incorporated in 1950 with a paid-up capital of Rs. 2,00,000. 74 per cent. of the capital is held by the holding company and the balance 26 per cent. by the English Company Messrs. William Kenyon & Sons Ltd., England.

The subsidiary was formed with the principal object of indigenous manufacture of interstranded ropes of different sizes used mainly in the Textile Industry and imported and sold by the holding company for over 60 years. The subsidiary has since its inception maintained satisfactory progress and has paid a dividend of 22.50 per cent., 17 per cent. and 18 per cent. for the years ended 31-3-1955, 31-3-1956 and 31-3-1957 respectively, free of income-tax.

(*c*) ASSOCIATED COMPANIES

(1) GREAVES COTTON & CROMPTON PARKINSON (PRIVATE) LIMITED—was incorporated in 1937 with a paid-up capital of Rs. 11,00,000 which has now increased to Rs. 50,00,000 divided into 3,000 6 per cent. cumulative preference shares of Rs. 100 each and 47,000 equity shares of Rs. 100 each. 100 per cent. of the preference capital and 50 per cent. of the equity capital is held by Greaves Cotton & Company Ltd., and the balance of the equity capital is held by the English Company, Messrs. Crompton Parkinson Ltd.

Greaves Cotton & Crompton Parkinson Private Ltd. was formed with the object of taking over and developing the business of distribution of electrical equipment handled by a department of Greaves Cotton & Company Ltd., until 1937. The Company's turnover position has been extremely satisfactory in recent years and with the proposed expansion of Crompton Parkinson (Works) Private Ltd., Worli, (to which a reference has been made below in detail) for whom this Company acts as sole distributors of its products in Northern, Western and Eastern India, it should be possible not only to maintain but considerably improve the turnover position with sales of indigenously manufactured products despite restriction in imports. The rate of dividend paid by the Company during the last three years ended 31-12-1956 was 3½ per cent., 8 per cent. and 11 per cent. respectively, free of income-tax.

(2) CROMPTON PARKINSON (WORKS) PRIVATE LTD.—was incorporated in 1937 with a paid-up capital of Rs. 3,85,000 which has now increased to Rs. 60,00,000 divided into 60,000 shares of Rs. 100 each. The Company has obtained permission of the Controller of Capital Issues for a further issue of shares amounting to Rs. 65,00,000 to finance its expansion programme. Originally this associated company was a wholly owned subsidiary of the English Company, Messrs. Crompton Parkinson Ltd., England. In 1947, Greaves Cotton & Company, Ltd., acquired 26 per cent. interest by purchasing the necessary shares from the English Company. Greaves Cotton & Company, Ltd.'s participation was increased to 50 per cent. as from 1st July 1955 in keeping with the Government's general policy of parity of Indian capital in joint ventures aimed at industrial development of the country.

It is anticipated that as a result of considerable expansion in the associated company's manufacturing programme its products will serve within next few years to increase substantially the present turnover resulting in larger yield on Greaves Cotton & Co., Ltd.'s investment.

The rate of dividend paid by the associated company during the years ended 30th June 1955, 30th June 1956 and 30th June 1957 was 7 per cent., 6.50 per cent. and 7.25 per cent. respectively, free of income-tax, and with the substantial improvements in its profit earning capacity, as a result of the proposed expansion, there is every reason to expect that the rate of dividend will show a marked improvement.

LAND, PREMISES AND PLANT

The Company has its main office at Bombay and offices at Calcutta, Madras, New Delhi, Ahmedabad, Kanpur, Bangalore, Coimbatore and at Manchester, England, and manufacturing plant at Sayani Road, Bombay.

The premises of the Head Office at Bombay and of the Branch Offices at Calcutta, New Delhi, and Madras are held on lease. The other office premises are held under tenancy agreement on reasonable terms.

The Company's subsidiary Messrs. Ruston & Hornsby (India) Private Ltd. has a large and modern factory on its own land at Chinchwad near Poona.

The Subsidiary, Messrs. Kenyon Greaves Private Ltd., have their works at Sayani Road, Bombay, in the same premises as the manufacturing plant of Greaves Cotton & Co., Ltd.

The associated company, Messrs. Greaves Cotton & Crompton Parkinson (Private) Ltd., has its main office at Bombay and branch offices at Calcutta, Madras, New Delhi and Ahmedabad. It also has large workshops at Bombay and Calcutta.

The Associated Company, Messrs. Crompton Parkinson (Works) Private Ltd., has its office and Works at Haines Road, Worli. It is erecting a second large plant at Kanjur near Bhandup, Greater Bombay, to supplement the production of the present factory at Haines Road in view of the growing demand for its products.

MANAGEMENT AND STAFF

The business of the Company is administered by the Managing Director, the Joint Managing Director and a third full-time Director who have been associated with the Company for very many years ; the working directors are ably assisted by well qualified technical and commercial executives, both Indian and European, carefully selected for their special knowledge and qualifications, most of whom have spent their entire working career in the Company. It has always been the policy of the Company to arrange for its officers to pay frequent visits to the various manufacturers overseas with whom it is associated so that they may at all times be right up to date with all the latest developments. All the European and most of the Indian Officers have received their initial training with the manufacturers in both Europe and America whose products they are handling in India.

The total number of employees of the Company including the management, staff and operatives employed at Bombay is approximately 536. The efficiency and continuity of management at all levels are maintained by the Company's longstanding practices of promotion wherever possible from within the organisation. Labour relations have, in general, been satisfactory and there is reason to hope that they will continue to be so.

The Subsidiaries, Messrs. Ruston & Hornsby (India) Private Ltd. and Messrs. Kenyon Greaves Private Ltd., are managed by the Company as their Secretaries and Treasurers, the Associated Company Messrs. Greaves Cotton & Crompton Parkinson Private Ltd. is managed by the Company as their Managers. All these Companies have on their board qualified Technical Directors associated with the Company for many years.

OBJECTS OF ISSUE.

The object of this Issue is to enable the Company to participate in the expansion of its Associated Company, Crompton Parkinson (Works) Private Ltd., to which detailed reference has been made under paragraph "History and Development of Business."

FINANCIAL INFORMATION

FUTURE PROSPECTS AND DIVIDENDS

While the Company has been taking an increasing interest in indigenous manufacture, the Company's main interest continues to be the import, sale and servicing of a wide range of machinery, mostly heavy machinery. In the past during the initial establishment of the manufacturing projects, the return from these investments was naturally small. Nevertheless, the Company has been able to maintain a consistent reasonable dividend out of its very substantial trading profits. With the progress of the subsidiary companies beyond the initial stages, investments in them are beginning to yield better returns. This, together with the maintenance of a substantial proportion of the Company's trading, of which the Company is confident in spite of restrictions in imports, should ensure a healthy dividend position for the future. The Company has counteracted import restrictions by negotiating substantial orders for heavy machinery on deferred-term basis on lines approved by Government, as well as by increasing its turnover in lines manufactured in India, both by its subsidiary and associated companies, as well as independent manufacturers with whom connections have been established.

As indicated earlier, the object of this issue is to enable the Company to participate in the expansion programme of Crompton Parkinson (Works) Private Ltd. which as will be seen from the financial statements of this Company is already showing good progress at its present level of production ; with the substantial increase in the Works' production resulting from the second plant construction of which is nearing completion at Kanjur, near Bhandup, Greater Bombay, the Works may reasonably be expected to be able to pay larger dividends than has been the case so far. This should serve to raise the investment income of Greaves Cotton & Co. Ltd. thereby ensuring, in the absence of circumstances beyond their control, their capacity to maintain the dividend at the current rate of 7½ per cent on the increased capital with prospects of further improvement once the second plant at Kanjur attains maximum productivity.

GENERAL INFORMATION

MINIMUM SUBSCRIPTION

(*a*) The minimum amount which in the opinion of the Director is required to be provided in respect of each of the matters mentioned in clause 5, Part I of Schedule II of the Companies Act, 1956 is Rs. 46,60,000 made up as follows :—

(i) Cash purchase price of property purchased or to be purchased	Rs. 45,60,000
(ii) Expenses of this Issue	„ 1,00,000
(iii) Re-payment of monies borrowed in respect of the foregoing matters	NIL
(iv) Additional Working Capital (being the balance)	NIL

(*b*) The amounts to be provided in respect of the matters aforesaid otherwise than out of the proceeds of this Issue is Rs. 4,40,000 and has been already provided out of such facilities as were available to the Company.

EXPENSES OF ISSUE

The expenses of this Issue including brokerage are estimated to amount to Rs. 1 lac and are payable by the Company.

UNDERWRITING

The shares now intended to be issued have not been underwritten but the Company will pay brokerage as indicated below.

OTHER PREVIOUS ISSUES

No shares or debentures have been issued or agreed to be issued within the two years preceding the date hereof either for cash or as fully or partly paid-up otherwise than in cash. No amount has been paid to the Company by way of premium on any shares within the two years preceding the date hereof.

COMMISSION

No sums have been paid within the two years preceding the date hereof or are payable as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for any shares in or debentures of the Company or as discount in respect of shares issued.

PAYMENT TO PROMOTER

No amount or benefit has been paid or given within the two years preceding the date hereof or is intended to be paid or given to any promoter or to any officer of the Company apart from normal remuneration and reimbursement paid to such officers.

OPTION TO SUBSCRIBE

Apart from shares to the value of Rs. 11,60,000 which the existing shareholders propose to take up in exercise of their rights, the Company has not entered into any contract or arrangement and does not at present propose to enter into any contract or arrangement whereby any option or preferential right of any kind has been or is proposed to be given to any person to subscribe for any shares in the Company.

INTEREST OF DIRECTORS

Mr. N. M. Wagle is the Managing Director of the Company and receives remuneration for his services as such.

Mr. L. M. Thapar was appointed Joint Managing Director of this Company with effect from 1st April 1957. He will be entitled to receive remuneration for his services as such on his executing a Service Agreement with the Company.

Mr. J. H. Langdon is an Executive Director of the Company and receives remuneration for his services as such.

Mr. Karam Chand Thapar, Mr. H. D. Varma, Khan Bahadur C. B. Taraporvala and Mr. S. Lall together share commission totalling 1 per cent of the net profits of the Company.

No Director has any financial or other interest in any of the property acquired by the Company within the two years preceding the date hereof or proposed to be acquired by it.

BROKERAGE

Brokerage at the rate of rupee one per Equity Share will be paid by the Company on allotments made in respect of applications bearing the stamp of a member broker of a recognised Stock Exchange. In addition a brokerage of 50 nP. per Equity Share will be paid by the Company to the Managing Brokers in respect of all acceptances of applications for the 35,000 shares offered to the Public.

PROSPECTUS AND FORMS OF APPLICATION

Copies of the Prospectus and Forms of Application may be obtained from the Brokers at the addresses given above and from the Bankers named above at any of their Branches in India.

QUESTION HOUR IN PARLIAMENT

Foreign Loan Repayment

REPAYMENTS made so far on loans received specifically for the first and second Five-year Plan schemes amount approximately to Rs. 1.27 crore to foreign countries and Rs. 4.93 crores to the World Bank.

• • • •

Small Savings

Collections under the Small Savings Scheme have shown an upward trend in the first two months of 1958 as a result of the number of measures taken by the Government. During January and February this year, Rs. 5.6 crores and Rs. 7.3 crores were collected, respectively, as against Rs. 1.8 crore and Rs. 2.5 crores during the corresponding months of the previous year. Among the measures taken by the Government to accelerate small savings are increase in the rate of interest on 15-year annuity certificates, permitting of pledging of National Savings Certificate with Scheduled banks and co-operative societies, sale of treasury savings deposit certificates through authorised agents on commission, and celebration of savings, fortnights by conducting a special drive.

—*B. R. Bhagat*

T.E.L.Co.

The Automobile Division of T.E.L.Co. may get the benefit of the financial credit assistance recently extended to India by the U.S.A. along with other automobile manufacturers in the country. The Automobile Division of T.E.L.Co. was licensed for the manufacture of trucks and bus chassis only. The indigenous content of the vehicle manufactured by T.E.L.Co. forms about 47 per cent. of the c.i.f. value of the complete unit. The production of the Division is now 7,417—more than 20 per cent. of the target. The Company has submitted a programme for increased production of 12,000 annually. When production goes up, prices are likely to come down. The truck manufactured by T.E.L.Co. is the only diesel truck in the country and another is being licensed through Hindustan Motors. Other trucks in the country are run on petrol.

• • • •

Steel Position

The steel position in the country is expected to improve considerably by 1959. The steel position during the current year will be difficult. The Centre has urged the State Governments to release more quotas of steel for the small-scale industries. There is dissatisfaction in regard to the supply of steel, because there is a great demand for it as a result of rapid increase in the production of Indian engineering industries. But supply does not keep pace with demand, because of foreign exchange shortage and limited internal production of steel.

• • • •

Aluminium Plants

Two private parties have offered to establish aluminium plants, one at Mettur (Madras) and the other at the Rihand Dam site (U.P.). The matter is under consideration.

—*Manubhai Shah*

Shipping Co-ordination Committee

A Shipping Co-ordination Committee has already been set up in January. Two liaison officers, one representing the Indian shipping companies in the private sector and the other representing those in the public sector, have been appointed to assist the Committee in finalising arrangements for booking shipping space on Indian vessels for import and export cargoes moving on Government account. The Committee does not deal with shipping problems connected with trade moving on private account.

• • • •

Freight Payment

I am not aware of any negotiations with foreign shipping companies to accept payment of freight in Indian rupees.

• • • •

Masulipatam Port

The quantity of iron ore exported from Masulipatam port during 1957-58 was 235,549 tons till the end of February, as against 270,817 tons during the previous year. The port has been used to full capacity. If the development schemes relating to Masulipatam port in the second Plan are fully executed, the maximum capacity of the port will increase by over 50 per cent.

—*Raj Bahadur*

Sirhind and Rajasthan Canals

No loan has been sanctioned for the Sirhind Feeder Project for 1957-58. For the Rajasthan Canal Project, a loan of Rs. 25 lakhs had been sanctioned in 1957-58. The question of sanctioning a loan for 1958-59 does not arise at this stage. Provision in the second Five-year Plan for the Sirhind Canal Project was Rs. 5.50 crores and for the Rajasthan Canal Project Rs. 22 crores.

• • • •

Kosi Barrage

The construction of the Kosi barrage has been finally approved by the Planning Commission. There is no change in the site or height of the barrage. In the design, the diversion sluices intended to divert 50,000 cusecs of the Kosi waters into the old eastern *dhars* have been omitted. The project authorities are planning to complete the barrage in all respects by June 1962. Details of the programme of construction are yet to be approved by the Kosi Control Board. There has been an increase in the estimated expenditure. The total revised estimate of the Kosi project, as now approved by the Planning Commission, is Rs. 44.76 crores.

—*S. K. Patil*

Import of Tractors

Representations for the liberalisation of the import policy with regard to tractors are under consideration. They will be kept in view while framing the policy for the next licensing period

—*Satish Chandra*

Foodgrains Enquiry Committee

The Government has not taken any firm decision in regard to the recommendations of the Foodgrains Enquiry Committee on imports from abroad in the next two years. However, the Government is keeping in view the recommendations while arranging for imports from abroad.

—*A. P. Jain*

Foodgrains Imports

The Government proposes to import two million tons of wheat and 500,000 tons of rice during the financial year 1958. The two million tons of wheat are estimated to cost about Rs. 77 crores, of which about Rs. 13 crores may have to be incurred in foreign exchange. Excepting Canada and the United States, India is not negotiating with any other country at present for the import of foodgrains. Out of the current agreements with the United States and Canada, about 500,000 tons of wheat may remain to be shipped at the beginning of the next financial year. The foreign exchange requirements mainly on freight for shipping them to India may be approximately Rs. 2 crores.

—*A. M. Thomas*

Mechanical Engineering Institute

The Mechanical Engineering Research Institute is likely to be located at Durgapur in West Bengal. The Council of Scientific and Industrial Research has decided to establish a Central Public Health Engineering Research Institute, but the place where it is to be located is still to be decided.

—*Dr. M. M. Das*

Aid for Oil Refinery

The offer of the Rumanian Prime Minister to help India in setting up an oil refinery in India is still under consideration.

—*K. D. Malaviya*

Labour Demands

An inter-departmental committee has been set up to facilitate consultation among the Ministries concerned on questions regarding labour demands in undertakings in the public sector. The Committee consists of representatives of the Ministries of Labour and Employment and Finance and of the employing Ministries.

—*Abid Ali*

Textile Mill in Pondicherry

The Bharathi Textile Mill in Pondicherry, which is partly closed, has approached the Government for a loan, but it is not thought advisable to grant it. The reasons for the partial closure are mainly economic. The number of workers on the rolls is 1,050, of whom about 100 are employed now. Shortly about 100 looms are expected to start working, thus absorbing about 300 more workers. As the closure of the mill is not due to any labour or industrial dispute, the Pondicherry Administration has not been able to intervene. The management has been advised either to try to raise a loan privately to run the mill or to allow the workers to draw their retrenchment compensation and seek employment elsewhere.

AUDITOR'S REPORT.

I beg to report that I have audited the above Balance Sheet of the Canara Bank Limited as at 31st December, 1957, and also the above Profit and Loss Account of the Bank for the year ended that date with the Books of Account and certified Returns from the Branches and that I have visited some major branches of the Bank during the year and have examined the books of account and cash and securities as at the time of my visit and report that:

(a) I have obtained all the information and explanations which to the best of my knowledge and belief were necessary for the purposes of the audit.
(b) Such information and explanations have been found to be satisfactory.
(c) Transactions of the Bank as have come to my notice have been, in my opinion, within the powers of the Bank.
(d) The Returns received from the Branches have been found adequate for the purposes of my audit.
(e) The Bank's Balance Sheet and Profit and Loss Account dealt with by this Report are in agreement with the Books of Account and the Returns.
(f) In my opinion and to the best of my information and according to the explanations given to me the said accounts give the information required by the Companies Act, 1956, and the Banking Companies Act, 1949, in the manner so required and the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1957, and the Profit and Loss Account gives a true and fair view of the profit for the year ended 31st December, 1957.
(g) In my opinion proper books of account as required by law have been kept by the Bank so far as appears from my examination of those books.

BANGALORE, 14th January, 1958.

A new level of excellence in fan design

Here is the fan that combines beauty, comfort, performance and durability that every one looks for. Orient Fan, replete with many features, is a technical masterpiece—a result of a new level of excellence in design and technique that is achieved by the vast funds of engineering 'know-how' accumulated over the years.

Its pressure die cast, dynamically balanced rigid rotor complete die cast casing, centre less ground shaft, stove enamelled paint are the reasons for its remarkable performance and incomparable finish.

Here is the fan created by Orient's highly skilled technicians backed by their modern designers, tool engineers and other specialists to meet the exacting demand of the users all over the country and abroad.

Orient FANS

Years ahead in look and performance

FALL IN FOREIGN EXCHANGE RESERVES

PLANNING COMMISSION'S NOTE ANALYSED

THE Planning Commission's note on foreign exchange position, as we pointed out in our leading article last week, has clearly confirmed the distressing fact that the Government has been lacking in economic prescience of high order, an important pre-requisite for successful planning. That there is no exaggeration whatever in this statement will be evident from a careful perusal of the details furnished in the note. Such a perusal will reveal that, from the very beginning of the second Five-year Plan, *the authorities have until recently not only failed to recognise the importance of planned imports but actually encouraged heavy import licensing. This is very regrettable, considering* the special stress laid by the Planning Commission in the chapter on Finance and Foreign Exchange that "the accent of policy (trade) must necessarily be on maximising export earnings and economising to the utmost on imports." Indeed, no other aspect of economic policy has been so miserably handled as the one relating to foreign trade. How else can one explain the fact that, while exports from India have not risen much beyond the Rs. 600-crore mark, imports into the country have been considerably higher than the anticipated levels for the first two years (1956-57 and 1957-58), as also the assumed average for the whole of the Plan period.

The following table indicates the trend of foreign trade during the first two years of the second Plan as compared with that assumed in the Plan:

(In crores of rupees)

	1957-58		1956-57		Average annual rate
	Actual*	Anticipated	Actual	Anticipated	
Imports c.i.f. ..	1,244	886	1,077	783	868
Exports f.o.b. ..	683	583	637	573	593
Balance of trade ..	—561	—303	—440	—210	—275

* Based on the actuals for the first six months (April-September 957) only.

It will be seen from the above figures that the deterioration in the adverse balance of payments set in in the first year. This occurred despite the rise in exports. For the rise was more than offset by the substantial increase in imports, which continued unabated in the year just ended (1957-58) also, notwithstanding the severe restrictions imposed in the past six months. This was because there was a heavy load of past commitments—amounting to as much as Rs. 990 crores in September 1957—which reflected itself in actual imports during the year.

Outstanding Commitments

Out of the outstanding foreign exchange commitments of Rs. 990 crores in September 1957, about Rs. 590 crores were on Government account and Rs. 400 crores on private sector account. It is now estimated that, at the end of March 1958, the commitments amounted to Rs. 864 crores. The bulk of this sum—Rs. 523 crores, to be precise—is accounted for by Government, the share of the private sector being Rs. 300 crores, and the balance of Rs. 41 crores represents commitments for import of steel entered into mainly by the Iron and Steel Controller. Of the Rs. 300 crores of outstanding commitments of the private sector, approximately, Rs. 200 crores, represent "normal or perhaps rather less than normal outstandings"—since import licensing has been strict in the past year—and only about Rs. 100 crores represent a bunching of commitments on account of capital goods for the Plan. A breakdown of imports (c.i.f.) on Government and private accounts is given below:

(In crores of rupees)

	April-Sept. 1957	1956-57	1955-56
Private	383	661	540
Government*	239	416	205
Total ..	622	1,077	751

* Including iron and steel controller.

The above figures show that although the rise in imports has been appreciable in both cases, it is proportionately higher in the case of Government imports. Thanks to the continued appreciable rise in imports thus without a corresponding improvement in exports, the drain on India's foreign exchange reserves which began in April 1956 has continued uninterruptedly ever since. By the end of March 1957, despite a credit of Rs. 61 crores from the International Monetary Fund, the reserves had fallen to Rs. 219 crores. The sterling balances as on that date stood at Rs. 527 crores. Further losses since then reduced them to Rs. 360 crores by the fourth week of September 1957, and it is estimated that they might have fallen to about Rs. 280 crores by April 1958.

Explaining the drain, the Planning Commission's note gives the following details:

The rise in imports and the consequent drain on foreign exchange resources is itself attributable mainly to the attempt to carry out the second Five-year Plan. But the shortage has been to some extent aggravated and hastened by factors like the heavy demands of defence; the need to import more foodgrains than was originally anticipated; the increased requirements of raw materials, components, spares, replacements, etc., for matching the higher levels of industrial production reached in 1955 and 1956 for which some allowance was made in the Plan estimates but has proved to be inadequate; higher imports of consumer goods in the years 1955-56 and 1956-57 as compared with earlier years; and increase in prices and in freight rates. Dealing with these factors, the note observes:

"The foreign exchange expenditure on defence has risen during the past few years and it seems likely that its annual average during the first two years of the second Plan will be about Rs. 30 crores higher than the average of the preceding three years. Furthermore, the outstanding commitments are exceedingly heavy.

". . . during the last three years of the first Plan, imports of foodgrains, etc., had substantially fallen, but, in the first year of the second Plan, they have risen sharply to Rs. 102 crores. This compares with an average annual import of Rs. 48 crores worth of foodgrains assumed in the second Five-year Plan. This assumption has proved so far to be wide of the mark, but it may be recalled that, at the time it was made, it appeared reasonable. Right up till July 1955, the Food Ministry was burdened with stocks of foodgrains which it was finding some difficulty in disposing of. Even as late as the early part of 1956, it was contemplated that the foodgrains which at that time it was agreed to take under P.L. 480, would be used to build up a reserve and would not have to be issued straight to the public for consumption.

"The index of industrial production (base 1951=100) rose from 113 in 1954 to 122 in 1955, 133 in 1956 and about 140 in the early months of 1957. The higher levels of industrial production achieved year after year involved considerably higher imports of raw materials and producer goods. To a considerable extent, this was foreseen and allowed for in preparing the second Five-year Plan. It seems, however, that there was some underestimation of the higher requirements, though it is difficult to say in precise detail where the underestimates lay."

Giving the break-up figures relating to the principal imports in the year 1956-57 as compared with 1955-56, the Planning Commission's note says that the increase in imports under chemicals, drugs and medicines is mainly accounted for by chemicals, a direct reflection of the higher levels of industrial production in the country. The increase under cutlery, hardware and electrical goods is also largely a reflection of higher industrial activity, since about half of the increase is accounted for by electrical goods. The main increase is under the omnibus item 'others.' This item covers, besides a number of consumer goods, several articles required for the maintenance of industrial production. A few illustrations are given. As compared with 1954-55, imports of rayon yarn have increased by about Rs. 4 crores, staple fibre by about Rs. 1.25 crore, raw wool and wool tops by about Rs. 2.5 crores, raw rubber and rubber motor covers by about Rs. 3.25 crores, parts of cycles by about Rs. 70 lakhs, and electric motors by about Rs. 50 lakhs. It is probable that, in these and other instances, there was some under-estimate in the Plan of the requirements for "maintaining" the economy at the higher levels it has reached.

Consumer Goods

Referring to the "widespread impression" that excessive imports of consumer goods in the past two years had seriously aggravated the foreign exchange difficulties, the note says that the available data hardly confirm this impression. While there has been a rise in imports of a few items, it would seem that over-liberal import of consumer goods could have had only a relatively small effect. The total value of imports of commodities under the principal heads of consumer goods for the years 1954-55, 1955-56 and 1956-57 was Rs. 61.80 crores, Rs. 74.89 crores and Rs. 80.83 crores, respectively.

The Planning Commission's note alludes next to the increase in freight rates and prices and observes:

"The large increase in the value of imports between 1955-56 and 1956-57 was due mainly to an increase in their volume and only to a relatively small degree to an increase in their unit cost arising from higher prices abroad or from higher freight rates. As regards freight rates, it has been estimated by the Reserve Bank that their rise resulting from the Suez episode accounted for about Rs. 15 to Rs. 20 crores of the increase in the total value of imports. As regards the effects of higher prices of commodities abroad, *no precise calculations are possible, but some general idea of the extent of the increase can be obtained from the trend of export prices between 1954 and 1956 in the United Kingdom—the principal source of India's imports. While the price index of all export commodities rose by only 6 per* cent. between 1954 and 1956, the price of metals and engineering products, which bulk largely in our imports in 1956-57, rose by 12 and 7 per cent., respectively. *These figures give some general idea* of the extent to which our import bills in 1956-57 for machinery (Rs. 211 crores) and for metals (iron and steel Rs. 133 crores—other metals Rs. 37 crores) may have been swollen."

Apart from the aforesaid factors, the largest single items of increase other than foodgrains during 1956-57 were iron and steel and machinery of all kinds, which together accounted for Rs. 344 crores, as against Rs. 208 crores in the previous year. The increase of Rs. 136 crores thus represented more than one-third of the total rise in imports. The increased imports were in the main due to the requirements of the Plan.

Government Commitments

The outstanding foreign exchange commitments on Government account at the end of September 1957, as already stated, stood at Rs. 590 crores, representing nearly 60 per cent. of the total of Rs. 990 crores. The break-up of these commitments is: Ministry of Steel, Mines and Fuel: Rs. 236.37 crores; Ministry of Railways: Rs. 96 crores; Ministry of Transport and Communications: Rs. 19.01 crores; Ministry of Irrigation and Power: Rs. 18 crores; Ministry of Food and Agriculture: Rs. 10.69 crores; and other Ministries and State Governments: Rs. 211.65 crores. Alluding to this, the note states:

"Apart from Defence, the Ministries making the heaviest drawals on foreign exchange resources are the Ministries of Railways, Iron and Steel, Irrigation and Power, Transport and Communications." According to the Planning Commission, all these Ministries have definite programmes of work designed to produce certain results and none of these Ministries has made commitments precipitately so as to run ahead of their time schedules. As regards steel projects, the payments and commitments made so far amounting to Rs. 298.5 crores were unavoidable, if these steel plants are to be completed according to schedule. "In neither of these cases," the Commission opines, "can it be said that commitments have been entered into prematurely. On the other hand, in some cases, as, for example, coal, there may have been undue delay in placing orders for equipment if the target envisaged in the Plan for 1960-61 is to be reached by then. In may be true that foreign exchange resources were not carefully husbanded; delegations may have been sent abroad too freely and the construction of too many large buildings undertaken requiring foreign exchange for steel, lifts and for electrical and air-conditioning equipment. But these extravagances have involved lakhs rather than crores. There is no evidence that excessive or premature commitments for Plan projects were made by any Ministry on a large scale."

Private Commitments

As regards the commitments of the private sector (Rs. 400 crores), a great part represents outstanding licences for import of raw materials, producer goods and consumer goods. About 40 per cent., according to provisional figures, is accounted for by purchase of capital and producer goods for carrying out development projects. In regard to purchases, the private sector, we are told, has not gone beyond what was laid down in the Plan, nor has it gone ahead too fast towards the attainment of Plan targets.

In the last two years, there has been a great increase in the imports of both capital and producer goods and a smaller increase in the import of consumer goods. The imports of capital goods increased from Rs. 135.07 crores in 1954-55 and Rs. 194.47 crores in 1955-56 to Rs. 253.17 crores in 1956-57, while those of producer goods increased from Rs. 304.27 crores and Rs. 329.22 crores to Rs. 433.68 crores. Consumer goods im-

BOMBAY DYEING'S PROFIT LOWER

EXPANSION SCHEMES PROGRESSING

AGAINST the background of the serious general setback to the cotton textile industry in the year 1957, the performance of the Bombay Dyeing and Manufacturing Company, Ltd. (Managing Agents: Messrs. Nowrosjee Wadia and Sons (Private) Ltd., Bombay), during the year ended 31st December 1957, is perhaps somewhat encouraging. It is true that the Company's profit has suffered a recession. But the setback is less severe than in respect of many other units in the industry. It is, however, noteworthy that the Company's turnover has moved up sharply. And viewed in the context of a substantial decline in profits shown by other units in the industry, the Company's results must be deemed satisfactory in that the gross profit for the year under review at Rs. 110.31 lakhs shows a drop of only Rs. 15.49 lakhs or 12.31 per cent. from Rs. 125.80 lakhs for the previous year.

In consonance with the decline in the gross profit, the net profit at Rs. 39.69 lakhs also stands lower, as compared with Rs. 54.16 lakhs in 1956 and Rs. 49.52 lakhs in 1955. The provision for depreciation has been raised substantially from Rs. 26.46 lakhs to Rs 48.12 lakhs. The provision for taxation takes up Rs. 14.32 lakhs, as against Rs. 33 lakhs in the previous year. This is, however, inclusive of a provision of Rs. 3.40 lakhs as wealth tax, Rs. 4.84 lakhs as additional liability for taxation for previous year and Rs. 3.08 lakhs as liability for wealth tax for previous year. Although the wealth tax constitutes only ½ per cent. of the net assets, it works out to 3.08 per cent. of the gross profit and as much as 8.5 per cent. of the net profit for 1957. The corresponding percentages on the gross and net profits for 1956 is 2.4 and 5.7 respectively. Thus, as the profit margin goes down, the incidence of wealth tax goes up.

The bulk of the appropriations from the year's gross profit is taken up by depreciation as stated above and by development rebate amounting to Rs. 45.80 lakhs. The amount set apart to the latter account in the previous year was Rs. 13.14 lakhs. In view of these large provisions, the Directors have been constrained to withdraw a sum of Rs. 23 lakhs from the dividend equalisation reserve for payment of the dividend. The profit has been strengthened by the addition of Rs. 6.65 lakhs, representing accumulated net profit of previous years on sales of Government securities. The dividend has been maintained at the rate of 10 per cent. for the previous year. The distribution is in the shape of an interim dividend of Rs. 7.50 per share on its original shares of Rs. 250 each and a final one of Re. 1 75 per share of Rs. 25 each, subsequently sub-divided.

The following comparative table discloses the progress of the Company's working during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds	8,02.22	7,47.15	7,23.34	7,26.42
Other income	15 48	15 41	10 08	7.65
Closing stocks	2,42 45	1,92.69	1,67.45	2,23.45
Expenses	7,43 60	6,43 89	6,20 99	6,56 61*
Gross profit	1,10 31	1,25.80	1,18 20	74 04
Managing Agents' remuneration	8.18	12.18	12.31	7.75

Transfer from reserves, etc.	29.65	..	..	..
Loss on "Neville House" ..	..	..	..	4.21
To reserves and other provisions	45 80	27.38	24 21	11.78
To dividend	25 10 (10%)	25 10 (10%)	25 10 (D. 8% +B. 2%)	20 08 (D. 8%)
Carry forward	0.86	2.41	0.73	0.52

* Not actual but only approximate.

It will be noted from the table above that sale proceeds have gone up sizably from Rs. 7.47 crores in 1956 to Rs. 8.02 crores during the year under review, although the year under review, as the Directors themselves point out, was a most difficult one for the textile industry in general. It is noteworthy that the Company increased its exports of cloth from 50.5 million yards in 1956 to approximately 62.8 million yards in 1957, and the value of foreign exchange earned rose from Rs. 3.95 crores to Rs. 5.03 crores. India's total exports of cloth in 1957 were 854 million yards, as against 744 million yards in 1956. It is thus significant that one out of every nine yards of the increase in exports in 1957 came from the Company's mills. Due to the increase in the production of Indian mill yarn, prices were lower during the year by about 7 to 8 per cent. Exports of yarn were, however, higher in 1957 than in the previous year. Free yarn sales by the Company in 1957 amounted to 5.06 million lbs., including exports based on the quotas allowed by Government. The Company's exports of yarn earned Rs. 15.72 lakhs.

Manufacturing and other expenses during the year rose sharply from Rs. 6.44 crores in 1956 to Rs. 7.44 crores, reflecting the larger volume of turnover in the Company's activities and also the increase in other heads of expenditure. Of this, stores and spare parts consumed accounted for a rise from Rs. 41.90 lakhs to Rs. 57.50 lakhs, salaries and wages and bonus from Rs. 94.29 lakhs to Rs. 102.71 lakhs and dearness allowance from Rs. 83.41 lakhs to Rs. 97.94 lakhs.

Referring to the progress made in the Company's schemes of expansion, the Directors in their latest report observe:

"In 1957, the new machinery received amounted to Rs. 1.64 crores and Rs. 37.44 lakhs was spent on construction of new buildings. By the end of December 1957, 904 automatic looms had been installed at the Spring Mills out of the 1,206 ordered. Seven out of the eight new hot air sizing machines received at the Spring Mills have already gone into production. New automatic pirn winders and bobbin stripping machines were also put into operation during the year. The construction of the building of the new bleach works at the Textile Mills was completed, and the erection of the bleaching, dyeing and finishing machinery was taken in hand. The continuous peroxide bleaching range has since commenced working. The entire erection of the new machinery and the transfer of some of the old machinery from the old bleach and dye house to the new bleach works is expected to be completed during the course of the current year."

The Directors state further that exemption has been granted to the Company from making the compulsory deposit with Government for the year 1956 under the Income-tax Allowances (Current Deposit) Rules 1957, as the financial resources of the Company had been utilised in large-scale renovation and reorganisation of the mills.

An impressive financial position is disclosed by the Company's balance-sheet as at 31st December 1957. The paid-up capital of the Company, all in ordinary shares, now sub-divided into Rs. 25 each, remains unchanged at Rs. 2.51 crores. The reserves and surplus aggregate Rs. 3.44 crores, of which general reserve accounts for Rs. 57.50 lakhs and rehabilitation and development reserve for Rs. 2.22 crores. Current liabilities aggregate Rs. 2.48 crores. The gross block of Rs. 7.95 crores stands well written down at Rs. 4.02 crores. Additions during the year were of the order of Rs. 2.03 crores. The current assets aggregate Rs. 4.41 crores and include, among other items, investments in Government securities and shares of companies Rs. 38.47 lakhs, stores and spare parts Rs. 19 71 lakhs, stock-in-trade Rs. 2.42 crores, sundry debtors Rs. 24.32 lakhs, loans and advances Rs. 1.02 crores and cash and bank balances Rs. 13.71 lakhs. The cash and bank balances have actually dropped from Rs. 1.29 crores as at the end of 1956, evidently due to the large additions to fixed assets.

The Rs. 25 fully paid-up ordinary shares are currently quoted at Rs. 56.40 *cum-div.* (final div. Re. 1-75). On an *ex-div.* basis, the shares provide a yield of 4.57 per cent. per annum.

(*Concluded from next column*)

acres. The balance consists of fuel clearings (16 acres), roads and buildings (156 62 acres) and streams and swamps (297.99 acres) The current season's (1957-58) tea crop is estimated at 1,130.000 lbs. to be harvested at an f.o.b. cost of 148.10 nP per lb. The coffee crop is estimated at 477 tons.

The Company's financial position, as disclosed by its latest balance-sheet, is quite sound. Its reserves and surplus aggregate Rs. 24 33 lakhs, as against a paid-up capital of Rs. 19 46 lakhs, all in ordinary shares of Rs. 2 each. The gross block of Rs. 45.26 lakhs stands written down to Rs. 30 51 lakhs. Additions to the gross block during the year accounted for Rs. 1.78 lakhs. The current liabilities of Rs. 19.47 lakhs include a provision for taxation of Rs. 7.92 lakhs. The current assets aggregate Rs. 32.76 lakhs, of which cash balance alone, amounting to Rs. 12.25 lakhs, provide sufficient cover to the current liabilities and provision for taxation.

The Rs. 2 fully paid-up ordinary shares are currently quoted at Rs. 4.85 *cum-div.* (final div. Re. 0.20 nP). On an *ex-div.* basis and on the basis of the latest dividend, the yield is 12.9 per cent. per annum.

O.V. ESTATES' RESULTS ENCOURAGING

RECORD PRODUCTION AND HIGHER DIVIDEND

THE working of the Ouchterloney Valley Estates (1938) Ltd. (Managing Agents: Messrs. Peirce Leslie & Co., Ltd., Kozhikode, Kerala) during the year ended 31st October 1957 is highly encouraging both in regard to production of tea and coffee as well as earnings. The distinctly improved results for the year under review are significant inasmuch as they are in refreshing contrast to the Company's disappointing performance in the previous year. The chief factors which reversed the downward trend noted in the Company's profits since 1953-54 were the substantial improvement in production of both tea and coffee and the higher prices realised for coffee. In fact, the year's output of both tea and coffee constitutes a record in the Company's history. The better results have brought some encouraging news to the shareholders as well, for the dividend, which had been cut consecutively for the past two years, that is, from 30 per cent. in 1953-54 to 20 per cent. in 1954-55 and further down to 10 per cent. in 1955-56, has once again been restored to 30 per cent. Another gratifying feature is that the year's profit is fully sufficient to meet the enhanced distribution, while in the previous year, even the modest dividend of 10 per cent. was made possible only by utilising a part of the reserves built up in previous years.

The gross profit for the year under review at Rs. 14.53 lakhs compares favourably with a mere Rs. 1.58 lakhs for the previous year and Rs. 10.77 lakhs for 1954-55. After raising the provision for taxation from Rs. 60.000 to as much as Rs. 6.30 lakhs but lowering that for depreciation from Rs. 2.24 lakhs to Rs. 97,303, the net profit amounts to Rs. 6 18 lakhs, as compared with a net loss of Rs. 1.16 lakhs in the previous year. The year's net profit is again Rs. 2.58 lakhs higher than the Rs. 3.60 lakhs earned in 1954-55. The Directors have written back a sum of Rs. 2.70 lakhs, being the estimated surplus provision for taxation made in previous years and have transferred Rs. 2.50 lakhs to the general reserve. It may be stated here that the Directors had not made any allocation to the reserves in the previous two years.

The following comparative table, presenting the salient features of the Company's results for the past four years, gives an idea of its progress since 1953-54:

	For the year ended 31st October			
	1957	1956	1955	1954
	Rs.	Rs.	Rs.	Rs.
Sale proceeds of tea ..	19,98,825	19,93,952	16,93,362	16,61,898

* Provided out of excess provision written back.
† Transferred to general reserve.

The tea crop for the year at 1,053,521 lbs. is a new record for the Company, having exceeded the previous best of 987,979 lbs. secured in 1954-55 by as much as 65,542 lbs. Despite this bumper crop, the upward trend in the cost of production has not been reversed. The average price realised is also lower. The coffee crop of 19,554 cwts. is more than thrice the crop of cwts. in the previous year. It is also a record, the previous peak being 17,060 in 1950-51. The improvement in production aided further by the higher price realised; in fact, it is the coffee crop which has contributed more to the highly successful working of the year under review.

The Company's estate, which consists of Outcherloney village, Gudalur consists of 19.674.49 acres. Of these acres are under tea (mature and immature 46.45 acres) under coffee (mature 2,715.2 205.25 acres). The area

MYSORE CHEMICALS AND FERTILISERS

DIVIDEND MAINTAINED

THE results of the Mysore Chemicals and Fertilisers Ltd. (Chairman and Managing Director: Mr. K. Narayanaswamy, Mysore) for the year ended 31st March 1957 show that the Company's working during that year was better than that in the preceding year. Sale proceeds show a sizable improvement and along with them the profit also has gone up. The gross profit for the year under review at Rs. 4.51 lakhs has advanced by Rs. 1.41 lakhs from Rs. 3.10 lakhs for the previous year, to which level it had modestly receded from Rs. 3.87 lakhs earned two years earlier. Despite this mild decline, it can be fairly stated that the Company has maintained a somewhat steady progress. The net profit at Rs. 1.43 lakhs also stands slightly higher, as compared with Rs. 1.28 lakhs in the previous year. This has been arrived at after raising the provision for depreciation from Rs. 1.27 lakhs to Rs. 1.62 lakhs and that for taxation from Rs. 54,801 to Rs. 1.46 lakhs, including a sum of Rs. 15,000 as provision for wealth tax. No amount has been transferred to the reserves except the usual contribution of Rs. 12,000 to employees' retiring gratuity fund. The dividend has been maintained at the rate of 5 per cent. for the past few years.

The table given hereunder will give some idea of the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1957	1956	1955	1954
Sale proceeds	26.76	19.77	N.A.	N.A.
Closing stock of finished goods..	1.70	5.25	N.A.	N.A.
Raw materials consumed ..	7.35	6.38	N.A.	N.A.
Other expenses	13.63	10.91	1.16*	1.30*
Gross profit	4.51	3.10	3.87	2.89
Depreciation	1.62	1.27	1.20	1.65
Taxation	1.46	0.55	1.18	..

	(5%)	(5%)	(5%)	(5%)
Carry forward	0.12	0.05	0.14	0.01

N.A.—Not available. * Incomplete.

Sale proceeds during the year have increased by Rs. 6.99 lakhs to Rs. 26.76 lakhs. Cost of raw materials consumed has increased from Rs. 6.38 lakhs to Rs. 7.35 lakhs and other expenses from Rs. 10.91 lakhs to Rs. 13.63 lakhs. The fall in the closing stock of finished goods from Rs. 5.25 lakhs to Rs. 1.70 lakhs indicates that the Company's products are having a good demand.

The Directors report that the factory worked satisfactorily during the year under review. Despite dislocations and the fact that the Company had to pay heavily for the raw materials due to the crisis in the Middle East, it continued to maintain the normal flow of supplies to meet the agricultural needs of the country. Sales continued to show an improvement to the extent of the demand from the surrounding districts. The stock position in respect of essential raw materials and important spare parts was also satisfactory. As regards plant and equipment in the factory, the Directors state that a new motor generator set has been erected successfully and the trial runs have been completed. The new cell plant is under completion and further steps will be taken as soon as satisfactory decisions are arrived at in regard to power supply.

The Company was formed for the purpose of manufacturing and dealing in sulphuric and other acids, ammonia, ammonium sulphate and other salts of ammonia and such other chemicals as can be produced with the help of sulphuric acid, ammonia, etc. The Company meets many of the requirements of chemicals of the Government of Mysore. The factory is situated at Belaguli on the Mysore-Arsikere railway in Mysore District.

Private Government Company has a paid-up capital of Rs. 10 lakhs in ordinary shares of Rs. 10 each, reserves and surplus aggregate Rs. 6.82 lakhs. * Including bilities stand at Rs. 18.37 lakhs.

The above stock of a value of Rs. 54.30 lakhs rise in import aggregate Rs. 28.86 lakhs and cases, it is prop t liabilities and provision for of Government h e enough margin. ed appreciable ri corresponding imp paid-up shares are being drain on India's fore Rs. 6.85 *cum-div.* On an began in April 1956 ha works out to 7.87 per cent.

Points From The Chair

Taxation Policy

"ALREADY, in these ten years, in the range and incidence of direct taxation, we have achieved the unenviable distinction of being among the most heavily taxed countries in the world. We are the only country in which there is a direct tax on personal expenditure and where the combined rate of taxes on individual earnings and wealth can exceed 100 per cent. of income. So far as individuals, firms and companies are concerned, nowhere else are people called upon to bear so many different taxes and imposts. Can India, in her present stage of development, afford the pace which is being forced upon her, without gravely imperilling her capacity for the production of goods and services? No one can possibly question the concept of social justice and the compelling necessity of a wider diffusion of well-being throughout the community. But it is axiomatic that wealth has to be produced before it can be distributed. If the incentive to earn, to save and to spend is increasingly to be denied, where is it ultimately going to end up? If the answer is that, whatever happens, there can be no retreat from the Plan, it may well be asked whether the Plan is to be the master or the servant of the economy? In these last few months, there has been a greater responsiveness to informed criticism, and I would earnestly urge the need for a closer understanding between Government and the business community. The so-called vested interests may be conservative and their outlook may sometimes be suspect, but they have learnt a great deal in the last few years and have a real desire to employ their experience and resources for the general good; and they can inject a sense of realism into our planning which is sorely needed."

SIR HOMI MODY,
Central Bank of India Ltd.

Inflation

"While it is agreed that the credit restriction and tight money policy of the Government was necessary to combat inflation and protect the £, it nevertheless brought difficulties to manufacturers such as ourselves. It is hoped that the Chancellor will soon find it possible to ease this policy and reduce the burden of taxation to some extent. It must also be quite apparent to all that this is no time for general increases in wages or reduction of the working week to 40 hours. Every effort is being made by your Board to increase productivity and reduce costs which, in the long run, will benefit shareholders, employees and all connected with our company. The country's economy continues to be beset by so many uncertainties that no reliable forecast of what the future may hold for us is possible. So much will depend on whether inflation is definitely halted or not."

SIR M. GEORGE NAIRN, BT.,
Michael Nairn & Greenwich Ltd., Kirkcaldy

Wool Prices

"At this time a year ago I referred to the quite substantial advance in wool prices which, with occasional setbacks, had been going on since April 1956. This hardening tendency continued until May 1957. Between then and the end of our financial year, there was quite a recession. Although it is always difficult to pass on advancing raw material prices to customers, and then only after a considerable time lag, we derived some benefit from the general course of wool values during the first nine months of our year. This went some way to offset the otherwise narrowing margins of profit obtainable in the face of continued increases in production costs of every kind and severe competition for the business available, largely due, I think, to the generally accepted policy of keeping plants running. Otherwise, two things in particular adversely affected the past year's result. They were, first, the fall in values between the end of the Merino wool buying season and our stocktaking date, and, second, the Suez crisis which involved us in substantial additional charges for transport, power and other items in addition to difficulties and losses arising from delays in the shipment of wool from Australia and New Zealand."

SIR JOHN KEELING,
West Riding Worsted and Woollen Mills Ltd., Bradford

Nationalisation of Steel Industry

"The Socialists have now definitely reaffirmed their intention to renationalise this great basic industry (steel industry). It is very difficult to understand why the steel industry which has made such outstanding progress should be made a political cock-pit for the second time. Surely our record convinces every thinking person that it is not only being managed efficiently, but that our output is increasing adequately to meet the requirements of our home consumers, as well as simultaneously stepping up our exports. We are producing steel at a price which is highly competitive, and the labour in our industry is happily and contentedly employed. We are told that the largest factor in a disappointing year as regards our nationalised coal industry was absenteeism and that, in spite of more mechanisation, production does not improve but still tends to fall. We have never yet had to say that absenteeism in the steel industry has had any adverse effect upon output since, apart from genuine illness, it is completely unknown. It may well be that this is largely due to every man having a real interest in his job and accepting responsibility for preserving the standard of efficiency in the steel industry which has long been acknowledged."

G. H. LATHAM,
The Whitehead Iron and Steel Co., Ltd., Newport, Mon.

COMPANY MEETINGS AND DIVIDENDS

HINDUSTAN LEVER LTD. Annual General Meeting, Bombay, 7th April 1958. Dividend: Re. 1.40 per share, payable on 8th April 1958. Transfer books remain closed from 31st March to 7th April 1958, both days inclusive.

INDUSTRIAL INVESTMENT TRUST LTD. Annual General Meeting, Bombay, 8th April 1958. Dividend: Rs. 5.50 per share. Transfer books remain closed from 24th March to 8th April 1958, both days inclusive.

KOHINOOR MILLS COMPANY, LTD. Annual General Meeting, Bombay, 10th April 1958. Dividend: Rs. 12.00 per share (final), payable on and after 11th April 1958. Transfer books remain closed from 22nd March to 10th April 1958, both days inclusive.

RYAM SUGAR CO., LTD. Annual General Meeting, Calcutta, 10th April 1958. Dividend: Re. 1.50 per share or 15 per cent., free of income-tax. Transfer books remain closed from 29th March to 10th April 1958, both days inclusive.

WALCHANDNAGAR INDUSTRIES LTD. Annual General Meeting, Bombay, 11th April 1958. Dividend: Rs. 21.00 per share, without deduction of income-tax, payable on and from 30th April 1958. Transfer books remain closed from 22nd March to 14th April 1958, both days inclusive.

GODAVARI SUGAR MILLS LTD. Annual General Meeting, Bombay, 14th April 1958. Dividend: Rs. 20.00 per share. Transfer books remain closed from 1st to 14th April 1958, both days inclusive.

BOMBAY DYEING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 17th April 1958. Dividend: Re. 1.75 per share (final), payable on or after 28th April 1958. Transfer books remain closed from 25th March to 17th April 1958, both days inclusive.

STANDARD MILLS CO., LTD. Annual General Meeting, Bombay, 28th April 1958. Dividend: Rs. 22.50 per share (includes bonus), payable from 12th May to 31st July 1958. Transfer books will remain closed from 7th to 28th April 1958, both days inclusive.

DUNLOP RUBBER CO. (INDIA) LTD. Annual General Meeting, Calcutta, 18th April 1958. Dividend: Re. 1.62 (16¼ per cent.) per share. Transfer books will remain closed from 7th to 27th April 1958, both days inclusive.

JAY SHREE TEXTILES LTD. Annual General Meeting, Rishra, Dist. Hooghly, West Bengal, 22nd April 1958. Dividend: Re. 0.50 per share. Transfer books will remain closed from 9th to 22nd April 1958, both days inclusive.

SWAN MILLS LTD. Annual General Meeting, Bombay, 23rd April 1958. Dividend: Rs. 25.00 per share, payable on and after 24th April 1958. Transfer books remain closed from 28th March to 23rd April 1958, both days inclusive.

GOLD MOHUR MILLS LTD. Annual General Meeting, Bombay, 24th April 1958. Dividend: Rs. 15.00 per share, payable on and after 25th April 1958. Transfer books remain closed from 28th March to 24th April 1958, both days inclusive.

FINLAY MILLS LTD. Annual General Meeting, Bombay, 25th April 1958. Dividend: Rs. 20.00 per share, payable on and after 26th April 1958. Transfer books remain closed from 28th March to 25th April 1958, both days inclusive.

MYSORE CHEMICALS AND FERTILISERS LTD. Annual General Meeting, Mysore, 25th April 1958. Dividend: Re. 0.50 per share. Transfer books will remain closed from 10th to 25th April 1958, both days inclusive.

MAFATLAL FINE SPG. AND MFG. CO., LTD. Annual General Meeting, Bombay, 28th April 1958. Dividend: Rs. 15.00 per share, payable from 5th May 1958 to 31st July 1958. Transfer books will remain closed from 11th April to 2nd May 1958, both days inclusive.

INDIAN ALUMINIUM COMPANY, LTD. Annual General Meeting, Calcutta, 28th April 1958. Dividend: Re. 0.60 per share. Transfer books remain closed from 5th to 28th April 1958, both days inclusive.

INDIA PAPER PULP CO., LTD. Interim dividend of Re. 0.50 (5 per cent.) per share, for the year ended 31st March 1958. Transfer books will remain closed from 8th to 17th April 1958, both days inclusive.

BINNY AND CO. (MADRAS) LTD. Final dividend of Rs. 6.00 per share, (making a total of Rs. 10.00 for the year) for the year ended 31st December 1957. Transfer books will remain closed from 11th to 25th April 1958, both days inclusive.

BUCKINGHAM AND CARNATIC CO., LTD. Final dividend of Rs. 6.00 per share (making a total of Rs. 10.00 for the year), for the year ended 31st December 1957. Transfer books remain closed from 3rd to 25th April 1958, both days inclusive.

BANGALORE WOOLLEN, COTTON AND SILK MILLS LTD. Final dividend of Rs. 6.00 per share (making a total of Rs. 10.00 for the year), for the year ended 31st December 1957.

VAIKUNDAM (TRAVANCORE) RUBBER CO., LTD. Final dividend of Re. 1.50 (15 per cent.) per share, on the increased capital of Rs. 8,80,010, for the year ended 31st December 1957. Transfer books will remain closed from 8th to 12th April 1958, both days inclusive.

TRAVANCORE RAYONS LTD. Dividend of Re. 1.00 per share or 10 per cent. for the year ended 31st December 1957.

JAWAHAR MILLS LTD. Dividend of Re. 0.75 (15 per cent.) per share, for the year ended 31st December 1957. Transfer books will remain closed from 17th to 30th April 1958, both days inclusive.

GOKUL RUBBER AND TEA PLANTATIONS LTD. Dividend of 6 per cent. for the year ended 31st December 1957. Transfer books remain closed from 5th to 15th April 1958, both days inclusive.

RESULTS OF BALRAMPUR SUGAR BETTER

INDUSTRIAL INVESTMENT TRUST RAISES DIVIDEND

Balrampur Sugar Co., Ltd.

THE directors of the above Company (Chairman: Mr. P. L. Saraogi, Kanpur, U.P.) submit the audited accounts of the Company for the year ended 30th June 1957.

The results for the period, after providing for all charges including provisions for taxation and taking into account earlier provisions no longer required, show a profit of Rs. 4,76,073 (loss of Rs. 69,251 after providing Rs. 70,000 for reserve for stock realisation and also depreciation of Rs. 1,35,000). From this amount has been deducted the carry forward loss from the previous year of Rs. 48,371 (credit of Rs. 20,880) leaving a balance of Rs. 4,27,702 (debit of Rs. 48,371). From the above balance has been deducted depreciation amounting to Rs. 1,30,000 and transfer to rehabilitation reserve of Rs. 1,70,000 (*nil*) leaving to credit of profit and loss account Rs. 1,27,702 (debit of Rs. 48,371). Out of this amount the directors recommend payment of a dividend of 25 nP (*nil*) per share free of income-tax, for the year ended 30th June 1957 Rs. 70,000 (*nil*) and carry forward to next account Rs. 57,702 (debit of Rs. 48,371).

The directors report that both the factories during the season 1956-57 had a record crop and the cane crushed was the highest recorded so far. Balrampur factory crushed 29,98,215 (18,65,905) lakh mds. with an extraction of 8.93 (9.57) per cent., while Tulsipur factory crushed 39,66,299 (22,00,961) lakh mds. with an extraction of 9.19 (9.97) per cent. The extraction on the low side can be partly attributed to the early start and late closure of the factories and the lower average sugar content.

Balrampur factory commenced crushing on 12th November, 1956 and finished on 24th April, 1957. Tulsipur factory commenced crushing on 12th November, 1956 and finished on 22nd June, 1957.

The cane price remained at the same rate of Re. 1-7-0 at the factory gate and Re. 1-5-0 at outstation, and these favourable prices and good crops due to early and timely rainfall resulted in availability of more cane. Sales and despatches were satisfactory. About 7,000 tons of sugar were sold for export during the current year. The sugar produced in India during the period was the highest recorded at 20.29 lakh tons.

The Government of India increased excise duty on sugar from Rs. 5.62 per cwt. to Rs. 11.25 per cwt. with effect from 16th May, 1957. Further an additional excise duty of Rs. 3.31 per cwt. in lieu of Central and State sales tax has been imposed with effect from 14th December, 1957.

While the efficiency of both factory operations continued at a high level, the directors feel that both the factories require extensions and reconstructions of some of their machines in order to increase their efficiency and show better result. The matter is still under investigation and proper steps shall be taken after full report is received.

Due to severe drought the directors regret to report that the crop expected to be crushed during the next season in Balrampur shall be about 26 lakh maunds and in Tulsipur about 30 lakh maunds.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Industrial Investment Trust Ltd.

The directors of the above Company (Secretaries and Treasurers: Messrs. Premchand Roychand and Sons, Bombay) present the audited accounts of the Company for the year ended 31st December 1957.

The net revenue for the year amounted to Rs. 5,92,898 (Rs. 5,99,628) to which is added the amount transferred from capital reserve (net loss on sale or redemption of investments) Rs. 15,922 (*nil*), tax assessed on "capital gains" for the year ended 31st December 1956, transferred from capital reserve Rs. 4,912 (*nil*), refund of income-tax adjusted during the year in respect of assessment years 1949-50 and 1950-51 Rs. 23,116 (U.K. income-tax Rs. 2,621) and the amount brought forward from the previous year of Rs. 3,23,874 (Rs. 7,33,137) making a total of Rs. 9,60,722 (Rs. 13,35,386). From this amount the directors have set aside towards tax assessed for the assessment years 1954-55 to 1957-58 a sum of Rs. 2,30,123 (*nil*) and wealth tax assessed for 1957-58 Rs. 5,916 (*nil*) leaving a balance to be dealt with of Rs. 7,24,683 (Rs. 13,35,386). The directors recommend the payment of a dividend at the rate of 5½ per cent. per annum, i.e., Rs. 5.50 (Rs. 5.00) per share, free of income-tax, which will absorb Rs. 5,50,000 (Rs. 5,00,000) leaving a balance to be carried forward of Rs. 1,74,683 (Rs. 3,23,875 after paying Rs. 4,50,000 as dividend for the year ended 31st December 1955 at the rate of Rs. 4.50 per share, free of income-tax and after transferring Rs. 11,511 to capital reserve and Rs. 50,000 to investment reserve) subject to provision for taxation for the year ended 31st December, 1957.

Accounts in brief are as under:—

	Rs. 1,30,40,194		Rs. 1,30,40,194

†Subject to taxation for the year ended 31st December 1957.

Ryam Sugar Co., Ltd.

The directors of the above Company (Registered Office, Calcutta) submit the audited accounts of the Company for the year ended 30th June 1957.

The profit and loss account reveals a net profit of Rs. 1,64,412 (Rs. 1,99,788) after providing Rs. 65,141 (Rs. 96,266) for depreciation and Rs. 2,44,000 (Rs. 2,07,000) for taxation. An amount of Rs. 2,559 has been written back from the provisions made during the previous year for administration charges under the Employees Provident Funds Act, 1952. There was also a carry forward of Rs. 13,204 (Rs. 5,264) from the previous year's profit and loss account. Including these two amounts, the credit balance in the profit and loss account is Rs. 1,80,175 (Rs. 3,76,204 after adjustment) and the directors recommend that this amount be appropriated as under:—

In payment of dividend on preference shares at 6 per cent. (free of income-tax) for the year ended 30th June 1957 Rs. 48,000 (Rs. 48,000), in payment of dividend on the ordinary shares at 15 (17½) per cent. (free of income-tax) for the year ended 30th June 1957 Rs. 1,20,000 (Rs. 1,40,000) and to transfer to development reserve Rs. 10,000 (Rs. 1,25,000 to general reserve and Rs. 50,000 to rehabilitation reserve) leaving a balance to be carried forward to the next account of Rs. 2,175 (Rs. 13,204).

The factory commenced crushing operations on 22nd November 1956 and closed on 17th June 1957. The cane crushed amounted to 32,32,812 (25,77,959) mds. which was the highest crush recorded in the past 16 years. The factory had to run a longer season than was desirable, as cane supply from the area allotted to the factory, which the factory was obliged to take up, continued up to the closing date mentioned. Recovery during the latter part of the season went down as low as 3.23 per cent. but the directors were still able to obtain an average of 9.14 (10.44) per cent. As a compensation for the loss suffered by us through low recovery, during the prolonged crushing season, the Government of Bihar has agreed to pay a cane cess rebate of Rs. 78,660. The amount of compensation is not adequate in the directors' opinion and necessary representations have been made to the said Government.

Cane prices continued at Re. 1-7-0 per md. at the factory gate and Re. 1-5-0 per md. at outstations. These price levels kept up the incentive to growers referred to in the directors' last report and cane cultivation in the area had increased considerably over the previous year.

The Company sold 34,494 bags of sugar for export through Indian Sugar Mills' Association whom the Government of India had entrusted with export of sugar in accordance with its export programme.

It is considered that it will be in the interests of the Company and also cane growers of the area to expand the factory. With a higher crushing capacity, the factory will be able to take up the cane from the area allotted to it in a shorter time and can thereby avoid loss to the growers through driage and loss to the factory through low recovery. There have also been requests from the growers of the area for expanding the factory so that they may increase cultivation and be able to dispose of their cane in time. The Company considers that expansion of the factory will be to its advantage under the present conditions, but inadequacy of transport facilities is being a great impediment to any scheme of expansion. The nearest railway station, Tarsarai, is about 7½ miles from the factory and is now linked with a narrow-gauge tram line. This line is not capable of taking up any additional traffic load. Expansion of the factory will mean considerable increase in the outward and in-ward traffic and unless the Company has sufficient traffic facilities to cope with the additional traffic load no scheme of expansion can be taken up. The directors have requested the North Eastern Railway to construct a metre-gauge railway line from Tarsarai to the factory and to provide with a railway siding. This request which has also been recommended by the State Government of Bihar, is under consideration of the railway administration. If the railways provide the Company with the facilities requested for, it will be able to implement schemes of expansion and thereby be able to increase the output of the factory.

Accounts in brief are as under:—

Champarun Sugar Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Begg, Sutherland & Co. Private Ltd., Kanpur, U.P.) submit the audited accounts of the Company for the year ended 30th June 1957.

The results for the year, after making the usual provisions for taxation, depreciation and adjustments, show a loss of Rs. 3,72,666 (profit of Rs. 5,50,484) from which has been deducted the debit balance brought forward from the previous year of Rs. 29,503 (Rs. 24,019) leaving at debit of Rs. 3,43,163 (credit of Rs. 5,74,503 from which was transferred Rs. 1,10,000 to contingency reserve; Rs. 2,55,000 to rehabilitation reserve and Rs. 1,80,000 was paid as dividend at the rate of Re. 1.00 per share, leaving to be carried forward Rs. 29,503).

The adverse trading results during the year have been almost entirely due to the very poor quality of sugarcane supplied to the factories. The quality of cane crushed at both factories is the worst recorded in the past 20 years. The relative figures for crush and extraction are given in the following table:

		Barrah	*Champatia*
Cane crushed (Mds.)—			
1955-56		35,52,767	20,69,019
1956-57		35,32,463	27,60,361
Yield of sugar % cane—			
1955-56	per cent.	9.54	9.89
1956-57		8.57	9.31
Starting date		10th Nov., 1956	20th Nov., 1956
Finishing date		12th May, 1957	17th April, 1957

While the directors continue to make every effort to develop and improve the supplies of sugarcane to the factories, the abnormal climatic conditions together with an adverse varietal position obtaining in Champaran District in 1956 produced a very poor quality of cane throughout the district. The industry has referred the matter of poor cane quality to the Government of Bihar on many occasions and has recently reinforced its arguments by pointing to the results of the year's working. It is to be hoped that Government, both of the State and at the Centre, will renew their efforts to improve cane quality and so avoid such disastrous trading conditions.

The cane price remained at the previous rate of Re. 1-7-0 per maund at the factory gate and Re. 1-5-0 per maund at outstations and these prices had to be paid irrespective of the quality of the cane supplied. While it is understood that increasing attention is being given in Government circles to the possibility of relating cane prices to quality, the results of the Company for the year under review afford a striking example of the consequences of paying for cane on the basis of its weight only.

During the year the Government increased the excise duty on sugar by 100 per cent. to increase the price of sugar to the consumer without in any way increasing the profits to the manufacturer. Indeed for some period after the increase in excise duty a part of it had to be borne by the Company as the market would not absorb the extra price. The stocks of sugar remaining as at 30th of June 1957 have been valued taking into consideration the new excise duty and accordingly it is not necessary to make provisions for a fall in the value of stocks.

The efficiency of both factories continued at a high level despite the poor quality of raw material crushed. The sugar produced was in good demand in the sugar market.

For the current season the prospects appear somewhat brighter, in that the very dry conditions have assisted in improving the quality of the cane which may increase its sugar yield.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	18,00,000	Block ...	25,50,7[illegible]
Reserves ...	34,56,103	Stock-in-trade	82,22,[illegible]

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fifty-first Annual General Meeting of the above Company will be held at the Registered Office of the Company, No. 9, Wallace Street, Fort, Bombay, on Wednesday the 23rd day of April 1958, at 4-30 p.m. (S.T.), for the purpose of transacting the following business:—

(1) To receive and adopt the Directors' Report and the audited statement of accounts for the year ended 31st December 1957.

(2) To sanction the declaration of a dividend on the Preference Shares.

(3) To elect a Director in place of Mr. C. M. Khatau, who retires by rotation, but being eligible offers himself for re-election.

(4) To elect a Director in place of Mr. M. H. Phillips, who retires by rotation, but being eligible offers himself for re-election.

(5) To appoint Auditors for the current year and to fix their remuneration.

(6) To consider and if thought fit to pass the following resolution as a Special Resolution in respect of which a special notice as required by Section 261 of the Companies Act, 1956, has been received by the Company.

"RESOLVED that Mr. Jaisinh Vithaldas, who is a member and a Director of Messrs. Vissanji Sons & Co. (Private) Ltd., who are the owners of the firm of Mathuradas Vissanji & Co., which holds an office or place of profit under the Company as its Cotton Buying Agents, be and is hereby appointed a Director of the Company."

To consider and if thought fit to pass the following Resolutions as Special Resolutions:—

(7) That pursuant to Section 369 of the Companies Act, 1956, The Bombay Company (Private) Limited, the Managing Agents of the Company, be and they are hereby authorised to retain all commission or other remuneration earned or to be earned by them at any time as representatives of Messrs. Sociedad Mercantil (Exportacion) S. A. Lima (Peru) on any sales to the Company by the said Messrs. Sociedad Mercantil (Exportacion) S. A. and which are required to be purchased by the Company in the normal course of business from Messrs. Sociedad Mercantil (Exportacion) S. A. and provided that the prices charged to the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

(8) That pursuant to Section 359 of the Companies Act, 1956, The Bombay Company (Private) Limited, the Managing Agents of the Company, be and they are hereby authorised to retain all commission or other remuneration earned or to be earned by them at any time as representatives of Messrs. H. Kupper & Co., Alexandria (United Arab Republic), on any sales to the Company by the said Messrs. H. Kupper & Co. and which are required to be purchased by the Company in the normal course of business from Messrs. H. Kupper & Co. provided that the prices charged to the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

(9) That the Articles of Association shall be altered in manner following:—

The following Article shall be substituted for Article 94, namely:—

94. Each Director shall be paid out of the funds of the Company by way of remuneration for his services a sum not exceeding Rs. 100 for each Meeting of the Board attended by him. The Company may from time to time by Ordinary Resolution, increase the remuneration to be paid to the Directors."

To consider, and if thought fit, to pass the following Resolution as an Ordinary Resolution:—

(10) That the Company hereby approves of the appointment and consents to the continuation of the appointment of the following firms as Selling Agents of the Company's products in the respective areas mentioned against them for a period of five years from 1st January 1958 with a proviso that the arrangement may be terminated by six months' notice by the Board or by the Selling Agents.

THE VISHNU COTTON MILL LIMITED,
For THE BOMBAY COMPANY (PRIVATE) LIMITED,
E. S. VERNON-JONES,
Managing Director,
Managing Agents.

9, WALLACE STREET,
BOMBAY, *25th March* 1958.

Note.—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member of the Company.

Warrants for the Preference dividend, if declared, will be posted to shareholders on 19th May 1958 and will be payable on and from that date.

The Transfer Books of the Company will be closed from 1st May 1958 to 15th May 1958 both days inclusive.

Shareholders are requested to notify to the Company any change of address, failing which their dividend warrants will be posted to the addresses as registered with the Company.

Explanatory Statement as Required by Section 173(2) of the Companies Act, 1956.

(1) Mr. E. S. Vernon-Jones is interested in the Special Resolutions Nos. 7 and 8 in that he is a Managing Director and shareholder of The Bombay Company (Private) Limited, the Managing Agents of the Company.

(2) The Bombay Company (Private) Limited, the Managing Agents of the Company, are interested in Special Resolutions Nos. 7 and 8.

Special Resolution under item 6

Mr. Jaisinh Vithaldas has been a Director of your Company and in view of his long experience of the textile industry, the Board consider it most desirable that the Company should once again be in a position to avail itself of his invaluable services.

Mr. Jaisinh Vithaldas is a Director and member of Vissanji Sons & Co. (Private) Ltd. which company owns the firm of Messrs. Mathuradas Vissanji & Co. who are the Company's Cotton Buying Agents. By a Special Resolution passed at an Extraordinary General Meeting of the Company held on 13th April 1956, the Company accorded its consent to the firm of Mathuradas Vissanji holding the office or place of profit as Cotton Buying Agents under the Company within the meaning of Section 314 of the Companies Act, 1956.

The appointment of Mr. Jaisinh Vithaldas requires a Special Resolution of the members of the Company.

Special Resolutions Items 7 and 8.

Messrs. Sociedad Mercantil (Exportacion) S. A. Lima (Peru) and Messrs. H. Kupper & Co. Alexandria (United Arab Republic), from whom the Company purchases respectively Peruvian and Egyptian cotton, are both represented in India by The Bombay Company, (Private) Limited, Managing Agents of the Company, who were authorised to retain commission earned on such purchases by special resolutions passed on 30th June 1956 in accordance with the provisions of Section 359 of the Companies Act, 1956. The present resolutions therefore only seek renewal of the authority previously given.

Special Resolution Item 9.

The Directors are prepared as a temporary measure, to act for reduced remuneration. The Company is advised that this proposal should be effected by the substitution of a new Article for Article 94 which alteration requires a special resolution of the members. In terms of the proposed new Article the remuneration of the Directors may be fixed at a lesser rate than that laid down.

Ordinary Resolution Item 10.

Your confirmation in accordance with Section 294 of the Companies Act, 1956, is sought for these appointments of Selling Agents in the territories mentioned in the resolution. Copies of the respective Agreements (for the sake of identity initialled by the Chairman) may be inspected at the Registered Office of the Company during business hours.

By Order of the Board,

THE VISHNU COTTON MILL LIMITED,
For THE BOMBAY COMPANY (PRIVATE) LIMITED,
E. S. VERNON-JONES,
Managing Director,
Managing Agents.

9, WALLACE STREET,
BOMBAY, *25th March* 1958.

THE LAKHSHMI COTTON MANUFACTURING COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Sixty-third Annual General Meeting of the above Company will be held at the Registered Office of the Company, No. 9, Wallace Street, Fort, Bombay, on Thursday the 24th day of April 1958, at 4-30 p.m. (S.T.), for the purpose of transacting the following business:—

(1) To receive and adopt the Directors' Report and the audited statement of accounts for the year ended 31st December 1957.

(2) To sanction the declaration of a Dividend.

(3) To elect a Director in the place of Sir Vithal N. Chandavarkar, who retires by rotation and is eligible for re-election and to consider and, if thought fit, to pass the following resolution of which a special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company.

"RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Sir Vithal N. Chandavarkar who has attained the age of 70 years and who retires by rotation be and is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

(4) To appoint a Director in place of Mr. Pratapsinh Mathuradas, who retires by rotation, but who is eligible for re-election, and to consider and, if thought fit, to pass the following resolution as a Special Resolution.

"RESOLVED that Mr. Pratapsinh Mathuradas who is a member and a Director of Messrs. Vissanji Khimji & Co. Private Ltd. which holds an office or place of profit under the Company as its Cotton Buying Agents, be and is hereby re-elected a Director of the Company."

(5) To appoint Auditors for the current year and to fix their remuneration.

Special Business:

To consider, and if thought fit to pass the following Resolution as an Ordinary Resolution:—

(6) That the Company hereby approves of the appointment and consents to the continuation of the appointment of the following firms as Selling Agents of the Company's products in the respective areas mentioned against them for a period of five years from 1st January 1958 with a proviso that the arrangements may be terminated by six months' notice by the Board or by the Selling Agents.

Name of Agents	*Area or Place*
Messrs. Jwalaprasad Radhakrishna.	Markets of Uttar Pradesh State
Messrs. Dwarkaprasad Chiranjee Lal.	Markets of Bihar State
Messrs. Sohanlal Mehra & Brothers.	Markets of Jammu & Kashmir
Messrs. Jagdishprasad Dulichand.	Markets of Assam State
Shri Bholanath Sen as sales representative.	Markets of West Bengal and Orissa

To consider, and if thought fit to pass the following Resolution as a Special Resolution:—

(7) That the Articles of Association shall be altered in manner following:

The following Article shall be substituted for Article 86, namely:—

"86. Every Director shall at the time of his appointment and thenceforth during his continuance in office hold in his own name shares in the Company of the nominal value of Rs. 5,000 at the least. Each Director shall be paid out of the funds of the Company by way of remuneration for his services a sum not exceeding Rs. 100 for each Meeting of the Board attended by him. The Company may from time to time in General Meeting, by ordinary resolution, increase the remuneration to be paid to the Directors."

By Order of the Board.

For THE LAKHSHMI COTTON MANUFACTURING COMPANY LIMITED,
E. S. VERNON-JONES,
Chairman.

Note.—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member of the Company.

Warrants for the Dividends, if declared, will be posted to shareholders on 29th April 1958 and will be payable on and from that date.

The Transfer Books of the Company will be closed from 11th April 1958 to 25th April 1958 both days inclusive.

Shareholders are requested to notify to the Company any change of address, failing which their dividend warrants will be posted to the addresses as registered with the Company.

Explanatory Statement as Required by Section 173(2) of the Companies Act, 1956.

Resolution under item 3.

Sir Vithal N. Chandavarkar, a Director of the Company, who retires by rotation and is eligible for re-election, has attained the age of 70 years and he cannot, therefore, be appointed a Director of the Company except by a Resolution in respect of which a special notice has been given in accordance with sections 190 and 281 of the Companies Act, 1956. The Company has received such a special notice from some members notifying their intention to move the resolution as set out under item 3. It is in the interests of the Company that the experience and valuable services of Sir Vithal N. Chandavarkar should continue to be made available and accordingly the resolution is commended for acceptance.

Special Resolution under Item 4

Mr. Pratapsinh Mathuradas is a Director and member of Vissanji Khimji & Co. (Private) Limited who are the Company's Cotton Buying Agents. By a Special Resolution passed at an Extraordinary General Meeting of the Company held on 13th April 1956 the Company accorded its consent to Vissanji Khimji & Company (Private) Limited holding the office or place of profit as Cotton Buying Agents under the Company within the meaning of section 314 of the Companies Act, 1956. It is most desirable that the Company continues to receive the benefit of Mr. Pratapsinh Mathuradas' experience acquired over many years, of the textile industry in this country.

Ordinary Resolution No. 6.

Your confirmation in accordance with section 294 of the Companies Act, 1956, is sought for these appointments of Selling Agents in the territories mentioned in the resolution. Copies of the respective Agreements (for the sake of identity initialled by the Chairman) may be inspected at the Registered Office of the Company during business hours.

Special Resolution Item 7.

The Directors are prepared, as a temporary measure, to act for reduced remuneration. The Company is advised that this proposal should be effected by the substitution of a new Article for Article 86 which alteration requires a special resolution of the members. In terms of the proposed new Article the remuneration of the Directors may be fixed at a lesser rate than that laid down.

By Order of the Board,

For THE LAKHSHMI COTTON MANUFACTURING COMPANY LIMITED,

N. C. JAVERI,
Partner,
Managing Agents.

BOMBAY, 31st *March*, 1958.

