OURS is a story worth telling. It is really a chapter in the story of our country's industrial progress. India's first ring spinning frame rolled off our assembly lines in 1946. We have since added other firsts to our credit—the Lancashire type boiler and the water-tube boiler. Some of the largest sluice gates in India have been erected by us at Rupar. At Hirakud we have provided giant penstock liners. For the Indian Railways we manufacture rolling stock and locomotive boilers. At Sindri our chemical plants and equipment are at work. We have started manufacturing sugar and jute mill machinery. For the D.V.C. we are now fabricating a variety of equipment. Our products are manufactured to international standards and in technical collaboration with the world's best know-how. This is how Texmaco serves India's basic industries.

THE KOHINOOR MILLS COMPANY, LIMITED

SIXTY-THIRD ORDINARY GENERAL MEETING

MR. E. D. SHEPPARD'S ANALYSIS OF THE CAUSES FOR LOWER CLOTH OFFTAKE

THE view that the high food prices form the basic cause for the fall in cloth consumption was expressed by Mr. E. D. Sheppard, Chairman of the Kohinoor Mills Company, Ltd., in the course of his speech at the Sixty-third Ordinary General Meeting of the Company held in Bombay on 10th April 1958. Until such time as the food position became easier with the consequent lower prices, he added, it was hard to foresee any real improvement in the textile industry.

The following are extracts from Mr. Sheppard's speech:

"The year under review has been a difficult one for Indian industry, in general, and for the textile industry, in particular. The year started with the industry still reeling from the blow of the steep excise duty increase in the previous autumn and when it was just coming round to take stock of the situation and to try to assess the future, the new pattern of taxation announced in the May budget sent share prices tumbling to levels lower than those seen for many years. It was a year of hard work and frustration. A significant comment on the new pattern of taxation is that your Company is at this moment called upon to pay taxes equal to 114 per cent. of its assessable profit for the year. Taxation is, of course, inevitable and taxes have to be paid, but there is no reason why their form should not be simple and equitable. The present tax structure is not only complex but operates inequitably as between unit and unit. While nothing can be said by its most ardent supporters in favour of the wealth tax on companies, with its insidious erosion of capital resources, it is the dividends tax that I find the most regressive and inhibiting. Based as it is on paid-up capital only, it penalises most unfairly, companies such as yours which have ploughed back their profits during past years. But worse still, it directly penalises the investor, to whom the country is now looking for fresh capital for new enterprises.

"If the people's sector is to fulfil its part in the second Plan, it must raise capital and for that purpose can only look to gentlemen like yourselves who have already shown your willingness to risk your heritage or your savings in order that industries, great and small, may be built up. To levy this additional tax directly on the return you receive on your moneys so invested, thereby reducing your capacity to invest further, seems to me a most peculiar way of encouraging new capital formation which, all are agreed, is so vitally necessary to the country's progress. To me this seems like deliberately diverting a part of a stream of pure drinking water flowing into an arid land before it can reach those who are thirsting for it and anxious to quaff it to the full. However, I believe there are now signs in New Delhi of a better understanding of our problems.

The Villain of the Piece

"Turning to the textile industry as a whole, many of you will be wondering how, with an ever-increasing population and greater earning capacity in the industrialised areas of the country, the demand for cloth has latterly fallen off. The villain of the piece has been last year's monsoon. It is an established fact that food prices and cloth prices are very closely linked. If the price of food goes up, the demand for cloth goes down. The vast majority of the population, already living on a bare subsistence level, could hardly eat less, but they can always wear their old clothes for another year. This is the basic problem and until such time as the food position becomes easier with consequent lower prices, it is hard to foresee any real improvement in the textile industry. In this connection it is interesting to note that the fine count mills are thought, on the whole, to have fared better than others. I would suggest that this reflects the benefit they derive from selling their products to a public less affected by a rise in food prices. Medium count mills like yours, and coarse count mills are the ones who feel the pinch most.

"There are, of course, other factors which affect the movement and sale of cloth. At all levels the wholesale and retail trades are less able to hold stocks to meet future demands. Wealth and expenditure taxes have tightened everybody's purse strings and the credit squeeze has done the same. Another consideration is the high rate of excise duty. It is not only the monetary incidence of this duty that is so irksome but also the bewildering frequency with which the Government sees fit to alter it. Merchants, understandably enough, do not want to burden themselves with large stocks, the value of which is liable to be reduced overnight if a sudden reduction is made in the rate of duty. These other factors do help to make the position more difficult, but I wish to emphasise that less taxation, freer credit conditions and lower excise duties would not put more money into the pockets of the vast majority of people who buy cloth. It is the financial position of the man in the street and agriculturalist that dictates what prices can be obtained and what profits can be made by your mill and the whole industry.

Stocks

"You will note that sales of cloth, yarn and waste are lower by more than fifty lakhs, while stocks of finished goods are up compared with those at the end of 1956. I would like to comment briefly on the effect of the large holding of stocks by mills in general. Owing to the fall in demand, many mills have had to pile up stocks in their godowns and when they need money to make purchases or to pay wages, they sell off a portion of these stocks, often at give-away prices. How does this affect us? While, generally speaking, we get a favourable price for our goods, there is a limit to the premium that people will pay for the name *Kohinoor*. These emergency sales of accumulated stocks by various mills have a very real effect in depressing the market for all of us. It is reported that a number of mills are closing down shifts which will slow down the rate of stock accumulation. I feel that in time, therefore, the basic economic law of supply and demand may prevail to the benefit of the whole industry. Of course, your Company is in a strong position and I am sure that we can weather the present storm successfully.

Exports

"As you are aware, half of the output of your mills is in the form of sewing thread and yarn and, as mentioned last year, there is an overproduction of yarn in the country. This has been brought about by Government's vacillating policy of allowing, and then prohibiting, exports from time to time as the years went by. The overseas buyer soon got tired of relying on these intermittent supplies and looked for sources whence he could obtain his requirements regularly as and when he wanted them. Thus, Pakistan and Hongkong were enabled to replace India as suppliers of yarn to many markets previously served by India and it looks as if most of these markets are lost permanently. In the meantime, the handlooms which were expected to consume the additional yarn thus retained in the country have failed to do so. The idea that exports are things that can be turned on and off like a tap, can have duties imposed on them at will from time to time, and will still continue to flourish whenever required, is quite fallacious. The foreign buyer may put up with these conditions for a while, but in the meantime he is busily engaged seeking alternative sources of supply and it is usually not long before he finds them. India is desperately in need of foreign exchange and, in order to earn it, a long-term settled export policy is essential, even at the risk of some temporary shortages at home. Let us hope that no further obstacles will be placed in the way of exports of yarn and sewing thread and that even at this late hour we may be able to retrieve the position to some extent.

"In the meantime, owing to the unremunerative prices of weaving yarn, many mills are entering the sewing thread market with the result that keen competition has brought the prices down to very near the cost level.

"The remarks made by Mr. Milne, in my absence last year, concerning imported cotton seem to have fallen on deaf ears. As pointed out in the report, import licences continue to be given on a piecemeal basis which makes purchasing and the planning of future production most difficult. These licences were formerly granted on a 'first come, first served' system. I feel that the present quota system, unsatisfactory though it might be, is a far more fair way of allocating the small imports that may be allowed. While urging the Government to continue this system, I would appeal once again for a more far-reaching system of import licences. The country's resources and the mill industry's needs can be forecast fairly accurately from year to year, so there seems to be no reason why an import policy for the twelve-month period cannot be worked out.

Another Worry

"I wish to say a few words about another matter which has been worrying us for some time. Ever since the virtual elimination of imports of rayon yarn, the local prices have risen very considerably. While there has been a fractional increase in the price of finished rayon cloth, it in no way covers the higher price that now has to be paid for the yarn. This is a problem affecting not merely our No. 3 Mill, which, as you know, is mainly engaged in the production of rayon cloth, but also many smaller units which may be forced to go out of production. It will be in the best interests of the local manufacturers of rayon, therefore, to ensure that a fair method of distribution at reasonable prices is arranged so that the art silk industry may not be overtaken by shut-downs and unemployment.

"With regard to the selling agents' commission for the year under review, I have to report that the selling agents have agreed to accept a lower rate of commission, that is to say, 1 per cent., with effect from 1st January 1958 until further notice, a measure which I hope will meet with your approval. Normally speaking, the reduction would have been made in 1957, but our selling agents asked whether it might be made from the beginning of the current year in order to avoid serious income-tax problems for them. In consequence, the benefit will accrue to the Company from this year onwards until such time as the profits have returned to normal.

The Future

"You will expect me to say something about the future. It is difficult to be optimistic though personally I feel we are over the worst, and that a slow and gradual improvement may be hoped for. Large withdrawals have had to be made this year from the reserves to meet tax liabilities and to maintain the dividend and this is not a process that can be continued indefinitely. Unless market conditions improve quicker than seems likely, it may be necessary to reduce the dividend next year. I hope we shall not have to take this step, but I feel it my duty to warn you now of the possibility.

"Meanwhile, your agents are taking all possible steps to reduce costs and have other plans in mind to increase the earning capacity of your mills in the future."

NOTE.—*This does not purport to be the proceedings of the Meeting which is being sent separately to shareholders.*

Resident Field Engineer

The unique
HOLLERITH SERVICE

The accountant's visitor had come to see what sort of job Hollerith punched card machines were doing. "Tell me," he asked, "what sort of service did Hollerith give you?" This time the accountant looked surprised. "Did?" he queried, "Surely you know that one of the big things about Hollerith is the *continuous service.*"

The two reports

In Hollerith installations your equipment is, as it were, 'hand-tailored'. Your problems are very fully studied before the first careful report is presented to you. No fee is charged for this service. The second report is a detailed working plan in which the flow of work—every facet of the operation—is set out in full.

First careful report

Consultant, guide and friend

The Technical Service Man sees your installation in. Trains your staff. Stays with you till you are absolutely at home with your mechanised office. The maintenance of your machines is now in the hands of the Field Engineer who is always very quickly available.

Responsible advice

Modern business, because its control is based on figures, points all the time to mechanisation. You may only need simple punched card equipment. You might even be ready for an electronic computer. An electronics specialist is available to discuss this with you. Why not send for him? No fee is charged.

Trains your staff

The Hollerith Type 550 Electronic Calculator

Footnote

Hollerith is a vast organisation with immense research facilities, a network of offices throughout India, and a very long experience of Indian business needs.

THE UNITED COMMERCIAL BANK LIMITED

MR. G. D. BIRLA'S SPEECH AT FIFTEENTH ANNUAL GENERAL MEETING

PLEA FOR RESTRAINT IN COMPETITION FOR DEPOSITS AMONG BANKS

THE alarming tendency among banks to try to attract fresh deposits by offering high interest rates was deprecated by Mr. G. D. Birla, Chairman of the United Commercial Bank Ltd., in the course of his speech at the Fifteenth Annual General Meeting of the Bank held in Calcutta on 9th April 1958. While calling for a restraint in such competition, Mr. Birla observed that, if it was conceded that the second Plan disbursements by themselves resulted inevitably in the flow of new deposits, it followed logically that the offer of higher interest rates was unnecessary in order to induce deposits.

The following is the full text of Mr. Birla's speech:

"GENTLEMEN,

"The balance-sheet and profit and loss account of the Bank have been in your hands for some time and you would, no doubt, have noticed with pleasure the continued progress achieved by the Bank during the year to which the accounts relate.

"You will notice that the total of the current, savings and fixed deposits and other accounts at the end of 1957 stood at Rs. 61.07 crores, as compared with Rs. 52.15 crores at the end of 1956. The increase in deposits of Rs. 8.92 crores represents a rise of 17.1 per cent. which is a higher rate of increase than 9.3 per cent. recorded in 1956 and compares with the rise of 16.9 per cent. in the deposits of Scheduled banks other than the State Bank of India, for the year 1957. The rise in the deposits of the State Bank of India was much higher than that of the banking system by reason of certain adventitious factors to which reference is made in the report of that bank.

"Cash on hand and with banks and money at call and short notice amounted to Rs. 8.23 crores and represented 13.5 per cent. of our deposit liabilities.

Investments

"The investments of the Bank in Government and other approved securities at Rs. 19.94 crores were only Rs. 50 lakhs higher than our holding at the end of 1956. The additional resources which accrued to the Bank from the increase in deposits were utilised primarily to repay the loan taken from the Reserve Bank of India during the 1956-57 busy season, thereby enabling the Bank to work within its own resources. The cash balances and unencumbered investments together amounting to Rs. 27.92 crores give a ratio of 45.7 per cent. to total deposits.

"The amount of bills discounted and purchased declined from Rs. 15.92 crores to Rs. 13.00 crores, but the high figure of bills at the end of 1956 was due to the conversion of advance accounts into bills for 'rediscount' with the Reserve Bank of India under the Bill Market Scheme. The figure at the end of 1957 is the normal figure and does not include any created bill. This self-liquidating asset forms 21.3 per cent. of the deposits of the Bank.

"The total of our liquid assets, cash on hand and with banks, money at call and short notice, unencumbered investments and bills represents 67 per cent. of our deposit liability which, you would agree, is a highly satisfactory liquidity ratio.

"Our advances at Rs. 24.69 crores are roughly 40 per cent. of our deposits. There is a decline in the total of our advances and bills in conformity with the policy of credit squeeze pursued during the second half of 1957.

"The foreign exchange business of our Indian and overseas branches continued to expand and our London branch shows considerable increase in its activity and usefulness.

"The credit for the excellent results of the working of the Bank goes primarily to the General Manager, Mr. S. T. Sadasivan, and his able deputies and assistants, to whom I take this opportunity of offering the thanks of myself and of the Board of Directors. I wish also to record our thanks to the other members of the staff of the Bank for their contribution in achieving these results and I took forward to greater co-operation from them in the current year and the years to come.

"The official Bank rate of the Reserve Bank of India was raised on the 15th May 1957 from 3½ per cent. to 4 per cent., but the rate for advances to Scheduled banks against Government securities, which had earlier been raised from 3½ per cent. to 4 per cent. was left unchanged. At the same time, the stamp duty on usance bills of exchange, which was intended to act as a surcharge on interest rate and which was raised to As. 2 per cent. for three months or part thereof, was reduced to one-fifth of 1 per cent. per annum. As a result of these changes, loans against Government securities cost the Scheduled banks 4 per cent., while loans against bills cost a minimum of 4-1/5 per cent.

Money Market

"Monetary conditions during the earlier part of 1957 were, as a result of the severity of the 1956-57 busy season as well as the already fully extended position of the banking system, extremely stringent, and the demand for accommodation from trade and industry imposed a severe strain upon the resources of the commercial banks. In addition to the need to satisfy this seasonal demand, the banks were called upon to finance the heavy imports of steel, which were at the time being made. Fortunately, the Reserve Bank of India, which has displayed a sensitive awareness of its role in the monetary sphere in terms of the implementation of the second Plan, suitably anticipated the difficulties that might be presented during the 1956-57 busy season, and, by substantially liberalising the bill market scheme, under which it approved lines of credit totalling approximately Rs. 150 crores, thereby giving the banks all the money they asked, enabled the commercial banks to tide over this period of stringency. Borrowings from the Reserve Bank of India against both Government securities and bills reached a peak of Rs. 103 crores at the end of March 1957, and this figure would have been much higher but for the receipt by the State Bank of India of extraordinary deposits arising from the sale of U.S. surplus commodities under P.L. 480 which enabled the Bank to dispense with borrowings from the Reserve Bank of India altogether. At about the same time, but gathering momentum in the second half-year, the deposits of commercial banks also began to rise and eased the strain under which they were functioning. But during the great part of the year Scheduled banks, other than the State Bank of India, and, in particular, the Exchange banks, had to resort to heavy borrowings from the central banking institution and also to sell off a part of their holding of Government securities.

Credit Squeeze

"It was during the slack season of 1957 that the favourable circumstance of an increase in deposits, coupled with a decline in advances, began week by week to improve the position of Scheduled banks. On the one hand, early in June, the Reserve Bank of India, in pursuance of its policy of selective monetary control and with a view to bringing down prices and discouraging speculative holdings of stocks, directed the commercial banks to reduce the level of advances against foodgrains. A few days later the Reserve Bank advised the banks generally to reduce the volume of advances and gradually to lower the advances-deposits ratio from the high level that it had reached at the peak of the busy season, so that the banks could, while regaining normal liquidity, find themselves in a better position to take on the next season's demand for finance without undue dependence on the Reserve Bank for accommodation. Towards the close of the year, the Reserve Bank made it known to the Scheduled banks that the facilities under the bill market scheme would not be as liberal as they were at the beginning of the year and that the banks should, normally, try to work on the basis of their own funds and only with a modest resort to central bank credit. These measures, which should be construed to be tantamount to a 'credit squeeze,' succeeded in bringing about a reduction in the level of Scheduled banks' advances from the busy season peak of Rs. 939.87 crores to Rs. 839.98 crores at the end of November 1957. On the other hand, the process of augmentation, throughout the period of the deposit resources of Scheduled banks gathered momentum. During 1957, deposits of all Scheduled banks rose from Rs. 1,101 crores to Rs. 1,369 crores. Even if the State Bank were left out of the reckoning, by reason of its extraordinary receipts, the improvement in the deposits of the other Scheduled banks, still, amounted to the considerable figure of Rs. 145 crores.

Interest Rates on Deposits

"It is clear that the disbursements in connection with the second Plan are to be seen as having a directly favourable impact upon the resources of the banking system. Set against this fact, I find it difficult to understand why banks should persist in bidding for deposits by means of steadily mounting rates of interest. The published accounts of banks reveal how steeply the figure of interest paid on deposits has risen. I had occasion some years ago to speak to you on this same matter when I deprecated the alarming tendency to try to attract fresh deposits by means of higher interest rates. I would like to reiterate here my plea for restraint in the competition for deposits through high rates. If it is conceded that the second Plan disbursements by themselves result inevitably in the flow of new deposits, it follows logically that the attraction of higher interest rates is unnecessary in order to induce deposits.

"It is a matter of pride to hear the Indian central banking institution being described as one of the most efficient in the world. This is no exaggeration, for the selective monetary control instituted by the Reserve Bank has succeeded in keeping at bay the inflationary pressures which this country had to face during 1957. While it is true that the inflationary potential in deficit financing was partly offset by the contractionary influence of a balance of payments deficit, the fact, nevertheless, remains that, by timely directives, the Reserve Bank has played a considerable part in imbuing the Indian economy with stability and in preventing the price situation from getting out of hand.

