The Government have under consideration various suggestions made to them for conserving cement and supplementing its availability by admixing with it certain materials of pozzuolanic activity. It is felt that considerable savings could be effected by intergrinding portland cement with siliceous admixtures either at the site of construction or in the cement mill itself. In several cases, the sand cements, comprising as much as 45 per cent. sand stone and 55 per cent. portland cement, have yielded satisfactory results. Such materials that could lend themselves to partial replacement for cement are reported to be available at many places in the country and some of these are in the proximity of the cement factories. Already a factory for producing pozzuolana from local shale has come into production near Bhakra Nangal Dam site. This has been functioning since May 1957. The shale available at the dam site is burned at 1400OF and the material is ground to the fineness required. The cost of the plant is estimated at Rs. 25-30 lakhs, most of the items having been fabricated here. At present, 10 per cent. of the cement is being replaced by the Pozzuolana with a likelihood of increasing it to 20 per cent. shortly. The Government have appointed a Technical Committee to investigate fully the problems posed by such admixtures or replacements in portland cement.

There is yet another type of cement, the production of which would make available a larger quantity of cement within the existing clinker capacity and i.e., portland blast furnace slag cement. It is an intimately inter-ground mixture of portland cement clinker and granulated blast furnace slag. Normally, the slag constituent is between 20 to 50 per cent. of the portland blast furnace slag cement. The following six schemes have, in this connection, been licensed for the manufacture of portland blast furnace cements, for a total capacity of 1.2 million tons per annum:

Location	Capacity (Tons p.a.)	Source of obtaining slag
Bhadravati	18,000	Mysore Iron and Steel Works.
Chaibassa	170,000	Tata Iron and Steel Co., Jamshedpur.
Drug	85,000	Bhilai Steel Works.
Rajnandgpur	365,000	Rourkela Steel Works.
Durgapur	240,000	Durgapur Steel Works.
Durgapur	330,000	Durgapur Steel Works.

A capacity of 46,500 tons per annum is also being set up for white and coloured portland cements through following schemes:

Location	Capacity (Tons p.a.)
Kottayam	5,000
Thiruvattiyur (Madras)	16,500
Porbunder	25,000

The development of sludge cement also offers great potentialities. This utilises the calcium carbonate sludge obtained as a by-product as in the manufacture of ammonium sulphate fertiliser at Sindri. Already one cement factory, with an annual capacity of 200,000 tons, is working at Sindri, utilising the sludge from the Sindri Fertiliser plant. The establishment of such new fertiliser plants opens, therefore, an avenue for setting up further capacity for sludge cement.

There has been a noticeable shift in favour of larger cement kilns and a number of rotary kilns of a daily production capacity of 700 tons have been installed in preference to smaller kilns of 250-300 tons daily capacity. The production of cement in such kilns is found to be more economical and consumption of fuel is also lower. There are, however, many areas in the country where availability of limestone is limited, which would not lend to setting up of large factories. Many of such areas are deficit in cement and several schemes are afoot for installing smaller cement factories with a production capacity ranging from 60 tons to 175 tons per day. The recent advances in the shaft kilns have made it possible to manufacture cement by the shaft-kiln process at a price comparable to the one produced in the larger rotary kilns, without impairing the quality of cement produced. While the shaft kiln factories may not become very common in India, there might be at least half a dozen to one dozen such small factories set up during the Second Plan period. The natural advantages of the shaft kiln process are that limestone of lower grade and fuel of lower calorific value can be utilised. The capital cost of the project is substantially lower and so is its maintenance and running cost. A suggestion has also been made to some State Governments notably Himachal Pradesh and Assam to examine the prospects of setting up small cement factories based on Vertical Shaft Kilns. A small cement factory is also being established in Kashmir, with a view to meeting local demand.

The capital cost for setting up a cement factory in India is estimated at Rs. 120-125 per ton annual capital for new factories and between Rs. 75 and Rs. 80 per ton of annual capacity for expansion of existing factories. Of these, nearly 60-65 per cent. is by way of machinery and capital equipment.

The production cost of cement itself in India is not high as compared to foreign countries, but the incidence of freight and packing charges are relatively higher, with the result that cement is sold in this country at a price somewhat higher than obtaining in some other countries. But this may not be a major handicap in export of cement specially from Port Town Factories.

There has also been considerable development in the field of manufacture of cement machinery. Two firms are already making certain items of cement machinery such as Kilns, Clinker Coolers and Clinker Breakers etc., for their own use. Besides, one engineering firm in collaboration with Messrs. Miag of West Germany has already been licensed for manufacture of complete cement plants of 300-500 tons daily capacity, with an installed capacity of two such plants per annum.

There is also a scheme prepared by one of the biggest group of Cement Manufacturers in collaboration with two of the well known British firms for the production of heavy items of Cement Machinery like Grinding Mills, Tube Mills, Air Separators and Dust Collectors, Rotary Kilns, Conveying and Transport equipment, Slurry Mixer Basins and Slurry Pumps, Wash Mills, and Fans and Blowers etc. This scheme is in the last stage of finalisation. The scheme also visualises the production of large, medium and high pressure boilers and some of the items of Mining Machinery like Winders, Cages and Skips and Haulers etc.

At present, there are 29 factories, located practically in all the States of India except Assam, West Bengal and Kashmir but these States would also start manufacturing cement during the Second Plan through the schemes already approved. These schemes have already been covered in the estimates given earlier.

ENGINEERING

(*Concluded from page 372*)

may accrue to the people in different parts of the country.

"It is well known that State Governments have placed particular emphasis on regional development of industries and the Planning Commission has taken note of this desire on the part of both the people and Governments concerned. Even so, and accepting both the need and desirability for such development in backward or undeveloped areas, the question that arises is how far the railways are qualified to or obliged to play a part in this development through freight concessions. If railways were to grant such concessions, it is obvious that they cannot be the judges of areas to which these concessions should extend. They cannot define which are the backward areas or undeveloped areas, and it is necessary that this decision should be made by an authority other than the railways. Indeed, a planned programme of development of industries should be available to the railways, so that they may consider granting the concession. Otherwise, the railways will lay themselves open to the charge of favouring particular areas when they do not grant concessions to other areas similarly situated. In this connection, our attention has been drawn to the practice of the Canadian Government which grants low concessional rates for wheat moving from certain territories, the value of the concession being reimbursed to the railways by the Federal Government of Canada. We would commend this procedure to the Government of India for assisting backward parts of the country."

It is noteworthy that the Committee does not favour the creation of freight pools. The chief argument in favour of the system of "freight pool" is that it will prevent the concentration of industries in regions where the main raw materials are found and will promote wider spread of industries. On the other hand, it has been argued that the "natural geographical advantage with reference to any raw material or to the sale of a finished product in an existing market should not be whittled down by these artificial methods and that it would be unfair if industrialists, who had the vision to see that these natural advantages should be taken advantage of, are now to be penalised by the greater freight which they will have to pay under a system of pooled freight, so that new industries and new *entrepreneurs* may be benefited." After a study of this problem, the Committee has reached the conclusion that though at first sight, a pooled freight may look attractive, this "method of encouraging certain areas where industrial development is needed is not justified."

As regards the constitution of the Railway Rates Tribunal, the Committee has recommended that it should consist of an experienced High Court judge as President with two other members chosen for their knowledge or experience of commercial, industrial and economic conditions in the country or of the commercial working of railways. The President and the members of the Tribunal may be appointed for a period of five years and may, in suitable cases, be eligible for reappointment. The jurisdiction of the Tribunal should be divided into mandatory and advisory functions. The Tribunal will have mandatory powers of decision in matters which arise out of complaints of undue preference and the levy of unreasonable rates and charges. Its advisory functions will relate to classification of goods, scales of charges for the carriage of passengers and their luggage, military traffic and traffic in railway materials and stores and demurrage charges. Finally, it has recommended that necessary provision should be made in the Indian Railways Act so that the Tribunal may adopt an "informal procedure" in dealing with cases where a formal hearing is unnecessary and may be dispensed with.

AUTOMATION TECHNIQUES IN U.K.

In the next four or five years, British industry will be making big strides in the greatly increased use of automation equipment. Many major employers of clerical labour expect to be using digital computers to improve speed and accuracy and to reduce costs, and most firms hope that, by adopting automatic techniques, they will reduce the labour factor in their costs. These are some of the trends indicated in a report by Britain's Board of Trade on its special enquiry into automation in United Kingdom industry. The report is based on answers to a questionnaire circulated towards the end of 1956.

Some industries report installation of automatic equipment to overcome shortages of labour, others to increase the quality and consistency of their products, while large process industries such as oil refining, chemicals, and iron and steel consider that it would not be possible to handle the quantities involved without some degree of automatic control. On computers, the report says that industries expected to have them in use in the next few years include nationalised industries, iron and steel firms, oil companies, aircraft constructors, and large engineering concerns.

One interesting point is raised in a summing-up of the effect on labour of automatic techniques. "While some firms expected to reduce the size of their labour force," the report says, "some expected to have to increase it—in some cases to keep pace with increasing production—and some to keep their existing labour force while increasing their output."

Notices

THE RAVALGAON SUGAR FARM LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE TWENTY-FIFTH ANNUAL GENERAL MEETING of the Company will be held at Construction House, Ballard Estate, Fort, Bombay, on WEDNESDAY the 26th MARCH, 1958, at 4-30 p.m. (S.T.), for the purposes of transacting the following business:—

1. To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 30th September, 1957.

2. To declare Dividends on Preference, Ordinary and Deferred Shares.

3. To appoint a Director in place of Shri Lalchand Hirachand who retires by rotation and is eligible for re-appointment and to consider and, if thought fit, to pass the following resolution as a Special Resolution in respect of which a Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company:—

"Resolved that pursuant to the provisions of Section 261 and other relevant provisions (if any) of the Companies Act, 1956, Shri Lalchand Hirachand who retires by rotation and who is a Director, Officer and Member of Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company, be and is hereby re-appointed a Director of the Company."

4. To appoint a Director in place of Shri Govindji Raoji who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution as a Special Resolution in respect of which a Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company:—

"Resolved that pursuant to the provisions of Section 261 and other relevant provisions (if any) of the Companies Act, 1956, Shri Govindji Raoji who retires by rotation and who is an Officer and Member of Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company, be and is hereby re-appointed a Director of the Company."

5. To appoint Auditors for the current year and to fix their remuneration.

6. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"That the Articles of Association of the Company be altered in the manner following:—

"The present Articles Nos. 10, 23, 32, 42, 43, 49 and 74 of the Articles of Association of the Company be deleted and the same be substituted by the following new Articles as under:—

"10. Subject to the provisions of the Act and Article 63 and the other Articles, the shares in the Capital of the Company for the time being (including any shares forming part of any increased capital of the Company) shall be under the control of the Directors who may allot or otherwise dispose of the same or any of them to such persons, in such proportion and on such terms and conditions and either at a premium or at par or (subject to compliance with the provisions of Section 79 of the Companies Act, 1956, or any statutory modifications thereof for the time being in force) at a discount and at such times as they may from time to time think fit and proper, and with the sanction of the Company in General Meeting to give to any person the option to call for or be allotted shares of any class of the Company either at par or at premium or subject as aforesaid at a discount such option being exercisable at such time and for such consideration as the Directors think fit.

"23. If any certificate be old, decrepit, worn out, defaced or rendered useless then upon production thereof to the Directors they may order the same to be cancelled and may issue a new certificate in lieu thereof, without any charge and if any certificate be lost or destroyed then upon proof thereof to the satisfaction of the Directors and on such indemnity as the Directors deem adequate being given a new certificate in lieu thereof shall be given to the party entitled to such lost or destroyed certificate on payment of Re. 1 for every new certificate.

"32. The Directors may, if they think fit, receive from any member willing to advance the same, all or any part of the moneys due upon the shares, held by him beyond the sums actually called for; and upon the moneys so paid in advance or so much thereof as from time to time exceeds the amount of the calls then made upon the share in respect of which such advance has been made the Company may pay interest at such rates as the member paying such sum in advance and the Directors agree upon or subject to the provisions of the Act and these Articles the Company may at any time repay the amount so advanced upon giving to such member three months' notice in writing.

"42. For the purpose of enforcing such lien the Board of Directors may sell the shares subject thereto in such manner as they think fit but no sale shall be made unless a sum in respect of which the lien exists is presently payable and until notice in writing of the intention to sell shall have been served on such members, his executors or administrators or his committee, *curator bonis* or other legal representatives as the case may be and default shall have been made by him or them in the payment of the sum payable as aforesaid for seven days after the date of such notice.

"43. The net proceeds of the sale shall be received by the Company and applied in or towards payment of such part of the amount in respect of which the lien exists as is presently payable and residue if any shall be paid to such member, his executors or administrators or assigns or his committee, *curator bonis* or other legal representatives as the case may be.

"49. Subject to the provisions of Section 111 of the Companies Act, 1956, or any statutory modification thereof for the time being in force the Directors may, at their own absolute and uncontrolled discretion and without assigning any reason decline to register or acknowledge any transfer of shares and in particular may so decline in any case in which the Company has a lien upon the shares or any of them or whilst any moneys in respect of the shares desired to be transferred or any of them remain unpaid or unless the transferee is approved by the Directors and such refusal shall not be affected by the fact that the proposed transferee is already a member. The registration of a transfer shall be conclusive evidence of the approval by the Directors of the transferee.

"74. Subject to the provisions of the Act and these Articles any bonds, debentures, debenture-stocks or other securities may be issued at a discount, premium or otherwise, and with any privileges and conditions as to redemption, surrender, drawings, allotment of shares, appointment of Directors, provided that debentures with the right of allotment of or conversion into shares shall be issued only with the consent of the Company in General Meeting."

7. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"Resolved that the Company hereby approves of contracts or arrangements being entered into with Messrs. Hind Auto Engineering Co., Associates of Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company, for sale, purchase or supply of any property movable or immovable, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable and provided further that Messrs. Hind Auto Engineering Co. shall make payment within one month from the date of sale or supply by this Company."

8. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"Resolved that the Company hereby approves of contracts or arrangements being entered into with Messrs. New Vardhaman Machinery Stores, Associates of Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company, for sale, purchase or supply of any property, movable or immovable, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable, and provided further that Messrs. New Vardhaman Machinery Stores shall make payment within one month from the date of sale or supply by this Company."

9. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"Resolved that the Company hereby approves of contracts or arrangements being entered into with Messrs. Standard Tool Co., Associates of Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company, for sale, purchase or supply of any property, movable or immovable, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable, and provided further that Messrs. Standard Tool Co. shall make payment within one month from the date of sale or supply by this Company."

10. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"Resolved that the Company hereby approves of contracts or arrangements being entered into with The Premier Garage, Poona, Associates of Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company, for sale, purchase or supply of any property, movable or immovable, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable, and provided further that The Premier Garage shall make payment within one month from the date of sale or supply by this Company."

11. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"Resolved that the Company hereby approves of contracts or arrangements being entered into with Messrs. P. V. Brothers, Associates of Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company, for sale, purchase or supply of any property, movable or immovable, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable, and provided further that Messrs. P. V. Brothers shall make payment within one month from the date of sale or supply by this Company."

12. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"Resolved that the Company hereby approves of contracts or arrangements being entered into with Messrs. National Garage, Nagpur, Associates of Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company, for sale, purchase or supply of any property, movable or immovable, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable, and provided further that Messrs. National Garage shall make payment within one month from the date of sale or supply by this Company."

13. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"Resolved that the Company hereby approves of contracts or arrangements being entered into with Messrs. Nav Bharat Motor Agency, Sholapur, Associates of Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company, for sale, purchase or supply of any property, movable or immovable, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable, and provided further that Messrs. Nav Bharat Motor Agency shall make payment within one month from the date of sale or supply by this Company."

The Transfer Books of the Company will remain closed as from Friday the 7th March, 1958, to Thursday the 27th March, 1958, (both days inclusive).

By Order of the Board,
WALCHAND & CO. PRIVATE LTD.,
Managing Agents,
GULABCHAND HIRACHAND,
Director.

CONSTRUCTION HOUSE,
BALLARD ESTATE, FORT,
BOMBAY, *7th February*, 1958.

Note:—(1) A member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the proxy need not be a member.

(2) The Dividends, if sanctioned, will be paid at Devkaran Nanjee Banking Co., Ltd., Fort, Bombay, on and from Friday the 28th March, 1958, to those members whose names stand on the Company's Register as on Thursday the 27th March, 1958.

DETAILS OF OIL MILL PLANT FOR SALE

1. 3 Nos. Giant Oil Expellers as per specification: Manufacturers: M/s. Steel Construction Co., Ltd., Bangalore City—capable of dealing with about 15 tons of shelled groundnuts per working day of 24 hours. Arranged for and driven through worm gearing of heavy construction consuming about 25 B.H.P. The frames of the machine are throughout of steel fabrication including the feed box and are fitted with Twin Steam-jacketed Tempering kettles with self-contained chain drive thus ensuring High Cooking capacity. The cage box, bars and worms are made of special steel and hardened to withstand heavy duty. The cone adjustment mechanism is of special trouble-free design avoiding all gears or clutches.

2. 4 Nos. Filter Presses with Pumps.

3. 1 No. Steam Boiler of the following specifications: Marshall No. 25 size, 25 H.P. Locomotive type multitubular Boiler constructed entirely of steel in strict accordance with the Indian Boiler Regulations for a working pressure of 150 lbs., and evaporating capacity of 1,950 lbs. per hour with accessories and 'Hayward Tyler' Horizontal 'Duplex' Steam Pump suitable for the above 25 H.P. Boiler.

4. 1 Mild Steel chimney.

5. 2 Nos. Kalyan Decorticators with Stone Separators.

6. 1 No. Rotary Pump with 25 H.P. motor.

7. 3 Nos. Settling Tank, 400 gallons capacity, with cover.

8. 4 Nos. Oil Storage Tanks, 400 gallons capacity, with lids.

9. Miscellaneous spare parts. Details will be furnished to the interested buyers, if General Manager, Mysore Sugar Company, Ltd., Mandya, is addressed.

Intending purchasers are requested to send their applications in a sealed cover within 8 days from the date of the publication of this notice.

V. HANUMANTHAPPA,
Secretary.

The Mysore Sugar Co., Ltd.,
Bangalore 2.

NOTICE

INSPECTION OF THE PEARL BANKS OFF Tuticorin conducted by the Fisheries Department during January, 1958, has revealed that there are more than 2 crores of mature fishable pearl oysters at Kodamuthi, Karuval and a few other pearl beds. These oysters are found to be fully grown and in healthy condition. The yield of pearls is found to be good. So there will be a pearl fishery commencing from 3rd March 1958, and lasting till the end of April 1958. Judged from the results of the last year's FISHERY AND THE PEARL BEDS IN THE SAME REGION coming up for fishing, the prospects of the ensuing fishery are very bright. Sites for Pearl Bazaar and Thotties will be sold in auction, on Monday, the 24th February 1958 at 3 p.m. in the Fisheries Office, Tuticorin. All enquiries for further particulars may be addressed to the Additional Director of Fisheries, Tuticorin, Madras State, India.

CALTEX OIL REFINING (INDIA) LIMITED

NOTICE IS HEREBY GIVEN THAT THE Register of the Company's 5¼ per cent. Debenture Stocks 1966-70 will be closed for transfers from 18th March to 31st March 1953, both days inclusive.

P. A. ENGINEER,
Secretary and Treasurer,
State Bank of India,
Agents for Caltex Oil Refining (India) Ltd.,
for the management of the Debenture Stocks.

STATE BANK OF INDIA,
MUNICIPAL LOANS SECTION,
APOLLO STREET, FORT,
BOMBAY-1, *28th February* 1958.

TENDER NOTICE

1. Tenders are invited from established foundries in India only for the supply of Cast Iron C.S.T. 9 Sleeper Plates, Broad and Metre Gauge, to be supplied by 31st December, 1953.

2. No raw materials will be arranged by the Railways.

3. Applications for copies of tender documents should be made to the Deputy Director, Works, Ministry of Railways, State Entry Road, New Delhi. Tender documents embodying conditions of supply and contract and relevant drawings will be supplied at Rs. 10 per set and will be available for sale from 28th February, 1958 onwards on any working day during office hours.

4. Tenders will be received upto 13.00 hours on 25th March, 1958, and opened in the office of the Railway Board, New Delhi, at 15.00 hours on the same day.

SECRETARY, RAILWAY BOARD.

NEW DELHI, *18th February* 1958.

THE KELVIN JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Ninety-ninth Annual General Meeting of the Members of THE KELVIN JUTE COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday the 31st day of March, 1958, at 3 o'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the eleven months ended 31st May, 1957, the Balance Sheet as at that date and Reports of the Directors and Auditors.

2. To declare Dividends.

3. To appoint Directors in place of Mr. R. S. Kanoria and Mr. B. L. Bajoria, the retiring Directors.

And in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956.

"That Mr. B. L. Bajoria be and is hereby appointed a Director of the Company liable to retirement by rotation."

Special notice dated 19th February, 1958 of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. B. L. Bajoria is an "associate" of the Managing Agents within the meaning of the Act, and that therefore, he can only be appointed by special resolution as a Director of the Company liable to retirement by rotation.

4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 17th to 31st March, 1958, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & CO. LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *27th February*, 1958.

Note:—Payment of the proposed dividends, if declared, will be made on or after 15th April, 1958, only to those members whose names are registered in the Books of the Company on 31st March, 1958, or to their Mandatees. Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

RALLIS INDIA LIMITED

CLOSURE OF REGISTER OF MEMBERS

NOTICE IS HEREBY GIVEN THAT THE Register of Members and the Transfer Books of the Company will be closed from 15th March 1958 to 28th March 1958, both days inclusive.

By Order of the Board,
KENNETH SHEPPARD,
Secretary

16, HARE STREET,
CALCUTTA, *24th February* 1958.

THE BANK OF INDORE, LIMITED

(Incorporated in Indore, 1920)

NOTICE IS HEREBY GIVEN THAT THE Thirty-eighth Annual Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Bank, Prince Yeshwant Road, Indore City, on Thursday the 27th March, 1958, at 4 p.m. (S.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 31st December, 1957.

(2) To declare a Dividend.

(3) Rai Bahadur Sir S. M. Bapna, Kt., C.I.E., and Seth Bhanwarlal Sethi, retire by rotation, but are eligible for re-election.

(4) To elect Auditors for the ensuing year and to fix their remuneration.

By Order of the Board of Directors,
N. D. JOSHI,
Manager.

INDORE CITY,
14th February, 1958.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

N.B.—(*a*) The Transfer Books of the Company will be closed from 13th March 1958 to 27th March, 1958, both days inclusive.

(*b*) The Dividend when sanctioned will be payable on and from Friday the 28th March, 1958.

(*c*) Shareholders are requested to intimate the Bank their change of address, if any, immediately.

Leases of land obtained by industrial or commercial undertakings (other than co-operative societies) approved by Government and carrying on *bona fide* industrial or commercial operations, and by sugar factories approved by the Government, which are governed by special provisions under the Bombay Tenancy and Agricultural Lands Act, 1948, will hereafter be subject to certain conditions specified by the Government of Bombay. Two notifications incorporating the conditions have been published in Part IV-B of the Bombay Government *Gazette Extraordinary*, dated 14th February 1958. The conditions applying to the leases of industrial or commercial undertakings relate to the duration and termination of lease and purchase of land by lessee, while those in respect of leases of sugar factories relate, besides the duration and termination of lease, to the payment of land revenue, etc., land in excess of the requirements of lessee and right of purchase.

APPOINTMENTS AS SELLING AND BUYING AGENTS UNDER COMPANIES ACT

PROPOSALS OF AMENDMENT COMMITTEE EXAMINED

By F. R. Ginwalla, B.A., LL.B.

IN order to check certain abuses of the Managing Agency system in India and to prevent enrichment of the managing agent in several ways, the Companies Act 1956 imposes certain restrictions on the appointment of the managing agent of a company or his associate as the selling or buying agent of the company and on the contracts between the managing agent or his associate and the managed company for the sale or purchase of goods or the supply of services. These restrictions are contained in Sections 356 to 360 of the Act. The provisions of these sections need a careful analysis, in view of Section 361 which states that any contract relating to the matters referred to in Sections 356 to 360, which was in force on 1st April 1956, shall, in so far as the contract relates to any of the matters referred to in the foregoing sections, be deemed to be terminated on 1st March 1958, unless it terminates on an earlier date. I shall, therefore, venture to analyse these provisions in the light of the Report of the Companies Act Amendment Committee appointed by the Government of India by its order of 15th May 1957.

Section 356

Section 356 relates to appointment of managing agent or his associate as selling agent of the goods produced by the company. Under this section, no managing agent or his associate shall receive any commission or other remuneration for sale of goods produced by the managed company and sold, (i) at the premises at which the goods are produced, (ii) the head office of the managing agent or (iii) from any place in India.

As regards sales of goods at places outside India, the sub-section (2) of Section 356 states that a managing agent or his associate may be appointed selling agent of such goods provided (i) he maintains his own office at such place for his own business, unconnected with business of the company, (ii) the remuneration payable to him for such work is sanctioned by a special resolution of the company (which must recite the material terms of the appointment), and (iii) no other sums are payable by the company to him for such work, whether by way of expenses or otherwise. Such an appointment shall not be for more than five years at a time, but its renewal is permissible during the last year of the term for another similar period upto five years. Every such appointment and all particulars thereto are required to be entered in the register maintained by the company for that purpose. This is the true picture of Section 356 as it stands at the date of the Report of the Companies Act Amendment Committee.

Now let us consider what changes are proposed by the Companies Act Amendment Committee with regard to this section. The Committee considered this section in the light of the suggestions made by managements, the chambers of commerce and the shareholders' association. The management pleaded for the abrogation of restrictions on the freedom of the contracts. The chambers of commerce suggested that the Central Government should have discretionary power to exempt companies from the restrictions on contracts falling within Sections 356 to 360. The shareholders' associations pleaded for more rigid restrictions and pressed for a total ban on all such contracts which involve a conflict of interest and duty, or at least for the imposition of a condition of previous approval of the Central Government to the matters falling within Sections 356 to 360. It is significant that the managing agents occupy a fiduciary position in relation to the managed company and therefore there must be some restrictions on the managing agents in respect of the contracts between the company and themselves or their associates.

The Report of the Committee does not suggest any modification in the body of Section 356, except so far its part (*a*) of sub-section 2 is concerned. It is suggested by the Committee that the words "or any other company managed by the Managing Agents" should be added at the end of sub-section 2(*a*) so as to read as follows:—

"that the managing agent or associate maintains an office at such place for his own business, that is to say, for a business not connected with that of the company or any other company managed by the managing agent."

In suggesting this amendment, the Amendment Committee observes: "If a managing agent keeps an office outside India only for selling the goods of the several companies of which he is the managing agent, it could not be said that he is keeping an office for his own business or for a business not connected with that of the managed company. In that case the managing agent would be charging the managed companies *pro rata* and recovering his expenses under Section 354." In order to bring out the point that the commission should not be allowed in such a case, the sub-section 2(*a*) is proposed to be put into amended form as observed above.

Section 357

Section 357 states that, where and in so far as the business of the company consists of supplying or rendering services to outsiders, the same rules as contained in Section 356 shall apply as regards business procured outside India. Similarly, the commission for rendering services to the company or procuring supply of services to the company is controlled by Section 357. Under the old Act of 1913, there were no such restrictions on the powers of the company to appoint Managing Agent or his associate as selling agents of the company either in India or outside India and therefore the managing agents were at full liberty to earn as much commission and remuneration as they could. This is now not possible under the new Section 357. In view of the foregoing underlying idea the Amendment Committee have not touched this section.

Section 358

Section 358 relates to appointment of managing agent or his associate as buying agent for the company. Under this section, subject to exceptions specified in sub-sections (1) and (2), no managing agent or his associate as buying agent for the company shall receive any payment whatever from the company for goods purchased on its behalf whether in India or outside India. Sub-section (1) exempts the expenses sanctioned under Section 354. Sub-section (2) makes another exception and states that, as regards goods purchased by the managing agent or his associate outside India, if (i) the managing agent or his associate maintains an office at such place and (ii) such office is maintained by him not only for the company's business, but also for his own separate distinct and independent business, then, he may at his option, receive (*a*) such part of the office expenses as may be reasonably attributed to the company's business or (*b*) remuneration by way of commission or otherwise for work done by him or his associate for such purchases. In case of the former, the maximum amount payable to the managing agent or his associate must be specified in the special resolution of the company and in case of the later remuneration would be payable according to the terms of a special resolution. In either case, the special resolution of the company must set out in details the particulars specified in sub-section (4). The special resolution has its force for three years but it may be renewed in the last year of its term for a further period of three years. Every resolution so passed is required to be entered in a register maintained by the company for that purpose.

The Amendment Committee has proposed to add the words "or any other company managed by the Managing Agent" after the words "business not connected with that of the company" occurring in sub-section 2 of this section. The need to amend this sub-section arises on account of the proposed amendment of Section 356 (2) which we have already discussed.

Section 359

Section 359 provides for commission, etc., of managing agent as buying or selling agent of other concerns. The Amendment Committee, in its Report, states that,

"while it has been claimed that this section gives rise to difficulties due to the multiplicity of transactions involved, it has also been pointed out that, where the main contract for sale or purchase of goods or supply of services ranging over a period, has secured the approval of the company by a resolution, each transaction of sale or purchase or instalment of service taking place under the main contract need not get separate approval by way of a resolution of the company. The section, as it stands, supports this construction and no amendment is called for."

Section 360

Section 360 deals with principal to principal contracts between the company and its managing agent or his associates. The object of this section is to restrict the scope for managing agent making profits for himself or in the names of his associates.

Sub-section 1 of Section 360 requires the previous approval of the company by special resolution to dealings between the company and its managing agent or his associates. It was urged before the Amendment Committee that Section 360(1) involves serious hardship, as it interferes with transactions in the normal course of business between a company and its managing agent or his associates and it is particularly so where a group of public companies has the same managing agents. The Amendment Committee has recognised that the requirements of previous approval as contemplated by sub-section (1) of Section 360 has caused hardship and that it has made it difficult for a company to meet the temporary shortages of stores, chemicals, machine parts or other materials in an associate company required in order to avert a breakdown in the latter. Such temporary services or arrangements have sometimes to be made available at a very short notice. The Amendment Committee has therefore suggested that it would be sufficient if the company gives its consent at the next general meeting. In order to bring out this idea and to simplify the section with regard to the material particulars to be set out in the special resolution, the Amendment Committee has suggested that the section should be recast by substituting a new sub-section as stated in the Report for the existing sub-section (1) of Section 360, by amending sub-section (4) by adding the words "or rendering" after the words "or supply" and by adding an explanation to the section. When Section 360 is recast it will read as follows:—

A contract between a company and its managing agent or an associate of the Managing Agent.

(*a*) For the sale, purchase or supply of any property, movable or immovable, or rendering of any service other than that of Managing Agent, or

(*b*) for the underwriting of any shares or debentures to be issued or sold by the Company,

shall not be valid as against the company, unless the company either previously or at its next meeting within a period of three months from the date of the contract approves of the Contract by a special resolution.

(2) The special resolution aforesaid shall—

(*a*) set out the material terms of the contract proposed to be entered into; and

(*b*) provide specifically that for any property supplied or sold, or any services supplied or rendered, by the company, the managing agent or associate shall make payment to the company within one month from the date of the supply or sale of the goods, or the supply or rendering of the service, as the case may be.

(3) Every such contract and all particulars relating thereto shall be entered in a separate register maintained by the company for the purpose.

(4) Nothing contained in clause (a) of sub-section (1) shall affect any contract or contracts for the sale, purchase or supply or rendering of any property or services in which either the company or the managing agent or associate, as the case may be, regularly trades or does business, provided that the value of such property and the costs of such services do not exceed five thousand rupees in the aggregate in any calendar year comprised in the period of the contract or contracts.

Explanation.—Where it is not possible to set out in the special resolution all the terms and conditions of the contract or the details regarding quantities or rates or times of delivery of goods or rendering of services, it shall be deemed to be a sufficient compliance with the section, if the special resolution approves generally of the terms relating to the duration of the Contract, the goods or services to be supplied or rendered, the approximate quantities thereof, the rate or rates or payment therefore and the remuneration, if any, payable to the managing agent or his associates, provided that full particulars of the transactions resulting from the contract are entered in the register kept under sub-section (3).

Section 361 does not save the operation of existing contracts for the intervening period upto 1st March 1958 or if they, by their own force, terminate on an earlier date upto that date. Sections 356 to 360 prohibit certain arrangements with and payments to managing

(*Continued on page 399*)

GOVERNMENT OF ZANZIBAR

FOR SALE THE PASSENGER AND GOODS VESSEL

H.H.S. "AL HATHERA"

On the instructions of the Government of Zanzibar TENDERS are invited by the undersigned for the purchase of His Highness s Ship "AL HATHERA" ex "KAFARU." Particulars :—Twin Screw Vessel built in December 1929 by Bow and McLackland & Co. Paisley. Tonnage Gross 279, net 101, length 125', breadth 25.1' and depth 10'. One single-ended oil burning Scotch boiler. Two triple expansion surface condensing engines. Cylinder diameter 22" by 35" by 57". Stroke 3'-3". Speed about 8 knots on consumption of about 8 tons of oil per day. Fitted with a hatch forward, length 10'-6", breadth 12 and capacity 70 tons approximately. Cargo capacity worked by one derrick capable of lifting 5 tons by a fitted steam winch. The vessel is also designed for deep sea towing from a self rendering steam winch aft. Oil bunkers are stowed in Port and Starboard wing tanks having a total capacity of 58 tons. Water capacity : fore peak 25 tons, after peak 25 tons and domestic peak 2 tons. Fitted with usual accommodation for Master and Officers amidships whilst the accommodation for the crew is situated forward. Can be seen afloat at Zanzibar Harbour where it is lying with a defective boiler.

2. For further information and inspection apply to the Port Officer, Zanzibar. The "AL HATHERA" is offered "as lies." The vessel to be removed within one month of the receipt of the notice of the acceptance of the tender. No responsibility will be accepted for the accuracy of the above information. Nor can any responsibility be accepted by His Highness' Government for any costs incurred by the successful tenderer in obtaining a seaworthiness certificate. His Highness' Government does not bind itself to accept the highest or any tender.

3. Sealed tenders should be addressed to the Chairman, Central Tender Board, c/o Treasury, Zanzibar, marked "Tender for the purchase of 'AL HATHERA'" and sent by registered post so as to reach him not later than 10 a.m. on the 30th April, 1958.

CENTRAL INDIA MILLS SUFFER HUGE LOSS

PREFERENCE DIVIDEND IN ARREARS

THE audited accounts of the Central India Spinning, Weaving and Manufacturing Company, Ltd. (Managing Agents: Tata Industries Private Ltd., Bombay), for the year ended 30th June 1957, disclose a very disappointing performance, in that it has suffered a huge loss of Rs. 20.79 lakhs, even before making any provision for depreciation. This compares with the small profit of Rs. 1.38 lakhs earned in 1955-56. The amount of depreciation due for 1956-57 is placed at Rs. 7 lakhs. If this amount is included, the total loss will be of the order of Rs. 27.79 lakhs. This is equal to six times the net loss sustained in 1955-56. Last year, the reserves were depleted by Rs. 6 lakhs in order to cover the loss and to meet the dividend on the 5 per cent. tax-free cumulative preference shares. For the year under review, the loss has been so large that the Directors have decided to suspend even the preference dividend. They have adjusted the loss (before depreciation) by a further withdrawal from the reserves, this time by no less than Rs. 20.66 lakhs. For the second year in succession, the ordinary shareholders have had to forego the dividend. Indeed, even for the two years preceding, they did not get much of a dividend, the rate being no more than 3 per cent. for 1954-55 and 2 per cent. for 1953-54. Even those payments, it may be noted, were possible only with the assistance of the dividend equalisation fund.

The following comparative table shows the trend of the Company's progress at a glance:

(In lakhs of rupees)

	For the year ended 30th June			
	1957	1956	1955	1954
Sale proceeds of cloth, yarn and waste	2,83.23	3,12.05	4,04.54	3,52.05

† Paid out of dividend equalisation fund.

The main reasons for the setback in the Company's financial results are two. The depression in the cloth and yarn markets brought about by the Government through heavy taxation and the dislocation and disruption caused by the large-scale renovation programme that is being implemented by the Company.

It may not be much of a consolation to shareholders that the Managing Agents have given up even the minimum commission of Rs. 50,000 to which they are entitled under the new Companies Act. Nevertheless, it deserves to be recorded as a point in favour of the much maligned managing agency system.

It will be seen from the comparative table above that, though sale proceeds have declined from Rs. 3.12 crores to Rs. 2.83 crores, expenses have risen sharply from Rs. 2.63 crores to Rs. 3.40 crores. The closing stocks at Rs. 66.67 lakhs are nearly double of Rs. 34.62 lakhs a year earlier, reflecting the difficult trading conditions in the cloth and yarn markets brought about by the steep rise in excise duties, Government's propaganda of its notional fair prices which had no relation to costs and credit restrictions. The Directors say that, as a result of all this, stocks had to be disposed of at very low prices and rebates had to be offered to induce traders to lift sold stocks.

As stated earlier, the management is actively implementing a programme of rapid modernisation of the Company's mills so as to enhance its profit-earning capacity. Alluding to this in their latest report, the Directors observe thus:

"In order to put the mills on a remunerative basis, the Directors, after considering alternative schemes, have now embarked on an extensive renovation and rehabilitation programme which will cost approximately Rs. 2.03 crores. The programme involves the complete scrapping of mills Nos. 1 and 2 with the exception of the preparatory equipment of mill No. 1 and 456 looms of mill No. 2 which are serviceable and have been retained. In accordance with this decision, mill No. 1 was demolished and the very old and worn out machinery and motors, and other miscellaneous equipment were sold. In substitution of these two units, a new unit is being erected with up-to-date lighting, humidification and other equipment. This unit will be equipped with 49,712 spindles and 704 looms, a considerable portion of which has already been received at site and is under erection. Simultaneously, extension to mill No. 3, which is a wholly spinning unit equipped with 31,408 spindles, is being carried out to house 456 looms. The number of spindles in this unit will be reduced from 31,408 to 29,656. The renovation programme has put an enormous burden on the financial and managerial resources of the Company. Out of the planned outlay of Rs. 2.03 crores, about Rs. 85 lakhs have already been expended, all out of the internal resources of the Company and by resort to short-term borrowings, in anticipation of receiving a large loan from the National Industrial Development Corporation Private Ltd. Additional heavy commitments have been entered into to purchase the balance of plant and equipment to complete the programme. A renovation plan of this magnitude, involving new buildings, the large-scale erection of new plant and equipment and mass scrapping or moving of existing plant with the redeployment or retirement of labour is bound to adversely affect the operations of any mill. The transition period between the demolition of the old unit and the operation of the new unit is unavoidably one of dislocation and disruption of normal working. On the basis of the progress so far achieved, it appears likely that the new unit will commence coming into operation by the middle of 1958. The resultant economies of this large-scale rehabilitation programme are expected to be realised when the whole new unit comes into operation."

In addition to the schemes mentioned above, the Directors have sanctioned a further capital expenditure of about Rs. 7 lakhs during the year to purchase a stentering and drying range, two finishing ranges, a cloth conditioning machine and additional tractors and trailers. The value of new plant and equipment installed during the year amount to Rs. 2.50 lakhs, while those awaiting installation is of a total value of Rs. 71 lakhs. New construction work completed cost another Rs. 29 lakhs. The Company has sold away all its five ginning and pressing factories owned by it at Wardha, Yeotmal, Hinganghat, Umri and Limba for a consideration of Rs. 6.25 lakhs as they were found old and unsuitable.

The paid-up capital of the Company as at 30th June 1957 stands unchanged at Rs. 96.87 lakhs, of which Rs. 50 lakhs are taken up by tax-free cumulative preference shares of Rs. 500 each carrying dividend at 5 per cent. and the balance by ordinary shares of Rs. 100 each. As against this, the reserves and surplus aggregate Rs. 27.25 lakhs. There is no provision for taxation. The current liabilities amount to Rs. 233.59 lakhs, of which secured loans from the State Bank of India are of the order of Rs. 106.56 lakhs and unsecured loans for Rs. 72.55 lakhs. The gross block of Rs. 242.11 lakhs stands written down to Rs. 87.24 lakhs. It is stated that arrears of depreciation up to 30th June last amount to Rs. 11.15 lakhs. Works under construction and machinery awaiting installation at cost are shown at Rs. 42.63 lakhs. The current assets aggregate Rs. 227.84 lakhs and fall short of the current liabilities by a margin of Rs. 5.75 lakhs. The contingency liability in respect of the preference dividend for the year ended 30th June 1957 is Rs. 2.50 lakhs.

The Company's application to the National Industrial Development Corporation Private Ltd. in August 1956 for a loan of Rs. 1.56 crores for financing the plan for renovation and rehabilitation of the mills has not met with complete success. The Directors say that the actual amount of the loan to be granted will be substantially reduced. They further observe: "Though negotiations have now reached an advanced stage, considerable time will still be taken in examining title deeds and completing other formalities before the loan can be drawn against. In the circumstances, as already stated, the Company had to resort to temporary borrowings from banks and other sources. We are giving consideration to alternative sources for meeting the additional finance required, in view of the reduction in the amount of the loan to be made available to us."

No progress has so far been made in the negotiations by the Directors of the Consolidated Tin Mines of Burma with the Government of Burma for joint control of the mines. Repeated reminders for remittance of profits have also proved futile. The Company proposes to delete Article 6 of its Articles of Association which provides, *inter alia*, that Directors should be British subjects. Group net profits of the Company for the 15 months to June 1957 was £7,884, as against £8,197 for the previous year. The Company's fixed assets in Burma stand written down at £81,107.

SPENCER'S PROGRESS STEADY

DIVIDEND MAINTAINED

THE year ended 30th June 1957 adds one more year of successful working to the history of Spencer & Co., Ltd. (Director and Secretary: Mr. C. W. Stephenson, Madras). The Company's working during the year under review is characterised by a further rise in sale proceeds and other income as also in earnings. Thus, sale proceeds and other income have risen by Rs. 21.39 lakhs to Rs. 3.34 crores. On the earnings side, the gross profit has increased by Rs. 3.69 lakhs to Rs. 29.73 lakhs. The pace of improvement has, however, somewhat slowed down, as compared with that in the previous year, when the gross profit staged a rise of no less than Rs. 6.19 lakhs from Rs. 19.85 lakhs for 1954-55. But it is gratifying that the upward trend in gross profit has been maintained for the third year in succession.

The net profit, however, stands a shade lower at Rs. 14.09 lakhs, as compared with Rs. 14.18 lakhs in the previous year. This is due to the increase of Rs. 3.70 lakhs to Rs. 13.65 lakhs in the provision for taxation, which is inclusive of Rs. 1.50 lakhs for wealth tax for the two years ended 30th June 1957. It will be noted that, even at Rs. 75,000 per annum, the wealth tax represents 5.05 per cent. of the net profit. The provision for depreciation takes up Rs. 1.99 lakhs, as against Rs. 1.91 lakhs. The dividend on ordinary shares has been maintained at 15 per cent. per annum for the sixth year in succession. A sum of Rs. 2.09 lakhs has been added to the various reserves, as against Rs. 3.55 lakhs made in the previous year. This includes Rs. 98,200, being provision for current repairs on buildings and machinery, Rs. 1 lakh to fixed assets depreciation reserve and Rs. 11,405 to capital reserve. The last item represents the profit on sale of sundry assets.

The progress of the Company's working during the past four years is reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th June			
	1957	1956	1955	1954
Sale proceeds and other income	3,33.59	3,12.20	2,99.04	2,95.53

	(15%)	(15%)	(15%)	(15%)
Carry forward	9.03	6.32	5.11	4.55

* Only approximate.

The improvement in trading results for the year under review would have been even better had it not been for the rise in manufacturing and other expenses by Rs. 17.70 lakhs to Rs. 3.04 crores. In the previous year expenses had increased by only Rs. 6.98 lakhs. This explains the relatively smaller pace of growth in profit.

The Company's financial position, as seen from its latest balance-sheet, is quite sound. The paid-up capital of Rs. 100 lakhs is made up of 400,000 ordinary shares of Rs. 10 each, 232,000 (6½ per cent.) 'A' cumulative preference shares of Rs. 10 each and 368,000 (8½ per cent. 'B' cumulative preference shares of Rs. 10 each. As against this, the reserves and surplus amount to Rs. 98.19 lakhs, of which the share of the general reserve alone is Rs. 56.09 lakhs. The provision for taxation stands at Rs. 20.88 lakhs and current liabilities at Rs. 49.99 lakhs. The gross block of the value of Rs. 122.18 lakhs has been well written down to Rs. 49.81 lakhs. The current assets aggregate Rs. 219.24 lakhs, represented by investments amounting to Rs. 25.45 lakhs, stocks and stores Rs. 83.82 lakhs, book debts, advances and double taxation relief claims Rs. 52.06 lakhs and cash balances Rs. 57.92 lakhs. It will be seen that the cash balances alone provide a sufficient cover to the current liabilities and for about 50 per cent. of the provision for taxation.

The Rs. 10 fully paid-up ordinary shares of the Company are currently quoted at Rs. 17.65 *cum-div.* (final dividend Re. 1). On an *ex-div.* basis, the shares provide a yield of 9 per cent. per annum, free of tax.

EARNINGS OF BHOPAL SUGAR IMPROVE

DIVIDEND ALSO HIGHER

THE Bhopal Sugar Industries Ltd. (Managing Agents: Messrs. A. H. Bhiwandiwalla & Co. (Bombay) Private Ltd., Bombay) is another sugar company to report impressive results for the 1956-57 season, although the tax on white sugar had reached pretty high levels. The Company's working during the year ended 30th September 1957 is encouraging from the point of view of both production and earnings. The quantity of cane crushed, the output of sugar and the average recovery of sugar were all the highest to be achieved since 1943. With sales also closely keeping abreast of production, the Company's earnings have reached new high levels. It is, therefore, in the fitness of things that the shareholders should have been allowed to participate in the Company's prosperity. The dividend has been raised from 15 per cent. to 20 per cent. The proposed distribution, it may be noted, is twice as much as that for 1954-55 and 1953-54.

The gross profit for the year at Rs. 18.46 lakhs represents an advance of Rs. 7.50 lakhs or 69 per cent. over that for the previous year. It is more than four times the gross profit (of Rs. 4.71 lakhs) earned in 1954-55 and more than three times the 1953-54 gross profit.

The progress of the Company during the past four years is indicated in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th September			
	1957	1956	1955	1954
Sale of sugar and molasses	75.25	48.80	25.58	29.70
Closing stocks of sugar and molasses	32.36	19.61	12.13	3.28
Manufacturing and other expenses	50.96	37.60	25.57	24.62
Excise duty	18.94	7.96	4.49	2.89
Gross profit	18.46	10.96	4.71	5.88
Managing Agents' commission	1.60	0.96	0.31	0.44
Depreciation	1.56	1.34	1.61	1.51
Taxation	7.55	5.50	0.75	1.13
Net profit	7.75	3.16	2.04	2.80
Transfer from reserves	..	0.87	..	1.78
Provisions no longer required	0.06	..	..	..
To reserves	8.71	..	..	..
Dividends—				
5% Red. cum. preference	0.62	0.62	0.62	0.62
Ordinary	3.50	2.62	1.75	1.75
	(20%)	(15%)	(10%)	(10%)
Carry forward	0.31	0.34	0.05	0.38
Cane crushed	2,693,458 Mds.	2,031,425	1,222,870	1,110,480
Sugar production	95,491 Bags.	68,581	40,242	37,904
Recovery	9.70 %	9.27	9.10	9.45

It will be seen from the above table that, as in the case of several other companies which have produced such good results, the largest share of increased earnings has been whisked away by the Government. The rise in the excise duty from Rs. 7.96 lakhs to Rs. 18.94 lakhs, representing an increase of Rs. 10.98 lakhs or 137.94 per cent. over the year, is itself enough to drive this point home. The provision for taxation takes up Rs. 7.55 lakhs, as against Rs. 5.50 lakhs. The increase of only Rs. 2 lakhs in this provision may appear small as compared with that in profit, but it must be borne in mind that the latter amount, namely, Rs. 5.50 lakhs, is inclusive of a provision of Rs. 1.65 lakhs for the previous year. The provision for 1956-57 also includes the liability for Wealth Tax. The Directors would have done well to show this tax liability separately, so that the public may know how this inequitous tax affects the Company. The provision for depreciation is modestly higher at Rs. 1.56 lakhs, as against Rs. 1.34 lakhs.

The net profit at Rs. 7.75 lakhs is more than twice as much as that (Rs. 3.16 lakhs) for 1955-56. This has enabled the Directors not only to enhance the dividend but also to plough back a substantial amount, equal to about 50 per cent. of the net profit. Thus, a sum of Rs. 3 lakhs has been transferred to general reserve and Rs. 71,400 to development rebate reserve. Incidentally, it may be noted that the reserves had not received any allocation for quite a few years in the past.

The Directors say that the working of the factory during the year was smooth and satisfactory, thanks to absence of any breakdown during the season and good labour relations. As stated at the outset, the crushing, sugar production and recovery during the year touched a new peak. The duration of the season was 142 days, as against 112 in the previous season. The total quantity of sugarcane crushed increased from 2,031,425 maunds in 1955-56 to 2,693,458 maunds and production of sugar likewise rose from 68,581 bags to 95,491 bags. The average recovery at 9.70 per cent. was higher, as compared with 9.27 per cent., 9.10 per cent. and 9.45 per cent. in 1955-56, 1954-55 and 1953-54 respectively. The average quality of the cane also showed a marked improvement. The total overall average yield from all the farms at 854 maunds per acre was slightly better than 843.3 maunds in the previous season. The Directors say that the condition of the crop in the current season is satisfactory and they expect that, in all probability, the previous year's production of 95,491 bags would be exceeded. The new mill and the vacuum pan which were ordered last year have been erected in position, as a result of which the Directors expect to get higher extraction this year.

The paid-up capital of the Company as at 30th September 1957 remains unchanged at Rs. 30 lakhs. Of this, Rs. 17.50 lakhs are in ordinary shares of Rs. 10 each and the balance, namely, Rs. 12.50 lakhs, in 5 per cent. tax-free redeemable cumulative preference shares of Rs. 100 each. As against this, the reserves and surplus stand at Rs. 12.89 lakhs. The gross block of the value of Rs. 41.57 lakhs stands written down to Rs. 17.60 lakhs. The current liabilities, including a provision of Rs. 14.46 lakhs for taxation, amount to Rs. 34.50 lakhs, against which the current assets aggregate Rs. 59.79 lakhs.

The Rs. 10 paid-up ordinary shares of the Company are currently quoted at Rs. 20.76 *cum-div.* On an *ex-div.* basis, the year's dividend means a yield of 10.66 per cent. per annum.

Points From The Chair

Outlook for Shipping

"WITH the improvement in working at ports our turn-round has improved and we expect more voyage to be completed due to our placing newer and faster ships in service. Our operating results as up to the six months ended 31st December 1957 have been satisfactory. We propose to provide regular coastal berthings for the carriage of general cargoes both from the West and East coast ports, and we expect improved earnings in the carriage of coastal cargoes. In regard to the carriage of rice from Burma to India aggregating four lakh tons in the current year, the rate of freight as agreed by the Government of India is far from economic. While the low rate awarded is no doubt the result of lower prevailing tramp freight, it particularly hits essentially Liner Companies like ours who have not hesitated in the past to carry rice cargoes at comparatively lower rates even when the tramp freights were at a high level. The persistent very low level of tramp rates in the overseas trades has, however, affected the liner rates on bulk cargoes like ores, fertilisers, oilcake, bulk oil, scrap, etc., and the effects of this downward trend in rates will have some impact on the working results for 1958-59. The import restrictions and the delayed announcements in regard to export quotas also affect the availabilities of cargoes in the liner trades. In view, however, of the positive foreign exchange earning possibilities manifest in the expansion of the export markets of these commodities, I am sure the question of the release of sizable quotas of these commodities is engaging the constant attention of the Government of India. With these steps and with the expansion of the trade, in general, as a whole, I would expect our liner services getting a reasonable support in years to come."

DHARAMSEY M. KHATAU,
Scindia Steam Navigation Co., Ltd.

Penal Bank Rate

"I find it difficult to understand what good purpose—apart possibly from a psychological effect—is served by a penal bank rate under existing conditions. It is well known that last year this country exported £3,326 million of goods; whilst our international trading account shows a credit surplus of only between £250 and £300 million. In view of the first of these facts, can it be said that sterling is overvalued? But in view of the second and the fact that nearly half the world's trading is financed through our currency, can we wonder that doubts may sometimes rise in some quarters as to our international solvency? There is the rub. And it must be the earnest hope of all of us that the combined efforts of the Radcliffe Committee and of the Three Wise Men will find the solution. Does a seven per cent. Bank rate which is unfair in its incidence restore the confidence of the world in British character and creditworthiness on which, in the absence of an exchange standard, the value of the £ sterling must ultimately depend? I have my doubts. And is it generally realised that a difference of two per cent. interest on the floating debt is equivalent to an addition of over £100 million a year in the cost to the taxpayer of the service of that debt? Not to mention the cost of funding operations. And, as the Chancellor of the Exchequer told us last year, each one per cent. extra costs our balance in our international trading account not less than £15 million."

SIR ERIC GORE BROWNE,
Alexanders Discount Co., Ltd., London

COMPANY MEETINGS AND DIVIDENDS

EMPIRE DYEING & MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 10th March 1958. Dividend: Rs. 3.00 per share, payable on and after 24th March 1958. Transfer books remain closed from 21st February to 14th March 1958, both days inclusive.

W. H. BRADY & CO., LTD. Annual General Meeting, Bombay, 10th March 1958. Dividend: Rs. 25.00 per share. Transfer books remain closed from 21st February to 14th March 1958, both days inclusive.

BRADY ENGINEERING CO., LTD. Annual General Meeting, Bombay, 10th March 1958. Dividend: Rs. 3.00 per share, payable on and after 24th March 1958. Transfer books remain closed from 21st February to 14th March 1958, both days inclusive.

NEW CITY OF BOMBAY MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 10th March 1958. Dividend: Rs. 5.00 per share, payable on and after 24th March 1958. Transfer books remain closed from 21st February to 14th March 1958, both days inclusive.

INVESTMENT CORPORATION OF INDIA LTD. Annual General Meeting, Bombay, 10th March 1958. Dividend: Rs. 9.25 per share. Transfer books will remain closed from 3rd to 10th March 1958, both days inclusive.

NEW GREAT EASTERN SPINNING & WEAVING CO., LTD. Annual General Meeting, Bombay, 11th March 1958. Dividend: *Nil*. Transfer books remain closed from 21st February to 14th March 1958, both days inclusive.

JUBILEE MILLS LTD. Annual General Meeting, Bombay, 13th March 1958. Transfer books will remain closed from 1st to 14th March 1958, both days inclusive.

ANDHRA SUGARS LTD. Annual General Meeting, Venkatarayapuram, Mandapaka, Tanuku (Andhra Pradesh), 15th March 1958. Dividend: Re. 1.25 per share. Transfer books will remain closed from 1st to 15th March 1958, both days inclusive.

JOGTA COAL CO., LTD. Annual General Meeting, Calcutta, 15th March 1958. Dividend: *Nil*. Transfer books remain closed from 25th February to 14th March 1958, both days inclusive.

JHANSI ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Jhansi, 17th March 1958. Dividend: Re. 0.86 for the fifteen months months ended 31st March 1957. Transfer books will remain closed from 5th to 18th March 1958, both days inclusive.

UNITED MOTORS (INDIA) LTD. Annual General Meeting, Bombay, 17th March 1958. Dividend: Re. 1.20 per share, payable on and after 31st March 1958. Transfer books will remain closed from 10th to 24th March 1958, both days inclusive.

ALKALI AND CHEMICAL CORPORATION OF INDIA LTD. Annual General Meeting, Calcutta, 19th March 1958. Transfer books will remain closed from 10th to 19th March 1958, both days inclusive.

NAGRI FARM TEA CO., LTD. Interim dividend of 10 per cent. or Re. 1.00 per share for the year 1957, payable on or after 6th March 1958. Transfer books remain closed from 28th February to 6th March 1958, both days inclusive.

LINGA TEA CO., LTD. Interim dividend of 10 per cent. or Re. 1.00 per share, payable on or after 1st March 1958. Transfer books remain closed from 24th to 28th February 1958, both days inclusive.

CENTRAL SCIENTIFIC CO., LTD. Interim dividend of 5 per cent. or Re. 0.25 per share, free of tax, for the year ending 31st March 1958. Transfer books will remain closed from 25th to 31st March 1958, both days inclusive.

COIMBATORE COTTON MILLS LTD. Dividend of Rs. 9.00 per share for the year ended 31st December 1957. Transfer books will remain closed from 13th to 26th March 1958, both days inclusive.

JEYPORE SUGAR CO., LTD. Dividend of 6 per cent., or Re. 0.60 per share, for the year ended 30th June 1957. Transfer books will remain closed from 17th to 26th March 1958, both days inclusive.

AZAM JAHI MILLS LTD. Dividend of Rs. 3.50 per share, for the year ended 30th September 1957, payable on 15th April 1958. Transfer books will remain closed from 14th to 28th March 1958, both days inclusive.

VOLTAS LTD. Dividend of Rs. 9.00 per old share and Rs. 6.00 per new share, for the year ended 31st August 1957, payable on 27th March 1958. Transfer books will remain closed from 3rd to 24th March 1958, both days inclusive.

RAVALGAON SUGAR FARM LTD. Dividend of Rs. 12.00 per ordinary share and Rs. 2.40 per deferred share, for the year ended 30th September 1957, payable on 28th March 1958. Transfer books will remain closed from 7th to 27th March 1958, both days inclusive.

LOYAL TEXTILE MILLS LTD. Dividend of Rs. 2.50 (5 per cent.) per share, for the year ended 30th June 1957. Transfer books will remain closed from 14th to 20th March 1958, both days inclusive.

T. STANES AND CO., LTD. Final dividend of Re. 1.20 (12 per cent.) per share, for the year ended 30th September 1957, making a total of Rs. 2.00 per share, for the year. Transfer books will remain closed from 15th to 29th March 1958, both days inclusive.

RESULTS OF JHANSI ELECTRIC
JOGTA COAL TO REDEEM PREFERENCE SHARES

Jhansi Electric Supply Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Moonna Lall & Sons, Jhansi) submit the audited accounts of the Company for the 15 months ended 31st March 1957.

The total revenue for the year from all sources amounted to Rs. 15,42,065. From this is to be deducted operating expenditure for the period including depreciation, provision for statutory contingency reserve, instalment of preliminary expenses as per Electricity (Supply) Act, redemption of debentures and income and wealth tax provision (the provision for income-tax during the period has been made taking into consideration the deferred taxation which the Company will have to meet in future on account of extra depreciation allowable under the Income Tax Act in the initial years of the establishment at fixed assets) amounting to Rs. 14,88,338 leaving a net amount available for the period of Rs. 53,727. This amount together with the balance of Rs. 2,603 brought forward from last year amounts to Rs. 56,330 which is available for appropriation. The directors recommend this amount to be disposed of as under against the working for 15 months:—

To dividend to shareholders at Re. 0.86 (Re. 0.69 for 12 months ended 31st December 1956) per share free of income-tax absorbing Rs. 45,946 (Rs. 36,757) and leaving to be carried forward to next year Rs. 10,385 (Rs. 2,603).

Plants.—During the period under review a new Mirrless-Brush Generating Set of 245 kw. was installed at Jhansi which is giving excellent service. For the installation of this set an old set installed in 1932 has been dismantled and stored for disposition. The other plants at Jhansi and Gorakhpur were maintained in good and efficient order and they worked perfectly well. To further improve the supply position at Gorakhpur, negotiations are going on with Hydel Authorities to obtain A.C. supply so as to take up new areas for supply in A.C. and supplement present D.C. position with converted D.C. supply.

Distribution.—Extensions of 18 street lights were made at the instance of Municipal Authorities at Jhansi and 24 street lights were extended at Gorakhpur. The following table indicates the progress that has been made during the last four years:—

Jhansi and Gorakhpur

Year	Units sold	Consumers connected
1953	17,31,638 (10,91,070*)	2,039 (1,351*)
1954	16,40,711 (12,45,080*)	2,081 (1,469*)
1955	18,59,626 (13,70,391*)	2,259 (1,584*)
1956 (upto March 1957)	23,37,242 (19,07,775*)	2,437 (1,798*)

Figures in brackets marked * relate to Gorakhpur.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,34,640	Block ...	16,60,784
Debentures	5,36,000	Stores and spare parts	3,49,769
Reserves ...	82,299	Debts, deposits and advances ...	3,64,255
Provision for taxation ...	1,15,644	Investments	25,142
Liabilities ...	12,01,715	Cash ...	37,844
Profit and loss account ...	10,385	Miscellaneous expenses and losses	42,889
Rs.	24,80,683	Rs.	24,80,683

Jogta Coal Co., Ltd.

The directors of the above Company (Managing Agents: Bajpaie Trust Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

It will be observed, that this year there has been quite a long delay in completing the balance-sheet of the Company. The delay is due to the fact that at the request of some registered holders of the preference shares of the Company the directors agreed to frame a scheme so that all the preference shares of the Company could be redeemed. This was being done especially in consideration of the registered holders of the preference shares having agreed to waive all claims to past accumulated dividends and the premium of Rs. 4 per share originally stipulated as payable upon redemption. The scheme framed by the directors had been duly supported by the Counsel's opinion but still some objections were taken by Company Law Administration and considerable time had to be taken in convincing the Government Department about the legality of the proposed procedure adopted. This was ultimately done only after obtaining a further opinion from Counsel. And, the directors have the pleasure to state that, subject to the shareholders' approval, they have been able to finalise an adequate scheme for redeeming all the preference shares of the Company which is calculated to be for the ultimate benefit of the Company as also all its members.

Raisings and Despatches: During the year under review a total quantity of 1,22,917 tons of coal has been raised and 8,300 tons soft coke manufactured as against which the despatches amounted to 1,06,887 tons of coal, 8,348 tons soft coke and 386 tons hard coke. These figures will be found to be slightly lower than the corresponding figures of the previous year but the difference is quite negligible and the overall position of the Colliery should be deemed to be quite satisfactory from all points.

The directors inform that just after the expiry of the year under review, possession of the Jogta Colliery 11 seam has been recovered amicably from the ex-lessee and this seam is also now being worked by the managing contractors.

Redemption of Preference Shares: For the purpose of redeeming the preference shares of the Company which will require a total sum of rupees five lakhs the directors have reversed the following amounts, i.e.—(A) The amount hitherto standing in general reserve Rs. 1,12,060, (B) the amount being the difference between the depreciation actually allowed by the Income-tax Department and the amounts already charged in the Company's books up to the previous year Rs. 2,87,078 and (C) from out of the profits previously allotted for partially writing off the preliminary expenses and share selling commission, which profits, would otherwise, have been available for declaring dividends Rs. 40,400 making a total of Rs. 4,39,538. The entire amount of Rs. 4,39,538 as aforesaid together with a further sum of Rs. 60,462 out of the profits of the year ended 31st December 1956 the directors propose to transfer to a special fund called *Capital redemption reserve fund* and utilise the entire amount for redeeming the fully paid-up 5,000 preference shares of the Company at the face value thereof. With reference to the redemption of the preference shares the directors have to point out that these shares carry with them the right to a fixed preferential dividend of five per cent. free of income-tax and also carry a preferential right of repayment upon liquidation. As against above, the considerable amount of surplus money now in the hands of the Company, being the amounts received from the managing contractors by way of the annual guaranteed income cannot be invested at any more advantageous term than 2½ per cent. subject to income-tax. Thus, by redeeming the preference shares not only a considerable present saving can be effected, but at the same time the volume of total capital participating in the profits being less, the future return on the ordinary shares will also improve.

After allocation of Rs. 5,00,000 as aforesaid there will be left a further sum of Rs. 6,078 only out of the profits for current year and the directors recommend that out of the same, a sum of Rs. 5,000 only be utilised for writing off a portion of the share selling commission standing in the books of the Company and the balance sum of Rs. 1,078 be carried over to the next year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	27,00,000	Block ...	19,76,146
Reserves ...	4,39,538	Loans and advances ...	6,20,349
Provision for taxation ...	3,59,398	Investments	27,477
Liabilities ...	20,935	Cash ...	3,27,471
Profit and loss account ...	60,463	Miscellaneous expenses and losses ...	6,28,891
Rs.	35,80,334	Rs.	35,80,334

Burhwal Sugar Mills Co., Ltd.

The directors of the above Company (Managing Directors: Pandit Durga Shanker Dixit and Lala Dayaram, Kanpur) submit the audited accounts of the Company for the year ended 30th September 1957.

The year's working after making all the usual allowances and normal depreciation of Rs. 46,949 (*nil*) resulted in a profit of Rs. 4,62,953 (Rs. 2,21,946) to which is added the balance brought forward from last year of Rs. 453 (Rs. 46,187) and the amount transferred from dividend equalisation reserve of Rs. 35,000 (*nil*) making a total of Rs. 4,98,406 (Rs. 2,68,133). Out of this amount has been provided for taxes Rs. 3,00,000 (Rs. 1,18,000). The directors paid an interim dividend absorbing Rs. 1,49,680 (Rs. 1,49,680). They have now proposed a final dividend at 3 (*nil*) per cent. absorbing Rs. 44,904 (*nil*) leaving a balance to be carried forward to next year of Rs. 3,822 (Rs. 453). The total dividend paid for the year is 13 (10) per cent.

No provision for bonus to workers for the year ended 30th September 1957 has been made as neither the basis of payment nor the amount to be paid can be ascertained. The bonus relating to the earlier two years 1954-55 and 1955-56 has been written off to profit and loss account.

The working of the year has been satisfactory because crushing of cane continued till 3rd July, 1957 and the crushing for the whole season was a record of *mds.* 30,22,517 (20,69,293) cane. The quality of the cane was not good and the recovery percentage was not satisfactory.

The next year's prospects do not appear to be bright on account of expected short supply of cane without any improvement in the quality of cane in spite of every effort having been made, due to unfavourable weather conditions.

The directors are making efforts to get the crushing capacity of the mills increased from 651 to 800 tons and have applied to the Government for necessary permission and have placed orders for more machinery.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	14,96,800	Block ...	9,88,212
Reserves ...	4,40,000	Stock-in-trade	21,34,041

Liabilities ...	19,76,679	Goods-in-transit	1,156
Profit and loss account ...	3,822	Debts, deposits and advances ...	5,00,558
		Investments	6,135
		Cash ...	45,368
Rs.	42,18,044	Rs.	42,18,044

Arrah-Sasaram Light Railway Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1956.

Gross Earnings.—Gross earnings for the half-year were Rs. 9,93,083 which is Rs. 26,471 more than the earnings of the corresponding period ended 30th September 1955. There is an increase of Rs. 61,269 under coaching and decreases of Rs. 32,601 under goods, and Rs. 2,197 under miscellaneous.

Working Expenses.—The working expenses for the half-year were Rs. 6,79,524 plus Rs. 25,558 for renewal expenses, making a total of Rs. 7,05,082 which is Rs. 3,854 less than the figure for the corresponding period ended 30th September 1955.

Net Earnings.—The net earnings for the half-year were Rs. 2,88,001 an increase on the figure for the corresponding period ended 30th September 1955 of Rs. 30,325.

Comparative Statistics:—

Half-year ending	Gross earnings	Working expenses	Expenditure on renewals	Dividend per cent. per annum less tax
	Rs.	Rs.	Rs.	Rs.
31-3-1955 ..	8,11,147	7,74,410	35,246	6
30-9-1955 ..	9,66,612	6,68,498	45,488	6
31-3-1956 ..	8,67,897	7,80,518	70,432	6
30-9-1956 ..	9,93,083	6,79,524	25,558	4.425

The net profit for the half-year is Rs. 82,050 (Rs. 82,964) to which is added the balance brought forward from last account of Rs. 12,838 (Rs. 810) making a total of Rs. 94,888 (Rs. 83,774). The directors recommended that the available balance be disposed of as follows:—

To payment of a dividend for the half-year ended 30th September 1956 at the rate of 4.425 (6) per cent. per annum without deduction of tax Rs. 47,995 (Rs. 47,995) and balance to be carried forward of Rs. 46,893 (Rs. 35,735 after deducting Rs. 44 being forfeited dividends paid).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	21,69,300	Block ...	33,40,226
Reserves ...	6,00,000	Stores, etc. ...	30,665
Provision for taxation ...	2,44,963	Debts, deposits and advances ...	2,06,503
Liabilities ...	12,83,691	Investments	5,29,961
Revenue account ...	46,893	Cash ...	2,17,269
		Miscellaneous expenditure	20,223
Rs.	43,44,847	Rs.	43,44,847

New India Sugar Mills Ltd.

The directors of the above Company (Managing Agents: The Cotton Agents Private Ltd., Calcutta) presented the audited accounts of the Company for the year ended 30th June 1957.

The profit and loss account after providing Rs. 4,59,203 (Rs. 2,95,000) for depreciation shows a profit on the year's working of Rs. 10,25,119 (Rs. 5,00,578) to which is added the balance brought forward from the previous year of Rs. 3,730 (Rs. 1,364) making a total of Rs. 10,28,849 (Rs. 5,30,828 which includes Rs. 28,886 being gain on sale of investments). From this there has been provided for taxation Rs. 7,10,000 (Rs. 2,56,000) leaving a balance available for disposal of Rs. 3,18,849 (Rs. 2,74,828). Out of this amount the directors recommend payment of dividend on 486 cumulative preference shares of Rs. 100 each at 9 per cent. per annum free of income-tax absorbing Rs. 4,374 (Rs. 4,374), on 10,000 cumulative redeemable preference shares of Rs. 100 each at 5½ per cent. per annum less tax absorbing Rs. 37,675 (Rs. 40,563) and on 78,910 ordinary shares of Rs. 10 each at Rs. 2.50 (Rs. 2.50) per share free of income-tax absorbing Rs. 1,97,275 (Rs. 1,97,275) leaving a balance to be carried forward of Rs. 79,525 (Rs. 3,730 after placing Rs. 28,886 to investment reserve).

During the year under review the factory worked for 190 days against 174 days during the previous year and had a record crushing. The sugar cane crushed during the year amounted to 51,53,581 maunds against 45,74,333 maunds during the previous year. The crushing was also the highest in the State of Bihar. The average recovery was, however, lower at 9.17 per cent. against 9.47 per cent. in the previous year which was due to cane having been affected by disease and crushing over a longer period. Sales and despatches were satisfactory. About 2,500 tons of sugar was sold for export during the current year.

The directors regret that due to shrinkage in the area under sugarcane crop by reason of diversion to other food crops, a crushing of about 35 lakh maunds of sugar cane only is expected during the current year.

Pursuant to Section 212(3) of the Companies Act, 1956 the directors have to state that as the entire issued capital as on 31st March 1957 of the Darbhanga Marketing Co., Ltd. was held by the Company, the profits of the subsidiary company for the last as well as the previous financial years which have not been dealt with in or for the purposes of the accounts of the company, wholly concern the members of the Company. As regards The Behar Journals Ltd., 61.45 per cent. of the issued capital of the said company as on 31st March 1957 was held by the Company. The proportionate part accordingly of Rs. 11,727 being profit of the last financial year and of Rs. 1,39,573 being net aggregate losses of the previous financial years, of the said The Behar Journals Ltd. which have not been dealt with in or for the purposes of the accounts of the company, concern the members of the Company.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	18,54,619	Block ...	21,78,693
Reserves ...	22,50,288	Stock-in-trade	58,83,393

Profit and loss account ...	79,525	Investments	17,43,689
		Cash ...	3,25,827
Rs.	1,20,27,482	Rs.	1,20,27,482

Eastern Investments, Ltd.

The directors of the above Company [Secretaries: Messrs. Bird and Co. (Private) Ltd., Calcutta] submitted the audited accounts of the Company for the year ended 31st December 1957.

The profit and loss account after providing for all charges and making provision of Rs. 6,53,393 (Rs. 5,44,728) for taxation and after paying an interim dividend on the cumulative preference shares at 2½ per cent. per annum, less tax, amounting to Rs. 42,812 (Rs. 46,094) shows a profit of Rs. 4,18,509 (Rs. 5,29,212) to which is added the balance brought forward from the previous year of Rs. 3,27,916 (Rs. 3,06,138) making a total of Rs. 7,46,425 (Rs. 8,35,350). The directors propose to dispose of this amount as follows:—

By paying a final dividend of 2½ per cent. per annum, making the total dividend at 5 per cent. for the year, on the 25,000 issued preference shares less income-tax at 30 per cent. plus 5 per cent. surcharge on income-tax Rs. 42,813 (Rs. 46,094), by payment of a dividend at the rate of 9 (9) per cent. per annum on the 51,260 issued ordinary shares without any deduction for income-tax paid by the Company Rs. 4,61,340 (Rs. 4,61,340) and by carrying forward a sum of Rs. 2,42,272 (Rs. 3,27,916).

Investments.—The Company's portfolio is representative of investments which are quoted on the Calcutta Stock Exchange with the exception of certain shares costing Rs. 78,358 for which no quotations are available. The total of the market value of the investments for which quotations are available together with unquoted investments as valued by the directors, exceeds the book value at 31st December, 1957, by Rs. 31,75,971.

General reserve.—Rs. 70,824 have been transferred from profit and loss account to general reserve account representing net profit made on sales of investments during the year.

On the other hand the increase in the rates of taxation on companies in the 1957 budget has made it necessary to draw on the balance brought forward from 1956 to the extent of Rs. 85,644 to maintain the ordinary dividend at the rate proposed of 9 per cent.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	76,26,000	Investments	1,64,12,908
Reserves ...	54,81,635	Loans and advances	2,979
Provision for taxation ...	3,38,770		
Liabilities ...	27,27,210		
Profit and loss account ...	2,42,272		
Rs.	1,64,15,887	Rs.	1,64,15,887

Woodland Estates Ltd.

The directors of the above Company (Managing Director: Mr. M. K. Thomas, Trivandrum) submitted the audited accounts of the Company for the year ended 31st March 1957.

The tea crop from the Company's two estates viz., Braemore and Marigold amounted to 1,93,046 (2,38,010) pounds. The average selling price per pound of tea was 167.74 (154.00) cents.

The total rubber crop harvested from the Company's three estates viz., Braemore, Marigold and Lakshmi was 2,89,071 (1,94,649) pounds. The average selling prices for rubber were as follows:—R.M.A. grades 154.52 (146.20) cents. per pound., E.B.C. and Scrap 136.00 (101.30 scrap only) cents. per pound and for sole and Latex crepe 205.35 (143.10 for latex only).

The net profit for the year after allowing for the usual depreciation and outgoings, debenture interest and income-tax thereon, amounts to Rs. 2,58,584 (Rs. 67,706) of which a sum of Rs. 50,000 (*nil*) has been provided for debenture redemption fund, and Rs. 1,10,000 (Rs. 30,000) for taxation. The balance together with the carry forward of Rs. 2,245 (Rs. 5,524) makes a total of Rs. 1,00,830 (Rs. 43,230). Of this the preference dividend for the year amounting to Rs. 14,540 (Rs. 6,500) have already been paid; and a sum of Rs. 6,500 (Rs. 3,859) has been set aside for payment of bonus to staff. The balance available is Rs. 79,789 (Rs. 32,870) which the directors propose to dispose of as under:—

To payment of 10 (12½) per cent. dividend on the equity shares Rs. 69,500 (Rs. 20,625) and to carry forward Rs. 10,289 (Rs. 2,245 after placing Rs. 10,000 to general reserve).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,27,500	Block ...	13,48,592
Debentures ...	5,07,560	Stock-in-trade	1,54,590
Reserves ...	1,47,259	Stores and spares ...	47,463
Provision for taxation ...	1,38,864	Estate nursery	6,359
Liabilities ...	1,62,640	Debts, deposits and advances ...	1,09,030
Profit and loss account ...	10,289	Cash	1,67,402
		Miscellaneous expenditure	60,676
Rs.	18,94,112	Rs.	18,94,112

N.B.—Figures within brackets relate to the corresponding period of the previous year.

QUESTION HOUR IN PARLIAMENT

Estate Duty

SINCE the Estate Duty came into being, a total amount of Rs. 5.95 crores has been realised by the Exchequer. The total expenditure incurred on collecting this tax is Rs. 22 lakhs. The Government is aware of the gifting away of property during the period since the Duty came into being. I do not know, however, whether a separate register is kept for it. The real difficulty is not the gifting away, but the joint Hindu family.

—*Jawaharlal Nehru*

L.I.C. Business

The amount of business completed by the L.I.C. during 1957 was Rs. 273.63 crores approximately. The information relating to collection of premium during the year 1956 and 1957 will be available only when the accounts and business statistics for the period 1st January 1956 to 31st December 1957 are ready. It is true that the accounts for 1957 have not yet been prepared. We have been told by the Corporation that the figures have to be collected and audited. Unless they are audited, they are not finalised. The accounts will be ready by March or April 1958.

—*B. R. Bhagat*

Foundry Forge Project

The proposed foundry forge project with Czechoslovak participation will cost about Rs. 30 crores and will produce annually 30,000 tons of castings, 8,000 tons of steel castings and 27,300 tons of steel forgings. An understanding has been reached between the Governments of India and Czechoslovakia about the terms of payment for the plant and machinery required to be imported for the project. According to this understanding, India will not have to make any foreign exchange payment for the project before April 1961. Technical and financial details in regard to the project are being worked out with the representatives of Messrs. Techno-export of Czechoslovakia. As the project is intended to supply castings and forgings to the heavy machine building plant (for which Ranchi has been under active consideration), it has to be set up in close proximity to it. The Government of India had received four offers in respect of the foundry-forge project—from Britain, Germany, Russia and Czechoslovakia. After examining these offers, the Czechoslovak offer was found to be the best.

—*K. C. Reddy*

Productivity Councils

Fifteen Productivity Councils are proposed to be set up during 1958-59 on regional, State and local basis. The National Productivity Council has already been registered as a society under the Societies Registration Act. The Union Ministries concerned and organisations of employers and workers have been requested to nominate their representatives on the Council. These representatives will collectively co-opt on the Council representatives of other interests. Organisations of industries, employers and workers in the industrial centres are being approached to initiate efforts to organise Productivity Councils. The State Governments have been requested to give their support in the formation of such councils. Meetings of representatives of employers, workers, Government, and institutions and organisations interested in Productivity are being promoted at certain places for preparing draft constitutions of the Councils. The Productivity Council of Mysore State with the Minister of Industries of the State as President has recently been constituted as a result of such joint consultations.

Cement Supply

In view of the comparatively easier supply position of cement as a result of increase in indigenous production, the State Governments have been advised to increase the public quota to the extent possible and abolish the permit system for sale of cement by stockists to consumers.

• • • •

Export of Cement

The Government is considering the question of exporting about 100,000 tons of cement mainly with a view to making a start in building up an external market for Indian cement. The country is all the time short of cement and that production is going up from year to year. While in 1957 production was 5.6 million tons, it is expected to reach seven million tons by the end of 1958. Even this output may not be sufficient for internal needs, but, in order to cater for different markets and create an external market when the second Plan targets are reached, we are trying to plan out a minimum export of about 100,000 tons. The outright sale of 10,000 tons of cement to Pakistan is agreed to, keeping in view the fact that Pakistan is a neighbouring country and has helped India with a large quantity of cement earlier. The contract has been signed at the rate of Rs. 117-8-0 per ton, but even this quantity may not be required by Pakistan and is liable to be cancelled. The price charged to Pakistan cannot be compared with the price of Rs. 140 per ton India has paid for cement imported from East and West European countries, as the latter involves a large margin of freight.

—*M. M. Shah*

Oil Tanker

A proposal to acquire at least one more tanker in the public sector during the second Plan period is under consideration. At present, there are two tankers owned by Indian shipping companies, one in the public sector and one in the private sector. The former was acquired after the second Plan commenced.

• • • •

Port Development

The World Bank has invited the Government of India and the authorities of the ports of Madras and Calcutta to send a delegation to Washington early in March 1958 to negotiate the terms of the loans which the Bank proposed to advance to these two port authorities. The loan agreements are expected to be finalised early in April.

• • • •

I.A.C. Fares

The proposals made by the Indian Airlines Corporation for the revision of passenger fares are under examination. The proposals are for revision rather than for increase of passenger fares. They envisage an increase in 106 sectors and a decrease in 18 sectors, out of the total of 173 sectors. The estimated additional revenue is approximately Rs. 33 lakhs per annum.

—*Humayun Kabir*

Agricultural Prices

The State Governments are the proper authorities to enforce the prices fixed for agricultural commodities. I am feeling concerned that States are not enforcing statutory prices in the manner in which they should do.

—*Ajit Prasad Jain*

Price Stabilisation Board

The Government is considering the suggestion of the Foodgrains Enquiry Committee to set up a price stabilisation board to arrest increase in the prices of foodgrains in the country.

—*A. M. Thomas*

Community Development

The community development plan is to be revised shortly so as to transfer authority to people's institutions at and below the district level. The revised plan also envisages the merging of the National Extension Service and the community development stages into a single-phase programme. The revised programme is expected to come into being on 1st April this year.

—*S. K. Dey*

Stainless Steel Plant

The Government is considering the question of setting up a plant for the manufacture of stainless steel in the country as evolved by the National Metallurgical Laboratory, Jamshedpur. Under the process evolved by the Laboratory, nickel, a strategic and costly material, will not be used in the manufacture of stainless steel. Instead, manganese available in plenty in the country will be used. Steps have been taken to patent the process both at home and abroad.

—*Dr. M. M. Das*

Oil Exploration

Dasuya area in the Punjab is one of the many parts in the country were there is a possibility of finding oil. The Government proposes to undertake extensive exploration of this area.

—*K. D. Malaviya*

Plan for Progress

Industry in India

Steel biting into the earth, metal and concrete taking shape as buildings, and giant machines roaring into action are today changing the pattern of India's economy through dynamic industrialisation. Over Rs. 1,000 crores will be spent on the expansion of industries during the Second  Five Year Plan. This intensive development programme will increase the national income, create more employment and bring the benefits of modern living to India's millions.

Proud to play a part in this mighty adventure of building a new India, Textile Machinery Corporation Limited, pioneer in many fields of engineering, supplies industry, railways and river valley projects with a wide range of equipment.

MONEY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, *26th February*

Conditions in the short-term money market were fairly comfortable during the week under review. While the supply of funds was somewhat large, the demand was not so heavy as it was two weeks ago. Banks did not, therefore, find any difficulty in meeting their requirements. In fact, banks were able to increase their deposits with the Reserve Bank and to reduce their borrowings from the Bank. Interest rates were, however, unchanged at the previous week's levels. Inter-bank call money continued to be bid at 3 per cent. among the Exchange banks and larger Indian banks and at 3½ per cent. among the smaller Indian banks. House money at call was placed at 4½ to 4¾ per cent. and short-term deposits at 4½ to 4¾ per cent. for one to six months.

A drop of Rs. 11.65 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 21st February 1958. Notes held in the Banking Department are higher by Rs. 12.25 crores, and the fractional increase in total notes issued is covered by a corresponding rise in rupee coin. There is no change in rupee securities or foreign securities, but foreign balances have dropped again by Rs. 1.85 crores. Deposits of the Central Government are a shade lower and those of the other Governments have declined by Rs. 8.09 crores. Deposits of banks have gone up by Rs. 8.08 crores. Loans and advances to Governments show a rise of Rs. 1.51 crores, while other loans and advances have declined by Rs. 4.39 crores, of which advances to Scheduled banks against usance bills account for Rs. 2.02 crores. Investments are lower by Rs. 2.26 crores.

The Scheduled banks' statement for the week ended 14th February 1958 discloses a sharp rise of Rs. 8.18 crores in demand deposits and of Rs. 2.39 crores in time deposits. Borrowings from the Reserve Bank have been reduced by Rs. 2.49 crores. A rise of Rs. 6.78 crores is noted in advances, while bills purchased and discounted are lower by Rs. 2.20 crores. Cash balances have shrunk by Rs. 3.73 crores and money at call and short notice by Rs. 2.41 crores.

The Gilt-edged market ruled very steady. Though the Life Insurance Corporation did not make any fresh purchases this week, the demand for short-dated issues and the scarcity of stocks improved the sentiment and some of the issues recorded gains. 4 per cent. State loans were in demand from provident fund institutions. 3 per cent. 1986 Conversion Loan was neglected at Rs. 71 05. 3 per cent. 1970-75 gained 5 nP to Rs. 85 80. 3 per cent. 1966-68 put on 15 nP to Rs. 91.85 and 3 per cent. 1964 gathered 10 nP to Rs. 94.30. 3 per cent. 1963-65 changed hands 10 nP higher at Rs. 94. 3 per cent. 1959-61 was maintained at Rs. 99.05 and 3 per cent. 1958 at Rs. 99.75. 2½ per cent. 1961 gained 5 nP to Rs. 94.65 and 2½ per cent. 1960 and 2½ per cent. 1962 similar rise to Rs. 97.45 and Rs. 94 80, respectively. 3½ per cent. 1961 was unchanged at Rs. 99.65 and 3½ per cent. 1954 at Rs. 97.75. 3½ per cent. 1965 and 3½ per cent. 1967 had sellers at Rs. 97.55 and Rs. 97.60, respectively. Among State loans, 4½ per cent. 1969 was marked up by 15 nP to Rs. 100 05, 4 per cent. Madras 1967 and 1968 were in demand and rose by 10 nP each to Rs. 97.70. Andhra 1967 advanced by 25 nP to Rs. 97.60 and 1968 by 40 nP to Rs. 97.75. U.P. 1967 and 1968 gained 5 nP each to Rs. 97.65.

The Government of India has issued a notification intimating that the whole of the 4½ per cent. Loan 1958-68, will be repaid at par on 1st June 1958, with all interest due up-to-date. Interest will not accrue on the loan from and after 1st June 1958. A similar notification has been issued in London in respect of the outstanding balance of the Sterling loan.

In consonance with the setback in sterling abroad, rupee also was a shade easy in terms of the U.S. dollar. Banks' selling rate of ready dollars rose from Rs. 475 to Rs. 476 per $100 and their buying rate from Rs. 471.75 to Rs. 472.75 per $100. In New York, spot sterling declined from $2.81⅛-2.81⅜ to $2.81¼-2.81½ and three months' forward was marked down from $2.79⅛-2.79⅜ to $2.78⅛-2.78⅜. Transferable sterling declined from 279.40-279.50 cents to 279.15-279.25 cents.

KIP ARRIVALS SMALL

(From Our Own Correspondent)

MADRAS, *24th February*

There has been no important change in the kip market. Arrivals are small and offtake fair sized at unchanged prices. U.K. buying is small, because U.K. dressers are making selective purchases and are not keen to buy ahead. E. I. tanners state that there is no profit at the current prices and that they are going slow in their output. The only satisfactory feature is that there has been good call for low grade kips for inland trade at attractive prices.

In the tanned skins section, there are several enquiries for light weight goat skins and middle class sheep. A small volume of business has been reported—goat at unchanged levels and sheep at prices lower than those in January.

From 18th March 1958, Amsterdam (the Netherlands) will have a new futures market for hides—the first in Europe—in which the Netherlands and foreign parties may participate. The countries interested in this market are the Netherlands, Belgium, Luxemburg, the three Scandinavian countries, the U.K., France, Switzerland, Italy, Austria, Germany, Argentina, the U.S.A., Canada and New Zealand. The other futures markets already functioning in Amsterdam are for rubber, cocoa, coffee, pepper and copra. The new futures market for hides will be managed by N.V. Amsterdamse Liquidatiekas, Amsterdam.

BULLION QUIET

(From Our Own Correspondent)

BOMBAY, *26th February*

The bullion market ruled quiet during the week under review and the upward trend in prices noted in the previous weeks suffered a slight reversal. Towards the close, gold staged some recovery from the week's lowest levels touched on Monday, but silver maintained the downward trend throughout after an early improvement. Increased arrivals of yellow metal, without any corresponding expansion in offtake, and heavy profit-taking at higher levels caused the setback in gold. The relaxation of the squeeze by the bulls in this metal is reflected in the narrowing of the *budla* charges in favour of buyers from As. 4 to an anna today. At one time, that is, on Monday, the *budla* charges actually went against buyers, but, in the last two days, they turned again in their favour. The recovery in gold in the last two days was due to an improvement in offtake and short-covering, following reports of confiscation of large parcels of smuggled gold at the Palam airport in New Delhi.

After an early spurt to new high levels, silver declined sharply on expectations that the offtake would contract during the *Holi* festival and on reports that duty for import of a large quantity of Tibetan coins had been paid. Despite the recession in silver, the "bulls" continue to tighten their grip, as witness the widening of the *budla* charges in their favour from Re. 1-4 to Re. 1-13 today.

Forward silver (March settlement) picked up early in the week from Rs. 192 to Rs. 192-12, but reacted to a low of Rs. 191-1 today. The closing was, however, again better at Rs. 191-9. The April settlement, after a rise from Rs. 190-12 to Rs. 191-5, declined to close at Rs. 189-12.

Ready silver closed at Rs. 191-9, after being marked up from Rs. 192-4 to Rs. 192-14. The floating stocks of silver are estimated at 800 bars. The daily average arrivals were 20 bars, while the offtake was lower at 15 bars.

Gold for forward delivery (March settlement) was marked down from Rs. 111-14 to Rs. 111, but gained before closing to Rs. 111-8. The April settlement finished on balance with a loss of As. 2 at Rs. 111-8.

Ready gold dipped from Rs. 112-8 to Rs. 111-10, the lowest level touched during the week being Rs. 111-2. The floating stocks of gold are reported to be 15,000 tolas. The daily average arrivals were 4,000 tolas, while the offtake was no more than 3,000 tolas per day.

In New York, silver was unchanged at 88¼c., while London prices moved up from 76⅜d. to 76½d. for spot and from 76¼d. to 76⅜d. for forward. Gold also gained from 249s. to 249s. 4½d. following the setback in sterling.

The following comparative table shows at a glance the trend of the market during the week under review:

	26-2-58	Highest	Lowest	19-2-58

LINSEED QUIET

(Messrs. A. Bradley and Co.)

CALCUTTA, *24th February*

There was little material change in the linseed market during the week. A generally quieter tone prevailed and trading was rather dull. A slight advance in seeds to Rs. 21-7 in mid-week was followed by a reaction, owing to lack of interest from buyers. Crushers were inactive, with poor demand for oilcake and lack of parity. The oil market was supported earlier in the week by some enquiries from shippers, and business was reported at Rs. 50-8, but sellers were later quoting Rs. 50, with buyers keeping out of the market. There was no fresh business for export with buyers' ideas around £105.10, sellers indicating £107.

The latest available quotation for February-March is Rs. 21-2 per maund.

KEEN DEMAND FOR HIDES

(From Our Own Correspondent)

KANPUR, *24th February*

During the week under review, the demand for wet cow and buff was keen. The goat sector ruled active, in view of the Soviet order. New supplies of cow and buff were considerable. A good portion of these were fresh unsalted ones direct from the butcheries. The Madras dealers were keen buyers of light cow, sheep and goat, whereas the local tanners went in for other categories.

The latest available quotations are: Wet salted cow 1st grade Rs. 380 and 2nd grade Rs. 350 per score; wet salted buff 1st grade 1 lb. 4 ozs. and 2nd grade 1 lb. 6 ozs. per rupee; Goat 1st grade Rs. 325 and 2nd grade Rs. 300 per 100 pieces; sheep 1st grade Rs. 300 and 2nd grade Rs. 265 per 100 pieces.

COTTON FUTURES EASY

(From Our Own Correspondent)

BOMBAY, *26th February*

The Room Rates Committee of the East India Cotton Association fixed the tendering differences on the maturing March contract on Monday the 24th inst. The rates were generally considered to be on the low side. Since they were about Rs. 30 to Rs. 45 per candy lower than the price of the corresponding ready qualities, it was thought that they would discourage the tendering of cotton against the March contract. Although the tendering differences were believed to be in favour of bulls, the cotton futures market ruled distinctly easy during the week under review. Business earlier in the week was restricted, with prices showing a mixed trend, as the attention of traders was focussed on the fixation of room rates. When the rates were announced the market initially improved, but it proved shortlived and the market subsequently suffered a sharp setback. This was due to heavy bull liquidation and hedge pressure. Bulls were keen to square up their position in the maturing contract and switch over to May which was regarded more attractive, price-wise. There was also a large volume of spot house selling, following the recession in spot prices due to the pressure of larger arrivals and the accumulation of inferior quality cotton. The easiness was further aided by the discouraging news from the piecegoods market and the report that the season's crop had been estimated higher at 5.2 million bales by the Indian Central Cotton Committee. The declining trend of the market was, however, arrested today and the market improved, thanks to heavy short-covering in the March contract which, consequently, recovered most of the lost ground. The May contract also moved up in sympathy. Nevertheless, today's closing rates were below last week-end quotation.

I.C.C. Moglai Jarilla (March 1958) opened the week at Rs. 658 50, as against the previous close of Rs. 670.75 and after improving to Rs. 673, declined to Rs. 660.50 yesterday. Opening today at Rs. 662.50, it firmed up to Rs. 667.50 before closing fractionally lower at Rs. 667. The net loss over the week was Rs. 3.75. The market remained closed on Saturday as a mark of respect to the memory of the late Maulana Azad. I.C.C. Moglai Jarilla, (May 1958), after having opened the week Rs. 2 25 lower at Rs. 667, improved to Rs. 670.05 before dropping to Rs. 657.50 yesterday. Commencing today's session at Rs. 659.50, the contract gained Rs. 2.50 to Rs. 662 and closed at that rate. The net loss over the week was Rs. 7.25. The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	26-2-58	High	Low	19-2-58
I.C.C. Moglai Jarilla (March 1958) ...	667	673.50	659.50	670.75
I.C.C. Moglai Jarilla (May 1958) ...	662	670.50	656.50	669.25

New crop arrivals have been increasing in Gujerat, Saurashtra and Madhya Bharat areas. The season is gradually coming to a close in Vidarbha, Khandesh and Punjab while it has just commenced in Andhra and Mysore. About 55 per cent. of the total season's crop has so far been marketed. Areawise, about 80 per cent. crop in Vidarbha, Khandesh and Punjab has been marketed. Malwa, Moglai and Rajasthan will take about six weeks more while the season will continue in Saurashtra and Gujerat till the end of April. The quality of the crop has been satisfactory although the crop in Surti and Broach areas has suffered some quality deterioration.

The spot market also ruled easy. Prices of almost all varieties declined. Mill demand was slack. Short staple varieties were practically neglected, although there was good demand for quality lots. Keen demand was noted in Laxmi, Khandesh, etc.

In the absence of export inquiries shippers showed no interest in exportable varieties. Consequently prices of Bengal *Deshi*, Kala, Wagad, etc. were marked down. The foreign section was listless. Spinners would appear to have deferred their purchases until the announcement of import quotas by the Government. It is expected that the Government would also announce a quota for East African cotton as a large volume of business has been concluded in this cotton subject to import licences being available.

It is reported that an understanding has been reached between the Egyptian delegation and the Government of India in respect of cotton imports. A quantity of 100,000 bales of Egyptian cotton has been tentatively fixed for import. The delegation is also reported to have offered a discount of 12 per cent. No official announcement has yet been made.

The following are the latest available quotation—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 580; Berar Jarilla 765; Khandesh 785; Oomra *Deshi* 600; Vijay 800; Hubli Laxmi 1,020; Jaydhar 780. *Delivery Contracts*: Vijay 890; Bengal 550.

Karachi cotton futures market ruled bearish during the week under review. Absence of export inquiries, slackness of domestic spinner demand and increasing new crop pressure touched off a large volume of selling which depressed prices. N.T.R.G. March declined from Rs. 74-9-6 last week-end to Rs. 71-3 yesterday. The March position dropped, over the week, Rs. 2-5-6 to Rs. 72-6. The spot section was also weak.

An easy trend was depicted by the Alexandria cotton futures market during the week, reflecting the weak foreign demand and the recession in spot prices in the wake of larger crop arrivals.

Export sales from the commencement of the season till 31st January aggregated 452,134 bales (of 720 lbs.), as compared with 385,463 bales

during the same period last season. It is reported that a new arrangement has been formulated under which cotton will be allowed to be shipped in "export account" Egyptian pounds to all countries which have no payments agreement in Egyptian pounds. Details of the new system and any possible advantage it might have to foreign buyers are still not available.

The following are the latest available quotation—in tallaris per lb.—from Alexandria:

Karnak: March 76.80; May 78.05. *Ashmouni*: February 66.40; April 66.70.

An erratic trend was witnessed on the Liverpool cotton exchange during the week under review. While the American contracts ruled firm due to speculative support which was inspired by the report that the U.S. Congress had voted additional Soil Bank payments, the mixed growth contracts were easy due to hedge selling. Sudan contracts were well maintained on support based on the lower crop forecast by the Sudan Government. The following are the latest available quotations—*in pence per lb.—from Liverpool*:

American cotton one inch staple contract: March-April 25.35; May-June 25.30; July-August 25.58; October-November 26.26. *American cotton mixed growth contract*: March-April 26.10; May-June 26.35; July-August 26.62; October-November 27.23. *Sudan*: May-June 32.90; July-August 33.10; September-October 33.35.

Values in the New York cotton futures market registered a perceptible improvement. The report that the House Appropriation Committee voted an increase of $175 million for the 1958 acreage reserve of the Soil Bank set in motion a general covering operation which pushed values higher. The near contract (March), however, was brought under hedge pressure and, therefore, ruled easy. Spot values eased slightly.

Reports from Washington indicate that, subject to Congressional approval, there is a possibility of the Administration establishing a cotton export subsidy of 6 cents per pound in the 1958-59 season in lieu of the present export sales programme on a competitive bid basis. Shippers will not get a cash payment as subsidy but cotton of equivalent value from the surplus stocks of the Commodity Credit Corporation will be released to them. The proposed substitution of a fixed subsidy for U.S. cotton, as against the present C.C.C. two-price selling system is generally considered a very welcome measure.

Efforts to increase acreage for the 1958 crop in order to ensure production of sufficient high grade cotton to relieve the scarcity of such quality is still continuing. Congressional approval is being sought to enable growers to choose increased acreage by sacrificing a part of the price support due to them under the law. Trade sources, however, generally do not anticipate that legislation can be put through in time to affect the acreage of the 1958 crop.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	25-2-58	18-2-58	11-2-58
Spot	35.95	36.00	35.95
March	35.10	35.17	35.02
May	35.41	35.36	35.20
July	35.70	35.43	35.35

SUGAR FIRM

(From Our Own Correspondents)

BOMBAY, 26th *February*

A firm trend was in evidence in the sugar market during the week under review. There was strong buying support, induced by renewed rumours of a possible additional excise duty of about Rs. 2 per maund on sugar in order to offset losses on export. Spot stocks were slim—estimated at 20,000 bags only—despite heavy arrivals of sugar which aggregated 21,300 bags, as against 18,600 bags in the previous week.

Medium grain sugar advanced from Rs. 106½-Rs. 107½ to Rs. 107-Rs. 109 per bag, including additional excise duty. Large grain spurted by a rupee to Rs. 110-Rs. 113. Small grain gathered half a rupee to Rs. 106.

* * * *

HAPUR, 24th *February*

Quiet conditions were witnessed in the sugar markets during the week. Limited business was done for Rajasthan and Punjab side, while other centres displayed little buying interest. The rates for some qualities, however, advanced slightly. The Government of India's export policy is still undecided and the Government is reported to be considering the question of modifying last year's arrangements for sugar export. The quantity to be exported will depend on world conditions. The price of sugar in world markets have gone down and it is not possible to fix any target for exports. Crushing season in west U.P. is likely to close early, due to overall shortage of cane and faulty system of cane supplies to factories through societies.

Slack outside buying enquiry accounted for the dull conditions in the sugar markets at Muzaffarnagar, but prices continued to rule steady. The Government's export policy announcement was keenly awaited. The latest ex-mill delivery prices were: Khatauli (B-29) Rs. 37.75; Mansurpur (B-29) Rs. 37.81; Amroha (D-29) Rs. 35; Daurala (B-29) Rs. 37.25; Mawana (B-29) Rs. 37.50; Meerut (D-29) Rs. 35.50; Shamli (B-29) Rs. 37.56; Bijnore (E-29) Rs. 34.75; Simbhauli (E-29) Rs. 35.75.

Following withdrawal of demand from consuming centres, sugar prices turned easy in the Kanpur market and mill delivery quotations were lower by As. 2 per maund. The market was taking a bearish view of the Government's unsettled policy about exports.

The *khandsari* market continued to rule steady, due to revival of demand from Madhya Pradesh. The *khandsari* producers were finding production profitable even after buying cane at Re. 1.37 per maund. Prevailing prices are Rs. 27 to Rs. 33 per maund.

The *gur* market presented a steady trend. Price fluctuations were within narrow range. Local arrivals continued to be small, at an average of 2,500 maunds, and stocks were now put at 120,000 maunds, the corresponding figure last year being 90,000 maunds. Total arrivals from the beginning of the season are estimated at 3.5 lakh maunds, as against about 4.1 lakh maunds by this time last year. Crushing season is likely to continue for another fortnight by which time it is expected that cane supplies will become inadequate. Sowings of cane for the next season is in full swing. The latest prevailing prices of *gur* were: *Pansera* Rs. 13.12 to Rs. 13.37; *balti* Rs. 13.

Good support from Gujerat side accounted for steady conditions in *gur* prices in the Muzaffarnagar market. Offtake of *shakker* was to Rajasthan and Punjab side and daily arrivals went down to an average of 5,000 maunds. *Khandsari* prices also advanced on good demand from Madhya Pradesh.

While *gur fagun* delivery ruled quiet in sparse trading on the eve of delivery date, *baisakh* delivery moved both ways in active bouts of buying and selling. The latest quotations were: *Gur fagun* Rs. 13.15 and *baisakh* Rs. 13.83.

YARNS ADVANCE

(From Our Own Correspondent)

BOMBAY, 26th *February*

In contrast to the distinctly easy conditions noted last week, a firm trend prevailed in the yarn market during the week under review. Rayon yarns evoked good support, thanks to growing scarcity of imported yarns. It was felt that even the *ad hoc* supplementary licence for import of yarn worth Rs. 40 lakhs granted to actual users was too insufficient to meet the needs of rayon fabric weaving mills. There was enlarged demand for staple fibre yarns from nearby centres such as Surat. The South Indian producers were reported to be quoting higher prices for yarn, following the increase in price of indigenous raw staple fibre. Stocks of foreign raw staple fibre were very low. Cotton yarns were steady, despite fall in raw cotton prices and persistent reports of heavy accumulations of yarn stocks with mills.

Snia rayon yarn (120 dull cones) April delivery met with excellent enquiries and rallied Rs. 10 to Rs. 919. February delivery gathered a rupee to Rs. 925. In the spot section, 120 Japan went up by 9 nP to Rs. 5 31. 150 Japan strengthened by 13 nP to Rs. 5 06. 120 Italy and 150 Italy were fully maintained at Rs. 5.25 and Rs. 5.12, respectively. Indigenous yarns, however, suffered a setback. National Rayons 150 bright cones first grade declined by 9 nP to Rs. 4.16. 120 bright cones first grade eased by 7 nP to Rs. 4.69.

Staple fibre yarns (40×2) April delivery attracted good attention of operators and climbed up by Rs. 7 to Rs. 587. February delivery advanced by Rs. 5 to Rs. 572. Spot (40×2) Centurys and Kohinoors put on 3 nP each to Rs. 3.18 and Rs. 3.24, respectively. New Greats added 5 nP to Rs. 3.03. Foreign yarns, however, suffered a setback in prices, Paramounts declining by 7 nP to Rs. 6.40 and Fujis by 10 nP to Rs. 6.37.

Among cotton yarns, ten counts Podars improved by 12 nP to Rs. 13.87. Moderns were quiet at Rs. 14.50. Twenty counts Moderns rose by 13 nP to Rs. 17.50. Indus were unchanged at Rs. 16.87. Among thirty counts, Indus were done at Rs. 20.37. Forty counts encountered selling. Minaxis receded by 13 nP to Rs. 23.87, and Moderns by 25 nP to Rs. 24.75. Among sixty counts, Moderns increased by 50 nP to Rs. 59.50. Raghuvamshis were firm at Rs. 52. Finlays, however, retreated by 50 nP to Rs. 59. Eighty counts were fully maintained at last week's levels, Mahendras being quoted at Rs. 69.50, Moderns at Rs. 71 and Finlays at Rs. 75.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	26-2-1958	19-2-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia February	925 00	924 00
120 dull Cones Snia April	919.00	909.00
120 Japan (per lb.)	5 31	5 22
150 Japan (per lb.)	5.06	4.96
120 Italy (per lb.)	5.25	5.25
150 Italy (per lb.)	5.12	5 12
Staple fibre yarn (per case of 200 lbs.)—		
40 × 2 February	572 00	567.00
40 × 2 April	587 00	580 00
40 ×2 New Great (per lb.)	3.03	2.98
40 ×2 Cits (per lb.)	—	3.12
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	13 87	13 75
20s Modern	17 50	17 37
30s Indu	20 37	20 50
40s Minaxi	23 87	24 00
60s Raghuvamshi	52 00	52 00
80s Modern	71 00	71.00

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 26th *February*

The oilseeds market ruled easy during the major part of the week under review and there was a fall in prices. Today, the market picked up strength and there was some recovery in values. Castorseeds were particularly depressed, thanks to liquidation by bulls and bear pressure. Brazil was reported to be selling castor oil to the U.S. at a substantially low rate (about $277.09 or Rs. 1,317 per ton). Enquiries for Indian oil from the U.K. were only at £115 (Rs. 1,533) per ton; this quotation was considered to be unremunerative. Shippers were not inclined to enter into commitments, as they preferred to await the details of the Union Government budget (1958-59) which would set at rest the rumours of a revision in export duty on castor oil. Groundnuts encountered selling induced by weakness of sarson and offerings by upcountry interests in spot groundnuts, in the wake of lower offtake by crushers following lack of interest in oil by *vanaspati* manufacturers. Cottonseed lacked support owing to bearish advices from cotton market. Linseed also lacked support. Some export house buying in linseed oil was, of course, noted, but this was against previous sales. Kardi seed and niger seed remained firm throughout the week and suffered a setback yesterday which, however, gave way to recovery today. The closing rates were higher than those at the end of last week.

Groundnut February contract dropped from Rs. 158.62 last week-end to Rs. 157.12 yesterday, but recovered to Rs. 158.25 today. May position receded by Re. 1.25 to Rs. 157.37 before finishing at Rs. 158.25. Bold ready declined by 25 nP to Rs. 31.50. Coromandel receded from Rs. 32.87 on the 21st inst. to Rs. 31.50 and Khandesh quality from Rs. 32.87 to Rs. 32.12. Groundnut oil ex-mill which stood at Rs. 18 on the opening day fell to Rs. 17.62 today. Railway receipt was done today at Rs. 17.50, same as last week.

Castorseed May contract fell from Rs. 139.37 on Wednesday last to Rs. 136.25 yesterday. Today, however, it recovered to Rs. 137.62. The net loss over the week was Re. 1.75. Ready Madras decreased by 62 nP to Rs. 27.75. Kanpur quality dropped a like amount to Rs. 26.50. Castor oil fell from Rs. 16.12 to Rs. 15.87, but recovered today to Rs. 16.12. Commercial, after declining from Rs. 14.37 to Rs. 14.12 yesterday, wound up the week higher at Rs. 15.25.

Linseed May contract was quoted yesterday at Rs. 28.94, as against Rs. 29.31 on the 19th inst. Today, however, it improved to Rs. 29.37. Over the week, bold ready declined by 32 nP to Rs. 28.37. February-March shed 25 nP to Rs. 28.75. Linseed oil ready climbed down from Rs. 15.69 last week-end to Rs. 15.50 yesterday, but moved up to Rs. 15.62 today.

Cottonseed February contract, after receding from Rs. 100.50 to Rs. 99.25 on Friday, gradually rose to Rs. 101.75 today. May contract was done today at Rs. 100.50, same as last week; it was lower at Rs. 99.25 on Friday.

Kardi seed bold ready fluctuated between Rs. 18.37 and Rs. 18.12 before finishing at Rs. 18.25, representing a rise of 75 nP as compared with the quotation on Wednesday last. Niger Madras eased from Rs. 27.37 on the 20th inst. to Rs. 27.25 yesterday. This rate was maintained today also.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	26-2-1958	19-2-1958	12-2-1958
	Rs.	Rs.	Rs.
Groundnut—			
February 1958	158 25	158 62	155 00
May 1958	158 25	158 62	155 88
Bold ready (per cwt.)	31 50	31 75	30 87
Khandesh quality	32.12	32 00	31.12
Linseed—			
May 1958	29 37	29 31	29 87
Bold ready (per cwt.)	28 37	29 00	28.62
Castorseed—			
May 1958	137 62	139 37	138.12
Madras (per cwt.)	27.75	28.37	28.25
Cottonseed—			
February 1958	101 75	100 50	96 25
May 1958	100 50	100 50	96 75
Groundnut oil *			
Ex-mill ready (per quarter) ..	17.62	17.62	17.12
Castor oil †			
Commercial (per quarter) ..	15.25	14.37	14 81
Ready	15.62	15 00	15 62

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

BLACK PEPPER RISES

(Messrs. Parekh and Co.)

BOMBAY, 26th *February*

Following sizable purchases by New York, Malabar black pepper ruled firm during the earlier part of the week, with values hardening further to Rs. 575 at Alleppey for ungarbled and to Rs. 98½ at Cochin for the garbled. In the later part, however, the market turned quiet when New York dealers withdrew, as buyers began to counter offer at ½ to 1 cent lower. Spot at New York rose from $0.23½ to $0.25½ and dealers there bought Malabar black at prices ranging from $0.23 to $0.24½ for nearby shipment.

Alleppey came down from Rs. 575 to Rs. 550, while garbled from Rs. 98½ to Rs. 96. There were heavy fluctuations in the forward market at Cochin where March and May moved erratically, the highest and the lowest being Rs. 100 and Rs. 101½ and Rs. 96½ and Rs. 98, respectively.

Singapore is reported to be barely steady at $0.64. Sellers there are reserved, since holders are watching keenly the day-to-day political developments in Sumatra. General feelings are that the present firm attitude of the Central Government at Djakarta in dealing with the Rebel Governments will most likely restore law and order soon in the disturbed areas, provided there is no outside interference.

The future of the market is uncertain. Prices are likely to move narrowly both sides, pending the clear picture of the Indonesian situation. Conflicting newspaper reports as to the latest development in Sumatra have so far proved a supporting factor. However, everything will depend upon the attitude of the U.S.A. buyers, as Malabar is usually lacking strength of its own.

In A.S.T.A. March shipment having been done at $0.24¼ is now quoted at $0.23¾. The buyers having paid for April-May-June at $0.24¼ are now indicating 1 cent lower.

In delivery section, prices, having staged a sizable increase for March and April, are now moving narrowly for want of new incentive.

Today's nominal quotations are: Ready delivery Rs. 72 per Bengal maund, March Rs. 503-Rs. 508 and April Rs. 509-Rs. 514 per candy of 5¼ cwts.

TEA IMPROVES

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

COCHIN, 20th *February*

Approximately 1,300,000 lbs. were on offer in Sale No. 5, which was held on Tuesday, 18th February. There was a very useful all-round selection on offer, particularly of high grown teas. The sale opened quietly, but a good general demand developed. Low medium and medium teas met a useful enquiry at 5 to 10 nP below last rates. Good medium teas and best liquoring high growns encountered some competition and although rates were often below valuations, they were frequently above last prices. There was a rather better demand for high grown fannings. There was a strong demand for whole leaf grades at dearer rates. The following are the quotations:—

	1958 Rs.
Plain B.P.	1.45
Low medium	1.65 to 1.75
Medium	1.80 to 2.10
Good medium	2.30 to 2.60
Quality	2.90 to 5.70

The average price realised in Sale No. 5 was Rs. 2.35 per lb., as against Rs. 2.30 per lb. in the previous sale and Rs. 2.59 per lb. in the corresponding sale of 1957.

London Market—Sale of 17th February 1958.—Little irregular, except for Dooars, which were generally dearer.

Sale of 18th February 1958.—Steady, except where quality declined.

Colombo Market—Sale of 17th February 1958.—Good demand. Lowgrowns steady. Plain mediums down 5 cents better. Mediums firm. Highgrowns opened very strong prices following improved quality, but eased at close.

Sale of 18th February 1958.—Better liquoring fannings and broken mixeds dearer. Others lower.

Export Quota.—The Government of India have announced a further release of 8.4 per cent. of the best crop basis. This makes the total release to date for the 1957-58 season 460.96 million pounds or 63.4 per cent. of the B.C.B. The market reacted sharply to this news and business was done down to 5 nP. The market later recovered and there are now sellers at 7 nP.

Forthcoming Auctions.—Sale No. 6 will be held on Tuesday, 4th March.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Dust Sale 'E'.*—700,000 lbs. Good demand, but rather irregular. Milled dusts slightly easier. Others about steady."

FOODGRAINS MOVE UP

(From Our Own Correspondent)

HAPUR, 24th *February*

The latest food position was explained by Mr. A. M. Thomas, Deputy Food Minister, in the Lok Sabha this week. The review reveals that present stocks are roughly 12.5 lakh tons of rice and wheat 9.25 lakh tons being held by the Centre and the rest with the States. The stocks compare favourably with those held in January 1957 when the total stood at 3 lakh tons. It is the Government's intention to build up a reserve of 20 lakh tons, consisting of equal quantities of rice and wheat. India expects to get 16 lakh tons of wheat from abroad during the first half of 1958. Out of this quantity, 10 lakh tons are expected from the U.S. under various heads, 4 lakh tons under the recently concluded wheat loan from Canada, and more than 125,000 tons as balance supplies under the Colombo Plan.

Wheat at Hapur recorded fractional gains, due to falling stocks at the *tag end* of the season which is always a lean period. Local stock ran down further to 8 *khatties*, the corresponding figure last year being 40 *khatties*. There is still over one and a half month for the beginning of the arrivals of new wheat crop into the markets. Crop prospects, too, are not very bright, due to failure of winter rains. Prevailing prices are: Wheat *dara* Rs. 15.75 and farm quality Rs. 17.25 per maund.

Rice improved during the week in sympathy with wheat and reports of overall shortage of rice. The latest prices are: *Basmati* Rs. 28 to Rs. 31; *mainpuri* Rs. 24; coarse Rs. 20.75 per maund.

After recording slight gains during the week on encouraging Punjab advices, gram receded later on early crop prospects. Stocks ran down further by 2 *khatties* to 16 *khatties*, following despatches to east U.P. With the beginning of harvesting of the *bejhar* crop, barley and *bejhar* ruled quiet during the week and maize sought lower levels, owing to falling seasonal demand. The latest prevailing prices (in rupees per maund) were: Gram 10.50 to 10.75; barley 9.37; *bejhar* 8.87; maize 10.62; *bajra* 11.37; *jowar* 9 to 10; *guwar* 11.25.

Pulses future ruled quietly steady during the week. The latest prevailing quotations were: Peas *jeth* Rs. 9.17; *arhar jeth* Rs. 10.90; *bajra fagun* Rs. 11.62; *urd baisakh* Rs. 16.65.

BANKING

(Concluded from page 362)

ing stocks in the country and it understands that the precautionary measures taken by the customs authorities have already reduced it to some extent. The incentive to smuggle, besides, arises from the difference between the prices ruling in India and the prices ruling overseas, rather than from any stability that might have been imparted to the prices ruling in India by the existence of a futures market.

"With respect to the argument that futures trading in bullion should be prohibited in India on the analogy of the practice in the rest of the world, the Commission is of the view that the analogy is not wholly justified, as the conditions are not entirely parallel. In most countries abroad, the use of bullion was confined to monetary purposes and the State Governments and Central Banks enjoyed a monopoly of purchase. Private transactions in bullion were permitted only to licence-holders or to specialised agencies which needed the metal for industrial purposes. In important producing countries such as South Africa, Australia and Mexico, standing arrangements were made to sell the surplus stocks to foreign countries on a Government-to-Government basis. In the United Kingdom, the London Bullion Market functioned mainly for international transactions and provided only for a deferred delivery contract rather than a hedge contract. In the East European countries, the price mechanism itself had been eliminated. In the African and West Asian countries, although private transactions were permitted more or less freely, there had never been any tradition of futures trading either in bullion or in other commodities. In India, on the other hand, there was a free market in gold and silver, private transactions took place on a large scale, and there was a long tradition of futures trading in all commodities. In view of these basic differences, the Commission is of the view that a case exists for permitting futures trading in India irrespective of whether it was or was not permitted abroad. It may be that futures trading in bullion was not conducted in other countries, but the uniqueness of India in this respect followed naturally from the fact that India was also unique in being the only important country with a free ready market in gold and silver."

The Commission also feels that the service rendered by a futures market in integrating the prices of bullion ruling in different centres in the country is of some value. After taking all these facts into consideration, the Commission has come to the conclusion that the advantage is, on balance, in favour of permitting futures trading in bullion on a limited scale, even if the case in its favour might not be as strong as in the case of agricultural commodities. "The requirements of the situation would, however, be adequately met", the Commission adds, "by providing the necessary facilities only at a limited number of centres and there is no need for continuance of all the markets in existence at present." The Commission is reinforced, in this conclusion, by considerations of enforcement, finance and transitional hardship to the classes affected. These considerations, it adds, are by no means of decisive importance and will not have, by themselves, influenced the Commission in its conclusions. The fact, however, that they also point in the same direction gives added emphasis to the conclusions that the Commission has already reached on other grounds.

CONSTITUTION OF THE BANK OF ENGLAND

The present constitution of the Bank of England has been stoutly defended by Sir John Braithwaite, Chairman of the London Stock Exchange. He is wholly in favour of the retention of the existing system of having on the Bank's Board part-time directors drawn mainly from those business houses situated "in the very heart of stirring and living finance and commerce." This system has, however, been opposed by the Labour Party, on the ground that the dual capacity of these part-time directors with close business associations "puts too great a strain on the honesty and integrity" of these persons.

The question, which is to be reviewed by a Committee under the Chairmanship of Lord Radcliffe, was raised by the Labour members of Parliament, following the alleged leakage of the news of Bank rate rise by some of these part-time directors. The Tribunal, under the chairmanship of Lord Justice Parker, which enquired into these allegations, gave a clean bill of honour to them. It did not, however, give any opinion on the present system of having directors with close business associations on the Board of the Bank of England, as it was outside the terms of reference.

Sir John Braithwaite examined the demand for a change in the present system from the practical side, as well as from the moral point of view. Thus, he observed:

"Upon the practical side, it is said that the knowledge and experience of the City of London could be made available to the Bank by calling the appropriate persons into conference from time to time as and when they were needed. That, in my opinion, would not produce anything like the results obtained by the existing system. In the first place those called in in this way would not carry the responsibility that the directors of the Bank carry now; advice without responsibility has not the same value; and in the second place, occasional contact with what we may loosely call the market—the whole market of the City of London—would not at all take the place of constant and continual contact; not only with the Governor but with a Board of colleagues, slowly building up a body of gradually maturing opinion upon each problem as it arises, until the right course to pursue emerges almost of itself when the time for decision arrives."

On the moral side, he stated: "It seems to me to be utterly defeatist and altogether lamentable that it should be almost taken for granted in some quarters that there is no such thing as a standard of integrity which can stand up to the occasional strain to which a part-time director of the Bank may be exposed; and, I might add, not only part-time directors of the Bank but many others in the City of London and elsewhere, who are exposed to similar strains, and can and do bear them without difficulty. It is to me inconceivable and not to be tolerated that we should positively budget for a lower standard of integrity than we know we possess."

Notice

RAZA BULAND SUGAR COMPANY LIMITED

RAMPUR, U.P.

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 22nd Annual General Meeting of the Shareholders of the Company will be held at Rah-e-Raza, Rampur, the Registered Office of the Company, on Thursday the Twenty-seventh March, 1958, at 10 a.m., to transact the following business:—

1. To receive and consider the report of the Board of Directors and the Auditors and the Audited Statement of Accounts of the Company for the year ended 31st October, 1956.
2. To declare a Dividend.
3. To appoint a Director in place of Shri R. K. Jain, who retires by rotation at the Meeting, and is eligible for re-appointment.
4. To appoint a Director in place of Shri Ravi Prakash Jain, who retires by rotation at the Meeting, and is eligible for re-appointment.
5. To appoint Auditors for the year 1956-1957 and fix their remuneration. Messrs. V. Sankar Aiyar & Co., Chartered Accountants, the retiring Auditors, are eligible for re-appointment.
6. To consider any other business that can be transacted at an Annual General Meeting with the permission of the Chairman.

The Share Transfer Books of the Company will remain closed from 17th March, 1958 to 5th April, 1958, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint one or more proxies to attend and vote instead of himself, who need not necessarily be a member. Such proxies should reach the Company at least 48 hours before the meeting.

By Order of the Board,

FOR RAZA BULAND SUGAR COMPANY LIMITED,

S. K. KAUL,
Secretary.

NEW DELHI,
Dated 2nd February, 1958.

Note.—(1) The Dividend as proposed by the Directors, if declared, will be paid on or after the 14th April, 1958, to those members whose names appear in the Books of the Company on the 27th March, 1958, or to their Mandatees. No applications for Dividend Warrants will be necessary.

(2) Members or other persons holding shares of the Company on blank transfer should submit such shares for transfer with stamped and completed transfer deeds and the registration fee before the closure of the Transfer Books so as to be entitled to the despatch of the Dividend Warrants in respect of those shares to them. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

(3) Members should immediately notify any change that may have occurred in their addresses as the Dividend Warrants will be sent at the addresses of members registered in the books of the Company on the 27th March, 1958.

***These shares carry the right of a preferential dividend at the rate of 3 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only 7 per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

‡ These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 10 per cent. of ordinary capital.

§These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend.

¶Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shar s. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Prefere ce sh res. T.=Company has Debentures N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Divid..... i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (z) Clive Mills have paid dividend at Rs. 10½ on bonus shares, for the year 1955. * Including bonus. (k) Investments.
† New Central Jute Mills—Dividend for 1956 is on shares of Rs. 10 each. The Albion and Lothian Jute companies have been amalgamated with New Central Jute Co., will effect from 1st December 1954.
‡—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. §—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

WAGES COUNCILS IN U.K.

By John Walton

APPROXIMATELY one wage-earner in five in Britain has his wages fixed by a body whose orders have the force of law. Such wage-earners are found in major industries like agriculture, distribution, catering, and road haulage, and in a large number of smaller ones such as drift-nets mending or button manufacturing. What is common to all these industries is that none of them is sufficiently well organised on either side for the effective regulation of wages by voluntary agreement and, as a result, in each of them a wages council or board has been set up.

Some 60 such bodies today regulate, by statutory order, wages for about 3,500,000 workers, and a man who is chairman of five of them has recently been assessing their achievements and activities. He is Mr. C. W. Guillebaud, a Cambridge economist and an expert on industrial relations. In a booklet, *The Wages Council System in Great Britain*, he claims that they are fulfilling the main purposes for which they were formed.

Historically, Wages Councils have an ancestry in the old Trade Boards, which in 1909 were first brought into being by Act of Parliament to tackle the scourge of "sweated" industries. The Act applied them in chain-making, lace-finishing, tailoring and paper-box making, and there is no doubt that they did much to lift the standard of earnings for many workers and protected the good employers who had found competition difficult when faced by firms thriving on "sweated labour."

This, according to Mr. Guillebaud, is one of the

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVI. No. 2451 BOMBAY, 8th MARCH 1958 PRICE: Re. 1.50

MEANING OF THE BUDGET

THE Union budget for 1958-59 is certainly disappointing and unrealistic from the point of view of business men, middle class and even the agriculturist. None of them has received any relief or encouragement. But it has the virtue of being logical and consistent with the social and economic philosophy of the Congress Party, which has earned the distinction, both domestically and internationally, of having successfully maintained a socialist democracy during the last 10 years in this troublous part of the planet inhabited by man. In recent weeks, high tributes have been paid to Mr. Jawaharlal Nehru and his colleagues for the way in which they have piloted the destinies of India in the face of severe hardship, trials and tribulations. The mere fact that, unlike China and some parts of South East Asia, India has not gone communist has won for them the respect and admiration of the free world. Praises have been showered on them by such eminent heads of Governments as Mr. Harold Macmillan, the British Prime Minister, President Eisenhower of the U.S. and his Secretary of State, Mr. Dulles.

There is greater realisation in the Western World today than ever before of the importance and the urgency of ensuring that, in its efforts to improve the economic well-being of its people through democratic methods, India does not fail. As a practical display of their enlightened interest in India, several of the highly developed countries in the free world—the U.S., Canada, the U.K., France, Western Germany and Japan, to name some of them—have offered material help in varying degrees. Even the heads of private enterprise in these countries have expressed a sense of satisfaction with what the Government of India has been trying to do for its people through the first and the second Plans, as witness the observations of Sir Norman Kipping, Director-General of the Federation of British Industries, London. Early this week, an ex-editor of *Capital*, our Calcutta contemporary, Mr. Geoffrey Tyson, publicly praised in London Mr. Nehru's Government for its "daring experiment" and said that "only a bold, imaginative and challenging blue-print is likely to brace the country for a real take-off into economic development." In the midst of these compliments from foreign friends who not long ago were critical of India's economic policies, is there any chance of criticisms on the latest budget being heard by Mr. Nehru and his fellow ministers? They will only evoke the laconic reply from them that the business men of this country have neither vision nor capacity to move with the times.

The budget for 1958-59 shows beyond doubt that the Government remains unconvinced by all the criticisms against its fiscal and monetary measures introduced since the end of August 1956 when it set out with the clear object of restraining the enthusiasm of the private sector. It further shows that the advice tendered by friendly foreign observers on this subject has been quietly ignored. The hope that the improvement in the chances of getting foreign assistance would result in better working conditions for the private sector has been belied. On the contrary, the Government's determination to proceed with its policy of establishing heavy industries irrespective of the cost, reducing disparities of income and wealth and preventing concentration of economic power in the hands of a few business men has been firmly established. In fact, the official *Economic Survey 1957-58* makes it clear that what matters now is the "core of the Plan." And, in the "core," it is the public sector that dominates, with only the steel and coal mining programmes in the private sector being included in it. "For the rest," to quote the *Survey*, "the course of private investment hereafter will depend mainly upon the availability of foreign investment or satisfactory deferred payment terms." The private sector has thus been largely left to fend for itself in a situation where the bulk of the savings in the country is being absorbed by the Government in some way or other and the unfavourable climate for attracting foreign private capital remains unclieared.

As it is the core of the Plan that matters now, the Government has chosen not to give reliefs and incentives which will lead to a diversion of resources to projects that are not essential in its opinion. And, since the external and internal resources required for financing the "core" are more than those that are readily available, it is obvious that additional funds can be found only by forcing out the savings from the private sector. Viewed thus, there is force and logic in the Government's economic policy. If, as a result, consumer goods industries like cotton textiles suffer in the form of low profits or losses and unemployment of men and machines alike, there is no alternative for them except to endure the suffering. In other words, the people of this country are now being peacefully called upon to pay a heavy price for the establishment of heavy industries. There could be some satisfaction if the resources that are being collected in the name of "core of the Plan" are at least used for that purpose with single-minded devotion. But what is happening in actual practice is that a large part of them is being consumed by the inevitable defence expenditure and a long list of unproductive ventures in social and commercial spheres. Consequently, it seems that the return to the community will be both belated and disproportionately small as compared with the sacrifices made. During the past two years, in particular, the country was faced with the risk of falling between two stools, an anæmic private sector and an amateurish and inefficient public sector. The budget for 1958-59 has only enhanced that danger.

The Prime Minister, who presented the budget in his capacity as the Finance Minister, drew some satisfaction from the fact that the upward trend in price levels has suffered a reverse and that today the index number for wholesale prices is well below the peak in August last and even a shade lower than that a year ago. Further, he was comforted by the marked shrinkage in the withdrawal of foreign balances as well as by the absence of stringency in the money market. In other words, he was happy that inflationary forces had been brought under control. But this improvement in the economic situation is more apparent than real. Even the official appraisal concurs with this view. Thus, the *Economic Survey 1957-58* admits that, "despite the slight fall in prices in recent months and despite the relative improvement in monetary trends, the economic situation is basically one in which there is a continuous pull, on balance, in the direction of inflation." It also admits that, "though the outlook on foreign exchange resources for the Plan is now a little better than it appeared to be about a year ago, there is still a sizable gap in the foreign exchange resources required for the Plan." There is, however, no recognition, either by the Prime Miister or by the official appraisers of the economic situation, of the cost at which this seeming stability on the monetary and price fronts has been achieved. We advisedly say "seeming stability," because, despite a slight fall in commodity prices, there has been no worthwhile decline in cost of living as such, especially of the middle class. And to buy this stability the country has had to pay in the form of growing unemployment and underemployment in certain industries, more notably in cotton textiles, and shrinkage in their profits. A setback in the competitive capacity of India's export industries is also the direct outcome of this policy. Even though the price of cloth today is less than that before the excise duties were enhanced in September 1956, the demand for cloth continues to be slack. This only shows that people have less money to spend than before. There are also other indications to show that, despite all the measures taken to introduce socialism and despite making the rich less rich, the living standards of the common man are not better, if not worse. One, however, need not be surprised at this outcome, as the investments in the public sector and in the heavy industries in the private sector will take a few more years to bear fruit.

The pedestrians have heaved a sigh of relief that they have not been called upon to pay still higher taxes on the goods they consume. They will, however, be premature in congratulating themselves on this point. For they are yet to realise the full impact of the large deficit financing of about Rs. 400 crores incurred during 1957-58. On top of it, there is going to be a further large dose of deficit financing in 1958-59. It may very well be

first place, the Plan outlay is very much higher at Rs. 1,017 crores, as against Rs. 845 crores in the year drawing to a close and Rs. 670 crores in 1956-57. Although the total revenue in 1958-59 is expected to be higher by Rs. 45 crores, the year is expected to end with a revenue deficit of Rs. 27 crores, as against a surplus (revised) of Rs. 5 crores in 1957-58. Secondly, receipts through small savings and open market long-term borrowings have been overestimated at least to the tune of Rs. 100 crores. Thirdly, the law of diminishing returns has begun to operate in most of the well-established old industries. A large number of units in cotton textiles, tea, coal and jute may report losses or only meagre profits. This will mean a lower yield in the form of direct taxes and even indirect taxes in some cases. Fourthly, the quantum of foreign assistance, estimated at Rs. 325 crores, appears to err on the optimistic side. Actual receipts may fall short by at least Rs. 30 crores, if not Rs. 50 crores. Fifthly, as a result of recession in the industrially advanced countries, India's exports may fail to reach the total anticipated. It is true that import costs also may fall, but the decline is unlikely to be large enough to offset the drop in export prices, so that the terms of trade may prove to be quite adverse. Consequently, the balance, of payments position may continue to be critical. Sixthly, till a couple of years ago, there was a possibility of the actual expenditure falling short of the planned outlay, but now the Government's capacity to spend has greatly gone up, as is evident from the experience in 1956-57 and 1957-58. And, finally, whereas a substantial part of Plan expenditure in 1957-58 was outside India, the expenditure in rupees in 1958-59 will be heavier than in the current year.

It is unnecessary to expatiate on the adverse consequences of a large volume of deficit financing to the man-in-the-street. Much, however, will depend on the availability of food, but this is unlikely to be plentiful until at least the 1958-59 crop starts moving. More inflation will only add to the cost of production and discourage exports. The foreign exchange cushion has been practically deflated. The foreign assistance that has been promised will be utilised mostly for the core of the Plan, leaving very little for import of raw materials, machinery, stores, etc., needed by other industries. Taking all aspects into consideration, it looks as though the country cannot afford to incur deficit financing of the order implied in a capital outlay of Rs. 1,017 crores. The pedestrian is thus in for severe hardship. He will be compelled by force of circumstances to tighten his belt further. Viewed thus, the budget for 1958-59 is literally a "pedestrian" budget.

T.I.S.CO.'S GOLDEN JUBILEE

IF the Tata enterprises in general and the Tata Iron and Steel Company, Ltd. (T.I.S.Co.) in particular represent today all that is best in industrial civilisation, the credit is due to the long line of distinguished men in the management who, having been imbued by ideals of economic statesmanship, have given of their best to the cause which fell to their lot to serve. Nevertheless, there is something in the Tata organisation which, we venture to believe, can obtain only in an atmosphere of free enterprise—a certain daring and adventure in ideas and organisation. It is this combination of broad vision, high organising ability and continued adherence to the ideals of service which transcend the limitations of what is immediately profitable that has invested the Tata House with a national significance. Small surprise, then, that the entire country regards the T.I.S.Co's Golden Jubilee, celebrated last week, as a national event. Appropriately enough, the Government has issued a postage stamp in commemoration of the event.

Naturally, at the inauguration of the Golden Jubilee Park, at Jamshedpur, both the Prime Minister, Mr. Nehru, and the Company's Chairman, Mr. J. R. D. Tata, projected their thoughts to the far-off years when the illustrious founder of the Tata enterprise, Jamsetji Tata, lived and worked. Mr. Nehru called him "one of the founders of modern India." Mr. Tata, in the course of his reference to Jamsetji, said that it was a measure of the man that, even in those days when the "passive despair engendered by colonial rule had reached its peak," he dreamt of a modern industrialised India. It is difficult at this distance of time to reconstruct the personality of Jamsetji. The biographer of the T.I.S.Co. enterprise, Mr. Verrier Elvin, in his admirable study, *The Story of Tata Steel*, succeeds in bringing out the significance of Jamsetji's personality to the events of the early years which preceded the establishment of T.I.S.Co. From all accounts, Jamsetji was a man of indomitable courage. To have conceived a steel enterprise in days when India was still probably regarded as a country which could not go beyond metal fabrication is itself a tribute to Jamsetji's vision. It would appear that there was something of the Rennaisance scholar too in him. For he could combine a great passion for detail with a broad vision. Without in any way losing sight of the great mission to which he called himself, he could still find time to dictate the details for planting trees in the footpaths of the town which had not yet been built. His love of knowledge was matched only by his love of fellow-men. He represented what Bertrand Russell would call knowledge inspired by love. This intrepid industrial savant pored continually over the periodical reports on minerals in India with a view to discovering the site where his dream factory could be built. Further, his wide travels in Europe and the U.S. gave him a knowledge of men and things which so richly supplemented his own individual researches into the technology and economics of a modern industrial establishment. As Mr. Nehru said, India has now its Five-year Plans, but in those days Jamsetji had constituted himself into a Planning Commission. With incredible industry and foresight, he threw himself into the task of laying the foundation of a steel factory and a steel town. The discovery of the iron ore deposits in Dhalli-Rajhara, in Mayurbhanj and Singhbhum, is Jamsetji's lasting contribution to the growth of Indian economy. Before he passed away in 1904, he had already done considerable work in the cause of a steel enterprise—a work which was to be carried further by his sons and other able lieutenants who had obviously caught something of the spirit of the great master under whom they were trained.

Jamsetji himself did not live to see the fruition of his efforts. The T.I.S.Co. was registered on 26th August 1907. Within three weeks, 8,000 Indians had contributed Rs. 2 crores by way of the Company's share capital. It took some 2½ years to set up the factory which then had an initial capacity of 35,000 tons of pig iron and 50,000 tons of finished steel. By the end of 1911, the first cast of pig iron had flowed down the "runners" and the first ingot was rolled in February 1912. Since then, the factory has grown far beyond the confident expectations of many of its ardent supporters in the early years. This has also given the lie to its early detractors who could never bring themselves to believe that India could make steel. The saga of T.I.S.Co's growth is, however, not a tale of "all pleasure and no pain." Although the first decade was an era of smooth sailing, it was followed by a period of acute stress. There were times when every inch of the upward path of progress had to be fought and won. Indeed, there were periods when all seemed lost. In those dark days—the early twenties—the Company could hardly know where the money for paying its next day's wage bill could come from. The threat of competition from cheap Continental steel, which had actually begun to flood the Indian market, compelled the industry to seek protection. The grant of protection in 1924 provided some relief to the industry. Even before this measure of assistance came to the Company, the management had embarked upon an expansion scheme designed to raise capacity to 450,000 tons of ingot steel. But, when the expansion scheme was under way, the industry found itself confronted by the depression of the 'thirties which, as is well known, was the worst of its kind within living memory. By 1933, however, the Company had weathered the storm. After a lapse of well over a decade, it paid an ordinary dividend in 1935-36.

From the Company's point of view, the depression of the 'thirties has been appropriately compared to an "ordeal by fire." As with individuals, so with industrial enterprises, adversity is a great university which inculcates the best of discipline. Having survived the depression and its aftermath, the Company could forge ahead, confident of its essential strength. Further additions were made to the plant. And, during the Second World War, it could reach a peak production of 1.24 million tons of pig iron, 1.08 million tons of steel ingots and 839,000 tons of saleable steel.

In the post-war period, the Company has undertaken two programmes of expansion. The Modernisation and Expansion Programme, launched in 1951, was designed to raise the capacity of the plant to 1.3 million tons of ingot steel or 935,000 tons of finished steel. Into this programme was dovetailed in 1955 a new expansion programme, the two together being designed to raise the output to two million tons of steel ingots a year. The significance of this programme will be clear from the fact that it implies doubling the output which almost tantamounts to setting up another T.I.S.Co. The entire project is expected to be completed in May next. It is heartening to be told that it is running to schedule. "If this gigantic undertaking, involving the marshalling of plant and equipment from nine countries in three continents and all the uncertainties and shortages that India faces today, is still running more or less to schedule, it is", as Mr. Jehangir Ghandy, the Managing Director of T.I.S.Co., observes, "a major tribute to the team of American and Indian engineers working on it." The programme, it is stated, will help solve largely the intractable problem of surplus labour in the factory.

The saga of T.I.S.Co's growth will not be complete without a reference to its philosophy of what might best be described as its broad industrial humanitarianism. Welfare measures for workers, including housing, educational facilities for their children, modern municipal services and town planning, are all a concrete expression of the Tatas' early realisation that, as between the machine and the man behind it, the latter should claim the first attention. The sprawling industrial township of Jamshedpur, with its 300,000 inhabitants, can boast of a system of municipal services which is a model of its kind for all the urban centres in this country; the Company operates these services. And it must be remembered that the entire city has grown out of the jungle which was all that stood in its place early in this century. For its employees, the Company has built more than 13,000 houses. Free medical services have lifted the expectancy of life within the last 20 years by four years. The Company's educational activities—there are over 100 schools—cover technical and trade schools and a post-graduate institute.

Nothing brings out more clearly the T.I.S.Co's essentially human attitude towards the workers than the fact that, even before the long-interrupted distribution of dividends to shareholders was restored in 1935-36, the management gave a bonus to workers. The Company's profit-sharing bonus scheme, introduced in 1936-37, gives in its present form 30 per cent. of the net profits to employees. Apart from the basic wage, the worker gets a production bonus, an incentive bonus, dearness allowance, food rebate, and emergency bonus and annual profit-sharing bonus; he is also entitled to provident fund and retirement gratuity. In accordance with the modern trend of treating a worker not merely as a wage-earner but as an active partner in industry, the Company has instituted a scheme designed to secure the association of the workers in the task of management. Introduced in 1956, the scheme ensures joint consultation at several levels and points in the management of this vast enterprise.

Such, in brief, are the achievements of T.I.S.Co. Its role as a maker of steel is only one aspect, though an important aspect, of its contribution to Indian economy. Its industrial leadership is not confined only to the industry it serves. It has stimulated the growth of many other enterprises in the country. Its sociological implications are no less significant. The fact that Jamshedpur is not only a miniature India but also possesses something of an international status—it has more foreign technicians than almost any other city—serves to show how rapid industrialisation helps to bring about that emotional integration, on which Mr. Nehru rightly lays so much stress. Above all, as an embodiment of all that is best and all that compels admiration and evokes respect in free enterprise, T.I.S.Co. will be long remembered as a pre-eminent exponent of the economic aspect of the democratic way of life. In associating ourselves with the many citizens of the country who have felicitated the Company on its Golden Jubilee, we express the hope that it will be allowed to retain its present status as part of the private sector—a status which, judging from its performance so far, should enable it to render an increasingly beneficial service to the nation.

PRIVATE SECTOR'S HOPES SHATTERED

U.S. RECESSION—ORIENTAL LIFE

THURSDAY, 5 P.M.

MARKET GOSSIP

SOON after the Birla Mission returned to this country in November last, after visiting the U.S., Canada, the U.K., France and West Germany, it announced at a Press conference quite optimistically that it was convinced that the Government of India was not suffering from any 'ism' and that its *economic* policies were pragmatic. After making a fervent plea to the Government to create conditions which would enable the private sector also to raise sufficient internal capital, it observed that it did not take a pessimistic view, because the key to the door that was blocking the country's progress was in India. It then proceeded to declare: "We believe that India is wise enough to take the right course. And from this emanates our optimism." In our comments on this statement, we were rather sceptical. We observed, in our issue of 23rd November 1957, that, while the *Industrial Delegation* was perfectly right in saying that the key was in India, the key was unfortunately in the hands of the very persons who had slammed the door against the private sector and firmly secured it in the past twelve months by fixing further bolts and nuts and that the strongest of these locks and bolts had been added in the face of vehement opposition and eloquent persuasion. We pointed out that as many as eight Union Ministers themselves had questioned the wisdom of these steps but to no purpose. For these reasons, we were unable to share the optimism of the Delegation. We, however, added that we would be only too happy to see our scepticism completely belied and that at an early date. We are sorry to find that our reading of the Government's mind has proved correct and that the Central budget for 1958-59 has shattered the optimism of the Industrial Delegation. It is, indeed, no exaggeration to say that this budget is a slap in the face of the Delegation. For not one of its demands has been conceded. Its report has been consigned to the waste-paper basket.

For over eight months, the private sector labour hard to convince the Government that its fiscal innovations were not the right ones. Some tried to carry conviction to the Government by speaking frankly and openly. The vast majority, however, believed in the policy of lobbying and persuasion. Both have miserably failed. The private sector asked for a few reliefs and a little more freedom from vexatious controls. But what has it got? More fetters, more checks and balances. To the Rs. 130 crores of new taxation imposed last year, some Rs. 6 crores have been added. Then there are the additions to the tax burden by some of the State Governments.

The former Finance Minister, Mr. T. T. Krishnamachari, justified some of his curious taxes and control measures on the ground that he did not trust the honesty of taxpayers in this country. The expenditure tax, the tax on dividends and bonus shares, the compulsory deposit scheme are all the result of this distrust. It is precisely this reasoning which constitutes the rationale for the gift tax and the tightening of the rules and regulations governing the development rebate also. The gift tax is intended to plug the loopholes in the estate duty and wealth tax. Similarly, the restrictions on the use of development rebate are to ensure that the beneficiaries do not fritter away the resources by paying large dividends. There are already quite a few checks against a liberal distribution of profits to shareholders. Restriction on the use of development rebate on top of these are unwarranted. But the Government is apparently so distrustful of the business community that it is not satisfied with these checks and has gone in for one more. This new fetter on the private sector neutralises, to some extent, the liberalisation of the provisions relating to the compulsory deposit scheme which was effected last year.

Mr. Nehru, who has now taken upon his shoulders the onerous responsibilities of the Finance portfolio also, has repeatedly stated that the private sector should be given sufficient freedom to play its role. This statement sounds hollow in the light of the latest budget. He would have lost nothing by abolishing the compulsory deposit scheme, by reducing the tax on dividends and by giving up the tax on bonus shares, a tax which does not exist anywhere in the free world. Even Prof. Kaldor had opposed this tax. By deciding not to do so, he has shown that he will not yield even an inch in favour of private enterprise. On the contrary, there is enough indication that he wants to accelerate the growth of the public sector, even if it means more inflation and still less resources for the private sector. One cannot but view the reduction in the exemption limit for the estate duty from Rs. 1,00,000 to Rs. 50,000 except from this angle. As a result of this measure, thousands of middle class will be roped into the net and harassed by the tax authorities.

* * * *

The tax collecting machinery is already groaning under pressure of heavy work. The lowering of the exemption limit for income-tax last year, the introduction of complicated wealth and expenditure taxes, and the various additions to the existing taxes have enormously increased the power, work and responsibility of tax collectors. Now even before they could adjust themselves to these new responsibilities, they have been asked to shoulder additional responsibilities consequent upon the tightening of development rebate provisions, the introduction of gift tax and the reduction in the exemption limit for estate duty. There should, therefore, be no cause for surprise if the tax collecting machinery were to be more inefficient than it is now. The assessees should not grumble if the income-tax officers lose their temper more often than they do at present and become autocrats. As in the case of estate duty and wealth tax, the gift tax gives them a very large measure of discretion. According to Dr. Rustom C. Cooper, a leading chartered accountant of this city, in many cases the Wealth Tax Officers are taking undue advantage of the provision in the law which lays down that the basis of wealth tax should be what appears to be fair market value "in the opinion of the Income-tax Officer." He complains that, in many cases, the Wealth Tax Officers disregard reports of expert architects on property valuations without assigning any reasons. These architects, it may be noted, are from a panel appointed by the Central Board of Revenue itself. There is a similar provision in the Gift Tax Bill in regard to valuation of the gifts. Are Gift Tax Officers, he asks, better judges of property values than qualified architects, even though they are not able to find a single flaw in the report? The same thing happens also in case of life interests valued by qualified actuaries. Dr. Cooper's experience is that, in all such cases, the standard answer given by the tax officers concerned is: "We have departmental instructions in this matter." There will thus be more room for harassment by tax collectors.

* * * *

The business recession in America has now well past the stage of diagnosis. No one is in any doubt that it exists. The rising unemployment and the decline in industrial production are all pointers to a malady which has already set in. It is true that experts differ among themselves as to the extent of the malady and, even more, as to the right remedies which need to be prescribed. But all those who have the good of the free world at heart rightly insist that the political consequences of any prolonged American recession would be damaging to a degree. From this point of view, it is somewhat heartening to be told by President Eisenhower that the recession would begin to end this month. Only, not many experts share his optimism. They feel that, unless something were done, the recession would not halt by itself. In this connection, the study of the recession and the analysis of the experts' views, which have been presented by the March issue of the *Monthly Bank Letter* of the First National City Bank of New York, make interesting reading.

Hope of improvement in the early future, the *Letter* says, rests largely on two possibilities. One is that the usual spring pick-up will check the downtrend. The other is that, in many lines at least, the decline in industrial operations has brought production so far below consumption and is cutting inventories so satisfactorily that a larger output will soon be called for. It, however, warns that a seasonal improvement, though it could have important psychological effects, should not be confused with real recovery. As regards the hope of recovery in a situation created by excessive reduction in inventories, it cites the example of the steel industry. In January and February, steel output, measured in terms of weekly production, was 40 per cent. below levels in the corresponding period of last year. But consumption has not declined to the same extent. This must eventually lead to an increase in production as and when stocks are reduced. But it notes that there are no signs of a large-scale revival of orders.

In the course of a review of the recent history of recession, the *Monthly Letter* observes:

"Many experts, in and out of Government, looked for a deep depression immediately after World War II. The troubles that actually developed in 1946 stemmed from shortages of consumer goods and long and bitter strikes which prolonged the shortages and intensified upward pressures on prices. Since then, we have had two mild recessions, in 1949 and 1954. The 1958 recession so far is no larger than those were but it is entitled to be treated with more respect. A decade or so after each great war people's wants get saturated and we find that we have enough homes and cars and factories for the time being. Capital spending shrinks and a more or less serious readjustment ensues. That has been the historical experience.