GILT-EDGED FIRM

(From Our Own Correspondent)

BOMBAY, 1st *April*

The short-term money market ruled fairly steady during the week under review. With the financial year-end requirements having been satisfied, the demand for funds was confined only to trade and crop movement. The credit requirements for these purposes nevertheless exceeded the available supplies in the market and interest rates were, therefore, well held at the previous week's levels. Inter-bank call money continued to be bid at 3 per cent. among the Exchange banks and big Indian banks and at 3¼ per cent. among the smaller banks. House money at call was offered 4¼ to 4⅜ per cent. and short-term deposits at 4⅛ to 4¼ per cent. for one to six months.

An expansion of Rs. 7.31 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 28th March 1958. Notes held in the Banking Department are lower by Rs. 6.76 crores and the fractional change in total notes is covered by a corresponding increase in rupee coin. There is no change in rupee securities or foreign securities, but balances held abroad (in the Banking Department) have suffered a fall of Rs. 7.19 crores. There has been a decline of Rs. 1.37 crores in deposits of the Central Government and of Rs. 22.73 crores in deposits of other Governments. Deposits of banks show no notable variation. Loans and advances to Governments have fallen by Rs. 2.97 crores, while other loans and advances have gone up by Rs. 3.84 crores, of which advances to Scheduled banks against usance bills account for Rs. 3.05 crores.

The Scheduled banks statement for the week ended 21st March 1958 discloses a rise of Rs. 2.74 crores in demand deposits and of Rs. 92 lakhs in time deposits. Borrowings from the Reserve Bank have also gone up by Rs. 1.49 crores. There has been an increase of Rs. 8.40 crores in advances and of Rs. 3.40 crores in bills purchased and discounted. Cash balances and money at call show no notable variations.

The Gilt-edged market ruled firm during the week under review. There was good demand for short and long-dated issues, which together with the scarcity of stocks and the further increase in the selling prices of some of the securities by the Reserve Bank lifted up prices. The Reserve Bank put up its price of 3½ per cent. 1964 by a further 10 nP to Rs. 98.10. 3¾ per cent. 1967 by 5 nP to Rs. 99.75 and 4 per cent. 1972 by 5 nP to Rs. 100.60. In the State loans section also, short-dated issues were in good demand, while long-dateds were steady but dull.

3 per cent. 1986 Conversion Loan was featureless and attracted sellers at Rs. 71. 3 per cent. 1970-75 had buyers 10 nP higher at Rs. 86.30. 3 per cent. 1966-68 attracted attention and gained 10 nP to Rs. 92.45. 3 per cent. 1964 was marked up by 10 nP to Rs. 94.50 and 3 per cent. 1963-65 by 15 nP to Rs. 94.55. 3½ per cent. 1962 had sellers at Rs. 97.90 and 3½ per cent. 1961 at Rs. 99.65. 3½ per cent. 1965 was on offer at Rs. 97.70 and 3½ per cent 1967 at Rs. 97.65. 3¾ per cent. 1974 had sellers at Rs. 98.20.

HIDES DECLINE

(From Our Own Correspondent)

MADRAS, 31*st March*

Trading in kips with the U.K. has been negligible, as importers have kept out of the market. It is reported that business will be resumed, if prices decline by 8 to 10 per cent. on January levels. E. I. tanners will be hard hit, as their inventories cost them more. Arrivals of tanned hides and calves are small, clearance fair sized, and prices have declined by one anna per lb. further.

There has been no change in the tanned skins market and shipment business in this section also has been poor.

In the March London auctions, tanned sheep skins good qualities maintained January levels at the close, though, on the opening, prices were weak. Other sorts declined 6*d.* to 1*s.* per lb. and old parcels 1*s.* to 2*s.* less on January rates were sold.

LINSEED RISES

(Messrs. A. Bradley and Co.)

CALCUTTA, 31*st March*

Firm conditions continued to prevail in the linseed market during the week under review. Although there was no further rise, price levels were well maintained. Shortage of supplies was the main feature again, and there were virtually no offers of new crop seeds from upcountry centres. The price of oil advanced slightly, more as a result of scarce supplies than increased demand. Enquiries from shippers were negligible. Despite an increase in U.K. prices to £110, fresh business was unworkable, except from Bombay where cheap charter freight was reported to be available.

The latest available quotations are: Ready Rs. 23-6 and April-May Rs. 23-4 per maund.

HIDES WELL MAINTAINED

(From Our Own Correspondent)

KANPUR, 31*st March*

During the week under review, the hides and skins market was firm. In relation to the fresh supplies, demand was quite strong and the accumulated stocks were cleared straightaway. The chief purchasers were the local tanners led by Messrs. Cooper Allens. The Madras dealers and the country tanners were keen buyers of the lighter variety of cow as well as goat and sheep.

The latest available quotations are: Wet salted cow 1st grade Rs. 380, 2nd grade Rs. 340, and 3rd grade Rs. 210 per score; wet salted buff 1st grade Rs. 210 per score and grade 1 lb. 12 ozs. per rupee; 1 lb. 6 ozs. and 2nd grade 1 lb. 12 ozs. per rupee; goat 1st grade Rs. 310 and 2nd grade Rs. 285 per 100 pieces; sheep 1st grade Rs. 335 and 2nd grade Rs. 280 per 100 pieces.

SILVER MOVES UP

(From Our Own Correspondent)

BOMBAY, 1*st April*

The imposition of heavy margins on daily outstanding purchases of over 40 bars of silver and *on budla charges above* Re. 1 in favour of bulls did not have any adverse effect on prices during the week under review. *On the contrary*, silver made a further small headway but at higher levels, there was a hesitancy. The prospect of having to pay a margin of Rs. 500 per bar on all outstanding purchases in the current settlement if the price crossed Rs. 196, that is, Rs. 7 above the starting rate, kept the forward rate well within this limit. The *budla* charges in favour of buyers in silver at one time touched Re. 1 early in the week, but subsequently narrowed down to As. 8 to As. 9, in view of the deterrent penalties. The total amount of margins paid by the "bulls" up to yesterday on their outstanding purchases in silver under the amended by-laws enforced last week is said to be to the tune of Rs. 9.40 lakhs.

After an initial spell of steadiness, gold ruled quiet with a minor setback in prices due to a contraction in demand in the ready section. Reports of inflow of smuggled metal also damped sentiment.

Silver for forward delivery (April settlement) moved up from Rs. 195-4 to Rs. 195-14 before reacting to Rs. 195 on Friday last. There was, however, a revival to Rs. 196 yesterday before giving way to Rs. 195-12 at the close of business today. The May settlement came up to Rs. 195-7, from last week's closing of Rs. 194-9, but closed at Rs. 195-3.

Ready silver finished at Rs. 196-3, as against Rs. 195-8 a week ago. The floating stocks of silver are estimated at 500 bars. The daily average arrivals were of the order of 25 bars, including unrefined metals amounting to 15 bars, while the offtake was 12 bars per day on an average.

Forward gold (April settlement), after moving up from Rs. 111-3 to Rs. 111-11, gave way to Rs. 111-2 at the close today. The May settlement closed unchanged over the week at Rs. 111-8, the highest level touched during the week being Rs. 112.

Ready gold was marked up from Rs. 110-15 to Rs. 111-3. The floating stocks of gold are reported to be 20,000 tolas. The daily average arrivals were 4,500 tolas, while the offtake was lower at 3,000 tolas per day.

In New York, silver was unchanged at 88⅝c. In London also, silver prices were maintained at 76½d. for spot and at 76*d.* for forward. Gold, on the other hand, gained from 249*s.* 3*d.* to 249*s.* 4*d.*

The following comparative table shows at a glance the trend of the market during the week under review:

	1-4-58	Highest	Lowest	26-3-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

STRONG GENERAL DEMAND FOR TEA DUSTS

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

COCHIN, 27*th March*

A total quantity of 525,000 lbs. was offered in sale 'G' which was held on Tuesday, 25th March 1958. There was a strong general demand at dearer rates. All descriptions advanced in price irregularly 5 nP to 10 nP.

London Market—Sale of 24th March 1958.—Quality improving prices for better Assams and Doaars were again higher. Plain liquoring and stalky teas irregular and somewhat easier.

Sale of 25*th March* 1958.—Irregular, though generally firm to dearer, except for poorest sorts.

Colombo Market—Sale of 24*th March* 1958.—Good demand. Highgrowns irregularly lower, following quality. Good mediums firm low. Mediums dearer. Low-grown declined 5c.

Sale of 25*th March* 1958.—Active and dearer, except rubbish. Export duty raised 5c. Rebate on duty up to maximum of 50c. Teas under Re. 1.50 announced last night.

Calcutta Market—Export.—More general demand at irregularly easier rates, except for good liquoring teas which were steady. C.T.Cs. firm, but poorer kinds unwanted.

Internal.—Good general demand which improved as sale progressed. Orthodox grades from all districts with clean black appearance were frequently up to 6 nP dearer. Poorer sorts weak feature. C.T.C. not so well supported. Medium C.T.C. irregularly easier.

Export Quota.—There is very little activity in the export quota market, particularly because the books of the Joint Controller have been closed from 20th March until 1st April 1958. The quotation is 3 nP nominal.

Forthcoming Auctions.—Dust sale 'H' will be held on Tuesday, 8th April.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:—

"*Sale* 8.—1,450,000 lbs. Good, but irregular demand. Best quality 25 nP to 50 nP easier. Good medium strong and dearer. Medium sorts barely steady. Low medium brokens easier, but low medium fannings with colour dearer."

COTTON FUTURES EASY

(From Our Own Correspondent)

BOMBAY, 2*nd April*

There were only three trading days for the cotton market during the week, since the market remained closed on 28th and 29th March, as well as today. The earlier part of this brief period witnessed steady conditions which, however, gave way to an easy trend towards the close. The initial steadiness was due to strong rumours of an export quota for ¾" cotton. But as the expectation failed to materialise, the market turned easy. The delay caused disappointment among operators and those who had built up long positions in anticipation of a quota were inclined to liquidate. There was also a considerable volume of profit-taking sales prompted by the consideration that, until a clearer picture of the textile situation emerged, cotton prices would be subdued. Another factor which adversely affected sentiment was the failure of mill demand to revive to the extent anticipated. Some mills were said to be still burdened with heavy stocks of unsold yarn and cloth which prevented them from buying large quantities of cotton. All these factors let lose a wave of selling and prices suffered a setback.

I.C.C. Moglai Jarilla (May 1958) opened the week at Rs. 680, fractionally higher than the previous close and after improving to Rs. 682.25, declined to Rs. 673.75 yesterday. The net loss over the week was Rs. 8. The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	1-4-58	*High*	*Low*	26-3-58
I.C.C. Moglai Jarilla (May 1958) ...	673.75	682.25	671.75	681.75

In the spot section, however, values of most varieties were maintained. Good demand was noted for quality cotton like Laxmi, Jaydhar, and Khandesh. Among exportable styles, Oomra *Deshi* and Bengals met with large enquiries from the U.K. and Japan. C.P. and Berar *Deshi* also attracted attention. The total quantity passed for shipment till 27th March out of the recent quota for 50,000 bales of Bengals is about 4,269 bales. The shippers are optimistic about exhausting the entire quota by the end of next month. The chances of selling the 50,000 bales quota for 23/32" cotton, announced a week ago, are also considered to be quite bright.

In the foreign section, demand was noted for Sudan cotton. Sizable business was concluded for May-June shipment subject to the availability of import licence. There were renewed interest in Egyptian cotton. Egypt is reported to have agreed to extend its newly instituted export account system to its cotton sales to India and allow a price discount of 21 per cent.

It had hitherto been known that Egypt was willing to give a discount of 12½ per cent. on sales of its cotton to India. The latest decision to raise this discount substantially would appear to have been prompted by recent reductions in Sudan prices. It remains to be seen how the Sudan Government is going to react to the latest Egyptian move. A rumour is already current that in order to outbid Egypt, the Sudan Government might even go to the extent of removing the present export duty on its cotton altogether. The present Sudan export duty, it may be noted, is 2.50*d.* per lb. or Rs. 110 per candy. With the latest Egyptian announcement, prices of Egyptian cotton have tended to be very attractive to the mill buyers in this country and have pushed the Sudan cotton out of parity.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal Deshi 600; Berar Jarilla 750; Khandesh 800; Oomra *Deshi* 680; Vijay 900; Hubli Laxmi 1,040; Jaydhar 890; *Delivery contracts*: Vijay 920; Bengals 585.

The Karachi cotton futures market continued to rule easy during the week under review also. The easiness was due mainly to absence of any revival in foreign demand and slackness in domestic spinner interest. Fears of competition from Indian cotton following the recent reduction in export duty would also appear to have adversely affected sentiment of operators. N.T.R.G. May, which had closed at Rs. 71-3 last week-end, declined to Rs. 70-10-6. July position shed As. 2-6 to Rs. 71-4-6. The spot section, however, ruled steady with values more or less maintained. Sind *Deshi* was done at Rs. 64-8. Punjab *Deshi* gathered As. 8 to Rs. 63. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

4F Roller 70-8; S.G. 75; Punjab Roller 73-8; S.G. 77; 289F N.T. Roller 75-4; S.G. 83-8; 289F Punjab Roller 80-8; S.G. 90-12.

The Alexandria cotton futures market ruled firm during the week. The reduction in export duty and offer of discounts of as much as 23 per cent. if payments were made in hard currencies, including sterling, led to an improvement in foreign demand. There was large-scale speculative buying induced by anticipation of better demand, especially from India. Consequently, values moved higher. The Karnak March contract went off the board on the 26th inst. at 68.00 tallaris. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week's closing rates:

Karnak: May 79.30 (78.00); July 80.20 (78.85).
Ashmouni: April 67.10 (66.80); June 67.95 (67.40).

The Sudan Gezira Board has announced that the policy for 1958 is to offer the cotton crops of the Gezira, Alternative Livelihood Schemes, Gash, and Nuba Mountains for sale by free and frequent public auctions which will be open to all buyers without discrimination. While there is cotton to be sold, auctions will be held on Tuesdays, Wednesdays, Thursdays and Fridays every week except on the occasions of public holidays, and the procedure at these auctions will be as in 1957. While the Sudan Gezira Board reserves the right to change its system of sale, it has no intention, it is stated, of doing so unless there is an appreciable change in circumstances.

An easy trend was witnessed on the Liverpool Cotton Exchange during the week under review. Advices from New York were weak and they touched off a fair volume of liquidation. The slow movement of yarn and cloth also imparted weakness to the market. The *main reason for the* decline in Sudan cotton futures was the heavy speculative selling by a leading mill group in anticipation of a further fall in Sudan cotton prices and a probable removal of export duty on Sudan cotton. The following are the latest available quotations—in pence per lb.—from Liverpool:

American Cotton One Inch Staple Contract: March-April 25.00; May-June 24.90; July-August 25.40; October-November 26.08. *American Cotton Mixed Growth Contract*: March-April 25.82; May-June 25.90; July-August 26.30; October-November 26.88. *Sudan*: May-June 31.50; July-August 31.70; September-October 32.35.

Despite the fact that the mid-March parity price announced by the Department of Agriculture on 28th March was higher than the mid-January price, the New York cotton futures market ruled easy. This was due to profit-taking sales by Commission Houses and liquidation by local and New Orleans interests which came as a natural reaction to the recent strident advance in prices. The drop in prices would have been more marked but for expectations of a record low crop and a sharp reduction in stocks, particularly of good quality cotton.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	31-3-58	25-3-58	18-3-58
Spot	36.10	36.20	36.00
March	35.98	36.17	35.72
May	36.23	36.41	35.95
July	36.72	36.84	36.31

YARN IMPORT POLICY

(From Our Own Correspondent)

BOMBAY, 1*st April*

The important event of the week under review in so far as the yarn market is concerned is the announcement of import policy for the April-September licensing period. Under the policy, no licences will be issued, as in the previous half-year, to established importers of art silk yarn. Only actual users will be given licences, subject, of course, to a ceiling; in the previous half-year, a quota of Rs. 2 per loom per shift had been granted. The face value provision in respect of art silk yarn has been liberalised. As regards cotton yarn, the import quota has been slashed from 40 per cent. to 25 per cent. The Press version of the import policy does not mention anything about staple fibre or staple fibre yarn. As regards nylon yarns, import licences will be granted to actual users up to not more than 15 per cent. of the value. Requests for import against these licences will, however, be considered only on an *ad hoc* basis in consultation with the Textile Commissioner. Meanwhile, the Government of India has decided to allow imports of acetate yarn of 120 and 150 deniers against actual user licences to the extent of 10 per cent. of the face value of licences, including additional licences issued in the period.

The continued drastic cut in import of art silk yarn has caused great disappointment among traders who were expecting at least a quota of 5 to 10 per cent. for established importers. It is feared that the restrictions in the face of an already acute shortage of supplies will result in considerable hardship to small consumers and handloom weavers. The Bombay Yarn Merchants' Association and Exchange Ltd. has sent a telegram to the Union Minister for Commerce and Industry urging him to reconsider the issue and to grant an interim allocation of some quota for import of rayon yarn to established importers.

Immediately after the announcement of the import policy, both rayon and staple fibre yarns staged a smart rise in prices. Reports from Punjab indicated that large business had been arranged by several mills, particularly in Gujerat and Coimbatore, in 20s dull hanks and cones. In view of the unsatisfactory demand for cotton yarns, several mills were reported to have switched over to the production of staple fibre yarns.

In the rayon yarn section, spot 120 Japan advanced by 9 nP to Rs. 6. 150 Japan rallied 32 nP to Rs. 5.94. 120 Italy spurted by 31 nP to Rs. 6. 150 Italy were marked up by 25 nP to Rs. 5.87. Indigenous yarns also showed improvement. National Rayons 150 bright cones first grade gained 6 nP to Rs. 5.81 and 120 bright cones first grade 19 nP to Rs. 5.56. Snia rayon yarns (120 dull cones) April delivery was fully steady at Rs. 925.

Staple fibre yarns (40's×2) June delivery evoked good support and advanced by Rs. 6 to Rs. 624. April delivery spurted by Rs. 4 to Rs. 610. Spot (40's×2) Kohinoors and Citys gained 5 nP each to Rs. 3.36 and Rs. 3.31, respectively. Centurys put on 3 nP to Rs. 3.34. Foreign yarns were fully firm, Paramounts being quoted at Rs. 6.81 and Fujis at Rs. 6.66.

Among cotton yarns, ten counts Moderns were neglected at Rs. 14.50 and Podars at Rs. 13.75. Twenty counts Indus receded by 13 nP to Rs. 16.62. Moderns were dull at Rs. 17.37. Among thirty counts, Indus were unchanged at Rs. 20. Forty counts Moderns were stagnant at Rs. 24.50. But Minaxis rose by 25 nP to Rs. 23.87. Among sixty counts, Raghuvamshis shed 25 nP to Rs. 51.75. Moderns and Finlays were both on offer at Rs. 59. Eighty counts Mahendras were dull at Rs. 69.50, as also Moderns at Rs. 70.50 and Finlays at Rs. 75.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	1-4-1958	26-3-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia April	925 00	929 00
120 Japan (per lb.)	6 00	5 91
150 Japan (per lb.)	5 94	5 62
120 Italy (per lb.)	6 00	5 99
150 Italy (per lb.)	5.87	5.62
Staple fibre yarn (per case of 200 lbs.)—		
40's×2 April	610 00	606 00
40's×2 June	624 00	618 00
40's×2 New Great (per lb.)	—	3.12
40's×2 City (per lb.)	3.31	3.26
Cotton yarn (per bundle of 10 lbs.)—		
10s Four	13.75	13.75
20s Modern	17.37	17.37
30s Indu	20 00	20 00
40s Minaxi	23 87	23 62
60s Raghuvamshi	51 75	52 00
80s Modern	70.50	70.50

OILSEEDS DULL

(From Our Own Correspondent)

BOMBAY, 2*nd April*

The week under review was a short one for the oilseeds market, owing to holidays on Saturday and today. During this brief session, the market presented dull conditions. In the absence of any fresh encouraging development, operators were not inclined to extend their commitments either way. Consequently, turnover was restricted and values moved narrowly. The market ruled steady in the first two sessions of the week, thanks to persistent rumours of the complete abolition of export duty on castor oil and expectations of buying by some Communist countries. On Monday, however, the market turned slightly easy. There were reports that there would not be any revision in export duty on castor oil in the near future. Overseas enquiries for linseed oil were not encouraging. Prices, as a result, tended to move down. The trend more or less continued yesterday also.

Groundnut May contract advanced from Rs. 162 to Rs. 162.75 on the 28th March, but receded to Rs. 162.50 on Monday. After recovering to Rs. 162.75 yesterday, it finished lower at Rs. 162.50. Over the week, Bold ready improved by 12 nP to Rs. 32.62. Coromandel was fully maintained at Rs. 33.25. Khandesh quality, after rising by 12 nP to Rs. 33.37, declined to Rs. 33.25. Groundnut oil ex-mill dropped 13 nP to Rs. 17.87. Railway receipt which was quiet at Rs. 17.75 till Monday tvoked some support yesterday and rose by 12 nP to Rs. 17.87.

Castorseed May contract opened the week firm at Rs. 149.62, as against Rs. 149.37 last week-end. Induced by good buying support, it rallied to Rs. 151.87 on Friday but fell to Rs. 149.25 on Monday. Today, it again improved to Rs. 149.75. Ready Madras encountered selling and dropped 50 nP to Rs. 29.62. Kanpur decreased by 37 nP to Rs. 28.25. Castor oil B.S.S. declined by 6 nP to Rs. 16.69. Commercial quality was quiet at Rs. 15.37.

Linseed May moved down from Rs. 31.37 to Rs. 31.12 yesterday. Bold ready fell by 68 nP to Rs. 30.44. Linseed oil ready shed 12 nP to Rs. 16.25.

Cottonseed May contract improved from Rs. 109 last week-end to Rs. 109.25 on Friday, but eased thereafter, yesterday's closing rate being Rs. 108.

Among others, niger seed Madras quality was fully steady at Rs. 28.25 till the close on Friday. After improving to Rs. 28.75 on Monday, it again relapsed to Rs. 28.25, yesterday. Kardi seed Bold ready evoked good enquiries and hardened by 50 nP to Rs. 19.50.

The following table shows the closing prices of oilseeds and oils yesterday as compared with those a week and two weeks before:

	1-4-1958	26-3-1958	19-3-1958
	Rs.	Rs.	Rs.
Groundnut—			
May 1958	162 50	162.00	160.75
Bold ready (per cwt.)	32 62	32 50	32.00
Khandesh quality	33.25	33.25	32.50
Linseed—			
May 1958	31.12	31.37	30.75

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

JUTE GOODS GIVE WAY

(From Our Own Correspondent)

CALCUTTA, 1*st April*

The outstanding event of the week under review was the opening of the East India Jute and Hessian Exchange here on Saturday last for forward trading in raw jute and jute goods by the Union Commerce Minister, Mr. Nityananda Kanungo. This, however, did not prevent prices of jute goods from giving way. For genuine buyers accorded only meagre support. The announcement of stock figures was awaited. It was feared that they would show an increase as at the end of March, since shipments had been below expectations. For instance, hessian shipped between 1st and 20th March was only 16,500 tons, as against 21,200 tons in the first 20 days of February. Sacking shipments aggregated only 16,500 tons, as against 20,000 tons. In contrast with the trend in jute goods, raw jute was steady and rose fractionally. This followed fair interest shown by mills. Fair business was also done. Arrivals were on the decline, and the addition to prices in the mofussil centres was a factor for steadiness here. Lack of rains so far for preparing land for sowing was also a factor for this week's higher trend in raw jute, despite recession in jute goods.

Some business was also done in the futures market on Saturday as well as yesterday. It was, however, felt that some time would elapse before prices were stabilised at the I.J.M.A. levels. Current quotations for both B. twills and hessian 40" 10 oz. are far below the minimum rates. The one notable feature of the rules and regulations governing futures trading is that, at the weekly clearing, members would be obliged to pay the differences in the week. This, it was hoped, would prevent over-trading. On the Exchange, the minimum quantity that can be dealt with is 50,000 yards in respect of hessian, 15,000 bags (50 bales of 300 bags each) in respect of B. twills, and 500 maunds in respect of raw jute. Each member must deposit for the commencement of trading Rs. 10,000 in respect of raw jute and a similar amount for gunnies. Outstanding business can be up to 15,000 maunds of raw jute, 1·5 million yards of hessian, and 2,500 bales of B. twills. For trading over and above these qantities, additional margin deposits have been fixed, but no member will be permitted outstanding business exceeding 50,000 maunds of raw jute, 10 million yards of hessian, and 10,000 bales of B. twills. These rules and regulations are directly aimed at ensuring stability in prices and keeping off mere speculators.

Opening the Exchange, the Minister declared that it would regulate only three-month futures contracts for the present. The transferable specific delivery contracts will continue as at present, but the question whether these should be dealt with by the Exchange will be considered after a year. This, however, will depend on as to how the Exchange shapes itself in the meantime and to what extent it is able to stabilise prices. This means that the I.J.M.A. mills can continue to put through contracts for specific delivery with their recognised brokers in the usual way. This clarification has put an end to the uncertainty when the decision for inaugurating the Exchange was announced a fortnight back.

On Tuesday last, ready B. twills were better at Rs. 98.70 and ready 40" 10 oz. hessian at Rs. 39.10, following support from speculators. Genuine business, however, was not much. At the rise, more genuine business soon followed and, on Wednesday, the prices for the above representative constructions reached Rs. 98.90 and Rs. 39.25, respectively. Further improvement to Rs. 99.05 and Rs. 39.25 was recorded on Thursday. Selling pressure followed and, on the next day, the rate for B. twills fell to Rs. 98.60 and that for hessian 40" 10 oz. to Rs. 39.15. Over the week-end, hessian 40" 10 oz. improved further to Rs. 39.40. Some encouragement was derived in that burlap consumption in the United States during January and February amounted to 141 million yards, representing an increase of 4 million yards over the figure for the corresponding period in 1957. On the other hand, B. twills sagged to Rs. 98.30. The recession was due to the opening of the official futures market, as *fatka* operators were obliged to depress prices for settlement in *fatka*. Yesterday, the rate was a little better at Rs. 98.50, with the 8 oz. hessian being quoted at Rs. 31.75 and the 10 oz. at Rs. 39.20.

Mills accorded fair support to raw jute. Sellers were reserved, as the lack of rains so far was put to good use by them. Prices in the mofussil markets hardened, and this strengthened the reserve of sellers. Arrivals were meagre. The latest quotations for the 1957-58 crop April-May delivery are:

	Middles	*Bottoms*
	Rs.	Rs.
Pakistan:		
District	31.50	28.50
Northern	31.00	28.00

Pucca bales 1st marks (per bale ready)	..	Rs. 160.00

SUGAR FULLY STEADY

(From Our Own Correspondents)

BOMBAY, 1*st April*

The sugar market presents a fully steady trend. The normal monthly release of sugar for sale in the free market which was expected early this week has still not been announced. Owing to this delay and on account of the shortage of small grain sugars, prices have tended to look up.

Medium grain sugar has risen by 50 nP to Rs. 106-108 per bag. Small grains has put on a like amount to Rs. 105.50. Bold grain is done at Rs. 109-112.25, as against Rs. 109-112.

Arrivals of sugar into market during the six days ended today aggregated 12,800 bags, as against 10,900 bags in the previous week.

* * * *

HAPUR, 31*st March*

The sugar markets ruled quietly steady during the week. Although ready demand from some of the consuming centres was slack, Saurashtra, Rajasthan and Punjab were the main buyers. A few factories have closed their crushing season and

more are likely to close soon. An overall increase in production of indigenous sugar is expected; sugar output up to 15th March amounted to 15.23 lakh tons, as against 13.59 lakh tons in the corresponding period of last year. Despatches were 7.16 lakh tons, as against 7.40 lakh tons last year. Stocks with factories on this date stood at 12.36 lakh tons, as compared with 11.46 lakh tons a year before.

The ex-mill delivery prices of sugar in the Muzaffarnagar market eased slightly towards the week-end for want of ready "challans" and, as the date for placing the indents with the railways expired, the market became quiet. Crushing in the Iqbalpur and Deoband factories has been closed. The latest ex-mill delivery prices were: Meerut (D-28) Rs. 35.75; Khatauli (C-29) Rs. 36.62; Deoband (B-29) Rs. 37.37; Iqbalpur (D-28) Rs. 36.25; Muzaffarnagar (B-29) Rs. 37.81; Rampur (B-29) Rs. 36.87; Mawana (B-29) Rs. 37.75; Modinagar (B-29) Rs. 36.87; Bijnore (E-29) Rs. 34.94; Shamli (B-29) Rs. 36.81.

The Kanpur sugar market witnessed a lull in buying activity. The past release had been sold out and a new quota had not yet been announced. Local stocks mounted to about 50,000 bags. The week-end marked brisk inquiry from Madhya Pradesh and the next quota was quoted 25 nP a maund above parity with the ruling prices. Cane supplies to some of the factories was now reported scarce and suspension of crushing season in some of the factories will begin soon.

Good demand from consuming centres accounted for steady conditions in the *khandsari* prices, but production is gradually declining, due to fall in arrivals of cane with crushers. Prevailing prices were: Rs. 27 to Rs. 33 per maund according to quality.

Good spot demand mainly from Punjab, despatches being mostly by trucks, accounted for the revival of firm conditions in ready *gur* prices during the week. Fall in daily arrivals to an average of 750 maunds also acted as a bullish factor. Local stock is put at 1.40 lakh maunds which is greater than the corresponding figure last year at 95,000 maunds. The total arrivals from the beginning of the season amounted to 3.80 lakh maunds, as against 4.45 lakh maunds a year before.

Sowings of cane for the next season are also nearing completion and, as *gur* prices this year have been better than previous years, an increased cane acreage in the next season is expected. The cane prices for the next season for delivery to factories have been announced by the Government and will be the same as in previous years barring a deferred payment prescribed by the Government for linking the price of cane with that of sugar. The prevailing price of *gur pansera* quality was Rs. 15.75 to Rs. 16.25 per maund.

Gur futures moved both ways with depressed undertone during the week, due to restrictions imposed by local Chamber on forward trading in *baisakh* delivery, but these restrictions were waived now as market conditions became quiet. *Gur baisakh* and *fagun* opened at Rs. 14.78 and Rs. 13.36 last Monday and are quoted today at Rs. 14.94 and Rs. 13.25, respectively.

FOODGRAINS QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, 31*st March*

Quietly steady conditions were witnessed in the foodgrain market during the past week. Harvesting of wheat crop has also begun and, although coarse grain harvesting was completed a week before, arrivals of new grains into the markets have as yet been very poor. Wheat prices were almost unchanged during the week to be quoted at Rs. 15.37 per maund for average quality and up to Rs. 17 for farm produce. Although local wheat stock with the trade was very small, the presence of a heavy quantity of imported wheat as Government reserve was the main quietening factor. New wheat arrivals would begin in the market after about a week's time.

Despite satisfactory supply position, rice continued to rule steady, due to reports of overshortage of supplies. The week-end prices were: Basmati Rs. 29 to Rs. 31.75, mainpuri Rs. 25.19; coarse Rs. 21 per maund.

Gram recorded some gains during the week on firm Punjab advices. The local gram stocks at 12 *khatties* were mostly State Government owned. Harvesting of gram has also begun. Barley and *bejhar* stayed steady, due to paucity of local stocks and increasing consumer demand. Firm trend in *jowar* and *guwar* continued during the week also. The week-end prices (in rupees per maund) were: Gram 11.12 to 11.37; barley 9.25; *bejhar* 9; maize 11.25; *bajra* 12; *jowar* 10.50 to 11.25; *guwar* 13.50 to 14.75.

Vigorous support from stockists accounted for steady conditions in ready peas prices. Peas arrivals mounted to an average of 3,000 maunds daily, which included the quantity brought here by trucks from east U.P. for storage and local stocks swelled to 48 *khatties*, as against 20 *khatties* last week-end. While *dara* quality ruled steady, farm quality registered a slight fall during the week. *Arhar* and other pulses were mostly unchanged, barring *moong* which recorded gains on advices from the South. Prevailing prices (in rupees per maund) were: Peas *dara* 10.19; farm 11.75; *arhar* 11.75; *urd* 17 to 18; *moong* 20; *massor* 16.

After an early fall on bear pressure, pulses futures registered gains towards the week-end. Peas *jeth* and *arhar jeth* opened at Rs. 10.59 and Rs. 12.59 last Monday and touched the lowest of the week at Rs. 10.12 and Rs. 12.12, respectively. They were quoted at Rs. 10.46 and Rs. 12.84.

KEEN DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, 1*st April*

There was keen demand for yesterday's tea export offerings, as well as last week's internal sales. The very satisfactory increase in price at the auctions in Mincing Lane—the average price realised was 54.86*d.* as against 52.34*d.* in the previous week and 45.60*d.* in the corresponding period last year—and the high demand for quality North Indian teas there, particularly for good Assams, were encouraging factors, despite the increase in United Kingdom stocks to 119 million lbs. in the week ended 21st March from 117.5 million lbs.

Relief to common teas, already promised, has not so far been announced. The delay is causing disappointment. The subject matter was discussed by the Committee of the Tea Association of India with Mr. Nityananda Kanungo, the Union Commerce Minister, here on Saturday last.

In the internal auctions held last week, offerings of dust teas aggregated 18.896 chests. Prices of all orthodox grades rose by 6 nP, while those of poorer lots of this category eased. C.T.C. Assams received less support. The best liquoring lots gave way by 20 nP, and the medium kinds also eased in an irregular trend. The quotations were: Best Assam C.T.C. Rs. 2.75 to Rs. 3.00; best Assam C.T.C. Re. 1.85 to Rs. 2.05, medium Dooars Re. 1.58 to Re. 1.60; and medium Assam grainy dust Re. 1.60 to Re. 1.62.

Leaf offerings amounted to 4,780 chests. Prices improved with C.T.C. Assams being a strong feature.

During yesterday's export sales, offerings aggregated 52,047 packages. Demand was good, although irregular. Prices improved. A firm tendency was recorded in medium B.O.Ps and O.Fs showing an improvement in quality, while P.Fs and B.Ps in this category rose irregularly. But prices for the more ordinary mediums eased. Prices for "teas for price" and the commonest kinds gained. The plain B.Ps hardened by 4 nP to 6 nP. Plain fannings rose above valuations, but black leafy Dooars eased in an irregular trend. A few lots of good C.T.Cs rose to realise as high as 20 nP above valuations, other lots were firm at about last rates. Legg-cut teas were in good demand, while the poorer liquorings eased. Whole leaf grades as well as the tippy teas were steady. The quotations were: Best Assam C.T.C. fannings Rs. 2.70 to Rs. 2.90; clean black pekoe Rs. 2.25 to Rs. 2.30, best Assam C.T.C. B.P. Rs. 2.60 to Rs. 2.80; plain B.P. Re. 1.44 to Re. 1.48; medium fannings Re. 1.74 to Re. 1.78, plain fannings Re. 1.60 to Re. 1.64, and medium B.P. Re. 1.56 to Re. 1.60.

Export quota (transferable) changed hands at 3 nP. Sellers demanded 3½ nP subsequently.

BLACK PEPPER TOPPLES DOWN

(Messrs. Parekh and Co.)

BOMBAY, 1*st April*

Last week's weakness in Malabar black pepper gathered further momentum during the week, following the topple-down of prices in Singapore where white broke from Str.$148 to Str.$120 and black from Str.$84 to Str.$71. Contrary to the general expectation of bulls, spot in New York came down to $0.26 from the highest of $0.29. Aggressive buying in Singapore by Europe in white pepper having subsided, Singapore speculators became friendless. They scrambled for liquidating their last week's purchases with loss.

After the lowering of the Bank rate in England from 7 to 6 per cent., one of the London operators foresaw a boomlet and bought scale-up a sizable quantity from $0.23 to $0.27 A.S.T.A. terms, from both India and Singapore. But when they saw that there was no follow through by genuine consumers either on the Continent or in the U.S.A., they began to press sales in New York. The tables turned. Buyers withdrew. New York came down casting its reflection on India as well as on Singapore.

News that the Central Government of Indonesia gave special sanction to South Sumatra for bartering coffee and pepper with Singapore proved the last straw on the back of Singapore speculators.

Alleppey receded from Rs. 662½ to Rs. 587½, while garbled at Cochin in ready went down from Rs. 107½ to Rs. 103¾, May delivery from Rs. 113¾ to Rs. 107½ and July from Rs. 115 to Rs. 109. Calicut climbed down to Rs. 635 without business. Most of the Calicut growers being Mahomedans, sales during the Ramzan month were reported to be small, but growers in the area, having larger unsold stock, were anxious sellers, in view of the proximity of monsoon and higher production. Recession in all the primary markets was so rapid that buyers preferred to remain out of the picture.

At the time of writing, the future of the market is uncertain. If New York dealers do not come out to make fresh purchases for a fortnight or so which appears very likely, as they have already made heavy purchases from both India and Singapore during the last boom, prices may go down to the former low level, particularly in view of the proximity of monsoon in India, new harvesting in Sarawak and the availability of sufficient stock of Lampong in Singapore.

In the A.S.T.A. section there were sellers for April at $0.24½ but without buyers. May-June changed hands at prices ranging from $0.26 to $0.25. In the delivery section, prices for May broke to Rs. 580 with undertone weak.

Today's nominal quotations are: Ready delivery Rs. 85 per Bengal maund and May Rs. 575-Rs. 580 per candy of 5¼ cwts.

GOVERNMENT OF INDIA
MINISTRY OF RAILWAYS
(Railway Board)

Requirement of Roller Bearings with Axle Boxes

THE RAILWAY BOARD, GOVERNMENT OF India, propose to obtain from established and reliable manufacturers 14,000 Nos. of Roller Bearings with Axle Boxes to R.D.S.O. Sketch No. 58-W-038 for Bogie open Wagons Type Box Mark I. These are required for delivery in India from September, 1958, at the rate of 250 wagon sets per month.

The drawing referred to above is obtainable from the Research Design and Standardization Organisation, Baroda House, New Delhi, and the Director General, Indian Store Department, Government Building, Bromyard Avenue, Acton, London-W/3, on payment.

Quotations should reach the undersigned by 6th May 1958, the latest.

Firms may obtain copies of the tender from the Office of the Research Design and Standardisation Organisation, Baroda House, New Delhi, on payment of Rs. 2 each.

The quotations will be opened in public on 7th May, 1958, at 11 hours in the Committee Room, Railway Board's Office, State Entry Road, New Delhi.

H. D. SINGH,
Director, Railway Stores,
Railway Board, State Entry Road,
New Delhi.

W. H. BRADY AND COMPANY LIMITED

NOTICE

MR. R. S. SMITH HAVING RETIRED, HIS connections with us as a Technical Adviser and Senior Assistant, ceases from the 31st March, 1958.

**These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only 7 per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown asamount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. † Less income-tax. (x) Clive Mills have paid dividend at As. 10| on bonus shares for the year 1955. * Including bonus. (k) Investments.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian Jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954. ‡ Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Dividend for 1956 is on shares of Rs. 10 each. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.
Also 1954 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share.

SURVEY

(*Concluded from page 622*)

Direct revenue from this project, after full development of the area, will be to the tune of about Rs. 1 crore by way of water rates only. Betterment levy will bring to the exchequer Rs. 45 crores and sale of Government waste land another Rs. 67 crores. Indirect revenue from income-tax, excise, post and telegraph and railway is also expected to be considerable.

The canal will develop a waste desert tract about 400 miles long and 40 miles wide and bring civilisation to an area where life is at present practically non-existent. There are no roads or railways and the only means of communication are camel paths. Drinking water is scarce and its supply is a serious problem. The development of this area will provide an opportunity for the rehabilitation of landless displaced persons from East and West Pakistan and for settling people migrating from the overcrowded parts of the country. But, unlike other projects, the problem in this region is not merely one of providing water, but of all-round development, namely, building up of villages, construction of roads, electrical installations, post and telegraph offices, schools, hospitals, etc. This requires co-ordinated planning of work and execution. Since the probl

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVI. No. 2456 BOMBAY, 12th APRIL 1958 PRICE: Re. 1.50

TAXING GIFTS

INDIA is unenviably engaging itself in erecting all ill-assorted structure of taxation. Having borrowed its fiscal ideas from many quarters, in addition to possessing some of its own, and unwilling to stick to any one system, India now finds itself confronted by a fiscal architecture which must be forbidding to any spectator. That the whole edifice may some day fall apart through sheer lack of coherence does not seem to worry its builders. All that they are now concerned with is how best they can raise large resources. In their anxiety to find new sources of revenue, they would leave no fiscal stone unturned. A new stone in the fiscal architecture is the gift tax. It has been very pertinently pointed out that it does not fit into the fiscal structure. But the Government does not seem to be in any mood to listen to reason.

Gift tax owes its birth to Prof. Kaldor's report, though we are sure that the learned Professor himself would be the first to disown its parenthood, considering how greatly the tax he proposed has been changed into the one now sought to be imposed. What the Government has done is to take his idea and then to misshape it. It will be recalled that Prof. Kaldor proposed gift tax as part of an integrated system of taxation he outlined. But the Government, anxious as it has been to borrow only such isolated concepts as will suit its revenue purposes, has changed Prof. Kaldor's original concept. To mention only two ways in which the present tax differs from Prof. Kaldor's proposal, Prof. Kaldor wanted it to replace estate duty. But gift tax is sought to be imposed while estate duty is being continued. Again, while Prof. Kaldor would have imposed the gift tax on the fortunate recipients, the Government would penalise the charitable donor.

At the last annual session of the Federation of Indian Chambers of Commerce and Industry, Mr. G. P. Kapadia, President of the Indian Merchants' Chamber, was at some pains to point out how "on a scientific consideration the combination of all the three measures, namely, the estate duty, the gift tax and the wealth tax, cannot be justified at all." Mr. Kapadia then proceeded to reinforce his point by a reference to the tax systems of the countries where gift tax has been imposed. In the U.S., Canada, Japan and Australia which have a gift tax, there is no levy on wealth. The provisions for exemption of gift tax are more liberal in the U.S. than in India. So far as Canada is concerned, Mr. Kapadia pointed out how the low rate for gift tax, the high exemption limit for succession duty and the absence of wealth tax in that country show an equitable pattern of taxation. Again, in Australia, the rates for gift tax are quite low. He also cited the practical approach which Japan has made to its tax system. Although gift tax has been imposed in that country, the rates for income-tax are quite low. Thus, the present rates of income-tax range from 10 per cent. on 5,000 yen to 65 per cent. on 800,00 yen; these rates may be compared with the tax rate of 77 per cent. for earned income and 85 per cent. for unearned income in the highest slab of income in India. Clearly, gift tax is an exotic plant on the Indian soil for the simple reason that this country does not possess the climate which has made its cultivation possible in other countries.

Together with wealth tax, gift tax now enters the sacred precincts of family life. No longer is a man free to give away as gift what is his own without subjecting himself to the curious scrutiny of an external authority. With his gift for apt illustrations, Mr. A. D. Shroff brought out the essence of the Gift-tax Bill when he said recently: "When you study some of the implications of the Bill you will appreciate that gift tax is not something to be ignored. If you own a house and if you wish to give a flat to your son that will be considered a gift. If you have given the use of a flat in your building to your parent or your relative it will be treated as a gift and if I admit a partner in the firm and because of the consideration that he is going to put in extra work and help me in the business, and if I agree to concede a certain part of my share in the profit of the firm to the new partner that will be considered a gift." He went on to say how individuals and firms who make contributions to political parties would also be taxed for the gifts they make.

Nevertheless, if the gift tax must be enforced, the present Bill must be drastically altered. It should be modified in a way which will take into account at least the beneficial features which are to be found in this tax in other countries. There are, of course, two welcome features in the Gift-tax Bill. There is, for instance, the liberal allowance for a gift made to one's wife. Again, the rebate of 10 per cent. of the tax liability which is allowed for the prompt payment of the tax is to be welcomed. The value of the provision will, however, rest on how promptly the taxation authorities complete their assessment proceedings. In order that the tax may really be acceptable, it would have been far wiser for the authorities to have related the tax to the ability of the man to pay it. In its present form, the tax is payable by the donor irrespective of the net wealth of the man who receives the gift. Also, the way in which gift is defined needs to be changed. As Prof. R. J. Taraporevala has so ably argued in his article (vide Commerce dated 29th March 1958), there is little justification for bringing voluntary forgiveness of indebtedness within the ambit of a gift tax. Surely, it is not right that the practice of the Christian virtue of forgiving a man his debts should be penalised by the imposition of tax. It seems odd that the leaders of a party which has continuously agitated for scaling down agricultural indebtedness and urged the creditors to forgo their claims, should now think in terms of subjecting a man's act of forgiveness of his debtor to a tax. Fiscal onslaught could not have been more unhappily directed.

Clearly, there is both need and scope for extending as well as widening the list of exemptions. The basic tax-free allowance of Rs. 10,000 takes little account of the continuing inflationary conditions under which Rs. 10,000 is hardly equivalent to Rs. 3,000 in pre-war years. This is also true of the permissible tax-free gift of Rs. 10,000 to a female dependent at the time of her marriage. There is also no reason why all insurance policies should not be completely exempted. And if such exemption stimulates the growth of life insurance it is all to the good both for the State and for the community. It seems particularly unwise to limit the exemption from gift tax only to the gifts made to a charitable institution to which section 15B of the Income-tax Act applies. Whatever might be said against communal or religious charities, there is no doubt whatever that such institutions have done a great deal of good. So long as the State does not eliminate the need for such institutions it is best that they should be encouraged to function.

Many difficult issues will arise in the actual administration of the gift tax legislation. In the course of his admirably analytical study of the provisions of the Gift-tax Bill, Prof. Taraporevala has called attention to some of these issues. Whichever way the matter is looked at, it looks as though these issues cannot be avoided. It seems necessary to point at least to one such issue, namely, the problem of determining the adequacy of consideration. In terms of the Bill, a transfer of property made without consideration, or for inadequate consideration, will be regarded as a gift. Prof. Taraporevala rightly argues that where the consideration takes the form of personal services rendered or the forsaking of

penalise him for not possessing economic foresight if some of his transactions turn out to be wrong. We commend Prof. Taraporevala's suggestion that no tax should be imposed on a transfer of property in the ordinary course of business—that is a transaction which is "bona fide at arm's length and free from donative intent." Another aspect of the problem is that gift tax legislation might unwittingly penalise a firm for taking into partnership a man with special abilities. As Prof. Taraporevala points out, many professional firms of lawyers, accountants and architects admit into partnership men possessing the necessary qualifications and ability whose services would be valuable to the firm without charging the new entrant for goodwill or for the other assets of the firm. And yet, under the Gift-tax Bill, the existing partners of such firms may be deemed to have made a gift of the share in the partnership to the new entrant. This cannot be the intention of the legislature.

Finally, it seems necessary to reiterate the obvious point that the very idea that gifts could be made subject to tax is foreign, if not also repugnant, to Indian thought and tradition. Nevertheless, if the tax must be imposed, it must be in a form and operate in a manner which will not appear excessively harsh. Again, in the administration of the tax, the authorities must be prepared to display some charity in judgment—the quality from which all gifts flow, thereby making their taxation possible for the State.

COMPANY LAW

THE Companies Act 1956 has earned the reputation of being the most voluminous Act of its kind. With its 658 clauses, the Act covers, as is well known, a great deal of fresh corporate ground. Indeed, it is in the nature of a re-enactment rather than a mere amendment of the original Act. Nevertheless, the fact that so soon after the Act was placed on the Statute Book it has been found necessary to build new amendments into the Act shows how the authorities cannot be too careful in drafting corporate legislation. Complicated as this legislation has been, it is gratifying to note that while the authorities have been able to set up a competent machinery to administer the Act, company managements on their part have shown great abilities for adjustment to the conditions created by the new legislation.

The administrative set-up of the Company Law Department consists of a Secretariat at New Delhi with four regional offices in Bombay, Madras, Calcutta and Kanpur and offices under the control of full-time Registrars of Joint-Stock Companies in all the States of the Indian Union. An Advisory Commission, consisting of a full-time Chairman and four part-time members representing trade and industry, the accountancy profession, shareholders and labour, has been appointed to enquire into and advise the Central Government in regard to matters arising out of certain aspects of the administration of the Act. Although it is not mandatory on the part of the Government to accept the advice of the Commission, the Central Government, according to the annual report on the working and administration of the Companies Act for the year ended 31st March 1957, issued by the Department of Company Law Administration, has generally accepted the Commission's views in regard to the cases referred to them and has "so far had not to differ from the Commission on any major issue of policy." This augurs well for the future administration of the Act. It is to be hoped that this tradition will be maintained.

There has been, as we pointed out in our last week's issue, a fall in the total number of companies registered in 1956-57. The number was 848 with a total authorised capital of Rs. 210.6 crores, consisting of 84 public companies and 764 private companies with an authorised capital of Rs. 54.1 crores and Rs. 156.5 crores respectively; the corresponding figures for 1955-56 are: 1,448 companies with a total authorised capital of Rs 156.9 crores distributed between 186 public companies with an authorised capital of Rs. 67.8 crores and 1,262 private companies with an authorised capital of Rs. 89.1 crores. The fall in the number of companies has been attributed to exaggerated apprehensions about the provisions of the new Companies Act. There may be some element of truth in this, but the fall could be traced to the fact that the climate for capital investment in 1956-57 was not generally conducive to fresh corporate enterprises.

The total number of companies, as on 31st March 1957, was 29,951, with a total paid-up capital of Rs. 1,058 crores—20,311 private companies with a paid-up capital of Rs. 334.0 crores and 9,640 public companies with a paid-up capital of Rs. 724.0 crores—as compared with 30,331 companies with a capital of Rs. 1,019 crores a year ago—20,427 private companies with a paid-up capital of Rs. 335.1 crores and 9,954 public companies with a total capital of Rs. 684.2 crores. A size-wise analysis of the new enterprises, registered in 1956-57, shows that a large number of them—about 46 public companies and 561 private companies—falls within the Rs. 1 to Rs. 25 lakh group. The number of giant incorporations having an authorised capital of Rs. 1 crore and more in 1956-57 was 38, as against 42 in 1954-55. In the group with an authorised capital of more than Rs. 5 crores, except for India Rayon Corporation, India Reinsurance Corporation and the Saurashtra Cement and Chemical Industries Ltd. all are "Government" companies, the more important of them being the National Coal Development Corporation Private Ltd., Heavy Electricals Private Ltd., Neyveli Lignite Corporation Private Ltd. and Western India Shipping Corporation Private Ltd.

There are two features of the working of companies to which the report draws special attention. The report points out that there has been a tendency for managing agencies to surrender their offices and get themselves appointed as selling agents to the companies they had managed before. This is a tendency which naturally offends against the spirit of the Companies Act. Secondly, it would appear that several public companies—227 of them—have converted themselves into private companies presumably in order to escape some of the restrictive provisions of the Act applicable only to public companies. This trend is particularly surprising, considering that there is a definite fiscal disincentive for private companies. Perhaps, when this factor begins to be realised by the managements there will be no positive trend towards the conversion of public into private companies. If, in spite of the existing fiscal differentiation, the trend towards the formation of private companies continues, it must obviously be because many of the clauses in the Companies Act are unduly harsh on public companies. Again, the reversal of this trend could be easily accelerated by appropriate fiscal reliefs which would encourage the formation of public companies and render the conversion of private into public companies, a most desirable form of corporate metamorphosis.

A somewhat irksome feature of the new Companies Act has been the obligation imposed on managements to discover and report the relations of the directors who are employed in the companies concerned. This provision has perhaps more a sociological than economic significance. It is at all times difficult for directors, especially of large companies, to find out which relations of theirs are employed in their concerns. The statistics quoted in the report show that the evil of nepotism is less widespread than what many quarters had believed. There are 6,000 persons related to 2,600 directors in respect of whom special resolutions had to be passed. About 55 per cent. of the relatives of directors draw a salary of less than Rs. 250 per month. Only 15 per cent. of the relatives of directors have an emolument of Rs. 500 and above. To turn to another aspect of Company Law. Altogether 3,650 special resolutions under the section relating to the offices held by directors have been passed; these covered about 16.5 per cent. of the companies actually at work, the total number of directors concerned being 5,250. Nearly 3,000 directors, it is stated, held offices of profit, ranging from part-time posts carrying a relatively small remuneration to posts of executive directors with substantial emoluments. The study has further disclosed that about 50 per cent. of the directors held places of profit carrying a monthly pay of less than Rs. 500.

The new Company Law is designed to prevent loans being given by companies to their directors and also some undesirable forms of inter-company investment. These two evils do not appear to be as widespread as many had been led to think at one time. The report points out that during the year under review the number of applications for the regularisation of the existing loans and the approval of new ones made to the Government under section 295 of the Act was 77, of which 34 involving an amount of Rs. 3.54 crores were approved, while 32 involving Rs. 1.37 crores were rejected. The rest of the applications were either withdrawn or pending consideration. The Government received 62 applications under sections 372 and 373 of the Act relating to inter-company investments and accorded sanctions in 42 cases involving a total amount of Rs. 3.29 crores and turned down eight applications carrying a total amount of Rs. 16 lakhs. A curious fact which has emerged from the investigation into inter-corporate investments is that, in some instances, insolvent or nearly insolvent companies wanted to invest in associated companies and in a few others the investments proposed were in disregard of the interest of the shareholders. Clearly, this is a trend which has to be curbed in the interests of the lending companies themselves.

A whole bunch of provisions in the Companies Act is designed to prevent unwholesome cornering of shares and to protect minority shareholders. In this connection, it is interesting to note that the Central Government passed an order for investigation into the beneficial ownership of shares of a company where it was alleged that some 95,000 shares had been cornered by a small group of persons with a view to acquiring, in a surreptitious manner, control over a long established company. The investigation, it is stated, has brought to light the mechanics by which large blocks of shares were cornered, the sources which provided the funds needed for these operations, and the motives of the persons really interested in these operations. It is not clear whether any action followed this investigation. But such investigations deserve to be commended in so far as they may prepare the ground for future action by the Government which could forestall the nefarious tactics of industrial adventurers. So far as the administration of safeguards provided in the Act for the benefit of the shareholders against mismanagement, oppression or excesses likely to be committed by company managements is concerned, the Central Government, it is stated, received 77 appeals relating to 32 companies. Of these, 15 were rejected and, in 14 cases, companies were directed to register the shares in the names of transferees; at the end of the year, 44 cases were pending for consideration by the Government.

A valid criticism against the Companies Act has always been that it has been one of the most under-administered pieces of legislation. It is, therefore, gratifying to note that the Company Law Administration is now trying to remedy this obvious defect in the administration of the Act. During the year under review, 47 cases were considered by the Central Government for the appointment of inspectors under sections 235 and 237 of the Act. In 25 cases, it was considered unnecessary to appoint inspectors, while investigations were ordered in nine cases. The report reveals that the Government has been handicapped in dealing with the investigation of companies because of difficulties in getting suitable personnel, deliberate withholding of relevant books by company managements and lack of regular arrangements with the police in the States for purposes of ensuring continuous support to investigating authorities. Fraudulent mismanagement of corporate finances by managements deserves to be investigated and ruthlessly punished, because it constitutes a violation of the sacred trust which shareholders have reposed in the companies. At the same time, the authorities, on their part, will do well to ensure that genuine cases of hardship which arise from developments beyond the control of the managements receive the consideration they deserve.

In terms of the provisions of the Companies Act 1956, foreign companies—that is, companies incorporated in countries outside India and having places of business in this country—are governed by sections 591 to 608 of the Companies Act. These sections are similar to those of the English Companies Act. The report points out that there is no discrimination in any of the provisions against the foreign companies and, in fact, the accounts provisions are decidedly in their favour as compared with the corresponding provisions applicable to Indian companies. It would appear that, in the course of working of the new Act, the attention of the Department was drawn to a number of difficulties about the preparation and presentation of the annual accounts of foreign companies. The Government, therefore, modified some of the provisions relating to foreign companies; presumably, this has been well received by the foreign concerns. At the same time, it is gratifying to be told that, "by and large, the provisions of the new Act relating to foreign companies have worked smoothly." This is as much a tribute to the foreign companies as to the sense of sympathetic understanding on the part of the Company Law Administration.

SHARE MARKET TURNS A LITTLE QUIET

OUTLOOK FOR TEXTILES—COPPER UNDER CONTROL—EGYPTIAN COTTON

THURSDAY, 5 P.M.

THE share market has turned a little quiet this week. Barring a few counters, the list shows minor losses over the week. There has been no change in sentiment, but operators would appear to be a little cautious and have preferred to book their profit. Operators were disappointed by the announcement made by the Century Mills and the Shivrajpur Syndicate to the effect that they have withdrawn their earlier proposal to capitalise a part of their reserves and issue bonus shares, because of the heavy incidence of bonus tax at the rate of 30 per cent. Some of the companies had kept the proposal to issue bonus shares in abeyance in anticipation of a reduction in bonus tax in the current year's budget. But this expectation, as is well known, has not materialised.

MARKET GOSSIP

A typical instance of a company which has been deterred from issuing bonus shares because of the heavy incidence of the tax on such shares is the Bombay Burmah Trading Corporation. The shareholders of the Corporation, it may be remembered, had been insisting on the management to issue bonus shares. In reply to this demand, the Chairman of the Company drew their attention at the last annual meeting to the heavy incidence of bonus tax and asked them whether it was prudent to issue bonus shares at such a heavy cost. Though he did not anticipate any revision of the bonus tax in the current year's budget, he preferred to await the budget proposals. As there has been no change in the tax in the latest budget and in view of the decision taken by the Century Mills and the Shivrajpur Syndicate, it is rather doubtful whether the management of the Bombay Burmah would yield to the shareholders' demand for a bonus issue. It is perhaps this factor that has caused a setback in Bombay Burmah shares from Rs. 558.50 (touched on Monday) to Rs. 546 at the close today.

• • • •

In an otherwise quiet market, the ordinary shares of the National Rayon Corporation have been somewhat active. They came up to Rs. 227 today from Rs. 216 touched on Thursday last in anticipation of a higher dividend, though at the close they shaded off to Rs. 223.50. This expectation has now been belied by the Directors' decision taken this evening to maintain the distribution for the year 1957 at the previous year's level of Rs. 14 per share. There is, however, one difference. While last year, they had paid a dividend of Rs. 12 and a cash bonus of Rs. 2 per share, they have now consolidated this distribution to a dividend of Rs. 14 per share. The Directors' decision is explained by the lower profit earned by the Company. Despite an increase of Rs. 1.15 crores to Rs. 5.37 crores in sales, the gross profit has declined by over Rs. 5 lakhs to Rs. 1.39 crores, due to a sharp rise in operating expenses and high incidence of excise duty. The net profit has declined from Rs. 58.33 lakhs to Rs. 52.59 lakhs.

Investors in textile shares have watched with great dismay the gradual shrinking in the values of their investments. It is true that most share values have receded in recent months. Even so, the fall in textile scrips, despite some improvement in the last few weeks, has been particularly disturbing. Over the year ended 29th March 1958, the index number of cotton, woollen and silk shares (Base 1949-50=100) has fallen from 121.6 to 96.0; over the same period the fall in industrial securities in general has been less steep—from 109.2 to 97.9. The fall in textile scrips reflects the great financial strain to which cotton mill companies have been subjected. Having been compelled to work under conditions of mounting cloth stocks, high taxation and inflated wage bill, the cotton mill industry now finds that it has to dip into its past reserves in order to maintain the dividend to shareholders. Indeed, many mills have had actually to close down. It has been computed that at least 26 mills have ceased to exist, thereby throwing 25,000 workers out of employment. The reports and accounts of even the best managed mills show that they have been unable to arrest the decline in their profits. Addressing the annual meeting of the Kohinoor Mills Company, Ltd., its Chairman, Mr. E. D. Sheppard, summed up the conditions witnessed in the year 1957 when he said that it was a "year of hard work and frustration." Referring to the impact of taxation on their own company, he said: "A significant comment on the new pattern of taxation is that your company at this moment is called upon to pay taxes equal to 114 per cent. of its assessable profit for the year." Further comment on the burden of taxation on the textile industry is needless. Is there any prospect for the lifting of the cloud which overhangs the textile industry? Clearly, the cloud will not lift unless the real income of the large masses of India's consumers goes up. In any case, so long as foodgrains prices remain what they are, it is difficult for the consumer to divert a larger proportion of his income towards the cloth market. For, as Mr. Ramnath A. Podar, Chairman of the Millowners' Association, Bombay, pointed out in the course of his speech at the annual general meeting of the Association, held in Bombay, today, "the inflationary pressures and the increase in the cost of living resulting primarily from dearer food that accompanied the second Plan have had a depressing effect on the demand for cloth." Fortunes of the cloth mill industry are thus tied up with the progress of the Government's programmes designed to increase agricultural production. Unfortunately, these programmes, as was brought out in the recent Parliamentary debate on food, have not made any significant progress. As a direct consequence of the poor offtake of cloth, mills' stocks have mounted. Mr. Podar was at some pains to emphasise that the view held in certain quarters that industry could lightly carry two months' stocks with it was not correct. He calculated that at present prices, two months' stocks would amount to Rs. 66 crores. Surely, the industry cannot be expected to lock up in idle stocks finances of this magnitude.

The industry has a cast-iron case for relief in taxation. The burden of excise duty alone is very high. It is true that the Government, having realised that the levy weighed too heavily on the industry, has reduced it. But, as Mr. Podar pointed out, the incidence of the duty (except in the case of coarse varieties), despite its downward revision, remains higher than what it was prior to September 1956 when it was raised. Mr. Podar said: "Attention is drawn to this fact because cloth prices today are actually lower than those of December 1955 in spite of the load of the increased excise duty while the cost of production has increased enormously during this period. Cotton and wages account for nearly 80 per cent. of the manufacturing charges and in both these respects the producer has to pay heavily."

An uncertain factor from the industry's point of view is the future trend of textile wages. A Central Wage Board is now engaged in sifting evidence with a view to determining the wage levels in the industry. The report of the Wage Board will naturally enough be awaited with interest. But there is one general consideration which the Wage Board cannot possibly ignore. It is the need for maintaining a certain relationship between the wages and the workload. Mr. Podar pointed out that since the Labour Appellate Tribunal's award of 1955 there had been an enormous increase in the incidence of taxation. In addition, the Bombay mills had been called upon to pay a heavy dearness allowance and gratuity to their workers. It has been computed that the increase in dearness allowance payable by the cotton mills of Bombay City alone amount to Rs. 3.42 crores per annum since 1955. After referring to these developments, Mr. Podar said: "The industry's capacity to pay, having thus gone down, one may well ask whether the present wage bill can at all be sustained, especially on the basis of the present workloads." This indeed is the crux of the problem for the textile industry. He, therefore, rightly suggested that if the workers' emoluments had to be increased, it could be done only through rationalisation and modernisation of the industry. He felt that it was in the best interests of the labour itself that it should co-operate with the industry in hastening the modernisation of the present plant and machinery inasmuch as it would greatly improve the opportunities for increased income through higher productivity.

There are two silver linings to the grey, if not altogether dark, textile cloud. One is the Government's decision not to yield to the demands for a blanket increase of 25 per cent. in wages. The other is the evidence of some change in workers' attitude towards rationalisation and modernisation in industry. These two developments are of utmost interest to Indian industry, in general, and to the textile industry, in particular. The Union Minister for Labour and Employment, Mr. G. L. Nanda, rejected in the Lok Sabha this week the recent demand by certain sections of labour for an immediate 25 per cent. increase in the wages of workers in organised industry. He said that the demand, though spectacular, was unreasonable, even by the yardstick applied by the trade unions. The national income had no doubt gone up by 18 per cent., but the real wage of a worker had increased by 20 per cent. since 1947. He was, of course, opposed to wage freeze as such. But it is significant that he has turned down the unreasonable demand for a straight 25 per cent. increase in wages which would cause irreparable damage to industry, besides increasing the inflationary pressures on our economy. The other notable development is the change in the workers' attitude towards rationalisation. This is indicated in the statement, made by the former Union Labour Minister, Mr. Khandubai Desai who tendered evidence before the Wage Board, at Ahmedabad. Mr. Desai said: "As responsible citizens, workers will respond to any reasonable scheme of rationalisation." He, however, felt that such scheme should come through co-operation and agreement with the working classes and this should not prove difficult as they had given a very good account of themselves in the past. India's industrial progress would be quickened, if the workers realised that, in the long run, modernisation is their best ally.

Much confusion and no little resentment prevails in the non-ferrous section of the metal market. There is considerable disappointment over the latest move of the Central Government to regulate distribution of non-ferrous metals (copper, lead, tin and zinc). A special order to this effect was issued by the Union Ministry of Commerce and Industry on the 2nd inst. The order is applied in the first instance only to imported copper; it may be extended to cover any other imported non-ferrous metal by another notification. In terms of this order, the purchase and sale of imported copper in different forms must be at a price not exceeding 3½ per cent. above the landed cost. No person shall acquire or agree to acquire copper except under and in accordance with a permit issued in this behalf by the Controller. Importers of copper are further required to notify the Controller of any quantity of copper imported or cleared on or after the 1st inst.

The aforesaid order has brought to a standstill business not only in copper but also in lead, tin and zinc. Doubts are expressed as to whether the regulation now envisaged is applicable to sales of copper—they are said to be quite substantial—on forward shipment basis effected by importers and dealers. This question and the other implications of the order are being studied carefully by the trade. The Committee of the Bombay Metal Exchange is expected to meet on Wednesday or Thursday next to discuss the whole issue and to decide the future course of action.

The clamping down of control on imported copper has caused great disappointment to the metal traders. The high level of copper prices, it is pointed out, was due not to the unwillingness of established importers to part with stocks except at high prices but to the fact that the quantity allowed to be imported was far short of the requirements and actual users were bidding higher and higher prices for limited supplies. The annual requirements of copper to be met from imports (in addition to the domestic output of about 8,000 tons) are estimated at 50,000 tons. As against this quantity, the imports permitted on the basis of quotas established by the end of December 1957 aggregate only 27,000 tons and another 7,500 tons are made available by Canada under the Colombo Plan for shipment in the current year. The total of imports thus comes to 34,500 tons, that is, about 15,500 tons less than what is actually required. It is the shortfall in imports in relation to current consumption that is said to be primarily responsible for the chaotic and confused situation in the market. To quote a prominent metal trader:

"The fact that the Government has recently given licences to the State Trading Corporation for a couple of thousand tons of copper clearly shows that the Government knows that quantities it had originally licensed are far short of the current requirements. It is, therefore, ununderstandable as to why, in the first instance, it should have cut the established importers' quotas by 20 per cent. It is very clear that, even after the issuance of the above licences to the State Trading Corporation, the total tonnages permitted to be imported are much short of actual requirements and, unless certain priority is decided with regard to consumption, the present scramble for supplies will continue. The method of trying to regulate supplies by means of price controls, etc., is a negative approach and shows utter lack of understanding on the part of the Government of the basic malady. The present control order only limits the margins of profit of the established importers and, to that extent, it is an arbitrary measure which will very definitely fail to benefit the general public."

Another arbitrary feature of the current import control order, it is pointed out, is that it tends to override the commitments already made by established importers against incoming parcels. Particular objection has been taken to the way in which the Government has sought to perpetuate shortages and bring in the State Trading Corporation into the field, thereby eliminating established traders.

Egypt's offer of a discount of 21 per cent. on cotton sold to India has brightened the prospects for larger imports of Egyptian cotton by this country. The discount, which is about eight per cent. higher than the earlier offer of about 12½ per cent., will go a long way towards making Egyptian cotton an attractive buying proposition. In fact, the recent cut in export duty and the higher discounts now given have made Egyptian cotton a good bargain vis-a-vis Sudanese styles. The latest quotation for Karnak T154, after deducting the discount of 21 per cent., is Rs. 1,725 while the equivalent Sudan cotton is quoted at Rs. 1,710. Since Indian buyers have a preference for the former its price is still considered favourable.

With the announcement by the Government of India on the 6th inst., of an import quota for 30,000 bales of cotton stapling 1.3/16" from soft currency areas, Indian buyers are in a position to enter the market for Egyptian cotton in a sizable way, although not to the extent anticipated earlier as the quota is far below expectations. The trade was expecting an allocation of 90,000 to 100,000 bales of cotton. A snag, however, appears to be the uncertainty regarding the exact payments procedure. The Indo-Egyptian barter agreement signed on 25th March last provides for the import of Egyptian cotton by India in exchange for export of tea and jute goods. Under the agreement, accounts for these three main items of trade between the two countries will be maintained in Egyptian pounds. It may be noted here that this is in contrast to the payments agreement entered into between the two countries last year which stipulated payments in rupees. However, goods other than the aforesaid items will continue to be paid for in rupees.

After the signing of the agreement last month it was announced that the State Bank of India would open an export account in Egyptian pounds with the National Bank of Egypt to provide remittance facilities to Indian exporters of tea and jute goods and importers of Egyptian cotton. But how exactly payments are to be made and other related questions have not so far been clearly specified. This ambiguity, it is needless to add, will, if not cleared as early as possible, prejudice business prospects.

Against this background, it is of interest to note that Sudan, on its part, is leaving no stone unturned to push up its export of cotton. The recent reduction in reserve prices of the Gezira Board and the slash in export duty are part of an overall drive to attract foreign buyers. The latest

EQUITIES REACT

PROFIT-TAKING ERASES EARLIER GAINS

(From Our Own Correspondents)

BOMBAY, *10th April*

AFTER an earlier improvement, in extension of the previous week's upward trend, equities made a mild retreat during the week under review. While the underlying sentiment was still one of confidence, in anticipation that favourable changes might be made by the Select Committee in respect of the development rebate to companies, the provisions regarding which were made more stringent in the latest Budget, operators preferred to book their profits. The announcement of lower production by T.I.S.Co. and I.I.S.Co. for the year ended March 1958, the dropping of the proposals to issue bonus shares by the Century Mills and Shivrajpur Syndicate —this gave rise to fears that more companies which were expected to capitalise their reserves would also follow suit—and rumours that the stamp duty on forward transactions would be raised, induced the "bulls" to liquidate a part of their holdings. On balance, the majority of the scrips in the list showed small losses. The notable exceptions to the general trend were electricity shares, Belapurs, Premier Constructions and National Rayons, which recorded sizable gains.

In the steel section, Tata Ordinaries moved up from Rs. 182.50 to Rs. 183.75 before reacting to Rs. 180.75 at the close today. The new shares dropped Re. 1.50 to Rs. 176.50. Indian Irons made a small gain from Rs. 21.56 to Rs. 21.60, but this was more than wiped out when the shares dipped to Rs. 21.28 today.

Textile shares were generally quiet, on uninspiring advices from the cloth market. Bombay Dyeings gave way from Rs. 56.40 to Rs. 55.70. On reports that the bonus issue proposal had been given up, Centurys declined from Rs. 438 to Rs. 430. Kohinoors were lower by Rs. 5 at Rs. 281. Central Indias lost Rs. 4 to Rs. 89, Finlays Rs. 7.50 to Rs. 275 and Indu Ordinaries 32 nP to Rs. 9.64. New Greats declined by Rs. 10 to Rs. 195, while New City Mills put on Rs. 10.50 to Rs. 110.50. Shree Niwas Cottons shed Rs. 2.50 to Rs. 146.50 and Simplex Rs. 3.50 to Rs. 156. Svadeshis fell by Rs. 6.50 to Rs. 179.75 and Tata Mills by Rs. 3.25 to Rs. 39.25.

As stated already, electricity shares attracted good attention, the main bullish factor being that from the current financial year the return to these companies would be higher. Ahmedabad Electrics scored a gain of Re. 1.40 to Rs. 97.70. Bombay Suburbans were up by 75 nP at Rs. 108.75 and Surat Electrics by Re. 1.50 at Rs. 107.50. Tata Hydros improved by Re. 1.50 to Rs. 118.50. Tata Powers by Rs. 25 to Rs. 1,206.25 and Andhra Valleys by Rs. 52.50 to Rs. 1,142.50.

In the sugar group, Belapurs were prominent with a gain of Rs. 6.50 at Rs. 247. Phaltans were, however, lower by Re. 1.50 at Rs. 140 and Walchandnagars by Rs. 2.50 to Rs. 288.75. Cement shares were quiet in tune with the general trend. Associated Cements shed over the week Re.1.75 to Rs. 150.50 and Digvijays Re. 1.25 to Rs. 142.50. In the engineering section, Alcocks suffered a heavy drop today to a low of Rs. 267.50, as against the previous week's closing of Rs. 282.50, but gained a fraction to Rs. 270 at the close. Tata Locomotives improved from Rs. 159.25 to Rs. 163.25, but gave way to Rs. 160 at the close. Premier Constructions received good support and rose by Rs. 8 to Rs. 182.25. Among mining shares, Shivrajpurs lost Rs. 4 to Rs. 95.50, following reports that the bonus issue had been dropped. Indian Coppers shed 12 nP to Rs. 3.20.

In the shipping group, Scindias rallied from Rs. 17.16 to Rs. 17.88, before giving way to Rs. 17.36. Great Easterns lost 24 nP over the week to Rs. 20.04. Among miscellaneous industrials, Bombay Burmahs were conspicuous with the drop today to Rs. 546, after an earlier rise from Rs. 552 to Rs. 558.50. The fall was presumably due to fears about bonus shares. National Rayons came up to Rs. 227 from Rs. 219, on expectations of higher dividend, but dipped just at the close to Rs. 223.50. Tata Chemicals were lower by 20 nP at Rs. 14.16 and Tata Oils by 75 nP at Rs. 39.50. Wimcos changed hands Rs. 2.50 lower at Rs. 177.50.

Calcutta Stock Exchange

CALCUTTA, *9th April*

Steady conditions prevailed on the Calcutta Stock Exchange during the week under review and despite the profit-taking on Monday closing levels were higher on balance and gains were widespread. Prospects of a reduction in export duty on tea, including the good quality varieties, attracted attention in tea shares. In jute goods, foreign business done was substantial, and it was expected that stocks of goods with mills would decline from now on. This brought fair support to jute shares.

Indian Irons received fair attention. The Company's output during the year ended March 1958 was considered satisfactory, despite the interruption in production by the expansion plans. Pig Iron produced increased to 733,945 tons from 695,156 tons, representing an increase of 38,789 tons, while saleable steel fell by 33,163 tons to 410,558 tons, and steel ingots by 24,735 tons to 507,580 tons. It is generally expected that a dividend of 10 per cent. might be announced on the increased capital. Further, the anticipation of a bonus issue by capitalising the share premiums reserve enlivened activity.

Coal shares were active and the royalty concession accorded to the West Bengal and Bihar collieries continued to keep up enthusiasm. Burrakurs were maintained at Rs. 23.25. For the half-year ended December 1957 the Company's profit increased by Rs. 5.26 lakhs to Rs. 7.24 lakhs, despite a greater provision for taxation, and a new provision of Rs. 2.80 lakhs for wealth tax. The dividend has been maintained at 3¾ per cent. Amalgamateds had buyers at Rs. 17, as against Rs. 18.50 earlier and Karanpura Collieries at Rs. 91.50, as against Rs. 91.00. Central Indias improved to Rs. 7.69 from Rs. 7.28 on interested buying. Western Bengals scored to Rs. 5.87 from Rs. 5.12 and East Indias to Rs. 21.81 from Rs. 21.56.

An increase in the volume of business in jutes was recorded following interested buying in selected counters in anticipation of better dividends for the last accounting period. In addition, the opening of the official futures market and the smooth working there lent support to jute goods prices. Agarparas were taken to Rs. 8.18 from Rs. 7.87 and Chitavalsahs to Rs. 13.00 from Rs. 12.75. Indias hardened to Rs. 109 from Rs. 106, while Ganges, after moving to Rs. 49 from Rs. 48, closed lower at Rs. 47. Birlas firmed to Rs. 15.37 from Rs. 15.06. Nellimarlas were raised to Rs. 12.31 from Rs. 11.87 to close at Rs. 12.12.

Indian Irons opened at Rs. 21.61 and closed at Rs. 21.41 on profit-taking. Kumardhubis were higher at Rs. 8.56, as were Burn & Cos. at Rs. 334 before closing at Rs. 328. Indian Galvanisings were supported at Rs. 14.31, as against Rs. 14.12 earlier, while Jessop & Cos. gave way to Rs. 20.31 from Rs. 21.19 and Texmacos to Rs. 18.15 from Rs. 18.25.