International Economic Scene

"I shall now turn my attention, albeit briefly, to the international economic scene. After a long tussle with inflation, dear money enthusiasts in the rest of the world have finally won the battle so well as to have induced deflation! The result is that many countries are trying to change into reverse gear, but the process appears to be difficult, and recession in the United States of America is threatening to become an invisible export to other countries. The United States unemployment has reached a 16-year peak of 5.1 million, and other economic indicators also presage a difficult time for the economy. This recession is sought to be got over by a number of programmes, including the easing of credit. For the third time in recent weeks, the Federal Reserve Bank approved a reduction in the discount rate, and the latest cut of half per cent. brings the rate down to 2½ per cent. The Bank of England has also followed the general trend and reduced the Bank rate by 1 per cent. to 6 per cent. Among other countries which have effected a reduction in the discount rate is West Germany, where the Deutsche Bundesbank reduced the Bank rate by half per cent. to 3½ per cent. This is the fourth successive reduction since the autumn of 1956. The Netherlands Bank also cut its Bank rate by half per cent. to 4½ per cent. Quite suddenly, it seems to me that the bogey of inflation has yielded place to the reality of recession. While I shall not presume to advocate a world-wide cheap money policy—after all, conditions in the various countries differ widely, and the level of Bank rate must be consistent with trends in the internal economy of each country—I should nevertheless, point out that we seem to have reached a stage where we may be exaggerating the effect of inflation in present-day conditions. A study has to be made of the extent to which a rise in prices is not necessarily evidence of inflation. After all, when there occurs in improvement in the standard of living, some element of increase in the price level is inescapable. And it is true to say that never before in economic history have so many countries participated in so general a rise in the standard of living. Finally, I should like to say that, in our preoccupation with the so-called dangers of inflation, we should not allow ourselves, as the rest of the world had during 1957, to become oblivious to the even greater danger of recession.

Capital Market

"The prices on the Stock Exchange continued to decline and the downward trend was accentuated by the budget of May 1957 which introduced several new taxes and still further reduced individual and corporate saving capacity. A few new issues of capital and offers for sale were successfully put through, but these issues were rather exceptional, and conditions in the Stock Exchange have remained wholly unfavourable for the raising of any capital for new enterprises. The yield on industrial securities rose from 5.75 per cent. (tax-free), at the beginning of the year to 7.26 per cent. (tax-free) at the end of the year and this factor also contributed to the difficulty of existing companies in procurement of fresh capital by way of debentures or preference shares at reasonable rates. The Industrial Delegation which visited the United States and Europe has pointed out that the limiting factor in getting credit from abroad is not so much the reluctance on the part of foreign institutions and suppliers to give credit as the difficulty of raising internal capital in India itself. It is really the quantum of rupee capital available in India which would appear to determine the finance that could be obtained from abroad. Broadly speaking, it would be necessary to raise 20 per cent. of the capital to be used for the purchase of equipment for any project and the whole of the rupee counterpart of the expenditure on the project before foreign credits could be sought for the rest of the capital. If the minimum rupee capital which, thus, would come to about 50 per cent. of the entire cost of a project could not be raised in the country, there would be no basis for seeking credit from abroad. In view of the fact that it is almost impossible to raise any substantial amount of rupee equity capital, industrial expansion in the private sector will have to come to a stop unless the profitability of industry is restored to a reasonable level through fiscal reliefs.

"It is gratifying to learn that the efforts of the Government of India to raise dollar credits in the United States of America have been successful and that loans of $150 million from the Export-Import Bank and $75 million from the Development Loan Fund have already been arranged, part of which is available for utilisation by the private sector in cover of 100 per cent. of the cost of purchase from the United States. These arrangements imply that, if the private sector is to derive benefit from these loans, it should be able to raise immediately the rupee capital required for the full cost of any project and not merely 50 per cent. of the cost which would have sufficed under schemes of deferred credit or foreign participation.

Economic Situation

"I now turn to the review of Indian economy, and, in doing so, I have inevitably to deal with the second Five-year Plan, the execution of which has become a subject of controversy. There are those who vehemently insist that the plan be implemented *in toto* irrespective of the cost or availability of resources, while others urge that the Plan be pruned or rephased without stating how or to what extent the re-planning should be done. People are apt to forget that the Plan is not an end in itself, but only a pointer to certain objectives, viz., greater production, fairer distribution and increased employment.

"The Plan envisages an outlay of Rs. 4,800 crores in the public sector and Rs. 2,400 crores in the private sector, making a total of Rs. 7,200 crores which, in subsequent estimates, has been still further increased to allow for increased costs and additions to projects. But, sticking to the original estimate of expenditure in the public sector, the main provisions are: Rs. 2,300 crores for transport, communications, power and irrigation; Rs. 340 crores for agriculture and Rs. 690 crores for industry and mining in the public sector (total Rs. 3,330 crores), and Rs. 700 crores for industry, mining and plantations in the private sector. The projects covered by these allotments constitute the core of the Plan, the rest of the Plan expenditure being for community projects, social services and the like. In insisting that the Plan shall be put through at all costs, the Government is more figure-conscious than performance-conscious, more insistent on the amount of Plan expenditure than on the achievement of the planned rise in production or planned increase in employment. The public sector is faced with difficulties in the matter of both spending to the target limit as well as in achieving the production and employment targets. On the other hand, it would appear that the private sector is almost certain to complete its assigned task and invest its full quota of earmarked resources well before the end of the Plan period. Mr. T. T. Krishnamachari, whose exit from the Finance Ministership I deeply depiore, speaking before the annual meeting of the World Bank on 25th September 1957, said:

"'Private enterprise is, in fact, playing a vital role in India. Indeed, its development has never been more marked or varied at any previous period than during the past ten years. To some extent our recent difficulties stem from the very sizable boom in private investment that has been under way. We do not regret this boom as it takes us a step forward towards our objective of higher levels of living.'

"The physical targets assigned to the private sector are also well on the way to fulfilment. The index of industrial production has risen from 100 in 1951 to 168.5 in June 1957.* Privately owned collieries are already producing coal at an annual rate of 40 million tons, as against a target of 48 million tons in 1961. Textile mills were briskly moving towards the Plan target of 8,500 million yards, but there is not enough cotton available to enable this quantity of cotton textiles to be manufactured, and as both internal consumption and exports have dwindled, the Plan target will have to be lowered. Expansion of manufacturing capacity in cement is lagging behind on account of foreign exchange shortage, but enough progress has already been achieved to make the supply position turn easy. Steel is an easy winner. Owing, however, to factors, all too familiar, of shortage of foreign exchange and lack of internal capital, the tempo of industrial expansion is slowing down and the goal of 3 million new jobs is receding. It, therefore, behoves the Government to reappraise the situation and initiate policies calculated to reactivate the industrial sector and to increase the foreign exchange earnings on our export trade.

Need for Foreign Capital

"Our foreign exchange needs will, for years to come, exceed our earnings. But I am averse to the idea of continued borrowing from abroad, because, ultimately, the problem of repayment would become acute. Already, we have piled up future liabilities at an average rate of Rs. 90 crores per annum for a four-year period beginning from 1960-61. It would be better to create a favourable atmosphere in which foreign capital would feel encouraged to invest in our enterprises. Such foreign participation in equity capital would contribute to the creation of new wealth and the question of repatriation of capital would normally not arise so long as private enterprise is allowed to function with a reasonable degree of freedom. In this connection, I should like to bring to the notice of the Government of India the note handed to the Indian Industrial Delegation by the Department of Commerce, Washington, listing the factors which are considered to constitute some of the obstacles to U.S. investment in India and to appeal to the Government to take action to remove the deterrents.

Agriculture

"The weakest feature of the second Five-year Plan is the imbalance between agriculture and industry. Agriculture occupies a key position in our economy. At the end of the second Plan period our total national income is expected to rise to Rs. 13,500 crores, of which nearly 46 per cent. is expected to come from agriculture. If agricultural production is not increased substantially, the purchasing power of the countryside will, in relation to industrial production, be reduced and the latter will ultimately have to go down. Increased food production would polish scarcity conditions with attendant wholesome effect on the psychology of the masses and creation of conditions favourable to higher production. This should be emphasised from another angle also, for it is difficult to contemplate with equanimity, in view of the deteriorated foreign exchange situation, continued imports of between two and three million tons of foodgrains a year for as far ahead as we could visualise. While production of grains in absolute figures is not declining, the increase in output is not commensurate with the addition to population. Even after allowing for the vicissitudes of the monsoon and the failure of rains in some parts of the country it should be possible with greater utilisation of available water in other parts and through more intensive cultivation, to produce a higher yield of foodgrains per acre. But unfortunately, the cut in fertiliser imports is likely to reduce agricultural production still further. We cannot afford to build steel mills at the risk of jeopardising food supplies. The least that should be done is to erect more fertiliser factories at the same time as steel mills.

"Increased production of cash crops could also alleviate our foreign exchange position. An additional 1 million bales each of jute and cotton per annum would mean an annual gain of almost Rs. 55 crores in foreign exchange. There is a scarcity of vegetable oils all over the world and the prices of copra and oilseeds have either remained steady or only slightly declined in the commodity markets of the world, while other internationally traded commodities have been sagging. Our production of oilseeds and the yield of oilseeds per acre have remained static and a 25 per cent. rise in the output of oilseeds would enable us steadily to export to foreign markets vegetable oil which is so much in demand. We were successful last year in exporting about 160,000 tons of sugar earning valuable foreign exchange. Again, if only we could increase the production of foodgrains by 10 per cent. and improve the export of tea and ores, we could achieve a diversification of our exports and substantially improve our foreign exchange earnings with resultant benefit to our foreign exchange reserves. I would go to the length of suggesting that exports of sugar and other commodities in international demand should be encouraged even at the risk of such commodities becoming somewhat scarce in the country or of subsidising such exports.

Tax Relief

"I feel happy to conclude my speech on a note of favourable import. Government have recently announced certain fiscal reliefs by way of repeal of the compulsory deposit of reserves relating to the year 1958-59 and reductions in excise duties on various qualities of cotton textiles. While it had been hoped that these concessions might have formed part of the budget proposals themselves, it is heartening to note that, on due representation being made to them, Government have seen the validity of the requests for relief and have accorded it. If, as I hope, this is indicative of the willingness on the part of the Government to study each situation dispassionately, and not merely from the point of view of revenue, we may look forward to revisions being announced and implemented by Government at timely junctures.

New Finance Minister

"I have great pleasure in welcoming the appointment of Mr. Morarji Desai as Finance Minister. He has held charge of the Ministry of Commerce and Industry with great distinction and he brings to his new and onerous task a reputation as an extremely able and efficient administrator. I am sure that Finance is in the hands of one who will safely steer this important portfolio through the remaining difficult years of the second Plan period."

*The index number for June 1957 is taken because it was at that time that sugar factories ceased production for the season.

REPORT OF THE AUDITORS TO THE MEMBERS OF LLOYDS BANK LIMITED

In our opinion and to the best of our information and according to the explanations given to us, the foregoing accounts of the Bank, with the annexed statements relating to the Bank's subsidiaries, The National Bank of Scotland Limited and Lloyds Bank (Foreign) Limited give in the prescribed manner the information required of banking companies by the Companies Act, 1948, and on the basis therein authorised give, subject to Note I and to the corresponding note on the accounts of The National Bank of Scotland Limited, a true and fair view of (a) the state of the Bank's affairs as at 31st December 1957 and of its profit, ascertained as indicated in the accounts, for the year ended on that date and (b) the state of affairs and the profit, ascertained as indicated in the accounts and annexed statements, of the Bank and its subsidiaries so far as concerns members of the Bank.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for our audit. In our opinion the Bank has kept proper books of account and obtained proper and adequate returns from the branches and the above accounts of the Bank are in agreement therewith. The accounts of the Eastern branches are included therein as at 31st October 1957 and the accounts of the subsidiaries are made up to 1st November and 30th September 1957 respectively.

(Continued in next page)

AUDITORS' REPORT ON THE INDIAN BRANCHES OF LLOYDS BANK LIMITED UNDER SECTION 30 OF THE BANKING COMPANIES ACT, 1949.

We have audited the Balance Sheet of the Indian Branches of Lloyds Bank Limited dated 31st December 1957 and above set forth and the annexed Profit and Loss Account for the year ended 31st October 1957 with the books and accounts as kept at the Chief Managers' (Eastern Branches) Office, Calcutta, in which are incorporated certified returns from the ten Indian Branches and also with the books and accounts kept at the Calcutta Branch.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions of Section 211 (1), (2) and (5) and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with Schedule VI of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule of the Banking Companies Act, 1949.

We report that :—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit.

(b) In our opinion proper books of account as required by law have been kept by the Chief Managers' (Eastern Branches) Office and the Calcutta Branch so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the 9 Branches not visited by us.

(c) The Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the certified returns.

(d) In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Branches as at 31st December 1957 and the Profit and Loss Account gives a true and fair view of the profit for the year ended 31st October 1957.

CALCUTTA, 25th March, 1958.

NEW PUBLICATIONS

Economic Development in India, 1946-1956. By C. D. Deshmukh. Published by Asia Publishing House, Contractor Building, Nicol Road, Bombay. Pages: 167. Price: Rs. 6.00.

THE book comprises the successive series of five lectures delivered by Mr. C. D. Deshmukh, in connection with the Dadabhai Naoroji Fellowship awarded to him, in the year 1957. The treatise may modestly be styled as a personal retrospect. It may well be so, obviously because the major economic policies during the decade under review, namely, 1946 to 1956, bore the impress of Mr. Deshmukh's personality. The scope of the book, it must be admitted, seems to be wider, for it is not so much a retrospective narration of events as a dispassionate appraisal of the pace and progress of the economic and financial policies pursued during an eventful period in the country's economic history.

A cogent, competent and absorbing account takes us through three distinct periods. The first stage—1946-49—presents a sad spectacle of "missed opportunities" and, probably, misdirected energies. This is followed by an exposition of the factors that inhibited consistent policies in the beginning of this period. An exhaustive discussion brings into the light the repercussions of decontrol and devaluation on the domestic economy. The second stage, 1950-52, sees the beginning of an era of planning, which brings into the fore a host of problems of unprecedented magnitude. The last phase is more spectacular. It is marked by all-out efforts at "pressing the advantage of the normality of prices and the rise in production" in order to ensure rapid and balanced economic development. A stage is set for the second Plan.

While summing up this succinct survey, Mr. Deshmukh has done well to dwell at length upon the institutional implications of economic development in our country, with special reference to the second Five-year Plan. It is, however, too much to expect a book of this nature to provide us with appropriate tools of analysis immediately applicable to an underdeveloped country like ours. Nor does it venture to suggest ways and means to cure the maladies of the economy. The author, however, has spared no pains to emphasise and point the direction to which the study of dynamic problems of economically retarded countries should be channelised. A high sense of detachment and objectivity with which he surveys the scene make the book all the more appealing. This publication will be of special interest to teachers and students of economics no less to planners and other authorities who are concerned with the task of India's economic development.

Handbook of Company Forms. By C. C. Sutaria. Published by the Institute of Secretaries, Lentin Chambers, Dalal Street, Bombay 1. Pages: 144. Price: Rs. 5.

With the growing complexity of corporate gislation in India, the job of company secreries is becoming a highly difficult and technical one. The task of filling various forms in rict conformity with the provisions of such mplicated enactments as the Companies Act, 56, is a veritable nightmare for many a comny secretary. As ignorance of the provisions law is no excuse for errors in procedural atters, the need for expert knowledge and clear guidance cannot be overemphasised. Viewed against this background, the publication under notice, which is a book of instructions on forms prescribed under the Companies Act 1956, by Mr. Sutaria, is very welcome. One cannot find a more competent man to deal with the subject than Mr. Sutaria. Apart from being the Chairman of the Council of the Institute of Secretaries, Bombay, he has to his credit 17 years of experience as a practising company secretary. Mr. Sutaria has brought to bear upon this handbook his expert knowledge of the provisions of Company Law and sound practical experience making it a good, reliable and practical guide.

The handbook contains concise and clear instructions for filling up a large number of company forms as well as for filing annual returns and copies of balance sheets. The author gives instructions on each form, explains the procedural requirements, and makes references, wherever required, to the relevant provisions of the Act. In addition to the text there are four appendices. This practical guide on company forms should deservedly find a place on the desk of every company secretary.

Law and Practice of Estate Duty. By V. Balasubramaniam. Published by Messrs. N. M. Tripathi Ltd., Princess Street, Bombay 2. Pages: 884. Price: Rs. 22-8.

The law on estate duty is a complicated piece of legislation. Actual experience in administering the law is also somewhat limited in this country, thanks to the fact that this levy was introduced only recently. The author of the book under review has presented a thorough study of the various provisions of the Act. He has cited many important cases which have a bearing on estate duty law. He has also drawn attention at appropriate places to statutory provisions which require clarification and amendment. In this connection, he observes: "Though the Act is generally based on the U.K. law on the subject, substantial differences between the two exist and the rights and obligations of parties being different under both laws the 'tangled confusion' of the law cannot altogether be resolved with the help of the judicial observations in that country. Special attention may in this connection be drawn to the incidence of estate duty for which the laws are not settled and some provisions may very well require to be made in this respect if not at present, at least later on, in the administration of the Act. Further reliefs from estate duty in hard cases such as charity may also be called for." These observations deserve the attention of the authorities. The notable feature of the book is the numerous examples which have been given to illustrate the principles underlying the various sections of the Act.

Bonus, Gratuity and Other Allowances in Factories. By Messrs. J. D. Jain and P. D. Jain. Published by Industrial Law Advisory Service, Post Box No. 1675, Delhi. Pages: 609. Price: Rs. 15.

The authors of the book under review have dealt exhaustively with the subject of allowance of bonus, gratuity, provident fund and other allowances. All the cases decided by the Industrial Tribunals, Labour Appellate Tribunal, the High Courts and the Supreme Court which have a bearing on the subject have been cited. The book also contains the Industrial Disputes Act 1947, Industrial Disputes (Banking and Insurance Companies) Act 1949, Industrial Employment (Standing Orders) Act, 1946, Industrial (Development and Regulations) Act, 1951, Registration and Licensing of Industrial Undertaking Rules, 1932, Indian Factories Act, Workmen's Companies Act, Minimum Wages Act, Payment of Wages Act and other miscellaneous labour legislations and rules framed thereunder as amended up to date.

The book will therefore serve as a very useful volume for frequent reference. One, however, wishes that the authors had numbered the pages in continuous order for it could have facilitated ready reference.

Punjab Agriculture Facts and Figures. By R. L. Anand. Issued by Economic and Statistical Adviser to Government, Punjab. Pages: 212.

Punjab had earned the distinction of being the granary of this country before Partition. The State's contribution to the total agricultural production in the country suffered greatly after the Partition of the country in 1947. Mr. R. L. Anand, the author, has taken great pains to bring under one cover a large mass of statistical material relating to agriculture in the Punjab. He observes in his preface that the object of this book "is to indicate the direction and velocity of the changes that have taken place in agriculture, since the Partition, in the background of the position during the period 1939-47." The book is bound to be referred to with interest by administrators in the Punjab and students of rural economics.

The New Company Law, Vols. I and II. By C. S. Rangaswami and G. Basu. Published by Oxford Book and Stationery Co., 17, Park Street, Calcutta 16. Pages: 887. Price: Rs. 30.

Besides being a voluminous piece of legislation, the new Companies Act has introduced several novel features into the original Act. Indeed it has been rightly contended that the recent amendments are in the nature of a re-enactment, rather than a mere modification of the original Act. The authors of the book under review have succeeded in explaining in a lucid manner the various provisions of the Act. In their notes to the sections of the Act, the authors have done well not only to explain the meaning and significance of each section but also give the background to that section by citing the appropriate references from the report of the Company Law Committee.