"We have built into the economy many new devices which, like unemployment insurance, support spending power in business recession or, like deposit insurance, eliminate the crippling effects on credit supply of panicky runs on banks. Federal outlays naturally rise in recession, while revenues fall off, creating pump-priming deficits quite automatically. Indeed, the general post-war experience suggests that, in our anxiety to avoid another decade of stagnation like the 1930's, we have built into the economy better protections against deflation and unemployment than we have against inflation and upward spiralling wage costs."

Analysing some of the views of the American economists, the *Monthly Letter* draws attention to what Mr. Percival F. Brundage, Director of the Budget, had to say on the subject of American recession. It would appear that Mr. Brundage, in the course of his reference to the suggested remedy of larger public works expenditure, said that, whereas it would be perhaps a year before such a programme could be effective, a tax cut would take effect immediately. According to the *Monthly Letter*, this idea—that is, cut in taxes, is receiving increased support. It says: "It does not seem sensible for the Federal Government to hunt around for places to put more money into circulation when it is demanding in taxes around half of business profits and 10 to 15 dollars a week out of the average household budget. There is no end of stimulus available through tax reductions." The *Letter* notes that Dr. C. F. Phillips, an economist and President of the Bates College, and other witnesses supported the Sadlak-Herlong Bill which would reform the income-tax structure over a five-year period and wind up with a rate schedule running from 15 to 42 per cent. for individuals and a 42 per cent. rate for corporations. The *Letter* says: "It is doubtful if there is any action Congress could take that would so frighten the economic outlook and revitalise efforts to produce and sell and go ahead. This bold approach, curiously, is also the one which, with reasoned control over federal expenditures, would hold the highest promise of rebalancing the budget. There is no question but that more taxable income would be earned and reported under an easier set of rates." It adds: "Prosperity demands more than cheaply-created money purchasing power; it demands enterprising work effort. If Congress wants private enterprise to offer more employment, the means are readily at hand to make it possible."

Clearly, a cut in taxes is a much greater incentive to American economy, or economy anywhere, and is more immediately beneficial than any other expedient. Whether the aim is to arrest a recession or to stimulate an economy, it cannot be better achieved than by appropriate tax reliefs.

* * * *

It is now 18 months since the life insurance companies were taken over by the Government of India, but the companies have not yet been taken into liquidation for two reasons. In the first place, the question of compensation has not been finalised and settled to the satisfaction of the companies. Secondly, some of the companies have been thinking of taking to new lines of business, in order to avoid the consequences of heavy tax liability on the shareholders in the event of liquidation. The first company to formulate a scheme on these lines is the Oriental Government Security Life Assurance Company, Ltd. There is, however, one difference.

The directors of the Company felt that, instead of starting a new business, such as investment business, it would be advantageous to amalgamate the Company with the business of another existing investment Company. With this object in view, they carried on negotiations with the Investment Corporation of India Ltd., a subsidiary of Tata Sons Private Ltd., and have succeeded. They have evolved a scheme of amalgamation which, it is felt, would be in the interests of both the Companies, as the earning capacity of both after the amalgamation would be considerably increased and larger savings would be effected in establishment expenses. Under the scheme, the undertaking and all the property, rights, powers and all the liabilities and duties of the Company will be transferred without further act or deed to the Corporation by an order to be made by the High Court. In consideration of such transfer, the Corporation will allot to every member of the Company, in respect of every share of the Company of Rs. 200 each held by the member, 40 shares of the Corporation of Rs. 100 each credited as fully paid-up, or, in the alternative at the option of the member of the Company, make a cash payment of Rs. 4,000. This compares favourably with the current market value of the Oriental Life shares at Rs. 3,980 per share. The shares of the Investment Corporation are at present closely held. There is, therefore, no regular market for them. But they are nominally quoted at Rs. 120 and on the basis of last dividend of Rs. 9.25 per share, the yield on them works out to 7.7 per cent. Accordingly, the compensation offered to the shareholders of the Oriental Life in the form of shares of Tatas' Investment Corporation are more attractive than cash compensation. In the first place, they get Rs. 800 more in terms of capital value and a yield which is high enough, taking into consideration the current rate of return on first class equities.

Under its existing articles of association, the Oriental Life Company has no powers to amalgamate with another Company. In order, therefore, to bring the scheme into effect, the articles of association have to be amended and, after the scheme is approved by the shareholders, it has to be sanctioned by the Bombay High Court.

The Company has already received compensation from the Life Insurance Corporation of India aggregating Rs. 1.36 crore. On appeal to the Tribunal constituted under Section 17 of the Life Insurance Corporation Act, the Company has received a further sum of Rs. 5.05 lakhs by way of additional compensation. The Directors of the Company are not satisfied that full justice has been done to the shareholders even by the Tribunal. They are, therefore, considering whether an appeal should be filed in the Supreme Court against the Tribunal's award.

Another life insurance company which is taking steps to alter its Articles of Association, in order to enable it to function effectively in the best interests of the shareholders, is the Bombay Life Assurance Company, Ltd. No definite scheme has yet been formulated, but the Company is consulting legal opinion in regard to changing the articles of association and dealing with the amount of compensation received by the Company. A sum of Rs. 11.72 lakhs was received from the Life Insurance Corporation by way of compensation and on appeal to the Tribunal, the Company got a further sum of Rs. 2.22 lakhs.

* * * *

In our notes on the trend of oil prices in India published in these columns a fortnight ago (*vide* page 351), it was stated that the Government of India had permitted the oil companies to effect an interim increase of As. 2 per gallon in the price of motor spirit and As. 13 per eight gallons in the price of superior kerosene. This is incorrect, in that the increases allowed were only one anna and six annas, respectively.

EQUITIES BUOYANT

BUDGETARY RECESSION SHORT-LIVED

(From Our Own Correspondents)

BOMBAY, *6th March*

BARRING a setback in the special Budget session on Friday last, the share market was buoyant throughout the week. In the pre-Budget trading, sentiment was good and prices recorded some gains on expectations that the Government might show a last-minute gesture to industries, particularly textiles, as a result of the various representations made by the interests concerned. The absence of any relief in the Budget, therefore, caused some disappointment. Further, the tightening of the rules governing the grant of development rebate to companies was also viewed with some concern, as it was thought that such rigorous application would affect capital formation in new companies. The only new tax proposed was the levy of tax on gifts, but even this was anticipated long back and was discounted in prices. The market's disappointment over the Budget proposals was duly reflected in the sharp fall in prices in the Budget session. The recession was more marked in textiles.

On second thoughts, however, the market took a more favourable view of the outlook for industries in general, now that the tax structure has been finalised and offers no scope for any increase during the rest of the Plan period. The receipt of liberal foreign aid from several countries was also noted with optimism. Though there is no reference in the Budget to the existing cut in excise duty on medium varieties of cloth, which will be effective only up to the end of the current month, there is a widespread belief that the period of relief would be extended beyond the end of March. The increase in development rebate for shipping companies from 25 per cent. to 40 per cent. and the relief in excess dividend tax applicable to Section 23A companies were welcomed. Moreover, the technical position of the market was so sound that even small buying was enough to push up the prices. On balance, therefore, equities staged a sizable recovery over the week.

The market remained closed on the 5th and 6th inst. on account of *Holi*.

In the steel section, Tata Ordinaries jumped in the pre-Budget session from Rs. 169.25 to Rs. 171.50, but in the Budget session reacted to a low of Rs. 167. Subsequently, however, they rallied to a high of Rs. 175.75 on Tuesday before closing at Rs. 174.50. The new shares were marked up by Rs. 5.50 to Rs. 170.25. Indian Irons rose from Rs. 19.52 to Rs. 19.76 before losing ground to Rs. 19.44 in the Budget session. Latterly, they advanced to close at Rs. 20.52.

In the textile section, Bombay Dyeings fell to Rs. 49.70 in the Budget session from Rs. 51.10 touched earlier, but gathered strength to close at Rs. 52. Centurys closed with a gain of Rs. 7.75 at Rs. 389.25, after touching a high of Rs. 391.50. In the Budget session they had gone down to a low of Rs. 373. Kohinoors rallied from the Budget low of Rs. 256 to Rs. 267, the gain over the week being Rs. 4.75. Finlays recorded a rise of Rs. 8 to Rs. 260, Gokaks Rs. 2 to Rs. 150 and Morarjee Mills Rs. 3 to Rs. 208. New Greats gained Rs. 3 to Rs. 214, while Shree Niwas Cottons lost Re. 1 to Rs. 140. Simplex improved by Rs. 2 to Rs. 160. Standards by Rs. 11 to Rs. 406, Svadeshis by Rs. 3.50 to Rs. 168.50 and Tata Mills by Rs. 2.25 to Rs. 39.

In the miscellaneous section, sugar shares were buoyant, Belapurs gaining Rs. 5 to Rs. 239, Phaltans Rs. 3.50 to Rs. 152.50 and Walchandnagars Rs. 2 to Rs. 272.50. Among cements, Associated Cements closed with a gain of Rs. 2.25 at Rs. 145.75, after touching a low of Rs. 140. Shipping shares recorded impressive rises, consequent on the grant of a higher development rebate. Scindias showed a gain of 93 nP at the *ex-div.* rate of Rs. 17.08. Great Easterns stood 76 nP higher at Rs. 20.52. Alcock Ashdowns were up by Rs. 2.50 at Rs. 217.50 and Tata Locomotives by as much as Rs. 6 at Rs. 145.50. Premier Constructions rose by Rs. 4.50 to Rs. 159.50. Shivrajpurs were marked up by Rs. 4.50 to Rs. 95. Premier Automobiles changed hands at Rs. 79.20 *ex-div.*, as against Rs. 82.50 *cum-div.* a week ago. Hindustan Motors gained 28 nP at Rs. 6.24. Bombay Burmahs (old) were done at Rs. 502 *ex-div.* at the close, which on a *cum-div.* basis showed a rise of Rs. 7.75. National Rayons hardened from Rs. 215.25 to Rs.221.25. Tata Chemicals looked up by 36 nP to Rs. 12.96 and Tata Oils by Rs. 2.25 to Rs. 38. Wimcos were done Re. 1 higher at Rs. 171.50.

Calcutta Stock Exchange

CALCUTTA, *5th March*

The absence of any new taxation proposal (excepting the gift tax) in the 1958-59 Budget introduced in Parliament by Mr. Nehru on Friday last did not come as a surprise to market circles, since it was well anticipated that after the plethora of new taxes enacted in May last there was not much scope for fresh taxation. On the other hand, market circles were disappointed to note that the exchequer proposed to collect Rs. 6.50 crores by way of gift tax and small adjustments to the existing taxation structure. The absence of any relief in taxes, in fact, came as a great disappointment. Ever since the Budget was announced the undertone of the Calcutta share market was steady, which demonstrated market men's satisfaction at the absence of further fiscal levies. However, transactions did not expand and the market has so far failed to attract funds.

No doubt, there was appreciation for the small relief proposed in regard to the excess dividend tax for Section 23A Companies, but market circles were of the view that all funds employed in the business rather than the share capital should be taken into consideration for working out the dividend percentage for taxation purpose. Similarly, the proposed increase from 25 to 40 per cent. in the development rebate in respect of new ships was welcomed and, in accord with this satisfaction, shipping shares rebounded with activity. However, when the several vexatious conditions for qualifying for the development rebate of companies were known, caution was in evidence.

Madras Stock Exchange

MADRAS, *4th March*

In refreshing contrast to the dull conditions which prevailed in the previous week, the Madras Stock Exchange presented a steady trend during the week under review. Turnover also was better and prices registered moderate gains in all counters. The chief factor which helped enliven sentiment was the absence of any fresh tax proposals, barring the Gift Tax, in the Union Budget which was presented in Parliament on Friday last. Nevertheless, there was a sense of disappointment over the fact that the Budget did not contain any measures of relief in regard to bonus tax, dividend tax and the compulsory deposit scheme. Another factor which infused cheer to the market was the optimistic picture presented by the Prime Minister about the economic outlook, in view of the increasing foreign aid for financing the Plan. The absence of any fresh tax proposals in the Madras State Budget which affect the Stock Exchange as such was also welcomed. Plantation shares were noted with attention and there were enquiries for select textile scrips. The sugar and miscellaneous industrials followed the general trend.

Among tea shares in the planting section, Parksides improved by 18 nP to Rs. 18.68. Haileyburias advanced by 15 nP to Rs. 16.25. Chembras increased by 8 nP to Rs. 2.98. Periakaramalais and Blue Mountains added 3 nP each to Rs. 4.08 and Rs. 2.93, respectively. Kil Kotagiris were 15 nP better at Rs. 5.13. Devasholas strengthened by 25 nP to Rs. 19.75. The Company has declared 7½ per cent. interim dividend, as against a corresponding distribution of 10 per cent. in the previous year. Despite the announcement of a final dividend of 10 per cent., making a total of 30 per cent. for the year ended 31st October 1957, as against a total of 10 per cent. paid for 1955-56, Ouchterloneys were a shade quiet at Rs. 4.80. Among coffee shares, Coffee Lands rallied by 85 nP to Rs. 29.50. Consolidated Coffees improved by 50 nP to Rs. 22.40. Rubber shares also evoked good support. Anandams hardened by 38 nP to Rs. 14.50. Cochin Malabars rose by 15 nP to Rs. 4.50. Thirumbadis advanced by 9 nP to Rs. 1.40 and Kailas by a like amount to Rs. 3.79. Puthuthottams gathered 3 nP to Rs. 2.58. Mercaras, however, declined by 25 nP to Rs. 7.15.

In the textile section, Venkatesas were marked up by Rs. 9 to Rs. 133. Metturs put on Re. 1.50 to Rs. 363.50. Coimbatore Cottons gained a rupee to Rs. 161. Buckinghams were steady at Rs. 159.50, Lakshmis at Rs. 111.50, Maduras at Rs. 35.25 and Virudhunagars at Rs. 27. Vasantas, however, lost Rs. 5 to Rs. 250 and Rajalakshmis Rs. 4 to Rs. 73.

In the sugar section, Deccans were well favoured and rose by 22 nP to Rs. 8-12. Travancores went up by 15 nP to Rs. 10.15. E.I.Ds were 10 nP better at Rs. 29.50. Among miscellaneous industrials, F.A.C.Ts improved by 15 nP to Rs. 5.05. Dalmia Cements went up by 8 nP to Rs. 10.13, Mysore Chemical and Fertilisers and Andhra Cements gathered 5 nP each, the former to Rs. 5.85 and the latter to Rs. 12.

NEWS IN BRIEF

THE standing committee of the Central Silk Board which met in Bombay recently recommended over Rs. 10.75 lakhs during 1958-59 to eight State Governments for development of silk industry.

The setting up of a plant in India for assembly and progressive manufacture of tractors by the trade representatives of the U.S.S.R., in order to meet the present import difficulties, is now under consideration by Russian experts.

The Government of India has fixed the price of tea, for the purpose of determining the export duty, at Rs. 2.87 per lb., as against Rs. 2.99 per lb., in force from 1st February last. There is, however, no change in the existing rate of duty of 38 nP per lb.

The Union Government has decided to set up a uranium metal processing plant at an estimated cost of Rs. 27 lakhs. The plant, which is expected to be in operation by the middle of this year, will provide enough uranium for scientific experiments and for use in the three reactors that are under construction.

The all-India third estimate of sesamum for 1957-58 puts the current year's area at 5,287,000 acres, as against the corresponding adjusted estimate of 5,145,000 acres for 1956-57, representing an increase of 142,000 acres or 2.8 per cent. The overall production of sesamum up to the end of December 1957 is, however, reported to be about 3 per cent. lower this season, as compared with the corresponding period of the last season.

Pursuant to the recommendations of the Mineral Advisory Board which met in June 1957 in Simla, the Government of India has decided to set up a sub-committee on mica to advise Government on all matters connected with mica trade and industry. The Joint Secretary of the Department of Mines and Fuel will be the Chairman of the sub-committee, of which the Director, Geological Survey of India, will be the Vice-Chairman.

India is expected to produce almost all the accessories of an electrical railway coach in about two years' time. An Indo-British firm at Dum Dum, which got orders for manufacturing electric coaches for the suburban sections of the Eastern Railway, had to import only about 40 per cent. of the components from abroad. The import of components will also decrease gradually. With the coming up of the heavy electrical plant in Bhopal in a few year's time almost all the necessary parts will be manufactured in this country itself.

The Government of India has decided to allow refund of customs and central excise duties paid on raw materials such as oxidised oil, resins, pigments, fillers, driers, powdered cork, etc., entering into the manufacture of linoleum subsequently exported. The refund will be admissible on consignments exported on or after 18th February 1958, by virtue of a notification issued under the Sea Customs Act and the Central Excise and Salt Act. The Collector of Customs, Calcutta, will be the authority for information regarding the procedure regulating the fixation of the rate of refund.

The Government of India is holding negotiations in London to get deferred payment terms for the cost of machinery and equipment required for a security paper mill proposed to be established at Hoshangabad in Madhya Pradesh. The mill, meant for the manufacture of currency, bank note and other security paper, is to be set up in conjunction with Messrs. Portals, Ltd., of the U.K., from whom such paper is at present being imported. A wholly Government-owned private company is to be floated. This company will enter into an agreement with the British firm. The total estimated capital cost of the project is about Rs. 4 crores.

The production of lead and zinc ores in India during the quarter ended December 1957 increased to 24,121 tons from 24,004 tons in the preceding quarter. This was higher by 1,880 tons, as compared with the corresponding quarter of 1956. The entire production was reported from the Zawar mines of Rajasthan. The lead and zinc concentrates recovered from the ores during the quarter ended December 1957 aggregated 1,253 tons and 1,850 tons respectively, as compared with 1,340 tons and 1,906 tons in the preceding quarter. The lead concentrates are sent to the smelting plant at Tandoo in Bihar. Zinc concentrates are sent to Japan for smelting. The total production of lead and zinc ores during 1957 was 95,462 tons, as against 79,959 tons in the preceding year. The recoveries of lead and zinc concentrates amounted to 4,850 tons and 7,469 tons, respectively, as against 3,909 tons and 6,880 tons in 1956.

Seven more housing colonies for handloom weavers in Madras and Andhra Pradesh will be built under schemes approved by the Government of India. The houses in the colonies will also be used as workshops by the weavers. The colonies will have common plants for dyeing, finishing and calendering. The co-operative societies which will own and run these colonies will, in addition, arrange the bulk purchase and supply of yarn to the weavers and undertake marketing of the finished products. The cost of construction of a house in these colonies varies from Rs. 3,000 to Rs. 3,600. A third of the cost will be treated as grant and the balance as long-term loan repayable in 25 years. In addition, Government has sanctioned loans for providing amenities such as water-supply, drainage, etc., in the colonies. Schemes to build housing colonies for weavers in Madras, Andhra, Orissa, Bombay and Mysore have already been sanctioned by the Central Government as part of a programme to improve the living conditions of weavers. Of the seven schemes now sanctioned, three are for Madras and four for Andhra Pradesh.

From Abroad

A scheme to construct a 270-mile monorail link to carry coal from Tanganyika's interior to the coast railway is under study. The project may cost £15 million, which means half the cost of a normal railway.

Unemployment in Canada reached a post-war peak of 520,000 in January last. This figure also represented a big jump from the 386,000 of mid-December 1957. The previous post-war high was 401,000 in March 1955.

The British European Airways and the Soviet State Airline, Aeroflot, signed an agreement in Moscow on the 26th ultimo, providing for direct London-Moscow flights by both the organisations from this summer.

Both the British Petroleum and the Royal Dutch-Shell are participating with the French and U.S. Companies in exploiting a vast potentially oil-bearing area in the Sahara Desert. It is expected that their area of operations will be in the vicinity of the Hassi Messaoud Oilfield.

Russia will allow Ceylon a credit of Rs. 140 million (£10½ million) to enable the latter to purchase Soviet material for economic development. It is stated that prices will be based on world market rates and that the loan is repayable in twelve years, carrying interest at 2½ per cent.

Work on the world's longest undersea tunnel in Japan linking the main island of Honshu with the southern island of Kyushu has been completed by Japanese engineers. It took 21 years to construct the tunnel, the estimated cost being Rs. 10.40 crores. It is about 2½ miles long and will be used by both vehicles and pedestrians.

The K.L.M. Royal Dutch Airlines is expected to reduce its staff by about 1,000 because of the loss it sustained this year to the tune of 22 million guilders. It is said that the 4 per cent. loss of income resulting from the suspension of services to Djakarta, together with the decline in world prosperity, would cause the company to effect economies.

Uranium ore, comparing well with or even exceeding those which are at present being exploited in considerable quantities in Canada, has been discovered in the Swiss Alps. The general appearance of the uranium-rich layers and the analysis made of samples appear to suggest that further investigations as to their exact dimensions are well worth taking.

A new trade agreement involving $2½ million (about Rs. 1.25 crores) has been concluded between Austria and the U.S.A. Under the agreement, Austria will pay for American agricultural products with shillings. This will be banked in Austria to finance exports from Austria to Spain, Pakistan, Turkey, Korea, Viet Nam and other underdeveloped countries.

West German imports of foodstuffs and stimulants in 1957 aggregated £850 million, an increase of £68 million over that in the preceding year. The main items, in order, were fruit and vegetables £170 million, grain and grain products £136 million, coffee and tobacco £119 million, fats £119 million and cattle and meat £60 million.

Pakistan's deficit in its balance of trade during 1957 was of the order of Rs. 47.79 crores. Its total exports in 1957 stood at Rs. 161.21 crores, as against Rs. 162 crores in 1956. Imports in 1957 were of the value of Rs. 209 crores, as compared with Rs. 198 crores in 1956. The country's big imports of cereals, involving an outlay of Rs. 27 crores, was the chief factor which contributed to the rise in the deficit.

The Dunlop Rubber Company in Britain has announced a five per cent. reduction in the selling prices of tyres, with effect from the 1st inst. This is expected to be followed by other major British manufacturers. Incidentally, the announcement has coincided with the 70th anniversary of the first ride on pneumatic tyres made by Johnnie Dunlop when has was ten years old.

Ceylon intends to start the manufacture of "crystal tea" to create a new class of consumers for its teas. "Crystal tea" which will be made out of the essence of the tea leaf will reduce the process of tea brewing to the simple method of stirring the ready-made crystals in a cup of boiling water. Negotiations are now proceeding with a British firm to set up a pilot plant to turn out the crystals.

Unemployment in Norway touched a post-war record at the end of January this year, the total being about 39,000 out of a labour force of approximately one million. This compares well with 28,000 unemployed at the end of January last year and 31,000 in January 1953. It is stated that much of the unemployment is seasonal, while a portion is due to a decline in the activity of some industries like wood-processing and shipping.

Orders booked with Japanese shipbuilders are fast declining, consequent on lower freight rates. Orders held by 24 major yards at the end of 1957 were for 230 ships with an aggregate 3,876,250 gross tons, as compared with 285 ships with 4,320,000 tons six months ago. It is expected that, unless new orders are received, eleven shipyards will become idle by the end of this month, while another 27 will be idle by the end of September.

Lack of demand from charterers and the steep fall in freight rates have compelled the shipowners in the U.K. to lay off their ships so as to avoid the heavy operational losses. Consequently, the volume of British tonnage now lying idle in the U.K. ports is said to be more than that at any time since the world depression of the early thirties. The early February total was 99 ships of 492,000 gross tons which compares unfavourably with a mere 16 British ships of an aggregate 32,000 tons at the beginning of last year. Idle British shipping a month earlier had already touched 80 ships of 375,000 tons.

The U.N. Food and Agriculture Organisation's Rice Committee in Rome expects the quantity of rice available for export to the world in 1958 to be lower than that in the two preceding years. This, according to the Committee, is due to the "significantly lower" crop harvests made in 1957-58 by some of the main exporting countries and to the very low level of carry-over stocks from previous harvests. The reduction in supplies, it is stated, is more marked in the lower grades than in the more expensive grades. The 1957-58 crop is estimated at 434,000 million lbs. as compared with 438,000 million lbs. last year. Increased production in Japan, Korea, Mainland China, the Philippines, Europe and Egypt was more than offset by smaller crops in India, Thailand, Indo-China Peninsula and the U.S.

PERSONAL

MR. Ernest Schmidheiny has been elected as the new Chairman of Swissair.

Dr. K. Freubenberg, Director of the Research Institute for Wood Chemistry in Hendelberg, and a world-famous organic chemist, arrived in Bombay on Sunday on a three-week tour of India.

Mr. Ramdas Kilachand has been elected representative of the Indian Merchants' Chamber on the Indian Central Cotton Committee for a fresh term of three years beginning from 1st April 1958.

Mr. Clyde S. Fullerton, Vice-President and General Sales Manager, and Mr. Joseph W. Letzkus, Sales Vice-President for the Middle East and the Far East, of Trans World Airlines, arrived in Bombay on Friday last on a round-the-world study of the tourist air traffic potential for the coming year. While in India, they will hold consultations with tourist officials and heads of travel agencies.

Professor D. T. Jack, who was Labour Adviser to the Government of India in 1943, has been invited by the Sierra Leone Government to undertake an economic survey of this West African territory and make recommendations for practical measures of development. Professor Jack, now Professor of Economics at Durham University, will leave for Sierra Leone about the middle of March.

Mr. L. D. Mudie, General Manager, Burmah-Shell Oil Storage and Distributing Company of India Ltd., has been elected Vice-President of the Bombay Chamber of Commerce and Industry for the year 1958-59 and will take office after the annual general meeting to be held on 18th March 1958. Mr. Mudie came out to India with Burmah-Shell in 1937 and served in the Royal Artillery from 1940 to 1945. Since the conclusion of hostilities, he has served with Burmah-Shell in India, apart from the years 1952 to 1954 when he was General Manager for Shell in Israel and Cyprus. He became the Chairman of Burmah-Shell Refineries in March 1957. He served as a member of the Committee of the Bombay Chamber of Commerce and Industry during 1957-58.

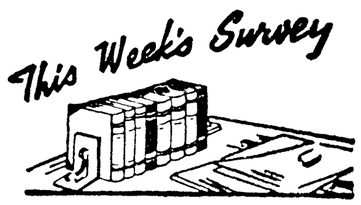
"COMMERCE" 1933

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *11th March*

Indian Central Cotton Committee

An interesting discovery has been made of cotton materials among the remains of prehistoric civilisation at Mohenjo-Daro. They have been identified at the Indian Central Cotton Committee's technological laboratory as being made of fibres of cotton botanically known as *Gossypium arboreum*. The discovery occupied an important place among the many references made by the President, Dewan Bahadur Sir T. Vijayaraghavacharya, in opening the twenty-sixth meeting of the Committee at Karachi. The session was held in the Assembly Hall of the Karachi Chamber of Commerce. The President made reference to several other subjects on the agenda, notably the Central Provinces Cotton Market Act, the Madras Cotton Control Act, the economic investigation into the cost of production of crops in the principal cotton and sugarcane tracts of India, and also to the effect of the Ottawa Agreement on the greater use of Indian cotton by Lancashire mills. The meeting resolved that Sir Purshotamdas Thakurdas be appointed Vice-President of the Indian Central Cotton Committee for the year 1933-34 in the place of Sir Joseph A. Kay, whose term expires on 31st March 1933. An important decision taken by the Committee was that common standards should be adopted for Indian cotton in the Indian markets before the introduction of universal standards.



MERCHANT SHIPPING BILL

THE Bill to amend and consolidate the law relating to merchant shipping, now referred to the Select Committee, is the most voluminous of its kind undertaken in Indian legislative history. The history of merchant shipping legislation in India makes interesting reading. Beginning with the Bombay Coasting Vessels Act of 1838, a number of Acts relating to merchant shipping were passed by the Indian legislature from time to time. Although attempts were made to revise these laws in 1867 and in 1832, again in 1883 and 1896, they were not successful owing to certain legal and constitutional difficulties. A major difficulty was that part of the British statute law on the subject, the Merchant Shipping Act 1894, applied to India and any Indian enactment had to be in legal harmony with the British Law. Some consolidation, however, was effected in 1923 when the Indian Merchant Shipping Act was passed. Since then, the Act has been amended from time to time. Nevertheless, by reason of Article 372 of the Constitution, the U.K. legislation continues to apply to India. This arrangement has been generally regarded as unsatisfactory. The present Bill, which has as many as 447 clauses, revises and consolidates all laws in force in India, whether passed by the British Parliament or the Indian legislature.

The Bill consists of 16 parts which deal successively with administration, registration of ships, certificates of officers, seamen and apprentices, safety, accidents, navigation, investigations and enquiries, salvage operations, control of Indian ships, sailing vessels, penalties, miscellaneous matters and repeal of the existing laws which the Bill seeks to replace or modify. When the Bill becomes law, it will not be necessary to set up any new organisation. For the Mercantile Marine Department can itself undertake the administration of the Act. But it is believed that the Department will need some expansion in order to carry out the additional duties and responsibilities contemplated in the Act. A rough estimate of the increase in annual expenditure will be between Rs. 2 and Rs. 3 lakhs, of which 40 to 50 per cent. will be recovered by way of fees and miscellaneous charges. Some additional expenditure will become necessary in connection with the setting up of new bodies contemplated in the Bill, namely, the advisory boards attached to seamen's employment offices, the tribunal for adjudication of disputes between seamen and employers, the National Welfare Board for seafarers, the Marine Board and the committees for the purpose of advising the Government regarding modifications of rules, regulations and scales of fees.

The Bill consolidates all the provisions relating to appointment of various officers for the administration of the Act. The new part on registration of ships replaces the British law on the subject. Provision has been made in the Bill for the holding of examinations for the grant of appropriate certificates to marine officers. Welfare measures for seamen and apprenticeship training have been dealt with in a separate part. The provisions relating to passenger amenities, which form part of the Bill, take into account the recommendations of the Deck Passenger Committee. A passenger welfare cess is contemplated, the proceeds of which will be utilised for the provision of welfare measures for passengers. The provisions relating to pilgrim ships, it is stated, have been revised so as to conform to the new International Sanitary Regulations 1951. Provision is also made for the advertisement in advance of the provisional dates of sailing and for the acceptance of provisional bookings of passages against deposits. The Control of Shipping Act 1947 has been made a part of the Bill with suitable modifications. The 1947 Act empowers the Government to control the movements of all mechanically propelled vessels of 150 tons. Power is now taken to prescribe a lower limit by notification and to bring under control ships chartered by Indians and Indian companies. An entirely new part is the one which provides for the implementation of such recommendations of the Sailing Vessels Committee as have been accepted by the Government. It provides for a uniform system of registration and tonnage measurement of sailing vessels and also for a system of annual inspection and issue of certificates of inspection.

The new part on registration of ships lays down the conditions for such registration and for the grant of the status of Indian ships. A notable feature of the provisions in this part is that either ships owned by companies or ships in which majority ownership is held by Indians can be registered as Indian ships. The property in a ship will be divided into 64 shares, of which 33 or more shares should be owned by Indian citizens in order to entitle a ship to be deemed an Indian ship. This opens the door for at least minority participation of foreign interests in Indian shipping industry. Even this limited concession seems to be opposed by a section of opinion in India. Clearly, this is not a correct stand to take. In the first place, the concession is limited. Secondly, the conditions which might have provided some justification for a stand on 100 per cent. Indian ownership have changed in recent years. After all India needs foreign capital; its foreign exchange resources are not plentiful enough to meet its entire requirements. And shipping, it must be noted, needs, to begin with, more foreign exchange than any other industry, for India does not produce all the ships it needs, so that it has necessarily to buy them abroad.

Further, if India can permit participation of foreign capital in other vital enterprises, there is no reason why it should not permit such participation in the shipping industry. The argument that shipping constitutes a vital defence industry should not be carried too far, considering that, in an atomic age, the "defence" significance of ships is less than it was in the early years of the century. Again, in India's altered political context, any invitation to foreign capital to participate in Indian shipping enterprise will not imply any political loss, considering that India has ample powers to control and regulate its enterprises, whether they are partially or wholly owned by foreigners. Above all, the inflow of foreign capital into Indian shipping industry will bring with it the much-needed technical staff for which, in certain cases, India has even now to depend on the West. Surely, it is a shortsighted policy to sacrifice speedy development of shipping industry at the altar of an irrational, meaningless and fear-inspired prejudice against foreign capital.

INDO-U.S. ECONOMIC RELATIONS

Trade relations with the U.S. are of utmost significance to India. For one thing, the U.S. is a country which, with its high purchasing power and diversified economy, is capable of offering the best market anywhere in the world for Indian goods. Secondly, the U.S. capacity to aid India's development through export of plant and machinery is virtually limitless. And yet, it is a pity that the trade between the two countries is not expanding as fast as it should. Indeed, there has been a decline in India's exports which has rendered the balance of payments position particularly difficult in the context of India's growing import requirements. Between 1955 and 1956, India's imports from the U.S. increased from $188 million to $267 million, while its exports to the U.S. declined from $221 million to $205 million. The increase in the U.S. exports to India is mainly accounted for by India's increasing requirements of capital goods. Only, this country has been unable to win a larger share of the U.S. import trade. This is the more disappointing because the U.S. imports from the rest of the world are increasing; in 1956, the U.S. imported $12,585 million from the rest of the world, as compared with $11,384 million in the previous year. Readers may feel annoyed for the reason that we have referred to trade statistics for 1956 instead of for 1957. The fault is not ours. The blame must be laid at the doors of the Government of India. Its innovation in a new form of presenting foreign trade figures has yielded results which are confusing and far from up to date. Verily, the foreign trade data of India is in a mess.

Against this background, the joint statement issued in Washington by Mr. K. B. Lall, Joint Secretary, Union Ministry of Commerce and Industry, and Mr. Henry Kearns, Assistant Secretary of the U.S. Department of Commerce, makes encouraging reading. The statement, which followed the conclusion of talks between these two official representatives of their respective countries, is not in the nature of a trade agreement, as such. Nevertheless, it does serve to emphasise the importance of and the need for closer Indo-U.S. trade relations. The signatories recognise that "closer commercial relations between the two countries would prove mutually beneficial." To this end, they express their desire "to facilitate, develop and expand private trade between their two countries by every appropriate means." They have agreed that there exists a potential for a significant increase in value and volume of trade. It has been recognised that effective steps should be taken to promote trade within the framework of the G.A.T.T. and the I.M.F., of which both countries are members, that adequate and economic shipping facilities are vital to the expansion of the trade between the two countries and that private travel for business men of one country should be encouraged in the other.

As regards the lists of specific commodities available for export, India cited a list which included jute goods, tea, manganese ore, mica, cashew nuts, pepper and spices, frozen and preserved foods, carpets and rugs, coir products, hides and skins, leather manufactures, essential oils, handloom fabrics and other handicrafts including silks, shawls and jewellery. On behalf of the U.S., Mr. Kearns observed that his country was a principal supplier of commodities required for India's economic development programme, including foodgrains, industrial machinery, vehicles, iron and steel products, non-ferrous metals, fertilisers and chemicals.

Both representatives noted the fact that investment of private capital aids in the promotion of economic development and trade. Since U.S. private investment in India, although increasing, is still relatively small, they considered it desirable to "encourage an increasing flow of American private capital to India in appropriate fields." In this connection, they agreed that every appropriate support should be given to efforts designed to promote technical collaboration between Indian and U.S. enterprises. They further agreed that a greater interchange of scientific and technological knowledge between their two countries would be desirable.

It is to be hoped that these joint consultations, the gist of which has been set forth in the statement, will be a prelude to wider and more effective economic co-operation between India and the U.S. The importance of private capital investment by the U.S. in India has been rightly stressed by the representatives of the two countries. In the context of the underdeveloped nature of Indian economy and the meagre availability of foreign exchange in relation to its immense requirements for purposes of development, there is no gainsaying the fact that a larger flow of private American capital would be of significant assistance to Indian programmes of industrial development. This, however, implies that the Indian economic climate should be favourable to such foreign investment. That it is not is the consensus of competent opinion. All efforts should be made to create such a climate in this country. From this point of view, the joint statement has done well to stress the need for exploring the possibilities of concluding an agreement or convention whereby double taxation is avoided. Such a convention, although it is not the only thing that is needed for facilitating inflow of American capital into India, could be of considerable assistance to Indo-American economic relations.

MUTUAL SECURITY

The emergence of economic aid to uncommitted nations as a major adjunct of Soviet diplomatic offensive against the West has invested the economic aspects of the U.S. Mutual Security Programme with a new importance and urgency. That the U.S. is fully aware of the implications and challenges of this Soviet economic offensive is reflected in President Eisenhower's address on the Mutual Security Programme and Mr. Dulles' testimony before the Foreign Affairs Committee of the U.S. House of Representatives urging the enactment of the Administration's $3,942 million Mutual Security Programme for continued economic and military assistance to friendly countries.

In his address to a conference of national leaders, called to discuss the role of American assistance to other nations, President Eisenhower maintained that, though the principal deterrent to war was adequate military strength, positive peace could be brought about only by active work to create the living conditions, the level of education and health and the sense of common purpose which make for a meaningful life. An effective system of military security requires closer economic co-operation between the nations of the free world, so that they can develop their resources, raise their standard of living and thus provide an effective barrier against communist infiltration.

It is this realisation that has impelled the U.S. Government to make economic aid an important component of the mutual security programme. It is also based on the recognition that a country blessed with great natural resources, modern industry and high productivity has an obligation to help the less fortunate peoples abroad. During the post-war period, the U.S. has expended nearly $45 billion in purely economic assistance throughout the world. It is an insult to American intelligence to think that the mainspring of assistance of such a vast magnitude is the belief of Americans that it will help them to control the policies and aspirations of the nations to whom aid is given. The Director of the International Co-operation Administration, which administers American aid, has dispelled any doubt that might have remained on this point when he observed recently: "One thing we are not trying to do and should not try to do is to buy friends with this programme. You cannot buy friends with a programme of economic assistance. We are trying to strengthen the economies of the uncommitted areas of the world, so that they can be independent of any domination, including the domination of the U.S. itself." Their policies thus flow from the conviction that economic well-being is the best bulwark against communism and that poverty anywhere is a threat to prosperity everywhere. But at the same time the Americans do not make any pretensions that they are motivated by purely humanitarian considerations.

The Mutual Security Programme is composed of aids of two kinds, military and economic. Of these, the military side is much the larger. Of the $3,940 million asked by the President for the fiscal year 1959, the sum needed for direct military assistance is $1,800 million. Defence support, that is, financial assistance to other countries to maintain their military strength, accounts for another $830 million. Thus, the total for defence purposes is $2,600 million. Even then, economic aid is one of the major tools which serve both defensive and constructive purposes. In the Mutual Security Programme for 1959, it accounts for $1.300 million, about half of that earmarked for military purposes. The larger part of the economic aid operations falls under three heads. In the first place, there is the Technical Assistance programme which provides the necessary spark that releases the latent creative energies of the underdeveloped countries. Secondly, loans supplied through the new Development Loan Fund to help needy countries tide over difficulties. In fact, the Development Loan Fund is now the only element of Mutual Security Programme which can ordinarily be used to promote assistance for development. Thirdly, there is special assistance. This includes, among other things, grants where loan repayment would be impossible. In short, economic aid is designed to bridge the two great gaps that stand in the path of most of the newly developing countries, namely, lack of trained manpower and capital.

The U.S. mutual aid programme, commencing from the Marshall Plan, Point Four, etc. has grown and undergone radical changes both in the methods of administration and objectives. From being an instrument meant for post-war emergency reconstruction, it has now become a long-range basis of peaceful development. The scene of operation has also shifted from war-torn countries to newly-developing nations.

PAKISTAN'S BUDGET

The large outlay on defence has made it difficult for Pakistan to devote a larger proportion of its revenue to development expenditure. The budget for 1958-59, which was presented last week by the Finance Minister, Mr. Syed Ajmad Ali, gives some evidence of the stress to which the Pakistan economy is subject as a result of heavy defence outlay and increasing administrative expenditure. The revised estimates for 1957-58 place revenue, including revenue from railways, at Rs. 139.38 crores and expenditure at Rs. 140.36 crores, thereby revealing a deficit of Rs. 98 lakhs. Revenue receipts for 1958-59 have been estimated at Rs. 143.76 crores and expenditure at Rs. 143.54 crores, resulting in a revenue surplus of Rs. 22 lakhs. Defence continues to absorb a major portion of expenditure. Thus, out of a revenue budget of Rs. 143.76 crores for the year 1958-59, Rs. 80.85 crores have been provided for defence. In addition to this expenditure, Rs. 6.89 crores have been provided for defence under capital account. Again, the additional expenditure required for the induction of U.S. military aid is placed at Rs. 12.29 crores. Defence thus accounts for an overall expenditure of Rs. 100 crores. It may be mentioned here that Pakistan's expenditure on defence was Rs. 75 crores in 1953-54, Rs. 80 crores in 1954-55, Rs. 82 crores in 1955-56 and about Rs. 100 crores in 1956-57. The upward trend in defence expenditure is being maintained. In view of this, it is hardly surprising that development expenditure, placed at Rs. 145 crores for 1958-59, cannot be stepped up. "Much as I would have wished to provide a larger sum for this purpose," the Minister said, "it is not possible to do so in view of the available resources." It must be noted here that, unlike in India, Pakistan has no separate railway budget. The proportion of defence expenditure to the total revenue is, therefore, much higher than that in India.

The Finance Minister has been compelled to withdraw some of the concessions granted to industrialists in the past and also to impose a few new taxes. The rebate of As. 2 in supertax allowed to private limited companies paying dividends in Pakistan, has been withdrawn. Business profits tax is being continued. But it will no longer be allowed as deduction for purposes of income-tax and super-tax assessments. A 12½ per cent. tax has been imposed on bonus shares. The fall in foreign exchange earnings—the deficit was Rs. 25.6 crores in 1957, as against Rs. 90 lakhs deficit in 1956—has induced the Finance Minister to raise customs and import duties so as to serve the twin purpose of raising revenue and curbing imports. Customs duties have been raised in respect of several items including motor cars and car parts (by 100 per cent.), provisions and oilmanstores (by 45 to 100 per cent.), woollen hosiery (by 30 to 50 per cent.), glass and glassware (by 40 per cent.) and electrical appliances (by 40 per cent.). Excise duties are sought to be raised or imposed in the case of several goods such as rayon, woollen cloth and fans. To the extent these imposts raise the prices of the goods on which they fall, the industries concerned will be compelled to work in a climate of consumer-resistance to their products.

A-I.I. can take it!

WHEREVER it's got to go, send it by Air-India International. For we operate *twelve* flights each week, serve *twenty* cities directly, offer easy onward connections to every city in the world!

Fly your cargo by A-I.I. It's quick, it's convenient —and so much, much less expensive in the long run!

7 flights a week to London
4 flights a week to Beirut
3 flights a week to Rome and Cairo
2 flights a week to Nairobi via Karachi and Aden
2 flights a week to Tokyo via Bangkok and Hong Kong
2 flights a week to Paris, Prague, Geneva, Dusseldorf, Zurich
1 flight a week to Sydney via Singapore, Jakarta and Darwin
1 flight a week to Damascus

INCIDENCE OF RAILWAY FREIGHT ON EXPORT GOODS HIGH

PROBLEM REQUIRES URGENT ATTENTION

By Chinoobhai C. Javeri

OUR efforts at promoting exports are hampered and handicapped because the products we export are pushed out in competition with other countries due to its high price. The higher price of our products may be attributed to a host of factors, the heavy incidence of railway freight being one of them. Let me illustrate the point by citing cotton textiles as an example.

In India, the distances are vast as compared with Japan and the U.K. where distances are small. There, the mills are located near the port or at a short distance from it. The incidence of railway freight on merchandise in those countries, if any, is, therefore, negligible. Even the ocean freight paid by those countries on raw materials imported by them is often less than the railway freight paid in India. It might also happen that the raw material imported by those countries cost less than what it costs in India even after paying the ocean freight, because they can buy their requirements from the cheapest source in the world market.

Numerous items are used in the manufacture of cotton textiles such as raw cotton, dyes. coal, chemicals, starch, bobbins, etc. The railway freight paid on the carriage of various raw materials required by mills work out quite high. The percentage of aggregate railway freight in relation to total cost of production, if systematically worked out, would show how its high incidence inflates the price, rendering our cloth non-competitive and difficult to market. This incidence is further accentuated in case of fine and superfine varieties which derive no advantage of the cheap Indian cotton, as these varieties are manufactured out of high-priced imported cotton.

Take the consumption of raw cotton. It constitutes a major item in the manufacure of cloth. It is brought to mills from long distances. Likewise, the mills located in the interior have to pay high railway freight on foreign cotton consumed by them.

Finally, when cloth is manufactured and exported, it again travels over a long distance upto the port, incurring railway freight once again. This point is strikingly brought out by the fact that the railway freight from Ahmedabad to Bombay is nearly the same as the ocean freight from Bombay to Ceylon. It is true that any decrease in railway freight will not make significant reduction in cost. Yet, in view of keen foreign competition, even a slight reduction in cost might help exports.

There are mills in the interior which do not run on electricity but use coal. The amount of haulage on coal by rail from the mine to the mill, due to its remoteness, is excessive. It is as much as the price of coal. For instance, the railway freight from the mine to Ahmedabad is Rs. 17-4-6 per ton, whereas its sale price ex-colliery is Rs. 20-12 per ton.

Maize constitutes the basic raw material in the manufacture of starch, which is used by the textile industry. It is brought from a long distance by rail to the factory. Coal is also consumed to run the factory, paying a high railway freight. The heavy incidence of railway freight incurred on various accounts is reflected in the price of starch. This in turn is reflected in the cost of production of cloth.

The above analysis of a few items goes to prove the high incidence of railway freight entering into the manufacture of raw materials and other auxiliaries used by consuming industries. It is a factor which is responsible for the higher cost of our production. In relation to the cost of production of an article, excluding labour and basic raw material, the percentage of railway freight is comparatively high.

I have taken cotton textiles as an example but a similar position, I venture to say, will be revealed in other industries also. It would be worthwhile for the Government to probe into the whole question and determine industry-wise the ratio of aggregate railway freight to total cost of production, excluding labour and basic raw material.

One method of tackling this problem is to determine the total incidence of railway freight in the cost of production of our major items of export and give *ad hoc* rebate on exports. It is visualised that the computation of the incidence in respect of many items will be complicated and difficult. But it is not necessary to be exact.

The other method is to reduce the freight substantially for export goods. Such a concession might conflict with the provisions of the G.A.T.T. I am, however, of the opinion that, except cotton textiles, which is an established industry, it should be possible for us, even under G.A.T.T., to give special rebate on exports where an industry manufacturing the goods is in its teething period.

Since excise duties, which do distinguish between local and export sales. are refunded on export, we can likewise make a distinction in railway freight and charge reduced rates for export goods. The objection against discrimination can be got over by reducing the freight rates on the goods which are largely exported and then a surcharge, equivalent to the reduction, may be levied on goods for domestic consumption, of course, exempting exports from it as it is being done for excise.

Let me make it clear that I have no doubt about the difficulties involved in identifying export goods when they are not railed in bags, bales, containers or packages but despatched loose or in bulk. An answer to this vexed point would be to maintain bonded warehouses owned either by the Port Trust or recognised clearing and forwarding agents, where goods can be directly railed and stored, and therefrom shipped as and when required.

Another course would be to reduce effectively freight rates in respect of movement of certain goods towards port which may be restricted to only a few exportable items. This will considerably help our export of items such as sugar, manganese ore, etc. Take, for example, manganese ore. The railway freight is about Rs. 22 per ton from Londa to Bombay and the cost of low grade ore is Rs. 65 per ton. Thus, the incidence of railway freight on it is as high as 33⅓ per cent. of the cost. There are items which can be easily distinguished as being meant for export when railed to ports. In those cases a guarantee may also be taken from an exporter to produce proof of shipment.

According to trade reports, it is alleged that some countries, which are also members of the G.A.T.T. and far more advanced industrially than India, do give indirect or secret rebates which enable them to sell their goods in export markets at an advantage in competition with others in the field. Their mode of giving indirect or secret rebates should properly be investigated by our Trade Commissioners abroad collecting relevant information for our guidance.

For internal consumption, the incidence of railway freight is not so much a factor to reckon with. But in exports its incidence affects the competitive position of our products. Thus, there is a strong case for granting freight concession not only for finished products but also for the movement of raw materials which are used in the manufacture of goods meant for export.

A deep and detailed study should be made of this intricate problem and a workable formula be devised, whereby the incidence of railway freight on goods manufactured for export is considerably reduced.—*All Rights Reserved.*

RESERVE REQUIREMENTS REDUCED

DEMOCRATS ARE RAISING A SCARE

From Our Special Correspondent

NEW YORK, *26th February*

STORMS are raging in the United States in more than one way. Physically, many portions of the country east of the Mississippi River have been ravaged by the worst weather in generations. Snow has blanketed and buried many States. This has not added cheer to the confusion over the state of national and international affairs.

An emotional storm is raging over mounting unemployment which, however, is strictly relative. By contrast, the chemical industries are booming, literally speaking, and profit margins are mounting. Mindful of the general recession psychology and of falling loans to business by commercial banks, the Federal Reserve Board saw fit to reduce reserve requirements ½ of 1 per cent. across the board.

The very small reduction attested to the reluctance of that agency to act. Mr. William McChesney Martin, Chairman of the Board, is still convinced of the threat of inflation, as he has said many times. In the opinion of many, he should have resigned a long time ago.

Uniform Ratio Lacking

At the present time, reserve requirements of the New York and Chicago banks are 20 per cent. of their demand deposits, other cities are 18 per cent. and country banks are even less than that. Since these requirements were established many, many years ago, the importance of New York and Chicago as money centres and accumulation centres of funds has changed. Other mighty money centres have arisen, such as San Francisco, although the only real "money market" remains in New York. Because of this situation, the entire banking industry is almost unanimous in demanding an equalisation of reserve requirements which, it is believed, would make for a better distribution of lendable funds. So far, the Federal Reserve has done nothing about it.

The Democratic Party, under the leadership of former President Harry S. Truman, has seized upon increasing unemployment as its chief ally in winning this year's important Congressional elections. The old familiar slogans are back again. The Republicans are being accused of mismanaging the domestic economy in attempts to help big business. There are also pointed references to the fact that, under the last Republican President, Herbert Hoover, who left office in 1933, the "great depression" was ushered in.

Effective Attack

It is an effective attack, particularly for those who remember the last depression. Comparisons between now and then are, of course, completely untenable. There was no insurance of bank deposits in those days, savings were meagre, unemployment insurance and social security did not exist. Pension and welfare funds were also virtually unknown since rugged individualists were supposed to take care of themselves, or they had to depend on charity.

The foreign situation does not exactly help the Republicans now in power. The mess in which France finds herself in North Africa seems hardly soluble by offers of mediation. The combination of Middle Eastern nations into larger units seems to supersede the Eisenhower Doctrine and similar pieces of paper. Revolutions and counter-revolutions in Indonesia are another disturbing note and the proposed shake-up in the U.S. Department of Defence sounds an ominous note to the average man in the street.

The stock market has reflected this confusion and uncertainty. While the bear market of last year appears to have receded into memory, there has been no decided upsurge of confidence. Prices have moved sideways. It is an improvement, anyway.

A big fight is now going on in Congress over the extension of the Reciprocal Trade Act. Opposing forces are mobilising for another tariff rumble. Both sides admit the prospects for reciprocal agreements extension are very much touch-and-go at this stage.

Tariff Battle

In the last tariff battle, Clarance Randall, consultant to the President, declared that never in the recollection of the oldest members of Congress had there been anything like the pressures that were brought to bear on the law makers. The agreements barely made the grade in 1955. It is generally conceded that this year the pressures will be even greater owing to the recession. Hence, both the high tariff and the low tariff boys are grooming for another fight.

The high-sounding Nation-wide Committee of Industry, Agriculture and Labour on Export Import Policy is headed by O. R. Stackbein who is a spell-binder. The philosophy is simple. It is that high wages and profits are highly vulnerable to competition from abroad. Impressive segments of the textile, chemical and bicycle industries *plus* a smaller group of labour unions have enlisted under the Stackbein banner. They battle the reciprocal Tariff Bill. They take the view that the escape clause compromises in recent tariff Acts have been virtually nullified by the President's refusal to accept Tariff Commission recommendations. Most of the time, the President *has* followed the Commission's findings.

America's oldest protectionist group is the more moderate American Tariff League, headed by Richard H. Anthony. The League has come up with a new sliding-scale import scheme to supplant the inflexible trade agreements. It has the endorsement of some 200 leaders in business, labour and agriculture. Both protectionist groups would like to curb the President's power to act under the escape formulæ.

INDO-U.S. LOAN AGREEMENT SIGNED

TOTAL FOREIGN AID IN 1958-59 ESTIMATED AT RS. 325 CRORES

THE details of the $225 million credit to India announced on the 16th ultimo have now been finalised and letters of commitment have been exchanged between the two countries. As already announced, the loan is to come from two sources, the Export-Import Bank of the U.S. and the Development Loan Fund. After four weeks of discussions with the authorities of the two credit institutions, the three-man Indian delegation, under the leadership of Mr. B. K. Nehru, Secretary of Economic Affairs, Union Ministry of Finance, exchanged on the 4th inst. the letter of commitment with Mr. Samuel Wagh, President of the Export-Import Bank, and Mr. Dempster MacIntosh, on behalf of the Development Loan Fund.

Out of the total credit of $225 million, the Export-Import Bank will provide $150 million and the U.S. Department Loan Fund $75 million, the proportion being more or less in line with that announced by the U.S. Ambassador at a Press Conference held in New Delhi last month. The terms of the loans are as follows:

"A credit of 150 million dollars from the Export-Import Bank will be utilised for the procurement in the United States of capital equipment, machinery and services needed by India in the next twelve months for the following programmes:

"Irrigation and reclamation, power, transport and communications, mining and certain selected industries like textiles, chemical industries, the fabrication of heavy structurals and electrical equipments and machine tools. Payment made in the United States after 28th February for goods under these programmes will be eligible to be paid from this credit. The credit will bear interest at 5¼ per cent. and the term will be 15 years. Repayment of principal will, however, start only on 15th January 1964.

"A credit of 75 million dollars from the Development Loan Fund will be utilised for the purchase of components for the manufacture of trucks, buses and jeeps needed for India's road transport development, purchase of structural steel and other steel products required by Indian railways and for the purchase of machinery for India's jute and cement industries. Repayment will start on 15th March 1959 and can be in rupees. The credit in respect of railway purchases will bear interest at 3½ per cent. and will be repaid in 40 semi-annual instalments. The other credits will bear interest at 5¼ per cent. and will be discharged in 30 semi-annual instalments.

"Both the credits will be from the respective institutions to the Government of India, hence purchasers in India, both in the public and private sectors, will have to follow the normal procedure for negotiation of purchases, etc."

In order to study the details of administrative arrangements in India for import licensing and for payment of foreign exchange and to acquaint themselves with various aspects of Indian economy, a five-man mission, led by Mr. Hawthorne Arey, Director of the Export-Import Bank, will have arrived in India (on the 7th inst.) by the time these lines appear in print. The other members of the mission are: Mr. Raymond L. Jones, Mr. Charles E. Honstan and Mr. Robert L. Moorman (all representing the Bank) and Mr. Edward S. Lynch of the Development Loan Fund. The mission is expected to be in India for three weeks, during which time the members will hold discussions with officials in New Delhi and will later tour the country.

There is no reason to believe that the terms are unsatisfactory or unduly stiff. They are more or less in line with those indicated in the course of the leading article, in our issue of 25th January 1958. May be that the period of repayment of the loans could have been longer than agreed upon, but some other concessions have been granted which will be beneficial to India. The rate of interest to be paid to the Export-Import Bank is ¼ to ½ per cent. less than that charged hitherto by the Bank, namely, 5½ to 5¾ per cent., a cut which is in line with the general fall in interest rates in the U.S. during the last one month. At the time of the announcement of the U.S. loan to India in January last, the Federal Reserve rate was 3 per cent. but this was subsequently reduced to 2¾ per cent. The maximum period for which the Bank usually lends is 18 years, but in the case of India it has fixed the period at 15 years. It may be argued that the term could have been extended to the maximum of 18 years. It must, however, be noted that the period of 15 years now agreed upon is longer than that (of 12 years) originally proposed by the Bank. To this extent it is a concession. The Bank has also granted another concession by allowing the repayment of the principal to commence six years from now, that is, in January 1964, instead of from next year. In other words, the repayment will start only almost at the end of the third year of the Third Plan.

The loan of $75 million to India from the Development Loan Fund is the first to be granted since the establishment of the Fund last year. It is more advantageous to get a loan from the Fund than from the Export-Import Bank, inasmuch as the period of repayment is longer than is the case with the Bank and the loan can be spent in any country in the world, unlike that from the Bank which can be used only in the U.S. On these two grounds, India would have benefited more if it had got a larger share of the total loan from the Fund than it has been granted. If it has not received more, it is due to the fact that the demand for loans from various countries is so large that the Fund's authorities cannot but ration its available resources. It is, therefore, gratifying to note that the Fund has given high priority to India.

Two rates of interest will apply for the loan from the Fund—3½ per cent. for non-profit-making projects and 5½ per cent. for profit-making projects. This is also in consonance with the general expectations. As regards the rate of interest on non-profit-making projects, it will be recalled that there was actually a move in the U.S. to make the Fund's rate competitive with those offered by Russia, and the Senate Foreign Relations Committee agreed that the Fund should be empowered to reduce the rate of interest below 3½ per cent. The reduction in rate, however requires the sanction of the Congress. The Congress is not in session and India cannot afford to wait till it meets to get the benefit of a lower rate of interest, if approved by it. The non-profit-making projects, namely, the railways, is more favourably placed in another respect also. The repayment of the loan it gets will be spread over 40 semi-annual instalments (that is, over 20 years), while the loan for other projects will have to be discharged within 30 semi-annual instalments or 15 years. In either case, the period of repayment is much less than the Fund's originally contemplated maximum time-limit of 40 years. It is even less than that of 25 years, to which Mr. MacIntosh, the Fund's Manager, wanted the repayment period to be reduced for all loans granted by the Fund. Another feature of the loan from the Fund is that the repayment can be made in rupees. This, indeed, is a welcome feature for India.

The availability of the loan assistance from the U.S. has already been taken into account by the Finance Minister in assessing the foreign assistance that may be available to India during 1958-59, when formulating his budget. He has estimated the total foreign assistance at Rs. 325 crores, which, according to him, would "materially help in the implementation of the Second Plan." Up to the end of March 1957, economic assistance to the extent of Rs. 463 crores had been made available to India by foreign countries, but of this only Rs. 219 crores had been utilised up to that date. The balance of about Rs. 244 crores has been mostly committed for the supply of equipment and commodities.

During the current financial year, the World Bank sanctioned loans aggregating Rs. 63 crores—Rs. 43 crores for railway development, Rs. 15 crores for the expansion of T.I.S.Co. and Rs. 5 crores for the construction of the Trombay thermal station. Negotiations are under way for obtaining loans from the Bank for the development of ports, the Koyna hydro-electric project, and the Damodar Valley Corporation. In addition to the $225-million (Rs. 107-crore) loan granted this week, the U.S. is considering, as a matter of high priority, further measures of assistance to India to tide over the present shortage of foodgrains. The Government of India has just concluded an agreement with West Germany for the postponement of certain payments which will fall due in the next three years or so, in respect of the Rourkela steel plant. The sum involved in the agreement is 660 million marks (or about Rs. 75 crores). Early last month, an agreement was signed with Japan for loans aggregating 18 billion yen (or about Rs. 24 crores) through the Export-Import Bank of Japan. This loan will be utilised for purchase of Japanese goods, mostly machinery and equipment. The loans will be repaid within a period of ten years and will bear interest at rates which will be decided on the basis of the rate charged by the World Bank. The U.S.S.R. has offered a credit of 500 million roubles (or about Rs. 60 crores) to be available in the form of technical assistance and equipment for setting up a heavy machine building plant, a plant for the manufacture of coal mining machinery, an optical factory and a thermal power station and for the development of the Korba coalfieds. This credit, like the one given for the Bhilai Steel Plant, carries interest at the rate of 2.5 per cent. and is repayable in twelve equal annual instalments. The U.K. Government has agreed to give in advance on 1st April 1958, three annual instalments of £4 million each due from it under the transfer of pension arrangements made in 1955. An agreement has also recently been concluded with France for economic and technical assistance. Under this agreement, France will finance up to a total of 25 billion francs (Rs. 28 crores) the manufacture and supply of capital goods for which orders are placed by Indian purchasers with French suppliers during the twelve months following the date of the agreement. During the year, Canada has authorised $21 million as assistance to this country under the Colombo Plan. It has also made a special grant of $7 million for the purchase of wheat and has agreed to supply an additional quantity of 400,000 tons of wheat. The Ford Foundation has continued its assistance with a further allocation of $6.2 million.

The various programmes of assistance already in operation or promised have all been taken into account by Mr. Nehru in arriving at the figure of Rs. 325 crores, the sum for which he has taken credit in the Budget. The corresponding figure budgeted for the current year was Rs. 150 crores, but the revised estimate is lower at Rs. 105 crores. The substantially larger credit taken into account for 1957-58 on the basis of the agreements concluded will provide a cover for a substantial part of our requirements. Such large assistance naturally involves large commitments by way of interest payments and capital repayments. The bulk of this burden will have to be met during the Third Plan period. Accordingly, the task before the country, as the Finance Minister has emphasised in his economic survey, is not one of earning foreign exchange to meet the immediate requirements alone but also to cover these future liabilities—not to mention the further requirements for the investment programmes in the coming years.

UNION BANK MAKES GOOD PROGRESS

FRESH CAPITAL TO BE ISSUED

IN consonance with the general trend of banking business and earnings, the Union Bank of India Ltd. (General Manager: Mr. F. K. F. Nariman, Bombay) also has recorded a sizable expansion in its turnover and profit during the year ended 31st December 1957. There has been a marked increase in its deposit resources. The total deposits, as at the end of the year, show a rise of Rs. 7.46 crores (at Rs. 20.73 crores), probably the sharpest rise in any year in the history of the Bank. Advances also have risen by Rs. 1.70 crores, but the pace of increase is much less than that noted a year before, evidently due to the credit restrictions enforced during the year. This has enabled the Bank to strengthen its liquid assets substantially and also to place its large surplus resources with other banks. The gross income of the Bank has gone up by Rs. 35.27 lakhs to a high of Rs. 97.82 lakhs, but the profit shows a rise of only Rs. 3.57 lakhs to Rs. 14.71 lakhs.

With this rise during 1957, the Bank's profit has no doubt established a new high in absolute terms, but a closer scrutiny reveals that, as in the case of many other banks, and for reasons explained in these columns in our earlier issues, the rise in profit of the Bank is not commensurate with the expansion in business. Consequently, the profit margin, as indicated by the ratio of profit to gross income, has shrunk from 17.8 per cent. to 15.0 per cent. At the end of 1954, it was as high as 21.7 per cent.

The increase in profit has naturally meant a larger provision for taxation; this has been raised from Rs. 2.25 lakhs to Rs. 4 lakhs. The reserve fund gets the same amount as in the previous year, namely, Rs. 2.50 lakhs. A sum of Rs. 1.50 lakhs has been set aside for contingency account, which had not received anything last year. A sum of Rs. 1 lakh has been utilised to write off the Bank's premises account, as against *nil*. The Bank has a modern new building in Bombay, as anyone who goes to Dalal Street from Apollo Street can see. No allocation has been made to the investment account, which had received Rs. 1.25 lakh a year ago. The bonus to staff has been raised from Rs. 1.80 lakh to Rs. 2.50 lakhs, but the dividend is unchanged at 8¾ per cent. per annum, free of income-tax, to which level it had been stepped up last year from 7½ per cent.

The following table gives an idea of the Bank's progress in recent years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Gross income	97.82	62.55	40.53	31.07
Interest and discount earned	74.86	48.35	31.52	26.74

Investments	5,00.94	3,48.69	2,94.90	2,34.31
Cash (including money at call and short notice)	5,96.93	1,76.66	1,40.42	74.38
Balance-sheet total	26,81.56	20,72.36	13,05.01	7,95.61
Ratio to deposit of—	%	%	%	%
Advances	50.1	65.8	60.4	65.2
Investments	24.2	26.3	32.4	34.5†
Cash	28.8	13.3	15.4	12.6

† Ratio arrived at after taking into account investments earmarked against borrowings from other banks.

Of the rise of Rs. 35.27 lakhs in gross income during 1957, interest and discount earned account for Rs. 26.51 lakhs and exchange and commission for Rs. 9.30 lakhs. The relatively sharper rise in exchange and commission earned is due to the marked expansion in the Bank's bills business. The bulk of the increase in income has been offset by the rise of Rs. 19.71 lakhs in interest paid and of Rs. 11.67 lakhs in expenses.

With the additions made year after year, the Bank's published reserves have been brought up to the level of its paid-up capital. The most outstanding feature disclosed by the Bank's latest balance-sheet is the rise of Rs. 7.46 crores in deposits. A break-up analysis of the deposits shows that time deposits have gone up from Rs. 3.09 crores to Rs. 5.59 crores, savings deposits from Rs. 77.98 lakhs to Rs. 90.34 lakhs and current and contingency accounts from Rs. 9.40 crores to Rs. 14.23 crores. On the assets side, advances are up by Rs. 1.70 crores, loans, cash credits and overdrafts having risen from Rs. 5.66 crores to Rs. 6.78 crores and bills purchased and discounted from Rs. 3.05 crores to Rs. 3.62 crores. The relatively smaller increase in advances accounts for the drop in credit ratio from 65.8 per cent. to 50.1 per cent. and the rise in the ratio of the liquid assets (investments and cash) to deposits from 39.6 per cent. to 53 per cent.

The Bank's bills business must have expanded substantially during the year, as witness the rise in bills for collection outstanding at the end of the year from Rs. 1.27 crores to Rs. 1.56 crores; two years before it was only Rs. 80 lakhs. Acceptances and endorsements, which had gone up from Rs. 2.18 crores to Rs. 5.23 crores a year ago, have, however, declined to Rs. 3.41 crores at the end of 1957.

Consequent on the sharp rise in deposits during the last few years, the ratio of capital and reserves to total deposits has declined from 12 per cent. in 1953 to less than 4 per cent. at the end of 1957. The Directors have, therefore, decided to increase the paid-up capital to Rs. 60 lakhs from the present level of Rs. 40 lakhs, by the issue of 400,000 new shares of Rs. 5 fully paid up at par to the existing shareholders in the ratio of one share for every two shares. The necessary application to the Controller of Capital Issues for this purpose has already been made.

DENA BANK'S PROFIT MOVES UP

DIVIDEND UNCHANGED

THE Directors' report and accounts of the Devkaran Nanjee Banking Company, Ltd. (Managing Director: Mr. Pravinchandra V. Gandhi, Bombay), for the year ended 31st December 1957 disclose that the commendable progress made by the Bank in the preceding years was well maintained during the year under review also in all directions. The pace of increase in profit, however, has slowed down, but this is due to higher cost of operation.

The Bank has increased its total working funds from Rs. 25.07 crores to Rs. 27.68 crores; its deposits have gone up from Rs. 19.50 crores to Rs. 23.32 crores; it has added six more offices to the list of branches; and the number of its accounts has increased from over 120,000 to more than 132,000. The profit, too, has recorded an increase of Rs. 2.30 lakhs to a record high of Rs. 17.17 lakhs, but this rise does not compare well with that of Rs. 3.76 lakhs noted in 1956.

Notwithstanding the rise in profit the provision for taxation is unchanged at Rs. 8 lakhs, while the reserve fund has been strengthened by the addition of Rs. 5 lakhs, as against Rs. 3 lakhs transferred from the profit for 1956. The allocation to the investment reserve is maintained at Rs. 50,000. The dividend is being repeated at 6 per cent. per annum, free of income-tax, after it had been successively raised from 4 per cent. paid for 1954 to 6 per cent. for 1956.

With the rise of Rs. 18.73 lakhs during 1957, the Bank's gross income has nearly doubled itself in the course of the last three years. Of the increase in 1957, interest and discount earned account for Rs. 13.19 lakhs and commission and exchange for Rs. 5.60 lakhs. As against this, the rise in interest paid is of the order of Rs. 11.77 lakhs and that in establishment and

PROVISIONS OF GIFT-TAX BILL

REBATE ALLOWED FOR ADVANCE PAYMENT

WITH the proposal to tax gifts, announced by Mr. Jawaharlal Nehru, in his capacity of Finance Minister, the Government of India may be said to have put into effect practically all the fiscal measures suggested by Prof. Nicholas Kaldor, the British tax expert, in his report on Indian tax reform, submitted to the Government in March 1956. There are, however, substantial differences between Kaldor's conception of gift-tax and the Gift-Tax Bill introduced by the Government. For, while the former formed part of an integrated system of fiscal reform, and was intended to ensure that the tax was paid by the donee, the latter forms part of a hotchpotch tax system and fixes the responsibility for the payment of gift-tax on the donor, though any failure on his part to pay the tax would bring the donee into the picture and make the latter liable to tax.

Taxation Commission

The Taxation Enquiry Commission, it may be recalled, also discussed the levy of a tax on gifts. The Commission, however, was averse to imposition of the tax till the Government had acquired "considerable experience" in the operation of the estate duty. It said:

"The introduction of a tax on gifts has also been suggested by some witnesses as a means of preventing the evasion of death duties and incidentally also of income-tax. The present provisions regarding the taxation of gifts may be recounted briefly. All gifts *inter vivos* made within two years of the death of a person are chargeable to estate duty. Gifts for public charitable purposes are taxable, if they are made within six months of the death of a person. In both cases an exemption has been provided up to a maximum limit under Section 33 of the Estate Duty Act. Gifts made otherwise than under the above conditions are not chargeable to estate duty. The suggestion now made is that a small charge should be placed on such gifts as and when they are made. The analogy for this purpose is provided by the gift-tax in vogue in many countries, including the U.S.A.

"A gift-tax is theoretically an attractive proposition, but it requires considerable experience of the operation of estate duty before it can be introduced. One of the prerequisites for operating successfully a tax of this nature would be to introduce the submission by income-tax assessees of a statement of assets and liabilities. As more experience is gained of this type of work, the feasibility of introducing a gift-tax can be considered. Moreover, the rates of death duty are at present low. The value of a gift-tax as a second line of defence for estate duty is greater if the rates of the latter are steeply progressive. We are, therefore, not in favour of introducing the gift-tax at this stage."

Explaining the nature of the proposal to tax gifts—the Gift-tax Bill comes into force from 1st April 1958—Mr. Nehru stated that it would not only fill a gap in the scheme of direct taxation but also make evasion or avoidance of tax difficult. He added: "The transfer of properties through gifts to one's near relations or associates is one of the commonest forms of avoidance of not only the Estate Duty but also income-tax, wealth tax and even the expenditure tax. The only way of effectively checking this practice is to levy a tax on gifts. Such a tax is already being levied in other countries, for example, the U.S.A., Canada, Japan and Australia." A similar view is expressed in the Statement of Objects and Reasons, appended to the Bill, which also points out that "with the introduction of this tax, the integrated tax structure which the Government have been aiming at will be complete."

Exemptions

Gift-tax, as already stated, is payable by the donor. But, if the tax cannot be recovered from the donor, it may be recovered from the donee, provided that the amount of the tax which may be received from the donee shall not exceed that portion of the gift-tax which is attributable to the value of the gift made to the donee by the donor as at the date of the gift. All persons (individuals, Hindu undivided families, companies, firms and associations of persons) making gifts are taxable under the Act, except—(*a*) Government companies, (*b*) corporations established by a Central, State or Provincial Act, (*c*) public companies whose affairs are controlled by and a majority of the shares of which are held by six persons or more, (*d*) subsidiary companies of the companies referred to in (*c*), and (*e*) recognised charitable institutions or funds.

Gifts exempt from tax are:

(*a*) immovable property situated outside India; (*b*) movable property situated outside India, where the donor is not a citizen of India or where the donor, not being an individual, is a non-resident; (*c*) savings certificates declared gift-tax free; (*d*) gifts to Government or local authorities; (*e*) gifts to recognised charitable institutions or funds; (*f*) gifts for any charitable purpose up to Rs. 100 in respect of each gift; (*g*) gifts to female dependant members on the occasion of marriage, subject to a maximum of Rs. 10,000; (*h*) gifts to wife, subject to a maximum of Rs. 1,00,000; (*i*) gifts of policies of insurance or annuities to wife, children or dependants subject to a maximum of Rs. 10,000 in respect of each donee; (*j*) gifts under a will and (*k*) gifts in contemplation of death.

Without prejudice to these exemptions, no person need pay gift-tax if the gifts do not exceed Rs. 10,000 in one previous year. But, if the taxable gift to any individual donee exceeds Rs. 3,000 during the year, the donor will have to pay tax in respect of all gifts above Rs. 5,000.

The value of gifts made during a previous year (which is the same as for income-tax assessments) is the subject of charge; gifts are valued normally at the market value of the property as on the date of the gift. The taxable gifts made during five previous years immediately preceding the assessment year (excluding gifts made before the 1st day of April 1957) are aggregated and the rate applicable to the aggregated value is the rate at which tax is charged on the value of the gifts made during the previous year. The rates of tax are:

On the first Rs. 50,000—4 per cent., on the next Rs. 50,000—6 per cent., on the next Rs. 50,000—8 per cent., on the next Rs. 50,000—10 per cent., on the next Rs. 1,00,000—12 per cent., on the next Rs. 2,00,000—15 per cent., on the next Rs. 5,00,000—20 per cent., on the next Rs. 10,00,000—25 per cent., on the next Rs. 10,00,000—30 per cent., on the next Rs. 20,00,000—35 per cent. and on the balance—40 per cent.

Gifts by Wife

Since the liberal exemption given to gifts made to one's wife (Rs. 1 lakh) may lead to avoidance of tax by gifts being made through one's wife, an explanation to clause 3 of the Bill provides that "gifts made by the wife of any person out of any gifts made to her by her husband shall be deemed to be gifts made by the husband." Further, clause 4 seeks to plug other loopholes by which the gift-tax may be avoided. Thus, it brings to charge certain transfers of property which are made for nominal or inadequate consideration or for a consideration which, although it may be stipulated, is not meant to pass actually. Similarly, release or discharge from one's debts or liabilities, appropriations or withdrawals from joint accounts for the benefit of a person other than the person who made the original deposit or investment, are brought within the scope of gifts.

The authorities for assessing and collecting the tax on gifts are the income-tax officers. Persons who have made taxable gifts will have to make a return in a form which will be prescribed. Every person who, during the previous year, has made any taxable gifts should furnish the appropriate return to the gift-tax officer before 30th June of the corresponding assessment year. Broadly speaking, the procedure of assessment, appeals, revision and references are the same as in the Income-tax, Wealth-tax and Expenditure-tax Acts. Thus, the appointment of Appellate Assistant Commissioner of Gift-tax and Commissioner of Gift-tax is envisaged. Penalties are prescribed for non-submission of returns or for concealment and inaccurate submission of returns, the penalty (in addition to the tax) in the former case being 1½ times the amount of tax and in the latter case (in addition to the tax) 1½ times the amount of the tax which would have been avoided if the return had been accepted as correct. Wilful submission of false returns is punishable with simple imprisonment upto one year or fine upto Rs. 1,000 or both.

Appeal

There is provision for appeal by an aggrieved assessee to the Appellate Assistant Commissioner and from the latter to the Appellate Tribunal. In the event of a dispute about the valuation of any gift, the Tribunal may refer the question to two valuers, representing the assessing authority and the assessee, and in the event of a difference of opinion among the valuers, the Tribunal may refer the dispute to a third valuer (nominated by agreement or failing agreement, by the Tribunal) whose decision will be final. The provisions relating to the reference of questions, which involve legal issues, to the High Courts and further appeal to the Supreme Court follow the lines laid down in the Income-tax, Wealth-tax and Expenditure-tax legislations.,

A novel feature of the Bill is the provision for a rebate on advance payments. This is intended to encourage prompt payments. Thus, if a person making a taxable gift of Rs. 10,000 or more pays within 15 days of his making the gift, an amount calculated in the manner indicated below, he will be given credit at the time of assessment, not only for the amount so paid, but for a further sum of 10 per cent. of the amount so paid:

(1) in cases where the value of the gift does not exceed Rs. 50,000—four per cent. of the value, (2) where the value of the gift exceeds Rs. 50,000 but does not exceed Rs. 2,00,000—eight per cent. of the value, (3) in any other case—15 per cent. of the value.

Revenue

The financial memorandum appended to the Bill states that, in the absence of reliable data regarding the number and value of gifts made every year, it is difficult to make even a rough estimate of the number of persons who would be liable to tax. As a rough guess, however, it has been estimated that the number of assessees may be about 10,000 in any one year. Mr. Nehru also pointed out that there was no reliable data for making an estimate of the yield and that, "on a rough guess the yield from the gift-tax has been placed at Rs. 3 crores." The tax, as already stated, will be administered by the Income-tax Department, which is also administering the two new taxes imposed last year, namely, the Wealth-tax and the Expenditure-tax. It is, however, averred that, in view of the fact that the pressure of work on the department has increased as a consequence of the lowering of minimum taxable limit under income-tax to Rs. 3,000, some expansion of staff will be necessary for administering gift-tax; this is provisionally estimated to cost Rs. 8 lakhs.

SHORT-TIME WORKING ON THE INCREASE

U.K.'S FOREIGN TRADE IN TEXTILES—CHINA ADDS 1.2 MILLION SPINDLES

From A Special Correspondent

MANCHESTER, *25th February*

MANCHESTER LETTER

THE fear of widespread short-time working is looming large again among Lancashire textile workers. The chequered post-war fortunes of the cotton industry, so long influenced by factors outside the control of management and trade unions, have taken another turn for the worse in recent weeks. It has become the maxim of many responsible officials not to "talk down" the industry; doing so, they argue, only adds to uncertainty and discourages business. But the more forthright among them concede they can foresee no influence to stimulate a revival of the demand for cotton goods which has fallen off so sharply over recent months.

Latest official returns of unemployment do not give a true reflection of the proportions of short-time working in the mills, nor the extent to which mill order books have run down.

Cotton spinning, weaving and finishing workers unemployed totalled 2,700 when the Ministry of Labour last assessed the position in mid-January. Since then several mills have closed, others have reached the point where production has had to be curtailed and an unofficial estimate puts the effect of these measures at an increase of several thousand in the number of operatives on short time.

The future trend remains uncertain. "Some spinning and weaving mills are booked up until the end of September," said a spokesman for the industry. "Others have only two weeks' work on hand."

The credit squeeze is one of the influences said to be affecting turnover in textile goods. But the principal factor weakening the position of Lancashire mills is the flood of cheap foreign cloth arriving in Britain, principally from India and Hong Kong. Last year imports totalled 372,000,000 square yards and Lancashire's more pessimistic spokesmen fear that, if the Government continues to ignore the industry's pleas for controls to limit the flow, unemployment and short-time working may become more widespread later in the year.

Yarn Price Revisions

When the raw cotton basis, on which American yarn prices in Lancashire are established, was lowered earlier this month it represented the first reduction since December 1956. Easier rates for the United States staple, together with some sympathetic downward movements in similar growths, were responsible for the change, which did not take the market by surprise.

In the intervening 14 months or so, cotton yarn prices quoted by Lancashire spinners have shown some variations, so that the lower counts are now actually cheaper than at the end of 1956, while some of the finer qualities in the American range are several pence dearer. The following table indicates the position:

(In *d.* per lb.)

	Cop twist		Ring beams		Pin cop weft	
	16s	32s	20s	36s	16s	42s
1956						
Dec. 1 ..	43.81	53.76	50.26	61.24	43.41	58.64
1957						
Mar. 9 ..	43.94	53.99	50.43	61.41	43.54	58.92
May 29 ..	43.21	54.21	50.21	61.53	43.81	59.31
July 29 ..	43.71	54.91	50.93	62.55	43.31	60.26
Oct. 19 ..	43.66	54.63	51.42	63.48	43.26	60.04
Nov. 29 ..	44.27	56.29	52.38	65.01	43.87	61.53
1958						
Jan. 11 ..	43.82	56.35	52.33	65.19	43.42	61.55
Feb. 5 ..	42.99	55.52	51.49	64.33	42.59	60.82

Most of the revisions which have occurred in prices have been due to differential changes in the raw cotton basis, which have led to irregular movements in selling rates. In addition, the advance caused by the wage increase to the operatives last summer and a whole variety of rising overhead costs, had to be taken into account.

During the same period, the rise and fall of prices quoted in the Egyptian type yarn section has been pronounced. Reaching a peak around April last, the rates ruling for some of the finest qualities have been reduced by over 20*d.* per lb. In such standard counts as 60s cop twist, the fall has been in the region of 12*d.*

It is virtually impossible to make a completely accurate assessment of the balance of payments situation affecting cotton goods for the simple reason that there is no direct comparison between the appropriate earnings and costs in dealing with a commodity involving the use of a variety of processes. Only a guide can be obtained to the position through the figures issued by the Board of Trade covering overseas business in general.

These are given in broad terms indicating the value of exports and imports, with comparisons of previous years, as illustrated below:

(In £000's)

	1953	1954	1955	1956	1957
Exports—					
Raw cotton	1,748	2,608	2,894	2,148	1,780
Manufactures	117,063	112,051	97,673	88,683	88,500
Total ..	118,811	114,659	100,067	90,831	90,280
Imports—					
Raw cotton	107,159	125,897	98,584	104,196	108,481
Manufactures	10,983	21,647	23,894	25,771	33,455
Total ..	118,142	147,544	122,478	129,967	141,936
Balance	+669	-32,885	-22,411	-39,136	-51,656

The above table shows the bare outline and obviously does not include the numerous cases where overlapping occurs both in the cost of articles used in the distribution of textiles as well as certain processes which call for imported materials. Equally, it does not indicate the shipments of made-up garments or exports of a multitude of other articles which contain a proportion of cotton fibre. Even so, the position is disturbing, as it portrays a lack of balance in the main sources of trading in cotton textiles and particularly the rising cost of imports of foreign-made fabric.

Chiefly owing to the improvement in exports of yarns in the man-made fibres range last year, earnings from synthetics were over £1,000,000 higher at £32,989,000. This compared with the peak figure of £40,049,000 obtained from overseas trade in synthetic fibre yarns and woven fabrics in 1954. Unfortunately, the cost of imported yarn and cloth in this branch showed a marked increase in 1957, being £13,868,000 against £11,086,000 in the previous 12 months.

There was little change last year in the position of miscellaneous textile manufactures, other than synthetics, cotton and wool. Export earnings of £84,869,000 were £400,000 higher than in 1956, while the cost of imports was £30,874,000 against £29,995,000. In addition, £39,900,000 was paid for imports of textile fibres and waste, excluding cotton and wool.

Individual sections within the various branches of the textile trade have undoubtedly been able to balance their respective budgets, but, without delving very deeply into such matters, it is impossible to provide details. From the country's economic viewpoint, too, the employment offered to hundreds of thousands of workers, both in the production and distribution of textiles, is a very important factor.

Spinning Mill Changes

A chief feature of the current cotton spindleage statistics, published by the International Cotton Federation, is the inclusion of figures supplied by the Russian authorities. They show that the Soviet Union has the fourth largest spinning industry in the world, by volume of spindles, and the second largest by consumption of raw cotton.

Returns relating to July 1957 indicate a further contraction in European spindleage, although it still represents just about half the world total. Compared with the previous year, there was a fall of 1,500,000 spindles in Britain, but an increase of 700,000 spindles in France.

The net world gain in spindleage was 551,000—to a grand total of 129,422,000 spindles. Most of the expansion was in Asia, where Chinese mills added 1,200,000 spindles, India 300,000 and Japan 500,000.

Raw cotton consumption during the season to the end of July again established a record at 42,438,000 bales. This was due not only to the increase in spindles, but also to the increased average production per spindle, which rose from 302.91 bales per thousand spindles to 327.90 bales. This trend has been apparent throughout the past decade and is mainly due to the longer number of hours run in the coarser yarn mills and more shift working.

Even when idle spindles are omitted from the account, Britain's mills still worked fewer hours than any of their rivals. During the 12 months under review, the average spindle-hours operated in the United Kingdom were 2,124; in Hong Kong, they were 8,158; in India 5,932; in the United States 6,117; and in Japan 4,867.

RAILWAY FREIGHT RATES ON COAL

RAMASWAMI MUDALIAR COMMITTEE RECOMMENDS UPWARD REVISION

THE Railway Freight Structure Enquiry Committee, under the chairmanship of Dr. A. Ramaswami Mudaliar, has, in its report, accepted in principle the present policy of quoting specially low railway freight rates for coal, which, it says, is in keeping with the treatment accorded to this commodity generally on railways the world over. Nevertheless, it is of the opinion that the existing scales of rates for coal ignores the "cost-of-service" principle and is not quite realistic under the present conditions. The Committee is, therefore, unanimously of the opinion that the freight rates for coal need an upward revision, with a view to making it more rational and realistic.

The coal industry has all along received most favourable treatment in respect of railway freight rates, and extremely low rates are being charged on the ground that coal is an important basic raw material for many industries. Another consideration for this special treatment is that coalfields are mainly concentrated in Bengal and Bihar and the coal from these fields has to be moved over long distances to Madras and beyond in the south and Bombay and beyond in the west. The specially low rates charged for coal have considerably helped the development of coal production in the country and the transformation of the country from an importing one to an exporting one. Almost from the very beginning, coal in wagon-loads from Bihar and West Bengal coalfields was charged according to a telescopic scale of rates on the through distances, while the scale of charges for other general merchandise was on a flat scale. Even with the introduction of the telescopic scale on the through distance for all commodities in the revised rates of structure of 1948, coal was differently treated and a separate scale was prescribed for coal. The old pattern of legs was continued, thereby deviating from the patterns adopted for general goods. The following is the scale of rates now applicable to coal:

Distance	*Rate per maund per mile* Pie
1 to 200 miles	0.30
201 to 400 miles	0.10
401 to 1,000 miles	0.08
Over 1,000 miles	0.07

The above rates are applicable to coal sent at owner's risk. For coal sent at railway's risk, the rate per maund is 20 per cent. more than the owner's risk rate, exclusive of terminal, transhipment and other extra charges, except for traffic in bulk, involving transhipment *en route* due to break-of-gauge or ferry, for which class I rate only is chargeable.

Till October 1956, the terminal charge for coal in wagon-loads was less than the standardised terminal charge for other general merchandise and no short-distance charge was levied. Since 15th October 1956, however, this position has been altered and coal in this respect is now treated in the same manner as other general merchandise.

Not Realistic

While the Railway Freight Structure Enquiry Committee accepts the principle of quoting specially low rates for coal, it is of the view that the existing coal scale, with a sudden and precipitate drop from 0.30 pie to 0.10 pie after 200 miles and a further decrease to 0.08 pie for the next 600 miles and down to 0.07 pie for distances beyond 600 miles, ignores the "cost of-service" principle and is not quite realistic under the present conditions. It is pointed out that, beyond 1,000 miles, coal at present pays only 7 pies per maund for every 100 miles of haul. While the price of coal has gone up by almost 400 per cent. as compared to 1939, the freight on coal is only 70 per cent. higher than that charged in 1938-39. "The low freight rates, particularly over longer distances," the Committee points out, "must be causing the railways increasing loss. Moreover, with the much steeper sea freight prevailing on coastal routes and with the rapidly increasing demand for coal movement, more and more coal has to be handled by railways over long distances and we consider that some at least of the transport capacity utilised for coal movements could be better used for other important traffic waiting to be lifted. It is, therefore, necessary that the coal rates are rational and realistic."

While the Committee is unanimously of the view that the coal rates should be modified, it has not made any definite suggestion in this connection. It has, however, forwarded to the Goverment, for its consideration, two alternative proposals regarding the manner in which the freight rates on coal may be modified. Evidently, opinion among the members of the Committee was sharply divided on either of the proposals; for the Committee has thought fit to forward both the proposals to the Government. The first proposal is: "In the context of the complete standardisation and rationalisation of the freight structure and the considerable degree of flexibility that has been secured in it, there is no justification for keeping coal out of the general rates structure and the time is opportune to assimilate coal into it and prescribe a suitable classification within this structure. With this assimilation in view, it is suggested that coal in wagon-loads may be classified 25 per cent. and 32.5 per cent. in smalls. This classification will apply at owner's risk. At railway risk, the rates will be 20 per cent. higher."

Second Proposal

The second proposal is: "Undue importance should not be given to the desirability of assimilation ignoring other considerations. Coal has always been treated differently in respect of freight rates and it should not necessarily be in accordance with the percentage scheme accepted for all other commodities. It is, therefore, suggested that it would be more realistic to fix the coal scale independently of the scheme of percentage rates." The following scales of rates are recommended under this proposal:

Distance Miles	*Rate per maund per mile* Pie
1-25	1.10
26-75	0.36
76-150	0.32
151-300	0.24
301-500	0.15
501-800	0.10
801-1,200	0.07
Over 1,200	0.05

The present and proposed freight rates for representative distances under each of these proposals are compared in the following table:

(Per ton)

Representative distances (in miles)	Existing rates: Prior to 15th Oct., 1956	Existing rates: From 15th Oct., 1956	Proposed rates: Under 25 per cent. class of general structure with ceiling at 800 miles	Proposed rates: Under the separate coal scale proposed
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
25	2 3	3 13	3 5	4 0
50	3 3	4 13	4 9	5 4
75	4 5	5 1	5 11	6 9
100	5 5	6 1	6 13	7 11
200	9 9	10 5	10 13	11 11
300	10 15	11 11	14 8	15 1
400	12 6	13 2	17 10	17 3
500	13 8	14 4	20 9	19 5
600	14 10	15 6	23 0	20 12
800	16 15	17 11	27 15	23 9
1,200	21 3	21 15	27 15	27 9
1,500	24 2	24 14	27 15	29 11

It will be seen from the above table that the freight rates under either of the proposals are higher than those which prevailed prior to 15th October 1956. As compared with the enhanced rates introduced on 15th October 1956, consequent on the adoption of the revised terminal charges and the new imposition of the short-distance charge, the rates under the first proposal will be slightly less for distances up to 50 miles. In the opinion of those members of the Committee who favour this proposal, there cannot be serious objection to the cut in rates for distances up to 50 miles. Justifying this reduction, they point out:

"The rates for coal have all along been held to be paying for the lower leads and the position before 15th October 1956 was considered satisfactory. For important industries, which are situated near the coalfields for the reason that they require very large quantities of coal, the burden of freight rates should not be enhanced further and might even be justifiably slightly lower than that imposed as a result of changes introduced on 15th October 1956, particularly as an additional freight burden is being imposed generally on all industries."

It will be noted that, under the first proposal, there will be sudden and sharp increases in rates for coal moving over long distances. It is, however, suggested that, as a first step towards complete rationalisation and integration of rates, a ceiling on rates for coal may be placed for the present at about 800 miles or even 1,000 miles, instead of the general ceiling of 1,500 miles.

It is feared that such a rise in rates, particularly for long distances, will adversely affect industries depending on coal fuel or thermal electricity. In reply to this point of view, the Committee points out:

"The percentage of cost of fuel, whether coal or thermal electricity, on the *ex*-factory cost of product has been worked out in respect of some 28 industries in the same manner as had been followed in working out such cost in the Report of the Sixth Census of Indian Manufactures, 1951, on the basis of coal freight rate of 1951 and the proposed freight rate. Both on the 1951 freight and on the proposed increased freight rate, the cost of coal entering into the *ex*-factory value of the product is comparatively very small, except in the case of certain industries, i.e., iron and steel, cement and ceramics. It was also pointed out to us at Kanpur that the increase in freight rates for hard coke would affect the iron foundries scattered throughout the country, but it is considered that the changes that are proposed are not likely to affect these industries also."

Rebate

If, however, there be a few industries in which the increased fuel costs affect them adversely and they are confronted with real difficulty as a result of the revision in the coal scale, the supporters of the first proposal suggest that suitable reduced rates in the shape of a rebate may be granted in such cases. They have, however, pointed out that the decision to grant such rebates must be taken by the Ministry of Railways and not by individual administrations.

Under the second proposal, there will be an all-round increase in rates for all distances (including short-distance traffic) and the rise will be sharper than that under the first proposal for all distances except for over 300 miles and up to 1,200 miles. Justifying the increase in rates for short distances, the supporters of this proposal point out that, "if the increase on the long-distance traffic on the basis of the percentage rate proposal can be considered insignificant, the increase on the short-distance traffic under this proposal cannot be considered as unduly burdensome to industries nearer the coalfields." They are also opposed to any rebate being given to any industry on the ground of undue hardship caused by the increased freight on coal and they point out that under their scheme there will be no need for giving any rebate.

Rail and Steamer Rates

Another problem concerning the coal freight rates, which the Committee examined, is the disparity between the freight costs for long-distance movements by rail and by coastal steamers. The difference in the rate per ton for movement of coal to Madras, Bombay, Ahmedabad, etc., from the coalfields is significant. The Committee, while emphasising the need for encouraging such movements by coastal steamer, suggests that rail freight rates from the collieries to Calcutta and from the receiving ports to centres of consumption should be calculated at the through telescopic basis. In this connection, the Coal Consumers' Association, Calcutta, submitted to the Committee the urgent need for equalising the freight burden on coal from the Bihar-Bengal Coalfields to places in western and southern India over the all-rail and rail-*cum*-sea routes by the grant of a suitable subsidy to those consumers who were obliged to avail of the dearer coastal route. The grant of a subsidy is, however, opposed by the Ramaswami Mudaliar Committee. Thus, it points out:

"At present the gap between the two rates is so high as to make the grant of a subsidy, not a practical proposition. The suggestion to calculate freight rates on the railway portions of the rail-*cum*-sea route on the basis of the combined distance from the collieries to the port and from the importing port to destination points narrows down the difference in the overall freight burden between the two routes. We have already referred to the fact that, with the rapidly increasing industrialisation of the country, the demand for coal movement over long distances by rail will increase and that it is desirable that as far as possible a good portion of this coal should go by the sea route and it is in the interest of the railways that such alternative route is availed of to the maximum extent possible."

If the concession recommended by the Committee is not found sufficient to bring about the desired result, the Committee suggests that the Government may consider the question of giving any other concession. The Committee has, however, made it clear that any financial burden of such a concession should be borne by the general revenues of the Government and not by the railway revenues.

Architects of India's steel industry: (from L to R) Jamsetji Tata, R. D. Tata, Ratan Tata and Dorabji Tata

The Spirit of Adventure

"Tatas represent the spirit of adventure."

—Mahatma Gandhi

"Jamshedji Tata laid the foundations of heavy industry in India by starting Steel and Iron Works in, what came to be known as, Jamshedpur... It had a precarious childhood but the war of 1914-18 came to its help. Again it languished and was in danger ... but nationalist pressure saved it."

—Jawaharlal Nehru
from The Discovery of India

"Be sure to lay wide streets planted with shady trees, every other of a quick growing variety. Be sure that there is plenty of space for lawns and gardens. Reserve large areas for football, hockey and parks. Earmark areas for Hindu temples, Mohammedan mosques and Christian churches."

—Jamsetji Tata to his son Dorabji, in 1902, six years before work started at Jamshedpur

"We are constantly accused by people ... of wasting money on the Town at Jamshedpur. We are asked why it should be necessary to spend so much on housing, on sanitation and water-works, on roads ... on hospitals and on welfare. People who ask these questions are sadly lacking in imagination. We are not putting up a row of workmen's huts at Jamshedpur; we are building a city..."

—R. D. Tata addressing Tata Steel shareholders on October 25, 1923

"So far we have but scratched the surface of this great land. Vast resources still remain unexploited and unused in the service of man. To think that hundreds of thousands of people should ever fall at the touch of famine, or die from disease aggravated by insufficient nourishment, while there is so much latent food and wealth in the country!... Is it not time to stir ourselves, to wake up to the great opportunity and the stern duty before us, the task of India's industrial regeneration?"

—Dorabji Tata addressing Tata Steel shareholders in 1918

"We are like men building a wall against the sea. It would be the height of folly on our part to give away any part of the cement that is required to make the wall secure for all time. That is why we and you have to use this money... to build up this great industry... And we should not think of dividends until we have done that...

"...Make no mistake about this point. We hold this money in trust for you. But you yourselves hold it in trust for the Indian Nation..."

—R. D. Tata addressing Tata Steel shareholders on June 4, 1925

The Indian Steel Industry celebrates its 50th Anniversary

THE TATA IRON AND STEEL COMPANY LIMITED

PROGRESS AND PROBLEMS OF VANASPATI INDUSTRY

WAYS AND MEANS OF ENCOURAGING COTTONSEED CRUSHING

DESPITE the fact that production of vanaspati (hydrogenated vegetable oil) in 1957 crossed the three-lakh-ton mark to reach an all-time peak of 300,400 tons, the vanaspati manufacturing industry is still beset with many problems. It is one of the few major consumer goods industries which have yet to achieve optimum use of its installed production capacity. Only 58 per cent. of the industry's capacity, it may be noted here, was put to use last year. The lack of adequate supplies of edible oils at economical prices, shortage of raw materials other than oil (such as coal and tinplate), transport difficulties, etc., continue to impede the development of the industry. The progress achieved so far, in spite of these difficulties, is, however, remarkable. This achievement itself indicates that, provided conditions conducive to its development are created, the industry could make a significant contribution to the economy of the country and the health of the people. The vanaspati industry can also help augment the foreign exchange receipts of the country. Vanaspati is a promising export item, particularly to countries in West Asia which, with annual consumption exceeding 25,000 tons, offer an excellent export market.

Record Production

According to the Annual Report for 1957 of the Vanaspati Manufacturers' Association of India, production of vanaspati last year, as noted earlier, reached a record figure of 300,400 tons. The high level of output was accompanied by an equally high level of demand. The low stocks of vanaspati at the end of 1956, a sufficient supply of edible oils, and a good marriage season contributed to this result. Consequently, the upward trend of production of vanaspati, which had received a setback in 1956 due to shortage of edible oils, was resumed last year. Production of vanaspati during the period 1951-57 increased by 73 per cent. from 172,320 tons in 1951 to 300,400 in 1957. As compared with this, production of sugar, cloth, soap and shoes increased, during the period, by 82 per cent., 43 per cent., 34 per cent. and 29 per cent. respectively. This indicates that vanaspati has obtained its due share of the additional purchasing power placed in the hands of the people as a result of economic development. The following table indicates the regional pattern of production and consumpton of vanaspati during the last three years.

(In tons)

Region	Production		Consumption	
	1956	1957*	1956	1957*
Andhra, Madras, Mysore and Kerala	22,025	28,350	17,035	19,400
Bombay, Madhya Pradesh and Rajasthan	101,791	117,400	64,928	81,000
Uttar Pradesh, Punjab and Delhi	78,055	94,980	98,006	116,300
West Bengal, Bihar, Assam and Orissa	53,275	59,670	56,393	66,000
Supplies to Defence Services	..	..	6,960	10,200
Exports	..	..	10,653	4,200
Total	255,146	300,400	235,975	297,100

* Estimated.

During the year under review, the Government showed active interest in promoting export of vanaspati as a means of increasing foreign exchange earnings. But export could not be maintained even at the level of the previous year. It declined from 10,653 tons in 1956 to a mere 4,200 tons in 1957. The primary cause for this sharp fall in export was that Indian vanaspati was dearer than that of its competitors. This in turn was the result of the relatively high prices of groundnut oil in India, as compared with the world prices of other edible oils. Until edible oil prices in India come down to parity with the prices of edible oils in Europe, it will be difficult to make any significant progress in exports. In order to make Indian vanaspati competitive with foreign products, the Association had made representation to the Government and the Export Promotion Committee to grant a rebate of excise duty paid on vegetable oils used in the manufacture of vanaspati for export and help reduce the packing cost. The Government has accepted the first suggestion, with effect from 1st October 1957 last, while the second is still under consideration.

Supply of Vegetable Oils

With the rapid rise in the production of vanaspati, the availability of edible oil at reasonable prices is becoming a matter of increasing concern to the manufacturers. The failure of oilseeds output to rise to the expected levels, owing to inadequate and untimely rains and the consequent rise in prices of seeds have compelled the Government to stop exports of edible oils. Greater attention has also come to be focussed on the question of increasing other edible oil supplies in India. Cottonseed, with an annual availability exceeding 1,500,000 tons, is a promising source of increased oil supply. But it still remains to be exploited fully. Only a beginning has been made in this direction. The Government has shown an active interest in the encouragement of cottonseed crushing by abolishing excise duty on cottonseed oil and export duty on cottonseed cake and continuing a liberal export policy in respect of these. The Government has also asked the vanaspati industry to play an active part in it by establishing cottonseed crushing units and using cottonseed oil in the manufacture of vanaspati in increasing proportions. As Mr. S. H. Turner, Chairman of the Vanaspati Manufacturers' Association of India pointed out, in his address to the twelfth annual general meeting of the Association, the fact that cottonseed crushing has hardly developed, despite the inducements given to it, suggests that this industry is faced with special technical and economic problems and that, unless these are satisfactorily solved, the prospects for cottonseed oil industry are none too bright. Mr. Turner, therefore, did well to highlight these problems and suggest solutions for them. These are reviewed in the following paragraphs.

Cottonseed Crushing Neglected

India has had a relative abundance of oilseeds with higher oil contents than cottonseed. These seeds are easy to crush and they yield oils which can be directly used for edible purposes. This is not the case with cottonseed and hence it has been neglected by the oil crushing industry and is being used as cattle-feed. This long-established practice has now become the chief impediment to the progress of the cottonseed crushing industry.

As the price of cottonseed is determined by its demand as cattle-feed, whereas prices of cottonseed oil and oilcakes are influenced by the relative prices of other oils and oilcakes, the crusher is frequently faced with lack of parities between these prices. Thus, the crushing of cottonseed is rendered uneconomical. Further, the marked preference for cottonseed as cattle-feed makes the sale of cottonseed cake and hulls difficult. Since cottonseed yields only 12 to 15 per cent. oil, the price of the oilcake, hull and linters, which constitute about 80 per cent. of the production, determine the profitability of cottonseed crushing. This, as Mr. Turner rightly pointed out, is the crux of the problem. Until farmers stop using cottonseed and take to its cakes and hulls as cattle-feed, cottonseed crushing could not be an economic proposition.

From this analysis flows the suggestion of Mr. Turner that, if cattle-owners can be persuaded to pay a fair price for the cake which, by reason of its higher protein content, is a more nutritious animal food than the whole cottonseed and use it, instead of cottonseed, as cattle-feed, then the cottonseed industry could progress and prosper. Prices of Indian cottonseed oil would then become more competitive both in the internal and export markets than they are now. Mr. Turner is convinced that, if this fundamental requirement is not met, the incurring of additional capital expenses on modern cottonseed pre-treatment and crushing equipment will be a waste. For, as he puts it, "as long as the crusher has to buy seed in competition with cattle-owners at high prices, sell his cake at low prices and compete with groundnut oil, his industry rests on economically insecure foundations."

The consumption of cottonseed oil by the vanaspati industry is of less fundamental importance to the development of the cottonseed crushing industry than the establishment of a growing and profitable market for its principal product, namely, oilcake. Nevertheless, the industry can play a significant role in encouraging cottonseed oil crushing. The Government is anxious to see that the vanaspati industry provides an outlet for cottonseed oil, in order to encourage the crushing of the latter. For this purpose a meeting was convened by Mr. Manubhai Shah, Union Minister for Industry, on 17th August 1957, and requested vanaspati manufacturers to agree to use cottonseed oil upto a certain percentage and gradually increase this percentage, so that 60,000 tons of cottonseed oil could be produced by 1960-61 for use by the vanaspati industry. The vanaspati industry is also willing to co-operate, in any reasonable manner it can, in the task of building up the cottonseed crushing industry. This is borne out by the fact that, despite the difficulties in obtaining good quality oil and the technical obstacles in processing it, vanaspati manufacturers have voluntarily agreed to use this oil to the extent of 2½ per cent. of their oil requirement during 1958. Some manufacturers have even ventured into the field of cottonseed crushing.

It is, however, an oversimplification of the problem to think, as some people do, that cottonseed crushing industry could be developed rapidly if only the vanaspati industry would use all the cottonseed oil produced in India. As the crushers themselves admit, disposal of oil is not difficult. The fact that substantial quantities of cottonseed oil have been exported and its internal price has remained above that for groundnut oil for long, clearly support this view. The basic problem, according to Mr. Turner, is to find remunerative outlets for other products of cottonseed and, obviously, in this, the vanaspati industry cannot help. The Cottonseed Oil Committee, appointed by the Government to recommend measures for rapid development of cottonseed crushing, is studying the entire problem and it may be able to suggest ways and means whereby prices of cottonseed and its products could be brought into parity.

Other Problems

Now to turn to the other problems of vanaspati industry. The supply of coal and tinplate caused considerable anxiety to most of the factories. Although the factories have been allotted sufficient coal quotas, they received only partial supplies owing to transport difficulties and, as the quotas were valid for only 45 days, the balance of the quotas not delivered within the period was cancelled. The Government did not accept the Association's suggestion to make a substantial part of the coal quotas non-lapsable but granted *ad hoc quotas* to factories whenever transport was available to enable them to build up buffer stocks.

Procurement of tinplate for containers for packing vanaspati was extremely difficult during the year, thanks to restrictions on import of tinplates and the decline in indigenous output. The quotas of indigenous tinplate allotted on the basis of 50 per cent. of capacity of tin fabricating plants of vanaspati factories, inadequate as they were, were further slashed to 30 per cent. of the basic quota for the first quarter of 1958. Factories which have no tin fabricating plants found it extremely difficult to procure sufficient number of containers even at very high prices. To meet the shortage in the supply of tinplates, the Association made a number of suggestions. They were: (1) as food packing industries require prime coke quality tinplates, which cost much more than that of electrolytic or waste quality and indigenous tinplate is of prime coke quality, the requirements of foodpackers should be met from the domestic output and imports of only thinly-coated, electrolytic quality or black sheets should be allowed for non-food industries, (2) non-food industries might be persuaded to use second-hand containers and (3) in order to check profiteering by some of the fabricators, tinplates should be allotted to users who may get their containers fabricated. The Government was not inclined to accept these suggestions. It, however, agreed to issue import licences to actual users, who had imported tinplates in the past, to meet their minimum requirements and also permitted the use of second-hand containers. But this did not serve to relieve the situation, as most of the vanaspati factories were used to relying on established importers to meet their requirements and the new arrangement caused hardship to them. The use of second-hand containers were

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Union Bank of India, Limited, as at 31st December, 1957, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the audited Returns of Kalbadevi, Abdul Rehman Street, Mandvi, Bhat Bazar, Princess Street, Zaveri Bazar, Rajkot and Surat Branches and the unaudited Returns from fifteen other Branches, not visited by us for the purposes of this Report.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949, read with the Provisos to sub-sections (1) and (2) of section 211 and sub-sections (5) of sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be, and are not, drawn up in accordance with the Sixth Schedule of the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) we have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank, so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for Banking Companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1957, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

MINIMUM PRICES FOR GUNNIES FIXED

I.J.M.A.'S BID TO CURB SPECULATIVE ACTIVITY

THE Committee of the Indian Jute Mills' Association has advised the member mills not to sell gunnies below certain specified minimum prices. These prices are based on Rs. 100 per 100 bags for B Twills, Rs. 39.50 per 100 yards for 40 in. 10 oz. hessian and Rs. 29.75 per 100 yards for 40 in. 7½ oz. hessian. The decision to this effect was taken by the Committee on the 26 ultimo as a measure to arrest the recent sharp recession in gunny prices, following the speculative activity in the *fatka* market. Explaining the reasons which compelled the Committee to take this step, the Indian Jute Mills' Association, in the course of a Press note, says:

"To avoid any possible misconceptions the Indian Jute Mills' Association thinks it desirable to explain briefly the impelling reasons which led to the recent decision not to sell jute manufactures at less than certain specified prices. For several weeks, gunny prices had been falling heavily, and in the week immediately preceding the decision the fall had been greatly accelerated. The decline in prices, which was quite unwarranted by the statistical position or prevailing market conditions, was a direct result of the activities of speculators in the *fatka* market and was having a most serious effect, not only on raw jute prices, with the danger of repercussions on India's drive towards self-sufficiency in jute, but also on the foreign exchange earnings of the country. The precipitated fall in prices was also causing grave embarrassment to genuine traders, whose position as holders of goods was being imperilled, and above all the confidence of overseas buyers in the Calcutta market was being completely undermined. In these circumstances, immediate action was clearly necessary to curb speculation and restore a measure of stability to the market, and the decision not to sell below the prices specified was taken by the Association in the knowledge that its anxiety over the situation was fully shared by the Government of India."

The jute mills in Calcutta are passing through one of the most depressing periods in many years. This has been due mainly to disappointing news from overseas consuming countries. The setback in business activity and the rising trend of unemployment in the U.S. during the last few months have had their impact on U.S. burlap consumption. There has been a sharp fall in the American cotton crop in the 1957-58 season which has meant a fall in consumption of cotton bagging. Enquiries from Australia have also slackened, consequent on the partial failure of the wheat crop in that country. Consequently, there has been a decline in exports of jute goods from India during the last few months. With no marked expansion in internal consumption also, the stocks of goods with mills have accumulated. Though the stocks are still lower than those a year ago, the uncertainty about the world business recession has been exploited by the speculators and prices have been depressed to unduly low levels, the downward trend having gathered momentum in the week prior to the announcement of minimum prices by the I.J.M.A. Thus, ready hessian 40 in. 10 oz. which had stood at a high of Rs. 43.25 per 100 yards in the middle of October last, slumped to a low of Rs. 38.15 just prior to the I.J.M.A. announcement and ready B. Twills were marked down from Rs. 121.60 per 100 bags to Rs. 94.60. These were, perhaps, the lowest levels to be seen in the last ten years. The decline in prices to attractively low levels has, instead of inducing overseas buyers to enter the market, kept them away, presumably in anticipation of further decline in prices. Some of the mills are said to have even tried to sell their goods at a discount, with a view to encouraging buyers, but the response is stated to have been very poor.

The fixation of minimum prices has, however, helped the market recover sizably, the latest quotation for ready hessian 40 in. 10 oz. being Rs. 39.40 per 100 yards and ready B. Twills Rs. 93.90 per 100 bags, but confidence has not been restored and prices are still below the minimum prices fixed by the I.J.M.A. The move to fix minimum prices, as is clear from the I.J.M.A.'s Press note, was to curb speculative activity in the *fatka* market, which has depressed prices to such unduly low levels as are not warranted either by the statistical position of mills or by the current market conditions. It was also intended to avert a threatened crisis on the settlement day (29th February). From this point of view, the I.J.M.A.'s decision is to be welcomed. It, however, remains to be seen how far it will restore confidence in the overseas markets. The fixation of minimum prices is not backed by any specific programme of support either by the industry as a whole or by the Government. At best, it can only be a palliative designed to defeat the efforts of speculators. But it must not be forgotten that, ultimately, market prices are determined by the demand and supply position. Unless overseas buyers are convinced that prices of Indian jute goods are competitive, any large expansion in offtake cannot be expected, more so in the present context of a business recession in some of the important importing countries. Then there is the allied question of raw jute prices. The present low prices of raw jute may be attractive to mills, but they are not so for jute growers. The sowing season will be in full swing shortly and, unless prices improve, cultivators will be tempted to divert their lands to growing more remunerative crops. A compromise solution, therefore, lies in assuring a fair return to jute growers and a remunerative raw jute price to manufacturers. This can be done only by increasing the yield per acre of the land under jute crop. Thus, one comes back to the age-old problem of improving the efficiency of agriculture.

IMPORTS OF HESSIAN BY PHILIPPINES

A proposal by the Philippine National Marketing Corporation to include hessian cloth in its importation programme has revived the controversy over the existing ban. A committee named by the Philippine Cabinet is at present studying the proposal. The Philippine Chamber of Industries has opposed the move by describing it as economically unsound and inconsistent with the administration's policy to encourage local industries. The Chamber has sent a protest note to the Cabinet Committee.

URUGUAY MANUFACTURES JUTE GOODS

Uruguay has commenced internal manufacturing of jute, according to the *Jute Bulletin* of the Indian Central Jute Committee, with a view to reducing the country's dependence on Indian supply of jute products and conserving foreign exchange. Uruguay is a leading wheat-producing country, its other main commercial crops are cotton and oilseeds. Requirements of hessian to handle these crops are at present obtained entirely from India at an annual cost of around $4 million. The first plant to produce hessian for bags, containers and general packing purposes was opened in Montevideo in November 1957. It has 200 looms with a daily capacity of 82,020 yards of hessian. The new plant when working at full capacity is expected to produce hessian valued at $2 million, thus enabling Uruguay to reduce imports to half and conserve valuable exchange. It is proposed to operate the plant in three shifts by 470 workers and also to grow the required raw material locally.

CUBA TO GROW KENAF

Another country which is keen on doing away its burlap imports is Cuba. This country's annual requirements are 45 million new bags to pack sugar and other agricultural products. It proposes to undertake shortly commercial production of kenaf, a soft tropical fibre widely used as a substitute for jute, not only to supply its own requirements but to export to the U.S. and other markets. The U.S. is viewed as a potential market for Cuban kenaf. That country imports 750 million lbs. of jute products every year. Europe's annual jute imports total 1.3 billion lbs. Much of this is resold in Western Hemisphere as burlap, sacking and twine. The Cuban Government is studying the possibility of mechanical harvesting, as well as de-fibering, spinning and weaving techniques. Initial experiments have been successful and commercial processes may be developed soon. High grade fibre will be cultivated for export to U.S. and other markets.

India purchased 600,000 bales of raw jute from Pakistan during 1956-57, out of the latter's total export of 4.6 million bales during the year, according to the Pakistani Government's White Paper on finance. This is less than India's purchases last year from Pakistan, which stood at 1.38 million bales. The White Paper attributes the fall in exports to "large-scale smuggling of raw jute" from Pakistan.

TATA STEEL COMPLETES FIFTY YEARS

REMARKABLE STORY OF ITS GROWTH

WHAT was fifty years ago a tiny village with a few mud huts—Sakchi, in the jungles of South-east Bihar—stands today as one of the best known cities in India. It is now Jamshedpur, the city where most of India's steel is produced. In this city is situated the Tata Iron and Steel Works, the largest single unit in the private sector and the biggest and most up-to-date, integrated manufacturer of steel in the whole of Asia. The working capital of the Company aggregates nearly Rs. 100 crores and the net sale of products is at an annual rate of over Rs. 40 crores. The Company gives direct employment to more than 60,000 persons and distributes to them by way of wages and salaries, as well as other provisions including profit-taking bonus, every year as much as Rs. 12—13 crores, which represents nearly 28 per cent. of the Company's total revenue. So remarkable has been the progress made by the Tata Iron and Steel Works that, on the occasion of its Golden Jubilee celebrations, inaugurated by the Prime Minister, Mr. Jawaharlal Nehru, on Saturday, the 1st inst., the Company could certainly look back upon its career with justifiable pride and satisfaction. The celebrations must be regarded as of national importance, because it is this Company which is the pioneer in the Indian iron and steel industry, although some stray attempts to produce steel were made before—Farquhar and Motte in 1775-95, the Porto Novo Steel and Iron Company in 1870-74 and the Bengal Iron and Steel Company, Ltd., in 1889-1905.

Establishment

Over half a century has elapsed since the Company was established; it was on 27th August 1907 that the founders of the Company issued a prospectus in Bombay to raise the capital requirements for erecting the steel plant. Within three weeks, the entire capital of Rs. 2.17 crores (£1.63 million) was secured, the number of persons contributing to it being about 8,000. The first steel product rolled out of the plant in February 1912. Since then, the Company has produced more than 22 million tons of steel that has helped India to advance on the path of industrialisation, on the one hand, and to save hundreds of crores of rupees in foreign exchange, on the other. It has paid Rs. 175 crores as wages and bonus, Rs. 45 crores as dividends, Rs. 70 crores as taxes and Rs. 40 crores as contribution to the Government's Price Equalisation Fund.

Behind the giant enterprise of Tata Steel stands the personality and genius of Jamsetji Nusserwanji Tata, that pioneer of modern Indian industrialisation from whose vision, faith and effort have flowed so many achievements in the industrial field. Jamsetji Tata cherished the desire to establish an iron and steel works in India probably before 1880. But there were many difficulties, one of them being the Government's refusal to grant prospecting licences for minerals to an Indian. There were also widespread doubts about India's resources and ability for making steel. Jamsetji first demolished these disbeliefs by setting in motion, despite onerous mining laws, a systematic search for iron ore and other raw materials. This adventure was quite successful, thanks to the solid work done by a band of energetic persons—Messrs. C. M. Weld, C. E. Perin, Dorab Tata, Ratan Tata, Shapurji Saklatvala, Srinivas Rao, B. J. Padshah—and the valuable clues provided by Mr. P. N. Bose, the noted geologist.

Before the construction of the Steel Works could begin, a huge amount of money had to be raised. Mr. Jamsetji Tata sent his sons to England in order to raise capital. But they came back empty-handed, as the finances in England "did not believe that India and Indians could make steel." A British capitalist was so amused at the move of Mr. Tata that he is reported to have jocularly said: "I would eat every pound of steel rails produced in India." All this did not, however, discourage the Tatas. In fact, they became more determined to go ahead with the venture. Meanwhile, Mr. Jamsetji Tata died (1904). His unfinished works was taken up by his sons, Mr. Dorab Tata and Mr. Ratan Tata, his nephew, Mr. R. D. Tata, and his loyal and trusted lieutenant, Mr. B. J. Padshah. The Company was registered on 26th August 1907 and, after the necessary amount was raised as share capital, the construction of the Steel Works began in 1908. Pig iron was first produced in December 1911 and the first steel was rolled on 16th February 1912, followed by the rolling of bar mill eight months later. Over the years, the Company had to pass through several vicissitudes till the late thirties when it was established on solid foundations. Credit for this goes both to the sagacity of the management and to the loyalty of the employees.

The original plant had an annual production capacity of about 120,000 tons of pig iron and 80,000 tons of rolled steel. The T.I.S.Co. has not stood still with the passing years. New refinements and improvements in line with the most up-to-date techniques known to the steel industry of the world have been systematically added, the plant expanded, and the range of products widened. The present output is running at an annual rate of 758,047 tons for pig iron, 575,780 tons for steel ingots and 449,588 tons for saleable steel. The items manufactured by the Tata Steel Works are sheets, plates, bars, structurals, rails, sleepers, fishplates, wheels, tyres and axles for railways, alloy tool and special steels and agricultural tools. Among the by-products are coal tar, sulphate of ammonia, benzol, zinc dross, flux skimmings, red oxide and ferro-sulphate. The companies located around the factory and associated with it manufacture, among other things, tin plates, rods, wire, wire nails, bolts and nuts, electric cables, steel mill rolls and castings, road-rollers and locomotive boilers. Incidentally, it will be interesting to note that the Company owns its own mines, quarries and collieries.

The following table will show the progress in production made by the factory since the commencement of its operations:

(In thousand tons)

	1911-12	1916-17	1926-27	1936-37	1946-47	1956-57
Ores and fluxes	..	306	1,355	1,366	1,769	2,093

Total saleable steel	1	99	374	680	753	799

Two-million Ton Target

T.I.S.Co's expansion project, designed to double capacity to two-million ingots of steel, is now entering the final phase. This project, known as the T.M.P. programme, is estimated to cost Rs. 120 crores. It is the largest expansion job in the private sector, the investment being one-fifth of the total outlay by organised industries in the second Plan period. Started in December 1955, the project is scheduled to be completed by May 1958. The entire project has been grafted on to an earlier Rs. 25-crore project to raise the output of 800,000 tons of finished steel to 931,000 tons, launched in 1951; the Government granted Rs. 10 crores towards this project out of the Iron and Steel Controller's Price Equalisation Fund. The earlier project, known popularly as Modernisation and Expansion Programme (M.E.P.) included the building of a new 52-coke oven battery to replace an old one, the enlargement of the capacity of the blast furnaces, the setting up of steel melting facilities and the modernisation of the blooming mill as also the plate mill. A significant item in the programme was a 200,000-ton skelp and strip mill to provide the raw material for making tubes and cold rolled strip. Even while this programme was under way, the management undertook an ambitious project to expand its output to two million ingot tons (T.M.P. programme). In December 1955, the Company entered into a $130 million (Rs. 61-crore) contract with Kaiser Engineers Division of the Henry J. Kaiser Corporation of Oakland, California, entrusting them with the responsibility for all the engineering, procurement, construction and supervision services for this project.

The scope of the T.M.P. ranges all the way from the mining of ore and other raw materials to the finishing mills. It embraces practically every phase of production and also involves improvement and expansion in services such as electrical distribution, water, fuel, roads, sewers and transport. The principal items included in the programme are a battery of 26 coke ovens, a new blast furnace with a 28-ft. hearth designed for top pressure operations which will produce 1,650 tons of pig iron per day, a sintering plant of 5,000 tons a day capacity to use iron ore fines hitherto thrown away, a new steel melting shop with seven 200-ton open hearth furnaces and three 32-ton converters and three new rolling mills—a 46" blooming mill, a medium and light structural mill, and a sheet bar and billet mill.

Raw Materials

The T.M.P. will, of course, involve a large-scale stepping up of the raw material supply. T.I.S.Co. uses today 2 million tons of iron ore a year; it will need 3.4 million tons after expansion. This additional requirement will be met by the new mine at Joda (Orissa) and by stepping up production at Noamundi (near Jamshedpur), believed to be the largest mine in Asia. Again, the expanded plant will need some 3 million tons of coal, of which approximately a million tons will have to be purchased from the market, the balance being met by the Company's own collieries in the Jharia and Bokaro fields. For carrying out the programme, additional quantities of limestone (a million tons, as against the present 700,000 tons) and of dolomite (90,000 tons, as against the present 50,000 tons) are also needed. Available sources of supply are capable of meeting this demand. So far as manganese is concerned, low grades of manganese are used for the manufacture of pig iron and processed manganese—ferro-manganese—for the manufacture of steel. A Tata plant for the manufacture of ferro-manganese is being set up at Joda. It is also proposed to take up manufacture of other ferro-alloys like ferro-silicon, ferro-chrome and ferro-phosphorus at Joda when circumstances permit.

Under its current programme of expansion, modernisation and renewals, the Tata Steel Company has planned to incur over the five-year period 1955-60 a total capital expenditure of Rs. 118.7 crores (including interest during construction). For financing this expenditure, the Company has made the following arrangements:

	(Rs. crores)
World Bank Loan against the first mortgage of the company's properties	36.0
New share capital, including premium	13.5
Special advance from Government (unspent balance on 1st April 1955)	5.2
Bank borrowings	10.0
Retained earnings and sale of investments	37.0
Total ...	101.7

The balance still to be provided is Rs. 17 crores. The Company has initiated negotiations in the U.S. with a view to raising this amount.

It must be said to the credit of the Company that due attention has been paid to research. It has an extensive and modern research laboratory entrusted with the task of finding ways and means of improving manufacturing technique and developing new processes. The Company also administers the town of Jamshedpur, providing all municipal services, including a fully equipped hospital. For its employees, it has built 12,500 quarters. The total capital expenditure on the town so far comes to more than Rs. 7 crores and the annual cost of administration is put at about Rs. 1.30 crores.

With these splendid achievements, the Tata Iron and Steel Company has today carved for itself a prominent place in the industrial map of India. The Company can justly claim that it has "served the country consistently and well." With the combination of an expanded and renovated plant and a strong and mature organisation, the Company will, there is no doubt, give a good account of itself in the years to come, contributing to the economic development of the country to a greater and more significant extent.

A CHRONOLOGY OF INDIAN STEEL

About 400 B.C. ...	Porus presents Alexander with 30 lb. of Indian steel.
About 480 B.C. ...	Xerxes employs in his army Indian archers using arrows tipped with Indian steel in the battle of Thermopylae.
About A.D. 321 ...	Erection of 50-ft. long Iron Pillar at Dhar, ancient capital of Malwa, 33 miles, west of Indore.
About A.D. 400 ...	Erection of the famous Iron Pillar at Delhi, near Kutab Minar. The pillar is 23 ft. 8 in. long and weighs approximately 6 tons—the largest mass of iron to be cast in the ancient world.
13th Century A.D.	Iron beams and pieces used in the construction of the Sun temple at Konarak.

NEW PRODUCTS AND PROCESSES

Resins from Tar Oil Fractions

A PROCESS for making water soluble thermosetting resins by reacting crude tar acids obtained from carbonisation of coal or their alkali extracts with formaldehyde has been developed at the Central Fuel Research Institute, Jealgora. Tar acids obtained from coal and wood distillation are treated with caustic alkali to convert them into alkali salts. The alkali salts so obtained or the caustic extract of crude tar acids as such are reacted with formaldehyde under controlled conditions to yield a water soluble thermosetting resin. The production of the resin has been studied on a pilot plant scale to the extent of 5 gallons batches, and no difficulties are envisaged for large-scale production of the resin. The product is a water soluble resin obtained as an aqueous solution of a specified percentage which can be stored for 2 months, after which it tends to become very viscous. The process is simple. The equipment required can be fabricated indigenously. Except formaldehyde, which will have to be imported till indigenous product is established, all the other raw materials can be obtained locally. The resin so developed has been used in bonding of saw-dust, bagasse, asbestos, mica dust, jute fibre, paper pulp, etc. to produce hard boards and moulded articles. As the resin can be prepared in a conventional type of resin kettle, existing plants can well be utilised with minor modifications, if necessary, for its production. Regarding the utilisation of the resin for hard board manufacture, existing plants using thermosetting resins can well adopt this resin with small changes, depending on the filler material used.

Stretchable Paper

A stretchable paper with exceptional toughness is now in commercial production in the U.S. The new paper, which is said to be five times tougher than ordinary kraft paper, yet competitive in price, is to be used initially in the manufacture of grocery bags and sacks. Other applications are expected to include disposable articles of wearing apparel, disposable undersheeting for hospital beds, paper-metallic laminates for construction industry use, and masking, gummed and pressure-sensitive tapes. The greater toughness of the new paper is attributed to the fact that it can be stretched to an unusual extent. Although its intrinsic tensile strength, or tearing resistance, is reported to be lower than that of conventional paper, its ability to withstand stretching to about 20 per cent. more than other papers greatly increases, it is claimed, its impact-absorbing characteristics. The process for producing the new paper has been developed by Sanford Cluett, the inventor of the "Sanforising" process for shrinkage control in cotton fabrics.

Speedier Cargo Handling

A new cargo handling system which is designed to expedite ground handling of air cargo is said to permit the loading of 35,000 lbs. of cargo into a turbo-prop air freighter in 40 seconds and to permit equally rapid unloading. According to the Aircraft Industries Association of America, tests indicate that the new method can lead to 40 per cent. reduction in manpower needed to prepare and load freight and a 90 per cent. reduction in the idle ground time now necessary for transports while cargo is loaded and unloaded. The operation of the system depends on the use of pallets, on each of which loads of up to 3½ tons can be tied. The pallets rest on rollers at the dock, or warehouse, and can be moved on to trucks which have rollers on the truck-beds. An electric winch is then used to pull the pallets into the cargo hold of the aircraft, which is also equipped with rollers on the floor.

Sound Waves Improve Chromium Plating

Chromium plating, which is extensively used on metal parts for automobiles and in many other fields, is improved by sending sound waves through the plating solution, it has been reported by the National Carbon Company of Parma, Ohio, the United States. The sound waves make the chromium plating harder and brighter and make it adhere better to the base metal. In addition, it makes the plated surface less porous. Both sonic and ultrasonic sound waves have been used and both produced essentially the same effect. The Company believes that the sound wave vibrations have the effect of agitating, or stirring, the plating solution at the surface to be plated.

Plastic to Improve Crop Yields

Black plastic film can be used to improve crop yields, according to recent U.K. experiments. The film, it is claimed, increases the soil temperature by collecting heat from the sun, and forces seeds to germinate more readily than they would otherwise do. Although the black coloured film used in the experiments has a thickness of only 1.5 thousandths of an inch, the effect of its use is said to be such that it could considerably increase the yield and rate of growth of voting plants in the earliest stages of crop growth. During field experiments the film has been used in three-feet widths, which are unrolled over the ground and weighted down against the ground with soil.

Atoms for Heating Homes

Private homes of the future may have nuclear reactors in their basements where they now have furnaces, it was predicted recently by three nuclear chemical engineers of Alco Products, Inc., in the United States. These reactors would not only supply heat in winter, but would also provide power for air conditioning, electric lights and electric home appliances. Dr. A. Louis Medin, head of Alco's nuclear chemical technology division, said that the programme now under way in the United States to improve reactor technology would reduce present high costs.

Serving Industry—which Serves Mankind

1901—the birth of Monsanto starting with practically sweet nothing—the manufacture of a *single* chemical—Saccharin. Today, Monsanto ranks among the greatest names in chemicals and plastics, serving industry which serves mankind. Today—hundreds of industries rely on Monsanto: Agriculture—Automotive—Aviation—Beverages—Ceramics—Chemical Processing—Cosmetics, Perfumes—Dental—Dyeing—Electrical—Foods—Insecticides—Leather Tanning—Lumber—Machinery—Mining—Packaging—Paint, Varnish, Lacquer—Petroleum—Pharmaceutical—Pulp, Paper—Plastics—Printing Ink—Radio—Rayon—Refrigeration—Rubber—Soaps and Detergents—Textiles.

To those of you who are concerned with any operation in any of these industries, we extend a personal invitation—"Come and consult us". We shall help you increase production... improve products... decrease operating costs... and increase your sales.

LECTURES are held on various subjects like Physical Health Mental Peace and Spiritual Strength

RAMTIRTH BRAHMI OIL (Special No. 1)

Hair and Brain Tonic, and useful for Eyes, Memory, Sound Sleep and Body Massage is being prepared scientifically with precious ingredients at SHRI RAMTIRTH YOGASHRAM. It is useful to every one in all seasons. Available everywhere. *Price: Big bottle Rs. 4/-, Small bottle Rs. 2/- postage extra.*

YOGASANA MAP (Chart)

To be healthy and to keep fit, ask for our attractive Yogasana Chart showing Yogic Asanas, which will be sent on receipt of an M. O. for Rs. 2/- including postage. These Asanas can be easily performed at home.

SHRI RAMTIRTH YOGASHRAM, DADAR, BOMBAY 14.

DISCONTENTMENT AMONG LIFE INSURANCE FIELD OFFICERS

DIFFERENCES SHOULD BE SETTLED EARLY

THE non-co-operation movement launched, and now temporarily withdrawn, by the National Federation of Insurance Field Workers in furtherance of their demands in respect of the categorisation scheme of the Life Insurance Corporation has added another dimension to the complex problems of the young organisation. As a protest against what the Federation calls an unfair imposition of the categorisation scheme and the non-fulfilment of its basic demands in respect of remuneration and conditions of service, the Central Zone branch of the Federation called on the field officers of the zone to non-co-operate with the Corporation in the canvassing of new business. The movement was started on an all-India scale on 10th February under the direction of the central body of the Federation and suspended from 1st March 1958. An uneasy truce has for the moment been established by the assurance given by Prime Minister Nehru, who is also currently the Finance Minister, that he will meet the representatives of the field officers some time early this month and consider their demand.

The dispute centres round certain provisions of the categorisation scheme evolved for fitting in the field staff in the organisational set-up of the Corporation. The scheme, which was evolved in September last year, defines the position of the field workers, who are given a new designation "field officers," in the Corporation and the functions that are allotted to them, standardises their remuneration and lays down the conditions of service. The Corporation's conception of a field officer is different from the conventional idea of an inspector. Prior to September 1956, inspectors were in the main canvassers of business. Their main function was to sell life insurance, their remuneration and promotion or depromotion being determined by their selling ability. In contrast, the function of a field officer of the Corporation is not entirely to sell life insurance but to develop and increase the production of new business by activising existing agents, by recruiting, training and motivating new agents and by guiding, supervising and directing the activities of the agents under him. He will also be responsible for rendering after-sales service. The agents will, therefore, be the real salesman and field officers will only direct and supervise their work.

With their functions defined and with systematic training to enable them to guide, supervise and direct the activities of their agents, the field officers, it is expected, will be able to carry the benefit of insurance to every nook and corner of the country. The scale of pay for field officers is fixed at Rs. 125-500. In addition, dearness allowance on the same scale as that for other employees of the Corporation and conveyance allowance of a specified amount, varying according to the salary of the person concerned, are also payable. Field officers are also eligible for provident fund, gratuity, leave, etc., like any other employee of the Corporation.

Incentives

It is also realised that an essentially sales organisation like the Life Insurance Corporation must necessarily provide incentives for developing its sales. The Corporation proposes to provide two kinds of incentives to its field officers. First, a bonus commission of 5 per cent. to be paid on the excess of the first year's scheduled premium income over six times the total remuneration of the field officer. Secondly, two or three increments in the scale fixed for field officers, depending on his performance.

A revised quota of business in terms of the first year's income has also been fixed. In the case of field officers appointed after 31st August 1956 and in the case of field officers who were in the service of insurers on 31st August 1956 and who retained the whole of their direct organisation and were not allocated any additional agents by the Corporation, the quota has been fixed at six times the annual remuneration based on his monthly remuneration as on 30th September 1957 and 31st August 1956 respectively. In the case of all other field officers the quota has been fixed as the sum of (1) $2\frac{1}{2}$ times the annual remuneration of the field officer based on his monthly remuneration as on 31st August 1956 and (2) 4 per cent. of the sum of the average annual business secured during the years 1954 and 1955 by the agents allotted to the field officer. If the quota calculated in the above manner is less than Rs. 10,000 it will be deemed to be Rs. 10,000.

For the purpose of categorisation, the performance of a field officer will be determined from the statement of first year's premium income other than single premiums. The actual performance so determined will then be compared with the revised quota as calculated above. The field officer is given the option to have his performance, either for the thirteen months ended 30th September 1957 or for the twelve months ended 31st December 1957, whichever is more favourable to him, taken as the basis. If this performance of a field officer is equal to or comes within a margin of 10 per cent. either way of his quota, he is fitted at the lowest point in the new scale of Rs. 125-500 at which his total remuneration would not be less than the last remuneration he drew either from the insurer (in the case of employees whose services were transferred to the Corporation) or from the Corporation (in the case of new recruits.) Better standards of performance will be rewarded by one or more grade increments and poor performances get correspondingly lower starts.

Wage Bill To Go Up

The scheme proposes to do away with the uncertainties regarding the services of field officers and in respect of leave, gratuity, provident fund, etc., it is laid down that the field staff are to be treated on a par with the administrative staff. In cases where the application of the scheme would lead to hardship either by way of reduction in remuneration or liability to termination of service, they are to be reviewed by a special committee to see how they could be mitigated. The Corporation is now giving detailed shape to the scheme and working out its precise effects on all the field staff. According to a statement laid on the table of the Lok Sabha by Mr. B. R. Bhagat, Deputy Minister for Finance, as a result of the implementation of the scheme the wage bill of the Corporation in respect of the field staff will go up by Rs. 2 lakhs from Rs. 13 lakhs to Rs. 15 lakhs per month.

The National Federation of Insurance Field Workers, while agreeing with the scheme in its broad outline and appreciating the improvements effected therein as a result of the consultation which the Chairman of the Corporation had with the representatives of the field staff, has declined to associate itself wholeheartedly with the scheme. This is because the Corporation could not agree to concede some of its demands, especially the demand that under no circumstances should there be any reduction in the emoluments drawn by a field worker prior to the setting up of the Corporation and that no one's services should be terminated. According to the statement, noted above, the main demands of the Federation are: (1) a minimum basic salary of Rs. 150 per mensem for members of the field staff, (2) regular automatic increments, (3) there shall be no reduction in basic salary and total emoluments from those in force on 19-1-56 or 31-8-56 whichever is higher, (4) no one's services should be terminated without reason, (5) restoration of emoluments reduced and services terminated during the last two years, (6) special start for those who have done especially good business, (7) minimum commission for the agents should be 35 per cent., (8) rights and privileges of supervisory staff should be given due weightage, (9) recognition of National Federation at all levels, (10) appointment of joint committees for framing field staff regulations, (11) workers' participation in management.

Corporation's Stand

The Corporation's stand as far as the first demand is concerned is that the scale of pay of Rs. 125-500 fixed under the scheme will give a minimum remuneration of Rs. 235 per mensem inclusive of allowances. A basic minimum pay of Rs. 150 per mensem will give a total remuneration of Rs. 285 per mensem. The Corporation maintains that considering the qualifications possessed by the staff there is no justification for a minimum of Rs. 285. As regards increments, it is held that the scale prescribed provides for regular increments which are to be granted after considering (a) the volume and quality of business produced by the field officer, (b) the ratio of expenses of his organisation, (c) success in the organisation of agents, (d) services to policyholders. The Corporation is not willing to agree to the condition that there should be no reduction in basic salary and total emoluments as on 19th January 1956 or 31st August 1956 whichever is higher. The reason given is that basic salary or emoluments as on 19th January 1956 did not have any real significance as emoluments granted by private insurers were arbitrary and they cannot, therefore, be made an indisputable criterion. Nor is the Corporation prepared to concede the demand that no ones' services should be terminated without reason on the ground that power to terminate services in some cases without reason is essential as a residuary power. It is pointed out that the efforts of the Corporation is to see how many can be retained and not how many can be thrown out. As regards the plea that emoluments reduced and services terminated during the last two years should be restored, it is pointed out extreme action has been taken only where it could not be avoided. The Corporation, it is said, has been guided, during the transitional period, by the practices prevailing in pre-nationalisation days. Out of 449 field officers whose services have been terminated since September 1956 due to poor business results, 190 had failed to produce any business. 185 produced such a small volume of business that remuneration paid to them was more than the first year's premium income from business produced by them. In 74 cases, the remuneration paid to them was 50 per cent. or more of the first year's premium income on the business introduced by them. The Corporation will give special start for those who have done exceptionally good business and the categorisation scheme provides for special consideration of field officers whose performance has been outstanding. In respect of commission for agents, the scale prescribed is 25 per cent. to 35 per cent. It is pointed out that the Corporation has adopted scales similar to that which prevailed before nationalisation in spite of the fact that nationalisation has removed competition and made it easier for agents to procure business. The Federation had demanded that the rights and privileges of supervisory officers should be given due weightage. The Corporation, will appoint a committee to examine the case of all former supervisory officers.

Complex Problem

It is obvious that the Corporation is up against a complex problem in trying to bring about uniformity in the terms and conditions of services of field staff, who under private insurers, were working under varying conditions of employment. It is inevitable that such a sweeping change will result in hardships to some. Nevertheless, every effort should be made to minimise them as far as possible. The Corporation's stands is that no prior commitments can be made to concede the demands of any section of the staff without fully ascertaining their implications. It has shown its willingness to discuss cases of hardships with the representatives of the field officers. It is necessary that, in matters like categorisation, the points of differences between the Corporation and the staff should be resolved early by mutual negotiation and not by direct action. It should be borne in mind that the field staff is a vital section of the Corporation's employees. It is they who make or mark the future of life insurance. As the salesman of a business organisation, it is they who are primarily instrumental in popularising life insurance. Their role assumes an added significance and importance by virtue of the fact that insurance, unlike a public utility service, is never bought over a counter; it has to be sold. The fact that life insurance has been nationalised does not in any way minimise their importance. Every thing possible should, therefore, be done to secure the willing and active co-operation of the field staff. At the same time, it must be remembered that nationalisation of life insurance has virtually eliminated the competitive element in salesmanship; to this extent, the task of a salesman is easy. The Corporation is a business organisation and it has to be run on business principles. In the engagement of staff and their remuneration, it has to be guided by business considerations. Within this broad framework, it should be possible to arrive at a mutually satisfactory arrangement which would be fair and just to the staff and also does not involve an undue burden on the Corporation.

DEVKARAN NANJEE BANKING CO., LTD.

HEAD OFFICE: **Devkaran Nanjee Buildings, Horniman Circle, Fort, BOMBAY**

Balance Sheet as at 31st December 1957

CAPITAL AND LIABILITIES	Rs. nP	Rs. nP

Note.—Remuneration received by two Directors for their own use from other companies by virtue of nomination by the Bank on the Board of other companies amounted to Rs. 1,680 during the year.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of the DEVKARAN NANJEE BANKING CO., LTD., as at 31st December, 1957, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the unaudited returns from all the Branches in India not visited by us for the purposes of this Report.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956, they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;

(c) in our opinion, proper books of accounts as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank ;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1957, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

ANNUAL REPORT

To be submitted to the Shareholders at the Fifty-Second Annual General Meeting to be held at the Registered Office of the Company at Mahatma Gandhi Road, Fort, Bombay, on Wednesday, the 12th day of March, 1958, at 4 o'clock in the afternoon.

Directors' Report for the year ended 31st December, 1957

The Directors submit to the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1957. The Auditors' Report is also annexed.

	Rs.	nP.
The transactions for the past year, including the balance brought forward from the previous year, Rs. 15,54,924·45, have resulted in a profit of	1,09,02,381	34
An interim dividend was paid for the half-year ended 30th June, 1957, at the rate of 6 per cent. free of Income-tax on the Paid-up Capital of Rs. 3,00,00,000, which absorbed	18,00,000	00
Provision made for Income-tax and Super-tax for the year	30,00,000	00
Bonus to Staff	15,00,000	00
The Directors now propose :—		
To pay a final dividend for the half-year ended 31st December, 1957, at the rate of 10 per cent. free of Income-tax, making 16 per cent. for the year, on the Paid-up Capital of Rs. 3,00,00,000, which will absorb	30,00,000	00
To carry forward to the next account	16,02,381	34
Total .. Rs.	1,09,02,381	34

The Bank's business continued to function satisfactorily.

The official Bank Rate was raised from 3½ per cent. to 4 per cent. on 16th May, 1957. The Rate of 4 per cent. continued to the end of the year.

Mr. Dinsha R. Daji, who had been a Director of the Company for nearly 23 years, died on 8th July, 1957. Mr. Daji rendered great service to the Company. His mature counsel was greatly esteemed by the other members of the Board. The Directors deeply regret the loss of a valued colleague.

Under the provisions of Section 256 of the Companies Act, 1956, the following Directors of the Company retire by rotation, but are eligible and offer themselves for re-election :—

Sir Joseph Kay, K.B.E.,
Mr. Ramniwas Ramnarain,
Mr. Krishnaraj M. D. Thackersey.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

COWASJEE JEHANGIR, *Chairman.*

STEEL INDUSTRY IN BRITAIN

PRODUCERS OPPOSE RE-NATIONALISATION—LABOUR PARTY'S DOCTRINAIRISM EXPOSED

IT will be recalled that the Labour Party in Britain declared, at a conference convened last autumn to frame its future economic policy, its intention to re-nationalise the iron and steel industry if and when the Party was returned to power. The Party made its policy known to the public through the issue of a pamphlet entitled *Industry and Society*. The industrialists in Britain have taken serious note of this determination of the Labour Party. For, as the Chairman of the United Steel Corporation pointed out early this year, it would be wrong to dismiss the Party's aims and ideas set forth in the pamphlet "as crazy or belonging to the distant future," in view of the fact that none can rule out the possibility of the Socialists coming back to power sooner or later. Of late, there has been a good deal of speculation as to which of the two parties will win the next elections. Till recently, there was no evidence of a definite swing in either direction. But the latest elections in Rochdale which favoured the Labourites and their demand for early general elections are factors indicative of the possibility of the Labour threat materialising sooner than expected.

Even before the Rochdale by-election, the steel producers in Britain had launched a countrywide campaign against re-nationalisation. The chairmen of all the leading steel companies in that country such as Stewarts and Lloyds, the United Steel Corporation, Dorman Long and Company and the Steel Company of Wales Limited, availed themselves of the opportunity offered by their annual meetings to educate public opinion against this issue. Consequently, a considerable portion of the chairmen's speeches at the annual meetings of these various companies is devoted to a presentation of the case against re-nationalisation of their industry.

The lead to this opposition was given by Mr. A. G. Stewart of Stewarts and Lloyds. Although he was aware that it was most inadvisable, under normal circumstances, for industry to enter into political controversy, he felt that it was necessary to fight nationalisation and that, if this meant meddling in politics, it was inevitable. He pointed out that there were no reasonable grounds on which nationalisation of the steel industry could be justified. Asserting that public opinion was definitely not in favour of such a move, he observed: "There is little confidence in nationalisation in this country. Many of the general public are thoroughly disillusioned with it: they have seen it in action, they have suffered its cost and witnessed its failures."

Case Weak

Continuing, he went on to show how the case for nationalisation was weak. He traced the massive development and expanson of steel in recent years and said:

"What has been achieved in the last few years in steel is a national triumph. By every reasonable test that even the most ardent nationaliser could apply, steel is serving the nation well. Prices are among the world's lowest; production has exceeded the most sanguine estimates; labour relations are a model for the rest of industry. Since the war, the industry has invested about £740,000,000 at current prices in one development after another. One result is that crude steel output has been increased from 12,700,000 tons in 1946 to approximately 21,600,000 tons in 1957. This has been achieved largely out of the industry's own resources with the help of the private investor. What more could nationalisation do—save to throw the burden of future investment on to the ordinary taxpayer?"

Answering the poser whether under a nationalised industry the workers would be better off, Mr. Stewart remarked:

"Wages in the steel industry, I am pleased to say, are above the national average, while strikes are almost unknown. There is harmony and contentment that just does not exist in State undertakings, where the workers find themselves checked and encumbered by red-tape. In the coal industry last year (1956), there were 3,771 separate disputes. That is how contented miners are?"

He then referred to the difficulties arising from the frequent talk of re-nationalisation in the following terms:

"The industry is tired of being treated like a shuttlecock. The threats to which it is subjected by the left wing are doing incalculable harm to the steel industry, both here at home and overseas. One immediate result of the threat of nationalisation is that capital for further expansion becomes more difficult to raise."

He added that, since 50 per cent. of Britain's total exports depended on steel, any setback to the progress and efficiency of steel industry would have disastrous repercussions on the economy of the whole nation. Apprehensive of the future for Stewarts and Lloyds, who rely so much on export trade, he spoke of the reluctance of foreign customers to negotiate with what would virtually be a Government Department. He grieved that the steel industry had to suffer due to political prejudices and held the view that "no responsible body has the right to play such a game of political spite and tit-for-tat with the prosperity of the nation."

Stewarts and Lloyds have taken active steps to oppose the Labour Party's resolution. An advertisement with the heading "Should steel be re-nationalised?" urging the public to consider the wisdom of such a step has been circulated in the vicinity of the steel works.

Threat to All

The Chairman of the United Steel Companies Ltd. also lodged a protest against the Labour Party's threat. He sounded a note of warning to the public of the danger of the socialist threat to re-nationalise steel. "Steel is only a beginning," he said. "The nationalisation programme of the Socialist Party is a threat to every industry and is already undermining confidence abroad." He asserted that the programme was "a threat to personal freedom." He emphasised the impropriety of such a decision in strong terms. He observed:

"On its merits, no one wants to nationalise steel. Neither the proprietors nor men employed in making it nor the people who buy it nor the men and women who elect members of Parliament,

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of The Bank of India Limited, as at 31st December, 1957, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated unaudited returns from all the Branches in India not visited by us for the purposes of this Report and the audited returns of all Branches outside India audited by other Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1957, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

A. F. FERGUSON & CO., *Chartered Accountants.*
S. B. BILLIMORIA & CO., *Chartered Accountants.*

BOMBAY, *6th February*, 1958.