Among miscellaneous industrials, Dunlop Rubbers rose to Rs. 25.12 from Rs. 24.75. Hindustan Levers were steady at Rs. 22.87. From Rs. 17.50 Indian Oxygens rose to Rs. 18.31 before giving way to Rs. 17.69. Hindusthan Motors were dealt with at Rs. 7.37, as against Rs. 7.19 earlier. Indian Cables sagged to Rs. 29.06 from Rs. 29.25, and India Steamships to Rs. 10.94 from Rs. 11.12. Orient Papers were better at Rs. 28.75 as were Aluminium Corporations at Rs. 10.31.

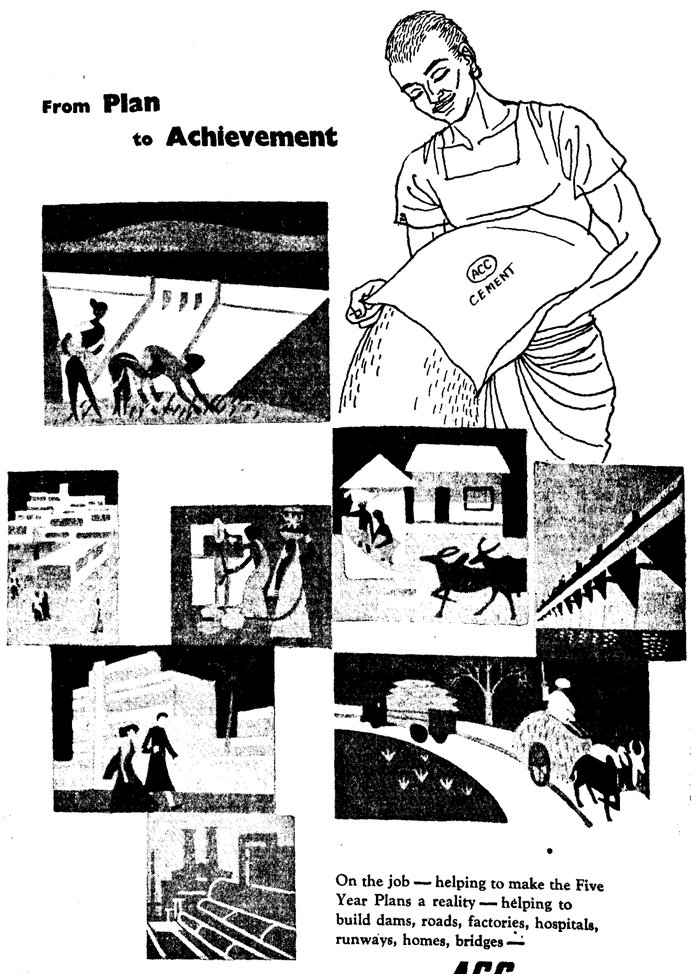
Madras Stock Exchange

MADRAS, *8th April*

The Madras Stock Exchange continued to rule steady during the week under review. Plantation shares elicited renewed buying support. Tea shares were in good form, thanks to hopes of an early announcement of cut in export duty on common teas. Rubber shares reacted favourably to persistent expectations of an upward revision in rubber prices. Several miscellaneous industrials changed hands at higher prices. Sugar, bank and electricity shares were fully maintained at last week's levels. Textiles, however, were distinctly dull.

Among tea shares in the planting section, Balanoors advanced by 50 nP to Rs. 16. Peermades put on 12 nP to Rs. 22.12. Alageswars were better by 10 nP at Rs. 2.60. Haileyburias gained a like amount to Rs. 18.50. Kalasas gathered 3 nP to Rs. 15.25. Blue Mountains were a shade better at Rs. 3.22. Chembras picked up 2 nP to Rs. 3.65. But Twyfords and Parksides shed 10 nP each to Rs. 13.50 and Rs. 16.70, respectively. Chandramalais eased by 8 nP to Rs. 3.17. Among coffee shares, Coffee Lands went up by 20 nP to Rs. 32.85. Savamalais were marked up by 35 nP to Rs. 4.65. Badras strengthened by 25 nP to Rs. 3.75. Consolidated Coffees, on the other hand, receded by 20 nP to Rs. 23.55. Anaparais retreated by 10 nP to Rs. 4.90. Among rubber shares, Cowcoodys evoked good support and firmed up by 90 nP to Rs. 9. Kalpettas rose by 50 nP to Rs. 21. Nilamburs and Nenmenys gained 25 nP each, the former to Rs. 12.75 and the latter to Rs. 16. Thirumbadis gathered 3 nP to Re. 1.53. Midlands, however, eased by 12 nP to Rs. 16.



On the job — helping to make the Five Year Plans a reality — helping to build dams, roads, factories, hospitals, runways, homes, bridges —

NEWS IN BRIEF

A CENTRE for giving specialised training to marketing secretaries, under a scheme sponsored by the Union Government, was declared open at Hyderabad recently.

The Government of India is exploring the possibilities of manufacturing important chemicals such as carbon black, accelerators and anti-oxidents used in the rubber industry.

The production of biscuits in India during 1957 amounted to 17,328 tons, a level which exceeded the target of 15,000 tons fixed for 1960-61 by the Planning Commission.

The total production of fish in India in 1956 is estimated at 1,012,250 metric tons. Out of the total catch, marine fish accounted for 7,18,697 tons and fresh-water fish for 2,93,553 tons.

The Union Government has withdrawn the restriction on free export of manganese ore. Accordingly, the shippers and mine owners are now allowed to utilise their quotas freely for export.

The total number of radio licences of all types in force in India on 31st December 1957 was 1,347,216. It represents an increase of over 150,000 as compared with the corresponding date of the previous year.

The Hindustan Machine Tool Factory maintained a record production of 402 machines valued at Rs. 1.6 crore, during the financial year ended 31st March 1958, as against the target of 131 machines set for the year.

Canada has agreed to supply India metals worth Rs. 5.75 crores as assistance under the Colombo Plan. These include 10,000 tons of aluminium, 7,500 tons of copper and 500 tons of nickel.

A Japanese radio company has installed the most modern meteorological radar at Dum Dum airport, Calcutta. It is designed to ensure safe and smooth flight by enabling the jet aircraft to descend away from storm centres and turbulent clouds.

Orders have been placed with a German firm for the supply and erection of a pilot plant to conduct experiments whether steel can be manufactured from iron ore with coal other than metallurgical coal.

The Agra Merchants' Chamber has, in consultation with the Forward Markets Commission, fixed ceiling and floor prices for rape seed *jeth* delivery at Rs. 28 and Rs. 20, respectively, in order to prevent unhealthy speculative tendency on the part of operators.

Imperial Chemical Industries (India) has launched a scheme to award two scholarships annually for post-graduate technical education in the next five years. Besides the scholarships, each of the value of £650, the selected candidates will also be given travelling expenses.

An offer for practical training of an Indian national in Paper Pulp Technology has been received from Finland under the auspices of the International Association for the Exchange of Students for Technical Experience. The duration of the training will be six months.

The total number of conciliation proceedings held by officers of the Central Government in respect of disputes arising in undertakings in the Central sphere during 1957-58 was 2,299. During the same period, the number of settlements brought about was 1,372 and the number of disputes referred for adjudication was 58.

With a view to giving some relief in excise duty on cotton fabrics produced by powerlooms, the Union Government has decided to treat those powerlooms employing more than 300 looms, on a par with composite mills. Those units which employ over 100 powerlooms but not more than 300 powerlooms have been included in the purview of the compounded levy system, as a temporary measure. The compound rate prescribed for the latter group is Rs. 90 per loom per shift per month. The revised rate came into force with effect from 1st inst.

The Government of India, having permitted State Governments to continue to levy sales tax on the sales and purchases of non-dutiable stocks of cloth, sugar, tobacco and its products, for a further period of three months, the scheme of voluntary compounding of sales tax formulated at the instance of the trade will continue to be in operation with the added benefit of the restrictions contained in section 15 of the Central Sales Tax Act, as these commodities become goods of "special importance" with effect from the 1st inst. The rate of compounding has been reduced to 2 per cent. where it was more at present, on stocks lying on hand as at the close of 31st March 1958. As a further incentive compounding at a rate of 1 per cent. only will be allowed in the case of medium cloth. The Government has also reduced the rate of composition on stock of goods intended for inter-State sales to ½ per cent. on the condition that the dealers furnish proof of inter-State sales of such goods later on.

From Abroad

The West German Shipowners' Association announced on the 1st inst. that 100 sea-going ships with a total cargo capacity of 333,000 tons, were laid up in West German harbours. Low freight rates are stated to be the cause for the increase in the number of ships laid up. At the beginning of the year, it is stated, 20 ships were involved.

An international convention to set up a new U.N. specialised agency for shipping has come into effect. It will be the Inter-Governmental Maritime Consultative Organisation (I.M.C.O.), established in accordance with a convention drawn up at the U.N. Maritime Conference in Geneva in 1948. A 12-member preparatory group will meet at U.N. headquarters later this spring to arrange the first session of the organisation's assembly.

World production of refined copper during February this year declined to 247,746 tons from 261,853 tons in the previous month. Output of crude copper also recorded a similar decline from 264,819 tons in January 1958 to 237,277 tons during the month under review. Deliveries to fabricators during February 1958 aggregated 224,176 tons as compared with 259,878 tons in the previous month. Stocks of refined copper at the end of February 1958 amounted to 470,464 tons, as against 448,900 tons at the end of January.

The current economic slump in the United States has led several major American firms to effect measures of economy in their organisations. Accordingly, the Frigidaire Division of the General Motors Company discharged 1,100 workers from its Dayton Ohio, factory. The Westinghouse Electric Company is expected to lay off 4,000 workers in the near future at its Columbus, Ohio, factory. Again, the General Electric Company has announced that 1,900 workers would be laid off for a week at its Louisville, Kentucky washing machine factory. However, 3,300 workers at its refrigerator factory have been told to return work.

PERSONAL

MR. Ali Yavar Jung, India's Ambassador to Egypt, left Bombay for Cairo last Friday.

Mr. Madanmohan Mangaldas has been elected President of the Ahmedabad Millowners' Association for 1958-59.

Mr. D. Samanta has been re-elected President and Mr. M. L. Agarwala, Vice-President of the Indian Colliery Owners Association for the year 1958-59.

Mr. W. R. Davis, M.B.E., Technical Director and Chief Engineer of the Metal Box Company of India Ltd., retires this month after 25 years' service.

Mr. P. A. Gopalakrishna, Joint Secretary, Union Cabinet, has been appointed Chairman of the Life Insurance Corporation in place of Mr. G. R. Kamat.

Mr. I. S. Chopra, at present Ambassador of India to Sweden, has been appointed Ambassador of India to Baghdad. He is expected to take up his new assignment in July.

Mr. H. V. R. Iengar, Governor of the Reserve Bank of India, left Bombay for London *en route* to Bonn (West Germany) to finalise deferred payment arrangements with West Germany for financing certain projects included in the second Five-year Plan.

Mr. Bijoy Prasad Singh Roy and Mr. P. Lakshmipathy Naidu, representatives of the Indian National Steamship Owners' Association, have been elected as Commissioner of the Port of Calcutta and Trustee of the Madras Port Trust, respectively, for a period of two years from 1st April 1958.

AGRICULTURAL PRICES AND INCOMES

A DEGREE of stability in agricultural prices is generally recognised as a *sine qua non* for ensuring a stable level of income to farmers. While the provision of facilities for agricultural improvement and promotion of credit and marketing arrangement will help improve productivity and raise farm incomes, they are obviously not a guarantee against fluctuation in farm incomes brought about by variations in agricultural prices. Additional measures are, therefore, called for to stabilise or support agricultural prices at levels which will ensure to the cultivators a reasonable return and to the consumer a fair price. But agricultural price support policy is a question requiring careful thought and study, because its influence and impact extend far beyond the confines of the agricultural sector. Agricultural prices are not only the determinant of the level of incomes of the agricultural population; they form the base of the entire cost structure of the country. The problem of the price-stabilising authority is, therefore, to strike a delicate balance between the interest of the producers and consumers. Due to a variety of reasons, it is difficult to work out any rigid formula which could serve as a guide for all times and all countries.

The F.A.O. Seminar on policies to support and stabilise agricultural prices in Asia and the Far East, which concluded its session on the 3rd inst. at New Delhi, has, therefore, done well to envisage only "limited objectives" for price stabilisation policies in the region. Large, sustained transfer payments for the purpose of agricultural price support from other sectors of the economy—such as is common in Western industrialised countries like the U.S.A.—were ruled out in view of the general low level of income and the dominance of the agricultural sector. In these circumstances, it was generally agreed, the aims of support and stabilisation policies should be the following: (1) To eliminate large fluctuation in agricultural prices which are harmful to both producer and consumer, and to contain them within a fairly narrow range which does not involve large and continuing transfer payments between agricultural and other sectors. Excessive price rigidity, it was felt, should be avoided in order to allow production to be adjusted gradually to changes in demand; (2) to improve marketing facilities and practices so that cultivators could be sure of equitable treatment and a larger share of the price paid by the consumer than what they obtain at present; (3) to provide a favourable economic and social climate for the expansion of agricultural production.

It was also felt that, in most countries, the use of a single formula to establish the desirable level at which agricultural prices should be stabilised, was inadequate and might lead to undue scarcity. On the other hand, it was recognised that purely *ad hoc* decisions were liable to be insufficiently based and, sometimes, unduly biased by one particular set of considerations. It was emphasised that many factors such as changes in production cost, prices of things farmers buy and sell, price of competing crops, trends in general wholesale price, cost of living and nature of demand should be taken into consideration. The seminar suggested that a systematised procedure should be established to provide reliable indicators for such factors and that, in fixing the price, the views of experts and representatives of all interests concerned should be sought. A decision on domestic price level for the main agricultural products arrived at by these procedures, it was felt, would have taken into account almost all the relevant factors.

The experts were of the view that in many Asian countries the most suitable method of implementing the price stabilisation policies for basic foods was probably by Government market operations, combined with the maintenance of a reserve or buffer stock and the regulation of imports and exports. A major difficulty in the region for effectively holding agricultural prices at the level desired by Government was the lack of liquid resources and the weak bargaining position of most producers. Government stabilisation operations would go far to cure this malady, particularly if the main procurement operations were undertaken at the minimum stipulated prices during the post-harvest slump.

It is difficult to evaluate the influence of price support and stabilisation measures on production. In most countries of the region, price policies for foodgrains have been aimed primarily at protecting the consumers and curbing inflation, sometimes at the expense of the producers. They cannot be said to have acted as an incentive to production. They might, on the other hand, have had the opposite effect. In few countries, according to the seminar, where incentive price policies have been tried, there were indications of a positive response. As regards cash crops, however, there was general agreement that production responded remarkably to price assurances and changes in price level. Price factors would have their greatest influence on medium and large farmers, producing largely for the market, although price stabilisation and support schemes may be expected to have an even greater effect on the marketed surplus than on total food production.

MARKET RESEARCH

Even those who are inclined to consider advertising of the kind common in western countries as mere industrial frivolity will readily concede that market research has a more constructive and useful role to play in modern commerce. In a highly competitive world, where consumer habits and preferences are ever changing, motivation research, which supplements intuition with scientific enquiry, enables one to establish why people buy or do not buy a particular product and what influences them in their choice. This in turn makes it easy for the producers to fashion the product according to the preferences of the consumers. Besides, market research provides valuable guidance for the splitting of advertisements among the different regions and the direction of sales and distribution efforts.

The role of market research in industrial production was lucidly outlined by Mr. S. H. Turner, Chairman of Hindustan Lever Limited, in his address to the annual general meeting of the Company held in Bombay on Monday. Illustrating his points from the experience of his Company, Mr. Turner pointed out that market research was a very important activity, having wide influence on the development of business. It involves a study of consumer preferences, habits and attitudes and helps one to decide how the immediate market operations are to be directed. It also involves an examination of market trends which indicates the future pattern of the market and assists in shaping future policies. The decisions on the improvement of the existing product or the development of new ones, the adoption of new selling methods and the application of new advertisement techniques, will be more effective if taken in the full and intimate knowledge of the market which continuous research is designed to provide. The *raison d'etre* of market research for large manufacturers of consumer goods, as Mr. Turner pointed out, is that economies come largely from mass production and mass selling of standardised products. This standardisation is successful only if the resultant product appeals in properties and performance to the largest number of people. The products must be such as will appeal to the millions of customers conditioned by different social, cultural and religious background. For this, a continuous study of consumer habits and preferences is essential.

Market research, through personal contact with and query of selected samples of consumers, enables the manufacturers to discover the variegated pattern of consumer preferences. The combined opinions and attitudes of the individuals composing the sample will with a slight margin of error, be representative of the entire range of consumers. Once a clear idea of the market is obtained it is also possible, as noted earlier, to split advertisement and distribution between the different regions in a judicious manner.

Besides the study of the peoples' current habits and preferences, a growing and important use of market research, according to Mr. Turner, is the study of possible modifications and changes in product so as to keep pace with shifts and changes in consumer requirements and habits. Consumers preference in a free economy are never static. This is particularly true of a country like India where society is changing fast and is likely to change even faster in future. Emphasising the value of market research, Mr. Turner observed:

"Our functions as a Company is to try and give the consumer products which he will like and which will do the job he wants them to do. Before we can do that we must find out what the consumer will like, what is the job he wants them to do, as distinct perhaps from the job we think he ought to want them to do, whether the products we can make come near enough his ideal, whether our methods of telling him about them are adequate. For all these purposes there is no tool more valuable than market research."

It is to be hoped that other manufacturers of consumer goods in this country will show a better awareness of the value of such research.

NATIONAL INCOME

There are no two opinions on the need for an effective curb on population growth as an important condition for rapid improvement in incomes and in levels of living. For, under the conditions prevailing in India, a high rate of population growth, as the Planning Commission very pertinently stressed in the second Five-year Plan, is bound to affect adversely the pace of economic advance and living standards *per capita*. Viewed thus, it is, indeed, gratifying to note that the rate of increase in India's population has slowed down of late. The actual population growth rate during the first year of the second Plan—that is, 1956-57—was lower at 1.21 per cent., as compared with that in the previous two years (1.31 per cent. in 1955-56 and 1.28 per cent. in 1954-55) and also with the assumed average annual rate of 1.25 per cent. in the Plan. The net addition to the population in that year was 4.64 million, as against 4.96 million in 1955-56 and 4.80 million in 1954-55. The total population was 387.68 million, that for the two previous years being 383.04 million and 378.08 million, respectively. These estimates are based on the figures relating to the national income of India and *per capita* income furnished in the fifth issue of the annual paper on national income released recently by the Central Statistical Organisation.

Thanks to the reduction in the rate of population growth thus and to the development in the different sectors of the country's economy as a result of the implementation of the Plan, the national income of India in real terms has gone up markedly, the actual extent of the rise in 1956-57 being as much as 5.1 per cent. (or Rs. 530 crores), the total national income at 1948-49 prices being Rs. 11,010 crores, as against Rs. 10,480 crores in 1955-56. The rise in national income was accounted for by both agricultural and non-agricultural sectors, the improvement at 1948-49 prices being Rs. 240 crores and Rs. 290 crores, respectively. In 1955-56, it will be recalled, there was a slight decline in agricultural output. The increase in the rate of national income was greater than that of population growth, so that the *per capita* income has increased from Rs. 273.6 in 1955-56 to Rs. 284.0 in 1956-57. The estimates for 1956-57, it is stated, are based on partial material and are subject to revision, while those for the previous year are based on the detailed method of estimation followed for the earlier years and show a slight increase over the preliminary estimates published last year.

The table below indicates the trend of population, national income and *per capita* income:

Year	Population (in millions)	National income (or net national output) at 1948-49 prices (Rs. crores)	*Per capita* income (or net output) at 1948-49 prices (Rs.)
1948-49	350.34	8,650	246.9
1949-50	354.99	8,820	248.6
1950-51	359.32	8,850	246.3
1951-52	363.85	9,100	250.1
1952-53	368.66	9,460	256.6
1953-54	373.28	10,030	268.7
1954-55	378.08	10,280	271.9
1955-56	383.04	10,480	273.6
1956-57*	387.68	11,010	284.0

* Preliminary.

It will be seen from the foregoing table that national income in real terms advanced by 18.4 per cent. during the first Plan period (1951-52 to 1955-56) and by 5.1 per cent. during 1956-57, the first year of the second Plan. The corresponding rise in *per capita* income was 11.1 per cent. and 3.8 per cent., respectively. Expressed at current prices, the national income stood at Rs. 11,410 crores in 1956-57 and Rs. 9,990 crores in 1955-56, or Rs. 1,800 crores and Rs. 380 crores higher than the 1954-55 level. The *per capita* income at current prices correspondingly rose from Rs. 254.2 in 1954-55 to Rs. 260.8 in 1955-56 and Rs. 294.3 in 1956-57. The larger increase at current prices than at constant prices was due to price changes.

Economic Prosperity in
South East Asia
offers new markets for your goods

Now is the time to trade with South East Asia, because the people there can afford to buy your goods. The Indian Overseas Bank Ltd., with branches in several strategic centres has made a special study of this important, growing market. You can depend on them to help you solve your trading problems.

IMPLICATIONS OF FOOD SHORTAGE

NEED FOR REMOVING SENSE OF INSECURITY AMONG LANDOWNERS

From Our Own Correspondent

NEW DELHI, *8th April*

DELHI LETTER

NO apology is required for reverting to the subject of food which, in some ways, is the most crucial but, at the same time, the most intractable problem of the second Plan, and for which the occasion is provided by the miserable performance of the Food Minister in the Lok Sabha last week. The crucial character of the problem is easily described. In the context of a foreign exchange situation which, according to the Planning Commission itself, is going to be difficult throughout the Plan period on account of the attempt to carry out a Plan of the dimensions proposed, an increase in food imports, as now planned, will involve an estimated net foreign exchange expenditure of about Rs. 200 crores in the remaining three years including the current year. If large-scale food imports are considered inevitable, that much drain on the country's foreign exchange resources will also be inevitable. For, as stated at the end of my last letter, "the vague public impression that because large quantities of foodgrains can be got on credit from the U.S.A. and Canada, there will be no substantial expenditure of foreign exchange in the years immediately ahead, is patently wrong."

As nearly two-thirds of Indian people are rice-eaters and the problem of shortage and prices has always been more acute in the case of rice than in the case of wheat, any amount of wheat imports is not going to counter the inflationary pressures generated by "development" expenditure financed by created money (which, according to latest information, has reached a record level of Rs. 400 crores in 1957-58 at the Centre alone) in rice-eating States unless, of course, habitual rice-eaters can be compelled to eat some quantity of wheat, whether they like it or not, under a system of statutory rationing. As compulsory rationing is not generally wanted, it is easy to see how foodgrain imports which will largely consist of wheat will not wholly absorb the inflationary impact of continued deficit financing unless, of course, domestic rice production is increased, by a concerted effort, in the remaining three years of the Plan to a level at which supply can match demand.

Likely Danger

If no such effort is made to increase rice production in the short run and if its shortage is allowed to become more acute in terms of both prices and supplies, there is the danger that the Kerala Chief Minister's expectation of Communist majorities in the next General Elections in Kerala, Andhra Pradesh and West Bengal may even be fulfilled. As public memory is proverbially short, it has to be recalled that the American Wheat Loan in 1951 mitigated the then serious food situation in the predominantly wheat-eating areas but had no effect on the predominantly rice-eating areas where Communists made some serious headway in the General Elections of early 1952 by exploiting the unrelieved food shortage which was reflected in a very low rice ration at the time. People's traditional eating habits are not so easily changed as some politicians and even some economists think they can be. The habitual wheat-eater's dislike for rice and the habitual rice-eater's dislike for wheat are matters of general observation, individual exceptions notwithstanding.

The will to bring about a substantial short-term increase in food production in general and in rice production in particular is virtually lacking in the Food and Agriculture Ministry, however hoarse the Prime Minister may cry in this regard. The pessimistic and defeatist approach of the Food and Agriculture Ministry is of a piece with its lack of interest in liquidating the food shortage problem in the short run. If anything, the Food section of that Ministry appears to be more interested in keeping that problem alive, for the very name of the "Food and Agriculture Ministry" suggests to one's mind that "Food" as a problem of shortage, imports and licensed distribution is accorded primacy over the more important "Agriculture" which is a problem of production. That the Food Minister, Mr. Ajit Prasad Jain, appears to think that food shortage is inevitable, that more food cannot be produced within the country on a large scale without chemical fertilisers and without completing major irrigation projects or utilising fully the irrigation potential already created, has always been known here. It is, therefore, not surprising that he propounded a novel economic theory in his reply to the Lok Sabha debate on the Budget demand for his Ministry:

> "Mr. Asoka Mehta in his speech has said that self-sufficiency in food in an expanding economy is illusive; the need for food depends upon the tempo of development. If I can use Browning's simile of ever-receding ideals to mundane economy, I would say that in a developing economy, self-sufficiency becomes an ever-receding ideal, because the demand for food depends upon the tempo of development, and if we are to increase the tempo of development, there is likely to be a lag between our production and our demands."

Defeatist Bias

This is a strange theory. It is all the more strange because it passes one's comprehension how an expanding economy, if it is really expanding, cannot involve an adequate expansion in food production. Where a high tempo of development is being financed by a large dose of "created money" the need is all the greater for expanding food production if only to absorb the inflationary impact of such deficit-financed development. This, of course, is ignored by Mr. Jain and the result is that his entire approach to "food" as a problem of production is vitiated by his theoretical defeatist bias. Throughout his speech he dealt with food as a problem of shortage, imports and distribution in the "short run" (that is, according to his own definition, "the rest of the Plan Period") though he conceded, probably to satisfy the Prime Minister, that the real solution lay in increasing production in the long run. And he also added, again in deference to the Prime Minister's wishes:

> "The other day, the Prime Minister said that he was confident we would be able to show better results than what the Foodgrains Enquiry Committee expected. I join my humble voice to that statement and I am sure that we will give a better performance."

One wonders if this parenthetical statement of the "humble voice" can be taken too seriously in the context of what it has authoritatively said at the very outset in support of Mr. Asoka Mehta's thesis about food production.

The Lok Sabha debate, like the Food Minister's speech, was barren of constructive and workable suggestions for dealing with food as a short-term problem of production. Where almost everybody is obsessed with the problem of food distribution and with the idea of doing big things like major irrigation projects and fertiliser factories, it is not surprising there is no realisation that the key to maximisation of production is in the hands of substantial landowners (with 30 acres and more each) who have, under their own personal cultivation, as much as 110 million acres out of a total of 132 million acres of cultivation-land owned by them in the country as a whole.

These landowners are patently unwilling to make any substantial re-investment in their lands by way of better soil management through proper manuring, land improvement and provision of well-irrigation, pump sets, etc., out of a sense of fear and insecurity engendered by the standing threat of dispossession through ceilings on landholdings. If, in terms of the Planning Commission's own land reform policy which has laid down that efficiently-managed forms with considerable permanent investments in them should be exempted from the operation of land ceilings, all these substantial owners are registered and given a three-year chance to acquit themselves creditably, a tremendous incentive will begin to operate and produce results by way of increased production on at least 75 per cent. of their lands. It would be a safe estimate that at least three out of every four substantial landowners would readily take advantage of the chance offered to them by way of a possible exemption from land ceilings and, without waiting for State help, deliver the goods.

CREDIT POLICY IN U.K.

RETURN TO EASY MONEY UNLIKELY

By Paul Bareau

AFTER exactly six months at the abnormally high level of 7 per cent., the Bank of England rate was reduced to 6 per cent. on 20th March. Some such move had been widely expected, but its exact timing took most people by surprise. The surprise was due to the fact that, given the crucial stage at which a number of important wage negotiations now stand, many people felt that no hint of relaxation should be given by the Government and the Bank of England on the all-important credit front.

This problem of timing, however, is relatively unimportant. The expectation of a downward move in the Bank rate was based on the wide recognition that 7 per cent. was a crisis rate, and that the crisis in which it was introduced and with which it was called upon to deal has disappeared.

The Bank rate was raised from 5 to 7 per cent. last September at a time when sterling was under severe speculative attack and the gold and dollar reserves were being emptied at ominous speed. The attack on sterling was halted on the very day after the Bank rate was increased. Over the ensuing six months, the gold and dollar reserves rose from £660,000,000 to £907,000,000 (including a drawing on the extra line of credit from the Export-Import Bank) and seem bound for higher levels still.

Deflation of Demand

In the domestic economy, the high Bank rate and the other measures of restriction that were applied with it have been eminently successful in damping down the fires of inflation. The cost of living has been virtually stabilised and there is less inflation in the market for labour. In the more difficult conditions that have obtained in the domestic market, British exporters have found a keener edge in their appetite for exports. The very satisfactory level at which British exports have been maintained during the past six months—a period during which world prices have been falling—must, in part, be attributed to the credit "squeeze," of which a high Bank rate has been an essential part and to the consequent deflation of demand at home.

This deflation of demand has not led to a recession in the true sense of the word. On the contrary, industrial production has been well maintained over a period when it has been falling in the United States and Canada, and unemployment in Britain is still around 2 per cent. of the labour force at a time when the proportion has reached several times that figure in North America and many countries of Western Europe. The high Bank rate during its six months of existence performed very well—far better, indeed, than its critics were prepared to anticipate when it was imposed.

There is a more profound reason why, now that the critical period is over, the Bank rate should have been brought below its 7 per cent. level. It is the unmistakable evidence of deepening economic recession in the United States and in a number of primary producing countries. The free world is now facing the prospect of modest deflation. In response to this change in the prevailing economic climate, interest rates are coming down. The crest of the "dear money" wave was passed some months ago in the United States, Germany and other countries.

There has inevitably been some delay in Britain's adherence to this trend. The initiative had to come from the countries which were not only creditors in their current balance of payments but had accumulated ample gold reserves. Before Britain could join the movement towards lower interest rates, foreign confidence in sterling had to be restored. It can be claimed that this has now been achieved.

Disparity in Interest Rates

This justifiable delay in joining the downward trend of international interest rates had, however, opened up an abnormal and undesirable gap between short-term interest rates in London and those prevailing in other international financial centres. This, in its turn, led to a considerable flow of foreign short-term capital seeking employment in the London market. This so-called "hot money" is of no particular use to the country. It seeks the shortest of short-term employment in such assets as Treasury bills on which a high rate of interest has been paid. It, therefore, burdens the current

India's expanding steel industry needs
huge quantities of blast furnace coke,
yet precious reserves of coking coal must be
carefully conserved. Millions of tons
of coal a year must therefore be scientifically
washed and blended for steelworks coke ovens.

Simon-Carves have half a century's world-wide experience of the complete design and construction of large-scale plants for coal washing, grading, blending, storage and handling. In conjunction with The Automatic Coal Cleaning Company they offer the most advanced range of mechanical equipment for Baum jig washing and for two-product and three-product dense medium separation. These great resources are being applied to the construction of the complete coal preparation and blending plant for the new Durgapur steelworks —where Simon-Carves are also building the new coke ovens, by-product plant, sulphuric acid plant and power station.

FOR RAIL PASSENGERS

DOES YOUR LUGGAGE CONTAIN JEWELLERY, PRECIOUS STONES, WATCHES, SILKS, SHAWLS, CAMERAS, MUSICAL INSTRUMENTS OR OTHER "EXCEPTED ARTICLES"?

If so, you are advised that when you entrust such articles to the care of the Railways for carriage and the value of such articles in any one package exceeds Rs. 300/-, you should

(1) declare their value in writing at the time of booking, and

(2) pay a percentage on the value so declared over and above the normal freight charges,

failing which the Railways will not accept liability for the loss, destruction, deterioration or damage of such articles. The articles named above and many others you will find listed as "Excepted Articles" in the Railways Time Tables and Guide.

The Station Master of the nearest station will give you detailed information if you contact him.

CENTRAL AND WESTERN RAILWA

SUSTAINING THE STERLING AREA

U.K. WILL HAVE TO PLAY A LARGER PART

HOW to sustain the sterling area as a whole in a situation of increasingly keen export competition? This is the question confronting the United Kingdom at present. The latest *Economic Survey* (for 1958), prepared by the British Treasury, points out that, while the U.K. is expected to earn a substantial current balance of payments surplus in 1958 with some improvement in invisible earnings, the export earnings of the rest of the sterling area are likely to remain depressed. The *Survey* has drawn special attention to three main factors causing anxiety in relation to the U.S. recession. First, the rest of the world (except Germany) has been losing gold and dollars in the past year, so that it is not well placed now to ride out a period of difficulty. Secondly, the fall in commodity prices is already affecting the economies of primary producing countries, both inside and outside the sterling area. Thirdly, world industrial production is likely to be lower in the first half of 1958 than in the corresponding period of 1957, since there is no prospect of the expansion in Europe offsetting the efforts of U.S. recession, as it did in the year 1953-54.

In view of these factors, the U.K., the *Survey* emphasises, will have to play a larger part in sustaining the sterling area as a whole. An important point stressed here is that, in the context of the increasingly keen export competition, the British exporters will be able to hold their own only if they can keep prices down. The *Survey* would appear to feel that prospects of keeping down prices are quite bright, as witness its remarks reproduced below:

"Fortunately, there is some scope for price reductions in U.K. manufactures, following the 8 per cent. drop in the cost of imported raw materials last year. The long upward movement of U.K. export prices has been checked and some reductions are likely. The economic climate in the U.K. itself is now less inflationary than it has been for several years, and this has been reflected in increased confidence in sterling. These trends are likely to continue in 1958. The fall in demand in relation to capacity, which took place last year, will probably continue this year. In real terms, Government spending on goods and services will be almost unchanged, and the rise in public investment which was rapid in the second half of last year, is being checked. Private fixed investment will slow down and there is likely to be less investment in stocks this year than last."

The *Survey* points out that many oversea sterling area countries have already begun to draw heavily on their accumulated sterling holdings. In the second half of 1958, the total of these holdings declined by £226 million, after a rise of £69 million in the first half. From one point of view, these drawings, it is said, are helpful to the U.K. and other countries, since the process maintains exports and helps in the defence of the U.K. and the world against a deflationary spiral. The *Survey* is confident that, because the United Kingdom's current trading position should be favourable this year, the rest of the sterling area will be able to draw on its sterling balances without imposing too great a strain on the gold and dollar reserves; sterling is strengthened by such a reduction of liabilities as well as by an increase in reserves.

Reserves Rise Markedly

That the aforesaid note of confidence is quite justified is clearly borne out by the highly satisfactory figures relating to the sterling area's gold and dollar reserves. The month of March 1958 witnessed a marked rise of $231 million in these reserves, the total of which at the end of the month stood at $2,770 million. The reserves have thus now climbed back to the level they were at in December 1954. The rise of $231 million in March was more appreciable than that in the preceding two months; the actual increase was of the order of only $135 million in February and $131 million in January. The total expansion in reserves for the whole of the first quarter of 1958 comes to $497 million.

The *Economic Survey* takes a reasonably optimistic view of the prospects for U.K. economy in the current year, while, at the same time pointing out that Britain's economic prosperity is inevitably bound up with the course of world economic developments. International trade, of course, vital to the U.K. economy. Britain's ability to influence world economy positively depends on its own economy. The economy of Britain, it is said, is well poised for an expansion of output, the considerable reserves of productive capacity which have been built up. If these reserves are fully employed, they can well be a useful factor in checking a world deflationary trend.

Latest Trends

The following table gives an idea of the latest trends in Britain's economy:

	1957	1956	1955
Company Finance and Investment (In £ million)—			
Gross trading profits of companies operating in U.K.	3,294	3,134	2,986
Non-trading income plus trading profits earned abroad	425	380	389
Total	3,719	3,514	3,375
Gross fixed capital formation at home	1,262	1,149	983
Gross Fixed Investment (£ million, 1948 prices)—			
Vehicles, ships and aircraft	352	321	290
Plant and machinery	840	778	769
Dwellings	439	448	459
Other new buildings and works	692	661	598
Total	2,323	2,208	2,116
Balance of Payments on Current Account (In £ million)—			
Imports	3,605	3,475	3,442
Exports	3,508	3,414	3,076
Visible balance	—97	—61	—366
Government (net)	—143	—167	—136
Other invisibles (net)	+477	+494	+433
Current balance	+237	+266	—69

The U.K.'s domestic product—that is, the money value of output, including services produced at home—rose by £1,046 million, or 6 per cent., in 1957, according to the White Paper on national income and expenditure published in London the other day. Adding in the net income from abroad, the gross national product rose by £1,069 million to £19,188 million—a rise of nearly 6 per cent. The total compares with £18,119 million in 1956 and £16,834 million in 1955. Personal savings increased both absolutely and as a proportion of disposable income in 1957, reaching a record level of over £1,600 million. This sum represents about 10-11 per cent. of personal income after tax and equals nearly two-fifths of the total savings. Gross fixed investment increased by £273 million, or 9 per cent., and investment in plant, machinery and vehicles, and new constructional building increased by £278 million, or 11 per cent. In 1957, gross fixed investment took 18 per cent. of gross national product, as compared with 15 per cent. in 1951, 14 per cent. in 1948, and 13 per cent. in 1938. In all, gross investment in fixed assets and stocks at home plus net investment abroad increased in 1957 to £4,050 million, and took 21 per cent. of gross national product, as compared with 17 per cent. in both 1948 and 1951.

Two important facts emerge from these estimates of national income and expenditure. They are the striking rise in personal saving and the material increase in gross fixed investment, particularly investment in the manufacturing sector. The steady rise in the gross national product continued in 1957 and, although given in current money terms, reflects a real rate of growth. With such a high rate of personal saving and a satisfactory increase in the rate of investment, the prospects for economic expansion seem favourable so far as domestic economic circumstances are concerned.

The U.K. had a current surplus of £122 million in its balance of payments during the six months ended December 1957, according to the White Paper on balance of payments 1955-57. This compares with a surplus of £98 million for the corresponding half of 1956. The improvement was entirely in the current surplus with oversea sterling countries, which rose to £228 million. The present estimate for 1957 as a whole shows a surplus of £237 million—£29 million less than the revised figure of £266 million for 1956.

Long-term capital transactions show a marked change between the two halves of 1957 on both Government and private account, making in total a reduction in the net capital debit from the unusually high figure of £168 million in January-June to the extremely low figure of £21 million in July-December. The fall on private account was the result of the steps taken in July to end the flow of capital into dollar securities through sterling area free markets, which had previously been abnormally large. The Government account benefited from a drawing on the Export-Import Bank line of credit as well as from arrangements made to defer payment on the U.S. and Canadian loans. The balance of current and long-term capital transactions showed a total surplus of £48 million, as compared with £35 million in 1956.

SOUTH INDIAN BANK LTD.

The working results of the South Indian Bank Ltd. (H.O.: Trichur, Kerala, General Manager: Mr. M. V. John) for the year ended 31st December 1957 disclose that the Bank has made commendable progress during the year. It has enlarged its deposit resources by Rs. 60 lakhs, its advances have gone up by about Rs. 33 lakhs and its liquid assets stand strengthened by Rs. 7 lakhs. The profit, too, has risen by Rs. 65,000 to a record level of Rs. 3.24 lakhs. With this rise, the upward trend in the profit has been maintained for the third year in succession and has enabled the Bank to more than make good the shrinkage in profit suffered in the two years 1953 and 1954, when it fell from Rs. 2.70 lakhs to Rs. 2.12 lakhs. What is more, the profit has been doubled in the course of the last seven years.

Consequent on the improvement in profit, the Directors have increased the provision for taxation from Rs. 1.20 lakh to Rs. 1.50 lakh and have raised the allocation to the reserve fund from Rs. 55,000 to Rs. 70,000. A sum of Rs. 10,000 has been set aside to the contingency fund, which did not receive anything in the previous year. The distribution to the shareholders has been maintained at 9 per cent. per annum, free of income-tax, but this is on a higher capital of Rs. 10.74 lakhs.

Reflecting the expansion in the Bank's business is the rise in gross income from Rs. 17.82 lakhs to Rs. 22 lakhs. Interest and discount earned has gone up from Rs. 15.11 lakhs to Rs. 19 lakhs and commission and exchange from Rs. 1.88 lakh to Rs. 2.24 lakhs. On the expenditure side, interest paid is higher at Rs. 12.62 lakhs, as against Rs. 10.07 lakhs, and expenses have crept up from Rs. 4.91 lakhs to Rs. 5.87 lakhs.

Established in 1929 in Trichur as a private limited company with an initial authorised capital of Rs. 1.25 lakh and a paid-up capital of Rs. 22,000, the South Indian Bank was converted into a public limited company in 1939 and, in 1946, it became a Scheduled bank. During these 28 years of its history, the Bank has been able to overcome successfully many tribulations and expand its business. It has now 24 branches. In the very first year of its working, the Bank earned a profit of Rs. 3,700 and the profit has now grown to Rs. 3.24 lakhs. It has maintained an unbroken dividend record, having made respectable distributions from the very start. Commensurate with the growth of its business, the Bank has increased its paid-up capital several times and it stands as at the close of 1957 at Rs. 10.74 lakhs. Its reserves, including the addition made from the profit of 1957, aggregate Rs. 7.07 lakhs.

The progress of the Bank's financial position in recent years is indicated by the following comparative table:

(In lakhs of rupees)

	As on 31st December			
	1957	1956	1955	1954
Paid-up capital	10.74	9.40	8.75	8.75
Reserves	7.07	6.49	5.94	5.53
Deposits	3,67.01	3,07.10	2,58.63	2,04.88
Borrowings from banks	4.01	25.45	0.07	0.41
Acceptances (*contra* item)	42.20	37.83	34.59	31.00
Advances	2,13.59	1,80.97	1,59.75	1,17.77
Investments	1,23.90	1,20.70	68.30	42.01
Cash	46.99	43.19	42.16	56.46
Balance-sheet total	4,51.45	4,04.08	3,21.60	2,60.24

The Bank's deposits have grown three times in the course of the last seven years. Of the total deposits, at Rs. 3.67 crores on 31st December 1957, as much as Rs. 2.69 crores or about 80 per cent. constitute time deposits. This is not a peculiar feature of the South Indian Bank only; it is a common feature of banks in Kerala. Savings bank deposits amount to Rs. 39 lakhs and current and contingency accounts aggregate Rs. 59 lakhs. Advances, at Rs. 2.14 crores, constitute 58.2 per cent. of the deposits. The Bank is also maintaining a fairly high level of liquidity, the ratio of investments and cash to deposits at the end of 1957 being 46.6 per cent.

U. CO. BANK STEPS UP DIVIDEND LEVEL

PROFIT ALSO RISES

TO the small group of Scheduled banks which have raised their dividend levels for 1957 belongs the United Commercial Bank Ltd. (General Manager: Mr. S. T. Sadasivan, Calcutta). Many of the banks have had to toe a cautious line in respect of their distributions and maintain the dividends, after having raised them last year, on account of the fact that the pace of increase in their profits has considerably slowed down. The profit of the United Commercial Bank for 1957, no doubt, follows the general trend. Nevertheless, if the Directors have recommended an increase in the distribution, it is because the Bank's dividend record has all along been moderate. Further, the dividend is being raised by only ½ per cent. to 7½ per cent., after having been stepped up by 1½ per cent. last year. With this increase, the dividend has been raised successively in the course of the last four years from 4 per cent. paid for 1953.

The small increase in dividend is only in consonance with the smaller increase in the Bank's profit for the year. Thus, the Bank's profit for 1957, at Rs. 59.70 lakhs, represents an increase of only Rs. 3.18 lakhs over the year, while in the previous year it had recorded a rise of no less than Rs. 19.83 lakhs to Rs. 56.52 lakhs. The gross income has, no doubt, gone up by as much as Rs. 62.83 lakhs to Rs. 366.19 lakhs. The rise would have been much sharper but for the fall of Rs. 12.47 lakhs to Rs. 107.67 lakhs in income from commission and exchange. Income from interest and discount has risen by Rs. 75.26 lakhs to Rs. 257.24 lakhs. As against this, interest paid on deposits and borrowings has increased by Rs. 45.31 lakhs to Rs. 163.12 lakhs and other expenses by Rs. 14.45 lakhs to Rs. 136.72 lakhs.

The progress of the Bank's working during the last three years is well illustrated by the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Interest and discount earned	2,57.24	1,81.98	1,63.90	1,42.42
Commission and exchange	1,07.67	1,20.14	78.53	73.17
Interest paid	1,63.12	1,17.81	86.29	76.48
Expenses	1,36.72	1,22.27	1,13.65	1,03.33
Depreciation and repairs	6.65	6.76	7.07	6.44
Profit	59.70	56.52	36.69	31.06

To reserve fund	19.00	20.00	8.50	6.50
„ bonus to staff	7.00	6.50	4.00	2.50
Dividend	15.00 (7½%)	14.00 (7%)	11.00 (5½%)	10.00 (5%)
Carry forward	0.49	0.29	0.28	1.09

	As on 31st December			
	1957	1956	1955	1954
Capital	2,00.00	2,00.00	2,00.00	2,00.00
Reserves	1,34.00	1,15.00	95.00	86.50
Deposits	61,07.45	52,14.76	47,69.24	40,42.18
Borrowings from other banks	34.05	8,50.12	4,25.56	3,92.30
Acceptances (*contra* item)	15,76.10	18,17.30	19,03.53	8,89.44
Advances (including bills purchased and discounted)	37,69.09	38,45.32	27,59.19	24,64.50
Investments	19,94.21	19,43.17	22,16.73	17,15.78
Cash	8,28.40	7,50.88	6,21.16	6,07.72
Balance-sheet total	90,22.61	91,51.42	81,68.74	62,16.20
Ratio to deposits of—	%	%	%	%
Advances*	61.7	73.7	57.8	60.9
Investments*	32.1	27.8	37.6	33.6
Cash	13.5	14.4	13.0	15.0

* Ratio arrived at after taking into account the securities earmarked against borrowing from other banks.

It will be observed that the Bank's reserve fund stands considerably strengthened, thanks to the addition of no less than Rs. 47.50 lakhs from the earnings in the last three years alone. The upward trend in deposits has been maintained with a further increase of Rs. 8.93 crores during the year under review. As in the case of most other banks, the bulk of this expansion had occurred in high interest-bearing fixed deposits, which have gone up from Rs. 22.58 crores to Rs. 29.48 crores. Savings bank deposits are higher at Rs. 5.81 crores, as against Rs. 5.22 crores. Current and contingency accounts have risen from Rs. 24.35 crores to Rs. 25.78 crores.

Another notable feature disclosed by the Bank's latest balance-sheet is that the advances are a shade lower than those at the close of 1956. This is mainly due to the fall in bills purchased and discounted from Rs. 15.92 crores to Rs. 13 crores. Loans, cash credits and overdrafts have, however, gone up from Rs. 22.53 crores to Rs. 24.69 crores. The decline in total advances, albeit small, together with the rise in deposits, has brought down the credit ratio considerably.

SHARP RISE IN PROFIT OF MERCANTILE BANK

DIVIDEND RAISED

THE year 1957 proved to be a difficult one for foreign banks operating in India and other Eastern countries. Foreign exchange shortages and restrictions on imports, and on exports in some of the countries, tended to restrict business activity and made trading conditions none too easy. It is heartening to note that, despite the difficult conditions, the Mercantile Bank Ltd., which was named till the end of last year as the Mercantile Bank of India Ltd., has earned a substantially higher profit. The profit (after providing for taxation and after making allocations to contingency accounts, out of which full provision has been made for bad and doubtful debts and any other diminution in the value of assets) has jumped by £94,759 to £331,243. This is probably the first time that the Bank's published profit has crossed the £300,000-mark.

The Directors are satisfied that the Bank's inner reserves are adequate enough to cover every likely contingency and that it is no longer necessary to build up these reserves at the same rate as before. Accordingly, they have not made any additional allocation to the contingency account which had received £50,000 in the previous year. No allocation has been made to write off freehold banking premises and property, for which purpose a sum of £50,000 was used last year. The saving on these two accounts has, however, been used to strengthen the reserve fund, which has thus received £100,000, as against *nil* a year ago. The officers' pension fund receives, as in the previous year, £13,000. In short, the total amount of appropriations, other than the dividend, is unchanged. The larger profit, therefore, permits of a larger distribution to the shareholders. The Directors had declared, in August last, an interim dividend of 12½ per cent. on the then paid-up capital of £1.47 million. They have now recommended a final dividend of 6¼ per cent. on a capital doubled subsequently by the capitalisation of £1.47 million, following the reorganisation of the Bank's capital structure. On the old capital the final distribution also represents a dividend of 12½ per cent., thus making a total dividend of 25 per cent., as against 14 per cent. paid for each of the previous three years on the same capital. These appropriations leave a surplus of £231,452 to be carried forward, including £224,521 brought in from 1956.

The Bank's progress during the past three years is fully reflected in the following comparative table:

(In thousands of £'s sterling)

	As on 31st December			
	1957	1956	1955	1954
LIABILITIES (Main)				
Capital	2,940	1,470	1,470	1,470
Reserves	2,100	2,000	1,750	1,750
Unappropriated surplus	231	224	219	200
Notes in circulation	219	219	259	278
Deposits and other accounts	66,885	69,440	66,084	63,210
Bills payable	1,118	1,317	1,085	1,137
Acceptances (*contra* item)	1,190	124	195	445
ASSETS (Main)				
Cash	14,969	9,778	10,043	14,013
Investments	14,995	17,916	20,877	16,180
Securities against note issue	371	371	371	371
Bills receivable	14,988	17,281	16,509	15,815
Loans and advances	28,986	28,756	23,362	21,068
Fixed assets	718	617	652	652
Balance-sheet total	76,273	74,897	72,055	68,504

The capital of the Bank stands doubled to £2.94 million, made up of 2.94 million shares of £1 each, consequent on the capitalisation of a sum of £1.47 million from the reserves, as stated above. Formerly, the Bank's capital comprised 150,000 'A' shares and 150,000 'B' shares of £5 each, on each class of which a sum of £2 10s. per share was paid up and 720,000 "C" shares of £1 each fully paid up. In November last, the uncalled liability on the "A" and "B" shares was abolished, the rights attached to these two classes of shares were modified and the whole of the issued capital was converted into one uniform class of shares of £1 each fully paid-up. Accordingly, the reorganised capital structure stood at £1.47 million, made up of 1.47 million shares of £1 each. Following this, a sum of £1.47 million was capitalised and issued as capital bonus in the ratio of one share for every one held. The reorganisation of capital became effective on 31st December 1957. The Directors replenished, the reserve fund by transferring £1.47 million from the inner reserves, thus restoring the reserve fund to the level prior to the reorganisation of the capital. With the transfer of £100,000 from the profit for 1957, the reserve fund stands now at £2.10 million.

The Bank's deposits as at the end of the year are lower by £1.11 million, thus reversing the upward trend noted in the previous three years. Acceptances on behalf of customers have, however, risen sharply. On the assets side, loans and advances are only a shade higher, while bills receivable have declined by £2.30 million and investments (other than securities lodged against note issue) by £2.92 million. Cash balances have been strengthened by £5.19 million thus more than making good the shrinkage suffered in the previous two years.

PUNJAB NATIONAL FARES WELL

PROFIT CROSSES ONE-CRORE MARK

REFLECTING the generally improved conditions that prevailed during 1957 in trade and industry, the Punjab National Bank Ltd. (General Manager: A. M. Walker, Delhi), the oldest name in Indian national banking and one of the biggest Scheduled banks in India, has shown a remarkable expansion in all its operations during 1957. As is graphically represented in the Directors' report and statement of accounts for the year, the index of deposits (1950=100) has jumped from 241 at the end of 1956 to 282 at the end of 1957, the increase being the highest in the last seven years. Over the year, the deposits have expanded by Rs. 18.23 crores to Rs. 124.61 crores, a record figure for the Bank; considering the fact that, during the year, there was keen competition among banks to attract deposits, the expansion noted can be considered a notable achievement. As is well known, during the year, the Central Government as well as the State Governments came into the money market for large borrowings at attractive rates of interests, which had the effect of channelling the flow of funds to time deposits rather than to demand deposits. This trend is reflected in the fixed deposits of the Punjab National Bank going up by about Rs. 12 crores during the year to Rs. 60.06 crores, while demand deposits have gone up by only Rs. 3.47 crores to Rs. 33.28 crores. Despite keen competition, the Bank has been successful in attracting higher savings bank deposits which stood at Rs. 30.87 crores at the end of 1957 compared with Rs. 28.12 crores at the close of the previous year.

The following comparative table summarises the progress made by the Bank during the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Interest and discount earned	5,18.45	4,01.62	3,43.20	2,75.64

Ratio to deposits of—	%	%	%	%
Advances	54.5	51.6	46.6	42.8
Investments	31.1	45.4	50.6	46.8
Cash	19.6	11.6	10.3	14.9

* The final dividend of Rs. 2.50 is on the increased capital.

As there was also heavy demand for funds during the year, advances have shown a substantial increase of Rs. 13 crores to Rs. 67.96 crores over the year. Presumably, in anticipation of further expansion in the demand for funds, investments have been liquidated to the extent of about Rs. 10 crores and the cash position strengthened by about Rs. 12 crores. The overall improvement in the resources of the Bank has also enabled the Bank to reduce its borrowings from other banks to a considerable extent.

The expansion in the demand for funds and the higher interest rates that prevailed during the year have meant a sharp increase in the earnings of the Bank, though to some extent, the benefit of higher earnings has been reduced by the higher rates which the Bank has had to pay on its deposits. Thus, interest and discount earned have gone up by about Rs. 117 lakhs to Rs. 518 lakhs during the year, an increase of about 29 per cent., while interest paid has also gone up by about Rs. 74 lakhs to Rs. 267 lakhs, an increase of about 38 per cent. Expenses have also increased, a substantial part of it being in

salaries, etc. Nevertheless, it is gratifying to note that the Bank has been able to earn a substantially higher profit, which has crossed, for the first time in the Bank's history, the Rs. 1-crore mark. At Rs. 111.07 lakhs, the profit exceeds the previous year's record (of Rs. 87.85 lakhs) by Rs. 23.22 lakhs. As will be seen from the table above, the Bank's profit has more than doubled itself in three years.

The provision for taxation has been raised from Rs. 27.50 lakhs to Rs. 50 lakhs. The bonus to staff has claimed a higher amount than before and there has been slightly reduced allocation to reserves. The Directors have, however, been able to recommend the stepping up of the dividend from 16 per cent. to 20 per cent. by raising the interim as well as the final distribution from Rs. 2 to Rs. 2.50 per share of Rs. 25. The final dividend of Rs. 2.50 per share is, however, on the increased capital, which was brought to the present figure of Rs. 125 lakhs during the year by the capitalisation of the share premium amount of Rs. 37.50 lakhs from the reserves. The dividend record of the Bank is excellent. For the years 1950 and 1951, the Bank paid 4 per cent. The rate was raised to 6 per cent. for 1952 and has been steadily stepped up since then. Thus, for 1953, it was raised to 8 per cent. and further to 12 per cent. for 1954, 14 per cent. for 1955 and 16 per cent. for 1956. Now, for 1957, it has been increased further to 20 per cent.

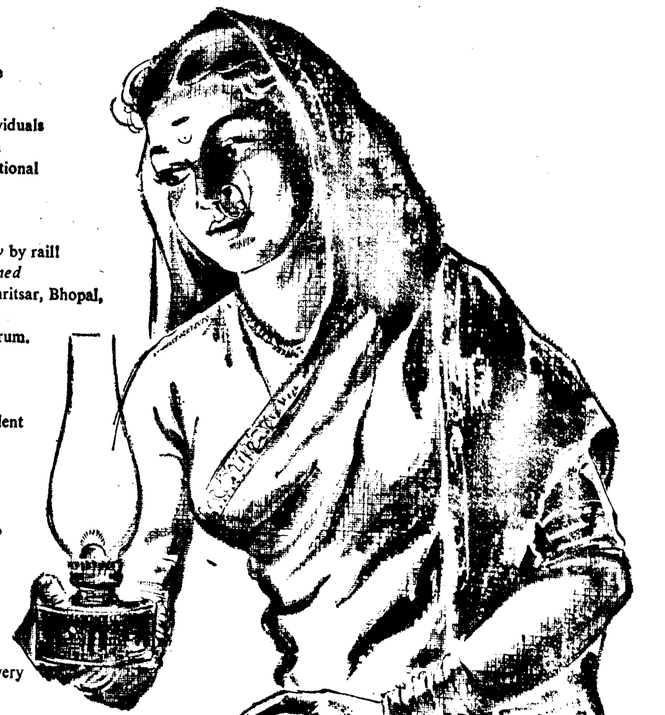
PRODUCTIVE INVESTMENT IN INDIA

The proportion of productive investment (that is, expenditure leading to formation of fixed capital assets) to the total outlay of Rs. 1,960 crores in the public sector during the first Five-year Plan period was about 75 per cent., the sum actually spent being Rs. 1,500 crores. This was revealed by Mr. S. N. Mishra, Union Deputy Minister for Planning in his reply to a question in the Lok Sabha on the 3rd inst. According to Mr. Mishra, the net capital formation in and through the Central Government during the first year of the second Plan is estimated at Rs. 511 crores and for 1957-58 at Rs. 722 crores. Estimates of net capital formation financed from the States' own resources are not available. It is not possible to calculate the net return on productive investment so far per annum. But investment in dams, power houses, factories, railways, etc., add to the productive capacity of the country and is reflected in the growth of the economy. Referring to the total amounts so far raised by way of loans in respect of these productive investments and how these loans were proposed to be paid back, the Minister observed:

"The borrowing operations of Government have to be linked not to productive investment as such but to the total public expenditure relatively to receipts. Over the five years of the first Plan, net market borrowings amounted to Rs. 204 crores and small savings to Rs. 237 crores. Foreign loans utilised aggregated Rs. 102 crores. Over the two years of the second Plan, receipts from net market borrowings and small savings have been Rs. 213 and Rs. 129 crores, respectively. The foreign loans as shown in the budget amounted to Rs. 89 crores. These loans have, in the last analysis, to be repaid out of the increases in production arising from the investments undertaken.

The Australian Government proposes to raise $25 million on the New York market in the week after next. This will be its first approach to New York for a loan wholly of new money, as against conversions, during the last 30 years. The proceeds of the loan will be applied towards Commonwealth and State borrowing programmes for the current financial year. Australia has had several refinancing issues in New York since the war and, in the past eight years, has obtained loans amounting to $318 million from the World Bank. In March last year, Australia obtained a loan of $20 million in New York most of which was required for conversions and two-thirds of the $25 million loan of the previous June was used to retire maturing bonds.

SITA HAS NEVER SEEN A TRAIN!



True! Sita has never seen a train! Yet she knows that a train brought the oil that burns in her humble lamp in the far off village where she lives!

Yes, Indian Railways serve Sita and 38 crores of other individuals like her in their daily lives—intimately yet unobtrusively, in a multitude of ways. They serve, too, every sector of the national economy, for which movement is life.

We Carry 15 Cities Daily!

Think of it! One per cent of India's population travels *daily* by rail! About 3,800,000 passengers *daily*—equivalent to the *combined* population of these 15 Indian cities: Ajmer, Allahabad, Amritsar, Bhopal, Cuttack, Gwalior, Howrah, Jabalpur, Jaipur, Mysore, Patna, Poona, Rajkot, Tiruchirapalli, and Trivandrum.

We Carry Over One Crore Maunds Daily!

The Indian Railways also carry over 360,000 tons (more than one crore maunds) of vital supplies *daily*—the equivalent in weight of foodgrains which all the people living in the 15 cities named above normally consume in 200 days! Besides life-giving food for the people, they carry precious coal and other raw materials for industry, finished goods for far-flung markets and a countless variety of other cargo which helps to maintain the country's trade and commerce, imports and exports in good shape.

Over the past 105 years, wherever the Indian Railways have gone, prosperity has followed in close step. Daily, they run nearly 7,000 passenger and goods trains. Without them, today, the Nation's throbbing economy, its very heartbeat, would come to a breathless standstill!

REPORT OF THE AUDITORS

We have audited the foregoing Balance Sheet of the Indian Branches of Comptoir National D'Escompte de Paris, as at 31st December, 1957, and also the foregoing Profit and Loss Account of the Indian Branches of the Bank for the year ended on that date in which are incorporated the returns of the Calcutta Branch of the Bank audited by other Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of Section 211 and sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit;

(b) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books, and proper returns adequate for the purpose of our audit have been received from the Calcutta Branch;

(c) the Balance Sheet and Profit and Loss Account of the Indian Branches of the Bank dealt with by this report are in agreement with the books of account and the returns;

(d) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis and read with the notes appearing thereon, the said Balance Sheet gives a true and fair view of the state of the affairs of the Indian Branches of the Bank as at 31st December, 1957, and the Profit and Loss Account gives a true and fair view of the profit of the Indian Branches for the year ended upon that date.

BOMBAY, 28th March, 1958.

SWITCH TO SHIFT WORKING IN MILLS

PLANS UNDER WAY TO STREAMLINE COTTON AND RAYON WEAVING

From A Special Correspondent

MANCHESTER, 1st *April*

MANCHESTER LETTER

REASONS of space prevented more than a brief summary being made last week of the lengthy survey of current conditions in the industry presented by Mr. Ernest Hirst as President of the Master Spinners' Federation. Such palpable distortions of the truth as stories of a dwindling intake of juveniles and failure of the trade to re-equip suitably need constant denial, if they are to be finally disregarded by outsiders. Pay and conditions for youngsters in the mills are better than ever before and recruitment has been well maintained. As for modernisation, Lancashire has not lagged behind, but has streamlined its industry, as Mr. Hirst declared. Concentration in the future is clearly to be on the more effective units.

Shift work is bound to be a bone of contention between its advocates and those who believe it to be impracticable in an industry so largely staffed by women. Probably more mills will go over to shifts in the future, as productive capacity is reduced. But, as Mr. Hirst said, modernisation and increased shift working will tend to go hand in hand. One of the objects of the weaving redundancy plan is to stimulate shift work by eliminating surplus plant.

In this connection, it is as well to stress the fact once more than an immediate switch to shift working would not greatly reduce costs, enabling Lancashire to compete with Eastern producers. Nor does the price regulation scheme now in force in spinning and doubling lead to "feather-bedding"—as recent mill closures have amply borne out.

Lack of an aggressive selling policy has been blamed for the virtual disintegration of Lancashire's once-renowned export empire. In reply, Mr. Hirst took pains to show conclusively that Britain's overseas trade in cotton goods has been lost either through cheap Japanese production or through development of indigenous industries in such territories as India, South Africa, South America and Australia, where a high level of protection has been given to local mills by luty or quota.

Still Great

Reiterating Lancashire's case against unrestricted imports of duty-free Commonwealth cloth, Mr. Hirst continued: "Even on present figures, we are still a great exporting industry and we can continue to be so, if we are not denied the spring-board of a healthy home market. On the other hand, it cannot be expected that the whole of our great industry can turn to specialities overnight or that the potential sales of these can or should replace bulk industrial, household and clothing textiles of good quality."

At a time when politics are making news, Mr. Hirst made no secret of his belief that the Rochdale by-election was no flash-in-the-pan result. "In an area which knows, as Rochdale knows, and as many other Lancashire towns know, what tremendous efforts have been made by the cotton industry since the war," he continued, "it is not only those directly employed in the mills but also a great slice of the other electors who will not vote for a Conservative unless he is prepared to stand up for our industry in deed as well as word."

Details of the "Crossley Plan" for limiting imports by voluntary restriction among the merchants have not yet been published, but Mr. Hirst revealed that the Federation has given support in principle to the scheme. In his view, the producers and finishers will back the system, if it should be needed. Much will depend on the outcome of the present mission to Hong Kong, and there success or failure hangs in the balance.

Surplus Looms Plan

Lancashire textile union leaders have given a qualified welcome to the surprise news that cotton and rayon weaving employers are planning to streamline their industry. A new company, Weaving Reorganisation Ltd., has been set up in Manchester. Its sponsors, the Cotton Spinners' and Manufacturers' Association and the Rayon Weaving Association, say that it is well known that the industry has a surplus of looms.

Mr. Lewis Wright, General Secretary of the 75,000-strong Weavers' Amalgamation, the main union involved, said that 200 Lancashire mills had closed down in the past three years. If the new scheme resulted in the closing down of mills which had not re-equipped with modern machinery, "good could come of it." Mr. Wright added: "But the operatives' reaction to the scheme will depend on what is meant in the employers' announcement about 'provision for redundant workers.' The trade unions are about to put before the employers a detailed claim for compensation for redundant workers. Only if labour gets as much consideration as capital are the trade unions likely to look upon the scheme with any favour."

Lancashire mills which consider selling out to the new company have been given a pledge of secrecy in negotiations.

In a statement, the company said that surplus looms meant a constant risk of overproduction in the industry. "Some of the machinery is out of date, but, in present conditions, there is little or no incentive to undertake the heavy financial risk of re-equipment. Yet it is essential to find means for putting the industry on a sound footing for the future by reducing its equipment in quantity and improving quality."

Subsequently, the Executive Committee of the Weavers' Amalgamation criticised weaving industry employers for not telling them of their surprise move to buy mills and scrap them. In a statement, they said: "It is very much to be regretted that the union representing the majority of the workers should be kept so much in the dark." Even if joint consultation had not been desirable the Weavers' Amalgamation could have been informed, "a little more fully as to the nature and purpose of the new company." Mr. Lewis Wright, Amalgamation General Secretary, said that no sound conclusions could be reached until the union knew more about how the new company—Weaving Reorganisation—could operate.

Higher Wage Levels

The Government's campaign against inflation had not really been set in motion last October and so the statistics relating to earnings of workers in British manufacturing industries at that time, now released by the Ministry of Labour, do not show any evidence of the subsequent economic pressure. In the six months from April to October last year, the average wages of the 7,000,000 workers included in the survey increased by nearly 8*s.* per week to a new record of £10 12*s.* 5*d.*

Cotton operatives received their last wage advance in August when an increase of 5 per cent. was conceded after short negotiations between the employers and the trade unions. As a result the average earnings, as shown in the table below, moved upward yet again:

	Men (over 21)	Youths (under 21)	Women (over 18)	Girls (under 18)	All workers
	s. d.	*s. d.*	*s. d.*	*s. d.*	*s. d.*
Cotton spinning—					
April 1956	194 3	116 7	119 10	96 5	142 9
October 1956	205 3	126 3	126 11	102 7	151 6
April 1957	208 6	126 4	129 4	104 10	154 1
October 1957	210 9	129 2	136 0	109 4	162 2
Cotton weaving—					
April 1956	196 7	104 5	126 0	94 1	147 11
October 1956	206 8	112 7	133 3	99 1	156 1
April 1957	210 1	112 1	135 11	102 10	159 5
October 1957	220 7	119 4	142 6	103 5	167 5
Total cotton—					
April 1956	195 3	112 7	122 6	95 6	145 0
October 1956	205 10	121 9	129 7	101 3	153 5
April 1957	209 5	121 10	132 2	104 2	156 4
October 1957	220 1	126 0	138 9	107 3	164 5
Rayon weaving—					
April 1956	212 3	102 1	130 0	90 4	159 6
October 1956	219 3	104 10	134 3	95 11	165 5
April 1957	222 9	104 9	137 4	95 10	169 1
October 1957	235 2	110 10	144 0	99 6	178 11
Textile finishing—					
April 1956	209 8	102 5	110 10	80 10	175 10
October 1956	220 1	107 3	114 11	83 6	183 8
April 1957	227 7	111 8	118 11	86 1	191 2
October 1957	231 9	113 6	120 5	89 9	193 11

The average number of hours worked in the mill towns remained identical with those operated six months previously, the weaving figure being 43.9 hours, spinning 44.3 and the average for all cotton firms 44.1 hours. In textile finishing, the average was again lower at 47.7 hours against 48.2 in April, 1957.

Lancashire mills have lost 67,000 workers in six years, union leader Mr. Charles Schofield, said in his annual report as General Secretary of the Operative Spinners' Amalgamation. He accused the Government of being "prepared to sacrifice the industry rather than face an unpopular issue with other members of the Commonwealth."

Attacking the Government's refusal to limit the flood of cut-price cloth from Far East mills, he said: "Just what sort of a case is likely to persuade the Government that the Lancashire cotton industry is being bled to death, after the representations which have been made during the past three and a half years, is difficult to imagine."—*All Rights Reserved.*

Member Federal Deposit Insurance Corporation.

SUITABLE LEGISLATION FOR SUGAR EXPORTS TO BE ENACTED

MR. A. P. JAIN'S DISCLOSURE AT I.S.M.A. MEETING

THE question of enacting suitable legislation governing sugar exports is receiving the Government's consideration and a scheme for export will soon be finalised. This was revealed by Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, while inaugurating the twenty-fifth annual general meeting of the Indian Sugar Mills' Association (I.S.M.A.), held at New Delhi last week. On the basis of prevailing prices, sugar, Mr. Jain said, could be sold abroad at a loss of about £20 (Rs. 267) per ton. He added: "The two schemes submitted by the Association for exporting sugar at a loss have been carefully considered by the Government. It is not possible to allot quotas for export under the existing laws."

The loss on sugar exports, as Mr. Jain indicated, is, indeed, very considerable, being as much as Rs. 267 per ton, even after allowing for a full remission of excise duty and cane cess. On this basis and taking the export target at 200,000 tons, the total loss on overseas sugar sales works out to Rs. 6.34 crores. This amount, together with the loss of Rs. 5.32 crores by way of Union excise duty remission and Rs. 1.02 crore by way of cane cess remission, will come to Rs. 13.18 crores, as against the foreign exchange amounting to about Rs. 8.80 crores earned on sugar exports. It is thus evident that the sacrifice involved in sugar export business far outweighs the foreign exchange earned.

Cost of Production

Be that as it may, considering the huge loss arising from export of sugar, it will certainly be interesting to know how the Government proposes to meet such loss. Whatever may be the nature of the scheme, the fact remains that, if Indian sugar is to compete effectively in the world market, the cost of production must be reduced. Speaking of high sugar prices, Mr. Balmokand Shah Sawhney, the erstwhile President of the I.S.M.A., made a few interesting observations. He pointed out that the rise in prices was due to the high tax burden levied by Government, the same being 38 per cent. of the total cost of production. Even a cursory glance at the cost structure of Indian sugar as adopted by the Government, he observed, would at once convince anybody of the fact that neither was the sugar mill industry responsible for the present level of prices nor did it benefit from them. Comparing last year's cost of sugar production with that of 1946-47, Mr. Sawhney said: "While the Government levies show a phenomenal increase of 344 per cent., the cost of cane has also gone up by 14 per cent. Similarly, other items of cost have also gone up, reflecting the higher prices of raw materials and increased labour charges. In sharp contrast to the increases on all these items, the single item which has shown a decline and that too by a fair percentage of 17 per cent. is in respect of overheads and the gross profit margin allowed to the industry. It is, therefore, not understood how, in the face of these facts, allegations against the industry of high prices or high profits can be sustained."

Tax Relief Urgent

There is considerable force in these observations. There is an urgent need for granting appropriate tax relief to the sugar industry. As Mr. Sawhney rightly remarked, disproportionately high rate of taxation on this industry is bound to stifle its future development. Admittedly, if the industry has to fulfil the Plan targets and also maintain increased exports, it is necessary that a rising tempo of production and consumption of sugar within the country is maintained; these are like the two hands of a clock and should function in close harmony.

The high cost of sugar production can be reduced, apart from lowering the burden of taxation—direct and indirect—by reducing the incidence of heavy sugarcane price which at present accounts for nearly 60 per cent. of the total cost. This can be brought about through [illegible]ortion of a more rational system of fixing [illegible]or cane, in the place of the present [illegible]aying for cane only on the basis of [illegible]ective of quality considerations. [illegible]he imperative need for simplify-[illegible]alities and granting concessions [illegible] exportable sugar. No less im- [illegible] for manufacturing sugar the quality of which compares favourably with that produced in other countries. Mr. Jain did well to emphasise this aspect. Referring to the competition of Indian sugar with the well-known British refined and Formosan sugars, Mr. Jain disclosed that, last year, Indian sales had generally been made at prices £4—£6 per ton lower than the then prevailing prices of the latter. He saw no reason why Indian sugar should sell at such a heavy discount. Urging the sugar manufacturers to produce sugar which would equal in quality British or Formosan sugar, he said: "It would appear very important not only for getting higher prices but also for establishing a permanent market for our product abroad that all sugar exported from this country is of the desired standard quality."

Importance of Exports

The importance of sugar exports was stressed well by Mr. Sawhney. He said:

"The country's growing needs for foreign exchange necessary for importing heavy machinery, etc., for rapid industrialisation makes it incumbent on us to explore all avenues of furthering exports to earn more foreign exchange. In fact, as the Prime Minister said in the course of his budget speech last February, 'we must try to produce more, export more and save more to find the resources for implementing the Plan.' Already, last year, we earned over Rs. 12 crores of foreign exchange by export of sugar.

"Apart from the undoubtedly urgent need of foreign exchange, export of sugar is also necessary for continued health and development of the industry and welfare of the cane growers. For sugar industry, in common with all other industries based on agriculture and, therefore, on the vagaries of nature, cannot plan its production within narrow limits. A plan for exports will alone be able to insure against periodical plenty and scarcity. Fortunately, because of our geographical position, we have an easy access to a number of sugar importing countries which are in our neighbourhood."

Mr. Sawhney dealt at length on the sugar industry's anxiety over competition from the *khandsari* sector. Alluding to the reports of large-scale diversion of cane supplies from sugar mills to *khandsari* production, he observed:

"I hope Government will appreciate the industry's anxiety. In fact, it had expected that Government would at the last budget time announce some steps in the form of suitable excise duty on *khandsari* sugar to curb the unplanned growth of this wasteful industry. But the absence of any such proposals in the budget has been a great disappointment. If I have dealt at length with the threat from *khandsari*, it is because I feel the seriousness of this development has not yet been fully appreciated. If timely action is not taken now, more and more *khandsari* units will crop up. And once these units come up in large numbers, the problem will only become more difficult. It may be that, at present, this problem is confined to U.P. only. But, if the disparity in prices continues, the *khandsari* factories will spread in other areas also and pervade the sugar industry in the whole country. We are witnessing the difficulties encountered by the textile industry as a result of undue encouragement given to the powerlooms. A similar situation is bound to develop in case of sugar industry also, if timely steps to avert such a situation are not taken. I would, therefore, urge, with all the emphasis at my command, for speedy and effective action in this behalf, in any case, well in advance of the next crushing season."

It is unnecessary to discuss this issue again, since it was referred to in some detail in *Commerce* only two weeks ago (*vide* page 559). Suffice it to say that the apprehensions of the *khandsari* sector jeopardising the development of white sugar industry seems to be unjustified, or at least quite premature. *Khandsari* production will not touch a level that will offer stiff competition to white sugar, for two reasons. First, the consumption of *khandsari* sugar is limited, although it is available at lower prices than white sugar, consumer preference is and will always be for white sugar. Now that *khandsari* prices have gone up markedly, the price advantage it enjoys *vis-a-vis* white sugar has been reduced to a great extent. Secondly, the sugar consuming capacity of the country itself is expanding, what with the rise in population and improvement in the standard of living. It must, of course, be stressed that suitable steps should be taken to remedy a situation when it is found, on an impartial examination of the position, that the growth of the *khandsari* sector is at the expense of the white sugar industry. It is gratifying to be told by the Union Food and Agriculture Minister that a special committee has been set up to examine the question in detail. To quote the Minister: "While I agree that there should be no diversion of cane

Total .. Rs.	36,02,03

We have audited the foregoing Balance Sheet of the Indian Branches of The British Bank of the Middle East, as at the 31st day of December, 1957, and also the foregoing Profit and Loss Account of the Indian Branches of the Bank for the year ended on that date, in which are incorporated the unaudited returns of Calcutta Branch not visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions of Sub-Sections (1) and (2) of Section 211 and Sub-Section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit;

(b) in our opinion, proper books of account as required by law have been kept by the Indian Branches of the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branch of the Bank not visited by us;

P. L. SANDEM
Mar

(c) the Balance Sheet and Profit and Loss Account of the Indian Branches of the Bank d by this report are in agreement with the books of account and the returns;

(d) In our opinion, and to the best of our information and according to the explanations the said accounts give the information required by the Companies Act, 1956, in th required for banking companies, and on such basis the said Balance Sheet gives a view of the state of the affairs of the Indian Branches of the Bank as at 31st D and the Profit and Loss Account gives a true and fair view of the profit Branches for the year ended upon that date.