The Central Sales Tax Act, 1956. Parts I (Pages: 234), II (Pages: 210), III (Pages: 138) and IV (Pages: 170). By B. L. Dalmia. Published by Law Chamber, 134, Mahatma Gandhi Road, Calcutta 7. Price: Rs. 3.50 for each Part and Rs. 12.00 for a complete set.

In the first part of the book the *Central Sales Tax Act* 1956, the author Mr. Dalmia has dealt with the Central Sales Tax Act 1956 and explained the different sections of the Act in the light of the judgments of the High Court on the subject from time to time. The second part deals with the Central Sales Tax Rules and the rules on the subject in different States. The third part is devoted to an explanation of the schedule of exempted goods and the fourth part to the rates of sales tax. It will thus be seen that all the four parts taken together constitute a complete guide to sales tax legislation.

CALCIUM CARBIDE INDUSTRY IN INDIA

PACE OF EXPANSION GREATER THAN WHAT WAS ORIGINALLY ENVISAGED

IT is surprising that the pace at which some industries are expanding does not at all conform to the pattern envisaged in the second Five-year Plan. One such industry is the calcium carbide industry. The aggregate annual rated capacity of this industry is expected to touch 41,600 tons when all the plans sanctioned by the Government are implemented successfully. This represents a rise of as much as 15,400 tons as compared with the target of 26,200 tons set for 1960-61 by the Planning Commission. It is not known whether any new circumstances have arisen since the development programme was drawn up for the calcium carbide industry so as to prompt the upward revision in target. When the target of capacity and production was fixed at 26,200 tons (on the basis of 300 working days) and 24,000 tons, respectively, the Commission had clearly stated: "It does not seem necessary to envisage further expansion of this industry during the second Plan, having regard to the level of requirements (estimated at about 24,000 tons) by 1960-61. But additional capacity for calcium carbide may have to be envisaged, if acetylene is proposed to be made on the basis of any new organic chemical products in preference to materials like alcohol. The picture relating to such developments is not completely clear at this stage."

It is thus evident that the anticipated capacity of the calcium carbide industry (41,000 tons) will be very much more than what is actually required to meet the estimated domestic demand (24,000 tons) in full. Certain figures cited by Mr. K. R. Damle, I.C.S., Chairman of the Tariff Commission, at the public enquiry into the question of continuing protection to the industry held in the city last week, reveal that the estimates of demand for 1958 vary only between 10,000 and 16,000 tons, that the average quantity actually available for consumption in the past three years has been less than 10,000 tons, and that the Development Wing expects the demand to increase to just 20,000 tons a year by 1961. In other words, the surplus capacity of the industry (in relation to requirements) at the end of the second Plan period will be as much as 17,000 tons. One, therefore, wonders whether capital, which is scarce, should be expended on undue expansion and whether it will not be advisable to divert such capital to other industries which badly require an increase in their capacity.

Bright Future

From the foregoing account one should not, however, rush to conclude that the calcium carbide industry does not have a bright future. For the demand for the product of this industry, as Mr. Damle said in his speech, is likely to increase considerably with the completion of the various steel projects now in progress. Further, calcium carbide is put to very limited uses in this country at present. It has varied uses and, with the putting up of the new plants and the expansion of existing ones, this industry may form the nucleus for other industries like plastics and synthetic organic chemicals to develop.

The calcium carbide industry, it will be recalled, has passed through many vicissitudes. The Tariff Commission first examined the claim of the industry for protection in 1955 and recommended in 1956, grant of protection up to the end of December 1958 by levying a protective duty of 45 per cent. *ad valorem* (standard). The Government of India accepted the recommendations, but decided to maintain the duty at 50 per cent. *ad valorem*, the same rate as the revenue duty. There has hardly been any progress since protection was granted.

At the Commission's enquiry in 1956, there were three units in the industry, one each at Calcutta, Talaiyuthu (Madras) and Chingavanam (Kerala). The latter two were only pilot plants. The rated capacity of the three units was 5,050 tons a year and no additions have been made to it since then. The unit in Kerala worked for only a short period before the last enquiry and it was closed down after the enquiry. The production of calcium carbide of the other two units was 2,890 tons in 1956, 3,596 tons in 1957 and 607 tons in January-February 1958. The Birla Jute Manufacturing Company has been working up to capacity and the Industrial Chemicals Ltd. worked hardly upto about 20 per cent. of its capacity. The former company has a programme to expand its installed capacity to 6,600 tons a year by about the middle of 1960, the Industrial Chemicals Ltd., Madras, to 10,000 tons a year by the middle of 1959, and the Travancore Electro-Chemical Industries Ltd. to 9,000 tons a year. The Indian Carbide Corporation Private Ltd., Bombay, and the Calico Mills, Ahmedabad, have plans to set up plants with annual capacities of 10,000 tons and 6,000 tons, respectively.

The total production of calcium carbide in 1957 was a bare 3,596 tons, as against the demand of about 13,000 tons. Naturally, the country is still depending for its supplies largely on imports. The principal sources of supply are Norway, Yugoslavia, China and Canada. The imports were 9,422 tons valued at Rs. 52.49 lakhs in 1954-55, 7,085.15 tons valued at Rs. 38.96 lakhs in 1955-56, 5,976.35 tons valued at Rs. 37.29 lakhs in 1956-57 and 2,979.5 tons valued at Rs. 17.97 lakhs in April-August 1957. Under the import policy for the periods January-June 1956 to July-December 1956 and January-June 1959, established importers were allowed a quota of only 25 per cent. of half of their best year's imports. No quota was fixed for established importers for the period July-September 1957. The quota for October-March 1957-58 was increased to 33⅓ per cent., with the proviso that the imports during 1955-56 also would be taken into account for determining the quota. The same policy is being continued for the current licensing period. Applications for imports from actual users were also allowed and licences were issued to them in consultation with the Development Wing according to the need of each case.

Quality

It is indeed gratifying to be told by the Birla Jute Manufacturing Company, Ltd., that it has taken various steps to improve and maintain uniformly the quality of its products. The steps include improvement in the furnace and additions of ancillary equipment. The Company says that it has not received any complaint in regard to the quality during the last several months. But the Tariff Commission, according to Mr. Damle, has received a large number of complaints from consumers. While they admit slight improvement in the gas yield, they state that the phosphine-content continues to be still high. The Indian Standards Institution has formulated standards for two grades of calcium carbide —grade A (maximum phosphine-content is 0.06 per cent.) corresponding to the average quality of the imported material and grade B (0.08 per cent.) corresponding to the average quality of the indigenous material. In the case of domestic product, the phosphine-content varies between 0.074 and 0.083 per cent. In the case of gas yield, a direct comparison, it is said, is not possible, as the sizes produced by the Company do not coincide with those for which standards have been laid down.

The calcium carbide industry is said to suffer from two handicaps. First, it has not been able to locate better quality raw materials (limestone, coke, charcoal and petroleum coke). Secondly, the cost of electricity which comes to about 5.33 nP kw.h. is very high, especially for an electro-chemical industry. Mr. Damle drew special attention to these handicaps in the course of his speech.

The Tariff Commission is currently examining the claim of the Birla Jute Manufacturing Company for continuing protection for a further period of two years, that is, up to the end of 1960; the prospective manufacturers have asked for protection for a longer period. The Commission is also examining the question of fixing fair ex-factory prices of calcium carbide produced in India.

INDO-SAUDI ARABIAN TRADE

A bilateral agreement on trade and economic relations has been reached between the Government of India and Saudi Arabia. The agreement has followed the visit of the Saudi trade delegation to India last month. During its stay in this country, the delegation carried out an exhaustive survey of many commercial and industrial centres and held discussions with Government spokesmen and representatives of commerce and industry. Under the agreement, the Governments of both countries will co-operate with each other in order to ensure mutual expansion of trade, setting up of joint industrial enterprises, and promotion of ship-

PROBLEMS OF GLASS INDUSTRY

CAUTION IN LICENSING NEW CAPACITIES URGED

THE President of the Bengal Glass Manufacturers' Association, Mr. O. M. Somany, did well to urge, while speaking at the thirteenth annual general meeting of the Association held at Calcutta recently, that great caution should be exercised in licensing new capacities The overall rated capacity of the glass industry has been raised from the original figure of 338,000 tons to 384,000 tons without any corresponding upward revision in the production target of 200,000 tons (representing the total demand for glass and glassware, excluding bangles). Surely, the provision for such a heavy unused capacity, as Mr. Somany rightly declared, cannot be viewed with equanimity, inasmuch as it will react most adversely on the cost of production and, at the same time, bring in the problem of excessive internal competition. He did well also to make special mention of the lack of uniform progress in the production of glass goods of late. In this connection, he gave the following figures:

(In tons)

	1957	1956	1955	1950
Bottles and phials	70,235	62,413	55,270	51,850
Sheet glass	28,296	24,848	20,540	5,100
	(54.22)†	(47.62)†	(38.0)†	(9.6)†
Table and pressedware ..	31,749	28,219	25,460	12,060
Lampware	17,890	19,887	16,690	13,150
Scientific glassware ..	3,115	3,357	2,500	2,140
Shells for lamps	1,090	1,522	1,160	630*
	(39.90)‡	(35.92)‡	(26.1)‡	(14.0)*‡
Thermos flasks	364	330	315	350*
	(53,364)§	(48,336)§	(43,700)§	(45,900)*§
Miscellaneous glassware ..	3,637	3,031	2,270	1,990
Total ..	156,976	143,587	124,205	87,130

* Relates to 1951. † Million sq. ft. ‡ Million pieces. § Dozen.

It will be seen from the above table that, while the production of bottles and phials, sheet glass, table and pressed wares, shells for electric lamps, thermos flasks and others have registered considerable improvement, that of lampware and scientific glassware has suffered a setback. The rate of increase in output itself has markedly slowed down in 1957 as compared with previous years. In respect of sheet glass, table and pressed wares, etc., it seems that the production targets are well within realisation, whereas much headway has yet to be made with regard to bottleware, miscellaneous glassware and thermos flasks

Recent Trends

Mr. Somany referred to certain recent trends in the development of glass industry. These are given below:

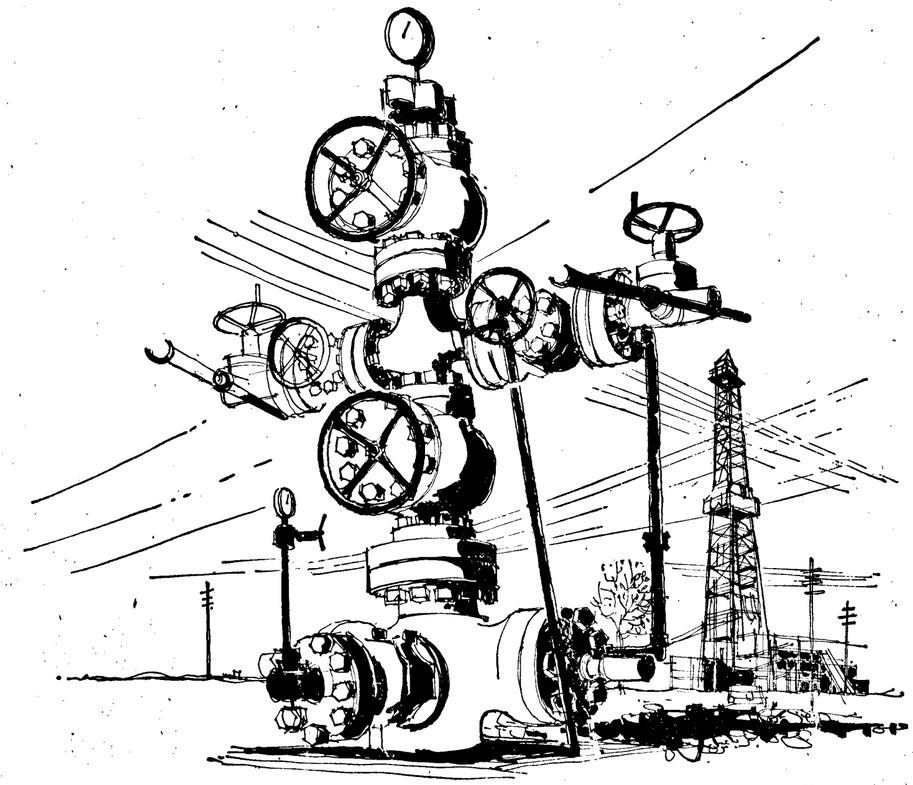
The average size of glass factories has tendered to increase, as a result of which the comparatively small units have to close down. Although more than 40 units continue to be out of production, the volume of total output has been rising from year to year. This rationalisation in the size of factories has evidently been brought about by the pressure of economy of production and modernisation of operating techniques. In the years to come, this tendency towards bigger sized units is likely to be more intensified, making capital and investment in the comparatively small units virtually immobile.

Certain projects designed for diversification of production have not so far been implemented.

During recent years, the cost structure of the industry has been continuously soaring up, whereas the marketing prospects and prices of the products have not materially improved.

Since glass is used mostly as a packing material, its cost of manufacture has an important bearing on the economy of other industries such as pharmaceuticals, chemicals, cosmetics, inks and preserved fruits consuming glass containers. Unless, therefore, the glass industry is in a position to market its products as cheap as possible, other alternative packing materials, as Mr. Somany pointed out, will establish their hold on the market and the prospects for the industry will be most adversely affected. Some of the suggestions he put forward with a view to removing the handicaps facing the glass industry deserve to be sympathetically considered. These relate to the availability of cheap, easy and adequate transport for moving raw materials and finished products, establishment of a quartz crushing plant in West Bengal, reduction in railway freights, more careful scrutiny of applications for import of glass and glassware, and more liberal import of certain basic chemicals such as heavy soda ash, borax and boric acid.

The Story of Oil—8



Trees of steel

When a well strikes oil, the first consideration is to stop it gushing. Such an occurrence, though spectacular and common in the early days of drilling, is wasteful. To counteract the pressure, therefore, the mud used during drilling is pumped into the well. The drill is then replaced by narrow tubing which stretches from the bottom of the newly discovered deposits to the 'Christmas Tree' on the surface. The latter is a system of valves which control the flow of oil.

Crude oil, by itself, cannot move. It usually lies between natural gas (on top) and water, so that when the oil trap is pierced by the well, any gas present seeks to expand and pushes down on the oil, driving it upwards. Or gas may be dissolved in the oil itself, and as it expands it pushes the oil to the surface. If, however, a large quantity of water lies below the oil, it forces the oil out of the porous rock and into the well. Sometimes a combination of gas and water pressure drives the oil to the surface.

Normally this pressure is sufficient to keep a well flowing for some time. But as the porous rocks are drained, the pressure declines. Then one of several artificial methods can be used to keep the oil flowing. The 'Christmas Tree' can be replaced by a mechanical suction pump which draws the oil up to the surface. Or gas can be fed into the deposits (between the casing and the tubing) to mix with the oil and bring it to the surface. Or, as a last resort, gas or water can be pumped down a neighbouring well to recreate the original pressure.

Thirty or forty years ago, only a quarter of the oil discovered could be recovered. With today's production techniques a much larger recovery percentage is possible.

CENTURY MILL'S PROFIT DOWN

RAYON PLANT EXPANSION PROGRESSING—BONUS ISSUE SHELVED

IN common with other textile mills in the country, the profit of the Century Spinning and Manufacturing Company Ltd. (Managing Agents: Messrs. Birla Brothers Private Ltd., Bombay) also for the year ended 31st December 1957 shows a decline. The reason is not far to seek. The setback in the Company's earnings for the year under review is attributed by the Directors to the sluggishness in the cloth trade which lasted throughout the year 1957. The gross profit at Rs. 67.78 lakhs has fallen by Rs. 28.86 lakhs from Rs. 96.64 lakhs for the previous year, to which level it had advanced from Rs. 87.65 lakhs two years ago. Incidentally, this is the lowest gross profit earned by the Company since 1952 when it amounted only to Rs. 51.17 lakhs. The net profit at Rs. 19.98 lakhs is only slightly better than a third of Rs. 56.27 lakhs earned in 1956. It is again substantially lower than Rs. 34.10 lakhs for 1955 and Rs. 42.59 lakhs for 1954.

A sum of Rs. 7.12 lakhs has been provided for taxation, as against Rs. 3.11 lakhs in the previous year. This is inclusive of a provision of Rs. 3 lakhs for taxation in respect of previous years' liability and Rs. 4.12 lakhs as provision for wealth tax for 1956 and 1957. The provision for depreciation has been raised from Rs. 30.81 lakhs to Rs. 37.76 lakhs. The Directors state that they have reviewed the question of provision for depreciation on fixed assets of the Company and feel that "depreciation only at normal rates allowable under the Income-tax Act would be sufficient, as against the full provision for depreciation allowable under the said Act as done in the previous year." Due to this change, the amount of depreciation debited to the accounts is less to the extent of approximately Rs. 51 lakhs as compared to the total depreciation allowable under the Income-tax Act. A sum of Rs. 18.32 lakhs, representing development rebate, has been credited to development reserve, as against Rs. 55 lakhs in the preceding year. Despite the fall in earnings, the dividend has been maintained at 22 per cent. for the fifth year in succession, to which level it had been stepped up in 1953 from 20 per cent. paid for 1951 and 1952. The payment of interim dividend amounting to Rs. 8.75 lakhs has been met by transferring Rs. 5.92 lakhs from the dividend equalisation reserve and Rs. 2.83 lakhs from the general reserve. A sum of Rs. 15.32 lakhs has been transferred from general reserve for payment of the proposed final dividend.

The following comparative table will bring out clearly the progress of the Company during the past three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds (gross)	9,39.23	7,80.32	8,25.73	7,88.06
Stocks of finished goods and materials in process ..	2,02.78	1,82.22	1,17.06	2,11.44*
Expenses (including raw materials consumed)	9,02.40	7,55.01	7,13.09	7,04.31†

* Include raw materials and waste.
† Only approximate.

Commenting on the working of the mill, in the context of the depressed state of the cotton market in 1957, the Directors observe:

"The working of the Company's textile mill during the year was normal. As reported last year, the increase of excise duty on cloth in September 1956 had an adverse effect in the offtake of cloth and stocks were mounting. Sluggishness in the cloth trade lasted throughout the year 1957 and there has been a setback in the earnings of the year. In December 1957, sales tax on cloth was replaced by an additional excise duty, and as a temporary measure excise duty on medium cloth was cut by 6 pies per square yard. This measure was expected to improve the offtake of cloth, but the replacement of sales tax by excise duty gave rise to difficulties and confusion in trade circles regarding sales tax payable on floating stocks, and stocks continued to mount. To solve the sales tax problem on floating stocks, the State Government announced reduced rates for compounding the sales tax payable. Since then, some improvement in the offtake of cloth is perceptible. The replacement of sales tax by excise duty has added to the cost of production in that sales tax exemption on purchase of mill stores, colours, chemicals, machinery, spare parts, etc., was withdrawn when the replacement was effected."

As regards the Company's expansion programme, the Directors state that the 5½-ton plant rayon factory at Kalyan reached full production in June 1957 and the working of the rayon factory was satisfactory. The work of expanding the rayon plant to 12 tons is stated to be progressing well and the plant is expected to reach full production before June 1958.