Statement pursuant to Section 212 of the Companies Act, 1956

The Profit and Loss Account of The Bank of India Limited for the year ended 31st December, 1957, does not include any profit or loss of its subsidiary, The Bank of India (U.K.) Nominees Limited (a nominee company incorporated and operating in the United Kingdom), as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by The Bank of India Limited. The shares of the subsidiary are wholly owned by the Bank.

Having regard to the fact that no Profit and Loss Account of the said subsidiary is prepared in the circumstances aforesaid and that its Balance Sheet and the Reports of its Board of Directors and Auditors are drawn up in accordance with the law in force in the United Kingdom, an application was made to the Central Government under sub-section (8) of Section 212 of the Companies Act, 1956, and, in exercise of the powers conferred by the said sub-section (8) of Section 212 of the Companies Act, 1956, the Central Government, being satisfied that it is necessary so to do, have directed that, in relation to The Bank of India (U.K.) Nominees Limited, a subsidiary of the Bank, the provisions of Section 212 of the said Act shall apply only to the extent that The Bank of India Limited, shall be required to attach to its Balance Sheets copies of the Balance Sheets and of the Reports of the Board of Directors and of the Auditors of the said subsidiary made out in accordance with the provisions of the English Companies Act for the time being in force in the United Kingdom and that The Bank of India Limited, is exempted from attaching to its Balance Sheets a copy of the Profit and Loss Account of the said subsidiary.

THE BANK OF INDIA (U. K.) NOMINEES LIMITED

DIRECTORS' REPORT FOR THE YEAR ENDED 31ST DECEMBER, 1957.

The Directors submit the Balance Sheet for the year ended 31st December, 1957. The Auditors' Report is also annexed.

No Profit and Loss Account is submitted as none has been prepared. No profit was made and no loss was sustained. The expenses of the Company have been paid by The Bank of India Limited, of which the Company is a wholly-owned subsidiary.

J. DONALDSON,

LONDON, *1st January*, 1958.

THE BANK OF INDIA (U. K.) NOMINEES LIMITED

Balance-Sheet, 31st December, 1957.

Capital Authorised and Fully Paid-up : 100 Ordinary Shares of £1 each	£100	Cash at Bankers	£100
	£100		£100

Signed on behalf of the Board,

J. DONALDSON,
S. H. BRADFORD, } *Directors.*

We have obtained all the information and explanations which we have required and which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Company. We have examined the above Balance-Sheet which is in agreement with the books of account. In our opinion such Balance-Sheet gives the information required by the Companies Act, 1948, in the manner so required and is properly drawn up so as to exhibit a true, correct and fair view of the state of the Company's affairs at 31st December, 1957, according to the best of our information and the explanations given to us and as shown by the books of the Company.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

although some of these might favour it for reasons which have nothing to do with merits. But, although nobody wants it, the attitude of the Socialist Party and the threat of re-nationalisation which it broadcasts, psychologically might well undermine the confidence so essential for regular development in all the long chain from the primary products to the infinite variety of intermediate and final products.

"If a finger is pointed to the nationalised industries, whether to have nationalised them has been a good thing or a bad thing may be still a matter of opinion. But, in the conduct of them since, it has been demonstrated that, when nationalised, they soon wear political clothes. The Acts by which they were nationalised provide management machinery which it was claimed would make them free of political interference, but, in practice, it has been found that what is their business becomes the business of Parliament."

After alluding to the political implications of nationalisation, he proceeded to point out the characteristics of the steel industry and showed how essentially different steel was from other basic industries. Replying to the poser "What is steel?" he said:

"Steel is a manufacturing and trading activity. It is not just the conversion of iron ore into something which the man in the street calls steel and which in its primary state he has never seen. The companies and persons who make steel work it up into innumerable things used for all kinds of purposes, the building of ships, railways, motor cars and even small things like pins and needles. Steel cannot be nationalised in isolation. In the nature of things, undertakings which make steel must fashion it into many finished or semi-finished things. Not all steel undertakings turn their steel into the same kind of finished things and the finished things in many cases are also made by people who do not make steel.

"These undertakings are competing against each other and against the steel industries of the world and their success depends upon flexibility of policy and speed of decision which can only be achieved if the men on the spot have both the responsibility and the authority. Nationalisation of them must inevitably involve centralisation of ultimate responsibility and loss of time. This must mean interference with the executive authority of the management of the industry and the growing reference of decisions to a central body—a central body which cannot be aware of local circumstances and which will, moreover, often operate with its head over its shoulder to observe parliamentary reactions to its operations."

Devotion to Doctrine

As there was thus no justifiable ground for re-nationalisation, the Chairman of United Steel felt that the only ground left to the Socialists was their devotion to the century-old Karl Marx doctrine, namely, to nationalise the "means of production, distribution and exchange." The ultimate outcome of pursuing this doctrine would be, in his opinion, "an end to private ownership of nearly every kind of property."

Proceeding, he recalled the remark of Sir Hartley Shawcross, once a Labourite now retired from politics, that "Industries should not be nationalised for the sake of nationalisation, but only if they were not being conducted efficiently." Stressing the point that the steel industry was already subject to Government control, he outlined the present relation of the industry to the State thus:

"The Act of Parliament, by which the steel industry was denationalised in 1953, was not a sale back to the actual parties from whom it had been compulsorily acquired in 1951. It is true that it provided for the sale back to private ownership. Much consideration had been given by Parliament in the form of management and control of the industry after denationalisation and the Act set up machinery for supervision which today may not be remembered by the man in the street. This machinery was a body called the Iron and Steel Board. It is composed largely of members independent of the industry (including the chairman and several steel consumers) and has other members drawn from the employers and the trade unions. The function of the Board is to take care that sufficient iron and steel is provided for the country's needs, that the industry's future plans are adequate, that sufficient raw materials and fuel should be made available, that prices should not be excessive, as well as encouraging research and safety, health and welfare and arranging for joint consultations. This Board has been in daily operation ever since the Act was passed and the industry works in co-operation with it. In this way, the State seems to have all the authority needed in the interest of the State and for the protection of the consumer."

He concluded by emphatically declaring that socialisation would lead to a restriction on personal liberty and that it was, therefore, a bad thing. Speaking almost in a prophetic vein, he sounded the following warning:

"It is the beginning of communism and logically in time it would convert our country into a State as completely communist as Russia and other eastern States which are either already communist or going that way.

"Industry and everybody who depends upon it in their daily lives should do a lot of hard thinking and should really try to understand where the policy of the Socialist Party may lead.

"It is dangerous for members of the community who are not particularly interested in the steel industry to think that the nationalisation of steel concerns only the proprietors, that is, the shareholders in steel undertakings. It concerns all, because it is a large step forward in a programme which sooner or later will make the State the proprietor of every kind of property and the employer of the whole population. In other words, it is a programme which leads to slavery, and we can become slaves without having chains round our necks and wrists and ankles.

"If this should seem an exaggeration, it is nevertheless a warning to all of us to think very hard about the Socialist aim to enlarge State ownership and State control and a warning to those who are strangers to steel to be as much concerned about what may happen to them as steel people are concerned to retain their property."

The Chairman of Dorman Long & Co. (Sir Elis Hunter), too, referred to the difficulty of securing additional capital for further modernisation and expansion following the uncertainty caused by the Labour Party's decision to take the industry back to the public sector. The Chairman of the Steel Company of Wales also expressed similar views. He saw no justification for re-nationalising steel. The industry possessed an exceptionally good record. Prices of British steel compared favourably with world prices. Labour relations were good. Wages in steel industry were amongst the highest in the country. The industry contributed considerably towards exports. Moreover, the steel industry made a large contribution in the form of taxation towards national expenditure. Further development and expansion programmes were being planned, but these would be hampered if confidence in the future of the industry were undermined. "No industry," he said, "can flourish in a state of uncertainty regarding its future and when dealing with iron and steel a vigorous and enlightened long-term policy is essential."

Ruinous Game

The *Financial Times*, London, has characterised the Labour Party's programme to re-nationalise the industry as a ruinous game of leapfrog. Condemning it in severe terms, this paper says:

"Perhaps there is no example of party conduct which causes more public contempt for politicians than the attitude of the Labour Party towards the steel industry. Already the industry has been nationalised once and denationalised once. The de-nationalisation statute itself provided for a substantial public control over the industry's investment and pricing policies. The Labour Party is still committed to another nationalisation when it is returned to power. Conservative opinion could well come to favour a second denationalisation in the event of a second nationalisation being accomplished. To any private citizen this must seem a deplorable prospect. If the two-party system involves a change in the basic structure of the steel industry twice in every decade, then there is something seriously wrong with the way the system is working. Yet there is no obvious way out. The steel industry has come to occupy a vital role in the emotional tradition of the Labour Party. It is remembered in terms of the armament makers of the First World War and of the unemployment of the 1930s. A Labour Party leadership which is retreating from old-type nationalisation might find itself overwhelmed if it tried to withdraw from its commitment on steel."

The *Financial Times* then continues to point out that Britain turned away from nationalisation, because the record of the public corporations was unsatisfactory. It regards the managerial efficiency of railways and coal mines as poor. It points out that the Labour Party itself is now dissatisfied with the results of the nationalisation of the Bank of England. Another difficulty which the *Financial Times* brings to light is the adjustment of the nationalised industry to the European Free Trade Area. To quote it: "A double pricing policy such as exists at present could not survive into a period of European Free Trade. That fact alone would remove any advantage from planning of prices which nationalisation might be alleged to provide." This paper, therefore, appeals for a compromise solution, which does not involve "the rigours and waste of full nationalisation," acceptable to both the Labour and Conservative parties.

Labour M.P.'s Reply

The publicity given by the steel industry to the case against nationalisation seems to have roused the ire of the Labour Party. Some say that it has only strengthened the determination of the party to implement its programme if it got an opportunity. Speaking at a Labour Party Conference, Mr. Alfred Robens, a Labour M.P. and a former Minister of Labour, for instance, asserted:

"I say quite emphatically and without any shadow of doubt that the first function of public ownership will be to re-nationalise the iron and steel industry. That is a pledge. I have noticed that the chairmen of steel companies have been saying that Labour should remove any doubt that there might be about the future of this industry. I therefore do that now. The nationalisation of the iron and steel industry has nothing whatever to do with its present efficiency. No one, in fact, is making a case for the public ownership on the basis that it is an inefficient industry. We have never said that. The public ownership of the iron and steel industry is vital to the economic planning of this nation's affairs."

It will be noted from the aforesaid quotation that Mr. Robens has been honest enough to admit that his party wants to re-nationalise the steel industry on sheer fanatical devotion to a socialist doctrine and nothing else. In doing so, they are going against the sound advice of Sir Hartley Shawcross. Be that as it may, the steel industry's public campaign is a success from two points of view. One, the Socialists have admitted that the industry in the hands of the private sector is neither inefficient nor lacking in foresight. And, secondly, it has exposed the fact that the Labour Party, or at least a section of it, has returned to pure doctrinairism.

FOR RAIL PASSENGERS

DOES YOUR LUGGAGE CONTAIN JEWELLERY, PRECIOUS STONES, WATCHES, SILKS, SHAWLS, CAMERAS, MUSICAL INSTRUMENTS OR OTHER "EXCEPTED ARTICLES"?

If so, you are advised that when you entrust such articles to the care of the Railways for carriage and the value of such articles in any one package exceeds Rs. 300/-, you should

(1) declare their value in writing at the time of booking, and

(2) pay a percentage on the value so declared over and above the normal freight charges,

failing which the Railways will not accept liability for the loss, destruction, deterioration or damage of such articles. The articles named above and many others you will find listed as "Excepted Articles" in the Railways Time Tables and Guide.

The Station Master of the nearest station will give you detailed information if you contact him.

CENTRAL AND WESTERN RAILWAYS

TREND OF OIL PRICES DOWNWARD

REFINERS HAVING A VERY LEAN TIME

IN recent weeks, news items about cuts in oil prices have followed one another in rapid succession. The announcements have mentioned crude oil as well as products, consuming countries as well as exporting centres. In the circumstances, the superficial observer might be forgiven for supposing that the bottom had fallen out of the markets and that the oil industry was facing a serious slump. Fortunately, the position is by no means as bad as that. It is very easy for the layman to get an exaggerated impression of the decline, because what is essentially the same price movement may be reported separately for different products and by numerous companies—often from several different selling points.

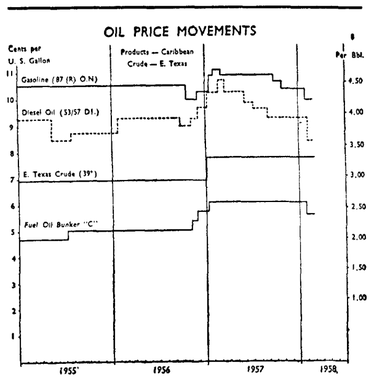
In fact, the past few weeks have seen a general reduction of f.o.b. prices in the U.S. Gulf/Caribbean area which has spread its influence eastwards across the world. Gasoline prices have been reduced in the Caribbean by half a U.S. cent per American gallon, light heating oils and kerosine by one-quarter, gas oil by five-eighths and heavy fuel oil by 30 cents a barrel, equivalent to about 0.75 cent a gallon. The chart puts these changes into perspective. (The chart does not take account of the latest reduction in fuel oil—10 cents a barrel on 24th February.) It shows that the fall from the peaks of a year ago has been most severe—14 to 17 per cent.—in middle distillates (represented by diesel oil on the chart). Motor gasolines are down by 8-11 per cent., as compared with February 1957, aviation gasolines by about 6 per cent. and heavy fuel oil by 12 per cent. Almost all distillate products are now below the levels ruling in October 1956, before the Suez emergency began. Heavy fuel oil, however, is still 15 cents a barrel above that level.

The reasons for the break are not unfamiliar. The price increases of a year ago were brought about more by the rise in crude oil costs than by the pressure of demand for products. And once the Suez emergency was over, demand proved disappointing. Domestic consumption in the U.S.A. was only fractionally higher in 1957 than in 1956, while in January 1958, it was 5 per cent. down on the corresponding month last year. The business recession and the unseasonably mild weather are responsible for the sluggishness of demand. But price cuts might have been avoided if refiners had restricted their operations sufficiently to avoid the accumulation of stocks which occurred in recent months. (Stocks of the main products on 14th February, at 397 million barrels, were nearly 13 per cent. above the level of a year ago.)

This fall in the Gulf/Caribbean area has affected the Persian Gulf market, though not to the same extent: demand in the Eastern Hemisphere has been holding up much better than in the west, and there is no surplus of products in the Persian Gulf. The fall there since product prices were first posted at Abadan at the end of May now amounts to about 6½ per cent., on average, for motor gasolines, 6 per cent. for kerosine and 5-5½ per cent. for middle distillates. Aviation gasoline is down by about 6 per cent. and heavy fuel oil by 9 per cent. Hence, while the relationship between Caribbean and Abadan prices is the same for aviation gasoline as it was last May, the other products are relatively higher at Abadan now than they were then. At Ras Tanura and Bahrein, prices are generally 0.175 to 0.25 cent. a gallon—fuel oil, 10 cents a barrel—above those at Abadan, reflecting the freight advantage. The latest reductions in the Persian Gulf have not yet spread to Far Eastern markets, where prices are normally appreciably above the Middle Eastern level because this is a deficit area, needing to draw in supplies from the Middle East.

The past months' reductions in export quotations have begun to benefit the consuming countries, where prices have been on the downgrade for some time as the result of earlier declines in oil prices and freight rates. Taking the U.K. as an example, the past month has seen reductions in wholesale prices ranging from ¼d. an Imperial gallon for heavy fuel oils to ¾d. a gallon for gasoline and 1d. a gallon for aviation turbine fuels. Since the peaks of last March, wholesale prices in the U.K. have been reduced as follows: gasoline by 4¾d. a gallon, burning oil by 4¼d., automotive gas oil by 4½d. and fuel oils by 4d. Except for black oils (mostly a farthing dearer) this brings wholesale prices to below those ruling in October 1956, before the closure of the Suez Canal and the consequent steep rise in transport costs.

The burning question exercising many minds is whether the fall in the price of products is likely to result in a general break in crude oil quotations. Since product prices in the Western Hemisphere are now no higher than before the Suez emergency—most are lower—whereas crude oils are, on average, about 25 cents a barrel dearer, it is obvious that refiners must be having a very lean time. However, the bulk of the refining is, of course, done by integrated concerns which produce much, or all, of the crude they handle; their position is naturally different from that of the non-integrated refiner. They argue that the crude oil price advance of January 1957 was no more than sufficient to cover the rise in the cost of labour and materials in the three and a half



years which had elapsed since the previous general increase. They point out, quite justifiably, that there is no present case for cutting posted crude oil prices on grounds of cost; and that a reduction now would do nothing to stimulate demand, but might easily result in a further shading of product prices. In the end, the question will be decided, not by argument, but by the forces of the market.

So far, no general break has occurred despite a series of local adjustments in the U.S.A. during the past two or three months. Though numerous—cuts of up to 15 cents a barrel have been made in the Illinois Basin, the Four Corners area, N. Dakota, Montana, Ohio, Michigan, and S. Texas—these reductions have affected only a small proportion of the country's crude oil production. Similarly, the past month's cuts (5 to 15 cents a barrel) in heavy Venezuelan crudes are a direct reflection of the fall in heavy fuel oil and do not necessarily presage a general decline. Again, the 10 cents reduction in the East Mediterranean, initiated by Esso on 31st January, reflects that company's assessment of the competitive advantage conferred upon Persian Gulf supplies by the decline in tanker freights; it does not, of itself, imply that any general downward move is in prospect.

Nevertheless, the weakness of products on the U.S. Gulf/Caribbean markets constitutes an undoubted threat to the North American and Venezuelan crude oil price structure. And, if this were to give way, it is difficult to see how Middle Eastern sellers could avoid reducing their own postings: indeed, the tendency of recent years has been for the differentials between Western Hemisphere and Middle Eastern crude oil prices (in favour of the former) to widen, as producers in the latter area have sought to extend their markets. In view of the stagnation of demand in the U.S.A., the only way of buttressing the price structure is by resolutely tackling the problem of over-supply from which the markets have been suffering for some months. The refiners are now moving in this direction and are imposing upon themselves the kind of discipline to which crude oil producers are subjected by the State regulatory authorities. It is not yet possible to say that they have acted in the nick of time. But the verdict of the markets cannot be long delayed.—*By Special Arrangement with* PETROLEUM PRESS SERVICE.

NUCLEAR POWER GENERATION COSTS ALREADY GOING DOWN

Though the present capital cost of building a nuclear power station is three times that of building the most advanced conventional steam station, the "progressive lowering of nuclear generation cost to below that of steam plant can be confidently expected." This is stated by Lord Citrine, who was the Chairman of the British Central Electricity Authority till the end of 1957, when it was split into two bodies. Discussing future electricity charges for industrial and domestic use in the United Kingdom, Lord Citrine says that, already, the capital cost per kilowatt of nuclear plant is on the downgrade.

Even before the reduction of generating costs to below that of steam plant is achieved, the use of nuclear power generation should not result in making electricity dearer despite the present higher capital costs. The operating cost of the nuclear system is low, and the higher capital cost "is not of such significance that it cannot be spread over and offset by economies in the supply system as a whole without itself affecting the price of electricity to consumers."

Lord Citrine, writing on the Central Electricity Authority's programme for nuclear power, states in the *Fuel Economy Review* just published: "Britain leads the world in the practical application of nuclear power to electricity generation, and has good prospects of a healthy export market in this field." Lord Citrine tells of speedy implementation of the British Government's 10-year nuclear power programme. "In only one year and nine months," he says, "four groups of manufacturers were organised for the construction of nuclear power stations, personnel were trained in the know-how of reactor design and operation, initiating specifications were issued, tenders invited, received, examined and adjudicated upon, and firm contracts placed for the first two commercial-size nuclear power stations to be built in any country in the world."

TOTALLY ENCLOSED AND SQUIRREL CAGE SCREEN PROTECTED MOTORS ALSO AVAILABLE

Applications are invited for stockist dealers from important centres in India.

Plan for Progress

Transport and Travel

A network of steel rails girdling the country, ribbons of tarmac stretching over the land, and invisible paths traced across the skies are today breaking the barriers of vast distances in India to meet the needs of her developing economy. Thousands of millions of passengers and millions of tons of freight are carried every year by rail, road and air. During the Second Five Year Plan will be built 18,000 miles of surfaced roads and eight aerodromes and gliderdromes, and 2,258 locomotives and 1,18,611 coaches and wagons will be put into commission. Textile Machinery Corporation Limited, is proud to play its part in this mighty effort to strengthen the economic life lines of the nation. A pioneer in many fields of engineering, it supplies industry, railways and river valley projects with a wide range of equipment.

ANNUAL MEETING OF SPENCER AND COMPANY, LIMITED

MR. Z. R. IRANI'S ADDRESS TO SHAREHOLDERS

SIZABLE INTEREST IN AMERICAN PROJECT FOR MANUFACTURE OF DRUGS SECURED

THE efforts of Spencer and Company, Ltd., to enter new fields of activities have made little progress, but the management has not given up its negotiations. Disclosing this at the Sixtieth Annual General Meeting of the Company held at Madras on 28th February 1958, Mr. Z. R. Irani, Chairman, clearly told the shareholders that the Company had acquired a sizable interest as the largest Indian investor in a comprehensive project finalised by one of the biggest and most reputed American concerns for the manufacture of drugs and pharmaceuticals in this country.

The following is the text of Mr. Irani's speech:

"GENTLEMEN,

"Our meeting today is the sixtieth annual general meeting of the Company, a landmark in its history. Perhaps, I should on this occasion give you a synopsis of the main happenings during the last sixty years, but even a brief report will take up time which will be more profitably spent in dealing with the present and, so far as I can reasonably prognosticate, the future.

"Eleven months ago, Mr. Edwards resigned his seat from the Board and your Directors elected me to the exalted office of Chairman. We have hard times before us and, I trust, I shall be worthy of the confidence reposed in me. Our thanks are due to Mr. Edwards, who was Chairman of the Company for seven years, for his able guidance of its affairs over that period.

Company's Activities

"You will have had ample opportunity to examine the accounts for the year ended 30th June 1957 and, with the help of the comparative figures of the previous year, to gauge the progress of the Company. I feel that you should be made aware of the activities of the Company and the extent of contribution each has effected towards the whole. In the main we trade as wholesalers and retailers of consumer goods throughout our various branches; we own three hotels and cater now in a very restricted manner on the Southern Railway; we manufacture and trade in drugs and pharmaceuticals, house furnishing and steel furniture, aerated waters and cigars; we grow and trade in tea; we trade in refrigeration and air-conditioning machinery, both domestic and commercial, and finally we have sundry smaller activities arising from or interconnected with the foregoing main ones. The wholesale and retail trade has contributed 55 per cent. towards the trading profit of the Company, hotels and catering 15 per cent., drugs and pharmaceuticals 8 per cent., house furnishing 5 per cent., aerated waters 3 per cent., cigars 1 per cent., tea 6 per cent., refrigeration and air-conditioning 4 per cent. and sundries 3 per cent. We have always been known as the 'suppliers of India's daily needs' and you will be able to appreciate how we stand in the context of current economic conditions.

"Within its present field, the Company has, if I may say so, done as well as can be expected in the year under review. Such activities as have not involved imports have shown, and will no doubt, with assiduous development, continue to show, progress. Even so, the relaxation of import policy in certain directions will be of considerable assistance, as, for instance, in the case of machinery for the manufacture of aerated waters and certain specialised provisions and foods which would conduce towards tourist satisfaction.

"Though we have managed to maintain turnover in the consumer goods trade, it is here that the Government's import control policy has a vital impact on the Company's business, particularly, as we have been and are predominantly a merchant house. From the commencement of 1957, the import of consumer goods has been severely cut. This, of course, is part of the larger 'lan policy and the paucity of foreign exchange esources needed for it dictates the practical toppage of licensing of consumer goods import. low serious the foreign exchange resources position is will be apparent from these basic facts. At the beginning of the Second Plan in April 1956, the sterling balances were of the value of Rs. 746 crores; nine months later, they had shrunk to Rs. 534 crores and at the end of last year they amounted only to about Rs. 300 crores.

"With a steadily expanding gap in trade balance of payments, the value of imports in recent years having been always much in excess of the value of exports, the Government finds itself driven to such expedients as rephasing the annual outlay on the Plan and the commitments position, arranging credit in the form of deferred payments for capital goods import, and, of course, the imposition of the most rigid control on consumer goods import. It is, however, gratifying to note that larger foreign aid will now be available. Against an estimated foreign aid requirement of about Rs. 700 crores for the Second Plan, a substantial part, in addition to the credits arranged earlier, seems to have been negotiated, such as the American loan of 225 million dollars. Japanese yen credit equivalent to Rs. 25 crores, West German deferred payments arrangement for 120 million marks and the Russian loan equal to Rs. 60 crores. It is to be hoped that an improvement in the position, coupled with an export drive resulting in larger earnings of foreign exchange, will make it possible to relax to some degree the present extreme rigidity of the import control policy so far as consumer goods are concerned.

"In a country based on a free social order, the production and trade of consumer goods play a vital part. Professor Erhard, in his book, *Prosperity Through Competition*, which analyses the great economic achievement in West Germany since the war, says:

> "'First consideration must be given to the freedom of every citizen to live his life according to his financial circumstances, personal desires and values. This basic principle of freedom for the consumer must logically be counterbalanced by freedom for the producer to make and sell what he believes to be marketable. Freedom for the consumer and freedom to work must be explicitly recognised as inviolable basic rights by every citizen. Democracy and a free economy are as logically linked as are dictatorship and State controls.'

And again,

> "'To maintain a competitive economy is, therefore, in every sense a social obligation. We can learn from our own past, but also in looking at countries beyond the Iron Curtain we can see that in the planned economy, and even more in the State-controlled economy, the proportion of wages in the national income is and has always been smaller than in the market economy. It would be remarkable if it were otherwise, for not only does the bulky bureaucratic machinery in the nature of things consume a large part of the national income but the composition of the national income also shows that it is not meant to satisfy human needs.'

Plan too Ambitious

"It is my sincere belief that, in furthering the economy of a country, the production of the heavy industries and consumer goods must march hand in hand and that the balance must not be untowardly disturbed. You will recall that, speaking last year on the Second Plan, I ventured to express my doubt whether outlay on the Plan on the scale contemplated was not somewhat too ambitious in relation to available and potential resources. Events have shown that that fear was not entirely groundless. In the assessment that I made, I was in good company, for Mr. Neogy, closely associated for long with the Planning Commission, also felt that 'the Second Plan is unrealistic and overambitious and its massive superstructure is raised on precarious foundations.' I must mention also that, in this view, I do not have the support of that expert academic body, the Panel of Economists, who consider that 'on the whole, a plan of Rs. 4,800 crores at present prices should be feasible, provided the effort to mobilise domestic resources in all forms is considerably increased and external assistance of Rs. 700 crores as envisaged is forthcoming.' As against this assessment, evidence is now available that this view of inadequacy of resources was not far wrong, because it has been admitted in official circles that, while some check on Plan tempo must be put, the hard core of the Plan will be adhered to. This realistic appraisal is all to the good and national economy will be spared any violent strains which a whole-hog programme, based on a misjudgment of capacity, may impose or precipitate. Making haste slowly is a wise dictum which can apply equally to revolutionary economic policies

Severe Regimentation Necessary

"I repeat what I said last year that an enforced economy to be effective must have severe regimentation. The objective of such an economy is to raise the *per capita* income with a view to bettering the living standard of the people. This objective, however, is frustrated, if, contemporaneous with an increase in *per capita* income, there is a corresponding increase in the cost of living. The *status quo* then remains unchanged, but there is the cheapening of money and an ever-mounting inflationary spiral to be contended with. This is the position today. Economists assert that such a stage is intermediary and is to be expected, but will undoubtedly lead to prosperity and contentment. However much this is emphasised, invariably an enforced economy, however utopian its objectives, has ended in tribulation. Progressive stability can only be achieved by the will and the work of a people. An increase in tempo towards that end is undoubtedly advisable, but it must be judicious and not overstrained and it must not make the amenities of an advanced world inaccessible, amenities which distinguish civilisation from primitiveness.

"Speaking on Budget day, but before we have heard what the new tax proposals are, I am at a slight disadvantage, but it requires no prophet to forecast that the gift tax will be one of them. In the integrated pattern of our new tax system, this is the one hole yet to be plugged and with the gift tax along with the wealth and expenditure taxes and with a further streamlined income-tax system, the revenue armoury is claimed to be now practically evasion-proof. Our tax policy is being brought into alignment more and more with the avowed objective of evolving a socialistic pattern of society, which incidentally has the immediate effect of augmenting revenue so necessary to finance the Plan. Our Prime Minister has even quite lately made it unmistakably clear that last year's new taxes were an approach to the solution of the problem of accumulation of wealth. The Finance Minister too has made it plain that there will be no retreat from the basic tax structure and that it will have to remain. These declarations must completely dispel any fond hopes that, on the completion of the Plans, a lightening of the tax load may be looked for. While this is the broad position in the Centre, the State pictures are equally bleak. To give effect to the Plan programmes for the year 1958-59 so far as the States' sector is concerned, States have to find additional resources of the order of Rs. 200 crores from further taxes, small savings, public loans, etc. The Centre will be in no position to dispense more aid in view of the new arrangements for distribution of revenues recommended by the Finance Commission. The State tax field has been fully exploited and taxes having reached a state of inelasticity, it is a matter of some concern to us what new devices will be adopted for raising more State revenues.

Not Opposed to Planning

"The foregoing opinions have not been expressed with any intention of opposing planning. On the contrary, it is for the Government to legislate and for us as educated, and responsible citizens to adhere to such legislation, with the right, as always, of free constructive criticism. My intention is to show you how Governmental policies are affecting and are likely to affect the business and, accordingly, the future earnings of your Company.

"Apart from our endeavours to find suitable lines to supplement our consumer goods trade, and we are doing this with fair success, your Board is ever on the look out to employ the Com-

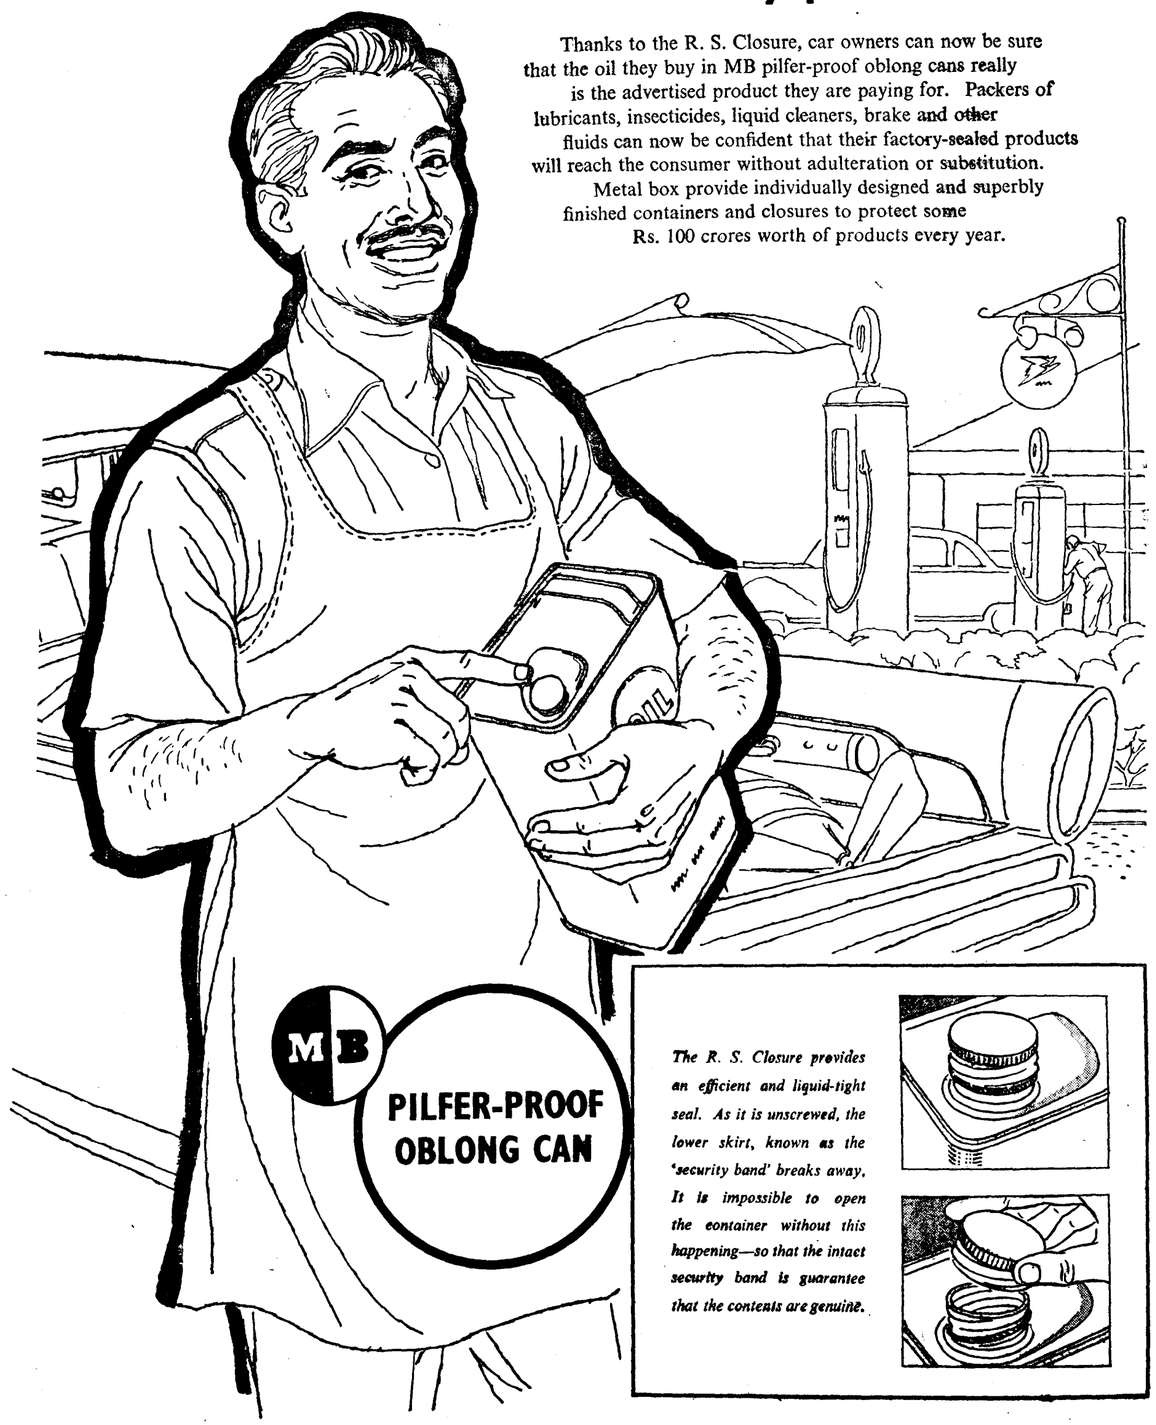
a pilfer-proof package

for every product !

Thanks to the R. S. Closure, car owners can now be sure that the oil they buy in MB pilfer-proof oblong cans really is the advertised product they are paying for. Packers of lubricants, insecticides, liquid cleaners, brake and other fluids can now be confident that their factory-sealed products will reach the consumer without adulteration or substitution. Metal box provide individually designed and superbly finished containers and closures to protect some Rs. 100 crores worth of products every year.



The R. S. Closure provides an efficient and liquid-tight seal. As it is unscrewed, the lower skirt, known as the 'security band' breaks away. It is impossible to open the container without this happening—so that the intact security band is guarantee that the contents are genuine.

REVENUE AND EXPENDITURE OF CENTRAL GOVERNMENT

OVERALL DEFICIT OF RS. 200 CRORES ENVISAGED

MR. Jawaharlal Nehru, India's Prime Minister and acting Finance Minister, presented the Government of India's budget for 1958-59 on the customary day, namely, the last day of February. The budget was devoid of any major surprises. The only new direct tax to be introduced was the one on gifts. This, however, had been expected as a natural outcome of the revamping of the tax structure made by Mr. T. T. Krishnamachari during his short regime as Finance Minister.

The budget of a modern government has many facets. On this page, it is proposed to recount briefly the revenue and capital sides thereof. The new tax proposals and the adjustments sought to be made in the existing ones are outlined on the next page. A statistical picture of the revenue budget is presented in Tables 1, 2 and 3 on this, as well as the next, page.

Revised Estimates for 1957-58

The final budget for the current year, that is 1957-58, as adopted by Parliament, placed the revenue at Rs. 708.03 crores and expenditure at Rs. 672.29 crores, leaving a revenue surplus of Rs. 35.74 crores. The revised estimates show that, as usual, the revenue had been underestimated, for they place them at Rs. 724.63 crores, an increase of Rs. 16.60 crores over the budget estimates. Expenditure, too, has gone up from the budgeted figure of Rs. 672.29 crores to Rs. 719.58 crores, due chiefly to an increase in defence expenditure and the additional transfer of Rs. 34.5 crores to the States as a result of the Finance Commission's recommendations, which have been accepted by the Government. Consequently, the surplus has shrunk from Rs. 35.74 crores to Rs. 5.05 crores.

Explaining the important variations in the revenue estimate, the Finance Minister observed as follows:

"The revenue from customs is now expected to be Rs. 183 crores, against the budget estimate of Rs. 167.6 crores. Excluding the additional duties levied on sugar, cloth and tobacco, which accrue to the States, Union Excise Duties are now expected to yield Rs. 252.45 crores, against the budget estimate of Rs. 259.57 crores. The decrease of Rs. 7.12 crores is mainly due to a fall in the revenue from cloth and motor spirit. This is partly counter-balanced by increased revenue from cement and diesel oils. No change is anticipated in the budget figure of Rs. 206.40 crores for Corporation Tax and income-tax, but the share of the States will increase from Rs. 65.98 crores to Rs. 73.43 crores, as a result of the Finance Commission's Award. The revenue from Wealth Tax this year is now put at Rs. 9 crores, a drop of Rs. 3.5 crores in the original estimate due to the time taken in obtaining necessary statements from assessees. The tax on Railway fares is now expected to yield Rs. 4.84 crores, against the original budget of Rs. 7 crores. The revenue from Posts and Telegraphs is likely to drop by Rs. 2.72 crores to Rs. 1.23 crores, due partly to a fall in traffic and partly to the interim relief to low paid employees granted recently. The dividend from Railways is now estimated at Rs. 44.24 crores, against the budget figure of Rs. 43.79 crores. Of this sum, Rs. 37.91 crores, representing the interest element, is taken in reduction of interest payments on the expenditure side and the balance credited as contribution to revenue."

On the expenditure side, the defence expenditure has moved up from Rs. 252.71 crores (budget estimate) to Rs. 266.05 crores. Of this addition, Air Force has accounted for Rs. 6.80 crores and the Army for Rs. 6.86 crores. Purchase of additional stores, rise in prices, grant of additional dearness allowance and certain other concessions to personnel have been the causes for the increase in the Army budget, while that in the Air Force expenditure is almost entirely due to the replacement of aircraft and equipment.

The variations in Civil expenditure are as follows:

"Civil expenditure shows an increase of Rs. 33.95 crores over the budget estimate of

* Effect of budget proposals.

Rs. 419.58 crores. Payments to States on account of their share of Union Excise Duties and of grants under the substantive provision of Article 275(1) of the Constitution have increased by Rs. 39.90 crores, as a result of the Finance Commission's award and the levy of certain additional duties in replacement of sales tax. There is an increase of Rs. 1 crore on account of additional dearness allowance granted during the course of the year and an increase of Rs. 2½ crores in interest charges, due to larger expansion of Treasury Bill than anticipated in the budget. A provision of Rs. 3 crores has also been made for writeback to revenue of losses on the Food Trading Account. It will be recalled that a Food Subsidy Fund of Rs. 25 crores was intended to be built up from the additional taxation levied this year, which if unspent, would have been available for the current and future years. But since the revenue surplus this year has been more or less absorbed by the transfer of additional resources to the States under the Finance Commission's award, it has not been possible to meet the entire subsidy from revenue. The amount of this subsidy this year will be Rs. 30 crores and next year Rs. 20 crores and it is proposed to write this back to revenue over a period of 10 years. The increases I have mentioned amount in all to Rs. 46½ crores roundly but they have been offset by savings under other heads of Rs. 12½ crores. Thus there is a saving of Rs. 5 crores under Education; Rs. 1 crore under Community Development; Rs. 2 crores under Scientific Departments; Rs. 1 crore in the grant to States for development of backward classes and Rs. 2 crores in respect of grants to States towards expenditure necessitated by natural calamities. The balance of the savings is spread over a number of heads."

Budget for 1958-59

The position for the coming year, that is, 1958-59, is as follows:

"On the basis of existing taxation, the revenue is estimated at Rs. 763.18 crores and expenditure at Rs. 796.01 crores, leaving a deficit of Rs. 32.85 crores on revenue account. The revenue from Customs has been placed at Rs. 170 crores, the decrease of Rs. 13 crores as compared with this year's revised estimates reflecting the effect of the restrictions on imports. Excise duties are expected to yield Rs. 260.45 crores, excluding Rs. 41.48 crores from additional duties on sugar, cloth and tobacco which accrue in almost their entirety to the States. This is an improvement of Rs. 8 crores over the current year's revised estimate. Under income-tax, the revenue is placed at Rs. 217 crores, allowing for a normal expansion in revenue of Rs. 10½ crores over the current year's revised estimate. The Wealth Tax is expected to yield Rs. 12.5 crores, the tax on Railway fares Rs. 9.22 crores and the Expenditure Tax Rs. 3 crores. The revenue from Posts and Telegraphs is estimated at Rs. 2.34 crores, against Rs. 1.23 crores this year. The dividend payable by Railways next year is estimated at Rs. 49.58 crores of which Rs. 7.04 crores will be taken as contribution to revenue and the balance of Rs. 42.54 crores in reduction of interest payments on the expenditure sile. The surplus profits of the Reserve Bank next year have been placed at Rs. 30 crores, the same as in the current year. A credit of Rs. 7.34 crores has also been taken on account of the surplus of the cement account of the State Trading Corporation to be transferred to Government. This amount will be utilised on the development of national highways. The share of income-tax payable to States next year will be Rs. 76.97 crores, against the current year's revised estimate of Rs. 73.43 crores.

"Expenditure next year is estimated at Rs. 796.01 crores, of which Rs. 278.14 crores will be on Defence Services and Rs. 517.87 crores under the Civil heads. Estimates for Defence Services show an increase of Rs. 12.09 crores over the revised estimate for the current year. The increase is wholly in the Air Force estimates, mostly for the purchase of stores for replacement. The Navy estimates show an increase of Rs. 1.46 crores, but this is offset by a reduction in the provision for the Army.

"Civil expenditure next year shows an increase of Rs. 64.34 crores over the revised estimate. Of this increase, payments to States of the proceeds of the additional excise duties on sugar, cloth and tobacco account for Rs. 27.96 crores. The greater part of the balance is due to larger provision for nation-building, development and social services. The provision for expenditure on nation-building and development services under Civil Administration amounts to Rs. 130.09 crores, as compared with Rs. 109.62 crores during the current year. The provision for Education at Rs. 29.63 crores is higher by Rs. 5.48 crores and include Rs. 11.97 crores for grants to States, Rs. 2.51 crores for scholarships and Rs. 4.32 crores for grants to the University Grants Commission. For expenditure on Medical and Public Health, the provision has been increased from Rs. 10.43 crores this year to Rs. 16.03 crores next year and for Agriculture and Allied Services, the provision made next year is Rs. 17.64 crores, against the current year's revised estimate of Rs. 16.85 crores. The provision for Scientific Research has also been stepped up by

NEW TAXATION PROPOSALS

CHANGES IN EXISTING TAXES OUTLINED

THE new taxation proposals do not bring about any major change in the present structure and rates. The object of the few proposals that have been made is to make such improvements as are necessary to make the present pattern of taxation an integrated one and to plug the loopholes that now exist. The introduction of gift-tax and changes in estate duty are in keeping with this main objective. The particulars of gift-tax are explained in an earlier article. In this article, we propose to outline the changes that have been made in the existing taxes.

Indirect Taxes

Let us first refer to the few changes that have been made in the excise duties and customs duties. In the sphere of Central excise, only four changes have been made. These relate to tobacco, cement, cotton textiles and vegetable oil products. It may be recalled that the Central excise tariff relating to unmanufactured tobacco, other than flue cured, was amended during May 1957, on the recommendation of the Tobacco Expert Committee. Some doubts have since been expressed regarding the implication of the expression "1/16" square in size used in sub-item 1 (5) (iii) of item No. 9 of the Central Excise Tariff. The intention was that the size of granule of tobacco should not be larger than what could pass through a sieve of 16 uniform circular or square apertures per linear inch. To make this intention clear and to put the matter beyond doubt, the sub-item 1 (5) (iii) has been suitably amended and the existing explanation thereto is being omitted. This is essentially a drafting improvement and involves little financial implication.

As regards cement, the excise duty has been raised from Rs. 20 per ton to Rs. 24 per ton, raising the estimated revenue from this source from Rs. 11.20 crores to Rs. 13.44 crores, an increase of Rs. 2.24 crores. This will not, however, raise the price of cement to the consumer, as the surcharge at present collected by the State Trading Corporation has been withdrawn. The additional revenue consequent upon the increase in the duty is specifically earmarked for road development. As regards cotton textiles, the change affects only the powerlooms. It is proposed that the concession of paying duty at compounded rates should no longer be available to powerloom establishments having more than 100 looms. Simultaneously, the compounded rates applicable to units having 25 to 100 powerlooms are being suitably enhanced in two stages. This would bring in an additional revenue of Rs. 83 lakhs. The rate of duty on vegetable products is being lowered for the first 3,000 tons cleared by each factory. This would give substantial relief to the smaller producers and will cost the Exchequer Rs. 24 lakhs per annum.

Coming to Customs Duties, only a few minor adjustments and verbal changes are being made in the Tariff Schedule to remove some anomalies or doubts. The only change of any significance is the introduction of the alternative *ad valorem* rate of duty in respect of expensive varieties of artificial silk yarn like nylon, perlon, etc.; so far as the other yarns, such as viscose, are concerned, the rate of duty is being left unchanged. The financial effect of these changes will be negligible.

The changes proposed to be made in the sphere of direct taxation are best brought out by quoting from the official note explaining the relevant provisions of the Finance Bill and the Bill to amend the Estate Duty Act.

Income-tax

It is proposed that the rates of tax applicable for the current financial year 1957-58 be continued for the next financial year 1958-59 with one small modification as follows:

At present, all companies, including a company to which the provisions of Section 23A of the Income-tax Act are applicable, are subject to the graduated rate of super-tax on all dividends declared in excess of six per cent. of the paid-up capital. These rates are as under:

On that part of the said dividends which exceeds 6 per cent. but does not exceed 10 per cent. of the paid-up capital—at the rate of 10 per cent.

On that part of the said dividends which exceeds 10 per cent, but does not exceed 18 per cent. of the paid-up capital—at the rate of 20 per cent.

On that part of the said dividends which exceeds 18 per cent. of the paid-up capital—at the rate of 30 per cent.

It is now proposed to vary the slabs and the rates for excess dividend super-tax in the case of a Section 23A company, that is to say, a company in which the public are not substantially interested. The proposed slabs and rates are:—

On that part of the dividends which exceeds 6 per cent. but does not exceed 10 per cent. of the paid-up capital—at the rate of 10 per cent.

On that part of the dividends which exceeds 10 per cent. of the paid-up capital—at the rate of 20 per cent.

AMENDMENTS TO THE INCOME-TAX ACT

Proposals Which Have the Effect of Reducing the Tax Liability

I. *Exemption of the value of travel concessions received by employees on leave to their home-towns or villages in India*: At present, the value of free or concessional passages received by a non-Indian national from his Indian employer in connection with his proceeding on home leave out of India is exempt from tax under certain conditions. A similar concession is now proposed to be granted for Indian employees proceeding on home leave to their home town or village within India.

II. *Exemption of Investment income of registered trade unions*: A worker's trade union is essentially a welfare organisation for its members. It is therefore proposed to exempt such trade unions from income-tax on the income they derive from the investment of their surplus funds.

III. *Exemption of Scheduled Tribes who migrate to the Union territory of Manipur*: Members of the Assam Hill tribes are at present exempted from tax so long as they reside within the tribal areas. Some of these tribes have now migrated to or are resident in the adjacent Union territory of Manipur. It is therefore proposed to extend the exemption to cover such cases also.

IV. *Exemption of gratuities payable by local authorities to their employees*: At present, gratuity payments for past services paid to Government employees under the Pension Schemes of the Central or State Governments are exempted from tax. Similar schemes have been adopted by some municipal corporations, for their employees. It is, therefore, proposed to extend the exemption to employees of all local authorities and statutory corporations having similar death-*cum*-retirement gratuity schemes for their employees.

V. *Exemption of entertainment allowance received by Government employees*: At present, entertainment allowances received by all employees (including Government employees) from their employers are exempted from tax, upto the limit of one-fifth of salary or Rs. 7,500, whichever is less, provided the employees concerned were in receipt of such entertainment allowances before 1st April 1955. It is now proposed to exempt the entertainment allowances paid by Government even though the persons concerned were not in receipt of such allowances before 1st April 1955, but, at the same time, to restrict the exemption upto one-fifth of salary or Rs. 5,000, whichever is less. The existing provisions will continue to apply only in the case of non-Government employees.

Proposals Which Have the Effect of Increasing Tax Liability

VI. *Restriction of tax-free allowance for income earned abroad but not brought into India*: At present, an assessee who is resident in India is entitled to exemption from Indian income-tax on his foreign income retained or spent abroad, upto a maximum of Rs. 4,500. It is now proposed to restrict the exemption in the case of employees of Government, local authorities or statutory corporations, to a sum calculated at the rate of Rs. 1,000 for each month of service in respect of which the salary is received abroad.

VII. *Stricter definition of 'Technician' for purposes of income-tax exemption*: The law at present exempts the income of foreign technicians in India under certain circumstances. The present definition of "technician" has been found to be capable of a wider interpretation than was intended. It is, therefore, proposed to re-define the term so as to restrict the exemption to experts engaged in the fields of constructional or manufacturing operations or of mining, and generation or distribution of electricity or any other form of power. However, persons already exempted under the old definition will not be adversely affected.

VIII. *Allowance of development rebate made subject to certain conditions*: Under the existing law, an assessee carrying on a business is entitled to a development rebate at the rate of 25 per cent. of the actual cost of all new machinery or plant installed during the relevant previous year. It is proposed, firstly to increase the rate of allowance to 40 per cent. in the case of a new ship launched after the 31st day of December 1957. In the case of any other new machinery or plant, the rate shall continue to be 25 per cent.

Secondly, in order to secure that the development rebate is availed of for the development of the industry, and is not frittered away otherwise, it is proposed that the grant of this development rebate shall be subject to the following conditions:

(a) an amount equal to the development rebate is debited to the profit and loss account of the relevant previous year and credited to a reserve account;

(b) this amount is utilised by the assessee during a period of ten years next following only for the acquisition of assets for the purposes of the undertaking or for investment in the undertaking;

(c) the asset on which the development rebate is allowable shall not be sold or otherwise transferred by the assessee before the

(Continued on page 448)

PROTECTION FOR BICHROMATES

CONTINUANCE UNDER EXAMINATION

ALTHOUGH ten months still remain for the tariff protection to the bichromates industry to expire, the Tariff Commission has taken up for investigation the question of continuing protection to the industry. A public enquiry into the industry's case for protection was held in Bombay on 18th February, with Mr. K. R. Damle, I.C.S., Chairman of the Tariff Commission, presiding. The industry, we are told, has prayed for continuance of protection for a further period beyond 31st December next and also put forward four other measures of assistance. These are: (1) continued ban on imports of bichromates, (2) adequate relief from the high rate of taxation, (3) more rational system of freight rates covering transport of raw materials as well as by-products, and (4) proper railway priority for movement of raw materials.

The bichromates industry, it will be recalled, was one of those industries the establishment of which was considered essential by the Government of India under conditions created by the war. The first unit to manufacture bichromates was established in 1940. Early in that year, the Government gave an assurance that if the industry were conducted on sound business lines, it would protect it against unfair foreign competition after the war. Thanks to this assurance, more units were established during the war years.

The first tariff enquiry into the bichromates industry was undertaken by the former Tariff Board in 1946. The Board recommended protection for the period ended 31st March, 1949, by the conversion of the then existing revenue duty of 30 per cent. *ad valorem* into an equivalent protective duty made applicable to sodium bichromate, potassium bichromate and all chrome compounds. The Government accepted the recommendation but limited the period of protection to one year. In December 1948, the Board reviewed the case and suggested continuance of protection up to the end of March 1950. The second detailed enquiry was undertaken in 1949 and, on the basis of the Board's suggestion, the Government extended protection up to 31st March 1952. Subsequently, the rate of protective duty was raised to 31½ per cent. *ad valorem*. The period of protection was thereafter extended up to the end of 1954. The third enquiry was undertaken by the Tariff Commission in 1953-54 and protection was extended by a further period of four years ending December 1958. The duty was enhanced to 35 per cent. *ad valorem*, with effect from 16th May 1957.

When the first enquiry into the question of tariff protection for the bichromates industry was undertaken in 1946, there were 17 units engaged in production with a total annual rated capacity of 6,200 tons. Owing to decline in demand after the war and increased internal competition, several small units had to close down, thereby bringing the number of units to 11 with an aggregate capacity of 5,500 tons in 1949 (second enquiry). The number declined further to eight in 1953 (last enquiry), but the capacity was higher at 6,060 tons, as a result of expansion in the capacity of some units. Of these, four have since closed down, but, with the setting up of a new unit in Calcutta in 1953, there are at present five units engaged in the production of bichromates. Two of them are in Calcutta and one each in Bombay, Madras and Kanpur. The average number of workers employed in 1957 by three main producers in their bichromate plants was about 700. The overall annual capacity of all the five units is 4,548 tons of sodium and potassium bichromates.

The whole of the aforesaid capacity is, however, not being utilised. During 1957, for instance, the actual production was 3,623 tons, representing about 79 per cent. of the capacity; it was, of course, higher than what was produced in the previous years—3,262 tons in 1956, 2,934 tons in 1955, 3,207 tons in 1954 and 2,461 tons in 1953. The Tariff Commission will do well to find out the reasons for this under-utilisation of capacity and suggest measures for remedying the situation.

In the course of his speech, Mr. Damle indicated that the bichromates industry was now meeting the entire demand of the country. In 1954, the Tariff Commission had estimated the annual domestic demand at 2,400 tons for sodium bichromate and at 150 tons for potassium bichromate. The estimates relating to current demand show variations. The Development Wing of the Union Ministry of Commerce and Industry put it at 3,400 tons and 240 tons, respectively, while two of the main producers place the total demand at 3,800 tons and 280 tons, respectively. The actual sales of sodium bichromate by the three main producers amounted to 2,392 tons in 1955, 2,961 tons in 1956 and 3,330 tons in 1957; the corresponding figures for potassium bichromate are 166 tons, 188 tons and 204 tons. The chief consuming industries are textiles, leather tanning, wood preservation and match industries.

As regards the quality of bichromates, the manufacturers claim, according to Mr. Damle, that their products conform to Indian Standards Institution specifications. The Development Wing and the Central Leather Research Institute have endorsed this claim. Three of the important consuming industries—leather, textiles and matches—have expressed their satisfaction about the quality. There are, however, a few other consumers who have pointed out certain defects in the indigenous products. Mention, for instance, is made of the tendency of the indigenous product to become lumpy during the rainy season.

Imports of bichromates have been banned since 1953. Exports are freely allowed since 1955 and the Government has permitted, with effect from 26th August 1957, drawback of duty on imported raw materials used in bichromates for export. The rates of drawback (per cent.) are Rs. 3 for sodium bichromate dihydrate, Rs. 3.45 for anhydrous sodium bichromate, Rs. 3.10 for potassium bichromate, Rs. 3.60 for ammonium bichromate and Rs. 4.55 for chrome acid. None of the producers appears to have taken advantage of this concession and made any sizable exports. Referring to this, Mr. Damle stated that the Tariff Commission would like to know what stood in the way of the industry developing an export market.

If the bichromates industry has not been able to develop an export market despite the drawback of import duty on raw materials, it is probably because the cost of production is high. The latest figures relating to prices are not available. The comparison of the fair ex-works prices of indigenous products with the landed costs of imported products as made by the Tariff Commission in its last report (1954) reveals that the former are higher than the latter. The fair ex-works prices of indigenous sodium and potassium bichromates were Rs. 1,612 and Rs. 2,033 per ton. This compared unfavourably with the c.i.f. prices of imports from the U.K. (Rs. 1,225 and Rs. 1,470) and West Germany (Rs. 968 and Rs. 1,171).

The only by-product obtained in the production of bichromates is anhydrous sodium sulphate. The total production by the three main producers of bichromates was 2,100 tons in 1957, as against 1,840 tons in 1956, 1,870 tons in 1955, 1,920 tons in 1954 and 1,300 tons in 1953. There are also other sources of sodium sulphate. They are available as deposits in Jodhpur and as by-products in the rayon and hydrochloric acid industries. The Development Wing has estimated the current demand for sodium sulphate at 26,000 tons and the demand in 1960-61 at 65,000 tons. It is understood that the overall production of sodium sulphate at present falls short of the demand. The quality of sodium sulphate produced by the bichromate manufacturers is reported to be satisfactory. The bichromate industry has also found no difficulty in disposing of the by-product. Several derivatives of bichromates are made in the country by producers of bichromates and those of fine chemicals and paints. They are basic chrome tan, chromium sulphate, chromic acid and chrome salt, chrome oxide green, potash chrome alum, ammonium bichromate, sodium chromate and chromium pigments. The capacity of two main producers of bichromates for production of chromium compounds is 800 tons per annum. Their actual production was 38 tons in 1953, 18 tons in 1954, 195 tons in 1955, 300 tons in 1956 and 310 tons in 1957.

The raw materials required by the industry, namely, chrome ore, soda ash, sulphuric acid and lime and limestone are all available in the country. As the entire demand for soda ash could not be met from domestic production, it is also imported by the State Trading Corporation and the required quantities are released to the manufacturers on the recommendations of the Development Wing. The manufacturers of bichromates are at present using mostly imported Magadi ash, as it is cheaper than the light ash.

TRENDS IN ASIAN TRADE

ADVERSE BALANCE WIDENS

ONE of the notable subjects expected to be discussed at the annual meeting of the Economic Commission for Asia and the Far East (E.C.A.F.E.), which commenced at Kuala Lumpur on the 5th inst., relates to the Japanese proposal for intra-regional trade talks. The proposal was brought before the meeting of the E.C.A.F.E. Committee on Trade held at Bangkok from 20th to 27th January last, but was held over. For there was a split in the members' views on the scheme, with South Viet Nam, the Philippines and Pakistan against it and India and Indonesia in favour. Some delegates to the meeting felt that a majority of countries were against the scheme, while the Japanese sources said that support for the proposal was growing.

The deliberations of the Bangkok Conference of the E.C.A.F.E. Committee on trade and the speeches made by the representatives of member-countries strongly underlined the need for basing trade expansion on international co-operation which alone would lead to greater economic development and increased well-being for all. The Committee discussed in detail the several issues relating to trade such as status of import and export licensing systems, possible effects of the European Common Market, trade promotion talks and techniques, training of personnel to stimulate trade, and simplification of customs formalities. The discussions were in the light of current developments in Asian trade and trade policies highlighted in the report prepared by the E.C.A.F.E. Secretariat which was submitted to the Committee.

Although much of the statistics cited in the above report are old in that they relate to 1956, they will nevertheless give an idea of the trend of trade of E.C.A.F.E. countries. These countries are having an adverse balance of trade with the rest of the world; it was as much as $1,900 million in 1956, as against $350 million in 1955. The bulk of this deficit—amounting to $1,016 million—was accounted for by Japan, followed by India the deficit of which was $385 million, thanks to enlarged imports, on the one hand, and reduced earning from exports of jute and cotton, on the other. The marked increase in adverse balance of trade has been due to the heavy imports into many countries in the E.C.A.F.E. region, while exports have not registered any significant expansion. Imports reached a new high of $10,776 million in 1956, an advance of 18 per cent. over the previous year. Of the increase of about $1,640 million in imports the share of Japan alone was $760 million, that of India being $350 million, of Indonesia $250 million, of Hongkong $150 million and of Malaya $107 million. The export earnings of the region, excluding Japan, remained virtually at the same level as in 1955. The export earnings of Ceylon, Indonesia, Pakistan and Southern Viet Nam suffered a setback, while those of India, Malaya and Thailand remained more or less the same. Japan stepped up its exports from $2,000 million to $2,500 million. It was this improvement which was largely responsible for the increase of 6 per cent. in the total export earnings of the region as a whole which aggregated $8,860 million in 1956, as against $8,343 million in 1955.

The study of trade fluctuations in specific countries reveals that rice exports from the E.C.A.F.E. region during 1956 were not only maintained but increased, but a decline in prices reduced the earnings. Rice exports from Burma diminished slightly, while those from Thailand and Cambodia increased. There was a fall in both quantum and prices of rubber exports from Ceylon. Pakistan exported less jute and raw cotton; prices of the latter commodity declined. The fall in rubber prices also adversely affected Indonesia and Malaya. In general terms for the area, only export earnings from tea showed some increase, while those from rubber, rice, jute, raw cotton and sugar suffered a decline.

Commenting on the export trade, the E.C.A.F.E. report says that the decline in exports from the non-industrial countries in the region—from 10.4 per cent. of the world export total in 1950 to only 5.9 per cent. in 1956—was due to a significant world trend. It says: "This trend is the decline in the relative share of exports of non-industrial areas in world exports. The exports of the industrial areas have risen at a much faster rate than those of the non-industrial areas—of the total increase in the value of world exports by $9,300 million from 1955 to 1956, the exports of the industrial areas accounted for $7,500 million, whereas the exports of the non-industrial areas increased by only $1,800 million.

ALKALI AND CHEMICAL'S RESULTS ENCOURAGING

GROSS PROFIT UP, BUT NET PROFIT DOWN DUE TO HEAVY TAXATION

ENCOURAGING are the results of the Alkali and Chemical Corporation of India Ltd. (Secretaries: Imperial Chemical Industries (India) Private Ltd., Calcutta) for the year ended 30th September 1957. Thanks to an increasing demand for the Company's products and efficient working of the manufacturing units, both production and sales touched new record levels. Although there was a substantial rise in manufacturing and other expenses, higher turnover has enabled the Company to report better profit. It will be gratifying to know that the earnings for 1956-57 represent a fresh record high. The gross profit at Rs. 48.46 lakhs has jumped up by Rs. 8.25 lakhs or over 20 per cent. as compared with that for the preceding year. This is the highest gross profit in the history of the Company. The profit for 1955-56 was itself a record, such having exceeded the previous best of Rs. 38.57 lakhs earned in 1950-51. With the improvement in the year under review, the gross profit has almost trebled that (Rs. 16.33 lakhs) in 1952-53.

Although the gross profit is significantly higher, the net profit is markedly down from Rs. 25.13 lakhs to Rs. 17.98 lakhs. The reason for this setback is the heavy burden of taxation. The provision for this purpose has been stepped up from a mere Rs. 4.67 lakhs to as much as Rs. 18.30 lakhs. Of the latter amount, Rs. 2 lakhs are on account of wealth tax (including Rs. 90.000 in respect of the previous year) alone. It will thus be noted that the tax provision has gone up fourfold. The rate of wealth tax is only at ½ per cent. of the net assets, but its incidence on the Company is pretty high, being about 6 per cent. of the net profit. The provision for depreciation has also been raised from Rs. 10.41 lakhs to Rs. 12.18 lakhs.

The heavy load of taxation has had its adverse effect on the Company in two ways. First, the Directors have not been able to plough back the same amount as they did in the previous year. Thus, a sum of only Rs. 13.84 lakhs has been allocated to the various reserves, as against Rs. 18.89 lakhs in the previous year. Secondly, despite higher turnover and better gross profit, the dividend to shareholders could only be maintained at 8 per cent., the rate for the previous two years. A breakdown of the allocation to reserves shows that the dividend equalisation reserve which was the recipient of Rs. 13.64 lakhs a year ago now gets only Rs. 6.20 lakhs. The transfer to general reserve has been reduced from Rs. 3 lakhs to Rs. 2 lakhs. The addition to the reserve for deferred income-tax liability due to initial allowances, however, has been raised from Rs. 2.25 lakhs to Rs. 5.64 lakhs.

The progress of the Company's working during the last four years is indicated in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th September			
	1957	1956	1955	1954
Sale proceeds	2,25.46	1,88.31	1,55.10	1,17.69

* Tax refund and provision no longer required.

Production in most units during the year surpassed all previous records. This is reflected in the rise of Rs. 37.15 lakhs, or 20 per cent., in sale proceeds, Rs. 9.19 lakhs in stocks of finished goods and those in process, Rs. 25.09 lakhs in manufacturing expenses and Rs. 10 lakhs in other expenses.

There was a record output of chlorine and caustic soda to meet the demand both for the purposes of sale in the market and for the Company's manufacture of chlorine derivatives. The Directors are giving consideration to extend this plant. The output of the hydrochloric acid plant kept pace with the demand and both production and sales increased during the year. A substantial increase in output and sales was recorded in "Gammexane" formulations of benzene hexachloride. The production of "Gammexane" Technical BHC was maintained at the previous year's level. In regard to paints, there was a steady expansion in the demand for the Company's well-known "Duco," "Dulux" and ancillaries and the plant has been working to capacity. Difficulties in obtaining imported raw materials and delays in deliveries after the Suez trouble affected production during the latter part of the year when the extensions went into operation. Sales of metal pretreatment products were very satisfactory and it is stated these are becoming increasingly popular. About the Company's new venture, namely, the manufacture of polythene, the Directors say that the contractors have been working on the site throughout the year. Site development is substantially complete; piling and foundation are sufficiently advanced, enabling the erection of structural steel. Delivery of plant and equipment from the United Kingdom has started and is reasonably in step with the programme.

The balance-sheet as at 30th September 1957 shows that the total assets of the Company amount to Rs. 502.19 lakhs, of which the net block accounts for Rs. 214.88 lakhs. The depreciation provided up to the end of the year on the block account aggregates Rs. 60.65 lakhs. The current assets amount to Rs. 287.31 lakhs, as against which the current liabilities and provision for taxation stand at only Rs. 118.63 lakhs. The excess of assets over current liabilities and provision for taxation, that is, the net assets, amounts to Rs. 383.56 lakhs, which is represented by paid-up capital amounting to Rs. 279.42 lakhs and reserves and surplus Rs. 104.13 lakhs. It may be remembered that, during the last financial year, the Company had issued 2,480,000 'A' ordinary shares of Rs. 10 each at par to the ordinary shareholders of the Company in the ratio of four shares for every one share held. The Directors state that despite the depressed state of the investment market at the time, only 6.5 per cent. of the issue was not subscribed. This balance, however, was taken up by I.C.I. (India) Private Ltd., in accordance with its undertaking. As at the close of 1956-57, a sum of about Rs. 62 lakhs, representing the final call, remained to be called up on the new shares. This was, however, called up on 12th November 1957, so that the paid-up capital in the next balance-sheet will be up by this amount.

An interesting chart included in the Directors' report and accounts for the year under review gives an indication of the Company's disbursements of earnings. It shows that materials and services took up 38 per cent., depreciation 5 per cent., other manufacturing and administrative expenses 6 per cent., freight and transport charges, etc., 5 per cent., selling expenses 16 per cent., interest 1 per cent., taxation 8 per cent., profit retained in business 6 per cent., shareholders' dividends 3 per cent., and wages, salaries and allied expenses 12 per cent.

The Rs. 10 fully paid-up shares of the Company, that is, the old ones, are being currently quoted at Rs. 13.50 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 6.3 per cent. per annum. The Rs. 10 fully paid new shares are standing at a little above Rs. 12. They rank for full dividend from the financial year beginning from 1st October 1957.

TURNER MORRISON & CO., LTD.

The Income-tax authorities at Calcutta have announced that all shares belonging to Mr. Haridas Mundhra in Turner, Morrison & Co., (Private) Ltd., whether standing in his own name or in the name of the British India Corporation Ltd., or in the name of Mr. W. H. J. Christie, have been attached under an order of the Certificate Officer and Additional District Magistrate, 24 Parganas. Accordingly, it is stated further, anyone making deals in these shares, will be doing so at his own risk and responsibility.

The Company has also announced the resignation of Mr. Haridas Mundhra from its directorate. Following this, the Company is said to have applied to the Government for permission to change its constitution.

It is stated that Mr. Haridas Mundhra, with a holding of 49 per cent. of the Turner Morrison shares, has never had any direct or active participation in the running of any company managed by Turner Morrison & Co. (Private) Ltd.

IMPRESSIVE RISE IN VOLTAS' EARNINGS

DIVIDEND MAINTAINED

VOLTAS Ltd. (Chairman: Mr. J. D. Choksi, Bombay) completed three years of useful existence on 31st August 1957. Promoted jointly under the stewardship of Messrs. Tata Sons Ltd. and Messrs. Volkart Brothers for the specific purpose of taking over the engineering and import divisions of the latter in India, the Company was formally incorporated on 6th September 1954. It took over the above divisions without any substantial changes in the organisational set-up. All agreements with regard to representation which existed with Volkart Brothers at that time were also taken over and, in addition, the new Company added to itself certain machinery and pharmaceutical lines. During the second year of its existence, that is, in 1955-56, the introduction of a machine tools department enlarged the Company's activities further. Representations of a number of first rate manufacturers were secured for which specialised staff were engaged. The Company, since incorporation, has thus been steadily increasing both its scope and volume of business. This is fully reflected in its accounts for the year ended 31st August 1957.

The gross profit at Rs. 82.65 lakhs is very nearly three times the sum of Rs. 28.71 lakhs earned in 1954-55 while, it is Rs. 34.80 lakhs better than in 1955-56. This is, indeed, highly encouraging. The heavy burden of taxation has, however, claimed the lion's share of the Company's gross profit. The tax provision has increased by 2½ times from Rs. 20.10 lakhs in 1955-56 to no less than Rs. 50 lakhs, which includes an additional provision of Rs. 5.25 lakhs for 1955-56. The provision for depreciation has increased from Rs. 3.57 lakhs to Rs. 4.70 lakhs. In view of these large provisions, the phenomenal rise in gross profit is not fully reflected in the net profit which at Rs. 27.95 lakhs is only slightly higher than the Rs. 24.18 lakhs for 1955-56. This is just sufficient for payment of the same dividend, namely, 9 per cent., as last year on shares of the first issue and *pro rata* for shares of the second issue, as also to make some additions to essential provisions. It may be noted, in this connection, that the Company's paid-up capital originally consisted of Rs. 150 lakhs in 15,000 shares of Rs. 1,000 each. After the close of 1955-56, the Company subdivided the shares of Rs. 1,000 each into ten shares of Rs. 100 each. Again, during the same period, in order to meet its increased financial requirements, the Company raised its capital by an issue of 105,000 ordinary shares of Rs. 100 each at par. The issue was fully subscribed. The allotment having taken effect on 1st January 1957 only, the dividend on shares of the second issue is equal to only two-thirds of the full dividend, that is, Rs. 6 per share. Reserves are provided with Rs. 11.46 lakhs, as against Rs. 10.75 lakhs allocated in the previous year. These are in the nature of Rs. 6.76 lakhs (Rs 7.14 lakhs) to provision for retiring gratuity, Rs. 3.25 lakhs (Rs. 3.25 lakhs) to general reserve, Rs. 1.24 lakhs (Rs. 24,663) to provision for doubtful debts, Rs. 17.000 (Rs. 7,000) to development reserve and Rs. 4,214 (Rs. 4,479) to capital reserve. The last item represents the surplus on sale of fixed assets. Figures in brackets refer to the previous year.

The following comparative table shows the Company's progress during the past three years:

(In lakhs of rupees)

	For the year ended 31st August		
	1957	1956	1955
Proceeds of sales and services	20,60.40	14,52.86	9,91.20
Other income	5.32	2.51	1.98
Closing stocks	7,59.90	7,07.18	3,85.36
Cost of sales and services	17,31.05	12,01.85	8,16.08
Selling expenditure	54.48	40.94	23.13
Other expenses	1,97.54	1,64.73	1,26.27
Gross profit	82.65	47.85	28.71
Depreciation	4.70	3.57	2.88
Taxation	50.00	20.10	11.41
Net profit	27.95	24.18	14.47
Transfer from reserves	3.60	0.99	..
To reserves	11.46	10.75	14.29
Dividends	19.80*	13.50	8.25
	(9%)	(9%)	(5.5%)
Carry forward	1.39	1.10	0.17

* Includes a *pro rata* dividend of Rs. 6 per share on the additional capital, raised by the issue of 105,000 shares of Rs. 100 each in December 1956.

It will be seen from the above table that the Company's proceeds from sales and services increased from Rs. 9.91 crores in 1954-55 to the impressive level of Rs. 20.60 crores in 1956-57. The improvement over 1955-56 was of the order of over Rs. 6 crores. It will also be no

this rapid growth in business is reflected in a sharp increase in all the various items of expenses.

Referring to the Company's working during the year and the progress achieved in its manufacturing programme, the Directors in their latest report observe:

"The total turnover, covering billings for sales and service, is over Rs. 6 crores higher than last year. This achievement reflects the Company's continued expansion, in spite of the adverse factors which prevailed during the year, such as import restrictions due to the shortage of foreign exchange, long delivery periods, etc. The demand for machinery and plant, as well as pharmaceuticals, vitamins and chemicals, has been well sustained throughout the year. Towards the end of 1956, Government made the issue of import licences for large orders covering plant and machinery (capital goods) conditional on the importer securing deferred terms of payment from suppliers abroad. While, generally speaking, suppliers abroad have shown a sympathetic understanding of the situation, stringent money conditions abroad have made the negotiation of transactions on deferred terms difficult, and the import trade is bound to be materially affected, so long as these conditions exist.

"Apart from the Crystal Air Conditioner, the Tushar water cooler is manufactured in the Company's own workshops. Arrangements have been made with foreign principals for local production of diesel engines, water meters and tool holder bits, tipped tools, etc. Agreements for manufacture of a number of other items have been finalised or are under discussion and the production of air-compressors, pharmaceutical products and vitamin A will start shortly. The change-over from imports to local production takes considerable time and involves substantial initial costs in each individual case. The Company has successfully pursued its policy of accepting selling agencies for high-quality goods produced by manufacturers in India. The increased sales have called for additional service facilities, resulting in several service establishments having been set up throughout the country at centres where equipment sold by Voltas is in operation."

As stated earlier, the Company's paid-up capital as at 31st August 1957 stands raised from Rs. 150 lakhs in 1955-56 to Rs. 255 lakhs, by the additional issue of 105,000 fully paid-up shares of Rs. 100 each in December 1956. Its reserves and surplus are, however, very small and need to be adequately built up. They aggregate only Rs. 30.14 lakhs. The gross block of the value of Rs. 66.55 lakhs stands written down at Rs. 55.59 lakhs. Capital works in progress at cost amounts to Rs. 1.45 lakhs. The current liabilities are of the order of Rs. 918.33 lakhs, of which secured bank loans amount to Rs. 379.85 lakhs. The current assets aggregate Rs. 11.46 crores. Of these, stocks account for Rs. 616.01 lakhs, debts, deposits and advances for Rs. 499.10 lakhs and cash balances for Rs. 26.29 lakhs. The current assets cover the current liabilities and the provision for taxation by a wide margin.

The Rs. 100 fully paid-up old shares of the Company are currently quoted at Rs. 115.50 *cum-div.* On an *ex-div.* basis, the yield is 8.45 per cent. per annum. The new shares are quoted at Rs. 110 *cum-div.*, the yield being 5.77 per cent. per annum.

WORKING OF COMPANIES ACT IN NORTHERN REGION

Thirty-nine private companies with a total authorised capital of over Rs. 1.21 crores were registered in the Northern Region under the Companies Act during the last quarter of 1957. In addition, one association, which is not for making profit, was registered under the Act in Uttar Pradesh. The Northern Region comprises Punjab and Himachal Pradesh, Delhi, Uttar Pradesh and Rajasthan. During the same period 29 companies went into liquidation in the region.

In the Punjab and Himachal Pradesh, six private limited companies were registered. Nine companies—three public and six private—went into liquidation. The number of companies finally dissolved was 15, while 89 companies were struck off the register under section 560 of the Companies Act. During the period, 14 cases involving default of provisions of the Companies Act were decided by the Courts and a total fine of Rs. 685 was imposed on the accused in those cases. A managing director of a public company was convicted under section 282 of the Indian Companies Act, 1913, for forging false audit certificates on balance-sheets of the company. He was sentenced to imprisonment till the rising of the Court with a fine of Rs. 1,000. Eight more fresh complaints were filed in Courts against different companies.

In Delhi, 23 private limited companies were registered, while one company went into liquidation. Fifty-six companies were struck off the register and four companies were finally dissolved. Twelve cases pending in the Courts against certain companies and their officers for technical defaults under the Companies Act were decided resulting in conviction. A total fine of Rs. 1,020 was imposed.

In Uttar Pradesh, seven private companies were registered during the period. While 14 companies went into liquidation, three companies were struck off the register. The number of companies finally dissolved was three.

In Rajasthan, three private limited companies were registered during the period under review. The number of companies that went into liquidation was five, of which four were public companies and one private. Three companies were finally dissolved during the quarter. Only one fresh prosecution was launched against a company for default under the Companies Act. The Court decided two pending cases during the period and imposed a fine of Rs. 375.

Points From The Chair

Enforced Economy

"AN enforced economy to be effective must have severe regimentation. The objective of such an economy is to raise the *per capita* income with a view to bettering the living standard of the people. This objective, however, is frustrated if contemporaneous with an increase in per capita income there is a corresponding increase in the cost of living. The *status quo* then remains unchanged, but there is the cheapening of money and an ever-mounting inflationary spiral to be contended with. This is the position today. Economists assert that such a stage is intermediary and is to be expected, but will undoubtedly lead to prosperity and contentment. However much this is emphasised, invariably an enforced economy, however utoplan its objectives, has ended in tribulation. Progressive stability can only be achieved by the will and the work of a people. An increase in tempo towards that end is undoubtedly advisable, but it must be judicious and not overstrained and it must not make the amenities of an advanced world inaccessible, amenities which distinguish civilisation from primitiveness."

Z. R. IRANI,
Spencer & Co. Ltd.

The International Sugar Agreement

"There is another factor regulating production in Jamaica. It is the International Sugar Agreement. All members of the Commonwealth Sugar Agreement are also members of the International Sugar Agreement under the terms of which the Commonwealth is collectively limited to exporting 2,500,000 tons in 1958. The annual consumption of Commonwealth importer members of the Agreement has increased by 800,000 tons since 1952. The United Kingdom and Commonwealth members, therefore, will be entirely justified, when the International Agreement comes up for re-negotiation this autumn, in insisting on an increase of at least 50,000 tons each year, that is to say, approximately 2 per cent. per annum. An expansion at this rate should be well within the capacity of the industry to maintain. It would secure for the Commonwealth about one-third of the expanding market that it is itself providing and leave two-thirds for other sugar exporting countries of the world."

PETER RUNGE,
West Indies Sugar Co., Ltd., London.

Outlook for Natural Rubber

"It is the opinion of many of the principal manufacturing concerns that for the next few years all the natural rubber that is likely to be produced will be required. This view has been expressed, despite the expansion of synthetic rubber producing facilities all over the world. These companies lay such store on the future availability of sufficient supplies of natural rubber that they are spending large sums on planting rubber on a considerable scale in Africa. I feel their action indicates confidence to the future of the natural rubber industry as well as a desire to insure against any serious effects from a possible worsening of the political situation in the Far East. During the next two or three years production capacity of synthetic rubber will increase substantially due to the completion of synthetic producing factories outside the United States. However, if the estimates of world expansion in the use of all rubbers prove correct, consumers must continue to use an ever-increasing percentage of synthetic. It would be dangerous, however, to adopt the attitude that, because all natural rubber is likely to be used, our market will automatically continue to merchandise the same tonnage which we have enjoyed in the past."

MAURICE SYMINGTON,
Rubber Trade Association of London, London.

Demand for Security

"The popular desire for large and better pensions is a natural outcome of the rising standard of living. The insurance offices are setting the pace and have done much to make the public pension-minded. Far from being enervating, security that is earned can make for peace of mind and better work—very often those who criticise the popular demand for security have never known insecurity themselves. But it needs to be more widely understood that a pension is a form of deferred pay and that it involves an immediate sacrifice in order that the future may be more secure. The crux of the matter is that pensions, as distinct from State benefits, must be properly related to the contributions paid. In everyday language, pensions must pay their way. Whether achieved by the life office practice of "funding" or by gradually increasing contributions over the years, as in America, sound finance must always be the basis of true insurance. If a Government should introduce a new pension scheme, this should be separate from, and not confused with, its primary duty to maintain a basic standard of living for old people."

SIR JOHN BENN, BT.,
United Kingdom Provident Institution, London.

COMPANY MEETINGS AND DIVIDENDS

NEW CITY OF BOMBAY MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 10th March 1958. Dividend: Rs. 5.00 per share, payable on and after 24th March 1958. Transfer books remain closed from 21st February to 14th March 1958, both days inclusive.

W. H. BRADY & CO., LTD. Annual General Meeting, Bombay, 10th March 1958. Dividend: Rs. 25.00 per share. Transfer books remain closed from 21st February to 14th March 1958, both days inclusive

BRADY ENGINEERING CO., LTD. Annual General Meeting, Bombay, 10th March 1958. Dividend: Rs. 3.00 per share, payable on and after 24th March 1958. Transfer books remain closed from 21st February to 14th March 1958, both days inclusive.

INVESTMENT CORPORATION OF INDIA LTD. Annual General Meeting, Bombay, 10th March 1958. Dividend: Rs. 9.25 per share. Transfer books remain closed from 3rd to 10th March 1958, both days inclusive.

NEW GREAT EASTERN SPINNING & WEAVING CO., LTD. Annual General Meeting, Bombay, 11th March 1958. Dividend: *Nil*. Transfer books remain closed from 21st February to 14th March 1958, both days inclusive.

ANDHRA SUGARS LTD. Annual General Meeting, Venkatarayapuram, Mandapaka, Tanuku (Andhra Pradesh), 15th March 1958. Dividend: Re. 1.25 per share. Transfer books remain closed from 1st to 15th March 1958, both days inclusive.

UNITED MOTORS (INDIA) LTD. Annual General Meeting, Bombay, 17th March 1958. Dividend: Re. 1.20 per share, payable on and after 31st March 1958. Transfer books will remain closed from 10th to 24th March 1958, both days inclusive.

JHANSI ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Jhansi, 17th March 1958. Dividend: Re. 0.86 for the fifteen months ended 31st March 1957. Transfer books remain closed from 5th to 18th March 1958, both days inclusive.

ALKALI AND CHEMICAL CORPORATION OF INDIA LTD. Annual General Meeting, Calcutta, 19th March 1958. Dividend: Re. 0.80 per share, free of income-tax, payable on and after 19th March 1958. Transfer books will remain closed from 10th to 19th March 1958, both days inclusive.

GILLANDERS ARBUTHNOT AND CO., LTD. Annual General Meeting, Calcutta, 20th March 1958. Dividend: Re. 1.00 per share. Transfer books remain closed from 7th to 20th March 1958, both days inclusive.

KUMERGODE ESTATES LTD. Annual General Meeting, Mangalore, 22nd March 1958. Dividend: Re. 0.50 (25 per cent.) per share. Transfer books will remain closed from 14th to 22nd March 1958, both days inclusive.

MADURA MILLS CO., LTD. Annual General Meeting, Madurai, 24th March 1958. Dividend: Rs. 2.25 (15 per cent.) per share, free of tax. Transfer books remain closed from 4th to 24th March 1958, both days inclusive.

STANDARD BATTERIES LTD. Annual General Meeting, Bombay, 24th March 1958. Transfer books will remain closed from 17th to 31st March 1958, both days inclusive.

VOLTAS LTD. Annual General Meeting, Bombay, 24th March 1958. Dividend: Rs. 9.00 per old share and Rs. 6.00 per new share, payable on and after 27th March 1958. Transfer books remain closed from 3rd to 24th March 1958, both days inclusive.

RAVALGAON SUGAR FARM LTD. Annual General Meeting, Bombay, 26th March 1958. Dividend: Rs. 12.00 per ordinary share, payable on and from 28th March 1958. Transfer books remain closed from 7th to 27th March 1958, both days inclusive.

RAZA BULUND SUGAR CO., LTD. Annual General Meeting, Rah-e-Raza, Rampur, 27th March 1958. Dividend: Re. 1.50 (15 per cent.) per share, free of income-tax, payable on and after 14th April 1958. Transfer books will remain closed from 17th March to 5th April 1958, both days inclusive.

RALLIS INDIA LTD. Annual General Meeting, Calcutta, 28th March 1958. Dividend: *Nil*. Transfer books will remain closed from 15th to 28th March 1958, both days inclusive.

SIJUA (JHERRIAH) ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 31st March 1958. Transfer books will remain closed from 20th to 31st March 1958, both days inclusive.

DHANALAKSHMI MILLS LTD. Dividend of Rs. 10.00 per share, for the year ended 31st December 1957. Transfer books will remain closed from 18th to 31st March 1958, both days inclusive.

NELLITHANAM RUBBER AND PRODUCE CO., LTD. Dividend of Rs. 2.25 per share, for the year ended 31st March 1957. Transfer books remain closed from 8th to 15th March 1958, both days inclusive.

UNITED NILGIRI TEA ESTATES CO., LTD. Interim dividend of Re. 0.50 (5 per cent.) per share, for the year ending 31st March 1958. Transfer books will remain closed from 25th to 31st March 1958, both days inclusive.

ALUMINIUM INDUSTRIES LTD. Interim dividend of 6¼ per cent. on ordinary shares, for the year ending 31st March 1958. Transfer books will remain closed from 16th to 23rd March 1958, both days inclusive.

K.C.P. LTD. Dividend of Rs. 7.50 per ordinary share, free of tax and Rs. 10.00 per deferred share, free of tax, for the year ended 30th June 1957, the latter subject to the sanction of the Industrial Finance Corporation of India. Transfer books will remain closed from 13th to 27th March 1958, both days inclusive.

GILLANDERS ARBUTHNOTS EARN LESS

DISAPPOINTING YEAR FOR RALLIS INDIA

Gillanders Arbuthnot and Co., Ltd.

THE directors of the above Company (Managing Director: Mr. P. E. G. W. Parish, Calcutta) submit the audited accounts of the Company for the year ended 31st March 1957.

The trading activities during the year, both in Calcutta and at the Branches in India and Burma, have recorded a substantial improvement resulting in a satisfactory increase in the gross trading profit. These results have been achieved largely by an expansion in business transacted on account of those agencies held by the Company for indigenous products. On the other hand the Company's import business during the year suffered to some extent as a result of import restrictions, and the additional and more drastic restrictions imposed in the months following the period under review will inevitably further curtail this aspect of the Company's activities.

Commissions and allowances earned record a considerable decrease which is attributable to the effect of the Companies Act, 1956, and to the cessation of income from those managing agencies for jute, tea and coal which were relinquished during the year under report and in the preceding year. These accounts cover only the first year of working under the Companies Act, 1956, and cannot, therefore, indicate the full effect of the restrictions imposed thereunder on managing agents and it appears inevitable that there will be further contractions in the earnings from these sources in future. The directors are fully conscious of this situation and while action has been taken to consolidate the Company's position in relation to its managed companies, active steps have also been taken to expand the Company's interests in other directions.

The income from investments is substantially lower than in the previous year, the decrease being principally traceable to the reduction in the dividends received from the tea companies under the Company's management. Last year benefited in this respect from the satisfactory conditions which prevailed in the tea industry in 1954 but that prosperity unfortunately has not been maintained and the outlook at present continues to give cause for some anxiety.

In their previous report the directors gave a full explanation of the circumstances which led up to the relinquishment of the managing agency of the Air Conditioning Corporation Private Ltd. and the loss which was suffered on the sale of the amount advanced to that Company. This matter has now been finalised and the total loss amounting to Rs. 25,63,690, has been written off in the profit and loss account for the year under review under the heads of brokerage, Rs. 2,50,000 being the sum paid as brokerage on the sale of advance, bad and doubtful debts written off, Rs. 21,96,390 being the difference between the amount advanced to the Air Conditioning Corporation Private Ltd. and the price realised on the sale of the advance, and loss on sale of investments, Rs. 1,17,300, being the loss incurred on the disposal of the Company's shareholding in the Corporation. The last mentioned amount has been partly offset by the profit realised on the sale of other investments and only the net loss features in the profit and loss account. As indicated last year, the directors consider that, while it is proper that these losses should be written off in full in the year under review, it would not be inappropriate to utilise past accumulations of profit to offset to some extent the very considerable debit and with this in view a sum of Rs. 21,96,390 equivalent to the actual amount of the advance written off as irrecoverable has been transferred from contingencies reserve and appropriated against bad and doubtful debts in the profit and loss account.

After making the above adjustments the profit and loss account records a credit balance of Rs. 24,05,483 which compares with Rs. 30,03,640 for the previous year. After providing for income-tax, super-tax and agricultural income-tax and adding the balance brought forward from the previous year, the amount available for disposal is Rs. 12,43,398 as against Rs. 18,71,841, arrived at as follows:—

The profit and loss account shows a balance of profit of Rs. 24,05,483 (Rs. 30,03,640) to which has to be added the balance brought forward from the previous year of Rs. 89,541 (Rs. 1,51,360) making a total of Rs. 24,95,024 (Rs. 31,55,000). The provision required for taxation is Rs. 12,51,626 (Rs. 12,83,159) leaving a balance for disposal of Rs. 12.43,398 (Rs. 18,71,841). Of this balance the following amounts have been utilised in paying in full the dividends for the year ended 31st March 1957, on the preference share capital:—On 1st October 1956 Rs. 62,500 (Rs. 62,500) and on 1st April 1957 Rs. 62,500 (Rs. 62,500). The directors now recommend that the remaining balance should be disposed of as follows:—

In paying a dividend on the 6,50,000 ordinary shares of Rs. 10 each at the rate of 10 (16) per cent. without any deduction in respect of income-tax payable by the Company Rs. 6,50,000 (Rs. 10,40,000) to transfer to general reserve Rs. 2,00,000 (*nil*) to transfer to superannuation fund Rs. 1,00,000 (*nil*) and leaving to be carried forward to next year of Rs. 1,68,398 (Rs. 89,541 after transferring Rs. 6,17,300 to contingencies reserve).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	90,00,000	Goodwill ...	23,00,000
Reserves ...	34,20,910	Block ...	18,58,585
Liabilities ...	2,12,14,518	Stock-in-trade	40,00,124
Profit and loss account ...	1,68,398	Stores, tools, etc. ...	1,83,116
Provision for taxation ...	2,11,759	Debts, deposits and advances ...	1,38,02,164
		Investments	1,01,79,802
		Cash ...	16,91,794
Rs.	3,40,15,585	Rs.	3,40,15,585

Rallis India Ltd.

The directors of the above Company (Managing Director and Chairman: Mr. M. P. A. Paspatti, Calcutta) submit the audited accounts of the Company for the year ended 31st August 1957

Disturbed trading conditions were experienced during the year under review, although there was some improvement towards the end of the period. The year's trading in gunnies and in oil and oilseeds resulted in losses, but profits were made in all other articles.

There was a further reduction in turnover of approximately Rs. 1 crore compared with the previous year. The departments mainly affected were oil and oilseeds and also cotton, owing to the smaller licensing of imports of foreign cotton, while there were substantial increases in the business done in fertilisers and steel.

The start of the Company's industrial activities showed satisfactory progress. The Wolf Electric Tools venture was able to earn a small profit in its first year. The manufacture of "Rallis" fans, while progressing, had not yet reached the profit earning stage at the close of the year.

Despite a careful watch on expenditure, it was not possible to avoid an increase in the total of establishment expenses. The main causes of this increase were rises in the cost of living index which automatically increase the dearness allowance payable; statutory compensation on retrenchment in certain departments; repairs and maintenance of buildings, and increased transportation and communication expenses.

Every endeavour is being made to effect further economies in expenditure; to withdraw from activities which have ceased to be remunerative, and to enter into new and profitable ventures.

The result of the year's working before, providing for depreciation, was a profit of Rs. 1,91,009. Depreciation at usual rates amounts to Rs. 7,54,541, and the arrears of depreciation, which have been mentioned in previous accounts by way of note and which now amount to Rs. 12,40,859, have also been provided for. For these purposes, the sum of Rs. 14,04,391 has been appropriated from the property reserve which now amounts to Rs. 4,83,498 and which is considered adequate.

Allocations to profit and loss account for the year are as follows:—Balance of loss brought forward from the last account Rs. 44,12,938 from which have to be deducted profit for the year before charging depreciation Rs. 1,91,009, part of provision for taxation and taxation contingencies no longer required Rs. 5,25,000 and transfer from property reserve of Rs. 14,04,391 leaving a debit of Rs. 22,92,538. To this amount has to be added depeciation for the year of Rs. 7,54,541, arrears of depreciation for two years of Rs. 12,40,859 and provision for wealth-tax Rs. 1,25,000 leaving a balance to the debit of profit and loss account to be carried forward to the next account Rs. 44,12,938. The directors regret that they are unable to recommend a dividend on either preference or ordinary shares for the year ended 31st August 1957.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,00,000	Block ...	62,18,009

		Profit and loss account ...	44,12,938
Rs.	6,00,34,120	Rs.	6,00,34,120

Bharat Collieries Ltd.

The directors of the above Company (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th June, 1957.

The year's working after providing overhead and interest shows a surplus of Rs. 11,80,816 (Rs. 11,71,735) to which is added the balance brought forward from last year of Rs. 8,535 (Rs. 27,433) and the transfer from general reserve of Rs. 2,75,000 (*nil*), making a total of Rs. 14,64,351 (*Rs. 11,99,168*). The directors have made provisions and appropriations out of the same as under:—

To cess Rs. 50,261 (Rs. 1,36,003), to salary and wages as per Appellate Tribunal award Rs. 6,05,248 (Rs. 29,000), to depreciation (including fixed assets written off) Rs. 3,70,031 (Rs. 3,72,187) to wealth tax Rs. 41,000 (*nil*) and to charity and donation Rs. 37,491 (Rs. 1,838). The directors recommend payment of dividend for the year ended June, 1957 to the shareholders as on 8th March, 1958 as follows:—

On 30,000 5½ per cent. cumulative preference shares at Rs. 3.94 nP (after deduction of income-tax paid by the Company on its profits for assessment years 1952-53, 1949-50 and 1947-48) out of which accumulated reserve distribution is proposed) Rs. 1,18,200 (Rs. 1,65,000) and on 4,00,000 ordinary shares at 60 (62) nP per share Rs. 2,40,000 (Rs. 2,50,000) leaving a balance of Rs. 2,120 (Rs. 8,536) to be carried forward.

Coal raisings were 4,69,945 (5,25,865) tons and despatches were 4,61,657 tons as against 5,23,167 tons in the previous year.

An increase of Rs. 3 per ton in the selling price of coal was allowed by the Government of India with effect from 5th July, 1956, to cover the rise in the wage bill consequent upon the Award of All India Industrial Tribunal (Colliery Disputes) effective from 26th May, 1956. The Labour Appellate Tribunal in 1957 again enhanced the wages, etc., directing payment thereof retrospectively with effect from 26th May, 1956. As against the same, the Government of India increased the selling price of coal by Re. 1.50 per ton effective from 8th July, 1957 only. The accounts of the year under report include a provision of Rs. 6,05,248 towards arrear of wages, etc., upto June, 1957. This has required transfer of a sum of Rs. 2,75,000 from general reserve.

The sinking of pits Nos. 4 and 5 at Chapui Khas Colliery was completed during the year under report and work in connection with the layout is now in progress. Raisings on commercial sale from these pits will begin by the end of 1958 and increase gradually towards achieving the target of about half a million tons for this colliery under the second Five-year Plan. Mechanisation of this colliery is receiving the serious consideration of the management.

The directors are also considering sand stowing at Ekra Khas Colliery to increase the life of and raisings from this colliery. Negotiations are being carried on with the Coal Board for requisite financial assistance to install ropeway for sand transport.

The new Mines Regulations have also added to the cost of raisings. Working results for the first half of the current year are, however, satisfactory and it can reasonably be expected that the same will be maintained. The industry's prospects generally appear to be sound and satisfactory.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	70,00,000	Block ...	67,23,620
Debentures	30,00,000	Stock-in-trade	4,51,176

Profit and loss account ...	2,120	Debts, deposits and advances ...	49,72,149
		Investments ...	20,63,144
		Cash ...	56,932
Rs.	1,54,62,525	Rs.	1,54,62,525

New Savan Sugar and Gur Refining Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Karam Chand Thapar and Bros. Private Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st May 1957.

The lessees crushed a total quantity of 21,35,688 mds. of cane during the crushing season 1956-57 and produced 2,10,784 mds. of sugar and 70,403 mds. of molasses. The low crushing and consequently lower production of sugar is on account of heavy rains causing water logging in several areas as reported in the last report. The incidence of disease also increased and the lessees are making all-out efforts to eradicate the disease by replacing the entire diseased variety from the area.

It is, however, not possible to effect complete replacement of the infected variety in one year and the directors apprehend a further reduction in the quantity of cane crushed in next two years. They will, however, be able to expect improvement for the crushing season when most of the diseased cane would have been replaced with improved varieties.

The accounts for the year show a profit of Rs. 1,03,003 (Rs. 1,07,147). A sum of Rs. 68,000 (Rs. 55,000) has been set aside for taxation leaving a sum of Rs. 45,799 (Rs. 77,046), including last year's carry forward, which the directors propose to distribute as follows:—

To dividend at 3.75 (3.75) per cent. per share free of income-tax for the year ended 31st May, 1957 Rs. 41,250 (Rs. 41,250) and to carry forward Rs. 4,549 (Rs. 10,796 after placing Rs. 25,000 to reserves).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	11,00,000	Block ...	19,26,645
Reserves ...	4,45,000	Debts, deposits and advances ...	30,181
Provision for taxation ...	1,26,659	Investments	58,294
Liabilities ...	3,63,732	Cash ...	24,820
Profit and loss account ...	4,549		
Rs.	20,39,940	Rs.	20,39,940

United Motors (India) Ltd.

The directors of the above Company (Chairman: Sir Joseph Kay, K.B.E., Bombay) submit the audited accounts of the Company for the year ended the 31st December, 1957.

The result of this year's working after charging Rs. 5,892 (*nil*) for depreciation and providing Rs. 64,584 (Rs. 6,000) for taxation is a profit of Rs. 56,397 (Rs. 74,142) which together with the amount of Rs. 7,356 (Rs. 10,335) brought forward from last year, makes a total of Rs. 63,753 (Rs. 1,09,476 including Rs. 24,999 transferred from reserves for miscellaneous contingencies). The directors propose to dispose of this amount as follows:—By payment of a dividend of Re. 1.20 (Rs. 2.00) per share free of income-tax absorbing Rs. 61,272 (Rs. 1,02,120) and leaving a balance to be carried forward to next year of Rs. 2,481 (Rs. 7,356).

The Company has shown an improvement of profit over the last year. This has been achieved by introducing certain economies in the working of the Company and better performance in the sale of spare parts and also in the workshops. It is expected that this performance will be maintained in the coming year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,21,200	Block ...	2,23,596
Reserves ...	4,83,147	Stock-in-trade	2,46,912
Provision for taxation ...	72,762	Work-in-progress ...	15,302
Liabilities ...	3,02,133	Stationery	1,062
Profit and loss account ...	2,481	Debts, deposits and advances ...	1,36,427
		Investments	48,019
		Cash ...	11,94,781
		Deferred revenue expenditure	15,624
Rs.	18,81,723	Rs.	18,81,723

Howrah-Sheakhalla Light Railway Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for half-year ended 30th September 1956.

Gross earnings for the half-year were Rs. 3,41,685 which is Rs. 729 more than the earnings of the corresponding period ended 30th September 1955. There are decreases of Rs. 9,102 and Rs. 99 under goods and miscellaneous respectively and an increase of Rs. 9,930 under coaching.

Working expenses for the half-year were Rs. 3,08,805 plus Rs. 3,000 set aside to renewal reserve making a total of Rs. 3,11,805 which is Rs. 524 less than the figure for the half-year to 30th September 1955.

Net earnings for the half-year were Rs. 29,880 against Rs. 28,627 for the half-year to 30th September 1955, an increase of Rs. 1,253.

Comparative Statistics

Half-year ending	Gross earnings	Working expenses	Allocation to renewal reserve	Dividend per cent. per annum less tax
	Rs.	Rs.	Rs.	
30-9-1955 ..	14,43,481	12,62,630	62,500	6
31-3-1956 ..	14,25,119	12,40,041	62,500	6
30-9-1956 ..	14,95,546	12,43,257	62,500	4.425

The net profit for the half-year is Rs. 64,333 to which is added the balance brought forward of Rs. 54,334 making a total of Rs. 1,18,667. The preference dividend paid during the half-year ended 30th June 1956, absorbed Rs. 25,000 leaving a balance of Rs. 93,667. The directors recommend that this amount be disposed of as follows:—

By payment of a dividend for the half-year at the rate of 4.425 per cent. per annum without deduction of tax absorbing Rs. 35,399 and leaving a balance to be carried forward of Rs. 58,268.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	26,00,000	Block ...	49,29,738
Debentures	7,00,000	Stores, etc. ...	9,35,307

SPENCER AND COMPANY, LIMITED

(*Concluded from page 430*)

pany's working capital in as beneficial a way as is possible. The schemes being examined are naturally all connected with consumer goods, whether by way of manufacture, acquisition of like interests or expansion of trade. All this takes time for, whilst business risks must surely be taken, the new schemes must show reasonable prospects of fair returns on capital invested. I would mention also that when a modicum of foreign exchange is involved, a consumer goods project does not rank in Governmental policies and there lies the rub. What is even more, there must necessarily be a time lag before the benefits of new operations can come into the till.

"Last year, I informed you that I hoped to be able today to tell you about our progress in new fields. Much has been investigated, but little achieved for the foregoing reasons, but we press on and it is wise that I do not disclose what is afoot until negotiations are complete. However, I am at liberty to tell you that there has been finalised a comprehensive project for the manufacture of drugs and pharmaceuticals by one of the biggest and most reputed American concerns and in this we have secured a sizable interest as the largest Indian investor.

Labour Relations

"I do not propose to dwell on labour relations save again to quote Professor Erhard who says: 'Trade unions should ask themselves whether their pursuit of higher wages, if it leads to higher prices, does not put them on a par with irresponsible speculators.' In the dwindling consumer goods trade, I wonder if labour unions realise that retrenchment is unavoidable and that demands for increased benefits cannot but extend retrenchment. I emphatically state that no conscientious employer wishes to create unemployment unless forced so to do.

"Finally, in the light of the various trading difficulties confronting us, our staff has rendered yeoman service, for which we are grateful."

The balance-sheet as at 30th June 1957 was unanimously approved and adopted. A further and final dividend of 10 per cent., free of income-tax, on the ordinary shares as recommended by the Directors was declared, making in all a total dividend of 15 per cent., free of income-tax, for the year.

Note.—This does not purport to be a record of the proceedings of the annual general meeting which will be sent separately to shareholders.

THE OSMANSHAHI MILLS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-fifth Annual General Meeting of the Shareholders of the Osmanshahi Mills Limited will be held at the Registered Office of the Company, 159, Gunfoundry Road, Hyderabad-Dn., on Friday the twenty-eighth day of March, 1958, at 3-30 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 30th September, 1957.

2. To elect a Director in place of Shri J. R. Motishaw, who was co-opted on the Board of Directors on 25th September, 1957, under Clause No. 93 of the Company's Articles of Association and whose term of office expires at this Annual General Meeting, and to consider and, if thought fit, to pass the following Resolution as an Ordinary Resolution, as he being eligible, offers himself for re-election.

Ordinary Resolution

"RESOLVED that Shri J. R. Motishaw be and is hereby appointed a Director of the Company."

3. (*a*) To elect a Director in place of Shri Nadirsha B. Chenoy, who retires by rotation under Clause No. 101 of the Company's Articles of Association and Section 256 of the Companies Act, 1956 (but who offers himself for re-election) and who has attained the age of 77 years and to consider and, if thought fit, to pass the following Ordinary Resolution of which special notice as required by Section 281 of the Companies Act 1956, has been received by the Company and is hereby given.

Ordinary Resolution

"RESOLVED that Shri Nadirsha B. Chenoy, who has attained the age of 77 years and who retires by rotation under Clause No. 101 of the Company's Articles of Association and Section 256 of the Companies Act, 1956, be and is hereby re-elected a Director of the Company and that the age limit prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."

(*b*) To elect Directors in place of—

(i) Rai Bahadur Srikishen Sukhdeve Malani and

(ii) Shri Goverdhanlal Bansilal Pitty.

who retire by rotation in accordance with Clause No. 101 of the Company's Articles of Association and Section 256 of the Companies Act, 1956, but being eligible, offer themselves for re-election.

4. To consider and, if thought fit, to pass the following Resolution as an Ordinary Resolution as required by Section 293 (1) (*e*) of the Companies Act, 1956.

Ordinary Resolution

"RESOLVED that the consent of the Company under the provisions of Section 293 (1) (*e*) of the Companies Act, 1956 be and it is hereby accorded to the Board of Directors of the Company endowing the Company's funds consisting of 2½ per cent. tax-free N.G.P. Notes of the face-value of O.S. Rs. 39,600 (costing I.G. Rs. 34,243) to and for the benefit of the Council of Scientific and Industrial Research, New Delhi."

5. To consider and, if thought fit, to pass the following Resolution as an Ordinary Resolution pursuant to Section 293 (1) (*d*) of the Companies Act, 1956:—

Ordinary Resolution

"RESOLVED that the consent of the Company is hereby accorded under the provisions of Section 293 (1) (*d*) of the Companies Act, 1956, to the Board of Directors borrowing moneys for the purposes of the Company, even if such borrowings (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business), together with moneys already borrowed by the Company exceeds the aggregate of the Paid-up Capital of the Company and its Free Reserves, that is to say, Reserves not set apart for any specific purpose, but so that the total amount of such borrowings remaining undischarged for the time being shall not at any one time be more than Rs. 50,00,000 (Rupees fifty lakhs) in excess of the aggregate of the Paid-up Capital of the Company and its Free Reserves."

6. To appoint Auditors for the current year and fix their remuneration.

The Transfer Books of the Company will be closed from 14th March, 1958 to 28th March, 1958 both days inclusive.

A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND SUCH A PROXY NEED NOT BE A MEMBER OF THE COMPANY.

By Order of the Board,

C. B. TARAPORVALA,
K. B. DAGA,
C. S. TYABJEE,
Committee of Directors.

HYDERABAD-DECCAN,

Dated 7th February, 1958.

Note.—The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the above item of business will be posted to each Shareholder individually to his last given address.

THE CENTRAL BANK OF INDIA LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-seventh Annual General Meeting of the Shareholders of The Central Bank of India, Limited, will be held at the Registered Office of the Company, in the Central Bank Building, Mahatma Gandhi Road, Fort, Bombay, on Friday, the 28th day of March 1958, at 4 p.m. (S.T.), to transact the following business:—

BOMBAY, 3*rd March* 1958.

Note.—A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(*a*) The Transfer Books of the Bank will be closed from Friday, the 7th day of March 1958, to Friday, the 28th day of March 1958 (both days inclusive).

(*b*) Dividend Warrants for the half-year ended 31st December 1957 will be posted to the Shareholders at their registered address on and after the 31st day of March 1958. Shareholders are requested to intimate the Bank their change of address, if any, immediately.

ANNEXURE TO THE NOTICE

Explanatory Statement as required by Section 173 of the Companies Act, 1956.

To,

THE SHAREHOLDERS OF
THE CENTRAL BANK OF INDIA, LIMITED.

Dear Sir/Madam,

In conformity with the Companies Act, 1956, which came into force on 1st April 1956, the following Explanatory Statement, as required by Section 173 of the aforesaid Act, sets out all material facts relating to item 5 mentioned in the accompanying Notice dated the 3rd March, 1958.

2. In respect of item No. 5, it is notified that Mr. Manmohandas M. Amersey who retires by rotation and is eligible for re-appointment, has attained the age of 67 years and hence he cannot be re-appointed a Director of the Company except by a resolution in respect of which special notice has been given in accordance with the requirements of Section 190 and 281 of the Companies Act, 1956. The Company has received such a special notice from some members notifying their intention to move the resolution as set out in the said Item No. 5. Mr. Amersey has been a Director on the Board of this Company since 1947. As a businessman of wide experience, he has proved himself very useful on the Board and it is in the interest of the Company that the Board should continue to receive the benefit of his services.

By Order of the Board,

N. K. KARANJIA,
General Manager.

BOMBAY, 3*rd March* 1958.

1951	... ...	Tata Steel launches a modernisation and expansion programme.
1953	... ...	The Steel Corporation of Bengal is merged with the Indian Iron and Steel Company. The Mysore Iron and Steel Works' first electric pig iron smelter goes into production. The Government of India negotiates an agreement, in December, with Krupps and Demag of Germany to establish an integrated steel works of 500,000-ton ingot capacity at Rourkela.
1955	... ...	Tata Steel signs agreement in December with Kaiser Engineers of U.S.A. for its Two-million Ton Expansion Programme. Also signs agreement with Didier Werke A.G. of Germany for a refractory plant at Belpahar. The Government of India signs an agreement in February with the U.S.S.R. for a million-ton steel plant at Bhilai. Decision taken to increase capacity of the Rourkela plant to one million tons. Supplementary agreements signed in July.
1956	... ...	Final contract signed between the U.S.S.R. and the Government of India for the Bhilai steel plant in April. Tata Steel's skelp mill goes into production. Work on the Durgapur steel plant commences in September. Contract finalised in December between the Indian Steel Works Construction Company—a British consortium—and the Government of India for the supply, construction and erection of the steel plant.
1957	... ...	Cast iron spun pipe plant set up at the Mysore Iron and Steel Works.
1958	... ...	A new blast furnace is brought into operation, completing the first phase of the Indian Iron and Steel Company's 1953 extention programme. The ferro-manganese plant at Joda commences production.
1958 March	...	Jubilee of The Indian Steel Industry at Jamshedpur.

AMERICAN LETTER

(*Concluded from page* 409)

Other factions in the fight are chambers of commerce, headed by the Chamber of Commerce of the United States. Regional trade groups in the Mid-West and Far West are calling in some instances for as much as an 11-year extension of the Acts, instead of five years now contemplated. Groups in the Mississippi Valley also favour extension.

The League of Women Voters has staunchly supported reciprocal trade, not only by tuning in frequently on legislative ears in Washington, but also by holding meetings and clinics among its large membership. State Department officials admit privately that the League, more than any other group, can claim credit for renewal of the agreements every time they have come up since Cordell Hull sired them in 1934.

The Commerce and Industry Association of the New York and the National Council of American Importers have had a prominent role in the fray on the freer trade side. The National Foreign Trade Council has not yet taken a stand on this particular legislation, but it is traditionally in favour of lowering tariff barriers.

One of the newer and more vigorous trade groups is the Committee on Foreign Trade Education, younger men who insist that the Administration's proposals "could hardly have been worse." The Committee for a National Trade Policy headed by such prominent men as Charles P. Taft of Ohio and Harry A. Bullis, Chairman of General Mills Corporation, belong in the militant category, too, and in the broader field, there is the United States Associates of the International Chamber of Commerce whose spokesmen ardently seek the breakdown of world barriers with the U.S. taking the leadership in the struggle.

Otherwise, there are no momentous changes in the economy as a whole. Consumer buying is still at a high level and the early date of Easter is expected to be a further stimulant for retail trade.—*All Rights Reserved.*

CHARTERED BANK BUILDINGS,
CALCUTTA, *27th February,* 1958.

MONEY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, *5th March*

Fairly comfortable conditions continued to prevail in the short-term money market during the week under review. Barring the demand for the usual month-end requirements earlier in the week and for payment of income-tax, there was no pull on the market, as the supplies were more than enough to meet the day-to-day requirements of borrowers. Though the upward trend in bank credit is being maintained, the pace of increase in deposit of banks is much sharper, with the result that banks are in a more comfortable position this season than in the previous season. Consequently, banks are not keen borrowers in the inter-bank call money section, where the rate of interest was unchanged during the week at 3 per cent. among the Exchange banks and bigger Indian banks and at 3½ per cent. among the smaller Indian banks. House money at call was placed at 4¼ to 4⅜ per cent. and short-term deposits at 4½ to 4⅝ per cent.

A fractional contraction of Rs. 74 lakhs in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 28th February 1958. Notes held in the Banking Department are higher by Rs. 95 lakhs and the consequent increase of Rs. 21 lakhs in total notes issued is covered by a similar rise in rupee coin. There has been an increase of Rs. 5.59 crores in deposits of the Central Government, but other Governments' deposits are lower by Rs. 1.06 crores and deposits of banks by Rs. 1.88 crores. Balances held abroad have gone up by Rs. 2.49 crores. Loans and advances to Governments show a fall of Rs. 1.46 crores, while other loans and advances have risen by Rs. 1.92 crores, in spite of a decline of Rs. 1.94 crores in advances to Scheduled banks against usance bills.

The Scheduled banks' statement for the week ended 21st February 1958 shows a sharp rise of Rs. 11.14 crores in demand deposits and of Rs. 3.00 crores in time deposits. Inter-bank borrowings are also higher by Rs. 1.83 crores, while borrowings from the Reserve Bank stand reduced by Rs. 4.41 crores. An increase of Rs. 1.23 crores is noted in advances and of Rs. 2.62 crores in bills purchased and discounted. Cash balances have improved by Rs. 1.18 crores and money at call and short notice by Rs. 2.52 crores.

The Gilt-edged market continued to rule steady during the week under review also, thanks to the sustained enquiry for selected short-dated and long-dated loans. There was good demand for State loans on the eve of the half-yearly interest payment. During the week, the Reserve Bank put up its selling rates for 3½ per cent. 1964, 3½ per cent. 1967, 3⅜ per cent. 1967 and 4 per cent. 1972 loans by 5 nP each to Rs. 97.80, Rs. 97.65, Rs. 99.65 and Rs. 100.05, respectively.

3 per cent. 1986 Conversion Loan was maintained at Rs. 71.05. 3 per cent. 1970-75 was marked by 30 nP to Rs. 86.10 on good enquiries. 3 per cent. 1968 gained 10 nP to Rs. 91.95 and 3 per cent. 1963-65 5 nP to Rs. 94.05. 2½ per cent. 1960 put on 5 nP to Rs. 97.50 and 2½ per cent. 1961 10 nP to Rs. 94.75. 3½ per cent. 1961 was unchanged at Rs. 99.65, while 3½ per cent. 1964, 3½ per cent. 1967 and 3⅜ per cent. 1967 all moved up to the Reserve Bank's selling rates. 3½ per cent. 1965 held its own at Rs. 97.55, while 4 per cent. 1972 rose by 5 nP to Rs. 100.05, following the increase in the Reserve Bank's selling price. Among the State loans, 4 per cent. 1967 and 1968 put on 15 nP each to Rs 97.85. Andhra 1967 rose by 20 nP to Rs. 97.80 and 1968 by 5 nP to Rs. 97.80. U.P. 1967 and 1968 gained 20 nP each to Rs. 97.85.

In the foreign exchange section, the rupee staged a recovery during the week, following the revival of sterling in terms of the U.S. dollar. Banks' selling rate for ready dollars, after an increase from Rs. 476 per $100 to Rs. 476.50, dropped to Rs. 475.50. Their buying rate moved up from Rs. 472.75 to Rs. 473, before declining to Rs. 472 per $100. At the close, there was again a rise to Rs. 472.25 per $100. In New York, spot sterling advanced from $2.81⅛-2.81¼ to $2.81-7/16-2.81-9/16 and three months' forward from $2.78⅛-2.78⅜ to $2.78-11/16-2.78-13/16. Transferable sterling also rose from 279.15-279.25 cents to 279.40-279.50 cents.

KANPUR HIDES MOVE UP

(From Our Own Correspondent)

KANPUR, *2nd March*

During the week under review the Kanpur hides and skins market ruled steady. The tendency of prices was upward, particularly in wet salted cow and buff. For a time, the upper grade buff looked scarce. The fresh supplies were not as large as in the previous year. The main purchasers were the local tanners and the Madras dealers. The country tanners evinced keen interest in lower grade cow. The latest quotations are as follows:—

Wet salted cow 1st grade Rs. 380; 2nd grade Rs. 340; and 3rd grade Rs. 240 per score; wet salted buff 1st grade 1 lb. 4 ozs. and 2nd grade 1 lb. 7 ozs. per rupee; goat 1st grade Rs. 325 and 2nd grade Rs. 350 per 100 pieces; sheep 1st grade Rs. 235 and 2nd grade Rs. 300 per 100 pieces.

LINSEED QUIETLY STEADY

(Messrs. A. Bradley and Co.)

CALCUTTA, *3rd March*

The market has remained quietly steady throughout the week and seeds prices have advanced slightly from Rs. 21-2 to Rs. 21-8, while oil prices have shown little change around Rs. 50-4. The prevailing firmness in mustard oil has helped to maintain the present price-level; otherwise, the general tone remains dull and trading has been limited with crushers more or less inactive. Shippers have withdrawn from the oil market and local buyers are scarce. A further decline has been recorded in linseed oil prices overseas with sellers offering afloat oil freely at £105 and buyers showing little interest above £102. The latest quotations are as follows:

Ready/March Rs. 21-8 and April/May Rs. 21-6 per maund.

BULLION STEADY

(From Our Own Correspondent)

BOMBAY, *5th March*

Contrary to the general expectations that the approach of festival would cause a shrinkage in demand for bullion and, consequently, a drop in prices, the bullion market ruled very steady during the week, with actually a rise in prices. The "bulls" continued to hold their grip in silver, as indicated by the high *budla* charges in their favour at Re. 1-12 to Re. 1-14 throughout the week. The larger arrivals in the spot section, without a corresponding rise in offtake, and reports of payment of large duty for import of Tibetan coins caused a slight setback yesterday morning, but the recession proved to be short-lived. Subsequently, there was a sharp recovery which more than made good the earlier loss and the white metal recorded a gain of nearly a rupee over the week.

The slackness in arrivals was the main factor which imparted strength to gold. There was good demand for the metal, but the actual offtake was restricted by the smaller arrivals. Consequently, the premium of the ready position over the forward (current settlement) widened from As. 2 to As. 6.

Forward silver (March settlement) advanced from Rs. 191-9 to Rs. 192-14 and, after a setback to Rs. 191-7, regained again to close at Rs. 192-8. The April settlement closed at Rs. 190-10 (as against Rs. 189-12 a week ago) after moving between Rs. 191-2 and Rs. 189-11.

Ready silver was marked up over the week from Rs. 191-9 to Rs. 192-8, the highest level touched during the week being Rs. 192-14. The floating stocks of silver are estimated at 700 bars. The daily average arrivals were 25 bars, while the offtake was lower at 15 bars per day.

Gold for forward delivery (March settlement) rallied from Rs. 111-8 to Rs. 112-8 earlier in the week. After a dip to Rs. 111-8 on Monday, there was a recovery to Rs. 112-5 at the close today. The next settlement moved up over the week from Rs. 111-8 to Rs. 112-7.

Ready gold appreciated from Rs. 111-10 to Rs. 112-11. The floating stocks of gold are reported to be 15,000 tolas. The daily average arrivals were 2,500 tolas, as against which the average offtake was 3,000 tolas per day.

In New York, silver was unchanged at 88⅝c. while in London it was marked up by ¼d. to 76⅞d. for spot and to 76¼d. for forward. Gold declined from 249*s.* 4½*d.* to 249*s.* 3½*d.*

The following comparative table shows at a glance the trend of the market during the week under review:

	5-3-58	Highest	Lowest	26-2-58

LIMITED DEMAND FOR TEA DUSTS

[*Messrs. Forbes, Ewart, and Figgis (Private) Ltd.*]

COCHIN, *27th February*

A little over 700,000 lbs. was on offer in Dust Sale 'E' which was held on Tuesday, 25th February. The sale opened to a good, although irregular, demand, but the enquiry appeared to be limited. Milled dusts were generally easier, but other types remained about steady. Best liquoring highgrown dusts sold well.

London Market—Sale of 24th February 1958.—Fully firm top and bottom little irregular in the middle.

Sale of 25th February 1958.—Fairly steady.

Colombo Market—Sale of 24th February 1958.—Best highgrowns strong; prices following improved quality. All others slightly less. Demand lower rates.

Sale of 25th February 1958.—Liquoring offgrades very strong fully 20c. dearer. Blackleaf kinds steady.

Export Quota.—The market is still depressed and business is being transacted at 5½ nP.

Forthcoming Auctions.—Dust Sale 'F' will be held on Tuesday, 11th March.

As we go to press, Messrs Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 6.—1,100,000 lbs. Strong general demand, particularly for medium quality and upwards. Low mediums about steady."

COTTON FUTURES LOOK UP

(From Our Own Correspondent)

BOMBAY, *5th March*

The cotton futures market, after having ruled easy during the first two days of the week, staged a smart rally on Saturday. The trend gathered further momentum in the subsequent two sessions. The market ruled fully steady today. The earlier easiness was mainly attributed to the disappointment caused by the absence of any relief in excise duty on cloth and no reduction in export duty on cotton in the budget presented to Parliament on Friday. This was indicated in the post-budget session of the market on Friday wherein the March contract declined by Rs. 8.75 from the pre-budget close and the May contract by Rs. 6.50. The subsequent improvement was mainly due to the fact that the volume of tenders on the first notice day, that is, 1st inst., was very small, only 660 bales, and that there was no tender at all on the 3rd inst., the second notice day. The earlier fear that on a large amount of unwanted cotton would be tendered against the maturing contract was thus removed. There was also renewed rumours that the Government was likely to provide some kind of relief in excise duty. A section of the trade was also hopeful about an export quota for ¾" cotton. These considerations led to short-covering and excellent bull support. Prices advanced as a consequence. The rise would have been more marked but for the absence of follow-up support. The none-too-happy textile situation, the upward revision of the cotton crop and slackness of export demand discouraged large-scale buying.

I.C.C. Moglai Jarilla (March 1958) opened the week at Rs. 667, the same as the previous day's closing, and declined to Rs. 663 on Friday and further to Rs. 658 on the same day in the post-budget session. Speculative support and short-covering pushed the contract to Rs. 667 yesterday. Opening at Rs. 673 today it improved to Rs. 675.50 and closed at that rate. The net gain over the week was Rs. 8.50 I.C.C. Moglai Jarilla (May 1958), after having commenced the week at Rs. 662, declined to Rs. 660.50 the same day. In the post-budget session on Friday the contract dropped further to Rs. 658. It again rallied to Rs. 674.25 yesterday on heavy short covering. The contract commenced today's session at Rs. 670, and after gaining Re. 1.50, closed one rupee lower. The net gain over the week was Rs. 8.50. The following table indicates the trend of the contract during the week:

(In rupees per candy of 784 lbs.)

	5-3-58	*High*	*Low*	26-2-58
I.C.C. Moglai Jarilla (March 1958) ...	675.50	677	658	667
I.C.C. Moglai Jarilla (May 1958) ...	670.50	674.25	656	662

The room-rates fixed for the March contract were a matter of controversy among traders. A section of the trade felt that the rates were low and preferred to go in appeal against the fixation of rates for some qualities. All the appeals were, however, rejected by the Board of the E.I.C.A.

The spot section was quiet. The general sentiment was subdued and volume of business small. Mill demand continued to be slack. Short staples were practically neglected although stray lots of quality cotton like Khandesh, Vijay, Laxmi, Jaydhar were still sought after and their prices were well maintained.

In the export section, enquiries were noted for Bengal. About 5,000-6,000 bales of Bengals were reported to have been sold to France during the last fortnight. Japan is said to have been interested in Wagad for which at present there is no export quota.

The most important development of the week, as far as the foreign section is concerned, was the announcement by the Government of India on Friday of its decision to permit 70,000 bales of East African cotton of stapling 1.1/16" and above for import by 31st July 1958. Not more than half of this quantity would be allowed for shipment before 31st March 1958. According to a Press Note issued by the Joint Chief Controller of Imports, Bombay, licences against this allocation would be issued to actual users, i.e., mills only. The latter should submit their applications, together with figures of consumption of East African and American cotton for the three cotton seasons, namely, 1954-55, 1955-56 and 1956-57, to the Textile Commissioner, who will issue quota letters to applicants eligible for licences. The varieties which qualify for import under this announcement are B.P. 52, West Nile, Masaka, Kenya, Bunyoro, Teso, Busoga, Lango, Budama, Acholi and Bukhedi.

The announcement has been welcomed by the trade which is now concerned over its impact on the ruling price structure of East African cotton. The quantity of East African cotton sold, subject to the availability of import licence, is around 110,000 bales. The announcement now made fails to cover up this entire quantity. The general impression is that this may, consequently, lead to the cancellation of the excess quantity sold to this country by East African shippers and thereby bring about a setback in prices of this cotton.

In anticipation of an import quota for Egyptian and Sudan cotton, mill interest in these varieties revived. Some business in Egyptian Karnak, Menoufi and Giza 30 is reported to have already been concluded subject to availability of import licences.

The following are the latest available spot rates —in rupees per candy of 784 lbs.—from Sewri, figures in brackets being last week-end quot[illegible]

890 (900); Hubli Laxmi 1,020 (1,020); Jaydhar 780 (780); *Delivery Contracts*: Vijay 910 (890); Bengal 555 (550).

Cotton futures values in the Karachi market made small gains during the week under review on fresh buying support which was attracted to the low rates. The improvement would have been more marked but for the selling prompted by the categorical refusal of the Government to reduce export duty on cotton and the continued slackness of foreign demand. N.T.R.G. March improved from Rs. 71-3 last week-end to Rs. 72-11. The May contract gained, over the week, As. 12 to Rs. 73-2. The spot section also ruled easy. The following are the latest available rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 64; Punjab *Deshi* 62; 4F Punjab Roller 71-12; S.G. 76-11; L.S.S. Punjab Roller 74-15; S.G. 79-15; 289F Punjab Roller 81-11; S.G. 90-11; N.T. Roller 76-3; S.G. 83-15.

As a protest against the "indifference" of the Government in the face of the developing crisis in the cotton trade, the Karachi cotton market was closed on 26th February. It was pointed out by traders that the price of *Deshi* cotton had fallen steeply during the past few months from about Rs. 80 per maund to less than Rs. 65. The bulk of this year's crop was yet to be marketed while about 20,000 bales of last year's crop was still in the godowns. The Karachi Cotton Association had suggested heavy reduction in export duty or subsidy by the Government to facilitate exports. The Government, however, rejected the plea for incentives or aid as, in its view, there was no case for giving artificial relief.

The Alexandria cotton futures market ruled fully steady during the week. Although there was a considerable volume of professional and upcountry selling it was absorbed by trade buying based on the expectation of renewed foreign demand, especially from India. Values, as a result, were fully maintained. The latest available quotations—in tallaris per lb.—from Alexandria are given below:

Karnak: March 77.15; May 78.40. *Ashmouni*: April 66.80; June 67.25.

The Liverpool cotton futures market ruled distinctly easy during the week under review. There was a considerable volume of American liquidation and heavy hedge selling in both the American and American type contracts. Sudan contracts also met with hedge pressure and ruled easy. The following are the latest available rates—in pence per lb.—from Liverpool:

American cotton one inch staple contract: March-April 24.87; May-June 24.95; July-August 25.27; October-November 25.97. *American cotton mixed growth contract*: March-April 25.50; May-June 25.80; July-August 26.25; October-November 26.90. *Sudan*: May-June 32.65; July-August 32.85; September-October 33.10.

Sizable gains were recorded by the New York cotton market during the week. Earlier in the week, on active buying, stimulated by the House of Representatives' approval of a *rise of $250 million* for 1958 Soil Bank Programme, cotton values firmed up. Towards the close, however, values eased. The easiness was due to speculative selling touched off by the news that the Department of Agriculture had allowed five weeks more for farmers to cancel previous sign-ups to the Soil Bank. It was thought that the current attractive prices might stimulate withdrawals from the acreage retirement programme. Over the week, prices showed an improvement.

The total Government-controlled stocks at present aggregate about 4.5 million bales, comprising 3 million bales of the 1957 loan and about 1.5 million bales of 1956 and earlier crop stocks. It is reported that 3,361,108 cotton acres had already been signed up in the Soil Bank upto 21st February and that, in addition, 1,257,910 acres had been offered to the Bank.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(*In cents per* lb.)

	4-3-58	25-2-58	18-2-58
Spot	35.95	35.95	36.00
March	35.30	35.10	35.17
May	35.57	35.41	35.36
July	35.77	35.70	35.43

SUGAR QUIET

(*From Our Own Correspondent*)

BOMBAY, 5*th March*

Hopes of an additional levy of excise duty on sugar in the latest budget have been belied. At the same time, the Food Ministry has announced the usual monthly release of 1.72 lakh tons out of the current season's production for free sale. As a result, stocks which had been cornered by a few speculators have come out in the form of distress sales. Consequently, prices of both spot in the wholesale market and ex-mill prices have come down. The undertone of the market is distinctly quiet.

Small grain sugar has fallen from Rs. 106 a week ago to Rs. 104.75 per bag and medium grain from Rs. 107-109 to Rs. 105-107.50. There is, however, not much change in the price of large grain which at Rs. 110-112.50, compares with Rs. 110-113 a week ago.

Ex-mill quotations in the Bombay-Deccan area are down by about Rs. 2 per bag and in U.P. by Re. 1 to Re. 1-8 per bag.

Arrivals during the week amounted to about 17,700 bags, as against 21,300 bags in the preceding week.

YARNS FIRM

(*From Our Own Correspondent*)

BOMBAY, 5*th March*

The Union Budget which was presented last week did not contain any measures to raise import and export duties on rayon and staple fibre yarns; while this was encouraging, there was disappointment at the absence of any concrete steps for encouraging exports of cotton yarn. Thus, although the budget was featureless so far as the yarn market was concerned, the proposal to impose an *ad valorem* import duty of 50 per cent. on nylon yarn and perlon yarn had its repercussions on rayon and staple fibre yarns, the prices of which rose in sympathy with nylon yarns. Cotton yarns, however, remained dull. It was feared that the position, rendered difficult by the presence of large unsold stocks of yarn, would become more difficult by the levy of excise duty on cloth produced on powerlooms. The meeting convened last week by producers and consumers of indigenous art silk yarn to consider the question of internal distribution of the yarn which had been postponed, took place today. Although no final decision seems to have been taken yet, the general consensus of opinion would appear to be the maintenance of the *status quo*, with a slightly higher percentage of allocation to consumers direct. The percentages on which a decision has formally been arrived at is understood to be 70 for consumers and 30 for dealers.

Snia rayon yarn (120 dull cones) April delivery attracted attention and put on a rupee to Rs. 920. In the spot section, 120 Japan improved by 13 nP to Rs. 5.44. 150 Japan were fully maintained at Rs. 5.06. 120 Italy went up by 6 nP to Rs. 5.31. 150 Italy rallied 19 nP to Rs. 5.31. Among indigenous yarns, National Rayons 150 bright cones first grade spurted by 28 nP to Rs. 4.44 and 120 bright cones first grade by 25 nP to Rs. 4.94.

Staple fibre yarns (40×2) April delivery evoked good support of operators and climbed up by Rs. 5 to Rs. 592. Business in June delivery commenced on Monday and was quoted at Rs. 603. Spot (40×2) New Greats increased by 6 nP to Rs. 3.09. Citys were done at Rs. 3.19. Kohinoors, however, lost a naya paisa to Rs. 3.23. Among foreign yarns, Paramounts hardened by 10 nP to Rs. 6.50. Fujis were firm at Rs. 6.37.

Among cotton yarns, ten counts were neglected. Moderns at Rs. 14.50 and Podars at Rs. 13.87. Twenty counts Moderns were stagnant at Rs. 17.50. Among thirty counts, Indus were unchanged at Rs. 20.37. Forty counts Minaxis receded by 12 nP to Rs. 23.75. Moderns changed hands at Rs. 24.75, same as last week. Sixty counts were dull. Moderns at Rs. 59.50, Raghuvamshis at Rs. 52 and Finlays at Rs. 59. Eighty counts were on offer, Mahendras being quoted at Rs. 69.50, Moderns at Rs. 71 and Finlays at Rs. 75.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	5-3-1958	26-2-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia February	—	925.00
120 dull Cones Snia April	920.00	919.00
120 Japan (per lb.)	5 44	5.31
150 Japan (per lb.)	5.06	5.06
120 Italy (per lb.)	5.31	5.25
150 Italy (per lb.)	5.31	5.12
Staple fibre yarn (per case of 200 lbs.)—		
40×2 February	—	572.00
40×2 April	592.00	587.00
40×2 June	603.00	—
40×2 New Great (per lb.)	3.09	3.03
40×2 City (per lb.)	3.19	—
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	13.87	13.87
20s Modern	17.50	17.50
30s Indu	20.37	20.37
40s Minaxi	23.75	23.87
60s Raghuvamshi	52.00	52.00
80s Modern	71.00	71.00

CASTORSEEDS FIRM

(*From Our Own Correspondent*)

BOMBAY, 5*th March*

The most notable feature of the working of the oilseeds market during the week under review was the spurt in the castorseed section of the market. Although the castorseed section experienced only narrow fluctuations in the earlier part of the week, thanks to the absence of any relief in export duty in the budget, it improved in the later part of the week on persistent support from local and Calcutta interests, induced by reports of small arrivals. Other sections, namely, groundnut and linseed, also advanced in sympathy with castorseed.

Traders were somewhat disappointed to find that the budget contained no fresh incentive for export trade in oilseeds. This led to some weakening of sentiment. Thus, castor May which was quoted at Rs. 136.87 in the pre-budget session declined to Rs. 136.00 the corresponding quotations for linseed May being Rs. 28.87 and Rs. 28.81 and for cottonseed May Rs. 102.50 and Rs. 102.00. Groundnut May, however, remained unchanged at Rs. 127.62.

In the groundnut section, groundnut May opened the week at Rs. 158.25 and declined to Rs. 158.12 on the following day and to Rs. 157.87 on Saturday. The market, however, improved on Monday so that groundnut May came to be quoted at Rs. 159.62. This trend was maintained on Tuesday also. Today, however, it receded to Rs. 159.25. Bold ready improved over the week from Rs. 31.50 to Rs. 31.94. Khandesh quality from Rs. 32.12 to Rs. 32.50 and Coromandel from Rs. 32.25 to Rs. 32.50. Groundnut oil was quoted at Rs. 17.50, as compared with Rs. 17.62 last week.

In the castorseed section, castor May commenced the week at Rs. 137.87. After receding to Rs. 137.37 on Saturday, it moved up to Rs. 140.75 on Monday and still further, to touch a high of Rs. 143.75 yesterday. Today, however, owing to some profit-taking at the close, it declined fractionally to close at Rs. 142.75. Castorseed Madras improved by Rs. 2 to Rs. 29.75. Castor oil commercial was quoted at Rs. 14.81 and B.S.S. at Rs. 16.50, as against Rs. 14.12 and Rs. 15.44 respectively last week.

The upward trend in linseed was less marked than in either of the other two sections. However, linseed May after opening at Rs. 29.12 moved up during the week to touch a high of Rs. 29.31 yesterday. It closed the week somewhat lower at Rs. 29.19. Linseed ready bold improved by 13 nP to Rs. 28.50 and small Satna by 13 nP to Rs. 27.50. Linseed oil, however, declined from Rs. 15.62 last week to Rs. 15.50.

Crushers evinced keen interest in cottonseed. Cottonseed May opened the week at Rs. 101.25 and moved up to Rs. 102.75 on the following day and still further to Rs. 103.50, thanks to consistent support. It touched a high of Rs. 106.75 yesterday, though it came to be quoted somewhat lower at Rs. 104.50 today.

Among other seeds, *kardi* seeds was quoted at Rs. 18.25 and *niger* seed at Rs. 27.12, as compared with Rs. 18.12 and Rs. 27.00 respectively early in the week.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	5-3-1958	26-2-1958	19-2-1958
	Rs.	Rs.	Rs.
Groundnut—			
February 1958	—	158.25	158.62
May 1958	159.25	158.25	158.62
Bold ready (per cwt.)	31.94	31.50	31.75
Khandesh quality	32.50	32.12	32.00
Linseed—			
May 1958	29.19	29.37	29.31
Bold ready (per cwt.)	28.50	28.37	29.69
Castorseed—			
May 1958	142.75	137.62	139.37
Madras (per cwt.)	29.75	27.75	28.37
Cottonseed—			
February 1958	—	101.75	100 50
May 1958	104.50	100.50	100.50
Groundnut oil *			
Ex-mill ready (per quarter)	17.50	17.62	17.62
Castor oil †			
Commercial (per quarter)	14 81	15.25	14.37
Linseed oil †			
Ready	15.50	15.62	15.69

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

PEPPER STEADY

(*Messrs. Parekh and Co.*)

BOMBAY, 5*th March*

Despite quietness at New York and Singapore, Malabar black pepper ruled fairly steady during the week, owing to continuous buying support by bulls and covering by shorts. In order to keep up the morale of the growers, speculators at all terminal centres remained buyers as soon as they saw any slight weakness in the trend.

Spot in New York, after touching $0.25½, came down to $0.24 for want of buying by grinders who preferred to hold off as there was lack of aggressive demand and the market failed to hold its recent rise. Dealers in U.S.A. marked down their bidding by ½ cent than what was offered from India. As a result, business during the week proved poor.

Singapore moved between Str. $62 and Str. $63 with undertone uncertain. Holders there preferred to give some concession to attract buyers, as they thought that the situation at Sumatra would improve, because Dr. Sukarno was reported negotiating with Central Sumatra for some kind of compromise through Dr. Hatta.

Alleppey moved from Rs. 550 to Rs. 757, and ready garbled from Rs. 94½ to Rs. 97. In forward trading, March and May deliveries improved to Rs. 98.75 and Rs. 100, respectively. Some weakness developed at Cochin when the Russian boat for February cargo was delayed. But it proved temporary, as exporters came in to buy. Calicut, which was until recently soft seller at round about Rs. 550, became reserved at Rs. 575, as holders and growers there thought that New York should sooner or later come in for Malabar black, if the present uncertainty in Indonesian situation continued and as soon as the present heavy stock of Lampong at Singapore was liquidated.

In the A.S.T.A. section, March-April-May remained steady at $0.24.

In delivery section, prices showed small improvement owing to resistance by sellers and buying by speculators.

The following are today's nominal quotations: Ready delivery Rs. 73 per Bengal maund and April Rs. 527.32 and May Rs. 533.38 per candy of 5½ cwts.

GOOD DEMAND FOR HIDES

(*From Our Own Correspondent*)

MADRAS, 3*rd March*

Arrivals of tanned hides and calves were restricted and met with ready clearance. Shippers were active buyers at unchanged prices, despite patchy U.K. demand. There were more enquiries from the U.K. for lower grade cow hides and calves, but stockists were not anxious to sell them if not combined with higher selections. Shipment business continued difficult. There was no change in the tanned skins section. Goat was steady and sheep weak. Shipments of tanned hides and calves to U.K. ports during February were more or less of the same volume as during January.

JUTE GOODS RECOVER

(*From Our Own Correspondent*)

CALCUTTA, 4*th March*

The feature in the jute markets during the week under review was the reversal of the downtrend in prices of both hessian and sacking constructions and the sharp rise in sacking prices from the lowest levels touched earlier in the week. This reaction followed the advice accorded to its member mills by the Indian Jute Mills Association not to sell their products below specified minimum prices based on: (1) hessian per 100 yards: (*a*) 40" 10 oz. Rs. 39.50, and (*b*) 40" 7½ oz. Rs. 29.75, and (2) B. twills per 100 bags Rs. 100. The I.J.M.A. considered this move essential, in order to arrest the down-trend, which caused prices to fall to distressingly low levels. The announcement of these minimum prices on Wednesday last had also their tonic effect in the burlap market in New York, where prices were firm. However, it was reported that much business did not take place in New York as buyers there desired to watch and see if the sharp rise in Calcutta after the decision of the I.J.M.A. would be maintained. This week's development has not so far attracted foreign buying in Calcutta also, but prices are steady. This has been a welcome feature, as prices must be stabilised for a time, in order to enable buyers to enter the market with confidence.

The movement to ships of gunnies that were bought for shipment was affected by the strike of the crews of launches towing gunnies for loading on to ships at the docks here. The striking crews were subsequently joined by port labourers and other employees. On Tuesday last, ready B. twills were as low as Rs. 94 with 40" 10 oz. hessian quoting at Rs. 38. On the next day, the fixation of minimum prices by I.J.M.A. not only arrested the decline but B. twills regained by three points to Rs. 97, with 40" 10 oz. hessian improving to Rs. 38.90. Bear-covering soon followed, and the prices advanced further to Rs. 98.80 and Rs. 39.45, respectively on Thursday. On Friday, on account of due date manipulations in the *fatka*, prices eased to Rs. 98.55 and Rs. 39.30, respectively, but recovered to Rs. 98.90 (B. twills) and to Rs. 39.40 (hessian 40" 10 oz.) over the week-end. However, only little fresh business with foreign buyers took place. For buyers desired to wait if the higher levels would be maintained. For the present, the fixation of minimum prices has proved a success; whether the success will be maintained remains to be seen. Unless minimum prices are backed by purchasing and holding power, or buyers support the market, the ceilings fixed would be difficult to be kept. Yesterday, prices improved further with B. twills being quoted at Rs. 99.50 and 40" 10 oz. hessian at Rs. 39.50.

Minimum prices for jute goods was followed by a sharp recovery in raw jute prices. It was feared that if cultivators did not get fair prices, the next crop would be affected as they would naturally grow more paddy than jute. Thereby, the jute acreage might suffer. Northern bottoms recovered to Rs. 24.50 from Rs. 22.75 and daissee bottoms to Rs. 28 from Rs. 27. Stockists here possess considerable quantities of jute purchased at higher prices at the beginning of the season. In addition, there is a fair quantity of jute in the interior too. When prices fell, many weak sellers came forward with offers and mills took advantage. In Pakistan, the recession in prices has been causing great anxiety to the authorities there.

FAIR DEMAND FOR TEAS

(*From Our Own Correspondent*)

CALCUTTA, 4*th March*

Fair demand was in evidence in tea auctions. More attention was shown to higher quality teas, but plain teas were quiet. Note was taken of the strong demand in last week's Mincing Lane sales, where the good varieties rose above valuations. There is no change in the existing rate of export duty of 38 nP per lb. for this month. The price of tea for determining the duty has been fixed at Rs. 2.87 per lb. as against Rs. 2.99 per lb. for the last month.

Mixed conditions were in evidence during yesterday's export sales. Offerings aggregated 10,287 packages, which met with fair demand. A strong feature of the sales was bright liquoring teas, prices of which rose. Prices of Plain B.Ps and fannings lost by 4 to 6 nP, but the clean black leaf grades met with keen buying and as a result prices rose. Fannings fell by 2 to 4 nP and medium BPs by 4 to 6 nP. Among C.T.Cs. the best lots realised slightly higher prices, but the poorer varieties were sold below valuations. Legg-cut teas tumbled by 4 to 8 nP. Whole leaf grades were fully steady with the more stylish teas receiving more attention. Darjeelings met with fair demand but at lower rates. The quotations were: Best Assam C.T.C. fannings Rs. 2.80 to Rs. 3.00, clean black pekoe Rs. 2.20 to Rs. 2.25, best Assam C.T.C. B.P. Rs. 2.70 to Rs. 2.90, medium fannings Re. 1.72 to Re. 1.76, plain B.P. Re. 1.44 to Re. 1.48, plain fannings Re. 1.52 to Re. 1.56, and medium B.P. Re. 152 to Re. 1.56.

Export quota changed hands at 5 nP. Subsequently it declined to 4¼ nP with buyers offerings 4 nP.

In the internal auctions held last week, dusts offered amounted to 19,663 chests. Demand was strong, and following competition, prices of all teas, with a few exceptions, were fully firm. Prices of orthodox teas from all districts possessing a clean black-leaf appearance gained. Good C.T.C. Assams were also noted for firmness. However, the plainer liquoring teas eased. The quotations were: best Assam C.T.C. Rs. 2.80 to Rs 3.10, medium Assam C.T.C. Re 1.75 to Re. 1.95, medium Assam grainy dust Re. 1.62, and medium Doars Re. 1.60.

Leaf on offer amounted to 3,332 chests. Despite better demand, prices were often easier.

BANKING

(*Concluded from page* 411)

other expenses is no less than Rs. 4.18 lakhs, mainly accounted for by the increase of Rs. 3.39 lakhs in salaries, allowances, etc.

The Bank's progress during the last three years is well illustrated by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954

Advances	45.1	47.0	34.7	34.4
Investments	39.1	41.2*	50.9	45.3
Cash	20 8	17.4	21.4	27.3

* Ratio arrived at after taking into account investments earmarked against borrowings from other banks.

The latest balance-sheet shows that, as against a paid-up capital of Rs. 50 lakhs, the Bank's reserves aggregate Rs. 40 lakhs, having moved up by more than 50 per cent. in the course of the last four years alone. The reserves, however, include a sum of Rs. 9 lakhs being the premium on shares collected in 1944 when the Bank issued 60,000 shares of Rs. 50 each at a premium of Rs. 15 per share. The pace of expansion in the Bank's deposits noted in the previous two years has been well maintained with an increase of Rs. 3.82 crores during the year under review, thus raising them by more than 100 per cent. in four years (from Rs. 10.37 crores at the end of 1953). Fixed deposits have gone up during the year under review from Rs. 5.05 crores to Rs. 6.59 crores, savings bank deposits from Rs. 4.80 crores to Rs. 5.19 crores and current and contingency accounts from Rs. 9.64 crores to Rs. 11.53 crores. Thanks to the expansion in deposits, the Bank has been able to repay the outstanding borrowings from other banks which had stood at Rs. 50 lakhs at the end of 1956.

On the assets side, advances have risen by only Rs. 1.37 crores, as against an increase of Rs. 3.56 crores in the previous year. The slowing down of the pace of increase in advances is mainly due to the general credit restraint on banks enforced during the year. Of the total advances, loans, cash credits and overdrafts amount to Rs. 8.13 crores, having gone up from Rs. 6.59 crores at the end of 1956, while bills purchased and discounted have declined a little from Rs. 2.56 crores to Rs. 2.39 crores. The investments (at cost) are higher by Rs. 59 lakhs at Rs. 9.11 crores. Of these, the market value of investments costing Rs. 8.79 crores is Rs. 8.59 crores and the others are taken at cost. Cash balances (including money at call and short notice) have been considerably strengthened by Rs. 1.46 crores, money at call and short notice alone accounting for a rise of Rs. 1.74 crores to Rs. 1.79 crores.

VANASPATI INDUSTRY

(*Concluded from page* 416)

also not of much practical value because of the difficulties of collection, transport and cleaning of such containers.