EXPORTS OF INDIAN COFFEE

GROWERS' SUGGESTION FOR RECAPTURING OVERSEAS MARKETS

THE outstanding characteristic of coffee as a commodity in world trade is that the market for it has, and is capable of being, expanded under a wide range of world conditions. A study of world coffee trade over the last few decades has shown that between 1914 and 1950 world exports of this commodity have expanded on an average by half a million bags per year and since 1950 the rate of increase has gone up by one million bags per annum. Such a marked increase has occurred through cycles of overproduction and underproduction of coffee and despite erratic price fluctuations, as well as in periods of relative stability in prices. This expansion in world marketing of coffee has been brought about mainly by the promotional efforts of both producing and consuming countries.

The coffee trade has not, however, grown uniformly in all countries which supply to the world market. Since 1950, while the total world exports have increased by 21 per cent., South America's share has declined by a little less than 10 per cent., African countries have expanded their exports from 15 per cent. to 23 per cent.. North America and Asia have also made slight overall gains. Along with the shifts in exports, there have also been changes in production, as will be seen from the following table:

*Green Coffee: World Production**

(Million bags of 132 276 lbs.)

	Average 1945–46 to 1949–50	1953–54	1954–55	1955–56	1956–57	1957–58 (estimated)
Central America ..	5.3	7.1	7.5	7.8	8.1	8.3
Brazil	25.3	19.7	18.1	25.5	18.0	22.0
Colombia	4.5	7.1	6.4	6.8	7.5	7.1
Rest of S. America	1.3	1.2	1.5	1.2	1.6	1.5
Africa	2.6	6.8	7.1	8.7	8.6	9.1
Asia, Oceania ..	2.5	2.1	1.6	2.3	2.6	2.6
Total ..	41.6	44.0	42.2	50.4	46.1	50.5

* Years beginning in the second half of the calendar year, in some countries like Brazil as early as July 1, in others about October 1.

While production has gone up by 8.9 million bags or 21.4 per cent. from the pre-war average level, the exportable production has risen during this period by 7 million bags or 20 per cent. to 42 million bags. Of this exportable quantity of 42 million bags in 1957-58, Brazil, Colombia and other South American countries account for 60 per cent., as against 77 per cent. in the pre-war years and the share of North America, Asia and African countries has gone up from 23 per cent. to 40 per cent. The total world exportable production of 42 million bags during 1957-58 is expected to be in excess of the annual world exports by 2 to 3 million bags.

One of the important factors which have enabled the orderly marketing of coffee is that it is a storable commodity. This quality can be utilised by either the producing countries or the consuming countries for purposes of storing coffee. It is this characteristic, (which enables the producers to take the load of surplus coffee off the market) which induced the Latin American countries to come to an agreement recently in Mexico City to build up stocks and withhold supplies from the world market, thus avoiding a depression in coffee prices. Despite this agreement, coffee prices have shown a downward trend during the last few months. This is because of the growing supplies from African countries. The efforts of the Latin American producers to bring Africa also within the Mexico City agreement have so far failed, but they have not given up their efforts to bring about an international agreement.

In India, too, the coffee industry has made rapid strides. During the past ten years, the acreage under coffee in this country has expanded by 30 per cent. and production has gone up by 151 per cent. to a record level of 42,000 tons in 1956-57. In the current year, the production is estimated to be less at 37,000 tons, while the next crop is expected to be another bumper one, exceeding the previous record of 42,000 tons achieved in 1956-57. Though the Indian coffee production is not on such a scale as to influence world market, its quality is liked by many overseas consumers. At one time, Indian coffee had an extensive and stable market abroad, but the hold is now lost, thanks to the uncertain export policy of the Government of India. With the growing internal production, the coffee planters are naturally worried about the export prospects for Indian coffee, particularly because the trend of world prices have once again turned against them. During the current year, for instance, there will not only be a smaller surplus available for export but the earnings on exports will be very much less, as a result of the sharp fall in prices during the last few months.

The anxiety of the coffee growers over the dim export prospects was expressed by Mr. U. K. Laxman Gowda, the outgoing Chairman of the Mysore Planters' Association, at the ninety-fourth annual meeting of the Association, held at Chickmagalur a few days ago. Mr. Gowda who laid the blame for the loss of world markets for Indian coffee on the shoulders of the Government, explained the growers' attitude to marketing of coffee and made some useful suggestions for recapturing the markets for Indian coffee. Thus, Mr. Gowda observed:

"The coffee market has been undergoing some very rapid changes; so has been official policy, although they are not related. From 1948 to 1952, the Central Government was eager to export as much as possible and it was even prepared to insist on exports, even if that led to a possible shortage in the home market. In 1953, there was a reversal of this policy. After about five years of concentrating on an effort to feed the internal market, there has suddenly come a switch in the policy of the Government. The industry is now asked to export all it can. By the time this swing in Government opinion has taken place, the foreign market has gone against us and the position might be far worse before the end of this year, unless the recent international negotiations for a world coffee agreement is successfully concluded. Our own attitude to coffee marketing is that the internal market should be adequately supplied and encouraged to consume more at a reasonably-held price. At the same time, a vigorous campaign for increased production and export should be continued.

"The coffee growers of India may indeed surprise the nation next year with a bumper crop which may well exceed the quantity produced by them last year. This result is being achieved by the past attention devoted to coffee by the growers and further increases in production would call for a continuing policy of fostering the coffee industry by encouraging the growers. An emergent point arising from the fall in world coffee prices is of considerable importance to growers and consumers alike. For the past ten years it was generally possible to hold down internal prices well below the world level. It was made possible by the extra earnings from the exports of our surplus. Now we have ever-increasing surplus with the margin vanishing, as a result of the steep fall in world prices. The subsidy so far given to internal consumers cannot long be continued without injuring the industry.

"With an ever-increasing surplus appearing in the world market the chances of Indian coffee establishing a foothold in the export market depends on quality, regularity of supply, competitive prices and good trade connections. After a long period of exit from the overseas markets, India's traditional hold in those markets have disappeared and need fresh building up. The Chairman of the Coffee Board is aware of this need and the Board has decided upon a quality scheme. If I may say so, the Board might consider using the trade, which has the necessary experience, in its marketing operation. A matter that requires emphasis is the role of the curers. It has to be recognised that it is only with their active co-operation quality coffees can be placed on the market. Some form of incentive to produce quality coffees at the curing stage must be actively considered."

Mr. Gowda's implied suggestion for an increase in internal prices may not be acceptable to the Government and may even meet with consumer resistance. The only other courses open to the Government for capturing world markets are, therefore, to leave the coffee marketing to the regular trade channels and to provide an incentive to production of quality coffee at the curing stage. In fact, the marked expansion in world exports of coffee since 1950 has been made possible by the acceptable changes in the form and blends of coffee developed during this period. The Government would, therefore, do well to pay urgent attention to this problem of exports and work out a solution in consultation with the growers.

EXPORT OF DUST TEAS

The Government of India has allowed the export of dust teas to all destinations under licence without being required to be covered by export quota rights. A Press note issued by the Tea Board says that applications for such licence should reach the Tea Board's office in Calcutta or Cochin as the case may be before 30th September and the licences will be valid up to 31st October.

The Government of India has announced, by a notification in the *Gazette of India Extraordinary* that the operation of sections 19, 20 and 21 of the Tea Act 1955 will continue to be relaxed in the case of export licences for dust teas applied for before 30th September and available up to 31st October 1958.

ELECTRIC FANS INDUSTRY

REMARKABLE PROGRESS ACHIEVED—UPWARD REVISION OF PLAN TARGET

IF the performance of the electric fans industry during 1957 is any indication, the target of expansion for the industry fixed under the second Plan will not only be reached but exceeded much earlier than 1961. The total production of electric fans in 1957, which aggregated 520,000, falls short of the 1961 target by only 80,000. Thus, by the end of the second year of the Plan, the second Plan target has almost been achieved.

The progress of the industry during 1957, according to Mr. I. Sukumar, President of the Fan Makers' Association of India, has been "most phenomenal." The production of 520,000 electric fans during the year represents a 54 per cent. increase over the previous year's figure of 338,000 fans. Mr. Sukumar observed, during the course of his presidential address to the tenth annual general meeting of the Fan Makers' Association of India, held on 29th March at Calcutta, that not only was the industry making rapid progress in production, but tremendous improvements were also being made in the quality and design of the product. This had enabled Indian fans to capture a sizable foreign market. During 1957, for instance, electric fans and parts worth Rs. 18.12 lakhs were exported to 35 countries, as compared with Rs. 12.7 lakhs in 1956, representing an increase of 42.5 per cent.

There is no doubt that there will be an expanding demand in the country for electric fans as a result of the availability of electricity in new areas, more electricity in old electrified areas, improvement in the standard of living, increase in the tempo of industrial activity and construction of more residential houses. Fans will in due course be considered more a necessity than a luxury item. Exports are also expanding fast. Mr. Sukumar pointed out that the target fixed under the second Plan would have to be revised from 600,000 to one million which, he felt, could be reached by the existing units by working additional shifts, if necessary.

Export

There is also considerable scope for export of fans. According to Mr. Sukumar, the country has already the distinction of producing some of the finest ceiling fans in the world and it is competing with established brands on the basis of quality and performance. Despite certain difficulties, exports of fans from India during 1957 showed an improvement of 42.5 per cent., as compared with 1956. Indian fans are at present being exported to 35 countries, mostly in West Asia, Africa and South-East Asia. These markets could be developed further provided more determined efforts are made. The publicity given to the Indian product is inadequate and contact with foreign markets, so essential to export trade, is poor. Mr. Sukumar is confident that given good publicity and agency in competent hands, the export target of 40,000-50,000 fans per year could easily be achieved.

The question of adequate export incentives, Mr. Sukumar added, could not be overlooked. There is a big demand for fans within the country itself. So, unless adequate incentives are provided, exports will suffer. At present, due to the shortage of raw materials, the high price of certain types of imported raw material, higher labour cost, etc., the manufacturing costs have gone up considerably. Foreign competition is severe and if the Indian products are to find their way to foreign markets they should be offered at competitive prices which may often be well below cost.

The Government, Mr. Sukumar said, had, no doubt, been helpful and had taken various steps such as allotment of advance quota for raw materials, replenishment and drawback of duty on *ad hoc* basis, to promote exports. He felt, however, that these measures, in themselves, were not sufficient to boost exports. According to him, additional measures such as survey of foreign markets, foreign publicity, stationing of officers in important foreign centres by the Engineering Export Promotion Council, assisted by the Government, were called for. If the country were to face boldly the competition from rival countries like Japan, he added, something more should be done. A Japanese exporter or manufacturer, Mr. Sukumar pointed out, was given a rebate of 3 per cent. of total exports in income-tax. He had no difficulty in getting raw materials and no export problems. The Japanese Government provided assistance in publicity programmes and market surveys. The Indian producer/exporter also required such help if he were to compete successfully. For effective competition, quality of the product should also be improved. Mr. Sukumar pointed out that modern designs of foreign products were based mainly on high-standard plastic moulding, perfected sheet-metal fabrication, intricate pressure die-casting and recent development in finishing process. Indian manufacturers had not so far adopted these branches of techniques because of lack of equipment and facilities to import them. He, therefore, urged the Government to permit and encourage imports of such manufacturing equipment as would improve the quality of product and enable larger and cheaper production.

Problems of the Industry

Mr. Sukumar referred to some of the major problems of the industry. The most pressing one, according to him, was the inadequate and sometimes irregular supplies of essential raw materials like electrical steel sheets, pig iron, steel and ball bearings, etc. The changeover to condenser type fans, he said, had made the condenser an important component. Self-lubricating bearing, a product of powder metallurgy, was also an important component and was getting more and more popular as it was indispensable for table fans. Mr. Sukumar urged that the Government should permit more imports of these condensers and grant licences to parties interested in undertaking their manufacture with foreign collaboration. He regretted that the Indian Telephone Industries had not been able to help the fan makers in the matter.

Mr. Sukumar dealt with another industry, namely, electrical stampings, which is basic to the manufacture of fans and other electrical machinery. He pleaded that manufacturers of stampings, who were catering to the needs of a major portion of the fan industry, should bring down their prices. Unless the price was brought down, he pointed out, electric fan manufacturers would not be able to reduce their cost. He also urged that the ball bearing industry should give adequate supplies of ball bearings to the fan industry.

(*Concluded from next column*)

greatest increases percentage-wise in the production of electric energy were registered in the small, less developed areas. In 1956, world consumption is estimated to have been the equivalent of nearly 3.7 thousand million metric tons of coal, about 7½ per cent. more than in 1955 and almost twice as much as in 1937. In the world outside the U.S.S.R., mainland China and Eastern Europe, energy consumption in 1956 was 7 per cent. greater than in 1955 and 80 per cent. greater than in 1937.

Owing to the substantial increase in population, world *per capita* energy consumption, does not display quite such a rapid rise since pre-war; in 1956 it is shown as the equivalent of 1.35 metric tons of coal, as against 1.27 in 1955 and 0.94 tons in 1937. The corresponding *per capita* figures for the world excluding the U.S.S.R., mainland China and Eastern Europe are somewhat higher: 1.57 metric tons in 1956, 1.49 in 1955 and 1.14 in 1937.

North America accounted for nearly 44 per cent. of the 1956 world consumption, Western Europe for 23 per cent., Asia (excluding mainland China) for nearly 5½ per cent., South America for 2 per cent., Africa for 1.7 per cent., and Oceania for around 1 per cent. The combined share of the U.S.S.R., mainland China and Eastern Europe was 23 per cent.

Between 1937 and 1956, energy consumption increased by 252 per cent. in South America, by 182 per cent. in Africa, by 128 per cent. in Oceania, by 95 per cent. in North America, by 85 per cent. in Asia (excluding mainland China) and by 45 per cent. in Western Europe. The U.S.S.R., mainland China and Eastern Europe together consumed about 180 per cent. more energy in 1956 than in 1937.

The United States consumed 39 per cent. of the total world consumption, almost three times as great as consumption in the U.S.S.R., the second largest consuming country. The next largest consuming countries were the United Kingdom, West Germany, Canada and France.

WORLD FUELS AND ENERGY

PRODUCTION AND CONSUMPTION PATTERN

IN 1956, according to the latest issue of the *U.N. Statistical Yearbook*, the world (including U.S.S.R. but excluding mainland China) mined more coal—nearly 1,580 million metric tons—than in any year during the preceding two decades. The 1956 production was five per cent. more than the 1955 output and 25 per cent. more than the pre-war peak year of 1937. Out of this, the U.S. accounted for 30 per cent., U.S.S.R. 19 per cent., the U.K. 14 per cent. and West Germany 8½ per cent. In the world outside the U.S.S.R. and mainland China, coal production in 1956 was nearly 4 per cent. greater than in 1955 and exceeded the 1957 output by only 10½ per cent.

The *Yearbook* puts world production of crude petroleum in 1956 at 839.8 million metric tons, nine per cent. more than in 1955, 60 per cent. more than in 1950 and about three times the 1937 production.

The U.S. accounted for 42 per cent. of the world's crude petroleum production in 1956, four Middle Eastern countries (Iraq, Kuwait, Qatar and Saudi Arabia) for nearly 17 per cent., Venezuela for nearly 16 per cent. and the U.S.S.R. for 10 per cent. These four areas, producing around 85 per cent. of the 1956 world's oil output, are mainly responsible for the phenomenal increase in production over the past two decades, their combined output rising from 233 million metric tons in 1937 to 709 million tons in 1956.

Among the other producing countries, crude oil output in 1956 amounted to 26.4 million metric tons in Iran, 12.9 million in Mexico, 12.7 million in Indonesia and 10.9 million in Romania. In the post-war period, striking gains have been achieved by the smaller producers; between 1948 and 1956, crude petroleum output has risen from 2,687,000 metric tons to 5,616,000 in Brunei, from 635,000 to 3,506,000 in West Germany, from 950,000 to 3,427,000 in Austria, from 70,000 to 1,264,000 in France, from 480,000 to 1,202,000 in Hungary, from 496,000 to 1,097,000 in the Netherlands, from 9,000 to 567,000 in Italy, from 7,000 (1949) to 462,000 in Chile, from 60,000 to 417,000 in Bolivia and from 36,000 to 294,000 in Yugoslavia. In Burma, oil production fell from 1,049,000 metric tons in 1937 to 231,000 tons in 1956.

Petroleum

World (excluding U.S.S.R., mainland China, Albania, Czechoslovakia, and India) output of refined petroleum products in 1956 as compared with output in 1950 (with 1937 in brackets) shows an increase of 49 (171) per cent. for motor spirit (gasoline, petrol), of 80 (250) per cent. for kerosene, of 87 (409) per cent. for distillate fuel oils and of 39 (168) per cent. for residual fuel oil. Europe's share of world output of motor spirit rose from 7 per cent. in 1937 and 1950 to 12 per cent. in 1956, and of residual fuel oil from 6 per cent. in 1937 to 22 per cent. in 1956. Meanwhile, North America's share of world output of motor spirit declined from 84 per cent. in 1937 to 76 per cent. in 1956, and its share in world output of residual fuel oil dropped from 81 per cent. in 1937 to 50 per cent. in 1956.

The data for some 150 countries bears witness to the widespread growth in the generation of electric energy during the past three decades. In 1956, the world (excluding a few small producing countries) is estimated to have generated nearly 1,678 thousand million kilowatts, 9 per cent. more than in 1955, 75 per cent. more than in 1950, and almost six times as much as in 1929.

Of the 1956 world total, North America accounted for 46½ per cent. (the United States alone for 41 per cent.), Europe for 30 per cent., the U.S.S.R. for 11½ per cent., Asia for nearly 7 per cent., South America for nearly 2 per cent., and Africa and Oceania for more than 1½ per cent. each.

The principal producing countries in 1956 were the United States (684 thousand million kilowatts; 76 per cent. more than in 1950), the U.S.S.R. (192 thousand million kw.h.; 110 per cent. more than in 1950), the United Kingdom (101.2 thousand million kilowatts; 39 per cent. more than in 1951), West Germany (85.1 thousand million kw.h.; 91 per cent. more than in 1950), Canada (82.8 thousand million kw.h. in 1955; 50 per cent. more than in 1950), Japan (73.6 thousand million kw.h.; 64 per cent. more than in 1950) and France (53.8 thousand million kw.h., 63 per cent. more than in 1950). The

(*Continued in previous column*)

NEW PRODUCTS AND PROCESSES

Long-range Radar Techniques

MARCONI'S Wireless Telegraph Company announced the development and pilot production of a device which, when incorporated into 10 cm. and 25 cm. radars, can increase the effective range by as much as 25 per cent. Designed around a new travelling wave tube developed and produced by the English Electric Valve Company, it is claimed to be one of the most significant contributions to radar engineering since the war-time introduction of the cavity magnetron. The device —known as a travelling wave tube amplifier— makes it possible for the first time directly to amplify the very weak radar signals which return from the target aircraft. The travelling wave tube operates on an entirely different principle from that of the thermionic valve and produces effective amplification of extremely high radio frequencies. Marconi's has pioneered the use of these devices in point-to-point telecommunication equipment with great success, and the principle has now been extended to the field of radar. In addition to extending range, the new technique improves reliability.

High-speed Grinding Machine

A Vienna firm, Harald Burkert, has developed an economical high-speed shearing and grinding machine which operates with extremely little waste. Even the last third of elastic plastic grinding discs of a high speed, so-called angle grinder, only two-thirds of which can be used economically, may be used with the new high speed shearing and grinding device. Further advantages are its low weight, its handiness and the clear sight of the grinding disc. The high efficiency and r.p.m. make it possible to utilise the grinding disc down to a very small diameter. The device has no parts that wear quickly. The economic grinder is being used in the metal processing industry for all types of grinding operations and has given equally good results in the workshops and on the building site. Especially difficult filing and finishing operations can be carried out within a very short time and with only small power consumption. Owing to its low weight, the grinder will often be preferred to the so-called "angle-grinder." The push button built into the handle is easy to be operated and can be fixed, if required. The maximum diameter of the grinding disc is 115 mm., the highest circumferential speed 80m./sec., and the net weight 3.5 kgs.

New Triple Microscope

A microscope permitting focusing, observation and photography at the same time is not new in itself. It has already been built in the U.S. with dimensions of 9.8 by 13 by 6.5 feet and at a price of about £10,000. But Herr Hans Georg van Ooyen, of Homberg, Lower Rhine, was recently granted a patent for a three-way microscope no bigger than two cigar boxes and costing about £500. He called it the "mirror microscope." Its main part is a system of prisms splitting the light into three instead of two rays, as by a conventional microscope. One ray is directed toward the lens and permits the observer to focus the object. The second ray is projected towards a screen on which the object can be observed, and the third ray goes into a camera. A ray filter renders harmless the heat waves which otherwise might destroy the object. In the American construction a complicated fan system cools the entire microscope, but hampers observations by causing marked vibrations.

Measuring Thickness of Metal Coatings

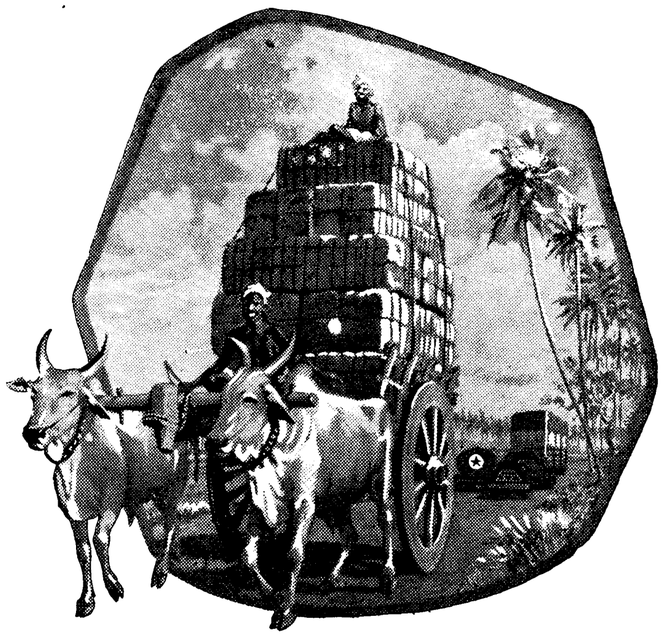
The thickness of coatings, or thin films of metal, bonded to the surface of different types of base metals can be measured with the aid of a new thickness meter developed by Nash and Thompson of Surrey, England. The device measures the thickness of the coatings non-destructively—that is without harming the coating, or coatings—and operates independently of the magnetic properties of the base metal on which the coatings are deposited. The instrument can measure the thickness of both very thin and quite thick coatings. In the case of nickel coatings deposited on steel, coatings ranging in thickness from 0.0001 inch up to 0.005 inch can be measured within an accuracy of 10 per cent. when only a single measurement is made.

Portable Cardiograph

A portable cardiograph, or device for recording the behaviour of the heart, has been developed in the U.K. The complete instrument weighs only 19 lbs. and can easily be carried by a single individual. Conventional cardiographs, on the other hand, are large and bulky devices. The operation of the new portable machine, which has been developed by Siemens Edison Swan, depends on the use of transistor crystal valves in place of conventional thermionic valves. Despite its small size and light weight the machine includes a recording unit, which writes out the results on paper in the form of a black trace, and a series of nine lead connections. A battery-operated motor is used to drive the recording unit and the equipment can be operated without being connected to a mains electricity supply.

New Rubber

A new type of synthetic rubber that is said to have excellent resistance to high temperatures has been developed. Tests carried out on the new material are said to have shown that it can stand up to exposure to temperatures of 600 degrees Fahrenheit for periods of up to 25 hours and can withstand temperatures of the order of 400 degrees Fahrenheit for more than 100 days. It is also, its developers claim, resistant to most corrosive chemicals and solvents and is thus suitable for use in mechanical equipment used in chemical plants, or guided missiles where such strongly chemically active materials are used.



International Panorama of Progress

New caravans in old settings

Ancient and modern transportation, travelling along the same road, present a vivid and, at the same time, curiously appropriate contrast. This meeting of the past and present symbolizes the rapid advance in many parts of the world from slow, laborious methods of hauling goods and equipment to swift, up-to-date means of transport. Power once supplied by beasts of burden is steadily being supplanted by the more efficient power of petroleum. Caltex quality fuels, oils, and lubricants keep cars, trucks and tractors operating smoothly, speeding production, transportation, distribution—and bringing to the peoples of many nations a new prosperity, a new era of comfort and convenience. Caltex is participating in the present and planning for the future in over 70 countries—partner in progress in Europe, Africa, Asia, Australia and New Zealand.

PRODUCTIVITY AS A DETERMINANT OF WAGES

SOME COMMON MISCONCEPTIONS

[Productivity is a concept having wide significance for economic progress and the raising of the levels of living. The spectacular rise in productivity of the manufacturing industries of the United States and Western Europe in the past decade not only opened up new vistas for social and economic progress but produced far-reaching repercussions on labour and industrial policy in these countries. The term has, however, so far eluded attempts at precise measurement because it represents a complex, overall relationship between the total input of the various factors of production and the aggregate output. Further, the methods and statistics for its measurement, though highly developed in Western countries, are still imperfect as they have to rely, in large measure, on crude comparisons between production and employment. Nevertheless, productivity concepts have played, and continues to play, a dominant role in discussions and negotiations relating to wages. But there are, however, certain widely held misconceptions as to what exactly the term connotes and on what level improvements in productivity can be advanced as an argument for higher wages. For instance, a dangerous misconception regarding the relationship between wages and productivity is that increases in productivity can and should be matched by increases in money wages, industry by industry or even plant by plant. The following article, taken from the February issue of the Guaranty Survey, which serves to dispel some of the common misconceptions, may be of interest to readers. The analysis of implications of the relationship between productivity and wages is of practical interest to this country. As the current efforts at productivity improvement begin to bear fruit, they may give rise to demands having the same repercussions detailed in this article. It is pointed out that the relationship between real wages and productivity applies only to average real wages and average productivity for the economy as a whole and that wage differentials corresponding to different levels of productivity in different plants or industries would be both grossly unfair and economically impossible. The essential point, it is stressed, is that an attempt to match gains in productivity in specific industries or plants with wage increases in those industries or plants is futile as well as inflationary.—ED.]

IT has become a commonplace of current economic discussion to say that, if chronic price inflation is to be avoided, increases in money wages must not exceed gains in productivity. If they do, unit labour costs rise, and employers must recover the higher costs by raising prices in order to maintain profitable operations. If competitive conditions make it impossible to raise prices sufficiently, production becomes unprofitable, and the balance is restored by the painful process of business recession and unemployment.

This principle appeals so strongly to commonsense and the historical evidence for it is so overwhelming, that it has gained general acceptance. Even economic spokesmen for labour organisations agree to it, although it is usually difficult to detect any sign of such agreement in the actual behaviour of union representatives at the bargaining table. Unfortunately, as acceptance has grown, misunderstanding seems to have increased likewise. Whatever hope there may be of preventing the constant upward push of labour costs from causing inflation, unemployment, or both must depend, in part at least, upon a realistic conception of the relationship between wages and productivity.

One of the commonest sources of misunderstanding is the customary practice of expressing productivity in terms of output per man-hour of labour. This leads to the unconscious assumption that productivity, the power to produce, is an exclusive attribute of labour and that changes in output per man-hour are due primarily to alterations in the character or quality of workers.

Complex Relation

Actually, productivity, as it affects business operations and costs, is an over-all relationship between output of product and aggregate "input" of labour time, capital equipment, managerial effort and other factors of production which represent cost to business enterprises. Ideally, productivity should be measured in terms of all factors. In practice, because of the ready availability of labour statistics and the overwhelming importance of labour as an ultimate component of total cost, it has been found convenient and approximately accurate to express productivity as a ratio between physical units of output and man-hours of labour. It is a fundamental error, however, to regard this ratio as a measure of the specific productivity of labour.

This error leads to another, namely, that productivity establishes some sort of measurable ethical standard for wages. There is no valid basis for such a conclusion. Average output per man-hour of labour is calculated to have approximately tripled in the last half century, not because the typical worker of today is stronger, more skilful, or more diligent than the worker of 50 years ago, but because he uses better methods, more and better tools and machines and, above all, vastly more mechanical power.

As a matter of strict ethics, it would perhaps be easier to argue that the benefits of rising productivity should go to the inventors, investors and managers who, by great effort, cost and risk, have made available these methods, tools, machines, and sources of power, than to the workers who use them. Yet this also would be a wrong conclusion, for the improved equipment has increased productivity so greatly that it has become possible for employers to pay the much higher wages that prevail today and at the same time pay the suppliers of the equipment at rates sufficient to keep capital flowing into industry.

A closely related error is that wage rates, if they are to keep pace with increases in productivity, must be made to do so by collective bargaining, legislative authority, or other conscious and centralised planning. All the historical evidence is on the other side. As far back as the statistical information goes, real wages and productivity have moved together. This relationship prevailed long before collective bargaining became the usual practice in industry and it has continued to prevail to the present day without essential alteration. This means that the rise in real wages has been due to the spontaneous and natural operation of free markets, not to strike threats or governmental compulsion. It means that the worker is not a passive beneficiary of coercion or recipient of largess. He is the free and independent owner of a marketable commodity or service which others buy and pay for at an almost constantly rising price, not because any human authority forces them to do so but because it is economically possible and worth while for them to do so.

Specific *vs.* General Wage

A widely held and potentially dangerous misconception concerning the relationship between wages and productivity is that increases in productivity can and should be matched by increases in money wages, industry by industry or even plant by plant. Both labour and management have fallen into this error. Spokesmen for management have proposed that changes in productivity be accepted by both sides as the decisive factor in wage negotiations with a view to avoiding industrial strife, stabilising the price of the product, and giving workers an incentive to increase their output. Labour spokesmen have contended that wage increases in certain industries could not have been inflationary because they were matched or even exceeded by gains in productivity in those same industries.

Actually, wage differentials corresponding to different levels of productivity in different plants or industries would be both grossly unfair and economically impossible. The relationship between real wages and productivity applies only to average real wages and average productivity for the economy as a whole. Within this all-inclusive framework, wage-productivity ratios for particular plants and particular industries not only can vary but must be allowed to vary if any semblance of economic freedom, maximum industrial efficiency, price stability, and fair distribution of income is to be maintained.

A realistic analysis begins with the elementary fact that any increase in the total real income of the economy is limited to the increase in total output—is, in fact, identical with it. Such an increase never takes place uniformly in

SIXTY-FIFTH ANNUAL REPORT OF THE BOARD OF DIRECTORS TO THE SHAREHOLDERS

The Directors submit to the Shareholders of the Bank the General Balance Sheet and Statement of Profit and Loss Account for the year ended 31st December, 1957.

The Balance of Profit and Loss Account for the year, after providing for Taxation and after Allocations to Contingency Accounts out of which full provision has been made for Bad and Doubtful Debts and any other diminution in the value of Assets amounts to £331,243
making the amount available .. £555,764
to which has to be added the balance brought forward from last account 224,521

out of which the following appropriations have been made :—

To Interim Dividend of 12½ per cent. on the "A," "B" and "C" shares, less Income Tax at 8s. 6d. in the £, paid on 20th August, 1957, on the then paid-up capital of £1,470,000	£105,656	
To Officers' Pension Fund	13,000	
To Amount transferred to Reserve Fund	100,000	
		218,656
leaving a sum of ..		£337,108

from which the Directors recommend :—

A Final Dividend of 6¼ per cent., less Income Tax at 8s. 6d. in the £, payable on 1st April, 1958, on the increased paid-up capital of £2,940,000	105,656
Balance to be carried forward to next account	£231,452

An explanation of the increase in the Balance of the Profit and Loss Account for 1957 is set out in the Chairman's Statement to Members.

The following Directors retire by rotation under Articles 120 and 121 of the Articles of Association :—
Lord Bicester.
Mr. J. B. Crichton.
Mr. R. W. B. Dunlop.

To the Board's regret Lord Bicester and Mr. J. B. Crichton have decided not to offer themselves for re-election. The Board wishes to record its great appreciation of their valued services to the Bank.

Mr. R. W. B. Dunlop, being eligible, offers himself for re-election.

Under Articles 122 and 123 of the Articles of Association the Board recommends the election of the Hon. S. G. Catto and Mr. R. N. Drake as Directors. Resolutions to that effect will be proposed at the Meeting.

An Agency of the Bank was opened at Rajawongse Road, Bangkok, on the 14th November, 1957.

At the Extraordinary General Meeting following Class Meetings held on the 25th November, 1957, the Directors' proposals for the reorganization of the Share Capital of the Bank were approved. The reduction of capital involved in the proposals was confirmed by the High Court and became effective on the 31st December, 1957, when the capital assumed its new form as shown in the Balance Sheet attached to this Report.

On the reorganization becoming effective, the Directors transferred from Contingency Reserves to the Reserve Fund the sum of £1,470,000 to bring the Reserve Fund up to the same figure as that prior to the reorganization.

At the same Extraordinary General Meeting the Members approved of the change in the name of the Company to "Mercantile Bank Limited."

Messrs. Cooper Brothers & Co. and Messrs. W. A. Browne & Co., the present Auditors, will continue in office pursuant to Section 159 (2) of the Companies Act, 1948.

By Order of the Board,
R. N. DRAKE,
Chief Manager.

REPORT OF THE AUDITORS TO THE MEMBERS.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the Balance Sheet and Profit and Loss Account which are in agreement with the books of account and returns. In our opinion and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and on such basis the Balance Sheet gives a true and fair view of the state of the Bank affairs as at 31st December, 1957, and the Profit and Loss Account gives a true and fair view of the profit ascertained in the manner therein indicated for the year ended on that date.

MERCANTILE BANK LIMITED

HIGHER PROFIT DESPITE DIFFICULT TRADING CONDITIONS

SIR KENNETH W. MEALING SURVEYS WORLD ECONOMIC TRENDS

THE Annual General Meeting of the Mercantile Bank Limited was held in London on Tuesday, 1st April, 1958. The Chairman, Sir Kenneth W. Mealing, in the course of his statement accompanying the Directors' Report and audited accounts for the year ended 31st December 1957, observed that, although trading conditions were rendered difficult by reason of foreign exchange shortages and restrictions on imports and exports in some of the countries where the Bank operates, the trading profit in 1957 was larger than in the previous year. Referring to India, he stated that this country was "struggling with and through its high Five-year Plan target to improve the standard of living of its vast population and there is no doubt this endeavour is meeting with some success."

The following is the full text of Sir Kenneth's statement:

"There was no change in the Directorate during the year. Lord Bicester, who has served on the Board for twenty years, has indicated that, owing to the pressure of other commitments, he cannot offer himself for re-election at the forthcoming Annual General Meeting. Mr. J. B. Crichton, who retired as Chief Manager in 1947 after 46 years' service with the Bank, and who has been a Director since 1945, has also decided not to offer himself for re-election owing to advancing years.

"The long and valuable services to the Bank of these two gentlemen is greatly appreciated by their colleagues. To fill the vacancies thus created the Hon'ble S. G. Catto and Mr. R. N. Drake will be proposed for election to the Board at the forthcoming meeting.

"The Board's proposals detailed in their circular letter of the 30th October, 1957, to shareholders for the cancellation of the uncalled liability on the 'A' and 'B' shares in the capital of the Bank, the modification of the class rights attached to the 'A' and 'B' shares, the conversion of the whole of the issued share capital into a single uniform class of shares of £1 fully paid up and the capitalisation of the sum of £1,470,000 out of the reserve fund were duly approved at the separate class meetings and at an extraordinary general meeting of the members held on the 25th November, 1957. The reduction of capital involved was confirmed by the High Court and became effective on the 31st December 1957, and the capital assumed its new form on the same day. On the reorganisation becoming effective the Directors transferred from contingencies reserves to the reserve fund the sum of £1,470,000 to bring the reserve fund up to the same figure as that prior to the reorganisation.

"At the same extraordinary general meeting the members approved of the change of the name of the Company to 'Mercantile Bank Limited.'

Balance-sheet

"Foreign exchange shortages, restrictions on imports and exports in some territories where the Bank operates have tended to restrict business, and made trading conditions difficult, but nevertheless, the trading profit was larger than the previous year. The balance-sheet total excluding the capitalisation of reserves mentioned above is unchanged at £75 million. Deposits are lower by £1 million whilst, on the assets side, there is an increase of over £5 million in cash. Investments are lower by nearly £3 million, bills receivable by over £2 million and loans and advances are practically unchanged. The Board is satisfied that our inner reserves more than cover every likely contingency and that it is no longer necessary to build up these Reserves at the same rate as previously. Consequently, the profit for the year 1957 is shown at £331,243, after making transfers to the inner reserves, which permits a larger distribution to members. In August, 1957, your Directors declared an interim dividend of 12½ per cent. on the then paid-up capital and they recommend a final dividend of 6¼ per cent. on the increased capital referred to above. From the balance the usual allocation has been made to the officers' pension fund whilst the sum of £100,000 has been transferred to the reserve fund which now stands at £2,100,000 leaving the balance carried forward at £231,452 against £224,521 brought forward from the previous year.

"In the United Kingdom Mr. Harold Macmillan became Prime Minister on 13th January, 1957, with a reconstituted Cabinet. Full employment, a high rate of capital investment and a rising wage-spiral continued with its inevitable inflationary effect. Gold and dollar reserves fell at an accelerated speed in the second half of the year and this together with the hardening of the West German mark resulted in speculation against and a serious weakening of the pound sterling. To counter this adverse trend Bank Rate was raised in September to 7 per cent. and steps taken further to restrict credit. By the end of the year sterling had regained its position but unless restraint is used in capital investment, Government spending, wage demands and in pressure upon sterling by other members of the sterling area, the permanent solution of the crisis of September 1957 will not readily be found.

Recession

"In America fears of a recession in economic progress became apparent towards the end of the year. Unemployment began to rise and there was a decline in business activity, so that some loss of confidence in the prosperity curve was evinced although it is generally hoped and believed that the steps which the American Government can take if necessary should avert any danger of a serious slump developing although some leading business men and economists there apparently do not fully share these hopes.

"In the international field the year was undistinguished. The new technique of sending frequent open letters from the Kremlin to Heads of States requesting 'summit meetings' which, whether successful or not can be used to make pro-communist propaganda throughout the 'uncommitted' world, seems to show that the Kremlin's underlying objectives are unchanged. Nevertheless the year was notable for the absence of armed conflict other than border incidents, and for the success of the United Nations Emergency Force in maintaining peace between Israel and Egypt. It is to be hoped that the successful establishment of this principle may enable similar action to be taken in future should the occasion unfortunately arise. If so, it may well prove to be one of the beneficial results of the Suez Canal incident, for political conditions in the Middle East cannot be regarded as by any means settled or satisfactory yet.

India

"The outstanding political event in India in 1957 was the general election which began on the 24th February, in which 193 million adult voters chose 494 members of the Lok Sabha (Central Parliament) and 3,102 members of State Legislative Assemblies. The Congress Party was returned with a comfortable majority at the Centre and in the States with the exception of Kerala State in Southern India where a Communist Government was returned with a small majority. In Kerala, conditions, particularly law and order, have deteriorated to a degree which inspires the hope that the voters in Kerala will give a different verdict when they get the opportunity.

"The year was an important one for India. Progress in the second Five-year Plan was made in many directions, but the vast financial implications, and the difficulty in obtaining overseas aid to fill the gap between India's external financial resources and the necessary expenditure, became evident. Mr. Krishnamachari's Budgets on 19th March and 15th May with their steep new taxation, direct and indirect, resulted in heavy falls on the Stock Exchanges, the siphoning off of investment capital and loss of confidence by the private sector and foreign investors in India. The resultant loss of expansion in the private sector may well be greater, and more lasting, than the immediate gain in revenue towards financing the public sector of the Five-year Plan. It is now generally recognised that the latter must be re-phased as finance will only be available for the 'hard core' of the Plan: steel, coal, railway, major ports and ancillary power. Whether sufficient emphasis is laid upon increasing food production is a matter of doubt—especially as it seems certain that between two and three million tons of foodgrains will have to be imported annually for the next few years, at a time when the foreign exchange reserves of the country are so greatly depleted. To check the drain a very stringent import policy was adopted and still continues. The overall minimum external reserve to back the Rs. 2,250 crores of currency is now reduced to the equivalent of Rs. 200 crores, of which Rs. 115 crores is to be in gold coin and bullion. There has been a further measure of inflation, inevitable in the circumstances, and, in the second half of the year, a good deal of industrial labour unrest.

"Nevertheless, India is struggling, with and through its high Five-year Plan target, to improve the standard of living of its vast population and there is no doubt this endeavour is meeting with some success. The general election confirmed India's adherence to democracy for the ensuing five years under the guidance of Prime Minister Pandit Jawaharlal Nehru, and the influence of this throughout the whole of South East Asia is of primary importance to the entire free world.

Pakistan

"Mr. H. S. Suhrawardy continued as Prime Minister until October 1957 when Mr. I. I. Chundrigar, leader of the Muslim League, took over the Premiership. This Government was, however, short lived, and in December resigned, to be succeeded by Malik Firoz Khan Noon with a Cabinet of eight members of whom seven are members of the Republican Party. This Government relies on the support of the Awami League, National Awami Party and National Congress Party. Two main issues continue to bedevil Pakistan politics: the question of separate or joint electorates and the continuance of the one-unit constitution in West Pakistan. Opinion is so divided on these two issues that political stability still seems some way off. Pakistan's foreign policy continues to be firmly pro-Western and her overseas prestige was undoubtedly enhanced by Mr. Suhrawardy's visits, when he was Prime Minister, to the Far East, the United Kingdom, the U.S.A. and other countries.

"The industrialisation of Pakistan continues to expand; the Industrial Development Corporation provided Rs. 12 crores to finance industrial projects, including sugar and jute factories, newsprint, pharmaceutical products and dyestuffs, and fuel and power. The Pakistan Industrial Credit and Investment Corporation was established in October with a capital of Rs. 2 crores and loans from Government (Rs. 3 crores) and the International Bank (Rs. 2 crores) making a total of Rs. 7 crores to assist in the expansion and modernisation of industrial enterprises in the private sector, particularly small and medium sized concerns engaged in the processing of indigenous raw materials. On the other hand, agricultural development is not receiving the expansion essential to the country and Pakistan continues to be dependent on large food imports: in 1958 it is estimated that 700,000 tons of rice and not less than 600,000 tons of wheat will have to be imported, whilst the adverse balance of trade for the ten months ending October 1957 was Rs. 22.54 crores.

"Heavy Governmental expenditure resulting in excessive monetary demand brought about inflationary tendencies during the year, and credit restrictions were accordingly imposed to meet this trend. It is to be hoped that profitable revenue from the many industrial enterprises created in recent years will soon come to the assistance of the economy which at present is so largely dependent on foreign aid.

"Severe drought adversely affected the tea crop in 1957 and there was a marked decline in world demand for jute goods, the two main industries of East Pakistan. Further progress was made in the industrialisation of Khulna and the opening of the new shipyard was an important event, but much remains to be done if local amenities such as roads and housing drainage and water supply are to keep pace with the industrial development of Khulna.

Ceylon

"Mr. S. W. R. D. Bandaranaike's Government continued in power throughout the year and has had considerable difficulties to contend with. Tact and skill were displayed in settling the Tamil problem and this language is now recognised as the language of the Tamil minority and as the administrative language of the Northern and Eastern Provinces.

"Economically, Ceylon has been adversely affected during 1957 by several factors; and the balance of trade for the first eleven months was unfavourable by Rs. 82 million compared with a favourable balance of Rs. 102 million for the same period in 1956 and a favourable balance of Rs. 480 million in 1955. Her Budget estimated for a deficit of Rs. 199.6 million but this is likely to be greatly exceeded by the great increase in cost of wages in the Public Sector which must throw a considerable strain on the economy. Labour unrest, strikes, and delays in clearance of goods in Colombo Harbour are all contributing to a serious economic decline.

"Ceylon's economy is based on three commodities: tea, rubber and coconuts: the world prices of which declined during the year. She is a nett importer of foodstuffs and for the first eleven months of 1957 it is estimated that the cost of this has increased by some Rs. 92 million. Apart from transport there has been no nationalisation of privately owned industry although fears of this have not been allayed. The Paddy Lands Bill which should shortly become law is a measure of agrarian reform designed to increase rice supplies and reduce the nation's bill for imported foodstuffs.

"Tea had a record crop with average prices fluctuating between Rs. 1.48 and Rs. 2.18 per lb. Rubber also produced a record crop and is now a creditor of Communist China to the extent of Rs. 120 million under the 5-year barter agreement which has now expired. Under a new agreement 30,000 tons of rubber a year will be sold at Singapore prices in exchange for 200,000 tons of rice at Burmese prices.

Burma

"Early in 1957 the Premier, U Ba Swe, was replaced by his predecessor, U Nu, as I forecast last year. Second thoughts about nationalisation seem to be taking place and it is believed that a Bill will soon be passed by the Government to provide incentives to foreign investors to introduce capital into the country by reliefs in taxation and customs and guarantees against nationalisation for ten years with guaranteed repatriation of profits, dividends and capital. This welcome change in outlook would, and may, have beneficial effects provided greater progress can be made in dealing with the problem of the insurgents and banditry still unfortunately rife in many districts in spite of the surrenders which have so far taken place.

"The Four-year Plan has been scrapped and the Prime Minister has stated that in future planning will be a continuous process, revisions taking place in the light of experience. A recent development is the setting up of joint venture corporations to handle the import of consumer goods and industrial requirements. These, having a monopoly, operate profitably.

"The country's economy is largely dependent on the export of rice, of which before the War, Burma was the largest exporter. Although production is still some 20 per cent. below the pre-war figure, exports for the year ended 30th September 1957, were estimated at no less than 2,017,000 tons and earned K.87 crores in foreign exchange. The carry-over from 1957 is only estimated at 250,000 tons of rice and rice products. The third crop forecast for 1958 estimates and exportable surplus of 1.3 million tons. Long-term commitments include, to India 500,000 tons, Ceylon 200,000 tons and Pakistan 100,000 tons.

Federation of Malaya

"An historic event took place on 31st August 1957, when the Federation of Malaya became an independent sovereign nation within the Commonwealth under the able Chief Ministership of Tengku Abdul Rahim. On the 17th September the Federation was admitted as a member of the United Nations Organisation and diplomatic relations have been and are being entered into with many countries. The change to independence was effected calmly and in a friendly atmosphere and Ministers have made a special point of reassuring investors concerning their stake in the country.

"The rubber and tin industries continue to be the main support of the national economy. Rubber cultivation covers 3½ million acres or some 65 per cent. of the total cultivated area, the export earnings of rubber produce 60 per cent. of total earnings and 25 per cent. of the employment of the people. The tin industry provides some 20 per cent. to 25 per cent. of export earnings. The price of both these products had declined substantially during 1957, and it is important that the development of other industrial and agricultural projects should take place to render the economy more viable. Indeed, many new industries are coming into existence: ten large factories are to be constructed to produce chemicals, cables, rubber-products, tobacco and matches, and many smaller factories are also under consideration.

"The estimates for 1958 budget for a deficit of $119.2 million, but as the estimated general revenue surplus brought forward at end 1957 is $494 million, the estimated deficit for 1958 will reduce this general surplus to $375 million. Britain agreed in January 1957 to provide Malaya with financial aid amounting to £38,700,000 over the first five years of independence.

Singapore

"Further progress in the policy of political advancement was made in 1957. In March the Chief Minister, Mr. Lim Yew Hock, led an All-Party delegation to London and agreement was reached in April on a new constitution designed to confer full internal self-government on Singapore. External affairs and defence will remain the responsibility of H.M. Government, and reserve powers are retained for emergency use. Elections are to take place in August 1958, but the results of the first fully-elected City Council were disappointing as only 30 per cent. of the electorate voted and this resulted in a decisive swing to the left, which may not bode well for the elections to the new 51-member Assembly and the inauguration of the new Constitution next August.

"Economically 1957 was a prosperous year for Singapore and there appears to be no reason why 1958 should not also be prosperous, but I must mention some of the factors which may bear upon this prosperity. The confused political situation and uncertain outlook in Indonesia may affect both Malaya and Singapore, over 17½ per cent. of whose external trade is with Indonesia. A trend to the left in Singapore is unlikely to expedite favourable consideration by the Federation of Malaya of union with Singapore, and indeed is likely to result in the speeding up of the modernisation of Malaya's ports and tightening of her tariff policy to Singapore's disadvantage. A third factor is the rapid increase of population, which is rising by 50,000 a year, and must result in unemployment unless new industries are developed to provide employment and homes. This requires capital for both public and private development and the annual amount of new capital formation has not increased over recent years.

"Rubber prices fluctuated throughout 1957, from $1.11¾ per lb. for R.S.S 1 at the commencement of the year to 82½ cents at the end of the year, with a 'low' at 74 cents in November. Washington statistics estimated World output of natural rubber in 1957 at 2,930,000 long tons with consumption at 30,000 tons less, and synthetic output at 1,255,000 tons and consumption 5,000 tons less. United States consumed 560,000 long tons of natural and 930,000 tons of synthetic rubber, a total of rather under 50 per cent. of aggregate world consumption of both products.

"Trade with Japan, both export and import, showed a substantial increase. Imports from West Germany increased by 26.8 per cent. to $97.9 million.

"The Port of Singapore at present handles approximately two-thirds of Pan-Malayan trade estimated to be in the region of $8,400 million a year, only equalled by the record year 1951 when the balance of trade was favourable to the extent of $1,270 million, whereas for 1957 it is estimated the balance will be unfavourable to the extent of some $200 million.

Thailand

"The peaceful and prosperous progress of Thailand was disturbed by political upheaval resulting in the departure of Field Marshal Pibulsonggram and his co-adjutor, General Phao Sriyanond and eventually the appointment as Prime Minister of Lt.-Gen. Tanom Kittikachorn, close friend of Field Marshal Sarit, following elections held on 15th December 1957.

"Industrial development has not made great progress during the year but 1,566,699 metric tons of rice were exported, having a value of £54,707,536 and U.S. $29,409,338, representing an increase of some 25 per cent. over the previous year, but it is believed that the exportable surplus in 1958 will not greatly exceed 1 million tons.

"Trading conditions have become more difficult, due to overstocking in 1956-57, shortage of money which is to some extent siphoned off by a plethora of lotteries, drawings for which take place seven times a month, tightening of credit and also uncertainty which necessarily accompanies political changes. It is to be hoped that Lt.-Gen. Tanom Kittikachorn's Government will become firmly and satisfactorily established, maintaining the pro-Western foreign policy of its predecessors whilst securing the goodwill of the people by enlightened internal administration. Should this prove to be so, there seems to be no reason why Thailand's economic progress should not continue.

"A sub-branch of the Bank was opened in the Rajawongse Road on 14th November 1957, for the convenience of our clients in that area of Bangkok.

Hong Kong

"The value of imports into Hong Kong increased by 12.8 per cent. over 1956 at $5,149 million of which $1,131 million came from China, $667.3 million from the U.K. and $539 million from the U.S.A. From Malaya and Japan imports declined. Exports declined in total by 6 per cent. compared with 1956 and although increases in exports to the U.K. and U.S.A. occurred, they could not counterbalance the serious and continuous fall in exports to Indonesia, Thailand, Japan and South Korea. Exports to China, which have steadily declined since 1951, reached a new low in 1957 at $123.4 million.

"Great progress has been made in establishing Hong Kong as a manufacturing centre, both as to quantity and quality of goods, and exports of Hong Kong products reached a value of nearly $794 million in 1957. There has been a boom in building development with consequent high prices for land, but money has become dear as a result of the raising of Bank rate and this has been reflected in depressed prices on the Stock Exchange.

"Sir Alexander Grantham, who has been Governor for ten years, retired at the end of 1957. There can be little doubt that the peace and prosperity which this colony has enjoyed since the war has been largely due to his wise Governorship.

Mauritius

"Notwithstanding early drought, the sugar crop at 561,800 metric tons was only 10,000 tons lower than the previous year's all time record. Under the terms of the International Sugar Agreement, the export quota for Mauritius remains the same at 470,000 long tons, of which 335,000 will go to the British Ministry of Food and the balance of 135,000 long tons will be offered in the Preferential markets of the United Kingdom and Canada. The Cyclone and Drought Insurance Fund is now estimated to exceed Rs. 110 million, but there will be some claims from Estates affected by the drought in the north of the Island.

"In general, trading conditions in the Island were satisfactory in 1957, but exports and imports show a substantial increase over 1956. Tea output reached 1½ million lbs. and is increasing. It is hoped, with Government assistance, to have 5,000 acres under tea by 1960.

"Passenger transport by railway has ceased and road traffic consequently increased. An ambitious road building programme is under way and three new hydro-electric power projects are being developed.

"A Commission headed by Sir Malcolm Eve, Q.C., was appointed by the Secretary of State to make recommendations on the demarcation of boundaries and the electoral system in implementation of the new Constitution. This Report is not yet ready, but in the meantime the new Ministerial system appears to be working very satisfactorily.

Japan

"The prosperity and expansion which Japan enjoyed in 1956 received a severe check in 1957. The pace of expansion had become too great and the cost of imports rose out of proportion to the value of exports, so that an adverse balance of trade and shrinkage of foreign exchange began to put a severe strain on the country's economy. In an endeavour to improve matters the Bank

HINDUSTAN LEVER LIMITED

SPEECH OF CHAIRMAN, MR. S. H. TURNER, AT ANNUAL GENERAL MEETING

"THERE IS NO TOOL MORE VALUABLE THAN MARKET RESEARCH"

THE Annual General Meeting of Hindustan Lever Limited was held in Bombay on 7th April 1958. The following is the text of the speech made at the meeting by the Chairman, Mr. S. H. Turner:

"I have great pleasure in welcoming you to this annual general meeting of the Company.

"The annual report and accounts have been with you for some time and I shall take them as read. As I have also circulated to you my review of their salient features, I do not wish to dwell on them further in my speech today.

"I would like to tell you about a particular activity of our Company which has an important influence on the development of our business, that is, marketing research. Marketing research involves a study of consumer preferences, habits and attitudes. Thus it helps us to decide how our immediate market operations should be directed. It also involves an examination of trends, so that its findings indicate the future pattern of the market and assist us in shaping our forward policies. All our decisions on the improvement of existing products or the development of new ones, the adoption of new selling methods and the application of new advertising techniques are the more effective for being taken in the full and intimate knowledge of our markets, which continuous research into these markets is designed to provide.

"To large manufacturers of consumer goods —and we must rank among the largest in India— economies come largely from mass production and mass selling of standardised lines. This standardisation is only successful, if the resultant products appeal in properties and performance to the greatest number of people. We have many millions of customers. They vary widely in their tastes. They are conditioned by different social, cultural and religious background. We must have products which are acceptable alike to the rich and the poor, to the educated and the uneducated, to the Punjabi and the Tamil.

Choosing A Sample

"To discover what preferences are most general in this variegated pattern of consumers, we choose a representative sample of them and find out what their opinions are by questioning them. The result is intended to reflect the opinion of our universe of potential customers. The size of this sample is determined mathematically once we have postulated the number of categories of people it shall contain to fulfil the particular purpose in view. The combined opinions and attitudes of the individuals composing this sample will be representative of our universe within a calculable margin of error, provided the questions we put to them are so phrased as to evoke the respondent's true opinion and not an opinion adapted to please the questioner or to express what the respondent thinks it is respectable to say rather than what he really thinks.

"The framing of our questions to ensure that the respondent is not tempted to disguise his true feelings calls for great skill. For example, people who believe that good form requires them to have a bath every day sometimes sincerely think they have a bath every day, whereas, in fact, they only have a bath four times a week when the weather is cold. In a foreign country, it was once found that, if everyone cleaned his teeth as frequently as was claimed, the toothpaste manufacturers would be unable to supply the total demand. Similarly, we find that, in Kerala, people are inclined to say they take a bath four times a week, and some may even claim to do so twice a day, whereas, in Saurashtra, nobody minds confessing to washing himself and his clothes only once a week or even much less frequently. The mental attitude to washing in Kerala is conditioned by an abundant supply of water. The habits in Saurashtra have been formed by a geography in which water is scarce and precious. In Northern India, there are still women to be found who will not admit to eating *vanaspati*, because it is socially more estimable to eat ghee. And in most U.P. households, both the wife and the husband will treat the choosing of anything, whether cooking fat or soap, as the prerogative of the male, despite the fact that the investigator may often have an uncomfortable suspicion that, when it comes to the point, the wife makes the husband's choice for him.

Many Techniques

"These shynesses, reticenses, resistances, subconscious blocks, or what you wish to call them, run through the whole of our work. Nowadays, therefore, in addition to the straightforward technique of so phrasing the questions that they are completely neutral, a great many techniques have been devised to set people's subconscious at ease, to get at the facts below their lapses of memory and to allow for their desire to conform to convention. We may, for instance, ask a group of housewives in for a cup of tea and get them sufficiently relaxed so that they will talk freely and even admit the prejudices which, in answer to formal questions, they might feel were too ridiculous to mention. These are obvious examples. Beyond them lie the more surprising discoveries that have been brought out by touching the deeper layers of the mind. Women are, for instance, quite often allergic to advertising that suggests that some new product will save them a lot of time in the kitchen, because they feel that it is their capacity as homemakers that gives them their prestige in the family; if making a home is made too easy, what will happen to the respect their husband and children feel for them? Or, again, we have done some investigations which suggest very strongly that many of the prejudices people have about Dalda do not really have anything to do with Dalda at all but are only a way of venting their resentment against a world which, for many professional class people, is narrower and more difficult than it was before the war. Buying Dalda instead of ghee is a very good way of economising, so they transfer to Dalda the resentment they feel that the world has now become a place where they have to watch every rupee.

"Another technique is to try simply to get the housewife to talk freely, with the investigator doing no more than listen sympathetically, prompting only when the flow stops. In that way we can sometimes discover what the associations are which really matter in people's minds. These are not always either predictable or logical; for instance, it is not necessarily the rich woman who buys Sunlight; it may be the poor woman who values its lather and the ease with which she can do her washing with it; the rich woman whose washing is done for her by servants quite often feels that they are so wasteful of soap anyway that it is best to buy for them the cheapest brand on the market.

Research Results

"I have not attempted to describe marketing research techniques in detail, or with the accuracy of a textbook. I have only been trying to give you some idea of the principles on which a marketing research department works. I would now like to try and tell you something of how we use the results of marketing research in order to influence the decisions we have to make from day to day in the running of our business; and nowadays, there are hardly any decisions on the marketing side which we can make without taking into account our research results.

"We begin with a picture of our market. Who is it who buys our products? We know they are not bought equally over the country. Dalda, for instance, is bought far more in the hard fat areas of the North than in the oil areas of the South. Sunlight is specially strong in Eastern India. We have to find out exactly what the map is like for each product and whether the reason for its strength or weakness in particular areas is due to the habits of the local people or to something in the product. For instance, Dalda sells well both in Maharashtra and in the Punjab, but that in itself gives no guidance on how we should split our advertising between the two. Marketing research shows that we have a much lower percentage of the total hard fat market in the Punjab and that, therefore, the Punjab is much more likely to reward a major advertising effort than Maharashtra. Again, Sunlight sells quite satisfactorily in the Punjab, but marketing research shows that, whereas in Eastern India it is used largely as a general laundry soap, in the way we hope it will be used, in the Punjab, it is used mainly for washing particularly good clothes. The Punjab, therefore, offers an immense opportunity for the expansion of Sunlight's use into general washing.

Shape of Market

"Until we know the shape of the market, we do not know where to strengthen our distribution or how to split up our advertising. We may even find sometimes that we have reached saturation point, that any further consumption of our products can be only attained by a quite disproportionate expenditure, and we might then even slacken our advertising or make our distribution less intensive. And, of course, if marketing research shows that our product is bought only by the professional class, because it is suitable only for the educated, we would not spend a lot of money advertising it in publications read only by farmers or industrial workers.

"We not only have to find out who buys our products and where. We have also to find out what they think of them. We have a very clear idea in our own minds of what our products can and cannot be expected to do, and the temptation is always to think that our image of them is so based upon technical fact that the public must think of them in exactly the same way. Sometimes this is not so. It is no consolation that we are right and the public are wrong. The public's beliefs are a fact. We do not expect the mountain of public opinion to go to the Mohamed of our knowledge. On the contrary, I hope you have all noticed we are at pains to bring the Mohamed of our knowledge to the mountain of consumer opinion.

Cross-check

"With a product we have had on the market for a long time, marketing research is only one of several ways of knowledge. We can, for instance, cross-check a great deal of what marketing research tells us from our sales figures, which tell us quite as clearly as marketing research can whether we sell more in U.P. than in Mysore or in Malabar Hill than in Parel; and, though the figures themselves will not tell us why, sometimes we can find that out too from what our dealers and our shopkeepers and our salesmen tell us; or sometimes we can guess what is giving us our sales from the laboratory's reports on the performance and quality of the product. We know that the law does not permit Dalda to have the taste of ghee and are not surprised when we find that Dalda is not used for those purposes where it is the ghee taste which is essential.

Not A Panacea

"Marketing research is not a panacea. It does not provide an answer to every question. Sometimes, people find it so difficult to define what they mean that we are driven back on our own personal judgment.

"For instance, it was discovered a long time ago that when people buy a toilet soap they look at almost anything except its capacity to clean— the luxury of its appearance, the purity of its colour and, above all, the pleasantness of its perfume. The reason is obvious. Every toilet soap will wash the dirt off one's face. Thus far marketing research gave a perfectly clear answer, but, when we then tried to find out which colour or perfume or wrapper people like, we very rapidly got frustrated. One cannot get adequate explanations out of most people for why they like the perfume or colour they like; their reasons are too intangible, too indefinable, perhaps too deep in the subconscious. The standard way of praising a perfume is to say that it is nice and, since different people call perfumes of almost every note and composition nice, that is very little help. If one presses them, they may say 'strong' or 'weak.' But since different people have different definitions of 'strong' and 'weak,' one tends to find that the same perfume is being praised for both qualities. Equally, people will talk of the purity of a colour or of its whiteness. 'Pure' is a word of clear meaning when applied to ghee or to morals; but what is a pure as against an impure blue? And white is a colour or infinite shades. One has to use one's judgment of which shade of colours or perfumes the public would probably like, and then, within the narrow range thus selected, make a final choice by asking people their preferences as between, at the most, three or four blank tablets, the only difference between which is the perfume or colour or whatever the variable is one is testing. Moreover, as people's preferences are usually accurate only between two products at a time, even to test four is a pretty elaborate business. To test the whole possible range is simply impossible.

Rinso

"Thus a large part of our marketing research effort is product testing. Recently we were faced with a problem in marketing Rinso. We had to decide whether we should choose for the powder a soap base which would give a superlative lather provided warm water was used, or an alternative base which, though giving a less spectacular lather, would dissolve well in cold water. We prepared experimental powders with the alternative bases and gave trial packets of both to a selected sample of housewives. The majority preference was in favour of the cold water-soluble product and, as a result of this, we were able to formulate Rinso to be most suitable for a country where the water is rarely heated for washing.

"In the spring of 1957, we introduced our lather shaving cream—Erasmic. Before launching this product, we carried out widespread product tests, and the results were measured by marketing research to ascertain that the product was of sufficiently high quality.

"Social and economic changes have the most important bearing on our business. For example, the development of new industrial colonies like Chittaranjan and Sindri where the habits of the villagers living on a subsistence level change quickly when they become industrial workers with regular pay and modern amenities. Their standard of living rises suddenly and they begin to consume products which they could not afford before. A study of these new dynamic townships that are growing up shows that they are likely to create a strong demand not only for our main products but also for our special lines and toilet preparations.

Consumers' Wishes

"Besides research into our current products and people's existing habits and preferences, a growing and important use of our research is looking into the future to study possible modifications and changes in products to make sure that we keep pace with shifts in consumer requirements and habits. It is as much our responsibility to investigate future demands of consumers as to satisfy their present demands. In a free economy, consumers' wishes are never static, and it is for us to look ahead and find out what consumers are likely to want in the future. This is particularly important in a country like India where society is changing fast and will change perhaps even faster in the future.

"In recent years, we have applied marketing research techniques to estimating the size of the groundnut crop. The official figures do not come out until the end of February and, since the heaviest buying season of the year is in December, January and February, we must form our own assessment of the crop to guide our buying policy of groundnut oil and seed. We take a very rough sample of roadside farmers and confine ourselves to a few simple questions. The margin of error with such a technique is obviously considerable, but we have found that we get an answer which is reasonably near the final official answer, and also that we get an idea, which the official figures give only months later, of where the crop has been good and where the crop has been bad, which has a very considerable influence on the relative prices our different factories will have to pay.

Advertising

"When we are satisfied that we are making the right product, a product which will both do a good technical job and will also satisfy the desires or prides which the public wants it to satisfy, there still remains the question of how to tell the public that this desirable product is there to be bought. The answer is advertising and, therefore, all consumer goods manufacturers must spend a lot of money on advertising—particularly India, where advertising has not only the task of trying to sell a particular brand of product against its competitors, but may often be required to introduce the product-type as one which is a necessary part of a higher standard of living.

"We should naturally like to find out whether our advertising money is being spent to the best effect. That is not easy. When people buy something they very rarely remember why they first bought it. Very few people ever say that they first bought Sunlight Soap because they read in a newspaper on the 15th January that it washes white and bright. Partly this is because they do not know that that is what happened. Advertising comes to them from many angles—shop displays, cinemas, press, posters—and it is hard to identify just what sparked the final decision to buy. Partly it is because people like to think they make their minds up for themselves and resent the idea that they were moved by the pretty girl in the advertisement.

Not Easy to Test

"Because of all this, it is not easy to test how effective advertising is in making people buy. What we can test is whether people have seen our advertisements and whether they remember what the advertisements said. In these respects, the results of the tests we have done on our own advertising are generally satisfying. Lifebuoy advertisements, for instance, have been seen and remembered by about half the people we have asked. Cinema-goers seem to be receptive to advertising films and ours have normally been well remembered. In a recent enquiry, Rexona shop display material was recalled by a high proportion of respondents.

"Though it may be difficult to assess how effective any particular advertising campaign or subject has been in creating a sale, nevertheless, we have constantly to develop our judgment in them. Motivation research attempts to supplement intuition with scientific enquiry. It involves investigation of consumer attitudes and behaviour and particularly of the reasons why people buy. We feel that, if we can establish the reasons (whether they be conscious or unconscious) why people buy and what influences them in their choice, then we will be in a better position both to give them the products they want and also to present and advertise them in a convincing way.

"Our function as a Company is to try and give the consumer products which he will like and which will do the job he wants them to do. Before we can do that, we must find out what the consumer will like, what is the job he wants them to do, as distinct perhaps from the job we think he ought to want them to do, whether the products we can make come near enough his ideal—one never achieves perfection—and whether our methods of telling him about them are adequate. For all these purposes, there is no tool more valuable than marketing research."

Note:—This does not purport to be a record of the proceedings of the annual general meeting.

WORLD SOCIAL STATISTICS

FALL IN MORTALITY RATE—INCREASE IN FOOD SUPPLY

THE data on the number of physicians, dentists, midwives and pharmacists in more than 180 countries and territories, contained in the 1957 issue of the *U.N. Statistical Yearbook*, shows that in more advanced countries, there is generally one physician for every 1,000 inhabitants; in the least advanced countries, perhaps only one physician for every 50,000 inhabitants. The *Yearbook* points out that differences in national definitions and methods of enumeration make it difficult to obtain a close comparison between countries of similar standards. However, the number of inhabitants per physician provides a convenient yardstick for measuring medical care.

Among the more advanced countries, for example, the number of inhabitants per physician was only 610 in Austria; around 700 in Czechoslovakia, Hungary, New Zealand, Switzerland and West Germany; and less than 800 in the United States. Among the less advanced countries, there was only one physician for 71,000 inhabitants in Indonesia (1954), for 58,000 in Nigeria (1954), for 29,000 in French West Africa, for 22,000 in Ghana, for 20,000 in the Belgian Congo and Liberia, for 9,300 in Kenya and for 8,200 in Madagascar. Between these extremes, with one physician for 4,000 to 6,000 inhabitants, are such countries as (in alphabetical order): Algeria, British Honduras, Ceylon, El Salvador, Honduras, India, Iraq, Leeward Islands, Mauritius, Reunion and the Republic of Korea. In South America, the number of inhabitants per physician ranged from 760 in Argentina and 860 in Uruguay (1957), up to 3,300 in British Guiana and 4,000 in Bolivia.

Infant Mortality

For purposes of international comparability, the table on infant mortality rates (i.e., number of deaths of infants under one year per 1,000 live births) is limited to countries for which complete or virtually complete registration data exists. These rates, which largely reflect levels of health and living conditions, point to a worldwide and substantial reduction over the past two decades in the proportion of infants dying within a year of birth. Among the countries shown with the highest pre-war rates, the infant mortality rate in 1956 (compared with the average 1930-34 rate) shows a drop from 278.8 to 42.6 in Malta, from 244 to 112.3 in Chile, from 242.4 to 96.7 in Barbados, from 185 to 42.5 in Singapore, from 165.1 to 66.5 in Ceylon, from 163.1 to 66 in Mauritius, from 156.7 to 58.6 in Hungary, from 154.9 to 98 in Yugoslavia, from 144.7 to 87.8 in Portugal and from 143.7 to 53.1 in Jamaica.

Over the same period, Czechoslovakia brought down its infant mortality rate from 128 5 to 31.5, Japan from 124.2 to 40.7, Spain from 118 (1932-34) to 51.7 and Italy from 105.6 to 48.4. Among the new record low rates in 1956 (1930-34 average in parantheses) were: Sweden 17 (51.9), Netherlands 19 (46.7), New Zealand (Europeans) 19.4 (32.4), Australia 21.7 (42.9), United Kingdom 24.5 (65.5), Denmark 25 (73.1), Finland 25.4 (73.9), Switzerland 25.8 (49) and the United States 26 (60.4). The rate for Hawaii in 1956 (22.1) was slightly higher than in 1955 (20.6) but only a fraction of the average 1930-34 rate of 76.5. The latest data (1955) for Norway (20.6) was also a record low for that country.

Expectation of Life

The *Statistical Yearbook* contains data for some 65 countries on the expectation of life (average number of years of life remaining at age specified, if subject to mortality conditions of period indicated) at birth and at ages 20, 40 and 60 years. A baby girl at birth may expect to live longer—up to nearly six years longer in some countries—than a baby boy, except in Ceylon, India, among the Asian population of the Union of South Africa and among the Indian population of Guatemala; and a woman 60 years old may expect to live longer—up to about four years longer in certain countries—than a man of the same age, except among the Guatemalan Indians.

According to the latest data, the Netherlands is the country where the expectation of life at birth is longest both for females (73.9 years) and for males (71 years). The countries showing the next longest expectation of life at birth were, for females: United States (whites), 73.6 years; Sweden, 75.43 years; England and Wales, 72.99 years; Norway, 72.65 years; and New Zealand (European population), 72.43 years. For males: Sweden, 70.49 years; Norway, 69.25 years; Israel, 68.3 years; New Zealand (European population), 68.29 years; and Denmark, 67.8 years. The United States (whites) which ranked second for female life expectancy fell to eighth place for male life expectancy at birth (67.3 years).

At the age of 60 years, a woman might look forward to another 19.6 years in Iceland, 19.45 years in Norway, 19.3 years in the United States (whites), 18.9 years in the Netherlands, 18.64 years in Canada and 18.61 years in Sweden; and a man of 60 to another 18.39 years in Norway, 18.2 years in Iceland, 17.8 years in the Netherlands, 17.38 years in Sweden, 17.1 years in Denmark and 16.9 years in Israel. On the other hand, the expectation of life at 60 years was only 2.1 years for men and 3.5 years for women in Greenland (1946-51).

Man's life span has been substantially lengthened since the 1920s. For example, the life expectancy of a male baby at birth has been extended by 27.6 years in Ceylon (1920-22 to 1954), by 22.2 years in Trinidad (1920-22 to 1954-56), by 12.9 years in Scotland (1920-22 to 1956) by 12.4 years in Finland (1921-30 to 1951-55) and by 11.9 years in England and Wales (1920-22 to 1955) and in Switzerland (1920-21 to 1948-53).

International Levels of Food Supplies

The *Yearbook* provides data, at the retail level, on *per capita* supplies of foodstuffs, protein and calories in some 40 countries. The latest data given (generally for the split year 1955-56 or 1956-57 shows that over 3,000 calories *per capita* were available daily in 12 countries (arranged in alphabetical order), namely, Australia, Canada, Denmark, Finland, Iceland (1950-51), Ireland, New Zealand, Norway, Switzerland, United Kingdom, United States and the German Federal Republic. Other countries having between 3,000 and 2,800 calories were Belgium, Luxembourg, Sweden, Argentina, Austria, the Netherlands, France, Israel and Uruguay. At the other end of the scale, there were less than 2,000 calories available daily *per capita* in Burma (1947-48), Ceylon, India, Pakistan and the Philippines, and less than 2,300 in Honduras, Japan and Venezuela (1951).

In Europe, annual *per capita* meat supplies have steadily recovered from the low levels of the early post-war years and in 1956-57 (or 1955-56) exceeded the pre-war average (generally 1934-38) in Belgium, Luxembourg, Finland, France, Iceland (1950-51), Netherlands, Portugal, Sweden and the United Kingdom; stood at or close to the pre-war level in Ireland and Switzerland but fell short of the pre-war level by 15 per cent. in Denmark (the largest European pre-war *per capita* consumer). By 1955-56, France had become the largest *per capita* meat consumer in Europe, with 78 kilos against an average of 61 kilos in 1934-38. Milk supplies (measured in fat and protein contents) *per capita* in 1956-57 (or 1955-56) were higher than the pre-war average in Belgium, Luxembourg, Finland, Iceland (1950-51), Ireland, Italy, Norway and the United Kingdom, and about the same in the other nine European countries listed except for a slight decline in Sweden and Switzerland.

Annual *per capita* supplies of meat in recent years were around 100 kilos or more in Argentina, Australia, New Zealand and Uruguay, but they amounted to only one kilo in India, three

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of The United Commercial Bank Limited, as at 31st December, 1957, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the Branch returns audited by the Statutory or other Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the proviso to sub-sections (1) and (2) of Section 211 and sub-section (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1957, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

THE PUNJAB NATIONAL BANK LIMITED

HEAD OFFICE "SHREE NIWAS," 8, UNDERHILL ROAD, DELHI.

(Established in 1895)

DIRECTORS' 111th REPORT TO THE SHAREHOLDERS FOR THE YEAR ENDED 31st DECEMBER, 1957

The General Board of Directors begs to submit to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1957.

The transactions for the year under report have resulted in a profit of Rs. 1,17,26,903.52 (including Rs. 6,20,272.48 brought forward from the previous year's account) after contribution of Rs. 9,31,930.00 to Gratuity Fund Trust. The following amounts have been appropriated for the under-mentioned purposes:—

		Rs.
1.	Transferred to Income-tax Provision	50,00,000.00
2.	Transferred to Reserve Fund	22,50,000.00
3.	Transferred to Bonus to Staff Account	18,00,000.00
4.	Transferred to Charity Account	1,00,000.00
5.	Ad-interim Dividend at Rs. 2·50 per share free of Income-tax paid	8,75,000.00
	Total .. Rs.	1,00,25,000.00

The Directors recommend that the balance of Rs. 17,01,903.52 be disposed of as follows:—

	Rs.
(a) Dividend at Rs. 2·50 per share free of income-tax on the increased capital as on 31st December, 1957	12,50,000.00
(b) Carry forward to the next year's account	4,51,903.52

The Directors consider that the working of the Bank has been satisfactory.

By Order of the General Board of Directors,

S. P. JAIN,
Chairman.

7th March, 1958.

kilos in Ceylon and Japan, 10 in the Philippines, 12 in Egypt, and 21 kilos in Italy and Yugoslavia.

Among the low-meat consuming countries, *per capita* annual supplies of cereals (flour and milled rice equivalents) were high, attaining 185 to 200 kilos in Egypt, Turkey and Yugoslavia, around 150 kilos—about double the corresponding figures for Canada and the United States—in Greece, Italy, Japan and Pakistan, and 125 to 130 kilos in Ceylon, India, Philippines and Portugal. Calories derived from foodstuffs of animal origin (defined as meat, eggs, fish, milk, cheese, butter, etc.) accounted in Japan for only 5 per cent. of the total daily *per capita* supplies of calories, for 7 to 8 per cent. in Egypt and Turkey, for 13 to 18 per cent. in Greece, Portugal, Israel, Italy and Yugoslavia; but in New Zealand they represented 50 per cent. of the total, 43 to 44 per cent. in Australia and Canada, and 38 to 40 per cent. in Ireland, United Kingdom, Uruguay, Iceland, Norway, Sweden and the United States.