It may be remembered that the Directors had decided at the close of the previous year to increase the authorised capital of the Company from Rs. 1.5 crore to Rs. 5 crores and the subscribed capital by Rs. 164.14 lakhs to Rs. 273.57 lakhs by capitalising reserves and issuing fully paid-up bonus shares. In view of the fact that under the Finance Act No. 2 of 1957, the tax on bonus shares has been increased from 12½ per cent. to 30 per cent., the Directors have decided to drop the proposal for the time being.

The paid-up capital of the Company as at 31st December 1957 stands at Rs. 109.43 lakhs, all in ordinary shares of Rs. 100 each. As against this, the reserves and surplus aggregate Rs. 288.87 lakhs, of which the general reserve alone accounts for Rs. 201.84 lakhs. The current liabilities at Rs. 483.53 lakhs include secured loans from a bank of Rs. 170 lakhs and unsecured loans of Rs. 124.81 lakhs. The gross block of the value of Rs. 745.32 lakhs (Century Mills Rs. 294.55 lakhs and Century Rayon Rs. 450.77 lakhs) stands written down to Rs. 475.34 lakhs. Additions during the year were of the order of Rs. 175.02 lakhs. The current assets aggregate Rs. 406.48 lakhs and fall short of the current liabilities and provision for taxation by a margin of Rs. 77.05 lakhs. The current assets include investments in Government securities and shares of companies amounting to Rs. 11.17 lakhs, stores and spare parts Rs. 28.46 lakhs, stock-in-trade Rs. 283.19 lakhs, sundry debtors Rs. 23.21 lakhs, loans and advances Rs. 40.69 lakhs and cash balances Rs. 19.69 lakhs.

The Rs. 100 fully paid-up ordinary shares are being currently quoted at Rs. 430 *cum-div.* (final dividend Rs. 14 per share). On an *ex-div.* basis, the shares provide a yield of 5.3 per cent. per annum, free of income-tax.

E.I.D. FARES VERY WELL

ALL-ROUND RISE IN OUTPUT

HIGHLY encouraging results are disclosed by the audited accounts of the East India Distilleries and Sugar Factories Ltd. and its subsidiaries (Managing Director: Mr. G. N. Noel-Tod, Madras) for the year ended 30th September 1957. There was a conspicuous improvement in production activities in all the varied sections of the Company's business with sales also making a commensurate rise. These are fully reflected in the Company's earnings and profit for the year under review. It should, however, be noted that, while in the previous year the group accounts included the results of the holding company for the 12 months ended 30th September 1956 and those of its subsidiary companies for the period of only nine months ended September 1956, the accounts for the year under review represent the working of the group for the whole year. The better results are, therefore, partly due to the fact that the working of the subsidiary companies cover an additional three months' period. The gross profit for the year amounts to £840,691, having risen by no less than £240,919 from £599,772 for the previous year. The net profit, after raising the provisions for both depreciation and taxation, the former from £94,309 to £100,161 and the latter from £284,756 to £505,922, stands, however, only slightly higher at £234,608, as compared with £220,707 in the previous year. Of the amount of £505,922 provided for taxation, the tax on profit arising in the United Kingdom accounts for £13,355 and that on profit in India for £409,714. It also includes a sum of £82,853 representing the additional taxes payable in respect of the previous year, particularly 1955-56. Deducting from this net profit the profits of subsidiaries which are attributable to outside shareholders' interests amounting to £11,250, the net profit attributable to the holding company alone accounts for £223,358 and compares well with £200,155 a year ago.

After bringing in the surplus of the previous year, the profit available for appropriation is £282,807, out of which a sum of £2,625 has been set aside to capital reserve (£4,500 in the previous year) and £120,000 (£100,000) to general reserve. The Directors have maintained the dividend on the ordinary shares at the same rate as the previous year, namely, a first interim of 5 per cent. and a second one of 10 per cent. In view of the heavy inroads made by taxation into the profits of the year under review and the necessity to conserve resources in the light of the present state of world trade, the Directors state that they are not able to recommend the payment of any further dividend on the ordinary shares for the year ended 30th September 1957. The dividend on 7 per cent. preference capital absorbs £14,000 and that on the ordinary capital £82,493, leaving a balance of £63,689 to be carried forward, as against £59,449 brought in.

The vastly improved activities of the Company during the year under review resulted in a sharp rise in the sale proceeds from £6,707,595 in 1955-56 to £10,216,706. The Company's crushing of sugarcane during the season 1956-57 amounted to 371,291 tons yielding 33,413 tons of sugar, having risen from 349,247 tons of cane crushed in the 1955-56 season producing 29,574 tons of sugar. It is stated that the quantity of cane crushed and sugar produced are the highest in the Company's history. The recovery of sugar has also improved from 8.47 per cent. to 9 per cent. The excise duty on sugar was doubled on 15th May 1957 from Rs. 112.50 per ton to Rs. 225 per ton. Sales of spirit and carbonic acid gas continued to be satisfactory. The year under review was the best at the factory to date for production of sulphuric acid which at 9,000 tons showed a distinct improvement over the previous year. Production and sales of other products from the Company's chemical factory also showed an improvement. Substantial improvements in regard to both production and profitability was made in pottery and emphasis still remains on sanitaryware products. The tonnage of fertiliser mixtures sold during the year was higher than for the previous year, although sales of superphosphate were at a lower level, due chiefly to delays in the receipt of imported raw materials on account of the temporary closure of the Suez Canal. The formulation of insecticides and fungicides was commenced in November 1956 and manufacture proceeded satisfactorily throughout the remainder of the year. The plant is now working to its full capacity in three shifts and the demand for these products from the market is also encouraging. Business in the distributing departments continued to be satisfactory. But due to the current stringent control on imports, the Directors are concentrating on increasing the Company's franchise for goods of Indian manufacture.

The consolidated balance-sheet as at 30th September 1957 shows the paid-up capital of the Company at £749,950 of which £549,950 are in ordinary shares of £1 each and the balance in 7 per cent. cumulative preference shares of £1 each. Against this, the reserves and surplus aggregate £1,165,455. In addition, there is a reserve for future taxation of £158,202. There is a 4½ per cent. debenture liability on account of Parry & Co., Ltd., to the tune of £29,375. The current liabilities amount to £4,519,191, including a provision for taxation at £612,851. The gross block of £1,792,762, including additions during the year amounting to £121,477, has been written down to a book value of £898,165. Expenditure on buildings, plant and machinery in course of construction amounts to £32,545. The current assets aggregate £5,682,963 and cover the current liabilities and provision for taxation by a very wide margin.

The £1 fully paid-up ordinary shares are being currently quoted at Rs. 27.40 *ex-div.* On the basis of the year's dividend, the shares provide a yield of 7.3 per cent. per annum, free of income-tax.

NATIONAL CARBON'S PROFIT DECLINES

Higher cost of raw materials used for manufacture, a significant decline in demand for flashlight batteries during the last half of the year and increases in wages and other costs, all these have cumulatively led to a decline in the profit of the National Carbon Company (India) Ltd. (Chairman and Managing Director: Mr. Jennis Roy Gallcway, Calcutta), for the year ended 25th December 1957. The overall performance of the Company was, however, quite satisfactory with sales and productivity both showing a sizable improvement over the previous year. Even so, they were not such as to offset the combined effect of the causes mentioned above. Sales of industrial products were satisfactory throughout the year and showed an all-round improvement over the previous year. Sales of consumer products were satisfactory during the first half of 1957, but, during the latter half of the year, they declined appreciably. There was a sizable rise in sale proceeds from Rs. 518.94 lakhs in 1955-56 to Rs. 535.35 lakhs. Despite all the encouraging performance as aforesaid, the gross profit at Rs. 93.35 lakhs has dropped by Rs. 6.20 lakhs from Rs. 99.55 lakhs for 1955-56. It is even lower than that of Rs. 94.51 lakhs earned in 1954-55. The net profit, after providing for depreciation and taxation, also stands lower at Rs. 40.63 lakhs, as compared with Rs. 46.80 lakhs in the previous year.

The Directors have raised the provision for depreciation from Rs. 9.12 lakhs to Rs. 12.03 lakhs, but have lowered that for taxation from Rs. 43.63 lakhs to Rs. 40.69 lakhs. A break-down of the year's tax provision shows that income-tax accounts for Rs. 37.40 lakhs, super-tax on dividend for Rs. 1.79 lakh and wealth tax for Rs. 1.50 lakh. A sum of Rs. 5.40 lakhs has been transferred to development rebate reserve, as against *nil* in the previous two years. In view of the fall in the profits of the Company, the Directors have made a slight downward revision in the rate of dividend to 14 per cent. from 15 per cent. for the previous year. This consists of an interim dividend of 7½ per cent. already paid and a proposed final dividend of 6½ per cent.

The following comparative table will give some idea of the Company's progress during the past two years.

(In lakhs of rupees)

	For the year ended 25th December		
	1957	1956	1955
Sale proceeds	5,35.35	5,18.94	4,51.77
Closing stocks of work-in-progress and finished goods	81.84	62.37	43.10
Raw materials, etc., consumed	2,29.53	2,19.11	1,78.04
Expenses	2,35.76	2,22.39	1,83.59
Gross profit	93.35	99.55	94.51

Depreciation	12.03	9.12	7.69
Taxation	40.69	43.63	36.66
Net profit	40.63	46.80	50.16
Adjustment of income-tax and capital issue expenditure	..	12.06	..
To reserves	5.40	..	..
Dividends	28.00	80.00*	40.25
	(14%)	(15%)	(37½%)
Carry forward	28.42	21.20	16.46

* On the increased capital of Rs. 2 crores.

The Eveready Flashlight Company, a division of National Carbon Company (India) Ltd., at Lucknow, commenced trial production towards the close of the year. It is expected that the flashlight cases produced in this plant will be available for sale in volume during 1958. This, in turn, is expected to stimulate demand for the Company's battery products. The Company's efforts to develop export markets for the various products of its manufacture resulted in export sales for the year exceeding Rs. 15 lakhs with potential existing for further increase. The Company has also instituted an intensive programme for developing indigenous sources of raw materials used in the manufacture of its products. The zinc rolling mill of Metals and Ores Company, also a division of National Carbon Company (India) Ltd., operated satisfactorily throughout the year. The bulk of the zinc processed

Points From The Chair

Outlook for Textiles

"IT is an established fact that food prices and cloth prices are very closely linked. If the price of food goes up, the demand for cloth goes down. The vast majority of the population, already living on a bare subsistence level, could hardly eat less but they can always wear their old clothes for another year. This is the basic problem and until such time as the food position becomes easier with consequent lower prices, it is hard to foresee any real improvement in the textile industry.... There are, of course, other factors which affect the movement and sale of cloth. At all levels the wholesale and retail trades are less able to hold stocks to meet future demands. Wealth and expenditure taxes have tightened everybody's purse strings and the credit squeeze has done the same. Another consideration is the high rate of excise duty. It is not only the monetary incidence of this duty that is so irksome but also the bewildering frequency with which the Government sees fit to alter it. Merchants, understandably enough, do not want to burden themselves with large stocks, the value of which is liable to be reduced overnight if a sudden reduction is made in the rate of duty. These other factors do help to make the position more difficult, but I wish to emphasise that less taxation, freer credit conditions and lower excise duties would not put more money into the pockets of the vast majority of people who buy cloth. It is the financial position of the man in the street and agriculturalist that dictates what prices can be obtained and what profits can be made by your mill and the whole industry."

E. D. SHEPPARD,
Kohinoor Mills Co., Ltd.

Inflation

"While I shall not presume to advocate a world-wide cheap money policy—after all, conditions in the various countries differ widely, and the level of Bank rate must be consistent with trends in the internal economy of each country, I should, nevertheless, point out that we seem to have reached a stage where we may be exaggerating the effect of inflation in present-day conditions. A study has to be made of the extent to which a rise in prices is not necessarily evidence of inflation. After all, when there occurs an improvement in the standard of living, some element of increase in the price level is inescapable. And it is true to say that never before in economic history have so many countries participated in so general a rise in the standard of living. Finally, I should like to say that, in our preoccupation with the so-called dangers of inflation, we should not allow ourselves, as the rest of the world had during 1957, to become oblivious to the even greater danger of recession."

G. D. BIRLA,
United Commercial Bank Ltd.

Prospects for Textiles

"As for the prospects of the current year, I might tell you that the trading conditions have not improved to any extent. Prices of cloth have remained at a low level with poor demand. The export demand as well as the export rates have remained subdued. The measure amalgamating the sales tax with excise duty which was expected to bring some relief to the trade in regard to disposal of accumulated stocks, in fact, has had no appreciable effect and the industry is still carrying large stocks. The textile industry is indeed facing a major crisis. The profitable running of mills in the context of the rate of excise duty on coarse and medium cloth as prevailed till a few days ago, with rising cost of production, had become an impossibility. The abnormal accumulation of stocks in the industry coupled with consumer resistance and lower purchasing power of the common man has been forcing the mills to undersell so much so that the very economy of the industry has been shaken. The question is how long can the industry lose and still survive."

KHAN BAHADUR C. B. TARAPORVALA,
The Osmanshahi Mills Ltd.

Slump in Textiles

"It would be of interest to attempt a research to know the reasons for this slump in the textile mill industry. There is a school of thought that clings to the view that the rise in cloth stocks has something to do with the trend of food prices. When the food prices are high, sales of cloth fall and when the food prices are low, cloth sales are correspondingly high. According to this theory, therefore, the relation between cloth sales and food prices is reciprocal and the dominant element in making of cloth sales over the country generally is the level of food prices. If one agrees with this view then the continuance at the present scale of excise on cloth will not appear to have much bearing on cloth sales and, therefore, the market for cotton textiles will pick up as the price of foodgrains show a tendency to fall. On the other hand, there are others who claim that the higher excise duties are a deterrent and an obstacle to increased cloth sales. Last year, I had said that the various taxation measures introduced by the Central and State Governments and the various credit controls would have their effect on the textile industry. The objectives for which the excise duty on cloth was levied, namely, mopping up of profits of textile mills and traders to enable the Government to secure a fair share in the increased profits, to put a brake on the consumption of cloth, to encourage handloom production, to boost up exports, etc., have in more ways than one, been nearly secured but not without causing considerable dislocation to the industry."

C. DAMODAR REDDY,
The Azam Jahi Mills Ltd.

COMPANY MEETINGS AND DIVIDENDS

SWAN MILLS LTD. Annual General Meeting, Bombay, 23rd April 1958. Dividend: Rs. 25.00 per share, payable on and after 24th April 1958. Transfer books remain closed from 28th March to 23rd April 1958, both days inclusive.

FINLAY MILLS LTD. Annual General Meeting, Bombay, 25th April 1958. Dividend: Rs. 20.00 per share, payable on and after 26th April 1958. Transfer books remain closed from 28th March to 25th April 1958, both days inclusive.

EAST INDIA DISTILLERIES AND SUGAR FACTORIES LTD. Annual General Meeting, Madras, 25th April 1958. Dividend: 15 per cent. or 3s. per share, for the year ended 30th September 1957.

NATIONAL CARBON CO. (INDIA) LTD. Annual General Meeting, Calcutta, 25th April 1958. Dividend: Re. 1.40 per share. Transfer books remain closed from 5th to 25th April 1958, both days inclusive.

MONOGRAM MILLS LTD. Annual General Meeting, Ahmedabad, 26th April 1958. Dividend: Rs. 12.00 per share. Transfer books remain closed from 13th to 26th April 1958, both days inclusive.

GOLD MOHUR MILLS LTD. Annual General Meeting, Bombay, 24th April 1958. Dividend: Rs. 15.00 per share, payable on and after 25th April 1958. Transfer books remain closed from 28th March to 24th April 1958, both days inclusive.

CENTURY SPINNING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 29th April 1958. Dividend: Rs. 22.00 per share, for the year 1957. Transfer books remain closed from 11th to 28th April 1958, both days inclusive.

ALLIANCE JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 30th April 1958. Dividend: *Nil.* Transfer books remain closed from 16th to 30th April 1958, both days inclusive.

WAVERLEY JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 30th April 1958. Dividend: *Nil.* Transfer books remain closed from 16th to 30th April 1958, both days inclusive.

BURRAKUR COAL CO., LTD. Annual General Meeting, Calcutta, 30th April 1958. Dividend: Re. 0.37 (7½ per cent. per annum) per share, payable on or after 7th May 1958. Transfer books will remain closed from 23rd to 30th April 1958, both days inclusive.

NATIONAL CO., LTD. Annual General Meeting, Calcutta, 2nd May 1958. Dividend: Re. 0.75 per share. Transfer books remain closed from 10th April to 2nd May 1958, both days inclusive.

CHEMICAL AND ALKALI DISTRIBUTORS LTD. Annual General Meeting, Bombay, 3rd May 1958. Transfer books remain closed from 15th April to 3rd May 1958, both days inclusive.

ELGIN MILLS CO., LTD. Annual General Meeting, Kanpur U.P., 6th May 1958. Dividend: Re. 1.00 per share. Transfer books remain closed from 19th April to 6th May 1958, both days inclusive.

BELSUND SUGAR CO., LTD. Annual General Meeting, Calcutta, 6th May 1958. Transfer books will remain closed from 24th April to 6th May 1958, both days inclusive.

WESTERN INDIA MATCH CO., LTD. Annual General Meeting, Bombay, 7th May 1958. Dividend: Rs. 11.00 per share (includes bonus of Re. 1.00 per share). Transfer books will remain closed from 23rd April to 10th May 1958, both days inclusive.

MAHINDRA AND MAHINDRA LTD. Annual General Meeting, Bombay, 12th May 1958. Dividend: Re. 1.75 per share, payable on and after 19th May 1958. Transfer books will remain closed from 28th April to 12th May 1958, both days inclusive.

ATUL PRODUCTS LTD. Annual General Meeting, Ahmedabad, 3rd June 1958. Dividend: Rs. 8.00 per ordinary share. Transfer books remain closed from 16th April to 7th May 1958, both days inclusive.

BENGAL COAL CO., LTD. Final dividend of Rs. 16.00 per ordinary share, for the year ended 31st October 1957.

NEW BEERBHOOM COAL CO., LTD. Final dividend of Re. 0.38 per ordinary share, for the year ended 31st October 1957.

BENGAL FLOUR MILLS CO., LTD. Final dividend of Re. 1.25 (12½ per cent.) per share, for the year ended 31st December 1957.

VASANTA MILLS LTD. Dividend of Rs. 12.00 per share, for the year ended 31st December 1957. Transfer books will remain closed from 1st to 14th May 1958, both days inclusive.

COORG TEA CO., LTD. Interim dividend of Re. 0.50 (10 per cent.) per share, for the year ended 31st March 1958. Transfer books remain closed from 17th to 24th April 1958, both days inclusive.

INDIAN ALUMINIUM COMPANY, LTD. Annual General Meeting, Calcutta, 28th April 1958. Dividend: Re. 0.60 per share. Transfer books remain closed from 5th to 28th April 1958, both days inclusive.

SHIVRAJPUR SYNDICATE LTD. Annual General Meeting, Bombay, 29th April 1958. Dividend: Rs. 8.00 per share (includes bonus of Rs. 3.00 per share), payable on and after 6th May 1958. Transfer books remain closed from 7th to 25th April 1958, both days inclusive.

