A process for producing carbon bonded graphite crucibles has been developed at the National Metallurgical Laboratory, Jamshedpur. According to which the body ingredients are mixed hot and pressed in hydraulic or toggle presses into crucibles. The crucibles are aged, baked in a reducing atmosphere and then flashed at high temperature before storage. The process has been studied on semi-pilot plant scale and crucibles with a capacity of 20-25 lbs. of metal have been prepared. Crucibles sent for service trials have been favourably reported upon by industrial concerns. Although only one grade of carbon bonded crucibles has been perfected so far, with the data available, it may be possible to produce crucibles for specific temperature ranges. These crucibles can be used in non-ferrous and ferrous foundries and for highly corrosive melts also due to their higher corrosion resistance. Machinery and equipment required for producing these crucibles consists of size reduction units, mixers, crucible press, baking kilns and flashing furnaces. Parties interested in undertaking the commercial development of the process may contact the Secretary, National Research Development Corporation of India, New Delhi.

They live next-door to each other ... years apart!

Next-door neighbours may look and dress alike; yet each is an individual ... sometimes, years apart in ideas and outlook.

It's a fascinating business, studying people and their next-door neighbours. At Hindustan Lever, through the modern science of marketing research, we study needs, aspirations, preferences, dislikes. They help us know you better, guide us in making products that will suit your taste, your pocket ... your way of life.

In this way, you are advising us, guiding us — for ultimately it is *you* for whom we produce.

AMENDING COMPANIES ACT—IV

SUGGESTIONS OF SASTRI COMMITTEE ANALYSED

By F. R. Ginwalla

IN this article, we shall examine the recommendations made by the Amendment Committee for amending the provisions concerning the directors.

Section 252 makes it obligatory on a private company which is a subsidiary of a public company to have at least three directors though such a private company could be formed with only two members under Section 12. A private company which is not a subsidiary of a public company need have only two directors. Accordingly, the Report observes that a private company which is a subsidiary of a public company need have only two directors. Section 252(1) and (2) are proposed to be amended by providing that "a public company shall have at least three directors and a private company shall have at least two directors."

Age Limit

The expectations of Parliament that persons above the age of 65 should retire to make room for younger people do not appear to have been realised to any appreciable extent because the company managements, after giving the necessary special notices, have got resolutions passed for continuance in office of their overaged directors. The Report observes that "on the other hand, in view of the unfavourable comment which this practice has evoked, we believe that within the next few years the provisions as they stand will achieve their object." The Report therefore does not recommend any change in the provisions of Sections 280 to 282. It is further observed that, in the case of directors appointed by managing agents under Section 377, or by debenture-holders, it is essential to obtain the approval of the general meeting for relaxing the age limit.

Tenure of Office

Under the Act, the appointment of a director may be made in any of the following ways:

(1) By the company at its general meeting (Sections 255-56), (2) by the principle of proportionate representation (Section 265), (3) by the directors in a casual vacancy (Section 262), (4) by the directors under Section 260 (appointment of additional directors), (5) by the directors under Section 313 (appointment of alternate directors), (6) by the managing agents (Sections 255 and 377), (7) by the third parties having a right under the articles (Section 255) and (8) by the Central Government (Section 408).

The Report does not propose any amendment to Section 260 (appointment of additional directors), Section 262 (appointment of directors in casual vacancy) and Section 265 (appointment of directors by proportional representation). The Report, however, proposes amendments to Sections 255, 256, 257, 313, 377 and 408 relating to the appointment of directors. It was suggested to the Amendment Committee that chambers of commerce, trade associations, clubs and companies licensed under Section 25 should be exempted from the operation of Section 255 because all directors generally retire simultaneously every year. The Report states that a general provision may, therefore, be made by adding at the beginning of Section 255(1) the words: "Unless the articles provide for the retirement of all directors at every general meeting."

The expression "retiring director" in Sections 256, 257(1) and 264(1), according to the Report, should be taken to refer to a director liable to retire by rotation and who is about to retire and not to additional or alternate director or director appointed by debenture-holders or financiers pursuant to the articles. The Report suggests that the words "a director retiring by rotation" should be substituted for the words "a retiring director" occurring in Sections 256 and 257. While we are on Section 257 we may note a further amendment of Section 257. The Report states that the amendment of Section 257(1) is necessary to prevent resolutions pursuant to notice signifying candidature being brought before the meeting at the last moment, sometimes on antedated notices. The Report recommends that the following words should be added at the end of Section 257(1):

"A copy of such notice shall be forwarded by the company to every member at least seven days before the date of the meeting."

As regards Section 313, the Report states that it is not possible to fix any definite period for the term of office of alternate directors. It suggests that Section 313(2) may be amended in the following terms:

"An alternate director appointed under sub-section (1) shall not hold office for a period longer than that permissible to the original director in whose place he is appointed and shall vacate office if and when the original director returns to the State in which meetings of the Board are ordinarily held."

Section 377 relates to restrictions on the right of a managing agent to appoint a director. The Report observes that "it has been claimed by some managing agents that, by an agreement with the company, they might acquire a right to nominate the Chairman of the Board of the managed company in the exercise of their power of appointment of directors." The Report states that managing agents cannot be permitted to force their nominee as chairman, on the board. It is open to the board to elect the nominee of the managing agents. To clear any doubt Section 377(1) is proposed to be amended by the addition of the words, namely, "but the Chairman of the Board, if any, shall always be elected by the directors."

Under Section 408, the Central Government has powers to appoint directors. The Committee observes in the Report that, in its opinion, the directors so appointed by the Government need not hold qualification shares under Section 270 nor need they be members of the company. They are removable by the Government before the expiry of the term of appointment. In practice, difficulties are felt in finding suitable members of the company who can be appointed by the Government. Government may appoint members if proper persons are available but need not be bound to appoint only members. Section 408(1) is, therefore, proposed to be amended by deleting the words "being members of the company" occurring therein.

It was represented to the Committee that the requirement that 200 members should join in the application to the Central Government under Section 408(1) is difficult of compliance. A suggestion is, therefore, made in the Report that the number may be reduced to 100 but the alternative provision of one-tenth of the voting strength should remain. As a consequential amendment of Section 408(1) it is suggested in the Report that the word "persons" should be substituted for the words "members of the company" occurring in Section 408(2). A new sub-section (4) is proposed to be added to Section 408:

"A director appointed by the Central Government under sub-section (1) or (2) shall not be required to hold any qualification shares nor shall be he liable to retire by rotation but may be removed by the Central Government at any time and another person appointed in his place."

Consent to Act as a Director

Section 264 requires the consent of a candidate for directorship to be filed with the Registrar. It is the view of the Committee that this requirement is a meaningless formality because it may happen that a director may not be elected at all. It is also of the view that it is sufficient if a director files such a consent within seven days of his appointment. Sub-section (1) of Section 264 is proposed to be amended accordingly. The Report on page 99 gives the form of the draft of the amended section on the above lines. It is significant that Section 264 is not applicable to a private company unless it is a subsidiary of a public company.

Qualification Shares

Section 271 requires a director to file with the company a declaration of the qualification shares held by him. The Report states that this is again a needless formality. The Report, however, suggests that such a declaration should be filed with the Registrar and not with the company as mentioned in the section itself. An amendment to Section 271 is proposed by substituting the words "file with the Registrar" for the words "file with the company." This is the only proposed change in this section.

Proportional Representation

The Report indicates that the opinion of the Committee was divided as regards the suggestions on Section 265. The majority of the Committee saw no reason to change the provisions of this section as it was enacted only in 1955 and no new facts were proved to warrant a change. It appears to be the view of the majority of the Committee that the system of proportional representation cannot be made obligatory in the case of public companies. It, however, appears to be the view of some of the members (not a majority) that having regard to the greater scope for oppression of minorities in private companies the system of proportional representation should and can be made obligatory in the case of private companies "without the difficulties attendant upon it in the case of public companies."

Managing or Whole-time Director

The Report states that, in Section 269, there is a drafting omission. On plain reading of the section it is difficult to understand why the appointment of a managing or whole-time director for the first time after the commencement of the Act in the case of an existing company should require the sanction of the Government, while the appointment of a managing or a whole-time director of a company incorporated after the commencement of the Act made within three months of its incorporation should be exempt from such a sanction. The Report observes that the intention of the legislature was obviously that, in such cases, the appointment shall not have effect beyond a period of three months from the date of incorporation, unless approved by the Central Government. The Report suggests that the whole Section 269 should be redrafted so as to indicate clearly the aforesaid intention of the Legislature. The draft of the amended section is given on page 102 of the Report.

Disqualification

The Report observes that a conviction by a foreign court involving moral turpitude is as much a disqualification as conviction by an Indian court. In order to give effect to the foregoing view, Section 274(1)(*d*) is proposed to be amended by deleting the words "in India" occurring after the word "court." Similar amendment is proposed also in Section 267(*c*).

Section 283(1), as it stands, makes it the duty of a director to vacate office on the happening of any of the contingencies specified therein. But, unfortunately, there is an omission of a provision compelling the disqualified director to quit his office as a director. To supply this omission the opening part of Section 283(1) is proposed to be started with the words "A director shall be deemed to have vacated his office if," etc. It is further suggested in the Report that it is desirable to attach a penal provision so as to deter a person from continuing to act as a director after he becomes disqualified. Under Section 283(1)(*e*), a conviction *per se* results in vacation of the office. The Report observes that it is desirable to have one uniform rule for Section 267(c), Section 274 and Section 283, and, in all these cases, conviction for an offence involving moral turpitude by any court, Indian or foreign, should be a disqualification or a ground for vacation of office. The following amendment of Section 283(1)(*e*) is proposed:

" (*e*) he is convicted by a court of any offence involving moral turpitude and sentenced therefor to imprisonment for not less than six months."

Section 283(1)(*h*) is proposed to be amended so as to prevent a director from evading this provision by obtaining a loan indirectly from the company in contravention of Section 295. It is possible that a director may avoid disqualification by taking a loan from the company through his near relative, say a son or a brother. To avoid a possibility of such an evasion, the words "directly or indirectly" are proposed to be inserted after the word "accepts" in Section 283(1)(*h*).

A new clause (L) is proposed to be added to Section 283(1). The word "or" is proposed to be added at the end of clause (K). The proposed new clause (L) is: "(L) having been appointed a director by virtue of his office in or employment by the company, or as a nominee of the managing agents he ceases to hold such office under or to be employed by the company or the managing agency ceases, as the case may be." This amendment is suggested to make it clear that an officer of a company who is appointed as director of the company must cease to be a director when he severs his connection with the company. Similarly, it is reasonable to provide that a director who is a nominee of the managing agents must vacate his office as a director when the managing agency ceases.

The Committee has tried to plug loopholes in the existing Section 294 which has been the subject of criticism ever since the Act came into force. The loopholes in the existing section have enabled the managements to violate the spirit of the law, if not its letter and unjustly enrich themselves at the expense of the shareholders. Space does not permit us to discuss as to how it is possible for the managements to evade this section. The suggestions of the Committee for the amendment of Section 294 appear to be on the right lines but it is a matter of anybody's guess as to what extent these suggestions will be acceptable to the corporate sector. New provisions are proposed to be introduced in Section 294 on the following lines:—

"(1) Where on or after the first of April 1956, a managing agent has resigned his office and taken up a sole selling agency of the company the managing agency of which he resigned, the sole selling agency agreement, whether taken in his name or in association with or in the names of others for his benefit, shall, unless approved by the Government within six months of the date on which the Amending Act comes into force, become void and inoperative.

"(2) The Central Government may, by notification in the official *Gazette*, specify industries or commodities in which sole selling agencies shall not be appointed by any company engaged in such industries or manufacturing such commodities except with the approval of the Central Government of the person, firm or company proposed to be appointed, the area in which such person, firm or company shall operate and the terms and conditions of the selling agency.

"(3) Any appointment of sole selling agencies existing at the date on which the above provision comes into force shall cease unless the approval of the Central Government to such appointment (including its terms and conditions) is obtained within a period of six months after such date."

The Report states that it was pointed out to the Committee that in the ordinary course of business it often becomes necessary to appoint sole selling agents for different areas and that it is inconvenient and needlessly expensive to call a general meeting within six months of each such appointment. The Report appreciates this inconvenience and suggests a remedy in the nature of the proposed amendments in Section 294(1) and (2). It is proposed that in Section 294(1), the words "a period of six months from the date on which the appointment is made" should be substituted by: "before the expiry of six months from the date on which the appointment as sole selling agent is made or at the next general meeting of the company, whichever is later." Section 294(2) is proposed to be amended by deleting the words "of six months" wherever they occur.

Director's Interest

Section 297 refers to contracts in which directors have interest. It was urged before the Committee that occasions might arise, when, in order to avert a stoppage of work or breakdown, it may be necessary to enter into contracts urgently with persons or companies coming within the restriction of the section and that it would be impracticable to obtain the consent of the Board before entering into contracts. The Report, therefore, proposes that a proviso be added to Section 297(1) in the following terms:—

"Provided that if, in the cases excepted under sub-section (2), and in circumstances of urgent necessity, the company has to enter into a contract of the above description with any of the parties aforesaid without obtaining the prior consent of the Board, such consent shall be obtained at the next meeting of the Board or within three months of the date of the contract, whichever is earlier."

It is proposed to amend Section 297(2) in the following terms:

"Section 297(2): Nothing contained in clause (*a*) of sub-section (1) shall affect:—

"(*a*) purchases of goods from the company for cash at prevailing market prices or any contract or contracts for sale, purchase or supply of any goods, materials or services in which either the company or the director, relative, firm, partner or private company as the case may be, regularly trades or does business provided that the value of such goods or the cost of such services do not exceed five thousand rupees in the aggregate in any calendar year with every company, director, relative, firm, partner or private company, aforesaid; and

"(*b*) in the case of a banking or an insurance company, any transaction in the normal or ordinary course of business of such company with any other company, director, relative, firm or partner aforesaid."

The rest of the provisions are not affected.

Disclosure of Interest

The Report states that Section 299 is wide in its terms and the holding of even one share in a public company may be considered as constituting an interest. This has been the law under the old Act and also under the English Act. The Report observes that the difficulty is not so great as is imagined because the director is required by Section 299 to give a general notice only once in a year regarding his interest in the firm or company concerned.

The real difficulty according to the Report arises under Sections 300 and 301. Under Section 300, an interested director cannot take part in the discussion of or vote on any contract or arrangement in which he is interested in terms of Section 299. Section 300 (2) exempts from the operation of sub-section (1) the contracts therein mentioned, but the exemption provided in clause (*d*) of Section 300(2) is very limited. The Report therefore states that the following words should be added at the end of clause (*d*):

"or holding not more than two per cent. of the paid-up capital of the company with which the contract or arrangement is proposed to be entered into."

As a result of the above proposed amendment a director will be able to take part in or vote upon any contract with a public company or its subsidiary provided he does not hold shares of such a company exceeding two per cent. of the paid-up capital.

Section 305 refers to duty of disclosure by directors. As the section includes within the meaning of a director "any person in accordance with whose instructions the Board of Directors of a company is accustomed to act" the reference to a disclosure within 21 days of his appointment is inappropriate. The Report, therefore, suggests that Section 305 should be amended so as to provide that in case of such a "deemed director" the notice should be sent 21 days before the first meeting of the Board held in a year or where he acquires such a position subsequently at the first meeting of the Board held thereafter. The Report further observes that Section 305 should be further amended on the lines of Section 308 so as to cast an obligation on the persons concerned to report to the companies affected any changes in the particulars relating to such persons within 20 days of the occurrence of the change.

Board of Directors

Sections 292 and 293 regulate the Board's powers and place restrictions thereon. These sections have been the subject of criticism. The Report states that it was pointed out to the Committee that these two sections have created hardships and dislocated business in a manner which probably the draftsman did not contemplate. The Report refers to the various difficulties placed before the Committee. Recognising the need to amend Section 292 so far as companies generally are concerned, the Report recommends that Section 292 might be amended so as to provide as follows:

(1) that in any company, it shall be permissible for the Board to delegate the power to borrow, to invest, or to make loan, to the principal officer at the head office or to the branch office, or to any such designated officer, and on such conditions as the Board may prescribe; (2) that the actual day-to-day operation of overdraft, cash credit and other similar accounts shall not be deemed to be borrowings; (3) that the acceptance of deposits by banking companies shall not be deemed to be borrowings; (4) that the placing of moneys by one banking company with another shall not be deemed to be making of a loan; (5) that the total amount on loan at any one time shall be the total amount outstanding after allowing for loans or drawings thereon previously repaid.

In order to give effect to the above recommendations the Report proposes to amend Sections 292(1) and (2). The draft amendments are laid down on page 108 of the Report.

Section 293 restricts the powers of Board of Directors. As regards this section, amendments are proposed in sub-section (1), clauses (*b*), (*c*) and (*e*), explanation to sub-section (1) and sub-section (5). Sub-section (6) is new. The relevant provisions of Section 293, when amended, will read as follows:

The Board of Directors of a public company, or of a private company which is a subsidiary of a public company, shall not, except with the consent of such public company or subsidiary in general meeting,

(*a*) (Same as before); (*b*) remit, or give time for the repayment of, any debt due by a director except in the case of a renewal or continuance of an advance to its director made by a banking company in the ordinary course of business; (*c*) invest, otherwise than in trust securities, compensation received by the company from the compulsory acquisition or requisitioning after the commencement of the Act, without the consent of company of any such undertaking as is referred to in clause (*a*), or of any premises or properties used for any such undertaking and without which it cannot be carried on or can be carried on only with difficulty or only after a considerable time; (*d*) (same as before); or (*e*) .... (*Note*:—A minor drafting change has to be made in this clause by inserting the word "annual" after the word "average").

Explanation I. (Existing Explanation to be numbered as explanation I.) *Explanation* II. Every resolution passed by the company in general meeting relating to the exercise of the power referred to in clause (*d*) of sub-section (1) shall specify the total amount upto which moneys may be borrowed by the Board of Directors. *Explanation* III. Temporary "loans" in Section 293(1)(*d*) means loans repayable on demand or within six months from the date of the loan such as short-term, cash credit arrangements, discounting of bills, and issue of other short-term loans of a seasonal character, but not loans raised for the purpose of financing expenditure of a capital nature.

(2) (Same as before). (3) (Same as before). (4) (Same as before).

(5) No debt incurred by a company from or security given by a company to lender in excess of the limit imposed by clause (*d*) of sub-section (1) shall be invalid or ineffectual as against the company unless the lender had, at the time when the debt was incurred or security given, notice or could with reasonable care and diligence have found out that the limit imposed by clause (*d*) of sub-section (1) had been or was thereby exceeded.

(6) Every company shall disclose in its profit and loss account every donation made by it during the year of account to any political party, giving particulars of the amounts given and the name of the person or persons, association or party to whom or to which, such donation is made.

Reasons for Amendments

We have thus before us the amendments proposed in Section 293. It will be interesting to note why the Committee has proposed these amendments. The reasons may now be briefly stated. Section 293(1)(*b*) is proposed to be amended to avoid the difficulty in the case of advances by a bank to its directors. Section 293(1)(c) is sought to be amended so as to make its meaning sufficiently clear by deleting inappropriate words and adding appropriate words wherever necessary. Explanation II has been added to Section 293(1) because it was pointed out to the Committee that a blanket resolution of a general meeting without setting out any upper limit to the loan should not be permitted. Explanation III is added because the Act does not define the "temporary loans." The Report states that a well-known bank had sent a definition of "temporary loans" and that the Committee has adopted this definition in the form of "Explanation" with suitable modifications.

As regards the expression "free reserves" the Report states that it is sufficiently explained in Section 293(i)(*b*) itself. It is, however, stated in the Report that the foregoing expression refers to general reserves and does not include capital reserves, depreciation reserves or share premium account. As regards the proposed amendment of Section 293(5), it is stated in the Report that the majority of the Committee has desired that the existing Section 293(5) should be left as it is. The minority, however, was of the opinion that Section 293(5) has put undue burden on the lender and was at variance with the provisions of Regulation 79 of Table A of the English Act. The intention of the Committee behind the proposed amendment of Section 293(5) was to protect bankers and *bona fide* creditors advancing moneys to companies.

A new sub-section (6) is proposed to be added on account of the "strongly expressed" views of the High Courts of Bombay and Calcutta—(1) I.C. 199 of 1956. O.C.J. Appeal No. 15 of 1957; 59 Bom. L.R. 738 and (2) A.I.R., 1957 Calcutta, 234—while disposing of applications made by certain companies for confirmation of an alteration of their memorandum of association so as to permit contributions to political parties. It is unnecessary for us to discuss here the facts of those cases. The Report states that different views have been held on the propriety or expediency of allowing companies to contribute to the funds of political parties. On the one hand, it has been said that such contributions are an offer of a monetary temptation to the Government of the day run by the party in power to adopt policies that should help the donors in their business. On the other hand, it is said that there is no wrong-doing, moral or legal, in a company financially supporting a party whose economic and industrial policies the company considers to be or likely to be beneficial or profitable to it. Section 293(1)(*e*) places a limit on the amounts upon which the Board may, on its own authority, make contributions for the purposes therein specified. The Report observes that the legislature has enacted this section in terms wide enough to include contributions to political parties and that the High Courts of Bombay and Calcutta have also taken a similar view.

DEVELOPMENT OF SMALL INDUSTRIES

PROPER CO-ORDINATION OF ACTIVITIES VITALLY NECESSARY

THE eleventh session of the All-India Small-Scale Industries Board, held at Mussoorie last week, did well to focus attention on some of the outstanding problems—both short-term and long-term—confronting the small industries in the country. In particular, the Board expressed serious concern over the scaling down in the Plan in the outlay on small-scale industries from Rs. 200 crores to Rs. 160 crores, a reduction of 20 per cent., and shortage of foreign exchange. It was pointed out that the allocation of foreign exchange was inadequate even for maintaining the present rate of expansion and development of industries, what with the rising demand for external resources from various State Governments for financing the small-scale industries set up by them as well as from the National Small Industries Corporation to finance its hire-purchase scheme. The Board made a fervent appeal to the Government of India to ensure that the foreign exchange requirements of the industries in the private and public sectors were adequately met.

Another problem which came up for discussion at the session related to the difficulties experienced by industries in regard to availability of raw materials. The Board noted that there was shortage of iron and steel and non-ferrous metals. It also noted that the authorised dealers who are often handicapped by control regulations could not satisfy the raw material needs—quantitative and qualitative—of small units. The Board reiterated its plea to the State Governments to set up raw material depots and consult the Iron and Steel Controller to make available the right types of steel required by small units through the existing agencies.

Technical Personnel

The Board dwelt at length on the necessity of removing the lacuna of technical personnel. It recommended the creation of a special cadre of technical officers to serve as understudies to foreign experts in the sphere of industrialisation. It may be mentioned here that there are at present about 16 foreign experts whose entire expenditure is met out of the assistance received from the Ford Foundation. The experts advise the small-scale industrialists on the adoption of modern methods of manufacture, demonstrate use of improved tools and instruments, and assist in the preparation of model schemes and in conducting training courses. Indian technicians are also sent abroad for training in various small industries like battery separators, survey instruments, and shoe lasts industry. There are various institutes where training is imparted to small-scale industrialists in blue-print reading, heat treatment, electroplating, manufacture and assembly of batteries. Many prototype workshops and training centres are being established with foreign assistance (technical and financial) with a view to imparting practical and theoretical training for skilled workers and foremen drawn from small-scale industrial units, besides developing and building prototypes of machines and tools which can be taken up for production by small industrialists. A comprehensive scheme for the setting up of a centre of this type at Howrah has recently been drawn up following discussions between the Japanese Technical Mission (Leader: Mr. K. Tachibana) and officials of the Central Government. The details of the project, including the machinery and equipment and technical experts required for the Centre, are included in the agreed minutes of discussions signed in New Delhi on the 14th inst. This Centre is in addition to the two others now being established—one near the Industrial Estate at Okhla with the assistance offered by West Germany, and the other at Rajkot with the assistance of the U.S. Technical Co-operation Mission.

Meanwhile, the National Small Industries Corporation (N.S.I.C.) is making efforts to procure Government contracts for execution by small-scale units, supply machinery on hire-purchase basis to industrial units, give marketing assistance, and undertake construction and management of the Industrial Estates at Okhla and Allahabad. It is claimed that the scheme of assistance to small-scale industries to secure Government contracts has been very popular. The value of contracts received from the Director-General of Supply and Disposals and with the N.S.I.C's assistance during 1957-58 is put at as high as Rs. 62.15 lakhs, as against a bare Rs. 4.68 lakhs in 1957-58. Indeed, the progress made in this direction is, in the opinion of Mr. Kennard Weddel, Chief of the Small Business Programme in the U.S. Air Force Purchase Organisation, most encouraging. Mr. Weddel, it will be recalled, visited India recently and evaluated the assistance rendered to small industries in participating in the Central Government's stores purchase programme. In his report, Mr. Weddel has, while appreciating the progress made under the programme, warned against any possible duplication of and mutual encroachment in the functions of the various agencies entrusted to execute the Hire-Purchase Scheme. He has rightly urged co-ordination of activities among the States Directorates of industry, the Service Institutes and the National Small Industries Corporation. He observes:

"It should be a grave disservice to the programme, so well established as between the Corporation and the decentralised purchasing organisations of the Central Government, if the several Institute Directors were to set up their own individual 'lobbies' to contact the purchasing officers. It would even more seriously damage the programme, should the State Directors of Industry by-pass the liaison officers and set up their own direct contacts with the purchasing officers in the interest of the small concerns located within their own respective States. Where this has happened in other countries, the result has been the destruction of interest on the part of the purchasing officers and, consequently, a natural lack of effectiveness in the entire programme."

Price Differentials

Proceeding, Mr. Weddel stresses the need for vigilance to ensure economical production and competitiveness in price among small-scale units. He considers it necessary that price differentials upto a maximum of 15 per cent. must be allowed at the present stage of development in India, although he emphasises that such differentials should not be thought of as for ever necessary. In this connection, he makes the following interesting remarks:

"It is my positive recommendation that in every case of a price differential being paid a small concern, the institute Director be notified of the amount of the price differential as well as the percentage involved, and that the Director make a definite point of having his staff follow up with the concern in question, giving it all proper assistance in getting its costs more in line, so that on future procurements it could be truly competitive. In the event it is ever clearly established that a small industrial concern is abusing the price differential provision, this fact should be brought to the attention of the procurement officials through the Corporation's liaison officer, as being in the best interests of the Government's programme."

The recommendations made by Mr. Weddel are quite valuable especially in the light of the growing demand for assistance to small-scale units for securing Government contracts, as noted above. While the progress in the implementation of the hire-purchase scheme is notable, the fact remains that there is dearth of resources relatively to the expansion programmes included in the second Five-year Plan. It cannot be gainsaid that a readjustment in targets of production and outlays is essential. In its latest memorandum on the Appraisal and Prospects of the Plan, the Planning Commission has cut the allocation assigned to the programmes of village and small-scale industries from Rs. 200 crores to Rs. 160 crores. It, of course, says that, if resources were available, an outlay of Rs. 170-175 crores could be achieved. With the revision in allotment to Rs. 160 crores, the requirements of some programmes such as handloom, small-scale industries and industrial estates may not be fully met.

The Commission's review of the progress made by the small-scale industries in the past two years shows that the trend of production in the decentralised sector of the cotton textile industry falls considerably short of the target assigned to it. Thus during 1956-57, handloom production amounted to 1,600 million yards, that is, 130 million yards above that in 1955-56. In 1957-58, the estimated production is about 1,650 million yards. Upto the end of 1957, the total quantity of cloth produced from Ambar yarn was only about 7.0 million yards and it does not appear that even the revised target of 150 million yards will be achieved. The production of traditional *khadi* has been increasing at the rate of about 5 million yards per annum above the base level of about 35 million yards. No specific target was fixed for *khadi* production. The achievement in regard to the installation of powerlooms has so far been insignificant.

Out of the 62 sanctioned industrial estates, 11 had been completed in the first two years and another 19 are expected to be completed in 1958-59. For providing technical and marketing advice to small industries, 4 regional Small Industries Service Institutes, 12 major Institutes, 2 branch Institutes and 27 Extension Centres had been set up by the end of 1957-58. One more regional Institute, two major Institutes and another 33 Extension Centres will be set up during the course of 1958-59.

The total expenditure incurred during the first two years of the Plan amounted to about Rs. 59 crores and the Commission expects an estimated outlay of Rs. 91 crores by the end of the third year. The *khadi* and village industries account for two-fifths of the expenditure, small-scale industries and industrial estates for more than a quarter, and handloom and powerlooms for about a fifth.

Rise in Expenditure

There are indications that in most of the States, as continuing schemes are implemented and new schemes initiated, not only will the funds provided in annual plans be utilised more fully but demands will be pressed for an increase in allocations. Some programmes like the industrial estates are in increasing favour and in respect of other programmes also as the initial administrative and organisational difficulties are overcome, the tendency is to accelerate the pace of activity. Judging from the present rate of progress, the levels of expenditure in the last two years of the Plan period, it is said, can register an appreciable rise over those in 1958-59 unless inhibited by inadequacy of funds.

For the handloom programme substantially larger annual outlays than were provided in the first three years would be needed if a target of 700 million yards of additional production from mill yarn is to be achieved. The Reserve Bank of India would in future meet most of the requirements of the handloom industry for working capital and to that extent the outlay from the cess fund would diminish, but expenditure on improvement of production techniques, marketing organisation and sales rebate will have to be increased. The programme for the installation of powerlooms in the handloom sector has made a halting start and it does not appear that the progress in the coming years will be rapid. The provision for small-scale industries is likely to be utilised almost fully. Allocations to some of the States where the administrative and technical staffs have been strengthened for implementing the small industries schemes may have to be increased in the last two years. Commitments in respect of the industrial estates are being rapidly made by the States within the existing ceilings but the funds required for completing all the approved estates within the second Plan period may not be available and quite a few estates may have to be carried over to the third Plan period. Expenditure on handicrafts and village industries will show a fairly large shortfall. On the other hand, expenditure on traditional *khadi* might well exceed the allocation and the total expenditure on Ambar *khadi* may more than make up for the shortfall under village industries. Allocations for sericulture and coir are likely to be utilised to the extent of more than 80 per cent.

It would appear from the foregoing analysis by the Planning Commission that the progress in the implementation of the schemes for the development of small-scale industries in the coming years will be inhibited by paucity of resources. Viewed thus, the Government of India will do well to make proper readjustments in outlay on various items so that any misuse of resources is avoided. In conclusion, it must be stressed that the small-scale and village industries should be developed not as independent entities but as ancillaries to the more efficient large-scale industries.

EXPORT PROMOTION COUNCIL FOR CHEMICALS

An Export Promotion Council for chemicals and allied products has been set up with the support of the Government of India. The main object of the Council will be to maintain and promote exports of all chemical, pharmaceutical and allied products. The Council will consist of 11 panels, namely, for pharmaceuticals and fine chemicals, glass and glassware, ceramics and enamels, acids and fertilisers, alkalis, dyestuffs, salt and heavy chemicals, miscellaneous chemicals, soaps and toiletries, rubber and paints. Mr. Charat Ram, President of the Indian Chemicals Manufacturers' Association, Calcutta, will be the Chairman of the Council which will include representatives of manufacturers and exporters.

NEW PUBLICATIONS

Constitutional Developments in India. By Charles Henry Alexandrowicz. Published by Oxford University Press, Bombay, 1. Pages: 235. Price: Rs. 12.

COMING from a learned and experienced professor, this book on the Constitution of India is designed to meet the needs of both the students of Constitutional Law and the laymen and it serves the purpose well. The author has attempted a vivid summary in addition to the analysis of the provisions of the Constitution. Dealing with the subject in a realistic way, the author has wisely summed up the subject, not aiming at the detailed description of the text of the Constitution, as is being done by a majority of authors, and dweit upon it against the background of constitutional development and judicial interpretation. It is, therefore, hoped that the book would make substantial contribution to the general study of comparative Constitutional Law.

The Constitution of India is one of the bulkiest constitutions of the world; it comprises 395 Articles and 9 Schedules. This is due to the fact that it embodies not only the broad principles but also the details of the administrative machinery. What is more, at the time of its being framed, it had behind it the experience of the world regarding the essentials for the administration of a progressive State. Chapters dealing with "The Fundamental Rights," "Separation of Powers" and "Indian Federalism" form interesting reading and deserve special attention. The chapter on Fundamental Rights is framed on the elaborate model of the Irish, United States and the recent continental constitutions, particularly those wherein conditions are more or less analogous to those existing in India. It enshrines classic guarantees of individual liberty apart from various other rights such as right to equality, right against exploitation, right to property, right to freedom of speech, etc., cultural and educational rights and right to constitutional remedies.

The Constitution-makers, in shaping the various fundamental rights, have definitely laid down that in the interest of public order and security the State may impose reasonable restrictions on the enjoyment of these rights guaranteed by the Constitution. What would baffle an enquiring student of Constitutional Law here is the precise meaning of the qualifying word "reasonable" attached to the restrictions. The author points out, in this connection, that had the text stood in its original wording, legislatures would have been complete masters of the situation and could have imposed any restrictions on the fundamental rights. But as a result of later amendments introduced by one of the members of the Constituent Assembly it is now open to the judges to view the reasonableness of the restrictions. Further, in adjudging the merits of the restrictions the judges are called upon to apply an objective standard and it has also been held that the court, in the examination of the term "reasonableness," would go both to the substantive and procedural aspects of the law under consideration. Again, another controversial term in the Constitution, "public interest," has been decided to interpret public order, decency and morality and the interest of the general public and security of the State *inter se*. It was on this ground the Supreme Court in *Ramesh Thapper* vs. *The State of Madras*, held that the restrictions imposed under the Madras Maintenance of Public Order Act were void and unconstitutional in the absence of the expression "public order" having been covered by the Act.

In a similar manner, Prof. Alexandrowicz proceeds to examine "equality before law"—a concept which does not rule out concessionary provisions for backward classes; "freedom of religion" which does preclude the regulation of secular activities of religious bodies; "right to property" which does not deter the State from acquiring private property for public purposes. It will be recalled that the last mentioned right has been considerably modified by developments subsequent to the Sholapur Mills case. *Ubi jus ibi remedium*—no right without a remedy. The fundamental rights are a mockery unless there are adequate provisions to enforce them. The Constitution, therefore, guarantees the right to move the Supreme Court under various writs, namely, *habeas corpus, mandamus*, prohibition, *quo waranto* and *certiorari* for the enforcement of fundamental rights. The author regards these prerogative writs as the cornerstone of the Constitution of India.

The author elaborately examines the Parliamentary system of government embraced by the Constitution of India. The President of India, the head of the executive in theory, is by convention a mere figurehead. The Ministry headed by the Prime Minister assumes real executive power. Similarly, in the States which comprise the Union, the Governor constitutes the nominal head who, in fact, is the agent or the spokesman of the Centre and who is called upon to implement the policies laid down by the Centre in various States from a wider federal point of view. The Ministry headed by the Chief Minister in the State acts as the guiding star of the Governor in the implementation of policies.

Then, there are other traditional ideas of classifying the Constitution. That of India is obviously a written Constitution—it contains 367 Articles and 9 Schedules. Is it flexible or rigid? Such an elaborately written Constitution is apparently a rigid one. In practice, however, it has become flexible, as witness several amendments. However, the flexibility of the Constitution depends upon the ease with which it can be amended. The procedure of amending the Indian Constitution is fairly elaborate but due to the overwhelming majority of the Congress Party in Parliament, resort to that procedure has become easy. Circumstances may change and the Constitution may not after all be so flexible.

The question whether India is a unitary or a federal State continues to be a topic of polemics among the political pandits. The vastness of the country, the diversity of communities inhabiting this land, the historical background of "Provinces"—these and similar factors have necessitated a federal State. But there are other factors such as the prevalence of the federal authority in case of conflict in the concurrent list and the President's power to suspend the Constitution in any State and to assume control of the governmental machinery in the States (though in an "emergency"). Because of these considerations, the author is led to the conclusion that our Constitution is quasi-federal in character.

The author rounds off by summing up India's role as a sovereign body in the comity of nations. It has been felt by the Constitution-makers that India should adopt a policy of non-participation in the armaments race and non-alignment to any power bloc: all the same, the nation should pay full respect for international laws and treaty obligations and also strive for an abiding understanding and friendship with other nations in order to make its contribution to the solution of world problems.

India and the United Nations. Report of a Study Group set up by the Indian Council of World Affairs. Manhattan Publishing Company, New York. Pages: 213. Price: $3.

The Carnegie Endowment for International Peace (U.S.A.) has initiated a series of studies called "National Studies on International Organisation." These studies are prepared by unofficial national bodies. This ensures that national views would be represented and the strictly official viewpoint does not predominate. The result expected is a balanced presentation of the picture of a country in the context of world relations. The report on "India and the United Nations," prepared by a Study Group set up by the Indian Council of World Affairs, largely justifies this expectation. The study starts by recalling the Indian attitude of indifference to the League of Nations, dominated as it was by imperial powers, and contrasts this attitude with the intense interest India, as represented by the Congress, took in world affairs. There is, however, no paradox here. For India believed that the League of Nations was helpless against the machinations of imperial powers and that the League was not an instrument in the furtherance of the cause for which India was fighting. Secondly, Indians believed that their fight for freedom was a part of the larger fight of all oppressed peoples and, therefore, morally supported all struggles for national freedom. It is alleged that the same attitude inspired India's non-participation in the war against fascism. But the full and real story of this issue has been a matter of many acrid controversies and has to be read elsewhere.

Then there is an admirable narration of India's foreign policy objectives and activities in the United Nations in such matters as the future of dependent and trust territories, racial equality, elimination of want and misery. The authors of this study have done well in including a chapter on India's attitude on organisational and structural questions such as veto, membership and the Secretariat which normally are not within the knowledge of those who depend only on newspapers. It has been emphasised that India's attitude on such structural questions is only a projection of India's general foreign policy.

One of the fundamental objectives of India's foreign policy is the peaceful settlement of international disputes. In line with this objective, India has endeavoured to tackle the vexed problem of Kashmir. The book under review has described step by step this problem which, in the words of the Prime Minister, has got "curiouser and curiouser." But the dozen pages devoted to this question do not seem to cover the problem fully. There is also no attempt to argue the case. Facts are presented and a brief mention is made of the views of the Study Group. On questions of disarmament and nuclear power and weapons, India, being a minor power, could play only a minor role. However, the keen desire to exploit atomic energy for purposes of economic development has pushed India nearer to the Soviet Union on the question of international control of fissionable material. That may be purely accidental. But the fact remains that India has not played and is not likely to play any key role in the settlement of this question. Big Powers are big.

The study is rounded off with a brief survey of India's relationship with the international economic and financial organisations. There is, however, no searching analysis. A study made late in 1957 would have been able to see greater potential association of India with the I.M.F. and I.B.R.D. S.U.N.F.E.D., which was then only at the discussion stage, has been briefly mentioned in the book.

For a study attempting to cover such a large field, there are remarkably few sources of material mentioned in the footnotes. This may be so partly because the Study Group consisted of such well-informed men as Mr. M. C. Setalvad, Prof. D. R. Gadgil, Prof. Narayan Prasad, Mr. Frank Moraes, Dr. V. K. R. V. Rao, and Dr. Appadorai. The study is, of course, a committee report and naturally lacks the fervour of advocacy. But this should, in fact, be regarded as its merit.

Indian Economics. By A. N. Agarwala. Published by Kitab Mahal, Allahabad. Pages: 274. Price: Rs. 5.

"The number of books that have been written on economic conditions and problems of India is already very large, though that has not prevented the publication of still newer books on the subject." These are the words of the author of this book and yet, like others, he has some excuse to write a new book. There is, however, nothing new in the book to justify whatever excuse the author cares to put forth. It deals with the same old material collected from the same sources as other qualitatively similar books. The author has made a brave attempt to cover 24 subjects in 274 pages—less than 12 pages on the average per subject. The superficial treatment can well be imagined; the question, "Is India overpopulated?" is dealt with in less than a page, for example. Further, one fails to see what is Hicksian in the treatment of the subject, as claimed by the author.

It is high time Indian teachers of economics resisted the temptation of writing textbooks at the slightest provocation and instead turned their attention to more intensive research which would benefit them and their students.

Cost Accounting Problems. By R. S. Saksena. Published by Motilal Banarsidass, Publishers and Booksellers, Bankipur, Patna-4. Pages: 275. Price: Rs. 7.50.

In order to have a thorough grasp of the principles of cost accounting, one should not only acquire some practical experience but also work out the problems in that subject. The purpose of this publication is to guide the students of costing in working out problems. The author has made a careful selection of them. As stated by the author himself, the examinees should work out similar problems independently and use this book for reference and comparison. The author has solved problems under elements of cost, output cost accounts, process cost accounts, contract cost accounts and cost reconciliation. He has done well to give important specimen rulings of forms and analytical abstracts which will provide the necessary guidance to students. The book is bound to prove useful to students of commerce in general and to those who are preparing for specialised cost accounting examinations, in particular.

MYSORE SUGAR'S PROFIT DECLINES

SHARP FALL IN PRODUCTION

THE Mysore Sugar Company Ltd. (Chairman and Managing Director: Mr. B. M. Krishnan, B.A., I.A.S., Bangalore) has reported a sizable decline in profit in its working during the year ended 30th June 1957. This is attributed by the Directors to the lower production of sugar, consequent on inadequate supply of cane due to adverse seasonal conditions in the preceding year. The quality of cane too was not up to the mark and this led to a setback in the percentage of sugar recovery. Hence sales were appreciably lower and along with them, the profit also suffered a recession. Thus, the gross profit at Rs. 11.45 lakhs has fallen by Rs. 8.37 lakhs from Rs. 19.82 lakhs for the previous year. It is also Rs. 3.84 lakhs lower than that (at Rs. 15.29 lakhs) for 1954-55.

Despite the fall in profit, the Directors have decided to maintain the dividend on the Company's shares at the rate of 20 per cent. for the year under review. This is the eighteenth year in succession for which this level of distribution to shareholders has been kept without a change. It may be of interest to know that the Company stepped up its dividend from 15 per cent. to the present level of 20 per cent. in 1939-40. Until 1950-51, the distribution consisted of a dividend of 10 per cent. and a bonus of 10 per cent. In 1950-51, the bonus and dividend were consolidated together and, since then, this pattern of return has been kept up. The Directors have maintained the distribution at the rate of 20 per cent. irrespective of a rise or fall in the Company's prosperity. In this context, it is again worthwhile mentioning that the Company's gross profit touched a high of Rs. 69.04 lakhs in 1951-52 only to be followed by a gross loss of Rs. 10.38 lakhs in 1953-54.

The net profit, after raising the provision for depreciation from Rs. 5.70 lakhs to Rs. 7.12 lakhs and providing nothing for taxation, as against Rs. 5 lakhs in the previous year, stands at Rs. 4.33 lakhs. This is less than half of Rs. 9.12 lakhs for the previous year. The Directors state that no provision is made for taxation since the amount at credit of taxation reserve is estimated to be adequate to meet the year's tax liability also, inclusive of wealth tax. No amount has been allocated to the reserves for the second year in succession. The amount set aside to employees' gratuity fund has been reduced from Rs. 5 lakhs to Rs. 50,000.

The following comparative table brings out some of the salient features of the Company's working results for the last four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1957	1956	1955	1954
Sale proceeds (sugar and distillery sections)	2,41.23	2,91.76	N.A.	N.A.
Other income	20.57	19.31		
Closing stocks (sugar and distillery including crops-in-progress)	37.18	67.50		
Expenses	2,20.01	2,97.78		
Gross profit (+) or loss (—) ..	+11.45	+19.82	+15.29	—10.38
Depreciation	7.12	5.70	5.29	4.63
Taxation	..	5.00	..	..
Net profit (+) or loss (—) ..	+4.33	+9.12	+10.00	—15.01
Unclaimed dividends paid ..	..	0.02	..	..
To employees' gratuity fund ..	0.50	5.00	..	..
Transfer to reserves	..	..	5.02	..
Dividend	4.36 (20%)	4.36 (20%)	4.36 (20%)	4.36 (20%)
Carry forward	2.10	2.63	2.90	2.28
Sugarcane crushed (in tons) ..	224,228	347,523	375,548	12,582
Sugar produced (in tons) ..	21,631	34,798	35,312	1,210
Recovery per cent.	9.64	10.14	9.4	N.A.

N.A.—Not available.

As is disclosed by the table, the Company's sale proceeds from its sugar and distillery sections made a sizable fall of Rs. 50.53 lakhs, as compared with the previous year. Expenses also have come down from Rs. 2.98 crores to Rs. 2.20 crores but this only reflects the decline in the Company's manufacturing activities.

The Company's sugar factory at Mandya is capable of crushing 2,000 tons of sugarcane per day. It has also a distillery attached to the factory. Cultivation is done by the Company on an area of 3,500 acres. The Company also manufactures country spirit for consumption in the State and for export. Crushing of sugarcane in the Company's factory at Mandya started on 19th August 1956 and closed on 13th February 1957. The factory actually worked for 175 days and a total quantity of 224,228 tons of sugarcane was crushed. The quantity of sugar produced was 21,631 tons, the percentage of recovery being 9.64. The working of the distillery continued to be normal, though, it is stated, there was a drop in production and sale of spirits, as compared with the previous year.

A sound financial position is disclosed by the Company's balance-sheet as at 30th June 1957. The reserves and surplus aggregate Rs. 88.34 lakhs, as against a paid-up capital of Rs. 21.79 lakhs in shares of Rs. 10 each. Of these reserves, the general reserve accounts for Rs. 62.50 lakhs, development reserve for Rs. 11 lakhs, dividend equalisation reserve for Rs. 10 lakhs and stores depreciation fund for Rs. 2.50 lakhs. The provision for taxation stands at Rs. 15.34 lakhs and other current liabilities total Rs. 100.35 lakhs. The gross block of Rs. 152.14 lakhs has been well written down to Rs. 62.88 lakhs. Additions to the gross block during the year were of the order of Rs. 22.32 lakhs. Capital works-in-progress aggregates Rs. 2.75 lakhs. The current assets aggregate Rs. 160.20 lakhs and cover the current liabilities and provision for taxation by a wide margin.

The Rs. 10 fully paid-up shares are being currently quoted at Rs. 33.75 *cum-div.* On an *ex-div.* basis, the year's dividend works out a yield of 6.3 per cent. per annum.

BOARD OF MANAGEMENT FOR JESSOP COMPANY APPOINTED

In February 1958, it was brought to the notice of the Government of India that Messrs. Jessop Co., Ltd., Calcutta, was passing through a severe financial crisis. On a preliminary examination of the facts, the Government found that it had reason to believe that this industrial undertaking was being managed in a manner highly detrimental to the scheduled industries in which it was engaged and to the public interest and also that there was likely to be a fall in its production.

In the circumstances, on 12th March 1958, the Government ordered an investigation into the affairs of this company under section 15 of the Industries (Development and Regulation) Act. The Committee, appointed to carry out this investigation, has submitted its report to Government. The report shows that, while this undertaking has adequate technical management at the top level, its financial position is extremely unsatisfactory, mainly as a result of gross mismanagement of its funds by certain private parties who were closely associated with its management till recently. After considering the report and after examining the working of the said undertaking, the Government of India has come to the conclusion that Messrs. Jessop Co., Ltd., is working in a manner highly detrimental to the scheduled industries and to public interests.

The Government has, therefore, decided that this undertaking which is engaged on works of great national importance, should be placed under a stable and sound management. In exercise of the powers conferred by section 18A(1) (B) of the Industries (Development and Regulation) Act, 1951, the Government of India has appointed a Board of Management to take over the management of the whole of this undertaking. Mr. B. P. Singh Roy, President of the Federation of the Indian Chambers of Commerce and Industry, will be the Chairman of the Board of Management. The other members of the Board are: Dr. B. D. Kalelkar, Industrial Adviser (Engineering), Ministry of Commerce and Industry; the Secretary to the Government of West Bengal, Industries Department; Mr. S. D. Srinivasan of the Life Insurance Corporation of India; Mr. S. S. H. Sitwell; Mr. C. V. Graham; Mr. C. E. Cargin and Mr. A. H. Mitchell. Mr. T. D. Markan, whose services have already been lent to Messrs. Jessop & Co., Ltd., by the Life Insurance Corporation of India, will be the Secretary of the Board. One more member will be added to the Board of Management shortly to function as a whole-time Financial Controller. These arrangements will be in force for a period of three years.

INDO-BURMA PETROLEUM EARNS MORE

DIVIDEND UNCHANGED

DESPITE a decline in sale proceeds of petroleum products, the audited statements of the Indo-Burma Petroleum Company, Ltd. (Managing Agents: Messrs. Steel Brothers and Company, Ltd., Calcutta), for the year ended 31st December 1957, show a rise in its profit. This comes in refreshing contrast to the recession noted in the previous year. The improved results are, no doubt, due to the substantial rise in "other income" and a sizable reduction in expenses. At Rs. 61.27 lakhs, the gross profit for the year under review compares well with Rs. 55.56 lakhs for 1956 and Rs. 60.61 lakhs for 1955. At this level, it is only a shade lower than Rs. 61.68 lakhs for 1953, the highest to be recorded since 1949.

After providing for Managing Agents' remuneration, depreciation and taxation, the net profit at Rs. 20.73 lakhs shows a rise of Rs. 2.84 lakhs over Rs. 17.89 lakhs for 1956. It is, however, Rs. 3.41 lakhs lower than the Rs. 24.14 lakhs for 1955. The provision for depreciation at Rs. 4.09 lakhs and that for taxation at Rs. 30.43 lakhs are both higher, as compared with Rs. 3.91 lakhs and Rs. 28.92 lakhs, respectively, in the previous year. The year's tax provision is inclusive of Rs. 2.32 lakhs provided as wealth tax for 1956 and 1957.

The dividend for the year under review has been maintained at 20 per cent. paid for the previous year. This is only just half of 40 per cent. paid two years earlier, consisting of a dividend of 30 per cent. and a cash bonus of 10 per cent. It will be of interest to know that the dividend of 40 per cent. for 1955 had been raised to this level in four successive years from 10 per cent. for 1951. After paying the preference dividend, the amount available for distribution is not enough to pay the dividend at 20 per cent.

The following comparative table will give an idea of the Company's progress during the last three years:

(In lakhs of rupees)

	For the year ended 31st December		
	1957	1956	1955
Sale proceeds and commission earned ..	2,04.45	2,35.36	2,24.02
Other income	1,31.65	1,17.54	1,13.89
Expenses	2,74.83	2,07.34	2,77.29
Gross profit	61.27	55.56	60.61
Managing Agents' remuneration ..	6.02	4.84	2.75
Depreciation	4.09	3.91	4.82
Taxation	30.43	28.92	28.90
Net profit	20.73	17.89	24.14
Adjustments relating to previous years, written back	3.08	..	5.62
Transfer from reserves and provisions ..	0.89	5.00	22.03
To adjustment relating to previous years	..	0.40	1.02
Provision for extra port trust charges ..	0.73	..	..
To reserves	1.00	..	2.00
,, Pakistan exchange loss written off ..	..	..	6.04
Dividends—			
7 per cent. preference	2.40	2.58	2.58
Ordinary	20.00 (D. 20%)	20.00 (D. 20%)	40.00 (D. 30% +B. 10%)
Carry forward	1.07	0.68	0.77

The Directors state that the main refinery erected near Rangoon by B.O.C. (1954) Ltd. in which this Company is interested, reached full production from indigenous crude oil in 1957 and that Burma is now virtually self-sufficient in the major petroleum products. As a result, the Company's sales on own account were reduced in Burma but sales on behalf of B.O.C. (1954) Ltd. on consignment increased considerably. In India, I.B.P. obtained a reasonable share of the greater demand, particularly for kerosene. It may be remembered that in the previous year, with the consent of the Government, the Company had entered into a joint venture with Messrs. Steel Brothers & Co., Ltd., in prospecting for oil in England. Referring to this, the Directors observe that selection and acquisition of the site for a well to test the second structure in Lancashire took longer than had been anticipated and it was not until December that erection of the derrick could be undertaken. The well commenced drilling in January 1958.

The paid-up capital of the Company as on 31st December 1957 is unchanged at Rs. 150 lakhs, divided into 1,000,000 ordinary shares of Rs. 10 each and 50,000 seven per cent. taxable cumulative preference shares of Rs. 100 each. The capital is supplemented by reserves and surplus aggregating Rs. 145.81 lakhs. The provision for taxation stands at Rs. 40.71 lakhs and current liabilities amount to Rs. 115.24 lakhs. The gross block of the value of Rs. 94.17 lakhs, including an addition of Rs. 15.87 lakhs made during the year, stands at the written down

(*Continued in previous column*)

(*Concluded from next column*)

value of Rs. 44.39 lakhs. Investments (at book value) together with interest accrued, aggregate Rs. 243.02 lakhs and other current assets Rs. 164.35 lakhs. Of the latter, cash balances alone account for Rs. 56.66 lakhs.

A great bulk of the Company's investments are in ordinary shares of companies. The Company holds 20,800 ordinary shares of Balmer Lawrie & Co., Ltd. These were acquired at Rs. 62.33 lakhs, but their market value on 31st December 1957 was only Rs. 30.99 lakhs. Another investment is in Burma Oil Company to the tune of Rs. 72.37 lakhs but the shares are not quoted. Investments in British Government securities amount to Rs. 103.34 lakhs, the market value of which in December last was Rs. 86.03 lakhs.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 24.50 *ex-div.* On this basis, the yield is 8.16 per cent. per annum.

MYSORE CHEMICALS AND FERTILISERS LTD.

CHAIRMAN, MR. K. NARAYANASWAMY'S SPEECH

THE Twenty-first Annual General Meeting of the Mysore Chemicals and Fertilisers Ltd. was held in Mysore on 25th April 1958. Addressing the shareholders on the occasion, Mr. K. Narayanaswamy, Chairman and Managing Director of the Company, observed as follows:

"GENTLEMEN,

"I deem it a pleasure to extend to you all, on behalf of the Board of Directors, a cordial welcome to this the twenty-first annual general meeting of our company.

"The audited accounts along with the Directors' report have already been circulated and, with your permission, I propose to take them as read.

"I regret very much the delay in presenting the balance-sheet and the Directors' report. This was unavoidable, because the Government of Mysore and also the Mysore State Electricity Board took time to communicate their final decision in regard to the rate of power supply.

"The profit of Rs. 1,30,751-11-6 shown in the accounts has been arrived at, after making reasonable provision for depreciation of the fixed assets to the tune of Rs. 1,61,763 which is about Rs. 35,000 more than that of last year; and for payment of income, super and wealth taxes of Rs. 1,45,600 which also exceeds from that of the provision made last year by about Rs. 91,000.

"I had made a reference last year to the growing use of commercial fertilisers on the part of our generally conservative agriculturist classes and the beneficial effect of this auspicious development on the economic health of the nation. In view of the fact that increased agricultural production is the only effective way open to this country for combating inflationary trends inherent in large-scale developmental expenditure under the Plan, let us all pray and hope that no efforts will be spared to arrange a steady and unfailing flow of fertilisers to agricultural fields, in spite of the foreign exchange crisis facing the country.

"Representation has been made to the Electricity Board and also to the Government of Mysore, by your Directors in regard to fixation of reasonable rates for supply of power to your factory. As you are aware, this Company was formed in 1937 on the initiative of the Mysore Government with active support and concessions—the most important then and even now—being the supply of power at low rates. I should, along with my colleagues on the Board and on behalf of you all, give public expression to our belief, that the Government and the Electricity Board will help this industry to thrive by continuing electric power supply at concession rates.

"Gentlemen, I think you will agree that taking a general survey over the past year, the working results are satisfactory. The amount brought forward together with the results of the year's trading totals to Rs. 1,36,236-10-2 and, as you will see from the report before you, your Directors have recommended payment of a dividend of 5 per cent. on the shares, thus maintaining the consistency in the rate of dividend.

"About the expansion activities of the factory, I may state that, though the new motor generator set is erected successfully and the new cells will be completely erected soon, commissioning of these new units need extra power. Running of these plants in alternation or in addition to the present ones is receiving active attention of your Directors.

"Cordial relationship continued between the management and the labour during the year and, as usual, your Directors evinced keen interest in their welfare. In appreciation of their loyal services, your Directors have paid them a bonus equivalent to one-twelfth of their basic earnings for the year 1956-57.

"On behalf of the Company, I wish to express our gratitude to both the Central and Mysore Governments for their continued sympathy towards this industry. I also wish to thank my colleagues on the Board for their co-operation and valuable guidance at all times.

"Gentlemen, with these observations, I now move that the Directors' report and the audited balance-sheet and profit and loss account for the year ended 31st March 1957, already circulated to shareholders, be approved."

N.B.—This does not purport to be a report of the proceedings of the general meeting.

Points From The Chair

Decimal Coinage

"THE report and accounts for the year 1957 cover a period during which two important factors came into being. The first in point of time was the introduction of decimal coinage. I said in my statement last year that the absence of exact equivalents in the decimal system for the units of the old coinage at the lower levels must inevitably lead to confusion about the prices of single cigarettes, which form a high proportion of the total sales. Confusion did in fact occur and it was not limited to the prices of cigarettes. Nevertheless, it was not as bad as the pessimists forecast and the worst of it did not last very long. There is still room for argument in the bazaar when units of the old coinage are tendered in payment but, generally speaking, the markets seem to have settled down to an accepted *modus operandi* and perhaps the opportunity for a little bargaining is not altogether unwelcome. Thus far there are few signs of any marked changes in demand in those price classes in which your Company's products sell. Such changes, indeed, were not to be expected immediately, since the two major products, which previously retailed at five annas and ten annas per packet of ten cigarettes, fell fairly naturally into the price classes of thirty and sixty naye paise. The second factor was the exemption of cigarettes and tobacco from sales tax and the imposition by Government of a surcharge on the excise rates to make good the loss."

D. S. BARRON,
Godfrey Phillips, India, Ltd.

Shortage of Exchange

"A feature common to the economy of the three countries where we operate and trade is a shortage of availability of overseas exchange. In India this stems from the application of foreign exchange control in the interests of the large capital requirements of the second Five-year Plan. Pakistan and Burma also have programmes for industrial development. The economy of these two countries, which is primarily agricultural in character, suffered from low rainfall resulting, in the case of Pakistan, in the need to import large quantities of food and, in the case of Burma, in a poor rice harvest which will seriously curtail the quantity of rice available for export. These economic stresses have repercussions on the rate of trade expansion but once they have been overcome we should be able to look forward to a steady increase in demand for petroleum products. It is of interest to note in this context that the *per capita* sales of these products per annum in India, Pakistan and Burma, with a total population of some 500 million, is less than 5 gallons, whereas the corresponding figure for the United Kingdom is around 120 gallons and for the U.S.A. 600 gallons."

W. E. EADIE,
Burmah Oil Company Ltd., Glasgow.

Pensions

"We consider that any State pension scheme should be limited to provision against basic needs. In the endeavour to build a responsible society it is essential that the independence of the individual and the necessity for personal thrift should not be undermined. This has always been fundamental to our British way of thinking and to depart further from this principle would be to court disaster in a progressive and highly competitive world. Nothing could be more harmful to the character than to create the impression that it was no longer necessary for the individual to think about his future or to make provision for his future. This is not solely a matter of destroying initiative. To provide for pensions by a State scheme above basic needs would add greatly to the obligations of the citizen to the State. The sum of such obligations for State benefits in infancy, in childhood, in education, and in the health and other welfare services is already substantial and will increase steeply as more of the elderly in our aging population claim old-age pensions at even the present level. Nor would we approve of any State scheme providing more than basic needs even if there were provision for opting out which is probably not feasible anyway. We cannot agree that citizens elect a Government to compete with them in their business."

THE RT. HON. LORD GRANTCHESTER,
London and Manchester Assurance Co., Ltd.

Investment in Gold

"There have been signs during the past year of a gradual resurgence of investment interest in South African gold mining companies. Although production costs have continued to rise in every field of mining activity, deflationary influences have, for the first time since the war, affected the market for certain metals and minerals. The gold mining industry, however, has not been similarly affected; while the prices of other metals have fallen, gold has continued to enjoy a stable market, at a uniform price. The yield attractions and prospects for growth and capital appreciation offered by many gold mining companies bear favourable comparison with those offered in other fields of investment, and the recognition of these qualities by a growing number of investors is a reassuring indication that the revived interest in gold mining is likely to widen. The renewed interest in gold has not yet developed into the broad demand that might be expected if a rise in the gold price were considered imminent. The possibility of an increase in the gold price is, however, an added inducement for investment in gold mining that should not be ignored. As the pressure exerted on international gold reserves steadily increases, so does the possibility that the price of gold may ultimately be raised."

H. F. OPPENHEIMER,
Orange Free State Investment Trust Ltd.

COMPANY MEETINGS AND DIVIDENDS

SHREE AMBICA JUTE MILLS LTD. Annual General Meeting, Calcutta, 29th May 1958. Dividend: Re. 0.50 per share. Transfer books remain closed from 22nd May to 5th June 1958, both days inclusive.

RADIO AND ELECTRICALS LTD. Annual General Meeting, Madras, 30th May 1958. Dividend: 0.45 per share or 9 per cent. Transfer books remain closed from 16th to 30th May 1958, both days inclusive.

GODFREY PHILLIPS, INDIA, LTD. Annual General Meeting, Andheri, Bombay, 30th May 1958. Dividend: Re. 1.50 per share. Transfer books remain closed from 24th to 30th May 1958, both days inclusive.

RAMNUGGER CANE AND SUGAR CO., LTD. Annual General Meeting, Calcutta, 30th May 1958. Dividend: Re. 1.50 per share or 15 per cent. Transfer books remain closed from 15th to 30th May 1958, both days inclusive.

INDO-BURMA PETROLEUM CO., LTD. Annual General Meeting, Calcutta, 30th May 1958. Dividend: Rs. 2.00 per share (includes interim dividend of Re. 1.00 per share). Transfer books remain closed from 20th to 29th May 1958, both days inclusive.

MYSORE SUGAR CO., LTD. Annual General Meeting, Bangalore City, 30th May 1958. Dividend: Rs. 2.00 per share or 20 per cent. Transfer books remain closed from 24th to 30th May 1958, both days inclusive.

CAMBODIA MILLS LTD. Annual General Meeting, Coimbatore, 30th May 1958. Dividend: Re. 0.50 per share. Transfer books remain closed from 7th to 30th May 1958, both days inclusive.

SHREE KRISHNA GYANODAY SUGAR LTD. Annual General Meeting, Dalmianagar, 31st May 1958. Dividend: Re. 1.00 per share or 10 per cent. Transfer books remain closed from 20th to 31st May 1958, both days inclusive.

SRI BALASUBRAMANIA MILLS LTD. Annual General Meeting, Singanallur, Coimbatore, 5th June 1958. Dividend: 7½ per cent. Transfer books remain closed from 23rd May to 5th June 1958, both days inclusive.

PEERMADE TEA CO., LTD. Annual General Meeting, Pathirapally, Kerala State, 7th June 1958. Dividend: Rs. 2.50 per share (includes interim dividend of Re. 0.75 per share). Transfer books will remain closed from 25th May to 10th June 1958, both days inclusive.

RAJNAGAR TEA CO., LTD. Annual General Meeting, Calcutta, 9th June 1958. Dividend: Re. 1.10 per share or 11 per cent. Transfer books will remain closed from 3rd to 9th June 1958, both days inclusive.

ANIL HARDBOARDS LTD. Annual General Meeting, Bombay, 9th June 1958.

MAHARASHTRA SUGAR MILLS LTD. Annual General Meeting, Bombay, 9th June 1958. Dividend: Rs. 100.00 per share (includes bonus of Rs. 25.00 per share). Transfer books will remain closed from 2nd to 17th June 1958, both days inclusive.

NATIONAL RAYON CORPORATION LTD. Annual General Meeting, Bombay, 12th June 1958. Dividend: Rs. 14.00 per share, payable on and from 13th June 1958. Transfer books were closed from 16th April to 15th May 1958, both days inclusive.

SVADESHI MILLS CO., LTD. Annual General Meeting, Bombay, 20th June 1958. Dividend: Rs. 9.00 per share, payable on 21st June 1958.

TATA MILLS LTD. Annual General Meeting, Bombay, 25th June 1958. Dividend: Rs. 2.00 per share, payable on 26th June 1958.

SIVANANDHA MILLS LTD. Dividend of Re. 1.20 per share or 12 per cent. for the year ended 31st December 1957. Transfer books remain closed from 21st May to 4th June 1958, both days inclusive.

SPENCER & CO., LTD. Interim dividend of Re. 0.50 per share or 5 per cent. for the year ending 30th June 1958. Transfer books will remain closed from 2nd to 9th June 1958, both days inclusive.

SWINTON ESTATES CO., LTD. Interim dividend of 5 per cent. for the year ended 31st March 1958. Transfer books will remain closed from 2nd to 9th June 1958, both days inclusive.

ATHIMATTAM RUBBER CO., LTD. Dividend of 3½ per cent. for the year ended 28th February 1957. Transfer books remain closed from 19th to 26th May 1958, both days inclusive.

COMPANY REGISTRATIONS

MAKHANA (RAJASTHAN) PRIVATE LTD. (First Director: Mr. Baijnath C. Makhana.) Business: Selling agents, commission agents, etc. Authorised capital: Rs. 2,00,00,000. Private company. Address: 203, Kalbadevi Road, Bombay.

TEXTILE APPLIANCES AND INSTRUMENTS CO., PRIVATE LTD. (First Director: Mr. B. P. B. Joshi.) Business: Exporters and importers of textile appliances. Authorised capital: Rs. 5,00,000. Private company. Address: 81, Alkanevi, Baroda District.

AMAR JYOTI TRADING CO. PRIVATE LTD. (First Director: Mr. V. J. Kapur.) Business: Manufacture of carbons and stationery articles. Authorised capital: Rs. 5,00,000. Private company. Address: 155, Mody Street, Fort, Bombay.

EARNINGS OF RAMNUGGER CANE LOWER

GODFREY PHILLIPS REDUCE DIVIDEND

Ramnugger Cane and Sugar Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Anderson Wright, Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st August 1957.

The factory started crushing on the 30th November 1956 and continued till the 28th April 1957. A quantity of 25,17,752 maunds of sugarcane was milled, with an average sugar recovery of 8.84 per cent. as compared with 26,02,900 maunds and 10.46 per cent. respectively during the previous season.

The total crush was made up of 11,29,892 maunds of cane from the Company's own farms and 13,87,860 maunds from cultivators. The corresponding figures for the preceding season were 14,24,021 maunds and 11,78,879 maunds respectively. The percentage recovery of sugar from cane dropped in spite of higher manufacturing efficiency, because the cane had been impoverished by pest and floods.

The standing sugarcane crop was attacked by a pest called 'Chilo Tumidicostalis' and intensive measures were taken to control the infestation. Besides mechanical operations, a large acreage of sugarcane was sprayed with insecticides by means of hand-sprayers and power machines, and the remaining area was aerially sprayed with the help of a Beaver 'Plane obtained from the Plant Protection Department of the Government of India. The West Bengal Government gave every assistance for pest control work in the locality by lending staff and equipment and defraying a part of the expenses for this work. The results achieved from these operations have been satisfactory.

All crops in the districts of Nadia and Murshidabad were later heavily inundated by floods of a magnitude unrecorded heretofore. Damage was caused not only to the Company's standing sugarcane and paddy crops, but plantation for the 1957-58 crop was also considerably delayed. Both the factory and zamindary offices were deluged and, although sugar stocks were saved by the timely construction of a brick wall at the entrances of the godowns, certain items of stores and manure, especially those lying in various out-farms, were washed away. Some of the staff and labour quarters at Ramnugger either collapsed or were badly damaged. The Company had to undertake relief operations by way of providing food and clothing to flood-stricken people and repairing many residential quarters.

The expansion programme has progressed satisfactorily, and all the machinery ordered for this purpose, with the exception of a few units, has been installed. The crushing capacity of the factory during the Season 1958-59 is expected to be 1,200 tons of sugarcane per day.

The minimum price of sugarcane payable by factories was fixed at Re. 1.44 nP per maund for gate deliveries and Re. 1.31 nP per maund for outstation cane. As in the past four years, the Government did not exercise any statutory control on the price and distribution of sugar, *gur* and *khandsari*, but 25 per cent. of sugar produced was kept in reserve with factories to be requisitioned, if necessary, at fair ex-factory prices to be fixed by the Government. No requisition, however, was made from our factory during the period. Releases of sugar from factories were regulated by the Government as in the past. The rate of excise duty on sugar was increased from Rs. 5.62 nP per cwt. to Rs. 11.25 nP per cwt. with effect from the 16th May 1957. The factory's total production of molasses was requisitioned by the West Bengal Government for supply to distilleries in the State at a rate of Re. 1 per maund.

The Employees' Union submitted a charter of demands to the Company and conciliation proceedings were initiated by the Assistant Labour Commissioner, Barrackpore. All issues were conclusively settled, as a result of which salaries and rates of dearness allowance of the employees were increased with effect from the 16th April 1957.

In view of considerable reserves built by the Company from its year-to-year profits, it was decided to approach the Central Government for permission to issue bonus shares in the ratio of one bonus share for every ordinary share held by members. In the meanwhile, the rate of tax on bonus shares was increased from 12½ per cent. to 30 per cent. The Board then re-considered the matter, and it was decided to postpone the proposal.

The sugar production in the country during 1956-57 rose to an all-time record of 20,26,702 tons. It was possible, therefore, to export this commodity for the first time on a substantial scale. The export business was entrusted to the Indian Sugar Mills Association, which is reported to have shipped 1,52,911 tons to various countries.

The profit of the Company, after deducting all working charges and commissions, and after providing Rs. 1,94,445 (Rs. 2,28,656) for depreciation and Rs. 2,50,000 (Rs. 5,70,000) for taxation, amounts to Rs. 4,18,772 (Rs. 11,24,508) to which is added the amount brought forward from last year of Rs. 1,25,739 (Rs. 20,350) making a total of Rs. 5,44,511 (Rs. 11,44,858). This amount the directors recommend, should be dealt with as follows:—

In payment of dividends for the year ended 31st August 1957, without any deduction in respect of Indian Income-tax or Bengal Agricultural Income-tax paid by the company on preference shares at 6 per cent. per annum Rs. 24,000 (Rs. 24,000), on ordinary shares at 15 (20) per cent. per annum Rs. 2,48,973 (Rs. 3,31,964), provision for additional super-tax in respect of dividend on ordinary shares Rs. 23,238 (Rs. 43,155), and provision for wealth tax Rs. 20,000 (*nil*) leaving to be carried forward Rs. 2,28,300 Rs. 1,25,739 after transferring Rs. 5,00,000 to reserves and Rs. 1,20,000 to reserve for additional taxation.

Season 1957-58.—The factory completed the season after crushing 16,14,999 maunds of sugarcane with an average sugar recovery of 9.40 per cent. Cane yield per acre suffered as a result of drought, red-rot and untimely planting due to late recession of flood-water from the area. The Company was able to sustain a major portion of the crop in its own farms because of its irrigation resources and timely disease-control measures. The fall was more pronounced in cultivators' fields and they supplied considerably less cane to the factory than during the past few years. They also found it more profitable to convert their cane into *gur*. Excise duty on sugar has been rapidly increasing for some time now and *gur*-manufacture being exempt from any such levy, attracted appreciable quantities of cane from the factory area.

Additional excise duty on sugar was levied at the rate of Rs. 3.31 nP per cwt. with effect from the 14th December 1957 in replacement of Central and State Sales Taxes. There has been no change in the price of cane or in the Government's sugar policy.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,59,820	Block ...	25,79,664
Reserves ...	40,00,000	Machinery and buildings under erection ...	14,48,429

Godfrey Phillips India, Ltd.

The directors of the above Company (Chairman: Mr. D. S. Barron, Bombay) submit the audited accounts of the Company for the year ended 31st December 1957.

The Company made a net profit after provision for taxation, depreciation and all other charges, of Rs. 7,51,831 (Rs. 10,87,734). To this amount is added the balance brought forward from last year of Rs. 13,04,518 (Rs. 11,96,811) less short provision less excess provisions for previous years of Rs. 1,96,006 (Rs. 62,604) making an amount available of Rs. 18,60,343 (Rs. 23,32,206 including Rs. 1,10,265 being reserve for taxation written back). Out of this sum the directors have decided to transfer to reserve for gratuities Rs. 57,000 (Rs. 1,06,000) leaving a balance of Rs. 18,03,343 (Rs. 22,26,206). From this amount the directors recommend payment of a dividend on the preference shares at 5½ per cent. per annum subject to tax, absorbing Rs. 1,13,025 (Rs. 1,21,688) and a dividend on the ordinary shares at 15 (20) per cent. per annum absorbing Rs. 6,00,000 (Rs. 8,00,000) leaving a balance to be carried forward to next year of Rs. 10,90,318 (Rs. 13,04,518).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	70,00,000	Block ...	31,46,373

Trichinopoly Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Mooljee Ramjee and Sons, Ramjeenagar, Tiruchirapalli) submitted the audited accounts of the Company for the year ending 31st December 1957.

As anticipated in the directors' last report, the profit position is comparatively poor. The net profit after deducting all expenses including Rs. 75,551 being bonus to workers for the year 1956 and writing off Rs. 1,17,966 (Rs. 1,20,435) as depreciation on fixed assets is Rs. 1,81,435 (Rs. 4,67,686). Donations amounting to Rs. 1,652 (Rs. 2,339) have been paid therefrom. Along with Rs. 62,837 (Rs. 1,508) carried forward from last year, there is a sum of Rs. 2,42,620 (Rs. 4,66,855) to the credit of profit and loss account. The directors recommend that a sum of Rs. 55,000 (*nil*) be drawn from the dividend equalisation fund and propose the amount thus available viz., Rs. 2,97,620 (Rs.4,66,855) be disposed of as follows:—

To provide for development rebate reserve Rs. 50,940 (*nil*), to provision for taxes Rs. 1,20,000 (Rs. 1,75,000), to pay a tax free dividend of 9 (11½) per cent. to shareholders absorbing Rs. 1,25,886 (Rs. 1,57,350) and to carry forward to next year Rs. 794 (Rs. 62,837 after transferring Rs. 48,668 to general reserve, Rs. 13,000 to reserve for rehabilitation and Rs. 10,000 to dividend equalisation fund). Due to meagre earnings no workers' bonus liability for the year 1957 can arise.

Trade conditions have continuously deteriorated during the year under review. The Textile Industry is passing through a difficult phase and a crisis appears to be developing. There is overproduction of yarn and handloom products and glut in the market. Export possibilities are far from encouraging.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,98,730	Block ...	5,98,169
Reserves ...	9,45,940	Stock-in-trade	8,88,805

Liabilities ...	2,53,919	Debts, deposits and advances ...	9,51,296
Profit and loss account ...	794	Investments ...	1,02,457
		Cash ...	1,56,005
Rs.	29,48,079	Rs.	29,48,079

Samastipur Central Sugar Co., Ltd.

The directors of the above Company (Kanpur, U.P.) submit the audited accounts of the Company for the year ended 30th June 1957.

The results for the year, after making the usual provisions charging depreciation and adjustments, show a loss of Rs. 2,24,407 (profit of Rs. 95,077) from which has been deducted the balance brought forward from the previous year of Rs. 3,554 (Rs. 8,477) leaving at debit of profit and loss account Rs. 2,20,853 (credit of Rs. 3,554 after placing Rs. 25,000 to contingencies reserve on stock realisation and Rs. 75,000 to rehabilitation reserve).

The crushing operations commenced on 29th October, 1956 and concluded on 16th May, 1957. The crop taken off amounting to 29,51,842 (28,35,276) maunds, was one of the highest on record. Unfortunately the recovery of 8.91 (9.32) per cent. was the lowest since the 1935-36 season and this adversely affected the working results of the Company.

The cane price remained at the high rate of Re. 1-7-0 per maund at the factory gate and Re. 1-5-0 per maund at outstations. These prices had to be paid irrespective of the quality of the cane supplied, and while Government are at last giving some attention to the possibility of paying for cane in accordance with its quality, the results of the Company for the year under review give a striking example of the unfair consequences to the manufacturer of paying for cane on the basis of weight.

The prospects for the current season are much brighter as the climatic conditions were much more favourable and the improvements in the factory and the work done in cane development should be reflected in the results of the year's working.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	11,99,000	Block ...	22,10,161

		Loose tools	67,362
		Debts, deposits and advances ...	12,59,237
		Investments	600
		Cash ...	2,08,563
Rs.	53,21,026	Rs.	53,21,026

*Reserves are shown after deducting the debit balance of Rs. 2,20,853 in the profit and loss account.

Punjab Minerals Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Bird & Co., (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 30th September 1957.

The profit and loss account after providing for all charges shows a profit of Rs. 660 (Rs. 3,477). From this amount is deducted the debit balance brought forward from the previous year of Rs. 1,34,831 (Rs. 1,38,308) leaving a debit balance of Rs. 1,34,171 (Rs. 1,34,831) to be carried forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

THE SVADESHI MILLS COMPANY LIMITED

NOTICE

IN SUPERSESSION OF THE NOTICE DATED the 11th April 1958, notice is hereby given that the SEVENTY-SECOND ANNUAL GENERAL MEETING of THE SVADESHI MILLS COMPANY, LIMITED, will be held at the Registered Office of the Company, Bombay House, Bruce Street, Fort, Bombay, on FRIDAY, the 20TH JUNE 1958 at 4-30 p.m. (S.T.), to transact the following business:—

(1) To adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 31st December 1957 and the audited Balance Sheet as at 31st December 1957.

(2) To declare Dividends.

(3) To appoint a Director in the place of Mr. J. R. D. Tata who retires by rotation and is eligible for re-appointment and to consider and, if thought fit, to pass the following resolution as a Special Resolution in respect of which a special notice, as required by section 261 of the Companies Act, 1956, has been received by the Company:—

"RESOLVED that pursuant to the provisions of section 261 and other applicable provisions, if any, of the Companies Act, 1956, Mr. J. R. D. Tata who retires by rotation and who is a director, officer, member and an associate of Tata Industries Private Ltd., the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency agreement to appoint ex-officio and Special Directors to the Board) be and is hereby re-appointed a Director of the Company."

The reasons which make this Special Resolution necessary are fully set out in paragraph 2 of the explanatory statement annexed to this Notice, and the same shall for the purpose of section 261 be deemed to be incorporated in this Notice.

(4) To appoint a Director in the place of Mr. D. D. Romer who retires by rotation and is eligible for re-appointment and to consider and, if thought fit, to pass the following resolution in respect of which a special notice, as required by section 281 of the Companies Act, 1956, has been received by the Company:—

"RESOLVED that pursuant to the provisions of section 281 and other applicable provisions, if any, of the Companies Act, 1956, Mr. D. D. Romer who has attained the age of 83 years and retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under section 280 of the said Act shall not apply to him."

(5) To appoint a Director in the place of H.H. Maharaja Fatesinghrao Gaekwad who was appointed an additional Director of the Company by the Board of Directors and who ceases to hold office under section 260 of the Companies Act, 1956, but who is eligible for re-appointment and in respect of whom the Company has received a notice in writing proposing his candidature for the office of Director.

(6) To appoint a Director in the place of Mr. C. H. Bhabha who was appointed an additional Director of the Company by the Board of Directors and who ceases to hold office under section 260 of the Companies Act, 1956, but who is eligible for re-appointment and in respect of whom the Company has received a notice in writing proposing his candidature for the office of Director.

(7) To approve, pursuant to section 281 of the Companies Act, 1956, the appointment of Mr. T. V. Baddeley, C.B.E., as Special Director made by Tata Industries Private Limited, the Managing Agents of the Company, as authorised by the Company's Articles of Association and the Managing Agency agreement, and, if thought fit, to pass the following resolution in respect of which a special notice as required by section 281 of the said Act has been received by the Company:—

"RESOLVED that pursuant to the provisions of section 281 and other applicable provisions, if any, of the Companies Act, 1956, the appointment of Mr. T. V. Baddeley, C.B.E., who has attained the age of 69 years, as a Special Director by Tata Industries Private Ltd., the Managing Agents of the Company, as authorised by the Company's Articles of Association and the Managing Agency agreement, be and is hereby approved and it is hereby specifically declared that the age limit for Directors prescribed under section 280 of the said Act shall not apply to him."

(8) To appoint Auditors for the current year and to fix their remuneration.

Notes:—(*a*) The relative explanatory statements pursuant to section 173 of the Companies Act, 1956, in respect of the special business under items 3 to 7 set out above are being posted to all shareholders.

(*b*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(*c*) The Transfer Books of the Company were closed from Saturday the 22nd March to Saturday, the 19th April 1958, both days inclusive.

(*d*) If dividends on shares as recommended by the Directors are passed at the meeting, the payments will be made on and after Saturday, the 21st June 1958, to those members whose names were on the Register of the Company on the 19th April 1958.

By Order of the Board of Directors,

TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, *16th May*, 1958.

ANNEXURE TO THE NOTICE

Explanatory Statements as required by Section 173 of the Companies Act, 1956.

The following explanatory statements as required by section 173 of the Companies Act, 1956, set out all material facts relating to the special business mentioned in the Notice dated the 16th May 1958.

2. *Item No.* 4: Mr. P. S. Mistry was appointed an additional Director in October 1957 by the Board of Directors under Article 136 of the Articles of Association of the Company. Under section 260 of the Companies Act, 1956, he can hold office only upto the date of this Annual General Meeting. As required by section 257 of the Act a notice has been received from some members signifying their intention to propose his appointment as a Director. Mr. P. S. Mistry is a young business man and a building contractor and it is desirable that he should continue to be a member of the Board.

3. *Item No.* 5: Mr. Kantilal Nahalchand was appointed an additional Director in November 1957 by the Board of Directors under Article 136 of the Articles of Association of the Company. Under section 260 of the Companies Act, 1956, he can hold office only upto the date of this Annual General Meeting. As required by section 257 of the Act a notice has been received from some members signifying their intention to propose his appointment as a Director. Mr. Kantilal Nahalchand is a business man of repute and it is in the interest of the Company that the Board should continue to receive the benefit of his advice as a member of the Board.

By Order of the Board of Directors,

TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

THE TATA MILLS LIMITED

NOTICE

IN SUPERSESSION OF THE NOTICE DATED the 11th April 1958, notice is hereby given that the FORTY-SIXTH ANNUAL GENERAL MEETING of THE TATA MILLS LIMITED will be held at the Registered Office of the Company, Bombay House, Bruce Street, Fort, Bombay, on WEDNESDAY the 25TH JUNE 1958 at 4-30 p.m. (S.T.), to transact the following business:—

1. To adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 31st December 1957 and the audited Balance Sheet as at 31st December 1957.

2. To declare a Dividend.

3. To appoint a Director in the place of Mr. B. C. Mehta who retires by rotation and is eligible for re-appointment.

4. To appoint a Director in the place of Mr. P. S. Mistry who was appointed an additional Director of the Company by the Board of Directors and who ceases to hold office under section 260 of the Companies Act, 1956, but who is eligible for re-appointment and in respect of whom the Company has received a notice in writing proposing his candidature for the office of Director.

5. To appoint a Director in the place of Mr. Kantilal Nahalchand who was appointed an additional Director of the Company by the Board of Directors and who ceases to hold office under section 260 of the Companies Act, 1956, but who is eligible for re-appointment and in respect of whom the Company has received a notice in writing proposing his candidature for the office of Director.

6. To appoint Auditors for the current year and to fix their remuneration.

Notes:—(*a*) The relative explanatory statements pursuant to section 173 of the Companies Act, 1956, in respect of the special business under items 4 and 5 set out above are annexed hereto.

(*b*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(*c*) The Transfer Books of the Company were closed from Saturday, the 22nd March to Saturday, the 19th April 1958, both days inclusive.

(*d*) If dividend on shares as recommended by the Directors is passed at the meeting, the payment will be made on and after Thursday, the 26th June 1958, to those members whose names were on the Register of the Company on the 19th April 1958.

By Order of the Board of Directors,

TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

GOVERNMENT IN THE ECONOMIC SYSTEM

(*Concluded from page 978*)

situation, must seek to avoid aggravating inflationary pressures.

The other major tool for moderating the business cycle is credit policy. As Walter Bagehot said over a hundred years ago, "money does not manage itself." In the United States, primary responsibility for credit policy has been entrusted by the Congress to the independent Federal Reserve System. Its policy seeks to keep additions to money demand in balance with additions to resources. Credit restraint does, of course, create problems—there isn't enough money to go around. Although some desirable credit needs are not met, there appears to be only one comprehensive alternative: to replace the capital and credit rationing of the money market with government allocation as to who may obtain credit or capital and in what amounts and for what purpose. The risks of so pervasive a centralised decision-making power are hardly justified by the inability of every prospective borrower to meet his needs fully under a policy of credit restraint. There will be some uneven impacts with or without government allocation, as there are in every aspect of economic activity. And provided that we neither tamper basically with the rationing of the money market nor vitiate the policy of restraint, it is proper to have programmes that recognise the established national policy in such areas as small business, agriculture and housing.

To keep prosperity by keeping it healthy requires understanding, judgment and skill. In the words of the Scotch proverb, "it takes a steady hand to hold a brimming cup." This is not to say, however, that a steady hand on monetary and fiscal management offers a complete and effortless solution. The wage-cost-price spiral can be stubborn. For that problem, however, the rigidities of direct controls offer no satisfactory solution. To by-pass the market and make political pressure the route to economic advantage is not a promising way to foster economic responsibility. A short-run check to the wage-cost-price spiral may take the form of a profit-squeeze where consumers balk at higher prices in a climate of credit restraint.

Long-term Approach

A long-term approach to the problem requires either a re-examination of the great power in private economic groups or the exercise of restraint and responsibility by those who hold such power. Broader recognition of the fact that inflation can give, at best, only temporary advantage may induce increasing self-restraint. Perhaps strategically placed private decision-makers will reflect a little more on their responsibilities. This awareness is indispensable to stability with progress in a free economy.

As useful as the price mechanism is, it has never been expected to provide for every need. In addition, therefore, to measures strengthening markets and fostering stability, there is a third and less well-defined category of government economic activity: to supplement the market system in those areas where it alone cannot as well provide certain essential needs.

The first of such activities supplements the market by expediting unusual industrial developments of potential economic or social value. War-time necessity occasioned such hot-house development for atomic energy and synthetic rubber manufacture. In more unusual cases, government subsidies were provided to speed the development of the rail-roads in the last century and, more recently, of civil aviation. Far-sighted but rare intervention of this sort, when undertaken, should be designed to utilise the market mechanism as soon and as fully as possible.

The second and more traditional government activity supplementing the market is the conservation and development of natural resources through programmes for highways, waterways, natural parks, forests and wild life.

Personal Security

Personal security is the object of the third type of government supplement to the market. It seeks to cushion the human costs of a dynamic, but non-utopian society. The interdependent and complex nature of an industrial society and humanitarian impulses compel a deep concern for those who find themselves below a basic standard of living.

In meeting the need for personal security, we can help individuals satisfy their urgent material wants and lessen the anxieties that prevent the full enjoyment of freedom. Unemployment compensation can ease the burden of changes in job conditions. The reinforcement of health insurance plans can assist individuals to protect themselves, through their own efforts, from the often crushing financial burden of major illness. A social security system can protect a worker and his family against the dependency resulting from old-age or premature death.

A basic standard of living may be provided through various public assistance programmes for the relatively few who, for various reasons, may be unemployable. These and other meritorious measures do, indeed, use the coercive fiscal powers of government, but they do so to help individuals within the framework of a free economy and, at the same time, to create the climate most favourable to free, personal economic activity. Moreover, such programmes if properly conceived and administered, can widen rather than narrow individual freedom.

It should not be necessary—and yet it is—to emphasise that such welfare programmes must be carried out with judicious care. A cool head is needed in welfare as well as a warm heart. Public policy that encourages private laxity helps neither the individual nor the society as a whole. What the government does to help must remain consistent with the belief that the only real security is that which an individual wins for himself.

Much more, of course, is involved in promoting the general welfare than dealing only with the casualties of life. Public and private action, for example, should seek to remove the obstacles to equal economic opportunity for all persons. A society which values each individual must take steps to bring the first rung of the ladder of opportunity within the reach of all. Universal education and various vocational programmes are thus a social and moral necessity. So also is the unremitting discouragement of discrimination of all kinds. And the best climate for its elimination is the expanding volume of opportunities that a growing economy affords.

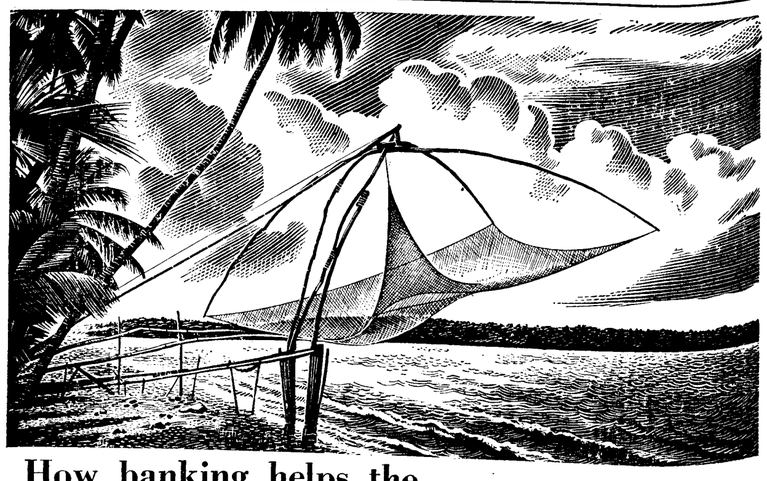
In these three areas—strengthening of competitive markets, moderating economic fluctuations and providing certain necessary supplements to the market system—is to be found the proper place of government in the economy. A proper role for government must rest on a proper regard for freedom. Such a belief emerges from the intimate relationship of personal security, material well-being and freedom. In approaching the difficult problems of the economy, it cannot be emphasised too frequently that material well-being is mainly a question of whether the economy remains dynamic and grows in a reasonably stable manner. Strengthened and supplemented in appropriate but clearly limited ways, the free economy best assures the rapid economic progress which allows a widespread and increasing standard of living. It is thus that plenty-in-freedom has become a reality in the United States.—*Reprinted from* Public Relations Journal.

WORLD BANK AT WORK

The International Bank for Reconstruction and Development has reported a net income of $32.4 million for the nine-month period ended 31st March 1958, as compared with $26.2 million for the corresponding period in 1957. This income was placed in the supplemental reserve against losses on loans and guarantees, raising the reserve to $226.7 million. Loan commissions amounted to $14.7 million and were credited to the Bank's special reserve, increasing that reserve to $108.5 million. Total reserves as on 31st March 1958 were $335.2 million. Gross income, exclusive of loan commissions, was $72.6 million, as compared with $53.6 million in 1957. Expenses, which included $34 million for interest on Bank borrowings and other financial expenses, amounted to $40.2 million for the period, as compared with $27.4 million last year.

During the third quarter of this fiscal year, the Bank made four loans aggregating $107.4 million in Brazil, Italy, Japan and Mexico. This brought the total number of loans to 193 in 46 countries and raised the gross total of commitments to $3,587.5 million. Disbursements on loans for the nine-month period were $407.4 million, bringing the total disbursements to $2,703.5 million.

Malaya became a member of the Bank on 7th March 1958, with capital subscription of $25 million, making the total subscribed capital of the Bank $9,358.4 million as on 31st March 1958.



How banking helps the

FISHING INDUSTRY

THE seas around India's 2,900 miles of coastline are rich in fish. In the South of India, particularly, fishing is an important industry. It supplies food and many valuable by-products, some of which are exported.

In South India alone, the fishing industry employs over 1½ lakhs of people, and its catches are worth about Rs. 3½ crores every year.

Banking has greatly helped the growth of the fishing industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the fishing industry.

We at Palai are proud that so many leading fishing firms, and indeed important firms in every field of business and industry in South India, employ the *complete* banking service we offer:

Current Accounts — Demand Drafts — Telegraphic Transfers — Investments — Letters of Credit — Bill Collection — Deposits — Loans and Overdrafts — Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

ESTD. 1927

PALAI CENTRAL BANK LTD.

Head Office: Palai, Kerala.
Branches at: Madras, Madurai, Cochin, Quilon, Trivandrum, Mangalore, Bangalore, etc. Also at: Delhi and New Delhi.

A LEADING BANK IN SOUTH INDIA

MONEY FAIRLY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, 21*st May*

With the busy season almost at an end, the short-term money market ruled fairly comfortable during the week under review. The subscriptions to the Central Government's loan, no doubt, drained away a substantial part of the surplus funds with banks and, in fact, a few of them appeared again as borrowers. Their demand was, however, easily met with the least strain on the market. There was, therefore, no change in interest rates. Inter-bank call money was placed at 3 per cent. among the Exchange banks and large Indian banks and at 3-3¼ per cent. among the smaller banks. House money at call continued to be quoted at 4¼ to 4⅜ per cent. and short-term deposits at 4⅛ to 4⅜ per cent. for one to six months.

The Reserve Bank of India statement for the week ended 16th May 1958 shows a contraction of Rs. 15.12 crores and a rise of Rs. 15.29 crores in notes held in the Banking Department. There has been an increase of Rs. 24.84 crores in foreign securities and a corresponding fall in rupee securities. The rise in foreign securities has been more than offset by a decline of Rs. 30.79 crores in balances held abroad (in the Banking Department), so that the drain on foreign assets in unabated with a drop of Rs. 5.95 crores during the week. Deposits of the Central Government have risen by Rs. 21.78 crores, while those of other Governments are lower by Rs. 2.04 crores. Deposits of banks have dropped by Rs. 38.11 crores, reflecting the withdrawal of funds for subscribing to the Central Government's loans. Loans and advances to Governments are higher by Rs. 2.27 crores and other loans and advances by Rs. 13.37 crores, of which advances to Scheduled banks against usance bills account for Rs. 9.21 crores. Investments have gone down by Rs. 17.92 crores.

A slight fall in deposits is indicated by the Scheduled banks' statement for the week ended 9th May 1958. Demand deposits have declined by Rs. 1.40 crores and time deposits by Rs. 1.10 crores. While borrowings from banks are higher by Rs. 1.31 crores, those from the Reserve Bank have declined by Rs. 2.29 crores. Advances have dwindled by Rs. 3.09 crores and bills purchased and discounted by Rs. 3.65 crores. There has been a sizable fall of Rs. 18.60 crores in investments, while cash balances have grown by Rs. 8.34 crores and money at call and short notice by Rs. 3.30 crores.

The Gilt-edged market ruled dull and the volume of business was restricted. Thanks to the enquiries in some of the medium and long-dated issues, the undertone remained steady. 3 per cent. 1986 Conversion Loan had business 10 nP lower at Rs. 71.15, while 2½ per cent. 1961 attracted buyers and gained 10 nP to Rs. 95.45. 2½ per cent. 1962 had buyers at Rs. 95.35 *ex*-voucher, as against Rs. 95.30 *cum*-voucher a week ago. 3 per cent. 1959-61 was steady at Rs. 99.10, while 3 per cent. 1963-65 was in demand and rose by 5 nP to Rs. 95.35. 3 per cent. 1964 put on 10 nP to Rs. 95.30 and 3 per cent. 1966-68 10 nP to Rs. 92.75. 3 per cent. 1970-75 also gathered 10 nP to Rs. 87. 3½ per cent. 1962 was marked down by 5 nP to Rs. 97.80. The new loan, 3½ per cent. 1963, was available at the quoted rate. 3½ per cent. 1964 was at Rs. 98.20. 3½ per cent. 1965 had also sellers, but the quotation was unchanged at Rs. 97.80, as also 3¼ per cent. 1967 at Rs. 97.55. 3¼ per cent. 1967 shed 5 nP to Rs. 99.45. 3¼ per cent. 1968 was available at Rs. 99.50. 4 per cent. 1960-70 dropped 5 nP to Rs. 100.40. Among State loans, 4 per cent. 1963 issues were in demand; West Bengal 1963 gained 5 nP to Rs. 99.40, as also U.P. 1963 to Rs. 99.35. 4 per cent. 1967 put on 5 nP to Rs. 98, while Andhra 1967 and 1968 were marked down by 5 nP to Rs. 97.80.

There was a further improvement in the rupee in terms of the U.S. dollar, in consonance with the strength of sterling abroad. Banks' selling rate of ready dollars declined from Rs. 475.50 to Rs. 475 per $100 and their selling rate from Rs. 472 to Rs. 471.75 per $100. In New York, spot sterling gained strength from $2.81.7/16-2.81.9/16 to $2.81.11/16-2.81.13/16 and three months' forward from $2.79-2.79⅛ to $2.79⅛-2.79⅜. Transferable sterling moved up from 279.50-279.60 cents to 279.55-279.65 cents.

KEEN BIDDING IN FINER TEAS

(From Our Own Correspondent)

CALCUTTA, 20*th May*

The 1958-59 season's first export sale will take place on 9th June. Since new season's Darjeelings have begun leaving the hills in larger quantities, a special sale is scheduled to be held on 26th May. One such special sale was held on 12th May, when new Darjeelings on offer amounted to 6,636 packages.

Keen competition was offered for the finest varieties which, as a result, realised high prices. Fair support was accorded by British buyers, and the subsequent report that the U.K. stocks for the week ended 9th May were lower by 2 million lbs., at 118 million lbs., was noted in the market as indicating that still larger interest from British buyers was in store. A remarkable feature was the fair buying done on Russian account. Possibly, the delay in tea movements in Colombo port, following labour troubles, should have made Russian buyers shift attention to Calcutta. Despite this fair buying as the sales came to a close, a few lots had to be withdrawn and a number of teas failed to realise the prices according to valuations.

Transferable export quota changed hands first at 2½ nP and then at 2 nP. Subsequently, the rate declined to 1½ nP. From 1½ nP, non-transferable shipping licence declined to 1 nP, but sellers demanded 2 nP. In new season's sellers demanded 17 nP, but buyers offered 16 nP.

SLUMP IN SILVER

(From Our Own Correspondent)

BOMBAY, 21*st May*

Trading in the bullion market during the week under review was noted for the sharp fall in the price of silver, which affected gold also to some extent. The precipitate decline in silver was due to the withdrawal of support by the erstwhile bulls on account of the approach of the slack season. While the supply position in silver showed signs of improvement, the offtake dwindled substantially. Consequently, there was a heavy unloading by "bulls" and "bears" pressed their sales. The waning demand and expansion in arrivals are reflected in a discount of As. 8 at which ready silver came to be quoted today, as against *nil* a week ago and a premium of Rs. 3 two weeks back.

As the closing price of forward silver (July contract) yesterday stood at more than Rs. 7 below the starting rate for that settlement, the bears were obliged to pay a margin of Rs. 500 per bar on their outstanding sales in that contract. The loosening of the bull grip is also reflected in the wiping out of the backwardation charge for the transfer of business from June to July contract from Rs. 2-2 at the close of the previous week to *nil* today.

Gold also softened in sympathy with silver. The fall in demand and the decision of the Bombay High Court holding that the provisions of section 178A of the Sea Customs Act were *ultra vires* the Constitution, so far as gold was concerned, also aided the bearish sentiment. The Bombay High Court's judgment, it is feared, would encourage smuggling activity.

Silver for forward delivery (June settlement) broke from Rs. 193-6 to a low of Rs. 187-10 today, before recovering at the close to Rs. 188-7. The July settlement dropped from Rs. 191-4 to Rs. 187-6, but closed higher at Rs. 188-7.

Ready silver slumped from Rs. 193-7 to Rs. 187-2 before closing at Rs. 187-15. The floating stocks of silver are estimated at 300 bars. The daily average arrivals were 40 bars (including unrefined metal), while the offtake was 10 bars per day.

Forward gold (June settlement), after an initial improvement from Rs. 111-5 to Rs. 111-13, dipped to Rs. 109-7 and closed at Rs. 109-10. The July settlement declined from Rs. 109-15 to Rs. 108-3 and finished at Rs. 108-6.

Ready gold fell sharply from Rs. 113-5 to Rs. 110-15. At the close, there was a partial recovery to Rs. 111-2. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 2,000 tolas, while the offtake no more than the same quantity.

New York silver was unchanged at 88⅝c. In London also, silver held its ground at 76½*d.* for spot delivery and at 75⅞*d.* for forward. Gold fluctuated between 249*s.* 5½*d.* and 249*s.* 4*d.* before closing at 249*s.* 4¾*d.*

The following comparative table shows at a glance the trend of the market during the week under review:

	21-5-58	Highest	Lowest	14-5-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

HIDES DULL

(From Our Own Correspondent)

KANPUR, 19*th May*

During the week under review, conditions in the local hides and skins market were dull, as operators were somewhat indifferent. There was a tendency for prices to sag in respect of wet salted buff. The volume of new arrivals declined slightly. The main purchasers were the local tanners. The Madras dealers and the country tanners were lukewarm in their support. The latest quotations are as follows:—

Wet salted cow 1st grade at Rs. 360, 2nd grade at Rs. 200 and 3rd grade at Rs. 140 per score; wet salted buff 1st grade at 1 lb. 6 ozs. and 2nd grade at 1 lb. 11 ozs. per rupee; goat 1st grade Rs. 300 to Rs. 280 and 2nd grade at Rs. 270 to Rs. 260 per 100 pieces; sheep 1st grade at Rs. 325 and 2nd grade Rs. 275 per 100 pieces.

During the internal sales held last week, dusts on offer amounted to 20,150 chests. Although demand was good, the price-trend was mixed. The best liquoring C.T.C. Assams eased by 20 nP below valuation, while the bright liquoring mediums tended dearer. Orthodox teas eased by 2 nP, although earlier in the sales these had eased by 4 nP. Darjeelings realised the price according to valuation and were of an ordinary description. The quotations were: Best Assam C.T.C. Rs. 2.80 to Rs. 3.00, medium Assam C.T.C. Rs. 2.15 to Rs. 2.25, medium Assam grainy dust Re. 1.70 to Re. 1.72, and medium Dooars Re. 1.68.

COTTON FUTURES RECOVER

(From Our Own Correspondent)

BOMBAY, 21*st May*

The cotton futures market began the week on a subdued note and, after a brief spell of firmness on Friday, declined again on Saturday. The market ruled easy on Monday and most part of Tuesday, but picked up strength towards the close of the day. The firm trend persisted today also. The firmness on Friday was due to the expectation of a possible cut in excise duty on medium and coarse cloth following talks in the city between Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, and the representatives of the cotton textile industry. But the categorical refusal of the Minister to agree to any reduction in duty caused much disappointment. The Minister's promise to set up a committee to examine the present crisis facing the industry failed to inspire confidence among operators. Sentiment was further adversely affected by the reported plea made by the representatives of mill interests that the Government should discourage export of ¾" staple cotton. The Government of India's decision to maintain the floor and ceiling prices of cotton for the 1958-59 season at last season's level also imparted weakness to the market. It was contrary to the general anticipation that the floor prices would be revised upwards as recommended by the Cotton Advisory Board. These factors induced heavy selling on Saturday and prices fell sharply. The market, however, gathered support yesterday following strong rumours—they proved true late in the day—that the Government would release immediately an export quota for 50,000 bales of cotton. The quota comprised 35,000 bales of all varieties not above 23/32" in staple and 15,000 bales of cotton of all varieties not above ¾" in staple to be exported on a first-come-first-served basis. The trade was awaiting a quota for ¾" cotton for a long time, and although the quantity presently allowed was considered small, it was widely welcomed. The announcement touched off fresh buying, with the result that values firmed up. Most of the lost ground was recovered, so that the week's closing rates were only a little lower than those at the end of the last week.

I.C.C. Moglai Jarilla (May 1958) opened the week at Rs. 666, as against the previous close of Rs. 668, and after rising to Rs. 670.50 the next day, declined to Rs. 654 on Tuesday. It recovered to Rs. 665 today. I.C.C. Moglai Jarilla (August 1958) commenced the week's trading at Rs. 677.50. After improving to Rs. 680.75 on the following day, it dropped to Rs. 664 yesterday before rising again to Rs. 675.50. After opening at Rs. 673 today, the contract hardened to Rs. 679, before finishing lower at Rs. 676.50.

The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	21-5-58	*High*	*Low*	14-5-58
I.C.C. Moglai Jarilla (May 1958) ...	665	670.50	654	668
I.C.C. Moglai Jarilla (August 1958) ...	676.50	679	664	678.50

Total tenders against the maturing May contract on the 15th and 19th inst. aggregated 250 bales and 650 bales respectively. The total today aggregates 3,650 bales.

The spot section was active though prices did not show any marked improvement. Mills which were keeping off the market hitherto came forward to make sizable purchases. Sustained demand was noted for staple varieties. Particular interest was evident in Khandesh, Laxmi, Jaydhar and 0394. The Ahmedabad mills were interested in Kalyan and a sizable volume of business was reported.

In the export section, although demand for Bengals was subdued shippers were interested in Kalyan early in the week in anticipation of a quota. Soon after the quota was announced, prices of exportable varieties like Kalyan, Wagad, Kalagin and Oomra *Deshi* improved. Exporters feel that the new quota will be utilised in about a month's time. Japan is expected to be the principal buyer. This country, it is reported, is releasing fresh foreign exchange allocation next month which will enable it to purchase more Indian cotton.

The import section was quiet. Shipment business was confined mainly to small quantities of Egyptian and Sudan cottons. Spot lots of U.S. styles also attracted the attention of spinners.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 593; Berar Jarilla 720; Khandesh 795; Oomra *Deshi* 660; Vijay 895; Hubli Laxmi 1,005; Jaydhar 840. *Delivery contracts*: Bengal 580; Wagad 608; Kalagin 605.

The Karachi cotton futures market continued to rule firm during the week under review. There was large-scale buying in May contract, in view of the approaching maturity date. The distant July delivery also met with heavy bull support in anticipation of better demand from foreign countries. Firm upcountry advices, following smaller crop arrivals, imparted further strength to the market. N.T.R.G. May improved from Rs. 76-9 last week-end to Rs. 77-4 on Monday. The July contract firmed up from Rs. 73 to Rs. 74-2-6. Yesterday, however, there was some reaction attributed mainly to profit-taking sales. Nevertheless, the closing rate were well above those last week-end. The spot section was active and prices improved. Sind *Deshi* was quoted a rupee higher at Rs. 64-8, while Punjab *Deshi* was a shade easy at Rs. 62-4. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few other popular varieties of Pakistan cotton prevailing at Karachi:

4F Roller 69-8; S.G. 78-8; 4F Punjab Roller 74; S.G. 79-8; 289F Punjab Roller 85; S.G. 95-8.

Quiet conditions prevailed in the Alexandria cotton futures market during the week. Values showed a declining trend. Overseas demand was slack and domestic spinner interest low. With the long-staple May contract expiring this month, interest has shifted to July which is now the basis on which offers are made. The latest available quotations—in tallaris per lb.—from Alexandria are given below:

Karnak: May 77.05; July 78.65. *Ashmouni*: May 69.10; August 69.56.

The delay in the announcement by the U.S. Department of Agriculture of the subsidy rate for U.S. cotton export under the new export subsidy payment-in-kind programme continued to restrict business in the Liverpool cotton futures market. Trading was characterised by large-scale switching operations from near to distant positions. The Liverpool American futures contracts showed modest improvement, while the mixed growths contracts were maintained at last week's levels. Sudan contracts were neglected with values remaining unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: May-June 24.89; July-August 25.36; October-November 25.98; December-January 26.35. *American cotton mixed growth contract*: May-June 25.65; July-August 26.10; October-November 26.60; December-January 26.99. *Sudan*: May-June 31.06; July-August 31.20; September-October 31.85.

Cotton futures values in the New York market registered a perceptible decline on hedge selling and liquidation prompted by reports of improved weather conditions in most of the cotton belts and further curtailment in operations in the domestic textile industry. Even the revised lower crop estimate for the season published by the Crop Reporting Board failed to lift values.

The Crop Reporting Board of the U.S. Department of Agriculture, in their revised estimates of the current crop, have placed area under cultivation as on 1st July 1957 at 14,066,000 acres, the harvested area at 13,558,000 acres the yield per acre at 388 pounds and production at 10,964,000 bales of 500 pounds each. Official Sept. 1957 estimate of the crop was as high as 12,713,000 bales. Persistent heavy rainfall during harvesting was responsible for the sharp cut in production. The crop also suffered in quality which resulted in a scarcity of good grade cotton.

New crop conditions are receiving very close attention even so early in the season because the planted acreage is reported to be the smallest on record. Out of 17.6 million acres of allotted acreage, about 5 million acres have gone out of cultivation as entries in the Soil Bank and only record high yields will lead to a crop exceeding 11 million bales.

It is reported that according to the Secretary of Agriculture cotton planting allotment would be cut to around 14 million acres in 1959 unless the present law is changed. The House of Representatives' Agricultural Sub-Committee is considering legislation to prevent such a drop in acreage which, it is said, would be "very drastic and very bad for cotton."

Operating provisions of the export subsidy "payment-in-kind" programme have been announced but the rate of subsidy has not been made known. It is, however, made clear that the rate of subsidy is subject to change at any time. According to present rules, sales under P.L. 480 funds will not be eligible for subsidy under this programme but steps are being taken to make them eligible. The programme, it may be recalled, applies only to export on and after 1st August 1958.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	20-5-58	13-5-58	6-5-58
Spot	36.30	36.45	36.05
May	—	—	36.00
July	36.25	36.59	36.33
October	36.76	36.95	36.87
December	36.87	—	—

YARNS IRREGULAR

(From Our Own Correspondent)

BOMBAY, 21*st May*

The yarn market ruled irregular during the week under review. Art silk yarns ruled easy, while staple fibre yarns were steady. The easiness of art silk yarns were due to enlarged supply as a result of deliveries effected by indigenous manufacturers and further arrivals of stocks from foreign countries. Towards the close of the week, however, the yarns picked up strength and the closing quotations were actually higher than those prevailing a week before. Although the offtake in staple fibre yarns was restricted due to tight money conditions and absence of support from important centres like Punjab, Bhagalpur, Calcutta and Surat, prices were not only fully maintained but actually registered a rise as compared with the previous week. Cotton yarns continued to rule dull. Buying support from weavers was at a low ebb, as the prices of handloom cloth did not show any signs of improvement.

It is learned that the existing scheme for the distribution of indigenous rayon yarn to the weaving industry may be modified so as to give a fair share in the supply of yarn to the small units which are experiencing difficulties in getting adequate supply of yarn at fair prices. The Textile Commissioner is reported to have called for information from weavers regarding the number of looms and shifts worked by them during the October-March 1958 period. Meanwhile, the Government of India has published draft amendment to the Customs and Excise Duties Drawback (Art Silk) Rules, 1957, providing for a rebate on exports of art silk fabrics at the following rates in place of the existing rates:

Art silk fabrics made from yarn

	Rebate (Rs. per lb.)
Below 75 deniers	2.00
75 deniers and above but not above 100 deniers	1.28
Above 100 deniers but not above 135 deniers	0.77
Above 135 deniers but not above 175 deniers	0.52
Above 175 deniers	1.12

Spot 120 Japan advanced by 6 nP to Rs. 6.37. 150 Japan rose by 8 nP to Rs. 6.30. 120 Italy rallied 13 nP to Rs. 6. 150 Italy, however, receded by 6 nP to Rs. 6.44, for want of follow-up support. Among indigenous yarns, National Rayons 120 bright cones first grade improved by 7 nP to Rs. 5.69, while 150 bright cones first grade shed 2 nP to Rs. 5.64.

Staple fibre yarns (40x2) June delivery evoked more enquiries and gained Rs. 6 to Rs. 608. Business in August delivery commenced today at Rs. 621. The contract came in for persistent selling and dropped to Rs. 613. Over the week, spot 40x2 New Greats strengthened by 5 nP to Rs. 3.19. Kohinoors and Citys gathered 4 nP each to Rs. 3.28 and Rs. 3.26, respectively. Centurys climbed up by 8 nP to Rs. 3.27. Foreign yarns, however, lacked support. Paramounts receding by 3 nP to Rs. 7.16 and Fujis by 6 nP to Rs. 7.25.

In the cotton yarn section, ten counts Moderns declined by 50 nP to Rs. 13.50. Podars were dull at Rs. 13. Among twenty counts, Gokaks eased by 12 nP to Rs. 16.75. Moderns were neglected at Rs. 16.75 and Indus at Rs. 16.37. Forty counts Minaxis were stagnant at Rs. 23.37, as also Moderns at Rs. 24. Sixty counts Moderns were on offer at Rs. 60, Raghuvamshis at Rs. 50.50 and Finlays at Rs. 60.50. Eighty counts Mahendras changed hands at Rs. 69.50, same as last week. Moderns were unchanged at Rs. 69.75.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	21-5-1958	14-5-1958
	Rs.	Rs.
***Art silk* yarn (per case of 200 lbs.)—**		
120 Japan (per lb.)	6.37	6.31
150 Japan (per lb.)	6.30	6.22
120 Italy (per lb.)	6.00	5.87
150 Italy (per lb.)	6.44	6.50
***Staple fibre yarn* (per case of 200 lbs.)—**		
40 x 2 June	608 00	602 00
40 x 2 August	613.00	—
40 x 2 New Great (per lb.)	3.19	3.14
40 x 2 City (per lb.)	3.26	3.22
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	13.00	13 00
20s Modern	16.75	16.75
40s Minaxi	23.37	23.37
60s Raghuvamshi	50.50	50.50
80s Modern	69.75	69.75

SUGAR MOVES DOWN

(From Our Own Correspondents)

BOMBAY, 21*st May*

There was a sharp fall in prices in the sugar market during the week under review. Selling was quite pronounced, thanks to the special release of 100,000 tons of sugar for sale in the free market announced on the 14th inst., that is, just a fortnight after the previous normal monthly release of 166,000 tons. The special release was prompted by the exceptional firmness in sugar prices noted in recent weeks. Arrivals of sugar (by rail) into the market during the week were large, being 17,600 bags, as against 16,400 bags in the previous week.

Small grain sugar dropped Rs. 2 to Rs. 107 per bag. Medium grain fell by Re. 1.50 to Rs. 108-Rs. 110. Large grain receded from Rs. 112-Rs. 116 to Rs. 111-Rs. 116.

Sugar trade circles are greatly intrigued at the inordinate delay in the announcement of the Government's sugar export policy. Unless the announcement is made, the prices of sugar, they say, will not be maintained at a reasonable level. Meanwhile, a recent Press report from New Delhi avers that the Government of India has decided to set up a separate central organisation to handle the export of sugar. The decision, it is said, has been taken in view of the feeling that the State Trading Corporation would not be able to undertake the task. The proposed organisation is expected to enlist the full co-operation of the proprietors of sugar mills and benefit by the experience they have gained, specially last year, in exporting sugar.

* * * *

HAPUR, 19*th May*

After ruling steady to firm in during the past few weeks under the bullish influence of rumours suggesting the possibility of early exports, sugar prices registered an easy trend during the week under review. Absence of any concrete scheme for sugar exports and the release of a special quota of one lakh tons for free sale by the Government, were the main depressing factors. Crushing in sugar factories in west U.P. has finished and ex-mill delivery prices eased fractionally during the week-end.

Want of support from the consuming centres and easy supply position following release of special quota for free sale accounted for a fall of 50 nP to 62 nP per maund in *ex*-mill delivery prices of sugar in the Muzaffarnagar market during the past week. The offtake during the week was small and the latest prevailing *ex*-mill delivery prices are:—Meerut (D 28) Rs. 36.50, Simbhauli (E 29) Rs. 36.75, Iqbalpur (C 28) Rs. 37.12, Mansurpur (B 29) Rs. 38.50, Mawana (C 29) Rs. 37.12, Shamli (C 29) Rs. 37, Amroha (D 29) Rs. 35.62, Bijnore (E 29) Rs. 35.44.

In the absence of any definite policy regarding exports, sugar prices in the Kanpur market, which had risen out of all proportion in recent weeks, declined fractionally during the week under review. Buyers from the consuming centres were shy in transacting business at higher rates and the release of a special quota of one lakh tons besides the monthly quota of 1.66 lakh tons, released about a fortnight back for free sale, also had a dampening effect on the market sentiment. Latest spot and *ex*-mill rates there, respectively are:—(Per bag and per maund): (D 29) Gola Rs. 100.50, Rs. 35.50, Burhwal Rs. 100, Rs. 35.50, Hargaon Rs. 100, Rs. 3.56, Basti Rs. 104, Rs. 37.

Khandsari enjoyed fairly good demand and prices continued steady to be quoted in the week-end at Rs. 31 to Rs. 34 per maund.

Poor arrivals, due to off season and better pre-monsoon demand, accounted for slight gains in dry quality *gur* prices during the week. The local stocks were slowly running down and were put at 1.38 lakh maunds and arrivals averaged about 100 maunds daily. Dry quality *gur* was quoted at Rs. 15.75 per maund.

Ready *gur* prices in the Muzaffarnagar market advanced by 50 nP per maund during the week, due to good demand from Gujerat coupled with decreased arrivals. *Shakker dara* was in good demand from Rajasthan and prices were almost unchanged, *Masala shakker* prices, however, improved by Re. 1 per maund. Total arrivals of *gur* in the season in the Muzaffarnagar market amounted to 9.30 lakh maunds and the present stock is put at 1.25 lakh maunds, as against 1.75 lakh maunds in the corresponding period of last year. The prevailing prices are:—*Chaku Minja* Rs. 17.25 to Rs. 17.62, *Shakker dara* Rs. 18 to Rs. 19, *Masala* Rs. 22 to Rs. 24.50, *khandsari* Rs. 31 to Rs. 34 per maund.

Forward *gur* market ruled quiet during the week in the absence of new driving forces. *Gur fagun* having opened at Rs. 12.44 last Monday and touching the highest at Rs. 12.60 and lowest at Rs. 12.31 is today quoted at Rs. 12.52.

OILSEEDS RECOVER AT CLOSE

(From Our Own Correspondent)

BOMBAY, 21*st May*

After presenting a firm trend in the first three sessions of the week, the oilseeds market developed easiness on Monday which persisted yesterday. Today, the market staged a slight recovery. The initial firmness was aided by hopes of the removal of export duty on castor oil, revival of buying interest in spot groundnut oil from *vanaspati* manufacturers and bear-covering in linseed. There were, therefore, enlarged enquiries for oilseeds and oils and prices moved up. On Monday, however, the market staged a reaction, owing to bull liquidation and bear pressure in castor futures. The reaction gathered further momentum yesterday and today, thanks to weaker advices from Saurashtra and fresh selling in groundnuts by upcountry operators. Linseed was subdued, as fresh support was lacking; the U.K. rate for linseed oil was around £108 per ton. Cottonseeds were dull. Business put through in kardiseed and nigerseed was restricted. Castorseeds, however, were somewhat maintained on reports about the application of *Teji* options which encouraged traders to expect further relief in export duty. There were rumours that Russia was again in the market for a good quantity of castor oil. The U.K. quotation for commercial castor oil (bulk) was £111-112 per ton, as against the Indian quotation of £120.

Groundnut May contract advanced from Rs. 169.25 to Rs. 171-25 on Saturday, but relapsed to Rs. 170 yesterday before finishing at Rs. 170.50 today. August contract, after rising from Rs. 167.50 to Rs. 169.50, declined to Rs. 167.50. Over the week, bold ready was higher by 38 nP at Rs. 34.25. Coromandel quality and Khandesh both improved by 50 nP to Rs. 34.87. Groundnut oil ex-mill increased from Rs. 18.12 to Rs. 18.75, but thereafter moved down to touch Rs. 18.37 today. Railway receipt, after rising from Rs. 18.12 to Rs. 18.37, declined to Rs. 18.12 yesterday, but recovered to Rs. 18.37 today.

Castorseeds May contract stood at Rs. 147.75 on the opening day, as against Rs. 147.25 last week-end. It evoked good buying enquiries and spurted to Rs. 149.12 on the 17th inst. Under the influence of persistent selling orders, the contract gradually receded to Rs. 147.25 today. September contract rallied Re. 1.12 to Rs. 152.37 on Saturday. Subsequently, however, it came in for selling and lost much of the earlier gains, today's closing rate being Rs. 150.50. Ready Madras moved up from Rs. 29.25 to Rs. 29.87, but eased to Rs. 29.50 today. Kanpur quality, after rising from Rs. 27.75 to Rs. 28.44, relapsed to Rs. 28.25. Castor oil B.S.S. had some buying support in the earlier sessions of the week, the rate advancing from Rs. 16.25 to Rs. 16.50 on the 17th inst. Thereafter, the quotation tended to recede, today's rate being Rs. 16.25. Commercial quality put on 25 nP to Rs. 15.25, but declined to Rs. 15.12 today.

Linseed May contract which was done at Rs. 30.37 last week-end improved to Rs. 30.94 in the middle of the week. After declining to Rs. 30.69 yesterday, the contract recovered to Rs. 30.81 today. September contract recorded a rise of 50 nP to Rs. 31.37 on Saturday. This rate was maintained on the following day also. It, however, declined to Rs. 31.19 yesterday before finishing higher at Rs. 31.31 today. Over the week, bold ready gained 25 nP to Rs. 30.62. June-July was higher by 19 nP to Rs. 30.94. Linseed oil hardened by 25 nP to Rs. 15.94.

Cottonseed May contract was steady at Rs. 108 in the first three sessions of the week, but gave way subsequently on account of selling pressure, today's closing rate being Rs. 106. September contract dropped Re. 1.75 to Rs. 106.75.

Kardiseed bold ready elicited some support and strengthened from Rs. 19.12 to Rs. 19.25 on Saturday. After maintaining at this level on Monday, it declined to Rs. 19.12 yesterday. This rate was maintained today too. *Nigerseed* Madras quality was in request and improved from Rs. 28.25 to Rs. 28.50 on the 17th inst. Thereafter, selling ensued and the rate gradually declined to touch Rs. 28 today.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	21-5-1958	14-5-1958	7-5-1958
	Rs.	Rs.	Rs.
Groundnut—			
May 1958	170.50	169.25	168.75
August 1958	167.50	167.50	167.00
Bold ready (per cwt.)	34.25	33.87	33.75
Linseed—			
May 1958	30.81	30.37	30.12

Commercial (per quarter) ..	15.12	15.00	15.37
Linseed oil †			
Ready	15.94	15.69	£15.62

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

JUTE GOODS STEADY

(From Our Own Correspondent)

CALCUTTA, 20*th May*

Fairly steady conditions were in evidence in the jute markets during the week under review. Earlier, prices of jute goods made a fractional recovery encouraged by more business with foreign countries. In the meanwhile, further rains fell in most jute-growing districts and led to renewed reports of the excellent condition of the young plants. This naturally led to easiness in raw jute prices, with subsequent reflection in prices of jute goods. By the week-end, therefore, prices of jute goods returned to the week's opening levels, which were, however, higher than the I.J.M.A. minimum prices. Earlier, Argentina issued import licences in respect of goods which were due to have been shipped in April, but which were held back on account of that country's suspension of licences in order to have an appraisal of the foreign exchange commitments. Another good news for the gunny market was the reduction of the freight rate on gunnies to New Guinea via Hong Kong from 379s. to 365s. per 50 c.ft. less 10 per cent. deferred debate. It would be remembered that recently the freight rate on gunnies to the U.S. Atlantic and Gulf ports was also reduced. These revisions have followed shipping space having become noticeably in excess of cargo offering. Trade circles, therefore, take the view that more reductions might be in store, now that there is keen competition among shipowners to secure freight.

The slight increase in production in the month of April from 85,300 tons to 88,000 tons, mainly due to an increase in the number of working hours from 197.5 to 200.5, did not have any pronounced effect on the market, in view of the fair possibilities of business in both hessian and heavy goods. Egypt showed interest in B. twills, and its requirement was understood to be for a substantial quantity. Russian interest led to the placing of an order by the Russian Trade Agency. The quantity of cloth and bags covered was stated as being substantial, and shipment was to be completed by September. Trade circles hoped that more export business would be done during this month. Hessian shipped from 1st to 5th May was double, at 13,000 tons, as compared to that shipped from 1st to 5th April. Sacking shipment amounting to 6,300 tons recorded a similar rise.

There was some covering business on Tuesday last, and this erased the earlier decline in prices. Thus, ready B. twills were steady at Rs. 101.05 and hessian 40" 10 oz. at Rs. 41.25. On the next day, the news that the Government of Argentina would issue import licences for due-April hessian imparted some cheer to lift hessian 40" 10 oz. to Rs. 41.50. In sympathy, B. twills were fractionally higher at Rs. 101.10. At this stage, Egyptian interest in heavy goods was a significant factor which pushed B. twills up to Rs. 101.75 on Thursday, with hessian 40" 10 oz. remaining unchanged but steady, at Rs. 41.50. Russian interest followed and imparted a steadying influence. On Friday, although B. twills sagged slightly to Rs. 101.35, hessian 40" 10 oz. was steady at Rs. 41.50. Over the week-end, these two constructions moved down to Rs. 101.05 and Rs. 41.35, respectively. It was noted that, while forward quotations for B. twills were higher on balance, the trend was reverse in respect of hessian. Thus, Oct.-Dec. B. twills opened at Rs. 102.10 and after improving to Rs. 102.85 moved down to close at Rs. 102.20, which was 10 nP higher on balance. However, Oct.-Dec. hessian 40" 10 oz. closed at Rs. 41.20 after rising to Rs. 41.45 from Rs. 41.25. Yesterday prices eased as there was little buying on foreign account. Ready B. twills sagged to Rs. 99.85 and hessian 40" 10 oz. to Rs. 41.00.

With the continued reports about excellent conditions of fibre plants raw jute prices were marked down. May-June daisee bottoms gave way to Rs. 28.75 from Rs. 29.35. Assam bottoms were at one time as high as Rs. 27, as against Rs. 25.50 earlier, following fears of damage to crop consequent on excessive rains. However, information obtained subsequently disclosed that the young plants were above the water level and so far no damage had been caused. As a result, the price declined to Rs. 25.50. Buyers discounted old crop rates by 25 nP; sellers were nevertheless reserved. In new crop, Assam bottoms had business at Rs. 26 Aug-Sept. delivery. Aug.-Sept. Assam new middles were done at Rs. 29. The latest quotations for the old crop May-June delivery are:

	Middles Rs.	Bottoms Rs.
Pakistani:		
District	32.00	29.00
Northern	31.50	28.50

WHOLE LEAF TEAS FIRM

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 15*th May*

There were 1,209,676 lbs. on offer in sale No. 12, which was held on Tuesday, 13th May. There was a useful all-round selection on offer, although Nilgiri teas showed a further decline. The sale opened to a strong general demand. This demand was particularly noticeable for clean black leaf medium teas which are irregularly 10 nP dearer. Low medium and medium brokens were firm, but the equivalent fannings were dearer. Stalky descriptions were the weakest feature and buyers were reluctant to purchase these teas. Whole leaf met a good market and were firm to dearer. The following are the quotations:—

	1958 Rs.
Plain B.P.	1.45
Low medium	1.70 to 1.85
Medium	1.85 to 2.15
Good medium	2.15 to 2.45
Quality	2 40 to 3.60

The average price realised in Sale No. 12 was Rs. 2.14 per lb., as compared with Rs. 2.13 in the previous sale and Re. 1.74 in the corresponding sale of 1957.

London Market:—*Sale of 12th May* 1958.—Very strong plain dearer.

Sale of 13th May 1958.—Market firm to dearer.

Colombo Market.—No sale this week.

Calcutta Market:—*Export*.—Darjeeling sale 'A.' Strong general demand for everything, buyers following flavour and any flavoury teas sold above valuation.

Internal.—20,500 packages dust. Met strong general demand which strengthened as sale progressed. Orthodox descriptions up to 6 nP easier at the start, steady at close. Black leaf steady. Best C.T.C. irregular and up to 20 nP easier. Bright liquoring medium C.T.C. often dearer. Darjeelings about steady.

Export Quota.—Some business has been transacted over the week in Special Export Licence at 2 to 3 nP. Today's quotation is sellers 2 nP buyers 1½ nP. New season's quota quotation is sellers 17 nP buyers 16 nP.

Forthcoming Auctions.—Sale No. 13 will be held on Tuesday, 20th May 1958.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:—

"*Sale No.* 13.—1,300,000 lbs. Strong general demand, particularly low medium and medium brokens, which are irregularly 5 nP dearer. Similar fannings about steady. Good mediums firm. Best liquoring easier with quality whole leaf strong."

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, 19*th May*

Steady conditions were witnessed in the food-grain markets during the past week, due mainly to comparatively restricted arrivals this year. Wheat prices here continued steady around the previous week's levels, while coarse grain prices continued to harden. In the Punjab, there was persistent decline in wheat prices which was attributed to the restriction on the movement of wheat following the formation of wheat zone.

Wheat prices at Hapur hovered around the week's opening level of Rs. 15.50 per maund for average quality and up to Rs. 16.50 per maund for farm produce. Daily arrivals which were at an average of 600 maunds for most part of the week improved to 1,000 maunds today which were small as compared to about 2,500 maunds in the corresponding period of last year and about the same amount in 1956 when average wheat was quoted at: Rs. 14.62 and Rs. 13.25 per maund, respectively.

Rice prices here also continued to be steady and latest prices on Monday were: Basmati *sela* Rs. 32 to Rs. 36, mainpuri Rs. 26, coarse quality Rs. 22.50 per maund. Gram is reaching here from Punjab in larger quantity and local gram stock is now put at 33 *khatties*, but due to quietly firm conditions in Punjab, gram prices improved here also slightly during the week. Paucity of local stocks coupled with poor arrivals accounted for further gains in the prices of barley and *bejhar* during the week. *Jowar* and *guwar* prices ruled steady and week-end prices (in rupees per maund) and latest stocks are as follows: Gram 11.25 to 11.44, barley 11, *bejhar* 10.50, *jowar* 12 to 13.25, and *guwar* white 15.50; stocks maize 6, gram 33, *bejhar* 10, *jowar* 7, *bajra* 5 *khatties*.

Peas arrivals continued fairly heavy at an average of 1,000 maunds per day, but prices eased slightly due to fast increasing stocks which are now placed at 175 *khatties* which includes about 15 *khatties* of old stocks. *Arhar* arrivals were also heavy from Punjab and Delhi bordering places and *arhar* stock here swelled to 110 *khatties*, corresponding figure last year being 25 *khatties*. Reported shortage of *arhar* in Madhya Pradesh and Mysore, however, accounted for steady conditions in *arhar* prices. Prices of *urd* and *moong* were also steady to be quoted in the week-end at: Peas *dara* Rs. 9.50, white quality Rs. 10.25, peas *dal* Rs. 11, *arhar* Rs. 12, *arhar dal* Rs. 15.62, *urd* Rs. 17.50 to Rs. 18.50, *moong* Rs. 22 to Rs. 22.50, *massoor* Rs. 13.25 to Rs. 14.50.

KIPS UNCHANGED

(From Our Own Correspondent)

MADRAS, 19*th May*

There was no noticeable change in the kip market during the week under review. Trading with U.K. was poor, and there were many enquiries for light weight and medium cow fifths and inferior fifths which were in short supply. Sellers were anxious to sell better grades than lower ends in light and medium weights and all grades combined in heavies. There was good demand for buff calf, but arrivals were small. Prices of tanned goat and sheep skins remained unchanged.

In the London auctions, demand for sheep skins was erratic, and prices were 1s. below March levels. The offerings sold comprised mostly old stock carried over from earlier auctions.

In the May sales, 360,000 goat skins out of 470,000 skins were sold and 530,000 sheep skins out of 900,000. The consignors state that the prices realised have been disastrous.

In view of the erratic prices realised in the May London public sales, the Southern India Skins and Hides Merchants' Association, Madras, adopted the following resolution passed by the Managing Committee on 15th May 1958.

"In the opinion of this Committee the present system of London public auctions is injurious to the E. I. tanned goat and sheep skins tanning industry. Hence, it is resolved to take steps to stop the present system of consignments to the public auctions and to request the Government of India to allow only exports on c.i.f. and exports on consignment for sale by private treaty only. The Committee authorises the following delegation to wait on the Hon'ble Minister for Commerce and Industry and present a memorandum to him and report the results to the Managing Committee."

COPPER SEMIS HARDEN

(From Our Own Correspondent)

CALCUTTA, 20*th May*

While an easier trend in electrolytic zinc, tin and lead was in evidence during the week under review in the metal market, prices of copper semis were hardening. Manufacturers raised the price of copper conductors to Re. 1.68 a lb. from Re. 1.60. Importers complained of accumulation of copper with them, as in the absence of permits nothing could be sold. From time to time, importers had been furnishing the Government details of arrivals as required of them under the Control Order. In the absence of sales, they were put to inconvenience on account of blocking of funds. At the same time, manufacturers felt acute difficulty for raw material, and as a result prices of semis and copper utensils were rising. Business in the copper market continued to be at a standstill. On the London Metal Exchange, copper moved down, as a result of restricted demand on account of the bus strike affecting industries. In New York, the downward movement was fractional. In the local market, tin moved down to Rs. 507 from Rs. 568. More arrivals were reported, and the supply position became easier to that extent. With more material in the market and consumers confident of getting their requirements without difficulty, the volume of business was low. That the metal continues to be surplus in producing countries was amply indicated in the International Tin Council's decision to maintain the 40 per cent. cut in export in the July-September quarter also, when exports would be limited to 23,000 tons. This is the only way to stabilise prices. It was stated that the Council thought that Russian tin exports to China were probably on the increase. Russian exports of tin to Western Europe were stated to have recorded an uptrend. In the local market, electrolytic zinc declined to Rs. 56 from Rs. 57.50 following more arrivals. Lead at Rs. 61 dropped by 50 nP, following lower demand, as also on reports of declining trend on the London Metal Exchange.

UNIQUE OPPORTUNITY FOR BUSINESS MEN

EXPERT Accounts Investigator—Prominent Tax Consultant—Efficient Business Organiser—Company Secretary holding highest academical qualifications with thirty years' deep experience in high executive positions, offers part or full-time services to business magnates troubled with complicated Accountancy, Taxation or Organisational problems. Correspondence strictly confidential. Inquire Box No. 964, c/o "Commerce," Brady House, Veer Nariman Road, Fort, Bombay.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (c) Clive Mills have paid dividend at As. 10‡ on bonus shares for the year 1955. * Including bonus. (k) Investments.
† New Central Jute Mills—Dividend for 1956 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1956 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17·6 includes an interim dividend of Rs. 7·6 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

MARKET GOSSIP

(*Concluded from page 971*)

sources had become available in Britain sufficient to provide through additional exports a balance of payments of the size needed. Since the U.S. recession is expected to be temporary, it seems unwise, according to Prof. Paish, to absorb those resources now available for employment in export trades into work for the home market. He, therefore, feels that "it is preferable to expand credit facilities to Britain's temporarily embarrassed foreign customers to enable them to continue their development without a check." If, after achieving a suitable balance of payments surplus, there is still an unnecessarily large amount of unemployed resources, Prof. Paish thinks that it will be wise to give second priority to relaxation of restrictions on investment on which future prosperity so largely depends. He concludes that, only if, after these steps, there are still resources running to waste, is there a case for taking steps to absorb them by cutting taxes heavily and encouraging rise in consumption.

* * *

As we go to press, a report from London says that the British Bank rate has been cut from 6 per cent. to 5½ per cent. This cut follows the reduction of 1 per cent. made on 20th March last. The further downward revision in Bank rate, though it

RECOGNITION OF TRADE UNIONS

INTER-UNION rivalry and political bias continue to be the twin evils which afflict trade unionism in this country. They have led to industrial strife, to considerable loss of production and, what is perhaps more deplorable, to deterioration in industrial discipline. If this trend has to be averted, labour leaders and employers must agree on some methods by which rivalry among unions could be eliminated. As recent events in Jamshedpur have shown, the introduction of politics into trade unionism is bound to end in unjustified strikes, loss of output and decline in morale. Inter-union rivalry is an ill-wind that blows nobody any good. Such rivalry, as the Union Labour Minister, Mr. Gulzarilal Nanda, pointed out at the recent Indian Labour Conference at Naini Tal, is the "bane" of the labour movement in the country and is the major factor in the present disturbed conditions of industrial relations.

Whether in the larger sphere of general employer-employee relations or in the somewhat narrow, though very important, issue of the recognition of a trade union, the only method by which some realism could be imported into the arena is to encourage direct negotiations, rather than compulsory adjudication. Unfortunately, the Naini Tal Conference could not reach any decision on the suspension of the adjudication laws. It was, however, agreed that voluntary arbitration, rather than adjudication, should receive special emphasis. The U.P. Governor, Mr. V. V. Giri, whose right to speak on labour questions is based on a lifelong experience in trade unionism, stressed that the only way in which industrial relations could be ideally maintained was by having a strong and well-organised trade union movement which did not believe too much in politics but believed in economics of industry and stood for bettering the workers' standards of living; if this was the primary basis, the subsidiary basis might be political. This, in a nutshell, is the principle by which trade unionism in this country must be guided, if it is to grow into a nationally constructive movement of the workers. The facts of the labour situation in India, however, are different and far from pleasant. Whereas Mr. Giri pleaded for one union for one industry, there are not only two or more unions in one industry but many such unions even in respect of single industrial enterprises. The West Bengal Labour Minister, Mr. Abdul Sattar, was certainly not wrong when he suggested, at the States Labour Ministers' Conference at Naini Tal, that there had been a "mushroom growth" of trade unions. This is not a situation which augurs well for the future of industrial relations.

The prevailing practice in respect of recognition of trade unions is not based on any law on the subject. In one sense, it is right that no legal cobwebs are allowed to grow over the recognition issue. There is now no legal obligation on the part of any employer to recognise and deal with a trade union. However, some States, notably Bombay, have laid down a few regulations for ensuring recognition for a trade union. In Bombay, as is well known, a "representative" union is one which can claim 15 per cent. membership from among the workers. Although in some of the major industries such as textiles there are large unions which can speak with some authority for a large proportion of the workers, there are industries and even individual industrial establishments which face the problem of multiplicity of unions. This makes it difficult for the employer to negotiate with workers. It is also easy to see that the workers themselves are bound to lose in the long run through their divided loyalty. This defect in India's trade unionism cannot obviously be removed without the active co-operation of the workers. The remedy lies in their hands.

A peculiar difficulty which a union recognised by the employer has to face is mendacious, scurrilous, vindictive propaganda by a rival union. Thanks to the illiteracy of the average Indian worker, it is often easy for a rival union to create conditions in which a recognised union will find it difficult to maintain its status. All that the rival union has to do is to act on the principle that nothing succeeds like excess, put forward impossibly high demands, create an illusion that it can wrest better and larger concessions from the employers and thereby cut the ground under the feet of the recognised union. This may be good "politics," but it is bad trade unionism. Both employers and labour leaders, although they know the essential weakness of the existing system which provides no legal basis for recognition of trade unions, have not demanded the institution of regulations for compulsory recognition. The enforcement of compulsory recognition may sometimes prove to be a remedy worse than the disease. The best solution obviously is one in which rival trade unions agree to abide by a code of conduct evolved as a result of mutual agreement. It is noteworthy that the representatives of the labour organisations who participated in the recent Labour Conference agreed to implement a code of conduct designed to maintain harmonious inter-union relations. The basic principles of the code, it is stated, are:

(1) Every employee in an industry or unit shall have freedom and right to join the union of his choice. No coercion shall be exercised in this matter. (2) There shall be no dual membership of unions. In the case of representative unions, it was agreed that this principle needed further examination. (3) There shall be unreserved acceptance of and respect for democratic functioning of trade unions. (4) There shall be regular and democratic elections of executive bodies and office-bearers of trade unions. (5) Ignorance and backwardness of workers shall not be exploited by any organisation. No organisation shall make excessive or extravagant demands. (6) Casteism, commun

parties, a committee composed of the representatives of all the central trade union organisations must go into the question and resolve the dispute. For this purpose, central trade union organisations which will act as standing machinery will provide necessary funds or persons for different localities. If this fails, the question should be left to an independent judicial decision. (7) Only those unions which observe the code of discipline will be entitled to recognition. (8) In the case of trade union federations not affiliated to any of the four central organisations of labour, the question should be dealt with separately.

If the code of conduct and the criteria were implemented in letter as well as in spirit, it would obviously go a long way towards placing trade unionism on a firm foundation. It is also necessary that the code of discipline which was evolved at the Labour Conference held last year should be observed by trade unions. Briefly, this code lays down that (1) there should be no strike or lockout without notice, (2) no unilateral action should be taken in connection with any industrial matter, (3) there should be no recourse to go-slow tactics, (4) no deliberate damage should be done to plant or property, (5) acts of violence, intimidation, coercion or instigation should not be resorted to, (6) the existing machinery for the settlement of disputes should be utilised, (7) awards and agreements should be speedily implemented, and (8) any action which disturbs cordial industrial relations should be avoided.

Finally, it seems necessary to call attention to one aspect of the issue of recognition of trade unions which has apparently not received the attention it deserves. Discussions on this issue often ignore the vital consideration that it is the community which pays heavily for inter-union rivalry. No one denies the right of a union to call a strike. The question is whether a union has a right to hold the community to ransom over the question of recognition. Trade unions are becoming increasingly powerful without there being any guarantee that they will use their strength wisely. The community has a right to demand that production and national interests are not sacrificed at the altar of inter-union rivalry. Nay, it has also a right to demand withdrawal of recognition to unions which indulge in anti-social acts in utter disregard of national welfare. In the absence of this safeguard, trade unionism would exert a baneful, rather than a beneficial, influence. A "recognition" issue, however important it may be, cannot be allowed to supersede wider national issues. And, in inter-union rivalry, if one of the unions involved has scant regard for the rule of law, a democratic community has the inherent right to intervene, to cry halt to such rivalry till saner counsels come to prevail.

COMMUNITY DEVELOPMENT

A GREAT deal of emphasis has been rightly laid on the Community Development (C.D.) and the National Extension Service (N.E.S.) Blocks in the second Plan. There is no doubt that this experiment in initiating rural India to live a better and fuller life is the most significant development in India's economic history. Having been conceived as an all-embracing programme for raising productivity levels in villages and also as a means of not merely improving the living standards of the rural population but inculcating in them the right methods of living, the Community Development programme has immense significance to the country's social and economic future. Naturally enough, both the Government and the public expect a great deal of improvement in the areas covered by this programme. At the end of the second Plan, it is expected to cover 276,000 villages with a population of 150 million. A sum of Rs. 200 crores has been set apart in the Plan for its implementation; in the first two years of the Plan, an expenditure of Rs. 53 crores was incurred and the anticipated outlay for the first three years ending 1958-59 is expected to be Rs. 87 crores.

More than in any other sector of Indian economy, Community Development cannot be measured in terms of monetary expenditure alone. Much depends on how rapidly rural India's attitude towards advanced agricultural practices is changed and how widely they are adopted. Further, it is of the utmost importance that people should see in the programme a meaning and a relevance to their lives. They must outgrow the static, convention-ridden and factious life which they have lived for several decades now. The primary aim should, of course, be to lift India's rural agriculture above its primitive levels. Much light on the success of the programme in achieving this objective has been shed by the Programme Evaluation Organisation (P.E.O.) of the Planning Commission in its fifth Evaluation Report on the Working of Community Development and National Extension Service Blocks. The Report represents the findings of a survey conducted in 82 blocks—36 Community Development Blocks and 46 National Extension Service Blocks—located in different States; in each State about one-fifteenth of the total number of blocks was selected, care being taken to ensure adequate representation for the different geographic areas within a State.

The findings of the survey are by no means very encouraging. It brings out very clearly the two important problems, namely, shortage of personnel and paucity of facilities which could make agriculture a more profitable proposition for the farmers. It would appear that about 40 per cent. of the blocks studied by the P.E.O. reported absence of block development officers for varying lengths of time, the average being five months. About 60 per cent. of the blocks, both N.E.S. and C.D., had to do without agricultural specialists for five and 10 months, respectively. Appropriately enough, the P.E.O. has suggested that the number of blocks should be increased only as the availability of personnel increases. It also urges that both personnel and finance for a block should be proportionate to its size. This suggestion stems from the Organisation's findings that some large blocks do not have proportionately larger personnel and finance; this has led to a certain "dilution" of the programme in these blocks. Because of delays in sanction and procedural defects, there have been shortfalls in budgeted expenditure. Thus, the *per capita* annual expenditure at Re. 1.4 in the case of N.E.S. blocks and Rs. 2.0 in the case of C.D. blocks is only 70 per cent. and 55 per cent. of the amounts envisaged in the block pattern. The Organisation has suggested that the procedure involved in making funds available to the blocks should be simplified.

People's participation in development programmes, it has been computed, works out to an average of Re. 1 per person per year in the N.E.S. blocks and Re. 1.8 in the C.D. blocks. A matter of serious concern, according to the Report, is that there is a decline in people's participation towards the close of the block period. This, the Report says, is contrary to what one would expect in the Community Development programme. It attributes this trend to the fact that educational efforts and the "radiational" influence have not been effective enough. Perhaps, it could also be attributed to the rise in the prices of the commodities which rural India has to buy and also to the fact that the programme has not given the results people originally expected from it. The authorities will do well to see that people continue to participate in the programme in an increasingly effective way.

The success of the agricultural programmes designed to raise productivity is largely dependent upon the use of fertilisers and improved seeds. From this point of view, it is somewhat disconcerting to note that the shortage of seeds and fertilisers continues in many community development regions. Only 24 of the 82 blocks studied have established seed farms and the number of blocks reporting the existence of some multiplication schemes is only 55. It is, however, gratifying to note that agriculturists are learning to use fertilisers on a somewhat larger scale.

The Report notes that facilities such as provision of finance and supply of fertilisers at the village do not seem to have any particular relevance to the adoption of superior cultural practices. Thus, most cultivators are prepared to continue to use improved seeds even if these facilities are withdrawn. Presumably, cultivators of cash crops show this preference; if so, it could be traced to the fact that it is more profitable to grow such crops. If this is correct, the conclusion is inescapable that no special inducement for adoption of better agricultural practices is necessary in respect of crops with attractive economic return. The level of agricultural prices obviously exerts a determining influence in the spread of advanced agricultural techniques. A sound price policy for agriculture is thus an important element in raising agricultural production. It is also noteworthy that those with larger holdings take more kindly to superior agricultural practices. One wishes that the Report had thrown more light on this question, for it would have shown what would be the optimum size of a holding for the use of better cultural practices in agriculture. Apart from the paucity of seeds and fertilisers and the absence of superior economic incentives for the farmers, there is an important reason why some households have failed to press into use the techniques by which agricultural output could be raised. This is the ignorance of the agricultural development programme. There is obviously great scope for more intensive educational efforts.

As regards the use of fertilisers, two contradictory trends are seen. More and more households have no doubt taken to it. At the same time, it is depressing to note that the proportion of households which are satisfied about the use of fertilisers has gone down. In this connection, the Report observes: "Among the reasons reported for dissatisfaction, the failure of the yield to come up to expectation is given as the most important. About three-fourths of the relevant households have not either adopted the fertilisers or given them up after a time or are dissatisfied with their use." Clearly, in the interests of agricultural production and fertiliser industry, the precise causes of this dissatisfaction with the use of fertilisers should be properly investigated. If such investigation reveals that wrong fertilisers have been used or fertilisers have been used in wrong doses or adequate preparation has not been made for the use of fertilisers, the appropriate remedial measures should be adopted.

The Report has brought to light a certain conflict between need and achievement in the Community Development programme. The level of programme activity, it is stated, is high only in areas which have a good rainfall. In other words, the regions which are blessed by nature are also those which receive the benefits from the man-made improved measures. It looks as though the whole programme illustrates the saying "the more one has the more one gets." Even in minor irrigation, maximum activity is reported from blocks which have already comparatively high percentages of the area under irrigation. This poses a somewhat difficult problem for the planners. By concentrating their time, energy and money on areas which are likely to benefit most from the programme, they will have put their resources to maximum use. On the other hand, such a policy will result in further decline in production in the less favoured areas. In the immediate future, however, it seems wise to devote more attention to areas which promise quick results rather than dissipate available resources on the less favoured areas. For, as the Report points out, the "favoured areas which are also better suited to adopt agricultural improvement practices can make much greater contribution to increase of agricultural production in the short run." This, however, does not mean that the less favoured areas should be neglected. Only, it would seem best to get maximum return from intensive development. At the last Development Commissioners' Conference, it was suggested that the target under the second Plan for an increase in agricultural production should be 50 per cent. in the favoured tracts, as against 30 per cent. increase in the less favoured areas. It would appear that the data on the agricultural efforts made in these two broad divisions of the country suggest that the contribution to increased agricultural output made by the less favoured areas *vis-a-vis* the more favoured ones will be substantially lower than what is envisaged.

An important conclusion reached by the P.E.O. is the absence of an all-round attack on the agricultural problems. Thus, its survey reveals that two-thirds of all relevant households have taken to the use of improved seeds for some crop or other. Again, the percentage of households which have adopted some fertiliser or other is almost equally high. But the number of households which use improved seeds, fertilisers and better techniques together is only one-third of the relevant households in the villages. This, as the Report rightly points out, would seem to indicate that different improved practices which complement one another are not being sponsored as parts of an integrated programme of farm development. From this point of view, the authorities will do well to implement the suggestion made at the recent conference on Community Development, held at Mount Abu, that increased production should be achieved by ensuring the "fullest utilisation and maximum benefit from all agricultural facilities." A concerted attack is bound to yield better results than individual programmes, however spectacular may be the achievements in these programmes taken individually.

END OF TWO-WEEK OLD T.I.S.CO. STRIKE

OIL PRICES REDUCED—WORLD COMMODITY PRICES—OUTLOOK FOR PAPER INDUSTRY

THURSDAY, 5 P.M.

MARKET GOSSIP

AFTER holding out for fourteen days, the strike in the T.I.S.Co. factory, which is reported to have resulted in a loss of over 19,000 tons of steel valued at over Rs. 1.11 crore, has been called off. In announcing the decision to withdraw the strike, the Jamshedpur *Mazdoor* Union advised the workers to go back to work and fulfil their usual duties and norms of production, as the country needs steel and more steel. If only the Union leaders had borne this fact in mind earlier, the aforesaid loss of steel could have been avoided. The withdrawal of the strike seems to have been a formal one, as workers were reported to have been gradually returning to work since the 23rd inst., that is, nine days after the strike began, and the number of such workers has been rising.

The share market, which had been lethargic till yesterday—a sharp fall in prices was averted by reports of growing improvement in the labour situation—responded well to the welcome development in the Jamshedpur labour situation; it is recognised that it will take several weeks before normal production is restored. Tata Ordinaries rose by Rs. 2 from yesterday's closing of Rs. 177.50 and Indian Irons by 20 nP to Rs. 21.48. This has also changed the market sentiment for the better. But textile shares continue to be a drag on the market. The fate of the industry's plea for a reduction in excise duty now rests on the Expert Committee's findings from its probe into the industry's problems. Except for a sympathetic rise today, albeit to a small extent, textile shares lack inspiration.

• • • •

The decision of the Tata Iron and Steel Company Ltd. to issue bonus shares in the ratio of one share of Rs. 75 for every five ordinary shares of Rs. 75 each to commemorate the Golden Jubilee of the Company has received the approval of the Controller of Capital Issues. It is to be approved by the shareholders at an extraordinary general meeting to be held on 19th June. The issue of bonus shares requires a sum of Rs. 3,83,72,100 to be capitalised. For this purpose, the full amount of Rs. 3,80,64,570 standing to the credit of the share premium account as on 15th May 1958 and such additional amount as may be received to the credit of the account up to the date of the meeting will be utilised and the balance, not exceeding Rs. 3,07,530, will be drawn from the general reserve to make up the required sum to issue 511,628 fully paid-up ordinary shares as bonus to the existing shareholders in the ratio of one share for every five shares. It is stated that certain shareholders holding 6,313 ordinary shares have not fully paid their calls in respect of the new issue made in May 1956 and such arrears of calls amounted as on 15th May 1958 to Rs. 2,20,955. The bonus shares will rank *pari passu* with the existing shares, except that they will not be entitled to the dividend in respect of the year 1957-58.

• • • •

It is a matter for general satisfaction that the Government of India and the major oil companies operating in the country have reached an agreement on oil prices, thus bringing to a close the protracted negotiations between them for reducing the prices of petroleum and petroleum products. The agreement will certainly serve to dispel the impression which unfortunately was tending to gain currency that the companies were taking too rigid a stand. The negotiations would not have borne fruit in the manner they did, had it not been for the patient and persistent efforts of Mr. K. D. Malaviya, Union Minister for Mines and Oil, and the co-operative attitude shown by the oil companies.

Under the agreement, the companies have consented to an *ad hoc* reduction, with effect from the 20th inst., in oil prices. Thus, the price of motor spirit has been cut by 14 nP per Imperial gallon, of kerosene (superior and inferior) by 48 nP per unit of 8 Imperial gallons, of high-speed diesel oil by 7 nP per Imperial gallon, of light diesel oil by Rs. 11.64 per ton, and of furnace oil by Rs. 13.91 per ton. The total of all these reductions is expected to be of the order of Rs. 83 lakhs per month or Rs. 9.96 crores annually. While a part of this amount represents the world-wide decline in petroleum prices that has been in evidence for some months now, the oil companies have also to forgo a portion of their profits, since the cut in prices results in lower realisations from sales. In this connection, it may be noted that, for the oil industry, the return on its investment is by no means excessive. In the past, the net return on the capital employed, estimated at Rs. 100 crores, has been only 6 per cent. or 3 per cent. of gross turnover. Further, for several years now, the companies have ploughed back their earnings into their Indian business.

The reduction in oil prices now effected will continue until a new price formula is evolved after the Government's cost accountant completes his examination of the accounts of the various oil marketing companies. On the suggestion of the Government, the companies have agreed to credit the entire savings to Government account, the final disposal of which is still under consideration. What is generally regarded as even more important than the *ad hoc* reduction in prices is that the oil companies have agreed to terminate the "valued stock account" procedure under which they were hitherto fixing prices of oil products. What is more, the companies have assured the Government their co-operation in the formulation of a new formula for determining oil prices in India. The Government will depute one of its own cost accountants to examine the accounts of the various oil marketing companies with a view to ascertaining what actually goes and should go into the prices of the different oil products sold in the country. This examination is expected to be completed in about six months' time and thereafter an agreed price formula will be settled for the different petroleum products, including those which are at present governed by the valued stock account procedure agreed upon with the Burmah-Shell. The new formula is likely to be given retrospective effect from May 1958. It is noteworthy that Burmah-Shell has agreed to terminate forthwith the price arrangement in force, instead of at the end of the six months' notice period as provided for in the agreement, and also to forfeit the deficit of Rs. 1.5 crore shown in its account at present, which it could, under the existing agreement, claim to recover through increased prices in future. Surely, the examination of the oil companies' accounts by a Government accountant should at least serve to remove the misapprehensions in certain quarters that there is some unexplained mystery about the way the oil prices are fixed.

The *ad hoc* reduction in oil prices now agreed upon works out to about 10 per cent. of the total value (c.i.f.) of oil and oil products consumed in India. The landed cost of the 5.5 million tons of oil and oil products in this country is estimated at about Rs. 95 crores, including cost, insurance and freight. But the actual cost to the consumer is double this amount. This is due partly to the heavy rail freight, excise duties, and other taxes which account every year for Rs. 45 crores and partly to distribution charges and profits of companies together amounting to Rs. 50 crores. Despite the reduction in oil prices, there are no prospects of the consumer getting any immediate relief. For the entire sum which the oil companies will credit to Government account every month is proposed to be utilised for oil exploration and prospecting. While the diversion thus of funds to projects which in the long run will prove beneficial to the country is to be welcomed, one feels that the consumer also deserves some relief. Cheaper petrol and diesel fuel will serve to impart a much needed fillip to motor transport, the development of which is as important as prospecting of oil. At any rate, the Government should concede the need for passing on, to some extent, the benefit of the cut in furnace oil price to industrial consumers who have been hit hard by mounting cost of production, following the all-round rise in wages, prices of raw materials and stores, and taxes.

• • • •

The continuing decline in world commodity prices has caused widespread concern in more than one country. It is true that, so far as India is concerned, world trends have a secondary significance, inasmuch as our foreign trade forms a small fraction of world trade. Even so, India cannot for long remain insulated from world trends. It is noteworthy that, in India too, there has been a certain decline in commodity prices. Thus, the index number of wholesale prices (Base: 1952-53=100) stood at 107.9 for the week ended 10th May 1958, as compared with 108.6 a year ago. In world market centres, prices have declined somewhat more steeply. The London *Financial Times* index of commodity prices (Base: 1st July 1952=100) was 80.40 on 26th May, as compared with 85.44 about 12 months ago. Over the same period, *Reuter's* commodity index (Base: 18th September 1931=100) receded from 469.0 to 412.2 and Moody's index (Base: 31st December 1931=100) from 414.6 to 403.2.

Many factors are responsible for the decline in world commodity prices. But the pride of place must, of course, be given to the recession in the U.S. and in a few other countries. This has resulted in reduced demand for commodities. Stocks have been kept low in most countries for fear that a further decline might reduce the value of the stocks held. Stockpiling has been abandoned by several governments. This applies particularly to non-ferrous metals. On the supply side, the declining price trend has been assisted by a larger production of a wide range of commodities, including non-ferrous metals. Commenting on the downward trend in commodity prices, the *Index*, the monthly economic review of Svenska Handelsbanken, Stockholm, says: "This general reduction in commodity prices has been welcome inasfar as it has been of help to the industrial countries in their efforts to stabilise domestic price levels. On the other hand, there have been disadvantages in that the inflow of foreign exchange to the raw material countries has diminished, making them less able to purchase the products of the industrial countries. This difficulty has been accentuated by the fact that the prices of manufactured goods have continued to rise and, as a result, the terms of trade of the primary producing countries have worsened. Thus, it has become more difficult for the industrial countries to export at the same time, as the primary producing countries are meeting greater obstacles in developing their internal economies and raising the generally low standard of living."

The problem for the free world is to halt the economic recession without bringing about inflation. The U.K. faces this dilemma. The fall in the rate of new orders which has characterised much of the British industry in the recent months, according to the London *Financial Times*, seems to be accelerating. Concern has been expressed by some industrialists about prospects later in the year. It is believed that it is unlikely that any major recovery in output can be expected this autumn failing some new stimulus from the Government or an unexpected early end to the U.S. recession. It would appear that the decline in orders has been most marked on the home market, though export orders have on the whole held up remarkably well. No drastic fall in production is, however, anticipated. The marked fall in the flow of home orders in the U.K. steel industry is symptomatic of the conditions which British industry is faced with. It remains to be seen whether the recent cut in the British Bank rate will provide the much-needed stimulus to British economy. However, so long as production costs remain high and demands for higher wages continue to be met, it must be difficult for British industry to hold its own against its rivals. Reviewing the prospects for British economy, the London *Financial Times* observes:

"Thus, we are left with an economy with every prospect of falling activity, and already possessing surplus capacity, one in which the only valid reason for refraining from expansion is the external position. The avoidance of expansion has not stabilised the price level, and rising production now seems on the whole the best hope of doing so. When and whether expansion can safely be resumed, without an external crisis, must be largely a matter of judgment. In any case, the restrictions on investment, through the banks and the Capital Issues Committee, should now obviously be relaxed. The two determining factors must be the course of the American recession and the development of unemployment in this country. An American recovery would provide a solid basis for expansion here, and rising unemployment might force the Government to take risks it would not otherwise choose to. For the moment, however, economic policy faces a great and cruel dilemma."

• • • •

In the context of the none too encouraging conditions in the world markets, much interest attaches to the meeting of the Commonwealth officials which is scheduled to open in London on 2nd June, which will be a prelude to the Commonwealth Trade and Economic Conference to be held in Montreal in September. The problem of commodity prices, the provision of capital for developing the Commonwealth and the measures which are needed to increase the sterling area's reserves are likely to figure prominently in the discussion. The sterling area is an important part of the free world, in that it finances nearly 40 per cent. of the world's trade. Clearly, in the interests of world trade, this area must be kept in a state of sound economic health. But the fortunes of the sterling area are also intimately connected with those of the dollar world. From this point of view, it is a matter for no small satisfaction that the economic recession in the U.S. is slowing down, though there are no signs that it has completely ended.

In his address to the Economic Mobilisation Conference of the American Management Association, President Eisenhower stressed that the improvement in the U.S. economy was "in the making." He, however, hastened to add: "Not all our economic troubles are over by any means." Reports from the country, he said, strongly indicated that the "economic decline of recent months is slowing down." He added: "Even in this recession year, business is spending more than $30,000 million to maintain productive equipment, expand capacity, and provide for the creation of new products. In the past five years, these outlays have reached the staggering sum of more than $150,000 million. State and local governments are spending nearly $10,000 million each year for new schools, better streets, and the other facilities that our people want and need. Nowhere is this faith in the future better exemplified than in the $7,000 million which will be spent by industry on research and development this year—outlays that have been growing at the rate of 10 per cent. a year. The wonders of recent years—nuclear energy, miracle drugs, synthetics, electronics—will be dwarfed by new wonders to come... In short, the future is bursting with vitality and promise." It remains to be seen whether, as in the past, American economy will emerge the better for its having gone through a recession.

Shares of paper mills seem to have caught the fancy of investors, as witness the continuously upward trend in their values since the beginning of March this year. Orient Papers are now quoted at Rs. 31.30, as against Rs. 24.50 at the end of February. Similarly, Titaghurs have gained from Rs. 33.50 to Rs. 38.50, India Papers from Rs. 19.37 to Rs. 20.87 and Shree Gopals from Rs. 13.87 to Rs. 16.19. The increased interest of investors in paper company shares must be attributed to hopes of higher return. These hopes are quite justified. The prospects for the paper industry are certainly bright. Because of industrial development, increase in literacy and improvement in the general standard of living, the demand for paper and paper-board is moving up by 10 per cent. every year. The aggregate requirements in 1960-61 are expected to be as much as 350,000 tons. The paper manufacturers are endeavouring their best to meet the rising demand for their products through expansion and modernisation. The total annual installed capacity of the industry has gone up markedly from 186,204 tons in 1955 to 252,000 tons at present. The actual production also has increased from 184,884 tons to over 210,000 tons. It must, of course, be said that there has been a persistent

EQUITIES RISE AT CLOSE

SEQUEL TO CALLING OFF OF T.I.S.CO. STRIKE

(From Our Own Correspondents)

BOMBAY, *29th May*

THE calling off of the T.I.S.Co. strike in Jamshedpur last evening, which followed the management's earlier announcement that the first phase of resumption of work would commence on the 28th morning and about 14,000 workers out of a total of 30,000 would be taken back consequent on the improvement in the labour situation, had an encouraging effect on the share market today. Prices, under the leadership of steels, scored small gains from yesterday's low levels and activity also broadened to some extent. The market derived comfort from the fact that, with the resumption of working, the loss of production of steel had been reduced. During the major part of the week, however, the market was lethargic and activity thinned down very much, with a further fall in prices. Reports of an improvement in the labour situation failed to enthuse sentiment, as it was feared that the loss of output due to the strike might affect the earnings of the current year. Reports of fresh tension in the Tata Locomotive factory also kept down the morale.

Tata Ordinaries moved narrowly between Rs. 179.25 and Rs. 177.50 before spurting to Rs. 180 today. At the close, they were done at Rs. 179.50. The new shares gained over the week Re. 1.50 to Rs. 177.50. Indian Irons were erratic. After an improvement from Rs. 21.32 to Rs. 21.56, the shares drifted yesterday to a low of Rs. 21.24. Today, however, they gained to Rs. 21.48.

Textile shares were quiet and prices were marked down. The loss was, however, made good to some extent by today's recovery. Bombay Dyeings dipped from Rs. 53.70 to Rs. 53, but recouped to Rs. 53.30. Centurys displayed an irregular trend. After an advance from Rs. 426 to Rs. 428, the shares sagged to Rs. 423.50. Today, they again improved to Rs. 427.50 before closing at Rs. 425.75. Kohinoors shaded off from Rs. 263.50 to Rs. 262, but gained to Rs. 263.25 at the close. Central Indias rose over the week by Re. 1 to Rs. 82, while Finlays were steady at Rs. 260.50, as also Gokaks at Rs. 137. Indu Ordinaries dropped 16 nP to Rs. 9.02, while Indore Malwas moved up by Rs. 2.50 to Rs. 108 and Khataus Rs. 3 to Rs. 162.50. Minerva were done Rs. 3 lower at Rs. 67, while Model Mills were unchanged at Rs. 170. Mysore Spinnings shed Re. 1.50 to Rs. 91. New Greats, however, gained Re. 1.50 to Rs. 203. Shree Niwas Cottons Rs. 2.50 to Rs. 136.50. Simplex were fully steady at Rs. 152.50, while Svadeshis were dull at Rs. 171.75. Swans lost Rs. 3 to Rs. 341, but Tata Mills shed 25 nP to Rs. 36.75. Osmanshahis had business Re. 1.50 lower at Rs. 42.50, while Azam Jahis gained 50 nP to Rs. 52. Ahmedabad Advances improved by Rs. 2.50 to Rs. 155 and Bradburys by Re. 1.50 to Rs. 159.50. New Kaiser-I-Hinds lost Rs. 2 to Rs. 68.

Banks were steady with an all-round rise in prices. Barodas made a fresh gain of Re. 1 to Rs. 116. Central Banks changed hands Rs. 2.20 higher at Rs. 53.50 and their new shares were taken up Re. 1.20 better at Rs. 55.70. Bank of Indias gained Re. 1.50 to Rs. 131.50. Punjab Nationals Re. 1 to Rs. 53.50 and United Commercials 70 nP to Rs. 60.

Electricity shares provided a mixed pattern. Ahmedabad Electrics picked up no more than 10 nP to Rs. 94.60, while Bombay Suburbans moved up by Re. 1.25 to Rs. 105.75. Surat Electrics were a shade better at Rs. 105.50. Tata Hydros were unchanged at Rs. 117.75, while Tata Powers lost Rs. 7.50 to Rs. 1,207.50 and Andhra Valleys Rs. 12.50 to Rs. 1,137.50.

In the sugar group, Belapurs advanced from Rs. 243.50 to Rs. 246, before closing at Rs. 245.50. Phaltans were 50 nP higher at Rs. 144.50, while Walchandnagars were unchanged at Rs. 263.50. Bhopal Sugars hardened from Rs. 19.76 to Rs. 19.84. Among cements, Associated Cements improved from Rs. 148.25 to Rs. 149.50. After a setback to Rs. 147.50, the shares closed better at Rs. 148.50. Their new shares were done 50 nP higher at Rs. 144. Digvijays gained over the week Re. 1.25 to Rs. 143.25. Dalmia Cements were featureless at Rs. 9.84. Orissa Cements were marked up from Rs. 11.56 to Rs. 11.72 and Jaipur Udyogs from Rs. 11.76 to Rs. 11.92. Among engineering and mining, Alcocks were marked down by Re. 1.25 to Rs. 245. Tata Locomotives, after going up from Rs. 166.25 to Rs. 167, drifted lower to Rs. 164. Today, however, they rallied to Rs. 166.50. Premier Constructions declined by Rs. 2.25 to Rs. 181.25. Larsen and Toubros gained 3 nP to Rs. 16.40 and Mahindras advanced by 52 nP to Rs. 18.52. Shivrajpur Syndicates were unchanged at Rs. 80.50 and Indian Coppers at Rs. 3.08.

After displaying some hesitancy, Scindias moved up gradually on institutional buying to Rs. 17.44. Great Easterns were unchanged on balance at Rs. 19.92. Among automobile shares, Hindustan Motors attracted some attention and gained 28 nP to Rs. 7. Premier Automobiles rose fractionally to Rs. 80.50.

In the miscellaneous section, Bombay Burmahs (old) moved up from Rs. 547 to Rs. 550, but drifted to Rs. 541 yesterday. Hopes of a cut in export duty on tea pushed up the shares again to Rs. 548.50 today. The partly paid-up shares showed no change at Rs. 205. National Rayons gained Re. 1.50 to Rs. 234. Their Rights were in demand and done Rs. 6.30 higher at Rs. 76.30. Tata Chemicals were steady at Rs. 14.84. While Tata Oils rose by 25 nP to Rs. 38, Hindustan Levers were done 48 nP lower at Rs. 22.48. Amar Dyes changed hands Re. 1.25 higher at Rs. 112.25. Hind Cycles had business Re. 1.25 higher at Rs. 133.75. I.C.I.C. were done at Rs. 74, West Coast Papers at Rs. 98 and Sirpur Papers at Rs. 11.72. W. H. Bradys were maintained at Rs. 280, while Wimcos gained Re. 1 to Rs. 171.

Calcutta Stock Exchange

CALCUTTA, *28th May*

Earlier in the week under review, settlement considerations, weaker advices from Bombay, and the grave situation in Jamshedpur restricted business and prices tended to sag on the Calcutta Stock Exchange. Soon, however, the improvement in the situation at Jamshedpur and news that the Tisco Works would resume operations as from today led to some bear-covering and imparted a steadier trend. Had it not been for the anxiety about the strike notice served by the All-India Port and Dock Workers' Federation on the port authorities, transactions on the Exchange would have recorded an increase. The cease-fire agreement in the Assam border with Pakistan was considered a long-term favourable factor. The absence so far of any relief to the tea industry made tea shares dull, albeit the indication, after last week's Tea Board meeting, that a reduction in the excise and export duty was imminent. Jutes and miscellaneous industrials, however, registered a satisfactory trend. Although the working results of some mills announced this week disclosed losses, the belief in the market was that the current accounting period for the bigger units, which have fully rationalised production, must show good results and that buying at current levels should prove to be a satisfactory investment. Another encouraging factor was the declining trend in fibre prices and the prospect of a good crop. Miscellaneous industrials were steady counters in view of the improved prospects. Coal shares were featureless, and the increase in coal price by Re. 0.75 per ton and hard and soft coke price by Re. 1 a ton did not induce buying, since it was thought that the increase would not be of any special benefit to the industry and that it would only just cover the rise in dearness allowance granted. Two more shares, viz., Indian Cables and Indian Aluminiums, were added this week to the list of shares in which forward trading is permitted. With this addition, the clearing list now contains eight shares.

Depression in cloth markets and the absence of any hope for further reduction in the cloth excise duty made textiles listless. Bengal-Nagpurs gave way to Rs. 4 from Rs. 4.19 and Kesorams were quiet at Rs. 10.50.

A visible decline in the volume of business was recorded in coals. Burrakurs were unchanged at Rs. 21.87, while Central Indias lost to Rs. 7.56 from Rs. 7.65. Amalgamated were, however, a conspicuous feature for a rise to Rs. 17.87 from Rs. 17 on interested buying.

Selected jute shares were supported. Anglo-Indias hardened to Rs. 154 from Rs. 149. At Rs. 111, Kinnisons recorded the impressive gain of Rs. 9. Indias gained strength to quote Rs. 128, as against Rs. 117 earlier. Champadanies picked up Rs. 4 at Rs. 96. New Centrals were as high as Rs. 16, as against Rs. 14.37 earlier, Nuddeas rising to Rs. 39 from Rs. 37.50. Belvederes were fully steady at Rs. 102, as were Agarparas at Rs. 8.44. From Rs. 15.75 Howrahs were lifted to Rs. 16.50. Budge Budges hardened to Rs. 94 from Rs. 89, while Nationals receded to Rs. 22.25 from Rs. 23.

Engineering shares recovered. Indian Irons opened at Rs. 20.94 and made a steady recovery to Rs. 21.54 on Monday. On Tuesday, the rate sagged slightly to Rs. 21.36. Texmacos, after improving to Rs. 18.08 from Rs. 17.65, closed at Rs. 17.70. Burn & Cos. were higher at Rs. 342, as against Rs. 339 earlier. Jessop & Cos. were steady at Rs. 20.19, while Braithwaites were fractionally higher at Rs. 26.31.

Several features were recorded in the miscellaneous industrials section. Martin Burns rose to Rs. 26 from Rs. 24.94 and Alkali and Chemicals to Rs. 15.25 from Rs. 14.56. Metal Boxes realised Rs. 28.62, as against Rs. 28.50 previously. Rohtas Industries jumped to Rs. 18.94 from Rs. 17.43. Indian Oxygens firmed to Rs. 18.25 from Rs. 18.12 and National Carbons being better at Rs. 25.56.

Madras Stock Exchange

MADRAS, *27th May*

The easy conditions continued on the Madras Stock Exchange during the week under review also. Business put through was at a low ebb and prices sought lower levels. The improvement in the labour situation at the Tata Iron and Steel Works at Jamshedpur did not evoke any favourable response. Advices from Bombay and Calcutta markets were also not encouraging. The cut in the British Bank rate by ½ per cent. to 5½ per cent. had no favourable impression in the market. Plantation shares were affected by the success of the Communist Party in the recent Kerala elections. Tea shares were generally quoted lower, despite the steadiness in tea prices and encouraging crop reports. The lower price levels, however, attracted some investment support and a mild improvement in prices was noticed towards the close of the week. Rubber shares were weak but coffee shares were favoured. Textiles were subjected to selling in the absence of support. Sugars were dull. Miscellaneous industrials were steady.

Among tea shares in the planting section, Twyfords and Neelamalais shed 10 nP each to Rs. 13.15 and Rs. 4.25, respectively. Kalasas lost a like amount to Rs. 15.30. Haileyburias, however, advanced by 13 nP to Rs. 18. Peermades gathered 12 nP to Rs. 20.37 *cum-div.* and Alageswars 10 nP to Rs. 2.95. Waterfalls were better by 10 nP at Rs. 3.16 and Periakaramalais by 5 nP at Rs. 4.12. Among rubber shares, Midlands declined by 35 nP to Rs. 15.75, Kalpettas by 25 nP to Rs. 25.25 and Tropicals by 20 nP to Rs. 20.50 *cum-div.* Pullangodes receded by 11 nP to Rs. 1.65. Anandams climbed down by 25 nP to Rs. 15.15 *cum-div.* T.R. & T.'s eased by 10 nP to Rs. 6.50 *cum-div.* Puthuthotams shed 7 nP Rs. 2.78. Cochin Malabars, however, attracted some support and added 20 nP to Rs. 4.60.

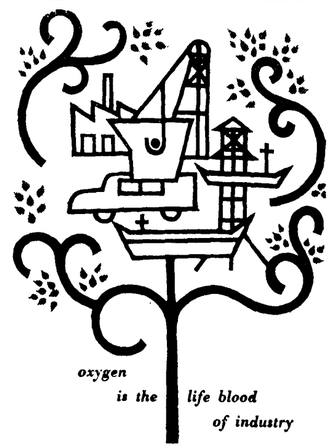
Among coffee shares, Consolidated Coffees were marked up by 55 nP to Rs. 25.10. On the announcement of a bonus share issue in the ratio of one share for every four shares held, Coffee Lands firmed up by 40 nP to Rs. 35.25. Kumergodes went up by 25 nP to Rs. 9.75. Savamalais gained 15 nP to Rs. 4.50.

In the textile section, Palani Andavars slumped by Rs. 5 to Rs. 130. Lakshmis dropped Rs. 3 to Rs. 91. Krishnarajendras and Coimbatore Cottons declined by Rs. 2 each to Rs. 77 and Rs. 139, respectively. Ranga Vilas shed Re. 1.50 to Rs. 59, Rajalakshmis Re. 1 to Rs. 69, Maduras 25 nP to Rs. 31.75 and Kotharis 13 nP to Rs. 9.87. Coimbatore Pioneers, however, evoked some support and improved by Rs. 5 to Rs. 227. Buckinghams added a rupee to Rs. 166.

Among miscellaneous industrials, Textools gained a rupee to Rs. 178. Aluminium Industries were marked up by 70 nP to Rs. 14. Mysore Chemical Manufacturings advanced by 40 nP to Rs. 15.40. Sen-Raleighs improved by 25 nP to Rs. 12.75 and Mysore Papers by a like sum to Rs. 16.25. Mettur Chemicals gathered 5 nP to Rs. 9.60. Orissa Cements, however, lost 40 nP to Rs. 11.85. Mysore Tobaccos receded by 25 nP to Rs. 12.30.

FORWARD TRADING IN MADRAS

The authorities of the Madras Stock Exchange have decided to commence forward trading on a fortnightly settlement basis with effect from 4th July. Trading in the initial stages will be confined to 12 popular scrips—five tea, four textiles and three other counters. The clearing work will be taken by the Bank of India. The counters that will be placed in the forward list are Blue Mountain, Periakaramalai, Cochin Malabar, Consolidated Coffee, Ouchterloney Valley, Travancore Rayon, Madura Mills, Lakshmi Mills (both Rs. 50 paid-up and Rs. 25 paid-up shares), Deccan Sugar and Abkhari and Aluminium Industries.



oxygen is the life blood of industry

Every branch of Indian industry depends on us for supplies of Oxygen. In every phase of India's industrial development, our products and prompt technical service ensure the most modern means and methods of metal fabrication.

Whether in mining or metallurgy, transport or shipping, power or irrigation, mills or factories, we serve every industry, big or small, and contribute today to the prosperous India of tomorrow as envisaged under the Second Five Year Plan.

NEWS IN BRIEF

LARGE deposits of high class fireclay valued at about Rs. 10 crores have been discovered recently in the State of Uttar Pradesh.

The export of gram including split gram and products thereof other than choori from Ganganager district in Rajasthan has been banned.

The Tariff Commission has taken up for investigation the claim of the electric motor industry for continuance of protection beyond 31st December next.

A meeting of the manufacturers of automobiles and automobile engines will be held in the Ministry of Commerce and Industry on 12th and 13th June 1958.

The Government of India has decided to allow those exporters whose cotton was burnt in the fire on the 11th inst. in Victoria Dock to ship fresh stock of cotton in lieu of the quantity burnt.

The Government of India has abolished the export duty on all varieties of oilcakes specified in item 21 of the Second Schedule of the Indian Tariff Act with effect from the 23rd inst.

Calcite deposits have been found in the various parts of Saurashtra region. The deposits in the Amreli and Junagadh areas are estimated at 58,000 tons and 28,000 tons, respectively.

A licence has been granted by the Government of India to the Bharat Electronics Company (Private) Ltd. for starting an electrical lamp bulb factory in the industrial estate at Pappanamcode, Kerala State.

The Union Government has decided not to grant further licences for the import of parts or C.K.D. (completely knocked down) packs to two motor cars, namely, Baby Hindustan and Standard Vanguard.

The Government of India has decided to construct a subsidiary deep water port south of Calcutta, according to the Chairman of the Calcutta Port Trust. The technical experts are now examining several sites.

The tenth International Conference of Agricultural Economists will be held in Mysore from 24th August to 4th September 1958. The general theme of the conference will be "agriculture and its terms of trade."

The Union Government has decided to permit the import of 13 items of refrigeration and air-conditioning machinery other than domestic refrigerators upto the full face value of quota licences issued during the current half-year (April-September 1958).

The Central Government has set up a 29-member Central Board of Fisheries under the Chairmanship of Mr. A. P. Jain, Union Minister for Food and Agriculture. The Board is expected to meet periodically and discuss at national level problems connected with fisheries research and development.

A Regional Handicrafts Training Institute for Women has been set up at Hyderabad under a scheme of the All-India Handicrafts Board and approved by the Government of India. The institute is expected to serve the States of Andhra Pradesh, Madras, Mysore, Kerala and the Union territory of Pondicherry.

An agreement has been reached between India and Russia to start a direct air service between the two countries. The agreement will result initially in a weekly service between Delhi and Moscow. The income from the service, operated by the Air-India International and Aeroflot, will be pooled and equally divided between the two undertakings.

At its meeting held in Bombay on Monday this week, the Board of Directors of the Central Warehousing Corporation decided to construct warehouses at Amravati (Bombay), Sangli (Bombay), Warangal (Andhra), Chandausi (Uttar Pradesh) and Devangere (Mysore). The total outlay on the construction of these was estimated at Rs. 10 lakhs during the current financial year. It was felt that, after further investigations, constructions might be undertaken at two or more centres during this year.

The Governments of India and the United States, signed in New Delhi on 27th inst., eight Indo-American Programme agreements under which India will receive $285,555 in technical assistance. This amount represents a portion of the $6.3 million programme of technical assistance to India under the U.S. fiscal year 1958 budget. The projects include groundwater exploration ($1.53 lakhs), livestock improvement ($41,100), health ($21,930), industry ($40,000), co-operation ($21,000) and agriculture ($8,525).

In pursuance of its policy to promote exports, the Government of India has decided to allow rebates of customs and Central excise duties paid on raw materials for the manufacture of French coffee and ground coffee, P.A.S. tablets and umbrella ribs exported from India. The existing rates of drawback on the export of galvanised iron wire products have been enhanced. Certain changes have also been made in the existing schemes of drawback for dyestuffs and jute manufactures. For further particulars regarding the procedure to obtain these concessions, exporters are advised to contact the Collectors of Customs at the ports of export.

The Central Government has announced a new policy for export of manganese ore during the period July 1958 to June 1959. The policy maintains the continuity in the existing export arrangements but discourages fragmentation of quotas and encourages bulk contracting and shipment of ore. A bonus export quota of 10 per cent. will be given to firms and parties who join together to form co-operatives with an aggregate export quota of 25,000 tons. Those who are able to secure bulk business in excess of their quotas or who are able to negotiate sales on long-term business for deliveries beyond June 1959 have been advised to approach the Chief Controller of Exports and Imports direct for working out satisfactory arrangements for the same.

From Abroad

Japanese steel mills have concluded a contract to buy 300,000 tons of coal from Russia.

Japan and Nationalist China have signed a one-year trade pact under which each country will buy goods worth $85 million.

It is claimed that the United States Navy's latest atom-powered submarine which is to be launched shortly will be the fastest and the most deadly underwater craft in the world.

The Finance Minister of Ceylon is now in the United States exploring possibilities of raising a substantial loan which will finance development projects and also balance the country's forthcoming budget.

Czechoslovakia will give Poland a loan of 250 million roubles for the development of its coal mines. Czechoslovakia and Poland will exchange goods worth 100 million roubles (about £9 million) annually, in addition to those already being exchanged.

A further increase of 0.2 per cent. in the cost of living index in the United States was recorded in April, bringing it to a record level of 123.5 per cent. from the 1947-49 base period. It is, however, stated that some food prices are declining and the overall living costs show signs of settling down.

A deficit of £49.7 million was disclosed in New Zealand's overseas exchange transactions in the year ended 30th April 1958, as compared with a surplus of £4.6 million in the previous year. This adverse movement is due primarily to a rise of 13 per cent. in private import payments and a 4 per cent. reduction in the export income.

The Ceylon Government has assured the prospective private foreign investors that it will not consider the question of nationalising any new private foreign investment in the country for the next ten years. The Government has also assumed that foreign private enterprise will be permitted eventual repatriation of capital, including appreciation thereof, and remittance of dividends.

Prospecting for oil in an undersea area between Saudi Arabia and Kuwait is expected to be started next month by a Japanese Corporation, the Arabian Oil. The Company is now awaiting the outcome of negotiations with British officials in London for a political agreement which will enable the Company to recognise the position of the British in Kuwait. It is stated that the political agreement is a prerequisite for the signing of the agreement with Kuwait.

Pakistan will receive Rs. 20 crores (£15 million) as aid from the counterpart funds arising from imports of U.S. surplus commodities bought for local currency, according to the agreement signed between the U.S. and Pakistan Governments. The funds will be made available forthwith and used for various development projects. An additional sum of Rs. 25 crores is expected to be released for development schemes during the current financial year ending March 1959.

At a meeting held under the auspices of the International Chamber of Shipping in London last week, the deep sea tramp owners from 12 countries decided to set up a committee to prepare a scheme for introducing international co-operative measures to combat the present depression in freight rates in tramp shipping. France, Germany, Greece, Holland, Italy, Japan, Scandinavia and the U.K. have agreed to nominate one representative to the Committee. In addition, the Chairman of the Committee will be British.

The aggregate net profits of 77 leading Swedish companies, the shares of which are quoted on the Stockholm Stock Exchange showed only a minor rise in 1957, that is, from Kr. 556 million in 1956 to Kr. 560.5 million. Of the 77 companies, 37 reported a higher net profit than in 1956, 20 a lower profit and 20 an unchanged net profit. Dividends to shareholders rose by 1.4 per cent. to Kr. 385.5 million. While the dividend in the case of 58 companies was unchanged, 17 companies increased and two lowered the dividend.

PERSONAL

MR. Murarji J. Vaidya has been appointed Vice-Chairman of the Central Silk Board.

Mr. M. K. Kaul took over charge as the General Manager of the Western Railway on Saturday last.

Lt.-Col. Jaswant Singh, Deputy Director-General, Health Services, Government of India, has been appointed to officiate as Director-General in place of Lt.-Col. C. K. Lakshmanan who has been given leave preparatory to retirement.

Air Vice-Marshal A. M. Engineer, D.F.C., formally took over charge as the General Manager of the Hindustan Aircraft (Private) Limited, Bangalore, from Mr. J. M. Shrinagesh, I.C.S., on the 28th inst.

Mr. Rameshwar Dayal, Indian High Commissioner-designate to Pakistan, arrived in Bombay from Rome on Sunday. He will spend a few days in Bombay before leaving for Delhi for consultations with the Government of India.

Mr. Hari Shanker Chaturvedi, a retired judge of the Allahabad High Court, has been appointed Chairman of the British India Corporation, Kanpur, in place of Mr. Haridas Mundhra, pending the decision on the application filed by the Life Insurance Corporation of India under the Indian Companies Act for the appointment of a special officer to take charge of the assets and management and affairs of the B.I.C.

Mr. I. A. Macpherson of Titaghur Paper Mills Company, Ltd., and Mr. M. L. Zutshi of Shree Gopal Paper Mills Ltd., and Ballarpur Paper and Straw Board Mills Ltd., have been elected Chairman and Vice-Chairman, respectively, of the Indian Paper Makers' Association for the year 1958. The other members of the Committee are Mr. D. S. Birkbeck (Tribeni Tissues Private Ltd.), Mr. J. F. Brierley (India Paper Pulp Co., Ltd.) and Mr. P. H. Sykes (Bengal Paper Mill Co., Ltd.).

Geared to the NATIONS ECONOMY

J. K. Organization is not content to rest on its laurels in a spirit of complacency. It is striving with all its vast resources at its command to meet the possible requirements of the country through various sectors.