Housing Conditions

From the latest post-war census data given, the commonest type of dwelling in the less developed countries is composed of one to two rooms (including kitchen). In British Guiana, 90 per cent. of the dwellings were composed of one or two rooms, 56 per cent. in Egypt, 57 per cent. in Finland and, not counting the kitchen as a room, 80 per cent. in Yugoslavia (urban areas). On the other hand, dwellings of five to six rooms constituted half or more of all dwellings in Australia, New Zealand and the Netherlands, and also constituted the largest group in the United Kingdom (44 per cent.), Canada (39 per cent.) and the United States (38 per cent). Dwellings of three to four rooms predominated in most other European countries and also in Brazil, Costa Rica (urban areas), Japan, Puerto Rico and Southern Rhodesia (municipalities only).

Overcrowding is measured by the density of occupation (number of persons per room), and it is stated that dwellings are generally considered overcrowded when there are more than 1.5 persons (United States) or two persons (Europe) per room. For example, the census data shows that there were two or more persons per room in over 93 per cent. of the dwellings in Paraguay, in 78 per cent. of the dwellings in British Guiana, in 56 per cent. of the urban dwellings in Ceylon. At the other end of the scale, in Australia, Canada, Denmark, the Netherlands, New Zealand, Switzerland, the United Kingdom and the United States, the proportion of dwellings with 1.5 or less persons per room ranged from 90 per cent. in Canada and the Netherlands up to 96 per cent. in the urban areas of Australia and Denmark.

Consumption Expenditure

Expenditure for food constitutes the largest item of consumers' private expenditure in all the 27 countries listed in this table. In the less advanced countries covered, it accounted for roughly half of the total expenditure in the latest year shown (generally 1956 or 1955)—54 per cent. in Ghana, 53 per cent. in Yugoslavia, 50 per cent. in Honduras, 46 per cent. in the Republic of Korea, 44 per cent. in Panama. The combined expenditure on food and the item "tobacco and beverages" represented 71 per cent. of total private consumption in Nigeria (1950), 55 per cent. in Japan, 50 per cent. in the Dominican Republic and 45 per cent. in Puerto Rico.

Among European countries, expenditure on food ranged from 30 to 34 per cent. in Sweden, Norway, Belgium, the United Kingdom and Luxembourg; it was somewhat higher, 36 to 37 per cent., in Austria, Finland, Ireland and the Netherlands and it reached 39 per cent. in France (1951) and 46 per cent. in Italy. Expenditure on food averaged around a quarter of total private consumption expenditure in the three largely self-sufficient food-producing countries listed: 21 per cent. in Canada, 26 per cent. in Australia, 27 per cent. in the United States.

Rent

Due to rent control, the proportion of private consumption expenditure devoted to rent has been drastically reduced in many countries since pre-war (1938): for example, it has fallen by about three-fourths in Italy, about a half in Australia, Ireland and Norway, and a quarter to a third in Sweden and the United Kingdom; in the latest year shown it ranged from only 3 to 6 per cent. of total private consumption expenditure in France, Austria and Denmark.

In most countries, clothing is the item accounting for the major expenditure after food; it exceeded rent in all countries listed except Belgium, Canada, the Dominican Republic, Panama and the United States, and tobacco and beverages in all except Ireland, Panama and the United Kingdom. Expenditure on tobacco and beverages is shown as exceeding or equalling expenditure on rent in all countries listed except Belgium, Canada, Chile, Ecuador, Israel, South Korea, Panama and the United States.

THE MERCANTILE BANK LIMITED

(*Concluded from page* 693)

of Japan raised its rediscount rate in March and again in May to 8.395 per cent. In addition to this tight-money policy, the Government issued directives to private enterprise to restrict non-urgent investment such as house building, and took steps to curb imports. As a result, cuts in production are the order of the day until the Government considers that the situation justifies an easing of the present tight-money policy. There are indications that these steps are taking effect and improving the balance of payments equilibrium.

"Japan had another favourable rice crop in 1957, estimated at 350 million bushels, 5.3 per cent. higher than in the previous year. Population is now estimated at 91 million and may rise to 100 million by 1970. Strikes occurred in the shipping and steel industries, both detrimental to the country's export trade. In shipbuilding Japan now ranks first in the World having launched 2,424,000 tons in 1957. This industry is now Japan's biggest dollar earner and one of the best sources of foreign exchange income for the nation.

"Mr. Ishibashi, who became Premier in December 1956, resigned owing to ill-health on the 23rd February, 1957, and Mr. Nobusuke Kishi was nominated Premier in his place.

"The life-line of trade, both national and international, is through the facilities made available by the banking system and the friendly co-operation between those responsible for commerce, industry and trade and the banks through which their financial business is transacted. Fortunately, this is well recognised by the Governments of the countries in which we have branches and, although legislative controls are increasing and thus adding to the burdens of our Managers and staff, the banking service we are able to provide is of considerable value to the national and international trade of these countries. The skilled work and friendly relations between our Managers and staff and the customers and other nationals of the countries in which they work is a principal cause of the continued prosperity of the Bank. Our gratitude is due to them.

"Mr. R. N. Drake has been Chief Manager since 1950. During this period we have made great progress. He will be retiring from the onerous position of Chief Executive and merits our thanks for his long years of service with the Bank, Mr. C. R. Wardle will be appointed Chief Manager in his place."

AUDITORS' REPORT TO THE SHAREHOLDERS, THE PUNJAB NATIONAL BANK LIMITED, DELHI.

We have audited the annexed Balance Sheet of the Punjab National Bank Ltd., as at 31st December, 1957, and also the annexed Profit and Loss Account of the Bank for the year ended on that date, with the books and accounts kept at the Head Office in Delhi, in which are incorporated the unaudited returns of the Bank's Branches in Indian Union, Pakistan and Burma none of which were visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the proviso to sub-sections (1) and (2) of Section 211 and sub-section (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are, therefore, drawn up in conformity with forms 'A' and 'B' of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) in our opinion, proper books of accounts as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from the Branches of the Bank;

(c) the transactions of the Bank, which have come to our notice, have been within the powers of the Bank;

(d) the Bank's Balance Sheet and the Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion and to the best of our knowledge and information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet, read along with the notes appearing thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1957, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

NEW DELHI, 7th March, 1958.

THE INDIAN BANK LIMITED, MADRAS

(ESTABLISHED 1907)

DIRECTORS' ONE HUNDRED AND FIRST REPORT

The Directors have the pleasure to submit a statement of Assets and Liabilities and of Profit and Loss Account of the Bank for the year ended 31st December 1957. The Auditors' Report is also annexed.

2. The Net Profit of the Bank for the year amounts to Rs. 32,01,184.42 and together with the sum of Rs. 8,13,491.40 carried from the previous year's account, makes a total of Rs. 40,14,675.82.

3. Out of this sum, the Directors have made the following *interim appropriations*:

	Rs.	nP
An *ad interim* dividend at the rate of 5 per cent. and a Bonus of 1½ per cent. (both free of Income-tax) was paid which absorbed	4,22,500	00

The Directors now recommend that the following further appropriations may be made:

To pay a *final dividend* of 5 per cent. and a *Bonus of* 1½ per cent. (both free of Income-tax) thereby making the dividend and bonus for the year amount to 12 per cent.	4,30,000	00
To pay a Golden Jubilee dividend of 2 per cent. (free of Income-tax)	1,32,800	00
To provision for Taxes	15,00,000	00
To transfer to Reserve Fund under Section 17 of the Banking Companies Act, 1949	10,50,000	00
To transfer to Sinking Fund	1,50,000	00
To transfer to Development Fund	50,000	00
To transfer to Gratuity Fund	50,000	00
To transfer to Bank's Buildings account	25,000	00
To carry forward	2,04,375	82
Total .. Rs.	40,14,675	82

4. The Bank rate which stood at 3½ per cent. at the *beginning* of this year was *raised* to 4 *per cent.* from 16th May 1957 and remains unchanged.

5. Offices of the Bank were opened during the year at Ayanavaram (Madras), Mint Street (Madras), Rajah Annamalaipuram (Madras), Saidapet (Madras), Thousand Lights (Madras), Brodipet (Guntur), Eluru, Nagercoil, Srirangam, Tennur (Tiruchirapalli), Tiruchirapalli Cantonment, Tallakulam (Madurai).

6. In accordance with Articles 95 and 96 of the Articles of Association of the Bank read with Section 259, of the Companies Act, 1956 four Directors, Messrs. Kumararajah M. A. M. Muthiah Chettiar of Chettinad, R. K. Venkatachalam, R. Sundram Iyer and Rao Bahadur T. S. *Kachapikesa Mudaliar retire this year by* rotation and they, being eligible, offer themselves for re-election.

7. The Directors regret to report the sad demise of Mr. C. Krishnamoorthy Mudaliar, Director of the Bank, on 21st December 1957. Mr. C. Ramanadha Mudaliar, who was co-opted in his place died on 14th February 1958. The Directors desire to record their great appreciation of their valuable services to the Bank.

NEW PUBLICATIONS

Taxation of Companies. By Girish C. Sharma. Published by "Taxation," 3, Daryaganj, Delhi-7. Pages : 716. Price : Rs. 25.

THE author of the book, Mr. G. C. Sharma, is an officer of the Central Board of Revenue. Because of his intimate contact with the work of assessment of companies, Mr. Sharma is particularly well equipped to write on the subject of taxation of companies. Since the book deals exclusively with the taxation of companies, it is bound to be a desk reference book for all those who are connected with company administration. Of the eleven chapters in the book, attention deserves to be drawn to the author's special treatment of Section 23A companies, of assessment of foreign companies and depreciation and other allowances. Carefully worked out examples serve to make each problem in the computation of income and taxes thereon clear to the reader. The author's practical approach deserves to be highly commended.

Economic and Commercial Conditions in Nigeria. Published by Her Majesty's Stationery Office, London. Price : 10s.

A detailed description of Nigeria as a market for British exports is given in a new survey, *Economic and Commercial Conditions in Nigeria*, prepared by the United Kingdom Trade Commissioners in Lagos and published for the Board of Trade by H.M. Stationery Office. Nigeria is the United Kingdom's largest dependency, with a population of 33 million, and this survey describes its vast development plans and gives much useful information about other aspects of Nigeria's economy. According to the survey, current public and private development plans are expected to maintain a strong demand for constructional material in particular, such as building materials and components, structural iron and steel parts, pipes, tubes, fittings and hand tools. Extensions to the road system of the country have brought about a greatly increased use of road transport but there is an intense competition in the motor vehicle market, especially from Western Germany. Cycles and powered cycles are wanted in increasing numbers. Nigeria provides a large market for a very wide range of articles manufactured in the United Kingdom. Specially important lines are indicated by the survey and statistics given. A particularly interesting feature of Nigerian trade is the local market. The Nigerian climate is so mild that it is possible to trade in the open air all the year round and this is one of the major factors that determines the method and cost of distribution of consumer goods. A considerable and increasing number of African concerns engage in the import trade, placing their orders in some cases directly with manufacturers but more often through the intermediary of confirming houses.

Indian Economics. General Editor : Kastur Chand Lalwani. Published by Artha Vanijya Gabesana Mandir, 12, Duff Street, Calcutta-6. Pages : 256. Price : Rs. 6-4.

Textbooks on Indian Economics are fast becoming out of date. The rapidity with which radical changes are brought about in the economic life of the post-Independence India makes most of the stuff in the traditional textbooks on Indian Economics beginning with nineteenth century, more or less of academic interest only. This calls for a reorientation of the methods and techniques of writing books on Indian Economics. The emphasis laid by the book under review on the current economic problems, no doubt, shows that the author is aware of this vital need.

The book begins with a bird's-eye view of the economic development during the eventful period of the last decade, beginning from the measures undertaken for post-war reconstruction. It is followed by an analytical study of a dozen of the burning economic problems of the day, ranging from the pressure of population, to planning and progress. The author might have done well to include more recent data. The chapter on industries is less informative than the one on agriculture. Nevertheless, it will prove useful both to students of Indian Economics and general readers.

Facts About Germany. Published by the Press and Information Office of the Federal German Government. Pages : 196.

Within the short compass of this publication of hardly 200 pages has been compressed a mass of information about the social, economic and cultural aspects of present-day Germany (West). The various topics are conveniently arranged and appropriately classified to facilitate easy reference. The first section contains a succinct account of the political and administrative set-up of the Republic and its historical evolution. The second, dealing with the economy and containing detailed information about such vital aspects as national product, pattern of consumption and employment, trade, currency and credit, public administration and taxation, industrial production and power generation is of particular interest to business men as it gives an idea of the vast dimensions of Western Europe's most efficient industrial economy. The social structure of Germany, labour and public welfare measures obtaining in the country, etc., form the subject matter of the third. The last section gives a bird's-eye view of the cultural aspects of the life of the German people.

Textile Industry in South India. Compiled by Messrs. Dalal & Co., Madras-1. Pages : 249. Price : Rs. 5.

This is the eighth edition of the *Textile Industry in South India* brought out by Messrs. Dalal & Co., stock and share brokers of Madras. The edition discusses the Indian cotton textile industry, in general, and in South India, in particular. Much information is thrown on production and export of textiles in South India, rationalisation of the industry, labour problems and Government policy. The aspect relating to handloom industry have also been dealt with. As many mills spin staple fibre yarn and as the shares of the silk and rayon industries are listed under "Textiles" on stock exchanges, the publishers have done well to include brief comments on staple fibre, spinning and silk and rayon industries. A special feature of this publication is the review of the financial conditions up to date of as many as 78 textile mills in South India.

We have audited the above Balance Sheet of the Indian Bank, Limited, as at 31st December 1957 and also the above Profit and Loss Account of the Bank for the year ended on that date with the books of account of Head Office and Branches, other than those in Malaya, and with certified returns from Malayan Branches and report that :—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit ;

(b) Such information and explanations have been found to be satisfactory ;

(c) The returns received from the branches have been found adequate for the purpose of our audit ;

(d) The transactions of the Bank as have come to our notice have been, in our opinion, within the powers of the Bank ;

(e) In our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required ;

(f) In our opinion,

(i) the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December 1957 ;

(ii) the Profit and Loss Account gives a true and fair view of the Profit or Loss for the year ended that date and shows a true balance of profit for the period covered by the audit ; and

(iii) proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books ; and

(g) The Bank's Balance Sheet and the Profit and Loss Account dealt with by the Report are in agreement with the books of account and Returns.

QUESTION HOUR IN PARLIAMENT

Atomic Fuel Fabrication Plant

AN atomic fuel fabrication plant is proposed to be established at the Atomic Energy Establishment, Trombay.

—Jawaharlal Nehru

Foreign Investments

Foreign capital investments in India at the end of 1955, the period for which latest information is available, was Rs. 63 lakhs in the public sector and Rs. 480.01 crores in the private sector.

• • • •

Bonus Shares

The tax demand on bonus issues for the fiscal year 1956-57 was Rs. 26.5 lakhs. For 1957-58, the tax demanded up to February 1958 was Rs. 164.4 lakhs. For the financial year 1958-59, the revenue expectation is Rs. 150 lakhs.

• • • •

Foreign Exchange for Ships Purchase

Expenditure in foreign exchange aggregating about Rs. 654 lakhs and Rs. 14,03 lakhs was allowed during the years 1955-56 and 1956-57, respectively, in connection with the purchase of ships and spares, including delivery charges.

—Morarji Desai

Small Savings

The net receipts under the Small Savings Scheme, taking all the saving certificates together, are larger this year than in the previous year. The total deposits are Rs. 174 crores and total withdrawals Rs. 156 crores, leaving a net deposit of Rs. 18 crores.

• • • •

Commonwealth Bank

The question of setting up a commonwealth bank to assist the underdeveloped Commonwealth countries in developing their economy is still in an exploratory stage. The U.K. Government initiated the question of setting up such a bank. The matter was discussed at various times at various levels including the Commonwealth Conferences and the Commonwealth Finance Ministers' Conference. But due to some difficulties, it has not taken any concrete shape, the main difficulty being the question of funds and who will contribute. The Government of India has not taken any initiative in the setting up of this bank.

• • • •

Insurance Companies

There is a proposal under consideration of the Government to transfer the controlled business of the Bharat Insurance Company and the Jupiter General Insurance Company to the Life Insurance Corporation. It is the Government's intention that the employees of these two companies should get benefits identical to those enjoyed by the Life Insurance Corporation employees.

• • • •

Repayment to U.S.A.

India has paid $2.26 million on account of principal and $25.98 million as interest charges on the $190-million U.S. wheat loan given to India sometime ago. No fresh loan has been taken to effect these repayments.

—B. R. Bhagat

Coal Machinery Plant

The plant for the manufacture of machinery and other equipment for coal industry with the assistance of the Soviet Union will be located at Durgapur in West Bengal. The plant will cost about Rs. 15 crores in the early stages according to the preliminary estimate of the Soviet experts given in their 1957 report. The detailed project report which is due to be received in the middle of 1959 will give closer and detailed estimates. The Soviet experts selected Durgapur for locating the factory after taking into consideration various factors such as the availability of coal, iron and steel nearby. The factory will produce equipment annually of about 30,000 tons. It will produce coal mining equipment such as coal cutters and, later on, if there is surplus capacity, it will produce heavier coal mining equipment, as also equipment for all types of mines. The country will save about Rs. 15-20 crores in foreign exchange after the factory starts production.

• • • •

New Drug Factory

The Government intends to set up, possibly during the second Plan period, a drug factory in the public sector which will cater for all the basic drugs needed by the country. It is a fact that the West Bengal Government has approached the Centre for permission to put up a chemical plant near the Durgapur steel plant site, but it has not specified what drugs it is going to manufacture there. This permission has not been granted, in view of Government's intentions regarding the establishment of a plant in the public sector. Permission has, however, been given to some of the private companies to expand their existing production capacity. Some negotiations are going on with the Soviet Union for assistance in the setting up of the drug plant.

• • • •

Insulating Paper Manufacture

India requires insulating paper worth about Rs. 10 lakhs per year. All the raw materials for production of this type of paper are available in the country. The desirability of manufacturing insulating paper was impressed last year on all leading paper mills. Besides Shrigopal Paper Mills which has been trying to develop this item for some years, the Trident Tissue Ltd., Calcutta and the Paper Pulp Conversions Ltd., Poona, evince interest in this line. Samples sent by these mills are under examination. It is not possible to establish a commercial manufacture of this kind of paper successfully in the immediate future.

• • • •

Cycle Parts Imports

The National Small-scale Industries Corporation is now importing cycle parts for issue to the small-scale cycle industry. Individual import licences are no longer being issued. As a result, these small-scale industrialists are now in a better position than previously. The step has been taken at their specific request and it is felt that the Corporation should come to their aid. The prices at which the components will be supplied by the Corporation during the current financial year will not be higher than what the units have been paying for them so far. There has not been any complaint of hardship by these units.

• • • •

Coir Industry

The Reserve Bank has been requested to inquire into the coir and leather industries for determining whether there is a case for financial assistance to these industries under the approved small-scale and cottage industries scheme. The report on the coir industry is now under examination. The inquiry into the leather industry will be instituted shortly.

—M. M. Shah

Purchase of Ships

The Great Eastern Shipping Company, Limited, Bombay, has recently acquired a second-hand vessel, *Durham Trader*, at a cost of £200,000. The Company has paid in full the price of the vessel by taking a foreign exchange loan from a London bank. The vessel will be employed on the coast and the foreign exchange loan will be repaid out of the net foreign exchange earnings of one of the Company's existing vessels which has been diverted from coastal to overseas trade. The Scindia Steam Navigation Company is also going to acquire a ship and negotiations are in progress for the purpose.

—Raj Bahadur

Assam Oil Refinery

The Assam Government delegation to consult oil experts on the question of the location of new oil refineries in the State visited the United Kingdom, France, Holland, West Germany, Switzerland, Italy and U.S.A. and consulted technical experts. Some offers of assistance have been received from one or two of the countries which the delegation visited. It is a fact that Mr. Tripathi, Assam Minister, had suggested the setting up of a multi-purpose pipeline to carry crude oil to the refinery. The Government is getting the whole question examined and will not like to commit itself this way or that. Finally, of course, it is for the Centre to take a decision.

• • • •

Production of Petrol

The production of petrol in the oil refineries in the country is more than the country's consumption. The surplus quantity of petrol is exported to neighbouring countries and there has been no temporary stoppages in the refineries as a result of their surplus production. I cannot say whether the surplus petrol produced by the Caltex refinery is exported at a far less price than that in India. The surplus production of motor spirit is exported. I think, subject to correction, at competitive prices. The surplus production is disposed of by the owners of the refineries. The Government does not come into the picture.

—K. D. Malaviya

Provident Fund

A decision on increasing the rate of contribution to employees' provident fund from 6¼ per cent. to 8⅓ per cent. will be taken very shortly. There are various factors which have held up a decision till now requiring further consideration. One reason is that the proposed increase will add to the burden of industry. Another more important consideration is the fact that the Act has not yet been made applicable to all the industries which can be covered by it. The number of workers not covered by the scheme is not just 30,000 compared to the 15 lakhs of workers already covered by it. The number in the former category is much larger. The Government has consulted employers' representatives in the matter, but they are generally reluctant to accept the enhanced rates. The increased rate will be a very useful addition to the resources for the Plan.

—G. L. Nanda

HABIB BANK LIMITED—*(Continued)*

Total Rs.	5,84,729 08

INCOME (Less provision made during the year for bad and doubtful debts and other usual or necessary provisions)	Rs. nP
1. Interest and Discount	3,22,960 96
2. Commission, Exchange and Brokerage	2,49,483 84
3. Rents	Nil
4. Net Profit made on Sale of Investments, Gold and Silver, Land, Premises and Other Assets	819 06
5. Net Profit made on Revaluation of Investments, Gold and Silver, Land, Premises and Other Assets	Nil
6. Income from Non-Banking Assets and Profit from Sale of or Dealing with such Assets	Nil
7. Other Receipts	11,465 22
Total Rs.	5,84,729 08

We have audited the foregoing Balance Sheet of the Habib Bank Limited Indian Union Branch as at 31st December 1957 and also the above Profit and Loss Account of the Bank for the year ended upon that date.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of section 211 and sub-section (5) of sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) We have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank, so far as appears from our examination of those books;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for Banking Companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December 1957 and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

20th March, 1958.

BALANCE OF PAYMENTS CRISIS AND THE SECOND PLAN

HOW TO RAISE FOREIGN EXCHANGE RESOURCES?

THE factors responsible for the debacle on the foreign exchange front were dealt with at some length in these columns last week. Concluding the review, we said that the central problem before the country was how to salvage as much of the Plan as was practicable in the context of the foreign exchange difficulties. Posing this question, the National Council of Applied Economic Research, New Delhi, has sought to emphasise that every attempt ought to be made to sustain, to the extent it is possible, the original size of the Plan and to resist attempts to whittle down the physical targets attached to it. Initial attempts should, it says, be directed to examine the possibilities of obtaining additional exchange up to the limit necessary to maintain the Plan's original allocations.

The Council has suggested two broad ways for raising the supply of foreign exchange. First, efforts may be made to maintain from now on a continuously favourable merchandise balance of trade of an appreciable magnitude during the remaining years of the Plan; this implies that the volume of current imports should be reduced to a minimum and that current exports have to be increased in substantial proportions. Secondly, alternative and supplementary possibilities of augmenting the supply of long-term and medium-term credit through agreements of different types with various countries and international agencies may be explored. Alluding, in particular, to merchandise imports, the Council stresses the need for cutting down all imports for consumption purposes and also to reduce the imports of intermediate goods which are intended to be processed into consumer goods internally.

Although there is nothing new or novel in these suggestions, the Council has certainly done well to draw special attention to them. As we pointed out in the course of an editorial two weeks ago, the Planning Commission's latest note on foreign exchange clearly establishes the lack of co-ordination (of policies) and co-operation (in their administration) among the various Ministries, as well as between the Government as a whole and the Planning Commission, in regard to imports. It is, however, gratifying to note that the Government has recently taken measures to economise on imports. The import policy for the half-year ended March last was one of severe austerity. The same policy has been continued in the current licensing period also, that is, April-September 1958, as witness the reduction or banning of quotas for a large number of items under Schedule (4). Despite the adoption of such austere import policy, the foreign exchange position may not ease in the coming months. For the total outstanding commitments are still very large; they aggregated as much as Rs. 864 crores at the end of March 1958. These, together with the large fresh commitments that will be entered into as the implementation of the second Plan gathers momentum, may be expected to accelerate the rate of depletion of foreign assets in the coming months, unless, of course, export earnings improve markedly.

What is the Remedy?

What then is the remedy? The council wants a temporary freezing of all outstanding licences already issued for imports of consumer and intermediate goods but have not yet been utilised. In this connection, it observes:

"In case effort is successful in curbing the supply of intermediate goods for consumer industries, there will also be a secondary advantage accruing, since imports of capital goods which are essentially for the manufacture of consumer articles as well as related spare parts need not also be imported any longer. One can presume that quite a bit of saving can be accounted for under the catch-all heads such as cutlery and hardware and electrical appliances, which conceal a whole group of consumer goods, including such items as wrist watches, cinematographic films, radios, refrigerators, kitchenware, household gadgets and mechanical toys. The total volume of imports anticipated under these categories in the foreign exchange budget of the Plan is of the order of Rs. 270 crores over the five years. Given the present emergency, the Government should have no hesitation to decide—at least for a period of 18 months or two years—on a drastic reduction of such imports to the extent of even 50 per cent. It is true that the consequent shortage will lead to a certain rise in prices for these articles. But these price rises will, in any case, be of the type of once-over increases and will, therefore, not lead to any spiral effect. Besides, the impact of such price rises will broadly be felt only by the upper income brackets, and there can be little ground, from the point of view of equity, to object to a cut in such imports. ... Other items on which it should be possible to ensure some saving in foreign exchange include raw jute, oils, paste-board and stationery and a whole range of miscellaneous items."

With regard to exports, the Council is doubtful whether the excises levied on a number of consumer articles will by themselves be able to curtail consumption and divert a part of the total output for export purposes. "Purely fiscal measures," to quote it, "are unlikely to be sufficient instruments for export promotion." In its opinion, the proceeds of excises can perhaps be used to give subsidies in order to encourage export trade. These subsidies may assume various forms including grant of short-period credits, initiation of export risk insurance scheme (this has already been done), special rail freight rates, shipping, freight rebates, etc.

Only A Palliative

In the present context of the critical foreign exchange situation confronting the country, the grant of subsidy to encourage export trade in some commodities may no doubt be necessary. But the question is: Why should it be met from out of the excises on domestic consumption, instead of from the general revenues? Further, there is no denying the fact that subsidy on exports is only a palliative and not a permanent, effective solution to the problem of maintaining sound and secure export trade. The key to export promotion lies in the Governments—Central and State—adopting measures designed to help the industries enhance their competitive capacity in world markets. Special mention may be made of extension of liberal tax concessions and depreciation allowances and a generally more constructive policy free from ideological considerations. The Council rightly points out that, whenever called for, reduction of export duties and other types of direct encouragement to export may be experimented with; the loss of revenue from such gestures is likely to be overwhelmingly compensated where exports really catch on.

External Sources

The Council has also suggested the possibilities of augmenting the supply for foreign exchange from external sources, including international agencies, foreign Governments and private foreign investors. Among these, the Council has made special mention of the following:

The question of requesting revolving credit from countries of friendly persuasion may be explored in some greater detail and with greater assiduity. The crucial period for India will be the next two years, and the situation is likely to look up after that period. If appropriately approached, quite a number of countries may be receptive to the idea of according India accommodation in foreign currency for these two years.

Assistance for specific projects, as in the case of loans from agencies such as the International Bank, will, of course, be welcome. But, generally, in entering agreements with foreign Governments and private investors, the accent should be to

(*Continued on page 723*)

Your Income tax affairs need not worry you

Preparation of Income tax returns is a complicated matter these days. This need not, however, worry you.

You will find it to your advantage to place your Income tax affairs in the hands of your bank.

The State Bank of India will be pleased to undertake the preparation of returns, the checking of assessments and the submission of claims for refund of tax at moderate charges. The Bank will ensure that you obtain all the refunds to which you are entitled.

Why not talk things over with your nearest Bank Agent or write for information?

The State Bank's local head office at Bombay, one of more than 555 offices waiting to serve you throughout India.

INDIAN ALUMINIUM COMPANY'S PERFORMANCE IMPRESSIVE

TAXATION, HOWEVER, AFFECTS NET PROFIT

THE year ended 31st December 1957 adds one more year of highly successful working to the Indian Aluminium Company Ltd. (Managing Director: Mr. H. Vance Echols, Calcutta). The Company's production and sales substantially exceeded the levels attained in 1956, thereby establishing a new record of achievement. Sales rose by 28 per cent. to Rs. 544 lakhs from Rs. 425 lakhs for 1956. Shipments of the Company's aluminium and fabricated products increased to 8,221 tons in 1957 from 7,064 tons in 1956. In addition, 848 tons of agency and distributor products were sold in 1957, as compared with 631 tons in the preceding year. The gross profit at Rs. 91.65 lakhs has sharply risen by Rs. 26.06 lakhs from Rs. 65.59 lakhs for the previous year, while it is almost double that (at Rs. 48.64 lakhs) two years earlier. The year's profit is thus a new record in the Company's history. The position in regard to net profit, however, is not quite so favourable. For, after raising the provision for taxation from Rs. 7 lakhs to as high as Rs. 38.97 lakhs, including Rs. 4.50 lakhs being the provision for wealth tax in respect of 1956 and 1957 and that for depreciation from Rs. 22.80 lakhs to Rs. 26.30 lakhs, the net profit at Rs. 26.38 lakhs stands actually lower, as compared with Rs. 35.79 lakhs in the previous year.

It may be remembered that in 1956 the Directors had made a provision of Rs. 30.16 lakhs for payment of ordinary dividend at the rate of 10 per cent. which included a provision of Rs. 10.05 lakhs on the assumption that the entire convertible loan stock will have been converted into ordinary shares. From this amount, they have paid the ordinary dividend for 1956 amounting to Rs. 27.07 lakhs, and have written back Rs. 3.09 lakhs. They have also written off Rs. 4.81 lakhs, being the expenses incurred in connection with issue of convertible loan stock. The Directors have declared a dividend of only 6 per cent. for the year under review but, it must be noted, this is on a higher capital of Rs. 384.59 lakhs raised by the conversion of Rs. 244.65 lakhs of loan stock into 1,834,890 ordinary shares of Rs. 10 each. As in the previous year, the provision for dividends has been made on the assumption that the entire amount of Rs. 23.48 lakhs 5 per cent. convertible loan stock outstanding at the end of December 1957 will have been converted into ordinary shares and will, in accordance with the conditions of the Deed Poll dated 17th December 1956, rank *pari passu* with the existing ordinary shares.

The comparative table given below provides an idea of the Company's progress in recent years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954

* Provision for dividend on ordinary shares has been made on the assumption that the entire convertible loan stock outstanding as on 31st December 1957 will have been converted into ordinary shares.

The outstanding performance of the Company during the year was due to several favourable factors. The Company's alumina plant at Muri worked to capacity and some increase in production was achieved by an improvement in operating practice. Bauxite mining operations were also conducted on a scale commensurate with the requirements of the alumina plant. Production of ingot and fabricated products at the Company's plants was at levels significantly higher than those attained in 1956. Thanks to regular power supply, the operation from April 1957 of three additional pots installed at the Alupuram smelter, resulted in a record production of 5,448 tons of aluminium. The Company's continued effort towards improving production technique, with a view to diversifying its range of products and developing markets, contributed to the increased output in all its fabricating plants. At the Belur rolling mill, an increased proportion of the production comprised medium and high-strength alloy products, slugs for containers and roofing sheet. The output of extensions at Alupuram was almost double that in 1956 and the products were made to exacting customer specifications. The aluminium paste plant at Kalwa operated to capacity to meet the increasing market demand.

Of the sale proceeds for the year under review, the Company's own products accounted for Rs. 430 lakhs and agency and distributor products for Rs. 114 lakhs, having gone up from Rs. 345 lakhs and Rs. 80 lakhs, respectively in 1956. During the year, sales of all the principal products of the Company, with the exception of circles, increased but, of these, the most significant advances were made in flat sheet and plate and extrusions, reflecting the further progress in the Company's development efforts, chiefly in the transportation field. Shipments to the road and rail transport industries increased to 3,061 tons from 1,985 tons for the previous year, accounting for more than two-thirds of the total increase during the year in shipments of the Company's products, excluding circles.

To surmount the difficulties caused by restrictions on imports and in order to finance the import of capital equipment essential to the implementation of its expansion plans, the Company negotiated for a loan of one million Canadian dollar from Aluminium Ltd., Canada. It is hoped that the Company will make at least partial use of this facility during 1958. Referring to its expansionist activities, the Directors, in their last report observe thus:

"Work on the expansion programme made considerable progress during the year under review, although the scarcity of construction materials, the congestion at Calcutta port and a severe shortage of railway wagons continued to cause difficulties and delays. It is hoped, nevertheless, that construction of the Company's new reduction plant at Hirakud in Orissa will be completed on schedule, and that the 10,000 tons annual production capacity being installed will come into operation early in 1959. The expansion simultaneously under way of the existing alumina plant at Muri to 18,000 tons of annual production capacity is also expected to be completed during 1958, and further expansion to 30,000 tons of alumina capacity will be thereafter taken in hand for completion by 1961. The Directors have concluded that early expansion of the Hirakud smelter from 10,000 tons to 20,000 tons ingot production capacity per annum is desirable in view of the demand for aluminium in the country and the drain on foreign exchange involved in satisfying this demand by way of imports. In order to facilitate this expansion, the Company's Canadian shareholder, Aluminium Limited, has expressed its willingness, upon satisfaction of certain conditions, to make to the Company a loan of up to five million dollars which is approximately equivalent to the foreign exchange required to expand the Hirakud smelter from 10,000 tons to 20,000 tons and the Muri alumina plant from 30,000 tons to 40,000 tons annual production capacity. An application for a licence under the Industries (Development and Regulation) Act, 1951, to proceed with this expansion has accordingly been made to the Government."

The paid-up capital of the Company as at 31st December 1957 stands raised from Rs. 241.10 lakhs in 1956 to Rs. 424.59 lakhs by the conversion, as stated above, of Rs. 244.65 lakhs loan stock into 1,834,890 ordinary shares of Rs. 10 each by the close of December 1957. The reserves and surplus aggregate Rs. 124.79 lakhs. The gross block of Rs. 718.90 lakhs, including an addition of Rs. 260.19 lakhs during the year has been written down to Rs. 497.12 lakhs. The current assets amount to Rs. 362.04 lakhs, as against current liabilities aggregating Rs. 309.79 lakhs, including a provision for taxation of Rs. 45.50 lakhs.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted on the Calcutta Stock Exchange at Rs. 12.87 *ex-div.* On this basis, the dividend for 1957 provides a yield of 4.66 per cent. per annum.

(Concluded from next column)

vision for taxation by a wide margin of Rs. 19.45 lakhs. Of these current assets, cash balances account for Rs. 11.16 lakhs, having risen from Rs. 8.01 lakhs at the end of 1956.

The Rs. 100 fully paid-up shares are being currently quoted at Rs. 153 *ex-div.* at which rate and on the basis of the dividend for 1957, the yield works out to 5.88 per cent. per annum, free of income-tax.

COIMBATORE COTTON'S PROFIT LOWER

EXPANSION SCHEME PROGRESSING WELL

THE report and audited accounts of the Coimbatore Cotton Mills Ltd. (Managing Agents: Messrs. R. Bheema Naidu & Co., Singanallur, Coimbatore District), for the year ended 31st December 1957, disclose a fall in the Company's earnings and profit for the year under review. This is not surprising, for the continued slump in the yarn market throughout the nine months ended December 1957 has adversely affected the working of this mill as it has affected every other unit in the industry. Describing the conditions under which the Company had to work, the Directors observe that, while the prices of cotton were steady at high levels, the prices of yarn went down day by day. Even at the lower price levels, the offtake remained anything but satisfactory.

Against this background, it is hardly surprising that the Company should show a slight recession in profit. The gross profit at Rs. 12.11 lakhs compares with Rs. 16.10 lakhs for 1956 and Rs. 14.88 lakhs for 1955. It is even a shade lower than Rs. 12.84 lakhs for 1954. It may be of interest to know that the previous year's profit, namely, Rs. 16.10 lakhs, was the highest earned by the Company since 1951. The net profit at Rs. 5.74 lakhs, however, stands slightly higher, as compared with Rs. 5.57 lakhs a year ago. This is due to the lower provisions made for both depreciation and taxation. Despite this modest improvement in net profit, the dividend has been drastically cut to 9 per cent. from 25 per cent. for the past three years in succession, to which level it had been stepped up from 20 per cent. for 1953. This is because the Directors have transferred Rs. 3.09 lakhs as provision for machinery replacement reserve, representing the total of the special depreciation and development rebate which the Company is entitled to claim for income-tax assessment. Such claim, in the previous year, had been included in the provision for depreciation.

The following table will bring out clearly the state of working of the Company for the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds	78.83	83.67	73.21	N.A.

N.A.=Not available.

As regards the Company's programme of expansion referred to in the previous year's report, the Directors state that the necessary buildings in respect of the installation of an additional 12,800 spindles have been completed and almost all the preparatory machinery and 13 ring frames, constituting 5,200 spindles, have been received. Of these, 2,000 spindles were erected and these went into production about the end of the year. It is also proposed to install a further 12,800 spindles. Accordingly, orders have been placed for the purchase of necessary preparatory machinery.

In order to finance the above schemes of expansion, it may be remembered, the subscribed capital of the Company was increased from Rs. 12 lakhs to Rs. 35.39 lakhs by the issue, in the year under review, of 23,388 shares of Rs. 100 each. Accordingly, the paid-up capital as at 31st December 1957, after deducting calls in arrears, stands at Rs. 35.21 lakhs. As against this, the reserves and surplus aggregate Rs. 22.10 lakhs. The current liabilities amount to Rs. 24.32 lakhs and include a provision of Rs. 10.78 lakhs for taxation. The gross block of the value of Rs. 69.79 lakhs stands depreciated at Rs. 37.87 lakhs. Additions to fixed assets during the year were of the order of Rs. 27.96 lakhs, of which as much as Rs. 20.32 lakhs were on account of machinery. The current assets aggregate Rs. 43.77 lakhs and exceed the current liabilities and pro-

(Continued in previous column)

DUNLOP'S RESULTS EXCELLENT

DIVIDEND ALSO HIGHER

THE Dunlop Rubber Company (India) Ltd. (Managing Director: Mr. John Luckham, Calcutta) has disclosed excellent results in its working during the year ended 31st December 1957. Both sales and earnings show an impressive rise over the previous year which was, in itself, a period of highly successful working. Total sales for the year amounted to about Rs. 20 crores, representing an increase of nearly Rs. 3 crores or 17½ per cent. over the sales in 1956. The gross profit (before providing for depreciation and taxation) at Rs. 195.17 lakhs has spurted by Rs. 61.89 lakhs or 46.43 per cent. from Rs. 133.28 lakhs for the previous year. The Company's outstanding performance in the past two years, thus, makes a sharp and welcome contrast to the decline of Rs. 7.35 lakhs suffered in 1955. Indeed, the gross profit for the year under review is a new record, having substantially exceeded the previous record of Rs. 146.54 lakhs earned in 1951.

The net profit has increased by only Rs. 25.57 lakhs; that is, from Rs. 55.10 lakhs to Rs. 80.67 lakhs. The relatively lower improvement in net profit is due to the substantially higher provision for taxation which, at Rs. 86.52 lakhs, is Rs. 39.18 lakhs more than that (at Rs. 47.34 lakhs) provided in the previous year. It is again Rs. 5.85 lakhs higher than the net profit itself. The year's tax provision includes the additional liability incurred in respect of the year 1956 as a consequence of the introduction of wealth tax and the increase in the rates of income and super-tax under the Finance (No. 2) Act, 1957. The provision for depreciation at Rs. 27.68 lakhs is, however, slightly lower than Rs. 30.54 lakhs provided a year ago. The Directors observe that the margin of net profit as a percentage of sales improved to 4.0 per cent., as compared with 3.2 per cent. in 1956, 3.6 per cent. in 1955 and 4.3 per cent. in 1954. In accordance with the Company's policy of ploughing back substantial sums year after year, the Directors have transferred this year also a sum of no less than Rs. 30 lakhs to the general reserve and this represents an increase of Rs. 4 lakhs over that provided a year ago.

The higher profit is not without interest to the shareholders also, for their dividend has been raised to 16½ per cent. from 15 per cent. which was the rate paid for the previous six years in succession. It should, however, be noted here that the Company made a fresh issue of 1,400,000 ordinary shares of Rs. 10 each at a premium of Rs. 5 in July 1957 in order to finance the Company's large schemes of expansion. To facilitate the ordinary share issue, the Directors declared an interim dividend of 7½ per cent. on the ordinary shares existing in June 1957. While the interim dividend of 7½ per cent. was on the old capital, the final dividend of 8¾ per cent. now proposed is on the increased capital.

The progress of the Company during the past three years can be gauged from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds	1,97.00	1,69.60	1,51.60	1,30.34

Ordinary	38.25 (16¼%)*	24.00 (15%)	24.00 (15%)	24.00 (15%)
Carry forward	22.23	13.25	11.72	11.89

* Includes a final dividend of 8¾ per cent. on the increased capital, raised by the issue of 1,400,000 ordinary shares of Rs. 10 each.

The sale proceeds, as stated earlier, show a marked rise over the year. The higher expenses reflect the enlarged volume on the production side. The major expansion of the Company's Sahaganj factory, it is stated, progressed considerably by the end of 1957. The shortage in indigenous production of tyres and tubes, in relation to demand, and the anticipated increase in motor and cycle traffic as a result of the Five-year Plans, prompted a decision on the part of the Directors to open a new Dunlop factory in Ambattur, near Madras. The new factory will initially manufacture truck, bus and cycle tyres, principally for the needs of the South Indian market. Construction of the Ambattur factory commenced in the latter half of the year and progress is made according to schedule. It is expected that the factory will go into production towards the end of this year.

The paid-up capital of the Company as at 31st December 1957 stands raised from Rs. 230 lakhs to Rs. 370 lakhs. This, as already stated, is due to the issue of 1,400,000 ordinary shares of Rs. 10 each made during the year under review. Of this capital, Rs. 70 lakhs are represented by two categories of 6 per cent. tax-free and taxable cumulative preference shares of Rs. 100 each and the balance by ordinary shares. This is supplemented by reserves and surplus aggregating Rs. 462.52 lakhs, which include a special depreciation reserve of Rs. 120.46 lakhs and a capital reserve of Rs. 70 lakhs, representing the share premium secured on the ordinary shares issued during the year under review. The 5 per cent. debenture stock stands reduced from Rs. 130 lakhs to Rs. 105.21 lakhs. Against this, there is a debenture-stock redemption fund of Rs. 4.31 lakhs. Including additions during the year amounting to Rs. 97.04 lakhs, the gross block aggregates Rs. 650.49 lakhs. This has been written down to a book value of Rs. 382.25 lakhs. The current assets amount to Rs. 823.73 lakhs, of which stock inventories (at cost or market value) alone account for Rs. 486.84 lakhs and cash balances for Rs. 5.44 lakhs, and exceed the current liabilities and provision for taxation, at Rs. 272.56 lakhs, by a substantial margin of Rs. 551.17 lakhs. Of the current liabilities, the bank overdraft and usance promissory notes deposited with banks stand reduced from Rs. 115.71 lakhs to Rs. 72.92 lakhs, while the unsecured loans amounting to Rs. 76.07 lakhs have been completely wiped out.

The Rs. 10 fully paid-up ordinary shares of the Company are currently quoted at Rs. 24.75 *ex-div.*, at which rate and on the basis of the latest dividend, the yield on the shares works out to 6.54 per cent. per annum, free of income-tax.

GREAVES COTTON AND COMPANY LTD.

The dividend on the equity shares of Greaves Cotton and Company, Ltd., paid during the years ended 31st March 1954, 1956 and 1957, was shown as 7 per cent. in each such year in our reference to the new issue of the Company (*vide* page 619) and also in the prospectus (*vide* pages 646-648) of our last week's issue. This is wrong. The correct figure is 7½ per cent.

Points From The Chair

Mass Output

"TO large manufacturers of consumer goods—and we must rank among the largest in India—economies come largely from mass production and mass selling of standardised lines. This standardisation is only successful if the resultant products appeal in properties and performance to the greatest number of people. We have many millions of customers. They vary widely in their tastes. They are conditioned by different social, cultural and religious background. We must have products which are acceptable alike to the rich and the poor, to the educated and the uneducated, to the Punjabi and the Tamil. To discover what preferences are most general in this variegated pattern of consumers, we choose a representative sample of them and find out what their opinions are by questioning them. The result is intended to reflect the opinion of our universe of potential customers. The size of this sample is determined mathematically once we have postulated the number of categories of people it shall contain to fulfil the particular purpose in view. The combined opinions and attitudes of the individuals composing this sample will be representative of our universe within a calculable margin of error, provided the questions we put to them are so phrased as to evoke the respondent's true opinion and not an opinion adapted to please the questioner or to express what the respondent thinks it is respectable to say rather than what he really thinks."

S. H. TURNER,
Hindustan Lever Ltd.

Stepping up Exports

"You are well aware of the hard times that we were up against during the year in this country with the falling foreign exchange balances. Adversity has its own rewards and the complacent attitude that we had in our international trade was rudely shaken and the need to make a conscious and persistent effort in developing a market abroad for the produce of this country has come to be recognised and the steps that have been taken by the Government in this direction, if supplemented by our leaders in trade and industry, should enable us to achieve a position of stability and progress in this direction. Undoubtedly, considerable assistance by way of loans and gifts from other countries have gone a long way in saving at least the hard core of the Plan and bridge the gulf which looked bleak and wide even a couple of months ago. But it is necessary to realise that the only way that the loans taken from abroad can be repaid is by stepping up our exports, and foreign loans are no substitute for a national effort and sacrifice."

DR. T. M. A. PAI,
Canara Industrial and Banking Syndicate Ltd.

COMPANY MEETINGS AND DIVIDENDS

GOKAK MILLS LTD. Annual General Meeting, Bombay, 18th April 1958. Dividend: Rs. 8.00 per share. Transfer books remain closed from 22nd March to 11th April 1958, both days inclusive.

DUNLOP RUBBER CO. (INDIA) LTD. Annual General Meeting, Calcutta, 18th April 1958. Dividend: Re. 1.62 (16¼ per cent.) per share. Transfer books remain closed from 7th to 27th April 1958, both days inclusive.

VISHNU COTTON MILL LTD. Annual General Meeting, Bombay, 23rd April 1958. Dividend: *Nil*. Transfer books will remain closed from 1st to 15th May 1958, both days inclusive.

SWAN MILLS LTD. Annual General Meeting, Bombay, 23rd April 1958. Dividend: Rs. 25.00 per share, payable on and after 24th April 1958. Transfer books remain closed from 28th March to 23rd April 1958, both days inclusive.

LAKSHMI COTTON MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 24th April 1958. Dividend: Rs. 15.00 per share, payable on and from 29th April 1958. Transfer books will remain closed from 11th to 25th April 1958, both days inclusive.

GOLD MOHUR MILLS LTD. Annual General Meeting, Bombay, 24th April 1958. Dividend: Rs. 15.00 per share, payable on and after 25th April 1958. Transfer books remain closed from 28th March to 24th April 1958, both days inclusive.

BUCKINGHAM AND CARNATIC CO., LTD. Annual General Meeting, Madras, 25th April 1958. Dividend: Rs. 10.00 per share. Transfer books remain closed from 3rd to 25th April 1958, both days inclusive.

FINLAY MILLS LTD. Annual General Meeting, Bombay, 25th April 1958. Dividend: Rs. 20.00 per share, payable on and after 26th April 1958. Transfer books remain closed from 28th March to 25th April 1958, both days inclusive.

EAST INDIA DISTILLERIES AND SUGAR FACTORIES LTD. Annual General Meeting, Madras, 25th April 1958. Dividend: 15 per cent. or 3s. per share, for the year ended 30th September 1957.

NATIONAL CARBON CO. (INDIA) LTD. Annual General Meeting, Calcutta, 25th April 1958. Dividend: Re. 1.40 per share. Transfer books remain closed from 5th to 25th April 1958, both days inclusive.

BANGALORE WOOLLEN, COTTON AND SILK MILLS CO., LTD. Annual General Meeting, Bangalore City, 26th April 1958. Dividend: Rs. 10.00 per share. Transfer books remain closed from 3rd to 26th April 1958, both days inclusive.

PREMIER CONSTRUCTION CO., LTD. Annual General Meeting, Bombay, 28th April 1958. Dividend: Rs. 10.00 per ordinary share, payable on and from 19th May 1958. Transfer books remain closed from 7th to 28th April 1958, both days inclusive.

STANDARD MILLS CO., LTD. Annual General Meeting, Bombay, 28th April 1958. Dividend: Rs. 22.50 per share (includes bonus), payable from 12th May to 31st July 1958. Transfer books remain closed from 7th to 28th April 1958, both days inclusive.

MAFATLAL FINE SPG. AND MFG. CO., LTD. Annual General Meeting, Bombay, 28th April 1958. Dividend: Rs. 15.00 per share, payable from 5th May 1958 to 31st July 1958. Transfer books remain closed from 11th April to 2nd May 1958, both days inclusive.

INDIAN ALUMINIUM COMPANY, LTD. Annual General Meeting, Calcutta, 28th April 1958. Dividend: Re. 0.60 per share. Transfer books remain closed from 5th to 28th April 1958, both days inclusive.

SHIVRAJPUR SYNDICATE LTD. Annual General Meeting, Bombay, 29th April 1958. Dividend: Rs. 8.00 per share (includes bonus of Rs. 3.00 per share), payable on and after 6th May 1958. Transfer books remain closed from 7th to 25th April 1958, both days inclusive.

CENTURY SPINNING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 29th April 1958. Dividend: Rs. 22.00 per share, for the year 1957. Transfer books remain closed from 11th to 28th April 1958, both days inclusive.

RAYALASEEMA MILLS LTD. Annual General Meeting, Rayanagar, Adoni, 30th April 1958. Dividend: Rs. 10.00 per share. Transfer books will remain closed from 23rd April to 7th May 1958, both days inclusive.

GANESH FLOUR MILLS CO., LTD. Annual General Meeting, Delhi, 30th April 1958.

EAST INDIAN COAL CO., LTD. Interim dividend of Re. 0.40 per share, for the year ending 30th April 1958. Transfer books remain closed from 12th to 25th April 1958, both days inclusive.

TITAGHUR PAPER MILLS CO., LTD. Interim dividends of Re. 1.13 per share, on "A" and "B" ordinary shares (includes bonus of Re. 0.25 per share) and Re. 0.12 per share, on preferred ordinary shares, for the year ended 31st March 1958, payable on or after 5th May 1958. Transfer books remain closed from 8th to 22nd April 1958, both days inclusive.

TRICHINOPOLY MILLS LTD. Dividend: 9 per cent. or Re. 0.90 per share, for the year ended 31st December 1957. Transfer books will remain closed from 16th to 30th April 1958, both days inclusive.

ORISSA MINERALS REPEAT DIVIDEND

Sassoon Spinning and Weaving Co., Ltd.

THE directors of the above Company (Managing Agents: M.G. Investment Corporation Private Ltd., Bombay) present the audited accounts of the Company for the year ended 31st December, 1957.

The net profit for the year after providing an amount of Rs. 2,33,499 (Rs. 3,29,166) for managing agents' commission, Rs. 18,44,976 (Rs. 15,09,052) for depreciation, Rs. 9,97,000 (Rs. 6,15,000) for provision for taxation and Rs. 3,24,202 (Rs. 9,57,995) for development rebate reserve amounts to Rs. 4,05,895 (Rs. 9,08,759) to which is added balance profit of Rs. 1956 Rs. 1,66,307 (Rs. 11,568) making a total of Rs. 5,72,202 (Rs. 9,20,327). Out of this balance, additional provision made for taxation for 1956 amounts to Rs. 1,31,000 (*nil*) leaving a balance of Rs. 4,41,202 (Rs. 9,20,327). To this amount is added the amount transferred from general reserve of Rs. 3,25,000 (*nil*) making an available balance of Rs. 7,66,202 (Rs. 9,20,327). Out of this amount the directors recommend payment of 60th dividend of Rs. 2 (Rs. 2.00) per share (free of income-tax) amounting to Rs. 7,54,020 (Rs. 7,54,020) leaving a surplus to be carried to 1958 account of Rs. 12,181 (Rs. 1,66,307).

The scheme of modernisation of the mills continues. An amount of Rs. 31,052 has been spent on construction of new buildings and Rs. 15,21,799 on installation of machinery, major portion of which has been installed and is working satisfactorily.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	37,70,100	Block ...	74,47,266
Reserves ...	1,19,98,715	Machinery awaiting installation	1,55,947
Provision for taxation ...	16,63,117	Stock-in-trade	98,20,443
Liabilities ...	68,78,443	Stores and spare parts	14,98,437
Profit and loss account ...	12,182	Other assets	18,734
		Debts, deposits and advances ...	46,56,048
		Investments	1,90,324
		Cash ...	5,35,358
	Rs. 2,43,22,557		Rs. 2,43,22,557

Orissa Minerals Development Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 30th June 1957. As pointed out in the last report, these accounts have been closed on an annual basis, in conformity with the provisions of the Companies Act, 1956.

Iron Ore.—Raisings increased from 3,39,722 tons to 4,11,993 tons compared to the previous year. Despatches also improved from 3,58,250 tons in the previous year to 4,11,767 tons in the year under review. The steel works order was increased from 40,000 tons to 50,000 tons per month from February, 1957.

Manganese Ore.—Raisings fell from 42,671 tons to 34,700 tons in this year. Sales, however, increased from 36,132 tons to 43,477 tons.

Manganese Dioxide.—Raisings were *nil* compared to 1,195 tons in the previous year. Sales fell from 3,196 tons to 2,951 tons in this year. Prospecting operations to prove the deposit are continuing and the indications are so far favourable.

Market.—The market continued to improve and good prices were recorded during the later half of the year. Unfortunately full advantage of this could not be taken due to shortage of wagons. The market has since shown a considerable decline.

Transport.—The transport position showed slight improvement towards the end of the year but as stated above, is still far from satisfactory.

Labour.—Labour relations continued to improve during the year under review. As stated in the last report the issues concerning the strike and resultant lockout have been referred to an Industrial Tribunal before which proceedings are now taking place.

Bolani Area.—In the previous reports the directors stated that the managing agents were in discussion with the Central Government regarding the formation of a new Company to develop and exploit the large deposits of ore in the Bolani area. They are now pleased to report that the new Company, Bolani Ores (Private) Ltd., was incorporated on the 5th June, 1957, with an authorised capital of Rs. 1,00,00,000 divided into 1,00,000 equity shares of Rs. 100 each. The Central Government and the Company participate in the capital of Bolani Ores (Private) Ltd., in the ratio of 50.5 per cent. and 49.5 per cent., respectively. The managing agents have been appointed secretaries and treasurers of Bolani Ores (Private) Ltd., for a period of 15 years.

The Eastern Shipping Syndicate.—During the year, the share of profit from the syndicate amounts to Rs. 31,556 and this has been included in the accounts.

The profit and loss account after providing for all charges and making provision of Rs. 10,90,000 (Rs. 2,80,000) for taxation and Rs. 1,85,100 (Rs. 1,71,128) for depreciation shows a profit of Rs. 4,74,480 (Rs. 5,57,498) to which is added the balance brought forward from the previous half-year of Rs. 1,00,667 (Rs. 1,05,053) making a total of Rs. 5,75,147 (Rs. 6,62,551). From this is deducted the amounts transferred to general reserve Rs. 315 (Rs. 232), to tax contingency reserve Rs. 24,000 (Rs. 74,200), to development rebate reserve Rs. 5,300 (Rs. 12,340) and to staff and workmen's accident and compensation reserve Rs. 29,824 (Rs. 15,112) leaving a balance of Rs. 5,15,703 (Rs. 5,00,667 after placing Rs. 60,000 to mechanisation reserve). The interim dividend declared on 5th September, 1957 on the ordinary shares at 20 (20) per cent. per annum without any deduction for income-tax payable by the Company absorbed Rs. 2,00,000 (Rs. 2,00,000) leaving a balance available of Rs. 3,15,708 (Rs. 3,00,667). The directors propose to dispose of this amount by payment of a final dividend on the ordinary shares at 20 (20) per cent. per annum without any deduction for income-tax payable by the Company Rs. 2,00,000 (Rs. 2,00,000) and by carrying forward Rs. 1,15,708 (Rs. 1,00,667).

The directors regret that in spite of the considerable improvement shown in the trading results it has not been possible to make the normal transfers to reserves for the future development of the Company's properties, nor to consider increasing the distribution to shareholders. This result has come about purely owing to the imposition of cesses by the State of Orissa amounting to Rs. 1,47,166, by export duties on manganese ore by the Central Government amounting to Rs. 1,64,749, not recoverable from buyers, both compared with *nil* previously. Also by the rise in provision for taxes amounting to Rs. 7,84,110 for income and Corporation tax and Rs. 25,890 for wealth tax.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	21,23,061
Reserves ...	36,50,291	Capital work-in-progress	3,58,064
Provision for taxation ...	9,66,681	Stock-in-trade	13,05,358
Liabilities ...	43,55,342	Stores and spare parts	8,46,492
Profit and loss account ...	1,15,708	Debts, deposits and advances ...	31,91,086
		Investments	25,39,939
		Cash ...	7,24,022
	Rs. 1,10,88,022		Rs. 1,10,88,022

Vishnu Cotton Mill Ltd.

The directors of the above Company (Managing Agents: The Bombay Co. (Private) Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts show a loss for the year of Rs. 9,54,275 (profit of Rs. 12,90,479) to which must be added the provision to gratuity fund of Rs. 34,603 (Rs. 45,000) and provision for balance of wealth tax Rs. 18,500 (*nil*) making a total debit of Rs. 10,07,378 (credit of Rs. 12,45,479). Deducting from this the credit balance brought forward from the previous year of Rs. 16,922 (Rs. 23,125) there is left a debit balance of Rs. 9,90,456 (credit of Rs. 12,68,604). In view of the loss sustained, the directors are unable to recommend the declaration of any dividend on ordinary shares, but they recommend that a dividend of Rs. 35 per share less income-tax on the 3,133 preference shares be paid absorbing Rs. 75,114 (Rs. 80,870). To meet this payment a transfer from reserve fund has been made of Rs. 80,000 (Rs. 2,19,000). There will be a final debit balance of Rs. 9,85,569 (credit of Rs. 19,33,322 including Rs. 2,19,000 transferred from dividend fund and Rs. 4,45,718 from depreciation renewal and extension fund. Out of this the directors placed to depreciation Rs. 14,45,782 and to debenture redemption fund Rs. 1,33,747. The ordinary dividend at Rs. 8 per share absorbed Rs. 2,56,000. Preference dividend absorbed Rs. 80,870. The balance carried forward was Rs. 16,922) which the directors recommend to be carried forward.

It has not been possible in view of the heavy working loss to make any provision for depreciation or development rebate, which amount to Rs. 11,84,277 and Rs. 2,98,461 respectively, nor for arrears of depreciation amounting to Rs. 3,93,345. Rs. 13,739.25 being refund of customs duty charged in excess on imported machinery has been reduced from the block. Forfeited dividends amounting to Rs. 2,214 have been added to reserve fund.

Trading Conditions.—The year was disastrous for an upcountry coarse-count mill committed to bulk production of goods for which demand, both internal and abroad, had been expected and indeed officially planned to increase. The sweeping reversal of this by heavy indirect taxation and the reduction of personal purchasing power through rising cost of foodgrains, made it clear to the management by the middle of the year that serious overproduction of cloth was imminent, though this fact was not generally recognised till much later. Accordingly, energetic steps were taken both to reduce production by the closure of third shift spinning and a comparable number of looms from 1st October, and to sell at the best prices obtainable, the heavy accumulation of cloth. However depressing the results of this policy may now seem, they undoubtedly averted disaster (stocks at the end of 1957) being 37.5 per cent lower than a year earlier) though heavy monthly losses continued, in spite of every attempt to reduce manufacturing costs by better productivity.

Absenteeism remained very high, and was indeed accentuated by the almost complete closure of two other mills in the city and the pressure of surplus labour.

Additions to buildings during the year cost Rs. 35,290, and to machinery Rs. 11,93,846. The main items were the installation of 12 northrop automatic looms, 6 twist ring frames, 1 dry ring doubling frame, a water-softening plant and 3 bowl friction calendars, and the conversion of 6 ring frames and 9 weft frames to E-10-B and Casablanca high-draft respectively. Needless to say, these are in respect of expenditure sanctioned, and commitments made, in earlier years.

The Managing Agents have agreed to accept a reduction in their minimum remuneration and it has been clear that only sacrifices on all sides can ensure the continued working of the mill under conditions possibly worse than the industry has ever known. The Company's cotton buying agents have agreed to accept a similar cut in their commission.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	47,66,500	Block ...	68,51,391
Debentures	30,00,000	Buildings and machinery under erection ...	26,138
Reserves* ...	18,73,706	Machinery received but uninstalled	8,87,630
Provision for taxation ...	37,900	Stock-in-trade	59,22,730
Liabilities ...	89,30,694	Stores, spare parts, etc.	14,61,461
		Debts, deposits and advances ...	26,09,888
		Investments	7,73,695
		Cash ...	25,967
		Miscellaneous expenses and losses	49,964
	Rs. 1,86,08,864		Rs. 1,86,08,864

*Reserves are shown after deducting the debit balance of Rs. 9,85,569 in the profit and loss account.

Jay Shree Textiles Ltd.

The directors of the above Company (Managing Agents: Messrs. Birla Brothers Private Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st December 1957.

The profit and loss account after providing for all working expenses and after providing sum of Rs. 6,94,123 (Rs. 5,67,169) for depreciation, Rs. 45,000 for wealth tax for 1956 and 1957, Rs. 85,968 (*nil*) for development rebate reserve, Rs. 7,423 (Rs. 32,412) for doubtful debts and after making sundry adjustments shows a profit of Rs. 3,25,254 (Rs. 4,69,630). To this is added the last year's balance brought forward of Rs. 2,632 (debit of Rs. 2,82,610) making a total amount for disposal of Rs. 3,27,886 (Rs. 1,87,020). The directors recommend a payment of dividend on 4,91,700 equity shares of Rs. 10 each at the rate of Re. 0.50 (Re. 0.37) per share, which will absorb Rs. 2,45,850 (Rs. 1,84,388) leaving a balance to be carried forward to next year's account of Rs. 82,036 (Rs. 2,632).

On the basis of Company's calculations, according to Income-tax Act, the approximate amount of unabsorbed depreciation, as on 31st December 1957 amounted to Rs. 38,07,313.

Working and Programmes.—The directors have pleasure to record that the steady improvement in the working of the Company has not only been maintained but has shown further improvement. As a result of this, it has been possible to increase this year's dividend to the level of Re. 0.50 per share from As. 6 per share, declared in the year before. There has been an increase in the sales (including processing charges) from Rs. 62.30 lakhs in 1956 to Rs. 88.33 lakhs during the year.

The Company's contribution, in the matter of saving foreign exchange for the country by cutting imports of essential goods like flax fire hoses, linen twines and belting yarns, has further continued to grow. The Company's manufactures are also helping indirectly in the export field, as leather industry, sports goods industry, cigarette tape industry and others, who are using the Company's products as raw materials in their manufactures have been helped to increase their exports.

The licence granted to the Company to establish a new staple fibre spinning mill was returned to the Government as the directors did not think it suitable to establish such a plant at the present moment.

The Company is negotiating with a foreign firm for technical collaboration with a view to start a new line of manufacture. The Government of India has approved of the new project in principle.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	50,08,000	Block ...	55,00,000
Debentures	13,71,000	Subsidised housing scheme account ...	23,854

Notices

MAHINDRA & MAHINDRA LIMITED

NOTICE

THE 12TH ANNUAL GENERAL MEETING of the Shareholders of MAHINDRA & MAHINDRA LIMITED will be held at the Taj Mahal Hotel, Apollo Bunder, Bombay 1, on Monday, the 12th May, 1958, at 4 p.m., to transact the following business:—

(1) To receive and adopt the Directors' Report, the audited Balance-sheet and Profit and Loss Account for the year ended 31st October, 1957.

(2) To declare dividend on Preference and Ordinary Shares.

(3) To appoint a Director in place of Sir Dhiren Mitra who retires by rotation under Article 110 of the Articles of Association and who, being eligible, offers himself for re-election.

(4) To appoint a Director in place of Mr. H. C. Mahindra who retires by rotation under Article 110 of the Articles of Association and who, being eligible, offers himself for re-election.

(5) To appoint a Director in place of Sardar H. S. Malik who ceases to hold office by virtue of Article 116 of the Articles of Association and who, being eligible, offers himself for re-election.

(6) To appoint a Director in place of Mr. Stephen A. Girard who ceases to hold office by virtue of Article 116 of the Articles of Association and who, being eligible, offers himself for re-election.

(7) To appoint Auditors for the current year and to fix their remuneration.

(8) To consider and if thought fit to pass the following resolution with such modification, if any, as may be agreed upon at the Meeting—the relative explanatory note as required by Section 173 of the Companies Act, 1956, is annexed hereto:—

"RESOLVED that the Company's Authorised Share Capital be increased by Rs. 3,50,00,000 and that Clause 5 of the Memorandum of Association be altered so as to change "Rs. 1,50,00,000 (Rupees One crore and fifty lacs) divided into 12,50,000 shares of Rs. 10 each and 25,000 shares of Rs. 100 each" into "Rs. 5,00,00,000 (Rupees Five crores) divided into 40,00,000 shares of Rs. 10 each and 1,00,000 shares of Rs. 100 each."

(9) To consider and if thought fit to pass the following as a special resolution with such modification, if any, as may be agreed upon at the Meeting:—

"RESOLVED that Article 3 of the Articles of Association of the Company be deleted and the following substituted therefor.

"*Article* 3: The Capital of the Company is Rs. 5,00,00,000 (Rupees five crores) divided into 40,00,000 Ordinary Shares of Rs. 10 each, 75,000 Preference Shares of Rs. 100 each and 25,000 Redeemable Cumulative Preference Shares of Rs. 100 each.

The said 75,000 Preference Shares of Rs. 100 each shall have such preferential rights privileges and other conditions attached thereto as may be determined by the Board at the time of the issue of this capital.

The said 25,000 Redeemable Cumulative Preference Shares shall confer the right to a fixed cumulative preferential dividend at the rate of 6 per cent. per annum without deduction of Income-tax on the capital for the time being paid up thereon, and the right in a winding-up to payment off of capital and arrears of such fixed dividend, whether declared or earned or not, accrued up to the commencement of the winding-up in priority to the Ordinary Shares, but shall not confer any right to participate in profits or assets. The Company shall be entitled on or at any time after the 1st day of November 1965 to redeem the whole or any part of the said Redeemable Cumulative Preference Shares for the time being issued and outstanding out of any moneys which may lawfully be applied for the purpose at par plus a premium of Rs. 5 per share upon giving to the holder of the shares to be redeemed not less than three months' previous notice in writing. In the event of the Company determining to redeem a part only of the said Redeemable Cumulative Preference Shares for the time being outstanding, the particular shares to be redeemed shall be selected by a drawing which the Company shall cause to be made by one of its officers at its registered office in the presence of a representative of the auditors of the Company for the time being.

Every such drawing shall be made in such a manner as the Company shall (subject to the approval of the auditors) determine as convenient for selecting the number of shares required to be drawn. The said Redeemable Cumulative Preference Shares shall confer the right to attend and speak at General Meetings of the Company but shall not confer any right to vote except when—

(i) the cumulative preference dividend is passed over in any year or has remained in arrears for more than six months from the date it is declared; or

(ii) any resolution affecting the rights, privileges or interests of the holders of the said Redeemable Cumulative Preference Shares is proposed; or

(iii) any resolution for the winding up of the Company is proposed.

None of the funds of the Company shall directly or indirectly be employed in the purchase of, or lent on the security of shares of the Company."

Notes:—(a) The relative explanatory statement pursuant to Section 173(2) of the Companies Act, 1956, in respect of the special business under items 8 and 9 set out above is annexed hereto.

(b) A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF, AND THE PROXY NEED NOT BE A MEMBER.

(c) The Transfer books of the Company will be closed from 28th April, 1958, to 12th May, 1958, both days inclusive.

(d) Dividends, if sanctioned at the Meeting, will be made payable to those Shareholders whose names are on the Company's Register on the 12th May, 1958, and the dividend warrants will be despatched to them on and after the 19th May, 1958.

By Order of the Board,
KESHUB MAHINDRA,
Director.

GATEWAY BUILDING,
APOLLO BUNDER,
BOMBAY 1, 19*th March*, 1958.

THE WESTERN INDIA MATCH COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-fifth Annual General Meeting of the Shareholders of the abovenamed Company will be held at the Registered Office of the Company at Indian Mercantile Chambers, Nicol Road, Ballard Estate, Bombay, at 4 p.m. on Wednesday the 7th day of May 1958, to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December 1957.
2. To declare a Dividend and a Bonus.
3. To elect a Director in the place of Sir Cowasjee Jehangir, Bart., G.B.E., K.C.I.E., who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution, of which special notice as required by section 281 of the Companies Act 1956 has been received by the Company:

"RESOLVED that Sir Cowasjee Jehangir, Bart., G.B.E., K.C.I.E., who has attained the age of 79 years and who retires by rotation, be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit of 65 years prescribed by section 280 of the Companies Act 1956 shall not apply to him."

4. To elect a Director in the place of Mr. Maneklal Premchand, who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution, of which special notice as required by section 281 of the Companies Act 1956 has been received by the Company:

"RESOLVED that Mr. Maneklal Premchand, who has attained the age of 69 years and who retires by rotation, be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit of 65 years prescribed by section 280 of the Companies Act 1956 shall not apply to him."

5. To elect a Director in the place of Mr. Dharamsey, M. Khatau, who retires under section 260 of the Companies Act 1956 and is eligible for re-election and offers himself accordingly.
6. To appoint Auditors for the ensuing year and to fix their remuneration.
7. To consider and if thought fit to pass the following resolution as a Special Resolution:

"RESOLVED that the Company hereby sanctions the borrowing of an aggregate sum of Rs. 110 lakhs on Cash Credit account from the Bank of India Ltd. and the Central Bank of India Ltd. (to the extent of Rs. 55 lakhs from each Bank) and as security for the said borrowing the Directors be and they are hereby authorised to hypothecate and charge all the movable property and assets of whatsoever nature of the Company so as to create a floating security and charge on all such property and

To All Shareholders of the Company and in particular Mr. B. B. Auty, Ethiopia; Mr. Mangalbhai Nathabhai Patel, Tanganyika; and Mr. M. V. Shirodkar, Baltimore, U.S.A.

ANNEXURE TO THE NOTICE

Explanatory Statements as required by Section 173 of the Companies Act, 1956

Items No. 8 *and* 9.—The Company's original programme for manufacture of Jeeps was limited to a volume of 2,500 units a year. The Tariff Commission reporting in 1956 forecasted a progressively increasing demand for Jeeps reaching to 5,000 units by 1960-61. Government in accepting the recommendations of the Tariff Commission called upon the manufacturers to elaborate and adjust their respective programme in accordance with the conclusions indicated by the Tariff Commission. The Company accordingly presented an application for the doubling of its programme of production and preliminary approval of Government has been received. This will necessitate a considerable expansion of Company's manufacturing operations, and of the assembly facilities.

The Trailer Division of the Company is also being expanded, and it is hoped that the Tractor manufacturing proposals will receive Government approval shortly.

It is anticipated that substantial additional capital will be required for these various expansion schemes. As a first step, it is proposed to increase the authorised capital of the Company from Rs. 1,50,00,000 to Rs. 5,00,00,000 as set forth in the Resolution. The alterations of clause 5 of the Memorandum of Association and of Article 3 of the Articles of Association are therefore proposed for Shareholders' approval as required by Section 31 and 94 of the Companies Act, 1956, and Article 50 of the Company's Articles of Association.

By Order of the Board,
KESHUB MAHINDRA,
Director.

BOMBAY, 19*th March*, 1958.

assets and to execute all such documents as may be required by the said Banks in connection therewith."

The Transfer Books of the Company will be closed from the 23rd day of April 1958 to the 10th day of May 1958 both days inclusive.

By Order of the Board,

A. HYDARI.
Executive Director.

INDIAN MERCANTILE CHAMBERS,
NICOL ROAD, BALLARD ESTATE,
BOMBAY, 28*th March* 1958.

A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER OF THE COMPANY.

The dividend and bonus when sanctioned will be payable at par at all Indian offices of the Central Bank of India Ltd. on and after the 14th day of May 1958 to those shareholders whose names stand on the Register on the 10th day of May 1958 and warrants will be posted in due course to each shareholder at his registered address. Shareholders are kindly requested to notify immediately any change of address.

Explanatory Statement issued under section 173 *of the Companies Act* 1956 *in connection with the items of special business to be transacted at the Thirty-fifth Annual General Meeting to be held on the* 7*th day of May* 1958.

As required by section 173 of the Companies Act 1956 the following explanatory statement is issued with the Notice of the Thirty-fifth Annual General Meeting of the Company and sets out all material facts relevant to items 3, 4, 5 and 7 in the Notice.

Item 3: Your Director, Sir Cowasjee Jehangir, is retiring by rotation. He has attained the age of 79 years and as such he cannot be reappointed unless the shareholders pass a resolution specifically declaring that the age limit of 65 years prescribed under section 280 of the Companies Act 1956 shall not apply to him. As required by section 281 of the Act a special notice has been received by the Company proposing that Sir Cowasjee Jehangir be reappointed a Director of the Company and that the age limit of 65 years prescribed under section 280 of the Act shall not apply to him.

Sir Cowasjee Jehangir is a business man of long and varied experience and during the period of his association with the Company since 1939 he has rendered valuable services to it. As it is in the interest of the Company that your Board should continue to receive the benefit of his advice, it is desirable that he should be reappointed a Director.

Item 4: Your Director, Mr. Maneklal Premchand, is retiring by rotation. He has attained the age of 69 years. He cannot be re-appointed unless the shareholders pass a resolution specifically declaring that the age limit of 65 years laid down by section 280 of the Companies Act 1956 shall not apply to him. As required by section 281 of the Act a special notice has been received by the Company proposing that Mr. Maneklal Premchand be re-appointed a Director of the Company and that the age limit of 65 years prescribed under section 280 of the Act shall not apply to him.

Mr. Maneklal Premchand is a well known businessman, being a Director of several leading companies. He has been a Director of the Company since 1948 and has rendered valuable services. It is in the interest of the Company that he should be re-appointed a Director.

Item 5: Mr. Dharamsey Mr. Khatau was appointed an additional Director on 25th June 1957 by the Board of Directors. He retires under section 260 of the Companies Act 1956.

Mr. Khatau is one of the leading businessmen in the country and is a Director of several companies. His wide and diverse experience will prove very useful and his re-appointment is in the interest of the Company.

Item 7: Since September 1938 your Company has had a Cash Credit arrangement with the Bank of India Ltd. and the Central Bank of India Ltd., originally for Rs. 20 lakhs (Rs. 10 lakhs from each of the said Banks), which in 1957 was increased to Rs. 60 lakhs (Rs. 30 lakhs from each of the said Banks) against hypothecation of all the movable property and assets of the Company. Now on account of increased taxes, the steep rise in excise duty, the increased cost of manufacture and the requirements of the new paper mill the Company needs more working capital. The aforesaid Banks have agreed to grant a total Cash Credit loan of Rs. 110 lakhs against the same security, namely, hypothecation and charge of all the movable property and assets of whatsoever nature of the Company. Each of the aforesaid Banks will allow Cash Credit to the extent of Rs. 55 lakhs. The terms on which the loan is offered by the Banks are fair and reasonable. Your Directors therefore recommend to the shareholders to sanction the necessary borrowing. Shareholders' sanction is required under Article 67 of the Company's Articles of Association.

The following Directors are interested in item No. 7:

Sir Cowasjee Jehangir as a Director and shareholder of the Bank of India Ltd.

Mr. Dinshaw D. Romer as a Director and shareholder of the Central Bank of India Ltd.

Mr. Dharamsey M. Khatau as a Director and shareholder of the Central Bank of India Ltd. and as a shareholder of the Bank of India Ltd.