Notices

THE SVADESHI MILLS COMPANY LIMITED

NOTICE

THE SEVENTY-SECOND ANNUAL GENERAL MEETING of THE SVADESHI MILLS CO. LTD., will be held at the Registered Office of the Company, Bombay House, Bruce Street, Fort, Bombay, on THURSDAY, the 15TH MAY 1958, at 4-30 p.m. (S.T.), to transact the following business:—

(1) To adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 31st December 1957 and the audited Balance Sheet as at 31st December 1957.

(2) To declare Dividends.

(3) To appoint a Director in the place of Mr. J. R. D. Tata who retires by rotation and is eligible for re-appointment and to consider and, if thought fit, to pass the following resolution as a Special Resolution in respect of which a special notice, as required by section 261 of the Companies Act, 1956, has been received by the Company:—

"RESOLVED that pursuant to the provisions of section 261 and other applicable provisions, if any, of the Companies Act, 1956, Mr. J. R. D. Tata who retires by rotation and who is a director, officer, member and an associate of Tata Industries Private Ltd., the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency agreement to appoint ex-officio and special directors to the Board) be and is hereby reappointed a Director of the Company."

The reasons which make this Special Resolution necessary are fully set out in paragraph 2 of the explanatory statement annexed to this Notice, and the same shall for the purpose of section 261 be deemed to be incorporated in this Notice.

(4) To appoint a Director in the place of Mr. D. D. Romer who retires by rotation and is eligible for re-appointment and to consider and, if thought fit, to pass the following resolution in respect of which a special notice, as required by section 281 of the Companies Act, 1956, has been received by the Company:—

"RESOLVED that pursuant to the provisions of section 281 and other applicable provisions, if any, of the Companies Act, 1956, Mr. D. D. Romer, who has attained the age of 82 years and retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under section 280 of the said Act shall not apply to him."

(5) To appoint a Director in the place of H. H. Maharaja Fatesinghrao Gaekwad who was appointed an additional Director of the Company by the Board of Directors and who ceases to hold office under section 260 of the Companies Act, 1956, but who is eligible for re-appointment and in respect of whom the Company has received a notice in writing proposing his candidature for the Office of Director.

(6) To appoint a Director in the place of Mr. C. H. Bhabha who was appointed an additional Director of the Company by the Board of Directors and who ceases to hold office under section 260 of the Companies Act, 1956, but who is eligible for re-appointment and in respect of whom the Company has received a notice in writing proposing his candidature for the office of Director.

(7) To approve, pursuant to section 281 of the Companies Act, 1956, the appointment of Mr. T. V. Baddeley, C.B.E., as Special Director made by Tata Industries Private Limited, the Managing Agents of the Company, as authorised by the Company's Articles of Association and the Managing Agency agreement, and, if thought fit, to pass the following resolution in respect of which a special notice as required by section 281 of the said Act has been received by the Company:—

"RESOLVED that pursuant to the provisions of section 281 and other applicable provisions, if any, of the Companies Act, 1956, the appointment of Mr. T. V. Baddeley, C.B.E., who has attained the age of 69 years, as a Special Director by Tata Industries Private Ltd., the Managing Agents of the Company, as authorised by the Company's Articles of Association and the Managing Agency agreement, be and is hereby approved and it is hereby specifically declared that the age limit for Directors prescribed under section 280 of the said Act shall not apply to him."

(8) To appoint Auditors for the current year and to fix their remuneration.

Notes.—(*a*) The relative explanatory statements pursuant to section 173 of the Companies Act, 1956 in respect of the special business under items 3 to 7 set out above are being posted to all shareholders.

(*b*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(*c*) The Transfer Books of the Company have been closed from Saturday, the 22nd March to Saturday, the 19th April 1958, both days inclusive.

(*d*) If dividends on shares as recommended by the Directors are passed at the meeting, the payments will be made on and after Friday, the 16th May 1958, to those members whose names are on the Register of the Company on the 19th April 1958.

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, 11*th April*, 1958.

TATA MILLS LIMITED

NOTICE

THE FORTY-SIXTH ANNUAL GENERAL MEETING of THE TATA MILLS LIMITED will be held at the Registered Office of the Company, Bombay House, Bruce Street, Fort, Bombay, on FRIDAY, the 16TH MAY 1958 at 4-30 p.m. (S.T), to transact the following business:—

1. To adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 31st December 1957 and the audited Balance Sheet as at 31st December 1957.
2. To declare a Dividend.
3. To appoint a Director in the place of Mr. B. C. Mehta who retires by rotation and is eligible for re-appointment.
4. To appoint a Director in the place of Mr. P. S. Mistry who was appointed an additional Director of the Company by the Board of Directors and who ceases to hold office under section 260 of the Companies Act, 1956, but who is eligible for re-appointment and in respect of whom the Company has received a notice in writing proposing his candidature for the office of Director.
5. To appoint a Director in the place of Mr. Kantilal Nahalchand who was appointed an additional Director of the Company by the Board of Directors and who ceases to hold office under section 260 of the Companies Act, 1956, but who is eligible for re-appointment and in respect of whom the Company has received a notice in writing proposing his candidature for the office of Director.
6. To appoint Auditors for the current year and to fix their remuneration.

Notes.—(*a*) The relative explanatory statements pursuant to section 173 of the Companies Act, 1956, in respect of the special business under items 4 and 5 set out above are annexed hereto.

(*b*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(*c*) The Transfer Books of the Company have been closed from Saturday, the 22nd March to Saturday, the 19th April 1958, both days inclusive.

(*d*) If dividend on shares as recommended by the Directors is passed at the meeting, the payment will be made on and after Saturday, the 17th May 1958, to those members whose names are on the Register of the Company on the 19th April 1958.

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, 11*th April*, 1958.

ANNEXURE TO THE NOTICE

Explanatory Statements as required by Section 173 of the Companies Act, 1956

The following explanatory statements as required by section 173 of the Companies Act, 1956, set out all material facts relating to the special business mentioned in the Notice dated the 11th April 1958.

2. *Item No.* 4: Mr. P. S. Mistry was appointed an additional Director in October 1957 by the Board of Directors under Article 136 of the Articles of Association of the Company. Under section 260 of the Companies Act, 1956, he can hold office only upto the date of this Annual General Meeting. As required by section 257 of the Act a notice has been received from some members signifying their intention to propose his appointment as a Director. Mr. P. S. Mistry is a young business man and a building contractor and it is desirable that he should continue to be a member of the Board.

3. *Item No.* 5: Mr. Kantilal Nahalchand was appointed an additional Director in November 1957 by the Board of Directors under Article 136 of the Articles of Association of the Company. Under section 260 of the Companies Act, 1956, he can hold office only upto the date of this Annual General Meeting. As required by section 257 of the Act a notice has been received from some members signifying their intention to propose his appointment as a Director. Mr. Kantilal Nahalchand is a business man of repute and it is in the interest of the Company that the Board should continue to receive the benefit of his advice as a member of the Board.

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,
T. V. BADDELEY,
Director.

SULEKHA WORKS LTD.

One more year of successful working has been reported by Sulekha Works Ltd. (Managing Agents: Messrs. Maitra Brothers & Co. Private Ltd., Calcutta) during the year ended 31st December 1956. As one of the leading manufacturers of inks in the country, the Company's sales have shown a steady rise from year to year. The Company's sale proceeds for the year have advanced from Rs. 15.35 lakhs in 1955 to Rs. 19.81 lakhs in 1956. It should be noted that its sales amounted to only Rs. 3.07 lakhs in 1951. Viewed in that context, the rapid progress shown by the Company during the span of only five years is really encouraging. Although the profit does not show a commensurate rise, the gross profit at Rs. 1.84 lakh is still a shade better than Rs. 1.51 lakh in the previous year. The net profit, after providing for Managing Agents' remuneration, depreciation and taxation, however, stands lower at Rs. 58,637, as compared with Rs. 62,892 in the preceding year. The Directors have transferred a sum of Rs. 45,000 to the various reserves, as against Rs. 55,000 set aside a year ago. The dividend has been stepped up to 10 per cent. from 8 per cent. paid for 1955.

In order to cope with the increasing demand for the Company's products, the Directors are now actively engaged in finding out the necessary space and finance for enhancing productivity. The newly acquired site at Sodepur is now undergoing repairs and alterations. Since much remains to be done in order to make it suitable for a complete factory, and this involves a large sum of money, further capital has to be raised. Accordingly, the Directors feel that the time has now come when they should issue further shares in order to utilise the present favourable situation.

The Company's paid-up capital as at 31st December 1956 stands at Rs. 1.52 lakhs. Its reserves and surplus aggregate Rs. 1.37 lakhs. The current liabilities amount to Rs. 9.35 lakhs. The gross block of Rs. 4.27 lakhs stands written down at Rs. 3.45 lakhs. The current assets amount to Rs. 8.79 lakhs.

THE DUNLOP RUBBER CO. (INDIA) LTD.

MR. JOHN LUCKHAM'S REVIEW

THE thirty-second annual general meeting of the Dunlop Rubber Company (India) Ltd. was held at Calcutta on 18th April 1958. Addressing the shareholders Mr. John Luckham, Managing Director, said:

"GENTLEMEN,

"The Directors' report and accounts for the year 1957 have been in your hands for some time and, with your permission, I will take them as read.

"It is with great regret that we have to record since our last meeting the loss which we have suffered in the passing of two of our Directors. Mr. George Morgan died in Calcutta on the 26th June 1957. Mr. Morgan originally came to Calcutta in 1889 and the experience which he gained during his distinguished career was of very great value to your Board of which he was a member since 1945. On the 19th January this year, Mr. Kanai Lal Jatia, who had also been on your Board since 1945, died from a heart attack at his Calcutta residence. His wise counsel was at all times made freely available to the interests which he so earnestly served, and he will be greatly missed in the industrial field with which he was connected.

"You will have seen from the notice convening the meeting that it is proposed to appoint Mr. E. H. Morris to the Board. Mr. Morris first came to India in 1933 and, apart from service in this country, has had many years of service with the Dunlop Rubber Company, Ltd., in the Far East. He returned to India in 1956 as General Sales Manager, following the untimely death of Mr. Guy Stack. The Company's business is expanding so rapidly that your Board feel it necessary to have a whole-time Director at the head of the Company's selling organisation and Mr. Morris is recommended for this appointment.

The Year's Trading

"During the year, production increased in nearly all lines, but, even so, we were not able to meet the demand for all our products. The Government permitted limited imports to help relieve some of these shortages, but, particularly in respect of cycle tyres and rims, sufficient quantities have not been available to meet requirements.

"During the past year, the road transport industry has been undergoing tremendous changes and expansion, particularly long-distance goods transport. The modern truck now engaged in this work requires tyres capable of carrying heavy loads at high speeds over long distances. Such tyres must be built with the best available materials and using the latest manufacturing techniques. It is in this respect that your Company is particularly fortunate in having available to it the full resources of the Dunlop worldwide research, technical and engineering organisations.

"We have continued to retain our premier position in the car tyre market. The progress which the motor car industry has been making in recent years is in danger of slowing up, owing to the difficult licensing situation of the imported components. The reasons for this are too well known to every one and unfortunately these are likely to persist for some time.

"The bicycle industry has continued to grow very rapidly and the demand for our products has been well in excess of supply. I will deal separately with our expansion plans to meet this situation.

"During 1957, the installation of plant for the manufacture of large earthmover tyres was completed and production commenced early this year. The demand for this type of tyre is increasing. Good progress was made in our industrial rubber products range and, in particular, the demand for conveyor belting has exceeded all expectations. The popularity of Dunlopillo for all its various uses continues to grow and the additional capacity which was installed during the year was utilised to the full.

Expansion Plans

"I am happy to be able to tell you that satisfactory progress is being made at your new factory at Ambattur, near Madras, and we are hopeful that everything will be ready for the production of bus, truck and cycle tyres to commence at the beginning of next year. The construction of the main buildings is well under way and plant and machinery are beginning to arrive in the country. Expansion is also continuing at Sahaganj and, in particular, increased production of giant tyres, cycle tyres and cycle rims is well in hand.

"I advised you at the annual general meeting last year that an issue of further share capital would form the basis of the Board's plans for raising additional capital. As most of you will be aware, in July 1957, 14 lakhs of new ordinary shares of ten rupees each at a premium of five rupees were offered to the ordinary shareholders in the proportion of seven for eight existing shares. It is gratifying to be able to report that, in spite of the difficult conditions, this issue was an unqualified success. The net proceeds of the issue amounted to Rs. 203 lakhs. As a result of the issue, the subscribed ordinary capital now stands at Rs. 3 crores, as against Rs. 160 lakhs at the end of 1956.

Raw Materials

"The raw materials supply position was generally satisfactory although, on several occasions during the year, our stock position became dangerously low in some of our main requirements. There was a period when the congestion in Calcutta port seriously delayed clearance of metal cargoes but the position improved very considerably towards the end of the year. Our production planning problems would be considerably lessened, if Government could grant import licences for essential raw materials on a longer basis than six months at a time.

"There was virtually no improvement in the production of raw rubber in India during 1957 as compared with the previous year. On the other hand, consumption of rubber reached a new record, with the result that we had to rely on considerable imports. In my report last year, I mentioned that import licences for raw rubber, issued after August 1956, were subject to a cess, if the imported rubber landed at a cost less than the local price. On imports during 1957, we paid nearly Rs. 11 lakhs to the Rubber Board on this account, and we also had to absorb Rs. 2 lakhs on rubber which was imported at a price higher than the local price.

"Prices of raw materials were stable throughout the year, but there were increases in import duty on a number of raw materials and machinery parts.

"As I have already said, our production is due to expand very considerably in the near future to meet the essential needs of the road transport industry which is so vital in this country. This expansion has, of course, the full support and approval of the Government and we are, therefore, confident that licences to import increased quantities of raw materials will be granted.

"The net profit for the year, after providing for depreciation, interest and taxation, was Rs. 80,67,449, as compared with Rs. 55,09,909 for 1956. In the face of the high level of taxation and the rapid expansion of our business, the building up of our internal resources continues to be of paramount importance. The Directors are, therefore, proposing the transfer of Rs. 30 lakhs to general reserve. This will increase the general reserve to Rs. 238,83,000 and you will see from the balance sheet that the increased ordinary share capital is covered more than one and a half times by the total reserves and surplus. The rate of ordinary dividend was maintained without change at 15 per cent. from 1951 to 1956 and, in view of the improved results, the Directors consider there should now be a modest increase. They are, therefore, recommending a final ordinary dividend of 8¾ per cent. which, with the interim dividend paid in June 1957, gives a total of 16¼ per cent. for the year and absorbs Rs. 38,25,000. The surplus carried forward will then be Rs. 22,23,000.

Balance Sheet

"The additions to fixed assets during the year amounted to Rs. 97 lakhs, most of which was in respect of building and plant additions at your Sahaganj factory, but this also included Rs. 17,80,000 expended on the new Ambattur factory. The amount of depreciation written off in 1957 was Rs. 27,69,000. A special provision of Rs. 6,60,000 made in previous years has now been transferred to special depreciation reserve and, after allowing for this, the net value of fixed assets has increased during the year by Rs. 69 lakhs to Rs. 382 lakhs.

"Stock inventories at Rs. 486,84,000 were Rs. 31,37,000 higher than at the close of the previous year, but, even so, finished goods stocks were abnormally low, owing to the ever-increasing demand for the Company's products. Sundry debtors were up by Rs. 83,66,000, due to the greater sales turnover.

"Turning to the liabilities side of the balance-sheet, I have already commented on the increase in ordinary share capital and reserves. Compared with the end of 1956, the bank borrowings have been reduced by Rs. 42,79,000 and the unsecured loans of Rs. 76,07,000 have been repaid. In spite of substantial increases in sundry creditors and provision for taxation, there was an overall reduction in current liabilities of Rs. 56,46,000. resulting from the additional share capital subscribed during the year.

Employee Relations

"The standards of our welfare facilities and working conditions have been well maintained throughout the year. General labour relations remained cordial, and I am sure you would like to join with the Directors in thanking the staff and operatives for the loyal and willing service throughout the year."

NOTE:—*This does not purport to be a record of the proceedings of the annual general meeting.*

QUESTION HOUR IN PARLIAMENT

Export of Thorium

ABOUT 378 tons of thorium nitrate have so far been exported to Austria, Egypt, France, Hong Kong, Japan, Pakistan, the U.K. and the U.S.A.

—*Jawaharlal Nehru*

Loans to Foreign Countries

India has advanced to Burma and Indonesia loans amounting to Rs. 15 crores and Rs. 5 lakhs, respectively. The Government of India has also loaned 3,100 tons of rice to Nepal to be repaid in kind.

—*Morarji Desai*

Building Construction

The estimated cost of buildings which the various Ministries of the Government have agreed to postpone amounts to Rs. 13.10 crores. Postponement of the construction of these buildings does not mean that their construction has altogether been given up. If any Ministry feels that the construction of any particular building is urgent, it will be examined on its merits, and its construction will be allowed to be taken up after its essentiality has been fully established.

—*B. R. Bhagat*

Textile Exports

The exports of cotton textiles from India in 1957 are estimated at 889.14 million yards, an increase of 145.3 million yards over 1956. In terms of foreign exchange realised, the exports in 1957 were worth Rs. 64.1 crores, as against Rs. 56.99 crores in the previous year.

* * * *

Rayon Yarn Manufacture

Three schemes for the production of rayon yarn are expected to be completed before the end of 1958. Two more schemes are scheduled to be completed before the end of 1959, while a sixth scheme will take some more time. Effective steps towards the implementation of the six schemes have been taken. Three of the schemes are for substantial expansion of the existing industrial undertakings, while the other three are for starting new factories.

—*Lal Bahadur Shastri*

Coffee Export

Proposals are under consideration for new methods of export sales of coffee so as to obtain better prices.

* * * *

Jute Goods Price

The voluntary fixation of minimum price for jute goods by the Indian Jute Mills Association has no adverse effect so far, although it is too early to assess the ultimate effects.

* * * *

Cement Distribution

After the State Trading Corporation took over the distribution of cement, it was supplied at uniform f.o.r. destination price at all railheads in the country, including distant places in Assam, North Bengal, Manipur and Tripura. The Corporation has started moving surplus cement of certain factories in Saurashtra and South India by sea to Calcutta and selling it at the uniform selling price, even though this involves heavy additional expense.

* * * *

Import Licences

The total of outstanding commitments in respect of import licences issued till the end of March 1958 was of the order of Rs. 864 crores. Of this, Government accounted for Rs. 523 crores, import of steel, mainly by the Iron and Steel Controller, for Rs. 41 crores and the private sector for Rs. 300 crores.

—*Nityanand Kanungo*

Trade with Tibet

The difficulties experienced by Indian traders in Tibet in regard to payment of prices are being discussed with the Chinese representatives at New Delhi.

* * * *

Khadi Production

The production of yarn by Ambar Charka has gone up from 1.2 million lbs. to 2.9 million lbs. The Khadi Commission is making efforts to produce fine variety of khadi with yarn up to 60s and voiles for export.

* * * *

Export of Monkeys

India earned foreign exchange to the extent of Rs. 86 lakhs by export of monkeys during the first seven months of 1957-58.