The allocation of tank wagons to vanaspati factories for their exclusive use continued to be the subject of representations by the Association during the year under review. For several years, the Association has been pressing the Railway Board to increase the number of tank wagons available for vegetable oil traffic and also the number of such wagons allotted to the vanaspati industry in order to ensure regular movement of oil from the producing centres to vanaspati factories. While the number of tank wagons for vegetable oils has improved significantly, the Railway Board has not agreed to increase the number of tank wagons available for the exclusive use of the vanaspati industry. On the contrary, the Board seemed to be of the opinion that the facilities provided to vanaspati factories should be discontinued because of the general improvement in availability of tank wagons. The Vegetable Oil Products Controller of India convened a meeting of the representatives of the Railway Board and the industry to discuss this matter. It was agreed at this meeting that the Association should submit data regarding delays in movement of oil in common pool tank wagons in support of its contention that the allotment of tank wagons to the vanaspati factories is necessary for expeditious movement of vegetable oils. The necessary data were recently submitted to the Deputy Director (Vanaspati) and it is hoped that the Railway Board will agree to continue and increase the allotment of tank wagons to the vanaspati industry for its exclusive use.

The Government's fiscal measures have also caused some hardship to the industry. The enhancement of the excise duty on vegetable oil, produced with the aid of power, from Rs. 70 per ton to Rs. 112 with effect from 15th May 1957, has put up the raw material cost of the vanaspati industry. The increase in duty, however, applies to production by an oil mill in excess of 125 tons and the duty continues to be Rs. 70 per ton on production in excess of 70 tons but less than 125 tons. Cottonseed oil has been totally exempted from this duty in order to encourage cottonseed crushing.

The levy of inter-State sales tax, with effect from 1st July 1957, at the rate of one per cent. on sales between registered dealers and sales to unregistered dealers at the rate prevailing in the exporting State, while it removed the uncertainty regarding the liability of tax on inter-State sales, has failed to reduce the evasion of sales tax. On the other hand, with the increased burden of sales tax, the tendency to evade has been increasing, causing great inconvenience to vanaspati manufacturers desiring to distribute their production through organised channels. According to the Association, it is becoming increasingly obvious that replacement of sales tax by a surcharge on Central excise duty on products like vanaspati is in the best interest of the States as well as the industry since it will ensure larger revenue through the elimination of evasion and do away with the harassment caused to the vanaspati trade and industry in complying with the numerous sales tax regulations. Representations have been made by the Association to the Central Government for the inclusion of vanaspati in the list of commodities on which sales tax has been replaced by a surcharge on Central excise duty. If this suggestion should prove unacceptable to the State Governments, the Association has recommended, as an alternative, the collection of sales tax by the State Governments from manufacturers and traders at a uniform rate of 3 per cent. at the first point of sales within their territories.

As regards the prospects for the industry, the Association's Annual Report points out that the shortage of food and restrictions on community feasts, rising cost of living and the adverse effect of foreign exchange shortage on the tempo of economic development—all these do not make the immediate outlook for the industry very reassuring. Nevertheless, there is every reason to believe, it points out, that, with the growing acceptance of vanaspati as a wholesome and nutritious fat, the industry will continue to register steady progress.

Notice

JARDINE HENDERSON LIMITED

NOTICE IS HEREBY GIVEN THAT AN Interim Dividend at the rate of 2¾ per cent. less Indian Income-tax thereon, will be paid to the Registered holders as on the 7th April, 1958, of the 50,000 Cumulative Preference Shares of Rs. 100 each in the Company in respect of the year ending 31st March, 1958.

The Share Transfer Books of the Preference Shares will be closed from 31st March to 7th April, 1958, both days inclusive.

By Order of the Board,

REVENUE AND EXPENDITURE OF CENTRAL GOVERNMENT

(*Concluded from page 432*)

Rs. 3.7 crores and that for Industries and Supplies by Rs. 1.62 crores.

"Larger provision is also being made for Community Development and National Extension Service and for welfare of Scheduled Tribes and development of Backward Areas and for Employment Exchanges, the increase next year over the current year's revised estimates being Rs. 3.86 crores.

"The estimates also include a provision of Rs. 6 crores for grants to States to help them to raise the emoluments of their low-paid employees, the corresponding provision for 1957-58 being Rs. 5 crores. The newly constituted Naga Hills and Tuensang District will cost about Rs. 3.64 crores next year. Gross interest charges will increase by Rs. 17.60 crores, of which Rs. 15.04 crores will be recovered from the commercial departments and the State Governments."

The new taxes, referred to on page 433, will bring a total sum of Rs. 6.57 crores. Of this, Rs. 50 lakhs represent the share of States. The reduction on excise duty on vegetable products will involve a loss of Rs. 24 lakhs. The net additional revenue is, therefore, Rs. 5.83 crores. This will leave a final uncovered deficit of Rs. 27.02 crores.

Capital Budget

The Central Government had hoped to spend Rs. 455 crores on its own account by way of capital expenditure in 1957-58. It now thinks that this expenditure will be no more than Rs. 427 crores, a drop of Rs. 28 crores. This is the result of investments in steel projects falling short of expectations by Rs. 29 crores. The expenditure on railway development was better by Rs. 14 crores, but the amount required for food purchases was Rs. 11 crores less than expected.

The Centre's capital budget for 1957-58 included loans to State Governments of the order of Rs. 238 crores and to Port Trusts, Statutory Corporations, foreign Governments (Nepal, Burma, Sikkim), etc. Rs. 86 crores. They are now expected to be Rs. 288 crores and Rs. 71 crores, respectively. These changes are explained as follows:

"The increase in the loans to State Governments is largely due to ways and means advances and payments on account of their share of the net collections from small savings. In recent years, the State Governments have been receiving a portion of these collections in their States as loans from the Centre. This share was raised during the current year from about one-fourth of the net collections to two-thirds. Some arrears were also due to the States in respect of the previous year which have been paid to them. Savings of Rs. 15 crores are, however, expected in the provision for other loans, despite the fact that the Government of Burma are drawing an additional sum of Rs. 5 crores against the loan assistance of Rs. 20 crores promised to them some time back and an increase of Rs. 5 crores is also expected in the loans to the Industrial Finance Corporation. The provision of Rs. 15 crores made in the budget for loans to the Refinance Corporation is not likely to be required this year."

Capital expenditure on Centre's account in the coming year (1958-59) is estimated at Rs. 412 crores. The drop of Rs. 15 crores over the revised estimate for 1957-58 is due to a reduction of Rs. 38 crores in the net outlay on food purchases and the special receipt of Rs. 16 crores from the United Kingdom as advance payments on account of sterling pensions which is taken in reduction of expenditure, partly offset by increases under other heads. An increased provision of Rs. 31 crores has been made for the steel plants and Rs. 10 crores for industrial development. As regards loans to States and others, a total provision of Rs. 362 crores has been made, that is, Rs. 284 crores for States and Rs. 78 crores for Port Trusts, Public Corporations, etc.

The capital budget for 1958-59, according to the Finance Minister's speech, includes a total provision of Rs. 743 crores for the implementation of the Plan—Rs. 122 crores in the revenue budget and Rs. 621 crores in the capital budget. Out of this provision, Rs. 53 crores will be provided from the revenue budget and Rs. 178 crores from the capital budget for assistance to the States. In addition to this, the Railways will be spending Rs. 93 crores from their own resources on the Plan and the States Rs. 181 crores. The total Plan outlay in 1958-59, including interest on loans on river valley projects treated as capital outlay and short-term loans, will amount to Rs. 1,017 crores.

Overall Deficit

The overall deficit for the current year (1957-58) had been placed at Rs. 284 crores, but the revised estimate places the figure at Rs. 380 crores, the whole of which has been covered by the expansion of Treasury Bills, in other words, by inflation. For the coming year, an overall deficit of about Rs. 200 crores (after taking into account the new taxes) is estimated. But this has been arrived at on the assumption that Rs. 145 crores can be borrowed from the open market by way of long-term loans, Rs. 100 crores by way of small savings, Rs. 285 crores from foreign loans and Rs. 25 crores from miscellaneous sources. To the extent receipts from all these sources fail to materialise and assuming that the capital outlay will be incurred as planned, the overall deficit will widen as it has done in the current year.

NEW TAXATION PROPOSALS

(*Concluded from page 433*)

expiry of ten years from the end of the year in which the new asset was put to use.

By a consequential amendment to section 35 of the Act, it is proposed to secure that an infringement of any of the above-mentioned conditions will lead to the disallowance of the development rebate earlier granted by revision of the assessment of the year in which such allowance was originally given.

It is further proposed that no depreciation allowances shall be granted on buildings, plant, machinery, etc., in respect of the year in which such assets are sold, discarded, demolished or destroyed, because, in those circumstances, the necessary relief is secured by the provisions of section 10(2) (vii) of the Income-tax Act.

Miscellaneous

IX. *Amendment of the definition of a "resident company."*: At present, a company is resident in India in any year—(*a*) if the control and management of its affairs is situated wholly in India in that year; or (*b*) if its Indian income in that year exceeds its foreign income. It is now proposed to delete the condition (*b*) above, so that companies incorporated abroad will be resident in India only if the control and management is wholly in India. This is also the recommendation of the Taxation Enquiry Commission. At the same time, it is proposed to treat all companies incorporated in India as resident companies, even if in some cases the control and management is shifted outside India.

X. *Computation of income from property—deduction of municipal taxes—clarification of*: At present, one-half the total amount of municipal taxes levied on house properties is deductible in the computation of the taxable income from the property. The intention of the Government always was that all taxes levied by local authorities in relation to house properties, under whatever description, should be regarded as the property tax for this purpose. Recently, however, one High Court has held that certain kinds of taxes like water taxes, conservancy taxes, etc., which are "service taxes" cannot be included in municipal property tax and have therefore to be wholly deducted in the computation of income. It is now proposed to amend the law clarifying the original intention.

XI. *Amendment of Section 18(2) of the Income-tax Act*: The purpose of this amendment is to clarify beyond doubt that the rates of tax to be applied for purposes of deduction of tax at source on salary incomes shall be the rates in force for the financial year in which the employer is required to deduct the tax.

XII. *Inapplicability of Section 23A in cases which will not result in any benefit to revenue*: It is visualised that, in certain circumstances, the declaration of a dividend or a larger dividend than that declared will only result in a loss to revenue, e.g., a case in which most of the shares are held by charitable institutions which are exempt from tax. It would, therefore, be pointless, in such cases, to insist on Section 23A companies declaring larger dividends, under pain of imposition of a penal super-tax. It is, therefore, proposed that in such circumstances, the Income-tax Officer may refrain from applying the provisions of Section 23A.

XIII. *Clarification of liability to assessment in the case of a firm, or association of persons discontinued or dissolved*: Proceedings for assessment and levy of penalty have sometimes to be started against a partnership firm or association of persons after its discontinuance or dissolution. The existing provision in the law enabling these processes, as interpreted by some High Courts recently, are ineffective. It is, therefore, proposed to amend the law suitably.

XIV. *Power to Central Board of Revenue to make rules for determining the value of perquisites*: It is proposed to empower the Central Board of Revenue to make the rules for determining the value of perquisites chargeable to tax in the case of salaried employees.

Wealth Tax

In regard to Wealth Tax, the only change proposed is to exempt a foreign citizen from payment of the tax on his foreign wealth, even though he may be resident or ordinarily resident in India. This was the intention of the Select Committee when the provisions of the Bill were discussed by them, but the intention has not been secured by the language of the provision as it now stands.

A company as at present defined in the Wealth Tax Act will exclude a company formed and registered in the State of Jammu and Kashmir from the scope of this Act, as the Companies Act, 1956, does not extend to that State. It is, therefore, proposed to make it clear that companies formed and registered in that State also fall within the scope of the Wealth Tax Act.

It is proposed that the exemption from Wealth Tax be extended to the newly issued Post Office National Plan Certificates, which have the same characteristics as the Treasury Savings Deposit Certificates, etc., already exempted.

Estate Duty (Amendment) Bill

The main amendments proposed in the Estate Duty Act are:

(1) *Gifts inter vivos*: (*a*) At present, gifts *inter vivos* made during a period of two years before death are liable to estate duty. It is now proposed to increase this period from two years to five years; and (*b*) at present, relief is admissible to the extent of Rs. 5,000 in value in cases of gifts in consideration of marriage or of gifts which are part of the normal expenditure. It is proposed to increase the limit to Rs. 10,000 in either case.

(2) *Coparcenary property*: Under the Act as it stands now, if a member of a Hindu family governed by the Mitakshara, Marumakkattayam or Aliyasantana law dies, his share in the coparcenary property is subjected to estate duty only at the rates applicable to that share. Under the proposed amendment also only this share will be subjected to duty but at the rate applicable to the value arrived at by adding to the share of the deceased the shares of the lineal descendants of the deceased in the joint family property.

(3) *Rate of duty*: At present, the first slab of Rs. 50,000 of property consisting of a coparcenary interest in joint Hindu families governed by the Mitakshara, Marumakkattayam or Aliyasantana law, and the first Rs. 1,00,000 of other chargeable property is exempt from duty. On the balance of the estate, duty has to be paid at progressive rates under the 'slab system' which range from five per cent. to 40 per cent. It is now proposed to fix the exemption limit at Rs. 50,000 whether the estate consists of coparcenary property, or property of any other kind. The rate of duty for the first slab of Rs. 50,000 will be 6 per cent. The only other alteration in rates is the rounding off of the rates of 7½ per cent. and 12½ per cent. to 8 per cent. and 12 per cent. respectively.

(4) *Deduction on account of court fees, probate duty, etc.*: Under the existing provisions of the Act, the entire court fee paid is allowed as a deduction from the estate duty payable. It is proposed to restrict this deduction to one-half of such fee.

(5) *Relief for gift-tax*: As it is proposed to introduce a tax on gifts with effect from the 1st April 1958, provision has been made to ensure that the property on which gift-tax has been paid is not again subjected to estate duty.

(6) *Assessment and Appellate Procedure*: The procedure for 'provisional' and regular assessments is clearly specified. Provision has also been made for first appeal to be filed before the Appellate Controller of Estate Duty and for a second appeal to the Appellate Tribunal. The assessment and appellate procedure are broadly the same as those in force for income-tax, wealth-tax and expenditure-tax.

(7) *Transitional Provisions*: To facilitate the change-over to the new appellate procedure and to avoid any hardship in individual cases, it is provided that the procedures for appeal, reference to High Court, etc., under the existing Act in respect of assessments completed prior to the commencement of the Act shall not be affected by the proposed amendments.

COMMERCE

FUNDAMENTAL DIFFERENCES

THE basic conflict between the Government's and, what we venture to describe, the people's approach to economic problems is rapidly coming to the surface. Judging from Mr. Nehru's speech at the annual meeting of the Federation of Indian Chambers of Commerce and Industry and his reply to the budget debate in the Rajya Sabha, it seems clear that the Government is still obsessed with the view that it alone can deliver the economic goods. The essence of the Government's economic philosophy is that the private sector can do little by itself, unless it is aided substantially by the State, and that the State, on the other hand, both by its choice and by the compulsion of events, has necessarily to play a dominant role in economic development. The essence of the other approach—to give it a non-controversial epithet, the non-Governmental approach—is that things are best left to the people. "Fundamental effort," Mr. Babubhai Chinai, the outgoing President of the Federation, declared in the course of his address, "should come from people themselves." This, we have no hesitation in affirming, is the only sound, practical and correct approach to economic problems. It is also the most pertinent approach for a country which has chosen democracy as its way of life.

In his occasional, though fortunately rare, moods of weariness, apparently induced by the heavy burden of the high office he is carrying on his shoulders, Mr. Nehru has himself complained of the Indian tendency of looking to the Government for assistance and initiative. Evidently, it has not occurred to him that the pathetic dependence of the people on the Government does not stem from any inherent weakness in Indian character but is the logical result of the whole trend of Governmental policy which has sung the praises of the earthly paradise under a Socialist Welfare State, the immense good which could accrue to the people through the assumption by the State of increasingly larger powers to direct all activities. If this deification of the State has led, as was feared by us in the past, to the spiritual impoverishment of the people, nobody is more to blame than the Government itself. If the Government spokesmen just stopped saying to people, "we know we can serve you and nobody else can," they would be doing a very real service to the people.

The basic question is how best people's energies could be canalised into the whole complicated economic system, with a view to raising living standards. Here again, the Governmental approach is at variance with the non-Governmental approach. The State, according to the Government, should take upon itself larger and larger responsibilities for economic development. Only, the Government does not stop to think whether this State capitalism will not lead to the drying up of the springs of popular initiative. Obsessed by a sense of its own self-importance and being anxious to do all things under the sun, including such ill-assorted functions as diamond mining, distribution of cement and selling life insurance, the Government has been casting its fiscal net far and wide in order to gather the resources it needs for performing its self-imposed tasks. Enterprises in the non-Governmental sector, which too have been exhorted to make their contribution to the overall economic progress, now find that they have reached the very limit of their internal resources and borrowing capacity. And yet, the Government continues to monopolise and scrape to the bottom of the resources barrel common to both the sectors. Great deal of damage, as Mr. Chinai said, has been done by the view that there is no limit to the possibility of raising internal funds. Unconscious of the damage it is inflicting on the national economy, the Government has resorted to raising tax burdens and imposing a whole series of fiscal innovations, such as expenditure tax, wealth tax, gift tax, dividend tax, bonus tax and compulsory deposit scheme.

The net effect of the fiscal burdens was neatly summed up by Mr. Chinai when he declared that the country has reached a stage where "taxation is falling heavily on initiative and responsibility which are badly needed today." This has been painfully apparent for some time now. And the Federation has itself tried to educate public and Governmental opinion on the inhibiting character of the fiscal burdens. It recently organised a conference in which it tried to focus attention on the importance of tax relief and the savings to which it would lead. Earlier, its industrial delegation, after a tour of the West, where it said to an incredulous audience that, nearer home, all was nearly as well as it could be with free enterprise, reported that "action should be taken to promote savings both in the personal and corporate sectors." To its dismay, it now finds that all its appeal has been wasted on an unwilling Government which, besides not making any attempt at scaling down the burden, has added to it in the shape of a gift tax and a tightening of the conditions pertaining to development rebate. And the Prime Minister was loath to recognise the importance of tax relief beyond indicating that he would be prepared to consider slight modifications in the tax structure. In the Rajya Sabha, he was even more forthright. He said:

> "I do not think that the situation in India at the present moment is such that it does not offer enough incentive for people to save. I recognise we are heavily taxed. But that type of criticism about saving and capital formation through less taxation and the view that, in a Welfare State, we should not be unduly harsh on the private sector is wholly different from our approach, different from the Congress approach and the Government's approach."

After this statement, if anyone still pins his faith to tax relief, he is welcome to live in his paradise.

What Mr. Nehru has plainly ignored in his attempt at the rebuttal of the case for tax relief is that corporate savings are also a vital part of national savings. Whatever might be the political prejudice against millionaires and personal savings, is there any valid argument against corporate savings and their re-investment? Surely, it does not stand to reason that the large masses of shareholders in the corporate enterprises, most of whom are middle class people who have risked their meagre savings out of hard-earned income, should be denied the reward they so richly deserve. And what incentive and scope for increased income and ploughing back of reserves are there in a situation in which even modest dividends are heavily taxed, capital and bonus shares are subject to levy and deposits demanded of corporate reserves? Again, whatever might be the justification for the harsh treatment accorded to the idle rich, their income and their wealth, there can hardly be any for subjecting corporate enterprises to the same treatment. If the ostensible reason for denying tax relief is that the Government wants all the savings it can muster from the public for carrying out its own programmes, then there is no reason why it should not practise the economy which it preaches with such missionary zeal to the people. The dense growth of overlapping ministries and bureaucratic shrubs could be thinned with great advantage to the national economy and the saving so effected passed on to people in the shape of relief in taxation.

LIFE INSURANCE—I

TWO aspects of nationalised life insurance figured prominently in public discussions this week. A reference was made to them by Mr. B. M. Chinai, the retiring President of the Federation of Indian Chambers of Commerce and Industry, New Delhi, in his speech at the annual meeting of the Federation. It was also indirectly referred to in the Rajya Sabha when it generally considered the Budget for 1958-59. Naturally, Mr. Nehru replied to them at some length and clarified the Government's intentions and policies. One of the two aspects pertained to the very subject of nationalisation itself and the other to the investment policy of the Life Insurance Corporation.

Was the Government right in nationalising life insurance? Has nationalisation of this service become a failure? Must it be denationalised? The issues, of course, were not posed in such a clear cut fashion, but Mr. Nehru gave definite and forthright answers. He said that the Government was right in nationalising life insurance, that nationalisation had not proved a failure—"one swallow does not make a summer" was the reply to the argument based on the "disreputable" L.I.C.-Mundhra deal—and that there was no going back on nationalisation of life insurance. No other answers could have been expected from Mr. Nehru. He is very much unlike Gandhiji in these respects, for Gandhiji never hesitated to acknowledge Himalayan blunders, to learn from mistakes and to rectify them. Right from the beginning, this journal has held the view that nationalisation of life insurance was a hasty Himalayan blunder, that it was an unwarranted doctrinaire step to cover the failure of the Government to correct and eliminate the bad and the black sheep in the private sector operating life insurance, and that it might ultimately prove a menace to the freedom of man. The L.I.C.-Mundhra episode has unfortunately proved some of our misgivings. It has shown beyond doubt that corruption and disregard of public interest are failings common to both the sectors and that public ownership, far from being a cure, only tends to aggravate this blemish. The volume of life funds misused in one year after nationalisation, for instance, has been much more than what used to be the case when life cover was being provided by the private sector.

In making a reference to this subject, it is not our intention to run down either the public sector, in general, or the L.I.C., in particular. Our object is to place the lessons of nationalisation in their proper perspective and to correct some of the wrong impressions that may arise from Mr. Nehru's public statements. We do not see how nationalisation of life insurance has either added to the real wealth of the country or improved the lot of the poor man. The occupation of this strategic height by the State, as Mr. Nehru prefers to describe it, has only made the people to depend more on the Government, has put more power in the hands of political despots both in and out of Office, has brought about more of bureaucratism than socialism and has reduced the democratic content of this liberal State. Where there were about 150 employers, life insurers, investors and advertisers a little over two years ago, there is only one monolithic monopolistic corporation today. Those who want jobs, those newspapers which need advertisements, those people who want to cover their life, and those who want to sell their shares or buy them, all of them have now to go to one institution only instead of to 150 institutions. Before nationalisation, the fifty or sixty thousand employed in life insurance business had the right to criticise the Government through either the platforms or the Press. And, indeed, many of them did. But how many of them can do so now? Theoretically they may enjoy this right, but, in actual practice, they cannot exercise it boldly, except at the risk of losing their job. Is this state of affairs conducive to socialism and democracy? In our opinion, it is not.

Parliamentarians, Ministers and bureaucrats have stated time and again that, though there were all sorts of frauds in life insurance business when it was in the private sector, they were not effectively exposed or brought to the attention of the public in the same way as has been done in the case of the L.I.C. This is a misleading argument and we are sorry to find that even Mr. Nehru repeated it in the Lok Sabha on Tuesday this week. He said:

> "This particular instance (L.I.C.-Mundhra affair), I find, is now being used to run down the public sector and public enterprise and to praise private enterprise. I do not want to run down private enterprise, because I feel private enterprise is an essential part of the country's structure and it will be completely wrong for us to have it as a part of the structure and yet not help it. But this business of running down public corporations and the public sector, because of some mistake or error made in the Life Insurance Corporation, seems to me rather odd. As a matter of fact, the L.I.C. itself has done better in the last year than ever since life insurance came to India. It is making rapid progress and doing rather well. We have heard previously of quite big insurance companies going to pieces. In fact, there were all kinds of frauds in them. Still there are cases going on in courts. One of the reasons for the formation of the L.I.C. was that several life insurance companies were in a very, very bad way. But I do not remember such organised expression of opinion at that time that private enterprise was bad."

Let us first take the last point in the aforesaid quotation. It is not right to say that bad management in the private sector goes unnoticed and uncriticised by the Press. The law against libel and defamation is so strong that it is not easy to write about the bad deeds of business, whether they be in the private or the public sector, on slender evidence. But whenever sufficient evidence was forthcoming, public condemnation had not been any less severe. There are also other reasons why the misdeeds in the private sector receive less publicity than those in the public sector. In the first place, in reporting court proceedings of cases against companies or in commenting on them, one has to be extremely careful, lest one should run the risk of contempt of court. Secondly, the court proceedings are so long-drawn-out and cover technical points of law that their news value is less. And, thirdly, it is but natural that scandals in the public sector evoke greater attention than those in companies in the private sector, for the simple reason that, whereas the whole public is interested in the former as it is vitally affected by the incident, only a section of the public is interested in the latter.

The existence of a large number of laws governing the operations of the private sector is itself proof, in a way, of the fact that the misdeeds and mismanagement in that sector have had public exposure. The laws against joint-stock companies, banks and insurance companies are the result of discovery and exposure of the weaknesses and deficiencies of the private sector, and the agitation that was carried on against them in public. If only these laws had been effectively implemented by the authorities, with an eye on the need for healthy competition which automatically brings to light the corrupt and inefficient elements and finally eliminates them, the private sector today would be in a healthier and cleaner state of affairs than it actually is. If, for instance, the control on insurance companies had been strictly enforced and if no attempt had been made to suppress healthy competition under false notions of helping the smaller insurers, there would have been no need to nationalise life insurance. If the Company Law had been properly administered, without fear or favour, if the tax collectors had been efficient and honest, and if there had been co-operation among, and co-ordination of activities of, the various ministries concerned with the country's economic affairs, there would have been fewer opportunities for dubious adventurers like Mr. Mundhra to flourish. It is, therefore, no exaggeration to say that a large measure of blame for the existence of some bad characters in the private sector has to be attached to the Government (the public sector) itself.

While neither sector in the business world should be "run down", there should surely be healthy competition between the two in establishing standards of efficiency and morality. How is such competition to be ensured, except by exposing the bad points of both from time to time? Sound criticisms are always essential for keeping any organisation or individual on right lines and in good form. It will be a bad day for this country when the public and private sectors decide through mutual understanding not to criticise each other and expose their faults to the people. Mr. Nehru and his colleagues will be doing a real service to the nation, in general, and the business community, in particular, if they bring to light, from time to time, the specific mistakes and wrongdoings of the private sector.

While nationalisation of life insurance was neither right in principle nor necessary for practical reasons, it is too early to say that it has been a failure or to claim that it has been a success. The L.I.C. has been in existence for only a short period which is not sufficient to judge its performance impartially. Mr. Nehru is perfectly right in demanding that the L.I.C. should not be condemned merely on the ground of its bad investments in the Mundhra concerns. But he is not right in resenting the fierce light of publicity directed on the deal and on its implications. He is also not right in giving too much credit to the L.I.C. for what he considers to be its good record. It is true that the new business completed by the L.I.C., amounting to Rs. 250 crores, is a record, exceeding that of Rs. 236 crores and Rs. 238 crores done in 1954 and 1955, respectively, when life insurance was in the private sector. Commendable as this record is, what certainty is there that the private sector also would not have produced the same volume of business had it been allowed? May be, it might have fared even better. An important factor that determines the volume of life business is the rate of growth of national economy. As the economy expands, the new life business also will grow, assuming that effective promotional campaigns will be kept up. A better criterion for judging the efficiency of nationalised life insurance will be its performance in other directions, such as prevention of lapses, lower expense ratio, smaller claims, larger profits and bigger bonus to with-profit policyholders (which imply shrewd and successful investments), spreading of insurance habit amongst a wider section of population, and satisfaction among policyholders about the efficiency of the insurer's service. All these tests can be applied only after the Corporation has been in existence for at least a decade.

It has been suggested by some that the monolithic character of the monopolistic L.I.C. should be removed by breaking it up into four or five or six regional corporations, each competing with one another. There does not appear to be any tangible advantage in adopting this structure, if all the corporations are to be the monopoly of the public sector. It will lead to a lot of complications and aggravate the fissiparous tendencies that are already prevalent, instead of leading to healthy competition. Further, it would appear odd, if not politically unfeasible, for a State monopoly to have different sets of premium rates, bonuses, etc., and varying investment policies. The problem of management and control also will become difficult. The scope for political jobbery and for conferring special favours on those business men who are prepared to connive with influential public officials will widen. Indeed, there could easily be more Mundhra scandals than is likely under a monolithic structure.

It would appear that the Prime Minister is not opposed to this suggestion. He told the Federation of Indian Chambers of Commerce and Industry that he did not rule out the possibility of the Government considering whether the present monolithic structure of the Corporation should be continued or some other structure should be evolved. Apparently, Mr. Nehru, who is a true democrat at heart, does not like a monolithic organisation, though he is not averse to complete State monopoly. But he will be well advised to exercise caution for the reasons just mentioned. This suggestion, it may be noted, is not a new one. It was advocated immediately after nationalisation became a *fait accompli* and was rejected as unsound by the then Finance Minister, Mr. C. D. Deshmukh. The Government of India should, therefore, carefully consider the pros and cons of decentralisation of the monopoly of life insurance, before coming to a final decision. Nothing would be lost by referring the subject to an expert committee under the chairmanship of Mr. Deshmukh, who must have bestowed considerable thought on it when he piloted the legislation on nationalisation of this activity.

The best alternative to the present monopoly in life insurance is denationalisation. But Mr. Nehru has flatly turned it down. He has firmly stated that there is no going back on the step that has already been taken. A second best would be partial denationalisation, that is, to allow both Government-owned and private-owned (that is, joint-stock companies) corporations to operate side by side. This was what Mr. B. M. Chinai suggested in his speech, but it is too much to expect that the Government will agree even to this suggestion. Since Mr. Nehru has said that there can be no going back, it clearly means that he is against partial denationalisation also.

There now remains the other important issue pertaining to the investment policy of the L.I.C. For considerations of space, however, the examination of this question has to be deferred to our next issue.

WILL PRIVATE SECTOR FARE BETTER UNDER NEW FINANCE MINISTER?

DEVELOPMENT REBATE—U.S. BANK RATE—STERLING

THURSDAY, 5 P.M.

THE hesitant tone that has now come to prevail in the share markets confirms the earlier inference that the post-budget spurt in equities was chiefly due to technical factors. The improvement in values did not represent any satisfaction among investors with the budget for 1958-59, as some commentators have made it out to be. If it did so, the upward trend should have continued. What really happened was this. Some operators had gone long in the expectation that the budget would contain some reliefs. They hid their disappointment by buying a little more of the speculative scrips which in turn induced a certain amount of bear covering. This was apparently a manœuvre to prevent the bears from gaining an upper hand. In this attempt, they were helped by the absence of floating stocks, because the large majority of investors never pick up sufficient courage to cut their losses, unless they are forced by a pressing need for liquid funds. They always hope for the best and even a small rise strengthens it. Another factor that helped the bulls was the growing conviction that the Government was bound to come to the rescue of the cotton mill industry, as the depression in it is threatening to go too far. No relief has been announced till the time of writing, but the hope persists. And while it lasts, the bulls seem to be gradually booking their profit. It would not be surprising, therefore, if most of the equities were to retreat soon to the pre-budget levels.

MARKET GOSSIP

• • • •

The prospects of Mr. Morarji Desai becoming the Finance Minister seem to be very bright. All reports from New Delhi confirm this view. This possibility has raised hopes in the breasts of some that free enterprise will fare better under him than it did under Mr. T. T. Krishnamachari. Similar hopes were voiced when T.T.K. changed his rooms in the Central Secretariat at New Delhi on 1st September 1956, but they failed to materialise. Even a person brought up in the days and atmosphere of free enterprise, Mr. C. D. Deshmukh, changed his colour and convictions after he became the Finance Minister under the leadership of Mr. Nehru. Will Mr. Morarji Desai be different from his predecessors when he occupies the chair of finance?

During his brief regime as Commerce and Industry Minister, he did not go out of his way to do anything against or in favour of the private sector. It must also be said to his credit that he interfered with the private sector less than T.T.K. He left the futures market, for instance, severely alone, though he did warn some of them—and that rightly—against excessive speculation. In fact, the Forward Markets Commission has been told, so it would appear, not to bother about extending its domain. This is clear from the decisions he took recently in regard to futures trading in *gur* and bullion. Another good thing he has done is not to expand the tentacles of the State Trading Corporation too far. There are, of course, complaints even now from some quarters about the S.T.C., but the worst fears that one entertained shortly after it was ushered in have not materialised. The S.T.C. now looks less ferocious and considerably tamed. It would not be so today, if T.T.K., who brought it into existence, had been given a free hand and Mr. Morarji Desai not taken up the Commerce and Industry portfolio.

T.T.K. heralded his entry into the Finance Ministry, after laying the foundations for the forces which have practically exhausted India's foreign exchange reserves, by announcing a stiff increase in the excise duty on cloth. Mr. Morarji Desai may mark his entry by giving some fractional relief to the cotton mill industry. But this difference amounts to nothing. The industry has already suffered heavily and Mr. Desai mercilessly allowed it to suffer. He was unmoved by all the arguments and protestations of the millowners, who are all his friends. Either he did not believe them, or, if he did, he was reluctant to take the corrective step. Now the facts are there for all to see. The profits of many cotton mills have yielded place to losses or only to a nominal surplus. Production of cloth has been falling since the beginning of this year. Exports are shrinking. Quite a few units have closed down. A number of others are working short-time. Thousands of workers have lost their jobs. Those who are still working will get smaller sums, or none at all, by way of bonus for 1957. So pitiable is the position of the cotton mill industry today that even the Communists have started pleading for a relief in the tax burden recklessly imposed on the industry last year. Seeing that the Communists are trying to take advantage of the distress of the cotton mill industry in order to spread their hold over the workers employed in that industry, some of the Congress Party members also have now started pressing the Government to do something for the industry. How amusing! It seems that, with the Congress Party, persuasion from friends does not work, but it is only when its political opponents begin to say the same thing, its members sit up and take notice.

It is generally said that Mr. Morarji Desai has an advantage which neither T.T.K. nor Mr. Deshmukh has, that is, the qualification of being a full-fledged Congress man. The argument is that it is not necessary for Mr. Desai to demonstrate his loyalty to the Congress and its ideals by going out of his way and hitting at the "money bags." The way in which he has been quietly allowing the cotton mill industry to suffer shows that this belief has little validity. Has he become the victim of the complex that, if he were to do anything in favour of an industry or trade, he might be accused of possessing pro-capitalist leanings? It looks as though the popular belief that he is a rightist in the Congress Party and a friend of industrialists is more a handicap than an advantage to the private sector.

It seems to us that it is futile to hope that things will change for the better for the private sector after Mr. Morarji Desai becomes the Finance Minister. There is now no room for doubt that the real policy-maker is Mr. Nehru. His speech in the Rajya Sabha on Tuesday clearly shows that he is absolutely unconvinced of the need for giving incentives to this sector. In reply to Rajkumari Amrit Kaur, who made a fervent plea for the abolition of the novel taxes introduced last year and this year, Mr. Nehru teased her by saying that she was ignorant of the socialist philosophy of the Government, of which she was a distinguished member till not long ago. He dubbed her attitude as that of "petty capitalist, who owns a factory or two and who thinks that, by having more factories, he can cure the poverty of the people of India." He then went on to say that one could put up hundreds and thousands of factories and still one would not cure the poverty, unless one went about it the socialist way aimed at reducing economic disparities. Under such a leader, what can Mr. Morarji Desai, who has a high sense of discipline and of devotion and loyalty to his leader, do even if he feels that something requires to be done? He will not dare to go against a policy, once adumbrated, even occasionally, as was done by T.T.K. when he was the Commerce and Industry Minister. But for T.T.K's daring, for instance, Tatas would not have had licence for doubling the capacity of their steel works or for manufacturing diesel trucks at the T.E.L.Co. factory.

In any case, Mr. Morarji Desai is an evangelist and he expects everyone to be like him. He has always held the view that business men should not aim at making profit but work with a service-motive. That he is not an expert in economic and financial matters he will himself admit. The country badly needs foreign exchange. And his advice is that business men should sell for export even at a loss! It is reported that, some time ago, when some friends told him that the cotton mills were losing on account of heavy taxation, he remarked that, as the mills had made large profits for several years now, there was nothing wrong if they had to work at a loss for a year or two. Replying to the general criticism of heavy taxation, he told the members of the Federation of Indian Chambers of Commerce and Industry at New Delhi yesterday to reorientate their minds and observed: "If the Government helps you to save compulsorily through taxes, you ought to be thankful to the Government rather than be critical of it." In other words, the Government knows what is good not only for the common man but also for the business community. What relief in taxation can one expect from a person who thinks thus? And how will it mean a change for the better to the investment markets if he becomes the Finance Minister?

• • • •

Since the aforesaid account was prepared and just before going to press comes the official announcement of changes in the Union Cabinet. Mr. Morarji Desai has become the Finance Minister, his place as Commerce and Industry Minister being taken by Mr. Lal Bahadur Shastri. Mr. S. K. Patil has been transferred from Irrigation and Power to Transport and Communications. The Finance Minister of Uttar Pradesh, Mr. Hafiz Mohammed Ibrahim, has taken the place of Mr. Patil. The Finance Minister of Andhra Pradesh, Mr. B. Gopal Reddi, has become the Minister for Economic Affairs, who will be assisted by Mrs. Tarkeshwari Sinha as a Deputy Minister. Three more Deputy Ministers have been appointed. They are: Mr. S. V. Ramaswamy, Railways; Mr. Ahmed Mohiuddin, Civil Aviation; and Mr. P. S. Naskar, Rehabilitation.

• • • •

It is now becoming increasingly clear that, from the investors' point of view, the effect of the proposed restrictions on the grant of development rebate to companies is to reduce the disposable profit. Under the scheme of development rebate, a company is entitled to claim exemption from income-tax to the tune of 25 per cent. of the expenditure on new plant and equipment; the relevant percentage has now been increased to 40 per cent. for shipping companies acquiring new ships. It must be remembered that the ultimate benefit of the development rebate to a company is really to the extent of the tax on the amount of the rebate. What is saved by a company is the amount of tax on the development rebate, and not the full amount of the development rebate, as such. Even so, this has been a welcome concession, in that it offers a modest incentive for expansion of plant. The changes now introduced by the Budget are: (1) a company will get the benefit of the development rebate only if, at the end of the relevant year, it debits to its profit and loss account the amount of development rebate and sets it aside as a development reserve; (2) it does not sell or transfer to any person, other than the Government, the asset which has received the concession of a development rebate before the expiry of ten years.

Clearly, the effect of the new regulation, under which the development rebate is to be debited to the profit and loss account, is to reduce the disposable profit. For companies which embark on large expansion programmes, the new restriction would mean a serious drain on their profits. Two valid objections have been raised against the new regulation. In the first place, it is asked why the Government should reduce the incentive value of a development rebate by hedging its grant with a restriction which reduces the immediate profitability of the new investment. Secondly, it is rightly pointed out that the concept of the new restriction does not take into account the obvious fact in the business world, namely, that a new plant or machinery may not start earning in the very year of its installation. In other words, this condition can be met only by dipping into the profit made by the existing plant, over which the shareholders have a legitimate right to a reasonable return on their investment. The result will be that existing companies will find it extremely difficult to raise additional capital for expansion and those that have already found the necessary capital will find it hard to maintain their dividend levels.

As regards the other restriction, namely, the prohibition (for a ten-year period) of sale of the relevant asset to any person, other than the Government, it is wondered why the Government should compel the company to hang on to its asset for so long a period. If technological improvement within the ten-year period—technology moves very fast, indeed, these days—makes the original equipment obsolete, why should a company be compelled to maintain its equipment for fear that it may lose the benefit of the rebate if it sells it away?

The proposed restrictions obviously tend to reduce the value of the development rebate. Nevertheless, if they must be maintained, the least the Government should do is to relax them by spreading the amount of debit to the profit and loss account over a period of five years from the year in which the rebate is allowable. Such a provision will permit an equitable distribution of the burden to the profit and loss account of the company. Yet another suggestion is that the period governing the prohibition of the sale of the relevant asset should be reduced from 10 to 5 years. It is to be hoped that the Government will amend the relevant provisions along these lines.

Three of the twelve U.S. Federal Reserve Banks, namely, those of New York, Philadelphia and Chicago, have reduced their discount rates from 2½ per cent. to 2¼ per cent. with effect from the 7th inst. The other Federal Reserve Banks are expected to follow suit. This is the third cut in the U.S. Bank rate within a short span of five months. The first reduction was made in November last, when the discount rate was brought down from 3½ to 3 per cent., followed by another cut in the fourth week of January to 2¾ per cent. With the latest cut of ¼ per cent., the discount rate in the U.S. stands reduced by 1¼ per cent. from the level ruling until November last and has been brought back to the level which prevailed in the third quarter of 1955.

The latest cut in the U.S. discount rate has not come as a surprise, for, ever since the last reduction, it has been widely expected that another downward move in the rate would follow. It is also in line with the fall in the U.S. Treasury Bill rate for 91-day bills, which declined in the closing week of February to 1.202 per cent., the lowest level seen in the last three years, from 2.587 per cent. in the closing week of January. The gradual fall in interest rates in the U.S. had already brought about a cut in deposits of leading banks in America. Thus, on the 26th ult., the First National City Bank of New York reduced its interest rates on foreign time deposits by ¼ per cent. and several other major banks followed suit. The rate on six-month deposits was reduced from 3 to 2¾ per cent. and that on three-month deposits from 2¾ to 2 per cent. Foreign time deposits are the dollar holdings of foreign Governments in the U.S. and, consequent on the sharp fall in Treasury Bill rates, the foreign Governments were seen switching over their holdings to banks.

While the general fall in interest rates has brought about a reduction in deposit rates of banks, there is as yet no move on the part of the commercial banks to reduce their prime rates, that is, their lending rates. In fact, the consensus of opinion is that no reduction in prime rate is warranted at present, since there will be heavy borrowings this week by corporations for income-tax payments due on the 15th inst. No doubt, the demand for bank credit has slackened of late, but, even so, the ratio of advances to deposits of banks is already high enough not to warrant any reduction in lending rates of banks. It may be recalled that, nearly four weeks ago, the Federal Reserve Bank made a cut of ½ per cent. (from 20 to 19.5 per cent.) in the reserve requirements of member banks, thus releasing about $500 million from the then reserves of banks. This addition of $500 million to the banks' resources was to enable them to lend and invest more and was part of the Government's measures to counter the business recession in the U.S.

Meanwhile, the U.S. President has announced his plans to stimulate the economy, which has somewhat worsened, as indicated by the sharp rise in unemployment during February. The number of persons unemployed at the end of last month was 5.17 million, the highest level in the last sixteen years. The President's measures to check unemployment are mainly two. First, he proposes to extend the unemployment compensation programme beyond the statutory 26 weeks—20 weeks in some States—where necessary. Unemployment compensation is being counted upon to provide larger consuming power during a recession, but how far the extension of the benefit, though necessary on social grounds, is going to

EQUITIES HESITANT AT HIGHER LEVELS

UNDERTONE STEADY

(From Our Own Correspondents)

BOMBAY, *13th March*

AFTER an initial jump, in continuation of the upward trend noted in the immediate post-budget days, equities displayed considerable hesitancy during the week under review. The sharp rise in prices since the Budget session naturally attracted a mild corrective reaction. The Prime Minister's defence of the Government's tax policy in his speech at the annual meeting of the F.I.C.C.I. and in his reply to the debate on the budget in the Rajya Sabha, in the course of which he said that the broad approach to taxation, namely, that of obtaining larger resources, required for the economic growth of the country, from those who can afford to pay more, was inevitable and that there was no choice but to carry on a heavy load of taxation and to spread it out as far as one can, gave room for doubts in the minds of operators whether the Federation's plea for a revision of tax structure would bear any fruit. The serious labour situation in the works of the Indian Iron and Steel Company, where the workers are reported to have taken a violent attitude and the rivalry among the unions has worsened the situation, also restrained operators from enlarging their commitments. Settlement considerations and fears of heavy carry forward charges in view of the large bull position built in post-budget period induced some liquidation. The undertone, however, remained steady.

In the steel section, Tata Ordinaries advanced early in the week from Rs. 174.50 to Rs. 176.75, but slowly gave way to Rs. 173.50 yesterday. After a recovery to Rs. 175 this morning, the shares closed at Rs. 174. The new shares closed at Rs. 170, as against Rs. 170.25 a week ago. Indian Irons jumped from Rs. 20.52 to Rs. 20.84, but soon receded to Rs. 20.52. There was again an improvement to Rs. 20.84 on Tuesday, but the news of the labour situation at the Company's works caused a setback to Rs. 20.32 yesterday. Today, however, there was a partial rally to Rs. 20.68 before closing at Rs. 20.44.

Textile shares presented a mixed pattern. Despite the none too encouraging reports from the cloth market, there was no marked fall in this section. The decision of the Directors of the Kohinoor Mills Ltd. and the Bombay Dyeing and Manufacturing Company Ltd. to maintain the dividends for the year 1957 at 18 per cent. and 10 per cent., respectively, gave hopes that the dividends of other leading cotton textile mills would also be unchanged, contrary to earlier fears that mills would be forced to cut their distribution. Bombay Dyeings moved up from Rs. 52 to Rs. 52.80 early in the week. After a setback to Rs. 51.80 the shares gained to Rs. 52.20, but the recovery was not sustained and the closing was lower at Rs. 51.60. Centurys came in for some speculative activity and rallied from Rs. 389.25 to Rs. 398.50, but the higher level attracted heavy profit-taking, bringing the shares down to Rs. 393.25 at the close. Kohinoors gained over the week Rs. 5 at Rs. 272, the highest level touched during the week being Rs. 274.25. Central Indias gained 50 nP over the week to Rs. 82. Finlays were marked up by Rs. 5 to Rs. 265, while Gokaks were unchanged at Rs. 150. Indu Ordinaries rose by 32 nP to Rs. 9.40. Indore Malwas were steady at Rs. 107.50, while Khataus were lower by Re. 1.50 at Rs. 141. Morarjee Mills shed Rs. 3 to Rs. 205, New Greats Re. 1.50 to Rs. 212.50 and Shree Niwas Cottons Rs. 5 to Rs. 135. Simplex were dull at Rs. 159.50, while reports of bonus issue attracted support to Standards, which as a result recorded a gain of Rs. 12 at Rs. 418. Svadeshis put on Rs. 3 to Rs. 171.50, while Tata Mills were unchanged at Rs. 39.

Bank shares were quiet, with a fractional fall in prices. Barodas lost 50 nP to Rs. 115. While Centrals (old) were unchanged at Rs. 52.50, their new shares declined by 30 nP to Rs. 54. Bank of India's were lower by 75 nP at Rs. 134.75 and their new shares by 50 nP at Rs. 135.50. Dena Banks were done at Rs. 45.50 *ex-div.* at which rate they showed a fall of 75 nP. Union Banks changed hands 36 nP lower at Rs. 8.72. Punjab Nationals and United Commercials provided exceptions, with a rise of 30 nP to Rs. 52.80 in the former and of 50 nP to Rs. 60 in the latter.

A sharp rise of Re. 1.75 to Rs. 42.50 in New Indias was the only feature in the insurance section. The other scrips were inactive and prices were unchanged.

Electricity shares were quiet. Ahmedabad Electrics were lower by 50 nP at Rs. 94.50 and Bombay Suburbans by 25 nP at Rs. 103.25. Surat Electrics were a shade better at Rs. 105.50, while Tata Hydros shed 50 nP to Rs. 113.25. Tata Powers were marked down by Rs. 2.50 to Rs. 1,117.50. Andhra Valleys provided an exception with a rise of Rs. 10 to Rs. 1,077.50.

In the miscellaneous section, sugar shares showed no uniform trend. After an initial rise from Rs. 239 to Rs. 241.50, Belapurs suffered a sharp fall to Rs. 235.50. Bhopals gained over the week 76 nP to Rs. 21.52. Phaltans shed Rs. 2 to Rs. 150.50, while Walchandnagars rose by Re. 1 to Rs. 273.50. Kesar Sugars changed hands Re. 1.70 lower at Rs. 51.30, while Ravalgaon Sugars were done Re. 1.50 higher at Rs. 131.50. Cement shares recorded a general decline. Associated Cements moved down from Rs. 145.75 to Rs. 143 and their new shares shed 50 nP to Rs. 138.50. Digvijays lost Rs. 2.25 to Rs. 136.50 and Orissa Cements 12 nP to Rs. 12.32. In the engineering and mining group, Alcock Ashdowns shed Re. 1.25 to Rs. 216.25. Tata Locomotives improved early in the week from Rs. 145.50 to Rs. 149.25, but subsequently gave way to Rs. 145.75 at the close. Premier Constructions showed no change at Rs. 159.50. Shivrajpurs lost a rupee to Rs. 94. Indian Coppers were quiet at Rs. 2.86.

Among shipping and automobile shares, Scindias were erratic, moving between Rs. 17.16 and Rs. 16.72, before closing at Rs. 16.76, as against the previous week's close of Rs. 17.08. Great Easterns lost 72 nP over the week at Rs. 19.80. Premier Automobiles declined by 70 nP to Rs. 78.50 and Hindustan Motors were a shade quiet at Rs. 6.16.

In the miscellaneous group, Bombay Burmahs (old) rallied from Rs. 502 to Rs. 513, before reacting to Rs. 505.50. The partly paid-ups lost Re. 1.25 to Rs. 190. National Rayons moved up from Rs. 221.25 to Rs. 225, but reacted to close at Rs. 222.50. Gwalior Rayons were done 60 nP lower at Rs. 10.96. Tata Chemicals were a shade better at Rs. 13.12. Hindustan Levers attracted attention and gained 80 nP to Rs. 21.56. Tata Oils were quiet at Rs. 37.50. Voltas were unchanged at Rs. 120 and their new shares at Rs. 116. Wimcos had business Re. 1.50 higher at Rs. 173.

* * * *

Madras Stock Exchange

MADRAS, *11th March*

Barring textile shares which were depressed, the Madras Stock Exchange continued to rule steady during the week under review also. Plantation shares were generally well favoured, thanks to absence of any fresh taxes on plantation companies in the Kerala budget and the decision of the State Government to abandon the proposal to levy wealth tax on agricultural property. Hopes were also entertained that the Mysore budget, too, would not contain any new tax burdens on plantations. Banking, electricity, sugar and miscellaneous shares were more or less maintained at last week's price levels. Textiles, as already stated, were depressed, reflecting disappointment of operators over the Centre's refusal to lower excise duty on cloth. There were also persistent reports of heavy accumulations of yarn and cloth stocks with many mills, as well as of drop in yarn prices.

Among tea shares in the planting section, Kalasas rallied Re. 1.95 to Rs. 14.95 on special support. Peermades improved by 50 nP to Rs. 20.25. Chembras rose by 17 nP to Rs. 3.15. Coonoors gathered 15 nP to Rs. 18.75, Blue Mountains 7 nP to Rs. 31 and Chandramalais 5 nP to Rs. 2.95. Kil-Kotagiris were a shade better at Rs. 5.15. Devasholas, however, receded by 25 nP to Rs. 19.50. Coffee shares elicited good support. Coffee Lands advanced by a rupee to Rs. 30.50. Consolidated Coffees gained 30 nP to Rs. 22.70. Ouchterlonys put on 5 nP to Rs. 4.85. Among rubber shares, Cochin Malabars attracted attention and climbed up by 30 nP to Rs. 4.80. T.R.&Ts spurted by 22 nP to Rs. 6.25. Malankaras increased by 25 nP to Rs. 15.50 and Thirumbadis by 16 nP to Rs. 1.56. Midlands strengthened by 12 nP to Rs. 14.62. Nelliampathys were higher by 8 nP at Rs. 2.68 and Highlands by 15 nP at Rs. 12.25.

In the textile section, Coimbatore Pioneers declined by Rs. 4 to Rs. 226. Bangalore Woollens, Dhanalakshmis, Radhakrishnas and Rajalakshmis lost Rs. 2 each to Rs. 170, Rs. 185, Rs. 128 and Rs. 71, respectively. Coimbatore Spinnings and Ranga Vilas shed a rupee each, the former to Rs. 59 and the latter to Rs. 64. Cambodias eased by 20 nP to Rs. 9.40. Loyals softened by 15 nP to Rs. 37.10. Mettur Industries, however, met with excellent buying support and forged ahead by Rs. 36.50 to Rs. 400 induced by the announcement of 50 per cent. special dividend.

Among miscellaneous industrials, Mysore Chemicals and Fertilisers strengthened by 40 nP to Rs. 6.25. India Cements rose by a like amount to Rs. 27. F.A.C.Ts improved by 33 nP to Rs. 5.38. Ranes were higher by 25 nP at Rs. 5.75. Dalmia Cements gathered 7 nP to Rs. 10.20. Spencers, on the other hand, encountered selling and shed 15 nP to Rs. 16.60.

MERCANTILE BANK LTD.

The Directors of the Mercantile Bank Ltd. have recommended a final dividend of 6¼ per cent., less income-tax, for the year 1957 on the increased capital of £2.94 million raised in November last by the reorganisation of capital structure and issue of scrip bonus in the ratio of one for one. The Bank had paid in August last an interim dividend of 12½ per cent., less tax, for the year on the old capital of £1.47 million. The total dividend for the year thus comes to 12½ per cent. on the increased capital, as against 14 per cent. paid on the old capital for 1956.

The Federation of Malaya became a member of the International Monetary Fund and the International Bank for Reconstruction and Development on the 7th inst. The quota of Malaya in the International Monetary Fund is $25 million and its subscription to the capital stock of the Bank is 250 shares with a total par value of $25 million. This brings the total membership of the Fund and Bank to 65. Admission of Malaya brought the total of members' quotas in the Fund to $9,031,000,000. The total subscribed capital of the Bank is now $9,358,400,000.

BANK OF INDORE RAISES DIVIDEND AGAIN

PROFIT SLIGHTLY HIGHER

A SMALL rise of about Rs. 65,000 to Rs. 6.70 lakhs in profit is disclosed by the audited accounts of the Bank of Indore Ltd. (Manager: Mr. N. D. Joshi, Indore City) for the year ended 31st December 1957. Though this increase is in consonance with the general trend of bank profits, it does not compare well with that of Rs. 98,000 noted by the bank in 1956. This has, however, enabled the Bank to maintain more or less the allocations to the reserves, provide a larger sum for payment of bonus to staff and raise the dividend level.

The transfer to the reserve fund has been maintained at Rs. 1 lakh, while the allocation to the contingency fund is a shade lower at Rs. 1 lakh, as compared with Rs. 1.04 lakh provided last year. The bonus to staff has been raised from Rs. 79,400 to Rs. 2.09 lakhs, while the provision for gratuity has been lowered from Rs. 70,000 to Rs. 15,000. The dividend has been stepped up from 16 per cent. to 17 per cent. This is the third year in succession for which the dividend has been raised, that is, from 12 per cent. to 14 per cent. for 1955, and again to 16 per cent. for 1956.

The steady progress made by the Bank during the past three years is fully reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Interest and discount earned	37.82	31.14	27.11	25.16
Commission and exchange	4.71	3.78	3.02	2.55
Interest paid	20.33	15.20	12.78	11.66
Expenses	15.66	13.81	12.32	11.13
Depreciation	0.30	0.28	0.32	0.32
Profit	6.70	6.05	5.07	5.02
To reserves	2.00	2.04	2.00	2.00
„ gratuity fund	0.15	0.70	0.25	0.15
„ bonus to staff	2.09	0.79	0.71	1.01
Dividend	2.60	2.45	2.14	1.84
	(17%)	(16⅓)	(14⅔)	(12%)
Carry forward	0.52	0.87	0.61	0.65

	As on 31st December			
	1957	1956	1955	1954
Capital	15.30	15.30	15.30	15.30
Reserves	29.00	28.00	27.00	26.00
Deposits	7,98.13	7,38.81	6,72.87	6,05.24
Borrowings from banks	20.00	..	..	..
Advances	587.94	4,81.91	3,75.54	3,65.81
Investments	2,21.00	2,50.05	2,65.29	2,04.78
Cash (including money at call)	65.52	66.56	75.48	70.56
Balance-sheet total	9,41.27	8,48.87	7,66.19	6,82.63
Ratio to deposits of—	%	%	%	%
Advances	73.7	65.2	55.8	60.3
Investments	28.2	33.8	39.4	33.8
Cash	8.2	7.6	11.2	13.1

The Bank's gross income is up by Rs. 7.65 lakhs, the contribution of interest and discount earned being Rs. 6.68 lakhs. Income from commission and exchange has risen by Rs. 93,000.

As will be seen from the above table, the Bank's published reserves have steadily grown to a high of Rs. 29 lakhs, as against a paid-up capital of Rs. 15.30 lakhs. In addition, the Bank has built up a sizable inner reserve; during the last 10 years alone the Bank has set aside from the profits an aggregate sum of over Rs. 9 lakhs to the contingency fund. The most notable feature disclosed by the latest balance-sheet is that, while deposits have grown by only Rs. 59 lakhs over the year, advances are higher by Rs. 1.06 crore. This is in contrast to the general trend of bank deposits and advances. This is probably an indication of the difficulties of banks in small cities like Indore in attracting deposits, unlike those in big cities where, thanks to organised money markets, banks are in a more advantageous position in getting large deposits.

The Bank's fixed deposits are higher by Rs. 46 lakhs at Rs. 5.01 crores and savings bank deposits by Rs. 15 lakhs at Rs. 94 lakhs, while current and contingency accounts are a shade lower at Rs. 2.02 crores. The relatively smaller increase in deposits have necessitated larger borrowings from other banks, as witness the outstanding borrowings amounting to Rs. 20 lakhs at the end of the year, as against *nil* a year ago. On the assets side, loans, cash credits and overdrafts have gone up from Rs. 4.40 crores to Rs. 5.50 crores, while bills purchased and discounted have declined from Rs. 42 lakhs to Rs. 38 lakhs. Consequent on the sharp rise in total advances without a corresponding expansion in resources the investments have been reduced by Rs. 29 lakhs. Cash balances are, however, higher Rs. 9 lakhs, even so, the total of liquidity ratio stands reduced from 41.4 per cent. to 33.4 per cent.

NEWS IN BRIEF

THE Central Government has decided to allow full drawback, instead of seven-eighths as hitherto, of customs duty paid on imported ammonium nitrate used in the manufacture of nitrous oxide for export.

India's import restriction policy is stated to have resulted in the closure of the Calcutta branch of the 60-year old watch firm, the West End Watch Company, throwing 200 persons out of employment. The head office in Bombay continues to function as usual.

The Lok Sabha passed on the 10th inst. a Bill which seeks to extend the life of the control of Shipping Act by another two years. This extension is being given pending the passage of the Indian Merchant Shipping Bill, a comprehensive measure consolidating all the existing shipping laws in the country which is now before a joint committee of Parliament.

The production of copper ore in India during the quarter ended December 1957 was higher at 104,205 tons, as against 98,352 tons in the preceding quarter. The entire production was reported from Singhbhum district of Bihar. The total production of copper ore during 1957 was 403,929 tons, as compared with 386,196 tons in 1956, and that of copper metal was 7,848 tons, as against 7,628 tons.

The management of Sholapur Spinning and Weaving Mills has declared a lock-out on the ground that the mills are running into heavy losses. Nearly 6,400 workers are employed by the mills. It is said that the management has not paid to their employees their December, January and February wages and the pay-off compensation amounting to nearly Rs. 13 lakhs, due to financial difficulties.

An order valued at about Rs. 78 lakhs for certain types of railway equipment has been placed by the Railway Board with a firm in Poland. The firm, it is stated, has agreed to receive 50 per cent. of the payment in Indian rupees. The balance will be paid in pounds sterling. The order is for the supply of nearly 17,000 rolled steel tyres for broad gauge wheels and over 9,000 forged steel axles of various measurements.

Employment exchanges secured 17,042 placements during January 1958, as compared with 15,625 in the previous month. The increase in placements was mainly reported from Punjab, Bombay, West Bengal and Andhra. Of those placed during January, 4,324 were under the Central Government, 8,430 under State Governments, 2,131 under quasi-Government establishments and local bodies and the remaining 2,157 under other employers.

The Government of India has set up a Central Advisory Council for the Export Risks Insurance Corporation to make available to the Corporation the benefit of advice of experienced persons connected with the export trade on matters of interest to the Corporation. The Advisory Council consists of ten members with Mr. R. M. Ghandhi, Chairman of the Board of Directors of the Corporation, as its Chairman. The Corporation, it will be recalled, was set up on 30th July 1957.

With the concurrence of the Planning Commission, the Government of India has decided to set up a plant for manufacturing raw film and other photographic materials. The details are under examination and will be negotiated with a team of foreign experts who are expected to arrive in India in the next few months. No final decision, however, has yet been taken about the selection of a site for the proposed plant. Preliminary data relating to a site near Ootacamund were recently received and these are under examination.

The first annual meeting of the Mica Export Promotion Council was held in Calcutta on Friday last under the chairmanship of Mr. A. P. Mathur, Joint Chief Controller of Imports and Exports, Calcutta. In his opening remarks, the Chairman said that, though complete figures for 1957 were not available, the total export of mica during the year would be slightly more than that of the previous year. He pointed out that exports of mica to U.S.A. and the U.K. were maintaining the same level as during the previous year, while those to West Germany and Japan showed an upward trend.

The Government of India proposes to reorganise the Planning Commission with a view to meeting the requirements of the second Plan. The main features of the proposed reorganisation of the Commission are the creation of new divisions to deal with perspective planning, scientific and technical manpower, statistical surveys, and international trade and development. The reorganisation aims at rationalising the work of the Commission. It is not proposed to modify in any manner the Commission's constitution, functions or responsibilities. It is also proposed to strengthen some of the existing divisions, particularly those connected with the collection of economic and statistical intelligence.

From Abroad

China has offered a loan of Rs. 5 crores to Ceylon to help the latter tide over the difficulties caused by the recent floods. The loan, if accepted, is repayable in four equal instalments within ten years and will carry interest at 2½ per cent.

Burma is expected to raise its rice export price by £4 per ton this year, following a drop in production of 1.2 million tons. It will export only 1.5 million tons of rice this year, as compared with 2 million tons last year.

The Japanese Ministry of Trade is shortly expected to impose restrictions on the output of steel mills. According to it, output of steel plates will be restricted by 33 per cent., medium-sized sections by 40 per cent., wire rods by 15 per cent. and round steel bars by 30 per cent.

The Egyptian Ministry of Industry has proposed East German participation in its industrialisation plans, chiefly in the establishment of a motor vehicles plant to the extent of about £E12 million. The proposal is in reply to an East German offer to provide capital goods as a loan.

A B.O.A.C. turbo-prop "Britannia" airliner set a new trans-Atlantic flight record on the 10th inst. when it flew from London to New York in 9 hours and 32 minutes. The plane was making a test flight and, despite the fact that one of its engines failed half an hour before landing, it was able to break the record.

A new factory for making Massey-Harris-Ferguson tractors, forming part of a £2-million programme for the enhancement of facilities in France, has been opened by the Standard Motors at Beauvais in France. The factory, which is managed by Standard-Hotchkiss, is working in collaboration with another plant in Paris to manufacture more than 100 tractors a day. It stands on a 50-acre site with a capacity to grow to eight times its present size.

Pakistan's first dry-dock was declared open by President Iskander Mirza in Karachi harbour on the 5th inst. The dock is 600 feet long and 90 feet wide and deep enough to take ships of 26-foot draft at high tide and of 16 ft. draft at low tide cargo ships of 18,000 d.wt. and passenger ships of 20,000 tons can be accommodated. Work on the dock, which was constructed by the Pakistan Industrial Development Corporation, started in 1953. It has cost Rs. 4.29 crores.

A Netherlands firm, Messrs. van Doorne of Eindhoven, has started production of a wholly Dutch-designed small motor car. The firm which is known for its manufacture of highly specialised transport vehicles has exhibited its "D.A.F.-car" on the Amsterdam motor show. The new car attracted considerable public attention. Among its many features are an automatic gearshift and an air-cooled engine. The price for the standard model is less than 4,000 Holland guilders or less than Rs. 5,000. The annual production is planned to reach 50,000 cars by 1960.

Increasing competition in foreign markets and growth of national industries in traditional markets have induced the Netherlands Trading Society of Amsterdam to stimulate the formation of Dutch export "Combines." The Bank has sought clarification from several enterprises whether they would be prepared to join similar interests in associations with a view to promoting exports. It is learnt that the Bank's proposal is having a favourable response and that the ultimate formation of export combines will, as far as possible, be left to the enterprises themselves.

The trade school in Karachi, run under Swedish auspices, was formally inaugurated on 16th February last. The school aims at training small industry enterprisers in two-year courses. There are also specialised courses in carpentry and joinery and in cotton-clothes manufacture. The school is headed by Mr. Max Leden, and four of the teachers are Swedes. It has at present 36 pupils, but this number is soon expected to be doubled. The Swedish Committee for Technical Assistance has supplied machinery and furniture for the buildings and also pays the Swedish teachers. Costs for the school buildings are being defrayed by the Pakistani Governments, which also pays the local teachers.

PERSONAL

MR. B. P. Singh Roy has been unanimously elected President of the Federation of Indian Chambers of Commerce and Industry for 1958-59.

Mr. Chivu Stoica, Prime Minister of Rumania, arrived in India on Friday last on a State visit.

Dr. Leopold Figl, Austrian Minister for Foreign Affairs, left Bombay for Karachi on Monday.

Mr. D. F. Macmillan of Messrs. Andrew Yule & Co., Ltd., and Mr. J. D. K. Brown of Messrs. Jardine Henderson Ltd., have been elected President and Vice-President, respectively, of the Committee of the Bengal Chamber of Commerce and Industry for the year 1958-59.

"Dear Sirs ..."

This is an important letter for it may close a big deal, or open a new account. More letters, estimates, indents, ledgers, bills, cheques and receipts—all these add up to prosperity provided the essential raw materials are available. In business there is no more essential raw material than paper.

For 75 years The Titaghur Paper Mills Co. Ltd. have been among the largest producers of fine quality papers. The makers of Elephant Brand Papers remain as pioneers in the forefront of the Industry.

TITAGHUR PAPER

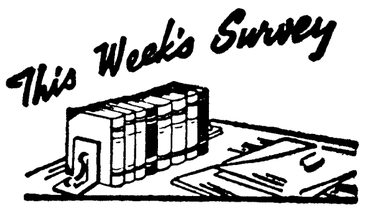
TP 2008 B



ASIAN ECONOMY

MOST countries of the Asian region are disclosing signs of what has been described as a "development crisis." Perhaps, it is not altogether correct to attribute all the ills to Asia's 'development' programme as such. For many of them stem from certain unrealistic policies adopted by the Governments. Be that as it may, it is clear that the two problems which face the countries are the rise in population which has synchronised with an inadequate rise in agricultural production and the shortage of capital in relation to the immense needs of this region which has embarked upon bold programmes of industrial development. The U.N.'s survey of Asian economy, which was presented to the annual conference of the Economic Commission for Asia and Far East (E.C.A.F.E.), which met last week at Kuala Lumpur, has spotlighted the essence of the Asian economic problem by calling attention to the steep rise in Asian population, the low level of capital formation and the importance of food production.

China and India, according to the U.N. survey, will by the year A.D. 2000 have a population as large as the present world total if present trends continue. Again, at the present rate of growth of population, the E.C.A.F.E. region alone will have by 1980 a population as large as the present world total. Since there was a "clear possibility" that the hopes of raising *per capita* incomes may be defeated if population growth continues unchecked, it rightly urges the need for plans to curb such growth. It, however, recognises that the region has great untapped assets, including hydro-electric potential and valuable mineral resources. Only, it feels that this advantage is likely to be nullified by the fact that the "ever-mounting number of the people themselves are creating in many countries an issue which is likely to prove still more decisive."

Reviewing the economic progress in the Asian region in 1957, the survey notes that the economic conditions were satisfactory in agriculture and industry but demand on the whole outran supply, bringing about inflationary pressures and adverse trade balances. It warns: "The present economic situation in the E.C.A.F.F. region is not one to make for complacency." The survey further notes that, although foreign aid continued to be available for the region on a large and sometimes rising scale, the flow of private capital from abroad was "less satisfactory." Referring to food, it says: "The outlook for the food situation is not bright for 1958 and bigger imports can be expected." Asian imports of rice in the current year, it is stated, are likely to be larger than those of 1957.

Against this background, it is hardly surprising that the delegates to the E.C.A.F.E. session tended to emphasise the importance of agricultural production. Thus, Mr. Manubhai Shah, the Indian delegate, pointed out that the one "cardinal" lesson the region must learn was that primary production could not be relegated to secondary place in favour of industrial expansion. A similar view was expressed by the U.N. official, Mr. Philippe de Seynes. It was worth emphasising again and again, Mr. de Seynes declared, that agriculture held the key to many of the problems, both internal and external, which beset underdeveloped countries attempting to accelerate the pace of economic progress. The importance of this observation will become clear when it is realised that inadequate agricultural production in an underdeveloped country exposes it to two dangers—the danger of increased dependence on imports and the consequent pressure on foreign exchange reserves, on the one hand, and the loss of foreign exchange which might have been earned through exports, on the other. The result is naturally a slower tempo of industrial development, because of the difficulties in importing capital goods which cannot be paid for.

Of considerable significance to the underdeveloped world is the course of American recession which must necessarily affect adversely the U.S.'s capacity to absorb imports from abroad. This certainly is not a matter of unconcern to the underdeveloped countries which naturally look to the U.S. for economic aid and supply of much essential equipment. In his analysis of the implications of recession in the U.S. and elsewhere, Mr. de Seynes pointed out that what was important for underdeveloped countries was that, in previous recessions the industrial countries were not all involved at one time. At the beginning of this year, on the other hand, there were important elements of similarity in the situation of most of the industrial countries of North America and Eastern Europe. As regards Western Europe, he said, it did not seem to promise an expansion in 1958 which would offset any significant drop in the demand from North America. After emphasising that the present situation constituted a "more serious challenge" to national and international economic statesmanship, he said: "It must regrettably be conceded that we have not yet found the right formula for international stabilisers to compare with the built-in and other stabilisers available within each of the developed countries."

From the point of view of underdeveloped countries, the situation created by the recession in the U.S. and absence of real and rapid improvement in other countries is difficult in all conscience. Nevertheless, it is not irretrievable. For one thing, the Asian countries could themselves pool their reserves, limited though they are, in order that they might jointly solve some of their common problems. In this connection, Mr. Dag Hammarskjoeld. U.N. Secretary-General, in the course of the address which he sent to the E.C.A.F.E. conference, did well to stress that the growing importance of intra-regional trade was perhaps a sign that the time might not be too far off when this type of integration might be extended to Asia and the Far East. Such integration could be of great benefit for the countries concerned. It must, however, be admitted that the scope for it is limited, in view of the fact that the economies of most Asian countries are not sufficiently complementary. Secondly, there is some further scope for generation of internal capital. Even now, in respect of many countries, notably India, the pursuit of sound policies could make all the difference to rapid capital formation. What is even more important is that such policies could also induce a greater inflow of foreign capital. This would also eliminate the need for cutting down consumption in an effort to build up capital. For, as Mr. Abdul Rahman, Malaya's Prime Minister, rightly observed, it will be "many years before Asian countries can generate enough capital to finance the expansion of their economies, without gravely penalising the consumption levels of the masses of their population."

The need for foreign capital is also matched by the scope for its profitable investment. Malaya's Finance Minister, Col. Shik Lee, said: "I would also suggest that it is a matter of enlightened self-interest that the more developed countries of the West should do all they can to help development in view of the enormous potential markets of the E.C.A.F.E. countries for manufactured goods." Foreign capital—especially capital from the free world which alone can and will offer its capital without political strings —would be willing to come only to countries which adopt appropriate economic policies. In this connection, these countries will do well to bear in mind the advice of Mr. Richard Casey, Australian External Affairs Minister, that they should continue to guide their economic development towards a goal in which the "individual is respected." If they base their economic policies on this sound advice, it may still be possible for the West to utilise its surplus capital for investment in the Asian countries.

The absence of uniform policy in Asian countries, or even within the same country, in respect of foreign capital is one of the factors which prevent a more rapid inflow of private foreign capital into these countries. From this point of view, it is noteworthy that the Malayan Prime Minister, Mr. Abdul Rahman, made a thought-provoking suggestion that the underdeveloped Asian countries should join together in drawing up an international charter "to regulate their treatment of foreign private capital." He said his suggested charter would be strictly voluntary, aimed at assuring potential lenders that their just rights and interests would be fully respected and protected. He further said that the charter, in order to attract private financial and technical assistance, should be routed through appropriate U.N. channels. This, he said, would indicate to foreign investors the part they are expected to play in promoting development in the receiving country and also remove any fears in the recipient countries that such investment might interfere with their sovereignty and national interests. There is no doubt that such a charter could go a long way in stimulating the flow of foreign private capital into Asian countries. Mr. Abdul Rahman's proposition, therefore, deserves to be pursued and given a practical shape.

LABOUR PROBLEMS

In the course of his brief, though comprehensive, speech, Mr. Homi Mody, President of the Employers' Federation of India, who was addressing its annual meeting, held this week at Calcutta, made some notable observations on a few of the most topical problems in the sphere of industrial relations. Mr. Mody welcomed the increasing recognition in labour circles of the fact that no benefit would accrue to the workers from a situation in which wages rose and production levels remained stagnant. Clearly, all rise in wages must be rooted in productivity increases which furnish the only reasonable ground for an upward revision of wages. To overlook this consideration is to invite a cost-inflation which must seriously jeopardise industrial growth and throw to the winds all chances of building up an industrial edifice which will stand the gusty storm of international competition. The wage boards, as well as labour leaders, as Mr. Mody himself suggested, will do well to appreciate the need for linking fair workloads with fair wages.

A topic which has attracted considerable discussion in recent months is the participation of workers in management. We have, in the past, appealed for caution in this experiment not because we are opposed to it but because we are genuinely interested in its success. Nothing is more detrimental to its success than haste. For, in the context of the political bias of trade unionism in this country and the admitted educational backwardness of our working class, there is a great deal to be said in favour of a cautious approach to the problem of workers' participation in management. Mr. Mody did well to warn against expecting "too much too soon" from this experiment. He rightly insisted that the whole experiment would require "not only right attitudes on the part of both employees and managements but also the right types of men to sit on the councils." Here is a sphere which offers a wide scope for constructive work by labour leaders. Workers, who have for long been exhorted to know only their side of industrial relations, should now be taught to learn to see the "other" side of every issue.

Yet another topic to which Mr. Mody made pointed reference was the implications of the Employees' State Insurance to employers. Although the scheme covers only about 50 per cent. of the labour ultimately to be covered by it, even the employers whose employees do not receive any benefit from the scheme have had to pay ¾ per cent. of the wage bill on the ground that the scheme would soon be extended to cover their establishment. This "anticipatory" levy, considered as wrong in equity and bad enough in all conscience, is now sought to be increased. The Government has notified its intention to raise the rate of contribution by employers from 1¼ per cent. to 3¼ per cent. of the wage bill in the areas where the scheme is in force and from ¾ per cent. to 1¾ per cent. where it is still to be extended. Whatever might be the justification for raising the rate of contribution by employers in areas to which the scheme applies, the continued retention of the levy, much less the attempt to raise it, can have neither legal nor economic validity. It is, as Mr. Mody pointed out, "grossly unfair" on the part of the authorities to ask the employers to make a larger contribution towards the cost of maintaining what, in reality, is an unrendered service.

CORE OF SECOND PLAN

At long last, the Government of India has come out with the definition of what constitutes the "core" of the second Five-year Plan. Replying to a series of questions in the Lok Sabha last week, Mr. B. R. Bhagat, Union Deputy Minister for Finance, presented a statement detailing the names of the projects included in the "core" for which foreign exchange had been wholly or at least partially arranged. The following are the projects:

Public sector: (1) *Steel*: Rourkela, Bhilai and Durgapur steel plants, as also Mysore Iron and Steel Works for ferro-silicon expansion only; (2) *coal*: The National Coal Development Corporation schemes covering Kathara, Korba (open cast), Korba (inclines), Gidi, Saunda, Korea and existing State collieries, as well as Singareni collieries; (3) coal washeries; (4) Neiveli lignite project (mining part only); (5) railway development programme, including the requirements of the Posts and Telegraphs Department in connection with the railway electrification programme; (6) ports development programme—only Bombay, Calcutta, Madras and Visakhapatnam; (7) *power projects*: (*a*) Korba thermal station (Madhya Pradesh); (*b*) Khapa Kheda Akola thermal station extensions (Bombay); (*c*) Hirakud project second stage (Orissa); (*d*) Lakkavalli (Bhadra) project (Mysore); (*e*) power transmission; distribution and extension schemes (sub-stations equipment, conductor, switch-gears, underground cables, steel for support, ground water meters, etc.); (*f*) Bhakra-Nangal hydro-electric project (Punjab and Rajasthan); (*g*) Chambal project first stage (Madhya Pradesh); (*h*) Rihand project (U.P.); (*i*) Tungabhadra hydro-electric scheme (Mysore); (*j*) Nariamangalam hydro-electric scheme (Kerala); (*k*) thermal stations in Saurashtra region (Bombay); and (*l*) Ganderbal and Mohra power stations (Jammu and Kashmir).

Private sector: (1) *Steel*: Tata Iron and Steel Works and Indian Iron and Steel Works; and (2) *coal*: All projects that have been licensed.

The total foreign exchange required for the "core" of the Plan is expected to be Rs. 967 crores, including a very small amount intended for the private sector. Two years of the Plan have already been gone through for which a payment of Rs. 375 crores is estimated to have been made and the rest of the amount—Rs. 592 crores—is intended for the remaining part of the Plan.

Disclosing the aforesaid information, Mr. Bhagat observed:

"It is impossible to supply a complete list of all projects in the public sector for which foreign exchange is being arranged, especially as many of them are still under negotiation. It may, however, be said that, apart from those projects which are already covered by foreign aid or for which foreign aid is being negotiated or proposed to be negotiated, foreign exchange is being allocated on the general principle that resources should be made available for the 'core' of the Plan and for completing projects that have already made considerable progress. These principles apply to all projects whether in the public or in the private sector, and foreign exchange is being made available to the utmost extent possible for all projects that satisfy the above criteria."

The aforesaid definition of the "core" of the second Plan, though it is an authoritative one, has nevertheless added more to the confusion already prevailing. It was only the other day that Mr. Jawaharlal Nehru, Prime Minister, declared at Jamshedpur that the "hard core" meant 90 to 95 per cent. of the Plan and it would be implemented, whatever might be the difficulties. Is this "core" the same as the one now defined in the latest official statement? It is to be hoped that the position will be made clear in the statement which the Prime Minister will make in Parliament on the latest foreign exchange position of the country next week. It is needless to say that definition of intentions, if it is vague and loose, will create uncertainties which result in a sense of frustration. Surely, there is, as Mr. A. D. Shroff aptly described some time ago, nothing so fatal to any plan for development as the state of mind in the country where the people are not definitely told "what next." Again, since agriculture is the hard core of the Plan, the non-inclusion of fertilisers in the "core" is a serious omission.

MADRAS BUDGET

The Madras budget for 1958-59, presented to the Legislative Assembly on 1st March by Mr. C. Subramaniam, Finance Minister, reflects a somewhat comfortable financial position for the Government in the coming year. The Finance Commission's award, which has added a net increase of Rs. 2 crores to the State's resources, has helped the budget to show a small overall surplus. In order to cover a revenue deficit of Rs. 1.05 crores, new taxation has been proposed which is expected to yield Rs. 1.20 crores. The deficit will thus be converted into a small surplus of about Rs. 15 lakhs.

The proposals for additional taxation are: (1) Enhancement of the tax on diesel oil from 10 nP per gallon to 35 nP per gallon. This is expected to yield Rs. 70 lakhs. (2) Raising of the rate of entertainment tax from 20 per cent. on the first slab to 25 per cent., from 25 per cent. on the second slab to 33⅓ per cent. and from 33⅓ per cent. on the third slab to 40 per cent. This is expected to give a revenue of Rs. 30 lakhs. (3) Levy of agricultural income-tax, in the place of the existing surcharge on land revenue, on all landholdings with an exemption limit of Rs. 3,000 and at rates and slabs now in force on plantation holdings. Although the actual revenue from this tax is difficult to estimate, it has been reckoned, for purposes of the budget, at Rs. 70 lakhs. These proposals together are expected to yield about Rs. 170 lakhs in a full year, but making allowance for the likely delay in getting through the necessary legislation, the yield has been estimated at Rs. 1.20 crores in the ensuing year.

The revenue deficit of Rs. 1.05 crores on the basis of the existing tax structure compares with the surplus of Rs. 4.83 lakhs in the revised estimate for the current year. The revised estimate shows a revenue of Rs. 60.41 crores and an expenditure of Rs. 60.36 crores, leaving a surplus of Rs. 5 lakhs. As against this, the budget estimate had placed the revenue at Rs. 57.98 crores and expenditure at Rs. 61.32 crores, leaving a deficit of Rs. 3.33 crores. This appreciable improvement in the revenue position during the current year has been mainly due to the Finance Commission's award which came into effect during the year. Under the award, the State got an additional Rs. 1.47 crores. There has also been a welcome upward trend in receipts from certain items of revenue such as tax on motor vehicles, land revenue, etc.

The budget estimates for the coming year (1958-59) anticipate a revenue of Rs. 62.70 crores and an expenditure of Rs. 63.75 crores, leaving a gap of Rs. 1.05 crores, which has been closed by additional taxation listed above.

Receipts under the capital budget for 1958-59 are expected to aggregate about Rs. 17.35 crores (as against the revised estimate of Rs. 22.11 crores for the current year) comprising Rs. 5.85 crores in open market loans (less repayments) and Rs. 10.75 crores in loans (less repayment) from the Government of India and certain autonomous bodies and Rs. 0.74 crore as contingency fund. As regards disbursements, capital expenditure (including State trading schemes) is fixed at Rs. 9.73 crores, as against Rs. 16.67 crores (revised) in the current year. It is made up of Rs. 2.39 crores on buildings, Rs. 1.69 crores on irrigation, Rs. 70 lakhs on minor irrigation, Rs. 1.43 crores on industrial development, Rs. 96 lakhs on roads; Rs. 35 lakhs on purchase of buses and the balance on miscellaneous items. Capital expenditure on electricity schemes has been placed at Rs. 11.94 crores but the outlay is now met by the Electricity Board and hence the details have been left out of the State Budget. Loans to local bodies, etc. (net disbursements) are estimated to aggregate Rs. 7.62 crores. Total disbursements thus aggregate Rs. 17.35 crores, as compared with Rs. 24.06 crores in the current year.

The budget for the current year had estimated the Plan outlay for the State at Rs. 31.79 crores. Appreciable shortfalls in implementation are expected on certain schemes due to the delay in their sanctioning, acquisition of land and scarcity of building materials. These shortfall are more than made up by a much larger outlay on irrigation and power. The revised estimate places the Plan outlay at Rs. 32.31 crores, an excess of Rs. 52 lakhs over the original provision. For the coming year, the Plan outlay has been fixed at Rs. 30.47 crores. Central assistance in loans and grants of a maximum of Rs. 18 crores has been assured and the balance of Rs. 12.47 crores should come out of the State resources.

The novel feature of the budget and in fact the most controversial, is the imposition of the agricultural income-tax in the place of the existing surcharge on land revenue. The *raison d'etre* for the tax, according to the Finance Minister, is that, in view of the decision to fix a ceiling on future acquisition of land, it is just and proper that those who hold land in excess of the ceiling at present should make a contribution to the common resources. The agricultural income-tax, with an exemption limit of Rs. 3,000 income, will be levied at rates and slabs now in force on plantation holdings. The non-agricultural income of the assessee will also be taken into consideration in reckoning his total income and the agricultural portion will be assessed at the higher rates applicable to top slabs. The agricultural income-tax, in addition to a fairly stiff land tax, will impose a heavy burden on landholders. And the burden will be heavier if the tax on agricultural income is levied, as is envisaged under the proposals, at higher rates applicable to top slabs arrived at after taking into account both agricultural and non-agricultural incomes. It is true that the Taxation Enquiry Committees envisaged the gradual integration of taxation of agricultural and non-agricultural incomes. It pointed out, however, that it can only be a long-term objective. The Commission had also expressed misgivings about the constitutional validity of any interim measure which took non-agricultural income of a land-owner into consideration for levying a surcharge on agricultural income-tax.

Be that as it may, it is true that the incidence of the agricultural income-tax will fall heavily on a class which has already been hit hard by a fall in incomes brought about by the Fair Rent Act and other measures of land legislation. Since the revenue effects of the tax, as the Finance Minister himself admitted, is not much, its only result would be to discourage development expenditure on land.

KERALA BUDGET

For the second year in succession the Communist Government of Kerala has budgeted for a surplus. In contrast to the rigorous tax measures introduced last year which were estimated to yield Rs. 2.33 crores, the new taxation proposals, expected to bring in only Rs. 66.78 lakhs, may be termed comparatively moderate. The revenue from these taxes is expected to convert the revenue deficit of Rs. 32.77 lakhs, into a surplus of Rs. 34.01 lakhs. The new taxes proposed are: an increase in the rate of tax on urban immovable property, a stamp duty on forward transactions in pepper and coconut oil, a single-point tax at purchase point on timber instead of the present multi-point sales tax, a surcharge of 10 per cent. on passenger fares in the State Transport Services, increase in electricity duty and its extension to bulk consumers other than licensees, an increase in sales tax on diesel oil from 8 nP to 20 nP.

The Finance Minister estimated the revenue receipts for the year 1958-59 at Rs. 33.62 crores and expenditure at Rs. 34.17 crores. After the budget estimates were finalised information was received from the Centre, as in the case of Madras, that assistance towards payment of special dearness allowance to Government employees would be raised. This entitles the Government to an additional grant of Rs. 22.06 lakhs. The revenue gap has thus been narrowed to Rs. 32.77 lakhs. The new taxation proposals, as noted, are estimated to bring in Rs. 67.78 lakhs. The revised estimates of revenue and expenditure for 1957-58 are put at Rs. 29.68 crores and Rs. 29.88 crores, respectively. The current year is thus expected to close with a small revenue deficit of Rs. 19.69 lakhs.

The Kerala Finance Minister pointed out that, for 1958-59, apart from the revenue deficit of Rs. 54.83 lakhs (before taxation and excluding the Central grant of Rs. 22.06 lakhs), funds had to be found for the capital expenditure of Rs. 7.88 crores. For these two items together resources to the extent of Rs. 8.43 crores have to be raised. Against this, there is an opening balance of Rs. 35.53 lakhs and a net accretion of Rs. 8.06 crores under debt heads. The surplus under the debt heads includes a sum of Rs. 3 crores proposed to be borrowed from the open market, a sum of Rs. 1 crore being the State's share of the proceeds of small savings and a sum of Rs. 2.20 crores to be realised by the sale of securities.

The Minister revealed that the expectation in regard to agricultural income-tax was not realised in the current year and super-tax on agricultural income was reduced owing to modification in the rates by the Assembly. A few weeks ago, the Government also decided to drop the wealth tax on land proposed in the last budget. This is a welcome decision, because wealth tax is an inequitous tax, especially when levied on agricultural land. The Kerala Government deserves to be complimented on rectifying a wrong action. The Communists have done what the Congress Party is unwilling to do.

Subsidies for food continues to be a heavy burden on the State. A sum of Rs. 50 lakhs has been provided in the budget for this purpose. The Government should encourage higher production of foodgrains and try to popularise other foodgrains such as wheat. It should also find out whether the proposed land reforms, fixing a very low ceiling of 15 acres, is really conducive to higher production. The Finance Minister admitted that his expectation, expressed in his last budget speech, that eight or ten industries would be started in the State during the current year had not fructified due to a number of reasons. The Government might do well to re-examine whether it has offered any new incentive to private *entrepreneurs* to establish industries within its borders.

LONDON LETTERS

OLD THINKING AND MODERN FACT

VERDICT OF THE THREE WISE MEN

From Our Own Correspondent

LONDON, *1st March*

WHEN the Government set up last year its special economic committee—the Council on Prices, Productivity and Incomes—the Opposition were critical that it would make policy pronouncements under a cloak of impartiality and the Trades Unions at one time threatened non-co-operation. Now the first report of the Council—the Cohen report, named after the Chairman, Lord Cohen—has appeared and justified the worst fears of the objectors. For the Three Wise Men—as the members of the Council are called—have not been content with setting out statements of the relevant economic facts necessary to form a judgment on policy, they have gone on to pronounce the policy. From the constitution of the Committee, it was inevitable that the analysis could only be on traditional lines and the Wise Men have earned the immediate dislike of the Trades Unions and of the Opposition. Hence any policy based on the report will be opposed from the outset, however much good it might contain.

The report stresses the need for the stability of sterling and for maintenance of internal purchasing power. This amounted precisely to what the Governor of the Bank of England declared was necessary in his speech to the Overseas Bankers' Club earlier in the week: the Governor said that that must be the policy come slump, come recovery. On wages, it boldly declares that, if increases have to be conceded this year they should be lower than those given in previous years on average. But this week, in the House of Commons in a debate on employment policy, evidence was given from all over these islands that unemployment is growing and slowly, slowly, public opinion is wakening to the fact that worse is coming round the corner and that the thinking which can only dwell on inflation is sadly behind the times.

In America, recession is sufficiently established to have induced the Federal Reserve System to lower its cash ratio requirements in an endeavour to make credit easier. In this country, the most dramatic evidence of the change in world climate are the lines of cargo vessels being laid up in the estuaries. For freight rates have been falling sharply for some months with European demand for coal and grain reduced (even Germany is showing signs of having passed the peak of prosperity with unemployment growing). A year ago, the total of British shipping laid up in the U.K. was 32,000 tons. Now it has passed 490,000 tons and a quarter of the increase dates from the New Year. A year ago, no foreign ships were laid up here at all—now the total is 290,000 tons and half of this increase is since the New Year.

And in the City these facts are noted and the Cohen report is read with them as background. Of course, the City likes the trend of the report as much as do the employers' organisations (the Federation of British Industries called the report "weighty, impartial and carefully considered") who are all for more deflation, but the City is good at doing addition of sums and it doesn't quite see how the report adds up in realistic terms. First of all, it knows that it is no use getting on the worst terms possible with the trades unions and, secondly, it knows that more recession is not going to do it any good. Thirdly, it is sadly aware that, at the moment, neither the Government nor they have the answer for restoring prosperity without inflation!

Besides, the Cohen report is firmly against what it calls premature *reflation* and faces with complete equanimity a check to production and a dampening down of demand. Such a dampening was expected, it has come, it must not be run away from. The Government may well find their new Council more of an embarrassment than an asset!

ECONOMISTS LOOK AT PRICES

LONDON, *7th March*

In his last despatch (published above), your Correspondent pointed out the political reactions to the Report of the Cohen Council on prices, productivity and incomes. The comment was made that, because of the criticism of the Opposition and the Trade Unions to the broad findings of the Report, much that was good in the analysis would be lost. It is, therefore, worth looking at the Report of the Council objectively in rather more detail, separating out the analysis of the working of the economic system from the conclusions drawn.

It is true that the majority of statistics assembled in the Report are not new but to put them together in an overall survey of the economic picture of Britain from 1946 to the present day is a worthwhile task and, if the Council had been content with highlighting the picture instead of going on to indicate policy, their Report would have been better received. One tends, for instance, to forget that the rise in prices since 1946 is unparalleled in peace-time. "Many people," as the Report says, "tend to assume that price rises of this size are part of the natural order of things: that prices have always risen at the rate of 4 per cent. to 5 per cent. a year and are bound to go on doing so." Between 1946 and 1956, the annual supplies of goods and services in the United Kingdom increased by about a third. If there had been no rise in prices, the value of the national product would at 1946 prices have been £15,500 million in 1956. In actual fact, the value was £24,500 million. These rising prices cost the country £9,000 in those eleven years. It is not surprising that, practically half of this sum, went in paying extra wages and salaries, the rest went about 19 per cent. to extra profit income, 19 per cent. in paying for imports at higher prices and 13 per cent. in extra indirect taxes to the Government. Real wages rose nothing like as much, indeed between 1948 and 1952 real wages fell. In the last four years, they have risen about 6 per cent. On balance, wages have improved over the period in relation to all other sources of income, and dividends, in particular, are a much smaller share of profits than they were before the war. They have not even recovered their pre-war value in real terms, mainly because of the much larger share of profits now taken by taxation.

If we want to measure the sort of figure by which wages and salaries should have risen, it is worth noting that, over the whole period, production has increased only around 3 per cent. per annum, a figure which embraced an increase in productivity per man of 2¼% per annum.

So much for the analysis of what has been happening in prices. The terms of reference of the Report began with the words "having referred to the desirability of full employment and increasing standards of life based on expanding production, etc.," the Council should keep under review changes in prices, productivity and the level of incomes. The Government thought they were safeguarding themselves by that preamble of "having referred to the desirability of full employment," but the Council make short work of blowing the Government out of the water by telling them that the preamble is ambiguous and that not everything which is desirable is obtainable. That sets the tone for the Council's conclusions, which is more or less to say that the rise in prices should be stopped and that it is not possible to do so while maintaining full employment.

We are faced with the familiar complaint that the country has been trying to do too many things at once. This has resulted in an abnormal pressure of monetary demand for both consumer and capital goods and service which, in the view of the Council, has been the main cause of rising prices and incomes. The Economists forming the Council consider that the objective should be to stop and not merely to moderate this demand inflation. They do not consider that the change in the world atmosphere during the last few months should modify this view and they state frankly that production will have to be cut back—"such a check is to be expected and tolerated as indeed it was in 1956." Their principal weapon is monetary policy in which they have unlimited faith, they applaud the September measures of last year and criticise them only for being two years too late, and as for wage increases, they do not want any more of them. Finally, to make sure of earning the complete condemnation of the left, they declare they do not want to see any physical controls over investment, prices, subsidies, dividends or rents.—*All Rights Reserved.*

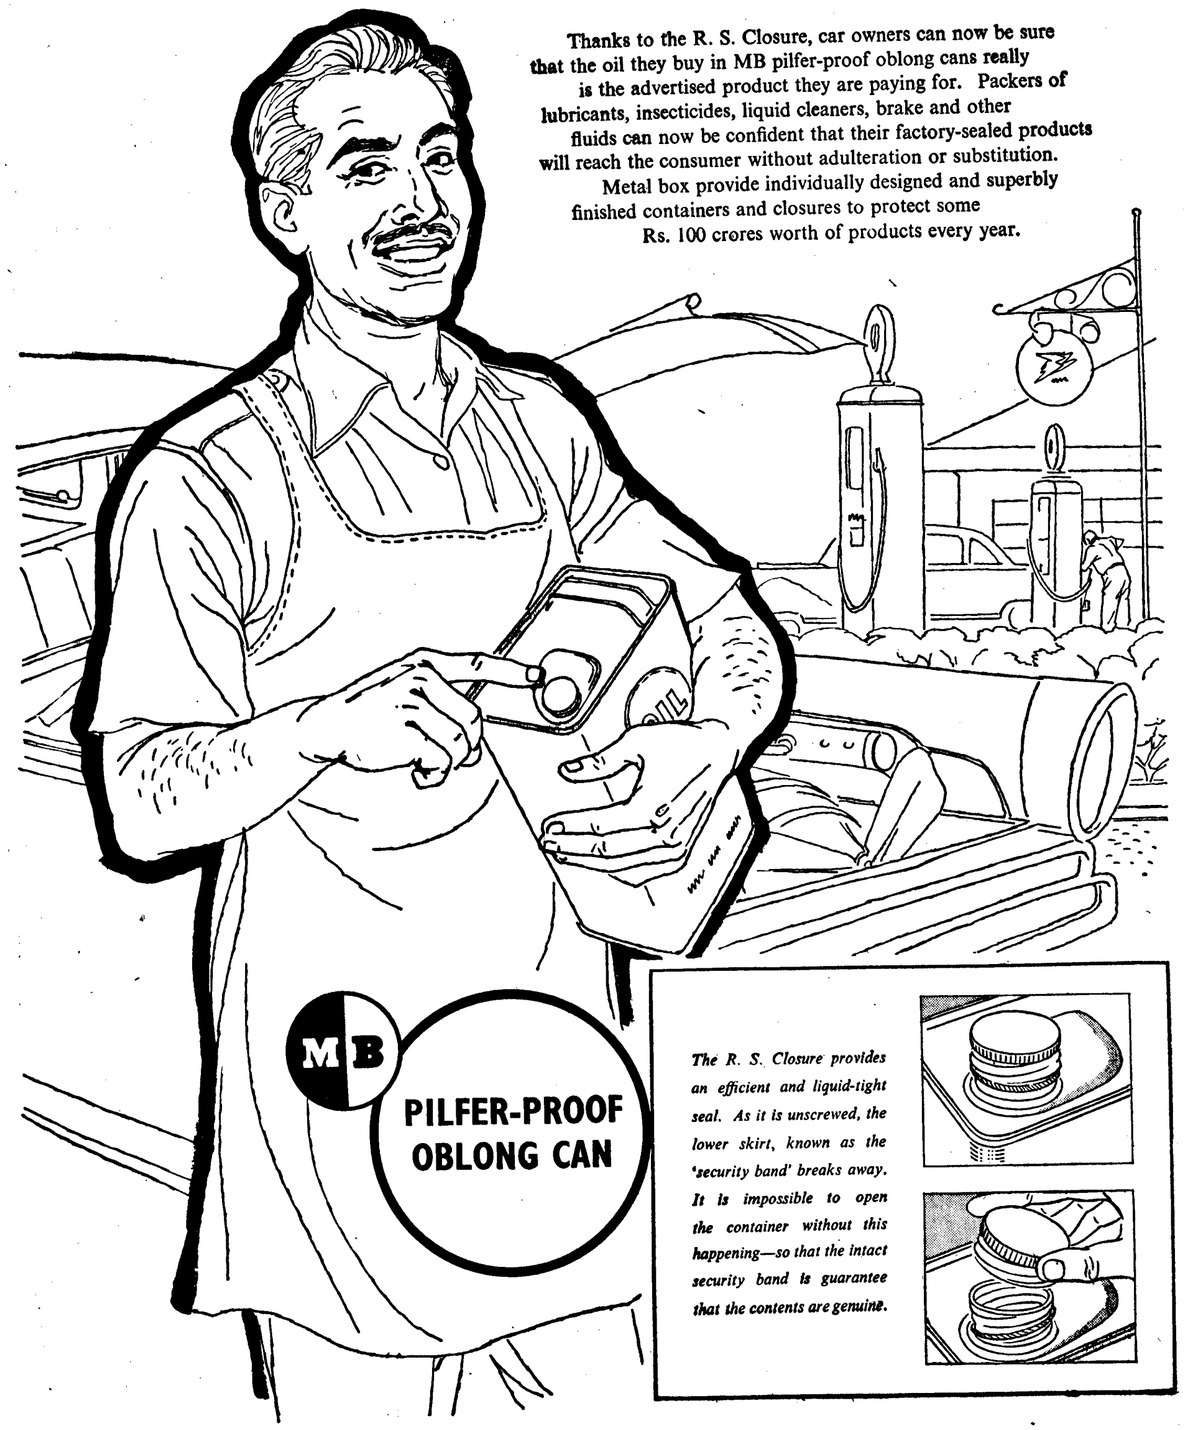
a pilfer-proof package
for every product !

Thanks to the R. S. Closure, car owners can now be sure that the oil they buy in MB pilfer-proof oblong cans really is the advertised product they are paying for. Packers of lubricants, insecticides, liquid cleaners, brake and other fluids can now be confident that their factory-sealed products will reach the consumer without adulteration or substitution. Metal box provide individually designed and superbly finished containers and closures to protect some Rs. 100 crores worth of products every year.



MB
PILFER-PROOF
OBLONG CAN

The R. S. Closure provides an efficient and liquid-tight seal. As it is unscrewed, the lower skirt, known as the 'security band' breaks away. It is impossible to open the container without this happening—so that the intact security band is guarantee that the contents are genuine.

I.C.I.C. BREAKS NEW GROUND

LOANS IN FOREIGN CURRENCY GRANTED

WITH the year ended 31st December 1957, the Industrial Credit and Investment Corporation of India Ltd. (General Manager: Mr. P. S. Beale, Bombay) has completed the third year of its operation. During this short period of its history, the Corporation has come to occupy a unique position in the field of industrial financing. While it is not the only source of rupee finance for industries, it has earned the distinction of being the only source within the country so far for loans in foreign currencies. The year 1957 was the first one when the Corporation had an opportunity for making use of the $10-million loan (or its equivalent in other currencies) made available by the World Bank in 1955 for the purpose of meeting the external costs of the industrial projects which the Corporation assists. The Corporation is also the only one of its kind in this country which provides permanent share capital for industrial development.

Apart from the fact that the pace of progress in the initial stages of a new enterprise cannot but be somewhat slow, the activities of the Corporation have been handicapped by the unfavourable investment climate which has developed during the past three years, more particularly during 1957. In such a climate, investors have been reluctant to enter into new commitments and their ability to do so has also been curtailed by the high level of taxation. Judged against the background of these conditions, the operations of the I.C.I.C. cannot be regarded as unimpressive. Up to the end of 1957, the Corporation had sanctioned financial assistance to the tune of Rs. 11.65 crores by way of loans, underwriting and direct participation in share capital, as against Rs. 6.01 crores up to the end of 1956, distributed as follows:

(Amount in lakhs of Rs.)

Method of assistance	1957		1956	
	No. of operations	Amount	No. of operations	Amount
Loans in rupees	9	323	10	295
Loans in foreign currency	5	221	..	..
Underwriting of issues	16	535	7	238
Direct subscriptions to share capital	11	86	8	68
Total Rs.		1,165		601

It will be seen from the above data that the total assistance sanctioned by the I.C.I.C. in 1957 is divided more or less equally between loan operations in rupee and foreign currencies, on the one hand, and underwriting operations, on the other. During the year under review, the Corporation received a large number of enquiries for financial assistance, and it broke new ground, as already said, by sanctioning loans in foreign currencies equivalent to $4.63 million or Rs. 2.21 crores. These loans in foreign currencies are yet to be approved of by the World Bank, as they are granted out of the loan received from the Bank, and, if approved, will result in the utilisation of nearly one half of the foreign currency resources at present available to the Corporation from the Bank. The I.C.I.C. proposes to approach the World Bank in due course for an additional line of credit for use, when the present one is exhausted.

The year 1957 has been one of steady progress both in the completion of transactions previously sanctioned and in the approval of new ones. An idea of the substantial disbursements made during the year in respect of rupee loans and other transactions sanctioned so far can be had from the following comparative figures of investments in and loans to industrial companies as at the end of the last two years:

(In lakhs of Rs.)

	As at the close of	
	1957	1956
Loans	195.05	53.56
Investments—		
Preference shares	66.36	38.06
Ordinary shares	142.52	77.82

The operations in the form of underwriting public issues of capital became more difficult during the year under review, due to the slump in share markets and the reluctance of investors to take on new commitments, particularly in new established companies. In the case of some issues underwritten by the Corporation during the year, the public response was negligible. Out of the five underwriting operations completed during 1957 covering in all about Rs. 93 lakhs, the I.C.I.C. had to take up no less than Rs. 58 lakhs, the balance having been taken up by other investors. The underwriting operations sanctioned so far since the inception of the Corporation aggregate 16, involving a total commitment of Rs. 5.35 crores, and, of these, nine were completed by the end of 1957 and two more have been completed since then.

The Chairman of the Corporation, Dr. A. Ramaswami Mudaliar, in the course of his statement circulated to the shareholders (the full text of which appears on page 472 of this issue), expresses his confidence that "with the traditions that are being established, it should be possible in the future to organise underwriting activities on a larger scale." He, however, hastens to qualify this remark by emphasising the fact that the "success in this field depends upon a suitable investment climate," and expresses the hope that the Government will give due regard to the necessity of doing its share "to bring about the right sentiment among potential investors without whose support we cannot do fully what we set out to achieve."

The high level of taxation, which has made the climate for investment cloudy, has also affected the Corporation's financial results. The gross profit has, no doubt, recorded an impressive rise from Rs. 36.90 lakhs to Rs. 48.17 lakhs, but the provision for taxation has taken a large slice of it, such being no less than Rs. 25.10 lakhs, as against Rs. 15.25 lakhs set aside last year. The result is that the net profit, at Rs. 23.07 lakhs, is only Rs. 1.42 lakhs higher. In addition, the Directors have had to make, out of the undistributed surplus of Rs. 6.31 lakhs brought in from 1956, an additional provision for taxation amounting to Rs. 2.83 lakhs in respect of the profit for 1956, consequent on the increase in taxation in the budget of May 1957, that is, long after the accounts for 1956 had been passed. The Directors have maintained the allocation to the general reserve at Rs. 5 lakhs, but have raised the dividend fractionally from 3½ per cent. to 4 per cent., absorbing Rs. 20 lakhs, as against Rs. 17.50 lakhs. The surplus left to be carried forward is no more than Rs. 1.55 lakhs.

The declaration of a higher dividend may seem anomalous in the context of the need for building up larger reserves. It must, however, be noted that even the enhanced dividend is a very modest one and, unless a reasonable return is assured to the investors in the I.C.I.C., its efforts to find additional resources within the country will prove to be a difficult task. The Directors are exploring how best additional funds can be raised and their success depends on the tax relief the Corporation gets from the Government. The Chairman's plea for tax concessions to companies such as the I.C.I.C., by virtue of their special functions, without any of the benefits of development rebate, additional depreciation, etc., which industrial enterprises are enjoying, deserves sympathetic consideration at the hands of the Government. The Corporation's ability to provide larger finances for industrial development in future, therefore, depends on the Government's response to this plea.

U.S. BANK RATE CUT AGAIN

Three of the member banks of U.S. Federal Reserve Board have reduced their discount (bank) rate from 2½ per cent. to 2¼ per cent. with effect from the 7th inst. The three banks are the New York, Philadelphia and Chicago Federal Reserve Banks. The discount rate is the interest charged to member banks when they borrow from the Federal Reserve system. A cut in this rate results in a reduction of interest rate generally which normally has the effect of stimulating borrowing and expanding business.

(*Concluded from next column*)

in this country, will, if it materialises, go a long way towards closing India's foreign exchange gap of the order of $1,400 million for the remaining period of the second Five-year Plan. The move of Mr. Humphrey and other American friends of India clearly indicates that the U.S. is fully seized of the magnitude of India's foreign exchange problem in the coming years of its development and that there is a large section of public opinion in the U.S. in favour of giving India much larger assistance than has been granted so far.

U.S. ECONOMIC AID TO INDIA

FRESH MOVE IN AMERICA FOR MASSIVE ASSISTANCE

AS was expected in these columns last week, a joint mission from the U.S. Export-Import Bank and Development Loan Fund, led by Mr. Hawthorne Arey, Director of the Bank, has arrived in India to discuss the details of the U.S. credits aggregating $225 million granted to India by a formal agreement signed on the 4th inst. The other members of the mission are: Mr. Raymond L. Jones, Chief of the Loans Division, Mr. Charles E. Houston, Economist, and Mr. Robert L. Moorman, Engineer, all representing the Bank, and Mr. Edward Lynch, acting Chief of the Loans Division of the Development Loan Fund. In the course of its three-week stay in India, the mission will study the detailed administrative arrangements necessary for drawal of the credits and will also acquaint itself with various aspects of India's economy. The mission is expected to meet the Planning Commission and officials of the Ministries of Finance, Commerce and Industry, as well as the other ministries concerned and to tour the country, visiting important centres of business and industry.

The quickness with which the U.S. Export-Import Bank and the Development Loan Fund have set upon their task indicates their earnestness in making available the promised credit as early as possible for the successful implementation of India's development plans. It is also an expression of the growing realisation in the U.S. about the imperative need for extending assistance to India for implementing the second Five-year Plan. In fact, the signing of the agreement between India and the representatives of the Bank and the Fund is being followed by fresh moves in the U.S. to give larger assistance to India.

A new joint move to give increased economic aid to India is expected to be made in the U.S. Congress shortly. A resolution to this effect, jointly sponsored by Senator John Kennedy (Democrat) and Mr. Sherman Cooper (Republican), former U.S. Ambassador to India, will have been introduced in the Congress by the time these lines appear in print. This resolution is closely on the heels of a similar one introduced on the 24th ult. by Senator Monroney (Democrat). Mr. Monroney's resolution had recommended the creation of an international development association in co-operation with the World Bank for providing long-term loans at low rates of interest and repayable in local currencies to supplement the World Bank loans and thereby help completion of worthwhile development projects which would not otherwise go ahead.

Mr. Monroney desired that the International Development Association should permit maximum use of foreign currencies available to the U.S. through the sale of agricultural surpluses and ensure that funds necessary for the international development could be made available by a process which eliminated any possible implications of interference with national sovereignty. In introducing his resolution, Mr. Monroney said that any residual funds from the Marshall Plan aid programme should be recycled for use again in world economic development. The most notable aspect of Mr. Monroney's proposal is that it envisages the International Development Association as a second mortgage operation which can help the World Bank give a loan of $400 million to India and Pakistan for harnessing the Indus river systems. "The International Development Association could," Mr. Monroney said, "perhaps take 50 per cent. of the $400 million loan, subordinating its loan to first claim of the World Bank." He added that the loan could be for a period of 40 years carrying interest at 2 per cent. per annum and repayable not in dollars or hard currencies, but in the local currencies of India and Pakistan.

The Kennedy-Cooper resolution, referred to above, will, it is stated, be more specific than the concept of an international development association put forward by Mr. Monroney.

Another proposal to give massive economic aid to India has been put forward by Senator Hubert Humphrey, a member of the Senate Foreign Relations Committee. Mr. Humphrey has proposed a "Marshall Plan" of $900 million aid to India, in addition to the $225 million loan granted recently. The nomenclature "Marshall Plan," it may be noted, is used to indicate the size of the aid rather than the purpose for which the original Marshall Plan was intended. The effort of Mr. Humphrey to get larger economic assistance for India, which is warmly appreciated

(*Continued in previous column*)

BARODA BANK'S PROFIT SLIGHTLY HIGHER

SHARP FALL IN CREDIT RATIO

THE audited accounts of the Bank of Baroda Ltd. (General Manager: Mr. N. M. Chokshi, Baroda) for the year ended 31st December 1957 fully reflect the effect of the substantial rise in the cost of borrowing from the money market and the increase in interest rates on deposits, as also of the higher establishment expenses. Thus, whereas the Bank's gross income for the year has recorded a rise of Rs. 55.63 lakhs, the outgo by way of interest paid has gone up by Rs. 37.52 lakhs and establishment and other expenses by Rs. 14.35 lakhs. The result is that the profit (at Rs. 43.85 lakhs) is up by no more than Rs. 3.95 lakhs. This rise in profit does not compare well with that of Rs. 10.25 lakhs noted a year ago. This feature, which is common to all banks, is explained by the fact that, while deposits, particularly the high-interest bearing fixed deposits, had continued to grow, advances had risen at a much slower pace, thanks to the enforcement of credit restrictions, with the result that profit-margin thinned down.

As against an increase of Rs. 3.95 lakhs in profit, the rise in provision for taxation (at Rs. 21 lakhs) is Rs. 5.25 lakhs. Presumably, the provision made last year has fallen short and this has been made good by a larger allocation from the profit of 1957. In the circumstances, the Directors' decision to maintain the dividend at 14 per cent. per annum, to which level it had been raised only last year from 12 per cent., is fully justified. It may be noted here that even this has been possible only by drawing a fractional sum from the previous year's undistributed surplus.

The progress of the Bank's working during the past three years is fully reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Gross income	285.28	229.65	180.04	152.52
Interest and discount earned	233.40	186.83	149.27	129.28
Commission and exchange	51.15	42.40	30.14	22.68
Interest paid	140.05	102.53	76.86	60.82
Expenses	99.47	85.12	71.95	62.35
Depreciation	1.91	2.10	1.58	1.32
Profit	43.85	39.90	29.65	28.02
Provision for taxation	21.00	15.75	9.00	8.00
Bonus to staff	9.50	8.75	8.00	7.65
Dividend	14.00 (14%)	14.00 (14%)	12.00 (12%)	12.00 (D. 10% +B. 2%)
Carry forward	4.11	4.76	3.36	2.70
	As on 31st December			
	1957	1956	1955	1954
Capital	1,00.00	1,00.00	1,00.00	1,00.00
Reserves	1,28.00	1,28.00	1,28.00	1,28.00
Deposits	52,82.81	45,13.85	40,51.62	34,85.38
Borrowings from banks	0.63	4,16.21	4,03.45	3,73.80
Advances (including bills purchased and discounted)	34,99.62	35,86.57	30,41.56	25,50.18
Investments	11,87.32	11,80.33	12,29.79	11,83.72
Cash (including money at call)	8,71.49	4,52.38	4,76.61	3,64.06
Balance-sheet total	64,32.58	63,08.59	56,29.03	46,65.94
Ratio to deposits of—	%	%	%	%
Advances	66.2	79.4	75.0	73.2
Investments	22.5	26.1	30.4	34.0
Cash	16.5	10.0	11.8	10.4

The rise of Rs. 55.63 lakhs in gross income of the Bank reflects the expansion in turnover and the rise in interest rates on advances, following the rise in the Bank rate. Of this rise, interest and discount earned account for Rs. 46.57 lakhs and commission and exchange for Rs. 8.75 lakhs. Consequent on the increased cost of borrowing and higher rate of interest paid on deposits, interest paid has gone up by Rs. 37.52 lakhs. The bulk of the rise in expenses is accounted for by salaries, allowances and provident fund, which have gone up by Rs. 8.56 lakhs to Rs. 71.41 lakhs.

The balance-sheet of the Bank as on 31st December 1957 discloses a rise of Rs. 7.69 crores in deposits and, with this expansion, the deposits have gone up by over 50 per cent. in the course of the last three years. A break-up analysis of total deposits shows that fixed deposits have risen by no less than Rs. 6.76 crores in 1957 to Rs. 31.56 crores. Savings bank deposits (at Rs. 8.53 crores) are up by only Rs. 87 lakhs and current and other accounts (at Rs. 12.73 crores) by a fraction of Rs. 6 lakhs. Consequent on the substantial expansion in deposit resources, the Bank has been able to repay almost entirely the borrowings from other banks aggregating Rs. 4.16 crores outstanding as at 31st December 1956. In distinct contrast to the rise of Rs. 5.45 crores in 1956, the Bank's advances as at the end of 1957 show a slight fall. While loans, cash credits and overdrafts have gone up from Rs. 25.86 crores to Rs. 30.65 crores, bills purchased and discounted have dropped from Rs. 10.01 crores to Rs. 4.35 crores. The slight decline in advances, in the face of a sharp rise in deposits, has brought down the credit ratio to a low of 66.2 per cent., the lowest since 1953. Investments are higher by Rs. 7 lakhs at Rs. 11.87 crores. Of these, investments in securities maturing in 1962 or earlier are shown at a book value of Rs. 6.81 crores, the market value of the same being Rs. 6.68 crores. This depreciation of Rs. 13 lakhs compares favourably with that of over Rs. 18 lakhs noted in the previous year. The Directors have, as in the past, followed the policy of making no transfer from reserve or other funds to cover this depreciation. All other investments are shown at or below market value. Cash balances have been considerably strengthened by Rs. 4.19 crores and this has pushed up the cash ratio from 10 per cent. to a high of 16.5 per cent., which compares well with the all-India average of 12.4 per cent.

PANDYAN BANK

The Pandyan Bank Ltd. (Managing Director: Mr. S. N. K. Sundaram, Madurai) has earned a profit of Rs. 3.50 lakhs during the year ended 31st December 1957. This compares favourably with that of Rs. 3.47 lakhs earned in the previous year and of Rs. 3.22 lakhs in 1955. If the extent of increase in profit, however, is not as large as in the previous year, it is because of the higher administrative expenses and the dearer money rates which necessitated larger interest payments on deposits and borrowings. The provision for taxation has been raised from Rs. 1.35 lakhs to Rs. 2.40 lakhs, of which a sum of Rs. 52,000 represents additional tax payable in respect of the year 1956 as a result of the Finance Act 1957. No allocation has been made to the general reserve, which had received Rs. 75,000 last year. The contingency reserve which was created last year with a transfer of Rs. 50,000 from the profit has been strengthened further by Rs. 25,000 this year. The dividend is unchanged at 7½ per cent., to which level it had been raised two years ago from 6½ per cent. (for 1954).

The Bank's gross income for the year amounts to Rs. 20.95 lakhs, representing an increase of Rs. 3.88 lakhs over the year. Income from interest and discount has gone up from Rs. 12.85 lakhs to Rs. 15.83 lakhs and commission and exchange from Rs. 2.97 lakhs to Rs. 3.48 lakhs.

The Bank's deposits (as at the end of 1957) have grown from Rs. 244.23 lakhs to Rs. 273.91 lakhs. Fixed deposits have gone up from Rs. 128.19 lakhs to Rs. 157.53 lakhs and savings bank deposits from Rs. 33.25 lakhs to Rs. 47.62 lakhs, while current and contingency accounts are marked down from Rs. 82.79 lakhs to Rs. 68.76 lakhs. Advances and bills have risen from Rs. 134.98 lakhs to Rs. 172.24 lakhs. Investments have, however, declined from Rs. 72.90 lakhs to Rs. 69.56 lakhs and cash balances from Rs. 54.78 lakhs to Rs. 53.08 lakhs. The investments are shown at cost, the market value of the same being Rs. 67.98 lakhs.

The Bank opened 12 new offices during the year, bringing the total number of offices to 55.

THE BANK OF INDIA, LTD.

ESTABLISHED 7th SEPTEMBER, 1906

CAPITAL—AUTHORISED, ISSUED AND SUBSCRIBED .. .. Rs. 5,50,00,000
CAPITAL PAID-UP .. .. Rs. 3,00,00,000
RESERVE FUND .. .. Rs. 3,10,00,000

SIR VITHAL N. CHANDAVARKAR.

Current Deposit Accounts.—Except at certain places interest is allowed on daily balances from Rs. 500 to Rs. 1,00,000 at 2 per cent. per annum. No credit will be given for interest amounting to less than Rs. 5 per half-year.

Fixed, Short and Savings Bank Deposits received on favourable terms. Rates on application.

Foreign Exchange Business Transacted and Letters of Credit opened for approved customers.

The Bank acts as Executor and Trustee under Wills and Settlements and undertakes Trustee business generally.

Every Description of Banking Business Undertaken.

T. R. LALWANI, *General Manager.*

PROGRESS OF MYSORE BANK MAINTAINED

PROFIT AT A RECORD LEVEL

A RISE of Rs. 3.48 lakhs to Rs. 24.08 lakhs in profit is disclosed by the audited accounts of the Bank of Mysore Ltd. (General Manager: Mr. B. V. Narayana Reddy, Bangalore) for the year ended 31st December 1957. This is on top of an increase of Rs. 3.39 lakhs recorded in 1956 and has taken the Bank's profit to a fresh record level, exceeding the previous high of Rs. 21.85 lakhs earned in 1951. Notwithstanding this increase in profit, the provision for taxation has been pruned further from Rs. 5.50 lakhs to Rs. 4 lakhs, but a sum of Rs. 12.96 lakhs has been added to the various reserves, which had not received anything in the previous year.

The general reserve gets Rs. 7.96 lakhs, of which a sum of Rs. 3.55 lakhs is in respect of the year 1956 and Rs. 4.41 lakhs relates to 1957. A sum of Rs. 2 lakhs has been provided as reserve for contingencies and Rs. 3 lakhs for depreciation on investments. The bonus to staff has been raised slightly from Rs. 3 lakhs to Rs. 3.20 lakhs, but the distribution to the shareholders is unchanged at 16 per cent. per annum, a rate which the Bank had paid consistently on the present capital for the previous 10½ years. Until last year, the distribution was made up of a dividend of 12 per cent. and a bonus of 4 per cent., but, in respect of 1956, the dividend part was raised to 14 per cent., with a corresponding cut in the bonus. This year, there has been a further change in the method of distribution, in that the dividend and bonus parts have been consolidated. All these appropriations are not, however, covered by the year's profit and the Directors have had to draw on the undistributed surplus brought in from 1956. Consequently, the surplus carried forward to the current year stands reduced from Rs. 5.92 lakhs to Rs. 1.87 lakhs. It must, however, be remembered that this reduction is almost equal to the sum credited to general reserve in respect of 1956.

An idea of the Bank's progress during the last three years can be had from the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Gross income	82.78	68.74	60.73	56.80
Interest and discount earned	69.84	57.60	50.90	49.55
Commission and exchange	11.50	10.22	9.64	7.04
Interest paid	29.20	22.06	19.18	17.91
Expenses	28.04	24.76	23.53	20.58
Depreciation	1.42	1.32	0.81	0.67
Profit	24.08	20.60	17.21	17.64
Provision for taxation	4.00	5.50	6.00	7.00
To reserves	12.96	..	1.00	..
" bonus to staff	3.20	3.00	2.81	2.60
Dividend	8.00 (D. 16%)	8.00 (D. 14% + B. 2%)	8.00 (D. 12% + B. 4%)	8.00 (D. 12% + B. 4%)
Carry forward	1.87	5.92	1.82	2.42
	As on 31st December			
	1957	1956	1955	1954
Capital	50.00	50.00	50.00	50.00
Reserve fund	91.96	84.00	84.00	84.00
Deposits	12,88.92	11,19.17	10,55.86	9,98.86
Borrowings from banks	30.00	99.00	..	..
Advances (including bills purchased and discounted)	9,79.44	9,12.39	7,01.33	6,01.19
Investments	4,22.33	4,02.75	3,88.88	2,99.88
Cash (including money at call)	1,10.57	90.13	1,42.24	1,91.53
Balance-sheet total	17,00.40	16,03.17	13,45.76	13,05.03
Ratio to deposits of—	%	%	%	%
Advances	76.0	76.6	66.4	60.2
Investments	30.4*	25.5*	36.7	30.0
Cash	8.6	7.6	13.5	19.2

* Ratio arrived at after taking into account investments earmarked against borrowings from banks.

The Bank's published reserves stand at an impressive level of Rs. 91.96 lakhs, as against a paid-up capital of Rs. 50 lakhs. The deposits have grown by Rs. 1.70 crores. Unlike in the case of other banks, the bulk of the rise in Mysore Bank's deposits comes from current and contingency accounts which have gone up by Rs. 1.18 crores to Rs. 5.86 crores.

On the assets side, advances show a rise of only Rs. 67 lakhs (as against that of Rs. 2.11 crores noted at the end of 1956), the share of loans, cash credits and overdrafts being Rs. 48 lakhs (at Rs. 8.49 crores) and that of bills purchased and discounted Rs. 19 lakhs (at Rs. 1.30 crores). Investments stand strengthened by Rs. 19 lakhs at Rs. 4.22 crores. The market value of these investments is Rs. 4.14 crores and the depreciation, amounting to Rs. 8 lakhs, is more than adequately covered by a provision of over Rs. 10 lakhs. Cash balances have also gone up by Rs. 20 lakhs and with it the cash ratio has risen from 7.6 per cent. to 8.6 per cent. The total liquidity ratio, at 39 per cent., is, however, well below the all-India average of 44.2 per cent at the end of 1957.

IMPACT OF EXCISE DUTY ON COTTON CLOTH

RATIONALISATION OF STRUCTURE URGED

IT is deplorable that, although the cotton textile industry provides employment to hundreds of thousands and earns for the country a considerable amount of precious foreign exchange, the authorities continue to treat it as a milch-cow without caring very much for its health and future wellbeing. There is, therefore, a great danger of this highly useful animal becoming a dry and burdensome one. How else is one to explain the heavy burden of taxation—direct and indirect—imposed on this industry. Every year, the industry contributes as much as Rs. 132 crores as taxes to the Central and State Governments. The major portion of this contribution is accounted for by excise duty. The budget estimate of the total receipts from excise duty, including the additional excise levy, for the coming financial year (that is, 1958-59) is placed at Rs. 80.46 crores, representing 14.3 per cent. of the aggregate tax revenue of the Central Government.

The impact of the excise duty on cloth has been so heavy that, though the price of cloth today is less than that before the excise duties were enhanced in September 1956, the demand for cloth continues to be slack. This has resulted in heavy accumulations of stocks with mills, representing more than two months' output. The accumulations have caused untold hardship to mills, especially to the marginal units, inasmuch as the carrying of stocks entails a financial burden, not to speak of the pressure on their storage space. Nearly Rs. 60 crores of finance, it is said, has been locked up consequent on the heavy accumulations of stocks. It is not surprising, therefore, that some units have completely closed down and quite a few have resorted to short-time working, resulting in sizable unemployment.

Grave Crisis

The grave crisis confronting the cotton mill industry was impressively described by Mr. Ramnath A. Podar, Chairman, Millowners Association, Bombay, in a Press interview last week. Mr. Podar warned that, if no immediate steps were taken to reduce the burden on this premier national industry, about 40 to 50 more mills in the country would close down, throwing nearly 50,000 workers out of employment. He revealed that 25 mills had already been forced to close down, resulting in the enforced idleness of some 25,000 workers and more closures were in the offing. In Bombay City alone, we are told, about 6 to 8 mills are facing the prospect of being closed down. The present curtailment of shift working in the mills has already resulted in the unemployment of more than 12,000 workers and about 15,000 more workers are threatened with unemployment. There is likely to be a loss in output of about 150 million yards of cloth a year, consequent on more than 5,000 looms having been rendered idle. Mr. Podar urged the authorities to stop the present dangerous drift in the affairs of the textile industry by effecting a substantial reduction in the excise duty. He rightly said:

"Half-hearted concessions will not meet the requirements. The textile industry is on the horns of a dilemma. The running of mills has become uneconomic and unremunerative. How long will it continue to suffer losses? The fear of payment of heavy retrenchment compensation to workers is keeping the textile units working. The abnormal accumulation of stocks with the mills, coupled with the sharp increase in the excise duty and the rising costs, has crippled the industry. The recent budget proposals have sorely disappointed the industry which had expected to receive relief in the shape of a reduction in the excise duty. The industry has made drastic cuts in cloth prices which today are lower than those obtained even in December 1955. It is impossible for the mills to continue to make distress sales of their output for an indefinite period."

The burden of excise duty on the cotton mills is all the more heavy, because the structure of excise duty itself is inequitable, in that it is based only on counts of warp yarn used in weaving cloth irrespective of the value of cloth. This aspect has been well brought out by Mr. S. Jaipuria, a Director of the Swadeshi Cotton Mills Company Ltd., in the course of a memorandum prepared by him on the subject of classification of cotton fabrics for purposes of central excise. In this memorandum, Mr. Jaipuria has put forward a few suggestions for rationalising the structure of excise duty, so that it may become more fair and equitable.

Incidence Highest

The following table indicates how the incidence of excise duty on medium goods still remains the highest:

Description of cloth (average width: 45")	Gross selling price including excise, per linear yard (in annas)	Excise duty per square yard (in pies)	Excise duty per linear yard (in pies)	Net selling price per linear yard (in pies)	Percentage of excise duty to net selling price
Coarse *dhoti*	8	15	18.75	77.25	24.27
Coarse sheeting ..	10	27	33.75	86.25	39.13
Medium goods ..	11	35	43.75	88.25	49.57
Fine	20	55	67.75	172.25	39.33
Superfine	32	77	96.25	287.75	33.45

Mr. Jaipuria has sought to stress that the range of prices applicable to different varieties of cloth technically falling within any one of the four recognised categories, namely, coarse, medium, fine and superfine, is very wide and that the incidence of tax is proportionately much higher in the case of lower priced cloth than in higher priced cloth in the same category. According to him, it is well known that tapestry, a luxury item, which is sold, say, at Rs. 3.50 per yard but is technically classified as coarse cloth is subject to the same excise duty per square yard as ordinary sheeting, a utility variety, sold at 37 nP or 50 nP per yard. Similar differences are found to exist in respect of other categories—medium, fine and superfine—as well. If the replacement of the existing specific duties by *ad valorem* duties is ruled out on account of the alleged administrative difficulties, then the only rational thing, Mr. Jaipuria says, will be to formulate a tariff fixing rates of excise for different varieties of cloth, according to their use, in addition to the present tariff classes based on warp count alone. To quote him: "There is no doubt that experts must have tried to formulate a tariff on this nature and the fact that no concrete scheme has yet been drawn up need not deter us from pursuing the matter."

Wide and Varied

Incidentally, it may be noted that the varieties of cloth produced by mills are wide and varied as is shown below:

Wearable: *dhotis*, *saris*, mulls, voils and dorias, poplin, crepes, twills and haircords, longcloth, sheeting, leopard cloth and markin, shirtings and sucies, madapalam, cambrics and lawns, prints and chintz, coating, tussores, corduroy and beford corduroy, drills, jeans, satin drill and gabardine, and others.

Non-wearables: mosquito netting, canvas, ducks, filter cloth, flannelette, lint cloth, polishing cloth, umbrella cloth, table cloth and domestics, tapestry, furnishing fabrics and curtain cloth, chaddars, bedsheets, etc.

The above classifications more or less represent the different varieties of cloth packed by the Indian mills. Nevertheless, they still fail, as Mr. Jaipuria points out, to take into consideration the processes to which the different varieties have been subjected to. A poplin, for instance, may be bleached and may also be dyed. In fact, it is possible to produce poplin of four varieties, bleached, dyed, mercerised and sanforised. While poplin sanforised is subjected to the bleaching and mercerising processes, it may be both white or dyed. Naturally, the range of prices for these poplins differs according to the processes to which they have been subjected. It will, therefore, be necessary, as Mr. Jaipuria emphasises, to take into account these factors also while fixing specific rate of duty. If this is done, the incidence of duty expressed in terms of the percentage of cloth will vary within a much narrower range than at present. In order, however, to minimise the varieties, Mr. Jaipuria suggests the fixation of rates of excise duty for different processes to which a cloth has been subjected, in addition to the specific rate prescribed for that variety. In other words, this means that, while there will be only one rate fixed for fine poplin, the additional rates fixed on account of bleaching, dyeing, mercerising or sanforising may be added on as additionals. If the cloth is subjected to only two processes out of the four mentioned above, then the additional rates should be for two processes only.

Taking into consideration all these factors, Mr. Jaipuria has prepared a list of varieties into which the total production of the mills can be classified. The list divides the cloth into wearables and non-wearables which are sub-divided into coarse, medium, fine and superfine counts which are further sub-divided into grey, bleached, dyed, printed, mercerised and sanforised. This list is quite comprehensive and compact. If it is adopted, the present incidence of excise duty expressed in percentages of the different varieties of cloth, it is claimed, will narrow down and the burden on the different sections of the society will be equitable as far as practicable.

SIZE OF COTTON MILL INDUSTRY

The pace of expansion in the size of the Indian cotton mill industry noted during 1954-55 and 1955-56 was further accelerated in the cotton year ended 31st August 1957. The total number of mills existing as at the end of the year was 499, as against 465 on the corresponding date in 1955-56 and 449 two years before, according to the latest Mill Statement of the Millowners' Association, Bombay. The paid-up capital of the mills recorded an increase of Rs. 6.81 crores to Rs. 121.96 crores; the extent of the rise in the previous two years was much less, being Rs. 1.19 crore in 1955-56 and Rs. 1.07 crore in 1954-55. The average number of workers employed (all shifts) also rose from 789,024 to 798,599. The quantitative progress made by the mill sector in the past three years is indicated below:

	As on 31st August		
	1957	1956	1955
Number of mills	499	465	461
Number of mills registered and/or in course of erection	34	32	34
Number of mills idle	20	16	27
Paid-up capital (Rs. crores) ..	121.96	115.15	113.96
Spindles installed	12,906,622	12,375,805	12,068,544
Spindles working (first shift only) ..	11,027,944	10,723,608	10,423,075
Looms installed	206,126	206,580	207,847
Looms working (first shift only) ..	186,976	188,449	186,094
Cotton consumption (in bales of 392 lbs.)	5,204,600	4,979,890	4,797,084
Average number of workers employed (all shifts)	798,599	789,024	423,595*

* First shift only.

It will be seen from the foregoing table that the expansion in the cotton mill industry's size during the year under review was accounted for solely by the spinning side of the mills. The number of new spindles installed was 530,817 which compares favourably with 307,261 and 180,379 in the previous two years, respectively. In contrast, the weaving capacity of mills suffered a setback, the number of looms installed decreasing from 206,580 to 206,126 or a reduction of 454 looms; in the previous year, there was a fall of 767 looms. The continued decline in loomage thus reflects the scrapping of looms worn out without being replaced by an equal number. The Government's policy of "no expansion in weaving capacity" may have contributed to this net fall in the number of looms.

Side by side with the expansion of spinning capacity, the number of spindles actually working (first shift) also registered an improvement, from 10,723,608 during 1955-56 to 11,027,944 in 1956-57. The extent of actual utilisation of capacity (first shift only) was less as compared with that in the previous year, being 85.5 per cent. for spindles and 90.7 per cent. for looms, as against 86.7 per cent. and 91.2 per cent., respectively.

The Annual Mill Statement of the Millowners' Association, Bombay, also gives an idea of the progress made by the cotton mill industry in Pakistan during the year 1956-57. Over the year, four new mills were established, bringing the total number of mills existing to as many as 91. The number of spindles and looms installed also rose from 1,754,682 and 26,684 to 1,821,448 and 28,000, respectively. The average number of spindles working (first shift) during 1956-57 was higher at 1,702,430, as against 1,649,832 a year before, and of looms at 25,745, as against 23,815.

A new sheep-handling "cradle" has been invented by a New Zealand sawmiller, Mr. R. E. Burgess, of Tokanui, South Island. His device, claimed to save much labour, consists of an elevated pen which turns on axles and discharges the sheep, on their backs, down a chute. This is all done by pulling a lever. The sheep is confined to a tray at the base and work, such as paring of the feet and other handling jobs, can be done without struggling with the animal. After the pulling of another lever, the sheep is back on its feet, and running to the paddock. Mr. Burgess says his machine lightens considerably the strain on man and sheep during handling operations. When shown at a field day of the Invermay Agricultural Research Station in Otago, the invention appeared to find a good deal of favour among sheep farmers.

A sub-committee appointed by the Textile Commissioner is investigating the possibilities of using more indigenous wool in textile materials now containing imported wool. The terms of reference of the body are: (i) To explore the possibilities of producing from indigenous raw wools textile materials required by Government (both military and civil) either in entirety or in admixture with as little as possible of imported raw wools or with Indian cotton; and (ii) to review existing specifications for woollen materials required by the defence and other civil departments and effect suitable modifications/amendments, so as to permit greater utilisation of indigenous wools without unduly impairing the functional performance or durability.

CLOTH IMPORT POLICY SHARPLY CRITICISED

DECLINE IN MILL LABOUR FORCE

From A Special Correspondent

MANCHESTER, *4th March*

SHARP criticism of the Government's policy in permitting unrestricted duty-free imports of cotton goods to enter Britain in competition with Lancashire products is contained in the Annual Report of the Master Cotton Spinners' Federation. "The cotton industry does not ask for special protection, provided the competition from overseas is fair," says the Federation in a long statement dealing with the state of trade within the industry. "Government policies," it continues, "are endangering the very existence of the cotton industry, leading to the destruction of valuable capital investments and to unemployment in Lancashire."

MANCHESTER LETTER

Not only those directly employed in the cotton industry will suffer, warns the Federation. Also adversely affected will be people connected with it, such as the makers of bobbins, tubes and packing paper, suppliers of oils and accessories, as well as shopkeepers, tradespeoples and all ratepayers in the towns most concerned, including the owners of other industrial and business properties.

"The Government has failed to take any effective action whatsoever," asserts the Federation, which represents owners of 450 spinning mills throughout Lancashire and Cheshire. It then lists 17 points which have been brought to the notice of the Government by the Cotton Board and representatives of the various sections of the trade in the course of discussions between delegations from the industry and Government departments. These include statistics showing the substantial increase in imports from foreign countries and the quantity of cloth now being retained in the home market.

The survey points out that arrivals of cotton goods from India have risen from 76,500,000 yards in 1950 to 200,000,000 yards last year and Hong Kong has increased exports to the United Kingdom from 20,000,000 yards to 100,000,000 yards in the same period. The majority of mills in Hong Kong, the statement adds, are owned and run not by long-established British colonists but by mainland Chinese who have entered the Colony for political reasons since the war.

Labour Force

The labour force employed in cotton textiles in Britain has fallen in recent years by about 25 per cent. the Federation continues, and more than 250 mills have closed down, largely owing to unfairly aided imports and to embargoes or quotas placed by other Governments on British exports.

The volume of retained imports now represents nearly 20 per cent. of total consumption of cotton textiles in the home market, adds the report. In individual categories such as shirtings, shirts and towels where imports are concentrated, the percentage is very much higher and the damage done is correspondingly greater.

Attempts to reach voluntary agreements with India, Pakistan and Hong Kong on this question have so far failed due to the refusal of the Hong Kong millowners to accept any restriction on their exports to the United Kingdom. "It is now incumbent on the Government to ensure that a settlement is no longer held up by the unreasonable attitude of a third party," the report declares. "The industry is considering whether it is possible to take independent steps to help itself but it is too early yet to report further on the schemes which have been considered."

Union Plan Discussion

The Government is to be pressed to act on the Lancashire textile unions' new policy declaration, *Plan for Cotton*. The Legislative Council of the United Textile Factory Workers' Association is to travel to London on 12th March for a meeting with Sir David Eccles, President of the Board of Trade. Mr. Harold Bradley, the Association Secretary, disclosed that the deputation wanted to see whether the Government was prepared to implement the recommendations "in whole or in part."

Australia: New Setback

Any action threatening to curtail Lancashire's trade in cotton and rayon textiles with Australia strikes a blow at the very heart of local export activity. The importance of the market, despite the reduction in shipments over recent years, needs no over-elaboration, as it remains the largest single consuming area for British-made goods.

Openings provided for Japan under last year's trade pact were not kindly received in Lancashire, while from time to time restrictions have been placed on imports which have had unfortunate effects on Anglo-Australian trade. The latest development of this kind, involving a ban on printed cotton textiles pending the findings of a Tariff Board which has been considering a claim for protection submitted by the local industry, is another setback.

There is a reluctance in Lancashire to take the worst possible view of this action, as the embargo may well be short-lived. Trade amounting to some 20,000,000 yards of cloth a year is in jeopardy, but, in the long run, the decision may turn out to be only a temporary measure, dispersing current fears.

Overseas Trading

Some degree of satisfaction at the improvement in Lancashire's cotton cloth exports in January must be tempered by the realisation that imports showed an almost equivalent rise. Cloth shipments at 40,032,000 square yards were the highest since the previous May, but arrivals of foreign cloth amounted to 38,644,000 square yards, leaving the gap as narrow as it was during the final quarter of 1957.

Figures for a single month provide insufficient basis on which to gauge the prospects for the year as a whole, and there must inevitably be a backlog between the time when orders are booked and cargoes actually sail for abroad. Traders are now commenting on the slack trading period lately experienced, and forecasting that export returns in a few months' time will show a very different picture. On the other hand, the flow of foreign cloth into Britain has not diminished, as official statistics will indicate in due course.

As compared with January last year, takings of cotton goods by Australia improved fairly substantially and bigger shipments went to South Africa and Nigeria. On the inward journey, supplies from India remained predominant, amounting to 13,762,000 square yards of grey cloth, but Hong Kong stepped up shipments from 5,648,000 square yards last year to 8,682,000 square yards. Arrivals from Japan, however, declined from 5,792,000 yards to 2,830,000 yards.

For the first time figures are available for Chinese imports, which show a remarkable expansion. In January 1958, they amounted to 6,368,000 square yards, as against 1,243,000 yards in the same month last year.

Inter-Fibre Rivalry

Producers of rayon and other synthetic fibres in the United States have not been slow to "cash in" on the fact that this season's cotton crop is not only small in quantity but well below average grade in quality. American spinners are receiving circulars lauding the advantages of rayon and offering supplies for quick delivery. Exploiting the situation in a businesslike manner, these forward-looking manufacturers of synthetics are telling the mills: "High quality rayon, not subject to nature's whims, is steadily available."

Lancashire spinners, who for years have experimented with blends of the different fibres, hardly need such special pleading, and are well aware of the benefits which can be gained from the effective use of blending to produce fabrics to meet particular purposes. To the American firm relying almost exclusively on cotton, however, some of the claims made for synthetics must seem very attractive. The rayon suppliers stress the savings, range of types and improvements in finishing which can be obtained from their products. They list many advantages, offering "clean, dry fibre, in disposable containers," "style effects impossible to obtain with cotton alone," and finishing in which "blends retain a higher percentage of the fabrics' original strength and colour fastness is improved."

Millowners would, indeed, be hidebound by tradition, if they failed to react at least a little to such blandishments. Some, it must be supposed, will be tempted to try out blends as an experiment. While cotton remains by far the dominant textile fibre, its consumption is slipping by proportion, if not by volume. To the American cotton farmer and distributor, hampered by acreage restrictions and the ravages of the weather, the future looks still more doubtful.

REPORT OF THE DIRECTORS TO BE PRESENTED TO SHAREHOLDERS AT THE FORTY-FIFTH ANNUAL GENERAL MEETING TO BE HELD AT THE REGISTERED OFFICE OF THE BANK IN BANGALORE CITY

The Directors have pleasure in submitting to the Shareholders the Balance Sheet and Profit and Loss Statement as at 31st December, 1957.

The result of the Bank's working for the year ended 31st December, 1957, is a surplus of Rs. 24,07,561.38 which sum, together with Rs. 5,95,136.54 brought forward from 31st December, 1956, aggregates to Rs. 30,02,697.92.

	Rs.	nP.
The following appropriations have been made :—		
Transferred to General Reserve Fund for the year 1956	3,55,000	00
An Interim Dividend at the rate of 16 per cent. per annum free of Income-tax, was paid for the half-year ended 30th June, 1957, which absorbed	4,00,000	00
Transferred to Reserve for Contingencies	2,00,000	00
Transferred to Reserve for Depreciation on Investments	3,00,000	00
Transferred to Reserve for Income-Tax and Super-Tax	2,00,000	00
The Directors now propose :		
To transfer to General Reserve Fund for the year 1957	4,40,613	00
To pay a final Dividend at the rate of 16 per cent. per annum for the year ended 31st December, 1957, free of Income-Tax, which will absorb	4,00,000	00
To provide for Income-Tax and Super-Tax	2,00,000	00
To pay a Bonus to Staff of three months' salary about	3,20,000	00
To carry forward to next account	1,87,084	92
Total .. Rs.	30,02,697	92

The Central and Head Office accounts, as at 30th June and 31st December, 1957, have been audited by Messrs. Fraser and Ross, Chartered Accountants, while the accounts of the Branches have been audited by Messrs. B. K. Ramadhyani and Co., Chartered Accountants, Brahmayya and Co., Chartered Accountants, Santhappa and Co., Chartered Accountants and Sri. S. R. Mandre, Chartered Accountant. Sri. S. P. Nanjundappa, Deputy Controller, has examined the accounts for the year on behalf of the Government of Mysore.

Under Section 256 of the Companies Act, Sri G. V. Rudrappa, Dharmaprakasa, Sri M. V. Veerappa and Sri K. Subba Rao Ramaswamy are the Directors due to retire on this occasion. They are eligible for re-election and offer themselves accordingly.

The Auditors, Messrs. Fraser and Ross, B. K. Ramadhyani and Co., Brahmayya and Co., Santhappa and Co., and Sri. S. R. Mandre, also retire and offer themselves for re-appointment.

The Dividend, when sanctioned, will be payable on and after 29th March, 1958, to those Shareholders whose names stand in the share registers of the Bank as on 26th March, 1958.

THE BANK OF MYSORE, LIMITED,
AVENUE ROAD, BANGALORE CITY,
15th February, 1958.

By Order of the Board,
B. V. NARAYANA REDDY,
General Manager.

DIRECT TAXATION MEASURES IN THE NEW BUDGET

By Dr. Rustom C. Cooper, M.Com., Ph.D. (Econ.), F.C.A., F.S.A.A. (Hons.)

THE "pedestrian" budget of the Prime *Minister-cum-Finance Minister* contains certain features which are worth a critical review. In this article an attempt is made to assess the implications of some of the more important proposals.

Service Taxes: The Finance Bill proposes an amendment to Section 9 of the Income-tax Act. The amendment seeks to negative the decision of the Bombay High Court in the Chitnavis case. It was only recently that the Bombay High Court held that, for the purpose of income-tax assessment, service taxes, such as water tax and conservancy tax, should be allowed to be deducted in full. It is, therefore, to be regretted that the Government should attempt to amend the law every time the Supreme Court or a High Court gives an adverse decision which results in loss of revenue.

Amendment of Section 23A: The same trend is also reflected in another proposal to amend Section 23A of the Indian Income-tax Act. This section deals with compulsory distribution of dividends by private companies. The present proposal seeks to give power to the income-tax authorities not to pass an order under Section 23A, where it is found that passing such an order would not be beneficial to revenue. This is clearly a case of "heads I win tails you lose" mentality.

Preference to Public Sector: Some of the proposed exemptions from income-tax are such that the Government could obviously be accused of being partial to the public sector. For instance, gratuities paid by local authorities and public statutory corporations started by both Central and State Governments will now be exempt from tax. The same concession, however, is not extended to the employees of private enterprises.

Similarly, entertainment allowances received by Government employees not exceeding one-fifth of salary or Rs. 5,000, whichever is less, will be exempt from tax. Again, this concession is also not available to employees of private business and industry. In fact, in 1955, the Government actually withdrew this concession for employees in the private sector who were not receiving entertainment allowance before 1st April 1955. This kind of discrimination is most unfair and unjust, to say the least. No reasons have been advanced by the Government to justify such a discrimination, especially at a time when the Government has universally recognised the important part which the private sector must play in the successful implementation of the second Five-year Plan.

Development Rebate: There is a proposal in the Finane Bill to impose certain restrictions regarding the grant of development rebate for income-tax purposes. At the outset, one must admit that development rebate is an important concession made to industry in recent years, but by making the conditions under which it is available stringent, the Government is adding to the hardships of the private sector. The present proposal contains the following three restrictions:

(a) The amount of development rebate must be debited to the profit and loss account and credited to a special reserve account in the balance-sheet;

(b) It must be utilised within the next ten years for acquisition of new assets or for investment in the undertaking;

(c) The assets on which development rebate is allowed should not be sold or transferred before the expiry of ten years.

Non-compliance with any one of these conditions would result in either non-allowance of the rebate or withdrawal of the same if already granted. It is conceded that the Government has a right to impose reasonable restriction to ensure that such an important concession is not frittered away by private *entrepreneurs*. Yet, there are certain inherent hardships involved in these proposals which require to be mitigated; for instance, the debit of the entire amount of the development rebate to the profit and loss account in the very first year of acquisition of new asset may result in denying to the shareholders even a modest dividend for that and also subsequent years. It is suggested that the Government might consider an alternative whereby the writing off to the profit and loss account could be allowed to be spread over a reasonable number of years. Again, the third condition preventing sale or transfer of assets before the expiry of ten years would cause considerable hardship, where it becomes necessary to effect a forced sale of assets, say, for instance, on account of obsolescence. Provision must be made to ensure against hardship in such cases.

Estate Duty: In the sphere of Estate Duty there are two important changes which deserve one's attention. The first is the proposal to reduce the non-taxable limit from Rs. 1,00,000 to Rs. 50,000. This is something which will directly hit even the lower middle-class person. It is common knowledge that, during the last few years, the price level has gone up by at least five times. If allowance is made for this, it will be seen that the limit of Rs. 50,000 means only Rs. 10,000 in terms of pre-war price level. It is open for serious consideration of the Government whether there is any justification for imposing Estate Duty at this low level. The Government has not made out any case at the present juncture for reducing the non-taxable limit to Rs. 50,000 and that too at the very time when it seeks to introduce Gift Tax through a separate statute.