COTTON TEXTILES	Dhoties—Sarees—Shirting—Longcloth—Coating—Mulls—Poplins—Cotton Blankets in multi-check designs and colours and woollen finish—Mineral Khaki Drills—Tapestry—Canvas—Yarn, etc.	ENGINEERING	Engineers Files—Baling Hoops for Jute Mills and Cotton Mills, etc.
WOOLLEN TEXTILES	Woollen Worsted—Cord Suitings—Tweed—Flannel—Serge—Knitting Wool—Rugs—Blankets, etc.	CHEMICALS	Heavy Acids, Chemicals, Disinfectants, Insecticides, Ayurvedic and Unani Medicines, etc.
JUTE TEXTILES	Canvas—Hessian—Bags—Twine—Chair cloth.	PAINTS	Paints for Marine and Industrial requirements, Paints for Buildings and other uses, Enamels and Varnishes and Distempers.
HOSIERY	Underwears—Shirts—Knickers—Socks, etc.	SUGAR	Quality " Majholia " Sugar
ALUMINIUM	Alloys—Sheets—Circles—Coil of Strips—Shots—Expanded Metal—Notched Bars, etc.	STRAWBOARDS	Strawboards, Mill Boards and Corrugated Boards.
STEEL	Bars—Rods—Steel Castings for Sugar Mills, Oil Mills and Railways.	PLASTICS	Electrical Fittings and other household utility materials, etc.
		OIL-SOAP-ICE	Industrial Oils, Mustard Oil, Soaps.

TEXTILE MILLS' CLOSURE

THE expert committee to report on the present conditions of the textile industry, which might be constituted soon by the Government of India, will examine the entire problem confronting the industry such as the cost structure and the impact of Central taxes on production as well as consumption of cloth. Disclosing this, the Union Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, indicated at Coimbatore on Thursday last week that the Committee would be asked to submit its report at the earliest, preferably in six weeks' time, even though its tenure will be three months.

While the appointment of the expert committee on cotton textiles must be widely welcomed, it is to be hoped that the committee will thoroughly investigate the conditions of the textile industry and that the Government will implement its recommendations without any inordinate delay. The latter aspect is specially stressed because our experience with enquiry committees has shown that, while the committees take a very long time to complete their findings, an equally long time is taken by the Government before any measures are implemented. The Government sometimes takes many months even to release the report of committees to the public.

Be that as it may, the task to which the expert committee on textiles will address itself is, indeed, a difficult one. The cotton mill industry is today faced with a crisis of great magnitude, thanks to the severe impact of taxation, marked increase in cost of production following the all-round rise in wages and in the prices of raw materials and stores, continued retention of control on production of certain varieties of cloth, and stiff consumer resistance in internal and overseas markets. The cumulative effect of all these factors is that several mills have incurred heavy losses. How else can one explain the complete closure of 26 mills and the cutting down of production operations by another 37 units? This state of affairs cannot be allowed to continue for long, inasmuch as it will aggravate the problem of unemployment, besides adversely affecting the supply of such an essential item of consumption as cloth. Something must be done immediately to solve the problem, as, otherwise, there is the danger of the malady becoming too bad to be set right.

Viewed thus, the Indian Labour Conference held at Naini Tal last week certainly did well to focus attention on the need for dealing with the problem of textile mills' closure. It put forward a series of recommendations. Among these, there are three specific suggestions made with the object of giving immediate relief to the mills. First, steps may be taken to make available, if possible, long-staple cotton to the coarse and medium count mills as a special relief measure to enable them to produce finer varieties of cloth. Secondly, when adequate additional securities are available, the Scheduled banks, including the State Bank of India, should be requested to reduce the margin required by them for the advance of working capital. Thirdly, the lacuna in the present provision for lay-off compensation whereby labour can be denied compensation by working nominally for some days in a week after 45 days' lay-off to avoid payment of compensation should be immediately removed.

In addition to these specific suggestions, the Indian Labour Conference urged the adoption of several measures of a general character. Thus, according to the conference, where the Government is convinced on expert advice that certain old units are beyond the economic possibility of reopening, grant of licences for new units of equivalent capacity should be considered in the same place, if parties are willing to seek such licences; for the other closed mills or units which have given notice of closure, an expert committee should be appointed to examine each individual unit and recommend steps to restore normal working; grant of licences for rehabilitation and modernisation through the National Industrial Development Corporation may be expedited; for such units where working is found uneconomic, the question of granting licences for necessary balancing equipment—spindles, looms, or preparatory equipment—may be favourably considered after examining the unit concerned. In Kanpur and Indore where the situation is more difficult, special expert committees may be set up to enquire into the existing conditions of units located there and to suggest remedial action.

The aforesaid suggestions of the Indian Labour Conference are, indeed, quite pertinent and their implementation will doubtless go a long way towards alleviating the disquieting problem arising from the closure of textile mills. Equally pertinent is the recommendation relating to liquidation proceedings. It is common knowledge that these proceedings take an unconscionably long time. If the Government is convinced on competent advice that a cotton mill, company or a unit cannot be worked unless ownership is changed, it must devise some measures—legal, if necessary—designed to ensure an early completion of liquidation proceedings. of sale by transfer or open auction of such property even before liquidation, so that the new party can soon start working of the units. In the interim, the Government, as the conference suggested, should as far as possible work the mill as a measure of unemployment relief with such conditions as agreed to between the Government as an employer and the workers concerned. There will perhaps be no need to implement this suggestion if the other measures the conference recommended are adopted.

PORT WORKERS' STRIKE

A storm is gathering over another vital segment of the nation's economy. If nothing is done to prevent it, it will sweep over the major ports of the country, bringing to a halt cargo loading and unloading operations. The All-India Port and Dock Workers' Federation has issued a strike call to unions affiliated to it to be effective from 16th June. It hardly needs to be emphasised that a strike by port and dock workers at this moment will do much harm to the country. It will throw out of gear the development projects, put up the landed cost of the capital goods imported and interrupt the supply and inflate the prices of other essential imports.

Dock workers seem determined to tread the war path. The efforts made so far to persuade the Federation to call off the proposed strike have proved infructuous. What are the facts behind this unpatriotic decision? Has the Federation explored all avenues of peaceful settlement of disputes? Is there no other means of getting the grievances of workers remedied than direct action? What are the factors that inhibit a satisfactory settlement of the issues at dispute? These are some of the questions for which the public expect satisfactory answers both from the dock workers' organisation and the authorities concerned. It is indeed a sad commentary on industrial relations in this country that, notwithstanding the unanimous acceptance of codes of conduct for employers, employees and unions, strike is still considered the most handy weapon for getting things settled.

The Federation has demanded as a condition for withdrawal of the strike call positive assurances by the Government that some of its "basic demands" such as the implementations forthwith of the recommendations of Mr. P. C. Chaudhury, Officer on Special Duty appointed in 1956 and whose report was submitted in September 1957, in respect of the pay structure of class III and class IV dock workers, would be conceded. A spokesman of the Federation has pointed out that the Government was given enough time to consider the various demands. He charged the Government with "putting off things" and trying to force the issue on the Federation.

The Government in a statement issued recently has sought to justify its stand. The statement points out that Mr. P. C. Chaudhury's report, a document running into 394 printed pages, was discussed at length with the representatives of dock workers. Mr. Chaudhury himself had mentioned that some of the principles governing his proposals with regard to the pay scales and conditions of service might come up for review by the second Pay Commission appointed by the Government of India recently and that his recommendations might require modification to that extent. The Government urged various Port Administrations to examine the other recommendations in consultation with the representatives of labour. Special officers were appointed or departmental committees set up for the purpose. Since Mr. Chaudhury did not make detailed recommendations regarding the pay scales of the numerous categories of workers but had confined his recommendations to certain "test posts," the main task of examining the pay scales devolved on the Port Trusts.

While this work was proceeding and the unions were themselves engaged in discussions with the Port Authorities, the Federation, at the end of January 1958, passed a resolution calling a general strike on the 28th February 1958. In informal talks with the union representatives, the unrealistic approach adopted by them was pointed out. Apparently, realising the reasonableness of Government's point of view, the Federation postponed its decision to take a strike ballot to 7th May. It was in view of this threat of strike and, on the specific request of the Federation, that its representatives were invited to Delhi for discussions on the 8th and 9th May last.

By the end of April discussions on the recommendations of the Chaudhury report were completed only at the Port of Madras. This was the position when Mr. S. K. Patil, Union Minister for Transport and Communications, met representatives of the Federation last month. The Minister pointed out to them that, when proposals requiring Government sanction were received from the Port Authorities, Government would have to consider them in consultation with other Ministries concerned. It was, therefore, unrealistic, he said, to expect final decision to emerge within another two months. He requested the Federation's representatives to wait till the 15th of July 1958.

The representatives of the Federation said they could not wait any longer for the satisfaction of their demands. They suggested that further consideration of the matter at port level would not yield results satisfactory to the Federation and that the machinery for speeding up settlement of the question of pay scales should consist of a tripartite committee to be set up in Delhi with representatives of the Port Authorities, labour and of Government. Government was willing to consider the setting up of such a machinery and requested the Federation to submit a memorandum outlining its points of view on the various issues. In its memorandum, the Federation demanded that, as a precedent to its acceptance of such a committee, the Port Authorities should agree to a new structure of basic pay scales proposed by it in the memorandum. Some of these scales, it is pointed out, go to levels beyond what was recommended by the 1947 Pay Commission or by Mr. Chaudhury.

The Government also points out that the Federation has withdrawn co-operation to a committee appointed in last March to work out a piece-rate scheme for introduction in Calcutta. Experience has shown how greatly the earnings of workers at Bombay and Madras have increased under the piece-rate scheme.

The Federation seems to be impatient over the delay in the implementation of Mr. Chaudhury's recommendations. In a complicated issue like this some delay is inevitable. The Government, on its part, should take as early a decision as possible. In any case, a strike is not the way to settle the dispute and no solution can be found in an atmosphere of strife and conflict.

STATISTICAL QUALITY CONTROL

Judged by the standards attained by the industrially advanced countries in the West, the technical efficiency of machinery and other equipment employed in Indian industries is deplorably low. This is due primarily to the lack of adequate attention paid to statistical quality control. Considering that India is on the threshold of a new era of industrial development the need for the proper adoption of statistical quality control can hardly be overemphasised. For such control provides techniques which help greatly in reducing manufacturing costs through quantitative and qualitative improvement in output. That there is vast scope for the introduction of these techniques in our industries is amply borne out by the survey of some 50 Indian plants conducted recently by Dr. William R. Pabst, United Nations technical assistance expert, with a view to exploring the possibilities of applying the tools of statistical quality control in the various industries in the country.

The survey of Dr. Pabst has brought out the very interesting conclusion that, with the present plant and equipment, the Indian industry can augment output by as much as 20 to 50 per cent. In most industries and plants included in the survey, a substantial increase in production, it is stated, can be achieved by the proper balancing of machines and facilities, elimination of the return flow of products to scrap and rework, specification and adherence to standards, and utilisation of optimum materials for processing. Dr. Pabst points out, and rightly so, that the less advanced industrial countries like India stand to gain greater potential usefulness and larger initial saving by the introduction of statistical quality control methods than their counterparts in countries where industrialisation has matured.

In the considered opinion of Dr. Pabst, the area of great potential application is in the balancing of plant and equipment utilisation. The example of a steel foundry which he visited shows that some units within a plant were able to make 95 per cent. acceptable castings, whereas other units in the same plant, using the same moulds, the same sand and the same metal, were able to get only 60 per cent. of their product approved. These poorer units did the same work but failed to produce effectively. Dr. Pabst says that experience elsewhere is that training and psychology can bring those units to the same high level and make an overall gain of nearly 25 per cent. in production to the plant as a whole. Another instance showed that the efficiency of weavers in mills varied from 80 per cent. to 40 per cent. and that of pottery workers varied as much until the difference in their methods were spotted and removed. The other fields of potential usefulness in Indian industry include the more effective utilisation of raw materials and control of product weights and qualities. Dr. Pabst avers that many inferior items now on the Indian market can be substantially improved in quality without any increase in cost through application of statistical quality control methods.

The foregoing brief account will indicate the vital role played by statistical quality control techniques in industrial development. It is indeed gratifying to note that the Government of India has recognised this role. It has, for instance, invited, through the Indian Statistical Institute, foreign experts to train personnel and advise industry on the use of these techniques. Meanwhile, the Institute has established statistical quality control units in Calcutta, Delhi, Bombay and Bangalore in order to assist local industries in the actual implementation of these techniques and to provide training courses for plant personnel. Incidentally, it is said that the next statistical quality control training course will be given shortly at the Indian Statistical Institute, Calcutta, under the general guidance of Dr. Pabst.

SOIL CONSERVATION

It is now generally recognised that the success of India's second Five-year Plan, with its emphasis on industrial development of the country, depends on the expansion of agricultural output. Being a land with agrarian economy, any amount of industrial growth without a corresponding expansion in agricultural production will not bring prosperity. While the present production from land itself falls very much short of the normal requirements, the problem is rendered more difficult by the annual growth in population of 4.4 million. Agricultural production is thus the crux of the whole problem of national development. As Dr. Punjabrao Deshmukh, Union Minister for Co-operation, pointed out in his inaugural address at the All-India Soil Conservation Seminar, held in Ootacamund on the 25th inst., "the choice is to get on with the Plan by increasing agricultural production or not to get on with the Plan at all. There is no other way out."

The shortfall in agricultural production is due to the low yield of most of the crops, but Dr. Deshmukh pointed out that this could not be attributed to the vagaries of nature alone. The one single factor which has contributed to a large extent to the general low level of yields is the gradual deterioration of soil due to erosion which has been taking place for generations. Development of irrigational potential is, no doubt, one of the important ways of increasing agricultural output. As against a net area under irrigation of 56 million acres in 1955-56, the target under the second Five-year Plan is an additional 21 million acres, that is, a total area of 77 million acres in 1960-61. Another method —perhaps the cheapest—of raising output is the use of improved seeds and proper fertilisers. These methods will not, however, be adequate, unless proper care is taken to prevent soil erosion, because with the loss of soil, the very physical basis for production will be lost. In order to raise agricultural output, the main emphasis, therefore, should be on soil conservation.

On a conservative estimate, Dr. Deshmukh said, about 200 million acres, made up of 100

F.I.C.C.I. ON ADMINISTRATION OF COMPANY LAW

FURTHER TIGHTENING OF PROVISIONS HELD HARMFUL TO CORPORATE ENTERPRISE

From Our Special Correspondent

NEW DELHI, *27th May*

SOME findings of the latest Annual Report on the Working and Administration of the Companies Act, 1956 have just been the subject of a representation to the Ministry of Commerce and Industry. The representation, made by Mr. G. L. Bansal, Secretary-General of the Federation of Indian Chambers of Commerce and Industry (F.I.C.C.I.) is based on certain relevant facts regarding registrations of new companies. In 1956-57, according to the aforesaid Report, 848 new companies were registered as against 1,448 in 1955-56 and 1,203 in 1954-55. The figures of authorised capital in respect of companies formed in 1956-57, Mr. Bansal points out, superficially show an increase from about Rs. 157 crores in 1955-56 to Rs. 211 crores. But this increase is mainly accounted for by 13 Government companies with a total authorised capital of Rs. 120 crores. The amount of paid-up capital actually raised by the new companies during 1956-57 was only Rs. 13 crores. About Rs. 26 crores was raised by existing companies in the market and by the issue of bonus shares.

DELHI LETTER

Capital Market

These facts, continues Mr. Bansal, lead to the conclusion that it has not been possible for the private corporate sector either to maintain the rate of new company flotations or to secure funds from the organised capital market. The new taxation measures adopted by Government since September 1956 and the consequent depression in the stock market have no doubt been contributory factors. But it cannot be gainsaid that the trend has also been accentuated by the severe and restrictive provisions of the new Companies Act. This setback has been attributed in the Report itself to "the exaggerated apprehensions about the provisions of the Act." It is also stated that company promoters and others interested in corporate activities might have wanted to understand the ramifications and implications of the new law before forming companies. It is further stated that because of the limit set on the number of companies with which a managing agent or a director could remain associated, it might have partially encouraged the recent tendency to set up new departments of existing companies rather than incorporate new companies. Finally, a hope has been expressed that the present setback in new registrations may prove to be only short-lived with the gradual realisation of the fact that the new Company Law placed no new impediments in the way of the formation of new companies and that the policy of Government continued to be to encourage the development and expansion of the private sector in conformity with the Plan.

Not sharing this hope, Mr. Bansal says that the stringency and the restrictions of the new law and its cumbersome and complicated provisions have not a little been responsible for the setback in new company formation. The apprehensions of the business community were fully voiced at the time of the passing of the Act. It is, therefore, surprising that the Company Law Administration has, in its Report, suggested certain further restrictions on the normal practices of companies in expanding existing undertakings and forming new ones. For instance, it is suggested that the restrictions regarding inter-company loans and investments in sections 370 to 372 should be enlarged. The Report refers to the suggestion of the Companies Act Amendment Committee for some changes in the definition of "companies under the same management" with the avowed object of "plugging some of the loopholes and for otherwise strengthening these sections." As if this were not enough, it is even suggested for consideration that the restrictions regarding inter-company loans and investments should be enlarged to make them applicable not only to companies under the same management but to all companies.

In this connection, Mr. Bansal emphasises that inter-company loans and investments are regarded everywhere as normal and necessary company practices. They are recognised as such all the world over and in our Act also. In case there are any abuses of the law in this regard, the remedy lies in the proper functioning of the administrative machinery. Any attempt to tamper with the law further will only result in the trend, referred to above, getting more accentuated and making expansion of corporate enterprise more and more difficult.

The Federation's Secretary-General has also dealt with the findings of the aforesaid Report that 227 public companies have been converted into private companies, presumably in order to escape from some of the restrictive provisions of the Act applicable only to public companies, and that 15 managing agencies have surrendered their office although some of them have got themselves appointed as selling agents of the companies which they had managed before. The Report comments that to the extent these trends are not quite desirable and run counter to the general spirit of the Act, they will be watched and steps to rectify them will be considered. The Report also complains of the difficulties and inadequate powers in regard to investigation and prosecution of companies. In the view of the Federation, however, these trends are only an indication of the severity and stringency of the provisions of the Act pointing to the need to soften them and not to tighten them up further. They are by no means an abuse of the Act. After all, the conversion of a public company into a private company requires the approval of Government and the appointment of selling agents the approval of shareholders.

Mr. Bansal's representation on behalf of the Federation refers, on the other hand, to the Report of the Company Law Advisory Commission for the year 1956-57 as being more realistic and constructive. The Commission has observed that both Government and the managements have generally found it possible to accept and abide by the advice of the Commission. They have also stated, in connection with the regulation of transfer of control as a result of the changes in the ownership of shares, that such regulation by an order can provide at best only an interim remedy since a majority of the shareholders cannot always be baulked of their right to elect a Board of their own choosing and prevented from having a say in the management in proportion to the voting rights they control. The Federation trusts that this realisation will be translated into practice.

Plan Targets

The Federation's representation, Mr. Bansal concludes, has been made in view of the need for rapid industrial development in the context of the second Plan and for the fulfilment of the targets in the private sector. Incidentally, it may be recalled here that the private industrial sector has still a long way to go before its second Plan

RECESSION CREEPS ON

From Our Own Correspondent

LONDON, *24th May*

UNEMPLOYMENT in Great Britain has now reached 450,000 or about 100,000 more than a year ago and about double the level of 1955. This is probably the most important factor in the Government's view—more important, for instance, than the rising gold reserves which have now reached £1,000 million or the hitherto satisfactory balancing of the trade accounts—in inducing them to support another cautious drop in Bank rate. The previous reduction to 6 per cent. was made two months ago and the ½ per cent. off brings the rate to 5½ per cent.

LONDON LETTER

The reduction was quite unexpected in the City and there are many who regard it as premature. They think it is further evidence that the Government, which is supposed to be determined upon deflation, really run away from it when it looks like being successful. The trade balance, they argue, may well have stopped improving and on the wages front there is little real resistance to continued concessions to meet the rising cost of living.

On the other hand, sterling is about as strong as it can be and the reduction in Bank rate will be seen as a measure of confidence that will enable strong sterling to be maintained at a cheaper price than hitherto. After all, in Western Germany the Bank rate is 2 per cent. less than that in London.

What future developments are possible in Bank rate policy? All money rates, of course, have now moved in sympathy with the Bank rate and the thinking is that the Treasury Bill rate will continue to fall away so that a further cut in Bank rate would be in line with market sentiment. The immediate response of gilt-edged prices to the drop is, of course, further evidence of this but the Bank is making out that a further fall should not necessarily be looked for. With a rate of 5½ per cent., it would be possible to have a rise instead of a fall; in other words, that Bank rate is now at a "normal" sort of level instead of at a "crisis" level. But most people in the City think this is said very much "tongue in the cheek" and that a rise in Bank rate now could only mean a crisis.

The recession does not seem to have altered the rise in retail prices and the cost of living index went up last month by a further 1 per cent. What then is one to make of the Government's concession to the New Zealand butter exporters of agreeing to clap quotas onto butter imports from Europe if the exporting countries do not do it themselves voluntarily? This move would raise butter prices by about 15 per cent. and so contribute towards increasing the cost of living. If the Government wants to hold wages down it must hold the cost of living down. In the case of British agriculture, the Government has achieved the twin objectives of cheap food and prosperous farmers by subsidising farmers out of general taxation. The New Zealand farmer is also subsidised and the Government there is prepared to bring the local butter support price down but it would still be about 25 per cent. higher than the low prices at which butter is being sent into this country from Europe. The question is whether it would not make more sense for the British Government to assure the New Zealand shipper of a given return, as it used to do until a few years ago when it was the sole importer of butter from the Dominion, than to make the British public pay for it in higher food prices. And this would really be a cheaper method for the nation than that proposed since those European countries who are prepared to spend their substance in financing cheap butter shipments to the United Kingdom would continue to do so and leave the Government only with the task of making up the difference to the Dominions shipper.

Another way of achieving the same object would be for the Government to offer a bonus on imports from New Zealand while the dumping from European countries continues. This method would be just as economic and would have the enormous advantage of letting people both in this country and in New Zealand know the true state of affairs. These quota techniques disguise what is really happening and are in fact methods of raising prices by inducing scarcity.

AMERICAN LETTER

BIGGEST DROP IN INSURED UNEMPLOYED

SAVINGS CONTINUE TO RISE, BUT INCLINATION TO SPEND IS LESS

From Our Special Correspondent

NEW YORK, *17th May*

DESPITE a better tone in business, public opinion in the United States is gravely disturbed over developments throughout the world. Sputnik III was, of course, no novelty. But its size seemed awe-inspiring to many Americans. The latest propaganda round was won again by the Kremlin over the United States. The net result is that imaginations are running wild. "If the Russians are capable of sending one and a half ton of metal into space, they certainly can hit every spot on this globe," runs the reasoning—depressing thoughts in certain circumstances.

The political plight of France has had a deep impact here. The reaction was the same as that of a dear relative being hopelessly ill. Yet, when the end approaches, it is still a great shock. It should not be, but it is. What is happening now was discussed openly as long ago as last Christmas. The very thought of suggesting that Northern Africa under whatever name could ever be considered "territorial France" is just unthinkable to any outsider but the French. Rapidly succeeding governments, always ready to compromise every issue but this one, were never long enough in office to even approach a solution. Since de Gaulle has been turned down, the inevitable end seems to be that the extreme leftists will be taking over eventually. What will become of Africa, nobody cares to guess. One very well known U.S. foreign correspondent who just returned from France told me today that "the French do not seem to be ripe for democracy."

Another development disturbing to Americans is the growth of the United Arabs Republics and the hostile attacks against American property. All this was topped by the violent Latin American attacks upon Vice-President Nixon and his wife.

Rude Awakening

It was a very rude awakening for the United States to find out how strong the enemies are and, conversely, the relative weakness of this country's position. In the end, it was probably a salutary development, since no effort will be spared now to correct matters. What can be done as a practical matter remains to be seen. One U.S. trait is to assume that anything can be bought with a sufficient amount of dollars, victory on the battlefield, victory over cancer and infantile paralysis as well as victory in ideological matters. That illusion is now being shattered. How deep the shock has been is hard to tell at this time. The popular attitude is not too much removed from the French. Let's have a good time, let's go about our business—things will straighten out eventually.

So far as U.S. politics are concerned, the disastrous Latin American tour of Vice-President Nixon may have helped him and the Republican Party enormously—strange as it may seem. Mr. Nixon is now somewhat of a martyr who bore up well under a bit of adversity. He displayed restraint and dignity, coupled with a dash of naivete. In U.S. eyes, he is a hero and President Eisenhower was the first one to demonstrate it by receiving his No. 2 man in person at the airport instead of letting Mr. Nixon report at the White House. The multitude which was at hand at the airport to greet the Vice-President proved that psychology, too—although it was helped by a governmental ruling that U.S. employees may have time off for the pilgrimage.

There are quite a few political observers who predicted, even before Mr. Nixon's trip through Latin America, that the President may resign in favour of Mr. Nixon some time next year. This, it was felt, would give Mr. Nixon a chance to prove himself at the White House before the next elections came around. If this was true then, it is certainly truer today. In the meantime, President Eisenhower is labouring under a work-load that is hardly compatible with a convalescent from three serious illnesses at his age.

In the U.S. business and industrial picture, the most cheerful news was a drop of 70,900 in the number of insured unemployed in the week ended 3rd May. It was the biggest drop so far this year. Thus, the total drawing unemployment insurance was down to 3,194,800 out of a labour force of about 62 million. The report implied that much of the reduction was seasonal in the northern part of the country.

Building showed signs of life. On the basis of preliminary figures, April contracts for non-residential building in the 37 States east of the Rocky Mountains were up by 18 per cent. over April 1957. The other encouraging features included a 13 per cent. increase in contracts for apartments and other large residential buildings and a 16 per cent. boost in streets and highways construction.

Home Comes First

In the face of a steel and automobile industry still in the doldrums, building and construction is being favoured by the authorities, as, perhaps, capable of easier stimulation. A home is more basic than an automobile and a family buying a home these days any place in the U.S. certainly must have an automobile. But the home comes first.

Thus, the Administration asked Congress for an immediate $4,000-million increase in the Federal Housing Administration's authority to insure mortgages. The request covers the period through June 1959. The boost is needed, the Administration maintained, because the rise in the number of insurance applications so far this year has outplaced earlier estimates to such an extent that the present authorisations would be used up at an early date. The F.H.A. prescribes standards of building. It inspects the ground and finds out in the course of construction whether or not specifications are in order, before the insurance is issued.

Somewhat overlapping, but co-operating with the F.H.A., is the Veterans Administration. It issues guarantees on mortgages for qualified veterans on houses up to $12,500. They run for 30 years with an interest rate of 4½ per cent. It may be interesting to note that houses selling for, say, $13,000 today are being bought by people with an income of, say, $5,000 a year. Their monthly payments, including insurance and taxes, run in the neighbourhood of $85 a month. The old criterion was that a person should not spend more than one-fourth of his income on shelter. This still holds true in this income group.

Building Boom

Houses costing $17,000 to $20,000 are being bought by the $9,000 and $12,000 a year income group. Beyond that, one enters into the luxury category. It is probably difficult to understand the U.S. people's craving for their own homes. But families are again growing larger as a result of the enormous war and post-war prosperity, the cities are getting more crowded, city schools are getting poorer and the craving for fresh air is universal.

Personal income in the U.S. rose slightly in both March and April as against in 1957. April incomes were at a seasonally adjusted annual rate of $342,800 million, off only 1.3 per cent. from the peak of last August. They were up by $600 million from March and considerably above the figure of 12 months previously. Moreover, farm income has shown notable increases. Total personal incomes have held up well indeed. But people are cautious. Savings have been on the increase, but people do not seem to have any inclination to go on a spending spree. That is what is holding back the industrial economy of the U.S.—

BRITAIN REDUCES BANK RATE AGAIN

NO RELAXATION OF MONETARY POLICY

THE British Bank rate was reduced by ½ per cent. to 5½ per cent. on the 22nd inst., two months after the previous cut of one per cent. was made on 20th March from the "crisis" rate of 7 per cent., at which it had stood since 19th September 1957. Thus, in the course of nine weeks, the British Bank rate has been reduced twice by 1½ per cent. in the aggregate. The latest cut has come just over five weeks after the Budget.

The main official explanation for the latest reduction in Bank rate, which determines the interest rates throughout Britain, is only "technical factors," and the same general considerations which governed the previous cut in March hold good for the latest step also, which, it is again explained, does not imply any general slackening of the British Government's economic policy. The reduction in March last has since been justified by the further rise of sterling in the international currency markets and the strengthening of the sterling area's gold and dollar reserves. Thus, in New York, spot sterling now stands at $2.81.11/16-2.81.13/16, as against $2.81.5/16-2.81.7/16 just immediately after the previous reduction and $2.78.3/16-2.78.5/16 on 19th September 1957, the day on which the Bank rate was last raised to the emergency level of 7 per cent. In fact, the spot rate for sterling almost touched the par value on 17th April 1958, when it came up to $2.81.13/16-2.81.15/16, but the authorities had deliberately kept down the rate by open market operations.

The sterling area's gold and dollar reserves, which had drained down to a low of £1,850 million at the end of September 1957, slowly accumulated themselves to $2,539 million at the end of February this year and further to $2,914 million at the close of April. Judged from the encouraging improvement in the country's economy, it was generally expected that a further cut in the Bank rate from the 20th March level was a certainty, but last week's announcement was not without an element of surprise. For, with the internal labour trouble on wage issue in full swing and with the political upheavals in France and Lebanon, it was least expected that a cut would be made now. Presumably, the Bank of England authorities thought that the technical considerations which had been in favour of a reduction in Bank rate for some time past outweighed the other considerations. The technical factors would have justified a cut earlier, but the events of the last two weeks would seem to have delayed it. Seeing that sterling had stood well against foreign developments, the Bank made bold, but cautiously, to enforce the cut, which was justified also by the trend of interest rates abroad.

Speaking on the distinctly encouraging resistance of sterling, Mr. Cameron Cobbold, Governor of the Bank of England, in his address to the Manchester Chamber of Commerce on the 19th inst. (that is, three days before the reduction in Bank rate), said:

"The behaviour of the U.K. balance of payments has continued the satisfactory showing of the early months of the year, suggesting that there is a real foundation of progress towards stable prices and a stable exchange situation. If that is so, it is a foundation very well worth consolidating. Our main effort in the coming months must be to consolidate it and to avoid another of the exchange crises which have plagued us in the last ten years."

Making it clear that he made no prophecy, Mr. Cobbold added:

"We must obviously keep our eyes wide open. If things should move further downwards during the summer and autumn, it is surely important that we must be as strong as we can be, and we shall be able to meet what may be coming to us if we start from a sound position."

While official circles emphasise that the latest cut in Bank rate, as on the previous occasion, does not indicate a general relaxation of the monetary policy, it, no doubt, reflects the Government's growing confidence that inflation does not offer a serious threat to the country's economy. There is, in fact, a section of opinion which thinks that the Bank rate could have been cut safely to 5 per cent. and by doing so, the U.K. authorities could have demonstrated to the world their confidence in the U.K.'s economic prospects without creating the impression that it was switching over to cheap money policy. For, it is pointed out that "anything over 4 per cent. or so is a crisis Bank rate by U.K. standards and by the standards of most other leading commercial countries." Moreover, a cut to 5 per cent., it is stated, would still have left short-term money rates in London so much higher than those prevailing in the other main international financial centres that there would have been little danger of the pound being adversely affected by a reversal of the recent steady inflow of liquid funds from abroad.

The cautious step taken by Britain in reducing the Bank rate by only ½ per cent. shows that the authorities intend relaxing their monetary policy slowly and effectively by consolidating the gain before another step is taken again. Expressing his satisfaction that the financial restrictions aimed at halting inflation and putting the brake on rising prices were working satisfactorily, the British Prime Minister, Mr. Harold Macmillan, gave an assurance in London on the 22nd inst. that the Government would not keep any of the measures any longer than was absolutely necessary. The main object of the various steps taken by the Government, he added, was to prevent a rise in costs, lesser employment at home, and a lower standard of living and to provide a sound base for future expansion. It is clear from Mr. Macmillan's speech that the latest lowering of the Bank rate is one of the steps to consolidate the country's position and to resume expansion slowly and cautiously.

WORLD BANK LENDING IN ASIA TOUCHES $1,000-MILLION MARK

The World Bank's loans to Asian countries will approach the $1,000-million mark when two new Indian loans, now approved, are signed, and two further electric power loans in Japan have been negotiated. According to World Bank figures, India leads the Asian countries as a recipient of bank loans to 1st May this year, with the amount committed amounting to $372.61 million. Pakistan is next with commitments amounting to $126.45 million. The two new loans to India that will swell World Bank's Asian lending to $873 million are $29 million for improvement of the Port of Calcutta and $14 million for similar works at Madras.

World Bank lending in Asia is running at record levels. Six weeks remain in the fiscal year, and new loan volume in Asia has already reached $274 million—more than $100 million higher than that in any other fiscal period. This is the third fiscal year in succession that Asian member countries have received the largest share of World Bank loans. Four loans to India—each in a different currency—which were made in the current year serve as good examples of the objectives of bank lending. These loans aggregating the equivalent of $90 million are helping India's railways meet two years' foreign exchange costs on its huge five-year improvement programme.

The World Bank has made seventeen loans in Asia aggregating $229 million directly to private enterprise or to official agencies re-lending to private enterprise. In India, the Bank has lent $195 million to private interests, with the biggest borrowers comprising the private sector of the country's steel industry—Tata Iron and Steel Company and Indian Iron and Steel Company. These concerns borrowed $159 million from the Bank to help them finance imports of equipment and services necessary to double their productive capacity. Two further loans amounting to $26 million were made to the Tata Power Company to help finance the initial construction and later expansion of the Trombay power plant. The original plant is now supplying 125,000 kw. capacity to the city of Bombay, and an additional 62,500 kw. will go on the line in this area in 1960.

In Pakistan, the Bank has lent $22.4 million for private enterprise. Sui Gas Transmission Company Ltd. borrowed $14 million to help finance construction of a pipeline which is now supplying natural gas to Karachi and other centres. A loan of $4.2 million financed a part of the costs of the plant of the Karnaphuli Paper Company Ltd.

Two other loans to private enterprises in Asia are one for $10 million to the Industrial Credit and Investment Corporation of India, Ltd., and one for $4.2 million to the Pakistan Industrial Credit and Investment Corporation. These organisations are designed to serve as a focus for capital formation and investment funds for development. In addition to lending funds to bolster the foreign exchange resources of these institutions, the Bank was active, through consultants, in the drawing up of their charters and in obtaining substantial equity investment from the United States and other sources abroad.

A breakdown of World Bank loans in member countries in Asia up to 1st May 1958, follows:

To Burma, two loans amounting to $19.35 million; to Ceylon, one loan of $19.11 million; to India, 16 loans of $372.61 million; to Iran, one loan of $75 million; to Iraq, one loan of $19.8 million; to Japan, nine loans comprising $92.9 million; to Lebanon, one loan of $27 million; to Pakistan, nine loans, comprising $126.45 million; to the Philippines, one loan of $21 million, and to Thailand, six loans comprising $106.8 million. The total is 47 loans or $873.02 million.

STATE BANK OF SAURASHTRA

The Government of Bombay has made it clear that it has no intention of departing from the policy laid down by the former Saurashtra Government in the matter of working of the State Bank of Saurashtra. It emphasises once again that the legal power vested in the State Bank of Saurashtra whereby arrears of dues owing to it could be recovered by a revenue process as arrears of land revenue will be exercised only in relation to the loans taken over by the Bank from the several banks through the amalgamation of which it was constituted and to long-dated loans granted to industrial undertakings, within the territories now comprising the Bombay State and which are outside the purview of normal commercial banking.

Under section 187 of the Bombay Land Revenue Code, 1879, as adopted and applied to the then State of Saurashtra, a provision was made whereby arrears of dues owing to the State Bank of Saurashtra were made recoverable by a revenue process as arrears of land revenue.

The then Saurashtra Government had made it clear in March 1954, that this provision would be exercised only in relation to the loans taken over by the State Bank of Saurashtra from the several banks through the amalgamation of which it was constituted and to long dated loans granted to industrial undertakings which were outside the purview of normal commercial banking. It was also made clear by the then Saurashtra Government that it was not their intention to place the State Bank of Saurashtra in a favourable competitive position *vis-a-vis* the other commercial banks operating in Saurashtra.

EXPORT-IMPORT BANK LENDING AUTHORITY INCREASED

President Eisenhower signed, on the 22nd inst. a Bill increasing the lending authority of the Export-Import Bank of Washington from $5,000 million to $7,000 million. Both branches of Congress acted favourably on the measure in response to a request included in the President's Budget Message of 13th January, and in his Economic Report of 20th January.

The Export-Import Bank was organised to assist in financing and to facilitate exports, imports and the United States' international exchange of commodities. The Bank is required by law to supplement and encourage private capital, not compete with it, and to make loans only on reasonable assurance of repayments. The funds for its operations are borrowed by the Bank from the U.S. Treasury. Since its organisation, the Bank has made loans in all parts of the world including the recent $150 million line of credit to India.

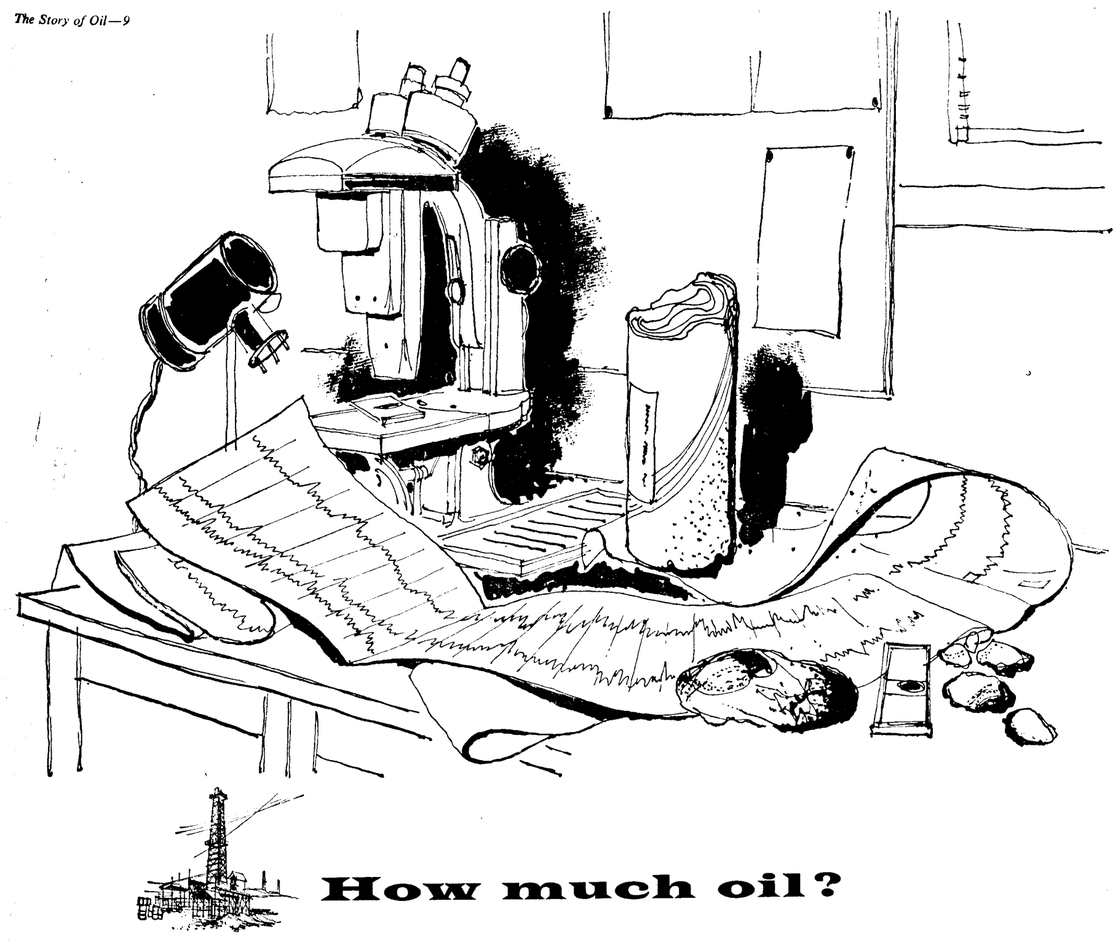
The Story of Oil—9



How much oil?

One oil well does not make an oilfield. As soon as the first well in a new area gives proof of steady production the next step is to establish the extent of the oil accumulation in its underground trap. This is done by drilling further wells, the programme for which is based on the results of scientific surveys and tests carried out during the drilling of the discovery well.

Surveys for such " down-the-hole " information are commonly made by recording instruments lowered into the well on a cable. One instrument produces a record in the form of wavy lines on a chart which, when interpreted, confirms the nature of the rocks penetrated by the drill and shows exactly where the oil zone lies. Another instrument gives records from which the amount and direction of the slope or dip of the rock layers can be calculated.

Tests carried out in oilfield laboratories include analyses of samples of rocks and oil recovered from the well. From rock samples it is possible to calculate how much room there is for the oil in the spaces between the grains of sand in a sandstone rock, and the amount of water associated with the oil. An analysis of a sample of crude oil gives data about its gas content and other characteristics.

With all this information to hand the development of the oil find can proceed on a planned basis, and decisions can be made on how far apart the wells should be drilled, how deep they should go, how many drilling outfits will be kept in operation, and what size of refinery will be required.

SETBACK TO COTTON TEXTILE EXPORTS

TRADERS URGE IMMEDIATE AID MEASURES

DESPITE all the stress laid on boosting sales of Indian cotton piecegoods abroad and the activities of the Cotton Textiles Export Promotion Council, the business actually put through with foreign countries has suffered a distinct setback of late. The total exports of cloth during the first four months of the current calendar year amounted to not more than 216 million yards (preliminary estimate only), a drop of as much as 105 million yards as compared with the corresponding period of 1957 when exports aggregated 321 million yards. The downward trend in exports is expected to persist in the coming months also, so that the total shipments for the whole of 1958 would be around 650 million yards, as against 850 million yards in 1957.

The setback to cloth exports is, indeed, disquieting, especially in the present context of the none too happy foreign exchange position. Since cotton textiles constitute one of the staple earners of exchange, the situation demands immediate measures to relieve the crisis and this should be done on a concerted basis at both Government level as well as trade level. This aspect was impressively brought out by the All-India Exporters' Association, Bombay, in the course of a memorandum submitted to the Union Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, during his recent visit to the city. It is gratifying to note that, in his reply to the memorandum and the suggestions made verbally by the members of the Association, the Minister expressed his full sympathy for the development of export trade in cotton textiles and assured the Association that the Government would try to help the trade as much as possible.

Trend of Exports

Before referring to the suggestions put forward by the Association for promoting exports of cotton textiles, it will be appropriate to indicate the trend of exports in the four months ended April 1958 as compared with the same period of 1957. Here are the relevant figures:

(In million yards)

	Total	Coarse	Medium	Fine	Superfine
1957					
January	90.66	22.07	63.07	2.90	1.62
February	71.47	17.59	50.93	1.58	1.06
March	83.99	20.97	59.80	1.32	1.90
April	74.90	18.67	52.62	1.87	1.74
Total ..	321.02	80.01	226.42	7.67	6.92
1958					
January	63.92	19.66	42.06	0.44	1.79
February	47.72	15.04	30.27	0.05	1.76
March	53.95	16.91	34.58	0.45	2.01
April	50.35	15.87	31.44	0.61	2.43
Total ..	215.97	67.48	138.35	2.15	7.99

The Association sought to impress upon the Minister for Commerce and Industry the fact that the export trade in cotton textiles was almost facing a "crisis of unprecedented magnitude." It was highly doubtful whether exports of even 700 million yards could be reached during 1958. The Association referred to certain disturbing trends in a few important markets for Indian textiles. The analysis reveals that Sudan has stopped the O.G.L. for cotton textiles which will seriously affect India's cloth trade with that country. Indonesia has become a trouble spot and hence exports from India to this country are not likely to be maintained. Canada is tightening its cloth import policy. The U.K. has been clamouring for a reduction in cloth exports from India, Pakistan and Hong Kong. All these factors, it was pointed out, were bound to affect adversely our cloth trade with these countries. The Association also drew the attention of the authorities to the more alarming news from the East African territories that the Governments of Kenya, Uganda and Tanganyika have imposed an enhanced import duty on grey and non-grey varieties of cloth as well as other textiles. It is reported that the incidence of import duty will be more than 50 per cent. on grey cloth, about 50 per cent. on non-grey cloth and nearly 100 per cent. on printed cloth. Incidentally, it may be noted that the quantity of cloth actually sold to East African markets last year was of the order of over 75 million yards, representing about 9 per cent. of the total exports to all destinations. With the imposition of higher import duties, the whole picture for the future, as the Association suggested, seems to be a bleak one; this is a situation which can be dealt with only at Government level.

The Association urged the Government of India to implement immediately the remedial steps suggested by the Export Promotion Committee which, it pointed out, were well thought out and represented a large measure of unanimity among the various associations. These steps, it will be recalled, relate to: relaxation of conditions attached to the licences issued to mills for the installation of automatic looms; permission for installation of a sufficient number of automatic looms to allow the production for export purposes only of 1,000 million yards of cotton cloth a year by way of replacement of existing plain looms; permission to mills to import modern machinery and equipment up to a certain percentage of the value of goods that may be exported by them in excess of their normal exports, say, about 50 to 75 per cent; removal of such restrictions as those formerly imposed on exports of mineral khaki cloth; permission to stockists of cloth to enter the export trade; a refund of excise duty already paid on cloth held in stock is recommended for the purpose; facility for the processing factories to clear cloth from mills without payment of excise duty which will be paid by the former in case the cloth is sold in India and not exported; and abolition of controls on the manufacture by mills of certain varieties of cloth for purposes of export.

Six Other Suggestions

Over and above these recommendations, the All-India Exporters' Association placed before Mr. Lal Bahadur Shastri six other suggestions. First, in order to have effective results, the incentive measures should be promptly announced so that advantage can be taken by exporters to negotiate business with foreign buyers. Secondly, a small portion of export proceeds must be allowed as currency retention for promoting exports; thirdly, the present structure of railway freight has increased the incidence of cost which ultimately affects the competitive character of Indian cloth in the foreign markets. It is, therefore, urged that the Government should immediately announce some rational basis of railway freight for the purpose of exports of cloth and other items which may go a long way towards reducing the prices of cloth exports. Fourthly, in place of free licensing of cloth, O.G.L. must be introduced. Fifthly, the present practice of compulsory tex-marking on the exports of cloth should be abolished. Finally, exporters other than manufacturers who are exporting ready-made garments in which duty-paid cloth is used should be given refund of excise duty as a measure of incentive, so that ready-made garments can get an acceleration in the neighbouring markets where there are prospects of increasing trade in these garments. At present, this facility is only for manufacturers of garments.

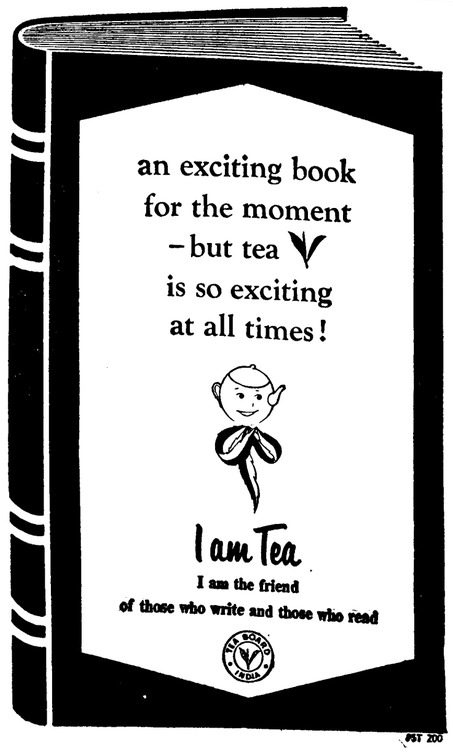
These are, indeed, quite sound suggestions and they merit the consideration of the Government. Equally sound are the two other suggestions made by the Association. In the first place, as against the loans advanced by India to the Burmese Government, Burma should be persuaded to purchase Indian cotton textiles through private trade channels. The second suggestion pertains to the recent regulations imposed by the Nigerian Government under which Indian exporters should henceforth produce manufacturers' invoices for the purpose of passing their goods from customs. It is stated that this condition is difficult to be fulfilled; exporters can produce the certificate of origin by a recognised chamber of commerce or association. The Association urged the Government to take up this question on a Government level and thus remove the hardship caused to exporters.

TEXTILE IMPORTS INTO AUSTRALIA

The Government of Australia has lifted the emergency restrictions on imports of printed cotton textiles. This decision was a sequel to the Tariff Board's recommendation against tariff protection for the printed textile industry. According to the Trade Minister of Australia, the textile printing industry's cotton cloth can be imported from the cheapest sources of supply and very little duty will be payable, but the industry's costs are such that extremely high duty on already printed textiles will be necessary if the industry is to be protected.

The Government has also revised duties on artificial silk piecegoods. The revised duty under the British preferential tariff is 2*s.* 6*d.* per square yard (as against the previous rate of 1*s.* 6*d.*) *less* 15 per cent. *ad valorem* with a minimum duty of 1*s.* 6*d.* Under the intermediate tariff, the duty proposed is 2*s.* and 8½*d* a square yard, less 15 per cent. *ad valorem* with a minimum duty of 1*s.* 8½*d.* The previous duty was 1*s.* 8½*d.* Under general tariff, the duty will be 3*s.* 1½*d.* a square yard less 15 per cent. *ad valorem* with a minimum duty of 2*s.* 1½*d.* The previous duty was 2*s.* 1½*d.* The increased duties on a sliding scale will operate when the value for duty is less than 80*d.* per square yard.

The Government of India has decided to consider applications from actual users on an *ad hoc* basis for the grant of advance licences for the import of wool raw and wool tops for the licensing period October 1958-March 1959. This has been done, it is stated, to ensure uninterrupted supply of this raw material to the woollen industry so as to enable the latter to draw up a planned production programme.



GOVERNMENT ACTION TO HELP COTTON INDUSTRY URGED

WEAVERS' UNION ON REDUNDANCY PLAN

From A Special Correspondent

MANCHESTER, 20*th May*

TEXTILE traders in Britain have been watching the progress of negotiations between the National Farmers' Union and the Government over the question of imports of foreign butter with more than usual interest. They cannot help but compare the attitude of the authorities on this matter with that taken up when imports of cotton goods are under consideration. A good deal of adverse criticism has been voiced at the decision to stop imports of Belgian butter on the ground that they represented "dumping" on the British market.

MANCHESTER LETTER

There can be no doubt that the supplies of foreign cotton cloth reaching this country are entering the home market at prices well below comparable goods made in Britain. That the Government refuses to take restrictive action is mainly due to the fact that the major proportion of these imports is from Commonwealth and Colonial sources.

Questions about this attitude may well be hurled at the Prime Minister when he addresses the Cotton Board's annual conference at Harrogate in October. Mr. Macmillan thus emulates the example of Mr. Thorneycroft in venturing within "the lion's den." His courage is to be commended, but, if precedent is followed, few members of the audience will be able to direct verbal arrows at him. At the same time, there will certainly be very great attention paid to what Mr. Macmillan has to say. Much can happen in the meantime to change the situation, but it looks as if there will have to be some move by the Government, rather than through trade sources, if any way out of the current impasse is to be found.

Views Vary

Conflicting opinions have been expressed within the trade about the outlook following the conclusion of talks between British and Eastern trade leaders. Much depends on the way in which the official statement issued at the end of the discussions has been interpreted. To many, the failure to secure an agreement in detail on the extent of future imports was taken to mean that the negotiations had proved unsuccessful. It was pointed out that the representatives of India and Pakistan had already accepted the principle of limitation during similar discussions last year.

Those with a more intimate knowledge of the progress of the discussions, however, are not discouraged. Their belief—and it must be soundly based—is that the continuance of negotiations has served its purpose in maintaining contact with the leading personalities in the two countries involved and that the door has not been closed on further discussions on the subject. The hopefulness of the position is centred on the final phrase of the official statement indicating that "consideration is still being given to various possibilities."

Further Action Urged

Leaders of the cotton trade unions, at a meeting in Manchester this week, decided to seek a meeting with Labour Members of Parliament representing textile constituencies in Lancashire and Cheshire to urge further action on the part of the Government to assist the industry. Alderman H. Chorlton of Rochdale, President of the United Textile Factory Workers' Association, said that there was a crisis in the cotton industry. Stoppages were taking place in numerous mills, short-time was being worked and was causing much unemployment. The Association, he added, was determined that something should be done to draw the attention of the Government to the increasing seriousness of the position.

Delegates to the annual conference of the Textile Officials Association have also decided to appeal to the Prime Minister for Government action to help the Lancashire cotton industry. A resolution said that spinning and weaving mills were closing down and there was a widespread decline in activity; unless the position improved Lancashire would become "impoverished."

Mr. William Abbott of Shaw, the President, referred to the difficulties Lancashire firms were meeting in export markets and suggested that the Cotton Board should consider sponsoring sales in overseas markets. Lancashire should intensify its salesmanship abroad, with more emphasis on the personal touch.

Redundancy Plan

It was only to be expected that the trade unions would resent the fact that they did not get prior intimation of the intention to launch Weaving Reorganisation Ltd. as a means of dealing with redundancy in the manufacturing section. This feeling is noticeably present throughout the comments on the subject in the annual report of the Weavers' Amalgamation. In its report, the Amalgamation gives a lukewarm blessing to the scheme, particularly if it can rid the industry of the weak sellers who have for so long been the bane of the weaving branch. "It is well known that there is a number of weaving sheds selling cloth cheaper than others by using up capital assets, ignoring sinking fund charges and letting the machinery gradually run down," the report adds.

Turning from the principle of redundancy to the practical application of such a plan, the union leaders are understandably anxious of the effect on individual operatives. They fear history repeating itself "in the Jarrow approach." If the industry must contract still further, the report continues, it were better that the weak sellers went first than that sound mills should be the victims of "take-over" bids by outside financial interests.

Supplementing its views by definite proposals, the weavers' union puts forward a programme for the consideration of the employers. They urge that long-term notice to close a mill should be given, suggesting that six months' margin would be little enough to enable operatives to seek other employment. In a number of areas, the village mill has for generations been the one source of work in the locality. Cases have occurred where the closing of such a firm has created a severe social problem. The union rightly stresses the need to keep mills running, particularly in such instances, wherever it is possible, by re-equipment or by changing policy to create an efficient unit.

Compensation Scheme

So far, the programme includes ideas which can be discussed and acted upon if the spirit moves those in control. The call for compensation is a tangible factor, which has already been the subject of a joint approach to the employers by all the cotton trade unions. "Adequate compensation should be made to displaced operatives to help them to readjust themselves to new circumstances," the report declares.

In another section of the document, more details are given of the actual claim for compensation which has been submitted. The establishment of a central fund on the basis of a levy equal to 0.25 per cent. of the wages bill in every mill would provide nearly £200,000 in a year, even taking average earnings at the low figure of £6 10*s.* a week.

The unions suggest no compensation for operatives with under five years' service in the industry, but, for others made redundant, they propose 13 weeks' wages, plus one additional week's pay for each year of service up to a maximum of 50 weeks. No compensation should be paid if employment is available in the same grade, but proportional adjustments should be made if lower grade work is offered. If a redundant operative refuses to accept reasonable alternative work, he or she would have no claim on the fund.

Production Contrasts

Although output of cotton and rayon goods in Lancashire in the first quarter of the current year exceeded the weekly average production during the whole of 1957, a comparison between recent returns and those issued 12 months ago underlines the inevitable fall in machine activity. Too many mills have closed down, while others have increasingly adopted short-time working, for the average output to be unaffected; even so, reports tend to accumulate of rising stocks in certain quarters.

Whereas activity in purely cotton goods was fairly well maintained during most of 1957 with a fall in production of both yarn and cloth in the man-made fibres range, the reverse has so far been the case in 1958. Output of fabric produced from man-made fibres is still lower than last year, but synthetic yarns have held their own, largely as a result of the widening number of end-uses in the industrial sector.

The main feature of the March returns issued by the Cotton Board was the reduction in

GUEST, KEEN, WILLIAMS, LIMITED

A DIFFICULT YEAR, DESPITE GROWTH IN SALES AND OUTPUT

STATEMENT OF THE MANAGING DIRECTOR, MR. H. M. L. WILLIAMS

THE Twenty-eighth Annual General Meeting of Guest, Keen, Williams, Ltd. was held in Calcutta on 29th May 1958. The following statement was made by the Managing Director of the Company, Mr. H. M. L. Williams, on the occasion:

"The year 1957 has seen a continuation in the growth of the Company's sales and output generally, but it has been a difficult year. In spite of the greater out turn, earnings have not been maintained at the previous year's level due to the continued rise in manufacturing costs and the increased costs of stores and of almost all commodities bought out. This experience is in common with that of many other enterprises in India and, if you recall the remarks I made to you last year, will not be any surprise.

"The year started with good order books, which were maintained throughout the succeeding months at a satisfactory level in the Company and its Subsidiary. During the year the deliveries of steel from overseas were most irregular, and from the end of February until the end of September imported spring steel billets and sleeper bars were generally not available. When these raw materials eventually arrived the deliveries were out of phase with the Works' consumption rates so that during the latter months of the year, and well into 1958, additional financing and handling costs have had to be borne.

"Raw materials remain the largest factor in the cost of production, and every rise in steel prices causes a commensurate rise in working Capital required. Salaries and wages continue to increase and are the second greatest cost factor; during the year under review they rose by over 15 per cent of the 1956 figure. The rate of taxation on the profits of 1957 is the highest in the history of the Company. In spite of a fall in the surplus before taxation the amount provided for Tax and directly attributable to the year's operation exceeds that actually provided in 1956 by almost Rs. 2½ lakhs; in addition there is a further liability of nearly Rs. 14 lakhs for 1956, which has had to be found from Reserves.

Accounts

"The Accounts are presented for the second year in succession under the 1956 Companies Act, and for the first time it is possible to show the comparative figures of the previous year. To assist in making this comparison two-colour printing has been used, and I hope you will find the general presentation of the Accounts brochure up to expectation. The practice adopted last year of showing a summary of the Profit and Loss Account in a simplified form has been continued, but modified in a way which it is thought will readily appeal to Shareholders.

"For the 52 weeks ended 28th December 1957 on a total of sales and miscellaneous income of Rs. 9,18,58,837, compared to Rs. 8,01,08,259 for the previous year, the surplus before taxation has fallen by Rs. 11,56,572 to Rs. 1,41,13,317. The provision for taxation at Rs. 72,00,000 shows an increase of Rs. 2,39,226 over 1956, but with regard to the taxation of that year reference is made under the heading of Appropriations. Included in the provision for 1957 is an amount of Rs. 2,40,512 for Wealth Tax.

Appropriations

"You will see from the Report of the Directors that having paid an Interim Dividend of 8 per cent without any deduction for Tax, they now recommend a final dividend of 12 per cent without any deduction for Tax, and a transfer to General Reserve of Rs. 25,90,741, appropriating the remaining balance at the credit of the Profit and Loss Account. In making these recommendations your Directors have given consideration to the rate of dividend and, in view of all the circumstances of the year, think that it is proper to maintain the Shareholders' distribution not very different from the previous year.

"I would like to draw your attention to the item in the Appropriation Account amounting to Rs. 13,75,133 for Taxation relating to the previous period. This further impost arose as a result of changes in the Tax rates and the introduction of the Wealth Tax, which were not announced until May 1957, and of course had to be found out of the unappropriated profits of 1956. Minor adjustments in the taxation structure between the years are not unexpected, but on this occasion the amount concerned is very substantial, and when looking back on the final surplus for the year 1956, must not be ignored.

Balance Sheet

"The additions to Fixed Assets during the 52 weeks ended 28th December 1957 amounted to Rs. 62,26,724 and shows a substantial increase in comparison with Rs. 36,38,362 for the previous year, reflecting the progress of implementation of the plant rehabilitation and of the new Development Schemes. In addition the cost of Capital works in progress and advances to suppliers of Capital equipment are very substantial at Rs. 1,15,13,531, the finance for which has been found mainly from Reserves.

"Stocks in hand have increased by Rs. 1,21,60,041 to Rs. 3,18,84,623 due to large quantities of construction stores being required for development work and the out-of-phase deliveries of imported raw materials which I mentioned in my opening remarks.

"Under Book Debts, customers' accounts have risen considerably to Rs. 1,96,00,364 due to an improved volume of sales, and to the inflationary effect brought about by the higher cost of raw materials. Also contributory are the delays in settling price amendments with Government. The problem of long term outstandings over three months is being constantly tackled, but with two statutory alterations in the price of steel during the year, together with the difficulties in realising Sales Tax between different Government Departments, great pressure is being put on the Company's liquid resources, and at the end of the year the Company had a Bank overdraft of Rs. 92,70,265.

Production

"The output of both Calcutta and Bhandup Works has shown a continuing rise in most of the major producing departments, which is very satisfactory; an exception is the fall in output of the Railway Switches and Crossings Department to which I refer later. The Steel Sleeper Department, contrary to earlier planning, had to be kept in spasmodic operation throughout the year converting imported bar into finished track sleepers as and when supplies became available; on account of this and delay in delivery of new plant the expected changeover to greater production of steel turnout sleeper has been delayed, but I am glad to tell you that since the end of the year it has been possible to overcome some of these difficulties.

"The Bolt and Nut Works continues to maintain its steady rise in output of the past few years and the tonnage sold in 1957 was over two and a half times that in 1953. Much of last year's sales relate to the heavier fastenings for the Railways which have to be executed at very low margins and do not reflect a commensurate rise in profits. The past year showed a marked increase in demand for bright finished specialised bolt and nut items. However, whilst raw material supplies improved towards the end of the year, they were still insufficient and too irregular to enable the major portion of the plant to be worked on a two-shift basis.

"The Steel Melting Furnace had another successful year and worked up to what must be considered as about its peak output of over 8,000 tons which, from this size of furnace making special quality steels, is most satisfactory. The production of forgings for wagon and other Railway needs such as signal and track appliances, continued at a high level. The Forging Section has in addition produced an increased variety of items for the automobile industry. The Railway Track Fitting Section which makes tie bars, cotters, keys, rail anchors and loose jaws was another department to achieve a record output, but the demand for these items appears to be nearing saturation point and, since the end of the year, plant capacity is not being fully utilised.

"The Screw Works at Bhandup has once again held its own in the race for greater production, and at nearly four million gross of wood screws shows a remarkable build-up over the past five years from nothing to a figure of about half the Country's requirements. At the same time this Works has continued to increase its production of most of its other items, and during the year added screw eyes to the range of products.

"Page 4 of the Report brochure gives a graphic illustration of the past year's output in most of the major production departments, and the general steadiness of the upward trend will, I hope, be considered as satisfactory. To these has also to be added the Calcutta Rolling Mills, which is the king pin of most of the fabricating departments and supplies them with rolled bars and sections.

"Throughout Calcutta and Bhandup Works continually mounting costs have now become a feature of production requiring the constant attention of management in our industry, and indeed in all industry today. Labour and material costs have again risen. Whilst improvements in productivity achieved by modernisation have helped to counteract this rising trend and keep our prices and quality standards competitive, there is a limit at which the level of costs must so affect the price of our products that employment can be endangered. The Company has always paid great attention to producing a quality of product acceptable by high standards, and the wisdom of following such a policy is certainly sound as a long term policy for an engineering enterprise supplying the Country's needs. Nevertheless, the fact must not be overlooked that customers in India are often conscious of price before quality, and it therefore behoves a Company such as yours with substantial overhead expenses (compared to many smaller units) to obtain the maximum effectiveness in operation, whether it be the use of man power, raw materials or machines.

Agency Department

"This Section continues to try hard, and much effort has been applied during the year to working up those Agencies which look like having a reasonable period of life ahead of them. Unfortunately, the restrictive Import Licence Policy now means that most sales are confined to forward delivery and put on the Company's customer the onus of obtaining an "Actual Users" import licence. The quota licences for items which at one time formed a good turnover as sales ex-stock are now almost non-existent.

"However, in spite of these difficulties Invoiced Sales and Commissions, which latter made a valuable contribution, totalled Rs. 42,36,174. The problem of clearing sea consignments through Calcutta Port, I am pleased to report, have eased during the year, but it still seems impossible to clear air and postal consignments expeditiously.

Development and Future Prospects

"The past year was the beginning of the large-scale additions (as apart from rehabilitation) to Calcutta Works, and it saw a progressive increase in plant installed at Bhandup. This expansion programme, as at present planned is for implementation over the years 1957 to 1959, during which time very substantial sums of money have to be found. Accordingly your Directors have been considering ways and means of increasing the Capital of the Company; unfortunately, their task is not made easy by today's atmosphere of heavy Taxation with the present deterrents to Capital formation, which check the natural evolution of Capital growth from within, and offer little inducement to the potential investor in Industry.

"Last year I mentioned that the new Tax proposals were no inducement to any investor and now that they have become facts, you can see from the Company's Accounts what a huge load has been imposed on our resources. To be successful any enterprise must continually keep itself up-to-date and introduce more efficient machinery and be constantly on the lookout to combat rising costs of manufacture. Your Management is fully aware of this need, and during the past year the new Central Tool Room has been completed, which should be a help i

BEHIND THE WHEELS OF INDUSTRY

Orient Industrial Motors are precision built from the highest quality materials to give high performance and long service.
Liberally designed, these motors have a high overload capacity and are capable of withstanding severe punishment.
Best insulating materials are used both in the slots and on the windings to give long life.
Dynamically balanced pressure die cast rotors are truly indestructible.
Uniflow forced draft ventilation system keeps belt dust away from the rotor.
These and several other features make ORIENT motors truly DEPENDABLE.

SUGAR INDUSTRY IN INDIA'S ECONOMY

CANE ACCOUNTS FOR 60 PER CENT. OF VALUE OF MANUFACTURE

ALTHOUGH cultivation of sugarcane and production of sugar originated in India in ancient times, it was not until the grant of tariff protection in 1932 that a real beginning was made in the manufacture of sugar by the modern vacuum pan process. The progress achieved by the industry since then has been so phenomenal that it ranks today as the second biggest industry in India, next only to textiles. The industry produces such an essential article of food as sugar, provides the means of living to the workers in the mills and an army of cane growers, and contributes crores of rupees as taxes and levies to the Central and State Governments, as well as to local bodies. How vital is the role played by the sugar industry will be clearly evident from the latest official census of the industry (excluding the *gur* sector), which, though it relates to a year which is more than two years old, that is, 1955, gives some idea of the importance of the sugar industry in the national economy.

The salient features of the census of sugar industry are indicated in the table given at the bottom of the page. It will be seen therefrom that the number of factories registered in 1955 was 161, of which returns were received from 153 units, a coverage of 95 per cent. The value added by sugar manufacture during the year 1955 was as much as Rs. 29.64 crores. The value added by manufacture is arrived at after deducting the value at factory of materials, fuels, etc., consumed and amount paid to other concerns for work done for the factory which together aggregated Rs. 86.72 crores, as well as depreciation (Rs. 1.82 crores), from the ex-factory value (Rs. 118.18 crores) of products manufactured, by-products derived and work done for customers. The value of sugar production in the 153 sugar factories during 1955 amounted to Rs. 116.49 crores, while that of other products was Rs. 2.24 crores, or a total of Rs. 118.73 crores. Out of this, the share of the State of Uttar Pradesh (the biggest sugar-producing State) alone was Rs. 64.45 crores. The share of other important States was: Bihar Rs. 23.51 crores; Bombay Rs. 13.64 crores; Madras Rs. 4.86 crores; and Andhra Rs. 4.82 crores.

Productive Capital

The total productive capital employed in the 153 sugar factories in 1955 was of the order of Rs. 89.99 crores. The bulk of this—Rs. 65.10 crores—was accounted for by working capital, the balance of Rs. 24.89 crores representing the share of fixed capital. Of the working capital, the stocks of finished products and by-products alone were valued at Rs. 52.12 crores. The working capital utilised for holding stocks of raw material was Rs. 10.11 crores, cash in hand and at the banks was Rs. 2.51 crores, and semi-finished products in stock or in process accounted for Rs. 35.18 lakhs. The fixed capital of Rs. 24.89 crores consisted of plant and machinery, Rs. 14.39 crores; buildings, Rs. 7.10 crores; land, Rs. 52.42 lakhs; and other fixed assets, Rs. 2.88 crores.

The 153 sugar mills from which returns were received employed during 1955 about 121,380 workers, who represent over 4.1 per cent. of the entire labour force of 2,690,403 in factories (subject to the Factories Act) in 1955. The sugar industry is one of the biggest paymasters, the aggregate salaries and wages paid during 1955 having been Rs. 10.97 crores. The average annual income per employee in the sugar industry thus works out to Rs. 904; the *per capita* income (at 1948-49 prices) in India in 1955, it may be noted here, was Rs. 274. The major portion of the salaries and wages—Rs. 7.53 crores—was paid to persons other than workers. The money value of other benefits or privileges amounted to Rs. 56.33 lakhs.

Besides the heavy salaries and wages distributed to workers, the sugar industry pays every year considerable sums of money to agriculturists for the sugarcane supplied by them. An idea of such contribution can be had from the large value of cane consumed by factories during the year 1955 which aggregated Rs. 70.66 crores (the quantity involved was 17.23 million tons); this sum, of course, includes the price of cane grown on farms owned by several mills. The value of cane consumed, it will be interesting to note, represents as much as 60 per cent. of the total value of production of sugar and other by-products (estimated at Rs. 118.73 crores). It is the high cost of cane that is largely responsible for the continuing unconscionably high prices of sugar to the consumer. The obvious conclusion which emerges from these data is that, if the price of sugar is to be reduced to a level that suits the pockets of the common man, the heavy incidence of cane price must be lowered. Such a reduction can be effected, as this journal has ere now pointed out, in two ways. First, the price that the factory pays for cane should either be reduced or be linked to the sucrose-content of cane. Secondly, the heavy burden of cess on cane crushed for manufacturing sugar—amounting to 15 per cent. of the minimum price fixed for cane—must be brought down.

Packing and Fuels

In addition to the payment of huge sums of money for cane, the sugar factories together paid in 1955 Rs. 2.50 crores for packing; more than 17.18 million gunny bags were used. The value of other goods and commodities consumed was Rs. 6.65 crores. The sugar mills also paid a large sum of money—amounting to Rs. 1.71 crore—for fuels, electricity, lubricants, etc. The breakdown of the payments is:—Coal: Rs. 36.60 lakhs; 115,672 tons; electricity: Rs. 19.51 lakhs; 18.08 million kw.h.; lubricating oils: Rs. 34.03 lakhs; 714,467 gallons; others: Rs. 80.75 lakhs. The sugar industry also paid Rs. 4.63 crores as cost of transporting materials, fuels, etc., to the mills and commission to purchasing agents, etc., where these are not included in the reported value.

The aforesaid statistical data relating to the sugar industry will clearly show the contribution which the industry makes to the national wealth. With the steady increase in population and improvement in the standard of living, the consumption of sugar in the country is bound to rise in the coming years. Surely, the industry has vast scope for further growth and for contributing to the welfare of the nation's millions.

CENSUS OF MANUFACTURING INDUSTRIES—SUGAR 1955

D.A. TO COAL MINERS INCREASED

STRIKE NOTICE WITHDRAWN

IN announcing the payment of an increased dearness allowance of Rs. 4.87 per month, in terms of the award of the Labour Appellate Tribunal, as reported briefly in these columns last week, the colliery owners have averted what would have been a serious situation resulting in a strike of workers in a number of collieries. The threatened strike by coal miners with effect from the 19th inst., coupled with the stay-in-strike of workers in the Tata Iron and Steel Company, Ltd., would have paralysed industrial activity for some time to come. Such a situation has been averted by the withdrawal of the strike notice by the workers, following the announcement of an increase in dearness allowance. It is stated that the workers of about 600 coal mines in West Bengal and Bihar controlled by the I.N.T.U.C. and those controlled by the Colliery *Mazdoor Sangh* had given notices of strike with effect from the 19th inst. Even without a strike the position of colliery owners would have been difficult, but this was overcome by the timely announcement of an increase in the selling price of coal by As. 12 per ton and of coke by Re. 1 per ton.

In terms of the Labour Appellate Tribunal's award, the Joint Working Committee of the Indian Mining Association, Indian Mining Federation and Indian Colliery Owners' Association advised their member collieries to start paying the additional dearness allowance of Rs. 4.87 for a full month's work. Payment at this rate was made for weekly-paid workers on pay days which occurred last week-end. A similar payment for monthly paid staff will be made at the end of this month. The Labour Appellate Tribunal, which gave its award in respect of colliery wages last year, laid down a scheme of variable dearness allowance, under which, when the cost of living index increased by over 10 points above the base of 102 within a particular half-year the dearness allowance for the succeeding half-year was to be increased by a flat amount of Rs. 4.87 per month for every such 10 point rise. The All-India Average Consumer Price Index Number (cost of living index) for the six months ended December 1957 rose by more than 10 points (to 113.2). The collieries were, therefore, obliged to pay an additional dearness allowance on the basis of Rs. 4.87 per month for a full month's work until the position is reviewed for the next half-year, that is, the half-year ending 30th June 1958, for which payment will be made during the following six months.

It may pertinently be asked in this connection why the colliery owners took more than four and a half months to announce the dearness allowance for the half-year July-December 1957 and thus gave an excuse for the workers to call for a strike. An explanation for this is that the official statistics of consumer price index for every month is not available in time and as such payment of dearness allowance from the beginning of each half-year on the basis of the average figure for the preceding half-year is not possible. It is thus pointed out that the final revised figures for December 1957 was available only early this month and the colliery owners could not have been expected to find the average consumer price index for the six months ended December 1957 earlier and pay the colliery workers accordingly.

As per the decision of the colliery owners, the additional dearness allowance of Rs. 4.87 has to be given with retrospective effect from 1st January 1958. The arrears from this date will be paid to those who have earned them and the details of these arrears to each worker will be announced later. If, however, any revision of dearness allowance, either upwards or downwards, is necessary from 1st July 1958, on the basis of the average index for the current six months, an announcement will duly be made and any such revision will be made as soon as figures for the full half-year are available.

In order to meet the increased cost of dearness allowance, the Government of India has raised the selling price of coal and of hard and soft coke by As. 12 and Re. 1 per ton, respectively, with effect from the 17th inst. The increased price of coal will be effective for six months. The industry does not benefit from this increase in selling prices, as it is said to be barely sufficient to cover the higher cost of dearness allowance. It is to be hoped that this increase in prices of coal is without prejudice to the recommendations of the Coal Prices Revision Committee, the report of which is long overdue.

ANNUAL MEETING OF THE TRAVANCORE RAYONS LTD.

CHAIRMAN, MR. AR. RAMANATHAN'S REVIEW

LIKELIHOOD OF FURTHER EXPANSION IN RAYON YARN PRODUCTION

SPEAKING at the Twelfth Annual General Meeting of The Travancore Rayons Limited held in Rayonpuram on 26th May 1958, Mr. AR. Ramanathan, Chairman, referred in brief to the part the Company would play in achieving the higher targets set for the industry under the second Plan. He said that rayon yarn output had reached 8.6 tons per day and that there was a likelihood of Government permitting further expansion provided suitable credit on deferred payments was arranged. A proposal to put up a sulphuric acid plant was already under way and licence for expansion of cellulose film manufacture had been obtained.

The following is the full text of Mr. Ramanathan's speech:

"GENTLEMEN,

"This is the twelfth annual general meeting of your Company, at which I have the pleasure of addressing you. I extend to you all a cordial welcome. The Directors' report and accounts have been circulated to you sufficiently in advance and, with your permission, I take them as read.

"Your Company has been growing in every way, year by year. Your Directors have been following a policy of successive expansion in the interests of your Company and of the nation. But the year 1957 has been exceptional in the sense that, although the sales have been an all-time peak, the production for the relevant year and the profits have registered a sharp fall. This is why I call 1957 as a year of 'profitless prosperity.' I am dealing with this aspect in detail later in my speech.

Working Results

"The year's working has resulted in a profit of Rs. 21,64,526.42, after providing the following:

			Rs.
Depreciation	...	...	34,54,811.14
Excise Duty	...	...	9,06,881.15
Wealth Tax	...	...	1,05,142.00

"With the sum of Rs. 2,63,689.54 brought forward from the previous year, the total amount available for appropriation is Rs. 24,28,215.96. Out of this, your Directors have recommended transfer of Rs. 10 lakhs to the general reserve, and payment of dividend at 10 per cent. on the equity shares, same as last year, and 5 per cent. on preference shares. The dividend will absorb Rs. 12,50,000. The balance of Rs. 1,78,215.96 will be carried forward.

"As I said last year, the market for cellulose film, which was dull in the second half of 1956, took a turn for the better in 1957. With our going into commercial production of moisture-proof heat sealing cellulose film and the popularity which this variety gained among the tobacco manufacturers, there was no difficulty in the market absorbing our production of the film in both the plain and moisture-proof varieties. I am glad to tell you that we are now in a position to meet the entire needs of the country in regard to this article.

"In the case of rayon yarn, the imposition of excise duty at the end of 1956 resulted in some accumulation of stock and consequent slowing down of production. The market became lethargic, with the consumers showing disinclination to bear the new burden. However, towards the latter half of the year, the situation improved and the sales were brisk, thanks to the austere *import policy of the Government* after July 1957, prompted by the acute foreign exchange crisis. Unfortunately, there was a labour strike of about a month's duration in October-November, which added its contribution to the fall in production and profits. You will, thus, see the causes which were responsible for the decline in production during 1957. However, a welcome relief is provided by the fact that owing to the favourable atmosphere in the third quarter of the year, the sales boomed up and the year recorded the highest sales thus far, representing an increase of 32 per cent. over that of 1956. We were able to meet these sales, despite the reduced production, because we carried an unusually huge opening stock of finished yarn at the beginning of the year.

"I just now explained to you the apparent paradox that, although the production was low, the sales were the highest during the year under review. But, then, there is yet another paradox, i.e., although the sales were high, the profits were much less than in 1956. This is explained by the following reasons: (1) the incidence of excise duty, amounting to Rs. 9,06,881 for the year; (2) the losses created by a month-old labour strike; (3) the Wealth Tax, by way of which we have paid Rs. 1,05,142. This tax is, in my opinion, as in those of many others, difficult to be justified in the case of companies, except, if I may say so, on the ground that, so far as Government is concerned, it is easier to levy this tax on companies and collect it from them too with greater ease. Fourthly, comes the dwindling of the margin of profit. While, on the one hand, prices of raw materials, auxiliary materials, spares and replacements, freight rates, and labour costs, taxation and duties were increasing, the prices of our products were pegged and there was a moral price control, so to say, to which we were committed, in the larger interests of the industry and of the country. I hope that, with the expanded capacity of the plants in full utilisation in the year 1958, we will be able to achieve better results.

Help from Governments

"I am glad to record that, as usual, we continued to receive due help and encouragement at the hands of the State and Central Governments. The country is faced with many problems, some of them intriguing and perplexing. It is a great credit to those at the helm of affairs that they are not borne down by the difficulties, and every situation is overcome in a remarkably able manner. Sweeping political, social and economic changes are overtaking us. I am sure it is equally recognised by all concerned that we, of business and industry, are trying to adapt ourselves to these revolutionary changes with appreciable resiliency.

"I do not wish to deal very much with the heavy burdens of taxation, the various disincentives to capital formation, the inflationary pressures, the foreign exchange crisis and so on. These are but the inevitable features of an expanding economy of an underdeveloped country. It is the duty of every one of us to put our shoulders to the wheel, despite differences here and there, keeping in mind the future prosperity of India, and help work out the second Five-year Plan to a fruitful conclusion. I am glad to see that the Government are now becoming more and more realistic and there is every reason to hope that as they gather more and more experience, they would, no doubt, be able to see the best means of attaining their ends with the least stresses and strains on the various sectors of the economy.

"Now, I wish to say a few words about the part your Company will play in achieving the higher targets set for your industry under the second Plan. As your Directors have already said in their report, the production of rayon yarn has been stepped up by another 1.8 tons a day, bringing up the present installed capacity to 8.6 tons a day. But, owing to some delay in the arrival of certain vital equipments, the relative new spinning machines could be commissioned only early in the current year. The proposal of manufacturing cellulose adhesive tape stands postponed as the Government has felt that the scheme could wait for some time. On the other hand, they have been good enough to grant us licence for expansion of the cellulose film manufacture, with every likelihood of permitting expansion of rayon also, subject to suitable deferred credit schemes being got. A proposal to put up a sulphuric acid plant of capacity 50 tons per day is already under way.

"You will note from the balance-sheet that, on the assets side, the gross block has gone up sizably and that on the liabilities side the borrowings have been reduced by as much as Rs. 24 lakhs. These have been possible by the usual prudent policy of your Directors in the matter of ploughing back the earnings into the business.

"Before I conclude, I think it quite necessary to refer to relations between the employees and the management. As I said earlier in my speech, we had during the year under review, a very unfortunate strike extending for about a month, with all its bad repercussions, both for labour and for the management. For the first time in the history of the Company, a reference had to be made to adjudication. The main issue involved is bonus for 1956. I would stress very strongly that the issue could easily have been solved, if the leaders of the workers had been reasonable in their demands. I note with consternation the pernicious tendency, which is manifesting itself too often nowadays, of workers refusing to obey reasonable orders and insisting on the granting of their terms on the spot, under threat of forthright direct action. This is a very dangerous situation, which I am sure no Government or employer can view with tolerance. This is certainly not the way of collective bargaining. Such a practice is in vogue in no civilised country. While I am all for genuine collective bargaining, I am firmly of the view that strikes are now an outmoded weapon. Strikes might have been justified years ago when there was no legal protection for the workers, but not now, when the statute book is replete with labour legislation and safeguards for their rights. Where differences cannot be resolved by mutual discussions and a spirit of 'give and take' it will be in the best interests of labour-management relations and of national productivity, that unsettled points be referred to independent adjudicators or arbitrators.

Strikes Unnecessary

"Strikes are quite unnecessary and unjustified, especially in the present state of our nation, when the crying need of the hour is production and more production. I commend this point, simple and well known though it is, to the earnest and sincere attention of the labour leaders and the State and Central Governments. Secondly, I very much wish that trade unions eschewed politics and functioned as independent, non-political agencies of genuine collective bargaining. To bring this into effect it is fundamentally essential that the office-bearers of unions are purely employees of the concerned industries and no outsiders find a place therein. Thirdly, I would request early legislation permitting only one union for each industrial unit, as too many unions in the same unit serve neither the cause of labour nor of production. Lastly, is the case of continuous process industries like ours, for inclusion among what are called 'public utility' concerns under the Industrial Disputes Act? Sudden strikes in such industries result in huge loss of semi-manufactured articles, besides causing considerable damage to the plant and machinery. Two weeks' notice of strikes and lock-outs in such industries would only be fair and reasonable. I hope all these points will receive due consideration at the hands of the Government and labour leaders.

"I now beg to move that the Directors' report, balance-sheet and profit and loss account for 1957 be approved and adopted."

Note:—This does not purport to be a record of the proceedings of the annual general meeting.

UNIQUE OPPORTUNITIES FOR INDUSTRIALISTS

A PHARMACEUTICAL Laboratory and a Central Distillery, both independent units situated upcountry, doing lucrative business, large turnover, now offered for outright sale as running concerns. Parties interested may please write in confidence along with their bank references to Box No. 965, c/o "Commerce," Brady House, Veer Nariman Road, Fort, Bombay.

TEA CULTIVATION IN SOVIET RUSSIA

NEW METHOD INCREASES YIELD SUBSTANTIALLY

RUSSIA has been one of the biggest tea-consuming countries in the world from very early times, but it had to depend on other countries for its requirements, as very little tea was produced at home till early this century. During the last 40 years of Soviet power, tea cultivation has made such vast strides that it is now one of the biggest tea-producing countries in the world. It is, however, still importing tea from other countries to meet its requirements. The rapid growth of the Soviet tea industry is illustrated by the fact that, whereas in 1917 the area under tea crop aggregated 995 hectares (1 hectare=2.5 acres) yielding 650 tons of tea leaves—there were only three primitively operated factories then producing about 150 tons of low quality tea—in 1957, the area under tea was 74,300 hectares giving a total yield of 112,300 tons of graded leaf.

In 1925, the Soviet Government started the Georgian Tea Joint-stock Company and later organised it into a trust. Soon after, a perspective plan for tea development was worked out and scientific research was organised, followed by careful tests of soils, selection of areas best suited for tea plantations and tracts where special State tea-growing farms were organised. By 1932 the tea acreage exceeded 25,000 hectares. Through collective and State farms the Georgian Republic planted large tracts with tea every year. Tea planting was started in the Azerbaijan Republic in 1932 and in the Krasnodar Territory in 1937, when the area under tea in the U.S.S.R. covered no less than 44,000 hectares. In 1950 it expanded to 54,300 hectares and further to 74,300 hectares in 1957.

Along with the expansion in area the U.S.S.R. kept the yield per unit of area also rising. Thus, while in 1937 the average yield of graded green leaf per hectare was 866 kilograms, it grew to 2,082 kilograms in 1950 and 2,353 kilograms in 1956. In some areas, the yield was very much higher than the average. Thus, in the Makharadze District, the yield per hectare was 3,606 kilograms and in the Batumi District it amounted to 3,680 kilograms. Kobuleti District produced still higher yield at 4,025 kilograms and the small Ochkhamuri Tea State Farm harvested as much as 4,514 kilograms per hectare. Consequent on the increasing yield, the total production of graded leaf rose more than four times from 23,600 tons in 1937 to 112,300 tons in 1957. In addition, 10,000 to 12,000 tons of coarse leaf is harvested annually for brick tea.

To a large extent, the rapid growth in tea cultivation in recent years has been due to the mechanisation of such labour-consuming work as deep ploughing, levelling of top soil, row-crop cultivation with application of chemical fertilisers and pruning of tea plants. Experimental tests are also being carried out since 1952 for harvesting of tea crop by machines.

Another feature of the development of tea cultivation in the U.S.S.R. is the extensive research work done by the All-Union Research Institute of Tea and Sub-tropical Crops since 1930. Explaining the work of the Institute, Mr. A. Ivanova, in an article on "Soviet Tea," says:

"This Institute made a study of the necessary conditions for tea cultivation and worked out zonal agronomic measures. It has established that the root system of tea planted densely in trelisses maintains the soil on slopes in fine condition. This is why the Institute has recommended to collective and state farms planting tea on slopes up to 25 degrees not to employ the costly terrace-building system. This method is now practised by tea growers on a wide scale.

"On the basis of many years' experience, the Institute has worked out and recommended a system of crop fertilisation for collective and state farms that boosts tea harvest yields. It has established the after-effect of phosphatic manure, and found its application once in four years as sufficient. The Institute has suggested that deep winter reworking of soil between rows be dropped. This measure decreases labour expenditure greatly. Now many collective and state farms have dropped winter reworking of soil. Scientists have worked out a system of pruning the plants, which increases harvest yields and facilitates even ripening of leaves on shoots. Valuable grades of tea have been developed and propagated, increasing the harvests and improving their quality. The collective and state farms are constantly aided by the scientists in choosing the methods best suited for their plantations."

In another article, Mr. N. Nikolozishvili gives details of the new method of tea cultivation adopted widely in the U.S.S.R., that is, the development of the root habit in tea plants. Thus, he says:

"It is known that on plantations where the soil is 'podzol,' with a layer of hard-pan lying close to the surface, tea bushes cannot develop an extensive root habit. And if the roots develop close to the surface, the plant cannot use the nutritive substances and moisture of the lower layers of soil to a sufficient extent. This causes an imbalance in the plant's nutrition and lowers the yield of the tea bush. Experiments show that active roots grow badly in an uncultivated layer of soil. Their main mass develops in mellow, cultivated layers. The lower layers of the soil in tea plantations grow more condensed as time goes on and this also causes a gradual fall in harvest yields.

"This can be avoided by deep loosening of the soil (to a depth of from 45 to 60 centimetres) at regular intervals. And deep loosening of the soil requires special machinery.

"Deep loosening of the soil, with the simultaneous setting in of dissolved mineral fertilisers and drain digging, helps the development of the root habit. Tea bushes will in consequence use the supplementary moisture and nutritive substances contained in the deep layers of fertilised and aerated soil. All this will undoubtedly have the effect of increasing the crop yield of the tea bushes."

By adopting this method of cultivation, the Georgian tea planters are stated to have increased their yield many times. In many collective and State farms of the Georgian Republic the yield of tea leaf is 4,000 kilograms or more per hectare.

The anxiety over the 1958-59 season coffee crop, consequent on the earlier reports about deficiency of showers, has now been relieved. Though somewhat belated, the showers are reported to have occurred in varying degree all over the coffee area and the earlier deficiency has to a large extent been made good. Consequently, the prospects for the ensuing season have brightened up considerably and the Coffee Board's latest estimate of 1958-59 crop is placed at about 45,000 tons. The revised estimate of 1957-58 crop is 41,687 tons, made up of 20,823 tons of Plantation, 7,179 tons of Arabica Cherry and 13,685 tons of Robusta. Despite the very cautious and conservative estimates made earlier in the year, the Coffee Board's latest monthly *News Letter* says, this year's crop may equal the record crop of 1956-57.

Receipts into the pool are 41,477 tons to end of April (20,973 tons Plantation, 7,551 tons Arabica Cherry and 12,953 tons Robusta), as compared with 39,515 tons received during the same period last year.

The exportable surplus from 1957-58 crop now stands at 11,684 tons (8,407 tons Plantation, 3,251 tons Arabica Cherry and 26 tons Robusta) and 5,499 tons (5,006 tons Plantation and 493 tons Arabica Cherry) have so far been sold for export till 10th May 1958. The prices have been more or less steady from mid-April, though they are low.

OUTPUT OF JUTE GOODS RISES IN 1955

VALUE ADDED BY MANUFACTURE, HOWEVER, DECLINES

THE summary of the *Tenth Census of Indian Manufactures, 1955*, released last week in advance of the main report, discloses that the number of jute textile factories (employing 20 or more workers on any day and using power) registered and in existence in 1955 was 112, as against 108 in 1954, the bulk of which continued to be concentrated in West Bengal. The number of factories from which returns were received was 107, as compared with 105 in the preceding year. Any change in the other data relating to the industry (referred to below) is, therefore, due, among other things, to the increase in the number of factories and the fall in coverage.

While there is a fall in the number of persons employed from 271,415 to 271,198, there has been an increase in the average number of days worked from 278 to 297. The decline in the number of persons employed is accounted for by employees other than workers, the number of which has declined from 16,485 to 16,116, whereas the number of workers has risen from 254,930 to 255,082. The total wage and salary bill of employees amounted to Rs. 30.06 crores, of which Rs. 25.56 crores were paid as wages, Rs. 3.77 crores as salaries and Rs. 73.08 lakhs as other benefits. In 1954, the total of all these aggregated Rs. 28.76 crores.

The total productive capital employed in the industry during 1955 was Rs. 71.48 crores, having gone up from Rs. 65.26 crores in 1954. The fixed capital aggregated Rs. 36.85 crores and working capital Rs. 34.63 crores, as compared with Rs. 31.30 crores and Rs. 33.96 crores, respectively. The increase in fixed capital is mainly accounted for by plant and machinery, the value of which rose from Rs. 17.01 crores to Rs. 22.60 crores.

The production of jute goods (excluding carpets) recorded an increase from 966,254 tons, valued at Rs. 124.60 crores, to 1,029,722 tons worth Rs. 136.78 crores. An area-wise break-up analysis of production shows that West Bengal produced 974,793 tons of jute goods valued at Rs. 129.81 crores, as against 909,672 tons of the value of Rs. 117.89 crores in 1954. In Andhra also, the output rose from 26,009 tons to 26,449 tons and the value from Rs. 3 crores to Rs. 3.27 crores and that in Bihar and M.P. from 11,968 tons (Rs. 1.33 crores) to 13,349 tons (Rs. 1.65 crores), while in Uttar Pradesh it fell from 18,605

EXPORT RISKS INSURANCE

FIRST MEETING OF ADVISORY COUNCIL

IT augurs well for the success of the Export Risks Insurance Corporation that the Government of India and the Corporation desire to avail themselves of the advice of non-official experts in the field of export trade and finance in the working of the Corporation. The constitution of a Central Advisory Council, as recommended by the Export Credit Guarantee Committee (Chairman: Mr. T. C. Kapur) set up by the Government of India in 1956 and in pursuance of whose recommendation the Corporation has been set up, is an earnest of the Government's wish to associate non-officials with the Corporation's work. The Committee had recommended the setting up of a Central Advisory Council consisting of not more than 21 members, representing the export trade, banks engaged in financing exports, various export Promotion Councils and Commodity Boards, to advise the Corporation regarding the insurance needs of the export trade, the changes taking place in the export trade and the steps to be taken to provide for new conditions.

The first meeting of the Central Advisory Council was inaugurated by Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, on the 17th inst. at Bombay. Inaugurating the meeting, Mr. Shastri observed that, in the context of the urgent need for augmenting exports, the question of export risk insurance assumed added significance. According to him, although the formation of the Corporation had been a step in the right direction, sufficient advantage had not been taken by exporters of the new organisation. Mr. Shastri observed that the Government had throughout been of the view that association of those who had experience of exports with the Corporation would be a great advantage. It was to promote close association between the Corporation and those whom it sought to serve that the Central Advisory Council had been set up. He hoped that this establishment of a firm link between the exporters and the Corporation would prove fruitful.

Mr. Shastri pointed out the close interrelation between export finance and credit insurance. He called upon the banks to provide more export finance facilities to exporters. Explaining the factors that influenced the financing of exports, he observed that it was necessary to appreciate the role the Corporation could play in making export finance more readily available. Banks generally made advances only to those exporters about whose financial position they had no doubt. To the extent to which these risks could be insured and the benefits under the policy were assigned to the banks, it should be possible for them to make export finance facilities more readily available to the exporters.

He also advised exporters to appreciate the banks' point of view. In every form of insurance, while the insurer underwrote the risk, the insured also undertook certain obligations. Failure of the insured to discharge his obligations under the policy freed the insurer from his liability. Insurance policy, therefore, could not be treated as the sole security by a bank. It could only be an additional security. There could be, and perhaps were, cases, said Mr. Shastri, in which banks had refused to make advances against shipping documents. Such refusal, he believed, was not the result of the non-appreciation of the value of the policies of the Corporation but was probably due to the lack of confidence in the exporter, or the exporter was trading beyond his loss-bearing capacity. The Minister urged banks to offer their full co-operation in promoting exports. Inasmuch as the risks involved in export on credit terms could be covered, the insured exporters deserved greater assistance.

Mr. Shastri also drew the attention of the financing banks to a facility which insured exporters deserved. Claims under the policies of the Corporation, he pointed out, were payable six months after the due date of payment. This practice was not peculiar to the Corporation. Similar was the position under the policies issued by other credit insurers. The bank, when a default in payment took place or where transfer of moneys to India was delayed, made recoveries from the exporter immediately. This, he pointed out, naturally placed the exporters in a serious handicap. Was it not possible, the Minister asked, for the banks in the case of insured exporters to defer recovery of advances made by them till the claims became payable? Advances made would continue to carry interest till payment was received from the Corporation. He suggested that banks could further secure themselves by getting admission of claim confirmed by the Corporation. This concession would keep the working capital of the exporter intact and enable him to carry on business. He hoped that this suggestion would receive sympathetic and favourable consideration from the banks.

The number of exporters, the Minister observed, who have so far insured was very small, as compared with that of the exporters' class as a whole. Although the number of policies issued was not even a hundred, yet the progress made, according to him, was encouraging, considering that credit insurance business was new to this country. Resistance to insurance was proverbial. Other types of insurance had to face very great resistance. By strong and persistent efforts made by insurers this resistance was diminishing. He added that the Corporation would also have to make great efforts to popularise this form of insurance.

In addition, there were many other difficulties to be faced. Mr. Shastri mentioned a few. The Corporation had to face difficulties arising out of the exporters' ignorance of the principles of credit insurance. Solutions should also be found for complicated problems posed by exporters. There was also the need to accustom the insured to carry out their obligations under policies which was not an easy task. These difficulties, Mr. Shastri pointed out, were not anything unusual. Every pioneer in a new field had to face similar problems.

POSTAL LIFE INSURANCE POLICIES

Arrangements have been made with the Government of Pakistan for the settlement of claims relating to Postal Life Insurance policies the liability for which rests with the Government of Pakistan and the holders of which had migrated to India by 30th June 1955. The Director-General of Posts and Telegraphs notifies that claims in respect of such policies supported by necessary documents and policies should be sent to the Director-General of Posts and Telegraphs, Life Insurance Section, Vinay Nagar, New Delhi, in the prescribed forms to be obtained from that office. After verification, the claims will be referred to the Director-General of Posts and Telegraphs, Karachi, for issue of valuation certificate which would constitute the authority for payment of the value of the policy to the claimant on behalf of the Government of Pakistan. Assignees in India of Pakistan liability policies assigned prior to 1st April 1948 may also send their claims in the same manner.

It has also been decided with the concurrence of the Government of Pakistan that any outstanding premia for the period after 31st March 1948 together with interest at 3½ per cent. will be deducted before payment is made in settlement of any policy which has become a claim.

Insurants whose policies have not so far become claims will have the facility of reviving their policies and keeping them alive by paying the premium due on such policies in cash at a post office in India. The insurant concerned will select the post office at which he wishes to deposit the premium and obtain the prior permission of the Director-General of Posts and Telegraphs, New Delhi, before making payment. Arrears of premium in respect of lapsed policies may be paid at a post office in India after ascertaining the amount from the Director-General of Posts and Telegraphs, Karachi (Pakistan), through the Director-General of Posts and Telegraphs, New Delhi. If the arrears of premium relate to any months between April 1948 and March 1958, the rate of interest chargeable for late payment will be 3½ per cent. per annum. The rate of interest for late payment will be 6 per cent. per annum on arrears of premia for any month after March 1958. Where revival of a lapsed policy is desired, the insurant will have to produce, at his own cost, satisfactory evidence of continued good health.

Indian holders of Postal Life Insurance policies which are the liability of the Government of India and which stand assigned (prior to 1st April 1948) to parties in Pakistan may also put in their claims to the Director-General of Posts and Telegraphs, New Delhi, if they have not so far been paid the portion of the value of the policy due to them. Similar applications should also be made by those wanting release or reassignment of policies financed from provident fund accounts and assigned prior to 1st April 1948 to corporate bodies in Pakistan. Such policies will be got reassigned in favour of the insurant without valuable consideration.

They live next-door to each other
...years apart!

Next-door neighbours may look and dress alike; yet each is an individual ... sometimes, years apart in ideas and outlook.

It's a fascinating business, studying people and their next-door neighbours. At Hindustan Lever, through the modern science of marketing research, we study needs, aspirations, preferences, dislikes. They help us know you better, guide us in making products that will suit your taste, your pocket ... your way of life.

In this way, you are advising us, guiding us — for ultimately it is you for whom we produce.

LOCATION OF SECOND SHIPYARD

BRITISH MISSION'S FINDINGS—COCHIN RECOMMENDED AS BEST SITE

THE United Kingdom Shipyard Mission, which visited India last year under the auspices of the Colombo Plan, in its report submitted to the Government of India, has recommended a site near Ernakulam (in Cochin) as the best site for the location of the second shipyard. According to the Mission, the site near Ernakulam offers more chances for the successful development of the second shipyard than any other site examined by it. A model illustrating the proposed layout for the Cochin site has been submitted along with the report which also lists, in order of priority, four other sites which are considered suitable for locating the second shipyard. They are: Kandla, Trombay, Geonkhali (near Calcutta) and Mazagon (Bombay).

The terms of reference required the Mission to advise the Government of India on the site and the layout of a new shipyard and the equipment which would be required to establish it and to furnish the estimates of the capital cost of the shipyard and to prepare a report for consideration by the Government. The Mission formulated certain minimum and necessary requirements which a site should satisfy for being considered for location of the yard. The depth of water and tidal range should be adequate and suitable for the safe launching of the largest ships to be built. There should be good water channels from the sea or estuary. The site should be sheltered from storms, adequate in area and with adjoining grounds available for development. It should be near existing or projected major ports and township with industrial possibilities. Adequate services, including electric power, water power, road and rail access should be available. Applying these criteria, the Mission examined the conflicting claims of the various sites. None of the sites examined, according to it, is ideally suited for development. Nevertheless, the five sites mentioned above are, in its opinion, worthy of further consideration.

Advantages of Cochin

As regards the claims of Cochin, the Mission observes that it possesses more advantages at the Ernakulam site than any other site examined. It is an expanding port; a number of industries subsidiary to shipbuilding are already established there; rail transport and other services are good, and there is a working force of labour familiar with industrial process. The site at Cochin is not perfect from the civil engineering viewpoint. However, the problems in this connection, says the report, are not insuperable, as may be instanced by the extensive work already carried out by the Port Authorities.

Mazagon is a recognised ship repair centre. Redevelopment of the part of the present establishment for building of cargo ships upto 12,000 tons deadweight, the Mission feels, is a practical proposition. However, it points out that only four ships of this tonnage could be built a year and the output would thus fall substantially short of the target laid down for the second shipyard, that is, 60,000 tons, to be increased to 80,000 tons. The main advantage is that Mazagon Dock can be redeveloped quickly and at a reasonable cost. Further, the present organisation is experienced both in the building of ships and repairs.

Kandla, according to the Mission, would be a suitable site for shipbuilding, if it were not so remote from other industrial areas. In all probability, according to it, there would be difficulty in recruiting and retaining technicians and specialised labour. Trombay, it is pointed out, is advantageous from the civil engineering construction point of view; but the initial dredging of the yard frontage and of a channel connecting the site with existing deep water would be costly. Also, maintenance dredging would be a heavy recurring annual charge. Goenkhali, the Mission feels, is the better of the two sites near Calcutta, the other being Diamond Harbour. It is near the steel-making districts. The river Hooghly is, however, considered to be unreliable for safe launching and continuous heavy dredging might, in time, endanger the foundation works.

The Mission estimates the cost of the proposed shipyard at the five sites as follows: Cochin Rs. 19.16 crores, Kandla Rs. 20.31 crores, Trombay Rs. 17.38 crores and Geonkhali Rs. 20.88 crores. For the somewhat different proposals for the redevelopment of Mazagon Dock, the costs are estimated at Rs. 7.04 crores. Total foreign exchange payments necessary for the purchase of equipment abroad have been estimated at Rs. 2.75 crores. Payments in respect of the Mazagon Dock proposals have been placed at Rs. 1.3 crores. It may be noted that these estimates have been prepared on the assumption that the complete shipyard, including dry-dock and repair facilities, will be ready and in full use in a period of about three years. Items external to the main proposal, for example, railway and road construction, townships, etc., have been excluded, as has been the cost of acquiring the site.

The Mission points out that, however, well equipped the new shipyard may be, it is of utmost importance that the labour force should be of good quality and well trained. The labour content in Indian industries, it points out, is higher than in Europe. It, therefore, suggests that every means should be utilised to make sure that the considerable capital investment involved in the shipyard is economically employed.

Now that the Mission has submitted its report, it is for the Central Government to take a quick decision. Prompt action is also called for, considering that a great leeway has to be made up in the matter of shipbuilding. The question has so far been handled in a haphazard manner, with the result that, though more than a decade has passed since the founding of the first shipbuilding yard at Visakhapatnam, the country's output of new tonnage is very small. The experience so far gained and the additional advantages such as easier availability of the requisite materials and technical know-how that will be available, should enable shipbuilding to progress at a faster rate than in the past.

HIGH TENSILE STRUCTURAL STEEL

The Indian Standards Institution has published an Indian Standard specification for high tensile structural steel. This standard is one of a series of Indian standards being published for implementation of the I.S.I. Steel Economy Programme. The standard prescribes the requirements for high tensile structural steel (including fusion welding quality) in the form of bars, plates and sections, used in bridges and general building construction. The material specified in this standard has higher ultimate tensile stress and yield stress than ordinary structural steel. Copies of this standard (IS:961-1957), published in English, can be obtained from the Indian Standards Institution, 9 Mathura Road, New Delhi, or from its branch offices at Calcutta, Bombay and Madras.

SLUM CLEARANCE

REPORT OF SELECTED BUILDINGS PROJECTS TEAM

AMONG the most urgent problems facing the industrial cities of India, the extreme shortage of housing and the menace of spreading slums occupy pride of place. They are the problems which demand positive and immediate action to meet the pressing social and economic needs of the community. Slum clearance in India is a new programme of national dimensions. In the past, it has been attempted on a local basis. It is for the first time that an endeavour is being made to evolve a national policy. The Government of India, realising that the prerequisite of the slum problem was the construction of low-rent housing for industrial workers, initiated a National Housing Programme in the first Plan. This programme included a subsidised industrial housing scheme and a scheme for low-income group housing. In 1956, the Government introduced the Slum Clearance and Sweepers' Housing Scheme and allotted a sum of Rs. 20 crores for its implementation in the second Plan.

Viewed against this background, the report of the Selected Buildings Projects Team on Slum Clearance just published is a document of considerable economic and sociological importance. The Team was set up with Mr. S. K. Patil as Chairman by the Committee on Plan Projects. It was required to review, among others, the slum clearance schemes of a few States and make general observations on the progress made and the policy underlying the schemes.

Statutory Corporations

The Team is of the opinion that the suitable agency for organising slum clearance activity is a statutory corporation or a Board with a Chairman and an appropriate number of Directors. It has, therefore, recommended the creation of autonomous, statutory Housing Corporations in every State and a Housing Corporation at the Centre to which the State Corporations may be subsidiaries. They should be charged with the responsibilities of implementing the programmes included in the Plan and be made the agencies for formulating regional planning policies.

It is suggested by the Team that the proposed Housing Corporation at the Centre should be entrusted with the funds earmarked in the Plan for housing schemes. It should be the Corporation's duty, the Team recommends, to allocate funds, on principles approved by the Government, to the various State Corporations. The Team also feels that the Corporation should establish close liaison with the National Buildings Organisation and the Central Buildings Research Institute. If for any reason it is not possible in the near future to set up a Central Housing Corporation, the Team suggests, all housing schemes of the Centre should be entrusted with one Ministry of the Government of India.

The Team points out the necessity of having one common and authoritative definition of what constitutes a 'slum,' and strongly recommends that the Government of India should frame a comprehensive definition of a slum. In its opinion, the definition given in the U.S.A. Housing Act of 1949 covers all the points. This Act defines a slum as "any predominantly residential area, where the dwellings which, by reason of dilapidation, overcrowding, faulty arrangement of design, lack of ventilation, light or sanitary facilities or in combination of these factors, are detrimental to safety, health or morals."

Certain remedial measures for stopping the influx of population from villages to cities are also mentioned. It is urged that no licences to start new industries or for expansion of any of the existing industries should be granted by the Central Government unless a 'no objection' certificate is produced from the Local Body. The need for a firm decision to limit employment expansion in the congested areas is also underlined by the Team. It suggests that the establishment of industrial estates should be co-ordinated with slum clearance schemes. An interesting suggestion of the Team for dealing with the influx of people into cities is the establishment of "satellite towns." It is better, the Team emphasises, to carry industries to the people than carry people to the industries."

It is obvious that the slum clearance job is neither cheap nor easy and there is no dramatic solution to it. An attempt to tackle it, as the Team emphasises, must comprise well-planned, well-organised and concerted action, using the tools of (1) slum prevention, (2) rehabilitation of sub-standard housing and (3) slum improvement and slum servicing.

NEW PRODUCTS AND PROCESSES

Srifirset Compounds for Celllulosic Fabrics

IN order to give better and permanent finishes on rayons, a series of *Srifirset* compounds have been successfully developed at the Shri Ram Institute for Industrial Research Delhi. Finishes obtained by these compounds are claimed to be quite fast and give permanent dimensional stability to the fabrics. The wear life, drape and crease resistance are also improved. *Srifirset I* is a light yellow coloured liquid with 50 per cent. active material. Basically it is a combination of formaldehyde and a carbohydrate derivative of urea. The method of preparation consists in reacting suitable carbohydrate and urea under specified conditions of temperature, time and pH. The product, after purification is dissolved in formalin to obtain a 50 per cent. solution which remains stable over long periods.

Srifirset II is a modification of Srifirset 1 wherein the free formaldehyde is replaced by a formaldehyde donor. This is a light yellow liquid containing 50 per cent. of active solids and is also stable to prolonged storage.

Srifirset III is essentially a tetra methylol derivative of modified urea containing some tri derivative also. The product obtained is a light yellow coloured liquid with 50 per cent. active material and is quite stable to storage over long periods.

Srifirset V is a modified composition obtained from Srifirset I and III in the form of methylol derivatives. The product is light yellow coloured liquid containing 60 per cent. active solids and does not deteriorate on storage.

Manufacture of these compounds has been studied in a pilot plant and batches of about 100 lbs. have been successfully prepared. The application of these resins on cellulosic fabrics imparts, it is claimed, dimensional stability and wrinkle resistance. The wash fastness of direct colours is considerably improved. There is up to 50 per cent. improvement of wet tensile strength of treated rayons. The wear life of the fabrics is considerably improved and they possess softer and fuller feel. All the compounds are miscible with water in all proportions. The application of these resins on the fabrics requires only the usual equipment for padding, drying and curing. Parties desirous of manufacturing these compounds may correspond with the Secretary, National Research Development Corporation of India, New Delhi 1.

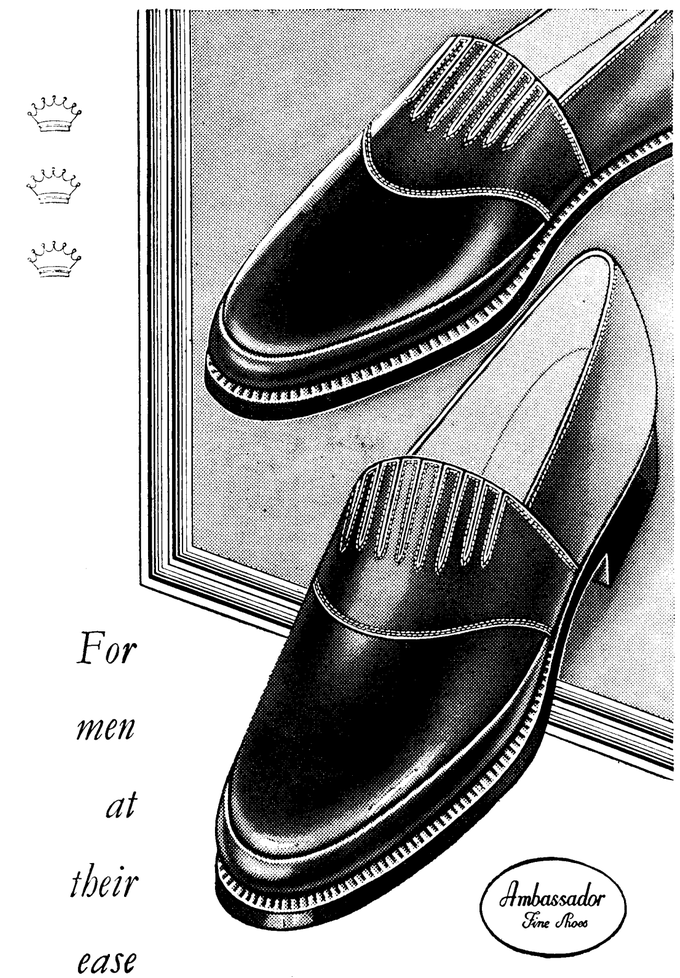
Stable Bath Catalyst

The application of amino-plast resins, such as urea formaldehyde and melamine formaldehyde resin precondensates, to textile materials is widely practised to impart crease and shrink-resistant effects. These resins are applied as aqueous solutions and to accelerate polymerisation in the fibre, catalysts are added to the bath. The commonly used catalysts are organic and inorganic acids or acid salts. Being acidic in nature these catalysts are likely to initiate premature condensation resulting in unstable treatment baths. Catalysts derived from organic amines overcome these defects but their use is not widespread because the treated fabrics develop fishy odours on storage; at the same time, they are costly and not readily available.

Catalysts to eliminate most of these defects have been developed at the Shri Ram Institute for Industrial Research, New Delhi. These stabilising catalysts are cream coloured powders or pastes, soluble in warm water, and produce nearly neutral pH in the resin treatment baths. The baths are therefore stable for long periods, the required low pH being developed during drying and baking stages only. Two grades of catalyst have been successfully prepared with different modifiers. Batches of 30-40 lbs. have been prepared in the pilot plant and tested successfully on large-scale mill trials. The use of these catalysts, it is said, does not involve any wastage of resin solution and the bath is stable for about 200 hours. Finish on the fabrics is uniform and the treated cottons show less impairment in tensile and tear strength. The treated fabrics have a softer handle. Manufacture of these catalysts is not costly and the raw materials are easily available. Parties interested in undertaking the development of the process may contact the Secretary, National Research Development Corporation of India, New Delhi 1.

New Method for Rot-proofing Jute

The discovery, after a period of intensive research, by the Indian Jute Mills Association Research Institute at Calcutta, of some simple and relatively inexpensive methods of rot-proofing jute is expected to go a long way in solving one of the jute manufacturing industry's perennial problems, namely protection of jute from damage by microbes. The most commonly used techniques for proofing of textile fibres in general against this kind of attack have been: (1) chemical modification of the fibre structure by the process of acetylation; (2) deposition on the fibre of certain toxic compounds, and (3) application of certain compounds which form a sort of plastic barrier on the surface of the fibres. The cost of acetylation and application of plastic films is usually very high, with the result that in practice the rot-proofing of vegetable fibres has been mostly confined to methods based on chemical deposition. But this process, however, has not been completely free from inefficiency and serious processing difficulties. The new process is expected to be free of these defects.



Style 17. A handsome casual styled to perfection with mudguard front and concealed elastic gores. Your foot slides in and out easily, yet you enjoy snug stay-in comfort. Soft pliable upper leather and leather sole for extra walking ease.

AMENDING COMPANIES ACT—V

SUGGESTIONS OF SASTRI COMMITTEE ANALYSED

By F. R. Ginwalla

THE Report of the Amendment Committee has proposed several changes in respect of managerial remuneration and managing agents. Thus, it proposes amendments of Sections 198, 309, 310, and 311. It has suggested that the head note of Section 198 should be abrdjged into "Overall maximum managerial remuneration." The amended Section 198 will be:

"*Overall maximum managerial remuneration*".—In the case of a public company or a private company which is a subsidiary of a public company, the total managerial remuneration payable by the company to its directors, its managing agent or secretaries and treasurers, if any, and its manager, if any, in respect of any financial year, shall not exceed 11 per cent. of the net profits of the company for that financial year, computed in the manner laid down in Sections 349, 350 and 351, except that the remuneration of the directors shall not be deducted from the gross profits. Provided that nothing in this section shall affect the operation of Sections 352 to 354 and 356 to 360.

"*Explanation*.—For the purposes of this section and Sections 309, 310, 311, 348, 352, 381 and 387, 'remuneration' shall include:

"(*a*) The value of rent-free accommodation or any concession in the matter of rent charged by the company to the persons aforesaid;

"(*b*) the value of any other benefit or amenity granted or provided by the company free of charge or at a concessional rate to the persons aforesaid;

"(*c*) any sum paid by the company in respect of any obligation or service which, but for such payment, would have been payable by the persons aforesaid; and

"(*d*) any sum paid by the company to effect an insurance on the life of or provide a pension or annuity for the persons aforesaid."

2. The percentage aforesaid shall be exclusive of any fees payable to directors under Section 309(2).

3. Subject to the maximum remuneration provided in sub-section (1), a company may pay a monthly remuneration to its directors, including a managing or whole-time director in accordance with the provisions of Section 309 or to its manager, in accordance with the provisions of Section 387.

4. *Note*:—This sub-section has been proposed to be amended by inserting the words "subject to the approval of the Central Government" between the words "may" and "pay".

Section 309

Remuneration of directors:—

(1) (Same as before).

(2) A director may receive remuneration by way of a fee for each meeting of the Board or a Committee of the Board attended by him.

(3) A director who is either in the whole-time employment of the company or a managing director may be paid remuneration either by way of a monthly payment or at a specified percentage of the net profits of the company or partly by the one way and partly by the other, provided that such remuneration shall not exceed five per cent. of the net profits for one such director, and if there is more than one such director, ten per cent. for all of them together.

(4) (Same as before.)

(5) (Same as before.)

(5A) If any director draws or receives directly or indirectly, by way of remuneration, any sum in excess of the limit prescribed by this section or without the prior sanction of the Government, where it is required, he shall account to the company for such sum as if he held it in trust for the company.

6. (Same as before.)

7. (Same as before.)

8. This section shall come into force from 1st April 1956 and, if that date does not coincide with the commencement of the financial year of a company, it shall come into force with effect from the commencement of the company's financial year immediately succeeding that date.

9. (Same as before.)

Sections 310 and 311, to some extent, overlap each other. The Report proposes that these sections may be combined and replaced by a section reading as follows:

"In the case of a public company or a private company which is a subsidiary of a public company, any provision relating to the remuneration payable to any director including a managing director or a whole-time director in the case of companies incorporated on or after 1st April 1956, and in the case of any such company incorporated before that date, any amendment of any such provision which has the effect of increasing such remuneration directly or indirectly, or of making an alteration in the terms of appointment or re-appointment of managing or whole-time directors shall not have effect unless approved by the Central Government."

We have noted the proposed amendments of Sections 198, 309 to 311. We shall now see why the Committee has recommended a change in the law or a clarification of the meaning and effect of the foregoing sections. The Committee has proposed to add an "explanation" to Section 198(1), as noted above, because a question was raised whether the word "remuneration" in Sections 198(1), 309 and 348 would include perquisites such as motor car, rent-free accommodation, free passage and other benefits. The Committee observes in its Report that "if the provisions of Sections 198(1), 309 to 311, 348, 381, 387, fixing ceilings on the remuneration of various categories of managerial personnel are to be effective, any evasion thereof by the grant of perquisites or benefits having a money value should be checked."

A question came up before the Bombay High Court in a suit under Section 90 of the Civil Procedure Code as to whether, if a managing agent renders services to the company in a capacity other than that of a managing agent and which are not covered by Sections 352 and 354-360, he would be entitled to remuneration for such non-managerial service. It is possible to take the view that Section 198 covers all services rendered by a managing agent in any capacity, or the view that Section 198 covers only managerial services and no others. The Bombay High Court took the latter view that Section 198 covered only remuneration for managerial services. Section 198(1) is therefore proposed to be amended so as to make it clear that it applies only to remuneration for managerial services. It is significant that the word "managerial" has been introduced in Section 198 (1) for this purpose. The Report observes that this is, however, a matter of policy and it is for the legislature to decide whether the Sections 198 and 348, as they stand, carry out the intention of the legislature. Sections 198(2) and 309(2) are suggested to be amended to remove inconsistency between them. Section 198(2) speaks of fees payable to directors for attendance at Board meetings. Section 309(2) speaks of remuneration paid to directors by way of a monthly payment or by way of a fee for attendance at the Board meetings. The Report (*vide* page 124) observes that it is not possible to fix an absolute minimum or maximum limit with regard to directors' fees and remuneration and that a sitting fee should be reasonable having regard to the position of the company and the status of the directors.

Remuneration to Directors

The Report has recommended that Section 198(3)(*b*) should be deleted and for the existing sub-section 198(3)(*a*) a new sub-section as already noted above should be substituted. The proposed sub-section (3) is intended to bring out the real intention of the legislature that the payment of remuneration to directors and the manager need not be postponed till after the end of the financial year or till the accounts of that year are presented to the shareholders but may be made monthly, subject to the ceiling fixed by Sections 309 and 387. Overdrawings are subject to be refunded as proposed in the amendment to Section 309.

It was urged before the Committee that in cases falling within Section 198(4), it should be open to the board of directors to sanction payment of remuneration to managing agents or directors or a manager upto the limit of Rs. 50,000 without reference to anybody else, and irrespective of what the previous rate of remuneration was. The Report states that the foregoing section as it stands does not require even a resolution of the company or the approval of the Government for the payment of such remuneration. It points out that, in the case of a company which is not making enough profits to enable it to remunerate its management as agreed, it is proper that the shareholders or the Central Government should have a voice in determining such remuneration. In order to give effect to this recommendation, Section 198(4) is proposed to be amended. A new section 5A has been proposed to be introduced in Section 309 with a view to rendering the directors accountable for overwithdrawals on the footing of trustees and preventing them from raising a defence of limitation. Section 309(8) has been proposed to be amended as a result of the criticism of the Bombay High Court in *re. Ramaben vs. Jyoti Ltd. and others* (1956 Bom. L.R.P. 67.).

The Report (*vide* page 72) suggests that the drafting of Section 310 is unhappy. Again, it suggests (*vide* page 125) that Sections 310 and 311 overlap each other and that they may be combined and replaced by one section. We have seen this section as proposed in the Report. In combining Sections 310 and 311, the Report appears to have clarified the following three points:

(1) that if a person is appointed as a managing director or whole-time director under an agreement for a period of five years on a scale of say, Rs. 2,000-200-3,000, the increase in the monthly remuneration during the second, third and fourth years does not require Government approval under Section 309;

(2) that increase of dearness allowance from time to time according to a scale prescribed in a contract approved by the Government does not require Government's approval for every such increase;

(3) any appointment or re-appointment of a managing or whole-time director made after 1st April 1956, which involves no increase in the scale of remuneration previously paid for the post does not require Government's approval.

Managing Agency

The system of managing agency in India has become the subject of keen controversy both inside and outside Parliament. Public interest in this controversy has increased. The prospects of its survival appear to be dark and gloomy. One view, strongly held, is that the system has outlived its utility and leads to so much abuse that it should be abolished. The others take a sympathetic view that the system has still much useful role to play in the economic and industrial progress of our country and that it should be reformed instead of being ended. The Report observes that "the provisions embodied in the Act are the result of a compromise. On one view they provide for gradual abolition; on the other, the system is put on trial." Many managing agencies came to an end on 15th January, 1957, by virtue of Section 87A of the Act of 1913. Most of them have been renewed for a term of 10 years. A large number of managing agencies will come up for renewal after 15th August, 1958, by virtue of Section 328(1)(c). As regards the managing agencies which have been renewed for a term of 10 years, the Report states that "it is for consideration whether these renewals are covered by Section 330, so that these managing agencies will not come to an end by 15th August 1960."

We find from the Report that the Government has not laid down any policy regarding the future of the managing agency system. The Report (*vide* page 129) states that "it is true that these appointments and reappointments are made without prejudice to any action the Government may take under Section 324. It is now desirable that the Government should formulate a definite policy so that by the 15th August 1960, action can be taken under Section 324 and the present state of suspense removed."

Section 329

The Committee has made a healthy recommendation with regard to Section 329. It has clarified that the previous sanction of the Government is not necessary if the variation of the managing agency agreement is necessary only for the purpose of bringing it in conformity with the provisions of the Act. Section 329 is proposed to be amended by the addition of: "Except where the resolution seeks only to bring the terms of the managing agency agreement in conformity with the provisions of the Act." In view of the provisions of Section 325, read with Section 379, the words "secretaries and treasurers" in Section 332(4)(*b*) are proposed to be omitted.

Section 340 states the point of time when certain disqualifications of managing agents take effect. The language of Section 340(1) is very unhappy, and the Committee appears to have made a right approach to this section while suggesting its amendment. Section 340(1) when amended will read:

"The disqualifications imposed by Sections 334(*a*), 335(1), 336 and by any resolution passed in pursuance of clause (ii) of Section 337 shall take effect subject to the result of any appeal or petition of revision or review from the order of adjudication, appointment of receiver, sentence or finding of the court as the case may be."

The Report states that sub-sections (2) to (5) of Section 342 do not clearly carry out the intention underlying them. Resignation cannot absolve the managing agent of his liability for his acts of omission or commission during his

managing agency. The Report observes that "though he cannot be allowed to work after his resignation, the company may not desire to accept his resignation unconditionally or at all. In many cases, however, it would be necessary to require the managing agent, who has been in close touch with the affairs of the company, to prepare the statement of affairs and accounts of the company as provided by sub-section (3) and furnish such other information as may be necessary in order to enable the board of directors and the company to have a clear idea of the state of the company's affairs at the date of the notice of resignation by the managing agent." The Report, therefore, recommends that sub-section (2) should be amended and that sub-sections (3) to (5) of Section 342 should be redrafted in order to give effect to recommendations of the Committee as noted above. A provision has been proposed to be made in sub-section (4) that in the case of default by a managing agent to comply with the requisition to prepare a statement of affairs, the board may itself cause such a statement to be prepared together with a report from the auditors. The Report (*vide* page 132) gives the drafts of the proposed amendments.

Section 343 is proposed to be recast in the following terms:

"A transfer of his office by the managing agent of a company or any arrangement entered into by him which has the effect of transferring his right to manage the whole or substantially the whole of the affairs of the company to another person, shall not take effect unless it is approved both by the company in general meeting and by the Central Government."

In suggesting the above amendment, the Report observes that it was brought to the notice of the Committee that some managing agents had given an irrevocable power-of-attorney to third parties to manage the affairs of the company of which they were in charge, reserving to themselves a portion of the profits with a view to evading the provisions of Sections 332 and 343. Section 332 states that no person shall be a managing agent of more than 10 companies after 15th August 1960. Section 343 states that the transfer of the managing agency shall not take effect unless it is approved both by the company at its general meeting and by the Government. The amendment of Section 343 has been proposed to remedy its defects which enables a managing agent to evade its provisions.

Section 346

Section 346 is framed in a comprehensive manner in order to ensure that when a change likely to affect the composition of the managing agency as already approved by the Government occurs, the latter has an opportunity to re-assess the position. The Report observes that it was represented to the Committee that Section 346(1), as it stands, requires sanction to be obtained after a change takes place and, if for any reason, approval is not granted by the Government, the consequence is that the managing agent ceases to act as such. To remedy such a situation it is proposed to amend Section 346(1) so as to provide that the change does not take effect until approval is granted.

Managing Agency

It is pointed out in the Report that the attention of the Committee was invited to the fact that a director's remuneration even in the case of some of the biggest English concerns never exceeded two per cent. of the net profits whereas, in India, managing agents drew a much larger percentage of the profits. The Committee has, however taken the view that there were no sufficient grounds for revising the percentage of profits fixed by the legislature as recently as in 1955 after prolonged discussion.

Doubts were raised as to whether the commission payable to managing agents for buying agencies, selling agencies, etc., under Sections 356 to 360, would also fall within the overall ceiling of 10 per cent. of the net profits as fixed in Section 348. The Committee appears to have taken a reasonable view. It has suggested that the ceiling of 10 per cent. of the net profits is exclusive of such commission as mentioned above. A new sub-section (2) is proposed to be added to the existing section. [The existing section is proposed to be numbered as sub-section (1)] The new sub-section 2 to Section 348 will read: "Nothing contained in sub-section (1) shall be deemed to affect the operation of Sections 354 to 360."

Profits and Losses

The Report states that "net profits of a company in any financial year" in their ordinary, commercial sense, which no business man would misunderstand, mean the excess of revenue receipts over the revenue expenditure incurred for earning these profits in a given period and that it is in this light many of the expressions like "usual working charges," "outgoings," "repairs," occurring in Section 349(4) have to be understood. The Report rightly points out that any attempt at defining the foregoing expressions is not practicable.

The Report, however, recommends a change in Section 349(4). Clauses (J) and (L) are proposed to be amended. A new clause (O) is suggested to be added at the end of Section 349(4). This section, when amended, will read:

"S. 349(4). In making the computation aforesaid, the following sums shall be deducted. (Clauses (A) to (I) remain the same.)

"(J) All other outgoings inclusive of contributions made under Section 293 (1)(*e*). (Clause K remains the same.)

"(L) The loss (not including any loss of a capital nature) computed according to this section and incurred in any year which begins at or after the commencement of this Act, in so far as it has not been taken into account in arriving at the net profits of that year or of any subsequent year preceding the year in respect of which the net profits have to be ascertained. (Clauses (M) and (N) remain the same.)

"(O) Debts considered to be bad or doubtful in the year of account."

There are several reasons for amending Section 349(4). It was stated before the Committee that the expression "usual working charges" in Section 349(4)(*a*) was vague and pointed reference was made to the treatment for account purposes of contributions to religious and secular charities, funds of political parties and associations organised for sport, etc. The Committee took the view that the foregoing expression was not vague and that it meant revenue expenditure usually incurred by companies and treated as such. If these contributions were recurring and reasonable, they would, according to the view of the Committee, be part of the "usual working charges" in Section 349(4)(*a*) or "outgoings" in Section 349(4)(J). To put this matter beyond doubt, the Report has suggested an amendment of clause (J) of this sub-section as observed above. The loss contemplated by Section 349(4)(L) (according to the view of the Committee) is the loss appearing in the audited accounts and balance-sheet of the company and the entirety of this loss, in so far as it has been incurred in any financial year which begins at or after the commencement of the Act must be written off before the managing agent or managing director can claim a percentage of profits. Section 349(4)(L) has been suggested to be amended by the insertion of the words "computed according to this section and" before the word "incurred."

Bad debts might properly be included as one of the usual working charges referred to in Section 349(4)(*a*). As Section 349(4) descends into a few details but does not exhaust them, a managing agent might, without writing off bad debts, try to take a commission by way of a percentage on imaginary or inflated profits. To avoid that danger, a new clause (O) has been suggested to be added to Section 349(4). With reference to sub-sections (4)(*f*) and (*g*) of Section 349, it was stated before the Committee that interest on borrowings by way of debentures or otherwise should not be deducted in arriving at profits during the period of construction before the company starts manufacturing, such interest being attributable to capital and going to enhance the capital value of the asset. The Report in this context states that if this interest is not capitalised, it will be part of the loss, but it can be regarded as loss of a capital nature within the meaning of Section 349(4)(L) and there is no need for making change in this respect.

In Section 349(4)(*c*), a question was raised as regards bonus paid in subsequent year for work done by workmen in the previous year. In this connection, the Report says:

"If no appropriation for bonus has been made and the bonus is payable in a subsequent year, say, under an award of an industrial tribunal, the bonus is an outgoing of that year. However, a provision made to meet a bonus which, it is known at the time of the closing of the accounts, will have to be paid, is properly to be included as a working charge; any additional bonus awarded by a tribunal can only be treated, as we have already indicated, as an outgoing of the subsequent year in which the amount is ascertained or becomes payable."

Further, the Report has proposed the addition (*vide* page 309 of *Commerce* dated 1st March 1958) of a new section 362A so as to require every company to annex to its profit and loss account a statement giving the relevant details regarding the computation of the commission payable by way of a percentage of the profits to managing agents, directors, etc.

Depreciation

Before discussing the recommendations of the Committee for the amendment of Section 350 it is necessary to observe the amendments proposed in Section 205 which states that dividend should be paid only out of profits. The Report states that the Act does not define "profits" nor does it indicate the manner in which profits have to be computed for the purpose of declaration of dividend. Business men refer to "profits" as the excess of receipts over the expenditure for earning the profits during a year. The decisions as to the funds out of which dividends may be paid are not uniform. There are conflicting opinions as to the proper method of computing profits for the purpose of declaring dividend. There is also divergence of opinion as regards the question whether losses brought forward from previous years should be covered before any dividend can be declared from the profits of the current year as contemplated by note (*h*) in Part 1 of Schedule VI of the Act or whether the dividend could be paid out of the current profits leaving the previous losses to be recovered over a number of years, present and future, or even never to be recovered at all. The Report (*vide* page 74) states that the Committee, after due consideration of all relevant circumstances, has proposed the amendment of Section 205 in the following terms:

"Dividends may be declared or paid only out of the net profits of the company for the financial year arrived at after providing an amount for depreciation for that year on the scale prescribed by Section 350(*a*) of the Act or out of the undistributed profits of previous years or out of both."

Now we come to Section 350 which has presented difficulties regarding deduction of

Organic Chemicals

depreciation. The Committee has proposed the amendment of Section 350 in the following terms:

"The amount of depreciation shall be the amount calculated with reference to the written down value of the asset as shown by the books of the company at the end of the financial year, ending on 1st April 1956, or immediately thereafter and at the end of each subsequent financial year, at the rates specified for the asset by the Income-tax Act and the rules framed thereunder for the time being in force, as normal depreciation including therein extra and multiple shift allowances, but not any special, initial or other depreciation or any development rebate, whether allowed by that Act or the rules framed thereunder or otherwise or any arrears of depreciation."

Note.—As regards proposals for the amendment of Sections 354, 356 to 361 and the addition of a new section 362A (*vide Commerce* dated 1st March 1958).

Loans to Managing Agents

Section 295 deals with loans to directors. Section 369 deals with loans to managing agents and their associates. Section 370 provides that loans or financial assistance to companies under the same management cannot be given without the consent of the lending company by a special resolution. The Report does not touch Section 295 but suggests significant amendments in Sections 369 and 370.

Section 369(1)(*a*) prohibits a public company or a private company which is a subsidiary of a public company from giving a loan to its managing agent or any associate of the managing agent. The Report observes that it is possible to avoid this restriction by giving a loan to a managing agent or its associate through an intermediary. To prevent this, the words "shall directly or indirectly make" are proposed to be substituted for the words "shall make" in Section 369(1)(*a*).

In order to prevent any abuse of the facility (of current accounts) given by Section 369(2) it is proposed in the Report that an "explanation" may be added to this section in the following terms:

"The credit referred to in sub-section (2) refers only to the cash advance given by way of a permanent advance or imprest for facilitating the carrying on of the company's business, transactions on such advance or imprest accounts being settled as far as possible on monthly basis."

As regards loans made before the Act, in contravention of Sections 369 and 370, the Report proposes that a provision similar to that of Section 295 should be inserted as Section 370A. The draft of the foregoing new section (page 146 of the Report) states that in respect of loans to managing agents and their associates, outstanding at the commencement of the Act, consent of the Central Government should be obtained within six months or such other time as may be granted by the Central Government or the loan should be enforced for repayment. As regards Section 370, the Report states (page 147) that "the restrictions in Section 370(1), explanation (ii), could be defeated if the majority are nominee directors representing a company having predominant shareholding interest in either the borrowing or lending company or in both. There may also be cases where the directors of the lending company, whether nominees of the holding company or not, are accustomed to act in accordance with the directions or instructions of other persons." The Report therefore proposes that clause (ii) of explanation to Section 370(1) may be amended so as to read as follows:

"If a majority of the directors of the one body constitute, or at any time within the six months immediately preceding constituted, a majority of the directors of the other body. For the purpose of this explanation, any person in accordance with whose instructions the board of directors of a company is accustomed to act, shall be deemed to be a director."

(The word "or" is proposed to be added at the end of this clause.)

A new clause (iii) is proposed to be added to explanation to Section 370(i) in the following terms:

"If the ultimate holding in the shares of the two bodies is controlled by the same company or individuals having or controlling share holding interest therein, despite the interposition of one or more companies in the chain of holding company and subsidiaries."

The object of suggesting the foregoing clause to the explanation to Section 370(1) is to prevent the inter-company loans which are opposed to the spirit of Section 370(2). The Report explains the purpose of the amendment by an illustration. Lending company A has subsidiaries B, C, D, and E, of which B alone is a public company. F, a subsidiary of B, gives loans to C, D and E as well as to A. The loans given by F would not strictly fall under Section 370(2). To make this position clear a new clause (iii), as observed above, has been proposed to be added to the explanation to Section 370(1).

A further new clause (iv) is proposed to be added to the explanation to Section 370(1) in the following terms:

"If the holding company of one is under the same management as the other within the meaning of the foregoing clauses (i) to (iii)."

As regards Section 370(ii), it was suggested that loans by a subsidiary to its holding company or to another subsidiary of the same holding company should be included in this section and exempted from the operation of Section 370(i). Sections 295 and 370 do not allow loans by a subsidiary to its holding company, evidently because such loans might be granted under pressure or compulsion from a quarter having a controlling interest and might not be to the advantage of the lending company. In view of these considerations the Committee has come to the conclusion that there is no sufficient reason to alter the law in this respect. The Report, however, suggests that a minor drafting omission in Section 370(2)(*b*) may be rectified by the insertion of the words "or for" after the word "to."

As regards Section 370(2)(*c*), the Report observes that, under the Banking Companies Act, banks cannot have managing agents. It, therefore, recommends that banks should be exempted from the operation of Section 370 so as to permit them not only to lend to other banks but also to companies under the same management in the usual course of business. In order to give effect to the above recommendation, the Report proposes to add a new subclause (c) to Section 370(2), namely, "(c) by a bank in the ordinary course of its business."

A further amendment of Section 370 has been proposed by the addition of a new sub-section (3) to the effect that nothing contained in Section 370 shall apply to a book debt unless the transaction represented by the book debt was, from its inception, in the nature of a loan or an advance.

Section 384 prohibits the appointment of a firm or a body corporate as a manager. The Report proposes that the words "no company" should be substituted for the words "no public company, and no private company which is a subsidiary of a public company" occurring in the opening part of Section 384. As regards Section 387 which refers to remuneration payable to a manager, the Report observes that the intention of the legislature appears to have been that even if the remuneration of the manager is fixed on the basis of a fixed monthly payment, the total remuneration drawn by him should not exceed 5 per cent. of the net profits. Section 387 is not explicit on the point. In order to make this point clear, the Report proposes that the words "not exceeding five" occurring in Section 387 may be dropped and the following words may be added at the end of the section

"but such remuneration shall not exceed in the aggregate five per cent. of the net profits."

The Report proposes that a new Section 388A may be added so as to exclude private companies from the operation of Sections 384 to 388. As a consequential amendment arising out of the proposed new Section 388A, the Report states that sub-section (5) of Section 386 should be deleted.

INDIAN PAPER MAKERS ASSOCIATION

MR. J. F. BRIERLEY'S SPEECH AT ANNUAL GENERAL MEETING

GOVERNMENT'S POLICY ON PRICES CRITICISED

THE view that it was hard to reconcile Government's policy on paper prices with its exhortation to the industry to increase production was expressed by Mr. J. F. Brierley, Chairman, Indian Paper Makers Association, in the course of his speech delivered at the Annual General Meeting of the Association held at Calcutta on 23rd May 1958. Mr. Brierley pointed out that, if the Government was going to absorb for its own use about 30 to 40 per cent. of the paper produced in the country and at the same time pay prices which barely covered production costs, it was clearly impossible for the industry to set aside funds for expansion. He also said that, if it was intended that the shortfall should be recouped from prices charged to civilian consumers, the morality of such an attitude was questionable and at variance with the request which the Government had made to keep selling prices down.

The following is the full text of Mr. Brierley's speech:

"GENTLEMEN,

"On behalf of the Committee, I should like to extend a cordial welcome to our guests to this annual general meeting of the Indian Paper Makers Association. The annual report for 1957 has been sent to members. I regret that it has been issued somewhat late this year and that it has not been in your hands for longer.

Steady Progress

"1957 has been a year of steady progress and, although no new unit came into production, the substantial expenditure by existing units on modernising and expanding their plants is reflected in the continued increase in the production of paper. The final figures will probably show that, for the first time in the history of the Indian paper industry, production of paper has exceeded two lakh tons. This was an achievement of great merit and shows the very real effort the industry is making to reach the target laid down for it in the second Five-year Plan. However, one would not be being honest with oneself, if one tried to believe that the target was within reach, even at this comparatively early stage of the Plan. Nevertheless, very great strides have been made in the last seven years since the commencement of the first Five-year Plan, and the production of paper has almost doubled in this time. Such progress would be impossible without the combined efforts of all those concerned, and I think it would be fitting were I to place on record here the valuable assistance in implementing expansion schemes which is received from the Paper Development Wing of the Ministry of Commerce and Industry. For a rapidly expanding industry such as ours, it is essential to have a Government department working in close collaboration, and the paper industry is fortunate in being in this position. The help and advice which we need is always readily available from the Paper Development Wing, and it is comforting to know that the many problems, big as well as small, which face us from time to time are always fully appreciated.

Quality and Price

"While the industry can justifiably be proud of its achievement, still greater progress has to be made. This is particularly so if there is to be any substantial quantity of paper available for export, and this is a matter which must be given more direct consideration, in view of the country's foreign exchange position. But, before we can expect to sell our products on overseas markets, we must be able to satisfy overseas buyers as to their quality and we must also be able to offer paper at competitive prices.

"Mention of prices brings me to the other side of the picture for 1957. 1957 will be remembered as a year when production costs in the paper industry continued to rise steadily. Every one connected with the industry is all too fully aware of the rise in prices of essential materials and in other costs, which has taken place since paper was decontrolled in 1950. For instance, the price of coal, of which about 3½ tons are consumed for the manufacture of each ton of paper, has risen by nearly 30 per cent.; the price of hosiery cuttings has risen by 80 per cent; rosin by 48 per cent; and china-clay by 60 per cent. While labour costs, partly through increases in wage rates and partly through increased amenities, have risen, on an average, by about 35 per cent.

Electricity Duty

"A major contributory factor to the mills' rising costs of production has been Central and State Government duties or statutory price increases of one description or another. The latest of these, but I have no doubt not the last, is the enhancement of the electricity duty payable by mills in West Bengal with effect from 1st February 1958. While I appreciate the importance to the West Bengal Government of the increased revenue which follows from this measure, I wonder whether they fully realise its impact on the West Bengal paper industry. Is it realised that it will increase the cost of producing paper in West Bengal by 1 nP per lb.? This is, moreover, only the direct effect on mills of the enhanced electricity duty. There will, in addition, be an indirect effect, as the prices of any chemicals and stores produced in West Bengal are bound to be increased similarly.

"I understand that, more recently, the Government of Punjab have taken similar action which may affect even more drastically the costs of production of paper mills in that State.

"I feel most strongly that Government should pay far greater attention to the impact on the industry of measures which they enforce to increase revenue. At the moment, they appear to see this matter only from the point of view of increased revenue, and they should be aware of the fact that, when prices increase, it is very often some action on their own part which has been responsible for the increase.

Selling Prices

"The paper industry has always maintained selling prices at as low a level as possible. In spite of the increases in cost to which I have referred, mills have been able, by increasing their efficiency, to maintain relatively steady selling prices. It is to the industry's very great credit that, during the eight years since decontrol until March of this year, the selling price of standard white printing paper was kept down to only 12 per cent. above the price ruling in 1950. This does not, of course, include the increase of 16 per cent. since March 1955 as a result of the imposition of excise duty.

"There is, however, a limit to the extent to which any industry can absorb increases in costs. There will always come a stage when some of the increases must be passed on to the consumer, particularly if the industry is to expand and maintain its plant in efficient working order. Accordingly, in March of this year, Goverment was advised that the industry could no longer bear the whole of the increased cost of production which had taken place in the previous 12 months, and were asked for an increase of about 9 per cent. in the price for supplies against the Government rate contract for 1958-59. The industry's request for this increase was fully substantiated by figures, but, unfortunately, Government was prepared to increase the price by only 3.6 per cent. This increase was accepted by the industry, but not without very great misgiving, and it was made clear to Government that the increase was considered to be inequitable and thoroughly out of line with the increased cost of production.

Morality Questionable

"It is hard to reconcile Government's policy on paper prices with their exhortation to the industry to increase production. If Government are going to absorb for their own use between 30 and 40 per cent. of the paper produced in the country, and at the same time pay prices which barely cover production costs, it is clearly impossible for the industry to set aside funds for expansion. If it is intended that this shortfall should be recouped from the prices charged to civilian consumers, then I can only say that the morality of such an attitude is questionable and at variance with the request which Government have made to keep selling prices down.

"At the same time as discussing supplies to Government, representatives of the industry also discussed civilian prices with Government and the industry assured Government of its co-operation in assisting to keep them down. It was, however, made clear that, as in the case of supplies to Government consumers, a stage had been reached at which part of the increase in production costs would also have to be passed on to civilian consumers. Prices have accordingly been increased by about 5 per cent. with effect from 1st April 1958. Although there has been a certain amount of comment on this price increase in the Press, I am glad to say that it is generally appreciated that the cause of the high prices at which paper is selling in the bazaar is not the prices charged by the mills but the excessive profits taken by the bazaar. This Association has emphasised to its members that they must do everything within their power to see that paper sold to their distributors is thereafter sold to consumers at the prices recommended by the mills.

Bamboo Resources

"An address from this chair would be incomplete without a reference to bamboo. Bamboo is the industry's main raw material and to all intents and purposes, and until other raw materials can be developed, is the only raw material which can sustain the existing industry and its expansion. The bamboo resources of the country are vast, but not so vast as to justify the belief in many quarters that they are unlimited. Insufficient is known about the total extent of the resources and a scientific survey of them by Government is now an urgent necessity, as the future development of the industry depends on precise knowledge of the quantity of bamboo available. Meanwhile, I must repeat the warnings of my predecessors that the country's paper production capacity is in real danger of outstripping the supply of this essential raw material.

"The Raw Material Resources Sub-Committee of the Pulp and Paper Panel has produced some rough estimates placing total resources of bamboo on a sustained annual basis at about 1.8 million tons. The estimated annual requirement of the existing industry is 0.4 million tons and a further 0.85 million tons are estimated to be required for new projects and expansion of existing units authorised under the Industries (Development and Regulation) Act, 1951. It is recognised that the total resources include substantial quantities in regions which are incapable of being exploited economically. The Raw Material Resources Sub-Committee, therefore, feels that the balance of 0.55 million tons should, generally speaking, be considered as a reserve to meet possible eventualities, such as gregarious flowering. It is evident from these figures that the time has come when Central and State Governments must not only see that existing resources are utilised to the fullest extent, but also that steps are taken to increase the annual yield of bamboo areas.

Lease of Forests

"In this connection, I cannot emphasise too strongly that it is in the interest of State Governments to lease out forests direct to paper mills on a long-term basis. It is only in this way that the forests will be exploited fully and properly, and that full advantage will be taken of the resources of the country. Although the increasing outturn of bamboo from areas worked by long-term lease-holders makes it abundantly

EXCISE DUTY HITS TRAVANCORE RAYONS' PROFIT

EXPANSION SCHEMES PROGRESSING

A RISE in the cost of production, heavy excise duty on rayon yarn and curtailment of production due to labour unrest, all these have cumulatively resulted in a sizable decline in the profit of the Travancore Rayons Ltd. [Managing Agents: Messrs. Emcete and Sons (Travancore) Private Ltd., Rayonpuram, Kerala State] for the year ended 31st December 1957. The combined effect of all these factors was so great that even a substantial rise in sale proceeds could not offset the fall in profits. It may be of interest to note, in this connection, that the sale proceeds for the year under review at Rs. 255.50 lakhs are a new record in the Company's history, such having exceeded the previous best of Rs. 195.43 lakhs in 1955 by as much as Rs. 60.07 lakhs. Production of rayon yarn and cellulose film, however, fell by 1,559,000 lbs. from the previous year's peak of 7,070,000 lbs. to 5,511,000 lbs. as a result of interruption of work, due to strike, which lasted for nearly a month. The gross profit at Rs. 60.25 lakhs has dropped by Rs. 10.11 lakhs from the previous year's record of Rs. 70.36 lakhs.

After maintaining the provision for depreciation at Rs. 34.55 lakhs (Rs. 34.29 lakhs in 1956) and allocating Rs. 1.05 lakh as provision for wealth tax for 1953, the net profit at Rs. 21.64 lakhs shows a decline of Rs. 10.86 lakhs from the record level of Rs. 32.50 lakhs for 1956. In view of the fall in profits, the transfer to general reserve has been halved to Rs. 10 lakhs from Rs. 20 lakhs provided a year ago. No amount has been transferred to deferred taxation reserve for the second year in succession. The dividend on the ordinary shares has been maintained at 10 per cent. paid for the previous year, to which level it had been stepped up successively from the maiden distribution of 5 per cent. for 1953.

The following comparative table will give some idea of the salient features of the Company's results for the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds	2,55.50	1,93.60	1,95.42	1,61.65
Closing stocks	18.03	61.22	25.70	31.00
Expenses	1,52.42	1,59.42	1,35.69	1,04.02

As stated earlier, the sale proceeds during the year under review were the highest on record, representing an increase of 32 per cent. over those for 1956. It may sound paradoxical how the sales were so high when production had actually suffered on account of the strike. The answer to this is given in the large stocks carried over from the previous year. Expenses, on the other hand, have come down from Rs. 159.42 lakhs to Rs. 152.42 lakhs. These include a sum of Rs. 9.07 lakhs paid as excise duty during the year under review. The decline in expenses, despite higher manufacturing costs, reflects the fall in production. This is indicated by the cost of raw materials consumed which has come down from Rs. 80.39 lakhs in the previous year to Rs. 67.98 lakhs.

The plant for the manufacture of moisture-proof transparent cellulose film was in operation almost throughout the year. The demand for moisture-proof heat-sealing cellulose film was steady, the chief consumers being the tobacco manufacturing industries. The installed capacity of the cellulose film plant is five tons per day but this quantity was found to be in excess of the country's demand. Hence accumulation of stocks of plain cellulose film was noticed by the end of 1956. With the taking up of the manufacture of moisture-proof heat-sealing film in larger quantities during 1957, a balanced supply position was achieved and the Company is now in a position to meet the entire needs of the country in both varieties. The imposition of excise duty at the close of 1956 had an unfavourable effect on the selling price of rayon yarn and during the first half of 1957, sales left very little margin of profit. It was not possible, under the prevailing market prices, to pass on the new impost to the consumer and the manufacturers had to bear the burden in the form of increased cost in production. As the result of a decline in demand, production of rayon yarn during 1957 registered a fall as compared with 1956.

Commenting on the Company's schemes of expansion, the Directors in their latest report observe thus:

"The third stage in the expansion schemes—for enhanced production of rayon yarn by about 1.8 tons per day—which was taken up during 1956, has just been completed. Owing to some delay in the arrival of certain vital equipments, the machines could not be put into commission during the year under review. Another item in the expansion programmes recently taken up is the setting up of a sulphuric acid plant of about 50 tons capacity per day. Licence for the import of plant and equipment has been received, and implementation of the scheme is in progress. The Directors are considering further stepping up production of transparent cellulose film, both plain as well as moisture-proof heat-sealing varieties, by the installation of additional machines. Licence for substantial expansion has been obtained and the schemes will have to be taken up as soon as acceptable terms regarding finance, credit facilities for deferred payments, etc., are finalised."

The Directors state that although the import restrictions made effective in 1957 have reacted favourably towards the indigenous industry, difficulty is often felt in obtaining supplies of essential spares and replacements from abroad. Many of the items that could be procured in the Indian markets have also gone up in price which in turn has led to increase in the cost of production.

The Company's paid-up capital as at 31st December 1957 remains unchanged at Rs. 150 lakhs (in 500,000 five per cent. cumulative preference shares of Rs. 10 each and 1,000,000 ordinary shares of Rs. 10 each). Its reserves and surplus are small and aggregate only Rs. 61.93 lakhs. Of this, both the general reserve and deferred taxation reserve account for Rs. 30 lakhs each. The 4 per cent. first mortgage debenture liability stands reduced from Rs. 21.50 lakhs to Rs. 19 lakhs. The current liabilities aggregate Rs. 91.99 lakhs, of which secured and unsecured loans from banks and from the State Government account for Rs. 59.99 lakhs. The gross block of Rs. 388.81 lakhs stands written down to Rs. 193.68 lakhs. The current assets aggregate Rs. 129.24 lakhs and cover the current liabilities by a comfortable margin.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 13.32 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 8.11 per cent. per annum.

INDIAN CABLE'S ISSUE

The Directors of the Indian Cable Co., Ltd. have decided to offer 828,848 new ordinary shares of Rs. 10 each at par. The new ordinary shares will be offered to existing shareholders whose names are on the register of the Company on 11th June 1958 in the proportion of one new ordinary share for every two ordinary or preference shares held, with the right to renounce all or any of the shares so offered in favour of third parties. It is stated that no fractional entitlement will be allowed. For this purpose, the register of members will remain closed from 28th May to 11th June 1958, both days inclusive.

(Concluded from next column)

a paid-up capital of Rs. 25.50 lakhs, made up of 21,000 ordinary shares of Rs. 100 each, 1,500 six per cent. cumulative preference shares of Rs. 100 each and 3,000 (6½ per cent.) cumulative preference shares of Rs. 100 each. It should be noted here that these reserves have been built up after capitalising a sum of Rs. 14 lakhs out of reserves in the past. The current liabilities stand at Rs. 53.65 lakhs and include a provision of Rs. 5.35 lakhs for taxation. Of the current liabilities, secured loans from a bank account for Rs. 22.03 lakhs and unsecured loans for Rs. 16.94 lakhs. The gross block of Rs. 86.31 lakhs has been written down to Rs. 34.54 lakhs. The current assets aggregate Rs. 84.60 lakhs and exceed the current liabilities and provision for taxation by a margin of Rs. 30.95 lakhs.

The Rs. 100 fully paid-up shares are being currently quoted at Rs. 239 *ex-div.*, at which rate and on the basis of the latest dividend, the yield on the shares works out to 5.02 per cent. per annum, free of income-tax.

VASANTA MILLS' PROFIT DECLINES

DIVIDEND ALSO LOWER

THE audited accounts of Vasanta Mills Ltd. (Managing Agents: Messrs. R. K. Shanmukham Chetty & Bros., Singanallur, Coimbatore District) for the year ended 31st December 1957 furnish yet another instance of the difficult conditions for the textile industry. The Company's profit has registered a steep fall, in sharp contrast to the marked improvement noted in the previous year. This is attributed to the general recession in the textile industry, the high incidence of sales tax on cotton and of excise duty on cloth, the heavy surcharge on electric power and, above all, the enhancement in the wage bill. The decline in the Company's profits has resulted in lower amounts being added to the reserves, as compared with the previous year. The shareholder also gets much less, for the distribution to him in the shape of dividend has been sizably reduced to 12 per cent. from 20 per cent. paid for the previous two years. The gross profit for the year under review at Rs. 12.26 lakhs is just half of Rs. 24.09 lakhs for 1956, to which level it had smartly risen from Rs. 18.53 lakhs for 1955.

The net profit amounts to Rs. 3.98 lakhs and makes an unfavourable comparison with Rs. 8.37 lakhs a year ago and Rs. 7.25 lakhs two years earlier. This is arrived at after lowering the provision for depreciation from Rs. 7 lakhs to Rs. 4.70 lakhs and that for taxation from Rs. 6.50 lakhs to Rs. 2.72 lakhs. The general reserve and the dividend equalisation reserve, both of which had received Rs. 2 lakhs each in the previous year, have not been provided with anything. A sum of Rs. 1.37 lakhs has, however, been added to a new development rebate reserve created in accordance with the provisions governing the allowance of development rebate as announced by the Government recently. The dividend, as stated earlier, has been lowered to 12 per cent. from 20 per cent. for the previous two years, to which level it had risen from 15 per cent. for 1954 and 12 per cent. for 1953. Thus the distribution is once again taken to the 1953 level.

The following comparative table provides a broad idea of the Company's progress during the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds	1,73.81	1,73.99	1,61.59	1,60.57*
Closing stocks	30.23	18.97	12.93	N.A.
Manufacturing and other expenses	1,73.21	1,56.35	1,42.77	1,42.37
Gross profit	12.26	24.09	18.53	18.82
Managing Agents' commission ..	0.86	2.22	1.60	1.65
Depreciation	4.70	7.00	4.68	4.75
Taxation	2.72	6.50	5.00	6.00
Net profit	3.98	8.37	7.25	6.47
To general reserve	..	2.00	0.50	2.00
,, other reserves	1.37	2.00	2.00	0.01
,, donations and charities ..	0.13	0.01	0.01	
Dividends—				
Preference	0.28	0.28	0.28	0.28
Ordinary	2.52	4.20	4.20	3.15
	(12%)	(20%)	(20%)	(15%)
Carry forward	0.12	0.44	0.56	0.30

* Net sales.

It will be seen from the table that the Company's sale proceeds have been nearly maintained at the previous year's level. Sales of cloth registered a decline on account of the heavy incidence of excise duty while the fall in demand from the handloom consuming interests rendered the yarn market dull with low and uneconomic rates. The high prices for cotton was another adverse factor which cut into the profit margins. Manufacturing and other expenses have made a substantial rise of Rs. 16.86 lakhs to Rs. 173.21 lakhs. These are inclusive of three months' bonus paid to the employees of the Company in respect of the year 1956 in terms of an agreement with the workers' unions.

As regards the Company's schemes of expansion, the Directors state that further progress was made in the modernisation of the mills' spinning department and in the conversion of the spinning frames to high draft system as a means to eliminate the intermediate processing wherever possible. These measures, it is stated, will improve the quality of the Company's products. An additional generator has been installed in the mills which, with the existing two generators, will take care of 50 per cent. of the factory's current requirements in the event of a power cut.

A sound financial position is disclosed by the Company's latest balance-sheet. Its reserves and surplus aggregate Rs. 39.99 lakhs, as against

(Continued in previous column)

INDIA SUGARS SUFFER LOSS

MARKED FALL IN PRODUCTION

THE working results of the India Sugars and Refineries Ltd. (Managing Agents: The India Sugar Agencies Private Ltd., Madras) during the year ended 30th September 1957 makes uninteresting reading, for the Company has reported a loss of Rs. 3.58 lakhs for the year under review, as against a gross profit of Rs. 13.30 lakhs made in the previous year. As regards production too, the report reveals a sharp and unwelcome contrast with the encouraging performance noted in the previous year when the quantity of cane crushed and the output of sugar both touched new record levels. Thus, the output of sugar declined from 13,565 tons to 7,959 tons.

The year under review was beset by several difficulties for the Company. Thus, the erection of the Company's new plant was completed somewhat late in the season. Teething troubles usually experienced in new installations had to be dealt with and labour had to be trained to handle the modern units installed. There was also a breakdown of the electrical system for a period of three weeks during the season. Consequently, the season was unduly prolonged and the cane also deteriorated and was of poor quality.

After paying Rs. 30,000 as managing agents' remuneration, there is a net loss of Rs. 3.88 lakhs, which has been adjusted by the Directors against the general reserve. In view of the loss suffered, the Company has not been able to make any provision for depreciation. With the amount of Rs. 6.77 lakhs carried over as surplus from the previous year, the Directors have proposed to make payment of both the preference and ordinary dividends. Accordingly, a dividend of 10 per cent. on 319,760 shares and a *pro rata* dividend on 320,000 new shares issued in 1955-56 has been recommended by the Directors for the year under review, as against 11¼ per cent. paid for 1955-56.

The following comparative table brings out the progress of the Company during the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1957	1956	1955	1954
Sale proceeds	82.23	97.72	99.37	90.24

Refund of sales tax	..	0.04	..	..
Previous year's administrative expenses written off	..	0.10	..	..
Dividends—				
7½ per cent. preference ..	0.21	0.33	0.09	0.09
Ordinary	6.00	4.04	4.41	3.11
	(10%)†	(11¼%)‡	(14%)§	(17½%)
Carry forward	0.46	6.77	5.22	4.30
Cane crushed (in tons) ..	120,694	133,142	127,609	97,155
Sugar produced (in tons) ..	7,959	13,565	13,067	9,995

* Adjusted against general reserve.
† On a higher capital of Rs. 63.98 lakhs, fully called up on 31st March, 1957.
‡ On the increased capital of Rs. 55.95 lakhs brought about by the issue of 320,000 new ordinary shares of Rs. 10 each and 4,714 bonus shares.
§ On a higher capital of Rs. 31.48 lakhs raised by the issue of shares of the value of Rs. 2.80 lakhs.

During the year under report, the quantity of cane crushed fell from the previous year's record of 133,142 tons to 120,684 tons. Likewise, sugar produced, as already stated, declined from the peak level of 13,565 tons for 1955-56 to 7,959 tons. This is the lowest level since 1949-50 when a quantity of only 3,368 tons was produced.

The paid-up capital of the Company stands raised from Rs. 54.34 lakhs to Rs. 66.42 lakhs, consequent on the new shares having been fully called up. The present paid-up capital is made up of 6,900 (7½ per cent.) cumulative preference shares of Rs. 100 each and 639,760 ordinary shares of Rs. 10 each. Calls in arrears account for Rs. 3.56 lakhs. The reserves and surplus aggregate Rs. 11.49 lakhs. Besides this, there is a provision for taxation and contingencies amounting to Rs. 16.22 lakhs. The current liabilities aggregate Rs. 84.45 lakhs. The gross block of the value of Rs. 78.71 lakhs has been written down to Rs. 59.83 lakhs. The current assets aggregate Rs. 118.75 lakhs and cover the current liabilities and provision for taxation by a wide enough margin.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 13.25 *cum-div.* On an *ex-div.* basis, the latest dividend works out a yield of 8.16 per cent. per annum, free of income-tax.

Points From The Chair

Revolutionary Changes

"I am glad to record that, as usual, we continued to receive due help and encouragement at the hands of the State and Central Governments. The country is faced with many problems, some of them intriguing and perplexing. It is a great credit to those at the helm of affairs that they are not borne down by the difficulties, and every situation is overcome in a remarkably able manner. Sweeping political, social and economic changes are overtaking us. I am sure it is equally recognised by all concerned that we, of business and industry, are trying to adapt ourselves to these revolutionary changes with appreciable resiliency. I do not wish to deal very much with the heavy burdens of taxation, the various disincentives to capital formation, the inflationary pressures, the foreign exchange crisis and so on. These are but the inevitable features of an expanding economy of an underdeveloped country. It is the duty of every one of us to put our shoulders to the wheel, despite differences here and there, keeping in mind the future prosperity of India, and help work out the second Five-year Plan to a fruitful conclusion. I am glad to see that the Government are now becoming more and more realistic and there is every reason to hope that as they gather more and more experience, they would, no doubt, be able to see the best means of attaining their ends with the least stresses and strains on the various sectors of the economy."

AR. RAMANATHAN,
Travancore Rayons Ltd.

National Superannuation

"At the very time when I was addressing you last year, the Labour Party was making public its outline of a national superannuation scheme. Hints also of a Government scheme continue to appear in the Press. The effects of such schemes on the country and on our business could be very important, whether for good or bad, and it is imperative that quiet and sober consideration should be given to the problem. The intervening year since the publication of the Labour Party's outline has given everybody time to think and I imagine that the general consensus of opinion would now be that the scheme was too ambitious. Moreover, closer examination of the scheme strengthens the grave doubts about its consequences for employees who are members of existing pension schemes, whether self-administered or insured. Pension arrangements are inevitably complex and it is not enough to have good intention about allowing members of existing schemes to contract out of an enlarged State scheme. The practical problems are formidable and can over-ride the good intentions. Detailed consideration of these problems and of the effects of such an enlarged scheme on the national economy confirms the conclusion that serious consequences would follow if the State should depart appreciably from its proper function of ensuring that the basic needs of the elderly are met. In this respect, I would not wish to interpret the phrase 'basic needs,' in a narrow sense. But I am convinced that it would be unwise for the State to go further than this."

SIR FRANK MORGAN, M. C.
Prudential Assurance Company Ltd., London.

Oil Industry

"So far as our industry is concerned, the stock position in the U.S.A. is better, owing to much reduced refinery runs and to severe curtailment of production of crude oil, which in the Texas fields has been reduced to eight days a month—the lowest ever recorded. In the world outside the United States, records of the year so far available suggest that as a whole consumption is being maintained, but without the full impetus to expansion which previous years' experience had led us to expect. Within the whole field, of course, some parts of the business have slackened and others have improved. Consumption of bunkers by shipping, for instance, is much lower, because of reduced activity in this sphere, consumption of gasoline and gas oil, on the other hand, still retains much of the characteristic buoyancy of previous years."

THE RIGHT HON. LORD GODBER,
"Shell" Transport and Trading Co., Ltd., London.

Steel Renationalisation

"I feel I must also make some reference to the possible renationalisation of the steel industry, for once again the industry is the subject of political controversy. As large consumers of steel, we must add our voice to those who fear the consequences of further nationalisation. This Company depends completely for a large part of its activities on an efficient steel industry providing supplies of high quality steel at an economic price; without this it would be impossible for us to compete in world markets. It is not easy to discover what are the reasons, or excuses, for nationalising steel again, particularly when it is possible for any Government to exercise a considerable measure of control over the industry through the existing Iron and Steel Board. Is renationalisation likely to result in a more efficient and progressive industry? Alternatively, is there a risk that renationalisation might have the opposite effect? Surely it is not asking too much of our politicians that issues of this magnitude should be settled on the merits of the case rather than on a mixture of political theory and spite."

HERBERT SMITH,
British Ropes Ltd., London.

COMPANY MEETINGS AND DIVIDENDS

SRI BALASUBRAMANIA MILLS LTD. Annual General Meeting, Singanallur, Coimbatore, 5th June 1958. Dividend: 7½ per cent. Transfer books remain closed from 23rd May to 5th June 1958, both days inclusive.

PEERMADE TEA CO., LTD. Annual General Meeting, Pathirapally, Kerala State, 7th June 1958. Dividend: Rs. 2.50 per share (includes interim dividend of Re. 0.75 per share). Transfer books remain closed from 25th May to 10th June 1958, both days inclusive.

MAHARASHTRA SUGAR MILLS LTD. Annual General Meeting, Bombay, 9th June 1958. Dividend: Rs. 100.00 per share (includes bonus of Rs. 25.00 per share). Transfer books remain closed from 2nd to 17th June 1958, both days inclusive.

RAJNAGAR TEA CO., LTD. Annual General Meeting, Calcutta, 9th June 1958. Dividend: Re. 1.10 per share or 11 per cent. Transfer books will remain closed from 3rd to 9th June 1958, both days inclusive.

ASPINWALL & CO., LTD. Annual General Meeting, Calvetty, Fort Cochin, 10th June 1958. Dividend: 6 per cent. or Re. 0.60 per share. Transfer books remain closed from 26th May to 11th June 1958, both days inclusive.

NEW CHURULIA COAL CO. LTD. Annual General Meeting, Calcutta, 10th June 1958. Dividend: *Nil.* Transfer books remain closed from 2nd to 10th June 1958, both days inclusive.

CHEVIOT MILLS CO., LTD. Annual General Meeting, Calcutta, 12th June 1958. Dividend: *Nil.* Transfer books remain closed from 29th May to 12th June 1958, both days inclusive.

DELTA JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 12th June 1958. Dividend: *Nil.* Transfer books remain closed from 29th May to 12th June 1958, both days inclusive.

ORIENT JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 12th June 1958. Dividend: *Nil.* Transfer books remain closed from 29th May to 12th June 1958, both days inclusive.

NATIONAL RAYON CORPORATION LTD. Annual General Meeting, Bombay, 12th June 1958. Dividend: Rs. 14.00 per share, payable on and from 13th June 1958. Transfer books were closed from 16th April to 15th May 1958, both days inclusive.

PODAR MILLS LTD. Annual General Meeting, Bombay, 16th June 1958. Dividend: Rs. 10.00 per share (includes interim dividend of Rs. 4.00 per share), payable on or after 17th June 1958. Transfer books will remain closed from 6th to 16th June 1958, both days inclusive.

INDIA SUGARS AND REFINERIES LTD. Annual General Meeting, Madras, 16th June 1958. Dividend: Re. 1.00 per share or 10 per cent. Transfer books remain closed from 1st to 16th June 1958, both days inclusive.

HOOGHLY FLOUR MILLS CO., LTD. Annual General Meeting, Calcutta, 19th June 1958. Transfer books will remain closed from 12th to 19th June 1958, both days inclusive.

VICTORIA MILLS LTD. Annual General Meeting, Bombay, 19th June 1958. Dividend: Rs. 20.00 per share (includes bonus also), payable on and from 3rd July 1958. Transfer books will remain closed from 6th to 19th June 1958, both days inclusive.

MARSHALL, SONS AND CO. (INDIA) LTD. Annual General Meeting, Calcutta, 20th June 1958. Transfer books will remain closed from 6th to 20th June 1958, both days inclusive.

BENGAL FLOUR MILLS CO., LTD. Annual General Meeting, Calcutta, 20th June 1958. Dividend: Re. 1.25 per share. Transfer books will remain closed from 6th to 20th June 1958, both days inclusive.

SVADESHI MILLS CO., LTD. Annual General Meeting, Bombay, 20th June 1958. Dividend: Rs. 9.00 per share, payable on 21st June 1958.

TATA MILLS LTD. Annual General Meeting, Bombay, 25th June 1958. Dividend: Rs. 2.00 per share, payable on 26th June 1958.

RAJAGIRI RUBBER AND PRODUCE CO., LTD. An interim dividend of 7½ per cent. or Re. 0.75 per share, for the year ending 30th June 1958.

SIVANANDA MILLS LTD. Dividend of Re. 1.20 per share or 12 per cent. for the year ended 31st December 1957. Transfer books remain closed from 21st May to 4th June 1958, both days inclusive.

SPENCER & CO., LTD. Interim dividend of Re. 0.50 per share or 5 per cent. for the year ending 30th June 1958. Transfer books remain closed from 2nd to 9th June 1958, both days inclusive.

SWINTON ESTATES CO., LTD. Interim dividend of 5 per cent. for the year ended 31st March 1958 Transfer books remain closed from 2nd to 9th June 1958, both days inclusive.

TRAVANCORE RUBBER AND TEA CO., LTD. Dividend of 4 per cent. or Re. 0.40 per share, for the year ended 31st December 1957. Transfer books will remain closed from 3rd to 20th June 1958, both days inclusive.

NENMENY RUBBER AND PRODUCE CO., LTD. Dividend of 7½ per cent. or Re. 0.75 per share, for the year ended 31st December 1957. Transfer books will remain closed from 17th to 21st June 1958 both days inclusive.

PENINSULAR PLANTATIONS LTD. Interim dividend of 15 per cent. or Re. 1.50 per share, for the year ended 28th February 1958.

DELTA JUTE SUFFERS LOSS

PODAR MILLS' RESULTS DISAPPOINTING

Delta Jute Mills Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th November 1957.

The accounts, after charging all expenses and providing for sales tax, show a loss of Rs. 2,70,304 (Rs. 3,12,615). The directors have transferred from dividend equalisation reserve Rs. 25,000 (Rs. 32,500) and from general reserve Rs. 2,70,000 (Rs. 2,90,000). With the balance brought forward from last year of Rs. 4,547 (Rs. 15,912) there is a total amount available for distribution of Rs. 29,243 (Rs. 1,69,547) which includes Rs. 38,000 being excess provision for taxation written back and Rs. 5,750 being provision against anticipated loss on jute written back). The directors recommend that a dividend of Rs. 5.00 (Rs. 5.00) per share be paid on the preference shares absorbing Rs. 25,000 (Rs. 25,000) leaving a balance to be carried forward of Rs. 4,243 (Rs. 4,547 after paying dividend on ordinary shares at Rs. 5 per share absorbing Rs. 1,40,000).

Wealth tax for the year ended 30th November 1956 is estimated to amount to Rs. 34,500 and this has been provided for by transfer of this sum from investment realisation surplus. No depreciation has been provided on such plant as, in the Board's opinion, stands in the Company's books at or below its scrap value.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	33,00,000	Block ...	33,46,704
Reserves ...	37,22,179	Stock ...	19,12,427
Provision for taxation (including wealth tax)	34,829	Stores, spare parts and loose tools	9,05,123
Liabilities ...	6,55,026	Work-in-progress ...	2,25,606
Profit and loss account ...	4,243	Debts, deposits and advances ...	2,60,836

Podar Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Podar Sons Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1957.

The profit for the year amounts to Rs. 1,30,863 (Rs. 10,00,006) adding thereto the balance brought forward from last year of Rs. 4,72,683 (Rs. 3,92,677) there is a total available balance of Rs. 6,03,546 (Rs. 13,92,683). The interim dividend already paid on ordinary shares at Rs. 4 (Rs. 5) per share free of income-tax absorbed Rs. 1,60,000 (Rs. 2,00,000). From the balance of Rs. 4,43,546 (Rs. 11,92,683) the directors have proposed dividend on 10,000 preference shares at Rs. 4 (Rs. 4) per share free of income-tax absorbing Rs. 40,000 (Rs. 40,000), a final dividend on 40,000 ordinary shares at Rs. 6 (Rs. 5) per share [making to Rs. 10 (Rs. 12 including a bonus of Rs. 2 per share) for the whole year] free of income-tax absorbing Rs. 2,40,000 (Rs. 2,00,000) leaving a balance of Rs. 1,63,546 (Rs. 9,52,683 from which the directors provided Rs. 4,00,000 for taxation and Rs. 80,000 for special bonus on ordinary shares at Rs. 2 per share; leaving Rs. 4,72,683) to be carried forward to next year's account.

The directors regret that the result for the year under review is disappointing. The year 1957 was a most difficult year for the cotton textile industry in general. The heavy increase in excise duty on mill cloth levied in September 1956 had very adversely affected the industry. Sluggishness in the cloth and yarn trade has reflected in the lower profits realised for the Company's products as well as in the higher stocks of finished cloth and yarn carried at the close of the year.

The third shift of the spinning department started by the mills of the Company in the month of February 1957 was closed by the end of the year, because of adverse market conditions.

Exemption has been granted to the Company from making the compulsory deposit with the Government for the year 1956, under the Income-tax Allowance (Current Profits Deposit) Rules 1957.

As there will not be any assessable income of the Company for the year after allowance of depreciation and development rebate, no provision has been made for taxation and the liability for the wealth tax has not been provided as it is covered by the provisions for taxation made in the previous year. Full provision has been made for necessary depreciation upto 31st December 1957.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	50,00,000	Block ...	28,58,260

		Cash ...	53,411
Rs.	1,46,64,380	Rs.	1,46,64,380

Cheviot Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th November 1957.

The accounts, after charging all expenses, providing for sales tax and writing back provision for anticipated loss on jute made during the previous year, show a loss of Rs. 82,708 (Rs. 4,16,015). The directors have transferred from dividend equalisation reserve Rs. 70,000 (Rs. 85,000) and from general reserve Rs. 80,000 (Rs. 4,25,000). With the balance brought forward from last year of Rs. 8,565 (Rs. 2,615) there is a total amount available for distribution of Rs. 75,857 (Rs. 1,16,100). The directors recommend that a dividend of Rs. 7.00 (Rs. 7.00) per share be paid on the preference capital absorbing Rs. 70,000 (Rs. 70,000) leaving a balance to be carried forward of Rs. 5,857 (Rs. 8,565 after placing Rs. 5,635 being provision against anticipated loss on jute and dividend on the ordinary shares at Rs. 2.00 per share absorbing Rs. 31,900). Wealth tax for the year ended 30th November 1956 is estimated to amount to Rs. 23,000 and this has been provided for by a further transfer of this sum from general reserve.

With a view to having direct contacts with overseas markets, the Board together with the Board of other Jute Mill Companies under the same group management resolved to form a company under the style of Budge-Budge & Allied Jute Mills Exports (Private) Ltd. This Company, having been registered, commenced business on 31st July 1957. Each of the participating Jute Mill Companies has subscribed equally to the capital, and the Company's share is shown against "Investments" in the balance-sheet. Andrew Yule & Co., Ltd., have no interest in Budge-Budge and Allied Jute Mills Exports (Private) Ltd., but have been appointed its secretaries on a fee of Rs. 1,000 per annum.

In accordance with the working time agreement of the Indian Jute Mills Association the mill worked 48 hours per week with 12½ per cent. of the total looms sealed. Trading during the period continued to be difficult owing to the disparity between prices of raw jute and those of manufactured goods.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,95,000	Block ...	26,24,126
Reserves ...	21,56,282	Stock ...	13,30,786

Liabilities ...	6,57,056	Work-in-progress ...	2,11,179
Profit and loss account ...	5,857	Debts, deposits and advances ...	2,66,806
		Investments	85,126
		Cash ...	1,30,155
Rs.	54,37,278	Rs.	54,37,278

Orient Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th November 1957.

The accounts, after charging all expenses and providing for sales tax, show a loss of Rs. 55,117 (Rs. 2,24,955). The directors have transferred from general reserve Rs. 50,000 (Rs. 2,80,000) and the balance brought forward from last year was Rs. 11,098 (Rs. 5,783) leaving a balance to be carried forward of Rs. 5,981 (Rs. 11,098 after paying a dividend on the ordinary shares at Rs. 3 per share absorbing Rs. 74,730 which was possible only after transferring Rs. 25,000 from dividend equalisation fund)

Wealth tax for the year ended 30th November 1956, is estimated to amount to Rs. 22,000 and this has been provided for by a further transfer of this sum from General Reserve.

In accordance with the working time agreement of the Indian Jute Mills Association the mill worked 48 hours per week with 12½ per cent. of the total looms sealed. Trading during the period continued to be difficult owing to the disparity between prices of raw jute and those of manufactured goods.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,91,000	Block ...	24,09,748
Reserves ...	23,04,049	Stock ...	13,39,354
Provision for taxation (including wealth tax)	22,874	Stores and spare parts	7,83,695

Rs.	52,68,750	Rs.	52,68,750

Rajnagar Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The Company's profit for the year is Rs. 94,452 (Rs. 26,027). And after providing taxation on profits for the year Rs. 73,763 there is a balance of Rs. 20,689 (Rs. 26,027). To this amount added the balance brought forward from the previous year of Rs. 1,66,870 (Rs. 1,96,996) making a total of Rs. 1,87,559 (Rs. 2,39,870 which includes Rs. 16,347 being provision for taxation no longer required and Rs. 500 being reserve for bad debts no longer required) after deducting provision for taxation for previous years of Rs. 34,080 (Rs. 41,000) there remains a balance of Rs. 1,53,479 (Rs. 1,98,870). Out of this the directors recommend a dividend of 11 (10) per cent. payable without any deduction for income-tax paid by the Company Rs. 35,200 (Rs. 32,000) leaving a credit balance to be carried forward of Rs. 1,18,279 (Rs. 1,66,870).

It will be observed that an amount of Rs. 34,080 has been provided in respect of taxation for previous years. It has been considered advisable to make this provision as appeals which have been lodged against assessments made in Pakistan may or may not succeed.

During the year a sum of Rs. 34,300 was received from Pakistan on account of past profits and this was utilised in reducing the Company's outstandings with the managing agents to whom a balance of Rs. 1,53,249 remained due at the end of the year. The managing agents have agreed to grant a further loan to the Company sufficient to enable the directors to recommend the payment of a 11 per cent. dividend on the ordinary shares. A further sum of approximately Rs. 1,30,000 on account of past profits is due for remittance from Pakistan and sustained efforts are being made to obtain the necessary sanction from the State Bank of Pakistan.

Crop.—The total crop harvested during the year was 4,701 maunds as compared with 5,127 maunds in 1956. The average sale price realised for season 1957 was Rs. 1.97 per lb. compared with 1956 average of Rs. 1.77 per lb.

The area under tea is 648 acres. The gardens remain in good order.

The estimates for season 1958 provide for the production of a crop of 4,800 maunds at a total cost on revenue account of Rs. 6,64,422.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,20,000	Block ...	3,58,800
Reserves ...	1,40,000	Stock of tea	1,98,769
Provision for taxation ...	2,45,000	Stores and spare parts	1,52,715
Liabilities ...	2,46,725	Debts, deposits and advances ...	1,98,752
Profit and loss account ...	1,18,279	Investments	1,007
		Cash ...	1,59,961
Rs.	10,70,004	Rs.	10,70,004

Adoni Spinning and Weaving Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Kothari & Sons, Madras) submit the audited accounts of the Company for the year ended 31st December 1957.

Result of the Company's working for the period under review after providing a sum of Rs. 2,61,336 for depreciation is a profit of Rs. 8,061. To this amount is added the amount brought forward from last year of Rs. 1,007 making a total of Rs. 9,068 which the directors propose to carry forward to next year.

During the year under review, while cotton prices had been rather high, yarn prices showed steady deterioration-prices of 20's yarn coming down from Rs. 17.25 in September 1957 to Rs. 16 in December 1957. The present price is Rs. 15.50 per bundle. Because of these conditions, the Company was not able to make sufficient profits. The directors, therefore, regret that they are unable to recommend the payment of any dividend this year.

Since the requirements of cotton for the current financial year have been purchased at comparatively lower rates, the directors hope to obtain better results for the year 1958.

Expansion.—Expansion plan has been going on as per programme. Buildings for the installation of the balance 12,000 spindles are nearing completion. Erection of the machinery is expected to commence about July next and the directors expect to start the additional 12,000 spindles sometime in October 1958.

For the additional capital required for the above expansion and for working funds, the directors have raised debentures of Rs. 17,00,000 between the State Bank of India and the Life Insurance Corporation of India.

The directors have provided depreciation short only to the extent of Rs. 45,015 on fixed assets. This, they intend to provide next year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	49,67,907	Block ...	35,78,543
Liabilities ...	13,25,176	Stock ...	11,56,758
Profit and loss account ...	9,068	Stores and spare gear ...	95,958
		Materials for factory expansion ...	1,59,226
		Debts, deposits and advances ...	5,69,524
		Cash ...	6,08,440
		Miscellaneous expenditure and losses	1,33,702
Rs.	63,02,151	Rs.	63,02,151

N.B.—Figures within brackets relate to the corresponding period of the previous year.

NEW PUBLICATIONS

Readings in Land Utilisation. By the Indian Society of Agricultural Economics, 6-48, 4Esplanade Mansion, Mahatma Gandhi Road, Bombay. Pages: 234. Price: Rs. 10.

THE pace and progress of economic development is largely conditioned by the rate at which we can step up agricultural productivity. It calls for a judicious utilisation of land and water resources of the country. It must be admitted that the present pattern of land utilisation in India is quite defective and that, with the present method of land use, the available area is insufficient for the needs of an expanding economy. While one-third of the land is under crops, the crop-land *per capita* is only three-fourths of an acre. The productivity of the primary sector is deplorably poor with the result that it has become increasingly difficult to meet the existing demand for agricultural produce. The area under pasturage too is insufficient relatively to the large livestock population. As regards forestry, there is need for more careful exploitation as well as conservation of its products. Viewed thus, the book under review is quite timely and will be helpful in the framing and execution of national agricultural policies.

The book comprises six chapters on the various aspects of land use, with extracts drawn from different authoritative sources. The first chapter is a succinct review of the varying approaches to the problems of land utilisation. The second chapter deals with scope and methods of land utilisation and the third with land classification and land use planning. The fourth chapter is devoted to a discussion of the four important land use planning projects, i.e. Soil Conservation Districts in the U.S.A., Land Use Planning Programme in the T.V.A. area, "Rural Zoning" in Northern Lake State in the U.S.A. and Land Improvement Work in the Bijapur District of Bombay State. The next chapter is mainly concerned with the nature and extent of land misuse in India. The last chapter deals with the "Problems in formulation and execution of a National Land Policy." There are some interesting extracts in this chapter which throw light on the role of the technician in making optimum use of land resources, on the importance of soil surveys, soil conservation and afforestation. Against this background is set the land use policies in India.

The book gives a comprehensive account of the various problems involved in land utilisation. But one cannot overlook the fact that there is a certain lack of cohesion in the work. This is perhaps inevitable in a compilation of extracts, however carefully such compilation is done. Nevertheless, the book will be beneficial to students of agricultural economics, especially to research scholars no less to those who frame policies and programmes for efficient utilisation of land.

Practical Problems in Accountancy. By K. S. Gadre. Published by Panch Sheel Prakashan, Krishna Niwas, 281, Frere Road, Bombay-1. Pages: 370. Price: Rs. 6.00.

This book contains answers to questions in accountancy set for the examinations of the Bombay and Poona Universities. It is written by one who, besides being a chartered accountant himself, has had teaching experience in the subject for nearly three decades. Mr. Gadre deserves to be complimented on the lucid way in which he has solved the practical problems in accountancy. The problems cover, among others, bank reconciliation, bills of exchange, and branch, company, consignment, departmental, joint venture, partnership and single entry accounts, etc. The sums have been carefully selected. There is a chapter on abbreviations of accountancy terms commonly used and also an addendum to the chapter on company accounts. Surely, the publication will be very useful to both university students and those preparing for commercial diploma examinations.

Arthik Aur Vanijya Bhoogol. By Chaturbhuja Mammoria. Published by Gayaprasad and Sons, Agra. Pages: 1,204. Price: Rs. 15.

A distinguished professor and author of more than a dozen books—both in Hindi and in English—on various economic subjects, Mr. Mammoria is no doubt well qualified to write a book of this nature. The book under review, written in Hindi, gives a comprehensive account of the various branches of economic geography. The importance given to subjects relating to India is a welcome feature of the book. Needless to say that the book will be useful to students of B.Com. and M.Com. and other allied courses, who study economic geography in the Hindi medium.

Ankekshan ke Siddhanth. By Om Prakash Bajpai. Published by Lakshmi Narain Agarwal, Educational Publishers, Hospital Road, Agra. Price: Rs. 5-12.

To write a textbook on a technical subject in a language like Hindi, the power of abstract expression of which is somewhat limited, is a very difficult task indeed. The author of the book under review, Mr. Bajpai, has succeeded to *a certain extent in giving in Hindi a lucid exposition* of auditing. Even so, the Hindi equivalent of some of the English words perhaps need to be simplified. However, teachers and students of commerce will find the book a valuable Hindi textbook on auditing.

New Era of Science. By K. S. Krishnan. Published by the Publications Division, Ministry of Information and Broadcasting, Government of India, Delhi-8. Pages: 45. Price: Re. 0.50.

This is a reprint of the lectures delivered in 1956 by the well-known scientist, Dr. K. S. Krishnan. Here is a popular exposition of recent advances in science. Dr. Krishnan has succeeded in presenting a large and intricate subject in a way that appeals to laymen. Indeed, the book is an excellent introduction to modern science. We commend it to the attention of those who would like to be informed of the immense progress which science has made in recent years.

Indian Economics. By G. B. Jathar and K. G. Jathar. Published by Oxford University Press, Bombay. Pages: 479. Price: Rs. 12.

The two-volume *Indian Economics* by Messrs. G. B. Jathar and S. G. Beri has held the field as a classic work of reference for more than quarter of a century. The book under review, written by the surviving author, Mr. G. B. Jathar, in collaboration with his son, Mr. K. G. Jathar, is a compressed edition of the original volumes. In fewer than five hundred pages the book seeks to present a picture of the contemporary economic scene as it has emerged out of the turmoil of national adjustment. In its 23 chapters, the book gives a succinct, analytical survey of the course and progress of economic development in the country. The chapters on many topics, including those on agriculture, co-operation, industries, finance and taxation are well-nigh exhaustive. The last chapter on "Planning and Unemployment" is a critical appreciation of the first and second Plans. Almost all the subjects on Indian economics of topical importance are discussed in a lucid style. The academic detachment that pervades the discussions on many of the controversial subjects makes the book particularly useful to students of economics.

Millions Still Go Hungry. Published by Food and Agriculture Organisation of the United Nations, Rome. Pages: 102.

Although the world food production has increased in recent years, the fact remains that whereas there are large agricultural surpluses in some countries, millions go without sufficient food in others. The Food and Agriculture Organisation's (F.A.O's) publication under review is not an exhaustive study of the food problem as such, but it tells vividly the story of the efforts that are being made in order to raise agricultural yields. The F.A.O. has played an important role in this task. Summing up its rapid review of world agricultural and fisheries problem, the F.A.O. says:

"We hear, too, a great deal about the so-called underdeveloped countries, and the difficulties confronted by technical advisers have provided much of the material of this book. Fisheries have progressed little beyond the hunting stage, and even such weapons of the chase as the echo-sounder have come to it through the urge of a world war. Forestry is in many ways little further advanced: though it presents a picture of ruinous over-exploitation in some regions, very much the greater part of the world's forest resources are still untapped. In the agriculture of even the most advanced countries, the differences between average yields and those under the highest level of farming are still very wide."