—*Manubhai Shah*

Oil Prospecting

Drilling will be resumed at Jwalamukhi as soon as the current testing of the various layers for evidence of oil is completed. Except for some delay in the programme of drilling operations at Jwalamukhi on account of the alternating layers of very hard and soft rocks and the accident at the Jwalamukhi well which require fishing operations [illegible] drilling rigs and collars, oil prospecting in the [illegible] progressing according to schedule.

(7) To approve Cambay will be started by the Compan[illegible]8. The road from the railment of Mr. [illegible]l drilling site in Cambay most of the material has Special Direct[illegible] of the work in this unit tries Private though some Soviet drillagents of the [illegible] Testing for oil in the Cauvery basin in Madras State will be taken up some time. The areas in which there is more probability of oil being discovered are engaging Government's attention.

—*K. D. Malaviya*

Neiveli Lignite Project

Only the mining part of the different schemes covered under the Neiveli Lignite Project is included in the core of the second Plan. Although the remaining schemes are not in the core, it is expected that the thermal plant (the foreign exchange requirements of which will be met out of the Russian aid) will also be completed by the end of the Plan period. It is further hoped that sufficient progress will be made on the fertiliser plant also during the Plan period.

—*S. N. Mishra*

Sugar Consumption

The *per capita* consumption of sugar and *gur* in India is 11.3 lbs. and 18.5 lbs., respectively. The total production of sugar and *gur* in 1956-57 was 2,029,000 tons and 3,257,000 tons. The production is sufficient for the needs of the country.

—*A. P. Jain*

Wheat from U.S.

Further purchases of wheat from the United States under Public Law 480 will be made possible only after the U.S. Congress makes further allocations for the purpose some time in August this year. In addition to the wheat from the U.S.A., India is getting about 15 million dollars worth of wheat from Canada under the Colombo Plan. The prices at which India is buying wheat from the U.S.A. compare favourably with prices fixed under the International Wheat Agreement to which India is also a party.

—*A. M. Thomas*

Self-sufficiency in Jute

India is well on the road to attaining self-sufficiency in the matter of raw jute. (The Government will shortly be taking steps to set up co-operative societies for the marketing of jute. These and some other steps which the Government will soon take will help towards ensuring good price for jute.—*A. P. Jain.*)

—*M. V. Krishnappa*

Rural Credit

There will be some fresh examination of the report of the Rural Credit Survey Committee following the comment made by the Prime Minister, Mr. Nehru, on the report at the Indian Co-operative Congress on Saturday. It is not possible to say whether the implementation of the recommendations will be stayed, but there is a possibility of their re-examination. Pilot schemes in respect of grant of credit facilities to the agriculturists have been implemented in select areas of Andhra, Bombay, Madras, Orissa, Punjab and Madhya Pradesh. The central banks in the areas are reorganised on the basis of State partnership. In Bombay, 92 large-sized societies are established in Dharwar district, where the pilot scheme is implemented. The societies distribute Rs. 121 lakhs under short-term and medium-term loans. The marketing societies in this district handle agricultural produce valued at Rs. 16.91 lakhs.

* * * *

Agricultural Institutes

The Government of India, in consultation with the Planning Commission, has decided to develop the Indian Agricultural Research Institute in the capital and four agricultural colleges in the country as centres of post-graduate education in agricultural science. The four colleges will be administered by the State Governments, the Government of India providing financial assistance.

—*Dr. Punjabrao Deshmukh*

Penicillin Sales

The total sales turnover of the Penicillin Factory at Pimpri rose from Rs. 54 lakhs in 1956-57 to Rs. 1.8 crore in 1957-58.

* * * *

Demurrage from Soviet Ships

Claims for demurrage from Russian ships which brought equipment for the Bhilai project, amounting to Rs. 58 lakhs, are under scrutiny.

* * * *

Indian Shipping Companies

Thirty Indian companies are engaged in shipping trade in the country. These companies own ships of a total of 581,680 tons. Among them, the Scindia Steam Navigation Company is the biggest with 234,290 tons and the India Steamship Company, Ltd., Calcutta, comes second with 99,140 tons.

* * * *

Kandla Port

There has been a slight reduction in the depths available near the jetties at the Kandla port because of earth slipping down the banks, owing to the fact that it has yet to be cut down to the proper slope. The question of improving and stabilising the approach channel by carrying out training works or dredging has been under examination through model experiments at the research station at Poona. In the meantime, the port authorities have been able to spot another channel with greater depths which has been developed and is being used by ships entering the port.

MONEY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, 16*th April*

Conditions in the short-term money market were very comfortable during the week under review. While fresh demand for money showed a distinct fall, there was a sizable return of funds to banks, with the result that banks had a surplus which was utilised to reduce their borrowings from the Reserve Bank. There was, however, no sign of a downward trend in interest rates which were maintained at the previous week's levels. Inter-bank call money was unchanged at 3 per cent. among the Exchange banks and big Indian banks and at 3½ per cent. among smaller banks. House money at call was placed at 4½ to 4⅝ per cent. and short-term deposits continued to fetch 4½ to 4⅝ per cent. for one to six months.

For the third week in succession, notes in circulation have expanded considerably. The Reserve Bank of India statement for the week ended 11th April shows a rise of Rs. 18.53 crores in active notes, thus bringing the cumulative increase for the past three weeks to Rs. 66.39 crores. Notes held in the Banking Department are also higher by Rs. 5.23 crores, so that the total notes issued disclose a rise of Rs. 23.76 crores. As against this, there has been an increase of Rs. 10 crores in foreign securities, Rs. 10 crores in rupee securities and of Rs. 3.76 crores in rupee coin. The rise in foreign securities is on top of an increase of Rs. 44.87 crores recorded in the previous week, but this has been more than offset by the fall of Rs. 16.53 crores in balances held abroad. With this drop foreign balances have dwindled by Rs. 44 crores in the last two weeks. Central Government's deposits have declined by Rs. 6.04 crores, while other Governments' deposits have gone up by Rs. 6.39 crores. Deposits of banks are lower by Rs. 3.22 crores. Loans and advances to Governments have risen by Rs. 8.96 crores, while other loans and advances have recorded a fall of Rs. 18.39 crores, of which advances to Scheduled banks against usance bills account for Rs. 5.13 crores. Investments are lower by Rs. 2.17 crores, but there has been an increase of Rs. 13.20 crores in Government Treasury bills purchased.

The Scheduled banks' statement for the week ended 4th April 1958 discloses a substantial rise of Rs. 21.54 crores in demand deposits, which have crossed the Rs. 750-crore mark. Time deposits also have gone up by Rs. 8.44 crores. Borrowings from the Reserve Bank have been reduced by Rs. 4.06 crores. As against an aggregate expansion of Rs. 29.98 crores in deposits, the total advances have gone up by only Rs. 7.08 crores, of which bills purchased and discounted alone account for Rs. 4.48 crores. Consequently, cash balances have swelled by Rs. 19.83 crores, balances with other banks by Rs. 1.11 crores and money at call by Rs. 1.61 crores.

The Gilt-edged market ruled firm with widespread gains in prices. Good demand for short and medium-dated loans and absence of sellers were the main bullish factors. There was no increase in the Reserve Bank's selling prices, except in 3½ per cent. 1965, which was raised early in the week by 5 nP to Rs. 97.75. Among the State loans, the near-dated issues and 4 per cent. 1967 loans were in good demand. 3 per cent. 1986 Conversion Loan was unchanged at Rs. 71.20. 3 per cent. 1970-75 was placed at Rs. 86.30 after payment of half-yearly interest, as against Rs. 86.35 *cum*-voucher a week ago. 3 per cent. 1966-68 was in demand and rose by 5 nP to Rs. 92.60. 3 per cent. 1964 and 1963-65 attracted attention and gained 25 nP and 20 nP, respectively, to Rs. 94.95. 3 per cent. 1959-61 put on 5 nP to Rs. 99.10. 2½ per cent. 1962 was in request and added 10 nP to Rs. 95.15. 2½ per cent. 1960 and 2½ per cent. 1961 each rose by 15 nP to Rs. 97.95 and Rs. 95.20, respectively. 3½ per cent. 1964 gathered 5 nP to Rs. 98.20. Among State loans, 4 per cent. Madras 1963 shot up by 25 nP to Rs. 99 and 4 per cent. 1964 by 5 nP to Rs. 98.75.

The rupee ruled steady in the foreign exchange market, with no change over the week in prices. Banks' selling rate of ready dollars, after a rise from Rs. 475 to Rs. 475.25, declined to Rs. 475 per $100. Likewise, their buying rate improved from Rs. 471.75 to Rs. 472, before receding to Rs. 471.75 per $100. In New York, spot sterling was marked up from $2.81.11/16-2.81.13/16 to $2.81.13/16-2.81.15/16 and three months' forward from $2.78¾-2.79 to $2.79-2.79¼. Transferable sterling, however, declined from 279.50-279.60 cents to 279.35-279.45 cents.

HIDES DULL

(From Our Own Correspondent)

KANPUR, 14*th April*

During the week under review, the hides and skins market ruled dull. Due to advent of summer season, arrivals of fresh material from outside the district fell not only in volume but also in quality. Buff purchasers were slightly in difficulty because of lower quality. The main purchasers were the local tanners and the Madras dealers.

The latest available quotations are: Wet salted cow, 1st grade Rs. 380 and 2nd grade Rs. 280 per score; wet salted buff, 1st grade 1 lb. 6 ozs. and 2nd grade 1 lb. 12 ozs. per rupee; goat, 1st grade Rs. 300 and 2nd grade Rs. 275 per 100 pieces; sheep, 1st grade Rs. 275 and 2nd grade Rs. 250 per 100 pieces.

READY SILVER CROSSES Rs. 200-MARK

(From Our Own Correspondent)

BOMBAY, 16*th April*

The bullion market continued to be dominated by "bulls." The squeeze in silver was further tightened pushing up the prices further. Ready silver crossed the Rs. 200-mark for the first time in the last nearly seven years and touched a high of Rs. 202 today, at which level it was only Rs. 5-4 short of the record of Rs. 207.4 reached in June 1951. The scarcity of floating stocks, the decline in arrivals of Tibetan coins and encouraging advices from other centres were the main factors which were fully exploited by the "bulls" to rig up prices of the white metal. This forced the "bears" to cover their sales feverishly. The scarcity of stocks is fully reflected in the widening of the premium of ready metal over the forward (May settlement) from Re. 1-12 to Rs. 2-4. The forward position (May settlement) also almost knocked at Rs. 200, the highest level touched for the week being Rs. 199-12. However, fears of special clearing being enforced at this level brought the price down to Rs. 199-9 today. The purchasers had to pay a margin of Rs. 500 per bar on their outstanding purchases in the May settlement when the forward price crossed Rs. 196-7 on Friday last under by-law 33C. But this did not deter them from pushing the price well above this level.

Gold also ruled firm, in sympathy with silver. The good demand in the ready section also assisted sentiment.

Silver to forward delivery (May settlement) rallied from Rs. 196-1 to Rs. 199-12 before closing at Rs. 199-9.

Ready silver jumped from Rs. 197-13 to Rs. 202, but the closing was a shade lower at Rs. 201-13. The floating stocks of silver are estimated at 400 bars. The daily average arrivals were 20 bars, while the offtake was 15 bars per day on an average.

Forward gold (May settlement) was marked up from Rs. 111-13 to Rs. 113-2, at which level there was profit-taking, bringing the price down to Rs. 112. Fresh buying, however, lifted it to Rs. 112-14.

Ready gold gathered strength from Rs. 112-4 to Rs. 114-2. After a setback to Rs. 112-13, it advanced again to Rs. 113-15 at the close today. The floating stocks of gold are reported to be 30,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was slightly higher at 3,600 tolas.

In New York, silver was unchanged at 88.5/8c., while London prices gained a little. Spot silver was raised from 76d. to 76⅛d. and forward from 75⅞d. to 75¾d. Gold was, however, marked down from 249s. 3½d. to 249s.

The following comparative table shows at a glance the trend of the market during the week under review:

	16-4-58	Highest	Lowest	9-4-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

N.B.—Foreign bullion prices shown in the above table relate to the previous day.

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, 15*th April*

Fair demand, coupled with the stricter import policy, was responsible for the steady conditions which prevailed in the metal market during the week under review. Trade circles had an opportunity to go through the Red Book in greater detail, and pointed out that, although for certain items the basic period was advanced to 1956-57, this was not done in the case of metals. In view of the growing industrial development, imports of base metals had gradually increased, and as such the trade strongly felt that there was every reason to advance the basic period for metal imports also. Copper scrap would be permitted to be imported by actual users only on producing proof of consumption. However, since in recent years consumers had preferred to use more ingots than scrap, it was hoped that proof of future consumption would be sufficient to qualify for import licence. The scarcity of copper was acute, and consumers were anxiously awaiting the receipt of the Canadian metal. In tin, the rate was considerably lower than in Bombay, but even the lower rate of Rs. 508 should go down, as by adding 3½ per cent. to the c.i.f. value of Rs. 482, the quotation should be only about Rs. 500. However, tin has not been for the present time included in the Control Order. Electrolytic zinc was firm at Rs. 53.75, as against Rs. 51.75 in Bombay. Naturally, Bombay attracted business from Calcutta. The reverse was the case in lead. The local quotation was Rs. 58, as against Rs. 63.00 in Bombay.

COTTON FUTURES EASY TOWARDS CLOSE

(From Our Own Correspondent)

BOMBAY, 16*th April*

The cotton futures market, after having ruled firm during the first three sessions of the week under review, turned easy on Monday. The earlier firmness was due to very strong rumours of the possibility of an export quota for ¾" cotton. The reported suggestion to the Government, made by the East India Cotton Association at its weekly Board meeting on Friday, that an export quota for ¾" cotton should be immediately released, strengthened the rumour, and touched off heavy short-covering and scattered replacement buying, resulting in a smart rally in prices. Firm advices from the oilseeds market aided the upswing. But the trend was reversed on Monday following heavy liquidation, prompted by the fixation of lower room rates for the delivery contracts. The news that the Millowners' Association had opposed the plea for a quota for staple varieties imparted further weakness to the market. The failure of cloth offtake to improve to the desired extent, which was reflected in the large accumulation of stocks and the weak demand for ready cotton, continued financial stringency and weaker upcountry advices were other discouraging factors. The easiness of the market persisted till the close today. Over the week, prices showed a marked fall.

I.C.C. Moglai Jarilla (May 1958) opened the week at Rs. 633.50, as against the previous close of Rs. 661.25, and improved to Rs. 668.50 on Saturday. Profit-taking and bull liquidation dragged the contract down to Rs. 654.25 yesterday. Opening today's session at Rs. 655.50, the contract gathered Rs. 4 before closing at Rs. 654.25. The net loss over the week is Rs. 7. I.C.C. Moglai Jarilla (August 1958) opened the week Re. 1-8 higher at Rs. 673 and firmed up to Rs. 678 on Saturday before declining to Rs. 666.50 yesterday. Commencing today at Rs. 668.50, the contract rose to Rs. 671 before finishing at Rs. 666. The net loss over the week is Rs. 4.50.

The following table indicates the trend of prices during the week:

(In rupees per candy of 784 lbs.)

	16-4-58	*High*	*Low*	9-4-58
I.C.C. Moglai Jarilla (May 1958) ...	654.25	668.50	653.50	661.25
I.C.C. Moglai Jarilla (August 1958) ...	666.00	678.00	665.50	670.50

The sagging trend in spot prices continued during the week also. Spinner interest was subdued. Most of the mills would appear to have covered a large part of their requirements. Stray demand was noted for good qualities like Co2, Laxmi, Jayadhar, etc., while short-staple continued to be neglected. Advices from upcountry centres, especially in the South, were discouraging.

On the export front, steady demand was noted for exportable varieties and regular sales were reported. Consequently, Bengal *Deshi* prices have been steadily improving. Hopes of a quota for staple cotton were being entertained in some quarters.

In foreign section, the uncertainty regarding the payments procedure for Egyptian cotton import and the rupee-tallaris relation have put a curb on business in those styles. Certain varieties of American cotton like El Paso evoked the interest of mills and sizable purchases of that variety by a Bombay mill was reported.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week's closing rates:

Bengal *Deshi* 620 (610); Berar Jarilla 740 (750); Khandesh 785 (790); Oomra *Deshi* 665 (675); Vijay 890 (900); Hubli Laxmi 1,040 (1,040); Jaydhar 830 (870). *Delivery contracts*: Bengal 583 (578).

Cotton futures values in Karachi made handsome gains during the week under review. The expectation of a possible reduction in export duty and the low level of prices attracted a sizable volume of fresh support. Values consequently moved higher. But the improvement would have been more marked but for the continued slackness of foreign demand. The recession in the U.S. and the critical situation of Japanese textile industry, whose requirements of coarse cotton are supplied to a large extent by Pakistan, were the factors which adversely affected sentiment. N.T.R.G. improved from Rs. 71.10 last week to Rs. 72-6 and the July position gained, over the week, As. 14½ to Rs. 72-10-6. The spot section depicted a mixed trend. While the *Deshi* styles were in good form, other varieties were neglected and were quoted lower. Sind *Deshi* and Punjab *Deshi* gathered Re. 1 each to Rs. 65.8 and Rs. 63.81 respectively. The following are the latest available rates—in Pakistani rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

4F Roller 71-1; S.G. 76-13; 289F N.T. Roller 77-1; S.G. 87-1; 289F Punjab Roller 82-9 S.G. 93-1.

Easy conditions prevailed in the Alexandria cotton futures market during the week under review. Competition of Sudanese styles and the apprehension of further cut in duty by that country discouraged buying. Values, therefore, eased. The latest available quotations—in tallaris per lb.—are given below:

Karnak: May 78.25; July 79.30. *Ashmouni*: April 66.50; June 67.80.

The Liverpool cotton futures market depicted a fully steady trend during the week. Despite the prospect of larger shipments of C.C.C. cotton to Liverpool, values were well maintained. The steadiness was influenced by the anticipation that the C.C.C. stocks contained only a small percentage of good quality cotton. The comparatively small volume of tenders against the March-April

contracts, about 8,200 bales against the American contract and 2,000 bales against the American type contract, also imparted strength to the market. The latest available quotations—in pence per lb.—are as under:

American cotton One Inch Staple Contract: May-June 24.75; July-August 25 05; October-November 26.32; December-January 26.57. *American Cotton Mixed Growth Contract*: May-June 25.33; July-August 25.82; October-November 26.32; December-January 26.57. *Sudan*: May-June 31.00; July-August 31.20; September-October 31.85.

Cotton futures values in New York moved higher on Commission House buying and short-covering prompted by reports of unwanted showers in the Western and Central cotton belts and delay in crop preparation due to wet soil and cool temperature. Expectation entertained in some quarters that the entry into the Soil Bank would exceed five million acres also imparted strength to the market.

The House of Representatives' Appropriation Committee seems to favour the continuation of the present export sales programme on a competitive bid basis. The Committee is reported to be against the replacement of this programme by the proposed export subsidy system. Trade circles, on the other hand, are strongly in favour of the latter.

The following are the latest available quotations from New Yark, as compared with those a week and a fortnight before:

(In cents per lb.)