Deduction of Probate Court Fees: Another unjustifiable proposal in the Finance Bill is to reduce the allowance against Estate Duty liability of court fees payable on grant of probate, letters of administration and succession certificates to half the actual figure. Under the 1953 Act, there was a provision for full deduction of court fees payable in these cases. There is no justification for denying this allowance to the extent of 50 per cent. of the actual payments made. Once again, the Government has not advanced any reason in support of this amendment. This step clearly leads to double taxation in respect of same property.

The combined effect of the proposal to reduce the non-taxable limit and denial of deduction of court fees paid, by 50 per cent., would be a serious blow on a large number of people falling within the lower middle-class group for whom the tax burden is already very high.

Gift-Tax: The Gift-Tax Bill provides for the valuation of the subject matter of gift being on the basis of its fair market value "in the opinion of the Gift-Tax Officer." The words within quotations are capable of considerable mischief as shown by the present working of the Wealth Tax legislation containing a similar provision. For instance, in many cases, the Wealth Tax Officers are known to disregard reports of expert architects on property valuations without assigning any reasons. These architects are members of a panel appointed by the Central Board of Revenue itself for Estate Duty purposes. The Gift-Tax Officers, who are at best administrators of fiscal laws, could not, by any stretch of imagination, be better judges of property values than the qualified architects. It is, therefore, most unfair that reports should be rejected by Wealth Tax Officers even though they are not able to find a single flaw in the report. The same thing also happens in case of valuation of life interest made by qualified actuaries for Wealth Tax purposes. In all such cases, the standard answer given by the Wealth Tax Officer is, "We have departmental instructions in this matter." It is true that the law provides for subsequent appellate machinery, which one can use when there is a difference of opinion between the officer and the assessee on the question of valuation. However, this does not help to mitigate the hardship caused to the public, because appeals have to be filed in almost every case, leading to considerable harassment and expense to the assessees. Where the stake involved is not large, the assessee may prefer not to go in appeal simply to save time, expenses and botheration. This, however, could be no justification for a department to act in an arbitrary manner, knowing as it does, that, because of the small stake, the assessee is not likely to go in appeal.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE BANK OF MYSORE, LIMITED.

We have audited the Balance Sheet of The Bank of Mysore, Limited, as at 31st December, 1957, and also the Profit and Loss Account of the Bank for the year ended on that date.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to Sub-sections (1) and (2) of Section 211 and Sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this Report are in agreement with the books of account and the returns;

(e) In our opinion, and the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December 1957, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

OUTLOOK FOR SUGAR EXPORTS BLEAKER

CONTINUED FALL IN WORLD PRICES

MORE than six weeks have elapsed since the Union Minister for Food and Agriculture disclosed that the Government of India was expected to announce its decision on sugar exports "in a short time." But no announcement has been made up to the time of writing (Saturday, 8th March). Meanwhile, the chances of India exporting sugar appear to be bleaker than they were a couple of months ago. The world sugar market has suffered a marked setback in the past few weeks and, consequently, the gap between world prices and Indian prices has widened further against India. The latest available rate for Cuban raw sugar at New York is 3.37 cents per lb. (f.o.b. Cuba), as against 3.67 cents a month before. Refined sugar is now being sold in London at £30¼ per ton, as against £32 a month ago and £36 three months ago. As compared with the currently ruling world prices, the price of Indian sugar is higher by as much as Rs. 227-242 per ton, even after allowing for full remission of excise duty and cane cess.

The continued maintenance of low sugar prices the world over has been due to the substantial increase in stocks, thanks to the marked expansion in output, on the one hand, and the relatively low rate of rise in consumption, on the other. According to a recent study made by Mr. F. O. Licht, the German statistician, the aggregate world stocks of sugar have gone up by 15.27 per cent. over the previous year, whereas consumption has advanced by only 1.53 per cent. In Europe, the higher stocks of sugar are reflecting, first, the increased production of the campaign year 1957-58 and, secondly, the lower consumption due to hoarding purchases during the Suez crisis. There has also been an increase in sugar stocks in Cuba, Brazil and Australia. Dominican Republic and Taiwan, however, show a reduction in stocks.

The world sugar output, as already stated, has expanded markedly. The current sugar season (1957-58) is expected to witness an all-time peak level of output. The first estimate of the U.S. Department of Agriculture places the total world production of sugar at 43,263,176 metric tons (or 47,689,000 short tons), as against 41,261,000 metric tons in the previous season, representing a rise of over two million tons or 5 per cent. The anticipated increase is accounted for by all the continents, as is shown below:

(Thousand metric tons—raw value)

	1957-58	1956-57 †
Europe	14,307	13,784
Of which Russia	4,855	4,636
North and Central America	13,718	13,075
Asia	6,100	5,973
South America	5,073	4,804
Africa	2,823	2,263
Oceania	1,442	1,362
Total	43,263	41,261

It will be seen from the table above that the bulk of the improvement in world sugar production in the current season is accounted for by North and Central America and Europe, the actual increase being of the order of 643,000 tons and 523,000 tons. Among the countries of Europe, Russia has suffered a setback in production, the actual fall being 181,000 tons. As regards the rise in output in other continents, it is 427,000 tons in Asia, 271,000 tons in South America, 80,000 tons in Oceania and 60,000 tons in Africa. The rise in Asian sugar production has been shared by India, Indonesia, the Philippines, Formosa and China. Indonesia is expected to have a sugar production of 935,000 short tons (866,000 tons in 1956-57). The output in the Philippines, Formosa and China is estimated at 960,000 tons, 1,200,000 tons and 400,000 tons, as against 955,000 tons, 1,154,000 tons and 360,000 tons, respectively. The latest report from Indonesia is that smaller quantity may be available for export.

Mr. F. O. Licht's third estimate of the European beet sugar production for 1957-58 places the aggregate output higher than the first estimate of the U.S. Department of Agriculture at 15,885,847 tons. This figure shows an increase of 1.5 million tons as compared with 1956-57 and of 1.6 million tons over 1955-56. The countries which have shared in the increase are Western Germany, France, Yugoslavia, Poland and Czechoslovakia.

According to the Presidential decree, the Cuban sugar output for 1957-58 is fixed at 5.5 million tons. In addition, Cuba has previous season's carry-over of 680,000 tons of sugar. The allocation for the current season's output suggested by the Cuban Institute is as follows:

	Tons
U.S.A. free quota	1,872,690
U.S.A. retained quota	500,000
World free quota (held by producers)	1,500,000
World free quota sold and to be sold by I.C.E.A.	843,750
World obligatory reserve	234,375
Voluntary reserve	249,185
Local Cuban consumption	300,000
Total	5,500,000

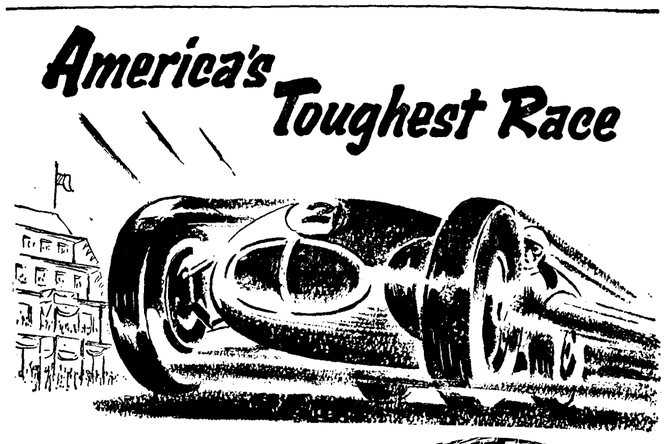
The above figures reveal that the total world market supply of Cuban sugar in the season comes to as much as 2,343,750 tons (excluding the carry-over stocks) which almost equals the initial quota established under the International Sugar Agreement.

It may be noted here that the International Sugar Agreement is due to come up for re-negotiation in the ensuing autumn. The U.K. and Commonwealth countries are likely to insist on an upward revision in the quota to the extent of at least 50,000 tons each year, that is, approximately 2 per cent. per annum. Such an upward revision, it is pointed out, will secure for the Commonwealth about one-third of the expanding sugar market which it is itself providing and leave two-thirds for other sugar exporting countries of the world. All the members of the Commonwealth Sugar Agreement (C.S.A.) are also members of the International Sugar Agreement, under which the Commonwealth is collectively limited to exporting 2.5 million tons of sugar in 1958.

Under the C.S.A., it will be recalled, the British Government negotiates every year with the Commonwealth exporting countries a fixed price for a portion of their sugar exports. This price is arrived at by applying a formula which takes account of cost factors involved in producing sugar. The price so arrived at is known as the "negotiated price." It is applied at present to about 1,535,000 tons of sugar for shipment to the U.K. at a price of £43 16s. 8d. per ton. This price is very much higher than the world price, so that the Sugar Board, which purchases sugar and sells it to importers at the world price, is making losses on its current transactions. Consequently, the Board has imposed, with effect from 20th February last, a surcharge equivalent to about 1.25d. per lb. on refined sugar on all imports. Despite this levy, the sugar prices in the U.K. have not only not increased but have actually fallen. The quotation as on the 4th inst. was £30½ per ton, as against £31-5/8 before the imposition of levy. For, since the retail section of the sugar trade is very competitive, the levy has not been passed on to consumers immediately, particularly because there are stocks in hand bought at previous prices.

Replying to a question in the Lok Sabha last week, Mr. A. M. Thomas, Union Deputy Minister for Food, said that the Government of India was not aware of any demand for Indian sugar in the United States. According to him, one of the members of the Indian Industrial Delegation which visited foreign countries recently stated that there was scope for exploring a market for Indian sugar in the United States. But the Government felt that this suggestion was not very practical. That was because the United States mainly imported sugar from Cuba, Mexico, Peru and the Philippines, and the interests producing sugar in these countries had connections with American interests.

According to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture (Department of Agriculture), the all-India first estimate of sugar produced directly from cane in vacuum pan factories puts the current season's production at 2,067,000 tons, as against the actual production of 2,029,000 tons during the previous season. This shows an increase of 38,000 tons or about 1.9 per cent. The rise in sugar production is expected to be shared mainly by Bombay (69,000 tons), the Punjab (24,000 tons) and Mysore (31,000 tons). The States of U.P. and Bihar, however, are expected to show a decline to the extent of 37,000 tons and 27,000 tons, respectively.



EUROPEAN COAL MINES FACE RECESSION

PITHEAD STOCKS MOUNTING

THE coal industry in the U.K. and the Continent is facing a recession. Thanks to a decline in consumption in domestic markets and a sharp rise in imports of coal, the collieries in these countries are now burdened with mounting stock at pithead. In Britain, the National Coal Board is faced with huge pithead and opencast stocks of "power station smalls." Despite the substantial cuts in export prices since the beginning of 1958, the Coal Board has not been able to increase its exports of "smalls," because in Europe no country seems to be in short supply of this variety of coal. This part of the season is usually a peak period for fuel consumption and, during the first six weeks of 1958, the temperature was well below that of the 1957 winter. Even so, the coal consumption in the U.K. so far has been running at a lower level than last year—the figure for the first five weeks being about 23.5 million tons, as against 23.95 million tons for the corresponding period of 1957. Exports of coal during this period have dropped by about 300,000 tons to 585,000 tons.

The output also has been running behind last year's rate, the production in the first six weeks aggregating 26.2 million tons, as compared with 27.3 million tons a year ago. This is due to larger absenteeism. Nevertheless, the stocks as at the end of January showed an increase at 25 million tons, as against 18.67 million tons a year ago. In these circumstances, it is not surprising that the National Union of Mineworkers in the U.K., which had put in a claim for a wage rise of 10s. per week to cover the rising cost of living, has been firmly told by the Coal Board that the demand could not be met. The situation in the U.K. coal industry is described by Lord Mills, Minister of Power, thus: "A need has now arisen in the coal industry for selectivity of output, instead of 'coal at any cost.' The price of coal has now gone so high that people are thinking before they buy and looking at the alternative." Strangely enough, the domestic solid fuel rationing in Britain has not been removed.

Ruhr Coal Mines

For the first time since 1954, six collieries in the Ruhr had to close down for a day on the 22nd ult. to reduce production, following a rise in pithead stocks of lean (non-coking) coal and domestic coke, and about 150,000 miners were rendered idle. Many collieries are thinking of introducing short-time working. The coal industry in the Ruhr has been affected by the heavy import of 35 million tons contracted in the U.S., the actual imports being staggered over the next three to four years. American coal is more competitive, in that the U.S. coal is available in the Ruhr even below the price of Ruhr coal, because of the decline in transatlantic freight rate. Very little U.S. coal is, however, being ordered by the Ruhr or by any other country in Europe now; most of the coal actually being imported from the U.S. into Europe represents the fulfilment of long-term contracts made at a time when freight rates were higher. Secondly, Ruhr coal is under a very strong competitive pressure from heavy fuel oil.

In Belgium, the Government has informed the European Coal and Steel Community High Authority of its decision to check imports of American coal into Belgium. Such imports have been placed under licence. Simultaneously, the Belgian Government has asked the E.C.S.C. countries to implement the 'mutual aid' clause in the Schuman Plan treaty. This clause is designed to enable ports in the other countries to refuse to discharge coal cargoes consigned to Belgium in circumstances like the present. Faced with the rapid accumulation of pithead stocks, the Belgian Government will license imports of coal under existing contracts, but licences for fresh imports will not be given. Since the old contracts are based on shipping agreements concluded when freight rates were much higher than at present, there is no fear of the U.S. coal being undersold in Belgium. Deliveries under new contracts made in recent months have, however, made U.S. coal cheaper than Belgian coal, on account of the fall in freight rates. During each of the last two years, Belgium has imported about 2 million tons of U.S. coal. In addition to restricting imports of coal from the U.S., the Belgian Government proposes to bring in legislation designed to render financial assistance to collieries.

the E.C.S.C. by three to four million tons this year. The large cut will be in imports of coal from the U.S. High stocks, consequent on lower domestic consumption without any drop in production, coupled with large deliveries from the other E.C.S.C. countries, are said to be the main reasons for France's decision to cut imports.

In this context, the data relating to production of hard coal in Europe during 1957 and imports of American coal, compiled by the Secretariat of the U.N. Economic Commission for Europe, may be read with interest. The output in Europe (other than U.S.S.R.) showed an increase of only one million tons during 1957, while imports of coal from the U.S. rose by 6.7 million tons to a record total of 45.1 million metric tons. In the U.S.S.R., output of hard coal and lignite increased by 34 million tons to 463 million tons.

Coal Output

The following table gives a country-wise break-up of coal production during the last three years, as compared with that in 1937:

(In million metric tons)

Country	1937	1955	1956	1957
Belgium	29.9	30.0	29.6	29.2
Czechoslovakia	16.8	22.1	23.4	24.2
France	44.3	55.3	55.1	56.8
Saar	13.4	17.3	17.1	16.4
Western Germany	137.6	130.7	134.4	133.2
Netherlands	14.3	11.0	12.0	11.7
Poland	66.0*	94.5	95.6	94.0
United Kingdom	244.3	225.2	225.6	227.0
Other European Countries (except U.S.S.R.)	12.9	27.9	28.6	29.0†
Total Europe (except U.S.S.R.)	579.5	614.9	621.4	622.4
U.S.S.R.‡	128.0	391.0	429.2	463.0

* Post-war territory. † Provisional. ‡ Including lignite.

The only major producing countries where output recorded increases are France (with a rise of 1.7 million tons), U.K. (1.4 million tons) and Czechoslovakia (0.8 million tons). The biggest absolute declines occurred in Poland (1.6 million tons) and in the Federal Republic of Germany (1.2 million tons). The reduction in West Germany and Poland is attributed to reductions in working time.

The principle importers of U.S. coal during 1957 were: West Germany with an import of 16 million tons (as against 11.5 million tons in 1956), Italy—8.1 million tons (6.6 million tons), France—6.9 million tons (6.1 million tons), Netherlands—4.5 million tons (4.0 million tons), the U.K.—2.1 million tons (3.2 million tons), Belgium—2.1 million tons (2.0 million tons) and Austria—2.0 million tons (1.9 million tons).

SAFETY IN COAL MINES

A representative conference comprising mine-owners, labour representatives, mining engineers from coalfields in India, the Chief Inspector of Mines and other Government officers concerned, is likely to be held in the course of this month at New Delhi to discuss problems relating to safety in coal mines and allied matters, with a view to evolving out measures offering maximum safety in the working of coal mines in India. The conference is being sponsored by the Union Ministry of Labour. It is reported that each party attending the conference has been asked to prepare a suitable memorandum and submit it to the Government, so that when the conference, the Steering Group, as it is called, meets, it will have before it a clear picture of the situation and what measures are necessary to offer maximum safety in the workings of coal mines. The views of the Steering Group, when formulated, will receive the attention of the Tripartite Industrial Committee on Coal Mining, when it meets some time in June or beginning of July this year.

"...and a bonus of goodwill to the management —for installing the 'Tushar' WATER COOLER!".

QUICK DIVIDENDS in improved staff relations — and greater efficiency! That's what investment in a TUSHAR Water Cooler brings you.

The TUSHAR provides a constant supply of cool, hygienic drinking water for your staff and clients. It's easy to operate and most economical to run. Why not get in touch with Voltas Limited, and order a TUSHAR now?

With the TUSHAR you get
- A continuous supply of instantly-cooled water at the touch of a button — no unhygienic refilling or storing.
- A choice of two handsome models.
- Ease of installation.
- Economical to run.

'Tushar' WATER COOLERS
A modern must for factories, offices, schools, hotels, hospitals and colleges

PROBLEMS FACING TEA INDUSTRY

INTERNATIONAL REGULATION OF SUPPLIES LONG OVERDUE

A COMPREHENSIVE and illuminating review of the problems facing the tea industry was provided by Mr. C. D. Wilson, Chairman of the Indian Tea Association, at the seventy-seventh annual general meeting of the Association held at Calcutta on the 7th inst. These ranged from the heavy burden of taxation to soil conservation and afforestation. His speech was indeed, a Marathon one, being not less than 7,500 words. His appraisal of the tea industry's position was well balanced and his criticisms of the Government's policy were mild and constructive. He endeavoured to see the Government's point of view and did not hesitate to give the authorities credit where it was due. If the Ministers and the officials concerned with this important industry, both at the Centre and the States, carefully read his speech with an open mind, they will, we have no doubt, concede the need for a suitable change in a number of their policies pertaining to tea. We suggest that the I.T.A. should send, if it has not already done so, a copy of Mr. Wilson's speech not only to the authorities concerned but also to members of the Rajya Sabha, the Lok Sabha and of the legislatures of States where tea is grown. In a democracy, it is always better to keep the Government and the people's representatives fully informed of the problems (as also of what appears to be the right solutions for them) facing each sector of this country's economy.

Tea's Importance

At the outset, Mr.Wilson did well to highlight the importance of the tea industry to Indian economy. This industry has an outstanding record to its credit in recent years, as will be seen from the following extract from Mr. Wilson's speech:

"We have earned by our sales of tea abroad, Rs. 499 crores of foreign exchange in the last four years, a sum greatly in excess of that earned by either of the other exporting giants, jute and cotton. In the same period, we have paid nearly Rs. 200 crores in direct and indirect taxes, and we have provided annual employment, shelter and medical care for a million workers and their families. Our members have built for our labourers 74,634 new houses, to approved dimensions, and the standard of medical attention is such that the death rate on tea gardens is as low as that of the United Kingdom, while the live birth rate is exceeded in only one country in the world. We have not merely controlled malaria, we have nearly conquered it, and the spleen rate, which in 1946 was seven hundred a thousand, today averages only fifteen a thousand, and in one district is as low as one. Statistics of labour relations show that, in 1957, we lost 189,578 man-days work through industrial disputes, representing only one hour a worker in the whole year. There have been fifty-two strikes, but twenty-nine finished on the first day, and only eleven lasted more than four days."

It is important to bear in mind here that all the aforesaid fine achievements were accomplished with no external aids and with none of those loans which refresh so many industries under the Plan. Tea, it may be further noted, is outside the Plan, save for a forecast of future production. Nevertheless, the contribution by tea for the success of the Plan is immeasurable. It is not suggested that the tea industry has not benefited by the Five-year Plans. Every conscious and devoted effort to raise the living standards of the masses helps tea, for, when people have more money in their pockets, they will drink more tea. The internal consumption of tea which was only 181 million lbs. in 1951 is now running at the rate of 220 million lbs. But that is no reason why the authorities should not take prompt steps to mitigate the problems facing this vital industry.

Overproduction

The first great problem facing the tea industry, according to Mr. Wilson, is overproduction of tea in the world as compared with the current demand for it. How serious is this problem? In Mr. Wilson's view, the overproduction is not so great as some buyers and statisticians would have us believe; nor are the stocks lying unsold large. But the trouble is buyers, in general, have not the funds to take up even this little extra supply of tea at prices which are remunerative to both producers and consumers. The I.T.A., which represents the vast majority of gardens in North-East India, has tried, on a voluntary scale, to reduce the crop grown in this area by laying the greatest emphasis on quality plucking and by mercilessly destroying in the gardens tea waste. Even for purposes of chemical manufacture or export such waste is not sent out of the gardens, on the ground that "it is bad business to sell a few million lbs. of rubbish for a few annas a pound and thereby run the triple risks of discrediting Indian teas both at home and abroad, of discouraging would-be consumers who may initially be tempted by cheapness, and of debasing the market value of the crop as a whole." Through these twin measures, the tea output in North-East India was kept down by about 19 million lbs. in 1957, as compared with 1956. However, in the absence of a corresponding restraint in production in other parts of the world, this cut in production was more than neutralised. In South India itself, the crop was up by 17 million lbs., mostly due to good weather, as opposed to the drought in North-East India which helped the I.T.A. to enforce a reduction in production. In Ceylon, there was a record production of nearly 400 million lbs. But for floods and dock strikes in Ceylon and political disturbances in Indonesia, the increase in world tea crop in 1957 would have probably occasioned a precipitous fall in the prices of this soft beverage. But, as Mr. Wilson rightly remarked, "It is a poor industry which must rely for its prosperity upon the activities and misfortunes of others."

World-wide Regulation

When viewed in this context the need for an international agreement for regulating supply of tea will be better appreciated. Mr. Wilson explained this need rather forcefully. He said:

"The production of tea in the African territories and elsewhere is rising, and I believe that when the troubles in Java have sorted themselves out, when Ceylon's exports resume their normal flow and when the new African teas, well packed and duty free, reach the London market, a recession in prices may have to be faced. There is still no international agreement, because there seems still to be in every producer's heart, and in the mind of every Government, the comforting belief that, if there is trouble, it is the other fellow who will go to the wall.

"The regulation of production—what is now known as 'planned production'—in such a way that plantations can pay good wages, can carry out their social obligations and can still give good value to the customers, seems a sensible and civilised way of doing business, and it is a pity that tea, which led the way in the international ordering of its affairs, should now seem so incapable of concerted action. Perhaps, if producers were able to discuss the matter informally amongst themselves, suggestions might be framed which would do justice to Pakistan, which now consumes most of her crop but which would like to retain her export rights under the old agreement, to Indonesia which must always remember that twenty years ago her production was twice what it is today, to Ceylon which depends entirely upon her foreign trade, and to the African territories, newcomers to the business but claiming their right to develop.

"Throughout the recent, rather frustrating, years, the Government of India has shown itself receptive to new proposals; it has endeavoured to negotiate with other Governments rather than wield the big stick which our commanding position as producers and as leading contributors to the costs of international propaganda affords us; and, despite the present discouraging position of negotiations, it is my belief that, eventually, corporate wisdom will prevail, and that a new agreement will come into being. When it does, the benefits to producer and to consumer will be such that all will regret that the agreement had been so long in coming. Whether the situation will deteriorate so badly in the meanwhile that the producers of this or of any other country will be obliged to regulate their crops 'unilaterally,' I cannot say, but I believe that few Governments would like to take the initiative in such a matter."

The predominance of common tea in the total of production is another problem. because in a situation such as the present, it fetches lower prices and reduces the producer's margin of profit. What is common tea? Who produces them? And how can the problem be mitigated? Replies to these posers can be found from the following quotation from Mr. Wilson's speech:

"It is, perhaps, not generally realised that every garden produces some common tea, the trouble starting when the proportion of such teas becomes too great. It is not easy to define common tea, for the market is fickle, and the neglected teas of one season often command a good price in the next, but, in general, one may say that a tea is likely to be common, if it comes from certain areas or if it fetches below a certain price. If that price is above the cost of production, the common tea producer rests modestly content, but, if a large portion of his crop is likely to sell below cost, he is immediately in difficulties.

"I believe that we have now reached a stage when much of India's common teas cannot be sold at a profit, unless there is, first, general disregard of legislative and welfare requirements, and, secondly, neglect of maintenance, a neglect which itself leads to further decline. World regulation of output would help, as will most certainly the ruthless destruction of tea waste and of residue teas. So, too, will an improvement in quality—if indeed soil and climatic conditions are such that improvement is possible—but too often the common tea producer is already in financial straits, and has not the surplus funds which are necessary if improvements are to be made and sustained. Quality is not merely an accident of location, but is the reward of long years of patient husbandry and constant attention to details in field and factory. It is never cheaply earned, nor can it be conjured up in a season by new machines or some extra sulphate of ammonia."

Differential Export Duty

It has been proposed by some that a differential export duty based on value will be of some help to those who produce common tea. Mr. Wilson seems to think that this solution is neither desirable nor feasible without doing grave injustice to producers of quality tea. He favours a straight reduction in the burden of taxation on tea, instead of a device like *ad valorem* differential export duty. Thus, he says:

"It has been suggested that an *ad valorem* export duty might help us, but we have so far not been able to see how the many difficulties attendant upon such a system could be overcome. First, export duties are only paid by a portion of the crop, and those producers who export least are often the ones in the greatest difficulty. Secondly, *ad valorem* duties are based on selling prices, and tend to ignore costs of production, as, for example, in Darjeeling. Thirdly, if we want to increase our exports, we are unlikely to do so by increasing the export duty on the teas which seems at the moment most popular with overseas buyers. And there are, of course, the problems of identification, of valuation of teas exported unsold, of assessment of duty on blended exports, and of bidding in the Calcutta and Cochin auctions when the duty to be paid will be dependent upon the bid. Perhaps, these difficulties are capable of a solution which avoids delays, and injustice, but so far the solution has eluded us, and we look for relief rather through the acceptance by Government of the recommendations of its Commissions and through the simplification of the now cruelly complicated tax structure upon tea."

Not all those who advocated lower export duty on common tea suggested that the loss of revenue to the Government should be met through an increase in the export duty on finer teas which fetch a higher price. In theory, at least, there seems to be nothing wrong in having different rates of export duty based on the prices obtained by the different varieties. This policy has been in vogue in regard to some other raw materials and manufactured goods. If, however, in actual practice, this will not be feasible, it is a different matter. That apart, it must be conceded that, if different rates of duty on exports of tea come to be adopted, the rates on superior varieties of tea should not be so high as to

BEST VALUE
FOR YOUR MONEY
A cheap battery may seem a bargain, but it is really costlier in the long run. The cheapest battery in the end is the one that gives the most in months of reliable service. The long-lived CB 95 alloy plates, the virtually indestructible Porvic separators and the shock-resistant hard rubber container all add up to make Silver Exide the cheapest battery in the long run. You get the best value for your money when you buy Silver Exide, the battery manufactured under strict Quality Control at every stage of production.

DEBATE ON RAILWAY BUDGET

CONCERN EXPRESSED OVER GROWING EXPENSES AND ACCIDENTS

THE two targets of attack in the debate over the Railway Budget in the Lok Sabha and the Rajya Sabha were the increase in expenses of administration and in the number and gravity of the accidents on the railways. Many members, however, emphasised that the Administration should be enabled to augment the railways' capacity for lifting goods and carrying passengers. Some members were critical of the railways' labour policy, while others complained of "lack of discipline" among the ranks of the railway workers. The Union Minister for Railways, Mr. Jagjivan Ram, strongly defended the railways against many of the attacks, though he agreed that much remained to be done in the matter of ensuring greater efficiency in the running of the railways.

It should not occasion any surprise that the members of Parliament should express their concern over the increasing number of accidents on the railways. Indeed, one member averred that, if the averted accidents and engine failures were taken into account, it could be shown that the Railway Administration was even more negligent than was indicated by the published figures relating to actual accident. This argument, of course, is theoretical. Even so, it cannot be denied that the public is becoming more and more concerned over the fatal accidents on the railways. It is not as if the appropriate remedies are not known to the administrators. Only, it is not clear whether action is being taken to administer the remedies in as energetic a manner as the situation demands. Dr. Kunzru, speaking in the Rajya Sabha, stressed the importance of track renewals and increase in line capacity. It is not clear how many of the accidents are really due to the absence of attention to these considerations.

Human Element

In any case, the Minister's defence was hardly convincing. He attributed the accidents to the "human" element. This may be an explanation, but is hardly a defence. After all, all accidents, except those caused by what in legal parlance are known as "acts of God," are due to the human element. It should be the task of the Administration to improve the "human" element. In the Lok Sabha, Mr. A. E. T. Barrow attributed the accidents to the low level of training given to drivers. He declared: "The training which is being imparted to our drivers is ill-conceived, ill-planned, superficial and valueless." If this criticism is correct, it is a grave reflection on the technical education and training imparted by the authorities to a class of persons who, in the interests of safety, ought to be the best-educated of the men who man the railways. In this connection, the authorities will do well to implement the suggestion, made in the Lok Sabha, that the rules and regulations should be made available in regional languages and care should be taken to see that the employees understand and observe them. Nobody disputes that, with the best will in the world, accidents might occur. But the public should be assured that the Administration will take all reasonable precaution for the safety of passengers and goods they carry.

The increase in working expenses came in for much criticism. The point was made that the estimates were subject to wide variations. The Administration was criticised for presenting the budget in an "irresponsible and cavalier manner." Perhaps, this criticism is not altogether justified, considering that the estimates have had to be corrected from year to year in order to take into account the changes in coal prices, emoluments to staff and charges under repairs which became necessary. Even so, the Administration should be careful in preparing estimates and also give fuller explanation of changes in estimates. There is room for improvement in the matter of explanation of certain items, such as repairs and maintenance and miscellaneous expenses which absorb not an inconsiderable part of the total expenses. Further, little information is given about the number and cost of claims, including pending claims.

Above all, the fact remains that working expenses are going up year after year at a very steep rate. Working expenses in 1954-55 were Rs. 205.87 crores, in 1955-56 Rs. 252.86 crores, in 1956-57 Rs. 273.00 crores, in 1957-58 (revised estimate) Rs. 301.02 crores and in 1958-59 (budget estimate) Rs. 311.13 crores. Clearly, the need for utmost economy is more urgent than ever, if the increase in revenue is not to be frittered away in working expenses. A member in the Lok Sabha pointed out that in the Northern Railway there is more staff than the work warrants. It should be possible for the Administration to ensure that a scientific system of job analysis and time and motion studies is instituted and the strength and quality of the staff are in proportion to the nature and quantum of work to be carried out. There is also room for economy in the matter of construction. Some members were rightly indignant that, at a time when the authorities complained of insufficient finance for augmenting rolling stock and other essential equipment, they were wasting their resources on constructional activities.

Coal

Again, utmost efforts are needed to ensure maximum economy in the utilisation of coal, the bill for which is increasing year after year. For 1958-59, the fuel bill is estimated to account for Rs. 57.21 crores out of the total budget estimate of Rs. 311.13 crores for working expenses, as against Rs. 53.86 crores and Rs. 301.02 crores in 1957-58 (revised estimate). Even a small percentage reduction in coal bill would improve the railways' net earnings. Naturally enough, many members of both Houses of Parliament pressed for the practice of economy in fuel consumption, elimination of waste and prevention of pilferage of coal. It is to be hoped that the committee, which has been appointed to go into the question of economy in coal utilisation, will soon submit its report to the authorities, in order to enable the latter to take the necessary measures.

As regards the wide ramification of pilferage, it should be evident that, if it remains unchecked it is bound to swell the administration costs and also bring the railways into disrepute. Pilferage of railway stores is a direct loss to the railways, while pilferage of goods entrusted to their care would come to be reflected in the cost of claims. There is yet another aspect of the matter. All pilferage is a reflection on the standard of discipline in the Administration. If it is not checked in time, it might be difficult to check it later when the malady may become more chronic and widespread than now.

The two important subjects which came up for review were the amenities for passengers and the railways' labour policy. Overcrowding in trains is an evil which is likely to remain for a long time to come. Assuming that this is part of the larger question of the railway plan, there is no justification for the existence of complaints regarding sanitation in railways and stations. There is considerable truth in these complaints. Even in certain large stations and in the suburban stations in large cities like Bombay, the sanitary arrangements are a blot on the fair name of the railways. The number of closets is small and their upkeep leaves much to be desired. Indeed, if the railways were under a private agency, they would long ago have had to face prosecution by the Government or the Municipality for violation of the laws relating to public health. It is a pity that such conditions are allowed to continue, despite the fact that the appropriate measures for improvement do not involve any great expenditure. As regards the railways' labour policy, the criticism was that certain labour unions had been favoured by the authorities. While we would emphasise that the authorities should not favour one union as against another, it does not seem fair to suggest that they should give to unregistered unions the facilities which they give to registered unions.

The general consensus of opinion in both Houses was that the railways should be enabled to meet the growing demand for their services. It was suggested that the railways must provide for additional traffic to the tune of 80 million tons at the end of the second Plan. In his reply to the debate in the Lok Sabha, Mr. Jagjivan Ram stated that it was difficult to say whether the increase in traffic by the end of the second Plan would reach that level. Trends, he said, were being carefully watched and action would be taken at the appropriate stage to see that the necessary transport capacity was provided by the railways in order to cater to the requirements of the second Plan. He added: "The total volume of goods traffic that could be carried out of the funds provided for the railways under the second Five-year Plan is 162 million tons—an increase of 42 million tons over the first Plan. The inadequacy of this provision is appreciated in all quarters and increased line capacity is already being provided to cater for 181 million tons." While this is commendable in itself, it is to be hoped that the expansion programme will be kept sufficiently flexible in order to step up outlay as soon as acute shortages in transport capacity begin to be felt. Further, it cannot be too strongly stressed that the railways constitute only one means of transportation and that an integrated transport policy implies simultaneous emphasis on other forms of transport, including road, inland navigation and sea transport.

USE OF PLUTONIUM

A $10-million programme to convert the atomic explosive plutonium to peaceful use as a fuel for nuclear power reactors has been initiated by the United States. The Atomic Energy Commission authorised its Argonne National Laboratory near Chicago to construct a Fuels Technology Centre to conduct research on the project. The success of the programme, it is stated, would contribute greatly to peaceful use of atomic energy as it would lead to great demand for plutonium which is now used mostly in nuclear weapons and research. Most of today's nuclear reactors use a mixture of natural uranium and enriched uranium 235 as fuel to produce heat to generate electricity, producing plutonium as a by-product.

In another announcement from Washington, the commission said it has accepted as a basis for contract negotiations a proposal by two private firms to build a $108 million advanced nuclear power plant capable of producing new fuel while consuming original fuel. The proposal was made jointly by the Pennsylvania Power and Light Company and the Westinghouse Electric Corporation under the A.E.C's power demonstration reactor programme. The projected plant would be a reactor of the homogeneous type, producing a net electrical output of 70,000-150,000 kilowatts for the power company's system.

FUEL TANKER

The Aeronautical Research Laboratories in Melbourne have been carrying out exhaustive road tests with a 4,600 gallon aluminium semi-trailer tanker which, with the weight saved, will allow 600 gallons more pay-load to be carried under existing road legislation in Victoria. Designed and built by the Shell Co. of Australia Ltd., the unit is undergoing these tests hauled by a Leyland Beaver forward-controlled export type tractor, one of the many Leyland vehicles operated by the oil company. The particular model chosen for this work is a 12 ft. 6 in. wheelbase chassis normally used as a tipping vehicle and having a 4 ft. longer wheelbase than the usual tractor model.

Static and dynamic strain-gauge tests have been carried out, and actual road tests have been made with the tanker fully loaded with water. On one of the tests, the Beaver and tanker were driven over 3 in. raised billets and wooden blocks to stimulate bad road conditions. Stresses and reactions were then measured on a recording instrument connected to control and stress points on the tank.

Special features of the unit are Franklin air-bag suspension and glass-fibre mudguards. A Fowler oil-well turntable and aluminium sub-frame have been fitted. The aluminium tank was built by Engineering Products at Burnley, Victoria.

The concreting of the 207-foot high dam of the Koyna Hydro-electric project was inaugurated by the Chief Minister of Bombay, Mr. Y. B. Chavan, on the 1st inst. The work of excavation for the foundation of the dam has been completed. Actual construction of the dam is now taken in hand. The project, the first stage of which is estimated to cost Rs. 38.28 crores, has a power potential of about 500,000 kw. It will be completed in three stages. At the end of the first stage, which is expected to be completed in 1960-61, it will store 36,045 m.cft. of water and generate 240,000 kw. of electricity for supply to the Bombay area and to the districts of Satara, Kolhapur and Sholapur. The second stage, which is estimated to cost Rs. 8 to Rs. 10 crores envisages the increase in power supply to 410,000 kw. while the third stage is concerned mainly with exploiting the further power potential provided by the tail race water for a seasonal power house which is expected to have a capacity 60,000 kw.

The Norwegian concern, Borregaard A/S has reached an agreement with Unilever Ltd. for the sale of all the Unilever shares in the two concerns, namely, De Nordiske Fabriker De-No-Fa and Lilleborg Fabriker. Borregaard will pay £4.5 million in cash for the Unilever interests. De-No-Fa is one of the world's largest producers of hardened fats, and Lilleborg are manufacturers of oils and soaps. They both have factories in Norway.

Unilever and Borregaard have also agreed on a plan for future extensive mutual co-operation in the technical field.

NEW PRODUCTS AND PROCESSES

New Process for Canning Vegetables

A CANNING factory of the Netherlands has put on the market canned vegetables prepared by means of a new continuous process in which the vegetables do not lose colour and retain better their original nutritive value and taste. In the conventional method of blanching fresh vegetables the nutritive value, taste and flavour are partly lost as a result of the large quantity of water and the high temperature used. Preparation by the new method is by means of a continuous vacuum system. The equipment consists of two tanks filled with water at different levels. The open ends of the connecting tube in the shape of an inverted U are arranged in the water. A vacuum pumping installation connected to the horizontal part of this tube, which is 10.3m. (34 ft.) above the liquid level, draws the water containing the fresh vegetables from the tank with the highest level, which then flows into the tank with the lowest level. The process is continuous if care is taken that the level in the first tank is always higher than in the second. In this manner the vegetables pass a vacuum in the horizontal part of the tube, so that the air is sucked out of the vegetables. During the descent in the vertical tube the spaces which were first filled with air are now filled with water. During blanching this process took place at a high temperature, so that the nutrients were leached out. The vegetables prepared by the new method, it is claimed, retain a noticeably higher nutritive value; they have a better colour and taste and prevent the development of thermophilic bacteria. A patent for the new process is pending in many countries.

A New Protective Coating

A new protective coating for metal and concrete surfaces has been developed in the U.K. by Wailes Dove Bitumastic, London. It is said to combine the waterproofing properties of coal tar pitch with the resistance to chemical attack and corrosion of epoxy resins. The material is said to have excellent adhesion to both metal and concrete surfaces and to be able to withstand exposure to acids, alkalis, oils, fats and many other corrosive chemicals. At the same time, the coating, which is called Epimastic, has, it is claimed, excellent resistance to abrasion and other forms of mechanical wear, or shock. It can be applied to almost all types of industrial equipment where surface protection is desired, and retains its properties over long periods of time.

Wood Tar and Tinplating

Recent research into the use of wood tar as an additive for tinplating solutions has given promising results. Research by the Tin Research Institute, London, in conjunction with a number of U.K. companies has shown that wood tar as an additive leads to the production of a bright finish to the tin coating. With normal tinplating processes, on the other hand, a matt finish is produced. It is not known, however, at present which ingredients of the wood tar are the active agents in producing this result, and research is continuing to discover which constituent of the tar actually causes the bright finish. The experiments and trials carried out so far are said, however, to have shown sufficient promise to indicate that the process is one which is of practical industrial importance.

Corrosion—Resistant Wrought Iron

An improved U.S. wrought iron which is said to be at least 25 per cent. more corrosion-resistant than standard types and to possess greater uniformity and better physical and mechanical properties has been developed. The new wrought iron, which is to be known as 4-D and which will sell for the same price as standard types, is said to be the result of 17 years of research and development. Basically, the process by which it is produced is described as calling for removal of more oxygen from the base metal to leave it in purer state. At the same time, the phosphorous content is increased to provide added strength, and the silicate fibres are distributed throughout the iron.

Device Does Work of 3,000 Clerks

A new electronic typewriting device has been perfected in the United States, which can record enough data in 30 seconds to fill a 300-page book. It is made by the General Dynamics Corporation. Called the Computer Readout, the device is designed to record information provided by giant computers or "electronic brains." It can record in permanent, readable form the data output of computers at speeds 10 times as great as those of any other recording method. The General Dynamics Corporation says that the device is able to do as much work as 3,000 stenographers. It can record more than 259 million words a day or their equivalent in figures or diagrams.

Atomic Measuring Device

A new atomic measuring instrument is enabling a United States tile manufacturing company to achieve nearly exact uniformity in the thickness of its resilient tiles for use in floors. The instrument makes it possible to maintain within one per cent. the desired thicknesses of ashphalt and vinyl-asbestos tiles, the company says. The device, made by the Industrial Nucleonics Corporation, measures the density of tiles by sending beta rays through them. Electrical signals from a thickness-recording gauge are then translated into lines on a chart for analysis of the manufacturing process. The company that is using the instrument is the Mastic Tile Corporation of America, New York.

LABOUR-MANAGEMENT RELATIONS IN THE U.S.

REPORT OF A TRIPARTITE TEAM

LABOUR-MANAGEMENT relations in the U.S. present a number of interesting contrasts to those in India or Britain. Many of its features, while bearing the impress of the distinctive traits of American genius, have evolved out of circumstances which were unique. Although the labour union movement in the U.S. is of comparatively recent origin, the American worker was fortunate enough to get certain political and social privileges such as adult suffrage and free education which had taken many years of intense struggle for workers in Europe to secure. These privileges served to make the American worker literate and more enlightened than his European confreres. Economic and social conditions, such as the abundance of land, the dependence on immigration for the necessary manpower, not only stimulated the inventive genius of the American people but also fostered outlook and work attitudes conducive to economic development and innovation. American labour, despite the fact that it was comparatively more educated, steered clear of the ideological cross-currents that swept over nineteenth century Europe. Nevertheless, it is true that the revolutionary philosophies of Marx and Engles and Sorel did exert their influence on the labour movement, but the latter was never attracted *en masse* by them nor taken in by the startling panaceas for the ills of society such as new economic and social orders offered by intellectuals. As Dr. Melder observes, "the rank-and-file members, as well as leaders, of American labour unions have no basic quarrel with capitalistic free enterprise as an economic system of allocating resources, distributing income and producing economic values, provided the institution of labour unionism is permitted to function on behalf of workers."

Labour unions in America, it must be borne in mind, grew round job interests. Although their purpose was to put labour in a position of strength so as to enable it to bring pressure on management to reduce the insecurities and burdens brought about by its continuous quest of management for efficiency and innovation, its aim was not to place a curb on innovation but to evolve a variety of new social and economic relations between workers and management, involving the sharing of or participation in regulation of innovation and the burdens and adjustments thereto. A new philosophy of industrial relations took shape. Its benefit to workers has been in the shape of an increasing share in the fruits of their labour and to the nation, in the form of higher production and productivity *plus* a long period of peaceful industrial development.

In order to study the mechanics of this dynamic system of employer-employee relations, the Government of India sent, in 1953, a tripartite team to the U.S. under the Point Four Programme. The team held discussions with Federal and State agencies, employers' and workers' organisations, visited a number of industrial establishments and trade schools, including the Tennessee Valley Authority and submitted a joint report to the Government of India. The report contains a number of useful suggestions as to how India can benefit from the American experience in the field of labour-management relations. A summary of the report, embodying the main findings and recommendations, contained in the January issue of the *Indian Labour Gazette* makes interesting reading.

Systems Dissimilar

The team observes, at the outset, that the basic characteristic of the American people, namely, their strong individualism and dislike of Government intervention beyond maintenance of law and order and provision of essential services, bears its imprint on all organisations and activities, including labour-management relations. It is clearly reflected in the constitution and mode of functioning of workers' as well as employers' organisations. To compare American practices and legislative provisions for the settlement of labour-management disputes with those obtaining in India, observes the team, is to draw parallels with two dissimilar experience. In the U.S., from the deliberate efforts on the part of the legislature to lend a helping hand to trade unions, the pendulum has swung back to the other side of curbing the strength of the union movement. In India, on the other hand, from a mere fact-finding enquiry which the Government had the power to order in earlier years, the country has moved to compulsory arbitration in order to maintain uninterrupted the flow of industrial production. Nevertheless, a comparative study of the experiences of both countries is useful for the lessons which it might offer.

The team points out that, in the U.S., there are no statutory Standing Orders. The collective bargaining contracts cover almost all items which form the subject matter of Standing Orders in this country. There is large diversity in the provisions on account of local conditions, including the strength and weakness of the labour organisation in the local area. While thus flexibility is a limited advantage, a definite disadvantage, according to the team, is the lack of even a minimum amount of statutory security in places where no contracts exist.

Nor are there in the U.S. any statutory works committees or production committees. Works committees, however, do function in places where, in practice, they are found beneficial to both workers and industries and do not jeopardise the interest of the trade union movement. Irrespective of whether there are formal works committees or not, complete co-operation exists between the parties in all matters relating to the improvement of working conditions. As regards production committees, there are various forms of consultation between employers and employees ranging from individual or group suggestion at the departmental level to consultation for the industry as a whole at the national level. Though in mass production processes of the assembly line type it is becoming increasingly difficult to assess the value of individual effort and offer commensurate reward to encourage better efficiency, the suggestion system with personal rewards does exist in the U.S. and is becoming more and more fashionable. Particular mention may be made in this connection of the "Scanlon Plan" which is an ingenius combination of a suggestion system, an incentive plan and profit-sharing with co-operation between management and workers at all times and at all levels.

Conciliation Procedure

The team points out that the conciliation procedure in industries which do not fall under the national emergency provisions in America is largely the same as that obtaining in non-public utility industries in India. The conciliation machinery has been found useful in both countries. In India, however, a time-limit is prescribed for the efforts of the conciliation machinery even in public utility industries. In the U.S. such efforts can go on endlessly. Boards of inquiry for fact-finding are provided for in both the countries, but, whereas they have to be used in America in national emergency disputes, their use in India is extremely rare in view of the provision for authorities with higher sanctions under the Industrial Disputes Act.

True to American tradition, there is a definite opposition in the U.S. on the side of both employers and workers to the idea of compulsory arbitration which does not at all exist there. The small element of compulsion introduced during the war through the War Labour Board and the Wage Stabilisation Board was only grudgingly accepted as an emergency measure.

As regards modification and rejection of awards, in India, this means the right of the Government to modify or reject an award of an adjudicator. In the U.S., however, though there can be modification or even rejection of an award by agreement between the parties themselves, any action by a third party in this respect is unknown.

In India, it is left to the Government to decide the cases in which the right to strike should be allowed free play and those in which it should not. But Americans consider restrictions on strikes as equivalent to restrictions on collective bargaining. As a result, there is, in the United States, an unrestricted right for direct action except where such right is circumscribed by contractual or statutory obligations. There are, however, about 85-90,000 voluntary labour-management contracts in America, providing for prohibition of strikes and lockouts. The team points out that what has been achieved in India by statute obtains in the U.S. as part of contractual obligations and healthy traditions. In both countries, strikes and lockouts receive undue publicity. In the U.S., to counteract this one-sided influence, the National Planning Association publishes a series of studies entitled *Factors in Successful Collective Bargaining*, in which an analytical study is made of establishments with a fairly long history of industrial peace. The team has suggested that this practice may be usefully copied in India also. It may be noted here that the results of a case study of labour-management co-operation and consultation in the Tata Iron and Steel Company, Jamshedpur, sponsored by the Union Ministry of Labour, have already been published.

Dismissal

The team points out that the only legal restrictions on the employers' right to discharge workers are the Federal and State Acts which prohibit discharges for union activity. The Selective Services Act also stipulates that veterans should not be discharged without cause within a year of their appointment. There are no statutory provisions governing retrenchment, seniority, etc. Such matters are settled by contract terms which vary widely. The procedure to be adopted by the employer in case of dismissals or discharges is laid down in contracts. The propriety of punishment can be questioned by the workers or the unions on his behalf. It can also form the subject matter for invoking the grievance procedure. Insistence on reinstatement is, however, rare because of the large possibilities for alternative employment. For the same reason, American trade unions have also never opposed technological changes leading to higher productivity.

The team points out that, due to the basic difference in approach, there are a variety of authorities under the Industrial Disputes Act in India, while the corresponding number in the U.S. is limited. In order to facilitate smooth implementation of the various legislations, it is necessary that the number of authorities should be reduced to a minimum. According to the team, there is a good deal which India can learn from the U.S. in the matter of the mode of selection of conciliation officers, their training, and the opportunities offered to them at regular intervals for refresher training. It attributes the success of conciliation system in the U.S. to the ample time allowed to the conciliation officers and the real desire of the parties to settle the differences instead of treating conciliation proceedings as a mere legal formality.

Summing up its impressions, the team observes that any comparison of labour legislation in India with that of the U.S. would be inappropriate, as, in the latter, voluntarism is the rule and administrative orders the exception. If any parallel should at all be drawn, it shou'd be done not between legislative provisions alone but between such provisions *plus* the contractual obligations as have sufficient sanctions for enforcement. The team urges that labour legislation in India should be simplified, so as to enable the parties to arrive at an early settlement of disputes. It refers, in this connection, to the fact that, in the U.S., even the comparatively simple machinery under the Taft Hartley Act has been blamed by American labour as leading to delay in the settlement of disputes. It is also suggested that active trade unionism should be encouraged, so as to secure a greater measure of responsive co-operation from unions.

Emphasising the importance of maintaining an atmosphere of mutual confidence, the team suggests that the Government should see to it that such a climate is maintained and legislation on industrial relations should be undertaken with this end in view. In the U.S., the Government has been playing this role very effectively, sometimes throwing the weight on the side of workers and at other times on the side of employers. The team recommends that the distinction between public utility industries and non-public utility industries, with the present scheme of arbitration in the former and collective bargaining in the latter, should be done away with and a uniform system, whereby collective bargaining could be given a fair trial, should be adopted.

Serving the Plan

The monies deposited with The Punjab National Bank Ltd. go to finance nation-building activities.

Today, more than ever, *P.N.B.* places its experience and organization at the service of the nation by mobilizing savings.

Splitting the atom is not the only source of chain reaction, India's immediate target for steel has a chain reaction too.

Six million tons of steel mean 7,200,000 tons of coking coal, 15,000,000 tons of iron ore, three new works and industrial townships, a new mining region, over 700 miles of railway tracks linking the steel belt,

CHAIN REACTION

80,000 tons of nitrogenous fertiliser, and immense saving of foreign exchange.

This is the starting point of new industries, more employment, lower prices, exports, and expanding markets, hence more industries, more steel . . . and it starts all over again.

The Indian Iron & Steel Co. Ltd. form a vital link in this mighty chain

STEEL IS THE STARTING POINT

Use steel only when you must today, there will be more tomorrow.

INDUSTRIAL CREDIT & INVESTMENT CORP. OF INDIA LTD.

DR. A. RAMASWAMI MUDALIAR'S REVIEW OF OPERATIONS

PLEA FOR TAX CONCESSIONS TO INDUSTRIAL FINANCING COMPANIES

THE Third Annual General Meeting of the Industrial Credit and Investment Corporation of India Ltd. will be held in Bombay on 7th April 1958. In the course of his statement circulated to the shareholders along with the Directors' report and accounts relating to the year ended 31st December 1957, Dr. A. Ramaswami Mudaliar, Chairman of the Corporation, draws the attention of the Government to the double taxation anomaly in respect of its investments in new ventures. The Directors have made a representation to the Government for some tax relief, without which, he says, it will be difficult for the Corporation to build up adequate reserves. The plea for tax relief, he adds, has considerable bearing on the Corporation's ability to raise additional funds for augmenting its resources.

The following is the full text of Dr. Ramaswami Mudaliar's statement:

"It will be seen from the Directors' report that by the end of 1957 your Company had agreed to give financial assistance in rupees for a total of Rs. 944 lakhs in respect of 31 projects. In addition, five loans in various foreign currencies had been sanctioned for a total of the equivalent of Rs. 221 lakhs.

"With the Directors' report and annual accounts for 1957, your Company completes the third year of operation and I take this opportunity to review the activities of this Company and to make a few observations of a general character. After allowance is made for the slow rate of progress inevitable in the initial stages of a new enterprise it may be stated that from the figures given above your Company's operations will not be regarded as unimpressive. In my previous remarks at general meetings I have referred to a number of measures in the field of taxation and elsewhere which have operated during the three years since this Corporation commenced business; collectively these measures have produced what is conveniently described as an unfavourable investment climate in which investors have been reluctant to take on new commitments and in which their ability to do so has been curtailed by high taxation. It is against the background of these conditions that the operations of this Corporation must be viewed.

Special Position

"From the information given in the Directors' report for 1957 it will be apparent that total assistance sanctioned by your Company can be divided more or less equally between loan operations in rupees and foreign exchange, on the one hand, and underwriting operations in respect of shares or debentures, on the other. In the provision of loans, while your Company is not the only source of rupee finance in India, it has come to occupy a special position by reason of its ability to grant loans in foreign currencies of moderate amounts in present times when the shortage of foreign exchange is holding up the development of many enterprises. Out of a line of credit of the equivalent in various currencies of U.S. $10 million available to your Company from the International Bank for Reconstruction and Development, loans have so far been sanctioned of an equivalent of $4.63 millions for five projects, and it may not be long before the entire amount is used up. It was hoped at the time when this Company was floated that further foreign exchange resources would be made available when the first line of credit became exhausted and I trust that your Company may be enabled to continue to render assistance in the form of foreign exchange loans in suitable cases and for suitable amounts through the grant of additional credit from the World Bank when this becomes necessary.

"As a financing institution which also takes care of providing permanent share capital for industrial development, your Company is the only one of its kind in this country and it is a matter of no small significance that within the short period of its existence it has been able to carry through substantial underwriting operations, in spite of the unfavourable investment climate. Out of 16 underwriting operations sanctioned involving a total commitment of Rs. 535 lakhs, nine operations had been completed by the end of 1957 and two more have been completed so far in this year. Of equal importance with the actual underwriting operations effected is the laying of the sound foundation for our future activities in this field. I am hopeful that with the traditions that are being established it should be possible in the future to organise underwriting activities on a larger scale. It has been our endeavour to interest institutions and firms of good standing to join us as underwriters or sub-underwriters, so as to be able to organise underwriting operations which are too large for your Company to carry through alone. I have emphasised before that success in this field depends upon a suitable investment climate and I trust that Government will give due regard to the necessity for doing their share to bring about the right sentiment among potential investors without whose support we cannot do fully what we set out to achieve.

Assistance Broadbased

"Generally, our approach is based on the idea of interesting other parties or agencies in our operations, so as to broaden their base. In this way we hope, as experience of our operations becomes more widely known, potential investors will learn to rely on the detailed examination of every project which we insist upon before providing financial assistance of any kind. It is to be noted that the World Bank in its operations is always looking for, and has achieved a substantial measure of success in obtaining, the support of other financial institutions and investors.

"I should like to mention one significant feature of the assistance so far sanctioned. Out of the 36 projects which we have agreed to help, 16 are new enterprises. It may also be noted that both in the matter of industries covered and their distribution over the country the assistance is broadbased. Special attention has been given to the needs of underdeveloped areas.

"It has become a matter of concern that, while your Company has been trying to fulfil the role for which it was set up by providing risk capital to new as well as existing enterprises, the discharge of that function has been rendered more difficult as a result of new factors which have come into operation during the last three years. On account of a considerable increase in income-tax and corporation tax rates and the levy of capital gains tax, the earnings of your Company after tax are so reduced that the sums remaining are insufficient to permit adequate allocation to reserves as well as a reasonable return to the shareholders. I need not repeat all the arguments which show the need for building up substantial reserves against the risks inherent in our operations—particularly in the financing of new ventures. In the case of new ventures, your Company may have to wait several years before it can receive any dividends on its investment and, when received, such dividends in common with all dividends received on investments in shares by your Company, will suffer corporation tax in the hands of your Company, despite the fact that the same earnings will already have suffered corporation tax in the hands of the company concerned. Investors in new projects who look to an appreciation in the value of their investments as some compensation for foregoing dividends in the earlier years now find that the capital gains will be taxed, admittedly at a lower rate than normal income-tax. This means that your Company will be taxed on capital gains when it realises investments, with the view to taking on new commitments. It will be recalled that it is the policy of this Company to revolve its investments in order to make its funds available for further industrial financing. Your Directors have represented to Government that consideration be given to the grant of tax concessions to companies, such as yours, which are engaged in industrial financing and do not have the benefits available to industrial enterprises in the way of development rebate, additional depreciation allowances and the like. Without some such concession your Directors feel that it will be difficult for them to recommend the setting aside of adequate amounts to reserve for possible capital losses on their operations and at the same time give a reasonable dividend to the shareholders.

Heavy Taxation

"It will be evident from the results of 1957 that, against operating profits of Rs. 48 lakhs, taxation takes Rs. 25 lakhs leaving only Rs. 23 lakhs for allocation to reserves and for dividends to the shareholders.

"You will see from the accounts that the meeting of the additional tax imposed in respect of 1956 and the allocation of Rs. 5 lakhs to reserve this year, together with the payment of a modest dividend of 4 per cent. tax-free on the paid-up capital, have involved a substantial reduction in the balance which stood to the credit of the revenue account after payment of the dividend last year. Unless we are able to step up our income during the current year and obtain some tax concessions, the payment of a dividend to shareholders at a reasonable rate commensurate with the risks which this business involves will be no easy matter. Your Company's present resources are likely to be fully utilised in the near future. How best additional funds can be raised is engaging our attention and my plea for tax relief has considerable bearing on our ability to do so.

"Turning now to the state of India's economy during 1957, I should like to refer to certain aspects of major importance. Early in the Second Plan both the private and the public sectors have met a severe shortage of internal and external capital for fulfilment of the production targets laid down. While I am far from happy at the apparent slowing down of the rate of progress as a result of such shortage, it looks to me that the country is now entering a more realistic phase of planning. I see in the country welcome signs of awareness of difficulties which lie in our path and a determination to grapple with those difficulties in a serious fashion.

Unsatisfactory Feature

"While special attention appears to have been given recently to the need for increasing exports, it does not appear to me very probable that substantial and early relief to our balance of overseas payments can come from this source. The unsatisfactory feature of our overseas payment situation is the dependence on imports of foodgrains. It appears that favourable harvests during the first Plan period have resulted in insufficient effort being directed towards the expansion of food production during the second Plan period, with the result that the partial failure of crops in some parts of the country have increased the dependence on imports at a time when this can ill be afforded. I am glad to note that this problem is now engaging the attention of Government. However, I believe it should be given a central place in all our planning, both present and future, because, with the population growing at a faster rate than ever before as the result of improved standards of living and health, our efforts in the direction of industrial or other development will remain at risk until we have built up a continuing overall surplus of foodgrains for domestic consumption.

"I referred briefly to the need and the efforts which are being made to encourage exports and said that this was not likely to be an easy task. I feel bound to observe that, in my opinion, the channelling of exports through State Trading is not the only or the best way in which the most satisfactory results are likely to be achieved. The efforts of the Government could, I believe, be even more profitably directed towards the support of export promotion groups comprising those in the exporting industries to whom in any event the Government must look for the major efforts.

Must Rely on Our Own Efforts

"Any survey, such as I have attempted of the problems confronting our country at this important stage of the second Five-year Plan, would be incomplete, if I do not pay a tribute to all those overseas Governments, international agencies and other friends of India who have, during this period of exchange shortage, come forward with help in various forms. We must also remember the many overseas companies who have made new investments or increased existing ones in India thereby showing their confidence in our country. On the other hand, we must ourselves recognise that help from such sources can, at best, be only marginal in meeting our large-scale requirements. It is to our own efforts that we must look in the main for finding the resources to carry through our ambitious plan of social and industrial development whether they require finance in the form of rupees or foreign currencies. To this end it is necessary to recognise that it is the actions of individual persons which will determine whether we are able to find the resources we need or not and the task falling on the Government is primarily to bring about the conditions under which individuals will be able and willing to do their share.

"In the present and the immediate future I believe that the utmost attention should be given to the completion of those projects included within the second Five-year Plan which are already substantially advanced. This applies particularly to those which when in operation, will achieve early savings of foreign exchange. Concentration in this direction at this moment even at the cost of deferring the commencement of other attractive projects which may also eventually achieve exchange savings by avoidance of imports is the only way in which quick results can be counted upon. Coupled with a review designed to take advantage of progress already made, there should be, in my opinion, an early objective examination and rephasing of the remainder of the second Five-year Plan with due regard to the resources now available to us. The time for proceeding on the assumption that windfalls will come from some direction or other so as to enable us to avoid a crisis is, in my opinion, passed. At all costs, we must endeavour to avoid a reduction in economic activity as the result of a shortage of imported raw materials or semi-finished goods necessary to sustain the industries already started or far advanced in construction."

Plan for Progress

People's Prosperity

Fields swaying with golden corn, tall chimneys

spouting smoke, flowing waters generating power, and a network of roads, railways and airways linking remote distances are today creating new opportunities for a richer and fuller life for the Indian people. By the end of the Second Five Year Plan the total national income will have risen by 25% and the per capita income, by 18%. Textile Machinery Corporation Limited is proud to play its part in this mighty adventure of bringing plenty, prosperity and happiness to the people. A pioneer in many fields of engineering, it supplies industry, railways and river valley projects with a wide range of equipment.

GIFT-TAX BILL

MAIN FEATURES REVIEWED

By Premjus Roy

THE Gift-Tax Bill, 1958 was introduced in the Lok Sabha along with the New Finance Bill on 28th February 1958. The object of the Bill is to levy a tax on gifts *in whatever form made* by one person to another, and thereby to fill a gap in the existing tax system which made it possible to avoid or reduce tax liability by gratuitous transfers of property. The question of a gift-tax was examined by the Taxation Enquiry Commission in 1954. The Commission had expressed the view that, although a gift-tax was "theoretically an attractive proposition," it required considerable experience of the operation of estate duty before it could be introduced, and it had finally expressed itself against introducing gift-tax at that stage. Prof. Nicholas Kaldor in his report, made in 1956, recommended the levy, in addition to the taxes on income which were already there, of taxes on capital gains, net wealth, personal expenditure, and gifts. Within a short space of less than two years, all these new taxes recommended by Prof. Kaldor will have come into full operation. Taxation of capital gains was reintroduced under the Finance (No. 3) Act of 1956, as part of the scheme of taxation of income, with effect from the assessment year 1957-58. Separate Acts for Wealth-Tax and Expenditure-Tax were passed in 1957, and we now have the Gifts-Tax Bill before the Lok Sabha which is to be brought into operation with effect from 1st April 1958.

A gift-tax on *inter vivos* transfers is levied in the U.S.A., Sweden, Canada, Australia, the Netherlands, and a few other countries, as a supplement to, and not in replacement of, death duties. Prof. Kaldor had recommended that the gift-tax should be levied uniformly on all transfers—whether made during lifetime or coming into operation after death, and that it should replace the present Estate Duty, but, under the Gift-tax Bill as now introduced, it is proposed to levy a tax on transfers as gifts during the lifetime, while the Estate Duty Act is retained to levy a duty on bequests and inheritances which come into operation after the death of a person.

Kaldor Modified

In two other important respects, Prof. Kaldor's recommendations have been modified in the Bill. He had recommended that the rate of gifts-tax should be double the present rates of Estate Duty, and also that the gifts-tax should be levied upon the donee, i.e., the person receiving the gift, at rates which should be progressively higher according to the total net wealth of the donee after the gift. In the Gift-Tax Bill, the rates of gift-tax follow the present rates of Estate Duty, and the liability for gift tax is imposed upon the donor, that is, the person making the gift, irrespective of the total wealth of the donee.

The important provisions of the Gift-Tax Bill may now be examined. The Act would apply to the whole of India, except Jammu and Kashmir State. It would apply to all classes of persons—individuals, Hindu undivided families, companies, firms and other association of persons. Certain companies and institutions are, however, totally exempted from the operation of the Act. These include a Government company, a corporation established by an Act, a public company, whose affairs or whose shares carrying more than 50 per cent. of the total voting power were not controlled or held by less than six persons, a subsidiary of such a public company, or any charitable institution or fund to which Section 15B of the Income-tax Act applies.

Assessment Year

The Act will come into force from 1st April, 1958, and hence the first year of assessment to gift-tax would be assessment year 1958-59, which would be based upon gifts made during the 'previous year.' Here, the 'previous year' would be the same as adopted for income-tax assessment, but, if for income-tax assessment, there are different previous years for different sources of income, the previous year which expired last would be the previous year for gift-tax assessment. Hence, except in the case of persons who keep their accounts to a different date, in the case of most persons such as salary earners, or persons having income from dividends, etc., the assessment would be made in respect of gifts made during the year ending 31st March. Thus, in the case of such salaried persons, etc., for gift-tax assessment for 1958-59, it is gifts made between 1st April 1957 and 31st March 1958 which will have to be taken into consideration.

What is chargeable to gift-tax is the total value of gifts made during the previous year: any gift made prior to 1st April 1957 (where previous year is the year ending 31st March) would thus be entirely ignored. 'Gift' is defined as "transfer by one person to another of any existing movable or immovable property made voluntarily and without consideration, and includes the transfer of any property deemed to be a gift under Section 4," and, under Section 4, certain transactions are to be treated as gifts, such as the difference between the full market value and the actual consideration paid where the transfer is for less than full consideration, the release, discharge or surrender of any debt or interest in property in favour of another person, etc. The taxable value of any property gifted is to be the estimated market price of the property on the date on which the gift is made. In the case of cash gifts, there is no difficulty of ascertainment of such market value. In the case of other kinds of property transferred by gift, however, market value will have to be ascertained, practically on the same lines as market value, has to be ascertained for the purpose of Wealth-Tax.

Exemptions

For calculating the taxable amount of gifts, there are certain important exemptions prescribed under the Gift-Tax Bill. There is a basic exemption for gifts upto Rs. 10,000, but, if the value of taxable gifts to any one donee during 'the previous year' exceeds Rs. 3,000, this basic exemption is reduced to Rs. 5,000. Hence, if the total value of chargeable gifts made by a person during a year is only Rs. 10,000, he will not have any liability for gift-tax for that year. If he makes gifts of Rs. 40,000, the first Rs. 10,000 will be exempt and he will have to pay tax on the balance of Rs. 30,000 at the prescribed rate of 4 per cent., that is, his liability would be Rs. 1,200. Suppose he makes a gift of Rs. 4,000 to one son and Rs. 2,000 to three daughters. In this case, he makes a gift of more than Rs. 3,000 to one donee, i.e., his son, and so the basic amount of exemption would be reduced to Rs. 5,000, and, therefore, he will have to pay gift-tax on the balance of Rs. 5,000 (gifts made Rs. 10,000 less exempt amount Rs. 5,000). Apart from this basic exemption, there are certain other exemptions prescribed. These include the following:—

(i) Gifts of immovable property outside India.

(ii) Gifts of movable property outside India, if made by an individual who is not a citizen of India, or by a Hindu undivided family, firm, company, or association which is not resident in India.

(iii) Gifts of Government Savings Certificates, which are specifically declared exempt from gift-tax.

(iv) Gifts to Government or any local authority such as a municipal corporation.

(v) Gifts to any charitable institution or fund to which Section 15B of the Income-tax Act applies.

(vi) Other charitable gifts, subject to a maximum of Rs. 100 in respect of each gift.

(vii) Gifts to any dependent female relative made by an individual on the occasion of her marriage, or gifts made by a Hindu undivided family to any female member of the family on her marriage, subject in either case to a maximum of Rs. 10,000 in respect of one female.

(viii) Gifts made by an individual to his wife, subject to a maximum of Rs. 1 lakh in the aggregate in one or more previous years.

(ix) Gifts of policies of insurance or annuities made by an individual to his wife or children or any other dependent person, subject to a maximum of Rs. 10,000 in the aggregate in one or more previous years of the benefits in respect of each donee.

(x) Gifts made under a will (as such gifts would be liable to Estate Duty), and

(xi) Gifts made in contemplation of death, as these also would be liable to Estate Duty.

It will be noted that the above exempted items are to be completely ignored from the

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of The Bank of Baroda, Limited, as at 31st December, 1957, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns of 14 Branches audited by other auditors and the unaudited returns from other Branches not visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the proviso to sub-sections (1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank, so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1957, and the Profit and Loss Account gives a true and fair view of the profits for the year ended upon that date.

THE BANK OF INDORE, LIMITED

(INCORPORATED IN INDORE, 1920)

REPORT OF THE DIRECTORS TO BE SUBMITTED TO THE SHAREHOLDERS AT THE THIRTY-EIGHTH ANNUAL ORDINARY GENERAL MEETING

GENTLEMEN,

The Directors have the pleasure to lay before you the Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December, 1957, duly audited by Messrs. A. F. Ferguson & Co., Chartered Accountants.

	Rs.	nP.
The Net Profit for the year including the sum of Rs. 67,485.87 brought forward, amounts to	7,37,115	74
An ad-interim Dividend was paid for the half-year ended 30th June, 1957, at the rate of 16 per cent. per annum on 61,215 shares absorbing	1,22,430	00
Amount transferred to Reserve Fund (bringing that Fund upto Rs. 29,00,000)	1,00,000	00
Amount transferred to Contingency Fund	1,00,000	00
Bonus paid to the Bank's Staff	2,09,182	48
	5,31,612	48
Your Directors now recommend :—		
To pay a Final Dividend at the rate of 18 per cent. per annum on 61,215 Shares for the half-year ended 31st December, 1957, amounting to	1,37,733	75
To transfer to Gratuity Fund	15,000	00
To donate to the Indian Red Cross Society, Madhya Pradesh Branch	500	00
To carry forward to the next account	52,269	51
Rs.	7,37,115	74

Last year Branches of the Bank were opened at Bhopal and Shujalpur Mandi.

The Directors hope that you will find the progress of the Bank satisfactory.

S. M. BAPNA,
Chairman.

THE BANK OF INDORE, LTD.,

NEW PUBLICATIONS

Capital Taxation in a Developing Economy (India). By I. S. Gulati. Published by Orient Longmans (1957). Pages: 209. Price: Rs. 12.50.

THIS book is "a somewhat revised version" of the thesis submitted to the London University by Dr. Gulati for the Doctorate degree. The book is divided into three parts and a final postscript surveys the budget proposals presented by Mr. T. T. Krishnamachari, the then Union Minister of Finance, in May 1957.

The first part of the book deals with the theory of capital taxation. The author discusses the definition of a capital tax, the general nature of a capital tax, the economics of capital taxes and the different capital taxes—their economic effects and other problems. Much of the analysis in the first part of the book is theoretical and in parts most unrealistic. Even the theoretical analysis is based on implicit assumptions which are highly debatable. Thus Dr. Gulati's analysis of the effects of capital taxes on incentives is based on generalisations and subjective opinions which may appear theoretically plausible but which do not display familiarity on the part of the author with the practical working of modern industry and the capital markets of the world. Claims such as "investment ... depends not on the availability of savings but on the profitability of an enterprise" (p. 28) can hardly be proved by the facts of economic history of India and other countries of the world. Dr. Gulati argues that "capital taxes may ... encourage investment, in so far as they serve as a substitute for income and profits taxes which hit the investor's prospects directly" (p. 32). Whilst this may be true in theory, Dr. Gulati's long analysis based on this assumption is of little practical utility or interest because it is extremely unlikely that Governments will be able to reduce substantially the taxation of income and profits. Indeed, the temptation for Governments, especially those with leftist tendencies, in many of the underdeveloped countries of the world will be to impose a capital tax in addition to the existing high taxes on income and profits—as has been done in India.

The second part of the book deals with capital taxation and Indian economic development. The author first discusses the role of capital taxes and development finance. He makes a plea for using capital taxation as a tool for raising resources for development—especially in the so-called underdeveloped countries of the world. Dr. Gulati tries to define "the optimum tax system in a developing economy." Once again, his analysis is full of glib generalisations like "given a certain pattern of distribution of income and property in the economy, the revenue yield of the optimum tax system maximises itself at the cost of minimum loss of production in the private sector" (p. 66) and "the optimum tax system would be a combination of those taxes which, while yielding the maximum revenue, impinge the least on incentives" (p. 69). Dr. Gulati next surveys the plans proposed after 1944 for developing the economy of India. He deals with The Bombay Plan, the People's Plan and the First Five-year Plan. He concludes that "in the discussion on planning in India, taxation has not received the attention it deserves" (p. 94). This book was published in 1957. Yet it does not deal with the second Five-year Plan. One wonders in what respect the author could be said to have revised his thesis which was written presumably some years earlier. The facts and analysis in the book are largely out of date in the context of the economic developments in India in the last two years.

The final portion of the second part of the book contains Dr. Gulati's proposals for introducing capital taxes in India. The author is strongly in favour of an annual tax on capital "so long as a capital tax does not swamp the entire income." Dr. Gulati proposes that India should levy a capital or wealth tax on an annual basis at rates ranging from 0.20 per cent. upto 1.50 per cent. of the capital value in possession of individuals. The yield from such a tax is estimated at no less than Rs. 52 to Rs. 57 crores annually! We already know the havoc which the imposition of the wealth tax at rates estimated to yield Rs. 12½ crores annually has caused in the private sector of the Indian economy. Dr. Gulati's proposals would increase the burden of the wealth tax by more than four times its present level. Would it not be more fair to say that under such proposals the author is clearly wanting the demise of the private sector within the shortest possible time?

The third part of the book deals with the law and working of estate duty legislation in India. This is perhaps the most useful part of the book. Whilst some of the analysis in this part of the book displays Dr. Gulati's obsession for increasing the burden of taxation—almost irrespective of cost, it sometimes appears—the survey of facts of estate duty taxation in India is interesting and reasonably objective.

The postscript of the book deals with the Central Budget for 1957-58. Dr. Gulati compares the wealth and the expenditure taxes introduced by Mr. Krishnamachari with the proposals contained in the Kaldor Report—and, as can be expected, Dr. Gulati finds the new levies too light! He conveniently forgets to stress that the Kaldor Report was based on the important assumption that the maximum rate of income-tax and super-tax would be reduced to 45 per cent.—as compared with 84 per cent. as in the budget proposals. Dr. Gulati has failed to realise that in the upper slabs of wealth the total burden of income-tax, a super-tax and the wealth tax under the budget proposals will exceed 100 per cent. of the annual incomes of assessees. This completely vitiates his case for an annual tax on capital on the ground that such a tax would be paid out of income and would stimulate investment in more risky enterprises.

This book presents a one-sided picture of the case for capital taxation. The proposals of the Kaldor Report, which Dr. Gulati seems to accept fully, have been adversely criticised by many economists. The introduction of the wealth tax and the expenditure tax has been severely criticised and condemned on economic and administrative grounds by many leading thinkers in the field of taxation in India and abroad. Thus, economists like Dr. Lakdawala and Professor Taraporevala have published detailed arguments against the imposition of these taxes. Dr. Gulati should at least have taken notice of the arguments advanced by the critics of capital taxation and he should have tried to meet these arguments. But he has failed to do so. To ignore the case against capital taxation as advanced by leading economists, as Dr. Gulati has done, merely displays a biased attitude towards the subject and reveals an unscientific approach towards it.

Dr. Gulati appears to be unfamiliar with the wealth of good material on taxation which exists in Indian financial and economic journals and books. Thus, in his bibliography there are 53 books and articles mentioned. But of these only 14 items are of Indian origin and of these eight items are official or Government of India publications. The footnotes to the various chapters in the book also reveal the same defect. It would not be inappropriate to suggest that authors like Dr. Gulati should read articles and editorials on taxation in leading journals like *Commerce, Indian Finance, Capital, Eastern Economist*, etc., before rushing into print.

The book is shabbily printed. In the reviewer's copy there are pages in which the printing on one side of the paper has actually penetrated through the paper to become visible on the reverse side of the page. This makes the reading of the printed matter on such pages very difficult and irritating.

The style of the book is far from lucid—it is highly technical, laborious and confusing. This book will be understood only by persons with advanced formal training in economic analysis and terminology.—*V. V. K.*

A sum of Rs. 6,80,985 has so far been sanctioned to different State Governments during 1957-58 for family planning schemes. Besides, a sum of Rs. 15,48,033 has been sanctioned as grants to local bodies and voluntary organisations in different States during 1957-58. The State Governments have been asked to implement family planning programme.

About 88,290 lbs. of quinine sulphate were produced during 1956-57 and, during 1957-58, the output amounted to 41,853 lbs. upto the end of October 1957. It is not possible to estimate the exact annual requirement of quinine in the country. On the basis of data available, the annual demand for quinine is estimated to be about 20,000 lbs.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE BANK OF INDORE, LIMITED

We have audited the foregoing Balance Sheet of The Bank of Indore, Limited, as at 31st December, 1957, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the Proviso to sub-sections (1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1949. Sheet and Profit and Loss Account Act, 1956; they are, therefore, drawn up in conformity with forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account;

(e) in our opinion, and to the best of our information and, according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1957, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

MANAGEMENT OF STATE ENTERPRISES

PROBLEM OF BALANCING PUBLIC ACCOUNTABILITY WITH FREEDOM AND EFFICIENCY

By Prof. P. C. Jain

WHILE ensuring "public accountability" for their investments and outlays, the problem in the case of autonomous public corporations and State undertakings managed by public limited companies is to give the managing directors or chairmen of such corporations freedom, initiative and enterprise necessary for their efficient working. If adequate Parliamentary control is lacking, there might be a waste of public money and the consumer interests might not be served well. If, on the other hand, there is too much Government interference with the working of such corporations and the management does not have the necessary freedom, the public corporations might not be able to work in the best public interest. As the scope of the public sector increases in future and more public corporations are created, the problem of efficient management of public corporations will assume still greater significance. The serious risk which can arise, if the balance between "public accountability" and the consequent Government control and freedom of the persons in charge of such corporations is lost, is shown by the L.I.C. affair, the Chagla Commission's probe into it and the Parliamentary debate on the Commission's report.

Four Ways

There are four ways in which public enterprises might be run, namely, as a department of the Government, a private limited company, a public limited company and an autonomous public corporation. It is now generally recognised that departmental management and the private limited company are not suitable for State undertakings. India's first Comptroller and Auditor-General, Mr. Narhari Rao, rightly told the Public Accounts Committee of the Indian Parliament in December 1952 that private limited companies for managing State enterprises are "a fraud on the Companies Act and also on the Constitution" and "to convert a Government concern into a private company solely by executive action is unconstitutional." Parliamentary control in the case of private limited companies is not adequate and there is no satisfactory way of securing efficient working of such companies while ensuring at the same time the proper use of public money. So far as departmental management is concerned, Government's control and consequently public accountability is complete but balance is lacking as there is too much red-tape, lack of initiative and enterprise on the part of people who are called upon to run them, inflexibility and insensibility to consumer needs and, consequently, inefficient working. The railways, posts and telegraphs, the ordnance factories and the like are under departmental management and they have somehow adjusted themselves to this form of management but it would not be suitable in the case of industrial and other enterprises in the public sector which have to face competition from private enterprise in India and abroad.

Nothing Much to Choose

There is nothing much to choose between public limited companies and public corporations so far as the efficient working of public enterprises is concerned. In both these forms, it is perfectly possible to balance public accountability with freedom of management. But this is not an automatic process and the balance has to be achieved by a method of checks and balances. How this balance could be brought about is indicated by the Chagla Commission's report. It is necessary to secure public accountability, to which aspect of the matter we shall presently return, but it is equally necessary to secure independence of the management of such public enterprises. In the case of the L.I.C., the Chagla Commission found that (i) there was a tendency on the part of the Finance Ministry to look upon the Corporation as a wing or branch of that Ministry and to issue orders to it in the belief that the Corporation was bound to carry out those orders; and (ii) the Chairman of the L.I.C., who is a member of the Indian Civil Service, allowed himself to be cowed down by a senior member in the person of the Principal Finance Secretary and failed to take an independent decision which is necessary if independence of management is to be ensured.

The Chagla Commission was concerned only with the L.I.C. but the same sad state of affairs exists in the relations of the Finance Ministry with the Reserve Bank of India, the State Bank of India and the Industrial Finance Corporation of India. A Governor of the Reserve Bank of India and a Chairman of the Board of Directors of the State Bank of India resigned, because they did not see eye to eye with the Finance Ministry which has continued to regard these vital institutions, which are autonomous in theory, as "a wing or branch of that Ministry." An independent person might have the courage to resign but a civil servant who occupies the post of Governor, Chairman or Managing Director of such autonomous corporations might not have it.

The freedom and initiative of management of such corporations and institutions will be ensured if some method is devised for reducing the interference of the Finance Ministry in their day-to-day working. There can be no doubt that, in the case of all institutions in the public sector, Parliament and the Government frame the general policy but, if it were the intention of Parliament that the Finance Ministry or some other Ministry should control the day-to-day working of these institutions or the actual enforcement of the general policy, they would have been made departments of the Government. The very fact that these corporations and institutions are made 'autonomous' shows that they should have some freedom and independence of action. The vital problem is to ensure this freedom in actual practice.

Ideal Compromise

The Chagla Commission came to the conclusion that an "ideal compromise" was secured by section 21 of the L.I.C. Act which provides that Government control would be restricted to matters of policy involving public interest and such control would be exercised only through directives given in writing. But the sound principle laid down in section 21 has not been adhered to in the working of the Life Insurance Corporation. It is not only in the case of the L.I.C. but the other corporations and institutions as well that such a principle is of vital importance but this principle is not always adhered to. What really happens is that the persons in charge of such corporations and institutions meet the Secretary to the Government and the Minister concerned, discuss things in a general sort of way and carry out the 'advice' of the said Secretary and the Minister, without critical appraisal which is necessary if independence of judgment and freedom of action are to be maintained. So far as written directives are concerned, there is no difficulty as the Secretary and the Minister concerned take direct responsibility for them and they are open to discussion in Parliament and the Press. The problem is to prevent the persons in charge of such corporations from being cowed down by the 'advice' given to them by the Secretaries and the Ministers. In this connection, the Chagla Commission has suggested a sound principle, which unfortunately does not seem to find favour with the Government, if the observations which Mr. Jawaharlal Nehru made in the Lok Sabha are any indication of the Government's mind in this matter. The Commission's suggestion is that chairmen of corporations like the L.I.C. should be appointed from persons who have business and financial experience. Such persons would have the technical knowledge necessary for taking an independent decision and would not be easily cowed down by the Minister and the Secretary to the Government. The supply of such men is not unlimited but it is not as limited as the Prime Minister would have us believe.

It is also not a relevant consideration that such men should not be opposed to nationalisation and should, on the whole, agree with Government's policy. If a competent person with business experience or trained in economics takes up such a job, he would certainly strain all his energy to make it a success, for failure would cost his reputation. Where then is the question of his opposition to nationalisation, mixed economy and the Government's economic policy? The real point is that chances of his independence to the 'advice' and unwritten directives of the Minister and the Secretary would be greater. If civil servants are to be appointed to such posts, the least the Government should do is to adopt the Chagla Commission's sound recommendation that (i) appointments to important offices in the autonomous corporations should not be looked upon as merely the transfer of an officer from one

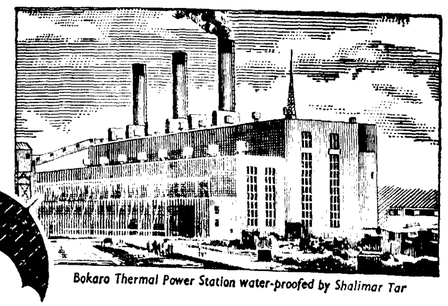
Proof of Stp project proofing . . .

. . . The play is on the word (p)roofing—for in supplying protective roofing materials for India's new Power Houses (SINDRI, BOKARO, TILAIYA, MAYURAKSHI, JAMSHEDPUR, HIRAKUD), administrative and residential buildings (SINDRI, CHITTARANJAN, JAMSHEDPUR), **Shalimar Tar Products** are project proofing, with roofing, in a big way!

Nor is it the only way. At Sindri, floors in production bays and stores are acid and alkali proofed by **Stp**; at Bhakra-Nangal, **Stp** water-proofing and Hotpour Expansion Jointing play their part.

This is on the project side. On an ever increasing scale **Shalimar Tar Products** also protect the homes and industries of India.



Bokaro Thermal Power Station water-proofed by Shalimar Tar

Over 12,000,000 sq. ft. of Shalimar waterproofing Tarfelt were supplied in one year to protect the roofs of India.

MADURA MILLS FARE BADLY

STRIKES AND ADVERSE TRADING CONDITIONS ARE MAIN CAUSE

FOR the second year in succession, the Directors of the Madura Mills Company Ltd. (Managers: Messrs. A. & F. Harvey Ltd., Madurai) have cut the dividend, this time from 17½ per cent. to 15 per cent. for the year ended 31st December 1957. While in the previous year the cut in the dividend rate from 20 per cent. to 17½ per cent. came more or less as a shock to investors in the Company's shares, in view of the excellent performance of the Company in that year, the recent further reduction may, however, be received with sympathy for the management. Even in the previous year, the Directors' action in lowering the dividend was justified, for they were motivated by a desire to avoid the penal rate of dividend tax of As. 6 per rupee on dividend paid in excess of 18 per cent. Besides, they also wanted to conserve and add to the liquid resources of the Company in order to finance the large-scale scheme of modernisation and rehabilitation of the mills during the next few years. The reason for the latest cut is obviously different. Higher wages, consequent on the implementation of an award by a Special Industrial Tribunal, long-drawn-out strikes in almost all the Company's mills and the highly depressed trading conditions in the yarn market, all these were cumulatively responsible for a drastic reduction in the Company's earnings and profit for the year under review. The heavy load of taxation was another factor which made an already difficult situation definitely worse. Indeed, even the attenuated dividend of 15 per cent. declared for the year has to be paid out of the large undistributed surplus of the previous year.

The gross profit for 1957 at Rs. 68.63 lakhs represents a decline of Rs. 57.67 lakhs or 45.66 per cent. from Rs. 126.30 lakhs for the previous year. This is the lowest gross profit earned by the Company since 1950, in which latter year it was a mere Rs. 22.11 lakhs. The net profit at Rs. 73,610 shows to what distressing levels the earnings of a progressive and up-to-date mill can descend in times of serious adversity. It bears no comparison with the profit of Rs. 44.20 lakhs for 1956 and a like amount for 1955. Despite the sharp fall in gross profit, the provision for taxation at Rs. 42.15 lakhs is still not appreciably lower than Rs. 51.50 lakhs made a year ago. A breakdown of this provision shows that Rs. 26.19 lakhs are on account of tax on current profits, Rs. 1.37 lakhs, tax deducted at source on income from investments and securities, Rs. 3.32 lakhs, additional super-tax on dividend paid in 1957, Rs. 3 lakhs wealth tax and Rs. 8.26 lakhs under provision in the accounts upto 31st December 1956, arising mainly from the Finance Act, 1957. The rate of wealth tax, which is supposed to be only at ½ per cent. of the net assets, works out to 4.4 per cent. of the gross profit and slightly more than four times the net profit of the Company. The provision for depreciation has been raised from Rs. 18.79 lakhs to Rs. 19.67 lakhs.

The following comparative table shows at a glance the Company's progress during the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds	18,09.22	15,63.67	14,82.85‡	16,01.79†
Other income	6.52	6.59	5.29	2.07
Closing stocks	2,15.42	41.71	35.94	2,89.44*
Raw materials consumed	9,64.14	9,96.54	9,48.18	10,35.08‡
Wages and other expenses	4,56.67	4,53.20	4,32.52	4,36.88
Gross profit	68.63	1,26.30	1,07.44	1,31.90

To reserves				20.00
Dividend	26.25 (15%)	30.63 (17½%)	35.00 (20%)	35.00 (20%)
Carry forward	6.92	32.44	18.87	9.67

* Include raw materials.
† Net sale proceeds.
‡ Only approximate.

Sale proceeds have fallen by no less than Rs. 2.55 crores to Rs. 13.09 crores. The decline of Rs. 32.40 lakhs in the cost of raw materials consumed apparently reflects the fall in output, resulting from the strikes in the mills, while the rise in the closing stocks from Rs. 41.71 lakhs to Rs. 215.42 lakhs points to the adverse conditions prevailing in the yarn market and the keen competition among yarn producers, following the addition of more spindles in the country.

Alluding to these conditions in their latest report, the Directors observe thus:

"The year 1957 has been a particularly difficult one for the Company and these difficulties have inevitably reflected themselves in the accounts for the year. As the result of the implementation of an award by a Special Industrial Tribunal, revised workloads and wages were introduced in June 1957. This was followed by strikes at several of the Company's mills; the Tuticorin Mill (approx. 60,000 spindles) was stopped for 46 days; the mills at Madurai (approx. 2,27,000 spindles) were stopped for 20 days and certain shifts in the Pandyan Mill (33,000 spindles), also at Madurai, were stopped for periods of five days. Prior and subsequent to these stoppages, all the Company's mills ran at efficiencies considerably below normal. After prolonged negotiations, in which the State Government also took part, the labour position has now almost returned to normal. It is hoped that, as efficiency and co-operation of the workers improve, the Company will be in a better position to face the future.

"In addition to the above, the yarn market has experienced a year of fluctuating fortunes. Business during the first part of 1957 was carried out at reasonable levels, but, from the second quarter onwards, the spinning industry shared in the general recession in the textile industry. Consumption of cloth, particularly of the handloom variety, has not reached the anticipated targets and this, coupled with the considerable expansion which has taken place in the spinning sector, has resulted in the Company carrying larger stocks of yarn at the end of the year than is normal."

An impressive financial position is disclosed by the Company's balance-sheet as at 31st December 1957. The reserves and surplus aggregate Rs. 4.31 crores, as against a paid-up capital of Rs. 1.75 crores, in ordinary shares of Rs. 15 each. Of these reserves, renewal and replacement reserve accounts for Rs. 2.44 crores, general reserve for Rs. 1.70 crores and provision for contingencies for Rs. 10.58 lakhs. The gross block of the value of Rs. 5.91 crores has been written down to Rs. 1.95 crores, the difference, namely, Rs. 3.96 crores being represented by the total depreciation provided up to the end of the accounting year. Additions to the gross block during the year were of the order of Rs. 9.13 lakhs. The current assets aggregate Rs. 7.32 crores, against which the current liabilities are of the order of only Rs. 3.21 crores. Of the current assets, Rs. 50.55 lakhs are represented by investments in shares and debentures (of which quoted investments are Rs. 17.09 lakhs with a market value of Rs. 22.80 lakhs), Rs. 79.55 lakhs by stores and spares, Rs. 512.35 lakhs by stock-in-trade, Rs. 82.23 lakhs by debts, deposits and advances and Rs. 6.93 lakhs by cash and bank balances.

The Rs. 15 fully paid-up shares of the Company are currently quoted at Rs. 35.25 *cum-div.* On an *ex-div.* basis, the shares provide a yield of 6.82 per cent. per annum.

BHARAT SUGAR FARES BETTER

In contrast to the decline suffered in the previous year, the Bharat Sugar Mills Ltd. (Managing Agents: The Cotton Agents Private Ltd., Bombay) show an improvement in its profit for the year ended 30th June 1957. The gross profit for the year under review at Rs. 5.50 lakhs shows a rise of Rs. 2.48 lakhs from Rs. 3.02 lakhs for the previous year, to which level it had steadily receded from Rs. 8.94 lakhs for 1953-54 and Rs. 5.06 lakhs for 1954-55. The net profit, after providing Rs. 1.60 lakhs for taxation, as against only Rs. 12,000 in the previous year and Rs. 94,400 for depreciation as against Rs. 70,300, also stands higher at Rs. 2.47 lakhs, as compared with Rs. 1.83 lakhs in the previous year. It is, however, still lower than Rs. 4.11 lakhs earned in 1953-54, while it is only a shade better than Rs. 2.31 lakhs in 1954-55.

A gratifying feature of the Company's results under review is that the net profit is sufficient to maintain the dividend on the ordinary shares at the rate of 15 per cent. paid for the past few years. In the previous year, owing to the decline in the Company's gross as well as net profits, the Directors had to draw a sum of Rs. 50,000 from the dividend equalisation reserve to pay the dividends. No amount has been transferred to the reserves for the third year in succession. Indeed, the last occasion when the Company made any allocation to reserves was in 1953-54, when a sum of Rs. 1.50 lakhs was transferred to the dividend equalisation reserve.

The factory, which is situated at Sidhwalia, in the Saran District in Bihar State, and has a crushing capacity of 650 tons of cane per day, worked for 158 days during the year under review, as against 181 days in the preceding year. The quantity of sugarcane crushed at 2,256,545 maunds was also lower, as compared with 2,498,153 maunds a year ago. It is stated that the lower crush during the year was due to a fall in the area under sugarcane in the factory area and the infestation of the crop by red rot disease. A redeeming feature was the higher average recovery at 9.63 per cent., as compared with 9.48 per cent. in the previous year. Sales and despatches were also satisfactory. It is interesting to note that the Company was able to sell about 2,000 tons of sugar for export during the current year. The Directors state that, due to severe drought conditions and shrinkage in the area under sugarcane cultivation, consequent on the diversion to other food crops, a crushing of only about 1.8 million maunds of sugarcane is expected during the current year. The Company has some small farms of its own which yielded 48,000 maunds of sugarcane, as against only 42,000 maunds in the previous year.

The following comparative table brings out the Company's progress in working during the last four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1957	1956	1955	1954
Sale proceeds	73.32	60.29	25.86	60.95

	(15%)	(15%)	(15%)	(15%)
Carry forward	0.08	0.02	0.13	0.26

* Approximate.

The latest balance-sheet of the Company shows the paid-up capital at Rs. 20 lakhs in 150,000 ordinary shares of Rs. 10 each and the balance in 5,000 five per cent. taxable cumulative preference shares of Rs. 100 each. These are supplemented by reserves and surplus aggregating Rs. 13.59 lakhs. The gross block of Rs. 19.29 lakhs stands well written down to Rs. 5.88 lakhs. The current liabilities amount to Rs. 31.47 lakhs, against which the current assets aggregate Rs. 59.17 lakhs. Of the current assets, the stock-in-trade alone, valued at Rs. 32.33 lakhs, more than covers the current liabilities, as also the provision for taxation.

The Rs. 10 fully paid-up ordinary shares are nominally quoted at Rs. 13.50 *ex-div.*, at which rate the yield is 11.11 per cent. per annum.

RAZA BULAND SUGAR COMPANY LTD.

The Raza Buland Sugar Company Ltd. [Managing Agents: Messrs. Govan Bros. (Rampur) Private Ltd., Rampur, U.P.] has earned a higher gross profit of Rs. 40.60 lakhs for the year ended 31st October 1956, as compared with Rs. 25.63 lakhs in the previous year. It has to be stated at the outset that the scheme of amalgamation of the Raza Sugar Company Ltd. with the Buland Sugar Company Ltd. was implemented with effect from 1st November 1955. The accounts for the year under review, therefore, relate to the working of the amalgamated company, while the accounts of the previous year represent the combined working of the two companies in their individual capacity. The net profit, after raising the provision for taxation from Rs. 7.35 lakhs to Rs. 17.50 lakhs and that for depreciation from Rs. 3.06 lakhs to Rs. 3.83 lakhs, also stands higher at Rs. 15.60 lakhs, as against Rs. 13.01 lakhs in the preceding year. Out of the net profit, general reserve has been provided with Rs. 6.50 lakhs. The allocation in the previous year consisted of Rs. 3.50 lakhs to general reserve and Rs. 89,008 to reserve for bad and doubtful debts. The dividend is proposed to be paid at 15 per cent., same as in the previous year. It must, however, be noted here that the dividend for 1955-56 is on a higher capital of Rs. 63.59 lakhs, following the creation of 299,400 fully paid-up ordinary shares of Rs. 10 each. The new shares are in exchange for 199,960 ordinary shares of Rs. 10 each fully paid-up of the Raza Sugar Company Ltd., in accordance with the scheme of amalgamation. These shares rank for dividend from the financial year commencing from 1st November 1955.

Sale proceeds for the year rose from Rs. 1.33 crores in 1954-55 to Rs. 2.95 crores. Both Raza and Buland factories commenced crushing operations early in December 1955. The number of days worked was 205 and 215 and the quantity of cane crushed was 5,533,418 and 5,522,667 maunds, as against 146 and 148 days and 3,580,597 and 3,507,290 maunds, respectively, in 1954-55.

The paid-up capital of the amalgamated Company stands at Rs. 63.59 lakhs. The reserves and surplus stand at Rs. 85.88 lakhs. The gross block of Rs. 67.03 lakhs has been written down to Rs. 41.35 lakhs. Besides, there is a sum of Rs. 1.09 lakhs by way of construction work in progress. As against current assets of the order of Rs. 183.64 lakhs, current liabilities stand at only Rs. 76.62 lakhs.

The success of the offer for sale of shares in Indian Oxygen Ltd. by the British Oxygen Company Ltd. has already been reported and details have now been received indicating the basis of acceptance. It will be recalled that after reserving 30,000 shares for employees, a balance of 570,000 were available for the public. It is learned that over 1,800,000 shares were applied for by the public and applications for the minimum quantity (50 shares) alone exceeded one million.

In order to achieve the broadest spread, the British Oxygen Company, Ltd. has given priority to the smaller applications on the following basis:

50 shares 40 per cent., 100 shares 25 per cent., 150 shares, 200 shares, 250 shares and 300 shares 20 per cent. Higher denominations have been accepted at a reducing percentage down to a minimum of approximately 7 per cent.

KUMERGODE'S PROFIT IMPROVES

DIVIDEND ALSO HIGHER

THE sharp recession in earnings and profit suffered by the Kumergode Estates Ltd. (Managing Agents: Messrs. Peirce, Leslie & Co., Ltd., Mangalore) in the year ended 31st October 1956 has been more than offset by the Company's highly encouraging working during the following year, that is, 1956-57. This was possible because of the sizable improvement in production of coffee. The price fetched by the crop was also satisfactory, having been fully maintained at the previous year's level. The year's coffee crop at 3,163 cwts. is substantially higher than 1,943 cwts. harvested in the previous year while, it is even slightly better than the erstwhile high of 3,021 cwts. in 1954-55. The value realised was unchanged at Rs. 2.50 per point.

The bumper crop and the consequent higher sale proceeds have naturally resulted in an impressive rise in the Company's gross profit. This has enabled the Company not only to enhance its distribution to the shareholders but also to conserve a larger sum for the rainy day than was possible in the previous year. The shareholders will be gratified that their dividend has been raised to 25 per cent. from 20 per cent. for 1955-56 and 1954-55. It may be noted here that the Company had declared a maiden dividend of 10 per cent. only in 1953-54.

The gross profit at Rs. 2.99 lakhs is more than three times the Rs. 95,347 earned in the previous year, and is comfortably higher than Rs. 2.29 lakhs for 1954-55. Indeed, the year's gross profit is a new peak in the Company's history. The net profit is fully in consonance with the rise in the gross profit. At Rs. 1.88 lakhs, it has more than quadrupled from Rs. 45,796 for the previous year. The allocation to reserves at Rs. 1.30 lakhs is also higher by Rs. 1 lakh. Thus, the general reserve has been provided with Rs. 1 lakh, as against *nil* in the previous year. The transfer to debenture redemption reserve has been maintained at Rs. 30,000. The latter item represents the value of debentures redeemed during the year.

The following comparative table brings out some of the salient features of the Company's working during the past four years:

(Value in rupees)

	For the year ended 31st October			
	1957	1956	1955	1954
Proceeds of coffee crop	5,50,558	4,88,387	5,70,218	3,75,002
Proceeds of other crop	3,866	2,749	2,628	2,402
Expenses	3,75,288	3,13,928	3,45,406	2,88,204
Gross profit	2,99,126	95,347	2,29,395	90,564
Managing Agents' remuneration	21,700	7,100	13,317	11,028
Depreciation	21,176	22,642	20,362	9,775
Taxation	67,873	19,800	33,705	..
Net profit	1,88,287	45,796	1,62,011	69,186
Preliminary expenses written off	..	..	..	24,380
To reserves	1,30,000	30,000	1,30,000	50,312
Dividend	50,000 (25%)	40,000 (20%)	40,000 (20%)	20,000 (10%)
Carry forward	45,670	37,383	61,687	69,675
Coffee crop (in cwts.)	3,163	1,943	3,021	1,880
Value of coffee per point (Rs.)	2.50	2.50	2.25	2.50

It is interesting to learn that the year's output of coffee has exceeded even the original estimate of 3,000 cwts. which was subsequently revised downwards to 2,800 cwts. The above table reveals that sale proceeds from the coffee crop for the year at Rs. 5,50,558 are better than those for 1955-56 and 1953-54 but slightly lower than that for 1954-55.

The Company's estate, consisting of 782.62 acres, is situated in Mysore State. Of this area, 572.47 acres are under mature coffee (Arabica 466.73 acres and Robusta 105.74 acres) and 38.26 acres under immature coffee (Arabica 27 acres and Robusta 11.26 acres). The area in reserve is 81.60 acres. The balance is devoted to cardamoms (2.06 acres), oranges (4.94 acres), paddy (59.02 acres) and sites, roads, etc., 24.27 acres.

The current season's (1957-58) crop is estimated at 3,540 cwts. The visiting agent's report indicates that the estate is being maintained in good order.

A satisfactory financial position is disclosed by the Company's latest balance-sheet. Its paid-up capital remains unchanged at Rs. 2 lakhs, all in ordinary shares of Rs. 2 each. This is supplemented by reserves and surplus aggregating Rs. 3.86 lakhs. The debenture liability on account of 7½ per cent. 1955-64 debentures has been reduced by Rs. 30,000 to Rs. 2.10 lakhs. The current liabilities amount to Rs. 2.16 lakhs. This is inclusive of a provision of Rs. 85,000 for taxation. The gross block of Rs. 7.68 lakhs stands depreciated at Rs. 6.86 lakhs. There have been additions during the year of a total value of Rs. 80,395 of which Rs. 34,532 on water-supply represents cost of constructing two more masonry tanks and extending the pipelines for both spraying and domestic use. The current assets at Rs. 3.25 lakhs, in which cash balances alone account for Rs. 1.15 lakhs, are enough to cover the current liabilities, as well as the provision for taxation.

The Rs. 2 fully paid-up shares of the Company are currently quoted at Rs. 7 *cum-div.* On an *ex-div.* basis, and on the basis of the latest dividend, the yield is 7.7 per cent. per annum.

Points From The Chair

Rephasing of Plan

"IN the present and the immediate future I believe that the utmost attention should be given to the completion of those projects included within the second Five-year Plan which are already substantially advanced. This applies particularly to those which, when in operation, will achieve early savings of foreign exchange. Concentration in this direction at this moment even at the cost of deferring the commencement of other attractive projects which may also eventually achieve exchange savings by avoidance of imports is the only way in which quick results can be counted upon. Coupled with a review designed to take advantage of progress already made there should be, in my opinion, an early objective examination and rephasing of the remainder of the second Five-year Plan with due regard to the resources now available to us. The time for proceeding on the assumption that windfalls will come from some direction or other, so as to enable us to avoid a crisis is, in my opinion, passed. At all costs, we must endeavour to avoid a reduction in economic activity as the result of a shortage of imported raw materials or semi-finished goods necessary to sustain the industries already started or far advanced in construction."

DR. A. RAMASWAMI MUDALIAR,
Industrial Credit and Investment Corporation of India Ltd.

Encouragement of Travel

"The importance of tourism as a major factor in the balance of international payments is being increasingly recognised all over the world. I should like to pay tribute to the value of the activities in this country of the British Travel and Holidays Association and in Australia by the Australian National Travel Association in attracting tourists from overseas. Each country that seeks to increase its revenue from overseas tourists must do everything possible to encourage the complete chain of the best possible transport by sea and air, the minimum of irksome and irritating Government inspections and formalities at its ports, and good hotel and sightseeing arrangements to ensure that tourists carry with them the best possible impression of the country when they go home. Such chains can only be as strong as their weaker links and I was glad to see how clearly this fact was realised by the representatives of all the Governments and industries concerned at the Pacific Area Travel Association Conference which I attended in Canberra last year. . . . Another important factor in encouraging people to travel—especially those with no previous experience of doing so—is the growing simplification of the facilities given them for making and paying for all their arrangements for transport, sightseeing and hotel accommodation before they leave their homes. In this field of what are sometimes known as "packaged tours" the travel agent as a creator of traffic plays an important part. We regard him as being just as much an integral part of our sales organisation as we do our own offices or general agents. Furthermore, we need and receive his help in offering our passengers facilities for easy sightseeing at our ports of call. About one-third of our total passage money comes through travel agents and we are convinced that we get good value for the commission we pay them in return."

SIR AUSTIN I. ANDERSON,
Orient Steam Navigation Co., Ltd., London.

International Tin Agreement

"At a meeting of the International Tin Council held early in December 1957, it was decided to restrict tin exports from those countries which ratified the International Tin Agreement by imposing a cut of 28½ per cent. in the annual rate of production for the period 15th December 1957 to 14th March 1958. The effect of this restriction varies considerably as between the producing countries and, for Malaya constitutes a reduction of approximately 34 per cent. of the average production during the years 1953-57, which, for the purpose of assessment, is taken as the 'base period.' Within six weeks of imposing its first restriction on tin exports, the International Tin Council has again considered the situation and at a recent meeting it agreed on quotas destined to reduce supplies from the six main producing countries under the Agreement, not by 28½ per cent. as before announced but by approximately 40 per cent. It is, therefore, thought probable that the Malayan output for the second quarter of the current year may be reduced by as much as 48 per cent. in order that exports of tin may be kept at the level authorised by the Tin Council. For the producers who have yet to pay to their Governments the second and third contributions each of 5,000 tons metal, or the cash equivalent, the cost, both in reduced output and in cash, of maintaining the scheme is considerable."

D. W. THOMAS,
Rambutan Ltd., Redruth.

COMPANY MEETINGS AND DIVIDENDS

LOYAL TEXTILE MILLS LTD. Annual General Meeting, Kovilpatti (South India), 20th March 1958. Dividend: Rs. 2.50 (5 per cent.) per share. Transfer books remain closed from 14th to 20th March 1958, both days inclusive.

STANDARD BATTERIES LTD. Annual General Meeting, Bombay, 24th March 1958. Dividend: Rs. 8.00 per share, payable on 26th March 1958. Transfer books will remain closed from 17th to 31st March 1958, both days inclusive.

AZAM JAHI MILLS LTD. Annual General Meeting, Hyderabad-Deccan, 27th March 1958. Dividend: Rs. 3.50 per share, payable on and after 15th April 1958. Transfer books remain closed from 14th to 28th March 1958, both days inclusive.

OSMANSHAHI MILLS LTD. Annual General Meeting, Hyderabad, Deccan, 28th March 1958. Dividend: Nil. Transfer books remain closed from 14th to 28th March 1958, both days inclusive.

ANAPARAI ESTATES LTD. Annual General Meeting, Balehonnur, Mysore State, 29th March 1958. Dividend: Re. 0.80 per share. Transfer books will remain closed from 22nd to 29th March, 1958, both days inclusive.

SIRPUR MILLS LTD. Annual General Meeting, Somajguda, Hyderabad-Deccan, 31st March 1958. Dividend: Re. 0.50 per share. Transfer books will remain closed from 17th to 31st March 1958, both days inclusive.

KELVIN JUTE CO., LTD. Annual General Meeting, Calcutta, 31st March 1958. Dividend: Rs. 9.00 (includes interim dividend of Rs. 4.00 per share) per share, for the eleven months ended 31st May 1957. Transfer books will remain closed from 17th to 31st March 1958, both days inclusive.

J. K. CHEMICALS LTD. Annual General Meeting, Bombay, 31st March 1958. Transfer books will remain closed from 17th to 31st March 1958, both days inclusive.

INDOCO REMEDIES LTD. Annual General Meeting, Bombay, 31st March 1958. Transfer books remain closed from 14th to 31st March 1958, both days inclusive.

SIJUA (JHERRIAH) ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 31st March 1958. Dividend: Re. 0.75 (7½ per cent.) per share. Transfer books will remain closed from 20th to 31st March 1958, both days inclusive.

HINDUSTAN LEVER LTD. Annual General Meeting, Bombay, 7th April 1958. Dividend: Re. 1.40 per share, payable on 8th April 1958. Transfer books will remain closed from 31st March to 7th April 1958, both days inclusive.

INDUSTRIAL CREDIT AND INVESTMENT CORPORATION OF INDIA LTD. Annual General Meeting, Bombay, 7th April 1958. Transfer books remain closed from 15th March to 7th April 1958, both days inclusive.

INDUSTRIAL INVESTMENT TRUST LTD. Annual General Meeting, Bombay, 8th April 1958. Transfer books will remain closed from 24th March to 8th April 1958, both days inclusive.

KIL KOTAGIRI TEA AND COFFEE ESTATES CO., LTD. Final dividend of Re. 0.30 per share (15 per cent.), for the year ended 31st October 1957. Transfer books will remain closed from 1st to 12th April 1958, both days inclusive.

DEVASHOLA (NILGIRI) TEA ESTATES CO., LTD. Interim-dividend of Re. 0.75 per share, for the year ended 31st December 1957.

VIJAYESWARI TEXTILES LTD. Dividend of Rs. 3.00 per share, for the year ended 31st December 1957.

SIRPUR PAPER'S OUTPUT HIGHER

RAVALGAON SUGAR REPEATS DIVIDEND

Sirpur Paper Mills Ltd.

THE directors of the above Company (Managing Agents: Messrs. Birla Brothers Private Ltd., Somajiguda (Hyderabad-Deccan) submit the audited accounts of the Company for the year ended 30th June 1957.

The profit and loss account after providing Rs. 17,63,251 (Rs. 3,00,000) for depreciation, Rs. 1,343 (*nil*) for bad and doubtful debts and Rs. 82,000 (*nil*) for wealth tax, shows a profit on the year's working of Rs. 13,16,590 (Rs. 15,19,261) to which is added the balance brought forward from the previous year, of Rs. 17,813 (Rs. 13,708) making a total of Rs. 13,34,403 (Rs. 15,32,969). From this amount there has been paid for forfeited dividends Rs. 857 (*nil*) and for brokerage and commission on issue of shares Rs. 10,161 (Rs 1,13,622) leaving a balance available for disposal of Rs. 13,23,385 (Rs. 14,19,347). The directors recommend payment of dividends on 40,480 (36,480) cumulative redeemable preference shares of Rs. 100 each fully paid up at 6 per cent. per annum without any deduction of income-tax absorbing Rs. 2,25,126 (Rs. 2,09,772) and on 21,85,524 ordinary shares of Rs. 10 each fully paid up at Re. 0.50 (Re. 0.50) per share, without any deduction of income-tax Rs. 10.92.762 (Rs. 10,92,762) leaving a balance to be carried forward of Rs. 5,497 (Rs. 17,813).

During the year under report, the production of paper was about 17,405 tons as against 14,200 tons in the previous year and 13,700 tons in the year prior to that.

The results of the working of the Company, during the year under review, are considered satisfactory particularly in view of the fact that the cost of production was higher consequent to the all-round increase in the prices of raw materials, chemicals, railway freight and wages, and the prices of paper were maintained almost at the old rates.

The Government of India have, since 16th May 1957, increased the excise duty on the paper and board by about 60 per cent. to 92 per cent. on different categories of paper and board, while inter-State sales tax has also come into force with effect from 1st July 1957.

The disputes between the workmen and the management, reported in the previous year's report, have been amicably settled. All pending cases before the Industrial Tribunals and High Court, have been withdrawn. Consequently, the relationship between the workmen and management now continues to be quite satisfactory. The assurances of co-operation given by the workmen could reasonably expected to produce better results all-round and particularly, in stepping up production.

There has been delay in the arrival of extension machinery and the target date for completion of expansion had to be shifted a little further. As the machinery have already started arriving and the erection work is well in hand, it is expected that the different plants would start going into production in the next few months.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,59,52,530	Block ...	3,09,64,819

Ravalgaon Sugar Farm Ltd.

The directors of the above Company (Managing Agents: Messrs. Walchand & Co. Private Ltd., Bombay) present the audited accounts of the Company for the year ended 30th September 1957.

The net profit for the year after providing Rs. 8,50,000 (Rs. 7,50,000) for taxation is Rs. 13,96,064 (Rs. 13,88,899) to which is added the amount brought forward from the previous year of Rs. 67,511 (Rs. 64,612) making a total of Rs. 14,63,575 (Rs. 14,53,511). From this amount the directors propose to transfer to reserve for special depreciation and development rebate Rs. 2,75,000 (Rs. 1,43,000), to general reserve Rs. 1,45,000 (Rs. 2,00,000), to dividend equalisation reserve Rs. 80,000 (*nil*), to debenture redemption reserve Rs. 2,00,000 (Rs. 3,00,000) and to reserve for contingencies including gratuity Rs. 75,000 (Rs. 1,25,000). The directors also recommended payment of dividends on preference shares at 5½ per cent. (less income-tax) Rs. 1,10,000 (Rs. 1,10,000), on ordinary shares at Rs. 12 (Rs. 12) per share without deducting income-tax) Rs. 4,80,000 (Rs. 4,80,000) and on deferred shares at 7 per cent. (less income-tax) Rs. 28,000 (Rs. 28,000) leaving a surplus to be carried forward Rs. 70,575 (Rs. 67,511).

The factory commenced crushing on 8th November 1956 and the same was stopped on 1st June 1957. Sugarcane crushed during the season was 1,48,249 (1,42,432) tons while sugar manufactured 1,69,202 (1,68,140) bags with a recovery of 11.53 (11.07) per cent.

During the year under report the confectionery plant at Ravalgaon produced about 794 (490) tons of confectionery and about 15,705 (Rs. 10,577) maunds of sugar-candy.

The factory continued to produce wax from cane mud. About 7,672 (11,131) lbs. of wax was produced during the year.

The area of land taken on lease by the Company is 2,370 acres and 15 gunthas, while the area of land owned by the Company is 6,511 acres and 15¾ gunthas.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	44,00,000	Block ...	45,49,203

		Cash ...	3,21,768
Rs.	1,69,73,037	Rs.	1,69,73,037

Loyal Textile Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. Thiagaraja Chetty and Sons Private Ltd., Kovilpatti, South India) present the audited accounts of the Company for the year ended 30th June 1957.

The year's working has resulted in a profit of Rs. 8,57,168 (Rs. 10,31,019). After providing Rs. 2,37,710 (Rs. 1,75,777) for normal and special depreciation, Rs. 2,35,000 (Rs. 53,915), for development rebate, Rs. 2,00,000 (Rs. 4,00,000) for income-tax and Corporation tax and Rs. 22,500 (*nil*) for wealth tax, there is a balance of Rs. 1,61,958 (Rs. 4,01,327). This sum together with Rs. 75,058 (Rs. 1,94,590) brought forward from last year and amounting to Rs. 2,37,016 (Rs. 5,95,917) is available for distribution. An interim dividend of 2½ per per cent. (free of tax) has already been paid on preference shares. The directors recommend the following dividends out of the balance of Rs. 198,725 (Rs. 3,63,822).

A final dividend of 2½ per cent. tax free on preference shares absorbing Rs. 37,473 (Rs. 37,473) and a dividend of 5 (7½) per cent. tax free on equity shares of the Company absorbing Rs. 1,57,590 (Rs. 2,36,291) leaving a balance of Rs. 3,662 (Rs. 75,058 after providing Rs. 15,000 for dividend on deferred shares) to be carried forward to the next year's account.

The directors regret that they could not maintain the same dividend as last year, on account of adverse trading conditions prevailing during the year and the heavy incidence of excise duty. On the mills' products the Government has collected during the year Rs. 7,26,280 as excise duty and Rs. 2,27,557 as sales tax.

The directors are indeed pleased to state that since the last annual report 6,000 spindles out of 12,000 have been installed and commissioned during the year. They expect to install the balance of 6,000 spindles before the end of current year.

S. L. KOTHARI,
General Manager.

The accounts show that a profit of Rs. 15,66,094 (Rs. 13,59,518) for the year 1956-57 after providing Rs. 51,000 for payment of bonus to staff and Rs. 2,14,155 extra price for cane. To this amount is to be added the balance of profit brought forward from 1955-56 account of Rs. 1,90,836 (Rs. 1,42,520), excess provision for bonus in 1955-56 Rs. 10,153 (Rs. 1,240) and subsidy from the Government of India for Industrial Housing Colony Rs. 29,700 (*nil*) making a total of Rs. 17,96,783 (Rs. 15,03,278). After deducting expenses not relating to the year of account and donations amounting to Rs. 6,704 (*nil*) leaving an available balance of Rs. 17,90,079 (Rs. 15,03,278). The directors have made the following appropriations:

Tax free dividend at 12½ per cent. on the paid-up capital Rs. 3,75,000 (Rs. 4,39,411 being dividends for two years, viz., 1954-55 and 1955-56. The dividend for 1954-55 was 6 per cent. and 10 per cent. for the year 1955-56) amount transferred to the general reserve Rs. 9,00,000 (Rs. 5,00,000), amount transferred to dividend equalisation reserve Rs. 2,50,000 (Rs. 3,00,000), to gratuity reserve Rs. 25,000 (*nil*) and to provision for taxes Rs. 2,25,000 (*nil*) leaving the balance of Rs. 15,079 (Rs. 1,90,837 after paying Rs. 67,068 being extra amount for purchase of cane, Rs. 600 towards donations and Rs. 5,632 as brokerage on shares) to be carried forward to next year's account.

During the year under report the Company's sugar factory commenced crushing on 12th December 1956, and closed it on 7th May 1957 during which period 1,07,078 (86,489) tons of sugarcane was crushed and 11,468 (9,375) tons of sugar was produced. The recovery of sugar for the season was 10.70 per cent. as against 10.84 per cent. for the previous season.

The directors are glad to report that the extension plant has worked successfully during the last season. It is expected that the factory will crush 1,000 to 1,200 tons per day during 1957-58 season. The factory has commenced production on 1st December 1957, for the 1957-58 season.

During the year under report the directors acquired for the Company shares in Shree Akkamamba Textiles Ltd., 17,500 fully paid-up shares of Rs. 10 each of the total value of Rs. 1,75,000.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,00,000	Block ...	3,09,64,819
Reserves ...	19,50,000	Stock-in-trade	27,68,024
Provision for taxation ...	2,25,000	Stores, spare parts and loose tools	9,92,224
Liabilities ...	51,47,274	Other assets	4,079
Profit and loss account ...	15,080	Loans and advances ...	5,68,353
		Investments	1,95,000
		Cash ...	79,555
Rs.	1,03,37,354	Rs.	1,03,37,354

Kelvin Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the 11 months ended 31st May 1957.

The profit for the period, after providing for depreciation Rs. 3,57,878 and taxation Rs. 2,40,000 including wealth tax, amounts to Rs. 2,48,578, to which must be added the credit balance brought forward from the previous half-year of Rs. 91,333 making a total of Rs. 3,39,911. From this amount is deducted—dividends previously forfeited now paid Rs. 10 leaving a balance of Rs. 3,39,901. The interim dividends for the period ended 31st May 1957, declared by the directors on 12th December 1957: on 10,000 preference shares at Rs. 3 per share absorbed Rs. 30,000 and on 21,000 ordinary shares at Rs. 4 per share absorbed Rs. 84,000 leaving an available balance of Rs. 2,25,901 which the directors recommend should be distributed as follows:—

To final dividend on 10,000 preference shares at Rs. 3.42 nP per share for the period ended 31st May, 1957 absorbing Rs. 34,200 and final dividend on 21,000 ordinary shares at Rs. 5.00 per share for the period ended 31st May, 1957 absorbing Rs. 1,05,000 leaving to be carried forward Rs. 86,701.

Jute stocks are shown at cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 31st May, 1957, have been valued at market rates.

In accordance with the working time agreement of the Indian Jute Mills' Association, the mills continued to work 48 hours per week throughout the year with 5 per cent. of the total complement of the looms sealed until the 14th July, 1956, with 7½ per cent. sealed from 16th July to 15th September, 1956, and with 12½ per cent. sealed from the 17th September, 1956, to the end of the accounting period.

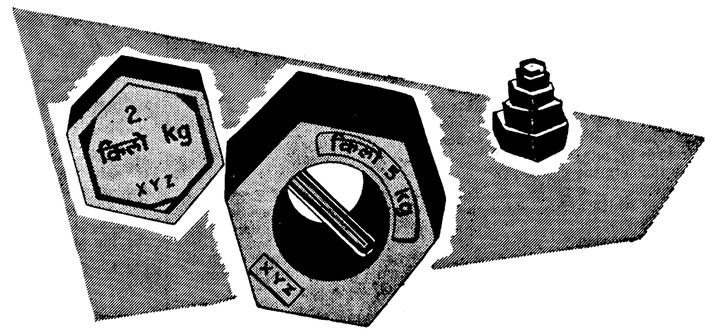
The year under review has been a difficult one as far as trading conditions were concerned and raw jute prices remained high in relation to the price of manufactured goods, and it was difficult to transact business at a profit.

Accounts in brief are as under:—

Liabilities	Rs	Assets	Rs.
Capital ...	31,00,000	Block ...	46,67,316
Reserves ...	53,00.000	Stock-in-trade	41,77,326
Provision for taxation ...	54.797	Stores and spare parts	11,47.977
Liabilities ...	38,94,327	Debts, deposits and advances ...	15,00.286
Profit and loss account ...	86.701	Investments	6,02.444
		Cash ...	3,34,396
Rs.	1,24,35,745	Rs.	1,24,35,745

N.B.—Figures within brackets relate to the corresponding period of the previous year.

CHANGING OVER TO
THE METRIC SYSTEM



India has at present no common system of weights and measures. There are not less than 143 systems in use. This multiplicity gives room for malpractices. The introduction of a uniform system throughout the country based on Metric Weights and Measures will be very convenient and make calculations extremely easy, especially because the country has already adopted the decimal coinage. The Standards of Weights and Measures Act, 1956 has laid down the basic units under the metric system. The reform will be gradual so as to cause minimum inconvenience to the people.

Even after its introduction in an area or a trade, the traditional weights and measures will be permitted to be used for a period of three years.

THE CHANGE-OVER TO THE METRIC SYSTEM OF WEIGHTS AND MEASURES BEGINS FROM OCTOBER, 1958

KNOW THE METRIC WEIGHTS

The basic unit of weight is the KILOGRAM= 1 seer 6 tolas (or 86 tolas.) or 2 lb. 3 ozs.

SUB-UNITS
10 milligrams = 1 centigram
10 centigrams = 1 decigram
10 decigrams = 1 gram
10 grams = 1 decagram
10 decagrams = 1 hectogram
10 hectograms = 1 kilogram

MULTIPLES
100 kilograms = 1 quintal
10 quintals or 1000 kilograms = 1 metric tonne

Notices

INDUSTRIAL INVESTMENT TRUST LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-fifth Annual General Meeting of Industrial Investment Trust Ltd. will be held at the Registered Office of the Company, 61, Apollo Street, Fort, Bombay, on Tuesday the 8th April, 1958, at 4 p.m. (S.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ended 31st December, 1957.

(2) To declare a Dividend.

(3) To appoint a Director in place of Sir Joseph Kay, K.B.E., who retires by rotation and is eligible for re-appointment and to consider, and if thought fit, to pass the following resolution of which a special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company.

"Resolved that pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir Joseph Kay, K.B.E., who has attained the age of 74 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him."

(4) To appoint a Director in place of Mr. Kishore M. Premchand who retires by rotation, in accordance with the Articles of Association of the Company, and being eligible offers himself for re-election.

(5) To appoint Auditors for the current year and to fix their remuneration.

NOTICE is also hereby given that the Transfer Books of the Company will remain closed from Monday the 24th March 1958 to Tuesday the 8th April 1958, both days inclusive.

By Order of the Board,
PREMCHAND ROYCHAND & SONS,
Secretaries and Treasurers.

BOMBAY, *5th March*, 1958.

Explanatory Statement as required under Section 173 of the Companies Act, 1956.

Item No. 3 of the Notice.—Sir Joseph Kay, K.B.E., who retires by rotation and is eligible for re-appointment, has attained the age of 74 years, he having been born on 20th January, 1884, and hence he cannot be appointed a Director of the Company except by a resolution in respect of which a special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a notice from some members notifying their intention to move the resolution as set out in the said item. Sir Joseph Kay, K.B.E., has been a Director of the Company ever since its inception. As a business man of wide and varied experience closely associated for a long time with the Company, he has rendered very valuable services to the Company and it is in the interest of the Company that it should continue to receive the benefit of his services.

Notes.—(*a*) A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

(*b*) The dividend when declared will be made payable at the Bank of India Ltd., Bombay, on and after the 30th day of April 1958. The Dividend Warrants will be posted to those Shareholders whose names stand on the Register on the 8th day of April, 1958.

Change of address, if any, should be notified to the Company immediately.

By Order of the Board,
PREMCHAND ROYCHAND & SONS,
Secretaries and Treasurers.

BOMBAY, *5th March*, 1958.

HINDUSTAN LEVER LIMITED

NOTICE OF MEETING

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Members of HINDUSTAN LEVER LIMITED will be held at the INDIAN MERCHANTS' CHAMBER HALL, Lalji Naranji Memorial Building, 76, Veer Nariman Road, BOMBAY-1, on Monday, 7th April 1958, at 4 p.m., for the following purposes, namely:

ORDINARY BUSINESS

1. To receive and consider the Accounts and Balance Sheet, and the Reports of the Directors and Auditors.
2. To declare a dividend for the year 1957.
3. To elect Directors.
4. To re-appoint the Auditors and fix their remuneration for the year ending 31st December 1958.

SPECIAL BUSINESS

5. To consider and if thought fit to pass the following resolution which will be proposed as a Special Resolution:

"That the Articles of Association of the Company be amended in the manner following, that is to say:—

"(1) the following shall be added to Clause 14:

'Provided that option or right to call of shares shall not be given to any person except with the sanction of the Company in General Meeting.'

(2) The following shall be added to Clause 45:

'Provided that option or right to call of forfeited shares shall not be given to any person.'"

A MEMBER OF THE COMPANY ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF. A PROXY NEED NOT BE A MEMBER.

The Transfer Books of the Company will be closed from 10th March to 14th March 1958 (both days inclusive) and again from 31st March to 7th April 1958 (both days inclusive).

By Order of the Board,
K. T. CHANDY,
Secretary.

Dated the 10th day of March, 1958.
INDIA HOUSE, FORT STREET,
BOMBAY-1.

Statement pursuant to Section 173 of the Companies Act 1956 and Clause 77 of the Articles of Association in regard to Item No. 5 of the Agenda

The Securities Contracts (Regulation) Act, 1957, and the Rules made thereunder provide that option or right to call of shares shall not be given to any person except, in certain circumstances, with the sanction of the Company in General Meeting. The purpose of the proposed amendments is to comply with the above Act and Rules and the requirements of the Stock Exchanges on which the Company's shares are listed.

To all Shareholders of the Company and in particular Uniliver Limited, London.

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fiftieth Annual General Meeting of the Company will be held at Construction House, Ballard Estate, Fort, Bombay, on Friday the 11th April 1958, at 4-30 p.m. (S.T.), for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 30th September 1957.
2. To declare Dividends on Preference and Ordinary Shares.
3. To appoint a Director in place of Shri Jyotendra L. Mehta who retires by rotation and who is eligible for re-appointment.
4. To appoint a Director in place of Shri Tulsidas Kilachand who retires by rotation and who is eligible for re-appointment.
5. To appoint a Director in place of Shri Bahubali Gulabchand who retires by rotation and who is eligible for re-appointment.
6. To appoint a Director in place of Shri Phoolchand Ramchand Gandhi who was appointed an Additional Director of the Company and who ceases to hold office under Section 260 of the Companies Act, 1956, and who is eligible for re-appointment. The Company has received a notice in writing proposing his candidature for office of Director as required under Section 257 of the Companies Act, 1956.
7. To appoint and/or approve the appointment pursuant to Section 281 of the Companies Act, 1956, of Rao Bahadur Jivatlal Purtapshi who is a Debenture Director of the Company, and to consider and, if thought fit, to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company:—

"Resolved that pursuant to the provisions of Section 281 and other relevant provisions (if any) of the Companies Act, 1956, the appointment of Rao Bahadur Jivatlal Purtapshi who has attained the age of 70 years be and is hereby made and/or approved as Debenture Director and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

8. To appoint Auditors for the current year and to fix their remuneration.
9. To consider and, if thought fit, to pass the Special Resolutions contained in the notice posted to members.

The Transfer Books of the Company will remain closed as from Saturday the 22nd March 1958, to Monday the 14th April 1958 (both days inclusive).

By Order of the Board,
B. D. SARDESAI,
Secretary.

CONSTRUCTION HOUSE,
BALLARD ESTATE, FORT,
BOMBAY, *25th February* 1958.

Note.—(1) A Member entitled to attend and vote at the meeting is entitled to appoint a Proxy to attend and vote instead of himself and the proxy need not be a Member.

(2) The Dividends, if sanctioned, will be paid at the Bank of India Ltd., Fort, Bombay, on and from Wednesday the 30th April 1958, to those Members whose names stand on the Company's Register as on Monday the 14th April 1958.

THE JAY SHREE TEA GARDENS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twelfth Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at India Exchange (2nd Floor), India Exchange Place, Calcutta-1, on Wednesday the 23rd April 1958 at 3.00 p.m.

(1) To receive and consider the Directors' Report and pass the Audited Accounts for the year ended 31st December 1957.

(2) To declare dividend on Preference and Ordinary Shares.

(3) To elect a Director in place of Shri N. C. Mehta who retires by rotation and in respect of whose re-appointment, to consider and if thought fit to pass the following resolution of which a special notice has been received by the Company.

"RESOLVED that Shri N. C. Mehta, who has attained the age of 65 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit prescribed under Section 280 of the Companies Act 1956 shall not apply to him."

(4) To appoint Auditors for the current year and to fix their remuneration.

(5) To transact any other business that may be transacted at such meeting.

(6) As a special business to consider and if thought fit to pass the following special resolution with or without modification:

"RESOLVED that for a period of five years from 1st January 1957, payment of commission to the Directors upto a maximum of one per cent. to be decided by the Directors from year to year, on the nett profits of the Company in respect of each financial year, as determined in accordance with and subject to the provisions of the Companies Act 1956 be and is hereby sanctioned to all the Directors of the Company and that the same be distributed amongst such Directors and in such manner as may from time to time be thought fit by them."

The Share Transfer Registers will remain closed from 25th March 1958 to 23rd April 1958 both days inclusive.

By Order of the Board,
BIRLA BROTHERS PRIVATE LIMITED,
Managing Agents.

8, INDIA EXCHANGE PLACE,
CALCUTTA, *4th March* 1958.

Note.—1. A member entitled to attend and vote at the meeting may appoint a proxy in place of himself and that the proxy need not be a member.

The explanatory statement as required in pursuance of sub-section 2 of Section 173 of the Companies Act 1956 in respect of item Nos. 3 and 6 is given below.

Ordinary Resolution No. 3

Shri N. C. Mehta, I.C.S. (Retd.), Bar-at-Law, Director of the Company, retires by rotation. As he has attained the age of 65 years his re-appointment as a Director of the Company requires the resolution of shareholders specifically declaring that the age limit prescribed in Section 280 of the Companies Act 1956 shall not apply to him. The Company has received special notice from a member notifying his intention to move the resolution set out in the item. Shri N. C. Mehta has been a member of the Board of Directors of the Company since long and it is in the interest of the Company that he should continue to be a Director of the Company.

Special Resolution No. 6

Under Section 309 (4) of the Companies Act 1956, Special Resolution is required for the payment of Directors' Commission not exceeding one per cent. of the nett profits of the Company. The said resolution is to be for the period beginning from 1st January 1957 onwards and subject to its being passed the Directors' Commission at 1 per cent. of the nett profits of the Company for the year 1957 and subsequent years will become payable to the Directors.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN THAT THE Directors have decided to declare a second Interim Dividend on 24th March 1958 (additional to the Interim Dividend of 2%, free of income-tax, declared on 13th August 1957) in respect of the Company's financial year ending 31st March 1958, of 2%, free of income-tax, payable on or after 8th April 1958 to registered shareholders whose names appear in the Register on 24th March 1958 or to their mandatees.

Transfers received at the Company's Registered Office before 12-30 p.m. on 22nd March 1958, will, if in order, be registered in time for the transferees to receive the Dividend.

By Order of the Board,
J. R. BLAIKIE,
Secretary

VIRGINIA HOUSE,
37 CHOWRINGHEE,
CALCUTTA, *8th March* 1958.

N.B.—Shareholders should inform the Registrar of any changes in their registered addresses.

THE PULLANGODE RUBBER AND PRODUCE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THIS Company will pay on the 31st March 1958 to the Registered holders as at that date, interest due on the Preference Shares for the year ended that date at the rate of 6 per cent. per annum.

By Order of the Board,
ASPINWALL & CO., LTD.,
Managing Agents.

COCHIN, *3rd March* 1958.

THE UNITED COMMERCIAL BANK LIMITED

NOTICE

CLOSING OF SHARE REGISTER AND TRANSFER BOOKS

NOTICE IS HEREBY GIVEN THAT REGISter of Members and Transfer Books of The United Commercial Bank Limited will be closed from Monday, the 24th day of March to Wednesday, the 9th day of April 1958, both days inclusive.

By Order of the Board,
S. T. SADASIVAN,
General Manager.

CALCUTTA, *6th March* 1958.

SHIP-REPAIR FACILITIES

The Government of India has appointed a Committee, under the chairmanship of Mr. O. V. Alagesan, to investigate and report on the existing ship-repair facilities in India, with a view to effecting such improvements or expansion as may be called for, having regard to the country's requirements. The terms of reference of the Committee are:

(1) To enquire into and report on the existing ship-repair facilities in Calcutta, Bombay, Madras, Visakhapatnam, Cochin, Kandla and at such other places where, in the opinion of the Committee, the problem needs looking into; (2) to recommend what improvement and expansion is required in such facilities in order to meet adequately the requirements of the developing merchant shipping of India as well as of non-Indian shipping which may require repairing facilities at Indian ports; (3) to report particularly whether facilities for dry-docking available at present are adequate and if not, what improvement/additional facilities are required and at which places; (4) to report whether materials, stores, etc. required for ship repairing are available adequately within the country or whether the country is deficient in this respect. If the latter is the case, to recommend what steps should be taken for reaching self-sufficiency in this field as far as possible; and (5) to consider and recommend the steps which are to be taken (*a*) by the Government and (*b*) by the private sector for securing such improvement and/or expansion in the ship-repairing facilities as the Committee may recommend. The Committee has been asked to submit its report within a period of six months.

QUESTION HOUR IN PARLIAMENT

World Bank Loans

THE Government of India's request to the World Bank for loan assistance to the Koyna hydro-electric project in Bombay State and the two Damodar Valley Corporation expansion projects is under the active consideration of the Bank. The two D.V.C. expansion projects are the second Durgapur thermal power station and the fourth unit for the Bokaro thermal power station. The total foreign exchange component of the cost of projects amounting to Rs. 32.08 crores has been mentioned in the memorandum furnished to the World Bank. The mission, during its visit to India, had discussions on these projects. It will indicate their acceptance only when negotiations are completed and the terms and conditions of the loan assistance are gone into.

* * * *

Deferred Payments

India will be able to meet fully its commitments to foreign countries in respect of repayment of loans or deferred payment arrangements due for payment from 1961 to 1970 on an annual basis. Generally speaking, the burden arising out of these commitments will not be too much. The Government will be able to meet them mainly out of export surplus or the surplus generated by production under the second Five-year Plan. The loans that will fall due for payment by India to foreign countries from 1960-61 to 1970-71 will amount to Rs. 49.50 crores. The amount due for payment under deferred payment arrangements during the period on a yearly basis will be Rs. 16.97 crores in respect of the public sector and Rs. 29.55 crores for the private sector. These figures are approximate. The Government is undertaking an examination in the Ministry of Finance of the question of how far the repayments will affect our internal economy.

* * * *

Kerala Banks

Forty-one banking concerns are now under liquidation in Kerala. Th irregularities which led the banks into liquidation are generally the unsound policies followed in granting advances, frittering away of profits by declaration of high dividends, mismanagement or lack of proper control by directors and chief executive officers, borrowing by directors against inadequate securities, and indiscriminate opening of branches. Misfeasance proceedings against the directors who are responsible have been started in a few cases. Full details relating to all the banks are being collected and further necessary action will be considered when these details are available. I do not think that the funds of the State Bank of India should be utilised to take over these banks which have gone into liquidation. There is no question of reorganising these banks, as they have gone beyond the pale of reorganisation.

* * * *

Balance of Payments With U.S.S.R.

According to preliminary estimates, there was a current account deficit of Rs. 10.9 crores in India's balance of payments with the U.S.S.R. during April-September 1957, the latest period for which information is available. The current restrictions on imports from as well as increased exports to the U.S.S.R. are expected to reduce the gap in payments. The bulk of imports on Government account are for the Bhilai steel project and are financed by the U.S.S.R. credit for this purpose. For other transactions, the trade agreement with the U.S.S.R. provides for payment in rupees by both parties.

—*B. R. Bhagat*

Car Prices

The Government has agreed to an increase in the prices of cars, as it is found that producers are selling at a loss.

* * * *

Export of Edible Oils

The question of allowing free export of groundnut and other edible vegetable oils has been considered, but, in view of consumer demand in the country itself, there is no scope for such export at present.

—*Morarji Desai*

Iron Ore Export

There is no target as such fixed for the export of ore, although the Government is working on the basis that, ultimately, it will be able to export seven million tons of ore to Japan. Apart from the assistance which will be given to this project from the U.S. President's Asian Economic Development Fund, discussions with Japanese experts will indicate how much Japan is prepared to contribute in the way of technical know-how. It is not true that the Japanese experts who had visited the country earlier had recommended the development of the Karwar port for the export of the ore. Independently, however, the State Trading Corporation is considering the question of developing Karwar port. There is no truth in reports that the Japanese are planning to develop the Madras harbour for the purpose. Madras harbour is fully packed. The development of railways to ports with Japanese financial assistance is what they are going to negotiate for. As to which lines will be so developed will depend upon which particular mining areas will be chosen to supply the ore.

—*Nityanand Kanungo*

Companies Act

A Bill to amend the Companies Act in the light of the recommendations of the Companies Law Amendment Committee may be introduced in Parliament in the latter half of this year. The recommendations of the Committee are under the consideration of Government. Some of the changes suggested by the Committee may make compliance with the law easier for companies. Others will make the law more restrictive. I do not think prosecutions under the Act are on the increase. The administration has been generally following the practice of giving warnings, in view of the fact that the law itself is very complicated.

* * * *

Film Factory

Negotiations are going on with the Agfa Company in East Germany for the setting up of a raw film factory in India. The proposed factory will cost Rs. 7.5 crores and is designed to manufacture 500 million feet of raw films.

* * * *

Cement Factories

The two new cement factories to be set up in Madras State during the second Plan period will be located at Thiruvattiyur and Ramanathapuram. In addition to this, expansion of capacity of two existing units is also contemplated. By the end of the second Plan, the total capacity of all the cement factories in the State is estimated to be 1,369,500 tons per annum.

* * *

Self-sufficiency in Cement

It is difficult to say when exactly India will be self-sufficient in cement. If all the schemes licensed for implementation by the end of the second Plan period are to materialise according to original estimates, the internal demand for cement can be met. However, owing to foreign exchange difficulties, some of the schemes may not materialise. But the supply position of cement will considerably ease as internal production increases.

Uneconomic Units

A working group of the Labour Ministry is at present studying the problem of uneconomic industrial units and the labour employed by them. The group is expected to make recommendations in the light of its study. [The Government has ordered investigation concerning a few mills under the Industries (Development and Regulation) Act. The National Industrial Development Corporation and the Industrial Finance Corporation provide loan finance to industry. The workmen affected by closures are also entitled to retrenchment compensation under the Industrial Disputes Act.—*L. N. Mishra.*]

—*G. L. Nanda*

Internal Resources

The State Governments are expected to find about Rs. 181 crores for financing their plans during 1958-59. This estimate falls short by about Rs. 7 crores of the amount initially calculated by the Planning Commission for financing of State plans during 1958-59. Estimates of resources for the Central Government have already been presented in the budget statement for 1958-59 which was laid before Parliament by the Prime Minister on 28th February 1958. It is proposed to review the progress made by States in raising resources in a memorandum on the appraisal and prospects of the second Five-year Plan which is under preparation and is to be presented to Parliament during the current session. The estimates of States' resources—in crores of rupees—for financing the Plan in 1958-59 are: Andhra Pradesh 12.0; Assam 6.2; Bihar 14.0; Bombay 48.0; Kerala 8.0; Madhya Pradesh 11.2; Madras 10.0; Mysore 9.9; Orissa 3.5; Punjab 17.8; Rajasthan 8.3; Uttar Pradesh 22.3; West Bengal 13.1; and Jammu and Kashmir 2.0. These estimates are worked out in consultation with State Governments between December 1957 and February 1958.

Oil Transportation

The Government of India is still considering the preliminary report of the U.S. pipeline consultants regarding the transportation of Assam oil from the sources to the sites of the two refineries to be set up.

—*K. D. Malaviya*

Bhilai Steel Plant

The Government of U.S.S.R. has agreed that, in addition to the cost of the main plant and equipment amounting to about Rs. 63.1 crores which is already being supplied under credit, the cost of training of engineers and technicians in the U.S.S.R. will also be included in the credit under the main agreement. The Secretary to the Department of Iron and Steel who visited the U.S.S.R., discussed the possibility of obtaining further relaxations in the terms of payment. Under the agreement of 2nd February 1955 with the Government of U.S.S.R., only the main plant and equipment was to be supplied on credit repayable in 12 equal annual instalments, interest being at 2½ per cent. Cost of training engineers and technicians and cost of a number of stores, other than the main plant and equipment were to be paid for in cash.

MANAGEMENT OF STATE ENTERPRISES

(*Concluded from page 478*)

department to another, (ii) there should be some security of tenure and a fairly long duration of office, and (iii) it should be impressed upon those who are appointed to these posts that they have to discharge their duty to the corporation irrespective of whether their actions find favour with Government or not. It should be possible to find civil servants who would take this attitude if a proper selection is made. In order to make things quite clear both to the civil servants to be appointed to such posts and the Secretaries and Ministers, a written pledge should be taken from the former that they would abide by this principle. This will make the Secretaries and Ministers more careful in giving unwritten directives and in tendering bad 'advice' in the hope that it would be accepted without placing any responsibility upon them.

Parliamentary Control

So far as "public accountability" is concerned, the position in India is quite satisfactory, at least so far as the Centre is concerned. Parliament's control over public corporations and other companies in the public sector is secured by (i) answers given by Ministers to questions asked by members on the floor of the House, (ii) discussions on the annual reports of the Ministry concerned, and (iii) the watch which the Estimates Committee and the Public Accounts Committee of Parliament keep on such corporations. The Comptroller and Auditor-General is entitled to audit the accounts of such corporations and to bring the defects to the notice of the Public Accounts Committee. It has, however, not been possible in India to use two other devices for ensuring greater public accountability which have recently developed in the United Kingdom, namely, the practice of members of Parliament writing directly to the management of such corporations to get information with a view to seeking satisfaction of the grievances which their constituents might be having and the appointment of statutory Consumer Councils on the regional and local boards of State enterprises to safeguard the consumer interests. The object of both these devices is to keep a watch on the working of State enterprises and to ensure that, if there are malpractices, they are brought to the notice of Parliament through interpellations or otherwise. But there are certain practical difficulties in trying these methods in India.

British Example

A Select Committee of the House of Commons on Nationalised Industries recommended in 1953 that a Committee should be appointed by the House of Commons under the Standing Orders to keep a watch on such industries and to examine their accounts, reports, etc., but not in any way to control their working. The Lok Sabha should appoint such a Standing Committee with a person of the status of the Comptroller and Auditor-General, two accountants and an economist on its staff to keep a constant watch on public corporations by examining the published reports and accounts, by getting the other necessary information from the corporations concerned, and by examining persons in control and management of such corporations, if such a course is considered necessary. The Standing Committee would report to the Lok Sabha only those cases in which it is unable to get a satisfactory account or which it is unable to deal with itself. Such a Standing Committee would ensure greater public accountability, as it would have more time than the Estimates Committee and the Public Accounts Committee which are already overworked with Government accounts to look into the affairs of autonomous public corporations. The existence of such a Committee would also exercise a sobering influence on Secretaries to the Government and the Ministers and would make the freedom, initiative and enterprise of the persons in charge of autonomous corporations more effective.

So far as Ministerial responsibility to Parliament is concerned, the present practice in India is sound, under which a Minister is responsible to Parliament for the general policy and working of the autonomous corporations under his charge. It would introduce a dangerous principle if the suggestion which the Union Home Minister, Mr. G. B. Pant, made in the Rajya Sabha in the course of debate on the Chagla Commission report, were to be accepted. He said: "Except where a Minister is not concerned in any way with an act or with an omission which reflects on the administration, he should assume responsibility. The field of responsibility should be large. Responsibility should be interpreted not in strict but in liberal terms. It is necessary that Ministers should assume responsibility except where it is obvious that they are not in any way answerable directly or indirectly." If this principle were accepted, it would introduce too many 'ifs' and 'buts' and, in certain cases, Ministerial responsibility, which is the mainstay of Parliamentary control over public corporations, would be reduced to a farce. If it is found that the work of a Minister has become "too heavy," the right course would be not to dilute his responsibility to Parliament, but to appoint more Deputy Ministers or to reorganise it in such a way as to reduce the amount of routine work.—*All Rights Reserved.*

MORE DEMAND FOR MONEY

(*From Our Own Correspondent*)

BOMBAY, 12*th March*

The short-term money market experienced a slight pull during the week under review, consequent on an expansion in demand, which at times exceeded the available supplies and borrowers had to seek temporary accommodation from the Reserve Bank. Despite the fact that we are right in the midst of the traditional busy season, the stringency in the market is, however, not half as acute as in the corresponding period of last year. This is because of the sizable expansion in deposit resources of banks. Thus, demand deposits of Scheduled banks (as at the end of February) show a rise of Rs. 23.12 crores over the year and time deposits an increase of Rs. 246.84 crores or a rise of Rs. 269.96 crores in total deposits. As against this, total advances are higher by Rs. 69.30 crores only. Consequently, their total cash balances have swollen by Rs. 25.60 crores and money at call by Rs. 27.74 crores.

Interest rates were, however, unchanged during the week, inter-bank call money being quoted at 3 per cent. among the Exchange banks and large Indian banks and at 3½ per cent. among the smaller banks. These rates are lower as compared with the position a year ago, when inter-bank money among all banks was bid at 3½ per cent. House money at call was placed this week at 4½ to 4¾ per cent. and short-term deposits at 4½ to 4¾ per cent. for one to six months. A year ago the rate for House money at call and term deposits was common at 4 to 4½ per cent. Thus, despite the slackness in demand this season, the last mentioned rates have not shown any decline.