As the Director-General of the F.A.O., Mr. B. R. Sen, rightly points out, "there are still millions of hungry people, there are unused resources, maladjustments of distribution, depressed rural populations." He adds: "Some of the obstacles loom even larger now that we see them closer." This book discusses some of these obstacles. Clearly, given international co-operation of the kind which the F.A.O. expects from its members, there is no doubt it would be less difficult to solve many of these problems.

THE TRAVANCORE RUBBER AND TEA COMPANY, LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THE 14th Annual General Meeting of the Company will be held on Thursday, 19th June 1958, at the Registered Office of the Company at Pathirappally at 11.30 a.m. to transact the following business:—

1. To receive and adopt the Audited Accounts and Balance Sheet for the year ended 31st December 1957 and the reports of the Directors and Auditors.
2. To declare a Dividend.
3. To elect Directors.

Note:—Mr. K. V. Mathew, one of the Directors who is retiring and is eligible for re-election, will be 65 years of age at his next birthday in December 1958, *and a resolution* that the age limit prescribed under Section 280 of the Companies Act 1956 shall not apply to him, is necessary to enable him to continue in office beyond the next general meeting. Hence, special notice of the following resolution for exempting him from the age limit as required by Section 281 is hereby given:

"Resolved that Mr. K. V. Mathew who will be aged 65 years next birthday be and is hereby re-elected as a Director and that the age limit prescribed by Section 280 of the Companies Act 1956 shall not apply to him."

(A copy of the Explanatory Statement under Section 173 of the Companies Act 1956 is available for inspection to the shareholders at the Registered Office of the Company during office hours on all working days till the date of the above meeting.)

Mr. V. O. Markos, the other retiring Director, is now 67 years old but in his case a resolution exempting him from the age limit prescribed under Section 280 of the Companies Act 1956 has already been passed at the Annual General Meeting held on 4th June 1956.

4. To appoint Auditors.

The Transfer Books and Register of Members of the Company will remain closed from 3rd June 1958 to 20th June 1958 (both days inclusive).

Any shareholder unable to attend personally is entitled to appoint any person (whether a member or not) as his proxy to attend and vote instead of *himself*, subject to the provisions of Section 176 of the Companies Act 1956. Such proxy should reach the Registered Office of the Company at least 48 hours before the time fixed for the meeting.

By Order of the Board,

THE TRAVANCORE RUBBER & TEA CO., LTD.,

BOMBAY, 21*st May* 1958.

MONEY EASY

(From Our Own Correspondent)

BOMBAY, 28*th May*

The short-term money market displayed easy conditions during the week under review. With the onset of the slack season, the demand for bank credit continued to decline and, despite the subscriptions to the new loans, banks were reported to be having surplus of cash which they utilised to reduce their borrowing from the Reserve Bank. Activity in the market was, therefore, dull, with very few borrowers. There was, however, no sign of a fall in interest rates. Inter-bank call money rate was stagnant at 3 per cent. among the Exchange banks and at 3-3½ per cent. among the smaller Indian banks. House money at call continued to be offered at 4½ to 4⅝ per cent. and short-term deposits at 4½ to 4⅝ per cent. for one to six months.

The Reserse Bank of Ihdia statement for the week ended 23rd May 1958 shows a contraction of Rs. 16.14 crores and this is the second week in succession in which the active notes have declined, the aggregate fall in the last two weeks being Rs. 31.27 crores. Notes held in the Banking Department are up by Rs. 1.83 crores, so that the decline in total notes issued is of the order of Rs. 14.31 crores. This is covered by a fall of Rs. 15 crores in rupee securities and a fractional rise of Rs. 68 lakhs in rupee coin. There is no change in foreign securities, but balances held abroad (in the Banking Department) are lower by Rs. 4.44 crores. Deposits of the Central Government show a small rise of Rs. 99 lakhs and those of other Governments by Rs. 2.81 crores. Loans and advances to Governments have gone up by Rs. 1.03 crores, while other loans and advances are lower by Rs. 9.81 crores, of which advances to Scheduled banks against usance bills account for Rs. 6.28 crores.

A fall of Rs. 6.67 crores in demand deposits and of Rs. 2.53 crores in time deposits is seen in the Scheduled banks' statement for the week ended 16th May 1958. Inter-bank borrowings also have declined by Rs. 2.65 crores, while borrowings from the Reserve Bank have increased by Rs. 13.22 crores. Advances have been brought down by Rs. 6.87 crores and bills purchased and discounted by Rs. 1.89 crores. Investments have been strengthened by Rs. 14.85 crores, reflecting banks' subscriptions to the new loans, while cash balances and money at call have shrunk by Rs. 40.23 crores and Rs. 7.18 crores, respectively.

The Gilt-edged market ruled dull with very little business passing through in the absence of sellers. Consequent on the easy money conditions, institutional investors like banks would appear to be keen on strengthening their investment portfolio, but paucity of sellers restricted business. 3 per cent. 1986 Conversion Loan was marked down by 15 nP to Rs. 71.3 per cent. 1970-75 continued to be in demand and gained 5 nP to Rs. 87.05. 3 per cent. 1966-68 had buyers 5 nP higher at Rs. 92.80, as also 3 per cent. 1963-65 at Rs. 95.40. 3 per cent. 1959-61 was in request at Rs. 99.10, while 3 per cent. 1958 recorded a rise of 5 nP to Rs. 99.80. 2½ per cent. 1962 hardened by 10 nP to Rs. 95.40. 3½ per cent. 1961 was wanted 5 nP higher at Rs. 99.60, due to proximity of half-yearly interest payment. 3½ per cent. 1965 gained 5 nP to Rs. 97.85. 3½ per cent. 1967 was dull at Rs. 97.55 and 3¾ per cent. 1968 at Rs. 99.50.

The slight weakening of the sterling, following the announcement of a cut in British Bank rate, had its effect on the rupee as well. Banks' selling rate of U.S. dollars rose from Rs. 475 to Rs. 475.25 per $100, while their buying rate, after improving from Rs. 471.75 to Rs. 472, dropped to Rs. 471.75 per $100. In New York, spot sterling declined from $2.81.11/16-2.81.13/16 to $2.81½-2.81⅝, but soon improved to $2.81⅝-2.81¾. Three months' forward was 1/16c higher on balance at $2.79.5/16-2.79.7/16, while transferable sterling dropped from 279.55-279.65 cents to 279.35-279.45 cents.

COPPER SUPPLIES SCARCE

(From Our Own Correspondent)

CALCUTTA, 27*th May*

Quietness pervaded the metal market during the week under review. Shortage of copper for industrial consumption was very acute, and industries making alloys were naturally disinterested to enter into commitments for other metals also, which were available in the desired quantities without difficulties. Since copper is an ingredient for most alloys, without sufficient copper, the alloying industries as well as the manufacturers of non-ferrous metal semis and brass and copper utensils are suffering a shortfall in production. In this situation, the pity is that stocks of copper have accumulated with importers, but considerable delay ensues for release orders from the Government. The small-scale copper users are, in fact, threatened with elimination from their business. It was noted here that copper prices for spot as well as forward on the London Metal Exchange sagged, in view of the bus strike affecting industries in several ways, but the aversion of the threatened tube railway strike imparted a recovering trend subsequently. From Rs. 61, lead receded to Rs. 60.50 in the local market. Demand also declined. Further, reports from foreign markets recorded a declining trend. There were reports that the U.S. Administration's price support scheme for lead and zinc would depress prices, as, by such a measure, the main problem would remain unsolved. Those criticising the subsidy scheme suggested fixation of higher tariffs and quotas. In the local market, electrolytic zinc closed quiet at Rs. 57.50 after having risen from Rs. 56 to Rs. 58. Tin was unchanged throughout the week at Rs. 507. Owing to comfortable stock position and decline in industrial activity on account of shortage of copper, demand for tin also declined. Moreover, recent arrivals increased stocks with suppliers.

FURTHER DROP IN SILVER

(From Our Own Correspondent)

BOMBAY, 28*th May*

The bullion market ruled easy with a further fall in prices, which was more pronounced in silver than in gold. Paucity of demand in silver, coupled with large offerings induced by the imposition of heavier margin, subject to the approval of the Bombay Government, brought down prices rapidly, thus maintaining the downward trend noted last week. In gold, though the tendency was quiet, the demand from Madras for ready gold checked a sharp fall in prices.

At an extraordinary general meeting of the Bullion Association held on Friday last, the general body approved of the amendments to certain by-laws providing for enforcement of stricter margins, intended to curb unhealthy speculation in the market. The amendments, which are subject to the approval of the Bombay Government, provide for the imposition of a margin of Rs. 1,000 per bar in silver when the *budli* between the current and next settlement exceeds Re. 1 but not Rs. 2 and Rs. 2,500 per bar if it is above Rs. 2. Similarly in gold, a margin of Rs. 10 per tola is payable when the *budli* exceeds As. 8 but not Re. 1, and Rs. 25 per tola when it exceeds Re. 1.

Forward silver (June settlement) slumped from Rs. 188-7 to Rs. 185-15 on Saturday. As the closing rate in this settlement on that date stood at Rs. 186-6, that is Rs. 7 below the starting rate for the settlement, the "bears" were required to pay a margin of Rs. 500 per bar on their outstanding sales in June settlement. This was the second time within a span of five days that the sellers were obliged to pay a margin, but the previous payment on 20th May was in respect of their sales in July settlement. There was a further fall to Rs. 184-7 on Monday, but the lower levels attracted short-covering and prices recovered to Rs. 186 before closing at Rs. 185-7. The July settlement dropped from Rs. 188-7 to Rs. 185-1, but improved to close at Rs. 186-5. The *budli* rate which was *nil* at the close of the previous week suddenly rose to As. 8 in favour of bears and further widened to As. 14 at the close today.

Ready silver lost over the week Rs. 2-7 to Rs. 185-8 consequent on the slackness in demand and increase in floating stocks. The floating stocks of silver are estimated at 400 bars. The daily average arrivals were 40 bars, while the offtake was 15 bars on an average.

Gold for forward delivery (June settlement) moved down from Rs. 109-10 to Rs. 108-15 before closing at Rs. 109-2. The July settlement dropped over the week from Rs. 108-6 to Rs. 107-14. The *budli* charges were throughout against sellers.

Ready gold was marked down from Rs. 111-2 to Rs. 109-14. The floating stocks of gold are estimated at 25,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake also was of the same order.

In New York, silver was unchanged at 88⅛c. and in London at 76½d. for spot and 75⅞d. for forward. Gold moved irregularly, but on balance showed a gain of ½d. at 249*s.* 5½d.

The following comparative table shows at a glance the trend of the market during the week under review:

	28-5-58	Highest	Lowest	21-5-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

† 3rd June settlement.

N.B.—Foreign bullion prices shown in the above table relate to the previous day.

GOOD CALL FOR COW HIDES

(From Our Own Correspondent)

MADRAS, 26*th May*

Enquiries for kips from the U.K. were better and buying was selective. Emphasis was more on lightweights and lower grades. Arrivals into the Madras market were moderate and shippers were the active buyers. Prices ruled firmer for lightweight cow hides. There was good call for inferior fifths cow hides for inland demand and prices ruled 10 per cent. above U.K. levels. Arrivals of buff hides and calves and cow calf were small and prices remained unchanged.

In the tanned skins section, goat skins, especially light weights fifths and inferior fifths and 8/9 lbs. higher selections, ruled steady. Top-mark prime sheep and common quality sheep skins were unchanged.

The Southern India Skins and Hides Merchants Association has submitted a memorandum to the Minister for Commerce and Industry, Government of India, requesting the Government to ban all shipments of tanned goat and sheep skins to the U.K. for sale in the periodical London auctions for a period of six months, and to finance the tanners at this end to enable them to hold stocks. How far the Government can assist the trade is difficult to assess. However, if the E.I. tanners follow the law of supply and demand, much of their loss can be averted or minimised.

JARILLA MAY EXPIRES

(From Our Own Correspondent)

BOMBAY, 28*th May*

After commencing the week on a firm note the cotton futures market turned easy on Saturday. The easiness gathered further momentum yesterday and persisted till the close today. The earlier firmness was due to the following factors: (1) Strong hopes that the Government of India would allow a supplementary quota of about 35,000 bales of cotton of stapling ⅞" cotton. (2) The expectation that the expert committee to be set up for examining the present textile crisis would recommend suitable measures to tide over the difficulties faced by mills. The latter, it was thought, would thus be enabled to make larger purchases of cotton. (3) The firm trend of spot prices, following the announcement last week of an export quota, also influenced the futures sections. The larger-than-expected tenders against the May contract, which expired on the 24th inst., was responsible for the reaction in prices of the August contract on Saturday. Heavy selling induced by the continuing crisis in the textile industry, dull conditions in the domestic and export market for cloth, the downward trend in raw cotton consumption and the prevailing monetary stringency, resulted in a break in values yesterday. Prices moved to lower levels today.

I.C.C. Moglai Jarilla May (1958) opened the week firm and after improving to Rs. 672 went off the Board on the 24th inst., at Rs. 666. Total tenders against the contract aggregated 5,250 bales, comprising 2,900 bales of Laxmi A, 850 bales of Vijay, 200 bales of Jayadhar A, 50 bales of Gaorani, 700 bales of Cambodia, 450 bales of M.P., Jarilla and 100 bales of Jayadhar B.

I.C.C. Moglai Jarilla (August 1958) opened the week at Rs. 678.50, as against the previous close of Rs. 676.50 and improved to Rs. 682.50 the same day. It declined to Rs. 675.75 on Saturday and further to Rs. 675 yesterday. Opening today's session at Rs. 673.50, the contract gathered 75 nP before closing lower at Rs. 672.25.

The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	28-5-58	*High*	*Low*	21-5-58
I.C.C. Moglai Jarilla (May 1958) ...	666*	672	670.50	665
I.C.C. Moglai Jarilla (August 1958) ...	672.25	682.50	671.50	676.50

*On 24-5-1958.

In the spot section, mill demand was confined to staple varieties and their prices consequently improved. Short staples were, however, practically neglected.

In the export section, brisk business was reported in all exportable varieties. Prices of permissible varieties like Kalyan, Wagad, Kalagin moved higher. The Government of India has notified the export licensing procedure in respect of the export quota of 50,000 bales of cotton announced last week. Licences will be issued on the basis of shipping bills and will be valid for shipment within 30 days or till 31st August 1958, whichever is earlier. Licences for export will be issued only to those exporters who have to their credit exports of Indian raw cotton during any one of the last five years ending 30th April 1958. Not more than 10 per cent. of the quantity released, that is, 35,000 bales of cotton stapling not above 23/32" and 15,000 bales of cotton stapling not above ⅞", will be allowed for shipment by a single exporter from all ports. It has also been notified that there will not be any extension in the validity period of export licences issued against the quota of 50,000 bales of Bengal *Deshi* released on 5th February and 50,000 bales of 23/32" cotton on 25th March. These are due to expire at the end of June next.

The most important development of the week in the foreign section was the announcement by the Government on Saturday of an import quota for 30,000 bales of cotton stapling 1-3/16" and above from soft currency areas. A portion of the above quantity will be reserved for distribution to new mills which do not have the basic performance to their credit. The importers of Egyptian cotton have been advised to approach the State Bank of India regarding the procedure of payment against import of Egyptian cotton. Import licences issued for this quota would be valid for shipment up to 31st August 1958.

The varieties of cotton allowed to be imported are: all Karnak and Menoufi, Giza 30 fully good and better, Dandara (Giza 31) fully good and better, Ashmouni fully good and better, GS down to CG6S, GL down to G6L, private estate Sudans down to Grade VI, Tanguis and Pima cottons, BP 52—grade Unug and over up to Unwe, and Abyan cotton.

This brings the total quantity allocated for import from soft currency areas so far in the season to 195,000 bales, comprising 125,000 bales Egyptians and Sudans and 70,000 bales East Africans.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Bengal *Deshi* 600; Berar Jarilla 740; Khandesh 785; Oomra *Deshi* 665; Vijay 900; Hubli Laxmi 1,015; Jayadhar 850. *Delivery Contracts*: Bengal 582; Wagad 620; Kalagin 611.

Firm conditions prevailed in the Karachi cotton futures market during the week under review. The firmness was due to encouraging foreign enquiries and better domestic spinner demand. The N.T.R.G. May contract moved up from Rs. 76-8 at the beginning of the week to Rs. 77-7 on the 3rd inst., before expiry at Rs. 76-12 the following day. July contract hardened from Rs. 73-12 to Rs. 75-15-6. The spot section also ruled firm, with values registering an improvement. *Deshi* styles,

however, lacked support and prices receded. The following are the latest available quotations—in rupees per 82 lbs.—for a few other popular varieties of Pakistani cotton prevailing at Karachi:

Sind *Deshi* 64; Punjab *Deshi* 61-8; 4F Roller 70-12; S.G. 79-12; 4F Punjab Roller 74-12; S.G. 81-4; 289F N.T. Roller 80-4; S.G. 91-4.

The Alexandria cotton futures market ruled easy during the week under review also. The continued stiff competition from Sudan and reports of satisfactory progress of new crop were responsible for the easiness. Even enquiries from the principal free world customers of Egypt failed to impart strength to the market. The latest available quotations—in tallaris per lb.—from Alexandria are as follows:

Karnak: May 76.10; July 77.65; *Ashmouni*: June 68.45; August 68.70.

A divergent trend was witnessed on the Liverpool Cotton Exchange during the week. While the American cotton contracts ruled easy, the mixed growths contracts were fully steady. The easiness of the former was due to lower New York advices, while short-covering imparted strength to the latter. Sudan contracts were neglected with values nominally unchanged. The latest available quotations—in pence per lb.—from Liverpool are given below:

American Cotton One Inch Staple Contract: May-June 24.95; July-August 25.32; October-November 25.95; December-January 26.35. *American Cotton Mixed Growth Contract*: May-June 26.00; July-August 26.13; October-November 26.62; December-January 26.94. *Sudan*: May-June 31.00; July-August 31.20; September-October 31.85.

Cotton futures values at New York eased during the week under review on trade and commission house selling prompted by reports of favourable weather and news of a sharp increase in repossession from Government loan during the week ended 16th May. A part of the selling was also attributed to reports that the National Cotton Council had favoured the policy of larger acreage and lower support prices. A section of the trade felt that new legislation along these lines would materialise in time to affect the 1959 production.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	27-5-58	20-5-58	13-5-58
Spot	36.30	36.30	36.45
July	36.27	36.25	36.59
October	36.68	36.76	36.95
December	36.82	36.87	—

IMPORT OF ART SILK AND STAPLE FIBRE YARNS

(From Our Own Correspondent)

BOMBAY, *28th May*

A notable development of the week under review in so far as the yarn market is concerned is the announcement of the Government of India's decision to issue licences for imports of art silk yarn and staple fibre yarn against exports of staple fibre fabrics and art silk and staple fibre mixed fabrics in accordance with the provisions contained in Appendix XLII to the current Red Book for the licensing period April to September 1958. Applicants are required to specify the proportion in which the licences should be issued for the import of art silk yarn and staple fibre yarn. The Government has also decided to permit the utilisation of licences granted for imports of art silk yarn under the provisions contained in the Appendix for import of nylon yarn. Those who have secured licences for imports of art silk yarn against exports of art silk fabrics can effect exports of staple fibre fabrics in place of art silk fabrics as required of them. Such exports will be accepted for redemption of the bonds executed by them.

The aforesaid announcement would appear to have had no significant effect on the market. This is perhaps because the operators wanted to study the implications of the Government's decision. In the absence of a clear picture about the supply position in respect of both art silk and staple fibre yarns, traders were hesitant to enter into fresh large commitments. There was also the imminent approach of the monsoon. Enquiries for art silk yarn from consuming centres had already slackened and upcountry consuming interests were said to be offering resistance to high prices. It was reported that a few mills in South India were somewhat anxious to sell their June and July deliveries. Cotton yarns continued to rule dull, thanks to easy advices from the cotton market and obscure export outlook. Consequently, the volume of transactions actually put through in the yarn market during the week was restricted, with values moving narrowly.

Spot 150 Italy receded by 7 nP to Rs. 6.37. 120 Italy were dull at Rs. 6. 150 Japan, however, evoked some support and rallied 14 nP to Rs. 6.44. 120 Japan gained 4 nP to Rs. 6.41. Among indigenous yarns, National Rayons 150 bright cones first grade softened by 2 nP to Rs. 5.62. But 120 bright cones first grade gathered 3 nP to Rs. 5.72.

There was some support for forward staple fibre yarn. 40x2 August delivery gained Rs. 4 to Rs. 617. June delivery hardened by Rs. 3 to Rs. 611. Spot 40x2 Centurys and Kohinoors shed 2 nP each to Rs. 3.25 and Rs. 3.26, respectively. Citys lost a naya paisa to Rs. 2.25. New Greats were neglected at Rs. 3.19. Foreign yarns, however, where in better form. Fuji strengthened by 6 nP to Rs. 7.31 and Paramounts by 3 nP to Rs. 7.19.

In the cotton yarn section, ten counts Podars receded by 37 nP to Rs. 12.63. Moderns were stagnant at Rs. 13.50. Twenty counts were dull. Indus being quoted at Rs. 16.37, Moderns at Rs. 16.75 and Gokaks at Rs. 16.75. Among thirty counts, Hinds were unchanged at Rs. 19.50. Forty counts Minaxis were quiet at Rs. 23.37, as also Moderns at Rs. 24. Among sixty counts, Moderns changed hands at Rs. 60, same as last week. Raghuvamshis were on offer at Rs. 50.50. Finlays, however, gathered 50 nP to Rs. 61. Eighty counts Mahendras were dull at Rs. 69.50 and Moderns at Rs. 69.75.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	28-5-1958	21-5-1958
		₹
Art silk yarn (per case of 200 lbs.)—	Rs.	Rs.
120 Japan (per lb.)	6.41	6.37
150 Japan (per lb.)	6.44	6.30
120 Italy (per lb.)	6.00	6.00
150 Italy (per lb.)	6.37	6.44
Staple fibre yarn (per case of 200 lbs.)—		
40 × 2 June	611.00	608.00
40 × 2 August	617.00	613.00
40 × 2 New Great (per lb.)	3.19	3.19
40 × 2 City (per lb.)	3.25	3.26
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.63	13.00
20s Modern	16.75	16.75
30s Hind	19.50	19.50
40s Minaxi	23.37	23.37
60s Raghuvamshi	50.50	50.50
80s Modern	69.75	69.75

SUGAR DECLINES FURTHER

(From Our Own Correspondents)

BOMBAY, *28th May*

The sugar market continued to rule depressed during the week under review and there was a further fall in prices. The ex-mill quotations in the Bombay-Deccan area registered a drop of Re. 1 per maund. The sugar prices would have suffered a more marked setback but for slim spot stocks estimated at just 13,000 bags. Arrivals of sugar by rail into the market during the week were negligible, being 2,900 bags, as against 17,600 bags in the previous week.

Large grain sugar receded by a rupee to Rs. 110-Rs. 115 per bag. Medium grain declined by a like amount to Rs. 107-Rs. 109. Small grain lost 50 nP to Rs. 106.50.

Production and despatches of indigenous sugar up to 15th May 1958 amounted to 1,947,000 tons and 1,082,000 tons, respectively, as against 1,913,000 tons and 1,170,000 tons in the corresponding period of the previous year. Stocks with factories as on 15th May 1958 stood at 1,290,000 tons, as compared with 1,270,000 tons a year before.

* * * *

HAPUR, *26th May*

Sugar prices eased further during the week in the absence of any concrete scheme as yet finalised for exports. Lack of buying and ample stocks with traders were also the depressing factors. The supply position was easy.

Quiet conditions were witnessed in the sugar market at Muzaffarnagar on account of slackness in demand from consuming centres. Moderate business was transacted locally and prices of different varieties declined further by 6 nP to 25 nP per maund. The latest prevailing prices were:—Rampur (B29) Rs. 37.50; Buland (C29) Rs. 37; Iqbalpur (C29) Rs. 36.81; Mansurpur (C29) Rs. 37.25; Daurala (B29) Rs. 37.50; Mawana (C29) Rs. 36.87; Shamli (B29) Rs. 37.75; Amroha (D29) Rs. 35.50; Bijnore (C29) Rs. 35.37; Meerut (D28) Rs. 36.37; Simbhauli (E29) Rs. 36.62.

Fresh development lacking, the Kanpur sugar market ruled quiet. Quotations (spot and ex-mill) at the week-end were: (d29) Gola Rs. 100.87, Rs. 35.87; Burhwal Rs. 100.87, Rs. 36.12; Hargaon Rs. 100.37, Rs. 35.62; Basti Rs. 103.75, Rs. 37.

Khandsari prices were depressed during the week. Production from *gur* in some centres was still taking place. The prevailing prices were Rs. 30 to Rs. 33.50 per maund according to quality.

Poor arrivals due to off season with better premonsoon demand accounted for an improvement of about 75 nP per maund in the prices of dry quality *gur* during the week which was quoted at Rs. 16.75 per maund, while *kotha* quality was done upto Rs. 16. The week's offtake aggregated 12 wagon-loads and the local stock was put at 1.35 lakh maunds. The conditions of the new cane crop were reported to be fairly good in the irrigated areas.

As demand for ready *gur* was poor, prices ruled quiet in the Muzaffarnagar market. Arrivals declined further and there was moderate demand for *shakker dara* from Rajasthan at almost unchanged prices. The latest prices were:—*Chakku minja* Rs. 17.25 to Rs. 17.50; *shakker dara* Rs. 18 to Rs. 19; *masala* Rs. 22 to Rs. 24.50; *khandsari* Rs. 30.50 to Rs. 33.50.

Future *gur* ruled quiet in the absence of any new driving force. *Fagun* delivery transactions were to be governed by next crop yield which was as yet very uncertain. *Gur fagun* opened at Rs. 12.54 last Monday, touched the highest of the week at Rs. 12.85 and lowest at Rs. 12.49 and was quoted at Rs. 12.70 today.

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, *28th May*

Barring the groundnut section which ruled distinctly bearish, the oilseeds market presented a firm trend during the week under review. The firmness was aided to some extent by the abolition of export duty on all varieties of oilcakes specified in item 21 of the second schedule of the Indian Tariff Act. Castorseeds attracted good attention of operators, thanks to expectation of export business in castor oil with the U.K. and Russia. The expectation was based on hopes of a further cut in export duty and reduction in the British Bank rate. Meanwhile, it was reported that Brazil had increased castor bean price by $5 to $15 per ton with the object of reviving interest in castor oil by creating a disparity in price. A leading export house was reported to have bought a large quantity of oil B.S.S. at Rs. 16.44 per quarter yesterday. It was said that the speculative houses were busy applying call options, as they were hesitant to buy in futures due to the disparity of Re. 1 per cwt. in the price of castor oil and castorseed, the former being cheaper. Linseed was fully steady on reports that Australia was interested in buying Indian linseed oil. There would have been a marked rise in prices but for large upcountry offerings. Cottonseed was better. The groundnut section, however, ruled, as already stated, bearish. Offerings from upcountry interests, especially Saurashtra, were considerable, while fresh buying in oil from vanaspati producers was lacking. Operators feared that groundnut and groundnut oil might develop further weakness after the May contract matures. Owing to the weakness of the maturing contract, backwardisation charges in groundnut futures narrowed down from Rs. 3 on Monday to Re. 1 yesterday. Since the prices were not above Rs. 165, margin rule became inoperative yesterday. Today, however, there was a recovery in prices due to technical considerations.

Groundnut May contract which stood at Rs. 170.50 last week-end was subjected to continuous selling pressure and moved down to touch Rs. 165 yesterday, at which level the margin became inoperative. Today, however, the contract evoked some support and recovered to Rs. 166.25. August contract dropped from Rs. 167.50 to Rs. 164 before finishing higher at Rs. 164.24. Over the week, Bold ready dropped 25 nP to Rs. 34. Coromandel and Khandesh quality both fell by 50 nP to Rs. 34.37. Groundnut oil ex-mill improved from Rs. 18.37 to Rs. 18.62, but gradually receded to Rs. 17.87 today. Railway receipt was quoted today at Rs. 17.87, as against Rs. 18.37 at the close of last week.

Castorseeds May contract elicited good buying inquiries and spurted from Rs. 147.25 to Rs. 151.87. September contract also met with large buying orders, its quotation advancing by Rs. 4.12 to Rs. 154.62. Ready Madras registered a rise of 62 nP to Rs. 30.12. Kanpur quality strengthened by a like amount to Rs. 28.87. Castor oil B.S.S. had buyers at higher levels, today's closing rate being Rs. 16.50, as against Rs. 16.25 last week-end. Commercial quality hardened by 25 nP to Rs. 15.37.

In the linseed section, no transactions were put through in the May contract yesterday and today. The contract was nominally quoted at Rs. 30.94, a rise of 13 nP as compared with the previous week's closing rate of Rs. 30.81. September contract evoked enlarged buying inquiries and moved up from Rs. 30.31 to Rs. 31.37 on the opening day. After fluctuating between Rs. 31.25 and Rs. 31.12, the contract finished at Rs. 30.87 today. Bold ready was fully maintained at Rs. 30.94 till the close yesterday. It was, however, a shade easy at Rs. 30.75 today. Linseed oil, after improving from Rs. 15.94 to Rs. 16, declined to Rs. 15.87 yesterday, but recovered to Rs. 15.94 today.

Under the influence of persistent buying orders, cottonseed September contract scored a gain of Rs. 2.75 to Rs. 109.50. There was no business in the May contract during the major part of the week under review. Some stray transactions were put through at Rs. 106.75 on Friday.

Kardiseed bold ready was fully steady at Rs. 19.12 in the first two sessions of the week, but gave way on selling pressure to Rs. 18.75 on Monday. This rate was maintained yesterday also. Today, however, there was some recovery, the closing rate being Rs. 19. Nigerseed Madras quality recorded an improvement of 75 nP during the week, today's closing rate being Rs. 28.75.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:,

	28-5-1958	21-5-1958	14-5-1958
Groundnut—	Rs.	Rs.	Rs.

JUTE GOODS GIVE WAY

(From Our Own Correspondent)

CALCUTTA, *27th May*

Both jute goods and raw jute suffered a setback in prices during the week under review. The weakness of jute goods was due to the possibility of work in port coming to a standstill as from 16th June judging from the strike notice served by the All-India Port and Dock Workers' Federation on the authorities of all major ports in the country. The decline in prices of jute goods and the reports of excellent condition of the jute crop contributed to the downtrend in the fibre market. If the strike notice resulted in stoppage of work in the country's

major ports, it would mean that the entire import and export trade would come to a standstill.

B. twills declined during this week to a level far below the I.J.M.A. minimum price, while hessian 40" 10 oz., despite the decline, was above the floor. Moreover, there was only routine business done with foreign buyers, although enquiries from several countries, including the U.S.S.R., Egypt and the United States, were received. That foreign buyers did not desire to rush in and lift as much as possible was indicated. Trade circles felt that foreign buyers were disinclined to take any step which would go to push up prices. It was, however, thought that if the strike was not averted and if indications continued to point out materialisation of the threat, foreign buyers might lift as much as possible before 16th June for quick shipment. Strong holders were, therefore, disinclined to rush in and sell at the decline.

On Tuesday last, ready B. twills dropped to Rs. 99.30 from Rs. 99.85 and buyers showed little or no interest. Ready hessian 40" 10 oz. gave way from Rs. 41.00 to Rs. 40.60. On Wednesday, rates were further affected by mills' sales of fair quantities for forward delivery. Thus, B. twills sagged to Rs. 99 and hessian 40" 10 oz. to Rs. 40.55. Shipments during the current month have proceeded satisfactorily and, up to 15th May, hessian shipped amounted to 16,250 tons, as against 11,400 tons in the corresponding period in April. Sacking shipments amounted to 12,900 tons, as against 9,500 tons only. On Thursday, hessian 40" 10 oz. recovered to Rs. 40.65 due mainly to price fluctuations in the futures trading. On the other hand, B. twills continued the recession and touched Rs. 98.70. On the next day, that is, Friday, conditions became worse, the two constructions declining to Rs. 40.45 and Rs. 98.00, respectively. The week's lowest levels were touched over the week-end, consequent on selling pressure. B. twills were as low as Rs. 97.10 and hessian 40" 10 oz. Rs. 40.05. Yesterday, B. twills declined further to Rs. 97.00, but hessian 40" 10 oz. were better at Rs. 40.60, although no business transpired.

In futures, May 40" 10 oz. hessian was at the highest at Rs. 40.72 and lowest at Rs. 39.86 before closing at Rs. 40.08. These rates for August 40" 10 oz. hessian were Rs. 40.92, Rs. 39.94 and Rs. 40.08, respectively. May B. twills at Rs. 98.80 were at the highest, and at Rs. 95.85 were the lowest before closing at Rs. 95.95. These rates for August B. twills were Rs. 101.25, Rs. 98.25, and Rs. 98.45, respectively.

Raw jute prices also fell, following decline in the goods market and reports of good condition of the crop. Northern bottoms declined from Rs. 25 to Rs. 24.75. The latest quotations for May-June delivery of the old crop are:

	Middles Rs.	*Bottoms* Rs.
Pakistani:		
District	31.50	28.50
Northern	31.00	28.00

TEA IN DEMAND

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *24th May*

There was just under 1,300,000 lbs. on offer in Sale No. 13, which was held on Tuesday 20th May. There was a useful selection on offer, but some teas showed a seasonal decline in quality and leaf appearance. The sale opened to a strong general demand, particularly for low medium and medium B.O.Ps, which were irregularly 5 nP dearer. However, the equivalent fannings were about steady. Good mediums, although meeting with good support, remained firm on last week's quotation. Best liquoring teas were easier following decline in quality. Whole leaf met a strong demand and were generally dearer. The following are the quotations:

	1958 Rs.
Plain B.P.	1.45
Low medium	1.70 to 1.90
Medium	1.90 to 2.15
Good medium	2.15 to 2.45
Quality	2.35 to 3.35

Dust Sale 'K':—

There was 1,137,646 lbs. on offer in Dust Sale 'K' which was held on Thursday 22nd May. The sale opened to a very good general demand which was maintained throughout the auction. All types were easier to purchases, and prices were irregularly 5 to 10 nP easier. The sole exception were the milled descriptions which are firm on last rates.

London Market:—Sale of 19th May 1958:— Market unchanged.

Sale of 20th May 1958:—Market strong to dearer all round, particularly plain and medium fannings grades, which were often 3*d.* dearer.

Colombo Market:—No sale this week.

Calcutta Market:—Sale of 20th May 1958:— 19,900 packages dust. Met fair demand at easier rates. Orthodox types 6 to 8 nP lower. Exportable types 2 to 4 nP easier. C.T.C. weakest feature. Best 20 to 25 nP easier.

Export Quota:—As the period of validity of special export rights draws to its close, the market has continued fairly active. Business has been transacted at 3½ nP. New season's quota quotation is sellers 15½ nP, buyers 15 nP. As we go to the press, it has been rumoured that the validity of special licence may be extended until 30th June 1958.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 14:—1,250,000 lbs. General demand rather quieter. Prices irregularly 5 to 10 nP easier for low medium and medium descriptions. Less enquiry for fannings. Highgrowns lower, following quality. Whole leaf considerably easier."

BLACK PEPPER SAGS

(Messrs. Parekh & Co.)

BOMBAY, *27th May*

After drifting within a very narrow range with undertone quietly steady during the fortnight ended 21st May 1958, Malabar black pepper during the week showed a sagging tendency in sympathy with Singapore where white broke from Str.$130 to str.$120 and black from Str.$74 to Str.$69 for want of foreign demand. The price of specific delivery in Bombay worked down from Rs. 590 to Rs. 535 for June.

Alleppey was lowered from Rs. 600 to Rs. 562½. Garbled (ready) at Cochin moved down from Rs. 103.75 to Rs. 98.75. May delivery was finished at Rs. 105½, while July receded from Rs. 112.50 to Rs. 101.87 under pressure of heavy hammering by stale bulls who became tired-long, together with selling by bears who were encouraged to build up bear positions, in view of continuous absence of foreign enquiry.

In spite of business in May shipment to New York from both Singapore and India having remained very small, the dealers there seemed to be unwilling to make fresh purchases. They seemed to be buying from hand to mouth mostly from consignments. Such an attitude was attributed to the persistent talk of an imminent recession in almost all the newspapers in the U.S.A. Sales of various spices in chain stores having gone down, replacement buying by grinders was conspicuous by its absence, despite general expectation of pick-up in demand by now for the replenishment of their autumn requirements.

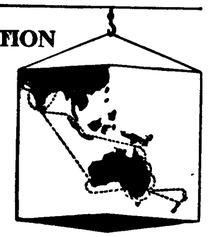
Reassuring news from Indonesia and absence of demand from the U.S.A. brought forth liquidation by holders at both Singapore and India, ending in recent fall in prices much against the general expectation. New York market did not pay any heed to worsening internal situation in France and Lebanon.

The future of pepper appeared to be uncertain, as, in spite of the prospect of smaller crop in Sarawak, the market at Singapore failed to show any revival either in turnover or in price. However, at the time of writing, the market at Cochin showed improvement, having its reflection on Bombay. Garbled at Cochin for July reacted to Rs. 105 under fresh buying by bulls and covering by bears. Specific delivery in Bombay for June improved to Rs. 550.

In A.S.T.A., July-Aug-Sept. was done from $0.26½ to $0.24½, while May and June changed hands from $0.26¼ to $0.24¼. The fall seemed to have been accelerated by the news that the Indo-American Conference Line was likely to reduce the freight from India to the U.S.A. in the near future.

Today's nominal quotations are: Ready delivery Rs. 78 per Bengal maund; June Rs. 550-Rs. 560 and July Rs. 555-Rs. 565 per candy of 5¼ cwts.

For INFORMATION on AUSTRALIA, NEW ZEALAND, and FIJI



Business men requiring up-to-date information and a complete banking service are invited to use the facilities of the Bank of New South Wales, the oldest and largest commercial bank operating in Australia, New Zealand, Fiji, Papua and New Guinea, with over 1,000 branches and agencies.

The services include trade and industrial introductions, economic and market information, and assistance with travel requirements.

BUFF AND COW EASY

(From Our Own Correspondent)

KANPUR, *26th May*

During the week under review, the conditions of the hides and skins market were unaltered except for the fact that this supply position in respect of the main items of buff and cow was slightly easy. Thanks to this rising summer temperature, the volume of goods from the local butcheries were lower. The main purchasers were the local tanneries and the Madras dealers. The country tanners were lukewarm.

The latest available quotations are: Wet salted cow 1st grade Rs. 330 to Rs. 350, 2nd grade Rs. 250 and 3rd grade Rs. 200 per score; wet salted buff 1st grade 1 lb. 6 ozs. and 2nd grade 1 lb. 11 ozs. per rupee; goat 1st grade Rs. 260 to Rs. 290 and 2nd grade Rs. 220 to Rs. 260 per 100 pieces; sheep 1st grade Rs. 300 and 2nd grade Rs. 275 per 100 pieces.

BLACK LEAFY TEAS STRONG

(From Our Own Correspondent)

CALCUTTA, *27th May*

Tea prices eased during last week's sales for domestic consumption. Dusts on offer aggregated 19,513 chests. There were withdrawals of C.T.C. Assams and those that sold realised very low prices. The best lots were the weakest features for the decline was of the order of 20 nP to 25 nP. Orthodox descriptions gave way by 6 nP to 8 nP. Black leafy teas fit for export were the strongest feature, inasmuch as the decline was only by 2 nP to 4 nP. On competition being offered, "teas for price" were steady. The quotations were: Best Assam C.T.C. Rs. 2.65 to Rs. 2.85; medium Assam C.T.C. Rs. 2.00 to Rs. 2.10; medium Assam grainy dust Re. 1.70; and medium Dooars Re. 1.64 to Re. 1.66.

The quantity of leaf on offer was meagre, being 551 chests.

Transferable export quota changed hands at 1½ nP, but, subsequently, sellers demanded 2 nP. Non-transferable quota realised 1½ nP. Sellers demanded 16½ nP for new season's quota, but, as buyers were prepared to offer only 16 nP, no business was done.

It was noted that there was a further decline in the U.K. tea stocks. For the week ended 16th May, these were only 116.83 million lbs., as against 118.56 million lbs. in the previous week. On this basis, it was expected that British buyers would show marked interest as and when the season's regular export sales opened next month.

A Tea Board announcement on Saturday last extended the period of validity of special export licences for tea against 1957-58 export quotas by a month up to 30th June.

After the meeting of the Tea Board last week at which the producers' schemes for according relief to the industry were considered and endorsed, an announcement from New Delhi reducing export and excise duties was believed to be imminent. Consideration was also accorded to the other problems of the tea industry, and the Board gave it to a committee to examine any demand for funds from gardens for renovation of plant and machinery and improvement of plantations. A Rs. 2-crore finance guarantee fund would be created from the accumulated balance of the Tea Improvement Fund. This new fund will be used as a guarantee for banks and other agencies making loans to the industry.

During the special Darjeelings sales held yesterday, offerings amounted to 7,113 packages, the quality of which registered a general decline. However, they contained a number of attractive teas with useful first flush flavour. Demand was good and prices were firm. Keen competition was offered to the more flavoury teas, with prices rising above valuations.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, *26th May*

Steady to quiet conditions prevail in the foodgrains market. The Government of India is reported to be arranging for more imports in order to build up sizable reserves. Negotiations are already in progress with the United States for the import of 3.5 million tons of wheat and 500,000 tons of rice. The willingness of Burma to supply only 270,000 tons, as against its original commitment of 500,000 tons during the year, is stated to be an additional reason for increasing imports.

While wheat prices in the U.P., are steady, those in the Punjab zone are depressed. The wheat crop in the U.P. is said to be lower than last year and, with restricted arrivals which are sufficient to meet the day-to-day requirements of consumers, the trade has not been able to build up stocks.

Wheat at Hapur ruled quiet at almost unchanged levels of Rs. 15.50 per maund for average quality and about Rs. 16.50 for farm produce. Wheat arrivals averaged 1,000 maunds daily and local stock improved to four *khatties*. Threshing operation having finished, the agriculturists were hesitant to part with the produce in anticipation of higher prices in the coming months.

Rice continued to rule steady. *Basmati sela* quality was quoted at Rs. 32 to Rs. 36 per maund and mainpuri produce at Rs. 26.

Despite further heavy arrivals from Punjab which resulted in an improvement of local stocks from 33 *khatties* last week-end to 42 *khatties* now, gram continued to be steady on Punjab advices. Barley and bejhar, however, eased slightly, thanks to increased arrivals of new crop into the market, arrivals of both cereals averaging 150 maunds each daily. *Jowar* and *guwar* were steady during the week with good demand. The week-end prices (in rupees per maund) were:—Gram 11.25 to 11.44; barley 10.87; *bejhar* 10.25; *jowar* 12 to 13.25; *guwar* 15.50.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (a) Clive Mills have paid dividend at Rs. 10‡ on bonus shares, for the year 1955. * Including bonus. (k) Investments.
† New Central Jute Mills—Dividend for 1956 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. F.—Bengal Coal Co. Dividend from 1954 to 1956 are on shares of Rs. 300 and for 1956 the dividend of Rs. 17·5 includes an interim dividend of Rs. 7·5 per share. In 1956 the shares of Rs. 300 were split into shares of Rs. 100 each.

SURVEY

(*Concluded from page 1019*)

million acres of agricultural land, 50 million acres of other non-cultivable land and 50 million acres of desert areas needed immediate protection by intensive soil conservation measures in Madras, Bombay, Punjab and the former Hyderabad State. The authorities did not pay any attention to tackle this problem on an all-India basis till 1953, when a Central Soil Conservation Board was set up by the Government of India. Judging from the vast area which needs protection, the progress made so far in this direction and the target fixed under the second Five-year Plan appear insignificant. Thus, according to Dr. Deshmukh, during the first Five-year Plan not more than 0.7 million acres of land were protected by soil conservation measures. The target for the second Plan was fixed at 3 million acres, out of which agricultural land accounted for 2 million acres. During the first year of the second Five-year Plan, soil conservation measures were extended over 177,000 acres with a financial assistance of Rs. 79.96 lakhs as loan and Rs. 31.68 lakhs as subsidy. In 1957-58, about 250,000 acres were protected with financial assistance to the tune of Rs. 151.80 lakhs as loan and Rs. 73.84 lakhs as subsidy. For the current year, 170 soil conservation schemes in different States have been sanctioned, costing the Centre Rs. 207 lakhs as loan and Rs. 96.78 lakhs as subsidy.

Dr. Deshmukh went on to point out that crop-cutting experiments in scarcity areas of Bomb

MARKET GOSSIP

decline in the extent of utilisation of capacity. During 1957, about 16·0 per cent. of capacity was lying idle, which compares unfavourably with 8·7 per cent in 1956 and 6·7 per cent. in 1955.

It is indeed unfortunate that, when the demand for paper is rising continuously, a large part of the capacity is lying idle. This is due to the fact that selling prices are steady, whereas the cost of production has risen. This aspect was well brought out by Mr. J. F. Brierley, the erstwhile President of the Indian Paper Makers' Association, in the course of his speech at the annual meeting of the Association held at Calcutta on Friday last. Mr. Brierley indicated that the percentage rise in prices of fuel and raw materials since paper was decontrolled in 1950 has been 30 in coal—22 tons of coal are required to produce one ton of paper—48 in rosin, 60 in china-clay and 80 in hosiery cuttings. Labour costs have risen on an average by about 35 per cent. He also referred to the Central and State Government taxes and the statutory price increases of one description or another. If the paper industry is to meet the expanding demand for paper at an economic cost, it is imperative that the burden of taxation on the industry should be reduced. The Government should, as Mr. Brierley rightly urged, pay far greater attention to the impact on the industry of measures which it adopts in the interests of its revenue. That the industry legitimately deserves such attention will be evident from the fact that, despite increases in production cost, it has sought to maintain relatively steady selling prices. White printing paper was kept down to only 12 per cent. above the price ruling in 1950; this does not include the increase of 16 per cent. since March 1955 as a result of the imposition of excise duty.

Mr. Brierley was quite right when he declared that there was a limit to the extent to which any industry could absorb increases in cost. Criticising the Government's policy on paper prices, he declared that it was hard to reconcile this policy with its exhortation to the industry to augment production. There is considerable force in this statement of Mr. Brierley, as also in his remarks that, "if the Government is going to absorb for its own use between 30 and 40 per cent. of the paper produced in the country, and at the same time pay prices which barely cover production costs, it is clearly impossible for the industry to set aside funds for expansion. If it is intended that this shortfall should be recouped from the prices charged to civilian consumers, then I can only say that the morality of such an attitude is questionable and at variance with the request which the Government has made to keep selling prices down." We commend this observation to the attention of the authorities.

DELHI LETTER

(*Concluded from page 1020*)

targets can be fulfilled. That against the revised five-year target of Rs. 840 crores (involving Rs. 440 crores of foreign exchange) of private industrial investment, only Rs. 275 crores has been invested in the first two years of the second Plan, has belied the impression in some circles that the private sector has already fulfilled or overfulfilled its targets.

The Federation's representation has just brought forth a reply, on behalf of the Minister for Commerce and Industry, from his Deputy Minister, Mr. Satish Chandra. This official reply confirms that the points raised by the Federation are being examined along with the recommendations of the Informal Committee on the amendment of the Companies Act.

First, Mr. Satish Chandra says, the extent to which the provisions of the new Companies Act have contributed to the decrease in the number of new registrations cannot be satisfactorily established, because of the impact of many other economic factors of deeper and wider significance which affected the working of both the public and the private sectors in the year 1956-57. The tentative figures available with the Ministry show that the number of new registrations in 1957-58 has been higher as compared to 1956-57.

Secondly, on the subject of conversion of public into private companies and conversion of managing agencies into selling agencies, the official reply says that while all genuine cases of conversion have been, and will continue to be, dealt with sympathetically, it would not be right for Government to connive at such conversions as are found to be only a device to evade some provisions in the new Act.

Thirdly, in regard to the working of sections 370-372 of the Companies Act, the Deputy Minister says that the Informal Committee on the amendment of the Companies Act went into these sections. There was no suggestion in the Report of the Company Law Administration that inter-company investments for the purpose of expanding existing undertakings or forming new ones should be discouraged.

FLOOD CONTROL

IN many parts of India, the onset of monsoon is never regarded as an unmixed blessing. The excess of rains which frequently alternates with failure of monsoon brings in its wake heavy floods so destructive of all that the peasant holds dear—his little cottage, his farm and his cattle. Apart from their "human"—or, one should say "inhuman"—aspects, floods are a source of grievious economic loss to the country. During the period 1950-56, the total damage inflicted by floods has been estimated at Rs. 323 crores, excluding the value of loss of cattle and losses arising from breakdown in transport, industry and other services; out of this, crop damage accounts for Rs. 228 crores, damage to houses and property for Rs. 74 crores and damage to public utilities for Rs. 21 crores. The Ganga river system alone accounted for Rs. 203 crores out of the total damage estimated at Rs. 323 crores. The annual *per capita* flood damage varies from State to State; it is heaviest in Assam where it was estimated at Rs. 6 for the 1950-56 period. The annual damage per acre of net area sown is also highest in Assam where it was of the order of Rs. 7.

Appropriately enough, the measures for preventing flood damage have received considerable notice in recent years. For a long time, the problem had not been lifted above the State level. This is surprising, considering that the problem cannot be successfully solved except on an all-India scale. Indeed, even international co-operation is often necessary, for rivers know no man-made borders. Fortunately, India's neighbours have evinced a keen interest in the solution of this problem. The Government too is engaged in perfecting the machinery for combating the flood menace. It has spelled out the flood control policy with greater clarity. In the second Plan, a provision of Rs. 60 crores was made for flood control measures; this allocation, in the context of the reappraisal of the resources of the Plan, has been reduced to Rs. 51 crores. Many expert bodies have kept the whole problem under perpetual scrutiny. Mention must be made of the Central Flood Control Board, the periodical meetings of which have served as a focal point for the discussion of the flood problem and of the measures designed to solve it. At the seventh meeting of the Board, held recently at New Delhi, Mr. Hafiz Mohammed Ibrahim, the Union Minister for Irrigation and Power, revealed that emergency protection works constructed in some of the worst flood-affected areas had given immunity to this region. Several schemes approved by the Board at the last meeting had been completed; they included embankment along the Bagmati, the Burhi Gandak and the Kamla-Balan, the Kosi and the Ghagra. The Minister emphasised that greater attention should be paid to the preparation of comprehensive integrated basin-wise plan for flood control.

A significant milestone in the evolution of the Government's flood control policy is the expert examination of the problem by the High Level Committee on Floods (Chairman: Mr. A. C. Mitra). The Committee has analysed the flood problem in relation to four specific regions, the North-West river system, the Ganges river system, the Brahmaputra river system and the Peninsular river system. Each system has its own peculiar problems; for instance, the Peninsular rivers do flood but not as frequently as the Himalayan rivers. Again, the flood problem is more serious in the eastern parts of the country than the western; it is more serious in the northern than in the southern part. The Committee has done well to emphasise that absolute or permanent immunity from flood damage is not physically attainable by known methods of flood control. Within this physical limitation, it has, however, done much not only to state the broad aspects of the problem but also to suggest the measures designed to control and prevent the menace of floods. The Committee has shown a high sense of realism in that it has emphasised the importance of relating the benefits accruing from flood control measures to the cost of carrying them out. Sanction of flood control schemes, as the Committee rightly points out, must depend in the main on their economic justification. Any flood control policy, if it is to be realistic, cannot obviously ignore cost considerations.

Among the measures for protection against floods, the construction of embankments has long been regarded as the most important. After discussing the controversy relating to the suitability and effectiveness of embankments as a measure of flood control, the Committee observes that, in general, embankments are a satisfactory means of flood protection "when properly designed, satisfactorily executed and adequately maintained in locations where construction of embankments is technically indicated." The Committee, however, emphasises that a suitable combination of this method with other methods of flood protection would be more efficient and desirable. In this connection, it has examined the other methods of controlling floods or reducing flood losses such as construction of works for storing the excess volume of flood flows in reservoirs and detention basins, channel improvements or enlargements for enabling the river to carry the flood flows at lower water levels, diversion of a part of flood discharged into other natural or artificial channels or spillways and water shed improvements. "The impression seems to exist in the minds of people that, by catering for power and other benefits by means of storage reservoirs," the Committee points out, "flood control can be secured as an incidental benefit." This belief, according to the Committee, is not justified. It adds: "To be effective, a reservoir must have adequate capacity set apart exclusively for flood control purposes and this means an extra height of the dam specifically for this purpose."

In the opinion of the Committee, the question as to whether embankments should have precedence over dams and detention reservoirs on a river which requires a combination of both is not one of priorities but is really a question of the best engineering and economic solution to the problem. The real criterion here is economic—that is, which of the combinations, each technically feasible and sound, would afford greater overall benefits at less cost. That, in fact, is the criterion which decides which plan has to be adopted. Once the plan has been adopted, it is then a problem more of phasing rather than of determination of priorities. Again, priorities, the Committee insists, must be decided by taking an integrated view of the various considerations involved, the human and social aspect receiving its due emphasis. The order of priorities which it recommends consists of: (1) emergent schemes, (2) continuing schemes, (3) schemes for the protection of important urban and industrial communities, (4) schemes which would help in augmenting food production in the country, and (5) schemes which combine other beneficial utilisation of waters.

A notable point made by the Committee is that control over excessive sediment is important for flood control. Soil conservation, it is stated, helps in reducing the sediment load in rivers by making them less liable to change their courses or erode their banks. The effect of these measures on high flood discharges is not, however, marked, but medium floods are moderated and their frequency reduced by these measures. The Committee lays particular emphasis on soil

conservation measures which comprise, among others, the maintenance of a mantle of vegetation, terracing, contour bunding, contour cultivation, gully plugging and check dams. It has rightly suggested that the soil conservation organisations in the States should be strengthened. This recommendation, no less than the Committee's other valuable suggestions, deserves the immediate and close attention of the authorities.

BUDGET REFORM—I

IT is now increasingly recognised both in India and abroad that a State's budget is more than a mere statement of revenue and expenditure. Many changes, political and economic, have taken place in this country since the first budget was presented in 1860 by the First Finance Member, James Wilson. Even before India attained independent status, the Finance Members of the Government of India had begun to take advantage of the budget session in order to give an exposition of the Government's economic policy. After the attainment of independence, however, the Government of India has been particularly anxious to utilise the budget as an instrument for directing economic trends. From a modest statement of accounts relating to civil and military expenditure of the Government, the budget has now become a source of immense power as well as significance for national economy. Successive Finance Ministers have always recognised the growing importance of the nature, purpose and function of the budget as an instrument for effecting economic changes. Accordingly, this instrument has been continuously refined, refashioned and altered to suit the growing demands of a developing economy. Apart from this consideration, the achievement of political independence by India, the financial integration of States, the dependence of States on loans and grants made to them by the Centre, and the continuing ramifications of the Central and State Governments' economic services have all served to invest the budget with a new significance. From this point of view, it is of the utmost importance that the budget should increasingly reflect popular will, on the one hand, and also expert knowledge and guidance, on the other. The finer this instrument the greater will be its utility to national economy. Appropriately enough, the Estimates Committee, in its report entitled *Budgetary Reform*, has spotlighted many of the defects which are at present found in the form in which the budget is presented and also suggested such changes as will make it a more valuable economic document. Although the Committee's suggestions have been made in the context of the Central Government's budget, they are capable of adoption by the State Governments. These suggestions, therefore, merit consideration by the Central and State Governments and also by the legislatures at the Centre and in the States.

One of the chief defects of the budget, according to the Estimates Committee, is that the budget documents do not indicate with sufficient clarity the programmes and schemes on which expenditure is proposed to be incurred and that the "subject rather than the object" of expenditure is given undue importance, with the result that many developmental and other projects get submerged under the plethora of sub-heads and minor heads, thus making it difficult to draw any rational conclusions. It is difficult not to agree with this conclusion, for the budget documents, valuable in themselves, are certainly defective in so far as it is often difficult, in the absence of any relevant reference in the Finance Minister's speech, to find out how exactly the various data presented in the budget reflect or impinge upon national economy. Indeed, the Committee's report, which is a painstaking document, insists again and again upon making available fuller and more intelligible information by the Government. Since the common man is called upon to contribute in an increasingly larger measure to the Central Exchequer and he is also affected by the changes in the budget, it is necessary that he should be enabled to know and appreciate the meaning and relevance of the budget to the business of everyday life. The Committee rightly observes that the present budget is dominated by the administrative and accounting approach which does not assist in the economic analysis of the programmes in the budget.

Because the Five-year Plan dominates the budget, it is obviously necessary to make some attempt at clarifying the Plan and the non-Plan expenditure incurred by the Government. It would, however, appear that this question was examined by the Government in 1955-56. But the authorities then felt that such a separation of estimates was not a practical proposition. The Committee learns that the whole issue is being examined again by the Government. It is to be hoped that the Government will be able to make the necessary clarification of expenditure in order to show how the budget is being continuously guided by the Plan. There are two specific suggestions which are particularly relevant to the formulation of the budget. One is the provision of lump sum or omnibus entries. The Committee rightly holds that, for proper budgeting and for a proper appreciation of the justification for expenditure provided in the budget, it is necessary that such lump sum entries should not ordinarily find a place in the budget and if, for some reason, this is inevitable, at least the sub-divisions of the proposed entries together with full justification therefor should be given in the budget documents. Another specific suggestion is that the Government's contribution to various international bodies should all be brought together under one list; brief explanatory statements should be provided as to their nature, purpose, etc.

A notable suggestion made by the Committee is in respect of presenting a performance budget which, as the term indicates, is based on functions, activities and projects undertaken by the Government; the emphasis in this form of budget is placed on the general character and the relative importance of the work to be done and the services to be rendered, rather than upon the means of accomplishment, such as personnel and services. The Committee observes that the performance-*cum*-programme system of budgeting would be ideal for a proper appreciation of the schemes and outlays included in the budget, especially in the case of large-scale developmental activities. Explaining the significance of this system of budget, it says:

> "Under this system, the functions of various organisational units would be split into programmes or activities, sub-programmes and component schemes, etc., and estimates would be presented for each. Before this is done, the schemes and programmes would have to be set in terms of measurable end-products which may differ from scheme to scheme, costs would have to be carefully determined for each, and targets in physical and monetary terms would have to be fixed. This would facilitate a review of the performance and of the proposed programme and consequently for decision making at a high level and is particularly suited to the requirements of overall budgetary planning. It is recognised, however, that the budget must also serve management purposes at and below the departmental level. The performance budget does not, therefore, rule out the existing accounting budget which is necessary for control purposes. In fact, it would be considered more or less an additional 'activity' statement, representing the information scattered over a number of budget documents or supplementing the annual reports, and split in terms of programmes, sub-programmes, projects, component schemes, etc."

In the course of a somewhat brief reference to the Defence budget, the Committee notes that the Defence estimates ought to give much fuller information about the important defence activities. It says: "It is, therefore, felt that the form of the Defence Service Estimates requires to be completely reviewed so as to show separately expenditure relating to various units, institutions, inter-service organisations, etc., and that they should contain more information than at present consistent with the requirements of the security of the country. Such a review woud have to be undertaken by the Ministry of Finance and Defence in consultation with the Chiefs of Staff." We are aware that there are many strategic considerations which generally prevent a fuller disclosure of details by the Defence Ministry. Even so, we commend the Committee's suggestion to the Government of India. After all, in a democratic State, defence of a country is as much the people's as the Government's responsibility. If their responsibility has to be appreciated by the people, it is necessary that the Government should, within the obvious limitations imposed by the strategic and other considerations, take the people into confidence.

Two topics of particular relevance to current fiscal and economic trends are the loans and grants made by the Centre to the States and the increasing volume of investments by the Central Government in industrial enterprises. The Committee insists on more detailed information in respect of these two activities. It suggests that a separate statement giving an up-to-date list of grants and loans made by the Centre and those proposed to be made should be provided; at the same time, the Government should explain the purpose of these loans and grants, their utilisation in the past and the benefits that have accrued or would accrue from the expenditure by the States of such loans and grants. As regards the Government's expenditure in the sphere of the public sector, the Committee rightly holds that Parliament has a responsibility to see that the money invested in an undertaking is properly utilised and has, therefore, the right to have all information relating to the working of public enterprises. The importance of the public sector will become clear when it is realised that, in the period of the second Plan, the Government hopes to invest some Rs. 500 crores in industrial enterprises. Unfortunately, the information provided by the Government is far too meagre to enable the public to judge the utility and the progress of the public sector.

An important suggestion made by the Committee is that the accounting years of all public enterprises should synchronise with the accounting year of the Government itself. Further, the undertakings, it is suggested, should prepare a performance and programme statement for the budget year together with the previous year's statement and it should be made available to Parliament at the time of the annual budget. Further, these bodies might also be encouraged to prepare business-type budgets which would be of use to Parliament at the time of the budget discussion. In addition, the latest accounts and balance-sheets as well as the annual reports should be made available to Parliament at the same time. It would also be desirable to bring out a consolidated volume containing the documents mentioned earlier for all the statutory bodies and private limited companies of Government, containing an "appreciation of their working and their net result on the budget, so that their impact on the national economy could be appreciated." It is certainly strange, if not also unjust, that the Government which compels by law the corporate enterprises in the private sector to disclose a large variety of details should be so chary of publishing similar information in respect of State-owned concerns.

T.V.A.

THE Tennessee Valley Authority (T.V.A) which is celebrating its twenty-fifth anniversary this year is deservedly known all the world over as an excellent instance of democratic planning. This $2-billion enterprise owes its origin to the farsightedness of the U.S. Government which foresaw the immense advantages which should accrue to the people of the Valley through harnessing the turbulent Tennessee. The T.V.A.'s activities are spread over seven American States, covering an area as large as England and Wales. Flood control, deep water navigation and hydro-electric power are among the benefits it has conferred on the people of the region. Its system of 31 dams serves to keep the Tennessee under check whilst its large hydro-electric plants generate 10 million kilowatts which are sold at 1.6 cents a unit or at only 50 per cent. of the national average. River traffic today is 25 times as large as it was before the T.V.A. came on the scene. Afforestation and measures designed to prevent soil erosion and to promote soil conservation have significantly raised soil fertility. Its savings to the nation through flood damage alone are estimated at $131 million, while the savings through low power rate policy are placed at $746 million. *Per capita* income in the region has improved from 45 per cent. of the national average to 63 per cent. Again, whereas only 3 out of 100 farms used electricity twenty-five years ago, nearly 80 per cent. of the farms use it today. Thanks to the power and other facilities made available by this enterprise, the Valley has witnessed the growth of many new industries, including food industries, fertilisers, shipbuilding, synthetic fibres, pharmaceuticals and drugs. If imitation is the sincerest form of flattery, it is certainly not without significance that 18 projects similar to the T.V.A. are already under way in different parts of the world. An enterprise which is as beneficial as it is gigantic and which is a concrete expression of America's pragmatic philosophy, the T.V.A. is for long bound to remain a source of genuine inspiration to the free world.

FOREIGN EXCHANGE CRISIS DEEPENS

GROUNDNUT OIL EXPORT—GOLD PRICES

THURSDAY, 5 P.M.

THE foreign exchange crisis confronting India has deepened considerably of late. During the first two months of the current financial year (1958-59), there was a net contraction of as much as Rs. 42 crores in foreign assets. Thus, the total of foreign securities and balances held abroad for the week ended 30th May 1958 stood at Rs. 242.42 crores, as against Rs. 284.41 crores for the week ended 4th April. If this trend were to persist—there are strong indications that it would—the country would have nothing left in its foreign assets portfolio when the ensuing year begins on 1st April 1959. Such a position cannot, of course, be allowed to occur without running serious risk to India's stability in the international economic sphere.

MARKET GOSSIP

The rapid rate at which the foreign exchange situation has deteriorated of late, notwithstanding the operation of a severely restrictive import policy, must be attributed largely to the marked setback to export trade, thanks to reduced purchases by the U.K., the biggest customer for India's products, prolongation of recession in the U.S. and slowing down of economic activity in several East European countries. It is true that the Government of India has adopted several measures designed to boost earnings from exports such as the downward revision in the export cess on tea, concessions in respect of manganese ore exports, grant of export quota for groundnut oil and H.P.S. groundnuts, and extension of the grant of rebates of customs and excise duties paid on raw materials for the manufacture of several goods exported from India. It is also true that the Government is contemplating new steps relating to export of sugar and cement, as also incentives like grant of export subsidies, tax relief and freight concessions on a number of commodities. Nevertheless, the possible improvement in export earnings as a result of all these measures may not be substantial, considering the huge import commitments that still remain to be fulfilled, especially with regard to payments for capital goods and defence imports. The production of foodgrains in the current season (1957-58) is lower by two million tons, as compared with the previous season, so that there is the need for meeting the deficit through imports which means large payment of foreign exchange. It must be remembered, too, that the scope for a further general cut in imports barring some marginal adjustments here and there is strictly limited.

Against this background, it remains to be seen what the Government proposes to do in order to ease the foreign exchange situation. There are two ways of augmenting the foreign exchange resources. First, the International Monetary Fund may be requested to grant another standby credit for a fairly large sum. Secondly, the Government may request the U.S. Administration for further substantial long-term assistance in the form of grants and loans. In any case, without substantial aid from abroad, it might prove difficult for the Government to implement even the "core" projects in the second Plan.

* * * *

Oilseeds traders have welcomed the latest decision of the Central Government to allow exports of groundnut oil (20,000 tons) and hand-picked selected groundnuts (10,000 tons), although they feel that the decision is a belated one. More than two years have elapsed, it will be recalled, since an export ban was imposed on groundnut oil and groundnuts. Traders have all along been urging the authorities to revive exports on the grounds that groundnut oil prices have declined considerably, there are good prospects for rapeseed and mustard seed crops, and internal stocks of edible oils are sizable. Even the Export Promotion Committee (August 1957) recommended that, since groundnut oil was in very great demand in overseas countries and fetched a good price, the Government should examine the ways and means of releasing a small quantity for export. The Central Oilseeds Committee also urged, on 20th March 1958, the Government to allow some export of groundnut oil. But the authorities had not conceded the plea so far on account of fears that exports of groundnut oil would raise the internal prices of oils and thereby affect the common man for whom groundnut oil is one of the articles of daily use. If the Government has since revised its decision, it is presumably because of the pressing need for earning foreign exchange.

The release of export quota for groundnut oil and H.P.S. groundnuts has not had any effect in so far as the local oilseeds market is concerned. Groundnut oil ex-mill, which had gone up from Rs. 18.12 per quarter to Rs. 18.37 yesterday following the announcement, declined today to Rs. 18.19. In the case of forward delivery (August) in groundnut, today's closing rate is Rs. 167.75 per candy, as against Rs. 167.50 before the announcement. For traders feel that the Government's decision to allow export of groundnut oil and H.P.S. groundnuts may not prove immediately helpful. The consensus of opinion seems to be that no export will be possible out of the current seasons's crop, as there is wide disparity between prices in India and those prevailing in overseas countries. The c.i.f. price of Indian groundnut oil works out to about Rs. 1,707 per ton (including the export duty of Rs. 150), as against the quotation of Rs. 1,360 in the U.K. Even with the complete abolition of export duty, the difference in price will be nearly Rs. 200. Some business is, of course, considered possible with Burma, countries in West Asia and Persian Gulf ports. The same position, it is stated, more or less holds good in the case of H.P.S. groundnuts. The export price (including the duty of Rs. 300) per ton of groundnuts (55-60 grains per ounce) works out to Rs. 1,267, which is stated to be very high. If the export duty is reduced, traders expect some business with overseas countries. Taking both oil and H.P.S. nuts together, it is felt that export business will be done out of the coming season's crop which starts arriving in the market in November. It will be interesting to note here that, on the basis of the currently ruling prices, the total foreign exchange that will be earned on exports of 20,000 tons groundnut oil and 10,000 tons H.P.S. groundnuts aggregates Rs. 3.40 crores and Rs. 1.26 crore, respectively.

The export of 20,000 tons of groundnut oil should not normally cause internal prices to shoot up, because this quantity is less than 3 per cent. of the total annual production. The Export Promotion Committee had suggested that a minimum of 50,000 tons should be exported every year and that the quantity could be increased to 100,000 tons or more a year when our crop position improved. It, of course, emphasised the need for the Government to examine the ways and means by which exports of groundnut oil did not greatly affect internal prices. In this connection, it suggested: (1) curbing internal demand for groundnut oil in difficult years by fiscal or other measures; (2) insistence on the *panaspati*, paints and varnish and soap manufacturers who are important consumers of groundnut oil to use cottonseed oil up to 25 per cent. of their requirements; and (3) imports of requisite quantities of cheaper oils like coconut oil and palm oil. A judicious use of all these measures could, in the opinion of the Committee, ensure fairly steady quantities of groundnut oil being made available for export year after year.

* * * *

In world financial circles, the question whether the U.S. would raise its official price for gold, fixed at present at $35 per ounce, has been the subject of considerable speculation. It is believed that the issue might figure somewhat prominently at the forthcoming Commonwealth Conference in September and also at the International Monetary Fund scheduled to meet in October this year. The London *Economist* has suggested that the U.S. price of gold should be raised at least three times its present level, considering the immense amount of inflation that has taken place since the price was fixed in 1933-34 when it was raised from the previous level of $20.67 per ounce. The U.S. and Canada are the two countries where the price of gold in local currency is the same as or lower than the price in 1934. The U.S. price has been unchanged since 1934. The Canadian price, in terms of Canadian dollars, has fluctuated 11-15 per cent. above and 6 per cent. below the price in 1934. In 1957, the price of gold in Canadian dollars was about 4 per cent. below that at the beginning of 1934. Neither country protects the domestic market for gold, but gold production is a much more important industry in Canada than in the U.S. In all other important gold-producing countries, the price of gold in local currency is now higher than in 1934.

The speculation over the possible increase in the official gold price in the U.S. has acquired some special significance, because of the continuing strain in balance of payments, loss of gold reserves, and economic recession in that country. Between 1956 and 1957, U.S.'s exports increased from $23,518 million to $26.262 million and imports from $20,447 million to $21.331 million. The visible balance of payments thus rose from $3,071 million to $4,931 million. However, because of the net outflow of U.S. capital which increased from $2,980 million to $3,035 million and Government loans and grants which increased from $2,321 million to $2,568 million and other transactions, there was a net transfer of gold and dollars to foreign countries to the tune of $625 million in 1957, as compared with a net gain of $923 million in 1956. Commencing from 1958, American imports have fallen only by 5 per cent., whereas exports, including economic aid and farm surplus disposals, are estimated to have fallen by 18 per cent. The net effect of this and other developments is that there has been a drain to the extent of $1,100 million on the U.S. gold stock.

The net outflow, which began in February, has brought the U.S. gold stock down to $21,700 million. This sum still exceeds the combined total of all other countries' known gold reserves. Examining the issue of an increase in the U.S. official price in the light of this trend, the June *Monthly Bank Letter* of the First National City Bank of New York points out that, of the $21.7 billion U.S. gold stock, $600 million are held in Treasury reserve account and $21.1 billion as backing for gold certificates held by the Federal Reserve Banks as their reserves. Only $11.4 billion of the Reserve Bank's holdings of gold certificates, it is stated, are needed to satisfy the legal requirements that they hold gold or gold certificates equivalent to 25 per cent. of their note and deposit liabilities. It adds: "This leaves well over $9 billion surplus gold reserves which can be used to redeem in gold the dollars held by foreign Governments and central banks. With beyond $9 billion of surplus gold reserves, there is obviously no question of any practical need to consider either raising the gold price or suspending U.S. Treasury sales at $35 an ounce and permitting the price to rise in free market." Thus the *Monthly Bank Letter* is not convinced of the argument for raising the gold price.

A somewhat plausible argument for raising the official price of gold in the U.S. is that such a measure would help arrest the recession in that country. Clearly, the effect of an increase in the price of gold on the American economy would be that of a devaluation of the dollar. Countries which are in a position to sell gold to the U.S. would find that they are able to buy American goods more cheaply. This would tend to augment U.S.'s export trade. Referring to this argument, the *Monthly Letter* observes:

> "Some observers abroad are inclined to think that the U.S. Government may be led to raise the price of gold as an anti-recession measure. The direct benefit of such an increase to American business would be minor for gold mining is of rather negligible importance. An increase would, of course, be helpful to gold-producing countries. They would gain buying power at the expense of non-producing nations. The last—and only—time the dollar price of gold was significantly changed was during the Great Depression. The situation was quite different. Then, the Federal Reserve had been embarrassed by gold shortage in fighting the depression. Now the Federal Reserve holds $9.7 billion excess gold reserves; gold is not a limiting factor in applying measures to increase money and credit supplies as aids to recovery. In 1934, the 69 per cent. increase in the gold price was designed to raise our prices generally—an object of dubious merit in the present instance. Then our policy was selfish and nationalistic; we sought to improve our trade position at the expense of other nations and incidentally threw the world currency system into a turmoil from which—with the war—it has never fully recovered. Now we have a higher respect for international responsibilities.
>
> "The dollar is used more commonly than gold in financial settlements among the nations and it is in our interest that this should be so. Any alteration in the ratio of gold to the dollar would have large implications, running far beyond a bonanza to gold miners. For example, an increase in the dollar price would penalise foreign Governments, banks, and individuals who have trusted the dollar; it would hand out windfall profits to those who have not. The intricate world-wide machinery of industry and trade needs credit and trust as lubricants. The very talk of a rise in the dollar price of gold is a threat to prosperity. The sooner the question ceases to disturb men's minds the better.
>
> "Any nation can raise the price it will pay in its own currency for gold. An increase in the price of gold is tantamount to—or a method of—currency devaluation. Many nations, sometimes more than once, have devalued their currencies over the post-war period. They have done so reluctantly, because they had to. It is natural that currency devaluations should be undertaken with greatest reluctance. For devaluation generally means higher prices and higher prices are unpopular. The United States is no exception to this rule. The dollar price of gold will scarcely be advanced unless the need to do so becomes imperative and inescapable.
>
> "The most imposing argument for an increase in the gold price is that the growth of world trade plus inflation create a need for more gold reserves which can be provided by marking up the price, world-wide. *The Economist*, for example, draws a conclusion that the price of gold should be trebled because dollar prices of many commodities have trebled over the past 20 years or since the last world-wide round of gold price increases was completed. This is getting the cart before the horse; the inflation of the past 20 years got its gold base out of the excessive rise in gold price and enormous stimulation to gold production. If the gold price were to be related to commodity prices and marked up every time commodity prices rose, it would cease to have use or meaning as an official currency standard. The use of any fixed gold price is to check excessive credit expansion and rising commodity prices.
>
> "Any comparison of the gold position today with 20 years ago would show a scarcity because we have indulged in so much inflation in the meantime. But to raise the price of gold dramatically at this juncture would be to destroy faith in all the currencies of the Western world. In the 1930's gold price increases had a legitimate object of encouraging recovery of a painfully and inequitably deflated world price structure. Inflation today is barely mastered. We should have no wish to give it a longer lease on life."

An increase in gold price would, of course, mean a substantial benefit to the world's gold producers. It would, however, also mean a special bonus to the Soviet Union which, as is well known, is a significant producer of gold. In 1957, world production of gold (excluding output in the Soviet bloc) aggregated $1,020 million, as against $980 million in 1956. South Africa increased its output from $556 million to $596 million; Canada from $154 million to $155 million; in the U.S., however, production declined slightly by $1 million to $64 million. No reliable estimates of gold production in the Soviet Union are available. The estimates for annual production in recent years vary from $150 million to $560 million. One estimate places Soviet gold production in 1957 at $600 million or nearly the same as in South Africa. In recent years, the Soviet Union has sold its gold to foreign countries; during the 12-year period 1946-57, such sales are estimated at $900-1,300 million. It can certainly afford to export its gold, because it is not only a large producer of gold but its gold holdings are also known to be very large; its gold holdings are believed to be $7 billion or more. Naturally enough, the U.S. would be reluctant to adopt a measure which would artificially buttress the economic strength of the Soviet Union in the international sphere.

SHARE MARKET DULL

UNDERTONE STEADY

(From Our Own Correspondents)

BOMBAY, *5th June*

IN the absence of any fresh incentives, the share market ruled dull during the week under review. The undertone over the week was, however, steady with modest gains in prices in all sections except in textile counters. The recovery in prices which followed the withdrawal of the strike in T.I.S.Co. works at Jamshedpur was well maintained in the new account which opened on Monday this week also, but subsequently the market became lethargic and a minor setback was recorded in prices. Despite the easy money conditions, the market would appear to be in no mood to forge ahead. The none too encouraging reports from the cloth market and fears about fresh crisis in foreign exchange were the main disquieting factors. There was, however, no heavy selling pressure and prices managed to score small gains in most counters.

In the steel section, Tata Ordinaries advanced early in the week from Rs. 179.50 to Rs. 182.25, but subsequently shaded off to Rs. 181.25 at the close. The sharp fall in the Company's production last month did not have any notable effect on the shares, as it had already been discounted in prices. The output of saleable steel in May fell to 28,500 tons from the previous month's figure of 63,000 tons and 65,100 tons in the corresponding month of 1957. Steel ingots have declined from 100,300 tons to 52,900 tons and pig iron from 95,000 tons to 57,400 tons, the corresponding figures for May 1957 being 86,660 tons and 91,300 tons respectively. The new shares gained over the week Re. 1.25 to Rs. 178.75. After an early rise from Rs. 21.48 to Rs. 21.68, Indian Irons slowly receded to Rs.21.44.

Among textiles, Bombay Dyeings gained from Rs. 53.30 to Rs. 53.50 before receding to Rs. 52.90 yesterday. Today, however, they improved to Rs. 53.20 at the close. Centurys rose from Rs. 425.75 to Rs. 427.50, but staged a sharp fall to Rs. 419.50. The closing was better at Rs. 421.75. Kohinoors gave way from Rs. 263.25 to Rs. 256.50. Central Indias were featureless at Rs. 81.50, as also Finlays at Rs. 260. Gokaks were marked down by Rs. 7 to Rs. 130 and Indu Ordinaries by 36 nP to Rs. 8.72. Indore Malwas shed Rs. 3.25 to Rs. 104.75, while Khataus gathered Rs. 5 to Rs. 167.50. New Greats were done Rs. 2 lower at Rs. 200.

Bank shares were featureless. Barodas showed no change at Rs. 116, while Centrals were a shade quiet at Rs. 53.30. Their new shares were maintained at Rs. 55.70, while Bank of Indias gained Re. 1.50 to Rs. 133. Bank of Bikaners were done at Rs. 21.52 *ex-div.* and Jodhpur had business at Rs. 1.30.

Fractional gains were recorded in electricity shares. Ahmedabad Electrics picked up 35 nP to Rs. 95 and Bombay Suburbans 25 nP to Rs. 106. Tata Hydros were 25 nP higher at Rs. 118 and Tata Powers by Rs. 7.50 at Rs. 1,215, while Andhra Valleys were unchanged at Rs. 1,137.50.

Sugar shares ruled better. Belapurs moved up over the week by Re. 1.50 to Rs. 247. Bhopals gathered Re. 1.16 to Rs. 21 and Phaltans Re. 1.50 to Rs. 146. Walchandnagars were unchanged over the week at Rs. 263.50. Cements were also marked up. Associated Cements moved up from Rs. 148.50 to Rs. 150.75, but shaded off to Rs. 149.75 at the close. Their new shares were unchanged at Rs. 144. Digvijays hardened by Re. 1.75 to Rs. 145 and Orissa Cements by 44 nP to Rs. 12.16. In the engineering and mining group, Alcocks were featureless at Rs. 243.75, as against Rs. 245. Tata Locomotives were in good favour early in the week and rose from Rs. 166.50 to Rs. 171.50, but sagged subsequently to Rs. 168.75. Premier Constructions staged a spurt from Rs. 181.25 to Rs. 186.50 and Mahindras gained 44 nP to Rs. 18.96. Shivrajpurs were unchanged at Rs. 80.50, while Indian Coppers were steady at Rs. 3.10.

In the shipping group, Great Easterns provided a feature with a spurt of Re. 1.20 to Rs. 21.12 on reports about the Company's expansion programme. Scindias moved narrowly between Rs. 17.60 and Rs. 17.40 and closed at Rs. 17.44 with no change over the week. Among automobiles, Hindustan Motors were dull at Rs. 6.96, while Premier Automobiles scored a gain of Re. 1.30 to Rs. 31.80.

In the miscellaneous section, Bombay Burmahs (old) improved from Rs. 548.50 to Rs. 555.50, following the cut in excise duty and export cess on tea, but gave way to close at Rs. 549.50. National Rayons advanced from Rs. 234 to Rs. 239.25, before reacting to close at Rs. 236. Gwalior Rayons had business Re. 1 higher at Rs. 13.12. Tata Chemicals gained 44 nP to Rs. 15.28. Alembic Chemicals shot up by Rs. 21 to Rs. 156 on reports that the Company had decided to put up a plant for manufacture of penicillin and in order to finance the expansion programme the Company proposed to raise fresh capital to the tune of Rs. 23 lakhs. Tata Oils spurted by Rs. 2.25 to Rs. 40.25. Killick Industries were Re. 1.75 lower at Rs. 147.25.

Calcutta Stock Exchange

CALCUTTA, *4th June*

Although there was a spell of profit-taking on the Calcutta Stock Exchange earlier in the week under review, steadier conditions set in as the week progressed. There was an increase in the volume of business, but gains were fractional in character, reflecting the caution of operators, in view of the economic uncertainties arising from the port workers' threat to go on strike as from 16th June and the fresh foreign exchange crisis. In view of the cut in imports of raw materials and spares for plants, industrial production, particularly engineering, has slowed down, and there have been recent instances of lay-off in view of paucity of raw materials, especially in the steel fabricating industry. These factors naturally justified the caution of operators. After remaining quiet for most part of the week, tea shares ruled steady from Monday and more scrips changed hands. This was naturally attributed to the scaling down of the excise duty and the cut in export cess announced by Government over the week-end. Reports from Jamshedpur were encouraging, and it was hoped that the loss of production, estimated at Rs. 1 crore, consequent on the recent labour troubles would be made up in the current working year itself. Engineering shares were steady and attracted investment buying. There were more sellers in cotton textiles in view of the unfavourable conditions facing the industry and Government's shelving of the question of further relief to the industry by appointing an investigating committee. Among jutes, shares of the fully modernised mills which were understood to be working better, continued to attract support. Coals, on the other hand, were quiet.

With restricted turnover, a sagging tendency was in evidence in coals. Pench Valleys moved down to Rs. 19.25 from Rs. 19.56, while Burrakurs were unchanged at Rs. 21.87. At Rs. 11.37, Raneegunges were fractionally lower.

Jutes continued to respond to selective enquiry. From Rs. 15.37 New Centrals gained to Rs. 15.81. Fort Glosters were accorded support to rise from Rs. 320 to Rs. 333. Ganges were taken to Rs. 51.50 from Rs. 48.00. Nuddeas hardened to Rs. 39 from Rs. 38.50. On the other hand, Kanknarrahs gave way to Rs 47 from Rs. 51, consequent on the Director's decision to skip over the dividend for 1957 when the loss amounted to over Rs. 20 lakhs.

Shares of paper mills changed hands at advancing rates. From Rs. 11.19 Sirpurs rose to Rs. 11.75. Shree Gopals realised Rs. 15.87, as against Rs. 14.62 previously. Orients picked Re. 1.25 at Rs. 32.25. Titaghurs were fractionally higher at Rs. 38.75, as were India Pulps at Rs. 21.12.

Engineering shares moved within narrow limits. Indian Irons opened at Rs. 21.53 and rose to Rs. 21.57 to close at Rs. 21.52. Marshalls moved up to Rs. 5.87 from Rs 5.50 on publication of a good working report. For the year ended June last, the gross profit increased to Rs. 7.08 lakhs from Rs. 5.19 lakhs and the dividend has been maintained at 20 per cent. Texmacos recovered to Rs. 18.50 from Rs. 17.70, while Burn & Cos. sagged to Rs. 338 from Rs. 342.

Miscellaneous industrials accounted for several features. Indian Oxygens at Rs. 18.50 registered a further rise by 25 nP. Bengal Flour Mills changed hands at Rs. 30, as against Rs. 28.50 previously. At Rs. 18.37, Angelo Bros. gained one point. Firm support raised Orissa Minerals to Rs. 25.62 from Rs. 25.37. Dunlop Rubbers were steady at Rs. 26.25 as were Hindusthan Levers at Rs. 25.27. Rohtas Industries were taken up to Rs. 19.31 from Rs. 18.37, and Indian Aluminiums to Rs. 15.50 from Rs. 14.84. Indian Cables gained strength to Rs. 35.50 from Rs. 34.37.

Teas firmed up in the latter part of the week following the cut in excise duty and export cess and official promise of early relief to producers of common teas. Methonis improved to Rs. 17.37 from Rs. 16.62 and Rangamattees to Rs. 68 from Rs. 67. Brooke Bonds recovered to Rs. 17.50 from Rs. 17.06.

• • • •

Madras Stock Exchange

MADRAS, *3rd June*

The Madras Stock Exchange presented a fully steady trend during the week under review with the exception of textile shares which continued to remain depressed. Transactions put through were larger in the previous week and prices registered an improvement. Plantation shares came in for good attention of operators, thanks to the cut in export cess on tea from Rs. 4 to Rs. 2 per 100 lbs. and the reduction in excise duty on teas which are not used in the manufacture of packaged tea from an anna to half an anna per lb. with effect from the 1st inst. Coffee and rubber shares were also well supported. The sugar, electrics and miscellaneous industrials were fully steady. Textiles, however, were featureless in the absence of encouraging offtake.

Among tea shares in the planting section, Parksides were marked up by 53 nP to Rs. 16.85. Peermades and Nonsuch Teas improved by 13 nP each to Rs. 20.50 and Rs. 21.75 respectively. Neelamalais and Kil Kotagiris rose by 10 nP each, the former to Rs. 4.35 and the latter to Rs. 5.60. Chembras were quoted 6 nP higher at Rs. 3.73. Periakaramalais gathered 4 nP to Rs. 4.16 and Blue Mountains 3 nP to Rs. 3. Balanoors increased by 25 nP to Rs. 16.25 *cum-div.*, despite the cut in dividend to 17½ per cent. for the year ended 31st March 1957 from 25 per cent. in the previous year. Among coffee shares, Consolidated Coffees firmed up by 35 nP to Rs. 25.45. Bababudins were better by 12 nP at Rs. 12.12. Coffee Lands put on 5 nP to Rs. 35.30. Among rubber shares, Mercaras strengthened by 35 nP to Rs. 7. Vaikundams hardened by 23 nP to Rs. 20.43, Malankaras by 20 nP to Rs. 17, Cochin Malabars by 15 nP to Rs. 4.75, Pulangodes by 5 nP to Rs. 1.70 and Nelliampathys by 3 nP to Rs. 3.08.

Textiles as stated earlier, encountered selling. R.C. Ambikais were pushed down by Rs. 20 to Rs. 126. Vasantas slumped by Rs. 9 to Rs. 230. Coimbatore Murugans dropped Rs. 5 to Rs. 110. Janardans eased by Rs. 3 to Rs. 72. Loyals and Coimbatore Cottons lost Rs. 2 each to Rs. 33.50 and Rs. 137 respectively. Ranga Vilas receded by Re. 1.50 to Rs. 57.50. Metturs softened by a rupee to Rs. 348.

Among miscellaneous industrials, Textools evoked good support and rallied Rs. 2 to Rs. 180. Spencers advanced by 40 nP to Rs. 17.75 *cum-div.* Mysore Chemical Manufacturings improved by 60 nP to Rs. 16. Aluminium Industries increased by 35 nP to Rs. 14.35 and F.A.C.Ts by 28 nP to Rs. 5.40.

NEWS IN BRIEF

ORDINARY coconut shell charcoal has been decontrolled for the purpose of export with effect from 29th May 1958.

The Government of India has decided to award 45 scholarships to Indian nationals for practical training in West Germany in different branches of engineering and technology excepting chemical engineering and technology.

A new oil spring has been traced at Longsilil, six miles from Sibsagar town (Assam), by the Natural Gas and Oil Research Department. Drilling operations are expected to start in the current month, with the assistance of some Russian experts.

India and Czechoslovakia have reached agreement on the establishment of an assembly plant of electrical meters in India with Czech technical help. The planned yearly output of the plant is put at 60,000 electrical meters.

The Government of India has fixed the price of tea for the purpose of determining the export duty at Rs. 3.50 per pound, as against Rs. 3.24 per pound in force from 1st May 1958. There is no change in the existing rate of duty of 38 nP per pound.

The Union Ministry of Works, Housing and Supply has appointed an *ad hoc* committee to assist the Government in implementing the announcements in the Lok Sabha that a part of the work-charged staff will be brought on to the regular categories which had been in existence for at least three years, would be made permanent.

The Committee of the Indian Jute Mills' Association has unanimously decided that the minimum selling prices for gunnies fixed by the Committee last February should be maintained by the mills. The Committee has agreed that the reasons for fixing the minimum prices are still valid and that the statistical position does not warrant the downward pressure on prices brought about in the past few days by the manipulations of bear operators.

The Government has decided that the procedure for export out of India of articles under claim for rebate of duty on excisable goods used in their manufacture should be extended to cotton sola hats as well. It is already applicable to ready-made apparel, tents, sugar products, cotton bags, umbrella cloth, chaddars, pillow cases, table covers, embroideries, laces, tarpaulins, mosquito nets and ground-sheets.

With a view to imparting knowledge of efficient management to small *entrepreneurs*, the Small Industries Service Institute of the Government of India is organising a business management training course. This course will be held thrice a week in the evening. Full particulars about the course can be had from the Deputy Director, Business Management and Training, Small Industries Service Institute, 40-40A, Cawasji Patel Street, Bombay-1.

The eleventh annual conference of the All-India Plastics Manufacturers' Association will be held in Bombay on the 13th and 14th inst. The conference will be inaugurated by Mr. Manubai M. Shah, Union Minister for Industry, and presided over by Mr. Ambalal Kilachand. The conference will discuss the various problems confronting the plastics industry and take suitable decisions. A symposium is also proposed to be organised during the conference at which eminent persons in the field of plastics will read papers on the technical aspects of plastics industry. The organisers of the conference are, besides, arranging a film show on plastics.

The Government of India has decided to grant licences for import of copra to non-scheduled soap manufacturers also although, such licences will be restricted to those units which are registered under the excise regulations and have been paying excise duty. The Government has also decided to validate licences issued to soap manufacturers, both in the scheduled and non-scheduled sectors on an *ad hoc* basis to permit imports of coconut oil upto a certain extent against licences for copra granted to them. This import will have to be arranged within the face value of the licences granted to them for import of copra.

A committee has been set up by the Government of India, with Mr. Mahavir Tyagi, M.P., as Chairman, to go into the question of the administration and procedure of the Income-tax Department. The other members of the Committee are: Mr. Rajendra Pratap Sinha, M.P., Mr. B. M. Gupte, Mr. G. P. Kapadia, President of the Indian Merchants' Chamber, Bombay, and Mr. K. S. Sundara Rajan, Member, Central Board of Revenue. Mr. F. M. Vallibhoy, Commissioner of Income-tax, Bombay South, will act as Secretary. The Committee will advise the Government on the administrative organisation and procedures necessary for implementing the integrated scheme of direct taxation to eliminate evasion and avoid inconvenience to the assessees. It is expected to submit its report before 31st March 1959.

The prices of "Hindustan Machines" have been substantially reduced according to an announcement by the State-owned Hindustan Machine Tools. The 1,000-mm. lathe which was hitherto costing Rs. 36,000 will now cost Rs. 29,500 only. This reduction will be applicable in respect of all orders booked from 1st June 1958. When the Factory started production in May 1956, the lathe price was fixed at Rs. 30,000, as against the imported landed cost of corresponding Swiss lathe at Rs. 40,500. The same was reduced to Rs. 36,000 with effect from 1st June 1957. The sale prices of 1,500-mm. lathes and six types of milling machines have also been progressively reduced so that all machines produced by the Company are sold below the landed cost of imported machines of equivalent quality.

India produced minerals worth Rs. 125.70 crores during 1957 as against Rs. 19.82 crores in 1956. The increase of Rs. 17.5 crores or 16 per cent. was due mainly to higher production of coal, iron ore, lead and zinc ore, limestone and salt. The higher prices of manganese ore and coal in the first and latter halves of year also accounted for this increase. Coal with an output of 43.5 million tons was the leading commodity and was valued at Rs. 81.4 crores, an increase of 4.1 million tons over that in 1956. The share of the State collieries in the increase was about 390,000 tons. Next in order of importance were manganese ore (Rs. 13.9 crores), salt (Rs. 7.4 crores), gold (Rs. 5.1 crores), iron ore (Rs. 4.3 crores), limestone (Rs. 3.8 crores), copper ore (Rs. 2.7 crores), mica (Rs. 2.3 crores), and ilmenite (Rs. 1.7 crore). The overall position is indicated by the quantity index of mineral production which stood at 123.2 in 1957 (base: 1951=100), as compared with 116.7 in 1956.

From Abroad

The United States has given a loan of $25 million (about £9 million) to Chile for economic development.

The United States has lent to the Burmese Government $10 million to help strengthen its internal security forces. The loan covers a period of 40 years and is repayable in either Burmese or American currency.

The Government of Malaya has announced that it is going ahead with plans to establish a Central Bank. Under the proposed Malayan legislation, Singapore will come under the jurisdiction of the Malayan Central Bank.

The turnover of the West German chemical industry in the first quarter of 1958 amounted to £370 million which is 5 per cent. higher as compared with the corresponding quarter of last year, when the annual rate of increase was 16 per cent.

The U.S. Government and private banks have lent Colombia $103 million to help fill the gap caused by declining coffee prices. It is said that in addition to this, Brazil is also conducting aid discussions with the International Monetary Fund.

Bulk buying of tea in the Republic of Ireland came to an end on Sunday this week, with the winding-up of the State-sponsored firm, Tea Imports Ltd., the sole authority for importing tea. Henceforward individual importers will buy tea direct from foreign exporters.

The Government of Pakistan has decided to float two new loans, 3 per cent. loan 1963 and 3½ per cent. loan 1970-71, for financing the development plans of the Central and Provincial Governments. Subscriptions to the loans will be received from the 14th inst. The 3 per cent. loan will be kept open until further notice.

A report from Canada's Trade Department states that 136 foreign companies set up new plants in Canada last year as compared with 150 in the preceding year. The 1957 total included 105 from the U.S., 19 from the U.K. and 12 from other countries. The new plants covered a wide range of products, including electronic equipments, steel mill equipment, electric tools and transformers.

German Borgward cars and lorries will soon be built in Argentina by Borgward-Argentina, a subsidiary, and Dinfia, an Argentine aircraft company. The new plant, which will be built at Cordoba, is expected to turn out 10,000 vehicles a year within three years after it goes into production.

The United States will provide $2.5 million (about Rs. 1.25 crore) towards the cost of the Jordan Valley irrigation project under an agreement signed in Amman on the 1st inst. The project is expected to help greatly the planting of sugarcane and beet, rice and other important produce. The total cost of the scheme is £4.5 million (about Rs. 5.85 crores).

The Persian Senate has ratified the Persian Pan-American Oil Agreement under which the National Iranian Oil Company will grant an exploration concession in the remaining area of the "open" district No. 1 in the Persian Gulf to Pan-American Petroleum which is a subsidiary of Standard Oil. The agreement provides for the setting up of a joint concern to be known as the Iran Pan-American Oil Company and under it Persia will receive a cash bonus of $25 million.

The U.S. Atomic Energy Commission and the Department of Defence have announced plans to build a cobalt 60-gamma food irradiator which will become a part of the projected U.S. Army Ionizing Radiation Centre at Lathrop, California. The gamma facility will be used by the Army Quartermaster Corps in connection with its food preservation project, replacing the food irradiation reactor previously proposed as the gamma radiation source for the centre. Source of the gamma facility's radiation will be approximately two million curies of radioactive cobalt 60. This amount of radioactive cobalt is several times greater than the quantity of cobalt 60 now in use in the U.S. (approximately 350,000 curies).

International air cargo movements to and from the United States in 1965 will be equivalent to moving 328,110 tons between Bombay and New York City, according to a forecast made by an American air transportation expert, Mr. Stanley E. Brewer. International air cargo moved to and from the United States in 1965 will be more than ten times the quantity moved in 1956. The rate of growth of U.S. international air cargo for the period 1961 to 1965 will be between 27 and 32 per cent. per year, according to a forecast by Mr. Brewer. The Brewer study states that the air cargo potential is greater in the U.S. international market than in the U.S. domestic market because of the longer distances to cover and the slower speed of competing forms of transportation.

PERSONAL

MR. A. R. H. Ismail, a Bombay City business man, has been appointed Consul for the Dominican Republic in Bombay.

Mr. J. N. Sen Gupta has joined the Forward Markets Commission as a member. He was a member of the Trades Sub-Committee of the National Planning Committee set-up by the Indian National Congress in 1939-40.

Mr. Gopala Menon, India's Consul-General in New York, has been elected President of the 68-member Society of Foreign Consuls at its annual meeting. Mr. Menon was Secretary of the Society last year.

Mr. M. Ganapati, till recently General Manager of the Western Railway, left Bombay for Rourkela on Wednesday last to take up his new appointment as Resident Director of the Rourkela steel plant.

Dr. H. J. Bhabha, Chairman of the Atomic Energy Commission, returned to Bombay from Paris on Friday last after attending the meeting of the U.N. Scientific Advisory Committee on Peaceful Uses of Atomic Energy held at Geneva last month.

Mr. R. Venkataraman, Minister for Industries and Labour, Government of Madras, is the leader of the Indian Delegation to the 42nd session of the International Labour Conference, which commenced at Geneva on 4th June. The other members of the delegation are: Mr. L. N. Mishra, M.P., Parliamentary Secretary to the Minister for Labour and Employment (Government), Mr. Babhubhai M. Chinai, M.P. (Employers' group) and Mr. G. Ramanujam, President, I.N.T.U.C. (Workers' group).

They're marvellous— so crisp, so nourishing!

That's because they are made in a most modern factory from selected material with added vitamins under expert supervision and perfect hygienic conditions. No wonder Sathe's Biscuits are always so good to eat, crisp and tasty.

RELIEF TO TEA INDUSTRY

THE Government of India has at last granted some relief to the Indian tea industry, which is overburdened with heavy taxation and is at the same time facing increasing competition from other countries which have a lower cost of production than India. It has thus reduced by 50 per cent., that is, from Rs. 4 per 100 lbs. to Rs. 2, the cess on export of tea with effect from the 1st inst. Simultaneously, the Government has halved the excise duty on tea leviable at the factory stage with effect from the same date. While the former relief is intended to promote exports of Indian tea, the latter step is expected to promote internal consumption. The cut in export cess, it is stated, is only a temporary relief, effective for two or three months, till the Government is able to formulate a scheme of giving relief to the tea export trade on a permanent basis. It is common knowledge that the tea producers, particularly those of common tea, have been asking for a reduction, if not the abolition, of export duty on common tea, which constitutes the major portion of India's tea output. While the Government in recent months has given expression to its appreciation of the tea industry's difficulties and has promised some relief, it has not been able to announce immediately a reduction in export duty, particularly on common teas, consequent on the difficulty of ascertaining what is "common tea."

Announcing the decision to give the aforesaid relief, the Government, in the course of a Press note, says:

"The question of affording some relief to the tea industry has been engaging the attention of the Government. It has not, however, been possible yet to devise a scheme by which a greater quantum of relief is secured by the producers of the common teas as distinct from the superior categories.

"Pending a further study of this problem, which is bound to take some time, in order to provide some immediate relief the Government of India has decided that the excise duty on teas which are not used in the manufacture of packaged tea should be reduced to half anna per pound (lb.); and the cess of Rs. 4 per 100 pounds levied on teas exported outside India under the provisions of Section 25(1) of the Tea Act, 1953, should be halved."

The present rate of excise duty is one anna on internal loose tea and As. 4 per lb. for packet tea up to 60 lbs. packet. These rates of duties were brought into effect on 15th April 1953, as against a flat rate of As. 3 per lb. on all teas which prevailed earlier. In reducing the export cess from Rs. 4 to Rs. 2 per 100 lbs., the Government has restored it, albeit temporarily, to the level which prevailed before 25th November 1954, from which date it was raised to Rs. 4. The year 1954, it will be remembered, was a boom period for the tea industry and the Government wanted to share the prosperity of the industry. Accordingly, it raised the export duty on tea from As. 4 to As. 7 with effect from 3rd October 1954. This was followed by the increase in export cess from 25th November 1954. On 7th January 1955, the Government once again raised the export duty to As. 10 per lb. Along with this increase, the Government announced its intention to introduce a slab system of export duty on lines adopted in Ceylon. The slab system of export duty came into effect from 1st March 1955 and remains in effect till date, but the slabs were modified on 1st April 1956, as the following table shows:

Price per lb.	*Duty per lb. from 1-3-1955*	*Duty per lb. from 1-4-1956*
	As.	As.
Up to Rs. 2-8 ..	4	4
Rs. 2-8 to Rs. 3-4 ..	6	6
Rs. 3-4 to Rs. 4 ..	8	
Rs. 4 to Rs. 4-12 ..	10	10
Above Rs. 4-12 ..	12	12

The price of tea for the purpose of determining the export duty for a particular month is fixed by the Government on the first of that month on the basis of "world price" which prevailed in the preceding month. The main defect of this system of export duty is that all varieties of tea irrespective of the prices fetched by them have to bear the same rate of duty.

As the bulk of India's production consists of common tea, the average prices fetched in the export and internal auctions in recent years have fallen within the lowest slab. Thus, in 1957-58, the average price realised in the Calcutta export auctions was Rs. 2.10 per lb., as against Rs. 2.37 in 1956-57, Rs. 2.03 in 1955-56 and Rs. 3.09 in 1954-55, with the result that the burden of export duty has proved to be heaviest on common teas which fetch much below the general average and which are becoming increasingly difficult of sale in world markets. While the cost of production of these teas has also grown substantially, the African countries, which are able to produce at a much lower cost, are successfully competing with Indian teas. To give relief to tea producers in India, the tea growers had suggested two alternative measures: (1) to levy export duty on an *ad-valorem* basis or (2) to fix the price for the purpose of levying export duty on the basis of the averages of Calcutta and Cochin sales, instead of on the basis of the London price. The Plantation Enquiry Commission suggested that the previous six months' weighted average price of Indian tea sold in the London auction might be taken, instead of determining the weighted average of the preceding month's auctions in London. None of these suggestions were acceptable to the Government of India.

There has, however, been a welcome change recently in the Government's attitude towards the industry and has promised to give some relief in export duty, but the main difficulty lies in evolving a practical definition of "common teas." The Government has not, of course, given up the idea of studying the problem. It has thought fit, in the meantime, to give an interim relief, as stated at the outset. The falling level of foreign exchange earnings has obviously prompted the Government to provide some reliefs to the industry. In 1957, India exported 447 million lbs. of tea valued at Rs. 107 crores, as against 523 million lbs. of the value of Rs. 143.3 crores in 1956 and 367 million lbs. (Rs. 113.53 crores) in 1955. It will thus be seen that, though the quantity exported in 1957 was higher than in 1955, the foreign exchange earnings were Rs. 6.5 crores lower. It is to be hoped that the Government will be able to work out a rationalised system of export duty before the next session of Parliament commences, when a Bill based on the system can be introduced and passed.

PRODUCTIVITY

The commendable awareness of the importance of productivity as a factor contributing to higher production and better living standards shown by both employers and labour union leaders augurs well for the success of the productivity movement in India. As the experience of other countries, notably that of Israel, has shown, the movement can succeed only if productivity-consciousness seeps through every section of the community and an attitude receptive to the idea of higher productivity develops among workers, employers and the general public. It was this realisation that led to the establishment by the Government last year of the National Productivity Council. The Council, as is well known, is intended to be a central institution for stimulating productivity-consciousness and for organising training programmes in the technique of productivity improvement. It is proposed to set up 15 local productivity councils which will be the main vehicles for propagating productivity concepts. A few local councils have already been established.

Inaugurating a meeting of employers and employees convened to discuss the formation of the Madras Productivity Council, Mr. R. Venkataraman, the State's Minister for Industries and Labour, underlined the importance of higher productivity and indicated some of the methods of achieving it. He also drew attention to certain essential prerequisites for the success of the productivity drive. He maintained that higher productivity was one of the major factors which could make the Plan a success.

The Minister rightly emphasised that, if higher productivity were to be achieved, it was necessary to secure the most effective utilisation of men, materials and machines. That these are not being put to the optimum use and that there is scope for improvement in their utilisation was pointed out by Dr. Pabst, U.N. Technical Assistance Expert on statistical quality control, who recently made a survey of Indian industries. According to him, a 20 to 50 per cent. increase in output could be achieved, without any expansion in plant capacity, by a rational balancing of machines and facilities, by specifying and holding to standards and optimum utilisation of materials. By increasing the operational efficiency of existing factors and industries higher production could be achieved and capital investments on new units could be saved.

An important factor to be reckoned with, in introducing high productivity techniques in industries. is the attitude of labour. As. Mr. Venkataraman pointed out, since the problem is one of human relations it requires cautious and careful handling. Labour should be made to feel that its interest will not be harmed. The fear of unduly high level of expected work performance, unemployment and doubts as to the other consequences of increased productivity should be removed from their minds. Oftentimes, labour's opposition springs from exaggerated fears of the effects of higher productivity on employment. The assurance given by the Government of India that surplus labour resulting from higher productivity would not be made to suffer should dispel these fears. It is good to remember that the scheme can succeed only in a climate of good employer-employee relations. This is the reason why the I.L.O. Productivity Mission to the underdeveloped countries is careful to see that the technique of productivity improvement is introduced only in industries or units having reasonably satisfactory labour-management relations.

The drive for higher productivity may have to face many obstacles but the goal is worth striving for. Higher productivity and higher standards of living go hand in hand. As J. B. Shearer, Chief of the I.L.O. Productivity Mission to India observed, "the higher productivity approach is the cheapest way to increase the standard of living."

TONING UP ADMINISTRATION

It is a truism that the success of any scheme for economic development will depend to a very great extent on the way in which those who are in its charge implement it. In the present context of the increasing scope and tempo of commitments under the second Five-year Plan, the need for maintaining efficiency, integrity and economy in administration cannot be stressed too strongly. This is possible only if each executive devotes continuous attention to the problem. Viewed thus, the Prime Minister, Mr. Jawaharlal Nehru, has, indeed, done well to urge his colleagues in the Government personally to keep in touch with the work of the Organisation and Methods Division as part of the general drive to improve the speed and efficiency of the administrative machinery. A communication to this effect is reported to have been addressed to Cabinet Ministers and Ministers of State in the Central Government.

Thanks to the growth in the magnitude and complexity of Government business, as well as to the importance of taking quick decisions, greater attention has been given in recent years to administrative organisation, as witness the setting up of the Organisation and Methods Directorate in the Central Cabinet Secretariat sometime ago. Although some improvement has taken place since the time the Directorate was set up, there are still, as Mr. Nehru is believed to have pointed out, too many instances of avoidable delay, neglect, and faulty planning and execution, especially in matters which require joint or co-ordinated action by several Ministries or Departments. How else can one explain the liberalisation of import restrictions during the years 1955 and 1956 and the issue of large licences for a variety of merchandise? It is the lack of co-ordination (of policies) and co-operation (in their administration) among the various ministries as a whole and the Planning Commission that has been responsible for the present none too happy position on the foreign exchange front. Otherwise, it is difficult, as this journal stated on an earlier occasion, to understand why, during the years 1955 and 1956, the Finance Ministry remained silent when heavy import licensing was going on and why the Planning Commission did not act promptly in warning the public and the authorities.

Mr. Nehru has drawn special attention to the delay in execution which is one of the chief reasons for waste and misdirection of resources. The delay in execution, in turn, is attributed to delay in according sanctions. It is needless to say that the remedy for this lies in greater decentralisation, so that each Ministry is made more responsible for carrying out its project

than it has been in the past. Mr. Nehru has also made special mention of the activities of the Administrative Vigilance Division created in 1955 for the maintenance of integrity in public administration. His review reveals that in 1957, as many as 578 preliminary enquiries and 483 regular cases were registered. These involved 180 gazetted officers and 684 non-gazetted personnel. Convictions were secured against 84 Government servants and 247 other Government servants were punished departmentally. The officers against whom action was successfully taken included a Secretary to the Government, a Joint Secretary, other heads of departments, senior officers of Railways and of the Supplies, Central Public Works and other departments. It is to be hoped that these stern measures will be reflected in a significant improvement in the integrity of the services.

SOUTHERN ZONAL COUNCIL

Ootacamund was the venue of the third meeting of the Southern Zonal Council, inaugurated by Mr. Govind Ballabh Pant, Union Home Minister, on the 1st inst. The Zone, it will be recalled, came into being in July last and consists of four States, namely, Andhra Pradesh, Kerala, Madras and Mysore. It covers an area of 248,130 sq. miles and a population of about 99 million, representing nearly 25 per cent. of the country's entire population. The Council has been set up, as in the case of the four other Zonal Councils, primarily with the object of bringing the contiguous States on a common platform for considering the administrative and economic issues of mutual interest.

Inaugurating the meeting, Mr. Pant expressed particular satisfaction at the improvement in the food position since the Council met last (in September 1957). He observed that, although the Southern Zone for rice had been in existence for less than a year and despite some stresses and strains, the overall result of movement control had been to stabilise the price level and to make surplus foodgrains available to areas where it was needed most. Incidentally, he disclosed that the Union Government had agreed to supply 12,000 tons of rice per month to Kerala during the three months, May to July 1958. Mr. Pant, however, made it clear that the Centre, despite pressing demands from States was rather unable to supplement the available rice stocks, in view of the serious difficulties involved in importing rice. He made a fervent plea for stepping up rice production in the Zone locally, especially in the coastal districts which can be fertilised by the maximum utilisation of Andhra rivers and in the dry belt in South India bordering the eastern side of the Western Ghats.

One of the most effective ways of raising food production lies in harnessing water resources within the Zone on a co-operative basis. Stressing this aspect, Mr. Pant alluded to the willingness of the Andhra Government, from the very inception of the Council, to make available the Krishna and the Godavari waters for irrigation and water-supply in north Madras. According to him, among the three river basins —the Chalakudy, the Periyar and the Pamba— the claims of the areas to the east and west of the ghats and the Chalakudy river basins have already been investigated by the joint team of engineers from Madras and Kerala. The Periyar river is being used for both irrigation and power. As he stated, it will also be worthwhile to investigate the possibility of utilising the available waters of the Pamba basin in the interest of both the States. The Home Minister did well to emphasise that, in the proposed discussions between the Chief Ministers of Kerala and Madras, adequate consideration would be given to the alternative ways in which these waters could be used and that the guiding consideration in choosing between the various alternatives would be the overall effects on the economy of the Southern Zone as a whole, rather than that of individual States.

Speaking in general terms on the progress made by the South as a whole, Mr. Pant said that the emphasis in the area had recently been on economic development. In particular, he referred to Madras, Visakhapatnam, Kundah and Neiveli, where one saw evidence of expanding developmental activity and promise for the future. He noted that expansion was taking place not only in the public sector but also in the private sector. He claimed that the rate of formation of new companies in the States represented on the Southern Council had increased in the last two or three years. This may be true, but the pace of expansion would have been more appreciable but for the unhelpful official policies and heavy fiscal burdens.

At the end of its meeting, the Council resolved to get a proposal for the setting up of a regional grid, linking the power systems of the constituent States, examined by a technical committee. It also approved the scope and procedure of the work of the Manpower Planning Committee, appointed earlier by the Council. At the request of the Committee, the State Manpower Officers have taken up the examination and assessment of the existing position in respect of skilled manpower, as also the review of the available training facilities with a view to exploring the possibilities of improvement and additions to training arrangements.

The salt of the earth...

...looks grey and impure. Yet, mined and refined, it is a source of wealth; a commodity man has needed through the ages.

Oil, too, needs expert processing and grading before it becomes useful to man. And MOBIL Industrial Lubricants are the result of 92 years' research and experience in the field of industrial lubrication.

Correct Lubrication is a *regular programme.* It means the *right* Mobil product for the *right* part at the *right* time! Such a programme will cut maintenance costs and boost production in *your* plant. Ask our Technical Department for their FREE advice, *today!*

FOREIGN CREDIT FACILITIES

F.I.C.C.I.'S SURVEY PROVIDES BASIC INFORMATION

From Our Special Correspondent

NEW DELHI, *3rd June*

DELHI LETTER

THE Federation of Indian Chambers of Commerce and Industry (F.I.C.C.I.) has just issued what it calls "a survey" of foreign credit and exchange for the private sector. This, however, is no survey in the sense of an estimate of the private sector's requirements of foreign exchange for its projects under the second Plan and of the extent to which they have been met up till now. What, on the other hand, is given in the Federation's *Survey* is basic information to Indian businessmen about "the various institutions and facilities that are available in regard to obtaining foreign exchange and credit for purposes of financing the importation of capital goods."

The foreign agencies and the facilities available from them alone are covered in this despatch. The leading lender is the *International Bank for Reconstruction and Development* which has, up to the end of 1957, provided loans to the tune of $194 million to the private sector (as against $163 million to the public sector) in India. Recently, the Bank has also sanctioned two loans ($43 million) to the public sector for improving port facilities at Calcutta and Madras. The periods for loans secured so far vary from 11 to 20 years and the rate of interest ranges from 4¾ to 6 per cent. Private parties are eligible to get loans from the World Bank only if they are guaranteed by the Government of India and, that too, only in respect of fairly big projects.

The *International Finance Corporation* (with its headquarters in Washington, U.S.A.), on the other hand, requires no such Government guarantee or intervention. It deals directly with private businessmen and would finance only private enterprise. It can invest in productive private enterprises in association with private investors who provide competent management. This agency can finance either the expansion of an existing enterprise or the creation of a new one and deal with companies whose assets, after financing, equal at least $500,000. The I.F.C's investments will have the character of loans because they carry interest and also the character of share capital because they carry some right to participate in the growth of the business concerned. Another requirement is that a part of the investment should be in the form of convertible debentures or common stocks options. The rate of interest has to be negotiated in each case, and the usual period of the loan is from 5 to 15 years. It is noted that the rate of interest charged so far has been around 7 per cent. and the effective interest rate may work out higher because the I.F.C. has the right to convert its investment or part thereof into equity capital. No private enterprise project in India appears so far to have availed of the I.F.C's financing facilities.

The *Export-Import Bank of U.S.A.* (with its headquarters in Washington), in its lending operations, has the objective of stimulating American exports. The rate of interest charged varies from project to project but, by and large, it is comparatively less than the rate charged by other sources. The loan periods range from 1½ to 15 years. And the credit obtained has to be used for purchasing American equipment. It is noted that, in 1957, an Indian manufacturing concern secured a credit of $1.8 million from the Bank. Since then, the Bank has announced a credit of $150 million to India for financing the purchase in America of capital equipment, machinery and technical services needed by India in the 12-month period (1958-59) for projects in both the public and private sectors.

With the conclusion of this loan agreement with the U.S. Export-Import Bank, it is stated, the possibilities (to the private sector) of obtaining further funds directly from the Bank are limited. This means that private parties in India may have to be mostly contended with that small part of the $150-million credit made available under specified broad heads, namely, engineering, chemical, cotton textile, automobile and coal mining industries, and purchase of machine tools. As far as these industries are concerned, private parties would be given import licences without any conditions regarding deferred payment. The applicants for import licences under this credit arrangement would have to mention the total estimated f.o.b. value of equipment to be purchased in the U.S.A. Payments would have to be made for imports by the purchasers on normal trade account, and the Government of India will then seek reimbursement from the Export-Import Bank.

The Development Loan Fund, operated by the U.S. Government, does not give grants or purchase equity securities. Financing from this Fund is available for projects in underdeveloped countries only, preference being given to private enterprise and to projects which are unable to obtain finance on reasonable terms from other sources including private investment, the Export-Import Bank, the World Bank and the I.F.C. For extending loans, guarantee of repayment by Government is not necessarily required. However, loans for private investment from the Fund will not be made if such investment is unacceptable to the Government of the country in which the investment is proposed. The project for which financing can be proposed must have a total value of $500,000 and the minimum amount for which a loan may be requested is $100,000.

The Government of India has recently entered into an agreement with the Fund for obtaining a credit of $75 million from this source in the 12-month period 1958-59. Out of this, the private sector will have up to $5 million for equipment purchases necessary for the modernisation and expansion of the jute industry. As there are some cement units in the public sector, it is not clear whether the other allocated sum of $5 million would be available exclusively to the private sector for equipment purchases necessary for the expansion of the cement industry. On the other hand, it looks as though the sum of $25 million (allocated from the said $75 million Fund Credit) for the assembly of trucks, jeeps and bus components into complete units would be available mostly to the private sector. These credits (aggregating $35 million) would bear interest at 5¼ per cent. and have to be discharged in 30 semi-annual instalments, beginning from March 1959, possibly in rupees. The other part ($40 million) of the credit is intended for railways; it carries interest at 3½ per cent. and is repayable in 40 semi-annual instalments It is emphasised that although private parties can directly approach the Fund or apply to the T.C.M. in India, in this case (that is, the $75-million credit) they would have to apply to the Government of India.

The Commonwealth Development Finance Company, Ltd. (with its headquarters in London) primarily helps the financing of private enterprise. According to circumstances it may make a direct loan, take up debenture-stock or subscribe to equity capital or it may combine all these forms of investment. In appropriate cases, it can underwrite or guarantee an issue. The loans given by the Company are not tied to expenditure in the sterling area. Normally, the Company does not deal in amounts less than £250,000. The Company has so far taken up about 20,000 shares of Rs. 100 each in the Industrial Credit and Investment Corporation of India.

JAYSON BROTHERS

18/589, Thykad, TRIVANDRUM-1

A TALE OF TWO COUNTRIES

From Our Own Correspondent

LONDON, *31st May*

LONDON LETTER

DOMESTIC news in the City after the Whitsun holiday could not be duller, even the long-term problems are being shelved with the thought of the coming Commonwealth Economic Conference in September. That Conference will discuss the hardy annuals—strengthening sterling, promoting dollar exports and investing in the more backward parts of the Commonwealth. The industrial ordinary share index stands only a fraction higher than just before the holiday and 2 per cent. higher than a couple of months ago, but no one expects it to climb in the foreseeable future to the levels of last September. Government securities stand fractionally higher than the September level as a result of the Bank rate cuts.

The one item of City interest which will be with industrial companies for the whole year ahead is the effect of the change in the method of taxing undistributed profits. Hitherto, these have borne a special tax of only 3 per cent., while distributed profits have borne 30 per cent. Under the Budget arrangements, all profits will bear 10 per cent. and several progressive companies, which have been making 100 per cent. on their capital, and ploughing it back into expanding businesses paying only 3 per cent. additional tax, will now find that their tax bill goes up and they have no financial advantage in not pushing up their dividends. The net effect, of course, is going to be some increase in dividend distributions, but what the benefit of that to the economy is supposed to be as against capital investment, no one is very clear.

With the lack of City news proper, the twin topics of national interest have been the developments of the bus strike in London and the not immediately economic but highly significant revolution in France. As for the bus strike, the employers and the union are having sporadic, but so far completely fruitless, meetings, with the Government hovering uncertainly on the side-lines saying it doesn't want to intervene unless there is complete deadlock. Meanwhile, the Transport Workers Union, having made an abortive attempt to get the London Underground Railway men on the side of the bus men, are now having a go at the petrol distribution workers in the London area. The Trades Union Congress is doing its best to dissuade the Transport Workers' Union from pressing on with this line, but the Government's step in getting troops standing by to take over petrol distribution has done nothing to help. The T.U.C. likes to fight its battles according to certain gentlemanly rules, one of which is that, without provocation, it does not seek to bring unions other than those directly involved in a dispute into the battle; but it likes handling these things on its own and does not welcome Government intervention. Indeed, there is nothing so likely to make the trade union organisations as a whole behave awkwardly than a threat of Government intervention at the wrong time. The Government, of course, can always come in, if there is no hope of settling whatever the problem is in other ways.

As for France, until the last few days there has probably been more interest in this country than in France herself. The British Press has given priority coverage to the developments in France and has attempted to explain to its readers the significance of what was going on without trying to paint the whole picture in black and white. The return to power of General de Gaulle is seen as the end of parliamentary government in France, since the General plans to put Parliament into cold storage for a year, while he handles affairs directly and proposes changes in the constitution. These changes would, it is feared, mean the end of government by parliament indefinitely.

The French have caught themselves in a net of their own weaving; government by Parliament has been in disrepute since the parties have never been able to combine sufficiently for effective government. The country has been unable to see the need for a liberal outlook in colonial affairs and the breaking up of the French Empire in Madagascar, Indo-China, Morocco and Tunisia has been evidence of this. As for Algeria, enlightened Frenchmen realise

GOVERNMENT'S BORROWING PROGRAMME

ESTIMATES COMMITTEE'S SUGGESTION

AN important source of internal finance on which much reliance is being placed for carrying out the second Five-year Plan is the net receipts of borrowing from the public. Out of the total estimated requirements of Rs. 4,800 crores for the Plan, it was planned to borrow from the public to the tune of Rs. 700 crores during the second Plan period, that is, at an average of Rs. 140 crores per annum. This meant that the annual receipts from this source will, on an average, be about 40 per cent. higher than they had been before the beginning of the Plan period. While the Planning Commission did not consider this target as an over-ambitious one, it was conscious of the fact that maturities during the second Five-year Plan aggregated Rs. 430 crores, so that the gross borrowings over the five-year period would have to be of the order of Rs. 1,130 crores. In view of the anticipated brisk demand for funds in the private sector, the Planning Commission did not consider the task of mobilising a net amount of Rs. 700 crores for public investment as easy of fulfilment.

As against the original target of Rs. 140 crores per annum, the actual public borrowings during the first year of the Plan amounted to Rs. 141 crores and Rs. 72 crores in 1957-58. The budget estimates of borrowing in 1958-59 were placed at Rs. 137 crores. Though the borrowing programme for 1958-59 is higher than in the previous year, the Planning Commission, in its *Appraisal and Prospects of the Second Five-year Plan*, has emphasised that the performance in the coming years will have to be even better if the Plan targets in this respect are to be reached.

Parliamentary Control

In view of the importance of public borrowing in the larger financial management of a democratic government, in general, and in the financing of the second Five-year Plan, in particular, the question arises how far Parliamentary control should be exercised over the Government's borrowing programme, which is carried out by the Reserve Bank. This question has been discussed in some detail by the Estimates Committee in its latest report on Budgetary Reform. The powers of the Government of India regarding borrowing are conferred by Article 292 of the Constitution which lays down:

"The executive power of the Union extends to borrowing upon the security of the Consolidated Fund of India within such limits, if any, as may from time to time be fixed by Parliament by law and to the giving of guarantees within such limits, if any, as may be so fixed."

Article 292 of the Constitution thus provides for the enactment of a law fixing the limits of borrowing, as well as for giving guarantees by the Government. But so far no such law has been enacted. This question of enacting a law for this purpose has no doubt been discussed by the Government of India on a number of occasions, but the Government has not thought it necessary or advisable to introduce any legislation on the subject. The main grounds for such a decision of the Government, according to the Estimates Committee, are:

(1) The enactment of law under Article 292 is permissive and not mandatory.

(2) The extent of Government borrowings including deficit financing, if any, is clearly indicated in the budget documents and is, in effect, determined by Parliament in approving the budget.

(3) Government is functioning within a Plan which has been approved by Parliament. The Plan contemplates deficit financing of a substantial order. The annual budget is merely a projection of the approved Plan in the light of the requirements of that year. Thus, the Government borrowings in a year are regulated within the limits provided in the budget for the execution of the Plan.

(4) The limits, if any, to be imposed by law must necessarily cover both the market borrowings as well as the extent of deficit financing. They will thus have to be sufficiently high. While wide limits would provide no real checks, narrowing them would be impracticable.

(5) In a system of Government responsbile to Parliament where Government policies including borrowings are governed by and regulated under the wishes expressed by Parliament imposition of limits on borrowings by law would hardly offer any additional safeguards.

The Estimates Committee is inclined to concede that, from the point of view of practical considerations, it might be difficult to fix rigid limits on borrowings by Government, at least in the present developmental stage of economy. Nevertheless, it is of the view that "it is desirable that the Government should report to Parliament every time it goes in for borrowing." It adds: "Further, the details of the individual borrowing might also be brought to the notice of Parliament both before going to the market and after."

Difficult to Appreciate

It is rather difficult to appreciate the point of view of the Estimates Committee. In the first instance, Parliament is informed of, and its approval sought for, the Government's borrowing programme for each year when the budget is discussed and passed. It, therefore, serves no additional purpose if the Government is asked to inform Parliament of its borrowing programme again. Secondly, the details of the loan or loans and the timing thereof are decided by the Reserve Bank of India in the light of the prevailing market conditions. For instance, this year, the Central Government came to the market two months earlier than last year, because it found that the money conditions were much easier than in 1957. Last year, it was early in August that the Government entered the market and in 1956 it was in July, when Parliament was not in session. The Government and the Reserve Bank must be permitted the necessary freedom to decide the details of the loan programme and also time its announcement. Is it not enough if Parliament knows and approves the outline of the Government's loan programme? The Government cannot certainly be expected to announce the details of the loans in advance. There can be no harm in announcing the details after the borrowing is over, but even in this case, no useful purpose will be served unless the Government announces the extent of support the Reserve Bank of India and the State Bank of India had to give to the loan programme. Surely, the Reserve Bank, as the custodian of the Government's public debt, can be trusted to exercise all necessary vigilance in implementing the borrowing programme once it has been approved by Parliament.

U.S. DEVELOPMENT LOANS

The United States Government has announced plans for eight loans from the Development Loan Fund, amounting to $39,386,000 for economic development in Ceylon, Pakistan, Turkey, Israel and the Nationalist Republic of China. Three of the loans aggregating $6,386,000 are for the Republic of China on Taiwan; two amounting to $2.5 million for Ceylon; one of $15 million for Israel, one of $5.5 million for Pakistan, and one of $10 million for Turkey. The formal agreements for these loans are expected to be executed in the near future.

CORRESPONDENTS ALL OVER THE WORLD

These loans bring the total of authorised loans announced under the D.L.F. programme to $119,386,000. The Fund was established last year by the Congress to help finance economic development projects in the newly developing countries of the free world and to encourage the participation by private investment and enterprise in the development of these areas. The funds to be made available under the loans to be granted to the five countries will be used to assist them, both through private enterprise and governmental operations, to finance the purchase of equipment and materials needed for a varied list of development projects.

Terms of the loans will vary according to the type of the agreement being negotiated. Details of the loans being authorised are as follows:

Ceylon.—$1.6 million to assist in financing the purchase and import of equipment and materials for irrigation and land development and for the rehabilitation of reservoirs damaged by severe floods last winter. This loan would be repayable over a period of 20 years. $800,000 to assist in highway maintenance and development, repayable over 10 years.

Republic of China.—The three loans being authorised for economic development in the Republic of China include $3.2 million for the Taiwan Railway Administration, $2.5 million for the Asia Cement Corporation and $686,000 to the Land Bank of Taiwan for fisheries development.

Israel.—The $15 million loan authorised for the Government of Israel will be used to assist in financing the import of equipment and materials for development in electric power, transportation, industry, agriculture, quarrying, mining and public works. A substantial amount of the equipment being financed will go to private business. The loan would be repayable in 15 years.

Pakistan.—A $5.5 million loan is being established to assist the Government of Pakistan in financing the import of equipment and materials for use in connection with building a better water-supply and sewage disposal system for Karachi, the capital. The sum will be supplemented by the equivalent of $8.4 million in United States-owned Pakistani rupees received from the sale of surplus American agricultural commodities which will be loaned to Pakistan to meet local currency costs relating to the project. The total loan would be repayable over a period of 30 years.

Turkey.—The authorised loan of $10 million for Turkey is for the Industrial Development Bank of Turkey to assist this institution in financing loans to meet foreign exchange costs of private industrial development in Turkey. This loan would be repayable over a period of 10 years.

GIFT TAX ACT, 1958

The Gift Tax Act received the assent of the President on 15th May 1958. The Act is deemed to have come into force on 1st April 1958. The Gift Tax rules framed by the Central Board of Revenue under section 46 of the Act have been published in the *Gazette of India*, dated 31st May 1958. The rules also take effect from 1st April 1958.

Gift tax is payable by individuals, Hindu undivided families, companies, firms or associations of persons on the value of taxable gifts made by them during the previous year which would generally be the same as for income-tax assessment. In respect of the first assessment under this Act, that is, for 1958-59, gift tax is payable only on those gifts made on or after 1st April 1957, whatever be the previous year. In order to arrive at the figure of taxable gifts from the total value of the gifts made during a previous year, the various items of gifts exempt under section 5(1) of the Act should first be deducted. If the balance exceeds Rs. 10,000 in one previous year, the excess constitutes the value of taxable gifts on which the donor will have to pay the tax at the rates mentioned in the Schedule to the Act.

Every person who has made any taxable gift during the previous year is required to submit a return of his gifts before 30th June of the corresponding assessment year. The returns of gifts for 1958-59 have, therefore, to be furnished to the Gift Tax Officer before 30th June 1958.

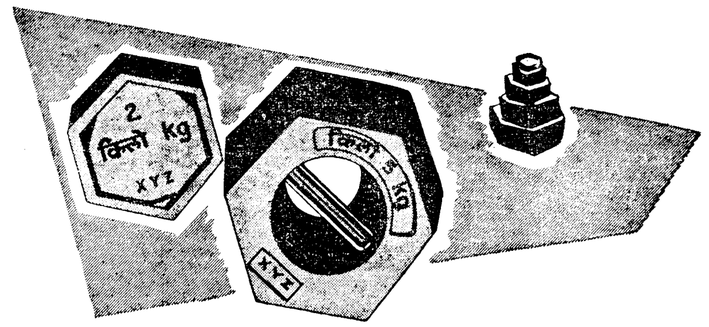
The Government of India has decided to allow the State Governments to retain the whole proceeds of the market loans that they may float in the current. Announcing this, a Ministry of Finance Press note says:

"Last year, when it was decided that two-thirds of the net proceeds from small savings should be released to the States for development purposes, it was the intention that, if, during a year any State Government went in for market loans, a third of its borrowing from this source should be set off against the State's share of small savings. The Finance Ministry has since reconsidered the matter in consultation with the Planning Commission and it has been decided that the States may be allowed to retain the whole of the proceeds of market loans that they may float in the current year."

Central loans of the order of Rs. 980.52 crores were outstanding against the States, as on 31st March 1957, according to a Survey made by the Ministry of Finance. The highest amount due from any single State was from the Punjab which owed the Centre a sum of Rs. 192.84 crores. The loans outstanding against West Bengal and Uttar Pradesh amounted to Rs. 153.55 crores and Rs. 114.98 crores, respectively. The dues from other States were: Andhra Pradesh Rs. 62.15 crores; Assam Rs. 22.24 crores; Bihar Rs. 62.94 crores; Bombay Rs. 86.42 crores; Kerala Rs. 11.54 crores; Madhya Pradesh Rs. 48.21 crores; Madras Rs. 84.01 crores; Mysore Rs. 23.54 crores; Orissa Rs. 78.93 crores; Rajasthan Rs. 34.20 crores and Jammu and Kashmir Rs. 4.97 crores.

CHANGING OVER TO

THE METRIC SYSTEM



India has at present no common system of weights and measures. There are not less than 143 systems in use. This multiplicity gives room for malpractices. The introduction of a uniform system throughout the country based on Metric Weights and Measures will be very convenient and make calculations extremely easy, especially because the country has already adopted the decimal coinage. The Standards of Weights and Measures Act, 1956 has laid down the basic units under the metric system. The reform will be gradual so as to cause minimum inconvenience to the people.

Even after its introduction in an area or a trade, the traditional weights and measures will be permitted to be used for a period of three years.

THE CHANGE-OVER TO THE METRIC SYSTEM OF WEIGHTS AND MEASURES BEGINS FROM OCTOBER, 1958

KNOW THE METRIC WEIGHTS

The basic unit of weight is the KILOGRAM = 1 seer 6 tolas (or 86 tolas.) or 2 lb. 3 ozs.

SUB-UNITS

10 milligrams = 1 centigram
10 centigrams = 1 decigram
10 decigrams = 1 gram
10 grams = 1 decagram
10 decagrams = 1 hectogram
10 hectograms = 1 kilogram

MULTIPLES

100 kilograms = 1 quintal
10 quintals or 1000 kilograms = 1 metric tonne

PROBLEMS OF COTTON MILL INDUSTRY

ENQUIRY COMMITTEE SET UP TO SUGGEST REMEDIAL MEASURES

SOON after we went to press last week, the Union Ministry of Commerce and Industry announced the setting up of a Committee, with Mr. D. S. Joshi, I.C.S., Textile Commissioner, as Chairman, to enquire into the various problems confronting the cotton textile industry and to suggest remedial measures The Committee has been asked to study, among other things, the issues relating to rated capacities, incidence of different elements of cost in the different parts of the country, finance, modernisation of machinery, management efficiency and production patterns. It has also been asked to make a reassessment of the phased requirement of cotton piecegoods for both domestic consumption and export.

The Commerce and Industry Ministry has certainly done well in not only broad-basing the terms of reference of the Committee but also choosing as members persons who have an intimate knowledge of the textile industry's affairs. The Committee thus consists of Messrs. D. G. Karve, N. Majumdar, Kanhaiyalal Mehta, Padampat Singhania, Krishnaraj M. D. Thackersey, S. R. Vasavada, R. Venkataswamy Naidu, and K. R. Aravamuthan (Member-Secretary).

The Committee has to address itself to a very difficult task. The cotton textile industry, as this journal has pointed out on more than one occasion in the recent past, is facing a crisis of great magnitude, as witness the accumulation of stocks, decline in exports and curtailment of production. The aggregate stocks of cloth held by mills as on 10th May 1958 were 705 million yards (including the 255 million yards of cloth sold but not lifted by the trade). Although this quantity is less than that held in the previous months, it is nevertheless quite large. The heavy stocks of cloth have caused untold hardship to mills, especially to the marginal units, inasmuch as the carrying of stocks entails a financial burden, not to speak of the pressure on their storage space. Over Rs. 46 crores of finance, it is said, has been locked up consequent on the heavy accumulation of stocks, imposing a severe strain on the finances of mills. The position in respect of stocks would have been worse but for the distinct setback in production of late. The quantity of cloth that actually came off the looms of mills in the four months ended April 1958 was only 1,641 million yards which compares unfavourably with 1,836 million yards in the corresponding period of 1957. The drop in production has followed the complete closure of 26 mills and the cutting down of production operations by another 37 units. Exports of cloth have also suffered a setback. Total exports of mill-made cloth are now running at an annual rate of only 600-650 million yards, as against the actual exports of 850 million yards in 1957 and 744 million yards in 1956.

What is the aforesaid state of affairs in the cotton mill industry due to? For the answer to the poser, one has only to peruse the interesting speech made by Mr. Krishnaraj M. D. Thackersey, Vice-Chairman of the Indian Cotton Mills Federation, at the Federation's meeting with Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, recently, a reference to which was made in the course of an editorial two weeks ago (*vide* page 969 of *Commerce* dated 24th May 1958).

In brief, the crisis in the textile industry has been brought about largely by the impact of heavy taxation. The revenue from excise duty (inclusive of handloom cess) on mill-made cloth expected in 1958-59 amounts to Rs. 53 crores, as against Rs. 9.26 crores in 1950-51. In addition, the rates of additional excise duty in replacement of sales tax may yield a revenue of Rs. 22.87 crores on the basis of normal production, as against Rs. 19.16 crores which represented the sales tax collections of all the States. Following the replacement of sales tax by additional excise duty, the Bombay Government has withdrawn the concessions which were available to the industry in regard to purchase, free of sales tax, of its requirements of machinery, raw materials, stores, etc. As a result, the industry is called upon to bear an additional burden of about Rs. 2 crores. Similar is the position in this regard obtaining in States like Madhya Pradesh and Uttar Pradesh. Even fents are not spared from sales tax in these two States. There is also sales tax on yarn in U.P. What is worse, the Bombay Government has published a Bill seeking to abolish certain land tenures obtaining in the City of Bombay with a view to subjecting them to full revenue assessments. This again is calculated to impose a heavy burden on the mill industry in the City.

There are two other factors which have led to the crisis in the cotton mill industry. First, offtake of cloth continues to be low, thanks to high excise duty and the sharp rise in the prices of food and other commodities. Secondly, the cost structure of the industry is persistently rising, on account of increase in raw cotton prices, enhanced fuel and power cost, and rise in basic wages, dearness allowance and other direct or indirect benefits conferred on the workers by statute or otherwise. The rise in dearness allowance has been spectacular. The amount of dearness allowance paid to cotton mill workers in Bombay City for 26 working days during the month of April 1958 was Rs. 78.10, as against the average of Rs. 73.99 paid in 1957, Rs. 68.77 in 1956 and Rs. 64.81 in 1955.

The advance in the cost of production has not been accompanied by a corresponding advance in prices of cloth. On the contrary, several mills have had to reduce prices with a view to stimulating consumption. The result has, therefore, been, as Mr. Thakersey said, "continuous losses for a period extending over 20 months, which have thus created a big dent in the mill finances. The inevitable consequence of these losses is that production of cloth has been curtailed by putting certain looms out of commission, by closure of shifts and, in certain cases, by complete closures." If, in spite of the adverse conditions, many mills are trying their best not to close down, it is due to the fact that they are reluctant to undertake the commitments in respect of compensation and gratuity on retrenchment.

The foregoing account will clearly reveal that the malady of the cotton mill industry "is not just a superficial one but is deep-seated" and that "half-hearted measures will not go to help the industry to tide over the crisis." Emphasising this aspect, Mr. Thackersey put forward the following suggestions:

(1) Reasonable reduction in labour cost (this accounts for as much as 30 per cent. of the total cost) by scaling down suitably the dearness allowance payable to workers on the basis of recent family budget enquiries and more scientific method of collecting prices;

(2) revision in the rates of excise duty on mill cloth to a level which existed in 1955-56 when the Government collected Rs. 28.18 crores from the industry;

(3) change in the basis of levying excise duty from specific to *ad valorem* so as to make the incidence equitable according to the price and category of cloth, the *ad valorem* rates being fixed on tariff values of cloth fixed in terms of the Tariff Board formula (and not on wholesale prices, that is, contract prices);

(4) provision of some incentive designed to enhance the competitive capacity of the industry in the international textile market, especially in so far as coarse and medium varieties are concerned; a specific suggestion made here is that the Government should consider the measure adopted in Japan where exporting firms are allowed to deduct 9 per cent. of export earnings from taxable income;

(5) assistance to mills situated beyond a radius of 150 miles from the port towns in their export efforts through concessional freights, movement priority, warehousing facilities at ports, etc.;

(6) "very serious" efforts to grow longer staple cotton in India and to reduce the production of shorter staple cotton;

Mrs. Housewife **and Airconditioning...**

Whee Mrs. Housewife had an ACCAIRE installed at home the only thought in her mind was to find relief from the sweltering heat of summer.

But she was surprised and delighted when many other blessings came with the ACCAIRE. Dust and dirt were kept out and the furniture and fittings stayed clean, eliminating the chore of dusting twice daily. Her daughter stopped getting those frequent coughs and colds that used to cause her and hubby so much anxiety. And they all slept better and felt so much more refreshed in the morning

For all this Mrs. Housewife was prepared to pay a heavy electric bill but she was surprised to find that it fitted into the monthly budget so easily.

OUTLOOK FOR TEXTILE INDUSTRY

MORE COMPANIES SEEKING NEW PRODUCTS AND OUTLETS

From A Special Correspondent

MANCHESTER LETTER

MANCHESTER, *28th May*

WITH the outlook for the Lancashire textile industry clouded by so many uncertainties, more companies are seeking new products and outlets in a bid to broaden their scope and buttress their foundations against whatever difficulties and problems may beset the cotton industry in the future. The search for new ideas is not confined to the small fry of the industry. Some of the best known names in the trade have joined in the hunt to diversify their interests, the latest to disclose its activities in this field being the British Cotton and Wool Dyers' Association, Manchester. Mr. Edgar Isles, the Chairman of this £2,000,000 group, revealed in his annual report a surprising development—the group's entry into the "high-class catering trade." A new subsidiary, Patisserie Coffee Houses Ltd., has been established as part of a policy of diversificaton.

Other Lancashire cotton firms have gone into engineering, plastics and dry-cleaning as an insurance against the dangers of having too many eggs in one basket. A growing number have also branched out into the tufted carpeting industry. One of these is Hayeshaw Ltd., the Lancashire cotton, rayon spinners and doublers. Mr. Richard H. Taylor, the Chairman, says that the introduction of new pattern-yarns, mainly for tufted carpets, has enabled the company to open new markets and increase output. He tells shareholders that the tufted carpet industry in Britain is still a young one and for this reason it was difficult to forecast with any accuracy the future level of activity.

Japanese Visitors

A team of eight millowners representing the All-Japan Cotton Spinners' Association has made a two-day visit to Lancashire for discussions in Manchester with leaders of the International Federation of Cotton and Allied Textile Industries.

The party is on an informal tour of Europe to study new developments in blended textiles. A spokesman said that they were eager to increase the consumption of blended fabrics on the domestic market in Japan.

International Talks

There has been widespread discussion in Lancashire on the reported statement of Mr. Kasturbhai Lalbhai, made at Bombay, that a "definite understanding" was reached during the recent three-nation talks in London on the ceiling of Indian textile exports to Britain. On the surface, this statement clashes with the official *communique* of the Cotton Board at the close of the conference that no agreement had been reached on the ceilings to be fixed, although both India and Pakistan had accepted the principle of a limit being set. The Indian delegation leader's statement when he returned home was at once discussed by Cotton Board officials with the leader of the Lancashire delegation, Sir Cuthbert Clegg. Later, a Board spokesman said: "The Board's statement of 13th May still stands. But although it has not been possible to arrive at a basis likely to result in an all-round agreement, consideration is still being given to a number of possibilities."

The spokesman added that no further information could be given at this stage about the nature of the "possibilities" now under consideration. But the Bombay message has at least rekindled hopes in Lancashire that a "gentleman's agreement" on the imported cloth problem might yet be reached. It is clear that the last word has not yet been said, in spite of the great disappointment among the majority of Lancashire traders at what seemed to be a negative outcome of the three-nation talks. Mr. Kasturbhai Lalbhai's view gives force to the views of those Lancashire trade leaders who refused to regard the conference as a failure.

Lancashire textile leaders are keeping a close watch on the duties operated by other countries on imports of cotton piecegoods. The industry has recently been represented at a number of overseas enquiries and Mr. D. C. Shaw, Director of the Statistics Department of the Cotton Board, left London by air at the week-end for Ottawa where he will appear as the United Kindom cotton industry's representative at the resumed enquiry by the Canadian Tariff Board into the current duties on cotton piecegoods.

A familiar figure to both home and overseas textile leaders will shortly disappear from the principal "shop window" for Lancashire textile designs—the Cotton Board's Colour, Design and Style Centre in Manchester. She is Miss Kathleen Glover who has been Secretary of the Centre for 18 years. During that time, visitors to the Centre have seen many thousands of Lancashire and overseas fabric in the scores of exhibitions which Miss Glover has helped to arrange.—*All Rights Reserved.*

The Sri Ram Institute for Industrial Research, Delhi, has recently developed a process to manufacture stable bath catalysts for amino plast resins for application in textile finishing. Amino plast resins are widely used to impart crease and shrink-resistant effects. These resins are applied as aqueous solutions and, to accelerate polymerisation in the fibre, catalysts are added to the bath. Two grades of catalysts have been successfully prepared with different modifiers. Batches of 30-40 lbs. have been prepared in the pilot plant and tested successfully on large-scale mill trials. The use of these catalysts does not involve any wastage of resin solution and the bath is stable for about 200 hours. Finish on the fabrics is uniform and the treated cottons show less impairment in tensile and tear strength. The treated fabrics have a softer handle. Manufacture of these catalysts is not costly and the raw materials are easily available.

(*Concluded from previous page*)

(7) permission to mills to import foreign cotton in larger quantities against exports of cotton textiles;

(8) assistance to mills which are in a position to change the pattern of production from coarser to finer categories of cloth to import their cotton requirements over and above the quota allotted to traditional users;

(9) ban on export of cotton of ¾" staple;

(10) abandonment of the proposed increase in the provident fund contribution from 6¼ to 8¼ per cent;

(11) suitable amendment of the provisions in the Industrial Disputes Act relating to payment of retrenchment compensation, so as to provide relief to mills which are in financial difficulties; wherever there is provision for gratuity, it should not be compulsory for them to pay retrenchment compensation as well;

(12) permission to mills to adjust their labour complement and to introduce other efficiency methods subject to general standards which should be laid down;

(13) provision of enlarged credit to cloth trade; and

(14) suspension for the time being of clauses 12(1) and 12(2A) of the Cotton Textiles (Control) Order which compulsorily require mills to sell certain fixed quantity of yarn.

The series of suggestions made by Mr. Thackersey are indeed interesting and merit the due consideration of the Cotton Textiles Enquiry Committee. How far and to what extent will the Committee favour the suggestions and commend them to the acceptance of the Government it is difficult to say. It must, however, be admitted that, since the cotton mill industry plays a vital role in the economy of the country as the producer of such an essential item of consumption as cloth, a source of employment to many thousands of workers, and contributor of large amounts of tax to the Central and State Governments, the situation calls for measures which will help reduce production costs and also for substantial fiscal relief.

THIS BOY HAS A LOVING MOTHER

Mother knows that children's dresses are more than mere clothing; they are a measure of a mother's care. She takes no chances–they have got to be lovely, comfy and durable. Dressing a child well is a family tradition.

When BINNY'S started manufacturing their quality cloth nearly eighty years ago, young mothers in India discovered a new standard in textiles for their sons, for here was *variety* in colour, design and texture undreamt of before. As the years passed, BINNY'S continued to *pioneer new materials, including anticrease* suitings and union fabrics. Soon BINNY became a household word and buying BINNY'S a family tradition.

Today, more people are able to buy more cloth, but *discerning* people look for the reassuring BINNY'S trade marks on the cloth they buy.

BINNY's - **a great name in textiles**

THE MYSORE SUGAR COMPANY, LIMITED

MR. B. M. KRISHNAN'S SPEECH AT ANNUAL GENERAL MEETING

REVISION OF FORMULA FOR LINKING CANE PRICE TO SUGAR PRICE URGED

THE Twenty-fourth Annual General Meeting of the Mysore Sugar Company Limited, was held at the Registered Office of the Company at Bangalore on Friday, 30th May 1958. The meeting was attended by a large number of shareholders and was presided over by Mr. B. M. Krishnan, I.A.S. (Retd.), Chairman and Managing Director of the Company. The following is the speech of the Chairman at the meeting:

"GENTLEMEN,

"I welcome you to the twenty-fourth annual general meeting of the shareholders of the Mysore Sugar Company Limited. The occasion is a particularly happy one, as we are meeting in the Silver Jubilee year of the Company. During 25 years of its existence, the Company has steadily progressed from strength to strength and has come to occupy a pre-eminent place in the sugar industry of the country. It has succeeded, in a remarkable degree, in satisfying the consumption potential of our State in respect of an essential commodity like sugar, enriched the Mandya District by generally improving the economic condition of the agricultural classes in the area, created wide range of employment opportunities and, above all, made substantial contributions to the Central and State exchequers.

"The report of the Directors and the audited statements of accounts for the year 1956-57 have been in your hands for some time and I shall, with your leave, assume that they may be taken as read. This meeting should, in the ordinary course, have been held a few months ago and, due to reasons beyond the control of your Directors, there has been some unavoidable delay. This will be appreciated when it is remembered that yours is a Government Company which is subject to certain special provisions regarding audit by the Comptroller and Auditor-General of India. With a view, therefore, to mitigating the inconvenience to shareholders from the delay in holding the meeting and the consequent delay in payment of dividend, your Directors have already declared and disbursed, in anticipation of your approval, the dividend of 20 per cent. which they have proposed in their report. Permit me to say that this action of your Directors meets with your approval.

"Sri S. Muninanjappa, I.A.S. (Retd.), who was the Chairman and Managing Director of your Company for the major part of the year 1956-57, relinquished his office on the 7th April 1957, on his appointment as the Managing Director of the recently nationalised Kolar Gold Mines. He was succeeded by Sri K. Thipperudriah, I.A.S. (Retd.), who has signed the balance-sheet, and, on his resignation, I took over as Chairman and Managing Director with effect from the 6th February 1958. Although I have been in office for only a short time, I shall, following the usual practice, say a few words about the position of the industry and the working of your Company.

A Disturbing Factor

"The year 1956-57 was a notable one for the sugar industry of India, when production of sugar reached a high level of 20.3 lakh tons, representing an increase of 1.7 lakh tons over the previous year's record. With the increase in the number of factories and the expansion of the several existing factories, already licensed, there is every reason to hope that production during the current year will register a further increase and that the second Plan target of 22.5 lakh tons of sugar will be easily achieved next year. But, the sudden expansion of the *khandsari* process of sugar manufacture in Northern India seems to be becoming a disturbing factor in the sugar economy of the country.

"Another creditable achievement of the industry was that India was able to enter the international sugar market as an exporter and earn valuable foreign exchange to the tune of Rs. 12 crores. The subsequent steep fall in world prices of sugar has, however, hampered the prospects of building up a permanent export market. And even if sugar is to be exported for earning the much-needed foreign exchange, the price to be paid becomes prohibitive. Considering both the immediate necessity and the long-range advantages of a regular export market for our sugar, the Indian Sugar Mills Association has submitted certain proposals to the Government of India for promoting exports on a subsidised basis and an early announcement of a sugar export policy on an all-India basis is now awaited. While production has been steadily on the increase, contrary, perhaps, to expectations, demand for internal consumption has not improved but has been somewhat stationary at 19.5 lakh tons per annum. This can probably be attributed to the prevailing high prices of sugar in India and also, to some extent at least, to a long-standing imbalance in production between the Southern and Northern regions of the country.

Price of Sugar

"The high price of Indian sugar has been a standing complaint from the general public and the current wide disparity in the prices ruling for Indian and foreign sugars points to the need for a policy of scientific rationalisation in our sugar prices. But what is not realised, or is not so well known, is that the industry is helpless in regard to this matter, as the major elements in the cost structure are entirely beyond its control. A break-up of the sugar price will show that sugarcane, the price of which is statutorily fixed, accounts for 42 per cent., while excise duty and cane cess together account for another 35 per cent. With salaries and wages and cost of labour amenities increasing year after year and the appreciating costs of spares and stores, fuel and even water in some cases, there appears to be little scope for the industry to effect economies in manufacturing costs. A Central Wage Board for the Sugar Industry has recently been set up, and it remains to be seen to what extent the wage bill is likely to be altered as a result of the Board's recommendations.

"Here, I would like to make a reference to a matter of urgent and topical importance to the sugar industry at the present moment. In pursuance of their policy of making the cane growers share in the prosperity of the industry, the Government of India have very recently announced their acceptance of the principle of linking the price of sugarcane with the price of sugar, by the application of a formula, recommended by an Expert Committee. From such details as are now available, it is apprehended that the formula, if enforced in its present form, will cause great financial hardship and cripple a large segment of the industry in the country. Your own Company will be the one that would, in all probability, be hard hit. According to our appreciation of the effects of the suggested formula of the proposed deferred price for cane over and above the statutory price, it is seen that, far from there being any profit, we will have to register a certain loss.

Fair Price of Cane

"While the ryots should get a fair and even liberal price for their cane, consistent with returns which they would derive from alternative crops and the earnings and paying capacity of individual units, the application of the present formula will put the sugar industry in a financial predicament and may lead to results which it is obviously nobody's intention to achieve. I earnestly hope that the authorities concerned will give due consideration to the appeals and suggestions made by the industry and suitably revise the formula, so that the fortunes of the industry are left in a sound position to help the ryot on the one side and all other sections intrinsically concerned with its future place in the industrial economy of the country, on the other. More details, I am not in a position to place before you because the several financial and economic implications and consequences of the proposal are still *sub judice*, as it were, and have not crossed the stage of negotiation and appeal.

"Finally, let me assure you that your Directors are doing their best in this matter to secure a solution of the problem which, I am sure, will find acceptance to the industry as a whole and all sectors concerned with its well-being and prosperity.

"I shall now turn to the affairs of your Company. As you would have observed from the Directors' report and the audited accounts, the results of the year under review were somewhat unfavourable. This was not altogether unexpected and had been forecast by my predecessor while addressing you in December 1955. Ours being an industry based on agriculture, monsoons play a large part in its fortunes. Cane cultivation in the Mandya District suffered a setback in 1955, due to poor monsoons, and on account of the inadequate cane supply, our factory could not work to full capacity. The result has been less production at greater cost and the consequent financial results are fully reflected in the accounts. Crushing of cane started on the 19th August 1956 and closed on the 13th February 1957, the number of working days being 175, as against 266 in the preceding season. Cane crushed during the season was 2,24,341 tons and the output of sugar 21,631 tons. The corresponding figures for the preceding season were 3,47,523 tons and 34,798 tons.

"There was no change in the sugarcane price which continued to be Rs. 39-2-1 per ton. Unlike the previous two years, no provision has been made for the payment of any additional cane price, in view of the shortfall in earnings. The cess on sugarcane continued at the high rate of Rs. 6 per ton. In this context, the assurance of the Mysore Government to rationalise the levy of sugarcane cess in the different parts of the reorganised State is only to be welcomed.

Sugar Sales

"Sugar sales during the year under review dropped to 26,325 tons, as against 35,540 tons in the year preceding. The realisations therefrom amounted to Rs. 2,32,71,910 as against Rs. 2,79,13,587 in the preceding year. Towards the close of the year, that is, from 15th May 1957, the excise duty on sugar was doubled from Rs. 112-8 to Rs. 225 per ton. Another event of importance to the sugar trade occurred on the 13th December 1957 when the sales tax on sugar, levied by State Governments at varying rates, was integrated with the Central excise duty by raising the latter to Rs. 291-4 per ton. Trading conditions were favourable and we were able to realise a slightly higher net price on sales. But this advantage was more than offset by the higher cost of production resulting from lower output.

"The trading operations of the Company during 1956-57 have resulted in a gross profit of Rs. 15,65,562-1-7. After meeting administrative charges and setting aside Rs. 6,62,761-0-6 for depreciation, there is a net profit of Rs. 4,33,214-15-2, as against Rs. 9,11,573-11-4 in the preceding year. No provision has been made for payment of taxes, as the amount at credit of the taxation reserve is estimated to be sufficient to meet the current year's liability, inclusive of wealth tax. The decline in profit is to be attributed to the lower production at higher cost and the consequent reduced profit margin on sales, despite the higher realisation per ton of sugar. The cost of production in our factory is above the standard cost incidence, even in normal years, and this was particularly so during the year under review. The earnings from the Distillery were also below normal due to a reduced offtake of alcohol and to lower prices realised on sales. The profit available for distribution, inclusive of the balance of Rs. 2,63,106-11-3 brought forward, comes to Rs. 6,96,321-10-5. Notwithstanding the sizable fall in profits, your Directors have recommended, and since paid in anticipation of your approval, a dividend at the usual rate of 20 per cent., which absorbs Rs. 4,35,800. After making a contribution of Rs. 50,000 to the employees' gratuity fund which was created last year with an initial contribution of Rs. 5 lakhs, there remains a balance of Rs. 2,10,465-10-5 which is proposed to be carried forward.

Utilisation of Reserves

"A matter that is closely related to the dividend policy of the Company and which has exercised the minds of shareholders for some years past is the utilisation of a part of our huge reserves for issue of bonus shares. We are technically advised that the capital block and the reserves and surpluses must be more rationally placed in our financial set-up than at present. The proposal, for one reason or another, has failed to materialise so far and the high rate of tax on bonus issues that is now in force renders the problem still more difficult. All the same, your Directors are keenly alive to the urgent need for bringing about a reorganisation of the capital structure of the Company and it is their earnest desire to finalise a scheme to meet the aspirations of the shareholders for bonus shares during this memorable year of the Silver Jubilee of the Company. As a first step in this direction, you will be glad to hear that in the revised Articles of Association, that are now placed before you for approval, a clause has been added providing for capitalisation of reserves and issue of bonus shares. The existing Articles, you will please note, do not contain such a provision.

"The expansion scheme of the factory designed to achieve a balanced capacity of 2,000 tons of cane per day has made satisfactory progress. In reality, the scheme envisaged not only expansion by a balancing of the units, but also replacement and modernisation of machinery, which are essential for achieving a greater all-round efficiency of operation. In order to realise the full benefits of the expansion scheme and to ensure a comfortable crushing of 2,000 tons of cane per day, we need some more machinery and equipments. The existing difficult foreign exchange position stands in the way of our programmes for expansion. A scheme for the expansion of the distillery so as to step up production to 12 lakh gallons of alcohol per annum, as against its present average capacity of 8 lakh gallons, is under execution.

Alcohol Prices

"We are now receiving large orders from the Government of India for our alcohol and, if we continue to get these orders and also take measures to improve and strengthen our market, there need be no difficulty in disposing of the entire output of the expanded distillery. But the prices realised on sale of alcohol to large industries are so low and uneconomical that we can hardly make a profit on this business. Here, I may say that the recent recommendations of the Industrial Alcohol Committee for the fixing of ceiling prices for alcohol are not very encouraging. While the Committee has made certain recommendations for the development of alcohol-based industries, for facilities for export of alcohol, and for the constitution of a Development Council for alcohol and products based on it, which are to be welcomed, the price for alcohol suggested by the Committee is so low as to make alcohol manufacture an uneconomical proposition.

"From what I have stated above, it will be apparent that both our sugar factory and distillery are well on the road for achieving higher production in the near future and, given favourable conditions, we can look forward to better results from their working in the years to come. You will be glad to hear that the factory has crushed very nearly four lakh tons of sugarcane during the current year and has achieved a record production of 39,545 tons of sugar. Similarly, under the pressure of heavy orders the production of alcohol has registered an appreciable increase. As against these encouraging achievements and prospects, one disquieting aspect is the uneconomical working of our sugarcane farms. By reason mainly of the high cost of wages and overheads and due to the prevailing practice of keeping the labour all through the year regardless of the seasonal nature of agricultural operations, the labour costs on the farms have been steadily rising without any corresponding benefits. The economics of our farm operations are thus intimately bound up with labour problems and a decision taken a few years ago to close down some of the farms could not, therefore, be implemented so far.

Labour Relations

"In the sphere of labour relations, I am happy to say that the relationship between the management and labour in our Company was cordial during the year under review and that several points of difference were amicably settled after discussion and negotiation. A few disputes, perforce, have had to be referred for adjudication and one of these is the vexed question of bonus. Among the terms of reference of the Central Wage Board for the Sugar Industry, which is presently examining the wage structure of the industry, is the working out of principles governing the grant of bonus to workers. The recommendations of the Board in regard to this important matter will be awaited with great interest by industries in general and the sugar industry in particular.

"In conclusion, I desire to express my sincere thanks to my colleagues on the Board

ASHOK LEYLAND LIMITED

SIR A. RAMASWAMI MUDALIAR'S REVIEW

The following is the speech delivered by Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), Chairman, Ashok Leyland Ltd., to the shareholders at the Ninth Annual General Meeting of the Company held on 26th May 1958, at 11 a.m., at the Company's Registered Office at Ennore.

Ladies & Gentlemen,

I have pleasure to extend to you a cordial welcome to the Ninth Annual General Meeting of your Company.

The Directors' Report, Audited Balance-Sheet and Profit and Loss Account for the year ended 31st December 1957 have been in your hands for some time and, with your permission, I shall take them as read.

Last year, I expressed the hope that, in spite of many difficulties in our path which had to be overcome, we should be able to make steady progress towards the full manufacture of heavy duty commercial vehicles, while at the same time being able to make modest dividend payments to those whose investments enable us to provide capital equipment. It is, therefore, gratifying to your Directors to find the Company is in a position to justify their recommending the payment of a dividend at the rate of 6 per cent per annum, free of Income-Tax.

During the year 1957 very considerable progress was made in the expansion of your Company's buildings and in the installation in them of plant and equipment required for the further implementation of our Phased Manufacturing Programme. The total expenditure during the year on buildings amounted to Rs. 16.75 lakhs; and the total expenditure on plant and equipment Rs. 34.5 lakhs. This by no means represents the end of our expansion.

Early in 1957 it became obvious that in order to meet the heavy expenditure on buildings and equipment additional capital would be required. In the month of August, therefore, 20,34,522 shares of Rs. 5 each were offered for subscription, of which 10,45,834 shares were, in terms of a resolution passed by you, offered to Messrs. Leyland Motors Ltd. The whole of this issue was taken up and the financial difficulty of managing with too little capital in relation to the magnitude of our manufacturing project was thereby removed.

Your Company's objective is the establishment of the production at its Ennore Factory of the complete range of Leyland heavy duty commercial vehicles, as the development of roads and, consequently, of road transport in India progressively increases the demand for such vehicles. In accordance with this policy, a proposal for the expansion of our project to include the manufacture of Leyland 'Tiger' and 'Titan' chassis in our Programme was submitted to the Government of India at the end of 1956. This new Phased Manufacturing Programme has now been accepted. Planning is already in progress and physical implementation will commence towards the end of 1958.

This first step in the extension of our activities to include the manufacture of commercial vehicles with heavier load capacities than the 'Comet' is of very great importance to us for two reasons. The trend towards heavier vehicles as India's roads continuously improve and bridges and culverts are strengthened or rebuilt is inevitable. While, therefore, it may appear uneconomic from the point of view of the existing sales potential to engage in the production of vehicles with gross loading capacities exceeding 12 tons, there is no doubt that by the time manufacture is fully established the demand will justify the new project. The second reason, and initially the more important, is that the new programme provides in the first phase for the manufacture of the Leyland '600' and '680' diesel engines which are alternative fittings in the heavier chassis. These engines are suitable for most heavy transport requirements and they are the standard power units in Leyland trucks up to the 'Octopus' which is designed for 54,000 lbs. gross loads.

To enable the production of 'Comet' chassis to be increased without delay to 3,000 chassis per annum and to provide for the addition of the 'Tiger/Titan' Programme, your Company's authorised capital has been increased to Rs. 3.25 Crores, of which Rs. Two Crores only will be fully paid-up until such time as a new capital issue may prove expedient.

In my address last year I referred to difficulties we experienced due to certain anomalies in regard to gross vehicle weight restrictions. This question has continued to engage the attention of the Central and State Governments and of manufacturers and operators. Happily, it now appears not only that a serious attempt will be made to increase permissible gross laden weights on all roads which will bear them but also that steps will be taken to limit registered laden weights in all cases to a figure not exceeding, in any circumstances, the manufacturers' specified gross vehicle weights. This is a most important step and in the right direction and all those responsible for it are to be congratulated. There is, however, still scope for a great deal of progress in the development of a road system which will enable heavier, and therefore, more economic, load units to be carried over our highways. Gross vehicle weights have been restricted to such a low level in the past that the present tendency to consider 12 tons the ultimate limit is understandable. 12 tons may very well be an immediately desirable target, but it is quite inadequate as an ultimate one. If India's roads are to play their part in solving the tremendous problem of transporting goods and persons as industrial and agricultural production continue to develop, then 25 tons and not 12 must be the ultimate target for commercial vehicles. It is only by such a re-orientation of thinking on this question that full use will be made of the ability of heavy road transport vehicles to solve the country's transport problem.

The sales of 'Comet' chassis have increased steadily since the Manufacturing Programme was inaugurated and there is every indication that this trend will continue. We are fortunate to enjoy the confidence of State and Municipal Transport organisations and repeat orders from these important operators continue to encourage us. More recently, private operators have been purchasing our vehicles in a continuously increasing volume and sales to the latter now exceed those to the former. We can without doubt look forward to 1958 being an outstanding year in your Company's history both with regard to sales and to progress with the Manufacturing Programme. At some point towards the end of this year we shall pass the half-way mark in manufacture. That is, more than half the value of a 'Comet' chassis will become made in India. At the end of 1957, 36 per cent of the value of the chassis was produced at your Factory; and at the end of 1958 the percentage will become 55. In this connection, I would like to draw your attention to the fact that these percentages indicate nett savings in foreign exchange. To arrive at these figures, the value of materials which are still imported for fabrication in your Factory is deducted from the gross savings represented by the deletion of units and components from C.K.D. packs imported from Leyland.

Unfortunately, just when we have surmounted all our initial difficulties, are well ahead with our production programme and are beginning to enjoy a sales demand which will ensure our efforts shall be financially sound, a shortage of foreign exchange has intervened. We are, therefore, continuously in the position of not knowing whether our own efforts to increase our local production to meet the sales demand will be matched by our ability to import from Leyland Motors those portions of the chassis still manufactured by them. This is a most unsatisfactory state of affairs, because it obviates planning sufficiently far ahead to ensure complete co-ordination of our own and of Leyland Motors' effort to keep strictly to our programme. It is suggested that Government might relieve manufacturers of this anxiety by issuing licences for import at least six months in advance of the beginning of the period in which import will take place. Such an arrangement would enable manufacturers in India, still dependent on the import of some parts of their products, to order imported material in time to ensure its delivery at the right time.

Leyland Motors have continued to assist us in every way possible and we owe them a debt of gratitude. In this connection, I am sure you will wish that I shall convey to Sir Henry Spurrier and Mr. D. G. Stokes our special thanks for their personal help and guidance, which has proved so valuable in assisting us to deal with the problems incidental to the establishment of a modern commercial vehicle factory. I should like also to pay a special compliment to the Executives and staff and all the employees of the Company who have done commendable work and who deserve recognition for their loyal service throughout the year.

Note.—This does not purport to be a record of the proceedings of the Annual General Meeting.

International Panorama of Progress

A wider world for fabrics

CALTEX
PETROLEUM PRODUCTS

In many countries, the subtle influences of past traditions and customs have been combined with modern materials and design to create new trends in fashion. This resurgence-in-textiles on the part of European and other nations has broadened their panorama of progress, created a wider world for fabrics through expanded production, employment and opportunity. The textile industry is just one of many nourished by Caltex quality fuels and lubricants. Through the power of petroleum, Caltex keeps industry and every segment of society expanding, aiding the prosperity of today and holding forth the promise of an even brighter tomorrow to over 70 countries—partner in progress in Europe, Africa, Asia, Australia and New Zealand.

INDIAN COFFEE IN A PARLOUS POSITION

COFFEE BOARD CHAIRMAN'S REVIEW

THE world coffee industry is passing through a strenuous period. While some Latin American countries are making tremendous efforts to keep the load of growing output off the world markets, with a view to avoiding a depression in prices, through "support" schemes, a few other countries, especially those in Africa, are increasing their acreage under coffee and have even drawn up programmes for further large-scale expansion. While, as it is, the carry-over at the end of the current season is expected to be of the order of 20 million bags, the highest since 1946-47, the further expansion in acreage under coffee in African countries cannot but add to the imbalance between production and consumption in the years to come, unless the rate of world consumption is increased at a rate commensurate with the rise in output. Despite all the efforts now being made to increase world consumption, the prospects of the surplus output being mopped off are dim.

The production of Indian coffee is also increasing. No doubt, India possesses a large internal market, but the exportable surplus is at the same time growing, so that the coffee growers have to depend on the external markets, which fetch a higher price than the internal market. With a steady decline in prices of mild coffee—India is known for its good quality of mild coffee—and with a growing preference abroad for low-priced and low-quality coffees, the margin of profit on exports is rapidly declining. It is against this background that Mr. K. Srinivasan, Chairman of the Coffee Board, examined the present position of, and outlook for, the Indian coffee industry in his address at the half-yearly meeting of the Board held on 30th May 1958. He said that the recent developments in the world coffee markets have placed India "in a very parlous position."

During the season 1956-57, India produced 42,200 tons of coffee and the latest estimates of the current season's crop placed it at 41,687 tons. Production in 1958-59 is expected, according to the Coffee Board Chairman, to be above 45,000 tons and possibly nearer 50,000 tons. Earlier estimates placed the coming season's crop at over 50,000 tons, in view of the excellent condition of the plants and the prospects of timely rains and good supply of fertilisers. The blossom showers were scanty in most areas and patchy in some and this caused some anxiety about the crop up to the end of April. Latterly, however, the position seems to have improved a good deal. Though the position is still unsatisfactory in some areas, the general outlook is now said to be very much better than what was feared once.

The total receipts into the pool out of the 1956-57 crop amounted to 41,660 tons, all of which had been sold by the middle of April last. The releases for internal consumption during 1957 amounted to 26,202 tons, as against the Coffee Board's estimate of 25,810 tons made in November 1956 and 23,807 tons in 1956. Prices remained more or less steady, but a shade higher than usual, after the spurt in May 1957 when the short-lived increase in excise duty was made. The final export figure for the 1956-57 crop stands at 15,228 tons, as against the official allotment of 15,155 tons. This is a fresh record for export of Indian coffee during the last two decades. Though prices were ruling fairly low at about Rs. 300 per cwt. for Plantation A throughout the year, the increased quantity of coffee exported made up for the shortfall in price. The year's marketing enabled the Board to make a payment so far of Rs. 2.65 per point. The final payment will be made this month.

The estimated consumption during 1958 is about 29,000 tons. The exportable surplus out of the 1957-58 crop has been revised to 11,708 tons made up of 8,407 tons of Plantation, 3,251 tons of Arabica Cherry and 50 tons of Robusta for experimental monsooning and export. If the trend of prices during February and March this year continues during the rest of the year, the Coffee Board Chairman expects a larger fall in consumption than the one estimated and it may stand somewhere between 27,000 and 28,000 tons. This, as he points out, would release a larger quantity for export, but unfortunately the prices in the overseas markets are even more disappointing than in 1957. The export programme commenced late this year, as coffee was not ready, and the opening sales in February fetched about Rs. 300 per cwt. for Plantation A for only a part of the coffee offered. The prices, according to Mr. Srinivasan, were far lower than those fetched at any time during the previous eight years.

Despite the restriction on exports imposed on themselves by some Latin American countries under the Mexico City agreement, the "support buying" scheme and certain financial arrangements in Brazil, prices of mild coffee sagged, forward quotations reached new low levels, consumers sought cheaper coffees and roasters and others in the U.S.—the largest market for coffee—began to limit their purchases to the minimum. The general recession also had its own adverse effect on consumption. Consequently, the prices fetched for Indian mild coffee suffered a steep decline and remained steady at about Rs. 240 per cwt. *ex*-works in April and May. During the current year, India has so far sold 5,499 tons (5,006 tons of Plantation and 493 tons of Arabica cherry) overseas, besides shipping 90 tons of Plantation to London out of selected estates for assessing market reactions and setting aside 770 tons for monsooning. These still leave 3,311 tons of Plantation and 1,988 tons of Arabica to sell. The Board is no doubt making efforts to promote sales abroad, but according to the Board Chairman, "the general position is, however, one of nervous and hesitant buying and trying to buy limited quantities and at the cheapest prices possible, in view of the uncertainty in the world market."

In view of the changed circumstances in the world market, there is urgent need for changing the method of marketing and for improving the quality of coffee exported abroad. In fact, the Coffee Board is conscious of this, as will be seen from the following extract from Mr. Srinivasan's speech:

"The need to re-examine our method of marketing, especially for export, has been felt for some time, and we took the decision sometime ago to have an Expert Committee to go into this question and to make recommendations. The matter was then taken up with Government and I am glad to state that we are very near constituting such a committee.

"We have not yet been able to secure a Cup Taster; but it is felt we should introduce tests for roasting at least, to supplement the system of screening introduced last year. The Board had set up a Committee for improving standards for quality of Indian coffees and the recommendations of that Committee are being implemented now. In an increasingly competitive and price conscious market, we have continually to give attention to improvement of quality and grading, as other countries are doing. In some countries, at any rate, the impression is that Indian coffees are priced far too high, even making allowance for the fact that a relatively higher price is inevitable because of superior quality."

The falling export prices, coupled with the increased cost of production, would necessarily mean a revision of the basic price of coffee released to the internal market, so as to compensate the grower adequately. But the Coffee Board does not seem to be in a mood to revise the present price policy. Thus, Mr. Srinivasan observed:

"After a good deal of anxious consideration it was decided to wait and watch the trends a little longer, and not to raise the basic release prices immediately. The view taken was that as the industry had had fairly high dividends during the last few years, a setback in this particular year may not very materially affect the industry, while, on the other hand, a rise may even have an adverse effect on consumption in India and on the industry itself. It should not perhaps matter if this were a temporary or passing phase, but it is

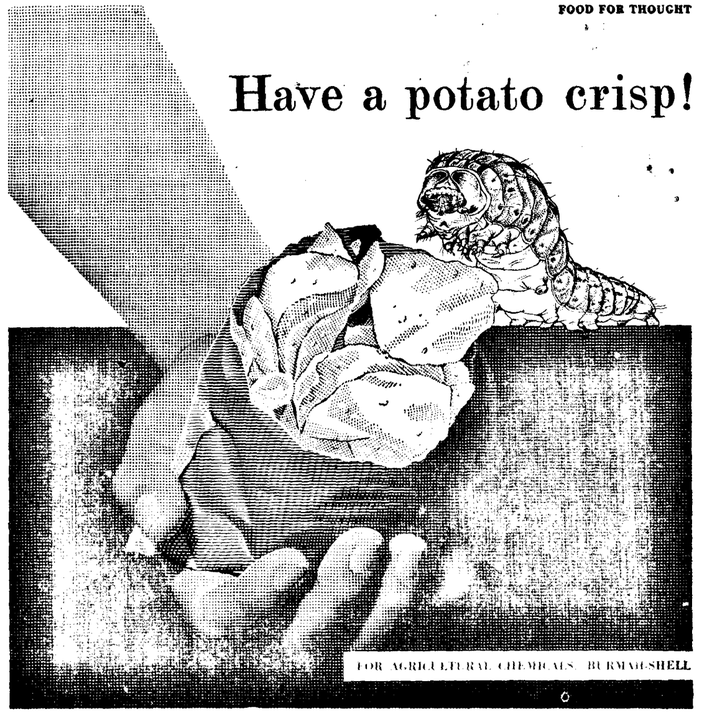
FOOD FOR THOUGHT

Have a potato crisp!



There are few foods which combine the down-to-earth simplicity and haute-cuisine elegance found in the potato. Whether it is mashed, baked, chipped or french fried, the potato occupies a prominent and useful place...from a formal marriage banquet to a handful of crisps.

All this is very well provided of course white grubs or cutworms haven't got there first. The white grub eats away all the flesh of a growing potato and causes considerable damage particularly in hill areas. The cutworm is a night bird: as soon as the sun goes down, he moves in the field to eat the tender young potato plants under cover of darkness. These potato loving pests can destroy as much as one-third of an entire potato crop.

Shell aldrin provides effective control of white grubs and cutworms and can increase production by as much as 50% on effective fields. And when you consider that India produces nearly two million tons of potatoes a year from 6,00,000 acres, you will realise how important it is to get these insect pests very firmly under control. For every rupee spent on importing aldrin as much as twenty rupees worth of potatoes could be saved. This is a sensible expenditure whichever way you look at it; food for thought in fact.

SHELL Chemicals can save crops
and Foreign Exchange too!

RAISING NEW CAPITAL FOR ELECTRIC SUPPLY INDUSTRY

FEDERATION OF ELECTRICITY UNDERTAKINGS OF INDIA URGES CHANGES IN LEGISLATION

IF public utilities are to have firm financial foundations, legislative enactments regulating them should be such as would allow them to maintain their financial integrity, attract capital and give a reasonable return to investors. The rate of return to be permitted on investment in public utilities is the core of the problem of their regulation. Reasonable return has been interpreted to mean, in the United States, as that which will enable the undertaking to raise, in the market, funds necessary for the proper continuity of its public duties. In India, this principle was embodied in the Electricity (Supply) Act, 1948, which permitted licensees a return which would "enable them to raise finance in the market for the proper continuity of their public duties."

The capacity of electricity undertakings in the private sector to raise finance for development seems to have been overestimated. It was was thought that the future pattern of electricity development in the country would largely be in the form of multi-purpose projects undertaken by the State and that the main role of undertakings in the private sector would be to purvey the power generated. The quantum of finance necessary for this limited purpose, it was thought, could be easily raised. Subsequently, it has been realised that the scope of expansion of units in the private sector, is wide in the context of the country's huge industrial programmes and that heavier investments are, therefore, required. The Planning Commission, in its recent memorandum—*Appraisal and Prospects of the Second Plan*—submitted to the National Development Council, observed that the postponement of any part of the approved power programmes was likely to create a difficult situation towards the end of the present Plan and the beginning of the next. The implementation of the Plan programmes in respect of electricity should receive top priority. The question of raising the necessary resources, therefore, assumes special urgency.

The problems and prospects of raising the necessary development finance for implementing expansion schemes of electricity undertakings operated by licensees are outlined in a memorandum submitted by the Federation of Electricity Undertaking of India to the Union Ministry of Irrigation and Power. The Federation submits that while the industry's need for sustaining investors' confidence has increased, its economic strength has actually deteriorated because of "ill-conceived measures of nationalisation sought to be enforced by some of the States, rigidity in regulation sought to be enforced by statutory audits functioning under the electricity law" and other reasons.

Hopes Belied

The memorandum points out that the hope that some substantial relief to the financial difficulties of the industry would result from capital being made available by institutions such as the Industrial Finance Corporation or the State Finance Corporations founded on the restrictive provisions of the Indian Electricity Act 1910, read with the Electricity (Supply) Act. These provisions resulted in these institutions applying standards other than the normal creditworthiness of the applicants when considering loan applications from electric supply concerns. Even where loans have been given, adds the memorandum, the rate of interest quoted is higher than what the Electricity (Supply) Act has contemplated. An objection (very valid from a creditor's point of view) which has especially influenced the Finance Corporations, the memorandum adds, is the bare-bone return to the investor in the industry, which precludes the possibility of the management having recourse to amortisation of the loan—a normal procedure in Corporation financing. The framers of the Electricity (Supply) Act, the memorandum furthers adds, had evidently visualised the possibility of loans to undertakings by State Electricity Boards. Here too, there has been no relief, either because Electricity Boards were not constituted at all or because the Boards, in States where they have been formed, were themselves in financial strait jackets.

The Electricity (Supply) Amendment Act, 1956, introduced a slight increase in the standard rate, and made provision for undertakings to benefit in some measure from the development rebate introduced by the Finance Act of 1955. But experience has now clearly demonstrated, the memorandum points out, that the overall impact of the amendments has not had the desired effect of improving the investment attracting capacity of the industry. The continuing difficulty of raising money (whether on equity or loan basis) has rendered it practically impossible for undertakings to go ahead with expansion schemes assigned to them under the Plan. In 1948, when the financial provisions embodied in the Electricity (Supply) Act came into operation, the capital base of many an undertaking bore a healthy relation to the paid-up share capital. There had been a healthy past practice of ploughing back profits into the business (or base), resulting in reasonable dividends being possible to investors even with a limit of 5 per cent. as the standard rate. With all fresh capital ranking for only the limited standard rate, however, and no significant surpluses being any more available to be ploughed back, the situation has steadily deteriorated from this point of view also.

Small Units

While large-sized undertakings with large expansion schemes have been penalised by erosion of dividend and other factors, the small-sized undertakings, on their part, says the memorandum, have not been without their special difficulties. These, being mostly diesel undertakings, have had to face a continuously increasing price of fuel, resulting in electricity rates having to be fixed too high. They too have been faced with the difficulty of raising equity capital and having to resort, if and where possible, to loans bearing interest at rates very much higher than the standard rate.

Borrowing of loan capital, the memorandum emphasises, cannot be the basic solution of the industry's problem. In fact, after a certain point, it tends to complicate matters by further reducing the security of the genuine investors' shareholding and thus scaring him away still more. Healthy growth demands that the Government does not shut its eyes to the inescapable economic fact that one cannot force the public to invest, but must make investment sufficiently attractive. The memorandum, therefore, urges the Government to take practical steps without delay to restore the confidence of investors.

Basic Remedy

The basic remedy is of course to revise the permissible "standard rate" so as to fix the limit at a rate which compares more favourably with the actual cost of attracting money. If, however, Government considers that, as Parliament has only recently fixed the "standard rate," it would be embarrassing on its part to reopen the subject, the Federation would appreciate Government's difficulty, while regretting that expediency of that kind should be allowed to stand in the way of the truer interests of the country.

The request for an increase in the standard rate, the memorandum avers, is not part of any special pleading, but is the reflection of widespread anxiety that, failing adequate incentive, not only will the industry be unable to expand but there is even real danger of it facing atrophy for want of funds.

As regards loans which are the only alternative method open for raising development finance in the market, the rate of interest payable on such borrowings will, according to the memorandum be very much higher than the present limit imposed by the standard rate. To meet this difficulty, the memorandum suggests that the Electricity (Supply) Act be suitably modified so as to treat any loans approved by the State Electricity Boards as on par with loans advanced by the Boards themselves. In other words, that the law be suitably amended so as to provide for the actual interest payable on such approved borrowings being treated as an operating expenditure with half per cent. accruing to the undertakings in addition as risk money. Such treatment, it is suggested, should also be accorded to preference capital which might stand a chance of being raised on the basis of a higher return.

Creditworthiness

The memorandum emphasises the need for strengthening the reserves of the industry both as a buffer against misfortune and to provide a measure of internal finance. Without such reserves, the industry will not be considered creditworthy to receive loans from foreign financial institutions. The Federation, therefore, suggests the reopening of the question of providing for a rehabilitation reserve as a source of internal finance. It had earlier sponsored such a move, the suggested rate of appropriation to the rehabilitation reserve being one per cent.

The purpose of regulation, in essence, is to maintain public utility services at levels which will cover all costs, including taxation. The present situation under the law, according to the Federation, is tantamount to charging future consumers some portion of true costs (tax deferred) properly attributable to current customers.

The memorandum pleads that, if all this fails, and pending, in any case, suitable amendments to the Electricity (Supply) Act, the Central Government should advise all State Governments that they may exercise individual discretions to allow special appropriations under the provisions of the Act, in such a way, as they think desirable, to ensure that the undertakings can earn sufficient profit to attract new capital, whether loan or equity. In this way, the memorandum says, each State can take its own view of the cost of developing its essential electricity services *versus* the alternative disaster of going short of them.

STAINLESS STEEL INDUSTRY

Faced with acute shortage of raw material, many units of the stainless steel fabricating industry are threatened with imminent closure. A leading Bombay factory, Messrs. Devidayal Stainless Steel Industries (Private) Limited, has served notice of closure of factory from 9th June 1958. This would result in retrenchment of about 500 workers.

The present crisis, though temporary, is due to the heavy restrictions on the import of stainless steel sheets during the last two licensing periods, non-issue of licences during July-September 1957 and issue of only 25 per cent. of licences during October-March 1958. The industry is actually starved of raw materials. Representations have been made to the Government to evolve a policy which would help the young industry to survive. It was the contention of the Engineering Association of India when its representatives recently met Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, in Bombay, that the material in the market and the incoming stocks of stainless steel against the licences of established importers should be frozen and channelised to the actual users. The Association felt that such a scheme would help the industry survive and would prevent unemployment of thousands of workers. In the Bombay region, actual users have received during the October-March 1958 period, a meagre quantity of about 140 tons, while the allocation to established importers aggregated about 800 tons. It is the contention of the industry that, if the material of the established importers is diverted to the actual users, the latter will be able to keep the factories running for three to four months when the material against the licences for April-September 1958 is expected to arrive. The Government should seriously consider the situation and evolve a formula which would be satisfactory both to actual users and established importers.

AMENDING COMPANIES ACT—VI

SUGGESTIONS OF SASTRI COMMITTEE ANALYSED

By F. R. Ginwalla

AMONG the proposals of the Company Law Amendment Committee with regard to the remaining sections of Part VI of the Act, mention must be made of the suggested changes in Section 210 which refers to annual accounts and balance-sheets and Section 211 which prescribes the form and contents of balance-sheet and profit and loss account. The Report observes that different companies have different accounting years according to their convenience or the seasonal nature of the industries in which they are engaged and it may not be practicable to prescribe a uniform financial year for all companies or even for companies engaged in a particular industry. A suggestion was made to the Committee that power may be given to the Government to prescribe a uniform financial year for all companies on the grounds that it may help collection of statistical data and facilitate the assessment of cost data and may also deter interlocking of funds by companies and the abuses incidental thereto. On the other hand, it was stated before the Committee that a uniform financial year may cause practical difficulties and cast a heavy burden upon managements and company auditors. The Report states that the Committee was, therefore, unable to accept a suggestion that there should be a uniform financial year for all companies.

Rigidity of Accounts

It was pointed out to the Committee that Section 211(1) read with the provisions of Schedule VI of the Act imposes such rigidity in the form in which accounts are to be presented to shareholders that a true and fair view of the state of a company's affairs and of its profits or losses for the relevant financial year may not emerge in an intelligible shape. It was further pointed out to the Committee that the present form in Schedule VI retards the development of accounting and costing techniques in this country and that it is so involved and cumbersome that it is hardly intelligible to an ordinary shareholder. The Report states that it is important that information should be given to the shareholders in a manner they could understand and which has the effect of giving, in the opinion of the auditor, a true and fair view of the state of the Company's affairs and of its profit and loss for the relevant year. Taking all the practical difficulties into consideration, the Committee has proposed certain amendments to Schedule VI which are contained in the Annexure to the Report. These recommendations are based upon the suggestions made by the Institute of Chartered Accountants of India. The modifications as proposed by the Committee will bring the balance-sheet more in conformity with acceptable accountancy concepts. Besides rectifying technical accounting defects in the present classification, the Committee has to some extent attempted at streamlining the headings of the balance-sheet. It may be observed that inasmuch as the Schedule can be altered by notification of Government, any further difficulties that might arise, even after companies have begun to adopt the slightly revised form, may be met by making such changes as may be necessary in the light of subsequent practical experience.

Sections 210 and 211

The proviso to Section 210(4), according to the Report, might lend itself to abuse by companies seeking to avoid a prompt presentation of the accounts to the shareholders. The Report, therefore, proposes that this proviso may be deleted. The words "that he had reasonable ground to believe, and did believe," occurring in the proviso to Section 210(5) are also suggested to be deleted.

The following amendments are suggested in Section 211:

(1) In the provisos to sub-sections (1) and (2), the words "or any company engaged in the generation or supply of electricity" are proposed to be inserted after the word "company" and before the word "or".

(2) As regards Section 211(5) (iii), the reference should be to the Indian Electricity Act, 1910.