Sir Chunilal V. Mehta and Mr. Maneklal Premchand as shareholders of both the Bank of India Ltd. and the Central Bank of India Ltd.

By Order of the Board,

A. HYDARI,
Executive Director.

WAVERLEY JUTE MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Seventy-ninth Annual General Meeting of the Members of WAVERLEY JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday, the 30th day of April, 1958, at 3 o'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the eleven months ended 31st May, 1957, the Balance-Sheet as at that date and Reports of the Directors and Auditors.
2. To appoint Directors in place of Messrs. D. P. Goenka and B. L. Bajoria, the Directors retiring by rotation at the Meeting.

   And in this connection to consider, and if thought fit, to pass the following resolutions which will be proposed as Special Resolutions in conformity with the provisions of Section 261 of the Companies Act, 1956:—

   (i) "That Mr. D. P. Goenka be and is hereby re-appointed a Director of the Company liable to retirement by rotation."

   (ii) "That Mr. B. L. Bajoria be and is hereby re-appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolutions as Special Resolutions in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Messrs. D. P. Goenka and B. L. Bajoria are "associates" of the Managing Agents within the meaning of the Act and that, therefore, they can only be reappointed by special resolutions as Directors of the Company liable to retirement by rotation.
3. To appoint Auditors and fix their remuneration.

As Special Business

4. To appoint a Director in place of Mr. R. G. Edwards who resigned from the Board in March, 1958, and in this connection, to consider, and if thought fit, to pass the following Resolution which will be proposed as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto:—

   "That Mr. D. N. Kapur be and is hereby appointed a Director of the Company liable to retirement by rotation in place of Mr. R. G. Edwards."

The Share Transfer Books of the Company will be closed from 16th to 30th April, 1958, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & Co., LTD.,

C. HOCKLEY,
Secretary,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, 3*rd April*, 1958

Explanatory Statement in Respect of Special Business

Mr. R. G. Edwards resigned from the Board at the end of March, 1958 and a Special Notice has been received from a member of the Company notifying his intention to propose a special resolution as set out in item 4 of the above notice appointing Mr. D. N. Kapur as a Director of the Company liable to retirement by rotation, in the place of Mr. R. G. Edwards. In the said Special Notice it has been pointed out that Mr. D. N. Kapur is an "associate" of the Managing Agents within the meaning of the Companies Act, 1956, and that, in view thereof, it will be necessary for the members to pass a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956, if they decide to appoint him as a Director of the Company liable to retirement by rotation since McLeod & Co. Ltd., the Managing Agents of the Company are authorised by the Articles to appoint a Director or Directors on the Board of the Company.

THE BELSUND SUGAR COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the members of the abovenamed Company will be held at the Registered Office, No. 14, Netaji Subhas Road, Calcutta, on Tuesday the 6th May, 1958 at 11-30 a.m., to transact the following business:—

1. To receive and consider the Directors' and Auditors' Report and to adopt the Audited Accounts of the Company for the year ended 30th September, 1957.
2. To declare dividend.
3. To elect Directors in place of those retiring.
4. To appoint Auditors for the current year and to fix their remuneration.
5. To transact any other ordinary business of the Annual General Meeting.

The Share Transfer Books and Register of Members of the Company will be closed from 24th April, 1958, to 6th May, 1958, both days inclusive.

By Order of the Board,
Per Pro. BANGUR BROTHERS LIMITED,

B. D. BANGUR,
Managing Agents.

14, NETAJI SUBHAS ROAD,
CALCUTTA, 1*st April*, 1958.

Note.—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

THE ELGIN MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Company will be closed from 19th April to 6th May, 1958, both days inclusive.

By Order of the Board,
Per Pro BEGG, SUTHERLAND & Co. PRIVATE LTD.,

R. P. MATHUR,
Secretary,
Managing Agents.

KANPUR, U.P. 3*rd April*, 1958.

ACTIVE NOTES CROSS RS. 1,600-CRORE MARK

(From Our Own Correspondent)

BOMBAY, 9*th April*

With only a few weeks to go for the end of the traditional busy season, the short-term money market has already started showing signs of slackening demand for funds. During the week under review, fairly comfortable conditions came to prevail in the market and banks were reported to have a surplus of money, as witness the rise in their deposits with the Reserve Bank to the tune of over Rs. 13 crores during the week ended 4th April. They were also able to reduce their borrowings from the Reserve Bank. These conditions did not, however, affect the interest rates which were firmly held at the previous week's levels.

Inter-bank call money was unchanged at 3 per cent. among the Exchange banks and big Indian banks and at 3½ per cent. among the smaller banks. House money at call continued to be offered at 4½ to 4⅝ per cent. and short-term deposits fetched 4½ to 4⅝ per cent. for one to six months.

A sharp rise of Rs. 40.55 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 4th April 1958. This is perhaps the sharpest expansion in any week and with this, notes in circulation have crossed, for the first time, the Rs. 1,600-crore mark, to stand at Rs. 1,619.69 crores. Last year, the peak level touched was Rs. 1,595.36 crores. In the week under review, notes held in the Banking Department have declined by Rs. 2.27 crores, so that the net increase in total notes issued was Rs. 38.29 crores. This is covered by a significant addition of Rs. 44.87 crores in foreign securities, while rupee securities and rupee coin have dwindled by Rs. 4.87 crores and Rs. 1.71 crores, respectively. The increase in foreign securities is, however, offset to a large extent by the decline of Rs. 27.47 crores in balances held abroad (in the Banking Department), so that the net addition to the foreign assets is only Rs. 17.40 crores. Central Government's deposits have gone up by Rs. 6.94 crores, while those of other Governments have dropped by as much as Rs. 47.61 crores, reflecting the withdrawal to meet the financial year-end requirements. As already stated, deposits of banks have improved by Rs. 13.22 crores. Loans and advances to Governments have gone up by Rs. 16.40 crores, while other loans and advances have declined by Rs. 4.48 crores of which advances to Scheduled banks account for a drop of Rs. 2.39 crores. Investments stand reduced by Rs. 20.33 crores.

The Scheduled banks' statement for the week ended 28th March, 1958 discloses a sizable expansion in bank deposits, demand deposits rising by Rs. 1.25 crores and time deposits by Rs. 11.19 crores. Borrowings from banks are higher by Rs. 1.92 crores and borrowings from the Reserve Bank by Rs. 4.25 crores. Advances (other than bills purchased and discounted) have crossed, for the first time, the Rs. 800-crore mark to Rs. 805.89 crores, representing a rise of Rs. 9.55 crores over the week. Bills purchased and discounted are higher by only Rs. 87 lakhs, but the total advances have reached a new peak of Rs. 962.33 crores. Investments are almost unchanged, but cash balances have gone up by Rs. 4.23 crores and money at call by Rs. 2.71 crores.

The most important development of the week in the gilt-edged market was the suspension of sale by the Reserve Bank of 3½ per cent. 1964 National Plan Loan and some of the State Loans which the Bank had been offering. There was no further increase in its selling price or any of the securities. This is taken as an indication in the market that the Central Government's new loan is round the corner. The market in general ruled firm with a further rise in prices of many issues, though activity was somewhat restricted. There was a sudden spurt in 3 per cent. 1986 Conversion loan on short covering and it rose by 20 nP. to Rs. 71.20. There were good enquiries for 3 per cent. 1970-75 and 3 per cent. 1966-68. The former had buyers 5 nP higher at Rs. 86.35 and the latter hardened by 10 nP to Rs. 92.55. 3 per cent. 1964 spurted by 20 nP to Rs. 94.70 and 3 per cent. 1963-65 by a like amount to Rs. 94.75. 2¾ per cent. 1962 gained 5 nP to Rs. 95.05 and 2¾ per cent. 1960 was marked up by 15 nP to Rs. 97.80. 2½ per cent. 1961 put on 5 nP to Rs. 95.05. 3½ per cent. 1964 gained 5 nP to Rs. 98.15 on good enquiries. 3½ per cent. 1965 was unchanged at Rs. 97.70, 3½ per cent. 1967 at Rs. 97.65 and 3¾ per cent. 1967 at Rs. 99.75. 4 per cent. 1972 was maintained at Rs. 100.15.

There was a slight hardening of the rupee in terms of the U.S. dollar during the week, in consonance with the improvement in sterling. Bank's selling rate of ready dollars declined from Rs. 475.25 to Rs. 475 per $100 and their buying rate from Rs. 472 to Rs. 471.75 per $100. In New York, spot sterling advanced from $2.81½-2.81⅝ to $2.81-11/16-2.81-13/16 and three months forward from $2.78¾-2.78⅞ to $2.78⅞-2.79. Transferable sterling also moved up from 279.25-279.35 cents to 279.50-279.60 cents.

LINSEED REACTS

(Messrs. A. Bradley and Co.)

CALCUTTA, 7*th April*

Increased movements of new linseed crop upcountry and appearance of new crop seeds on a small-scale locally, with better offerings from sellers generally, caused a slight reaction in the local market. Linseed prices dropped by about As. 12 to Rs. 22-10. Daily turnover was still small, with crushers trading cautiously. The oil market declined by Re. 1-8 per maund to Rs. 51-8. Business was negligible, as buyers showed very little interest. The overseas market was also quieter, with sellers quoting nominally around £106.

The latest available quotations are: Ready Rs. 22-10 and April-May Rs. 22-8 per maund.

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, 9*th April*

The bullion market ruled firm during the week under review, both silver and gold making sizable gains. Silver was again in the limelight, touching new high levels not seen since 1951.

Undeterred by the heavy penalty imposed under by-law 33C, which requires the purchasers to pay a margin of Rs. 500 per bar of silver on all their outstanding commitments, if the closing price of any forward contract on any particular day stood Rs. 7 above the starting rate for that settlement, the "bulls" in silver tightened their hold as the April settlement drew to a close and pushed up the price for that settlement above the margin level of Rs. 196. On the last day of the settlement, that is, on the 7th inst. forward silver (April settlement) rose to a peak of Rs. 197-14, though the closing rate for that settlement was a shade lower at Rs. 197-1. With the coming into force of the by-law 33C, the exemption limit of 40 bars permitted under by-law 33A amended recently became inoperative. The *budla* charges for transferring commitments from April to May settlement widened to a high of Re. 1-6 against sellers on the last day of the April settlement, but just at the close it again narrowed down to Re. 1, and the purchasers were thus able to avoid the margin of Rs. 500 per bar under by-law 33D, if the *budla* exceeded Re. 1.

Following the expiry of the April settlement, forward silver tended to decline on reports of large arrivals of Tibetan coins, but the good offtake in the ready section reversed the trend again today. Ready gold touched today Rs. 198, the highest level seen since June 1951, the scarcity of floating stocks being the main bullish factor.

Gold maintained a firm tone almost throughout the week, on reports of good offtake, particularly from Madras. The reopening of the Goa borders did not have any effect on gold prices.

Forward silver (April settlement) declined early in the week from Rs. 194-14 to Rs. 194-7, but it soon spurted to Rs. 197-14 on Monday last, before the settlement ran out at Rs. 197-1. The May settlement, after an initial drop from Rs. 194-7 to Rs. 194, gathered strength to Rs. 196-9 on Monday. On profit-taking, it reacted to Rs. 195-2 yesterday, but revived to close at Rs. 196-1 today.

Ready silver shot up from Rs. 195-7 to Rs. 198 before closing at Rs. 197-13. The floating stocks of silver are estimated at no more than 400 bars. The daily average arrivals were 20 bars, while the offtake was 15 bars on an average.

Forward gold (April settlement) shaded off from Rs. 110-11 to Rs. 110 early in the week, but gathered strength before the settlement ran out at Rs. 110-14. The May settlement fell from Rs. 111-1 to Rs. 110-7, before appreciating to Rs. 112-1. The closing was, however, done at Rs. 111-13.

Ready gold moved up from Rs. 110-13 to Rs. 112-4. The floating stocks of gold are estimated at 30,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was higher at 4,000 tolas.

New York silver was unchanged at 58.5/8c., while in London silver was erratic. After declining from 76*d.* to 75.5/8*d.*, spot silver improved to 76*d.* Forward silver fell from 75⅞*d.* to 75.5/8*d.* before being restored to 75⅞*d.* Gold moved up from 249*s.* 3⅞*d.* to 249*s.* 6*d.* but reacted to close at 249*s.* 3⅞*d.*

The following comparative table shows at a glance the trend of the market during the week under review:

N.B.—Foreign bullion prices shown in the above table relate to the previous day.

KIPS' ARRIVALS SMALL

(From Our Own Correspondent)

MADRAS, 7*th April*

There was no improvement in demand either for kips or for finished leather in the U.K. The leather dressers were following hand-to-mouth policy, buying only for their immediate requirements. Though spot stocks were small, they were not keen to buy. Some were reported to have retrenched their labour. Consequently, shipment business was at a low ebb, and E.I. tanners here were not happy over the situation. Arrivals from tanneries were small, and exporters who had earlier orders to execute were taking up the arrivals slowly, making a profit. Enquiries for cow calf and buff calf were received at lower prices and only a few lots were sold.

In the tanned skins section, prices of common tannages were weak, while better classes ruled steady.

Shipments during March 1958 were (in bales):—To the U.K. 2,145 tanned cow hides, 155 tanned cow calf, 35 tanned buff hides, 689 tanned buff calf, 977 tanned goat, 407 tanned sheep; to the Continent: 4 tanned cow hides, 10 tanned cow calf, 1 tanned buff calf, 1,033 tanned goat, 181 tanned sheep; to the U.S.A. 59 tanned buff hides, 182 tanned buff calf and 45 tanned goat; to Japan: 79 tanned sheep skins.

COTTON FUTURES WEAK

(From Our Own Correspondent)

BOMBAY, 9*th April*

The cotton futures market staged a brisk recovery in the earlier part of the week under review, but developed weakness on Monday which persisted yesterday and today too. The initial recovery in values was aided by persistent rumours of the release of an export quota for ⅜" cotton and expectations of enlarged domestic demand for cotton, following the likelihood of the Government liberalising its policy in respect of the installation of automatic looms. The recovery, however, was short-lived. On Monday, there was heavy liquidation by parties who had made purchases earlier in anticipation of an export quota. The continued low level of cloth offtake, despite the recent reductions in excise duty, the weakness of spot cotton consequent on the fall in prices in Southern markets owing to larger arrivals of new crop there and the disappointment over the delay in the release of a quota for ⅜" cotton, also imparted weakness to the market. Under pressure of persistent selling by Calcutta and Delhi operators, as well as by local speculative interests, cotton futures suffered a sharp setback. The previous gains were completely erased. In fact, today's closing rates were substantially lower than those on Tuesday last week.

I.C.C. Moglai Jarilla (May 1958) opened the week at Rs. 670 and, after improving to Rs. 677.75 on the 5th inst., slumped to Rs. 662.75 yesterday. Commencing today's sessions at Rs. 665.50, the contract gathered Rs. 2.25 to Rs. 667.75 but dropped to Rs. 661.25 at the close. The net loss over the week was Rs. 12.50. Trading in I.C.C. Moglai Jarilla August delivery commenced on the 3rd inst. The contract opened at Rs. 672.50 and, after making a handsome gain of Rs. 11 to Rs. 683.50 on Saturday, declined to Rs. 671 yesterday. The contract opened today at Rs. 674.50 and crept upto Rs. 676 before reacting to Rs. 670.50. The following table indicates the trend of prices of the contracts during the week.

(In rupees per candy of 784 lbs.)

	9-4-1958	*High*	*Low*	1-4-1958
I.C.C. Moglai Jarilla May 1958	661.25	677.50	661	673.75
I.C.C. Moglai Jarilla August 1958	670.50	683.50	670	678.50*

*On 3rd April 1958.

In the spot sections, most varieties showed a downward trend; only staple varieties were more or less steady. Activity was mostly confined to good quality cotton such as Laxmi 0394, Co2, the prices of which were maintained. The season is gradually coming to a close in many parts of the country. Arrivals in Gujerat and Saurashtra are still good, but those in Madhya Pradesh, Rajasthan, the Punjab and Berar, Khandesh and Gaoranj areas of the Bombay State have considerably declined. The season has started in the South and arrivals in principal markets are increasing.

In the export sections, renewed interest was noted for Bengal *Desi* from Japan and the U.S.A. Stray inquiries was also reported from West Germany. Demand for 23/32" cotton, however, was most encouraging.

The most important development of the week in so far as the foreign sections is concerned was the announcement of import allocations for 30,000 bales of cotton 13/16" and above from soft currency areas. The varieties eligible for import are: all Karnak and Menoufi; Giza 30—fully good and better; Dandara (Giza 31) fully good and better; Ashmouni fully good and better. G.S. down to G6S; GL down to G6L: Private Estate Sudans down to grade IV. Tanguis and Pima cottons. B.P.52m, Grade UNUG and over upto UNWE and Abyan cotton.

As regards payment procedure, while Sudan and other cottons are to be paid for in sterling, a special procedure for payment for Egyptian cotton is being worked out at present and will be announced very shortly. It is understood that such payment will be in Egyptian pounds. As hitherto, licences would be issued on quota basis to actual users, that is, mills, taking into account their consumption of both Sudan and Egyptian cottons in the past three sessions. It is also gathered that mills who did not use these cottons in the basic period but who now wish to use them would be provided with an opportunity to participate in the allocation on an *ad hoc* basis.

The mills and trade quarters are very much disappointed over the allocation, as it is much smaller than was expected. As almost half the quantity (about 15,000 bales) is already booked subject to import licences, it is thought that the allocations will enable the mills to cover only a negligible part of their requirements.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week's closing rates:

Bengal *deshi* 610 (600); Berar Jarilla 750 (750); Khandesh 790 (800); Oomra *Deshi* 675 (680); Vijay 900 (900); Hubli Laxmi 1,040 (1,040); Jaydhar 870 (890). *Delivery contracts*: Bengal 578 (585).

In contrast to the easy trend noted last week, the Karachi cotton futures market ruled fully steady during the week under review. The steadiness was influenced by the expectation of the removal of export duty (Rs. 80 per bale) on *Deshi* styles following the recommendation of the Pakistan Central Cotton Committee. The expectations induced good buying support and cotton futures registered a modest rise. The rise would have been more marked but for the continued slackness of foreign demand. N.T.R.G. May improved from Rs. 70-10-6 last week-end to Rs. 71-10. July contract gathered As. 7½ to Rs. 71-12. In the spot section, barring *Deshi* styles, which were neglected, values of most other varieties tended to move up. Sind *Deshi* was unchanged at Rs. 64-8, while Punjab

Deshi shed As. 8 to Rs. 62-8. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few other popular varieties of Pakistan cotton prevailing at Karachi.

4F Punjab Roller 71-12; S.G. 77; L.S.S. Punjab Roller 75-4; S.G. 79-4. N.T. Roller 77-4; S.G. 86-4; 289F Punjab Roller 82-12; S.G. 93-4.

Quiet conditions prevailed in the Alexandria cotton futures market during the week. Despite the recent reduction in export duty and the offer of attractive discounts, foreign demand had not revived to the extent desired. Keen competitions from Sudan and rumours of a further cut in export duty by that country, which might force Egypt also to follow suit, induced a cautious attitude among operators. They were, therefore, not inclined to enter into large commitments. The following are the latest available quotations—in tallaris per lb.—from Alexandria.

Karnak: May 79.85; July 80.75. *Ashmouni*: April 67.60; June 68.70.

Cotton values on the Liverpool cottons exchange followed a downward course during the week, following heavy liquidation and hedge selling. It was reported that the U.S. Department of Agriculture had refused extension of shipment period under the 1957-58 programme. This implied that all purchases from C.C.C. of last season's crop must be exported before 31st July next. Besides, easy advices from New York, the news from the yarn and cloth markets was uninspiring. Consequently, values moved down. Sudan contracts also were easy.

The following are the latest available quotations—in pence per lb.—from Liverpool. The figures in brackets are last week's closing rates:

American cotton one inch staple contract: May-June 24.35 (24.90), July-August 24.70 (25.40), October-November 25.40 (26.08).

American Cotton Mixed Growth Contract: May-June 25.20 (25.90), July-August 25.72 (26.30), October-November 26.30 (26.88).

Sudan: May-June 31.00 (31.50), July-August 31.70 (31.20), September-October 31.85.

The New York cotton futures market presented easy conditions during the week. The easiness was due to scattered liquidation and hedge selling. The refusal of the Department of Agriculture to extend the deadline for export beyond 31st July was an unsettling feature. Traders were inclined to await a clearer picture of new crop situation and more definite information regarding the exports subsidy proposed for the next season. Prices, of course, were prevented from falling further by occasional trade covering and New Orleans buying on expectation of a higher final loan rate for 1958 crop.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	8-4-58	31-3-58	25-3-58
Spot	35.95	36.10	36.20
March	35.81	35.98	36.17
May	36.04	36.23	36.41
July	36.53	36.72	36.84

ART SILK YARN FORGES AHEAD

(From Our Own Correspondent)

BOMBAY, *9th April*

The firmness of rayon and staple fibre yarns which followed the announcement of the continued restrictive import policy for April-September licensing period gathered further momentum during the week under review. In fact, the market was in the grip of bulls. The persistent denial of art silk yarn import quota to established traders—these traders have not been given any licences for the past fifteen months—at a time when there is already an acute shortage of supplies induced a buying spree. The sentiment of operators was also aided favourably by expectations of increased pressure of demand for art silk yarn from those weaving mills which had switched over to some extent to the consumption of nylon yarn in preference to art silk yarn. The expectations followed the marked rise of Rs. 4.50-Rs. 5 per lb. in the prices of nylon yarn, thanks to the imposition of restrictions on import of this yarn; acual users are allowed to import nylon and other synthetic yarns only upto 15 per cent. and that too subject to certain conditions. Traders noted the slackness in arrivals of imported art silk yarn, the total quantity actually arriving in Bombay port during the month of March 1958 being just 1.13 million lbs., as against 1.96 million lbs. in February and 1.62 million lbs. in January. Both dealers and consumers were busy making purchases of art silk yarn on fears of more acute shortage of supplies. Prices, as a result, forged ahead. In sympathy with art silk yarn and owing to denial of import quota to established traders, staple fibre yarns also evoked a buying spree, although, towards the closing sessions, there was a reaction. Cotton yarns, however, continued to rule dull in the absence of buying support. Even rumours of a reduction of 25 per cent. in output of South Indian mills failed to have any effect.

In the rayon yarn section, spot 120 Japan rallied 69 nP to Rs. 6.69. 150 Japan climbed up by 72 nP to Rs. 6.66. 120 Italy spurted by 50 nP to Rs. 6.50. 150 Italy strengthened by 75 nP to Rs. 6.62. Indigenous yarn prices also advanced further. National Rayons 150 bright cones first grade hardened by 25 nP to Rs. 6.06. 120 bright cones first grade improved by 44 nP to Rs. 6. Snia rayon yarns (120 dull cones) April delivery was knocking at the ceiling of Rs. 925, fixed by the Bombay Yarn Market Association and Exchange Ltd.

Staple fibre yarns (40×2) June delivery evoked excellent support and shot up from Rs. 624 last week to as high as Rs. 646 on Monday. At higher levels, profit-taking set in and the rate declined to Rs. 632 today. April delivery spurted from Rs. 610 to Rs 635 before closing at Rs. 623. Spot (40×2) Centurys and Citys were fully steady at Rs. 3.34 and Rs. 3.31 respectively. New Greats were done at Rs. 3.25. Kohinoors, however, eased by 3 nP to Rs. 3.33. Foreign yarns were also well supported. Paramounts rose by 31 nP to Rs. 7.12. Fujis firmed up by 40 nP to Rs. 7.06.

Among cotton yarns, ten counts Podars declined by 25 nP to Rs. 13.50. Moderns were neglected at Rs. 14.50. Among twenty counts, Moderns and Indus shed 12 nP each to Rs. 17.25 and Rs. 16.50 respectively. Gokaks were quoted at Rs. 17.25. Thirty counts Indus were unchanged at Rs. 20. Forty counts were dull, Minervas being quoted at Rs. 23.87 and Moderns at Rs. 24.50. Among sixty counts, Raghuvamshis fell by a rupee to Rs. 50.75, while Moderns gained a rupee to Rs. 60. Eighty counts Moderns receded by 25 nP to Rs. 70.25. Mahendras were on offer at Rs. 69.50.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those eight days before:

	9-4-1958	1-4-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia April	925.00	925.00
120 Japan (per lb.)	6.69	6.00
150 Japan (per lb.)	6.66	5.94
120 Italy (per lb.)	6.50	6.00
150 Italy (per lb.)	6.62	5.87
Staple fibre yarn (per case of 200 lbs.)—		
40×2 April	623.00	610.00
40×2 June	632.00	624.00
40×2 New Great (per lb.)	3.25	—
40×2 City (per lb.)	3.31	3.31
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	13.50	13.75
20s Modern	17.25	17.37
36s Indu	20.00	20.00
40s Minaxi	23.87	23.87
60s Raghuvamshi	50.75	51.75
80s Modern	70.25	70.50

EXPORT DUTY ON CASTOR OIL REDUCED

(From Our Own Correspondent)

BOMBAY, *9th April*

Speculations over the revision in export duty on castor oil have at last been ended. Yesterday, the Government of India announced reduction in export duty from Rs. 175 to Rs. 100 per ton. The duty on nigerseed has also been cut from Rs. 150 to Rs. 50. The oilseeds trade is disappointed at the announcement. It was hoping for a complete abolition of duty on castor oil. Even with the latest cut in duty, prospects of India exporting large quantities of castor oil either to the U.K. or the U.S. are considered to be bleak. The currently ruling rate (including the revised export duty of Rs. 100) of B.S.S. quality in India is about £129 per ton (c.i.f. London), as against £122-14 quoted for Brazilian oil; the latter rate is inclusive of the import duty of £10-14 and the difference of £5 on account of quality variation. The disparity between Indian shippers' quotation and London price thus comes to £6-6 per ton. The price of Indian oil will be very much higher—by over £16—as compared with the ruling price of about £112-14 in the U.S., where there is no import duty. It is not surprising, therefore, that the castorseeds section has not only reacted bullishly to the reduction in export duty but has actually suffered a setback. Those who had gone long on hopes of complete abolition of duty have turned out to be sellers. If the prices have not recorded a more marked fall, it is perhaps because of a feeling that the Government may reconsider the question and abolish the duty completely.

The groundnut section ruled strong, thanks to buying orders in groundnut oil from *vanaspati* manufacturers and reluctance of upcountry dealers to supply goods at current rates. The linseed section, however, is distinctly easy. Trade houses fear that delivery orders in May contract may be heavy this time, as floating stock in the city is estimated at about 6,000 tons. In sympathy with castorseeds and linseed and following weak advices from the cotton market, cottonseed is also easy. Kardiseed is dull. But nigerseed is somewhat well supported, induced by the cut in export duty.

Castorseeds May contract opened the week firm at Rs. 150.12, as against Rs. 149.75 last week-end, and, on persistent full support induced by anticipations of abolition of export duty on castor oil, jumped up to Rs. 154.62 on the 7th inst. Subsequently, however, the bulls came out to book their profits, as it was thought that the Government might lower the duty only to some extent. The tendency gathered momentum after the duty cut was announced and the rate dropped to Rs. 149 today. Ready Madras, after rising from Rs. 29.62 to Rs. 30.12, fell to Rs. 29.75. Kanpur quality advanced from Rs. 28.25 to Rs. 29.12 before finishing at Rs. 28.25. Castor oil B.S.S. which stood at Rs. 16.69 last week-end gradually improved to touch Rs. 17.25 on Monday. Thereafter, it declined, today's closing rate being Rs. 16.75. Commercial quality spurted from Rs. 15.37 to Rs. 16.00 but relapsed to Rs. 15.50 today.

Over the week, Groundnut May contract registered a rise of Re. 1.12 to Rs. 163.62; at one time today, it was quoted at Rs. 164.75, that is, just 25 nP below the rate at which margin comes into effect. Bold ready strengthened by 88 nP to Rs. 33.50. Coromandal hardened by 87 nP to Rs. 34.12. Khandesh quality gathered 75 nP to Rs. 34. Groundnut oil ex-mill met with good buying enquiries and spurted by 37 nP to Rs. 18.25. Railway receipt put on 25 nP to Rs. 18.12.

Linseed May was well supported in the earlier sessions, the rate moving up from Rs. 31.00 on Thursday to Rs. 31.31 on Monday. It, however, declined to Rs. 30.62 yesterday and further to Rs. 30.50 today. Over the week, Bold ready shed 44 nP to Rs. 30. Linseed oil encountered selling and receded from Rs. 16.37 on Thursday to Rs. 15.87 today.

Cottonseed May contract was distinctly firm during the first part of the week but developed a sagging tendency yesterday which persisted today also. The contract moved up from Rs. 108 to Rs. 109.50 on Monday, but eased to Rs. 107.50 today.

Among other seeds, kardiseed bold ready which had gone down from Rs. 19.50 last week-end to Rs. 19.75 on the 3rd and 4th inst., recovered to Rs. 19.50. This rate was maintained today also. Nigerseed Madras elicited good support and advanced by 50 nP to Rs. 28.75.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	9-4-1958	1-4-1958	26-3-1958
	Rs.	Rs.	Rs.
Groundnut—			
May 1958	163.62	162.50	162.00
Bold ready (per cwt.)	33.50	32.62	32.50
Khandesh quality	34.00	33.25	33.25
Linseed—			
May 1958	30.50	31.12	31.37
Bold ready (per cwt.)	30.00	30.44	31.12
Castorseed—			
May 1958	149.00	149.75	149.37
Madras (per cwt.)	29.75	29.62	30.12
Cottonseed—			
May 1958	107.50	108.00	109.00
*Groundnut oil**			
Ex-mill ready (per quarter) ..	18.25	17.87	18.00
Castor oil†			
Commercial (per quarter) ..	15.50	15.37	15.37
Linseed oil†			
Ready	15.87	16.25	16.37

* Rates include excise duty but exclude sales tax.
†Rates exclude both excise duty and sales tax.

SUGAR DULL

(From Our Own Correspondents)

BOMBAY, *9th April*

Dull conditions prevail in the sugar market. Reports from U.P. side indicate that the sugar mills and jobbers there are scaling down their quotations in order to unload a part of the substantial stocks which they had held previously in expectation of a rise in prices following the finalisation of export scheme. The ex-mill quotations for sugar in the Bombay-Deccan and Southern India, however, remain unchanged.

Small grain and medium grain sugars are quoted at Rs. 105.50 and Rs. 106-108 per bag, respectively, same as last week. Bold grain is done at Rs. 112, as against Rs. 109-112.25.

Arrivals of sugar by rail into the market during the week aggregated 10,500 bags. This quantity excludes arrivals by trucks which cannot be accurately ascertained.

* * * *

HAPUR, *7th April*

Sugar prices ruled quiet during the week, owing to absence of buying enquiry from consuming centres. The production of sugar in the country upto 22nd March amounted to 16.11 lakh tons. Cane supplies to factories were reported to be gradually declining, some factories stopped crushing for the season and the rest were expected to finish by the end of the current month at the latest. Ex-mill delivery prices moved down.

The week-end witnessed lively conditions in the Muzaffarnagar sugar market. Business in bulk quantity was done for Punjab and Delhi for Khatauli, Deoband, Daurala, Mawana and Shamli sugar factories. Limited business was also done for Gujerat, while demand from other consuming centres was dormant. The latest mill delivery prices were: Deoband (C-28) Rs. 35.87; Khatauli (C-29) Rs. 36.56; Iqbalpur (E-29) Rs. 35.50; Rampur (B-29) Rs. 36.75; Mansurpur (B-29) Rs. 37.81; Daurala (B-29) Rs. 37.12; Amroha (D-29) Rs. 35; Meerut (D-28) Rs. 35.69.

Good demand from consuming centres accounted for steady conditions in *khandsari* during the week. Production was gradually declining, due to fall in supplies of cane to crushers. Prices were around Rs. 27 to Rs. 33 per maund according to quality.

After the recent spurt, ready *gur* reacted towards the week-end for want of buying support. Dry quality eased from Rs. 16.75 in mid-session to Rs. 16 on Monday.

BLACK PEPPER QUIET

(Messrs. Parekh and Co.)

BOMBAY, *9th April*

Two-sided movements in prices of Malabar black pepper were noticed during the week, following prolonged holidays in Singapore and London. Bulls in the trade tried to manipulate the market during Easter, but, there being no support from New York, prices on balance at the time of writing showed small advance with undertone quiet. Ready garbled at Cochin improved from Rs. 101 to Rs. 110 to come down to Rs. 105. May delivery on the Exchange fluctuated between Rs. 105 and Rs. 116 to mark down to Rs. 107. Cochin showed hectic fluctuations in the wake of selling and buying bouts by speculators. May contract at Cochin seemed to be under the grip of speculators. Daily turnover of more than a couple of hundred tons were noticed even when ready was neglected. The spread between Ready and May delivery was once as high as Rs. 8 which showed how the market was technically far from healthy.

New York is reported to be showing very little buying interest, as most of its requirements are fulfilled by Lampong which is underselling Malabar. Further, sizable unsold consignments from India as well as from Singapore are reported to be on the way and consequently, New York market, except during the last week's boomlet, is always ruling below the replacing parity.

Singapore opened quiet after Easter, white and black pepper quoting at Str.$128 and Str.$72 respectively.

Alleppey ruled between Rs. 625 and Rs. 637, while Calicut from Rs. 680 to Rs. 700. Recent reduction in the coastal freight from Rs. 99 to Rs. 66 will make cost of pepper cheaper in Bombay.

Control of pepper market seems to have shifted to Singapore and the Malabar prices are shaping themselves reflecting changes in Singapore.

In A.S.T.A. section, April changed hands from $0.24½ to $0.26, while May-June from $0.25 to $0.27.

In delivery section, May delivery, after improving to Rs. 660 under pressure of buying by bulls, came down to Rs. 600 under short selling and liquidation by bulls.

Today's nominal quotations are: Ready delivery Rs. 88 per Bengal maund; May Rs. 620-Rs. 630 and June Rs. 635-Rs. 645 per candy of 5¼ cwts.

IRREGULAR DEMAND FOR TEA

(Messrs. Forbes, Ewart & Figgis (Private) Ltd.)

COCHIN, *3rd April*

Approximately 1,450,000 lbs. were on offer in Sale No. 8 which was held on Tuesday, 1st April. Quality still continued to be very useful, and there was a large quantity of Nilgiri teas on offer. The sale opened to a good but irregular demand. With the absence of the Russian buyer operating, best quality declined by 25 to 50 nP. Good mediums were strong and also dearer. Medium descriptions met with less competition and were barely steady. Low medium brokens were easier but similar coloury fannings were dearer. Whole leaf types were difficult to sell. The following are the quotations:—

	1958
	Rs.
Plain B.P.	1.45
Low medium	1.55 to 1.90
Medium	1.90 to 2.20
Good medium	2.40 to 2.90
Quality	2.80 to 6.00

London Market—Sale of 31st March 1958.—Irregularly firm.

Sale of 1st April 1958.—Market steady.

Colombo Market—Sale of 31st March 1958.—Good demand. Best irregular, following quality. Coloury mediums slightly dearer. Low grown Middle East weak considerably easier.

Sale of 1st April 1958.—Strong demand. Fully firm.

Export Quota.—There has been some business transacted over the week and today's quotation is sellers 4 nP and buyers 3 nP.

Forthcoming Auctions.—Sale No. 9 will be held on Tuesday, 15th April.

As we go to Press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Dust Sale H.*—650,000 lbs. Fair demand. Market irregularly 10 to 15 nP easier, except better types 5 to 10 nP lower."

TEA PRICES IMPROVE

(From Our Own Correspondent)

CALCUTTA, *8th April*

The market was in the grip of strong rumours that an announcement from New Delhi reducing the export duty on all kinds of teas by 12 nP per lb. was imminent. Originally, the authorities desired that only common teas should get the relief. They were, therefore, believed to be working out a scheme, which would give the benefit to inferior teas only. Apparently, on second thoughts, Government should have found a scheme reducing the duty on common teas alone would open up practical difficulties in implementation, and hence the extension of the proposed benefit to all teas.

In the meantime, Government has announced that the export of dust teas to all destinations will be allowed under licence without being required to be covered by export quota rights. Such licences will be issued in cases of applications submitted to the Tea Board up to 30th September and available up to 31st October. This means that dusts tea can be exported without ceilings, and is aimed at clearing the balance of the last crop by as much as possible.

Export offerings yesterday amounting to 58,325 packages met with strong and general demand. Prices of plain and medium brokens rose by 4 to 6 nP, and those of the commonest teas by 6 to 10 nP. C.T.C. teas were paid keen attention, and in the competition that ensued the mediums gained by 20 nP. Medium O.Fs were fully steady as were B.O.P's showing improvement in quality. However, low medium B.O.Ps were quiet and eased. Legg-cut teas lost 5 to 10 nP below valuations. Whole leaf grades recorded an addition by 10 nP. However, tippy teas were easier. The quotations were: best Assam C.T.C. fannings Rs. 2.80 to Rs. 3.00, clean black pekoe Rs. 2.30 to Rs. 2.35, best Assam C.T.C. B.P. Rs. 2.60 to Rs. 2.80, medium fannings Re. 1.78 to Re. 1.82, medium B.P. Re. 1.62 to Re. 1.66, plain B.P. Re. 1.50 to Re. 1.54, and plain fannings Re. 1.64 to Re. 1.68.

Export quota changed hands at 4 nP. Subsequently, the price rose to 4½ nP.

In the internal sales held last week, there was good demand at lower rates. Dusts on offer aggregated 20,417 chests. Orthodox teas gave way by 6 nP, the smaller powdery teas recording a greater decline. The best liquoring C.T.C. Assams representing an improvement in quality realised higher prices following keen competition, while the plainer kinds fell by 10 nP. Darjeelings with flavour were steady. The quotations were: best Assam C.T.C. Rs. 2.75 to Rs. 3.05, medium Assam C.T.C. Re. 1.85 to Rs. 2.05, medium grainy dust Re. 1.56, and medium Dooars Re. 1.54.

JUTE GOODS ACTIVE

(From Our Own Correspondent)

CALCUTTA, *8th April*

There was an impressive rise in business done in jute goods with foreign buyers during the week under review. Enquiries were also keen, and it looked as though foreign buyers would be lifting substantial quantities. During recent weeks, there was a conspicuous decline in activity on foreign account as shippers were putting off their purchases on the belief that prices would come down. However, with the fixing of minimum prices and, what was more important, with the opening of the official futures market, prices became steady. Naturally, foreign buyers whose stocks had already declined in view of lower purchases, might have apparently thought that chances of a further decline in prices were poor. On the other hand, prices began to stabilise at around the minimum prices. So, they began lending their support to the market, and during the week under review, prices moved up towards the minimum levels.

The first impression of the working of the futures market is that it has started working well, and those who drafted the rules and regulations can take pride in the fact that there have so far been no instances of over-trading. This circumstance has lent considerable support to the genuine buyers' market, where forward quotations for goods compare well with those of the official futures. This contributed to an increase in the specific delivery contracts with mills. The close relationship in prices between the futures and the genuine buyers' market has been achieved by the satisfactory system of tender and delivery. Basis exists for quality as well as price on tenders put forward on the Exchange.

In the hessian section, the market sentiment was cheered by the interest shown by American buyers for the 7½ oz. construction. Particularly interesting was the call for tenders for 20,000 bales of cornsacks by Australia. Buying was subsequently done with buyers for Australia, the United States, the United Kingdom, and the Argentine. Business was substantial. This was the first major enquiry received from Australia after reports of failure in grain crop, and buyers expected more business. On Tuesday last, ready 40" 10 oz. hessian rose to Rs. 39.50 from Rs. 39.20. The highest and lowest rates in the futures market were Rs. 40.18 and Rs. 39.48 for 40" 10 oz. hessian, and Rs. 101.00 and Rs. 99.40 for B. twills. Follow-up business in the genuine market was lacking, and as such ready B. twills gave way to Rs. 98.80 on Wednesday. On the other hand, ready hessian 40" 10 oz. scored further to Rs. 39.60 on keen enquiries. In particular, the enquiry from Australia boosted sentiment, and the steady prices in the New York market also pushed up local sentiment. On Thursday last, ready B. twills improved to Rs. 99.00, while ready 40" 10 oz. hessian was quiet at Rs. 39.55. The market was closed on Friday and Saturday on account of Easter. Yesterday, sentiment improved with B. twills rising to Rs. 99.87 and 40" 10 oz. hessian to Rs. 39.70. Forward quotations in the genuine market were higher on balance for the week. July-September 40" 10 oz. hessian scored to Rs. 40.05 from Rs. 39.70, and July-September B. twills to Rs. 100.85 from Rs. 100.25. April-June deliveries in both the constructions moved to Rs. 39.90 and Rs. 100.25 from Rs. 39.50 and Rs. 99.50, respectively.

Although quotations for goods in the genuine market and in the official futures compared well, raw jute prices differed. The quotations in the futures market for June delivery contract of Assam bottoms was Rs. 26.40, as against Rs. 25.25 April-May delivery in the real market. The difference was believed to have been due to drought conditions in the jute growing areas and the delay in preparing the soil for sowing. However, it should be noted that there was rain during the week in some areas in Assam, and this led to a decline in prices subsequently. Arrivals did not show any increase and were below demand.

METALS FIRM

(From Our Own Correspondent)

CALCUTTA, *8th April*

Fair demand, coupled with reports of firmer trend in overseas markets, lent strength to the metal market during the week under report. In view, however, of the Control Order and the time needed to understand its full import and implications, business at least in copper, which is the only metal to go under control for the present, was at a standstill. It had been believed earlier that in view of the actual shortage and consequent rise in prices the import policy for copper would be relaxed. This expectation has not materialised, but it is simultaneously stated in the policy announcement that additional import licences for non-ferrous metals would be issued. Since the State Trading Corporation has already been granted a licence for importing 2,400 tons of copper—the S.T.C. is likely to import this from Rhodesia—the trade fears that the S.T.C. might be granted most of the additional licences for import of non-ferrous metals. At the same time, purchase and sale of copper has been controlled as from 3rd April, and the official *communique* indicates the possibility of tin, zinc and lead also going into control. This would virtually keep away all middlemen from the importers to consumers, and to that extent is aimed at cutting down prices. Moreover, the Control Order stipulates that sales should not be priced 3½ per cent. above the landed cost. It was noted that Canada would be supplying non-ferrous metals (10,000 tons of aluminium, 7,500 tons of copper, and 500 tons of nickel) valued at $10 million under the Colombo Plan.

KEEN DEMAND FOR HIDES

(From Our Own Correspondent)

KANPUR, *7th April*

Fresh arrivals of goat and sheep during the week fell slightly. Demand for these and also for upper grade buff was keen. The main parties behind the transactions were the Madras dealers and the local tanners. Prices maintained the levels of the previous week.

The latest available quotations are: Wet salted cow 1st grade Rs. 380, 2nd grade Rs. 340 and 3rd grade Rs. 210 per score; wet salted buff 1st grade 1 lb. 6 ozs. and 2nd grade 1 lb. 10 ozs. per rupee; goat 1st grade Rs. 310 and 2nd grade Rs. 280 per 100 pieces; sheep 1st grade Rs. 335 and 2nd grade Rs. 260 per 100 pieces.

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, *7th April*

Despite arrivals of new crop grains in the market, the foodgrains market continued to rule steady during the week, as daily arrivals were still small. A heavy quantity of foodgrains is reaching the country from abroad and it is expected that, by the end of July 1958, India will have imported all the 33 lakh tons of wheat to be supplied by the U.S. under the existing P.L. 480 Agreement. The first gift grant of 1.15 lakh tons of wheat given in November last has already been received and India is to receive a second gift of 1.3 lakh tons from Canada under the Colombo Plan. In addition, India is also purchasing 4 lakh tons of wheat from Canada on deferred payment basis.

Wheat at Hapur ruled steady during the week. Average quality was quoted at Rs. 16 per maund and farm produce at Rs. 17. New crop arrivals today were put at 250 maunds and local stock continued unchanged at one *khatti*.

Rice continued to be steady at Rs. 29 to Rs. 31.50 per maund for *basmati* quality and Rs. 25.25 for *mainpuri*. Harvesting of coarse grains having finished about a week ago, arrivals of gram and other coarse grains had begun in small quantities here, but prices continued to rule steady, due to poor arrivals in the face of increasing consumer demand. The latest prices on Monday (in rupees per maund) were: Gram 11 to 11.25; barley 9.50; *bejhar* 9.25; *jowar* 10.50 to 11.75; *guwar* 13.81 to 14.75.

SUGAR

(*Concluded from page* 684)

in factory zones to the manufacture of *khandsari* sugar, it has to be considered how this can be prevented."

In the course of his speech, Mr. Sawhney made special mention of the licensing policy governing the expansion of the sugar industry. He stated that, in the matter of licensing additional capacity, the Government should first meet the requirements of the existing units. For, in his opinion, it would cost less in terms of both money and time, if preference was given to the expansion of the existing units wherever cane availability and other facilities permit the same. In this connection, he put forward two suggestions. First, wherever the units already licensed had not come up according to programme, the capacity thus released should be redistributed among the existing factories depending on the scope of expanding such units. Secondly, the restriction of allowing expansion only up to a maximum of 1,000 tons imposed mainly on the plea of non-availability of further capacity should be done away with. These are, indeed, pertinent suggestions which deserve the sympathetic consideration of the Government. In the course of his reply, Mr. Jain rejected the criticism that the Government had not given preference to expansion of the existing units over installation of new ones. He declared that applications for expansion had been approved in all cases except a few where expansions had been sought without completing expansions sanctioned earlier. Mr. Jain also rejected the suggestion that licences for such new factories as had not been able to establish themselves should be revoked in order to make room for more expansions.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown asamount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. † Less income-tax. (x) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year 1955. * Including bonus. (k) Investment in † New Central Jute Mills—Dividend for 1956 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954. K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. F—Bengal Coal Co. Dividend from 1954 to 1956 are on shares of Rs. 500 each. For 1954 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 500 were split into shares of Rs. 100 each.

COMMERCE AND INDUSTRY

(*Concluded from page 704*)

arrange for accommodations which are not tied-in to particular projects, since such arrangements generally reduce the flexibility of the operational programming of the Plan.

We need not always shy away from long- and medium-term deferred credit arrangements which involve payment of high interest charges. If agreement can be entered to spread out these interest charges evenly, the burden in the immediate period is unlikely to be very high, and it can be hoped that the country will be able to acquire sufficient wherewithal after a while to be able to honour these obligations.

Parallel to arrangements involving deferred credit, the Government may solicit from foreign investors within the country their attitude to a proposal for deferred remittances for a temporary period. There can be no question of freezing investment income of foreigners being remitted abroad. But it is possible that, given a certain amount of goodwill, foreign concerns may view favourably the suggestion to curtail the quantum of remittances for the next two years, and thus contribute toward the Government's efforts to tide over the exchange crisis.

While the aforesaid measures will go a long way towards easing the foreign exchange situation, it will be realistic, as the Council pertinently states, to examine

MARKET GOSSIP

(Concluded from page 671)

move to encourage exports is the reported approval by the Sudan Government of the proposal for the establishment of a "Sudan Cotton Exporters' Association." Its object, it is stated, is, among others, to maintain and extend existing markets for Sudan cotton, explore new ones and foster, promote and develop the sale of Sudan cotton in world markets. Meanwhile, there is also a rumour that Sudan is contemplating total abolition of export duty on its cotton.

* * * *

The most objectionable feature of the tax on wealth is its extension to pure investment trust companies. The tax on such companies tantamounts to double taxation, because the companies' property is truly the collective wealth of shareholders in whose hands the value of their shares in the companies is in any case treated as part of the chargeable property. In other words, the investment trust companies have to pay tax not only on the dividends they receive from the companies in which they have invested funds but also on the property built out of such dividends. Mr. Maneklal Premchand, Chairman of the Industrial Investment Trust Ltd., is perfectly justified in urging exemption of investment trust companies from the provisions of wealth tax. Addressing the twenty-fifth annual general meeting of the Company held in the City on Tuesday this week, Mr. Maneklal Premchand rightly declared that banks and insurance companies were exempted from payment of wealth tax and such exemption ought to have been extended also to investment trust companies "which come for any financial consideration under the category of banks and insurance companies." The tax actually payable by these companies may be small—it is Rs. 5,915.98 in the case of the Industrial Investment Trust Ltd.—but this is no criterion for judging the soundness of the levy. Indeed, the objection to the levy is fundamental.

In the course of his general review of the recent economic trends, Mr. Maneklal Premchand pointed out how the country continued to groan under the heavy tax burden. "The last budget," to quote him, "brought no relief to the citizen who is asked continuously to pay even after his death!" He no doubt admitted that some relief had been given to cotton mills by reduction in excise duty and that some attempt was made to curtail the huge spending programme of the Government. Nevertheless, as he himself recognised, with all the taxes loaded, there is nothing left for an individual to invest in industrial enterprise or securities.

SALES TAX

The State Governments have agreed in principle to levy sales tax on a uniform rate on certain special goods. The rate of tax will be 7 per cent. and be levied at a single point to be selected by the State. Any State which now levies a higher rate than 7 per cent. will be free to retain it. The special goods on which uniform rates of sales tax will be levied by States are: motor vehicles, including chassis of motor vehicles, motor tyres and tubes and spare parts of motor vehicles; motor cycles and cycle combinations, motor-scooters, motorettes and tyres, tubes and spare parts of motor cycles, motor-scooters, motorettes; refrigerators and air-conditioning plants and component parts thereof; wireless reception instruments and apparatus, radios and radio gramophones, electrical valves, accumulators, amplifiers and loudspeakers and spare parts and accessories thereof; cinematographic equipment including cameras, projectors and sound recording and producing equipment; lenses, films and parts and accessories required for use therewith; photographic and other cameras and enlargers, lenses, films and plates, paper and cloth and other parts and accessories required for use therewith; all clocks, time-pieces, and watches and parts thereof; iron and steel safes and almirahs; all arms including rifles, revolvers, pistols, and ammunition for the same; cigarette cases and lighters; dictaphone and other similar apparatus for recording sound and spare parts thereof; sound transmitting equipment including telephones and loudspeakers and spare parts thereof; typewriters, tabulating machines, calculating machines and duplicating machines and parts thereof; binoculars, telescopes and operaglasses; and gramophones and component parts thereof and records.

RADIO AND TELEVISION

The *U.N. Statistical Yearbook* estimates that in 1956 there were 315 million radio (wireless) sets in use in the world, including loudspeakers attached to a radio redistribution system, and of these more than half—160 million—were in North America (150 million in the United States alone). Rather more than a quarter—82 million—were in Europe (excluding U.S.S.R.). The U.S.S.R. is credited with 29.6 million sets, of which 22.2 million were radio redistribution (wired) loudspeakers. The *Yearbook* puts the number of television sets in the world at 56 million at the end of 1956, of which 42 million were in the United States and 6.57 million (licences issued) in the United Kingdom. Countries possessing the next largest number of television receivers at the end of 1956 were Canada (2,450,000), U.S.S.R. (1,324,000) West Germany (703,500), France (442,000), Italy (367,000) and Japan (328,000).

The Soviet Union is prepared to increase deliveries of coal and oil to European countries in order to reduce the deficit in the fuel and power balance of these countries, especially of West Europe. The offer was made by the Soviet delegation at a Conference of Government experts of Europe and the U.S.A. on the power situation in Europe.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVI. No. 2457 BOMBAY, 19th APRIL 1958 PRICE: Re. 1.50

STATE AND CO-OPERATION

THE classic controversy over the role of State in Co-operation found its echo at the third All-India Co-operative Congress, held last week in New Delhi. Both the Prime Minister, Mr. Nehru, and the President of the All-India Co-operative Union, Mr. K. D. Malaviya, were emphatic that Government participation in the co-operative movement must be severely restricted. Genuine co-operators will naturally be happy over this development, although they might fear that a large-scale withdrawal of Government support would mean a slower pace of progress for Co-operation. Much store is set by Co-operation in the second Plan. Briefly, the supply of credit is to be increased from Rs. 43 crores to Rs. 225 crores, over 2,200 marketing and processing societies, including 160 ginning and sugar factories, are to be formed, 5,500 godowns and 350 warehouses are to be built, and the number of members of societies raised from 5 million to 15 million. It now looks as though the choice before the country is between a slow and steady pace of growth of true Co-operation and its speedy development with a pull exercised by the State from above.

By and large, Mr. Nehru has cast his weight in favour of Co-operation, free from official control and supervision. He said that State-sponsored co-operatives did infinite harm, as they did not allow people to develop the "spirit of self-reliance and self-dependence." On the contrary, they encouraged the tendency to look up to Government for everything. He said: "You know I am part of the Government. Even so, I feel that this looking up to Government or any policy which encourages people to look to Government to help them at every stage is wrong, because the biggest thing we want in India is the spirit of self-reliance and self-dependence. Of course, Government's business is to help. I do not deny that. But it is one thing to help and it is quite another thing to boss." He felt that the Government was "quite wrong" in accepting some of the recommendations of the Rural Credit Survey which tended to push the co-operative movement in this country in a "wrong" direction. He particularly criticised the tendency to have large co-operatives and Government participation and control in such co-operatives. He stressed that the Government should revise its earlier policy in relation to Co-operation and aim at small co-operatives without official interference. Mr. Malaviya was equally emphatic in his denunciation of any attempt at governmental participation in the co-operative movement. He said: "A co-operative that is dependent on someone else, be it Government or any other agency, and cannot manage its own affairs, is no longer a co-operative. It can under no circumstances fulfil the basic objectives which Co-operation cherishes and stands for." He deplored that, instead of making the movement free from official control, such control was being intensified today. He urged that efforts at organising co-operatives should be directed to persuading and convincing the people about the need for a co-operative and creating the proper atmosphere. He added: "The progress of organising societies, let me repeat, is that of educating and rousing the spirit and not just registration."

These pronouncements are bound to cause much flutter in co-operative dovecots. There is no doubt that there has in recent years been far too much of State guidance in the co-operative movement. It is true that such guidance existed before. But, with the increase in financial assistance for the movement by the State, there has been an increasing control by the State Co-operative Departments. The Rural Credit Survey which has been mainly responsible for giving this twist to governmental policy advocated increasing State participation in the co-operative movement. It must, however, be admitted that the Survey was confronted by a very difficult situation. It found that Co-operation, despite the fact that it had been nursed for several decades now, had been a virtual failure. It noted that co-operative credit agencies accounted for no more than 3.1 per cent. of the farmers' credit needs, as against 69.7 per cent. provided by agricultural and professional moneylenders. It felt that the co-operative spirit had been overwhelmed by vested interests opposed to it and that State aid was insufficient. Accordingly, it insisted that Co-operation must be strengthened against both competition and opposition. For this purpose, the "prior requirement," so far as credit by itself is concerned, may be said to be the strengthening of the upper levels of the structure, that is, those above the primary societies, by such measures of State participation, and for so long as necessary, in order that a powerful helping hand may be held out, capable of guarding the primary structure against the dangers and weaknesses inherent in the present functioning of the co-operative credit system as a whole."

There can be no two opinions about the failure of the co-operative movement. Its successes are limited and by no means very inspiring. Sir Malcolm Darling who reported last year on certain aspects of Co-operation in India felt compelled to draw the attention of the authorities to several weak spots in the movement. He deplored that in every State the "path of Co-operation was strewn with wreckage." Normally one would expect a higher degree of co-operative effort in National Extension Service Blocks, considering that much time, energy and money have been devoted to these blocks as a means of raising their social and material levels. Sir Malcolm's verdict on the progress of Co-operation in these Blocks is by no means encouraging. He said: "On the whole, I was far from impressed with the progress of Co-operation in the Blocks I visited." If Co-operation has not made headway in these Blocks where it has the best chance of succeeding, it naturally calls for a great deal of searching of hearts on the part of the leaders of the co-operative movement in this country.

The weakness of official policy in relation to Co-operation seems to be that it tends to look upon the problem of stimulating the co-operative movement in terms of purely financial considerations. It is not money alone that matters, although it matters a great deal. What is necessary is to foster the spirit of Co-operation. Where this is absent, money can do little good but much harm. In any case, it seems wise to restrict governmental direction to a minimum and to allow the co-operative movement to progress by its own inner strength. The failure of a co-operative institution must be investigated fully, promptly and in an unprejudiced manner. Such investigation would reveal lessons for guidance. Again, there is no reason why the Government should not adopt, towards the whole movement, an experimental approach of a kind which was suggested by Sir Malcolm Darling in a restricted context. Referring to the question whether a large or a small society should be allowed to come into existence, Sir Malcolm suggested that experiments should be made in three forms: (1) with Government participation in shares and membership; (2) with Government participation in shares but not in membership; and (3) without participation in either membership or shares. He further suggested that all the three types should receive help on the same lines and the results should be judged after three or four years. Perhaps, a pragmatic approach on these lines towards the whole co-operative movement would yield results which could form a basis of a sound governmental policy towards Co-operation.

Co-operators, on their part, have left nobody in any doubt about their attitude towards governmental participation in their movement. The All-India Co-operative Congress has urged that State participation in the management of societies should not extend to day-to-day administrative matters and that representation of the State or the higher co-operative institutions on the board of management of partnered institutions should be confined to not more than three members. The Congress also recommended that, where societies were asked to carry out a policy at the behest of the State, although in its opinion it was not sound, the losses and gains arising therefrom should be the responsibility of the State. In another resolution, the Congress noted "the growing inroads being made

by the Governments into the independent working of co-operative institutions" and recommended that the All-India Co-operative Union should appoint a small team to examine the legislative and administrative provisions governing the working of co-operative societies in the different States and advise on how far and in what stages and manner official control could be progressively replaced by suitable arrangement by co-operative bodies themselves. It also recommended that the State Governments should proceed immediately to give up their present practice of placing officials at the head of apex and district banks and other organisations and allow them to elect their presidents.

It should thus be clear that co-operators are generally apprehensive about the growing interference by the State in their movement. It would be the height of folly for the Government to thrust itself into a movement, the leaders of which not merely dislike but even resent such interference. Presumably, co-operators feel that, even if State participation is prompted by paternal motives, it is fraught with a grave danger to their movement.

ATOMIC POWER

BOTH inside and outside Parliament, there is an ever-increasing interest in Government's atomic programme. Recent debates in the Lok Sabha on the grant for the Department of Atomic Energy showed how members were even willing to learn the mysteries of nuclear physics in order to be able to contribute to the discussion. If Mr. Nehru, for understandable reasons, could not satisfy the curiosity of all members, he at least did well to give the House a broad idea of the Government's atomic programme. Again, with his characteristic historical sense by which he often lifts a debate to a higher level, he tried to place India's atomic experiments against a global perspective. For reasons which are only too well known to need reiteration, India is now paying a heavy price for its having missed the bus of Industrial Revolution. It is now compelled to compress into a few five-year plans a progress which the West could cover in the more spacious days of the last century. Naturally enough, it is of the utmost importance that India should not miss the bus of atomic revolution. The country owes the commendable beginning which it has made in nuclear experiments to Mr. Nehru's farsightedness and to the devoted labours of a band of distinguished scientists, headed by Dr. H. J. Bhabha. The recent changes in the constitution of the Atomic Energy Commission are an indication of the Government's concern to see that the programme is not hampered by unnecessary red-tape.

India's attempts in the atomic field are particularly noteworthy, considering that, even in the advanced West, it was only two years ago that any significant steps were taken in harnessing the atomic energy to peaceful purposes. In this connection, the report of the activities of the Department of Atomic Energy for the year 1957-58 throws some light on the progress of the various schemes undertaken by the Department. *Apsara*, India's first reactor, is now in its second year of operation. With the setting up of this reactor, it has become possible, according to the report, to produce isotopes and give irradiation facilities to different scientific institutions. Small quantities of radio-sulphur, radio-phosphorus, radio-cobalt and radio-iodine, it is stated, have been produced. The reactor has also been used for activation analysis in chemical studies. The work on the Canada-India reactor is in progress. It is now expected to be completed towards the end of 1959. The work on Zerlina, the zero energy reactor, was commenced in March 1957; it is expected to go into operation towards the end of the year. Among other projects undertaken by the Department, mention must be made of the setting up of a small uranium plant which will turn uranium concentrates into reactor-grade uranium metal; the plant is expected to be in operation by the end of the year. A small plant for the fabrication of fuel elements has also been designed and is expected to be ready during the course of the year. A radio chemistry laboratory has already been set up. A large pilot plant for producing atomically pure beryllium oxide and sintering it into bricks is being designed. The construction of a pilot plant for extracting uranium from copper tailings has been completed. Investigations are being carried out for developing a process for the production of atomically pure graphite from the petroleum coke and coal-tar pitch produced in India.

The Department's Atomic Minerals Division is engaged in surveying and prospecting atomic minerals. A notable feature of the Division is that it has set up a section exclusively meant for rendering prompt assistance to private prospectors and mining concerns in the search for and development of uranium ore and other atomic minerals. It is to be hoped that this facility will be availed of by private prospectors who can thus make an effective contribution to the prospecting and development of atomic minerals. The Department's industrial operations are growing steadily. The aim of the Department, it is stated, is to produce all the materials required for a full atomic power programme. A monazite processing plant owned by Indian Rare Earths (Private) Ltd. has been set up at Alwaye, while a thorium-uranium plant has been in operation since 1955 at Trombay. The Department has now under consideration a proposal to set up a crude uranium plant to mill and process about 500 tons of uranium ore per day. The Travancore Minerals (Private) Ltd., owned jointly by the Government of India and the former Government of Travancore-Cochin, is engaged in extracting ilmenite, monazite and rutile and other mineral values from the sands. The Department is engaged in implementing the Government's decision to produce heavy water at the proposed fertiliser plant at Nangal. Working in close co-operation with the Atomic Energy Establishment at Trombay is the Tata Institute of Fundamental Research which is the national centre for advanced study and fundamental research in nuclear science and mathematics.

Impatient laymen are naturally interested in inducing the Government to devote more and more attention to applied, as distinguished from pure, science. While this distinction is largely correct, Mr. Nehru was certainly right in emphasising that one cannot always divide science into two water-type compartments. Much scientific truth has emerged from work in the sphere of applied science and applied science has, of course, gained much from experiments in the sphere of pure science. All this does not mean that the Government should not devote additional attention to applied research. Obviously, the whole matter should be left to technical experts to decide how much attention and money should be devoted to different aspects of scientific development.

There is certainly scope for the development of atomic power in India. In the first place, coalfields are not uniformly distributed all over the country. Coal has to be transported across 1,500 miles to important centres of coal consumption. Secondly, the railway system is already heavily loaded and has little spare capacity. If nuclear power were generated, it could relieve the railways of the burden of having to carry coal over long distances. Thirdly, the hydro-electric power resources are themselves not uniformly distributed. On the other hand, power in the industrial area is so short that the grid system, as a whole, has a very high load factor, a situation which is necessary and favourable for the economic operation of atomic power station. India's energy consumption is only ⅛th or 1/12th of that in highly industrialised countries. If India continues to consume power at the present rate, its coal resources may last the country some 200 or 300 years. If the rate of consumption were to rise to the American level, all potential power will last the country only some 30 years. On the other hand, it has been computed that India's reserves of atomic minerals are comparatively large. India is estimated to possess some 500 tons of thorium and 30,000 tons of uranium. In terms of energy, these reserves are equivalent to more than 30 times our reserves of coal.

No firm opinion can obviously be expressed on the economics of nuclear power. Even in the West, the whole subject is under continuous study. Available indications are that, with the progress of research, it will be possible to generate nuclear power at lower and lower costs. It is interesting to recall here what Sir Christopher Hinton, Chairman of Britain's Central Electricity Generating Board, had to say on this subject in a recent lecture to the Royal Society of Arts, London. He felt that nuclear power will be cheaper than conventionally produced power by 1962 and, by 1982, it will cost only half as much, if the development of nuclear power stations can be continued at its present pace and present trends in coal costs continue. Dr. Bhabha himself cited recently some interesting statistics. According to him, the capital cost of a 60-m.w. station might cost Rs. 2,000 per kw. of net electrical capacity and of a 150-m.w. station between Rs. 1,600 and Rs. 1,730 per kw. He also felt it was safe to assume that power would be available at 4.4 nP to 5 nP per kw.h. The day may not be far distant when India will not only be able to produce nuclear power but also produce it at a comparatively low price. If such development were to result in a reduced demand for coal, it might be all to the good, considering that coal is a vital raw material for a large number of chemicals and it is, therefore, unwise to burn it as a mere fuel. Only, this prospect calls for a certain change in the Government's present policy in relation to the conservation of certain varieties of coal.

BUSINESS MEN'S ROLE

WHAT is the role of business men in democratic India? Having lost their special representation in legislatures which at least gave them an opportunity to present their case before the Government, business men, always outnumbered by the rest of the community, face the additional danger of being not only outvoted but also outstripped in the democratic race to gain a public hearing. In the Government's political march to the Left—by any reckoning, this march has been incredibly rapid—it is the business community that will be left behind—and left far behind indeed. Since India does not have well-directed and well-shaped Rightist traditions which in other countries provide the chief leavening influence in political affairs, any failure on the part of business men to place their views before the Government and the public could do considerable damage to the cause of the country's economic well-being. "We represent a section of society," declared Mr. Homi Mody, in his address to the Federation of Indian Chambers of Commerce and Industry, this week in Bombay, "which fills an important place in the economic and social, if not the political, life of the country and it is our duty to place our views fearlessly before the Government and the public."

Here is the snag. Functioning in a sphere of his own, far from the rough and tumble of politics, the average business man, both by training and by habit, may be deemed to be an extremely shy creature. Despite all the good work he does and is capable of doing, he shuns publicity, lest he should unwittingly offend somebody that may really matter. Perhaps this is an unconscious, and if so, certainly an unwise, extension of the business principle that the customer is always right. The result is a strange reluctance, not far removed from intellectual timidity, to give free expression to his thoughts. The Government too is partly to blame for this. It is apt to ignore, sometimes even resent, sound but unpalatable advice. However, more recently, the authorities, as Mr. Mody himself recognises, have shown a "greater awareness of the realities of the situation and a greater responsiveness to informed and responsible criticism." This sought to encourage business men to span the gulf that separates them from the Government. We commend to them Mr. Mody's sage counsel that they should demonstrate by their actions that, "in the great task of transforming the age-old economy of the country, the Government can always count on the knowledge, experience and co-operation of the commercial and industrial community." This is at once a challenge and an opportunity to the community to show that, if it is critical, it is so only in a constructive way. The Government on its part will do well to realise that, if the community tends to be critical of official measures, it is by that token not to be accused of ignoble intentions. For does not a well-worn maxim warn us that a pleasant friend is not necessarily a candid one? If it is the misfortune of the candid to be misunderstood for a while, it is his solace to know that he is doing his duty and it may well be his ultimate reward to be both understood and appreciated. It is in that spirit that the business community has to exert itself in a land where it is perhaps yet to come into its own.

BOOM IN BULLION MARKET

BOMBAY BURMAH—FOREIGN EXCHANGE—CLOTH EXPORTS TO U.K.—PLEA FOR TAX RELIEF

THURSDAY, 5 P.M.

THE bullish trend in the bullion market continues unabated. This week, ready silver earned the distinction of piercing, for the first time in the last seven years, the Rs. 200-mark and touching Rs. 202-8 today. The closing was, however, lower at Rs. 201-11, representing a rise of Rs. 3-12 over the week. Forward silver (May settlement) went up to Rs. 200, but fears of enforcement of special clearing at Rs. 199-12 brought it down to Rs. 199-3 at the close, an increase of Rs. 3 over the week. Ready gold touched a peak of Rs. 114-3 before closing at Rs. 113-14 and forward gold finished at Rs. 112-10, after having been raised up to Rs. 113-2. The rise in gold over the week is Re. 1-4 for ready and Re. 1 for forward. The peak levels touched this week in the ready section fall short of the record levels touched so far in the history of the Bombay bullion market—that was in 1951—by only Rs. 5-4 in silver and Rs. 4-10 in gold. Under the present inflationary conditions, it will not be surprising if the precious metals were soon to make good this shortfall and surpass the 1951 levels.

MARKET GOSSIP

Though both the metals have participated in the rise, it is only silver which is in the limelight, being under the grip of the bulls. With a stock of hardly 400 bars in the City, the resourceful bulls have gained a supreme control over the market in the white metal and are relentlessly dictating terms to the now more docile "bears." All efforts of the bullion authorities to check speculation by imposing penalties by way of heavy margins have proved to be of no avail. It was only four weeks ago, when the price of the white metal was less than Rs. 195, that, in response to the protest of the sellers, the bullion authorities amended the by-laws by imposing heavier burden of margins on a lower limit of outstanding purchases in the forward section and on lower *budla* charges. In spite of this, even at the risk of losing the exemptions granted, the bulls have continued their gains. They paid a heavy margin in the last settlement and are paying in the current settlement also for having pushed up the forward prices in these settlements over Rs. 7 above their starting rates. The penalty of having to pay a margin of Rs. 500 per bar, if the *budla* charge in their favour exceeds Re. 1 (as against the former limit of Rs. 2), does not also seem to deter them. They even face the risk of having to pay a margin of Rs. 2,500 per bar, for today the *budla* in their favour is only As. 3 below the level at which this heavier margin is applicable.

There are only a few weeks to go before the traditional busy season comes to an end, but the chances of silver prices coming down seem remote. For there has been a considerable slackening in the influx of Tibetan coins in recent weeks. This and also the scarcity of stocks within the country and the inflationary pressures which have pumped in more money into the hands of the agriculturists, have provided the chief inspiring factors for the boom in silver. As the development programme under the second Five-year Plan gathers momentum in the coming years and the Government levies more and more penal taxes to pump out the extra income of the people, the chances are that the craze for the precious metals will grow, rather than diminish.

It is also believed that the influx of Tibetan coins will dwindle considerably, as the Indian exports to Tibet, against which import of silver coins is being permitted, are said to have slackened by a marked extent. During the last two years, there has been a heavy import of silver from Tibet and this has all been absorbed. Despite this, the silver price has gone up by Rs. 22 per 100 tolas in these two years. The stoppage of arrivals from Tibet will, therefore, serve only to strengthen the hands of bulls.

The following table gives an idea of the trend of bullion prices (for the ready metals) in Bombay from 1951 onwards:

	Silver (Per 100 tolas)		Gold Per tola	
	High	Low	High	Low
	Rs.	Rs.	Rs.	Rs.
1951	207-12	183- 8	118-12	104- 1
1952	193-11	140-12	106-12	77- 4
1953	172- 0	147- 4	93-10	79- 7
1954	174- 9	148- 4	96- 4	81-13
1955	176- 9	153- 2	99- 4	88- 2
1956	184- 0	168- 8	107- 4	94- 7
1957	191- 0	174- 2	112- 8	103-13
1958	202- 8	186- 3	114- 2	107-14

It will be noted that, ever since the debacle which occurred in 1952, the "bulls" have been trying to make good the loss suffered in that year and they have been nearly successful in their attempt, with each year witnessing fresh high levels. During the last three years, the pace of increase in prices has gathered momentum.

* * * *

The long-awaited gift of a bonus issue to the shareholders of the Bombay Burmah Trading Corporation has been announced this week. Coming close on the heels of the decision by two other companies, namely, the Century Mills and the Shivrajpur Syndicate, to shelve their proposal to capitalise a part of their reserves and issue bonus shares, in view of the heavy tax burden, Bombay Burmah's decision comes as a pleasant surprise to the shareholders, the doubts expressed in these columns last week having thus not materialised. Though the terms of the bonus issue suggested by them originally have been considerably watered down, the market has greeted the proposal with a sharp jump in the shares from Rs. 545 just before the announcement yesterday to Rs. 564 at the close today.

Subject to the approval of the Controller of Capital Issues, to whom an application is being made by the Company, the Directors have now decided to issue one fully paid-up share of Rs. 125 for every four fully paid-up shares of Rs. 125 each held and one fully paid-up share for every ten partly paid-up shares held. The Company's paid-up capital as on 31st May 1957 stood at Rs. 94.50 lakhs, made up of 100 ordinary shares of Rs. 2,500 each, 40,000 old ordinary shares of Rs. 125 each fully paid-up and 84,000 new ordinary shares of Rs. 125 each on which Rs. 50 per share has been paid up. Subsequently, the Company issued 10,000 ordinary shares of Rs. 125 each fully paid-up to the holders of the founder shares in consideration for the extinguishment of the special rights attached to them, so that the present ordinary capital which is entitled for the bonus issue is Rs. 104.50 lakhs. On the basis of the above rate, the amount required to issue bonus shares is Rs. 26.12 lakhs. There is already a sum of Rs. 21.23 lakhs in the share premium account which can be utilised for the purpose without attracting the penal bonus tax. The uncovered gap is only Rs. 4.89 lakhs, which has to be drawn from the general reserve, and the bonus tax is payable only on this small amount.

The aforesaid terms of bonus issue represent a substantial revision of the proposal submitted by the Action Committee of the Bombay Shareholders' Association, suggesting that the Company should issue bonus shares in the ratio of three shares for every two shares. On this basis, even after drawing the share premium amount of Rs. 21.23 lakhs, the tax liability would have amounted to Rs. 27 lakhs. The Directors did not think it prudent to make a gift of this sum from the shareholders' money. At the same time, they fully sympathised with the shareholders' demand for a bonus issue. Their latest proposal, therefore, is a happy compromise and brings a substantial saving for the Company. That the investors are pleased with this proposal is reflected in the rise in the value of shares as noted above.

* * * *

It looks as though the foreign exchange position of India is getting tighter and tighter, notwithstanding the continued restrictive import policy. The foreign balances to the credit of India at present are no more than Rs. 277.89 crores (as on 11th April 1958), even after taking into account the receipt of Rs. 21.33 crores (£16 million) by way of sterling pensions from the U.K. on the 1st inst. This amount represents a drop of as much as Rs. 238.83 crores as compared with last year when the balances stood at Rs. 516.72 crores (12th April 1957). It is too early to say as to what would be the level of these balances at the end of the current financial year, for much will depend on factors such as trend of export trade, availability of foreign assistance (especially from the U.S.) and extent of food imports. Even so, the depletion of foreign balances will be quite marked, considering the estimated huge net gap in foreign exchange of Rs. 160 crores in 1958-59. Assuming that no financial aid other than what has so far been negotiated will be forthcoming and assuming that there will not be any need for purchasing additional foodgrains abroad, the foreign exchange gap will have to be covered by drawing on the sterling balances. Consequently, the total of these balances at the end of March 1957 will be just Rs. 138 crores, that is, a little over Rs. 50 crores higher than the statutory minimum of Rs. 85 crores. In other words, this means that the amount of sterling balances available for utilisation in the last two years of the second Five-year Plan will be only about Rs. 50 crores, unless the authorities make use of the emergency provision for reducing the foreign securities to zero.

The critical foreign exchange situation confronting the country is clearly borne out by the statement indicating the latest position in respect of the exchange requirements of the "core" projects which the Union Finance Minister laid on the table of the Lok Sabha on Tuesday this week. According to the statement, the foreign exchange gap relating to the "core" projects that still remains to be covered in the coming three years amounts to as much as Rs. 341.87 crores, or more than 35 per cent. of the aggregate foreign exchange cost of Rs. 971.99 crores during the entire second Plan period. The bulk of this gap—Rs. 333.69 crores, to be precise—is accounted for by the public sector projects, the share of the projects in the private sector being only Rs. 8.18 crores, as the following figures show:

(In crores of rupees)

	Public sector	Private sector	Total
Total foreign exchange cost of "core" projects during the second Plan period	875.64	96.35	971.99*
Foreign exchange payments estimated to have been made up to 31st March 1958	322.83	59.58	382.41
Payments to be made between 1st April 1958 to 31st March 1961	552.81	36.77	589.58
Payments covered by foreign loans, credit, aid, etc., so far negotiated ..	219.12	28.59	247.71
Balance still to be met	333.69	8.18	341.87

* The earlier figure of Rs. 967 crores has been revised to Rs. 972 crores in the light of further information since received.

It will be seen from the table that the shortfall in the foreign exchange requirements of "core" projects in the public sector comes to over 38 per cent., while the same in the case of the private sector is only 8.5 per cent. Apart from doubts as to whether this huge shortfall will be made good in the remaining period of the Plan, it must be noted that the large external assistance already received has involved sizable commitments by way of interest charges and repayment of capital in the coming years. These, together with the further additions that may be made, will, as the Government of India *Economic Survey* 1957-58 itself candidly admits, throw a heavy burden on the country's balance of payments in the period of the third Plan.