A marked expansion of Rs. 33.41 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 7th March 1958. Notes held in the Banking Department are lower by Rs. 16.09 crores and there is consequently an increase of Rs. 17.32 crores in total notes issued. This is covered by a rise of Rs. 19.94 crores in rupees securities and a contraction of Rs. 2.62 crores in rupee coin. There is no change in foreign securities, but balances held abroad (in the Banking Department) are a fraction lower. Deposits of the Central Government have declined by Rs. 3.14 crores and those of other Governments by Rs. 5.82 crores. Deposits of banks show a rise of Rs. 1.94 crores. Loans and advances to Governments have gone up by Rs. 5.66 crores and other loans and advances by Rs. 7.70 crores, of which advances to Scheduled banks against usance bills account for only a fraction. Investments have fallen by Rs. 10.37 crores, while Government Treasury bills purchased and discounted are higher by Rs. 4.90 crores.

The Scheduled banks' statement for the week ended 28th February 1958 disclose a small decline of Rs. 98 lakhs in demand deposits and of Rs. 1.14 crores in time deposits. Borrowings from the Reserve Bank are up by Rs. 1.76 crores and those from the State Bank by Rs. 1.03 crores. Advances have gone up by Rs. 4.50 crores, while bills purchased and discounted are almost unchanged. Cash balances have improved by Rs. 4.84 crores and money at call by Rs. 51 lakhs.

The Gilt-edged market ruled steady with a rise in prices of some of the short-dated and short-medium issues. The persistent demand for these securities and the Reserve Bank's action in putting up its selling rate of 3½ per cent. 1962 by 5 nP to Rs. 97.90, and of 3½ per cent. 1964 by a similar extent for the second week in succession to Rs. 97.85 kept up sentiment. The volume of business was, however, low. There was a slackening of the demand for State loans during the week.

3 per cent. Conversion Loan was stagnant at Rs. 71.05, while 3 per cent. 1970-75 moved up by 5 nP to Rs. 86.15. 3 per cent. 1966-68 staged a sharp rise of 20 nP to Rs. 92.15, due to scarcity of floating stocks. 3 per cent. 1964 held its own at Rs. 94.30, while 3 per cent. 1963-65 gathered 10 nP to Rs. 94.15. 3½ per cent. 1962 moved up to the Reserve Bank's selling rate of Rs. 97.90, as also 3½ per cent. 1964 to Rs. 97.85. 3¾ per cent. 1965 advanced by 10 nP to Rs. 97.65.

The further improvement in sterling abroad gave strength to the rupee in terms of the dollar, as witness the drop in banks' selling rate of ready dollars from Rs. 475.50 to Rs. 475.25 per $100. The buying rate also declined from Rs. 472.25 to Rs. 472 per $100. In New York, spot sterling advanced from $2.81-7/16-2.81-9/16 to $2.81-9/16-2.81-11/16 and three months' forward from $2.78-11/16-2.78-13/16 to $2.78¾-2.78¾. Transferable sterling moved up from 279.40-279.50 cents to 279.50-279.60 cents.

FOODGRAINS QUIETLY STEADY

(*From Our Own Correspondent*)

HAPUR, 10*th March*

Quietly easy conditions were witnessed in the foodgrains market during the last fortnight. The Government of India has expedited its import programme and a heavy quantity of wheat is expected from abroad in the coming months. Apart from this, the measures taken last year to bring down prices of foodgrains have also borne fruit. These include opening of fair-price shops, credit squeeze by banks against foodgrains stocks, assumption of powers to ask stockists to sell grains at the average price for three months, restrictions of movement within specified zones, and procurement of rice in Andhra and the Punjab.

Wheat here eased fractionally to be quoted at Rs. 15.62 per maund for average quality and at Rs. 17 for farm produce. Arrivals from producing areas were nominal and local wheat stock ran down by 3 *khaties* to 5 *khaties* during the fortnight. The corresponding figure last year was 8 *khaties* when wheat average was quoted at Rs. 16.87 per maund. Crop prospects are fairly good, but adverse cloudy weather towards the week-end is causing concern to producers.

Rice also ruled quietly steady. Although the local supply position was reported to be satisfactory, the overall shortage of rice in the country was the main steadying factor. Prevailing prices were: *Basmati* Rs. 28.50 to Rs. 31; *mainpuri* Rs. 24.50; coarse quality Rs. 21 per maund.

Gram ruled quiet. The local gram stock was put at 13 *khaties*, as against 21 *khaties* a month before, the corresponding figure last year being 3 *khaties* when the price stood at Rs. 13.87 per maund. Barley and *bejhar* eased slightly. Harvesting of these coarse grains is in full swing. *Jowar* was mostly unchanged, while *guwar* advanced due to poor local stocks. Latest prevailing prices (in rupees per maund) were: Gram 10.62 to 10.86; barley 6.25; *bejhar* 8.75; maize 11; *bajra* 11.56; *jowar* 9.50 to 10.75; *guwar* 11.75.

The harvesting of new peas is in full swing and arrivals of new peas is at an average of 75 maunds daily. Good outside demand and paucity of stocks of the old quality accounted for hardening in prices of peas during the fortnight. *Arhar* continued to be quiet, while other pulses recorded a hardening trend due to paucity of local stocks. Prevailing prices (in rupees per maund) on Monday were: Peas *dara* new 9; white 9.75; *arhar* 10.50; *urd* 17.25 to 18.50; *moong* 17 to 17.50; *massoor* 15 to 15.50.

Future pulses spurted to touch new heights on continued bull support. Jeth delivery was quoted today at Rs. 9.75 and *arhar jeth* at Rs. 11.62, as against Rs. 9.17 and Rs. 10.90, respectively, on 24th February.

SILVER SOARS

(*From Our Own Correspondent*)

BOMBAY, 12*th March*

A sharp rise in silver prices to new high levels for the last six years was the main feature of the trading in the bullion market during the week under review. Thanks to the aggressive speculative buying and heavy short-covering in a rising market after *Holi*, forward silver (April settlement) soared to a peak of Rs. 194, a level not seen since February 1952. Ready silver came to touch a high of Rs. 193-10. Gold ruled steady for the major part of the week, but towards the close it was a little subdued.

The scarcity of floating stocks, and the slackening in arrivals of Tibetan coins made the "bulls" more aggressive. They, however, shifted their interest from the March settlement which matured on the 8th inst. to the April settlement. Consequent on this switch-over, the price of silver for the March settlement slumped suddenly from Rs. 193-11 to Rs. 191-8 on Saturday last and the carry forward charges which were in favour of bulls at Re. 1-14 on Friday last turned against them at As. 5 at the close of the settlement. The bull grip in the April settlement is reflected in the *budla* of As. 11 to As. 12 quoted against sellers for carrying over the business from April to May settlement.

The slackening of the demand in gold towards the close was responsible for the slight setback in the yellow metal during the last two days.

Silver for forward delivery (March settlement) after moving up from Rs. 192-8 to Rs. 193-12 slumped to Rs. 191 before the settlement ran out at Rs. 191-8. The April settlement advanced from Rs. 190-10 to Rs. 194, but closed a shade lower, on profit-taking, at Rs. 193-11. The May settlement staged a sharp rally from Rs. 189-13 to Rs. 193-12.

Ready silver gained from Rs. 192-8 to Rs. 193-12 and after a setback to Rs. 190-14, staged a recovery to Rs. 193-5 at the close. The floating stocks of silver are estimated at 700 bars. The daily average arrivals were of the order of 30 bars, while the offtake was no more than 10 bars per day.

Forward gold (March settlement) moved up from Rs. 112-5 to Rs. 113 before the settlement ran out at Rs. 112-12. The April settlement gained from Rs. 112-7 to Rs. 113-2, but dipped today to Rs. 112-2. At the close, there was a minor recovery to Rs. 112-8.

Ready gold closed at Rs. 112-8, after touching a high of Rs. 113-4, as against last week's closing of Rs. 112-11. The floating stocks of gold are estimated at 15,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was lower at 3,000 tolas per day.

In New York, silver was unchanged at 88⅝c. while London prices, were a little erratic. After an early rise from 76⅞d. to 76¾d., the spot metal receded again to 76⅞d. Likewise, forward silver rose from 76½d. to 76⅝d., but again fell back to 76½d. Gold moved up from 249*s.* 3½*d.* to 249*s.* 5*d.*, before giving way to 249*s.* 2¾*d.*

The following comparative table shows at a glance the trend of the market during the week under review:

	12-3-58	Highest	Lowest	5-3-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

COTTON FUTURES FIRM

(*From Our Own Correspondent*)

BOMBAY, 12*th March*

A distinctly firm trend was depicted by the cotton futures market during the week under review. The firmness was due to heavy short covering and renewed bull support, prompted by the hope, which persisted despite New Delhi's silence, that the Government would provide some relief in excise duty on cloth. This belief gained strength following the reported visit of some leading millowners to the capital presumably for discussions with the Government of India regarding the excise duty on cloth. Hopes were also being entertained that the Government would release an export quota for ¾" cotton and might possibly reduce the duty on Bengal *Deshi* by 25 per cent. Sentiment was also affected by the reports of serious damage to the cotton crop in the Surat tracts due to boll weevil attack. These factors, as noted, induced large scale upcountry covering and local bull support. Cotton futures as a result staged a smart rally.

I.C.C. Moglai Jarilla (March 1958) opened the week on Friday, the market having been closed on Thursday due to *Holi*, at Rs. 677.50, as against the previous close of Rs. 675.50 and improved to Rs. 685 the next day on good support. After easing to Rs. 680 on Monday, the contract again firmed up to Rs. 686 yesterday. Commencing today's session at Rs. 682, it gathered Rs. 5 before closing at Rs. 685. The net gain over the week was Rs. 9.50. Tenders against the contract on the 10th inst., the third notice day, aggregated 1,050 bales and the total to-date 1,650 bales.

I.C.C. Moglai Jarilla (May 1958) started the week at Rs. 1.50 higher at Rs. 672. The contract attracted excellent bull support and heavy upcountry buying and improved to Rs. 679.50 on Saturday. After declining to Rs. 677.50 on Monday it again firmed up to Rs. 683 yesterday on support by a leading Calcutta operator. The opening quotation today for the contract was Rs. 677.50. After gaining Rs. 4 it declined by Rs. 2 to close at Rs. 679.25. The net gain over the week was Rs. 8.75. The following table indicates the trend of prices of the contracts during the week:

(In rupees per candy of 784 lbs.)

	12-3-58	*High*	*Low*	5-3-58
I.C.C. Moglai Jarilla (March 1958) ...	685	687	675.50	675.50
I.C.C. Moglai Jarilla (May 1958) ...	679.25	683	670.50	670.50

Following the improvement in futures, better activity was noted in the spot section. There was a moderate improvement in mill inquiry, and prices also tended to look up. Spinner interest in short staple varieties was, however, subdued. Good quality cotton continued to receive attention. Good demand was noted for Berar Jarilla, Laxmi, Vijay, etc. The pressure of arrival would seem to have passed its peak. About 35 lakh bales have already reached the market.

In the export section, shippers interest in good quality lots of Bengals tended to revive. On strong rumours of a possible reduction in export duty on Bengals, shippers made purchases of superfine Bengals, against business concluded with France. Other varieties such as Kale Gin, Wagad and other *Deshi* styles were practically neglected.

Out of the total quota of one lakh bales of Bengal *Deshi* released for export, 34,700 bales have already been entered for shipment till 6th March. The first instalment of 50,000 bales has been more or less fully sold and out of the second instalment of 50,000 bales, which was released in the first week of February, about 15,000 bales are said to have been so far sold overseas.

The foreign section was featureless. Spinners were preoccupied with obtaining import licences against the 70,000 bales quota announced on the 1st inst. The trade is anxiously awaiting another quota for Sudan and Egyptian cotton.

The import allocation of 70,000 bales of East African cotton has failed to have any effect on prices in East Africa. This has largely been attributed to the fact that the entire quota has been fully covered by previous sales concluded, subject to the availability of import licence. Whilst the reserve prices of the Lint Marketing Board remain unchanged, there is a general belief that the Board would be willing to conclude private treaty sales at substantially reduced prices.

The Karachi cotton futures market ruled distinctly easy during the week under review. Due to the failure of export demand to revive and the continued slackness of domestic spinner interest, buying support was practically absent. The pressure of new crop arrivals and the large accumulation of stocks touched off a large volume of liquidation. Prices consequently declined. N.T.R.G. March eased from Rs. 72-11 last week-end to Rs. 71-15-6 and the May position dropped Rs. 2-6-6 to Rs. 70-11-6. The spot section was also easy. Values showed an all-round decline. The following are the latest available rates—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

4F Roller 70-6; S.G. 75-6; 4F Punjab Roller 73-6; S.G. 77-14; 289F N.T. Roller 74-14; S.G. 82-14; 289F Punjab Roller 80-6; S.G. 89.6.

Cotton futures values made small gains in the Alexandria market during the week on scattered buying based on the expectation of better foreign demand. It is reported that the Egyptian Government has decided to maintain the closing prices as on 25th February as the minimum prices. A new seasonal low was established for long staple contracts on 25th February when Karnak March reached a low of Rs. 76.80 tallaris and May 78.05 tallaris. The medium staple contract April closed on that day at Rs. 66.70 tallaris. It is also reported that representation has been made to the Government to declare itself receiver of all cotton at the closing prices on the 25th inst. The latest

available rates—in tallaris per lb.—from Alexandria are given below:

Karnak: March 78.40; May 79.10. *Ashmouni*: April 57.40; June 67.80.

Liverpool cotton futures market registered distinct improvement during the week under review. Both the American and American type contracts advanced on good trade buying and mill fixation. The market met with resistance at higher levels in view of the continued uncertainty regarding the new export policy of the U.S. and the large accumulation of unsold local stocks. Sudan contracts were, however, easy due to a fair volume of liquidation. The latest available rates—in pence per lb.—from Liverpool are as under:

American cotton one inch staple contract: March-April 25.42; May-June 25.37; July-August 25.65; October-November 26.20. *American cotton mixed growth contract*: March-April 25.75; May-June 26.19; July-August 26.52; October-November 27.05. *Sudan*: May-June 32; July-August 32.20; September-October 32.85.

New York cotton futures market ruled firm during the week. There was a general buying movement in the more forward positions which was prompted by the growing belief that the moves in the Congress to increase the cotton acreage will not be successful. The belief gained further strength from the reported observation of Mr. Benson, the Secretary of Agriculture that, although the "domestic pressures" were great, the Department was opposed to any increase in the present cotton acreage. There was, consequently, renewed Commission House and New Orleans buying and prices smartly rallied.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	11-3-58	4-3-58	25-2-58
Spot	36.10	35.95	35.95
March	35.65	35.30	35.10
May	35.82	35.57	35.41
July	36.12	35.77	35.70

YARNS ADVANCE

(From Our Own Correspondent)

BOMBAY, 12*th March*

The yarn market remained fully firm during the week under review also, with the exception of cotton yarns which continued to rule dull. There were enlarged enquiries for both art silk and staple fibre yarns and prices registered handsome improvement. The firmness of rayon yarn was aided by depleted stock position, thanks to restrictions on imports, and spurt in prices of nylon yarns, following upward revision in import duty on nylon yarn to 50 per cent. *ad valorem*. Staple fibre yarn evoked excellent demand from important consuming centres like Surat, Punjab, Bhagalpur and Calcutta. There were, besides, reports that, as the stocks of imported raw staple fibre were declining, the mills had been forced to pay higher prices for the indigenous material. Cotton yarns, however, continued to remain dull. The rise in the excise duty on cloth produced on powerlooms depressed the sentiment. There were fears that the impact of the enhanced levy would be so heavy that the powerloom factories might drastically curtail output and some might even close down.

Snia rayon yarn (120 dull cones) April delivery advanced by Rs. 5 to Rs. 925, which is the ceiling fixed by the Yarn Merchants' Association and Exchange Ltd. In the spot section, 120 Japan rallied 37 nP to Rs. 5.81. 150 Japan climbed up by 56 nP to Rs. 5.62 and 120 Italy by 44 nP to Rs. 5.75. 150 Italy spurted by 22 nP to Rs. 5.53. Among indigenous yarns, National Rayons 150 bright cones first grade strengthened by 62 nP to Rs. 5.06. 120 bright cones first grade were better by 22 nP at Rs 5.16.

Staple fibre yarns (40×2) April delivery attracted excellent attention of operators and forged ahead by Rs. 25 to Rs. 617. June delivery moved up by Rs. 21 to Rs. 624. Spot (40×2) Citys hardened by 11 nP to Rs. 3.30. Kohinoors increased by 13 nP to Rs. 3.36. Centurys were quoted at Rs. 3.31. Among foreign yarns, Paramounts strengthened by 50 nP to Rs. 7. Fujis were quoted higher by 41 nP at Rs. 6.78.

Among cotton yarns, ten counts Moderns were neglected at Rs. 14.50. Podars receded by 12 nP to Rs. 13.75. Twenty counts Indus dropped Re. 1.06 to Rs. 16.75. Moderns declined by 13 nP to Rs. 17.37. Among thirty counts, Indus were stagnant at Rs 20.37. Forty counts Moderns were dull at Rs. 24.75. Minaxis, however, improved by 37 nP to Rs. 24.12, on special buying support. Sixty counts Moderns were quiet at Rs. 59.50, Raghuvamshis at Rs. 52, and Finlays at Rs. 59. Among eighty counts, Moderns shed 50 nP to Rs. 70.50. Mahendras changed hands at Rs. 69.50, same as last week. Finlays were on offer at Rs. 75.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	12-3-1958	5-3-1958
Art silk yarn (per case of 200 lbs.)—	Rs.	Rs.
120 dull Cones Snia April	925.00	920.00
120 Japan (per lb.)	5.81	5 44
150 Japan (per lb.)	5.62	5.06
120 Italy (per lb.)	5.75	5.31
150 Italy (per lb.)	5.53	5.31
Staple fibre yarn (per case of 200 lbs.)—		
40×2 April	617.00	592.00
40×2 June	624.00	603.00
40×2 New Great (per lb.)	—	3.09
40×2 City (per lb.)	3.30	3.19
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	13.75	18.87
20s Modern	17.37	17.50
30s Indu	20.37	20.37
40s Minaxi	24.12	23.75
60s Raghuvamshi	52.00	52.00
80s Modern	70.50	71.00

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 12*th March*

The oilseeds market presented a distinctly firm trend during the major part of the week under review. Support from bulls was quite sustained, while shorts were busy covering their positions. Consequently, prices recorded handsome improvement. There was, of course, some setback yesterday and today, but this was purely technical, being due to profit-taking. The castorseed section ruled strong, thanks to fears of markedly reduced production in the current season. Arrivals of castor oil into the local market have been low. During February, only 567 tons arrived, as against 1,050 tons in the previous month. Even the continued slackness in demand for Indian castor oil from overseas countries failed to affect the sentiment of operators. It was reported that the U.K. had purchased a fairly large quantity of Brazilian oil at £102 (Rs. 1,360) per ton for B.S.S. and £99 (Rs. 1,320) for commercial quality. The currently ruling prices for these varieties in India, it may be noted, are Rs. 1,332 and Rs. 1,290 per ton, respectively (excluding export duty). Groundnuts elicited good support induced by shortage of contracts in the futures market and enlarged demand for oil from *vanaspati* manufacturers. Linseeds was subjected to nervous short-covering. Although no fresh export business was done in oil, foreign advices were somewhat better, the U.K. quotation being Rs. 1,373 per ton. Cottonseeds were strong, due to firmness of raw cotton prices. In sympathy with the general trend, *kardi* seed and *niger* seed registered a rise in prices.

Replying to a question in Parliament this week, the Union Minister for Commerce and Industry stated that the question of allowing free export of groundnut and other edible vegetable oils had been considered, but, in view of consumer demand in the country itself, there was no scope for such export at present.

Groundnut May contract which stood at Rs. 159.25 at the close of last week came in for enquiries and gradually moved up to touch Rs. 163 on Monday. Thereafter, it tended to decline owing to profit-taking, today's closing rate being Rs. 160.62. The net gain over the week was Re. 1.37. Bold ready advanced by 25 nP to Rs. 32.12. Coramandel recorded a rise of 12 nP to Rs. 32.62. Groundnut oil ex-mill spurted from Rs. 17.75 to Rs. 18.25 before finishing at Rs. 17.75. Railway Receipt, after increasing from Rs. 17.43 to Rs. 17.87, finished at Rs. 17.62.

Castorseeds May contract encountered good buying support throughout the week, the rate ralling from Rs. 142.75 last week-end to Rs. 145.75 *on the 10th inst.* At higher levels, profit-taking set in and the value came down to Rs. 143.87 today. Over the week, the rate was still higher by Re. 1.60. Ready Kanpur hardened by 40 nP to Rs. 28.37. Madras put on 12 nP to Rs. 29.62. Castor oil B.S.S. strengthened from Rs. 16.37 to Rs. 17 before winding up the week at Rs. 16.65. Commercial quality gathered 38 nP to Rs. 15.

Linseed May contract was well supported in the earlier sessions of the week, the rate rising from Rs. 29.12 to Rs. 30.56 on Monday but receded to Rs. 29.44 today. Bold ready picked up Re. 1.12 to Rs. 29.62. Kanpur quality was done at Rs. 28.62. Linseed oil improved by 31 nP to Rs. 15.87.

Cottonseed May contract met with good buying support and climbed up by Rs. 2 to Rs. 106 on Monday since when it has stood at this level.

Among other seeds, *kardi* seed bold ready increased from Rs. 18.25 to Rs. 18.50 *on the 10th inst.* before easing to Rs. 18.25. Niger Madras had good enquiries and advanced by 63 nP to Rs. 27.75; yesterday, it was still higher at Rs. 28.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	12-3-1958	5-3-1958	26-2-1958
Groundnut—	Rs.	Rs.	Rs.
May 1958	160.62	159.25	158.25
Bold ready (per cwt.) ..	32.12	31.94	31.50
Khandesh quality ..	32.50	32.50	32.12
Linseed—			
May 1958	29 44	29.19	29.37
Bold ready (per cwt.) ..	29 62	28.50	28.37
Castorseed—			
May 1958	143 87	142.75	137.62
Madras (per cwt.) ..	29.62	29.50	27.75
Cottonseed—			
May 1958	106 00	104.50	100.50
Groundnut oil *			
Ex-mill ready (per quarter) ..	17.75	17 50	17.62
Castor oil †			
Commercial (per quarter) ..	15.00	14 81	15.25
Linseed oil †			
Ready	15.87	15.50	15.62

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

SUGAR MOVES UP

(From Our Own Correspondent)

BOMBAY, 12*th March*

Despite the recent monthly release of 172,000 tons of sugar for free sale, firm conditions prevailed in the sugar market. For, although the sugar mills received their release orders on the 3rd inst., they could not move out sugar from their godowns until the 10th inst., as the excise inspectors had not received the copies of such orders. This is one of the standing difficulties confronting the mills. The Deccan Sugar Factories Association has brought this to the notice of the authorities time and again, but no effort has been made to remove the handicap.

The delay of nearly a week in the excise inspectors permitting the mills to deliver sugar against the release orders created a sort of an artificial scarcity in the Bombay-Deccan region, resulting in a rise of about Re. 1 per bag in ex-mill quotations of sugar. This rise, together with the bullish advices from the northern markets, imparted much strength to the local sugar market and prices moved up. The sugar millowners in the north are reported to fear that the current season's production will be only about 1.8 million tons, consequent on the substantial diversion of cane supplies to the manufacture of *gur* and *khandsari*. Knowledgeable quarters, however, consider that the first production estimate of about 2.1 million tons made by the Union Food Ministry is reasonable and accurate.

Over the week, medium grain sugar spurted by Re. 1.50 to Rs. 109 per bag. Small grain advanced by 50 nP to Rs. 105.25. Large grain was fully maintained at Rs. 110-Rs. 112.50.

The arrivals of sugar into the market aggregated only 10,900 bags this week, as against 17,700 bags in the previous week and 21,300 bags two weeks before.

* * * *

HAPUR, 10*th March*

Hopes of an increase in excise duty on sugar having been belied in the budget proposals, stocks cornered by some speculators came out in the market, with the result that sugar prices were depressed during the week. The release of a monthly quota of 172,000 tons for sale in the free market also eased the supply position and good business was reported towards the week-end. Supplies of cane to factories are now gradually declining, but it is hoped that sugar production in the country will touch last year's level.

Ruling quiet during the major part of the week, sugar improved slightly towards the week-end, thanks to local and outside buying, in the Muzaffarnagar markets. Free sale business in substantial quantity was done in the later session of the week and business in bulk quantity of Khatauli D-29 was at Rs. 35.62 and C-29 at Rs. 36.56. Prices on the whole advanced by 12 nP to 25 nP per maund.

Ready *gur* spurted to touch new heights induced by brisk buying support following strident advance in futures prices. Daily arrivals increased with the increase in prices. The producers of *gur* are now finding the manufacture of *gur* profitable, as against supplying cane to factories. The daily arrivals average 1,500 to 2,000 maunds and local stock is now put at 140,000 maunds, the corresponding figure last year being 94,000 maunds. The total arrivals from the beginning of the season were put at 360,000 maunds, as against 425,000 maunds in the corresponding period last year. The prevailing prices of *pansera* quality were upto Rs. 15 per maund. Ready *gur* also recorded an advance of about Re. 1 per maund during the week in the Muzaffarnagar market on brisk demand, coupled with appreciable advance in futures prices. Total arrivals there since the beginning of the season are put at 750,000 maunds and local stock was put at 295,000 maunds.

Future *gur* recorded a strident advance during the week on vigorous support by a bull syndicate. *Baisakh* opened at Rs. 13.87 on Monday last and was quoted today at the highest level of the season at Rs. 15.11.

Sowings for the next season is in full swing. As *gur* prices this season have been fairly high, an increased sowing acreage is predicted.

BLACK PEPPER EASES AT CLOSE

(Messrs. Parekh and Co.)

BOMBAY, 12*th March*

In the earlier part of the week, a further spurt in price was witnessed in Malabar black pepper, following manipulations by speculators who wanted to squeeze some of the exporters who sold short to Russia. As the Russian steamer was reported due this week for lifting cargo for the U.S.S.R., short sellers had to cover. As a consequence, there was a scramble for buying. Ready garbled shot up to Rs. 101½, March to Rs. 103¾ and May to Rs. 105½. In order to frighten shorts, the bulls spread various rumours of further sales at inflated price to communist countries. These rumours, however, have remained unconfirmed so far. In the later part, short-covering having been finished, the market eased and ready came down to Rs. 96¾, March to Rs. 98¾ and May to Rs. 101¼.

As New York remained very much below the replacing parity, no business was reported done except small purchases by a London house at 190*s.* A.S.T.A. terms. Spot in New York is steady at $0.24. Dealers there are reported to have bought a sizable quantity of Lampong at prices ranging from $0.23 to $0.23½, since India continued to quote high.

Alleppey moved between Rs. 562½ and Rs. 575 and Calicut from Rs. 570 to Rs. 600.

In A.S.T.A. section, after a small business for April-May-June at $0.25, there were sellers at $0.24½, but no business was listed.

In delivery section, price for April moved between Rs. 526 and Rs. 541. After the shipment to Russia, if the U.S.A. or other foreign buyers remain conspicuous by their absence, the market is likely to go down, as growers generally reappear as sellers on slight weakness in the trend. At the time of writing, the market looks improved at Cochin where ready garbled is quoted at Rs. 98, March at Rs. 99 and May at Rs. 103. Latest news from Indonesia are reassuring.

Today's nominal quotations are: Ready Rs. 76 per Bengal maund, April Rs. 536-Rs. 541 and May Rs. 543-Rs. 548 per candy of 5¼ cwts.

TEA DEARER

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 6*th March*

Offerings amounted to 1,100,000 lbs. in Sale No. 6 which was held on Tuesday, 4th March. Quality showed a further improvement and there was a very useful all round selection on offer. The sale opened to a strong general demand and exporters were active. Common and low medium teas were about steady, but medium teas, and in particular improved invoices, sold well at dearer rates. There was some competition for good medium teas and best liquoring highgrowns were well supported at dearer rates. There was rather more enquiry for fannings grades including highgrown fannings. The whole leaf teas met keen competition and prices were 10 to 15 nP dearer. The following are the quotations:—

	1958 Rs.
Plain B.P.	1.48
Low medium	1.65 to 1.80
Medium	1.90 to 2.25
Good medium	2.35 to 2.70
Quality	3.00 to 5.75

The average price realised in Sale No. 6 was Rs. 2.54 per lb., as compared with Rs. 2.35 per lb. in the previous sale and Rs. 2.43 per lb. in the corresponding sale of 1957.

London Market—Sale of 3rd March 1958.—Medium and better Assams 2*d.* to 6*d.* dearer. Others fully firm with dearer tendency.

Sale of 4th March 1958.—Plainest firm. Better dearer.

Colombo Market—Sale of 3rd March 1958.—Fair demand. Generally lower, except best quality brokens liquoring fannings firm to dearer.

Sale of 4th March 1958.—Best liquoring strong. Others barely steady.

Calcutta Market—Export.—Market followed recent pattern of selective buying. Commoner again easier to buy. Better teas well supported.

Internal.—Quite good general demand at easier rates. Reduced Middle East enquiry orthodox up to 10 nP easier. Best C.T.Cs opened firm, but at the close 20 nP easier. Internal leaf 4,000. Quite good general demand C.T.Cs fairly firm.

Export Duty.—The Government of India has announced that the "price of tea" for the purpose of determining the export duty for the month of March is Rs. 2.87 per lb., as compared with Rs. 2.99 for the previous month. The duty remains unchanged at 38 nP.

Export Quota.—The market has again declined and there are now sellers at 4 nP.

Forthcoming Auctions.—Sale No. 7 will be held on Tuesday, 18th March.

As we go to Press, Messrs. Forbes, Ewart and Figgis Private Ltd., wire:

"*Dust Sale F.*—600,000 lbs. Strong general demand. *Medium and good medium* 10 to 15 nP, others irregularly 5 to 10 nP dearer."

TEA IN GOOD DEMAND

(From Our Own Correspondent)

CALCUTTA, 11*th March*

More demand was in evidence in the export auctions held yesterday and in the internal sales of last week; but prices eased.

One question that is being so often asked in tea trade and industry circles is how long the industry should continue to be handicapped by the absence of planned international production. This subject was naturally raised by Mr. C. D. Wilson in his speech as the retiring President of the Indian Tea Association at its annual meeting held here on Friday last. He said that, while members of the I.T.A. were exercising restraint in production by destroying tea waste and selling teas *ex*-factory only if their quality would be acceptable at Calcutta auctions, he could not say if there had been a corresponding restraint in other parts of the world. One thing is, however, clear; that is, the restraint in North Indian output has not had any effect on reducing world supply. For the output in South India during 1957 was higher at 144.5 million lbs., as against 126.9 million lbs. in 1956. In Ceylon, the crop last year reached a record of 400 million lbs., and it is common knowledge that in East Africa production is increasing at a rapid rate aided by the availability of cheap labour and by the absence of export duty. Mr. Wilson thought that if producing countries could discuss among themselves these problems, a solution was possible.

There was good general demand during yesterday's export sales. The price trend was, however, mixed. Offerings aggregated 59,625 packages. Fannings were sold at higher prices, while plain liquoring teas eased by 4 to 6 nP. Opening at firm rates, clean black leafy common brokens advanced. Another strong feature was the bright liquoring non-wither Dooars, but the more ordinary types fell 4 to 8 nP below valuations. Medium C.T.C. fanning grades were about steady at previous rates, but brokens gave way. C.T.Cs showing autumnal characteristics were, however, sold at higher rates. Whole leaf grades were about steady, the cleaner and more stylish teas advancing. Darjeelings met with good demand, with the lots having autumnal flavour being in the forefront. The quotations were: Best Assam C.T.C. fannings Rs. 2.70 to Rs. 2.90 (as against Rs. 2.80 to Rs. 3.00 last week), clean black pekoe Rs. 2.20 (Rs. 2.20 to Rs. 2.25), best Assam C.T.C. B.P. Rs. 2.60 to Rs. 2.80 (Rs. 2.70 to Rs. 2.90), plain B.P. Rs. 1.42 to Rs. 1.46 (Rs. 1.44 to Rs. 1.48), medium fannings Re. 1.72 to Re. 1.76 (same), medium B.P. Re. 1.52 to Re. 1.56 (Re. 1.72 to Re. 1.76), and plain fannings Re. 1.56 to Re. 1.60 (Re. 1.52 to Re. 1.56).

In the internal auctions held last week, dusts on offer amounted to 18,942 chests. There was a good general demand, but prices eased. The largest decline, i.e., by 20 nP, was recorded in the better liquoring C.T.C. Assams. The plainer and medium teas and middle East and orthodox teas were lower by 10 nP. However, Darjeelings with flavour sold well. The quotations were: Best Assam C.T.C. Rs. 2.80 to Rs. 3.10, medium Assam C.T.C. Re. 1.75 to Re. 1.95, medium Assam grainy dust Re. 1.56, and medium Dooars Re. 1.54.

Leaf offered amounted to 3,753 chests. General demand for C.T.C. Assams was good. However, orthodox descriptions tended easier.

JUTE GOODS QUIET

(From Our Own Correspondent)

CALCUTTA, 11*th March*

In the absence of any large overseas interest, prices of jute goods were a shade lower during the week under review. Mills were anxious to sell, and this also brought down quotations fractionally. However, the announcement of the minimum prices by the Indian Jute Mills Association a fortnight back was helpful in arresting a heavy recession and infuse confidence among stockists and businessmen. Thus, the immediate objective of minimum prices was achieved, and the fact that prices tended to stabilise, albeit at levels slightly lower than the minimum prices, encouraged the hope in the market that more foreign buying would follow. However, it could not be said if American buyers would show interest for substantial quantities, in view of the persistent reports of American economic recession and growing unemployment there. Activity in the *fatka* market was keen, and was responsible for the steadiness. Reports coming from Dundee indicated that mills there were jubilant over the introduction of minimum prices here, as the low levels which the Calcutta goods touched a couple of weeks ago had naturally depressed Dundee and Continental quotations.

During the week, there was some speculative buying. However, the fact that shippers were not yet fully reconciled with the minimum prices was noted with some disappointment. Shipment figures for the month of February were available during the week, and caused satisfaction, since they were higher than in January. Sacking shipments amounted to 32,600 tons and hessian 31,000 tons, representing increases of 3,800 and 7,400 tons, respectively. These increases are reflected in a slight decline in stocks. That the decline in stocks has been insignificant compared to the increase in shipment figures is taken to indicate that purchases for internal consumption in the month fell. The total stocks of all constructions amounted to 95,100 tons showing a reduction of 1,500 tons. Constructionwise, hessian, at 27,300 tons, recorded a fall of 2,400 tons. Sacking, at 53,400 tons, was lower by only 300 tons. Miscellaneous goods, on the other hand, increased by 1,200 tons to 14,400 tons. The statistical position having thus improved, it was expected that prices would improve further. The resistance of mills to sell below the minimum prices, which are Rs. 100 for B. twills and Rs. 39.50 for hessian 40" 10 oz., it was thought, would bridge the small gap soon between the current levels and the minimum prices.

On Tuesday last, ready B. twills declined to Rs. 99 from Rs. 99.30 and ready 40" 10 oz. hessian to Rs. 39.35 from Rs. 39.45. At these levels some business was also done. The market was closed on Wednesday on account of *Holi*. Although the market was open on Thursday, not much activity was in evidence. B. twills recorded a small increase to Rs. 99.30, while 40" 10 oz. hessian was unchanged at Rs. 39.35. Business was done, and shippers evinced some interest in both near and forward goods. The fact that mills were also eager to sell reduced the rates to Rs. 98.50 and Rs. 39.50, respectively. Over the week-end, the quotations at Rs. 98.40 and Rs. 39.20 recorded a further fractional recession and this recession continued yesterday also. Thus, B. twills closed at Rs. 97.75 and hessian 40" 10 oz. at Rs. 38.90.

In line with the trend in the goods market, raw jute prices also fell fractionally. Sellers were keen for business. Mills purchased sparingly. The recent black-listing of four member firms of the London Jute Association by the Pakistani Government for having purchased Pakistani jute *via* Calcutta has resulted in the members of the L.J.A. and the Dundee Jute Importers Association agreeing to purchase Pakistani jute direct from shippers in Pakistan. The black-listing would, therefore, be soon cancelled.

Latest quotations for the different varieties of jute offering in Calcutta, March-April delivery are given below:

	Middles Rs.	*Bottoms* Rs.
Pakistani:		
District	30.50	27.50
Northern	30.00	27.00

Pucca bales 1st marks Rs.	157.50	(ready)

SHARP RISE IN COPPER

(From Our Own Correspondent)

CALCUTTA, 11*th March*

A substantial rise in the price of copper following the prevalence of acute scarcity was the main feature in the metal market during the week under review. Other base metals also rose. It was hoped that the Government would permit unrestricted imports at least in respect of copper in the next licensing period commencing from 1st April. The Government is aware of the poor stock position, both among importers and consumers, and the anticipated requirements for the next few months, for which information was earlier called for from all concerned. In view of this, the trade and industry are anxiously waiting for the new import policy that will be announced towards the end of this month. Another factor which encouraged the trade to hope for import relaxation in regard to base metals, particularly copper, was the grant of loans by several foreign countries and the possibility of further substantial aid from the United States.

Consuming industries are keenly waiting to receive the 7,500 tons of copper which Canada is shipping to India under the Colombo Plan. It is stated that the Government has completed allotment of this quantity to the consuming industries. However, this quantity would begin arriving only after three months and until then the scarcity would continue. During the week, electrolytic copper was fully steady at Rs. 175, as against Rs. 170 in the previous week. Tin was at one time as high as Rs. 519, but since the price was lower in Bombay, business continued to be diverted to that centre. The local quotation soon fell to Rs. 511, but again recovered to Rs. 513 at the close. Lead was fractionally higher at Rs. 58 and zinc at Rs. 53, but business was restricted.

LINSEED FIRM

(Messrs. A. Bradley and Co.)

CALCUTTA, 10*th March*

The general tone of the linseed market remained firm during the week. Prices advanced further by As. 4 per maund to Rs. 21-12, with supplies rather scarce. With one or two exceptions, crushers were virtually out of the market, owing to lack of parity. Oil prices rose by about Re. 1 per maund to Rs. 51-4, but demand was negligible and local buyers showed little interest in sympathy with a quieter trend in mustard oil. There was no change in overseas markets and the prospect of fresh export business continues to be poor.

The latest available quotation for both Ready March and April-May is Rs. 21-12 per maund.

CLEARANCE IN KIPS GOOD

(From Our Own Correspondent)

MADRAS, 10*th March*

There was no change in the kip market during the week. Arrivals were small and clearance was good. Stockists held firm to their prices, because, at current prices in the U.K., they were not able to replace their stocks without loss. U.K. buyers were not able to improve their ideas, since leather dressers were finding that imported full chrome leather was cheaper than kip leather. Arrivals of tanned buff hides and calves and cow calves met with good clearance at firm prices. Local demand for lower grade cow hides and calves was brisk and sales to the U.K. were negligible.

In the skins section, prices of goat were steady, while those of sheep weak. There were several overseas enquiries which looked more like feelers than for booking business. In the London tanned skins public auctions, 460,000 goat and 950,000 sheep will be offered for sale next ▼

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

DIRECT TAXATION MEASURES

(*Concluded from page 463*)

Gifts to Wife: The Gift-Tax Bill contains an important concession exempting gifts upto Rs. 1,00,000 made to one's wife. The Bill also provides that "the gifts made by the wife of any person out of any gifts made to her by her husband, shall be deemed to be the gift made by the husband." The object obviously is to prevent avoidance of tax. It, however, involves a vicarious liability on the husband. This measure, therefore, requires to be considerably modified.

The Gift-Tax Bill provides for exemption of gifts made by public companies but not by private companies. It has also been given a retrospective effect in so far as it applies to the year previous to the assessment year 1958-59. The previous year was an election year and a large number of private companies are known to have made substantial contributions to the funds of the Congress Party for election purposes in deference to the wishes of prominent Congress leaders. The effect of the present provision will, therefore, be to impose a tax on such contributions made to the Congress Party for election purposes. This is just one instance of the hardship arising out of the retrospective character of the Gift-Tax Bill. There are various other cases in which the retrospectiveness of this legislation would hit people.

Public Expectations not Fulfilled: The most disturbing feature of the present budget proposals is what may be called its negative character, namely, the Government's failure to realise its mistakes and remove inequities arising out of such measures as the compulsory deposit scheme, wealth tax on companies and the unduly heavy tax on bonus shares which has been universally condemned by the Taxation Enquiry Commission, the Roy

MARKET GOSSIP

(*Concluded from page 451*)

bring about the desired result remains to be seen. It is stated that, up to the end of February, about 3.25 million workers, or 62 per cent. of the unemployed, had exhausted the unemployment benefits. The second proposal of Mr. Eisenhower is to release $2,786 million for speeding up the public works programme. The President has expressed his hope that there will be an improvement in the economy during the current month. It is generally expected that there will be a rise in employment during March, but this will be only of a seasonal nature. Unless the expected recovery materialises, the Administration will be forced to take more serious measures. One of these measures which is being widely advocated is a drastic cut in taxes. In fact, the President is already thinking on these lines.

• • • •

After a setback in the closing week of February, the £ sterling has once again staged a recovery in the last two weeks. The spot sterling in New York, which had dipped from $2.81⅞-2.81¼ on the 18th ult. to $2.80.11/16-2.80.13/16 on the 26th—that is a drop of over 1c. in the course of a week—has improved substantially since then to stand at $2.81.9/16-2.81.11/16. Three factors have been responsible for this recovery. First, there has been a distinct improvement in the demand for sterling as a result of the inflow of short-term funds into London, though there is still some hesitancy for funds from North America to move into Britain on account of fears that one day £ sterling may be devalued. This lack of confidence accounts for the fact that the purchase of spot sterling is invariably accompanied by a sale in forward, thereby widening the discount at which the forward rates are quoted under spot. Thus, three months' forward rate, which was quoted at a discount of 2.7/16c. on the 19th ult., is now at a discount of 2.13/16c.

The second reason for the recovery of £ sterling is the British Government's recent decision to allow repatriation of all British bank notes held abroad. This has been interpreted by some as evidence of the British Government's confidence in its ability to hold the present par value of the £. The third factor is the substantial improvement in the sterling area's gold and dollar reserves during February. These reserves rose last month by no less than $135 million to $2,539 million, the highest level since July 1955, when they stood at $2,544 million. This rise compares with that of $131 million in January. A more impressive result of Britain's commercial and trading activity during February is the surplus of £45 million with the European Payments Union, the biggest monthly surplus earned during the last eight years, the corresponding figure for January being £10.5 million. Several factors contributed to this big E.P.U. surplus, the most notable one was the buying of sterling by the Royal Dutch-Shell Company with the foreign currency proceeds of its recent issue. The second important factor was the relaxation by France of its measures taken in earlier months to ease its balance of payments difficulties by repatriating overseas working balances every month-end.

The sterling area's reserves amounting to $2,539 million include the $561 million drawn from the I.M.F. in December 1956 and the $250 million loan taken from the U.S. Export-Import Bank last October. It will be recalled that Britain was granted a credit of $500 million by the Export-Import Bank in February 1957, out of which $250 million remain unutilised. The term of this unutilised credit expired on 28th February this year and the U.K. Government has renewed this credit for another year without drawing it. The extension has been agreed on a payment of a commitment fee of ¼ per cent., which will be deducted from the interest payable on any future drawing.

EXPORT OF SUGAR

Apropos our recent article on export of sugar, Mr. P. Hadfield, Managing Director of Messrs. Parry & Co., Ltd., Madras, writes as follows:

"May I have the privilege of space in your columns to correct statements contained in your issue of the 15th February, in the article on page 268, under the heading, 'Prospects for Large Sugar Exports are not Bright.'

"You accuse the Indian Sugar Mills Association of 'wasting time and energy on debating the question of the agency which should handle the export business.' No one in the know will attempt to deny that much time has been spent on this question, but this has not been time that could have been employed exporting sugar, and, if this could have been done, a solution would have been found very early on. Sugar cannot be sold abroad, except at a loss, and G.A.T.T. agreements prohibit any direct subsidy from Government funds. The Association has made many approaches to the Ministry of Food and Agriculture for the acceptance of proposals to spread this loss equitably over all factories.

"Each scheme submitted has been criticised on the grounds that its implementation requires action by Government of a nature deemed to be illegal under the Constitution. Until this difficulty is solved, no harm, nor delay in effecting export sales, can come from discussion as to what agency should be employed.

"There is no body of opinion favouring control of internal sales. Your statement to the contrary is almost certainly based on one of the schemes that was debated for collecting the subsidy necessary to finance export sales. A proposal was made, aimed solely at avoiding contravention of the Constitution, that a body should be formed to act as selling agents for all sugar and to receive a 'commission' for so acting; the commission to provide the money to finance exports. It was quite clear in the minds of all that mills would sell their own sugar, but would be obliged to pay the commission."

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVI. No. 2453 BOMBAY, 22nd MARCH 1958 PRICE: Re. 1.50

FISCAL PROBLEMS

JUDGING by the continuing references to taxation—too often pointed to be ignored and too weighty to be brushed aside—at the meetings of the trade and commercial bodies, it is clear that fiscal issues are a source of much real and genuine grievance to those who pay taxes. And yet the fact remains that these observations do not receive the attention they deserve at the hands of the authorities. This may be attributed partly to the Government's ideological pre-occupations. More specifically, it could be traced to the fact that taxpayers—the assessees to direct tax—in this country are unfortunately in a numerical minority. Even political minorities have never received a square deal through the ages. It is hardly to be expected that an economic minority should fare any better. Small wonder, the views of the taxpaying minority, lacking as it does political pull, exert little influence on policies. Only, few stop to think whether it is at all times right to judge the validity of the views by a reference wholly to the number of those who hold them. After all, economic issues, in a complex modern society, are bound to be beyond the pale of popular comprehension so that a standard, other than a mere reference to popular backing, deserves to be applied for evaluating the validity of economic pronouncements.

The fact is that complaints against tax burden serve only to evoke cold indifference from the Government until the danger, of which the complainants themselves have all along been warning the authorities, stares everybody in the face. The case in instance is the excise duty on cloth. It never required much economic prescience to see its danger. But no relief came until its effect on mills was too patent to be ignored. If this sad story of prolonged neglect is not to be repeated in other sectors of the economy, the authorities will do well to heed in time the clearest possible warnings by those who know precisely where and how the ill-effects of high tax burdens will manifest themselves. To the long line of thoughtful men, who have felt it their duty to point to the danger ahead of the fast-moving fiscal machine, belongs Mr. E. Parker, President, Bombay Chamber of Commerce and Industry, who devoted a large part of his critical address, at the annual meeting of the Chamber held this week, to the country's taxation problems. He was, however, at some pains to explain that his observations were not meant to be "destructively critical." Indeed, they were not. But it would be folly not to heed them on the mere ground that they are at variance with those who see little or no danger in the present fiscal trends. Mr. Parker's description of the tax picture is worth being quoted here:

"Just consider, for a moment, what is the effect of the many aspects of taxation in existence today in the country. If one possesses capital, Government takes part of it; if one earns an income, Government takes a substantial part of it; if you spend money you have to pay Government for the privilege of doing so; and now, even if you give it away, Government wants a share in it. And finally, as if not content with all that, when you die, Government wants a cut out of what is left! And meanwhile, Government goes on spending what it hasn't got!! It is an astonishing situation. There must surely be something wrong in a country's tax structure where it is possible for an individual to have to pay to Government in any one year a sum greater than the amount of his total income for that year.

"And yet, one hears regularly, all over the country, Government spokesmen, whether Central or State, exhorting business men and industrialists to 'see the light,' to realise that times have changed, even, as the Prime Minister himself said in Bombay recently, to appreciate that nineteenth century capitalism is dead. And really what they are saying is pay up, pay up, pay up!!! There is one light which I would like Government to shine. Their spokesmen are obviously of the view that the business man's and industrialist's pockets are a bottomless pit. If only Government would shine the light in that pocket, they would see that it is far from bottomless; in fact, the bottom is now very near the top."

Mr. Parker deplored that, though the Kaldorian theory, on which the country's tax system was based, envisaged a reduction of taxation on incomes, no attempt had been made to effect such reduction. He rightly suggested that industry could not "expand in fetters." There is now no gainsaying the fact that taxation has reached a stage at which no expansion seems worthwhile even for those who have surplus resources for investment. These resources are also being fast eroded. Foreign capital could, of course, go a long way towards restoring the balance. But the taxes which fetter domestic enterprise act also as a bar to the inflow of foreign capital. At any rate, even foreign capital, as Mr. Parker pertinently pointed out, would not be available without the "essential counterpart" of rupee capital. He rightly insisted that "that portion of industry that relies on capital formation within the private sector must be put in a position where at least the wheels can turn round."

If the private sector is to operate and expand successfully, it must be permitted to retain a reasonable share of its earnings which it can utilise for its own development. If it is not allowed to do so, the inevitable result will be its slow decay and its ultimate extinction. Alluding to the Prime Minister's well-known contention that there is only one sector, namely, the national sector, of which the public and the private sectors are the components, Mr. Parker wondered whether this was "a case of wishful thinking or a case of events casting their shadows before them." He pointed out how present taxation would leave the private sector high and dry. He said: "If taxation in its present varied forms is to continue for long, then the Prime Minister will surely be right—there will be only one sector, the public sector, for the private one will have dropped by the wayside." That this may not be the Government's intention—at least not the Government's expressed intention—is no consolation to the private sector, if the fiscal policies generally tend towards its virtual disappearance.

Defending the Government's economic policy, which has resulted in the increasing importance of the public sector, Mr. Y. B. Chavan, Chief Minister of Bombay, in the course of his reply to Mr. Parker, pointed out that "quick and self-sustaining industrial expansion requires key and basic industries, and these cannot be built up by private enterprise, because of the large investments necessary for those capital goods industries and because quick profits do not accrue from such industries until the demand for machinery has grown sufficiently." He went on to observe:

"Public utilities and basic industries have, therefore, to be under the control or ownership of the Government not for profit but for ensuring their proper functioning and development. Even a big concern like the Tatas which is in the basic steel industry has to depend considerably on Government help. But what are all these basic and key industries for? Are they not intended to provide the necessary momentum and equipment for a rapid growth of industries? With the development of basic industries, several categories of domestic capital goods will become available and there will be increasingly better and larger opportunities for private investment without having to depend on foreign equipment which eats up our foreign exchange. The growth of industries in the public and private sectors is thus complementary and not opposed to each other. In a very large measure, they are inter-connected, the one thriving better on the growth of the other."

Mr. Chavan's exposition of the Government's economic policy, despite its commendably conciliatory tone, does not square with the facts of the existing situation. He no doubt did well to emphasise the "complementary" aspect of the public and private sectors. This is a restatement of Mr. Nehru's analogy of two men in the same boat who must both be concerned that the boat does not sink. But, apart from the fact that this is an over-simplification of a complicated issue, it is the private sector's contention that its fellow-traveller is engaged in a ideological scuffle with it and does not even care if the boat capsises in the struggle. The public sector is in no mood to give any quarter to the "other man" in the boat. If it were a mere question of co-existence, it might mean only some painful readjustment. But there is a steady expansion of the public sector at the expense of the other sector. It is not true that the public sector is interested in owning only the "key" and "basic" industries, for, by no stretch of imagination could cement distribution or export trade in ores, or selling life insurance be termed "basic" to the economy.

Above all, the argument that some economic impotence is implied in the private sector's dependence on Government loans overlooks the fact that it is the Government which has brought the private sector to such straits by first preventing, through taxation and unwise pricing policies, the industrial units from accumulating reserves and next by siphoning off all available savings from the capital market, so that there is little surplus left for the private sector to draw upon. In this context, to cite the private sector's forced dependence on resources outside itself as an argument against it is certainly to add verbal insult to an already deep and painful economic injury.

LIFE INSURANCE—II

AFTER we wrote on nationalisation of life insurance in these columns last week, we received the full text of Mr. Nehru's speech in the Rajya Sabha. On the question of denationalisation, what we read there is even more categorical than what was reported in the daily Press. He said: "Now it is suggested by some people, 'Oh because of this (the L.I.C.'s bungling in the Mundhra deal), we hope you will denationalise life insurance or a part of it.' .... I think it would be wrong to leave any doubt about our intentions and I say that we do not propose to do so, now or hereafter. There is no going back, if I may say so." Last week, we only inferred that Mr. Nehru was opposed to even partial denationalisation, as was suggested by Mr. B. M. Chinai, the erstwhile President of the Federation of Indian Chambers of Commerce and Industry. But it is now quite clear that Mr. Nehru is definitely opposed to it. So when he said at the Federation's meeting that he would consider the question of splitting up the L.I.C. into a number of units, all that he had in mind was that they would all be owned and manned by the Government. In fine, life insurance would continue to be a State monopoly. Only, instead of one L.I.C., there would be a number of them. If this remedy were tried, it would prove to be worse than the disease for reasons stated in these columns last week.

Mr. Nehru is also wrong in thinking that those who favour denationalisation do so simply because of the L.I.C's mistake in investing in the shares of Mundhra concerns. Their demand is based on the more solid ground of principle, namely, that it is not conducive to, nor consistent with, a free, democratic society. One of the reasons for the increasing dependence of the private sector for financial support from the Government, a development strongly resented by Mr. Nehru, is nationalisation of life insurance. What else are people to do but to depend on the Government for their needs if the State goes on encroaching upon the sphere of free enterprise?

Now to take up the subject of investment policy of the Life Insurance Corporation. The ideal thing for the L.I.C. to do would be to continue the policy that had been laid down for the life insurers in the private sector. This policy was evolved on the basis of trial and error over a period of years and fulfils the sound criterion that investment of life funds should bring a fair and steady return to policyholders consistent with safety. There should be no element of unhealthy speculation in such investments. Some risk, of course, may have to be taken, for there can be no investment in equities if no risk at all is to be incurred. The degree and the quantum of such risks, however, should be clearly laid down, in order to prevent any possible misuse of funds by the authorities in charge of the Corporation. Some may say that this is a rigid approach and that there should be some flexibility to suit the needs of a planned economy of the type India is having at present. The only flexibility that can be imparted to this rule is that it could be reviewed from time to time, say, every five years, with the consent of Parliament, the body that represents the real owners of the Corporation.

If the aforesaid criterion is conceded, it naturally follows that the extent to which the L.I.C. can help in the establishment of new industrial concerns through direct participation is very limited. It will be highly desirable for the L.I.C. not to invest in shares of new concerns—it is immaterial whether they are ordinary or preference shares—for there is no guarantee of a return on these shares for some years to come. The only way in which the L.I.C. can help, without jeopardising the interests of its policyholders, the coming into existence of new industrial concerns is by participating, to a limited extent, in the formation of such credit institutions as the I.C.I.C. and the Industrial Finance Corporation specifically meant for meeting the long-term capital needs of industries. The L.I.C., however, can subscribe to the debentures of existing industries and the new capital of existing concerns, subject to certain well defined conditions designed to ensure the safety of its funds. It has been suggested by some that there is no harm in the L.I.C. investing in the equity capital of new companies with promising industrial projects, for, though there will be no yield on them for some years, the resulting loss will be more than compensated by large capital appreciation in the long run. But this amounts to taking a view of the future and assuming a larger degree of risk than is prudent for investing life funds. A life insurance company should think more in terms of a steady, fair yield and safety of capital than in terms of capital appreciation. Such risks should be left to individuals and institutional investors specially meant for playing that role.

In order to appreciate this point and also the others that will follow presently, it must be borne in mind that the funds of the L.I.C. should be treated as those of a trust. They are the savings of millions of small people given to the L.I.C. to be returned when their policies mature or when the risk covered materialises. It is nonsense to say, as some politicians do, that it is a myth to call the L.I.C.'s funds as belonging to a sacred trust. It is true that, so far as their capital is concerned, the policyholders have the guarantee of the Government of India, since the L.I.C. is owned by the latter. But that does not necessarily mean that the Government or the Corporation can do what it likes with the life funds. The L.I.C.'s funds are meant for a specific purpose and their disposition must be consistent with that purpose. If this principle is to be ignored, then why have a separate autonomous Corporation at all? Why not provide life insurance as a departmental service, as the postal, telephones and telegraphic services are?

Again, if the trusteeship character of the L.I.C funds is to be denied, the Government should be honest enough to abolish the system of with-profit policies and provide cover at a low rate of premium for whole life. The with-profit policyholders expect not only the amount for which they have insured their lives but also decent bonuses. How could these bonuses be ensured, unless the funds of the L.I.C. are invested in a sound and safe manner? Surely, the with-profit policyholders can legitimately expect a better deal in this respect from the L.I.C., as it is now owned by the Government, than they have had under private insurers. It must be remembered, in this connection, that, when life insurance was in the hands of free enterprise, the Government framed, quite rightly, of course, rules and regulations to ensure that the with-profit policyholders got a proper return for the extra premium they paid for this benefit. And any company which did not declare decent bonuses was looked down upon. The Government itself used to remind the private insurers repeatedly that they should regard themselves as the trustees of their policyholders. It does not now lie in the mouths of politicians to contend that this standard should not be applied to the L.I.C., just because life insurance is the monopoly of the public sector, which has the privilege of printing currency notes. It is necessary to warn the public that, if the trusteeship character of the life funds is to be disregarded, the L.I.C. will become a tool in the hands of politicians who will not hesitate to use its funds for the interests of their party. The risk is all the greater in a country like India, where there is a strong tendency for the party in power to equate itself with the country as a whole.

It is certainly no part of the function of the L.I.C. to act as a stabiliser of values on the stock exchanges. It is no argument at all to say that, just because it holds a large block of shares quoted on the stock exchanges, it must operate in these markets in order to protect the value of its holdings. It will be beyond the capacity of the L.I.C. to do so and the function involves a risk which no life insurer in the world regards as legitimate. If there are excessive fluctuations in the share markets, brought about by unhealthy speculation, the remedy lies in controlling speculation and not in asking the L.I.C. to counter the speculators. If stock market values go down as a result of the adoption of fiscal and monetary policies unfavourable to investors, the remedy lies in suitably amending these policies in good time. If these policies are regarded as inevitable and necessary, then it follows that their adverse repercussions on shares and stocks must also be regarded in the same spirit and allowed to take their course. There is clearly no sense in imposing heavy loads of taxation and allowing interest rates to go up and in simultaneously asking the L.I.C. to enter the share markets with a view to beating back the bearish waves generated by these policies. Surely, the L.I.C. is not a jobber on the stock exchange. The former Finance Minister, Mr. T. T. Krishnamachari, is not such a simpleton as not to realise the absurdity of such a proposition. Yet, if he had directed the L.I.C. to act as a stabiliser of the share markets, he must have done so with two objects in view; one, to cover the adverse effects of his new incentive-killing taxes on equities, so that popular opposition to them might not gather heavy momentum and, two, it was an opportunity to gain sufficiently effective control over the major industrial undertakings in the country at a relatively modest price. In fine, he decided to use the L.I.C. to further the ends of his party, namely, to establish a socialist pattern of society. But, unfortunately, his scheme misfired to some extent. He himself became a victim of this misfiring. The Congress Party has lost the services of an able administrator and is about to lose those of a few competent and experienced officials, of whom there are not many left now.

It would appear that the second objective referred to above appeals to Mr. Nehru, the Prime Minister. Even the first one does not seem to have evoked his disapproval. In his extempore speech at the last annual meeting of the Federation, he remarked that, while he could understand the criticism that the investment policy of the L.I.C. should not result in nationalisation of companies the shares of which were acquired by it, he could not accept the proposition that the Corporation should not invest in certain companies essential to the economy of the country and prevent their collapse through the activities of speculators. He then went on to say that, if there were dangerous symptoms in the share market and if the future of some important and vital undertakings was jeopardised, then the Government had every intention of seeing that these undertakings did not fail. He further said that, while it was natural that the L.I.C. funds must be invested in safe concerns, it would not be correct to say that safety should be the only factor to be taken into account. It must be noted that, when Mr. Nehru made these remarks, he was in charge of the Finance Ministry also.

If the investment policy of the L.I.C. were to be based on the aforesaid objectives, it would not be a very sound one. While Mr. Nehru has stated, on more than one occasion in recent weeks, that he did not believe in nationalisation through the backdoor, he has not disowned the theory of the State operating from strategic heights in order to shepherd the private sector through the so-called socialist road. And the L.I.C. is one of the strategic hills. This policy is full of risks, for the conception of national interests will differ not only from party to party but also from minister to minister belonging to the same party. Again, it is, of course, necessary to prevent speculators and anti-social elements from wrecking industrial concerns and thereby causing misery to investors, workers and consumers. But why should the L.I.C. be asked to perform this function? It is obvious that the L.I.C. can enter the scene only after much damage has already been done to such concerns. The lessons of the Mundhra episode are crystal clear on this point. One has only to reflect calmly to realise that it will take years to salvage such concerns as Jessops, Richardson & Cruddas, the B.I.C. and Osler Electric. So the policy for handling commercial adventurers and pirates should be based on the sound principle that prevention is better than cure. This means that the Government should be vigilant and effectively exercise its vast powers under the Company Law and the Industrial Development and Regulation Act against the anti-social elements. If, for instance, the Government's object was to force Mr. Mundhra and his "friends" out of any one of the concerns the shares of which the L.I.C. has bought, it could have been easily achieved by directing the banks which have given credit to him—the State Bank of India is prominent among them—to play the game which they have now done or even by asking the Company Law Authorities to act promptly against the various breaches of law committed by him. The Government could have acted against him even through the Income-tax Department. In fact, when one comes to think of it carefully, one will realise that the L.I.C. was actually trying to save Mr. Mundhra and help him to retain his newly won industrial empire. But for Mr. Feroze Gandhi and certain other interests, the whole deal would have gone unnoticed, with Mr. Mundhra continuing to reign over his empire. Thus, most of the considerations urged by Mr. Nehru are irrelevant to the investment policy of the L.I.C.

The fundamental business of the L.I.C. is to sell life insurance and promote savings among the people. If it is to succeed in this business, its investments must be safe and sound, earning a reasonable rate of return. It must not be made the handmaid of politicians. It is, of course, true that life funds should be available for promoting industrial development. But this objective must be sought to be achieved in a manner consistent with the principles of safety, quite a feasible criterion, provided the job is entrusted to those who are competent enough to handle it.

SHARE MARKETS IN CHEERFUL MOOD

CABINET RESHUFFLE—TREND OF MONEY

THURSDAY, 5 P.M.

THE sentiment in share markets has definitely changed for the better. The appointment of Mr. Morarji Desai as Finance Minister has been viewed by market circles in a favourable light. They consider that there will be at least no vindictive attitude on his part towards the private sector, though they realise that, at least for some considerable time to come, he will not be in a position to render any positive assistance by way of relief in direct taxation, in view of the fact that Mr. Nehru has firmly strengthened the new tax pattern drawn up and put into effect by T.T.K. There is, of course, considerable force in this line of thinking. It will be recalled that T.T.K. did a lot of loud thinking and upset the confidence of investors by his unsavoury, if not rude, remarks about the private sector. Even friends of T.T.K. used to feel that he ought to be a little discreet and dignified in his statements on free enterprise. One can be sure that Mr. Morarji Desai does not suffer from this weakness of T.T.K. He will not, for instance, say, as T.T.K. did in December 1956, that there will be a budget every alternate month or that the Indian bankers are clerical-minded. Nor will he try to get rid of any high officials he does not like by following such undignified method as the one adopted by T.T.K. for removing Mr. B. Rama Rau from the Governorship of the Reserve Bank. Mr. Morarji Desai is too perfect a gentleman to resort to such cheap tactics. He is, of course, a firm administrator. Though he was once regarded as a man of inflexible views, he is now a mellowed person. He is also more tolerant of criticism than he was before. A Finance Minister should speak less frequently than the other Ministers on economic matters. Silence is a much more golden virtue for him than for his colleagues in the Cabinet. It is a safe bet that Mr. Desai will follow this principle scrupulously.

MARKET GOSSIP

Everyone admits that Mr. Morarji Desai is a competent administrator, a loyal Congress man and a devoted worker. But he is not an expert either in finance or economics. Finance Ministership is a skilled job. The fact that Mr. Nehru could find no one else to take this post is, however, a reflection on the Congress Party. It only shows that this ruling party, for which no alternative is in sight, is lacking in specialists. If it has failed to attract such specialists from the community or even to retain the services of those few independents who came forward to serve the country in their own light, it is because of its peculiar economic philosophy. This philosophy does not sound practical to those who believe in tackling the economic poblems of the country with their feet on the ground. There are, of course, quite a few industrialists who are members of the Congress Party, but, unfortunately, they are regarded as capitalists and not socialists.

Although Mr. Morarji Desai is not an expert in financial matters, he has all the qualities of a leader. He is fortunate enough to have a strong Secretariat and can depend on his experts to find the right approach to the complex problems that come up to him. Besides, Mr. Gopal Reddi, Minister for Economic Affairs, has been in charge of Finance in Madras and Andhra for several years now and knows his job. Mrs. Tarakeshwari Sinha has been a keen student of economic matters. Then, there is Mr. Bhagat who has been in the Finance Ministry as a Deputy Minister for some time. With the help of these colleagues, Mr. Desai may well belie the misgivings of those who attach great importance to expert knowledge of economics and finance as one of the fundamental qualifications for Finance Ministership.

There are two more factors in favour of Mr. Morarji Desai. As a respected Congress leader, he can command the confidence and co-operation of the State Governments which are essential for the success of the Plan. Secondly, his appointment has been greatly welcomed by business men. They know him. He, too, knows and understands them well. Since the private sector has still a large role to play in the drive for the economic uplift of the masses, the mutual understanding that exists between Mr. Desai and business men may make their respective tasks easier. The transfer of Mr. Lal Bahadur Shastri from Transport and Communications to Commerce and Industry also augurs well for the future. Mr. Shastri has proved in his previous offices that he is not a doctrinaire but a pragmatic person, who is amenable to reason. And, if Mr. S. K. Patil could carry a little further the good beginning which Mr. Shastri has made in easing the burdens on transport and communications other than the Railways and in solving their problems, the economic progress of the country would definitely gain fresh momentum. It is to be hoped that the reshuffled Union Cabinet will take a more realistic view of the problems ahead than its predecessor.

• • • •

The relief given in the excise duty on cotton textiles and the suspension of the compulsory deposit scheme for 1958-59 have also gone a long way towards changing the sentiment of share markets on more cheerful lines. These measures, of course, do not go far enough. The Government could have abolished the compulsory deposit scheme altogether instead of merely suspending it for a year. It would have lost nothing thereby. Similarly, it could have reduced the excise duty on cloth to the extent it was increased on 1st September 1956, so that the cotton mill industry could raise its contribution to the national income substantially and compete effectively in the export markets based on the strength of its domestic base. Nevertheless, these two concessions have to be welcomed in the spirit of something being better than nothing. They have revived hopes that, at the Select Committee stage, the Government would consider favourably the demands for reducing the rigour of the conditions pertaining to the development rebate and for cutting the rate of taxation on dividends and bonus shares at least. Be that as it may, knowledgeable brokers in the share market are of the view that the present bullish fervour will last for some time. This is based on the theory that a bull market feeds on itself. Some speculators have already made sizable profits after a long interval and this will encourage them to take further risks as bulls. The reduction in the British Bank rate from 7 per cent. to 6 per cent., news of which has just come, will also strengthen their hands. Again, yields on equities in India have been standing at high levels for want of confidence. Now that there are signs of revival of confidence, yield ideas also may change in a downward direction.

• • • •

For the third week in succession, the Reserve Bank of India has stepped up its selling rate for some of the Central Government loans. This week it pushed up the rate by 5 nP for both 3½ per cent. 1965 and 3¾ per cent. 1967 and by 10 nP for 3½ per cent. 1964. Over the three weeks since the Union budget was announced, the Bank's selling rates have been raised as follows:

Name of the Loan	*Increase*	*Latest price*
	nP	Rs.
3½% 1962	5	97.90
3½% 1964	20	97.95
3½% 1965	5	97.70
3¾% 1967	5	97.65
3¾% 1967	10	97.70
4% 1972	5	100.05

The Reserve Bank's object in pulling up the Gilt-edged market thus is to prepare it for the successful implementation of the borrowing programmes of both the Central and State Governments in the coming months. Some regard these preparations as rather too early, because there is no prospect of even the Central Government coming to the market before the middle of May, the earliest. They point out that the demand for money for trade purposes is still good and that the banks are finding their resources quite usable. They feel that, if the Centre were to enter the market before the slack season definitely sets in and all the banks are saturated with surplus funds, the response would not be satisfactory, let alone impressive.

In this context, a few facts about the present state of the money market will be interesting. So far during the current busy season (from 25th October 1957 to 7th March 1958), notes in circulation have gone up by only Rs. 92.5 crores, as compared with Rs. 107 crores in the corresponding period of 1956-57 busy season, the actual notes in circulation being Rs. 1,578.7 crores, as against Rs. 1,525.9 crores a year before. Foreign assets of the Reserve Bank have gone down by Rs. 48.1 crores, as against Rs. 70.8 crores. The cash balances of both Central and State Governments are actually higher, but their borrowings from the Reserve Bank are also higher by nearly four times at about Rs. 44 crores. There has been a rise of Rs. 67.6 crores in the (net) deposits of scheduled banks. In the corresponding period of the 1956-57 season, the rise was larger at Rs. 72.1 crores, but that was on a relatively lower base. At the close of the first week of this month, total (net) deposits stood at Rs. 1,426.8 crores, as compared with Rs. 1,159.5 crores a year earlier. There has, however, been a change in the composition of deposits. As on 8th March 1957, of the total deposits, Rs. 696.8 crores were demand nature and Rs. 462.7 crores time nature. A year later, their respective totals were Rs. 716.2 crores and Rs. 710.6 crores. It will thus be seen that both demand and time deposits are almost at equal levels now. This unique feature is due, to a great extent, to the system of call deposits on which the rate of interest is almost equal to that on term deposits, which in turn is the result of keen competition for funds not only between banks, but also between banks and the Government. Even industrial concerns have begun to revert to the old system of taking fixed deposits.

A good part of the increase in deposits of banks has occurred in those of the State Bank which is handling the growing Government and semi-Government accounts. Of the increase of Rs. 267.3 crores in the deposits of scheduled banks over the year, the share of the State Bank of India alone is Rs. 137 crores, or more than half. A big part of this growth in the funds of the State Bank is attributed to the sale proceeds of wheat and cotton obtained from the U.S. under P.L. 480. Naturally, the other scheduled banks, especially the bigger ones, are envious of the State Bank.

It is now common knowledge that, owing to restrictions by the Reserve Bank on advances against certain commodities, the curtailment of imports, lower level of production in some industries, and fall in food and a few other agricultural crops, the demand for credit has been relatively slack as compared with this time last year. This is reflected in scheduled banks' advances which have gone up so far in the current busy season by only Rs. 68.5 crores to Rs. 936.4 crores, as against by Rs. 105.3 crores in the same period of last busy season. It is true that, a year ago, the total of advances was only Rs. 866 crores, but, in view of the rise in deposits as noted above, the credit ratio to deposits is actually lower now at 65.6 per cent., as against 74.6 per cent. in the first week of March 1957. For the same reason, the scheduled banks' borrowings from the Reserve Bank have also been lower, the latest outstanding of such borrowings being only Rs. 36.9 crores, as against Rs. 79.1 crores a year before.

The lower credit ratio of scheduled banks as a whole is also influenced by the surfeit of funds with the State Bank of India, the credit ratio of which is only 50.3 per cent., as compared with 63.5 per cent. in March last. If this Bank is excluded, the credit ratio of the rest of the scheduled banks is still high at 71.9 per cent., though not as high as it was a year ago when it stood at 78.2 per cent. This figure gives one an idea of the extent to which scheduled banks other than the State Bank are preoccupied with financing trade and industry.

The Reserve Bank, of course, must be aware of all this. And yet if it has already started toning up the Gilt-edged market, it must be because of its view that the busy season will come to an end earlier than usual and also because it wants to bring about a proper realignment of the yields on the existing loans in accordance with their maturities. The yield on 3¾ per cent. and 3½ per cent. 1967 loans, for instance, is 3.80 per cent. whereas that on 3½ per cent. 1964 loan, a shorter maturity, is higher at 3.97 per cent. Similarly, 3½ per cent. 1965 loan is giving a return of 3.87 per cent. If the authorities are thinking in terms of floating a medium dated loans among others and also a short-dated loan at a favourable rate, they have to see that such anomalies in the pattern of yields are corrected in good time and not just on the eve of new loan flotation. It will now be clear as to why the rate for 3½ per cent. 1964 has already been put up by 20 nP.

It is, of course, quite premature to talk of the terms and types of the new loans that are due to be issued by the Central Government. But the way in which the Reserve Bank has been pulling up the market during the last few days suggests that it must be thinking in terms of three types, short-, medium- and long-dated loans.

• • • •

The U.S. economic recession, as is only to be expected, continues to attract world-wide attention. In view of the importance of U.S.'s role to the world economy, which arises partly from its being a sizable importer and exporter of goods, and partly from its being a generous donor and lender, there is widespread anxiety over the fact that the recession shows no signs of halting. Last week, we referred to the fact that the number of unemployed has crossed the five-million mark to stand at 5.2 million. The increase in February alone was 1.1 million, while in January it was 700,000. The index of industrial production (Base 1947-49=100) was 130 in February, as against 130 in January; it has now reached the lowest point since late 1954. An official announcement, made on the basis of a survey of plans for installation of new plant and equipment, states that the present investment programmes signal the "end of the recent boom in capital investment." Business men plan to spend $32,047 million in 1958, as compared with $36,962 million in 1957. Outlays are due to fall to a yearly rate of $34,050 million in the first quarter and then to $32.550 million in the second quarter. Further declines are expected in the following six months. Manufacturing companies plan to cut their investments one-sixth while commercial companies plan a reduction of one-eighth. Railroads, mining and non-rail transportation are expected to reduce their investments by 33⅓ per cent., 15 per cent. and 19 per cent., respectively.

Although the recession continues to be somewhat disturbing, it is gratifying to note that it has not so far led to serious disturbances elsewhere. At any rate, the conclusion reached by a *Reuter's* survey of the economies of several countries is that the recession has failed to justify fears of a severe "chain reaction." The survey, however, notes that many countries, including Britain, Canada, India, West Germany and Holland, record rising unemployment figures. But apart from Canada, which particularly feels the rise and fall of the economic tides of the U.S.A., American recession is not the dominating cause for this. According to Mr. Sydney Campell, *Reuter's* Financial Editor, "world prosperity has taken a knock, but so far there has been no rot." He adds: "There may be many repercussions still to come, but by then a turn in the American tide is probable." Canada's case, however, appears to be different, for it seems to trace its present setback in employment situation to U.S. recession, though there are other factors such as heavy immigration last year and the tight money policy of the former Liberal Government. West Germany has reported a cut in export orders as a result of U.S. recession. The official British view, it is stated, is that there is no reason why a worsening of the depression in the U.S. should affect the U.K. economy in a general way, but that there are bound to be "black spots" in industry. There has been no slow-down in Italy, nor in France which has been cushioned by foreign loans and the fall in international commodity prices. Australia has reported a slight fall in unemployment. As regards India, the recession, according to the survey, is affecting it mainly through a worsening of the terms of trade which has led to its products fetching lower prices in world markets.

Being fully aware of the gravity of the situation, the U.S. Government has already taken, as we indicated last week, quite a few measures designed to inject more money into the economy. What is now both vigorously demanded and confidently anticipated is a sizable cut in taxation. Last week, President Eisenhower is reported to have discussed the economic issues with Republican Party leaders. After the meeting, Mr. Joseph Martin, Republican Leader in the House of Representatives, revealed that it had been agreed that a decision on cut in taxes could be delayed by another month. But according to Mr. James Michell, the Secretary of Labour, a "major" tax cut is the "next big step" towards halting the recession. It would appear that the leaders of the leading trade union organisation,

(*Continued on page 555*)

SHARE MARKETS BULLISH

FAVOURABLE REACTION TO CUT IN CLOTH EXCISE DUTIES

(From Our Own Correspondents)

BOMBAY, *20th March*

THE share market shook off its hesitancy and struck a buoyant note during the week under review. The long-awaited relief to cotton textile mills by way of reduction in excise duties was granted by the Government, when the Prime Minister (in his capacity as Finance Minister) announced on Tuesday this week, in the course of his reply to the Budget debate in the Lok Sabha, a cut in basic excise duties on all varieties of cloth. Though this relief was well anticipated by the market, as witness the rally in prices prior to the actual announcement, the cut in duties was much less than asked for by the industry. Nevertheless, the market greeted the announcement with a further jump in prices and welcomed it more as a gesture on the part of the Government in realising the serious position of the textile industry.

Another welcome relief granted to industries in general was that the compulsory deposit scheme would not be in force during the year 1958-59. Announcing this, Mr. Nehru said that withdrawal of the scheme was not being done now, as it would necessitate bringing an amending Bill. He, however, told the House that when the time came for amending the Income-tax Act, that would be done. It is, therefore, taken for granted that the scheme would not be enforced even after 1958-59, because of the difficulties involved in collecting the deposits. According to Mr. Nehru, a sum of Rs. 3.61 crores only was realised from the deposits and this was a comparatively small sum involving an enormous amount of work. Moreover, the strict regulation of the development rebate allowance would serve the purpose of the compulsory deposit scheme. The relaxation of deferred payment condition for the import of essential goods from the U.S. which would be financed out of the $150-million loan from the Export-Import Bank, announced by the Government of India yesterday, also aided sentiment. Only projects of sufficient importance in the engineering, chemicals, cotton textiles, automobiles and coal mining industries would be eligible for this concession. These favourable developments brought about a complete change in the market sentiment and lifted up prices to levels not seen for some months past.

In the steels section, Tata Ordinaries jumped from Rs. 174 to Rs. 178.25 and, after a short-lived setback to Rs. 175.75, forged ahead to close at Rs. 180.25. The new shares gained over the week Rs. 5.50 to Rs. 175.50. The withdrawal of the strike at Indian Iron and Steel Company's works gave additional strength to the scrips, which advanced from Rs. 20.44 to Rs. 21.36 at the close today.

Textiles gave the lead to the whole market. Bombay Dyeings picked up no less than Rs. 3.80 over the week to Rs. 55.40. Century's staged an impressive rise from Rs. 393.25 to Rs. 425. Kohinoors moved up from Rs. 272 to Rs. 285 before closing at Rs. 283. Central Indias recorded a gain of Rs. 8.50 to Rs. 90.50, Finlays Rs. 18 to Rs. 283 and Gold Mohurs Rs. 20 to Rs. 202.50. Khataus were marked up by Rs. 13 to Rs. 154, while New Greats lost Rs. 3.50 to Rs. 209 and New City Mills were done Rs. 25 lower at Rs. 100. Shree Niwas Cottons hardened by Rs. 13 to Rs. 148, Simplex by Rs. 2 to Rs. 161.50 and Standards Rs. 14 to Rs. 432. Svadeshis gathered Rs. 12 to Rs. 183.50 and Tata Mills Rs. 2 to Rs. 41.

Expectations of an increase in cement prices accounted for a brisk activity in cement shares. Associated Cements rallied from Rs. 143 to Rs. 150 and their new shares from Rs. 138.50 to Rs. 141. Digvijays gained Re. 1.75 to Rs. 138.25 and Orissa Cements 16 nP to Rs. 12.48. Sugar shares participated in the general rise, Belapurs changing hands Rs. 3.50 higher at Rs. 239. Phaltans were done Rs. 140.50 *ex-div.*, as against Rs. 150.50 *cum-div.* a week ago. Walchandnagars gained ground from Rs. 273.50 to Rs. 278.75. In the engineering and mining group, Alcock Ashdowns rallied by Rs. 11.25 to Rs. 227.50 and Tata Locomotives by as much as Rs. 7.25 to Rs. 153. Premier Constructions picked up Rs. 8 to Rs. 167.50. Larsen and Toubros rose by 44 nP to Rs. 13.80 and Mahindras were done 76 nP higher at Rs. 18.12. Shivrajpurs rose by Rs. 3 to Rs. 97. Shipping shares were relatively less active, but the undertone was steady. Scindias gained 8 nP to Rs. 16.84 and Great Easterns 16 nP to Rs. 19.96. Premier Automobiles were taken Re. 1 higher at Rs. 79.50 and Hindustan Motors 16 nP better at Rs. 6.32. Among miscellaneous shares, Bombay Burmahs (old) firmed up from Rs. 505.50 to Rs. 530. National Rayons staged a rise from Rs. 222.50 to Rs. 243.25. Tata Chemicals gained 40 nP to Rs. 13.52 and Tata Oils Re. 1 to Rs. 38.50. Hindustan Levers changed hands 96 nP higher at Rs. 22.52.

• • • •

Calcutta Stock Exchange

CALCUTTA, *19th March*

Opening on a firm note under the stimulus of improved economic situation as pictured by Mr. Nehru, the Calcutta Stock Exchange gathered a steadier trend as the week progressed. Closing levels, as a result, were higher on balance. There were hopes of a reduction in excise duty on cloth, which was, in fact, announced yesterday. The Prime Minister's assurance to the Congress Parliamentary Party regarding review of export duty on inferior teas contributed to fair gains in the tea section; this was interpreted as the beginning of a change in official attitude to the various problems confronting the tea industry.

The impressive rise in Indian Irons followed the end of labour strike in the Company's smelting shop, the continued expectations of a bonus issue, and hopes of 10 per cent. dividend on increased capital. Although prices did not vary in a noticeable way, more jute shares changed hands, thanks to improvement in jute goods prices and reduction in output during February. Encouragement was also derived from reports that recognised legal futures trading in jute goods and raw jute would soon be resumed. In accordance with the general trend, miscellaneous industrials gathered strength. The possibility of any major relief in taxation was ruled out but hopes were lingering that, the Finance Minister, in the course of his reply to the Budget debate in the Lok Sabha, would announce small concessions directly aimed at more industrial activity. The suspension of the compulsory reserve deposit scheme now announced boosted activity yesterday.

Among textiles, Kesorams hardened from Rs. 9.90 to Rs. 10, and Jayshrees from Rs. 6.19 to Rs. 6.62. Basantis were earlier better at Rs. 6.03, but Cawnpore Textiles declined to Rs. 4 from Rs. 4.44.

Coals were quiet, although more business was put through this week. The suspension of work in some collieries in Jharia following apprehensions of accident by the Mines Inspector was a factor which kept back enthusiasm. After being better at Rs. 213, Bengals receded to Rs. 208, with Burrakurs easing from Rs. 22.75 to Rs. 22.60. Pench Valleys were unchanged at Rs. 18.

More interest was shown in engineering shares. On interested support, Indian Irons touched a high of Rs. 22.18, after opening at Rs. 20.39. Guest, Keen Williams at Rs. 29.75 added a fractional gain, and Texmacos put on 70 nP to Rs. 18.05. Jessops opened at Rs. 22.62 and rose to Rs. 22.87 before losing to Rs. 22.19. Burn & Cos. at Rs. 326 picked up Rs. 6. The higher trend in metal prices contributed to the smart rise in Indian Coppers from Rs. 2.84 to Rs. 2.97.

• • • •

Madras Stock Exchange

MADRAS, *18th March*

An irregular trend was in evidence on the Madras Stock Exchange during the week under review. Plantation shares met with sustained buying support, induced by hopes of a reduction in export duty on tea following the Prime Minister's statement to the Congress Parliamentary Party, firmness of tea prices and absence of any new proposals of tax on plantation companies in the Mysore budget. But textiles encountered selling, thanks to mounting stocks with mills and continued decline in prices. The reduction in the excise duty on cloth announced by the Prime Minister today had no effect on the market, since most of the textile mills in South India are predominantly spinning units. Electricity and sugar shares were dull, in the absence of any encouraging development. In the miscellaneous section, buying was of a selective nature. The market received with satisfaction Mr. Nehru's announcement today of the suspension of the compulsory deposit scheme. This, however, did not lead to any improvement in enquiries, as operators preferred to await the exact details of the announcement.

Among tea shares in the planting section, Haileyburias spurted by 65 nP to Rs. 17.25. Kalasas improved by 15 nP to Rs. 15.10. Kil Kotagiris rallied 31 nP to Rs. 5.46. Twyfords picked up 10 nP to Rs. 12.50. Coonoors and Waterfalls added 5 nP each, the former to Rs. 18.80 and the latter to Rs. 3.35. Chembras gathered 2 nP to Rs. 3.17. Coffee shares were in the limelight. Coffee Lands forged ahead by 75 nP to Rs. 31.25. Anaparais were marked up by 65 nP to Rs. 5.80 *cum-div.*, induced by the announcement of a final dividend of 25 per cent., making a total of 40 per cent. for the year ended 30th June 1957, as against 25 per cent. in the previous year. Consolidated Coffees and Badras rose by 15 nP each to Rs. 22.95 and Rs. 3.30, respectively. Bababudins increased by 12 nP to Rs. 10.37. Mysore Coffees put on a like amount to Rs. 3.10 Sangameshwars strengthened by 9 nP to Rs. 2.72. Savamalais gathered 3 nP to Rs. 4.03. Among rubber shares, Thamarapallys were well favoured, the quotation rising by 90 nP to Rs. 21.75. Travancore Rubbers were quoted 25 nP higher at Rs. 13.75. Cochin Malabars and Highlands hardened by 20 nP each to Rs. 5 and Rs. 12.50 respectively.

In the textile section, Radhakrishnas slumped by Rs. 8 to Rs. 120. Rajapalayams dropped Rs. 3.50 to Rs. 130. Metturs declined by Rs. 2.50 to Rs. 397.50 *cum-div.* Coimbatore Pioneers and Ranga Vilas lost Re. 1.50 each, the former to Rs. 225 and the latter to Rs. 62.50. Cannanores receded by Rs. 3 to Rs. 153. Bangalore Woollens shed a rupee to Rs. 169.

TRAVANCORE BANK LTD.

PROFIT MORE THAN DOUBLES IN THREE YEARS

THE Travancore Bank Ltd. (General Manager: Mr. D. R. Vedamuthu, Trivandrum) has had another year of successful working during 1957. In consonance with the development of the country's economy and in tune with the general trend of banking business during the year, there was a sizable expansion in the business of the Bank, as witness the rise in the total working capital from Rs. 8.02 crores to Rs. 9.05 crores. The profit has moved up by Rs. 2.91 lakhs to Rs. 14.82 lakhs, thus maintaining the upward trend noted in the previous years. It will be recalled that the Bank's profit, which had suffered a slight setback in 1954 from Rs. 8.05 lakhs to Rs. 7.36 lakhs, staged a good recovery in subsequent years and has now reached a peak of Rs. 14.82 lakhs in the year under review. With this improvement, the profit has more than doubled itself in the last three years.

The bulk of the rise in profit for the year under review has, however, been eaten up by the provision for taxation which has risen from Rs. 4.90 lakhs to Rs. 7 lakhs. The transfer to the reserve fund has also been stepped up, but only slightly, from Rs. 2.40 lakhs to Rs. 2.97 lakhs. As in the previous year, a sum of Rs. 20,000 has been provided for depreciation on investments. The dividend has been raised to 5 per cent. from 4 per cent., to which level it had been stepped up two years ago from 3 per cent.

The following comparative table brings out clearly the progress of the Bank in the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Interest and discount earned	32.06	25.79	23.81	21.16
Commission and exchange	7.09	5.15	4.64	3.92
Interest paid	13.51	9.80	8.82	8.76
Expenses	10.53	8.96	9.22	8.63
Depreciation	0.21	0.29	0.35	0.35
Profit	14.82	11.91	10.20	7.36
Provision for taxation	7.00	4.90	4.00	1.25
To reserves	2.97	2.40	2.05	2.00
,, depreciation on investments	0.20	0.20	0.25	0.50
,, bonus to staff and gratuity fund	0.05	0.40	0.40	0.60
Dividend	5.00 (5%)	4.00 (4%)	4.00 (4%)	3.00 (3%)
Carry forward	0.06	0.45	0.44	0.94

	As on 31st December			
	1957	1956	1955	1954
Capital	1,00.00	1,00.00	1,00.00	1,00.00
Reserves	29.17	26.20	23.80	21.75
Deposits	6,05.48	4,65.54	4,76.70	4,39.09
Borrowings from other banks	..	10.00	..	..
Advances	3,33.60	2,63.81	2,51.57	2,21.57
Investments	2,44.12	2,60.32	2,55.09	2,55.50
Cash (including money at call)	1,75.28	97.25	1,10.44	98.00
Balance-sheet total	9,05.12	8,01.66	7,40.81	7,32.20
Ratio to deposits of—	%	%	%	%
Advances	55.1	56.7	52.8	50.5
Investments	40.3	53.8	53.6	58.2
Cash	28.9	20.9	23.2	22.5

As will be seen from the above table, the Bank's income from interest and discount has recorded a rise of Rs. 6.27 lakhs during the year under review, as against the aggregate increase Rs. 4.63 lakhs in the previous two years. Income from commission and exchange has gone up by Rs. 1.85 lakhs in 1957, as against Rs. 1.23 lakhs in 1955 and 1956. On the expenditure side also, a similar feature is disclosed. The rise in interest paid is of the order of Rs. 3.71 lakhs, which is more than three times the increase (Rs. 1.04 lakh) in the previous two years.

The Bank's reserves stand considerably strengthened at Rs. 29.17 lakhs and these are made up of a general reserve aggregating Rs. 22.92 lakhs and a contingency reserve of Rs. 6.25 lakhs. The expansion of Rs. 1.40 crores in deposits during the year under review is in refreshing contrast to the decline of Rs. 11 lakhs noted in 1956 and is shared by all classes of deposits. Thus, fixed and thrift deposits have gone up from Rs. 1.88 crores to Rs. 2.38 crores, savings bank deposits from Rs. 34 lakhs to Rs. 43 lakhs and current and contingency accounts from Rs. 2.43 crores to Rs. 3.24 crores. The pace of increase in advances has not slowed down during the year, as is the case with most other banks. On the contrary, the rise in advances has been much more than that noted in the previous year. Loans, cash credits and overdrafts have risen from Rs. 2.24 crores to Rs. 2.87 crores and bills purchased and discounted from Rs. 39 lakhs to Rs. 47 lakhs. Investments are lower by Rs. 16 lakhs, but cash balances (including money at call and short notice) stand strengthened by Rs. 78 lakhs.

NEWS IN BRIEF

THE Madras Legislative Assembly passed on the 14th inst. a Bill empowering the Government to enhance the sales tax on diesel oil from 10 nP to 35 nP a gallon. The increase will come into force from 1st April and is estimated to yield an additional revenue of Rs. 30 lakhs a year.

A new post-graduate course in tea will be introduced in the Assam Agricultural College for which a syllabus is now under preparation by Gauhati University.

The Department of Atomic Energy has decided to set up a plant for the production of uranium metal at Trombay, near Bombay. The Indian Rare Earths (Private) Limited, which has been entrusted with the task of erecting this plant, has started work on the project and it is expected that the plant will be ready by the end of 1958.

An agreement between India and the Lebanon for air services was signed in New Delhi on the 13th inst. Under this agreement, the airline designated by the Government of India will be entitled to touch the Lebanon at Beirut, and if desired, beyond, except points in Egypt. Similarly, the airline designated by the Lebanese Government is entitled to touch India at Bombay and proceed, if desired, beyond.

The manufacture of radial drills of ten different types is expected to be undertaken shortly by the State-owned Hindustan Machine Tools, Limited, Bangalore. This will further diversify the manufacturing programme of the factory which is already turning out two types of precision lathes and six types of milling machines. The Hindustan Machine Tools manufactured more than 300 machines in 1957. Its output was valued at Rs. 1.24 crores, representing more than half of the total output of machine tools in India which was of the order of slightly over Rs. 2 crores.

The National Productivity Council, which aims at launching a campaign for increase of productivity in the country has been constituted. The Council consists of 11 representatives each of Government departments, employers' associations and labour organisations. The Minister for Industry, Mr. Manubhai Shah, is President of the Council, and Dr. P. S. Lokanathan is the Chairman. Representatives of other interests like technicians, consultants, consumers and small-scale industries will be co-opted to the Council at the meeting. The total membership will be about 60. It will also consider a programme of productivity drive.

India and Poland have entered into a new trade development agreement under which payments for imports will be made in rupees. Under the agreement, the Narodowy Bank Polski will open a special trade development account. Contracts for the import of essential machinery from Poland will be registered with the State Trading Corporation and rupee proceeds will be credited to the special account and utilised only for payments for exports from India of specific commodities. This arrangement is in addition to the trade agreement concluded in April 1956, and will remain valid till the end of 1959. It is expected to lead to a substantial development of trade between the two countries.

From Abroad

Belgian steel output in February was 482,434 tons, as compared with 549,210 tons in January and 508,378 tons in February last year. The daily average output at 20,101 tons was also lower, as against 21,123 tons in January.

At a meeting scheduled to be held in London this week, shipowners representing Greek interests in the U.S. and Britain, are expected to finalise details of a scheme for a controlled lay-up of tonnage designed to limit the fall in tramp freight rates.

A cess of four cents, equivalent to approximately 0.72*d.* per lb., designed to finance a seven-year scheme to rehabilitate and develop the Ceylonese tea industry, is expected to be imposed by the Ceylon Government on exports of all tea from 1st April next. It is stated that no relief will be given on current purchases of tea not shipped by 1st April.

Orders with West German steel mills in January last amounted to 5.16 million tons, as compared with 5.42 million tons at the end of December 1957, and 5.62 million tons at the end of November 1957. It is stated that the orders are sufficient to keep the mills busy for hardly 3½ months, while a year ago, they were enough for almost six months.

The total ban on the issue of import licences for printed cotton textiles will be partially lifted by the Australian Government in the next licensing period commencing from 1st April. Indications are that for the April-July period licences will be issued equal to the square yardage imported by a "holder in the corresponding period last year." Not more than half of this quota can, however, be imported before 1st July.

The War Risks Rating Committee of the Institute of London Underwriters has announced that war and strike, riot and civil commotion risks on cargoes going to from or between ports in Indonesia and/or Dutch New Guinea are "held covered." By this, it is meant that cargoes can be insured, but that there is no fixed rate. The rate prevailing formerly for these voyages was 5*s.* per £100, which was fixed on 23rd December last year.

A trade mission, aimed at promoting Australian exports, will make a four-week tour of South-East Asian countries. It will be led by Mr. Swartz, Parliamentary Secretary to the Australian Trade Ministry. The mission, which is expected to leave on 15th April, will include twenty members, representing bankers, manufacturers and business men. It is learnt that Singapore, Malaya and Thailand will be offered goods and services ranging from breakfast foods to the erection of concrete buildings.

A new push button telephone system, with 800 internal connections will shortly be installed in a new factory now being built at Strijp in the Netherlands. The major advantage in this new service, as against the dialling, is that it takes considerably less time to push a number than to dial it. It is calculated that the introduction of this push button telephone in a factory or office with up to a thousand extensions would save annually about Rs. 18,000 as "dial time wages."

Britain's overseas trade gap in February 1958 narrowed down to £11 million. Barring October 1954, when there was a national dock strike and July 1946, this is said to be the lowest figure for any month since World War II. Exports in February were valued at £265.4 million or £12 million less than in January. Re-exports aggregated £12 million or slightly less than in January. Imports amounted to £288.7 million. This was £36 million less than in January and the lowest figure since the autumn of 1954.

The British consortium of Rustyfa Ltd. formed last summer for the purpose of supplying plant and equipment for a tyre factory under construction in Russia has secured orders worth more than £5 million for this factory. Members of the consortium are: David Bridge & Co., Crompton Parkinson, Lancashire Dynamo Holdings, Mather and Platt and Francis Shaw & Co. The factory, scheduled for completion by 1959, is expected to be one of the biggest outside the U.S., with an estimated annual output of 2 million tyres.

The 42nd Swiss Industries Fair is scheduled to take place in Basle from 12th to 22nd April 1958. More than 2,300 exhibitors will take part spread over 17 professional groups. The exhibition area will be increased to 1,375,000 sq. ft. by the addition of a new machinery hall. There will be a particularly well-assembled display, with an appeal to all the markets of the world, of those goods produced by the groups covering machine-tools and tools for the metal-working industry, the electrical industry, the watchmaking fair and textiles.

PERSONAL

DR. S. Radhakrishnan, the Union Vice-President, left Bombay for London *en route* to the U.S. last Friday on a four-week tour.

Mr. A. C. Gazdar, Technical Director, Air-India International, has been elected President of the Bombay branch of the Aeronautical Society of India. Mr. M. J. B. Maneckji has been elected Vice-President.

Mr. B. K. Nehru, Secretary, Economic Affairs Department, Union Ministry of Finance, arrived in Bombay from London on Thursday last, after completing his work in connection with the dollar loan in the U.S.

Mr. Walter Nash, Prime Minister of New Zealand, arrived in New Delhi on the 18th inst. He was accompanied by Mr. A. D. McIntosh, Secretary of the Department of External Affairs, New Zealand.

ACC HONOURS THE CODE

4

". . . . . reserves must be created for expansion and modernisation of the plant and machinery and in their utilisation the Management remains accountable to the investor. Money must also be provided for research."

Code of conduct — FORUM OF FREE ENTERPRISE

To ensure a continuous and growing supply of quality Portland cement to its customers, the ACC "ploughs back" every year a substantial portion of its earnings, to rehabilitate, expand and modernise its existing plants; to make its business grow and so to provide the country with the much-needed cement which goes into all types of construction, from the modest needs of the small village to the hungry demands of gigantic power and river valley projects, industrial development, housing schemes, hospitals, schools and the like.

This "ploughing back" of a portion of the ACC's earnings — though reduced last year owing to lower profits, resulting from higher costs and increased taxation — remains a vital factor in the production and supply of quality cement in increasing quantities to millions of satisfied users throughout India who have learned to depend on — ACC CEMENT.

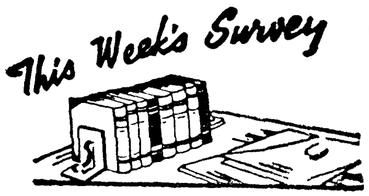
THE CEMENT MARKETING CO. OF INDIA PRIVATE LIMITED



PORT DEVELOPMENT

THE importance of transport, in general, and port development, in particular, to India's economy was emphasised by Mr. H. L. Murray, Vice-President, Bombay Chamber of Commerce and Industry, at the annual general meeting of the Chamber, held this week in Bombay. Mr. Murray prefaced his remark with the observation that, if he dealt particularly with ports and transport, he certainly did not do so in a spirit of "carping criticism" but with a view to demonstrating their vital importance in the context of the Plan. Although he paid a tribute to Government for its efficient handling of the congestion in ports, which had developed last year, he rightly suggested that the fact that the congestion occurred at all must serve as an "unpleasant reminder" of the inadequacy of our ports. He made the point that port development should be initiated "with an eye not merely to the present or the immediate future but to the far future, to, say, the fourth and fifth Five-year Plans." Work undertaken on the basis of long-term planning of the kind, as suggested by Mr. Murray, will certainly eliminate periodical crises on the port front and also reduce the overall outlay on port development. It is to be hoped that the authorities will realise the importance of allotting high priority to the development of ports, for which Mr. Murray made a special plea in his address.

The fact must be squarely faced that Indian ports are being called upon to handle an increasingly larger volume of traffic. Mr. Murray cited the case of the Bombay Port which handled in 1956-57 about 11.9 million tons, as against 10.3 million tons in 1955-56 or a mere 5.2 million tons in 1953-54. In this connection, he noted that the world's major ports are "developing new and highly technical systems of control, cargo working and management." Surely, Indian ports cannot altogether isolate themselves from the modern movement towards increasing mechanisation, if they are to discharge their responsibility towards the export and import trade. Two related issues, to which Mr. Murray drew pointed attention, are dredging equipment and ship repair facilities. He said that the harbour was silting at an alarming rate and the present antiquated dredgers could not cope with the task of maintaining sufficient water at the dock berths. He insisted that adequate repair facilities for ships were a "must" for a port of the size of Bombay. It would appear that the lack of repair berths in Bombay has compelled shipping companies to effect repairs at ports outside India. It should thus be clear that the setting up of additional repair facilities in Bombay would not only arrest the drain on foreign exchange involved in getting Indian ships repaired abroad, but also enable India to earn a modest amount of foreign exchange through the repairs to foreign ships which might be effected here. The report of the Committee, which the Union Government has appointed to investigate the whole problem, will, therefore, be awaited with interest.

As regards transport in general, Mr. Murray referred to the additional traffic which was bound to develop as the industrial programmes were executed. He, too, reiterated the widely-held view that "it may not be possible, with the present restricted resources, to expand the railways at the rate which would keep pace with the increasing demand." Road development could certainly take the burden off the railways. But it implies the adoption of constructive policies by the Union Government. Indicating, in broad outline, the measures which would be necessary, Mr. Murray said: "To develop road transport, the first prerequisite is, of course, the improvement of the highways. The second is to remove the various difficulties in the way of the operators, such as legislative restrictions on movement, lack of credit facilities for the purchase of commercial vehicles and the high and varying rates of taxation on vehicles in different States." The amendment to the Motor Vehicles Act has removed some of these handicaps. But the most important of them, namely, high tax burden and divergent rates of taxation, still remain. Mr. Murray suggested the centralisation of road taxes and the distribution of the revenue among the States. We commend this suggestion at least in so far as taxes on vehicles functioning in the inter-State sphere are concerned, for its acceptance will give the much needed fillip to long-distance movement of goods and passengers.

ATOMIC ENERGY

A reference to the possibility of India undertaking to build two or three atomic power plants made by President Rajendra Prasad, in his address to the Houses of Parliament last month, serves to emphasise that the Government is fully alive to the importance of peaceful uses of atomic energy. Indeed, among South-East Asian countries, India, as is well known, has made the most notable progress in the field of nuclear investigations. The research work which is being done in this country under the inspiring leadership of the great Indian scientist, Dr. H. J. Bhabha, Secretary of the Atomic Energy Department, has been commended by leading scientists abroad. Clearly, there is scope for extending and improving the work in this sphere. After all, nuclear science, both in its fundamental and applied aspects, is making rapid strides. And, if India is not to lose the atomic race, it has to step up the tempo of research work.

Against this background, it is gratifying to note that the Government of India has decided to invest the Atomic Energy Commission with additional powers and to make the Commission a more effective body than at present. Explaining the significance of this decision, the official announcement about the Commission says:

"Since the establishment of the Department of Atomic Energy in August 1954, research and development in the peaceful uses of the atomic programme is envisaged for the future, in the course of which India should be able to produce all the basic materials required for the utilisation of atomic energy and build a series of atomic power stations which will contribute increasingly to the production of electric power in the country. These developments call for an organisation with full authority to plan and implement the various measures on sound technical and economic principles and free from all non-essential restrictions or needlessly inelastic rules. The special requirements of atomic energy, the newness of the field, the strategic nature of its activities and its international and political significance have been taken into consideration in setting up the Atomic Energy Commission which will replace the one set up in 1948."

What is now attempted is to make the Commission a more active body, capable of taking and implementing prompt decisions. The Commission will consist of full-time and part-time members; the total number will be not less than three but not more than seven. At present, it will consist of three members. Dr. Bhabha will be the Chairman, in his capacity as the Secretary of the Atomic Energy Department, while another full-time member of the Commission will be the Member for Finance and Administration, who will also be the Secretary to the Department in financial matters. The Director of the Atomic Energy Establishment will be the third ex-officio full-time member in charge of research and development. The Commission will be responsible for formulating the policy of the Atomic Energy Department and for preparation of the budget for approval by the Government. All recommendations of the Commission on policy and allied matters will be put up to the Prime Minister through the Chairman. The Chairman will have the power to override the other members of the Commission, except that the Member for Finance and Administration will have the right to ask that any financial matter, in which he does not agree with the Chairman, be referred to the Prime Minister and the Finance Minister.

The whole object of setting up the Commission, according to Dr. Bhabha, who explained the nature and purpose of the Commission at a Press conference held in Bombay last week, is to expand the atomic energy programme. With this end in view, it is being modelled to a certain extent on the U.K. Atomic Energy Commission. Clearly, the work of the Department has increased both qualitatively and quantitatively. The latest addition to the activities of the Atomic Energy Department is the radio chemistry laboratory where research has been initiated into various processes, including separation of fission products from thorium. The expanding nature of the work of the Department and the fact that in a rapidly developing scientific field, it is of the utmost importance that red-tape should be kept to the minimum, if not altogether eliminated, imply that all research and expansion programme should be directed by a high-power body. This is precisely what has now been done. Now that the Commission has been invested with all necessary powers, it is to be hoped that it will initiate bold programmes which will increase the pace of nuclear development in India.

F.I.C.C.I. ON SALES TAX

There is a national aspect to sales tax in that it affects industries, dealers and consumers in States other than the one in which it is levied and also the country's import and export trade. This implies that the problems faced by trade and industry due to the lack of uniformity of the systems prevailing in the various States should be viewed from a national standpoint and corrective measures devised accordingly. The enactment of the Central Sales Tax Act, the amalgamation of sales tax on articles like cloth, sugar and tobacco with the excise duty levied thereon, etc., are steps in the right direction. But these measures by themselves are not sufficient to improve the situation materially. The wide disparities in the sales tax policies pursued by the State Governments continue to present difficulties to trade and industry. The Federation of Indian Chambers of Commerce and Industry has, therefore, done well to emphasise, in a resolution on sales tax, the need for more intensive efforts to bring about co-ordination of the sales tax policies of the State Governments.

The Federation has made a number of useful suggestions. In the first place, it suggests that the scheme of collection of sales tax, along with other levies implemented in respect of three articles, namely, mill-made textiles, sugar and tobacco, should be extended to as many articles as possible, particularly to those on which at present Central excise duty or customs duty is levied, except on those which are mainly used as raw materials. Secondly, the Centre should enact a model Sales Tax Act for the guidance of States. Varying definitions given to basic concepts like "dealer," "sales," etc., in State enactments cause much hardships to traders. The enactment of a model Sales Tax Act by the Centre, laying down the turnover limits, registration procedure, returns and forms, procedure for revision and appeals, etc., will be of great help in imparting a certain degree of uniformity to sales tax legislation. Within the broad features given in the model Sales Tax Act, the States should be free to adjust the rates and conditions according to the conditions obtaining in each. Thirdly, inter-State sales tax should be levied only once, though the goods may pass through dealers in two or three States. Fourthly, the Central Sales Tax Act should be so modified as to make export transactions cover not only transactions which themselves occasion export but also goods meant for export. It should not be difficult, the Federation points out, to give refund of sales tax collected on goods exported on irrefutable proof of such export. Finally, the inter-State Taxation Council, recommended by the Taxation Inquiry Commission, should be set up as early as possible in order to undertake the task of introducing as much uniformity as possible in the administration of sales tax.

The Madras Government has already introduced in the State Assembly a comprehensive Bill on sales tax. Many other State Governments may, following the example of Madras, enact fresh legislation overhauling the existing sales tax structure. It is necessary for the Centre to give a correct lead, on the lines suggested by the Federation, so that wide differences in the method and levy of sales tax in the States may be avoided.

MADRAS SALES TAX BILL

The General Sales Tax Bill, 1958, introduced in the Madras State Assembly by Mr. R. Venkataraman, Minister for Industries, on the 8th inst. has been referred to a Select Committee, after some preliminary discussions. The Bill envisages a comprehensive reform of the sales tax structure in the State on the lines suggested by Dr. P. S. Lokanathan, Director-General of the National Council of Applied Economic Research, who had been invited by the Government of Madras in May last for examining the scope and working of the sales tax law in the State, with a view to simplifying its structure and administration. In his report, submitted in December last, Dr. Lokanathan made a number of recommendations for the simplification and improvement of the sales tax system. The Government examined the various proposals and, in order to give effect to the decisions taken thereon, it was found necessary to replace the existing General Sales Tax Act, 1939, by a comprehensive enactment. The present Bill seeks to achieve this object.

Dr. Lokanathan had suggested a system of single-point tax on a wide range of commodities, together with a multi-point tax, at the rate of one per cent., on a residuary list. In addition, it was also recommended that, on certain essential commodities such as foodgrains, cereals, pulses and milk, the multi-point levy should be at a lower rate of half per cent. He also recommended the levy of slab rates on small dealers having a turnover of Rs. 25,000 and below.

The Government has accepted the suggestion to levy a single-point tax on a number of commodities. The rates of tax and the point of taxation in respect of goods recommended for single-point levy has also been accepted with minor changes and embodied in the Bill. The Government, however, did not favour Dr. Lokanathan's recommendation to reduce the general rate of multi-point tax from the prevailing two per cent. to one per cent., because of the uncertainty over its revenue effects. No reliable estimate has been made of the revenue from the proposed reduced rate of one per cent. Since the Government could not afford to experiment by reducing the rates when there was no guarantee that the yield from the reduction would not be below the present yield, it was decided not to reduce the rate. The principle of levying slab rates of tax on dealers having a turnover of Rs. 25,000 and less has also been accepted but the rates of tax for the various slabs has been so modified as to conform to the general multi-point tax of two per cent. Necessary provisions in that regard have been made in the Bill. The rate on cereals, pulses, milk and vegetables are correlated to the general multi-point levy and, as the recommendation for reducing the general multi-point levy has not been accepted, the lower rate recommended for these items have also not been accepted. But, as recommended by Dr. Lokanathan, the Government has decided to withdraw exemptions granted to vegetables and to tax them at one per cent. as against half per cent. recommended by him. However, merchants dealing exclusively in vegetable with a turnover of Rs. 25,000 and below would be exempt from the tax.

The Bill also seeks to reduce the taxable limit from Rs. 10,000 to Rs. 5,000 as recommended by the Taxation Enquiry Commission. Provision has been made to levy a tax of Rs. 5 per month for dealers with a turnover of between Rs. 5,000 and Rs. 10,000. Thus, sales tax will be levied on a turnover above Rs. 25,000, and between Rs. 5,000 and Rs. 25,000 it would be only a sort of compounded tax.

The Bill, in accordance with the recommendations made by Dr. Lokanathan, seeks to empower departmental officials to check the movement of goods by boats, lorries, to inspect, search and seize accounts. The object of this provision is to check evasion of taxes. It also contains provisions for the separation of appellate functions from the executive and proposes to appoint four Appellate Assistant Commissioners for dealing with appeals.

COTTON MILLS' FEDERATION

With the inauguration of the Indian Cotton Mills' Federation on Tuesday this week, a new and significant chapter has been added to the story of the cotton textile industry in this country. The Federation consists of all the mill-owners' associations, with the exception of the South Indian Millowners' Association; these include the associations of Bombay, Ahmedabad, West Bengal, Indore, Baroda, Nagpur, Saurashtra, Rajasthan, and the two organisations in Kanpur. The South Indian Millowners' Association, it is understood, has asked for some time to join the Federation. This seems to suggest that there are differences of opinion on a few issues between the Association and the other bodies. One such issue is that the South Indian mills, being mainly spinning units, want all possible active encouragement and assistance to the handloom industry, while the North Indian mills are opposed to such active assistance. Efforts are being made to straighten out the differences.

The proposal for establishing an apex body representing all the millowners was first mooted as early as in 1950, that is, after the Textile Control Board was wound up following the abolition of controls. A draft constitution of the proposed body was drawn up and circulated in February 1951 to the different associations in the country. Despite these efforts, no fruitful results emerged, thanks to power politics and group rivalries. Many years elapsed and the cotton textile industry found itself in the midst of stresses and strains on account of the unhelpful official policies, several of which were, and still are, based on ideological considerations. The industry came fully to realise that unless it approached the powers-that-be with one voice, there was no hope of a more helpful official treatment. It is this realisation and also the suggestion of Mr. Morarji Desai that prompted the renewed move of the different millowners' associations to form themselves into a central organisation. The scheme was actively taken up in November last and it is gratifying to note that the Indian Cotton Mills' Federation has now come into being.

The need for a central body clothed with the authority and prestige befitting an organisation representing the entire cotton mill industry is particularly urgent in the present context. With the rapid economic progress of the country, the opportunities and responsibilities of the textile industry have increased enormously. Since the last war, the industry has had to face many serious problems. Modernisation and rehabilitation of the productive equipment, promotion of exports on the scale prescribed by planners, and standardisation of wages, as Mr. Ramnath A. Podar, Chairman, Millowners' Association, Bombay, pertinently remarked in the course of his speech at the inaugural meeting of the Committee of the Federation, are some of the problems that have become highly complicated, demanding the collective wisdom and concerted action on the part of the various associations in the country for their solution. Mr. Podar did well to emphasise that the burden of presenting the textile industry's case and of seeking redress of its grievances would have to be borne increasingly by the Federation. "One of the most important functions of the Federation," to quote him, "would be seriously to consider a programmme of judicious publicity and propaganda, with a view to dispelling the prevailing misconceptions about the industry."

Considering the magnitude of the problems confronting the cotton mill industry, the responsibility placed on the Federation is, indeed, very vast. This aspect was impressively brought out by Mr. Kasturbhai Lalbhai, Chairman of the Federation, in his speech on the occasion of the Federation's inauguration. Here are a few extracts from his speech:

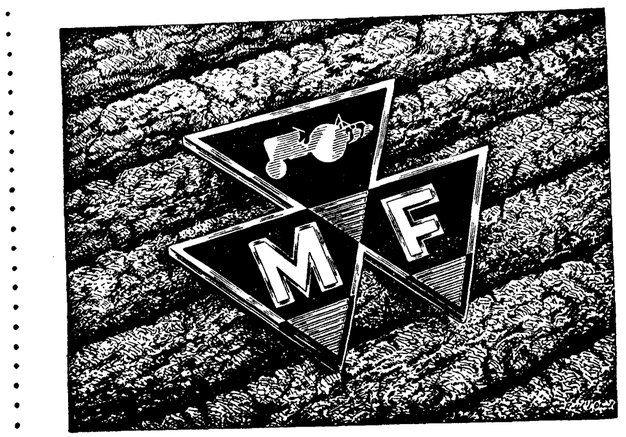
"The expansion of the industry under the impact of decentralisation policy of the Government of India has taken place in what were known as the deficit areas, and industrial units in these areas have assumed economic significance. In the conditions of a growing economy which our country is facing, the problems of the industry assume an all-India character.

"Our industry has to grow with the changing times . . . the interests of each sector of the community will have to be critically analysed by keeping in view the social philosophy of the day.

"The Federation will have to deal collectively with problems which may affect labour. The degree of recognition that it will obtain from various parties will depend upon the statesmanlike way in which the association and its staff handles its problems and the confidence it inspires in its dealings with others.

"A central association has also to develop and promote other activities, such as organisation of exhibitions, press and public relations, publications, international conferences, research and productivity studies, collection of industrial statistics, and promotion of commercial and training interests. In the matter of public relations, we have still to adopt the skilled techniques of the western countries. We should drop once for all ideas of keeping our operations behind a screen. Perseverance of this archaic attitude is potentially dangerous."

This is certainly a realistic appraisal of the task that lies before the Federation. If this task is to be tackled successfully, two things are imperative. First, the Federation must find men of sufficient ability and integrity who can, as Mr. Kasturbhai Lalbhai rightly mentioned, cope successfully with any situation or problem facing them in these difficult days. Secondly, the persons representing big, medium and small units or persons representing the different zones of the country should "work together with mutual respect and consideration and find the capacity to discharge their responsibilities for the common good."



The sign of a new prosperity...

Soon, all our products will be sold under the name Massey-Ferguson and this new symbol—signifying the most highly unified and complete service to farming ever known.

It is a symbol forged from the greatest pioneering effort in the history of agricultural mechanisation and the genius which revolutionised the whole technique of farming with the Ferguson System tractor and the Self-Propelled Combine.

It is on this rich inheritance that we build for even greater days, and a prosperous new chapter in the history of farm mechanisation.

For the farmer it means superb engineering and manufacturing resources streamlined to produce a complete range of farm machinery—it means a standardisation of implements, Service and Spares, centred on the Massey-Ferguson Distributor organisation—the finest of its kind throughout the world—it means more food at less cost.

Incorporated in the U.K.—Liability of members limited

NO RELIEF IN DIRECT TAXATION LIKELY

FEDERATION'S PLEA BASICALLY WEAK

From Our Own Correspondent

NEW DELHI, 18*th March*

DELHI LETTER

THE Federation of Indian Chambers of Commerce and Industry's annual session which concluded here last week must be deemed unsuccessful in one crucial respect: its plea for a reorientation of the Government's fiscal policy has already been rejected by the Prime Minister. This should have been expected in the light of the statement of objects and reasons of the Gift-tax Bill. This statement has laid down that "with the introduction of this tax, the integrated tax structure which the Government have been aiming at will be completed." To all intents and purposes, therefore, "the integrated tax structure" has come to stay and the new Finance Minister, Mr. Morarji Desai, will be operating within the four corners of this structure.

The Federation's plea for a drastic revision of tax policy is basically weak in the sense that it (the Federation) has approvingly stated that the second Five-year Plan's public sector outlay of Rs. 4,800 crores cannot be deemed to be over-ambitious, and has also, by implication, supported deficit financing on a considerable scale. As deficit financing does have, to some extent or other, inflationary effects and as it is axiomatic that inflation is liable to make the rich richer, there is here provided some moral (and even pragmatic) justification for more direct taxation to get at the "accumulating personal incomes and wealth" and for more of the so-called anti-inflationary taxation to mop up "surplus purchasing power." To plead for a lower level of taxation and, at the same time, to support inflationary deficit financing seem to be mutually contradictory. The standing obsession of the larger section of Indian business men that created money can work wonders in an underdeveloped economy is a measure of the financial *malaise* (or vicious circle?) in which the country finds itself today.

Be that as it may, the only relevant question now is whether any tax relief is possible within the limitations of the integrated tax structure that has been evolved. It appears to be theoretically possible, because, with the implementation of Mr. Kaldor's scheme of integrated taxation, his interrelated proposal for limiting the rates of income-tax and super-tax to a maximum of 45 per cent. would have to be logically implemented. Even here the prospects are not very promising, for, in spite of the fact that the Kaldorian scheme of taxation has been implemented fully in the 1957-58 and 1958-59 Budgets, the maximum rates of personal income taxation in this year's budget continue to be 76.1 per cent. of total income in the case of wholly earned incomes and 83.2 per cent. of total income in the case of wholly unearned incomes—the same percentages as in last year's budget. While in the 1957-58 budget, the maximum rate of 90.6 per cent. (in the case of both earned and unearned incomes) was reduced to the above rates (76.1 per cent. in the case of earned incomes and 83.2 per cent. in the case of unearned incomes), it is, indeed, surprising that no further reduction is made in this year's budget although corporate taxes, personal income-tax and wealth, expenditure and gift taxes this year will bring in Rs. 158.5 crores, as against Rs. 142.0 crores in 1957-58 (Revised).

The Federation has rightly demanded the reduction of income and super-tax rates to 45 per cent., now that the Kaldorian tax devices have been brought into operation. But here, too, there is a snag and it should be very relevant to recall here the Central Board of Revenue's note on Kaldor's estimate of tax evasion—a note which, for some mysterious reason, did not form part of the printed version of Kaldor's report on Indian Tax Reform. Mr. Kaldor estimated the incomes evading tax in India at Rs. 576 crores in all sectors other than agriculture and the income-tax lost through such evasion at anything from Rs. 200 crores to Rs. 300 crores. The Central Board of Revenue, on the other hand, made two different estimates of incomes evading tax. According to one estimate which used Kaldor's own method of analysis of profits and taxable incomes by economic sectors, only Rs. 214 crores of income evaded tax. The Central Board of Revenue pointed out that Mr. Kaldor had assumed a very high proportion of taxable income to total income and that large depreciation concessions and various exemptions on account of charities, new industries, etc., which were not covered by the Income-Tax Act definition of "income" might have been incorrectly classified as income by Mr. Kaldor. The Board of Revenue thought that even the figure of Rs. 214 crores of income evading tax was on the high side.

Applying the Pareto Law to the distribution of income in India, the Board made the second estimate that the income evading tax should be of the order of only Rs. 160-170 crores. According to this law, "if the logarithms of the numbers of persons enjoying a certain income, and the incomes, are plotted on a graph the line joining the points will be a straight line." The Board found that their data fitted in almost perfectly with a straight line with only two points of deviation at the top and the bottom. From this, it was deduced that there were about 210,000 possible assessees escaping altogether at the margin, while there were about Rs. 25 crores of tax evasion in the highest slabs. The Board's estimate of tax lost annually through evasion was Rs. 35-40 crores only and this loss, in its opinion, could be largely made good with the help of more adequate and trained staff which was becoming available.

Mr. Kaldor's thesis, in short, was that large-scale evasion was a rather inescapable result of very high rates of income-tax while the Board of Revenue's thesis, in effect, was that there was not much evasion even under high rates of income-tax. Mr. Kaldor's thesis led to the twin conclusion that the high rates of income and super taxes should be lowered to minimise evasion and the tax structure be variegated to catch such evading incomes as still there were at some point or other by one or other of his new tax devices. The Board of Revenue had unwittingly played into the hands of political leaders of administration who thought in terms of safely retaining the high rates of income-taxation and benefiting the Exchequer thereby; at the same time, Mr. Kaldor had also played into their hands by proposing a whole series of redistributive tax devices designed to secure "a more equitable distribution of wealth in the country." In relying on both Mr. Kaldor and the Central Board of Revenue, the political leaders of the Government have got the best of both worlds—securing more revenue as well as imparting a more egalitarian bias to taxation. It is doubtful if the Nehru Government will at any time agree to lose this double advantage.

There is, however, another direction in which tax relief is again theoretically possible and that is by effecting savings in administrative costs. How the wages and salaries component of the current expenditure of Cen-

EXPORTS TO CANADA

COMPANIES interested in exporting to Canada are invited to contact Agent proceeding from India to the Canadian Territories in May 1958. Prior commitments in Great Britain will determine final schedule dates for this tour. Expected arrival in Canada early July with visits following to almost all Provinces. Exploratory business undertaken to establish continuing and regular trading between Canada and India.

THE UNCERTAIN RECESSION

BUT NO REPETITION OF THE THIRTIES

From Our Own Correspondent

LONDON, 14*th March*

LONDON LETTER

THE American recession has become the most talked of thing in all financial and commercial circles; every economic index shows the transatlantic economy sliding downwards—yet so far this is a recession without depression. American unemployment exceeds 5¼ million equivalent to nearly 8 per cent. of the labour force, as compared with a proportion of under 5 per cent. a year ago. And, in Canada, the unemployment percentages are rather greater. Industrial production a month ago was, in the States, 9 per cent. lower than a year earlier. Financial policy is now reflecting these movements and discount rates have been cut—the American Treasury Bill rate, for instance, being 1½ per cent. against 3 per cent. last year.

What is happening in America has its counterpart in Europe to a limited extent so far. U.K. unemployment only shows a fractional increase, Germany shows no increase as compared with last year, although the indications are that a downward trend is developing, and Belgium shows an increase of nearly 2 per cent. In Belgium also production is 5 per cent. under last year's level but in other countries, including the U.K., production is actually higher than a year ago. However, Germany for one has suffered a reversal in its hitherto uninterrupted upward surge in production and, the U.K. apart, the general Continental indications are that the highly industrialised countries are beginning to reflect the transatlantic pattern.

It is the feeling that the reflection will become more and more faithful that concentrates general attention on the North American trend so that the question is asked whether this trend is going to repeat the history of thirty years ago.

So far as the stock markets are concerned, although these have plunged so low over recent months, the New York indices show a 4 per cent. rise in the past fortnight and there is no real *sense* of depression, while the behaviour of American financial institutions does not suggest a panic-stricken economy running to ground. On the other hand, the Administration is getting ready for offensive measures against the recession; there is talk of tax cuts to increase consumer purchasing power and the President, though not in favour of an extensive public works programme, has proposed a limited one of $2,000 million. Moreover, defence economies have been revised and increased weapon orders placed to keep the flow of money going into industry. On the social side, steps are being taken to increase spending on unemployment relief and Congress is treading hard on the heels of the Administration to make sure that the purchasing power of their constituents is not further diminished.

Although a good deal of surprise is expressed on this side about the absence of an air of depression in American thinking and parallels are being sought in vain with the depression of the Thirties, there are solid reasons why there should be a difference.

First of all, of course, the fact that remedial measures have already been taken or are being talked of indicates the awareness of the economy to the possibility of attack and the will of the economy to cope with that attack. In short, the capitalist system of America has a great deal for which to thank socialist thinking. They have, of course, the experience of the effective New Deal spending which helped to overcome the depression of the Thirties but, above all, there is the new concept of full employment—however this may be criticised by economists from time to time, and the realisation that the problems of the lack of purchasing power can be solved as can problems of a lack of productive power. In short, in spite of the cynicism of the Communist economies, Capitalist economies do possess the power in greater or less degree—and in the case of America in greater degree—to cope with the ills they create. There may be wasted productive power, as there is, right through, the capitalist world at present; there may be growing unemployment; but it is very difficult to imagine the onset of a crisis anything like as deep as that of thirty years ago in the light of modern knowledge and understanding.—*All Rights Reserved.*

AMERICAN LETTER

UNCERTAINTY ABOUT FUTURE PERSISTS

STRIKE IN AUTO INDUSTRY NOT RULED OUT

From Our Special Correspondent

NEW YORK, 12*th March*

THE U.S. recession, Presidential disability and the "summit talks" with Moscow are the three topics overshadowing all others in the minds of the United States.

The recession, to take first things first, has led to a host of demands for higher Government spending, following the pattern of the first Administration of Franklin Delano Roosevelt. The Eisenhower Administration takes the view that projects for which money has been appropriated will be sufficient to get the U.S. economy back on an upswing.

The opponents hold that this is insufficient. They propose a spending orgy which, inevitably, would lead to another dose of creeping inflation. The alternatives are quite simple. The United States cannot afford a serious recession, affecting its allies and the Western hemisphere.

So far, the effects of the recession have been limited. Tourist spending in both Canada and Mexico has declined to a moderate extent, but not alarmingly so. Britain, on the other hand, has been amazingly successful in attracting foreign capital with her anti-inflationary measures of high money rates.

Value of Dollar

Americans do not quite understand this psychology. Perhaps Britons do not comprehend it fully either. In the U.S., figures have to be larger every year in every category. In my judgment, nobody really cares whether the dollar is debased, up to a point, as long as sales and profit statistics show a so-called improvement over preceding periods. Very little can be done about such a state of mind.

The discussion of Presidential disability stems, of course, from Mr. Eisenhower's previous heart attack and a possible repetition. The President, it was announced, made an agreement with Vice-President Richard Nixon to take over in the event of the Chief Executive being incapacitated. Short of an outright resignation, such a solution is not ideal, everyone seems agreed.

The Vice-President, as acting President, under such conditions would have to work with assistants whom he may like or dislike, but these people, essentially, are the choice of the sick President and not his own men. Thus, there may be a lag in decisions, or simply indecision in crucial times such as the present.

"Summit" Talks

The "summit" talks with Russia would seem to be lost in a maze of technicalities, even though the Soviet leaders appear willing to come to Washington to spare President Eisenhower's health. Washington seems intent on involving the re-unification of Germany in these discussions. My own observation is that a large sector of West German opinion is not very much concerned with unification. There are only 15 million East Germans left, against 55 million West Germans and many, it seems, would be willing to write off the East, for the time being, in exchange for the assurance of not becoming the battlefield again.

Beyond that, American public opinion is utterly confused about what the fusion of Arab nations means. Everyone is concerned chiefly with his own pocket-book. Since the lush days of overtime and high incomes are over, there is a tendency to look askance at almost anything which is being proposed by those in power. Nobody is quite certain of the future.

The opposing camp among the Democrats are equally uncertain of their stand. They insist that the present anti-recession measures are not enough, but they do not dare to advocate too radical measures for recovery, because they are not quite sure the economy will not recover by itself and that they will be blamed later for irresponsible actions.

Former President Harry S. Truman is still the champion in the opposing camp. As before, he is against Adlai Stevenson, twice defeated Presidential candidate, to make a third try, but few other contestants are in view. If the recession does not subside before the elections next November, there is no doubt that the present Republican Administration will be voted out of office.

At present, about 62.5 million people are gainfully employed. The unemployed, reportedly, exceed 5 million. Some of these are unemployable in any but abnormal times. The record is not too bad by any standard.

Retail buying has been lagging, however, partly because of caution on the part of the public, partly because of the worst winter the U.S. has had in half a century.

Steel production, at present, is slightly above 50 per cent. of capacity. Heretofore, the automobile industry was the largest consumer of steel and retail sales in this area have been lagging. But the national highway programme has been absorbing an ever-increasing share of structural steel for bridges and other construction and the accelerated pace of this phase of U.S. national activity makes it look as though public demand for steel may outpace the automobile industry in short order. Also, the big question at the moment is: Will there be a strike in the auto industry this year?"

Walter Reuther, President of the United Automobile Workers of America, is determined to get additional benefits for his members. The automobile industry is equally determined to plead poverty, owing to reduced popular demand for cars.

If labour wins, which is a foregone conclusion, it would set the pattern for steel and all other industries in the U.S. Prices would go up again and the spiral would go up another notch. It is almost inevitable. In the process of the auto strike, however, it would be possible to clean up some inventories held by dealers, so that, after the final settlement, the industry would be in a little better shape than it is now.

Recession Relative

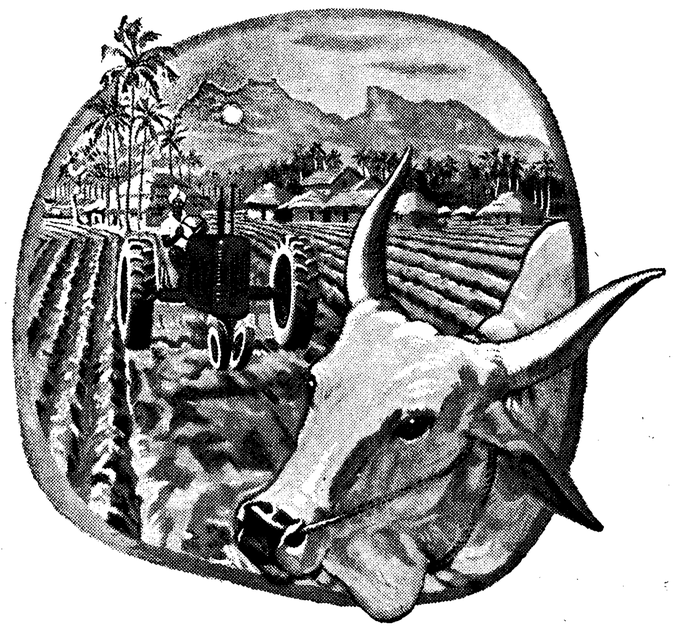
The present, widely advertised, U.S. recession is strictly relative. Some sections are, of course, hit harder than others, but there is an absence of hardships, except in very few isolated cases. There are now talks of extending unemployment benefits with Federal funds beyond the prevailing state limitations and of wholesale tax cuts to make more consumer buying possible.

Instalment debt (hire-purchase obligations) have been declining in recent months. Yet, such indebtedness is still some $2,000 million above last year's levels. Most of the reduction has occurred in debts for the purchase of automobiles.

Foreign cars still enjoy a fabulous market and U.S. manufacturers are planning to introduce smaller vehicles to stem the congestion in city streets.

The investment markets have shown considerable strength recently, possibly discounting an arrest of the recession and return to the previous inflationary trend of the U.S. economy.—*All Rights Reserved.*

The U.S. imports in the calendar year 1957 increased by three per cent. above the preceding year to reach a new all-time record high of $12,978.1 million. Imports for 1956 stood at $12,615 million. Bulk of the increase in general imports last year was due to sizable gains in imports of machinery and vehicles (from $634.9 million to $862.3 million); non-metallic minerals ($1,874.9 million to $2,090.7 million); edible oils and animal products ($433.8 million to $540.9 million); and miscellaneous imports ($491.4 million to $583.3 million). Declines were recorded in imports of wood and paper (from $1,587.8 million to $1,466.5 million); metals and manufactures, except machinery and vehicles (from $2,412 million to $2,322.9 million); and textile fibres and manufactures (from $1,045.7 million to $1,006.9 million). Imports for fourth quarter 1957 were valued at $3,332.2 million—about five per cent. above the corresponding period of 1956. During the 10-year period, beginning from 1948, general imports rose from $7,100 million to nearly $13,000 million in 1957.



International Panorama of Progress

Modern methods for ancient acres

Over centuries-old fields of rice and sugar cane a new sound is being heard. Shouts of encouragement to plodding buffaloes and oxen are being supplanted by the hum of modern farm machinery. Efficient equipment is bringing in bigger crops with less effort—aiding economies, easing the farmer's life. In many of the countries where agriculture plays a vital role, Caltex quality petroleum products help maintain and expand farm prosperity. Through the power of petroleum, Caltex fuels and lubricants run the machinery that lightens the work load, increases the standard of living for the peoples of over 70 countries. Caltex—partner in progress in Europe, Africa, Asia, Australia and New Zealand.

CALTEX

PETROLEUM PRODUCTS

STATE BANK MAKES GOOD PROGRESS

ALL-ROUND IMPROVEMENT IN BUSINESS

THE second full year of working of the State Bank of India, namely, the one ended 31st December 1957, proved to be one of marked expansion in the Bank's business, as witness the jump of Rs. 125 crores in the total working capital as at the end of the year, thanks to a significant enlargement in the deposits to the tune of over Rs. 124 crores. There was a further progress in the Bank's foreign exchange business, as well as in its developmental activities. An intensified effort in its branch expansion programme was made during the year and no less than 91 branches were opened, as against 46 in 1956. The pilot scheme for financing small-scale industries, which was initiated in 1956, was extended further. Another notable development of the year was the Directors' decision to finance co-operative marketing and processing societies, in accordance with the recommendations of the Rural Credit Survey Committee.

From the point of view of earnings, too, the year was a most prosperous one for the Bank, in that the gross income jumped up from Rs. 8.66 crores in 1956 to Rs. 11.82 crores; in 1955 it amounted to Rs. 8.16 crores. The bulk of the increase in income was from interest and discount earned which rose by Rs. 2.06 crores, that is, from Rs. 6.19 crores to Rs. 8.25 crores. In the previous year, there was an increase of only Rs. 28 lakhs in this main item of income. The sharper rise in interest and discount is the result of a bigger turnover of advances and a higher rate of interest, the increase being ½ per cent. Commission and exchange earned went up by Rs. 1.10 crores to Rs. 3.54 crores. On the expenditure side, interest paid on deposits and borrowings more than doubled itself from Rs. 1.59 crores to Rs. 3.40 crores. In the previous year, this item of outgo recorded an increase of only Rs. 22 lakhs. It must be noted, in this context, that the relatively sharp rise in interest payment is mainly due to the expansion in deposits and the increase in the Reserve Bank's lending rate. For the Directors observe in their report that there was no increase during the year in the interest rates offered by the Bank on its deposits. It is difficult to estimate how much the rise in the Reserve Bank's lending rate cost the State Bank on its borrowings, although the borrowings were less than in the previous year. Other expenses, too, rose from Rs. 5.51 crores to Rs. 6.39 crores, of which salaries and allowances to staff alone accounted for an increase of Rs. 77 lakhs to Rs. 5.15 crores. The rise in establishment expenses is explained partly by the employment of new staff and partly by increases in the emoluments of certain categories of employees.

The profit, at Rs. 1.87 crores, shows a rise of Rs. 31 lakhs, as against Rs. 20 lakhs recorded in 1956. This increase in profit has been utilised to step up the transfer to the reserve fund from Rs. 2.50 lakhs to Rs. 25 lakhs and to provide more for staff amenities. While bonus to staff has been cut from Rs. 40 lakhs to Rs. 32 lakhs and the allocation to the staff welfare fund has been maintained at Rs. 10 lakhs, the Directors have created a staff co-operative housing fund with an initial allocation of Rs. 10 lakhs, for the purpose of giving loans to staff co-operative housing societies. The loans, most of which will be advanced to the lower income group, will carry a concessional rate of interest. The provision for pension fund has been slightly raised from Rs. 6.14 lakhs to Rs. 6.37 lakhs. The dividend is, however, unchanged at Rs. 16 per cent. per annum, absorbing Rs. 90 lakhs. The appropriations leave a surplus of Rs. 55.99 lakhs to be carried over, as against Rs. 41.91 lakhs brought in.

The following comparative table shows the progress of the Bank's financial position during the last three years:

(In lakhs of rupees)

	As on 31st December			
	1957	1956	1955	1954
Capital	5,62.50	5,62.50	5,62.50	5,62.50
Reserves	6,62.50	6,37.50	6,35.00	6,35.00
Deposits	366,51.89	242,12.31	225,99.28	231,35.57
Of which—				
Fixed	139,36.49	87,15.70	33,90.64	34,23.81
Savings bank	32,95.51	31,04.63	27,92.80	27,49.05
Current, contingency accounts, etc.	194,19.90	173,91.97	164,15.84	169,62.71
Borrowings from other banks	16,50.50	17,27.00	5,00.00	..
Advances	173,47.74	140,16.00	105,81.25	100,82.28
Of which—				
Loans, cash credits and overdrafts	154,60.78	107,41.58	89,01.44	94,64.86
Bills purchased and discounted	18,86.96	32,74.42	16,79.81	6,17.42
Investments	183,43.34	106,87.78	116,97.39	108,71.93
Cash (including money at call)	41,51.93	28,84.54	30,91.40	37,87.02
Balance-sheet total	405,12.01	280,28.34	257,60.85	251,06.70
Ratio to deposits of—	%	%	%	%
Advances	47.3	57.9	46.8	43.6
Investments	50.0	44.1	51.7	47.0
Cash	11.3	11.9	13.7	16.4

The significant change disclosed by the latest balance-sheet is a rise of over Rs. 124 crores in deposits. A contributory factor to this exceptional rise was the deposit of counterpart funds in respect of imports of commodities from the U.S. under P.L. 480. No indication is, however, available of the quantum of these funds lodged with the Bank. It is also not known whether these funds are kept as demand deposits or time deposits. However, as will be seen from the table above, the fixed deposits of the Bank account for the bulk of the rise in total deposits, the increase being more than Rs. 102 crores. Current and contingency accounts show a rise Rs. 20 crores only and savings bank deposits nearly Rs. 2 crores.

As against the rise of Rs. 124 crores in total deposits of the State Bank, the increase in the case of other Scheduled banks was Rs. 144 crores, the share of time and demand deposits being Rs. 107 crores and Rs. 37 crores, respectively. In other words, the State Bank accounts for the bulk of the expansion in the deposits of all Scheduled Banks, thanks to the deposits of the U.S. counterpart funds under P.L. 480. Though the Bank's chairman stated at a Press Conference held last week that the role of the Bank was to act as a stabilising influence and not to compete with other commercial banks, it cannot be denied that, with the availability of huge counterpart funds, the Bank is certainly in a more advantageous position than the other commercial banks.

On the assets side, advances show an increase of only Rs. 33 crores (as against a rise of Rs. 124 crores in deposits), the corresponding rise in 1956 being Rs. 34 crores. In other words, the pace of increase in advances did not slacken very much as in the case of other banks. Of these advances, while loans, cash credits and overdrafts have gone up by over Rs. 47 crores, bills purchased and discounted have shrunk by Rs. 14 crores. With the faster growth in deposits than in credit, the Bank was able to strengthen its investments by no less than Rs. 76.5 crores and cash balances by Rs. 12.6 crores.

With the opening of 91 branches during 1957, the total number of branches opened since the inception of the Bank on 1st July 1955 till the end of 1957 was 137. In view of the rate of progress attained during the last year in branch expansion, the Directors are confident of discharging the statutory obligation of opening the remaining 243 branches within the prescribed period.

(Concluded from next column)

It will be interesting to note that the rise of Rs. 1.25 crores in gross income during 1957 was much more than the cumulative increase (Rs. 1.14 crores) in the previous two years. To the rise recorded during the year under review, the earnings by way of interest and discount have contributed no less than Rs. 1.09 crores, as against Rs. 89.5 lakhs in the aggregate during 1955 and 1956. Income from commission and exchange is up by Rs. 16 lakhs, the corresponding rise in 1956 being of the order of Rs. 20 lakhs. The pace of increase in expenses (other than interest paid) which tended to slow down in 1956—the rise in expenses in that year was no more than Rs. 2 lakhs, as against Rs. 24 lakhs in 1955—has, however, gathered momentum in the year under review with an increase of Rs. 22 lakhs. Of this rise, salaries and allowances alone accounted for Rs. 15 lakhs.

The most notable feature disclosed by the Bank's balance-sheet is the sharp increase of over Rs. 16 crores in deposits during the year under review, as against an aggregate rise of Rs. 15 crores in the previous two years. Barring a rise of a little over Rs. 1 crore in current accounts, call deposits, etc., almost the entire expansion in deposits is accounted for fixed deposits and cash certificates, which have gone up from Rs. 42.34 crores at the end of 1956 to Rs. 57.52 crores. Savings Bank deposits have suffered a slight setback from Rs. 28.66 crores to Rs. 28.59 crores. Current accounts, call deposits. etc. have risen from Rs. 67.71 crores to Rs. 68.76 crores.

As against an increase of Rs. 16 crores in deposits during 1957, advances of the Bank have gone up by only Rs. 10.73 crores. It may be of interest to note that, in the preceding two years, the rise in advances had been much sharper than that in deposits. Thus, between 1954 and 1956, while deposits had gone up by Rs. 14.75 crores, advances had moved up by no less than Rs. 30.69 crores. The relatively slower pace of increase in advances during 1957, in the face of a sharp rise in deposits, reflects the effect of credit restriction enforced during the year. The ratio of total advances to deposits is, however, unchanged at 65.5 per cent. Investments stand reduced by Rs. 3.51 crores. The market value of the investments shows a depreciation of Rs. 2.54 crores, the whole of which is accounted for by gilt-edged securities.

CENTRAL BANK'S PROFIT SLIGHTLY HIGHER

SHARP JUMP IN DEPOSITS

THE analysis of the audited accounts of banks for the year 1957 published so far has shown that, with the present pace of expansion in time deposits, the high level of interest rates, the continued credit restriction and the substantial rise in establishment expenses, banks have been able to maintain their profit levels—actually, however, the profit-margins of banks for the past year turned out to be slightly lower than those for 1956—only through some expansion in their business. The accounts of the Central Bank of India Ltd. (Manager: Mr. N. K. Karanjia, Bombay), the largest commercial bank in the private sector, for the year ended 31st December, 1957, are in keeping with this trend. Thus, the Bank's profit for the year has recorded a rise of only Rs. 4.44 lakhs to Rs. 109.76 lakhs, as against an increase of as much as Rs. 26.65 lakhs in 1956. This small rise of Rs. 4.44 lakhs is but a fraction of the rise of Rs. 1.25 crores in the gross income of the Bank for 1957 which in the previous year had gone up by Rs. 86 lakhs. This is due to the fact that bulk of the expansion in gross earnings has been offset by a sharp rise of Rs. 98 lakhs in outgo by way of interest paid and of Rs. 22 lakhs in expenses. In other words, inflation has eaten up a very large part of the rise in income.

Unlike many other banks, the profit of the Central Bank for the year under review is not a record one. It is Rs. 16.37 lakhs below the peak of Rs. 126.13 lakhs touched in 1951. From this record level, the profit had dropped precipitously to Rs. 77.37 lakhs in 1953. Since then there has been a sizable recovery, but the pace of expansion has slowed down considerably. The ratio of profit to gross income, which was as high as 24.6 per cent. in 1951, shrunk to 16.1 per cent. in 1956 and still further to 14.1 per cent. in 1957. Even in 1953, when the profit was at a low of Rs. 77.37 lakhs, the profit-margin was 15.1 per cent. of the gross income.

In view of the small rise in profit, presumably, the Directors have not found it necessary to raise the provision for taxation; this is kept at Rs. 13 lakhs. The allocation to the investment account is also unchanged at Rs. 15 lakhs. The dividend is being repeated for the second year in succession at 14 per cent. per annum, to which level it had been raised last year from 12 per cent. paid for the three consecutive years 1953 to 1955. The only beneficiary of the slightly higher profit is the staff; they receive Rs. 2.50 lakhs more (at Rs. 30 lakhs) by way of bonus.

A bird's eye-view of the Bank's progress in the last three years is given in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Gross income	7,80.12	6,65.15	5,69.44	5,41.05
Interest and discount earned	6,41.33	5,32.64	4,52.42	4,43.12
Commission and exchange	1,30.14	1,13.61	93.59	85.04
Interest paid	3,25.01	2,26.69	1,69.52	1,65.28
Expenses	3,42.28	3,20.25	3,18.38	2,94.02
Depreciation	3.07	2.89	2.87	3.00
Profit	1,09.76	1,05.32	78.67	78.75

FOREIGN INVESTMENT IN INDIA

By Mr. Manubhai Shah
UNION MINISTER FOR INDUSTRY

FOREIGN capital, technical know-how and enterprise make a threefold contribution to the industrial progress of an underdeveloped country. Such capital provides (i) the savings necessary for the large investments required for industrialisation, making good, in some measure, the inadequacy of domestic savings to finance the necessary investments; (ii) by bringing in technical expertise and technical know-how; foreign capital also bridges the gap in the supply of technical knowledge, as well as in the supply of trained personnel needed to carry through the vast programme of industrialisation; and (iii) an underdeveloped country seeking to industrialise itself rapidly has necessarily to import most of the machinery, capital goods and equipment, as well as many semi-processed or processed raw materials not required hitherto.

Pending the development of domestic heavy machine building industry to supply all these products, a country with a large programme of development must run into balance of payments difficulties which reflect against a shortage of domestic savings. Foreign capital here helps to improve the ways and means position in regard to external payments and thus, quite apart from the direct impetus to industrialisation imparted by foreign investment, it makes possible a larger programme of development than would be feasible in the absence of foreign capital.

India has a long history of foreign capital inflow, but not until recent years has the role of foreign capital in this country been so dynamic and of such vital importance. Indeed, the tremendous upsurge in industrial expansion that is now to be seen, and the solid foundations that have been laid for the future industrial expansion of this country, are due in no small measure to the interest evinced and the assistance rendered by friendly Governments and by private foreign enterprise both through technical and financial collaborations.

Although in the early years after independence there was some hesitation on the part of foreign capital to come into this country freely, more recently there has been a significant inflow of foreign capital and foreign business enterprise, especially in new fields of development. Foreign business investment, the value of which stood at some Rs. 288 crores in the middle of 1948, had increased to Rs. 420 crores by the end of 1953, that is, an increase of some Rs. 132 crores in 4½ years. In the next two years, there was a further increase of Rs. 61 crores in the value of foreign business investment in India, and, as at the end of December 1955, the value of foreign business investment has been estimated at Rs. 481 crores. Although the above figures incorporate some increase owing to valuation changes, especially in the plantations industries, by and large, the increase in the value of foreign business investment in India over the 6½ years under reference was the net result of an inflow of fresh foreign capital, as well as of re-investment of profits earned by foreign companies in India. Thus, allowing for changes in valuation—estimated at some Rs. 35 crores over the 6½ years—and after allowing for some repatriation of foreign capital which has taken place, there has been a net inflow of foreign capital (*including profits ploughed back by foreign enterprise*) to the extent of some Rs. 23 crores annually.