(3) The proviso to Section 211(7) may be amended in a manner similar to that suggested for the amendment of the proviso to Section 209(5).

In view of the amendments suggested to Schedule VI, the Report proposes to re-draft Section 296 in the following terms:

"Section 295 shall apply to any transaction represented by a book debt, which was from its inception in the nature of a loan or an advance."

Accounts of Subsidiaries

Section 212 states that the balance-sheet of a holding company should include certain particulars as to its subsidiaries. The Report observes that on the wording of Section 212(2)(a), as it stands, if the financial year of a subsidiary coincides with that of its holding company, the balance-sheet of the subsidiary to be attached to the holding company's balance-sheet would be the subsidiary's balance-sheet in respect of the immediately preceding financial year. This was presumably not the intention of the legislature, particularly when Section 212(2)(c) provides that the financial year of the subsidiary shall not end on a day which precedes the day on which the holding company's financial year ends by more than six months. To remove the aforesaid difficulty, Section 212(2)(a) is proposed to be amended as under:

"The balance-sheet referred to in clause (a) of sub-section (1) shall be made out in accordance with the requirements of this Act at the end of the financial year of the subsidiary, where such financial year coincides with the financial year of the holding company or if it does not so coincide, as at the end of the financial year of the subsidiary last before that of the holding company."

The Report clarifies that Section 212(3) (b) and (c) would apply only to profits and losses of a subsidiary which might properly be treated as revenue profits and losses (*vide* Buckly on Companies Act, 12th Edition, page 973). The proviso to Section 212(9) is proposed to be amended by omitting the words "that he had reasonable ground to believe and did believe." We have already noted that the Report has suggested similar amendments in Sections 209(5), 210(5) and 211(7).

Authentication of Balance-sheet

The balance-sheet and the profit and loss account have to be prepared and approved by the board of directors before they are submitted to the auditors for their report thereon. It was suggested to the Committee that the auditors should draw up a tentative balance-sheet and profit and loss account, draw the attention of the directors to any irregularities that come to light in the course of the audit, consider the explanation of the directors and then submit a report and that the directors should thereafter sign the balance-sheet and profit and loss account as finally settled. The Report has rejected the foregoing suggestion on the ground that it amounts to an inversion of the wholesome rule laid down both by the Indian and the English Acts. So far as the sequence of events leading upto the signature by the auditor on his report is concerned, the present Act makes no change as compared with the outgoing Act of 1913.

Board's Report

The Report observes that "the complaint has often been heard that directors' reports are colourless documents which do little to inform or educate the shareholders." A suggestion was made to the Committee that besides the matters required to be stated in the report to be attached to the balance-sheet, it should contain express declarations regarding commitments in respect of purchase or sale of investments and capital expenditure other than those shown in the balance-sheet, the correctness of the book debts or loans and advances due from directors, officers, and connected firms or companies and charges on the company's assets, the sufficiency of the provision for depreciation on fixed asset and the provision for a fall in the value of current assets, etc. The Report states in very plain terms that these are matters for the auditors to look into in the course of their audit and the directors to explain in their report.

The Report, however, recommends that new clauses (d) and (e) may be added to Section 217(1) in the following terms:

"(d) any material changes which have occurred between the end of the financial year of the company and the date of the report which affect the financial position of the company;

(e) any commitments in respect of the purchase or sale of investments and capital expenditure other than those shown on the face of the balance-sheet."

In the context of the above proposed amendments, the Report states that a period of six months or more, often elapses between the close of the financial year and the publication or directors' report and during this period material changes might have occurred. It is, therefore, fair that such changes should be brought to the notice of the shareholders.

As regards Section 217(1)(b) an amendment is proposed by deleting the word "either" and the words "or in a subsequent balance-sheet." In suggesting the foregoing amendment, the Report observes: "If, acting under the articles, the directors transfer an amount to reserve, it should be carried into the balance-sheet. In other cases, they can only recommend the proposal to the shareholders. In view, however, of the explanation of 'surplus' as the balance after the proposed allocation for dividend, bonus, or reserves given in Schedule VI, Part I, it would be seen that, if the Board recommends an appropriation for reserve it has to be incorporated in the balance-sheet at the close of the year and not left to be shown as a 'reserve' in a subsequent balance-sheet."

Copies of Balance-sheet

Section 219 requires that a copy of the balance-sheet and auditor's report should be sent to every member of a company not less than 21 days before the date of the general meeting. The Report suggests that Section 219 (1) should be amended by substituting the words "twenty-eight days" for twenty-one days."

Private Companies

It was suggested to the Committee by the Department that a provision should be made requiring private companies to file before the Registrar copies of their profit and loss account along with their balance-sheets. There are private companies carrying on business on a large scale and managing a number of public companies with substantial capital. The balance-sheet contains an item relating to the debit or credit balance of the profit and loss account. The profit and loss account also explains how this particular item has been arrived at. The Report, while accepting the foregoing suggestion of the Department, observes that "no harm would be caused if the profit and loss account is filed with the Registrar provided non-members are not entitled to inspect or get copies from him." To give effect to the above recommendation it is proposed that the words "in the case of a public company" occurring in Section 220(1) (a) may be omitted and that Section 220(1) (b) may be deleted and a new proviso may be added to Section 220(1) in the following terms:

"Provided that persons who are not members of the company shall not be entitled to inspect or obtain copies of the profit and loss account of a private company, not being a subsidiary of a public company, under Section 610."

As regards Section 220(2), the words "public or private" are suggested to be dropped.

Inter-company Investment

Section 372 refers to purchase by a company of shares, etc., of other companies in the same group. The Report states that clarification has been sought on the point whether investments made within the same group during the course of the year, but which do not exist at the date of the balance-sheet should be entered in the list required to be filed under Section 372(9). The Report recommends that the meaning of Section 372(9) should be made clear by inserting the words "during the course of the financial year as well as those in which shares or debentures held by it at the end of such year" after the words "made by it."

Section 416 lays down the formalities relating to contracts where a company is an undisclosed principal. Under the law as it stands, such a contract, at the option of the company, is voidable against the company if it does not comply with the requirements of Section 416. The Report proposes that in Section 416(3) (a) the word "unenforceable" should be substituted for the word "voidable." The effect of the proposed amendment is significant.

On the language of Section 417, as it stands, when a company with which moneys or securities of employees have been deposited, is itself a scheduled bank, the retention of the moneys or securities by the bank itself in a special account opened for the purpose would not be a compliance with the section and the bank would have to deposit the moneys and securities with another scheduled bank. To avoid this difficulty, Section 417(1) is proposed to be amended in the following terms:

"All moneys or securities deposited with a company by its employees in pursuance of their contracts of service with the company shall be kept or deposited by the company in a post office savings bank account or in a special account to be opened by the company for the purpose in a scheduled bank or where the company itself is a scheduled bank, in a special account to be opened for the purpose with that or any other scheduled bank."

Provident Funds

Section 418(1) requires that the provident funds moneys of employees of the company should be invested either in approved or trust securities or in the post office savings bank accounts, the excess may be deposited in a scheduled bank. There are no restrictions at present on the maximum amount that may be deposited in a post office savings bank and all the provident fund moneys have, therefore, to be kept only in the post office savings bank till they are invested in trust securities. The Report states that it was pointed out that there were practical difficulties in adopting this course because contributions received from branch offices in the shape of cheques, interest warrants, etc., could not be credited in the post office savings bank account. It was further pointed out that restrictions relating to deposit into and withdrawals from post office savings bank accounts, despite relaxations recently introduced, render it difficult for companies to keep their moneys in the post office savings bank and operate upon it as and when occasion arises. It was also urged that payments have to be made on account of withdrawals, refunds, etc., of provident fund deposits and large establishments have to keep a certain amount of liquid cash at the disposal of the trustees of the provident fund. To remove some of the foregoing practical difficulties it is suggested in the Report that the proviso to Section 418(1) may be deleted and the words "or in the State Bank of India in an account opened for the purpose" may be added after the words "post office savings bank account" in Section 418(1).

As regards Section 418(4) it was suggested to the Committee that this section impinges unnecessarily on the law of trusts and should be deleted. The Report observes that Section 418(4) is intended to facilitate collection of contributions of employees through the agency of the company and, therefore, it is appropriate. The only amendment desirable, according to the Report, is the omission of the unnecessary word "separate" in the opening part of Section 418(4).

Auditors

Section 224 relates to appointment of auditors and their remuneration. Section 224(1) is proposed to be amended so as to require an auditor appointed at the annual general meeting to "signify his written consent to act as such to the Registrar within a week of his appointment."

As regards Section 224(2), the Report suggests that the management by the exercise of its voting strength and through proxies secures the appointment of its own nominees as auditors and thereby attempts to avoid an independent auditor. In order to remedy such a situation, a suggestion was made to the Committee that the Government should be authorised to appoint auditors in appropriate cases. The Committee took the view that such a power to the Central Government was not an adequate remedy and that the increased vigilance on the part of the shareholders and the high sense on the part of the company auditors was the only effective remedy against the unsatisfactory state of company audits. The Committee was also unable to support the suggestion that the reappointment of auditors should be left to the absolute and unfettered discretion of the general body, particularly where the management has a predominant strength.

As regards the suggestion that it is undesirable for the statutory auditor to act as taxation adviser or serve in any other consultative or advisory capacity and provide himself with an additional source of remuneration or depend on the patronage of the Board, the Report states that there is a possibility of the independence of the auditor being impaired by his taking up the dual role. The Report, however, states that no hard and fast rule can be laid down and it must be left to the good sense and honour of the profession to preserve its independence and integrity. It must not be forgotten that by reason of his close knowledge of the accounts and dealings of the company an auditor is in a position to give the company his useful advice and guidance.

The Report states that the accountancy profession is anxious that it should continue the practice of signing audit reports in the auditor's business name without stating in the report the name and identity of the individual who actually signs it and that in the case of a firm of auditors any partner of the firm should be entitled to sign in the name of the firm without stating the name of the partner who actually signs the report. The Report states that this matter may be solved by providing that the report might bear the name of the auditor's firm but should indicate in addition the name or names of the auditors actually responsible for the audit. The Report indicates that the foregoing solution is not acceptable to the accountancy profession. The Report refers to the notification No. 60-CA (1)/57 dated the 27th August 1957, issued under the Chartered Accountants Act by the Council of the Institute of Chartered Accountants in consultation with the Government. This notification fixes the responsibility for the audits on the individual who signs the report. The Committee, after considering all the aspects of the matter, has not recommended any change in the existing law.

As regards the question of making "restricted state auditors" eligible for appointment as auditors of companies throughout India, the majority of the Committee has recommended that Section 226(2) should be amended by substituting the word "India" for the words "that state" so as to allow them to act as company auditors throughout India. The foregoing recommendation is made by the majority of the Committee after considering that a small number of "restricted auditors" are not likely to abuse their position as auditors in view of the stringent provisions of the Act. The majority of the Committee are of the opinion that there is no room for any substantial apprehension regarding any permanent dilution of standards in the accountancy profession.

Auditor's Functions

The object of Section 227(5) is that where a company, by virtue of other statutory provisions applicable to it, is not required to disclose certain matters, which under the Act, the company is required to disclose, the balance-sheet would, nevertheless, be regarded as presenting a true and fair view of the company's affairs, provided the relevant statutory provisions are specified therein. The Report states that the foregoing section which runs into 17 closely printed lines is capable of being expressed in a shorter manner with a few simple words.

Branch Audits

The Report has suggested a new definition of "branch office" in Section 2(9) as meaning "any establishment described as a branch by the company or any establishment carrying on either the same on substantially the same activity as that carried on at the head office of the company or engaged in any production, processing or manufacture."

Section 228 which relates to audit of accounts of a company's branch office has created doubts as to its precise import on account of its ambiguous language. The Committee proposes the amendment of sub-sections (1) and (2) and the addition of a new sub-section (3) in the light of the following considerations:

(1) The branch accounts must be audited by a qualified person. (2) The qualifications, rights and duties of such persons must be the same as those of a statutory auditor but confined to the audit of the accounts of the branch office or offices entrusted to him. (3) The statutory auditor should have the right but not the duty to examine the branch office accounts, if he so desires. (4) The branch audit reports should be returned to the statutory auditor. (5) The provisions of Sections 216, 224, 225, and 229 would apply to branch auditors also.

Investigation

Sections 234 to 251 have been modelled on Sections 164 to 175 of the English Act with some modifications. The Report states that though these provisions are stringent they are practically ineffectual and very little has been achieved by setting them in motion. The Report further states that though steps have been taken under these provisions against a few companies, they have proved mostly infructuous. The Report makes out a case for amendment of these provisions so that they may not remain a dead letter. The shareholders and the Department stressed the need for tightening up these provisions. On the other hand, the managements described them as unduly inquisitorial and harmful.

Section 234(1) is proposed to be amended by giving the Registrar power to call for and inspect such books of account or documents of the company as he might require. In view of the above proposed amendment of Section 234(1), consequential amendments are suggested in Section 234 (2), (3), and (4). Section 239 refers to inspector's power to carry out investigation into affairs of related companies or of managing agent or associate. In order to make an investigation under Section 239 effective, it is suggested in the Report that Section 239(1) (c) should be amended in the following terms:

"If an inspector appointed under Section 235 or 237 to investigate the affairs of a company thinks it necessary for the purposes of his investigation to investigate also the affairs of:

(a) Same as before. (b) Same as before. (c) Any other body corporate which is, or has at any relevant time been, managed by the company or the board of which comprises nominees of the company or is accustomed to act in accordance with the directions of the company or any of the directors or related companies any directorships in which are held by employees or nominees of those controlling the management of the first mentioned company."

It was stated before the Committee that some companies have taken the advantage of the wording of the existing Section 239 and have escaped the investigation of questionable inter-company loans or advances or investments of questionable or fraudulent character. The amendment of Section 239(1) (c), as observed above, is intended to cover such cases. In order to prevent any harassment, it is proposed to amend Section 239(2) by providing that the Central Government before according its approval to investigation to be made by an inspector shall give an opportunity to a person or body corporate concerned to show cause against the proposed investigation.

The Report states that difficulties have been felt by inspectors in the matter of securing production of documents and evidence under Section 240. To remove this defect suitable amendment of Section 240(1) is suggested in the Report.

The Committee is of the opinion that considerable delay is caused by attempts to refuse

PROFITS OF TATA AND SVADESHI MILLS DECLINE

DIVIDEND ALSO LOWER

THE slump prevailing in the cotton textile industry, consequent on the drastic increase in excise duties with effect from 1st September 1956, higher costs of the essential raw material, namely, cotton, and increased emoluments to labour, have led to a sharp decline in the profits of the Tata Mills Ltd. and the Svadeshi Mills Company Ltd., both under the management of Tata Industries Private Ltd., Bombay, for the year ended 31st December 1957. In addition to the above factors which are common to all units in the textile industry, the profit of the Svadeshi Mills Company, Ltd., was affected by the closure and partial working of the mills for about 30 days. The gross profit of the Tata Mills at Rs. 12.95 lakhs shows a decline of Rs. 18.88 lakhs from Rs. 31.83 lakhs for the previous year, to which level it had risen from Rs. 9.73 lakhs for 1954. The gross profit of the Svadeshi Mills at Rs. 23.87 lakhs is less than half of Rs. 49.67 lakhs for 1956, the highest earned by the Company since 1951 when the profit amounted to Rs. 50.99 lakhs.

In conformity with the fall in gross profits, the net profits, too, of both the Companies show a substantial drop. Tata Mills' profit has declined from Rs. 18.27 lakhs to a low of Rs. 1.70 lakhs. This is after lowering the provision for depreciation from Rs. 11.87 lakhs to Rs. 10.25 lakhs and providing Rs. 50,000 for wealth tax, after taking into account the surplus provision of income-tax of previous years amounting to about Rs. 30,000. A note attached to the balance-sheet states that the depreciation provided in the year is inadequate to the extent of about Rs. 2.25 lakhs. Svadeshi's net profit has gone down from Rs. 31.76 lakhs to Rs. 6.79 lakhs. A sum of Rs. 2.50 lakhs has been made as provision for wealth tax including Rs. 1.11 lakhs for 1956. No provision has been made for income-tax by both the Companies this year also as their assessable income for the year under review is estimated to be *nil*.

Dividends

The dividends of both the Companies have been lowered from their previous year's rate of 14 per cent., consisting of a dividend of 12 per cent. and a cash bonus of 2 per cent. Tata Mills have lowered the distribution to 8 per cent. and Svadeshis to 9 per cent. Even payment of this attenuated dividend has been made possible only by a withdrawal by the Companies from their No. 1 general reserve. Tata Mills have withdrawn Rs. 5.25 lakhs and Svadeshi Rs. 9.75 lakhs, the actual amounts required for distribution. The net profits, amounting to Rs. 1.70 lakhs in the case of Tata Mills and Rs. 6.79 lakhs in the case of Svadeshis, have been transferred to their No. 2 general reserve. It may be mentioned here that the general reserve of both the Companies have been split into two accounts, namely, general reserve No. 1 and general reserve No. 2. This has been done with the object of segregating in general reserve No. 1 profits which have already been taxed and which are available, if required, for payment of non-taxable dividends. General reserve No. 2 consists of other profits of the Companies, namely, profits which have either not been taxed or which for income-tax purposes have been deemed to have been utilised for payment of non-taxable dividends in the past.

The comparative table in the next two columns will provide an idea of the Companies' progress during the past four years ended 31st December 1957.

Tata Mills

The sale proceeds of Tata Mills have risen by Rs. 26.25 lakhs to Rs. 3.34 crores. But this has been more than offset by the rise in manufacturing and other expenses from Rs. 3.06 crores to Rs. 3.35 crores. Of this rise, raw materials consumed alone show a rise from Rs. 131.41 lakhs to Rs. 151.25 lakhs and electric energy from Rs. 5.89 lakhs to Rs. 7.36 lakhs. The accounts for the year also include a sum of Rs. 6.27 lakhs, representing 15.7 per cent. of the basic wages, paid as bonus for the year 1956 in terms of the agreement arrived at between the Mill-owners' Association, Bombay and the Rashtriya Mill *Mazdoor Sangh*.

The Company's plan for the reorganisation and renovation of the mill is making satisfactory progress. Machinery of the value of about Rs. 14 lakhs was installed during 1957. At the end of the year, machinery of the value of about Rs. 6 lakhs was awaiting installation. The Directors have placed additional orders for carding engines, a humidification and ventilation plant for the carding department and equipment to increase the processing and finishing capacity from 50 to 75 per cent. of the Company's total production.

The Company's paid-up capital as at 31st December 1957 stands at Rs. 65.58 lakhs, all in ordinary shares of Rs. 25 each. It may be remembered, the paid-up capital of the Company was increased in 1956 to this level from Rs. 32.79 lakhs in 1955 by a fresh issue of 131,157½ new ordinary shares to the holders of the then existing ordinary shares for subscription at par in the proportion of one new share for every ordinary share held by them with the option to the shareholders to apply for additional shares. The reserves and surplus stand at Rs. 53.37 lakhs. There is a 5 per cent. convertible debenture liability of Rs. 39.51 lakhs. The current liabilities aggregate Rs. 133.71 lakhs, of which secured loans from a bank account for Rs. 61.62 lakhs. The gross block of Rs. 218.16 lakhs, including additions made during the year of Rs. 16.57 lakhs, stands written down at Rs. 127.63 lakhs. Works under construction and machinery awaiting installation (at cost) amounts to Rs. 9.09 lakhs. The current assets aggregate Rs. 155.48 lakhs and cover the current liabilities and provision for taxation by a comfortable margin.

Svadeshi Mills

The Directors of the Svadeshi Mills state that further progress was made in 1957 in the reorganisation and renovation of the mills. Machinery of the value of about Rs. 24.27 lakhs was installed during the year under review. This included carding machines, a hot-air sizing machine, an evaporating cooling plant, a dyeing plant and a continuous peroxide bleaching range. At the end of the year, machinery of the value of about Rs. 7.40 lakhs was awaiting installation.

Against a paid-up capital of Rs. 115 lakhs, made up of Rs. 100 lakhs in ordinary shares of Rs. 100 each and Rs. 15 lakhs in 5 per cent. tax-free cumulative preference shares of Rs. 100 each, the reserves and surplus aggregate Rs. 95.33 lakhs. The gross block of Rs. 276.30 lakhs has been written down to a book value of Rs. 131.44 lakhs. Additions during the year were of the order of Rs. 28.43 lakhs. Works under construction and machinery awaiting installation (at cost) amount to Rs. 9.90 lakhs. The current assets aggregate Rs. 186.60 lakhs, against which the current liabilities stand at no more than Rs. 117.62 lakhs.

The Rs. 25 fully paid-up ordinary shares of the Tata Mills Ltd. are currently quoted at Rs. 36.75 *cum-div.* On an *ex-div.* basis, the latest dividend works out a yield of 5.75 per cent. per annum.

The Rs. 100 fully paid-up ordinary shares of the Svadeshi Mills Co., Ltd., are presently quoted at Rs. 171 *cum-div.* On an *ex-div.* basis, the yield is 5.55 per cent. per annum.

NATIONAL RAYON'S NEW ISSUE

The Directors of the National Rayon Corporation have decided to raise additional capital by the issue of 80,500 new ordinary shares of Rs. 100 each to finance the installation of a rayon tyre cord plant with an annual capacity of 4 million lbs. The new ordinary shares will be issued at a premium of Rs. 25 per share and will, in the first instance, be offered to the existing shareholders in the proportion of one new share for every two shares held. Members whose holding of shares is less than two or not a multiple of two will be offered one coupon in respect of every ordinary share held. Each coupon, when presented to the Company along with a similar coupon and a sum of Rs. 25 payable on application will entitle the holder to one partly paid share. The shareholders are also free to apply for any additional shares. The new ordinary shares will rank *pari passu* for dividend along with other shares from 1958. The sum of Rs. 100 for capital and Rs. 25 for premium in respect of each new ordinary share will be payable in five equal instalments of Rs. 25 each, commencing from 30th June 1958 with an interval of two months between each payment. The share certificates will be available for delivery within nine months from the date of allotment.

INDIAN WOOD PRODUCTS MAINTAIN PROFIT

DIVIDEND, HOWEVER, CUT

THE audited accounts of the Indian Wood Products Company, Ltd. (Managing Agents: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta) for the year ended 30th September 1957 disclose that although the Company's sale proceeds during the year under review have made a sizable rise from Rs. 41.81 lakhs in the previous year to Rs. 46.16 lakhs, its profit has only been very nearly maintained at the 1955-56 level. Thus, at Rs. 16.45 lakhs, the gross profit shows no change from Rs. 16.48 lakhs for the previous year. It may be mentioned here that the Company earned a record profit of Rs. 20.24 lakhs in 1954-55, but this level has not been kept up in the subsequent two years. This is not surprising, for the Directors had, in their report for 1954-55, drawn attention to the prospect of an increase in production costs as a result of the higher royalty charged on the Company's timber by the U.P. Government. Thus, manufacturing costs have risen from Rs. 22.88 lakhs in 1955-56 to Rs. 27.29 lakhs. The yield of timber per tree was considerably lower during the year on account of the smaller size of trees marked for the Company. Indeed, the profit would have been still lower had it not been for the better prices realised for the Company's products.

The net profit, after providing for Managing Agents' remuneration, depreciation and taxation, is, however, slightly higher at Rs. 4.84 lakhs, as compared with Rs. 4.69 lakhs a year ago. The Directors have made a provision of Rs. 9.23 lakhs for taxation, as against Rs. 9.99 lakhs in the previous year. This is inclusive of a sum of Rs. 45,000 as provision for wealth tax. It also includes Rs. 97,000, representing the additional super-tax payable on the interim dividend and proposed final dividend. The dividend has been cut to 27½ per cent. from 30 per cent. paid for the previous two years by lowering the final distribution from 20 per cent. to 17½ per cent. By this reduction, the distribution is taken back to the 1953-54 level. The net profit for the year under review is not sufficient even to pay this lower dividend but this has been made possible by bringing in the surplus from the previous year. No amount has been transferred to the reserves for the second year in succession.

The following comparative table will give some idea of the Company's progress during the last four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1957	1956	1955	1954
Sale proceeds	46.16	41.81	41.81	37.41
Closing stocks of manufactured goods	0.82	0.41	0.76	0.68
Cost of manufacturing	27.29	22.88	20.39	20.07
Other expenses	2.95	2.52	1.33	1.29

Dividend	5.50 (27½%)	6.00 (30%)	6.00 (30%)	5.50 (27½%)
Carry forward	0.78	1.45	2.77	1.80

The Company manufactures cutch and katha by a patent process. The factory is situated at Izatnagar in Bareilly District, Uttar Pradesh.

The financial position of the Company, as disclosed by its latest balance-sheet, is quite sound. Its paid-up capital is Rs. 20 lakhs, all in ordinary shares of Rs. 10 each. Of this capital, a sum of Rs. 8 lakhs represents the amount capitalised out of reserves in the past. Even after this capitalisation, its reserves and surplus aggregate Rs. 21.21 lakhs. The provision for taxation stands at Rs. 6.91 lakhs. The current liabilities amount to Rs. 13.59 lakhs. The gross block of the value of Rs. 19.96 lakhs stands well written down at Rs. 4.20 lakhs, the difference, namely, Rs. 15.76 lakhs, being the amount of depreciation provided up to the end of the year of review. The current assets aggregate Rs. 57.51 lakhs, of which cash balances alone amounting to Rs. 11.28 lakhs provide a substantial cover to the current liabilities and provision for taxation.

The Rs. 10 fully paid-up ordinary shares are being currently quoted at Rs. 44.25 *cum-div.* (final dividend Re. 1.75). On an *ex-div.* basis, the yield on the shares works out to 6.47 per cent. per annum, free of income-tax.

Points From The Chair

"Comet" Chassis

"THE sales of 'Comet' chassis have increased steadily since the manufacturing programme was inaugurated and there is every indication that this trend will continue. We are fortunate to enjoy the confidence of State and Municipal transport organisations and repeat orders from these important operators continue to encourage us. More recently, private operators have been purchasing our vehicles in a continuously increasing volume and sales to the latter now exceed those to the former. We can without doubt look forward to 1958 being an outstanding year in your Company's history both with regard to sales and to progress with the manufacturing programme. At some point towards the end of this year, we shall pass the half-way mark in manufacture. That is, more than half the value of a 'Comet' chassis will become made in India. At the end of 1957, 36 per cent. of the value of the chassis was produced at your factory; and at the end of 1958 the percentage will become 55. In this connection, I would like to draw your attention to the fact that these percentages indicate net savings in foreign exchange. To arrive at these figures, the value of materials which are still imported for fabrication in your factory is deducted from the gross saving represented by the deletion of units and components from C.K.D. packs imported from Leyland."

SIR A. RAMASWAMI MUDALIAR,
Ashok Leyland Ltd.

Price Policy for Paper

"It is hard to reconcile Government's policy on paper prices with their exhortation to the industry to increase production. If Government are going to absorb for their own use between 30 and 40 per cent. of the paper produced in the country, and at the same time pay prices which barely cover production costs, it is clearly impossible for the industry to set aside funds for expansion. If it is intended that this shortfall should be recouped from the prices charged to civilian consumers, then I can only say that the morality of such an attitude is questionable and at variance with the request which Government have made to keep selling prices down. At the same time as discussing supplies to Government, representatives of the industry also discussed civilian prices with Government and the industry assured Government of its co-operation in assisting to keep them down. It was, however, made clear that, as in the case of supplies to Government consumers, a stage had been reached at which part of the increase in production costs would also have to be passed on to civilian consumers. Prices have accordingly been increased by about 5 per cent. with effect from 1st April 1958. Although there has been a certain amount of comment on this price increase in the Press, I am glad to say that it is generally appreciated that the cause of the high prices at which paper is selling in the bazaar is not the prices charged by the mills but the excessive profits taken by the bazaar."

J. F. BRIERLEY,
Indian Paper Makers' Association.

Cost of Production

"Throughout Calcutta and Bhandup Works, continually mounting costs have now become a feature of production requiring the constant attention of management in our industry, and indeed in all industry today. Labour and material costs have again risen. Whilst improvements in productivity achieved by modernisation have helped to counteract this rising trend and keep our prices and quality standards competitive, there is a limit at which the level of costs must so affect the price of our products that employment can be endangered. The Company has always paid great attention to producing a quality of product acceptable by high standards, and the wisdom of following such a policy is certainly sound as a long-term policy for an engineering enterprise suppling the Country's needs. Nevertheless, the fact must not be overlooked that customers in India are often conscious of price before quality, and it therefore behoves a Company such as yours with substantial overhead expenses (compared to many smaller units) to obtain the maximum effectiveness in operation, whether it be the use of man-power, raw materials or machines."

H. M. L. WILLIAMS,
Guest, Keen, Williams, Ltd.

Copper Prices

"It is usual in this statement to refer to experience during the year with our most important raw material—copper. And it gives me great pleasure to express appreciation to our suppliers for their service and co-operation. As I have already mentioned, the price has fallen persistently; this has undoubtedly made for uncertainty in the trade and been a factor, among others, in the extremely short order books on which we have recently been operating. Since the end of the year, when the London Metal Exchange price stood at £181 10*s.*, there has been a further fall of approximately £20 per ton which has now, I am glad to say, been recovered. In spite of reduced demand for copper in North America, world consumption was in fact maintained in 1957 due to increased usage in other territories. The fall in price, therefore, can be attributed to production outstripping demand. Producers have now taken steps to correct this situation and there would seem to be a basis for further gradual recovery. Up till the 7th October 1957, two methods were in use for pricing copper sold in the United Kingdom—the London Metal Exchange price and the Rhodesian Selection Trust Price. With two different prices operating, the trade was faced with great difficulties, and we welcomed the decision to revert to one price only."

E. L. WILDY,
London Electric Wire Co. & Smiths Ltd.

COMPANY MEETINGS AND DIVIDENDS

SONEPUR COALFIELDS LTD. Annual General Meeting, Calcutta, 16th June 1958. Transfer books will remain closed from 9th to 16th June 1958, both days inclusive.

TRAVANCORE RUBBER AND TEA CO., LTD. Annual General Meeting, Pathirapally, Kerala State, 19th June 1958. Dividend: 4 per cent. or Re. 0.40 per share. Transfer books remain closed from 3rd to 20th June 1958, both days inclusive.

HOOGHLY FLOUR MILLS CO., LTD. Annual General Meeting, Calcutta, 19th June 1958. Transfer books will remain closed from 12th to 19th June 1958, both days inclusive.

VICTORIA MILLS LTD. Annual General Meeting, Bombay, 19th June 1958. Dividend: Rs. 20.00 per share (includes bonus also), payable on and from 3rd July 1958. Transfer books remain closed from 6th to 19th June 1958, both days inclusive.

KANKNARRAH CO., LTD. Annual General Meeting, Calcutta, 20th June 1958. Dividend: *Nil*. Transfer books will remain closed from 18th to 20th June 1958, both days inclusive.

KAMARHATTY CO., LTD. Annual General Meeting, Calcutta, 20th June 1958. Dividend: *Nil*. Transfer books will remain closed from 18th to 20th June 1958, both days inclusive.

MARSHALL, SONS AND CO. (INDIA) LTD. Annual General Meeting, Calcutta, 20th June 1958. Dividend: 20 per cent. or Re. 0.40 per share. Transfer books remain closed from 6th to 20th June 1958, both days inclusive.

BENGAL FLOUR MILLS CO., LTD. Annual General Meeting, Calcutta, 20th June 1958. Dividend: Re. 1.25 per share final. Transfer books remain closed from 6th to 20th June 1958, both days inclusive.

VIJAYA MILLS CO., LTD. Annual General Meeting, Ahmedabad, 23rd June 1958. Dividend: Rs. 40.00 per share (includes bonus of Rs. 5.00 per share). Transfer books will remain closed from 16th June to 6th July 1958, both days inclusive.

CHRESTIEN MICA INDUSTRIES LTD. Annual General Meeting, Calcutta, 23rd June 1958. Transfer books will remain closed from 16th to 23rd June 1958, both days inclusive.

EMPIRE JUTE CO., LTD. Annual General Meeting, Calcutta, 23rd June 1958. Transfer books will remain closed from 9th to 23rd June 1958, both days inclusive.

JAYA SHANKAR MILLS BARSI LTD. Annual General Meeting, Barsi, 23rd June 1958. Transfer books will remain closed from 16th to 30th June 1958, both days inclusive.

ALCOCK ASHDOWN & CO., LTD. Annual General Meeting, Bombay, 23rd June 1958. Dividend: Rs. 12.50 per share, payable on and after 30th June 1958. Transfer books were closed from 9th to 22nd May 1958, both days inclusive.

WEST COAST ELECTRIC SUPPLY CORPORATION LTD. Annual General Meeting, Madras, 23rd June 1958. Dividend: Re. 1.00 per share or 10 per cent. (made up of two interim dividends paid already) free of income-tax. Transfer books will remain closed from 20th to 23rd June 1958, both days inclusive.

INDIAN WOOD PRODUCTS CO., LTD. Annual General Meeting, Calcutta, 24th June 1958. Dividend: Rs. 2.75 per share (includes interim dividend of Re. 1.00 per share). Transfer books will remain closed from 12th to 24th June 1958, both days inclusive.

CHITAVALSAH JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 26th June 1958. Transfer books will remain closed from 12th to 26th June 1958, both days inclusive.

ASSAM SAW MILLS AND TIMBER CO., LTD. Annual General Meeting, Calcutta, 26th June 1958. Dividend: *Nil*. Transfer books will remain closed from 12th to 26th June 1958, both days inclusive.

INDIAN STANDARD WAGON CO., LTD. Annual General Meeting, Calcutta, 26th June 1958. Dividend: Rs. 5.00 per share. Transfer books will remain closed from 18th to 26th June 1958, both days inclusive.

EAGLE ROLLING MILLS LTD. Annual General Meeting, Calcutta, 27th June 1958. Dividend: 7½ per cent., payable on or after 1st July 1958. Transfer books will remain closed from 18th to 27th June 1958, both days inclusive.

HOARE MILLER & CO., LTD. Interim dividend of Re. 0.50 per share, for the year ended 31st December 1957, payable on or after 7th June 1958.

RAJGARH TEA CO., LTD. Dividend of Rs. 2.50 per share, for the year ended 31st December 1957.

CENTRAL PROVINCES RAILWAYS CO., LTD. *Ad-interim* dividend of 4 per cent. per annum, less income-tax, for the half-year ended 31st March 1958, payable on 8th July 1958.

SEN-RALEIGH INDUSTRIES OF INDIA LTD. Dividend of 6 per cent. or Re. 0.60 per share, for the year ended 30th September 1957. Transfer books will remain closed from 18th to 27th June 1958, both days inclusive.

BALANOOR TEA AND RUBBER CO., LTD. Dividend of Re. 1.75 or 17½ per cent. for the year ended 31st March 1958. Transfer books will remain closed from 25th June to 1st July 1958, both days inclusive.

PROFIT OF BENGAL FLOUR MILLS HIGHER

MARSHALL SONS REPEAT DIVIDEND

Bengal Flour Mills Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The profit for the year (including items relating to previous years) after providing for taxation and depreciation, was Rs. 9,10,908 (Rs. 5,13,605) to which is added the balance brought forward from 1956 of Rs. 90,879 (Rs. 76,830) making a total of Rs. 10,01,787 (Rs. 7,36,879 including Rs. 1,46,444 being provision for taxation no longer required). Out of this total, the Board paid an interim dividend of 12½ (11½) per cent. on 28th December 1957, amounting to Rs. 1,50,000 (Rs. 1,35,000). The Board has transferred Rs. 5,00,000 (Rs. 2,00,000) to general reserve, leaving a balance of Rs. 3,51,787 (Rs. 2,55,879 after placing Rs. 1,46,000 to tax contingency reserve) available for distribution, which it is recommended be dealt with as follows:—

To payment of a final dividend of 12½ (13½) per cent. absorbing Rs. 1,50,000 (Rs. 1,65,000) leaving a balance to be carried forward of Rs. 2,01,787 (Rs. 90,879). No provision has been made for liability to wealth tax. Payment of wealth tax is not considered to be a charge against the current profits of the Company, and the Board therefore intends to charge against reserves any payment made in respect of such assessments.

Operations.—Increasing extraction of residual *atta* continued throughout the year and resulted in a substantial reduction in flour produced. This again contributed towards making *atta* available to the public at reasonable prices. Restrictions on the movement of wheaten products imposed by Government early in the year interfered considerably with the company's goodwill in many parts of India. The good results are due to the new milling plant, the installation of which was reported by the Board last year.

The Board has planned a further extensive programme of modernisation and improvement. This is at present held up owing to the difficulty in obtaining foreign exchange, but it is necessary to build up funds against the time when it will be possible to purchase imported plant. The transfer of Rs. 5 lakhs to general reserve has been made with this in view.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,00,000	Block ...	7,31,000
Reserves ...	17,56,000	Stock of wheat, flour etc. ...	6,08,612
Provision for taxation ...	8,97,639	Stores and spare parts	2,05,536
Liabilities ...	14,27,327	Debts, deposits and advances ...	22,02,026
Profit and loss account ...	2,01,787	Investments	34,649
		Cash ...	17,00,930
Rs.	54,82,753	Rs.	54,82,753

Marshall, Sons and Co. (India) Ltd.

The directors of the above Company (Managing Agents: Marshalls (Direction) Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th June 1957.

The profit and loss account shows a profit of Rs. 7,08,571 (Rs. 5,19,244) to which is added the dividend income from John Fowler (India) Private Ltd. of Rs. 12,258 (Rs. 12,500) making a total of Rs. 7,20,829 (Rs. 5,39,851 including profit on sale of furniture and vehicles of Rs. 8,107). From this amount is to be deducted general depreciation amounting to Rs. 86,393 (Rs. 1,17,488), adjustments in respect of previous years Rs. 39,322 (Rs. 33,893), loss on sale of furniture Rs. 428 (*nil*) and provision for taxation including wealth tax Rs. 3,50,000 (Rs. 1,90,000) leaving a net profit of Rs. 2,44,686 (Rs. 1,98,470). With the balance brought forward from the previous year of Rs. 1,01,088 (Rs. 1,12,618) there is a total amount available for disposal of Rs. 3,45,774 (Rs. 3,11,089). It is recommended that this balance be disposed of as follows:—

To payment of a dividend of 20 (20) per cent. free of Indian income-tax amounting to Rs. 2,10,000 (Rs. 2,10,000) and leaving a balance of Rs. 1,35,774 (Rs. 1,01,089) to be carried forward.

In the year under review, there was a further slight improvement in turnover as compared with the previous financial year, and it is gratifying to note that the trading profit also showed a slight increase in spite of the very competitive market conditions which generally entailed a reduction in the normal realizable margins of profit. The directors, however, feel justified in again recommending a dividend of 20 (20) per cent. free of tax.

Due to various factors, there was a tendency towards an upward trend in expenditure. There were the usual annual increments to staff, and the fact that throughout the year the dearness allowance paid has remained high based on the cost of living index. The interest on overdraft was higher, and it will be appreciated, that this was necessitated by the increased trading. Congestion experienced at ports during the year under review also led to a considerable advance in delivery charges, but it is hoped that the steps now being taken by Government will lead to an improvement in this direction.

A sum of Rs. 3,50,000 (Rs. 1,90,000) has been provided for taxation, and the increased figure is due to the higher rate of taxation and includes wealth tax.

The directors have pleasure in reporting satisfactory co-operation with the Britannia Engineering Company in regard to the manufacture and supply of tea machinery, which is sold and serviced by the Company, and this business has assisted in no small measure in maintaining the turnover.

As a result of the co-operation between Marshall, Sons & Co., Ltd., Gainsborough, and the Britannia Engineering Company in the production of *Diesel Road Rollers* in this country, the Company, as the selling agent, will shortly feel the benefits. The first batch of *Diesel Road Rollers* are now coming off the line and it is hoped in the very near future that the *Steam Road Rollers* will also be ready for delivery. The production of these items will materially assist the Company in combating the difficult position arising from the non-availability of import licences.

Another indigenous production from which the Company is receiving material benefit is the range of Marshall Electric Motors produced by the Motor and Machinery Manufacturing Company, who have raised production during the year, and although not yet actually fulfilling demand the position is rapidly improving.

The Marshall Baxter range of Stonebreakers being made by the Company in India is developing satisfactorily and various sizes of these machines can now be offered from stock.

Bearing in mind the Government's desire that India should become more self-sufficient in her local productions the Company is endeavouring to associate itself with other indigenous manufacturers to whom the Company have offered the benefits of its sales organisation. In continued associations of this kind lies the future prosperity of the Company, and the directors are in close touch with developments.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,50,000	Block ...	3,60,934
Reserves ...	18,90,000	Stock-in-trade	1,22,86,160
Provision for taxation ...	6,05,971	Stores and loose tools, etc. ...	42,458
Liabilities ...	1,68,83,647	Debts, deposits and advances ...	74,23,967
Profit and loss account ...	1,35,774	Investments	1,83,840
		Cash ...	2,68,033
Rs.	2,05,65,392	Rs.	2,05,65,392

Aruna Mills Ltd.

The directors of the above Company (Ahmedabad) presented the audited accounts of the Company for the year ended 31st December 1957.

The profit and loss account shows a loss of Rs. 6,91,695 (profit of Rs. 8,79,789 which is adjusted against the reserve fund). The balance brought from last year is Rs. 37,011 (Rs. 27,287) to which is added the excess of preference share dividend account viz. Rs. 2,625 (*nil*) making a total of Rs. 39,636 (Rs. 9,07,076). The directors have transferred from reserve fund Rs. 2,85,614 (*nil*), from dividend equalisation fund Rs. 2,50,000 (*nil*) and from contingency fund Rs. 2,50,000 (*nil*) making a total of Rs. 8,25,250 (Rs. 9,07,076). Short provision of taxation of the previous year absorbs Rs. 4,16,000 (*nil*) leaving an available balance of Rs. 4,09,250 (Rs. 9.07,076). The directors recommend payment of a dividend on 10,000 5 per cent. cumulative preference shares for the year (less income-tax) absorbing Rs. 34,250 (Rs. 36,875) and a dividend of Rs. 25 (Rs. 25) per share, income-tax free, on 15,000 ordinary shares for the year absorbing Rs. 3,75,000 (Rs. 3,75,000) leaving to be carried forward a balance of rupees *nil* (Rs. 37,011 after placing Rs. 2,58,190 to reserve fund, Rs. 1,00,000 to dividend equalisation fund and Rs. 1,00,000 to contingency fund).

The stalemate created by the imposition of increased excise duties in September 1956 continued to depress the conditions of the cloth market, all throughout the year under review, and many textile manufacturing units were faced with accumulated stocks. In December 1957, however, the Central Government, at the time of amalgamation of sales tax with excise duties, reduced the excise duty on medium cloth by six pies per sq. yard. The Company's mills are manufacturing fine, superfine and medium varieties and the burden of excise duties on fine and superfine categories is excessive, and the reduction in excise duty on the medium varieties in the last month of the year, did not prove of much help.

During the year under review, the manufacturing cost continued to increase owing to rise in wages in certain occupations as well as the introduction of the scheme of gratuity under the Industrial Court Award, and higher prices paid for stores, dyes, chemicals and spare parts.

Further progress was made on the mills' reorganisation and renovation programme during the year. A sum of Rs. 27,79,197 was spent on extension of buildings and installation of new machinery and equipment. The main items covered by this expenditure included blow room machinery, revolving flat carding engines, mercerising range, singeing, shearing and cropping machines and electrical equipments and buildings for housing blowroom and cards.

The Board of directors of the Company resolved in June 1957, to increase the capital of the Company by Rs. 5,00,000 by the issue of 5,000 fully paid bonus ordinary shares of Rs. 100 each, to be issued and allotted to the shareholders of the Company in proportion of one ordinary share to three ordinary shares held by them and that the said shares should rank for dividend from 1st January 1958. An application was made to the Central Government for a consent thereto. The directors state that the Company has received the sanction of the Central Government. One of the conditions on which the sanction is granted is that the bonus shares should be issued in the year in which there would be assessable income. Looking to the working of the year 1957, the present market conditions and amount of depreciation in respect of expected installations of new machinery of the value of about Rs. 27 lakhs during the year 1958, the directors did not think it proper to recommend the issue of bonus shares at this stage but decided to consider the matter at a later date.

The installed capacity of the mills is 42,768 spindles, 1,452 doubling spindles and 912 looms with complete dyeing, bleaching, mercerising and sanforizing plants.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,00,000	Block ...	55,68,608
Reserves ...	98,23,189	Stock-in-trade	73,30,822
Provision for taxation ...	14,23,640	Stores, spare parts, etc.	14,93,779
Liabilities ...	61,57,948	Debts, deposits and advances ...	45,16,808
		Investments	7,27,534
		Cash ...	2,67,226
Rs.	1,99,04,777	Rs.	1,99,04,777

Arvind Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Narottam Lalbhai & Co., Ahmedabad) presented the audited accounts of the Company for the year ended 31st December 1957.

The profit for the year after providing Rs. 18,54,118 (Rs. 24,44,677) for depreciation and development and rehabilitation and Rs. 33,60,000 (Rs. 37,00,000) for tax provision amounted to Rs. 14,89,807) (Rs. 26,37,852). The ad-interim dividend of Rs. 12.50 (Rs. 7.50) per share for the first-half of the year 1957 absorbed Rs. 5,00,000 (Rs. 3,00,000) leaving a balance of Rs. 9,89,807 (Rs. 23,37,852). To this amount is added the balance brought forward from the previous year's account of Rs. 15,274 (Rs. 72,768) and surplus of preference shares dividend account of 1956 Rs. 6,339 (*nil*) making a total of Rs. 10,11,420 (Rs. 24,10,620). The directors recommend the payment of dividends as follows:—

To the payment of a dividend of 12.50 (Rs. 17.50) and a bonus Rs. 10.00 (Rs. 10.00) per ordinary share, income-tax free, on 40,000 ordinary shares for the second-half of the year 1957 absorbing Rs. 9,00,000 (Rs. 11,00,000), to the payment of a dividend on 5,250 5 per cent. cumulative preference shares for the year 1957 (less income-tax) absorbing Rs. 17,981 (Rs. 19,359), to the payment of a dividend on 10,500 4½ per cent. cumulative preference shares for the year 1957 (less income-tax) absorbing Rs. 32,367 (Rs. 34,847), to the payment of a dividend on 5,250 4½ per cent. 'B' class redeemable cumulative preference shares for the year 1957 (less income-tax) absorbing (Rs. 16,183 (Rs. 17,423) and to the payment of a dividend on 5,250 4½ per cent. 'C' class redeemable cumulative preference shares for the year 1957 (less income-tax absorbing Rs. 16,183 (Rs. 17,424 leaving to be carried forward to next year's account Rs. 28,706 (Rs. 15,274 after placing Rs. 6,06,293 to reserve fund Rs. 5,00,000 to dividend equalisation fund and Rs. 1,00,000 to contingency fund).

The stalemate created by the imposition of increased excise duties in September 1956 continued to depress the conditions of the cloth market, all throughout the year under review, and many textile manufacturing units were faced with accumulated stocks. In December 1957, however, the Central Government, at the time of amalgamation of sales tax with excise duties, reduced the excise duty on medium cloth by six pies per sq-yard. The Company's unit is manufacturing fine and superfine varieties and the burden of excise duties on these categories is excessive and the directors' hopes for relief have been frustrated.

The Board of directors of the Company resolved in June 1957, to increase the capital of the Company by Rs. 20,00,000 by issue of 20,000 ordinary fully paid bonus shares of Rs. 100 each, to be issued and allotted to the shareholders of the Company in proportion of one share to two ordinary shares held by them and that the said shares should rank for dividend from 1st January 1958. An application was made to the Central Government for consent thereto. The directors have pleasure to inform that the Company has received the sanction from the Central Government, and that necessary resolutions for issue of bonus shares shall be moved at the extraordinary general meeting of the Company to be held on 6th June 1958.

The installed capacity of the mills is 62,448 ring spindles, 3,964 doubling spindles and 1,216 looms with complete dyeing, bleaching and printing plants.

Accounts in brief were as under:—

BOMBAY, 21*st May*, 1958.

THE EMPIRE JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Eighty-ninth Annual General Meeting of the Members of THE EMPIRE JUTE COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 23rd day of June, 1958, at 3 o'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the thirteen months ended 31st July, 1957, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare Dividends.
3. To appoint a Director in place of Mr. B. L. Bajoria, the Director retiring by rotation at the Meeting.

   And in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:

   "That Mr. B. L. Bajoria be and is hereby re-appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. B. L. Bajoria is an "associate" of the Managing Agents within the meaning of the Act, and that therefore he can only be re-appointed by a special resolution as a Director of the Company liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

5. To appoint a Director in place of Mr. R. G. Edwards who resigned from the Board in March, 1958, and in this connection, to consider, and if thought fit, to pass the following Resolution which will be proposed as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto:—

   "That Mr. D. N. Kapur be and is hereby appointed a Director of the Company liable to retirement by rotation in place of Mr. R. G. Edwards."

The Share Transfer Books of the Company will be closed from 9th to 23rd June, 1958, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,

McLEOD & CO., LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *29th May*, 1958.

Note.—Payment of the proposed dividends, if declared, will be made on or after 7th July, 1958, only to those members whose names are registered in the Books of the Company on 23rd June, 1958, or to their Mandatees.

Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT IN RESPECT OF SPECIAL BUSINESS

Mr. R. G. Edwards resigned from the Board at the end of March, 1958, and a Special Notice has been received from a member of the Company notifying his intention to propose a special resolution as set out in item 5 of the above notice appointing Mr. D. N. Kapur as a Director of the Company liable to retirement by rotation, in the place of Mr. R. G. Edwards. In the said Special Notice it has been pointed out that Mr. D. N. Kapur is an "associate" of the Managing Agents within the meaning of the Companies Act, 1956, and that, in view thereof, it will be necessary for the members to pass a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956, if they decide to appoint him as a Director of the Company liable to retirement by rotation since McLeod & Co., Ltd., the Managing Agents of the Company, are authorised by the Articles to appoint a Director or Directors on the Board of the Company.

PRESIDENCY JUTE MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Seventy-third Annual General Meeting of the Members of PRESIDENCY JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Friday, the 27th day of June, 1958, at 3 o'clock in the afternoon, for the following purposes:

1. To receive and consider the Profit and Loss Account for the thirteen months ended 31st July, 1957, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint Directors in place of Mr. Alec. A. Leslie and Mr. B. L. Bajoria, the Directors retiring by rotation at the Meeting.

   And in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956.

   "That Mr. B. L. Bajoria be and is hereby re-appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. B. L. Bajoria is an "associate" of the Managing Agents within the meaning of the Act, and that therefore, he can only be re-appointed by a special resolution as a Director of the Company liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

As Special Business

5. To consider, and if thought fit, to pass the following resolution:

   "That Dr. S. C. Law, who attained the age of sixty-five years in July, 1957, and who was, at a General Meeting held on the 21st May, 1957, appointed a Director of the Company whose period of office is liable to determination by retirement of Directors by rotation be and is hereby permitted to continue in office as such Director, and it is hereby declared in conformity with the provisions of Section 281 of the Companies Act, 1956, that the age limit prescribed by Section 280 of the Act shall not apply to him."

   Special Notice of intention to propose the foregoing resolution has been received by the Company.

The Share Transfer Books of the Company will be closed from 13th to 27th June, 1958, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,

McLEOD & Co., LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *28th May*, 1958.

Note:—Payment of the proposed dividend, if declared, will be made on or after 15th July 1958, only to those members whose names are registered in the Books of the Company on 27th June, 1958, or to their Mandatees.

Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT

Dr. S. C. Law, who has been a Director of the Company since 19th April 1945, attained the age of sixty-five years in July 1957. Unless, therefore, as provided by Section 281 of the Companies Act, 1956, a resolution is passed by the Company in general meeting approving his appointment and specifically declaring that the age limit prescribed in Section 280 shall not apply to him, he will be required to vacate his office at the conclusion of the forthcoming Annual General Meeting in terms of the provisions of the proviso to sub-section 2 of Section 280 of the Companies Act, 1956.

The resolution in item 5 of the above Notice, of which special notice of the intention to propose it has been received by the Company, is intended to satisfy the statutory requirements and will enable Dr. S. C. Law to continue in office as a Director of the Company after the conclusion of the forthcoming Annual General Meeting and to be reappointed as a Director of the Company at all material times in the future.

MONEY SUPPLY EXPANDS

(From Our Own Correspondent)

BOMBAY, *4th June*

With a further expansion in supply of funds and a fall in demand for bank credit, the short-term money market continued to rule easy for yet another week. The activity in the market was therefore, poor and banks were able to reduce further their outstanding borrowings from the Reserve Bank. Despite the easy conditions, money rates were well held at the previous week's levels. Thus, inter-bank call money continued to be quoted at 3 per cent. by almost all banks, large and small. House money at call was placed at 4 to 4½ per cent. and short-term deposits at 4½ to 4¾ per cent. for one to six months.

A further contraction of Rs. 10.90 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 30th May 1958. This brings the total fall in active notes in the past three weeks to Rs. 42.17 crores. A rise of Rs. 1.39 crores is noted in notes held in the Banking Department, so that the net decline in total notes issued is Rs. 9.51 crores. This is covered by a contraction of Rs. 10 crores in rupee securities and a small rise of Rs. 49 lakhs in rupee coin. Deposits of the Central Government show a decline of Rs. 16.94 crores, while deposits of other Governments are higher by Rs. 3.49 crores and those of banks by Rs. 4.66 crores. There has been a drop of Rs. 6.76 crores in loans and advances to Governments and of Rs. 2.73 crores in other loans and advances. The decline in the latter is mainly due to a fall of Rs. 5.08 crores in advances to Scheduled banks against usance bills. Investments have gone up by Rs. 8.73 crores, while Government Treasury Bills purchased and discounted are lower by Rs. 1.11 crores.

The Scheduled banks' statement for the week ended 23rd May 1958 shows a small decline of Rs. 82 lakhs in demand deposits and a rise of Rs. 5.19 crores in time deposits. Inter-bank borrowings are lower by Rs. 1.21 crores and borrowings from the Reserve Bank by Rs. 10.69 crores. Advances have been further reduced by Rs. 4.13 crores and bills purchased and discounted by Rs. 1.96 crores. Cash balances show no worthwhile change, but money at call and short notice are higher by Rs. 4.86 crores.

The Gilt-edged market ruled firm with most of the securities in good demand, on account of the very comfortable money conditions. Business passing was, however, small, in the absence of sellers and due to scarcity of stocks. For the first time after the flotation of the Central Government's loans, the Reserve Bank of India entered the market as a seller of some securities and put up their selling rates during the week under review. Thus, last week-end the Bank started selling 3½ per cent. 1965 at Rs. 98, as against the market quotation of Rs. 97.85, and stepped up its price by another 10 nP to Rs. 98.10 yesterday. It began offering 3½ per cent. 1968 at the issue price of Rs. 99.50 and 4 per cent. 1973 at 5 nP higher at Rs. 100.05.

3 per cent. 1986 Conversion Loan gained 5 nP to Rs. 71.05, as also 3 per cent. 1970-75 to Rs. 87.10. 3 per cent. 1966-68 was unchanged at Rs. 92.80, while 3 per cent. 1964 gathered 10 nP to Rs. 95.40. 3 per cent. 1963-65 was placed at Rs. 95.45 *ex*-voucher, as against Rs. 95.40 *cum*-voucher. 3½ per cent. 1962 was in demand and rose by 10 nP to Rs. 97.90. 3½ per cent. 1961 was stagnant at Rs. 99.60 and 3¼ per cent. 1963 at Rs. 98.75. 3½ per cent. 1964 was in keen demand and picked up 15 nP to Rs. 98.35 and 3¼ per cent. 1965 rose by 25 nP to Rs. 98.10, consequent on the increase in Reserve Bank's selling price. 3½ per cent. 1967 was unchanged at Rs. 97.55 and 3¾ per cent. 1967 at Rs. 99.65. 3¾ per cent. 1974 gained 5 nP to Rs. 98.25 and 4 per cent. 1972 by a similar extent to Rs. 100.30.

The rupee was somewhat irregular in terms of the dollar, in consonance with the trend of sterling. Thus, banks' selling rate, after declining from Rs. 475.25 to Rs. 475 rose back to Rs. 475.25 per $100. Their buying rate moved between Rs. 472 and Rs. 471.75 before closing at Rs. 472 per $100. In New York, spot sterling was erratic moving between $2.81⅝-2.81¾ and $2.81½-2.81⅝, but finished ⅛c lower at $2.81½-2.81⅝. Three months' forward also declined over the week from $2.79.5/16-2.79.7/16 to $2.79¼-2.79⅜. Transferable sterling was, however, unchanged at 279.35-279.45 cents.

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, *3rd June*

Fully steady conditions were in evidence in the metal market during the week under review. Prices of tin and electrolytic zinc were well maintained, while lead registered a nominal decline. Consuming industries continued to be inconvenienced by the acute shortage in copper and the delay involved in the permit system. In this context, a scheme for the equitable and more efficient distribution of copper as formulated by a Calcutta merchant and submitted to the Union Commerce and Industry Minister has received attention here. The scheme envisages the setting up of two regional committees, one in Calcutta and another in Bombay. Each committee will be comprised of two representatives each of importers, scheduled industries, and non-scheduled industries to be nominated by the East India Metal Merchants' Association of Calcutta and the Bombay Metal Exchange, respectively. Industries consuming 10 cwts. and above should submit details of their needs to the respective committees, which would issue entitlement permits according to availability of copper on an equitable basis. Importers' profit should not exceed 5 per cent. including retailers' commission and brokerage, if any. If the scheme is accepted, it would amount to decontrolling of copper. If Government's intention is not to decontrol so soon, at best it can call for recommendations from the committees as to distribution and expedite the issue of permits. This would relieve the acute difficulty now experienced by both importers and consumers as a result of the delay ensuing in the issue of permits. In the meantime, it was noted here that in both New York and London copper prices tended upward in the week under review, despite reports about the possibility of resumption of work in the Chuquicamatia copper mines in Chile. There was more demand for zinc in this week, and the price was firm at Rs. 47.50. Tin was steady at Rs. 507, and Calcutta attracted some mofussil business which should have normally gone to Bombay, where the price was higher at least by Rs. 5. On the other hand, lead sagged to Rs. 59.50 from Rs. 60.50 on limited demand.

BULLION RECOVERS AT CLOSE

(From Our Own Correspondent)

BOMBAY, *4th June*

A sharp rise in bullion prices during the last two days, in refreshing contrast to the downtrend noted in the past few weeks, was the most notable feature of trading in the bullion market during the week under review. Replacement buying and heavy short-covering, on reports of slackness of arrivals of Tibetan coins and paucity of gold supplies, pushed up the prices sizably from the lowest levels touched on Monday. Another factor which was responsible for the upward trend in prices was the rumour that the Bombay Government did not seem to be in favour of approving the recently amended by-laws of the Bullion Association. But these rumours lack confirmation.

Earlier in the week witnessed a further depression in bullion prices on persistent "bear" hammering. The increase in floating stocks, reports about the prospect of large arrivals of coins from Tibet and about unauthorised arrivals of gold were the main bearish factors. The heavy fall in the price of gold resulted in the enforcement of a margin of Rs. 7 per tola on all outstanding sales of gold in that settlement on Friday last, as the day's closing rate stood more than Rs. 5 below the starting rate of that settlement. As the closing price of silver in June settlement stood on Friday more than Rs. 5 below the last clearing rate, a special clearing was also enforced.

Silver forward (June settlement) slumped from Rs. 185-7 to Rs. 181-3 before the settlement ran out yesterday at Rs. 182-12. The July settlement receded from Rs. 186-5 to Rs. 182-3 on Monday, but recovered to close at Rs. 185-9.

Ready silver was marked down from Rs. 185-8 to Rs. 181-7, but soon gained ground to Rs. 185-1 today. The closing was done at Rs. 184-13. The floating stocks of silver are reported to be 500 bars. The daily average arrivals were 30 bars (including unrefined metal), while the offtake was 10 bars on an average.

Gold for forward delivery (June settlement) reacted from Rs. 109-2 to Rs. 106-8 before the settlement ran out on Monday at Rs. 106-15. The July settlement was marked down from Rs. 107-14 to Rs. 106-1, but rallied to close at Rs. 107-9.

Ready gold finished at Rs. 108-9, after touching a low of Rs. 107-1 from Rs. 109-14. The floating stocks of gold are estimated at 40,000 tolas. While the daily average arrivals were 3,000 tolas, the offtake was of the order of 2,500 tolas.

In New York, silver was unchanged at 89⅝c., while in London spot silver dropped from 76½d. to 75½d. and forward from 75½d. to 75⅛d. Gold also declined from 249s. 5½d. to 249s. 4d.

The following comparative table shows at a glance the trend of the market during the week under review:

	4-6-58	Highest	Lowest	28-5-58

GOOD DEMAND FOR LOWER GRADE KIPS

(From Our Own Correspondent)

MADRAS, *2nd June*

There was no change in the pattern of kip trade or prices this week. Demand for lower grades for local use was good. U.K. inquiries were mostly for lower ends of hides and calves which were in short supply, and sellers were not eager to make forward sales, in view of the reported reduction in the output of various tanneries. There was patchy demand from the U.S.A. for tanned buff calf skins.

As regards tanned skins, importers on the Continent were not keen buyers, and hence prices ruled weak. E.I. tanners were in a well sold position, and the urge to sell would not be evident for a fortnight or two. Owing to good clearance of common sheep in the local market, prices were steady for these classes, but weak for other sorts, because shipment business was poor.

COTTON FUTURES DULL

(From Our Own Correspondent)

BOMBAY, *4th June*

The cotton futures market was dull and featureless throughout the week under review. In the absence of any important development, trading interest was subdued. Rumours regarding an additional export quota for ¾" staple cotton induced some scattered buying, but in the absence of follow-up support the market failed to improve. On the other hand, profit-taking and hedge selling led to a slight fall in prices. The main consideration which prompted the selling was the discouraging textile outlook. Traders feared that, with the crisis facing the textile industry continuing unabated, there would be a further decline in mill consumption of raw cotton and that purchases of raw cotton, both for immediate consumption and stock building, would be curtailed more drastically. The export subsidy in kind for U.S. cotton, announced by the U.S. Department of Agriculture on 29th May, also imparted weakness to the market. It was thought that this would affect exports of Indian cotton as the subsidy would improve the competitive position of U.S. cotton *vis-a-vis* Indian short staples. Advices from the spot and upcountry markets were also not encouraging. However, the main factor which prevented a steep fall in price was the support extended by a section of traders. This was based on the expectation that the expert committee studying the cotton textile situation would make suitable recommendations to enable the industry to tide over the crisis.

I.C.C. Moglai Jarilla (August 1958) opened the week at Rs. 673.50, as compared with the previous close of Rs. 672.25 and, after fluctuating in a narrow range, declined to Rs. 666.75 on Monday. It improved to Rs. 673.50 yesterday. Opening today's session at Rs. 667.50, the contract gained Rs. 4.25 before finishing at Rs. 670.25. The net loss over the week was Rs. 2.

The following table indicates the trend of prices of contract during the week:

(In rupees per candy of 784 lbs.)

	4-5-58	*High*	*Low*	28-4-58
I.C.C. Moglai Jarilla August 1958 ...	670.25	676	666.75	672.25

The spot market was easy. The brisk activity which followed in the wake of the recent export quota announcement, subsided. There was only moderate mill activity. Spinner interest was confined to staple styles like Jarilla, Vijay, Khandesh and Jayadhar. Short staples continued to be neglected.

In the export section, shippers' interest was noted in Kala, Kalyan and *Deshi* varieties. Renewed demand was evident for Kalyan and Berar Jarilla in anticipation of an additional export quota for ¾" cotton. The Joint Chief Controller of Exports notified on 29th May that the ceiling of 15,000 bales fixed for export of cotton of staple length ¾" had been reached and that no further application for the export of that variety would be entertained.

In the foreign section, good business was reported in East African varieties subject to availability of import licences. Busoga and Bukhedi were in the limelight. The Government of India announced on Monday that a "small quantity" of U.S. cotton would be permitted to be imported under the Indo-Burma-U.S. Tripartite Agreement of 1956. Contracting and shipment periods will commence on 2nd inst., and would terminate on 30th June and 31st July, respectively. The announcement has been welcomed by importers although they are not enthused over it. Although the exact quantity of the import quota for U.S. cotton has not been fixed, heavy applications for licences are reported to have been made by importers. Trade quarters point out that the Government would be well advised to announce an import quota for East African cotton. An early announcement, it is felt, will enable mills to secure sufficient raw material to spin finer counts.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week-end closings:

Bengal *Deshi* 590 (600); Berar Jarilla 725 (740); Khandesh 775 (785); Oomra *Deshi* 660 (665); Vijay 890 (900); Hubli Laxmi 1.010 (1,015). *Delivery contracts*: Bengal 578 (582); Wagad 616 (620); Kalagin 607 (611).

Although the Karachi cotton futures market ruled firm early in the week, it suffered a sharp setback on 31st May following the announcement, by the U.S. Department of Agriculture, of a cotton export subsidy of 6½ cents a lb. payable in kind for fibre exported after 1st August 1958. Traders' apprehension was that, as a result of the subsidy, Pakistan cotton will face increasing competition from U.S. short staples in international markets. Heavy selling prompted by this fear depressed values. N.T.R.G. July reacted from Rs. 76-5 on the 28th May to Rs. 75-6 on the 31st. The January 1959 contract declined from Rs. 76-5 to Rs. 75-10. The former receded further to Rs. 75-1-6 yesterday while the latter ruled unchanged at that rate. The spot market was depressed. *Deshi* varieties, in particular, came in for heavy selling. Prices of all varieties declined sharply. Sind *Deshi*, which was quoted at Rs. 69 last week-end, dropped to Rs. 59-4. Punjab *Deshi* receded from Rs. 61-8 to Rs. 54-8. The following are the latest available spot quotations—in rupees per maund of 82 lbs.—for a few other popular varieties of Pakistan cotton prevailing at Karachi:

4 F Roller 69-10; S.G. 78-10; Punjab Roller 73-10; S.G. 80-2; 289F Punjab Roller 85-2; S.G. 95-10; 289F N.T. Roller 78-10; S.G. 89-10.

Alexandria cotton futures market ruled quiet during the week. Shippers' interest was subdued

and local spinner demand slack. The Karnak May contract expired on the 28th inst., at 76.10 tallaris. Shipments of Egyptian cotton from the commencement of this season till the 14th of last month aggregated 529,277 bales, comprising 135,631 bales of Karnak, 148,217 bales of Menoufi, 49,998 bales of Giza-30, 181,425 bales of Ashmouni, 11,768 bales of Giza-31 and 2,238 bales of other varieties.

The latest quotations—in tallaris per lb.—from Alexandria are as follows:

Karnak: July 77.00; November 79.50; *Ashmouni*: June 68.50; August 68.50.

After commencing the week on a firm note, the Liverpool cotton futures market reacted sharply on Monday as a sequel to the announcement of U.S. cotton export subsidy. The market was closed on 30th and 31st May. The expectation that the subsidy would stimulate larger exports of U.S. cotton abroad prompted heavy selling, with the result that prices declined. Yesterday, however, the market staged a partial recovery due mainly to small trade buying. Both the American and American type contracts recovered a part of the earlier gains. The closing rates were higher than last week-end rates. Sudan contracts attracted buyers. Values improved slightly. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton One Inch Staple Contract: July-August 25.40; October-November 26.00; December-January 26.40; March-April 26.70; *American cotton mixed growth contract*: July-August 26.12; October-November 26.61; December-January 26.93; March-April 27.23. *Sudan*: July-August 31.30; September-October 31.95; November-December 31.95.

Presumably influenced by the statement of the Department of Agriculture that U.S. cotton stocks on 1st August next would be down by 2.6 million bales and that the quality of this season's crop was the lowest on record, the New York cotton futures market ruled fully steady during the first two sessions of the week. An easy trend, however, set in on Monday following reports of favourable weather in most cotton belts. The easiness persisted till the close of the week.

The Department of Agriculture announced on the 29th inst., a cotton export subsidy rate of 6¼ cents a lb. for fibre exported after 1st August. This rate is subject to change without notice. The subsidy will be paid in kind. Payments will make up the difference between the higher U.S. price paid by exporters for cotton shipped overseas and the lower world price at which the fibre is sold abroad.

The U.S. Department of Agriculture announced the export sale of 265,728 bales of U.S. Government-owned cotton at 28.58 cents per lb. basis middling inch cotton. This was the second sale made by the department under its new 1958-59 disposal programme. Bids for the cotton were received on 26th May. The cotton cannot be exported until 1st August next. No sales have been made under the second part of the 1958-59 disposal programme, the payment-in-kind scheme.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	4-6-58	27-5-58	20-5-58
Spot	36.30	36.30	36.30
July	36.12	36.27	36.25
October	36.40	36.68	36.76
December	36.54	36.82	36.87

YARNS FIRM

(From Our Own Correspondent)

BOMBAY, 4th June

Barring cotton yarns which continued to rule dull, the yarn market presented a firm trend during the week under review. Both art silk yarn and staple fibre yarn evoked good buying enquiries at higher prices. Buying was induced by fears of growing acute scarcity in supplies. Even the Government of India's decision to issue licences for imports of art silk yarn and staple fibre yarn against exports of staple fibre fabrics, as well as art silk and staple fibre mixed fabrics, failed to have any effect on the market, since the decision is applicable only to actual users, that is, weaving mills, and not to traders. The permission lately given by the Government for the utilisation of licences originally granted for art silk yarn imports to import nylon yarn, however, led to a fall of about Rs. 2 per lb. in the prices of nylon yarn. The traders felt that, as a result of the latest policy, imports of nylon yarn in the coming weeks would be larger. Cotton yarns, as already stated, continued to rule dull, thanks to decline in raw cotton prices, lack of encouraging export outlook and poor enquiries from weavers.

Concern over the severe shortage of indigenous and foreign rayon yarn supplies was expressed by the Silk and Art Silk Mills' Association, Bombay, at an extraordinary general meeting held on the 2nd inst. In the course of a resolution adopted, the Association warned that the continuation of such a situation would result in the inevitable closure of several units, resulting in unemployment. The Association estimated the minimum yarn requirements of the weaving industry (for avoiding unemployment) at 4 lbs. per loom per shift and urged the Government to keep this in view while fixing the ceiling for imported yarn. Incidentally, it unanimously recommended that the distribution of indigenous yarn to members should be on the same basis as imported yarn, namely, on a loom-shift basis. The Directors of the Association were authorised to undertake the distribution of the available supplies of indigenous yarn on this basis.

Spot 120 Japan advanced by 9 nP to Rs. 6.50. 150 Japan were firm at Rs. 6.44. 120 Italy spurted by 25 nP to Rs. 6.25. 150 Italy rose by a like sum to Rs. 6.62. Among indigenous yarn, National Rayons 150 bright cones first grade strengthened by 8 nP to Rs. 5.70. 120 bright cones first grade rallied 19 nP to Rs. 5.91.

Staple fibre yarns 40x2 June delivery elicited good support and climbed up by Rs. 15 to Rs. 626. August delivery hardened by Rs. 14 to Rs. 631. Spot 40x2 Kohinoors and Citys gained 8 nP each to Rs. 3.34 and Rs. 3.33, respectively. Centurys put on 7 nP to Rs. 3.32 and New Greats 2 nP to Rs. 3.21. Among foreign yarns, Paramounts increased by 18 nP to Rs. 7.37. Fujis strengthened by 13 nP to Rs. 7.44.

In the cotton yarn section, ten counts Moderns were neglected at Rs. 13.50, as also Podars at Rs. 12.62. Among twenty counts, Indus were unchanged at Rs. 16.37, Moderns at Rs. 16.75 and Gokaks at Rs. 16.75. Thirty counts Hinds were dull at Rs. 19.50. Among forty counts, Moderns were stagnant at Rs. 24. Minaxis, however, added 13 nP to Rs. 23.50 on special support. Sixty counts Finlays receded by 25 nP to Rs. 60.75. Raghuvamshis were done at Rs. 50.50. Moderns were on offer at Rs. 60. Among eighty counts, Mahendras changed hands at Rs. 69.50, same as last week. Moderns were quiet at Rs. 69.75.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	4-6-1958	28-5-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 Japan (per lb.)	6.50	6.41
150 Japan (per lb.)	6.44	6.44
120 Italy (per lb.)	6.25	6.00
150 Italy (per lb.)	6.62	6.37
Staple fibre yarn (per case of 200 lbs.)—		
40 × 2 June	626.00	611.00
40 × 2 August	631.00	617.00
40 × 2 New Great (per lb.)	3.21	3.19
40 × 2 City (per lb.)	3.33	3.25
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.62	12.63
20s Modern	16.75	16.75
30s Hind	19.50	19.50
40s Minaxi	23.50	23.37
60s Raghuvamshi	50.50	50.50
80s Modern	69.75	69.75

SUGAR FORGES AHEAD

(From Our Own Correspondents)

BOMBAY, 4th June

The bearish trend noted in the sugar market in the past two weeks abated during the week under review. In fact, the market at present rules distinctly firm with a sharp advance in prices. The bullish fervour of the market has been fanned principally by reports that the Union Food Ministry is contemplating to set up a separate corporation to handle the export business in sugar. The Corporation, it is said, will be authorised to collect a specified commission on domestic sales of released stocks so as to enable it to meet the anticipated losses on exports. It will be recalled that there has been inordinate delay in the announcement of a clear-cut export policy. Thanks to this delay and to the number of official statements clearly indicating an upward trend of sugar prices in the domestic market, manufacturers have in the past four months put up the ex-mill quotations by Re. 1-8 per Bengal maund on an average. The delay in the announcement of policy and the official statements have also led to the creation of artificial price movements and artificial pockets of scarcity, with traders resorting to hand-to-mouth policy in regard to sugar purchases.

It is understood that trade bodies have drawn the attention of the Ministry to these factors. Some responsible quarters have also advised the Ministry to go slow with the export policy, as the production of sugar during the current season is not likely to exceed that of last season, in spite of the fact that a number of factories have carried out their expansion programmes and that a few new factories went into production during the season. Domestic consumption is estimated at 1.9 million tons, which, it is said, will leave a very small surplus to be added to last year's carry-over of 465,000 tons.

The arrivals of sugar (by rail) into the market was higher than those in the previous week. They aggregated 11,300 bags, as against 2,900 bags.

Large grain sugar forged ahead from Rs. 110-Rs. 115 to Rs. 113-Rs. 118 per bag. Medium grain was quoted as high as Rs. 109-Rs. 112, as against Rs. 107-Rs. 109. Small grain jumped up by Re. 1.50 to Rs. 108.

* * * *

HAPUR, 2nd June

Sugar prices which ruled dull and depressed during the major part of last week recorded some gains towards the week-end, following revival of demand at lower levels. Early export prospects in view of the deteriorating foreign exchange also helped the bullish trend. It is understood that the Government of India is likely to set up a sugar export corporation soon, but, as world prices of sugar are below those of Indian sugar, a measure of subsidy through higher domestic prices, which in turn can be achieved by the levy of an excise duty, is being envisaged by the Government. Production and despatches of indigenous sugar amounted to 19.47 lakh tons and 10.82 lakh tons upto 15th May, as against 19.13 lakh tons and 11.70 lakh tons, respectively, in the corresponding period of last season. Stocks with factories on this date stood at 12.90 lakh tons, as compared with 12.70 lakh tons a year before.

Sugar prices ruled steady in the Muzaffarnagar market on export prospects. The latest ex-mill delivery prices were:—Meerut (D28) Rs. 36.25; Simbhauli (E29) Rs. 36.50; Iqbalpur (C29) Rs. 37; Mansurpur (B29) Rs. 38.25; Shamli (B29) Rs. 37.75; Daurala (B29) Rs. 37.50; Mawana (C29) Rs. 36.87; Modinagar (C29) Rs. 36.62; Amroha (D29) Rs. 35.50; Bijnore (E29) Rs. 35.37.

Sugar prices in the Kanpur market staged a handsome recovery towards the week-end, following early export expectations. In the context of such rumours, every operator had turned a buyer. Although most of the north Indian factories stopped crushing for the season, a few units in the South were still working and the total output is likely to go up to 20 lakh tons. Spot and ex-mill delivery, respectively, per bag and per maund were:—(C29) Gola Rs. 102, Rs. 36; Basti Rs. 104, Rs. 37; (D29) Gola Rs. 101.25, Rs. 35.75; Waltergunj ready (unstocked) Rs. 35.50; Lakhimpur ready (unstocked) Rs. 35.37; Burhal Rs. 101.25, Rs. 36; Hargaon Rs. 101.50, Rs. 35.50.

Khandsari prices ruled steady during the week, due to good marriage season demand. Production in some centres is being continued from wet gur. The latest prevailing prices were Rs. 30.50 to Rs. 33.50 per maund according to quality.

Poor arrivals at an average of about 100 maunds daily from producer's stocks and good demand accounted for steady conditions in ready gur prices. Dry quality was quoted at Rs. 16.75 and kotha mixed dry-wet at Rs. 15 to Rs. 16.25 per maund. Local stock ran down to 1.30 lakh maunds.

The sprouting reports of the next cane crop have been fairly encouraging, but the future outlook of the crop as a whole is difficult to predict. For much will depend on weather conditions and rains in the coming months. An increased sugarcane sowing acreage is reported.

Gur prices improved by about Re. 1 per maund in the Muzaffarnagar market where arrivals are at an average of 500 maunds. The latest prevailing prices were:—Chakku minja Rs. 18.25 to Rs 18.62; Kotah mixed Rs. 17.50 to Rs. 18.25; shakker dara Rs. 19 to Rs. 20; shakker masala Rs. 21 to Rs. 23; khandsari Rs. 31 to Rs. 33.50 per maund.

Under the lead given by pulses futures which recorded appreciable advance during the week, gur futures here also improved slightly despite no fresh incentive. Fagun delivery opened at Rs. 12.70 on Monday last and was quoted today at the highest level of the week at Rs. 12.90.

EXPORT QUOTA FOR GROUNDNUT OIL

(From Our Own Correspondent)

BOMBAY, 4th June

The notable event of import to the oilseeds market is the announcement—made yesterday—of the release for export of 20,000 tons groundnut oil and 10,000 tons hand-picked selected groundnuts. The export of oil will be allowed by traders who have exported outside India during any of the three years ended 1955-56, while that of H.P.S. groundnuts will be allowed by parties who have exported either H.P.S. or ordinary groundnuts in any of the years from 1949 to 1955. The traders are required to establish, with usual documentary evidence (bills of lading and invoices), their best year's exports within a period of 15 days with effect from the 3rd inst.

The groundnut section ruled distinctly firm during the major part of the week. Induced by rumours of export quota for oil, prices showed a hardening tendency. The tendency persisted till the close today when there was a reaction following the belief that there might not be any export business in groundnut oil, in view of wide disparity between Indian and foreign prices. In sympathy with groundnut and on renewed hopes of removal of expert duty on castor oil, the castorseed section also ruled firm with values moving upward. Linseed met with good support following reports that offers of 700 tons of linseed oil has been accepted by Australia. There was also a possibility of additional overseas enquiries for linseed oil. Cottonseeds elicited enlarged buying enquiries from crushers and prices registered an improvement. In sympathy with the general trend, nigerseed and kardiseed were fully maintained.

The Government has approved, under section 11 of the Forward Contracts (Regulation) Act 1952, the by-laws passed by the Bombay Oilseeds and Oils Exchange in connection with the delivery contracts and ready contracts in vegetable oils. The members are advised to enter into transactions for oils on terms and conditions specified in the by-laws of the Exchange, so that in cases of dispute they can have the facility of arbitration and the laboratory of the Exchange. They are informed that the Exchange has begun to register rates of vebetable oils and oilcakes with effect from Monday the 2nd inst.

Groundnut August contract which stood at Rs. 164.25 last week-end rose to Rs. 165.25 on the opening day. This rate was maintained in the subsequent two sessions also. On Monday, there was good buying support and the contract advanced to Rs. 166. It rose further to touch Rs. 168.50 today before closing at Rs. 167.25. May contract went off the board at Rs. 164.25 on Friday, as against Rs. 166.25 on Wednesday last week. Over the week, bold ready spurted by 75 nP to Rs. 34. Coromandel and Khandesh quality both rallied a like amount to Rs. 35.12. Groundnut oil ex-mill advanced from Rs. 17.87 to Rs. 18.62. Railway receipt strengthened by 50 nP to Rs. 18.37.

Castorseed September contract spurted from Rs. 154.62 to Rs. 157 today. Towards the close, however, it was a rupee lower. May contract went off the board at Rs. 152.37 on the 30th ultimo. Ready Madras hardened by 25 nP to Rs. 30.37. Kanpur quality gathered a like amount to Rs. 29.12. Castor oil B.S.S. put on 25 nP to Rs. 16.75. Commercial quality was higher by 7 nP at Rs. 15.44.

Linseed September contract attracted good attention of operators and increased from Rs. 30.87 to Rs. 31.69 before finishing at Rs. 31.56. May contract terminated at Rs. 30.81 on the 30th ultimo. Bold ready was quoted today at Rs. 31.12, as against 30.62 on the opening day. June-July improved from Rs. 30.75 last week-end to Rs. 31.06.

Cottonseed September contract which stood at Rs. 109.50 last week-end elicited good support and advanced to Rs. 112.75 today. At higher levels, profit-taking set in and the quotation declined to Rs. 111.75.

Among other seeds, kardiseed bold ready fluctuated between Rs. 18.37 and Rs. 18.50 before winding up at Rs. 18.75. Nigerseed Madras quality came in for selling in the first two sessions of the week, with the value declining from Rs. 28.75 to Rs. 28.25 on Friday. It recovered to Rs. 28.62 on Saturday and, after easing again to Rs. 28.37 in the subsequent two sessions, moved up to finish at Rs. 28.75 today.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	4-6-1958	28-5-1958	21-5-1958
	Rs	Rs.	Rs.
Groundnut—			
May 1958	164.25††	166.25	170.50

JUTE GOODS DULL

(From Our Own Correspondent)

CALCUTTA, 3rd June

With the threat of dock workers to go on strike as from 16th June hanging like Damocles' sword, buyers in jute goods market were extremely cautious during the week under review and entered into commitments only to the extent they could get them shipped prior to the strike, if it unfortunately materialised. Conditions were naturally lethargic, and prices of jute goods moved within a narrow groove. Hessian 40" 10 oz. was throughout maintained above the I.J.M.A. minimum of Rs. 39.50, but the price of B. twills did not yet recover from below the minimum, to which it had sunk in the previous week. To take stock of the situation, a committee meeting of the Indian Jute Mills Association was held earlier in the week, and it was subsequently announced that nothing had developed to give up the floors originally fixed. In spite of this, the price of B. twills was quoting below the minimum in the open market. At this level, mills naturally could not sell and the fall was attributed to speculative activity.

During the week, there was anxiety in the market in regard to the difficulty being experienced by Egypt to open letters of credit to cover the recent purchases of Egyptians. So far, there had been no development to indicate that the dock workers' strike would be averted. Therefore, operators having little or no holding power began selling their holdings even at a loss. This was a factor which prevented the price of B. twills to touch the hundred mark. At one stage during the week, fair business was done in hessian with both the United Kingdom and the United States, and soon export business in heavy goods followed. A slight recovery in the price of B. twills set in, but since the buying support was not sustained, the recovery was lost and the price moved down to the opening level.

Another reason why foreign buyers of jute goods preferred to purchase only in small quantities was presumably due to their belief that there would be no hectic advance in prices of jute goods, in view of the excellent condition of this season's jute plants. On Tuesday last, ready B. twills improved to Rs. 97.50 from Rs. 97, while ready hessian 40" 10 oz. was steady at Rs. 40.60. Small business was done with both the U.K. and the U.S.A. At lower levels, some covering business was also transacted. Soon, fair quantities in B. twills changed hands for near delivery position, and on Wednesday B. twills moved up further to Rs. 97.75, while hessian 40" 10 oz. was quiet at Rs. 40.55. At this stage, fears about the implications of the dock strike forced speculators to sell, and, therefore, on Thursday B. twills gave way to Rs. 97.60 and hessian 40" 10 oz. to Rs. 40.45. On the next day, prices were further affected, as there was no business forthcoming. Prices for the above two representative constructions declined to Rs. 97.30 and Rs. 40.30, respectively. At lower levels, some covering business was done. Over the week-end, the quotations stood nominally at Rs. 97.35 and Rs. 40.30, respectively. Yesterday, only little business was done and prices were quiet. B. twills were quoted at Rs. 97.50 and hessian 40" 10 oz. at Rs. 40.25.

During mid-week, fair business was done in raw jute, and prices improved fractionally. By the week-end, the trend soon reversed as buyers were reluctant to increase their purchases. Some transactions were also put through in new crop for forward positions. Latest quotations for the different constructions, June-July delivery, old crop, are as follows:

	Middles Rs.	Bottoms Rs.
Pakistani:		
District	31.50	28.50
Northern	31.00	28.00
Indian:		
Northern	27.75	24.75

Pucca bales 1st marks ... Rs. 157.50 per bale ready.

TEA PRICES LOWER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 29th May

The catalogues for Sale No. 14 which was held on Tuesday, 27th May amounted to 1,243,495 lbs. The quality of teas which has been exceptionally useful throughout the first five months of the year showed a further seasonal decline. The appearance of most teas was satisfactory for the time of year, although some low growns showed signs of stalk and fibre. The sale opened to a general demand, which was, however, quieter than in previous weeks. Low mediums and medium descriptions were irregularly 5 to 10 nP easier. There was less enquiry for fannings. Highgrowns were easier to purchase and these descriptions were irregularly 30 nP easier following quality. Whole leaf teas were considerably easier. The tippy teas on offer were neglected. The following are the quotations:—

	1958 Rs.
Plain B.P.	1.50
Low medium	1.65 to 1.80
Medium	1.80 to 2.10
Good medium	2.10 to 2.45
Quality	2.30 to 3.30

London Market:—No sales in London this week, due to Whitsun holiday.

Colombo Market:—No sales this week.

Calcutta Market:—*Export*.—Darjeeling sale 'B'. Good general demand. Prices irregular and generally dearer following quality.

Internal:—21,000 dust. Only fair demand. Orthodox 12 to 16 nP easier. C.T.C. up to 30 nP easier.

Export Quota:—Due to the extension of the validity of 1957-58 quota to the end of June 1958, large quantities of business has been transacted and, as a result, the price for special quota has advanced considerably to 9 nP. The price of new seasons quota is 15 nP.

Forthcoming Auctions:—Sale No. 15 will be held on Tuesday, 3rd June 1958.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale 15*:—1,069,000 lbs. Good general demand for everything except low medium and medium fanning which are neglected. Low medium brokens irregularly 5 nP easier. Medium firm. Best liquoring stronger and dearer."

BLACK PEPPER MOVES NARROWLY

(Messrs. Parekh and Co.)

BOMBAY, 4th June

Malabar black pepper moved both ways within a narrow groove with undertone fairly steady during the week. Prices in Singapore were steadily held, the quotations for white and black being Str.$118 and Str.$68, respectively. Arrivals of new Sarawak in Singapore were poorer as compared with the corresponding period last year. The quality of new crop Sarawak was said to be inferior. Stocks of Lampong pepper were reported to be in strong hands. There were some enquiries for white pepper from the Continent, but packers were not well disposed to sell at the present low prices, as they expected expansion of demand very soon.

Spot in New York was quoted at $0.24½. In view of higher replacing parity, holders there were unwilling to lower their prices. In the forward ring at Cochin, prices were moving erratically. Small buying enquiries were sufficient to push up the prices. Ready garbled was quoted at Rs. 98.50 while July and August were quoted at Rs. 102.50 and Rs. 103.75, respectively. Ungarbled at Alleppey was quoted at Rs. 572.50, and Calicut at Rs. 600. Inflow in all the primary markets was also said to be smaller. Off and on, enquiries from Eastern Europe was a supporting factor.

It is now high time that the Forward Market Commission allowed the establishment of a forward ring at Bombay which is the largest distributing centre for ungarbled pepper in India. Arrivals of ungarbled pepper in Bombay was estimated to be more than 4,500 tons during November 1957 to May 1958.

The turnover in specific delivery for the months of July and August was very much restricted, as most of the floating stock was held by strong parties. June and July-Aug.-Sept. shipments in A.S.T.A. were quoted at $0.24½ with small sellers.

The future of pepper appeared leaning mostly towards the bull side, as most of the consuming countries were living upon their inventories and arrivals from March and April commitments since purchases during May were small. Holders at the origin were firmly inclined, in view of poor prospect of new crop Sarawak and uncertainty in future marketing of Lampong during the new season. Everybody in New York and Europe was watching closely the attitude of the growers in Sarawak.

Today's nominal quotations are: Ready Rs. 78 per Bengal maund and June Rs. 558-Rs. 568 and July Rs. 560-Rs. 570 per candy of 5¼ cwts.

TEA DECLINES

(From Our Own Correspondent)

CALCUTTA, 3rd June

The extent of the decline in tea prices in the domestic sales held last week naturally caused anxiety in the market and speaks much in favour of the reduction in the excise duty announced on Saturday last. The Government had no doubt announced earlier its intention to give relief to producers of common teas only. But the difficulty would appear to be one of working out a scheme to benefit common teas only. Since most gardens produce common as well as high quality teas, the obvious solution, trade circles thought, would have been to announce a general revision on excise duty as well as export duty.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

For 1956 the dividend of Rs. 17·5 includes an interim dividend of Rs. 7·5 per share. In 1956 the shares of Rs. 500 were split into shares of Re. 100 each.

THE MYSORE SUGAR COMPANY, LIMITED

(*Concluded from page 1071*)

for their kind co-operation and guidance. On their behalf, as well as on my own, I tender our grateful thanks to the Central Government and to the Government of Mysore for their assistance and support. Finally, it is my pleasant duty to pay a tribute to the good work put in by our officers and workmen and to their sense of discipline.

"Gentlemen, I now move that the Directors' report and audited statements of accounts for the year ended 30th June

LONDON LETTER

(*Concluded from page 1064*)

that independence on Tunisian lines was the only solution, with Arabs and French settlers enjoying complete equality; but the Generals in command of the Algerian war and the settlers themselves decided to hang on to the fiction of complete unity with Metropolitan France and, in this, they have been encouraged by those commercial and financial interests which recognise the enormous economic potential of the Sahara. Saharan oil, minerals and probably atomic materials was too rich a prize to concede to an independent Algeria. It is these interests which will support and may in the end dominate General de Gaulle after his return to power. Much British comment has relied on the possibility that the General would not allow himself to be used as a tool of fascism, but he may have no option.

An independent Algeria working in close economic liaison with France would only be possible under a Popular Front government, but a coalition of the Left has been impossible ever since the cold war began in Europe, for a quarter of the French population support the Communist party and the Socialists will have nothing to do with them. The Socialists would rather see the end of parliamentary government than ally themselves with the Communists, even for the purpose of maintaining it. Of course, by now, the development of military opposition to Parliament in France has gone to the point that a decision to form a Popular Front government would be met by an attempted military coup. This could only be resisted by an effective popular uprising in support of a parliamentary government. The most restrained British comment on this has been that, if the choice was between General de Gaulle and civil war, then it would be better to have General de Gaulle; but, if the choice was between parliamentary Government and civil war, then it would be better to face the risk of civil war.

The task of the Left has not been made any easier by the fact that Russia, which does not understand parliamentary democracy anyway, was less interested in giving encouragement to a Popular Front government than to giving encouragement to de Gaulle whom it believes would prefer to see France restore her ancient military pacts with the Soviet Union than remain part of N.A.T.O.

The final conclusion of the British Press can be put as expecting that something had to happen but nothing else than what has happened ever seemed likely to happen and that Britain won't do any good by worrying about it, but must watch what happens next very carefully to see that there is nothing dangerous for this country in whatever does happen next. It is back to the old Liberal political dictum of "wait and see."—*All Rights Reserved.*

Notices

CHITAVALSAH JUTE MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Sixty-first Annual General Meeting of the Members of CHITAVALSAH JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 26th day of June, 1958, at 3 o'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the thirteen months ended 31st July, 1957, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare Dividends.
3. To appoint a Director in place of Mr. B. L. Bajoria, the Director retiring by rotation at the Meeting.

   And in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:

   "That Mr. B. L. Bajoria be and is hereby re-appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. B. L. Bajoria is an "associate" of the Managing Agents within the meaning of the Act, and that therefore he can only be re-appointed by a special resolution as a Director of the Company liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 12th to 26th June, 1958, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & Co., LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *28th May*, 1958.

Note.—Payment of the proposed dividends, if declared, will be made on or after 14th July, 1958, only to those members whose names are registered in the Books of the Company on 26th June, 1958, or to their Mandatees.

Applications for warrants will not be necessary. *Claims from or on behalf of holders of* shares on blank transfer will not be entertained.

THE ALEMBIC CHEMICAL WORKS COMPANY LTD., BARODA

NOTICE

NOTICE IS HEREBY GIVEN THAT FIFTY-first Ordinary General Meeting of the Shareholders of the Alembic Chemical Works Company, Ltd., will be held at the Office of the Company at Baroda (Alembic Road, Industrial Area) on Monday the 30th June 1958, at 3-30 p.m. (S.T.), to transact the following business:

(1) to receive Directors' Report and Audited Accounts for the year ending 31st December 1957,
(2) declaration of Dividends,
(3) election of Directors,
(4) appointment of Auditors,

and other Special Business specified in the Notice posted to each shareholder.

Note.—Any member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

(1) The Transfer Books of the Company will remain closed for the purpose of payment of dividends from Friday the 13th June 1958 to Monday the 30th June 1958 (both days inclusive).

(2) The Transfer Books of the Company will remain closed for the purpose of issue of ordinary shares from Friday the 25th July 1958 to Friday the 1st August 1958 (both days inclusive).

By Order of the Board,
For BHAILAL AMIN & SONS (PRIVATE) LTD.,
Managing Agents,
RAMAN B. AMIN,
Director.

BARODA, *28th May* 1958.

Note.—The Dividends when sanctioned will be made payable on or after the 31st July 1958 to those shareholders whose names stand on the Register of the Company on the 30th June 1958 and to whom the Dividend Warrants will be posted.

Shareholders are requested to notify, at once, any change of address.

HARINAGAR SUGAR MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twenty-sixth Annual General Meeting of the Shareholders of Harinagar Sugar Mills, Limited, will be held at the Registered Office, No. 207, Kalbadevi Road, Bombay, on Monday, 30th June 1958, at 4 p.m.

The Share Transfer Books will remain closed from 23rd June to 7th July 1958 (both days inclusive).

By Order of the Board,
HARINAGAR SUGAR MILLS, LIMITED,

DOCK LABOUR RESTLESS

THE docks are being cleared for staging a strike which is bound to paralyse the country's foreign trade and disturb industrial production. It is a pity that the dock workers who constitute a class of well-paid employees among the country's wage- earners are being perpetually stampeded into strike decisions. So far, few such decisions have been carried out for any extended period of time. But the strike scheduled to start on the 16th inst. is one which, more than any of its predecessors, deserves to be called off, if only because the justification for it is less thin than the earlier threats of strike. In any case, in the context of the steadily progressing industrial schemes and the continuing difficulties on the foreign exchange front, a dock strike is nothing short of an economic sacrilege.

In Bombay, the strike has, in fact, virtually commenced. The stevedore workers are already on the war path. In order to back their unconscionable demand for a straight 33⅓ per cent. rise in wages, the supervisory staff have struck work. This has brought work in the docks to a standstill. The subordinate staff are, however, on a paid holiday. It is not clear what all this means in terms of national wealth. No country can live, much less progress, if it pays its workers for work neither undertaken nor completed. But the strange behaviour of the stevedore supervisory staff is of a piece with all the traditional irrational behaviour of the dock workers. Some time ago, workers in the major ports resorted to go-slow tactics which imposed much real, if not immediately visible, burden on shipowners and the community. This situation was happily set right. But the leaders of dock workers have again fallen into one of their rebellious moods in which they apparently feel that they serve their followers best only by calling them away from their work.

If there is one thing at which the dock workers are good, it is in drawing up an impressive list of demands. It seems never to occur to them that it is infinitely more difficult to concede demands than to make them. These demands have been the subject of special enquiry by Mr. P. C. Chaudhury who was appointed Officer on Special Duty. Mr. Chaudhury submitted an interim report in July 1957 and the final report in September 1957. The manner of implementing the recommendations was discussed and agreed upon with the representatives of the Port and Dock Workers Federation in November 1957. It was then agreed that decision on matters which have a bearing on the terms of reference to the new Pay Commission should await the Government's decision on the Commission's recommendations.

Indeed, this consideration explains much of the delay which has so far taken place in implementing Mr. Chaudhury's report. Mr. Chaudhury himself admitted that his recommendations would need revision in the light of the new Pay Commission's findings. It is also noteworthy that Mr. Chaudhury's report did not make detailed recommendations as to the pay scales of numerous categories of workers but had confined itself to certain "test" posts. Clearly, it is difficult for the authorities to implement straightaway the recommendations contained in the Chaudhury Commission's report. It may be mentioned in this connection that dock workers do not by any means fall under a single category of workers. There are numerous categories. Further, the problem is complicated by the fact that they are employed under different administrations. Thus, the Government is the employer in the ports of Cochin, Visakhapatnam and Kandla. They work under the autonomous Port Trusts, like Madras, Bombay and Calcutta. Stevedore labour works for private employers. There is also an indistinct mass of workers who work for contractors.

The nature of the work and the responsibility of the workers, it is stated, differ not only from port to port but also, in some cases, from one department to another within a port. To reconcile the conflicting interests of these various classes of workers in a way that would neither impose a serious burden on the employers nor create a system of unjustified wage differences is a task which cannot be completed in a few weeks or months. Lest this should be interpreted to mean the postponement of consideration of the workers' demands to some unnamed future date, it is well to recognise that the Government itself wants no more than a few more weeks within which to consider how best it could implement the Chaudhury Commission's report. It has promised to announce its decision before 15th July. Nothing would be lost and a great deal may be gained by the workers acceding to the Government's appeal for time.

A notable aspect of the dispute over the dock labour's wages which has not so far received much notice is that their emoluments have in recent months moved up to levels at which they compare favourably with the levels of wages in other industries and services. After all, there can be no absolute scale of wages as such. From this point of view, it is perhaps not a low level of wages if dock workers are able to earn—as they, in fact, do now—an average monthly wage of Rs. 150. There has been a sizable increase in dock workers' income as a result of the implementation of the piece-rate system of wages. Workers themselves will readily admit that they have benefited by the piece-rate system. The system has given all-round satisfaction. Apart from the increased income which dock workers have received, they have been given many facilities which are not available to most classes of outdoor workers. They have fairly extensive medical facilities; a housing colony consisting of more than 500 tenements will soon come into existence. It is not as if they suffer from unduly low wages and poor amenities. It is true there is room for improvement in their conditions of work and even in the amenities provided for them. But little will be gained by hustling the authorities into a decision.

Again, it must be noted that many favourable decisions have been taken in order to improve the dock labour's wages and conditions of work. For instance, the port authorities have decided to extend leave travel concessions to their employees on terms and conditions similar to those applicable to Central Government employees. The number of shore workers of the permanent category has been increased from 2,700 to 3,400 in Bombay and from 750 to 900 in Madras. In Calcutta, the wages of the secondary gang workers have been brought on a par with those of primary gang workers. Wages of casual workers in the Visakhapatnam port have been increased to a level higher than the wages of casual workers under other employing authorities in that port. The attendance allowance to stevedore workers in Bombay and Madras has been increased from Re. 1 to Re. 1.50. In Bombay, Calcutta and Madras, these workers are entitled to a guaranteed minimum wage of 20 days, irrespective of the number of days they work. As the country's economy improves and foreign trade develops, the system of piece-rate wages adopted in some of the ports is bound to provide a steadily higher level of earnings to the workers. There can obviously be no public sympathy for a strike by the dock workers who are a comparatively well-paid class of employees and who also have before them prospects of increased earnings.

BUDGET REFORM—II

IT cannot be too strongly reiterated that the budget is an important instrument of economic policy. Naturally enough, most governments present along with the budget a comprehensive account of the economic trends in their countries. In India, the white paper on the budget presents such a study. The Estimates Committee, in its report on Budgetary Reform, has rightly stressed the importance of a comprehensive economic survey. Thus, it emphasises that the economic situation in the country should be analysed, related to objectives and proposals and explained by Government experts in a manner which would enable the correct position to be understood and appreciated by all. It should also explain the position relating to foreign exchange, balance of payments, trade and commerce, production, national product and income, cost of living, imbalances in economy, world trends, etc. Further, such an analysis should be made available to Parliament sufficiently early so that it could be made use of during budget discussions. Obviously, a survey of this kind presupposes the existence of a large variety of statistical data. It calls for a more extended system of statistical compilation and classification. In this connection, the Committee has drawn attention to discrepancies in the presentation of data by the Government itself. One such example of discrepancy, to which the Committee has referred, is that, whereas the Planning Commission estimated the total import of consumer goods in five years at Rs. 392 crores, the Ministry of Commerce and Industry placed such imports at Rs. 1,185 crores. There is certainly room for improvement in the statistical concepts which are employed by the Government. The discrepancy which the Committee has cited is clearly due to some confusion over the concept of consumer goods.

The classification of the overall budget into the revenue and capital budgets and the practice of calculating the surplus or deficit in the two divisions separately are now a recognised part of budgetary procedure. Commenting on this system of classification, the Committee observes that the system, in the form in which it is now followed, is designed mainly to suit the needs of accountability. It then proceeds to state that the system does not assist in proper programme formulation and appreciation as well as execution which would make clear whether optimum results have been achieved or would be achieved with a given outlay. It has, therefore, suggested that it is necessary that there should be some functional classification of governmental expenditure so as to focus attention on the various functions of the Government and their relative importance. It is a pity that the Committee is somewhat vague in this part of the report. It is not clear what precisely the Committee wants the Government to do. The Government, as is well known, has attempted a certain refinement of the system of economic classification. The report entitled *An Economic Classification of the Central Government Budget* classified the 1957-58 budget under six accounts: (1) transactions in commodities and services, and transfers: current account of Government administration; (2) transactions in commodities and services, and transfers: current account of departmental commercial undertakings; (3) transactions in commodities and services, and transfers: capital account of Government administration and departmental commercial undertakings (combined); (4) changes in financial assets: capital account of Government administration and departmental commercial undertakings; (5) changes in financial liabilities: capital account of Government administration and departmental commercial undertakings, and (6) cash and capital reconciliation account of Government administration and departmental commercial undertakings.

The report itself recognised that the impact of governmental activity on the rest of the economy was felt in a variety of ways and that no system of economic classification by itself could "unravel" these diverse ramifications of governmental activity. It also recognised that there was a certain arbitrariness in this classification itself. Further, the classification did not include all commercial undertakings of the Central Government. Nor did it include the accounts of the State Governments and other public enterprises. There can be certainly no point in presenting an elaborate classification of the budget if such classification takes into account only the Central Government's budget. It is noteworthy that the Estimates Committee too has realised this inherent difficulty. It says: "It is evident that for an economic classification to be really useful it would have to take into account the expenditure and proposed outlay on various functional activities in the entire country, i.e., Central and State budgets, the autonomous and other Government undertakings and the private sector also." It is a moot point whether an adequate machinery exists in the Government today which could undertake such an analysis and publish it promptly enough to be available for use by Parliament during the budget session. While we have no doubt that a beginning should be made in this direction, it might take some time before such a survey could become very much more useful than the material contained in the white paper on the budget. Again, it will be remembered that a survey of this kind cannot be entirely divorced from vital considerations of economic policy. It is somewhat difficult for permanent officials to present an account, the objectivity of which could commend itself to both the Government and the opposition.

An interesting section of the Estimates Committee's report is the one which deals with the reorganisation of the Government's financial year. The existing system was adopted in 1867; prior to that year, the financial year used to commence on 1st May. In Japan, the U.K., Germany and Canada, the financial year begins, as in India, on 1st April. France and Belgium are among the countries which have adopted the calendar year, while, in the U.S., Australia and Italy, the financial year commences on 1st July. The Chamberlain Commission, in the course of its examination of the case for revision of the financial year, commented that, from the financial point of view, the present date is "most inconvenient possible for the budget." It suggested the commencement of the year from 1st November or 1st June. The Committee notes that, since the budget is followed by the outbreak of the monsoon, many development works have to commence late in the financial year or have to be dropped; either grants remain unspent or there is a rush of expenditure towards the end of the financial year. Accordingly, the Committee has suggested that the financial year should commence from 1st October. The subject requires extended investigation by the Central and State Governments.

The Committee has made several notable suggestions for a more thorough pre-budget scrutiny and for facilitating the discussion on the budget. It draws attention to the fact that, because of delay in sanctions and somewhat hasty provisions, there is considerable lapsation of the funds provided in the budget; the total funds which lapsed during 1954-55 amounted to about Rs. 238 crores. The Committee emphasises that the administrative ministries should submit their respective schemes to the Ministry of Finance for inclusion in the budget only when all relevant details necessary for having a sufficiently clear picture of a particular scheme have been worked out. For this purpose, the prospective schemes should be processed throughout the year so that the rush at the time of the preparation of the budget is avoided. It also suggests that a procedure should be evolved whereby the necessity of a further sanction after the budget should be done away with and also an assurance would be given to the various authorities, including the State Governments, that, in respect of funds provided for approved projects, the unspent amount would be available in the next financial year. Apart from having a psychological effect on the minds of State Governments and spending departments, such a promise would also facilitate the execution of the projects on smoother lines and prevent rush of expenditure towards the end of the year.

Finally, the Committee advocates the revival of the system of the Standing Finance Committee for purposes of the pre-budget scrutiny. It may be recalled that, before the advent of responsible government in India, the Standing Finance Committee, consisting of members of the Legislature, scrutinised the expenditure schemes of Government above a certain limit before they were included in the budget. Obviously, such a committee could only have an advisory status. Even so, it might enable Members of Parliament to acquaint themselves with the different activities of the Government and enable them to make a constructive contribution towards the formulation of a generally acceptable budget.

(Concluded)

TAX LAWS

IT is now being increasingly realised that national tax policies have an international aspect. Fiscal measures adopted by a country, such as export and import duties, have, of course, a direct influence on other countries which have trade relations with it. But even such tax laws as income-tax and death duties have an international aspect in the sense that they affect the movement of capital and technical personnel from one country to another. International implications of tax laws have acquired a new significance not only in the context of the growing economic collaboration through bilateral and other trade agreements, but also because of the need for underdeveloped countries to attract foreign capital to their territories. Further, the movement towards the formation of the European Market adds to the urgency of considering the future of tax laws in European countries. In this context, the Report of the International Bureau of Fiscal Documentation, Amsterdam, is of more than academic interest. Being a body interested in the study of world fiscal problems, the Bureau, in its report for 1957, rightly warns against what it calls "blank cheque" legislation. The Bureau is constrained to point out that, in many countries, there is a tendency to enact tax legislation in a form which in effect gives the Government a "blank cheque" to change the law without consulting the legislature whenever it thinks that the economic situation in its country calls for it.

The Bureau points out that, as international relations have increased, taxation is no longer an exclusively national problem. It, therefore, urges that governments and parliaments should bear in mind that the regular changes in taxation Acts present more difficulties to foreign connections than for their own citizens. It commends the Anglo-Saxon practice which ensures that changes in the taxation Acts are normally made only once a year, at a regular time fixed beforehand. India cannot, of course, be made a target for this charge, considering that the major tax changes occur only once a year, at the time of the budget. Nevertheless, many changes are introduced in respect of other taxes and duties in the course of a year. Perhaps the authorities will do well to keep such changes to a minimum. Again, in the interests of international co-operation, some measure of uniformity is itself a desirable objective to pursue. The Bureau draws attention to the fact that "harmonisation" of tax laws is now being advocated more and more strongly. It is true that complete uniformity in tax laws is neither practicable nor desirable. It should, however, be possible to achieve some broad similarity in methods of treatment or of collection of tax.

Since the Bureau acts as a clearing-house for fiscal information, it is in a position to know what questions agitate the taxpayers most. It is interesting to be told that, in nearly all countries, high rates of taxation continue to be regarded as the worst disincentive to savings and investment The disadvantage of high rates of taxation in those cases where no exemptions apply, according to the report, is that they may lead to an expenditure which is not justified economically, since such expenditure is largely borne by the Revenue. These considerations have led to a number of interesting studies on the extent to which the present progressive taxation of income for individuals could be replaced by a new form of taxation. In the U.S. and France, many leading periodicals are pleading for an income-tax at lower rates and without too many exemptions. Judging from the number of enquiries received by the Bureau, the problems which agitate many enterprises are those relating to the tax liability of non-residents, insurance and superannuation funds, death duties and treatment of royalties. Presumably, these questions have emanated from enterprises which intend opening branches abroad.

As regards new fiscal measures actually adopted in several countries in 1957, the Bureau has cited the imposition of wealth tax in India; studies in wealth tax have been initiated in Eire and Norway. Further, from the point of view of international aspects of tax laws, it is gratifying to note that a number of tax conventions have been concluded in 1957. The U.S. concluded such conventions with Canada and Pakistan, Canada with the Netherlands, Germany and Australia, and the U.K. with Switzerland, Australia, Pakistan and Austria. The Bureau regards these conventions as a "favourable" development, because they cover a number of territories in need of economic development. However, it points out that the present tax conventions are "far from being ideal." This is because they display a marked lack of uniformity and the solutions contained therein are in most cases based on the tax laws of the more developed countries.

SHARE MARKET TURNS CAUTIOUS

YARN EXPORT POLICY—JOINT-STOCK COMPANIES—WORLD COTTON

THURSDAY, 5 P.M.

HARDLY has the share market recovered from the adverse effects of the labour strike at Jamshedpur than the shadows of an equally serious strike by port and dock workers at the six major ports of India which has been called from the 16th inst. have been cast on the market. *Naturally, the* operators have in the last few days not shown the same enthusiasm as they did earlier. Though the operators' apathy has not developed into a wave of selling pressure, presumably because of their hope that something would be done at the last moment to avert the dock strike, they prefer to sit on the fence and watch further developments. The efforts of the Government and Port authorities to avert the showdown have so far failed. The seriousness of the strike, if it materialises, has not been understood by those who are sponsoring it; it is coming off at a time when the country is making an all-out effort to increase its exports in order to earn the much-needed foreign exchange. What is more disquieting is that a similar strike is going on in the Port of London, involving 20,000 men, so that, if the two strikes go on simultaneously, the trade between the two countries will be jeopardised seriously. It may be noted, in this connection, that the U.K. is the biggest customer for Indian products, particularly Indian tea. The dock strike in London and the difficulty of obtaining samples from warehouses have had the effect of reducing the offerings in London tea sales this week and, if supplies are withheld from India, the U.K. has to run down its stocks considerably. The Government of India is, no doubt, taking all necessary steps to meet the emergency caused by the proposed strike, but it is feared that the strike, if it materialises, will seriously dislocate loading and unloading operations at all the major ports.

MARKET GOSSIP

These thoughts have, as already pointed out, not yet seriously disturbed the market. However, the operators are somewhat cautious. This is reflected in the fall of Tata Ordinaries from Rs. 183.75 touched on Monday to Rs. 181.25 today. Indian Irons have come down from Rs. 21.80 to Rs. 21.36. Textile shares have staged a smart recovery this week, though the closing rates are well below the week's peak levels. Thus, Bombay Dyeings have dropped from a high of Rs. 54 to Rs. 53·60 and Centurys from Rs. 429 to Rs. 425.50. In Calcutta, however, the imminence of the dock strike has already affected jute goods which have recorded a sharp fall during the last few days. Thus, hessian 40″×10 oz. (June delivery) has declined from Rs. 40.35 per 100 yards to Rs. 39.60 and sacking B. twills from Rs. 98.35 to Rs. 96 per 100 bags.

The Government of India has announced the cotton yarn export policy for the three years 1959, 1960 and 1961. Under the policy, the mills will be permitted to ship yarn to the same extent as exported by them during 1957 or 1958, whichever is higher. In addition, 48 million lbs. of yarn will be allowed to be exported annually by trade and industry on first-come-first-served basis.

The announcement of export policy for cotton yarn much in advance will be welcomed, because it marks a departure from the uncertain and vacillating policy hitherto pursued by the Government. The yarn interests had all along been urging a revision in policy. The plea was based on the ground that, owing to the lack of certainty in regard to yarn exports, the overseas buyers usually turned to other sources of supply for covering their requirements.

The latest policy is, however, only of academic importance, notwithstanding the removal of the aforesaid deficiency. The demand for Indian cotton yarn from overseas countries, including the traditional customers like Burma, Hong Kong, Sudan, Ethiopia, British Somaliland, Ceylon, Aden and East Africa has all along been at a very low ebb and it looks as though it will continue to be so in future, what with the stiff competition offered by Japan, Pakistan and China. The total quantity of yarn actually exported during 1956 was not more than 12 million lbs. It went down further in 1957 to 8.24 million lbs., as against the quota of 20 million lbs. granted for the year. Even after the marked fall in Indian prices of yarn lately, exports from this country continue to be slack. During the first five months of 1958, the aggregate exports amounted to just 3.58 million lbs. With the general situation in the world textile trade unhelpful, yarn exporters consider that the prospects of any appreciable improvement in foreign business in Indian yarn are not encouraging. In their opinion, the mere announcement of a long-term policy cannot by itself help exports.

It would not be out of place here if a brief reference were made to the latest position in respect of yarn supplies. The total production of yarn in the first four months amounted to about 555 million lbs. (provisional) which represents a decline of 49 million lbs. as compared with the corresponding period of 1957. Despite the fall in output, the stocks of yarn lying unsold with mills have gone up considerably; the total of these stocks is now said to be of the order of 44-45 million lbs., as against 36 million lbs. in January. This is due to the comparatively reduced utilisation in the mills themselves for weaving cloth, thanks to the heavy impact of excise duty, slack export business, and low offtake by handlooms as well as powerlooms. It is not surprising, therefore, that the prices of cotton yarns have suffered a distinct setback. An idea of the extent of setback can be had from the following latest available quotations for a few varieties of yarn as compared with those at the end of last year (1957):

(In Rs. per bundle of 10 lbs.)

	Latest available	*31st December 1957*
10 counts Modern	13.50	14.50
20 counts Gokak	16.75	17.50
40 counts Minaxi	23.87	24.75
60 counts Raguvamshi ...	50.75	51.75
80 counts Modern	69.75	72.00

The price of intransigence and indecision can often be very dear. But when they creep into the field of business, their consequences are disastrous. India's manganese ore export trade finds itself in an unenviable position, for it has almost lost its traditional and long-established markets, particularly the U.S., the U.K. and the Continent. High price ores, irregular supplies, and frequent changes in export policy seem to have forced these countries to turn to alternative sources of supply. To add to this, the U.S. recession has hit manganese ore exports hard and prices have declined sharply.

The export policy for manganese ore for the period 1st July 1958 to 30th June 1959, announced by the Government of India on 23rd May, does not hold out any promise of getting things improved. The Government seems to have totally disregarded the unanimous opinion of the manganese trade and mining industry that it should declare a long-term policy which is essential for manganese ore exports, considering that manganese ore is a peculiar type of raw material which requires that the buyers should plan their purchases and the mine-owners the development of mines and disposal of ores well in advance. Nor did it pay heed to the suggestion of the trade and industry to abolish the export duty of Rs. 30 per ton on manganese ore so as to make it competitive in world markets. The current price of Indian manganese ore is about $6 higher per ton than that of other countries. The price of high grade Indian ores is $36, as against $30 quoted by other countries for ores of the same grade and quality.

The State Trading Corporation which is now largely responsible for the export trade in manganese ore has landed the export trade and industry in a mess. Mine-owners and exporters had sold to the S.T.C. nearly 150,000 tons of manganese ore a year ago. This huge quantity is still lying with the former, as the S.T.C. has not taken delivery of it. The current world prices are very much lower than those ruling at the time the S.T.C. purchased the ore. Mine-owners and traders are, therefore, experiencing great difficulties. They have been crippled financially. The movement of ores has also been blocked. A number of mines have closed down, rendering thousands of workers jobless, and many are threatened with imminent closure. It is said that the S.T.C. has not got any export contracts with foreign buyers at all.

What is the way out of this impasse? Mr. Amirchand T. Gupta, Chairman of the Western India Minerals Association, suggests that the best course will be for the S.T.C. to close down its manganese ore export as, in the event of its continuance, according to him, it is likely that the country will lose its export trade in manganese entirely. Alternatively, he maintains, the business of manganese ore export by the S.T.C. should be headed by men of experience in the field. An independent advisory committee, he suggests, should also be formed to guide the ore business of the S.T.C.

Some light on the size and management pattern of joint-stock companies has been thrown by the information broadsheet, issued by the Department of Company Law Administration. The total number of new registrations in 1957-58 was 961, with a total authorised capital of Rs. 103 crores, as against 848 with a total authorised capital of Rs. 211 crores in the previous year. Of the total number of companies registered in 1957-58, the number of companies with an authorised capital below Rs. 1 lakh accounted for 25 per cent. About 40 per cent. of the companies fell in the group Rs. 1-5 lakhs in respect of authorised capital. In absolute terms, 605 companies out of a total of 961 have been formed with an authorised capital of less than Rs. 5 lakhs in 1957-58, as against 478 out of a total of 848 in 1956-57. If to these two groups were added the third group of companies having an authorised capital of Rs. 5-10 lakhs, the total percentage of companies having an authorised capital of less than Rs. 10 lakhs would work out to 87 in 1957-58, as against 83 in 1956-57.

The broadsheet points out that, in the last three years, despite the fluctuations in the number of new companies, there has been very little change in the share of small companies in the total number. The total number of companies with an authorised capital in excess of Rs. 10 lakhs was 127 in 1957-58 (96 private companies and 31 public companies), as against 140 companies (95 private companies and 45 public companies) in 1956-57. As regards giant incorporations, there were 28 companies with an authorised capital of Rs. 66 crores in 1957-58, as against a similar number with an authorised capital of Rs. 170.5 crores in 1956-57. These giant incorporations included two Government companies (both private companies) with a capital of Rs. 8 crores. Of the 26 non-Government companies with a total authorised capital of Rs. 58 crores, 17 were public companies with an authorised capital of Rs. 48 crores and 9 private companies with an authorised capital of Rs. 10 crores.

The total authorised capital of 18 new Government companies formed during 1957-58 accounts for 8.5 per cent. of the total authorised capital of the 961 companies formed during the year. It may be recalled here that 13 Government companies were set up during 1956-57, of which 12 survived. The Government companies formed during 1957-58 and their authorised capital are:

Export Risks Insurance Corporation Private Ltd.—Rs. 5.00 lakhs; National Instruments Private Ltd.—Rs. 3.00 lakhs; Mysore Fruit Products Ltd.—Rs. 10 lakhs; Madhusudan Chemical Industries Ltd.—Rs. 0.50 lakh; Cuttack Iron and Steel Products Private Ltd.—Rs. 0.75 lakh; Kalinga Ceramic Industries Private Ltd.—Rs. 5 lakhs; Spark Manufacturing Works Private Ltd.—Rs. 0.80 lakh; Konark Processing Works Private Ltd.—Rs. 0.90 lakh; Orissa Boat Builders Private Ltd.—Rs. 0.90 lakh; Utkal Fruit Products Private Ltd.—Rs. 0.20 lakh; Rourkela Fruit Products Private Ltd.—Rs. 0.20 lakh; Kalinga Fruit Products Private Ltd.—Rs. 0.20 lakh; Kalinga Foundry *Private Ltd.—Rs. 5 lakhs; Balanga Iron Works* Private Ltd.—Rs. 2.80 lakhs; Orissa Foundry Company Private Ltd.—Rs. 2.75 lakhs; Orissa Electrical Manufacturing Private Ltd.—Rs. 5 lakhs; Barbati Fruits Products Private Ltd.—Rs. 0.20 lakh and Kerala Cycles *Private Ltd.—Rs. 25 lakhs.*

As regards the pattern of management of the companies registered in 1957-58, 11 public companies and four private companies had managing agents, one private company had managers, one private company secretaries and treasurers, 212 private companies and 15 public companies managing directors. Again, 678 private companies and 39 public companies had only directors. The statistics relating to management of companies for 1957-58 thus confirm the observations made in the Department's first statutory report that there had been a perceptible shift towards the management of companies by

(Continued on page 1147)

EQUITIES RULE DULL AT CLOSE

TEXTILES ATTRACT SUPPORT

(From Our Own Correspondents)

BOMBAY, 12*th June*

AFTER maintaining cheerful conditions early in the week under review, equities ruled dull with fluctuations confined to a narrow range. The earlier cheerfulness, in which activity also broadened considerably, was attributed to rumours of devaluation of the rupee in order to boost exports and optimism that the Government would help the textile industry by giving some relief in excise duty. These hopes brought fresh speculative buying and bear covering, pushing up values well above last week's closing rates. It is noteworthy that textile shares took the lead in the upward movement. Reports of good investment support to some of the cash scrips of leading engineering and miscellaneous industrial concerns also enlivened sentiment.

In the latter half of the week lethargic conditions came to prevail for want of follow-up support. Though there was no selling pressure, equities failed to forge ahead. The most important factor which has chilled the operators' enthusiasm is the threatened dock strike, the efforts to avert which have so far failed. Another restraining factor is the delay in the monsoon, which if prolonged may affect the crops. The volume of business also thinned down considerably. On balance, equities disclosed some gains over a wide front.

In the steel section, Tata Ordinaries hardened early in the week from Rs. 181.25 to Rs. 183.75 and remained fairly steady around this week. Today, however, there was a setback to Rs. 181.25 on liquidation by a leading "bull." The new shares gained over the week 50 nP to Rs. 179.25. Indian Irons crept up from Rs. 21.44 to Rs. 21.84, but relapsed to Rs. 21.36 at the close.

Textile shares were prominent and, despite the profit-taking towards the close, values disclosed moderate gains over the week. Bombay Dyeings moved up from Rs. 53.20 to Rs. 54, before reacting to Rs. 53.60. Centurys shot up from Rs. 421.75 to Rs. 429 and, after a setback to Rs. 424.50, gained ground again to Rs. 430.50. At the close, they dropped to Rs. 425.50. Kohinoors were marked up from Rs. 256.50 to Rs. 260.50, but the gain was wiped out when the shares finished today at Rs. 256.50. Central Indias rose by Rs. 5 to Rs. 86.50, Finlays by Re. 1 to Rs. 261 and Gokaks by Rs. 5 to Rs. 135. Indu Ordinaries were done 32 nP higher at Rs. 9.04. Indore Malwas changed hands Rs. 3.25 higher at Rs. 108 and Khataus gathered Rs. 23.75 to Rs. 191.25. Model Mills provided an exception with a drop of Rs. 8.75 to Rs. 167.50. Morarjee Mills picked up Rs. 15.50 to Rs. 232.50, while New Greats were dull at Rs. 199.50. Podars improved by a rupee to Rs. 134 and Shree Niwas Cottons by Rs. 4 to Rs. 139. Simplex was another scrip which slowly gained ground from Rs. 159 to Rs. 164. Standards advanced from Rs. 390 to Rs. 404 and Svadeshis from Rs. 170.50 to Rs. 176.50. Tata Mills were steady at Rs. 37.50.

Bank shares attracted some support and scored useful gains. Barodas rose by 50 nP to Rs. 115.50. Centrals recorded a rise of 70 nP to Rs. 54 and the new shares Re. 1.60 to Rs. 57.30. Bank of Indias looked up from Rs. 133 to Rs. 134.50 and their new shares from Rs. 133.25 to Rs. 135. Punjab Nationals and United Commercials put on Re. 1 each to Rs. 55 and Rs. 61 respectively.

Some business was done in insurance shares. New Indias were a fraction lower at Rs. 48.25 and Orientals were down by Rs. 15 at Rs. 3,985. British India Generals gained Re. 1.24 to Rs. 15.24 and All-India Generals rose by Re. 1 to Rs. 4.50.

The electrical section was featureless. Ahmedabad Electrics were 30 nP lower at Rs. 94.70, while Bombay Suburbans were unchanged at Rs. 106. Surat Electrics improved by a fraction to Rs. 108.25. Tata Hydros were 50 nP lower at Rs. 117.50. While Tata Powers changed hands Rs. 5 higher at Rs. 1,220, Andhra Valleys were maintained at Rs. 1,137.50.

In the sugar group, Belapurs were erratic, moving between Rs. 248 and Rs. 246.50, before closing at the latter level with a fractional decline over the week. Bhopal Sugars put on 48 nP at Rs. 21.48. Phaltans advanced by Rs. 2 to Rs. 148 and Walchandnagars by Rs. 10.25 to Rs. 273.75. Cements attracted attention on hopes of an increase in cement prices. Associated Cements moved up from Rs. 149.75 to Rs. 153.25, before closing at Rs. 150.75. Their new shares were up by Re. 1 at Rs. 145. Digvijays gained over the week Rs. 2.75 to Rs. 147.75. Orissa Cements recorded a rise of Re. 1.16 to Rs. 13.32. Dalmia Cements improved by 56 nP to Rs. 10.48 and Jaipur Udyogs by 28 nP to Rs 13.12.

In the engineering and mining section, Alcock Ashdowns were a firm feature with a sharp jump of Rs. 17.50 to Rs. 261.25. Tata Locomotives crept up from Rs. 168.75 to Rs. 173.75 before closing at Rs. 172. Larsen and Toubros were maintained at Rs. 16.40, while Premier Constructions appreciated from Rs. 186.50 to Rs. 192. Mahindras were taken up 52 nP higher at Rs. 19.48. Shivrajpurs were unchanged at Rs. 80.50, while Indian Coppers were a shade better at Rs. 3.20 and B.B. Petrols at Rs. 2.

In the shipping group, Great Easterns were again in the limelight on good support and recorded a rise of Re. 1.28 to Rs. 22.40. After an early spurt from Rs. 17.44 to Rs. 17.72, Scindias lost ground to Rs. 17.44 at the close. Among automobiles, Premier Automobiles were a fraction better at Rs. 82, while Hindustan Motors were dull at Rs. 6.92.

In the miscellaneous industrial group, Bombay Burmahs (old) staged a spurt from Rs. 549.50 to Rs. 557 early in the week, but slowly lost ground before closing at Rs. 552. National Rayons moved from Rs. 236 to Rs. 240.75, but closed a fraction lower at Rs. 239.50. Gwalior Rayons hardened by 12 nP to Rs. 13.24. Tata Chemicals were 32 nP better at Rs. 15.60, while Tata Oils were done 50 nP down at Rs. 39.75. Alembic Chemicals, which had staged a sudden spurt last week, attracted profit-taking and lost Rs. 2.75 to Rs. 153.25. Amar Dyes were in good shape rising by Rs. 4.75 to Rs. 116.75. Hindustan Levers were a fraction higher at Rs. 22.84. Killick Industries declined by Rs. 3.75 to Rs. 143.50. Wimcos changed hands Re. 1.25 lower at Rs. 170.

• • • •

Madras Stock Exchange

MADRAS, 10*th June*

Despite deterioration in foreign exchange position and further cut in supply of electricity to industry from 50 to 75 per cent. with effect from the 7th inst., the Madras Stock Exchange presented a fully steady trend during the week under review, barring, of course, textiles, which continued to remain depressed. The steadiness was induced by expectations of better conditions at least in counters in which forward trading on a settlement basis would continue from next month. The other favourable factors were rumours of the devaluation of the rupee and hopes of rebate on exports. Plantation shares, particularly teas, elicited very good attention of operators, thanks to expectations of a reduction in export duty on tea. Sugar, banks, electrics and miscellaneous industrials also ruled steady. Textiles were subdued, thanks to persistent reports of large stocks of yarn and cloth with mills. The Government of India's decision to announce the cotton yarn export policy for the three years 1959, 1960 and 1961 much in advance, and anticipation of downward revision in excise duty on coarse cloth, failed to have any effect.

Among tea shares in the planting section, Peermades were marked up by 75 nP to Rs. 21.25 *cum-div.* Parksides firmed up by 52 nP to Rs. 17.37. Neelamalais advanced by 25 nP to Rs. 4.60. Chembras improved by 22 nP to Rs. 3.95. Twyfords strengthened by 20 nP to Rs. 13.20, Periakaramalais by 16 nP to Rs. 4.32, Kil Kotagiris by 15 nP to Rs. 5.75, Nonsuch by 12 nP to Rs. 21.87. Blue Mountains were better by 8 nP at Rs. 3.08. Cottonads, however, were quiet at Rs. 14.75 *cum-div.* reflecting disappointment of operators over the cut in dividend to 15 per cent. for the year ended 31st March 1958 from 17½ per cent. in the previous year. Among coffee shares, Consolidated Coffees were lifted by 30 nP to Rs. 25.75. Coffee Lands increased by 20 nP to Rs. 35.50 Amalgamated Coffees rose by 25 nP to Rs. 11.50. Among rubber shares, Nilamburs forged ahead by 90 nP to Rs. 13.75 *cum-div.* T.R. & T's strengthened by 30 nP to Rs. 6.85 *cum-div.* Velimalais increased by 23 nP to Rs. 5.35. Midlands rallied 25 nP to Rs. 16. Thirumbadis gained 12 nP to Rs. 1.67, Cochin Malabars 10 nP to Rs. 4.85, Pullangodes 7 nP to Re. 1.77 and Kailas 5 nP to Rs. 4.25.

In the textile section, Ramakrishnas were hammered down by Rs. 10 to Rs. 165 *cum-div.* Vijayalakshmis slumped by Rs. 5 to Rs. 92. Metturs and Coimbatore Pioneers declined by Rs. 4 each to Rs. 344 and Rs. 231 respectively. Dhanalakshmis and Coimbatore Cottons receded by Rs. 3 each, the former to Rs. 174 and the latter to Rs. 134. R. C. Ambikais shed Rs. 2 to Rs. 124. Coimbatore Spinnings eased by a rupee to Rs. 47. Travancore Rayons, however, improved by 65 nP to Rs. 13.85 on special support.

Among sugar shares United Breweries attracted good attention and marched ahead by Rs. 3 to Rs. 200. Mysores rallied Re. 1.25 to Rs. 35. Deccans were quoted 35 nP higher at Rs. 8.70.

Among miscellaneous industrials, Textools advanced by Re. 1.50 to Rs. 181.50. Orissa Cements climbed up by Re. 1.30 to Rs. 13. Sen-Raleighs hardened by a rupee to Rs. 14 *cum-div.* T. Stanes strengthened by 75 nP to Rs. 21.50. Mettur Chemicals increased by 30 nP to Rs. 9.90. Spencers gained 50 nP to Rs. 18.25 *cum-div.* Hindustan Levers rose by 38 nP to Rs. 22.92. Mysore Tobaccos, on the other hand, lost 15 nP to Rs. 12.15.

HOW WONDER SOLVENT "S-100"

in Sulekha Special

FOUNTAIN PEN INK

PROTECTS YOUR PEN

A UNIQUE DISCOVERY

1. Prolongs the life of rubber sack keeping it smooth and elastic.
2. Washes the feeder thoroughly and perfectly clean.
3. Protects the tip of the nib from any acid action and keeps it clean and bright.
4. Removes all possibilities of formation of sediment, mould or flakes within the ink fluid.

HELPS SMOOTH WRITING

1. The tip of the nib is kept moist ready-to-start even when kept open for a reasonably long time, while the writing dries quickly on the paper.
2. The ink flows from the pen with equal freedom at all times and climates and at any places from cold Darjeeling to the hot region of Rajputana—the solvent contains an anti-freezing ingredient keeping the ink perfectly fluid even at the freezing point.
3. The wonderful flow of Sulekha has no parallel in the world—an achievement of this solvent.

SOLVENT "S-100" IS A VITAMIN IN PEN-FOOD

MEMBER OF INDIAN STANDARDS INSTITUTION

NEWS IN BRIEF

THE proposed optical glass factory of the Government of India will be set up at Durgapur in West Bengal and not at Allahabad.

The Government of India is setting up a corporation for making arrangments to export handloom cloth, according to Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry.

An Indian delegation led by Mr. K. K. Sahni, Oil Adviser to the Government of India, will visit Bucharest next month to discuss details of the Rumanian offer to help establish an oil refinery at Gauhati, Assam.

The production of copper ore in India during the first quarter of 1958 was 94,144 tons. The entire production was reported from Singhbhum District of Bihar. The production of copper metal during the first quarter of 1958 was 1,667 tons, as compared with 1,781 tons in the corresponding period of last year.

Four new polytechnics will come into being in Madras State from the current academic year. The Union Government has accepted the recommendations of the All-India Council for Technical Education in this behalf. The institutions will be opened in the private sector and will be located in Salem, Tanjore, Tirunelveli and Virudhunagar.

The Union Government has decided to grant on an *ad hoc* basis advance licences for import of certain non-ferrous metals to the Scheduled industries for the period October 1958-March 1959. These licences will be valid for shipment only after 30th September 1958. Facilities for remittance of foreign exchange involved will not be allowed before 1st October 1958.

A mooring vessel, the first ship to be built for the Indian Navy at the Hindustan Shipyard, is to be launched by about the middle of next month. Built at an estimated cost of Rs. 30 lakhs, the ship is especially designed to handle moorings used for securing ships in harbour. These moorings lying on the ocean bed are required to be lifted and inspected at frequent intervals. The mooring vessel can also be used for the laying of boom defences in harbours and for limited salvage work.

The Government of India has decided not to change for the present the age of superannuation which is 55 years for the great majority of Government servants. As regards continuance in service, the Government has decided that the services of scientific and technical personnel should be freely availed of, as at present, even beyond the age of superannuation. With regard to others, the officers will be continued in service only where it is clearly in the public interest to do so.

The Union Government has published draft rules detailing the procedure for allowing drawback of customs and Central excise duties paid on raw materials used in the manufacture of hurricane lanterns, sparking plugs and paints when such finished products are exported from India. Accordingly, the proposed refund will be at a rate of Rs. 60 per ton of tin plate used in the manufacture of hurricane lanterns. The rate of drawback in respect of the other two schemes will be calculated on the basis of particulars furnished by the manufacturers interested in these drawbacks who are to contact the Ministry of Finance, Department of Revenue, New Delhi, in this respect.

The Government of India has issued notification applying sub-section (3A) of section 3 of the Essential Commodities Act to the State of Uttar Pradesh and Rajasthan in respect of wheat. The object is to control rise in prices and prevent hoarding of wheat in these States. The effect of this notification will be that, in the event of stocks of wheat being taken over by the Government, the price payable shall be the average of three months' prices before the date of the notification, and not the market rate prevailing at the time of taking over. The notification will be in force for a period of three months.

A Japanese firm has been given orders for the supply of 2,600 broad-gauge 20-ton capacity wheel sets by the Indian railways. The value of the contract is about Rs. 32 lakhs. Two Calcutta firms and one Bombay firm have been given orders for the supply of goods wagons to the Indian railways. One Calcutta firm has received orders for nearly 1,300 broad-gauge and metre-gauge wagons, while another Calcutta firm has received orders for the supply of 1,250 wagons. The Bombay firm has received orders for supplying 675 broad-gauge wagons. The total value of the orders placed with the three Indian firms is about Rs. 422 lakhs.

Production of rice in Madras State has registered an increase of about 15 per cent. during the last five years following the "Grow More Food" measures undertaken by the Government. In regard to millets, the output has remained more or less stationary, as very little had been done for increasing its production. Under the prevailing prices and on the basis of the prevailing purchasing power of the people, consumption of foodgrains per adult per day is estimated at about 15 ounces. On this scale of consumption, the total foodgrain requirements of the State are estimated at about 40 lakh tons. If the harvest is good this will leave a surplus of about 230,000 tons for export.

It is reported that Switzerland has expressed its willingness to grant India substantial concessions regarding postponement of payments for its Swiss imports in order to ease the present drain on the country's foreign exchange reserves. Negotiation in this connection have been going on for some time following a request from the Indian Government whether certain payments for Swiss imports could be postponed so that this money might be turned by India towards much needed long-term capital investments. The Swiss are said to have now given a guarantee that India may withdraw substantial sums from Switzerland and that these sums can be used for long-term capital investment.

An order for plant and machinery for the Matatila power house, valued at over Rs. 42 lakhs, is being placed with a concern in Czechoslovakia on barter system as a measure of economy in foreign exchange through the State Trading Corporation, New Delhi. With the installation of this plant the Matatila power house, which will have an installed capacity of about 15,000 kw., will be enabled to start supplying power to the districts of Jhansi, Jelaun and Hamirpur. There is no power available in these districts at present. It is also proposed to electrify some of the nearby towns having a population of 5,000 or thereabouts. The project is expected to cost the Exchequer about Rs. 374.25 lakhs, of which a sum of Rs. 300 lakhs is proposed to be spent during the second Five-year Plan period and the balance in the third Plan period.

The Hindustan Machine Tools Factory, Bangalore, has entered into a technical collaboration agreement with Messrs. Hermann and Kolb of Koeln, the well-known West German manufacturers of radial drills, under which the factory will manufacture under licence ten types of radial drills in 1¼" and 2" sizes; the first drill is expected to be on the market by December 1958. The sale prices of these machines are expected to be below the landed cost of imported machines of equivalent quality. The addition of these radial drills to their existing range of six types of milling machines and two types of lathes, it is claimed, will give further flexibility to the production programme of the Factory. This will enable the country to be self-sufficient in the matter of medium/heavy radial drills, as a result of which the country will save annually about Rs. 75 lakhs to Rs. 1 crore of foreign exchange on these machines which have been hitherto imported. According to the terms of the agreement, Messrs. Hermann Kolb will arrange to train ten employees of the Hindustan Machine Tools Factory at their works in Koeln in West Germany. The firm has further agreed to depute to the Factory suitable expert technicians.

From Abroad

The Jamaican Government and a newly-formed company, namely, Jamaica Oil and Chemical, have decided to construct a $1-million oil refinery capable of processing 30 million gallons of oil and gasoline annually.

The Peoples' Republic of China and Pakistan have signed a one-year barter agreement, under which China will supply 150,000 tons of coal to Pakistan in exchange for cotton which will be purchased in the open market.

The U.S. Joint Congressional Atomic Energy Committee has supported a recommendation allowing Britain to buy an American nuclear submarine propulsion plant. The present Atomic Energy Law will have to be modified to permit a U.S. company to sell the plant to a British company.

The International Tin Council has confirmed that the total exports of tin from the six participating countries during the first control period (15th December 1957 to 31st March 1958) were just one per cent. higher than the total permissible export quota of 27,000 tons.

Indonesia is contemplating to buy 24 ships from Poland, according to Mr. Nasir, the Indonesian Shipping Minister. Indonesia is also negotiating with Japan for the purchase of ten ships. It is likely to buy one ship in Finland, four in Italy and two in Germany. The capacity of the ships will be all in the 2,000-3,000 tons range.

An air agreement providing for the running of Pakistan and Portuguese planes from Lisbon to Goa has been signed between the Governments of Pakistan and Portugal. The agreement provides for operation from Goa to East African possessions of Portugal via Karachi and also the Karachi-Goa service. At present, the Portuguese airlines have facilities to run planes from Goa to Karachi.

The construction of Canada's first atomic power station at a river site 150 miles west of Ottawa is expected to be resumed in July. Work on this project had to be stopped in April last year to allow important technological advances to be incorporated in the design of the reactor. The station which will have a production capacity of about 20,000 kilowatts, is expected to go into operation in 1961.

A combine of two leading Netherlands engineering works has received an order from the Pakistan Industrial Development Corporation, Karachi, for the supply of two complete cane sugar factories. The daily capacity of each factory will be 1,500 tons of cane, with facilities for expansion to 2,000 tons. The factory plant to be supplied will comprise the complete manufacturing process from the arrival of the cane to the delivery of the sugar in bags. Supplies of boilers and turbo-generators will also be made.

The total value of orders for materials and equipment placed in the U.K. by oil companies during the first quarter of this year amounted to £32.5 million, as compared with £36.0 million in the same period a year ago. Of this, the largest single category was bulk chemicals, catalysts, barytes, etc., which together accounted for £5.2 million. Next came specialised equipment for oil drilling and production, including oil casing, tubing, etc., with £3.5 million and specialised equipment for oil refineries, etc., excluding pumps and valves, at £3.3 million. Orders for electrical equipment were worth £2.5 million during the quarter, while automotive equipment orders were valued at £2.4 million.

The Government of Nepal has invited foreign capital for industrial development under a new industrial policy, announcement. The new policy welcomes foreign capital in industries other than those manufacturing arms, ammunition and other explosive materials and also assures the investors all possible guarantees for transfer of profit. Withdrawal of capital would be provided under an agreement to be concluded between the Nepalese Government and investing party. The Nepal Government will itself take interest in co-operating with foreign investors in the development of industries like railways, electric ropeways and power generation. It will also guarantee that taxes on foreign investment here will not be more than those in the investors' own country and the Government will try its best to make available foreign currency to import plants and acquire foreign technicians.

General Manager.

PERSONAL

MRS. VIJAYALAKSHMI Pandit, India's High Commissioner in the United Kingdom, left Bombay for London on Sunday.

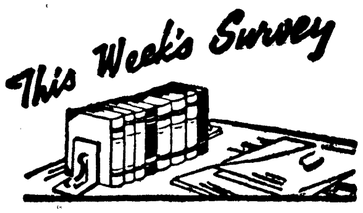
Mr. K. N. Mookerjee, Chairman of the National Rubber Manufacturers Ltd., is going abroad on the 19th inst. on a business tour.

Mr. H. V. R. Iengar, Governor of the Reserve Bank of India, who had gone to Australia, returned to Bombay from Singapore on Thursday last.

Mr. Abheraj H. Baldota, Partner, Messrs. Baldota Brothers, and Vice-President of the Bombay Metal Exchange, left last week on a business tour to the Continent, the U.K., the U.S.A. and Japan.

Mr. B. K. Nehru, Secretary, Department of Economic Affairs in the Union Ministry of Finance, left Bombay for London on Thursday last to attend the preparatory meeting of the Commonwealth Trade and Economic Conference.

Mrs. Sumati Morarjee, nominee of the Indian National Steamship Owners' Association, has been appointed a member of the National Harbour Board, representing the shipping industry, for a period of three years, from 22nd May 1958. The non-official members of the National Harbour Board as reconstituted are: Mr. M. A. Master, representative of Trade and Industry; Mrs. Sumati Morarjee, representative of Shipping; Mr. N. Bhaktavatsalam, representative of Sailing Vessels Industry and Mr. Dhara Singh, representative of Labour.



INCOME-TAX DEPARTMENT

IT was an American writer on public finance who once aptly remarked that a haphazardly run office could no more be successful in its operations than a carelessly conducted business enterprise. The same writer emphasised that, if evasion was not to be widespread and if the taxpayer's money was not to be wasted in inefficient tax assessment and collection, a technique of tax administration should be developed. Judged by this standard, it must be said that the Income-tax Department in India is certainly efficient and compares well with its counterparts in many countries. Even so, some feeling of distrust and discontent exists in the public mind against the administration of the tax. Further, tax evasion continues to persist. The Government of India has no doubt lately adopted an integrated scheme of direct taxation, but its successful implementation will depend solely on the administrative organisation and procedures, with due regard to the need for eliminating tax evasion and avoiding inconvenience to the assessee. Viewed thus, the setting up of a special committee (Chairman: Mr. Mahavir Tyagi, M.P., a former Minister of State at the Centre) to go into the question of the administration and procedure of the Income-tax Department must be widely welcomed.

The task to which the Committee will have to address itself is indeed vast. The Government of India has evolved a rather complicated system of direct taxation which is considerably broad-based, covering as it does taxes on wealth, expenditure and gifts, not to speak of the reduction in the exemption limit for income-tax payment. The entire work in connection with the assessment and collection of these taxes has fallen on the Income-tax Department. It is the imposition of such new burdens on the Department that invests the need for improving administrative organisation and procedures with special significance. It is to be hoped that the Mahavir Tyagi Committee will suggest measures designed so to improve the administrative machinery as to make it function without giving any scope for public complaint.

It will be interesting to note that the integrated scheme of direct taxation evolved by the Government of India has resulted in an appreciable rise in revenues to the exchequer. On the basis of the budget estimates for the current financial year (1958-59), the total collections from direct taxes (taxes on income, corporation tax, wealth tax, expenditure tax, gifts tax and estate duty) amount to Rs. 241 crores which represent as much as 30 per cent. of the aggregate revenue receipts. When the assessees contribute so largely to the Central exchequer, they have a right to expect from the tax-collecting officers courtesy and politeness. Instances are not wanting to prove the hardship and inconvenience caused to assessees as a result of the unhelpful attitude of the officers. The Income-tax Officer must, as the Income-tax Investigation Commission (1949) rightly stressed, show by his conduct that "he is not the tax grabber he is described to be but a referee standing between the State, on the one hand, and the taxpayer, on the other, with the sole idea and desire that both get a square deal." The Tyagi Committee will do well to lay down a code of conduct for observance by all those who are in charge of income-tax administration.

AGRICULTURAL SERVICE

No other factor plays a more important part in the execution of a network of development programmes in the field of agriculture than an efficient agricultural service. It is only such a service which can give judicious guidance to the rural people in the task of stepping up the production of primary products. Appropriately enough, due consideration must be given not only to provision of adequate facilities for intensive training but also to making the service sufficiently attractive to persons of high calibre. Viewed thus, some of the recommendations made by the Committee on Agricultural Services in the States, one of the ten Committees appointed by the Crops and Soils Wing Conference of the Indian Council of Agricultural Research held at Simla last week, are, indeed, of far-reaching importance.

The major recommendation of the Committee relates to the in-service training of the personnel of State Agricultural Departments. The Committee proposed the establishment of an Agricultural Staff College at the Indian Research Institute, New Delhi, to train senior personnel of Agricultural Departments and four regional staff colleges for junior officers. Surely, the implementation of this suggestion will go a long way towards ensuring adequate and regular opportunities and incentives for professional improvement to agricultural workers. The Committee did well to urge the need for imparting the more elementary types of agricultural education right from the school stage, instead of at agricultural colleges. This will provide suitably trained students for admission later to the agricultural colleges. The Committee also urged the establishment of agricultural schools in all districts to provide suitably trained students for admission later to the agricultural colleges, one school being attached to each college.

The Committee also put forward a suggestion so to improve the scales of pay in the agricultural departments, as to bring them on a par with those in other Government departments in order to attract the better type of persons. This is certainly a valuable suggestion. A major defect in the agricultural service, as Mr. A. P. Jain, Union Minister for Food and Agriculture, observed in the course of his inaugural speech at the Conference, lay in the organisational set-up. He was right when he declared that the human factor which is more important than the material resources should be given sufficient attention. Another notable recommendation made by the Committee relates to the development of the Agricultural Departments of the States, especially in the spheres of agricultural engineering, land reclamation, soil conservation, farm management and agricultural marketing. These are the fields in which there is vast scope for development and, to the extent such development takes place, the conditions in the agricultural economy will improve, thereby bettering the lot of those who depend mainly on agriculture for their living.

RAILWAY FREIGHT

The Committee of the Indian Chamber of Commerce, Calcutta, in a memorandum addressed to the Chairman of the Railway Board, has submitted that the freight structure recommended by the Railway Freight Structure Enquiry Committee has far-reaching implications. It has expressed concern over some of the principles laid down for the revision of freight structure. A study of the principles by the Committee indicates that the entire freight schedule would be up-graded, on an average, by 20 to 100 per cent. over the typical ranges of traffic movement and that, in case of some telescopic classes, the increase in freight would be higher still. The Committee observes that such a large increase in railway freight for all classes of commodities, raw materials as well as finished products, will have severe adverse effects on the entire cost structure of the economy and will aggravate the inflationary trends, especially because the average lead of raw materials traffic normally falls within the range of 300 miles, the first leg of the existing telescopic freight structure in which the Enquiry Committee had proposed the highest increase. The cumulative impact on the cost of manufactured goods of additions to the freight charges at every stage of manufacture would make it difficult for industries to implement their expansion programmes and would adversely affect the Plan itself.

It is common knowledge that there has been increasing consumer resistance in the case of many commodities in recent times. The increase in the price to the consumers that would result from the substantial increase in the production cost of consumer goods consequent on the upward revision of railway freight would, the Committee points out, further deteriorate the position. In the case of coal, the freight increase under the percentage class rate would be nearly 41 per cent. over a distance of 800 miles and 19 per cent. under separate coal scale. The increase in freight for movement of paper for 300 miles will be 13 per cent.; sugarcane 60 to 90 per cent. for 50 miles; sugar 52 per cent. for 75 miles, 34 per cent. for 150 miles, 16 per cent. for 300 miles; asbestos cement 50 per cent. for 75 miles, 33 per cent. for 150 miles and 16 per cent. for 300 miles; *vanaspati* 69 per cent. for 25 miles, 57 per cent. for 75 miles, 37 per cent. for 150 miles and 18 per cent. for 300 miles.

The Committee estimates that, in respect of export industries, the percentage increase in freight for tea would be 182 per cent. for 20 miles and 45 per cent. for 500 miles for smalls, 128 per cent. for 20 miles and 23 per cent. for 500 miles for wagon-loads; for cotton texiles, 148 per cent. for 20 miles and 34 per cent. for 500 miles for smalls, 107 per cent. for 20 miles and 11 per cent. for 500 miles for wagon loads; in the case of jute manufactures, 145 per cent. for 20 miles and 42 per cent. for 500 miles for smalls, 111 per cent. for 20 miles and 22 per cent. for 500 miles for wagon-loads.

The effect of such a large increase in rail freight for these goods, the Committee emphasises, would be to further impair the ability of the Indian industries to compete in foreign markets where they are already facing severe competition. Attention is also drawn to the adverse effects of the proposed increase in freight over short-distance traffic on existing industries which have been located near the sources of raw materials and markets. It would be undesirable, the Committee maintains, to penalise short-distance traffic and thereby encourage cross-movements involving wastage of carrying capacity of the railways at a time when its optimum utilisation is of paramount importance.

It must, however, be pointed out that so far as the Committee's criticism of increase in freight rates for short-distance traffic is concerned, it ignores the fact that such increase might give a fillip to motor transport. After all, in respect of transport of many goods over short distances road transport can give a more efficient service than the railways.

REVENUES FROM LAND

There is a growing tendency among State Governments to look to land as a source of enlarged revenues. This must be attributed to the increasing financial needs in the context of the implementation of development schemes, a majority of which are for the benefit of the rural areas. How the new tempo of agricultural development as well as the reforms in the sphere of ownership and tenure have been responsible for the State Governments turning their fiscal focus largely on land is indicated in the course of an interesting article appearing in the latest issue of *Agricultural Situation in India*. According to this survey, in the past two years, taxes or levies of some kind or other on land and its produce have figured prominently in State taxation. A comparison of the budget estimates for the current year (1958-59) with the revised estimates for 1957-58 will show that the share of land revenue in the total tax revenue of all the State Governments with the exception of Andhra Pradesh and West Bengal has gone up from 18.40 per cent. to 18.80 per cent. Similarly, the percentage share of agricultural income-tax and irrigation has risen from 1.44 and 1.42 to 1.50 and 2.12, respectively. The table below gives the anticipated yields from different sources pertaining to land in the different States during 1958-59, the figures in brackets relating to yields during 1957-58:

(In lakhs of rupees)

States	Total tax revenue	Land revenue	Agricultural income-tax	Irrigation	Forests
Assam	15,68	2,37	1,45	1	94
	(15,65)	(2,37)	(2,00)	(0,3)	(95)

	(4,11,80)	(75,87)	(5,95)	(6,15)	(26,09)

This table does not include yields from betterment levy.

The year 1957-58 witnessed the imposition of a cess on cotton, groundnuts and chillies and extension of land revenue surcharge along with a special surcharge in the form of agricultural income-tax to the P.E.P.S.U. area in the Punjab; introduction of agricultural income-tax, irrigation levy and betterment tax in Rajasthan; increase in yield from agricultural income-tax through certain amendments in Uttar Pradesh; levy of an educational cess on land revenue and betterment levy in Bihar; and imposition of a tax on agricultural wealth and upward revision in super-tax rates on agricultural income. In their number and the extent of yield, the new imposts on agriculture represented a respectable proportion of the entire new tax proposals of the State Governments in 1957-58.

The preference for taxation of agriculture has continued to be conspicuous during 1958-59, although, in some cases, it has been no more than the enforcement of levies held in abeyance for some reason or other in the previous year. The additional tax measures are: sales tax on foodgrains, including pulses, in the Punjab; rationalisation of irrigation rates and increase in irrigation rates on commercial crops in Rajasthan; betterment levy in Madhya Pradesh; betterment levy and water rates in Mysore; water rates, standardisation of rent, bringing in larger cultivated areas which had till now escaped taxation and cess on sugarcane purchased by factories in Orissa; and extension of agricultural income-tax to include all land holdings (as against only plantation holdings hitherto) in Madras.

It is thus seen that, barring Bombay, the agricultural income-tax is being extended to new areas and State expenditure on the development of agricultural land is being sought to be reimbursed in more and more States through levies under some name or other. Incidentally, it may be noted that the betterment levy and the irrigation fee are not always distinctive. Betterment levy is in vogue only in four States—Bombay, Assam, Kerala and Mysore. The estimated yields in 1958-59 are Rs. 34.86 lakhs, Rs. 1.00 lakh, Rs. 50,000 and Rs. 35,000, respectively. In some States where no new taxation has been proposed, the revenue from land is expected to register a substantial rise. The extent of the rise estimated during 1958-59 as compared with 1957-58 is Rs. 76 lakhs in Andhra Pradesh and Rs. 46 lakhs in West Bengal.

SMALL SAVINGS

The successful implementation of the second and the subsequent Five-year Plans depends largely on the effective mobilisation of domestic resources. And small savings constitute one of the fruitful sources of such mobilisation. The Planning Commission has naturally attached great importance to the need for raising a large amount by way of small savings. Out of the original second Plan outlay of Rs. 4,800 crores, the target fixed for small savings is Rs. 500 crores, or over 10 per cent. of the total. Despite the stress laid on stepping up small savings collections, the progress actually achieved has been deplorably poor. During the first two years of the Plan 1955-57 and 1957-58), the total amount raised through small savings by the Centre and the States was no more than Rs. 114 crores, as against the target of Rs. 200 crores.

Whatever may be the factors responsible for the poor progress, the need for intensifying the small savings drive cannot be overemphasised. For the importance of small savings, as Mr. Morarji Desai, Union Finance Minister, pertinently pointed out while inaugurating the third meeting of the National Savings Central Advisory Committee held at New Delhi last week, lies not merely in the amount of money that it brings but in the fact that it is also an indication of the efforts which the people, the masses, are prepared to make in the interests of the Plan. He conceded that the standard of living of the masses was low. Nevertheless, he felt that the standard was definitely rising and that it was not too much to expect them to save what they were getting as additional earnings. Mr. Desai went to the extent of stressing that the people must be persuaded "to see the necessity of saving even at the cost of not raising their standard of life to a level where people would be satisfied immediately and to use just a little for raising the present standard of life and to utilise the bulk of the increase for augmenting the resources for achieving our goal." He called for correct pro-

COMPANY REGISTRATIONS IN 1957-58

ADMINISTRATION'S VIEWS EXAMINED

From Our Special Correspondent

NEW DELHI, 10*th June*

THE Department of Company Law Administration has just released statistical information bearing on new company registrations in 1957-58. The trends revealed in that year represent, in the opinion of the Department, an improvement over 1956-57. This opinion is based on the fact that the total number of new company registrations in 1957-58 was 961 as against 848 in 1956-57. The Department's claim is only of limited validity because the total authorised capital of new companies registered in 1957-58 aggregated Rs. 103 crores only, as against Rs. 211 crores of those registered in the previous year. As the new companies in the public sector accounted for nearly Rs. 9 crores, the total authorised capital of new companies in the private sector was Rs. 94 crores in 1957-58, as against Rs. 91 crores in 1956-57. In the matter of authorised capital structure of new companies in the private sector, it could thus be seen, there was practically no improvement in 1957-58 over the previous year.

DELHI LETTER

This was not all, for the amount of paid-up capital actually raised by new companies in both the sectors in 1957-58 (ten months) was just Rs. 4 crores as against Rs. 13 crores in the previous year. Of this Rs. 4 crores, probably not more than Rs. 2 crores was accounted for by new companies in the private sector. This is a further confirmation of the F.I.C.C.I.'s contention (*vide* Delhi Letter in *Commerce* of 31st May 1958) that it has not been possible for the private corporate sector to secure adequate funds from the organised capital market for new company flotations. But the Department of Company Law Administration has tried to establish that the activity of the corporate sector has not been shrinking. In the opinion of the Department, "the correct position of the corporate sector is better gauged by the figures of net increase or decrease in the paid up capital of the companies." The Department's argument is as follows:

Paid-up Capital

During the first ten months of 1957-50 an increase of about Rs. 57 crores had taken place in the paid-up capital of companies at work and of this increase, Rs. 4 crores is accounted for by companies registered during 1957-58 and Rs. 53 crores by old companies. Of the net increase of Rs. 57 crores in the first ten months of 1967-58, an increase of about Rs. 17 crores has been effected by Government companies while Rs. 40 crores by non-Government companies. The overall position, after taking into account the net increase in paid-up capital of the existing companies, the capital raised by the new companies registered during 1957-58 and the loss of capital in the companies that have gone into liquidation or struck off the register, is that up to the end of January, 1958, there has been a net increase to the tune of Rs. 49 crores in the paid-up capital of all companies at work.

No Conclusive Answer

The reference in the Department's argument to the increase (Rs. 40 crores *minus* Rs. 2 crores) in the paid-up capital of old companies in the private sector is, however, not a conclusive answer to the Federation's contention. The ability of old-established companies to raise their capital in the market and by the issue of bonus shares is one thing and the ability of new companies to attract capital quite another. From this point of view, while expansion in the activity of the corporate sector in established directions may be a fact, corporate activity in new directions does not appear to have expanded significantly. To say, as the Department of Company Law Administration does, that the size and activity of the corporate sector has not been shrinking in recent years is to overlook the fact that the possibilities for expansion in corporate activity in the private sector have been somewhat shrinking.

There are other facts bearing on this question. In the first place, the paid-up capital of all companies at work in the latest three-year period has gone up by Rs. 137 crores, from the total of Rs. 970 crores in 1954-55 to Rs. 1,107 crores in 1957-58. This may be compared with the previous three-year period when the paid-up capital of all companies at work had gone up by Rs. 114 crores, from the total of Rs. 856 crores in 1951-52 to Rs. 970 crores in 1954-55. It would appear from these figures that the supposed far higher tempo of industrialisation in the latest three-year period than in the previous three-year period was reflected in a paid-up capital increase of only Rs. 23 crores (Rs. 137 crores *minus* Rs. 114 crores). Secondly, out of the increase of Rs. 137 crores in total paid-up capital in the 1955-58 period, Government companies have accounted for about Rs. 70 crores, as against an estimated Rs. 35 crores in the previous three-year period and non-Government companies for about Rs. 67 crores as against an estimated Rs. 79 crores in the 1952-55 period. A slight shrinkage in expansion of corporate activity in the private sector is thus a fact. The most optimistic construction on this can only be that expansion in the private sector's corporate activity in the 1955-58 period has maintained the same rate as in the previous three-year period.

Giant Corporations

The Department of Company Law Administration has also tried to refute the contention that, in the matter of giant incorporations, the promotional activity in the private sector has considerably been reduced. The Department's argument in this connection is that while giant flotations during 1957-58 accounted for a little more than two-thirds of the authorised capital *of all the companies formed in that year*, the share of new giant Government companies in the total authorised capital of all the new companies was only 8 per cent., as against 60 per cent. in 1956-57 and 20 per cent. in 1955-56. As talking in terms of percentages is apt to be misleading sometimes, it is necessary to examine the absolute figures in this connection.

Statistics pertaining to new giant companies with an authorised capital of Rs. 1 crore and more are as under:

	1955-56		1956-57		1957-58	
	No.	Authorised capital (Rs. crores)	No.	Authorised capital (Rs. crores)	No.	Authorised capital (Rs. crores)
Government ..	2	31	7	119	2	8
Non-Government..	24	62	21	52	26	58
Total ..	26	93	28	171	28	66

It will be seen from the above figures that the authorised capital of giant incorporations in the private sector has, at best, been steady at an annual level of Rs. 50-60 crores. While it has not declined significantly, it has not increased either. But even this is no reliable index of new corporate activity in the private sector because while new Government companies may be taken as established when once registered, it is by no means certain that all new non-Government companies are actually established, without any casualties, after registration. Figures of such possible casualties are lost in the figures of companies (old and new) ceasing to work. Incidentally, the rate of cessation of companies has been pretty high from 1951-52 (about 1,250 casualties) to 1956-57 (about 1,000 casualties.

The Government of India has decided to continue the special rebate of 6 nP in the rupee on sales of handloom cloth up to the end of August 1958. The grant of special rebate, which was announced on 10th April 1958, was for two months from 11th April 1958. This special rebate, is in addition to the usual rebate of 6 nP in the rupee and will be allowed on all retail sales of handloom cloth by weavers' co-operative societies and State-owned depots and on wholesale sales by weavers' co-operative societies.

(Concluded from next column)

took the opportunity of saying that the Government was persevering in its efforts to bring the Free Trade Area in Europe into being because it believed that was the only way in which the European countries could make the best use of their potential. Side by side with this, the Government was anxious to make the forthcoming Commonwealth Economic Conference which is to be held in Canada in the autumn, a great success and he emphasised they would have particularly in mind the question of Commonwealth investment and development policies.—*All Rights Reserved.*

GOLD AND DOLLAR RESERVES

From Our Own Correspondent

LONDON, 6*th June*

THIS week has recorded a further increase in the gold and dollar reserves of $125 million to a total of $3,039 million. This is about £70 million higher than a year ago and as much as £430 million above the crisis level of last September. As a result, the Chancellor of the Exchequer, in one of his speeches, this week, has been able to say that the economic position of the United Kingdom has been greatly strengthened and that confidence in sterling has been re-established with a corresponding strength in the sterling exchange rate. Furthermore, over the past year the total of sterling obligations, that is, balances held in this country, have been reduced by £265 million, and there has also been substantial fresh investment overseas mainly in the Commonwealth and the sterling area. The Chancellor added that as a result in the main of lower import prices we were at present earning a satisfactory surplus on our balance of payments.

LONDON LETTER

So much for the brighter side of the picture. The Chancellor, however, sets against this the general trend of world trade, in the context of which it might prove difficult to maintain the existing level of British exports. Export prices would then tend to fall so that the terms of trade would no longer continue as favourable as at present.

At home, unemployment has been rising against the seasonal trend although the rise has for the moment been halted. Production has also levelled off and the indices only stand at a point or two higher than a year ago, i.e., an increase of no more than 1 per cent. The Chancellor considered that the answer to the question whether the economy had reached a degree of stability which would make it unnecessary to continue with the present restrictions on credit and investment, would depend on the trend of wage settlements over the next few months. The Government appears to be upset because a number of voluntary wage settlements have been reached recently which seem to them to go beyond any probable increase in national productivity and so to hold potential inflation dangers. The Chancellor was probably quite honest when he said that the Government did not want a wage freeze; it has always said that it favours improving wages combined with increasing output. Similarly, the Government would like to see a steadily expanding economy but one in which prices are not constantly being pushed up. It does, therefore, envisage an end to financial restrictions subject to its being satisfied on this question of rising wages.

Stubbornness of Both Sides

The view thus clearly put by the Chancellor throws fresh light on the stubbornness of both sides in the London bus dispute. As these Letters have sought to point out, the dispute is much more than a local issue. It has become a symbol between the Government and trade unions on wage policy. If the dispute can be settled giving victory to the Government then it feels that it will have enormously strengthened its position on the general principle of holding down wage increases unless increasing output justifies a rise. While if it gives way it feels that it will have done nothing to prevent the continuous pressure for further general wage rises. The trade unions are as aware of the issues hanging on the struggle as is the Government and as reluctant to lose this particular battle as the Government is anxious to win it. But the answer may turn out to be a face-saving compromise on both sides!

In his same speech, which was made to the Association of British Chambers of Commerce, the Chancellor then developed the theme of the prospects for prices. He visualised not only a greater stability in prices generally but the possibility of reductions, particularly in the export trade. British exporters have, against the background of falling world demand, not been doing too badly and in some markets exceptionally well. For instance, shipments to the U.S.A. have been higher this year by 9 per cent. It is only realism to appreciate that competition for markets is going to intensify if world trade continues to shrink and that is going to be reflected in lower prices. The Chancellor then

AMERICAN LETTER

SIGNS OF UPTURN IN U.S. ECONOMY

GROUP INSURANCE MAKES HEADWAY

From Our Special Correspondent

NEW YORK, 3*rd June*

THE United States, as this is being written, is suffering from a bad case of inferiority feeling. This has two basic reasons. The abuse Vice-President, Mr. Nixon received in Latin America on his recent tour and the collapse of constitutional government in France. The fiasco of the Nixon tour is hardly understandable. The U.S. Central Intelligence Agency appears to have been well informed of the true conditions encountered by the Vice-President. Reports to that effect were distributed, but nobody, apparently, paid any attention to them. Strange as it may seem, Mr. Nixon is now a national hero, because he was crucified, in a way.

The dilemma in France raises a number of questions in American minds. General de Gaulle's record is not very impressive. He got along with very few people in his life. The Press disliked him and he distrusted the Press. His provisional government did not last and there is very little tangible in his career which speaks strongly in his favour. He has said nasty things about the United Kingdom and the United States and, rightly or wrongly, there is a suspicion here that, if his terms are not accepted by the West, he will cast his lot with the East.

France being the headquarters of the North Atlantic Treaty Organisation and the hub of the lifeline providing the sinews for U.S. installations in Europe, Gen. de Gaulle's ascendancy to power raises more questions than it answers. The entire N.A.T.O. structure is involved. Will the General, *the former uncompromising foe of* Germany, be able to maintain friendly terms with West Germany's able Defence Minister, Mr. Strauss? What will be the role of France from here on in so far as the steel-coal community is concerned and the common market area which has been voted into existence? Only time can tell.

"France is simply not ripe for democracy," a *New York Times* correspondent told me the other day after his return from Paris. But what about Africa? How *long* can Algeria remain part of continental France? Every Frenchman maintains it is and many Americans do, too. There is very little logic in history—even though *la logique est la logique* in French. Frankly, thinking Americans are afraid the net result of all this might be blood baths and/or civil war. It might easily lead to a major explosion with uncontrollable consequences some time this year.

Indeed, if this line of reasoning is pursued and the Kremlin takes advantage of the openings, the memories of 1958 may not be very happy ones at Washington and London. This, in brief, sums up U.S. fears. Perhaps, they are exaggerated—perhaps, they are not. It seems fairly obvious, however, that in the event of serious trouble in France, U.S. troops in that country would be moved to Africa and West Germany.

Recession

Domestically, the recession is still the most important question. It all depends where one sits. In Detroit, the capital of the automobile industry, it's a calamity. In the farming areas, everything is fine. Farm prices are 8 to 9 per cent. higher than last year. Most chemical industries are doing better than last year and the number of those receiving unemployment insurance is dropping seasonably as non-factory employment is gaining.

The major trouble is lack of leadership. There are cheerful words from Washington that all is well, but the people are not convinced. They are saving their money against the possibility of a debacle of unknown magnitude. They are *not* spending. Caution reigns everywhere. The Administration is not quite certain whether it wants to fight inflation—which is inevitable to a degree—or whether it wants to fight the recession. Hence, the average man in the street is just as bewildered. He is not taking any chances. He saves his money.

Yet, there are signs of an upturn. There has already been a slight increase in steel production. General Electric reported a notable gain in orders in both April and May. There have been reports of greater television set sales. In six south-eastern States, there was a pick-up in furniture sales. Women's apparel sales are holding up well. Food companies, generally, reported no slump in business.

Machine tool sales are still on the upgrade, giving evidence of industrial expansion plans. International Business Machines has been virtually depression-proof. I.B.M. has a record of no layoffs since 1921, even though the backlog of orders is off somewhat from the level of eight months ago.

Housing

In the housing field, the upturn is unmistakable. It is spearheaded by military housing in innumerable areas of the U.S. It may be interesting to note that the cheapest dwelling, outside of military housing, is the most successful. An $8,000 or $10,000 home sells twice as fast as the $16,000 to $20,000 variety.

A $15,000-house is bought by individuals with an income of about $5,000 a year. They may be veterans of one of the recent wars and they get 30-year mortgages, partly guaranteed by the Veterans Administration. Their mortgages may run about $13,000 and their monthly payments, including insurance, taxes and so on, may average $80 a month. This is less than one quarter of their monthly pay, a conservative average for U.S. standards. These buildings are adequate and sanitary for a growing family. They are usually located in the outlying sections. They all look alike. They are just painted a different colour.

The companies doing well in the U.S. today are those which have intensified their sales and advertising efforts. A notable example is life insurance. While writings of ordinary life insurance policies are off, sales of new group insurance plans are booming.

It is a way of saying that the U.S. is becoming a group economy. Mutual funds are booming. The monthly investment plan of the New York Stock Exchange is a relative success. Any employed person in an average company is subject to group benefits. They are most likely the only benefits, or potential benefits, he or she has. It is all done on the basis of acturial tables.

They show how many people die and survive, in what age groups, from whatever causes. It has been extremely good business for the underwriters and it has been a great factor of stability for the U.S. economy. How these actuarial tables would show up under the stress of atomic warfare is another question. There are also such unknown factors as radio-active dust, nerve gases, psycho-chemicals and various disease agents which may be applied in future warfare.

Group Economy

So far, the group economy of the U.S. is doing all right, despite the recession. Pleasure boats have reached a new high in numbers and the luxury trades are still booming. Tourists trade is not too far from its peak and the average American remains well fed, well housed and well clothed by any standard.

Meanwhile, the two major political machines, Republican and Democratic, are being primed for the Congressional elections this fall, It is not a very exciting contest. Both parties are enmeshed in the same foreign policy dilemma. The Democrats, no doubt, will make capital out of Secretary Dulles' mistakes abroad, the recession is and is not a vital issue and Federal deficit financing does not interest anybody but Government bond traders who have a fair understanding of fiscal matters. The average voter is concerned with his weekly pay-cheque and more than 62 million are getting it regularly.—*All Rights Reserved.*

MEDIUM-TERM LOANS TO INDUSTRIES

REFINANCE CORPORATION SET UP

AFTER a lapse of more than a year since the broad outline of the scheme for providing medium-term loans to medium-sized industries had been settled, the institution through which such credit is to be made available was registered on the 5th inst. as a private limited company under the name of Refinance Corporation for Industry (Private) Ltd. The idea of providing credit to private enterprise through specified banks can be traced to the Agricultural Commodities Agreement signed between the Government of India and the U.S. Government in August 1956, under which a sum of about $55 million or Rs. 26 crores from the counterpart funds was reserved for the purpose of relending to industries.

The Board of Directors of the Refinance Corporation consists of seven members, including the Governor of the Reserve Bank (who will be Chairman) and one of the Deputy Governors, the Chairman of the State Bank of India, the Chairman of the Life Insurance Corporation and three representatives of the banks associated with the scheme.

This is the second institution of its kind to be set up through U.S. aid for giving credit to private industries, the first one being the Industrial Credit and Investment Corporation Ltd. (I.C.I.C.). There is, however, one difference between the two institutions. While the I.C.I.C. can lend directly to industries, the Refinance Corporation cannot do so. As the latter's name itself implies, it is designed to lend to industries through selected Scheduled banks. The aim is to encourage banks to extend medium-term lending facilities to industries. There are several institutions for meeting long- and short-term credit needs of industries, but none to give exclusively medium-term credit. The various Financial Corporations, I.F.C. and State institutions give long-term, and Scheduled banks, short-term loans. It is true that a large volume of the Scheduled banks' advances, which is theoretically short-term credit, is being renewed periodically, so that the loans are in effect medium-term credit. The banks cannot, however, openly take the risk of locking up their funds in medium-term loans. It is to help banks in doing so that the Refinance Corporation has been set up. The setting up of the Corporation is, therefore, a welcome experiment in the history of banking in India.

The authorised capital of the Corporation is Rs. 25 crores. It will have an initial issued capital of Rs. 12.5 crores, contributed jointly by the Reserve Bank of India, Life Insurance Corporation and 15 of the larger Scheduled banks. These banks are: the State Bank of India, Central Bank of India, Punjab National Bank, Bank of India, Bank of Baroda, National Overseas and Grindlays Bank, United Commercial Bank, Lloyds Bank, Allahabad Bank, Chartered Bank, Indian Bank, United Bank of India, Mercantile Bank, Devkaran Nanjee Banking Co. and State Bank of Hyderabad. It will be recalled that, in May 1957, the Reserve Bank of India Act and the State Bank of India Act were amended in order to enable the two institutions to participate in the share capital of the Refinance Corporation for Industry. The share of the Reserve Bank in the capital of the Refinance Corporation is Rs. 5 crores and that of the State Bank of India Rs. 2.5 crores. The L.I.C. will provide Rs. 2.5 crores and the balance will be met by the other Scheduled banks. The issued capital will be supplemented by the American counterpart funds to the extent of Rs. 26 crores, so that the total resources that will be available to the Corporation will amount to Rs. 38.5 crores.

The procedure to be followed in making available loans to medium-scale industries is somewhat circuitous. Thus, the Government of India will make available to the Corporation the amounts required by the latter from time to time in the form of interest-bearing loans for distribution to Scheduled banks and arrange to obtain reimbursement in due course from the counterpart funds. The Scheduled banks in their turn will give loans to creditworthy industries from their funds and get themselves reimbursed by the Corporation. This part of the procedure is somewhat analogous to getting loans from the Reserve Bank against usance bills. Consequently, the banks will take the entire risk and responsibility for the creditworthiness of the industries to be financed. Out of the total amount of Rs. 38.5 crores thus available, each of the participating Scheduled banks will be allocated a quota within which it will be eligible to obtain refinancing facilities from the Corporation. The quota of each bank has not been announced, but it must obviously depend on the size of the bank.

Loans given by the member-banks to be eligible for assistance from the Corporation, must be for medium-sized industrial concerns for amounts not exceeding Rs. 50 lakhs in any one case and the period of the loans should not be less than three or more than seven years. These facilities will be available only to industrial concerns the paid-up capital and reserves (excluding reserves for the payment of taxes and normal depreciation reserves) of which do not exceed Rs. 2½ crores in any particular case. Loans must be for the purpose of increased production, primarily in industries included in the second Five-year Plan and succeeding Plans.

The next important question which arises is the rate of interest to be charged by banks on their advances to industries given out of the funds of the Refinance Corporation and that to be charged by the latter on loans given to banks. No indication of the rates of interest to be charged is available, as the Board of Directors of the Corporation has yet to meet themselves and then have a discussion with the representatives of banks on the details. In discussing the details, the Directors have to take into consideration the change in the conditions of the money market during the last one year. With the sharp rise in interest rates on deposits paid by banks and with the credit restrictions imposed on banks, their margin of profit has thinned down very much during the last 12 months. It is, therefore pointed out that the margin of profit earned on providing medium-term credit to industries should be at least as much as that earned by banks on their other advances. If this is to be so, the rate of interest charged by the Refinance Corporation cannot be more than the general rate of interest on deposits.

It may, on the contrary, be argued that the rate of interest on loans to banks (which are also of a medium-term nature) cannot be linked to or related to deposit rates of banks, as the deposits of banks are utilised to give advances repayable on demand, while the funds received from the Corporation are lent to industries for fixed periods and as such should bear a higher rate of interest than deposit rates. It is also argued that banks should not view the proposition from the point of profit motive alone but in the larger interests of industrial development. It should also be noted that the counterpart funds actually belong to the U.S., on which the Refinance Corporation has to pay interest when it borrows them through the Government of India. The rate of interest on loans to banks can, therefore, be expected to be fixed with an eye on a reasonable margin of profit to the Corporation. Anyway, it is to be hoped that an amicable and workable settlement on the details will be arrived at between the Corporation and the banks to make the venture a success.

BOMBAY STATE FINANCIAL CORPORATION

The working of the Bombay State Financial Corporation (Managing Director: Mr. O. H. Gheewala, Bombay) during the year ended 31st March 1958, the second year of its operation after the amalgamation of the two former financial corporations of the States of Bombay and Saurashtra, following the integration of the States, has been encouraging, in that the profit for the year has gone up from Rs. 7.38 lakhs for 1956-57 to Rs. 8.29 lakhs. It compares more favourably with that of Rs. 6.78 lakhs earned by the two former corporations in 1955-56. The higher profit has been achieved, despite a decline in the number of applications for loans and the amount of loan sanctioned. Notwithstanding the rise in profit, the Corporation has had to ask for a higher subvention from the Government of Bombay to pay the guaranteed minimum dividend of 3½ per cent. per annum for the year under review, consequent on the increase in the provision for taxation and the allocation to the reserves.

Out of the profit of Rs. 8.29 lakhs, the Directors have set aside Rs. 44,000 each for the statutory reserve fund and the reserve for bad and doubtful debts, having raised the allocation to each from Rs. 37,500 made a year ago. The provision for taxation has been stepped up from Rs. 3.04 lakhs to Rs. 4.40 lakhs, leaving a balance of Rs. 3.01 lakhs, which falls short of the amount required (Rs. 7 lakhs) to pay the guaranteed minimum dividend by Rs. 3.99 lakhs (as against Rs. 3.41 lakhs a year ago). This shortfall is being taken as subvention from the Bombay Government bringing the total contingent liability under this head to Rs. 17.34 lakhs so far.

During the year under review, the Corporation received 84 applications, for loans aggregating Rs. 267.74 lakhs as against 97 for Rs. 301.31 lakhs in the previous year. Of these, 25 applications were sanctioned loans for Rs. 53.30 lakhs, while in the previous year 37 applications for Rs. 72.47 lakhs had been sanctioned. The number of applications pending as at the end of the year was 39 for Rs. 130.59 lakhs, as compared with 17 for Rs. 68.79 lakhs a year ago. These bring the total number of applications for loans sanctioned so far to 154 for Rs. 317.45 lakhs.

Out of the loans aggregating Rs. 321.20 lakhs sanctioned, a sum of Rs. 201.99 lakhs has been disbursed so far and Rs. 18.49 lakhs may be disbursed from time to time as may be required by the industrial concerns for implementing their respective programmes of expansion. A further sum of Rs. 55.70 lakhs may be disbursed as soon as the legal formalities are satisfactorily completed. The Corporation's total commitments thus amount to Rs. 276.18 lakhs, as against a paid-up capital of Rs. 200 crores. In order to augment its lendable resources, the Corporation issued during the year bonds of the face value of Rs. 1 crore with a maturity of 10 years. The issue price was fixed at Rs. 98.50 per cent. The bonds are repayable at par in 1967 and carry interest at 4½ per cent. per annum. The bonds were oversubscribed, the total subscriptions amounting to Rs. 116.51 lakhs. Of these, bonds to the value of Rs. 3 lakhs were repurchased, so that the total outstanding amount on this account as at the close of the year was Rs. 113.51 lakhs. The Directors point out in their report that the Corporation may have to approach again the money market for additional funds with a view to expanding its activities in the enlarged State, which, in their opinion, has considerable industrial potentialities.

The paid-up capital of the Corporation is Rs. 200 lakhs, as against which the reserves aggregate Rs. 3.31 lakhs. The outstanding loans as at the close of the year aggregate Rs. 171.13 lakhs. Investments in Government securities amount to Rs. 11.95 lakhs and cash balances Rs. 130.25 lakhs.

PUNJAB FINANCIAL CORPORATION

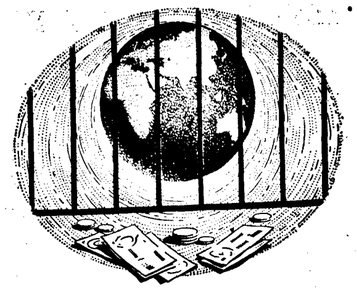
A further small rise from Rs. 3.70 lakhs to Rs. 3.79 lakhs in profit is disclosed by the audited accounts of the Punjab Financial Corporation (Managing Director: Mr. H. L. Bahl, Jullundur) for the year ended 31st March 1958. With this increase—albeit small—the upward trend in the profit of the Corporation has been maintained since its inception, having gone up from a mere Rs. 71,518 in the first year of its working. The accounts also reveal that there has been a substantial increase in the demand for loans, the aggregate amount sought for being Rs. 112.54 lakhs, as against Rs. 56.49 lakhs in 1956-57.

The number of applications sanctioned has fallen from 28 to 19, but the amount of loans has grown from Rs. 26.35 lakhs to Rs. 31.32 lakhs, in contrast to the sharp fall from Rs. 39.57 lakhs to Rs. 26.35 lakhs in 1956-57. Eleven applications for Rs. 9.37 lakhs were rejected, as against six for Rs. 2.55 lakhs in the previous year. As many as 15 applications for Rs. 36.40 lakhs either lapsed or were withdrawn, the corresponding figures for 1956-57 being 11 and Rs. 10.81 lakhs, respectively. Thirty-one applications for Rs. 69.95 lakhs were pending at the end of the year, as compared with 21 for Rs. 40.38 lakhs a year before. The total amount of loans sanctioned so far is Rs. 146.53 lakhs, of which loans declined by the parties or cancelled by the Corporation amount to Rs. 23.04 lakhs. Out of the balance of Rs. 123.49 lakhs, the amount of loans disbursed comes to Rs. 91.81 lakhs, leaving a balance of loan commitments at Rs. 31.67 lakhs.

As the Corporation had sanctioned by the end of June 1957 loans in excess of its paid-up capital and the scope of its activities had been expanded, the Corporation had to increase its resources by issuing bonds to the tune of Rs. 1 crore at Rs. 98.50 per cent. The bonds carry interest at the rate of 4½ per cent. and are repayable in 1968.

Out of the profit of Rs. 3.79 lakhs, the Directors have set aside Rs. 5,000 to the statutory reserve fund, raising it from Rs. 3,000 provided a year ago. The allocation to the investment reserve has also been raised from Rs. 27,000 to Rs. 30,000 and the provision for taxation from Rs. 1.70 lakhs to Rs. 2.05 lakhs. The balance available for paying the guaranteed minimum dividend of 3 per cent. is Rs. 1.39 lakhs, as against Rs. 1.70 lakhs, with the result that the Corporation has to take a larger subvention of Rs. 1.60 lakhs (Rs. 1.29 lakhs) from the State Government.

The Corporation's paid-up capital is Rs. 100 lakhs, while the reserves aggregate Rs. 10 lakhs, including an investment reserve of Rs. 57,000. The outstanding liability on account of the 4½ per cent. bonds issued is Rs. 102.17 lakhs. The amount of loans and advances outstanding is Rs. 75.46 lakhs. Investments in Government securities aggregate Rs. 30.78 lakhs and cash balances Rs. 98.08 lakhs.



The World's Cashier

Providing a complete banking service in south and east Asia is only part of our business. A bank whose scope was limited to one such area could not have the wide knowledge of financial conditions possessed by our world-wide network of branches. With offices in Europe and the United States, the biggest bank established by the Far East for the Far East can indeed claim to be the World's Cashier.

MODERNISATION IN TEXTILE INDUSTRY

TECHNICAL DEVELOPMENTS WILL INCREASE EMPLOYMENT, SAYS I.L.O. COMMITTEE

NEVER in the history of the cotton mill industry in India had the need for modernisation and rehabilitation been so urgent as it is today. Besides its obsolescence, much of the machinery and equipment of the industry has outlived the period of efficient and economical service. It is not surprising, therefore, that the rate of productivity in the textile industry is markedly lower than that in countries like Japan, the U.K. and the U.S. One of the serious impediments that has all along been lying in the way of rehabilitation and modernisation is the opposition from workers. This opposition is prompted by the fears that modernisation of equipment in cotton mills will lead to serious dislocation in the ranks of labour. That these fears are ill-founded was clearly brought out by the Textile Committee of the International Labour Organisation in the course of a resolution adopted at the end of the meeting held in Geneva recently; the meeting was attended by delegates representing the Governments, employers and workers of the 20 member-countries belonging to the Committee. The resolution, which concerns the effects of technological developments, states that the introduction of such developments should lead to lower production costs and higher consumption of textile goods, thus creating a situation leading to social progress, whereby a steadier and higher level of employment can be provided and good working conditions and amenities can be created, together with a higher level of real earnings.

Among the reasons for the introduction of technological developments to which the resolution refers are the need to improve quality or to change the pattern of production for competitive reasons, or for a combination of these causes. The resolution also alludes to the fact that technological developments are sometimes introduced to prevent losses and to enable the textile concerns to continue in business. Higher profits may or may not, therefore, result. It urges maintenance of close co-operation between the representatives of managements and labour with a view to the smooth introduction of technological changes. To quote it: "Both the management and the workers' representatives have a positive part to play in encouraging these changes. Work study and job evaluation can serve as a useful guide and protection for both employers and workers."

Distribution of Benefits

Discussing the distribution of benefits resulting from technological developments, the I.L.O. Textile Committee points out that the benefits may arise in very different forms, including, for example, a varying margin between cost of production and previously existing sale price levels, reduced costs enabling a concern to maintain production and employment, and improved conditions with or without a change in costs. The Committee accordingly considers that it is impossible to lay down a general formula or formulæ in relation to distribution of benefits, but both workers and employers are in agreement that the benefits should be shared between the capital and the labour engaged in the industry and the consumers of textile products. In this connection, it is stressed that, when technological developments involve changes in skills, vocational training should take into account the new requirements and that older workers must be allowed a reasonable period to adapt themselves to the new conditions.

The resolution adopted by the I.L.O. Textile Committee then gives a number of measures to reduce to a minimum the unfavourable effects of technical developments, including redundancy. In the considered opinion of the Committee, in cases of surplus labour, it is the responsibility of employers' and workers' representatives and Governments, each in their own sphere, to foresee as far as possible the effect on existing unemployment and to reduce to the maximum possible extent the effects of redundancy due directly or indirectly to technological or other changes. Technological improvements in the textile industry should, it is felt, play their part in enabling a reduction in the hours of work without loss of real wages and achievement of increased leisure, including paid holidays. This question will, of course, have to be considered in the light of all relevant social and industrial factors.

The I.L.O. Textile Committee also adopted a memorandum in which it discussed the conclusions it had reached on the working conditions in the textile industry. It recommended a series of measures that should be taken by the textile factories in order to ensure satisfactory working conditions. Many of these measures concern the environmental factors—cleanliness; lay-out and spacing; temperature, humidity and ventilation; lighting, noise and vibration; dusts, fumes, gases and vapours; and lifting and carrying of heavy weights. Other measures relate to prevention of industrial diseases and research to improve working conditions.