	15-4-58	8-4-58	31-3-58
Spot	36.00	35.95	36.10
March	35.92	35.81	35.98
May	36.25	36.04	36.23
July	36.68	36.53	36.72

YARNS WEAK

(From Our Own Correspondent)

BOMBAY, 16*th April*

The yarn market presented a weak trend during the week under review, in contrast to the firm conditions noted in the last fortnight. Rayon yarns encountered selling despite scarcity of stocks. For enquiries from consuming centres were poor. It was reported that several weaving mills, since they could not pay high prices for yarn, were compelled either to curtail production drastically or to close down. There was also some liquidation on stocks by traders who had gone long in the previous two weeks on expectation of an upward revision in the price of yarn released by the domestic producer for the current quarter (April-June 1958). The National Rayon Corporation released early this week art silk yarn at prices similar to those of yarn released in the preceding quarter, that is, at Rs. 3.56 (Rs. 3-9) per lb. for 150 denier bright yarn and at Rs. 3 87 (Rs. 3-14) for 120 denier yarn. In sympathy with rayon yarn and on fears of enlarged supply in the coming months based on reports that several mills had switched over to spinning staple fibre yarn instead of cotton yarn, staple fibre yarns were subjected to selling pressure. Cotton yarns continued to be dull with values generally moving downward.

Spot 120 Japan dropped 28 nP to Rs. 6.41. 150 Japan fell by 19 nP to Rs. 6.47. 120 Italy climbed down by 25 nP to Rs. 6.25. 150 Italy lost 6 nP to Rs. 5.56. Among indigenous yarns, National Rayons 120 Bt. cones 1st grade receded by 25 nP to Rs. 5.75 and 150 Bt. cones 1st grade by 10 nP to Rs. 5.96. Snia rayon yarn (120 dull cones) April delivery was nominally quoted at Rs. 625. No transactions were reported to have been put through in this contract.

Staple fibre yarn (40×2) April delivery were marked down by Rs. 8 to Rs. 615. June delivery retreated by a like amount to Rs. 624. 40×2 Centurys declined by 6 nP to Rs. 3.28. New Greats and Citys eased by 4 nP each to Rs. 3.21 and Rs. 3.27, respectively. Kohinoors shed 2 nP to Rs. 3.31. Foreign yarns (80×2), however, evoked some support and registered a rise in prices. Fujis rallied 10 nP to Rs. 7.16. Paramounts rose by 7 nP to Rs. 7.19.

In the cotton yarn section, ten counts moderns receded by 25 nP to Rs. 14.25. Podars were dull at Rs. 13.50. Twenty counts Indus were quiet at Rs. 16.50 and Moderns at Rs. 17.25. Thirty counts Indus were unchanged at Rs. 20. Among forty counts, Minaxis declined by 25 nP to Rs. 26.62. Moderns lost a similar sum to Rs. 24.25. Sixty counts Moderns were dull at Rs. 60, as also Raghuvamshis at Rs. 50.75. Eighty counts Moderns shed 25 nP to Rs. 70. Mahendras were done at Rs. 69.50, same as last week, and Finlays at Rs. 76.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	16-4-1958	9-4-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia April	625 00	925 00
120 Japan (per lb.)	6 41	6 69
150 Japan (per lb.)	6 47	6 66
120 Italy (per lb.)	6.25	6.50
150 Italy (per lb.)	6.56	6.62
Staple fibre yarn (per case of 200 lbs.)—		
40 × 2 April	615.00	623.00
40 × 2 June	624 00	632 00
40 × 2 New Great (per lb.)	3.21	3 25
40 × 2 City (per lb.)	3.27	3.31
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	13.50	13.50
20s Modern	17.25	17.25
20s Indu	20 00	20 00
40s Minaxi	23 62	23 87
60s Raghuvamshi	50 75	50 75
80s Modern	70.00	70.25

GROUNDNUTS SOAR DESPITE MARGIN

(From Our Own Correspondent)

BOMBAY, 16*th April*

Buoyant conditions prevailed in the oilseeds market during the week under review. In particular, the groundnut section ruled distinctly firm, with values forging ahead. Even the enforcement of margin at the rate of Rs. 25 per candy on all purchases of groundnuts above Rs. 165 as from Friday failed to have any effect. There was strong buying spree whipped up by sustained large off-take by crushers and *vanaspati* producers in spot groundnut and groundnut oil, respectively. The continued firmness of sarson also imparted strength. The May delivery which stood at Rs. 164.25 last week-end swiftly advanced, despite the margin, to touch the peak of Rs. 171.50 on Saturday. But, on Monday, a reaction set in, thanks to fears of intervention by the Forward Markets Commission. The Commission was reported to have asked the Bombay Oilseeds and Oil Exchange to find out the volume of outstanding business in groundnuts non-transferable delivery contracts. Yesterday, there were rumours that the Commission had decided to impose margins in April, May and June delivery contracts. Some apprehended that Section 18(3) of the Forward Contracts (Regulation) Act which empowers the Commission to regulate trading in such contracts with a view to discouraging unhealthy speculative business might be applied. The final decision of the Commission, however, is still not known.

The castorseeds section also presented a distinctly firm trend. Replacement buying was heavy, the chief reason being hopes of good export business, especially with Communist countries. Japan was said to be interested in buying Indian castor oil. Linseed was quite active with scarcity of contracts accelerating the rise in price. It was reported that Australia had bought 500 tons of linseed oil. Cottonseed ruled firm in the first two sessions in sympathy with the general trend but staged a set-back on Monday which gathered further momentum yesterday and today. The later setback was due to bearish advices from the cotton market. Over the week, *kardi* seed and *niger* seed showed an improvement in prices.

Groundnut May contract which stood at Rs. 163 62 last week-end moved up to a high of Rs. 171.50 on Saturday. After receding to Rs. 169 on Monday, it recovered to Rs. 170 today before finishing lower at Rs. 169.50. Business in the August contract commenced today at Rs. 169.25. At the close, it was higher by a rupee. Bold ready advanced from Rs. 33.75 to Rs. 34.87 on Saturday, but declined thereafter, the closing rate being Rs. 34 50. Coromandel and Khandesh quality rose from Rs. 34.25 to Rs. 35.25 and Rs. 35 37, respectively, before finishing at Rs. 35. Groundnut oil railway receipt rallied 56 nP to Rs. 18.75. Ex-mill spurted by 50 nP to Rs. 19.

Castorseeds May climbed up from Rs. 149 to Rs. 156.87 on the 12th inst. After declining to Rs. 154.50 on Monday, it rose again to Rs. 156.25 today. At the close, however, it was easy at Rs. 154.87. September contract commenced today at Rs. 159 and was quoted lower by 50 nP at the close of the session. Ready Madras improved from Rs. 29.75 to Rs 30 62. Kanpur quality put on Re. 1.12 to Rs. 29.37 Castor oil B.S.S. picked up 62 nP to Rs. 17.27. Commercial quality strengthened by 69 nP to Rs. 16.25.

Linseed May hardened from Rs. 30.50 to Rs.31.25 before finishing at Rs. 30.81. September contract opened today at Rs. 31.56 and was better by 6 nP at the close. Bold ready gained 50 nP to Rs. 30.50. Linseed oil gathered 25 nP to Rs. 16.12.

Cottonseed May moved irregularly. It opened the week at Rs. 108, as against Rs. 107.50 last week-end, and dropped to Rs. 106.50 the same day. After recovering to Rs. 109 on the 12th inst., the contract fell to Rs. 106 today. Business in September contract commenced at Rs. 109 today, but eased to Rs. 108.25.

Among others, *kardi* seed bold ready was well supported, the quotation advancing from Rs. 19.50 to Rs. 20.12. *Niger* seed Madras met with enlarged buying enquiries in the earlier sessions and improved from Rs. 28.75 to Rs. 29.50 on Saturday. It, however, declined to Rs. 29.25 on Monday and, after recovering to Rs. 29.37 yesterday, retreated again today to Rs. 29.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	16-4-1958	9-4-1958	1-4-1958
	Rs.	Rs.	Rs.
Groundnut—			
May 1958	169 50	163 62	162.50
August 1958	170.25	—	—
Bold ready (per cwt.)	34.50	33.50	32.62
Linseed—			
May 1958	30 81	30 50	31.12
Sept. 1958	31 62	—	—
Bold ready (per cwt.)	30 50	30.00	30.44
Castorseed—			
May 1958	154.87	149.00	149.75
Sept. 1958	158.50	—	—
Madras (per cwt.)	30.62	29.75	29.62
Cottonseed—			
May 1958	106 00	107.50	108.00
Sept. 1958	108.25	—	—
*Groundnut oil**			
Ex-mill ready (per quarter) ..	19.00	18.25	17.87
Castor oil †			
Commercial (per quarter) ..	16 25	15.50	15.37
Linseed oil †			
Ready	16.12	15.87	16.25

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

SUGAR BETTER

(From Our Own Correspondents)

BOMBAY, 16*th April*

Owing to restrictions on railway booking from the Bombay-Deccan area to Wadi Bunder, the spot stocks of sugar in the market have been reduced to just 15,000 bags. In view of such paucity of stocks, prices of sugar have tended to move up, notwithstanding a fall of 62 nP per bag in the ex-mill quotations in North and South India.

Arrivals of sugar into the market during the week aggregated 19,600 bags which were, of course, higher by 9,100 bags as compared with the previous week.

Medium grain sugar has risen by a rupee to Rs. 107-108 per bag. Small grain has gained 50 nP to Rs. 106. Large grain is fully maintained at Rs. 109-112.

• • • •

HAPUR, 14*th April*

The sugar market ruled dull during the week, but, in anticipation of revival of demand from consuming centres, prices were steady. There are definite indications that sugar production in the current season will be a little higher than last year; actual output up to 31st March amounted to 17.13 lakh tons, as against 15.44 lakh tons in the corresponding period last year. Stocks with the factories on this date were 13.34 lakh tons, as compared with 12.35 lakh tons a year before. Some more factories here have closed crushing operations and the rest are likely to follow by the end of the month. In certain areas, however, the season may drag on up to 15th June, due to plentiful cane supplies.

Sugar export prospects are still uncertain. The Government's plans in this respect are likely to be announced soon.

Sugar prices ruled quiet at Muzaffarnagar during the week. In mid-week, business was done on behalf of mills in the Punjab, Delhi, Gujerat, Saurashtra and the South. Prices of some varieties declined by 6 nP to 13 nP per maund. The latest prevailing ex-mill delivery prices were:—Meerut (D28) Rs. 35.69; Amroha (D29) Rs. 34.87; Khatauli (B29) Rs. 37.62; Deoband (C28) Rs. 35.75; Iqbalpur (C29) Rs. 36.37; Daurala (A29) Rs. 37.25; Mawana (B29) Rs. 36.50; Mansurpur (C29) Rs. 36.62; Simbhauli (E29) Rs. 36.

The Kanpur sugar market also ruled quiet for want of support from consuming centres.

Khandsari ruled steady, due to good consumer demand. There is a difference of Rs. 5 to Rs. 10 per maund in the prices of *khandsari* and crystal sugar, the former being quoted lower. With no restrictions on production, *khandsari* output in U.P. and Bihar has touched new heights and the overall production in the country is expected to be 3 lakh tons, as against 1.5 lakh tons in previous years. The prevailing prices of *khandsari* are:—Rs. 28 to Rs. 32.50 per maund, according to quality.

Having recorded some gains in the earlier part of the week, ready *gur* eased towards the week-end, following slack demand from outside centres. Best quality dry *gur* was today quoted at Rs. 15.25 per maund, as compared with the highest touched at Rs. 15.75 per maund. In a regular tussle to lend support to futures section prices, bulls and bears were trying to manipulate ready prices in their favour. Daily arrivals of *gur* went down to an average of 500 to 700 maunds, part of the arrivals being out of stocks retained by producers. The crushing season has almost come to a close. Local stock position continued unchanged at 1.40 lakh maunds, as against 98,000 maunds at the corresponding date of last year. Arrivals since the beginning of the season here aggregated 3.95 lakh maunds, as against 4.55 lakh maunds a year before.

Demand for *Chaku* quality of *gur* at Muzaffarnagar was good from the Punjab and Rajasthan and prices improved on that account. Daily arrivals of *gur* averaged 2,000 maunds and stocks at Muzaffarnagar were around 2 lakh maunds, as against 3 lakh maunds in the corresponding period last year. Booking position continued to be good. *Khandsari* stocks were put at 50,000 maunds and prices were Rs. 28 to Rs. 32.50 per maund. Prevailing prices of *gur* were:— *Chaku* Rs. 16.75 to Rs. 17.75; *chaku kotha* dry Rs. 17.25; *pansera* Rs. 15.50 to Rs. 16; *ladu rusket* Rs. 11 to Rs. 13.50; *shakker dara* Rs. 18.25 to Rs. 19.25; *masala* Rs. 20; *khandsari* Rs. 28 to Rs. 32.50.

Futures *gur* recorded a downward trend during the week at Hapur. *Baisakh* and *fagun* opened at Rs. 14.60 and Rs. 13.12 on Monday last and were quoted today at Rs. 14.22 and Rs. 12.62 respectively.

BLACK PEPPER RISES

(Messrs. Parekh and Co.)

BOMBAY, 16*th April*

Malabar black pepper was not able to consolidate the last week's small gain, in the absence of enquiries from New York. Singapore was reported selling Lampong Black at $0.25 to $0.25½ for nearby shipment, while India was quoting $0.26½ to $0.26¾.

News of some business with Rumania and Czechoslovakia lifted up prices in both Bombay and Cochin, but the improvement proved shortlived under pressure of bull liquidation. Tired feelings were reported to be slowly creeping in among the bulls who were until now holding on in anticipation of purchases by New York.

Alleppey and Cochin were reported steady but quiet at Rs. 650 for ungarbled, while ready garbled was quoted at Rs. 111 without business. May delivery on the forward market was moving narrowly between Rs. 115 and Rs. 117. Calicut was quoting Rs. 690 to Rs. 700. At Cochin, business in ready was conspicuous by its absence, while forward dealing in May contract amounted to a few hundred tons almost daily.

Singapore was steady, with sellers stiff, following purchases by New York and the Continent. New York spot improved from $0.25½ to $0.26, as sellers at the origins were reserved.

The future of the market depended upon Singapore where New crop Sarawak was expected to move some time during the middle of May. The position in India was expected to be more clear after the liquidation of May contracts in both Cochin and Bombay.

In the A.S.T.A. section, business was very restricted, as both buyers and sellers were awaiting new development. April was nominally quoted at $0.26¼, while May-June at $0.26¾.

In the delivery section, May delivery was fluctuating between Rs. 620 and Rs. 650. Bulls were marking time and hence were less aggressive at the moment.

Today's nominal quotations are: Ready Rs. 90 per Bengal maund; May Rs. 625-Rs. 635 and June Rs. 638-Rs. 648 per candy of 5¼ cwts.

TEAS DECLINE

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

COCHIN, 10*th April*

There was 650,978 lbs. on offer in dust sale 'H', which was held on Tuesday, 8th April. The market opened to only a fair demand. All grades met with less competition and prices were generally 10 to 15 nP lower. Better descriptions were easier to purchase and these types declined 5 to 10 nP.

The average price realised in dust sale 'H' was Re. 1.58 per lb., as against Re. 1.59 in the previous sale and Re. 1.88 in the corresponding sale of 1957.

London Market.—No sale this week.

Colombo Market.—No sale this week.

Calcutta Market—Export.—Strong general demand. Irregularly dearer most sorts.

Internal.—18,500 chests. Good general demand. Orthodox types fully firm to 6 nP dearer and sometimes more at the close. C.T.C. were generally well supported, particularly the smaller powdery types and any teas with improved liquors. Darjeelings were the weak feature. Internal leaf strong demand at dearer rates.

Export Quota.—There has been a fair amount of business transacted, and the quotation has hardened. Business has been transacted at 4¼ nP.

Forthcoming Auctions.—Dust sale 'I' will be held on Tuesday, 22nd April 1958.

As we go to Press, Messrs. Forbes, Ewart and Figgis Private Ltd. wire:

"*Sale* 9.—2,250,000 lbs. Limited demand which lessened considerably as sale progressed. Best liquoring declined up to Re. 1. Good medium and medium 20 to 30 nP easier, low medium and whole leaf 15 to 20 nP lower."

DUST TEAS RISE

(From Our Own Correspondent)

CALCUTTA, 15*th April*

Doubts have arisen among trade circles as to whether the Government of India would after all extend the proposed export duty relief for common teas to the superior varieties also. For Mr. N. Kanungo, the Minister for Commerce, declared in the Lok Sabha on 10th April that the authorities were still looking into the question of reducing the export duty on common teas and devising a system therefore. Trade circles urged that any system of affording relief to common teas alone would offer practical difficulties, and that the reduction of duty should be extended to all teas. In fact, about a week ago, the rumour that the duty was being reduced by 12 nP generally was strong. At any rate, the matter has been considerably delayed, and much time is being lost in working up a scheme. It is time Government took a decision, i.e., whether it should benefit all teas or commons only, and announce the reduction to enable the trade and industry to boost exports. For, if a crisis in the tea industry is to be avoided, stocks of common teas must be reduced and this can only be done by increased exports before the new crop starts arriving in the market.

The case for doing away with the export duty altogether was succinctly put forward by Mr. Nagendranath Karmarkar, when he addressed the annual meeting of the Indian Tea Planters' Association in Jalpaiguri. He said that after the withdrawal of the International Tea Agreement, a free market for tea was established and all producing countries had been offering keen competition. The increase in world acreage under tea had also been growing. While most other producing countries did not charge any export duty and thus provided producers ample opportunity to expand the markets for them, Indian producers were handicapped by the incidence of the export duty. He feared that if this duty was retained, it would liquidate about 50 per cent. of India's production capacity. Speaking specifically on the problems facing the producers of common teas, Mr. Karmarkar declared that if sales did not improve in the coming weeks—he failed to see how these could improve—many gardens in the Dooars and the Terai would suffer losses.

The plantation industry is already burdened with high costs of production and high wages. There has been a distinct increase in the number of dependants of plantation labour, and this has added to the problems of estates' managements. As though the existing problems for the industry were not sufficient, the report from New Delhi suggested the establishment of a wage board for the plantation industry. It was feared that the Board, as and when set up, might upset the existing agreement on wages. This aspect would, however, to be considered by the Sub-committee of the Industrial Plantation Committee scheduled to meet on 23rd and 24th April for the first time.

There were indications during the week that Pakistan was aiming at increasing its tea output. At present, Pakistani production is about 50 million lbs. a year, but it is being planned to raise it to 80 million lbs. With this end in view, it is likely that the Government would set up in Dacca a Tea Production Development Corporation, which would, to begin with, work the abandoned gardens.

In the internal sales held on Tuesday last, dusts offered aggregated 18,464 chests. Prices generally showed improvement. C.T.C. Assams were fully steady, and buyers showed special attention to the lots showing an improvement in quality. Orthodox teas with clear leaf appearance rose by 6 nP. On the other hand, Darjeelings were not wanted and were withdrawn. The quotations were: best Assam C.T.C. Rs. 2.75 to Rs. 3.05 (nominal), medium Assam C.T.C. Re. 1.85 to Rs. 2.05, medium Assam grainy dust Re. 1.60 to Re. 1.64, and medium Dooars Re. 1.56 to Re. 1.60.