One can see the pattern of foreign business investment in India as at the end of June 1948, December 1953 and December 1955 from the following comparative table:

Valuation of foreign business investments in India

(Rs. crores)

	June, 1948	December, 1953	December, 1955
Manufacturing	72.0	135.7	163.3
Trading	64.4	94.8	102.3
Utilities and transport	31.2	50.5	53.1
Mining	11.5	8.4	9.6
Financial—			
(a) Banking	31.7	16.2	20.2
(b) Others	6.9	14.7	19.1
Plantations	52.3	71.5	87.2
Miscellaneous	17.7	27.7	25.9
Total	287.7	419.5	480.7

Of the above, the investment in entirely *new* companies—i.e., in companies formed after the 1948—was some Rs. 36 crores. It is significant that, over the period from June 1948 to December 1955, retained and ploughed back profits of foreign undertakings in India contributed some Rs. 93 crores to the increase in the value of foreign business investments in India. The value of investments received in kind over this period—through import of plant and machinery, etc., against foreign investment—is estimated at Rs. 104 crores, quite a significant amount indeed.

Thus even allowing for valuation changes, the net increase in foreign private investment in India since 1948 has been of the order of Rs. 23 crores annually. Small though the amount is, it has over the years meant a sizable increase in the savings available for investment. Secondly, the value of this investment to the country is far greater than the value of external Governmental financial assistance of this magnitude. Quite apart from direct foreign investment in a number of new directions, over the years since 1948, there has been more than 300 cases of foreign technical collaboration with Indian enterprise, in setting up new units or in organising the production of new products and new lines. Thus, foreign technical know-how and technical assistance have made possible the starting of a large number of new industries which it would otherwise have been difficult to establish expeditiously.

Indeed, it can be stated that the rapid expansion of the engineering and of the chemical industries since independence has to no small extent been due to foreign collaboration with Indian industry and to the availability of foreign technical know-how. Such assistance has been available to Government projects and to private industry. By way of illustration, mention may be made of the generous assistance received by the Union Government from Germany, the U.K. and the U.S.S.R.—both in terms of finance and by way of technical help—for the three new steel plants in the public sector. A French firm has assisted in setting up of the electronics factory at Bangalore, while the Hindustan Machine Tools at Bangalore has been helped by the Swiss and the Germans. The fertiliser plant at Nangal and the expansion of the plant at Sindri are both being assisted by the Italians. The Heavy Electricals Project at Bhopal is being undertaken with the help of the British. Technical investigation has already been completed with the help of the Soviet Union and the U.K. on the establishment of a series of heavy engineering plants, for which the stage is now set for a Central Heavy Machine Building plant with the collaboration of U.S.S.R. and the heavy Foundry-Forge Plant in collaboration with Czechoslovakia.

Negotiations are also being conducted for the establishment of some important items of basic drugs and intermediates with Russian, German and American assistance. Russian assistance has also enabled work to be commenced on the manufacture of heavy mining machinery and of ophthalmic and optical glass.

India has also been receiving assistance for the implementation of her development programmes under various other schemes such as the Colombo Plan, the Indo-U.S. Technical Co-operation Programme and PL 480 Arrangements and from International Institutions like the International Bank for Reconstruction and Development, the International Monetary Fund as well as organisations like the Ford Foundation. Economic assistance received under these schemes is in the form of equipment, commodities and in the shape of services of experts and training facilities. The total assistance available for the second Plan period received from the international institutions as well as under the special schemes and arrangements such as Colombo Plan, PL 480 Arrangements and Technical Co-operation Mission amounts to about Rs. 610 crores. The major portion of this assistance was received under T.C.M. Programme and PL 480 Arrangements. The assistance received under T.C.M. amounted to Rs. 112 crores and that under PL 480 Arrangements Rs. 137 crores. The loans sanctioned by the World Bank amounted to Rs. 170 crores of which loans of Rs. 136 crores were sanctioned after the commencement of the second Five-year Plan. Of this sum, Rs. 49 crores were for the public sector and Rs. 87 crores for the private sector. The loans for the public sector are mostly for the development of Indian railways and those in the private sector cover the expansion of the steel plants of the Tata Iron and Steel Company and the Indian Iron and Steel Company. The assistance received from the Ford Foundation is about Rs. 7 crores and is mainly being utilised for rural development, industrial and business development, education and public administration and other projects.

The contribution of foreign capital and technical collaboration and participation to the growth of private industry—though not as spectacular—is, perhaps, even more significant. There are financial or technical co-operation arrangements between firms in different foreign countries and all automobile maufacturers in India; while the same is true of a number of the newer engineering and chemicals industries. While oil refining has so far been based on direct foreign investment by the U.S.A. and U.K. firms, firms from a large number of countries, especially from Europe, America as well as from Japan have assisted, through technical as well as financial collaboration, in the manufacture of such vitally important new industries as electrical equipment, a variety of chemicals and dyestuffs, drugs and medicines, plastics, industrial gases, aluminium, machine tools, industrial machinery such as textile and cement machinery, sugar mill machinery, paper mill machinery and a wide range of other products. The stage has also been set for making necessary arrangements for the establishment of two new aluminium plants and a few big fertiliser plants in the private sector by foreign financial and technical participation.

The above would serve to demonstrate that *contrary to some misconceptions, India has over* the past few years, attracted foreign capital and foreign investment over a wide field of industry. With some 400 million potential buyers and the great consumption propensity of a vast population on the road to economic and industrial development and expansion of the general levels of income, and with the availability of both tapped and untapped resources of raw materials and of relatively cheap and ready-to-learn labour, India undoubtedly offers excellent opportunities for industrial investment.

It is for these reasons that the policy of the Government is to encourage foreign capital investment in all desirable fields of new development. As early as 1949, the Prime Minister stated in Parliament:

> "Indian capital needs to be supplemented by foreign capital not only because our national savings will not be enough for the rapid development of the country on the scale we wish but also because in many cases scientific, technical and industrial knowledge and capital equipment can best be secured along with foreign capital. . . "

Even in the most difficult hour of the foreign exchange situation, India has freely permitted not only the transfer of profits and income on foreign capital but also capital repatriation facilities within the framework of existing rules and regulations.

The need for foreign capital and for the inflow of technical expertise in a developing country is not temporary; it is a continuous and long-term need, and indeed, increases as the industrial and economic base of the country expands. Correspondingly, with the growing tempo of industrialisation, there is need for an increasing variety of processed and semi-processed raw materials, for which internal production becomes both necessary and profitable. Foreign investment can not only bring in the necessary technical expertise and technical know-how, but can also bridge the gap between the investment needs of a growing economy and the supply of domestic savings.

The needs of India for such foreign capital are large, and, in comparison, the inflow of foreign capital hitherto, valuable as it has been, has been rather small. The Planning Commission had envisaged a new inflow of Rs. 100 crores of foreign capital during the second Plan period, to cover a part of the foreign exchange gap during the Plan period. This gap, as is generally known, has now widened and of all sources of foreign exchange to meet this increased gap, the inflow of foreign private capital is at once the most unobstructive and at the same time the most useful source, bringing as it does not only the requisite supply of foreign exchange but also savings, and the technical expertise required in the country. Such capital is not only welcome to the country and the Government but also welcome to private industry, in so far as foreign capital enters into collaboration or participation arrangements with indigenous industry, thus serving the threefold requirements of the economy outlined at the outset, namely, the supply of savings, of foreign exchange and of technical know-how. Our policy is to make foreign capital advantageous and profitable both to the investing and collaborating countries and to India.

EXCISE DUTY ON MILL CLOTH REDUCED

RELIEF OF RS. 15 CRORES TO INDUSTRY

THE sense of realism displayed by Prime Minister Mr. Jawaharlal Nehru in conceding the cotton mill industry's demand for a reduction in excise duty on piecegoods, albeit partially, is, indeed, commendable. The reduction was announced in the Lok Sabha on Tuesday this week. The following are the revised rates of excise duty (excluding the additional excise duty and the handloom cess):

(In nP per square yard)

	Revised	Before revision
Coarse		
Dhotis and *saris*	3	3.125
Other sorts	6	9.375
Medium		
Dhotis and *saries*	7	9.375
Other sorts	9	9.375
Fine	17	18.750
Superfine	22	25.000

It will thus be seen that the excise duty on all categories has been reduced to some extent. As a result of the cut, the relief to the cotton mills is expected to be of the order of Rs. 15 crores per annum.

The reduction in excise duty on cloth was long overdue. When the duty was enhanced in September 1956, it will be recalled, Mr. T. T. Krishnamachari, the then Union Finance Minister, had stated that the upward revision was effected merely to reduce the volume of consumption and to mop up extra profits accruing to the industry and trade. The events in the past few months have proved beyond doubt that these conditions, even if they had existed at that time—a doubtful point—ceased to exist long back. The domestic offtake has continued to be very slack, resulting in heavy accumulations of stocks with mills, despite reduced output, which entail a heavy financial burden. The industry has thus been compelled to make drastic cuts in cloth prices which today are lower than those obtaining even in December 1955. The mills cannot certainly be expected to continue to make distress sales of their output for an indefinite period. Many mills which have published their accounts for the past year have shown either a sizable loss or only a small profit. If some units have been able to pay a dividend to their shareholders, it is only by drawing on their reserves built out of past profits.

How heavy was the impact of excise duty on mill-made piecegoods was discussed at some length in these columns last week. There was a special reference to the deepening crisis in the textile industry as described by Mr. Ramnath A. Podar, Chairman, Millowners' Association, Bombay, in a Press interview. The effect of such a crisis is clearly reflected in the distinct setback to production of cloth and yarn in the first two months of the current calendar year. The aggregate quantity of cloth that actually came off the looms of mills in this period was 825 million yards, which compares very unfavourably with 870 million yards in the previous two months (November-December 1957) and 929 million yards in the corresponding period of 1957. The production in February 1958 was as low as 392 million yards, as against 433 million yards in January 1958 and 436 million yards in February 1957. The drop in cloth output has followed a fall in yarn production which amounted to 280 million lbs. in the first two months of 1958, as against 302 million lbs. during November-December 1957 and 300 million lbs. a year before. The actual output in February 1958 was 133 million lbs., that in the previous month and the corresponding month of 1957 being 147 million lbs. and 143 million lbs., respectively.

The continued downward trend in textile production is the result of the closure of several mills and curtailment of production by many others. There would have been a more drastic decline in production but for the fact that the fear of payment of heavy retrenchment compensation to workers is keeping several textile units working. Surely, there is no exaggeration whatever in the statement of Mr. A. D. Shroff, Chairman of the Central India Spinning, Weaving and Manufacturing Company, Ltd., that the economic conditions of the textile industry had become so perilous that many mills, even well-established units, are seriously considering reducing normal production by closing down one shift or part of their plant, with a view to cutting down losses. Addressing the annual meeting of the Company in Bombay on Friday last week, Mr. Shroff said:

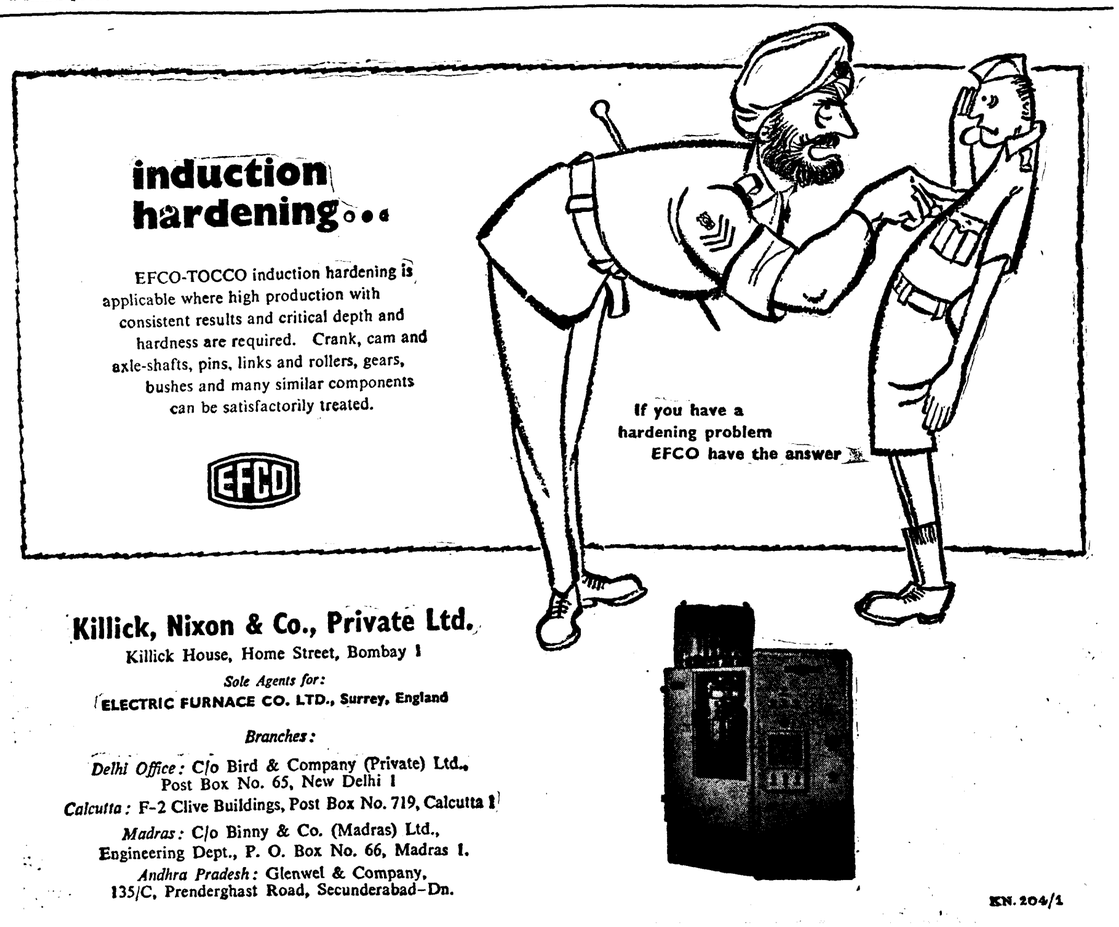
"The relief in the calamitous burden of excise duties on cloth, which we had prayed for, has not materialised in the Budget for 1958-59. I wonder what has compelled the Prime Minister to maintain the *status quo* in respect of excise duties on cloth which have done such untold harm to the economic condition of the textile industry. I cannot comprehend the working of the mind of the Central Government when they fail to realise that daily more and more mills are not only reducing production but are actually planning to cut down shifts in order to lessen the operating losses which they are incurring. This is too well known to Government, and the only palliative that can restore confidence in the textile industry is a substantial reduction in excise duties to make cloth move. I take this opportunity of urging upon the Prime Minister, before his budget proposals become law, to reduce excise duties to at least the pre-September 1956 level in order to revitalise the working of the cotton textile industry."

The mounting stocks of cloth with mills are due as much to the poor domestic offtake as to the slackness in demand from overseas countries. Although we are in the midst of the buying season, enquiries even from the traditional customers have not revived markedly. Consequently, exports of cloth from India have suffered a setback. The total quantity of cloth passed for shipment during the first two months of 1958 was only 111.67 million yards, a drop of nearly 50 million yards as compared with that in the corresponding months of 1957. The figures below show the position at a glance:

(In million yards)

	Coarse	Medium	Fine	Superfine	Total
January 1957 ..	24.98	65.62	2.92	1.62	95.14
February 1957 ..	18.54	54.36	1.60	1.66	76.16
Total ..	43.52	119.98	4.52	3.28	171.30
January 1958 ..	19.66	42.06	0.44	1.79	63.95
February 1958 ..	15.04	30.27	0.65	1.76	47.72
Total ..	34.70	72.33	1.09	3.55	111.67

The above table clearly indicates that there was a substantial fall in cloth exports during February 1958. The actual extent of the fall as compared with the previous month and the same month last year was 16.23 million yards and 28.44 million yards, respectively.



"SUMMIT" TALKS ON CLOTH IMPORTS WITH PRIME MINISTER

LITTLE HOPE OF IMMEDIATE ACTION

From A Special Correspondent

MANCHESTER, 11*th March*

MANCHESTER LETTER

ACCORDING to one commentator in a recent survey of the textile situation in Lancashire, one of the most outstanding characteristics of the industry has been the tendency over the past thirty years or more towards a regular cycle of expansion and decline. This, it is contended, takes place irrespective of conditions in the rest of the country's economy.

In the productive field, the mood is frequently governed by the availability of labour and, after each recession, the number of workers employed inevitably declines. As the impetus of demand strengthens, the call for supplies is often in excess of the capacity of the industry and order books lengthen until there is a reaction among customers and the slow downward trend of deterioration starts again.

Much can be gained from studying the outline of the broad aspect of available supplies, as shown in the table below, which indicates the variations which have taken place in recent years:

(In million yards)

Year	Output	Imports	Total	Exports	Balance for home trade
1937 ..	4,122	75	4,197	2,001	2,196
1947 ..	2,012	174	2,186	639	1,547
1948 ..	2,440	248	2,688	906	1,782
1949 ..	2,592	400	2,992	1,078	1,914
1950 ..	2,840	342	3,182	1,017	2,165
1951 ..	2,960	476	3,436	1,105	2,331
1952 ..	2,192	210	2,402	871	1,531
1953 ..	2,632	143	2,775	895	1,880
1954 ..	2,775	335	3,110	812	2,298
1955 ..	2,479	365	2,844	688	2,156
1956 ..	2,314	380	2,694	595	2,099
1957 ..	2,287	490	2,777	567	2,210

Only in 1947, when the industry was recovering from its wartime concentration, and in 1952, during a year of sharp depression, was output lower than in 1957. The shrinkage in productive capacity, brought about by reorganisation in individual cases and elimination in others, reduced the quantity of goods provided by the mills, but this was more than counterbalanced by the large increase in arrivals of foreign cloth, which were higher than ever before. It is perhaps significant that the previous peak of imports was in 1951—immediately prior to the first big post-war setback in Lancashire.

As a result of the inroads made by foreign competitors, the amount of cloth available last year was almost identical with the 1953 total, but, at that time, exports were nearly 330,000,000 yards higher than in 1957, creating an entirely different situation. The balance available for the home trade has, therefore, risen to compensate for these "lost" exports and the large supplies on the market present sufficient pressure to cause a definite squeeze on the manufacturer and merchant.

Hesitation to Forecast

Conditions in the industry during the past few months have been depressing enough, with the length of order lists continually slipping away, but pointers towards further contraction are certainly evident from the figures already quoted. Traders are distinctly reluctant to forecast prospects at the moment.

Not only are the normal consuming outlets keeping their commitments strictly at a minimum, but the tendency is now becoming widespread for specialised users in the industrial field to adopt a similar attitude. The tight money policy so effectively pursued by the Government is clearly having an influence on industry, in general, and those which require textiles as an integral part of their products may well restrict their purchases in the same way.

While some recent reports announced by Lancashire textile firms have indicated an encouraging upward trend in profit-earning capacity, most chairmen, in their annual statements, have advised caution in being too optimistic about the future. Some, indeed, have restrained their natural readiness to increase dividends and have gone to the other extreme of reducing their distributions on the grounds that the outlook is far from rosy.

Two-sided Argument

It was a closely-guarded secret that a small delegation was to hold "summit" talks with the Prime Minister on the No. 1 topic involving Lancashire-retained cloth imports. From the official reports given out afterwards, however, traders have derived little hope that immediate action can be expected. The most that can be said is that the Government, at the highest level, has an up-to-date picture of the industry's plight.

No comment could be obtained from the Cotton Board and, clearly, the members of the delegation had been told to keep their counsel and say nothing for the time being. It is understood, however, that, at the last meeting with the President of the Board of Trade, the attitude of the Government was regarded as so unsatisfactory that an approach at an even higher level was contemplated and the Prime Minister agreed to see the deputation.

There is no need to reiterate once more the tendency towards deterioration in the conditions affecting Lancashire trade in textiles. Many reasons have been quoted to indicate the downward movement and, only last week, the Master Spinners' Federation, in its annual report, issued a long array of points which emphasised the seriousness of the position. Over the last few years at least, 250 mills have shut down and the owners contend that the impact of the unrestricted entry of foreign cloth is the main reason for this falling off in trade. Short-time working in the mills is now affecting about 6,000 operatives.

New Loom Shown

A new precision belt high speed loom for weaving silk and rayon fabrics, designed to compete with Continental looms, was shown at Keighley last week by Messrs. George Hattersley and Sons. The loom is the latest version of a complete range of looms built by the firm to cover every weaving requirement from shuttle changing to pirn changing.

The latest model is intended to produce rayon fabrics of high quality and at a high rate of production. One of the main features of the design is the absence of overhead structure which prevents oil damaging the fabric and particular care has been taken to eliminate working parts near the cloth, so ensuring clean fabric.

Many Continental features have been included in the loom and Swiss technicians have co-operated with the firm in its design. There has been a persistent demand in Lancashire for a precision-built loom to take the place of expensive Continental models; the firm claims that this new loom, which normally runs at 200 picks a minute, will meet the need. The cost is between £500 and £600, regarded as a low price for a precision loom.

Forward-Looking Ventures

Whatever the future may hold for the rank and file of textile traders in this country, the experience of the past has not completely eliminated the belief that, by keeping pace with machinery modifications and spending money on re-equipment, progress can be made. Variations in profits must be anticipated during good times and bad, but, in the long run, the progressive concern should be able to outlive and outwit its less venturesome competitor.

It is not entirely by coincidence that reports of textile firms covering the trading year of 1957, now speeding from the presses, tend to stress this vital factor in forecasting their future earnings. Within the past week, several have emphasised this very point.

Looking back on ten years of amalgamation between two old-established firms, the joint venture of Clegg and Orr Ltd. has shown a total net profit of almost £1,000,000, whereas nearly £1,500,000 have been paid in taxation to the Government in the same period. Sir Cuthbert Clegg, the Chairman, points out that £950,000 has been spent on new buildings and machinery and £690,000 provided for depreciation.

In the case of this company, nearly all the machinery operated works double shifts and the likelihood that this plant will wear out sooner is apparent. Buildings and machinery in the accounts are only valued at £478,000, but a recent revaluation has put these assets at over £3,500,000.

From Sir Thomas D. Barlow, Chairman of Barlow and Jones Ltd., comes the comment: "Some of the equipment of the industry is old and, though large sums have been spent on new machinery in the last ten years, the cost is inordinately high. The only effective manner in which it can be amortised is by multi-shift working, a satisfactory basis for which must b

EXPORT DUTY ON BENGAL DESHI CUT

PAKISTAN ALSO MAY FOLLOW SUIT

THE announcement made by the Commerce and Industry Ministry on the 13th inst. releasing 50,000 bales of Bengal *Deshi* (not above "fine" in grade) for export and simultaneously reducing, with effect from 14th March, the export duty on them by 50 per cent. to Rs. 50 per bale was an agreeable surprise to the trade. Although a reduction in export duty was not only expected but had almost been taken for granted by a section of the trade, the actual cut was more than what was generally anticipated. A fresh quota for Bengal *Deshi* also came as a surprise, because what the trade was expecting was a quota for cotton of stapling ¾" and below. With this quota, the aggregate quantity permitted for export so far in the season is 150,000 bales, consisting exclusively of Bengal *Deshi*. The reduction in export duty and a fresh quota, at a time when foreign demand is tending to revive, would make Bengal *Deshi* attractive to foreign buyers. With the 50 per cent. cut in duty, Bengal *Deshi* cotton is cheaper than Pakistani *Deshi* styles by about 3 cents per lb. Out of the 100,000 bales released for export earlier, export commitments made thus far are reported to be round 65,000-75,000 bales. The balance of 30,000 bales, together with the 50,000 bales now permitted, leaves 80,000 bales in which business has yet to be concluded. Exporters are confident of exhausting this entire quantity by the end of the June next.

It is expected that, following the reduction in duty, France and the United Kingdom will renew their purchases. Germany, Belgium and Italy may enter the market and take substantial quantities. It is also anticipated that Japan, the largest customer, will also increase its offtake. But that country does not at present seem to be in a position to book larger business, as its textile industry has been adversely affected by the world-wide economic recession.

Now that the duty has been cut in India, there is a fear in the minds of exporters that Pakistan may also follow suit. It may be noted, in this connection, that recently a move was afoot in Pakistan for the total abolition or a drastic reduction of the export duty on cotton. The efforts proved abortive, as the Government of Pakistan refused to make any reduction, because, in its view, there was no justification for giving artificial relief of any kind. The Government maintained that, if foreign buyers were reluctant to enter the market, it was mainly because of the expectation created in their minds by the repeated request of the trade for reduction in duty and that it was, therefore, all the more necessary to remove the uncertainty. Although this is a clear statement of the attitude of the Government, it is nevertheless thought that, since India has cut the duty, traders in Pakistan will press their Government to do likewise and the latter may give some relief in duty. If Pakistan also reduces the export duty, it will, indeed, affect India's export prospects. But to what extent depends, of course, upon how much the duty is cut. If it is by a like amount, Indian cotton would still be cheaper, because the current duty on Pakistani *Deshi* styles is Rs. 115 per bale. Even if such a reduction comes about, established shippers in this country are confident of their being able to sell their quotas. Those who suffer probably are the small quota holders, who, for lack of adequate business connection, may find it difficult to dispose of their share. Anyway, now that the Government has done what was required of it, it is for the trade to exploit the opportunity afforded by the liberal policy and utilise the quota as quickly and fully as possible before fresh competition emerges.

Although trade quarters believe that the reduction in duty and a fresh quota are an indication of the Government being alive to the problems of the cotton trade, there is disappointment that it has not found it necessary to permit exports of ¾" cotton which has of late been facing a bad situation. There has been a sharp fall in the prices of such varieties as C.P. *Deshi*, Dholleras, Kala, etc., because domestic mill demand is practically absent. Export inquiries are, however, very encouraging, but, in view of the absence of export quota, it is not possible to export these cotton at present. Knowledgeable quarters point out that a quota for this cotton will not affect the domestic price level, because there is a comfortable surplus of this type of cotton. Indian mills will not go in for this cotton in any significant measure, as they consider their prices uneconomical. But foreign demand, it is pointed out, is good even at the ruling prices. Some even suggest that the Government could increase the export duty on these varieties while allowing its export and make good the loss in revenue occasioned by the cut in duty on Bengals. The Government would do well to review the supply position of this type of cotton and examine whether a quota for old crop cotton of ¾" and below style is feasible at present

The Government has also modified the procedure to be followed in issuing export licences. A new system has been introduced, under which export licences will be issued on a "first-come-first-served basis," subject to a maximum quantity of 5,000 bales for each individual shipper. Licensing will be stopped as soon as the ceiling is reached. If, on any particular day, applications are received for a quantity exceeding the ceiling, then licensing will be done on a *pro-rata* basis.

This procedure is a distinct departure from that hitherto followed. In the past, export licences used to be issued on the basis of individual quotas to shippers, taking into account their past performance. This system gave rise to many malpractices in addition to encouraging outsiders to enter the picture merely for obtaining export licences and sell them for a premium. The object of the new system is to encourage the entry of new blood into the field by providing opportunities not only to established shippers but also to those who are already having foreign connection but who had no past performance to claim licences.

NEW EGYPTIAN PAYMENTS ARRANGEMENT

A new payments system has been worked out by the Egyptian Government for its cotton under which a discount of 23 per cent. will be offered on cotton sold for hard currencies, including sterling. Exporters who offer their cotton at 23 per cent. discount will sell their hard currencies to the National Bank of Egypt at a premium of 30 per cent. on the official exchange rate of the Egyptian pound. The new regulation replaces the practice of giving discounts which vary with the need for the currency in which payment is made. The object of the new system is to ensure equal prices to the buying countries, to facilitate more normal trade with the West in terms of currencies which can be freely spent, to reduce barter deals with communist countries and to bring cotton prices more in parity with world market levels. The new arrangement is applicable to exports of the 1957-58 crop.

COTTON CROP IN M.P.

The total estimated area under cotton in Madhya Pradesh is placed at 19,59,400 acres according to the third forecast of the cotton crop of Madhya Pradesh for 1957-58. The weather was clear and cool with scanty to light, isolated showers in a few districts. The crop was adversely affected to some extent in Hoshangabad district owing to heavy rains at sowing time and in Chhindwara district by *dahia* disease. Due to prolonged drought since middle of September 1957, the crop was adversely affected to a varying extent in all the important cotton-growing districts, except Ujjain.

Total production is estimated at 4,23,800 bales (of 392 lbs. each) as against the corresponding estimates of 6,25,900 bales in the previous year. The estimated average yield per acre is 85 lbs. against the corresponding average of 110 lbs. last year.

TEXTILE OUTPUT IN JAPAN TO BE CUT

The cotton textile industry in Japan is apprehensive of a possible recession in the textile trade. With a view to overcoming such a recession, the Japan Cotton Spinners' Association has decided to curtail the production of yarn to about 182,000 bales per month in the coming quarter, that is, April-June 1958. The actual output is expected to be below 180,000 bales per month, as one of the mills is out of operation at present. The Association has requested the Ministry of Trade to issue an official recommendation for sealing 30 per cent. of the existing nine million spindles.

Following the proposed cut in yarn production, the total imports of raw cotton into Japan in the next financial year beginning from 1st April 1958 will be lower than the quota of 2.2 million bales previously requested by the Ministry. They are not, however, expected to be below the current year's imports of about 1.91 million bales.

AUDITORS' REPORT TO THE SHAREHOLDERS OF THE TRAVANCORE BANK, LIMITED

We have audited the annexed Balance Sheet of the Travancore Bank, Ltd., as on 31st December, 1957, and also the annexed Profit and Loss Account of the Bank for the year ended that date in which are incorporated the returns of all branches audited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions of sub-sections (1), (2) and (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) The transactions of the bank which have come to our notice, have been within the powers of the Bank;

(c) In our opinion, proper books of account as required by law have been kept by the bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) In our opinion, and to the best of our information and, according to the explanations given to us the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of affairs of the Bank as at 31st December, 1957, and the Profit and Loss Account gives a true and fair view of the Profit for the year ended upon that date.

GROWING CANE ON SCIENTIFIC LINES

LESSONS FROM OTHER COUNTRIES

FOURTEEN years have elapsed since the Indian Central Sugarcane Committee was established. Several schemes of cane research have been completed, while many others are still in progress. The Sugarcane Breeding Institute at Coimbatore, its sub-station at Karnal, a network of research stations and the Indian Institute of Sugarcane Research (opened at Lucknow in February 1952) have all been carrying on research work on almost every aspect of sugarcane. Nevertheless, the progress achieved in terms of actual field results has not been quite encouraging. Barring a few selected areas here and there, where striking improvement is noticeable, both the yield of cane per acre and the sucrose-content in cane have not only not increased but have actually tended to decline over the past fourteen years. The all-India average per-acre yield of sugarcane is at present not more than 13.27 tons (second estimate for 1957-58), as against 14.50 tons in 1942-43. Similarly, the average recovery per cent. of sugar in cane is low at 9.76 per cent. (1956-57), which compares unfavourably with 10.28 in 1942-43.

The continued low level of per-acre yield and sucrose-content is certainly disquieting, especially considering the crores of rupees spent in the name of sugarcane development programmes; a large part of this amount, it may be noted here, is raised by the levy of a heavy cess on cane crushed in the sugar mills. What is this state of affairs due to? The answer to the poser is not far to seek. The efforts of the cane research stations in improving cultivation of cane have been neutralised to a great extent by the lethargy of State Agricultural Departments. Not much has been done by the State Governments to carry successfully to farmers and fields the results of scientific research. This is one of the greatest, though less talked of, failures of the public sector in the past decade. Another factor responsible for the lack of improvement in the quality of cane-growing is the defective system of pricing cane. Under the system, the cultivators are paid for their supplies of cane according to weight, irrespective of quality considerations. What incentive does such a system give to the cultivators to endeavour to grow better quality cane? Since the cultivators are assured of a minimum price for their cane in terms of weights, they simply do not care to put forth any efforts for planting improved types of cane with higher sucrose-content.

Viewed thus, it is gratifying that the Government of India has accepted in principle the scheme for linking the cane price to its quality as well as weight, instead of to weight alone. And over a year has passed since this principle was accepted and yet its translation into actual practice has not been carried out. While the adoption of this system will induce quality-consciousness among the agriculturists, the efforts to improve cultivation must be intensified with all vigour. Better irrigation facilities must be provided, seed nurseries established, disease-free and improved varieties of seeds distributed, manures and fertilisers supplied, pests and diseases controlled, and demonstrations and crop competitions organised. Indeed, the entire cane agriculture should be modernised on scientific lines, if the present high cost of sugar production is to be reduced. How important this aspect is has been very well brought out by Mr. V. P. Timoshenko and Mr. B. C. Swerling, in the course of an interesting study—*The World's Sugar—Progress and Policy*—published by the Food Research Institute of Stanford University, Stanford, California (price: $6.50). Reviewing the developments in the sphere of world cane cultivation during the decades since the end of the First World War, the authors observe:

"Cane agriculture was in ferment everywhere. Newly bred varieties of cane sharply raised the level of per-acre yields. The gradual adoption of the tractor (and the truck) brought important changes in preparation of the soil, in planting, in cultivation, and in the organisation of the harvest. In those regions where labour shortage was a factor to be contended with, increased attention came to be paid to mechanical handling of cane and of sugar. A fully mechanised harvest has been accomplished in Louisiana and on some Hawaiian plantations, and is regarded with favour in Queensland. This process of modernisation, by which cane has incidentally been a major carrier of agricultural science to tropical regions, warrants serious attention."

According to the authors, the development and transmission of new cane varieties have displayed highly dramatic features in the cane regions of the world. Improved varieties, it is common knowledge, mean higher sugar yields per acre, greater resistance to disease, better adaptability to natural hazards like drought or frost, and more response to fertiliser applications. Indeed, we are told that, among the countries that stand in the scientific vanguard, better varieties have been *the most important single factor* responsible for higher sugar yields during the past four decades. To quote Messrs. Timoshenko and Swerling further:

"To the extent that breeding succeeds in lowering fibre content and reducing impurities, the efficiency of factory operations is improved. Combinations of early and late maturing varieties perpetuate high sucrose results over a longer grinding season and spread overhead factory costs at the same time that they increase yields. Good ratooning qualities cut the heavy expense of replanting; self-trashing canes reduce the costs of the harvest; erect canes lend themselves more readily to mechanical cutting than do those that lodge heavily. A modern cane economy marshals its frontline and reserve varieties much as a general calls up his troops."

The progress achieved in varietal improvement has been so marked that, by 1950, as much as 85 per cent. of all cane harvested throughout the world was grown from improved plant stock developed by experiment stations. Even in India where the inertia and poverty of the peasant is considered a strong barrier against better agricultural practices, nearly 90 per cent. of the cane acreage was planted with improved varieties by 1950-51. Further, no other tropical crop has witnessed a more rapid introduction of the tractor and mechanical farm equipment as sugarcane, though the hoe, the wooden plough, the matchete and the ox cart are still to be found in the cane fields of the world.

In cane agriculture even more than in sugar making, advance has come as a result of enlightened and organised research. The experiment station of the Hawaiian Sugar Planters' Association is spending over one million dollars every year, but this amount is very much more than compensated. It is estimated that the extra yield from POJ 2878 in a single year repaid all the funds invested in the Java sugar experiment station over a period of forty years. As the authors rightly point out, research organisations sponsored by the sugar industry "may run the risk of putting too high a premium on short-term results, but the liaison they provide between research workers and growers speeds the field testing and application of laboratory results."

The processes which have resisted mechanisation in Hawaii are the harvesting and cutting of seed cane. Recently, however, the need for planting larger acreages has tended to alter the practices. Machines have been developed to cut cane to length and the system of supplying the mechanical planters improved. Despite the progress achieved, the problems of adopting machines to cutting (and to planting) cane in Hawaii have not as yet been fully overcome. In almost every other cane region, however, the shift to tractors for cane land preparations has been proceeding rapidly. The tractor, it is said, is not only a labour-saving device but a mobile power unit that, by permitting speedier work and improved cultural practices, ranks, along with new cane varieties, as promoter of increases in cane yields. In Florida, Peru, South Africa and Australia, the tractor is entrenched. So rapidly has the process been advancing in the West Indies that the value of tractor imports into Jamaica was more than double that of all sugar factory machinery during 1951-53, without, taking into account the increase in supplementary agricultural equipment.

A brief reference may be made here of the peculiar system of harvesting adopted in Fiji. In this country, cane farms are 10 to 12 acres in size, individual output aggregating 120-180 tons a year. Steady supplies of quality cane are obtained by gangs of neighbours harvesting each other's cane, under the general supervision of a field officer supplied by the mill. Each grower is expected to supply man-hours equivalent to the time necessary for harvesting his own cane.

Notable progress has been achieved in the

(*Continued on page 542*)

LABOUR WELFARE IN COAL MINES

POOR PROGRESS IN HOUSING

WELFARE measures for coal miners in India started as an offshoot of a war-time necessity to maintain the productive efficiency of the industry by keeping up the morale of workers. Accordingly, a Labour Welfare Adviser was appointed in 1942 and a Coal Mines Welfare Fund was instituted in 1944. The Fund has since grown considerably in size and developed into a well-organised welfare State enterprise. In order to put the organisation on a sound footing, the Government of India passed, in 1947, the Coal Mines Labour Welfare Fund Act, which came into force on 14th June 1947. The Act provides for the setting up of a fund, to be called "The Coal Mine Labour Housing and General Welfare Fund," to be maintained under two separate heads—the housing account and the general welfare account.

The Fund is derived from the levy of a cess on all coal and coke despatched from the collieries at a rate not less than As. 4 and not more than As. 8 per ton fixed by the Central Government. At present, the cess is being levied at As. 6 per ton. The proceeds of the levy are divided between the general welfare account and the housing account in the ratio of 7 : 2.

The latest annual report on the activities of the Coal Mines Labour Welfare Fund for 1956-57 shows that, on the basis of the cess of As. 6 per ton levied on despatches by rail, the collections to the Fund during the year under review aggregated Rs. 99.33 lakhs. On despatches by means other than rail, the collections amounted to Rs. 5.99 lakhs. Other receipts to the Fund aggregated Rs. 8.49 lakhs, bringing the total receipts to the Fund during the year to Rs. 113.81 lakhs, as against Rs. 138.43 lakhs in 1955-56. The figures relating to 1956-57 are provisional, as the account for the year has not yet been closed. Out of the aggregate sum of Rs 113.81 lakhs received during 1956-57, the share relating to general welfare account was Rs. 83.73 lakhs and that to the housing account Rs. 30.08 lakhs. These bring the total receipts, since the inception of the Fund, to the general welfare account to Rs. 879.56 lakhs and to the housing account to Rs. 388.27 lakhs. As against these, the expenditure incurred during 1956-57 on the general welfare account is Rs. 56.06 lakhs and that on housing account Rs. 3.29 lakhs, the total sum spent so far being Rs. 535.99 lakhs and Rs. 123.05 lakhs, respectively. The closing balance as on 31st March 1957, in the general welfare account is Rs. 343.57 lakhs and that in the housing account Rs. 265.22 lakhs.

The following are the receipts and expenditure on the general welfare and housing accounts for the last five years:

(In lakhs of rupees)

Year	General Welfare		Housing	
	Receipts	Expenditure	Receipts	Expenditure
1952-53 ..	107.98	46.04	28.82	9.63
1953-54 ..	111.12	45.81	33.61	7.62
1954-55 ..	71.50	57.15	25.35	11.43
1955-56 ..	103.90	56.83	34.53	9.64
1956-57 ..	83.73	56.06	30.08	3.29

It will be seen from the table that there was a sharp fall in receipts during the year under review, though they were higher than those for 1954-55. On the other side of the accounts, the expenditure on general welfare was more or less on the same scale as in the previous year, while that on housing declined substantially. A sum of Rs. 19.70 lakhs was spent during the year on medical facilities and Rs. 5.96 lakhs on anti-malaria operations. The provision of adequate medical facilities is considered important by the Welfare Fund organisation which is giving a subsidy of 8 pies per ton of coal or coke despatched to colliery owners who maintain dispensaries to a prescribed standard.

From the inception of the Labour Welfare Fund, much importance has been attached to housing in coalfields, but the progress has been slow. In the earlier years, the idea regarding housing was that construction of houses should be concentrated in one place, so that the cost of amenities might be low. Experience, however, showed that the scheme was not popular, owing to the distance of the place of work from the site of a township. A scheme was, therefore, introduced for decentralisation of construction, under which colliery owners were entitled to a subsidy not exceeding Rs. 600 per house. This rate was subsequently raised to 25 per cent. of the cost, subject to a maximum of Rs. 750, in cases where construction was completed before 31st December 1953. Under this scheme, the construction of 2,805 houses was sanctioned.

Despite the offer of subsidy, the progress of this scheme was slow. Out of the 2,805 houses sanctioned, the actual number of houses constructed up to the end of March 1957 was only 1,623, while 24 were under construction. Applications in respect of 926 houses were withdrawn. Out of the 1,623 houses completed, claims for subsidy amounting to Rs. 11.02 lakhs were received up to the end of the year, and payment of subsidy in respect of 1,587 houses amounting to Rs. 10.79 lakhs was made.

In view of the slow progress, the terms were made more attractive to mine owners. Under the revised scheme, colliery owners were offered a subsidy of 25 per cent. up to Rs. 735 and a loan of 37.5 per cent. subject to a ceiling of 1,102-8 per house. The construction of 3,062 houses was sanctioned under the revised scheme up to the end of the year. Applications in respect of 411 houses were withdrawn. Construction of 948 houses was completed and 820 houses were under construction at the end of 1956-57.

The Coal Mines Labour Housing Board has constructed in all 1,566 houses at Bhuli (in Jharia coalfield), 48 at Bijaynagar (in the Raniganj coalfield), 219 at Bokaro, 180 at Kargali, 50 at Giridih, 50 at Bhurkunda and 40 at Kurasia (Korea coalfield). The new housing scheme for construction of miners' houses direct by the Coal Mines Labour Welfare Fund was sanctioned by the Government during the year and applications for the construction of 32,172 houses were received from the collieries up to the end of January 1957.

SAFETY IN COAL MINES

The Government of India has set up a fifteen-member Steering Group to prepare the ground for a conference which will consider the question of safety in mines in relation to management practices, workers' training, arrangements for check and inspection and measures designed to prevent accidents in mines. The Steering Group, which consists of representatives of employers, workers and mining experts and three Members of Parliament, met at New Delhi on 17th March. The constitution of the Steering Group is in pursuance of the announcement made in Parliament by the Union Minister for Labour and Employment, Mr. Gulzarilal Nanda, following the accidents in the Chinakuri and the Central Bhowra Collieries on 19th and 20th February. The main conference, which will follow the meeting of the Steering Group, will be attended by representatives of mine workers, employers, mining engineers and the Inspectorate of Mining.

The Steering Group consists of the following persons: *Employers' representatives*: (1) Mr. B. Hogg, Chairman, Indian Mining Association; (2) Mr. Inder Mohan Thappar, Calcutta; and (3) Mr. D. K. Samanta, Agent, Pathavdih Sudamdih Colliery, Pathendih P.O. *Workers' representatives*: (1) Mr. Kanti Mehta, Secretary, Indian National Mine Workers' Federation; (2) Mr. Mahesh Desai, General Secretary, Koyala Mazdoor Panchayat; (3) Mr. Kalyan Roy, Secretary, Indian Mines Workers' Federation; and (4) Mr. V. R. Acharjar, General Secretary, Hindustan Khan Mazdoor Sangh. *Representatives of Colliery Managers*: (1) Mr. A. Wright, Agent, Lodna Colliery Company, Dhanbad and (2) Mr. T. B. Malhotra, Agent, Ranipur Colliery, West Bengal. *Members of Parliament*: (1) Mr. T. B. Vittal Rao; (2) Mr. Ram Subhag Singh; and (3) Mr. Rajinder Singh. *Others*: (1) Mr. S. K. Nargundkar, General Manager, Singhareni Collieries, Kothagudium; (2) Mr. A. B. Guha, Mining Adviser, Ministry of Steel, Mines and Fuel; and (3) Mr. S. S. Grewal, Chief Inspector of Mines in India, Dhanbad.

COAL MINES PROVIDENT FUND

The Coal Mines Provident Fund Scheme has been modified to provide for a uniform rate of contribution for all categories of colliery workers. The rate has been fixed at 6¼ per cent. of the total emoluments of workers, which include cash payments, overtime compensation for guaranteed wages, additional payments for different and arduous work, remuneration for paid holidays, etc. Hitherto, the contributions to the Fund were recovered at different rates for different categories of workers. The need for a uniform rate for all categories of workers was felt following the enforcement of the revised wage structure in the coal industry in pursuance of the award of the All-India Industrial Tribunal (Colliery Disputes) in May 1956.

276 Crores

a new record in life insurance

The Life Insurance Corporation has recorded a spectacular achievement. In 1957, Rs. 276 crores of Life Insurance was sold in India, comfortably exceeding the target of Rs. 250 crores.

This is an outstanding improvement on the comparable figure of Rs. 238 crores in 1955, said to be the peak year for Life Insurance under private management.

The Corporation's signal performance reflects the popularity of Life Insurance as an instrument for social and personal security. Indeed, over 8,00,000 new policies now stand as eloquent testimonials to this conviction.

EXPORTS OF INDIAN JUTE GOODS

I.J.M.A. CHAIRMAN URGES NEED FOR INTENSIVE PROMOTIONAL WORK

THE main characteristics, or rather the weakness, of the Indian jute industry, by virtue of its position as an export industry, is its sensitiveness to the changes in the general economic and trading conditions in various parts of the world. To see the industry in its proper perspective, therefore, one must view it against the background of world trading conditions. To take the year 1957. Early in the year, it looked as though the industry was recovering from the difficulties of over-production during 1956 and it was expected that a substantial improvement in the state of the industry would result. This expectation did not, however, materialise, thanks to the change in world economic climate. Trading conditions continued to be unfavourable and jute mills never had an opportunity to unseal the additional looms that had been closed in 1956 following a glut of stocks of jute goods.

In judging the industry's performance during the past year and comparing it with that in the preceding years, one must bear in mind that, for the first time in many years, the Indian jute mills were not operating in a rapidly expanding world economy. On the contrary, signs of business recession came to be felt more and more as the year passed. There was, no doubt, a fall in production and, in the prevailing state of the world trade, exports were maintained at a reasonably satisfactory level. Mills were able to sell more goods than they produced, with the result that stocks with mills had fallen substantially. Statistically, the position of industry improved. But, financially, the past year was far from satisfactory one, as the prices of jute goods were hardly remunerative. In 1955, the entire industry is estimated to have suffered a net loss of less than Rs. 25 lakhs. The complete figure for 1956 are not yet available, but the accounts of companies representing 90 per cent. of the industry showed a net loss of more than Rs. 2.5 crores. As for 1957, it is too early to get the relevant data. It is, however, estimated that the loss in 1957 may not be as large as in the preceding year; it is nevertheless sizable. In any case, the cumulative effect of the losses in the last two years on the mills must be quite depressing.

Year of Consolidation

The leaders of jute industry, however, are inclined to take a hopeful view of the outlook for the industry. Thus, Mr. D. P. Goenka, Chairman of the Indian Jute Mills' Association affirmed, in the course of his speech at the annual meeting of the Association held in Calcutta on the 14th inst., that the mills were statistically in a better position than they were a year ago and said that, given a reasonable degree of market stability, they should be able "to recover a modicum of that prosperity which has recently proved so elusive." He based this subdued optimism on the following grounds:

(1) 1957 was a year of consolidation for the jute mills. (2) The statistical position of jute goods has improved. (3) The industry's dependence on Pakistan for raw jute has been greatly reduced. (4) Its efficiency has improved, thanks to further modernisation and rationalisation. (5) Despite adverse factors in some of the principal consuming markets, the mills have been able to make some progress in other markets.

Referring to the outlook for the current year in particular, Mr. Goenka struck a note of cautious optimism. He said:

"This year, I feel, there are more imponderables than usual. The general economic outlook is uncertain, and, in particular, it is difficult at this stage to foresee what will happen in the U.S.A. our principal market for hessian. The one certainty is that trading conditions are not going to be easy, and I do not think we can expect any material expansion of our export trade, except perhaps through the development of new uses for jute fabrics. Nevertheless, as I said at the outset, the past year has been one of consolidation. The competitive position of the Indian jute industry is now stronger than it was a year ago; and barring some unforeseen calamity, we should fare better in 1958 than we did last year."

The main theme of Mr. Goenka's address was the importance of export promotion work. The trend of export of jute goods in 1957, he observed, underlined the need to continue, and if possible extend, this side of the Association's activities. The experience of 1957 showed that strenuous efforts would be needed to maintain the old established markets and develop them in the face of keen competition from other methods of packaging and transport. During the past year, the exports to large traditional markets fell, but the losses were compensated by larger shipments elsewhere.

The two largest markets for Indian hessian are the U.S. and the U.K. and the exports to them dropped by 5 per cent. and 50 per cent. respectively. Examining the causes of such a decline, the I.J.M.A. Chairman said:

"Although the fall in exports to the U.S. reflected to some extent a reduction in the stocks of burlap held by the trade in North America, this is not a complete explanation. Of more significance is the fact that there was also a fall of about 12 per cent. in the U.S. consumption of burlap last year. This fall in the total consumption was due to a reduction in the use of burlap for the manufacture of bags and it is at least satisfactory that the consumption of burlap for industrial and other purposes continued to rise. In the U.K., the very heavy fall in consumption was a direct result of the operation of the U.K. Jute Control. . . . The situation in the U.K. market is most unsatisfactory and would have led to a substantial drop in our total hessian exports last year, if there had not been an appreciable increase in shipments to Argentine."

The principal market for Indian sacking is Australia, the offtake of which during 1957 suffered a substantial fall. This was largely due to the serious drought in the wheat-growing areas last year. Mr. Goenka, however, hoped that the lower offtake from Australia would be only temporary. The fall in exports to this continent was fortunately more than made good by larger shipments to other markets, particularly to Egypt and the underdeveloped countries in Africa and the Far East, so that the overall exports of sacking was higher, thus maintaining the upward trend. The Chairman of the I.J.M.A. regarded the emergence of these new markets for heavy goods as a "most encouraging sign." Though there were no orders from China for Indian sacking during 1957, Mr. Goenka considered the future prospects as reasonably bright.

The most disappointing feature of the past year was the decline in internal consumption. Since 1954, the internal offtake had been steadily rising and, with the rapid development of agricultural and industrial activities under the second Five-year Plan, it had been expected that the internal consumption would increase substantially in 1957. This expectation did not materialise; on the contrary, there was a fall of about 14,000 tons in domestic offtake. Though the consumption was higher than in 1955, the position is not considered as satisfactory.

Jute Control in Britain

Mr. Goenka examined the position of Indian jute goods in Europe and North America, in the light of his study of these markets in the course of his tour as a member of the Indian trade mission. In Europe, though exports during 1957 showed an appreciable increase, he saw little prospect of any substantial increase in trade, as most of the Continent's requirements of jute goods were being supplied by indigenous jute manufacturing industries, strongly protected by high import tariffs. In the U.K., the exports would show a marked rise, if India is not "so severely handicapped by the operation of the U.K. Jute Control," under which Indian jute goods imported in the U.K. are purchased by the Jute Controller and sold at no less than 30 per cent. above (this percentage was 40 per cent. till last July) the landed cost in order to bring the selling prices in line with those of Dundee. Mr. Goenka considered this as a "most short-sighted policy," because it gave room for paper sacks to gain ground at the expense of jute. The reduction in mark-up prices from 40 to 30 per cent. in July last, he said, was not sufficient to arrest the trend towards paper bags. In U.K. itself, there is a lot of controversy going on about the jute control; many consumers consider the system of marking up prices as penalising them.

The reason given by the U.K. authorities for not reducing the mark-up prices still further was the adverse effect which it would have on employment in Dundee. Mr. Goenka was not impressed by this argument, because only a small part of the Dundee's output was being affected, since the production of the types of cloth which India produces was found unremunerative and a great bulk of Dundee's production was in speciality goods. "This suggests," Mr. Goenka went on to say, "that the mark-up merely benefits jute's competitors, particularly the paper industry, and I am confident that, if the Government of India continues to press the U.K. authorities, the mark-up can be reduced to a level at which jute can compete with paper and recover much of the lost ground." In the meantime, the I.J.M.A. is continuing its efforts to promote consumption of jute sacks not only by advertising but also by direct personal contact with the farming community.

U.S. Market

In the U.S., where Indian jute goods are not subject to any artificial increase in price, as in the U.K., there was a further rise last year in the consumption of burlap for industrial purposes, but a decline in its use for the manufacture of bags. The three main reasons for this fall in use of burlap for bag manufacturing given by Mr. Goenka are: (1) the competition from paper sack in smaller packages, though the introduction of 50 lb.-light weight burlap bag has resulted in some return from burlap to paper; (2) the success of the "return-bag" programme which has slowed down the replacement of bags, and (3) the steady growth of bulk handling. In these circumstances, Mr. Goenka did not see how any material increase in bag business in the U.S. could be expected. The alternative is, therefore, to concentrate our efforts on encouraging industrial consumption and evolving new uses for burlap, while maintaining our position in the packaging field. Carpet backing, furnishings and a new type of cotton bale cover are some of the examples of industrial uses that the I.J.M.A. is trying to develop. The use of burlap as an irrigation canal liner is another project which offers a large potential market, if it can be exploited. Mr. Goenka is, however, convinced that the American market offers a serious challenge and that there is need for an intensification of the promotional activities there. Thus, he said:

"We are now considering how best to counter the threat of bulk handling, and if I tell you that our friends in the American burlap trade have suggested a campaign to 'Stem the Tide of Bulk.' I hope you will not think that we are trying to emulate King Canute. The advance of bulk handling may be inexorable; but that does not mean that we are powerless to prevent it from encroaching too far on our territory. The success of our efforts to increase exports to the U.S.A. will, of course, depend to a considerable extent on the general level of business activity in that country. While the U.S. administration still seems to be optimistic about the future, I notice that in recent economic reports from America it is now apparently a depression, rather than a recession, which is not going to take place. Whatever the future may hold, there is no doubt that the American market presents a serious challenge, and my visit convinced me of the need for an intensification of our promotional activities there."

Limiting Factor

There is, however, one limiting factor in the export promotion work, that is, paucity of finance. The industry is no doubt grateful to the Government of India for the grants it has given for publicity purposes; last year, a sum of Rs. 2.5 lakhs was given as grant. However, the foreign exchange difficulties and world conditions both demand an all-out effort and the industry, therefore, requires a substantial help. In addition to the grants for export promotion, the Central Government allowed last year a drawback of import duty on batching oil used in the manufacture of goods for export. Though no device has been evolved whereby this refund can be passed on to the manufacturers, instead of to the shippers as exporters, it is nevertheless of considerable assistance to the export trade, since in a buyers' market the benefit will inevitably pass on to the overseas customers. The benefit of this drawback has, however, been more than offset by the increased electricity duties imposed on the Calcutta mills by the recent West Bengal Electricity Duty (Amendment) Act. The new duties are expected to add at least Rs. 45 lakhs per annum to the manufacturing costs of mills. For an export industry which is in serious financial difficulties and facing serious competition in overseas markets, this burden is "an intolerable burden" and it is to be hoped that the West Bengal Government will accede to the plea of the jute mills and give them relief.

While advocating the need for promotional efforts in export markets, Mr. Goenka was not unmindful of the importance of quality for maintaining the sales. He averred that the industry was sparing no efforts to maintain the standard of the jute products. Another factor which has an important bearing on sales abroad is the price of jute goods. In theory, lower gunny prices are good, in that they help facing competition from substitutes and from new manufactures. From the practical point of

PROMOTION OF INTER-STATE MOTOR TRANSPORT
A NEW BODY SET UP

FEW developments are of greater importance to the progress of inter-State motor transport than the setting up of the Inter-State Transport Commission. Although the establishment of the Commission formed part of the reform of the motor vehicles legislation carried out in 1956 by the Government through the Motor Vehicles (Amendment) Act, the Government had not taken a decision on this important subject for more than a year. It is, therefore, gratifying to note that the Government has at last decided to set up the Commission.

The Commission, according to an official announcement made last week, consists of Dr. Nagendra Singh, Joint Secretary, Union Transport Department, as Chairman, and two other members, Mr. D. D. Suri, Deputy Secretary, Union Transport Department, and Mr. Jagdesh Prasad, Area Manager, Airlines Corporation. It is not clear why the Government has restricted the Commission to officials only, though it is true that the members chosen have a distinguished background and acquaintance with transport problems. The Government could have included some non-official members with intimate knowledge of road transport problems. The Act only lays down that the Government may constitute a Commission consisting of "a chairman and such other members, not being less than two, as it thinks fit" for the purpose of developing, co-ordinating and regulating the operation of transport vehicles in the inter-State region. Thus, the Act neither lays down that the Commission should consist of officials only nor prescribes that there should be only three members. The Government would have been well advised to include a few non-officials, and also a person with judicial experience who would be of assistance in dealing with certain legal aspects of inter-State disputes.

Powers

Under section 63A of the Motor Vehicles (Amendment) Act, the Commission has wide powers of control and direction. What is now attempted is to invest the Commission with only a few of the more important powers contemplated by the section. Thus, its functions are: (1) to prepare schemes for the development, co-ordination or regulation of the operation of transport vehicles and, in particular, of goods vehicles in an inter-State region; (2) to settle all disputes and decide all matters on which differences of opinion arise in connecton with the development, co-ordination or regulation of the operation of transport vehicles in an inter-State region and (3) to issue directions to the State Transport Authorities or Regional Transport Authorities interested regarding the grant, revocation and suspension of permits for the operation of transport vehicles in respect of any route or area common to two or more States.

The Commission has not been invested with powers to perform the further function, contemplated by the section, namely, to grant, revoke or suspend any permit or countersign any permit for the operation of any transport vehicle in respect of such route or area common to two or more States as may be specified in this behalf by the Central Government. This power will also be given to the Commission, if necessary, according to the statement made by the Union Minister of State for Transport, Mr. Raj Bahadur, in the course of a Press conference held in New Delhi, last week.

Explaining the object of appointing the Commission, Mr. Raj Bahadur said that, at present, there was no proper regulation of inter-State road transport services. On many inter-State routes, passengers and goods had to be transferred to other vehicles at the borders. The Central Government, he added, had been persuading the various State Governments to conclude agreements with the neighbouring States for the operation of transport vehicles. It would appear that, although the State Governments had agreed to the principle of free movement, in actual practice, they had failed to come to any satisfactory arrangement.

The setting up of the Commission is a step in the right direction. It meets a long-felt need. It may be recalled that the Estimates Committee, in its report on motor transport, had indicated that "prompt steps should be taken for the setting up of the Inter-State Transport Commission, so that it may start playing a useful role in developing motor transport in the country to relieve the existing transport bottleneck." Now that the Commission has been established, it is to be hoped that problems of inter-State road transport will receive the necessary attention and steps will be taken to make motor transpoft a more dynamic factor in transport economy.

There is no doubt that there is great scope for the expansion of motor transport in the intra-State and inter-State spheres. It had been formerly estimated that the overall traffic at the end of the second Five-year Plan would amount to 270 million tons. Since then, the revision of the targets for foodgrains and cement and the Government's decision to step up exports of mineral ores are among the factors which are likely to increase the overall traffic. In the course of his speech at the Transport Users' Conference, held recently in New Delhi, Mr. L. P. Misra, Chairman of the Reception Committee, estimated that "whatever developments may take place in the three types of transport—railways, coastal routes and inland waterways—there will be a deficit in the list targeted of at least 50 million tons and this will have to be thrown on the roads."

Advantages

Road transport, as is well known, has certain inherent advantages. It is more flexible than any of the other means of transport, the railways or waterways, in that it can cover a wider area, needs less equipment and gives door-to-door individualised service. Any stimulus given to inter-State road transport will significantly reduce transport bottlenecks in the country. In this connection, it is interesting to note that Mr. Raj Bahadur disclosed that there were now 120,000 goods vehicles and 50,000 passenger vehicles on roads, as against 90,000 and 35,000 respectively, at the beginning of the first Five-year Plan; goods vehicles carried about eight to ten million tons of goods at present. He hoped that the number of goods vehicles would increase to 240,000 and carry about 20 million tons by the end of the second Plan. The Minister placed the country's requirements at 300,000 vehicles with a carrying capacity of 70 million tons; he estimated the expenditure on the project at Rs. 1,000 crores.

Taxation

The figures, cited above, must serve to show the magnitude of the investment which would be necessary in order to make road transport contribute its full share to the national economy. But such investment cannot take place without substantial reduction in the present admittedly heavy burden of taxation on road transport. It has been computed that, in India, the taxation per motor vehicle per year is about Rs. 2,070, as against Rs. 800 in France, Rs. 950 in Austria, Rs. 1,300 in the U.K., Rs. 1,500 in Italy and Rs. 1,200 in Germany. A sizable reduction in tax burden would stimulate the growth of road transport, remove transport bottlenecks, increase employment opportunities and also improve the revenue which the Central and State Governments derive from the operation of motor transport services.

CHEAP RADIO SETS

The Ministry of Information and Broadcasting has for some time been discussing the production of radio sets at a low price with the radio manufacturers in the country. This was disclosed by Mr. R. K. Ramadhyani, Secretary to the Ministry, in the course of a Press interview, at Bangalore. The specifications of radio sets, he said, had been discussed and approved by the National Physical Laboratory and the manufacturers. It was expected that the orders placed for community listening sets would result in lower prices for radio sets on account of larger production. These measures, he said, had probably had some effect but the price of sets remained high. The community receiving sets cost about Rs. 205. Less expensive sets, he said, were possible but the manufacturers had yet to show adequate initiative in this direction. At a meeting of the Liaison Committee, held in September 1957, the representatives of the manufacturers were invited to send a memorandum showing the direction in which Government could help the industry but nothing had developed so far.

The Government of India, he said, was exploring the possibilities of cheap radio listening in various ways. One of these could be by providing a system of local transmitters which would enable good reception with crystal or small valve sets; the local transmitters would relay the programmes of Central station. Extension of radio reception could also be effected by providing in towns the facilities of what was known as "wired wireless." Under the system, a subscriber could get a connection or a loudspeaker or earphones; he would not need a receiving set at all. The Government had to study these proposals and decide upon the most practical and effective means or combination of means. In this connection, it was trying to get the services of a foreign technical expert to assist the A.I.R. to make a detailed technical study of its system with a view to making a large expansion in radio receivers possible. It is also considering a detailed investigation of the problems of radio manufacture in the country. Perhaps, this could be done with the aid of radio industrialists in foreign countries who might be willing to send a delegation to India. Such a delegation, he said, might be able to assist the radio manufacturers in the country.

There was, according to Mr. Ramadhyani, the possibility that the introduction of the new "transistor" type of radio sets would enable radio listening in the rural areas to make enormous strides. The main interest of this type of receiver was that it required very little current from batteries. The cost was, however, high. The electronics factory in Bangalore had the potential to manufacture radio components. The Ministry was interested in arranging for the production of transmitters for A.I.R. in this factory. These and other questions of radio manufacture, he said, would be studied with the management.

ROAD DEVELOPMENT

Some light on the development of roads in the last official year is thrown by the report of the Ministry of Transport and Communications for the year 1957-58. According to this report, a sum of Rs. 8.6 crores is expected to be spent on the development of National Highways during 1957-58, as against Rs. 9.25 crores in 1956-57: the total provision for National Highways in the second Plan is Rs. 55 crores. Physical achievements during the period 1st April 1957 to 15th January 1958 include the construction of about 110 miles of missing links and by-passes and 12 major and 10 minor bridges and improvement of 775 miles of existing sections. As regards roads, other than National Highways, a total provision amounting to Rs. 14.32 crores has been included in the second Five-year Plan, of which Rs. 2.35 crores is expected to be spent in 1957-58. The total expenditure on roads of economic or inter-State importance was Rs. 2.90 crores. About 135 miles of new roads were constructed and 275 miles of existing roads were improved. A sum of Rs. 16 crores was spent during the first Plan period out of the Central Road Fund. During the year under review, Rs. 1.46 crores was sanctioned out of the allocations made to the States. In addition, grants aggregating Rs. 21.12 lakhs were sanctioned from the Central Road Fund (ordinary) reserve for specific projects in various States.

SECONDHAND TONNAGE PRICES DECLINE FURTHER

With the continued depression in freight rates, secondhand tonnage prices have recorded a fresh decline, with the reported sale last week of a "Liberty" for £135,000 (about Rs. 18 lakhs), which compares with the price of $425,000 (about Rs. 21 lakhs) paid two weeks ago and of £225,000 (about Rs. 33 lakhs) paid in February last. There was, however, one sale during February in which a Liberty was purchased at an "as is where is" basis, delivery Japan, at $340,000 (about Rs. 16 lakhs). Only 15 months ago (December 1956), a Liberty was sold for £670,000 (about Rs. 89 lakhs), the highest price ever paid for a ship of this type. The maximum paid during the boom period of Korea was about £600,000 (Rs. 80 lakhs). Most of these war-time built vessels were sold by the Maritime Administration of the United States to American and foreign buyers between 1946 and 1951. The price at which the U.S. Government sold a few Liberty vessels to Indian owners was about Rs. 22-24 lakhs each.

Six thousand passenger aircraft are in use by airlines of the world, and nearly 1,500 additional passenger aircraft are on order, according to a study recently completed by the Boeing Airplane Company Transport Division market research group. Results of the study, just made public, show that late last year the total number of airliners known to be in use was 5,994; 1,433 were known to be on order. Of these totals, 99 were in use by Indian airlines and 19 were on order. Included in the total on order are the three Boeing 707 Inter-continentals Jet Stratoliners ordered by Air-India International and scheduled to enter service in 1960.

The study also shows that 757 all-cargo aircraft were in use by airlines throughout the world and 25 were on order. Of these totals, six were in use by Indian airlines. Boeing Airplane Company, which conducted the study, is manufacturer of Boeing 707 long-range jet airliners and Boeing 720's for intermediate-range use. Fourteen leading world airlines have ordered a total of 162 of the 600 mile-per-hour aircraft.

The booklet *Roads and Road Transport in India*, issued by the Indian Roads and Transport Development Association, Bombay, is a reprint of the articles contributed to the *Yojana* by Mr. B. V. Vagh, the well-known authority on road problems. The pamphlet is divided into three parts. The first part gives the basic facts about roads, the second examines the present position of roads and the resources aspect of road development while the third discusses the future of road transport. As might be expected of an author of Mr. Vagh's expert knowledge of road problems, his pamphlet is a mine of useful information about roads which has been very ably presented.

NEW PRODUCTS AND PROCESSES

Electrical Heating Mantles

IN foreign countries, an electrical appliance, known as "Heating Mantle" is generally used for heating round bottom glass equipment. In India the manufacture of such devices has not so far been undertaken because of the non-availability of technical skill and know-how. Local demands though limited are being met from imports. The price of imported articles too is high and once the appliance goes out of order, repair is not easily possible. A device similar to the imported mantles has been successfully developed at the Shri Ram Institute for Industries Research, Delhi. It consists of a highly efficient coiled coil heating element, insulated by a knitted layer of glass fabric, housed in a metallic container. The coils are arranged to form a basket like hemispherical surface which imparts uniform, controllable heat all round the bottom of the flask. Temperatures up to 400° C. can be easily attained. A metallic barrier protects the element from incidental overflows. Depending upon the requirement the heat output can be easily controlled.

The device can be manufactured to suit any flask size from 50 ml. to 20 litres. Damaged parts can be easily replaced. Prototype heating mantles made by the inventors have been in actual use for quite a long time and have given satisfactory service. The manufacture of these mantles can be taken up by firms engaged in the manufacture of electrical goods and other similar equipment. Production on small scale is also possible provided ordinary workshop facilities are easily available. Parties desirous of undertaking the commercial development of the process may contact the Secretary, National Research Development Corporation of India, Mandi House, Lytton Road, New Delhi-1.

Paper Made from Fungi

Research conducted by the Institute of Paper Chemistry at Appleton, Wisconsin, in the United States has shown that it is feasible to make paper and paper products from the filaments of fungi. The paper is made by using that part of the fungus known as the mycelium, which is thread-like in character. Relatively pure filaments of fungi are prepared and disintegrated in much the same way as in usual paper manufacture, when wood pulp is used. The disintegrated fungi can then be suspended in water and made into a sheet. Sheets of mycelia alone, the Institute says, tend to become brittle. But the addition of as little as 10 per cent. by weight of cellulose fibres produces sheets of paper with much the same characteristics as normal paper, although with somewhat less strength.

Rust-eating Paint

A new type of paint that attacks rust, combines with it chemically to form an impermeable film, and thus forms a protective coating for the material on which it is applied, has been developed in Australia by Davidson Paints, Ltd., and Gordon Abbots Industries, Ltd., manufacturers of the paint. The paint acts as a primer-surfacer, resisting acids, alkalis and weather reactions and prevents the reformation of rust. Previous methods of rust removal concentrated on chemical and mechanical which were more elaborate and costly. The new paint can be applied by brushing, spraying or dipping and dries completely in a day. Normal undercoat and paint may be applied over the "rust-eater."

New Green Pigments for Rubber

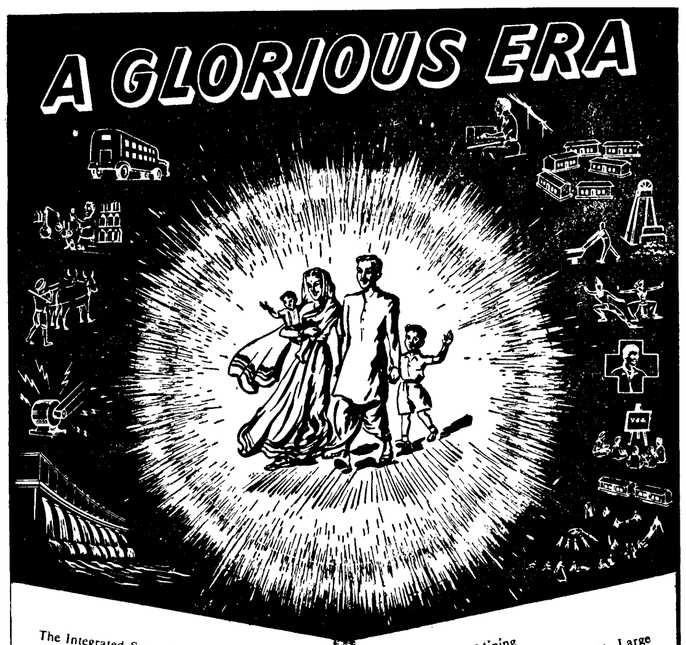
Two new green pigments for use in colouring rubber and polyvinylchloride plastics have been developed by Imperial Chemical Industries. In both cases the pigments produce a bright yellow-green colour. The rubber colouring compound, which is known as Vulcafor Fast Green 5GS, is said to possess excellent stability under all methods of vulcanisation. It will, for example, withstand high-temperature continuous vulcanisation processes. The plastics colouring compound, which is called Vynamon Green 5GS, is likewise said to have good stability. It can be used for both opaque and transparent polyvinylchloride compositions and is stated to have excellent light fastness.

Chemical Increases Rubber Yield

A weed-killing chemical developed in the United States is increasing the yield of rubber trees in the Far East. It is called 2-4-D, and is normally used by gardeners to kill dandelions and other broadleafed weeds. During the last five years the United States Rubber Company has been testing the chemical as a growth stimulant on rubber trees in Malaya and Indonesia. The company reports that the chemical has increased latex yields by as much as 25 to 40 per cent., and has rejuvenated older trees, adding years to their productive lives. Less than an ounce of the chemical is used on a tree. Mixed with palm oil, it is painted on a narrow section of the tree trunk from which the bark has been removed.

Unmined Coal Turned Into Gas

By using a new process the U.S. Bureau of Mines is turning underground coal into fuel gases without first mining the coal. This is done by passing heat created by high-voltage electrical currents through the coal and thus carbonising it. After carbonisation, the coal is porous enough to permit the passage through it of air, pure oxygen or steam. A chemical reaction then takes place which turns the coal into combustible gases and these are piped to the surface for use. There they may be used to provide power for electrical generators or in the production of synthetic liquid fuels or chemicals. The Bureau of Mines has made a considerable quantity of gas in this way and is now endeavouring to make the process cheap enough for routine commercial use.



The Integrated Second Five-Year Plan of the new State of Bombay which combines the schemes and provisions in the Second Five-Year Plans of the old Bombay State (Minus transferred territories), Vidarbha, Marathwada, Saurashtra and Kutch is of the order of Rs. 350.28 crores. The allocation of outlay among the various heads of development is as follows:-

Agriculture & Community Development
which includes Animal Husbandry, Dairying and Milk Supply, Forests, Fisheries, Co-operation and Community Development Projects, etc. ..... Rs. 8,675.22 lakhs

Irrigation and Power
which includes Multipurpose Projects, Major and Medium Irrigation Projects and Power Projects ..... Rs. 13,659.17 lakhs

Industry and Mining
which includes Mineral Development, Large and Medium Industry and Village & Small-Scale Industries .... Rs.1,318.97 lakhs

Transport & Communications
which includes Roads Development, Road Transport, Ports & Harbours ..... Rs. 2,924.41 lakhs

Social Services
which includes Education, Health, Housing, Welfare of Backward Classes & Social and Labour Welfare ..... Rs. 7,610.96 lakhs

Miscellaneous
Development of National and Regional Languages, Encouragement to Arts and Culture, etc. ..... Rs. 881.20 lakhs

LIFE INSURANCE BUSINESS IN 1957

SIZABLE IMPROVEMENT RECORDED

NOW that the excitement over the L.I.C.-Mundhra deal has waned, public attention is again tending to focus itself on the trend of new business of the Life Insurance Corporation. It is now almost 19 months since the Corporation was established. An interim report on its activities was published in August last which covered the period up to 30th June 1957. The statutory report for the first accounting period, which has been fixed as 1st September 1956 to 31st December 1957, is yet to be published. Meanwhile, figures of new business done in 1957, made available by the Corporation, make interesting reading.

Total business done in 1957 aggregated Rs. 281.38 crores, comprising Rs. 275.98 crores written in India and Rs. 5.40 crores written abroad, as compared with Rs. 200.28 crores in 1956. The target of new business laid down by the Corporation for the year was Rs. 250 crores. The actual business has thus exceeded the target by Rs. 31.38 crores. Whereas the total business, both foreign and Indian, has gone up by as much as Rs. 23 crores above the 1955 figure, the peak year of business when life insurance was under private management, business written in India alone shows an advance of as much as Rs. 38 crores over the 1955 figure. Foreign business, however, has fallen sharply to Rs. 5.40 crores, as compared with Rs. 12.59 in 1956 and 20.33 crores in 1955 (under private management). This fall is attributed to the fact that the Corporation no longer writes new business in Pakistan, Burma and Ceylon. It expects the foreign business to stabilise gradually at Rs. 10 to Rs. 15 crores. The following table gives the trend of life business in 1956 and 1957, as compared with the previous three years under private management:

(Sum assured in crores of rupees)

Year	In India	Outside India	Total
1957	275.98	5.40	281.38
1956	187.69	12.59	200.28
1955	238.30	20.33	258.63
1954	236.34	17.65	253.99
1953	155.20	14.66	169.86

The monthly break-up of the business figures reveals an interesting picture. During the first six months of the year, namely, from 1st January to 30th June 1957, business done aggregated Rs. 75 crores only. During the following three months an additional Rs. 73 crores of business was introduced. The balance of Rs. 133 crores was done during the last quarter of the year. Whereas the average business introduced during the months of October and November was over Rs. 21 crores, there was a spectacular rise in December. New business introduced during the first week of December was Rs. 7 crores. It increased to Rs. 9 crores in the second week, Rs. 11 crores in the third and Rs. 38 crores in the last week, thus making an aggregate of Rs. 65 crores during the month, which is only Rs. 10 crores less than the new business written during the entire first half of the year. This suggests that business activity was done during the last quarter of the year, even allowing for the fact that there is always a rush of business towards the close of the year. Perhaps, the Corporation will do well to bring home to the agents the importance of steady, rather than spasmodic, methods of doing business. "Rush" business, however impressive, is bound to end in serious lapses.

An analysis of the figures shows that the Southern Zone comprising Andhra Pradesh, Mysore, Madras and Kerala wrote the highest amount of business, followed by the Eastern and Western Zones with substantial business, thus indicating that the people in the South are more insurance minded than in any other region. The Northern and Central Zones have brought in the lowest amount of business. One wonders whether these regions received the attention they deserved. There is considerable scope for expansion in these areas. The following table gives the region-wise breakdown of the new business figures:

(Sum assured figures in crores of rupees)

Zones	No. of policies	Sum assured	Average amount of policy Rs.
Northern	74 738	33.90	4,500
Central	86,166	35.70	4,100
Eastern	192,159	67.62	3,500
Southern	269,508	74.14	2,700
Western	165,542	64.63	3,900
Foreign	5,055	5.40	10,700

The Corporation seems to be anxious to compare its performance with that of private insurers in pre-nationalisation days. It is true that the new business in 1957 was more than that written by private insurers two years back. It would not, however, be correct to conclude from this that the Corporation has outshone private insurers. 1955, despite the fact that business in that year was a record, was not a very bright year for insurance under private management, because the entire atmosphere was clouded by the threat of nationalisation which must surely have put a curb on the enthusiasm to canvass new business. A more appropriate method would be to compare the expansion of business in 1957 not with what was achieved in 1955 but with what it might have been had life insurance been left in private hands. The increase in population, in national income and the standards of living, all exert their influence on insurance. There are also other factors which contributed to an expansion of life insurance in the last year. The reduction of premium rates by Re. 1 in 1956 was an incentive for more people to go in for insurance. Further, the categorisation scheme, which took into account the production of completed business by a field officer during the thirteen months ended 30th November 1957 or 31st December 1957 for the purpose of fitting him into the new pay scales, was an additional inducement for expanding business.

There has been, as noted above, a fall in foreign business due to the very valid reason that the Corporation has ceased writing new business in Pakistan, Burma and Ceylon. But this does not in the least affect the validity of the contention that nationalisation has involved a loss of foreign exchange to the country in the form of a reduction in its invisible exports.

Be that as it may, judging from the aforesaid figures, the Corporation's performance is good. But, in view of the absence of any information regarding the expense and lapse ratio, it is not possible at present to judge the quality of business done.

ATOMIC INSURANCE

New and unfamiliar risks of colossal magnitude inherent in the erection and operation of atomic reactors offer a formidable challenge to the ingenuity of insurers. Insurers throughout the world are bestowing considerable thought on the problems of extending their protective hand to this young and promising industry. In the field of atomic energy development, Britain stands ahead of other countries, and in insuring atomic risks too that country is taking the lead. About two years ago, British insurance companies and Lloyds together established the British Insurance (Atomic Energy) Committee for the purpose of insuring atomic risks. The insurance interests of America have already formed syndicates for the purpose. An atomic insurance pool has been formed by a group of property insurance companies in the U.S. for insuring atomic property risks up to $1 million each. Many European countries have made, or are making, similar moves.

It is becoming increasingly evident that, in view of the huge financial commitments involved in providing cover for larger atomic reactors and power stations, insurers must co-operate not only on a national level but also on an international basis. In February 1957, British insurers convened an informal conference of European insurances for discussing the problems of atomic insurance. About a fortnight ago, at a three-day international Atomic Energy Insurance Conference, delegates representing insurers from fifteen European countries reached an agreement on the broad approach to the insurance of atomic risks. The principles agreed upon are more or less the same as worked out and practised by prominent British insurers. The Conference was sponsored by the British Insurance (Atomic Energy) Committee. Its object was to suggest how the European insurance markets could work in a more integrated manner, so as to provide insurance on a comprehensive basis for the many reactor installations now under construction or contemplated.

There was general agreement among the delegates regarding the form national pool arrangements should take. The pool arrangement, it may be noted, enables individual insurers to bind themselves together to act as an insurance pool. Material damage risks to atomic installations which should be pooled, it was decided, should be the

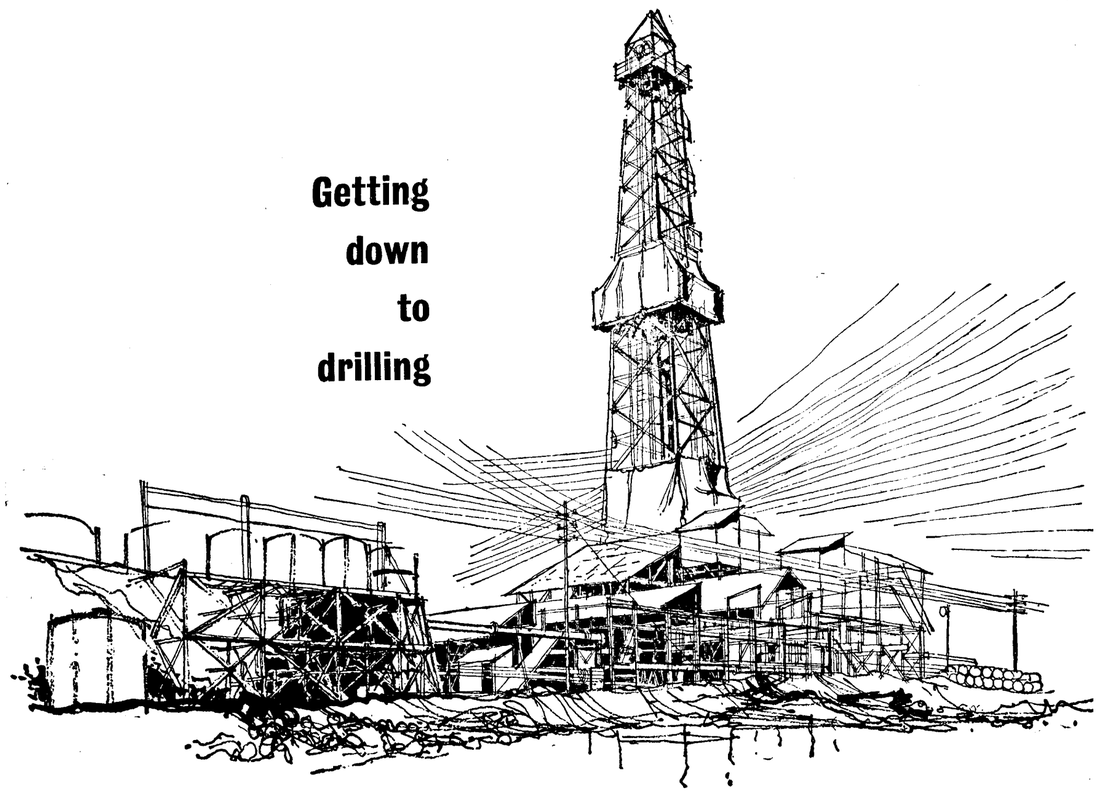
The Story of Oil—7

Getting down to drilling



The oil driller's derrick looks imposing and strange as it stands silhouetted against the sky, but it is merely a sturdy steel support for lowering and raising jointed lengths of heavy pipe into and out of the well during the drilling operations.

In modern drilling, a sharp-toothed bit is first attached to a length of steel pipe called the drill pipe. The drill pipe, held vertical by a giant block and tackle system in the derrick, is lowered into a pilot hole and revolved by means of a turntable on the derrick floor. The turntable is rotated by powerful engines behind the derrick. As the pipe is turned, the bit cuts a hole in the earth's rocks and lengths of drill pipe are added as the hole becomes deeper.

When the bit becomes worn the entire length of drill pipe must be removed, unjointed, and stacked in the derrick. After the new bit is attached the pipe is joined together and drilling begins again.

All during drilling, specially-prepared mud is pumped down inside the drill pipe. It passes through perforations in the bit and is forced back to the surface outside the drill pipe. This mud has many useful functions. It flushes rock cuttings back to the surface for examination, cools the bit and plasters the walls of the hole to prevent them from caving in. As drilling progresses the hole is lined with successive lengths of steel pipe called casing.

An oil well has been drilled to a depth of four miles, but a 10,000 foot well is still considered deep. Drilling at such depths is an extremely delicate operation, requiring great skill and long experience. Only by drilling, however, can the oil prospector prove the presence of mineral oil.

THE BANK OF INDIA LIMITED

CHAIRMAN, SIR COWASJEE JEHANGIR'S SPEECH AT ANNUAL MEETING

SPEAKING to the shareholders of the Bank of India Ltd. at their Fifty-second Annual General Meeting held in Bombay on 12th March 1958, Sir Cowasjee Jehangir, Bart., Chairman of the Bank, was strongly critical of the proposal to acquire control by the Government over joint-stock companies by purchasing sufficient number of shares. To him such a proposal savoured very much of confiscation and was as objectionable as outright nationalisation. Although the Prime Minister realised the necessity for a cautious and anxious examination of its repercussion, Sir Cowasjee suggested that there should be official unequivocal disapproval of any such intention.

The following are extracts from Sir Cowasjee Jehangir's speech:

LADIES AND GENTLEMEN,

"With your permission the balance-sheet may be taken as read.

"At the time of our annual general meeting in 1957 the currency in circulation was Rs. 1,515 crores, whilst at the corresponding time in 1956 it was Rs. 1,406 crores. This year it is Rs. 1,546 crores. The increase on last year's figure is Rs. 31 crores. This limited increase, viewed in relation to the requirements of the second Five-year Plan, is an indication of attempt at control of inflation.

"In present times, each year seems to witness substantial changes. The year 1956 saw the nationalisation of life assurance business and the formation of the Life Insurance Corporation of India. That year also saw that major enactment, the Companies Act, 1956.

"The year 1957 has seen the adoption of decimal currency. It has seen revolutionary taxation changes.

"Decimal currency is, I think, for the benefit of the country generally. The change-over appears to have been made smoothly. We are now quite used to naye paise in accounts and in our everyday dealings.

Taxation

"The major tax legislation changes during the year 1957 were contained in the following Acts:

The Finance (No. 2) Act, 1957.
The Wealth-tax Act, 1957.
The Expenditure-tax Act, 1957.

The picture for 1957 was an increased tax burden by enhancement of old taxes and the levy of new taxes.

"In the Finance (No. 2) Act, 1957, the rates of income-tax and super-tax were appreciably increased for companies. The increased rates come into force in respect of the Bank's income for the year 1956. These tax increases and the ever-present rise in expenses, not only in the principal item of salaries but in sundry overheads, will, I fear, add to our problems. It may not be easy in the future to maintain our net profits after tax.

"Taxpayers have to cope with the Wealth-tax Act from 1st April 1957, and the Expenditure-tax Act from 1st April 1958. These two new taxes are novel. I believe the Expenditure-tax has not been tried out in any other country. These levies may cause much apprehension. Apart from the doubt whether the yield from either tax will be substantial, the taxpayer will be obliged to furnish extensive information. He will, naturally, regard this as an inquisition. He will have misgivings as to how the new taxes will operate. They are likely, I think, to engender a sense of uncertainty and resentment to a much greater degree than other forms of direct taxation.

"The Wealth-tax is objectionable as being a capital levy. Though it does not apply to banking companies, because of an exception made by section 45 (a) of the Act, the tax applies to companies generally and is bound to affect their working and financial position. It has a double effect in that it also applies to the shareholders of companies.

"The commercial and industrial community were hoping for some relief in taxation in the present budget recently presented, but this has not materialised. Taxation has, in fact, become more severe and the Government are expecting to take five crores of rupees more from the people. A major portion of this comes from the Gift-tax, which replaces death duties in cases where donors are in a position to make gifts. Taxation on death also becomes more severe as, not only is the exemption limit for estate duty reduced from Rs. 1,00,000 to Rs. 50,000 but the exemption limit is increased from two years to five years in the case of *bona fide* gifts made before death, as if the Government were ashamed for being even less severe than England in any one direction. In no part of the world would such heavy taxation be tolerated without very severe agitation, but in India, we are a long-suffering people and the time is bound to come when the Government will have to retrace their steps from heavy taxation, as they will find that the result will be much worse for the country.

Stringency in Money

"During 1957, banks have continued to contend with a persistent tightness of money. This is so stubborn that it almost seems as if it has come to stay. We know, of course, that this is not so. Conditions sooner or later change, often turning completely round. I have seen many examples of this in my time. Even so, there is no sign of any early relaxation in the present scarcity of funds. These tight money conditions and the existence of various restrictions and legislative enactments affecting money and banking can hardly have made 1957 other than difficult for the business of banking. Banks depend upon deposits. In times of tight money the funds available for deposit with banks are restricted. Competition between banks for deposits increases. Higher rates of interest must be offered and paid.

"The funds of the Government and of semi-Government bodies are, generally, lodged with the Government banks. These banks also receive the rupee counterpart proceeds of surplus agricultural commodities of the United States of America under that country's Public Law 480. The two main Government banks are the Reserve Bank of India and the State Bank of India. As the central bank of the country, the Reserve Bank of India does not compete for business with the commercial banks, but I must make an allusion to the competition that banks like ours encounter from the State Bank of India which has a monopoly in several directions.

"The amount available with ordinary banks for advances to customers does not satisfy the demand. For a considerable time we have been obliged, much to our regret, to restrict or to decline to give credit facilities to many creditworthy customers. The pressure tends to become intensified at the present period of the year when the tax-gathering season is in full swing.

"We have heard a great deal about the Small Savings Scheme, but I would like to know which class of people are in a position to effect small savings. The Government and the public are well aware of the very heavy taxation we have to bear. It is said that India is the most heavily taxed country in the world. How can the Government expect to have anything like a substantial amount from a Small Savings Scheme when they take away everything they possibly can by taxation?

Controlling Interest in Companies

"As an alternative to direct nationalisation and State ownership, suggestions were recently made in the Legislature for the Government to obtain a controlling interest in important concerns. The method proposed, it seems, would be for the Government to buy enough shares in companies to secure control and, notwithstanding that the amounts required would be large, they are apparently expected to be provided from the funds at the disposal of nationalised institutions like the Life Insurance Corporation of India. A reason given for the proposal seems to be that it would be cheaper to buy a percentage of shares and gain control over a company than to compensate all the owners of or shareholders in a fully-nationalised institution. The repercussions of the idea call for cautious and anxious examination. The Prime Minister, in the course of his address two days ago to the Federation of Indian Chambers of Commerce and Industry, appears to have realised the necessity for such examination. I venture to suggest that there should be official unequivocal disapproval of any such intention. While the Government are not generous in their compensation to owners of nationalised concerns—one school of thought is that they are not even fair—it falls to be considered whether the proposal of divesting existing shareholders of companies of control over their own concerns without paying any compensation on the basis of wholesale nationalisation is fair and justified. To me it savours very much of confiscation and is as objectionable as outright nationalisation, if not more so. Both the Insurance Act and the Companies Act regulate the acquisition of control by companies in other companies, but, when it comes to applying salutary principles like these to themselves, the Government appear to be quite reluctant to adopt them. Such methods if adopted, would certaintly sap the foundations of private corporate enterprise on which the prosperity of the country depends.

"The Reserve Bank of India rate was raised from 3½ per cent. to 4 per cent. on 16th May 1957. In our case, any additional income due to the rise in the Bank rate and higher rates of interest on advances tends to be cancelled out by the increased interest paid to our depositor-customers and the upward pressure of operating costs.

"I would now refer you, ladies and gentlemen, to the balance-sheet and accounts.

"The total at foot of the balance-sheet is over Rs. 98 crores. This is an increase of Rs. 2 crores over the figure of Rs. 96 crores of the prevous year.

"The profit figure for 1957 is about Rs. 93½ lakhs. This is an increase of about Rs. 1½ lakhs over the previous year's profit of about Rs. 92 lakhs. The increase is not great but, at least, there is no recession in the face of increasing costs and difficult trading. Before the profit figure has been arrived at, usual appropriate and prudent provisions have been made.

"The provision for taxation absorbs Rs. 30 lakhs, as against Rs. 28 lakhs for the previous year.

"A final dividend of 10 per cent. free of income-tax, is proposed, absorbing Rs. 30 lakhs. This, with the interim dividend of 6 per cent. paid last August, makes the total distribution 16 per cent. per annum, or Rs. 48 lakhs for the year free of income-tax, on the present paid-up capital of Rs. 3 crores. The proposed carry forward is Rs. 16 lakhs, as against Rs. 15½ lakhs the previous year.

Satisfactory Results

"I think we have real cause for satisfaction in the result of the year's trading, having regard to all the circumstances in which our operations have been conducted.

"Mr. Dinsha K. Daji, who had been a Director of the Bank for 23 years, died on 8th July 1957. Mr. Daji was a solicitor of great experience, the benefit of which he ungrudgingly gave to the Bank at all times. My colleagues on the Board and I greatly miss Mr. Daji's wise counsel at our deliberations.

"Five days after the death of Mr. Daji, the General Manager, Mr. D. R. Thom, died on 13th July 1957, following an operation. Mr. Thom served the Bank for 28 years, the last three of them as General Manager. He had the respect and confidence of the Board and, by his death, the Bank has lost an officer of the highest calibre. He was at all times courteous and was popular with both customers and staff.

"Mr. T. R. Lalwani, who held the post of Deputy General Manager, has been appointed General Manager. Mr. Lalwani is our first Indian General Manager and is an officer of much experience. He has served the Bank at Head Office and at various branches.

"I have the pleasure to record the Board's appreciation of the help rendered during 1957 by our Local Committees at various centres.

"I would also express the thanks of the Board, in which I am sure shareholders will join, for the efficient service rendered during the year by the General Manager and the staff of the Bank at Head Office and branches. Their ability and continued hard work in carrying out the directions of the Board are a material contribution to the results of the year's trading which I have placed before you."

Note:—This does not purport to be a report of the proceedings of the annual general meeting which will be sent separately to shareholders.

GENERAL SERVICES Screwed and Socketed Tubes, Class 'A', 'B' and 'C' (Galvanised and Black) to B.S. 1387 upto and including 6" n.b. and Pipe Fittings. **POWER** Cold drawn, Hot finished and Electric Resistance Weld Boiler Tubes. **POLES** Tramway, Transmission and Lighting. **PUBLIC SERVICES** Air, Gas, Water and Sewage Mains. **INDUSTRIAL** Seamless and Electric Resistance Weld Tubes for Rollers, Conveyors and other industrial purposes. **STEEL STRIP** High Tensile Steel Box Strapping and Cold Rolled Steel Strip for manufacturing purposes.

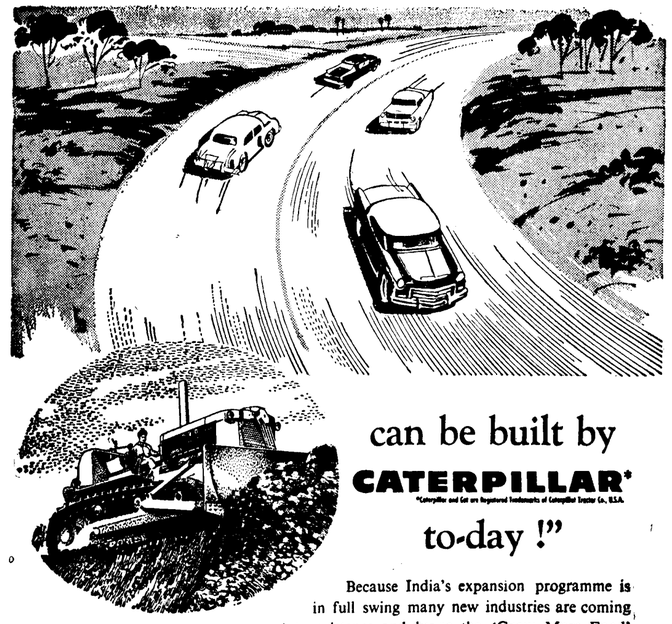
"Our highways of to-morrow...



can be built by CATERPILLAR*
*Caterpillar and Cat are Registered Trademarks of Caterpillar Tractor Co., U.S.A.
to-day !"

Because India's expansion programme is in full swing many new industries are coming into existence and due to the 'Grow More Food' campaign more food is being produced. More and more goods are being carried by road transport.

To open up new areas, to take care of the increasing traffic, new roads must be built and old roads have to be improved.

Better roads can be built with Caterpillar equipment. You do not save time by stopping the clock. Neither do you save money by buying cheap equipment. Caterpillar equipment will save you both time and money by giving you better output with less downtime and more economical operating costs.

Invariably a first choice among Government engineers and leading contractors, CATERPILLAR will, no doubt, play a leading part in building India's future Highways.

CATERPILLAR* *Paving the way to India's progress*

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the annexed Balance Sheet of the Central Bank of India, Ltd., as at the 31st December, 1957 and also the annexed Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the returns of 51 branches audited by us, 21 branches audited by other auditors and the unaudited returns from 95 other branches and 118 Pay Offices not visited by us.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of section 211 and sub-section (5) of section 211 and section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank;
(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank;
(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
(e) In our opinion, and to the best of our information and, according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet, read along with the notes appearing thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1957, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

REPORT OF THE AUDITORS

TO THE PRESIDENT OF INDIA,

We, the undersigned Auditors of the State Bank of India, appointed under Section 41 (1) of the State Bank of India Act, 1955, do hereby report to the Central Government upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1957.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Central Office and the Local Head Offices at Bombay and Calcutta and the Returns submitted and certified by the Secretary and Treasurer of the Local Head Office at Madras and by Branch Agents, which Returns have been incorporated in the above Balance Sheet and Accounts, and report (i) that, in our opinion, the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (ii) that where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory; (iii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank; (iv) that the Returns received from the Local Head Office at Madras and from the Branches of the Bank have been found adequate for the purpose of our audit; (v) that the Profit and Loss Account shows a true balance of profit for the period covered by such account; (vi) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; and (vii) that, in our opinion, Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs. S. B. Billimoria & Co. and Messrs. Ray and Ray. The audit of the Books and Accounts of the Local Head Offices has been carried out at Bombay by Messrs. S. B. Billimoria & Co. and at Calcutta by Messrs. Ray and Ray.

6th February, 1958.

S. B. BILLIMORIA & CO.,
RAY AND RAY. } *Auditors.*

THE BANK OF MAHARASHTRA LTD.

RESULTS FOR 1957 QUITE IMPRESSIVE

MR. VARDE DEPRECATES GOVERNMENT'S COMPETITION WITH BANKS FOR FUNDS

THE Twenty-third Annual General Meeting of the Bank of Maharashtra Ltd. was held at Poona on 8th March, 1958. Addressing the shareholders, Mr. V. P. Varde, Chairman of the Bank, clearly brought out the steady progress made by the Bank during 1957 against the background of India's economic trends. He was rather critical of some of the efforts of the Government to garner the savings of the people which amounted to an unjustifiable competition with banks, especially small banks and thrift societies. He reiterated his plea to the Reserve Bank to take appropriate steps to prevent concentration of banking resources in bigger institutions, so that sound regional banks could play their part effectively in the economic development of the country.

The following is the full text of Mr. Varde's speech:

"GENTLEMEN,

"I have the greatest pleasure in extending to you a cordial welcome to the annual meeting of our Bank this afternoon. The Directors' report and the audited statements of accounts for the year 1957 have been in your hands for the past few days and, as is customary with us, I shall take them as read.

"The year was notable for a sharp increase in the developmental expenditure which, in turn, aggravated the problem of mobilising the resources for the purpose. The major part of the year was, therefore, marked by strains in the Indian economy, caused mainly by the sharp decline in the foreign exchange reserves, the almost continuous rise in commodity prices and living costs and the continuous stringency in the money market. Although the pace of the annual increase in national output was maintained at approximately 5 per cent. as visualised in the Plan and a large import surplus accrued in the year, inflationary pressures persisted owing mainly to the inability of the country to mobilise savings at a level adequate to the task of development.

"The corrective measures were initiated in the second quarter of the year and were intensified after the Bank rate was raised from 3½ per cent. to 4 per cent. on 16th May 1957. The Budget for 1957-58, together with dearer money and credit restraints, partially helped in curbing the expenditure in the private sector and, although the trend of public investment was upward, the overall expenditure was less than what was anticipated under the Plan for the year. As a result, inflationary pressures abated in the last quarter of the year and the price rise was halted. On balance, the wholesale price index at the close of the year was only slightly higher than that of what it was a year ago; but the living costs were substantially high and the economic situation continued to be under a constant threat of inflation. No wonder that the middle class, which is the mainstay of your Bank, in particular, was badly hit during the year.

Monetary Trends

"In the monetary field, the economic situation produced a paradox. In spite of the Government effort to curb the expenditure and squeeze the public savings, the demand for investment was far in excess of the supply and the competition for acquiring funds was intense among all types of borrowers including Government and the banking system. During the year under report, the Government raised the rates of interest on the various types of its small savings schemes. For instance, the rate on 15-year annuity certificates was raised from 3.50 per cent. to 4.5 per cent. and on treasury savings deposit certificates from 3½ per cent. to 4 per cent. while post-office savings bank deposits were able to realise 2½ per cent. as against 2 per cent.

"The anxiety of the Government for attracting savings to the public sector can be well understood. I also concede that the depositors should be offered a fair rate of interest. But I wonder whether the Government is justified in entering into a direct competition with banks by offering higher rates of interest. From this point, the decision of the Government to introduce in a few months a new scheme entitled "cumulative time deposit scheme" with a view to attracting recurring deposits on the basis of a monthly payment of fixed sums over a period will be viewed with concern. It will affect particularly the small banks and thrift societies which have successfully attempted during the past few years to inculcate the habit of thrift amongst the low income groups. Whereas these institutions prepared the ground for promoting such savings, a part of the fruit will now be reaped by the Government. In such a situation, the banks were obliged to revise upward their interest rates on deposits even though the credit restraint imposed by the central banking authority prevented them from making full use of the additional deposits thus secured.

Highly Satisfactory

"Your Bank had to operate during the year in such a complex situation. Considering the difficulties, I am sure you will consider the results as highly satisfactory. During 1957, the Bank opened four new branches, one in Bombay and three in Marathwada, bringing the total to 38. The patronage extended by the public to these branches was gratifying. The Bank's deposits rose during the year by a little over 26 per cent. as against 23 per cent. in the preceding year and stood at the close of 1957 at Rs. 786 lakhs, as compared with Rs. 626 lakhs a year ago. True, the increase in the deposits of the scheduled banks over the year was almost of the same order, but the increase is inclusive of the deposits representing the counterpart funds of the U.S. Loan. The interest paid on deposits by the Bank, however, rose from 1.6 per cent. in 1956 to about 2 per cent. in the following year. This was primarily due to the fact that the bulk of the deposits with this Bank are either time deposits or savings deposits on which the interest rates during the year were stepped up by all banks.

"For a banking institution, the safety of funds is the prime consideration and this Bank continues to maintain its tradition for the liquidity of funds at its disposal. Out of total deposits of Rs. 786 lakhs, advances made, including bills purchased and discounted, amounted to Rs. 379 lakhs, as against Rs. 296 lakhs at the close of the previous year. Although the proportion of deposits employed in advances went up slightly, it might be noted that the percentage worked out at 48 per cent. as against 65 per cent. in the case of scheduled banks. I had told you last year that our policy in this respect was being termed as ultra-conservative, but I repeat that it would pay us in the long run. Indeed, the year's working has demonstrated its efficacy.

Expenses High

"The interest earned from advances was higher at Rs. 30 lakhs as compared with Rs. 23 lakhs in 1956. In effect, therefore, we had to pay Rs. 5 lakhs more for attracting additional deposits of Rs. 159 lakhs and were able to earn Rs. 7 lakhs more after making a better use of the additional deposits. Our income from commission, exchange and brokerage, however, reported a substantial rise from Rs. 2.52 lakhs to Rs. 3.87 lakhs. The salary bill rose from Rs. 7.76 lakhs to Rs. 9.41 lakhs for reasons which are too well known to you. The addition of new branches and the broadening of the Bank's activity were also responsible for higher expenses under rent, taxes, etc., and postage and other communications. Against this background, an increase of Rs. 0.68 lakh in the net profit subject to taxation is significant. Your Board has proposed to maintain the dividend at 6 per cent. to which level it was raised last year. Your Directors have, with your co-operation and support, always given a priority to the strengthening of the reserves over the quantum of the dividend. As a result, the Bank has been able to build up sizable reserves which now amount to Rs. 11.50 lakhs as compared with Rs. 10 lakhs a year ago. I am confident that this policy of building the strength of the institution will ever continue to receive your approval.

"I had dwelt exhaustively last year on your Board's decision to call the unpaid money on the present shares in order to strengthen the capital resources of the Bank and equip it for the greater task of playing the role, which its name signified. During the year under review, the paid-up capital of the Bank increased by Rs. 3.08 lakhs to Rs. 19.08 lakhs and the calls received in advance amounted to Rs. 3.86 lakhs.

Confidence In Mr. Nehru

"The Budget for 1958-59 is based on the view that the economic policies that had already been initiated have to be continued. It also indicates that the trend of public investment will continue to be upward—in the next financial year the outlay on the Plan will be of approximately Rs. 1,000 crores—but private investment may decline somewhat owing to paucity of funds in the capital market and lack of foreign exchange. It also assumes that the increase in the national output might be somewhat smaller than in the current year owing to a shortfall in the rice crop and the slowing down of the industrial output. The impact of overseas recession might be adverse on our terms of trade. But the Prime Minister has assured that there is no danger of the domestic demand, income and employment being curtailed, although the situation requires to be watched.

"In effect, an earnest effort is to be made in the coming year to achieve economic stability by avoiding the extremes of inflation and deflation. Should it prove successful, the economic health of the country is bound to improve. In this task, we have to collaborate with the Government by imposing restraints on our spending and by squeezing the savings. I believe that spending in excess of the resources, even as a temporary expedient or out of necessity, is as much dangerous to a nation and its Government as to the individual citizen. This has been brought home by the experience of the past one year and I hope that the lesson will not soon be forgotten. In this task, the banking system has an important part to play and it is to be hoped that it will not be found wanting.

Bank's Role In Maharashtra

"The Bank of Maharashtra was established in 1935, with the avowed object of assisting the people in the economic development of the region. Following the reorganisation of the Bombay State, Vidarbha and Marathwada have been unified with the districts in Maharashtra in the old Bombay State, although we regret the severance of Belgaum. The past few months have impressed the urgency of economic development of Maharashtra and a programme for setting up a network of new industries in the various districts has been chalked out. It is equally heartening to note that the Planning Commission has advised the State Governments to strengthen their plans for agricultural development further and to intensify their efforts in organising small industries. Maharashtra which primarily depends on agriculture and small industries can, therefore, legitimately look forward to a better deal at the hands of the Government. The economic face of Maharashtra is being rapidly changed and we can look forward to the day when the anxiety to have two square meals will give place to a decent living standard. This change has to be brought about by hard work and sacrifice. In providing financial wherewithals, the Bank of Maharashtra has rendered useful service in the past and, given the opportunity and support, it can be relied upon to extend its service in future. I have no doubt that the people of Maharashtra will continue to support this institution, so that the savings of the region can be mobilised fully and utilised in productive channels.

Decentralisation

"In giving you the assurance that the Bank of Maharashtra will not be found wanting in playing its legitimate role as the banker for the economic development of the region, I must frankly admit my disappointment at the lack of appreciation on the part of the authorities of the useful role which the regional banks of this type have been playing in the economic development of the country. It has been my lot to demand in my annual address to you for a due

AMBAR CHARKHA PROGRAMME

A REPLY TO ITS CRITICS

By C. K. Narayanswami

CRITICS of Ambar Charkha, it is unfortunate, are never prone to look at this improved cottage spinning unit objectively and assess its potentialities to promote productive employment among large numbers of people in the countryside realistically. Every time they speak about the Ambar Charkha, they do so with the power-operated mill spindle at the back of their minds. In their assessment of the productive efficiency and the economics of this hand-operated spinning unit, they are invariably inclined to draw comparisons with those of the mill spindle. *Commerce*, too, is not an exception.

In the article published in *Commerce* on 18th January, there is reference to "an expert committee" which is supposed to have reviewed the working of the Ambar Charkha Programme. "This Committee," you say, "was appointed in May 1957, by the Khadi and Village Industries Commission itself with Mr. A. Zaman, I.C.S., one of the Joint Secretaries, Ministry of Commerce and Industry, Government of India, as Chairman. In its report, the Committee stated that it would be more reasonable to expect an output of not more than 150 million yards by the last year of the second Plan by means of the Ambar Charkha."

This "expert Committee" had nothing to do either with the targets of the Ambar Charkha Programme or with their revision. The Zaman Committee was appointed by the Commission to go into the organisational aspects of the Ambar Charkha Programme. For your information, I may point out that the causes for the revision of the targets were not due to either the technical or the economic efficiency of the Ambar Charkha.

Experimental Programme

The Ambar Charkha Programme, as you might be aware, was treated more as an experimental programme than a developmental one. It was subject to close periodic reviews. It should be evident that in such conditions it was not possible either to plan or complete preliminary arrangements for the execution of a programme capable of producing 300 million yards of cloth at the end of the second Plan period. Consequently, the so-called targets were not targets in the usual sense. They were, rather, expectations based on certain assumptions.

You contend that the technical and economic efficiency of the Ambar Charkha has not been proved to the satisfaction of all. The answer to the contention is already provided at the commencement of this reply. However, I may repeat that the Khadi Commission has never claimed that a hand-operated charkha is an effective competitor of the spindle in the mill either as regards its productivity or its economic efficiency. To judge the Ambar Charkha by such comparative standards will be absurd. If the technical and economic efficiency of the Ambar Charkha is interpreted to mean that an average spinner, after due training and practice, can produce one hand per hour or eight hanks per working day, then the criterion for judgment is its performance in the field.

Field Enquiry

The Khadi Commission recently instituted a field enquiry on its own for such an assessment. This enquiry has shown that the efficiency of the Ambar Charkha has, indeed, been grossly underestimated. Where the charkha is plied by trained spinners for eight hours a day, productivity is found to be as high as 18 to 20 hanks in some areas, 16 to 18 hanks in other areas and 10 and more in yet several others. Productivity per hour almost everywhere where the charkha has been distributed for independent operation, has been found to be one hand per hour.

You say that Rs. 30 to Rs. 40 crores per annum would be required as subsidy to sell yarn and cloth produced with the aid of this "crude" and hand-operated spindle. In the absence of any mention of the source of your information, I can only say that it is fallacious. The subsidy required each year to market the cloth—sale of yarn is not contemplated at all as the production centres themselves arrange to have the yarn woven—depends entirely on the quantity of the cloth produced. If production of cloth goes up to 300 million yards in 1960-61 as originally planned, the subsidy likely to be required that year will not exceed Rs. 10 crores. Estimates such as the one presented in your article are likely to mislead the reader.

Another question which your article poses is whether Ambar yarn production will be adequate to manufacture 300 million yards and as to who will weave this yarn. That you should have posed these questions again after two years only shows that you are not in touch with the working of the Ambar Charkha scheme or its progress about which information is readily available with the Khadi and Village Industries Commission. Wherever Ambar Charkha yarn has been distributed to weavers habituated to weave only mill yarn, their performance has been satisfactory. In fact, groups of handloom weavers of mill yarn in several parts of the country have requested the khadi production centres to supply them Ambar yarn regularly. While there is likely to be some difficulty in arranging for weaving of yarn produced in areas which do not have concentration of weavers, yarn is not likely to accumulate beyond reasonable levels for want of weaving facilities.

No Compulsion

A curious point that you seek to make is that "there is no certainty that people will take to it (Ambar Charkha) easily, unless they are compelled or are on the verge of starvation." There is no compulsion of any kind exercised by anyone. Throughout the country the demand for the Ambar Charkha is far in excess of the supply. The reason for this is simple. Anyone who looks at the tables showing pressure of population on land and the size of the holdings on which it subsists, can see what poverty there is in the countryside, its acuteness and the need to find work for very large numbers. To say that this population lives on the verge of starvation may not be a gross exaggeration. To put it mildly, it exists on a sub-marginal level. A visit to some of the backward areas in the Punjab, Uttar Pradesh, Bihar, Rajasthan and Madras will bear out my statement.

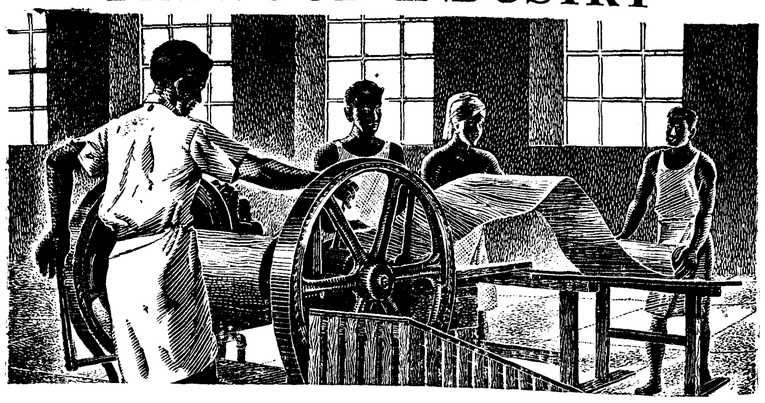
Now for the earnings of spinners on the Ambar Charkhas. They are not as bad as you suggest. In fact, the progressively increasing demand for the Ambar Charkha throughout the country proves that the Ambar Charkha is becoming the principal source of livelihood to those who take up the work seriously. The educated lower middle class in several areas have taken to the Ambar Charkha and today are earning Rs. 60 and more per month. The maximum so far earned by a spinner is very much higher and is well over Rs. 100 per month.

Quality of Yarn

Your observation about the quality of the Ambar yarn is misleading. The quality of this yarn is, in several respects, superior to the reeled mill yarn supplied to handloom weavers in the country. For your information, I reproduce below the findings of the A.T.I.R.A. (Ahmedabad Textile Industries Research Association) after a series of comparative weaving tests with Ambar yarn and reeled mill yarn:

Particulars	Breakage in one hank of Ambar yarn	Breakage in one hank of mill yarn
Unwinding of yarn	1.71	0.95
Preparing the warp	0.66	0.52
Sizing	0.20	0.21
	Breakage per hour (in yards)	Breakage per hour (in yards)
In weaving	14.0	18.5
	Production per hour (in yards)	Production per hour (in yards)
Only weaving	0.63	0.68
Weaving including all processes.	0.30	0.31

How banking serves the PLYWOOD INDUSTRY



TIMBER suitable for plywood and tea chests is plentiful on the south-western coast, and the plywood industry in India is expanding every year. Production capacity has doubled since 1948, rating over 150 million square feet per annum now. Out of India's 53 plywood factories, more than half are in Malabar, Cochin, Travancore and Bangalore.

Banking has greatly helped in the rapid growth of the plywood industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the plywood industry.

We at Palai are proud that so many leading plywood manufacturers of South India employ the *complete* banking service we offer.

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Letters of Credit—Bill Collection—Deposits—Loans & Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

MB 148

While such are the facts about the Ambar Charkha Programmes and the Ambar Charkha itself, it is astonishing that you should return to the charge again in *Commerce* of 15th February. You state that "further details confirming its (Ambar Charkha Programme) poor progress are now available. These reveal that the programme has been scaled down by nearly one-half. Thus, as against the target of 1 80.000 charkhas fixed for the year 1957-58, the actual number distributed is expected to be not more than 1,15,000. It will be, we are told, still less at 1.00 000 in 1958-59. The budget allocation, it is gratifying to find, has been similarly halved from Rs. 10 crores originally provided to Rs. 5 crores which is all the provision for the next year." The point is who scaled down the programme and why. It will be news to you to be told that the initiative in this direction came from the Khadi and Village Industries Commission itself. As has been stated earlier, the Commission instituted a field enquiry on its own. This enquiry revealed certain inadequacies of organisation for executing its Ambar Charkha Programme and felt that, unless these inadequacies are removed and a more efficient organisational pattern is developed, it would be unreasonable to take up a large programme with no prospect of efficient implementation. The Commission, therefore, told the Government that it would take up only 85 000 Ambar Charkhas—not 1,15,000 as you say—for distribution to spinners. Another 30.000 would be used for training in its *Vidyalayas* and *Parishramalayas*.

Zaman Committee

In order to find out how the Ambar Charkha Programme can be more efficiently organised, the Commission appointed the Zaman Committee. The recommendations of this Committee are now being examined with a view to evolving appropriate executive organisations at various levels. Thus, it will be clear to all concerned that the exponents of the Ambar Charkha are honest enough to admit shortcomings wherever they are found and advise modification of their programme to match with realities so that scarce resources, namely, finances are efficiently utilised. The very fact that 1.00,000 more Ambar Charkhas will be introduced in the next financial year provides positive proof of the popularity of the Ambar Charkha, and not its inefficiency.

Your reference to the upgrading of the price of Ambar cloth to Re. 1.62 per sq. yd., or a rise of 37 naye paise over that originally envisaged, needs some explanation. Let me assure you at the outset that this has nothing to do with the productive capacity or efficiency of the Ambar Charkha. At a conference of constructive workers and khadi institutions, the whole Ambar Charkha Programme and its impact on traditional khadi producers was reviewed. There are already some 12 lakhs of traditional spinners producing yarn for nearly 50 million yards of cloth. If the Ambar Charkha were to be established among them, as the Khera Committee appointed by the Government of India early in 1956 recommended, the switch-over could be only gradual and according to a phased programme. This will be facilitated if the transition from the traditional charkha to the Ambar Charkha is smooth. The conference, therefore, came to the conclusion that there should be a pool-price between traditional khadi and Ambar khadi. Marketing of Ambar khadi at a considerably cheaper price would be, in the opinion of that conference, disastrous to the khadi movement. What the predecessor of the Khadi Commission—the All-India Khadi and Village Industries Board—had stated about the price of Ambar khadi was based not on the pool-price of khadi, but on costs worked out for production of Ambar khadi alone. If, therefore, the Khadi Commission found it necessary to upgrade the original cost by 37 nP per yard the decision is in conformity with the needs of the khadi movement in the country. A more compelling circumstance, however, is the rise in the price of cotton and a general increase in the general price level of all essential commodities since then, which entailed payment of slightly higher wages both for spinning and for weaving.

Why Mainly Women?

Why should it be surprising if the response to the Ambar Charkha has been mainly from womenfolk? Should it not be a welcome feature of the programme? Be that as it may, the execution of the Ambar Charkha Programme was taken up by khadi institutions which were already engaged in the promotion of khadi production in the country. The bulk of the hand spinners, on the traditional charkha on their rolls are women. Naturally, these institutions tried to introduce the Ambar Charkha Programme among them. There need be no surprise if the response from them has been large. But the number of women who have taken to the Ambar Charkha are not all traditional spinners. In fact, over 65 per cent. are new to spinning. It is also not true to say that men have not been attracted to the Ambar Charkha. It may again be news to you that large numbers of men have found in the Ambar charkha an instrument of gainful employment. The field enquiry into the working of the Ambar Charkha Programme has shown that "of the male spinners who constitute 35 per cent. of the total number admitted, as much as 65.4 per cent. were altogether new to handspinning. The almost identical percentage distribution of both men and women among the new entrants to handspinning confirms further the conclusion that the Ambar charka has really proved attractive to both men and women in the prime of their lives in the areas where it has been introduced."

It is immaterial whether an Ambar charka gives employment to one person or two at the same time. According to the programme of training, two persons are trained on one Ambar charkha. A spinner is expected to carry out all the processes from the opening of cotton to the spinning and winding of the yarn. Thus the Ambar unit can employ only one spinner at a time; but, when distributed for independent operation, it was expected that other members of the spinner's family would lend a helping hand. This expectation has been justified from actual evidence obtainable from areas where large numbers of Ambar charkhas are in operation.

[The author of the aforesaid article is the well-known Director of Publicity of Khadi and Village Industries Commission, Bombay. While we welcome his correction of one or two factual errors and clarification of moot points contained in our articles, he has not put forward, in our view, any convincing arguments to prove that our main conclusion, namely, that Ambar Charkha will not be able to meet, to any significant extent, India's requirements of cloth in the coming years, is wrong. Concluding our second article (vide *page 258 of* Commerce *dated 15th February), we ourselves pointed out that Ambar Charkha and traditional charkha did have a place in the country's economy. At the same time, we sought to show that these means of production were being given too much importance in our plans for economic development. Despite all that Mr. Narayanaswamy has been saying all along, not only this journal but also a large section of competent observers is of the view that the amount of money and effort that are being expended on the Ambar Charkha programme could very well be utilised for more productive purposes. We have no hesitation in reiterating our stand that the place for Ambar Charkha is a limited one and that its use should be confined only to regions where other opportunities of gainful employment are either totally absent or cannot be provided at a reasonable cost. Even for this purpose, Ambar Charkha, or the ordinary charkha, should be relied upon only till such time as the benefits of modern industrialisation are not available to all parts of the country. Ambar Charkha can thus be only a passing phase and the aim should be to reduce the duration of this phase as quickly as possible. What is more important, whatever we do to support Ambar Charkha should not be at the expense of the more efficient means of production. It will be suicidal for a country like India, with its rapidly expanding population, to ignore this vital consideration. It will be pertinent to recall, in this context, the observations of Mr. T. V. Smith, one of America's leading philosophers and teachers, author of a new book entitled* Live Without Fear. *In an article on "People's Capitalism" contributed to an American periodical,* House Beautiful, *he observes, on the subject of large-scale production versus small-scale, thus: "A productive system ... where one does everything, or most things, by hand, is much simpler. Such machinery as there is among many backward peoples is made by hand and is operated by hand, with hardly more product than two hands can wrest for hungry mouth from reluctant soil. If mouths come too fast, as they often do, the hands cannot keep up with hunger; and famine or war takes off the surplus of bodies which the productive system could not sustain." Here is a clear warning, given in simple but telling language. If India is to remain a democratic and peaceful country, there should be economic contentment. Ambar Charkha, we are convinced, cannot fulfil this condition.*—EDITOR.]

In Education **PHILIPS** help to teach the modern way

INDIA'S teachers today need the most modern methods of mass education to cope with the fast-growing number of students in schools and colleges. Philips are proud to be helping our teachers by supplying the equipment they require—backed by many years of Philips research and experience. Whether in a city classroom or out under a village tree...whether it's a community listening radio set to bring entertainment and knowledge to the people, or audio-visual equipment to demonstrate the modern way of life, Philips help to teach our millions everything from basic hygiene to the ways of our democracy.

FREE TRADE AREA NEGOTIATIONS

ITALY PUTS FORWARD A COMPROMISE PLAN

NINE days from now—on the 31st inst. to be precise—the seventeen-member O.E.E.C. Inter-ministerial Committee (Chairman: Mr. Maudling of the U.K.) will be meeting at Paris to continue discussions on the establishment of free trade area. The discussions will centre round the recommendations of a group of experts on the Italian compromise plan between the British concept of a free trade zone and the French counter-proposals. The compromise plan was put forward by Signor Carli, Italian Minister for Foreign Trade, at the meeting of the Committee held in Paris last week.

There are two main points in the Plan. First, the 17 members should agree on a maximum and minimum external tariff, so that the members will have a certain flexibility and be able to adjust them within these ranges. Secondly, if a member-nation chooses to lower its external tariff for any particular product below the floor of the common range, that nation should then be prepared to face compensation duties on this product imposed by other members. The countervailing duty which can be applied by the country applying the higher tariffs will be equal to the difference between the external tariff applied to the product by the importing country and that applied to the same product by the exporting country. The basic duties used to compare and contrast the tariffs of any two countries will be those in force in January 1957. Commending the plan for acceptance, Signor Carli observed:

"I see my plan entirely as an attempt to find a way between the complete harmonisation of tariffs that will apply eventually to the six countries of the Common Market and will dispense with the problems of certificates of origin, and the complete freedom of the free trade area. It is an attempt to harmonise tariffs within certain limits with the outside world, as well as to obviate the necessity for certificates of origin.

"Inside the Common Market, some members will, of course, be at a temporary disadvantage when all tariff barriers are lowered; we are prepared to accept that, for the long-term benefit of the scheme. But, as far as the larger free trade area is concerned, I feel there must be some slight compensation for those whose tariffs to the outside world are lower than those of the importing countries. We will make no difference between raw materials and manufactured goods in my plan."

When the above plan was unfolded before the last week's meeting of the Committee, the delegates generally did not wish to comment on it; only they all agreed that the plan sounded simple. For they preferred to await the publication of the revised French proposals for the Union of European Economic Co-operation. The proposals are expected to be submitted at the ensuing meeting of the O.E.E.C. Ministerial Committee, although there seems to be some doubt about this. Incidentally, Mr. Faure, the French delegate, is understood to have expressed his "full and immediate support" for Signor Carli's plan.

Revised French Proposals

While the details of the revised French proposals are not revealed, there are reports in the Press indicating the broad features of the plan. The plan envisages that the lowering of trade barriers will depend on the extent to which competitive conditions between European industries can be equalised. Thus, in the case of Britain, trade liberalisation will depend on whether and to what degree the Continental producers can enjoy some of the benefits of Imperial Preference in overseas markets and on the elimination of the advantages which British industry derives from its duty-free Commonwealth imports of raw materials and semi-manufactures. France will also expect a bigger share of the British market for agricultural produce. The other aspects of the French plan are as follows:

Tariff reductions in a free trade area should lag behind those in the Common Market and—in contrast to the Common Market arrangement—will at all times require the unanimous consent of all member-countries.

Definition of origin rules will be very strict and be supplemented by special regulations covering a number of industrial sectors. Examples given include electrical engineering and chemical products, as well as non-ferrous metals and ferro-alloys. The latter items will either be excluded from free trade altogether or else be subject to countervailing duties which will also apply to manufactures produced from them.

Social charges will have to be harmonised at the same rate as in the Common Market, while escape clauses will give individual countries far wider latitude than in the Common Market in the application of import restrictions.

The revised French plan, it would appear, has been prompted by the growing public opinion in France showing its disapproval of the free trade area project. The free trade area is regarded as a British plan. In the words of M. Georges Villiers, President of the Patronat—the organisation of French industrialists—"contrary to the Treaty of Rome, the British idea of a free trade area does not foreshadow any economic integration. In fact, harmonisation of social and tax charges is not mentioned in it. Instead, the schedule of tariffs advocated is similar to that of the Common Market. It is necessary to find another system which will lead to better relations among the "Six" and the remaining 11 O.E.E.C. members, but we shall sink into quicksands, if we persist in continuing the discussion of tariffs."

Unacceptable

The revised French Plan is stated to be unacceptable to the other O.E.E.C. countries, including the U.K. "The Plan," to quote a report, "goes beyond the demands which France made at the beginning of the negotiations on the Common Market." The opposition to the Plan is mainly on four grounds. First, it reverses the sequence of abolition of duties and quotas and the harmonisation of certain social costs of production. Secondly, it comes near demanding equality of production costs when, in connection with the certificates of origin scheme, it asks for restriction on such goods as are not too different in price from those manufactured in the area of the "Six." Thirdly, by asking for negotiations industry by industry, the original idea of free trade may be distorted into a system of bureaucratic cartels. Finally, the demand for equal access to raw materials and equal start in export markets amount to a request for a share in Commonwealth preferences.

Differences

It is thus evident that France's counter-proposals are for a more restricted—and restrictive—union for European Economic Co-operation. Naturally, the proposals have served to bring into the open the differences among the countries concerned, both within and outside the Common Market. So far as the Common Market countries are concerned, it does not at present seem likely that they will either try to force France to accept a free trade area or succeed if they do try. Expressing this view, the *Financial Times*, London, observes: "Italian opinion has always been more concerned with the achievement of federal institutions for Europe than with expanding the area of trade. In Germany, there is a division of opinion, but a strong section would welcome a small Common Market in which Germany would be the dominant partner. The Benelux powers would prefer to see a free trade area established, but are not strong enough to impose it."

Outside the Common Market, the reaction of the Scandinavian countries to the French proposals is worth noting. The Norwegian Trade Minister, Mr. Arne Skaug, is reported to have pointed out that the restrictions on trade in aluminium and ferro-alloys as proposed by the French will constitute a particularly heavy handicap for Norway. In the absence of a free trade area, the Scandinavian countries will, he says, prefer a closer association with Britain and the sterling area.

The British View

Having regard to the radical nature of French counter-proposals, it looks as though negotiations for a free trade area may not be completed this summer. London observers, however, do not agree with this view. Thus, according to a London report, both British and other members of O.E.E.C. are well aware of the nature of the French objections to the free-trade area proposals as originally drafted, and the work of the Ministerial Committee throughout has been to reconcile, as far as possible, what France wants with what other European countries want. The British Government sees no reason why this should not be successfully achieved. Indeed, the whole object of the work at the Paris meeting (held last week) and of the many other recent exchanges is to give the negotiations sufficient impetus to ensure that they reach fruition at, or near, the time that the first tariff and quota cuts are due to come into effect in the common market. The British view, as Ministers have repeatedly said, is that it is essential to bring the free trade area into being in step with the introduction of the Common Market, to avert the serious economic and political stresses which might otherwise arise.

The anxiety of Britain over the question of establishing a free trade area is understandable. If such an area were not set up in time, there would be the inevitable danger of the Common Market countries adopting a protectionist policy. A clear indication to this effect has, in fact, been given by Prof. Walter Hallstein, President of the Commission of the European Economic Co-operation. Addressing the foreign Press at Bonn the other day, Prof. Hallstein said: "The Common Market will flourish even if the idea of a free trade area fails to be realised. The free trade area will be a healthy and good feature, but, if it were not realised, there would be a danger of the six Common Market countries adopting a protectionist policy." In conclusion, it must be emphasised that the Common Market in its present form and without a free trade area is bound to "re-divide," as the *Financial Times* rightly opines, "an already divided Europe; it offers every opportunity for Russia to use trade to play off the Common Market against the other powers of N.A.T.O." The Common Market countries will do well to ponder this statement. After all, they must realise that the Common Market, if it is an exclusive trading system, can also be excluded against by others.

Canada has offered to supply non-ferrous metals of the value of 10 million dollars as assistance to India under the Colombo Plan. It has been agreed with the Canadian Government that imports of aluminium, copper and nickel will be financed from this aid. The arrangement, broadly, will be that consumers in India will place orders on firms in India who have normally been acting as agents of Canadian manufacturers and suppliers of these metals. The Government will thereafter approach the Canadian Government for necessary allocations to cover the orders.

JAY SHREE TEA'S PROFIT LOWER

BUT DIVIDEND MAINTAINED

HIGHER production costs at home and growing competition in world markets for Indian common teas have together adversely affected the profit margins of several tea companies during 1957. The Jay Shree Tea Gardens Ltd. (Managing Agents: Messrs. Birla Brothers Private Ltd., Calcutta), which has estates both in North East India and Nilgiris in South India, fall into this category. The audited statement of accounts of the Company for the year ended 31st December 1957 show that, though the Company's income by way of sale proceeds was appreciably higher than those in preceding years, such has been more than neutralised by an almost proportionate increase in expenses. Consequently, the gross profit at Rs. 29.21 lakhs has declined by Rs. 2.48 lakhs from Rs. 31 69 lakhs for the previous year, to which level it had smartly risen from Rs. 24.87 lakhs for 1955. Even the previous year's profit was far short of the record profit of 1954 at Rs. 49.05 lakhs.

After the provision for taxation which at Rs. 9 lakhs is the same as that for 1956 and after that for depreciation, which has gone up from Rs. 7.88 lakhs to Rs. 8.72 lakhs, the net profit also stands lower at Rs. 9 23 lakhs, as compared with Rs. 12.54 lakhs for 1956. To this has been added a sum of Rs. 1.33 lakhs, representing excess provisions made in previous years no longer required. The Directors have then transferred from the disposable amount a sum of Rs. 3 lakhs to general reserve and of Rs. 1.70 lakhs to development rebate reserve, as against a total allocation of Rs. 8.50 lakhs. all to general reserve, in the preceding year. They have also proposed to maintain the dividend at 10 per cent. per annum, for the fourth year in succession. This return for a plantation company, it will be conceded, is a modest one.

The following comparative table discloses the progress of the Company's working during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds	1,78 95	1,62 24	1,07 66	1,30 41
Stocks	30 38	35 96	32 82	25 24

Carry forward	0 93	0 99	0 73	0 55

* On the increased capital of Rs. 58 57 lakhs, raised by the capitalisation of Rs. 19 52 lakhs in March 1954.

It will be observed that the Company's sale proceeds rose by Rs. 16.71 lakhs to Rs. 1.79 crores, touching the highest level for the four-year period under review. At the same time, expenses, too, have risen by Rs. 13.25 lakhs to Rs. 1.46 crores. They are also the highest for the aforesaid period.

The following observation of the Directors on the trend of tea market during 1957 will enable one to appreciate the satisfactory nature of the Company's results better:

"As compared with the previous year, 1957 realisations for majority of producers in North India can only be considered disappointing. Even though the price fluctuations have been very frequent, yet the average level of the market has left a meagre margin of profit for the bulk of the tea sold in Calcutta. The prices realised in South Indian auctions have also followed a similar pattern. The Indian common teas have had to face serious competition in the world markets. The producers of quality tea, however, were slightly better off as quality teas have throughout continued to be in better demand. The concertina between prices of quality and ordinary teas still continues to be high.

"The export duty was 50 nP for the month of January to April 1957, 25 nP for the months of May, June and July and 38 nP per lb. for the rest of the year.

"The rates of taxation directly on tea, and also generally on incomes and agricultural incomes have been raised during the year. New taxations like wealth tax and the current profit compulsory deposit scheme have also come into force during the year. The Central excise duty, the Assam road tax and the West Bengal entry tax remained unchanged, except for a brief period of 15 days when excise duty was increased to 10 nP."

Referring to the Company's other activities, namely, import of iron and steel and manufacture of sulphuric acid and superphosphate, the Directors say that, in view of the drastic curtailment of imports enforced during the year, there was not much activity in the import of iron and steel. Prospects for further activity are also not promising. As regards superphosphate, the order for the superphosphate plant could not be placed on account of the restriction on imports and the need to obtain deferred credit terms for payment. Efforts are, however, being made to obtain the necessary import licence for the essential plant and machinery.

The Company's additions to its fixed assets during the year were of the order of Rs. 10.79 lakhs. A breakdown of this total shows that Rs. 5.23 lakhs were expended on machinery, Rs. 4.50 lakhs on buildings and Rs. 68.000 on land and plantation. This capital expenditure covered (1) installation of a new 4-ft. drier at Risheehat tea estate in Darjeeling and rearrangement of the existing machinery, (2) provision of a fully equipped workshop, including a precision lathe and a milling machine at its Towkok tea estate in Assam, (3) installation of additional C.T.C. machines in its Assam gardens, (4) completion of the drum withering scheme in its Kallyar tea estate in Nilgiris, (5) construction of a tea warehouse in the Port Commissioner's area at Calcutta for warehousing of teas and (6) additions and alterations to the machineries and buildings in all the estates.

The Company has received permission to issue bonus shares in the ratio of one bonus share for every three existing shares, a scheme submitted to the Government last year. But, in view of the very high incidence of taxation on bonus issues, the Directors have proposed that, for the present, the scheme be kept in abeyance.

It may be remembered that, during the previous year, the Company issued 29,285 six per cent. tax-free, redeemable cumulative preference shares of the face value of Rs. 100 each to the existing shareholders in the first instance, the balance, if any, being kept for offer to the public. Of this, 1,953 shares were fully subscribed. The paid-up capital as at 31st December 1957 stands at Rs. 60.52 lakhs. in which the share of the ordinary capital is Rs. 58.57 lakhs. This is supplemented by reserves and surplus aggregating Rs. 50.97 lakhs. The gross block of Rs. 155 03 lakhs stands written down at Rs. 110 lakhs. The current liabilities, including a provision of Rs. 13.74 lakhs for taxation, amount to Rs. 64.50 lakhs. These are fully covered by current assets aggregating Rs. 65.99 lakhs.

It is gratifying to note from the Directors' report that the Company's properties, especially the tea factories, are now well equipped and modernised and that a fair measure of success has been achieved in its efforts to produce teas of high quality. The Company's teas, we are told, have become popular with the buyers both in India and abroad. The Directors are confident that, in the coming years, it should be possible for their gardens to manufacture quality teas.

Commenting on the outlook for tea, the Directors observe:

"Looking to the fluctuations in tea markets during the last few years, it is early to predict the future prospects of the industry for the current year. At present, world production of tea is considered to be ahead of world consumption. There is a likelihood of further increase in the North Indian crop, if better climatic conditions prevail in North India this year. Except for a possible slight increase in the internal demand for Indian consumption or a large-scale buying by the Iron Curtain countries, there is hardly any prospect of an increase in world demand for Indian tea. The efforts towards greater exports of Indian tea by the trade and the Tea Board, however, continue. There is every likelihood of Indian common teas facing a still keener competition during this year except for brief spells of better prices due to abnormal conditions which may create spot shortage of tea in the U.K. which is the biggest consumer. The cost of production of Indian teas has been on the increase during the last few years and the tendency still continues to be the same. It is, therefore, difficult to predict future prospects with a certainty. Considering the increased demands on the industry's resources from all sides, namely, duties, taxes, compulsory deposits, labour welfare measures, wealth tax and shortage of liquid finance in the domestic market, as well as expected acute competition at lower price levels by teas produced by other countries where the cost of production and incidence of taxes on tea are lower, the prospects for the industry can hardly be termed promising.

The Rs. 10 paid-up ordinary shares are currently quoted at Rs. 10.62 *cum-div.* On an *ex-div.* basis, the shares provide a yield of 10.4 per cent. per annum.

HINDUSTAN LEVER'S TURNOVER LARGER

WEALTH TAX TELLS ON NET PROFIT

THE performance of Hindustan Lever Ltd. (Chairman: Mr. S. H. Turner) during 1957 is in refreshing contrast to that of a large number of industrial units in the country which have published their results for that year in recent weeks. The past year, as readers are aware, was one of unfavourable trading conditions to the majority of major industries, with the exception of sugar. The results of the Hindustan Lever Ltd. for 1957 show that the vegetable oil and soap industry has managed to fare somewhat better than in 1956. The Company's results show an all-round improvement and the dividend has been stepped up from 12½ per cent. to 14 per cent. It will be recalled that, in October 1956, the old firm of Messrs. Lever Brothers (India) Ltd. was converted from a private to a public limited company under the new title of Hindustan Lever Ltd. Even before this new set-up, the Company had established for itself a sound reputation as the leading manufacturers of soaps, cosmetics and *vanaspati*, etc., in this country. It is not, therefore, a matter for surprise if the Company's turnover shows a steady rise from year to year. But what is really surprising is the marked rise in its business during 1957 from Rs. 27.40 crores to Rs. 33.19 crores. A large part of this growth, however, seems to reflect the inflationary forces that prevailed in the country, for the rise in gross profit is only modest, the major portion of the expansion in sale proceeds having been offset by an equally steep rise in the cost of raw materials and heavier expenses.

Whereas the turnover rose by Rs. 5.79 crores or by a little over 21 per cent., the gross profit has gone up by only six per cent., that is, from Rs. 264.48 lakhs to Rs. 280.63 lakhs. The net profit, however, is actually a shade lower at Rs. 115.54 lakhs, as against Rs. 116.28 lakhs, a drop of about Rs. 74,000. It would appear that, but for wealth tax, the upward trend in the net profit, too, would have been kept up, nominally at least. This will be clear from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December		
	1957	1956	1955
Sale proceeds	33,19 24	27,40 44	12,11 06
Other income	10 02	14 45	30 16
Consumption of materials ..	21,97 23	17,72 81	6,71 18
General expenditure	8,51 39	7,17 60	3,56 24
Gross profit	2,80 63	2,64 48	2,13 81
Depreciation	42 17	28 32	12 71
Provision for income-tax ..	1,18 52	1,19 88	1,05 29
Provision for wealth tax ..	4 40	..	..
Net profit	1,15 54	1,16 28	95 81
Provision for provident fund and retirement gratuity	15 32	12 29	6 16
Dividend	77 08 (14%)	60 62† (12½%)	75 00 (37½%)
Retained in business	22 24	34 36	14 65

† On the increased capital of Rs. 557 lakhs.

As will be seen from the said table, of the increase of Rs. 16.15 lakhs in the gross profit, the provision for depreciation alone has absorbed nearly Rs. 14 lakhs. The provision for income-tax is lower by Rs. 1.36 lakhs, but the wealth tax has taken up no less than Rs. 4.40 lakhs, as against *nil* for 1956. The higher incidence of taxation, coupled with a slightly bigger distribution to shareholders and increased provision for provident fund and retirement gratuity, has naturally reduced the amount retained in business. Thus, as against Rs. 34.36 lakhs conserved in 1956, only Rs. 22.24 lakhs could be retained in 1957. The Directors say that the 1956 accounts were published before the 1957 budget was presented. Consequently and as a result of the Finance (No. 2) Act, 1957, and the Wealth Tax Act, 1957, an additional Rs. 42.53 lakhs for taxation had to be provided for in respect of 1956, making the total provision for the year at Rs. 162.42 lakhs. Of this, they say, Rs. 47.10 lakhs was on account of the issue of Rs. 157 lakhs of bonus shares on 11th October 1956. After charging this additional taxation of Rs. 42.53 lakhs, the 1956 net profit was actually only Rs. 61.45 lakhs. These additional tax liabilities, aggregating Rs. 45 lakhs in all, have been met out of the undistributed surplus standing to the credit of the profit and loss account at the close of 1956.

As already said, sale proceeds in 1957 amounted to Rs. 33.19 crores. A breakdown of this turnover shows that soap and other detergents accounted for (64,775 tons) Rs. 14.31 crores, *vanaspati*, margarine and other edible fats for (69,672 tons) Rs. 16.50 crores, toilet preparations

(*Continued on page 539 col 2*)

KOHINOOR MILLS' PROFIT DOWN BY NEARLY TWO-THIRDS

DIVIDEND MAINTAINED WITH HELP OF RESERVES

THE results of the Kohinoor Mills Company Ltd. (Managing Agents: Killick Industries Ltd., Bombay) for the year ended 31st December 1957 provide yet another instance showing how even a modern and up-to-date textile mill has suffered heavily from the continued man-made depression in the cloth and yarn markets in the face of rising cost of production. The profit of the Company for 1957 is so low that even the maintenance of the dividend has been possible only by withdrawing a sizable sum from the reserves. The gross profit at Rs. 24.08 lakhs represents a fall of no less than Rs. 35.90 lakhs or as much as 60 per cent. from that (at Rs. 59.98 lakhs) for the previous year. It is the lowest to be witnessed since 1952 when the textile industry was badly hit by the post-Korean recession. The gross profit of the Company in that year was Rs. 23.16 lakhs.

The net profit at Rs. 6.65 lakhs is less than one-third of Rs. 22.29 lakhs earned in 1956. The provision made for depreciation at Rs. 6.13 lakhs and that for taxation at Rs. 9.50 lakhs are both lower than the corresponding appropriations of Rs. 11.21 lakhs and Rs. 20.50 lakhs, respectively, in the previous year. The latest provision for taxation is inclusive of Rs. 66,718 for the previous year and also for wealth tax amounting to Rs. 1.29 lakhs and Rs. 1.24 lakhs, respectively, for the assessment years 1957-58 and 1958-59. It is stated that the assessment of the Company's profit for the year ended 31st December 1956 is not yet over. In order to meet the extra tax liability, the Directors have transferred to the appropriation account Rs. 5 lakhs from the general reserve. It will be seen that the iniquitous wealth tax, supposed to be at only ½ per cent. of the net assets, works out to 5.35 per cent. of the gross profit and as much as 19.4 per cent. of the net profit for 1957. The corresponding percentage on the gross and net profits for 1956 is 2.1 and 6, respectively. Thus, as the level of profit goes down, the incidence of wealth tax goes up and becomes very onerous. The Law Makers of this country have unfortunately failed to recognise the injustice of a fixed rate of capital levy on the profit of a productive asset.

As stated at the outset, the dividend is proposed to be repeated at 18 per cent. per annum for the fourth year in succession. In order to do so, the Directors have withdrawn a sum of Rs. 5 lakhs from the dividend equalisation reserve. Thus, the net outcome of the Company's working during 1957 is not only a steep fall in profit but also depletion of the Company's reserves by no less than Rs. 10.25 lakhs.

The following comparative table reflects the Company's progress in the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds	6,18.35	6,75.32	6,69.76	6,79.25

Dividend	18.00 (18%)	18.00 (18%)	18.00 (18%)	18.00 (18%)
Carry forward	0.53	1.63	0.34	0.12

N.B.—Expenses include excise duty paid for which separate figures are not available for all the four years.

The cloth and yarn markets were dull during 1957 and this is reflected in the lower prices realised for the Company's products as well as in the higher stocks of finished cloth and yarn carried at the close of the year. It will be seen from the table that, while sale proceeds have declined from Rs. 6.75 crores in 1956 to Rs. 6.18 crores, stocks of finished goods have risen by Rs. 45.78 lakhs to Rs. 1.37 crores. The Company had to pay a sum of no less than Rs. 38 lakhs by way of excise duty alone in 1957 and this has again proved to be a heavy drain on its resources. The Directors say that the amalgamation of excise duty and sales tax on cloth has brought no financial relief but they hope that this measure will remove some of the uncertainty that has been hanging over the market for some time now. On the supply of cotton in 1957, the Directors say that the cotton season commenced with hopes of a larger crop, but, due to untimely late rains, several varieties of Indian cotton were available only at ceiling prices. As regards availability of foreign cotton, they add that the policy followed by the Government, namely, of issuing licences to mills and the trade on a piecemeal basis, made planning most difficult for mills using imported cotton.

The Company's paid-up capital of Rs. 100 lakhs is supplemented by reserves and surplus aggregating Rs. 113.28 lakhs. These are exclusive of employees' pension and gratuity reserve of Rs. 14 lakhs. The current liabilities and provision for taxation stand at Rs. 212.70 lakhs. Of these liabilities, loans from banks secured by stocks and stores account for Rs. 97.74 lakhs, having gone up from Rs. 86.57 lakhs a year before. The gross block of the value of Rs. 367.76 lakhs stands written down at Rs. 82.82 lakhs. The current assets aggregate Rs. 343.16 lakhs, of which the stock-in-trade alone, amounting to Rs. 246.50 lakhs more than adequately cover the current liabilities and the provision for taxation.

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 276 *cum-div.* (final dividend Rs. 12 per share). On an *ex-div.* basis, the shares provide a yield of 6.82 per cent. per annum, free of income-tax.

(*Concluded from previous page*)

for Rs. 63.63 lakhs and glycerine and groundnut cake for Rs. 1.74 crores.

In a review of the Company's working during the year under review, the Chairman, Mr. Turner, observes as follows:

"Although competition remained severe, sales of the Company's soap products continued to make steady progress, particularly in the rural areas, where consumption is still relatively low. Sales of *vanaspati* were well up on 1956. Dalda did particularly well. There was a pronounced increase in the turnover of toilet preparations, talcum and toilet powders making particularly good progress. Prices of oils and fats were higher in 1957 than in the previous year and were subject to marked fluctuations, particularly in coconut and sesame oils. In the early part of the year, the price of groundnut oil, our main raw material, increased mostly, because of good demand, supported by an increase in the excise duty in May, the higher price level held fairly steadily until December.

"At one time, the Company relied primarily on the railways for the carriage of its products to its customers throughout India. In the last few years, growing use has been made of road transport owing to the increasing burden on railways in 1957, road transport was employed whenever suitable facilities at economic cost could be found. The Company has been very eager to increase its exports to help earn the foreign exchange the country so badly needs. Exports of *vanaspati* were somewhat hampered by the high price for much of the year of the main raw material, groundnut oil. Nevertheless, by making selling prices as competitive as possible, the Company succeeded in increasing exports of *vanaspati* from 1,188 tons valued at Rs. 28 lakhs in 1956 to 1,324 tons valued at Rs. 32½ lakhs in 1957. In 1957, the Company's export tonnage of glycerine, a by-product of soap manufacture, was the highest ever—2,703 tons, as compared with 2,496 tons in 1956. Selling prices were lower, however, in 1957 than in 1956 and the turnover value dropped from Rs. 45 lakhs to a little over Rs. 43 lakhs."