As regards the action taken by the International Labour Organisation, the Committee has invited the Governing Body to request the Governments of the member-States, as well as the appropriate employers' and workers' organisations and research institutions in each country, to communicate to the Office the results of research into working conditions in the textile industry. It has also invited the Governing Body to instruct the I.L.O. to ensure that these results and other information are made known to all concerned, as also to convene meetings of experts whenever necessary to improve international standards of working conditions in the textile industry. In the course of another resolution, the Committee asked the Body to instruct the I.L.O. to institute a comprehensive enquiry into work study methods used in the textile producing countries.

THE "HANDBOOK OF INDIAN COTTON TEXTILE INDUSTRY—1958"

This *Handbook* (published by the Cotton Textiles Export Promotion Council, Cecil Court, 26, Lansdowne Road, Apollo Bunder, Bombay-1. Price: Rs. 3.00) is designed to serve as an exhaustive reference book for the textile trade in India and overseas. The edition is an improvement on the previous publication and every effort has been made to secure the most authentic information, based on a comprehensive questionnaire issued to the individual units in the various branches of the cotton textile industry. The *Handbook* contains a brief survey of the cotton mill, hosiery and apparel industries in India.

As part of the survey of the cotton mill industry, the publication gives a list of the composite and spinning mills with their production capacity, plant and equipment, as well as the range of yarn and fabrics manufactured by them. Particular attention is paid to the export qualities manufactured by the mills so as to make it convenient for the exporters in India and importers overseas to locate sources of supply for the range of goods required by them. An interesting part of the *Handbook* is an analysis of the hosiery and apparel industries in India. These sections contain an exhaustive list of the names and addresses of the hosiery and apparel manufacturers and range of goods manufactured by them. The publication is also well illustrated with photographs of several manufacturing processes in the mill, hosiery and apparel industries.

(Concluded from next column)

production line for the preparatory operations in fine-combed spinning of wool. The Research organisations of the U.S.S.R. Ministry of Light Industry and the Ministry of the Machine-building Industry worked on designs of machines and devices for the first automatic transfer machines for cotton spinning

The review of the progress in weaving machinery manufacture reveals constant improvement —quantitative and qualitative—in production. Automatic looms are widely used in production; in 1956, the output of such looms amounted to 92 per cent. of the total loom production. A still greater application of modern technique is being foreseen. In the Moscow region alone, it is planned to install 1,000 new automatic looms during 1958. In compliance with the plan of development of the U.S.S.R. National Economy in 1958, it has been decided to put into operation 224,000 spinning spindles and over 8,000 looms Soviet engineers are now elaborating new types of looms and machines.

The Ivanovo Textile Machine Works, for instance, has installed VZN-4SL model range which enables continuous boiling of crepe-de-Chine and crepe-georgette type silk fabrics in rope form. The time of boiling of silk fabrics in the new range is reduced by 2.2 times as compared with the boiling process in ordinary machines of periodical action.

TEXTILE INDUSTRY IN SOVIET RUSSIA

GROWING APPLICATION OF AUTOMATION

THE textile industry in Soviet Russia is making great strides towards rapid development in various fields—growing production of raw materials like cotton, flax, wool, hemp, kenaf and rayons, construction of new mills, and development of the engineering industry which, it is claimed, is in a position to meet the full demand of the industry for textile machinery. The preliminary estimates for 1957 as given by Mr. N. Tarasov, show that the U.S.S.R. produced 5,565 million metres (0.914399 metre=1 yard) of cotton fabrics, 425 million metres of linens, 278 million metres of woollens and 802 million metres of silks. These compare very favourably with 2,582 million metres, 120 million metres, 103 million metres, and 43 million metres, respectively, in pre-revolutionary Russia (1913). It is recalled that, in 1913, some branches of the textile industry did not exist at all, or were in their embryonic stage and that there were no factories for primary processing of flax, kenaf and hemp, no cocoon-reeling industry, and cotton ginneries were very few.

According to Mr. Tarasov, in recent years, many new textile producing centres have been developed, their locations being chosen, in according with scientific principles of distribution of the socialist industry, namely, location of industry close to the sources of raw materials, fuel and power resources, and to the consuming districts; industrialisation of the formerly backward regions; and rational division of labour between districts through the correct synchronisation, specialisation and overall economic development of these regions. It is pointed out that the industry had a lopsided and haphazard development in pre-revolutionary Russia. For instance, 90 per cent. of all the spindles and 96 per cent. of the weaving looms were concentrated in the Central industrial area, the North West (Leningrad) and West (Baltic), while nothing was done to develop textile production in the main cotton-growing regions of Central Asia and the Transcaucasus. Textile production, however, was restored in these regions during the period 1921-27. In the first and second plans, attention was focussed on the development of textile industry in the principal cotton-growing regions of the U.S.S.R. Along with construction of textile mills in the new regions, the industry was expanded in the central region. Altogether, the number of spindles was raised by 1,660,000 and of weaving looms by 16,000, the corresponding increases in the new regions being 696,000 spindles and 12,885 looms, respectively.

Automation

A most striking feature of development in the Soviet textile industry is the growing application of automation and industrial research in the field. In 1956, the proportion of new machinery went up considerably in all branches of textile industry. Cotton-spinning mills received a great many units in which all operations such as loosening, cleaning, and scutching, and production of the cloth were completely combined and automatised. Engineering works furnished the textile industry over 12,000 automatic looms and Soviet designers and engineering plants worked on designs of new types of the highly-productive automatic looms for the different branches of the textile industry. Of special interest among others is a new automatic loom with a change of bobbins for silk mills. It is pointed out that it operates at a much higher speed than that of mechanical looms.

A project had been worked out for the establishment of an automatic factory for bleaching fabrics by means of hydrogen peroxide instead of calcium hypochlorite. A new unit AOZH-2 is also reported to have been manufactured by the Ivanovo Textile Machinery Works for continuous bleaching of cotton fabrics. By using this unit, which is made up of 15 machines and apparatus, it is possible to cut the bleaching process from 36-48 hours to 2½-3 hours. Further, at the Naro-Fominsk works, the automatisation of the whole weft winding shop was completed, which made it possible to release over 100 workers from that shop and put them to work elsewhere in the factory where workers were needed, to increase labour productivity and raise shop output by approximately 50 per cent. The Central Woollen Industry Research Institute and the Textile and Light Industry Engineering Research Institute completed a joint project for

(Continued in previous column)

SLUMP IN EXPORTS OF COTTON GOODS

NEW SYMBOL FOR CALCULATING AMERICAN TYPE YARN PRICES INTRODUCED

From A Special Correspondent

MANCHESTER, *3rd June*

THE slump in exports of United Kingdom cotton goods in the month of April cannot be entirely explained away by the fact that Easter fell during that period. It is more than ten years since any monthly total of cloth shipments was so low, excluding a couple of occasions when strikes interfered with the flow of goods to the ports. The total of 31,595,000 square yards of cotton cloth exported compared with 37,663,000 square yards in the same month in 1957 and 40,262,000 square yards in March this year. As a result of this sharp decline in exports, the four-month total of cotton cloth shipments is now 10,000,000 yards below the 1957 level at 147,797,000 square yards, and the earnings from this trade have declined by more than £1,300,000 to £19,419,480.

MANCHESTER LETTER

Individual markets absorbing Lancashire cotton cloth have not shown any marked change, although shipments to India and Pakistan are distinctly lower than during recent years. To the end of April, South Africa increased takings by more than 4,000,000 square yards at 24,954,000 square yards and shipments to Australia are also up compared with 1957 at 24,855,000 square yards. The other main buyers include New Zealand with 11,074,000 square yards and Nigeria with 10,264,000 square yards.

Yarn Sales Lower

Shipments of cotton yarn have lately shown a similar downward trend and the April total of 2,293,200 lbs. was practically 1,000,000 lbs. lower than in the same month last year. Yarn exports for the four months amounted to 10,330,000 lbs., as against 13,309,000 lbs., while the value of these goods fell from over £6,000,000 to £4,400,000. Australia accounted for nearly one-third of this trade, having absorbed over 3,000,000 lbs., but, in most other directions, shipments were substantially lower, notably to India, Pakistan, Canada and European textile centres.

Traders in Lancashire can take little comfort from the fact that imports during April were also substantially lower. The quantity of grey cloth arriving in British ports was 20,170,000 square yards, as against the record level of 44,617,000 square yards in the previous month. The door is still wide open for these foreign cloth purchases.

Over the four months, arrivals of cotton cloth of all kinds were almost identical to the 1957 level at 139,875,000 square yards and very similar totals were recorded of rayon cloth imports, at 21,111,000 square yards. The major suppliers remain the same, although some appear to be gaining at the expense of others.

Hong Kong has stepped up shipments from 17,568,000 square yards to 31,365,000 square yards and China has sent 28,884,000 square yards, as against 5,626,000 square yards. Arrivals from India have declined from 63,460,000 square yards last year to 44,035,000 square yards and imports of Japanese grey cloth have fallen from 18,677,000 square yards to 13,481,000 square yards.

American Yarn Basis

Some background to the reasons which prompted the Yarn Spinners' Association to introduce a new symbol for calculating American type yarn prices during April was provided in the President's statement made at the annual meeting. The advantages of the former system were largely based on the fact that the "ATS" symbol was not related to any particular description of cotton. The pattern of price relationship between the different growths, grades and staples never remains static for long, and the idea of having a symbol unrelated to a definite type was at the time felt to outweigh the disadvantages.

The main argument against the previous symbol was that publication of the figure alone had no significance, while the non-disclosure of the basic price created misunderstandings. Criticism of the price pacts in certain quarters of the industry is vociferous enough without offering a loophole for opponents of the scheme to complain still further.

The decision to pivot American type yarn prices on American *middling one-inch* cotton and to give the symbol price wide publicity was taken after consultation with the Liverpool Cotton Association and all the committees involved. Variations in the basis have not been quite as frequent as was at first anticipated, but, if changes are required, adjustments can be made expeditiously. The rise of 20 points in the "AMI" symbol shortly before the Whitsuntide holiday was complicated by differential changes which resulted in an actual decline in yarn quotations, in some cases amounting to nearly ½*d.* per lb.

It has been a bone of contention for some considerable time among members of the Liverpool Cotton Association that the Yarn Spinners' Association has been unwilling to link its prices with those ruling in Liverpool. The latest move is that a request has come from the Cotton Association for joint discussions about published prices. The representatives of the spinners are apparently ready to consider any practical arrangement which would improve their existing methods of pricing and, although such talks will, of necessity, be lengthy in character, the possibility of increased collaboration between the two bodies seems in prospect.

Price Falls Hit Trading

Many of the firms in the Lancashire cotton industry which are dependent for their supplies on the finer grades of the raw materials have been adversely affected by recent reductions in quotations brought about by the changes introduced by the Sudan Government. The inability to obtain Egyptian cotton has also reacted unfavourably on owners of such mills. Comment on the situation has lately come from several quarters in the form of annual statements made by chairmen of leading concerns of this branch of the trade.

Col. B. W. Heaton, Chairman of Crosses and Heatons Ltd., the Bolton spinning group, has pointed out that the decline in the Company's trading results has been due mainly to the drastic fall in the prices of long-staple cottons. In order to maintain the quality of this yarn, the group is forced to carry stocks of fine cottons and, although a decline in price may be anticipated by reducing commitments to the lowest possible minimum, the tendency is for such firms to be exposed to considerable risk, as it is essential to carry sufficient stocks not only to keep mills in production, but, in the absence of adequate spot supplies in Liverpool, time must be allowed for the raw material to be shipped from abroad. "This means carrying several weeks' additional supply against which risks we have no cover other than our order book," adds Mr. Heaton, "and, when customers are only placing orders sparingly, this order book cover is very limited."

Switch to Synthetics

Similar difficulties were experienced by the leading sewing thread firm of J. and P. Coats Ltd., whose Chairman, Mr. R. Laidlaw, commented on the difficult year experienced in the purchase of raw cotton supplies. "It is still not possible to buy Egyption cotton due to conditions laid down by H. M. Government," he pointed out. "The same handicap is not experienced by any of our foreign competitors. In certain top grades, substitute cotton has cost us some 18*d.* per lb. more than the price paid for equivalent Egyptian cotton by these competitors."

The prices asked by the authorities in the Sudan for their last season's crop were quite out of line with other market conditions, continued Mr. Laidlaw. Only when a large part of the crop in the lower varieties remained unsold were reserve prices adjusted.

Whereas companies dealing largely in the finer qualities of textile goods have been finding conditions difficult, other firms concentrating on specialist products have not found the outlook entirely unfavourable. Mr. E. P. Andreae, Chairman of John Bright and Brothers Ltd., the Rochdale group engaged in the manufacture of heavy canvas and cord fabric, points out in his annual review that the recession in the spinning and weaving industry in Lancashire had induced certain textile companies concerned only with the lighter side of the trade to embark on production of industrial fabrics to make good deficiencies encountered in their normal spheres.

Although there had been an increase of about 17 per cent. in group turnover, the modest improvement in the trading profit emphasised the exceedingly difficult trading conditions prevailing. "The handicap from which our trade is suffering today is due not so much to a general falling off in demand from customers but to a productive capacity far in excess of their needs." Mr. Andreae continued. "Such conditions inevitably lead to price cutting which, if not checked, could well degenerate into an irresponsible struggle for survival and might even prove disastrous to some of the weaker producers whilst certainly affecting our profits for the ensuing year."—*All Rights Reserved.*

NATIONAL RUBBER MANUFACTURERS LTD.

MR. K. N. MOOKERJEE'S SPEECH AT ANNUAL GENERAL MEETING

LIBERALISATION OF ESSENTIAL RAW MATERIAL IMPORTS URGED

PRESIDING over the Twelfth Annual General Meeting of the National Rubber Manufacturers Ltd. held at Calcutta on 9th June 1958, Mr. K. N. Mookerjee, Chairman of the Company, observed as follows:

"GENTLEMEN,

"I welcome you to the 12th annual general meeting of the shareholders of the Company. The Directors' report and the audited accounts in respect of the year ended December 1957, have been in your hands for some time and, with your permission, I shall take them as read.

"The Company, hitherto a private limited company, was converted in 1957 into a public limited company. The Company offered for subscription fresh share capital comprising 420,000 ordinary shares of Rs. 10 each and 10,000 6 per cent. cumulative preference shares of Rs. 100 each, as per prospectus dated 31st October 1957. The subscription lists which opened on 22nd November 1957 were closed within the earliest possible period of four days, owing to heavy oversubscription. This is ample testimony to the confidence which the investing public throughout India has in the future of your Company. Consequent to the public issue of shares, the subscribed capital of the Company now stands at Rs. 60,00,000. The shares, as you are aware, are officially listed in the Calcutta Stock Exchange and are freely transacted.

"The accounts for 1957 indicate that the steadily upward trend of sales in the past years has been maintained and reached a figure of Rs. 1,32,17,358. Although the funds arising out of the fresh issue of capital, mentioned above, were in the hands of the Company at the close of the year under review and could not be utilised for securing additional production during that year, your Directors have been glad to recommend dividends at full rates on all shares, including those representing the new issue.

Expansion Schemes

"The Company's fresh issue of capital last year was primarily intended for raising additional finance for the purpose of carrying out the following expansion schemes:

"(1) To increase the production of cycle tyres and tubes under a licence granted by the Government for this purpose. With the construction of new roads, the overall demand in the country for cycle tyres and tubes has been progressively increasing. The output of cycle tyres and tubes in India in 1957 was about 7.15 million and slightly over 7 million, respectively, as against the current domestic demand of 9 million each per year. The Planning Commission originally estimated that the target for cycle tyre production is to be fixed at 11.8 million per year. It is understood that this target under the second Five-year Plan has been revised to 26 million tyres and tubes per year. It is expected that the domestic demand will rise to 16 million tyres and tubes each by 1960, as there will be a steady increase in the number of bicycles, with improved road conditions. Indigenous production at present substantially lags behind demand and the Government has to permit limited imports to meet the deficit.

Cycle Tyres

"Your Company has undertaken a programme of substantial expansion of cycle tyre production. Most of the additional plant and machinery required for this purpose have arrived and others are on the way. Installation of the new machinery is partly complete and is already contributing to increased production. It is expected that, in early 1959, we shall reach our target production of cycle tyres and tubes with rated annual capacity of 3.0 million tyres and 1.2 million tubes.

"(2) Your Company undertook substantial expansion of its production of V-belts and fan belts. As estimated by the Planning Commission, the capacity in respect of V-belts and fan belts would be raised to 1.5 million by 1960. The installation of additional plant and machinery at the Company's factory for the production of V-belts and fan belts has been completed as per licence issued by the Government.

"(3) The demand for conveyor belting in the country is increasing steadily. The gap between production and the country's requirements of conveyor belting is gradually widening and, according to available estimates, import of conveyor belting alone involves a drain on our foreign exchange resources of more than Rs. 60 lakhs annually. Your Directors are going ahead with the arrangements for installation of additional capacity for conveyor belting and flat belting as per manufacturing licence granted by the Government of India.

Production

"During 1957, production increased in all directions but was inadequate to meet all the demands for our products; there is, however, ample scope for raising further the production of the items already handled by your Company. Given reasonable opportunities and operating conditions, I see no reason why this Company should not continue to expand steadily on a firm footing with a view to bridging the gap between production and demand. Much, however, will depend on Government policies with regard to imports of raw materials and finished goods and availability of foreign exchange.

"During the year 1957, the supply position of raw materials was not fully satisfactory and, at times, production had to be curtailed due to shortage of raw materials, particularly of imported items. Conditions with regard to raw rubber is particularly unsatisfactory. Although the rubber manufacturing industry is required to pay very high prices for Indian rubber for helping the indigenous rubber plantation industry to expand its production, the gap between demand and production has been increasing and the prospect of any improvement in the future is not very bright. No relief is available by importing rubber as allowed by the Government to meet the deficit, because any price advantage arising therefrom has to be credited to the Rubber Board, according to existing regulations governing the issue of import licences for raw rubber. In the circumstances, active steps should be taken for implementation of the Government project for early setting up of a synthetic rubber plant in this country in order to meet the deficit in indigenous production of rubber. Here is a sphere wherein the synthetic rubber project of the public sector can be co-ordinated with the rubber industry in the private sector with advantage to all concerned.

"The position of the rubber manufacturing industry in India at present is, in my opinion, paradoxical. At a time when it is expected to expand rapidly, it has to halt at every step on account of the restrictive policy of the Government in the matter of imports of raw materials. Many of these obstacles could be eliminated by the licensing of essential items on a more liberal and long-term basis than at present. The net cost of imported materials increased during 1957 due to a rise in the rates of import duty on certain items and imposition of such duty on others. It is also high time that vigorous steps were taken for the manufacture of certain essential materials required by the industry. I am happy to note that arrangements have been and are still being made for the production of some important items like carbon black, sulphur and lithopene.

"I am glad to be able to tell you that our labour relations throughout the year 1957 were cordial and that no loss of production was suffered by your Company on account of any dispute between the management and labour. This is an especially encouraging feature against the background of the generally unsatisfactory industrial relations in the country as a whole. I refer with pleasure to an agreement entered into in 1957 between the Company and the Workers' Union by which the workers have undertaken to contribute and maintain production at a high level in line with the Company's expansion programme.

Research

"During the year under review, the technical and research wing of the Company dealing with control of raw materials, processes and finished goods was enlarged in pursuance of the firm belief of your Directors in scientific development and technical control of the Company's products. It gives me great pleasure to inform you that the Indian Rubber Manufacturers' Research Association has been formed recently for the promotion of research and scientific work in connection with the rubber manufacturing and other trades and industries allied therewith or ancillary thereto, which is so essential for the proper growth and progress of the rubber industry in this country. I am sure this body will render useful service to the different units of the industry by solving its various technical problems from time to time.

"Before coming to the formal business of this meeting, I would like to thank all the shareholders of the Company for the valuable support they have extended in respect of its new issue of capital and the officers, staff and workers for their loyalty and hard work throughout the past year."

BUILDING UP EXPORT MARKET FOR INDIAN SUGAR

REDUCTION OF PRICES IMPERATIVE

THE Government of India is expected to announce the export policy for sugar any day. A meeting of the representatives of the Ministry of Food and the Indian Sugar Mills Association was held in New Delhi early this month to consider the draft proposals finalised by the Ministry. Details regarding the deliberations of the meeting and the decisions arrived at therein are not known. From the reports available, it is, however, gathered that the Food Ministry is contemplating to set up a separate statutory corporation to handle the export business in sugar. The sugar factories may be asked, on a compulsory basis, to export 10 per cent. of their current season's production, that is, about 200,000 tons out of a total estimated output of 2,000,000 tons. With a view to meeting the loss on exports, a small levy is likely to be imposed on sugar released for domestic consumption. Any mill which fails to export the required quantity may have to pay a preferential excise duty on their domestic sales out of the export quotas.

While we do not wish to comment on the aforesaid scheme till the actual official announcement is made, we wish to reiterate that the sacrifice involved in sugar exports far outweighs the foreign exchange earned. The world price of sugar is currently ruling at about Rs. 415 per ton, as against the average price of Rs. 746 for Indian sugar, even after the full remission of excise duty (Rs. 291.20) and cane cess (Rs. 50.90). The loss on every ton of sugar sold abroad thus comes to as much as Rs. 331. On this basis and taking the export target at 200,000 tons, the aggregate loss on overseas sugar sales works out to Rs. 6.62 crores. This amount, together with the loss of Rs. 5.82 crores by way of excise duty remission and Rs. 1.02 crore by way of cane cess, will be Rs. 13.46 crores, as against the foreign exchange amounting to about Rs. 8.20 crores earned by exports.

It may, of course, be argued that, considering the critical position of foreign exchange in which the country finds itself today, whatever exchange that is earned from exports is most valuable. But this argument cannot be extended to such an extent as to overlook completely the long-term issue involved. The long-term issue is: How to build up a stabilised permanent export market for Indian sugar? The question is specially stressed because the prices of Indian sugar are high in all conscience and, unless they are reduced, the competitive capacity in world markets will continue to be very poor. Surely, the country cannot afford to go on exporting sugar at a loss continuously. The current wide disparity in the prices ruling for Indian and foreign sugars points to the need for a policy of rationalisation of sugar prices. This aspect was forcefully brought out by Mr. B. M. Krishnan, Chairman and Managing Director of the Mysore Sugar Company, Limited, when he addressed the twenty-fourth annual general meeting of the Company held at Bangalore on 30th May 1958; the full text of his speech was published in our last week's issue (*vide* pages 1070-1071).

What is not realised or is not so well known is, as Mr. Krishnan pertinently pointed out, that the sugar industry is helpless in regard to the matter of reducing prices, as the major elements in the cost structure are entirely beyond its control. Taking the average price of Indian sugar as 50 nP per lb., the cost of sugarcane that goes into the manufacture of sugar alone accounts for 21 nP, while excise duty and cane cess together account for another 18 nP. Viewed thus and considering the persistently upward trend in salaries, wages and other amenities for labour, as well as the appreciating costs of stores, spares and fuel, there is no exaggeration whatever in the statement of Mr. Krishnan that there appears to be little scope for the sugar industry to effect economies in manufacturing costs.

If the price of sugar is to be reduced to an economic level, it is imperative that the price of sugarcane is lowered and the heavy burden of taxation reduced. It is regrettable that this point has not received due recognition at the hands of the authorities. How else can one explain the recent decision of the Central Government to accept the principle of linking the price of sugarcane to that of sugar? It is unnecessary to go into this question, as it has been discussed in detail in our issue dated 29th March 1958 (*vide* page 573). Suffice it to say that the enforcement of the formula in its present form will, as Mr. Krishnan rightly said, cause great financial hardship and cripple a large segment of the industry in the country. Citing the example of his own Company which would in all probability be hit hard, Mr. Krishnan observed:

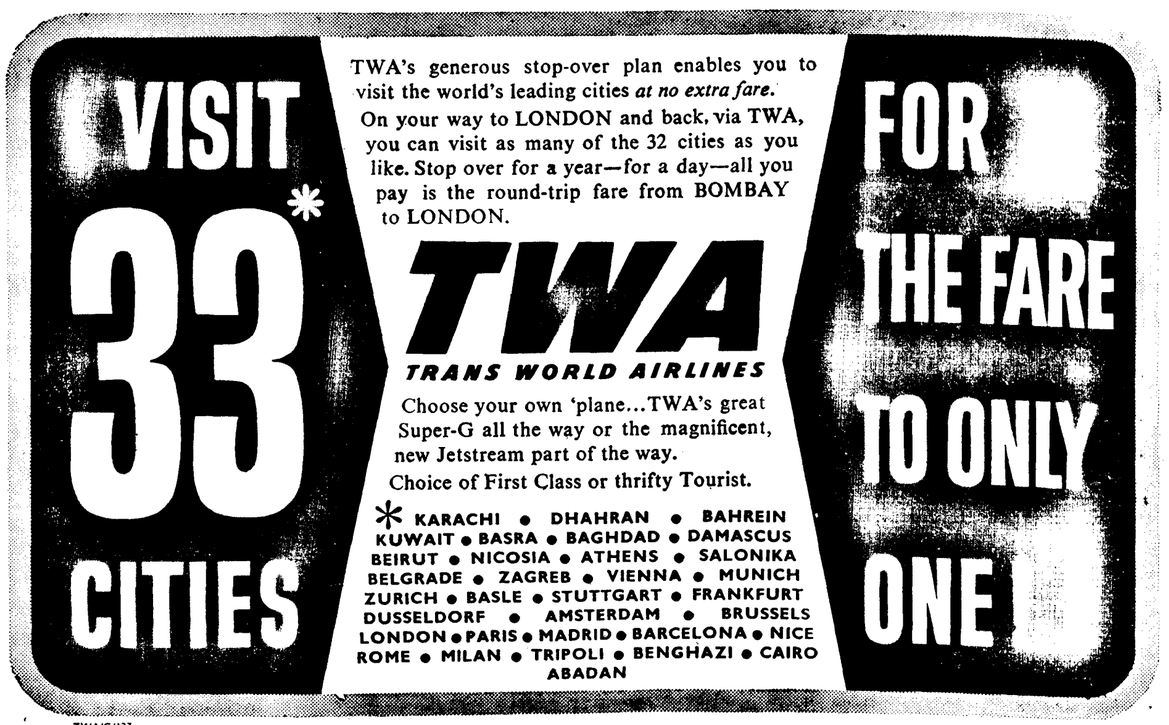
"According to our appreciation of the effects of the suggested formula of the proposed deferred price for cane over and above the statutory price, it is seen that, far from there being any profit, we will have to register a certain loss. While the ryots should get a fair and even liberal price for their cane, consistent with returns which they would derive from alternative crops and the earnings and paying capacity of individual units, the application of the present formula will put the sugar industry in a financial predicament and may lead to results which it is obviously nobody's intention to achieve. I earnestly hope that the authorities concerned will give due consideration to the appeals and suggestions made by the industry and suitably revise the formula, so that the fortunes of the industry are left in a sound position to help the ryot, on the one side, and all other sections intrinsically concerned with its future place in the industrial economy of the country, on the other."

There is considerable force in these observations. Instead of linking the price of sugarcane to the price of sugar realised by the mills, the Government can adopt the better and more rational policy of fixing a minimum price for cane at a level sufficient to ensure an economic return to the grower, leaving the maximum price to fluctuate in accordance with the law of supply and demand.

SUGAR MILLS IN EAST U.P.

At a meeting held in Gorakhpur last week, the East U.P. Branch of the Indian Sugar Mills Association requested the Wage Board for Sugar Industry to give, while fixing wages on region-wise basis, particular attention to some special factors obtaining in eastern Uttar Pradesh. The plea is based on the ground that the east U.P. factories, owing to adverse conditions for a number of years, have not been able to build up any reserves, to rehabilitate and modernise their plans, and to increase their capacity or renovate their plants, which are generally of small capacity and uneconomic, so that their cost of production is higher than those in other regions. It is said that, geographically, these factories are situated away from the consuming markets and have to pay higher rates of freight.

The future prospects for sugar mills in east U.P. are considered to be gloomy and its competitive capacity is rapidly dwindling. According to the Association, in certain regions, the factories have their own raw materials which reduce their cost of production and yield them additional profits. Most of the factories in east U.P. do not have their own farms. What is more, the paying capacity of the factories in this region is very low. In the opinion of the Association, the wages prevailing in a particular region in the agricultural and other occupations should also have a direct bearing on the wages to be paid in sugar industry. In east U.P., there is no other industry excepting sugar. As such, the Association points out, the agricultural wages should be considered before recommending revision of sugar industry wages, lest the labour from agriculture should be wholly driven away from agriculture to sugar industry to the great detriment of farming in east U.P.



DEMAND FOR HARD COKE TO BE REASSESSED

COMMITTEE TO STUDY FUEL ECONOMY

THE Government of India has appointed two committees, one to reassess the demand for hard coke in the country and the other, called the Fuel Efficiency Committee, to evolve suitable and adequate measures for achieving optimum economy and efficiency in the use of fuel resources in the country, particularly coal. The task of the first Committee is to make an overall assessment of the demand for sized hard coke that would arise by 1962 and to estimate the gap between the demand and availability of hard coke. The Chairman of both the Committees is Mr. P. M. Nayak, Coal Controller.

It will be recalled that, in May 1955, the Coke Oven Project Enquiry Committee estimated the demand for hard coke in the country by 1960 at 831,000 tons. Since then, there has been a rapid expansion of engineering and manufacturing industry consuming coke, and the demand for hard coke has far outstripped the supply. The problem will become more acute in the years to come, when the demand is expected to increase still further. It has, therefore, become necessary to reassess the requirements of hard coke and to plan for additional coal production to cover the gap between demand and supply. Accordingly, the Committee has been asked to recommend whether the required additional capacity can be obtained by expanding the existing coke oven plants including the Government plants at Sindri and Durgapur or by establishing new units at new locations.

In making its recommendations, the Committee will also go into the comparative advantages from the point of view of (1) availability of sources of supply of raw coal of the desired grade and quantity to be used in the plant with or without blending, (2) adequacy of transport, subject to the operating convenience of the railways, for the movement of these coals from pithead to the plant and of the finished products, including by-products such as tar, etc., from the plant to the ultimate points of demand, and (3) mode of disposal and extent of utilisation of the by-products, including coke oven gas and coal tar. The Committee has been asked to report to the Government within four months.

The second committee, namely, the Fuel Efficiency Committee, will deal with the broader problem of evolving suitable and adequate measures for making the maximum use of the available fuel resources.

The Committee will work in close co-ordination with the Department of Iron and Steel as well as with the railways and will be assisted in matters relating to research, technical investigations, etc., in the field of fuel efficiency and economy by a Fuel Efficiency Cell which will be located in the Central Fuel Research Institute. The Committee will evolve a pattern of survey, investigation and research in consumption of coals used in steam raising, power generation, processing and combustion in the various industrial furnaces and determine the combustion characteristics of different types of coals.

It will study the fuel problems of industries and advise them on the use of proper type of appliances. It will also draw up a comprehensive schedule of types, grades and sizes of coal for the various classes of consumers. The Committee will initiate and organise studies and surveys to ensure that the coals allotted to consumers are consumed with due regard to maximum fuel efficiency. It will also make recommendations for building up suitable technical organisations for fulfilling the above objectives.

It is true that the generation of other sources of power, such as atomic energy, will be more economic, but so far as India is concerned, with its limited financial resources, the replacement of coal by atomic energy as fuel cannot be thought of for several years to come. The general opinion among fuel technologists is that coal will still hold the field for a long time to come as the main source of fuel for the iron and steel industry and will, perhaps, continue to be the cheapest fuel until world's coal resources reach the stage of exhaustion. Coal is a wasting asset. In the context of the growing demand for coal by the developing iron and steel and other industries, there is a case for conservation of coal resources. At the same time, there is need to ensure that, in the name of conservation, excessive restrictions are not placed on the industry.

a ceiling to-day could be a shower tomorrow !

Don't let a situation like this develop. Act now before the monsoon, and ensure leak-proof roofs by specifying Shalimar Tarfelt. Shalimar Tarfelt is made in India from Indian materials to suit Indian conditions. You can't buy better roof protection.

Over 12,000,000 sq. ft. of Shalimar Waterproofing Tarfelt were supplied in one year to protect the roofs of India.

Save your roof and you save your ceiling
Save your ceiling and you save money !

Manufactured, applied and guaranteed by
SHALIMAR TAR PRODUCTS (1935) LTD.

PRICE STABILISATION FOR RUBBER

MALAYA DOES NOT FAVOUR WORLD AGREEMENT

THE fourteenth annual meeting of the International Rubber Study Group, which is now in session (from the 9th to 16th inst.) at Hamburg, is expected to discuss, among other things, the question of stabilising world prices of natural rubber. The meeting which will be attended by 100 to 200 delegates from the U.S., Australia, Austria, Belgium, Britain, Burma, Cambodia, Canada, Ceylon, Czechoslovakia, Denmark, France, Hungary, Indonesia, Italy, Japan, Liberia, Malaya, the Netherlands, Thailand, Vietnam and West Germany.

This is not the first time that the proposal for stabilisation of rubber prices comes up before the International Rubber Study Group or any other international gathering. It has been the subject of discussion almost every year for some years now. Even at last year's gathering of the I.R.S. Group, held in Indonesia, the question was raised by France and it also received some attention at the Economic Conference for Asia at its meeting in March this year. France wants to stabilise natural rubber price in order to ensure better living standards in South-East Asia. Malaya, as one of the largest producers of natural rubber, does not seem to be in favour of an international agreement for stabilising natural rubber prices, because of the inherent difficulties in implementing such a scheme. Moreover, Malaya does not feel the necessity of bringing in any such measures now, as statistics have proved that price has been stable for some time now. However, since rubber is a free market, some fluctuations are inevitable. Thus, the average price last month in Singapore was 73.13 cents f.o.b., as against 76.64 cents in April and 90.23 cents in the corresponding month of 1957. For the first five months of the current year the average price was 76.54 cents, as against 91.93 cents in the corresponding period of last year.

Earlier Talks Break Down

Some years ago, when the price of natural rubber fluctuated very widely on account of the Korean War, some schemes for stabilising its price were discussed seriously, but eventually the talks broke down. If nothing was achieved even in a period when fluctuations varied widely, it is doubtful whether the scheme will succeed now when prices, as already pointed out, are fairly stable.

When the question of price stabilisation for natural rubber was raised at last year's meeting of the I.R.S. Group, Indonesia and Ceylon, among the producing countries, were broadly in favour of the proposals. Though Malaya was sceptical about the success of the scheme, it did not express its view openly at the meeting, but diplomatically suggested further consideration. The U.S. and most other consuming countries were also opposed to it. At the end, the I.R.S. Group decided to continue at its next regular meeting, consideration of the need for possible action to reduce fluctuations in the natural rubber market.

It is quite true that few commodities have met with more severe competition from a synthetic product than natural rubber. With an improvement in both production and quality, synthetic rubber has become a severe competitor to natural rubber, but the price of the synthetic product has remained constant and has had a steadying influence on natural rubber for some time now. It is for this reason that the price stabilisation scheme is considered as ill-timed. Expressing this view, Sir John Hay, in his speech as Chairman of the United Sua Betong Estates Ltd., at the annual meeting of the Company held last week, said:

"The strange thing is that it should be revived at a time when rubber in its price has, for some time now, shown a greater degree of stability than is historically associated with that commodity. This new behaviour is, no doubt, due to the steadying influence of the synthetic product, the price of which scarcely varies. The untimeliness of this proposal and the arguments advanced in its support give colour to the belief that the term stabilisation is used on this occasion as a euphemism for a price support scheme conjuring up in some minds the inviting prospect of an unvarying profit for the producer with the comforting assurance of a regular revenue for his Government, a pleasant prospect indeed, but one, alas, remote from economic realities."

Fraught with Danger

Sir John was sceptical about the success of the scheme, unless it was truly international in character. In this connection, he quoted the instance of the International Tin Scheme and pointed out the dangers which any such scheme was fraught with. Thus, he observed:

"Rubber is produced in over a dozen territories spreading over four continents. It is a world commodity with a world market and selling at a common basic price. Any scheme for regulating price would require international agreement on a world scale, the provision of large funds for the acquisition of stocks, the power to restrict output and the administrative ability to do so effectively and equitably. It is difficult to believe that the many widespread producing territories in all their variability could conform to these essential conditions. The dangers of anything short of universal agreement are unhappily exemplified in the present tin scheme which by its omissions has given great impetus to production in Russia and China, necessitating increasing and burdensome restrictions on others. To embark on any such scheme for natural rubber would be fraught with great danger. The inevitable increase in costs, the depletion of cash resources tied up in stocks and restrictions on output would create intolerable burdens on an industry which must meet the severe competition of a synthetic product not so handicapped. The natural rubber industry could not afford any addition to existing burdens. Above all, its access to world markets must remain unimpeded and its capacity to produce unfettered, for only under such conditions could it hope to survive as a dynamic force in a rapidly changing world."

Outlook

Sir John was cautious in discussing the outlook for natural rubber price. "Events are too unpredictable," he said, "to justify a firm expression of opinion regarding the future course of prices." The future of automobile industry is, for instance, uncertain. In America, car production in 1958 is not expected, according to Sir John Hay, to exceed 4.5 million, as against over 6 million in 1957, while Europe, which is now said to be a larger consumer of natural rubber than the U.S., is said to have shown little contraction in demand. Whether this trend will continue depends on the early recovery in the U.S. and on political developments in Europe. Russia, its satellites and China together consumed about 280,000 tons in 1957, but no data is available to estimate their requirements in 1958. Figures of exports from Indonesia during the first two months of the current year show a fall of over 20,000 tons. It is, however, believed that the published returns of exports from Indonesia do not show a correct picture, as some exports have escaped official computation. Moreever, despite the internal political strife, Indonesia is expected to maintain production and export of rubber, in view of the dire need for earning foreign exchange. In translating the various speculations into figures, Sir John Hay estimated the production of natural rubber in 1958 at 1.92 million tons and consumption at 1.86 million tons. He, however, qualified his statement by saying that any such figures should, in all circumstances, be received with reserve.

U.K. PURCHASES OF CEYLONESE RUBBER

Britain's purchases of Ceylonese rubber in the first four months of this year were nearly triple those of 1957. Figures published by the Board of Trade in London show that from January to April the United Kingdom imported 11,576 tons (worth £2,486,000), as against only 3,509 tons (valued at £907,000) in the same period last year. In fact, the amount of rubber sold to Britain by Ceylon in the first four months of this year was not far short of the sales for the whole of 1957, which aggregated 12,689 tons, valued at £2,972,000.

DEVELOPING PEACEFUL USES OF ATOMIC ENERGY IN THE U.S.

PARTNERSHIP BETWEEN GOVERNMENT AND PRIVATE INDUSTRY

THE subject of a lively controversy in the U.S. is the role of private enterprise in development of atomic power for peaceful uses. At issue is the part to be played by private enterprise, on the one hand, and the part to be played by the Government, on the other, in ushering in the atomic age. In the U.S. until a few years ago, the Government had monopolised atomic energy and shrouded its development in mystery. There has of late been much criticism of the rate of progress achieved in the development of peaceful uses of atomic power or the lack of it. The controversy, of course, reflects honest differences of opinion among experts in a highly technical field still in its infancy. But much of it appears to stem from cleavages in political and economic philosophies, as the debate has crossed over from the purely scientific to the political arena. To complicate the matter there is the opinion that, unless the U.S. does something big, Soviet Russia will steal a march over it in developing atomic power plants and score another major propaganda victory. Finally, there is the consideration of developing goodwill under President Eisenhower's "Atoms-For-Peace" programme by increasing electric energy resources of fuel-needy and underdeveloped nations. Reduced to its essentials, the complicated controversy, according to the June *Monthly Bank Letter* of the First National City Bank of New York, turns on two questions: First, does private industry or Government offer the better means of tapping the nuclear power house for the beneficial use of mankind? Second, how fast should it be done?

Prior to 1954, the U.S.'s atomic energy programme was entirely in the hands of the Atomic Energy Commission (A.E.C.), which had been concentrating its efforts on other than nuclear power reactors. The Cole-Hickenlooper Atomic Energy Act became law in the summer of 1954, removing the shackles of Government monopoly and encouraging the participation of private industry in the atomic energy programme. Though still exercising strict control and supervision, the A.E.C., in effect, instituted a "partnership" with industry.

Politically-motivated Criticism

Almost continually since then, those who favour Government development of the atom have sharply criticised private industry for not making fast enough progress, and thus contributing to "an atomic power deficiency in the country." Senator Albert Gore of Tennessee, author of a Bill introduced in Congress last year that called for the Government to build $400 million of atomic power plants and a Bill at this session authorising expenditure of one billion dollars for a wide range of nuclear projects, complained: "Today the U.S. is further behind in the actual construction and operation of large-scale atomic power plants than ever before. Moreover, under the present A.E.C. programme and policies the situation will grow comparably worse instead of better." Hearings of the Joint Committee on Atomic Energy earlier this year provided other examples of politically-motivated criticisms. For instance, Andrew J. Biemiller, Director of the A.F.L.-C.I.O.'s Legislation Department, testified: "... America's rate of atomic power development is still highly inadequate. The Government should undertake promptly to construct and operate several large-scale atomic power plants to gain the practical experience and knowledge necessary for the United States to be able to provide effective world leadership in this field and to provide needed impetus for development for domestic needs as well."

The private industry-A.E.C. approach to nuclear power development might be described as working towards atomic "quality," as opposed to "quantity." The idea, it is stated, is to amass technical know-how through intensive research, with experimental reactors getting first priority. As the best types work out, they become the basis for large-scale power-producing prototypes. The idea of a "kilowatt race" was rejected because of the abundance of conventional fuels (coal, oil, gas) which, together with the advanced electric power technology achieved, provide the U.S. with the cheapest power in the world. The situation, it is recognised, is quite different in high-cost fuel areas such as Western Europe and the U.K. But it is also felt that the U.S.'s enviable conventional fuel position will not last for ever; coal deposits, while huge, are not limitless. It is, therefore, also recognised that now is the time to "advance the art" of nuclear technology so that the country will be in a position to produce atomic power economically when the need arises.

There are, however, differences of opinion when that date will arrive, but all parties are agreed that it is a long way off. The Atomic Industrial Forum estimated recently, on the assumption of continued reductions in nuclear power costs, that of the 8.9 million kw. of new generating capacity to be installed between 1965-70 in high-cost fuel areas, some 75 per cent. will come from atomic plants. According to Secretary Fred Seaton, atom power will compete with conventionally-produced power throughout the nation within two decades "if present trends continue." And Mr. Spron, President of the American Electric Power Company, foresees that by 1975 between 7 and 8 per cent. of the electricity produced in the U.S. will come from atom power plants.

A Vigorous Infant

In the meantime, while the industrial atom industry is only an infant, it is a decidedly vigorous one. The electric utility companies' programme includes 15 announced nuclear power plant construction projects involving a total investment of over $520 million. By the end of this year, electric utility companies will have spent about $140 million in furtherance of nuclear power development. Another $100 million will be spent in 1959.

It should be emphasised, however, that the A.E.C. has played an important part in the development of civilian power reactors. In the fiscal 1956-59 period, it is estimated that the A.E.C. will have spent some $265 million on research, development and construction of at least 12 different reactor types. In addition, it will have paid out some $38 million under the co-operative programme with private electric utilities and public power agencies. Moreover, the free flow to industry of information developed through A.E.C. research programme has been of immeasurable value.

In the battle over the industrial atom, advocates of public and private power at least agree on one thing: there is no question but that the Government will continue to play some kind of role. The very nature of the basic fuel—uranium—makes this inevitable. The same material and a great deal of the same knowledge can be used either to spin a turbine supplying power for the wheels of industry or to produce an atom warhead. Production and stockpiling of atomic weapons—and the need to keep abreast of all forms of nuclear technology—will be a continuing task for the Government. Thus, the hard fact is that the Government will continue to be deeply involved in all areas involving the atom. The real question, then, is: What kind of a role will it play, how large, and by what means?

If the Government launches a reactor "crash programme" and tries to develop the whole job, it will not only be costly for taxpayers but will retard advances in reactor design. Moreover, it is pointed out by representatives of private industry, that such a programme would greatly expand Government intrusion into the electric power industry. The Atomic Energy Act of 1954 stated that the development, use and control of atomic energy shall be directed so as to "... strengthen free competition in private enterprise." Yet "preference clauses" in the Act run, it is pointed out, contrary to such principles. One such clause gives public power groups preferred consideration in granting of licences for facilities to generate atomic electric power. The long time "preference clause" gives priority to public power users and co-operatives in purchasing power produced in Government-owned power plants which, of course, would include atomic plants.

Best Approach

For the years immediately ahead, according to the *Letter*, continuance of the partnership between Government and private industry, with heavy emphasis on research and development looking toward achieving competitive costs, offers the best approach for meeting the economic challenges of nuclear power. The Government's role, the *Letter* adds, should continue to be confined mostly to providing research and development assistance—though this approach will not be without its problems. As the Twelfth American Assembly session on "Atoms for Power" declared in December: "The dependence of private industry upon Government assistance in atomic power development is inescapable. In such a situation, there will remain, for a considerable time, the problem of finding a formula for equitable distribution of costs between the stockholder, the consumer, and the taxpayer."

Looking farther ahead, an independent nuclear power industry—free of Government domination or subsidy—holds the greatest promise. Under the free enterprise system, power from conventional fuels has been developed to a state of efficiency that is the envy of the world. This same system, with its incentives and competition, the *Letter* avers, offers the "best hope" for maintaining and extending atomic power supremacy.

UNIQUE OPPORTUNITY FOR BUSINESS MEN

Expert Accounts Investigator—Prominent Tax Consultant—Efficient Business Organiser—Company Secretary holding highest academical qualifications with thirty years' deep experience in high executive positions, offers part or full-time services to business magnates troubled with complicated Accountancy, Taxation or Organisational problems. Correspondence strictly confidential. Inquire Box No. 964, C/o "Commerce," Brady House, Veer Nariman Road, Fort, Bombay.

OUTPUT OF INDUSTRIAL MACHINERY IN INDIA

There was a considerable rise in the output of heavy and light industrial machinery and machine tools during 1957. A significant rise was recorded by the textile machinery industry. The number of carding engines manufactured during the first 11 months of 1957 was 883, as against 726 during the comparable period in the previous year. Similarly, the number of ring frames rose to 1,225 from 1,110, drawing frames to 30 from 24, automatic looms to 282 from 161 and reeling machines to 1,841 from 1,158. The output of speed frames, bundling and baling presses also went up, while there was a slight decline in the production of plain looms. During the short period of its existence the industry has made appreciable progress. In regard to three major items particularly, ring frames, looms and carding engines, the indigenous manufacturers are in a position to meet a large part of the country's demand.

There was a considerable rise in the production of jute mill machinery during the year under review. The production of sugar mill machinery also showed an upward trend. A Bombay firm has completed preliminary arrangements for taking up the assembly of cane crushing plant, one of the major items of a sugar plant. This is being done in collaboration with a Czech firm. The firm is also producing other items of sugar machinery like vacuum pans, evaporators, condensers, etc. Another firm, which has West German collaboration, has installed most of the plant and machinery required. A Madras firm is reported to have manufactured sugar machinery for four co-operative sugar factories in Bombay State.

A printing machinery manufacturer turned out the proto-type of stereo rotary printing machine of the Duplex type during the year. The production of new ranges of stone breakers and granulators was taken up by a firm with British collaboration. The possibility of manufacturing paper machinery is being examined by a committee. Some firms in the U.K., Sweden and Germany have shown interest in collaborating in the manufacture of paper machinery. A scheme for the manufacture of the domestic type hand-operated knitting machines in collaboration with a Japanese firm has been received from an industrialist and is being examined by the Government. Knitting machines of the industrial type are already being produced in the country.

The increase in the production of machine tools over 1956 was almost 100 per cent. This is largely attributed to the remarkable increase in the output of the Hindustan Machine Tools. Bangalore, which reached the monthly production rate of nearly 30 machine tools. The Hindustan Machine Tools has also taken up a fresh programme for the manufacture of milling machines.

NEW PRODUCTS AND PROCESSES

New Device for Sugar Plantation

SUBSTANTIAL saving in time and labour in sugarcane plantation is expected when a new mechanical device for planting sugarcane, developed at the Indian Institute of Sugarcane Research, Lucknow, comes into wider use. The device is in the form of a tractor-drawn attachment which can be used, with minor modifications in each case, with all the major types of tractors.

It consists of a planter attachment capable of sowing three rows at a time. The rear mounted tool bar fitted with three standard ridger bodies is used as the basic unit for design. Three wooden seats are fitted above these ridger bodies and to the rear of these seats are fixed three chutes leading vertically down to the furrows made by the ridger bodies. Wooden boxes carrying the seeds to be planted are provided between the seats. The fertiliser distributor, divided into three compartments, is also provided for applying the fertiliser in the furrows.

A wooden board fixed behind the tool bar levels the ground immediately after the planting is done. This new machine reduces the labour involved in manual planting and also speeds up the operation so that the cost of planting in the long run is substantially reduced. It has been found possible with the help of this attachment to plant six acres of land in eight hours maintaining a tractor speed of about two miles per hour.

New Process for Polishing Aluminium

A new chemical process for polishing aluminium articles has been developed at the National Metallurgical Laboratory, Jamshedpur. This method, it is claimed, will not only cut down the cost of polishing aluminium, but is also expected to yield a degree of brightness not obtainable by mechanical and electro-chemical methods at present in use.

Mechanical polishing is, of course, the simplest and the cheapest method of polishing aluminium. Its major defect, however, lies in the fact that it cannot reach deep recesses of the article to be polished. Moreover, it does not give as high a degree of brightness as yielded by some of the electro-chemical processes. The electro-chemical processes in their turn, however, are handicapped by a high cost of operation which limits their range of application.

The chemical process now developed has been found to be free from these defects. Its extreme simplicity is its major advantage. The simplicity and low cost of this process lends it to easy adoption on a small as well as a large scale with great advantage.

Removing Metal from Castings

The removal of excess unwanted metal from certain types of castings is often difficult when the areas where it occurs cannot easily be reached by hand grinding. A new "flame washing" process which has been developed by British Oxygen Gases is said not only to provide a cheaper and more efficient method for removing excess metal from steel castings, but also to be fully effective in areas where hand grinding is not easy to apply. The equipment used for application of the process is simple, being much the same as that for normal oxygen cutting processes, except that a special curved nozzle is used and propane is the fuel gas. It is claimed that it is possible to train skilled oxy-acetylene operators to become proficient in the technique after only about a week's training. One limitation of the process is the fact that its application is generally limited to castings which can be cut safely and readily by normal oxygen cutting methods. Likewise, it is not effective when sand is encountered to any great extent, or for stainless or high alloy steels.

Incombustible Tiles

A new type of incombustible tile which can be applied to walls and ceilings has been developed in the U.K. The tiles, which are made from fissured mineral wool, are also said to have excellent noise-absorbing properties. The material from which they are made has a low density and is stated to be efficient in blocking the passage of heat. The tiles can also be used, therefore, to provide some thermal insulation, thereby saving heating costs in rooms to which they are applied. Each tile is ½ inch thick and has a white painted surface. Two sizes are being made available, one 12 inches square and the other 12 inches by 24 inches. It is claimed that the tiles will adhere easily to any firm, flat, dry surface, including gypsum lath.

Fish Flour

A process for the conversion of fish into high quality food in the form of fish flour has been developed at the Central Marine Research Station at Mandapam in Madras State. The project was initiated primarily to help fishermen in making use of the surplus fish, when occasionally there were big catches, and which otherwise would have gone waste. The raw material used in investigations was shark fish having high urea content. By the fermentation process, it had been found possible to remove major part of the odour preventing development of rancidity to a great extent and almost completely eliminating urea. The cost of processing 100 lbs. of fish worked out to not more than 25 nP. The researchers attached to the Institute have designed a simple device in the form of a processing unit which can be used by the fishermen individually or through co-operatives. The cost of each unit is about Rs. 500.

THE ATUL PRODUCTS LIMITED

MR. KASTURBHAI LALBHAI'S SPEECH AT ANNUAL MEETING

THE Tenth Annual General Meeting of the Atul Products Limited was held in Ahmedabad on 3rd June 1958. Addressing the shareholders on the occasion, Mr. Kasturbhai Lalbhai, Chairman, disclosed that the Company was proceeding ahead with its scheme of manufacture of some basic intermediates and some additional dyes and that it would have to raise funds of its own to meet a part of the cost of expansion.

The following is the full text of Mr. Kasturbhai Lalbhai's speech:

"GENTLEMEN,

"The Directors' report, the statement of accounts and other papers relating to the working of the Company during the year 1957 have been circulated to you and they have been in your hands for some time. So, if you will kindly agree, we will take them as read for the purpose of this meeting.

"You will please see from the statement of accounts that the Company has maintained its progress. The sales for this year are Rs. 2,71,86,336, as against the sales of the last year and are, therefore, higher by Rs. 88,44,408. The profits for the year also show a corresponding increase, the profit subject to depreciation being Rs. 51,27,924, as against a similar figure of Rs. 30,95,549 for the last year. Out of this amount a provision of Rs. 22,66,113 has been made for depreciation for the year as well as the arrears of depreciation. Also a provision of Rs. 3,50,000 for development rebate reserve and a provision of Rs. 1,50,000 for wealth tax for the years 1956 and 1957 have been made. So this leaves a disposable income in the hands of the Company of Rs. 23,61,811. If you will please refer to the Directors' report, you will find the recommendations made by the Directors in respect of this.

Prices Unchanged

"It will be interesting for you to know that the Company maintained an unchanged level of prices for its products throughout the whole of the year under review and this policy continues even today. In consequence, the increase in the amount of sales is not due to an increase in prices, but is due to an increase in the volume and range of production during the year. The Naphthol plant, the Cibagenes and Cibanogenes plant and the Coramine and Vioform plant started working in the first quarter of the year; there was also a larger production from the expanded Sulfar Black plant. It may be mentioned that these new plants have not gone into normal working conditions and it will be possible to have a larger volume of production from these plants in course of time. So far as the plant for direct and acid dyes is concerned, the Company concentrated mainly in increasing the range of the dyes it manufactures. You will be pleased to note that the Company is now able to offer 29 direct dyes and 10 acid dyes to the market.

"Your Company caters to the requirements of a number of industries of which the cotton textile industry is the biggest customer. As such the working of your Company is naturally affected by the prosperity or otherwise of the cotton textile industry and, as you know, recently this industry is showing signs of passing through a bad time. In consequence, the sales of the products of your Company during the last two months of the year under review and the first three months of the year 1958 were rather below normal. They have now begun to pick up but it is obvious that their course will be dependent upon the condition of the cotton textile industry. As you can easily appreciate, a market, in which money is scarce and credits become sticky, is not a favourable market for good sales. I hope that both these difficulties will gradually disappear during the remaining part of this year.

Work Done by Laboratories

"I have referred above to the increased range of dyes that the Company now manufactures. If you will please recollect a couple of years back, I had referred to the extensions to the laboratories that the Company was going to make both for development and research. Those extensions were completed last year and now the Company has a group of trained chemists and also the necessary equipment, including a pilot plant, to undertake work which will improve the quality of our present production and widen its range. I would not like to describe this work as 'research' because the word 'research' connotes something definitely original and fundamental; but it may perhaps be described as the application and extension of the research work done by others. Our laboratories are at present engaged mainly in this type of work and the contribution they have made to the progress of the Company can be appreciated from the fact that out of 80 dyes that the Company manufactures it now pays royalty only on 22 dyes. However, if we want to be independent of foreign technical assistance, our laboratories will have to take up some independent and advanced work. You will be glad to know that the Board of Directors is alive to this aspect of the problem and giving it the necessary attention.

Development Plan

"I had referred last year to a comprehensive plan of development intended to be undertaken with the assistance of Imperial Chemical Industries Limited. The negotiations in this behalf were completed last year and the conclusions reached were embodied in a document which was approved by the Board of Directors of your Company. Unfortunately, when it came to the question of drawing up legal documents based on it, certain difficulties were encountered in conforming with the Indian law. The present position is that both the Companies are exploring fresh avenues for closer collaboration. It may be mentioned, however, that these difficulties do not materially affect the schemes of development the Company had in view. The Company is proceeding with the scheme of the manufacture of some basic intermediates and some additional dyes in consultation with the Atic Industries Private Limited which is also expected to follow a similar course in respect of products which are logically connected with its present line of production. Naturally, the Company will have to raise some funds on its own and also request the Government to accommodate the foreign exchange requirements of the Company in the various foreign loans the Government is receiving from abroad for the development of the country. However, your Directors are satisfied that, although this may affect the rate at which your Company is expanding, yet it will not impede progress.

Workers' Strike

"All of you know that under the guidance of the Atul Products Employees' Union, the workers of our various plants went on a general strike on the 13th May, 1958 and that strike has still not been withdrawn. In the meanwhile, the Company has restarted all the plants with some old and some new workers and they are today working at 70 per cent. capacity. I may say that I have not seen another instance of such an irresponsible strike. On 26th February 1958 the Union presented a list of demands and also stated that all of them should be referred to arbitration. Some of the demands related to the reinstatement of some workers whose discharge or dismissal had already been confirmed by Industrial Tribunals; other demands related to dearness allowance, gratuity, leave, etc.—matters which had already been considered by Industrial Tribunals about a year and a half back. Even so, the Company suggested that the Union might resort to the machinery of the Industrial Disputes Act, if it so desired. Instead of this course, the Union presented an ultimatum to the Company on 10th May 1958 that, unless the demands were accepted within 72 hours, the workmen would go on a general strike. Actually this call for a strike was given even before the expiry of 72 hours and even before the Company's letter of reply was in the hands of the Union. I wonder whether it is proper to thrust 'voluntary arbitration' on anyone by the weapon of a strike or to ask arbitrarily to accept their demands, particularly when the whole legal machinery evolved for the settlement of industrial disputes still exists or specifically when the employer has given them no cause to go on a strike by way of any malpractice of labour, etc. It may be that some labour leaders may feel that this machinery no longer suits their interests; but even so, it should be realised that they themselves evolved it, and they should respect it till it is changed.

INSURANCE AND EUROPEAN COMMON MARKET

SOME IMPLICATIONS ANALYSED

THE Treaty of Rome signed by France, Germany, Italy and the Benelux countries, under which the European Economic Community was established in December 1957, laid down, under Article Two, that it should be the aim of the Community, by establishing a Common Market and progressively approximating the economic policies of member-States, to promote, throughout the Community, harmonious development of economic activities, continuous and balanced expansion and increased stability, accelerated raising of living standards and a closer relation between its member-States. In pursuance of this objective the Common Market was brought into being on 1st January 1958. The Rome Treaty envisages three periods, covering 12 to 15 years, before the Community is in full operation. During these periods there will be a progressive liberalisation of economic relations between the member-countries. The latter agreed, *inter alia*, to eliminate duties and restrictions on the import and export of goods among themselves, establish a common customs tariff and a common commercial policy, abolish obstacles to the free movement of persons, services and capital, inaugurate a common transport and agricultural policy, co-ordinate economic policies, remedy disequilibria in the balance of payments, bring their respective laws into harmony to the extent necessary to secure the functioning of the Common Market, and establish a European investment bank and a social fund.

Although nothing appears specifically in the Treaty dealing with insurance, it has been widely assumed that the process of liberalisation will be carried to the field of insurance as well. An analysis of the implications and possible bearings of the European Common Market on insurance contained in a recent issue of the *Post Magazine and Insurance Monitor* is of topical interest.

Since the Common Market is a reality, it is difficult to see, according to the author of the article, how insurance, as it now operates in the member-countries, can be unaffected for long. Is there any likelihood of the Common Market establishing one insurance control law embracing all its members and superseding the present national laws? Posing this question, the author points out that this will be an ambitious project, for widely differing concepts of insurance control will have to be reconciled. To an important degree, the national economies of the six member-countries of the Common Market are complementary, but this is not the case with insurance. Each country has its own long-established and strongly organised insurance industry. Indigenous companies in each country are able to provide the greater part of the insurance protection needed by each country's economy, subject always to reinsurance internationally. In each country foreign companies operate, some of them having been established for a century or more, and play a very useful but subordinate part.

Small Insurers

In one or two of the member-countries, an important role is played by very small insurance companies, particularly in Holland. In France, on the one hand, mutual companies are important, regionally. A Common Market insurance control law would have to take into account all these varying interests if they were not to be injured. "Perhaps the most that could be achieved," according to the author, "would be some harmonisation of the present national laws governing the establishment and official supervision of insurance undertakings." It would certainly be contrary to the whole movement of European economic co-operation and the liberalisation of trade and services, it is pointed out, if in the process, insurance companies not of Common Market nationality should find that their present freedom to establish themselves and transact business in each of the Common Market countries subject to the laws thereof, were reduced.

One consideration, says the author, that must be prominently borne in mind of the insurance industry in the Common Market countries is that of competition. It is one thing to accept the theory of free competition as economically desirable and quite another to open all doors and windows wide to the fierce winds of competition. In the last two or three years, fire and accident (particularly motor car) insurance in a number of the Common Market countries have fallen upon difficult times. Premium rates are too low to meet claims and expenses and produce a profit but attempts to raise the level of rates break down on competition between companies and Government objections.

It should not be assumed, the author emphasises, that, on a short-term view, all the insurance companies at present organised in one or other of the Common Market countries necessarily discern any great attraction in extending their activities to the other Common Market countries. It is possible that the view is widely held that, before any such movement develops, efforts should be made by the national insurance industries concerned to establish the business within the national frontiers on a reasonably profitable base. Some experts, in fact, consider that the successful transaction of insurance depends upon local companies serving local interests, and that if, as is already the case, insurance needs are fully met within the frontiers of each country by the insurance markets as at present organised, the "removal" of these frontiers would only precipitate disastrous and unnecessary competition.

Another aspect of the same problem is that of the organisation and licensing of insurance agents and brokers. Here, again, it is pointed out, the present legal requirements are various and the standards of qualification widely different. A uniform Common Market law on this subject might well bear too severely upon the insurance agents and brokers of one member-country, as compared with another. On the other hand, to grant complete freedom of activity throughout the whole Common Market to insurance intermediaries could easily lead to the breakdown of those standards of professional responsibility which have been established in some of the major countries after great efforts.

A Long Vista of Problems

Beyond these two most knotty problems stretches a long vista of others. Insurance law, as it governs the contract of insurance, has, of course, developed along national lines; the fundamental principles are the same but there are wide differences of detail. This applies also to the great mass of legislation which, although not directly related to insurance, gives rise to the need for insurance of all kinds, particularly in the field of civil responsibility. Terms and conditions of policies have become established over many years in each country in accordance with the laws of that country. The task of reconciling these laws and the insurance policy conditions as between one member-country of the Common Market and the others is formidable, although not perhaps impossible.

So far little is known of how the various national insurance industries of the Common Market countries are regarding these and related matters. They are considering them within the framework of the *Comité Européen des Assurances*. A working group of representatives of the six countries commenced its studies at the Monte Carlo Meeting on the 11th and 12th September, 1957. This Working Group has undertaken to keep the European National Insurance Association outside the Common Market countries informed of the developments of their studies and to pursue with their co-operation in the examination of problems which may present themselves as within the ambit of O.E.E.C. It is understood that a move has been made to secure that the insurance industries of the six countries shall be represented authoritatively in the Economic and Social Council of the Common Market.

The U.S. Example

There is a disposition to look to the United States as an example of an effective Common Market and to assume that all the problems touched upon above in the insurance sphere have been satisfactorily mastered in that country. This disposition, however, it is pointed out, tends to overlook the way in which the regulation of insurance by the public authorities in the United States rests upon the powers of the individual States and that instead of State legislation developing independently, as it has done in Europe, it was evolved as each State grew to manhood in imitation of the measures taken by New York State, which has effectively led the others. At the same time, Insurance Commissioners or Superintendents of all the States have achieved effective co-operation and the insurance industry itself has long been organised on national lines rather than State by State. Moreover, there is a common language, a common currency and a common legal system. The success of the United States "Common Market" can, therefore, be attributed to circumstances which it would be impossible, at this point in history, to reproduce in Europe.

It is a fair summing up of insurance opinion in the Common Market countries to say that the problems presented to insurers by the Treaty of Rome are numerous and some of them red-hot, but that it is useless to ignore them. As the aim of the Treaty coincides with an ideal which is similar to that of insurance itself, namely, the ideal of internationality, it is only reasonable that insurers should endeavour in a practical manner to develop the most constructive programme possible in the spirit of the Treaty. All the insurance companies concerned will have to be prepared for the competition which is bound to arise as the Common Market is progressively realised, for an improvement of the services the industry can render and for a submission to the intelligent discipline of the Market. "It is conceivable in fact," the author says, "that insurance within the Common Market may move towards a vast cartel however much this may be opposed to the traditional outlook of certain of the countries involved."

Two Fundamental Principles

Much, however, will probably, be heard of two fundamental principles established by the Treaty of Rome in the matter of "services." These are, "liberty of establishment" and "liberty of circulation." The first visualises progressive removal of restrictions relating to the opening of agencies, branches or subsidiary companies by citizens of a member-country upon the territory of another member-country. Its implementation would open the internal frontiers of the Common Market. How to reconcile the protection of the insured with the competition which this would introduce is a most difficult

(*Continued on page 1147*)

THE BANK OF BARODA
LIMITED

WE are pleased to announce that the Scheme of Amalgamation of the Hind Bank Ltd. with the Bank of Baroda Ltd. has been sanctioned by the Reserve Bank of India on 31st May, 1958, as required by the Banking Companies Act, 1949 and that the entire business of the Hind Bank Ltd. (at its Head Office and Branches) will form part of the business of the Bank of Baroda Ltd. with effect from **1st August, 1958.** The Bank of Baroda Ltd. will carry on business including the business of the Hind Bank Ltd. absorbed by this Bank in its own name.

Bombay, 5th June, 1958.

N. M. CHOKSHI,
General Manager.

AMENDING COMPANIES ACT—VII

SUGGESTIONS OF SASTRI COMMITTEE ANALYSED

By F. R. Ginwalla

PART VII of the Act—this part contains 136 sections from 425 to 560; 29 sections are proposed to be amended—contains provisions for the winding-up of a company which may be either by the Court, or voluntary or subject to the supervision of the Court. The Companies Act Amendment Committee has made many valuable and helpful suggestions with regard to this branch of the Company Law. The Committee, while recommending the changes, appears to have strenuously concentrated its attention on the need for clarifying ambiguities, solving the difficulties of official liquidators, and enlarging the powers of official liquidators and Registrars of Companies in order to ensure the proper conduct of the liquidation proceedings and to speed up their disposal. We shall now observe the changes which have been recommended in the Report.

Section 426 refers to liability of present and past members as contributories in the event of a company being wound-up. Clause (*g*) of sub-section (1) is not happily worded and its meaning is obscure. The words "who is not a past or present member" occurring in the latter part of this clause creates an anomaly, restricting the protection granted by the clause only to debts of creditors who have not been past or present members. The Report states that there is no reason why a debt due to a creditor who is a past or present member, for loans made to the Company or for the price of goods sold to the Company by such member, should not have priority over debts due to a past or present member by way of dividends, etc., in his character as a member. To remove this anomaly, clause (*g*) is proposed to be amended so as to read as follows:

"(*g*) a sum due to any past or present member of the company in his character as such, by way of dividends, profits or otherwise, shall not be deemed to be a debt of the company payable to that member, in a case of competition between himself and any creditor not claiming in his character as a past or present member of the company; but any such sum shall be taken into account for the purpose of the final adjustment of the rights of the contributories among themselves."

Other Proposals

The other proposals are:

(1) Section 439 contains provisions as to applications for winding-up. The Report points out an omission in sub-section (5) of this section and suggests that for the words "clauses (b), (c), and (e)" the words "clauses (b), (c), (d) and (e)" should be substituted.

(2) The existing Section 521 states that the voluntary winding-up of a company shall not bar the rights of creditors and contributories to have it wound-up by a Court. The Report points out that this section may well be repealed for it is partly repetitive and partly inconsistent with Section 440(2). It may be observed here that the Company Law Committee had suggested the deletion of Section 218 of the Act of 1913 (corresponding to Section 521).

(3) Section 446 states the effects on a suit or other legal proceeding when a winding-up order is made or the official liquidator is appointed as provisional liquidator. The Report states that a suggestion was made to the Committee that the Court winding-up the company should have full powers to decide all claims made by or against any company and all questions of priorities and all other questions whatsoever, whether of law or fact, which may relate to or arise in the course of the winding-up of the company coming within the cognizance of the Court. The Report, while accepting this suggestion, states that such a provision should be made on the lines of Section 4 of the Provincial Insolvency Act, Section 7 of the Presidency Towns Insolvency Act and Section 45-B of the Banking Companies Act. The Report observes that such a provision would speed up the winding-up proceedings and that there could be no danger of the provisions being abused in view of the fact that it is the High Court or the District Court that has jurisdiction under the Act and there is a right of appeal.

(4) Section 449 states that, on a winding-up order being made in respect of a company, the official liquidator shall, by virtue of his office, become the liquidator of the company. As regards this section, the Report observes that there may be cases where the official liquidator is interested in the directors or managing agents or those who have had transactions and commitments with the Company. Such cases would be very few and the official liquidator should normally be the liquidator of the company. The Report recommends that Section 449 may be amended so as to empower the Court to appoint as liquidator a person other than the official liquidator stating the reasons for the appointment.

(5) Section 454 requires that a statement of affairs relating to the company (being wound-up) should be furnished to the official liquidator in a manner provided therein. The existing section does not contain any provision to punish the officers of the company for default or delay in filing the required statements. In order to facilitate the official liquidator in his work and speed up the winding-up of companies, Section 454 is proposed to be suitably amended so as to empower a winding-up Court to take cognizance of any default or delay in filing the required statement of affairs of a company with the official liquidator.

Extension of Time

As regards Section 455, the Report states that power should be given to the winding-up Court to extend the time of six months in cases where, on account of the time taken by the directors and chief officers of a company in filing the statement of affairs under Section 454, difficulty is experienced by the official liquidator in complying with the requirements of this section.

(6) Section 456 states that after the winding-up order all the property and effects of the company shall be deemed to be in the custody of the winding-up Court and that the liquidator shall take into his custody the property and effects of the company. The Report states that, in one particular case, the official liquidator had experienced considerable difficulty in taking into his possession the books, papers, properties and assets of the company. In order to avoid such a difficulty, it is proposed in the Report to insert a new sub-section in Section 456. The new sub-section will enable the official liquidator to request in writing the Chief Presidency Magistrate or the District Magistrate concerned to take possession of the property of the company (after giving due notice to the company) and forward the same to him. For the purpose of securing due compliance of the order, made under this sub-section, the Chief Presidency Magistrate or its District Magistrate has been empowered to take such steps or use such force as may be necessary in his opinion. The Report gives the draft of the new sub-section (2). The existing sub-section(2) is proposed to be numbered as sub-section (3).

(7) Section 457(2) enumerates the powers of a liquidator of a company being wound-up by the order of the Court. It is proposed to add a new clause in sub-section (2) so as to empower the official liquidator to inspect the records and returns of the company in liquidation on the file of the Registrar without payment of any fee.

(8) Section 463 relates to the control of the Central Government over liquidators. It is proposed to amend sub-section (1) by adding the words "or by the Indian Companies Act, 1913 (VII of 1913)" after the words "requirements imposed on him by this Act" (*vide* also paragraph 207 of the Report).

Committee of Inspection

(9) Section 464 relates to appointment and composition of committee of inspection. Section 465 relates to the constitution and proceedings of the committee of inspection.

The committee of inspection under the Indian Act has hardly any functions other than the "right to inspect the accounts of the liquidator at all reasonable times" according to Section 465(2). In our Act, all the powers exercisable by a committee of inspection as understood in the English Act can be exercised only by the Court. The elaborate provisions of the English Act relating to the committee of inspection are repeated in our Act though the inspection committee has hardly any important functions to perform. The utility of such a committee cannot be supported even on the ground that it is needed for vigilance. The need for vigilance is much less under the present Act because an officer appointed by the Central Government functions as official liquidator. Sub-section (3) requires that the committee should meet at least once every month, unless it decides to meet at shorter or longer intervals. Monthly meetings of the committee might consume a good part of the assets of the Company. In any case, the Report suggests that the obligation cast by Section 465 on the committee of inspection to meet once a month should be removed and the members should be left free to meet whenever necessary.

(10) The Report suggests that Section 468 should be suitably amended on the lines of Section 36 of the Presidency Towns Insolvency Act so as to empower an official liquidator to file in the winding-up Court an application for an order against any person for payment of money or delivery of property with him to which the company in liquidation is *prima facie* entitled.

It is suggested in the Report that this section should be further amended by inserting the words "or employee" after the words "or officer." The words "in his custody or power" may be substituted for the words "in his hands."

(11) Sub-section (1) of Section 469 provides that at any time after making a winding-up order, the Court may make an order against a contributory for the payment of any money due from him or from the estate of the person whom he represents "exclusive of any money payable by him or the estate by virtue of any call in pursuance of this Act." Section 470 which relates to the power of the Court to make calls came up for consideration before the Madras High Court—application No. 1598 in O.P. No. 187 of 1955—and on a construction of the words quoted above, the Court took the view that it had no power to make an order for payment against a contributory in respect of moneys due for calls made prior to the winding-up. This could not have been the intention of the legislature while enacting Section 469. The Report suggests that Section 469(1) should be amended by substituting the words "made in pursuance of Section 470 of this Act" for the words "in pursuance of this Act." The object of this proposed amendment is to enable the Court to make an order under Section 469 for payment of moneys due on calls made prior to the winding-up as moneys due from a contributory to the Company.

(12) Section 477 provides, *inter alia*, for the summoning and examination of any person suspected to be indebted to the company to be in possession of the property of the company. Under the analogous provisions of the Presidency Towns Insolvency Act where a person examined admits his indebtedness, or admits possession of property belonging to the insolvent, the insolvency Court is empowered to pass an order against such person for payment of such a sum or delivery of such property to the official assignee (*vide* Section 36 (4) and (5) of the Presidency Towns Insolvency Act). The Report states that it is desirable to have similar provisions in the present Act. It may be noted that the provisions of Section 446 (2) and (3) are not adequate for the purpose.

Winding-up of Companies

(13) Section 481(1) provides that when the affairs of a company have been completely wound-up, the Court shall make an order that the company shall stand dissolved from the date of the order and the company shall stand dissolved accordingly. But this does not cover a case when the official liquidator is not in a position to proceed in the matter for want of funds. In such a case, it cannot be said that the company's affairs are completely wound-up. Instances are not rare when the petitioning creditor or other creditors are not prepared to put the official liquidator in funds. With this view in mind the Committee has suggested that Section 481(1) should be amended so as to read: "When the affairs of a company have been completely wound-up, or the Court is of opinion that the liquidator cannot proceed with the winding-up of the company for want of funds or for other reasons, the Court shall make an order that the company be dissolved from the date of the order, and the company shall be dissolved accordingly."

(14) To enable a liquidator to draw his remuneration at intervals without waiting till the liquidation proceedings are over it is proposed to amend Section 490(1)(*b*) so as to read: "fix the remuneration, if any, to be paid to the liquidator or liquidators and the time and manner of such payment."

(15) It is desirable to provide in Section 502(2) that where the Court appoints a liquidator in a voluntary winding-up, it shall fix his remuneration after taking into consideration the views of the committee of inspection or creditors or contributories as the case may be. If the official liquidator is appointed in a creditor's voluntary winding-up under Section 502(2), the remuneration so fixed should be credited to the Central Government (*vide* paragraph 177 of the Report).

(16) Section 515 gives power to the Court to appoint a liquidator in a voluntary winding-up. The Report suggests that in case the official liquidator himself is appinted liquidator, the remuneration fixed by the Court should be credited to the Central Government. Section 515 is proposed to be amended accordingly.

(17) Section 512 which deals with the powers and duties of a liquidator in a voluntary winding-up, discloses an anomalous situation when we read Section 512(1) (*a*) and (*b*) with Section 457(2) (i) to (iv). We find that in a voluntary winding-up the liquidator has to obtain sanction of the appropriate authority mentioned in Section 512(1)(*a*) for the exercise of routine powers as executing receipts for moneys received, taking out letters of administration to the estate of the deceased contributory, etc. In respect of more serious matters like instituting a suit, to raise money on the security on the assets of the company, etc., as set out in Section 457(1) (*a*) to (*e*) he is not required to obtain any sanction. It appears strange that while he can exercise important powers without sanction, sanction should be necessary for much less important routine matters. The Report, after exhaustive consideration, recommends that the provision in Section 512(1)(*a*) requiring sanction for the exercise of the routine powers under Section 457(2) (i) to (iv) should be deleted.

If sanction is considered necessary for the exercise of any of the other powers mentioned in Section 457 which are of substantial character, Section 512(1) should be suitably amended as stated in the Report.

Who Can be a Liquidator?

(18) Section 513 states that a body corporate is prohibited from being appointed as liquidator in a voluntary winding-up. This section is silent as to firms. Section 513(1) is, therefore, suggested to be amended as follows: "No firm or body corporate shall be appointed as liquidator in the voluntary winding-up of a company."

(19) Under the law as it stands it is only the creditor or a contributory who is entitled to make the application for the appointment or removal of a liquidator and not the Registrar. In order to speed up liquidation proceedings and to ensure the proper conduct of the liquidation by a liquidator, suggestions are made in the Report to add a new sub-section (3) to Section 515 in the following terms: "The Registrar shall be entitled to make an application to the Court under this section."

Similarly, new sub-sections are proposed to be added in Sections 522 and 524.

As regards Section 524, the Report proposes an amendment as there is no provision in this section similar to the proviso in Section 502(2) enabling the Court, if it thought fit, to appoint the official liquidator, as liquidator in the place of the liquidator already acting. The Report suggests that

Section 524 should be amended so as to provide for the situation.

(20) The insolvency law contained in Schedule II to the Presidency Towns Insolvency Act and Section 47 of the Provincial Insolvency Act relating to the rights of the secured creditors is applicable in the winding-up of an insolvent company. The Report suggests that there should be a provision in the Act requiring a secured creditor (who realises his security) to reimburse the liquidator in respect of amounts spent for the preservation or protection of the asset before it is sold by or at the instance of the secured creditor. A new sub-section to this effect is proposed to be added to Section 529.

(21) A new section, 531A, is proposed to be added because Sections 531 and 533 which provide for cases of fraudulent preference do not contain a provision applicable to voluntary transfers dealt with in Section 55 of the Presidency Towns Insolvency Act and Section 53 of the Provincial Insolvency Act. A new sub-section reads: "Any transfer of property, moveable or immoveable, or delivery of goods made by a company not being a transfer or delivery made in the usual course of business or in favour of a purchaser or incumbrancer in good faith and for valuable consideration, if made within a period of one year before the presentation of a petition for winding-up by or subject to the supervision of the Court or the passing of a resolution, for the voluntary winding-up of the company, shall be void against the official liquidator or liquidator, as the case might be."

(22) Section 535 provides for disclaimer of onerous property in case of a company being wound-up. The Report draws attention to sub-section (4) and states that the words "company shall be deemed to have adopted it" occurring at the end of the sub-section are not appropriate. It is rather incorrect to say that in default of disclaimer, the company shall be deemed to have adopted the contract. The contract is already the company's contract. It is therefore suggested in the report that the concluding portion of the sub-section should be amended so as to read "the liquidator shall be deemed to have adopted it."

(23) Section 537(2) states that "nothing in this section applies to proceedings by the Government." The Report states that the foregoing sub-section is vague and general in its terms. The intention of the legislature apparently was to enable the Government to realise its dues from the assets of a company by attachment, distress or sale. This sub-section is proposed to be amended as follows: "Nothing in this section shall apply to any proceedings for the recovery of any tax, cess or dues payable to the Central Government."

(24) The Report recommends that it would be desirable to make it clear in Section 555 that all unclaimed dividends and undistributed assets should be deposited into the companies' liquidation account in the Reserve Bank of India. Though these words occur in the head-note to the section, they are omitted in the body of the section.

Section 555(9)(c) provides that where the winding-up is by or under the supervision of the Court, the liquidator retaining any moneys which should have been paid by him into the companies' liquidation account shall be liable to have all or such part of his remuneration, as the Court may think just, disallowed and to be removed from the office. This sub-section is apparently in conflict with the general scheme of the Act and particularly Section 463 which states in clear terms that the official liquidator functions under the control of the Central Government and it is for the Central Government to inquire into his conduct and take such action thereon as it may think expedient. The official liquidator is the paid official of the Central Government and no remuneration is allowed to him. It is here the conflict begins between this sub-section and Section 463. The Report states that this anomaly might be removed. It however adds that if the power of removal of the official liquidator is to be vested in the Court it must be so provided with due regard to Article 311 of the Constitution.

The Report does not suggest any amendment in the provisions of Parts VIII and IX of the Act. Part VIII contains four sections from 561 to 564 and Part IX contains 17 sections from 565 to 581. We therefore turn to Part X of which only Section 582(*b*) is proposed to be amended; Part X contains nine sections from 582 to 590.

Winding-up

Section 582(*b*) is corresponding to Section 270 of the Act of 1913, the meaning and effect of which were the subject of a difference of opinion between the Courts in India. One view was that a foreign company could not be wound-up as an unregistered company under the Act (Act of 1913) unless it consisted of more than seven members. The other view was that it could be so wound-up even if it did not consist of more than seven members. The object of the existing Section 582(*b*) read with Section 583 is to authorise the winding-up of a company incorporated in another country, but not in this country, which has an office and assets here. Even the pendency of a foreign liquidation does not affect the jurisdiction of Courts in India to make a winding-up order. If at the date of the petition for winding-up, the members are not more than seven in number, there is no jurisdiction under the present Act to wind-up an unregistered company and the remedy against the company lies by way of a suit. To make this meaning clear, it is suggested in the Report to amend Section 582(*b*) so as to read: "Save as aforesaid, shall include any partnership, association or company *if it consists* of more than seven members."

We now come to the remaining Parts XII and XIII of the Act. Part XI relates to companies incorporated outside India. The Report has suggested an amendment of Section 595(*c*). This section has been discussed with Section 149. The Amendment Committee while making suggestions for tightening up the penal provisions of the Act has not lost sight of the other features which make the Act cumbersome or defective or difficult of application.

Part XII contains provisions—Part XII contains six sections from 609 to 614 and out of these three sections are proposed to be amended—under the heading "Registration Offices and Officers and Fees." Section 610 relates to inspection of Registrar's records. As regards this section, the Report states that its sub-section (4) is inappropriate inasmuch as clause (ii) of the proviso to sub-section (1) does not require a person, desiring to inspect, to state that he is a creditor or member. Section 610(4) is corresponding to Section 426(4) of the English Act, where it was appropriate. This is however a matter for the legislature to consider.

As regards the copying charges prescribed by Section 610, the Report states that they might be increased to 75 nP from 36 nP for every 100 words. Similar recommendation has been made in respect of copying charges payable under Section 163(3).

Scale of Fees

Section 611 refers to scale of fees. It was stated before the Committee that the existing scale of filing fees (which has been raised) is unduly burdensome to companies in view of the large number of returns and documents required to be filed with the Registrar. The Report answers this criticism by stating that in view of the machinery set up for the administration of the Act, the levy cannot be said to be disproportionate to the service rendered.

The Report observes that, in spite of successive warnings, returns are either not sent or delayed inordinately in some cases. Prosecutions, except in cases of gross default, involve time and expense. To meet the situation the Report states that a second proviso may be added to Section 611 in these terms:

"Provided further that where any document, return or statement required or authorised by this Act to be filed or registered with the Registrar, is not filed or registered within the time specified in this Act, the Registrar may file or register such document, return or statement on payment of the prescribed fees and such penalty as may be imposed by him not exceeding the amount specified in Schedule X as fees payable for the document, return or statement, as the case may be."

The Report states that the present Act has multiplied the number of returns or documents to be filed with the Registrar and the fees under Schedule X have, in some cases, been doubled. It may be noted that returns or documents are required to be filed frequently, particularly under Sections 192, 264 and 303(2). The Committee has proposed to amend Sections 264 and 303(2) so as to cause appreciable reduction in the number of returns or documents to be filed.

Section 192

As regards Section 192, it was contended by the companies before the Committee that it should be open to them to file under one return all resolutions passed at one meeting, instead of having to file a separate return for each resolution or agreement. The Report indicates that, according to the view of the Department, Section 192, read with items 5 and 13 of Schedule X means that every resolution or agreement under Section 192 should be separately filed. The Report, however, does not agree with the foregoing interpretation as it is likely to cause hardship to companies which have to file numerous returns. The Report therefore suggests that it should be open to companies to file under one return copies of all resolutions passed at a particular meeting as prescribed by form No. 23 on payment of only one fee for such return. This suggestion of the Committee appears to be consistent with the object of the legislature. If in order to give effect to the above view of the Committee, an amendment of Section 192 or any of the items in Schedule X is necessary (which, the Report states, is not the case) such Amendment should be made. It may be pointed out here that this is, really speaking, a practical difficulty and it is within the power of the Government to remove it by issuing departmental instructions.

Section 614 provides for enforcement of duty on the part of the company to file with the Registrar the documents specified therein. In case of any default in filing the documents contemplated by this section, the Registrar has power to call upon the company to make good the default within 14 days after the service of a notice on the company requiring it to do so. It was pointed out to the Committee that Section 614 does not provide for any punishment for disobedience of the order made by the Court, upon the application made by the Registrar or any member or creditor of the company, directing the company and any officer thereof to make good the default within such time as may be specified in that behalf. It was further pointed out to the Committee that even where a prosecution is launched and a conviction and sentence follow there is no provision for compelling the performance of the duty of filing the returns, accounts, or other documents. In this context, the Report observes that it is necessary that the Registrar should have filed with him up-to-date statement of accounts, returns and documents, etc., but criminal Courts trying these offences do not direct the filing of these documents for want of statutory authority. In order to remedy this state of affairs, the Report suggests the renumbering of the existing sub-section (3) as (4) and the addition of a new sub-section (3) so as to enable the Court while convicting, acquitting or discharging the accused to direct the accused (whether the company or its officers) to file or register with or deliver or send to the Registrar, such return, account or other document within such time as may be specified in the order on payment of the penalty prescribed in Section 611. The disobedience of the order as aforesaid is proposed to be made an offence punishable with imprisonment which may extend upto six months.

Now to the last part, XIII—the last part contains 44 sections from 615 to 658 and out of these 10 sections are proposed to be amended—which contains general provisions and it is here that the Report becomes of absorbing interest.

Section 615

Section 615 empowers the Central Government to direct companies to furnish information or statistics. It appears from the Report that an Incorporated Law Society expressed the view that the Central Government has unduly wide powers under this section and they are capable of being exercised in such a manner as to involve the company in considerable expense in furnishing statistics or other information. This suggestion was rejected on the ground that the Government would not act unreasonably or put companies to needless expenditure. This section was enacted by the legislature with a view to enabling the Government to obtain such statistics or information as may be necessary to guide its industrial or economic policies.

Under the Act of 1913, prosecutions were made in consultations with the law officers of the State Governments because the administration of that Act was left to the States which had little interest in its enforcement. The Central Government has now taken over the enforcement and administration of the Act and has set up an organisation for its proper working. The Department of Company Law Administration in its present shape consists of a secretariat organisation in New Delhi. There are four regional offices under that Department and are located at Bombay, Calcutta, Madras and Kanpur. Each State has one Registrar of Companies. Each regional organisation has a qualified accounts officer and a solicitor to help and advise the Regional Director and the Registrar in the region. The Department entrusts prosecutions to public prosecutors appointed by the State Governments. This practice is not conducive to the efficient or speedy conduct of the proceedings. The previous Act had failed in its objectives due to lack of adequate and efficient machinery for its enforcement. It is therefore appropriate that in order to achieve the objectives of the New Act the administrative set-up should be streamlined by the Central Government. It is also desirable that the Central Government should provide the machinery for conducting prosecutions under the Act so as to reduce the current dependence of the Administration on the public prosecutors of the State Governments. The Report recommends that a legal practitioner with adequate knowledge of Company Law who could give his whole time to the task should be entrusted with the work of conducting prosecutions and filing appeals from the orders of the criminal Courts in trials for offences under the Act.

The offences under the Act are non-cognizable and action could be taken by the Court on a complaint by the Registrar or a shareholder or a person authorised by the Central Government. The Registrar has now power under the Act to prosecute for minor offences such as default in filing returns. In respect of more serious offences disclosed in reports of inspectors, the responsibility now lies with the Central Government under Section 242 to prosecute the offenders.

In spite of the stringent provisions of the Act there has not been sufficient awareness of the objectives of the legislation. Again, as stated in the Report, offenders are let off with very light fines and they leave the Court with an impression that on payment of fine they are absolved from filing the required documents with the Registrar. The fines imposed by the Courts are passed on by the managements to the companies. In order to remedy this state of affairs the following proposals are made in the Report:

(1) A new section 614(3) is proposed to be introduced so as to remove the defects in the existing Section 614.

(2) A general provision in shape of a new Section 629A on the lines of Section 138 of the Indian Penal Code or the relevant section of the Banking Companies Act, 1949, is proposed to be introduced in the following terms: "In cases not expressly provided for in the Act, if any provision of the Act is contravened, or if any default is made in complying with any requirement of the Act, or of any order made thereunder, every director and other officer of the Company who is knowingly a party to the contravention or default shall be punishable with a fine not exceeding five hundred rupees, and where the contravention or default is a continuing one, with a further fine not exceeding fifty rupees for every day during which it continues."

(3) The Act being a Central legislation, the Central Government should provide the machinery for conducting prosecutions under the Act. A new Section 624A is proposed to be introduced in the Act so as to empower the Central Government to appoint prosecutors for the conduct of prosecutions arising out of the Act generally for a specified local area or in particular cases (*vide* New Section 624A (1) at page 180 of the Report).

(4) The power to prefer an appeal against the order of acquittal made by a criminal Court rests with the State Government concerned. Since the Act is a Central legislation it is proposed in the new Section 424A(2) that the Central Government should have such power.

The above proposals will indicate that the time has arrived for tightening up the Company Law so that its provisions may be honoured more in their observance rather than in their breach.

Application of Fines

The existing Section 626 is proposed to be amended in the following terms:

(1) The Court imposing any fine under this section may direct that the whole or any part thereof shall be applied in or towards payment of the costs of the proceedings, or in or towards the rewarding of the person on whose information or at whose instance the prosecution has been made.

(2) Notwithstanding anything contained in sub-section (1), if, in any proceedings instituted by a shareholder against a company or any officer thereof in respect of an offence under this Act, such company or officer is convicted, the Court may, by an order, direct the payment by the company or such officer, of any reasonable expenses incurred by the shareholder aforesaid.

Government Companies

Section 617 defines a "Government company." As regards this section the Report proposes that for the words "share capital" the words "paid-up share capital" may be substituted.

As regards Section 620, which has been the subject of criticism, the Report states that it is of a wide and sweeping character and it is desirable that these companies should, as far as possible, be put on the same footing as other public companies.

Section 643

The Report has discussed the rule-making powers of the Supreme Court in paragraphs 21, 187 and 205. We have observed the recommendations of the Committee for the amendment of Section 2(33) and Section 643 so as to take away the power of the Supreme Court to frame rules in respect of matter provided for in Sections 552 and 555(3) of the Act and vesting it with power to make rules in respect of the matter provided for in Section 549.

The Report suggests that Section 643 should be amended as follows:

(1) Section 643(1)(*a*) should be amended by adding the words "and Section 552 and sub-section (3) of Section 555" after the words "sub-section (3) of Section 550." As suggested in paras 21 and 187 of the Report the reference to "sub-section (1) of Section 549" in Section 643(1)(*a*) should be omitted.

(2) Section 643(1)(b) requires that the rules should be "consistent with the Code of Civil Procedure." The adoption of the word "Code" as given in the Code of Civil Procedure would result in the anomaly that the rules made under Section 643 of the Companies Act will have to be consistent not only with the main body of the Code, but, in respect of each High Court, with the rules in the first Schedule as annulled, altered or added to by that High Court. The Report states that the anomaly can be avoided if the rules to be made under the Companies Act are required to be consistent with the sections in the body of the Code of Civil Procedure. (3) There is an express provision in Section 94(2) that the powers under that section which include the power to sub-divide the shares, shall not require to be confirmed by the Court. Nevertheless, Section 643 of the Act provides that the rules are to be made for giving effect to the "provisions of the Act" relating to sub-division of shares, and the only provision in the Act relating to sub-division of shares as such appears to be in Section 94. The Report therefore points out that the words "and the sub-division of the shares of a company" occurring in Section 643(1)(b)(iv) are inappropriate and should be deleted.

Section 616

Section 616 states that the Companies Act is applicable to insurance, banking, electricity supply and other companies governed by special Acts. As regards Section 616(*c*), the Report states that the words "The Indian Electricity Act, 1910 (IX of 1910) or" should be inserted after the words "the provisions of."

Section 647

The Report notes that the liquidation proceedings begun under the Act of 1913 in respect of a large number of companies have been going on for years and in most of the cases the companies have no assets worth the name. It may be desirable in some cases that the liquidators appointed under the 1913 Act should be discharged and the cases transferred to the official liquidators appointed under Section 448 of the Act. Again, there has been some difference of opinion on the question whether the official liquidator could take charge of pending liquidations. It has been the view of some Courts that a liquidator appointed under the Act of 1913 does not become *functus officio* until the winding-up is completed. An amendment of Section 647 is proposed in the following terms:

"Where the winding-up of a company which commenced before the date of the coming into force of this Act is pending on that date—

(i) Sections 471, 472, 552 and 555 shall apply in respect of any moneys paid into the companies liquidation account, whether before or after such commencement;

(ii) the further proceedings in liquidation after the order for winding-up made by the Court may, on an application made to the Court by the Registrar or any person interested, stand transferred to the official liquidator appointed under this Act;

(iii) in other respects the company shall be wound up in the same manner and with the same incidents as if this Act had not been passed."

The Report states that Sections 645, 647(2), 648, 656 and 658 are redundant in view of Section 6 (*a*) to (*e*) of the General Clauses Act. In view of the definition of "company" in Section 3, Section 656 is unnecessary and therefore it is proposed to be omitted. Section 658 is also otiose and it is proposed to be deleted.

There are a large number of concerns in South India variously styled as *nidhis*, mutual benefit societies, permanent funds, etc. This is a class of companies which are *sui juris* and which present peculiar features. They are companies incorporated and registered under the 1913 Act or the earlier Companies Acts and their objects, *inter alia*, are to enable the members to save money, to invest their savings, and to secure loans at favourable rates of interest. They inculcate the idea of thrift and compulsory saving in the minds of the poor and middle class people. These companies have transactions only with the members and not with the public. Their shares are only allotted to those who desire to take advantage of the benefits offered for depositing or borrowing money. Loans are granted to members on the security of their recurring deposits or of jewels or house property repayable with a moderate rate of interest during a period of four to seven years in monthly instalments.

The Report states that it was represented to the Committee that some of the provisions of the Act have caused hardship to the type of companies which have been discussed above and have seriously crippled their slender resources. The Report points out the difficulties experienced by these companies and suggests amendments of the relevant sections of the Act. These suggestions may be briefly stated as under:

(1) In case of *nidhis* whose membership runs into several thousands, publication on the notice board of the company and an advertisement in one or two issues of a local paper should be deemed to be a sufficient compliance of Section 53.

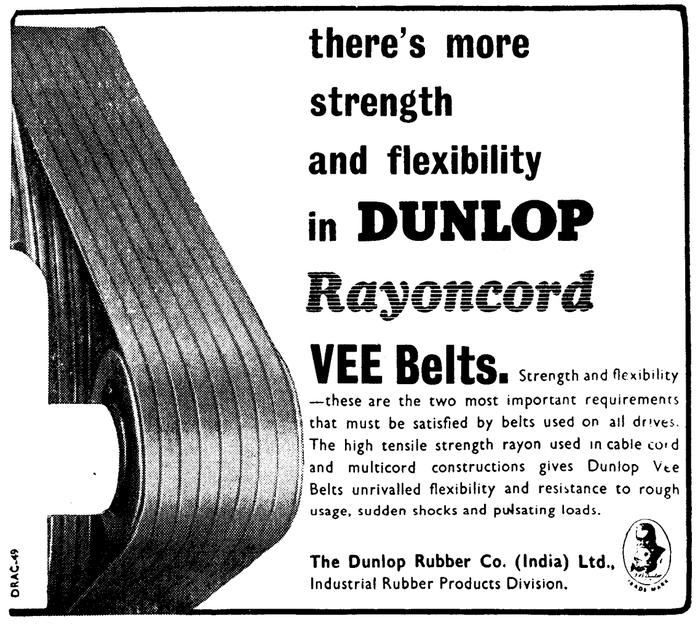
(2) *Nidhis* should be exempted from Section 159 which imposes obligation to file every year the return of members, past and present. It is enough if the changes in membership that have taken place during the year are alone returned.

(3) Suitable amendments are proposed to relax the provisions of the following Sections, namely, Sections 166, 207, 219, 270, 280 (relating to age limit of the directors) and 295.

The Report states that there is no justification for exempting these companies from the operation of Section 314 in view of the amendments proposed in that section.

As regards Section 75(1), the Report states that in the case of *nidhis* the fee leviable in respect of the return of allotments to be filed should be considerably reduced so as to enable them to extend their usefulness and service to the poor and the lower middle class people. It is open to the Central Government to reduce the fee in exercise of powers under Section 613 of the Act.

The *S.N.D.P. Yogam*, a non-profit-making concern, had represented before the Committee that it should be exempted from the operation of certain provisions of the Act, in view of its large membership of over 12,000, its numerous branches numbering 1,270 and its social and educational activities. The Report suggests that the considerations that apply to the case of *nidhis* should also apply to the *Yogam* and there is no need to grant any special exemptions.



TENNESSEE VALLEY AUTHORITY COMPLETES 25 YEARS

HOW IT SERVES U.S.'S NATIONAL ECONOMY

THE Tennessee Valley Authority, whose initials "T.V.A." have become synonymous throughout the world with the integrated development of natural resources, celebrates its twenty-fifth anniversary this year. It was on 18th May 1933 that the T.V.A. Act of Congress was signed into law. The owners of this enterprise, the people of the United States, made a substantial investment in T.V.A. The investment now is paying dividends in dollars and cents, in the vigour of economic life, and in its outstanding contribution to the national defence. In the beginning, T.V.A. was frankly called an experiment. Today it is a $2-billion going concern. Resources once idle are at work. Resources once wasted are being conserved and used.

The purpose of T.V.A., as delineated in its Congressional charter, was clear. The natural resources of the 40,910-sq. mile watershed of the Tennessee river system were to be developed to their maximum usefulness. The waters of the river system were to be harnessed for maximum flood control, deep water navigation, and maximum hydro-electric power production consistent with the operation of the dams for flood control and navigation. The great World War I chemical plants were to be used for the development of new forms of fertilisers which would be cheaper to the farmer as applied to the land—plant nutrients the soils of the country needed. The plants were to be available on overnight notice for the production of munitions should an emergency arise.

River System

What has happened in these 25 short years? The Tennessee river system, fourth largest in the country, has been brought under control. Every basin-wide flood, including the greatest in 90 years, has been passed downstream with little harm. An all-year navigation channel connects the great trans-Appalachian region with the inland waterway system directly connecting 20 states. Thirty-one major dams and seven large steam plants generate electricity in quantities that dwarf the demands of America's largest cities and more than half of it goes to atomic defence plants. At Muscle Shoals, Alabama, the Fertiliser-Munitions Development Centre provides for the nation's farmers and for the fertiliser industry the country's only public research organisation equipped for complete development of fertilisers from laboratory to demonstration-scale production. In war-time, it serves as a chemical defence plant.

In 18 states, team research in fertiliser problems has been established with the agricultural colleges. Also with college collaboration, education programmes are in operation in 34 states to bring the latest findings in fertiliser science and fertiliser use to the practical farm, as well as to fertiliser distributors and their local dealers. Tennessee Valley farms are steadily turning from row crops to pasture agriculture. Green fields are healing the open wounds of erosion and providing feed for livestock to supplement one-crop farming.

Forest Management

The forests, which cover over half the valley, are gradually being placed under scientific management by their owners. Idle, eroded areas are being reforested. The products of wood-using industries are valued at almost $450 million a year.

Malaria, which once sapped the strength of a third of the people along some stretches of the Tennessee, has not been detected for nine years.

Recreation, the bonus of river development, has become a major industry in which states, counties, cities and private individuals have invested over $72 million.

Perhaps most important of all, when the security of the nation was in peril in two terrible wars, the resources of a strategic region were mobilised quickly into the nation's scheme of defence to produce aluminium, chemicals, and the materials for atomic weapons. As this contribution to security and defence was national in significance, so have the region's resources been brought to the service of the nation's commerce, agriculture and industry. The new navigation channel is being used on an increasing scale by shippers in many mid-western and southern states to bring oil, steel, coal, grain and other commodities into the valley, or to receive goods from valley producers.

The structures regulating floods are designed and operated to help protect the lower Ohio and lower Mississippi valleys, benefiting millions of acres of land in those areas. Research into new fertiliser materials and processes, resulting in more than a hundred patents, has been made available without charge to scores of private industrial firms. This same type of research has helped make possible the economical development of the vast phosphate fields in western states and extended the utilisation of the nation's phosphate reserves. Farmers in every major agricultural region are making better use of fertilisers—and of their land—because of T.V.A.-sponsored educational activities.

Most of the dollars that bought the heavy equipment T.V.A. needed for its dams and steam plants was spent in states outside the valley. And as electric power has become widely available at low cost, the great plants manufacturing appliances, most of them in the north and east, have supplied an estimated two-billion dollars worth of their products to citizens of the region.

The past 25 years have been years of growth, sometimes rapid, sometimes painstaking and slow. Twice during that period the pace was quickened by war. During World War II, when the defence programme required power, 12 dams were simultaneously under construction. Again, during and after the war in Korea, T.V.A. undertook a programme of steam plant expansion to furnish the power needed for a tremendous enlargement of atomic energy facilities, for other defence plants, and for the rapidly growing demand from homes, farms, and industries. This surge of activity reached a peak in the past five years when installed capacity burgeoned from five to ten million kilowatts.

There were years of painstaking, though sometimes urgent, research to find fertiliser materials that would be cheaper to the farmer as applied to the land, and containing minerals the land needed. There were years of patient progress in reforestation efforts, in stimulating timber owners to greater and more scientific production, and in assembling data useful to industry in planning investment for future expansion.

There were years of building—the building of many structures, dams of beauty and utility, bridges, transmission lines, and in later years great coal-consuming generating stations, some of the largest in the world. There was building, too, that was less tangible but just as important: the foundations have been laid and much progress achieved in the relationship of T.V.A. with state and local agencies of government in the valley, with educational institutions, with industries and with individuals. Their co-operation has been, and always will be, essential to the success of the work.

Measured in dollars, the success of the work thus far is significant. Directly traceable savings in flood damage prevented is $131 million. Savings to shippers using the navigation channel in lowered transportation costs are more than $20 million a year. T.V.A.'s low electric rate policy has saved power consumers $746 million over what they would have paid for the same amount of electricity priced at the average of rate schedules in effect throughout the country.

To the expanded market for electric appliances has been added the entirely new market for boats, motors, lakeshore housing, and services and products related to water use. The valley is a national playground. There is no way of putting a dollar value on the victory over malaria, on the value to industry of research in new fertilisers, of better forests, and of improved farming systems. It is difficult to assess dollarwise the satisfaction of a farmer and his wife

EXPERIENCE is teaching your customers to always look for the label 'Sanforized'. They know this label is their guarantee that garments will not shrink out of fit...even after many, many washings.

What they don't know is the 'behind the scenes story' which ensures the complete reliability of all cloth labelled 'Sanforized'. Anytime, unannounced...our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to a rigorous international wash-test, reports on his findings. *Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized'.*

'SANFORIZED' on the label means better sales for you!

It's this kind of care plus our advertising plus *experience* which makes cloth with the label 'Sanforized' such a sure seller—such a profit-maker for *you!*

Look for 'SANFORIZED' on the label

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) Proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95, Marine Drive, Bombay 2

INDUSTRIAL PRODUCTION IN ASIAN COUNTRIES

SLOWING DOWN IN PACE OF INCREASE

FOR some years now, the countries in Asia and the Far East have been making concerted efforts to bring about rapid economic development with a view to ensuring improvement in the living standards of the masses which are at present deplorably low as compared with those in the industrially advanced countries in the West. The progress actually made, however, has been slow, especially of late. For, partly because of the drain on resources arising from internal and international tensions and partly because of pressures generated by economic development efforts, thanks to limitations in domestic supplies and resources, the external accounts are very adverse. Another impediment has been the growing pressure of population. How far these factors have checked the rapid growth in industrial production has been well brought out in the *Economic Survey of Asia and the Far East* 1957 prepared by the Secretariat of the Economic Commission for Asia and the Far East (E.C.A.F.E.), Bangkok.

The *Survey* reveals that, although manufacturing and mining production during the year 1957 rose by about 11 per cent. (on the basis of returns for the first three quarters), as against only 3.5 per cent. for the world as a whole, there was a definite slowing down in the pace of industrial progress. This tendency was more pronounced in the second half of the year than in the first half and was noticed in Japan and India, which between them produce about three-quarters of the manufacturing and mining output of the region, excluding Mainland China. The limiting factors, according to the *Survey*, are mainly on the supply side which included foreign exchange difficulties, bottlenecks in supply and distribution of raw materials, relative increase in raw material prices, and continued scarcity of capital and technically trained personnel.

Major Trends

It is against this general background that the *Survey* analyses the major trends in industrial production in the E.C.A.F.E. region. The analysis classifies the countries into three distinct groups. The first group consists of the comparatively advanced economies such as Japan, India and China; the rate of industrial growth in these countries, after achieving peak levels in 1956, slowed down in 1957, owing to temporarily reduced rates of capital formation. The second group consists of Hong Kong, Southern Korea, Pakistan and the Philippines which continued or even accelerated growth in industrial production in 1957, though in Pakistan and the Philippines there was a slight tapering off. All the other countries which experienced only a little industrial growth are included in the third group.

Among the countries in the first category, Japan is said to have shown a continued growth of industrial production during the first half of 1957. In the second half, however, it was compelled to cut the rate of investment and induce downward adjustments in production and inventories, thanks to the restrictive monetary and investment policy necessitated by the rapidly deteriorating balance of payments. As regards India, the index of industrial production (1953=100) which had reached 135 in 1956 fell to 133 in the first quarter of 1957. This decline is attributed to the difficulties in the balance of payments, with large expenditures on food imports interfering with imports of machinery and replacement parts, which led to revision or cut-back in some industrial projects. The closure of the Suez Canal late in 1956 also interrupted the regular supply of capital goods. Industrial production, however, picked up rapidly in the second quarter of 1957, the index reaching a peak of 149. It tended to decline again in the third quarter, the index being 141. In Mainland China, production is reported to have increased by 7 per cent. in 1957 as against 31 per cent. in 1956, while in Taiwan, production excluding sugar rose by 13 per cent. as against 6.1 per cent.

The countries in the second group registered substantial gains in industrial production during 1957. In Pakistan, for instance, the index of production (1954=100) rose to 142 in 1956 from 126 in 1955 and the rise continued in 1957. But the utilisation of capacity was somewhat limited on account of heavy food imports which did not permit imports of the required quantities of raw materials and spare parts and inadequacy of power supply. In the Philippines, production continued to increase in the first half of 1957, the rise being 8 per cent. as compared with the corresponding period of 1956. The *Survey* observes that the slowing down of advance occurred despite steadily rising domestic demand for consumer goods and Government encouragement by way of tax concessions and liberal dollar allocations for essential imports. It is stated that the shortage of imported raw material was one of the causes for the decline in production. South Korea showed a continuously upward trend in production, the index (1956=100) having risen from 143 in 1956 to 211 in October 1957. The pace of development in Hong Kong slowed down a little.

Indonesia and Burma are among the countries of the third group with comparatively small increases in industrial activity. There was more or less a steady decline in output in Ceylon during 1957. The difficulties in these countries resulted largely from acute foreign exchange shortages. There were a number of disincentives to investment in both the public and private sectors such as shortage of efficient management and skilled labour, limited size of the domestic market and inability to compete fully with foreign suppliers.

National Income

The *Survey* stresses that, though industrial production continued to expand in several E.C.A.F.E. countries, its relative contribution to national income as a whole remained at a low ebb, with the possible exception of Japan. The share of industrial production in Japan (according to 1956 estimates) was 28.3 per cent. which has been found more or less stable over years, in view of the already developed capacity in the country. In the 'semi-industrialised' countries like China, Hong Kong, India, Malaya and Singapore, there was a steady growth in the relative share of industries in the net domestic product. For example, the share of manufacturing, mining and construction in net domestic product in India has steadily gone up from 16 per cent. in 1950 to 19 per cent. in 1955. Some of the 'non-industrialised' countries in the region like South Korea and Pakistan, maintained a relatively high rate of industrial expansion.

The level of industrial production on a *per capita* basis is by and large too low in these countries. The *per capita* production (1956) of electricity was 25 kw.h. in India, 30 kw.h. in Mainland China, and 801 kw.h. in Japan, as against 1,702 kw.h. in the U.K. In regard to coal, it was 104 kg. in India, 189 kg. in Mainland China, 506 kg. in Japan, as compared with 4,405 kg. in the U.K.

The industry-wise review of production during the year shows that, while fuels (coal and petroleum) raised or kept up their relatively high rates of increase, there was definite retardation in the case of textiles (which actually declined), power, fertilisers and cement (based on the estimates for the first half of 1957), as is indicated below:

Item and unit	1955	1956	1957	Percentage increase	
				1957 over 1956	1956 over 1955
Coal (million tons) ..	179.69	197.79	225.68	14.1	10.1
Petroleum, crude (million tons) ..	18.87	20.40	22.28	9.2	8.1
Electricity (billion kw.h.) ..	91.13	106.23	114.29	7.6	16.6
Iron and steel—					
Pig iron (thousand tons) ..	10,779	12,611	14,531	15.2	17.0
Crude steel (thousand tons).	14,060	17,172	20,053	16.8	22.1
Cement (million tons).	22.13	27.04	30.21	11.7	22.2
Ammonium sulphate (thousand tons) ..	2,968	3,302	3,381	2.4	11.3
Cotton textiles—					
Cotton yarn (thousand tons).	2,099	2,438	2,433	—0.2	16.2
Cotton cloth (thousand tons).	11,492	14,320	14,109	—1.5	24.6
Paper (thousand tons) ..	3,059	3,606	4,164	15.5	17.9

Production of coal, we are told, was at a high rate in Mainland China, Japan and India. Petroleum output also recorded a rise, particularly in Indonesia. In contrast, the increase in electricity generation was relatively much less, though the total supply was higher. Similarly, production of iron and steel in the three main producing countries (India, China and Japan) continued to rise but at a slower rate. Mainland China and Japan accounted for the increase in production. India was operating the existing plants at capacity and did not show any appreciable increase in these years. The combined share of the three countries' crude steel output in the aggregate world output rose steadily from 5.7 per cent. in 1952 to 6.4 per cent. in 1955, 7.5 per cent. in 1956 and 8.4 per cent. in 1957. Cement is produced in several Asian countries. As the *Survey* shows, production doubled during 1952-57, the largest increase being registered by China (Mainland), Japan and Pakistan. The rate of increase, however, fell by 50 per cent. last year as compared with 1956. Another significant trend was the slight decline (on the basis of the first half) in cotton textile output.

The *Survey* proceeds next to the review of the current trends in industrial development programming. It is pointed out that, while agriculture has been accorded pride of place in the economic development plans in most of the countries and much attention has also been given to the infra-structure items such as transport and power, a comparatively small allocation of funds and other resources has usually been made for the development of industry as such (manufacturing and mining), though industrialisation is an almost universal objective of the countries of the region. In this connection, the *Survey* observes:

"The experience of 1957 has once again shown that, unless agricultural production is on a satisfactory basis, intensified efforts to achieve industrial development will generally result in increased inflationary pressure and balance of payments difficulties, and that the planned increase in industrial output is itself likely to be frustrated by certain supply shortages. In view of difficulties of this kind that have actually occurred or are in prospect, it is probably true to say that programmes of industrialisation are now being viewed with considerable realism and with less exaggeration than was sometimes apparent in the past. The need for fairly rapid industrialisation still seems to be a basic postulate of almost all countries in the region, but it is realised that a somewhat broader and more balanced approach to the objective is necessary."

The *Survey* refers to another significant feature in the industrial development programming in S.E. Asia, namely, the important role assigned to Government. At the same time, however, in some countries, this leading role of the Government is combined with a policy of encouraging private enterprise to take an active part in industrial development. The formation of development corporations, such as the Pakistan Industrial Development Corporation, the new investment policy outlined in August 1957 by the Philippine Government to withdraw from fields where private enterprise is expected to take over and greater stress laid by Burma on the utilisation of resources in the private sector, etc., are cited as instances in point. As regards India, it is stated that it is regarded as essential that encouragement is given to private industry, and, at the same time, a basic premise underlying the Five-year Plan is the continued relative as well as absolute expansion of the public sector.

Small Industries

The objective of import substitution receives considerable attention in the planning of industrial development. Efforts are also made to diversify exports by increasing the share of industrial products, and thus to achieve greater stability in foreign exchange earnings and, consequently, of imports of capital goods necessary for further economic development. The *Survey* refers to the relatively greater emphasis placed on heavy industries, particularly in India and China. Another trend in industrial development programming has been towards decentralisation through the development of small-scale industries in rural areas.

According to the *Survey*, the basic consideration in favour of placing greater emphasis on the development of small and cottage industries has generally been the shortage of capital and managerial and labour skills, together with general abundance of manpower. To quote it: "In short, the peculiar proportions of factor supply in the region are the main determining factor." The *Survey* clearly warns that, unless specific types of manufacturing are developed which use less of the productive factors in short supply and more of the abundant resources, the joint problems of increasing the immediate availability of goods and creating job opportunities cannot readily be solved. It no doubt admits that, in this connection, attention is being increasingly directed to the need to adapt the Western technology to the particular situation of the countries of Asia and to develop indigenous techniques of production and that care is also being taken to prevent the rise of new technological unemployment, stemming from the application of modern techniques. Nevertheless, the *Survey* emphasises that a basic problem facing small-scale operation has been that of raising productive efficiency, in general, and productivity of labour, in particular, without extensive mechanisation.

NEW PUBLICATIONS

The Design of Development. By Professor Jan Tinbergen. Published by Johns Hopkins Press, Baltimore, Maryland. Pages: 91. Price: $2.50.

THE *Design of Development* by Professor Jan Tinbergen of the Netherlands School of Economics is the second publication of documents in use at the Economic Development Institute, which the World Bank established in 1955 as a centre for the study of development problems by senior officials from the less developed countries. The author served as an economic consultant to the World Bank in 1955-57 and this book was written at that time.

The background of *The Design of Development* is the revolutionary change in the economic outlook of peoples all over the world since World War II. Almost without exception, nations have come to view the rate of economic growth as something that can and ought to be accelerated by deliberate policy. But the framing of such policies to suit the aspirations, needs and capacities of individual countries is an intricate and difficult task. There is no uniform answer to the development problems of, for example, India and Brazil, Ceylon and Colombia. But there are certain principles of economic policy whose observance can ensure a more effective use of productive resources.

It is on such basic matters that Professor Tinbergen concentrates in this book. He explains in non-technical language the essential characteristics of a "development programme"—using that term to cover development in both the Government and private sectors. He then suggests methods of appraising projects that are parts of such a programme and comments on the problem of stimulating private investment. The book is concerned with methods of assessment rather than with specific policy prescriptions. As Professor Tinbergen says: "Programming is not an alternative to common sense ... The role to be played by scientific knowledge and insight in the field of development will for a long time to come be only a modest one. The relevant facts of life are too many and too varied to make it possible to reach decisions without a strong intuitive feeling for human relations."

New Japan Vol. 10, 1958. Published by the Mainichi Newspapers, Yuraku-cho, Chiyoda-Ku, Tokyo, Japan. Pages: 354.

This tenth edition of *New Japan* is, in both contents and appearance, a publication *par excellence*. Grand in conception, elegant in design and layout, it is an outstanding showpiece of the Japanese publishing industry. *New Japan* is truly a symbol of the accomplishments of the Japanese people in every field of activity. Through maps, charts and illustrations and with the aid of crisp notes, it tells the story of Japan, its colour and customs, moods and manners, life and literature. A remarkable feature of the publication is that there are reproductions, with brief explanatory notes, of some of the masterpieces of Japanese paintings. Among topics of commercial interest contained in it, particular mention may be made of the directory of leading companies in Japan, the industrial map of the country and a number of sketchy, well written articles on the major industries of Japan. The enticing picture of the country presented through exquisite vignettes of places of scenic beauty has considerable tourist appeal. This publication is indeed Japan's "visiting card" to the world outside.

Citadel Market and Altar. By Spencer Heath. Published by The Science of Society Foundation, 1502, Montgomery Road, Elkridge 27, Maryland. Pages: 259. Price: $6.00.

The title of the book is a symbolism for the chief forces that make for social progress. The author of the book, Mr. Spencer Heath, is a student of the sciences, philosophy and history, and retired from active engineering research in order to pursue horticulture. The subject he deals with cannot be properly brought under either sociology or economics or philosophy. But it does deal with all the subjects. His chief concern is, of course, the dynamic expansion of human personality. As Mr. John Chamberlain in his foreword points out, Mr. Heath envisages the citadel as the protector of the market place. This is its role. When the citadel stays within the bounds of its purely protective function, human spirit is left free to devote itself to the spontaneous side of life symbolised by the altar. But if the citadel encroaches on the domain of the market, usurping its functions, man's creative faculties receive a setback. Mr. Heath insists that ownership is what confers freedom. To be a free man, one must have the right to a home base, something to stand on without asking any politician's permission. Emphasising the role of private property in land, Mr. Heath says:

"First and foremost of these benefits will be security of possession. The occupant obtains this security by an exchange process that is inviolate only so far as private property in land is respected and upheld. While this institution stands, a civilised society with secure and definite places of work and abode and exchange is possible; when it is destroyed, there can be no security either of ownership or possession, no respecting of property or freedom in any form; for then no occupancy or possession can rest on any sanction but the arbitrary will and power of a self-constituted or an elected coercive authority. Respecting the prerogative of ownership, and thereby of the exchange relationship between owners and tenants, is all that stands between the peaceable possession and use of land, between the amenities of civilised relationships and finally the dearth and darkness of utter slavery or a nomadic barbarism. These dire alternatives to private ownership and, thereby, security in the possession of land make plain the absolute indispensability of that institution to any social or civilised order of life."

This is a book with a challenge. It is fresh and vigorous. Above all, it owes not a little of its interest to the obvious sincerity of the author and his insight into social problems.

Bhadkad—Social and Economic Survey of a Village. Published by the Indian Society of Agricultural Economics, 46-48, Esplanade Mansion, Mahatma Gandhi Road, Bombay-1. Pages: 71. Price: Rs. 4.00.

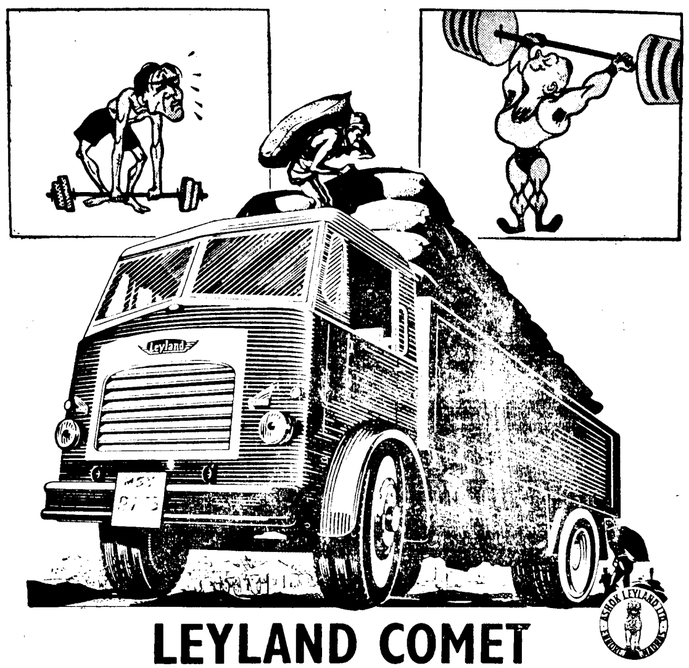
The book under review presents the results of two surveys conducted at an interval of 40 years. From this point of view, this is perhaps a unique contribution to the literature on Indian economic surveys. The first survey was conducted in 1914-18, whereas the second survey was conducted in 1955. The results of the two surveys, as the authors themselves point out, bring out "the stark reality that the progress in development either in the economic sphere or in social change has been very slow." Conditions of stagnancy have prevailed over a period of nearly 40 years. This, of course, is disconcerting. In conclusion, the Study says:

"The case of Bhadkad is illustrative of the various problems confronting Indian villages and agriculture, the difficulties and handicaps of the Indian farmers and the social stratification and beliefs which have arrested the progress of the rural community. The differences are only one of degree, introduced by local conditions. Similarly, the magnitude of the task of reconstruction of a typical Indian village which has had the impact of partial development due to facilities of communication and contact with the industrial centres of district is exposed. It is seen that the cultural development of the various groups of the population has varied and synchronised with their social contact with the urban structure of the society living outside the village. In this context, the survey also illustrates clearly the factors that resist development and the effect of piecemeal change in the traditional institutions without properly conceived substitute organisation to replace them. The problem in Bhadkad is therefore the same problem as that in many of the hundreds of thousands of Indian villages, viz., that of creating conditions for full employment and higher incomes and the need for visualising institutional changes which would so alter the pattern of the social and economic behaviour as to be responsive to this need for rapid economic development."

This observation must provide much food for thought for those who are engaged in the reconstruction of rural India.

The Indian Central Oilseeds Committee, Hyderabad, has published two monographs, one on the *Vanaspati Industry* by Dr. G. S. Hattiangdi and the other on *Solvent Extraction of Vegetable Oils* by Mr. H. V. Parekh, in a series of 12 monographs which it intends to bring out by the end of this year. Written by specialists in the line, these monographs should prove valuable guides to trade and industry, university students and researchers in the fields of allied science and technology. The monograph on the *Vanaspati Industry* (Price: As. 8) deals with vegetable oil products, hydrogenation of oils, fundamentals of vanaspati manufacture, its production, marketing and consumption and its nutrition value. The monograph on *Solvent Extraction of Vegetable Oils* (Price: As. 12) contains, among other things, a review of various methods of production of vegetable oils and application of solvent extraction processes to various oilseeds and to the village *ghani*.

BUILT TO CARRY HEAVIER LOADS



LEYLAND COMET

THE BIG CHASSIS FOR THE BIG JOB

The Leyland Comet is built to carry at least 50% more goods every time than any other chassis made in India. That means you save on time, save on fuel and save on maintenance. It's truly the BIG chassis for the BIG job—the only 7½ ton payload chassis made in India.

AL.130

KANKNARRAH AND KAMARHATTY JUTES SUFFER LOSS

PREFERENCE DIVIDEND AGAIN IN ARREARS

THE jute industry has been passing through a period of heavy stress and strain for some time past. Its problems are wide and varied but some of the chief ills which do not admit of an easy solution are difficulty of getting raw jute at economic price levels, the low price of the manufactured goods, as compared with the higher price of raw materials, the dwindling export market due to keen competition from Pakistan and resort to other new substitutes for jute goods by importing countries. The inevitable result has been that several mills in recent years are incurring heavy losses year after year and carrying forward such losses. The plight of the investor in the shares of these companies hardly requires any elaboration.

A typical example to illustrate the above conditions is provided by the working results of the Kanknarrah Company Ltd. and the Kamarhatty Company Ltd. (both under the managing agency of Messrs. Jardine Henderson, Ltd., Calcutta) for the year ended 31st December 1957. Both the Companies have suffered losses during the year under review. This is the third year in succession for which these Companies have incurred losses, although there is great variation in the extent of the loss each has suffered. A slightly encouraging feature of the year's working, however, is that even though there have been losses, they are far less pronounced than those in the previous year. This is evidently due to the better working conditions during the second half of the year and no less to the economies effected by carrying out a programme of modernisation. Thus, Kanknarrah has incurred a gross loss of Rs. 9.71 lakhs, as against Rs. 19.39 lakhs in the previous year and Kamarhatty's loss has come down from Rs. 7.50 lakhs to Rs. 4.48 lakhs. The wide variations in the fortunes of the two Companies within a short period can be gauged when it is realised that only as recently as in 1954 Kanknarrah had made a gross profit of Rs. 14.76 lakhs, while Kamarhatty earned as much as Rs. 18.54 lakhs.

After providing for Managing Agents' remuneration and depreciation, the net loss of Kanknarrah stands at Rs. 20.22 lakhs, as against a net loss of Rs. 22.19 lakhs a year ago. The net loss of Kamarhatty at Rs. 9.22 lakhs is slightly lower, as compared with Rs. 9.34 lakhs in the previous year. Both the Companies have raised the provision for depreciation substantially; Kanknarrah having increased it from Rs. 1.75 lakhs to Rs. 10.01 lakhs and Kamarhatty from Rs. 60,000 to Rs. 4.24 lakhs. Utilisation of the new machinery during the year under review is stated to be the cause for the greatly increased charge for depreciation. The total net loss carried forward for the two years, 1956 and 1957, amounts to Rs. 41.59 lakhs in the case of Kanknarrah and Rs. 18.02 lakhs in the case of Kamarhatty. Both the Companies have passed over the dividend on the preference as well as ordinary shares for the second year in succession.

The table at the bottom of the page will enable one to make a comparative study of the working of these two Companies during the past three years.

In compliance with the working time agreement of the Indian Jute Mills Association, the mills continued working the equivalent of a single shift for 48 hours per week throughout the year with 12½ per cent. of the total looms sealed. Triple shifts were worked in the mill on the new machinery and double shifts in the factory for some months in the year. According to the Directors' report the setting up of a few jute buying agencies in selected areas in order to ensure for mills regular and suitable supplies of raw material is promising enough to encourage a substantial extension of this system of purchase during the current season. This has resulted in a satisfactory reduction in the wastage percentage in the mills and the agencies themselves are now operating on an economical basis. During the year under review, the Kanknarrah Company purchased 19,968 and Kamarhatty 20,640 loom hours per week from the Reliance Jute Mills Company under the same managing agency. The purchase was for an initial period of six months from September 1957. This arrangement has been renewed for a further period of six months until 8th September 1958.

Commenting on the trading conditions during the year under review and the prospects for the current year, the Directors observe:

"In their last previous report dated the 30th August 1957, your Directors stated that substantial losses continued to be incurred until the end of March 1957, after which they had been much reduced but that, unfortunately, the full economies to be expected from the installation of modern spinning machinery had not at that date so far been achieved. Of the loss incurred during the year, much the greater part had already accrued by the end of June and, with the exception of the month of October, working results were distinctly better in the second half of the year, net profits being earned in some months. At the same time, while very considerable improvements are evident in the mill working and while substantial reductions in costs have in fact been achieved, as recorded in the last report, it is evident that still further reductions will have to be achieved in the cost of the raw material which is being processed before profits on a scale commensurate with the Company's capital can be earned.

"Increased availability of raw jute and the realisation by the market that the current year's crop would prove comparatively plentiful has resulted in raw jute prices being maintained at a level at which it has generally been possible in recent months to buy jute and simultaneously sell goods at a profit. While this is a welcome change from the situation which has confronted these Companies for some time past, it will be appreciated that the industry, being largely dependent as it is on the export of its products for its prosperity and indeed for its survival, is particularly vulnerable to any general recession in the volume of foreign trade throughout the world. The stock position is, however, sound and, with the foregoing reservation regarding world market conditions, your Directors are of the opinion that despite the very disappointing results for the past year the Companies are now in a better position to face the future than it has been for some years."

The following synopses of the Companies' latest balance-sheets give an idea of their financial position:

	As on 31st December 1957

INDIAN STANDARD WAGON'S PROFIT LOWER

SHARP RISE IN SALE PROCEEDS

DESPITE a substantial improvement in sale proceeds, the working results of the Indian Standard Wagon Company Ltd. (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) show a slight diminution in its gross profit for the year ended 31st March 1958. The reason is obviously to be found in the higher manufacturing expenses as a result of increased cost of raw materials and stores and spare parts consumed. Thus, the gross profit at Rs. 64.68 lakhs has declined by Rs. 6.04 lakhs or 8.5 per cent. from Rs. 70.72 lakhs for the previous year. Although this recession by itself is not very serious or marked, it has reversed the unbroken upward trend in profit since 1949-50, when the profit amounted to a mere Rs. 10.50 lakhs.

The net profit at Rs. 29.95 lakhs, on the other hand, stands higher, as compared with Rs. 26.48 lakhs for 1956-57, thanks to the cut in the provision for taxation from Rs. 35.20 lakhs to Rs. 26 lakhs. The tax provision for the year under review, in spite of the cut, still works out to about 40 per cent. of the Company's gross profit and the Directors have, in addition to the aforesaid provision, set aside Rs. 1 lakh for tax contingencies, as against Rs. 1.20 lakh provided a year ago. The distribution to the shareholders has been lowered to 20 per cent. from 30 per cent. paid for the previous two years (made up of a dividend of 25 per cent. and a cash bonus of 5 per cent.), to which level it had been stepped up from 25 per cent. paid in 1954-55. It should, however, be noted that the year's dividend is on a higher capital of Rs. 38.98 lakhs, doubled by the capitalisation of Rs. 19.49 lakhs in December 1957.

The Directors have created a new reserve, styled development rebate statutory reserve, and have made an initial contribution of Rs. 9,528, representing 75 per cent. of the development rebate allowable on plant and machinery installed after 31st December 1957. Also a sum of Rs. 75,000, being tax saving on account of the development rebate allowable on plant and machinery installed during the nine months to 31st December 1957, has been set aside to general development reserve, to which account the balance of the old development rebate reserve as at 1st April 1957, representing previous tax savings, has now been transferred. The transfer to plant replacement reserve has been raised from Rs. 5.25 lakhs to Rs. 5.74 lakhs, while that to general reserve has been maintained at Rs. 1 lakh.

(In lakhs of rupees)

* On the increased capital of Rs. 38.98 lakhs doubled by the capitalisation of Rs. 19.49 lakhs from the plant replacement reserve in December 1957.

The Directors observe that, although the orders on the books are not unsatisfactory, the prospects of steady work during the current year are somewhat uncertain, thanks to the shortage of steel.

A sound financial position is disclosed by the Company's balance-sheet as at 31st March 1958. The paid-up capital which stands raised from Rs. 39.85 lakhs in the previous year to Rs. 59.35 lakhs by the capitalisation of reserves as aforesaid, is supplemented by reserves and surplus aggregating Rs. 55.07 lakhs. The gross block of the value of Rs. 100.41 lakhs has been written down to Rs. 35.45 lakhs. Expenditure on uncompleted work amounts to Rs. 8.66 lakhs. The current assets aggregating Rs. 597.81 lakhs exceed the current liabilities (Rs. 494.98 lakhs) and the provision for taxation (Rs. 32.54 lakhs) by a large margin.

The Rs. 25 paid-up shares of the Company are being currently quoted at Rs. 98 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 5.37 per cent. per annum, free of income-tax.

ALCOCK ASHDOWN FARES BETTER

DIVIDEND, HOWEVER, LOWER

A MODEST improvement in sale proceeds and a rise in gross profit are the features which characterise the working of Alcock, Ashdown & Company Ltd. (Managing Agents: Messrs. Turner, Morrison & Co., Private Ltd., Bombay) during the year ended 31st December 1957. The gross profit at Rs. 12.63 lakhs has advanced by Rs. 3.24 lakhs from Rs. 9.39 lakhs for the previous year. This is a welcome improvement over the decline suffered in the previous year when the gross profit fell by Rs. 5.87 lakhs from Rs. 15.26 lakhs for 1955. After lowering the provision for depreciation from Rs. 2.03 lakhs to Rs. 1.51 lakhs and that for taxation (both India and Pakistan) from Rs. 6.10 lakhs to Rs. 4.75 lakhs, the net profit at Rs. 5.49 lakhs compares well with a net loss of Rs. 1.39 lakhs suffered a year ago.

It may be recalled that, during the year 1956 the fixed assets and stock of the Company's Karachi branch were sold to the Government of Pakistan. The profit of Rs. 15.09 lakhs arising out of this deal came in handy and the Directors were able not only to wipe out the loss referred to above but also to make some essential provisions and a slight enhancement in the rate of dividend distribution. The higher amount provided for taxation in the previous year is obviously due to the fact that tax is payable on the profit derived from the above transaction.

The Directors have declared a dividend of 12½ per cent. for the year under review, as against 15 per cent. for the previous year to which level it had been stepped up from 12½ per cent. paid in 1955. A sum of Rs. 46,250 has been set aside as provision for bonus for the year 1955 in terms of the Industrial Tribunal Award dated 16th January 1958, as against *nil* in the previous year. The Directors have raised the provision for leave travelling expenses, leave salaries, etc., from Rs. 80,000 to Rs. 96,000 but have lowered the reserve for pensions and gratuities from Rs. 82,546 to Rs. 75,000. The capital reserve and reserve for tax contingencies which were recipients of Rs. 6.70 lakhs and Rs. 40,000, respectively, in the previous year, have not been provided with anything.

The following comparative table will give some idea of the Company's progress during the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds and work done	85.54	86.29	1,46.38	1,32.60
Work-in-progress and incomplete orders at close	50.03	28.08	26.17	51.23
Expenses	96.54	79.67	1,06.79	1,20.91
Gross profit	12.63	9.39	15.26	10.24
Managing Agents' commission	0.88	2.65	1.42	0.88
Provision for—				
Depreciation	1.51	2.03	3.21	2.78
Taxation	4.75	6.10	4.75	1.30
Net profit (+) or loss (—)	+5.49	—1.39	+5.88	+5.28
Profit from sale of Karachi Branch assets, etc.	..	15.09	..	..
To pensions and gratuities	0.75	0.83	1.20	0.57
,, miscellaneous provisions	1.42	0.80	..	..
Transfer to reserves	..	7.10	0.72	..
Dividends	4.18	5.01	4.18	4.18
,,	(12½%)	(15%)	(12½%)	(12½%)
Carry forward	0.25	1.11	1.14	1.86

It will be seen from the table that work-in-progress and incomplete orders at the close of the year show a sharp rise from Rs. 28.08 lakhs in 1956 to Rs. 50.03 lakhs. The Company is engaged in the business of structural, mechanical and electrical engineers, shipwrights, launch, tug and barge builders, etc. Its workshop is situated in Mazagon, Bombay. They are also agents for mill stores and importers of iron and brass founders.

The Company's financial position, as disclosed by its latest balance-sheet, is quite satisfactory. Its reserves and surplus aggregate Rs. 52.57 lakhs, as against a paid-up capital of Rs. 33.42 lakhs, all in ordinary shares of Rs. 100 each. Of this reserve, the general reserve alone accounts for Rs. 24.90 lakhs. The gross block of the value of Rs 74.22 lakhs stands well written down to Rs. 11.39 lakhs. Workshop under construction at Bhavnagar branch costs Rs. 5.54 lakhs and plant and machinery not yet installed at Bhavnagar branch Rs. 7.83 lakhs. The current assets aggregate Rs. 110.03 lakhs, against which the current liabilities amount to no more than Rs. 48.80 lakhs.

The Rs. 100 fully paid-up shares are being currently quoted at Rs. 250 *cum-div.* On an *ex-div.* basis, the shares provide a yield of 5.26 per cent. per annum, free of income-tax.

Points From The Chair

Need for Synthetic Rubber

"DURING the year 1957 the supply position of raw materials was not fully satisfactory and at times production had to be curtailed due to shortage of raw materials, particularly of imported items. Conditions with regard to raw rubber are particularly unsatisfactory. Although the rubber manufacturing industry is required to pay very high prices for Indian rubber for helping the indigenous rubber plantation industry to expand its production, the gap between demand and production has been increasing and the prospect of any improvement in the future is not very bright. No relief is available by importing rubber as allowed by the Government to meet the deficit because any price advantage arising therefrom has to be credited to the Rubber Board according to existing regulations governing the issue of import licences for new rubber. In the circumstances, active steps should be taken for implementation of the Government project for early setting up of a synthetic rubber plant in this country in order to meet the deficit in indigenous production of rubber. Here is a sphere wherein the synthetic rubber project of the public sector can be co-ordinated with the rubber industry in the private sector with advantage to all concerned."

K. N. MOOKERJEE,
National Rubber Manufacturers Ltd.

Sugar Prices

"The high price of Indian sugar has been a standing complaint from the general public and the current wide disparity in the prices ruling for Indian and foreign sugars points to the need for a policy of scientific rationalisation in our sugar prices. But what is not realised, or is not so well known, is that the industry is helpless in regard to this matter, as the major elements in the cost structure are entirely beyond its control. A breakup of the sugar price will show that sugarcane, the price of which is statutorily fixed, accounts for 42 per cent., while excise duty and cane cess together account for another 35 per cent. With salaries and wages and cost of labour amenities increasing year after year and the appreciating costs of spares and stores, fuel and even water in some cases, there appears to be little scope for the industry to effect economies in manufacturing costs. A Central Wage Board for the sugar industry has recently been set up, and it remains to be seen to what extent the wage bill is likely to be altered as a result of the Board's recommendations."

B. M. KRISHNAN,
Mysore Sugar Company Ltd.

European Free Trade Area

"Negotiations for a European Free Trade Area have met with strong opposition from certain continental countries, who would prefer the Common Market to be established alone with a high tariff wall around it. If this view prevails it will have most harmful consequences for the countries concerned by dividing the free countries of Europe into two competing and antagonistic trading communities. It is hoped that wise counsels will prevail and that a European Free Trade Area will be established side by side with the Common Market of the six countries. Should Britain join a European Free Trade Area your Board considers that the steps which have been taken to modernise our methods of production will enable us to take full opportunity of the benefits which the European Free Trade Area can bring to this country. This large market should enable British worsted spinners and worsted manufacturers to increase the volume of their exports which at the present time are being restricted by import duties. The development of the European Free Trade Area can be confidently expected to raise considerably the standard of living of the people in the various member-countries. This in turn should lead to an increased demand for better qualities of wearing apparel."

SIR E. BEDDINGTON BEHRENS, K. B.,
Jeremiah Ambler Ltd., London.

Production Lacking Behind Demand

"This leads me to say something about the general economic conditions in the country. It is perhaps academic to discuss whether deficit financing has led and is leading to inflation in the country. The fact remains, however, that current production of various commodities is not keeping pace with the demand. In some cases this is due to comparatively temporary bottlenecks which are perhaps normal in a free developing economy, but which should not be there in a planned economy. But in other cases, the trouble lies in the imbalance between costs and prices, between the requirements of funds and the willingness to invest and between consumption and saving. It cannot be denied that costs are not under the full control of the producer, and prices are not governed by the business link between one product and another, or between one stage of production and another, but other outside factors. It also cannot be denied that there is a tendency for a consumption larger than what would be justified by either the immediate current production or by the requirements of the economy in general for larger savings and investments."

KASTURBHAI LALBHAI,
The Atul Products Ltd.

COMPANY MEETINGS AND DIVIDENDS

GANGANAGAR SUGAR MILLS LTD. Annual General Meeting, Jaipur, 23rd June 1958. Transfer books will remain closed from 20th June to 6th July 1958, both days inclusive.

METAL BOX CO. OF INDIA LTD. Twenty-fifth Annual General Meeting, Calcutta, 17th July 1958. Final dividend of 11¼ per cent, tax-free (making 17½ per cent. tax-free for the year).

BENGAL ASSAM STEAMSHIP CO., LTD. Dividend of Rs. 5.00 per ordinary shares, for the year ended 31st October 1957.

MURPHULANI (ASSAM) TEA CO., LTD. Dividend of Rs. 2.25 per preferred ordinary share and Re. 1.75 per ordinary share, for the year ended 31st December 1957.

TRAVANCORE RUBBER AND TEA SUFFERS LOSS

CAWNPORE SUGAR PASSES OVER DIVIDEND

Travancore Rubber and Tea Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Aspinwall and Co. (Travancore) Ltd., Pathirapally, Kerala State) submit the audited accounts of the Company for the year ended 31st December 1957.

The working of the company for the year resulted in a net loss of Rs. 57,573 (profit of Rs. 4,47,842), after making necessary provision for depreciation on buildings and machinery and also agricultural income-tax on account of rubber. Wealth tax is a new item and the provision for this amounts to Rs. 3,500 whilst provision amounting to Rs. 63,918 has been made for rubber rehabilitation. The decrease in earnings in 1957 is due partly to a poor rubber crop and partly on account of lower prices realised for the tea crop.

Rubber.—As against an estimate of 10,75,000 lbs., the crop harvested was only 9,37,218 lbs. As in 1956, a portion of the rubber crop was with advantage sold on the Estate as liquid latex. Expenditure and average sale prices for the last three years are given below:—

	Crop	Estate expenditure	All-in cost	Average sale price
		Cts. per lb.	Cts. per lb.	Cts. per lb.
1955 ..	10,35,280	70.88	110.95	144.64
1956 ..	10,32,428	77.78	112.55	145.72
1957 ..	9,37,218	97.72	127.07	145.90

It is conservatively estimated that a crop of 10,10,000 lbs. of rubber will be collected during 1958 at an Estate expenditure of 90.48 cts. per lb.

Tea.—The crop harvested, 10,02,302 lbs., is more than 1,00,000 lbs. over the last year's crop but about 50,000 lbs. below estimate. The shortfall was due to unfavourable weather conditions and the continued effect of the 1956 drought. Comparative figures of tea crops, cost and revenue for the year under review and 2 previous years are given below:

	Crop	Estate expenditure	All-in cost	Average sale price
		Cts. per lb.	Cts. per lb.	Cts. per lb.
1955 ..	11,65,729	134.87	178.77	204.06
1956 ..	8,89,643	183.13	210.54	210.90
1957 ..	10,02,302	168.71	186.47	158.79

The year 1958 started with more favourable conditions, and as at 31st March 1958 the crop is up by about 1,00,000 lbs. over the same period in 1957. In 1958 it is estimated that the tea crop will be 10,50,000 lbs. to be secured at an Estate expenditure of 154.55 cents per lb.

General.—Labour relations in the two Groups during 1957 have been barely satisfactory. Bonus to labour for 1955 and 1956 was settled which added to the labour costs. The year 1958 opens with an increase in wages to labour amounting to approximately 8½ per cent. with retrospective effect from 1st November 1957. From 1st October 1957 tea became subject to a single point sales tax of 5 nP in the rupee—as against 2 nP in the rupee previously when tea was subject to multipoint sales tax.

Tea prices generally during the year under review were much lower than 1956 and this factor together with the incidence of increased costs and higher taxation over a low crop, has resulted in the loss recorded (i.e., 27,68 cts. per lb.). The controlled price of rubber remained unchanged throughout the year under review.

A sum of Rs. 3,46,523 was carried forward in the profit and loss account in respect of 1956 working, and from this figure must be deducted the sum of Rs. 4,296 being charges short-provided for the previous year, also a sum of Rs. 57,573 being loss incurred on 1957 working which leaves Rs. 2,84,654. During the year under review the directors have distributed Rs. 96,000 (Rs. 96,000) being dividend at the rate of 6 per cent. free of income-tax on preference shares thus leaving a balance of Rs. 1,88,654 (Rs. 6,54,023) in the profit and loss account. In view of the loss incurred by the Company during 1957 and having regard to the dividend equalisation reserve built up in the years of prosperity, the directors have considered it expedient to transfer a sum of Rs. 82,000 (*nil*) from that reserve to the profit and loss account and recommend that a first and final dividend of 4 (7½) per cent. free of income-tax on the ordinary shares be paid (being 2 per cent. from the dividend Equalisation Reserve and 2 per cent. from the balance in the profit and loss account). This absorbs Rs. 1,64,000 (Rs. 3,07,500) leaving a sum of Rs. 1,06,654 (Rs. 3,46,523) to be carried forward in the profit and loss account.

Cawnpore Sugar Works, Ltd.

The Directors of the above Company (Managing Agents: Messrs. Begg, Sutherland & Co. Private Ltd. Kanpur, U.P.) submit the audited accounts of the Company for the year ended 31st October, 1957.

The results for the year, after making the usual provisions for taxation, depreciation and adjustments, show a loss of Rs. 9,27,781 (profit of Rs. 6,64,968) from which has been deducted the amount brought forward from the previous year of Rs. 91,991 (Rs. 82,023 leaving at debit of profit and loss account Rs. 8,35,790 (credit of Rs. 7,46,991 from which Rs. 3,50,000 was transferred to rehabilitation reserve; Rs. 80,000 was paid as dividend on preference shares; Rs. 2,25,000 to payment of dividend on ordinary shares) a 7½ per cent. or Re. 0.75 per share, leaving to be carried forward Rs. 91,991).

The adverse trading results during the year have been primarily due to heavy losses incurred by the Padrauna and Kathkuiyan Factories. The fall in recovery of sugar due to the fall in the quality of sugarcane supplied to the factories has further added to the losses.

The poor quality of sugarcane has been engaging the attention of the directors and efforts continue to be made to improve the supplies but the abnormal climatic conditions have consistently presented difficulties in achieving the desired results. The Industry continues to pursue the matter of poor cane quality with the State Governments of U.P. and Bihar and it is hoped that some effective measures in this direction will be taken. It must be remembered that in the U.P. all the Cane Development has to be done through the agency of the Co-operative Unions and this is largely the case in Bihar.

Last year it was reported that the Company's title to Padrauna and Kathkuiyan had been challenged but this title has now been confirmed. Pending the confirmation the Company was not able to spend money on a much needed overhaul.

The requirements of finance for the execution of the full reconstruction and replacement programme will be substantial. The matter is receiving the earnest consideration of the directors and every effort is being made to finance and carry out a good overhaul and a measure of rehabilitation sufficient to make these two Factories into profit making units.

The cane price remained at the previous rate of Re. 1-7 per maund at the Factory gate and Re. 1-5 per maund at outstations and these prices had to be paid irrespective of the quality of cane supplied. While it is understood that increasing attention is being given in Government circles to the possibility of relating cane prices to quality, the results of the Company for the year under review afford a striking example of the consequences of paying for cane on the basis of its weight only.

During the year, the Government increased the excise duty on sugar by 100 per cent. and thus increased the price of sugar to the consumer without in any way increasing the profits to the manufacturer. Indeed, for some time after the increase in excise duty a part of it had to be borne by the Company as the market would not absorb the extra price. An additional excise duty of Rs. 2.43 nP per maund has been further imposed with effect from 14th December 1957. The stocks of sugar remaining as at 31st October 1957 have been valued taking into consideration the new excise duty and accordingly it is not necessary to make provisions for a fall in the value of stocks and in fact the prices obtained for Marhowrah and Gauri sugars were slightly higher than in the previous year, but profit margins are very narrow when it is realised that of the price of a maund of sugar no less than Rs. 13-3 is represented by excise duty, cane cess and Co-operative Society charges. Of the total cost of manufacture 79 per cent. is accounted for by the cost of sugar cane and taxes.

The sugar produced was in good demand. The efficiency of the Marhowrah and Gauri Factories was maintained at a high level despite the poor quality of raw material crushed. Padrauna and Kathkuiyan suffered from the lack of a proper overhaul in the past.

It will be observed that a sum of Rs. 2,25,000 has been transferred from capital reserve to provision for taxation on account of tax liability on the sum of Rs. 4,43,000 representing surplus on the revaluation of Padrauna and Kathkuiyan Factories stores which was credited to capital reserve in the preceding year.

Empire Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod and Co., Ltd., Calcutta) submit the audited accounts of the Company for the thirteen months ended 31st July 1957.

The profit for the period after providing for depreciation Rs. 2,21,805 and taxation Rs. 1,55,000 including wealth tax, amounts to Rs. 2,21,705 to which must be added the credit balance brought forward from the previous half-year of Rs. 76,491 and overprovision of liability in respect of previous period written back Rs. 1,371 making a total of Rs. 2,99,567. From this must be deducted dividends previously forfeited now paid Rs. 375 and the amount transferred to development reserve of Rs. 1,06,600 leaving a balance of Rs. 1,92,592. The interim dividends for the period ended 31st July 1957 on 10,000 preference shares at Rs. 3.50 nP per share absorbed Rs. 35,000 and on 1,50,000 ordinary shares at 0.40 nP per share absorbed Rs. 60,000 leaving an available balance of Rs. 97,592. This amount the directors recommend should be distributed as follows:—

A final dividend on 10,000 preference shares at Rs. 4.09 nP per share for the period ended 31st July 1957 absorbing Rs. 40,900 and a final dividend on 1,50,000 ordinary shares at 0.35 nP per share for the period ended 31st July 1957 absorbing Rs. 52,500 leaving to be carried forward Rs. 4,192.

Jute stocks are shown at cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 31st July 1957, have been valued at market rates.

In accordance with the working time agreement of the Indian Jute Mills' Association working hours were 48 hours per week with 12½ per cent. of the total looms sealed. The Company purchased loom hours during the period and worked 275 looms on a double shift basis from 13th May 1957.

Trading conditions continued to be difficult during the period and it was not possible to transact simultaneous business at a profit.

Further installation of modern spinning plant was completed during the period catering for hessian warp and part of the sacking warp yarn requirements. Orders have been placed for the balance of sacking warp and also sacking weft requirements. Installation of sacking weft machinery should be completed by July 1958, and other machinery by March 1959.

Sirsilk Ltd.

The directors of the above Company (Chairman: Mr. G. P. Birla, Bombay) present the audited accounts of the Company for the year ended 30th September 1957.

The profit and loss account, after providing a sum of Rs. 14,68,978 (Rs. 14,07,094) being interest on loans, shows a surplus of Rs. 49,292 (Rs. 23,562) which has to be adjusted against the loss brought forward. No provision for depreciation has been made on account of inadequacy of profits.

The steps taken by the management have resulted in improvement in the working and efficiency of the various plants. The production of yarn and fabrics, registered a rise in the year as compared with that of the previous year. The repairs and renovations programme of the Chemicals and Cellulose and Acetate Sections has almost been completed and in consequence, further improvement in production is expected during the current year.

Despite a substantially higher turnover of the Company's products during the year, it is regretted that the financial results cannot be considered to be satisfactory by reason of the rise in the cost of linters, chemicals, coal and other charges as also levy of excise duty on artificial silk yarn since 1st December 1956, while necessary increase in the selling prices could not be effected and they continue to be lower than the cost of production.

The Minister of Commerce and Industry had issued a circular to all the industries requesting them not to increase their prices over those ruling as on 31st March 1957 without consulting the Government. As the Company's selling prices have been lower than the cost of production, an application has been made to the Government of India for cost accounting and for fixation of a fair selling price. The matter is still under examination of the Government.

The Government of India in consultation with the State Governments has levied an additional excise duty at 3 nP per square yard on fabrics in lieu of sales tax with effect from the 14th December 1957.

The Labour Union had raised disputes, as a result of which the agreement entered into with it could not be implemented. However, the said disputes have now been amicably settled and consequently all pending cases before the Industrial Tribunals and High Court have been withdrawn and the relationship between the workmen and the management now continues to be quite cordial.

Vijaya Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Haridas Achratlal and Co., Ltd., Ahmedabad) submit the audited accounts of the Company for the year ended 31st December 1957.

During the year under report, the company has made a gross profit of Rs. 12,12,567 (Rs. 23,77,766). Out of this the following amounts have been debited to revenue account as per requirements of the Companies Act 1956: To managing agents' remuneration Rs. 72,585 (Rs. 6,29,051), to depreciation for machinery and buildings Rs. 7,10,304 (Rs. 6,63,670), to development rebate Rs. 2,00,824 (Rs. 2,00,243) and to provision for taxes Rs. 1,50,000 (Rs. 4,50,000). There now remains a sum of Rs. 78,854 (Rs. 4,34,802) to which is added the balance brought forward from the last year's account of Rs. 59,446 (Rs. 34,644) making a total of Rs. 1,38,300 (Rs. 4,69,446). The directors recommend the following allocations from the above amount—To general reserve fund Rs. 1,00,000 (*nil*), to doubtful debt reserve fund Rs. 5,000 (*nil*), to charity account Rs. 10,000 (Rs. 10,000) and to carry forward to next year's account Rs. 23,000 (Rs. 59,446 after placing Rs. 3,75,000 to special reserve and Rs. 25,000 to gratuity reserve). The directors recommend to transfer a sum of Rs. 3,06,600 (Rs. 3,76,600) from the general reserve fund of the Company for the payment of following dividends:—To payment of, income-tax free interest on 3,500, 2nd cumulative preference shares of Rs. 100 each at 4 per cent. for the year 1957 Rs. 14,000), to payment of, subject to income-tax interest on 2,800 3rd cumulative preference shares of Rs. 100 each at 4½ per cent. for the year 1957 Rs. 12,600 (Rs. 12,600) and to payment of dividend at Rs. 35 (Rs. 35) per share and bonus at Rs. 5 (Rs. 15) totalling Rs. 40 (Rs. 50) per share both income-tax free on 7,000 ordinary shares of Rs. 500 each for the year 1957 Rs. 2,80,000 (Rs. 3,50,000). The directors have transferred a sum of Rs. 9,72,035 being the amount of undervaluation in stock up to the year 1955 and which was debited to development and rehabilitation reserve fund by the end of 1956 to general reserve fund during this year, because there is sufficient amount in this account.

The Mill has worked for two shifts during the year. There are 41,056 ring spindles and 780 looms along with necessary processing plants.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Profit and loss account ...	23,300	Investments	5,62,024
		Cash ...	2,30,061
Rs.	1,63,65,540	Rs.	1,63,65,540

Anyodaya Spinning and Weaving Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Mangaldas and Balabhai & Co., Ahmedabad) submitted the audited accounts of the Company for the year ended on 31st December 1957.

The gross profit of the year under report is Rs. 8,05,735 (Rs. 12,10,848). After deducting Rs. 4,97,097 (Rs. 3,70,290) for depreciation on various assets and Rs. 1,99,153 (Rs. 2,01,051) for development and rehabilitation reserve, and Rs. 50,000 (Rs. 60,983) provided for the remuneration of the managing agents there remains a profit of Rs. 59,485 (Rs. 4,25,804 after donating Rs. 2,720 and placing Rs. 1,50,000 for taxation). With Rs. 3,30,900 (Rs. 1,71,696) being the amount brought forward from the previous accounts the profit amounts to Rs. 3,90,385 (Rs. 5,97,500).

The directors have made appropriations thereof as under: To Shubha Khata Rs. 5,000 (Rs. 5,000) and to carry forward to profit and loss account Rs. 3,85,385 (Rs. 3,30,900 after placing Rs. 2,600 to doubtful debt reserve). The directors recommend that the following dividends be paid from reserve fund account No. 1 out of the amount credited in that account from the profits of the year 1951. For this purpose Rs. 2,59,000 (Rs. 2,59,000) have been transferred from reserve fund account No. 1 to the appropriation account.

To payment of dividend on 6,000 'A' capital ordinary shares each of Rs. 200 for 1957 at Rs. 35 (Rs. 35) [Rs. 30 (Rs. 30) plus Rs. 5 (Rs. 5) as bonus] per share Rs. 2,10,000, to payment of dividend on 2,000 'B' capital preference shares each of Rs. 250 for 1957 at Rs. 12.50 nP per share Rs. 25,000 (Rs. 25,000) and to payment of dividend on 12,000 'C' capital 4 per cent. cumulative redeemable second preference shares each of Rs. 50 for 1957, (all issues) at Rs. 2 (Rs. 2) per share Rs. 24,000 (Rs. 24,000).

A provision of Rs. 50,000 is made in the accounts for the remuneration of the managing agents. The company had applied to the Central Government for approval of a new managing agency agreement. It has become necessary to make a fresh managing agency agreement in order to make it conformable to the provisions of the Companies Act. The Central Government has approved the same with effect from 1st January 1957 and it includes the payment of Rs. 50,000 to the managing agents by way of minimum remuneration if the profits of the company are inadequate or there be a loss in any year.

Since the imposition of heavy additional excise duty in September 1956 the market did not recover from the depression which set in and throughout the year, the trade conditions were unfavourable. Goods had to be sold at low prices. There was great stringency in the money market and the offtake was slow. The impact of the enhanced excise duty on Industry has been severe. This has reflected on the results of the working.

There was a balance of Rs. 14,69,960 at the credit of the provision for taxation fund account and out of this Rs. 8,00,000 have been transferred to reserve fund account. No provision has been made in the accounts for income-tax and corporation-tax and also for wealth tax for the years 1956 and 1957 as there is adequate provision in the aforesaid provision for taxation fund. Adequate provision for bonus to the employees is made in the accounts under the item of "wages, bonus etc."

Accounts in brief were as under.—

Liabilities	Rs.	Assets	Rs.

Rohit Mills Ltd.

The directors of the above Company (Chairman: Mr. Rohitbhai Chinubhai, Ahmedabad) present the audited accounts of the Company for the year ended 31st December 1957.

The accounts show that the profit for the year after deducting the managing agents' commission Rs. 50,000 (Rs. 3,12,516), depreciation Rs. 10,21,534 (Rs. 8,48,936) and taxation provision Rs. 50,000 (Rs. 10,90,000) amounts to Rs. 1,63,145 (Rs. 11,69,435) to which is added the amount brought forward from previous year of Rs. 6,838 (Rs. 3,686) making a total of Rs. 1,69,983 (Rs. 11,73,121). Out of the above amount the directors have transferred Rs. 1,60,000 (Rs. 1,50,000) to contingency taxation fund and the balance of Rs. 9,983 (Rs. 6,838 after paying dividends on preference shares amounting to Rs. 58,563; paying dividend on ordinary shares at Rs. 8 per share including bonus of Re. 1 per share absorbing Rs. 3,90,000; placing an amount of Rs. 3,27,720 to development rebate reserve; Rs. 1,50,000 to contingency taxation fund and Rs. 2,40,000 to general reserve) is carried forward to the next year's account. The directors recommend that a sum of Rs. 4,48,600 (*nil*) be transferred from the reserve fund of calendar year 1955 to the profit and loss appropriation account for paying dividends for the year 1957. The directors recommend that the said amount of Rs. 4,48,600 be distributed as under:—

To dividend for the year 1957 on 10,000 5½ per cent. cumulative preference shares (deducting income-tax) Rs. 40,600 (Rs. 40,563 from profit), to dividend for the year 1957 on 2,000 4 per cent. redeemable cumulative 2nd preference shares Rs. 8,000 (Rs. 8,000 from profit), to dividend for the year 1957 on 2,500 4 per cent. redeemable cumulative 5th preference shares Rs. 10,000 (Rs. 10,000 from profit) and to dividend for the year 1957 on 48,750 ordinary shares at the rate of Rs. 7 (Rs. 7) per share plus Re. 1 (Re. 1) per share as bonus Rs. 3,90,000 (Rs. 3,90,000).

During the most part of the year the market conditions for cloth were not very favourable and as a result it was not possible to realise good prices for the Mills' cloth. It was also not possible to reduce the stocks of cloth in the mills. Recently there have been signs of improvement in the market conditions. Because of that and the reduction in excise duty, the next year is expected to be better year for the Textile Mills.

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting within the meaning of the Companies Act, 1956 (being the fifty-ninth Ordinary General Meeting of the Company) of the abovenamed Company will be held at its Registered Office, No. 15, Shib Thakur Lane, Calcutta-7, on Monday the 23rd June, 1958, at 4-30 p.m., for the following purposes:—

1. To receive and consider the Audited Accounts for the year ended 31st March, 1957 the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
2. To declare a dividend on the Ordinary shares.
3. To appoint Directors in place of those retiring. And, in this connection, Special Notice as required by Sections 280 and 281 of the Companies Act, 1956, is hereby given that at the meeting the following resolutions will be proposed as a Special Resolution, namely:—

   "That Mr. G. D. Bhagat who has attained the age of 71 years, be and is hereby re-appointed a Director of the Company and that the age limit prescribed by Section 280 of the Companies Act, shall not apply to him."
4. To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 17th June, 1958 to the 23rd June, 1958, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,

G. D. BHAGAT,
Chairman.

15, SHIB THAKUR LANE,
CALCUTTA-7, *2nd June,* 1958.

EXPLANATORY STATEMENT

In connection with item No. 3 of the above notice, it will be necessary, in accordance with Section 281 of the Companies Act, 1956, for the resolution re-appointing him as a Director to declare that the age limit provided under Section 280 shall not apply to him. Special Notice of the intention to move this resolution, as required by both Section 280 and Section 281 of the Act, has been received by the Company.

The Directors, including Mr. K. C. Bhagat who is also a Director and shareholder of the Company, have no interest in the resolution to be proposed.

SHAW WALLACE AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twelfth Annual General Meeting of the Members will be held at the Registered Office of the Company, 4, Bankshall Street, Calcutta, on the 10th July 1958 at 3 p.m., for the following purposes:—

(2) To declare a Dividend on the Ordinary Shares.

(3) To appoint Auditors and to fix their remuneration.

(4) To elect Directors in the place of two Directors retiring by rotation.

The Share Transfer Registers of the Company will be closed from the 1st July 1958 to the 10th July 1958, both days inclusive.

N.B.—A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,

D. A. HOUGHTON,
Secretary.

4, BANKSHALL STREET,
CALCUTTA, *4th June,* 1958.

GILT-EDGED FIRM

(From Our Own Correspondent)

BOMBAY, *11th June*

With an increase in the pace of return of funds and a further slackness in the demand for bank credit, the conditions in the money market eased further during the week under review. Consequent on the expansion in deposit resources, banks were eager to find profitable avenues of investments and to reduce their own borrowings from the Reserve Bank. There was, however, no notable decline in the interest rates. Inter-bank call money continued to be quoted at 3 per cent. among all sections of banks. House money at call was placed at 4 to 4⅛ per cent. and short-term deposits at 4 to 4⅛ per cent. for one to six months.

After a break of three weeks, an expansion of Rs. 20.80 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 6th June 1958. Notes held in the Banking Department are lower by Rs. 12.76 crores, so that the rise in total notes issued is Rs. 8.04 crores. Rupee securities have gone up by Rs. 9.94 crores, while rupee coin is lower by Rs. 1.90 crores. Deposits of the Central Government have declined by Rs. 8.76 crores and those of the other Governments by Rs. 6.07 crores. Deposits of banks too are lower by Rs. 1.89 crores. Balances held abroad have further dropped by Rs. 2.84 crores. Loans and advances other than to Governments have gone up by Rs. 98 lakhs; the advances to Scheduled banks against usance bills alone account for a rise of Rs. 1.21 crores. A rise of Rs. 3.07 crores is noted in investments.

Demand deposits of Scheduled banks have gone up by Rs. 4.25 crores and time deposits by Rs. 52 lakhs during the week ended 30th May 1958. Borrowings from the Reserve Bank stand reduced by Rs. 5.09 crores. A drop of Rs. 6.53 crores is noted in advances and of Rs. 4.80 crores in bills purchased and discounted. Investments have risen by Rs. 39.31 crores. Cash balances have gone up by Rs. 5.90 crores, while money at call and short notice is lower by Rs. 1.20 crores.

With the change in money conditions, there was an all-round demand for securities which as a result ruled firm during the week. Banks figured prominently as buyers of short and medium dated issues. The bullish sentiment was further strengthened by the Reserve Bank's open market operations at higher prices. The Bank, which had put up its selling price of 3½ per cent. 1965 by 25 nP to Rs. 98.10 during the previous week, raised it further to Rs. 98.25 in the week under review. It started selling 3½ per cent. 1974 at Rs. 98.30, that is, 5 nP more than the market price and 4 per cent. 1972 5 nP higher at Rs. 100.35. The Bank also started buying some securities against 'switches' during the week at quoted prices. These were: 2½ per cent. 1961 at Rs. 95.50, 2½ per cent. 1962 at Rs. 95.40 and 3½ per cent. 1961 at Rs. 99.60.

3 per cent. 1986 Conversion Loan was marked up further by 5 nP to Rs. 71.10. 3 per cent. 1970-75 hardened by 10 nP to Rs. 87.20. 3 per cent. 1966-68, 3 per cent. 1964 and 3 per cent. 1963-65 each gained 5 nP to Rs. 92.85, Rs. 95.45 and Rs. 95.50, respectively. 2½ per cent. 1960 gathered 15 nP to Rs. 98.15. 3½ per cent. 1962 put on 10 nP to Rs. 98. 3½ per cent. 1963 rose by 5 nP to Rs. 98.80 and 3½ per cent. 1964 by 10 nP to Rs. 98.45. 3½ per cent. 1965 was quoted at the Reserve Bank's selling price of Rs. 98.25.

In consonance with the weakening of sterling abroad, the rupee also lost some ground during the week. Thus, banks' selling rate of ready dollars rose from Rs. 475.25 to Rs. 475.75 per $100 and their buying rate from Rs. 472 to Rs. 472.50 per $100. In New York, spot sterling declined from $2.81½-2.81⅝ to $2.81.5/16-2.81.7/16 and three months forward from $2.79½-2.79⅝ to $2.79.3/16-2.79.5/16. Transferable sterling was marked down from 279.35-279.45 cents to 278.95-279.05 cents.

SLOW CLEARANCE IN KIPS

(From Our Own Correspondent)

MADRAS, *9th June*

Arrivals of E.I. tanned cow hides and calves were of the usual volume, and clearance by shippers was slow. There was good call for lower grades for inland trade. As the U.K. demand for these selections was 5 per cent. below current levels, shippers were not able to book orders for shipment. There were more enquiries for light-weight kips, and prices were a shade firmer. It was believed that mediums also would advance in sympathy, while heavyweight cow hides and buff hides would not attract good attention, due to the change in the pattern of shoe manufacture.

There were a few enquiries for 5½/6 and 8/9 lbs. goat skins from the U.K. and Continent at 3*d.* lower than May levels. Demand for sheep was not insistent and prices ruled quiet. Although importers were asking for offers of goat and sheep skins of common tannages, business did not result on account of price disparity.

Shipments during May were: 1,588 bales cow hides, 181 cow calf, 289 buff calf, 711 goat and 421 sheep to the U.K.; 15 bales cow, 3 cow calf, 1 buff calf, 523 goat and 115 sheep to the Continent; 5 bales cow calf, 32 buffs, 43 buff calf and 56 goat to the U.S.A.; 45 bales sheep to Japan.

TIN AND ZINC DECLINE

(From Our Own Correspondent)

CALCUTTA, *10th June*

Prices of base metals moved within narrow limits during the week under review. From Rs. 60, virgin lead spurted to Rs. 61.50, as alloy-makers and lead sheet rollers showed interest. Interest was also shown in copper and brass scrap. The sellers who had commitments to sell at the time control in copper was introduced have been unable to meet these, in view of Government allotment of their stocks to other purchasers. The buyers who bought forward prior to 1st April and had not taken delivery as on that date should, therefore, apply to Government for permits. In the meantime, it was noted that the trend in both New York and London was upward. There was a rise in the U.S. custom smelter prices. The rise in London prices would have been more pronounced had it not been for the troubles facing industry there. In tin, the price gave way from Rs. 507 to Rs. 504. Demand was less and there were fresh arrivals. Electrolytic zinc eased from Rs. 57.50 to Rs. 50.

BULLION IRREGULAR

(From Our Own Correspondent)

BOMBAY, *11th June*

The bullion market was indecisive and prices moved both ways during the week under review. After a slight hardening in values in the earlier half of the week, both silver and gold suffered a reaction, but at the close they again ruled steady. Over the week, while silver recorded a fall, gold gained a little.

The earlier rise was due to fresh speculative buying in gold on good offtake in the ready section and the absence of sales of Mysore gold, which was interpreted in some quarters that the supplies from this source would stop. Silver also improved in sympathy. Subsequently, reports of large arrivals of Tibetan coins and of influx of contraband gold induced bull liquidation. There were also reports that the Government of Bombay had approved of the amended by-laws of the Bullion Association, and these caused a further setback. It was, however, disclosed that the Government had not given its approval without proposing some changes. Consequently, prices hardened a little towards the close.

The Bombay Government gave its approval to the by-laws amended and approved by the general body of the Bullion Association on 23rd May last, but suggested that the penal margins should be made applicable to sellers as well as buyers, according to the circumstances. The Association had proposed that in the case of silver, the purchasers had to pay a margin of Rs. 1,000 per bar on their outstanding purchases, if the *budli* against sellers exceeded Re. 1 and a margin of Rs. 2,500 per bar if it exceeded Rs. 2. In the case of gold, it had been proposed that a margin at the rate of Rs. 10 per tola should be made payable on outstanding purchases if the *budli* against sellers exceeded As. 8 and of Rs. 25 per tola if the *budli* rose to more than a rupee. The Government, however, suggested that the sellers should also pay similar margins, if the *budli* against purchasers exceeded the stipulated levels. The Association has accepted the suggestion and the modified by-law will be applicable from the *Shravan* (August) second delivery onwards, that is, on *budli* between *Shravan* (second) delivery and *Bhadrapad* (September) contracts.

Silver for forward delivery (July settlement) advanced from Rs. 185-9 to Rs. 186-13, but soon gave way to Rs. 183-8 yesterday. Today, however, it again recovered partially to Rs. 184-15 and closed at Rs. 184-7. The August settlement (first delivery) rose from Rs. 185-7 to Rs. 187-2 but relapsed to close at Rs. 184-11.

Ready silver hardened from Rs. 184-13 to Rs. 186-1. After a recession to Rs. 182-12, it improved to close at Rs. 183-11. The floating stocks of silver are estimated at 500 bars. The daily average arrivals were 30 bars (including unrefined metal), while the offtake was 10 bars on an average.

Forward gold (July settlement) rose from Rs. 107-9 to Rs. 109-4, but the gain was nearly wiped out when the price touched Rs. 107-13 yesterday. It, however, regained to Rs. 108-3 at the close. Business in August settlement (First delivery) began yesterday at Rs. 107-6 and the closing today was done at Rs. 107-7.

Ready gold closed at Rs. 110-3, with a gain of As. 10 over the week. The floating stocks are reported to be 30,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was about 4,000 tolas on an average.

In New York, silver was unchanged at 88¾c., while in London there was a fall, the spot metal declining from 75⅞*d.* to 75½*d.* and the forward from 75⅝*d.* to 75¼*d.* Gold rose from 249*s.* 4*d.* to 249*s.* 6½*d.*, before receding to 249*s.* 5½*d.*

The following comparative table shows at a glance the trend of the market during the week under review:

	11-6-58	Highest	Lowest	4-6-58
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.

* 2nd July settlement.
† 3rd July settlement.

N.B.—Foreign bullion prices shown in the above table relate to the previous day.

COTTON FUTURES FIRM

(From Our Own Correspondent)

BOMBAY, *11th June*

The cotton futures market ruled distinctly firm during the week under review, in contrast to the dull trend noted last week. The firmness was not, of course, due to any basic change in outlook for the textile industry (the present crisis in which has been mainly responsible for the poor demand for raw cotton and the consequent low prices) which continued to be gloomy, although a section of operators was optimistic about the outcome of the study of the textile crisis by the special enquiry committee. The strength of the market was attributed to renewed rumours of an additional export quota for ¾" cotton. The official announcement of the quota was expected at any moment. The expectation led to speculative purchases in cotton futures the values of which were pushed up. The bullish implications of the delayed monsoon and the firmness of the oilseeds market were the other helpful factors. Under persistent local and up-country buying orders, cotton futures staged a smart rally. The improvement in prices would have been more marked but for the continued discouraging news from the cotton piecegoods market and reports of downward trend in raw cotton consumption in mills.

I.C.C. Moglai Jarilla (August 1958) opened the week at Rs. 673.00, as against the previous close of Rs. 670.25, and steadily advanced to Rs. 680.50 yesterday. Opening higher at Rs. 681.50 today, the contract gathered Rs. 2.75 before closing at Rs. 683.50. The net gain over the week was Rs. 13.25.

The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	11-6-58	*High*	*Low*	4-6-58
I.C.C. Moglai Jarilla (August 1958) ...	683.50	684.25	671	670.25

The sub-committee appointed by the East India Cotton Association is reported to have decided to maintain the *status quo* in respect of the basic structure of the present hedge contract and also in respect of delivery months. Trading in new crop hedge contract is expected to begin early in July for which permission is being sought from the Forward Markets Commission.

The spot section was also cheerful and brisk activity was reported. Both local and upcountry mills did substantial business in popular styles such as Jarilla, Vijay, CO2, Surti and Laxmi. The Southern mills were particularly interested in good quality Kalyan and Jarilla earlier in the week, but, towards the close, they withdrew from the market due to the severe power cut in Madras State.

In the export section, following quota rumours, demand for exportable styles became keen. Shippers purchased Wagad, Kala, Dhollera and *Deshi*, the prices of which registered sizable improvement.

In the foreign section, good business was reported in U.S. styles and selected East African growths, subject to availability of licence. Importers were anxiously awaiting the import allocation for sterling area cotton, as also American cotton.

Importers are very much perturbed over the new notification issued by the Joint Chief Controller of Imports concerning the import of Egyptian cotton. According to this notification, issued on 6th June, licence-holders of Egyptian cotton should open, if they have not already done so, the requisite letters of credit within two weeks from the date of the issue of the trade notice. It further stipulates that, in respect of licences for import of raw cotton from Egypt that will be issued in future, licence-holders should open the requisite letters of credit within two weeks from the date of issue of the licence. The notification thus modifies the procedure now in force for import of Egyptian cotton, namely, cash against documents on arrival of ship. According to the new payment agreement concluded between India and Egypt recently, import of Egyptian cotton has to be paid for in Egyptian pounds and for this, a certain amount of Egyptian pounds has been credited to the account of the State Bank of India by the National Bank of Egypt. Importers or mills who intend to import Egyptian cotton have to book exchange 'forward' or make payment against documents to the State Bank of India. The new procedure seeks to change this procedure and importers or mills have now to open letters of credit in favour of their suppliers in Egypt which it is said, means that they will have to incur additional expenditure, besides blocking their funds. Trade quarters point out that it is difficult to appreciate the Government's reason for this change, the more so because it is believed that the shippers in Egypt are quite agreeable to the present practice. Importers wonder what prompted the Government to change the existing procedure which has been working so smoothly and opt out for one which would only create considerable hardship to the trade.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 600; Berar Jarilla 735; Khandesh 790; Oomra *Deshi* 660; Vijay 890; Hubli Laxmi 1,020; *Delivery Contracts*: Bengal 585; Wagad 618; Kalagin 620.

The Karachi cotton futures market, after a quiet start, picked up strength on the 7th inst., and ruled firm till the close of the week. The firmness was induced by higher New York advices, better export demand and encouraging domestic spinner enquiries. N.T.R.G. July opened the week at Rs. 75-1 and, after declining to Rs. 74-7 on the 6th inst., improved Rs. 75-12 yesterday. January (1959) contract, which fell from Rs. 75-12 to Rs 75-6 in the earlier sessions, recovered to Rs. 77-6. In the spot section, barring *Deshi* styles which were better, most other varieties tended to look down. Sind *Deshi* and Punjab *Deshi* were

quoted at Rs. 60 and Rs. 56-6, as compared with Rs 59-4 and Rs. 54-8, respectively, last week-end. The following are the latest available quotations—in rupees per 82 lbs.—for a few other popular varieties of Pakistan cotton prevailing at Karachi:

4F Roller 69-6; S.G. 78-6; Punjab Roller 72-6; S.G. 79-14; 289F Punjab Roller 84-6; S.G. 89-6; 289 F.N.T. Roller 77-14; S.G. 90-6.

The Alexandria cotton futures market was subdued during the week under review also. Slack domestic and export demand in the wake of favourable weather and satisfactory crop reports led to selling. Prices, as a consequence, declined. In the spot section, however, premiums for Karnak and Giza 30 remained firm. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: July 75.80; January 77.75. *Ashmouni*: June 68.10; August 67.70.

Cotton futures values in the Liverpool market suffered a setback, thanks to liquidation and commission house selling which were only partly absorbed by local mill buying. The fact that the U.S. export subsidy of 6½ cents per lb. for cotton announced last week is subject to change at any time had an unsettling effect on the market. The volume of transactions was small, as traders were reluctant to enter into large commitments. Sudan contracts were practically neglected, although values were unchanged. The latest available quotations—in pence per lb.—from Liverpool are as follows, the figures in brackets being last week-end closings:

American Cotton One Inch Staple Contract: July-August 25.15 (25.40); October-November 25.80 (26.00); December-January 26.15 (26.40); March-April 26.45 (26.70). *American Cotton Mixed Growth Contract*: July-August 25.85 (26.12); October-November 26.33 (26.6); December-January 26.60 (26.93); March-April 26.90 (27.23). *Sudan*: July-August 31.30 (31.3); September-October 31.95 (31.95); November-December 31.95 (31.95).

The New York cotton futures market reported small gains during the week. There was a fair volume of trade covering and Commission House buying. The main influencing factors were the higher mid-May parity price of 38.68 cents per lb., as compared with the Mid-April parity of 38.59 cents, announced by the Bureau of Agricultural Economics, and prospects of a sharp reduction in carryover stocks at the beginning of the next season. A further rise in rates was, however, checked by reports of favourable weather and rumours of the probability of new legislation providing for higher acreage and lower price-supports materialising. Over the week, values showed modest improvement.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	10-6-58	4-6-58	27-5-58
Spot	36.30	36.30	36.30
July	36.16	36.12	36.27
October	36.62	36.40	36.68
December	36.83	36.54	36.82

EXPORT OF COTTON YARN

(From Our Own Correspondent)

BOMBAY, 11*th June*

An important development of the week in so far as the yarn market is concerned relates to the Government of India's decision to allow export of cotton yarn during the years 1959, 1960 and 1961. Accordingly, the mills will be allowed to export to the same extent as in 1957 or up to the quantity to be exported during the current year, whichever is lower. In addition, exports of 120,000 bales per annum will be allowed to the industry and trade on a "first-come-first-served basis." Another important development relates to distribution of rayon yarn. It is learned that the existing scheme of distribution of indigenous rayon yarn to the weaving industry has been modified and a more equitable distribution scheme evolved which will come into effect from the next quarter (commencing from July). The revised scheme lays down that 5 per cent. of the total production will have to be kept as reserve in order to meet some special needs. Out of the balance, 70 per cent. will have to be distributed direct to consumers and 30 per cent. to consumers through dealers. The latter quota will be divided equally between the newcomers and the manufacturers of gas mantles, hosiery and other items. At least 10 per cent. will have to be set apart for handloom weavers. The revised scheme will treat doublers and twisters not as consumers but as processors. This category of users will be given supplies equal to their quota for 1½ months for the time being. The needs of handloom weavers will not get acetate yarn, but their requirements for viscose yarn will be met by Travancore Rayons.

The yarn market depicted a firm trend during the week under review also with the exception of cotton yarns which continued to remain depressed. Both rayon and staple fibre yarns evoked good buying support on fears of growing acute shortage in supplies. The total imports of art silk yarn into Bombay port during the month of May 1958 amounted to only 2.03 million lbs. The firmness of staple fibre yarn was aided by reports that the production of indigenous staple fibre yarn had been hampered by scarcity in supplies of raw staple fibre. Cotton yarns, as already stated, were depressed, notwithstanding the liberal export policy announced by the Centre. Operators would appear to feel that prospects for larger exports were bleak, due to keen competition from Pakistan, Japan and Hongkong.

Spot 120 Japan advanced by 12 nP to Rs. 6.62. 150 Japan improved by 15 nP to Rs. 6.59. 120 Italy rallied 37 nP to Rs. 6.62. 150 Italy, however, receded by 12 nP to Rs. 6.50. Among indigenous yarns, National Rayons 150 bright cones first grade gathered 2 nP to Rs. 5.72. 120 bright cones first grade strengthened by 9 nP to Rs. 6.

Staple fibre yarn 40x2 August delivery met with excellent support and climbed up by Rs. 20 to Rs. 651. June delivery hardened by Rs. 15 to Rs. 641. Spot 40x2 Kohinoors and New Greats put on 3 nP each to Rs. 3.37 and Rs. 3.24, respectively. Citys gathered 4 nP to Rs. 3.37. Centurys were better by 5 nP at Rs. 3.37. Among foreign yarns, Paramounts increased by 7 nP to Rs. 7.44. Fujis rose by 6 nP to Rs. 7.50.

In the cotton yarn section, ten counts Moderns were dull at Rs. 13.50 and Podars at Rs. 12.62. Twenty counts were neglected, Indus being quoted at Rs. 16.37, Moderns at Rs. 16.75 and Gokaks at Rs. 16.75. Among thirty counts, Hinds were unchanged at Rs. 19.50. Forty counts Moderns were stagnant at Rs. 24. Minaxis, however, advanced by 37 nP to Rs. 23.87. Among sixty counts, Moderns were on offer at Rs. 60. Finlays and Raghuvamshis, on the other hand, gathered 25 nP each to Rs. 61 and Rs. 50.75, respectively. Eighty counts Mahendras changed hands at Rs. 69.50, same as last week. Moderns were quiet at Rs. 69.75.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	11-6-1958	4-6-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 Japan (per lb.)	6.62	6.50
150 Japan (per lb.)	6.59	6.44
120 Italy (per lb.)	6.62	6.25
150 Italy (per lb.)	6.50	6.62
Staple fibre yarn (per case of 200 lbs.)—		
40×2 June	641.00	626.00
40×2 August	651.00	631.00
40×2 New Great (per lb.)	3.24	3.21
40×2 City (per lb.)	3.37	3.33
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.62	12.62
20s Modern	16.75	16.75
30s Hind	19.50	19.50
40s Minaxi	23.87	23.50
60s Raghuvamshi	50.75	50.50
80s Modern	69.75	69.75

SUGAR SLUMPS

(From Our Own Correspondents)

BOMBAY, 11*th June*

The sugar market was in the grip of bears during the week under review and there was a heavy landslide in prices. Those who had made large purchases previously on rumours of an imminent announcement of sugar export policy with some levy on sugar consumed domestically in order to meet the loss on export turned out to be sellers, thanks to the delay in announcement. The ex-mill quotations in the Bombay-Deccan went down by Rs. 2 per bag. The co-operative sugar factories were reported to have sold substantial quantities of E and D grade sugar at Rs. 101.25 and Rs. 102 per bag, respectively. The Government of India announced this week the normal monthly release of 168,000 tons for sale in the free market.

Arrivals of sugar by rail into the market were considerable. They aggregated 21,600 bags, as against 11,300 bags in the previous week.

Large grain sugar slumped by Rs. 3 to Rs. 110-Rs. 116 per bag. Medium grain fell from Rs. 107-Rs. 112 to Rs. 107-Rs. 109. Small grain dropped Re. 1.50 to Rs. 106.50.

* * * *

HAPUR, 9*th June*

After ruling steady during the major part of the week on heavy outside buying inspired by rumours of an increase in excise duty for enabling exports, the sugar market turned quiet towards the week-end in the absence of any such announcement and with the release of a further quantity of 168,000 tons for sale in the free market. The Government's policy regarding exports is expected to be finalised soon and indications are that the mills may be required to export 10 per cent. of their current year's output and the losses in exports will be met by a small levy on sugar released for domestic consumption.

The ex-mill delivery prices rose by 25 nP to 44 nP per maund on good buying support from Punjab, Delhi, Rajasthan, Saurashtra and Gujerat, but eased slightly towards the week-end. The trade was anxiously awaiting the Government of India's export policy. The latest ex-mill delivery prices were Deoband (B29) Rs. 38; Khatauli (B29) Rs. 38.25; Iqbalpur (D29) Rs. 36.87; Rampur (B29) Rs. 37.50; Mansurpur (B29) Rs. 38.75; Daurala (B29) Rs. 37.87; Amroha (D29) Rs. 35.81; Bijnore (E29) Rs. 35.56; Meerut (D28) Rs. 36.44; Simbhauli Rs. 36.56.

Sugar prices ruled quiet in the Kanpur market, following the release of the monthly quota for free sale. The latest prevailing prices spot and ex-mill, respectively, per bag and per maund were: (C29) Basti Rs. 104; Rs. 36.50; Gola ready unstocked Rs. 35.69; Gurhwal Rs. 101 Rs. 35.95; Walterganj unstocked Rs. 35.44.

Good pre-monsoon demand from consuming areas accounted for an offtake of about 10,000 maunds during the week, reducing the local stocks to 120,000 maunds and the prices of *gur* improved by about a rupee per maund to Rs. 18 for dry quality and Rs. 16 to Rs. 17.25 for *kotha* mixed dry-wet. The standing cane crop reported fairly good is badly in need of rains now.

Arrivals of *gur* declined to about 200 maunds daily in the Muzaffarnagar market and, due to good support from Punjab and Gujerat coupled with sharp rise in future section prices, *gur* prices there advanced by 69 nP per maund for *Chakku kotha* quality. Demand from Rajasthan for *shakker dara* was good and the prices of this variety gained by 50 nP per maund. *Khandsari* ruled quiet from Rs. 31 to Rs. 33.50 per maund. Prevailing prices of *gur* were: *Chakku Minja kotha* dry Rs. 19; *kotha* wet Rs. 16.75; *shakker massala* Rs. 21 to Rs. 23, *shakker dara* Rs. 20 to Rs. 21.25 per maund.

OILSEEDS MOVE UP

(From Our Own Correspondent)

BOMBAY, 11*th June*

The oilseeds market presented a firm trend during the week under review. The firmness was aided principally by persistent rumours of an export quota for groundnut oilcake. Renewed expectations of the complete abolition of export duty on castor oil also aided the sentiment of operators. The buying fervour was fanned further by buoyant advices in the North Indian commodity markets. All these factors induced good buying support, while offerings were comparatively less. Consequently, oilseeds and oil prices registered a notable improvement. The groundnut section was particularly active during the week. Traders would appear to feel that some export business might be possible in H.P.S. groundnut with the U.K. and the Continent. Burma was also expected to purchase Indian groundnut oil shortly.

Groundnut August contract attracted good attention of operators and spurted from Rs. 167.25 last week-end to Rs. 173 on the 7th inst. After receding to Rs. 171 on Monday, the contract recovered to touch Rs. 172.50 today, before finishing at Rs. 172.37. Over the week, bold ready rallied 37 nP to Rs. 35.12. Coromandel and Khandesh quality both strengthened by 65 nP to Rs. 35.75. Groundnut oil ex-mill hardened from Rs. 18.62 to Rs. 19, although, on Saturday, it was higher still at Rs. 19.25. Railway receipt improved from Rs. 18.37 to Rs. 18.75 but wound up the week lower at Rs. 18.62.

Induced by persistent hopes of abolition of export duty on castor oil, castorseed September contract moved up, the closing rate on Saturday being Rs. 158.75, as against Rs. 156 on Wednesday last. After declining to Rs. 157.12 the following day, it recovered to Rs. 158.25 today; towards the close, however, it was a shade easy. Ready Madras picked up 13 nP to Rs. 30.50. Kanpur quality gathered a like amount to Rs. 29.25. Castor oil commercial quality rose by 6 nP to Rs. 15.50. B.S.S. was fully maintained at Rs. 16.75 today, same as last week.