In view of these considerations, the authorities will do well to consider how best the Plan could be rephased. The Central and State Departments should be told as to how far they can go. Unless this is done, there will be both drift and waste. Efforts should also be made to pave the way for the inflow of external resources. There are still many aspects of the Plan which, as we have pointed out ere now, are best left to the private sector. Surely, given the necessary climate for raising fresh capital, the private sector can very well implement several programmes now included in the public sector more speedily and at smaller cost and, what is more, with less stress and strain on the country's foreign exchange economy.

* * * *

The cotton textile interests of both India and Britain will watch with great interest the ensuing discussions in London between the representatives of the cotton industry and trade of the two countries on the question of cloth exports from India to the U.K. India will be represented by Mr. Kasturbhai Lalbhai, Chairman of the Indian Cotton Mills' Federation, and Mr. Neville N. Wadia, Chairman of the Cotton Textiles Export Promotion Council, who will be leaving for London next week. It will be recalled that, for quite a long time now, Lancashire has been persistently agitating against the duty-free imports of cotton textiles from India and other Commonwealth countries. In January 1957, a British textile delegation headed by Sir Cuthbert Clegg visited India and its negotiations with millowners had led to a tentative agreement envisaging the imposition of a ceiling on imports of Indian cloth into Britain. That, however, could not be put into effect, as similar agreements could not be reached with Pakistan and Hong Kong.

A fresh move was made by Britain recently. The Permanent Secretary to the Board of Trade went to Hong Kong to renew discussions. His mission, however, was not successful, as the millowners of Hong Kong refused to agree to restrictions on their exports. In the context of the refusal by Hong Kong thus, it remains to be seen whether any useful purpose will be served by the visit of the Indian millowners' representatives to the U.K. There may be justification in the claim of Lancashire that there has been a trend recently to retain a good deal of Indian cloth for home consumption which offers competition to the U.K. mills. But should India agree to a ceiling on exports? For any such move will adversely affect India's interests. This is especially so in the present context of things. The country is suffering from unemployment and underemployment. Further, it badly needs foreign exchange for implementing the second Five-year Plan and cotton textiles constitute one of the principal exchange earners. The Indian delegation will do well to bring all this to the attention of British cotton textile interests. They will also do well to impress upon them the fact that the Indian cotton mill industry is not only not enjoying any special favours from its Government, as is clear from the heavy burden of taxation to which it has been subjected and its adverse financial results for 1957, but is actually suffering from several handicaps arising from the unrealistic economic policy of the Government.

* * * *

The sluggishness of the share and capital markets and the inhibiting effects of high taxation are the themes on which company chairmen and spokesmen of the business and industrial community continue to dwell with great vigour and insistence. In his speech at the annual meeting of the United Commercial Bank Ltd., Mr. G. D. Birla made an impartial, competent and comprehensive survey of national and international economic trends, which all students of India's current economic problems have learnt to associate with his address in his capacity as the Bank's Chairman. Since many of India's fiscal difficulties could be traced directly to the Government's decision to push ahead at all costs with the Plan, Mr. Birla did well to point out that the "Plan is not an end in itself but only a pointer to certain objectives, namely, greater production, fairer distribution and increased employment." Commenting on the Plan itself, Mr. Birla showed how the public sector was faced with difficulties in the matter of both spending to the targets assigned to the private sector were well on and employment targets. Although the physical targets assigned to the privatt sector were well on the way to fulfilment, the tempo of industrial expansion was slowing down, thanks to factors such as shortage of foreign exchange and lack of internal capital. In this context, he rightly urged the Government to "reappraise the situation and initiate policies calculated to reactivate the industrial sector and to increase the foreign exchange earnings on our export trade."

As regards capital market, Mr. Birla recalled how the prices on stock exchange continued to decline and the downward trend was accentuated by the budget of May 1957 which introduced several new taxes and still further reduced individual and corporate saving capacity. The difficulty of raising internal capital has also had its effect on the inflow of foreign capital. Mr. Birla who, by reason of his recent tour abroad, can speak with some

EQUITIES RULE STEADY

TATA LOCOMOTIVES PROMINENT

(From Our Own Correspondents)

BOMBAY, 17*th April*

THE slight reaction in equities noted at the close of the previous week proved to be a short-lived affair and sentiment once again changed for the better during the week under review. Fresh speculative support was in evidence and, though at every rise there was profit-taking, useful gains were recorded over the week on a wide front. Expectations of some concessions in respect of development rebate, the strong support to Tata Locomotives on anticipations of higher dividend and to Bombay Burmahs following the announcement of a bonus issue in the ratio of 1:4 were main sustaining factors. Activity was, however, restricted and gains were pruned on reports of border incidence on the Indo-Pakistan border in the east and fears about the effect of the threatened strike in the Tata Iron and Steel Company works.

Tata Ordinaries jumped early in the week from Rs. 180.75 to Rs. 183.75 before giving way to Rs. 180.75 on Tuesday. Fresh support at this level lifted the shares to Rs. 183 and the closing was done at Rs. 182.75. The new shares were marked up over the week by Rs. 2.50 to Rs. 179. Indian Irons moved up from Rs. 21.28 to Rs. 21.72, but finished at Rs. 21.68.

Textile shares presented a mixed pattern. Bombay Dyeings rallied from Rs. 55.70 to Rs. 57 and after a dip to Rs. 53.40 gained fresh ground to a high of Rs. 57.40. Centurys rose from Rs. 430 to Rs. 436, but gave way to Rs. 430. Towards the close, they again advanced to Rs. 436. Kohinoors lost over the week Rs. 3 to Rs. 278 and Central Indias Rs. 4 to Rs. 85, while Finlays gained Rs. 2 to Rs. 277. Khataus were lower by Rs. 2 at Rs. 157 and Models by Re. 1.25 at Rs. 168.75. Morarjees changed hands Re. 1.50 higher at Rs. 217.50, but Mysore Spinnings shed a rupee to Rs. 90. New Greats picked up Rs. 4.50 to Rs. 199.50, while New City Mills recorded a loss of Rs. 3 to Rs. 107.50. Sassoon Silks were in the limelight with a rise of Rs. 2 to Rs. 10. Shree Niwas Cottons were done Rs. 3.50 lower at Rs. 143 and Simplex Rs. 2.50 lower at Rs. 153.50. Standards were a rupee better at Rs. 450, while the cut in dividend of Svadeshi from Rs. 14 to Rs. 9 per share for the year 1957 brought down the shares by Rs. 6.75 to Rs. 173. Tata Mills were marked down by Re. 1.25 to Rs. 38, following the reduction in dividend from Rs. 3.50 to Rs. 2 per share for the past year.

In the banking section, Barodas were prominent on good support and rose by Re. 1.50 to Rs. 113. Centrals were quiet, the old shares losing 30 nP to Rs. 53 and the new shares 20 nP to Rs. 55.30. Bank of Indias were a shade lower at Rs. 130.25. United Commercials shed 70 nP to Rs. 59.80.

The upward trend in electricity shares noted in the previous week was not sustained this week, consequent on profit-taking. Ahmedabad Electrics lost 60 nP to Rs. 97.10. Bombay Suburbans shed Re. 1.75 to Rs. 107, while Surat Electrics were maintained at Rs. 107.50. Tata Hydros were a shade quiet at Rs. 118. Tata Powers were marked down by Rs. 21.25 to Rs. 1,185. Andhra Valleys provided an exception with a rise of Rs. 10 to Rs. 1,152.50.

Sugar shares were lower. Belapurs declined from Rs. 247 to Rs. 245. Bhopals lost 24 nP to Rs. 22. Phaltans moved down by Re. 1.50 to Rs. 138.50 and Walchandnagars by Rs. 6.25 to Rs. 282.50. Cement shares were featureless, though the undertone was steady. Associated Cements moved within a narrow range and closed a fraction higher at Rs. 151, while their new shares lost 75 nP to Rs. 144.25. Digvijays were dull at Rs. 141.75. Engineering shares attracted good attention and sizable gains were recorded in them. Alcocks rallied by Rs. 7.50 to Rs. 277.50. Premier Constructions were lifted from Rs. 182.25 to Rs. 189. After an early rise from Rs. 160 to Rs. 162, Tata Locomotives dropped to Rs. 158.25, but again staged a smart recovery to Rs. 167 at the close on expectations of higher dividend. Larsen and Toubros gained 12 nP to Rs. 15.12. Brady Engineerings picked up Rs. 2 to Rs. 44, while Mahindras shaded off by 68 nP to Rs. 19. Among mining shares, Shivrajpurs were further marked down by Rs. 2.50 to Rs. 93. Indian Coppers were steady at Rs. 3.18.

Scindias were in favour and rose from Rs. 17.30 to Rs. 17.68 before closing at Rs. 17.60. Great Eastern Shippings gained over the week 8 nP to Rs. 20.12. Hindustan Motors were dull at Rs. 7, while Premier Automobiles shed Re. 1.50 to Rs. 81.50.

In the miscellaneous group, Bombay Burmahs provided the highlight, the old shares jumping from Rs. 546 to Rs. 564.50 and the new shares from Rs. 203 to Rs. 215, on the announcement of a bonus issue. National Rayons gave way from Rs. 223.50 to Rs. 216.75, before gaining ground to Rs. 219.50. Tata Chemicals were steady at Rs. 14.28, while Tata Oils were a shade quiet at Rs. 39. Wimcos maintained their downward trend with a drop of Rs. 2.50 to Rs. 175.

• • • •

Calcutta Stock Exchange

CALCUTTA, 16*th April*

Although the undertone was one of confidence, equities were far from active on the Calcutta Stock Exchange during the week under review. On Wednesday last, prices were marked down on settlement considerations. Operators put this to good use for consolidation of recent gains. Also, a bearish effect was caused by a bank offering some of its holdings of shares in bulk. That the sales were well absorbed indicated the healthy position of the market. There was investment support for selected counters, and the profit-taking that took place during the week not only eliminated the weak holders but provided genuine investors an opportunity to put their money in some of the first class equities listed on the Calcutta Exchange.

An increase in coal prices is anticipated. In addition, the possibility of revision of the output target for the private sector, in view of the slow progress made by the public sector acted as an incentive for buyers to go in for coal shares at lower levels during the week. Corporate news during recent weeks had been exceptionally satisfactory. However, the announcement of a cut in the dividend from 15 per cent. to 14 per cent. for the year ended 25th December last for National Carbon Company (India) Ltd. was received with disappointment. In view of the fact that balance carried forward was Rs. 7 lakhs higher at Rs. 28 lakhs, despite a decline in profit from Rs. 90 lakhs to Rs. 81 lakhs before providing for taxation, market circles failed to understand the cut in dividend, which went to add to the balances only Rs. 2 lakhs. However, expansion programmes have made satisfactory progress, and investors hoped that the cut in dividend would be made more than good in the current year.

In textiles, Elgin Mills were done at Rs. 13.06 *cum-div.* (of 10 per cent. for the year ended September last, as against 12.5 per cent. for the previous year). Kesorams regained to Rs. 11.50 from Rs. 11.37, but Cawnpores were fractionally lower at Rs. 3.75.

Coals were supported at lower levels, and were noted for a subsequent improvement in prices. Thus, East Indias were raised to Rs. 22.25 from Rs. 21.87. Burrakurs changed hands at Rs. 22.75 on an *ex-div.* basis. Pench Valleys improved to Rs. 19.25 from Rs. 19.00, while Central Indias receded to Rs. 7.37 from Rs. 7.56 and Raneegunges to Rs. 11.50 from Rs. 11.56. South Karanpuras were unchanged at Rs. 9.87.

Jutes were lower but there were ready buyers at these levels. This was so in view of the higher trend in jute goods and a welcome decline in stocks. Nationals changed hands at Rs. 21.70 *ex-div.* For the year ended October last, a final dividend of 3½ per cent. has been declared, thus bringing the total for the year to 7½ per cent. From Rs. 95.50, Champdanies fell to Rs. 93, while Ganges, after declining to Rs. 45, gained to Rs. 46. Howrahs declined to Rs. 13.57 from Rs. 14.31.

In contrast to the general trend, tea shares were noted for greater interest. Birparas were pushed to Rs. 115 from Rs. 112, but Hasimaras were unchanged at Rs. 21.50. Hantaparas were better at Rs. 111.50 as were Methonis at Rs. 17.19.

In the engineering group, Texmacos moved up from Rs. 18 to Rs. 18.20, but gave way to Rs. 17.90 before regaining soon to Rs. 18.20. Indian Irons, after declining to Rs. 21.18 from Rs. 21.25, recovered to Rs. 21.47. At Rs. 99.50, Indian Standard Wagons represented a decline of 50 nP.

Among other industrials, Indian Coppers lost ground to Rs. 3.11 from Rs. 3.18 following news of strike at the mines. Orient Papers dropped to Rs. 27.90 from Rs. 28.30. Investment interest was in evidence in India Steamships at Rs. 10.87. Indian Oxygens were steady at the lower rate of Rs. 17.12. Alkali and Chemicals, after realising Rs. 14.44, fell to Rs. 14.12. Buyers sought Calcutta Electrics at Rs. 13.87, as against Rs. 13.62 previously.

• • • •

Madras Stock Exchange

MADRAS, 15*th April*

A quietly steady trend was in evidence on the Madras Stock Exchange during the week under review. As there was no new favourable development, turnover was somewhat restricted, actual purchases being confined only to a few select scrips. In the planting section, rubber shares lacked support; the operators were awaiting the Government's decision on rubber prices. Tea shares generally tended to move up on reports of rising prices of tea in London and on expectations of an early announcement of the cut in export duty on common tea. Coffee shares ruled irregular. Textile shares were listless. The continued slackness in yarn and cloth markets affected the sentiment. Some support was, however, encountered by a few scrips in anticipation of better offtake of yarn following increase in rebate on handloom cloth for two months. Electricity shares met with investment support, although prices did not show much rise. The banking and sugar sections presented quiet conditions. Many miscellaneous industrials came in for selling and suffered a fall in values.

Among tea shares in the planting section, United Nilgiris advanced by 40 nP to Rs. 15.90. Emerald Valleys gained 5 nP to Rs. 6.70. Kalasas and Parksides improved by 10 nP each to Rs. 15.35 and Rs. 16.80, respectively. Nonsuch rose from Rs. 22.25 to Rs. 22.75. Peermades hardened by 13 nP to Rs. 22.25. Alageswars were steady at Rs. 2.60, Balanoors at Rs. 16.00, Coonoors at Rs. 20.40, and Coorgs at Rs. 11.75. Lucky Valleys and Mlamallays were done, the former at Rs. 10.60 and the latter at Rs. 30.00, same as last week. Blue Mountains, however, declined by 7 nP to Rs. 3.15. Haileyburias and Kil Kotagiris eased by 10 nP each to Rs. 18.40 and Rs. 6.10, respectively. Stanes Amalgamated dropped 50 nP to Rs. 14.50 and Waterfalls 13 nP to Rs. 3.30. Among coffee shares, Coffee Lands strengthened by 40 nP to Rs. 33.25, while Savamalais receded by 17 nP to Rs. 4.48, Anaparais by 10 nP to Rs. 4.80 and Sangameshwars by 5 nP to Rs. 2.95. Amalgamateds were dull at Rs. 10.75, Bababudins at Rs. 11.75, Badrasi at Rs. 3.75 and Balmadies at Rs. 3.35. Kumergodes changed hands at Rs. 7.60, same as last week, and Mysore Coffees at Rs. 3.10. Among rubber shares, Tropicals fell by 65 nP to Rs. 25. Rajagiris moved down by 50 nP to Rs. 15 and Nenmenys by 25 nP to Rs. 15.75. Be-Bes were neglected at Rs. 3.30, as also Anandams at Rs. 15.40, Malankaras at Rs. 16.25, Mercaras at Rs. 6.70 and Peninsulars at Rs. 19.00. Midlands, however, gained 25 nP to Rs. 16.25. Nilamburs were better by 10 nP at Rs. 12.85, Pullangodes rose by 10 nP to Re. 1.90, Thamarapallys gathered 50 nP to Rs. 23.00.

In the textile section, Coimbatore Kamalas were dull at Rs. 102, Coimbatore Murugans at Rs. 120, Coimbatore Pioneers at Rs. 229 and Coimbatore Spinnings at Rs. 58. Dhanalakshmis were unchanged at Rs. 177, as also Maduras at Rs. 23.50, Kotharis at Rs. 10.50, Radhakrishnas at Rs. 127.00 and Rajalakshmis at Rs. 72.00. Coimbatore Cottons dropped Rs. 3 to Rs. 150. Rajapalayams eased by Re. 1 to Rs. 129.

In the miscellaneous section, Rallis dropped 50 nP to Rs. 29.00. Travancore Chemical Manufacturings fell by a like amount to Rs. 12. Aluminium Industries declined by 20 nP to Rs. 13.30. Orissa Cements shed 10 nP to Rs. 12.40. India Cements, however, gained 40 nP to Rs. 27.65 on special buying support. Mettur Chemicals put on 12 nP to Rs. 9.50 and Travancore Cements 3 nP to Rs. 8.65. Hindustan Levers were better by 3 nP at Rs. 21.50. Mysore Papers were dull at Rs. 16.25, Mysore Stonewares at Rs. 11.75, Mysore Tobaccos at Rs. 12.70, Sen Raleighs at Rs. 11.60, Spencers at Rs. 17.25 and F.A.C.Ts at Rs. 5.30.

BRITISH BANK OF THE MIDDLE EAST

A sharp rise of Rs. 9.58 lakhs to Rs. 11.17 lakhs in the profit is disclosed by the audited accounts of the Indian branches of the British Bank of the Middle East for the year ended 31st December 1957. This is in refreshing contrast to the sizable shrinkage noted in the previous year and has taken the profit to the highest level since the Bank took over the branches of the National Handelsbank N. V. on 1st January 1954. It exceeds the previous high of Rs. 9.63 lakhs earned in 1955. The improvement in profit has been attained, despite a further setback in turnover. The balance-sheet total, which had declined from Rs. 9.99 crores to Rs. 8.74 crores at the end of 1956, has further dropped to Rs. 7.64 crores at the close of the year under review. The rise in profit is due to an increase in income, accompanied by a fall in interest paid and expenses.

The Bank's gross income has gone up by Rs. 6.78 lakhs to Rs. 36.02 lakhs. This is mainly accounted for by the increase of Rs. 9.12 lakhs in interest and discount earned to Rs. 24.16 lakhs as against a drop of Rs. 5.32 lakhs in the previous year. There has, however, been a decline of Rs. 2.45 lakhs to Rs. 11.67 lakhs in commission and exchange. On the expenditure side, interest paid has fallen by Rs. 1.63 lakhs to Rs. 4.99 lakhs and expenses by Rs. 1.26 lakhs to Rs. 19.66 lakhs. More than half of the profit has been set aside for taxation, as will be seen from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Interest and discount	24.16	15.04	20.36	15.01
Commission and exchange	11.67	14.12	13.11	7.76
Interest paid	4.99	6.62	5.84	4.44
Expenses	19.66	20.92	18.00	16.29
Depreciation	0.29	0.11	..	..
Profit	11.17	1.59	0.63	2.12
Provision for taxation	5.82	..	..	..
	As on 31st December			
	1957	1956	1955	1954
Deposits	1,07.00	2,40.99	2,44.45	1,75.04
Borrowings from other banks	71.00	15.00	10.00	25.00
Bills for collection	1,48.68	1,31.07	1,31.10	89.31
Acceptances, endorsements, etc.	1,91.27	2,38.85	2,03.59	2,13.89
Advances	3,45.70	4,10.26	5,57.45	4,53.03
Investments	43.28	38.53	39.92	20.50
Cash	84.19	51.68	74.04	64.83
Balance-sheet total	7,63.95	8,73.61	9,99.44	8,47.80

For the second year in succession the Bank's deposits have dwindled, the pace of decline being more marked in the year under review. Thus, the deposits, which had fallen by no more than Rs. 3.46 lakhs in 1956, have shrunk by as much as Rs. 73.93 lakhs as at the end of 1957. This is in marked contrast to the general trend of bank deposits in India. The fall is shared by the two main classes of deposits. Fixed deposits have declined by Rs. 30.51 lakhs to Rs. 21.63 lakhs, and current and other accounts by Rs. 43.74 lakhs to Rs. 144.48 lakhs. Savings bank deposits have, however, risen slightly to a little over Rs. 95,000. The fall in deposits has been offset to a large extent by an increase of Rs. 56 lakhs in borrowings from other banks. Advances show a decline of Rs. 64.56 lakhs and brings the total fall in the last two years to Rs. 211.76 lakhs. Loans, cash credits and overdrafts have declined by Rs. 47 lakhs to Rs. 1.20 crore and bills purchased and discounted by Rs. 18 lakhs to Rs. 1.65 crore. Investments are slightly higher, but cash balances are lower by Rs. 17.49 lakhs, reflecting the decline in deposits. There has been a contraction in acceptances, endorsements, etc., but this is made good to a small extent by the rise in bills for collection.

NEWS IN BRIEF

THE production of chromite in India amounted to 78,542 tons in 1957, as against 52,686 tons in 1956, according to the Indian Bureau of Mines.

The first blast furnace in Rourkela is expected to be commissioned by the end of this year and will start producing pig iron.

Under the schemes approved by the Government of India, two more industrial co-operatives for handlooms are to be established in Kerala.

Requests for further export of rice products by shippers who have completed shipment of the maximum ceiling of five tons will be considered on *ad hoc* basis.

Synthetic moulding powder will be licensed freely for export upto the end of September 1958, as an experimental measure. Export of synthetic resins, however, will not be allowed.

The eighth annual conference of the All-India Manufacturers' Organisation will be held at New Delhi on 3rd May 1958. Mr. Jawaharlal Nehru will inaugurate the conference.

Two new centres for teaching Indian fishermen, navigation and operation of mechanised fishing boats, modern gear and equipment will be set up in the current calendar year. One of them will be located at Mangalore and the other at Kakinada.

The Okhla Industrial Estate, the biggest of the 100 estates being set up during the second Plan for the development of small-scale industries, was formally inaugurated by the Prime Minister on the 12th inst.

Pending the receipt and consideration of the report of the Committee on matters relating to the salt industry in India, including quality control, the Government of India has decided to continue the standard of edible salt of 95 per cent. sodium chloride content fixed for 1957.

Four study groups have been constituted by the Central Government to go into the various problems relating to housing, education, health and transport of Government employees. A detailed study will help formulate such steps as would solve several day-to-day problems of the employees.

Under a training programme organised by the Technical Co-operation Administration, about 15 representatives of the commercial banking institutions in India will visit the United States to study banking methods in financing medium-scale industries.

Exports of silver drosses as also silver skimmings, slags, ashes, shimes and flue fust classified as metallurgical residues, will be licensed freely on production of a certificate from the Bombay Mint to the effect that the consignment offered for export cannot be refined in India.

The Union Finance Ministry has approved in principle a new small savings scheme of cumulative time deposits. Under this scheme, monthly deposits received from depositors are to be repaid to them at the end of five or ten years at their option.

The National Co-operative Development and Warehousing Board has approved the constitution of a National Federation of Co-operative Sugar Factories as a promotional agency to assist member factories in solving their problems. The Federation is further expected to give technical advice and guidance in improving the efficiency of the factories.

Iron and steel furniture manufactured in India is reported to be becoming popular in foreign countries. The value of iron furniture exported from India during January-February 1958 was Rs. 71,000 as against Rs. 31,000 in the corresponding period of the previous year, and that of steel furniture was Rs. 2,08,000 as against Rs. 1,52,000.

A new device to mechanise sugarcane planting has been worked out by the Indian Institute of Sugarcane Research, Lucknow. The device consists of a planter attachment capable of sowing three rows at a time and suitable for use with a Fordson Major tractor. The device ensures efficiency in the planting operation.

A four-member Indian textile delegation is now on a tour of Japan. Apart from making a detailed study of the production techniques adopted in the textile industry, the delegation will explore the possibility of manufacturing "ring travellers" for spinning industry at Coimbatore in collaboration with Japan. The team is expected to visit Hong Kong and Bangkok as well.

The Government of India has allowed a special rebate of 6 nP in the rupee in addition to the already existing rebate of 6 nP on the sale of handloom cloth for a period of two months with effect from the 11th inst. The decision is a sequel to the demand of the Madras Government. The rebate is designed to improve sales and clear off accumulations of unsold handloom cloth stocks.

The Government of Bombay has sanctioned a scheme for demonstration of mechanised fishing and operation of improved modern gear like nylon, hemp and kurolon and accessories like winches, gurdies, echo-sounder, etc., in the underdeveloped areas of fishing in Saurashtra waters. The scheme, which has been worked out in collaboration with Mr. Skapti Jonson, Engineer of the Food and Agriculture Organisation, aims at imparting knowledge of modern fishing to fishermen.

At its meeting held at New Delhi recently, the sub-committee of the Indian Central Sugarcane Committee recommended the establishment of two biological control centres—one each in Northern and Southern India—for testing the effectiveness of remedies against sugarcane borers. It also approved import of exotic parasites for tests against sugarcane borers in India, in collaboration with the Commonwealth Institute of Biological Control Laboratory, Bangalore.

The Government of India has set up the Indian Handicrafts Development Corporation (Private) Limited to organise production of handicrafts on a commercial basis to ensure prompt supply against orders, particularly in regard to exports. Supplementing the effort being made at present by private as well as official agencies, the Corporation will establish trade connections, sales depots and selling agencies for carrying out the functions assigned to it. Market surveys to explore prospects for Indian handicrafts in foreign markets will also be undertaken. The Corporation has been registered under the Companies Act.

The Government of India has decided that excise revenue stamps now in use for purposes of collection of licence fee chargeable under Central Excise Rules 1944, in respect of tobacco should be discontinued with effect from 1st June 1958. A notification to this effect is being published in the *Gazette of India*. Provision has, however, been made to enable the public to exchange tobacco excise revenue stamps for current Central excise revenue stamps of equal face value free of cost at Indian post offices within six months from 1st June 1958, provided the stamps are unused and unspoiled. It is made clear that no extension of this time limit will be granted. Tobacco revenue stamps were first introduced in 1943 and their use was permitted even after the issue of Central excise revenue stamps in 1944.

From Abroad

Shell Petroleum is reported to have cut the Caribbean prices of its motor gasolines and some other fuels.

The International Labour Organisation has decided to open a branch office in Moscow early next year.

The U.S. General Electric Company has appealed to the Government for increased restrictions on imports of heavy electrical equipment.

The number of unemployed in Germany at the end of March was 1,108,000. This was higher by 406,000 as compared with the same period in last year.

The U.S. has launched the tankship *American Explorer* which, it is claimed, is the world's fastest commercial tanker. The tanker is designed for possible future conversion to nuclear propulsion.

The Pakistan Finance Minister is now on a tour of West European countries, including Britain, negotiating long-term loans of about £18 million for Pakistan's developmental projects.

A German-Soviet trade, shipping and consular agreement providing for an exchange of goods of the value of £268 million during the three years ended 1960 was signed in Moscow on the 8th inst.

Industrial production in the Soviet Union is claimed to have increased by 11 per cent. in the first three months of this year as compared with the corresponding period of 1957.

It is reported that New Zealand will raise a loan of about £20 to £25 million on the London market in the course of the coming months in an attempt to relieve its deteriorating foreign exchange position.

With a marginal increase of 25,000 in unemployment in the U.S. in the month of March, the smallest rise in several months, the total number of unemployed aggregated 5,189,000, the highest for the last 16½ years.

According to the Incorporated Federated Association of Boot and Shoe Manufacturers of Great Britain and Ireland, the U.K. is the world's largest exporter of shoes. The total value of exports last year, excluding rubber footwear, was £11 million.

The Government of Thailand has approved of large increase in taxes on luxuries with a view to bringing down the budget deficit of 900 million baht. Major increases in import duties are: Cars with bodies 50 per cent.; television sets 30 per cent.; radio sets 25 per cent.; buses with bodies 20 per cent. Increased sales taxes are: 25 per cent. on petrol, 20 per cent. on car spare parts and liquor, and 10 per cent. on domestic electrical goods, diesel oil and cameras.

The main objectives of Soviet Russia's new seven-year economic plan covering the period 1959-65 were outlined by the Chairman of the State Planning Commission, Mr. Joseph Kuzmin. While the plan will give priority to the development of heavy industries, stress will be laid on the growth of chemical, rubber, oil and gas industries, ferrous and non-ferrous metallurgy, energy and the railway system. The plan also seeks to raise the output of light industries.

PERSONAL

DR. S. Radhakrishnan, Vice-President of India, returned on Sunday last, after a three-week goodwill tour of the U.S.

Mr. K. L. Dhandhania has been re-elected President of the Bharat Chamber of Commerce, Calcutta, for the current year.

Mr. C. C. Desai, India's High Commissioner to Pakistan, who arrived in Bombay on Monday, left for Dacca yesterday.

Mr. P. A. Gopalkrishnan, I.C.S., took over charge as the Chairman of the Life Insurance Corporation on the 10th inst.

Dr. Mono Mohan Das, Union Deputy Minister for Education and Scientific Research, has been redesignated as Deputy Minister for Scientific Research and Cultural Affairs.

Mr. Arthur S. Lall, India's Permanent Representative to the United Nations, has been appointed Ambassador to Indonesia in place of Mr. G. Parthasarathy who has been appointed India's Ambassador to China.

Mr. J. P. L. Shenoy, I.C.S. (Retd.), formerly General Manager of the B.E.S.T., Bombay, has been appointed Chairman of the Damodar Valley Corporation *vice* Mr. P. S. Rau, I.C.S., who relinquished charge of his office recently.

Mr. M. Senanayake, Minister for Transport and Works, Government of Ceylon, arrived in New Delhi this week for talks with the Government of India regarding the revision of the Indo-Ceylonese Civil Aviation Agreement which expired in October 1957.

Mr. G. Pande, a former Chairman of the Railway Board, has been appointed Chairman of the Board of Directors, Hindustan Steel Private Limited. Mr. S. Bhoothalingam was until now the Chairman in addition to his duties as Secretary to the Government of India in the Department of Iron and Steel.

Dr. S. T. Merani, Labour Attache, Consulate-General of India, Geneva, is representing the Government at the sixth session of the Textiles Committee of the I.L.O., which commenced at Geneva on the 14th inst. and will be held till the 25th inst. Mr. Madanmohan Mangaldas of Ahmedabad and Mr. R. G. Gokhale of the Millowners' Association, Bombay, represent employers, while Mr. A. N. Buch, Textile Labour Association, Ahmedabad, and Mr. K. Ramaswamy Naidu, I.N.T.U.C., Tamilnad Branch, Coimbatore, represent workers.

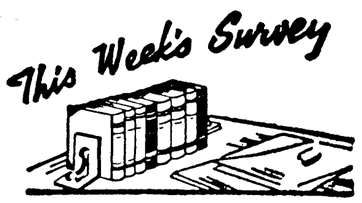
"COMMERCE" 1933

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 22*nd April*

Cotton Mill Industry

The present is not a moment for rejoicing, but of intensive preparation and energetic action. The Indian millowners should now be up and doing and put their own house in order. They wanted, through the *Indian Textile Journal*, all *swadeshi*-minded people to foot the bill. That the people have done so for the past quarter of a century must be admitted, if merely to give them their due. Since 1905, the middle classes of Bengal, to quote one example only, have used Indian-made *dhotis* and *saris*, whatever their cost might be. No better testimony could be given to the sincerity of a people in supporting its own industries. Foreign experts who have visited India have been almost unanimous in their opinion regarding the wasteful methods of production, lack of organisation and other defects leading to higher cost of production in Indian mills. These are the points which should receive immediate attention. What should be done now is to stop the internecine war which the mills are unfortunately engaged in at present. There should be co-ordination of interests, replacement of obsolete methods and machinery by modern and up-to-date means of production, scientific and efficient marketing, a little more of give and take and a little less of grabbing. It is only these things that will help the industry to stand on its own legs. It has been spoon-fed for quite a long time and, if it expects spoon-feeding all the time, it will only help itself out of existence and no Safeguarding of Industries Act will be able to save it.



MANPOWER PLANNING

THERE are not many branches of planning where long-term perspectives are so necessary as in planning for the rational development and utilisation of the manpower resources of the country. An adequate supply of technical and managerial personnel of high calibre and the requisite qualification cannot be had for the mere asking or at short notice. It is the end-product of an educational system and a social and economic situation attuned to the needs of an industrial society. Since manpower resources constitute the kingpin of all development plans, the need for manpower planning on a long-term basis cannot be overemphasised. This aspect was particularly emphasised by Prof. P. C. Mahalanobis, Statistical Adviser to the Planning Commission, in his address to a conference of State manpower officers held in New Delhi on the 8th and 9th inst. Prof. Mahalanobis pointed out that long-term perspective in manpower planning involved looking not merely three or four years ahead but 20 or 30 years into the future. Illustrating the point, he observed that it was not difficult to visualise a period of 15 or 20 years hence when India's steel output would have touched 20 million tons a year. This called for the provision of technical personnel not only for steel plants but the heavy machine-building and consumer industries which the increased production of steel would result in. He rightly pointed out that the level of development of a country bears a high degree of correlation to the social and economic status it accords to its scientists and engineers. The question of which profession young men of ability would chose for themselves was basic to the economic prosperity and development of a nation. Citing the example of Soviet Russia, Prof. Mahalanobis observed that the remarkable progress of that country was directly linked to the high value placed by the Soviet Government on scientific and technological skill.

It is no doubt true that the Government of India and the Planning Commission are fully alive to this problem. The appointment of a Cabinet Sub-Committee, in addition to other expert Committees, to study the problem, the establishment of a Manpower Directorate at the Centre and its counterparts in the States and the studies initiated by the Planning Commission and the Council of Scientific and Industrial Research for the assessment of manpower needs in the various fields reflect the Government's awareness of the urgency of the issue. Nevertheless, the problem has perhaps been handled in a haphazard manner so far. Too many expert committees have studied the problem in too many ways with the result that the assessment of future manpower requirements and the method suggested for meeting them differed widely. Lack of co-ordination has confused the whole issue. What is urgently required, therefore, is that the assessment of the manpower needs and the methods of providing them should be centralised in one agency, preferably the Manpower Directorate of the Ministry of Home Affairs. This Directorate should establish liaison with the Education Ministry and the Planning Commission.

The Conference of manpower officers discussed, among other things, the general approach to the problem of assessing trained personnel during the second and third Plan periods. It was decided that the requirement of trained personnel should be assessed on the basis of existing pattern of employment, trends of economic development and the study of manpower positions during the second Plan. In the absence of any authoritative indication of the scope and size of the subsequent plans and the order of priorities among the different sectors, it was felt that a formula should be devised to determine the norm or pattern of requirement based on past experience. It was agreed that the practice of other countries and the method employed by them for making manpower projections should be taken into consideration. It was also resolved that a more or less common approach should be adopted by study groups appointed to examine the problem in the various States and the Centre and that the manpower studies conducted in the various States should be made available to others for their benefit and guidance.

The question of trained personnel has two aspects, quality as well as quantity. On both counts India lags behind other advanced countries. In the U.S., according to Prof. Mahalanobis, there are 600,000 engineers as against 70,000 in India, and the former were increasing supply at the rate of 30,000 a year. In Soviet Russia, where industrial development is taking place at a faster rate, there are 700,000 to 800,000 engineers and the rate of growth is 70,000. China has the same number as India but it is adding 20,000 more a year. In India, apart from augmenting numbers, there is also the need, as Mr. G. B. Pant, Union Home Minister pointed out, to improve the efficiency of our scientists and engineers. What is required for this purpose, is more as well as better facilities for technical education both at the diploma and degree level.

POPULATION CONTROL

The population of India is expected to be of the order of 560 million by about 1986, owing mainly to the downward trend in death rate. This represents a rise of as much as 46 per cent. as compared with the present population of about 387 million. Can the country afford to maintain such a vast population? This is certainly a very pertinent question. One may answer it in the affirmative, basing oneself on the assumption that the implementation of the second and successive Five-year Plans will result in an appreciable expansion in production —agricultural and industrial. But the answer raises a counter-question: At what cost? The increase in population at the present rate will undoubtedly retard considerably the progress of the schemes of economic, social and cultural advancement. There is no exaggeration whatever in the statement of Mr. K. D. Malaviya, Union Minister for Mines and Oil, made in the course of a talk broadcast from the Delhi station of All-India Radio last week-end, that the leeway to be made is so tremendous that, unless we decide to stop "this maddening increase of human numbers," we are sure to get involved in a very desperate situation. Indeed, "there is," to quote Mr. Malaviya, "the danger of sheer numbers dominating our problems, oppressing our humanity and throwing all our plans to the winds."

What then is the remedy? It must, of course, be admitted that all possible measures should be taken to accelerate the pace of economic development, thereby augmenting our accumulative food and other resources. But this has its own limitations. Anyway, there is no denying the fact that our economy cannot, as Mr. Malaviya pertinently remarked, be tackled in such a short time that we can give relief to the size of population. Nor can we continue to depend on foreign countries or presume that some miracle will help the country out. The only course left, as Mr. Malaviya said, is to control population growth drastically and to adopt a nation-wide rational programme of conserving the country's resources in an intelligent and practical way.

Since the prosperity and happiness of a nation necessarily commences at the family level, utmost attention must be paid to the intelligent adjustment of the family size and spacing of children. It is gratifying to note from the latest annual report of the Central Health Ministry that the family planning programme continues to receive increasing attention. This will be evident from the figures cited below:

(In lakhs of rupees)

	1956-57		1957-58	
	Budget provision	Grants sanctioned	Budget provision	Grants sanctioned upto 31-12-57
Grants for operating clinics and continuation grant	12·00	3·20	15·07	14·76
Training and education	9·00	0·69	5·23	1·58
Research	6·00	4·30	3·56	6·07
Organisation	3·00	0·93	1·14	0·65
Total ..	30·00	9·12	25·00	23·06

In matters of social importance, especially family planning, voluntary organisations play a prominent part. The Government has done well, therefore, to offer every assistance to such organisations. The total of grants sanctioned during 1957-58 (up to the end of December 1957) was nearly Rs. 21 lakhs. With regard to the establishment of family planning clinics, however, progress would appear to be slow. Thus, as against the Plan target of 2,000 rural and 500 urban clinics, only 300 rural and 70 urban clinics are believed to have been opened so far. The main difficulty is the paucity of trained personnel, particularly in rural areas. It must be said to the credit of the authorities that they have taken some steps to remove this handicap. These include the setting up of a family planning, training and research centre in Bombay and a demonstration and experimental centre in Mysore State, short-term family planning training course at Delhi, financial assistance to the Family Planning Association of India and to the State Governments for opening regional training centres, distribution of posters, pamphlets and films, organisation of fairs and exhibitions and research on contraceptives. Efforts are also being made to develop community health and welfare activities around family planning clinics and to educate the people by personal contacts individually and in group by trained workers and natural group leaders.

TAX RELIEF

It is common knowledge that the various measures of taxation adopted by the Government in the last few years have been causing considerable concern to industrialists and business men. For the impact of taxation has been so severe as to dampen the very process of industrial growth by inhibiting savings and capital formation. This aspect was well brought out by Mr. Kishorilal Dhandhania, President of the Bharat Chamber of Commerce, Calcutta, in the course of his address at the fifty-eighth annual general meeting of the Chamber held at Calcutta last week. Mr. Dhandhania characterised the present phase of the country's economy as one of complex plateau marked by the levelling off in the rate of industrial growth, slowing down of domestic capital formation, tapering off of private construction activities, decline in acceleration in money supply and bank credit, and slash in prices of industrial securities. He pointed out that the rate of industrial growth had gone down from 8 per cent. in 1956 and 9 per cent. in 1955 to just 3 per cent. in 1957. This is certainly a disquieting trend which must be checked before it is too late. After all, it must be remembered that, in the task of economic development, no other factor plays such a vital role as investment which requires savings and capital accumulations. The authorities must provide the climate congenial to savings and investment. Mr. Dhandhania did well to urge a rethinking of whether the recent efforts at fiscal patterning of profit, income and wealth were conducive to capital accumulation at the present stage of development. In this connection, he made the following interesting observations:

"Certain social standards are attempted to be set through the various taxing laws. A dividend above 6 per cent. is being discriminatingly taxed. An income above Rs. 20,000 a year is subjected to progressive rates of super-tax, in addition to the proportional taxation at the maximum standard rate. Wealth in excess of Rs. 2 lakhs is taxed at rising rates becoming confiscatory above certain level. Not only this, the hundreds of taxing officers are empowered to carry on this social patterning by questioning business expenses, their reasonableness, propriety and all that, according to their ideas and ideals. We need to decide whether this pattern equitably rewards enterprise and risk of the highest order necessary to push up the economy to the desired goal."

Mr. Dhandhania was right when he questioned the propriety of taxing dividends above the six per cent. level. Such a low rate is hardly sufficient to reward risk and enterprise in industry and trade, not to speak of its adverse effect on the flow of foreign private capital into business enterprises in India. This is particularly so, considering the high rates of interest and enhanced value of gold. Mr. Dhandhania rightly declared that the shift in favour of taxing capital, in addition to taxation of income at high rates, was most inopportune and premature. "We have," to quote him, "surpassed Britain which did not dare in 1955 to introduce the tax proposals of Prof. Kaldor which we have all introduced in the course of two years, except the one for reduction of income-tax. Taxation has altered the relation between self-capital and borrowed capital, between incentives for spending and saving and the capacity of the business to face ups and downs in business activities. The net assets of even the bigger companies have been increased more with borrowed capital than self-capital."

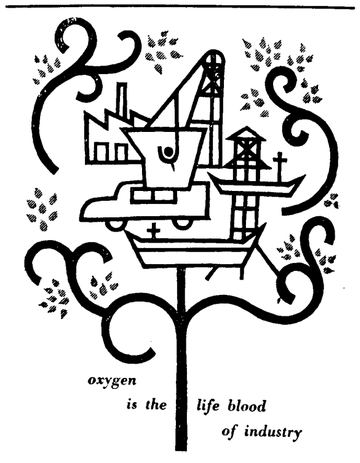
There is considerable force in these observations. If the level of savings is to be raised, it is of the utmost importance that, apart from providing appropriate reliefs in corporate taxation, the tax load, at least in the income bracket up to Rs. 1 lakh, must be reduced. This would enable the small and middle class *entrepreneurs* to contribute to capital resources required for financing the economic development programmes.

RAILWAY WEEK

One is apt to take many things of modern life for granted. Rarely does one realise how valuable they are until they are missed. It is only when one misses, one fine morning, the daily newspaper, the postman's knock on the door or finds that the 9-30 fast train has not arrived that one is jerked into the realisation that the Press, railways and the postal system have become part and parcel of modern life. But this is an uneasy way of making people conscious of the existence of such essential services. The so-called "Weeks"—the Safety-first Week, the Plan Week—which are observed so often in this country, serve to make the public Plan-conscious or safety-conscious as the case may be. But such "Weeks" aim at more than that. They are also occasions to take stock of what has happened, to highlight the achievements, and re-examine the causes of failures, if any.

India's biggest nationalised undertaking, the railways, the oldest and largest in the East, has just celebrated "Railway Week." It can indeed look back upon a proud record of achievement. The saga of Indian railways is a success story. It has responded remarkably to the needs of a developing economy and has given a good account of itself in the matter of operational efficiency. The Indian railways have all along endeavoured to cope with the phenomenal increase in passenger and goods traffic witnessed in the past few years. With the same number of passenger coaches today as the railways had in 1938-39, it has been called upon to carry two and a half times more traffic. Passenger amenities are also improving.

But the railways are faced with greater challenges in the years that lie ahead. They are expected to handle goods traffic to the tune of 180 million tons by 1960-61, as compared with 124.1 million tons lifted in 1956-57. Indian railways have probably reached a stage at which not much advance in operational efficiency is possible without radical changes such as large-scale electrification, dieselisation, doubling of track, etc. Out of the second Plan allocation of Rs. 1,125 crores, a major portion is required for replacement and rehabilitation requirements and the balance is inadequate to effect material changes in the systems and methods of operation. The shortage of resources is thus a challenge to the ingenuity and dynamism of Indian railways. Let us hope that it will prove equal to the challenge.



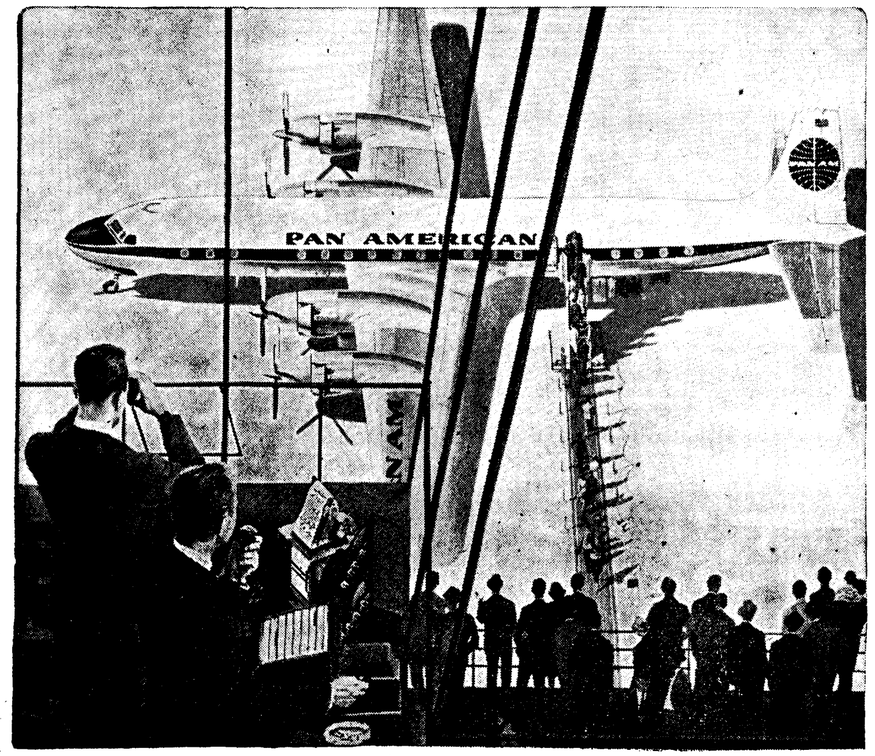
oxygen is the life blood of industry

Every branch of Indian industry depends on us for supplies of Oxygen. In every phase of India's industrial development, our products and prompt technical service ensure the most modern means and methods of metal fabrication.

Whether in mining or metallurgy, transport or shipping, power or irrigation, mills or factories, we serve every industry, big or small, and contribute today to the prosperous India of tomorrow as envisaged under the Second Five Year Plan.

INDIAN OXYGEN LTD

MAX-71B



For people in a hurry...

The "Super-7" Clippers—nonstop to the U.S.A. When you're in a hurry to get to the U.S.A., be sure you're aboard one of Pan American's radar-equipped "Super-7" Clippers* (Douglas-built DC-7Cs) — fast — quiet over-ocean airliners. Already they hold 20 official speed records over transatlantic routes.

And even when you're flying tourist-fare *Rainbow* service aboard Pan American's Clippers, you get the extra speed of the "Super-7s". Putting our finest equipment on tourist runs has been traditional at Pan American. As host to the world, Pan American makes you feel at home whatever your origin. For instance, 36 languages are spoken by flight personnel on Pan American's transatlantic services. Meals served aboard the Clippers have been recently awarded three international prizes for excellence.

For reservations, call your Travel Agent or Pan Am—over 800 offices throughout the world.

EFFICIENCY OF REORGANISED IMPORT CONTROL DEPARTMENT SLACKENS

DELAYS MUST BE AVOIDED

From A Special Correspondent

NEW DELHI, 15*th April*

DELHI LETTER

HOW bureaucratic delays have a habit of creeping in again and again in spite of constant efforts to eliminate or reduce them may be inferred from the slackness that appears to have set in recently in the Import Control Department. It may be recalled that, when Mr. T. T. Krishnamachari was in charge of Commerce and Industry, he reorganised the Import Control Department in such a way that applications for licences from the importing public came to be dealt with most expeditiously. This was made possible by expanding the Development Wing of the Commerce Ministry and staffing it with enough technical hands to deal with applications for imports of a variety of goods involving technical appraisal. Applications of actual users not borne on the register of the Development Wing also came to be increasingly and promptly certified by other already-existing or newly-created authorities like the Textile Directorate, the Sugar and Vanaspathi Directorate, the Tea Marketing Board, etc., concerned with some major industries. Under this reorganised set-up, "essentiality certificates" were issued by certifying officers who were specially empowered for the purpose on the basis of their specialised knowledge of industrial requirements, and licences came to be automatically issued by the Import Control Department on the basis of these certificates. The recommendations of the Development Wing were mostly impartial and unbiased as they were made by competent technical men.

This reorganisation greatly facilitated the prompt disposal of the large increase in applications at a time of increasing development imports. The effect was seen in applications being disposed of in less than two or three months as against the former six months or more. What was more, opportunities for undesirable practices were also mostly eliminated.

Efficiency

The efficiency of this reorganised set-up now appears to have considerably slackened. Two specific instances have come to the knowledge of this correspondent. One such instance is concerned with the sugar industry. The second biggest industry in the country is now handicapped by the circumstance that the certifying officer concerned has been entrusted with the onerous task of managing the three U.P. sugar factories taken over by the Government, a responsibility unrelated to his usual work. As this officer has to visit these factories frequently and devote the larger part of his time to their affairs, slackness and inefficiency in the matter of disposal of the sugar industry's applications for stores, spare parts and intermediate products are stated to have set in. The other instance concerns the shipping industry. The excessive delay, in some cases, in the disposal of applications for spare parts for the running and maintenance of ocean-going vessels in first class condition is liable to harm the earning of some foreign exchange through possible cessation of the functioning of some vessels for lack of replacements of parts.

There should be other instances in regard to other industries in the context of a general fall in the standards of prompt disposal. There is urgent need to restore these standards in the very beginning of the current half-year for which the import licensing policy has been announced. A heavy responsibility also rests on the various certifying authorities to consider more sympathetically the actual users' applications. This is considered necessary because the quotas of established importers for a number of raw materials and intermediate goods have been increased only by very narrow margins in many cases. As the actual users are being increasingly directed to the established importers for their industrial requirements which cannot possibly be satisfied in all cases, the result is that heavy premiums on prices of up to 300 per cent. are demanded by such importers. It is doubtful if this element of black marketing can be eliminated in the absence of a more generous disposal of actual users' applications. At the same time, it is asked why co-operative enterprises should not be placed on a par with other private undertakings in the matter of imports of industrial raw materials instead of giving them preferential treatment.

Delays

If bureaucratic delays in the matter of licensing imports of industrial raw materials and intermediate goods which have overshadowed all other categories of imports in both value and volume in recent years are not promptly eliminated, it is not difficult to infer that the more recent reduced tempo of development by way of a declining trend in industrial production in the private sector may continue for some more time. But such delays are not affecting the private sector alone; they are, in fact, reducing the tempo of development in the public sector as well. It should be interesting, in this connection, to mention some of the causes of delay in disposal of work in the Central Government. First, within Administrative Ministries, there are delays in examination of proposals in sections and in passing orders by officers, in locating previous papers and references, and in the movement of papers. Secondly, within a Ministry and its attached offices, delays occur in examination of proposals by technical officers in attached offices and in transmission of papers between Ministries and attached offices and within different sections of attached offices. Thirdly, in the Finance Ministry *vis-a-vis* the Administrative Ministry, delays are caused by repeated queries about matters of detail, by suggestions for reconsideration of proposals on lines generally found unacceptable to the Finance Ministry and by the disinclination on the part of Finance Officers to accept estimates furnished by Administrative Ministries.

Lack of Co-ordination

Fourthly, as far as the Administrative Ministry and other Ministries directly concerned in action programme are concerned, delays are caused by inadequate inter-departmental consultation and lack of *co-ordination*. There are also delays in inter-departmental consultation wherever there is such consultation. Fifthly, delays occur in consultation with the Law Ministry in the case of settlement of terms of agreement, bond, etc., and with the Home Ministry on establishment matters. There are also delays in selection and recruitment of personnel by the Union Public Service Commission. Sixthly, in the Administrative Ministry *vis-a-vis* the Central and State Public Works Departments there are delays in surveying, preparation of plans and estimates and collection of relevant data. Delays are also caused by the slackness on the part of contractors and by the non-availability or delayed supply of building materials and machinery. The delays in inviting and in considering and accepting tenders and in award of work to contractors should also be mentioned here. Finally, as far as the Administrative Ministry and State Governments are concerned, delays are caused by differences between them on matters of detail and financial liability. There are also delays in submission of formal proposals at Government level and delays by the State Governments in taking decisions on suggestions made by the Central Government. To some extent, these various kinds of delays have come to be reduced as a result of the efforts of the Organisation and Methods Division. But the O.M. Division is now "concerned only with the broader aspects of efficiency." It appears there is vast scope for its work in specific directions.

WORLD BANK LOAN TO PORTS

The World Bank has sanctioned two loans of $43 million (about Rs. 20 crores) for port development in India—$29 million for Calcutta and $14 million for Madras. Both the loans will be for a term of 20 years and bear an interest of 5½ per cent., including the 1 per cent. commission which is allocated to the Bank's special reserve. Amortisation of the loans will begin in April 1963. The loan agreements have been sent to India for execution by the Commissioners of the Ports of Calcutta and Madras. The loan agreements will be signed by an official of the Bank, while the guarantee agreements will be signed by the Bank and the Indian Ambassador to the United States at Washington.

PROSPECTS FOR 1958

From Our Own Correspondent

LONDON, 11*th April*

LONDON LETTER

"TO sum up," says the Government's *1958 Economic Survey* published this month, "the United Kingdom's economic problems in 1958 are inevitably bound up with the course of world economic developments.... its ability to deal effectively with its own economic problems; and in particular, upon the maintenance of the internal and external value of the currency." There is nothing at all startling about this statement, but, fortunately, the *Survey* itself is more analytical than the summary would indicate. The Government note that demand has been easing in relation to production and that this easing will continue right into 1958. As a result, there is a prospect that the rise in prices, which has been more or less continuous for the past 20 years, will be halted this year.

But neither do the Government appear to be worried about the alternative bugbear of deflation. In fact, they comment that unemployment at an average of 1.9 per cent. is only slightly higher than a year ago, although—and the qualification hides serious political implications—"there are areas of heavier unemployment." The confidence that the easing of demand will not lead to recession appears to have been caught from the United States, but, on this point, one cartoon showed President Eisenhower holding a survey of American economic activity in his hand falling from the top of a New York skyscraper and commenting halfway down to the ground that nothing was hurting yet! However, although the British Government believe that the United States Government are competent to take action against any serious decline even when they do hit the bottom, they are not quite so sure about Britain's ability to do so, if world economic developments are too adverse. The reason for this is that, when the world enters a period of recession as it was doing in 1957, the United States which was leading the band was gaining gold and all the rest—except Germany—were losing it. The trouble is that American recession can reduce the buying power of the primary countries and so hit Britain's exports. Against this, of course, there is the fall in import prices.

Safer Policy

On balance, however, the conclusion is that the United Kingdom may achieve a substantial current surplus in 1958 and there is a note of encouragement for the rest of the sterling area in the implication that these countries will be able to draw down their sterling balances without imposing too great a strain on the gold and dollar reserves. The philosophical comment is made that "sterling is strengthened by such a reduction of liabilities as well as by an increase in reserves." This piece of philosophy is very odd and very new, as it has been traditional British international banking practice to borrow short and lend long. A reverse of this policy is undoubtedly safer but also a good deal less profitable in terms of invisible income.

The surplus on the balance of payments for recent years has been re-assessed. 1955 showed a deficit of £70 million, 1956 a surplus of £266 million and 1957 a surplus of £237 million, making a total for the three years of £434 million. But, with an average long-term investment outflow of rather more than £200 million per annum steadily maintained regardless of the state of the current balance, the net balance over the three years is, of course, adverse to the extent of nearly £200 million. But, if we take the years 1956 and 1957 alone, years in which there was a favourable current balance, then the net balance, even allowing for the long-term investment outflow, averages over £40 million per year. It is also encouraging to note that the current balance before allowing for investment which was £98 million in the second half of 1956 was £122 million in the second half of 1957. It is expected that the improvement in 1958 will be even more marked.

It is at this stage that the position of the rest of the sterling area becomes important. In 1957, there was a heavy drawing down of sterling holdings (well over £200 million in the second half of the year) and a continued drawing down on this rate in order to pay the overseas non-sterling debts of the sterling area would preclude any building up of the gold and dollar reserves.—*All Rights Reserved.*

AMERICAN LETTER

U.S. GOVERNMENT'S DILEMMA

SEARCH FOR SOUND ECONOMIC POLICIES

From Our Special Correspondent

NEW YORK, 8*th April*

THE Eisenhower Administration at this time is torn between the natural inclinations of the Cabinet members to follow "sound" economic policies or follow the instinct of politicians who want the Government to spend the country out of the recession as a quarter of a century ago.

Indeed, the record of Congress before its Easter recess is reminiscent of the first 100 days of President Franklin Delano Roosevelt in 1932. The lawmakers voted more than $500 million for missile bases, $1,800 million additional funds for the Federal-State highway programme, the Federal debt ceiling was increased from $275,000 million to $280,000 million, a $1,800 million housing Bill was rushed through, about $1,400 million were added to defence funds this year, postal rates and pay were boosted and military pay scales were raised as well.

In addition, there are before Congress money requests for some $61,000 million for the next fiscal year beginning July. A Federal Budget deficit is now generally taken for granted and expected. The size is uncertain. Much will depend on the trend of tax receipts. Estimates for the deficit are as high as $15,000 million.

"Sound" Thinking

All this is highly obnoxious to the "sound" thinking of the conservatives who make up President Eisenhower's Cabinet. They could not be more sincere and sound. They are all successful business men who have quit making money out of patriotism. Most of them are millionaires who know the value of a dollar. They want stability, not uncertainty. They want to leave a "sound" heritage to the next Administration. They are honest men of goodwill and training. They are not politicians and, thus, they are baffled by pressure groups and slogans which are very much in evidence now that the economic indices are down.

They are quite different from the followers of President Roosevelt and Truman. Many of them were crackpots in American terminology, but there was action. They were not afraid to make decisions even though many of them might be wrong, and they were. Strangely enough, the U.S. public, as a whole, is not too much concerned with soundness. The average person buying a car, for example, will hardly ever consider the purchase of a $2,000 or $3,000 car unsound as long as his current income supports the monthly payment.

The Eisenhower Administration is striving for and aiming at sound policies to hand down. They are heartily supported by university professors and by such thinkers as Mr. Bernard Baruch who has been the adviser for many Presidents of the United States. Such sound thinking is also apparent in the statements of Mr. John Foster Dulles, Secretary of State, who opposes Soviet Russia for perfectly logical reasons in world politics. Yet, that "sound" thinking lets the Russians be the winners in every propaganda trick however old, obvious and superficial. In a way, it is a tragedy which may be understandable more in India with its old culture, philosophy and religion.

Constant Changes

I do not want to give the impression that the Eisenhower Administration is completely inflexible. Secretary of the Treasury, Mr. Robert Anderson told a small group today—I was one—that constant changes are the one characteristic of American progress and that this is recognised at Washington. The administration does not want to meddle too much in private business affairs—it merely wants to direct and support healthy growth on a sound basis. Obviously, the Executive and the Legislative branch of the Government are at cross-purposes. Every politician is using this recession to have his own pet spending project enacted for the benefit of his constituents and to the detriment of a sound dollar. It's an old, old story.

It may be gathered from the foregoing that the recession in the U.S. is widely overplayed. At present, there are still more than 61 million persons gainfully employed. Unemployment is somewhat over 5 million, against about 3 million a year ago. Savings continue to increase and so do consumer prices.

True, the automobile industry is in pretty bad shape. Since it is concentrated geographically, Detroit and its satellite cities have high unemployment. The automotive industry has a capacity of about 10 million units a year and it is producing about 6 million units. Steel output is down to about 50 per cent. of capacity as a result, but construction and building which is on the increase are now more important steel consumers than the auto makers.

Home Building

Lagging home building has taken a toll in terms of lower furniture and appliance sales and the "sound" pronunciamentos from Washington have created caution in the popular mind which has led to savings rather than spending.

Retail buying for Easter was quite satisfactory but below expectations. The weather was abominable. It is an important retail factor. Stores are still very cautious in their buying policies, but they expect that the advent of spring will change the picture for the better.

Cheerful notes also come from industrial purchasing groups. The machine tool industry which should be one of the first to feel the impact of future industrial planning, reported an upturn in orders. Purchasing executives in other fields suggested there is a better feeling in the air. Hand-to-mouth buying by industrial companies is no longer as prevalent as several months ago.

One of the stimuli in this connection have been price reductions. The first break has occurred in dairy products. Other produce prices are also expected to slide within the next few months with the advent of more element weather.

Price Cuts

Two major mail order houses, Montgomery Ward and Sears Roebuck, have made material price cuts in their spring catalogues. Eastman Kodak and Bell and Howell have seen fit to reduce their asking prices for cameras and related equipment. Easter flowers were cheaper this year than last and coffee prices are likely to turn down.

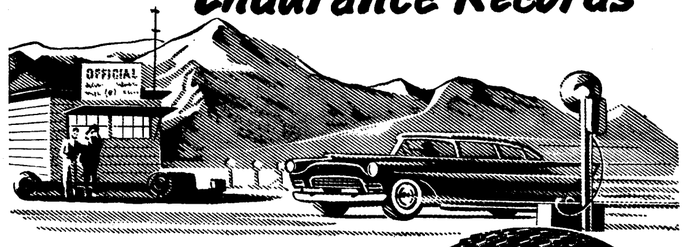
Aluminium companies slashed their quotations by 2 cents a pound. Merchants with unsold inventories on their shelves are likely to take a chance on a smaller profit, or none at all to get rid of their antiquated investments to make room for new goods. In recent weeks, the key to the cost of living has been food prices. Any relaxation in that sector of the price structure might prove of benefit to the wage earner, particularly in the light of reduced incomes. It could easily stimulate buying confidence and will, no doubt, do so.

Price Support

The problems of farm price supports are as unresolved as ever. Congress approved a freeze of agricultural supports at last year's level and did not allow Agriculture Secretary, Mr. Benson to scale them down. This was vetoed by the President and there does not appear evidence of a strong enough Congressional support to pass the bell over the President's veto.

The price support programme is closely tied in with U.S. Government holdings of surplus crops which are being disposed of under Public Law 480 against local currencies throughout the world. The Export-Import Bank of Washington is participating in this scheme and is receiving applications for such loans at the present time.—*All Rights Reserved.*

Stock Car Endurance Records



proved the TYRE for Safer motoring

America's incredible stock car endurance record—50,000 miles at an average speed of 108 miles per hour—was set on Firestone tyres, without a single tyre failure. The manufacturing skill and quality control that built such endurance into those tyres ensure supreme safety and dependability in the Firestone tyres for your car.

FOREIGN ASSISTANCERECEIVED BY INDIA

AUTHORISATIONS AGGREGATE RS. 630 CRORES UP TO THE END OF 1957

THE fiscal year 1957-58 proved to be one of the most strenuous period for India, inasmuch as the country's resources, internal and external, were considerably strained, thanks to the implementation of the development programmes under the second Five-year Plan. The balance of payments position was in jeopardy and the Government had to take drastic steps to conserve foreign exchange by slashing imports. Feverish efforts were also made to secure as much external assistance as possible. The missions undertaken by the ex-Finance Minister, Mr. T. T. Krishnamachari, and the industrial delegation under the auspices of the Federation of Indian Chambers of Commerce and Industry, in this connection, were noteworthy. As a result of these and other efforts, substantial assistance, by way of loans and deferred payment credits were successfully negotiated.

The foreign exchange needs of the country in the years to come are bound to grow and exceed our earnings. However much one is averse to borrowing from abroad, there is no gainsaying the fact that India has to depend to a large extent on external assistance, in view of the fact that the chances of raising the necessary foreign exchange resources are not very bright. The climate for tapping internal resources has been rendered cloudy by the various fiscal measures which, it is officially claimed, are mainly intended to finance the development plans. In view of the important role which external assistance has come to play in the implementation of the Plan, the need for continuously appraising the public of the extent of assistance offered by foreign countries and utilised during each financial year cannot be overemphasised. The Union Finance Ministry, which usually gives an authentic account of the external assistance negotiated and agreed upon each year in its annual reports, can render a more useful public service by giving a statistical account of the foreign assistance received and actually utilised year after year. The latest report of the Ministry for the year 1957-58, however, shows no departure from the traditional pattern.

Total Amount Authorised

It will, however, be interesting to note from the *Economic Survey, 1957-58* and the *Explanatory Memorandum on the Budget for 1958-59* that the total assistance received from foreign countries by way of loans and grants during the five years of the First Plan period amounted to about Rs. 166 crores. The total foreign assistance made available since the commencement of the second Plan to the end of December 1957 comes to Rs. 480 crores. This includes the loss of Rs. 17 crores suffered on American loan wheat from the U.S. If this loss is excluded, the total foreign assistance authorised since the commencement of the first Five-year Plan will be of the order of Rs. 630 crores. The receipts during the first year of the second Plan period amounted to Rs. 37.75 crores and receipts in 1957-58 are estimated at Rs. 105 crores. In the current year, they are expected to be of the order of Rs 325 crores and this amount has been taken credit for in the current year's budget. The utilisations of external assistance in 1956-57 are estimated at Rs. 96 crores. In 1957-58, they are expected to aggregate Rs. 130 crores. There is also a carry-over of about Rs. 130 crores from the authorisations of the first Plan period, but allowance has to be made for the fact that some carry-over from the authorisations of the second Plan period into the future is to be expected. The aforesaid amount of foreign assistance authorised so far does not include the sum of $225 million, which the U.S. has agreed to give as loan, and the agreement for which was signed on 4th March 1958. Nor does it include the credits from W. Germany, Japan and France, agreed upon during January and February this year.

The year 1957-58 was marked by several negotiations and agreements concluded in respect of foreign financial assistance, an account of which is provided by the Ministry of Finance report for the year. During 1957-58 the International Bank for Reconstruction and Development sanctioned the following three loans to India:—

(*a*) A loan of $9 8 million (Rs. 4.67 crores) to the Tata group of hydro-electric companies for the expansion of their thermal station at Trombay. The loan agreement was signed on 28th May 1957 and the loan has been guaranteed by the Government of India; (*b*) a loan of $90 million (Rs. 42.86 crores) for the development programme of Indian railways. The loan agreement was signed on 12th July 1957, and (*c*) a loan of $32.5 million (Rs. 15.47 crores) as a supplemental loan to the Tata Iron and Steel Company, which was granted a loan of $75 million in 1956-57 for their expansion programme. This loan has also been guaranteed by Government.

With these the total loans given to India by the Bank so far amount to $356.34 million (Rs. 170 crores). Negotiations are in progress with the Bank for obtaining loans for the three projects, (*a*) D.V.C. Expansion Project—third loan, (*b*) Koyna Hydro-electric Project and (*c*) Development of the ports of Calcutta and Madras.

In February 1957 India entered into an agreement with the International Monetary Fund for drawing $200 million (Rs. 95.24 crores) to tide over the temporary balance of payments difficulties. This amount was drawn in three instalments between February and June 1957.

Other Loans

In January 1958 the United States Government informed the Government of India of its willingness to discuss a loan of approximately $225 million (Rs. 107.15 crores) from the currently available resources of the United States Export-Import Bank and the Development Loan Fund. At the invitation of that Government a delegation proceeded to Washington to discuss individual schemes for assistance and allied matters and the necessary agreements were signed on 4th March 1958.

The Japanese Government offered a line of credit of 18 billion yen (Rs. 23.81 crores) for the import of capital goods from Japan for projects under the second Five-year Plan. The details of the credit have recently been negotiated and settled by a delegation which went to Japan in January 1958.

The West German Government has assured the Government of India of its interest in India's development plans and its willingness to assist in overcoming some of the difficulties that have arisen in the implementation of the Plan. As a first step, it agreed, in principle, to the deferring of certain payments falling due during the next 36 months for the Rourkela Steel Plant. A delegation of officials visited Germany in November 1957 and an interim agreement was reached, deferring payments upto 120 million Deutsche Marks (Rs. 13.61 crores). It has subsequently been agreed that payments amounting to 660 million Deutsche Marks (Rs. 75 crores) relating to the Rourkela plant may be deferred and the relative agreement was signed on 26th February 1958.

An agreement for economic and technical co-operation between India and France was signed in New Delhi on 23rd January 1958. Under it, the Government of France has agreed to provide facilities for financing the manufacture and delivery of capital goods up to a total of 25 billion francs (Rs. 28 crores) required for projects in the second Five-year Plan, for which orders may be placed with French suppliers during a period of twelve months from the date of the signing of the agreement. The terms of each contract, which will have to be approved by both Governments, will have to be negotiated separately in each case between the purchaser and the supplier.

Russian Credit

An agreement was signed with the Government of the Union of Soviet Socialist Republics in November 1957, accepting its offer of a long-term credit of 500 million roubles (nearly Rs. 60 crores). This credit will be used for setting up a heavy machine building plant, a coal mining machinery manufacturing plant, an optical glass factory and a thermal power station and for the development of the Korba coalfields. As in the case of the credit offered by that Government for the steel plant in Bhilai, this credit carries interest at the rate of 2.5 per cent. per annum and is repayable in twelve equal instalments commencing a year after the completion of deliveries for each industrial enterprise of the machinery and equipment.

An agreement designed to encourage new investments of private American capital in business enterprises in India was signed with the United States Government on the 19th September 1957. Under this agreement, the United States Government will provide guarantees to the American investor that receipts in Indian currency from new or expanded American investments in India, on schemes approved by the Government of India, can be converted into dollars.

Other U.S. Assistance

The United States Government continued to provide economic and technical assistance during the year under review. The allocation for technical assistance for their fiscal year 1958 is $6.3 million and it will be mostly utilised in continuing the technical assistance projects already undertaken with T.C.M. assistance. The pattern of United States Development Assistance hitherto was to make annual country-wise allocations, but since July 1957 this has been changed, and instead a Development Loan Fund has been established. No finance will be provided by the Fund until it is confirmed that finance is not available in whole, or in part, from other sources on reasonable terms. The projects eligible for finance from this Fund must be technically and economically sound and must provide reasonable assurance to contribute to the economic growth of the recipient country. In addition to the loan of $225 million (Rs. 107.15 crores) from the currently available resources of the Export-Import Bank and the President's Development Fund, to which references have been made earlier, the United States Government is considering, on a high priority basis, further measures to assist India in meeting its present grain shortage. From the U.S. Special Assistance Fund and Asian Development Fund, a sum of $8.7 million has also been provided for the conversion of the present nation-wide malaria control programme, which has been carried on since 1952 with T.C.M. assistance, to one of malaria eradication.

Commodities Agreement

The Agricultural Commodities Agreement with the United States Government signed in August 1956 provided for the sale of surplus agricultural commodities to India to the extent of $360 million during the three-year period ending June 1959. Arrangements have been made for the purchase of wheat valued at $251.4 million, rice $29.9 million, cotton $32.6 million, tobacco $3.6 million and dairy products $1.2 million. In view of the present shortage of foodgrains in the country, the balance of approximately $42 million, which was previously earmarked for import mostly of cotton, has been made available for purchase of additional quantities of wheat. This wheat will be received during the first half of 1958-59. Out of the sale proceeds, India will receive a long-term loan of Rs. 112 crores for economic development, including a sum of Rs. 26 crores which will be set apart for medium-term loans to private enterprise. It is proposed to set up a Refinance Corporation for providing loans to private enterprise. In addition, a sum of Rs. 26 crores will be received as grants for expenditure on economic development projects.

Under the Colombo Plan, the Government of Canada has authorised a sum of $21 million (including a sum of $6 million allocated last year) for assistance to India. This assistance will be used for the import of aluminium, copper, nickel, and wooden sleepers for railways, and for meeting the foreign exchange component of the outlay on transmission lines for the Kunda Hydro-electric Project and the Canada-India Reactor Scheme. Canada has also agreed to a special grant of $7 million for purchase of wheat and to supply an additional 400,000 tons of wheat on reasonable credit terms to meet the food shortage.

The Ford Foundation continued to provide financial aid. The more important grants were $2.1 million, supplementing a previous grant of $1.3 million for training in village and small-scale industries, $1.5 million for training Indian engineers in the United States steel industry and $685,000 for an English Language Teaching Institute.

In addition to financial assistance, India continued to receive technical assistance under the Colombo Plan, the U.S. Point Four Programme and the U.N. Extended Programme of Technical Assistance.

LLOYDS BANK REPEATS DIVIDEND

PROFIT IN INDIA RISES SHARPLY

THE year 1957 proved to be yet another period of expansion in activity for Lloyds Bank Ltd. (Chairman: Sir Oliver Franks, London), despite the intensive credit restraint called for by the Chancellor of the Exchequer, which no doubt had been scrupulously followed by Lloyds Bank also. The expansion in business, coupled with higher interest rates which obtained during the year, resulted in increased earnings, but the operating costs continued to "rise inexorably." The increase in costs took place in respect of not only salaries and wages but all other items of expenses. As Sir Oliver Franks, the Bank's Chairman, points out in his statement, with widespread branches providing a high standard of service in all offices and at the present level of salaries, "banking operations on this scale must of necessity be costly." This naturally had its effect on the Bank's profit for the year under review, albeit to a small extent.

The profit (after providing for taxation and making transfers to the contingency accounts, out of which full provision has been made for any diminution in value of assets, except in respect of depreciation in the market value of investments in British Government securities) has dropped from £2,541,793 to £2,502,391. The fall is no doubt small, but it is in distinct contrast to the rise of £219,354 recorded in the previous year and reverses the upward trend maintained since 1946. The dividend is, however, unchanged at 13 per cent. per annum, less income-tax, absorbing, as in the previous year, £1,387,739. The other appropriations have also been maintained, the transfer to the general reserve at £500,000 and that to the reserve for future contingencies at £500,000. These leave a larger surplus of £826,712 to be carried forward, as against £712,060 brought in.

The salient features of the Bank's balance-sheets and those of its Indian branches as at the close of the last four years are compared in the following table:

(In thousands of £'s sterling)

	As on 31st December			
	1957	1956	1955	1954
Capital	18,565	18,565	19,403	15,810
Reserve fund	18,000	17,500	15,000	17,000
Undistributed surplus	827	712	558	517
Deposits	1,257,523	1,197,444	1,190,146	1,244,306
Acceptances, endorsements, etc.	180,988	157,811	124,171	131,058
Cash, money at call and balances with other banks	275,226	247,156	245,666	252,892
Bills	276,046	242,128	242,853	254,800
Investments—				
Gilt-edged	367,840	369,578	387,542	424,525

The deposits of the Bank as a whole at the end of 1957 have jumped by over £60 million to £1,257 million and the cumulative rise in the last two years has more than made good the drop of £54 million suffered in 1955. The expansion in deposit resources has not been accompanied by an increase in loans and advances, which, on the contrary, show a fall of £9.6 million, reflecting the part played by the Bank in the intensive credit restraint. The reduction would have been greater but for the expansion in the Bank's advances in the East (along with the improvement in general business there) and the continued interest taken by the Bank "in the important and specialised field of medium-term credits to facilitate the export of major capital goods, a category of advances excluded from the operation of the general restrictions on bank lending."

Investments are lower by £1.57 million, at £378.05 million, of which those in British Government securities amounting to £326.28 million are shown at or under cost and below redemption value. Their market value as on 31st December 1957 shows a depreciation of £9.18 million but the Directors have not provided anything from the reserves or profit and loss account to cover this depreciation. For all the securities are redeemable at fixed dates, the majority within 10 years, when any depreciation will be recovered. The sharp rise in deposits, accompanied by a fall in loans and advances, has strengthened the cash balances by no less than £28 million and the holdings of bills by over £34 million.

The working of the Bank's branches in India during the past year is heartening, in that the profit has staged a rise of over 50 per cent., that is, from Rs. 28.64 lakhs to Rs. 43.06 lakhs. With this rise, the upward trend in profit has been maintained for the third year in succession, the pace of increase having widened considerably during 1957, in refreshing contrast to the experience of Indian Scheduled banks.

There has been a rise of Rs. 26.67 lakhs to Rs. 183.73 lakhs in income from interest and discount and of Rs. 2.69 lakhs to Rs. 50.71 lakhs in commission and exchange. The aggregate increase on these two accounts has been offset by the rise in interest paid to the extent of only Rs. 19.07 lakhs, at Rs. 76.72 lakhs. This, coupled with the small, but welcome, fall of Rs. 2.29 lakhs (to Rs. 110.76 lakhs) in expenses, has enabled the Bank to improve its profit substantially as seen above.