The following synopsis of the Company's latest balance-sheet gives an idea of its impressive financial position:

Liabilities	Rs.	Assets	Rs.
Capital	5,57,00,000	Gross block ..	4,73,36,554
Reserves and surplus ..	2,01,70,510	*Less*—Depreciation .	1,35,62,169
Provision for taxation ..	1,27,71,963	Net block	3,37,74,385
Liabilities	3,44,21,935	Trade marks and goodwill ..	6,23,264
		Stores, tools, stock-in-trade, etc. ..	7,04,65,468
		Sundry debtors ..	78,12,878
		Loans and advances.	61,74,782
		Investments ..	1,03,000
		Cash	41,10,631
Rs.	12,30,64,408	Rs.	12,30,64,408

The Rs. 10 fully paid-up shares are currently quoted at Rs. 21.75 *cum-div.* On an *ex-div.* basis, the yield is 6.88 per cent. per annum.

JESSOP AND CO., LTD.

A four-man committee to make a full and complete investigation into the working of Messrs. Jessop & Co., Ltd., one of the Mundhra Concerns which figured prominently in the Chagla Commission's enquiry into the L.I.C. investments, has been appointed by the Government of India in exercise of the powers conferred by Section 15 of the Industries (Development and Regulation) Act, 1951. The Committee consists of Mr. S. Moolgaokar, Director, Tata Industries, Bombay, as Chairman Mr. D. N. Mitra, Industrialist, Calcutta, and Mr. Guru Govinda Basu, Chartered Accountant, Calcutta, as member-Secretary.

Announcing the appointment of the Committee, the Union Ministry of Commerce and Industry, in the course of a Press note, says:

"The Government of India is of the opinion that the industrial undertaking of Messrs. Jessop & Co., Ltd., is being managed in a manner highly detrimental to the scheduled industries in which it is engaged and to public interest. There is likely to be a substantial fall in the volume of production of the articles manufactured by the undertaking, such as iron and steel structurals, other products of iron and steel and various items of transportation and industrial machinery, for which, having regard to the economic conditions prevailing there is no justification."

Points From The Chair

Tightness of Money

"DURING 1957, banks have continued to contend with a persistent tightness of money. This is so stubborn that it almost seems as if it has come to stay. We know, of course, that this is not so. Conditions sooner or later change, often turning completely round. I have seen many examples of this in my time. Even so, there is no sign of any early relaxation in the present scarcity of funds. These tight money conditions and the existence of various restrictions and legislative enactments affecting money and banking can hardly have made 1957 other than difficult for the business of banking. Banks depend upon deposits. In times of tight money the funds available for deposit with banks are restricted. Competition between banks for deposits increases. Higher rates of interest must be offered and paid. The funds of the Government and of semi-Government bodies are, generally, lodged with the Government banks. These banks also receive the rupee counterpart proceeds of surplus agricultural commodities of the United States of America under that country's Public Law 480. The two main Government banks are the Reserve Bank of India and the State Bank of India. As the central bank of the country, the Reserve Bank of India does not compete for business with the commercial banks, but I must make an allusion to the competition that banks like ours encounter from the State Bank of India which has a monopoly in several directions."

SIR COWASJEE JEHANGIR, BART.,
Bank of India Ltd.

Sterling Area and U.K. Economy

"The appointment of a committee under the chairmanship of Lord Radcliffe to enquire into the working of the monetary system has evoked a good deal of discussion among economists concerning the merits of the sterling area system and the position of this country as its banker. Widely divergent estimates have been made of the extent to which foreign currency accrues to the United Kingdom Control from the operations of oversea banks based upon or represented in London and it has been argued that the advantages of those operations to the United Kingdom economy are more apparent than real. The effectiveness of organisations like the Chartered Bank in sustaining the external economic defences of the United Kingdom cannot be in doubt. The Bank finances a very large proportion of the trade in primary products between the Eastern countries and the rest of the world and it is a considerable earner of U.S. dollars and other scarce currencies in its own right; moreover the Bank is enabled by means of its already extensive and growing oversea establishment to play an important part in the promotion of the export trade of the United Kingdom. To impose restraint upon the activities of the British oversea banks would be the last resort of the destitute and it is reassuring to know that changes in currency management and exchange control which might prejudice the unique position of the City of London in international commerce will not be made without the most searching enquiry."

V. A. GRANTHAM,
Chartered Bank, London.

Concentration of Banking Resources

"In giving you the assurance that the Bank of Maharashtra will not be found wanting in playing its legitimate role as the banker for the economic development of the region, I must frankly admit my disappointment at the lack of appreciation on the part of the authorities of the useful role which the regional banks of this type have been playing in the economic development of the country. It has been my lot to demand in my annual address to you for a due recognition of well organised regional banks, knowing the local conditions, appreciating the needs of the people and, while pursuing a sound banking policy, trying to strengthen the economy. But so far, at any rate, the legitimate request for a fair deal has fallen on deaf ears. Of late, much is being heard of decentralisation and local initiative as the essential aid for planned development on sound lines. May I, therefore, appeal to the Reserve Bank to revise its attitude and take timely steps, so that the concentration of banking resources in bigger institutions which has been in evidence in the past decade is arrested, if not prevented altogether, and the country is provided with a banking system robust in health and capable of meeting its financial needs in a fashion which is in conformity with the accepted canon of socialistic economy."

V. P. VARDE,
Bank of Maharashtra Ltd.

QUESTION HOUR IN PARLIAMENT

Thorium Export

INDIA has told the International Atomic Energy Agency that it will be prepared to supply thorium in the form of a suitable compound. The supplies to the Agency will have to be made from current production and not from any stockpile already in existence. The quantities to be supplied and the schedule of delivery will be determined only after the requirements of the Agency are known.

—Jawaharlal Nehru

Tax on Grains

Andhra Pradesh, Madras and Bihar which levy sales tax on foodgrains and Uttar Pradesh which levies a graduated fee on dealers in grains have not responded favourably to the Central Government's suggestion to exempt foodgrains completely from tax or fee.

—B. R. Bhagat

Diesel Locomotives

The Tata Locomotive and Engineering Works at Jamshedpur is not equipped to manufacture diesel locomotives. Orders have been invited for the supply of diesel locomotives to India. In these tenders, the terms and conditions on which foreign manufacturers will collaborate either with the Government or with the private firms for the manufacture of diesel locomotives in India have also been invited. After the replies to the tenders are received, the Government will decide whether the manufacture of diesel locomotives should be undertaken by the public or the private sector.

• • • •

Railway Freight

The Government's decisions on the recommendations of the Railway Freight Structure Inquiry Committee will be announced in the House during its current session. The Railway Board and the Railway Ministry are examining the Committee's report. Some delay in reaching decisions is inevitable, as the matter is of an important nature and any violent changes in the freight structure may adversely affect the railway earnings.

—Jagjivan Ram

"T.E.L.C.O." Locomotives

The price of locomotives to be supplied by the T.E.L.C.O. to the railways during 1958-59 is still under negotiation. The T.E.L.C.O. has quoted the price of each locomotive as Rs. 4.19 lakhs. The new price is to come into force from the first of next month and the matter is still under negotiation. (India has not imported in recent years locomotives from abroad. Therefore, there are no reliable data to compare the present price of T.E.L.C.O. locomotives with foreign prices. The T.E.L.C.O. has offered to supply the locomotives much below the figure of Rs. 4.19 lakhs quoted by it earlier. It will not be in public interest to go into details when the negotiations are on. Till the negotiations are finalised, I will not like to compare the T.E.L.C.O. price with that of Chittaranjan.—*Jagjivan Ram.*)

—Shaw Nawaz Khan

Second Shipyard

Since the second shipyard will take a pretty long time to come into being and there is financial stringency at the moment, the Government of India will be prepared to accept offers of co-operation from the private sector. In pursuance of the Industrial Policy Resolution, the initiative will lie with the Government and, wherever financial co-operation is forthcoming from the private sector, the controlling interest will always be with the State. (There is no question of reconsideration of the policy. Any requests received from the private sector will have to be considered in the light of the criteria laid down in the Resolution for securing the co-operation of private enterprise, namely, that the Government should be satisfied that the participation of private enterprise is necessary in the national interest and that it ensures the requisite power to the Government to guide the policy and control the operations of the undertaking.

—Raj Bahadur

Visakhapatnam Dock

The proposal to construct a dry dock at Visakhapatnam has been put off for the present. The reason for this is the non-availability of foreign exchange.

—Lal Bahadur Shastry

Port Facilities

A survey team of harbour experts from Japan recently visited some parts in India for studying the port facilities required for export of iron ore to Japan.

• • • •

Post Office Savings Bank Account

The cheque system introduced in post office savings bank accounts will be extended to Calcutta, Madras, Delhi and New Delhi, Nagpur, Ambala, Patna, Lucknow, Jaipur and Ahmedabad with effect from 1st April 1958. In Bombay where the scheme is launched on an experimental basis, the facility is availed of by only 449 depositors out of 9,698. The scheme will ultimately be extended to all postal head offices and permanent sub-offices.

• • • •

State Transport

In December 1957, the Centre informed all the State Governments that no assistance, whether by loans or by grants, will be available to transport undertakings owned or managed by them if they are run departmentally.

—Raj Bahadur

Iron Ore Deposits

A joint request by the Japanese and Indian Governments is proposed to be submitted to the U.S. before 31st March 1958 for a loan to the joint Indo-Japanese project to develop iron ore deposits in eastern India and improve railway and port facilities. The details are yet to be worked out. The American President's Fund can be utilised to finance schemes of help to more than one country.

—Nityanand Kanungo

Tea-plucking Machine

An engineering firm in Calcutta is now trying to design a tea plucking machine on the same lines as in the Soviet Union. Details of operating the machine have been asked for from the Soviet Union. It is understood that the use of the machine will require replanting of the tea bushes and hedges. The Government will have to see how the use of the machine affected the employment in tea gardens.

—Satish Chandra

Inland Water Transport

The Inland Water Transport Enquiry Committee has submitted an interim report recommending the urgent undertaking of a traffic survey in Bihar region. The Committee has recommended that, pending the completion of this survey, the Ganga-Brahmaputra Water Transport Board should endeavour to maintain the triangular service between Calcutta-Bihar, Bihar-Assam and Assam-Calcutta through a private agency, if necessary, and give that agency appropriate assistance. The other recommendations made by the committee are: (1) Until the triangular service is re-established, the inland water transport services between Buxar and Rajmahal on the Ganga and Patna and Darauli on the Gogra should be maintained; (2) South Bihar-Assam traffic should move by the rail-*cum*-steamer route *via* Calcutta as long as it is not possible to move the entire traffic by the Assam rail link; (3) Calcutta-Bihar (river stations) traffic should move by the rail-*cum*-river route *via* Rajmahal; (4) North Bihar-Assam traffic may move by the all-rail route as at present; and (5) the restricted inland water transport service in Bihar should be operated by the Ganga-Brahmaputra Water Transport Board through a suitable private agency, if necessary.

—Humayun Kabir

Oil Wells

Out of the seven oil wells drilled in the Moran area (Assam), four are productive. Good commercial production is expected from these wells.

—K. D. Malaviya

SUGAR

(Concluded from page 516)

field of transport. Rail transport facilities, provided mostly by the mills themselves, have laid the basis for the modern cane factory by expanding the area from which a single mill can speedily obtain its sugarcane. Cuba has experimented with what is called the "Portacana" system, employing portable cane baskets which may be removed from the truck bed, spotted around the field for filling, reeled back on to the individual truck and delivered to the mill. A wide variety of self-propelled equipment for loading cane provides a mechanical means of sharing available labour for cane cutting. In Louisiana, there are in use several models of mobile grab loaders. Florida has developed continuous cane loaders of a slanting platform type, presumably on the model of some Hawaiian harvesters. So simple a device as a wire rope sling facilitates unloading of trucks or rail cars by stationary canes. It is to techniques such as these that Puerto Rico has recently been turning in order to overcome a serious drain of labour to cities and to the mainland.

While the progress in cane transport in various regions has thus been swift and varied, India continues to be backward. Barring the case of sugar mills having their own cane plantations which have invested quite a lot of money on ensuring efficient transport facilities, the movement of cane from fields to factories continued to be confined to the century-old bullock carts. To the extent transport of cane is mechanised through introduction of motor trucks or such devices as are in use in other countries, the cost of sugar production can be lowered, with all its attendant benefits. Lower cost of production, it is needless to add, will mean lower price for sugar, larger consumption, and better prospects of successfully exporting sugar.

The twenty-fifth annual general meeting of the Indian Sugar Mills' Association will be held at New Delhi on Thursday, 3rd April 1958, Mr. Balmokand Shah Sawhney, President of the Association, presiding. The meeting will be inaugurated by Mr. Ajit Prasad Jain, Minister for Food and Agriculture, Government of India.

DEMAND FOR MONEY RISES

(From Our Own Correspondent)

BOMBAY, 19th *March*

There was a further increase in the pressure of demand for funds in the short-term money market during the week under review. As the available funds fell short of the borrowers' requirements, banks had to draw on their balances with the Reserve Bank or seek temporary accommodation from it. There was, however, no change in interest rates. Exchange banks and big Indian banks continued to bid inter-bank call money at 3 per cent., the corresponding rate among the smaller banks being kept at 3½ per cent. House money at call was offered 4¼ to 4⅜ per cent. and short-term deposits at 4¼ to 4⅜ per cent. for one to six months.

A fractional contraction of Rs. 41 lakhs in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 14th March 1958. Notes held in the Banking Department are higher by Rs. 63 lakhs. Rupee securities and foreign securities are unchanged, but foreign balances (in the Banking Department) have recorded an increase of Rs. 3.14 crores. Central Government's deposits are lower by Rs. 3.14 crores, but other Governments' deposits show a rise of Rs. 11.82 crores. Deposits of banks have gone down by Rs. 9.47 crores. Loans and advances other than to Governments have declined by Rs. 1.19 crores, of which advances to Scheduled banks against usance bills account for Rs. 77 lakhs. Investments have risen by Rs. 6.44 crores and Government Treasury bills purchased and discounted by Rs. 1.87 crores.

The Scheduled banks' statement for the week ended 7th March 1958 discloses an increase of Rs. 1.53 crores in demand deposits and of Rs. 2.65 crores in time deposits. Inter-bank borrowings have gone down by Rs. 2.14 crores, while borrowings from the Reserve Bank have risen by Rs. 8.05 crores and those from the State Bank by Rs. 1.10 crores. A rise of Rs. 4.19 crores is noted in advances and of Rs. 68 lakhs in bills purchased and discounted. Investments show no notable variation, but cash balances have risen by Rs. 6.41 crores.

The Gilt-edged market maintained a steady tone during the week under review, thanks to the persistent demand for the short-dated issues. Some of the medium and long-dated loans also came in for enquiry. 4 per cent. State loans of nearer dated maturities were also in demand. During the week the Reserve Bank put up its selling rates of 3½ per cent. 1964 by 10 nP to Rs. 97.95, 3½ per cent. 1965 by 5 nP to Rs. 97.70 and 3¾ per cent. 1967 by 5 nP to Rs. 99.70. 3 per cent. 1986 Conversion Loan met with keen buying on the eve of half-yearly interest payment for the benefit of tax-voucher, and, even after payment of interest, the quotation showed no change at Rs. 71.05. 3 per cent. 1970-75 attracted buyers 5 nP higher at Rs. 86.20. 3 per cent. 1966-68 was wanted at Rs. 92.30, as against Rs. 92.15 a week ago. 3 per cent. 1964 gained 5 nP to Rs. 94.35 and 3 per cent. 1963-1965 advanced by 20 nP to Rs. 94.35 on keen enquiries. 3½ per cent. 1962 had sellers at Rs. 97.90, 3½ per cent. 1961 at Rs. 99.65 and 3½ per cent. 1964 10 nP higher at Rs. 97.95. 3½ per cent. 1965 gathered 5 nP before being on offer at Rs. 97.70. 3½ per cent. 1967 had sellers at Rs. 97.65 and 3¾ per cent. 1967 5 nP higher at Rs. 99.70. Among State loans, 4½ per cent. 1969 Bombay was placed at Rs. 100.10 ex-voucher, as against the same quotation before payment of half-yearly interest payment. 4 per cent. 1963 and 1964 Madras gained 5 nP and 10 nP, respectively, to Rs. 93.45, while 1967 and 1968 shed 5 nP each to Rs. 97.80. U.P. 1964 was marked up by 10 nP to Rs. 98.30, while 1967 and 1968 declined by 5 nP each to Rs. 97.80.

In the foreign exchange market the rupee was featureless, but steady, in terms of the U.S. dollar, in consonance with a similar trend in sterling. Banks' selling rate for ready dollar was unchanged at Rs. 475.25 per $100 and their buying rate at Rs. 472 per $100. In New York, spot sterling showed no change over the week at $2.81.9/16-2.81.11/16. Three months' forward, however, gained from $2.78½-2.78¾ to $2.78¾-2.79. Transferable sterling closed at 279.50-279.60 cents, after moving up to 279.60-279.65 cents.

LINSEED ADVANCES

(Messrs. A. Bradley & Co.)

CALCUTTA, 17th *March*

A generally firmer tendency prevailed in the linseed market during the week under review. There was an all-round advance in the prices of seeds, oil and cake. This, however, did not affect the existing lack of parity and, with crushers still showing a very meagre interest, trading was rather dull on the whole. Seeds advanced by more than As. 8 per maund to Rs. 22-6, with new crop offerings just beginning to make an appearance at a nominal discount. There was good demand for oilcake which improved to Rs. 11-8 per maund.

In the oil section, despite a proportionately small advance to Rs. 52, offtake continued to be very dull and sellers were hesitant. A slight improvement to £106 in the U.K. oil market did not disturb local prices which still remained out of parity.

The latest available quotations are: Ready March Rs. 22-6 and April-May Rs. 22-4 per maund.

HIDES STEADY

(From Our Own Correspondent)

KANPUR, 16th *March*

During the week under review, the conditions of the hides and skins market were stable. Demand for wet salted buff was particularly keen. There was scarcity of upper grade buff which was reflected in the upward trend in price. The Madras dealers were a bit lukewarm during the week. The main purchasers were the local tanners.

The latest available quotations are: Wet salted cow 1st grade Rs. 380, 2nd grade Rs. 350 and 3rd grade Rs. 210 per score; wet salted buff 1st grade 1 lb. 5 ozs., 2nd grade 1 lb. 8 ozs. and 3rd grade 1 lb. 10 ozs. per rupee; Goat 1st grade Rs. 325 and 2nd grade Rs. 300 per 100 pieces; Sheep 1st grade Rs. 300 and 2nd grade Rs. 275 per 100 pieces.

BEARS PROTEST AGAINST BULL SQEEZE IN SILVER

(From Our Own Correspondent)

BOMBAY, 19th *March*

Futures trading in bullion remained suspended unofficially for three days of the week under review, that is, 15th, 17th and 18th inst., as the bears, who are in a numerical majority, refrained from doing business as a protest against the persistent bull squeeze in silver and the sharp rise in the price of the white metal. The stalemate ended today and the dissenting speculators reentered the ring, following a decline in prices in private trading yesterday and on reports that the Board of the Bombay Bullion Association would meet today to discuss the situation. The decision of the Board is not known up to the time of writing.

Earlier in the week, silver made a further headway on reports that the payment of import duty on Tibetan coins was considerably small, thereby suggesting that arrivals in future would be small. There was also scarcity of floating stocks in the market. These bullish factors were fully exploited by the longs who pushed up the price of the white metal to a high of Rs. 195-6 (for forward delivery in the current settlement) and Rs. 195 in the ready, a level not seen since July 1951. The protest by bears was of no avail, as prices in private continued to move up to touch Rs. 196-1 on Monday. The fear of operation of margin, however, brought down the prices subsequently.

Gold was quietly steady with a decline in prices earlier in the week, on a slackening of demand. Subsequently, there was a recovery consequent on a fall in arrivals.

Forward silver (April settlement) advanced from Rs. 193-11 to Rs. 196-1 (nominal) on Monday before reacting to a low of Rs. 194-7. The relaxation of the bull grip was also reflected in the fall in *budla* charges in their favour from As. 14 on Wednesday last week to As. 7 today. The May settlement closed today at Rs. 194, as against Rs. 192-13 a week ago.

Ready silver moved up from Rs. 193-5 to Rs. 195-13, but reacted to close at Rs. 194-3. The floating stocks of silver are estimated at 600 bars. The daily average arrivals were of the order of 15 bars, while the offtake was 10 bars per day.

Gold for forward delivery (April settlement) dipped from Rs. 112-8 to Rs. 111-12, but soon gained ground to Rs. 112-5 at the close. Business in May settlement commenced on Thursday last week at Rs. 112-8 and, after being nominally quoted at Rs. 111-12, moved up to Rs. 112-7.

Ready gold fell over the week from Rs. 112-8 to Rs. 112-3, the lowest level touched during the week being Rs. 111-9. The floating stocks of gold have gone up from 15,000 tolas to 20,000 tolas and this is reflected in the discount of As. 2 at which the ready metal is quoted below the current settlement. The daily average arrivals were 2,500 tolas, while the offtake was no more than 2,000 tolas on an average per day.

In New York, silver continued to be maintained at 88.5/8c., while London prices suffered a further fall this week. Spot silver declined from 76⅞d. to 76.1/8d. and forward from 76½d. to 75.7/8d. Gold was a shade quiet at 249*s.* 2½d.

The following comparative table shows at a glance the trend of the market during the week under review:

	19-3-58	Highest	Lowest	12-3-58

KIPS EVOKE STRONG PRICE RESISTANCE

(From Our Own Correspondent)

MADRAS, 17th *March*

Trading in kips with the U.K. has been selective, price resistance being strong. Importers feel that there is no profit in dressing kip leather and prefer to switch on to imported chrome leather. Tanners find that raw markets rule firm, due to chrome tanners' competitive buying, and are slowly reducing their tannery output.

Arrivals of tanned hides and calves are small and shippers have been active at unchanged prices. There is good call for lower grades for inland trade.

In the tanned skins market, there is no noticeable change. Shipment business is negligible, due to the proximity of the London public sales which is due to commence today.

COTTON FUTURES RALLY

(From Our Own Correspondent)

BOMBAY, 19th *March*

The cotton futures market ruled distinctly firm during the week under review. The announcement of an export quota for 50,000 bales of Bengal *Deshi* and the reduction in export duty by half to Rs. 50 per bale made on the 13th inst. induced a general buying movement earlier in the week which pushed rates to higher levels. The upswing was also aided by the bullish implications of a private crop estimate made by a leading cotton firm which placed the season's crop at 4.85 million bales which was about 100,000 bales lower than earlier estimates. Profit-taking attracted by the higher rates and selling induced by the continued delay on the part of the Government in announcing some relief in excise duty on cloth led to a mild recession. But this trend proved short-lived as the market again firmed up yesterday following reduction in excise duty on cloth, thereby providing relief to the industry to the extent of Rs. 15 crores. The expectation that, with this fairly substantial reduction in excise duty, the offtake of cloth would improve and would in turn lead to better demand for cotton prompted fresh support. Consequently, cotton futures values again firmed up.

I.C.C. Moglai Jarilla (March 1958) opened the week at Rs. 689, as against the previous day's close of Rs. 685 and moved higher to Rs. 689 the same day. After declining to Rs. 683 on Monday, the market again spurted to Rs. 688.50 yesterday. Opening at Rs. 691 today, the contract gathered Rs. 3 before closing at Rs. 691. Total tenders issued against the contract on the 17th aggregated 350 bales, bringing the total issued till that date to 2,150, comprising 1,650 bales of Vijay, 300 bales of Jarilla, 100 bales of Gaorani and 100 bales of Punjab American.

I.C.C. Moglai Jarilla (May 1958) followed more or less the same trend. Opening the week Rs. 3.25 higher at Rs. 682.50, the contract firmed up to Rs. 687 the next day. After easing to Rs. 681 on Monday, it again rallied to Rs. 686 yesterday and further to Rs. 690.50 today. The contract, however, closed a shade lower at Rs. 688.50.

The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	19-3-58	*High*	*Low*	12-3-58
I.C.C. Moglai Jarilla (March 1958) ..	691	694	683	685
I.C.C. Moglai Jarilla (May 1958) ..	688.50	690.50	681	679.25

Influenced by the strength of the futures section, the spot market also ruled firm. There was an all-round improvement in prices. Sustained demand was noted for Jayadhar and Laxmi. Vijay, Berar Jarilla, and Khamgaon also evoked good attention. Even short-staples, which were of late virtually neglected, registered a notable increase in prices. Mill demand is expected to improve further as a result of the reduction in excise duty on cloth.

Crop movement in Northern India is reported to have almost come to an end. About 97 per cent. of the Vijay crop has already come to the market. In Gujerat, Saurashtra and Kutch crop movement is in full swing. Arrivals in the Western region has been rapidly increasing since the middle of last month, while they are expected to gather strength in the South.

In the export section, following the reduction in duty and a fresh quota, prices rallied although they tended to ease later, reflecting the fear in the minds of exporters that Pakistan may also cut its export duty. Nevertheless, there was brisk activity and a sizable business was reported. Most of the recent sales were to France for April shipment. Inquiries were noted from the U.K. for superfine Bengals. The Government has modified the procedure for issuing export licences details of which are given elsewhere in this issue.

In the foreign section, barring some stray business in Californians, trading interest was subdued. It is reported that, following representations made by the mill interests, the Government of India has decided to take only the consumption as the basis for allocating East African cotton out of the recent allocation of 70,000 bales. It may be called, in this connection, that earlier it had been decided to take into account not only the consumption of both East African and American cottons but also stocks and licences held by mills as on 31st January 1958. It is learnt that licences would now be issued to mills on the basis of quota, taking into account only the consumption of East African and American cottons in the past three seasons.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week's closing rates:

Bengal *Deshi* 600 (575); Berar Jarilla 775 (760); Khandesh 810 (790); Oomra *Deshi* 650 (620); Vijay 930 (900); Hubli Laxmi 1,040 (1,040); Jayadhar 895 (885). *Delivery contracts*: Vijay 930 (920); Bengal 595 (560).

Cotton futures values in the Karachi cotton market made handsome gains during the week under review. On speculative buying based on the expectation of a probable cut in export duty following the reduction in duty on Bengal *Deshi* by the Government of India, values moved higher. Better inquiries were noted from abroad. Reduced pressure of new crop arrivals also helped to impart strength to the market. N.T.R.G. March improved from Rs. 71-15-6 last week-end to Rs. 72-13 yesterday. The May contract firmed up by Re. 1-6 to Rs. 72-1-6. The spot section also put on a better appearance. Sind *Deshi* and Punjab *Deshi* were quoted at Rs. 64-4 and Rs. 63-8 at close yesterday. The following are the latest available rates—in rupees per 82 lbs.—for a few other popular varieties of Pakistan cotton prevailing at Karachi:

4F Roller 71-10; S.G. 76-2; 4F Punjab Roller

74-14; S.G. 78-2; 289F N.T. Roller 76-10; 289F Punjab Roller 81-2; S.G. 91-2.

Alexandria cotton futures market ruled easy during the week. The easiness was mainly due to the slackness of export inquiries and the weakness of domestic spinner demand. Under pressure of hedge selling both the long staple Karnak and the medium staple Ashmouni contracts receded. The new payments arrangement worked out by Egyptian Government under which a discount of 23 per cent. will be offered for payments in hard currencies, including sterling, is expected to result in a revival of demand from foreign countries; but so far no marked improvement in demand has been noted. The latest available quotation—in tallaris per lb.—from Alexandria are:

Karnak: March 77.15; May 78.05. *Ashmouni*: April 66.75; January 67.25.

Liverpool cotton futures market ruled distinctly easy during the week reflecting the depressed condition of the yarn and cloth markets. Even reports that the U.S. Senate had rejected the proposals for increasing the cotton acreage and had voted additional funds for Soil Bank and the firm New York advices failed to lift values. Trading interest was subdued and prices eased on hedge selling and occasional profit-realisation. Sudan contracts were, however, maintained. The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being last week's closing rates:

American cotton one inch staple contract: March-April 25.29 (25.42); May-June 25.23 (25.37); July-August 25.51 (25.65); October-November 25.98 (26.20). *American cotton mixed growth contract*: March-April 25.73 (25.75); May-June 26.00 (26.19); July-August 26.33 (26.52); October-November 26.83 (27.05). *Sudan*: May-June 32.00 (32.00); July-August 32.20 (32.20); September-October 32.85 (32.85).

New York cotton futures market ruled firm during the week. The Senate's rejection of the proposals for an increase in the cotton acreage and its approval of larger funds for Soil Bank programme touched off a general buying movement which carried prices to new seasonal highs. These factors were interpreted as foreshadowing a tighter supply position in the next season than hitherto anticipated. Some quarters were inclined to believe that the crop would be as low as 10.50 million bales as a result of larger entry into the Soil Bank. The firmness of the market was also aided by the expectation of a higher loan rate for the current crop than the interim rate of 81 per cent. of parity announced earlier.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	18-3-58	11-3-58	4-3-58
Spot	36.00	36.10	35.95
March	35.72	35.65	35.30
May	35.95	35.82	35.57
July	36.31	36.12	35.77

SUGAR DECLINES

(From Our Own Correspondents)

BOMBAY, 19*th March*

In contrast to the firm trend noted last week, the sugar market presents distinctly easy conditions and values have tended to move down. Local offtake is poor, such being confined only to demand from small grocers. Purchases by the various suburbs are negligible, thanks to the trucking of sugar into these areas direct from the Bombay-Deccan factory areas. What is more, arrivals of sugar into the market this week have been considerable; they aggregated 23,100 bags, as against 10,900 bags in the previous week. The increased arrivals must be attributed to the continued fortnightly releases granted to the co-operative factories. Even firm advices from the North and reports of recovery in sugar prices from the markets in South India have failed to enliven sentiment.

Medium grain sugar has receded from Rs. 109 to Rs. 106-Rs. 107.50 per bag. Large grain has declined by a rupee to Rs. 109-Rs. 112.50. Small grain is quoted at Rs. 105, as against Rs. 105.25 last week.

The production and despatches of indigenous sugar up to the end of February 1958 amounted to 1,336,000 tons and 636,000 tons, as against 1,169,000 tons and 635.000 tons, respectively, in the corresponding period of last year. The stocks with factories on 28th February 1958 stood at 1.128,000 tons, as compared with 1,061,000 tons a year before.

• • • • •

HAPUR, 17*th March*

Steady conditions were witnessed in the sugar market during the past week. Good business was done for different consuming areas. The factories are reported to be drawing sufficient cane to work with maximum capacity. Crystal sugar prices recorded an advance of 6 nP to 31 nP per maund for ex-mill delivery in the Muzaffarnagar market where good business was reported during the week. The rise in prices was specially marked in the case of small grain. Amroha D-29 and Bijnore E-29 which rose from Rs. 35.12 and Rs. 34.81 to Rs. 35.37 and Rs. 35.12 per maund, respectively. Business for Saurashtra was done at a premium of 19 nP per maund. The latest ex-mill delivery prices were: Mansurpur B-29 Rs. 37.84; C-29 Rs. 36.81; Rohana B-29 Rs. 37.50; Lakhskar C-29 Rs. 36.44; Amroha D-29 Rs. 35.37; Seohara D-29 Rs. 35.44; Meerut D-28 Rs. 35.87; and Simbhauli E-29 Rs. 36.

Sugar prices ruled quietly steady in the Kanpur market. Demand from consuming centres was fairly good.

The production of *khandsari* in the country is expected to touch new heights this year. The industry, it is said, is flourishing on the artificial advantage due to heavy fiscal burden on crystal sugar. Demand is reported to be fairly brisk from consuming areas. The latest prevailing prices are Rs. 27 to Rs. 32.50. Due to very faulty arrangements for the supply of cane to factories through co-operative societies and eagerness on the part of cultivators to dispose of their cane at the fag end of the season, the *khandsari* producers are in a position to buy cane below the fixed price to be paid by the mills.

Ready *gur* recorded a strident advance, due to brisk buying by bulls at higher prices. Arrivals averaged 1,500 maunds and local stocks were put at about 145,000 maunds, the corresponding figure last year being 97,000 maunds. Crushing for *gur* will finish after about a fortnight's time. The prevailing price of *gur pansera* is Rs. 14.75 to Rs. 15.25 per maund.

Ready *gur* also recorded good gains in the Muzaffarnagar market, where arrivals averaged 4,000 maunds daily. The latest prevailing prices are: *Chaku* Rs. 17.75 to Rs. 18.25; rusket mixed Rs. 16 to Rs. 16.50; *ladu* rusket Rs. 11 to Rs. 12, *shakker dara* Rs. 17.50 to Rs. 19; *masala* upto Rs. 21.

Gur futures spurted to touch new heights on vigorous bull support. In view of the continued bullish tendency, the local Chamber increased the margin on all *gur baisakh* delivery purchases from Rs. 100 per unit to Rs. 250 and also fixed the ceiling and floor prices upto 20th March at Rs. 15.50 and Rs. 14, respectively, for *baisakh* delivery. This had a sobering effect and *baisakh* was today quoted at Rs. 15.37. The undertone is still bullish.

Sowings of cane for the next season is in full swing. Owing to fairly good prices of *gur* this season, an increased acreage is predicted.

YARNS RECEDE

(From Our Own Correspondent)

BOMBAY, 19*th March*

The yarn market exhibited a firm trend till today when it staged a relapse. The earlier firmness was aided by fears of growing shortage in supplies of foreign qualities and enhanced prices demanded by stockists. There were reports of speculative transactions among dealers and importers *inter se*. Turnover among dealers themselves rose considerably on hopes of still higher prices and expectations of the continued restricted import policy in the first half of the coming financial year. Today, however, art silk yarns encountered heavy selling, induced by apprehensions of slackness in demand from consuming centres, as a result of the diversion of consumer demand from rayon piecegoods to cotton cloth, following the reduction in excise duty on mill-made cloth. Staple fibre yarns ruled strong during the major part of the week. The producers raised their prices by an anna to two per lb., following the increase in prices of staple fibre. The stocks of imported fibre were reported to have declined, compelling the cotton mills to look to indigenous raw material for spinning staple fibre yarns. Cotton yarns continued to rule depressed, despite firmness of raw cotton prices. Demand from powerlooms was at a low ebb. It was stated that the impact of the recently enhanced excise duty on powerlooms had been so severe that many units had either curtailed output or closed down. Overseas enquiries for Indian cotton yarn continued to be slack, owing to the growing competition from other countries, particularly Pakistan.

Snia rayon yarns (120 dull cones) remained quiet at Rs. 925. In the spot section, 120 Japan receded by 6 nP to Rs. 5.75. 150 Japan declined by 12 nP to Rs. 5.50. 120 Italy dropped 13 nP to Rs. 5.62 and 150 Italy 16 nP to Rs. 5.37. Among indigenous yarns, National Rayons 120 bright cones first grade shed 4 nP to Rs. 5.12. But 150 bright cones first grade rallied 16 nP to Rs. 5.22 on special support.

Staple fibre yarns (40×2) April delivery encountered selling and climbed down by Rs. 13 to Rs. 604. June delivery fell by Rs. 10 to Rs. 614. Spot (40×2) Citys eased by 8 nP to Rs. 3.22 and Kohinoors by 11 nP to Rs. 3.25. Centurys were neglected at Rs 3.31 and New Greats at Rs. 3.14. Among foreign yarns, Paramounts retreated by 13 nP to Rs. 6.87. Fujis lost 9 nP to Rs. 6.69.

Among cotton yarns, ten counts Moderns were dull at Rs. 14.50 and Podars at Rs. 13.75. Twenty counts Indus were quoted at Rs. 16.75 and Moderns at Rs. 17.37, same as last week. Thirty counts Indus dropped 37 nP to Rs. 20. Among forty counts, Minaxis softened by 12 nP to Rs. 24. Moderns declined by 25 nP to Rs. 24.50. Sixty counts Moderns climbed down by 50 nP to Rs. 59. Raghuvamshis were quiet at Rs. 52, as also Finlays at Rs. 59. Among eighty counts, Moderns receded by 50 nP to Rs. 70. Mahendras changed hands at Rs. 69.50, same as last week. Finlays were on offer at Rs. 75.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	19-3-1958	12-3-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia April	925.00	925.00
120 Japan (per lb.)	5.75	5.81
150 Japan (per lb.)	5.50	5.62
120 Italy (per lb.)	5.62	5.75
150 Italy (per lb.)	5.37	5.53
Staple fibre yarn (per case of 200 lbs.)—		
40×2 April	604.00	617.00
40×2 June	614.00	624.00
40×2 New Great (per lb.)	3.14	—
40×2 City (per lb.)	3.22	3.30
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	13.75	13.75
20s Modern	17.37	17.37
30s Indu	20.00	20.37
40s Minaxi	24.00	24.12
60s Raghuvamshi	52.00	52.00
80s Modern	70.00	70.50

OILSEEDS FIRM AGAIN

(From Our Own Correspondent)

BOMBAY, 19*th March*

Barring a slight setback to prices on the 15th and 17th inst., the oilseeds market ruled firm during the week under review. In particular, castorseeds attracted very good attention of operators, thanks to renewed hopes of a cut in export duty on castor oil from Rs. 150 to Rs. 75 per ton. The hopes received further strength from the reduction in excise duty on cloth announced by the Prime Minister yesterday. There would have been a more marked rise in prices but for offerings from some local houses which thought that, even with the reduced export duty, no large export business in castor oil would be possible, since the foreign interests were not disposed to make commitments. Linseeds met with enlarged buying enquiries induced by encouraging upcountry advices. Support from shippers was confined to purchases against previous orders. Cottonseeds showed strength on firmness of raw cotton prices. In sympathy with the general trend, kardi and niger seeds registered some gains. Groundnuts which ruled strong on Friday staged a retreat in the subsequent two sessions. Although there was some recovery today, they once again turned easy towards the close. The sentiment of traders was adversely affected by weaker advices from upcountry centres. There were reports of a move in certain markets to fix ceiling prices for sarson. Groundnut oil met pressure from local crushers.

The all-India final estimate of groundnut for 1957-58 puts the current year's area and production at 14,457,000 acres and 4,271,000 tons of nuts in shell, as against the partially revised estimate of 13,450,000 acres and 4,200,000 tons of nuts in shell for 1956-57, respectively. This shows an increase of 1,007,008 acres or 7.5 per cent. in area and 71,000 tons or 1.7 per cent. in production during the current year as compared with last year.

The Government of India has decided to allow export of de-oiled cottonseed meal (solvent extraction variety having less than 1.5 per cent. oil content) without any quantitative restrictions to all possible destinations up to the end of September next. Licensing will be done on shipping bills supported by evidence of valid firm sale contracts, together with an application in the prescribed form and challan for appropriate value.

Groundnut May contract advanced from Rs. 160.62 last week-end to Rs. 161.37 on Friday. After receding to Rs. 159.50 on the 17th inst., it recovered gradually to Rs. 161.12 before finishing lower at Rs. 160.75. Over the week, bold ready and Coramandal declined by 12 nP each to Rs. 32 and Rs. 32.50, respectively. Khandesh quality which had improved from Rs. 32.50 to Rs. 32.75 early in the week relapsed to Rs. 32.50 yesterday; this rate was maintained today also. Groundnut oil ex-mill, after rising from Rs. 17.75 to Rs. 18.12 on Friday, moved down to Rs. 17.75 today. Railway Receipt fluctuated between Rs. 17.75 and Rs. 17.50 before winding up the week at Rs. 17.62.

There was a buying spree in castorseeds May delivery which climbed up from Rs. 143.87 to Rs. 147.62 today; towards the close, however, the rate was a shade easy at Rs. 147.25. Ready Madras was firm at Rs. 29.62 and Kanpur quality at Rs. 28.37. Castor oil commercial received good support and advanced by 19 nP to Rs. 15.19. B.S.S., however, encountered selling and fell from Rs. 16.65 to Rs. 16.31 yesterday; today, however, it recovered to Rs. 16.44.

Linseed May contract was in good form, the rate spurting by Re. 1.31 to Rs. 30.75. Bold ready strengthened by 75 nP to Rs. 30.37. April-May rose by 38 nP to Rs. 16.25.

Buying was quite sustained in the cottonseed May contract. It was quoted today at Rs. 110, as against Rs. 106 last week-end.

Kardi seed bold ready evoked enlarged buying enquiries and put on 37 nP to Rs. 18.62. Niger Madras gathered 12 nP to Rs. 27.87.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	19-3-1958	12-3-1958	5-3-1958
Groundnut—			
May 1958	Rs. 160.75	Rs. 160.62	Rs. 159.25
Bold ready (per cwt.)	32.00	32.12	31.94
Khandesh quality	32.50	32.50	32.50
Linseed—			
May 1958	30.75	29.44	29.19
Bold ready (per cwt.)	30.37	29.62	28.50
Castorseed—			
May 1958	147.25	143.87	142.75
Madras (per cwt.)	29.62	29.62	29.50
Cottonseed—			
May 1958	110.00	106.00	104.50
*Groundnut oil**			
Ex-mill ready (per quarter) ..	17.75	17.75	17.50
Castor oil †			
Commercial (per quarter) ..	15.19	15.00	14.81
Linseed oil †			
Ready	16.25	15.87	15.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

BLACK PEPPER RALLIES

(Messrs. Parekh and Co.)

BOMBAY, 19*th March*

Following purchases by New York at advanced prices and in sympathy with Singapore which rose from Str.$65 to Str.$68, Malabar black pepper showed hectic fluctuations during the week, the highest and the lowest in ready garbled being Rs. 103.75 and Rs. 101.25, respectively.

Speculators were very active. They tried to boost prices. In the rising market, the growers became reserved sellers. They brought down limited quantity in the primary markets, thus creating [illegible]gical scarcity. Some among the trade interpreted smaller arrivals as an indication for a final smaller production. But analysts were reported sticking to their former estimate and saw no reason for reducing it. The bears in the market were estimating the final production at 27,000 tons, while the bulls at 22,000 tons.

Alleppey and Cochin on the whole maintained firm undertone with temporary reaction under technical correction. Ready garbled at Cochin, after touching Rs. 103.75, is now quoted at Rs. 101.25 while May shot up to Rs. 108.75 to react to Rs. 107.50. Calicut remained firm at Rs. 600.

In A.S.T.A. section, April was done at $0.25¼, while there were buyers for April-May-June at $0.25¼ without sellers. New York is reported to have bought nearby shipment up to $0.24½. Most of the Bombay traders, being bearishly inclined, are reported to be trying to keep down the market irrespective of the rise on the Coast.

In delivery section, prices moved between Rs. 541 and Rs. 554 for April and from Rs. 548 to Rs. 564 for May.

Today's nominal quotations are: Ready Jelivery Rs. 78 per Bengal maund, April Rs. 554-Rs. 559 and May Rs. 564-Rs. 569 per candy of 5½ cwts.

DUST TEAS DEARER

[*Messrs. Forbes, Ewart & Figgis (Private) Ltd.*]

COCHIN, 13*th March*

A total of 600,000 lbs. was offered in Sale 'F' which was held on 11th March 1958. The sale opened to a strong general demand and medium and good medium teas sold at 10 to 15 nP dearer. The other descriptions advanced in price irregularly from 5 to 10 nP.

The average price realised in Dust Sale 'F' was Re. 1.56 per lb., as against Re. 1.49 in the previous sale and Re. 1.90 in the corresponding sale of 1957.

London Market—Sale of 10th March 1958.—Bottom fully firm. Top about 6d. dearer.

Sale of 11th March 1958.—Stronger, except plainest.

Colombo Market—Sale of 10th March 1958.—Strong demand. High and medium brokens dearer, following quality. All fannings firm. Gulf types firm to dearer.

Sale of 11th March 1958.—Active demand. Liquoring sorts often 20c. up. Others firm to dearer.

Calcutta Market—Export.—Good general demand at easier rates. Clean black fannings and bright liquoring kinds fully firm to dearer. Common and mediums 2 to 4 nP easier. Whole leaf weakest feature.

Internal.—20,000 dust. Good general demand. Slightly easier. Black leafy Middle East firm. C.T.Cs easier, except powdery types. 5,000 internal leaf. Quite good demand for few bright leafy. C.T.Cs orthodox irregularly easier.

Export Quota.—The market is still very depressed and business is being transacted at 4 nP.

Forthcoming Auctions.—Dust Sale 'G' will be held on Tuesday, 25th March.

As we go to Press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale 7:*—1,350,000 lbs. Strong general demand. Improved quality Niligiris irregularly 20 to 25 nP dearer. Mediums 10 to 15 nP dearer. Low medium and commons 5 to 10 nP easier."

GOOD DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, 18*th March*

There was good demand during yesterday's export sales in tea. Had it not been for the expectations entertained by buyers that Government would reduce the export duty on inferior quality of teas, the demand would have been greater. For they noted the assurance given by the Prime Minister that the matter would be reviewed following severe criticism of the duty at the meeting of the Congress Parliamentary meeting. However, the good qualities experienced keen bidding and it looked as though that there would be only little of the current season's teas to be carried forward to 1958-59.

It was noted that stocks of tea in the United Kingdom for the week ended 7th March were only 116 million lbs., as against 119 million lbs. in the previous week. This explained why British buyers showed keen interest in bidding during recent weeks. Another cause had been the labour troubles in Colombo port, delaying shipments considerably. The same cause should be attributed to more interest being shown by Russian buyers in the Calcutta auctions.

The Prime Minister's assurance for a review of the duty on inferior tea was particularly welcome to trade circles. For, unless cost of production is reduced, it is difficult to meet the competition being offered by other producing countries, especially Africa, in foreign markets. Regarding good quality teas, trade circles saw no difficulties in foreign markets, since it was not expected that their availability in the next season would surpass demand. Nevertheless, the margin of profit has been reduced considerably.

The Ceylon Government's proposal to levy a duty of four cents a lb. on all tea exports, which would be credited to a cess fund to finance a seven-year scheme for rehabilitation and development, was viewed here as a measure indirectly contributing to the competitive strength of Indian teas in foreign markets. However, by way of comment, trade circles stated that the duty would hit Ceylon's exports.

At the recent meeting of the Indian Tea Asso[illegible] Mr. C. D. Wilson stated that China was anxious to again export tea. His impression is amply confirmed now by a news report from Hong Kong, according to which China planned to become the world's biggest tea producer by 1962.

At present, India's exports of tea to Saudi Arabia is approximately 50 per cent. of total imports of tea into that country. That there was scope for increasing this share was indicated by Mr. Alireza, the Saudi Arabian Commerce Minister, who was here last week, if only quality could be improved and prices could be more competitive. He said that Indian tea should certainly be more popular in his country. What the Minister said can generally be applied to all foreign markets where Indian tea is being consumed. The need for gardens to show greater attention to improving quality was never greater than today. To enable the industry to do so, it must be spared at least a portion of the taxes, so that it would have sufficient funds to carry out improvements to existing standards.

There was good general demand in export offerings aggregating 60,788 chests. Prices of the good quality teas improved. Medium B.O.Ps and O.Fs registered an improvement in quality and were taken at higher rates. Clean black grades were fully steady, the fanning grades among them moving up by 4 nP. Plain and ordinary medium broken pekoes gave way by 4 to 6 nP, and the commonest teas by 2 nP. C.T.Cs, although irregular, maintained the last rate, while legg-cut teas, in irregular trend, turned in buyers' favour. Clean well-made whole leaf grades added 10 nP, while the most stalky and inferior lots gave way to rates below valuations. Flavoury Darjeelings and tippy teas met with good demand. The quotations were: best Assam C.T.C. fannings Rs. 2.70 to Rs. 2.90, clean black pekoe Rs. 2.25 to Rs. 2.30, best Assam C.T.C. B.P. Rs. 2.60 to Rs. 2.80, plain B.P. Re. 1.38 to Re. 1.42, medium fannings Re. 1.72 to Rs. 1.76, plain fannings Re. 1.56 to Re. 1.60, and medium B.P. Re. 1.50 to Re. 1.54.

Export quota changed hands at 3¼ nP.

During the internal sales last week, dusts on offer amounted to 20,282 chests. Demand was good, but prices realised were lower. Prices of orthodox teas gave way by 6 nP, although Middle East buyers showed more interest. C.T.Cs recorded an irregular trend although the best powdery lots tended firm to dearer. Prices of medium and plain liquoring teas eased, although demand tended to improve. Best liquoring teas also recorded a downtrend. The quotations were: best Assam C.T.C. Rs. 2.80 to Rs. 3.10 (nominal), medium Assam C.T.C Re. 1.75 to Re. 1.95, medium Assam grainy dust Re. 1.54 to Re. 1.56, and medium Dooars Re. 1.52 to Re. 1.54.

Leaf offerings amounted to 5,402 chests. A mixed trend was in evidence. The orthodox teas eased, and the brighter liquoring C.T.C. Assams gained. The plainer teas were bid at lower prices.

JUTE GOODS RECOVER

(From Our Own Correspondent)

CALCUTTA, 18*th March*

Prices of jute goods recorded a recovery during the week under review, following interested support. Both B. twills and 40" 10 oz. hessian reached very near the maximum prices. Sentiment was cheered when the Government called for tenders for 12.000 bales of B. twills and actually purchased double this quantity. Another factor was the announcement of production figures for the month of February. The total output of all goods is placed at 85,300 tons, 13.000 tons lower than in January. The lower figure was the result of shorter working month. The largest decrease was naturally recorded in sacking, which at 49,300 tons represented a fall of 8.000 tons. The production of hessian dropped from 34.000 tons to 30.100 tons and that of miscellaneous goods from 6,600 tons to 5.900 tons. Stocks at the end of January being 96.600 tons, the total availability of goods in the month was 181,900 tons. The closing stocks at the end of February were 95.100 tons; the total sales in the month thus aggregated 86,800 tons or slightly above production.

On Tuesday last, there was a measure of speculative support which raised ready B. twills from Rs. 97.80 to Rs. 98.20. On the other hand, ready hessian 40" 10 oz. gave way from Rs. 38.90 to Rs. 38 80. Business passing was dull, but mills were eager to sell only at the minimum prices which were above the market rates. This imparted a small recovery, B. twills being quoted at Rs. 98.60 and hessian 40" 10 oz. at Rs. 38.85. It was at this stage that the Government called for tenders for 12.000 bales and, in fact, purchased much more than this quantity. This support pushed the rate for B twills to Rs. 99, which was still lower by a rupee as compared with the minimum price. In sympathy, 40" 10 oz. hessian improved to Rs. 39.15. On Friday, a steadier trend prevailed and, despite fair quantities being unloaded by mills, prices gained further. B. twills rose to Rs. 99.50 and hessian 40" 10 oz. to Rs. 39.20. The sentiment was assisted by the announcement of reduced output for February. Over the week-end, B. twills at Rs. 99.60 added 10 nP, and yesterday at Rs. 99.62 showed further improvement. On Saturday, ready 40" 10 oz. hessian was maintained at Rs. 39.20, the rate yesterday being the same.

Mills showed only limited interest in raw jute. Despite this, prices improved following better trend in the goods market. The latest quotations for the different varieties for March-April delivery are:

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, 18*th March*

Prices of base metals remained fully steady during the week under review. Electrolytic copper was maintained at Rs. 176. There was hardly any material arriving without being sold in advance. This caused an increase in the rigours of scarcity. Even June shipments have already been booked. Market circles felt that, until more imports were permitted prices would only tend to harden. An uptrend was also reported from foreign markets. From Rs. 512, tin shot up to Rs. 518 here following higher advices from both London and Singapore. From Rs. 53, electrolytic zinc rose to Rs. 53.75 before closing at Rs. 53.50. Arrivals were reported, but demand was also high. Virgin lead closed steady at Rs. 58 after being lower at Rs. 57.50. A big Government order for antimonial lead cheered up sentiment.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 17*th March*

Quiet conditions prevailed in the foodgrains market during the week under review. The trend of prices, was downward, thanks to heavy arrivals from abroad. About 15 lakh tons of wheat and 5 lakh tons of rice have been programmed to be imported this year. But, as there has been an international shortage of rice, only two lakh tons are expected to be available from Burma. The Central stocks of foodgrains at present aggregate about 9 lakh tons, out of which 225,000 tons consist of rice and the rest wheat. Additional import of wheat on a loan or barter basis is, however, expected from the U.S.

Wheat prices here ruled quiet at Rs. 15.50 per maund for average quality and upto Rs. 17 per maund for the farm produce. Arrivals from the producing areas being nominal and demand being met from stocks, local wheat stock ran down further by one *khati* to five *khatties*. Imported wheat on Government account, however, is being stocked here in large quantity. While harvesting of coarse grains is in full swing, wheat harvesting will begin only after about two weeks. Rice prices recorded further slight advance and rice was reaching here from Mainpuri. The week-end prevailing prices were: *Basmati* Rs. 28 to Rs. 31.25; *mainpuri* Rs. 24.62; coarse quality Rs. 21 per maund.

Influenced by adverse crop reports from the main gram producing areas of the Punjab, gram prices recorded some advance during the week. Local gram stock, mostly on State Government account was put at 12 *khatties* and price at Rs. 10.82 to Rs. 11.12, as against the corresponding last year's stock at one *khati* and price at Rs. 14.25 per maund.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half yearly. P.=Company has Preference shares. T.=Company has Debentures N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. † Less income-tax. (c) Clive Mills have paid dividend at Rs. 10/- on bonus shares, for the year 1955. * Including bonus. (k) Investments.
‡ New Central Jute Mills—Dividend for 1956 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Port William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-5 includes an interim dividend of Rs. 7-5 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

MARKET GOSSIP

(*Concluded from page 503*)

American Federation of Labour-Congress of Industrial Organisations (A.F.L.-C.I.O.), have already indicated their acceptance of the need for tax cuts, including cuts in income-tax. Generally speaking, democratic leaders are opposed to tax reductions, for they believe that other methods would create more opportunities of employment. The view of trade union leaders, who are Democrats, is therefore significant. It remains to be seen what decision on taxation the Administration takes, in order to stem the recession which, from all accounts, has caused a sizable setback to American economy.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVI. No. 2454 BOMBAY, 29th MARCH 1958 PRICE: Re. 1.50

POST-MORTEM ON FOREIGN EXCHANGE POSITION

THE Planning Commission's post-mortem of the debacle on the foreign exchange front for the benefit of Parliament is more candid than one might have expected, but it is not as frank as it should have been. The examination was undertaken in response to the repeated demand from Parliament that the causes that have brought the country to the brink of external insolvency should be thoroughly investigated. The idea behind this demand was evidently that those who were responsible for the bungling could at least be exposed to the public gaze, so that, in future, they dare not aspire for positions of public responsibility and that the people, too, would be careful in selecting leaders for running the administration of the country. The Government has turned down the demand for apportioning blame, but has at the same time sought to assuage public opinion by conducting an objective analysis of the reasons for the foreign exchange crisis. Even this factual note is sufficiently uncomplimentary to the Government. It clearly confirms the distressing fact that the Government has been lacking in economic prescience of high order, an important prerequisite for successful planning.

One of the basic causes of India's foreign exchange difficulties lies in the overambitious character of the second Plan which in turn was born of overoptimism. This overoptimism itself was the result of an exaggerated view of the success of the first Plan, especially in the agricultural sector. It had been naively assumed that India had attained self-sufficiency in food and that its agriculture had made remarkable progress. What was worse, more credit than due was given to man than to nature and this fact was reluctantly conceded only when it was obvious and not when the critics of the planners wrote or spoke about it. An equally important cause for the Plan going awry is the unrealistic ideological predilections of the powers-that-be. The desire to present the people with a spectacular plan on the eve of the second general elections must be put down as the third cause. Soon after the second Plan was finalised, this journal said that the Plan looked more like an election manifesto than an economic plan. In fine, the domination of politics overwhelmed and overruled what little economic prescience there was in the Secretariat of the Planning Commission. Those who advised caution and dared to point out the shortcomings in the Plan were dubbed as defeatists, detractors and visionless people. The foreign exchange crisis would have been neither so sudden nor of such large magnitude as it has turned out to be if the politicians in the Planning Commission had listened to their experts. Further, the politicians, having overruled the expert opinion, should have at least taken vigorous steps promptly to get foreign capital and foreign assistance. This, too, they failed to do. On the contrary, they continued to follow a foreign policy in which economic considerations were subordinated to political considerations. It was not until July 1957, when it became crystal clear that the country was rapidly running into bankruptcy of foreign exchange, that political wisdom began to change. It is, of course, too much to expect the Planning Commission to be candid enough to admit these defects in policy-making, even though they are the basic causes of the foreign exchange problem.

The Planning Commission, however, could have referred at least to such factors as the failure of the Government to encourage the setting up of fertiliser plants by the private sector and the rapid development of known petroleum resources in Assam by that sector. More than two years were wasted in arriving at a decision about the development of oil in Assam and the country has as a result lost several crores worth of foreign exchange. India would have lost nothing but gained everything had it allowed the Assam Oil Company to go ahead full steam with the production of crude oil and its refining. Even the latest settlement on this subject is so unsatisfactory that progress in production of oil is not going to be as rapid as it could be. Why is the Government running after the Russians and the Rumanians after turning down the offer of co-operation and investment made by the British-owned Burmah Oil Company? Are foreign capital and technical know-how from the private sector of a free country inferior to those from totalitarian countries? We are told that considerations of ideology are responsible for this decision. But we fail to see the significance of this ideology, unless it be that the ultimate object of the Government is to impose State capitalism and totalitarianism on this country. Whatever be the reason, the result of this policy is considerable delay in creating the means which would lead to conservation and saving of large sums of foreign exchange.

The same result follows from the Government's refusal, well over two years ago, to Burmah-Shell which was prepared to put up a large fertiliser factory in the Trombay area of Bombay City, where it has its two-million ton oil refinery. By trying to split hairs with the Company on the margin of profit and deciding to have all the new fertiliser factories in the public sector, the Government has put the country to a heavy loss of foreign exchange, besides handicapping the plans for raising agricultural production. If only the Government had the foresight which its critics had and been less pusillanimous in allowing participation of foreign private capital in the development of these basic industries, India's economic progress would have been faster and on sounder footing. Today we are told that it is prepared to allow the private sector to put up fertiliser factories. But wisdom seems to have arrived a little too late, for even the biggest industrial houses in this country will find it difficult to raise the necessary rupee, as well as foreign, capital, unless adequate relief is given in the fiscal burdens imposed upon the private sector. Anyway, the loss suffered by the country as a result of lack of wisdom in the past is immeasurable and cannot be made good.

The foregoing are but two instances of the chances missed by the Government to augment and conserve the foreign exchange resources. Quite a few more instances of this nature can be quoted. But the two are sufficient to show how the pursuit of ideological considerations of dubious value has aggravated the foreign exchange problem and delayed the growth of valuable employment opportunities. And those ministries which have been pursuing these policies are as much responsible for the foreign exchange debacle as the one which liberalised the import restrictions in 1955 and 1956 and issued large licences for a variety of merchandise. It is a pity that neither the Planning Commission nor Parliament has cared to view the problem in its wider perspective and has instead confined its attention to a single track, namely, imports. Such a narrow view is not conducive to learning all the lessons from past experience.

The lack of co-ordination (of policies) and co-operation (in their administration) among the various ministries, as well as between the Government as a whole and the Planning Commission, in regard to imports is clearly established by the Planning Commission's note to Parliament. Otherwise, it is difficult to understand why the Finance Ministry remained silent when heavy import licensing was going on and why the Planning Commission did not act promptly in warning the public and the authorities. It is common knowledge that the then Commerce and Industry Minister and the then Finance Minister were at loggerheads and did not see eye to eye on many economic issues. When Mr. T. T. Krishnamachari said that the agricultural surpluses that arose towards the close of the first Plan period should be conserved within the country by open market purchases for meeting future contingencies, Mr. C. D. Deshmukh refused to concur with him on the ground that such would lead to inflationary consequences. Similarly, when Mr. Deshmukh supported the second Plan—he was one of its authors, as he was then a member of the Planning Commission—Mr. Krishnamachari denounced it as being too large and beyond the readily available resources, though he turned a somersault after he became the Finance Minister and ex-officio member of the Planning Commission, and maintained, even when the ground had become patently untenable, that the whole Plan must be implemented. Last year, when he was charged with having squandered away the foreign exchange resources, he frankly explained that, in 1955 and 1956—the years when import licensing was liberalised—he was not asked to legislate for the second Plan. A pet line of reasoning adopted by Mr. Krishnamachari for allowing large imports of steel, cement, plant and machinery,

credit that, at that time, there were more admirers than critics of this policy.

An important factor that encouraged the Government to permit large imports was the absence of confidence in the future of sterling. No mention of this is made in the Planning Commission's note and the reason for it is obvious. The Suez crisis, which began in the latter half of 1956, the possibility of a third world war, Britain's freezing of sterling balances belonging to Egypt, the serious divergence of opinion between Britain and India and fears of a devaluation of sterling—all these induced many people in this country, including those in authority, to think that it would be better to stockpile basic metals and convert sterling balances into goods. Even at this distance of time, it cannot be convincingly contended, by Indians at any rate, that the attitude then taken was a wrong one. We feel that one ought to make sufficient allowance for this legitimate action before condemning the large imports that were licensed in recent years. The Government's failure to maintain a proper account of the licences issued was, however, an inexcusable lapse, especially for a Government committed to planning. Equally inexcusable was the failure of the Government to take prompt steps for freezing all outstanding licences and reissuing only those considered as absolutely essential. If only the Government had taken this step immediately after it realised that the foreign exchange situation was tending to get out of control, several crores worth of foreign exchange could have been saved. It is, of course, too late to take any such step now, as almost all the outstanding commitments must have become *pucca* contracts, confirmed by payment of margins. The first quarter of 1957 might have been an ideal time for taking this drastic step.

While the Planning Commission admits apologetically, though reluctantly, the charge of overoptimism, it does not carry conviction when it remarks that "over-liberal" imports of consumer goods have had only a relatively small effect on the foreign exchange position. Between 1954-55 and 1956-57, consumer goods imports advanced from Rs. 75.09 crores to Rs. 95.01 crores, a rise of Rs. 20 crores. The real point is that, if the authorities have now found that the country could do with very little imports of consumer goods, they could have as well followed the present policy of austerity in the past. To some extent, this is also true of imports of producer goods. This would have enabled the country to conserve at least Rs. 50 crores per year which could have been more usefully expended on imports of raw materials, vehicles and ships.

COAL INDUSTRY

THE coal industry is among the first victims of the ideological warfare in which the Government has been engaged for some time now. Not content with the system of control which makes it the virtual owner of the industry, the Government has set before itself the onerous target of a significant share in the coal output. If there is no slip between now and 1960-61, the Government will increase its share of the coal output from about 4 million tons to 16.5 million tons. The private sector of the coal industry—there is little "private" about it, considering that its wages, prices, sales and powers of expansion are all controlled by the Government—is expected to reach a target of 43.5 million tons by 1960-61, which, together with the increased output by Government collieries, will make in all 60 million tons. Given the encouragement to which it is fully entitled by reason of its performance hitherto, the private sector in the industry could make a much larger contribution to the total output. But the Government is so obsessed with ideas of State-ownership that it looks askance at any suggestion for reducing its share in the total target for coal production.

In actual practice, the Government's policy has meant both slower utilisation and some misdirection of resources. The private sector increased its coal output from 35.3 million tons in 1955 to 36.4 million tons in 1956 and still further to 40.1 million tons in 1957. Thus, it has accomplished 50 per cent. of its target of 10-million ton increase in output. The Government sector, which has increased its output from 2.8 million tons in 1955 to 2.9 million tons in 1956 and to 3.4 million tons in 1957, has still a long way to go before it reaches the 16.5-million ton target set for it. Hypothetical reasoning is particularly fallacious. Even so, it is undeniable that, if the private sector had been given the green light and the facilities it needed, it would have exceeded its own brilliant record. The misdirection of resources which stems from the Government's ideological predilections was neatly brought out by Mr. Inder Mohan Thapar, in his address to the annual meeting of the Indian Mining Federation, last week. Illustrating his point by a reference to the Government's coking coal programme, he pointed out that, although all the present and future requirements for this variety of coal could be easily met from the existing public and private collieries or from a suitable extension of these collieries, the Government had decided to open a new area—the Kathara field—where one million tons of coking coal per year would be raised by open cast mining. He added: "The point I wish to make is that, in view of our reserves of metallurgical coal being comparatively limited, resources in such areas could be held in reserves for emergencies, and the meagre resources of foreign exchange that are now being utilised for these mines could easily be diverted to more fruitful purposes. In course of time, when India started manufacturing its own heavy machinery, these areas could be exploited with advantage with our own indigenous machinery, without imposing any drain on our foreign exchange resources." Here is a point of view which is so eminently sensible. And if it has nevertheless been overlooked, such neglect could be attributed only to the ideological consideration by which the Government's coal policy is governed.

The dichotomy of the industry into private and public sectors has led to a certain undesirable result. Complaints continue to be made of the Government's prejudice against the private sector, or—if that is too strong an allegation—at least, a certain excessive consideration for the public sector. It certainly does not augur well for the future of mixed economy that the Government should adopt a policy which implies discrimination against the private sector. Allegations of discrimination have been made in respect of both transport and allotment of materials. Mr. Thapar deplored that the requirements of transport of the State collieries came first and only the "left overs" are passed on to private collieries. He revealed that the Planning Commission had recently issued a directive to the Steel Controller to the effect that priority in respect of allotment of steel should be given to State collieries over the private collieries. Mr. D. Hogg, Chairman of the Indian Mining Association, another body representing coal producers, was equally vehement. Addressing the annual meeting of the Association, he said: "Facts must be faced. Why are heavy stocks held by one sector and not by the other? Should greater priority be given to the movement of coal to burn bricks for Government staff quarters in preference to industrial housing or a housing estate?" We know that the Government has, in the past, denied that it discriminates against the private sector. But the fact that allegations of such discrimination continue to be made by responsible and competent persons suggests that there is need for an impartial examination of the whole issue. Of what avail is it to the nation at large when one sector gains at the expense of the other if the total gain is less than what it could be under a system of economic justice? It is to be hoped that the Government will modify its policies, so that there is no ground for the criticism that it regards the private collieries as an unwanted child in the national family.

The creditable record of performance by the private sector of the coal industry has turned out to be a liability rather than an asset. It has apparently induced among the authorities a feeling of complacency. It would, however, be a dangerous illusion to think that, because it has done well so far, it could continue to do well in the future whatever happened. There are limitations to what could be achieved by the ingenuity and the initiative of this sector, unsupported by positive incentives to effort and facilities for undertaking an expansion programme. From this point of view, Mr. Hogg did well to list a few of the more important of the basic needs of the industry. He called attention to the need for (1) a realistic price structure, (2) security of tenure for leaseholders, (3) adequate transport, (4) facilities for the installation of required plant and machinery, and (5) a realistic approach to both the controls which bind the industry and the labour problems with which it is constantly faced. These may well be regarded as the "must" for the progress of the industry.

Appropriately enough, Mr. Hogg has placed the price issue first in the list he drew up. No issue has been more debated in recent years and yielded less result than coal prices. It is a long story of neglected opportunities, of economic higgling, of needless procrastination and belated action. At no time has the Government succeeded in giving a convincing answer to its critics. It is always a question of "too little and too late." If the Government concedes Mr. Thapar's legitimate contention that "coal must pay its way," it will be easy for it to find an acceptable solution. It is true that coal is a basic industry. Coal is an element of cost for other industries. But this consideration can be easily exaggerated. It accounts for only 1 to 5 per cent. of the production costs in most industries. Again, coal prices have almost stood like a rock against all the inflationary winds. Mr. Thapar quoted some illuminating statistics. As compared with 1947, wages in collieries are up by 54 per cent.—wages constitute some 60 to 70 per cent. of the production cost—and the cost of stores by about 50 per cent., whereas the increase in coal prices has been of the order of only 26 per cent. But wages and stores are not the only items to go up. Heavier depreciation has had to be provided; electrical charges, cesses, freights and building material prices have all moved up. The plain fact is that, since coal is a wasting asset, the price should carry an element which would help recover the original capital over a period of years. Further, the industry should earn a sufficiently large profit which would help it in carrying out its expansion programmes. For, as Mr. Hogg said, "there must be an adequate margin of profit to enable money to be ploughed back into the industry for future development, since, in mining, development is a continuous process which requires continued expenditure of a capital nature."

All these factors deserve to be taken into account by the Coal Prices Revision Committee which is engaged in the task of assessing the production costs in the industry as a prelude to recommending the necessary increase in coal prices. It would appear that the Committee has collected data relating to production costs for the years 1955 and 1956. In this connection, Mr. Hogg pointed out that the "information collected is now completely out of date," inasmuch as costs have risen since the data were collected. The increases in costs have been occasioned by the implementation of the Appellate Tribunal's award for workers, annual increments in wages, certain additional welfare amenities and the cost of implementing the new Coal Mines Regulations which involve the appointment of additional staff. The Committee will, therefore, do well to take all these factors into account before it submits its recommendations to the Government. Again, the soft coke producers have been particularly badly treated in the past. In June last, when the Government allowed an increase of Re. 1-8 per ton, it did not extend the increase in prices to soft coke producers. Mr. Thapar said: "I feel that a grave injustice has been done to the producers of soft coke by denying them their legitimate share in the recent price increases." He rightly urged that, in the interest of preventing deforestation and promoting the use of cowdung as manure, the production of soft coke must be encouraged. This can be done only by fixing soft coke prices at an economic level.

Finally, there is the all-important question of safety in the mines. It has acquired a new importance by reason of the recent disastrous accident in one of the best-equipped mines in India. It should serve to show that no one could be too safety-conscious. Here is a sphere in which labour leaders could do a great deal to supplement what the employers do on their own and are compelled by law to do. Statutory regulations have their place. But, as Mr. Hogg emphasised, "a most fundamental point is that education of our miners will require to be undertaken vigorously in order to achieve results and greater safety." Adult literacy, with special emphasis on the elementary knowledge of combustion in a coal mine and a wider diffusion of safety-consciousness among all ranks of workers, are absolutely necessary in order to prevent accidents. The union leaders owe it to the miners whom they serve to co-operate continuously with the management in inculcating a sense of safety-awareness in the workers.

ONE FETTER REPLACED BY ANOTHER

NEW LOAN PROSPECTS—U.K. BANK RATE—SUGAR AND 'KHANDSARI'—EGYPTIAN COTTON

THURSDAY, 5 P.M.

THERE have been no outstanding developments in the share markets this week. Although there was some profit-taking by bulls and the closing rates of today are well below the highest levels touched earlier in the week, sentiment remains unchanged. The profit-taking that emanated at the higher levels was of pre-settlement character. It is only but natural that some speculators should have decided to book their profit when the going is good. Further, there is a growing realisation that, unless the restrictions placed on the use of development rebate under the new Finance Bill are suitably modified, they will adversely affect the dividend-paying capacity of companies which have undertaken large development programmes. This view is mainly responsible for some of the scrips such as T.I.S.Co., I.I.S.Co., and National Rayons not being able to retain the entire gain they had made last week. It will, therefore, be important to wait and see what happens to these new restrictions in the Select Committee. If the amendments suggested by the spokesmen of industrialists and investors are not accepted, it will mean a distinct hardship to all those companies which have taken on hand substantial capital investment either on modernisation or on new lines of manufacture.

MARKET GOSSIP

There are, however, some who feel that it is not necessary to take an unduly pessimistic view of the consequences even if the Select Committee refuses to concede the industrialists' point of view. They point to the experience of the Bombay Dyeing Company which had spent in 1957 large sums of money on the installation of automatic looms. Although this Company had to debit its profit and loss account with as much as Rs. 45.80 lakhs by way of development rebate, it has managed to maintain the dividend at 10 per cent. But, in order to do so, it has had to withdraw from the dividend equalisation reserve no less than Rs. 23 lakhs. Not all companies, however, will be in a position to follow this practice. Take, for instance, the Tata Iron and Steel Company, Ltd. The aggregate cost of the expansion programme of this Company is put at Rs. 100 crores, of which the bulk, estimated at Rs. 75 crores, will be completed in 1958-59. If the new provisions pertaining to development rebate were to be enforced as they are, it would mean that the Company would have to debit the profit and loss account for that year with as much as Rs. 19 crores. The Company's capital expenditure in 1957-58 is said to be about Rs. 9 crores, so that Rs. 2.25 crores will have to be set apart from the profit for the year just closing. This amount is equal to a little more than one-third of the net profit for 1956-57. How can this Company, which requires well over Rs. 2 crores to pay its normal dividends, afford to remunerate its shareholders by drawing upon its past reserves, as the Bombay Dyeing has done? The position is similar with the A.C.C., Indian Irons and many other companies.

It may be argued that, as a result of the new proposals, only that portion of the profit that is required to pay dividends will be affected and that the companies themselves do not lose anything, for the development rebate will be held as a reserve. This is true enough, but are not shareholders to get a decent return on their investments in these days of high cost of living? And, if they do not, the market value of their investments also will go down. They will thus be subjected to an additional hardship.

It is noteworthy that a part of the explanation given by Mr. Nehru, in his capacity as the Finance Minister, for suspending the operation of compulsory deposit liability is the tightening of the conditions pertaining to the development rebate. In other words, one fetter on the private sector has been replaced by another.

• • • •

Conditions in the money market are still the same as those described in these columns last week. The demand for bank credit continues to be good and sizable. The Reserve Bank has pushed up its selling rates further for some of the Central Government loans, thereby indicating that it is quite earnest about preparing the market for this year's borrowing of the Central and State Governments. In view of the relatively larger deposit resources with banks now as compared with what they were a year ago, the chances of the Governments' success in raising the amounts they require are better. The Central Government at least can put through its borrowing programme with smaller support from the Reserve Bank. The State Bank of India alone can take up a very big block of the new loans, with the help of rupee counterpart funds of the U.S. and other foreign Governments.

As the commercial banks will constitute an important prop for the new loans, the Government will probably think it wise to rely on the type of borrowing programme followed in 1956, instead of on last year's pattern of only two loans, namely, a medium and a long-dated. Thus, it may issue, as was briefly hinted at in these columns last week, a short-dated loan, a medium-dated loan and a long-dated loan. The precise years of maturity will be fixed by taking into account the repayment position of the existing loans. A glance at them shows that the Government may as well issue a five-year loan, a ten-year loan and a fifteen-year loan. In view of the fact that, between 1959 and 1964, the maturities amount to Rs. 822.71 crores, the issue of a short-dated loan sounds a difficult proposition if one is to worry about the problem of repaying the outstanding loans now. But the authorities may not do so, as their present needs are urgent. The only loan that matures in 1963 is the 3 per cent. 1963-65, with an outstanding of Rs. 115.17 crores. This may not appear to be a very large amount five years hence, by which time the resources of the money market may expand enormously. The authorities, therefore, can justifiably proceed on the assumption that they can easily add at least Rs. 50 crores to the liability falling due in 1963. If this assumption is correct, then one can expect them to offer a 3½ per cent. 1963, the issue price depending upon the ruling yields on comparable loans.

Since the amount of outstanding loans to be repaid this year is no more than Rs. 21 crores and as the 3 per cent. 1959-61 carries the option to be repaid after 1959 but by 1961, it is unlikely that there will be any offer of conversion by the Central Government this year. The entire new issue will be offered for cash only. As the 1959-61 loan carries an interest rate of only 3 per cent.—a rate well below the current rate of interest even for three months' money—the Government can conveniently exercise its option, when the time comes, to repay after 1959.

To sum up, the forthcoming borrowing programme of the Central Government will, in all probability, consist of a 3½ per cent. 1963, 3½ per cent. 1968 (in which year there are no loans to be repaid) and 4 per cent. 1973, also a blank year. It is significant, in this connection, that the Reserve Bank has already pushed up the selling rate for the 4 per cent. 1972 loan to a premium of 10 naye paise.

There is an understandable note of warning in the official explanation in the U.K. for the decision to cut the Bank of England rate to 6 per cent. from 7 per cent., to which level it had been raised 27 weeks ago from the 5 per cent. level. In effect, the explanation insists that the cut should not be interpreted as a green light for inflationary expansion. The abnormal rise in the Bank rate from 5 to 7 per cent., according to a statement by the Bank of England, was required both to defend sterling against the marked lack of confidence in the exchange market of the world and also to support Government measures to maintain the real value of the pound. It adds: "While there is still a need to strengthen further the overseas monetary position, the speculative pressure against sterling has ceased and such an exceptionally high level of short-term interest rates in London is no longer justified. But at home, although inflationary pressures are moderating, the reduction in Bank rate does not imply any general relaxation in monetary policy."

Even without this explanation, it should be evident that the authorities are not inclined to regard the cut as a reflationary measure. For the Bank rate in the U.K., even at its present reduced level, is much higher than not only that in the U.S. (2½ per cent.) but also that in Continental countries such as Germany (3½ per cent.), France (5 per cent.), Italy (4 per cent.), Belgium (4½ per cent.) and the Netherlands (4½ per cent.). Be that as it may, the cut in Bank rate, which came as a pleasant surprise to City circles, was followed by a reduction in other interest rates and a smart rise in equities and Gilt-edged. The interest rate for 7-days' notice deposits declined from 5 to 4 per cent. and that for overdrafts to first class borrowers from 7½ per cent. to 6½ per cent. The Government could borrow on Treasury Bills at cheaper rates—at 5 9/16 per cent., as against 5⅝ per cent. earlier. The *Financial Times* Industrial Ordinary Index moved up from 160.2 to 164.5 and of Government securities from 80.87 to 81.26. Perhaps, the equities would have made an even better showing in the absence of the Government's re-affirmation of the broad lines of its anti-inflationary policy. Generally speaking, the U.K. Government's decision to cut the Bank rate reflects the improved external position of the pound. Nearer home, the Government apparently feels that there can be no relaxation of effort on its anti-inflationary front where credit curbs and control on capital issues continue to be in operation. Emphasising that too much should not be read into the Bank rate decision, the *Financial Times* says:

"The most important event of the week for stock markets was undoubtedly the reduction of Bank rate. It led to an improvement in the Gilt-edged market and to a sharp rally in industrials. Yesterday, the rally was satisfactorily maintained, and the bill rate was reduced, though not perhaps by quite as much as might have been expected. The cut in Bank rate was, of course, in itself an encouraging event, but it was not one on which too great an emphasis should be placed. After all, 6 per cent. is itself still a high Bank rate, and until a few months ago would have been thought of as an exceptionally high one.

"It is also true that the authorities were anxious to discourage any overoptimistic interpretation of their move. They found themselves with sufficient free play to be able to make this reduction, but they are still careful not to encourage any return to inflationary conditions. For the industrial market at any rate there is the rather depressing reflection that the hope of lower interest rates depends mainly on the development of a more serious degree of recession. In short, falling yields would be the accompaniment of falling profits."

Was the timing of the step correct? On this question, there is a section of opinion which feels that the decision could have been taken later. Discussing the merits of the decision, Mr. Oscar Hobson, the well-known commentator in the *News Chronicle*, observes:

"And on the merits of the Bank rate decision itself, what should the judgment be? In the City there are, as always, two schools—one which would have waited awhile before making the change, the other lot for the immediate plunge. Temperamentally I am with the former. Had the choice been with me, I should have waited another month or so. Nevertheless, I make no complaint. I hold, as I have already indicated here, that the essential work of the Bank rate has been done.

"The differentials between London rates and those in other centres, such as New York or Frankfurt, are now at least as much in favour of London (owing to reduction in other Bank rates) as they were six months ago. So there was no reason for maintaining our rates to attract or retain foreign funds. Sterling exchange rates wavered yesterday only by insignificant fractions, indicating that so far overseas opinion is unperturbed.

"One might indeed have kept the Bank rate at 7 per cent. a little longer for the sake of the influence it might have on the wages situation. I have some sympathy with that view, though, for reasons I indicated yesterday. I think there are more powerful forces than the Bank rate now in charge. And if need be, the Bank rate can, of course, be raised again. Since 1951, much lip service, but little observance, has been given to the doctrine of 'flexibility'."

An echo of the U.K. Bank rate decision was heard in the Lok Sabha. Replying to a question on the impact of the decision on the deferred payment arrangements which India has concluded with Britain, the Union Deputy Minister for Finance, Mr. B. R. Bhagat, revealed that, during the period upto 19th September 1957, imports of a total value of about Rs. 885.26 lakhs were approved in 16 cases from the U.K. on deferred payment basis. Of these, only in three cases of imports of goods, valued at about Rs. 435.59 lakhs in all, was the rate of interest specified, namely, 6 per cent. In none of these cases, involving a total import of Rs. 885.26 lakhs, was the rate of interest expressed as being linked with the Bank rate and hence the cost of these deferred payment arrangements was in no way affected by the subsequent rise in Bank rate. From 20th September 1957, the date of rise in the U.K. Bank rate to 7 per cent. up-to-date, imports of a total value of about Rs. 434.21 lakhs were allowed in 15 cases from the U.K. Of these, only in four cases of imports of a total value of Rs. 251.00 lakhs were interest rates specified.

The rate of interest specified was 7 per cent. in respect of imports of goods valued at Rs. 74.63 lakhs; 9 per cent. in respect of goods valued at Rs. 135 lakhs; 8 per cent. on goods valued at Rs. 6.67 lakhs and another 7 per cent. for a batch of goods valued at Rs. 34.70 lakhs. Mr. Bhagat said: "It will be observed that the rates of interest in the cases for which interest rates are separately available are higher during the period after 20th September 1957. In the other cases, the deferred payment arrangements specify only the gross instalments payable and no particular rate of interest is specified. It is, therefore, not possible to specify exactly what the impact of the rise in the Bank rate has been on the cost of the deferred payment arrangements in these cases."

Whether actually specified or not, there is no doubt that deferred payment arrangements from the British end will be influenced by the level of interest rates in that country. To the extent the Bank rate has been reduced in the U.K., deferred payment arrangements, concluded hereafter, may turn out to be less unfavourable to this country. But, since the reduction has been only marginal, it is unlikely that the relief will be substantial. Deferred payments arrangements, concluded with a country with high interest rate structure, imply two disadvantages. They are bound to be costly to the borrowing country at the time they are concluded. And once they have been concluded they cannot also be suitably modified when interest rates fall in the creditor country, unless, of course, they are linked to the Bank rate.

• • • •

The protracted delay in the announcement of sugar export policy is not surprising. The world sugar markets continue to rule depressed and the Government of India has not been able to find how best the heavy loss arising from sugar exports can be met even after allowing full remission of excise duty and cane cess. The Indian Sugar Mills Association is said to be firmly in favour of its proposal for the imposition of an extra levy on sugar used domestically in order to meet the loss on export. But this proposal has evoked very strong protest at the hands of not only a section of sugar millowners but also the trade, in general. Speaking at the thirteenth annual general meeting of the Bombay Sugar Merchants' Association held in the City day before yesterday, Mr. Maneklal Ujamshi, the President, declared that the proposed levy was unjustified, as the sugar industry had up to now prospered entirely at the cost of the consuming public. Proceeding, Mr. Ujamshi observed:

"In the early months of 1948-49, sugar mills collected from merchants a large sum of over Rs. 50 lakhs in the name of subsidy at the rate of As. 4 per maund. This amount with interest will be over Rs. 1 crore. Many of the mills have not even paid the amount to the Sugar Syndicate and have preserved the same with them on one excuse or another. This amount should be utilised in the initial stage to meet the loss on exports. The matter is known well to the Government, but it is regrettable that the amount has not been realised from the mills."

This is, indeed, an interesting point. It will be recalled that, in December 1948, as a result of the

EQUITIES REACT AT CLOSE

END-OF-ACCOUNT SELLING

(From Our Own Correspondents)

BOMBAY, *27th March*

AFTER maintaining a steady note for the major part of the week under review and a further gain in values, equities suffered a sizable setback on the Stock Exchange today. End-of-account profit-taking, fears of higher *badla* charges on account of the fact that the next settlement would be a prolonged one extending over three weeks, and baseless rumours about levy of excise duties on steel, rayon, paper, etc., all brought prices down at the close well below the week's best levels. While some of the counters, such as steels and rayons, showed losses over the week, the majority managed to finish with small gains.

Earlier in the week, sentiment was kept intact and the sharp gains recorded in the previous week were well consolidated. The Union Commerce and Industry Minister's speech in the Lok Sabha, in reply to the debate on his Ministry's demand, clarifying the State Trading Corporation's policy, good corporate results and hopes of more liberal U.S. aid provided the main helpful factors.

In the steel section, Tata Ordinaries crept up from Rs. 180.25 to Rs. 181.75, but suffered a setback today to Rs. 178.50. The new shares lost over the week Rs. 1.25 to Rs. 174.25. Indian Irons improved from Rs. 21.36 to Rs. 21.60 before reacting to Rs. 21.08 at the close.

Despite the setback today, textiles recorded moderate gains over the week. Bombay Dyeings moved up from Rs. 55.40 to Rs. 56.40, but drifted today to Rs. 55.60. Centurys gained from Rs. 425 to Rs. 434, before reacting to Rs. 424.50 today. The closing was a shade better at Rs. 426. Kohinoors moved irregularly and rose from Rs. 283 to Rs. 286, but in the reactionary trend which developed today, they dropped to Rs. 281.50. Central Indias lost Re. 1 to Rs. 89.50 and Finlays Rs. 2 to Rs. 281. Gokaks were marked up by Rs. 2 Rs. 153, while Indu Ordinaries were unchanged over the week at Rs. 9.96. Khataus gained Rs. 6.50 to Rs. 160.50. New Greats changed hands Re. 1.50 lower at Rs. 207.50, but Podars were picked up Rs. 5 higher at Rs. 145. Sassoon Silks rose by Re 1.76 to Rs. 8 and Sassoon Spinnings by Rs. 2.75 to Rs. 35. Shree Niwas Cottons showed no change over the week at Rs. 148, while Simplex shed Rs. 2 to Rs. 159.50. Standards were higher by Rs. 4 at Rs. 436 and Svadeshis by Re. 1.50 at Rs. 185. Swans changed hands Rs. 35 higher at Rs. 360. Tata Mills were, however, unchanged at Rs. 41.

Bank and insurance shares were steady with business done at higher levels. In the electricity section, Ahmedabad Electrics were a fraction lower at Rs. 94.70. Bombay Suburbans were maintained at Rs. 104 and Surat Electrics at Rs. 105.50, while Tata Hydros moved up by Re. 1.50 to Rs. 115.25. Andhra Valleys were done Rs. 10 higher at Rs. 1,090 and Tata Powers Rs. 11.25 better at Rs. 1,132.50.

Sugar shares were steady. Belapurs came up to Rs. 242 from the previous week's close of Rs. 239, but finished lower at Rs. 240. Phaltans shed Re. 1 to Rs. 139.50, while Walchandnagars gained over the week Rs. 4.25 to Rs. 283. In the cement group, Associated Cements moved between Rs. 152.50 and Rs. 149.25 and closed at Rs. 150.50 with a fractional gain over the week. The new shares gathered Rs. 3.50 to Rs. 144.50. Digvijays recorded a gain of Rs. 4.75 to Rs. 143. Despite the sharp reaction today, Alcock Ashdowns, in the engineering group, showed a gain of Rs. 25 over the week at Rs. 252.50. Tata Locomotives rallied from Rs. 153 to Rs. 160, before slipping down to Rs. 156.50. Premier Constructions improved by Re. 1.75 to Rs. 169.25. Larsen and Toubros rose by 40 nP to Rs. 14.20 and Mahindras provided a feature with a rise of Re. 1.12 to Rs. 19.24. Among mining shares, Shivrajpurs showed no change at Rs. 97. The Company has maintained the distribution to the shareholders at Rs. 8 per share (made up of a dividend of Rs. 5 and a bonus of Rs. 3) for the year ended 30th November 1957. Indian Coppers were 20 nP higher at Rs. 3.20.

Automobile shares provided a good feature on keen enquiries from interested quarters. Premier Automobiles shot up from Rs. 79.50 to Rs. 87.50 before closing at Rs. 84.50. Hindustan Motors changed hands 80 nP higher at Rs. 7.12. In the shipping group, Scindias moved up from Rs. 16.84 to Rs. 17.36 before closing at Rs. 16.96. Great Easterns finished 24 nP higher at Rs. 20.20. Among miscellaneous industrials, Bombay Burmahs (old) jumped from Rs. 530 to Rs. 550.50, but reacted to Rs. 539.50 at the close. National Rayons suffered a reaction from Rs. 243.25 to Rs. 236.50, while Gwalior Rayons stood 64 nP higher at Rs. 12. Tata Chemicals were steady at Rs. 13.64 and Tata Oils at Rs. 39. Hindustan Levers were done 86 nP higher at Rs. 23.28.

• • • •

Calcutta Stock Exchange

CALCUTTA, *26th March*

Expectations of higher retention prices for steel, increased prices for coal and cement, and improved prospects for sugar industry were the main factors which imparted strength to the Calcutta Stock Exchange during the week under review. The reduction in excise duty on cloth and the suspension of the much-vexed company reserve deposit scheme also continued to attract more buyers. The assumption of office as Finance Minister by Mr. Morarji Desai, too, was looked forward as a favourable factor, since it was thought that Mr. Desai was more practical than his predecessors. His announcement in Parliament that the State Trading Corporation would not step into the tea trade was greeted with cheer. The report that the House of Birla would be starting some industries in Kerala in agreement with the Communist Government there was considered as significant, as it was expected that the attitude of the Communist Members in Parliament towards the private sector as a whole would undergo a radical change and this should be reflected in less labour troubles in industrial areas, where union activity is in the hands of the Communist Party.

The absence of an announcement so far of a cut in export duty on inferior teas had been a disappointment, but Mr. Desai's earlier announcement in his capacity as Minister for Commerce and Industry that a scheme was being evolved was noted. It was hoped that no undue delay would be caused in according the expected relief. Earlier in the week, more jute shares changed hands with the rise in prices of jute goods. The recovery, however, was not maintained, as demand for jute goods from foreign countries petered out towards the end of the week and prices of goods gave way.

Coals received fair attention, as it was thought an increase in coal prices would soon be announced. Central Indias were raised from Rs. 7.06 to Rs. 7.12. Burrakurs jumped from Rs. 22.60 to Rs. 23.25. Equitables were fractionally higher at Rs. 25.87. Another feature was Western Bengals which hardened from Rs. 5.25 to Rs. 5.56. Bengals were, however, unchanged at Rs. 208.

Although there were more enquiries and more business in jutes, recovery was confined to selected counters. Later in the week, there, in fact, was a sagging tendency. Thus, Nationals, after changing hands at Rs. 22.20, as against Rs. 22 earlier, closed lower at Rs. 22.15. Champadanies were unchanged at Rs. 94, while New Centrals moved up from Rs. 13 to Rs. 13.50, and Chitavalsahs from Rs. 10.94 to Rs. 11.31.

Prospects for higher steel retention prices assisted sentiment in speculative Indian Irons. They opened at Rs. 21.33, rose to Rs. 21.43 and closed at Rs. 21.38. Texmacos at Rs. 18.35 were fractionally higher, while Burn and Cos. were fractionally lower at Rs. 325.50. From Rs. 22.25 Jessop and Cos. sagged to Rs. 21.19.

Teas showed small changes. Bishnaths changed hands at Rs. 19.87, as against Rs. 20.50 earlier. Rydaks declined to Rs. 26.87 from Rs. 27.25, but Huldibaris strengthened to Rs. 20.87 from Rs. 19.25 and Patrakolas to Rs. 128 from Rs. 125.

• • • •

Madras Stock Exchange

MADRAS, *25th March,*

The Madras Stock Exchange ruled distinctly steady during the week under review. The sentiment of operators was influenced favourably by the recent grant of a sizable loan by the U.S. Export-Import Bank and reduction in British Bank rate. These developments led to expectations of improvement in credit facilities available to the industries. There was widespread buying in plantation shares at markedly higher prices. The buying was induced by the assurance of the Union Minister for Commerce and Industry that measures designed to give relief to exporters of common teas would be expedited. Textiles were also well supported at higher levels. Following the reduction in excise duty on mill-made cloth, there were hopes of the Government taking steps to relieve the distress caused by the slump in yarn market.

Among tea shares in the planting section, Peermades evoked excellent support and advanced by Re. 1.50 to Rs. 21.50. Coonoors rose by Re. 1.35 to Rs. 20.15, Twyfords rallied a rupee to Rs. 13.50, Talayars gained 80 nP to Rs. 9 and Nonsuch Teas 88 nP to Rs. 21.50 *cum-div.* Parksides and Haileyburias put on 50 nP each to Rs 17.25 and Rs. 17.75, respectively. Among coffee shares, Coffee Lands were in the limelight, their quotation spurting by Rs. 1.25 at Rs. 32.50. Consolidated Coffees went up by a rupee to Rs. 23.95. Rajendras strengthened by 78 nP to Rs. 9.90. Savamalais were 32 nP higher at Rs. 4.35. Rubber shares also attracted good attention. Anandams rose by 90 nP to Rs. 15.40. Malabar Industrials improved by 75 nP to Rs. 14.50. T.R & Ts and Highlands climbed up by 60 nP each, the former to Rs. 6.90 and the latter to Rs. 13.10.

In the textile section, Metturs were well supported, the quotation being marked up by Rs. 6.50 to Rs. 404 *cum-div.* Bangalore Woollens increased by Rs. 4 to Rs. 173 *cum-div.* and Buckinghams by Rs. 3 to Rs. 167 *cum-div.* Ranga Vilas improved by Rs. 2.50 to Rs. 65, Lakshmis by Rs. 3.50 to Rs. 115, Rajalakshmis by Rs. 2 to Rs. 74 and Coimbatore Spinnings by Re. 1.75 to Rs. 61. R.C. Ambikais, however, were quiet at Rs. 153 *cum-div.*, reflecting disappointment of operators over the cut in dividend to only 7 per cent. for the year ended 31st December 1957, as against 20 per cent. in the previous year.

Among miscellaneous industrials, Hindustan Levers were higher by Re. 1.37 at Rs 22.87 *cum-div.* Spencers hardened by 40 nP to Rs 17. A. V. Thomas were better by 30 nP at Rs. 16.30. India Cements rose by 27 nP to Rs. 27.12 and Radio and Electricals by 25 nP to Rs. 6.

STATE BANK OF HYDERABAD

PROFIT IMPROVES SIZABLY

THE twelve months ended 31st December 1957 represent the first full year of working of the State Bank of Hyderabad (Managing Director: Mr. Balwant Singh, Hyderabad) after it was reconstituted and taken over by the Reserve Bank of India in October 1956 under an Act of Parliament, known as the State Bank of Hyderabad Act 1956. The working results of the Bank for the year under review are not strictly comparable with those for the previous accounting period, because the latter related to the fifteen months ended December 1956, following the change in the Bank's financial year-end from September to December. That the Bank has done well during 1957, despite the higher establishment costs, is evident from the fact that the profit, after providing for taxation, amounts to Rs. 5.29 lakhs, as compared with Rs. 4.43 lakhs (also after providing for taxation for the previous fifteen months. The profit for the corresponding twelve months of 1956 was Rs. 4.02 lakhs (subject to provision for taxation).

Out of the profit for the year under review, the Directors have transferred Rs. 2.94 lakhs to the reserve fund (as against Rs. 1.35 lakhs set aside from the previous fifteen months' profit) and have maintained the allocation to the pension fund at Rs. 75,000. The provision for gratuity fund has been doubled from Rs. 25,000 to Rs. 50,000 and a sum of Rs. 1.10 lakhs has been provided for bonus to staff as against Rs. 1.35 lakhs paid for the previous fifteen months. No allocation has been made to contingency fund, for which a sum of Rs. 1.62 lakhs had been provided a year ago.

The paid-up capital of the Bank is unchanged at Rs. 50 lakhs. With the transfer of Rs. 2.94 lakhs from the year's profit, the reserve fund has been brought up to 50 per cent. of the paid-up capital. The deposits as on 31st December 1957, at Rs. 13.78 crores, show a slight fall from Rs. 14.60 crores a year ago. Though the decline in deposits is small, it is in distinct contrast to the general trend of deposits of commercial banks. The Directors, however, attribute this fall partly to the repayment of Government deposits in accordance with the arrangements entered into with the erstwhile Government of Hyderabad and the Reserve Bank of India at the time of the appointment of the Bank as the agent of the Reserve Bank for the conduct of Government business in Hyderabad. There has also been some loss of deposits at the branches of the Bank in Bombay, as a result of the Bank's decision, as part of its revised policy, to restrict certain types of facilities previously made available at the Bombay branches, and its decision not to offer high rates of interest. Of the deposits, fixed deposits have declined from Rs. 6.38 crores to Rs. 5.74 crores and current and other accounts from Rs. 6.96 crores to Rs. 6.54 crores, while savings bank deposits have gone up from Rs. 1.26 crores to Rs. 1.49 crores.

On the assets side, advances have recorded a marked fall from Rs. 9.72 crores to Rs. 7.42 crores. Loans, cash credits and overdrafts have declined from Rs 7.84 crores to Rs. 6.03 crores and bills purchased and discounted from Rs. 1.88 crore to Rs. 1.39 crore. The fall in total advances is "accounted for partly by a delay in the momentum of seasonal advances and partly by the more cautious policy followed by the Bank in the matter of granting advances." The relatively sharper fall in advances as compared with that in deposits has brought down the credit ratio from 66.6 per cent. to 53.9 per cent. Investments are slightly higher at Rs. 3.11 crores (as against Rs. 3.03 crores a year ago), at which level they bear a ratio of 22.6 per cent. to deposits, the corresponding ratio at the end of 1956 being 20.8 per cent. Cash balances (including money at call and short notice) have been considerably enlarged from Rs. 2.48 crores to Rs. 3.76 crores, of which money at call and short notice alone accounts for Rs. 2.67 crores, having gone up from a mere Rs. 3 lakhs, while other cash balances have dwindled from Rs. 2.45 crores to Rs. 1.09 crore. The cash ratio has gone up from 17.1 per cent. to 27.3 per cent., and, together with investments, the total liquid assets as at the end of the year constitute 49.7 per cent., having been strengthened from 37.7 per cent. at the end of 1956.

The Bank continued to function as the agent of the Reserve Bank of India for the management of Government transactions and the custody of the currency chests of the Issue Department of the Reserve Bank of India at the centres where it was handling this work prior to the reorganisation of States.

NEWS IN BRIEF

A CENTRAL Government Press will be located at Mettupalayam in Coimbatore district, according to a proposal received by the State Government from the Centre. The acquisition of land for the Press has already been completed.

A preliminary survey in connection with the conversion of the Miraj-Pandharpur-Kurduvadi line into broad gauge has just been completed. Preliminary reports after its examination from the commercial and accounts points of view will be submitted to the Railway Board in about a month. The scheme is estimated to cost Rs. 10 crores.

The joint steamer companies of Gauhati have announced an increase in all freight rates by approximately 10 per cent., from 1st April. The enhancement of rates is said to have been necessitated by the continued increase in all overhead costs, while the revenue did not rise to the expected level owing to unfavourable river channels in Assam and Cachar.

The Union Government is expected shortly to approve schemes formulated by State Governments for the institution of apprenticeship courses for skilled and semi-skilled workers to undergo training in automobile and other industries. The schemes will commence working from next academic year. A sum of Rs. 34.76 lakhs has been allocated for next year for expanding industrial training institutes in Madras State.

India is expected to buy Thai rice again after a lapse of several years. The Indian Ambassador to Thailand, Mr. Mohan Sahay will make an offer for Thai rice after his return from leave soon. India is planning to increase her industrial goods exports to Thailand. It had suspended rice purchases from Thailand after a dispute over a rice shipment some years ago.

A limited company with a capital of Rs. 1 crore has been formed at Tiruchi in Madras State for manufacturing insulators and for producing malleable and non malleable castings and non-ferrous castings. The factory, which will be started shortly in Vadalur near Neiveli, is expected to commence production by July next year. It will have a production capacity of 1,200 tons of insulators, 2,000 tons of castings and about 120 tons of nonferrous alloys a year.

Negotiations with a U.S. firm for setting up a streptomycin plant at the penicillin factory at Pimpri near Poona have been practically finalised. The project will cost about Rs. 1.5 crores. The plant is likely to go into production in about two years. It will produce streptomycin and dihydrostreptomycin. The annual production is expected to be in the neighbourhood of 45,000 kilograms of these anti-tuberculous drugs. When in full production, the factory, it is stated, will be able to meet the entire requirements of the country in these drugs.

The Government of Bombay has appointed a study group of experts, with the Secretary to the Public Works Department as Chairman, to examine and propose specific measures for solving a number of problems arising mainly from over concentration of industry in the suburban and metropolitan areas of the Bombay City. The problems relate to overcrowding, shortage of housing accommodation, lack of open spaces and playing fields, and congestion of traffic. The study group will consider the possibilities of dispersing industry over a wider area by regulating location of new industrial units.

A decision to equip Dum Dum airport at Calcutta with a runway adequate for jet operation is expected to be taken by the Government shortly. Without such a runway, it is stated, the airport will not be able to handle the heavy volume of international traffic it now receives, when airlines switch over to jet aircraft. At present, Dum Dum receives four times the international traffic handled by Santa Cruz at Bombay. Construction of a jet runway for Santa Cruz has already been sanctioned, presumably because it is Air India International's base and A.I.I. is planning to operate jet airliners.

The U.P. Government has enforced the U.P. Foodgrain Dealers Licensing Order and U.P. Rice Mills (Licensing and Control) Order 1958, throughout the State with immediate effect. Accordingly, all dealers in foodgrains within the State, having stocks of 100 maunds or more of wheat, barley, bajra, jowar, rice, paddy, maize or products thereof, and owners, having a rice mill in which paddy is hulled and processed for conversion into rice by power, are required to obtain licences from the Regional Food Controllers who are the licensing authority for the purpose. The orders have been issued with a view to maintaining and increasing supplies of essential commodities and for securing their equitable distribution and availability at fair prices.

The Central Board of Trustees of the Employees' Provident Fund has decided to recommend to the Central Government that interest at 3¾ per cent. per annum be credited to subscribers' accounts for 1958-59; the same rate of interest was declared for 1957-58. The total amount of provident fund contributions for 1958-59 on which the rate of interest has to be declared is estimated at over Rs. 46.46 crores and the net amount available as interest is Rs. 1.76 crores. The rate of interest has thus been worked out at 3¾ per cent. The Employees' Provident Fund scheme, which was introduced in six industries in November 1952, now covers 37 industries, including plantations and mines. The total number of establishments brought under the purview of the scheme till the end of December 1957 was 6,272, with an aggregate 2,895,000 employees. Of these, 2,367,000 employees or about 82 per cent. are receiving the benefits of provident fund.

From Abroad

The forty-second Swiss Industries Fair will be held at Basle from 12th to 22nd April next. Exhibitors numbering more than 2,300 and divided into 17 business groups will give an almost complete survey of Swiss industrial production.

The Ceylon Government is expected to introduce shortly legislation to restrict foreign capital investments in local industries. This, according to Mr. William de Silva, the Industries Minister, is due to the fact that certain domestic industries are being threatened with closure by unhampered foreign investments.

The Japanese Ministry of Trade has proposed to "normalise" import financing to some extent so as to increase imports for sterling payment. The proposal was made in connection with the compilation of the import budget for April-September. It is stated that Japan's sterling balances have increased and are likely to grow further.

The Malayan tin industry may have to lay off up to 7,000 workers if the price of tin and the production quota continue to remain at the existing level, according to the Minister of Labour. Of this number, a vast majority would be from Chinese mines. Already up to the 1st inst., 4,203 workers had been retrenched. The total number of workers in the industry is estimated at 40,000.

The introduction of a tea export duty on an *ad valorem* basis in place of the flat rate of 65 cents per lb., is contemplated by the Ceylon Government. The measure is designed to give relief to medium tea growers and small holders who have been adversely hit by the flat rate of export duty. The scheme will, in all probability, be put into effect before the end of April.

A new commercial air record has been set by a Trans World Airlines "Jetstream" airliner by flying non-stop from London to San Francisco via the Polar route in 19 hours 5 minutes. The previous record time for the 5,500-mile flight was 19 hours 26 minutes. It is stated that the airliner made the trans-Polar crossing non-stop flight despite the prevailing head winds usually encountered between London and California.

The Ceylon Government proposes to introduce an *ad valorem* export duty on tea, in place of the present flat rate of duty of 65 cents per lb. The new rate of duty is likely to come into effect before the end of April. The details of the scheme have not yet been disclosed, but it is expected that the duties will be in the form of excise levies collected at the weekly auctions. A statutory Tea Board will also be set up to supervise the scheme.

The President of Mexico has authorised a cut of 43 centavos per kilo in taxes on the export of coffee. An *ad valorem* tax of 25 per cent. will now be levied on a price of 9.75 pesos a kilo. The decline in prices of coffee in the U.S. market in recent months has adversely affected growers in Mexico who made a representation to the President for an export tax relief. Mexico has fixed the export quota of coffee for the quarter ended June 1958 at 283,551 bags.

The New South Wales University of Technology in Australia hopes to complete in about six months a solar furnace which can vaporise metals within seconds. The furnace, one of the biggest of its kind in the world, will concentrate the sun's rays by means of mirrors and produce temperatures up to 7,000 degrees Fahrenheit, which means only 3,500 degrees less than the sun's surface heat. It has been designed to help test materials capable of withstanding extremely high temperatures, urgently needed for the construction of rockets.

The Austrian Government's investment programme for the current year will consist of an issue for an investment loan of 600 million Austrian schillings. Of this, 150 million schillings will be taken up by the banks, the entire balance being issued to the public. A special characteristic of the loan is that the investor will be able to choose between two types of bond—a 6 per cent. bond with a bonus or a 7 per cent. bond without bonus. The price of issue is 98 per cent.

The U.S. State Department has announced that it is expanding its programme of assistance so as to meet the demand for highly trained scientists from non-Communist countries. Accordingly, the National Academy of Science will administer the project, under which 150 scientists will be brought to the U.S. from non-Communist countries for two years of advanced scientific training and research. It is stated that, out of the 150 scientists, 60 will come from Europe and Africa, and 30 each from the Far East, Near East and Latin America.

The New Zealand Government holds the view that its case for anti-dumping duties has had lukewarm response from Britain. Revealing this at Auckland recently, Mr. Philip Hollaway, New Zealand Minister for Industries and Commerce, said that Britain was at least dangerously slow in making up its mind. He questioned whether this hesitancy implied that the U.K. was turning its back on the difficulties of a loyal member of the Commonwealth in favour of "flirtation" with doubtful European markets and added that, the sooner Britain was frank about it, the better.

American technicians have developed a machine which can read an article or scientific paper and then write a condensed version of it. The machine is called "Auto Extract." The article to be condensed is first transcribed in a code on a paper tape which is fed into the machine. The machine analyses the test for frequency and distribution of words, determines the relative degree of the significance of the words, and grades each sentence according to importance. Then it automatically extracts and prints the most important sentences.

PERSONAL

MR. Hans Olav has been appointed Ambassador Extraordinary and Plenipotentiary of Norway to India.

Mr. Morarji Desai, Minister of Finance, has been appointed a member of the Planning Commission.

Mr. D. Hogg has been elected Chairman and Mr. R. Maulik, Vice-Chairman of the Indian Mining Association for the year 1958-59.

Mr. A. L. Corke has been elected Chairman and Mr. Mohammed Yaqub Vice-Chairman of the Tanners' Federation of India, Kanpur, for the year 1958.

Messrs. Hiralal L. Shah and B. M. Ghia have been elected President and Vice-President, respectively, of the Association of Merchants and Manufacturers of Textile Stores and Machinery, India, for the year 1958.

Mr. A. St. John Shuttleworth, Branch Manager of the Federation of British Industries in India, left India this week for Rangoon *en route* to London where he will join the Commonwealth and East Asian Department of the Federation. Mr. Shuttleworth has been succeeded by Mr. G. P. Brownie.

Mr. N. V. Ullal, Manager, Khatau Mills, has been unanimously elected Chairman of the Bombay Section of the Textile Institute, Manchester, for the year 1958. Mr. J. G. Parikh, Secretary, Silk and Art Silk Mills' Research Association, has been unanimously re-elected Honorary Secretary of the Bombay Section of the Textile Institute for the year 1958. The other members of the Committee elected for the Bombay Section for the year 1958 are Dr. C. E. Salkeld, Prof. R. K. Mody, Mr. J. J. Master, Mr. D. P. Ketkar, Mr. B. V. Dalke and Prof. T. V. Ananthan.

Mr. C. H. Bhabha (Central Bank of India), Mr. N. M. Chokshi (Bank of Baroda) and Mr. S. L. Kothari (Bank of Jaipur) have been re-elected Chairman, Deputy Chairman and Honorary Secretary, respectively, of the Indian Banks' Association for the current year. The other members of the Committee are:

Mr. T. R. Lalwani (Bank of India), Mr. M. R. Ruia (United Commercial Bank), Mr. Kamalnayan Bajaj (Punjab National Bank), Mr. S. Krishnaswamy Iyengar (Indian Bank), Mr. Sanjiban Banerji (United Bank of India), Mr. P. V. Gandhi (Devkaran Nanjee Banking Company), Mr. F. K. F. Nariman (Union Bank of India), Mr. N. K. Karanjia (Central Bank of India) and Mr. C. Eknath Kamath (Canara Bank).

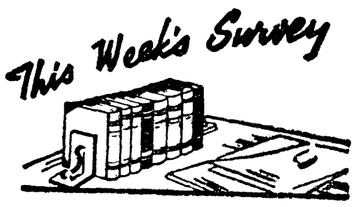
"COMMERCE" 1933

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *1st April*

The Road-Rail Controversy

We cannot, we regret, compliment the Select Committee upon the report they have issued on the Bill to amend the Railway Act. The first and primary task which the members of the Committee were called upon to perform was to consider the possible co-ordination of the rail and road services, and to see whether new powers can judiciously be extended to the railway companies for running their own motor services without unduly interfering with private enterprise. But their findings, if not *ultra vires*, are remarkably wide of the mark in many instances. They have gone far out of their way in order, apparently, to check the possible development by the railway companies of canal traffic and aerial transport; but the use, or non-use, of the waterways by the railways is a matter of little consequence; and the same may be said of the possible extension by the railway companies of commercial aviation; although, to be sure, it seems grossly improper that any restriction should be placed upon the development of these public utility services. When the members of the Committee turn to the legitimate portion of their task they again confuse the issues in a perfunctory, haphazard, and deprecatory manner.



PRODUCTIVITY IMPROVEMENT

ANY programme of productivity improvement, if it should succeed, must be recognised by all sections of people as an instrument of national economic betterment. It also needs to be developed as a national movement with the full understanding and support of employers, labour and technical experts within industry. With the establishment of the National Productivity Council at New Delhi under the presidentship of Mr. Manubhai Shah, Union Minister for Industry, with Dr. P. S. Lokanathan as Chairman, it should now be possible to give the movement proper direction and perspective. The movement is of comparatively recent origin in India, having had its start only in 1952 when an I.L.O. productivity mission arrived in India for work in the field of productivity improvement. The Council was established in pursuance of the recommendations of the Indian Productivity Delegation which visited Japan in 1956 under the leadership of Dr. Vikram A. Sarabhai.

At its first meeting held in New Delhi on the 22nd inst., the Council has drawn up an eight-point programme for launching a vigorous productivity drive. The main features of the programme are dissemination of information relating to productivity, training in productivity techniques, organisation of productivity services at important industrial centres, promoting inter-plant visits, sponsoring of productivity delegations to advanced countries, training of personnel abroad and inviting foreign technicians and specialists. The Council's decision to confine its activities and those of the proposed Local Councils to the field of industry initially is a wise one as it is not advisable to seek to cover too many fields in the first instance.

Under the programme approved by the Council, a technical inquiry service and a technical digest service are proposed to be organised to answer technical inquiries from industries and to disseminate information collected from different sources. The aim is to propagate productivity-consciousness among the people. This aspect, it must be emphasised, is very important for the success of the drive, as the experience of Israel has shown. In that country, the concept of productivity has penetrated almost every aspect of life—industry, agriculture, the armed forces, transport and administration and has been responsible in no small measure for the success of its productivity improvement programme. The Israel Institute of Productivity, which is a statutory body, has been mainly instrumental in inculcating productivity-consciousness among the people. There is also the need in India to educate workers of the exact significance of the term productivity improvement, for there is a danger of its being regarded as a synonym for rationalisation and provoking the opposition of labour.

The Council proposes to organise training of management at all levels in the techniques and process of productivity, including scientific management, human relations, job evaluation, wage incentives, industrial designs, work measurement and methods analysis. The productivity service will be organised through regional productivity units. About 15 Local Productivity Councils are proposed to be established in 1958-59 which will be the main instruments for propagating productivity concepts.

PLANNING COMMISSION

In the course of his second Laski Memorial Lecture at the Laski Institute of Political Science at Ahmedabad, Professor D. R. Gadgil, the well-known economist, permitted himself to indulge in some forthright criticism of the Planning Commission. He said that the Commission had proved impotent and failed in almost every aspect. It had failed to put together detailed and meaningful projects after technical and other examination; it had not produced objective criteria relating to programmes and allocations; it had failed to produce annual plans with appropriate breakdowns or to watch the progress of the Plan even in its broadest elements; it had failed to insist on right policies being followed and at times even participated in the adoption of wrong and inappropriate ones. All this failure, he felt, could be traced to the fact that the Commission, which was essentially an advisory body, had come to mix itself with the actual processes of deciding public policies even in matters other than development. He added: "It is the 'power complex' of the Planning Commission and its non-ministerial members—which prompted them to exercise patronage and power like ministers—that has led to the Commission's neglect of its main functions and extension of its activities to many irrelevant fields." He observed that the second Plan was a sizable step towards a planned economy but the authorities had failed to execute it in a planned manner. This failure was evident from the non-adoption of such elementary policies as those relating to price stabilisation and absence of precautions for the conservation of agriculture, food and foreign exchange reserves.

It is not clear why Prof. Gadgil did not express such strong views all these years or even at the time the Panel of Economists met at New Delhi early this year. But the more important question is: How far is his criticism correct? For one thing, Mr. Gadgil cannot denounce the Commission for its failure to insist on adoption of right policies and at the same time blame the Commission for mixing itself with the process of formulation of policies. We do not know how far his allegation of "power complex" in the Commission is correct. But it is true that some observers have felt that the Commission was becoming something of a super-cabinet. If that is true, it is perhaps part of the price for a regimented economy to which both the Government and the Commission are committed. Finally, Prof. Gadgil deplores the absence of precautions for the conservation of agriculture, food and foreign exchange resources. May it not be that these defects arise from the nature of the second Plan itself? And yet, Prof. Gadgil has had no criticism to offer on the size of the Plan in relation to the resources in sight. Nevertheless, if the general sense of his criticism is taken to mean an insistence on greater drive and vigour in administration, in all its aspects, it is all to the good.

EXCHANGE GAP AND INDUSTRIAL PROGRESS

The official apologists generally explain the foreign exchange crisis as being due to large imports of capital, rather than consumer, goods and also insist that, as against the debit factor of the reduction in foreign exchange reserves, there is a sizable credit factor in the shape of increased and more diversified industrial production. In the course of his recent reply to the debate in the Lok Sabha on the demands of grants for the Ministry of Commerce and Industry, Mr. Manubhai Shah, the Union Minister for Industry, was at some pains to emphasise that the entire trend of the import of different types of goods had been "one of promotion of industrial development in this country." He pointed out that the imports of goods not vital to the national economy, particularly consumer goods, were being gradually "tapered off." Imports of consumer goods which were valued at Rs. 214 crores in 1955 and Rs. 216 crores in 1956 declined to Rs. 163 crores in 1957. On the other hand, the import of machinery had risen from Rs. 55 crores in July-December 1955 to Rs. 66 crores in January-June 1956 and still further to Rs. 74 crores and Rs. 84 crores in July-December 1956 and January-June 1957 periods respectively. Again imports of producer goods or what Mr. Shah called "industrial goods," increased from Rs. 177 crores in the first half of 1955 to Rs. 196 crores in July-December 1955 and still further to Rs. 229 crores in January-June 1956 and Rs. 252 crores in July-December 1956; it was Rs. 292 crores in January-June 1957.

Mr. Shah contended that it was not correct to say that industrial production had gone down as a result of exchange restrictions. The fact was that, except the cotton textile industry, all other industries had recorded increase in production. The general index of industrial production (Base: 1951=100) rose from 122 in 1955 to 133 in 1956 and still further to 147.2 in 1957. Again, the country's industrial base had been strengthened by the development of machine-building industry. In this connection, he drew attention to the increase in production in several old industries and the establishment of new industries. India had no industry for the production of industrial machinery in 1947. In 1957, it produced Rs. 36 crores worth of heavy machinery; this level was bound to increase with the passage of time. The Government had decided to set up, with Russian collaboration, a central heavy machine building plant at Ranchi at a cost of Rs. 80 crores in the first stage and Rs. 160 crores in the second stage. This plant, he claimed, would be one of the biggest steel machinery manufacturing plants in the world. Other significant increases in industrial output to which he called attention include: (1) the Hindustan Machine Tools factory has already crossed the target meant to be reached in 1960-61, (2) Hindustan Cables has also crossed the 1960-61 target by producing 650 miles of cable; India—will soon be self-sufficient in cables, and (3) Hindustan Antibiotics has produced 26 million mega units of antibiotics, as against the 1960-61 target of 24 million mega units.

Although this survey of industrial production is impressive in its own way, it must be admitted that it refers to a period in which the import restrictions had not yet begun to be felt. It remains to be seen whether this trend will be maintained in the current year and the next. Further, the fact that drastic restrictions on imports became necessary so soon after a period of liberal imports suggests that the earlier optimism was unwarranted. The Government's failure to make a careful appraisal of foreign exchange earnings and expenditure is perhaps the most deplorable episode in recent economic history.

IRON ORE TO JAPAN

Agreement has at last been reached between India and Japan on the project for the development of iron ore potential of this country and its export to Japan. The project covers three schemes—exploitation of ore deposits in the Rourkela area, construction of a railway link from the mines to the Visakhapatnam port through Sambalpur and Titalgarh, and development of the port. The last-mentioned scheme envisages setting up of two berths (with appropriate machinery) for handling ore-loading exclusively. The whole project is expected to be completed by 1964, the year from which India will supply to Japan annually two million tons of ore for an initial period of ten years. The price of ore payable by Japan will be determined from year to year, depending on the average of the export price for countries other than Japan minus a small rebate.

The aggregate capital outlay of the project is estimated at Rs. 40 crores ($84 million), including the foreign exchange requirement of about Rs. 14.76 crores ($31 million). Of the foreign exchange requirement, Japan will contribute Rs. 3.81 crores ($8 million) in the form of equipment and machinery on long-term deferred payment basis. The balance of Rs. 10.95 crores ($23 million) is expected to be secured from the U.S. The Government of India is making an application to the U.S. Government for assistance from the President's Asian Economic Development Fund; the application will be supported by the Japanese Government.

By a separate exchange of letters between Mr. K. B. Lall, Joint Secretary to the Union Ministry of Commerce and Industry, and Mr. S. Nagano, President of the Fuji Iron and Steel Mills of Japan and leader of the Japanese steel mission, it has been agreed that the possibility of India supplying to Japan every year 250,000 to 450,000 tons of iron ore from the Sukinda area through the port of Paradip in Orissa should also be explored. The proposed quantity is in addition to the 7.2 million tons of ore India has agreed to sell during the five years ending 1962 under the contract between the State Trading Corporation and the Japanese steel makers.

Negotiations for the long-term programme of Indian iron ore development and its shipment to Japan, it will be recalled, commenced some months ago. A Japanese technical survey mission, headed by Mr. C. Asada, submitted its report to the Government of India in January last. In this report, the mission expressed its preference for developing in the first instance of the Bailadila mines in the Bastar district of Madhya Pradesh rather than the Kiriburu deposits of the Rourkela region on the Orissa-Bihar border. This view was based on three considerations. First, the Bailadila mines are very near to Visakhapatnam, the distance being only 189 miles by one route and 292 miles by an alternative route, while the distance between the Rourkela site to Visakhapatnam is as much as 463 miles. Secondly, the construction of railway line will be quicker and movement of ore to the port speedier. Thirdly, the cost of constructing railway line will be less; it will be

only about Rs. 19 crores from Bailadila to Visakhapatnam (alternative route), as against Rs. 23.3 crores from Rourkela to Visakhapatnam.

The aforesaid recommendation was stoutly supported by the Japanese steel industry mission during its recent discussions with the representatives of the Government of India, held at New Delhi. The latter, however, insisted on the exploitation of Rourkela mines in the first instance. Apart from the known desire of the Orissa Government, the Railway Ministry was reported to prefer a railway line between Rourkela and Visakhapatnam to that between Bailadila and Visakhapatnam. For it was suggested that the former line could be used for moving a considerable volume of general goods traffic besides iron ore, whereas the Bailadila-Visakhapatnam line would be overwhelmingly an ore-carrying line. After protracted negotiations, agreement has now been reached incorporating the Indian point of view, although the Government of India has agreed to the Japanese proposal for exploring the possibility of supplying an additional quantity of about 250,000-450,000 tons of iron ore a year from the Sukinda area through the port of Paradip in Orissa.

Thanks to the aforesaid agreement and with the gradual development of mining areas in India, exports of iron ore to Japan may be expected to be of the order of four to five million tons per annum. The current ruling price of iron ore (Fe 60 per cent.) is about Rs. 45 per ton. On this basis and taking the quantum of shipment as 4.5 million tons, the foreign exchange earned will work out to over Rs. 20 crores annually. While the export of iron ore helps India, it will also assist Japan greatly in the development of its steel industry. Viewed thus, the understanding reached between the two countries must be widely welcomed as a landmark in the history of Indo-Japanese economic relations.

AGRICULTURAL PRICES

How best can agricultural prices and incomes be stabilised in the countries of Asia and the Far East? Although this problem is by no means a new one, it has assumed special importance in recent years. The economy of these countries is predominantly agricultural and their prosperity depends to a large extent on the export earnings of farm products. A disquieting trend of late is that trade in farm products has failed to keep pace with the expansion in world trade, following reduction in the dependence of the industrially advanced western nations on raw materials. This aspect was well brought out by Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, when he inaugurated the two-week Food and Agriculture Organisation seminar on policies to support and stabilise agricultural prices in Asia at New Delhi last week. As Mr. Jain rightly declared, as long as the Asian region continues to derive its foreign exchange largely from agricultural products, the aforesaid trend "is far from agreeable." Mention must be made here to the fear of possible adverse repercussions of the formation of the European Common Market with overseas territories associated with it on the export trade of Asian countries in agricultural commodities.

In this content, the F.A.O. has certainly done well to convene a special seminar to discuss the various aspects of farm economy in the Asian region. The success of the seminar will, of course, depend on whether it will be able to discover what Mr. Jain aptly described "the most acceptable and the least expensive measures to support and stabilise agricultural prices and incomes and to control consumer prices." The seminar should also point to solutions to some of the specific questions referred to by Mr. Jain such as the methods of price and income support suitable for each country, the statistical problems involved in assessing costs, the incentive effect of guaranteed prices, the response of farmers to indirect measures of assistance, and the impact of support and stabilisation measures on particular economics.

While examining the question of stabilising prices of agricultural commodities, due consideration must be paid to the need for safeguarding the interests of consumers, on the one hand, and avoiding the creation of any imbalance in the agricultural economy, on the other. This point must be specially stressed in India where the powers-that-be have made use of guaranteed minimum prices in respect of a few important commodities, particularly sugarcane, guided by purely political and ideological considerations. As Mr. Jain himself frankly admitted, guaranteed minimum prices have resulted in creating an imbalance in the output of different competing crops; sometimes, in periods of acute scarcity of foodgrains, the cultivators change over to the production of sugarcane or some other commercial crop which is financially more attractive. The authorities, according to Mr. Jain, are, therefore, feeling their way to a more comprehensive objective, namely, price stabilisation, rather than mere price support for individual commodities considered in isolation. But one may wonder whether overall price stabilisation is not a more difficult task than price support, depending for its success on the control of a large number of factors in the national and international spheres.

CEILING ON LAND HOLDINGS

It is a misnomer to call the land legislation proposed by many State Governments as "land reforms," because what they seek to achieve is not reform of the existing tenure patterns but a revolution of the whole concept of property ownership in land. How else could one look at measures which translate into practice the spirit of such predatory slogans as "Land to the landless" and "Tiller should be the owner of the land." Land reform enthusiasts do not seem to bother much about the wider implications of the policy they seek to implement. If the ownership of land should vest with the tiller, it is only logical that the ownership of factories should also remain with workers. What is really amusing is that the avowed aim of the reforms is to ensure social justice and higher production. It is hard to understand how the Government's taking over of land in excess of a fixed ceiling in return for an arbitrarily fixed quantum of compensation and distributing it among landless labourers who have neither the capacity nor the means to cultivate them efficiently could serve the ends of justice and result in enhanced production. But this is exactly what is envisaged in the various Land Reforms Bills currently on the legislative anvil in many States. The Kerala Agrarian Relations Bill, now before the State Assembly, proposes to fix the ceiling on land holding at as low as 15 acres of double-crop land for a family of five members. The Government of Andhra Pradesh has proposed to fix ceiling on the basis of an annual net income of Rs. 5,400. Under the proposed measures, future acquisition of land will also be covered by a ceiling.

In view of these and other similar developments, the All-India Agriculturists' Federation has done well to urge, in a memorandum submitted to the Government of India and the Planning Commission, that, pending a reappraisal of the land reforms policy by the Government and the Commission after consultation with agriculturists and those conversant with all aspects of agriculture, the State Governments should be directed not to rush with the proposed reforms. The memorandum has also requested the Prime Minister to meet a deputation of members of the Federation so as to enable them to explain their viewpoint regarding the contemplated enactments. According to the memorandum, there are many "blind spots" in the land reforms proposals, many of which, if carried out, will not only cause social injustice on a large scale but will also result in a disastrous decline in agricultural production and standards of cultivation. The memorandum deals at length with the question of ceiling on holdings and redistribution of land and points out that fixation of low ceilings will inevitably lead to further fragmentation of holdings and result in the break-up of some of the efficient commercial farms in the country. It will also replace the well-to-do farmers, who have the means to improve the productivity of the soil, by those who are neither acquainted with modern methods of agriculture nor have the means to introduce them without the help of the Government. Experience in all countries has shown, the memorandum points out, that fragmentation of large farms into small holdings will inevitably result in lowering the standards of cultivation and reducing the crop yield. Economic studies have also established that small-scale farming is a subsistence occupation and that the small farmer is no better off than a village cobbler or weaver.

The memorandum rightly draws attention to the assistance that will be required by those newly settled on land for purchasing bullocks, farm implements, etc. It points out that the total credit the Indian agriculturist now receives from all sources does not exceed 10.3 per cent. of the total expenditure, as against 60 per cent. in the U.S. Hence it will be beyond the capacity of even a rich government to undertake the huge commitment of financing millions of landless families to be settled on land, not to speak of a Government which is already in financial straitjacket. The curse of Indian agriculture is its primitive condition and this will be perpetuated by the proposals to impose a low ceiling on agricultural income and agricultural holdings. Too low a ceiling would also not permit mechanisation of farms. It is for this reason, the memorandum points out, that wherever ceilings are imposed, including some of the Eastern European countries, they have been fixed at fairly high levels.

The correct approach in carrying out land reforms will certainly be to treat agriculture on a par with industry. In the latter, it is not necessary that workers of a factory should be its owners. The guiding motives of agricultural policy, as the memorandum itself points out, should be increased production and equitable distribution of profits.

PALAI CENTRAL BANK LIMITED

NOTICE IS HEREBY GIVEN THAT THE 30th Annual General Meeting of the above Company will be held at the Registered Office of the Company at Palai on Thursday, the 24th April 1958, at 3.30 p.m., to transact the following business:—

1. To consider the audited Balance Sheet as at and Profit and Loss Account for the year ended 31st December 1957 and the reports of the Directors and Auditors.
2. To declare a Dividend.
3. To elect Directors in place of retiring Directors.
4. To consider and if thought fit to pass the following resolution of which special notice has been received by the Company:—

   "RESOLVED that the age limit of 65 years prescribed under Section 280 of the Companies Act shall not apply to Sri K. Joseph Augusti and that he be allowed to continue to hold the office of the Managing Director of the Company even after the conclusion of the 3rd Annual General Meeting held after the commencement of the Act."

5. To appoint an Auditor or Auditors and to fix his or their remuneration. The retiring Auditors, Messrs. Srinivasan & Co., Chartered Accountants, are eligible for re-appointment.
6. To transact any other business that can be transacted at the meeting.

The Explanatory Statement under Section 173 of the Companies Act is annexed hereto.

A member who is unable to attend in person is entitled to appoint another (whether a member or not) as his proxy to attend and vote instead of himself subject to section 176 of the Act. Such proxy should reach the Registered Office of the Company at least 48 hours before the time fixed for the meeting.

The register of shareholders and the Transfer Books of the Company will be closed from 25th March 1958 to 23rd April 1958, both days inclusive.

By Order of the Board,
K. JOSEPH AUGUSTI,
Managing Director.

PALAI, *17th March*, 1958.

ONLY A SMALL PART OF ADDITIONAL TAXATION USED FOR THE PLAN

DEFICIT FINANCING CONTINUES TO BE THE SHEET ANCHOR

From A Special Correspondent

NEW DELHI, *25th March*

IT is, indeed, amazing that the heavy additional taxation imposed in the name of the Plan since the Budget of 1956-57 has *virtually* not been available for financing it to a greater extent than in 1955-56.

DELHI LETTER

In my letter last week, it was stated that practically no portion—the word "practically" is now added by way of correction—of this revenue increase (of about Rs. 180 crores in the 1957-58 budget over the 1956-57 budget) was *really* available for the Plan and the small current saving (Rs. 61.5 crores) available for the capital budget in 1957-58 was practically what was available for the purpose at the 1955-56 level of revenue itself. The position was not materially different in the case of revenue expenditure on Plan schemes which was not covered in last week's letter.

The revenue expenditure on the Plan in 1957-58 (revised) was Rs. 98 crores which was about the same as in 1956-57 and a little more than in 1955-56; such expenditure proposed in 1958-59 is Rs. 122 crores which, in the light of the trend of reduction in the revised estimates from the budget estimates on this account in 1957-58, is not likely to be more than Rs. 100 crores ultimately. It would thus appear that additional taxation has not financed either the capital or the revenue schemes of the Plan to any significantly greater extent than what was possible at the 1955-56 level of revenue itself.

It might be said that additional taxation at the Centre has contributed, to some extent, to the financing of State Plans. Even this contention cannot easily be sustained, because, for one thing, the aforesaid figures of revenue expenditure on the Plan already include revenue grants to State Governments on account of some Plan schemes and, for another, the progressive increase in the States' shares of income-tax and some Union excise duties appear to have been matched, in their turn, by increases in their own security and administrative costs. This much at least can be safely inferred; Central contribution in the form of grants and loans, aggregating Rs. 720 crores, to the State Plans in the first two years of the second Plan has represented, in the last analysis, deficit-financing of about Rs. 600 crores at the Centre. *Prima facie*, there is warrant for the impression that additional taxation has almost entirely financed, whether at the Union or the States' level, only the expansion in security services and the increase in administrative costs of developmental and social services which, too, do not appear to have expanded at a faster rate than the growth of population.

No Consolation to Tax-payer

If it is obstinately contended that no significant economy in security and administrative costs is possible, it has to be examined whether the revenue and capital expenditure proposed in the 1958-59 budget on the Plan schemes can be pruned to any extent. The actual accounts for the year may well reveal ultimately that some pruning has taken place without anybody's prodding even as it has happened in the first two years of the second Plan. But this can be no consolation for the taxpayer who is initially confronted with a bigger budget provision every year for the Plan and forced to pay taxes for the the year may well reveal ultimately that some sort of dishonesty about the thing when the actual Plan expenditure is quietly allowed in a budget year to fall short of the original budget provision. For example, the actual outlay on account of the Central and State Plans together in 1956-57 was Rs. 670 crores, as against the budgeted provision of Rs. *830* crores and in 1957-58 was Rs. 845 crores as against the budgeted provision of Rs. 965 crores, while in the two years together the actual outlay involved deficit financing, by the Centre and the States, of about Rs. 700 crores which was more than what was originally contemplated for those two years.

Incidentally, this higher deficit financing was bad for the consumer who was forced, through a higher level of prices, to restrict even essential consumption and was thus stealthily deprived of a part of his real income. If the anxiety to reach the impossibly high targets of budgeted Plan expenditure in the first two years was responsible for a heavier dose of inflationary deficit financing than what was initially contemplated for those years, it may be that, in 1958-59, also a like attempt will be made to reach an impossibly high target of Plan expenditure (by the Centre and the States) of about Rs. 1,000 crores by a heavier dose of deficit financing than the Rs 205 crores now contemplated for the year. This danger is real, particularly because heavy food imports are to take place and these imports will be expected (wrongly perhaps) to cushion off the inflationary impact of larger deficit financing. It is in this context that the need for pruning the budgeted Plan expenditure here and now for the year becomes apparent.

The Possible Lines

The possible lines in which pruning could well take place are broadly indicated here in respect of the Centre's Plan schemes for 1958-59. On the revenue side, the budget provision of Rs. 8.32 crores in all for the handloom and *khadi* industries and for the Ambar Charkha programme should have been reduced by 50 per cent, in order not to queer the pitch, at a time of accumulation of cloth stocks, for the cotton mill industry which any day is vastly more important than the handloom sector if only for the reason that it clothes three-fourths of India's population. In the same way the provision of Rs. 6.93 crores for such largely experimental schemes as those covering pre-primary elementary and basic education, basic women education, audio-visual aid to education, etc., should have been reduced by half. The project for ground water exploration (for tube-well construction), costing Rs. 0.75 crore, could well have been deferred in view of the comparative failure of medium (tube-well) projects to provide cheap and dependable irrigation. Similarly, the provision of Rs. 0.5 crore for agro-economic research could well have waited for a later year. At least, one of the non-Plan schemes on the revenue side, namely, assistance to States for raising the emoluments of low-paid officers, costing Rs. 6 crores, should have been dropped on the ground that it is the States' responsibility to find the resources for raising the level of remuneration for their low-paid employees. In all, therefore, an economy of about Rs. 15 crores on both Plan and non-Plan schemes included in the revenue budget should have been possible.

On the capital side, the provision for purchase, to the tune of Rs. 2.5 crores, of shares of the State Trading Corporation should have been deferred. Similarly the proposed development of broadcasting, costing Rs. 2.2 crores, could well have waited for a later year. The provision of Rs. 12.2 crores in all for the Delhi capital outlay on the civil works programme and for the capital outlay on buildings should have been reduced by two-thirds on the ground that a number of Central Government offices which are needlessly concentrated in Delhi could be shifted to available accommodation in other cities of the country. The provision on account of civil aviation, costing Rs. 6.3 crores, should also have been reduced by half. In all, therefore, an economy of about Rs. 15 crores on the Plan schemes included in the capital budget could well be effected.

Pruning of State Plans

Similar pruning of the State Plans for 1958-59, expected to cost Rs. 562 crores in all, might conceivably reduce the proposed expenditures by Rs. 70 crores. It may be that even, with a possible reduction of about Rs. 100 crores in the planned outlay for the year, the likely resources will be sufficient for a total outlay (by the Centre and the States together) of, say, Rs. 800 crores only. The one certain advantage of timely pruning of the planned outlay for the year will be that it will restrain the temptation to resort to a larger dose of deficit financing.

The chances of this taking place are, of course, slender, and the voice of Dr. B. R. Shenoy himself is a voice in the wilderness. It is, indeed, a distressing state of affairs where, without giving substantial tax relief which is certainly possible and without even making the larger part of additional taxation available for the Plan, the Government continue to resort, almost deliberately, to the technique of inflation for taxing away stealthily a part of the real incomes of fixed income groups. And this in spite of the polite warning given here well before the budget by Mr. Per Jacobsson of the International Monetary Fund against the pitfalls of continued deficit financing! The smug answer that any inflationary pressures generated by deficit financing will be counterbalanced by increase in production ignores two relevant considerations. One is that the Plan schemes are largely of a kind that will not bring about an early and commensurate increase in production to absorb wholly the inflationary impact. The other consideration is that there is always a considerable time-lag between an initial spurt in prices and the effective operation of price restraints—a time-lag during which the mischief is already done. There seems to be no alternative to the sound financial advice of Mr. Per Jacobsson, however conservative it may appear.

Central Loans to States

The Government of India has turned down the second Finance Commission's scheme of consolidation governing repayment of loans made to various States, except in regard to loans given for rehabilitation of displaced persons and interest-free loans. This decision is contained in the explanatory memorandum on the action taken by the Government on the recommendations of the Finance Commission which Mr. B. R. Bhagat, Union Deputy Minister for Finance, placed in the Lok Sabha on the 14th inst. The four-tier scheme of consolidation for repayment of balances of all outstanding loans due from the States to the Centre as formulated by the Commission was as follows:

Rate of Interest %	When repayable	Consolidation
3 or more ..	On or after 1st April 1977	Single loan at 3 per cent. repayable on 31st March 1987.
Do. ..	On or before 31st March 1977	Single loan at 3 per cent. repayable on 31st March 1972.
Less than 3..	On or after 1st April 1977	Single loan at 2½ per cent. repayable on 31st March 1987.
Do. ..	On or before 31st March 1977	Single loan at 2½ per cent. repayable on 31st March 1972.

The main consideration which has weighed with the Central Government in rejecting the aforesaid scheme is that its implementation would affect the ways and means position of the Centre, since it would have the effect of postponing the repayment of loans normally due during the next 15 years. Consequently, there will be a reduction in the resources available for the Centre to assist the State Governments by way of fresh loans either for plan projects or for projects outside the Plan. The Government has also rejected the suggestion of the Commission for the fixation of a uniform rate of interest for all States irrespective of the purposes for which the loans have been taken. For, in its opinion, the rates of interest should have some relevance to the purpose of the loan. It has, however, conceded that the scheme of consolidation must be left for discussion with individual State Governments. It has accordingly laid down and communicated to the State Governments the following basis for calculation of interest rates on loans granted to States:

Industrial and commercial enterprises and industrial housing: The rate of interest should remain unaltered.

Electricity undertakings and extension of power facilities: The rate of interest should be refixed at 4 per cent. for all loans.

Multi-purpose river valley projects: The loans for each project should be broken up into two parts—one for power and the other for irrigation and other purposes. The loans allocated for power should bear interest at 4 per cent. Where such an allocation is not possible, an *ad hoc* rate should be settled for the composite loans in consultation with the State Government concerned and the Planning Commission.

Other loans (excluding loans for rehabilitation of displaced persons and interest-free loans): The rate of interest should be refixed at 3 per cent., except that, where the rate now applicable is less than 3 per cent., the lower rate shall continue to apply.

The Government of India has, however, accepted the Finance Commission's recommendations pertaining to loans for rehabilitation of displaced persons. Accordingly, with effect from 1st April 1957, the States should pay to the Union only the amounts of principal and interest they collect on account of these loans, including the arrears, if any, outstanding on that date.

While this concession is quite welcome, it must be emphasised that the State Governments should not relax their efforts to recover these loans. The Centre has also accepted the Commission's view that the terms of repayment of all interest-free loans—that is, loans given mostly for the construction of educational buildings, assistance to handloom and cottage industries, industrial or other housing, etc.—must remain unaltered.

The Government of India proposes that the revised arrangements should apply to outstandings of loans sanctioned during 1956-57 and 1957-58 and take effect in the case of all loans other than those for rehabilitation from 1st April 1958. The effect of the proposed revision is expected to be a reduction on the whole of about Rs. 4 crores per annum in the interest burden on States on account of loans taken between 15th August 1947 and 31st March 1958. The reduction would have been more by a crore of rupees if the Finance Commission's scheme of consolidation had been accepted. It may be noted here that the past ten years have witnessed an appreciable increase in the amount of loans given by the Central Government to the States. The total outstanding debt of the States to the Centre as at 31st March 1956 was as much as Rs. 900 crores, as against Rs. 195.41 crores before the first Five-year Plan commenced (31st March 1951) and Rs. 43.97 crores on 15th August 1947. The total amount of loans granted by the Centre to the States in the first two years of the second Plan (that is, for 1956-57 and 1957-58) is about Rs. 497.38 crores. The budget provision for 1958-59 is put at Rs. 284.51 crores; this raises the total for the three years of the second Plan to Rs. 781.89 crores.

U.K. INVESTMENTS IN INDIA

Foreign business investments in India from the United Kingdom as on 31st December 1955 were of the order of Rs. 391.99 crores, as compared with Rs. 347.28 crores on 31st December 1953 and Rs. 209.95 crores on 30th June 1948. This information was given in the Lok Sabha on Tuesday by Mr. B. R. Bhagat, Deputy Minister for Finance, in a written reply to Mr. D. C. Sharma. The Deputy Minister added that figures relating to such investments were collected only periodically and not annually. Hence figures for each year or for later years were not available.

LONDON LETTER

ON NOT SEEING THE WOOD FOR THE TREES

From Our Own Correspondent

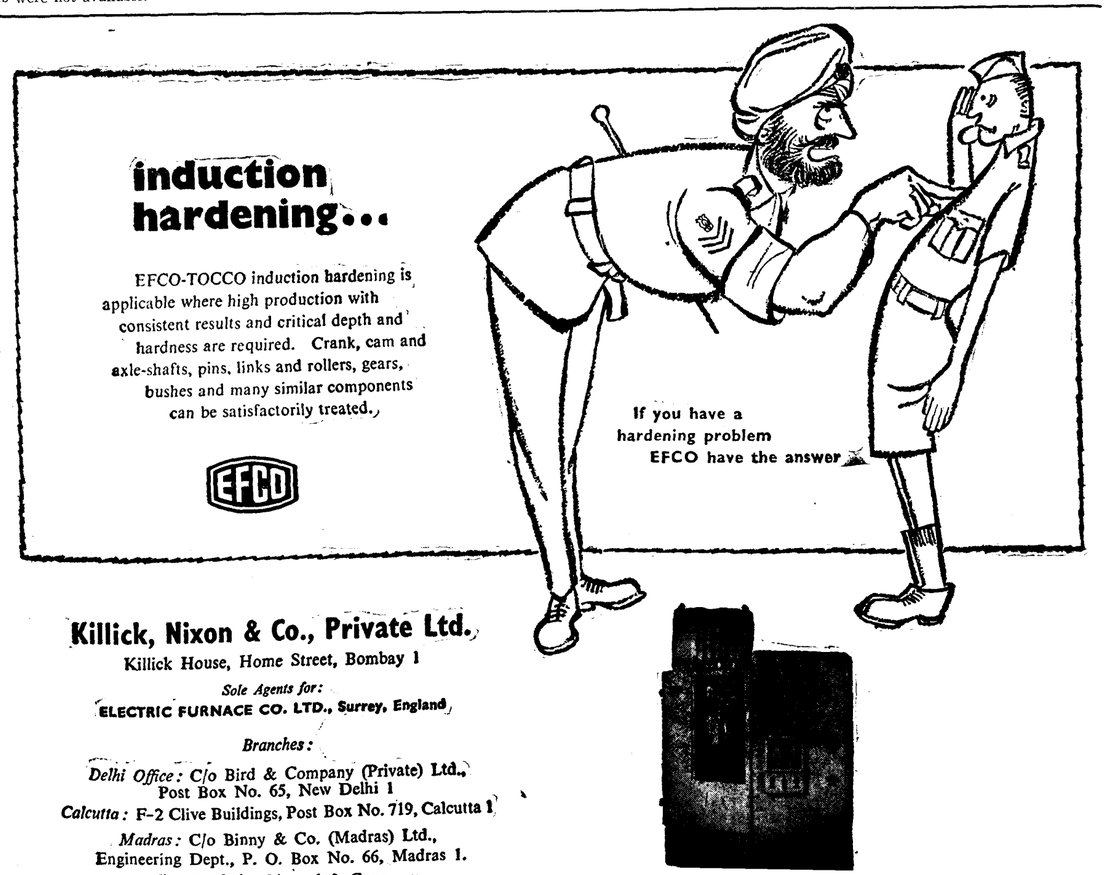
LONDON, *21st March*

ONE can quite see the outlook of the Bank of England sitting daily in the money market obsessed by the high level of money rates and the low price of Gilts; one can also see the point of view of the Treasury obsessed first by the high rate being paid for Treasury bills and next by the mounting flow of hot money into this country. But both could surely have remembered that Bank rate has a broad economic and psychological significance quite apart from its immediate impact on money rates and foreign funds. If this broader significance had been given due weight, would the Bank rate have been taken down now?

The official explanation of course is that 7 per cent. was a crisis rate. And the crisis was over; so it became pointless to maintain the rate, especially as it was inviting an embarrassing inflow of hot money which would make the gold reserves look fictitiously robust. But this is a very odd argument and, although some people in the City find it understandable, the retort is that the crisis has been over for some months and that the 7 per cent. could have been brought back to 6 per cent. certainly not later than the turn of the year. The reason why it was maintained has been underlined by every Government spokesman since the crisis: it was to emphasise the need to keep down bank credit, discourage borrowing and encourage saving. It was frankly disinflationary; many people have thought it masochistic—but however, one might quarrel with it, it was a logical part of a *financial* technique for combating inflation.

It is fully expected that the budget statement in two or three weeks will present a full analysis of the country's economic path—especially since the preparation of the budget has involved the resignation of a Chancellor of the Exchequer. If the weapons against inflation were to be altered, would not that have been the time to lower Bank rate—and so announce the result as part of the budget measures? But the fact that the Government have announced that the reduction of Bank rate does not mean any encouragement to either borrowing or reflation suggests that they do not want the Bank rate to be looked on as a monetary measure. This is what makes the whole policy so incomprehensible. From the crisis onwards, the Bank rate was a symbol of monetary severity—now apparently the more mundane considerations of the effect of a high Bank rate on money market rates in general and on Gilt-edged predominate. In other words, the Bank and Treasury officials closest to the problem can no longer see the economic and psychological arguments, because of the immediate fiscal disadvantages. But the fact that their view has prevailed suggests that the Government no more understood their own Bank rate policy than a baby understands a new toy. It finds it attractive, it plays with it, it gets tired of it and throws it away!

One would like to think that the Government are aware of the need for them to take some steps to avoid recession in this country following the American path. And they could take many steps without cheapening credit or they could cheapen credit along with the other steps, but to cheapen credit by itself looks like an error in timing, unless, of course, the Chancellor of the Exchequer and the Governor of the Bank thought it would be a good idea to move Bank rate when, as it were, nobody was looking and avoid any anticipation on the eve of the budget. Indeed peering behind the scenes at all the embarrassments which the Government has had to suffer in recent weeks, one can quite see this step as an anxious measure against an accusation of a further Bank rate leak! And, if so, one is fully entitled to take the Government's assurance that the step has no economic significance, at its face value!—*All Rights Reserved.*



CONTRIBUTION OF BANKING TO NATION'S ECONOMY

REVISION OF OFFICIAL ATTITUDE AND POLICIES STRESSED

JUDGED from all angles, the banking system in India has given a good account of itself during the past year. The banks, Indian and foreign alike, have done a great deal in channelising the savings of a large number of citizens, as witness the growth in the deposits of banks, have spared no efforts in serving the ever-increasing needs of the nation's trade, commerce and industry and have maintained their capacity to produce satisfactory results. In short, the banks in India have played a great part in assisting the authorities in the general economic uplift of the nation. There is, however, a feeling in banking circles that this contribution of banks to the economic well-being of the country is not being evaluated fairly and sincerely by a section of politicians. It is also felt that, with better encouragement and support from the Reserve Bank, Indian banking would be able to carry forward its mission with greater zeal than heretofore.