The linseed section ruled distinctly firm. The floating stocks were reported to have decreased, while the new crop was not expected to come for several months. Linseed September delivery evoked enlarged buying inquiries and climbed up from Rs. 31.56 to Rs. 32.44 today before finishing at Rs. 32.37. Bold ready increased from Rs. 31.12 to Rs. 31.87. Linseed oil was on request at Rs. 16.31, that is, 31 nP higher as compared with the last week-end rate.

Cottonseed met with excellent support from operators following firm advices from cotton market. The September contract which stood at Rs. 111.75 last week-end forged ahead to touch a high of Rs. 115.50 today. At higher levels, however, some profit-taking set in and the rate finished lower at Rs. 115.

In sympathy with the general trend, kardiseed bold ready improved by 25 nP to Rs. 19. Nigerseed Madras quality gained a like amount to Rs. 29.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	11-6-1958	4-6-1958	28-5-1958
	Rs.	Rs	Rs.
Groundnut—			
August 1958	172.37	167.25	164.25
Bold ready (per cwt.)	35.12	34.75	34.00
Linseed—			
Sept. 1958	32.37	31.56	30.87
Bold ready (per cwt.)	31.87	31.12	31.19
Castorseed—			
Sept. 1958	158.00	156.00	154.62
Madras (per cwt.)	30.50	30.37	30.12
Cottonseed—			
Sept. 1958	115.00	111.75	109.50
*Groundnut oil**—			
Ex-mill ready (per quarter)	19.00	18.62	17.87
Castor Oil—			
Commercial (per quarter)	15.50	15.44	15.37
Linseed oil†—			
Ready	16.31	16.00	15.94

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

JUTE GOODS DEPRESSED

(From Our Own Correspondent)

CALCUTTA, 10*th June*

In the absence of fair interest being shown for export, depressed conditions continued to prevail in jute goods during the week under review. A reaction was also in evidence in raw jute, although it was not to such an extent as to absorb fully the welcome reports of an early crop. The jute districts reported further thunder-showers, and the earlier fears of the crop having been affected by drought were not stressed in the market. In jute goods, foreign buyers showed interest in small quantities only. In view of the favourable crop reports, their buying policy was one of hand-to-mouth. Further dullness set in when the stock figures were announced towards the week-end. The increase at the end of May was as much as 14,500 tons. Sacking went up by 11,600 tons and hessian by 4,600 tons, while miscellaneous constructions declined by 1,700 tons. Throughout the week, B. twills were quoted below the I.J.M.A. floor price, and the huge increase in stock in heavy goods affected sentiment further. In hessian, the U.S. continued buying sparingly, in view of the economic recession there.

The present recession in prices was due not to excessive speculation but to a decline in buying for export. In recent months, production has been increasing, while no such expansion has taken place in exports. This is not reflected in the statistical position, only in view of an increase in offtake for internal consumption. The decline in prices was due also to slowing down of buying by shippers, in view of the apprehended dock workers' strike as from the 16th inst.

Ready B. twills were quoted on Tuesday last at Rs. 97.75 and hessian 40" 10 oz. at Rs. 40.30. No business was reported at these rates. On Wednesday, B. twills at one time spurted to Rs. 100.10. Since this rate was above the I.J.M.A. minimum price, the mills exhibited an anxiety to sell. Following this, the rate soon fell to Rs. 98.35, while hessian 40" 10 oz. steadied up to Rs. 48.45. Mills sold fair quantities in both hessian and B. twills for forward deliveries. B. twills July-September advanced from Rs. 99.60 to Rs. 100.05 and hessian 40" 10 oz. from Rs. 40.25 to Rs. 40.45. On Thursday, prices were affected on favourable weather reports from jute-growing districts. Thus, ready B. twills sagged to Rs. 97.75 and ready hessian 40" 10 oz. to Rs. 40.30. On the next day, prices were further affected on account of lack of business. Hessian 40" 10 oz. declined to Rs. 40.15 and B. twills to Rs. 97.50. There was no change to these rates at the close of the week. Although the market was featureless yesterday, B. twills were better at Rs. 98.00, with hessian 40" 10 oz. quoting at Rs. 40.10. It was stated that Argentine had opened letters of credit for May shipments.

Only little business passed through in the raw jute market. Sellers however, were reserved and this prevented prices from falling. The latest quotations for the old crop, June-July delivery are:

	Middles Rs.	*Bottoms* Rs.
Pakistani:		
District	31.50	28.50
Northern	31.00	28.00
Indian:		
Northern	27.75	24.75
Assam	27.75	24.75

Pucca bales 1st marks ... Rs. 160.00 per bale ready.

DUST TEAS DECLINE

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, 6*th June*

Offerings in Sale No. 15, which was held on Tuesday, 3rd June aggregated 1,069,666 lbs. Quality showed a further seasonal decline. Teas of rush production manufacture were also in evidence, particularly from the lower elevations. The sale opened to a good general demand for everything except low medium and medium fannings which were neglected. Low medium brokens are quoted irregularly 5 nP easier on last rates. Medium and good medium teas met with good competition and remained firm on the previous week's quotation. Best liquoring met a better market, and were stronger and dearer. Whole leaf were irregularly firm to dearer. The following are the quotations:—

	1958 Rs.
Plain B.P.	1.45
Low medium	1.65 to 1.75
Medium	1.75 to 2.05
Good medium	2.10 to 2.45
Quality	2.35 to 3.35

Dust Sale "L".—The catalogues for this sale which was held on Thursday, 5th June, amounted to 1,062,538 lbs. The market opened with a good demand and prices were irregularly 10 nP lower. As the sale progressed, the market eased considerably, and towards the close there were many withdrawals.

London Market—Sale of 2nd June 1958.—Dearer 1*d.* to 3*d.*

Sale of 3rd June 1958.—Unchanged.

Colombo Market.—6.75 million lbs. Good general demand. Low and low medium firm. Better sorts slightly below last rates at opening became considerably easier, Russia buying. Off grades steady.

Calcutta Market.—No sale this week.

Export Duty.—The Government has issued a notification fixing the price of tea for the purpose of determining the export duty at Rs. 3.50 per pound, as against Rs. 3.24 per pound in force from 1st May 1958. There is no change in the existing rate of duty of 38 nP per pound.

The Government of India announced today two measures of interim relief to the tea industry. With effect from 1st June, the excise duty on teas which are not used in the manufacture of packaged tea will be reduced to half anna per lb., and the cess of Rs. 4 per 100 pounds levied on teas exported outside India under the provisions of Section 25 (1) of the Tea Act, 1953, will be reduced to Rs. 2.

Export Quota.—A fair amount of business has been transacted in special licence at 8/8½ nP. The market has remained firm throughout this week and today's quotation is sellers 8½ nP with probable buyers at 8 nP. New quota quotation is sellers 15½ nP. Buyers 15 nP.

Forthcoming Auctions.—Sale No. 16 will be held on Tuesday, 10th June 1958.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:—

"*Sale* 16.—1,050,000 lbs. Much less demand for everything. Low medium and mediums 10 to 20 nP easier. Good mediums irregularly 10 nP, best liquoring 20 to 30 nP. Whole leaf about steady."

FOODGRAINS FIRM

(From Our Own Correspondent)

HAPUR, 9*th June*

Firm conditions prevailed in the foodgrains markets during the week. This is very unusual as, during the summer months, the markets are supposed to be receiving a constant flow of supplies of *rabi* grains just harvested. But, this year, *rabi* grain arrivals have been very small and, naturally, there has been a marked advance in prices. Although official circles describe the food situation in east U.P. to be under control, other sources indicate that east U.P. districts are facing scarcity conditions. Offtake from the fair-price shops there is increasing and wheat prices have touched new heights at Rs. 21 per maund.

In Hapur, wheat recorded an advance of Re. 1.50 per maund during the week to be quoted at Rs. 17.75 per maund for average quality and upto Rs. 19 for farm produce. Daily arrivals continue to be small at an average of 500 maunds and they are being lifted by consumers and stocks are unchanged at five *khatties*. Wheat was being smuggled from Punjab in large quantity, but, due to strict vigilance, there has been a fall in arrivals from that side and this has accounted for spurt in wheat prices. Rice prices also ruled firm during the week, due to shortage of supplies and in line with wheat prices. The latest prices were: *Basmati sela* Rs. 37 to Rs. 40, *mainpuri* Rs. 27-50; coarse Rs. 24 per maund.

Firm advices from Punjab accounted for sharp gains in the prices of gram during the week. A small quantity continued to arrive from Punjab and local stock improved slightly to 46 *khatties*. Barley and *bejhar* spurted to touch new heights, due to poor arrivals and scanty local stocks. *Jowar* and *guwar* also hardened. The week-end prices (in rupees per maund) were gram 12.87 to 13.25: barley 12.62; *bejhar* 12; *jowar* 14 to 15; *guwar* 15.63.

A further gain of Re. 1 per maund was recorded in the prices of peas and *arhar* during the week, despite slack outside demand. An appreciable advance in future prices and general bullish sentiment in all grain prices were the main hardening factors. Arrivals were modest at an average of 500 to 750 maunds daily each. *Urd* and *moong* also registered gains during the week and prevailing prices (in rupees per maund) were: Peas *dara* 11.50; farm quality upto 12; peas *dal* 13.50; *arhar* 14.50; *arhar dal* 17.94; *urd* 19 to 20; *moong* 24; *massoor* 14 to 15.

Pulses futures spurted to touch new heights of the season on continued bull support and latest quotations were at the best of the week. Quotations were: Peas *bhadon* Rs. 12.28; *arhar bhadon* Rs. 15.10; *urd maha* Rs. 17.85.

EXPORT TEAS IN GOOD DEMAND

(From Our Own Correspondent)

CALCUTTA, 10*th June*

The cut in excise duty and the reduction in cess have been welcomed as signifying the Government's recognition of the tea industry's case for tax relief. Both the measures will amount to relief worth Rs. 120 lakhs. The relief will enable the industry to reduce cost of production to that extent and strengthen the competitive capacity of Indian teas in foreign markets. Trade circles, of course, feel that the Government's decision is a belated one. It is pointed out that, if only these concessions had been granted months ago when the industry eloquently began pleading for relief, such a great decline in exports as has occurred woud have certainly been avoided.

Relief to common teas has not so far been granted. This has caused disappointment, although it is said that a scheme in this regard is being worked out. Mr. B. C. Ghose, Senior Vice-Chairman of the Indian Tea Planters' Association, who is also a member of the executive committee of the Tea Board, declared here that the above concessions, equivalent to relief of 8 pies per lb of tea, did not touch a fringe of the problem of common tea. He stated that common tea needed a relief of a minimum of As 4 per lb of the various taxes on production, Central and State, to enable it to stand world competition in the face of overproduction.

Dusts amounting to 21,214 chests were offered at the internal auctions held last week. Although general demand was fair, prices declined. C.T.C. Assams were lower. The liquoring kinds eased by 20 nP, and the mediums and the plainer kinds by 10 nP. The grainy teas were occasionally higher. Black leafy grades, on competition, were firm to dearer. Orthodox teas were, however, easier by 8 nP. The quotations were: best Assam C.T.C. Rs. 2.40 (nominal); medium Assam C.T.C. Re. 1.70 to Re. 1.90; medium Assam grainy dust Re 1.52; and medium Dooars Re. 1.48 to Re. 1.50. Leaf on offer was only 414 chests.

The 1957-58 non-transferable shipping licence changed hands at 7½ nP, but sellers soon raised the price to 8 nP which failed to find buyers. At 8½ nP, business was done in the 1957-58 transferable special export licence. The 1958-59 export rights realised 16 nP before sagging to 15½ nP.

The season's first export sales were held yesterday when offerings amounted to 26,716 packages, of which 132 chests were of the old season's manufacture and the balance the new season's. There was fair support from all sections of the foreign buyers, and the best teas attracted considerable attention. Buyers from the U.S.S.R. and the United Kingdom were keen on bidding. This was attributed here to the delay in shipments from Ceylon. Russia is expected to continue showing more and more interest in Calcutta teas, thanks to the dock labour situation in Ceylon. The strongest features of the sales were the O.F's, B.O.Ps and orthodox Dooars possessing flavour. Keen competition was offered to the brighter liquoring C.T.C. Assams, the prices of which gained remarkably. Plain black B.O.Ps without liquor and the more ordinary C.T.C. kinds were less in demand. The plain B.Ps and fannings, however, found support from internal buyers and rose above valuations. Non-wither legg cut Dooars were about steady, as were stylish whole leaf grades. Darjeelings met with ready bidders. There are no quotations, owing to lack of representative selections.

No business was done in the 1957-58 transferable special export licence, for which sellers asked 7½ nP.

HIDES FEATURELESS

(From Our Own Correspondent)

KANPUR, 9*th June*

During the week under review, the hides and skins market ruled featureless. Thanks to extreme heat, fresh arrivals of goat and sheep went down further. The Madras dealers were brisk in the goat sector, whereas the local tanners were interested mainly in the superior cow and buff.

The latest available quotations are: wet salted cow 1st grade Rs. 300 and 2nd grade Rs. 225 per score; wet salted buff 1st grade 1 lb, 6 ozs. and 2nd grade 1 lb. 11 ozs. per rupee; Goat 1st grade Rs. 300 and 2nd grade Rs. 270 per 100 pieces; Sheep 1st grade Rs. 275 and 2nd grade Rs. 250 per 100 pieces.

LINSEED FIRMER

(Messrs. A. Bradley and Co.)

CALCUTTA, 9*th June*

A generally firmer tendency prevails in the linseed market and there has been an all-round advance in the price of seeds, oil and cake. Arrivals are still very meagre and sellers are reserved. In the oil section, offtake continues to be dull and sellers are hesitant. Shippers are not showing much interest at prevailing rates. U.K. markets are still out of line with ours. The latest quotation for ready and June is Rs. 22-14 per maund.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

Delegates from 32 member countries and observers from a number of others were recently in conclave in London to deliberate upon the free worl'd raw cotton problems. The occasion was the 17th Plenary Meeting of the International Cotton Advisory Committee, Washington—the first to be held in London. The delegates discussed such topics as the current trends in world cotton economy, with particular reference to the present and prospective supply and demand situation, present trends in production, effects of business conditions competition from man-made fibres and other factors on cotton consumption, measures taken by member-Governments to market surplus stocks and the supply and demand for extra long-staple cotton.

In a review of the world cotton situation presented to the meeting, the Committee stated that the basic fact about the present situation was that world carryover on 1st August 1958 would be the smallest for several years. Optimism over the future, however, the Committee added, must be tempered by the reappearance of certain adverse elements. After several years of continuous expansion, consumption was declining in many countries, and competition from substitute fibres and materials, particularly the newer synthetics, continued to be a very real threat to cotton. In contrast to the last season,

UNIVERSITY EDUCATION

THE report of the Banaras Hindu University Enquiry Committee is a shocking revelation of a deplorable state of affairs in that illustrious seat of learning. "We regret to have a state that, from all the material placed at our disposal," the Committee observes, "we cannot help feeling that it has become a hot-bed of intrigue, nepotism, corruption and even of crimes of various description." While it is to be hoped that the Ordinance issued by the President will help correct the situation in the Banaras Hindu University, it cannot altogether be denied that, in several Indian universities, the academic atmosphere and the educational attainments of the students leave much to be desired. There is little doubt that academic standards have fallen and are falling. The Union Public Service Commission, in its recent report, declared that, "as a general rule, candidates do not show any real grasp of their subjects and their answers are mainly based on cramming." It cannot be a matter of unconcern to trade and industry that university education in India is in a very bad shape. After all, recruitment to the higher technical and administrative cadres in industry has necessarily to be made from among the university men and, if these men are not intellectually well equipped nor possess the character and leadership which may legitimately be expected of them, it is time the community made a serious effort at arresting any further decline in university standards.

There has undoubtedly been much unplanned increase in the number of universities, thanks to the fact that the Central and State Governments have had to accede to many linguistic and regional claims for separate universities. There are at present about 37 universities with over 750,000 students on their rolls; in 1947, there were no more than 240,000 students and by 1951-52, the number had risen to 400,000. It has been computed that about 2.2 per cent. of the university-age group (estimated at 10 per cent. of the national population) are in our universities; this compares with about 2.5 per cent. in the U.K., 7 per cent. in Japan and over 16 per cent. in the U.S. Clearly, before any further increase in university education takes place, it is necessary to ensure that the available facilities are utilised by men capable of benefiting from them. The University Grants Commission, in the course of its reference to the expansion of university education in India, rightly observed that "consolidation rather than expansion is the need of the day." Although university education in India is cheap by Western standards, the cost of such education is not inconsiderable in relation to India's resources and income. The average direct expenditure per university student in India, according to the Commission, is about Rs. 500 per year, as against over Rs. 5,000 in the U.K. and the U.S. What is necessary is to make available increasingly larger funds to university education and also to see that universities fulfil their high mission. The University Education Commission (Chairman: Dr. S. Radhakrishnan) stated that "dissemination of learning, incessant search for new knowledge, unceasing effort to plumb the meaning of life, provision for professional education to satisfy the occupational needs of our society are the vital tasks of higher education."

Here is, as in other departments of activity, a certain conflict between quality and quantity. The University Grants Commission recognised this conflict when it affirmed that it was difficult to lay down any fixed principle on which the optimum numbers in universities may be determined. It went on to observe: "In a free democratic society, the supply of facilities for higher education will, have to respond in some measure at least to public demand." It added: "In our particular national situation, as the country's development projects progress, there will be a growing demand for men and women with high academic qualifications in the various avenues of industry, commerce and administration. There will be an ever-growing demand for professionally trained people, including especially teachers. We are, therefore, conscious of the need for a responsive flexibility in our plans." Appropriately enough, the Commission stressed the need for measures both to control numbers and to provide for expansion, though it felt that the country's primary concern at present was the improvement of standards and facilities.

A major cause of deterioration in academic standards as well as of indiscipline in universities is, of course, the low teacher-pupil ratio. The teacher-student ratio is now of the order of 1:20; the actual ratio in many of the arts colleges is considerably higher. The Estimates Committee, in its report on University and Rural Higher Education, rightly pointed out that, as a result of the low teacher-pupil ratio, the intimate personal contact between the teacher and the taught, which is the essence of a good tutorial system, is practically lost. The Committee, therefore, recommended that effective steps should be taken to reduce the ratio and to make the education pupil-centred. In this recommendation lies the seed of further progress in university education. A notable point made by the Estimates Committee is that arts education in universities should be suitably limited to those who have special attitude for literary and academic studies and more and more avenues and facilities provided for scientific and technical education. We have no doubt this is sound advice. Many students drift into arts education not because they have any real aptitude for it, but because there are not enough facilities for technical education. All this merely serves to swell the ranks of the educated unemployed.

It is of the utmost importance that technological education at all levels should receive more attention than now. It is, however, gratifying to note that the authorities are fully alive to the need for avoiding duplication of educational efforts and also for expanding the facilities for higher scientific and technical education. Thus, the study in spec

India must strive to make good the lost time and effort in the sphere of technical education. Indeed, there has been a world-wide interest in higher technical education and training. Even in the U.S. which has extensive facilities for scientific education, it has been felt that further fillip to such education is now necessary. An official report on Soviet education published by the U.S. Government noted that Soviet university students were encouraged to specialise in many branches of science and technology by means of subsidies and subsistence grants. It stated that 80,000 students took degrees in engineering each year in the U.S.S.R., as compared with only 30,000 in the U.S. and that 70 per cent. of the higher degrees were in scientific and technological fields. Dr. Bevis, the Chairman of the U.S. President's Committee on Scientists and Engineers, observed that, in the 1930s, Russia imported American engineers and American machinery for such relatively simple tasks as building dams. But it had now more scientists, engineers and technicians than the U.S. Russia's scientific achievements have been traced to the quality of the education imparted in that country. It would appear that China too is making much headway in the matter of technological education. Lord Boyd Orr, after his recent visit to Communist China, declared that China was industrialising more quickly than the Soviet Union. He added: "The Chinese are a highly intelligent people and they are going on a big drive for education. It is like a new religion in China." India's national interests demand a similar zeal for higher technological and scientific education.

FATS AND OILS

THE level of consumption of fats and oils constitutes a significant pointer to world economic activity. For, while the consumption of edible oils is determined by the level of incomes, the consumption of non-edible oils is influenced by the state of industrial activity. With a rising living standard and widening industrial application of oils, there has been in recent years a sizable increase in consumption of oils and fats. It is noteworthy that the *per capita* consumption of all fats and oils, according to the report of the Food and Agriculture Organisation (F.A.O.), was 11.4 kg. in 1955-56, as against 10.6 kg. in 1948-52 (average) and 11.0 kg. in 1934-38 (average). This, of course, is the overall figure. There were geographical variations. For instance, in 1955-56, the *per capita* consumption in North America was as high as 29.4 kg., whereas it was as low as 4.7 kg. in Asia (excluding Mainland China).

The rising trend in *per capita* consumption in post-war years has been facilitated by the increase in the output of world oils and fats. The preliminary estimate for 1957 places the world (excluding the U.S.S.R.) production at 26.8 million tons (in terms of oil), as against 25.8 million tons in 1956 and 21.5 million tons in 1948-52 (average). Of the following two tables, the first gives the variety-wise analysis of world output of oils and fats and the second the distribution of production:

World Production of Fats and Oils

(In thousand metric tons)

* Excluding U.S.S.R.

Explaining the changes in world output of oils and fats, the report points out that, in 1956, the U.S. output reached a new record volume of 6.6 million tons. The output in India declined by 8 per cent. to 2 million tons, but some further advance was apparently made in China which recovered the pre-war level of 3.4 million tons. Production in the U.S.S.R. is believed to be in the range of 2.5 to 3 million tons. For 1957, world output is provisionally estimated to have risen by 4 per cent. to 26.8 million tons. The upward trend in liquid edible oil output was resumed and production reached 10.9 million tons. Among non-edible oils, the 1956-57 world crop of linseed was the largest post-war crop. A reversal of the downward trend in plantations in Argentine, together with expansion in North America, accounted for an increase in the world linseed crop. The report forecasts that, during the current year, world output of oils and fats might remain at least as much as in 1957. Supplies of liquid edible oils, as a whole, are likely to be larger in 1958. Record groundnut crop in West Africa, it is stated, is expected from the harvest in progress and larger crops are forecast in most of the major producers, except China.

Because of the increase in consumption, world exports of oils and fats have risen in recent years. In 1956, they rose to 7.3 million tons (oil equivalent) or 7 per cent. above the previous year. The report brings out the fact that world trade has increased at a faster rate than production. The proportion of world output traded internationally in 1956 was 30 per cent. and moderately higher than in 1950-52. U.S. shipments of all fats and oils rose to 2.2 million tons, supplying 30 per cent. of world exports. Although world trade continued to expand in 1957, the increase in total volume was somewhat moderate. The trade situation for drying oils in recent years, it is stated, has been dominated by changes in the pattern in linseed and linseed oil exports. In 1956, the low volume of world trade in these commodities was chiefly caused by the sharp contraction in linseed cultivation in Argentine which was not offset by the expansion in North America. Exports of oils and fats from different countries and the variety-wise distribution of exports are summarised in the two tables given below:

* In terms of oil.

The overall world level of consumption of fats and oils, as indicated briefly at the outset, conceals the fact that there are regions of very high and very low consumption of oils and fats. The areas of high level plateaus are Western Europe and North America. In 1956, the *per capita* consumption in Western Europe was 23.8 kg., as against 20.0 kg. in 1948-52 (average) and 23.6 kg. in 1934-38 (average); the corresponding figures for North America are 29.4 kg., 31.6 kg. and 29.3 kg. Both Asia and Africa are low fat consumption areas. In 1955-56, it was as low as 4.7 kg. in Asia, although it was an improvement over the level of 4.1 kg. which was the *per capita* consumption in both 1948-52 (average) and 1934-38 (average). In Africa, the *per capita* level of consumption rose from 5.1 kg. in 1934-38 (average) to 5.4 kg. in 1948-52 (average), but declined to 5.1 kg. in 1955-56; the corresponding figures for Latin America are 7.5 kg., 9.2 kg. and 10.8 kg. It must, however, be pointed out that consumption estimates for Africa may not necessarily reflect the correct position, inasmuch as little information, as the report itself suggests, is available on the quantities of fats and oils produced in subsistence agriculture and national estimates of total production are frequently based on the volume marketed for export together with conventional estimates of retention by producers and quantities marketed locally. So long as living standards do not improve, the fat intake in the Asian, African and Latin American countries, as the report forecasts, is bound to remain extremely low by any comparison with the high levels in other areas or with desirable standards in tropical and subtropical countries.

DOCK STRIKE

THE all-India dock strike, which commenced from the 16th inst., has brought activity in major ports virtually to a standstill, though Kandla is reported to be free from strike. Naval personnel, volunteer corps and some loyal workers are trying to maintain unimpaired essential services, including the unloading of foodships. Minor ports have not been seriously affected. The diversion of cargo through these ports should serve to soften the rigour of the impact of the strike on India's foreign trade. Nevertheless, if the strike continues, much damage will be done to national economy. An official Press note has appealed to all patriotic workers to desist from supporting the All-India Port and Dock Workers' Federation which has sponsored the strike. In the event of the continuation of the strike, the Government, the Press note warns, will be compelled to take all possible steps to maintain the flow of goods essential to the life of the community.

While the Government cannot perhaps altogether escape blame for what is apparently an unconscionable delay in implementing the Chaudhury Commission's report, it must be remembered that, till recently, the union leaders themselves were not unaware of the Government's difficulties in implementing the Commission's recommendations which have a relevance to the many thousands of Government and quasi-Government employees. Clearly, there is some "prestige" element involved in the strike. For there is little doubt that the dock workers' income has gone up significantly since the time the authorities implemented the piece-rate system of wages. In Madras, it has resulted in a 100 per cent. increase in the earnings of workers. Again, on the basis of the Chaudhury Commission's report, the Madras and Bombay Port Trust authorities have taken decisions which are designed to revise the scales of pay of over 3,000 employees. All this would suggest that not all port employees have reasonable grounds for grievance. Indeed, a trade union leader in Cochin is reported to have admitted that their main demand had been conceded by the Port authorities. Only the workers in that port could not avoid or evade the strike, because they form part of the Federation. Surely, it is not right for the labour union to hold the community to ransom even in the interests of maintaining unity in the ranks of the workers. It is noteworthy that the labour union in Cochin has called off the strike.

Both the union leaders and the authorities will do well to strive to reach a settlement on an all-India basis in respect of the general principles which should govern the implementation of the Chaudhury Commission's report. As recent events in Jamshedpur and other centres have demonstrated, a strike seldom remains peaceful for a long time. Mischievous elements will always try to exploit the situation for nefarious ends. In the final analysis, workers lose, rather than gain, through a prolonged strike. It is to be hoped that better counsels will prevail and the union leaders will see their way to an early settlement of the dispute. The Union Transport Minister, Mr. S. K. Patil, has done well to affirm that, despite the strike decision by the unions, the Government will do its best to give a "square deal" to its employees. This assurance should augur well for the termination of the strike and the resumption of negotiations.

SHARE MARKET TAKES A CHEERFUL TURN

JUTE INDUSTRY—NON-FERROUS METALS—WORLD WHEAT POSITION—U.K. BANK RATE

THURSDAY, 5 P.M.

ALTHOUGH the wave of labour unrest in the city docks and elsewhere has not so far shown any sign of subsiding, the share market has struck a cheerful note. Values have surged forward on a fairly wide front. Although there are no reports of any encouraging improvement in the cloth position, textile shares have led the market this week. Thus, Bombay Dyeings have gained over the week Rs. 1.40 to Rs. 55 and Centurys Rs. 14.50 to Rs. 440. This spurt is attributed to general buying on expectations of further relief in excise duty on cloth. Despite the various ministerial statements made so far against a further reduction in excise duty on cloth, the market seems to be in an optimistic mood in that it regards further relief inevitable in the general interest of the industry, the workers and the country. Another group of shares which has been well favoured this week is cement, in anticipation of an increase in cement prices. Sugars, chemicals, engineering and mining scrips have all been sought for and they have scored handsome gains.

MARKET GOSSIP

Whereas the share market is cheerful, jute and tea markets in Calcutta are in a none too happy position. The jute mills are once again worried about the accumulated stocks, a more detailed reference to which is made below. The strike in Calcutta docks has resulted in the suspension of the export sale of tea scheduled to be held this week at that centre. The sales in Cochin have not been affected, because the strike in Cochin harbour was called off after two days. If the strike in Calcutta docks were to continue, the tea industry and trade will be faced with the problem of storing and financing the stocks. Meanwhile, Ceylon has been making all efforts to speed up shipments of tea to all parts of the world. The Trincomalee Tea Administration, an organisation of tea traders receiving Government co-operation, is organising the port of Trincomalee for tea shipments. Even shipments to Egypt, which stopped last month, as all Egyptian credit in Ceylon had been exhausted, are being resumed. It is stated that a fresh credit to the extent of Rs. 4 million in favour of Egypt has been secured by imports of Egyptian commodities into Ceylon through Japanese credit for cotton purchases from Egypt, under the tripartite pact among Ceylon, Japan and Egypt.

* * * *

The gradual accumulation of stocks of gunnies with jute mills in India from a low of 71,000 tons at the end of November last to a high of 112,000 tons at the close of May this year—this is the highest level since June 1957—coupled with the dock strike which is on from the 16th inst., has caused a shake-out in the jute goods market during the last few days. While the prices of hessian are now almost at the minimum price fixed by the I.J.M.A. recently, those of B. twills have pierced the bottom and stand at nearly Rs. 3 below the I.J.M.A.'s minimum prices. In the absence of any overseas demand, mills have been depending only on the internal demand and on Government orders. Naturally, mills are greatly concerned over the accumulation of stocks and the implications of the dock strike.

The dock strike and its repercussions on the industry may turn out to be temporary, but the accumulation of stocks has served to focus attention on the long-term problem of the industry, namely, that of meeting competition in overseas markets and from substitutes by making its goods more competitive in price. It was to meet this problem that mills embarked on a programme of rationalisation and modernisation with Government's financial assistance. In this process of modernisation, some of the surplus capacity which the mills have been carrying for years has been got rid of, although many have found it difficult to dispose of the surplus labour at the same time. The process is still going on. Some of the mills have, in the process, had to close down. The closure of mills in the past few months has created a misapprehension and has tended to obscure the circumstances attending their closure. The I.J.M.A. has, therefore, sought to remove this misapprehension in the course of a Press note. It emphasises the need for viewing the recent closure of mills against the proper background. Explaining this, the I.J.M.A. says:

"The paramount importance of the rationalisation of the industry has been repeatedly stressed by the I.J.M.A. and has been officially acknowledged by the Government of India. The workers' unions themselves have recognised that there is no alternative course, if the jute industry in this country is to survive. The unrelenting competition from jute substitutes, the gradual introduction of new marketing methods, such as bulk handling, the steady growth of jute manufacturing industries overseas—all these are indisputable facts, requiring no substantiation, and it is these factors which have dictated the policy of rationalisation and modernisation of the Indian jute industry. The market conditions prevailing today are a stern reminder of the fact that the jute industry is predominantly an export industry and serve to underline the pressing need for the adoption of modern production techniques to enable the Indian mills to maintain the competitive position of their products in the world markets. The recessionary trend in the U.S.A. has been reflected in a weakening economy in the jute industry's markets generally, and the mills are at present faced with rapidly accumulating stocks of finished goods. It would be folly on the part of the Government, the manufacturers or the workers to shut their eyes to this situation."

The I.J.M.A., however, makes it clear that these closures have not resulted in a curtailment of the industry's output and that the impact on labour has been reduced to the minimum. This has been done by transferring the looms of the closed mills to other modernised mills, thus giving a closer and more economic concentration of the manufacturing potential. All permanent workers affected by the closures have been offered alternative employment, with continuity of service and no loss of pay, in the concerns to which the looms have been transferred. In most cases, the I.J.M.A. adds, the workers have also been given living accommodation in the vicinity of their new place of work.

The whole problem of the jute industry, with particular reference to the recent or prospective closure of jute mills, is expected to be reviewed by the Tripartite Committee for Jute Industry—this Committee is scheduled to meet shortly in Calcutta —appointed by the Government of India, following the recommendations of the Indian Labour Conference held recently at Naini Tal.

* * * *

Last week's announcement of the Central Government's decision to grant *ad-hoc* advance licences for import of unwrought copper, zinc, lead and tin to the scheduled industries for the six-month period ending March 1959 has not had any effect on the non-ferrous metal market. Despite the announcement, the prices of non-ferrous metals have gone up quite markedly. Tin has risen by Rs. 15 to Rs. 146 per quarter, zinc by Rs. 9 to Rs. 66 per cwt. and lead by Rs. 4 to Rs. 67 per cwt. The prices of scraps also have improved. Copper scrap is now quoted at Rs. 190 per cwt., as against Rs. 185 a week before, and brass scrap at Rs. 138, as against Rs. 135.

The spurt in the prices of non-ferrous metals, notwithstanding the grant of advance import licences for the ensuing half-year, is not surprising for three important reasons. First, it has been specifically laid down by the Government that licences will not be valid for shipment earlier than 30th September 1958, nor will facilities for remittance of foreign exchange involved be allowed before 1st October 1958. Secondly, traders seem to fear a growing scarcity in supplies of non-ferrous metals in the coming months. These fears are based partly on expectations of prolonged strike by dock workers which affects imports from abroad and partly on rumours of the Government contemplating extension of the foreign exchange allocations for the current half-year to cover the next three months, that is, October-December. Thirdly, there are apprehensions of an appreciable increase in the cost of imported metals, especially copper.

World prices of copper have registered a smart rally of late, thanks to the upward revision in prices effected by the U.S. custom smelters following the Administration's plan for a one-year stockpiling programme for domestically-produced copper. The programme envisages purchase of copper up to 150,000 tons at market prices but not over 27½ cents per lb: the Administration is being urged to raise the quantity to 175,000 tons. The firmness in tin prices must be attributed to the rise of £10 per ton in prices in Singapore which in turn is due to restrictions on output and buying support for the Far East and the U.S. The attention of metal traders the world over is now focussed on the question whether the U.S. Government will extend the stockpiling programme also to tin and zinc, instead of the higher tariff recommended by the Tariff Commission, or whether it will persevere with its suggestion for subsidising the domestic lead and zinc industry.

In the meantime, the International Tin Council commenced its sitting in Paris on Tuesday last. The Council is expected not to make any change in the current 40 per cent. restriction on tin exports but to content itself with a review of developments since its last meeting at the end of April. During this period, prices in London have remained around the floor level of £730 per ton, despite the extension of 40 per cent. restriction on member countries' exports till the end of September next and fair amount of buying by the Buffer Stock Manager. The Manager is believed to have used up all the original contributions sufficient to buy 23,000 tons of tin. Considering that Russia is now exporting more high-grade tin, the Council may decide to approach it for joining the Agreement.

* * * *

The prospective bumper winter wheat crop in the U.S. in this (1958-59) season is casting dark shadows over the world wheat trade. Wheat prices, which are already ruling at low levels, seem to be in for a further slump if the huge winter crop, anticipated at present, materialises. Mr. Galvin, an American expert, forecasts the crop at 1,060 million bushels which, together with the 202 million bushels expected from the spring wheat harvest, would give a total U.S. crop of 1,262 million bushels this year, the highest since 1952-53. Given good weather, the figure, it is said, could easily rise to a new peak. Reports from elsewhere too indicate the possibility of a good crop. The main exceptions, however, are Canada and the Middle East. Lack of rain in the former and drought in the latter seem to have made the crop outlook in these countries somewhat gloomy. Seeding in Australia and Argentine, on the other hand, has gone ahead in good condition. France too expects a large crop.

The world wheat picture thus remains one of surplus supplies. Stocks in the six major exporting countries on 1st April last aggregated nearly 2,000 million bushels, in spite of the fact that they were reduced by about 10 per cent. in the preceding 12 months. This reduction was assisted by smaller crops in many areas in 1957-58. Present indications are that this is unlikely to happen again this year.

The threat posed by the huge U.S. crop is of major concern to the world wheat trade. Why are the estimates of the crop so high, despite the fact that the U.S. Government has been trying, over the past few years, through Soil Bank and acreage controls, to reduce sowings to a manageable level? According to Mr. George Broomhall, a number of the large farmers probably sow above their allotments, either because some land may have to be abandoned later owing to bad weather or with the idea that it may be better to sell a large output at a discount in the open market than to have a smaller output eligible for the U.S. Government's loan. Latest U.S. reports suggest that an unusually large part of this year's winter crop will not be eligible for the loan. Estimates of how much, however, varies from 100 million to 350 million bushels. Eligibility for the loan is on harvested and not on seeded acreage.

* * * *

In the U.K., the possibility of a further reduction in the Bank rate has been the subject of considerable discussion. Although it is not seriously contended that inflationary forces have been completely mastered, the general feeling is that the dear money tide has turned and the "crisis" 7 per cent. rate, effected in September last, has yielded results. It is interesting to recall that many other countries, besides the U.K., have reduced their Bank rates in recent months. Thus, since September last, the U.K. has reduced the Bank rate from 7 per cent. to 5½ per cent., Denmark from 5½ per cent. to 5 per cent., Sweden from 5 per cent. to 4½ per cent., the Netherlands from 5 per cent. to 4 per cent., Belgium from 4½ per cent. to 4 per cent., Germany from 4 per cent. to 3½ per cent. and the U.S. from 3½ per cent. to 1¾ per cent. A notable trend in British economy is that, in the eight months following the crisis of last September, it has replenished its gold and dollar reserves to the extent of £336 million, excluding the $215 million drawn under the "Suez" credit granted by the Export-Import Bank.

Apart from this development, it is not perhaps without significance that the U.K.'s visible trade gap last month was one of the lowest since the war; it was just £6.6 million. Between April and May 1958, exports increased from £277.3 million to £301.9 million and imports declined from £310.6 million to £308.6 million; the adverse trade balance thus moved down from £33.6 million to £6.6 million in May. During the first five months of 1958, exports aggregated £1,441 million, as compared with £1,470.5 million in the corresponding period of 1957. Imports in the first five months of the current year aggregated £1,553.3 million, as against £1,783.3 million. The adverse trade balance in the five months ended May 1958 thus stands reduced to £112.5 million, as compared with £312.8 million in the corresponding period of 1957. It is admitted that the gap in May would have been a little wider had not the London dock strike affected the import figures earlier than exports. It has, however, been computed that, even when allowance has been made for this factor, the gap is significantly small.

A factor which serves to strengthen hopes of a cut in the U.K.'s Bank rate is the recent fall in the Treasury bill rates. Thus, the Treasury bill rate fell sharply from £4-14-5.72 to £4-10-1.77. The bill rate, it is stated, is now at its lowest since mid-September. The fall in the bill rate is attributed to a general expectation that a further cut in Bank rate will not be long delayed. The fact that the market rate for bills has been allowed to fall so far is interpreted to mean than the authorities are not anxious to discourage hopes of a cut in Bank rate. It remains to be seen whether the authorities will, in fact, reduce the Bank rate—and do that soon. Referring to the possibility of a reduction in the rate, the London *Economist* points out that "experience shows that operators are seldom right in guessing the timing with which the Bank of England plays its hand." It adds: "This is partly because the Bank frequently does aim at tactical surprise and partly because the weight of the other forces that the Bank has to consider, for example, the movement of short-term money, cannot be assessed by the outside public." On purely tactical grounds, the journal contends, there is an argument in favour of further delay: "funding by sales from the Government broker's supply are normally higher in anticipation of a Bank rate move than when hopes have been realised." The journal, however, admits that tactical considerations are seldom decisive.

As these lines are written comes the announcement that the British Bank rate has been reduced from 5½ per cent. to 5 per cent.

* * * *

It is hardly a month since the three-nation talks on exports of cotton goods from India and Pakistan to Britain broke down on the crucial issue of the import "ceiling" to be fixed by the U.K. Now comes news from Manchester that the Lancashire textile industry is hoping for an early negotiation of a gentlemen's agreement with India and Pakistan. Addressing the annual meeting of the Cotton and Rayon Merchants' Association at Manchester the other day, Mr. J. S. T. Hawke, the Chairman, stated, for instance, that a really trivial gap now separated the parties and this might be bridged during this month, the way being thus paved for a further visit to Hong Kong. It is, however, not known whether any mission, from

EQUITIES BUOYANT

TEXTILES IN THE FOREFRONT

From Our Own Correspondents

BOMBAY, 19*th June*

THE Stock Exchange struck a firm note during the week under review. Despite the strike of dock workers, which commenced on the 16th inst., with its serious repercussions on the country's economy, there was a fresh wave of buying in almost all counters and prices scored handsome gains. Hopes that the strike in the ports would soon be called off—the Kandla port workers did not join the strike and Cochin port workers called off the strike yesterday—and the expectations that the Government of India's determination to tackle the foreign exchange situation would result in more helpful attitude on the part of the Government towards the private sector and in further reduction of fiscal levies in order to promote exports of goods induced buying and made sellers reserved. Textiles were in the forefront on expectations of early relief in excise duty, while steels were well supported on reports that the steel production in Jamshedpur had substantially recovered from the effects of the recent strike. The good investment support to cash scrips of industries which have a promising future also added colour to the market.

In the steel section, Tata Ordinaries gathered strength from Rs. 181.25 to Rs. 185, but shaded off to Rs. 184 at the close. The new shares gained Rs. 2.75 to Rs. 182. Indian Irons crept up from Rs. 21.36 to Rs. 22.08 before closing at Rs. 22.

As already pointed out, textile shares were in the limelight and keen enquiries were in evidence in almost all counters. Bombay Dyeings appreciated from Rs. 53.60 to Rs. 55.20 and closed at Rs. 55. Centurys were picked up on rising prices on reports that the Company had received sanction from the Controller of Capital Issues for the issue of new shares in the ratio of one share for every eight shares. The shares gained ground from Rs. 425.50 to Rs. 442.50, but closed a shade lower at Rs. 440. Kohinoors came up to Rs. 260 from last week's closing of Rs. 256.50, before finishing at Rs. 258. Central Indias spurted further from Rs. 86.50 to Rs. 94. Finlays gained Rs. 7 to Rs. 268, Gokaks Rs. 16 to Rs. 151 and Indu Ordinaries 28 nP to Rs. 9.32. Indore Malwas were up by Rs. 2 at Rs. 110, while Khataus were lower by Rs. 5 at Rs. 186.25. Minervas were unchanged at Rs. 67.50, while Models lost Rs. 2.50 to Rs. 165. Morarjees were steady at Rs. 233. Mysore Spinnings showed no change at Rs. 91. Shree Niwas Cottons hardened by Rs. 8 to Rs. 147 and Simplex by Rs. 7 to Rs. 171. Standards rose from Rs. 404 to Rs. 417 and Svadeshis from Rs. 176.50 to Rs. 185. Swans shot up by Rs. 22 to Rs. 365 and Tata Mills by Re. 1.50 to Rs. 39.

Bank shares were steady and fractional gains were recorded. Barodas were up by 50 nP at Rs. 116. While Centrals were done 50 nP lower at Rs. 53.50, their new shares put on 50 nP to Rs. 57.80. Bank of Indias, old and new, were a shade better at Rs. 135 and Rs. 135.50, respectively. Punjab Nationals gained Re. 1.50 to Rs. 50, while United Commercials were unchanged at Rs. 61.

Electricity shares were steady. Ahmedabad Electrics changed hands 30 nP higher at Rs. 95 and Surat Electrics 50 nP better at Rs. 108.75. Bombay Suburbans were a fraction quiet at Rs. 105.75. Tata Hydros were well maintained at Rs. 117.50 and Andhra Valleys at Rs. 1,137.50. Tata Powers moved up by Rs. 10 to Rs. 1,230.

Sugar shares were well supported. Belapurs scored a gain of Rs. 7.50 to Rs. 254. Bhopals moved up by Re. 1 to Rs. 22.48 and Phaltans by Rs. 4.50 to Rs. 152.50. Walchandnagars spurted from Rs. 273.75 to Rs. 291.25, before closing at Rs. 285. In the cement group, Associated Cements gained ground from Rs. 150.75 to Rs. 155.75 and their new shares put on Rs. 3 to Rs. 148. Digvijays were a fraction better at Rs. 148.25. Orissa Cements rose by 48 nP to Rs. 13.80. Ashoka Cements were in good favour and gained Re. 1.24 to Rs. 10.24. Bagalkots were done 16 nP higher at Rs. 9.16. Dalmia Cements rose by 24 nP to Rs. 10.72 and India Cements by 80 nP to Rs. 268.

In the engineering and mining group, Alcock Ashdowns continued to maintain their upward trend with a rise of Rs. 3.75 to Rs. 265. Premier Constructions scored a gain of Rs. 9 to Rs. 201. Tata Locomotives were a bit erratic. After a decline from Rs. 172 to Rs. 169.25, the shares advanced to Rs. 174 before closing at Rs. 173. Larsen and Toubros gained 16 nP to Rs. 16.56 and Texmacos a like amount to Rs. 18.56. Mahindras were a shade quiet at Rs. 19.40. Shivrajpurs hardened by no less than Rs. 11 to Rs. 91.50. Indian Coppers were done 18 nP higher at Rs. 3.38 and B.B. Petrols 16 nP better at Rs. 2.16.

Among shipping and automobiles, Scindias gradually moved up from Rs. 17.44 to Rs. 17.88. Great Easterns gained strength from Rs. 22.40 to Rs. 23.08. Premier Automobiles advanced by Rs. 2.30 to Rs. 84.30 and Hindustan Motors by 28 nP to Rs. 7.20.

Among miscellaneous shares, Bombay Burmahs (old) staged a smart rise from Rs. 552 to Rs. 569, but closed at Rs. 565.50. National Rayons closed at Rs. 233.25 *ex-div.* (div. Rs. 14), as against Rs. 239.50 *cum-div.* a week ago. Gwalior Rayons were done 52 nP higher at Rs. 13.76. Chemical shares continued to be in favour. Tata Chemicals closed 92 nP higher at Rs. 16.52. Alembic Chemicals were taken Re. 1.75 higher at Rs. 155. Dharamsi Chemicals moved up by Rs. 4 to Rs. 65 and Amar Dyes by Re. 1.25 to Re. 118. Tata Oils gathered Re. 1.25 to Rs. 41. On being placed in the forward list, Voltas spurted from Rs. 121.50 to Rs. 136.50. Wimcos gained over the week Rs. 4.50 to Rs. 174.50. Hindustan Levers were 48 nP higher at Rs. 23.32. West Coast Papers finished Re. 1.50 lower at Rs. 95. Greaves Cotton (new) had business at Rs. 101.

Calcutta Stock Exchange

CALCUTTA, 18*th June*

Dull conditions prevailed in the share market early in the week under review and profit-taking pushed down equity prices. At lower levels, however, buying support was accorded by both investors and operators, and, despite the dock workers' strike, the number of transactions on Monday this week was higher. It was, however, realised in the market, that the strike, if continued, would bring many an industry irreparable damage, at least in the current accounting period. Stoppage of exports would accentuate the foreign exchange crisis, and it was noted that in February the foreign trade deficit mounted up to Rs. 24.74 crores, as against Rs. 16.17 crores in the previous month. There were some favourable factors, which, had it not been for the situation in ports, would have had a greater play in moulding the market's trend. The resumption of full production in the T.I.S.C.O. works and the lessons the strike brought to bear on labour leadership were factors that were noted with satisfaction, while the increase in stocks and the decline in prices of jute goods, weakened jute shares, except for some interest in selected counters. Despite the good beginning of this season's export sales, teas were neglected, because of the port workers' strike affecting exports and causing postponement of export auctions. Coals were subdued for some time, but there were a few features in anticipation of an increase in the fuel prices. Cement shares were favoured on expectation of an early price increase. Shares of paper mills continued, to be bought at higher levels, in view of the rising trend in paper consumption. Generally, fair interest was shown yesterday also.

Among textiles, Elgin Mills, after rising to Rs. 12.37, receded to Rs. 12.25. Earlier, Kesorams were done at Rs. 10.75, but closed at Rs. 10.50. Bengal-Nagpurs declined to Rs. 4.19 from Rs. 4.37.

A few features were recorded in coals on interested buying. Western Bengals advanced to Rs. 6.37 from Rs. 6.31, and New Beerbhooms to Rs. 14.94 from Rs. 14.87. Raneegunges were raised to Rs. 12.12 from Rs. 11.31. Bengals, though unchanged, were steady at Rs. 245. South Karanpuras hardened to Rs. 10.12 from Rs. 9.25. At Rs. 20.50, Pench Valleys were higher by a few nP.

A decline in the volume of transactions was recorded in jutes, while earlier in the week a few counters firmed up on good support. Birlas improved to Rs. 16.50 from Rs. 15.57 and Megnas were traded at rates up to Rs. 116 from Rs. 114. Indias were steady at Rs. 134, as were Kinnisons at Rs. 108.

Engineering shares moved narrowly. Indian Irons opened at Rs. 21.71, and after giving way to Rs. 21.39 recovered to close at Rs. 21.56. From Rs. 18.75, Texmacos lost to Rs. 18.30, but closed at Rs. 18.65. Guest, Keen Williams were on demand at Rs. 31.50 and Braithwaites at Rs. 26.87 were better. Burn & Cos. were unchanged at Rs. 336.

Cement shares were on demand. Asokhas hardened to Rs. 9.25 from Rs. 8.62. At Rs. 5.44, Sone Valleys were better by a few nP. Orissas hardened to Rs. 13.44, as did Jaipur Udyogs at Rs. 13.19.

Among miscellaneous industrials, Imperial Tobaccos were on demand at the higher rate of Rs. 12.12, as against Rs. 12 earlier. Indian Coppers, on steady demand, improved to Rs. 3.37 from Rs. 3.20. India Steamships maintained the earlier improvement at Rs. 11.12. Sirpur Papers recorded a further rise to Rs. 11.56 from Rs. 11.31. Orient Papers spurted to Rs. 32.25 from Rs. 31.90. Aluminium Corporations were bought at Rs. 11.94, as against Rs. 11.62 previously. There was a further rise in Indian Oxygens to Rs. 18.75, while National Cables were maintained at Rs. 27.19. National Rollings were in request at Rs. 10.44.

Madras Stock Exchange

MADRAS, 17*th June*

Barring textile shares which continued to rule easy, the Madras Stock Exchange presented a fully steady trend during the week under review also. Transactions put through were larger and prices were generally marked up. Tea shares met with good demand, thanks to rising tendency in tea prices and reports of better crop harvests. Coffee shares also evoked enlarged buying support induced by reports of larger production of coffee in several estates. Even the downward trend in export prices of coffee did not have any effect. Textiles were depressed, although there were rumours of a further downward revision in excise duty and some fresh move to step up exports. Sugar shares were firm on hopes of better return following the continued rise in prices. Banks, electrics and miscellaneous industrials were fully maintained.

Among tea shares in the planting section, Balanoors advanced by 50 nP to Rs. 17.25 *cum-div.* Parksides rallied 63 nP to Rs. 18. Twyfords strengthened by 30 nP to Rs. 13.50. Haileyburias hardened by a like amount to Rs. 18.30. Kil Kotagiris gathered 29 nP to Rs. 6.04. Nonsuch Teas improved by 25 nP to Rs. 22.12. Waterfalls and United Nilgiris gained 10 nP each to Rs. 3.30 and Rs. 15.40, respectively. Among coffee shares, Rajendras were better by 25 nP at Rs. 11. Coffee Lands increased 10 nP to Rs. 35.60. Consolidated Coffees put on 5 nP to Rs. 25.80. Among rubber shares, Mercaras forged ahead from Rs. 7 to Rs. 7.70. Midlands spurted by 22 nP to Rs. 16.22. Nenmenys rose by 15 nP to Rs. 14.25 *cum-div.* Vaikundams hardened by 17 to Rs. 20.60 and Velimalais by 15 nP to Rs. 5.50.

In the textile section, Mettur Industries were pushed down by Rs. 9 to Rs. 335 *cum-div.*, reflecting disappointment of operators over the Directors' decision to maintain the dividend at 20 per cent. for the year ended 31st March 1958, same as in the previous year. Vijayakumars and Vasantas declined by Rs. 2.50 each to Rs. 105 and Rs. 227.50, respectively. K. Rajendras receded by Re. 1.50 to Rs. 73.50. Dhanalakshmis and Bangalore Woollens retreated by Rs. 2 each, the former to Rs. 172 and the latter to Rs. 162. Coimbatore Spinnings softened by 50 nP to Rs. 46.50.

Among sugar shares, United Breweries were pushed up by Rs. 15 to Rs. 215. Mysores hardened by Re. 1.50 to Rs. 36.50. Travancores advanced by 45 nP to Rs. 10.25. Indias rose by 35 nP to Rs. 13.35 *cum-div.* E.I.Ds increased by 30 nP to Rs. 27.80 and Deccans by 4 nP to Rs. 8.74.

Among miscellaneous industrials, Binnys gained a rupee to Rs. 160. Mettur Chemicals hardened by 70 nP to Rs. 10.60. F.A.C.Ts. strengthened by 55 nP to Rs. 6 and Aluminium Industrials by 90 nP to Rs. 15.50. Sen Raleighs gained 50 nP to Rs. 14.50 *cum-div.*, Mysore Tobaccos 22 nP to Rs. 12.87, Mysore Chemical and Fertilisers 30 nP to Rs. 7 and Travancore Ogales 55 nP to Rs. 2.85.

GENERAL SERVICES Screwed and Socketed Tubes, Class 'A', 'B' and 'C' (Galvanised and Black) to B.S. 1387 upto and including 6" n.b. and Pipe Fittings. **POWER** Cold drawn, Hot finished and Electric Resistance Weld Boiler Tubes. **POLES** Tramway, Transmission and Lighting. **PUBLIC SERVICES** Air, Gas, Water and Sewage Mains. **INDUSTRIAL** Seamless and Electric Resistance Weld Tubes for Rollers, Conveyors and other industrial purposes. **STEEL STRIP** High Tensile Steel Box Strapping and Cold Rolled Steel Strip for manufacturing purposes.

Enquiries and Orders for Screwed and Socketed Tubes and Fittings ex-stock should be addressed direct to our Warehouse Offices.

NEWS IN BRIEF

THE Government of India has decided to release a quota of 5,000 tons of kardiseed for export during the period June-October 1958, by exporters who are able to effect shipment of kardiseed oil.

The Government of India has (through the National Industrial Development Corporation) so far granted Rs. 2.28 crores as loans to 12 jute mills in pursuance of its policy to expedite modernisation of jute mills.

India and West Germany have agreed on the draft of a convention to avoid double taxation of income. When ratified, the Convention will have effect in India for the 1958-59 assessment year and in West Germany for the 1957 assessment year.

A four-man delegation led by Mr. T. Sivasankar, Secretary, Ministry of Irrigation and Power, Government of India, will proceed to the U.S.A. shortly to negotiate with the World Bank a further loan for the Damodar Valley Corporation.

The production of chromite during the first quarter of 1958 was 18,451 tons as against 21,734 tons in the previous quarter, and 18,146 tons in the corresponding period last year. Orissa, Mysore, and Bihar accounted for 15,704 tons, 1,894 tons and 853 tons, respectively.

Booking of one-third rate trunk telephone calls between midnight and 6 a.m. can from now onwards be done in advance between 11 p.m. and midnight. Even if the call matures before midnight it will be charged only the one-third rate.

Cotton sewing thread and cotton thread other than sewing thread will continue to be freely licensed for export till 31st December 1958. The Government has also decided to continue the free licensing of umbrella cloth, medium variety for export till 31st December 1958.

The Central Fuel Research Institute at Digwadih, near Jharia, is reported to have completed investigation of the design and specification for a central washery to be set up at a cost of Rs. 2.5 crores at Bhojudih for the supply of one million tons of cleaned coal annually to the Tata Iron and Steel Company.

According to a trade agreement signed at New Delhi recently between the Chinese State Trading Company and the Indian State Trading Corporation, the two countries will export goods worth Rs. 2.9 crores each way during the period of six months from May to October this year. Exports from India will include cotton, pepper, tobacco etc., while imports from that country will be caustic soda, soda ash, newsprint, calcium carbide, and other industrial raw materials.

During the 11 months ended February 1958, the grand total of gross customs and Union excise revenue realised was Rs. 413.25 crores as compared with Rs. 330.28 crores during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 138.04 crores, as against Rs. 127.69 crores, export duties for Rs. 22.49 crores as against Rs. 28.14 crores, land customs and miscellaneous for Rs. 4.97 crores, as against Rs. 3.31 crores and Union excise duties for Rs. 245.81 crores as against Rs. 171.14 crores and air customs for Rs 1.94 crore.

The U.S. Department of Agriculture has authorised the purchase by India of some $2.74 million worth of unmanufactured tobacco with Indian currency. About 1,200 metric tons of tobacco is involved in the agreement which is part of the accord reached nearly two years ago whereby some $360 million worth of American agricultural products were to be sold to India. Under that agreement, the Indian Government pays for the commodities in rupees, a substantial portion of which is loaned back to the Government of India for economic development projects. Approximately, half of the commodities covered by the agreement have already been delivered. All outstanding deliveries are expected to be completed in another year. It is stated that the tobacco will be shipped from American ports during the period between 17th June 1958 and 30th June 1959.

From Abroad

The Australian Government has decided to approach the World Bank for a loan of about £A90 million to £A100 million to build a railway from Mount Isa to Townsville in New South Wales.

Sudan will receive a £14-million loan from the World Bank for a five-year railway development programme. The loan is to be repaid within 20 years.

Japan is expected to build as many vessels as possible under the terms of its reparations agreements with various South-East Asian nations. Japan's shipyards will be kept filled with orders for a long time.

A Bill, known as the Pioneer Industries (Relief from Income-tax) Bill, is expected to be introduced in the Malayan Legislative Council shortly. It is designed to encourage investment by relieving new industries from income-tax for periods extending from two to five years.

The Union Oil Company of the U.S. has cut the price it will pay to suppliers of Californian crude oil with effect from the 10th inst. The cuts range from 10 to 25 cents a barrel. This is a sequel to similar action by the General Petroleum Corporation.

The United States and Japan have formally signed a 10-year atomic agreement under which Japan will be provided with 2,700 kilograms of enriched uranium-235 to fuel nuclear power reactors expected to start operation by the end of this year.

The Pakistan Government's 1963 loan which was opened for subscription in Karachi on 14th inst., was closed after about an hour. According to official sources subscriptions to the loan exceeded Rs. 30 crores. The loan is to raise money to finance economic development plans.

Air fares from Moscow to destinations outside the Soviet Union were increased 150 per cent. from the 16th inst. This decision follows the introduction of a tourist rate of exchange of 27.6 roubles to £1 which is almost a 150 per cent. increase on the official rate. The price change brings rouble fares in line with Western currency charges.

Britain would welcome an expansion of East-West trade and would continue to take steps to reduce the list of strategic restrictions on trade with the Sino-Soviet bloc to the lowest level permissible within the limits of national security. This was disclosed by the Minister of State for Foreign Affairs, Mr. David Ormsby-Gore, in the House of Commons recently.

The U.N. expanded programme of technical assistance attained new levels of achievements during 1957 and its operation set a new record in expenditure. Thus as much as $31.5 million (about Rs. 15.7 crores) were spent in 1957—a million dollars more than in 1956. Contributing Governments increased from 77 to 84 and the number of countries or territories receiving the benefit was 132 as compared with only 10 in 1956. The number of experts provided by the programme was 2,513.

A Presidential decree ratifying the protocol concluded in Rome for the compensation of stockholders of the former Suez Canal Company was published in Cairo on the 15th inst. The decree ratifies all clauses of the protocol of 29th April and gives the Company a legal personality entitling its representatives to sign a final agreement with Egypt. The decree also authorises the Company to safeguard funds left for stockholders until a decision is made under the final agreement.

Under an agreement entered into with Britain, Japan will purchase from Britain an atomic electric power plant designed to resist any earthquake. The cost of the atomic power station is estimated at £30 million and will be in the 140,000-kilowatt class with such modifications as would provide protection against earthquakes. Japan is seeking aid from four British concerns for its construction. The agreement which will run for ten years contains safeguards to ensure that material and equipment supplied by the British will not be used for military purposes.

Foreign long-term investment in Canada rose by more than $2,000 million to a record of $15,600 million in 1958 and is expected to have reached $17,000 million by the end of 1957. It is stated the flow is still continuing to rise this year, albeit at a reduced rate. With the decline in business, the flow of foreign capital into Canada was lower at $293 million in January-March, as against $417 million in the corresponding quarter of the previous year. This amount is equivalent to the Canadian trade deficit in goods and services.

The Chairman of the Singapore Rubber Packers' Association has warned that Malaya is in danger of losing its rubber trade with Mainland China to Indonesia unless remedial measures are taken immediately. According to him, China is prepared to buy unlimited quantities of rubber from Indonesia. It appears that China has complained about the quotas of rubber shipped from Malaya. Hence, in order to straighten out things, traders are proposing to send a mission to China and the proposal is stated to have met with the support of the Singapore Ministry of Commerce and Industry.

The International Bank for Reconstruction and Development has arranged to borrow an additional $115 million (about £41 million) from the Deutsche Bundesbank (German Federal Bank). Of this sum, $40 million (about £14.25 million) will be for three years at 2½ per cent. and will replace a $40 million maturity due on 11th July on a previous loan. The other $75 million (about £26 75 million) will be a new loan maturing in one, two and three years at $25 million (about £8.9 million) each year. The loan will also bear interest at 2½ per cent. This transaction will bring to an aggregate $250 million (about £89 million) the amounts loaned by the Deutsche Bundesbank to the World Bank since the middle of 1957.

A U.N. summary of foreign economic aid to the newly developing countries through both bilateral and multilateral channels puts the total of United States aid at approximately $5,000 million a year. The U.S. total for the fiscal year 1956-57 includes Governmental grants, loans and commodity supply arrangements, and also private loans, bond purchases and similar investment. U.S. aid went to 65 countries. Soviet economic aid outside the Soviet bloc is estimated to have aggregated about $1,500 million over several recent years, but the Soviet Government does not submit data and figures are gathered from various official publications. The precise period covered is uncertain. The U.N. report does not include the recent Soviet "postponement" of economic development credits to Yugoslavia. It shows that the United States is the largest contributor to United Nations' multilateral aid programmes.

The construction of the oil refinery planned by Esso-Raffineriet A/S, the Norwegian subsidiary of the Standard Oil Company, New Jersey, will commence in the near future. The refinery will be situated at Slagen, near Tonsberg, on the western side of the Oslo Fjord. Two of Standard Oil's most experienced American experts have been appointed to act as managing directors during the initial period. Later on, they will be replaced by Norwegian directors. The construction will be financed by the floating of a loan on the Norwegian market. The refinery will have a capacity of 40,000 barrels per day. Part of the production will be exported, mainly to Sweden. It is estimated that the refinery will save Norway 70 million kroner (£3.5 million) annually in foreign currency.

PERSONAL

MR. S. V. Rayan, Editor, *Commerce*, returned to Bombay on Monday after a ten-week tour of the United States.

Mr. Bhishma Arora took charge as General Manager of the Central Railway from Mr. M. N. Chakravarti in Bombay on Monday.

Nawab Ali Yavar Jung Bahadur, Ambassador of India to Yugoslavia, has been concurrently accredited as Minister of India to Bulgaria.

Dr. Nagendra Singh, Director-General of Shipping, who led the Indian delegation to the I.L.O. Maritime Session held at Geneva recently, returned on the 13th inst.

Mr. Chinubhai Kilachand has been elected Chairman of the Indian Society of Advertisers Ltd. He succeeds Mr. Dharamsey M. Khatau who has been the Chairman of the Society for the past two years.

Mr. T. K. Ramasubramaniam, Chief Officer, Industrial Finance Department of the Reserve Bank of India, has been appointed General Manager of the Refinance Corporation for Industry (Private) Ltd.

Mr. G. L. Mehta, till recently Indian Ambassador to the U.S., arrived in Bombay on Friday last. He was appointed Indian Ambassador to the U.S. in September 1952 for a term of five years, which was extended last year by another six months.

"COMMERCE" 1933

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 24*th June*

Indian Cotton for Lancashire

In view of the threat held out by certain Japanese associations of a boycott of Indian cotton, it is of considerable interest to note that experiments have of late been made by a committee established by the British Board of Trade to encourage the greater use of Indian cotton in Lancashire mills. Sir Richard Jackson, Chairman of the Committee, states that they have been able to spin up to 44s twist and up to 60s weft from the Indian cotton submitted, and the Committee is pleased with the results. Forty samples of cloth have been woven in styles which it is believed would appeal to a variety of markets. The samples include several standard cloths. If these cloths meet with a good demand it would at once be followed by a substantial increase in the amount of Indian cotton used in Lancashire. It may be recalled here that the Indian Cotton Enquiry Committee was set up as a result of the clause in the Indo-British agreement at the Ottawa Conference, whereby the United Kingdom agreed to co-operate in encouraging a greater use of Indian cotton in the United Kingdom. The Committee decided, in the first place, to find out what was required to make Indian cotton more popular in Lancashire, and if difficulties were found to take steps to remove them. Six small bales of types of Indian cotton which the Indian Central Cotton Committee wished to have thoroughly tested were spun, and it is stated that the Committee is pleased with the results of the yarn, some of which has already been woven into cloth. The Committee has, therefore, arranged to purchase larger quantities of various types so as to carry out further tests on a commercial scale. The Committee fully realises that although it is its function to arrange experiments which prove what is possible, and point the way, it will be for the trade at large to put the fruits of its work to practical work. The Committee therefore wishes to keep everybody concerned, and particularly the exporter who would be able to deal with the selling side, fully informed of the progress it is making and the aims it has in view. A meeting of members of the Indian and other export trade sections will shortly be held when the Committee will make a report on its activities and exhibit samples of yarn and cloth made from Indian cotton for examination.

U.S. AID TO INDIA

IN the present context of the critical foreign exchange position confronting India, the agreement covering the utilisation of the $150-million credit (Rs. 71.4 crores) from the U.S. Export-Import Bank, signed at Washington on Thursday last week by the President of the Bank and the Indian *Charge d'Affaires*, is of special significance. The agreement is, of course, a formal one, since the purpose for which this credit is made available, together with the loan of $75 million (Rs. 35.7 crores) from the Development Loan Fund, was announced early in March. The rate of interest charged on the credit would appear to be quite reasonable, being 5¼ per cent. It will be interesting to note that this rate is ¼ per cent. lower than that usually charged by the World Bank. The term of the loan is also sufficiently long, namely, 15 years, and, what is more, the repayment of the principal will commence only on 15th January 1964.

The grant of the $150-million credit to India by the U.S. Export-Import Bank is, indeed, very timely, inasmuch as it has come at a time when the wide foreign exchange gap threatens to hold up many programmes in the second Five-year Plan. Thanks to this credit, the pace of the implementation of several development projects in both public and private sectors will be greatly accelerated. The amount will be utilised for financing the purchase in the U.S. of capital equipment (these will be transhipped in U.S. flag ships) for a number of projects. It is expected that orders for equipment will all be placed within the next 12 months. Out of the $150 million, irrigation and reclamation account for $27 million, power $33 million, mining $36 million, transport and communications $16 million, and certain selected industries (such as textiles, chemicals, fabrication of heavy structurals and electrical equipment, and machine tools) $38 million. The details of the allocations (in million dollars) for the projects that will be financed out of the credit are given below:

Irrigation and reclamation: Commitments: none reported; earthmoving and construction equipment for irrigation projects 24.00; equipment for clearance of jungle and reclamation in the Dandakaranya area 3.00.

Power: Commitments: equipment for power projects 2.28; equipment for generating and transmission projects 30.72.

Mining: Commitments: equipment for Rourkela iron ore mines 3.80; shovels and dumpers for iron ore mines (ordered through Voltas) 1.44; diesel locomotives for the above 1.56; earthmoving machinery and spares for Neiveli lignite 0.44; earthmoving machinery for National Coal Development Corporation 2.34; earthmoving machinery for National Coal Development Corporation 5.00; coalmining machinery for the above 10.00; machinery for Neiveli lignite (mining and earthmoving) 1.00; equipment for private coal mines 10.00.

Transport and communications: Commitments: aerodrome equipment for Indian Airlines Corporation 0.66; telecommunications equipment 0.14; equipment for Posts and Telegraphs Department 0.06; equipment for truck and jeep manufacture 1.56; equipment for ports 5.00; equipment for manufacture of road carriers 5.00; equipment for construction of roads and bridges 4.00.

Industry: Commitments: equipment for Fertilisers and Chemicals, Travancore, 0.60; miscellaneous orders for machinery placed through Director-General, Supplies and Disposals, 1.04; equipment for textile industry 10.00; equipment for fabrication of heavy structurals and manufacture of electrical equipment 10.00; machine tools 10.00; and chemical industries 10.00.

The aforesaid Export-Import Bank credit of $150 million is in addition to the loan of $75 million which India will be receiving from the U.S. Development Loan Fund. This loan, the terms of which are now being discussed between the Union Finance Ministry and the Fund, will be utilised for the purchase of steel for railways ($40 million), import of components for automobile industry ($25 million), cement industry ($5 million) and jute industry ($5 million). Incidentally, it may be noted that, while the Export-Import Bank credit is to be utilised only for the purchase of equipment in the U.S., the Development Fund Loan can be spent anywhere in the world, although it is believed that the bulk of the purchase will be made in the U.S.

The grant is yet another indication of the continued interest which the U.S. is evincing in the economic development of India. It was in 1951, it will be recalled, that the U.S. Government first granted a loan of $190 million (Rs. 90.44 crores) for the purchase of two million tons of wheat. Since then, the U.S. has made available to India, through the surplus disposal programme and the International Co-operative Administration, commodities and money of the value of about $1,000 million (Rs. 476 crores) in all. This, together with the Export-Import Bank credit of $150 million (Rs. 71.4 crores) and the Development Fund Loan of $75 million (Rs. 35.7 crores), brings the total U.S. aid to India to as much as $1,225 million (Rs. 583 crores). While the gesture of the U.S. to help India in its economic development programme is to be greatly appreciated, it remains to be seen what part of the $3,713 million foreign aid programme authorised by the U.S. early this month will be made available to India.

AGRICULTURAL PRODUCTION

Seldom in the economic history of India was the need for augmenting agricultural production more pressing and urgent than it is today. The population of the country continues to grow at an alarming rate, the annual rate of increase being over 4.5 million. If this growing population is to be well fed and well clad and if the inflationary trends that arise from the accelerated development of public and private expenditure are to be kept down, it is of the utmost importance that the output from land must be stepped up. Indeed, agriculture, as Mr. M. S. Sivaraman, I.C.S., Adviser, Programme Administration, Planning Commission, very pertinently remarked when he addressed the Central Institute of Community Development at Mussoorie last week-end, has to play a significant role in fostering industrialisation, in raising the level of rural life through a more efficient and diversified use of land and human resources. What is more, "exportable surplus of agricultural commodities in demand in other countries," to quote Mr. Sivaraman, "has to be produced from land in order to earn the foreign exchange required for rapid industrialisation."

Viewed thus, the Planning Commission has certainly done well in fixing the annual target for additional agricultural production under the second Five-year Plan at the high level of 27.8 per cent., including an extra food output of 15.4 million tons over 65 million tons produced at the end of the first Plan. Some observers are inclined to feel that the target is too high, considering the present vicious circle of low productivity of land, consequent poverty and inability to improve production, and perpetuation of low yields. Mr. Sivaraman, however, would appear to be confident that this vicious circle can be changed into a spiral of ascending production and brighter economic future, if the suggestions made by him for solving the problems of manuring are rapidly implemented, with due stress on self-help and self-reliance.

In the considered opinion of Mr. Sivaraman, no effort for improving total agricultural production will succeed unless the overall deficiency of nitrogen is made good on cultivated areas. At the present low average level of output, the major agricultural crops we are told, remove over 3.8 million tons of nitrogen from land, while the quantity supplied by way of manures and fertilisers is less than a million tons. Taking an overall picture of more than 350 million acres of cropped area, Mr. Sivaraman emphasises that the aim should be to produce about four tons of plant wastes per acre without depleting soil nitrogen or soil moisture or any of the other growth factors to the detriment of the crops now grown. He feels that it is possible to produce, without affecting the usual crops, the complete requirements of organic manure by way of composts for use on dry and garden lands and green manure for use on irrigated lands or in areas of abundant rainfall by border planting of green manure shrubs and perennial shrubs.

Mr. Sivaraman urges next "a more directed attention" to plant breeding which will help evolve high-yielding strains of different crops with different optimum periods of sowing, transplantation or harvesting. In particular, he stresses the need for proper extension of research work to the cultivators' lands as well as improvement of storage and distribution facilities for seeds. He suggests that each village has to be taken as a unit in itself and a programme should be drawn with the help of the village *panchayats* and leading cultivators to cover every holding with the available improved varieties.

The aforesaid two major approaches to the problem of raising agricultural production are quite valuable and deserve to be adopted widely by the farmers. There is no exaggeration whatever in the statement of Mr. Sivaraman that it is a mistake to think that the farmer can produce more only if there is a constant supply of credit facilities from year to year. It is, of course, not suggested that these are not important. But what deserves to be stressed is that reliance should be placed more on self-help and local initiative than on official spoon-feeding.

AFRICAN ECONOMY

Like India, the primary-producing countries in Africa have been very much affected by the downward trend in the prices of raw materials, on the one hand, and the continued rise in those of manufactured goods, on the other. Such a trend, according to a recent U.N. Survey, has resulted in financial setbacks, forcing the majority of countries either to cut expenditure or to postpone their plans for economic development, and the projects already initiated are being continued often with greater resort to foreign loans. The Survey reveals that the terms of exchange between primary commodities and manufactured goods became progressively less favourable to the primary-producing countries of Africa in 1957. The withdrawal of American programme of stockpiling of strategic minerals and the effect of the U.S.'s recession on the diamond market also had repercussions on the economy of Africa. The Survey warns that, if the U.S. recession were to spread to Europe, the African countries would be still more adversely affected. This is so because African exports to the European countries account for 70 per cent. of the total, whereas the share of the U.S. is less than 10 per cent.

The analysis of the recent trends in exports from African countries, as given in the Survey, shows the nature and extent of difficulties experienced by them. Among the primary commodities, metals, particularly copper, suffered the steepest price decline in 1957. Such a fall has hit hard the Federation of Rhodesia and Nyasaland and the Belgian Congo. During 1957, the Federation had an adverse balance of trade to the extent of as much as £21.3 million, which compares very unfavourably with surplus of £22.5 million in 1956. Exports from the Belgian Congo fell from 27.4 billion francs in 1956 to 23.9 billion francs in 1957. The African territories most affected by the fall in the price of lead were Morocco, Tunisia, North Rhodesia and South West Africa. The drop in the price of tin was felt chiefly by the Belgian Congo and Nigeria, while the price of zinc mainly concerned the Belgian Congo, Morocco, Algeria, North Rhodesia and South-West Africa. As regards the diamond industry, the Survey does not anticipate any immediate threat from synthetic stones, in view of the short supply of industrial diamonds. Concern, however, is expressed over the U.S. recession.

According to the U.N. Survey, the African producers of coffee were not affected by the difficulties experienced by Latin American coffee-exporting countries. While the coffee market is once again faced with the prospect of overproduction, the demand for African coffee, mainly *robusta*, has been growing. This is due largely to the popularity of "instant" coffee in the manufacture of which *robusta* coffee is being used. Cocoa has been the exception to the downward price trend. After a decline from 1955 through March 1957, cocoa doubled in price by the end of 1957, due mainly to a low West African crop. As for cotton, Uganda was able to dispose of its crop at only slightly lower prices than in the previous year. However, in Sudan, low cotton sales and increased imports created an unfavourable balance of trade.

It will be evident from the foregoing account that the trend of commodity prices has been unfavourable to the primary-producing countries of Africa. But one need not be unduly pessimistic about the future, in view of the indications that the American economy shows signs of recovery.

EXPORT CREDIT INSURANCE

Export credit insurers representing Australia, Austria, Belgium, Canada, Denmark, France, Germany, India, Israel, Italy, the Netherlands, Norway, Spain, Sweden, Switzerland, the U.K. and the U.S.A. were recently in conference in Venice. The occasion was the annual meeting of the Union of International Credit Insurers, known as the Berne Union. An observer from the International Bank for Reconstruction and Development also attended the conference. The delegates discussed, as usual, business experience during the previous 12 months, common problems of export credit insurance and guarantee techniques, the terms of payment appropriate to particular classes of goods and economic outlook in various countries. The Israel Foreign Trade Risks Insurance Corporation was elected a member of the Berne Union. Mr. Jacques Levy, of Coface, the French Export Credit Insurers, was re-elected President of the Union for the coming year and Mr. Hugh Aitken, President of the Export Credit Insurance Corporation of Canada, as Vice-President.

Particular attention was paid at the conference to the maximum period of credit for which members would grant insurance in respect of the largest capital goods transactions, a matter which has recently formed the subject of comment in international commercial circles and in the Press of many countries. Examination of the matter revealed that a certain misunderstanding of the policy and practice of credit insurance had given rise to the incorrect impression that the unanimity of opinion among insurers on this subject had been impaired.

A large part of that misunderstanding was due to the inadequacy of explanations regarding the true nature of operations involving credit insurers who are primarily concerned with suppliers' credits. Terminology, too, led to misunderstanding. In Germany, for example, the phrase "long-term" is applied to credit periods which in other countries would be called only "medium term." The conference reaffirmed its view that a maximum of five years post-shipment or delivery credit should not be exceeded. Even in cases where Governments chose to use credit insurance machinery in an unorthodox way for declared political purposes the same maximum might well be desirable.

Credit insurers heard a statement from the Export-Import Bank of Washington which, although not an export credit insurer, is an associate member of the Berne Union since some of its loans serve a purpose related to that of the Union's members. A small part of the Bank's dollar loans in recent years have financed individual foreign sales of U.S. capital equipment on medium-terms. Of these "exporter credits"—which are to be distinguished from the long-term development and other loans that comprise the major activity of this U.S. Government Bank—more than 80 per cent. have had maturities of not more than three years from date of shipment of the equipment being financed. In providing this "exporter credit" financing, the Export-Import Bank strongly supports the principles and co-operates closely with the activities of the members of the Berne Union which are designed to maintain on a sound basis the extension of international credit on medium terms.

The German delegate explained the true nature of the new facilities now being set up in Germany to finance export trade which have been the subject of extensive and inaccurate comment in certain quarters. The conference welcomed an assurance from him, given with the authority of the Federal Minister for Economics, that the Federal Government had no intention of initiating a race in the field of export credit terms.

WORLD EMPLOYMENT SITUATION

Unemployment has again shot into the forefront of the problems of the economically developed countries too. After several years during which unemployment was of limited importance in most industrialised countries, it has now become a matter of grave concern to Governments, employers and workers. The current U.S. recession, though not as severe as the depression of the thirties, is, nevertheless the most serious economic problem the U.S. and the rest of the world were called upon to face since the end of the second World War.

The present recession is both a challenge to the statesmanship of the leaders of Government in developed countries as well as an opportunity for them to demonstrate that they will not tolerate severe or persistent unemployment and that they can effectively combat it with the wide range of fiscal, monetary and other measures that have been developed since the thirties of this century. The recession is severe enough to provide an opportunity to gauge the effectiveness of many of the measures against unemployment that *a priori* seem workable but have not so far been put to the acid test of actua

RELIEVING UNEMPLOYMENT AMONG EDUCATED CLASSES

GOVERNMENT'S SCHEME REVIEWED

From Our Special Correspondent

NEW DELHI, *17th June*

DELHI LETTER

IT is just announced that the Government of India has decided on implementing a scheme to relieve unemployment among the educated through expansion of primary education in the three-year period 1958-61. The employment potential of the scheme is 60,000 teachers—15,000 to be appointed in the current year, 20,000 in the second and 25,000 in the last. It is proposed to utilise these teachers mainly for opening junior basic or primary schools in schoolless villages, especially in the more backward areas of a State. Preference, it is stated, will be given to women teachers while making appointments under the scheme because the emphasis in primary education in most of the States at the present time is to bring girls to school. The minimum academic qualifications for these teaching posts would be matriculation or post-basic. Provision is also made for organising short orientation courses where untrained teachers are recruited.

This scheme will involve Central assistance of about Rs. 14 crores to the States. This assistance over the three-year period will be given on a 100 per cent. basis for certain purposes, namely, emoluments of teachers, equipment grant at the rate of Rs. 250 per teacher, cost of training of teachers at the rate of Rs. 10 per trainee per month, emoluments of 1,200 inspectors to be newly appointed and construction of rural residential quarters, numbering in all 6,000, for women teachers at the rate of Rs. 2,500 per quarter. It is emphasised that this Centrally-sponsored scheme will not replace or reduce the magnitude of the programmes which the State Governments are to undertake under their second Five-year Plan for expanding primary education.

New Matriculates

On the face of it, the scheme looks laudable and essential because of the total number (74 million) of children in the age-group 6-14, only about 28 million attend primary schools now. On a rough estimate, the scheme may be expected to add two million children to the latter number (28 million). This gain may appear small, but it is not negligible. Again, of the estimated number of new matriculates (0.8 million boys and 0.2 million girls) who will enter the employment market in the three-year period 1958-61, only 6.0 per cent. can be employed as teachers under the latest Centrally-sponsored scheme. This is the most optimistic result that can be expected from the scheme even if it is assumed that there are no unemployed matriculates already in the market seeking jobs.

Employment Exchanges

No such assumption can, of course, be made in the absence of a survey of educated unemployment in the country. The number of unemployed persons on the live registers of employment exchanges can only provide a partial clue to the situation because not all the educated unemployed in the category of matriculates may be getting themselves registered. The number (300,000) of unemployed men and women seeking clerical and educational jobs and on the live registers of employment exchanges, as at the end of March 1958, is revealing in so far it goes. As the number of women job seekers has trebled in the last five years, it can be estimated that the number of educated ones among them must be anything between 30,000 and 40,000 on the live registers of employment exchanges. With placings in employment amounting to just 10 per cent. of registrations, there is *prima facie* evidence that educated unemployment is becoming more and more acute from year to year.

This should not be surprising if an idea is had of the number of matriculates who have not entered colleges or technical institutions and who, therefore, should have largely entered the employment market in the last three years. This number in the period 1955-58 can be deduced as 0.9 million. This number, by itself, was more than the 1955-56 number of trained and untrained men and women teachers to the tune of 0.7 million who had completed their schooling before 1955-56 and taken up jobs in primary schools. Judging by the fact that a first Plan scheme to relieve educated unemployment had led to the appointment of about 80,000 rural teachers by 1955-56, an optimistic estimate could be that 100,000 (out of 900,000) new matriculates have been similarly absorbed in the three-year period ending 1957-58.

What has happened to the remaining 800,000 new matriculates of the 1955-58 period? Judging by the trends of registrations and placings by the employment exchanges, it could again be estimated that 225,000 should have found jobs through the exchanges at the monthly rates of 1,250 in the Central Government offices, 2,750 in the State Governments' offices 1,000 under quasi-Government and local bodies and 1,000 in non-Government organisations. How many of the remaining 5.75 lakhs of matriculates in the period found employment, without the help of the exchanges, in private commerce, industry and transport cannot, of course, be figured out. The proportion of unemployed amongst them must, however, be fairly large. This number will be further swelled by the number of unemployed matriculates who will be entering the market in the 1958-61 period.

Restricted Market

It is in this context that a country-wide survey of educated unemployment is considered desirable, more so because this problem has acquired in recent years a new dimension by way of job-seeking by women. Quite apart from the fact that frustrated and unemployed educated youths add strength to Communist and other extremist movements in different parts of the country, there is the problem of psychological tensions that may be expected to result from the competition between the two sexes for jobs in a severely restricted market. From this point of view, the provision in the Central Government's latest scheme for rural quarters at a cost of Rs. 2,500 each for women teachers is a kind of unwise solicitude for women when there is no provision for quarters for men teachers. Surely, it cannot be supposed that vacant houses are not available for rent by women teachers in villages. Apart from this, there is the prospect of more girls getting educated in the next three years and more of them entering the employment market partly because of need and partly because of the greater attractiveness that is sought to be imparted to their prospective jobs. The special effort to recruit more women teachers is questionable because it is based on the assumption that men teachers are not quite suitable for imparting instruction to young girls. The Government of India is clearly adding to its problems by attracting more educated women to the employment market.

The Government of India has decided to include a few more industries in the list of industries for which licences have been granted for the import of raw materials under the export promotion scheme. They are fruit and vegetable preservation, biscuits, confectionery, coco, butter, pearl barley, corn flakes and rolled oats and cigarettes. The list which has been published in the current Red Book already contains over 70 industries. Under the export promotion scheme licences are granted for import of raw materials against exports effected in the preceding quarter on the following basis: Seventy-five per cent. of the value of the goods exported in excess of the exports made by the manufacturer in the year 1956 or twice the value of the imported raw material used in the manufacture of the goods exported whichever is less.

(Concluded from next column)

rest just because it could provide a substantial outlet for underemployed industry.

Final evidence of the state of balance of the economy can be seen in the index of industrial production which has only been brought up to date to March this year. It then showed no change compared with February and exactly the same as the average of February and March last year.—*All Rights Reserved.*

STRIKES AND U.K.'S ECONOMY

From Our Own Correspondent

LONDON, *14th June*

THE important dock workers' unions in this country are an exception to the general principle that trade unions are not given to striking merely in sympathy with others. Dock workers are very given to striking, particularly unofficially. The one that is paralysing the Port of London now began very curiously out of raising the speed limit for lorries from 20 m.p.h. to 30 m.p.h. That caused the lorry drivers to suppose that they would be required to do more work in the same time and at Smithfield meat market they went on strike, and that led to a use of voluntary labour which spread the strike to the porters, and so to the dockers. These last named came out when they were asked to handle meat that should have stayed in refrigeration while the Smithfield market strike was on. But the dockers do not strike simply out of sympathy, they have a basic discontent in that their national wage claim has been twice turned down by the employers.

LONDON LETTER

The Trade Union Congress, representing the body of trade unions, is opposed to the dockers' strike which is regarded as unofficial although nearly all 20,000 are out. It may be that the Government may feel inclined to let the wage claims be met and so take an important step towards ending the strike. Meanwhile, substantial quantities of food are being held up at the London Docks and there is a growing danger that some may have to be destroyed.

The estimate of the total import of foodstuffs and other goods held up is between £10 million and £15 million and since imports are affected out of all proportion to exports, the trade gap figures for May, £6½ million, are somewhat artificial, but even if the true trade gap were nearer £20 million it would compare with an average of £24 million a month for the first quarter of this year, and £33 million in April. However, it is significant that import prices are no longer falling but, on the other hand, the value of exports is still falling. The May figures were exceptional in being the highest for a year (but lower than in May last year) but the first five months of the year showing nearly 2 per cent. less on a year ago. On the other hand, imports for the same period were 13 per cent. less.

Bank Rate

These figures fit into the general picture of a quiet recession which leaves the balance of payments on the whole stronger than it has been for the last few years and leaves sterling strong. In short, it is a classic example of an economy balancing at a lower level of activity. In this atmosphere the City is expecting a further fall in the Bank rate.

The dullness on the domestic economic front is matched by a similar dullness internationally; even the European free trade area is not provoking much discussion at the moment and there is a tendency to say that the holiday season has begun and to leave serious economic discussion to the meeting of the International Monetary Fund later this year and the Commonwealth Ministers in September. Even the American recession has stopped receding, and while uncertainty remains in that country it is more of the nature that wonders whether things after all are going to be as serious as they once seemed.

Whether the recession is on the turn or not, the Treasury is inclined not to take risks about letting it become any worse. There is the continuous evidence of by-elections to show that the Government remains as unpopular as ever and it is not anxious to let that sort of feeling stay through the country too long. The fact that the stock markets are improving is not an indication that nothing needs to be done to influence the general level of employment and business activity. They are improving as the result of a reaction from last year's crisis which reached its nadir in February of this year when the *Economist* industrial share index sank to 166. Its rise from that point has been more or less steady and it now stands at 188. In America, the trend has been similar and yet the Russian offer to buy American goods has inspired inte-

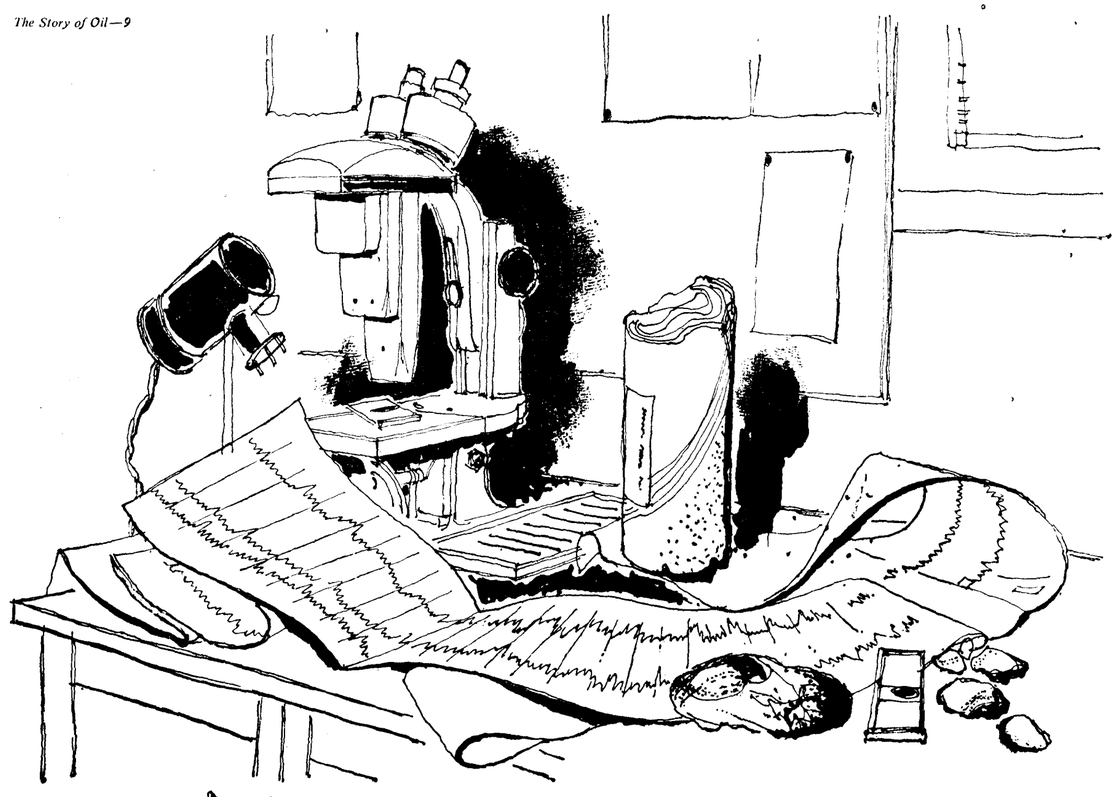
The Story of Oil—9



How much oil?

One oil well does not make an oilfield. As soon as the first well in a new area gives proof of steady production the next step is to establish the extent of the oil accumulation in its underground trap. This is done by drilling further wells, the programme for which is based on the results of scientific surveys and tests carried out during the drilling of the discovery well.

Surveys for such " down-the-hole " information are commonly made by recording instruments lowered into the well on a cable. One instrument produces a record in the form of wavy lines on a chart which, when interpreted, confirms the nature of the rocks penetrated by the drill and shows exactly where the oil zone lies. Another instrument gives records from which the amount and direction of the slope or dip of the rock layers can be calculated.

Tests carried out in oilfield laboratories include analyses of samples of rocks and oil recovered from the well. From rock samples it is possible to calculate how much room there is for the oil in the spaces between the grains of sand in a sandstone rock, and the amount of water associated with the oil. An analysis of a sample of crude oil gives data about its gas content and other characteristics.

With all this information to hand the development of the oil find can proceed on a planned basis, and decisions can be made on how far apart the wells should be drilled, how deep they should go, how many drilling outfits will be kept in operation, and what size of refinery will be required.

ADDITION OF GOLD TO INTERNATIONAL MONETARY RESERVES

RISE OF 20 PER CENT. EXPECTED IN 1956-65

THE trend of world production (excluding that of Soviet block countries) of gold during the post-war period shows that, except in the years 1951 and 1953, the output has increased every year. In terms of value (at $35 per fine ounce), the production in 1957 reached a high of $1,020 million, as compared with $736 million in 1945, the average rate of increase being 2.7 per cent. per annum, though in the last five years, the rate of increase was much higher at 4.7 per cent. per annum, because of the expanding production in South Africa. In addition to the production of gold, the free countries have also been receiving substantial quantities of gold through sales by the Soviet block countries. Out of the total quantity of gold thus available, some amount is being used for industrial and artistic purposes and a large quantity is acquired privately for saving or hoarding. A large part of the gold produced and bought from Russia has also gone to strengthen the monetary reserves of various countries. An interesting survey of the flow of gold to the monetary reserves has been made by Mr. Oscar L. Altman, Adviser in the Research and Statistics Department of the International Monetary Fund, in a *Note on Gold Production and Additions to International Gold Reserves*, published in the latest issue of *I.M.F. Staff Papers*. According to this note, the additions to the monetary reserves during the post-war years account for more than 50 per cent. of the cumulative production of gold. On the basis of the trend of gold production and the flow thereof to monetary reserves so far, Mr. Altman has made an attempt to estimate the increase in production and the probable additions of gold to international reserves in the next decade.

Production in S. Africa

The major determinant of changes in world gold production in the next decade is, according to Mr. Altman, likely to be production in South Africa. In this connection, he says:

"If output there remains at present levels, and production in all other countries does not decrease, world production in the next decade is likely to be of the order of $1,050 million per year. If South African production increases significantly in the years to about 1961, and slowly thereafter, and production in other countries does not decrease, total production in the next decade is likely to average $1,150 million per year. An increase in South Africa and a decrease in the rest of the world are likely to result in an average production of at least $1 billion per year. A depression in this period would increase these figures."

As regards the accretion of gold to monetary reserves, the author points out that the proportion of gold production that has flown into monetary gold stocks has varied considerably from year to year. In the years 1931 and 1945, gold production amounted to $14,455 million and the quantity of gold received by monetary authorities from the U.S.S.R. was estimated to be at least $365 million. During the same period, official gold reserves increased by $15,670 million, equivalent to 108 per cent. of the new production and 106 per cent. of the estimated total new supplies. Thus, there was a net outflow of gold from private channels to the extent of $850 million during 1931-45. The data of gold production and addition to monetary reserves during the post-war period show that gold reserves increased by $5.4 million, equivalent to 52 per cent. of the estimated production, as will be seen from the following comparative table:

(In millions of U.S. dollars)

Year	Gold reserves: At end of year	Gold reserves: Yearly additions	Gold production	Cumulative additions to reserves since 1945	Cumulative production of gold since 1945
1945 ..	33,770	..	..	..	..
1946 ..	34,120	350	752	350	752
1947 ..	34,550	430	787	780	1,539
1948 ..	34,930	380	795	1,160	2,304
1949 ..	35,410	480	818	1,640	3,122
1950 ..	35,810	400	846	2,040	3,968
1951 ..	35,960	150	837	2,190	4,795
1952 ..	36,260	300	852	2,490	5,647
1953 ..	36,680	420	849	2,910	6,496
1954 ..	37,340	660	897	3,570	7,393
1955 ..	38,000	660	944	4,230	8,337
1956 ..	38,490	490	980	4,720	9,317
1957 ..	39,200	710	1,020	5,430	10,337

As a first approximation, Mr. Altman does not consider it unreasonable to assume that in the next decade gold additions to monetary reserves may average from one half to two-thirds of gold production. "The percentage," he adds, "has rarely been less than 50 over any substantial period, and it may be two-thirds or more, under certain conditions." Discussing these conditions, the author goes on to observe:

"The variability of additions to gold stocks, in any year or in comparatively short periods, depends very much more on demand than on supply factors. The variability of gold production (leaving aside trend) is not great. On the assumption that there is no net dishoarding of gold on private account, the only other short-term variable factor affecting supply is sales of gold by the U.S.S.R. These sales are unpredictable, and they have never been measured with any accuracy. Incomplete tabulations for 1931-43 show that gold shipments by the U.S.S.R. to official recipients, excluding sales in gold markets, averaged $70 million per year. Such shipments were equivalent to 7 per cent. of average annual world gold production. Estimates of U.S.S.R. shipments in post-war years vary widely, and none can be accepted as authoritative. The estimates that have been published suggest that sales in some years were negligible; that in a number of years they were of the order of $150 million; and that in 1957 they reached a post-war high of about $250 million. Sales since 1950 have been much larger than in the years immediately following World War II. It is not unlikely that for the 12-year period 1946-57 they may have come to $900-1,300 million. These figures are equivalent to 9-13 per cent. of world gold production during the period."

Three Main Factors

In estimating the quantity of gold sales that Russia is likely to offer in the next decade, Mr. Altman has taken into account three main factors. In the first place, during the last 25 years, the U.S.S.R. has sold gold more or less continuously, but in differing quantities, to meet its trade deficit. Secondly, during the post-war period, it has commonly been considered the second largest producer of gold in the world. The third factor rests on political and economic grounds. On the basis of these considerations, he considers that the average sales of $100 million per annum may not be unlikely in the next decade.

The private demand for gold rises from its three uses: for money, for industry and the arts and as a means of saving or "hoarding." Of these, *bona fide* industrial and artistic demands are relatively the most stable. The net usage in the U.S. during the ten years 1946-55 averaged $80 million per year, but in four of these ten years it was less than $50 million per year. The latter figure, is, however, taken as a better approximation of *bona fide* uses than the former. On the assumption that the U.S. accounted for perhaps two-fifths of the gold used for world industrial artistic purposes, world demand for this purpose would be of the order of $125-200 million per year. Assuming that the increase in real income will be of the order of 3-5 per cent. It is estimated that the average demand for industrial purposes in the next decade will be $130-210 million per year. The most variable component in the demand for gold is for the purpose of saving or hoarding. During the 11 post-war years, the average demand for this purpose is estimated at $300 million per annum. Some of the private demand for gold is to be regarded as normal and is expected to continue. On the whole, Mr. Altman does not consider it unreasonable to suggest that the movement of gold into private hoards in the next decade might be no larger than in the past one, that is, $300 million per year and that it might indeed be smaller. The probable limits of such a movement would appear to be from $200 million to $450 million per annum.

Rise in Next Decade

What will be the increase in monetary gold stocks in the next decade, on the assumption that the present price of $35 per ounce is continued? To this question, Mr. Altman says, there can be no categorical answer. "The best that can be done," he says, "is to determine a range within which the actual result is likely to fall." Explaining in detail how he arrived at the range, Mr. Altman says:

"Average annual production of gold in the next decade may be assumed to fall within the limits of $1,050 million and $1,150 million. Additions to gold reserves may be assumed to be equivalent, on the average, to from one-half to two-thirds of gold production. These two sets of assumptions delimit the maximum and minimum additions to monetary gold stocks during the next decade as follows:

Assumptions:	Average yearly addition to gold reserves (Million dollars) Minimum	Maximum
1. If average annual gold production is $1,050 million and		
(a) One-half is added to reserves	525	
(b) Two-thirds is added to reserves		700
2. If average annual gold production is $1,150 million and		
(a) One-half is added to reserves	575	
(b) Two-thirds is added to reserves		770

"The question may also be approached by combining the individual demand and supply elements already described to yield a minimum-maximum range. This is done in the following summary, where values are stated as annual averages for the decade:

	Million dollars
1. Production of gold	1,050-1,150
2. Sales of gold by U.S.S.R.	100
3. Total supply of gold	1,150-1,250
4. Industrial and artistic uses (net) ..	130-210
5. Private demand for saving and "hoarding"—	
Range	206-450
Probable value	300

These figures add up to a minimum addition to monetary gold stocks of $500 million per year, and a maximum addition of $920 million per year. A probable value within this range would be of the order of $730 million, equivalent to about two-thirds of gold production.

At the end of 1957, the gold reserves of all countries, except the Soviet block, were $37 billion; excluding the U.S., they amounted to $14 billion. Reserves of gold and official holdings of exchange (largely dollar and sterling) were $53 billion and $30 billion, respectively. During the next decade, the gold holdings may, as shown above, be expected to increase by $7.3 billion. In any event, the actual increase will fall within the range of $5 billion and $9.2 billion.

DEPRECIATING MONEY

The First National City Bank of New York had published, in its *Monthly Letter* for December 1956, under the heading of "The Cost of Depreciating Money," a table comparing, for 16 countries, rates of interest and depreciation of money over the period of 1946-56. This tabulation evoked so much interest that the Bank has not only enlarged it by extending it to 24 countries but made it up-to-date by covering it for the decade 1947-57. The revised table is published in its latest *Monthly Letter* for June 1958.

The depreciation of money is measured in each case by the rise in the official cost of living or consumer price index:

Rates of Interest and Depreciation of Money

	Indexes of value of money* 1947	Indexes of value of money* 1957	Annual rate of depreciation (compounded)	Rates offered on Government's bonds† 1947	Rates offered on Government's bonds† 1957

REFINANCE CORPORATION

The first meeting of the Board of Directors of the Refinance Corporation for Industry (Private) Ltd. was held in Bombay on Tuesday last. At this meeting, the Board decided to fix the issued capital of the Corporation for the present at Rs. 12.5 crores, made up of 1,250 shares of Rs. 1 lakh each. The issue will be confined to the Reserve Bank of India, the Life Insurance Corporation, the State Bank of India and 14 other Scheduled banks. Out of the issued capital, 10 per cent. will be paid on application and further 10 per cent. on allotment. One of the items considered by the Board related to the execution of an agreement with the President of India so as to enable the Corporation to avail itself of loans to the extent of Rs. 26 crores, being the equivalent of $55 million reserved for relending to private enterprise in India under the Agricultural Commodities Agreement between the Governments of India and the U.S.

SETBACK TO COTTON TEXTILE EXPORTS

CHINA EMERGES AS A STRONG COMPETITOR

COTTON textile exports have suffered a distinct setback of late. The aggregate quantity of mill piecegoods actually shipped during the first five months of the current calendar year was no more than 267 million yards (preliminary estimate only), as against over 388 million yards in the corresponding period of 1957, representing a drop of 121 million yards or 31 per cent. If the present trend were to continue—there are indications that it would—the aggregate exports of mill-made cloth from India in the whole of 1958 will be just 650 million yards, which compares very unfavourably with 800 million yards in 1957 and 744 million yards in 1956.

The decline in mill cloth exports during the period January-May 1958 was accounted for by all varieties, barring superfine counts which showed some improvement. The decline was particularly marked in the case of medium cloth, the total shipment of which fell to 169.63 million yards in the five months ended May 1958, as against 273.83 million yards in the corresponding period of the previous year. Exports of coarse cloth were lower by 13.89 million yards at 83.95 million yards and of fine cloth by 5.38 million yards at 2.59 million yards. Exports of superfine categories, however, were slightly higher at 9.92 million yards, as against 8.72 million yards.

The following table indicates the trend of exports of different varieties of cloth during the first five months of 1958 as compared with the same period last year:

(In million yards)

	Coarse	Medium	Fine	Superfine	Total
1957					
January	23.07	63.07	2.90	1.62	90.66
February	17.30	50.93	1.58	1.66	71.47
March	20.97	59.89	1.32	1.90	83.99
April	18.67	52.62	1.87	1.74	74.90
May	17.83	47.41	0.30	1.80	67.34
Total ..	97.84	273.83	7.97	8.72	388.36
1958					
January	19.66	42.06	0.44	1.79	63.95
February	15.04	30.27	0.65	1.76	47.72
March	16.91	34.58	0.45	2.01	53.95
April	15.87	31.44	0.61	2.43	50.35
May	16.47	31.25	0.44	1.93	50.12
Total ..	83.95	169.63	2.59	9.92	266.09

One of the factors adversely affecting India's export trade in cotton piecegoods is the emergence of communist China as a formidable competitor in world textile markets, especially in the Far East. Detailed information about the extent of the Chinese textile industry is not easily obtained, but Japanese sources have lately disclosed figures which indicate that, however vast the domestic Chinese market may be, overseas trade in textiles is clearly the aim of the industry. China, like many other rapidly industrialising areas, is said to be planning to build up a textile trade to assist in the gradual construction of heavy capital industry. Considering that India is making an all-out drive to step up exports of cloth in order to earn the much-needed foreign exchange, a review of the progress made by the cotton industry in China will, indeed, be both interesting and valuable.

The installed capacity of the Chinese cotton textile industry has expanded considerably in the past two decades. The total number of spindles in place at the end of 1957 is estimated at 7.5 million. The addition to spindleage during the four years 1953-56 alone had been of the order of 1.2 million. About 50 cotton and allied textile mills had been erected in the four years ended November 1956. Thanks to the marked rise in capacity, the production of yarn has gone up appreciably. During 1956, about 2,107 million lbs. of cotton yarn came off the spindles of Chinese mills, as compared with the pre-war peak output of 997 million lbs. The preliminary estimate for the year 1957, however, places the yarn output lower at 1,839 million lbs. Even more marked was the rise in cloth production which expanded from about 1,362 million yards in 1936 to as much as 5,354 million yards in 1956.

The cotton textile industry in China is expected to play a vital role in financing the large expansion planned for the country's heavy industry. The cost of equipping a cotton mill with 100,000 spindles and 3,500 looms is estimated at £5.2 million (Rs. 6.9 crores), but this sum can be recovered in the first full year of operation itself. Under the first Five-year Plan, a sum of about £1,500 million (Rs. 2,000 crores) or about 38 per cent. of the total industrial investment was believed to have been invested in the textile industry. By the end of 1957, the number of spindles installed, as already noted, was 7.5 million, while 12 cotton mills with a projected total of 968,000 spindles and 27,000 looms were under construction.

Under the second Five-year Plan of China, the production target fixed for the end of 1962 is 7,750 million lbs. of yarn and 7,880 million yards of cloth. This is an ambitious programme, involving a rise of 80 per cent. for yarn and 60 per cent. for cloth over the estimated 1957 output. Remarkable progress has already been made in the Chinese textile industry in the first Five-year Plan and, even if the second Plan targets are not fully hit, a further rise in production will ensue. "The dual mission of the industry," to quote a report, "is not only to satisfy domestic demand for cotton goods but also to contribute financially to the industrialisation of the country. In the long run, it seems inevitable that China will become a really powerful exporter of cotton cloth to world markets, as has already been demonstrated by its growing shipments to the territories in South-East Asia." The *per capita* cloth consumption increased from 4.4 yards in 1947 to 10.2 yards in 1956, but it is still low, as compared to 32.4 yards in Soviet Russia and 17 yards in India. This factor, however, is unlikely to have much influence on the level of exports which may be expected to continue to rise.

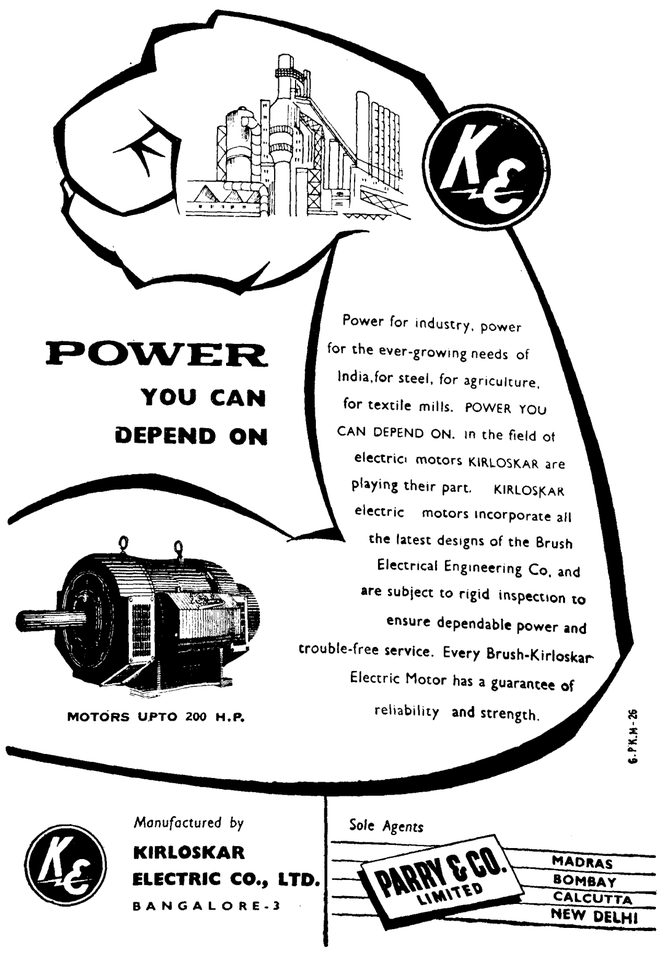
Alongside efforts to step up the production of cotton textiles, attempts are being made to raise the supply of cotton. Raw cotton production in China has also increased remarkably in recent years, the acreage by 1956 having risen by 127 per cent., as compared with 1949. This was 75 per cent. higher than 1936, the record pre-war year. According to figures now available to the International Cotton Advisory Committee, the Chinese cotton crop in 1956 amounted to 6,700,000 bales, as against 2,700,000 bales in 1948 and 3,900,000 bales in 1936. The peak post-war output was 7,000,000 bales in 1955.

As regards textile machinery in China, it is stated that there is much to be desired both technically and in basic construction, but, as far as conventional type cotton spinning and weaving machines are concerned, the capacity is said to be 1 million spindles and 25,000 looms annually. The country is, therefore, now almost self-sufficient in this field and is in a position to export textile machinery when it is found to be in the interest of the planned economy to do so. It is noted, however, that the present organisation is quite inadequate to meet the demands for new and improved types of machinery particularly for fibres other than cotton.

WORLD WOOL CLIP

For the first time since the war, world wool production is expected to show a fall in the current season, according to a statistical report presented recently to the International Wool Conference in Vienna. The report was prepared in conjunction with the Commonwealth Economic Committee. World output in 1957-58 is estimated at about 5,020 million lbs. (greasy basis), or one per cent. less than the revised total of 5,070 million lbs. in the previous season. The reduction affects only merino wool, which is down by 4 per cent., while crossbred and "other" (or carpet type) wools are expected to rise by 1 and 2 per cent., respectively.

Wool textile activity in the free world was slightly higher in 1957 than 1956, but the Committee emphasises a marked difference between the first six months or so, when most branches of the industry were working at near-record levels, and later months when activity was sharply reduced. Wool consumption in the free world during 1957 is estimated at about 1 per cent. more than in 1956 and constituted a new record. Italy showed the greatest proportionate increase, though improvements were also recorded in Japan, France, Western Germany and Australia, but the United Kingdom and Belgium showed little change. By contrast, consumption in the U.S.A. registered a sharp fall and was the lowest for nearly 20 years. A substantial reduction occurred in Uruguay, while more moderate falls were reported from the Netherlands and Canada.



RETURNS RELATING TO MILL CLOSURES

FURTHER DROP IN CLOTH PRICES EXPECTED

From A Special Correspondent

MANCHESTER, 10*th June*

MANCHESTER LETTER

VARIATIONS in the estimates of the number of mills which have closed down in Lancashire over the past few years have caused argument for some time past. Conflicting figures have been bandied about the trade and, in some cases, the rate of stoppages has undoubtedly been exaggerated. The latest authoritative returns on this subject have been disclosed by the Cotton Board covering not only spinning and weaving concerns but also textile finishing works.

The number of mills which have gone out of existence between the beginning of 1955 and the end of March this year was 344. A large majority of these units are weaving concerns, but it is interesting to note that the number of doubling mills which have closed, at 55, is only one less than the closures among spinners and waste spinners.

Earlier statistics dealing with cotton mill stoppages were given in a paper delivered at the Cotton Board's annual conference in 1956. It was then stated that 265 mills had closed from the beginning of 1952 to mid-1956. The current figures overlap this period, but it is obvious that recent trends have intensified the contraction which is taking place in the industry at this very minute.

Level of Closures

The level of closures in the first quarter of this year slightly exceeded 100 per annum, as compared with 83 mills going out of existence during the whole of 1957. The figure in the previous year was 125, while 1955 closures numbered 109. The fact remains that an average of two mills in Lancashire are at present shutting their doors every week.

In the circumstances it is hardly surprising that the available labour force has diminished to a marked extent. Including the textile finishing trade, the manpower at the beginning of 1955 was practically 333,000, but, by the end of the first quarter this year, it had shrunk to below 278,000. The major drop was in the weaving industry, where the operatives employed had dwindled from 140,700 to 112,300.

Still Sizable

At the same time, the extent of the cotton and allied textile industry in Britain should not be underestimated. The tendency in many quarters outside the trade has been to receive a wrong impression from the almost weekly tally of mills closing and diminishing activity.

The official journal of the Manchester Cotton Association has lately quoted figures to show the size of cotton textiles in the British Commonwealth and Empire, excluding Canada. Raw cotton stocks held last year amounted to nearly 3,000,000 bales and production during last season was over 6,000,000 bales. Consumption of raw cotton aggregated 7,361,000 bales and some 2,300,000 bales were imported and 910,000 bales exported. British Commonwealth mills contain 37,351,000 spindles and the latest survey of weaving machinery shows 534,700 looms in place. Average quarterly yarn production is practically 950,000,000 lbs. and cotton cloth output exceeds 2,350,000,000 yards per quarter.

Sir Ernest Goodale, President of the Textile Institute, has always been a keen advocate of textiles being regarded as a single industry with interdependent sections. Stressing the importance of the trade at the recent annual meeting of the Institute, he pointed out that textile firms employed over a million operatives and spent over £1,150,000 a year on co-operative research, while the "staggering sum" of several hundreds of millions of pounds had been expended on re-equipment of machinery since the war. Annual production value of the textile industry, he added, was over £2,000 million. In 1957, textiles were still responsible for 11¾ per cent. of the country's total export trade.

Lower Output

Reports from Lancashire cotton mill centres indicate a lack of enterprise among customers and a continuing general disinclination to undertake fresh commitments. This mood has been engendered by uncertainty over future prospects for the industry and the overall belief that prices will eventually move in favour of the customer. Underlining this situation has been the curbing of output in several Court-aulds' weaving establishments recently.

The man-made fibres industry encountered a recession in trading earlier than those mills predominantly using cotton fibre, and the more difficult conditions have persisted, so that, in all sections of the cotton and allied textile industries, the position is at present discouraging.

So far as raw cotton is concerned, there are many observers within the trade who are convinced that higher prices will have to be paid by consumers before very long. They point to the probability of smaller supplies of American raw cotton in the coming season and in particular to the limited quantity of top-grade cotton likely to be available. The dependence of the industry on home trade purchases and the important role taken by some of the larger chain stores are vital factors in assessing the future trend of events. The decision to enter the market and buy supplies on a large-scale by one of the prominent consuming groups could initiate a much wider demand than the original orders indicated.

Considerable attention has lately been centred on the reduction in the output of man-made fibres. In this connection, it is possible to adjust the volume of output more into line with the current level of demand. Consumers are requiring smaller quantities of fibre and the latest figures show a drop of 8 per cent. in total output of synthetics compared with the month of April last year.

Output of filament yarn was, in fact, at its lowest level for some time past and at 16,000,000 lbs. during April was 3,700,000 lbs. below the 1957 level. Production of staple showed a further advance as compared with the two previous months, but at 20,900,000 lbs. was nearly 2,000,000 lbs. below the comparable monthly total in 1957. During the first four months of the year, output of filament yarn declined by over 10,000,000 lbs. at 68,800,000 lbs. and a similar decline was noted in production of staple fibres at 81,500,000 lbs.

Foreign Competition

Commenting on the trade talks between British textile leaders and representatives of the Indian and Pakistani cotton industries, Mr. Charles Schofield, Secretary of the Operative Spinners' Amalgamation, one of the Lancashire textile trade unions, says in his latest quarterly report: "These talks will probably be the last of the series and should they fail it is difficult to envisage the conditions under which further talks can take place." Writing before the discussions actually began, Mr. Schofield expressed the hope that any agreement reached would cover all stages of manufacture, including not only yarn and cloth but apparel and household textiles. "Failure to make such provision would leave the door wide open to unlimited imports in that particular section and would encourage the switching of imports to the type left open," he declared.

The only possible likelihood of a resumption would be for the Government to turn completely round and commence negotiations with their opposite numbers, but, in view of their obstinate refusal to do anything during the four years that the subject has been under examination, it hardly seems likely that this course will be followed.—*All Rights Reserved.*

SWEDEN'S TEXTILE CONSUMPTION

Sweden's textile consumption is likely to rise after the stagnation in the past few years and is estimated to become 25 per cent. larger in 1965 than it was in 1955, provided personal incomes continue to increase, according to a survey by the Swedish Industrial Research Institute. Textile prices are expected to rise more slowly than other commodity prices. However, the share of clothing in total purchases is likely to remain unchanged at 12 per cent.

Considerable shifts in consumption among different groups and qualities of textiles are to be expected, the Institute says. The proportion of industrial products will increase and man-made fibres with improved properties will grow in popularity. The consumption of ready-made garments is likely to rise by 40 per cent. and knitwear by 25 per cent. Home-made textiles and handicraft products, on the other hand, are expected to show a drop of 10 per cent., while consumption of textiles for interior decoration will rise somewhat faster than the average for overall textile consumption.

Sweden's present textile consumption amounts to close on 11 kg. per head of the population. Over the past 25 years the consumption of ready-made garments has shown a more than three-fold increase, while the consumption of other textile goods has risen considerably less.

FREE WORLD COTTON PRODUCTION AND CONSUMPTION

SOME RECENT TRENDS ANALYSED

DURING the last cotton season, namely, 1956-57, the free world, taken as a whole, moved a step nearer a position of equilibrium in the supply of and demand for cotton. This was due to the sharp increase in cotton consumption from 28.5 million bales (of 478 lbs.) in 1955-56 to 29.5 million bales in 1956-57 and the marked decline in production from 30.8 million bales to 28.9 million bales. In the current season also the gap between supply and disappearance will have been considerably narrowed down and the end-season stocks scaled down substantially. Free world production and consumption this season are estimated to aggregate 27.40 million bales and 28.1 million bales respectively. In contrast to the last season, however, when the improvement in the situation was assisted by a marked increase in consumption, the reduction in stocks this season was entirely the result of lower production brought about by control of acreage. Consumption this season, though smaller than in the previous season, will have outstripped production by 1,300,000 bales. Stocks at the end of this season would be the smallest for many years.

Production in the free world is estimated at 27.3 million bales of which 10.9 million bales are accounted for by the U.S. and 16.4 million bales by other free world countries. According to the final ginning report, the U.S. crop at 10.9 million bales was virtually unchanged from the December figure. The Mexican crop estimate has been lowered to 2,085,000 bales, while the Sudan crop is now put at only 285,000 bales, as against an earlier estimate of 385,000 bales and last season's record outturn of 620,000 bales. Estimates of production in Turkey, Brazil and Egypt have, in contrast, been raised. The table at the foot of column 2 gives the latest estimate of world cotton production.

As regards consumption, free world consumption is estimated to aggregate 28.8 million bales, as compared with 29.5 million bales during last season. Consumption in the United States is presently running about five per cent. under last season's rate. The extent of the curtailments in U.S. textile production can be seen in the data for the daily rate of cotton consumption. The rate this season has been consistently lower than a year ago. In February, which is normally one of the peak months, consumption was unchanged from January and was the lowest for any similar month since before the war. On a calendar month basis, consumption during the first seven months was 4,896,000 bales, as against 5,174,000 bales in the comparable 1956-57 period, a decline of some 300,000 bales, or about 5 per cent. At its present rate, therefore, consumption for the full season would fall to under 8 million bales or to near its lowest level for the whole post-war period.

Consumption in Canada declined contra-seasonally during February and for the first seven months showed a decline of 25,000 bales or over 10 per cent., as compared with a year ago. Faced with a declining market for domestically produced textiles, the Canadian Tariff Board has held a series of hearings in respect of the tariff structure on imported cotton textiles. Japan has submitted details of a plan to put textile exports to Canada under quota. The suggested quota for 1958 is 19.5 million square yards, as compared with actual shipments of 14.8 million in 1956.

Till the end of December, consumption in the United Kingdom was about 2 per cent. higher than the comparable 1956-57 rate. Consumption in December was only fractionally less than a year ago. After being ahead in each of the first three quarters of 1957, cotton yarn production levelled off in the final quarter to about par with the same period in 1956. More recently, there has been an increase in short working. Indications are that cotton consumption during the last half of the season will be under the comparable 1956-57 level. Production of cotton and cotton waste yarns has declined by about 6 per cent. since November, with a particularly sharp reduction in output of Egyptian type yarns. In the weaving section, productive capacity is in excess of current needs and proposals are afoot to set up a company to ensure an orderly contraction of the industry.

On the Continent, conditions are much the same as in the United Kingdom—declining textile exports in several instances, deliveries not keeping up with production, rising stocks of cotton yarns and textiles and declining orders. So far, Belgium seems to be the most affected and cotton consumption during the first six months was lower by nearly 5 per cent. as compared with last season's rate. In France, consumption declined sharply in November and it was thought that this might be a turning point. However, there was an increase in December and again in January and consumption for the first half of the season rose by about 5 per cent. to set a new all-time high. In West Germany, too, consumption continues to forge ahead and to the end of December was up by about 5 per cent. In Italy, except for November, consumption each month has been significantly higher

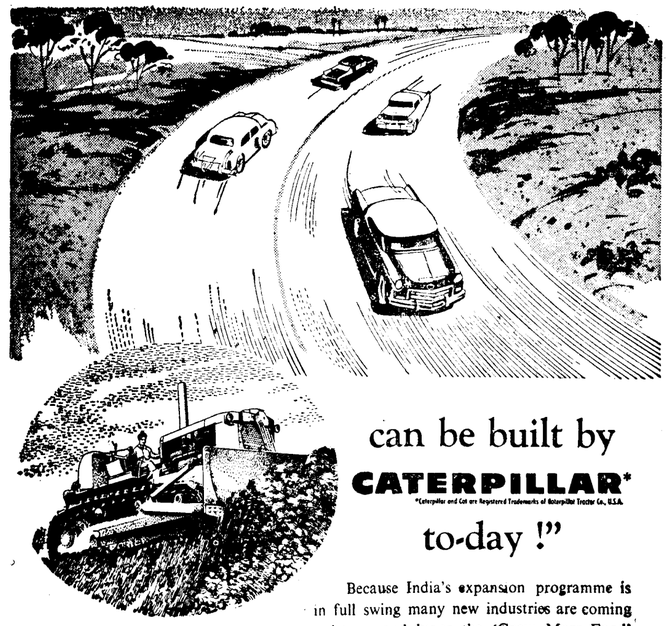
"Our highways of to-morrow ...



can be built by
CATERPILLAR*
*Caterpillar and Cat are Registered Trademarks of Caterpillar Tractor Co., U.S.A.
to-day !"

Because India's expansion programme is in full swing many new industries are coming into existence and due to the 'Grow More Food' campaign more food is being produced. More and more goods are being carried by road transport.

To open up new areas, to take care of the increasing traffic, new roads must be built and old roads have to be improved.

Better roads can be built with Caterpillar equipment. You do not save time by stopping the clock. Neither do you save money by buying cheap equipment. Caterpillar equipment will save you both time and money by giving you better output with less downtime and more economical operating costs.

Invariably a first choice among Government engineers and leading contractors, CATERPILLAR will, no doubt, play a leading part in building India's future Highways.

TRENDS IN WORLD SUGAR ECONOMY

SUPPLIES ARE AMPLE, WHILE DEMAND IS UNLIKELY TO IMPROVE MUCH

WHILE the Government of India has still not announced the export policy for sugar, the world sugar market has turned weaker. Spot Cuban raw sugar in the New York market which had staged a rally towards the end of May has since moved down; it is now quoted at 3.40 cents per lb. (f.o.b. Cuba), as against 3.60 cents three weeks before. Now that the three factors for the increase in price which occurred towards the of May, namely, the French situation, the Hawaii strike and the threat that the Brazilian surplus might pass into the hands of a Cuban operator, have faded into the background, the world sugar market again finds itself dull and featureless. Barring further developments, the chances of firmness in the world sugar market are considered to be small. This view is based on the expectation that, statistically, sugar will remain in ample supply for some time yet, whereas demand is unlikely to improve much, because the customers see little point in building up stocks.

Cuba, the largest producer of sugar in the world, is said to have almost reached the official production limit of 5.6 million Spanish tons, despite the rebel activity, but sales of Cuban sugar up to the end of May aggregated just under 1.8 million English long tons, as against over 2.3 million tons in the corresponding period of 1957, according to the latest market report of Messrs. J. V. Drake. The present export quota of Cuba under the International Sugar Agreement is 2.4 million tons, so that this country has still about 650,000 tons of sugar to market.

As regards the Cuban sugar situation, Messrs. C. Czarnikow point out that it should not be particularly difficult for Cuba to dispose of its permitted quota. It must, however, be said that Cuban sellers will have to be competitive. Stressing this aspect, a report in the *Financial Times*, London observes: "They (Cuban sellers) will shortly be faced with the full flush of the Brazilian crop. In the last quarter of the year, there will also be the European beet crop with which to contend." According to the report, it has been announced that Brazil will have at least 720,000 tons available for shipment in the year beginning this July, of which 360,000 tons or more will be ready this year. Brazil's sales are limited only by the restrictions put on Sugar Agreement countries' imports from non-member countries. Cuba's export quota under the Agreement will probably be increased later, to fill the gap left by exporters unable to ship up to their permitted level. Current total reserves in Cuba are 765,000 tons, of which 324,000 tons are earmarked for the U.S. Of the remaining 441,000 tons, some will be required to cover early January shipments.

Market Depressed

Viewed thus, it is not surprising that the world sugar market continues to rule depressed. Spot Cuban raw sugar at New York now stands, as already stated, at 3.40 cents per lb., as against 6.85 cents per lb. in April 1957. The world price of sugar has thus fallen by nearly half in about a year's time. An interesting account of the latest trends in the world sugar economy is contained in a recent issue of the *Times Review of Industry*. According to the *Review*, the fluctuations in world sugar price in recent months have been due to conflicting influences. On the one hand, there is political unrest in Cuba and, since the free market in sugar, which is only a small part of the total market, is strongly affected by the Cuban surplus, the rebellion has naturally tended from time to time to cause sudden increase in world price of sugar. The effect of this is, of course, limited. The rebels have burned some sugarcane in Cuba, but, as the potential production in this country presses hard upon its market outlets, a moderate reduction in capacity does not cause much alarm. Fears of prolonged strikes have been more significant, but they seem to have had little foundation, at least up to the middle of April. There has, however, been a prolonged labour dispute in Hawaii which has held up sugar supplies in the United States.

To the short periods of firmness of sugar produced by the rebellion can be added the effect following rumours of buying by Russia which, in fact, made some purchases of sugar early this year. But on the other hand, the production of world beet sugar has been exceptionally high, and there have been further occasional offers from Brazil. It is thus evident that the periods of firmness have been no more than interruptions in the declining trend of prices. It is difficult to say how far this decline has been further affected by the inventory recession in the U.S. or by trends in prices of other commodities. At the beginning of the new crop year, with ample supply of beet sugar in prospect, there might well be a tendency to hold off the market in the belief that the general trend of sugar price must be the same as that for other commodities.

It will be interesting to note here that world production of sugar has gone up markedly of late. The estimate of the total output in the current year, that is, 1957-58, is put at as much as 46.02 million tons (raw value) which compares very favourably with 42.98 million tons in 1956-57 and 39.40 million tons in 1955-56. The estimated level of output in the current season is more than half as much as that before the Second World War.

Trend of Production

The following table indicates the trend of world sugar production in the different regions during the year 1957-58 as compared with the previous two seasons:

(Thousand tons—raw value)

	1957-58 (Estimate)	1956-57	1955-56
Cane sugar:			
Cuba	5,577	5,582	4,664
India	2,000	2,026	1,562
Brazil	2,552	2,213	2,079
Mexico	1,297	1,138	803
Australia	1,261	1,187	1,135
Philippines	1,116	1,020	1,088
Hawaii	1,025	1,004	982
Formosa	930	889	895
China	925	945	935
Puerto Rico	930	884	1,028
Other countries	10,314	9,944	8,369
Total	27,927	26,832	23,750
Beet sugar:			
U.S.S.R.	5,150	4,700	3,720
U.S.A.	1,989	1,757	1,544
France	1,571	1,380	1,606
W. Germany	1,545	1,139	1,277
Poland	1,136	848	1,072
Italy	831	990	1,163
Czechoslovakia	768	649	718
U.K.	597	744	676
Other countries	4,508	3,937	3,871
Total	18,095	16,144	15,647
Grand Total	46,022	42,976	39,397

Generally speaking, the persistently rising trend of world sugar output has been matched by expanding consumption, especially in some of the areas which had previously been regions of low *per capita* consumption. It is not, however, surprising that such a rate of increase should bring periods of weakness in prices accompanied by attempts to restrict output by local arrangements, with a view to holding stocks off the market or by auction under the International Sugar Agreement. The first prospects for the coming season (1958-59) suggest that there will at least be a large increase in the area under sugar beet in both the West European and the Communist countries. The extent to which the improvement in area will result in an increase in output will, of course, depend on weather conditions. This aspect must be stressed because it is reported that long spells of cold have already delayed the spring sowings of sugar beet.

The increase in beet sugar production during 1957-58 as compared with the previous year is accounted for by a number of countries, the bulk of the increase coming from Germany, France, Poland and the U.S. Production in the U.K., however, was lower than in all the preceding six years, the estimated output being only 600,000 tons. As regards cane sugar production, a large part of the rise is accounted for by Mexico, Brazil, South Africa, Australia and Formosa. Brazil is producing 2½ times as much sugar as before the war. In India, white sugar production alone is expected to aggregate over 2 million tons.

SALARIES AND WAGES IN SUGAR INDUSTRY

Analysing the salient features of the latest official census of sugar industry in these columns three weeks ago (*vide* page 1028 of issue dated 31st May 1958), it had been inadvertently stated that, during 1955, the major portion of the salaries and wages—Rs. 7.5 crores—was paid to persons other than workers. This is not correct. The actual position is that the amount of Rs. 7.53 crores was paid as salaries and wages to workers and not to those other than workers, the latter getting only Rs. 2.87 crores.

SAFETY IN COAL MINES

I.M.A. SUGGESTS CODE OF DISCIPLINE

THE problem of safety in coal mines is not only a perennial one but a universal one. It is a complex one and requires a dispassionate study with all relevant facts and figures. The subject has aroused some interest and assumed special importance now in this country following the two serious accidents in the Chinakuri and Central Bhowra Collieries in February last. The Government of India lost no time in ordering an enquiry into these accidents and constituting a fifteen-member Steering Group to prepare the ground for a conference which will consider the question of safety in mines in relation to management practices, workers' training, arrangements for check and inspection and measures designed to prevent accidents in mines.

Generally speaking, colliery owners, more than anyone else, are fully alive to the importance of safety and the necessity at all times to reduce the risk of accidents to a minimum. It is, therefore, in the fitness of things that the Indian Mining Association, one of the three representative associations of colliery owners, has submitted a detailed memorandum to the Steering Group, so that the proposed conference can study all the relevant facts dispassionately and evolve some concrete and effective steps in order to improve the already high standard of safety in India.

Accident Rates

The statistics of accidents in coal mines of various countries compiled by the I.L.O. show that the rate of accident in India compares favourably with that in many others. Thus, in India the accident rate has declined from 0.72 in 1950 to 0.51 (estimated) in 1957, whereas in the U.S. it has gone up from 2.17 to 2.21 during the same period. In the U.K., it was estimated at 0.67 in 1957, as against 0.83 in 1950. In Canada, it has declined from 2.84 to 2.44 in 1955, while in Japan it has risen from 1.86 to 1.91. Another encouraging feature of the accidents in coal mines in India is that the death rate per million tons of coal raised declined from 9.3 in 1951 to 8.1 in 1955, in spite of the fact that there were major accidents in 1954 and 1955. The memorandum points out that the major disasters in collieries of India, constituting only 10 per cent of the total fatalities receive far more publicity than the other 90 per cent., which needs closer scrutiny. It is further stated that the majority of the accidents are not due to mechanical failures but to the human element which requires urgent attention. The memorandum emphasises that the risk of this element can be obviated by better education, training and discipline.

Bearing this in mind, the I.M.A. has attempted a practical approach to the problem. In this connection, it draws attention to the spate of legislative enactments, awards regulations, etc., affecting the coal industry, the colliery owners are being asked to comply with as many as 3,092 regulations involving the maintenance of 215 statutory books and forms. Any further legislative measures, instead of improving matters, may, it is feared, cause a deterioration, because the problem is one of scrupulous compliance with them. Even as it is, some of the existing legislative measures are not immediately enforceable due to paucity of materials and equipment, as well as trained personnel. The paucity of materials and equipment is, in turn, attributed to the drastic cut in imports, the procedure delays in obtaining licences for the permitted imports and the acute short supply of indigenous manufactures.

Recruitment of Labour

The I.M.A. suggests that until a better system of recruitment of labour is devised and proved satisfactory in operation, the present system of recruitment through sirdars and the Coalfields Recruiting Organisation should be continued. It is pointed out that "for geological reasons, conditions of work in Indian coal mines as a whole are easier than those in most other countries," so that there is no necessity for reduction of the present working hours. Any reduction in the present working hours, it is stated, would necessitate additional staff, thereby increasing the housing shortage and overcrowding. In fact, according to the I.M.A., in actual practice, a colliery worker does not put in more than six hours per day. The Association draws attention, in this connection, to the fact that the mining staff in the U.K. work longer hours than other employees in mines and that this is not regarded as detrimental to their ability to carry out their statutory duties.

What is more important is the inculcation of safety-consciousness through training and safety propaganda, but, as the I.M.A. points out, the problem of organising and putting into operation a planned programme for this purpose is not an easy one, in view of the illiteracy or semi-literacy of a large proportion of colliery workers and due to the migratory habits of many of these men. The I.M.A., therefore, suggests that safety councils should be set up on a coalfield basis which should study the problem of the particular field in question and then draw up suitable programmes. These councils should also assist colliery managements in putting these programmes into operation. The I.M.A. is of the opinion that research should be undertaken on (*a*) explodability of different types of coal dust in different seams, (*b*) quality and methods of stone dusting, (*c*) use of automatic detectors for fire damp, (*d*) methods of communication between the underground workings and the surface, and (*e*) the factor of safety in deep and fast winding installations. The Association also desires that the present legislative enactments regarding danger due to fire, if implemented rigidly, can eliminate this risk. It is stated that the research on the subject of "strata control" in this country is scanty and more research is required. The Association emphasises that stowing is essential in deep and gassy mines and, in view of the fact that stowing is an expensive operation, owners should be compensated more adequately than at present.

Rehabilitation

The I.M.A. draws attention to the need for serious attention to the question of rehabilitating partially disabled men. Most collieries, no doubt, reserve certain types of employment for such men, but the procedure needs to be systemised and extended. The reservation of certain types of work, even if systemised, will touch only the fringe of the problem. The I.M.A., however, suggests that programmes of training for partially incapacitated men and also for members of their families in order to fit them for other remunerative work are urgently required.

The chronic shortage of many items of safety equipment is another handicap which mines are faced with. Many of these items are not manufactured in India and, where available, the problem is one of getting them and in time. The imports of these items have been drastically cut.

As regards enquiries into accidents, the I.M.A. is strongly of the view that the practice, in the U.K. and elsewhere, of having a full-scale enquiry by technical men should be followed, since technical factors usually play a very large part in such accidents. If, however, it is felt desirable, a commission of enquiry should take up the work after the technical enquiry is over.

In conclusion, the I.M.A. draws attention to the serious source of trouble, namely, the multiplicity of labour unions, which, in their fight with each other as much as in their fights with management, have done a great deal to undermine discipline and the carrying out of legitimate orders. "The problem of indiscipline," the I.M.A. concludes, "must be seen in its wider context. Recriminations and counter-recriminations lead us nowhere. As a matter of fact, they only vitiate the atmosphere still further." It is, therefore, suggested that the causes of indiscipline should be thoroughly investigated and remedies suggested. In fact, as the I.M.A. suggests, a code of discipline should be applied to the coal industry.

DOMESTIC COAL DECONTROLLED IN U.K.

The rationing and price control of house coal, which has been in existence since the beginning of the war, will be ended from the middle of July. Announcing the decision in the House of Lords, the Minister of Power, Lord Mills, and in the Commons, the Paymaster General, Mr. Reginald Maulding said that the restoration of free competition and freedom for the householder to buy from any merchant should encourage producers and distributors to offer the public the qualities of coal they need at the most competitive prices. The Government appears to take the view that the end of price control does not imply any general increase in prices. In fact, one of the objects of the Government in removing control was to let competition exercise its influence. As a result of decontrol, the Government will make a saving in administrative expenditure to the tune of £1 million. Prices charged by the National Coal Board to the merchants will continue to be settled under the same procedure as before, "the gentleman's agreement," which provides the Board and the Minister should consult together before the Coal Board fixes prices.

In an old temple in Egypt, a scientist named Hero devised an instrument using steam pressure to force wine along a tube to be poured out on a sacrificial altar. That was in 100 B. C. Nearly two centuries ago, a small storm in a tea-kettle, noticed by James Watt, made it possible to use the mighty power of steam to change the face of the world. In India today more than 50% of the power produced is derived from steam. Texmaco in 1952, was the first to build a Lancashire boiler in India. It has since considerably expanded its range of production. With the fabrication of water-tube boilers, for the first time in India, in collaboration with the world's best technical know-how, Texmaco is now equipped to manufacture and supply the complete range of industrial Fire Tube, Water Tube and Locomotive boilers. This is how Texmaco serves India's basic industries.

OUTLOOK FOR INDIAN TEA INDUSTRY

GAP BETWEEN PRICES OF QUALITY AND POOR TEAS EXPECTED TO CONTINUE

THE season 1958-59 for Indian tea has opened in inauspicious circumstances, with the declaration of strike in five major ports of India with effect from the 16th inst. and the continuation of the dock strike in London. The opening sale for exports of the current season's crop held last week, no doubt, indicated a good start to the season. As was generally expected, there was good demand from overseas buyers, particularly from the U.K. and Russia. It was well known that the stocks in the U.K. had already been depleted to a considerable extent and that it augured well for the new season. On account of drought conditions in most tea-growing districts in North India early in the season, the manufacturing of tea made a slow start and production was, therefore, expected to be below normal. Further, the strikes in Ceylon and political unrest in Indonesia were expected to give a stimulus to the demand when the new season opened.

Subsequent developments, namely, the declaration of strike in Indian ports and the persistence of the dock strike in London have, however, somewhat obscured the outlook for the current season. The effect of the dock strike in London was already felt in the London tea sales held last week; auctions were held only on two days instead of three days and only a part of the quantity originally catalogued was offered for sale. There was no evidence on the part of buyers of any anxiety to buy as much as possible, because of the prospect of large offerings once supplies started arriving in London. While the interruption of exports from India on account of the dock strike in this country may prove to be temporary—one cannot, however, be dogmatic about it, if the recent Colombo dock strike were any guide—the general outlook for North Indian tea depends on many factors, which are equally applicable to South Indian tea.

Discussing the factors which go to shape the outlook for the tea industry during the current year, Messrs. J. Thomas & Co. Private Ltd., the well-known firm of tea brokers of Calcutta, in their annual report for the season 1957-58, point out that the wide fluctuations in prices, which began in 1951, following the restoration of free trading in tea in the U.K., show no signs of settling yet. The only perceptible pattern—a disturbing one too—that has emerged is the divergence in prices between the best and the poorest quality teas. The main reason for this is the growing production of teas, particularly, the common varieties, outstripping demand, and the buyers' preference for top quality teas. So long as consumption lags behind production, Messrs. Thomas & Co. observe, this trend is likely to continue in the forseeable future. In most of the North Indian tea districts, the plans for replanting and replacing essential parts of the factory are going ahead. New methods of hedge planting and manuring have been adopted and these will inevitably result in a larger yield per acre, and a sharp increase in production is likely during the next few years.

When the full impact of increased production begins to be felt, the question that will arise is whether there will be sufficient markets to absorb the larger Indian tea. The mainstay of Indian tea has long been its foreign markets and, with the present need for increasing our foreign exchange earnings, exports of tea have to be considerably increased. At the same time, the potentially large internal market has to be sufficiently developed to consume the surplus production. Though no accurate estimate of internal consumption has so far been made, the indications are that it is increasing.

The next important factor, on which the outlook for the Indian tea industry depends, is the quality of its production, particularly because the market has become competitive. In fact, the producers have come to realise this and have taken steps to improve the standards of manufacture. Their efforts are, however, "fettered to a great extent by the relentlessly increasing levies imposed by the Government which have brought the cost structure to an inflexible level regardless of whether the prices fetched allow the producer a margin of profit or not." This is unfortunate in view of the fact that "several gardens are in dire need of finance to carry out improvements for their continued existence." It is noted that "the high cost of production has also meant that the competitive capacity of the producer has been greatly reduced in some of India's traditional outmarkets where other countries have not only gained a firm foothold but also, in some instances, made alarming advances at the expense of our trade."

A feature of the market in the past few years has been the development of demand for particular grades from particular countries. For instance, Russia absorbed last year a large quantity of Assam broken orange pekoes and Darjeeling leaf grades. Turkey and Iran bought whole leaf grades and tippy teas, respectively, and the Middle Eastern countries sought black fannings types. These countries are expected to continue their purchases for the respective varieties of tea.

Messrs. Thomas & Co. seek to remove a misconception in the minds of producers of certain types of teas. Thus, they observe:

"The recent increase in the amount of tea manufactured by types of machines, such as the C.T.C., leads to the fear that more of this sort of tea will be made than can be readily absorbed. Some producers seem to think that the mere installation of a C.T.C. machine is a sure road to higher prices for their produce and that adequate knowledge and care in manufacture is not so important as with the making of ordinary orthodox black teas. A possible result of this trend is that, while well-made teas manufactured by the C.T.C. process will continue to find a ready market with the United Kingdom blenders, those teas which have neither attractive leaf appearance nor desirable liquor characteristics, will not only fetch uneconomic prices but will be difficult of sale."

As regards the future of low, medium and common teas, which form the bulk of North India's production, Messrs. Thomas & Co. observe that it will depend largely on whether the world demand for such teas is more than the world supply. They rule out bulk buying for stockpiling by the U.K., because of the tight financial position, unless there are positive threats to regular supplies from producing countries such, for instance, as the Suez Canal crisis. In conclusion, they point out that the absence of sizable stocks to cushion the vagaries of supplies will tend to make the market more sensitive and, therefore, fluctuations in prices may become a normal feature.

STOCKS OF GUNNIES SHOOT UP

OUTPUT RISES FURTHER

REPORTS that the Indian Jute Mills' Association is considering ways and means to reduce the stocks with mills lack official confirmation. It is, however, clear that mills are concerned over the slackness in overseas demand for jute goods and the consequent accumulation of stocks with them. The prospect of further accumulation of stocks due to the strike at the major ports of India which commenced on the 16th inst. cannot be ruled out unless the strike is called off soon or serious efforts are made to maintain the work in ports intact.

As at the close of May 1958, the stocks of gunnies with mills show a rise of 14,500 tons, the sharpest rise in any month since January last, to 112,000 tons. With this increase, the upward trend in stocks has been maintained for the second month in succession, bringing the total stocks to the peak level since June 1957. The following comparative table shows the variety-wise break-up figures of stocks:

Jute Goods: Stocks

(In tons)

	As on 31st May, 1958	As on 30th Apr., 1958	As on 31st Mar., 1958	As on 31st May, 1957
Hessian	25,000	20,400	24,500	40,400
Sacking	71,800	69,200	54,800	58,000
Others	15,200	16,900	15,000	11,000
Total ..	112,000	97,500	94,300	109,400

The increase in stocks has been mainly shared by hessian and sacking. Hessian stocks have gone up by 4,600 tons, thus reversing the successive decline noted since January. The rise in sacking stocks is disturbing; they have gone up by 11,600 tons to the highest level since October 1956. For the first time in the past nine months, the stocks of "other manufactures" have suffered a shrinkage of 1,700 tons. Over the year, the total stocks of all goods show an increase of 2,600 tons, which would have been much larger but for the drop of 15,400 tons in hessian stocks over the year.

The enlargement in stocks is partly due to the expansion in production to the tune of 6,900 tons during the month, which followed the rise of 2,700 tons noted in the previous month. At 94,900 tons, the total output represents the highest level since January 1958. The following comparative table shows the variety-wise production:

Jute Goods: Production

(In tons)

	May, 1958	April, 1958	March, 1958	May, 1957
Hessian	34,200	30,900	30,400	35,600
Sacking	53,700	50,600	49,500	45,000
Others	7,000	6,500	5,400	6,700
Total ..	94,900	88,000	85,300	87,300

Hessian production has gone up by 3,300 tons to 34,200 tons and sacking output by 3,100 tons to 53,700 tons. Other manufactures too have risen by 500 tons to 7,000 tons. Though this increase in "other manufactures" does not compare well with that in the previous month, it has taken production to a record level. The rise in total production of all goods was due to the larger working period during the month, the number of hours worked being 214.5, as against 200.5 in the previous month.

The Life of a
BALL BEARING...

...and the material used
The life of a ball bearing depends mainly on the material from which it is made. To ensure the supply of raw material and obtain control over the steel production, SKF acquired Hofors Bruk with its mines and forests, in 1916. Under SKF's management this 300-year-old works has developed into a modern steel works with an annual output exceeding 150,000 tons of steel ingots. The special ball-bearing steel produced at Hofors Bruk has shown itself to be unequalled.

I.L.O. IN A CHANGING WORLD

PROGRAMME OF WORK CLOSELY RELATED TO SOCIAL REALITIES

THE International Labour Organisation is among the most successful of the specialised agencies of the U.N. working in the international field and is the only institution to survive World War I and the League of Nations, the parent body. It has responded remarkably to the changes and challenges of the post-war situation. This may perhaps be one of the reasons for its survival and successful working. The scope and emphasis of social policy throughout the world have changed markedly, particularly since World War II, and the setting within which the I.L.O. does its work has also undergone radical transformation. Of the 79 nations which are members of the I.L.O., more than 25 per cent. are newly independent countries. All of them are committed to programmes of conquering poverty and combating social evils. Social policy is, therefore, in the forefront of their concern. Their needs, however, are different from those of the industrialised countries which were formerly preponderant in determining the direction of the I.L.O. activities. In the underdeveloped countries, much of legislation on standards of working conditions is inspired by or modelled on I.L.O. conventions or recommendations. But the primary concern of these countries in this field is not so much with legislation as with creating the institutions needed to give practical content and effect to legislations. Thus it was necessary for the I.L.O. to find means of assisting these countries to build up the necessary institutions. The expansion of technical assistance activities has in large part, been a response to this need. The problem is one of creating the means to improve working conditions and not only to protect the workers. More attention was required to be paid to those aspects of social policy conducive to expanding production, such as training, the organisation of employment and the raising of productivity. These needs have been reflected in the I.L.O.'s work through the development programmes in the field of manpower and productivity.

In the industrial countries, the pre-war concern with unemployment has become a concern for maintaining full employment. Pre-war social insurance, focussed mainly on benefit payments, has been transformed into a post-war concern with social security which comprises also preventive aspects of health and welfare and the attainment of conditions in which insecurity is less prevalent. There is more concern today with youth problems and, in the realm of women's work, less attention is now given to protective legislation and more to the creation of equal opportunities. The area of social policy has thus extended to include more and more the promotion of positive welfare and to become more closely integrated with national development as a whole. These trends have found their reflection in the I.L.O.'s work in the field of full employment, social security, workers' welfare vocational training and guidance, etc.

Notable Features

In his Annual Report submitted to the 42nd session of the International Labour Conference which opened in Geneva on 4th June Mr. David A. Morse, Director-General of the I.L.O. has surveyed the activities of the I.L.O. in a changing world. He points out the ways in which the I.L.O., has responded to the post-war situation and how it proposes to meet similar challenges in the future. The Report notes that among the notable features of recent development in the activity of the I.L.O., the widening use of the collective bargaining process and of education as instruments of social action are important. The I.L.O. was, for a number of reasons, initially concerned with industrial workers; there is now a widespread movement, says the Report, to extend to agriculture some of the benefits acquired by industrial workers, while the problems of the increasing non-manual segment of labour force are attracting more and more attention. The various approaches made by the I.L.O. in its work since were related to social and economic realities.

Soon after the Second World War, the first Industrial Committees, composed of representatives of industries themselves, were set up to deal with the problems of certain basic world industries: coal mining, inland transport. iron and steel, metal trades, textiles, building, civil engineering and public works, petroleum and chemical industries. Later, two other committees—the Advisory Committee on Salaried Employees and Professional Workers and the Committee on Work on Plantations—were set up on an analogous basis. To some extent the Industrial Committees have been asked to break new ground. They have made it possible to widen the range of social issues brought under review and have paved the way for the consideration by the conference of problems relating to particular groups of workers.

Examining the positive results obtained by this new working method, the Report notes (1) that the Committees have widened the channel through which people in the industrial world tell the I.L.O. what they want and through which the I.L.O. renders the services required, (2) there is no lack of proof of active interest in the work of the Committees, (3) that the number of Governments reporting on action taken in the light of the Committees' conclusions has increased considerably in recent years, (4) that the discussions of the Committees have often provided useful guidance to governments and to employers' and workers' organisations.

Technical Assistance

Since the introduction in 1950 of the technical assistance programme of the United Nations, in which I.L.O. takes part, I.L.O. has sent out more than 800 experts on mission. The fields in which they work include vocational training (more than 50 per cent.), labour conditions and administration (23 per cent.), productivity, co-operation and handicrafts and social security. The results have varied from country to country and from project to project. There have been a few disappointments, but in a very substantial proportion of cases positive results have been achieved, and there has been a gratifying measure of success in a great many cases, especially where new training or productivity centres and new labour services have been created.

"Technical assistance by the I.L.O.," observes the Report, "not only is inspired by the standards and polices worked out through tripartite discussion, but brings the I.L.O. into new types of contact in the field with workers and employers."

As regards the productivity programme, two things, says the Report, can safely be said: first, the sum total of accomplishment has been out of all proportion to the relatively small amount of time and money expended; and secondly, direct practical results, sometimes quite impressive, have been achieved in nearly all the projects.

The Report points out that the I.L.O. may have to review its programme and activities in the field of employment and unemployment to ensure that it is properly concentrating its work on the major problems in this field of economic and social policy and, in particular, that it is in a position to deal effectively with any problem of unemployment which may emerge with industrialisation and technological progress.

In the field of human rights, the Organisation has sought both to defend basic rights and freedoms essential to the achievement of its objectives and to promote the extension of such rights and freedoms in all countries. A great many of its activities converge towards these ends. In recent years, the main areas of concentration of effort have been trade union rights, forced labour and discrimination in employment and occupation.

The Organisation's approach to these problems may perhaps be characterised as eminently practical. It has sought to identify and isolate particular problems requiring urgent solution and to deal with them through its existing machinery and through such special machinery as may be required. Yet all of the problems are deeply rooted in the whole complex of political, economic, social and cultural factors which make up national and international society today. Hence the need to approach them through activities which take account of these various factors. Hence, too, the need to proceed in many respects through methods of persuasion.

Discussing educational activities, the Report says: "It has been necessary to find ways by which the Organisation can come nearer to the peoples it serves and nearer to the problems with which it deals. This has led to the evolution of the educational approach which has just begun to take shape and which will usefully supplement the other approaches to the social problems of today.

"In principle the educational approach extends over all the various fields of activity with which the I.L.O. deals. In practice, it has so far been applied primarily in the field of labour-management relations."

In the field of international assistance, the new programme is dependent on the force of education, persuasion and promotion. Its basic aim is to spread the idea of labour-management co-operation in ever-widening circles within each country through nationals of the country. There can be no international interference in national labour-management patterns but there can be effective international assistance at the points where the problems have been identified nationally, where the need is for objective advice, well grounded in experience but adapted to national conditions. The job has to be done by nationals in their own way.

Workers' Education

In 1956 the workers' education programme was launched and the first steps taken towards planning and implementing it. Its aim is to help equip the workers with the knowledge and understanding they need, not only to carry out their function and civic responsibilities in modern society, but also to contribute fully to the whole process of economic growth and social development. Under this programme, the I.L.O. is not, of course, seeking to substitute itself for the trade unions or to undertake tasks properly theirs. It is simply trying to meet certain needs by providing services appropriate to its own status, structure, terms of reference and methods of operation. The bulk of the programme consists of education in questions dealt with by the Organisation and directly related to the interests of workers as workers, as, for example, labour law and administration, methods of collective negotiation and social security.

LABOUR DISPUTES

Time-loss due to industrial disputes during March 1958 increased by 292,413 man-days, as compared with the previous month. The average duration of disputes, current at any time during the month, was 9.5 days as against 4.5 days in February. There were 117 fresh disputes in March, bringing the total number of disputes current at any time during the month to 148, including 22 lockouts. One hundred and four disputes terminated during March. Of these, 70 lasted not more than five days each and only four lasted more than 30 days each. During the month, time-loss increased in "construction" to 2,70,500 in "manufacturing" to 3,61,734, in "mining and quarrying" to 66,482 and in "agriculture and allied activities" to 12,006, while it decreased in the remaining groups.

West Bengal recorded the highest time-loss (497,459), followed by Mysore (81,003), Bihar (53,711) and Madras (29,923). As compared with the previous month, time-loss increased in West Bengal, Assam, Madras, Bihar, U.P., Kerala and Tripura and decreased in all other states. For the manufacturing industry group, the index of industrial unrest for March (base 1951=100) was 105, as against 77 in the previous month).

NEW PRODUCTS AND PROCESSES

Quick Method of Evaluating Ores

THE U.S. Bureau of Mines has developed a simple and accurate method for using X-ray equipment to analyse certain earth ores, metals, and compounds which are of growing military and industrial importance. The new technique makes it possible to analyse 40 samples in a single day. By contrast, only about a dozen samples could be analysed in a week by methods formerly used. The basis of the new technique, known as X-ray emission spectroscopy, is that every element has a characteristic, simple X-ray line spectrum. High energy X-rays cause the atoms of the sample to become excited and re-emit fluorescent X-rays, which are characteristic of the elements in the sample. In the Bureau's method, these rays strike a special crystal, which reflects the characteristic line spectra of the various elements at different angles as its face is rotated. Use of instruments or automation in the method virtually eliminates the chance of human error, and so within limits provides an accurate method for determining the purity and for making quantitative analyses of rare earth preparations. One of its advantages is the ease with which technicians can be trained to prepare samples and operate the X-ray machine.

Fabric-drying Cylinder Machine

A textile machinery factory at Enschedé (the Netherlands) has put on the market a new cylinder drying machine which can be used for most fabrics including cellulose fibre. Each cylinder of this machine has a separate elastic drive eliminating any tension in the cloth, which can, therefore, be dried crease-free and smooth. The r.p.m. of each cylinder corresponds exactly to the speed of the cloth. The speed can be controlled manually by means of push-buttons or automatically by means of a built-on hygrometer. The formation of marks due to the exchange of batches is prevented by the use of creep-drive. The cylinders are made of stainless steel, the conventional stuffing boxes are replaced by special, practically frictionless, sealing joints, thus reducing losses of steam and power. The special belt drive guarantees noiseless running of the machine. Each cylinder has a separate steam trap, increasing the drying capacity by 15 to 20 per cent. The cloth velocity can be read on a built-in speed indicator.

Heat by the Yard

A kit that will enable laboratory technicians and process engineers to "cut themselves a length of heat" and apply it to any complex shape that would otherwise pose a difficult heating problem was displayed at a recent Chemical Engineering Exhibition at Frankfurt, by a British firm. Known as "Heat-by-the-Yard," the system consists of a continuous network of resistance wires enclosed in a knitted elastic sleeve of glass-fibre yarn that can be wrapped like tape around any shape. The tape is made in half-inch and one-inch overall widths and supplied in kits in lengths of 25-ft. or 50-ft. together with terminal fixings. The electrical resistance has been so arranged that a normal working length of 12-ft. would require 120 volts, while a 23-ft. length would need 230 volts to obtain maximum temperatures. Nickel wire is used in the resistance network, and this will attain its nominal rating of 200-250°C.

Dust Control

Dust control applied to sack-emptying is one of the latest problems tackled by a British firm in order to improve working conditions and to increase production. The firm claims that its dust control unit cuts out dust hazards and breakdowns caused by dust penetration into the moving parts of machines. Wherever sacks are emptied of their contents this unit, the manufacturers claim, can be applied with equal success and the dust satisfactorily controlled. The unit is designed for easy positioning over hoppers, conveyors, storage silos, or wherever it is required. A fabric filter provides 100 sq. ft. of filtration area in spite of the small space it occupies. Various filter fabrics are available for dusts having peculiar characteristics.

Colour Pictures in One Minute

Full colour photographs can be taken and printed in one minute by use of a new film perfected by the Polaroid Corporation in the United States. The Company has been marketing, for a number of years, a camera and film that produce black and white photographs in a minute. Like the present black and white film rolls, the colour film rolls will consist of two parts—a roll of negative and a roll of self-processing positive paper. It has not yet been reported when the new colour film will be ready for marketing. According to the Company, preparing for its production is a "major undertaking involving several stages."

Space Radios

Two large radio telescopes, designed for more accurate reception of signals from outer space, will be developed by the Blaw Knox Company of Pittsburgh, Pennsylvania. The devices, with dish-like receivers 85 feet in diameter, would pick up and transmit radio waves given off by the sun, the planets and other galaxies. The telescope would be directed at a space object and moved to follow its course. The receiver would pick up radio waves from its target which would be transmitted to electronic instruments where they would be amplified and analysed.

NATIONAL RAYON CORPORATION LTD.

SPEECH OF THE CHAIRMAN, MR. KASTURBHAI LALBHAI

THE following is the speech delivered by Mr. Kasturbhai Lalbhai at the Eleventh Annual General Meeting of the Company held in Bombay on 12th June 1958:

"GENTLEMEN,

"I have great pleasure in welcoming you this afternoon and presenting to you for adoption the eleventh Directors' report and the audited statement of accounts for the year ended 31st December 1957. These have been in your hands for some time now and I believe I have your permission to take them as read.

"The accounts as usual contain the corresponding figures for the last year for comparison. You will have noticed that the provision for taxation this year amounts to Rs. 12,00,000 including a provision of Rs. 6,50,000 for 1956. Our anticipation that provision made last year would take care of the increased incidence of tax liability due to increased rate of income-tax and corporation tax and the new levy of wealth tax has not unfortunately come out true. This was mainly due to non-allowance of the expenses incurred for issue of debentures for the purposes of assessment. The provision of Rs. 5,50,000 made for current year's tax liability is slightly on a higher side than the estimated incidence and is expected to cover eventualities, if any, such as those we had to encounter in respect of last year's assessment.

Development Rebate

"It is a happy augury that the provisions with regard to the current profits deposits, introduced in November 1956, have been kept in abeyance this year. We hope, in due course, these provisions will be entirely removed from the Statute Book. The incidence of tax on corporations, however, still continues to be very heavy and is working as a drag on capital formation required for starting any new industry or expanding the existing ones. If the targets fixed by the second Five-year Plan for the private sector have to be achieved, it is essential that quite a few irksome provisions contained in the tax statute are removed as early as possible. I may particularly mention here the recent provisons regarding the development rebate. Though the rigours of the original provisions have been watered down to a certain extent, still the provisions continue to act as a disincentive and require some further consideration. Any new industry would find it extremely difficult to make any profits as such during the first year of its operation, much less a profit up to 75 per cent. of the development rebate. If, therefore, the development rebate is to act as an encouragement to the establishment of new industries as originally conceived, it is high time that the recent provisions made with regard thereto are amended as early as possible and the *status quo* restored. Capital required by private enterprise for meeting the obligations cast upon it under the National Plan is likely to come forth only if the role the risk capital has to play is recognised and its due rewards commensurate with the risks involved are not unnecessarily whittled down.

Imports of Yarn

"You may recall that, last year, I referred pointedly to the figures of imports of yarn made into the country for the year ended 31st March 1957. The actual imports for that year came to as much as 62 million lbs. of yarn which combined with the indigenous production of 21 million lbs. for the year made available to the country as much as 83 million lbs. of yarn. This quantity was evidently far in excess of the requirements of the country and had its natural effect, resulting in bringing down the prices of rayon yarn for the first two quarters of 1957 to very low levels. The situation, however, has completely changed now. Due to the paucity of foreign exchange the Government has been compelled to restrict imports of yarn considerably which has resulted in a steep rise in prices. Your Directors, nevertheless, have continued to maintain the prices of the Company's products at reasonable levels and I believe you will all agree that, under the circumstances in which the country is placed at present, that is the best policy for everyone concerned to follow.

"With a view to equitable distribution of the Company's products amongst the several consumers, your Company in concurrence with the authorities concerned have evolved a scheme whereby 70 per cent. of the yarn will be distributed directly amongst the consumers at the prices fixed by the Company and 30 per cent. will be distributed through dealers at a margin of not more than As. 3 over the Company's prices. We have also taken a stand that the regular consumers of the Company's yarn would first be given their due quota based on the average offtake of yarn by them during the past three years before considering distribution of yarn to any newcomers. Happily this stand has been appreciated and accepted by the authorities.

"The import policy of the Government with regard to the import of essential raw materials permits imports of requisite quantities of these raw materials for running the plant to its full capacity. The foreign exchange position of the country, however, is giving cause for great anxiety in every quarter irrespective of the foreign aid received by the Government of India recently. It is only to be wished that the country's position in this regard would improve and it would be possible for the Government of India not only to permit continuance of this policy of allowing full imports of all essential raw materials but also permit imports of essential capital goods for expanding the capacities of several industries.

"Before I conclude, I take this opportunity to express my sincere appreciation of the very good work done by the workers and the staff, technical and non-technical alike, whose efficiency, loyalty and co-operation have contributed in no small measure to the satisfactory working of the Company."

Note.—This does not purport to be a record of the proceedings of the annual general meeting.

AMENDING COMPANIES ACT—VIII

SUGGESTIONS OF SASTRI COMMITTEE ANALYSED

By F. R. Ginwalla

"LAWS are like cobwebs which may catch small flies, but let wasps and hornets break through." This saying seems to have been in the mind of the Committee when it attempted to interpret the obscure and ambiguous provisions of the Act and plug all its loopholes. It is obvious that for the effective implementation of an Act of such magnitude and complexity a great deal has to be left to the goodwill of those who are concerned with the working of joint-stock enterprise. In the preceding articles we discussed the positive aspect of the Report. There were, however, a few suggestions which, after due consideration, were rejected by the Committee. This negative aspect of the Report also deserves examination.

Managing Director

Section 2 (26): A suggestion was made to the Committee that Section 2(26) should be amended so as to replace the words "any powers of management which would not otherwise be exercisable by him" by the words "the management of the whole or substantially the whole of the affairs of the company." The Report observes that this suggestion was rejected because the suggested change would place the managing directors in the same position as a manager or a managing agent and would exclude persons who, though not entrusted with the management of the whole or substantially the whole of the affairs of the company, were entrusted with important powers of management. This was not the intention of the Act and the adoption of the suggested change would remove from the control of the Government the appointment and remuneration of directors who, though exercising important functions and powers of management, were yet not entrusted with the whole or substantially the whole of the management of the affairs of the company.

Agreements and Articles

Section 33(1)(c): Under this section any proposed agreement for managing agency or for appointment of secretaries and treasurers has to be filed at the time of the registration of the memorandum. It was pointed out to the Committee that if the terms of the agreement were altered at any time after the registration of the company, the filing of the proposed agreements would be a needless requirement and that Section 33(1)(C) might as well be omitted. The Committee was unable to accept the foregoing suggestion on the ground that this provision was necessary to enable the investing public to know the arrangements proposed to be made for the management of the company before they subscribed for shares.

Section 49(4) states that sub-section (1) of Section 49 shall not apply to investments made by a company whose principal business consists of the buying and selling of shares or securities. The Report states that the Committee was informed that difficulties were experienced over the interpretation of the words "whose principal business" occurring in Section 49(4) and therefore a suggestion was made to define the foregoing expression or to amend suitably Section 49(4). The Committee, while rejecting this suggestion, observes:

"We consider that any amendment might seriously impair the effectiveness of the section to achieve its object and that, in this context, Parliament intended to exclude from the operation of the provisions of sub-section (1)(*a*) only those companies which were mainly engaged in the buying and selling of shares and securities. The question of what is or is not a company's principal business is a question of fact which has to be decided having regard to the circumstances in each particular case and we do not feel that any amendment to Section 49(4) is required."

Further Issue of Capital

Section 81 corresponds to Section 105C of the 1913 Act. The Report states that the precise connotation of the words "first allotment of shares," "issue of new shares" and "directions which may be given by the company in general meeting" has been the subject of much discussion. Before formulating any amendment, the Report briefly discusses the object and purpose of Section 81. The capital of a company may be of four kinds:—

(1) Nominal, authorised or registered capital which, if it has to be increased, requires a resolution of the company at a general meeting under Section 94. (2) Issued capital. The whole of the authorised capital is not generally issued at once. Only a portion is issued in the first instance, which is styled as issued capital and further issues are made as and when necessary. (3) Subscribed capital. It is that portion of the issued capital which has been subscribed or taken up by the public. (4) Paid up capital. It is that part of the capital which is actually paid.

Section 81(1) does not deal with the increase of the authorised capital but only with the second and third kinds of capital referred to above. Companies do not always declare their issued capital, though all good companies do so. All issued capital is not fully subscribed in all cases during first allotment and further allotments continue to be made over a period of time. Unsubscribed but issued capital can be allotted at any time at the discretion of the directors. Where a part of the capital has been issued and fully subscribed and the company wants to expand its business and is in need of more resources, the company may increase its issued capital.

Under Section 105C of the Act of 1913, it was competent for the directors to increase the issued capital, subject to the condition that the new shares were offered *pro rata* to all the shareholders of the Company. Shares issued by the directors but not thus subscribed for could be allotted by the directors to anybody at any time and on any terms at their discretion. Thus, under the old Act, there was a possibility of the directors abusing their powers by allotting the shares to themselves or their nominees or friends on favourable terms. To avoid such abuses, Section 81 was enacted in the present Act, but it has been so worded as to make its interpretation difficult. It refers to increase of the "subscribed capital of the company by the issue of the new shares" "at any time subsequent to the first allotment." If the issued capital has been fully subscribed, the subscribed capital would be increased by the issue of new shares and Section 81 would apply to the case. Where, however, the issued capital has not been fully subscribed, the subscribed capital could be increased by the directors by making allotments against applications received by the company from time to time till the limit of the issued capital is reached. In that case, according to Report, the subscribed capital would be increased by the "allotment" and not by the "issue" of new shares and the section might not be applicable.

Sensible Interpretation

This interpretation, according to the Report, is sensible because observance of the conditions laid down in Section 81(1) (*a*) to (*d*) each time an allotment is made by the director out of the issued capital would be impracticable in many cases. But Section 81 refers to an increase of "subscribed capital" at any time subsequent to the first allotment of shares. Moreover, the words "issue of shares" are wide enough to cover "allotment of shares" and add to the difficulty of interpretation. The section does not define when the first allotment is deemed to be made. Again, Section 81(1) does not make it clear whether the proposal to increase the subscribed capital has to emanate from the company in its general meeting or from the directors as under Section 105C of the repealed Act of 1913. The Report observes that "on a reading of Section 81(1) as a whole, it looks as if the directors can *suo moto* increase the issued capital of the company and a contrary inference cannot be drawn from Section 81(1) (*a*) to (*d*) because the conditions therein specified might come into play when the company in general meeting has passed a resolution increasing the issued capital of the company without at the same time giving any directions as to how the shares are to be disposed of."

The object of Section 81, as already stated, is to provide against the contingency of shares offered *pro rata* to the shareholders but not subscribed for by them, being allotted by the directors to themselves or their nominees or friends if such shares happen to go up in market value. At the same time, it would be impracticable, if not impossible, to compel directors to make a *pro rata* offer to the existing shareholders from time to time before making any allotments against applications received by them over a period of months. The Report suggests that "one method of reconciling these points of view is to impose a time limit on the exercise of the power of directors to make allotments from time to time. They might be allowed to make such allotments, say, till the date of the next following annual general meeting or till the expiry of 6 or 12 months from the date of the offer to the shareholders of the further shares.

Having considered all these factors and the suggestions it had received, the Committee has proposed to amend Section 81(1). The text of of the proposed amendment will be found in Article II.

On the language of Section 81, as it stands, those preference shareholders who, by virtue of Section 85 become equity shareholders, would be entitled to participate in the new issue but not those preference shareholders who remain such under Section 85 (1) and (2). The Report does not recommend any change in this respect. It points out that, in the opinion of a minority of the Committee, preference shareholders who continue to remain as such under Section 85 should be entitled to participate in any further issue of preference shares along with equity shareholders. But the majority of the Committee preferred to accept the view of the Bhabha Committee embodied in Section 81 that the offer of further issues, whether of equity or preference shares, should be made only to the equity shareholders unless the company in general meeting gives other directions.

It was suggested by a stock exchange that an amendment of Section 82 should be made so as to bring shares within the category of actionable claims. The Report has rejected this suggestion on the ground that, if a change in the law is desirable, it has to be effected in other enactments and not in the Companies Act. Furthermore, the consensus of judicial opinion indicated that shares were goods within the meaning of the Sale of Goods Act, though shares partook of some of the attributes of negotiable instruments.

Preference Shares

As regards Section 86, a chamber of commerce pointed out to the Committee that specific provision should be made to protect the rights of preference shareholders who have taken shares on the faith of a statement in the prospectus that the shares will carry a fixed cumulative dividend of, say, five or six per cent. "free of income-tax." In support of this suggestion, it was stated before the Committee that there might arise a case when a company concerned was not liable to pay tax as a result of some special, initial or other depreciation allowance or development rebate allowed to it under the Income-tax Act or on account of the set-off of losses, and, in such an eventuality, the dividends received on such preference shares were taxed in the hands of the preference shareholders. In order to protect the preference shareholders it was urged that there should be a specific provision in the Act to compel the company to pay to the Government the tax payable by the shareholder. The Report states that in the opinion of the Committee no special provision in the Act was necessary because if the shareholder had a contractual or quasi-contractual right to be reimbursed or indemnified by the Company, his right, if any, arose under the ordinary law.

Tax-free Payments

The Report states that Section 200 was enacted after discussion and is prospective in its application. The objection to this provision has been raised by foreign concerns which have in their employment foreign personnel on a guaranteed minimum remuneration. Such remuneration, though in some cases subject to tax in foreign countries, is, according to the terms of the contract of service, free of Indian income-tax payable by them on their remuneration. In the case of approved foreign technicians, a limited measure of exemption has been provided by Section 4(3) (vi *a*) of the Income-tax Act as amended by the Finance Act of 1955. In other cases, the company concerned has to bear the tax and pay its employee a sum which would include the salary plus the tax payable thereon. Under Section 189 of the English Act, tax-free payments are prohibited to directors but Section 200 of the Indian Act goes a step further and covers all officers and employees of a company. Furthermore, Section 200 serves to ensure that the accounts prepared in accordance with Part II of Schedule VI reflect the full cost of staff salaries. It is a wholesome provision and the Committee sees no reason to suggest any amendment.

Section 271 exempts a technical director or director appointed by the Government from filing the required declaration of qualification

shares. The Report states that it was difficult to evolve a comprehensive definition of the expression "technical director" though, in a given case, it would not be difficult to say whether or not a director was technical director, having regard to his special qualifications, the nature and the extent of the work done by him for the company, and of the business of the company.

The Report rejected the suggestion made on behalf of the shareholders that directors should be persons who have a stake in the company and own a minimum of at least one per cent. of the equity share capital where its capital is less than a crore of rupees and one-half of one per cent. of such capital in the case of companies with a capital of over a crore of rupees. The Report, however, observed that though it was not possible to lay down a uniform rule as to share qualifications in all cases, it was desirable that directors should have a real or substantial interest in the fortunes of the company.

Section 275 restricts the number of directorships capable of being held by an individual to 20. Section 316 restricts managing directorships to two companies and Section 332 limits managing agencies to 10 companies. It was pointed out to the Committee by some chambers of commerce that in view of the paucity of capable business men in India the foregoing restrictions were inappropriate and unnecessary. On the other hand, the Report states that there were complaints that the limit of 20 directorships and 10 managing agencies was too high and there was a noticeable tendency for a few business men and their relations to concentrate in their hands enormous industrial power by virtue of their position as managing agents of a large number of public companies. In practice, the average number of directorships held by an individual in the United Kingdom or in the U.S. was much less than the number permitted by the Indian Companies Act of 1956. The Report states that after careful consideration the Committee was unable to accept any suggestion for the alteration of Sections 275, 276, 316 and 332. Parliament had enacted them quite recently and no new facts or unexpected difficulties were brought to the notice of the Committee to warrant a change.

Private Companies

In the case of private companies, the appointment of a managing agent or the variation of the terms of the managing agency agreements is subject to the approval of the Government under Sections 326 and 329. The remuneration payable to the managing agents is, however, not subject to the control of Government and there is no ceiling on such remuneration as has been provided for by Section 198 or Section 348 in the case of managing agencies of public companies or of private companies which are subsidiaries of public companies. The Report states that the result, therefore, is that there is no control over the remuneration payable to managing agents of private companies except under Section 326(2)(b). Section 355 lays down that the provisions of Sections 348 to 354 shall not apply to a private company unless it is a subsidiary of a public company and thereby makes it clear that the remuneration of the managing agents of private companies is not subject to any ceiling under the present Act. While the appointment of managing agents of private limited companies is subject to the control of the Government, the remuneration payable to them which is an integral part of the terms of such appointment, is left uncontrolled by Government. To this extent, the principle underlying Section 355 may be said to be inconsistent with the principle of Sections 326, 327 and 329. The Report points out that the logical position would be to delete Section 355 and make the ceiling on managerial remuneration provided in Sections 198 and 348 applicable to managing agents of private companies also. Alternatively, it is proposed that Section 327 (C) should be deleted. After detailed consideration, the Committee came to the conclusion that as these matters were so recently, as in 1955, debated in Parliament and the decision embodied in Section 355 was arrived at, it was too soon to suggest a change in the law.

Approval of Government

A chamber of commerce pleaded for abrogation of the control of the Central Government in the matter of fixing the remuneration of managing agents within the limits prescribed by Section 198(1). The Committee took the view that there was no need for amendment of Section 326 as it was advisedly enacted so as to empower the Government to consider whether the conditions of the managing agency agreement proposed are fair and reasonable, having regard to the financial resources of the company, the nature of the business and the qualifications and fitness of the managing agent.

The Report appears to have given detailed consideration to the Section 409 which empowers the Government to prevent a change in the board of directors likely to affect the company prejudicially. In the case of public companies, with appreciable reserves and good annual profits, attempts are sometimes made by speculators to corner shares with a view to superseding the existing management or to compelling the management to purchase the shares at extortionate prices in order to retain their control. The Report states that the power given to the Government under Section 409 is primarily intended to check this evil.

Shares of public companies are a valuable form of property intended to be transferable by the holder and any restriction upon the right to hold, enjoy or dispose of shares or on the right to exercise the rights and privileges appurtenant to the holding of shares must be reasonable and in the interest of the general public under Article 19 of the Constitution. As against the argument that Section 409 violates the fundamental right to hold and enjoy property, the Report states that it might be urged that some restriction on this right is reasonable in the public interest. Section 247 provides for investigation of the ownership of a company whose shares have been cornered or acquired to a considerable extent with a view to controlling the policy of the company and the management of its affairs.

An amendment of section 250 is suggested in the Report to empower the Government to direct that for a specified period (say three years), voting rights should not be exercised by transferees of shares if, owing to such a transfer, a change in the managing agency or directorate of a company prejudicial to the public interest is likely to take place. It may be noted here that the aggrieved party has the right to move the Court for an appropriate relief against any order made by Government pursuant to Section 250. The Government also has special powers under Section 408 to prevent oppression or mismanagement by the appointment of directors of its choice. Section 346 requires the approval of the Government for changes in the constitution of a managing agency. Sections 397 and 398 give the right to members to apply to the Court for a relief in case the affairs of a company are conducted in a manner oppressive or prejudicial to their interest. Section 402 enumerates the powers of the Court to pass orders on applications under the aforesaid Sections 397 and 398. The Report observes that "the powers of the Court under Section 402 are extensive, but very often, by the time these powers are exercised, the mischief might have been done." In addition to these provisions as discussed above, Section 409 empowers the Government to prevent changes in the board of directors. The Report points out that the paramount consideration in the exercise of this power is the interest of the company.

The Report discusses the merits of the Private Member's Bill (I of 1957) recently introduced in Parliament and withdrawn in view of the reference to the Amendment Committee. The Bill proposed the addition of a sub-section in existing Section 409 in the following terms:

"Subject to Section 324 of the Act, in the case of a scheduled industry, the Central Government may, if they are of the view that a change in the ownership of the shares would involve a change in the board of directors or in the managing agents of the company or the non-renewal or termination of the agreement in this regard, pass orders suspending for a period not exceeding three years the exercise of voting rights by the owners of the shares concerned in the cornering."

According to the Report, the result of such an amendment would be the maintenance of the existing management for a period of three years, if the Government chose to take action under the proposed legislation. Apart from this, the proposal contained in the Bill would cast upon the Government a large measure of responsibility by making it a sort of surety or guarantor for the existing management for a number of years. As it is, the Government has very wide powers under the Act for regulating the management of companies.

Cornering of Shares

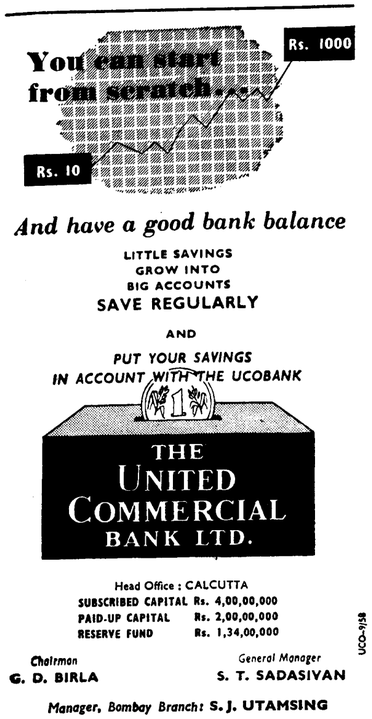
The Report discusses the possible methods of preventing cornering of shares. One such method would be to restrict the maximum number of shares that could be held by a single person, but this too might not be effective in the face of the prevalent practices of *benami* shareholdings. Another method would be to restrict the right of voting by proportionately reducing the voting rights on a sliding scale, i.e., by providing that if the holder of 10 shares has one vote, the holder of 100 shares would not have 10 votes but only, say, four votes. But the Report states that this proposal would run counter to the principle of Section 87 and is not acceptable to certain sections of the investing public or to the majority of the Committee. All cornering is not evil and the problem of cornering of shares of companies is not peculiar to this country. Viewing the problem in all its aspects, the Committee is constrained to note that no case has been made out for amendment of Section 409 as proposed by the Private Member's Bill and that, in the absence of adequate experience of the working of the Act, it would be premature to suggest any change in the existing law.

Advisory Commission

The Advisory Commission was constituted under the Act in the place of the Central Authority recommended by the Bhabha Committee. The object of constituting this Commission was to maintain flexibility in administration and effective regulation of company affairs. We find from the Report that, though the Commission was only advisory in character, its advice, except in a very few cases, was accepted by Government. The Commission has no separate staff of its own but the Department made the necessary enquiries and gathered information in respect of the applications referred to the Commission and the Commission made its recommendations on the basis of the information so obtained. It has been functioning in close contact with the Department with a common secretariat, thereby achieving a certain amount of economy and uniformity in administration.

Section 411 imposed a duty on the Commission to enquire into and advise the Government on all applications made under the enumerated sections. Section 413 confers upon the Commission certain powers of examining as witnesses officers of the company and others engaged in management of companies, for the purpose of making enquiry under Section 411. According to the Report, the Commission at present does not make the whole of the enquiry itself nor does it exercise the powers referred to in Section 413 but acts upon the information gathered by the Department.

The applications referred to the Commission, according to the Report under Section 411 do not include applications under Sections 234 and 235. The result is that if the Commission were to function as envisaged by Section 411, making its own enquiry on the applications referred to it, particularly under Sections 408 and 409, there would be a parallel enquiry or investigation by the Government on the one hand, and on the other hand, by the Commission and this would not be a satisfactory state of affairs. The Committee has, therefore, suggested that it is



desirable that the Commission should make its own enquiries and exercise the powers under Section 413 in order to be able to advise Government as required by the Act.

It was pressed upon the Committee on behalf of the Government that applications under Sections 408 and 409 should be removed from Section 411 (b) and left to be covered by Section 411(c) in appropriate cases. It was suggested that in view of Sections 235 to 240 and 248 providing for investigation of the affairs of a company under the directions of the Central Government without reference to the Commission, a parallel enquiry by the Commission into allied matters arising out of the applications under Sections 408 and 409 was not only unnecessary but also a source of embarrassment. On the other hand, it was suggested to the Committee that, in view of the wide powers vested in the Advisory Commission under Section 413 in the matter of compulsory production of evidence and the non-availability of similar powers to the agency constituted by the Central Government, it was desirable to entrust investigations under Sections 235 to 240 and 248 to the Advisory Commission in addition to the matters specified in Section 411(b).

Screening of Applications

As regards the right of the Department to screen applications made to the Central Government under Sections 408 and 409 and to refer to the Commission only such applications as it considered deserving of enquiry, the Report has observed that this practice is not in consonance with the language of Section 411 and that if any change in that direction is necessary it could be made by an amendment of Section 411. It may be noted here that the majority of the Amendment Committee were of the opinion that it was premature to suggest any amendment of existing law until sufficient experience was gained of the actual working of the aforesaid provisions of the Act.

A suggestion came up before the Committee on behalf of an Advocates' Association that when winding-up proceedings take a much longer time than originally estimated, the remuneration of the liquidator should be enhanced to an extent commensurate with the work done. As the legislature deliberately and for intelligible reasons inserted a provision to the contrary in Section 490(2), the Committee saw no reason to recommend any change on this point. Section 490(2) makes it clear that the remuneration of the liquidator fixed by the company at its general meeting should not be increased in any circumstances whatever, with or without the sanction of the Court.

Sections 591 to 602 of Part XI of the Act apply to foreign companies which "establish a place of business within India." According to the Report, the precise meaning and scope of the aforesaid phrase have been the subject of debate. Under Section 602(c), a share transfer or share registration office would be a place of business. Under Section 406 of the English Act (which corresponds to Section 591 of the Companies Act, 1956), it was held that a company incorporated outside the United Kingdom which employed agents within the United Kingdom, but had no office there, had not established a place of business within the United Kingdom within the meaning of Section 406 of the English Act. There are foreign companies which ostensibly carry on their business in India through agents, but, in fact, the office and the staff of the agency are mainly, if not solely, intended for the foreign companies. In such cases, though the agent is supposed to maintain the office and staff as his own, the foreign companies could be considered as having really established their places of business on Indian soil. A company, like an individual, could have more than one residence, and therefore a foreign company having an office and staff and carrying on business in this country would fall within the meaning of Section 591 of the Indian Act. The case, of course, would be different if the only office in India was an agent's office and not the company's office and no person in the company's service was working there. The Report ends the discussion here by observing "Border line cases are likely to arise from time to time where a conclusion has to be reached on a conspectus of all the facts and circumstances."

It was brought to the notice of the Amendment Committee that several foreign companies which have places of business in this country have failed to comply with the provisions of Part XI of the Act. The Report suggested that, in such cases, the proper course would be to take appropriate action in the Courts which would decide, on the facts of each case, whether the company had established a place of business in India.

Some chambers of commerce drew the attention of the Committee to the fact that the foreign shipping companies and other trading companies carrying on world-wide trading operations in India found it difficult to comply with the provisions of Section 594 and also with those of Section 211 and Schedule VI. It was stressed that the particulars of the accounts of subsidiaries and branches of foreign companies need not be filed when such subsidiaries or branches were carrying on business wholly outside India. As regards these and other points raised by the chambers of commerce, the Report stated that the power given to the Central Government under the proviso to Section 594(1) to grant exemption from the operation of Section 594(1) (a) and (b) to foreign companies in cases of genuine hardship or difficulty taken with the Government's general powers to relax the provisions of Section 211 in regard to the form and content of accounts of companies, would be sufficient to meet the situation.

The analysis of the Report would be incomplete if one failed to realise the following facts which seem to be established by the Committee as a result of careful consideration of all the materials placed before it:

(1) It is possible to have a different lay-out of the Act on the basis of subject-wise arrangement and regrouping and recasting of its different provisions but the balance of convenience lies in retaining the scheme and arrangement of the Act as at present.

(2) There are loopholes, omissions, ambiguities, mistakes and inconsistencies in the Act and that some of its provisions are unnecessary.

(3) The Act, to some extent, reflects the prevalent trends of public opinion and that the time is ripe for amending the Act so as to ensure efficient and honest management of companies and check unfair business methods and anti-social activities.

(4) The Act needs amendment so as to overcome practical difficulties in its working and eliminate the doubts arising out of considered legal opinions and judicial pronouncements.

(5) There is need to tighten up the penal provisions of the Act so that the offenders are made to realise that by courting punishment they are not absolved from the performance of their statutory duties.

(6) There should be a due recognition of the legitimate interests of the shareholders and creditors.

(7) Government companies should be placed, as far as possible, on the same footing as other public companies.

(8) It is desirable that the Government should formulate a definite policy regarding the managing agents so that by the 15th August, 1960, action could be taken under Section 324 and the present state of suspense removed.

(9) As the companies and the shareholders become gradually familiarised with the Act, as proposed to be amended, the practical difficulties which they are experiencing at present will gradually disappear and the object of the Act realised.

(10) The recommendations of the Committee being strictly within the terms of reference, any reassessment of considerations of general, economic or social policy underlying the Act is outside the ambit of the enquiry.

Conclusion

In conclusion, it may be observed that there may be some shortcomings in the Report. But the critics must view the shortcomings, if any, in the context of the inordinate length of the Act and the complexity of its structure. Moreover, the time allowed to the Committee was too short for a complete overhaul. Although the Committee has strictly adhered to its terms of reference in making its recommendations, it has, at the same time, attempted to furnish solutions to several problems mainly relating to the interpretation of obscure and ambiguous provisions of the Act which confronted business men, company managements, shareholders, auditors, lawyers and judges. The details of the Report should, however, be left to the interested and the inquisitive reader.

(Concluded)

Mr. Burrah Saheb
and Airconditioning ...

Mr. Burrah Saheb is really not bothered about the money he spends for his personal comfort. He is only interested in getting the very best and when it came to airconditioners he just took the ACCAIRE.