A heavy and sustained demand for bank advances has been the pronounced feature of the Bank's operations in India during 1957. An important aspect of the Bank's business is the financing of imports, which, however, was curtailed during the year due to shortage of foreign exchange. Despite this, the level of advances has been fairly well maintained, the fall in year-end figure being only Rs. 1.83 crores, as against an expansion of Rs. 3.96 crores in deposits. The outstanding borrowings from other banks stand considerably reduced. Investments are also lower by over Rs. 1 crore, but there has been a corresponding rise in cash resources.

The World Bank has granted a loan equivalent to $15 million for the rehabilitation and modernisation of Peru's most important railway systems, the Central Railway and the Southern Railway. The loan is for a term of 15 years and bears interest of 5½ per cent. per annum, including the 1 per cent. commission which is allocated to the Bank's Special Reserve. Amortisation will begin 15th February 1961. The loan is guaranteed by the Government of Peru. This is the Bank's ninth loan in Peru and brings the total lent there to $56 million.

INDIAN BANK'S PROFIT SHRINKS SIZABLY

SHARP RISE IN EXPENSES

IT is common knowledge that, despite the heavy expenses and the burden of high interest rates on deposits and borrowings, banks have generally been able to earn a larger profit in 1957 than in the previous year, though the pace of increase slowed down considerably. A notable exception to the general trend of profits is provided by the Indian Bank Ltd. (Secretary: Mr. D. P. Parthasarathy, Madras). Its profit has dwindled by no less than Rs. 13.70 lakhs to Rs. 32.01 lakhs, thus offsetting to a large extent the sharp rise of Rs. 25.43 lakhs to a record level of Rs. 45.71 lakhs touched in 1956. The drop in profit has also reversed the upward trend noted in the previous three years.

This setback in profit for 1957 is due to the sharp fall of Rs. 11.18 lakhs to Rs. 64.28 lakhs in income from commission, exchange and brokerage, consequent on the sharp decline in the Bank's bills business, as seen from the year-end figures, which has offset to a large extent the larger earnings from interest and discount which have gone up by Rs. 17.40 lakhs to Rs. 143.17 lakhs. Consequently, the gross income has recorded a rise of only Rs. 6.43 lakhs, at Rs. 210.76 lakhs. As against this meagre rise in total income, interest paid has recorded an increase of Rs. 6.61 lakhs to Rs. 83.81 lakhs and expenses are up by Rs. 13.40 lakhs at Rs. 93.43 lakhs.

Consequent on the decline in profit, the provision for taxation has been cut from Rs. 18.50 lakhs to Rs. 15 lakhs, while some of the other allocations have been stepped up. Thus, the transfer to the reserve fund has been raised by Rs. 50,000 to Rs. 10.50 lakhs and that to the sinking fund has been doubled to Rs. 1.50 lakhs. A development fund has been created with an initial allocation of Rs. 50,000. The provision for gratuity fund has been cut from Rs. 1.50 lakhs to Rs. 50,000. Despite the shrinkage in profit, the distribution to the shareholders has been maintained at 13 per cent. made up of a dividend of 10 per cent. and a bonus of 3 per cent., but this is on a slightly higher capital raised by making a further call on the partly paid-up shares. In addition, a special dividend of 2 per cent. to commemorate the Golden Jubilee of the Bank was paid.

* Includes a Golden Jubilee dividend of 2 per cent.

The increase in paid-up capital (which excludes calls unpaid) is due to a fresh call of Rs. 5 per share made on the 28,000 partly paid-up shares, bringing their paid-up value to Rs. 80 per share. The Bank has also 44,000 shares of Rs. 100 each fully paid-up. The Bank's deposits as at the close of the year show an increase of Rs. 2.65 crores, of which time deposits (fixed, savings and short-term deposits) alone account for Rs. 1.90 crores, at Rs. 17.03 crores. Savings bank deposits have gone up from Rs. 6.07 crores to Rs. 6.93 crores, while current and contingency accounts have declined fractionally from Rs. 11.36 crores to Rs. 11.24 crores.

Advances stand reduced from Rs. 23.69 crores to Rs. 19.97 crores, of which loans, cash credits and overdrafts have declined from Rs. 19.02 crores to Rs. 16.20 crores and bills purchased and discounted from Rs. 4.67 crores to Rs. 3.78 crores. Bills for collection have fallen from Rs. 5.78 crores to Rs. 4.10 crores and acceptances from Rs. 4 crores to Rs. 1.86 crores.

MODERNISATION OF TEXTILE INDUSTRY

RELAXATION OF CONDITIONS ATTACHED TO AUTOMATIC LOOMS UNLIKELY

ABOUT a fortnight ago, a Press report from Ahmedabad stated that the Government of India was considering the question of revising its policy with regard to the installation of automatic looms in cotton textile mills. It was said that some of the conditions imposed on mills desiring to install automatic looms might be withdrawn "in an effort to retrieve India's position in the export market." The report was widely welcomed by textile circles as a significant step. But more recent Press reports from Delhi, however, aver that there is no prospect of a revision in Government's policy, inasmuch as any such move will evoke bitter opposition from both the trade unions and the spokesmen of the decentralised sector of the textile industry (that is, the handlooms, the powerlooms and the *khadi* producing units).

The reported decision of the Government not to concede the just demand of mill interests for the relaxation of the stringent restrictions on installation of automatic looms is highly regrettable. Nearly two years have elapsed since the Government sanctioned the allotment of automatic looms for the purpose of producing 350 million yards of cloth for export, but hardly any progress has been made in this direction. In May 1957, it will be recalled, the National Development Corporation announced its scheme for the installation of 18,000 automatic looms in cotton mills. Since then, replacement of 10,000 looms has been sanctioned so far. The number of looms actually installed, however, is negligible. This is due to the stringent conditions attached to the licences issued to mills. These include maintenance of the export quota of the mill plus an additional quantity representing the enhanced production resulting from automatisation. The increased output can be sold in the home market only on payment of a penalty duty. The conditions thus are so onerous that even those mills which regularly export large quantities have not been able to benefit from the scheme.

Millowners Speak

The Chairmen of both the Millowners' Associations of Bombay and Ahmedabad have done well to draw special attention to this aspect. Presiding over the annual meeting of the Millowners' Association, Bombay, held at Bombay on Thursday last week, Mr. Ramnath A. Podar observed: "Even in regard to the installation of 18,000 additional automatic looms sanctioned for the purpose of producing cloth for export, little or no progress has been made because of the changed financial condition of mills and their inability to run the risk of guaranteeing to export almost the whole of the production on these looms over and above their normal exports. Not only should these restrictive conditions in regard to the installation of automatic looms be removed, but, in order to serve the cause of rehabilitation and modernisation, the conversion of ordinary looms into automatic looms should be encouraged to the extent that mills are in a position to do so." In the course of his speech at the annual meeting of the Ahmedabad Millowners' Association, Mr. Arvind Narottam, the President, said: ".... the conditions stipulated for allocation of these looms have been so unattractive that hardly any progress has been made in the direction of installation of such looms."

There is considerable force in the observations of the aforesaid eminent millowners. As this journal has itself pointed out ere now, the world textile market is governed by so many uncertain factors that it is futile to pin down mills to the condition of maintaining 87½ per cent. of their exports in any of the three preceding years, besides exporting the full production of automatic looms. The Export Promotion Committee clearly stated, in its report submitted as early as in August 1957, that the "Government might review the position and, as far as possible, relax these conditions with a view to making the scheme more attractive to mills without, at the same time, jeopardising the objective of export promotion." The Committee went a step further and said: "A sufficient number of automatic looms to permit the production for export purposes only of 1,000 million yards of cotton cloth a year should be installed by the industry by way of replacement of the existing plain looms. It would also help considerably if, as an incentive for more exports, mills are allowed to import modern machinery and equipment up to a certain percentage of the value of the goods that may be exported by them in excess of their nomal exports, say, about 50 to 75 per cent."

These are indeed, very sound suggestions and it is unfortunate that they have not received the attention of the authorities so far. Two considerations impart urgency to the need for modernisation and rehabilitation of the cotton mill industry. First, the competition in the world textile trade is becoming keener and keener and if it is to be weathered successfully, it is of the utmost importance that the efficiency of the mills must be enhanced so as to produce quality textiles at an economic price. Secondly, the apparel weaving capacity of the country is expanding at a fairly rapid pace, with the steadily rising trend of population and the improvement in the purchasing power as a result of the implementation of the second and subsequent Five-year Plans.

Unfortunate

Viewed thus, it is unfortunate that the cotton mill industry is at present suffering from compulsory cost inflation, due, among others, to the low efficiency of equipment, most of which is old and outmoded, as well as direct and indirect labour costs. As Mr. Ramnath Podar rightly declared, although the industry is the oldest and the largest mechanised enterprise in the country, yet the productive equipment of no other industry is more antiquated or in a more run-down condition than that of the cotton mill industry. In this connection, the following observations of Mr. Podar may be worth noting:

"The goal of giving a fair deal to the shareholder, of paying higher wages to labour, of supplying quality products to the consumer at reasonable prices, and of contributing bigger revenues to the Government should be striven for through the medium of the machine. It is, in fact, the superior machine that will help to reduce the cost of production by a margin sufficient to accommodate these fourfold demands on us. This is by no means a novel plea, for countries like Japan have enriched their national economy, besides acquiring a formidable competitive power, by being one lap ahead of others in regard to their plant and machinery. According to a recent study of the textile machinery now in place in Japan, new machinery represents about 60 to 90 per cent. To quote the President of the All-Japan Cotton Spinners' Association: 'The Japanese cotton industry had lost nine million spindles on account of the recent war and, as a result, the great majority of the equipment now in place is the latest type machinery of very high efficiency. This is the vital factor which strengthened the competitive power of our products in the world market.'

"It is small wonder, therefore, that productivity in the Japanese textile industry is as high as that in its counterpart in America. For example, the number of spindles handled by one operative in Japan is 1,600-2,000, while it is 1,500-2,100 in the United States, 800 in Britain and 380 (average) in India. Similarly the number of automatic looms handled by a Japanese worker is between 60 and 100, while in India it is not even half of it. The number of ordinary looms handled by a Japanese worker is 14-15, as against six in Britain and two (average) in India. There is no reason why productivity in the premier organised industry of our country should remain so low."

Any impartial observer of trends in the textile industry the world over will fully recognise the vital importance of modernising plant and machinery. After all, it must be remembered that production of cloth, if it continues to be on old and worn-out machinery, is bound to be inefficient and expensive. Apart from this, it hampers, as Mr. Podar aptly mentioned, the proper deployment of labour which, on account of its low productivity, cannot justifiably agitate for higher emoluments.

COTTON ATLAS OF INDIA

The Indian Central Cotton Committee deserves to be complimented on bringing out an attractive atlas on Indian cotton (Indian Mercantile Chambers, 14, Nicol Road, Ballard Estate, Bombay 1, Price Rs. 15). Printed on white art paper, with maps, charts and illustrations in black and white, and rexine bound, the publication should prove invaluable as a comprehensive statistical guide on the most important commercial crop of India. It covers an extensive field, giving State-wise information regarding every aspect of cotton production. There are also tables and illustrations of the trend of consumption, export and import of cotton as well as the progress of cotton growing in each State under the first Plan. World trends in cotton production, consumption, trade, etc., are also graphically depicted. This is a publication which no one who has anything to do with cotton should do without.

WORLD COTTON SUPPLY POSITION

PRODUCTION FALLS FAR SHORT OF CONSUMPTION

SIGNIFICANT progress has been achieved this season (1957-58) in correcting the imbalance between the supply and demand position for world cotton. Offtake in the current season is expected to exceed aggregate global production by a much wider margin than in 1956-57. World production and consumption are estimated at 39.4 million bales (of 478 lbs.) and 41.8 million bales respectively, as compared with 41.2 and 42.1 million bales respectively in the previous season. The deficit in production over consumption this season is about two and a half million bales. Stocks are expected to decline to their lowest level in five years. Expressed in terms of consumption, stocks will represent less than six months' supply which is considered as in the proximity of normal stocks. According to the International Cotton Advisory Committee, Washington, "there is no longer any surplus of good grades and the surplus situation in the extra long staples has been relieved somewhat by the abnormally small crop in the Sudan." The following table reveals the supply and distribution position of world cotton during the season:

World Supply and Disappearance

(In million bales of 478 lbs.)

	1955-56	1956-57	1957-58 (estimated)
Supply—			
Beginning stocks	22.2	24.3	23.1
Production	42.7	41.2	39.4
Total	64.9	65.5	62.5
Disappearance—			
Consumption	40.4	42.1	41.8
Destroyed	.2	.3	.2
Total	40.6	42.4	42.0
End-season stocks	24.3	23.1	20.5

In contrast to last season, when the marked increase in consumption contributed substantially to the overall improvement in the cotton situation, the reduction in stocks this season has been primarily brought about by a much lower production, particularly in the U.S. where the output this season is estimated at as low as 11 million bales, as compared with 13.02 million bales last season. Total supply this season in the U.S., estimated at 22.2 million bales, is less than last season's by over five million bales. The grade outturn of the current season's crop in the U.S. averaged lower than in any other post-war season. Only about one-third of the total crop was graded middling or above, as compared with nearly half in 1956-57. Also, the carry-over stock on 1st August 1957 contained only about 3 million bales of middling and above grades or a little more than half the quantity a year earlier. The average staple of upland cotton is the same as in 1956-57.

Output Outside the U.S.

Aggregate free world production outside the U.S. is presently estimated at 16.4 million bales, roughly half a million bales higher than last season. Acreage in the aggregate actually declined slightly but this has been offset by a higher average yield per acre.

Record high yields and increased acreage boosted production in Mexico to an estimated 2,175,000 bales, representing an increase of 400,000 bales over the last season. In Egypt, the third official estimate put production at 1,825,000 bales, as against 1.5 million bales in 1956-57. In India, production during the current season is expected to be roughly at last season's level of 4.2 million bales (of 478 lbs. each) while in Pakistan it is expected to be slightly higher than last season. A much smaller crop is expected in Turkey, thanks to abnormally low yields. Yields in Syria, on the other hand, showed a noticeable improvement so that, despite a reduction in acreage, production this season would set a new record.

Acreage declined slightly in the Sudan but yield per acre is well down and production is estimated to have declined to below 400 000 bales, as compared with last season's record 620,000 bales. All of this reduction is in the Sakel, extra-long-staple varieties for, production in the rain-grown areas is actually ahead of last season. The lower crop in the Sudan has affected the world extra long-staple situation. Aggregate free world production of these staples is now estimated at slightly over 1.3 million

PROGRESS OF TEXTILE TALKS WITH HONG KONG DISAPPOINTING

TRADERS, HOWEVER, ARE STILL HOPEFUL OF SETTLEMENT

From A Special Correspondent

MANCHESTER, *9th April*

THE possibility of a settlement being negotiated on the subject of cloth imports into the United Kingdom has raised the hopes of traders in Lancashire even after the somewhat disappointing reports received as to the progress of discussions in Hong Kong between the local millowners and Sir Frank Lee, Permanent Secretary to the Board of Trade. Messages from the Colony indicating that the negotiations had been largely abortive caught Lancashire traders at a time when large-scale stoppages of the industry were just beginning. Some mills had already shut down for a longer Easter break than was usual and others were preparing to close down machinery for several days next week and beyond.

MANCHESTER LETTER

In nearly every case, mill managements blamed the rising tide of foreign cloth imports for the slack trade of recent months which has led to the current curtailment of output. Already in the first two months of 1958, arrivals have totalled 67,000,000 square yards, as against exports of 76,000,000 yards. Hong Kong has sent over 15,000,000 yards of cloth to Britain, as against less than 10,000,000 yards in the same period of 1957.

Few Lancashire traders believed the Permanent Secretary to the Board of Trade would succeed where the industrial mission had already failed. They knew that the Hong Kong business men held the trump card of the Colony's status within the Commonwealth and would not hesitate to use it to protect their interests. The onus then turned on the Government to decide whether to support British cottons or regard the Colonial aspect as more important.

May Meet Again

But, before the door is finally closed on negotiations, the industrial representatives of both sides may meet again, if reports from Hong Kong reflect the attitude of the local millowners. They said that further talks would be welcomed, if Lancashire could first establish a basis for a ceiling on imports from India and Pakistan. This leaves the situation very much as it was last year when the Lancashire mission, led by Sir Cuthbert Clegg, did secure a provisional agreement with India on the understanding that it would only apply, if Hong Kong was prepared to accept suitable terms. The rejection of the scheme by Hong Kong led to a breakdown of the talks.

Whatever the eventual outcome of the fresh series of discussions, it must mean a further period of uncertainty in Lancashire. The confidence of buyers has been severely shaken by a number of developments, of which the imported cloth impasse is the major source of doubt. The credit squeeze has also been responsible for making customers restrict their purchases, while speculation over the future trend of raw cotton prices has again been a restraining influence. As a result producers have found great difficulty in securing contracts of any weight and the length of order lists held steadily diminished, culminating in the widespread stoppages of machinery extending both before and after the Easter week-end.

Lancashire traders welcomed the news that a delegation from India would shortly arrive in Britain for further discussions on this complicated issue. It was thought that the Indian textile trade had adopted a far more realistic view of the situation than other competitors and, in the circumstances, there were reasonable grounds for supposing that some form of settlement could be reached.

Justifying A Cause

A glimpse of the complex procedure called for in dealing with agreements coming within the scope of the Restrictive Trade Practices Act has been given in the annual report of the Cotton Yarn Doublers' Association. Those involved in the discussions deserve the commendations of their friends in the industry, as a large burden is on their shoulders and much will depend on the outcome of the case they present to the Court in due course, together with that offered by the Yarn Spinners' Association.

First of all, the organisation has to justify itself as being the responsible body to represent its members; later the facts of the case to be put forward have to be marshalled; finally the actual hearing takes place. Additionally, the organisation must decide which of the seven grounds of justification suits the terms of its particular agreement for submission to the Registrar.

To illustrate the extent of the work involved and the time taken to cope with the situation, the Yarn Doublers' Association held an informal preliminary meeting with the Registrar nearly a year ago. Subsequently, further discussions took place with the Treasury Solicitor and the Registrar's independent advisers, yet the report indicates that it is unlikely that the preliminary proceedings will be completed in time for the actual case to be heard in Court until after the summer.

In the meantime, individual members of the Association are completing a questionnaire which then requires consolidation to enable the case to be presented with as much documentary evidence as possible. The supporters of the current price arrangements need to have at their disposal sufficient data to reply to any questions raised by the Court when the actual hearing takes place and it can be assumed that the proceedings will be lengthy and highly complicated.

This, it must be emphasised, is only one agreement. Scores of simlar arrangements, some of which may be more straightforward in content, are being submitted to the Court in due course. The decisions to be taken may well cause fundamental changes in many sectors of British industry, dependent on the outcome of the deliberations. Whether the actual price schemes are condoned or not, however, the establishment of such organisations as the Yarn Spinners' and Cotton Yarn Doublers' Association has been an asset to the textile trade and they should continue to receive the full support of members.

Conditions Abroad

It is a long time since reports from overseas distributing centres provided much encouragement for Lancashire traders. Nor can competitors derive much satisfaction from the indications, which consistently point to a state of overstocking to such an extent that new business is unlikely in the near future.

West Africa has been a steady market for Lancashire textiles for many years, but, from advices quoted by the latest *Overseas Review* published by Barclay's Bank, the outlook in these territories is anything but promising. The report from Sierra Leone, for instance, refers to a trade recession, adding: "There still appears to be a heavy overstocked position, especially in textiles, and imports are still coming forward in large quantities. Many importers have already cancelled orders where possible and have stated that it is their intention to reduce their imports by approximately 50 per cent."

In Lagos, Nigeria, very quiet trading conditions continue, reports declare, and considerable stocks of textiles are likely to be carried over from the main season. Disappointing news from Ghana follows the distribution of £10,000,000 less by the Cocoa Marketing Board to farmers. This and other factors have depressed local trading conditions and, with increased imports, merchants are overstocked and there is little money in circulation.

Throughout the African Continent, the tone of trading remains subdued, although, in some areas, the position is not completely discouraging. Clothing and textile factories in South Africa are busily at work on initial orders for the winter season, but output is said to be somewhat lower than last year.

Quiet trading is also mentioned in Northern Rhodesia, where the turnover remains lower than a year ago. Some retailers are offering discount for cash in an endeavour to attract business. Bazaar trade in both Uganda and Kenya is reported as exceptionally dull, partly due to the payment of taxes keeping money tight.

With depressing unanimity, these reports clearly portray the problems facing the Lancashire exporter who is trying to raise his overseas trade target. All the selling power in the world will be wasted on a dealer who has warehouses full of goods which are already a drag on the market.—*All Rights Reserved.*

CONSUMER GOODS VS. CAPITAL GOODS IN PLANNING INVESTMENT

CHOICE BEFORE A DEVELOPING ECONOMY

By T. P. Subramonian

SENIOR LECTURER IN ECONOMICS, FORD FOUNDATION UNIT, UNIVERSITY OF MADRAS

AN economy seeking to develop by planning has to take certain vital decisions in the planning of investment. It has to decide on the amount of current income to be invested; it has to decide on the pattern of distributing this investment among the different sectors of the economy; it has to choose between technical variants of production in each sector. Each of these decisions will have a vital bearing on the nature, course and speed of economic development. This article is essentially concerned with one aspect of the second of these decisions, although it must be observed that all the three decisions are to some extent interrelated. Broadly speaking, an economy could be broken up into four sectors—agriculture, industry, transport and communications, and social services. For the industrial sector, as for the other sectors, the planning authority will have to determine its relative priority and the quantum of investment; besides, it will also have to allocate the capital funds and resources between the consumer goods industries and the capital goods industries. It is with the latter allocation that we are here concerned.

In a free-enterprise economy the choice between investment in the consumer goods sector and that in the capital goods sector is determined largely by the criterion of profitability. Usually any investment will be undertaken if its internal rate of return will exceed the market rate of interest. In the initial stages of the growth of an economy the market demand will exert itself only on consumer goods. Only in the later stages would investment in capital goods production be undertaken in response to the rising demand for consumer goods either from within the economy or from without. The producer-goods sector is very much more capital-heavy than the consumer-goods sector. In a growing private-enterprise economy, investment in the producer-goods sector is made possible by the larger volume of saving generated in the economy at the later stages of its growth. Thus, in an economy developing under free enterprise, in which the price system organises output and allocates investment, capital available for investment would tend to move towards the consumer goods sector and away from the producer goods sector. In a planned economic system, on the other hand, in which output programmes are prescribed centrally, a normative principle becomes necessary to guide the central authority in the allocation of resources among alternative lines of investment. This principle, however, is not available ready-made to any planning authority. In fact, it has to be evolved in the light of prevailing circumstances and on the basis of appropriate considerations.

Plan's Objective

The first consideration is obviously the central objective of the Plan. If the Plan has a plurality of objectives, the degree of emphasis placed on particular objectives becomes important. If the central aim of the Plan is the speedy creation of a welfare state or the immediate lifting of the standard of living of the mass of the people, the maximisation of the production of essential consumer goods would receive priority. On the other hand, if the aim is balanced industrial development considerable investment might be devoted to the building up of a sound base for such industrialisation in the shape of basic and capital goods industries. If the maximisation of employment opportunities in the immediate future is the objective of the Plan, consumer goods industries would receive preference over capital goods industries as the former could employ a larger number of workers for a unit of investment than the latter. If the emphasis, however, is on a high rate of growth the capital goods industries would receive precedence, for the rate of growth of gross output would be very much higher if the bulk of national investment is in the capital goods industries than if a large share of it is devoted to expanding capacity in the consumer goods industries.

Next to the central objective of the Plan, the overall investment pattern comes up for consideration. The pattern of investment among the four broad sectors of the economy would reflect the emphasis placed on the development of one or other of them. The magnitude of investment allocation to the industrial sector is a crucial determinant in deciding the division of this fund among capital goods and consumer goods. For, only if the allotment for industry is large enough can the economy afford to build up capital goods industries, as these call for heavy outlays of capital which will bear fruit only after an appreciable time-lag. On the other hand, if the overall allotment for industry is sparse, the economy would utilise it either for starting new units or for expanding existing units in the consumer goods sector. Provision of a minimum quantum of consumer goods to a growing population is invariably a necessity in any economy.

Another consideration is whether it is the short-term or the long-term interests of the economy that figure largely in the plan. Attention to the short-term aspect would indicate investment in consumer goods production; if the long-term interests are given prime attention, capital goods investment would claim priority. If a plan that fosters the long-term interest of an economy at the cost of short-term considerations is to succeed, the present generation should be able and willing to sacrifice for the sake of posterity. This ability and willingness of the present generation to undergo such sacrifice would depend largely on the prevailing levels of living. This is the next consideration in our allocation problem. For if, as in many of the underdeveloped countries, the levels of living are appallingly low, economic planning has inevitably to strive to raise these levels to bearable minima by steps designed to augment the production of essential consumer goods. Under such circumstances of initially very low levels of living, curtailment of or postponement of increases in consumption in the interest of capital goods development becomes extremely difficult.

Physical Requisites

A factor which is sometimes forgotten in discussions on the allocation of funds is the availability of the physical requisites for the development of particular industries. Few countries are endowed with all the natural resources necessary for a balanced industrial development. The most important capital goods industries are based on cheap fuel and metallic ores. Countries which lack such fuel and ores cannot, therefore, go far in building up such industries even if they are prepared to spare the funds.

The prevailing international atmosphere also exerts its influence on the allocation of resources between capital goods and consumer goods. If the atmosphere is peaceful, intergovernmental relations are cordial and international trade unhampered, the economy will be inclined to concentrate on consumer goods production and seek to enhance it by importing capital equipment from abroad in exchange for surplus consumer goods produced. In such a situation, the economy would not feel impelled to advance towards self-sufficiency in capital goods. On the other hand, if the international atmosphere is uncertain and foreign relations are none too friendly, a country seeking to develop would be driven to accord priority to capital goods investment so that within the shortest period of time it might attain self-sufficiency and economic strength. The case of the U.S.S.R., to which we shall refer later, comes immediately to one's mind.

Finally, we might say that the form of Government is also a determining factor. A democratic Government is under a handicap in its ability to call for sacrifice on the part of the people and compel them to defer satisfaction of their urgent requirements. When overall resources are limited, capital goods industries can be developed only if a higher rate of saving is generated and consumer goods requirements are postponed. In a democratic set-up, the possibility of social and political repercussions of an austerity policy will have to be constantly borne in mind and guarded against. A stable and totalitarian regime could, on the other hand, afford to follow an austerity policy of postponing consumption and raising savings, concentrate on capital goods industries and thus attain a higher rate of growth.

The foregoing appear to be the main factors which help to evolve the normative principle which guides the planning authority in the allocation of investment between the consumer goods sector and the capital goods sector. It is said that the natural sequence of development is from the capital-light consumer goods industries to the capital-heavy producer goods industries. The planning authority of an underdeveloped country might choose to follow this "natural" sequence in which case it would concentrate on consumer goods production in the initial stages when available capital per head is small and both the investment demand and replacement demand for machinery are small, and to undertake the production of capital goods in the later stages when gross investment could be higher. The planning authority might even try to speed up this sequence. It is also open to them to plan for a high rate of economic growth by going through a period of enormous investment while postponing increased consumption until considerable capital has been created. The obvious example is Soviet Russia. The appropriateness of a particular policy depends on the circumstances in the country in question.

Indian Plans—An Assessment

In the light of some of the considerations discussed above, let us examine India's Five-year Plans. In the first Five-year Plan in which agriculture and irrigation got pride of place, industrial development received rather low priority. Taking the public and private sectors together, a total investment of Rs. 3,100 crores (Rs. 1,500 crores public+Rs. 1,600 crores private) was actually made out of which about 9 per cent. (Rs. 293 crores) was on organised industry. This is no doubt a small percentage of total investment, but in allocating this amount between capital goods and consumer goods, the Plan has leaned heavily to the former. Out of Rs. 293 crores actually invested, 78 per cent. (Rs. 229 crores) went into the capital goods sector while 22 per cent. (Rs. 64 crores) went into the consumer goods sector. The explanation for this allocation lies in the policy of industrial development laid down in the Plan. The two aspects of this policy were (i) the augmentation of consumer goods production by the fuller utilisation of existing capacity and (ii) the introduction of the *first steps* for the building up of basic and capital goods industries. The rationale of this policy, as made out by the Planning Commission, was that till now the major emphasis on industrial development in India had been on consumer goods industries while basic and producer goods industries had lagged very much behind. The correction of this imbalance was therefore, considered the first step in industrial development. Further, while the output of consumer goods industries such as cotton textiles, sugar, soap, matches and salt was, on the whole, sufficient to meet the existing low level of demand in the country, the prevailing capacity for the production of capital goods was in most cases quite inadequate even for current requirements. It was considered that the first steps in industrialisation consisted in the making up of these deficiencies. All the same, as the magnitude of industrial investment in the first Plan was small, the impression made by it was meagre.

Second Plan

In its approach to industrialisation the second Five-year Plan makes a significant departure from the first. One of the basic objectives of the Plan is "rapid industrialisation with particular emphasis on the development of basic and heavy industries." Justifying this objective, the Plan states that "if industrialisation is to be rapid enough the country must aim at developing basic industries and industries which make machines to make the machines needed for further development. This calls for substantial expansion in iron and steel, non-ferrous metals, coal, cement, heavy chemicals, and other industries of basic importance." Investment in basic industries constitutes a heavy drain on available capital, which means capital left for the consumer goods sector is meagre. Further, investment in basic industries creates demand for consumer goods without enhancing their supply. Hence, to enhance consumer goods production without heavy capital outlay the Plan relies on fuller utilisation of existing capacity in factory industries and the adoption of labour-intensive small-scale methods wherever possible.

From out of a total investment of Rs. 6,200 crores envisaged in the public and private sectors together under the second Five-year Plan, Rs. 1,094 crores or about 18 per cent. are to be invested in organised industries excluding mining. Besides, a sum of Rs. 200 crores is provided in the public sector for financing village and small-scale industries. If this sum is added on, the provision for industrial investment will amount to Rs. 1,294 crores or 21 per cent. of the total Plan. Out of the Rs. 1,094 crores provided for organised industry about 19 per cent. will go into consumer goods industries and the remaining 81 per cent. into capital goods industries. While the output of capital goods, is sought to be increased substantially, that of consumer goods will increase relatively moderately but not insignificantly. For instance, the output of cotton textiles will go up by 24 per cent., sugar by 35 per cent., paper and paper-board by 75 per cent., soap by 50 per cent. and *vanaspati* by 48 per cent. On the other hand, the output of finished steel will increase by 231 per cent., aluminium by 233 per cent., cement by 183 per cent., industrial machinery (cotton, jute, cement, sugar and paper) by 471 per cent.

Now, is this allocation under the second Five-year Plan the appropriate one for the country under the circumstances? There is no doubt that it is in consonance with the central objective of the Plan, which is rapid industrialisation with an emphasis on heavy and capital goods industries. In the interest of rapid economic growth, India undoubtedly must endeavour to build up the capital goods industries. And as for potentialities of developing basic industries like iron and steel, India is in a uniquely fortunate position. Notwithstanding the validity of these broad considerations, certain doubts arise as to whether the allocation of investment between capital goods and consumer goods industries does not show an unduly heavy leaning towards the former. Ragnar Nurkse, for instance, questions the top priority which the second Plan has given to the building up of a steel and engineering industry at the present stage of India's development. (*Quarterly Journal of Economics*, May 1957). He wonders why dependence on capital goods imports must be terminated so *quickly* as attempted, and suggests that the funds devoted could appropriately be used for the correction of other structural weaknesses such as in agriculture, transportation, and technical education. The international situation today is not as hopeless as far as India is concerned as it was for Russia in the 1920s and 1930s. Nor do defence considerations assume top importance in the Indian context.

Consumer Goods

These doubts are raised not because capital goods development is not desirable in itself, but because too heavy an emphasis on it means too drastic a cut on consumer goods development. And this might conflict with the welfare objectives of the Indian Plan. Where living standards are very low, an increase in the availability of consumer goods would be an important means of raising the standards of living and welfare. The Soviet Union was able to achieve rapid economic growth by concentrating on capital goods industry which was financed by a very high rate of saving. 41 per cent. of the total investment was devoted to the industrial sector in their first Five-year Plan and 42 per cent. in their second; and of these, the bulk was invested in capital goods industries. The percentage of industrial investment devoted to consumer goods industries declined from 18.2 in 1929 to 13.7 in 1933, and 12.5 in 1935. But then, the Soviet Union, accorded rather low priority to welfare needs, and they could afford to do so. The situation is different in India and Soviet allocations are applicable to India only subject to this limitation.

It must be admitted that our second Plan does postulate appreciable increases in consumer goods production, the smallness of investment allotted for it notwithstanding. The technique of bringing this about, however, arouses doubts regarding its reliability. As mentioned earlier, the Plan relies less on expansion of installed capacity and more on fuller utilisation of existing capacity and on the adoption of labour-intensive methods. The technique of fuller utilisation of existing capacity assumes the existence of wide gaps between production and installed capacity. This assumption appears to be of doubtful validity, especially in view of the fact that the first Plan endeavoured to increase production by closing these gaps. The adoption of labour-intensive methods might come in conflict with capital formation and technical progress.* Also, whether unorganised small-scale industries operating on labour-intensive methods would succeed in achieving the targets fixed for them is open to doubt. If the adoption of modern efficient techniques for the production of consumer goods is rendered difficult by capital shortage, the solution would lie in a slight shifting of the pattern of capital allocation.

Inflation

Heavy investments on capital goods production and on social and economic overheads will generate a great demand for consumer goods, and unless this demand is matched by a proportionate output of such goods, inflation would emerge; and beyond a stage, such inflation would upset the Plan itself. Such inflation could be controlled by the augmentation of the supply of food and manufactured consumer goods and/or by the imposition of physical and monetary controls. The former would call for a reallocation of funds and the latter would raise the issues of regimentation and administrative feasibility. The Soviet Union minimised outlays on social and economic overheads and imposed drastic physical controls and rationing; consequently, inflation was not a problem for them. Our Plan envisages sizable outlays on social and economic overheads and fights shy of physical controls; consequently, inflation is a growing danger for us. If outlays on social and economic overheads cannot be reduced on account of the welfare ideal, and if controls are not acceptable on account of practical difficulties and fears of regimentation, the remedy to the inflationary threat would lie in a shifting of investment from capital goods to consumer goods.

Finally, the problem of foreign exchange has also to be considered before approving of the Plan's allocation between capital goods and consumer goods. It is argued that we have to become self-sufficient in capital goods because their imports would be a heavy drain on our foreign exchange resources. But imports of equipment for the building up of our capital goods industries would constitute a much heavier drain on our exchange resources. Availability of foreign exchange resources depends on normal export earnings, loans and grants from abroad and foreign private investment. While trying to get more of the latter two by the adoption of appropriate policies and the creation of a suitable climate, it would also be necessary to try to better our trade balance by augmenting consumer goods production, using highly productive techniques and enhancing exports.

In the light of the above considerations, one feels that in dividing the cake between the capital goods sector and consumer goods sector, our Plan has been a little too partial to the former. If it is too late now to alter the second Plan, the implications might be borne in mind while drawing up the Third.

* This has been discussed by the author in his paper on "Choice of Techniques in Consumer Goods Industries" (*Conference Papers*, 1957. Indian Economic Association.)

The Government of India is understood to have finally decided to set up integrated facilities for manufacture of steel plant equipment, together with a foundry and forge, at Hathia village in the Ranchi District of Bihar. The total capacity of the plant will be 40,000 tons of finished machinery annually in the first stage and 80,000 tons in the second stage. Separate units are also proposed for manufacture of mining equipment, heavy machine tools, heavy plate and vessels, and heavy structural fabricating works. These two projects will be placed under a new Central Government enterprise, to be called the Heavy Engineering Corporation (Private) Limited. They are expected to provide employment to about 7,000 persons in the first stage and 14,000 in the second stage.

The collection of wealth tax up to 31st March 1958 aggregated to Rs. 6.69 crores. This included Rs. 1.73 crore in the case of individuals, and Rs. 4.78 crores in the case of companies, the balance representing the tax collected from Hindu undivided families.

The total amount of new life insurance business completed by the Life Insurance Corporation during 1957-58 amounted to about Rs. 300 crores, according to the Union Deputy Minister for Finance. The amount of business completed in 1957 was Rs. 276.59 crores.

SUGAR MILLS IN EAST U.P. AND BIHAR

INTENSIVE CANE DEVELOPMENT URGED

CONDITIONS in the sugar economy of East Uttar Pradesh and Bihar continue to be none too satisfactory. The sugar mills in this region are confronted with two most pressing problems. First, the supply of cane is not adequate and regular. Secondly, the quality of cane is very poor. Indeed, there has been a distinct setback of late. In Bihar, for instance, the average recovery percentage of sugar in 1956-57 was as low as 9.36, which compares unfavourably with 9.76 in 1955-56, 10.22 in 1954-55 and 10.90 in 1942-43.

Thanks to these disquieting features, the existing capacity of several units is not fully and effectively utilised. The figures cited by Mr. B. S. Sawhney, the erstwhile President of the Indian Sugar Mills Association, at the recent annual meeting of the Association will reveal that, while the share of East U.P. and Bihar in the aggregate registered installed capacity of the whole of the Indian sugar industry in 1956-57 was 44 per cent., the proportion of cane actually crushed and sugar produced was as low as 32.6 per cent. and 31.5 per cent., respectively. The position of this region in the sugar economy of India (1956-57) is indicated below:

	All-India (Tons)	East U.P. and Bihar (Tons)	Share of East U.P. and Bihar in the total (Per cent.)
Daily cane-crushing capacity ..	129,960	57,057	44.0
Cane crushed	20,852,277	6,802,167	32.6
Sugar produced	2,026,179	639,194	31.5

Bihar, as is well known, is the second largest sugar-producing State in India. The quantity of sugar that actually came off the crushing plants of mills in this State during the season 1956-57 was no doubt the highest for the last several years—312,000 tons, to be precise—but was lower as compared with the production in 1939-40. The position in East U.P. is also serious, as the sugar mills there are not able to get even an economic crush. The production of 328,000 tons in the last season exceeded the 1936-37 level of output by just 4,000 tons.

It is thus evident that a large number of sugar factories in East U.P. and Bihar have not been able to make any headway, despite the progress of the sugar industry as a whole. From the point of view of market also, we are told that the sugar mills in this region are at a serious disadvantage. To quote Mr. Sawhney: There is no important market where they enjoy preference of any sort. Their production has to be sold in far-off places in competition with others more favourably situated."

Only Reasonable

The aforesaid trend is disquieting, especially considering that the sugar industry plays an important role in the economy of East U.P. and Bihar. Sugarcane is grown in this region primarily for being supplied to sugar mills. It is stated that in no other part of the country is the dependence of the agricultural economy on sugar industry so marked as in this region. Mr. Sawhney referred to this aspect and urged the Government of India and the two State Governments concerned to pay special attention to the problems of the sugar industry in East U.P. and Bihar. In his opinion, it is only reasonable that the tax burdens on the industry are lightened so as to enable the industry to rehabilitate itself. He regretted that, although the industry in these areas had been repeatedly representing for relief in excise duty on sugar and cess on cane crushed by mills, no relief had so far been given. Another direction in which the industry seeks the Government's assistance, he added, was by way of cane development work "which alone would provide a lasting solution to the ills." In this connection, Mr. Sawhney made the following general observations:

"Speaking of the difficulties of the East U.P. and Bihar factories in the matter of cane development, I am mindful of the fact that the position with regard to cane development in the country as a whole requires much more concentrated attention than has perhaps been given so far. The poor yield and quality of our cane is a malaise from which the industry as a whole suffers. This is the main problem facing the industry. Though the authorities themselves are conscious of the leeway to be made and have also undertaken some positive steps in the last few years, the problem is so big that all the efforts done so far have made little impression on the overall position."

There is no exaggeration whatever in the aforesaid remarks. As this journal has itself stressed time and again, barring a few selected areas here and there where striking improvement is noticeable, both the yield of cane per acre and the sucrose-content in cane have not only not increased but have actually tended to decline over the past 14 years. The all-India average per-acre yield of cane is at present not more than 13.27 tons (second estimate for 1957-58), as against 14.50 tons in 1942-43. Similarly, the average recovery per cent. of sugar in cane is low at 9.76, as against 10.28 in 1942-43. How backward is cane cultivation in India when compared to the other sugar-producing countries of the world is indicated below:

	Per-acre yield of cane (Tons)	Recovery (Per cent.)	Per-acre recovery of sugar (Tons)
India	13	9.73	1.26
Hawaii	62	10.46	6.45
Java	56	11.49	6.44
Australia	21	14.33	3.06
Mauritius	20	12.08	2.57
South Africa	22	10.90	2.44
Cuba	17	12.25	2.09

A Truism

It is a truism that sugar is grown in the fields, not in the factories. As Mr. Sawhney rightly declared, so long as we do not get from the fields what they are capable of yielding in terms of both quantity and quality of cane, so long will our industry remain in an unenviable position. He did well to call upon the Indian Central Sugarcane Committee—it is this Committee which supervises cane research in the country—to redouble its efforts to see that the tempo of research increased and that the results of such research were increasingly brought to the knowledge of the grower in the field. He said:

"Our Association had suggested that, in order to give a stimulus to the working of the research institutes, it would be better to bring all the main institutes under an autonomous Sugar Research Board on which the industry and the growers would be represented. But somehow the Government have not seen their way to agree to this suggestion so far. It is true that the Indian Central Sugarcane Committee on which the industry and the growers are represented has as one of its functions the supervision of the sugarcane institutes. But, in view of its multifarious activities, it would be advisable if the research institutes are placed under an autonomous Board devoted exclusively to research work. This Board would also take over the National Sugar Institute, Kanpur, presently not under the Indian Central Sugarcane Committee which would help better co-ordination between agricultural and technological research."

While the above suggestion is quite pertinent, there is no denying the fact that one of the most effective ways of bringing about a quantitative and qualitative improvement in sugarcane cultivation lies in the replacement of the present defective system of pricing cane based on quantity by a system of linking the cane price to quality as well as weight. It is only the adoption of such a system that will induce quality-consciousness among the agriculturists, inducing them to put forth efforts for planting improved types of cane with higher sucrose-content. Although the principle was accepted by the Government long ago, it has not yet been translated into actual practice. Indeed, it is deplorable that the Government has come out with its decision to fix minimum price of cane for the ensuing season—that is, 1958-59—at the existing high level of Re. 1.44 per maund (delivery at the gates of factory) and also to link it to the prices of sugar realised by mills. In other words, the cane growers are assured of a share in the so-called excess profit of sugar mills without any obligation on their (cane growers) part either to share the loss incurred by the sugar mills or to assure adequate and regular supplies of cane to the mills.

(*Concluded from next column*)

basis of the latest appreciation of the position, the additional production in the public sector by 1960-61 is expected to be 10.78 million tons, including 1.14 million tons from Singareni." It is rather surprising to note that this remark is not to be found in the Ministry's main report for the year. It will thus be seen that the public sector's output will fall short of the target of 12 million tons set for it under the Plan (including 1.5 million tons from Singareni Collieries) by 1.22 million tons. The summary report, however, adds that certain additional possibilities are also under consideration by the National Coal Development Corporation.

COAL OUTPUT BY NEW STATE COLLIERIES

MINISTER NOT VERY OPTIMISTIC

IN reply to the debate in the Lok Sabha on the demands for the Ministry of Steel, Mines and Fuel, in the course of which some of the members expressed doubts about the public sector's target of coal output under the second Plan being fulfilled, Mr. Swaran Singh, Union Minister, assured the House that every effort would be made to explore all possibilities of increasing coal production to reach the full target fixed under the Plan. Many difficulties beset the development of new coalfields and such development cannot also be expeditiously carried out. All this suggests that one cannot be too optimistic about the success of the public sector in achieving the target. Two years of the Plan period are over and not even a single ton of coal has been produced from new collieries. Whatever increase in output has been achieved so far in the public sector has come from the existing collieries. In fact, the Minister himself expressed his concern about the chances of successful execution of the production programme for the new collieries. According to the Minister, on the basis of the arrangements made and the commitments entered into, the expected production from the new collieries under the public sector would be of the order of 7 million tons per annum. If the full target of 12 million tons is to be achieved, the output of the existing State collieries and the Singareni collieries should be raised by no less than 5 million tons from the level at the beginning of the Plan period, as against which their additional output in the first two years is only 930,000 tons.

Outlining the progress in production made so far under the second Plan, Mr. Swaran Singh said that there had been an overall increase of about 14 per cent. in the total output of coal in the country during the first two years of the second Plan period. At the beginning of the Plan, that is, in 1955, production was 30.21 million tons, and this rose to 43.49 million tons in 1957. The share of the private sector in this production has, according to the Minister, gone up from 33.85 million tons to 38.20 million tons, representing an increase of nearly 13 per cent. This means that the output of State collieries amounted in 1957 to 5.29 million tons as against 4.36 million tons in 1955, or an increase of over 21 per cent.

Has Done Better

Mr. Swaran Singh claimed that percentage-wise, the public sector had done better than the private sector in raising more coal from the existing collieries. The figures of production in the public sector include those of the Singareni Collieries, the output of which has gone up by over 27 per cent. As regards the Singareni Collieries, there does not seem to be any decided view in Government circles whether it should be included in the private sector or in the public sector. While the Minister's statement above shows that these collieries come within the public sector, the Ministry's annual report for the year 1957-58 indicates that they are included in the private sector. Thus, the output of the public and private sectors in 1957 is given as 3.38 million tons and 40.11 million tons, respectively, as against 5.29 million tons and 38.20 million tons quoted by the Minister. It may be noted in this connection that the Singareni Collieries are not owned by the Central Government. The Andhra State Government, which owns 88 per cent. of the shares of the Company, runs it.

To revert to the Minister's speech. Replying to the criticisms made in the House about the poor performance of the public sector, Mr. Swaran Singh wanted the members to bear in mind that the additional production in the public sector had to be achieved by the development of virgin coalfields, which was a time-consuming process. After mentioning the various difficulties which beset the development of new coalfields, the Minister said that, in the absence of a phased programme, members would have to judge the performance of the public sector only after the full Plan period was over. He disclosed that the Government was not complacent in the matter of raising coal production in the public sector.

The cautious note struck by the Minister on the prospects of the public sector achieving its target is substantiated by the Ministry's annual report for 1957-58. The official summary of the Ministry's report thus says: "On the

STOCKS OF JUTE GOODS SHADE LOWER

SHIPMENTS ALSO DECLINE

FOR the second month in succession, the stocks of jute goods with mills have shrunk, although the fall during the latest month, that is, March 1958, is negligible. The stocks, which had gone down by 1,700 tons to 94,900 tons at the end of February, have further fallen by 500 tons to 94,400 tons at the close of March. The aggregate decline of 2,200 tons in two months is only a fraction of the sharp rise in stocks which occurred in January this year, when they mounted from 75,000 tons to 96,600 tons, and shows that the offtake of gunnies has not picked up to any great extent. On the contrary, the statistics relating to shipments during the month under review, as will be shown later, disclose a sizable drop. Obviously, there must have been a further decline in production during the month.

A variety-wise analysis of the stocks shows that the fall has occurred only in hessian, which has declined by 2,700 tons to 24,500 tons. This shrinkage in hessian stocks is on top of a drop of 2,500 tons in February. The cumulative decline in the past two months has more than offset the increase of 4,500 tons noted in January this year and has brought the March-end stocks of hessian to the lowest level since January 1957, when they were at a low of 23,800 tons. In contrast to the fall in hessian stocks, the stocks of sacking have gone up by 1,600 tons to 54,900 tons (as against a small decline of 400 tons noted at the end of February), at which level they constitute the highest level since July 1957. Stocks of "other manufactures" have also gone up by 600 tons to 15,000 tons and with this rise, they have maintained the upward trend for the seventh month in succession, lifting them from a low of 6,600 tons touched at the close of August 1957. At 15,000 tons, the stocks of "other manufactures" constitute the highest level seen in any month so far.

Stocks Compared

The comparative statement of stocks of the three main categories given below shows that the stocks as a whole show a decline of 3,300 tons over the year, mainly due to a rise of 3,600 tons in "other manufactures."

(In tons)

	As on 31st Mar., 1958	As on 28th Feb., 1958	As on 31st Jan., 1958	As on 31st Mar., 1957
Hessian	24,500	27,200	29,700	29,800
Sackings	54,900	53,300	53,700	56,500
Others	15,000	14,400	13,200	11,400
Total ..	94,400	94,900	96,600	97,700

There has been a setback in shipments (including coastal shipments) during March, as seen from the gross figures based on shipping bills presented, having fallen from 63,529 tons in February to 60,955 tons. This reverses the upward trend noted in the previous month, when shipments moved up by 16,139 tons from 47,390 tons in January this year. This decline in shipments is not surprising, in view of the fact that throughout the month overseas buyers were reported to have not placed any bulk order, but were content with buying their immediate requirements. The following comparative table shows the variety-wise shipments:

(In tons)

	Bags	Cloth	Total
Hessian—			
March 1958	2,814.9	31,128.1	33,143.0
February 1958	1,510.3	29,409.1	30,919.4
March 1957	3,030.3	32,415.7	35,446.0
Sacking—I			
March 1958	27,183.4	679.4	27,812.8
February 1958	32,287.3	322.7	32,610.0
March 1957	40,095.4	5,412.2	45,507.6

It will thus be seen that the decline in shipments is mainly accounted for by sacking, the shipments of which have dropped by 4,797 tons over the month, while hessian shipments have gone up by over 2,223 tons. The increase in hessian shipments is duly reflected in the fall in their stocks with mills at the end of the month, as seen above. As compared with the corresponding month of 1957, the shipments have dwindled considerably, that is, from 80,953.6 tons to 60,955.8 tons. The bulk of this is accounted for by sacking, the shipments of which have declined from 45,507.6 tons to 27,812.8 tons. Hessian shipments have also fallen from 35,446 tons to 33,143 tons.

The figures of despatches for export purposes and internal consumption relating to March are not yet available. It is, therefore, difficult to say how far the offtake from abroad during the month has been influenced by the minimum prices fixed by the I.J.M.A. at the end of February. Meanwhile, the minimum price scheme is said to have proved a greater success than had been expected. When the scheme was introduced there were doubts in certain circles that it may prove to be a failure, but these fears have not materialised. On the contrary, the scheme is said to be working well and have so far helped the market prices stabilise themselves, though a shade below the minimum prices fixed. The prices of raw jute have also benefited by the fixation of minimum prices. This, coupled with reports of scanty rainfall in the growing areas and the reserved attitude by sellers, has been keeping the jute goods market on an even keel. The curtailment of speculative activity in the *fatka* market, following the fixation of minimum prices and the opening of the futures trading on the East India Jute and Hessian Exchange, thus providing genuine and reliable hedging facilities, is expected to have the desired effect of bringing stability to the trade and restoring confidence of overseas buyers. It is, however, desirable in the interest of the industry and trade that the minimum prices should be maintained as long as circumstances warrant it. Otherwise, buyers will be inclined to keep out of the market in the belief that the minimum price scheme would be rescinded in the near future. The general outlook for the industry, however, depends on how far the American recession deepens or is checked, the Australian crop position in the current season and, more than anything else, how far the prices of Indian goods prove to be competitive. This, in turn, depends on the raw jute position.

FRENCH JUTE INDUSTRY

The production of jute yarn in France during December 1957, estimated at 8,500 tons, showed an improvement over the preceding month's total of 7,742 tons and the December 1956 output of 7,383 tons. Disclosing this, the *Jute Bulletin* of the Indian Central Jute Committee says that jute fabric production also rose to 6,700 tons in December 1957, from 6,187 tons in the previous month and 5,959 tons in December 1956. The total annual production of jute yarn in 1957, however, fell to 90,976 tons from 95,940 tons in 1956. Jute fabric production in 1957 dropped to 70,233 tons from 74,244 tons in the previous year.

Raw jute imports into France in November, 1957, were up at 10,030 tons from 7,493 tons in October 1957, and 5,722 tons in November 1956.

Exports of sacks, bags and cloth during November 1957, declined to 1,507 tons (1,001 tons to French territories and 506 tons to other countries) from 2,054 tons (1,319 tons to French territories and 735 tons to other countries) in the corresponding month of 1956.

The French jute industry employed 8,712 operatives who worked 1,265,000 hours in November 1957, as compared to 9,291 operatives working 1,571,000 hours in the same month of the previous year.

BURMA TO EXPORT RAW JUTE

There is a possibility of Burma's entry into the field of raw jute export in the near future to provide an alternative source of raw material to jute industries outside India, reports the *Jute Bulletin* of the Indian Central Jute Committee.

The Burma Government has received a recommendation from the Director-General, Agricultural and Rural Development Corporation, that all top qualities and grades of jute grown internally should be released for export. The recommendation is based on satisfactory grading results of Burmese jute samples sent to Dundee for tests.

It is of interest to note that even though jute cultivation in Burma has not yet been undertaken on a commercial scale, the last crop of 1,500 tons gave, on grading, an average of 25 per cent. Mill of Export Firsts and Lightnings. The next crop is Firsts/Mill Lightnings, with the balance made up planned to produce over 5,000 tons.

two generations at your service

WHEN Sven Wingquist founded SKF in 1907, he inaugurated right from the start a technical advisory service for users of SKF products. It offered then—as it has ever since—assistance with the selection of bearings, the preparation of complete bearing schemes, advice on mounting, lubrication and maintenance. For 50 years SKF has helped to ensure the use of the right bearing in the right place in machinery, vehicles, instruments and other applications of every conceivable kind throughout the world. It has carried out systematic research into bearing schemes and helped engineers everywhere to utilize bearings to the full, both technically and economically.

Innumerable bearing problems have been solved by SKF technicians ... and each solution has added to the vast storehouse of technical knowledge and experience available to every SKF engineer.

Today a new generation of specially trained SKF engineers is available in over 250 SKF offices throughout the world to solve the bearing problems of tomorrow. They are there to assist *you* in *your* progress. They are experts at their job — and they are backed by modern research departments. With the accumulated experience of the older generation at their disposal, they are ideally equipped to serve *you*. Why not put them to the test?

UTILITY OF STOCK EXCHANGES

A MECHANISM TO CHANNEL SAVINGS INTO PRODUCTIVE INVESTMENT

By George Carvelho

THERE is probably no other economic organisation about which there is so much apparent ignorance and misconception as the stock exchange. Even otherwise well-informed people have only the haziest idea of the nature, functions and importance of this useful institution and, as a result, the most fantastic falsehoods about it are accepted with uncritical credulity. This is particularly unfortunate because, in all probability, the stock exchanges will have to do a far bigger and more important job, in the years that lie ahead, than at any time in their history. For as the assault on economic inequality gathers force, wealth and income will become more widely diffused. Saving and investment in private business enterprises and even in governmental bonds will then cease to be the functions of the privileged few and will become increasingly the domain of a wider section of society, and eventually perhaps of the masses of the people.

Even now, the ownership of shares and securities is more widespread than is generally realised. With the disappearance from the investment scene of *zamindars* and princes, the function of supporting the stock market has devolved largely on the small investor of modest means and on institutional investors. Speaking at the T.I.S.Co. annual meeting, in August 1957, Mr. J. R. D. Tata said that nearly half of the shareholders of the Company had holdings of less than Rs. 1,000 each, while the holdings of about 87 per cent. amounted to less than Rs. 5,000 each. Mr. E. D. Sheppard of Killick Industries calculated that the ratio of shareholders to labourers in industry was surprisingly large, one shareholder to one labourer in steel, one shareholder to one labourer in cement, one shareholder to two labourers in textiles, and ten shareholders to one labourer in electricity.

Shareholding Democracy

If greater progress has not yet been made towards a shareholding democracy, the responsibility lies more with the Government than with the stock exchange. Taxation and inflation have left the once prosperous middle class without the wherewithal to invest. But it is a fair guess that as economic planning bears fruit in rising national income, and heavy direct taxation thins the ranks of those who conform to the conventional description of capitalists, the ownership of investments will become more broadbased. It will be the function of the stock exchange to render, on a truly nation-wide scale, the services which they now provide to a relatively small section of society.

If the stock exchanges are to prove equal to the tremendous responsibilities that will be laid upon them, an essential preliminary is that they must do a much better public relations job than they have done in the past. Traditionally, stock exchanges have shunned publicity, perhaps as a consequence of the ban on advertisements imposed on its members. But while this is a healthy and desirable restriction, it does not extend to an organised campaign to educate and inform public opinion about the nature of stock exchanges and the functions they perform. Never before has such publicity been so urgently needed. The New York Stock Exchange, for example, publishes an attractive monthly brochure for the investing public and the London Stock Exchange has constructed an impressive visitors' gallery.

Primary Purpose

Basically, a stock exchange is a market for shares and securities, in the same sense as we speak of a market for houses or for that matter, for shoes and ships and sealing wax, or cabbage, but not Kings. The difference is that it is much more highly organised than these. It is a 'perfect' market in the economic sense, unfortunately not always also, in the ordinary sense. Its primary purpose is to ensure the liquidity of investment. In other words, it aims at creating conditions in which any holder of a share in a company, or of a Government security will be able to sell his investments at any time he desired, quickly, smoothly and at a price corresponding to the current worth of that share or security. The importance of this ready liquidity of investments can hardly be exaggerated. The ordinary investor is willing to put his savings into shares, because he has the comforting assurance that, should he decide, at any time, for any reason, that he wanted to sell, he can do so, through the stock exchange, at the current market price, far more easily than he could sell a house or any other commodity. It is this assurance, that he is not tied for better or for worse to the concern whose shares he buys, that he does not have to sink or swim with it, that makes him willing to venture into investment.

Market Prices

Not only this. The investor, by following the daily stock exchange prices, can keep himself continually informed about the current market price of his holdings. The prices of shares, like the prices of everything else, are the consequence of demand and supply. In the case of shares, demand and supply are influenced by innumerable factors, some relating to the circumstances and conditions peculiar to the particular concern, others of a more general nature, reflecting the prevailing currents of economic, political and every other influence, which have a bearing on the position and prospects of that particular concern. In general, the price quoted for a share on the stock exchange reflects the present estimate of its worth, in the light of all factors, present and future that are expected to affect it. The importance of this up-to-the-minute valuation of investments is easy to see. The investor is provided with a stream of price quotations, which enables him to keep track of changing opinion about the profitability of his investments. Should he decide, at any time, that he has had enough and would like to get out, he can do so, with no more effort than that required to contact a broker, by letter, telegram or telephone.

Passing from individual price quotations to the whole list, the trend of stock market prices and the volume of business act as an economic barometer, registering the current judgment of informed opinion regarding the overall state of the economy and the outlook for the future. There may be occasions when these opinions and judgments are unreasonable, shallow and wrong. But whether right or wrong, excessive or deficient, they are an index of prevailing opinion. No serious student of economic affairs or practical business man or those who shape the economic policies of the Government, can afford to disregard the mood of the stock exchange and its assessments of current events, reflected in share prices. Without this barometer, fiscal and general economic policies would be shots in the dark and would involve the costly and perhaps even disastrous experience of hit or miss tactics.

Capital Formation

It is easy to see, in the light of all this, that the stock exchange plays an important role in the mechanism of capital formation. By offering to prospective investors a variety of securities including gilt-edged, debentures, preference shares and equities. it caters to all tastes, ranging from the ultra-cautious type who wants, above all else, a fixed rate of return and the maximum security of capital, to those venturesome spirits who are willing to face the risk of fluctuating dividends and wide variations of capital value. Not only does it provide an outlet into productive investment for existing savings, it stimulates new saving through the wide range of investment opportunities which it offers.

The stock exchange is not directly concerned with new issues. Its wares consist of existing securities. But a new issue is made more attractive to investors, if they know that it will be admitted to the stock exchange list and will therefore gain the advantage of regular quotations and quick sale if necessary. Without this, not many investors will be willing to take up a new issue.

The process of capital formation is given direction and savings are channelled into the most productive investment through the prices quoted on the stock exchanges. The price movements register the changing fortunes of different industries and companies, with a surprising degree of accuracy. New savings are drawn towards those among them, on which, the stock market has pronounced the most favourable judgment.

Were stock exchange operations limited to the transactions of genuine investors, there would perhaps be a wide measure of agreement about its social utility. But in most people's minds, the stock market is inseparably associated with speculation. And speculation is one of those judgment-charged words that carry with them a cluster of anti-social implications. The antics of bulls and bears, the esoteric mysteries of forward trading, fortnightly settlement and carry-over charges, appear to the uninitiated outsider as little more than facilities for large-scale gambling. That operators should enter into contracts to buy or sell vast amounts of shares without the slightest intention of taking or making delivery, that they should virtually bet on whether the price will move in their favour or against them and that only the winnings or losses should change hands, appears a monstrous perversion of the functions and advantages of stock exchanges.

Liquidity

There is an element of truth in such charges, but they do not amount to the whole truth. Provided it is not allowed to get out of hand, speculators render a useful economic service, though like most people in a similar situation, they are entirely unaware of the fact and are preoccupied only with their own gains and losses. But if stock exchange operations were limited only to genuine investors, the resulting volume of business would be far too little to provide that ready liquidity of investments and daily quotations of prices representing the present worth of shares, which are the great advantages of a stock exchange. When the volume of speculative dealings is added to those of genuine investors, this liquidity is assured and the correct price can be quoted at any time.

Speculators are thus not wholly pernicious parasites infesting the stock market. Within limits, they are necessary, and beneficial. But when the limit is exceeded, they become a dangerous menace to economic stability and ordered economic progress. It is all a matter of relative magnitudes. As Keynes said in the "General Theory", "Speculators may do no harm as bubbles on a steady stream of enterprise. But the position is serious when enterprise becomes the bubble on a whirlpool of speculation. When the capital development of a country becomes a by-product of the activities of a casino, the job is likely to be ill done."

It is futile to deny that Indian stock exchanges have had more than their fair share of speculators and there have been times when capital-forming, investment-directing activities have been almost submerged in an orgy of gambling. At such times, the gyrations of share prices have had little or nothing to do with sober, informed judgments about economic conditions and prospects. Prices fluctuated widely, according to the doings of whichever big operator happened to dominate the market at that particular time. Such behaviour cannot be too strongly condemned, for it defeats the very purpose for which a stock exchange exists. Saving and investment are discouraged and the mirror of investment gives a distorted and false reflection.

New Act

An important step towards the eradications of these evils was taken with the enactment of the Securities Contracts (Regulation) Act, 1956. Kerb markets and option dealings, which provided opportunities for the more obnoxious forms of speculative gambling, have been banned, stock exchanges are officially recognised and subjected to stringent, perhaps even excessive, control to ensure that healthy investment and legitimate speculation are facilitated and the undesirable varieties eliminated. This move to preserve and reform stock exchanges is a more sensible approach than that which advocates abolition of these useful organisations. There can be no doubt that healthy, vigorous stock exchanges have an immensely important part to play in mobilising the nation's savings and channelling them into productive investment. They will be more needed than ever before in India in the next few years.—*All Rights Reserved.*

NEW PRODUCTS AND PROCESSES

Building Boards from Sawdust

A PROCESS, utilising the abundantly available wood wastes like sawdust, for making hard boards has been developed at the Forest Research Institute, Dehra Dun. According to this process, sawdust or other similar material is thoroughly mixed with activators like tamarind fruit pulp, a phenolic substance and water in suitable proportions in a mixer and then dried to the desired moisture content. It is then pressed into boards at a high temperature and suitable pressure. Boards comparing favourably with the commercial hard boards are obtained by this process. By using suitable moulds simple moulded articles can also be made from the same composition.

The boards obtained by this process are hard, strong and of a uniform colour. They are to some extent thermoplastic in character and can be painted, varnished or polished as desired. Hard boards prepared by this method can be used in panelling, partitions, ceilings, cupboards, shelves, doors, furniture and as a core for plywood. Moulded articles like inkstand, ash tray, commode seat, tank packing, knobs, etc., can also be made.

The method is applicable both to soft woods and hard woods and their wastes. The equipments required consist of a disintegrator (if material other than sawdust is used), sieving machine, mixer, drier and a hot press. The manufacture can be adopted on a large as well as small scale. Saw mills and plywood factories, with their own supply of wood waste can adopt the process with advantage. Parties desirous of undertaking the commercial development of the process may contact the Secretary, National Research Development Corporation of India, Mandi House, Lytton Road, New Delhi.

Tractor-drawn Attachment for Planting Sugarcane

With a view to mechanising sugarcane planting, a planter attachment capable of sowing three rows at a time and suitable for use with a Fordson Major Tractor has been designed by the Indian Institute of Sugarcane Research, Lucknow. The rear mounted tool bar fitted with three standard ridger bodies is used as the basic unit for the design. Three wooden seats are fitted above these ridger bodies and to the rear of these seats are fixed three chutes leading vertically down to the furrows made by the ridger bodies. Wooden boxes carrying the setts to be planted are provided between the seats. A fertilizer distributor divided into three compartments is also provided for applying fertilizer in the furrows. A wooden board attached behind the tool bar levels the ground immediately after the planting is done. This new attachment reduces the labour required to be employed during the planting season and also speeds up the planting operation. Consequently, the cost of planting is appreciably reduced. With this attachment it is possible to plant six acres in eight hours maintaining a tractor speed of about two miles per hour. The attachment although originally designed for the Fordson Major Tractor, can, with minor modifications in the dimensions be made suitable for use with other tractors also. The fabrication of these attachments is simple and does not involve the use of heavy machine tools. Only a hand operated shearing machine, an electrically operated drill press, one small bench, lathe and one oxy-acetylene welding set are required; and hence it is possible to manufacture these units even in a small workshop. Parties desirous of undertaking the commercial development of the device are invited to contact the Secretary, National Research Development Corporation of India, New Delhi.

Engine Converts Heat Directly to Electricity

An experimental model of an engine capable of converting heat directly to electricity has been developed by two Massachusetts Institute of Technology (U.S.A.) scientists. Professors G. N. Matsopoulos and Joseph Kaye say they believe their engine could become "more than competitive in the small power plant field," although they do not think it feasible yet for large generating plants. The engine model—still in the testing stage—is based on the fact that when two metal plates are placed side by side and heated to different temperatures electrons leap from the hotter one to the cooler one, forming a stream of electricity.

Tranquilisers Prevent Death from Shock

In tests with animals, tranquilising drugs have been used to prevent death from shock after severe injuries. The results suggest that tranquillisers might be used to protect human beings involved in serious accidents, it was reported recently to a sectional meeting of the American College of Surgeons at New York. Further, it was reported that the tests seem to substantiate a 50-year-old notion that bodily injury releases poisons that may cause death through shock. The new findings suggest tranquillisers may block the action of the poison and thus prevent death.

Measuring Temperature Conductivity

Two new devices for measuring the efficiency of materials used to provide insulation against heat have recently been developed in the U.K. One of these units, a small probe-like device, which is for measuring the thermal conductivity of insulating materials, is now being made available, it is expected to be especially important in the preservation of foodstuffs. The second instrument, which was developed quite independently, is designed for use in measuring the heat-carrying properties of soils adjacent to buried electric cables and to pipes carrying hot fluids. The instruments, originally developed by the Department of Scientific and Industrial Research and by the Electrical Research Association respectively, are being manufactured by H. Tinsley and Co.

Dasturco offers a comprehensive range of services right from surveys and reports to the design and construction of plants.

EMPLOYEES' STATE INSURANCE

PROGRESS DURING 1956-57

AT the end of the year 1956-57, according to the Annual Report of the Employees' State Insurance Corporation, the Employees' State Insurance Scheme covered 1,122,500 employees. The scheme has made rapid progress not only in the coverage of employees, but also in its extension to different areas. It is at present operating in 42 regions in the States of Delhi, Uttar Pradesh, Punjab, Madhya Pradesh, Bombay, Madras, West Bengal, Andhra Pradesh and Kerala. According to Mr. Abid Ali, Union Deputy Minister for Labour, the total employees insurable under the scheme at present is estimated at about 2 million. The scheme, therefore, covers about 56 per cent. of the total insurable population. At the end of the year under review, arrangements for the extension of the scheme to Patna, Katihar, Monghyr and Samestipur in Bihar State, Jabalpur in Madhya Pradesh and Beawar in Rajasthan, were in progress. Negotiations with the Government of Mysore were also in progress for early implementation of the Scheme in Bangalore. It may be noted here that the scheme was extended in 1955-56 to industrial areas in two States, Kerala and Rajasthan, and extended to more centres in three States, namely, Madras, Madhya Pradesh and Uttar Pradesh.

Medical care, it is common knowledge, forms the pivot of the scheme and is supplied in kind. Even for cash benefits payable in the event of sickness, maternity and employment injury, medical certification is essential. Originally, medical care consisted only of outdoor medical treatment supplemented with domiciliary visits where necessary. This has been considerably improved in the past few years by including specialist care in medicine, surgery, gynæcology, and midwifery, radiology, pathology, tuberculosis, etc. In-patient treatment has been accepted on the scale of approximately two beds per 1,000 employees. These beds are provided as a temporary measure in existing Government and private hospitals and this is to be followed by the construction of annexes to existing hospitals or separate hospitals in areas where the number of beds required exceeds a hundred.

The standard of medical care, it is stated, has also considerably improved in recent years. General medical and domiciliary cases are at present provided either through full-time service system of salaried doctors and staff or through the panel system, that is, by individual agreements with private medical practitioners on payment of a capitalisation fee per insured person. The panel system is at present working in Bombay, Calcutta City and Howrah district and the Punjab, and partly in Coimbatore and in two towns in Madhya Pradesh. The service system is in vogue in the remaining areas. During the year under report, preliminary figures indicate, 21,11,370 new and 64,72,627 old cases were treated at the various State insurance dispensaries and the clinics of panel practitioners, as against 15,45,794 and 49,88,011 respectively in 1955-56. Cases referred for admission to hospitals and for specialist investigation were 18,383 and 1,67,231 as against 14,477 and 1,36,951 respectively in the previous year. Medical certificates issued numbered 24,43,850, as against 17,24,970 in 1955-56.

Cash Benefit

The problem of tuberculosis has been receiving the special attention of the Corporation. In view of the hardships to insured persons suffering from this disease, the Corporation has recently approved of the provision of cash benefits to insured patients. This facility, according to the report, is not being availed of by the insured to any large extent. This is surprising. The Corporation will do well to enquire why it is so. One wonders whether the procedure prescribed for obtaining the benefit is simple enough. If it is not, that is surely one of the reasons why it has not become popular with employees. The Corporation also resolved in 1956 to provide, at its own cost, artificial limbs to those whose limbs were amputated due to employment injury.

The income from employers' and employees' contribution has been steadily increasing. During the year, the income from employees' contribution was Rs. 3.22 crores and that from employers' special contribution Rs. 2.59 crores, as compared with Rs. 2.39 crores and Rs. 1.87 crore respectively in the previous year. The total income to the Corporation from these two sources thus aggregated Rs. 5.81 crores in 1956-57, as compared with Rs. 4.26 crores in 1955-56. The income from employees' contribution exceeded that from the employers' contribution by a substantial margin. This was due to the fact that the extension of the scheme in new areas increased employees' contribution more sharply than the employers'. The Central Government, the report says, took notice of this disparity and to remedy this, it has announced its intention to revise the rates of employers' contribution. Whatever might be the justification for this proposal, there is no justification whatever for demanding contribution from employers even in areas to which the scheme does not apply. There is even less justification for increasing the rates of contribution from the employers in such areas.

Administrative Costs

The earlier expectation that the gradual extension of the scheme to new centres will bring down the administrative cost of the scheme seems to have been proved correct, as is evident from the progressively declining trend of the administrative cost to total expenditure. During the year under review, the ratio of administrative cost to total expenditure dropped from 24.71 per cent. to 17.55 per cent. It was as high as 75 per cent. in 1952-53, 50 per cent. in 1953-54, 42 per cent. in 1954-55 and 24.71 per cent. in 1955-56. The ratio of the administrative cost to contribution income also came down from 9.6 per cent. in 1955-56 to 8.7 per cent. in 1956-57. It is to be hoped that the authorities will continuously strive to effect economies in administrative costs.

BRITISH-NORWEGIAN AGREEMENT ON HEALTH INSURANCE

A convention on Social Security between the United Kingdom and Norway came into force on 1st April 1958. Under this Convention, citizens of the United Kingdom will, when visiting Norway, be entitled to the same health service benefits as Norwegians. For a British tourist being taken ill or having an accident during a visit, this means he will receive free transport to hospital and free treatment there. If a Britisher in Norway wishes to consult a medical practitioner of any kind, he will have approximately 75 per cent. of the fee refunded by the Norwegian Social Insurance Institution through the local social insurance agency. As regards medicine outside the hospital, only expenses for vital medicines for specified illnesses are covered by the Norwegian equivalent of the National Health Service under the arrangement. Expenses for dental diseases are covered, but the patient must bear the cost of routine dental treatment such as fillings.

People from the United Kingdom who go to Norway to take up residence there will—on an equal footing with Norwegians—become members of the Norwegian Social Insurance Scheme. Under the Convention, any rights they hold under the British Social Insurance Scheme will be transferable to its equivalent in Norway. In addition to medical benefits, a Britisher in Norway may qualify for the following benefits: cash benefits in case of illness, childbirth, occupational injury and unemployment, children's allowances and old age pensions. Like any Norwegian, they will receive £18 each year for each child from the second onward.

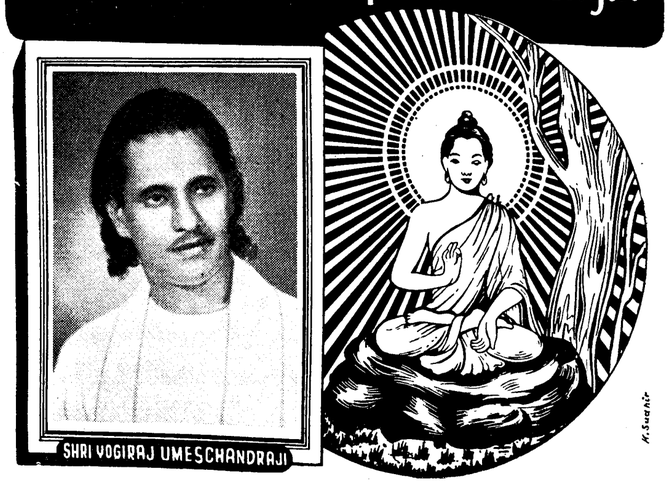
POLICYHOLDERS ASSOCIATION

An association of life insurance policyholders, known as the All-India Life Insurance Policyholders Association, was formed in Bombay on the 7th inst. The aim of the Association is to promote and safeguard the right of life insurance policyholders. Mr. R P. Masani, who presided over a meeting of life insurance policyholders, pointed out that such an organisation was necessary in view of the direct interest of the policyholders in life insurance and the development of insurance business. Explaining the aims and objects, Mr. Morarji Vaidya stated that the Association aimed at preserving the interest not only of the present but also of future policyholders. A sub-committee consisting of 35 members was appointed at the meeting to frame a constitution for the Association.

PANEL DOCTORS AS LEGISLATORS

A Bill seeking to remove the disqualification of medical practitioners appointed as "panel doctors" under the Employees' State Insurance Scheme for becoming members of the State Legislature was passed by the Bombay Legislative Assembly. The Bill, which is an amendment to the Bombay Legislature Members (Removal of Disqualifications) Act 1958, was necessitated by a decision of the Bombay High Court which held that medical practitioners appointed as panel doctors held an office of profit under Government. The Bill also removes the disqualification for membership of legislature of part-time medical officers and specialists appointed under the Employees' State Insurance Scheme.

LECTURES are held on various subjects like Physical Health Mental Peace and Spiritual Strength



RAMTIRTH BRAHMI OIL (Special No. 1)

Hair and Brain Tonic, and useful for Eyes, Memory, Sound Sleep and Body Massage is being prepared scientifically with precious ingredients at SHRI RAMTIRTH YOGASHRAM. It is useful to every one in all seasons. Available everywhere. *Price: Big bottle Rs. 4/-, Small bottle Rs. 2/- postage extra.*

YOGASANA MAP (Chart)

To be healthy and to keep fit ask for our attractive Yogasana Chart showing Yogic Asanas, which will be sent on receipt of an M. O. for Rs. 2/- including postage. These Asanas can be easily performed at home.