What he wanted primarily was a cool, clean room with a minimum of disturbing noises... a place where he could work with quiet efficiency. He found the ACCAIRE whisper-quiet and efficient in operation and that satisfied him.

Now his ACCAIRE gives him all that and more. It is a handsome unit, it is low in power consumption and it never lets him down.

PLASTICS INDUSTRY IN INDIA

SELF-SUFFICIENCY IN RAW MATERIALS AND MACHINERY ESSENTIAL

ALTHOUGH the plastics industry took its birth in India only after the end of the Second World War, the progress it has achieved since then is indeed remarkable. The production of compression and injection moulding, for instance, has gone up by ten times over the period 1948 to 1957. A similar rise has been recorded in the case of P.F. moulding powder. The output of P.V.C. base and nitrocellulose base has increased eightfold. In terms of value, the total production of plastics goods in 1957 amounted to Rs. 12 crores, as against Rs. 8 crores in 1956 and Rs. 75 lakhs in 1946. The industry is today claimed to be in a position not only to meet the entire domestic demand but also to export a part of its products to several countries.

The progress of the plastics industry has thus been so notable that there is surely no exaggeration in the statement made by Mr. B. D. Garware, in his welcome speech at the eleventh All-India Plastics Manufacturers' Conference held in Bombay on Friday last week, that the development of the plastics industry, which is practically an infant industry, has been quite phenomenal. According to Mr. Garware, the total investment in the industry at present is more than Rs. 10 crores and this is likely to reach about Rs. 15 crores in the next three to five years. There are about 250 compression presses in the country, with a total pressing capacity of nearly 13,000 tons. In the injection moulding line, there are 450 machines with a total capacity of approximately 1,000 ounces. The present trend, we are told, is towards installation of bigger capacity machines, with a view to manufacturing larger and larger mouldings. The industry is expected to import injection machines of about 60 ounces capacity. The number of machines in the extrusion section of the industry is 60, with capacity ranging from 1" to 4½".

Growth of the Industry

An interesting account of the growth of the plastics industry since its inception to the present day was given by Mr. Manubhai Shah, Union Minister for Industry, while inaugurating the Conference. The review is divided into three periods, namely, 1946 to 1951, the first Plan period 1951-56 and the second Plan period 1956-61. The first period 1946-51 witnessed a remarkable development of plastics processing industries, a prerequisite for the setting up of economical units for the manufacture of chemical raw materials. Rapid expansion took place in the moulding branch of the plastics industry, including extrusion, lamination, calendering and coating, as well as in the manufacture of synthetic resins and moulding powders from imported basic chemicals. Further, the use of P.V.C. in the manufacture of leather cloth and for the production of insulated cables, wires and flexibles made a welcome start. The value of plastics goods produced rose from Rs. 75 lakhs in 1946 to Rs. 2 crores in 1951. Such rapid strides in the plastics industry must be attributed to three factors: (1) activities of the Development Committee for the Plastics Industry (appointed in 1948) to implement the recommendation of the Plastics and Celluloid Industries Panel; (2) rich experience gained by the delegation of plastics manufacturers which visited the U.K. and the U.S.; and (3) protection for phenol formaldehyde moulding powder and bakelite electrical accessories.

During the second stage which coincided with the first Five-year Plan, the plastics industry concentrated its attention on the production of industrial goods—radio cabinets, telephone receiver sets, gramophone records, of polystyrene, injection and blow mouldings of polythene, spectacle frames, fountain pens, injection and blow mouldings of polythene and tooth brushes. Remarkable progress was also achieved in the production of paper and textile base phenolic resin boards by lamination for general industrial applications and for the electrical industries; polythene film and layflat tubing for packaging and manufacture of P.V.C. unsupported sheets by extrusion process. The production of the only raw material in the country, namely, formaldehyde moulding powder, was stabilised. The production of plastics goods and raw materials amounted to Rs. 8 crores in 1956. Export of plastics goods rose from Rs. 6.44 lakhs in 1951-52 to Rs. 14.07 lakhs in 1954-55. It is gratifying to note that import of moulds fell from 261 in 1953 to 87 in 1955.

The third stage is the present stage and coincides with the second Plan. A landmark in the development of the industry was the establishment of production of polystyrene (the large tonnage thermoplastic raw material used by the processing industry) in 1957. A beginning has also been made in the production of urea formaldehyde moulding powder suitable for moulding buttons and electric lighting accessories. Two calendering plants commenced operations for making P.V.C. unsupported film. The use of polythene for injection and blow moulding became popular and extrusion of polythene piping commenced. Large-size articles of polythene such a carboys, buckets, baskets and basins began to be moulded. Industrial items such as steering wheels, grills for air conditioners, refrigerator parts have claimed the attention of moulders. During this period, a beginning has been made in formulation of standards for the industry as well.

Latest Position

The following table shows the latest position of the plastics industry:

Description	Unit	Production			Installed capacity 1958
		1955	1956	1957	
P.F. moulding powder	000 lbs.	1,600.8	2,205.6	2,631.6	2,350
Plastics moulding	000 lbs.	2,478.8	3,603.6	3,800.0	51,608
Plastics laminated sheets	Tons	140.3	232.4	334.5	446
Tooth brushes	Mill. pcs.	4.6	9.6	13.5	N.A.
Fountain pens	Mill. pcs.	6.0	9.2	7.3	N.A.
Spectacle frames	Mill. pcs.	0.7	1.3	1.6	N.A.
Buttons	Mill. pcs.	1.3	3.0	2.9	N.A.
P.V.C. cables and wires	Mill. yds.	10.9	28.0	10.3	N.A.
Leather cloth	Mill. yds.	2.6	2.6	3.7	8.7
P.V.C. sheets	Sq. yds.	6,14,045	2,63,371	331.7*	3,700*
Plastics radio cabinets	Nos.	N.A.	98,557	59,000	N.A.
Polythene films and layflat tubings	Mill. lbs.	0.9	1.2	1.8	1.9

* Thousand lbs. N.A.—Not available.

The development programme drawn up for the plastics industry under the second Plan is on the basis of an estimated demand of 11,600 tons of different varieties of moulding powders. The targets of capacity fixed for moulding powders is 12,810 tons, including phenol formaldehyde (1,310 tons), urea formaldehyde (500 tons), cellulose acetate (900 tons), polystyrene (3,500 tons), polyvinyl chloride (1,500 tons) and polyethelene (5,100 tons).

Notwithstanding the phenomenal progress in the past few years, the plastics industry is now entering, as Mr. Manubhai Shah pointed out, a critical stage of development, thanks to the austere import policy. The Minister rightly emphasised, that the key to prosperity lay in building up self-sufficiency in raw materials, equipment and tools. He revealed in this connection that the Government had already licensed two schemes with a total capacity of about 14 million lbs. for the manufacture of polythene. According to him, one of the plants will be located in Calcutta and the other in Bombay. Besides, the scheme for P.V.C. from calcium carbide has been finalised. By 1961, the production of three raw materials, namely, polystyrene, polythene and P.V.C., is expected to go up to at least 16 million lbs. As against this quantity, the actual consumption in 1957 was only 7 million lbs. Mr. Shah did well, therefore, to stress the need for building up large volume of uses for these raw materials. In order to increase the demand for plastics goods, the industry must, as Mr. Shah pertinently remarked, have a collective programme for educating the consumers in plastics and improving the methods of marketing of plastics goods. The industry must keep abreast of the technical progress in other countries. Attention should also be devoted to the use of right plastics for the job, thoughtful design and maintenance of quality standards, which will ultimately enable the processing industry to consume more and more of raw materials.

Mould Manufacturing Capacity

While rapid development is taking place in the fields of raw material manufacture as well as in moulding and fabricating industry, it is essential that due attention be paid to the expansion of machine capacity for moulding, extrusion and fabrication, which, according to Mr. Ambalal Kilachand who presided over the Conference, is not keeping pace with the other sectors. Mr. Kilachand said that it was a matter of serious concern that licences were not obtainable for better and large-sized machines for even replacement purposes, let alone for expansion of the much needed additional capacity which alone would make for the fuller utilisation of raw materials production now being developed. He called upon the All-India Plastics Manufacturing Association to collect data regarding the present status of machines, needs for replacement and additional machinery required. Stressing the importance of building up mould manufacturing capacity, Mr. Kilachand suggested that possibilities must be explored to utilise the surplus engineering workshop capacity in the defence installations for manufacturing moulds for the plastics industry. He urged the Government to reduce the existing customs duty on moulds from 37½ per cent. to 5½ per cent., thus bringing it on a par with the capital equipment rate.

As regards mould manufacturing capacity, Mr. Manubhai Shah estimated the value of equipment and moulds required for the expansion of the processing industries in the next three years at Rs. 2 crores. He urged the industry to manufacture these items in the country itself. He disclosed, in this connection, that the services of a second expert on mould making would soon be available for the industry and that the Government had already placed at the disposal of the industry a blue-print with complete details for the establishment of a central tool making unit for the design and manufacture of moulds for those moulders who could not afford to have the equipment necessary for the making of moulds.

Plastics Technology

Another problem to which Mr. Kilachand referred related to the woefully inadequate facilities for education in plastics technology. He stressed that it was essential to provide more elaborate facilities for applied research and development in the higher technological institutes. He also stressed the necessity of statistical quality control and put forward the following suggestions:

Appointing more technical men wherever possible to run the operations in the interest of quality and right use of raw materials;

augmenting the technical service facilities to assist moulders;

concentration of the organised industry on the manufacture of industrial products in preference to others which could be made on smaller machines;

organised drive for the education of the general public about plastics materials and their usage through exhibitions, slides, lucid pamphlets and publicity; and

intensive study of many industries and machines in the hope of substituting the conventional components with more attractive and desirable plastics components.

These measures are indeed valuable and will, there is no doubt, go a long way towards improving the quality of plastics goods and reducing the prices. This is especially important considering the vast scope that exists for exports. Exports of plastics goods are important not only because they earn foreign exchange but also because an expanding export market is a pre-condition for the stability of the industry. It is gratifying to note that the plastics industry has endeavoured to export a part of its products to the industrially less advanced countries such as Ceylon, Burma, Thailand, East Africa, and Middle East countries. The total value of plastics goods exported has improved from about Rs. 6.40 lakhs in 1951 to Rs. 12.47 lakhs in 1957. The Exports Promotion Council started functioning in the beginning of the second Plan. It sent two delegations to study the prospects of exports—one to East Africa and Middle East countries and the other to South-East Asian countries. Meanwhile, the Government of India has granted refund of duty paid on imported raw materials and issued import licences to replace the raw materials content of exported goods. It is learned that a special licensing scheme has also been evolved and operated by the Plastics Export Promotion Council for grant of licences for raw materials against anticipated exports. It is to be hoped that all these measures will result in a steady improvement of the export trade in plastics goods.

SHARP RISE IN BENGAL COAL'S GROSS PROFIT

PRODUCTION AT A RECORD LEVEL

HIGHLY encouraging results are disclosed by the audited accounts of the Bengal Coal Company Ltd. (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) for the year ended 31st October 1957. Raisings of coal during the year at 2,801,164 tons were a record in the Company's history. Simultaneously with this, despatches as well as sale proceeds also made a substantial improvement, resulting in a sharp rise in the Company's gross profit over the preceding year. This is particularly significant in the context of a decline suffered in the previous year when a sharp recession was noted in all the above factors. Thus, the gross profit for the year under review at Rs. 109.19 lakhs has jumped up by as much as Rs. 24.91 lakhs or 29.5 per cent. from Rs. 84.28 lakhs for the previous year, to which level it had receded from Rs. 95.33 lakhs for 1954-55 after having shot up from Rs. 67.80 lakhs for 1953-54.

Although the gross profit has made a strident advance, this has been more than neutralised by the substantial addition to the provision for taxation and cesses. Thus, almost about 50 per cent. of the gross profit or Rs. 52.10 lakhs has been taken up by the provision for taxation and cesses alone, as against Rs. 21.37 lakhs in the previous year. Of this, the provision for taxation shows a rise from Rs. 18 lakhs to Rs. 42.65 lakhs and that for cesses from Rs. 3.37 lakhs to Rs. 6.20 lakhs. The above provision is also inclusive of a sum of Rs. 3.25 lakhs made as provision for wealth tax which, again, includes Rs. 1.56 lakhs for 1955-56. The provision for the latter, namely, wealth tax, has been made by transfers from capital reserve, investment realisation surplus and taxation reserve. The net profit, after making the above provisions, at Rs. 26.67 lakhs, stands appreciably lower, as compared with Rs. 33.99 lakhs a year ago.

The lower net profit has meant smaller allocations to the reserves. Thus, a sum of only Rs. 9.79 lakhs has been conserved, as against Rs. 13.69 lakhs in the previous year. A breakdown of this total shows that general reserve gets Rs. 7 lakhs, as against Rs. 2 lakhs in the previous year and provision for royalties Rs. 2.79 lakhs, as against Rs. 3.69 lakhs. The reserve against reduction in valuation of stores and coal stocks which had been allocated Rs. 8 lakhs in the previous year has not been provided with anything. The distribution to shareholders, however, is proposed to be maintained at 17½ per cent. paid for the previous year. This is the third year in succession for which this distribution has been maintained, having been stepped up from 15 per cent. for 1953-54 by raising the bonus part from 5 per cent. to 7½ per cent. The distribution for the year under review, as in the case of the previous year, is all in the form of dividend, the bonus part having been merged with the dividend.

The following comparative table indicates the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 31st October			
	1957	1956	1955	1954
Sale proceeds	7,60.46	5,83.33	6,61.77	6,04.15
Other income	25.20	44.45	13.69	9.27
Stocks	17.79	13.92	8.63	9.02
Coal purchases	61.66	39.88	46.17	44.20
Freight, shipping charges, etc.	1,55.42	1,52.39	2,24.26	1,83.53
Mining, establishment and other expenses	4,63.26	3,49.15	3,09.30	3,07.68
Gross profit	1,09.19	84.28	95.33	67.80
Managing Agents' remuneration	6.42	3.92	4.79	3.04
Provision for—				
Depreciation	24.00	25.90	26.27	24.21
Taxation and cesses	52.10	21.37	31.45	17.19
Net profit	26.67	33.99	32.82	23.36
Transfer from reserves	3.27			
To reserves	9.79	13.69	13.23	7.76
Dividends—				
4½% preference	0.62	0.66	0.66	0.66
Ordinary	17.50 (D. 17½%)	17.50 (D. 17½%)	17.50 (D. 10% + B. 7½%)	15.00 (D. 10% + B. 5%)
Director's commission			0.18	0.18
Carry forward	11.48	9.45	7.32	6.07
	Tons	Tons	Tons	Ton
Raisings	2,801,164	2,320,350	2,509,787	2,341,930
Despatches (including purchased coal)	3,101,282	2,559,083	2,809,167	2,672,529

It will be seen from the above table that raisings of coal during the year improved by 480,814 tons from that for the previous year; so also, the despatches by no less than 542,199 tons. As stated earlier, the raisings for the year under review are a new record for the Company and the Directors observe that these were the result of the planned expansion to meet the requirements of the second Five-year Plan. As regards despatches, however, they state that although they have shown a satisfactory increase over the previous year, the position has since deteriorated and that there is continued reason to doubt whether the railways will be able to maintain movement of the ever-expanding output. The rise in despatches of coal has lifted up the sale proceeds from Rs. 5.83 crores to as high as Rs. 7.60 crores. Mining, establishment and other expenses have increased from Rs. 3.49 crores to Rs. 4.63 crores and this is partly accounted for by the rise in salaries and wages of colliery workers from Rs. 198.82 lakhs to Rs. 278 lakhs.

A strong financial position is disclosed by the Company's balance-sheet as at 31st October 1957. Its reserves and surplus aggregate Rs. 173.61 lakhs, as against a paid-up capital of Rs. 120 lakhs, made up of Rs. 20 lakhs in 4½ per cent. (taxable) cumulative preference shares of Rs. 100 each and Rs. 100 lakhs in ordinary shares of Rs. 100 each. The provision for taxation stands at Rs. 51.65 lakhs and that for cesses at Rs. 9.79 lakhs. The current liabilities amount to Rs. 184.31 lakhs. There has been an addition of Rs. 31.82 lakhs to the gross block during the year, bringing its total value to Rs. 638.13 lakhs. This has been written down to Rs. 196.52 lakhs. The current assets aggregate Rs. 342.84 lakhs and include stores and spare parts Rs. 115.56 lakhs, stocks of coal Rs. 17.79 lakhs, sundry debtors Rs. 142.93 lakhs, loans and advances Rs. 18.84 lakhs and cash balances Rs. 34.63 lakhs. The excess of current assets over current liabilities and provision for taxation and cesses is as much as Rs. 97.09 lakhs.

The Rs. 100 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 245 *ex-div.* at which rate and on the basis of the latest dividend, the shares provide a yield of 7.14 per cent. per annum, free of income-tax.

NATIONAL RUBBER MANUFACTURERS LTD.

The National Rubber Manufacturers Ltd. (Managing Director: Mr. K. N. Mookerjee, Calcutta) was converted into a public limited company during the year 1957 and in order to implement successfully the expansion schemes on which it had actively embarked, the Company offered for public subscription 420,000 ordinary shares of Rs. 10 each and 10,000 six per cent. tax-free cumulative preference shares of Rs. 100 each in November 1957. These were fully subscribed. But the Company has called up only Rs. 5 per share on the ordinary shares and Rs. 50 per share on the preference shares. The fresh issue of capital was primarily intended to finance its expansion schemes.

The excellent response from the public to the Company's issue of shares and its encouraging performance during the year ended 31st December 1957 are an indication of the bright prospects fot the Company in the context of the country's continuing industrial progress. Its sale proceeds during the year under review show a sharp rise from Rs. 109.93 lakhs in 1956 to Rs. 132.17 lakhs. Indeed, sales would have reached even higher levels had it not been for the fact that the Company had at times to curtail its production due to shortage of some essential raw materials like raw rubber, reclaimed rubber, bead wire, imported chemicals, etc. In this connection, it must be remembered that the effect of the fresh issue of capital has not been reflected in the Company's working during 1957 as the funds from this source were received only towards the end of the year. In addition, the extra production capacity from the new plant and machinery was also not available during the year under review. Despite these shortcomings, the gross profit at Rs. 7.19 lakhs compares well with Rs. 6.80 lakhs for the previous year. After raising the provision for depreciation from Rs. 1.81 lakh to Rs. 2.20 lakhs and that for taxation from Rs. 1.50 lakh to Rs. 1.53 lakh (including Rs. 22,000 as provision for wealth tax for 1957), the net profit at Rs. 3.46 lakhs stands a shade lower, as compared with Rs. 3.49 lakhs a year ago. No amount has been transferred to the dividend equalisation fund which received Rs. 2 lakhs in the previous year. The Directors have proposed a dividend of 10 per cent. for the year under review, as against 20 per cent. in the previous year. It must, however, be noted that the dividend for 1957 is on a higher capital of Rs. 29 lakhs raised by the issue of shares as aforesaid. Although additional capital was raised only at the end of the year, dividend has been recommended on all ordinary shares including the new issue at the full rate for the whole year. The dividend absorbs Rs. 2.90 lakhs (Rs. 1.60 lakh in the previous year), leaving a sum of Rs. 1.80 lakh to be carried forward, as against Rs. 1.27 lakh brought in.

Commenting on the Company's progress in expansion and its outlook for the current year, the Directors in their latest report observe:

"Progress with regard to construction of additional structures and provision for additional power and other services in connection with the Company's expansion of production, particularly of cycle tyres, industrial V-belts and fan belts, and belting was satisfactory during 1957. Many of the plant and machinery required for the expansion programme already arrived and were under installation, while others were being shipped. Towards the end of 1957 production of all items started increasing. It is expected that during 1958 there will be substantial increase in both production and sales as some of the new plant and machinery have already gone into production. While there may be some increase in the profits of the Company in 1958, provided there is no shortage of raw materials or of foreign exchange, the full benefit of additional profit arising out of the expansion programme is expected to be derived from 1959 onwards."

The balance-sheet as at 31st December 1957 shows the Company's paid-up capital at Rs. 34 lakhs, made up of 10,000 six per cent. tax-free cumulative preference shares of Rs. 100 each, of which Rs. 50 per share has been called up, 80,000 ordinary shares of Rs. 10 each fully called up and 420,000 ordinary shares of Rs. 10 each on which Rs. 5 per share has been called up. This is supplemented by reserves and surplus aggregating Rs. 7.80 lakhs. The gross block of Rs. 50.22 lakhs, including additions during the year of Rs. 8.98 lakhs, stands written down at Rs. 21.61 lakhs. The current liabilities aggregate Rs. 73.27 lakhs, against which there are current assets amounting to Rs. 92.59 lakhs. Miscellaneous expenditure accounts for Rs. 87,762.

The Rs. 10 fully paid-up shares are being currently quoted at Rs. 12.37 *ex-div.*, at which rate and on the basis of the latest dividend, the yield works out to 8.08 per cent. per annum.

SAVAMALAI ESTATE REPEATS DIVIDEND

Slightly better results are disclosed by the audited accounts of the Savamalai Estates, Ltd. (Secretaries and Treasurers: Messrs. Peirce Leslie & Co., Ltd., Calicut), for the year ended 30th November, 1957. The gross profit at Rs. 1.47 lakh shows a slight increase from Rs. 1.43 lakh for the previous year. This small rise is in refreshing contrast to the setback noted in 1954-55 when the gross profit declined from Rs. 1.43 lakh for 1953-54 to Rs. 1.26 lakh. The Directors have raised the provision for taxation in order to meet the increase in agricultural income-tax rates imposed by the Madras Government in 1957-58 and also to cover the deficiency in the amount provided in the previous year. The net profit, after making the above provision, at Rs. 58,997, stands lower than Rs. 80,493 provided for the previous year. The Directors have transferred a sum of Rs. 50,000 to the general reserve, same as in the previous year. There is also no change in the rate of dividend which is proposed to be maintained at 15 per cent. paid for the previous year, to which level it had been stepped up from 10 per cent. for 1954-55. It may be stated in this connection that the dividend had been progressively reduced to the 10 per cent. level from 30 per cent. for 1952-53 and 25 per cent. for 1953-54.

The following comparative table will give some idea of the Company's progress during the past four years:

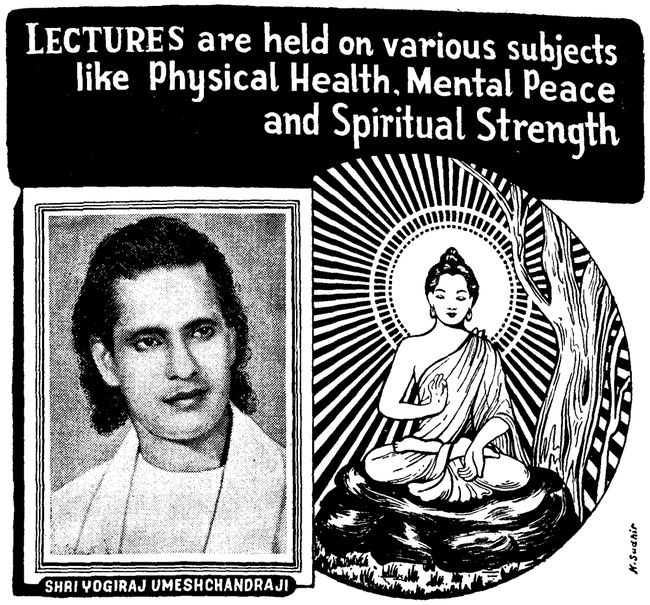
	For the year ended 30th November			
	1957	1956	1955	1954
Proceeds of coffee	6,27,032	7,25,590	6,45,372	..
Other income	1,237	6,065	3,890	8,546
Closing stocks	2,08,975	56,345	90,490	65,735
Expenses	3,14,821	2,82,604	2,60,015	2,29,536
Gross profit	1,46,838	1,43,340	1,26,412	1,43,498
Secretaries' and treasurers' remuneration	9,889	5,853	6,938	7,986
Depreciation	14,984	17,817	16,108	13,625
Taxation	62,968	30,177	25,250	41,909
Net profit	58,997	80,493	68,116	79,979
Transfer to reserves	50,000	50,000	50,000	..
Dividend—				
Ordinary	55,017 (15%)	55,017 (15%)	36,678 (10%)	91,695 (25%)
Carry forward	798	46,818	71,342	59,004
Coffee crop (in cwts.)	3,111	2,396	2,860	2,203

The Company's harvest of coffee during the 1956-57 season at 3,111 cwts. is a record and shows a sizable improvement over 2,396 cwts. in the previous season. Coffee has been valued at Rs. 2.50 per point which was the same in the previous season. Payments received up to the end of May amounted to Rs. 2.65 per point. This works out at approximately Rs. 132.50 per cwt. for robusta and Rs. 195 per cwt. for arabica, as against Rs. 132.50 and Rs. 192.50, respectively, for the previous season. The crop for 1957-58 is estimated at 3,300 cwts. and the present indications are that this will be harvested.

The Company's total area of 671.74 acres is made up of 357.03 acres under mature coffee (robusta 228.90 acres and arabica 128.13 acres) and 134.40 acres under immature coffee (robusta 49.82 acres and arabica 84.58 acres).

The Company's paid-up capital as on 30th November 1957 remains unchanged at Rs. 3.67 lakhs, all in ordinary shares of Rs. 10 each. Since the close of the year, the Company has sub-divided the Rs. 10 paid-up shares into shares of Rs. 2 each. Half of the above capital was raised by capitalisation of reserves in 1952-53. The reserves and surplus aggregate Rs. 4.01 lakhs. The provision for taxation less advance payments stands at Rs. 49,244 and current liabilities amount to Rs. 1.89 lakhs. The gross block of Rs. 8.17 lakhs has been written down to a book value of Rs. 7.24 lakhs. A sum of Rs. 38,081 was spent during the year on upkeep of immature areas. No new area was opened during the year for want of funds. The current assets amount to Rs. 2.81 lakhs and are enough to cover the current liabilities and provision for taxation.

The Rs. 2 fully paid-up shares of the Company are being currently quoted at Rs. 4.63 *cum-div.* On an *ex-div.* basis, the yield is 6.93 per cent. per annum.



RAMTIRTH BRAHMI OIL (Special No. 1)

Hair and Brain Tonic, and useful for Eyes, Memory, Sound Sleep and Body Massage is being prepared scientifically with precious ingredients at SHRI RAMTIRTH YOGASHRAM. It is useful to every one in all seasons. Available everywhere. *Price: Big bottle Rs. 4/-, Small bottle Rs. 2/-, postage extra.*

YOGASANA MAP (Chart)

To be healthy and to keep fit ask for our attractive Yogasana Chart showing Yogic Asanas, which will be sent on receipt of an M. O. for Rs. 2/50 nP including postage. These Asanas can be easily performed at home.

SHRI RAMTIRTH YOGASHRAM, DADAR, BOMBAY 14.

Points From The Chair

Development Rebate

"IT is a happy augury that the provisions with regard to the current profits deposits, introduced in November 1956, have been kept in abeyance this year. We hope, in due course, these provisions will be entirely removed from the Statute Book. The incidence of tax on corporations, however, still continues to be very heavy and is working as a drag on capital formation required for starting any new industry or expanding the existing ones. If the targets fixed by the second Five-year Plan for the private sector have to be achieved, it is essential that quite a few irksome provisions contained in the Tax Statute are removed as early as possible. I may particularly mention here the recent provisions regarding the development rebate. Though the rigours of the original provisions have been watered down to a certain extent, still the provisions continue to act as a disincentive and require some further consideration. Any new industry would find it extremely difficult to make any profits as such during the first year of its operation, much less a profit upto 75 per cent. of the development rebate. If, therefore, the development rebate is to act as an encouragement to the establishment of new industries as originally conceived, it is high time that the recent provisions made with regard thereto are amended as early as posssible and the *status quo* restored."

KASTURBHAI LALBHAI,
National Rayon Corporation Ltd.

Local Manufacture

"With so many countries restricting imports because of shortage of ready cash and/or development of local manufacture, we are continuing our efforts to open all possible new markets. The development of local manufacture is of course not a new problem and where it seems inevitable or justified our policy for many years has been to enter into partnership with the nationals concerned. It invariably means a loss of the export of some products from this country, but this is gradually compensated by the export of more technical goods as the country develops and by the fees received for technique and technical services in addition to the expected return on shareholding."

W. H. MCFADZEAN,
British Insulated Callender's Cables Ltd.

Aircraft

"We have been fortunate in having had a good share of the aircraft manufacturing business of this country. It is particularly satisfactory that with the successful Viscount and the new Vanguard and V.C.10 our aircraft interests are so largely in the civil field at a time when military orders have almost disappeared—though perhaps not for all time. But I feel that it is equally important to ensure that in a group such as ours the stake in various fields of engineering should be as well balanced as possible. Therein, in my opinion, lies the strength of the Vickers Group. We can, with well spread investments, afford to accept the fluctuating results which are inherent in the aircraft industry as it is today and also to develop new businesses either at home or abroad which may not give an immediate return, because we know that we have a steady foundation in generally stable interests such as general engineering, the steel products of English Steel Corporation, transportation products of Metropolitan-Cammell and, for most of the time, shipbuilding and ship repairing. That is why I believe that the rather lower proportion which our aircraft interests now bear to our total turnover is not a bad thing."

VISCOUNT KNOLLYS,
Vickers Ltd.

Cable Industry in England

"There is no doubt that the cable industry of this country is passing through a period of difficulty. The large-scale expansion of the industry which has taken place since the last war has resulted in excess capacity which in the present state of world demand cannot be fully employed. The curtailment in profit margins has occurred at a time when as never before industry has had to build up reserve in order to be self-financing and meet demands for expenditure to keep pace with technical developments, many of which are necessary due to the introduction of entirely new materials. Thus there is a tendency to stimulate a degree of rationalisation in the industry, with the object of securing maximum economies in production, administration and selling. Much ingenuity and enterprise will be required to solve our problems, but the history of the industry is such that I am confident that it will be successful in adapting its structure and organisation to meet its difficulties."

SIR JOHN DALTON,
W. T. Henley's Telegraph Works Co., Ltd., London

COMPANY MEETINGS AND DIVIDENDS

WEST COAST ELECTRIC SUPPLY CORPORATION LTD. Annual General Meeting, Madras, 23rd June 1958. Dividend: Re. 1.00 per share (made up of two interim dividends). Transfer books remain closed from 20th to 23rd June 1958, both days inclusive.

MUTTRA ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 23rd June 1958. Transfer books remain closed from 17th to 23rd June 1958, both days inclusive.

JAGATJIT COTTON TEXTILE MILLS LTD. Annual General Meeting, Calcutta, 24th June 1958. Transfer books will remain closed from 14th to 24th June 1958, both days inclusive.

INDIAN WOOD PRODUCTS CO., LTD. Annual General Meeting, Calcutta, 24th June 1958. Dividend: Rs. 2.75 per share. Transfer books remain closed from 12th to 24th June 1958, both days inclusive.

STAR TEXTILES LTD. Annual General Meeting, Calcutta, 26th June 1958. Dividend: *Nil.* Transfer books remain closed from 16th to 26th June 1958, both days inclusive.

TUNGABHADRA INDUSTRIES LTD. Annual General Meeting, Calcutta, 27th June 1958. Dividend: *Nil.*

KAMANI ENGINEERING CORPORATION LTD. Annual General Meeting, Bombay, 30th June 1958. Dividend: *Nil.* Transfer books remain closed from 10th to 30th June 1958, both days inclusive.

TIDE WATER OIL CO. (INDIA) LTD. Annual General Meeting, Calcutta, 1st July 1958. Dividend: Re. 1.25 per share (includes interim dividend of Re. 0.50 per share). Transfer books remain closed from 18th June to 1st July 1958, both days inclusive.

EQUITABLE COAL CO., LTD. Annual General Meeting, Calcutta, 3rd July 1958. Dividend: Re. 1.50 per share or 15 per cent. Transfer books remain closed from 20th June to 3rd July 1958, both days inclusive.

DHEMO MAIN COLLIERIES LTD. Annual General Meeting, Calcutta, 3rd July 1958.

HURRILADIH COAL CO., LTD. Annual General Meeting, Calcutta, 3rd July 1958.

WEST JAMURIA COAL CO., LTD. Annual General Meeting, Calcutta, 3rd July 1958.

AJIT MILLS LTD. Annual General Meeting, Ahmedabad, 7th July 1958. Dividend: Rs. 28.00 per share, payable from 24th to 26th July 1958. Transfer books remain closed from 17th June to 7th July 1958, both days inclusive.

BHARTIA ELECTRIC STEEL CO., LTD. Annual General Meeting, Calcutta, 8th July 1958. Transfer books will remain closed from 25th June to 8th July 1958, both days inclusive.

HOYLE'S PAINTS LTD. Annual General Meeting, Calcutta, 8th July 1958. Dividend: *Nil.* Transfer books will remain closed from 1st to 8th July 1958, both days inclusive.

PURTABPORE CO., LTD. Annual General Meeting, Kanpur, U.P., 8th July 1958. Dividend: *Nil.*

SHAW WALLACE AND CO., LTD. Annual General Meeting, Calcutta, 10th July 1958. Transfer books will remain closed from 1st to 10th July 1958, both days inclusive.

BRUSHWARE LTD. Annual General Meeting, Kanpur, U.P., 16th July 1958. Dividend: Re. 0.75 per share, free of income-tax.

BISRA STONE LIME CO., LTD. Interim dividend of Re. 0.87 per ordinary share, for the year ended 31st March 1958, payable on or after 14th July 1958. Transfer books will remain closed from 24th June to 8th July 1958, both days inclusive.

NEW INDIA ASSURANCE CO., LTD. Dividend of Rs. 3.00 per share, for the year ended 31st December 1957. Transfer books will remain closed from 30th June to 29th July 1958, both days inclusive.

ONDAL COAL CO., LTD. Dividend of 5 per cent. or Re. 0.50 per ordinary share, for the year ended 31st December 1957.

SENDRA COAL CO., LTD. Dividend of 2½ per cent. or Re. 0.25 per share, for the year ended 31st December 1957.

BENGAL PAPER MILLS CO., LTD. Dividend of 6½ per cent. on ordinary shares, for the year ended 31st December 1957.

RAJALAKSHMI MILLS LTD. Dividend of Rs. 4.50 per share or 9 per cent. for the year ended 31st December 1957. Transfer books will remain closed from 7th to 14th July 1958, both days inclusive.

COMPANY REGISTRATIONS

THE BARODA RAYON CORPORATION LTD. (First subscriber: Mr. Babubhai M. Chinai.) Business: Manufacturers, importers, exporters and dealers in rayon yarn, staple fibre and allied products. Authorised capital: Rs. 10,00,00,000. Public company. Address: Lalji Naranji Memorial Building, 76, Veer Nariman Road, Bombay.

VIJAY VILAS AGRONOMICS LTD. (First Director: Mr. K. S. Fatehsinghji.) Business: To carry on agricultural operations. Authorised capital: Rs. 5,00,000. Public company. Address: Khandelwal Bhavan, 2nd Floor, 166, Dr. Dadabhai Naoroji Road, Bombay 1.

RESULTS OF KAMANI ENGINEERING CORPORATION BETTER

GWALIOR SUGAR RAISES DIVIDEND

Kamani Engineering Corporation Ltd.

THE directors of the above Company (Managing Agents: Messrs. Kamani Brothers Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th September 1957.

The profits for the year come to Rs. 6,23,599 (Rs. 4,45,119). After deducting therefrom provisions for depreciation amounting to Rs. 3,49,037 (Rs. 2,89,962), for taxation Rs. 25,000 (*nil*), for gratuity Rs. 40,000 (Rs. 40,000) and for doubtful debts Rs. 25,000 (Rs. 10,000) the amount available together with the amount of Rs. 36,664 (Rs. 16,007) brought forward from last year comes to Rs. 2,21,226 (Rs. 1,19,164). The directors recommend that this amount be disposed of as under:—

To payment of dividend on 5½ per cent. (less income-tax) cumulative preference shares of Rs. 100 each for the years ended 30th September 1956 and 1957 (for 1955) at Rs. 5.50 per share absorbing Rs. 1,65,000 (Rs. 82,500) leaving a balance to be carried forward of Rs. 56,226 (Rs. 36,664).

Manufacture and Galvanization of Steel Transmission Line Towers. For the first half-year of the period under report, the Factory was unable to achieve the planned production due to non-availability of the required sections of steel regularly. However, the production was improved in latter part of the year. During the current year, it has been planned to increase its production and it has achieved record figure of about 800 tons per month since January 1958. During the period under review it was possible to supply transmission line towers to projects like Utran-Baroda, Calcutta Electrification, Rampur-Moradabad, Delhi Electricity Board, Korba-Bhilai, etc., successfully, totalling 4,456 tons, as compared to 3,357 tons in the previous year. Further orders were secured which total to 9,200 tons. The erection work of transmission line towers is being carried on at various projects and during the year under review it has completed 49 miles route.

Wagon Assembly Plant at Okha: The Company assembled and supplied 5,940 wagons to the Railway during the period under review. As indicated last year, the Company had to close the plant on account of stoppage of import of wagon parts in the country.

Manufacture of Road-rollers:—Due to appreciable demand for heavy type of road-rollers, the production thereof had to be switched on from light type of road-rollers. The production during the year was slowed down as a result of changes required to be made in designs of manufacture etc. The total production during the year under review was 52 numbers.

The working of the agency business showed good progress in spite of difficulties of obtaining plant and machinery on deferred payments. The extent of orders secured during the year under review is quite satisfactory as compared to previous year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	59,98,125	Block ...	38,88,330

		Lahore assets	8,32,742
Rs.	1,74,87,604	Rs.	1,74,87,604

Gwalior Sugar Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. J. P. Srivastava & Sons (Madhya Bharat) Private Ltd., Dabra, Madhya Pradesh] submit the audited accounts of the Company for the year ended the 30th June, 1957.

The results, after providing Rs. 2,43,603 (Rs. 2,27,011) for depreciation and Rs. 9,10,000 (Rs. 3,68,000) for taxation show a profit of Rs. 2,33,532 (Rs. 2,76,529) to which has to be added a sum of Rs. 14,799 (debit of Rs. 1,596) brought forward from the previous year, leaving at the credit of the profit and loss account a sum of Rs. 2,48,331 (Rs. 2,74,933) which the directors recommend to be disposed of as under:—

To dividend at 7 per cent. on 6,750 redeemable cumulative preference shares of Rs. 100 each for the year ended 30th June, 1957 Rs. 47,250 (Rs. 94,500 for the years 1955 and 1956, to dividend at 7 per cent. on 5,000 cumulative preference shares of Rs. 100 each for the year ended 30th June, 1957 Rs. 35,000 (Rs. 70,000 for the years 1955 and 1956), to dividend at 10 (6) per cent. on 15,939 equity shares of Rs. 100 each for the year ended 30th June, 1957 (free of Indian income-tax) Rs. 1,59,390 (Rs. 95,634) and to carry over to next year Rs. 6,691 (Rs. 14,799).

Full provision for cane cess has been made in the accounts for the year under review as the cross appeals filed by the Government of Madhya Pradesh and the Company remain pending with the Supreme Court of India.

The directors report that the Company's factory had a record season both in respect of duration and quantity of cane crushed during the year under review. The factory attained the highest ever crush of 39,61,651 maunds of cane as against 26,91,209 maunds of the previous year, necessitating the prolongation of the season to 197 days and resulting in a small drop in the recovery of sugar from 10.06 per cent. to 10.02 per cent.

The directors are fully alive to the importance of increasing the present capacity of the factory plant so as to cope with the increased supply of sugarcane and to crush it economically during a season of normal duration. They regret to report that apart from being able to carry out a partial extension and improvements in the present plant, they have not so far been successful in obtaining the requisite import licences for certain essential machinery that has to be imported for carrying out any substantial extension, due to the Government's restrictive import policy. The management is actively pursuing this matter with the Government authorities and it is hoped that some progress will be made in this regard in the near future.

The directors report that the supplementary irrigation schemes envisaged by the former Government of Madhya Bharat in the Harsi and other cane growing areas of the factory, have not received the attention that they merit by the successor Government of Madhya Pradesh. The Company is making further representations at various levels for the implementation of these irrigation projects during the second Five-year Plan. In the meanwhile the directors have given serious consideration to the fullest exploitation of the existing resources of land and water so as to maximise the cultivation and yield of sugarcane on the fulfilment of which the future prosperity of the Company will greatly depend. In conformity with this objective of more intensive and extensive cultivation of sugarcane, the directors have recommended the acquisition and control of the Gwalior Agriculture Co. Ltd., which owns extensive sugarcane farms in the vicinity of Dabra, by making it into a subsidiary of the Company.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	27,68,900	Block ...	17,53,053
Reserves ...	15,86,419	Stock of Sugar and molasses	58,00,419
Provision for income-tax	13,25,889	Stores, tools, etc. ...	8,00,352
Provision for wealth tax	40,000	Debts, deposits and advances ...	18,22,565
Liabilities ...	51,68,449	Investments	1,70,100
Profit and loss account ...	6,691	Cash ...	5,49,859
Rs.	1,08,96,348	Rs.	1,08,96,348

Purtabpore Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Begg, Sutherland and Co., Ltd., Kanpur, U.P.), submit the audited accounts of the Company for the year ended 31st October 1957.

The results for the year, after making the usual provisions for taxation, depreciation and adjustments, show a surplus of Rs. 20,257 (Rs. 3,91,334) to which has been added the balance brought forward from the previous year of Rs. 20,705 (Rs. 6,871) making a total of Rs. 40,962 (Rs. 3,98,205). The directors have transferred to rehabilitation reserve Rs. 25,000 (Rs. 2,50,000) leaving at credit of profit and loss account Rs. 15,962 (Rs. 20,705 after paying a dividend of 10 per cent. on the preference shares absorbing Rs. 60,000 and a dividend on the ordinary shares at Re. 0.75 per cent. per share absorbing Rs. 67,500).

The quantity of cane crushed by the factory during the season was 24,74,745 maunds with an extraction of 9.38 per cent. as against 25,97,018 maunds with an extraction of 10.22 per cent. in the previous season. The factory commenced crushing on the 26th November 1956 and completed the season on the 5th April 1957.

The unsatisfactory results during the year have almost entirely been due to the poor quality of sugarcane supplied to the Factory. The Industry continues to pursue the matter of the poor cane quality with the State Governments of U.P. and Bihar and it is hoped that some effective measures in this direction will be taken.

The net price received for sugar was slightly higher than in the previous year but cannot be considered to be remunerative particularly when it is realised that of the price of a maund of sugar no less than Rs. 13-3 is represented by excise duty, cane cess and Co-operative Society charges. Of the total cost of manufacture 79 per cent. is accounted for by the cost of sugar cane and taxes.

The cane price remained at the previous rate of Re. 1-7 per maund at the Factory gate and Re. 1-5 per maund at outstations and these prices had to be paid irrespective of the quality of cane supplied. While it is understood that increasing attention is being given in Government circles to the possibility of relating cane prices to quality, the results of the Company for the year under review afford a striking example of the consequences of paying for cane on the basis of its weight only.

The efficiency of factory operation continued at a very high level while the Company's estates continued to supply cane to the factory and seed-cane to growers to assist in improving both the quantity and the quality of the cane offered for crushing.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,00,000	Block ...	14,06,755

Liabilities ...	22,77,169	Debts, deposits and advances ...	17,03,318
Profit and loss account ...	15,962	Investments	34,760
		Cash ...	38,670
Rs.	58,94,117	Rs.	58,94,117

Tide Water Oil Co. (India) Ltd.

The directors of the above Company (Managing Agents: Messrs: Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st October 1957.

The accounts show a profit after charging all expenses, of Rs. 2,76,256 (Rs. 1,84,154) on which provision for income and super-tax requires Rs. 1,70,000 (Rs. 73,000) leaving a balance of Rs. 1,06,256 (Rs. 1,11,154). The balance brought forward from last year was Rs. 57,636 (Rs. 28,582) making a total available for appropriation of Rs. 1,63,892 (Rs. 1,89,736 including Rs. 50,000 being excess provision for taxation in previous years written back). The directors have transferred to provision for bad and doubtful debts Rs. 20,000 (Rs. 57,100 to general reserve). From the balance of Rs. 1,43,892 (Rs. 1,32,636) an interim dividend of 50 (50) naye Paise per share was paid on 19th September, 1957 Rs. 30,000 (Rs. 30,000). The directors now recommend that a final dividend of 75 (75) naye Paise per share be paid absorbing Rs. 45,000 (Rs. 45,000) leaving a balance to be carried forward of Rs. 68,892 (Rs. 57,636). Rs. 11,500 has been provided for wealth tax by a transfer of this amount from special reserve.

Gross sales have again shown an appreciable increase over those of the previous year and prospects for the current year are satisfactory.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Goodwill ...	2,00,000
Reserves ...	9,41,500	Block ...	63,232
Provision for taxation ...	2,27,114	Stock-in-trade	29,61,529
Provision for wealth tax	11,500	Debts, deposits and advances ...	19,68,867
Liabilities ...	37,25,486	Cash ...	3,80,864
Profit and loss account ...	68,892		
Rs.	55,74,492	Rs.	55,74,492

Tungabhadra Industries Ltd.

The directors of the above Company (Managing Agents: The Cotton Agents Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th September 1957.

The profit and loss account, after providing Rs. 4,49,800 (*nil*) for depreciation and Rs. 9,000 (*nil*) for the wealth tax, shows a profit of Rs. 61,543 (loss of Rs. 2,03,098) which has been adjusted against the debit balance brought forward from the previous year.

During the year under review, the production of vanaspati and refined oil in aggregate was about 11,600 tons in comparison to about 13,200 tons in the previous year, due to the fact that the factory could be worked only partially for a period of 1½ months on account of a breakdown in the D.C. generator and also due to scarcity of raw-materials at the fag end of the season.

Due to heavy fall in the International prices of hydrogenated groundnut oil and other edible oils, the company could not export its products to foreign market as the prices prevailing there were unremunerative. However, the demand for the company's products in the home market was satisfactory in spite of keen competition from other manufacturers.

The rate of excise duty on groundnut oil has been enhanced from Rs. 70 to Rs. 112 per ton, with effect from the 16th May 1957. This is in addition to the excise duty of Rs. 140 per ton already in force on vanaspati.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,58,950	Block ...	61,05,362
Debentures	15,03,000	Stock-in-trade	17,37,643

FOOD FOR THOUGHT

One for the pot!

Some people say that to make a good cup of tea you need a spoonful for each person—and one for the pot. Some freshly boiled water...a few minutes to stand...and you have one of the most refreshing and popular drinks in the world.

We might have our pet theories on the best way of making tea, but we are all agreed that it is one of the most important cash crops grown in this country. India grows—and exports—more tea than any other country in the world. Each year, the tea industry earns over Rs. 100 crores of valuable foreign exchange—exchange which the country needs so badly at the present time.

Tea planters continue to improve methods of cultivation to ensure that Indian tea will hold its own in highly competitive export markets. Control of pests and diseases is vital to improve the quality and to increase the yield per acre. One of the major pests—particularly in Assam—is the tea termite which attacks the roots of the tea bush and causes considerable losses.

A Shell chemical called dieldrin provides effective, persistent control of termites and prevents re-infestation for as long as two years. True, dieldrin has to be imported because it is not manufactured in India. But for every rupee spent on importing dieldrin enough extra tea can be produced to earn as much as six rupees of foreign exchange. This is a sensible way of spending money, whichever way you look at it: food for thought, in fact.

SHELL Chemicals can save crops

and Foreign Exchange too!

TRAVANCORE CEMENTS LIMITED

CHAIRMAN'S SPEECH

THE Eleventh Annual General Meeting of the Travancore Cements Ltd. was held in Kottayam on 11th June 1958. Addressing the shareholders on the occasion, Mr. C. S. Loganathan, the Chairman of the Company, expressed the hope that the Government would soon sanction such an enhanced price for the Company's cement as would cover the rising costs of production, taking into consideration also the special factors relating to Company.

The following is the full text of Mr. Loganathan's speech:

"GENTLEMEN,

"On behalf of myself and my colleagues on the Board, I extend to you all a warm welcome to this eleventh annual general meeting of the Company. The directors' report and audited accounts for the year 1957 have been in your hands for some time and, with your permission, I shall take them as read.

"In my speech last year, I had mentioned that the Government of India had directed the Tariff Commission to examine afresh the cost of production of cement and determine a fair price to be paid to cement producers. Your Company placed its case fully before the Commission for a fair increase in our price. It is understood that the Tariff Commission's report is now before the Government and we may hope that the Government would soon sanction such an enhanced price as would cover the rising costs of production, taking into consideration also the special factors relating to this factory.

Excise Duty on Cement

"The excise duty on cement which was Rs. 5 per ton was increased to Rs. 20 per ton with effect from 16th May 1957 and again to Rs. 24 per ton from 1st March 1958. However, the ex-works price at which we sell our cement to the State Trading Corporation remains the same, i.e., Rs. 73 per ton of loose cement.

"During the year 1957, our production of cement has been more than the rated capacity of the factory and our production for the year was 52,800 tons of cement. Our sales during the year was only 47,793 tons, out of which 25,260 tons have been sold to Government departments. The offtake of cement in the latter part of the year was very poor and this has resulted in accumulation of stock. However, the position has improved since the beginning of 1958.

"*White Cement*: The extension work for the manufacture of white cement is in good progress. All the machinery required for the white cement scheme have already arrived and it is hoped to start manufacturing operations by the end of this year.

Profit and Taxation

"The net profit for the year 1957, after providing for depreciation, is Rs. 5,18,136, to which is added the balance brought forward from the previous year, Rs. 7,08,101, making a total of Rs. 12,26,237.

"On account of the extra depreciation allowances, the Company's profits have not been subjected to income-tax so far. The unabsorbed depreciation amount as on 31st December 1957 stands at Rs. 12,35,216. As we have been allowed additional, shift and initial depreciation in previous years, the depreciation allowable in future years will be less and, therefore, the taxable profit will be more in future years. In order to meet the tax liabilities, a sum of Rs. 6,00,000 has been transferred to taxation reserve.

"After deducting the sum of Rs. 6,00,000 transferred to taxation reserve and income-tax paid in respect of the years 1947-48 Rs. 1,556, the balance available is Rs. 6,24,681. Your Directors recommend a dividend of 6 per cent. per annum, free of income-tax, which will absorb Rs. 3,00,000, leaving a balance of Rs. 3,24,681 to be carried forward.

"I also take this opportunity of expressing our grateful thanks to the officers, staff and workmen of the Company for the valuable services rendered by them."

Note:—This does not purport to be a record of the proceedings of the annual general meeting.

Notices

THE METAL BOX COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twenty-fifth Annual General Meeting of the Company will be held at the Registered Office, 59C, Chowringhee Road, Calcutta, on Thursday, the 17th day of July, 1958, at 12-30 p.m., for the following purposes:

1. The consideration of the Accounts, Balance Sheet and the Reports of the Board of Directors and Auditors.
2. The declaration of Dividends.
3. The appointment of Directors. Special notice of intention to propose the re-election of Sir Robert Barlow, who is sixty-six years of age has been received.
4. The appointment of and the fixing of the remuneration of the Auditors.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

Proxies, in order to be effective, must be received by the Company not less than 48 hours before the Meeting.

NOTICE is hereby also given that the Ordinary Share Register of the Company will be closed from the 1st to the 17th July 1958, both days inclusive.

By Order of the Board,
F. P. GILBERT,
Secretary.

59C, CHOWRINGHEE ROAD,
CALCUTTA, 18*th June* 1958.

BURN AND COMPANY, LTD.

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Board of Directors has sanctioned payment of the dividend on 6 per cent. and 7 per cent. Preference shares of the Company for the half-year ending 30th June, 1958. Payment will be made on or after the 10th July, 1958, to those shareholders whose names appear on the Company's Registers on the 30th June, 1958, or in accordance with their instructions.

By Order of the Board.
MARTIN BURN LTD.,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

DEMAND FOR FUNDS SHRINKS

(From Our Own Correspondent)

BOMBAY, 18*th June*

As the slack season progressed, the demand for bank credit shrunk further during the week under review, while the pace of return of funds to banks maintained an upward trend. Consequently, the short-term money market continued to experience easy conditions for yet another week. While banks were able to add to their investment portfolio to some extent and reduce their borrowings from the Reserve Bank, they were still left with large cash balances, but the money rates were unchanged. Inter-bank call money among Exchange banks and large Indian banks, as well as smaller banks was quoted at 3 per cent. House money at call was placed at 4 to 4½ per cent., while short-term deposits were offered 4⅛ to 4⅜ per cent. for one to six months.

The Reserve Bank of India statement for the week ended 13th June 1958 shows a fall of Rs. 3.60 crores in notes in circulation, while the notes held in the Banking Department are higher by Rs. 3.90 crores. There is no change in rupee securities or foreign securities, but balances held abroad (in the Banking Department) have further declined by Rs. 6.29 crores. Central Government deposits have gone up by Rs. 1.06 crores and deposits of banks by Rs. 5.18 crores. Loans and advances to Governments are lower by Rs. 3.65 crores and other loans and advances by Rs. 97 lakhs. The fall in the latter is mainly due to the decline of Rs. 1.70 crores in advances to Scheduled banks against usance bills. There has been a rise of Rs. 9.01 crores in investments.

A fall of Rs. 1.94 crores in demand deposits and of Rs. 7.42 crores in time deposits is disclosed by the Scheduled banks' statement for the week ended 6th June 1958. Borrowings from banks have shot up by Rs. 10.54 crores and those from the Reserve Bank by Rs. 1.22 crores. The downward trend in advances has been maintained with a further drop of Rs. 2.89 crores during the week under review. Bills purchased and discounted are, however, a shade higher by Rs. 50 lakhs. Investments have been strengthened by Rs. 4.62 crores, but cash balances show no notable variation. Money at call and short notice has risen by Rs. 99 lakhs.

The Gilt-edged market continued to rule firm with a further marking up in prices of some scrips, on good demand from institutional investors. Scarcity of stocks and absence of sellers, however, restricted the volume of business. There was a slight change in the Reserve Bank's open market operations. While the Bank stopped sales of 3½ per cent. 1965, it commenced sale of 3½ per cent. 1964 at Rs. 98.50, as against the market rate of Rs. 98.45.

3 per cent. 1986 Conversion Loan improved further by 5 nP to Rs. 71.15. While 3 per cent. 1970-75 was unchanged at Rs. 87.20, 3 per cent. 1966-68 was marked up by 10 nP to Rs. 92.95. 3 per cent. 1964 was in demand due to half-yearly payment of interest, and closed at Rs. 95.50 *ex*-voucher, as against Rs. 95.45 *cum*-voucher a week ago. 3 per cent. 1963-65 gained 5 nP higher to Rs. 95.55. 2½ per cent. 1961 gathered 10 nP to Rs. 95.60. 3½ per cent. 1961 dropped 10 nP to Rs. 99.50, while 3½ per cent. 1963 and 1964 were unchanged at Rs. 98.80 and Rs. 98.45, respectively. 3½ per cent. 1965 was placed 5 nP higher at Rs. 98.30. 3½ per cent. 1967 was unchanged at Rs. 97.55, 3¾ per cent. 1967 at Rs. 99.65 and 3¾ per cent. 1968 at Rs. 99.50.

In the foreign exchange market, the rupee was somewhat erratic, in tune with the trend of sterling abroad. Banks' selling rate of U.S. dollars (ready) declined from Rs. 475.75 to Rs. 475.50 before moving up to Rs. 476 per $100. Likewise, the buying rate was marked down from Rs. 472.50 to 472.25, but it rose again to Rs. 472.75 per $100. In New York, spot sterling fell over the week from $2.81.5/16-2.81.7/16 to $2.81½-2.81½ and three months' forward from $2.79.3/16-2.79.5/16 to $2.79-2.79½. Transferable sterling gained from 278.95-279.05 cents to 279.15-279.25 cents, but reacted to 279.05-279.15 cents at the close.

TRADING IN KIPS PATCHY

(From Our Own Correspondent)

MADRAS, 16*th June*

Shipment business in kips with the U.K. has been disappointing. Importers seem to be following hand-to-mouth policy in the matter of purchases and bid low prices for selected grades. Sellers wish to offer all grades combined, but there was no response. Trading, therefore, continues to be patchy. Emphasis has been on lower grades in cow hides, cow calf and buff calf.

There is no change in the tanned skins section and shipment business is small. Stocks of common tannages have been cleared in the local market and prices rule steady. There are a few enquiries from Japan for medium sheep skins.

HIDES SUPPLIES LOWER

(From Our Own Correspondent)

KANPUR, 16*th June*

During the week under review the hides and skins market was indifferent. Supplies were lower due to extreme heat of the season. The supplies of goat and sheep sector were particularly affected. The main purchasers were the local tanners and the Madras dealers. The latest available quotations are:

Wet salted cow 1st grade Rs. 350 and 2nd grade Rs. 250 per score; wet salted buff 1st grade 1 lb. 7 ozs. and 2nd grade 1 lb. 11 ozs. per rupee; goat 1st grade Rs. 300 to Rs. 280 and 2nd grade Rs. 270 to Rs. 260 per 100 pieces; sheep 1st grade Rs. 325 and 2nd grade Rs. 275 per 100 pieces.

BULLION DULL

(From Our Own Correspondent)

BOMBAY, 18*th June*

The bullion market ruled dull during the week under review and activity was very restricted, thanks to the penal margin system, as recently approved by the Bombay Government, which became operative in silver early in the week with the commencement of business in *Shravan* (second delivery) contract. With the onset of the slack season, the demand for both the metals was on a small scale, but during the last two days offtake in ready gold suddenly increased. The suspension of sales of Kolar gold by the National Overseas and Grindlays Bank—no official explanation for which is available—and the slackness in arrivals of Tibetan coins kept the undertone steady.

Silver forward (July settlement), moved within a narrow range of Rs. 184-14 and Rs. 183-11 and closed a fraction higher over the week at Rs. 184-13. The August settlement (first delivery) closed at Rs. 185-3, as against Rs. 184-11 a week ago. Business in second delivery began on Wednesday last week and the quotation improved over the week from Rs. 184-11 to Rs. 185-2.

Ready silver gained over the week from Rs. 183-11 to Rs. 184-5. The discount at which the ready metal was quoted under the current settlement narrowed down from As. 12 to As. 8, thanks to the fall in stocks from 500 bars to 400 bars. The daily average arrivals (including unrefined metal) were reported to be 30 bars, while the offtake was 5 bars per day on an average.

Forward gold (July settlement) fell from Rs. 108-3 to Rs. 106-13, but regained partially to Rs. 107-12 at the close. August (first delivery) settlement was unchanged over the week at Rs. 107-7.

Ready gold dropped from Rs. 110-3 to Rs. 108-1 before recovering at the close to Rs. 109. The floating stocks of gold are reported to be 30,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was 2,500 tolas on an average.

In New York, silver was maintained at 88⅛c., while there was a further reduction in London prices. Thus, spot silver dropped from 75¼*d.* to 75⅛*d.* and forward from 75½*d.* to 75*d.* Gold advanced from 249*s.* 5½*d.* to 249*s.* 6½*d.*, but weakened to 249*s.* 5*d.* at the close.

The following comparative table shows at a glance the trend of the market during the week under review:

	18-6-58	Highest	Lowest	11-6-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

BASE METALS FIRM

(From Our Own Correspondent)

CALCUTTA, 17*th June*

Prices of base metals were firm during the week under review. The Government's announcement to grant to scheduled industries advance licences on an *ad hoc* basis for the import of unwrought copper, zinc, lead and tin was welcomed both by the trade and industry. The trade, however, pointed out that the present shortage could be relieved only by more imports. It was also felt that, if the port workers' strike were to prolong, the working of the non-ferrous metals industry would be greatly affected and manufacturers of metal products would have no alternative other than to stop working until the situation in the port improved and more imports of raw materials were permitted. If only manufacturers and stockists could have carried adequate stocks, the trouble in the port would not start affecting the industry so immediately as it threatens now. Another important news of the week was the announcement by three major sheet mill rollers of a nominal reduction in prices of brass and copper sheets. The price of 4′×4′ copper sheet has been fixed at Rs. 209, as against Rs. 210 and that of the same size of brass sheet at Rs. 156, as against Rs. 162. The extent of the reduction was not considered satisfactory by consumers of these two products. However, it would be necessary for the Government to review the present system of granting permits in order to ensure a more equitable distribution. From Rs. 503, tin at one time receded to Rs. 501, but closed higher on balance at Rs. 505. At the lower level, there were good enquiries on commercial account and from the motussil. Fair business was also done. Although the supply position was comfortable, the lower trend did not alarm stockists. Soon, the trend was reversed, and there was a Government enquiry for a substantial quantity. Lead was unchanged, but firm throughout at Rs. 62, as was electrolytic zinc at Rs. 56.50.

COTTON FUTURES EASY

(From Our Own Correspondent)

BOMBAY, 18*th June*

The cotton futures market ruled easy during the major part of the week under review. The easiness was due to pressure of offers by upcountry centres in the wake of slack demand from mills. The reports from the spot market indicated heavy arrivals. The continued poor offtake in both yarn and piecegoods was another unhelpful factor. There was, therefore, selling which pushed down cotton futures values. Even strong and persistent export quota rumours failed to have any marked influence on the market. It was reported that China was keenly interested in Indian cotton and that it had already concluded a sizable volume of business subject to the availability of export licences. A barter trade agreement was also said to have been signed between India and China providing for the export of Indian cotton, pepper, tobacco and other items in exchange for Chinese industrial raw materials. Some cotton traders were inclined to believe that the Government might release an *ad hoc* export quota for China. This news failed to lift up cotton values to any significant extent, since Akola and Ahmedabad interests sold heavily, followed by local operators. Yesterday, however, a *mild* recovery set in which gathered momentum today. This was due mainly to short covering. The closing rates were below last week-end quotations. The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	18-6-58	*High*	*Low*	11-6-58
I.C.C. Moglai Jarilla (August 1958) ...	681.25	684.50	675.50	683.50

The Board of the East India Cotton Association, at its weekly meeting held on the 13th inst., is reported to have finalised its recommendations with regard to the hedge contract for the ensuing 1958-59 season. These recommendations will be considered at a general body meeting of the Association to be held on 24th June and later submitted to the Forward Markets Commission for approval.

In the spot section, there was moderate mill activity. Interest continued to be confined to popular styles like Laxmi, Jaydhar, and Jarilla. The outbreak of the monsoon in the South and the very low offtake of piecegoods discouraged buying. Prices of most varieties declined.

The Board of the East India Cotton Association is reported to have made the following recommendations in regard to trading in delivery contracts on 'on call' basis: (1) Trading in delivery contracts on 'on call' basis be permitted subject to fortnightly settlement clearing and the special clearing as provided in By-law 52(C). (2) If the price in the hedge contract added to the rate of 'on call' touches the ceiling rate fixed by the Textile Commissioner for that particular description, then the call price shall be deemed to be automatically fixed at the ceiling rate on the date of such occurrence at that rate by mutual consent or the buyer should give a hedge contract at the rate referred to above and the seller shall be bound to accept the same. (3) Provision for super appeal be made in delivery contracts as in the case of hedge contract.

Exportable varieties evoked brisk buying. There were good inquiries from China and business to the tune of about 20,000 bales was reported to have been done so far with this country, subject, of course, to the availability of licences. Towards the close of the week, business slackened, due to the delay in the announcement of the quota and the dock workers' strike. Inquiries from the U.K. and the Continent were noted for Kala and Wagad.

In the foreign section, spot lots of Egyptian and Sudan cotton attracted attention. American styles also evoked some interest. The following are the latest available spot quotations—in rupee per candy of 784 lbs.—from Sewri, the figures in brackets being last week-end rates:

Bengal *Deshi* 600 (600); Berar Jarilla 725 (735); Khandesh 780 (790); Oomra *Deshi* 650 (660); Vijay 885 (890); Hubli Laxmi 1,020 (1,020). *Delivery Contracts:* Bengal (June) 585 (585); Wagad (June) 630 (618); Kalagin (June) 625 (620).

The firm trend noted in the Karachi cotton futures market towards the close of last week gathered considerable momentum during the week under review. The renewed firmness was aided by better inquiries from overseas buyers, especially China, and higher domestic spinner demand. There was keen local and upcountry buying. Consequently, cotton prices moved up. Yesterday, however, there was a mild reaction, due mainly to profit-taking sales. N.T.R.G. July after rising to Rs. 77-2-6 on the 16th inst. finished lower at Rs. 76-8 yesterday. January contract advanced to Rs. 78-7-6 but eased to Rs. 78-3 yesterday. The spot section was active and prices, barring those of *Deshi* styles which remained unchanged, registered an improvement. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 60; Punjab *Deshi* 56; Punjab Roller 73-15; S.G. 81-7; 289F Punjab Roller 85-15; S.G. 98-15; 289F N.T. Roller 79-3; S.G. 91-15.

The Alexandria cotton futures market ruled steady during the week. There were fairly good export inquiries and sizable domestic mill support. A marked rise in price, however, was prevented by reports of favourable weather and satisfactory crop progress. The latest available quotations—in tallaris per lb.—are as follows:

Karnak: July 75.90; November 77.00. *Ashmouni*: June 69.00; August 68.15.

Limited turnover, with prices showing a sagging tendency, characterised trading in the Liverpool cotton futures market during the week. Both the American cotton contracts and the mixed growth contracts drifted lower under scattered hedge selling which met with only small buying. Weak

New York advices also weakened sentiment. The Sudan contracts, however, were steady, with values remaining unchanged. The latest available quotations—in pence per lb.—from Liverpool are as follows:

American Cotton One Inch Staple Contract: July-August 25.03; October-November 25.68; December-January 26.03; March-April 26.33. *American Cotton Mixed Growth Contract*: July-August 25.87; October-November 26.30; December-January 26.57; March-April 26.87. *Sudan*: July-August 31.30; September-October 31.95; November-December 31.95.

Quiet conditions prevailed on the New York Cotton Exchange during the week under review, reflecting the uncertainty regarding the new cotton legislation. Reports of favourable weather and excellent crop progress touched off a fair volume of selling which met with only limited support.

The U.S. Agriculture Department has announced the export sale of 97,697 bales of Government-owned cotton at 28.76 cents per pound basis middling 1" cotton. This is the third sale made by the Department under its new two-part 1958-59 disposal programme.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	17-6-58	10-6-58	4-6-58
Spot	36.25	36.30.	36.30
July	36.02	36.16	36.12
October	36.53	36.62	36.40
December	36.79	36.83	36.54

CEILINGS FIXED FOR STAPLE FIBRE YARN

(From Our Own Correspondent)

BOMBAY, 18*th June*

The most outstanding development of the week in the yarn market was the move of the Bombay Yarn Merchants Association and Exchange Ltd. to curb unhealthy speculative activity in the staple fibre yarn section. On Monday, the Association announced imposition of a margin of Rs. 100 per case on the outstanding bull position above 100 bales. This step, however, failed to have any restraining effect on the market. In fact, there was a fresh bout of speculative buying which lifted up the prices of staple fibre yarn further. In view of this and with a view to preventing a still further rise in prices, the Association announced yesterday the fixation of ceiling prices for the June and August contracts at Rs. 715 and Rs. 730 per bale, respectively. The Association also fixed a penalty of Rs. 10 per bale for non-delivery. The practice in vogue formerly was to levy no charge for the first 300 packages and to charge a deposit of Rs. 30 per package on every subsequent package.

The aforesaid move of the market authorities was a sequel to the steep rise of as much as Rs. 100 per bale in the price of staple fibre yarn in the past fortnight. This was occasioned by hectic speculative buying induced by reports of an acute shortage of supplies from indigenous manufacturers. It was stated that there would be a reduction of 75 per cent. in production in South Indian mills due to cut in electric power supply and scarcity in supply of indigenous raw staple fibre. The latter factor would appear to have resulted in several cotton mills paying high prices for the raw material.

In sympathy with staple fibre yarn and on fears of a further cut in imports in the ensuing half-year rayon yarns ruled strong. Even slackness in demand for art silk fabrics in both local and export markets failed to have any effect on the market.

The Government of India has decided to allow import of synthetic yarn against actual users' licences issued to art silk weaving units and hosiery factories for the import of artificial silk yarns. The procedure laid down is that, up to 50 per cent. of the face value of the licences for art silk weaving units (category A, B and C) and up to 100 per cent. of the face value of the licences for art silk hosiery factories (category D), the customs authorities will accept such licences for clearance of synthetic yarn up to the face value restriction and it is not necessary for the licensees to submit their licences to the licensing authority for specific endorsement to this effect.

Staple fibre yarns 40×2 June delivery shot up from Rs. 641 last week-end to Rs. 694 on Monday. Even after the introduction of margin, prices continued to rise, yesterday's rate being Rs. 715. Following the fixation of ceiling, the contract reacted to Rs. 701 today. August delivery was marked up from Rs. 651 last week to Rs. 708 on Monday and further to Rs. 730 yesterday. It, however, dropped to Rs. 712 today. Over the week, spot 40×2 New Greats climbed up by 36 nP to Rs. 3.60. Citys rallied 33 nP to Rs. 3.70. Kohinoors strengthened by 39 nP to Rs. 3.76 and Centurys by 38 nP to Rs. 3.75. Among foreign yarns, Paramounts made a strident advance of 93 nP to Rs. 8.37. Fujis hardened by 87 nP to Rs. 8.37.

Among rayon yarns, spot 120 Japan strengthened by 44 nP to Rs. 7.06. 150 Japan improved by 28 nP to Rs. 6.87. 120 Italy advanced by 38 nP to Rs. 7. 150 Italy rallied 50 nP to Rs. 7. Among indigenous yarns, National Rayons 150 bright cones first grade increased by 16 nP to Rs. 5.88. 120 bright cones first grade put on 44 nP to Rs. 6.44.

In the cotton yarn section, ten counts Moderns were stagnant at Rs. 13.50 and Podars at Rs. 12.62. Among twenty counts, Moderns receded by 25 nP to Rs. 16.50. Indus were dull at Rs. 16.37, and Gokaks at Rs. 16.75. Thirty counts Hinds were unchanged at Rs. 19.50. Among forty counts, Moderns were quiet at Rs. 24. Minaxis, however, improved by 63 nP to Rs. 24.50. Sixty counts Moderns changed hands at Rs. 60, same as last week. Finlays were on offer at Rs. 61. Raghuvamshis on the other hand, gathered 25 nP to Rs. 51. Among eighty counts, Moderns retreated by 25 nP to Rs. 69.50. Mahendras were unchanged at Rs. 69.50, as also Finlays at Rs. 76.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	18-6-1958	11-6-1958
Art silk yarn (per case of 200 lbs.)—	Rs.	Rs.
120 Japan (per lb.)	7.06	6.62
150 Japan (per lb.)	6.87	6.59
120 Italy (per lb.)	7.00	6.62
150 Italy (per lb.)	7.00	6.50
Staple fibre yarn (per case of 200 lbs.)—		
40×2 June	701.00	641.00
40×2 August	712.00	651.00
40×2 New Great (per lb.)	3.60	3.24
40×2 City (per lb.)	3.70	3.37
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.62	12.62
20s Modern	16.50	16.75
30s Hind	19.50	19.50
40s Minaxi	24.50	23.87
60s Raghuvamshi	51.00	50.75
80s Modern	69.50	69.75

OILSEEDS RECEDE

(From Our Own Correspondent)

BOMBAY, 18*th June*

Despite the releases of export quotas for expeller variety groundnut oilcake (30,000 tons), linseed oilcake (5,000 tons) and kardiseed (5,000 tons), the oilseeds market put on a distinctly easy appearance. This was due to poor prospects for exports at least in the immediate future, on account of the dock strike throughout the country. Today the market staged a slight recovery in prices purely on technical considerations. The castorseed section ruled depressed. There was speculative selling induced by fears of keen competition from Brazilian castor oil following the devaluation of this country's currency. Prices would have shown a more marked fall but for renewed expectations of the abolition of export duty on castor oil and upward revision in the present excise rebate on export from Rs. 88 per ton to Rs. 112. The groundnut section reacted to weakness in groundnut oil and oilcake in Rajkot. The outlook for export of these items at current rates were also considered to be poor. Linseed was quiet, notwithstanding Australian enquiries for Indian oil and higher London advices. Cottonseed encountered selling, owing to lack of fresh incentives and decline in cotton prices. Kardiseed and nigerseed were, however, firm.

Groundnut August contract was subjected to selling pressure and fell from Rs. 172.37 last week-end to Rs. 167.12 yesterday. Today, however, the contract recovered to Rs. 168.75. Bold ready declined from Rs. 35.62 on the opening day to Rs. 35.12 before finishing higher at Rs. 35.25 today. Coromandel, after declining from Rs. 35.75 to Rs. 35.62, recovered to Rs. 35.87. Khandesh quality was quoted today at Rs. 35.87, as against Rs. 36 early in the week. Groundnut oil ex-mill dropped 25 nP to Rs. 18.75. Railway receipt eased by 12 nP to Rs. 18.50.

Castorseed September contract was on offer, the rate moving down from Rs. 158 to Rs. 155.50 yesterday. Today, however, there was some support and the rate rose to Rs. 157.62 at the close. Ready Madras which stood at Rs. 30.69 on the 12th inst. decreased to Rs. 30.25 yesterday, but recovered to Rs. 30.37 today. Kanpur quality moved down from Rs. 29.25 to Rs. 28.87 before finishing at Rs. 29.12. Over the week, castor oil B.S.S. shed 13 nP to Rs. 62. Commercial quality lost a like amount to Rs. 15.37.

Linseed September contract lacked support in the earlier sessions, the rate declining from Rs. 32.37 to Rs. 31.37 on Monday. Thereafter, recovery ensued, today's closing rate being Rs. 32.31. Bold ready fell by 12 nP to Rs. 31.75. Linseed oil was depressed during the major part of the week, yesterday's rate being Rs. 16.12, as against Rs. 16.31 last week-end. There was, however, a notable recovery today and the price stood at Rs. 16.37 at the close.

Cottonseed September contract was taken down on selling from Rs. 115 to Rs. 112 on the 16th inst. Some support was lent to the contract yesterday and the price advanced to Rs. 113. There was a further addition of 75 nP today.

Kardiseed bold ready ruled irregular in the first three sessions of the week, the quotation declining from Rs. 19 to Rs. 18.50. It, however, improved subsequently, today's closing rate being Rs. 20. Nigerseed Madras quality, after declining from Rs. 29 to Rs. 28.62, recovered gradually to touch Rs. 29.50 at the close today.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	18-6-1958	11-6-1958	4-6-1958
Groundnut—	Rc.	Rs.	Rs
August 1958	168.75	172.37	167.25
Bold ready (per cwt.)	35.25	35.12	34.75
Linseed—			
Sept. 1958	32.31	32.37	31.56
Bold ready (per cwt.)	31.75	31.87	31.12
Castorseed—			
Sept. 1958	157.62	158.00	156.00
Madras (per cwt.)	30.37	30.50	30.37
Cottonseed—			
Sept. 1958	113.75	115.00	111.75
*Groundnut oil**—			
Ex-mill ready (per quarter)	18.75	19.00	18.62
Castor Oil†—			
Commercial (per quarter)	15.37	15.50	15.44
Linseed oil†—			
Ready	16.37	16.31	16.00

* Rates include excise duty,but exclude sales tax.
† Rates exclude both excise duty and sales tax.

SUGAR DECLINES FURTHER

(From Our Own Correspondent)

BOMBAY, 18*th June*

The sugar market continued to rule bearish during the week under review and there was a further fall in prices. The Government of India had still not announced the sugar export policy. The co-operative sugar factories were persistently making offers in substantial quantities against the latest release order. Arrivals of sugar by rail into the market continued to be large; they aggregated 20,600 bags, as against 21,600 bags the previous week.

Large grain sugar dropped a rupee to Rs. 110-Rs. 115 per bag. Small grain lost 50 nP to Rs. 106. Medium grain was quiet at Rs. 107-Rs. 109, same as last week.

Production and despatches of indigenous sugar amounted to 1,963,000 tons and 1,174,000 tons up to 31st May 1958 in the current season, as against 1,975,000 tons and 1,227,000 tons, respectively, in the corresponding period of last year. Stocks with factories as on 31st May 1958 stood at 1,212,000 tons, as compared with 1,270,000 tons a year before.

BLACK PEPPER IMPROVES

(Messrs. Parekh & Co.)

BOMBAY, 18*th June*

Despite a number of adverse factors such as dock strike and a complete lack of foreign enquiries, Malabar black pepper during the week showed improvement, in sympathy with Cochin where one or two prominent bulls who were long for July delivery in the forward ring were reported trying to bolster up the prices.

Ungarbled at Alleppey advanced to Rs. 587½, while garbled at Cochin in ready to Rs. 102½, July to Rs. 107½ and August to Rs. 108¾ and Calicut to Rs. 645, as against the lowest of Rs. 590 during the last week. No fresh business with New York was noticed, since Lampong as persistently undercuoting.

New York spot, after improving to $0.25¾, came down to $0.25½ for want of demand from grinders. June shipment, which was once quoted at par with ready, was now quoted at $0.25 without stimulating business. New York dealers seemed to have discounted the news of a smaller Sarawak crop and was moving cautiously, in view of the present recessionary trends.

Singapore rose to Str. $70 before coming down to Str.$69. The volume of business there remained very small, in contrast with the usual activities at this time of the season. Consumers in the world market appeared to be apathetic. They refused to buy at the price quoted by the sellers at the origins. They wanted concession which was not forthcoming, as arrivals in Sarawak were delayed and remained comparatively smaller. The holders of Malabar and Lampong were trying to maintain, in spite of resistance from buyers. The grinders in the consuming markets of the Continent and the U.S.A. appeared to have postponed buying in anticipation of lower price in spite of the approaching autumn.

In specific delivery, the price for June improved to Rs. 605, the main stimulant being the improvement in the local demand. The recent boom in imported spices proved a supporting factor.

In A.S.T.A. section, business remained very very thin, June and July-Aug.-Sept. quoting at $0.25½ and $0.26, respectively.

The future of the market depends upon the demand from the U.S.A., which has so far remained in abeyance, and also on the possible competition from Sarawak with the advance of its harvesting season.

Today's nominal quotations are: Ready Rs. 85 per Bengal maund, June Rs. 605-Rs. 615 and July Rs. 615-Rs. 625 per candy of 5¼ cwts.

LESS DEMAND FOR TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 12*th June*

The catalogues amounted to 1,053,556 lbs. for Sale No. 16 which was held on Tuesday, 10th June. Quality showed a further seasonal decline. Some estates from the lower elevation again showed teas of rush production. The sale opened with much less demand for all descriptions. Exporters were very quiet and internal buyers only showed interest at much lower rates. Low medium and mediums declined 10 to 20 nP. Good mediums were irregularly 10 nP easier. High grown teas met less demand at rates which were 20 to 30 nP lower than last. Pekoes and F.Ps were about steady, but the better OPs were occasionally dearer. The following are the quotations:—

	1958 Rs.
Plain B.P.	1.45
Low medium	1.55 to 1.70
Medium	1.70 to 1.90
Good Medium	2.05 to 2.25
Quality	2.25 to 3.10

London Market: *Sale of 10th June* 1958:—Fair demand, but prices somewhat irregular and 1*d.* to 2*d.* lower for less attractive sorts.

Colombo Market: *Sale of 5th June* 1958:—4.5 million lbs. Good demand strongest at close. Best sorts considerably dearer. Plain high and medium barely steady. More interest Middle East. Good and medium fannings distinctly lower. Off grades dearer, particularly liquoring fannings and dusts.

Calcutta Market: *Export*:—Fair demand. Good liquoring kinds strong. Plainer sorts irregular at 6 to 8 nP below valuation. C.T.C. well supported 13 per cent. large breaks withdrawn.

Export Quota:—Very little business has been transacted in special export quota and the quotation is 8 nP nominal. However, business has been done in new quota at 15 nP.

Forthcoming Auctions:—Sale No. 17 will be held on Tuesday, 17th June.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale* 17:—1,550,000 lbs. Much less demand with exporters quieter. Low medium and medium brokens 10 to 15 nP easier. Highgrowns irregularly 20 nP easier. Fannings, except better types, neglected. Whole leaf easier."

EXPORT SALE IN TEA POSTPONED

(From Our Own Correspondent)

CALCUTTA, 17*th June*

Tea trade and industry circles have been caught with an awe of anxiety in regard to the port workers' strike in Calcutta and other Indian ports. Tea shipments would come to a standstill, and the consequent accumulation in warehouses and in gardens would naturally present itself as a major financial problem to traders and industry alike within a few days. If the strike continues, export sales must be postponed, and this would naturally divert attention of foreign buyers to other producing countries, just as Ceylon and East Africa. There was no export auction yesterday on account of the strike. To what extent the damage caused would be *permanent cannot* be said at present. Already, Indian teas are meeting with stiff competition by cheaper-produced teas in East Africa and elsewhere.

During the internal sales held last week, dusts on offer amounted to 18,690 chests. General demand was good. Following good support from Middle East buyers, black leafy exportable grades from all districts were fully firm with the best lots selling 12 nP above valuations. The balance of orthodox teas opened firm and received more support towards the close of the sales. Demand being irregular, C.T.C. Assams were quiet with the thinner liquoring lots registering the greatest fall. The quotations were: Best Assam C.T.C.—unquoted, medium Assam C.T.C. Re. 1.70 to Re. 1.90, medium Assam grainy dust Re. 1.56 to Re. 1.58, and medium Dooars Re. 1.54 to Re. 1.56.

Leaf on offer was a meagre quantity of 368 chests.

The 1957-58 non-transferable shipping licence changed hands at 7 nP but fell to 6 nP. The 1957-58 transferable special export licence realised 7½ nP, but demand petered out soon. Business was done in the 1958-59 export rights at 15 nP but soon sellers raised the price to 16 nP at which rate there was no interest, however.

Note was taken of the fall in the London stocks by 3 million lbs. to 113.80 million lbs. in the week ended 6th June 1958. The programme for auctions in Mincing Lane has had to be curtailed and postponed in view of the difficulty to obtain samples from warehouses and the docks dispute.

According to a report from Assam, several gardens in the Sibsagar area have been affected by drought.

The Government announced an increase in the release of 1958-59 export quota by 10 per cent. to 60 per cent. of the crop basis. This is pending final declaration of the export allotment for the year.

HESSIAN MARKED DOWN

(From Our Own Correspondent)

CALCUTTA, 17*th June*

Dull conditions were in evidence in the jute markets during the week under review. Prices of jute goods sagged, and for the first time after the Indian Jute Mills Association fixed the minimum prices, the price of hessian 40" 10 oz. declined almost to the floor. In fact, it was known in the market that the Association was considering revision of the minimum prices in view of the reluctance of buyers to support the same and of the huge accumulation of stocks. A week ago, this subject was examined by the I.J.M.A., and as the meeting convened for this purpose was in progress, prices went down. In particular, heavy goods were badly affected. No decision was, however, announced by the I.J.M.A. It has been very unfortunate that, despite sincere and fervent appeals by the Government of India and national leaders, the All-India Port and Dock Workers' Federation did not withdraw their strike call. The strike commenced, as scheduled at midnight of the 16th and loading and unloading came to a standstill. Yesterday, as many as 37 ships were tied up in the Calcutta port. Lack of clearance at ports would affect several industries, and it was feared that prices of imported goods would automatically rise. Of the export industries, the jute industry would be hard hit. Fearing that the strike would materialise, foreign buyers kept out of the market during the week under review, and this was a strong factor for the fall in prices. Jute mills are already faced with the problem of heavy stocks of finished goods in their godowns, and if the strike is not settled soon, the problems created by further accumulation would be difficult of solution. It is to be hoped that the All-India Port and Dock Workers' Federation would call off the strike and give Government more time to come to a decision on their demands.

As stated, very little business was done during the week. Apart from sales against local consumption and against despatch to upcountry centres and some business on Government account, there was no other activity. All concerned realised that, without support from foreign buyers, prices would not stabilise. Had it not been for the port workers' strike, the announcement by the Calcutta/United States Conference of its decision to extend the temporarily reduced freight rates on jute goods to vessels beginning to load not later than 10th October 1958 would have received more attention. It was also announced that effective from this month the freight rate on jute back (backing/wide hessian) for shipment to the Pacific Coast has been revised, the new rate being $45 for one ton. As though the local factors were not sufficient to push down prices, the reports from New York that burlap consumption had declined in May affected sentiment further.

The increase in May output caused concern to stockists, especially the weak holders. Production amounted to 94,900 tons, representing an increase of 6,900 tons. Hessian increased by 3,300 tons, sacking goods by 3,100 tons, and miscellaneous constructions by 500 tons. The increase was due to the greater number of working hours. Adding the stock (97,500 tons) as at the beginning of May, the total availability was 192,400 tons. May-end stock being 112,000 tons, demand in the month was in the order of 80,400 tons, much less than the production during the month.

From 1st to 5th June, hessian shipped was only 6,600 tons against 12,900 tons, and sacking 3,800 tons against 6,300 tons. Consequently, a further increase in stock at the end of this month can be expected.

Ready B. twills gave way to Rs. 97 from Rs. 98, and ready hessian 40" 10 oz. to Rs. 39.95 from Rs. 40.10. It was noted that the fall in price for nearer delivery sacking was more than the fall in ready goods, and the decline in the price for forward was less than the fall in ready goods. On the other hand, the fall in hessian price by 15 nP was uniform in ready, nearer, and forward delivery. Foreign buyers sat on the fence for fear of the port workers' strike holding up consignments. However, on Wednesday news that the Government of India purchased 8,000 bales of B. twills failed to have any effect on the market. B. twills at Rs. 96, touched the lowest level for the week, while ready hessian 40" 10 oz. sank to Rs. 39.60. Speculators became nervous, and the opportunity was used for covering. Some business soon followed, and on Thursday ready B. twills moved up to Rs. 96.65. On Friday, the improvement was maintained to push up the rates to Rs. 97.20 and Rs. 40, respectively. However, at these rates there was no genuine business done and further the news of the fall in U.S. consumption of burlap in May was available. These factors pushed down the quotations for B. twills and hessian 40" 10 oz. to Rs. 97.00 and Rs. 39.80, respectively. Yesterday, the trend was affected by the news of the port workers' strike, and B. twills were unchanged and quiet at Rs. 97.00. However, hessian 40" 10 oz. was fractionally better at Rs. 39.85 following speculative support.

Raw jute prices were depressed in this week, and, in fact, transactions took place at below quoted market rates. This followed reports of satisfactory rains in several jute districts and the expectation that the monsoon would break out in this part of the country in two days' time from now. However, new crop sellers were reserved. Assam northern bottoms declined to Rs. 23.75 from Rs. 24.25, and daissee bottoms to Rs. 27.50 from Rs. 28.00.

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, 16*th June*

Steady to firm conditions were witnessed in the foodgrain markets during the week. The U.P. Government is perturbed by the rising trend in prices for which it does not find adequate justification. The eastern districts of the State have all along been facing chronic food scarcity conditions, but now a distressing situation is also reported from the western region. The Government has applied the Essential Commodities Act in the case of wheat to U.P. and Rajasthan, while, in Madhya Pradesh, it was applied some weeks ago. The Act empowers the Government to have wheat stocks on the average price of the last three months. The Union Government is alive to the situation and about 30,000 tons of wheat have been allotted to the U.P. Besides, the State Government has reserves of 46,000 tons of coarse grains and about 25,000 tons of wheat. Apart from this, about 100,000 tons of foodgrains are available at the moment in the Central storage depots in the State.

Wheat at Hapur recorded peak heights in the mid-session upto Rs. 18 per maund for average quality and Rs. 19.25 for farm produce, but sagged slightly towards the week-end to be quoted at Rs. 17.75 and Rs. 19, respectively, today. Daily arrivals of wheat, which had mounted to about 800 maunds last week due to unauthorised arrivals from Punjab, ran down to about 400 to 500 maunds following strict vigilance on such arrivals. Local stock was small at 5 *khatties*, the corresponding figure last year being 35 *khatties*. With arrivals averaging 1,500 maunds daily, wheat *dara* was quoted at Rs. 14.37 per maund. Stocks of wheat on the corresponding date in 1956 here were 72 *khatties* and arrivals at that time averaged 2,000 maunds daily and wheat *dara* was quoted at Rs. 13.87 per maund. The producer is retaining a part of his produce not with the intention of hoarding but for his consumption for some more months, as *kharif* prospects are still uncertain.

Rice also registered gains during the week, due to shortage of supplies and in line with the bullish trend in the prices of all the cereals. The prevailing prices towards the week-end were: *Basmati sela* Rs. 37 to Rs. 40; *mainpuri* Rs. 28; coarse quality Rs. 24.50 per maund.

Gram after initial gains, eased slightly towards the week-end on Punjab advices, while barley and *bejhar* continued to rule steady on poor crop reports and scanty arrivals. While wheat production in U.P., according to official sources, is less by 13 per cent. as compared with last year, barley production is less by 22 per cent. *Jowar* and *guwar* prices were mostly unchanged during the week and the latest prices (in rupees per maund) were: Gram 12.75 to 12.94; barley 12.62; *bejhar* 12.25; *jowar* 13 to 14; *guwar* white 15.50.

Good demand from east U.P. and Bihar mostly in the form of pulses accounted for the firm trend in the prices of peas during the week. *Arhar* was also steady, due to good offtake by millers for grinding. Daily arrivals averaged 1,000 maunds of *peas* and 250 maunds of *arhar* and stocks are put at 193 *khatties* and 148 *khatties*, respectively. *Urd* and *moong* were also steady during the week and week-end prices (in rupees per maund) were Peas *dara* 11.50; white 12; peas *dal* 13.25; *arhar* 14.50; *arhar dal* 18.25; *urd* 18.50 to 19.50; *moong* 24.50; *massoor* 15.75 to 17.

Pulses future moved both ways on speculative bouts of selling and buying during the week.

LINSEED FIRM

(Messrs. A. Bradley & Co.)

CALCUTTA, 16*th June*

The general tone of the linseed market remained firm during the week and price levels were well maintained. Shortage of supplies was the main feature again. The price of oil advanced slightly more as a result of scarce supplies than increased demand. Enquiries from shippers were negligible.

The latest available quotation for ready and June is Rs. 23 per maund.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. B.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

DOCK STRIKE ENDS

THE decision of the All-India Port and Dock Workers' Federation to call off the strike by the port workers will be widely welcomed. Any continuation of the strike, which lasted ten days from the 16th inst., would have been fraught with serious consequences to India's national economy, in general, and its foreign trade in particular. There was, as we have ere now indicated in these columns, little justification for the strike, notwithstanding the Government's delay in formulating its decisions on the Chaudhury Commission's recommendations. There were reasons for the delay. And, in any case, all that the Government wanted was only a few more weeks to complete its review of the admittedly complicated issues involved in the fixation of the wages of a large variety of workers distributed among the country's different ports. From this point of view, while the termination of the strike is to be welcomed—all's well that ends well—the workers cannot altogether escape the blame that they attempted to hold the community to ransom, and, for doing that, chose a most critical period in the country's recent economic history.

Under the terms of the settlement reached between the Government and the Federation, the former has agreed to start negotiations at port level for the settlement of the dispute and has accepted the principle of arbitration in the event of breakdown of negotiations. It has assured the Federation that it would implement Mr. Shastri's undertakings on uniformity and rationalisation of pay scales and service conditions without prejudice to existing incomes and benefits. It has promised to consider sympathetically the Federation's claim that heavy manual workers in docks should be distinguished from other categories of workers in industry. Presumably, this is meant to cover the demand for higher wages for these men. While we have the fullest sympathy for this class of workers, it must be recognised that, in railways, factories and construction works too, there are workers who undertake heavy manual labour. The scale of wages for heavy manual workers in ports should bear some relationship with the wages of similar categories of labour elsewhere.

The Federation urged the Government to consider the question of giving retrospective effect to the decisions that may be arrived at as a result of the discussions to be held on 14th July. The Government has agreed to take this point into account, wherever necessary, in fixing the dates from which the different decisions are to be given effect. It has also agreed to fix an equitable formula for the refixation of pay in the revised scales. A notable feature of the agreement is that the Federation has given the assurance that it would do its utmost to increase the output of work. It is also agreeable to the introduction of the piece-rate system of payment of wages in Calcutta and other ports where it is not already in operation. The system, as is well known, has worked very well in ports where it has been introduced; it has invariably meant higher incomes for workers and better output of work.

The aforesaid terms of the settlement clearly show that there is little in them which the workers could not have obtained through mutual discussions. A strike, therefore, was totally uncalled for. And it must be said to the credit of the authorities that they had never slammed the door on voluntary negotiations. This alone should convince any impartial observer what a tragic waste the strike has been. It would, however, be a great gain if the lessons of the strike and its aftermath were borne in mind by the Union leaders. Strike is a delicate weapon which, in the context of the democratic traditions the country is building up, should be used only in the last resort. It is, however, gratifying to note that, instead of prolonging the unjustified strike, the Dock Union leaders yielded to wiser counsels and called off the strike. The country's thanks are due to the patience and the persuasive qualities of Mr. Nehru and the persistent efforts of the Union Minister for Transport and Communications, Mr. S. K. Patil, and the Minister for Commerce and Industry, Mr. Lal Bahadur Shastri. It is to be hoped that the spirit of compromise which manifested itself in the Delhi parleys preceding the termination of the dock strike will continue to prevail in all future negotiations for the settlement of labour disputes.

NOT CRYING FOR THE MOON

IT would need much dry sense of humour to appreciate Bombay's wet weather. This week, the citizens have been treated by Nature to yet another sorry exhibition of its vagaries. In Bombay, on some days, it never rains but it pours. The much-awaited, long-delayed monsoon has announced its arrival with a bang. It has eclipsed not only the sun which no longer shines but, as an item of news, also the dock strike and the dangerous municipal strike, now happily called off. One may complain against strikes. But what can one do against the fury of the monsoon? It brooks no protests, hears no appeals. It gives no quarter, asks none; the pavement-dweller must shift for himself. It leaves the pedestrians, the passengers in the trains, the buses and the cars to themselves. Milton reminds us that "they also serve who only stand and wait." But the millions who stood and waited this Tuesday and Thursday for buses and trains which never arrived served neither themselves nor the offices nor the factories where they work. Perhaps, the fortunate few who determined to stay away in their homes by cashing in on the casual leave to their credit—though there is nothing "casual" about the monsoon—may have meant to serve themselves. But the brave men who, from an oppressive sense of duty, ventured abroad, found themselves literally in deep waters. Nevertheless, we nurse no futile sense of grievance against the imperious monsoon. We refuse to protest.

But

INDO-AMERICAN RELATIONS

By S. V. Rayan

I HAD the good fortune of receiving, towards the close of last year, an invitation from the State Department of the U.S. Government to visit the United States for a couple of months, in order to get a personal appreciation of its people and institutions. This invitation was extended under the U.S. Government's programme for exchange of leaders. In response to this generous offer, I proceeded to the U.S. on 30th March and returned to Bombay last week, after spending two months in the States and two weeks in England. During the two months of my stay in the U.S., I spent a fortnight in Washington and a fortnight in New York. The rest of the period was devoted to a quick tour of the country. I met and talked to several people of eminence in the field of industry, commerce, finance, journalism, politics and civil administration, besides visiting some heavy, light engineering and consumer goods industries.

It is my intention to write a series of articles on what I saw and heard during my tour of the U.S. I propose to begin this series with a general article on the Indo-U.S. relationship, with particular reference to prospects of getting Governmental assistance and private capital for pursuing our plans for economic development. The impressions that I gathered in the City of London on this subject are also included in this article. This will be followed next week by an article on economic trends in the U.S. and by another on some of my outstanding impressions of the American way of life. In the subsequent weeks, I propose to write on some of the specific industrial units in the U.S. visited by me and a few other aspects of that country's economy.

The relationship between the Governments of India and the U.S. has greatly improved. The area of differences has shrunk vastly. The feeling of friendliness between the two Governments was, perhaps, never so high during the last eight years as it has been for some months now. Even those sections of the Press in the U.S. which were hypercritical of the Government of India's political and economic policies have become less critical and very moderate in their criticisms. In fact, there is a better appreciation of India's foreign policy. There is a growing realisation of the value of a policy of non-alignment by India with either of the two power blocs. The balance of power between them is now so finely maintained that, if India were to depart from its present policy in favour of alignment with either the Eastern or the Western powers, it would upset the balance and might precipitate, sooner or later, a world war which every sane human being is anxious to avoid. Not all in the U.S. are, of course, convinced of this argument, but those in authority and the more responsible sections of public opinion appear to recognise its force. In any case, the feeling that once existed, namely, as India is politically neutral and does not want to join the Atlantic community of nations against the Communist bloc, it should not be given any sizable economic assistance, is on the wane, if it has not totally waned. In short, the foreign policy of India is not such a great stumbling block in the way of getting foreign economic assistance as it once appeared to be. But this should not lead one to believe that it is a positive factor. It is not.

The increasing feeling of friendliness towards India and a desire to help it in implementing its plans for economic development are reflected in the recent debates on the Cooper-Kennedy resolution in both houses of the U.S. Congress, favouring large-scale economic aid to India. In the second week of April, when I was in Washington, I was given to understand that this resolution was just an expression of goodwill by a few friends of India in the U.S. Congress and that, for a long time, it might not even come up to the Committee stage for hearing. I was even warned by competent observers that India should not build up any big hopes of U.S. aid on the strength of this resolution, lest it should feel greatly disappointed later. This warning was repeated by the same sources when I went to Washington again in the second week of May. But, as subsequent events have shown, the Cooper-Kennedy resolution met with considerable measure of support in the Senate and was actually incorporated in the general omnibus Bill authorising the U.S. President to give foreign aid to the tune of $3,713 million. The specific mention of India in the Foreign Aid Bill to the effect that India be granted long-term and expanded economic assistance was approved by 47 votes to 35. It is true that 11 days later, on 17th June 1958, when this measure came before the House of Representatives, the special reference to India, the only country to be singled out by the Senate, was deleted by a *tentative* agreement with the Senate. But those who supported this deletion in the House of Representatives made it clear that they were not opposed to India being helped by the U.S. Their only objection to the inclusion of India alone was that it would complicate U.S.'s relations with several other countries, which might feel that it was invidious to pick out India by name. Even the Republican Senator Styles Bridges, who opposed the Cooper-Kennedy resolution and voted against the amendment to the Foreign Aid Bill in the Senate, appeared to be not so much against aid to India as against singling out India for special mention in the policy statement of the Act, on the ground that it would be a slap in the face of every other nation in the world which the U.S. is aiding and which, unlike India, has been actively associating itself with the U.S. in its collective security arrangements.

This stand is only natural. If the Indian leaders are realistic, they will not only not find it difficult to recognise this point but even to reconcile themselves with it. The U.S. Administration's view on this subject was made very clear the other day by Mr. John Foster Dulles, the Secretary of State, who questioned the wisdom of the Congress in singling out India by name in its consideration of the U.S. aid programme for friendly nations. He was clear in his mind that it was in the interests of the U.S. to help India which was trying to develop its economy in an atmosphere of freedom. But "India is not the only free country in the world which deserves our support," he averred. "From the standpoint of our collective security arrangements," he went on to add, "we have closer ties with Pakistan than we have with India. Pakistan has accepted the doctrine that security is best achieved on a collective basis and is a party to the S.E.A.T.O. and the Baghdad Pact I could mention other countries which might feel hurt if India alone were given special recognition in a policy resolution." Thus, it is a question of big politics, closely tied up with the U.S. Government's foreign policy. If India does not like any suggestion of a compromise in its foreign policy, it is only but politic that it should respect a similar desire on the part of the U.S. It would surely be unrealistic to expect economic aid from the U.S. Government in a form and manner calculated to upset its relations with other friendly countries.

The resolution of Mr. Cooper and Mr. Kennedy and their able advocacy of India's case for economic assistance signify that there are good, sincere friends and sympathisers in the U.S. for India. Their number is tending to grow. The Administration itself is keen on helping India's economic development. But all this does not mean that India can expect to get, in the near future, a large credit line from the U.S. which will close its big foreign exchange gap. Even the Cooper-Kennedy resolution was no more than a gesture of goodwill; it did not specify the amount or type of assistance to be given to India. There is little likelihood of this country being given a general line of credit of the order of, say, $1.5 billion or $2 billion.

There is, however, every possibility of India getting assistance of the order of $250 million to $300 million per year from the U.S. for some years to come. This is about the same amount as has been sanctioned for the current year. The Administration, it appears to me, is not yet convinced of the advisability of approaching the Congress with a special Bill for granting a bulk loan to this country. It feels that it can assist India better from the funds at the disposal of the President than in this manner. There is evidence of this view in the latest P.L.480 loan under which India is getting additional supply of foodgrains of the value of $57 million. Special legislation for giving aid to India will take a long time, anything between 12 and 18 months. Further, India is not without its critics in the Congress and their number is not insignificant. The success of Mr. John Sherman Cooper in the Senate three weeks ago might have induced some to think that the Administration was not right in advising India against making special approach to the Congress towards the close of last year. But this opinion is not necessarily correct. Much valuable time might have been lost, without India getting even the $282 million which it has received so far this year.

In any case, with Congressional elections due in November 1958, there is no prospect of a fresh approach being made to the Congress for any large lump-sum assistance to India. The only course left is to negotiate with the U.S. Government from time to time for assistance from the overall funds sanctioned by the Congress for foreign aid. The U.S. Government is fully aware of India's needs, its problems and difficulties, thanks to Mr. Ellsworth Bunker, the U.S. Ambassador in this country, who is doing his best to ensure a sympathetic understanding of our position by his Government. It stands to reason to believe that the U.S. Government is competent enough to realise that, if it does not follow up its assistance to India in 1958 by similar assistance in the coming few years. India's plan for economic development cannot go forward and that the full value of its aid in the current year will not be realised. Much will, however, depend on the ability of our negotiators at New Delhi and Washington in putting forward to the U.S. Administration appropriate and eligible development programmes. An equally important factor will be avoidance of irritating political statements which may make it difficult for the U.S. Government to influence American public opinion in favour of continued assistance to this country.

Viewed thus, it is regrettable that the Government of India has not yet chosen a worthy successor to Mr. G. L. Mehta, who, as India's Ambassador to the U.S., worked hard to promote better relations between the two countries. During his long tenure of a little over five years in the U.S., there were more misunderstandings between the Indian and the American Governments than at any time during the preceding five years of India's independence. Mr. Mehta's task was, therefore, not an enviable one. Yet, it must be said to his credit that he has managed to perform his duties as an ambassador successfully and strengthen the bonds between these two great democracies in the world. During my short stay in the U.S., I came across sufficient evidence of the solid contribution he has made for furthering India's interests in the U.S. He was widely popular and everyone that I talked to spoke highly of him and felt sorry that he could not continue to be India's Ambassador in the U.S. for some more years. In my opinion, far more credit than due has been given to the former Finance Minister, Mr. T. T. Krishnamachari, and the Industrialists' Delegation and far less to Mr. Mehta for the sizable economic assistance which India has received from the U.S. Government during the last six months. It is, indeed, no exaggeration to say that Mr. Mehta has proved himself as an able statesman and diplomat; he has belied the doubts expressed by some on this score when Mr. Nehru chose him to represent India at Washington.

It is common knowledge that Mr. Mehta had been asking Mr. Nehru to relieve him of his ambassadorial duties for nearly a year. It is a pity that, despite this long notice on his part, Mr. Nehru could not make up his mind as to who should take charge of this key post. If Mr. Nehru found no one suitable enough, in his opinion, to take up this job, he should have requested Mr. Mehta to continue for a year more and no Indian with a sense of patriotism, least of all Mr. Mehta, would refuse to comply with such a request. The present time lag is costing India's prestige not only in the U.S. but even in the U.K. One of the few questions that were shot at me wherever I went in these countries was: "Who is going to succeed Mr. G. L. Mehta?" The frequency with which this question was posed to me showed the importance people attach to this post. And Mr. Nehru's failure to fill this vacancy promptly raises doubts in the minds of people in these parts of the world whether India is so bereft of talent that he cannot find a successor to Mr. Mehta, even after several months' notice. Such doubts are not conducive to formation of a favourable opinion about India as an investment market.

While Mr. G. L. Mehta has doubtless performed valuable service to India in the U.S., many other factors have contributed to the welcome change in the U.S. feelings towards India in recent months. It is the cumulative result of several international developments. The successful launching of Sputniks by Russia, the economic offensive of Russia which is a new weapon in the cold war between the two ideologies, the anti-U.S. sentiments frequently voiced in Latin America and Canada in recent months, the lack of definite success of the U.S.

(*Continued on page* 1235)

SHARE MARKETS TOO OPTIMISTIC?

STATE LOANS—SUGAR EXPORTS—METALS

THURSDAY, 5 P.M.

THE feeling of buoyancy in the share markets continues unabated. The rise in values is not confined to the popular speculative counters but embraces several investment scrips also. This is not surprising, because first class equities had remained depressed for a long time, offering attractively high yields. With interest rates moving down all over the world and with talks of special concerted efforts on the part of banks to bring down the interest rates on short-term deposits going on with the blessings of the Reserve Bank of India, it is understandable that the return on equities should tend to fall through a rise in their values. To the extent values had been depressed unduly in the past, a sizable recovery was warranted. It, however, looks as though the present upward movement in certain scrips has gone a little too far. It is in the very nature of stock exchanges to discount well in advance the future possibilities. But even recent history shows that they are capable of overdoing this function and coming to grief.

MARKET GOSSIP

It is, of course, true that, in staging a cheerful play for the investors, the stock exchanges in India are now in good company with their confreres in London, New York, and Montreal. The buoyancy of mood in these latter centres is, however, based on a better rationale than in India. In the U.S., the business recession has flattened out and, on the strength of a series of measures taken by the Eisenhower Administration, the economy of that country is gradually recovering. A policy of reflation is being actively and consciously pursued in the U.S. and it has no balance of payments problem. Canada and Britain, too, have taken special measures to give a fresh stimulus to their economy. Britain's foreign exchange position also has greatly improved and the pound sterling has regained the confidence of the world. In all these three countries, strong and determined efforts are being made to keep prices down through a check on the cost of labour and through adoption of measures for higher productivity. The organised labour in them are on the defensive and its demands for higher wages and increased benefits are not easily granted.

Another important factor in favour of the aforesaid foreign stock exchanges—a factor which is practically absent in India—is the existence of strong and large institutional investors who can afford to take a long-term view of the market for equities and stick to their holdings unperturbed by any temporary setbacks. They have enormous resources at their command and, what is more, their funds are steadily growing. A peculiar feature of the U.S. economic recession is that it has not yet adversely affected the growth of personal savings, most of which are diverted to institutional investors. This is due to a sudden wave of a keen desire among the American masses to save for the rainy day and to reduce their indebtedness arising from hire-purchase system.

Yet another factor that has sustained the bullish trend in New York, London and Montreal stock markets is the possibility of a new wave of inflation stemming from the anti-recession measures already taken and still to be taken. The economy of these countries is based on the system of free enterprise and they have Governments which believe in the virtues of a free enterprise system. Accordingly, the case for equities as a hedge against inflation has a better validity than in a socialist country like India where neither the party-in-power nor its effective opponents believe in a property-owning democracy. Further, the Government of India, in particular, is unpredictable.

In contrast to the U.S., the U.K. and other Western countries, which appear to have successfully tided over the economic crisis, at any rate for the present, India is still in the thick of it and there are yet no signs of our Government taking realistic measures to get out of the mess. The immediate outlook for industrial profits is far from encouraging and the dividends for 1958 by most of the major industries are unlikely to be satisfactory. Again, how is the Government of India going to solve the foreign exchange crisis? The share markets think that liberal concessions will be given to export industries. But how far will they be successful in the present state of heavy competition in world markets, even assuming that their hopes are not misplaced? This question apart, the possibility of a further deterioration in the supply of industrial raw materials also seems to have been ignored. Rumours of a devaluation of the rupee have acted as a spur on the stock exchanges. There is, however, no reason to believe that the Government of India will take this futile step.

Some say that certain sections of trade have already made large profits taking advantage of scarcity conditions and that these easy profits are being diverted to share markets. This explanation sounds convincing, but it cannot by itself support and sustain the sizable appreciation that has already taken place in the value of equities.

Taking all factors into account, it looks as though the share markets in India are building themselves up on thin ice and are tending to present a false picture of prosperity among investors. Nevertheless, as is always the case with stock markets, it is the sentiment that counts more than hard facts. And the sentiment is still bullish. The feeling that the Government of India is bound to do something effective to rescue the country from the economic doldrums is strong among the operators. It is to be hoped that they are right.

• • • •

Ten out of 14 State Governments have entered the long-term capital market, the four States that have kept themselves out being Assam, Bihar, the Punjab, and Jammu and Kashmir. Particulars of the States wanting to borrow and the details of their issues can be easily had from the advertisement appearing on page 1,203. It will be seen therefrom that the total amount sought to be raised by them is Rs. 47.50 crores. Since about Rs. 8.50 crores of maturing loans of five State Governments are offered facilities for conversion into the new loans, the net offtake of funds from the market will be of the order of Rs. 39 crores. If, however, all the State Governments exercise their right to retain subscriptions upto 10 per cent. in excess of the notified amounts, the offtake will be about Rs. 43 crores.

The money market has doubtless sufficient floating funds to absorb this offer in full. And the terms of the loans are not unattractive to institutional investors. The success of this borrowing programme of State Governments is, therefore, a foregone conclusion. Even the issue of the Communist Government in Kerala, it seems, will be fully taken up. Our enquiries go to show that there is no antagonism against its loan, even though the Communist Party has openly declared in its election manifesto that it does not believe in private ownership and has expressed itself in favour of the well-known principles of Marxism. Here is concrete evidence of the capital market's support for the Union Government's policy of co-existence with Communists even within the country!

All the ten State loans have a uniform maturity of 12 years. Only the Bombay State has come forward to break the monotony by offering an option to investors of subscribing to a 13-year loan. Apparently, it wanted to ease the problem of repayment in 1970, as it has already a loan of a little over Rs. 8 crores maturing in that year. This forethought on the part of the Bombay Government and its advisers is commendable.

Unlike in the case of maturities, there is a larger variation in yields, for, though the rate of interest is the same for all of them at 4½ per cent., their issue prices are in four categories. The Bombay Government alone accounts for two of them; its twelve-year loan is issued at Rs. 100 to yield 4.25 per cent. and the 13-year loan at a slight discount of As. 4, the yield on it being 4.26 per cent. The Governments of Andhra, Madras, Mysore, Rajasthan, U.P. and West Bengal are offering their loans at Rs. 99.50, the current and redemption yields on them being 4.27 per cent. and 4.30 per cent., respectively. The remaining three out of the ten borrowing States, that is, Kerala, Orissa and Madhya Pradesh, offer a slightly more favourable return; their issue price is Rs. 99, the current and the redemption yields being 4.29 per cent. and 4.36 per cent., respectively.

The major support for all these State loans will, we expect, be forthcoming from the State Bank and the Life Insurance Corporation. Another important source of support for them will be those Provident Funds which are not compelled by the Central Government to invest all their resources only in its loans. The other Indian Scheduled banks will also take sizable interest in them, but their share has invariably been less than that of the bigger institutional investors mentioned earlier. Having regard to the comfortable conditions in the money market, it may not be necessary for the Reserve Bank to go to the rescue of the State Governments this year.

An idea of the improvement in the money market can be had from a comparison of the latest position of Scheduled banks with that a year ago. As on 13th June 1958, the net deposits of banks aggregate Rs. 1,494.53 crores, as against Rs. 1,243.28 crores a year before, the increase over the year being Rs. 251.25 crores. Borrowings from the Reserve Bank are no more than Rs. 15.44 crores, as compared with Rs. 70.02 crores. On the assets side, the ratio of cash to deposits is lower at 7.78 per cent., though the actual balances are larger at Rs. 116.23 crores. Investments in Government securities have moved up from Rs. 334.88 crores to Rs. 484.85 crores, an addition of nearly Rs. 150 crores, resulting in a rise in their ratio to deposits from 26.94 per cent. to 32.44 per cent. In contrast to this, the advances and bills purchased and discounted have scarcely risen, their latest total being Rs. 874 crores, as compared with Rs. 872 crores, a fractional spurt of Rs. 2 crores. The ratio of bank credit to total advances is actually down from 74.77 per cent. to 61.08 per cent. In other words, out of an expansion of Rs. 251 crores in deposits, the Scheduled banks have been able to step up their credit to trade and industry by no more than Rs. 2 crores or a mere 0.8 per cent. Of the balance, they have added Rs. 15 crores to their till, put Rs. 116 crores in Government securities, and utilised about Rs. 55 crores to reduce their indebtedness to the Reserve Bank of India. There is then an addition of about Rs. 40 crores in money at call and short notice and balances with other banks in current accounts. The total of these two items stands at Rs. 68 crores, as against Rs. 30 crores on 14th June 1957. These funds, which must be taken into account in assessing the liquidity of the banking system, should help the banks to participate in the new State loans to a significant extent.

What has enabled the banks as a whole to report such a comfortable position is the negligible rise in their commercial loans and advances, which in turn is the result of forced contraction in the activities of the private sector. It is, therefore, quite pertinent to say that the gain in the monetary resources available to the public sector has been at the expense of the private sector. This is one more instance of the success of the Government's economic policies designed to transfer the resources of the private sector in its favour.

In saying this, we do not suggest that the capital market has become completely dry for the private sector. But what this sector can raise is only a fraction of what the Central Government has already drawn and the State Governments now propose to take up. Quite a few new issues of some well-known joint-stock companies are said to be waiting in the queue, pending the green signal of the Controller of Capital Issues. Prominent among these, it is learned, are the debenture issue of Guest, Keen, Williams, carrying interest at 6 or a little over 6 per cent., and ordinary right shares of Mahindra and Mahindra at par.

• • • •

As these lines appear in print, the Government's policy in regard to exports of sugar will have been announced. It may have even come into force through an Ordinance. The main features of this policy, as we understand it at the time of going to press, are as follows:

1. All exports are to be handled by a non-profit-making company to be formed by the Indian Sugar Mills' Association, with an authorised capital of Rs. 1 crore and an initial paid-up capital of Rs. 25 lakhs to be subscribed by all the sugar mills.

2. In view of the failure of production of sugar to come up to earlier expectations, the high level of domestic consumption now running at a rate in excess of production and the consequent fall in the anticipated stocks at the end of the current season, only 100,000 tons are to be exported, instead of 200,000 tons as first contemplated. Even of this 100,000 tons, only half—50,000 tons—will be allowed to be shipped up to December 1958.

3. Each mill will be directed to set apart 5 per cent. of its production for export.

4. Exports of only three fine grades are to be allowed.

5. The loss on exports is to be met by all the mills, but they are not to pass it on to consumers. A novel method of spreading this loss over all mills has been devised.

6. The amount of revenue which the Central and State Governments have to forgo is expected to exceed the value of foreign exchange earned on the exports.

7. Although the mills have given an assurance to the Government that they will not raise their selling prices unduly over the ruling rates, the risk of consumers being forced to foot the bill is great.

The non-ferrous metals market continues to rule firm and there has been a further rise in prices. As compared with Thursday last, tin has gone up by Rs. 3 to Rs. 149 per quarter. Similarly, zinc and lead have advanced by a rupee each to Rs. 67 and Rs. 68 per cwt., respectively. Copper and brass scraps have also staged an increase; the former is quoted today at Rs. 195 per cwt., as against Rs. 185, and the latter at Rs. 143, as against Rs. 138.

The continued firmness of non-ferrous metals must be attributed principally to fears of growing shortage of supplies in the coming months and rumours that the Government of India is contemplating to extend regulation of distribution order to cover imported lead, tin and zinc. The order, it will be recalled, now applies only to imported copper. In terms of this order, the purchase and sale of imported copper in different forms must be at a price not exceeding 3½ per cent. above the landed cost and no person shall acquire or agree to acquire copper except under and in accordance with a permit issued in this behalf by the Controller. The fears of a bigger shortage of non-ferrous metals supplies are based partly on the reported decision of the Government to extend the foreign exchange allocations for the current half-year to cover the next three months, that is, October-December, and partly on developments that have taken place lately in the world markets.

Of particular interest to the tin trade are the two notable decisions taken by the International Tin Council at its four-day session in Paris on the 20th inst. First, the Council decided that the Soviet Union should be approached to become a producer-member of the Council. Secondly, it agreed in principle to continue the 40 per cent. restriction on member-countries' exports during the fourth quarter of the year, though it postponed the decision about the level of permissible exports by producer-countries until the next meeting in London on 22nd July 1958.

The move to invite Russia to join the Council was a sequel to the need for ensuring stability in the world tin markets. The markets have all along been depressed, the price of cash tin in London remaining practically unchanged at the floor level of £730 per ton, thanks to the downward trend in consumption, especially in the U.S. Even the Council's continued extension of export controls and

(*Continued on page* 1235)

BUOYANCY IN SHARES KEPT UP

ALL-ROUND BUYING FERVOUR

(From Our Own Correspondents)

BOMBAY, *26th June*

THE share market continued to rule buoyant during the week under review also, with the wave of buying enthusiasm gathering momentum. Both speculative counters and cash scrips were keenly sought for. The main reason for the sustained buoyancy was the distinct change in the operators' sentiment. They would appear to be confident that, in the light of the serious foreign exchange position, the Government will do all it can to promote exports by reducing duties and/or subsidising exports. In fact, the Union Minister for Commerce and Industry announced in Naini Tal a few days ago that the Government would do its best to earn foreign exchange by promoting export of tea, jute goods, textiles and sugar, and explore a market for machine tools and other industrial products. He also disclosed that the Reserve Bank of India had decided to reduce the margin on advances to textile industry from 25 per cent. to 10 per cent., so as to make available more funds to the industry, and had instructed all scheduled banks accordingly. There were also rumours of devaluation as a step to boost up export trade. The expectations of an early increase in cement prices, rumours of bonus issues by some companies like Indian Irons and A.C.C. and the withdrawal of the dock strike in all ports, thanks to the intervention of the Prime Minister, were also bullish factors which pushed up prices. Another feature of the activity in the market was the sustained good investment demand for cash scrips.

In the steel section, Tata Ordinaries advanced from Rs. 184 to Rs. 186.75 and closed at Rs. 187.50. The new shares picked up over the week Rs. 2.50 to Rs. 184.50. Indian Irons shaded off early in the week from Rs. 22 to Rs. 21.84, but soon gathered strength to finish at Rs. 22.60.

Textile shares were again well favoured. Bombay Dyeings rose from Rs. 55 to Rs. 56 and, after a slight dip to Rs. 55.70, regained to close at Rs. 56.70. Centurys moved up from Rs. 440 to Rs. 447.25, but declined yesterday to Rs. 443. Today, however, they rallied to Rs. 449 at the close. Kohinoors provided a feature with a sharp rise of Rs. 16 to Rs. 274. Central Indias were unchanged at Rs. 94. Azam Jahis gathered Rs. 3.30 to Rs. 53.50. Edward Textiles were done Rs. 3.75 higher at Rs. 255. Finlays gained Rs. 5 to Rs. 273, Gokaks Re. 1 to Rs. 152 and Indu Ordinaries 40 nP to Rs. 9.72. Indore Malwas were unchanged at Rs. 110. Model Mills were picked up Rs. 3.75 higher at Rs. 168.75. Mysore Spinnings rose by 50 nP to Rs. 91.50, New Greats by Rs. 10 to Rs. 210 and New City Mills by Rs. 7.50 to Rs. 112.50. Osmanshahis were a shade quiet at Rs. 42, while Podars advanced by Rs. 10 to Rs. 145. Shree Niwas Cottons gathered Rs. 5 to Rs. 152. Simplex closed Rs. 8 higher at Rs. 179 and Standards Rs. 3.50 better at Rs. 420.50. Svadeshis gained ground from Rs. 185 to Rs. 193.75 and Swans from Rs. 365 to Rs. 376. Tata Mills gained over the week Rs. 3.25 to Rs. 42.25.

Bank shares were steady with a general rise in prices, which was more marked in some counters. Barodas gained Re. 1.50 to Rs. 117.50, while Central Banks were unchanged at Rs. 53.50. Their new shares rose by 20 nP to Rs. 58. Bank of Indias were maintained at Rs. 133.50, while their new shares were a shade better at Rs. 135. Punjab Nationals jumped by Rs. 5.50 to Rs. 62 and United Commercials by 40 nP to Rs. 61.40.

In the electricity group of shares, Ahmedabad Electrics were marked down by 30 nP to Rs. 94.70, while Bombay Suburbans were a fraction higher at Rs. 106. Surat Electrics rose by as much as Rs. 1.75 to Rs. 110.50, as also Tata Hydros to Rs. 118. Tata Powers moved up by Rs. 5 to Rs. 1,235 and Andhra Valleys by Rs. 6.25 to Rs. 1,143.75.

Sugar shares moved in consonance with the general trend of the market. Belapurs came up to Rs. 260 from Rs. 254 and finished at Rs. 259. Bhopal Sugars gained 24 nP to Rs. 22.24 and Changdeo Sugars 50 nP to Rs. 26.75. Phaltans advanced by Rs. 5.50 to Rs. 158, while Walchandnagars provided an exception with no change in price over the week at Rs. 285. In the cement group, Associated Cements gathered Rs. 2.25 to Rs. 158 and their new shares Rs. 3.50 to Rs. 151.50. Digvijay Cements closed Rs. 4 higher at Rs. 152.25, while Orissa Cements were placed 12 nP lower at Rs. 13.68. Ashok Cements dipped by 48 nP to Rs. 9.76. Jaipur Udyogs gained 60 nP to Rs. 13.64.

In the engineering and mining group, the upward trend in Alcock Ashdowns was maintained with a further rise of Rs. 2.50 to Rs. 267.50 this week. Tata Locomotives advanced from Rs. 173 to Rs. 175 before finishing at Rs. 174. Premier Constructions put on no more than a rupee to Rs. 202. Larsen and Toubros staged a spurt from Rs. 16.56 to Rs. 17.84. Mahindras were, however, unchanged at Rs. 19.40. Structural Engineerings had business at Rs. 217.50, as against Rs. 205 two weeks ago. Shivrajpurs were a shade better at Rs. 92, as also Indian Coppers at Rs. 3.40. B.B. Petrols were quiet at Rs. 2.08.

The end of the dock strike gave a boost to shipping shares. Scindias rallied from Rs. 17.88 to Rs. 18.52. Great Eastern Shippings advanced by no less than Rs. 1.48 to Rs. 24.56. Among automobiles, Premier Automobiles were quiet at Rs. 84, while Hindustan Motors were done 32 nP higher at Rs. 7.52.

In the miscellaneous section, Bombay Burmahs moved up from Rs. 565.50 to Rs. 871.50, but shaded off a little at the close to Rs. 569. The Partly-paids were marked down by Rs. 3.75 to Rs. 213.75. National Rayons were a little erratic, moving between Rs. 234.50 and Rs. 230.50 before closing at Rs. 232.25 with a loss of Re. 1 over the week. Their rights were done a rupee higher at Rs. 92. Gwalior Rayons were unchanged at Rs. 13.76. Tata Chemicals were steady at Rs. 16.56, while Hindustan Levers continued to attract attention and rose by 28 nP to Rs. 23.60. Dhrangadhra Chemicals had business Rs. 11 higher at Rs. 101, while Amar Dyes met profit-taking and lost a rupee to Rs. 117. Alembic Chemicals changed hands Rs. 3 higher at Rs. 158. Tata Oils gained Re 1.25 to Rs. 42.25. Wimcos staged a spurt from Rs. 174.50 to Rs. 184.50. Killick Industries moved up by Re. 1.50 to Rs. 143.75.

• • • •

Calcutta Stock Exchange

CALCUTTA, *24th June*

Steady conditions prevailed on the Calcutta Stock Exchange during the week under review. Contrary to expectations, the port workers' strike failed so far to impart any bearish tendency. This had been due to the fact that it had already been discounted in prices. Another favourable factor was the improvement in the situation in the Calcutta port and it looked as though calling off the strike was only a matter of time. The further cut in the British Bank rate to 5 per cent. also provoked the enthusiasm of operators. This led to the rumour that devaluation of the rupee was round the corner, although, on second thoughts, such a step was considered unlikely. For devaluation would only accentuate the country's economic difficulties. But for the anxiety regarding the reported suggestion to ban all imports of commercial items—this would definitely lower industrial production and increase unemployment—buying would have been more widespread. However, reports of the possibility of Mr. Morarjee Desai, the Finance Minister, negotiating a loan of $600 million with the U.S. Government during his forthcoming visit to Washington were encouragingly noted, as circumstances for this were considered propitious, in view of the U.S. Senate's passing of the resolution favouring long-term and expanded economic assistance to India. Yet another encouraging factor was the expectation of an increase in cement price. Early relief to the textile, tea and coal industries was also anticipated.

In textiles, Kesorams were unchanged at Rs. 10.75, while Cawnpores receded to Rs. 3.90 from Rs. 4.06. Dunbars were lower at Rs. 115.

In coals, Bengals at Rs. 248 were higher earlier, but declined towards the close to Rs. 244. Burrakurs closed at Rs. 21.25 after realising Rs. 21.50 earlier, while East Indians improved to Rs. 20.87 from Rs. 20.12. Pench Valleys at Rs. 20.75 put on an improved appearance.

Jutes continued to advance following prospects of increased demand for jute goods. It was also expected that mills would be permitted to rationalise fully and modernise production, with a view to reducing cost of production. The West Bengal Government has appointed a tripartite committee to study this subject. Anglo-Indias, at Rs. 161, added Rs. 9. Megnas moved up to Rs. 120 from Rs. 118. Ballys were asked at Rs. 162, as against Rs. 148 previously. Champdanys changed hands at Rs. 89.50. Unions picked up Rs. 3 to Rs. 126. Howrahs were raised to Rs. 16 from Rs. 15.25. Barnagores were firm at Rs. 91.

Engineering shares were taken at advancing rates. Indian Irons closed at Rs. 22.30 after opening at Rs. 21.83. Texmacos rose to Rs. 19 from Rs. 18.60 and Burn & Cos. to Rs. 340 from Rs. 335.50. Kumardhubis were better at Rs. 9.87, but Indian Standard Wagons were unchanged at Rs. 99.

In view of the postponement of the export auctions consequent on labour troubles in port, very few transactions were recorded in the tea section. East Indias were quiet at Rs. 18.87, as were Tezpores at Rs. 15, while Hantaparas gained one rupee to Rs. 112. Ranicherras changed hands at Rs. 15.62, as against Rs. 16.25 previously.

Miscellaneous industrials accounted for some features. India Steamships at Rs. 11.47 added a further gain. Electric Constructions were better at Rs. 11.31, as were National Tobaccos at Rs. 12.25. Sone Valley Cements were steady at Rs. 5.34. Orissa Cements spurted to Rs. 13.81 from Rs. 13.31. At Rs. 18.87, Indian Oxygens made further headway. Alkali and Chemicals were wanted at the improved rate of Rs. 15.19.

Madras Stock Exchange

MADRAS, *24th June*

The Madras Stock Exchange depicted a firm trend during the week under review. The firmness was aided by the statement of Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, that the Government will do its best to promote exports of tea, textiles, jute, etc., and the decision of the Reserve Bank of India to reduce the margin in respect of advances to textile mills from 25 per cent. to 10 per cent. Planting shares and selected textile scrips were in the limelight. Hardening of tea prices and expectation of better working results of coffee plantations provided additional support to planting shares. Textiles evoked good buying enquiries induced by the consideration that the reduction in margin would make available more money to mills and thus relieve, to some extent at least, the financial difficulties without their having to curtail production drastically. The State Bank was reported to have already reduced the margin in some cases. There was also hope of some early reduction in excise duty on cloth. The expectation that the Textile Inquiry Committee would recommend some interim relief favourably affected market sentiment. Sugar shares encountered investment support. Chemicals and engineering shares were also firm.

In the planting section, tea shares elicited good support. Haileyburias firmed up by 95 nP to Rs. 19.25. United Nilgiris advanced by 85 nP to Rs. 16.25. Devons rallied 60 nP to Rs. 18.10. Emerald Valleys strengthened by 20 nP to Rs. 7.10. Nonsuch improved by 38 nP to Rs. 22.50. Parksides gained 25 nP to Rs. 18.25. Blue Mountains were better by 12 nP at Rs. 3.24. Chandramalais and Neelamalais gained 10 nP each at Rs. 3.35 and Rs. 4.65, respectively. Alageswars were fully maintained Rs. 3.05, Coonoors at Rs. 20.50, Cottonads at Rs. 14.75 *cum-div.*, Talayars at Rs. 8.90 Woodcotes at Rs. 1.56 and Lucky Valleys at Rs. 9.50. Among coffee shares, Cowcoody hardened by 95 nP to Rs. 7.20. Consolidated Coffees were marked up by 70 nP to Rs. 26.50 and Rajendras by 60 nP to Rs. 11.60. Kumergodes rallied 32 nP to Rs. 10.00. Mysore Coffees were better by 7 nP at Rs. 3.45. Ouchterlonys gained 5 nP to Rs. 4.95. Anaparas rose by a like amount to Rs. 4.85. Among rubber shares, Woodlands were quoted 25 nP higher at Rs. 8.05. Velimalais and Tropicals gained 10 nP each to Rs. 5.60 and Rs. 19.45. Malankaras gathered 25 nP to Rs. 17.25. Pullangodes put on 4 nP to Rs. 1.78.

There was sustained buying in selected shares in the textile section. Radhakrishnas rallied Rs. 9 to Rs. 130.00. Coimbatore Spinning firmed up by Rs. 6.50 to Rs. 53.00. Janardanas hardened by Rs. 5 to Rs. 78. Rangavilas advanced by Rs. 3.25 to Rs. 62.00, Loyals by Rs. 2.50 to Rs. 35.50 and Madurais by Rs. 35 to Rs. 34.50. Rajalakshmis Cottons were fully steady at Rs. 134.00, as also Rs. 81.00. Buckinghams, however, were a shade easy at Rs. 167.00.

Among sugars and breweries, Mysores advanced Rs. 2 to Rs. 38.50, E.I.Ds gathered 30 nP to Rs. 28.10. Travancores were better by 51 nP at Rs. 10.76. Deccans were quoted 1 nP higher at Rs. 8.73. Andhras, Cauverys, and United Breweries were unchanged at Rs. 16.50, Rs. 90.50 and Rs. 215.00, respectively.

In the miscellaneous section, Chemicals and Cement shares received good support. Mettur Chemicals were marked up by 70 nP to Rs. 11.30 and F.A.C.Ts. by 75 nP to Rs. 6.75. Mysore Chemicals and Fertilisers advanced by 20 nP to Rs. 7.20. Travancore Chemicals put on 13 nP to Rs. 11.25, *cum-div.* India Cements moved up by Rs. 1.15 to Rs. 27.80. Dalmia Cements gathered 45 nP to Rs. 10.80. Andhra Cements gained 25 nP to Rs. 11.75. Orissa Cements gathered a like amount to Rs. 14.00. Textools hardened by Re. 1.50 to Rs. 183.00. Mysore Papers put on 40 nP to Rs. 17.00.

BHADRA PROJECT

Considerable progress, it is stated, has been made in the construction of the Rs. 24-crore Bhadra multi-purpose project (started in 1947-48), consisting of two main canals and two power houses. The dam has risen to about 102 feet above the river bed, more than half of its total height. The water stored up to the lowest level of the dam so far completed is already feeding the left canal; it has been used for irrigating 6,000 acres. On completion, the left bank canal will serve an area of 17,894 acres. Construction of the right bank canal has been undertaken; its two channels will serve an area of 156,000 acres. It is proposed to construct two power houses, one on the right bank of the river and the other on the left bank. Out of the 33,200 kw. of installed capacity under this project, about 12,000 kw. is expected to become available by the end of the second Plan period.

HIGHER YIELD BY ROTATION

A cotton crop grown after a fallow is found to give the best yield, followed by cotton after *guara*, berseem or gram, in experiments in the Punjab. Cotton after wheat gave the lowest yield. The cotton crop in the rotation wheat-fallow-fallow-cotton gave 16.5 maunds of cotton per acre, and wheat-*guara*-fallow-cotton 16.4 maunds. Cotton in wheat-fallow-berseem-cotton gave 15.8 maunds of cotton, while in wheat-fallow-gram-cotton it gave 14.5 maunds. In the wheat-fallow-wheat-cotton rotation, the yield of cotton was 12.7 maunds.

NEWS IN BRIEF

THE Government of India has decided to establish a coal-mining machinery plant and an optical glass plant at Durgapur with an investment of about Rs. 32 crores.

A rock salt mine has been discovered in the village of Barheta in Narsinghpur tehsil by the Natural Resources Department of the Madhya Pradesh Government. This is the first rock salt mine to be discovered in the country.

The State Trading Corporation of India has signed a contract with Intertrade, a State trading organisation in Yugoslavia, for the export of about 50,000 Indian sewing machines valued at over Rs. 30 lakhs. The first shipment of 8,000 machines is likely to take place next month from Calcutta.

The work relating to the Commission of Inquiry into the affairs of Dalmia concerns has been transferred from the Department of Economic Affairs in the Ministry of Finance to the Department of Company Law Administration in the Ministry of Commerce and Industry.

Lac, other than brood lac and any lac containing living insects, has been brought under control for export purposes. Applications received for their export will be licensed on merit. No application fee will be charged. The export of brood lac and any lac containing living insects will continue to remain prohibited.

The Government of India has sanctioned a scheme of subsidy (of Rs. 500 per ton) on tinplate used in the manufacture of the "open top sanitary cans" for the fruit preservation industry with effect from the 19th inst. Accordingly, the Metal Box Company (India) has been authorised to make supplies of such cans to established canners at the subsidised rates.

The Central Sales Tax (Second Amendment) Bill, 1958, has been referred to a Select Committee of the Lok Sabha. Public bodies, associations or individuals desirous of submitting memoranda on the Bill for the consideration of the Committee are required to send 45 copies of each memorandum so as to reach the Secretary, Lok Sabha Secretariat, Parliament House, New Delhi, on or before 15th July 1958. The Committee will meet next on 2nd August 1958.

The Government of India has decided to allow rebates of customs and Central excise duties paid on raw materials for the manufacture of fatty acids, disinfectants and antiseptics, and hurricane lanterns exported from India. Further, the existing rates of drawback on the export of art silk, roofing felts and crown corks have been revised. Certain changes have also been made in the existing schemes of copper dusting preparations and embroidered goods.

Production of lead and zinc ores in India during the first quarter of 1958 was 23,694 tons, as compared with 24,121 tons in the preceding quarter and 25,242 tons in the corresponding period last year. The entire production of lead and zinc ores was from the Zawar mines of Rajasthan. Lead and zinc concentrates recovered from the ores during the first quarter of 1958 were 1,170 tons and 1,546 tons, as against 1,253 tons and 1,850 tons, respectively, in the previous quarter.

The Government of India has decided that the procedure for export from India of articles under claim for rebate of duty on excisable goods used in their manufacture should be extended to cotton flannel motor car dusters as well. It is already applicable to ready-made apparel, tents, sugar products, cotton bags, umbrella cloth, *chaddars*, pillow cases, table covers embroideries, laces, tarpaulins, mosquito nets, ground sheets and cotton sola hats.

The current economic situation in the country in relation to industrial development will be discussed by the Central Advisory Council of Industries when it meets at New Delhi on 21st July. The Union Minister for Commerce and Industry and Chairman of the Council, Mr. Lal Bahadur Shastri, will preside. The Council will review industrial production, price trends, the present foreign exchange shortage and its impact on industrial production. It will also discuss reports of the Development Councils for different industries.

A Government of India delegation led by Mr. K. M. Sahni, Joint Secretary, Ministry of Steel, Mines and Fuel, left New Delhi for Bucharest on the 21st inst. to negotiate with the Rumanian Government the setting up of the first oil refinery in the public sector. The refinery, which will be located in Assam, will be one of the two plants to be built under the public sector. The other refinery will be set up at Barauni in Bihar. The delegation will hold negotiations on the basis of an offer made by the Rumanian Premier during his visit to India in March last. It is expected to stay in Rumania for about a fortnight.

Discussions on the avoidance of double taxation between the delegations of the Governments of Switzerland and India were held at Berne from 16th to 21st inst. An agreement covering avoidance of double taxation in respect of air enterprises of one country operating in the other has already been initialled. This agreement, which is to be signed at New Delhi shortly, will be applicable to taxation payable for aircraft operation as in the financial year 1957-58. Preliminary discussions on other points have been concluded and it is expected that further discussions thereon will be resumed later in the year.

As a result of the National Malaria Control Programme started in April 1953, the incidence of malaria has declined by 66 per cent. in the past three years, the figure for 1956-57 being 21 million, as compared with 63 million in 1953-54. The programme covered a population of 19.53 million in 1956-57, as against 13.72 million in 1953. With effect from 1st April 1958, the continued control programme has been converted into one of eradication of malaria, covering the entire population of the country in about six years. It aims at reducing the parasite reservoir in human beings to the extent of preventing resumption of local transmission. The estimated cost of the eradication programme during the current and next plan period will be about Rs. 63.24 crores, whereas a control programme for the same period is expected to cost about Rs. 52.02 crores. The DDT plant at Delhi, jointly sponsored by the U.N.I.C.E.F., the W.H.O. and the Government of India, is proposed to step up its existing annual production capacity from 700 tons to 1,400 tons. The second DDT plant with an annual capacity of 1,500 tons is under construction at Alwaye, Kerala State.

From Abroad

The British Government has removed all restrictions on the shipping industry's sources of raising capital in the U.K.

Ceylon and the U.S. have entered into a P.L. 480 agreement under which the U.S. will sell to Ceylon $4.2 million worth of rice. This amount includes a part of the cost of transportation.

Action on the Tariff Commission's recommendations for the increase in lead and zinc tariffs has been postponed by President Eisenhower until the Congress finally decides on the Administrator's subsidy plan for these and other minerals.

Russia has placed an order for a British gas turbine with Messrs. Ruston and Hornsby. The order is believed to be the first to be placed in the U.K. It will be mounted on a special rail wagon to provide a mobile electrical generating plant.

The British Prime Minister announced in the House of Commons the other day that one of the subjects which he discussed with the U.S. and Canadian officials during his recent tour related to the provision of enough credit to expand world trade.

A survey to assess the national income and balance of payments position is expected to be undertaken by the Malayan Federation Government. The survey will be administered by a Canadian U.N. expert who will be arriving there shortly.

The Government of Spain has imposed a surcharge of 1,500 pesetas (£12-16) on a metric ton of metallic zinc produced in the country. The surcharge is intended to alleviate the economic crisis in the Spanish zinc mines. It is provisional and will be revised every month.

The Chrysler Corporation of the U.S. is arranging for a credit of $150 million with about hundred banks in the country in anticipation of possible short-term credit requirements over the next few years. The agreement will become effective in July and last till 30th September 1961.

The new colour floodlighting system at Niagara Falls was switched on at a ceremony on the 20th inst. The system which is entirely British was designed and supplied by the General Electric Company through its Canadian associate company, the Amalgamated Electric Corporation. The order was secured by the U.K. Company in September last against strong U.S. competition.

A plea for the upward revision in import duties on artificial silk yarns from 12½ per cent. to 27½ per cent. under the British preferential tariff has been put forward by the Australian manufacturers to the Tariff Board. The manufacturers have also pleaded for the fixation of the most-favoured-nation rate at 40 per cent. and the general rate at 45 per cent.

The U.S. Agriculture Department has concluded an agreement with Vietnam under which the latter will purchase $6 million worth of U.S. tobacco. An amount equal to 25 per cent. of the proceeds received in payment for the tobacco will be set aside for loans by the Export-Import Bank to the U.S. and Vietnamese business firms.

The request of the Malayan Government for American financial assistance is being carefully considered by the U.S. Government. Malaya's development plan for 1956-60 envisages a total capital expenditure of about $M1,358 million with an increase of $M90 million in the annual recurrent expenditure. It is said that recession in the rubber and tin industries and the difficulty of raising loans in the open market have compelled the Government to slow down the rate of capital expenditure.

The U.S. Maritime Administration has contracted with the National Academy of Sciences—National Research Council—to conduct a series of studies in all fields of interest to shipping such as sea transport, ship design, power and propulsion systems, and navigational safety and harbour facilities. The Academy Research Council scientists will recommend programme to continue progress in each field, with emphasis on fields requiring priority action.

PERSONAL

MR. E. G. Norris, Deputy High Commissioner for the United Kingdom, in Bombay, left for London on the 20th inst. He is expected to return to India in October next.

Mr. Martin Arostegui will be Director of the United Nations Information Centre to be established in Rome. Mr. Arostegui will take up his new duties towards the end of June.

Mr. W. A. W. Clark, Deputy High Commissioner for the U.K. in India, left New Delhi for London via Bombay on the 19th inst. for consultations. He is expected to return to Delhi in about a month's time.

Mr. G. S. Jabbi, Deputy Chief Inspector of Mines, has been appointed Additional Chief Inspector of Mines in India, a post newly created in terms of the reorganised Department of Mines.

Mr. John V. Lund, Public Affairs Officer of the United States Information Service, Bombay, will be proceeding to New Delhi early next month to take up his new appointment as Deputy Director of Public Affairs of the U.S.I.S. for the whole of India

A survey by the research centre of the University of Michigan has revealed that more than half of America's families now own their own homes. The number of home-owners increased by about two-fifths between 1949 and 1957. Four out of five who bought homes in 1956 did so on credit by making a down payment and incurring mortgage debt which they pay off in monthly instalments. Most of the home buyers are workers in the middle income bracket, earning an average of about $5,000 a year.

Iron ore concrete (that is, concrete mixed with iron ore instead of stone in order to increase the volume weight and thereby the protection against radiation), has been used to a large extent in Sweden's new atomic research station at Studsvik, south of Stockholm. The station is now in its second building stage. The concrete of this type has been used for the 90 cm. thick basement flooring in the hall housing the R2 research reactor and for the 180 cm. thick walls of the reactor pool which is 9 metres high. The reactor building proper, which is 24 metres high, has a framework of prestressed concrete pillars and girders. The walls between the pillars (18 cm. thick), have been sliding-form moulded, the exterior insulation being 10 cm. mineral wool mats and the cladding corrugated light-metal sheets.

The Scandinavian Airlines System has signed a contract for a further six Caravelle jet airliners in Paris recently. Their value is £6.9 million ($19.5 million). This will bring the S.A.S. Caravelle fleet up to 12 units. In addition, the Company has option for a further 13 aircrafts of this type. The first S.A.S. Caravelle, *Finn Viking*, is to be delivered early next year. It is shortly to make its maiden flight. The S.A.S. is to operate the Caravelle aircraft on its European routes and on the services to the Near and Middle East. The travel time between Stockolm and London will be cut from 5 hours to less than 2½ hours and between Stockholm and Rome from 7 hours to 3½ hours.

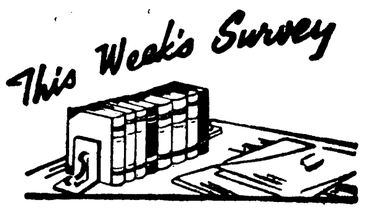
"COMMERCE" 1933

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *1st July*

Reserve Bank for India

The memorandum on the Reserve Bank scheme by Mr. S. N. Pochkhanawala, Managing Director, Central Bank of India, Bombay, referred to in our banking section last week, has been issued. It is divided into two parts. The first explains how indigenous banks stand to suffer in view of the privileges intended to be given to the Imperial Bank of India, and the second unfolds a scheme to convert the existing Imperial Bank of India into (1) The Imperial Reserve Bank and (2) The Imperial Bank of India, Limited. This memorandum contains his personal views and these have been based on the assumption that a Bill somewhat similar to the last Reserve Bank Bill will be placed before the Select Committee. . . . He has also yielded to a request to formulate a scheme whereby reforms pertaining to finance under the new constitution, as contemplated, may be carried out at a minimum of expenditure and with the least difficulty, without the establishment of the new Reserve Bank and consequent additional burden on the taxpayer. Banking business in India, as constituted at present, comprise (1) Imperial Bank, (2) Foreign Exchange Banks, (3) Indigenous Joint-stock Banks, (4) Co-operative Banks, and (5) Sowcars, Multanis and Chettiars. When the Reserve Bank is set up, the banking group will embrace these five with the Reserve Bank at the top. Thus, with the advent of the Reserve Bank, indigenous banks will be relegated to a more subordinate position. The Reserve Bank acting as the Central Bank, will command the currency and note issue; will be a depository of Government funds; will control credit and act as the bankers' bank. If it is allowed to receive deposits at interest, make advances to the public and discount bills of parties other than banks, the business of both the Imperial and indigenous banks is bound to suffer.



FISCAL CONCESSIONS IN U.K. AND WEST GERMANY

THE recent decisions of the U.K. and the West German Governments to provide fiscal incentives to taxpayers reflect a change in the official attitude towards the economic situation in the respective countries. No longer are the Governments prepared to continue restrictionist policies in the name of anti-inflationary drive. Apparently, they are convinced that the time has arrived for giving, rather than withholding, a fillip to the economy. In W. Europe, as a whole, the authorities have for some time now watched with concern the growing signs of a certain slackening in economic growth. The U.N.'s *Economic Survey of Europe in 1957* noted that the 4 per cent. growth of total output in 1957 in W. Europe, as a whole, "was about the same as in 1956, so that for two consecutive years, expansion has been slower than in the period 1953 to 1955." It warned that, in view of the developments in the U.S. and the continued weakening of the position of primary exporting countries, "it is clear both that a continued slowing down of expansion in W. Europe (not to speak of an absolute decline) might have a very serious impact on the world economy and that an early speeding up of W. European expansion will have to come from the economy of W. Europe itself." In the light of this observation as well as of the need for a stimulus to the economy which has been felt since the beginning of the year 1958, it is hardly surprising that there has been a steady trend towards the lowering of interest rates and providing appropriate fiscal concessions.

Fiscal relief, now announced by the U.K. Government, takes the shape of more liberal initial allowances. Thus, initial allowances for plant and machinery are being raised from 20 per cent. to 30 per cent. and for industrial building from 10 per cent. to 15 per cent. At the time of the last budget, the Government had undertaken to raise the allowance by a quarter of the previous levels. It has now agreed to raise it by one-half of these levels so that the cost of the new concession is £46 million in a full year, as against £23 million contemplated by the original proposal. The concessions come into effect from 15th April. Announcing them, Mr. Heathcote Amory, the British Chancellor of the Exchequer, said: "I have come to the conclusion that it would be well to make some increase in the practical encouragement I sought to give to industrial investment by improvements in initial allowances." Naturally enough, the Federation of British Industries has welcomed these concessions, though it feels that there is some doubt "about the extent to which this move will be effective at a time when demand for the product is tending to fall"; it favours the restoration of investment allowance. A similar view has been expressed by the Labour Opposition. Thus, Mr. Harold Wilson welcomed the concessions but argued that it would have been better to reintroduce investment allowances.

Be that as it may, it is noteworthy that not only industry but labour has welcomed the concessions. It is true that a mere increase in initial allowances cannot go far, as the economy is still subject to some of the monetary controls designed to check inflation. The cost of borrowing is still high, despite the recent reduction in the Bank rate to 5 per cent. Further, the capital issues control has been kept intact. Again, the restrictions on bank credit have not been relaxed to any significant extent. Nevertheless, it is significant that, at least in respect of one industry, namely, shipping, the authorities have decided to relax restrictions on the raising of fresh capital. The U.K. Minister for Transport, Mr. Harold Watkinson, announced that all Government restrictions on the shipping industry's sources for raising capital had been removed and hoped that this step would place the industry in a better competitive position. Explaining the effect of this relaxation, the Treasury authorities revealed that British shipping companies wishing to raise capital in the U.K. would still have to apply through the Capital Issues Committee but they would find approval of bank loans for shipbuilding programmes easier to obtain.

Even more striking than the fiscal concessions in the U.K. are the tax reliefs passed last week by the Lower House in W. Germany. Tax concessions in W. Germany involve a loss of £175 million to the Treasury, of which the Federal Treasury will bear half and the ten State Treasuries the remainder. The new Tax Bill, passed by the W. German Lower House, raises the number of tax-exempted gainfully employed people from 7 million to 9.8 million. The tax-free limit for married people is now £300. Income-tax in Germany for married couples will in future be: income £425-tax £28; income £840-tax £112; income £1,700-tax £305; income £2.500-tax £550; income £4,200-tax £1,780; there is a ceiling of 52 per cent. on tax on incomes of £5,000 and above. The profits tax on distributed profits has been reduced from 30 to 15 per cent., though the tax on undistributed profits has been increased from 45 to 51 per cent. The concessions now announced are stated to be the sixth reduction in German taxation in the last ten years.

The lead given by the U.K. and W. Germany is significant for the reason that these two countries, together with France, account for some two-thirds of W. Europe's gross national product and about 40 per cent. of intra-W. European trade. It is not, therefore, unlikely that other W. European countries will soon fall in line with the U.K. and W. Germany. France is, of course, faced with complicated political problems. But its economy is not in bad shape. And once it sets its political house in order, it too may turn its thoughts to giving a fresh fillip to its economy.

WORKERS' PARTICIPATION IN MANAGEMENT

The commendably candid views expressed by Mr. V. V. Giri, Governor of Uttar Pradesh and veteran trade unionist, on some of the labour problems of the day, should provide food for thought to all those who are associated with, or have interest in, the labour movement in India. Mr. Giri did well to emphasise, while inaugurating an Industrial Workers' Camp at Ranikhet, that rights and duties were only two sides of the same medal and that the former should not precede, but only follow, the latter. A firm believer in the art of persuasion that he is, Mr. Giri felt that so long as workers did not consider strike as the first weapon in their armoury, they could, through their organisations, persuade the employers and the Government to improve their economic conditions—wages, hours of work, housing and other reasonable requirements. But do the workers or their so-called representatives consider strike as the last resort? We wonder whether in the light of what has happened recently in Jamshedpur and other places and what is still happening in the country's major ports, organised labour in India can honestly answer the question in the affirmative.

Mr. Giri has no illusions regarding the scheme for workers' participation in management. He is not averse to associating labour in management. Only he is not very optimistic about its success in the current context in India. He enumerated certain prerequisites which should be fulfilled before the scheme could bear fruit. In the first place, there must be a strong trade union organisation ready and willing to take a responsible view of the matter. Secondly, there must be on the staff of these well organised unions a full complement of technical experts who can fully understand the technique and finances of industry, who are in a position to evaluate scientifically the demands of workers and are ready and willing to discuss, on equal terms, with technical advisers of employers, the solution of problems. "Without these," he asserted, "all talk of workers' participation in management will be moonshine and not in the best interest of the working class." He was also of the view that even without participation in management—provided workers' unions were well organised and disciplined and had integrity—employers would not only realise that it was their duty but also in their own interest to discuss any matters with workers and come to just decisions. The time had come, he added, when workers should organise themselves into strong unionism on the "basis of one union for one industry." He also urged the creation of joint standing machinery at all levels in every industrial undertaking "so that representatives of workers and employers may sit at a common table as equals, and iron out differences."

Mr. Giri felt that there should be an effort on the part of workers and employers in every industry, be it in the public or private sector, to come together and fix targets of production and methods of running the industry at all levels in the proper way. They should decide that, for the next five years, both partners in industry should think of greater production, both qualitatively and quantitatively, and share the profits of industry equally and reasonably, keeping in view the interest of consumers and the community. If these principles are well digested and understood by both employers and workers, the stage, as he pointed out, may be well set for establishing enduring industrial peace.

MORE U.S. AID TO INDIA

With the signing of the agreement covering the Rs. 35.70-crore ($75 million) credit from the U.S. Development Loan Fund between the Governments of India and the U.S. early this week, the formalities regarding the utilisation of the American loan assistance of Rs. 107.10 crores ($225 million) announced in March have been completed; the agreement covering the Rs. 71.40-crore ($150 million) loan from the Export-Import Bank was signed on the 12th inst., the details of which were given in our last issue (*vide* page 1154). The Development Loan Fund credit of Rs. 35.70 crores, it is stated, represents one-quarter of the Fund's capital for the current year and is the largest ever made by the Fund. Of this amount, railway development accounts for Rs. 19.04 crores ($40 million), road transport equipment such as truck and jeep parts or assembled vehicles for Rs. 11.90 crores ($25 million), cement plants machinery for Rs. 2.38 crores ($5 million), and jute mill equipment for Rs. 2.38 crores ($5 million). The bulk of the railway loan will be spent on the purchase of steel for goods wagons and locomotives and about Rs. 1.90 crore ($4 million) has been earmarked for structural steel for the repair, maintenance and construction of railway bridges.

Simultaneously with the above agreement, the Governments of India and the U.S. have signed another agreement which provides for the supply by the U.S. of Rs. 27.13 crores ($57 million) worth of agricultural commodities under a new Public Law 480 agreement; the previous P.L. 480 agreement, it will be recalled, was made in August 1956 and provided Rs. 151.36 crores ($360 million) worth of commodities to India. Under the new agreement the U.S. will sell to India wheat worth Rs. 17.61 crores ($37 million), maize worth Rs. 2.38 crores ($5 million) and sorghum worth Rs. 1.90 crore ($4 million), besides providing Rs. 5.24 crores ($11 million) to finance 50 per cent. of the cost of ocean transportation. As under the 1956 agreement, the Indian Supply Mission in the U.S. will purchase most of the commodities in the open market, using purchase authorisations issued by the U.S. Government. The commodities will then be shipped to India and sold. The U.S. will lend the Government of India 60 per cent. of the rupee proceeds (Rs. 16.28 crores) for use in economic development, the balance of Rs. 10.85 crores being kept by the U.S. for its own use in India.

A welcome feature of the $75-million Development Fund loan and the new P.L. 480 agreement is that they do not affect the country's foreign exchange position, since the repayment by the Indian Government will be in rupees. The gesture of the U.S. to supply more agricultural commodities to India will be widely appreciated, inasmuch as it has come at a time when India is confronted with not merely critical foreign exchange position but also an acute shortage of foodgrains, thanks to poor crop harvest in 1957-58. The aggregate production of foodgrains during the current season is estimated at 66.7 million tons, representing a drop of 2.0 million tons as compared with the previous season. The shortage, aggravated by alleged hoarding and speculation by traders, has led to a marked rise in prices of foodgrains. Surely, the supply of about 700,000 tons of foodgrains (wheat, maize and sorghum) by the U.S. under the new P.L. 480 agreement, as well as the import by the Government of India of 500,000 tons of P.L. wheat out of the existing commitments as an interim arrangement, will go a long way towards easing the food situation, besides helping India in its economic development programme. In this connection, it is comforting to be told by the Union Food and Agriculture Minister that the Central Government has sufficient stocks of foodgrains—largest in the last many years—to meet any emergency. According to him, the Government has 1,672,000 tons of foodgrains, comprising 1,057,000 tons wheat and 615,000 tons rice.

NUCLEAR REACTOR FOR JAPAN

An instance of Britain's desire to share with other countries the secrets of nuclear power development for peaceful uses, even at the cost of considerable commercial advantage to itself, is provided by the agreement recently entered into with the U.S., under which the former will make available to the latter all the information concerning Calder Hall. Britain, which stands at the forefront of other nations in the field of nuclear science, has shown considerable readiness to share the fruits of its expert knowledge and unique experience in the commercial utilisation of atomic power. Thus, it concluded, on the 16th inst., a ten-year agreement with the Government of Japan which would enable the latter to buy from Britain power and research reactors together with the nuclear fuel necessary for their operation. It also provides for the exchange of unclassified technical information and for the possibility of assistance to Japan in the construction of plants for manufacturing fuel and processing used fuel.

This is the second such agreement signed by the British Government. The first, with Italy, was concluded in December 1957. The immediate practical significance of the latest agreement is that it provides a suitable intergovernmenal "umbrella" for a contract for a British nuclear-power station which is expected to be awarded before the end of the year.

The agreement marks the clumination of a series of negotiations between the Japanese nuclear energy mission sent out to Britain early this year by the Japan Atomic Power Company, an industrial group formed by Japanese power undertakings and associated firms, and the U.K. Government. It indicates that Japan has decided, after thorough investigation and expert study, that the Calder Hall type reactor is the one that is best suited for general purposes. An earlier mission from Japan, the Ishikawa mission, after investigating the question of the suitability for Japan of the natural uranium graphite-moderated reactor from Britain, had declared that, if the operation of the Calder Hall atomic power plant proved satisfactory, it would be one of the reactors deemed appropriate for import. There were two problems peculiar to Japan to be taken into consideration in the construction of nuclear reactors. One was the problem of earthquakes, frequent in Japan. The other was the question of safety of the reactors. Discussions with nuclear experts in the U.K. led to the conclusion that, if the graphite pile is sufficiently supported by exterior supporting structures inside the reactors and if the pressure vessels and heat exchanges were firmly tied to the shielding concrete structure, the earthquake-resistant design could be achieved without impairing the reactor economics. As regards safety of the reactor, the Japanese mission was convinced by explanations based on experiment and calculation that, by installing the emergency shut-down system and other back-up devices in preparation for the worst, the safety of the plant could be ensured. Specifications of the requirements of the nuclear power plant were issued in February last. Four British nuclear consortia are already preparing tenders for the power station contract due to be submitted by the end of July.

Japan also signed, on the same day, a ten-year agreement with the U.S. which provides for the supply of 2,700 kilograms of enriched U-235 for fuelling Japanese research, experimental and power reactors. It supplants the earlier Japan-U.S. atomic energy agreement, signed in 1955, under which Japan constructed its first 50-kilowatt research reactor. The new agreement also provides for the operation of a larger 10,000-kilowatt Chicago Pile No. 5 research reactor now being constructed by Japan as well as planned construction of a 150,000-kilowatt nuclear power plant.

Both these agreements, which are good examples of international technical co-operation in the development of peaceful uses of atomic energy, are significant in another respect too. They contain safeguards, modelled on the statute of the International Atomic Energy Agency, to ensure that the material and equipment supplied will not be used for military purposes.

ART SILK INDUSTRY

The Tariff Commission is currently examining the question of continuing protection to the artificial silk and cotton and artificial silk fabrics industry beyond 31st December next; a public enquiry into the question was held in Bombay on the 17th inst., Mr. C. Ramasubban, Chairman of the Tariff Commission, presiding. The industry has pleaded for an extension of the protection period by another five to ten years with effect from 1st January 1959 at increased rates of protective duty. The plea is based on the ground that the industry has not yet consolidated itself, that raw material supplies are inadequate, and that there is still keen foreign competition in price, especially from Japan.

Art silk fabrics, it will be recalled, were first subjected to protective duties in 1934 under the scheme of protection formulated for the cotton textile industry. Following this action, the industry has grown steadily in the past 25 years. Although the Government discontinued protection to the cotton industry from 1st April 1947, it continued the protective duties on art silk fabrics. The former Tariff Board undertook the first enquiry into the industry in 1949 and recommended protection up to 31st March 1951 at the then prevailing rates of duty. This recommendation was accepted by the Government. The period of protection was subsequently extended up to 31st March 1953 as a result of the second enquiry and later up to the end of 1955. The third enquiry was held in 1955 and, on the basis of the suggestion made by the Commission, the Government continued protection up to 31st December 1958.

Since the last enquiry by the Tariff Commission in 1955, the art silk industry has expanded considerably. The number of powerlooms engaged in the manufacture of art silk fabrics now stands at 52,500 (including 8,000 looms which are not registered with the Textile Commissioner), as against 37,727 in 1955. The number of handlooms producing art silk and cotton and art silk mixed fabrics, however, has gone down from 150,000 three years ago to 96,132 at present. The decline is an indication that the very structure of the handloom sector is highly uneconomic. The most effective solution to this problem lies, as this journal has so often stressed, in the conversion of handlooms into powerlooms, so that the production operations will be mechanised, thereby leading to a rise in output, improvement in quality and reduction in cost of production. Be that as it may, more than 80 per cent. of the powerlooms weaving art silk fabrics are installed in Bombay and a little less than 10 per cent. in the Punjab, the balance being dispersed in other States. Among the handlooms, the State of Madras alone accounts for nearly 50 per cent., U.P. 17 per cent., Bihar 10 per cent., Orissa 6 per cent. and other States for the rest.

Following the increase in the number of powerlooms, the production of whole or mixed art silk fabrics has registered a notable expansion. The total quantity of fabrics that actually came off the looms in 1957 was 279 million yards. Although this quantity is lower than the previous year's total of 296 million yards, it compares very favourably with 180 million yards in 1954. As against this level of output, the annual demand is estimated at 300 million yards now and at 350 million yards in the next three years. Alongside the increase in output, the quality of fabrics produced is also said to have improved. Since 1955, the industry claims to have made considerable improvements in the texture, finish and design. Indeed, it is even claimed that the domestic fabrics can withstand competition in quality from similar imported fabrics.

It is gratifying to be told by the Tariff Commission's Chairman that the individual units in the industry are conscious of the need for research and that the Silk and Art Silk Mills' Research Association, Bombay, has been formed to cater to the research and developmental needs of the industry. The Association's laboratory has commenced work from January 1958. In addition to a pilot plant, as well as research and testing laboratories, the Association is making arrangements to start a technical college for imparting training in the technology of silk and man-made fibres leading to under-graduate and post-graduate courses.

The principal raw material required for the manufacture of art silk fabrics is viscose yarn, acetate yarn and staple fibre yarn. There are at present four units producing viscose and acetate yarn with an aggregate capacity of 33.90 million lbs., as against three units with a capacity of 13.6 million lbs. in 1954. Actual production in 1957 amounted to 25.18 million lbs., as against 11.58 million lbs. in 1954. During the first quarter of 1958, 7.58 million lbs. of yarn were produced. The existing four units have been allowed to increase their capacity by 14.4 million lbs. Four more units have been licensed for the manufacture of viscose rayon yarn and one new unit for acetate rayon yarn. One of the new units for viscose rayon yarn will also manufacture viscose staple fibre. It is expected that, by the end of 1960, there will be seven units manufacturing viscose yarn, with a total capacity of 68.3 million lbs. There will also be one unit manufacturing acetate yarn with a capacity of 4 million lbs. It is not certain whether the second unit licensed for acetate yarn will come into production before 1960. In 1954, there was one unit manufacturing staple fibre and even today there is only one. It had a capacity of about 10 million lbs. which has been increased to 32 million lbs. a year. Actual production rose from 6.9 million lbs. in 1954 to 12.58 million lbs. in 1955, 17.42 million lbs. in 1956 and 17.65 million lbs. in 1957. Production of this unit during the first quarter of 1958 was 6.07 million lbs.

THE CENTRAL ZONAL COUNCIL

The Central Zonal Council, which met last week at Naini Tal, is one of the Four Zonal Councils that were set up following the reorganisation of States. The object of these Councils, as is well known, is to enable the contiguous States within a zone to find common solutions for a number of inter-State problems, administrative as well as developmental. The States are not mutually exclusive components in a Federation; they are part and parcel of an organic entity, namely, the nation. Naturally enough, the Zonal Councils have sought to emphasise this basic bond of unity among the States, as a prerequisite for the healthy progress of the nation. Seldom was such co-operative endeavour so essential as now when the country is faced with many grave challenges.

It is against this background that one must assess the problems of the Central Zonal Council. Band together in the Central Zonal Council are two States, namely, Madhya Pradesh and Uttar Pradesh. Two of the biggest units of the Republic, they cover a population of over 89 million and an area of about 280,000 sq. miles. The Union Home Minister, Mr. G. B. Pant, inaugurating the meeting of the Central Zonal Council, stressed particularly the food problem within the zone. Alluding to the drought and heat-waves which recently threatened North-Western India, he said that they were bound to affect adversely the food production in the region. He called for earnest efforts to ensure adequate water-supply in these drought-affected areas of the zone. As Mr. Pant pointed out, there is vast scope for improving the food supply by using improved methods of cultivation. There is, of course, the need for assuring a sufficient supply of water. In this connection, he rightly emphasised the importance of stimulating local efforts at the village level in order to extend minor irrigation works. Mr. Pant also did well to stress that no real or lasting improvement could be made without the willing and understanding co-operation of the farmers themselves.

Proceeding, Mr. Pant pointed out that U.P., M.P. and other contiguous areas had a common terrain and the texure of the soil was similar. In this connection, he put forward a very notable suggestion, namely, to have common agencies for conducting research on land problems and animal husbandry, soil analysis and erosion control. He then referred to the transport problem of the two States. He particularly stressed the need for opening up means of communication in Madhya Pradesh, especially Bhundelkhand region and the hill areas. After all, as Mr. Pant himself pointed out, the development of transport and communications implies no heavy draft on the foreign-exchange resources. The problem deserves to be solved as early as possible because not only will it add to the facilities for movement of food but also make good the regional disparities in development.

Another problem confronting the two States is the dacoit menace. Although much has been done to counter it, Mr. Pant warned against any complacency. He said that the Central Zone reserve police could be requisitioned in any case of emergency and could be placed at key places including the dacoit-infected ravine areas. He thought that the creation of such a police force would help in undertaking sustained and co-ordinated action. Surely, the maintenance of law and order is of utmost importance to economic development. And it also calls for maximum co-operation between States.

PROGRESS OF RESEARCH IN IRRIGATION AND POWER SLOW

U.S. ENGINEERS' NOTABLE ACHIEVEMENT

From Our Special Correspondent

NEW DELHI, *24th June*

IN his presidential address to the Research Committee of the Central Board of Irrigation and Power, Prof. M. S. Thacker has admitted that very little research of a fundamental and basic nature in the fields of irrigation and power has been done in the last 25 years of the Committee's existence. Although a crore of rupees has been sanctioned for the purpose under the second Plan, more than two years have been lost already in the implementation of the scheme on account of procedural delays in the allocation of money through different State Governments. The Central research organisations have, however, been conducting work on immediate problems relating to specific projects in different parts of the country.

DELHI LETTER

In the field of hydraulic engineering for example, suitable air-entraining agents have been evolved for use in admixture with cement concrete for dam construction. Studies on sub-soil flows have been successfully carried out for the safe design of structures on permeable foundations. Studies are also in progress on the silting of reservoirs with the aid of model experiments. Research has been conducted on finding out alternative materials for use in flood protection works: one station has evolved soil-cement blocks containing 5 to 10 per cent. of cement; another station is engaged on studies on the stabilisation of sand and soils by chemical methods without the use of cement. Another piece of research has established the suitability of polythene film lining for channels to reduce seepage losses; it is stated that polythene products can be attained as by-products by processing lignite coals which are to be mined at Neiveli in Madras. Similarly, the loss of water through evaporation from reservoirs has also come in for study; in this connection, field experiments for evaporation control by covering the water surface with a mono-molecular film of Cetyl alcohol are under way. As the question of conservation of water-supplies also involves the question of water requirements of different crops, studies are now being conducted on the latter with the help of the Indian Council of Agricultural Research.

Power Engineering

So much about the progress of applied research in the field of hydraulic engineering. In the field of power engineering, however, the progress, according to Prof. Thacker's admission, is by no means satisfactory. The power engineering research programme, drawn up in 1956, is still to be implemented.

Prof. Thacker's review is revealing in the sense that the country has gone in for large-scale irrigation and power projects without any basic research preceding them. Whatever research has been or is being done has come only in the wake of ticklish and unexpected problems created by these projects. Some of these new problems are well-nigh insoluble. This poor research performance in the fields of irrigation and power, after years of construction activity, may be compared with the revolutionary research achievement of Mr. Stevens and his team of American engineers who will soon be completing their model project (*vide Commerce* of 10th and 17th May last) under the auspices of the Ford Foundation in the village of Khanpur near Delhi. The elimination of diesel or electric power for pump irrigation and of diesel, thermal or water power for electricity generation and the use of bullock power for operating pumps and generators with simple mechanical contrivances in the Khanpur project will, sooner or later, provoke a radical change in the familiar approach to irrigation and power generation and to research thereon. It is indeed amazing that Prof. Thacker and the Research Committee of the Central Board of Irrigation and Power have not taken note, in their meeting last week at Srinagar, of the tremendous implications of what is being done so near the Capital. The Khanpur project which should have involved just a few lakhs of rupees on prior research in the course of just a couple of years, constitutes a challenge to our engineers and researchers in irrigation and power and beckons them to think in terms of achieving cheaper and speedier results in the context of the country's poverty of currently mobilisable resources.

Public Sector as a Market

What a growing market the public sector constitutes for a wide variety of industrial goods can be known from the *Directory of Government Purchases during the year* 1956-57, just brought out by the Directorate-General of Supplies and Disposals, Ministry of Works, Housing and Supply. It is stated in the foreword that "the main object in publishing this booklet is to give indigenous manufacturers all available details in regard to the type and volume of stores purchased by the Government. It is hoped that industrialists will find the material of some assistance in planning schemes of expansion where capacity in the country is inadequate and in exploring the possibilities of indigenous production of goods hitherto imported."

A statement of the value of stores purchased by the Government of India during 1956-57 under some major categories of industrial goods is given in the following table:

(Value in Rs. lakhs)

Stores	*Indigenous*	*Imported*
Agricultural tractors and equipment	26	164
Cement and cement products	1,776	13
Chemicals	124	1,645
Cotton and cotton textiles	424	..
Electrical goods	1,273	1,020
General engineering goods	395	48
Hand tools	96	21
Jute and jute products	420	..
Leather and leather products	133	2
Line equipment	281	83
Machine tools	138	303
Mechanical engineering goods	659	3,239
Medical Stores	53	57
Motor vehicles and parts	77	1,320
Paints	179	2
Paper and paper products	702	123
Petroleum, mineral oil, etc.	652	956
Photographic and cinematographic equipment	3	55
Power plant	74	704
Radio equipment	22	243
Railway materials	2,603	2,725
Road dressing materials	319	469
Sanitary fittings	43	1
Scientific instruments, etc.	3	185
Ship-building	12	56
Soap	38	..
Steel sections	179	173
Steel tools and alloy wires	16	57
Miscellaneous textiles	178	6
Timber	361	175
Tyres and tubes for motor vehicles	162	..
Vegetable oils	78	..
Workshop machinery	21	429
Woodware	44	1
Woollen textiles	279	..

The above categories of stores are not exhaustive, nor do they give details of different goods. The total values, as given in the booklet, are Rs. 130 crores in the case of indigenous stores and Rs. 223 crores in the case of imported stores. As far as imported stores are concerned, the leading suppliers are the United States (Rs. 109 crores), the United Kingdom (Rs. 32 crores), France (Rs. 23 crores) and West Germany (Rs. 19 crores) and the Communist bloc countries (Rs. 7 crores).

The West Bengal Government has decided to move the Central Government for permission to impose a terminal tax on goods reaching Howrah by train. This is considered necessary in order to provide additional income for the Howrah Improvement Trust. An aerial survey of the entire town is stated to have already been completed by the Trust and plans are being prepared for the town's improvement. The Trust has a scheme to spend about Rs. 30 lakhs in the next 25 years. It expects to get Rs. 11 lakhs from the transfer of property tax and contribution from the State Government, Howrah Municipality and a few other sources.

Two American scientists have perfected a method of measuring the magnetic forces that originate inside the earth and in outer space. The scientists are Mr. T. L. Skillman of the Survey's Magnetic Observatory and Dr. P. L. Bender of the National Bureau of Standards. Their method involves sending a beam of light through a tube containing a small quantity of rubidium (one of the alkali metals). The development would provide scientists with magnetometers for measuring magnetism far more precise than those now available. The rubidium magnetometer also is expected to be useful in the laboratory and in geophysical prospecting for oil and metals.

An aggregate of S.Frs. 1.6 million is presently available for the operations of the Middle East Industrial Development Project Corporation. Besides this, further remittances of capital and reserves will be received within the next few weeks. It is said that more than a hundred leading industrial companies and banks from Western countries are now shareholders of the Corporation and 57 shareholders from Middle East countries have joined the Corporation.

AMERICAN LETTER

NO DEFINITE TREND HAS YET EMERGED

LOT OF TALK OF SHOWDOWN WITH LABOUR LEADERS BUT POSITIVE ACTION LACKING

From Our Special Correspondent

NEW YORK, *17th June*

CONFUSION is the keyword in economic matters. I just returned from the Annual Convention of the New York State Bankers' Association at Lake Placid, New York. A panel of eminent economists gave their opinions. Some of them foresaw an early upturn, others did not. In the meantime, the New York Stock Exchange has been reaching new 1958 highs, consecutively.

Economists always have pet theories. Some sell "advisory" services which make it profitable for them to be pessimistic, others are born optimists and find it profitable to be so. Thus, much judgment must be used in evaluating the pronouncements of university professors who find it to their advantage serving as economic advisers to banks, steel companies and other big private organisations.

There is also considerable confusion over politics. President Eisenhower's chief assistant, Mr. Sherman Adams, has been accused of accepting favours. Similar accusations are levelled against Mr. Eisenhower. The opposition Press makes the most of it, naturally. The fact is that the Chief Executive of the United States, as a matter of course, accepts many gifts as a matter of courtesy. The same applies to every other head of State.

Such presents range from lions, camels, horses, to household articles and wearing apparel which do not necessarily constitute a bribe. Often, they are a token of affection and of thanks, and of admiration for some measures which make individuals and groups beneficiaries of the end result. Nothing is wrong with such gestures, *per se*. They may be merely expressions of gratitude. And it is extremely difficult to interpret them as misdeeds. For the opposition, it is quite easy to twist and say that "this is an unpardonable sin." What is the criterion? What may be considered virtue in one area, may be held to be a misdemeanour in another. Who is the judge?

Politics, generally, are very much in the news. Most of the State legislatures have recessed until next year save for special sessions. The Congress is still struggling through its last few hectic weeks and days before going home. Much remains to be settled, such as the Indian aid measure, for example.

The Foreign Trade Bill was finally passed, but it contains many dangerous passages. There have been endless debates about the Labour Reform Bill. In this Congressional election year, there has been considerable reluctance, however, to put real teeth into the law. One of them would have been the requirement for secret union elections. The absence of this requirement has made it possible for unsavoury trade union leaders to know who voted against them. The non-conformists have subsequently been subjected to strong-arm tactics and coerced into not doing it again. Thus bad management remained in power and democratic processes were negated.

President Eisenhower himself wants a showdown with those labour leaders but the rank and file of politicians are more or less horror-stricken at such unpolitical behaviour which might lose them votes at the forthcoming November elections.

Despite much discussion about these matters in print and over the air and television waves, there seems to be not much public interest. In fact, if the recent primaries in some of the States are any criterion, there is appreciable apathy and lethargy. Republican voters specifically simply did not turn out to cast their ballots in their usual numbers. In South Dakota, for instance, which is normally Republican, those who voted represented the smallest number since 1946. California was somewhat of an exception. Republicans who voted outnumbered Democrats, even though there are more of the latter species in the State than there are Republicans.

Another source of domestic as well as international political friction is the question of what should be done with General de Gaulle. There is great official desire in the U.S. to do everything possible to help the General cure the ills of France within the allotted time limit of six months. There is that big Algerian problem, however, which is closely related to the unrest in the Middle East. The U.S., traditionally, is anti-colonialist, having been a colony once herself. Yet, how fast can the *status quo* be changed without disturbing what is left of world equilibrium. That is the other question asked by the White House and the State Department in view of the failure of the Eisenhower Doctrine in Asia Minor.

Official Britain, as seen from here, seems to be in no hurry to give de Gaulle active support for two chief reasons. Why hasten the demise of colonialism which must have further deteriorating effects on the United Kingdom's world sphere? Secondly, London enjoys its status as the number one special partner of Washington. It is easier than to restore France into a big-three-league as before.

Barring a further deterioration of East-West relations, foreign questions are still subordinated in American eyes to what is going to happen in the United States' economy. While there has been a better than seasonal improvement in employment in May, the overall economic picture remains more or less unchanged. Business spending for plant and equipment for 1958 is now officially estimated at only $30,800 million which would be off 17 per cent. from the 1957 record. Surveys by various groups suggest that this lower trend will continue into 1959.

The automobile industry is still depressed. In the first place, its labour contracts have run out and no successful formula has been found for renewals.

Another thing which is worrying Detroit is the boost in steel prices which will become effective 1st July 1958. Frantic efforts are now being made to counteract this measure by cutting production costs. There will be fewer style of chassis and doors, for example. There seems to be a desire to hold prices in the face of lagging demand. Whether this can be achieved, remains to be seen. There is still the threat of higher labour costs once a settlement is reached with the United Automobile Workers.

The unemployment situation in the auto industry is one of the worst in the country. The improvement in the overall employment picture is chiefly due to seasonal agricultural pick-ups. But the tell-tale figure is the percentage of unemployed in relation to the labour force employed. This figure in May was 7.2 per cent., against 7.5 per cent. in April and 4.1 per cent. a year ago. It is still uncomfortably high in the opinion of most unbiased students.

There is no immediate relief in sight, unless there develops a major national emergency, or there is a sudden emotional popular buying spree. A minor one came into being in recent weeks with a sudden upsurge in buying of old-style straw hats. It caught manufacturers com-

TREND AND PROGRESS OF BANKING IN 1957

RISE IN DEPOSITS THREE TIMES THAT IN ADVANCES

THE year 1957 was noteworthy for the considerable abatement, particularly in the latter part of the year, in the inflationary pressures in India which had manifested in the previous year. This was due to the corrective measures adopted by the Government of India and the Reserve Bank of India. So far as the banking system is concerned, the anti-inflationary measures did not adversely affect the growth of their resources. On the contrary, they, together with other forces which came into play, resulted in a substantial expansion in deposit resources of banks. Though this is a welcome development and afforded a "breathing space to banks," this has been achieved at a higher cost, to some extent, namely, by offering competitive rates of interest on fixed deposits. The Reserve Bank of India has struck a note of caution, in its Annual Report on the *Trend and Progress of Banking during* 1957, against the use of interest rate as a means of augmenting deposits.

In the monetary sphere, there was relatively a smaller expansion of money supply than in the preceding two years. Money supply increased over the year by Rs. 96 crores, as against Rs. 132 crores in 1956 and Rs. 215 crores in 1955. The lower degree of expansion is explained by "the lower deficit on external account which tended to neutralise, in part, the impact of deficit financing." It will be of interest to note that the deposit component of the money supply accounted for a larger share (Rs. 56 crores) of the increase, as a result of which the proportion of currency to total money supply declined slightly from 67.1 per cent. to 66 per cent. "The behaviour of deposits," the Reserve Bank's report points out, "assumes greater significance as time deposits, which are not reckoned as part of money supply, rose spectacularly by Rs. 201 crores.

The exceptionally large deposit expansion was thus the most striking feature of the banking year. The net deposits of Scheduled banks rose by Rs. 245 crores or by 23.3 per cent., as against Rs. 77 crores (7.9 per cent.) in 1956. What is more noteworthy is that this was the largest increase in any year since 1953, when the fall in bank deposits was arrested and the phase of expansion began. The two main short-term factors responsible for the bulk of the increase in deposits during 1957 were: (1) the placement by the U.S. authorities in India of funds representing the initial reimbursement by the Government of the cost of foodgrains imported into the country under P.L. 480 and (2) the tight import restrictions which might also have induced business concerns and other bodies to seek temporary investment of their reserve and other surplus funds in the form of time deposits. The long-term factors were: (1) the hardening of interest rates on fixed and savings deposits during the year, which "might have induced a switch from current to time deposit accounts and possibly also from non-banking to banking accounts," (2) the possible diversion of some of the generated money incomes in the last year or two to bank accounts, albeit with some delay, and (3) the branch expansion of banks, notably that of the State Bank of India. Out of the increase of Rs. 245 crores in total net deposits, Indian Scheduled banks accounted for Rs. 224 crores or over 90 per cent., the share of Exchange banks being small.

Whereas in 1956 the growth in deposits fell short of the increase in credit, in the year under review, the reverse was the case. The rise in deposits was more than three times that in bank advances. Over the year, the advances of Scheduled banks increased by Rs. 75 crores, as against Rs. 151 crores in 1956. This was mainly due to the retarded expansion of the private sector.

There were, however, marked variations in the trend of advances during the year. In the first six months of the year, the rise in advances (exclusive of money at call) was as much as Rs. 135 crores. This was far greater than that in the corresponding period of 1956 and, though seasonal in character, was of significance, in that the busy season demand of 1956-57 was itself superimposed on a high level of bank credit. "Substantial as this increase was," the report observes, "the rise in credit against certain commodities like paddy and rice, wheat, gram and sugar was of particular concern. Speculative holding of some of these commodities financed by bank credit was tending to aggravate inflationary pressures and in order to stem them, the Reserve Bank brought into play a wide range of credit controls." A general restriction on the quantity of credit was sought through raising the cost of borrowings from the Reserve Bank. Though this had a general restraining effect on banks' borrowings from the Reserve Bank, the underlying trend was still one of credit expansion, indicating the need for further restrictive measures.

A ceiling of Rs. 800 crores was fixed, to which the Reserve Bank Governor wanted banks to bring down their credit levels by October 1957. The banks succeeded in bringing about a substantial reduction in outstanding credit, but not to the full extent desired. "The general measures of control and the use of moral suasion," the Report adds, "had primarily the object of bringing about a quantitative reduction of credit." Alongside these, further use was made during the year of selective restriction on credit. As a combined result of these measures of credit control and a delayed onset of the busy season of 1957-58, accompanied by a sharp reduction in the volume of imports, the level of advances at the end of 1957 came down to Rs. 820 crores, barely 10 per cent. higher than at the end of 1956, as against an increase of a little over 25 per cent. in the preceding year. The moderate expansion in advances, as against a record rise in deposits, brought the credit ratio of banks down to 63.2 per cent. at the end of 1957 from 70.8 per cent. in December 1956. The greater part of the increase in bank credit during the year was accounted for by the Indian Scheduled banks, the advances of which rose by as much as Rs. 78.4 crores, while those of foreign banks declined by Rs. 3.8 crores.

The slower growth of advances as compared with the increase in deposits enabled Scheduled banks to strengthen their investment portfolios. Whereas in 1966, these had been reduced by Rs. 18 crores, in 1957 they rose by Rs. 89 crores, mostly in the latter half of the year, though, in terms of ratio to deposits, the change was but fractional. Indian banks, which were the recipients of the largest share of deposits, accounted for bulk of the increase. Among the Indian banks, the largest part of the increase was noted in the State Bank of India. This bank accounted for a considerable part of the growth in deposits, the other banks showing only a moderate increase in their investments.

With the expansion in deposit resources, the Scheduled banks' borrowings from the Reserve Bank were on a diminished scale in 1957. The total outstanding borrowings showed a decline of Rs. 41.6 crores over the year, in contrast to the rise of Rs. 56.3 crores in 1956.

Over the year as a whole, the range within which the inter-bank call money rates varied showed a significant change as compared with last year, with the improvement in the resources position of banks. The weekly weighted average of call money rates in Bombay during the eight of the 17 weeks since September remained below 3 per cent., as against that of over 3½ per cent. during 33 of the remaining 35 weeks. In Calcutta, the call money rate, which was maintained steadily above 3¾ per cent., dropped below 3 per cent. in December. The trend in deposit rates did not, however, conform to those discerned in inter-bank call money rates, despite the fact that the pressure of credit demand on banks was less intense during the year. Whereas the highest rate on three months' deposits in Bombay during 1956, when competition amongst banks was very severe, was 4 per cent., it rose to 4½ per cent. in the beginning of the year, stood at that level throughout the slack season and then further rose to 4½ per cent. in the last quarter of the year. Even the lowest rate at 4⅜ per cent. in December 1957 was also higher than the corresponding rate in 1956.

The difference between the call money rates in Bombay and Calcutta alike and the long-term rate of interest as represented by the average yield on 3 per cent. Conversion Loan 1986 widened during the year under review, in contrast to the trend in the previous year. The average yield on long-term Government securities exceeded the highest call money rate of larger banks in Bombay by as much as 1.23 per cent. in the last three months of the year, as against only 0.56 per cent. in the corresponding period in 1956. In Calcutta, it exceeded the highest corresponding rate by 1.48 per cent. in 1957, as against 0.11 per cent. in December 1956. The gap between these two rates was "an evidence of the abatement during the year of the financial stringency experienced in the previous year."

The Report gives a brief analysis of the profit and loss accounts of 25 larger Indian Scheduled banks each with deposits of Rs. 5 crores and over, which provides an idea of the impact of higher interest rates on the gross earnings and expenses of banks. While the gross earnings went up from Rs. 44 crores to Rs. 53.7 crores, the total expenses increased by Rs. 8.9 crores to Rs. 45.2 crores. Interest and discount earned were higher by Rs. 8.1 crores at Rs. 41 crores, but this increase was offset by an increase of Rs. 6.1 crores to Rs. 20.6 crores in interest paid on deposits mainly due to higher interest paid on savings and fixed deposits and the shift from current to time deposits. Administrative and other expenses rose by Rs. 8.9 crores to Rs. 45.2 crores. Accordingly, net profits showed only a fractional rise from Rs. 7.7 crores to Rs. 8.5 crores.

The pace of branch expansion was considerably speeded up during 1957, the total number of offices of banks rising by 183 to 4,376. While the offices of Scheduled banks increased by 310, those of non-Scheduled banks declined by 127. Of the expansion in the branches of Scheduled banks, the share of the State Bank of India alone was 84.

Briefly surveying the immediate prospects for the banking system, the Report says: "It seems possible that the rate of increase in deposits witnessed in the fiscal year 1957-58 will not be maintained in the coming year. Also, if investment in the private sector remains at a high level and internal production shows improvement, the higher liquidity, which characterised the commercial banking system in the latter half of 1957, might not continue." The Reserve Bank considers that the present time seems to provide an opportunity for banks to take appropriate measures to develop banking so as to keep pace with the growth of the country's economy. This would, however, require intensive effort to spread the banking habit and to attract further deposits in centres where bank branches are already established or where banking is comparatively undeveloped or not at all developed. In this connection, the Report once again recalls the fact that part of the rise in deposits was due to the higher rates of interest offered by most banks on deposits, and advises that in the efforts made by banks to augment deposits the use of interest rate as a means would call for considerable caution.

INDIAN OXYGEN is playing
a vital role in building a more powerful and self-sufficient India in the Second Five-Year Plan.

From transport to electric power, from the steel works to the oil refinery—every day our technical service is keeping the nation up-to-date with the most modern methods of metal fabrication.

END OF A PHASE

BANK RATE REDUCED AGAIN

From Our Own Correspondent

LONDON, *21st June*

THE cutting of Bank rate by a further ½ per cent. to 5 per cent. restores the level before the crisis of last September. The top rate of 7 per cent. ruled for six months and the reductions, which began in March and in three steps, have restored the traditionally 'normal' level of 5 per cent. marked a period of relaxation. If further cuts are made, which is by no means impossible, it will be a clear indication not merely that the brakes are off the credit vehicle but that the accelerator is being applied.

LONDON LETTER

As is usual on these occasions, the Treasury makes a point that there is "no necessary connection" between the cut in Bank rate and the easing of credit policy. They would say that, in the post-war context, a 5 per cent. Bank rate, which means an average rate of 6 per cent. for industrial borrowers from banks, is high. The Government still believes that high interest rates are necessary but they want Bank rate to be sufficiently flexible that it can be moved up again in case of temporary crisis, or brought down further in case of need for temporary relief.

However, all this is the usual verbiage to prevent the Government from declaring this particular action as a declaration of policy. By the same token, they would point out that the terms of settlement of the London bus strike announced at the end of this week also indicates no change in wage policy. But the fact is that the bus men have gained their point. The suburban bus drivers are to get their increase as well as the central drivers. There is no precise promise to that effect, but there is a very firm understanding that that is what is going to happen. Mr. Cousins, the head of the Transport Workers Union, has won as substantial a victory as was possible in the circumstances. Earlier in the week, the bus men, by a free vote to continue the strike, demonstrated that they were not being dragooned against their will. They were not supported by the Trades Union Congress, representing the body of trade unionists outside their own union, but, having achieved an adequate assurance from the employers about an increase in wages at the end of the week, they took Mr. Cousins' advice and agreed to go back.

Some Consolation

But the Government can also obtain some consolation from the fact that the transport workers were unable to spread the strike to the petrol and power workers because the Trades Union Congress was against any such sympathetic extension. The T.U.C., and it must be emphasised that means the body of trade unionists, did not want a direct conflict with the Government merely as a development of the wage claim of a particular union.

The Government are also not going to foot the London Transport bill of £2 millions which is the direct result of the strike (the cost to the transport workers of £1½ millions in strike pay, of course, will be borne by the men themselves)—but this sort of victory is no consolation to the London taxpayers at least for it will undoubtedly be met out of higher fares and economies if the latter can stretch sufficiently far.

The Government can, of course, say that the circumstances, now that the dispute is over, are different from those of two months ago when it began and when there were greater fears of the inflationary spiral continuing. The Bank rate has come down and a settlement of this sort with some increase in wages which follows hard upon a settlement with the railway men is not establishing any dangerous trends. So the strike is over, the transport workers feel that their prestige is in no way diminished and if a similar issue arises again it will no doubt follow a similar course!

Falling Interest Rates

Meanwhile, the City is happily watching a combination of falling interest rates, increased strength of sterling and a marked Stock Exchange recovery. A lot of bears have been buying in this week and the firmness of the last few days, which has raised the *Financial Times* ordinary share index over 3 per cent. in a week, is not likely to be maintained but the underlying strength is there and nobody expects a reversal of the present trend. The picture on the other side of the Atlantic is even more exuberant, but, while it is being carefully watched to see if the bubble might be pricked, it serves to support the City in its general mood of optimism.

The only fly in the City ointment at present concerns the Local Authorities who are potentially substantial borrowers for housing and road construction but who are being restrained in what is, after all, essential purpose borrowing by Bank policy, which still seems to belong to three months ago. With the restraint removed for practical purposes for free borrowers, the Local Authorities find the situation more than a little hard. When the Government and the Bank catch up on this front, then one will certainly be able to describe financial policy as liberal.—*All Rights Reserved.*

BRITISH DIESEL ENGINES

A steady, but little known, market for British diesel engines is the eastern seaboard of Canada, where many of the deep sea fishing boats are powered by diesels basically similar to Leyland bus and truck engines. Engines without auxiliaries are shipped by Leyland Motors Ltd. to Acadia Gas Engines Ltd., of Bridgewater, Nova Scotia, which adapts them for marine use. This company has standardised on Leyland 0.600 and 0.680 direct-injection diesels for installation in fishing vessels up to 60 ft. in length and normally manned by a crew of three.

Trials with the Indo-American strains of cotton in the Gujerat area of Bombay State show that high yield and superior fibre quality depend upon a well-distributed rainfall. It was also seen that the Indo-American cotton strains being shallow-rooted, drainage conditions of the soil have much to do with their yield and fibre quality. The strains were found to do better in the *goradu* (or light and well-drained) soils than the black soils under rain-fed conditions, but for a high yield and assured quality, supplementary irrigations were found necessary.

4¼ PER CENT STATE GOVERNMENTS LOANS

Name of State	Amount	Year of maturity	Issue Price per cent.
(1) Andhra Pradesh	Rs. 500 lakhs	1970	Rs. 99.50
(2) Bombay	Rs. 1000 lakhs	1970 1971	Rs. 100.00 Rs. 99.75
(3) Kerala	Rs. 300 lakhs	1970	Rs. 99.00
(4) Madhya Pradesh	Rs. 200 lakhs	1970	Rs. 99.00
(5) Madras	Rs. 500 lakhs	1970	Rs. 99.50
(6) Mysore	Rs. 500 lakhs	1970	Rs. 99.50
(7) Orissa	Rs. 300 lakhs	1970	Rs. 99.00
(8) Rajasthan	Rs. 250 lakhs	1970	Rs. 99.50
(9) Uttar Pradesh	Rs. 700 lakhs	1970	Rs. 99.50
(10) West Bengal	Rs. 500 lakhs	1970	Rs. 99.50

All the State Governments reserve the right to retain subscriptions upto ten per cent. in excess of the notified amount.

All the above loans will be repaid at par on 15th July 1970 except the 4¼% 1971 loan of the Government of Bombay which will be repaid at par on 15th July 1971.

THE LOANS WILL OPEN FOR SUBSCRIPTION ON 15TH JULY 1958 AND CLOSE ON 19TH JULY 1958 OR EARLIER WITHOUT NOTICE AS SOON AS SUBSCRIPTIONS APPROXIMATE TO THE AMOUNT OF EACH ISSUE.

All the loans will bear interest from 15th July 1958.

Subscriptions may be in the form of CASH/CHEQUE in respect of all the loans.

3% BOMBAY GOVERNMENT LOAN 1958, 3% COCHIN LOAN 1955-58, 3% MADHYA PRADESH LOAN 1958, 3% MADRAS GOVERNMENT LOAN 1958 and 3% UTTAR PRADESH LOAN 1958 will be accepted AT PAR for conversion into the new loan/s of the Government concerned; interest on the securities of the respective loans tendered for conversion will be paid upto and including 14th July 1958.

APPLICATIONS FOR ALL THE LOANS WILL BE RECEIVED AT THE OFFICES OF THE RESERVE BANK OF INDIA AT BANGALORE, BOMBAY, CALCUTTA, MADRAS AND NEW DELHI.

APPLICATIONS will also be received at PLACES WITHIN THE RESPECTIVE STATES as follows:—

(i) At the office of the Reserve Bank of India at Nagpur in the case of the Bombay loans.

(ii) At the branches of the State Bank of India and at Treasuries and Sub-treasuries in the case of Andhra Pradesh, Bombay, Kerala, Madhya Pradesh, Madras, Orissa, Rajasthan and Uttar Pradesh loans.

(iii) At the branches of the State Bank of India in the case of West Bengal loan.

(iv) At the branches and treasury pay offices of the State Bank of Hyderabad in the case of Andhra Pradesh and Bombay loans.

(v) At the branches of the Bank of Mysore Ltd. except at Bangalore, the State Bank of India, the State Bank of Hyderabad and at Government Taluk treasuries in the case of Mysore loan.

Copies of Notifications and Application Forms may be obtained at any Receiving Office.

EXPORT TRADE IN COTTON TEXTILES

MEASURES FOR IMPROVEMENT SUGGESTED

IT was only last week that we referred in these columns to the distinct setback to cotton textile exports in the current calendar year. This has been due to four important factors, namely, establishment of cotton mills in several countries of the Far East, the Middle East and East Africa, protective measures such as heavy import duties imposed by countries like East Africa, abolition of O.G.L. by Sudan, and tendency to place restrictions on imports by Commonwealth countries like Australia and Canada. Thanks to all these factors, as also to the keen competition offered by Japan and China, the outlook for export trade in Indian cotton textiles, one of the staple earners of foreign exchange, has turned out to be bleaker. What is, therefore, of the utmost importance is that energetic steps should be taken to remove the defects in the structure of the cotton mill industry and enhance its competitive capacity. This aspect has been well brought out by the All-India Exporters' Association, Bombay, in the course of a memorandum submitted to the Special Committee appointed by the Government of India to inquire into the conditions of the cotton mill industry.

At the very outset, the Association emphasises that, although the Committee has been constituted to report on the factors responsible for the present debacle in the mill industry with particular reference to production, management, finance, modernisation, etc., the question of decline in exports has assumed special importance. The relations between the industry and the trade, the Association points out, are so interlinked that it would be necessary to deal generally with the major difficulties facing the industry itself in so far as they affect exports. It has sought to impress upon the Committee the fact that Indian cloth has lost its competitive character in foreign markets on account of high cost of production, thanks to the steep rise in taxation and the severe restrictions on imports of raw materials required by the cotton textile industry.

Automatic Looms

Stressing in particular that price is the key for achieving the objective of augmenting exports of cloth, the Association observes:

"Though at present the price of some of the coarser varieties is lower in comparison to foreign products, yet there are other coarser and medium varieties where Indian cloth is beaten hollow by the better varieties manufactured by Japan, China, Hong Kong and other East European countries which are manufacturing their products on the latest machinery, including automatic looms. The need, therefore, of permitting the Indian mills to use automatic looms is paramount. For this purpose, it is necessary to simplify the conditions attached to the use of automatic looms which in turn have made it difficult for the mills to install them in their factories. Unless the machinery is modernised, the prospects of improving our quality of cloth are slender, and quality is an equally important factor which counts in competing with the products of the foreign countries."

There is considerable force in these observations of the Association. It may be interesting to note in this connection the views of Mr. Naval H. Tata on this subject. Addressing the shareholders of the Svadeshi Mills Company, Ltd., at their annual general meeting early this week, he said:

"According to a recent I.L.O. publication, at the end of January last year, over 35 per cent. of the world's 2.8 million looms were automatic. We appear very badly in this picture. Whether we like it or not, we should take note of the technological changes taking place in other countries which are progressing rapidly. If we do not take steps to improve the quality and reduce the price of our manufactures by rationalisation, there is no possibility of stepping up exports of our surplus cloth for earning vitally needed foreign exchange. . . . Two years ago, Government agreed to sanction an additional installation of 18,000 automatic looms to produce annually an extra 350 million yards of cloth, principally for export. But they laid down a very restrictive condition that, if the mill installing automatic looms diverted its automatic production into the home market, instead of exporting it, the mill would have to pay a penal excise duty of two annas per yard. In addition, the mill concerned was to maintain its previous level of exports. On a rough calculation, the penal excise duty worked out to a cost of Rs. 5 per loom shift. At a time when mills are barely earning about Rs. 2 per loom shift, very few companies are prepared to accept this condition under which the penal duty would be more than double what they expect to earn. Consequently, applications have been received by Government for only about half of the available quota of 18,000 automatic looms. . . .

"This is not all. Our foreign exchange difficulties have led to a virtual ban on imports of up to-date finishing and processing machinery. At a time when the emphasis, both at home and abroad, is on the demand for better and still better finished cloth, our lack of latest processing and finishing plant is putting us to a great disadvantage. Take, for instance, the need to sanforize the superior varieties of cloth produced by us to obtain a satisfactory profit margin. Try as we can, we cannot import this unit, owing to the country's foreign exchange difficulties. We are faced with the same difficulty in respect of a variety of up-to-date processing and finishing plants required by us for the marketing of improved cloth qualities."

To revert to the Association's memorandum to the Committee. It has stressed that all avenues must be explored to bring down the production cost of our mill-made cloth, including revision of taxes and improvement in the efficiency of labour and management. It has urged that the Government machinery attached to the export trade, the Excise Department and the Customs authorities should be advised to give all facilities and help in the matter of exports. It has advocated simplification of the procedure of exports where the exporter has to get his papers passed at several check posts. "This paraphernalia" to quote it, "should be reduced to the minimum, so that unnecessary delays might be avoided. The remedy is to put cloth exports under O.G.L. and the customs examination procedure should be minimised and simplified."

Railway Freight

The Association has put forward a plea for so rationalising the railway freight structure as to give concessional rates on exports of cloth despatched from upcountry mills to port towns. The plea is quite justified. One of the causes for the high export price of Indian cloth is the heavy incidence of transport cost. Surely, concessions in railway freight, together with timely allotment of wagons, will greatly facilitate exports of cloth produced by mills situated in mofussil areas. Incidentally, the Association has drawn the attention to the need for the right type of packing so as to ensure minimum ocean freight. It suggests that the cotton mills must be advised to have modern packing facilities and that the iron and steel factories be persuaded to manufacture hoops whenever indents are placed by the mills.

The Association refers next to the varying and confusing interpretations of section 43 of the Income-tax Act by the officers. Instances, we are told, have been found where the Indian exporters are made liable to pay income-tax on the earnings of their foreign constituents on the ground that the exporters are the agents of foreign buyers, although they are the principals. It is, therefore, urged that clear instructions must be issued to the income-tax officers to implement the recommendations of the Taxation Enquiry Commission on this subject.

Incentives to Exporters

In order to give incentive to exporters, the Association has made three suggestions. First, the Government must devise a procedure under which 10 per cent. profits earned by exporters should be exempted from income-tax as is done by Japan. Secondly, the mills which produce fine, superfine and printed cloth for export must be permitted to import foreign cotton equivalent to its content in cloth manufactured for export. Thirdly, minimum standards should be laid down for the production of coarse and medium cloth for export. This suggestion is specially stressed because several complaints have been received from overseas markets regarding the indiscriminate use of such marks as C, 3 C's, CAT and HAT. The complaint is that, since there is no restriction on the use of these markings, low quality cloth with such markings are sent to foreign markets which has greatly affected not only exports but also the prestige of Indian cotton textiles as a whole.

In this connection, the Association emphasises the need for adopting the random method of pre-inspection of cloth at the manufacturing stage, so that it may create greater confidence in the minds of foreign buyers about the quality

FURTHER TALKS ON CLOTH IMPORTS WITH FAR EASTERN MILL INTERESTS

LABOUR FORCE IN COTTON FACTORIES DWINDLING

From A Special Correspondent

MANCHESTER, 17*th June*

FURTHER discussions between the representatives of the Lancashire cotton industry and their Far Eastern competitors on the subject of cotton cloth imports into the United Kingdom are likely to be held in the near future, according to the Hon. J. S. T. Hawke, Chairman of the Cotton and Rayon Merchants' Association. He told the annual meeting in Manchester this week that only a "really trivial gap" divides the views of the British team and the representatives of India and Pakistan. Discussions broke down last month on the details of a pact to limit arrivals of cloth into British ports.

MANCHESTER LETTER

"I hope the gap will be bridged this month and the way set fair for a further visit to Hong Kong," added Mr. Hawke. Any agreement would have to include garments and finished goods, but this aspect could be a severe stumbling block for Hong Kong. Last year, the Colony shipped to Britain 71,000,000 square yards of cotton cloth, 7,300,000 woven shirts and more than 300,000 other garments.

"I have not the slightest doubt that some limitation of these imports from Hong Kong will eventually come about," declared Mr. Hawke, "and, at this juncture, it would be most unfair to Hong Kong to let her reliance on this market go much further than at present." The imports, he said, had caused very real hardship to Britain's old-established textile industry. He had yet to hear of a scheme drawn up in Lancashire which was practicable and could be worked without stimulating the import of finished goods and garments.

Price Regulation Schemes

Commenting on price regulation schemes in operation in the spinning and doubling branches of the cotton textile industry which are shortly to be investigated by the Restrictive Practices Court, Mr. Hawke declared: "Too long, I would say, has one section of the industry featherbedded itself at the expense of the rest of the trade." Since May last year, he pointed out, the Liverpool spot price of American cotton had fallen by about one penny per lb., but Lancashire spinners' prices for certain types of American yarns had actually risen. "This in a time of acute competition from overseas and falling trade hardly seems a realistic effort to keep the spindles humming," he remarked.

Mr. Hawke urged the Cotton Board to start a series of small groups representing both management and workers to draw up a list of all the anomalies and restrictions practised in the trade and decide how to overcome them.

A warning of a new and "very menacing" position for manufacturers of textile goods in the man-made fibres range is given in the Annual Report of the Manchester-based Rayon Weaving Association. Eastern competition is increasing, according to the report, and, in the three months from November 1957 to January 1958, nearly 1,500,000 yards of spun rayon fabric was imported into this country from Hong Kong at an average price of 9d. per square yard. This follows an "enormous" increase in imports of grey rayon cloth from Japan last year when arrivals more than doubled at nearly 22,000,000 square yards. For the first time, imports of rayon cloth from Japan are being retained in the home market. "There is nothing whatever at present to stop Hong Kong from doing, free of any restrictions, what the Japanese have now begun to do, subject to quota restrictions. Hong Kong's position is more favourable than Japanese because their fabrics pay only five-sixths of the duty on Japanese cloth," the report adds.

In such circumstances, Hong Kong is well able to do to the rayon side of Britain's textile industry what it has already done to the cotton side. Describing the position as "very menacing" and promising vigorous action, the Association declares: "There is every reason why Hong Kong should choose to extend its exports to us in this way, especially if current negotiations result in a limitation of their cotton exports to us."

Commonwealth Cotton Crops

Lord Derby, President of the Empire Cotton Growing Corporation, said at the annual meeting held in Manchester that cotton production in the eight territories served by the Corporation had shown a "truly remarkable" increase. In the 1947-48 season, the total crop was just over 500,000 bales. "Today, it is nearly 1,500,000 bales —a threefold increase in the short space of ten years," he said. In a message to the meeting, Sir David Eccles, President of the Board of Trade, said that the production of a crop of good and consistent quality at a reasonable cost remained the greatest selling point for the Commonwealth cotton-growing industries.

In a review of crop prospects for the current season, Mr. James Littlewood, the Chairman, observed, that, in Uganda, the total was expected to be 350,000 bales. This was considerably better than expected after the autumn drought of 1957. "I feel sure it will not be many years before the Uganda crop breaks the previous record of 417,000 bales," said Mr. Littlewood. Uganda cotton was in great demand and its reputation would be strengthened by new strains now being produced.

Because of unfavourable weather and pests, the Sudan crop would be less than half the 1956-57 record of more than 704,000 bales. "I feel sure this is only a temporary setback to be followed by a considerable improvement next season," Mr. Littlewood told the meeting. A slight reduction to about 150,000 bales was also expected in Tanganyika, following four record-breaking seasons. The Kenya crop would be around 11,000 bales, but efforts to persuade growers to plant early and farm well were sure to bring about higher production in the long term. Experiments were also being carried out with irrigated cotton growing. Mr. Littlewood stated that the steady production of 30,000 bales a year in Aden was very satisfactory after only ten years of cotton growing there. At the present time, because of the disturbances in the area, the Corporation's small research team were working under difficulties and having to travel with armed guards whenever they left the station.

Dwindling Labour Force

April was a bad month for overseas trade in British textiles and, from reports now issued, activity in the mills was equally disappointing. Easter always curtails output, but the level of production of yarn and cloth was clearly scaled down by the diminished manpower available. A fall of nearly 4,000 in the number of operatives on the books of spinning and weaving employers during the month brought the total at the beginning of May to 231,910. This compares with a labour force of 241,160 at the end of last year and 239,180 at the end of February.

The sharp decline in available workers during March and April has been concentrated more on the spinning than on the weaving branch. Spinners lost nearly 4,000 operatives during that period, as compared with 2,360 in the manufacturing branch.

Weekly yarn output in April at 15,000,000 lbs. was the lowest since August last year, the reduction being entirely taken up by the drop in cotton yarn spun. The average of 2,930,000 lbs. of yarn made from man-made fibres and mixtures was below the first quarter's level but exceeded several months in 1957. Only in July last year was weaving production lower than in April when weekly average output was 39,800,000 yards. The comparable figure in the same month last year was 44,860,000 yards, the major decline again being in the quantity of cotton cloth woven.—*All Rights Reserved.*

"GREAT OPPORTUNITIES" IN INDIA FOR U.K. ENGINEERING FIRM

"There are great opportunities for our fields of work in India, where the Simon-Carves reputation is gratifyingly high," said the Chairman, Mr. R. B. Potter, at the annual meeting at Stockport, Cheshire, of Simon-Carves Ltd. on 16th June, 1958. The firm are engineers and contractors for coke ovens, coal washeries, boiler and chemical plants, and have wide oversea interests. During 1957, the Chairman said, the emphasis on exports grew more pronounced. The coke-oven department was particularly busy in India, where it started up the first of the two new coke-oven batteries for the Indian Iron and Steel Company, Ltd., at Hirapur; it also made satisfactory progress on coke-oven reconstruction and steel works erection at Jamshedpur for the Tata Iron and Steel Company, and on the new Government of India steelworks at Durgapur. In 1958, the Chairman said, this department was concentrating its major effort in India.

The washery department, designers and contractors for coal-cleaning plant, were "actively engaged in a number of important schemes, especially in India," Mr. Potter stated, and were likely to be fully occupied for the foreseeable future. Speaking of the Company's oversea organisations, he noted that, in view of the heavy commitments in India—especially the Durgapur steel works contract—the firm's Calcutta office had been considerably expanded and strengthened.

STATISTICAL POSITION OF COTTON

END-SEASON STOCKS MAY BE SLIGHTLY HIGHER

IF present indications are any guide, the current season for Indian cotton, namely, 1957-58, now fast drawing to its end, will show higher closing stocks than at the end of last season. An upward revision of the season's crop estimate and a fall in consumption are the main factors responsible for the higher stocks. There has also been a reduction in the volume of India's international trade in cotton. Both exports and imports so far in the current season have been running below last season's level and the aggregate figures for the whole season may well be smaller than in the previous season.

The latest crop estimate, based on information available till the end of May, places the 1957-58 crop at 5.05 million bales (of 400 lbs. each) which compares with the last season's crop of 4.85 million bales. Carryover stocks at the beginning of the season with trade and mills aggregated 1.12 million bales and 600,000 bales, respectively. The total supply of Indian cotton would thus be of the order of 6.77 million bales. Stocks of foreign cotton at the beginning of the season were 290,000 bales. Imports during the whole of the current season is estimated to aggregate 460,000 bales. Total visible supply of both Indian and foreign cotton during the season will be about 7.51 million bales. This compares with last season's aggregate supply of 7.87 million bales.

As regards consumption, during the first eight months of the season, that is, from 1st September 1957 to 30th April 1958, Indian mills consumed 3,383,555 bales, comprising 2,999,692 bales of indigenous and 383,863 bales of foreign cotton, as compared with 3,517,306 bales consumed during the corresponding period of last season made up of 3,134,012 bales of indigenous and 383,294 bales of foreign cotton. Thus, while consumption of foreign cotton declined only nominally, that of Indian cotton fell sharply. The first steep drop, of as much as about 10 per cent., in cotton consumption by the textile mills occurred in February 1958. March disclosed a similar situation and figures for April indicated a further drop. The lower consumption was mainly the result of curtailment of production by mills through reduction in the number of shifts, power cut in the South and even outright closure of mills due to the continued slump in the piecegoods market. If the present trend continues, consumption of indigenous cotton during the whole season may not exceed 4.5 million bales, as compared with last season's peak of 4.6 million bales.

Exports and imports of cotton, as noted earlier, have been running below last season's level. Exports of Indian cotton to foreign countries during the first nine months of the season, that is, from 1st September 1957 to 31st May 1958, according to preliminary estimates, aggregated 171,495 bales, as compared with 242,664 bales in the same period last season. Imports of foreign cotton into India during the same period aggregated 312,673 bales, as against 478,773 bales in the corresponding period of the previous season. The following table indicates the country-wise breakdown of exports and imports:

(In bales of 392 lbs. nett)

	1st September 1957 to 31st May 1958	
	1957-58	1956-57
Imports (Varieties)—		
American	129,545	310,691
Sudan	60,952	48,081
Egyptian	38,318	38,577
East African	83,848	76,461
Others	10	4,963
Total ..	312,673	478,773
Exports (Destination)—		
U.K.	9,842	21,940
Continent	19,954	27,606
Hongkong	4,129	37,924
China	..	3,437
Japan	127,072	148,525
U.S.A.	9,577	2,359
Others	921	853
Total ..	171,495	242,664

To sum up, the statistical position of cotton during the current season is more or less as follows: Consumption will be about 4.5 million bales. Assuming that exports aggregate 250,000 bales, which is the quantity so far released for export, total disappearance of Indian cotton would be of the order of 4.76 million bales, including 10,000 bales estimated to have been destroyed by fire in May. Consumption of foreign cotton would be 585,000 bales. Aggregate disappearance would, therefore, amount to 5.34 million bales out of a total supply of 7.51 million bales, leaving 2.17 million bales to be carried over into the new season. This compares with last season's closing stocks of 2.01 million bales.

COTTON'S COMPETITIVE POSITION

The future of the American cotton industry depended to a large extent, on decisions which might be taken this year, observed Mr. Halbert M. Jones, President of the American Cotton Manufacturers' Institute, recently. These decisions, according to Mr. Jones, will be influenced by many factors, but the following will be of prime significance: (1) The importance of establishing a pricing system that will make cotton competitive with other fibres; (2) the extent of lost markets which cotton will suffer because of the shortage of quality cotton; (3) the extent to which the domestic markets for cotton and the domestic mills are protected from foreign imports; and (4) the restoration of the movement of cotton to the normal commercial channels of trade.

In the long run, cotton's competitive position will be the most deciding factor. If cotton was not given the opportunity to compete with other fibres, observed Mr. Jones, its future as a principal fibre was indeed uncertain. Cotton continued to be the most important raw material for the mills, but its share of the textile market was slipping away year after year. This conquest of cotton's market by its substitute, Mr. Jones said, could be attributed to a lack of understanding of the basic competitive problem and to unrealistic Government policy. This policy, he added, had been for years a source of concern for the industry. Cotton farmers were now aware that their products have been priced artificially out of many markets. Considering all the basic factors that should operate in cotton's favour, it was almost inconceivable, according to Mr. Jones, that the present situation should have been allowed to develop at all. All interests connected with the industry realised the seriousness of the situation and wanted something to be done.

On the domestic front, he pointed out, cotton had failed to share in the expanding markets of the past few years. In fact, it had not even held its own in the enlarged fibre markets. The trend of cotton consumption had been downward. From 9.8 million bales in 1946 and 9.5 million bales in 1947, it declined to 8.6 million bales during the last season. Consumption during this season (1957-58) would be no more than 8 million bales.

A market lost, the President averred, was not usually gained, except at great expense to every one concerned. The result was that cotton suffered a loss in two ways. In the first place, it lost, and was still losing, its share of the total fibre market. In addition, since 1948, consumer spending in the U.S. increased 28 per cent. but spending for textile products increased only by four per cent.

According to the U.S. Department of Agriculture, in 1957 *per capita* consumption of all fibres dropped to 36.2 lbs., as compared with 38.7 lbs. in 1956 and 40.3 lbs. in 1955. Year after year, the consumption of cotton was falling. This, according to Mr. Jones, was because of the neglect of the price factor. There were, he emphasised, a few hard unavoidable rules in the business world, but one of them could not be ignored. That was the fact that, when an item was priced higher than its competitors, it would be sold in diminishing quantities, and substitutes would spring up to take its place. That, he added, was exactly what happened to cotton's markets. Substitutes poured out in volumes from the laboratories into textile markets. Cotton ignored them in its price structure and it was paying the penalty. Textile manufacturers, the President hastened to add, were not seeking "cheap cotton." As an industry, he emphasised, the manufacturers like cotton, but they must be assured of one thing, namely, cotton must be competitively priced.

COTTON RESEARCH

The Cotton Research centre at Surat has successfully attempted, for the first time in India, the hybridisation of the Asiatic varieties of cotton with the American types. The new breeding technique adopted by the Centre, it is claimed, has resulted in combining the hardiness of Asiatic cotton with the superior characteristic of the American variety. The two-Indo-American strains, T. 170-CO. 2 and 134 CO. 2-M, have not only combined the extra long staple of the American variety with the hardiness and adaptability of the Asiatic cottons but also possess a high degree of resistance to pests and diseases. Their superior qualities have earned for them great popularity in Sabarkantha, Kaira, Panch Mahals, Baroda, Broach and Surat districts, as also the Deccan canals area of Bombay State. The production of these varieties rose from 40,000 bales in 1954-55 to about 120,000 bales in 1955-56.

But despite the long staple which these strains possess, it has been found that their spinning capacity is not very high on account of the weakness of the fibre. Attempts are being made at the Surat research station to isolate types with necessary fibre strength coupled with the required staple length. A few such selections which answer the purpose are now under intensive examination and trial.

The U.S. Department of Agriculture recently announced an agreement with Burma providing for the sale of $18 million worth (including certain ocean transportation costs) of U.S. agricultural commodities for kyats (Burmese currency) under Public Law 480. Included in the agreement is a provision for the sale of about 85,000 bales of cotton worth $13.8 million. The cotton will be shipped to other countries where it will be made into yarn and cloth which will again be shipped to Burma. Burma will pay for the manufacturing cost independently of the agreement. Sales under the programme will be made by private U.S. traders.

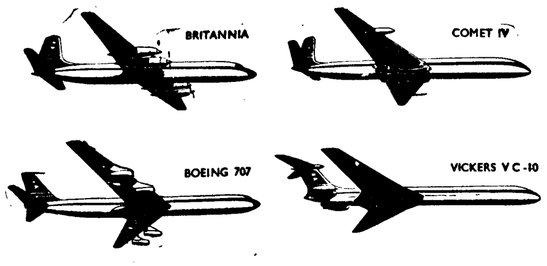
BOAC streaks ahead in jetliner travel!



Proof? Yes, indeed. B.O.A.C. Britannias, first jet-age airliners to fly the Atlantic, are proudly serving you today...and new Comet jetliners are already breaking records on transatlantic training flights in preparation for their introduction on the Atlantic later this year. Delivery of a fleet of magnificent B.O.A.C. 707 jetliners is expected next year...and already earmarked for B.O.A.C. early in the 1960's is a fleet of revolutionary new VC-10 jetliners—fastest, most powerful on the drawing board today. This is how B.O.A.C. is thinking and planning and acting...determined as always to lead the world in air travel—today and all the tomorrows to come.

B·O·A·C WORLD LEADER IN JET TRAVEL

BRITISH OVERSEAS AIRWAYS CORPORATION

UNCERTAINTY REGARDING SUGAR EXPORT POLICY

PRICES CONTINUE TO MOVE UP

THE sugar industry and trade are eagerly awaiting the Government of India's sugar export policy. The issue is reported to have been discussed at several meetings between the Union Minister for Food and Agriculture, Mr. Ajit Prasad Jain, and the representatives of the sugar industry, held at Naini Tal recently. Last week-end, the Secretary to the Food Ministry, Mr. B. B. Ghosh, met the spokesmen for the sugar industry to discuss details arising out of the tentative decision taken by the Government with regard to exports. The decision, it is stated, envisages the setting up of a separate statutory corporation by the Indian Sugar Mills Association to handle the export business in sugar. The sugar factories may be asked, on a compulsory basis, to export 5 per cent. of their current season's production, that is, about 100,000 tons out of a total output of 2,000,000 tons. With a view to meeting the loss on exports, a small levy is likely to be imposed on sugar released for domestic consumption. Any mill which fails to export the required quantity may have to pay a special excise duty on its domestic sales out of the export quotas.

The prolonged uncertainty regarding the sugar export policy is unfortunate, inasmuch as it has dislocated the mechanism of trading in the domestic sugar markets. Not only have the price movements been artificial but there are also reports of scarcity pockets in several areas. How else can one explain the persistently upward trend in prices of sugar? The wholesale price of D28 variety sugar in Bombay, for instance, is currently standing at about Rs. 41 per maund, as against Rs. 33 a year before, representing a rise of Rs. 8 (or over 24 per cent.). This rise is more than what is warranted by the increase in excise duty (including the additional levy) which comes to Rs. 6.52.

The following table indicates the latest available sugar prices prevailing in Bombay and Hapur, as compared with those after the additional excise duty was imposed:

	Latest available	After the imposition of additional excise
Hapur (mill delivery rates per maund)—	Rs.	Rs.
Anroha	35.81	32.31
Bijnore	35.56	32.50
Manaurpur	38.75	34.69
Bombay (wholesale prices per bag)—		
Small	106.00	105.00
Medium	107-109	106-108
Large	109-116	109-115

The upward trend in sugar prices is surprising, considering that the supply position is very comfortable. The opening stocks of sugar amounting to 428,610 tons and the estimated production of 2,000,000 tons bring the total available supply for the season as a whole to 2,428,610 tons. Although this quantity is less than the previous season's supply of 2,579,000 tons, it is nevertheless quite large as compared with the estimated consumption of two million tons on a liberal estimate. The estimated output of two million tons in the current season is based on the total production up to the end of May 1958 which aggregated 1,963,000 tons, as against 1,975,000 tons in the corresponding period of 1956-57.

Sugar in Different States

The position in respect of production, despatches and closing stocks of sugar in the different States as on 22nd May 1958 is shown below:

(In tons)

	Production	Despatches	Closing stocks
Northern India—			
Uttar Pradesh	941,946	558,434	607,285
Bihar	275,056	150,602	179,608
Punjab	81,974	41,539	54,388
Madhya Pradesh	33,844	25,423	20,770
Rajasthan	13,821	10,174	8,962
West Bengal	5,575	4,466	3,403
Total Northern India	1,352,216	785,638	874,416
Southern India—			
Bombay	315,260	170,845	208,613
Andhra	150,906	89,873	100,071
Mysore	73,075	40,520	33,717
Madras	53,559	31,508	36,728
Kerala	8,233	4,452	4,565
Orissa	3,903	2,602	2,543
Total Southern India	604,988	339,800	381,237
Grand Total	1,957,204	1,125,438	1,255,653

The production of 1,963,000 tons up to 31st May and the carry over stocks of 428,610 tons from the previous season together brought the total supply of sugar actually available during the first seven months of the season to as much as 2,391,610 tons. As against this quantity, total despatches amounted to 1,174,000 tons, as against 1,227,000 tons in the same period last year. Incidentally, it may be noted that the total quantity of sugar so far released for sale in the free market out of the 1957-58 season's production comes to 983,000 tons. The closing stocks with the mills as on 31st May were 1,212,000 tons, as against 1,270,000 tons a year before. The major portion of the stocks lying unsold with mills is accounted for by the three States of Uttar Pradesh, Bihar and Bombay.

Since the commencement of the season, about 22,000 tons of sugar have been exported. But these exports were against contracts entered into in the previous season. It was only in 1957 that the Government of India decided to allow export of sugar to the tune of 50,000 tons. The quantity was subsequently raised to 1,00,000 tons and still further to 200,000 tons, when it was found that prices in world markets were sufficiently attractive even for our high-cost sugar. Now that the world sugar market has turned weaker, there is no chance of India exporting sugar except at a very heavy loss. World price of sugar is currently ruling at about Rs. 415 per ton, as against the average price of Rs. 746 for Indian sugar, even after the full remission of excise duty (Rs. 291.20) and cane cess (Rs. 50.90). The loss on every ton of sugar exported thus works out to as much as Rs. 331.

SUGAR IN CUBA

It is understood that both France and Holland have renounced their quota rights under the International Sugar Agreement, according to Messrs. Czarnikow & Co., London. This means that 60,000 tons will have to be distributed and, under Article 14(7)(a), Cuba is entitled to 50,000 tons of this relinquishment which will presumably be taken from the world reserve quota. This would bring Cuba's export entitlement under the agreement to 2,465,000 metric tons, or approximately 2,392,000 Spanish tons. All this leaves Cuba with reserves which look to be fairly adequate as far as can be seen at present. It is realised that it may be asked to participate in further quota deficits under the International Agreement, whilst there may be additional reallocations by the United States in respect of further losses in Hawaii. Were a further substantial deterioration of cane to occur in Hawaii, the retained stock mentioned above would not look to be such a comfortable reserve as it does at present.

Now is the time to trade with

South East Asia

Rising standards of living open new markets for Indian goods

In South East Asia, as elsewhere, what you can sell depends on what the people need—*their ability to buy*. The Indian Overseas Bank with branches in several strategic centres has made a special study of this important growing market and can help you solve your trading problems.

IOB 311 B

COAL CONSUMPTION BY RAILWAYS

INTERIM REPORT BY COMMITTEE

THE Committee appointed by the Railway Board in December last under the chairmanship of Mr. Karnail Singh, Member (Engineering), Railway Board, to enquire into the increasing cost of fuel consumption by the railways and to estimate the railways' requirements of high grade coal during the next few years, has submitted an interim report. The Committee has recommended, *inter alia*, that, in order to meet the railways' requirements of high quality coal during the second and third Five-year Plans, three to five central washeries for upgrading non-coking coal, particularly in the outlying coalfields, should be set up.

The Committee has also made some suggestions for reducing the coal consumption. With the increase in load on the railways on account of the industrial development in the country, it will be advantageous for the railways, according to the Karnail Singh Committee, to electrify the major sections and "dieselise" the others. The Committee, however, has stressed that steam traction must still play an important role. The main difficulty in dieselisation is the availability of diesel equipments and indigenous sources of diesel oil. To overcome this difficulty, the Committee has recommended that the Government should take steps towards self-sufficiency in both the items. The Fuel Research Institute has, in this connection, suggested that an integrated project for low temperature carbonisation of non-coking coal with processing of tar for the manufacture of diesel oil would go a long way to meet the railways' requirements of diesel oil.

The Karnail Singh Committee has also suggested the adoption of a technique of hydrogenation of natural crude oil developed at the Fuel Research Institute which can produce maximum quantity of diesel oil from the oil obtained from the Assam Oil Company. It is stated that the Director of the Fuel Research Institute, during his recent visit to the U.S.S.R., visited large-scale units based on a similar process and discussed the possibility of utilising the said technique in India. By this process, more than 60 per cent. of the 1.5 million tons of oil proposed to be refined in the Assam oil refinery can be converted into diesel fuel. The quantity of diesel fuel produced through this process would be equivalent to 10 million tons of high grade coal for the railways.

The Committee has further suggested that the railways should have their own fuel organisation for enforcing standards of quality in coal. Various other suggestions which can bring down the cost of fuel consumed by railways and other connected aspects of coal savings have been made by the Committee.

The Committee's suggestion to electrify and dieselise some sections of railways had been made five years ago by the Driver Committee which submitted its report in March 1953. The Driver Committee had also recommended the use of gas turbine tractions. It was estimated by the Committee that, if all its recommendations were implemented, it would result in a cut of 20 per cent. in coal consumption and a saving of about Rs. 6 crores per annum in expenses in the course of the five years from then, on the basis of the then fuel bill. Though the railways have been gradually increasing the use of diesel locomotives and electric traction, the fuel bill has not shown any decline. On the contrary, it has gone up from Rs. 22.5 crores in 1952-53 to Rs. 53.86 crores in 1957-58 (revised estimate). The budget estimate for 1958-59 is Rs. 57.21 crores. A large part of this must, however, be accounted for by extension of railways to various parts of the country.

MACHINERY FOR COAL MINING

A team of three technical experts of the National Coal Development Corporation left Ranchi last week-end for the United States in connection with the purchase of mining machinery and equipment for the Corporation out of the loan granted by the Export-Import Bank of America. The Bank has sanctioned a loan of $150 million to the Government of India to meet its foreign exchange requirements for the second Five-year Plan. Out of this sum, the Corporation has been allotted $15 million for the purchase of machinery and equipment for its coal mines.

The Corporation which is opening several new coal mines in Bihar, Madhya Pradesh and Orissa, is expected to raise India's annual coal output to 13.5 million tons by the end of the second Plan period. Global tenders for the machinery and equipment needed will also be invited by the Corporation.

TEA INDUSTRY IN THE NILGIRIS

FISCAL POLICY AFFECTS PROSPERITY

PROSPERITY does not always grow with age and experience, for it depends on many other factors. This is as much true of the tea industry as of any other. For instance, the tea industry in the Nilgiris is over a hundred years old and produces some of the finest teas in South India and, with the natural advantages it enjoys on the hills, one would normally expect that the lot of the industry should be a happy one. That it is not so is evident from the speech of Mr. M. W. Hoare, Chairman of the Nilgiri Planters' Association, at the sixty-seventh annual meeting of the Association held last week-end. Mr. Hoare feared that he could not produce a very optimistic picture of the possibilities for the industry. He had several grounds on which he based his estimate.

Dealing first with labour, Mr. Hoare felt that the output of time-rated workers in the Nilgiris was falling and that the will to work a six-day week was lacking. This, he said, applied more to men workers than to women. Fortunately, harvesting of crop was in the hands of women who, according to Mr. Hoare, show a uniformly greater sense of responsibility or of the wish to earn more. Nevertheless, he was not sure whether even the women were prepared to make as much effort as was necessary for the continued prosperity of the industry. Alluding to the present-day living conditions of plantation workers and production, Mr. Hoare said:

"Our predecessors in the past used to consider that, in order to get good work from their labour, it was necessary to give them good conditions as compared with standards from the villages from which they came. We are now compelled to adopt standards which have risen beyond anything our predecessors would have dreamt of, and I wonder whether we might further increase our production, and maintenance of our production assets, by a more scientific approach to the study of work methods in plantations, as also a sociological study of living conditions and how the increased income of working families is being spent. We may have our own ideas of the subject, but a scientific study would certainly be helpful in formulating the State's and industry's policy in regard to work and wages."

The increase in wages and salaries has raised the cost of production and this has been offset only to some extent by an increase in crop. For instance, many of the estates in the Nilgiri district produced record crops, the total production of all estates being 17.63 million lbs., a shade less than the record output of 17.64 million lbs. attained in 1955. During the last 10 years, that is from 1947 to 1957, the production in the Nilgiris rose by 23 per cent., as against an increase of 70 per cent. in aggregate South Indian production. The reason for the modest rise is attributed to the fact that "the small holdings, which are so numerous in this district and form a substantial part of the acreage of the district, have not yet reached the yield levels of the large estates in the district." Most of the large estates have achieved increases in crops well up to the average of South India. The record crops in many estates were to some extent due to the favourable climatic conditions, but much of them were due to improved cultural processes, manuring programmes, keeping down of pests and diseases and the coming into bearing of replanted or infilled teas in the fields. In fact, the results achieved in the Nilgiri district have disproved the belief of the Plantation Enquiry Commission that most of the stands of tea in the Nilgiris are exhausted.

Mr. Hoare was, however, distressed to find that the planters who had raised the productivity of the fields did not have the necessary money to expand "the other assets to bring the result of their good work to fruition." In other words, the estates do not find enough money out of their profits for more buildings, more machinery and bigger factories, as this is being absorbed by taxation. A rough idea of the extent to which the fruits of the tea estates' efforts are being taken away by the various Governments —Central, State and Local—can be had from the following statistics given by Mr. Hoare:

"For an estate producing with great skill and care 1,000 lbs. of manufactured tea per acre, the following will be the distribution:

"Out of every 1,000 lbs., about 400 lbs. go to labour in wages, amenities, and other benefits.

"About 180 lbs. go towards paying for the tools, equipment and supplies required to keep the estate in production.

"About 275 lbs. will go towards Central income-tax, agricultural income-tax and sales tax, duties, cesses, road tax, property tax, education cess and a number of other levies.

"The remaining 145 lbs. go towards depreciation or enough funds to provide for the replacement of machinery, buildings and equipment, when they are worn out or too old, towards reserves and paying a return to those whose investment enabled in the first place the development of this industry."

The foregoing figures show that the return to the investor is a meagre fraction and naturally he is less and less attracted to invest in tea plantations. As was rightly pointed out by Mr. Hoare, after being taxed to the limit and to a point that those who have invested in the industry find the value of their shares eroded by successive falls in the market, there is no attraction left to draw savings to plantation investment. "In these circumstances," he added, the industry must look increasingly towards its own internal resources. If taxation levels do not allow this process, I fear that revenue will fall and earning capacity become still less."

Mr. Hoare was of the opinion that it was unfair to compare the tax burdens on Kerala plantations, where they are higher, with those in Madras State and then say that the estates in Madras should feel happier. Nor was it fair to argue that Madras estates had to pay income-tax and agricultural income-tax only, if there was any income. Arguments of this type are by no means a source of comfort to investors in Madras plantations. Speaking on the tax burden on tea industry in general, he made a plea for the reversal of the present fiscal policy, if the Government was genuinely interested in saving the industry from collapse, and encourage it to earn more foreign exchange. Thus he observed:

"This industry reached its present position of being the country's largest earners of foreign exchange and the biggest payers of its taxes by century-long careful nursing, wise husbandry and progressive development. By the return paid to investors, the industry attracted more investments; by the reserves built up by the industry more resources were available for expansion and development of production assets. The expensive period of the plantation industry in India has passed. If the folly of wrong fiscal and labour measures can only be proved by the collapse of the industry, then it is the sign of considerable lack of forethought. I have no doubt that the Government in the States and in the Centre have sufficient vision and practical understanding of the problems of industries to see that this trend of policy is reversed in time."

If the industry has not already suffered a collapse, it is because of some fortuitous circumstances, such as internal political trouble in Indonesia which holds up rehabilitation of the tea industry in that country, repeated internal commotions in Ceylon caused by floods, riots and strikes, adverse weather conditions in North India last year and the boom conditions following the Suez crisis. All these developments have, as Mr. Hoare said, helped to conceal the real problems of the tea industry.

As regards the outlook for tea industry in the Nilgiris in the current year, Mr. Hoare was somewhat pessimistic. He said that the industry was faced with a serious threat to production from a cut in the supply of electricity, because the tea factories are the biggest consumers of electricity in the district. The repercussions of this cut were described by Mr. Hoare thus:

"There are not many among us who have alternative sources of power and most of us must suffer by these sudden cuts, stoppages and enhancement of rates. This year's excellent flush of many estates lately has had to be allowed to grow into hard wood and then must be cut or broken back without benefit to anybody. The increased cost of doing this and laying off workers on half wages will add to the cost of the industry, but the loss to India in foreign exchange for tea alone is probably several lakhs of rupees a day. If a private supplier had done the same thing, there is no doubt that we should have had some redress for our grievance in a court of law. But the State-owned electric undertaking can interrupt supplies without regard to consequence, and enhance rates at will. The departmental heads so free with cuts might spend a night in the vicinity of the Kundah project. From a number of estates, they would be able to see the myriads of high-powered lights twinkling throughout the night."

The picture drawn by Mr. Hoare is certainly disturbing and the State Government would do well to consider seriously his suggestion to make up the deficiency in supply when it occurs by having thermal generators. It may be true that thermal plants are expensive to run, but they are to be used only in an emergency. The initial cost will not, therefore, be a large premium to pay for insurance against losses such as those caused by the present cut in power supply.

DUNDEE JUTE INDUSTRY

PROSPECT OF CUT IN OUTPUT

THE jute industry in Dundee is faced with the prospect of a cut in production, as manufacturers report that the demand for jute cloth has considerably slackened. A considerable part of the machinery is said to remain idle and several factories are reported to be running alternative weeks or three days per week. In short, according to jute traders, there has seldom been such a prolonged spell of idleness in Dundee as is being experienced now.

Britain's jute industry has had a good record in the post-war period. Lord Dundee, who made a reference to the position of the industry in the House of Lords last week, said that it had made a magnificent contribution to the national economy. He said that, since 1947, the production of jute cloth had increased from 48,000 to 80,000 tons per annum and the output of yarn from 73,000 to 137,000 tons per annum. A sum of £10.5 million of new capital had been spent on rehabilitation and modernisation of the jute industry during this period.

Nevertheless, since last year, the position of the Dundee jute industry has suffered a deterioration. Faced with keen competition from cheaper imported hessian cloth, despite a unique system of State trading by which it is protected, the industry had to reduce last year the number of persons employed by 3,000. In fact, the U.K. Government, realising the seriousness of the situation, reduced the basis of its selling prices of hessian from 40 per cent. to 30 per cent., thus making the sacks manufactured by the Dundee industry cheaper. Lord Dundee insisted that it was essential that the peculiar position of the industry in Scotland should not be overlooked at the forthcoming Commonwealth Trade and Economic Conference in Montreal, Canada. Any trade agreement made there, he added, should not be framed in such a way as to make it impossible for them later on to arrive at a fair and reasonable agreement with India.

Replying on behalf of the Government, Lord Strathclyde, Minister of State at the Scottish Office, said that the Government was acutely conscious of the special problems in the jute industry at the present time. The industry was facing competition from paper, and long-term difficulties had been aggravated recently by a general recession overseas.

Manufacturers other than jute goods and non-jute traders are, however, opposed to any step or agreement with other countries which will not allow free competition. They believe that only through competition can the quality of the Dundee industry's products be improved and prices made more competitive. The Federation of British Carpet Manufacturers, for instance, strongly feels that competition from imported jute yarns, if allowed more freely by the Board of Trade, would go a long way towards improving the quality and reducing the price of home spun yarn, supplies of which to carpet manufacturers during 1957 amounted to 23,263 tons, as compared with 1,493 tons imported. The Federation's latest annual report goes on to add:

"Although the supply of jute yarns has been sufficient, there are still carpet manufacturers who feel strongly that some of the British spun yarns supplied to the industry are below standard and that healthy competition from imported yarns would do much to remedy this and to eliminate the poorer types.

"Admittedly the Dundee industry has done much to modernise and render its plants efficient, but lack of competition from overseas leads to higher prices, which are inevitably passed on to the public.

"Since the war all imports of jute yarn have been subject to Board of Trade licence. Beyond the fact that imports of jute yarn are strictly controlled, the Board will not permit even a small stock of imported yarns to be held in this country to make good immediate shortages in supplies—a matter which the Federation has taken up on a number of occasions—unfortunately without success."

The U.K.'s carpet sales reached a record high of £66.8 million and the output, at 46.5 million square yards, was just below the record. Sales are expected to go up even higher. Last year's increase is said to be almost entirely due to larger buying in the domestic market, in which sales amounted to £58 million, a rise of over £7 million or 14 per cent. in two years, thanks to the halving of the purchase tax to 15 per cent. On the export front, sales rose from £8.5 million to £8.8 million only on account of the quota and similar other restrictions. If credit and import restrictions were to be removed throughout the sterling area, the Federation feels, exports might settle down at about £12 million per annum.

PROGRESS OF IRRIGATION RESEARCH

WORK IN DIFFERENT STATIONS REVIEWED

ALTHOUGH India ranks high among the countries which have developed their irrigation and power potential in right earnest, the research work in the sphere of irrigation is unfortunately less well-developed in India than in the West. Much progress, however, has been made in this field in recent years, thanks to the "research" consciousness in the country and the commendable guidance provided by the Central Board of Irrigation and Power. The Government has accorded its sanction to a Rs. 105-lakh research scheme prepared by the Board. The scheme is designed to encourage research on problems of a basic and fundamental nature pertaining to river valley projects and flood control works and to achieve economies by developing proper irrigation techniques. A notable feature of the Board's activities is the research session it organises every year. Last year, the session was held at Mysore where useful discussions took place on irrigation problems such as flood protection, construction of dams and weirs and tube-well irrigation. Last week, the Research Committee of the Board met at Srinagar where the Union Minister for Irrigation and Power, Mr. Hafiz Mohammad Ibrahim, in the course of his inaugural address, urged the research organisations in India to adjust their methods of work so as to encourage originality and initiative among young workers. He rightly stressed that organised research in the field of science and technology was the foundation of technical progress.

In his presidential address, Professor M. S. Thacker reviewed the irrigation research work which has been done in the various research stations in India. The Hirakud research station has evolved an air-entraining agent for use in admixture with cement concrete. This has led to considerable facility in construction and saving in cost. Research on this subject has been continued in the research laboratory at Rihand Dam in Uttar Pradesh, which has succeeded in evolving another air-entraining agent from indigenous materials. This agent, besides being as efficient as any other material, is also comparatively cheap. The Poona research station has been engaged in the study of the "effect of the horizontal impervious floor on the distribution of uplift pressures." It would appear that the study has established a relationship between the "percentage change in uplift pressure and the length of the floor." Referring to this result, Mr. Thacker said: "This is a valuable contribution to our knowledge on the subject and has proved useful in the designing of intricate structures."

Studies for training and controlling the behaviour of rivers like the Kosi and the Brahmaputra are under continuous study at various research stations, particularly those at Poona, Roorkee and Amritsar. Studies are also in progress on the silting of reservoirs. Research is being conducted on finding out alternative materials for stone for use in flood protection works. Studies at the Mysore Engineering Laboratories indicate that soil-cement blocks, containing 5 to 10 per cent. of cement, can be used economically for river training works. On the other hand, the Punjab Irrigation Research Station is engaged on studies on the stabilisation of sand and soils by chemical methods without the use of cement. The Board has also been concerned with researches on ground water studies and tube-wells.

The Bihar Institute of Hydraulics and Allied Research is engaged on investigations directed to the means of reclaiming tube-wells giving low discharges and has suggested the use of polythene film lining for small channels to reduce seepage losses and improve the overall efficiency of tube-well operations. The use of polythene lining for channels and canals appears to be attractive, but economic aspects would play an important part in considering its practical application on the scale required. In this connection, Mr. Thacker said: "During my visits to Australia and other countries, which are faced with similar problems, I have had occasions to discuss the matter of polythene lining with several engineers and technologists concerned. The technique appears to be simple; but, there is still a lot of investigational work to be done, from both the economic and technological points of view, before it can be generally adapted. I have seen in Germany some of the polythene products obtained as by-products from their brown coal or lignite. Perhaps, similar products can be obtained by processing our own lignites."

In West Bengal, the Kultigong series of rivers have posed the problem of heavy bed erosion. To combat the erosion, the River Research Institute, West Bengal, is studying the effect of introducing controls at different points of the rivers. Another important subject engaging the attention of irrigation engineers all over the country is the loss that takes place through evaporation and seepage in water reservoirs. It is estimated that these losses are very high, particularly in the smaller tanks or reservoirs. Mr. Thacker referred to his experience as a leader of a delegation of engineers and scientists to Australia where they had an opportunity to study the techniques employed in that country for minimising the evaporation losses from open reservoirs by covering the water surface with a mono-molecular film of cetyl alcohol. On their return, they set up a small committee to organise similar work in India. Preliminary field experiments have been planned to try out evaporation-control experiments using cetyl alcohol at three selected centres, namely, one reservoir at Faridabad near Delhi, the Poondi reservoir near Madras and the Krishnarajasagara near Mysore. While these field trials are in progress, laboratory experiments are under way at the National Physical Laboratory on the fundamental aspects of evaporation control, such as efficacy of different long-chain compounds. If these field trials and laboratory investigations led to useful results, Mr. Thacker felt that they might be able to conserve our water resources and release more water for irrigation purposes.

On the academic side of hydraulic engineering, the Indian Institute of Science, Bangalore, according to Mr. Thacker, has taken up studies on basic problems like air-entraining in high velocity jet, branching of flow in open channels, design of high discharge low head centrifugal pumps, determination of parameters which influence axial flow pump characteristics, and cavitation in water turbines. The Institute provides a hydraulic machines laboratory. The Punjab Irrigation Research Institute, at Amritsar, has also installed a turbine laboratory to conduct several studies.

Commendable as all this research work is, it is somewhat disconcerting to note that procedural delays hold up the progress of research. Thus, Mr. Thacker, in the course of his reference to the Rs. 105-lakh research scheme, said: "I am, however, constrained to point out that considerable time has been lost already in the implementation of the scheme. More than two years of the Plan period have gone by, but the work has been held up mainly because of procedural delays in the allocation of money through different State Governments." It is to be hoped that the authorities will take appropriate remedial measures and speed up the progress of irrigation and power research, so vital to the progress of the country in the sphere of agriculture and industry.

(Concluded from next column)

represents a return of 5½ per cent. on the share capital of the Company. The question whether advances from the Government of India should be treated partly or wholly as interest-free or alternatively as addition to share capital is said to be awaiting the decision of the Government of India. But, as stated at the outset, the Directors have made full provision for interest at 4½ per cent. per annum on the advances secured from Government.

NUCLEAR POWER COST

The view that nuclear power could be competitive only if the capital cost of nuclear power stations was reduced considerably by 1966 was expressed by Sir Christopher Hinton, Chairman of the U.K. Central Electricity Generating Board, and till recently Managing Director of the Industrial Group of the U.K. Atomic Energy Authority. He said there could be no doubt now that the credit allowed in the original U.K. nuclear power station costings for the return and re-use (in other subsequent power stations) of the plutonium products had been too high, and as a result, the estimate of cost per unit of electricity sent out had to be increased from 0.6d. per unit to 0.66d. per unit. The achievement of efficient and economic nuclear power, Sir Christopher said, depended upon the development of more efficient fuel elements. The responsibility for achieving this lay with the Atomic Energy Authority and the Central Electricity Generating Board. If it were not achieved, the U.K. would have either to proceed with the installation of nuclear power plants which would produce power more expensively than it could be produced from conventional plants, or, alternatively, to swing back to the use of conventional power plants.

OUTPUT OF MACHINE TOOLS

STATE-OWNED FACTORY MAKES HEADWAY

A SIZABLE increase in production, turnover and profit is revealed by the report and accounts of the State-owned Hindustan Machine Tools (Private) Ltd. (Chairman: Mr. N. R. Pillai) for the year ended 31st March 1958. Thus, whereas in 1956-57, the Company produced only 135 lathes, it produced 313 lathes and 89 milling machines in 1957-58. There is no dearth of orders for the Company's products which, in fact, exceed production. During 1957-58, it had orders for 611 machines, consisting of 315 lathes and 296 milling machines. Sales aggregated Rs. 1.44 crores, as against a mere Rs. 29.36 lakhs in the previous year. The profit (after providing for depreciation but before providing for interest on advances made by the Government to the Company) amounted to Rs. 30.71 lakhs as compared with Rs. 3.99 lakhs in 1956-57. This, together with Rs. 61,457 brought in, amounted in all to Rs. 31.32 lakhs. After providing for Rs. 9.08 lakhs for interest at 4½ per cent. on advances from the Government of India and Rs. 21.63 lakhs for writing down the development expenditure, there is a balance of Rs. 60,223 which has been carried forward to the current year's accounts.

The quality of the output of lathes and milling machines, it is stated, has been maintained at the "highest levels." It is noteworthy that the Company has effected reduction in the prices of its products. The sale price of the standard 1,000 mm. lathe has been reduced from Rs. 39,000 to Rs. 36,000 and still further to Rs. 29,500. The sale price of milling machines and 1,500 mm. lathes has also been reduced. Referring to the progress of construction and manufacturing programme of the Company, the Directors observe:

"Considerable difficulties involving increasing cost were experienced during the year by your Company in the procurement of castings in the absence of a foundry of its own and the increasing volume of diversified production at the factory. Work on the grey iron foundry, which was part of the original sanctioned project, could not be commenced due to foreign exchange scarcity, but it is hoped that an early start can now be made with this vital part of the project. Construction of a new assembly hangar to meet the urgent requirements of additional assembly space for the diversified production programme is nearing completion and the building is expected to be occupied by July 1958. The construction of a stores building has been completed and it has been temporarily employed as a training centre to cope with the augmented training programme necessitated by the extension of the system of multiple-shift working. The timber stores and pattern shop building as also a fireproof stores, were completed during the year. In addition, construction of a town administration building outside the perimeter of the factory has been completed. . . .

"Negotiations for licence rights and technical collaboration for the manufacture of radial drills were conducted during the year with two West German manufacturers, one French manufacturer and one Italian manufacturer. Of the four offers received, your Board has, with the approval of the Government of India, decided to accept the offer of Messrs. Hermann Kolb of Koeln, West Germany, for the manufacture in the Bangalore factory of 10 types of radial drills in 1½" and 2" sizes. The agreement, which unlike previous agreements of collaboration, does not involve the payment of recurring royalties, is expected to be signed during the first week of June 1958 and the first Hindustan radial drills produced in the factory are expected to be on the market by December 1958. The addition of 10 types of radial drills to the range of six types of milling machines and two types of lathes already in production, is expected to give your Company further flexibility in its production programme in relation to demand. This will also enable the country to be self-sufficient in the matter of medium-heavy radial drills, thereby saving considerable foreign exchange on machines, which had been imported hitherto."

The Company, it is stated, established during the year closer collaboration and co-operation with other machine tool factories in the country, such as Mysore Kirloskar Ltd. Harihar, Praga Tools Corporation, Hyderabad, and Cooper Engineering Works, Satara. It is gratifying to note that considerable inter-company mutual aid and assistance was developed during the year whereby deficiencies in the capacities of each factory was made good by other factories to the "general benefit" of the industry as a whole.

The Company's balance-sheet as on 31st March 1958 shows the share capital at Rs. 3.90 crores. Loans aggregate Rs. 2.98 crores, of which unsecured loans from the Government of India account for Rs. 2.35 crores. Assets include fixed assets (Rs. 3.51 crores) and current assets (Rs. 3.38 crores). The net profit for the year

NEW PRODUCTS AND PROCESSES

Plastipeel

DIFFICULTIES are often experienced in packing, transhipment and storage of fine tools, machine parts such as gears, camshafts, connecting rods, axle assemblies, valves and other precision instruments and equipments. Sometimes damage during transit is irreparable. In many cases a thin coating of 'gloss coat' is applied to partially avoid such damage. Although in foreign countries the use of such coating compositions is common, so far, their use in India has been only limited and the requirements have mostly been met from imports.

In an effort to develop an indigenous product, a formulation, Plastipeel, has been worked out at the Shri Ram Institute for Industrial Research, Delhi. Constituents of the formulation are mixed in suitable proportions in a vessel at high temperature. After thorough mixing the uniform mass obtained is cooled in moulds. The product so obtained is homogeneous and when applied in thin films gives transparent coating. The article to be coated is dipped in molten Plastipeel at 190° C. The excess material is then drained off. A transparent coating 0.09—0.1 inch block is retained on the article.

Use of Plastipeel as a packaging material reduces the packing risks, particularly for delicate components. Risk of minor damages during transit is also minimised. As a corrosion-resistant material it ensures safety in storage even in highly humid atmosphere. It can also be applied to china and glassware for packaging. Manufacture of the compound, it is said, is simple and can be taken up even on a small scale.

New High Temperature Lubricants

Solid lubricants which can withstand higher temperatures than ordinary graphite lubricants have been developed in the U.K. Whereas graphite loses its lubricating properties at high temperatures owing to its releasing the water which has been absorbed in it, and which plays an important role in its lubricating properties, the new lubricants are said to remain fully effective.

At the same time, the new lubricants can, if required, be partly graphite based. Their basic constituent is polytetrafluorethylene. When this material is added in a finely divided form to metallic powders such as bronze and copper, or alternately with graphite, and the resulting mixture is milled together, the PTFE forms a smear-like coating over the particles of other materials. Tests are said to have shown that the resulting material is a fully effective lubricant for use under high-temperature conditions where a solid lubricant is required. The PTFE is used in the proportion of about six parts of PTFE to every one part of the other materials.

"Eyetron"

An electronic device that can "see" the ground from an airplane through fog or clouds has been developed by the Diamond Antenna and Microwave Corporation of Wakefield, Massachusetts, in the United States. According to the Company, it may be the "definitive piece of equipment" to permit genuinely blind landings. The new device "sees" by means of microwave radio waves. These are short waves of extremely high frequency. The device converts the waves into visible light, and this enables it to produce pictures of objects on the ground instantaneously and continuously. The company says that Eyetron is a "revolutionary device" that reproduces the vision of the human eye electronically.

Hard Boards from Wood Waste

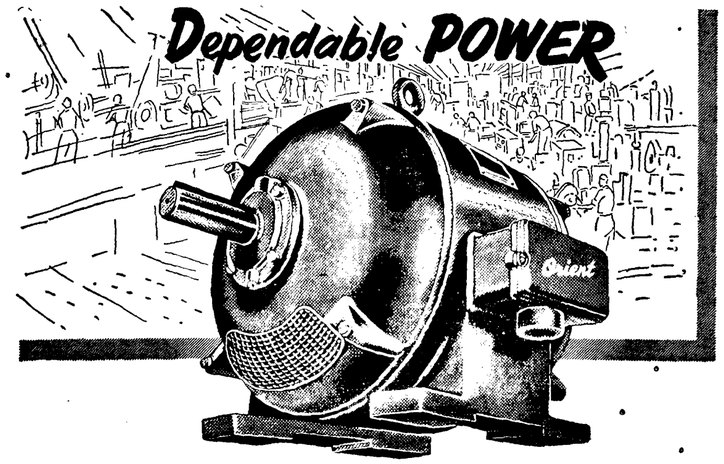
A process has been developed at the Forest Research Institute, Dehra Dun, to convert wood wastes into hard boards. The process is applicable both to soft and hard woods and their wastes. The equipment required consists of a disintegrator, a sieving machine, a mixer, a drawer and a hard press; and work can be undertaken on any scale. Saw mills and plywood factories, with their abundant supply of wood waste, can adopt the process with great advantage. Investigations carried out at the Institute on the boards produced by this new process revealed that the boards so produced are as good as any other type. They are strong, uniform in colour and can be painted, varnished or polished as desired. They can be used in panelling, partitions, ceilings, cupboards, shelves and a variety of furniture.

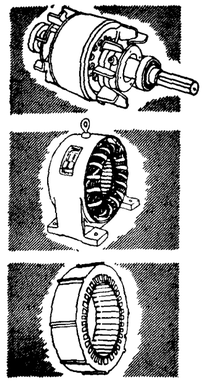
Man-made Diamonds

Man-made diamonds, identical to natural stones, will be in mass production for industrial users before the end of 1958, the General Electric Company of the United States reports. The diamonds are produced by subjecting carbon to high pressure and high temperature in a duplication of the natural process by which diamonds are made. The Company has already produced more than 100,000 carats of man-made diamonds. These have been shown to be identical to natural diamonds on the basis of optical, X-ray and chemical examinations and hardness tests. The largest of these diamonds are about the size of coarse grains of sand, and most of them are about the size of fine particles of sand. The company's synthetic diamonds will be used in cutting tools, grinding wheels, and other industrial equipment.

New Herbicides

The production of a new series of herbicides and weed killers is to be undertaken by the Heyden Newport Chemical Corporation, of U.S.A. The new compounds, which have been tried out experimentally over a number of years, are said to have shown outstanding results in controlling deep-rooted perennial weeds, such as bindweed. The herbicides are based on the use of 2,3,6-trichlorobenzoic acid, and are said to be exceptionally economical to use, having a relatively low cost and requiring a very small dosage rate.





BEHIND THE WHEELS OF INDUSTRY

Orient Industrial Motors are precision built from the highest quality materials to give high performance and long service.

Liberally designed, these motors have a high overload capacity and are capable of withstanding severe punishment.

Best insulating materials are used both in the slots and on the windings to give long life.

Dynamically balanced pressure die cast rotors are truly indestructible.

Uniflow forced draft ventilation system keeps belt dust away from the rotor.

These and several other features make ORIENT motors truly DEPENDABLE.

TRAINING OF LIFE INSURANCE PERSONNEL

L.I.C.'S PLAN LAUDABLE

TRAINED personnel is required by all specialised industries, trades and businesses for their successful operation and development. The old apprentice method is hardly adequate to meet the expanding demand for trained personnel of modern industries and businesses. In this country, the Universities are relied upon, almost exclusively, for the promotion of all branches of knowledge, general or specialised. Universities can, of course, make available young men with trained minds and general knowledge and, in some cases, specially trained for some of the professions. But they cannot be expected to prepare the men needed for special vocations and trades. University training, even if available, can only reach a limited number of young men and the task of specialised training needed for industries and vocations must be undertaken by the industries themselves, by the State or by both in collaboration.

Insurance, in all its branches, is a highly specialised form of business and needs, like any other specialised activity, a large mass of trained staff for its working. The major part of the responsibility to train the required personnel devolves upon the insurance industry itself, whether life or non-life. Insurance is a promising career for young men having qualities of head and heart suited to that profession. To the right type of individual, it offers complete opportunity and real equality—that is, an equal opportunity to prove unequal talents. It is, however, a highly specialised and technical profession requiring sound qualities of character, an understanding of human nature, and good training. Insurance is seldom bought. It has always to be sold. Whether a man makes a success of the business of selling depends as much on the extent to which he possesses the above qualities as on the soundness and adequacy of the training he receives. In advanced countries of the West, insurance agents are never selected at random nor trained perfunctorily. Few insurance salesmen are sent out nowadays with a rate book and a modicum of instructions in the rudiments of insurance to exercise their charm on the public without being given adequate advice as to the procedure they should follow, as to how to dig out prospective clients, assess their needs, evaluate their capacities and advise them on the plans that suit them best.

In India, where insurance is still in its adolescence, proper training of personnel is of utmost importance. The fact that life insurance has been nationalised does not in any way minimise the importance of training. One of the objectives of nationalisation of life insurance is stated to be the popularisation of insurance and to bring it within the reach of the common man. The achievement of such a purpose obviously means a vast expansion of insurance activity. That emphasises all the more the need for the spread of insurance knowledge, education and training and the raising of the necessary personnel required to sell insurance.

Primary Responsibility

It is heartening to note that the Life Insurance Corporation is aware of this. As the sole institution transacting life insurance business in this country, it is the Corporation's primary duty to see that facilities are created for the training of agents, field officers and other staff. Soon after its formation, the Corporation was faced with the task of instituting training facilities for the large development force taken over from private insurers. Two factors made this need all the more urgent. First, a large body of men who belonged to over 200 organisations of varying character and widely differing traits had to be integrated into a disciplined force capable of working in unison. Secondly, they had to be equipped for the sale and servicing of life insurance.

A special committee of the Corporation has finalised training courses for development officers, including branch managers, assistant branch managers in charge of development, field officers, and agents. The programme is for training 400 branch officers, 6,000 field officers and 100,000 agents. Simultaneously, arrangements are under way for setting up permanent training centres at Bombay, Calcutta, Madras, New Delhi and Kanpur. The Corporation also proposes to set up a number of temporary training units, organised exactly on the lines of the permanent training centres, in order to speed up the training of the existing development personnel.

New recruits to the development force of the Corporation will be imparted systematic training at these training centres before they are given assignments. There will also be a system of regular refresher courses for the existing staff. Gradually, training facilities will also be organised at the divisional and branch levels. This, no doubt, is a reform on a large scale necessitated by the need to spread the service of life insurance much more widely and, in particular, to rural areas. Once a trained field force swings into action, many causes which lead to bad, high-pressure selling, poor servicing and undue delays in settlement of claims, may be expected to disappear.

NATIONAL INSURANCE IN CZECHOSLOVAKIA

The National Insurance Act was passed in Czechoslovakia 10 years ago, in April 1948. The enactment meant considerable increase in, and extension of, claims to health insurance and pensions, covering even persons previously uninsured. The various types of insurance then in existence were completely unified by the Act. Pensions were increased up to 90 per cent. of income. Persons not liable to insurance before were granted social security. On the basis of acquired experience, the National Insurance Act was amended as from 1st January 1957. The amendment, bringing about further advantages for working persons, completed the unification of regulations.

Health insurance in Czechoslovakia is compulsory and applies to all employees, including domestic workers, undergraduates, certain students of secondary and vocational schools and apprentices. No contributions are paid by employees, nor are any reductions made from their wages for the purpose of insurance. Contributions are paid solely by employers.

All employees are eligible to the same sickness benefits. They are entitled to draw it from the first day of their sickness. The amount of benefit is graded in accordance with the earnings and length of occupation. When employed for over 10 years, the employee is entitled to 90 per cent. of his net earnings.

Sickness benefits are payable until the termination of incapacity for work but generally for a maximum of one year. The payment may, however, be voluntarily prolonged for another year. In the case of contracted, active tuberculosis, sickness benefits may amount to 100 per cent. of net wages.

Women employees are entitled to maternity leave for 18 weeks, that is, four weeks before confinement and 14 weeks afterwards. For the whole period of 18 weeks, they draw maternity benefits in cash. If they had worked for five years, they are entitled to 90 per cent. of their net earnings; otherwise, they are granted 75 to 80 per cent. of net earnings. The sickness benefits in cash include further special benefits on the birth of a child. This benefit may be claimed both by employed women and the dependants of insured men.

The preventive and therapeutical care of employed persons and pensioners and their dependants is absolutely free, including institutional medical treatment. This service comprises free provision of medicines, and therapeutical and orthopædic appliances. Even spa treatment, if recognised as suitable or necessary from the medical point of view, is given free at the expense of the health insurance scheme. Out of health insurance fund, is also paid certain recreation expenses offered by Czechoslovak trade unions to selected workers or their dependants. Children's recreation in pioneers' camps is also financed at the expense of national insurance.

All employees have a legal claim to family allowances in respect of all their children. Family allowances rise progressively with the number of children. Thus, family allowances of an employee with two children correspond to 13.5 per cent. of his average gross earnings, while those of an employee with four children correspond to 38.9 per cent. of the earnings. Family allowances are payable until the completion of the child's compulsory school attendance. If the child continues his studies or apprenticeship, family allowances may be paid until he reaches the age of 25.

BRITISH SOCIAL SECURITY SYSTEM

Britain's State-controlled social security system was the "nearest thing to perfection" among such schemes operating in the world, observed Prof. Renato Morelli, Chairman of the International Social Security Association. He was speaking at a Press conference called shortly before the close of the 13th general meeting of the Association held recently in London. About 400 delegates from 60 countries attended the meeting. The Association is an organisation for the interchange of information and experience between institutions administering social security schemes all over the world.

The Association's Secretary-General Mr. Leo Wildman, of the International Labour Organisation, also paid tributes to the British system and said it had a great deal to teach other countries. While there could never be slavish imitation of the British pattern, according to him, other countries could adapt their own schemes to incorporate the lessons learned by the United Kingdom in the administration of its social security service.

Reviewing the work of the Association's conference, Mr. Wildman said the reports submitted showed that the initiative for legislation introducing new social security systems had now switched from Europe to the underdeveloped countries of the Middle and Far East. He cited Burma, Indonesia, Iraq, the Lebanon, Thailand, and the United Arab Republic as countries introducing new schemes. India, Iran, and Turkey all reported improvements in their schemes since the last Association meeting three years ago. The Soviet Union had reported introduction of a new pensions and insurance scheme, and Czechoslovakia reorganisation of its social security scheme. The conference also studied the progress made towards the expansion of social security schemes introduced in Latin-American countries since the end of World War II. The delegates had decided, Mr. Wildman said, to set up a special study group of doctors, statisticians, and administrators to probe in detail the costs of medical care, hospital treatment, and medicines, as well as the finances of health insurance schemes. It was also decided to give priority to a study of the administrative problem of partial employment, a means used by some Governments to fight the effects of recession.

INVESTMENT INSURANCE

The U.S. is reported to have offered to conclude an investment guarantee agreement with the Federation of Malaya for protecting American investors and to encourage them to invest in the Federation. The pact will take the form of an insurance arrangement under which U.S. companies investing in Malaya would pay premium to the U.S. Government and can claim indemnity for losses arising from nationalisation or non-convertibility of assets. Subject to diplomatic negotiations, the U.S. Government would meet the claim and then recover it from the Government of the Federation. The U.S. has already concluded 37 similar agreements with other countries.

HEALTH INSURANCE

The non-Governmental Health Insurance Council of the U.S. reports that 72 per cent. of the U.S. population participate in one or more forms of voluntary health insurance plans. During 1957, the greatest increase in coverage was in the field of policies for major medical expenses. Most persons are covered by so-called group policies issued to workers in all types of employment for themselves and their families. The varying plans provide for hospital care expenses, surgical expenses, regular medical expenses, and major medical expenses.

4¼ PER CENT

BOMBAY STATE DEVELOPMENT LOAN, 1970

ISSUED AT PAR

AND

4¼ PER CENT

BOMBAY STATE DEVELOPMENT LOAN, 1971

ISSUED AT Rs. 99.75 PER CENT

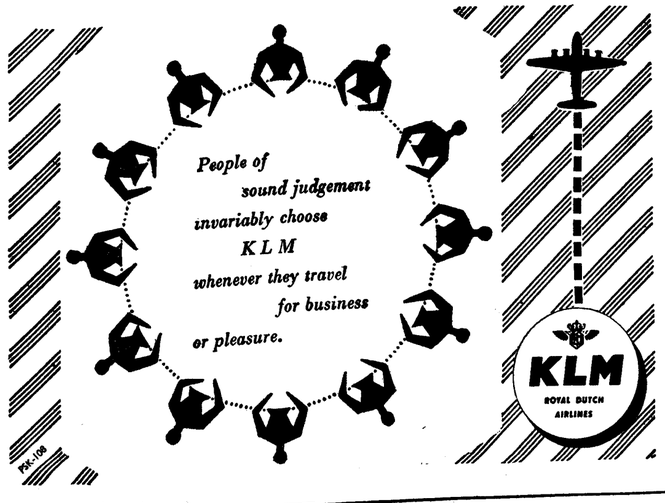
OPEN ON THE 15TH JULY 1958

The loans will be closed as soon as total amount of approximately Rs. 1000 lakhs has been subscribed, and in any case not later than the close of business on the 19th July 1958.

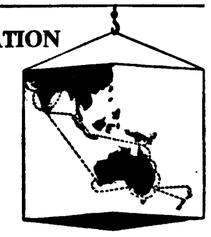
The applications for the loans will be received at—

(a) the office of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras, Nagpur and Bangalore
(b) the branches of the State Bank of India within the State of Bombay except at Bombay and Nagpur and at places mentioned in (c) below
(c) the branches and treasury pay offices of the State Bank of Hyderabad within the State of Bombay
(d) the Government treasuries and sub-treasuries in the State of Bombay at places where there is no branch or treasury pay office of the aforesaid banks
(e) Applications will also be collected by the State Bank of Saurashtra at Bhavnagar and its Branches within the Saurashtra area of Bombay State and forwarded to the nearest receiving office.

FULL PARTICULARS CAN BE OBTAINED AT ANY OF THE RECEIVING OFFICES MENTIONED ABOVE.



For INFORMATION on AUSTRALIA, NEW ZEALAND, and FIJI



Business men requiring up-to-date information and a complete banking service are invited to use the facilities of the Bank of New South Wales, the oldest and largest commercial bank operating in Australia, New Zealand, Fiji, Papua and New Guinea, with over 1,000 branches and agencies.

The services include trade and industrial introductions, economic and market information, and assistance with travel requirements.

Enquiries may be made through your own bankers or direct to:—

COMMONWEALTH IN WORLD TRADE

EXPORTS FROM INDIVIDUAL COUNTRIES MOVE UP

A NOTABLE feature of world trade in recent years has been the declining importance of trade among Commonwealth countries. The share of these countries in the aggregate world exports during the year 1956, for instance, was lower at 26 per cent., as against 29 per cent. in 1952. Similarly, as regards imports, the share of Commonwealth countries has gone down, the figure for 1956 being 30, as against 32 four years before. The major factors responsible for such a trend have been analysed in the memorandum *Commonwealth Trade* 1956-57, prepared by the Intelligence Branch of the Commonwealth Economic Committee (published by Her Majesty's Stationery Office, London. Price: 2*s.* net).

The memorandum reveals that the export promotion attributable to the main Commonwealth countries during 1956 was in most cases slightly lower than in 1955. The decline was most marked in the case of India and the Colonial territories. As regards imports, the percentage share of the United Kingdom and Australia fell considerably, whereas that of Canada registered an appreciable increase in 1956. The percentage value of trade accounted for by the individual countries of the Commonwealth in the world total in 1956 as compared with 1955 is given in the following table:

	Exports		Imports	
	1955	1956	1955	1956
World*	100.0	100.0	100.0	100.0
Of which:				
United Kingdom	9.8	9.7	12.3	11.2
Canada	5.3	5.3	6.0	6.6
Australia	2.1	2.0	2.4	1.9
New Zealand	0.9	0.8	0.9	0.8
Union of South Africa	1.1	1.1	1.7	1.6
Rhodesia and Nyasaland	0.6	0.5	0.5	0.6
India	1.5	1.3	1.8	1.7
Pakistan	0.5	0.4	0.3	0.4
Ceylon	0.5	0.4	0.3	0.4
Colonial territories	4.6	4.4	4.8	4.7
Total Commonwealth	26.8	26.0	30.9	29.8

* Excluding the trade of Albania, Bulgaria, China Mainland, Czechoslovakia, E. Germany, Hungary, N. Korea, Poland, Rumania, U.S.S.R.

Despite the decline in the Commonwealth's share in world export trade, there was a substantial increase in the aggregate exports of individual Commonwealth countries in 1956, with the exception of Ceylon which suffered a sharp setback from the high level of the previous year. Exports reached a record level for the U.K., Canada, S. America, N. Zealand, and Rhodesia. Australia, too, made a rapid recovery. Substantial increase in exports was recorded by Pakistan and Colonial territories as well. The rise in exports from India, however, was negligible. There was by and large a concurrent expansion in the imports into the Commonwealth countries during 1956. In the case of Pakistan, the total imports were higher by 50 per cent. as compared with the exceptionally low figure of 1955. The other countries registered varying degrees of increase in imports in the year under review, barring perhaps Australia and New Zealand which accounted for a decline, presumably because of import or credit restrictions.

Exports and Imports

The following table gives in terms of each country's own currency the aggregate outturn for the year 1956 (or in some cases, the trade year 1956-57) with comparable figures for the preceding year:

	Exports*		Imports	
	1955	1956	1955	1956
United Kingdom (£ million)	2,905	3,172	3,881	3,889
Canada ($ million)	4,282	4,790	4,712	5,710
Australia (£A. million)	757	960	818	717
New Zealand (£N.Z. million)	227	273	251	235
Union of S. Africa† (£ million)	328	367	481	495
Rhodesia and Nyasaland (£ million)	170	179	139	159
India (Rs. crores)	5,90 9	5,97.3	6,78 8	8,39 8
Pakistan (Rs. million)	1,505	1,620	1,087	1,690
Ceylon (Rs. million)	1,866	1,648	1,460	1,630
Colonies (£ million)	1,365	1,443	1,501	1,638

All the figures relating to exports are f.o.b. with the exception of Canada the exports of which are exclusive of freight, insurance, etc.
Import figures for U.K., India, Pakistan, Ceylon and Colonies are in c.i.f., while those for Canada, Australia, South Africa, and Rhodesia and Nyasaland are in f.o.b.
New Zealand imports are valued at the current domestic value in the country of export.
Australia: fiscal year ending 30th June year following.
India: fiscal year ending 31st March year following.
* Exports exclude re-exports except for the Colonies and Pakistan.
† Including South-West Africa Territory, 1954-56.

The factors influencing the trade of the Commonwealth countries can best be determined, as the memorandum rightly says, by reference to the index of the volume of trade, on the one hand, and the index of export and import prices, on the other. During 1956, we are told, there was a further marked expansion in the quantum of trade for most of the Commonwealth countries and, in general, an appreciably higher level of prices. The volume of exports from the U.K. and Canada reached a record level. There was also a large increase in the volume of exports from Australia and the Colonial territories. In contrast, India and Ceylon recorded decline from the high level reached in the previous year. On the import side, a striking expansion was noticeable in the case of Canada, India and Ceylon. The index for the U.K. remained steady at the level of the preceding year, whereas that for Australia and New Zealand was considerably lower.

Trend of Prices

The trend of prices varied for a number of Commonwealth countries, although, in most cases, an upward trend was evident for exports as a whole. The U.K.'s index was higher at 106, as against 102 in 1955 (Base: 1954=100). In Canada, a decline in the index of wheat export prices was more than offset by higher prices for metals and other products, so that the price index rose from 118 in 1955 to 121 in 1956 (Base: 1948=100). In Australia, there was a substantial improvement, thanks to the marked recovery in wool prices. The export price of wheat, metals and meat showed relatively little change and there was a sharp decline in prices of butter. In New Zealand, there was little change in the prices of wool and meat, while those of butter declined; the decline was only partly offset by substantially enhanced prices for cheese. The index for Pakistan again reflects the results of the devaluation of the rupee in mid-1955. The prices (in rupee terms) of all the major exports except tea were markedly higher. The data relating to India's trade during the first nine months of 1956-57 indicate a somewhat higher level of prices than in 1955-56. There was, however, a steep decline in Ceylon, where prices of tea and rubber were appreciably lower.

The trade balance of Commonwealth countries reacted in different ways according to the incidence of the various factors referred to before. In the U.K., the year 1956 witnessed a marked recovery from the sharp deterioration of 1955, thanks to the rapid expansion of exports. On the contrary, the striking expansion of Canada's imports occasioned a steep rise in the trade deficit, notwithstanding the further substantial increase in exports. Greatly increased exports and reduced imports both contributed to the large surplus earned by Australia in 1956-57. The same factors were responsible for the handsome improvement recorded for New Zealand in 1956. Rhodesia's surplus was substantially lower than in 1955. South Africa's deficit on merchandise trade (excluding gold) showed a marked improvement as the result mainly of heavier exports; taking into account its gold exports, South Africa's favourable balance for 1956 was £102 million, as against £60 million in 1955. The figures for the remaining Commonwealth countries show a distinct setback. In India and Pakistan, much heavier imports were largely responsible for the adverse trend, but, in Ceylon, there was a marked decline in exports also. Exports from the Colonial territories showed a further substantial recovery, but, here too, unfavourable balance showed a heavy increase, owing to enlarged imports.

The analysis of the trade balance of these countries during the first six months of 1957 will show, in many cases, a noticeable change as compared with the corresponding period of 1956. A pronounced deterioration is evident for the U.K., Canada, Ceylon and Rhodesia, while New Zealand's surplus was appreciably less than the exceptionally high figure recorded a year earlier. Australia, on the other hand, earned a large surplus, as compared with the small deficit shown for January-June 1956, and there was an improvement in South Africa's balance of merchandise trade. The data indicate a very marked deterioration for both India and Pakistan.

The figures relating to the foreign trade of India as given in the memorandum reveal that the total value of exports during 1956-57 was higher at Rs. 597.3 crores, as against Rs. 590.9 crores in 1955-56. A steep rise in the volume of tea shipments brought much greater export returns, though the increase was largely offset by a decline elsewhere. For instance, receipts from exports of raw cotton, vegetable oils and oilseeds fell by over one-half to Rs. 16.3 crores. Lower figures were recorded for hides, skins and leather which together accounted for Rs. 27.2 crores during 1956-57, as against Rs. 29.6 crores in 1955-56. The value of spices exported fell from Rs. 10.7 crores in 1955-56 to Rs. 9.1 crores in 1956-57 and of raw cotton from Rs. 29.7 crores to Rs. 13.5 crores. Exports of cotton manufactures recovered from the previous years' decline; the total of these exports amounted to Rs. 67.9 crores, as against Rs. 63.5 crores. There was, however, a little change in the case of jute goods, the exports of which aggregated Rs. 119.2 crores, as against Rs. 118.3 crores. The brightest spot in India's export trade was provided by tea, the total earnings of which moved up from Rs. 109.1 crores in 1955-56 to Rs. 145.1 crores in 1956-57.

Out of the total exports of Rs. 597.3 crores from India during 1956-57, the Commonwealth countries accounted for as much as 30 per cent.; the actual value of exports was Rs. 301.7 crores, as against a slightly higher rate of Rs. 304.7 crores in 1955-56. Exports from India to sterling area countries remained steady at the previous year's level, that is, Rs. 306.2 crores. There was a slight increase in the receipts from exports to dollar area over the previous year, the total earnings being Rs. 113.4 crores in 1956-57, as compared with Rs. 108.2 crores in the previous year. A marked decline in exports to O.E.E.C. countries was noted in 1956-57, the actual figure being Rs. 55.0 crores, as against the record level of Rs. 64.3 crores in 1955-56.

Country-wise Analysis

The country-wise analysis of India's foreign trade will show that there was a notable recovery in exports to the U.K. in 1956-57, owing to substantially greater exports of tea. Shipments to the U.S., Canada and Egypt also increased. On the contrary, there was a decline in exports to the Netherlands, Italy, Belgium, Pakistan, Australia, Burma, Japan and Ceylon.

While the export earnings on the whole recorded a slight increase in 1956-57 over the previous year, there was a further substantial rise in expenditure on imports which aggregated Rs. 839.8 crores, as against Rs. 678.8 crores. The steep rise in payment for imports was accounted for chiefly by iron and steel, machinery, vehicles and non-ferrous metals. There were larger purchases from all the main sources of supply. The most marked increase was in imports from Continental Europe, particularly Western Germany. There was also a sharp advance in imports into India from the U.K., the U.S.A. and Japan. In contrast, imports from Pakistan suffered a distinct setback, as a result of heavy reduction in purchase of raw jute.

The total value of imports into India during 1956-57 was Rs. 839.8 crores, as against Rs. 678.8 crores in the previous year. Of these imports, Commonwealth countries accounted for Rs. 332.2 crores (Rs. 305.0 crores in 1955-56), representing nearly 40 per cent. of the total, the sterling area for Rs. 334.7 crores (Rs. 297.4 crores), the dollar area for Rs. 116.1 crores (Rs. 97.6 crores), and O.E.E.C. countries for Rs. 219.0 crores (Rs 149.2 crores).

FOREIGN TRADE OF INDIA IN FEBRUARY 1958

India had an adverse balance of trade to the extent of Rs. 24.74 crores during the month of January 1958, according to the provisional figures of foreign trade by all routes—sea, air and land—on private and Government accounts. Exports of merchandise (excluding transit trade of Pakistan and other overland foreign countries, namely, Nepal, Tibet, Sikkim and Bhutan) accounted for Rs. 41.40 crores, re-exports for Rs. 0.56 crore and imports for Rs. 66.56 crores. The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Exports (including re-exports) of currency notes amounted to Rs. 30 lakhs, and current coins (excluding gold coins) to Rs. 2 lakhs, while there was no export of gold. Imports of currency notes aggregated Rs. 2.21 crores and of gold Rs. 14 lakhs. There were no imports of current coins (excluding gold coins) during the month.

The Directorate-General of Supplies and Disposals, Ministry of Works, Housing and Supply, has brought out a booklet entitled *Directory of Government Purchases during the year* 1956-57. The booklet is intended to help industrialists in their plans to establish fresh sources of supply in the country and to expand further capacity of the existing industries. It provides information on the various types and volume of stores purchased by the Government. It also gives figures showing the value of stores procured from indigenous manufacturers and the extent to which they have to be imported.

SOME REFLECTIONS ON NAINI TAL LABOUR CONFERENCE

IMPACT OF HIGH TAXATION AND WAGES ON COTTON INDUSTRY

By A Special Correspondent

THE discussions at the recent labour conference at Naini Tal were most ineffective. It is indeed difficult to believe that they could be otherwise. The dice had been heavily loaded against the employers' representatives whose protests against extravagant proposals were of no avail. The conference was presented with a *fait accompli* and all it was required to do was to ratify the decisions taken earlier at the State Labour Ministers' conference. Political leaders, some of whom had no manner of connection with labour or trade unionism, dominated the proceedings, and the feeling was created that the main object of the conference was to conciliate them. Questions like closure of industrial units were brought on the agenda at a later stage, giving insufficient opportunities to the participants to make a careful study of the relevant documents and to come to considered conclusions on them.

The conference was being held at a crucial time. After making good progress during the first Five-year Plan period, the country's economy had begun to exhibit alarming symptoms of exhaustion. The basic objectives of the second Plan, namely, the attainment of a big increase in production, investment and employment, were in great peril. It was obvious that progress in nearly all the important sectors of the economy had been halted. More and more concerns were finding it difficult to remain in business, while others were seeking deliverance from financial embarrassments by drastically curtailing their activity. According to the Government's own account, 26 cotton mills had completely gone out of business, while 37 others had closed partially.

The conference could have made itself useful by offering helpful suggestions for overcoming the crisis. Far from making any such constructive contribution, it adopted a number of resolutions that can only be characterised as unrealistic and sterile. The cotton mill industry was used as a convenient target for attack and its present distractions were attributed to lack of prudent and efficient management. How such a sweeping indictment could be made against the country's oldest and biggest organised enterprise, passes one's comprehension.

Inquiries

If it is a fact that all or the majority of the mills that have gone out of production were stricken by the malady of "continuous neglect" and "inefficient management," one may well ask why no remedial action was taken by the Government in good time under the Industries (Development and Regulation) Act. Inquiries have been conducted from time to time into the working of many units under the provisions of this legislation, but little is known about the outcome of such investigations. Surely, the Government would not have spared the erring concerns if they had really deserved punishment.

The temptation to raise the slogan of "mismanagement" in order to misrepresent the private sector should be strongly deprecated. If the present economic *malaise* of the country is due entirely or even largely to this evil, the remedy is as simple as it is obvious. But it would be shortsighted to ignore the fact that the country's present difficulties are the result of inflation, food shortage, heavy taxation, the growing rigidity of cost structure and the decline in the purchasing power of the people.

To take the example of the cotton mill industry, cloth prices today are below the pre-December 1955 level and yet mills are burdened with heavy unsold stocks, thus compelling them to reduce their output and labour complement. They are forced to take these steps because consumer resistance even to the reduced prices remains stiff. Thanks to dearer food, the common man has perforce to divert the bulk of his earnings towards the purchase of this commodity by postponing the fulfilment of his other needs.

The producer, who has already scaled down the cloth prices, cannot go further without inviting serious financial difficulties. He is in fact confronted with the intractable problem of cost inflation against which no remedial measures are within his reach. Cotton and wages alone account for nearly 80 per cent. of the production costs. The present distress of the industry is largely due to the inability of many mill concerns to earn sufficient profits to ensure their viability. A number of them are forced to make distress sales in an attempt to reduce their unsold stocks. Even the best managed mill companies, the realisations of which in previous years were commensurate with their efficiency and prudence, have had to be content with negligible profits for last year, the outlook for the current year being even worse.

These are well-known facts and, surely, Mr. Nanda, who is also in charge of planning, cannot be unaware of them. The travails of the industry began in 1956 when the rates of the excise duty were revised upwards twice in order to secure for the Centre an astounding sum of nearly Rs. 45 crores by way of additional revenue over that of 1955-56.

The position of many other industries is no better. In recent years, the tax burdens have become so heavy that few industries can expect to flourish. In the two years 1956-57 and 1957-58, the Centre alone has levied additional taxes amounting to nearly Rs. 130 crores, despite its own admission about the "inadequacy of corporate savings for financing the programmes in the private sector." In its Memorandum entitled *Appraisal and Prospects of the Second Five-year Plan* published in May last, the Planning Commission admits that the scope for additional taxation at the Centre is very limited and adds that "the effort already undertaken has been large" and that "the current rates of direct as well as indirect taxation are high."

One wonders whether any consideration was given to these weighty observations by the Government and labour spokesmen at the Naini Tal conference. The finances of many industrial units in the country are in a parlous condition and even the smallest increase in the burden is likely to prove to be the proverbial last straw. In these circumstances, the suggestion for raising the employers' contribution to the workers' provident fund from 6¼ per cent. to 8⅓ per cent. is almost reckless, as also the proposal for increasing the rate of contribution in respect of the Employees' State Insurance Scheme from 1¼ per cent. to 4½ per cent.

Capacity of Industry

It is the desire of all fair-minded persons that labour should prosper, but further advances in its material well being cannot take place by ignoring the capacity of industry to pay and the claims of the other sections of the population to a higher standard of living. While it is evident from the foregoing discussion that few enterprises are in a position to accept more financial responsibilities, the proposed increase in the expenditure on social security measures for industrial labour will be prohibitively heavy.

This is best illustrated by the fact that the cotton mills of Bombay City alone will be called upon to add another sum of Rs. 1.77 crore per annum to their wage bill of Rs. 31½ crores, if the proposals relating to the provident fund and the Employees' State Insurance Scheme are implemented. The industry as a whole, will have to accept an increase of more than Rs. 5½ crores to its total labour cost of about Rs. 100 crores per annum. Can it do so in a period of cloth accumulations, mill closures and disappointing working results?

It cannot be legitimately urged that labour is in desperate need of relief. The industrial working class in India, numbering some three million out of a population of 390 million, is much better off than the vast majority of the people who are still ill-fed and insufficiently clothed. Besides earning good wages, the workers are the beneficiaries of comprehensive social welfare measures which constitute a substantial part of labour cost. The following break-up of the wage bill for the year 1957 in respect of Bombay City cotton mills deserves careful study:

	(Per worker per month) Rs.
Average basic wage	49.56
Dearness allowance	74.00
Total	123.56
Provident fund	7.72
Employees' State Insurance Scheme: employers' contribution at 1¼ per cent.	1.54
Holidays with pay and four festival holidays	7.52
Gratuity	3.14
Bonus	7.50
Total cost per worker per month	150.98
Non-wage element	27.42
Percentage* of non-wage element to total cost per month per worker	18.17

It is true that non-wage expenditures have become inevitable in order to finance an expanding system of social security, but in no country are "social charges" allowed to make deep inroads into the resources of their industries. Industrial labour in India has made appreciable gains since independence and nothing would be lost if it remained satisfied with its present position until the country and the other elements of the population became more prosperous. Even as it is, the Government's labour policy has become a deterrent to private investment.

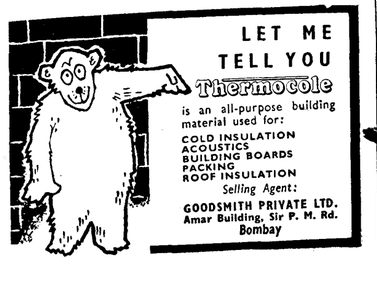
In this connection, the observations of the Committee on Finance for the Private Sector, better known as the Shroff Committee, which reported in April 1954 on the subject, are most appropriate. Says the Committee:

"A major factor impeding private investment today is the enormous change that has occurred in regard to conditions under which labour may be employed in factories and industries covered by the various legislative measures. Along with the increase in the general level of wages during the war and post-war years, a variety of additional obligations to compensate labour have been imposed by legislative measures adopted by the Central and State Governments and by the Tribunal Awards in recent years. Apart from the effect of these measures on the costs of labour to industry, they have greatly reduced the freedom of employers to adjust the labour complement or to enforce disciplinary measures or to rationalise in order to step up productivity."

Industrial labour undoubtedly constitutes an important element of the country's population, but it cannot in fairness claim preferential treatment. The present anomaly is largely the result of the existence of a multiplicity of trade unions in the country competing with one another for the favour of the working class by making absurdly extravagant claims on employers. Since the Naini Tal conference was dominated by rival trade union leaders, determined to outbid each other in securing concessions for labour, moderation and fair-play had little scope in its deliberations. Now that they have descended from the cool heights of the hill-station, they will perhaps realise that it is suicidal folly to impose new burdens on industries in the present circumstances. In any case, the Government should firmly reject all new demands on behalf of labour until the country as a whole makes good progress.

* If retrenchment and lay-off compensation, amounting to Rs. 5.75 per month per worker is taken into account, the percentage of the non-wage element will rise to 21.16.

Personal income in the United States rose during May at an estimated seasonally adjusted annual rate of $344,500 million. The annual rate figure is about $1,000 million higher than the annual rate figure based on April income. Wage and salary disbursements in May advanced by $750 million to an annual rate of $234,000 million. This was the first month-to-month rise in payrolls since August of last year. Most of the remainder of the increase in personal income from April to May occurred in Government transfer payments, which centred largely in old-age benefits. Personal income estimates include wages and salaries, the net income of proprietorships and partnerships (farm and non-farm) as well as dividend and interest, net rents received by landlords, and other types of individual income.



METTUR INDUSTRIES' PROFITS LOWER

DIVIDEND MAINTAINED—FINANCES SOUND

EVEN though power cuts in the Madras State had no adverse effect on the Mettur Industries Ltd. (Managing Agents: Messrs. W. A. Beardsell & Co. Private Ltd., Madras), its results for the year ended 31st March 1958 have suffered a setback. The Company's earnings and profit alike have experienced a further recession. This is not surprising because of the slump in the cotton textile trade and the rise in manufacturing expenses. It is common knowledge that earnings of almost every unit of the cotton mill industry have sustained a sharp fall and this Company has proved no exception. In addition, the Company's working was adversely affected by two illegal strikes which lasted for about seven days. While sale proceeds of the Company have slightly come down, expenses have gone up and the inevitable result is a decline in profit. Thus, the gross profit at Rs. 41.72 lakhs shows a drop of Rs. 5.12 lakhs from Rs. 46.84 lakhs for the previous year. This is the second year in succession the Company has sustained a fall in gross profit after touching Rs. 60.75 lakhs in 1955-56, the highest level to be witnessed since 1948-49.

Net Profit Down

The net profit has also come down from Rs. 17.52 lakhs for 1956-57 to Rs. 16.91 lakhs, a drop of about Rs. 61,000. The decline as compared with 1956-57 is doubtless small but it is more than 50 per cent. as compared with Rs. 31.68 lakhs for 1955-56. The decline in the net profit has led to a reduction in the provision for taxation from Rs. 23.50 lakhs to Rs. 19.40 lakhs. It is stated that this provision includes Rs. 1.10 lakhs relating to the previous year. After setting aside a sum of Rs. 5.09 lakhs for payment of bonus to staff, as against Rs. 5.94 lakhs in the previous year, the balance left over, including the small surplus from the previous year and the amount of Rs. 14,000 transferred from passage reserve, is Rs. 12.01 lakhs. This is just sufficient to pay a dividend of 20 per cent. free of income-tax. Accordingly, the Directors have declared a dividend of 20 per cent. for the year under review which is the same as in the previous year. This compares with 42½ per cent. for 1955-56, 35 per cent. for 1954-55 and 22½ per cent. (consisting of a dividend of 12½ per cent. and a bonus of 10 per cent.) for 1953-54. It may, however, be noted here that the Company declared a special dividend of 50 per cent. tax-free in March 1958 on the shares out of the accumulated profits. The special dividend was paid to shareholders as on 11th April 1958. No amount has been transferred to the reserves for the fourth year in succession.

Progress

The following comparative table gives an idea of the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Sale proceeds	1,51.21	1,51.27	1,56.19	1,53.99

Carry forward	0.01	0.05	0.46	1.43

At Rs. 151.21 lakhs, the Company's sale proceeds of cloth, yarn and waste show a fractional fall. The report states that the Company's products continued to be popular and that the organisation for distribution maintained the usual efficiency. This is reflected in the closing stocks which are lower at Rs. 1.54 lakhs, as compared with Rs. 1.74 lakhs in the previous year. The cost of cotton consumed increased by Rs. 2.43 lakhs and so also administration and other expenses by Rs. 2.66 lakhs. The rise in the latter has occurred mainly under salaries, wages and bonus.

A sound financial position is disclosed by the Company's latest balance-sheet. Its paid-up capital is Rs. 60 lakhs, all in ordinary shares of Rs. 100 each. Of this capital, as much as Rs. 30 lakhs or 50 per cent. represent the amount capitalised out of reserves in February 1951. Even after this capitalisation, the reserves and surplus aggregate Rs. 69.01 lakhs. Of these, general reserve accounts for Rs. 38 lakhs, raw material fluctuation reserve for Rs. 10 lakhs, fixed assets replacement reserve for Rs. 11 lakhs and dividend equalisation reserve for Rs. 10 lakhs. The provision for taxation stands at Rs. 18.32 lakhs and the current liabilities amount to Rs. 26.14 lakhs. The gross block of Rs. 66.60 lakhs has been well written down to Rs. 19 lakhs, the difference, namely, Rs. 47.60 lakhs, being represented by the total depreciation provided up to the end of the year of review. The current assets amount to Rs. 154.47 lakhs and are equal to more than thrice the current liabilities and provision for taxation. Of the current assets, investments in Government securities stand at Rs. 28.11 lakhs, stores and spare parts at Rs. 18.12 lakhs, stock-in-trade at cost at Rs. 28.64 lakhs, debts, deposits and advances at Rs. 24.44 lakhs and cash balances at Rs. 54.65 lakhs.

The Rs. 100 fully paid-up shares are being currently quoted at Rs. 338 *cum-div.* On an *ex-div.* basis and on the basis of the dividend for the year under review, the shares provide a yield of 6.29 per cent. per annum, free of income-tax.

ASHOK LEYLAND

Uttar Pradesh Roadways, a transport concern that serves the most populous of the Indian States, has placed an order for 100 British-designed Indian-built buses with Ashok Leyland Ltd., of Madras. The order is for 90 Leyland Comet and 10 Leyland Tiger Cub single-deck buses. The 30-ft. long Tiger Cubs will be U.P.'s first underfloor-engined buses intended for inter-city operation on de-luxe coach services. The new buses will be fitted with synchromesh gearboxes and will be powered by Leyland 0.350 horizontal diesel engines. An unusual fitment on the 100 buses will be tachograph equipment instead of speedometers which will help prevent rash driving and economise fuel consumption.

(Concluded from next column)

foreign exchange crisis had caught up with its expansion scheme for bicycle production and instead of recording an increase according to programme, the Company was lucky to maintain its 1956 level of production as, on more than one occasion, the factory had to be laid off due to break-down in supplies caused by the uncertain import licence position in the year. Keeping in view that such conditions might continue for some years to come, your Directors intend to take steps to rationalise the prices of the Company's products till such time as the foreign exchange position will allow it to expand its production to full capacity.

"The expansion sanctioned by the Government in February 1957 was put into effect by placing plant orders for delivery by the middle of 1958. The majority of this plant has now arrived. Although a special case has been put up to the Government for allowing the full capacity to be used, the outlook for the expansion has not so far been very bright.

"Labour relations continued to be generally satisfactory and negotiations were opened with the Employees' Union in connection with implementing the expansion."

The paid-up capital of the Company, as at 30th September 1957, stands raised from Rs. 85.02 lakhs to Rs. 100 lakhs, made up of Rs. 30 lakhs in 5 per cent. cumulative preference shares of Rs. 100 each and Rs. 70 lakhs in ordinary shares of Rs. 10 each. The reserves and surplus, aggregating only Rs. 18.33 lakhs, are no doubt small but it should not be forgotten that the Company is a young one, being no more than eight years in age. Secured loans amount to Rs. 93.70 lakhs and unsecured loans Rs. 6,205. Of the secured loans, as much as Rs. 46 lakhs represent the amount borrowed from the Industrial Finance Corporation of India by a charge on the Company's fixed assets. The other current liabilities aggregate Rs. 70.44 lakhs. The gross block of Rs. 167.22 lakhs, including additions during the year of Rs. 29.24 lakhs, has been written down to a book value of Rs. 132.75 lakhs. The current assets aggregate Rs. 149.77 lakhs.

During the year, an instalment of Rs. 10 lakhs out of a total of Rs. 15 lakhs additional loan sanctioned by the Industrial Finance Corporation was received. The Directors say that this loan, along with the additions to the capital, materially assisted implementation of manufacturing schemes for achieving self-sufficiency but that the benefits would not be visible till a later accounting period.

The Rs. 10 fully paid-up ordinary shares are being currently quoted at Rs. 14.27 *ex-div.*, at which rate the yield works out to 4.2 per cent. per annum.

SEN-RALEIGH FARES BETTER

EXPANSION SCHEME PROGRESSING

YET one more year of successful working is disclosed by the statement of accounts of the Sen-Raleigh Industries of India Ltd. (Chairman of the Board of Directors: Mr. Sudhir Kumar Sen, Calcutta) for the year ended 30th September 1957. In terms of value, the Company's sales during the year recorded a rise of 18 per cent. over the previous year. Its gross profit also shows some improvement, though not commensurate with the rise in sale proceeds, nor with the pace of progress in previous years. Thus, the gross profit at Rs. 23.17 lakhs shows an improvement of only Rs. 2.05 lakhs, or a little less than 10 per cent. In the previous year, the rise in profit was as large as Rs. 4.37 lakhs. The reason for this state of affairs, in the words of the Directors, is that the expansion in sales has resulted entirely from larger production of components and accessories which are sold at little or no margin and the additional production has only helped to offset the rising cost of raw materials.

The net profit, after raising the provision for depreciation from Rs. 6.76 lakhs to Rs. 7.26 lakhs and providing Rs. 63,444 for wealth tax, as against Rs. 45,000, also stands slightly higher at Rs. 15.28 lakhs, as against Rs. 13.91 lakhs in 1955-56. No provision has, however, been made for taxation as the profits of the Company are not yet taxable. The Directors have written off Rs. 1.90 lakhs, being the agency commission due from Raleigh Industries Ltd., Nottingham, for 1955-56, under an amendment to the agreement made in November 1948 between the Company and Raleigh Industries Ltd. Under the amendment, the Company would waive its right to the commission income from Raleigh Industries but in turn would be paying a fixed rate of royalty at a much lower figure than was paid previously. As effect has already been given to the revised rate in calculating royalties in the accounts for 1955-56, the adjustment in respect of commission is stated to have become necessary now. The auditors have, however, objected to this procedure on the ground that the relevant agreement between the Company and Raleigh Industries Ltd. have not yet been ratified by the members of the Company. In view of this adjustment, the amount transferred to reserves is lower at Rs. 7.85 lakhs, as compared with Rs. 9.10 lakhs in the previous year. The distribution to ordinary shareholders has been maintained at 6 per cent. for the third year in succession. The Company, it may be noted, paid the maiden dividend only two years ago. The dividend for the year under review is, however, on a higher ordinary capital of Rs. 70 lakhs.

The following comparative table, giving the salient features of the Company's results for the past four years, will give an idea of its progress:

(In lakhs of rupees)

	For the year ended 30th September			
	1957	1956	1955	1954
Sale proceeds	1,96.58	1,65.77	1,13.60	N.A.

*Provision for wealth tax.
† For the year ended 30th September 1953 and 1954.
‡On a higher capital of Rs. 70 lakhs.

The Company's sale proceeds for the year show an imprvement of Rs. 30.81 lakhs to stand at Rs. 1.97 crore. As stated earlier, this is only due to larger production of components and accessories. The cost of raw materials consumed has increased by Rs. 16.76 lakhs and other expenses by Rs. 10.64 lakhs. Of the other expenses, salaries, wages and bonus alone have risen from Rs. 20.55 lakhs to Rs. 24.88 lakhs.

Referring to the Company's operations during the year under review, and its programme for expansion, the Directors observe:

"It is necessary for the Company to increase its bicycle production but the first effects of the

(Continued in previous column)

DUNLOP RUBBER CO., LTD.

MARKED IMPROVEMENT IN RESULTS

THE Fifty-ninth Annual General Meeting of Dunlop Rubber Company, Ltd., was held on 16th June in London.

Mr. G. E. Beharrell, Chairman, in the course of his speech, said:

"It is very gratifying to your Board, and I am sure it must be to all shareholders, that the Group results show such a marked improvement after the unfortunately low figures for 1956. The recovery, you will remember, commenced in the second half of 1956 and continued throughout the year under review, with the results for the second six months of 1957 showing a very satisfactory increase over each of the two previous half-years. Our Group trading balance for the year 1957, at £19.86 million, was the highest we have yet recorded.

"Generally speaking, the improvement during the year was due to two factors. In the first place, we have been much less affected by inventory adjustments, which in 1956 had a very serious effect on the Group, particularly as far as the United Kingdom trading results were concerned. It is true that there have again been movements in the price of natural rubber over the year, but these have been much less violent than in most recent years. In addition, the effect of these movements has been cushioned to a greater extent by our increasing use of synthetic rubber at a stable price.

"The other factor which has improved our position in 1957 has been the remarkable recovery in the British motor industry from the recession of the winter of 1956-57. During 1957 the industry produced 1.15 million vehicles, compared with 1 million in 1956 and 1¼ million in the record year of 1955. Largely due to a substantial increase in shipments of cars to the United States, exports of cars in 1957 were the highest ever achieved while exports of all types of vehicles and components reached a record value of £447 million, £50 million more than in 1956.

Expansion of Turnover

"Our turnover for the year increased by 3 per cent. in value and by approximately 4 per cent. in volume; so that, taking the Group business as a whole, selling price levels were slightly lower than in 1956. Nevertheless, we improved our margin of profit to turnover before tax from 3.6 per cent. to 5.4 per cent. and in the second six months of the year the percentage was 5.8. Satisfactory though these increases are, your Board does not consider the margin of profit to be other than modest, particularly having regard to the fact that such a very large proportion of the profit is subsequently absorbed by taxation. In the year 1957 the total provision for tax represented no less than 60 per cent. of the total profit, compared with 56 per cent. in 1956. Certain countries have increased their taxation rates during the year and these, with the excessive burden of profits tax here at home, are largely responsible for this increase.

Exports

"The Dunlop Group, of course, is particularly concerned with overseas business and even though our United Kingdom trading position has improved substantially during 1957 the greater part of the Group turnover and profit continued to be derived from exports from the United Kingdom and from our activities in overseas markets. If we add to this our indirect exports of tyres on vehicles exported, the total overseas contribution is 70 per cent. of our total turnover, namely, about £161 million. We consider this to be no small achievement because competitive conditions in most overseas markets are becoming increasingly severe, and there has also been some slowing down in the growth of world trade, particularly towards the end of 1957. Industrial activity began to slacken in the countries of Western Europe, and this pattern is even more noticeable in North America. Import restrictions and decreased purchasing have also been evident in the countries producing primarily raw materials and thus trading conditions with them are likely to become increasingly difficult.

"I am sure you would wish me to include in this review of our affairs a message of congratulation and thanks to all Dunlop employees in all the countries in which we operate for their part in the greatly improved results for the year. My colleagues on the Board and I greatly value the opportunity which you thus afford to us of expressing directly to all employees the appreciation of the shareholders. I will, accordingly, send to them all on your behalf a message of warm appreciation and thanks for their continued efforts towards the successful conduct of the Company's affairs.

"The Directors were unanimous in recommending a dividend rate on the ordinary stock of 14 per cent. for the year. This was the rate paid for the three years up to and including 1955; and the Board is particularly glad that after restoring this dividend it has been possible to increase the Group reserves during the year by £3 million."

The report and accounts were adopted.

Points From The Chair

Tea in Ceylon

"It is necessary to make serious comment on what is happening in Ceylon. The whole Island is in a far from satisfactory state, which today shows no signs of clearing up. There are constant strikes which have seriously affected the harbour, but now include much of the port of Colombo from which the whole of our produce has to be despatched, and on which Ceylon's produce must depend. Tea sales have been cancelled for the last three weeks and it is rumoured that serious unrest is reaching the upcountry districts of the Island. There would seem to be a complete absence of vigorous Government action to bring an immediate end to further disorders. Serious harm has already been done by statements in the House of Representatives stating that the British-owned estates should be taken over at a negligible cost, and though this has been denied by the Prime Minister, much harm has already been done in creating uncertainty."

G. H. MASEFIELD,
Ceylon Tea Plantations Co., Ltd., London.

Demand for Yarn

"Although at no time throughout the year were we obliged to carry stocks greater than one month's production, the demand for yarn declined as stocks of handloom cloth accumulated. Added to this was the tendency of composite units to go coarser which has led to gross overproduction in particular items such as coarse *dhotis* and *saris* and it is our understanding that these items account for much of the accumulated stocks lying with mills. This position can be easily traced to the higher rates of excise duty and sales tax levied on finer cloths and the rebate in excise duty offered at the close of 1956 for increased yardage production. For a mill such as ours whose production is almost entirely confined to coarse counts of yarn it is perhaps not difficult to gauge the effect of this go-coarser movement among the composite mills on the demand for our products from the handloom industry. Faced with large accumulations of coarse mill-made cloth the handloom industry had no option but to curtail its production in similar varieties of handloom cloth. Furthermore, the tendency to go coarse led to a greater demand for suitable short-staple cottons which kept the cotton market firm and as yarn prices declined, a stage was reached in the latter half of the year when the sale of yarn of our range of counts was no longer economic."

W. E. NORTHEY,
Cambodia Mills Ltd.

Tax Burden on Cotton Cloth

"When the consumer's capacity to buy is restricted by the inflated price of cloth, due to the large and inequitable burden of excise duties, he either stays away from the market or reduces his purchases to the barest minimum. The result is that cloth does not move. Mills, to avoid mounting unsold stocks, are then compelled to bear a portion, in many cases a substantial portion, of the excise duties by reducing the overall sales price, thus adding to the unremunerative working. This is exactly what has happened in 1957. Excise duties still continue to be disproportionately heavy on coarse and medium cloths in relation to their price levels. As your mills are engaged to the extent of 75 per cent. on the production of coarse and medium varieties, we had to bear the brunt of this uneconomic pricing. In the Central Budget presented in February 1958, the Prime Minister made marginal concessions of excise duty which, of course, have failed to cheer the market. We expected a substantial reduction, but this was not granted. I appeal to Government to revise their notions of the capacity of Indian consumers and the mill industry to bear the heavy burden of excise duties and effect an immediate reduction in the case of medium and finer varieties to at least the pre-September 1956 level which will act as a welcome tonic to revitalise the industry."

N. H. TATA,
Svadeshi Mills Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

REWA COALFIELDS LTD. Annual General Meeting, Calcutta, 1st July 1958. Dividend: Re. 1.00 per share. Transfer books remain closed from 23rd June to 1st July 1958, both days inclusive.

EQUITABLE COAL CO., LTD. Annual General Meeting, Calcutta, 3rd July 1958. Dividend: Re. 1.50 per share or 15 per cent. Transfer books remain closed from 20th June to 3rd July 1958, both days inclusive.

DHEMO MAIN COLLIERIES LTD. Annual General Meeting, Calcutta, 3rd July 1958.

HURRILADIH COAL CO., LTD. Annual General Meeting, Calcutta, 3rd July 1958.

WEST JAMURIA COAL CO., LTD. Annual General Meeting, Calcutta, 3rd July 1958.

AJIT MILLS LTD. Annual General Meeting, Ahmedabad, 7th July 1958. Dividend: Rs. 28.00 per share, payable from 24th to 26th July 1958. Transfer books remain closed from 17th June to 7th July 1958, both days inclusive.

BHARTIA ELECTRIC STEEL CO., LTD. Annual General Meeting, Calcutta, 8th July 1958. Transfer books remain closed from 25th June to 8th July 1958, both days inclusive.

NEW SAMANBAGH TEA CO., LTD. Annual General Meeting, Calcutta, 9th July 1958. Transfer books will remain closed from 3rd to 9th July 1958, both days inclusive.

SHAW WALLACE AND CO., LTD. Annual General Meeting, Calcutta, 10th July 1958. Dividend: Re. 1.00 per share or 10 per cent. Transfer books will remain closed from 1st to 10th July 1958, both days inclusive.

METTUR INDUSTRIES LTD. Annual General Meeting, Madras, 11th July 1958. Dividend: Rs. 20.00 per share. Transfer books remain closed from 25th June to 11th July 1958, both days inclusive.

INDORE MALWA UNITED MILLS LTD. Annual General Meeting, Bombay, 14th July 1958. Dividend: Rs. 6.00 per share, payable on and after 21st July 1958. Transfer books remain closed from 9th June to 5th July 1958, both days inclusive.

METAL BOX CO. OF INDIA LTD. Annual General Meeting, Calcutta, 17th July 1958. Dividend: Re. 1.12 per share (final). Transfer books will remain closed from 1st to 17th July 1958, both days inclusive.

BHARAT LINE LTD. Annual General Meeting, Bhavnagar, 26th July 1958. Dividend: Rs. 12.00 per share (includes bonus of Rs. 6.00 per share), payable on and after 2nd August 1958. Transfer books remain closed from 1st to 30th June 1958, both days inclusive.

ORISSA CEMENT LTD. Annual General Meeting, Rajgangpur, Orissa, 16th August 1958. Dividend: Re. 1.50 per share or 15 per cent. Transfer books will remain closed from 21st July to 15th August 1958, both days inclusive.

CANNANORE SPINNING AND WEAVING MILLS LTD. Dividend: 12½ per cent. or Rs. 12.50 per share for the year ended 31st March 1958. Transfer books will remain closed from 18th to 30th July 1958, both days inclusive.

LAKSHMI MILLS CO., LTD. Tax-free dividend of 12 per cent. or Rs. 6.00 per ordinary share and Rs. 3.00 per "A" ordinary share, for the year ended 31st March 1958. Transfer books will remain closed from 19th July to 1st August 1958, both days inclusive.

RAMAKRISHNA MILLS (COIMBATORE) LTD. Dividend of 10 per cent. or Rs. 10.00 per share, for the year ended 31st March 1958. Transfer books will remain closed from 8th to 21st July 1958, both days inclusive.

MYSORE ELECTRICAL INDUSTRIES LTD. Tax-free dividend of 11 per cent. or Rs. 11.00 per share, for the year ended 31st March 1958.

TRAVANCORE CHEMICAL AND MANUFACTURING CO., LTD. Dividend of 7 per cent. or Re. 0.70 per share, for the year ended 31st March 1958. Transfer books will remain closed from 7th to 14th July 1958, both days inclusive.

KELVIN JUTE CO., LTD. Interim dividend of Rs. 5.00 per ordinary share, for the year ended 31st May 1958, payable on or after 31st July 1958 Transfer books will remain closed from 1st to 15th July 1958, both days inclusive.

COMPANY REGISTRATIONS

HIND RECTIFIERS PRIVATE LTD. (First Director: Mr. Rameshwarprasad Nevatia.) Business: Assembling and manufacture of rectifier apparatus etc. Authorised capital: Rs. 30,00,000. Private company. Address: 1st Floor, Kamani Chambers Nicol Road, Ballard Estate, Bombay.

RAITAN PRIVATE LTD. (First Director: Mr Chimanlal Ujamshi Shah.) Business: Manufacturing and marketing of all tanning materials Authorised capital: Rs. 20,00,000. Private company. Address: Hague Building, Sprott Road Ballard Estate, Bombay.

SHREE KRISHNA WOOLLEN MILLS PRIVATE LTD (First Director: Mr. R. Khanna.) Business: Manufacturers of all kinds of woollen, cotton and other textiles. Authorised capital: Rs. 10,00,000 Private company. Address: 166, Hornby Road, 3rd Floor, Fort, Bombay.

SAMA AND SONS PRIVATE LTD. (Managing Director: Mrs. Ahalya Bai Sama.) Business: Merchants, exporters and importers. Authorised capital: Rs. 5,00,000. Private company. Address: Mohan Nagar, Nagpur 1.

EASTERN ELECTRIC AND ENGINEERING CO., LTD (First Director: Mr. V. G. Motwane.) Business: Manufacturers and dealers in radios of all kinds. Authorised capital: Rs. 5,00,000. Private company. Address: 127, Mahatma Gandhi Road, Fort, Bombay.

SHREE GOPAL PAPER EARNS MORE

RESULTS OF MACNEILL AND BARRY GROUP COAL COMPANIES

Shree Gopal Paper Mills Ltd.

THE directors of the above Company (Managing Agents: Messrs. Karamchand Thapar & Bros. Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The production during the year was 14,342,211 tons, as compared to 13,420,909 tons during the previous year. The mills maintained their high level of working efficiency and continued to turn out paper of high standard.

The demand for paper during the period remained brisk. On account of increase in the cost of production, the prices of paper were put up in April 1958.

Prices of wood pulp and imported machine furnishings remained steady. There was, however, an increase in the customs duty on machine furnishings from 5½ per cent. to 10 per cent.

Work on all items connected with the first phase of the mills expansion scheme was completed during the year and the directors are glad to say that the effective productive capacity of the three machines has now been raised to 55 tons per day. The mills have made successful attempts in producing superior quality paper matching imported varieties and some of these have been very well received by the market.

Import licence for the equipment needed to expand the power house and the steam generating unit, to which a reference was made in the last report, was received only in February this year. This delay in the grant of the import licence has resulted in the second phase of the expansion programme getting delayed by about 12 months. The delivery of the power house and the steam generating equipments will commence in September next year and the erection would be completed by February 1960. Consequently, additional power and steam needed for running the new mill would not be available before March 1960. The possibilities of running the new pulp and paper mill and the soda recovery house earlier, which are expected to be completed by August 1959, are being examined, and the directors hope that it should be possible to bring this equipment into production at least in a limited manner within a month or two thereafter.

Vanaspati.—The factory having resumed production on 24th December 1956, continued to work intermittently till 17th September 1957, when it had to be stopped for about 2½ months, i.e., upto 1st December 1957, because the oil rates were not within vanaspati price parity. The factory worked for 206 days and produced 1,950 tons of vanaspati. The sales of vanaspati during the period were 1,781 tons.

During the year under review, the Company made a gross profit of Rs. 63,05,628 (Rs. 57,70,848). After providing for interest on debentures and other interest, directors' remuneration, managing agents' remuneration, depreciation (provision for the year being Rs. 10,78,208 against Rs. 9,62,159 in the previous year), contribution to staff welfare fund, etc., the accounts show a net profit of Rs. 44,15,653 (Rs. 39,70,660). A sum of Rs. 22,75,000 (Rs. 19,65,000) has been set aside for taxation (income-tax, super-tax and wealth tax, etc.) and Rs. 6,26,523 provided by way of development rebate (Rs. 70,192) leaving a balance of Rs. 18,38,442 (Rs. 19,46,672) including the balance brought forward in the profit and loss account from the last year. An interim dividend for the year under review was declared by the directors in December 1957 at 62 nP (As. 10) per ordinary share (free of income-tax) and Rs. 4.00 (Rs. 4.00) per first preference share (free of income-tax). This has absorbed Rs. 8,08,073 (Rs. 8,14,317) leaving a balance of Rs. 10,30,369 which the directors propose to dispose of as follows:—

To final dividend for the year 1957 on ordinary shares at 62 nP (As. 10) per share (free of income-tax) Rs. 7,78,073 (Rs. 7,84,317), to final dividend for the year 1957 on first preference shares at Rs. 4.00 (Rs. 4.00) per share (free of income-tax) Rs. 30,000 (Rs. 30,000), and to dividend on second preference shares for the year 1957 at the rate of 7 (*nil*) per cent. per annum (free of income-tax) Rs. 2,01,818 (*nil*) leaving a balance to be carried forward of Rs. 20,477 (Rs. 3,18,038).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,85,14,175	Block ...	73,68,594

Equitable Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill and Barry Ltd., Calcutta) submit the audited accounts of the Company) for the year ended 31st December 1957.

The year's working resulted in a profit, before charging depreciation of Rs. 23,25,880 (Rs. 23,20,286). After charging depreciation at normal income-tax rates, amounting to Rs. 11,33,843 (Rs. 11,50,192) there was a balance of Rs. 11,92,037 (Rs. 11,70,094). Adding thereto the amount brought forward from previous year of Rs. 41,728 (Rs. 82,379), sundry adjustments (net) on account of previous years Rs. 1,16,810 (Rs. 71,464), unclaimed liabilities written back Rs. 1,28,489 (Rs. 2,121) and unclaimed dividends forfeited Rs. 4,425 (Rs. 3,044), there is a total amount of Rs. 14,83,489 (Rs. 13,32,817 including Rs. 3,715 transferred from reserve for reduction in valuation of stores). And deducting therefrom provision for cesses (net) Rs. 32,000 (Rs. 694 being forfeited dividends), provision for wealth tax Rs. 1,13,349 (*nil*) and irrecoverable debts written off Rs. 2,09,844 (Rs. 3,715 obsolete stores), there is available for disposal a sum of Rs. 11,28,296 (Rs. 13,28,408). The directors propose that this amount be dealt with as follows:—

By transfer to investment depreciation reserve Rs. 1,00,000 (*nil*), to development reserve Rs. 4,00,000 (Rs. 5,00,000), to debenture redemption sinking fund Rs. 1,00,000 (Rs. 2,00,000) by payment of dividend on preference shares at the rate of 6 per cent. per annum Rs. 24,000 (Rs. 24,000) and by payment of dividend on ordinary shares at the rate of 15 (15) per cent. per annum Rs. 4,44,564 (Rs. 4,44,564) leaving to be carried forward Rs. 59,732 (Rs. 41,728 after transferring Rs. 90,000 to reserve for doubtful debts).

Net raisings during the year were 18,00,651 tons compared with 16,84,813 tons and 16,48,049 tons during 1956 and 1955 respectively. Despatches amounted to 18,10,936 tons against 16,84,549 tons and 17,08,125 tons during the preceding two years. Stocks totalled 56,106 tons. The collieries have been maintained in good condition.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	33,63,760	Block ...	1,22,44,887
Debentures	48,35,000	Stock of coal	11,38,830
Reserves ...	93,25,027	Stores and spare parts	64,22,809
Provision for income-tax	13,64,475	Debts, deposits and advances ...	1,55,24,790
Provision for wealth tax	1,13,349	Investments	15,76,612
Liabilities ...	1,86,72,881	Cash ...	8,26,296
Profit and loss account ...	59,732		
	Rs. 3,77,34,224		Rs. 3,77.34,224

Dhemo Main Collieries Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill and Barry Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The year's working resulted in a profit, before charging depreciation of Rs. 3,77,699 (loss of Rs. 1,02,206). After charging depreciation at normal income-tax rates, amounting to Rs. 90,238 (Rs. 1,13,884), there was a credit balance of Rs. 2,87,461 (debit of Rs. 2,16,090). Adding thereto hospital grant and other receipts in respect of previous year Rs. 9,262 (debit balance brought forward of Rs. 1,83,318) and unclaimed liabilities written back Rs. 200 (*nil*), there remains an available balance of Rs. 2,96,923 (debit of Rs. 3,99,408). And deducting therefrom the debit balance on profit and loss account brought forward from last year of Rs. 3,36,908, provision for wealth tax Rs. 5,500, provision for cesses Rs. 8,000, forfeited dividends paid Rs. 50 and adjustments in respect of previous year on account of implementation of Tribunal Award Rs. 14,000, there remains a balance at debit on the profit and loss account amounting to Rs. 67,535 (Rs. 3,36,908 after taking into account Rs. 34,519 being sand-stowing rebates relating to previous year; sundry receipts of Rs. 13,569 and Rs. 14,412 being income-tax refund).

Net raisings during the year were 2,74,146 tons compared with 2,12,536 tons and 2,37,928 tons during 1956 and 1955 respectively. Despatches amounted to 2,70,676 tons against 2,10,779 and 2,47,497 tons during the preceding two years. Stocks totalled 8,599 tons. The colliery has been maintained in good condition.

Underground conditions at the colliery were more stable during 1957 than in recent years and the output attained was the highest since the Company was formed. The profit on the year's working was a satisfactory one and the debit balance on the profit and loss account has been considerably reduced as compared with last year.

While the Company's results have been adversely affected by restrictions, imposed by the Mines Inspectorate during the early months of this year, the position is expected to improve.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	16,00,000	Block ...	22,62,214
Provision for wealth tax	5,500	Stock of coal	1,57,137
Provision for cesses ...	8,000	Stores and spare parts	3,64,461
Liabilities ...	29,99,522	Debts, deposits and advances ...	16,95,945
		Cash ...	65,730
		Profit and loss account ...	67,535
	Rs. 46,13,022		Rs. 46,13,022

Hurriladih Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill and Barry Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The year's working resulted in a loss, before depreciation, of Rs. 1,64,822 (profit of Rs. 2,22,743). After charging depreciation at normal income-tax rates, amounting to Rs. 44,879 (Rs. 32,554) the loss for the year was Rs. 2,09,701 (profit of Rs. 1,90,189). Adding thereto provision for wealth tax Rs. 5,320 (*nil*), retrenchment compensation Rs. 3,12,096 (*nil*), adjustments in respect of previous year Rs. 1,947 (*nil*), provision for bad and doubtful debts Rs. 3,500 (*nil*) and provision for taxation in respect of previous year Rs. 36,000 (*nil*), there is a total debt balance of Rs. 5,68,564 (credit of Rs. 2,48,060 including Rs. 45,985 brought forward and Rs. 11,886 being liabilities for brokerage written back). And deducting therefrom the balance brought in from previous year Rs. 45,210, liabilities in respect of previous years written back Rs. 5,091, adjustments in respect of previous year on account of implementation of Tribunal Award Rs. 20,000 (*nil*), unclaimed dividends forfeited Rs. 150 and countervailing grant in respect of Bihar Sales Tax for the year 1947-48 Rs. 23,276 (*nil*), there remains a debit balance of Rs. 4,74,837 (credit of Rs. 1,71,210 after providing for taxation, doubtful debts, etc.) which when set off against stores, not now required Rs. 75,000 (*nil*) and transfer from reserve for reduction in valuation of stores, from general reserve Rs. 4,00,000 (*nil*) leaves a balance at credit of profit and loss account, to be carried forward of Rs. 163 (Rs. 45,210 after paying a dividend at 15 per cent. absorbing Rs. 1,20,000 and Rs. 6,000 being payment of directors' commission on the above dividend).

Net raisings during the year were 1,12,233 tons compared with 1,89,698 tons and 2,35,138 tons during 1956 and 1955 respectively. Despatches amounted to 99,733 tons against 1,89,758 tons and 2,43,428 tons during the preceding two years. Stocks totalled 16,080 tons on 31st December, 1957. The Colliery has been maintained in good condition.

The Company's results for the year were unprofitable because of the increased raising costs during development. In addition there were no raisings for a period of 2½ months and heavy expenditure was incurred on the consequential retrenchment and lay-off compensation to labour.

While satisfactory raisings have been achieved in a remarkably short time the poor availability of wagons for coal movement, particularly for Grade I coal, over the South Eastern Railway which serves the Colliery, has resulted in stocks accumulating rapidly which, in turn, has had an adverse effect on working costs.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	4,91,094
Reserves ...	2,50,000	Stock of coal	2,98,856
Provision for taxation ...	60,001	Stores and spare parts	95,178
Provision for wealth tax	5,320	Debts, deposits and advances ...	3,87,943
Liabilities ...	5,78,813	Investments	49,103
Profit and loss account ...	163	Cash ...	3,72,123
	Rs. 16,94,297		Rs. 16,94,297

West Jamuria Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The year's working resulted in a profit, before providing for depreciation of Rs. 1,77,077 (Rs. 50,585). After charging depreciation at normal income-tax rates, amounting to Rs. 1,78,661 (Rs. 1,97,310) there was a debit balance of Rs. 1,584 (Rs. 1,46,725). Adding thereto the debit balance on profit and loss account brought forward from last year of Rs. 3,20,058 (Rs. 1,46,650), adjustments in respect of previous year on account of implementation of Tribunal Award Rs. 87,000 (*nil*) and income-tax in respect of 1952-53 Rs. 290 (*nil*) there remains a total debit balance of Rs. 4,08,932 (debit Rs. 3,20,058 including adjustments) and deducting therefrom unclaimed liabilities written back Rs. 57,120 (*nil*) and provision for doubtful debts no longer required Rs. 2,709 (*nil*) there is a balance at debit on the profit and loss account amounting to Rs. 3,49,103 (Rs. 3,20,058).

Net raisings during the year were 2,54,471 tons compared with 1,67,373 and 2,28,947 tons during 1956 and 1955 respectively. Despatches amounted to 2,48,214 tons against 1,80,640 and 2,34,753 tons during the preceding two years. Stocks totalled 9,330 tons.

The Amalgamated Mining Company relinquished their appointment as managing contractor to West Jamuria Colliery with effect from 28th February, 1957 and the Company took over the working of the colliery. The raisings obtained from this Colliery during January and February are not included in the Company's raisings shown above but the raisings attained during 1957 are the highest since 1940. The working results show an improvement over those of the previous year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,00,000	Block ...	31,03,736

Travancore Ogale Glass Manufacturing Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Ogale Bros. (Private) Ltd., Manjummel, Alwaye, Kerala State) submit the audited accounts of the Company for the year ended 31st December 1957.

The sales for the year exceeded Rs. 10,00,000 for the first time. The Company is now producing larger number of industrial glass products and it is proposed to develop this line of production. Special efforts are being made to increase exports of the Company's products to foreign countries. A net profit of Rs. 40,000 has been earned after providing for all expenses including depreciation, wealth tax, etc.

The Industrial Tribunal passed awards in respect of the disputes of the workers and staff in November 1957 granting fixed grades and scales to them. This would cast a heavy burden on the industry in future. Writ Petitions are therefore filed by the Company and also by the Workers and the Staff and the High Court was pleased to issue interim stay orders.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,98,380	Block	9,65,402

		Debts, deposits and advances ...	89,449
		Cash	1,73,709
		Profit and loss account ...	7,432
Rs.	14,59,855	Rs.	14,59,855

Star Paper Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Bajoria & Co., Calcutta) submit the audited accounts of the Company for the year ended 30th September 1957.

The profit and loss account for this period after allowing managing agents' commission and other charges, shows a credit balance of Rs. 9,23,477. After writing off the sum of Rs. 2,95,735 on account of depreciation, providing a sum of Rs. 2,00,000 for taxation and bringing forward the sum of Rs. 4,234 being the credit balance of the previous half-year, the sum of Rs. 4,31,976 stands at the credit of profit and loss account which, the directors recommend, be disposed of as follows:—

In paying a dividend on preference shares of the Company at 5 per cent. per annum free of income-tax absorbing Rs. 50,000, in paying a dividend on 2nd preference shares of the Company at 6½ per cent. free of income-tax absorbing Rs. 17,148, in paying a dividend on the ordinary shares of the Company at 60 nP per share free of income-tax absorbing Rs. 3,00,000, in paying a dividend on the "A" ordinary shares of the Company at 60 nP per share free of income-tax absorbing Rs. 60,000 and in carrying forward Rs. 4,828.

During the period under review the production at the Mills had been lower than the previous year's figure due to heavy percentage of broke in paper during the early part of the year and due to labour strike in the month of June 1957. Production during the latter part of the year had been satisfactory. Working results for the current year are expected to be better.

Due to further rise in production costs, selling prices of paper have been increased by 3½ nP per lb. with effect from 1st April 1958. The Government however, agreed to give an increase of only 2 nP per lb. for supplies of paper to be made to them during the year 1958-59.

Orders have been placed for almost all the major items of machinery required for the expansion scheme. Orders for the remaining items of motors, pipes, etc., will be placed very shortly. The paper machine will start coming by the end of the current year and it is expected to start the first machine sometime next year. Due to enforcement of deferred payment terms for the issue of import licence, the cost of plant and machinery increased considerably.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	87,85,200	Block ...	35,12,036
Reserves ...	7,29,123	Stock-in-trade	1,04,861

THE INDORE MALWA UNITED MILLS, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 51st Ordinary General Meeting of Shareholders of the Indore Malwa United Mills, Ltd., will be held at the Registered Office of the Company at 139, Medows Street, Fort, Bombay, on Monday the 14th July, 1958, at 4 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1957.
2. To declare a Dividend.
3. To appoint a Director in place of Shri Kudilal Govindram Seksaria, who retires by rotation and is eligible for re-appointment.
4. To appoint a Director in the place of Shri Sitaram Shivnandrai Parasrampuria, who retires by rotation and is eligible for re-appointment, and to consider, if thought fit, to pass the following Resolution of which a special notice, as required by Section 281 of the Companies' Act, 1956, has been received by the Company:—

   "RESOLVED that Shri Sitaram Shivnandrai Parasrampuria, who was born on 18-1-1893 and has attained the age of 65 years, be and he is hereby appointed a Director of the Company and that the age limit laid down in Section 280 of the Companies' Act, 1956, shall not apply to him."
5. To appoint Auditors for the current year, i.e., for the year 1958, and to fix their remuneration.

SPECIAL BUSINESS

6. To consider and if thought fit to pass, with or without modification, the following Resolution as an Ordinary Resolution:—

   "RESOLVED that the modification of the Resolution of the Board of Directors of the Company dated 4th November, 1955, relating to the payment of remuneration to the Committee of Wholetime Directors consisting of Shri Kudilal Govindram Seksaria, Shri Piarelal Sheoparshad Seksaria and Shri Chandansinha Sagatmal Bharaktiya (which resolution was confirmed at the Extraordinary General Meeting of the Company held on 30th December, 1955) pursuant to the suggestion of the Government of India be and the same is hereby approved and confirmed. And accordingly the payment to the said Committee of Wholetime Directors with effect from 12th November, 1955, of the remuneration of 7½ per cent. on the net profits of the Company computed in the manner laid down in Sections 349 to 351 of the Companies' Act, 1956, subject to the minimum of Rs. 50,000 per year in the event of absence or inadequacy of profits to be divided between the members constituting the said Committee of Wholetime Directors in such proportion as the Board of Directors may determine be and the same is hereby confirmed and sanctioned."

The Share Transfer Books of the Company, as previously advertised, will remain closed from Monday, the 9th June, 1958, to Saturday, the 5th July, 1958, both days inclusive.

By Order of the Board,
K. L. SEKSARIA,
Chairman.

Dated 29th April, 1958.

N.B.—1. The Dividend, when sanctioned, will be made payable on and after the 21st July, 1958, to those Shareholders whose names stand on the Register of the Company on the 9th June, 1958, at the Bank of Indore Ltd., Hamam Street, Fort, Bombay 1, upon presentation of Dividend Warrants which will be posted to each shareholder to his last given address.

2. A member of the Company entitled to attend and vote at the said meeting is entitled to appoint any other person (whether a member or not) as his proxy to attend the above meeting and vote instead of himself.

Explanatory Statement as Required by Section 173 of the Companies' Act, 1956

With respect to Item No. 4: The Resolution for the re-appointment of Shri Sitaram Shivnandrai Parasrampuria as a Director of the Company is required to be passed in view of the provisions of Sections 280 and 281 of the Companies' Act, 1956, because he has attained the age of 65 years. Shri Sitaram Shivnandrai Parasrampuria has been a Director of the Company for the past 25 years. As it is in the interest of the Company that the Board should continue to receive the benefit of his advice as a member of the Board, it is desirable that he be re-appointed a Director.

With respect to Item No. 6: As you are aware that consequent upon the resignation of the Managing Agents of the Company, your Directors appointed a Committee of Wholetime Directors consisting of Shri Kudilal Govindram Seksaria, Shri Piarelal Sheoparshad Seksaria and Shri Chandansinha Sagatmal Bharaktiya and delegated to the said Committee some of their necessary powers to enable the said Committee to look after and administer the day-to-day management of business and affairs of the Company at Indore and Bombay. You are also aware that your Directors having resolved to pay (subject to the sanction of the Company in the General Meeting) the following remuneration to the Members constituting the said Committee of Wholetime Directors, the payment of the said remuneration was confirmed and sanctioned by you at the Extraordinary General Meeting of the Company held on 30th December, 1955:—

(a) To Shri Kudilal Govindram Seksaria, 5 per cent. of the net profits of the Company as defined in Section 87C of the Indian Companies' Act, 1913, or any statutory modification or re-enactment thereof. In case of inadequacy of profits or loss, a minimum sum of Rs. 54,000 per year to be paid to him.

(b) To Shri Piarelal Sheoparshad Seksaria, 1½ per cent. of the net profits of the Company as defined in Section 87C of the Indian Companies' Act, 1913, or any statutory modification or re-enactment thereof. In case of inadequacy of profits or loss, a minimum of Rs. 36,000 per year to be paid to him.

(c) To Shri Chandansinha Sagatmal Bharaktiya, 1 per cent. of the net profits of the Company as defined in Section 87C of the Indian Companies' Act, 1913, or any statutory modification or re-enactment thereof. In case of inadequacy of profits or loss, a minimum sum of Rs. 30,000 per year to be paid to him.

The said remuneration would be payable for the period during which the said Directors act as such on the Committee.

The Company was advised that the approval of the Government of India regarding the appointment of the said Committee of Wholetime Directors was not necessary. The Government of India intimated the Company that their sanction for such appointment was necessary under the new Companies Act, 1956. Therefore the Company was advised that even though the interpretation of the Government was not correct, still with a view to be on the safer side, approval of the Government of India should be obtained. Accordingly, on the application made by the Company seeking the approval of the Government of India as to the appointment of the said Committee of Wholetime Directors, the Government of India indicated that it would approve the said appointment under Section 269 of the Companies' Act, 1956, with effect from 12th November, 1955, provided the total remuneration payable to the three Directors constituting the said Committee was fixed at a commission of 7½ per cent. on the net profits of the Company computed in the manner laid down in Sections 349 to 351 of the Companies' Act, 1956 subject to a minimum remuneration of Rs. 50,000 only per annum in the event of absence or inadequacy of profits, the said remuneration being divided amongst the Wholetime Directors in such proportion as your Directors may choose.

Your Directors have accepted the modification suggested by the Government in regard to the remuneration of the said Committee of Wholetime Directors and they had modified their Resolution dated 4th November, 1955, in so far as it related to the remuneration payable to the said Committee and with the consent of the Directors constituting the said Committee your Directors have determined that until otherwise resolved the said remuneration be divided between the Directors constituting the said Committee as follows:—

(a) 4½ per cent. of net profits to Shri Kudilal Govindram Seksaria.

(b) 1½ per cent of net profits to Shri Piarelal Sheoprasad Seksaria, and

(c) 1½ per cent. of net profits to Shri Chandansinha Sagatmal Bharaktiya.

The minimum remuneration of Rs. 50,000 payable in the event of absence or inadequacy of profits shall be paid and divided between Shri Piarelal Sheoparshad Seksaria and Shri Chandansinha Sagatmal Bharaktiya.

The Government of India has accordingly by its letter dated 17th February, 1958, approved the appointment of the said Committee of Directors with effect from 12th November, 1955.

You are, therefore, requested to confirm the said modification in the remuneration payable to the Directors constituting the said Committee of Wholetime Directors.

THE BOWREAH COTTON MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Company will be held at the Registered Office, No. 21, Strand Road, Calcutta-1, on Tuesday the 29th July, 1958, at 3-30 p.m., for the following purposes:—

PATHIRAPPALLY, *20th June*, 1958.

TEN STATES TO BORROW

(From Our Own Correspondent)

BOMBAY, *25th June*

The notable development of the week under review was the announcement of the terms of borrowing by ten State Governments for an aggregate sum of Rs. 47.5 crores. These new issues have been announced, as in the case of the Central loan, earlier than usual, because of the comfortable conditions in the short-term money market.

With a further slackening of the demand for bank credit, banks had plentiful cash resources for yet another week. Inter-bank call money rate was, nevertheless, stagnant at 3 per cent. among all sections of banks. House money at call was quoted at 4 to 4½ per cent. and short-term deposits continued to fetch 4½ to 4¾ per cent. for one to six months.

A contraction of Rs. 18.07 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 20th June 1958. There has been an increase of Rs. 19.50 crores in notes held in the Banking Department, resulting in a rise of Rs. 1.43 crores in total notes issued. The increase in the latter is covered by a corresponding rise in rupee coin. While there is no change in foreign securities, balances held abroad have further shrunk by Rs. 6.20 crores to a low of Rs. 17.42 crores (the total foreign assets at this level being Rs. 227.09 crores). Deposits of the Central Government are lower by Rs. 1.52 crores, but those of other Governments and banks have risen by Rs. 1.89 crores and Rs. 12.58 crores, respectively. Loans and advances to Governments have declined by Rs. 3.70 crores and other loans and advances by Rs. 1.67 crores mainly due to the fall of Rs. 2.70 crores in advances to Scheduled banks against usance bills. Investments are higher by Rs. 4.70 crores.

The Scheduled banks' statement for the week ended 13th June 1958 shows a fall of Rs. 2.44 crores in demand deposits of banks. Time deposits are, however, unchanged. Inter-bank borrowings disclose a sharp rise of Rs. 7.35 crores, while borrowings from the Reserve Bank have contracted by Rs. 1.85 crores. Advances have declined by Rs. 5.79 crores and bills purchased and discounted by Rs. 1.83 crores. A rise of Rs. 1.07 crores in investments and of Rs. 2.51 crores in cash balances is noted. Money at call and short notice has also risen by Rs. 1.93 crores.

The details of the new State loans appear on page 1203 of this issue. Suffice it to record here that all the loans carry a uniform rate of interest of 4¼ per cent. Bombay is the only State to issue two loans for an aggregate sum of Rs. 10 crores. The lists will open for public subscription on 15th July 1958 and close on 19th July or earlier without notice. Five States have offered conversion facilities. The 3 per cent. 1958 loans of Bombay, U.P., Madras and Madhya Pradesh and 3 per cent. Cochin Loan (1955-58) will be accepted for conversion at par. The new issues are expected to have a fairly good response. Their announcement have not had any perceptible effect on the Gilt-edged market, as the yields on the existing issues of corresponding or near maturity are more or less in conformity with those on the new issues. The trend of the market was distinctly firm throughout the week, with good demand for short and medium-dated issues. The Reserve Bank of India stepped up its selling rate of 3½ per cent. 1964 from Rs. 98.50 to Rs. 99.55. 3 per cent. 1986 Conversion Loan was lower at Rs. 71.10, while 3 per cent. 1970-75 continued to attract buyers 10 nP higher at Rs. 87.30. 3 per cent. 1966-68 was in demand and rose by 10 nP to Rs. 93.05. 3 per cent. 1964 and 3 per cent. 1963-65 were sought for at Rs. 95.50 and Rs. 95.55. 3 per cent. 1959-61 picked up 15 nP to Rs. 99.25. 3½ per cent. 1963 changed hands 10 nP higher at Rs. 98.90. 3½ per cent. 1964 rose by 10 nP to the Reserve Bank's selling rate. 3½ per cent. 1965 gained 10 nP to Rs. 98.40. The State Loans were dull, though there were enquiries for short-dated issues.

The weakening of sterling abroad had its effect on rupee in terms of the dollar. Banks' selling rate of ready dollars, after declining from Rs. 476.50 to Rs. 476.25, rose to Rs. 476.75 per $100 and their buying rate from Rs. 473 to Rs. 473.50 per $100. In New York, spot sterling declined from $2.81¼-2.81¼ to $2.80.11/16-2.80⅜ and three months' forward from $2.79-2.79⅛ to $2.78⅜-2.78-13/16. Transferable sterling also dropped from 279.05-279.15 cents to 278.85-278.95 cents.

BASE METALS MOVE UP

(From Our Own Correspondent)

CALCUTTA, *24th June*

Following good demand, prices of base metals recorded an increase during the week under review. The port workers' strike and the fear of dislocation of supplies also contributed to the upward trend. From Rs. 502, tin advanced to Rs. 516, while the price in Bombay was still higher. Until recently, purchases here had been done for small quantities only, in view of the increase in tin stocks. The strike in port shook the feeling of surplus in the market, and a fair quantity changed hands. Electrolytic zinc firmed up from Rs. 56.50 to Rs. 59. Some difficulty was experienced by the trade in getting ready supplies, thanks to prior sales put through by importers. Since big consumers had covered their requirements with importers, the demand that pushed up the price was from small consumers. At Rs. 63, lead gained one point.

A feature of the week was the competition offered by Chinese sellers inviting business for tin and zinc of Chinese origin at prices attractive to buyers. There was good demand for scrap, but the quantity on offer was small. It was noted that the price trend in copper in both New York and London was upward. There was a proposal in the United States for stockpiling 150,000 tons of copper. The futility of control on copper is becoming more and more evident, as prices for products made of copper have lost all relationship with the controlled price for the raw material.

BULLION EASY

(From Our Own Correspondent)

BOMBAY, *25th June*

The bullion market was easy during the week under review, with a drop in values of both silver and gold. The bearish trend in gold was, however, somewhat less pronounced. The decline in prices was attributed to the fall in demand, which was more of a seasonal character, and an increase in arrivals. In silver, a large inflow of unrefined metal and unauthorised Tibetan coins were reported. Gold, too, was adversely affected by sizable arrivals from upcountry centres and the slackness of demand except from Madras. In fact, the offtake from Madras was mainly responsible for checking a larger recession in gold. The increased arrivals and the drop in overall offtake are reflected in the contraction of the premium which the ready metal commanded over the current settlement from Re. 1-4 to As. 12.

Silver forward delivery (July settlement) declined from Rs. 184-13 to Rs. 182-6 before recovering a fraction to Rs. 183 at the close. The August settlement (first delivery) dropped from Rs. 185-3 to Rs. 183-4 and closed at Rs. 183-13. The carry-forward charge against bulls which was As. 6 at the close of the previous week widened to As. 14 today. The August settlement (second delivery) closed today at Rs. 184-5, as against Rs. 185-8 a week ago.

Ready silver was marked down from Rs. 184-5 to Rs. 182-3, but finished today a shade better at Rs. 182-13. The floating stocks of silver are estimated at 450 bars. The daily average arrivals were 35 bars (including unrefined metal), while the offtake was less than 10 bars.

Forward gold (July settlement), after an earlier improvement from Rs. 107-12 to Rs. 108-9, gave way to Rs. 106-10. The closing was done at Rs. 107-7. The August settlement (first delivery) lost over the week As. 7 to Rs. 106-15.

Ready gold dipped from Rs. 109 to Rs. 107-9, but recovered a little to close at Rs. 108-3. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were of the order of 2,600 tolas, while the offtake was 2,400 tolas.

In New York, silver continued to hold ground at 88⅝c., while in London, there was a further drop. After declining from 75½d. to 74⅞d., ready silver improved to 75d. On forward also, the fall over the week was ½d. to 74⅞d. Gold shot up from 249s. 5d. to 249s. 11½d. After a dip to 249s. 8d., it again jumped to 249s. 11½d.

The following comparative table shows at a glance the trend of the market during the week under review:

	25-6-58	Highest	Lowest	18-6-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

KIPS WELL SUPPORTED

(From Our Own Correspondent)

BOMBAY, *23rd June*

Arrivals of tanned hides and calves from tanneries were restricted and clearance by shippers were good. There were more enquiries from the U.K. for lightweight cow hides in all grades and fifths of medium and heavy weights, but sellers did not follow U.K. demand, because they were not keen to hold other grades without sales for a long time. There were enquiries for cow calf fourths and inferiors and buff calf seconds, thirds and inferiors, all of which were in poor supply. Trading was selective and small because the U.K. dressers were following a hand-to-mouth policy.

In the tanned goat skins section, demand centred round lightweight goat, while other weights were temporarily neglected. The sheep market was steady for prime class and unchanged for mediums and commons.

LINSEED SUPPLIES SCARCE

(Messrs. A. Bradley and Co.)

CALCUTTA, *23rd June*

The general tone of the linseed market remained steady, thanks to shortage of supplies from upcountry centres. Crushers showed very little interest, owing to lack of parity with oil prices and trading was rather dull on the whole. In the oil section, offtake continued to be very small and sellers were not inclined to reduce prices. Shippers were not showing any interest at prevailing rates, as foreign markets were still dull.

The latest available quotation for ready and June-July is Rs. 23 per maund.

COTTON FUTURES FIRM

(From Our Own Correspondent)

BOMBAY, *25th June*

The cotton futures market, after a quiet start, gathered strength on Friday and ruled firm during the rest of the week. Today, however, the closing was a shade easy. The earlier firmness was influenced by renewed rumours of the possibility of an export quota, and the expectations of some early relief to the textile industry in the form of a reduction in excise duty on medium and coarse cloth and some incentives for export. Hopes were also entertained, in certain quarters, that the Textile Inquiry Committee, which was studying the present crisis facing the industry, would recommend some interim relief to the industry. These considerations led to large-scale buying with the result that prices firmed up. The rise would have been more marked but for reports of favourable monsoon in most cotton tracts, declining trend in mill consumption of cotton, upward revision of this season's crop estimate and continued slackness in the piecegoods markets.

I.C.C. Moglai Jarilla (August 1958) opened the week at Rs. 679.75, as against the previous close of Rs. 681.25, and after declining to Rs. 677 the same day improved to Rs. 682.75 on the 21st inst., and further to Rs. 682.75 on Monday. The market remained closed on Tuesday. Commencing today's session at Rs. 686.50, the contract eased to Rs. 684 and closed at that rate. The following table indicates the trend of prices during the week:

(In rupees per candy of 784 lbs.)

	25-6-58	*High*	*Low*	18-6-58
I.C.C. Moglai Jarilla (August 1958)	684	686.50	676.50	681.25

Trading in new crop contracts is expected to start early next month. The East India Cotton Association, as its meeting yesterday, is reported to have approved the terms and conditions of the new contract submitted by the Board of the E.I.C.A. The new contract remains basically unchanged except for minor modifications in By-Law 55. The amendments will be sent to the Forward Markets Commission for approval. It is generally expected that permission to commence trading will be received by the first week of July.

In the spot section, although mill activity was subdued prices ruled somewhat firm. Volume of business was affected by heavy rains in the city. Enquiry was mostly confined to popular, staple styles such as 197/3, Laxmi, Jaydhar, Vijay and Jarilla. Early in the week a prominent mill group purchased 1,500 bales of Vijay and Jaydhar. Shorter staples were neglected.

On the export front, moderate business in exportable styles was reported. Shippers also purchased sizable quantities of Kala, Wagad, and Kalyan varieties in anticipation of an *ad hoc* quota for China.

The Joint Chief Controller of Exports notified, on the 20th inst., that the ceiling of 35,000 bales fixed for export of cotton not above 23/32" staple on first-come-first-served basis was reached and that no further application would be entertained. This brings to an end all export quotas issued thus far on a first-come-first-served basis.

The validity of export licences, issued against export quotas of Bengal *Deshi* and of cotton stapling 23/32" and below on "quota basis," released on 5th February and 25th March respectively, has been extended till the end of August 1958. The quantity remaining unutilised out of the two quotas is placed at around 35 to 40 thousand bales. As regards extension in the validity of shipping bills issued against "first-come-first-served" quota of 15,000 bales of ¾" and 35,000 bales of 23/32" staple varieties issued on 23rd May, it is reported that this would be readily given, if individual shippers approached the Export Trade Controller and convinced the latter with a satisfactory explanation for the failure to ship within the validity period of 30 days of the shipping bills. A number of shippers, it is said, have been unable to ship cotton due to the dock strike.

In the foreign section, enquiries were small. Some business was reported in Egyptians and Sudanese growths. There were rumours in market circles that an import duty on cotton was going to be imposed. Importers were eagerly awaiting permission for import of East African cotton.

In response to representations made by the trade, the Import Control authorities have notified that the opening of letters of credit for Egyptian cotton licensed for import would not be necessary if the importers got the sales contracts registered with the State Bank of India within a fortnight from the date of the contracts. In the case of previous sales licensed, registration would be allowed to be made within 15 days from the date of the notification, namely, 17th June.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 600; Berar Jarilla 720; Khandesh 800; Oomra *Deshi* 650; Vijay 875; Hubli Laxmi 1,030; Jaydhar 875. *Delivery Contracts*: Bengal 585; Wagad 634; Kalagin 626.

The Karachi cotton futures market, after ruling firm during the first two days of the week under review, turned easy on Monday. Better foreign inquiries and larger domestic mill demand were responsible for the firmness. But later demand slackened and selling ensued with the result that prices staged a retreat. The distant January contract, however, received some support and made up some of the losses. N.T.R.G. July, after having improved to Rs. 76-12-6 on the 20th inst., declined to Rs. 76-4 yesterday. The January contract firmed up from Rs. 78-8 to Rs. 79-14 before declining to Rs. 78-9-6 yesterday. The spot section ruled steady. Sind *Deshi* was quoted at Rs. 60, the same as last week, while Punjab *Deshi* was quoted As. 8 higher at Rs. 5-6-8. The follow-

ing are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

6 F Roller 70-9; S.G. 78-1; Punjab Roller 74-1; S.G. 81-1; 289 F.N.T. Roller 76-13; S.G. 91-9; 289 F Punjab Roller 85-9; S.G. 98-9.

In contrast to last week's steady trend, the Alexandria cotton futures market was easy during the week. The easiness was due mainly to long liquidation in the medium-staple Ashmouni contracts. With the approaching expiry date of Ashmouni June contract, interest shifted to August which was the basis on which shipment offers were made. The Karnak contracts also were quiet, although the nearby July attracted some attention. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: July 76.20; November 76.95. *Ashmouni*: June 68.90; August 68.10.

Firm conditions prevailed in the Liverpool Cotton Exchange during the week under review. A fair volume of American buying and short-covering by local operators and occasional mill fixation led to a hardening of values. The turnover, however, was limited, as the uncertainties regarding the U.S. export programme and the flexible export subsidy rate continued to restrict business.

The following are the latest available quotations—in pence per lb.—from Liverpool.

American Cotton One Inch Staple Contract: July-August 25.25; October-November 25.80; December-January 26.15; March-April 26.45. *Sudan*: July-August 31.30.

Reports regarding probable legislative developments and crop news were the major factors influencing the price trend in the New York cotton futures market during the week. Commission House buying and short covering induced by the news that the crop was late, pushed up values. The diminishing prospects of new farm legislation, providing for higher acreage and lower support prices, materialising and the expectation of a higher loan rate for the 1958 crop aided the upswing.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	24-6-58	17-6-58	10-6-58
Spot	36.35	36.25	36.30
July	36.18	36.02	36.16
October	36.70	36.53	36.62
December	36.95	36.79	36.83

STAPLE FIBRE YARN EXPORTS ALLOWED

(From Our Own Correspondent)

BOMBAY, 25*th June*

Last week's move of the Bombay Yarn Merchants' Association and Exchange Ltd. to curb the unhealthy speculative activity in the staple fibre yarn section through the introduction of margin and fixation of ceiling prices for forward deliveries has met with success. The prices of staple fibre yarn forward deliveries have since suffered a distinct setback. The spot section, however, rules distinctly firm, thanks to buying support induced by the Central Government's decision to allow free exports of staple fibre yarn within a ceiling of 150 million lbs. during the six months ending December 1958. Exports will be on first-come-first-served basis, the licensing being done on shipping bills which will be valid for a period of three months from the date of passing. The Government has clearly warned the trade not to enter into long-term commitments, as the licensing will be stopped immediately after the ceiling is reached. Meanwhile, it is reported that the indigenous producer of staple fibre has informed the cotton mills that it would not be able to supply even one-fourth of their requirements of fibre. Some of the spinning mills which have already sold staple fibre yarn to local dealers have also expressed their inability to supply yarn to buyers, as they are not in a position to cover raw fibre from the indigenous manufacturer against their sales.

In contrast to spot staple fibre yarns, art silk yarns were weak. Demand from actual users was at a low ebb. Advices from art silk fabrics markets were also not encouraging. There was, therefore, selling and prices staged a retreat. Even rumours of a drastic cut in import quota to actual users on account of foreign exchange difficulties failed to have any effect. Cotton yarns continued to rule depressed, despite the Government's decision to permit exports of 60,000 bales of cotton yarn during the half-year July to December 1958. Licensing will be done on shipping bills which will be valid for a period of three months from the date of passing. The Government has also decided to grant export licences against confirmed contracts on *ad hoc* basis within the aforementioned ceiling. The validity period of such licences will be six months with effect from the date of issue.

Staple fibre yarns (40x2) August delivery was subjected to nervous bull liquidation and slumped by Rs. 37 to Rs. 675. June delivery was hammered down by Rs. 36 to Rs. 665. Spot New Greats put on 4 nP to Rs. 3.64. Citys hardened by 8 nP to Rs. 3.78. Kohinoors advanced by a like amount to Rs. 3.84. Centurys gathered a naya paisa to Rs. 3.76. Among foreign yarns, Paramounts spurted by 50 nP to Rs. 8.87. Fujis rallied 63 nP to Rs. 9.

Among rayon yarns spot 120 Japan shed 6 nP to Rs. 7. 150 Japan eased by 18 nP to Rs. 6.69. 150 Italy receded by 25 nP to Rs. 6.75. 120 Italy were dull at Rs. 7. Among indigenous yarns, National Rayons 150 bright cones first grade declined by 13 nP to Rs. 5.75. 120 bright cones first grade, however, rose by 6 nP to Rs. 6.50.

In the cotton yarn section, ten counts Moderns were neglected at Rs. 13.50 and Podars at Rs. 12.62. Twenty counts Indus were dull at Rs. 16.37, as also Moderns at Rs. 16.50 and Gokaks at Rs. 16.75. Thirty counts Hinds were unchanged at Rs. 19.50. Among forty counts, Minaxis receded by 25 nP to Rs. 24.25. Moderns were quiet at Rs. 24. Sixty counts Moderns changed hands at Rs. 60, same as last week. Eighty counts Mahendras were done at Rs. 69.50, Moderns at Rs. 69.50 and Finlays at Rs. 76.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	25-6-1958	18-6-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 Japan (per lb.)	7.00	7.06
150 Japan (per lb.)	6.69	6.87
120 Italy (per lb.)	7.00	7.00
150 Italy (per lb.)	6.75	7.00
Staple fibre yarn (per case of 200 lbs.)—		
40×2 June	665.00	701.00
40×2 August	675.00	712.00
40×2 New Great (per lb.)	3.64	3.60
40×2 City (per lb.)	3.78	3.70
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.62	12.62
20s Modern	16.50	16.50
30s Hind	19.50	19.50
40s Minaxi	24.25	24.50
60s Raghuvamshi	—	51.00
80s Modern	69.50	69.50

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 25*th June*

Barring the castorseed section which ruled distinctly easy, the oilseeds market presented a firm trend during the week under review. Groundnuts were particularly strong, thanks to buying fervour fanned by rumours regarding the abolition of export duty on H.P.S. groundnut (Rs. 300 per ton) and groundnut oil (Rs. 150). Offerings in spot section were scarce. There was good buying in groundnut oil by *vanaspati* manufacturers. Linseed also ruled strong on good buying support induced by hopes of enlarged export business with overseas countries. The hopes were based on reports that linseed crop in Canada has been affected by adverse weather. Advices from London were also encouraging. The U.K. quotation for Indian castor oil was higher at Rs. 1,460 (£109-10) per ton, as against Rs. 1,427 (£107) a few days ago. Cottonseeds were fully steady on speculative buying and firmness of raw cotton prices. In sympathy, kardiseed and nigerseed were fully steady. Castorseeds, as already stated, were easy. There was selling pressure induced by fears of keener competition from Brazilian castor oil in overseas markets and increasing arrivals of seeds from Bihar. The reports that the Government might not concede the demand even for a downward revision in the export duty on oil, yet alone complete abolition, also imparted weakness. Today, however, some recovery was in evidence.

Groundnut August contract which stood at Rs. 168.75 last week-end evoked persistent buying support and spurted to touch Rs. 171.75 today. Bold ready rallied 75 nP to Rs. 36. Coromandel and Khandesh quality both advanced from Rs. 35.87 to Rs. 36.75. Groundnut oil railway receipt registered a rise of 31 nP to Rs. 18.81. Ex-mill hardened by 25 nP to Rs. 19.

Castorseed September contract was subjected to selling pressure and came down from Rs. 157.62 to Rs. 155.12 on the 21st inst. After recovering to Rs. 156.50 on Monday, the contract relapsed again to touch Rs. 155.12 today before recovering to Rs. 156. Over the week, ready Madras dropped 31 nP to Rs. 30.06. Kanpur quality shed 12 nP to Rs. 29. Castor oil B.S.S. declined from Rs. 16.62 to Rs. 16.56 on Saturday. It recovered subsequently, today's closing rate being Rs. 16.75. Commercial quality eased from Rs. 15.37 to Rs. 15.25 on Saturday, but thereafter, gradually recovered to Rs. 15.44 at the close today.

Linseed September contract was well favoured at Rs. 32.69 today, as against Rs. 32.31 last week-end. Bold ready strengthened by 25 nP to Rs. 32. Linseed oil evoked good support from shippers, the quotation advancing from Rs. 16.19 on the opening day of the week to Rs. 16.69 today.

Under the impetus of speculative buying, cottonseed September contract moved up from Rs. 113.75 to Rs. 114.50. Among other seeds, nigerseed Madras quality opened the week on a firm note at Rs. 29.75, as against Rs. 29.50. After being steady at Rs. 29.50 till the close yesterday, it moved up to Rs. 30 today on good support. Kardiseed bold ready which had eased from Rs 20 to Rs. 19.50 yesterday evoked enlarged buying enquiries today and wound up at Rs. 20.25.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	25-6-1958	18-6-1958	11-6-1958
	Rs	Rs.	Rs.
Groundnut—			
August 1958	171.75	168.75	172.37
Bold ready (per cwt.)	36.00	35.25	35.12
Linseed—			
Sept. 1958	32.69	32.31	32.37
Bold ready (per cwt.)	32.00	31.75	31.87

Ready	16.69	16.37	16.31

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

SUGAR FIRM

(From Our Own Correspondents)

BOMBAY, 25*th June*

The bearish trend noted in the sugar market in the past two weeks abated during the week under review. In fact, the market put on a distinctly firm appearance and there was a handsome improvement in prices. There were strong reports that the Union Food Ministry had finalised the export policy for sugar and that the official announcement might be made in a couple of days. The ex-mill quotations for U.P. and Bombay-Deccan sugar were raised by 50 nP per maund.

Arrivals of sugar into the market were considerably poor, thanks to dislocation of rail traffic on account of heavy rains. The total quantity that actually arrived by rail amounted to not more than 7,900 bags, as against 20,600 bags in the previous week.

Large grain sugar spurted by Rs. 2 to Rs. 112-Rs. 117 per bag. Medium grain rose by a rupee to Rs. 108-Rs. 110. Small grain gained 50 nP to Rs. 106.50.

• • • •

HAPUR, 23*rd June*

Sugar prices continued to rule steady during the week on rumours that the Government would announce the sugar export policy very soon and that some kind of cess was considered as an unavoidable part of the scheme. Demand from the consuming centres was fairly heavy. The Government of India would appear to be anxious to ensure that any scheme of exports designed to make Indian sugar compete in foreign markets does not lead to excessive rise in the domestic prices of sugar.

Export prospects having been again revived, the Muzaffarnagar sugar market ruled steady during the week and the ex-mill delivery prices of different varieties improved by 6 nP to 19 nP per maund. Demand from the Punjab, Delhi, Gujerat and Saurashtra was fairly good. Traders were keenly awaiting the announcement of sugar export policy. The latest ex-mill delivery prices (per maund) were:—Meerut (D28) Rs. 35.56; Simbhauli (E29) Rs. 36.50; Daurala (C29) Rs. 37.56; Mawana (C29) Rs. 37.50; Bijnore (E29) Rs. 36.50; Shamli (C29) Rs. 37.25; Amroha (D29) Rs. 36.06; Modinagar (C29) Rs. 37.12.

The sugar market at Kanpur also ruled steady. The latest prices were (spot and ex-mill, respectively per bag and per maund): (C29) Basti Rs. 105, Rs. 37.25; Gola Rs. 101.50, Rs. 36; Burhwal Rs. 101.50, Rs. 36.25.

The *khandsari* section also recorded gains during the week on good outside support. The latest prices were Rs. 32 to Rs. 34 per maund according to quality. Production in some centres continued from wet *gur*.

Good demand from consuming centres before the advent of monsoon accounted for fairly heavy offtake during the week, reducing the local *gur* stock to 75,000 maunds. Dry *gur* stayed steady to be quoted at Rs. 19 to Rs. 20 per maund, while *kotha* dry-wet quality was quoted at Rs. 18 to Rs. 19 per maund.

The condition of the standing cane crop is satisfactory, but the crop is now reported to be in need of rains.

The *gur* market at Muzaffarnagar displayed a firm tendency during the past week on good support from Punjab and Gujerat. Prices recorded an advance of Re. 1 per maund. *Shakker dara* improved by Re. 2 per maund, due to good demand from Rajasthan, while *masala shakker* rose by a rupee. *Khandsari* improved by 50 nP per maund due to good seasonal demand.

Future *gur* ruled quietly easy during the week. *Fagan* opened at Rs. 13.67 on Monday and was quoted today at Rs. 13.49.

BLACK PEPPER STEADY

(Messrs. Parekh and Co.)

BOMBAY, 25*th June*

Trading in Malabar black pepper during the week was thin, with fluctuations narrow. There being no encouraging news from overseas, price fluctuations depended more upon local developments such as improvement in demand and speculative support by traders who made huge profit on imported spices like cloves, cinnamon and arecanuts. Prices in all imported goods showed sizable rise owing to the restricted import policy by the Government. Outsiders and speculators paid more attention to imported goods at the cost of pepper. Pepper being comparatively cheaper than other imported spices, some investment buying was being done both in Bombay and on the Malabar coast in anticipation of future rise.

Singapore showed sizable improvement in white pepper from Str.$120 to Str.$126, while black advanced by Str.$1 only, as New York, one of the important consumers of black, remained reserved.

The dock strike at Cochin having been called off, the shipment of pepper remained unaffected but without foreign enquiries.

The future of pepper depends upon New York buying which is expected to come in any moment. If New York does not come out within the next month when Sarawak is expected to offer cheaper under pressure of crop movement, Malabar black may not maintain its present level simply on support from local demand or speculators.

Alleppey moved between Rs. 593.75 and Rs. 600, while ready at Cochin came down to Rs. 103 to improve to Rs. 105, July and August deliveries moved from Rs. 107.50 to Rs. 108.25 and from Rs. 108.75 to Rs. 110, respectively.

In specific delivery, July 1st improved to Rs. 610 under hedge lifting to come down to Rs. 592, with present nominal quotation at Rs. 597.

Business in A.S.T.A. was confined to short covering only. June and July-Aug-Sept. were nominally quoted at $0.25½.

Today's nominal quotations are: Ready Rs. 86 per Bengal maund, 1st July Rs. 567-Rs. 607 and 30th July Rs. 607-Rs. 617 per candy of 5½ cwts.

TEA PRICES RECEDE

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 20*th June*

About 1,514,223 lbs. were on offer in sale 17 which was held on Tuesday, the 17th inst. Teas from lower elevations were again very poor in appearance, being fibry and mixed. The quality of highgrowns showed little change from last week. The sale opened to a much less demand, with all exporters much quieter. Internal buyers were rather more active at the lower prices realised. Low medium and medium brokens declined by 10 nP to 15 nP per lb. and some times more. Fannings, except the better types, were the weakest feature of the sale and these types were virtually neglected. Highgrowns were irregularly easier by 20 nP. Whole leaf were irregularly down by 5 nP to 15 nP. Withdrawals were heavy.

The quotations were: Plain B.P. Re. 1.45; low medium Re. 1.50 to 1.60; medium Re. 1.60 to 1.80; good medium Re. 1.90 to 2.20; quality Rs. 2.50 to 2.80.

Dust Sale 'M': Just over 14,00,000 lbs. were offered in dust sale 'M' which was held on Thursday, the 19th inst. This large quantity met with a good general demand. Milled dusts met with some competition, but were easier by 5 nP. Mediums evoked less support and were irregularly lower by 10 nP to 15 nP. The better sorts were easier by 10 nP. Withdrawals were comparatively small.

London Market: Indians, Ceylons and South Indians were fully firm to dearer. Plainest kinds, however, were easier.

Colombo Market: Sale of 16th June 1958.—6.5 million lbs. Active and general demand. All markets, including Russia, except light liquoring sorts; highgrowns considerably dearer, frequently 50 cents up. Plainer mediums firm. Brighter kinds and UVAS up 5-10 cents. Small leaf lowgrowns up 10 cents. Gulf types up 15-20 cents.

Sale of 17th June 1958.—Offgrades active demand 10-15 cents dearer.

Calcutta Market: Internal.—18,500 packages dust. Good general demand. Black leafy types and grainy C.T.C. strongest feature. Dearer remainder irregular.

Export Quota.—With a further release of 10 per cent. making a total of 60 per cent. of the best crop basis, the market has declined. Special quota stands at 7 nP. Business has been transacted in new quota at 13 nP. Today's quotation is sellers 13 nP, with probable buyers at the same price.

Sale No. 18 was held on Tuesday, the 24th inst., when 1.6 million lbs. were offered. Demand was good. Low mediums and mediums were irregular but steady. Good mediums met with enquiry at firm rates. High-growns were irregularly easy, with quality plain and fibry sorts neglected.

NO EXPORT AUCTION IN TEA

(From Our Own Correspondent)

CALCUTTA, 24*th June*

Although the situation following the strike launched by the All-India Port and Dock Workers' Federation showed definite signs of improvement, no export auction in tea was held during the week under review also, in view of uncertainty regarding sailings from the port. The auction scheduled to be held on the 17th inst., was also postponed, as a result of the strike and apprehensions of delay in loading and unloading ships.

Trade circles realised that accumulations of tea in gardens and warehouses, apart from creating financial problems for many, might hit the industry in the long-run. The end of the London dock workers' strike was hailed; it was, however, noted that, when the strike in London was being staged, buyers did not exhibit any tendency to rush and "capture" available supplies. On the other hand, their buying was selective, and, in order to make up for reduced buying as a result of limited availability following the strike, withdrawals were made from stocks built up earlier. It was, therefore, anticipated that further sales in Mincing Lane would bear the impact of the huge accumulations of recent weeks and might affect prices.

Viewed thus, the postponement of export auctions here caused apprehension. However, it was considered as certain that foreign buyers would pay more attention to Ceylon tea, because of the termination of labour troubles in the Colombo port.

In the meantime, it was noted here that the current season has begun well for tea. Exports from 1st April have been substantially higher. Up to 7th June, North-East Indian tea shipped to foreign countries aggregated 25 million lbs., representing a substantial increase of 9 million lbs. as compared with the corresponding previous period and 14 million lbs. in the same period in 1956. A striking feature this year was the smart increase in shipments to Egypt and other Middle East countries and the Irish Republic. Another equally redeeming feature was the enormous interest displayed by Russia to which shipments amounted to more than 1.6 million lbs., as against nothing in the corresponding two previous periods. Usually, Russian interest in Calcutta auctions is shown later in the season, but this year's earlier activity should be attributed to port labour troubles in Ceylon, as also to Russia's anxiety to purchase more from this country in a demonstrative bid to increase Indo-Soviet trade and balance trade. The United Kingdom, the Netherlands, W. Germany, Canada and New Zealand are among other countries to lift more tea from Calcutta in the period 1st April to 7th June, while shipments to the United States, Turkey, Iran and Australia recorded decreases.

In the internal auctions held last week, dusts on offer amounted to 18,237 chests. General demand was good. Orthodox teas fit for export received good attention, and some favoured lines gained 8 nP. Other orthodox lines were firm, although irregular. C.T.C. Assams were fully firm. The quotations were: Medium Assams C.T.C. Re 1.70 to Re. 1.90; medium Assam grainy dust Re. 1.58; medium Dooars Re. 1.56.

Leaf offerings aggregated 178 chests, including 12 chests of 1957-58 manufacture.

Sellers offered the 1957-58 non-transferable shipping licence at 4 nP., but buyers were reserved. Transferable special export licence changed hands at 5 nP. After some business in the 1958-59 export rights at 11½ nP, the price gave way to 11 nP.

JUTE GOODS STEADY

(From Our Own Correspondent)

CALCUTTA, 24*th June*

Fairly steady conditions were in evidence in the jute markets during the week under review. Most of the business in jute goods done was of a speculative nature. Shippers' interest was nominal, in view of the uncertainty of sailing dates, consequent on the port workers' strike. The strike, however, has not yet affected the course of prices as such. The situation in the docks has considerably improved, and it is anticipated normalcy will soon return. However, if this expectation does not materialise and the strike continues beyond the end of the month, jute market would be affected. For, at the end of the month, mills would issue due-date delivery orders, for most of which there would be no shipping instructions. However, registered holders must pay and take delivery, in which event supplies in the market would be considerably in excess of demand. This might lead to selling pressure and depress prices. However, it was noted that after the Prime Minister's appeal from Manali, circumstances were more favourable for ending the strike. As and when the strike ended, it was expected that shippers' interest would revive. It was believed that U.S. buyers were only waiting for the end of the strike to enter the market. For burlap stocks in the United States were low, and the economic recession there had flattened out. Another interesting factor which emerged during the week under review was the report that the temporary lifting of the ban against imports of hessian by the Argentine Government. Indicative of the correctness of this report, a considerable quantity was purchased by a shipper for near delivery shipment to Argentina.

Immediately following the report from Argentina, much speculative interest was shown. The expectation that, when once normalcy returned in the port, foreign buyers would show fair interest, resulted in speculative enthusiasm which maintained prices. Throughout the week, hessian 40" 10 oz. was quoted above the I.J.M.A. floor, while B. twills moved within a narrow groove, much below the minimum price. It was known in this week that contrary to an earlier belief in the market, mills fully favoured the maintenance of the minimum prices at current levels and that there was no thought whatsoever of any revision.

On Tuesday last, prices of jute goods declined on account of speculative activity in the *fatka*. Ready B. twills lost to Rs. 96.25 from Rs. 97 the day previous and ready hessian 40" 10 oz. to Rs. 39.70 from Rs. 39.85. There was, however, no interest shown by buyers on behalf of overseas markets. On the next day, B. twills improved to Rs. 97.30 and hessian 40" 10 oz. to Rs. 39.90 following news of good shipping and the improvement in the port workers' strike. On Thursday, apart from some covering business, there was little other activity, and while hessian 40" 10 oz. was unchanged at Rs. 39.90, ready B. twills were pulled down to Rs. 97.15. On Friday, a definite uptrend was in evidence, as the end of the port workers' strike was considered nearing. It was believed that overseas interests were only waiting for the end of the strike to enter the market. Good speculative interest followed and ready B. twills advanced to Rs. 97.45 with ready hessian 40" 10 oz. spurting to Rs. 40.30. Over the week-end, prices for the above representative constructions rose further to Rs. 97.60 and Rs. 40.35, respectively; no business took place with shippers. Following expectations of the end of the port workers' strike, yesterday there was keen speculative activity which raised B. twills to Rs. 98.15 and hessian 40" 10 oz. to Rs. 40.80.

Prices of raw jute rose and mills bought a fair quantity. Assam upper bottoms advanced to Rs. 24.75 from Rs. 24.25 and local daisee to Rs. 28.50 from Rs. 28. Enthusiasm on reports of the good condition of the crop was checked by the need for plenty of rains to fill in tanks and streams in order that cultivators can have normal steeping and retting facilities. Rains have, of course, been adequate to keep the plants in good condition, but it has been unfortunate that the monsoon has not yet started in right earnest in this part of the country. Harvest is nearing, and unless tanks have sufficient water, the outturn as well as its quality will be affected. Crop reports from districts go to show that this year the proportion of daisee compared to mesta has increased. For, last year the mesta crop was plentiful and export being banned, the price for mesta was affected. It was noted that, as compared to 1947, jute production in West Bengal has increased to such an extent as to meet 50 per cent. of the requirements of mills in the country. This was stated by the West Bengal Agriculture Minister, Dr. Ahmed, in the Assembly; he added that intensive cultivation was being done and that the acreage under jute in the State was now one million as compared to 300,000 ten years ago.

MORE FOODGRAINS IMPORTS

(From Our Own Correspondent)

HAPUR, 23*rd June*

Steady conditions prevailed in the foodgrain markets during the week. The Union Food Minister announced this week that there would be a fresh import of 1.2 million tons of foodgrains. He revealed that the Government of India had in stock 1,672,000 tons of foodgrains (1,057,000 tons of wheat and 615,000 tons of rice) and to this would be added 500,000 tons of wheat to be imported from the U.S. under an interim agreement. He also revealed that the Indian Government had accepted from the U.S. another offer of a consignment of 700,000 tons of foodgrains under P.L.480.

Wheat at Hapur ruled quietly steady to be quoted now at Rs. 17.50 per maund for average quality and up to Rs. 18.75 per maund for farm produce. The U.P. State Government is very much perturbed over the persistent rise in grain prices and attributes this mostly to hoarding tendencies by traders. The State Food Minister has warned that the Government would seize foodgrains stocks in its bid to bring down prices. The Government is also considering to ousting bulk purchasers such as flour mills and co-operatives from the open market by supplying them from out of Government stocks. The number of fair price shops has been increased in east U.P. and they have also been opened in the five Kabal towns of the State, namely, Kanpur, Allahabad, Benares, Agra and Lucknow.

Daily arrivals of wheat mounted to an average of 800 maunds, due to unauthorised arrivals from Punjab side, but local stock continued unchanged at five *khatties*. The latest Government estimate puts the total production of wheat, barley and gram in the State at 5,369,000 tons, as against 6,218,000 tons last year. Apart from poor *rabi* crop yield this year, the cultivators are retaining a part of their produce, due to uncertainties about the next *kharif* crop, the sowings of which has commenced in some areas. Large-scale sowings will, of course, begin after the rains.

Rice registered fractional gains during the week, due to shortage of supplies. The latest prevailing prices were: Basmati *sela* Rs. 42, *mainpuri* Rs. 29, coarse quality upto Rs. 25 per maund.

Firm Punjab advices accounted for slight gains in the prices of gram during the week and stock position improved slightly by two *khatties* to 48 *khatties* owing to fresh arrivals from Punjab. Barley and *bejhar* continued steady at almost unchanged price levels, while *jowar* and *guwar* scored some gains, on account of good demand for seeds in the face of poor local stocks. The latest prevailing prices were: Gram Rs. 12.94 to Rs. 13.12; barley Rs. 12.87; *bejhar* Rs. 12.37; *jowar* Rs. 14 to Rs. 15; *guwar* white Rs. 16.25.

Peas and *arhar* ruled quiet, following slack outside demand at higher rates. Arrivals of peas were about 500 maunds daily and those of *arhar* aggregated 250 maunds. *Urd* and *moong* continued steady. The latest prevailing prices (in rupees per maund) were: Peas *dara* 11.50; white upto 12; peas *dal* 12.69; *arhar* 14.87; *arhar dal* Rs. 18.87; *urd* 19 to 20; *moong* 24.50; *massor* 15.25 to 16.50.

Futures pulses prices declined during the week on Bombay selling influenced by good rain reports there, the latest quotations being near the worst level of the week. Peas *bhadon* was done at Rs. 11.75, *arhar bhadon* at Rs. 14.95 and *urd maha* at Rs. 17.45, as against the week's opening of Rs. 12.24, Rs. 15.45 and Rs. 18, respectively.

HIDES SUPPLIES SCARCE

(From Our Own Correspondent)

KANPUR, 23*rd June*

The week under review witnessed steady condition in the hides and skins market. The market was persistently trying to adjust itself to the scarcity in supplies. As the extreme heat of the season affected supplies, the volume of buff, goat and sheep from the local butcheries continued to dwindle. The main purchasers were the local tanners and the Madras dealers.

The latest available quotations are: Wet salted cow 1st grade Rs. 360 and 2nd grade Rs. 250 per score; wet salted buff 1st grade 1 lb. 6 ozs. and 2nd grade 1 lb. 10 ozs. per rupee; goat 1st grade Rs. 280 and 2nd grade Rs. 240 per 100 pieces; sheep 1st grade Rs. 300 and 2nd grade Rs. 250 per 100 pieces.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. † Less income-tax. (a) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year 1956. * Including bonus. (b) Investments.
† New Central Jute Mills.—Dividend for 1956 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
F.—Bengal Coal Co. Dividend from 1954 to 1956 are on shares of Rs. 200 each. For 1956 the dividend of Rs. 17·5 includes an interim dividend of Rs. 7·5 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.
K—West William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each.

INDO-AMERICAN RELATIONS

(*Concluded from page 1194*)

Government's policy governing West Asia, the deterioration in the economic and political conditions in Pakistan, the chaos in Indonesia and Ceylon—all these have combined to highlight India favourably in the eyes of Americans and their Government. And the main reasons why these developments have had this advantageous effect on India are three: first, India has firmly established itself as a democratic country. Secondly, there is in India, as compared with many other countries in Asia or Latin America, relative political stability. And, thirdly, India has been genuinely trying to raise the living standards of its citizens and is one of the very few countries which have put the foreign assistance given to them to good use. It is needless to add that, if the present favourable impression that exists about India in the U.S. and, to a large extent, in the U.K., too, is to be sustained, the powers-that-be must see to it that nothing is done or allowed to be done which will bring down India in the esteem of the free world in respect of the three factors alluded to above. On the contrary, every effort must be made to improve the position in all these three respects, as the advantage which India now has is only of a relative nature and may diminish when political circumstances in other parts of the world improve and other countries set their house in order.

As things are today, there are several disconcerting signs which give rise to doubts about the future