Leaf on offer amounting to 6,029 chests met with strong demand, and as a result were dearer.

JUTE GOODS IMPROVE

(From Our Own Correspondent)

CALCUTTA, 15*th April*

The feature in the jute markets during the week under review was that prices of jute goods rose above the minimum levels. The improvement was due to fair business being done, as also to the uptrend in raw jute prices. A fair relationship was maintained between the prices for hessian 40" 10 oz. and B. twills in the futures and genuine markets, but this was not so in the case of Assam bottoms, for which the quotation in futures was at one time Rs. 27.04, as against Rs. 25.50 in the genuine market. Contrary to earlier expectations, stocks of jute goods as at the end of March recorded a welcome decline, small though it was. This was another factor for this week's steadiness in prices. Since overall shipments were lower in March—sackings shipments were only 27,800 tons as against 32,600 tons in February, but hessian shipments were high at 33,100 tons, as against 31,000 tons—traders were definitely anticipating an increase in stocks.

At the end of March, stocks of all constructions amounted to 94,400 tons representing a small reduction of 500 tons for the month as a whole, the corresponding figure for March 1957 being 97,700 tons. Particularly satisfactory to the market was the decline in hessian by 2,700 tons to 54,900 tons. Sacking increased by 1,600 tons to 54,900 tons and miscellaneous constructions by 600 tons to 15,000 tons. The current month has begun well, and the trade anticipate more business than in March. The working of the futures markets has so far been satisfactory and smooth.

During the week, interest was aroused by the statement of Mr. N. Kanungo, the Minister for Commerce, in the Lok Sabha, that a team of officers would in the near future investigate, if there was any surplus raw jute in the country. It would be remembered that recently a section of the trade urged the Government of India to permit exports of the inferior varieties of jute, viz., Bimli and mesta, to the extent that there was surplus with mills in India. The Minister at the same time added that information in the possession of Government did not indicate that there was any surplus. Already raw jute prices have been rising, and even if the team of officers found that there was really a surplus for export, it was thought that the fag end of the season was hardly the time for according permission to export. It was true that there were instances where cultivators were put to difficulties in the absence of buyers for the inferior varieties, and this had caused depression. It might be that the country had now export capacity in Bimli and mesta, but the problem is one of devising a procedure to ensure that the superior varieties did not get mixed up with the inferior and go out of the country. Evidently, Government would consider all these and relevant questions after the team of officers completed their study and submitted their report. Whatever the Government's finding, it should be said that any decision to permit exports of raw jute would bring difficulties to the mills.

Another official statement made now by the Deputy Minister for Food and Agriculture, Mr. M. V. Krishnappa, indicated that the country's dependence on Pakistan has been reduced to 40,000 bales of raw jute in 1957 from 2½ million bales ten years ago. With the measures now being taken to improve quality, it will not be before long India will be able to do without imports from Pakistan.

On Tuesday last, ready B. twills were quiet at Rs. 99.35 and ready 40" 10 oz. hessian at Rs. 39.65, as against the official futures quotations of Rs. 99.60 and Rs. 39.76, respectively. Business passing was little, but on Wednesday there was a spurt in prices following the announcement of reduced stock figures of mills. In addition, there was some covering business done. B. twills rose to Rs. 99.75 and 40" 10 oz. hessian to Rs. 40.00, both ready delivery. Although business with overseas countries was confined to small quantities here and there, covering business was continued to be done on Thursday also, raising quotations of B. twills and hessian 40" 10 oz. to Rs. 99.95 and Rs. 40.05, respectively. At this level, speculators accorded support, and on Friday the quotations rose further to Rs. 100.30 and Rs. 40.15, respectively. Raw jute prices were fully steady at this stage, and following this, over the week-end jute goods rose to Rs. 100.75 for B. twills and Rs. 40.40 for hessian 40" 10 oz. The market was closed yesterday, being a State holiday for Bengali New Year Day. The highest rate in the futures market was Rs. 101.50 for B. twills, Rs. 40.56 for hessian 40" 10 oz. and Rs. 27.04 for Assam bottoms, as against the lowest for Rs. 99.35, Rs. 39.68 and Rs. 26.10, respectively.

Fair business was done in raw jute with mills. As a result, quotations rose. Assam bottoms added 50 nP to Rs. 25.50. A similar rise was recorded in Daissee bottoms and northern bottoms.

FOODGRAINS QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, 14*th April*

Quietly steady conditions prevailed in the foodgrains markets during the week. The Government of India is arranging more imports of wheat and it is understood that, in the current year, wheat supplies will not fall short of requirements. As regards rice, the position is not so comfortable, as imports will fall short of the plan and the Union Government has decided to continue purchase of rice from Punjab. Imports of rice from Burma aggregated 77,000 tons by the end of March last.

Wheat ruled quiet during the week. Average quality was quoted on Monday at Rs. 15.25 per maund and farm produce upto Rs. 17. Daily arrivals of new wheat into the market were at an average of 400 to 500 maunds. As however, the entire arrivals were being lifted by consumers, the local wheat stock continued to be unchanged at one *khatti*. Threshing operations are in full swing and so arrivals of wheat will soon multiply. Wheat average was quoted at Rs. 13.12, as against Rs. 17 in the corresponding period of last year.

Rice continued to rule steady on reports of overall shortage of rice in the country. The week-end prices were:—*Basmati* Rs. 29 to Rs. 32; *mainpuri* Rs. 25.25; coarse quality Rs. 21 per maund. On reports of steady conditions in Punjab on not good crop reports and scanty local arrivals of new gram, gram prices registered further gains during the week. Local stocks of old quality gram owned by the U.P. State Government were unchanged at 12 *khaties*. Arrivals of new barley were meagre and prices recorded some gains during the week, as consumer demand was gradually increasing. *Bejhar* arrivals mounted to an average of 125 maunds daily, but prices were steady. Other grains were also steady at unchanged price levels. The week-end prices on Monday (in rupees per maund) were:—gram 11 to 11.37; barley 9.75; *bejhar* 9.37; *jowar* 11 to 12; *guwar* 14.25 to 14.75.

Heavy arrivals of peas during the week, both locally and from east U.P. by road coupled with credit squeeze by banks against grain stocks accounted for a slight fall in the prices of peas during the week. But the trend was fully steady with the revival of outside demand. Daily arrivals averaged 1,500 to 2,000 maunds and local stock of peas swelled to 102 *khaties*, as against 70 *khaties* last week-end. Total arrivals from the beginning of the season were put at 50,000 maunds. New crop *arhar* arrivals have also begun in small quantities and, due to good demand in the face of poor stocks at six *khaties*, prices recorded fractional gains during the week. Prices of other pulses were mostly unchanged and prevailing prices on 14th April were (in rupees per maund):—*peas dara* 9.75 to 10; white upto 11.25; *peas dal* 11.31; *arhar* 12.31; *arhar dal* 16; *urd* 17.50 to 18.50; *moong* 20.50 to 21; *massoor* 16.

After recording a slight fall in the earlier part of the week pulses futures advanced later and were now quoted near the best level of the week. Prices were:—Peas *jeth*: Rs. 10.49; *arhar jeth* Rs. 12.99; *urd baisakh* Rs. 16.87.

HIDES RECEDE

(From Our Own Correspondent)

MADRAS, 15*th April*

Arrivals of E. I. tanned hides and calves have been small and clearances slow. Prices have declined slightly. Shipment business is poor, due to Easter Holidays in the U.K. It is reported that dressers are finding it difficult to bring to book fresh orders from their customers. If prices decline further, there is every likelihood of resumption of business in kips.

There are several inquiries for tanned goat skins and common lining sheep but orders booked are small, because buyers' ideas have been 6d. lower than sellers. Semi prime and medium sheep skins rule weak.

LINSEED ERRATIC

(Messrs. A. Bradley and Co.)

CALCUTTA, 15*th April*

Price movements in the linseed market were rather erratic during the week. After a spectacular decline on Tuesday to Rs. 22 per maund, prices gradually began to creep upwards again and, towards the end of the week, had returned to their former level at Rs. 22-10 oil prices followed a similar pattern. Having declined to Rs. 51-4 for a short period, they again ruled steady at Rs. 52 with sellers reserved. Trading generally was rather limited. There was no change in the overseas market for linseed oil and no fresh business was reported.

The latest available quotations are: Ready and April-May Rs. 22-10 per maund.

Notice

THE BENGAL FLOUR MILLS COMPANY, LIMITED

THE BOARD OF DIRECTORS HAS DECIDED to recommend to the forthcoming Annual General Meeting of the Company a final dividend of 12½ per cent. for the year ended 31st December 1957.

By Order of the Board,
BALMER LAWRIE & Co., LTD.,
D. MANSON,
Secretary,
Managing Agents.

21, NETAJI SUBHAS ROAD,
CALCUTTA, 11*th April* 1958.

STOCK & SHARE QUOTATIONS

Abbreviations :—D. = Deferred shares. P.O. = Preferred Ordinary shares. Y. = Accounts published yearly. H. = Accounts published half-yearly. P. = Company has Preference shares. T. = Company has Debentures N. = Nominal quotations. x.d. = Ex. Dividend. c.d. = Cum. Dividend. i = Interim Dividend. f = Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—. figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown asamount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. † Less income-tax. (s) Clive Mills have paid dividend at Rs. 10† on bonus shares for the year 1955. * Including bonus. (k) Investments.
† New Central Jute Mills—Dividend for 1956 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17·5 includes an interim dividend of Rs. 7·5 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

MARKET GOSSIP

(*Concluded from page 727*)

authority, based upon intimate knowledge of the conditions under which foreign capital can come into this country, made the point that it would be necessary to raise 20 per cent. of the capital to be used for the purchase of equipment for any project and the whole of the rupee counterpart of the expenditure of the project before foreign credits could be sought for the rest of the capital. He added: "If the minimum rupee capital which thus would come to about 50 per cent. of the entire cost of a project could not be raised in the country, there would be no basis for seeking credit from abroad. In view of the fact that it is almost impossible to raise any substantial amount of rupee equity capital, industrial expansion in the private sector will have to come to a stop unless the profitability of industry is restored to a reasonable level through fiscal reliefs." So far as foreign capital itself is concerned, he urged the creation of a favourable atmosphere in which foreign capital would feel encouraged to invest in our enterprises. Such foreign participation in equity capital, as he rightly pointed out, would contribute to the creation of new wealth; the question of repatriation of capital would normally not arise so long as private enterprise is allowed

EUROPEAN ECONOMY

EUROPE is now facing some unexpected economic difficulties in the shape of coal and steel surplus, as well as consumer resistance in respect of many products. Petrol prices have been cut. This may well be a forerunner of the reduction in prices of other commodities and goods. It is not yet clear precisely how far these developments could be traced to the recession in the U.S. It is now believed that the European manufacturers are going to find the necessary adjustment between costs and prices a more difficult issue than it has been in the last few years. Economic policy-makers in Europe have to address themselves to the task of devising measures which would stave off any sizable recession. It is also of the utmost importance to the other countries that European economy should be in good shape, considering how large a place Europe occupies in world economy. Since the present difficulties had their origin in certain economic trends which became evident in 1957, the *Economic Survey of Europe in* 1957, published by the Economic Commission for Europe, deserves close study for the light it throws on European economy.

The *Survey* has analysed the economic trends in Eastern as well as in Western Europe. So far as Eastern Europe is concerned, it notes that good harvests in 1957 produced a post-war record crop of cereals, exceeding that of 1956 by more than 8.5 million tons; in 1957, the total cereal output was 47.1 million tons, as against 38.5 million tons in 1956 and 39.0 million tons, the average for the 1951-55 period. The most notable feature of the East European economic trends has been a certain partial retreat from collectivist agricultural policies. Co-operative farming has virtually disappeared in Poland. In Hungary, too, peasant farming has been successfully resumed, the Government having acquiesced in the dissolution of co-operative farms. It is also noteworthy that price incentives have been substituted for administrative pressures in respect of State-owned or co-operative farms in nearly all East European countries. Nevertheless, co-operative farming has been encouraged through the adoption of special measures such as lower obligatory delivery quotas or higher prices, better supplies of means of production, prior claims on the services of machine and tractor stations and lower charges for them, investment grants, and more generous bank credits. Even in the Soviet Union, a policy decision was taken which was designed to ensure a devolution of the control on farming; a few preliminary steps towards such devolution have been taken.

As regards industrial output in Eastern Europe, the authorities adopted more cautious plans which reflected some concern over costs. At the same time, the authorities tended to give preference to consumer goods industries. This preference is attributed to the fact that increases in wage bills in the industrial sector, higher bonuses and social benefits, and increases in farm prices and deliveries, all contributed in most countries to an increase in total incomes which was large enough to produce pressures on the consumer goods markets. On the whole, industrial production was better than expected and increases were broadly on lines of those attained in 1956. Gross output in 1957 rose by about 10 per cent. in the Soviet Union, by 9½ per cent. in Poland, by 7½ per cent. in Eastern Germany and by 10 per cent. in Czechoslovakia.

Eastern Europe continues to face difficulties in industrial administration which are inevitable in the context of its centrally planned economy. In 1956, the authorities in some countries decided to transfer more power and responsibility for economic decision to the industrial enterprises themselves. This trend, it is stated, could not be carried significantly further in 1957. The *Survey* notes that, in some cases, it was found that the formal granting of increased independence in one field was nullified by the retention of some other less immediate, but still effective, control. It adds: "The main disadvantages of the existing system were still apparent—disregard of costs, a tendency on the part of managements to avoid difficulties by setting production targets low enough to be sure of being able to over-fulfil plans and by avoiding new experiments of any kind, a pervasive lack of enthusiasm and initiative, and a feeling of frustration among technicians hampered both by excessive formalities imposed by the administrative machine and by reluctance on the part of managements to take risks with new processes or new production." The fact that these difficulties have been met with will not surprise those who know how difficult it is for authorities with numerous economic powers to exercise them wisely. In other words, they are an inevitable concomitant of centrally planned economies.

In Western Europe, the pace of economic growth in 1957 was, as in the previous year, below that of 1955. As the year 1957 progressed, the slowing down of economic activity became particularly marked. Analysing the recent trends in European economy, the *Survey* points out that the early post-war years, particularly the period till 1949, witnessed considerable release of pent-up demand for goods and services; production moved up to record levels. The first phase of post-war economic history, however, came to an end in 1949. The mild recession in the U.S. in 1948-49 affected West European exports adversely. The subsequent recovery in the U.S. as well as the round of devaluation in 1949 gave a fresh stimulus to West European exports. The increase in defence expenditure following the outbreak of hostilities in Korea also provided a powerful stimulus to the economy. Nevertheless, this period was followed by several setbacks in the light and heavy industries, so that, in 1953, there began a third period of more balanced growth. The rate of growth, however, differed from country to country. In Western Europe as a whole, gross national product rose annually by 4.9 per cent. in the period 1953-57, as compared with 5.2 per cent. in 1949-53. It will be noted here that, for Western Germany, the two respective figures were as high as 7.7 per cent. and 8.7 per cent., as against 2.9 per cent. and 2.5 per cent. in the U.K. The rising demand during 1953-57 called forth a substantial rise in production which, according to the *Survey*, testified to the high elasticity of output in Western Europe.

A notable feature of the third period was the emergence of in

a restrictionist shape. The basic difficulty faced by the authorities was whether economic growth had to be sacrificed in order to protect the balance of payments or maintain price stability or both. According to the *Survey*, this conflict has been resolved by accepting considerable unemployment for the sake of preventing a further deterioration of reserves in Denmark and by inducing a virtual stagnation of output in the U.K. In France, currency reserves have been sacrificed to maintain a high rate of economic growth, including a high rate of investment.

The central banking authorities in Western Europe have, as is well known, imposed credit restrictions with a view to curbing inflationary pressures. The *Survey* has made a very critical study of the nature and effect of these measures. During the period 1955-57, most West European countries raised their discount rates and, since this alone would have been ineffective, a more direct restraint on volume of credit was also attempted. The *Survey* goes on to observe that a more extensive interference with the banking mechanism occurred in directives given to the banks, but usually enforceable only as "gentlemen's agreements." Commenting on the working of these measures, the *Survey* says: "When credit allocation is left to the discretion of the commercial banks, there is clearly less guarantee that discrimination is exercised in conformity with the desired objectives. However operated, it works with immediate effect mainly in the field of consumer credit (on condition that minimum initial deposits are fixed sufficiently high). The restriction on consumer credit brings nonetheless only temporary relief, since, after a period, consumers have saved up the higher initial deposits and new credits granted again exceed repayments." In contrast, credit restriction on enterprises, it is pointed out, works more slowly and tends to have limited effects when introduced at a time of high liquidity in the economy. Further, the restrictions imposed on lending by the commercial banks can often be circumscribed through other channels of credit that are less easily subjected to supervision. The *Survey*, however, agrees that, in the longer run, as liquidities decline, restrictions do have the desired effect.

In conclusion, the *Survey* observes that, since credit policies, except for special measures designed to control hire-purchase credit, impinge directly upon investment rather than on consumption they have serious consequences for the long-term rate of growth of productivity and output and make the preservation of equilibrium in the balance of payments at high activity levels more difficult in the long run. The contraction of total demand through credit policies, it is stated, would be a rational procedure, leading to an improvement in the competitive position of the countries which have applied such measures only if the decline in the level of activity tolerable in both extent and duration should result in a fall in money wages relatively to those abroad. It adds: "Unless, however, there are significant and long departures from full employment, the relative level of wages is unlikely to show a marked decline, and the impact of credit restrictions on the level of investment is likely, by its repercussions on productivity, to prevent relative wage costs—which are the crucial determinant of a country's competitive position—from showing a noticeable improvement."

As regards prospects for the current year, the *Survey* makes the point that they will be largely determined by the shape of economy in the U.K., France and Western Germany which account among themselves for two-thirds of West European gross national product and about 40 per cent. of intra-West European trade. The U.S. recession, it is stated, is likely to affect Western Europe not only directly but also indirectly through the lower purchasing power of overseas countries. From an examination of the prospects for individual countries, it appears to the *Survey* that the three major industrial countries are all likely to accentuate the tendency towards stagnation. In view of the developments in the U.S. and the continued weakening of the position of primary exporting countries, the *Survey* has done well to warn that a continued slowing down of expansion in Western Europe, not to speak of an absolute decline, might have a very serious impact on the world economy. Finally, it rightly affirms that any impetus to an early speeding up of West European expansion will have to come from the economy of Western Europe itself.

FINANCE BILL

AMONG the welcome, though limited, concessions which the Government has made in response to the continuing plea for relief from high taxation, mention must be made of the two fiscal announcements, made last week by the Union Finance Minister, Mr. Morarji Desai. The first relates to Section 23A companies and the second to the mode of providing for development rebate. The rate of tax in respect of high dividends by Section 23A companies is being reduced. Thus, the rate in respect of dividends above 18 per cent. is sought to be brought down from 30 per cent. to 20 per cent. The relief is certainly justified, in view of the fact that the law itself compels these companies to declare certain dividends. Indeed, this class of companies deserves more liberal fiscal treatment So far as development rebate is concerned, this allowance, as is well known, has been fixed at 25 per cent. of the value of machinery and plant installed by a business undertaking; this has been increased to 40 per cent. in the case of shipping companies in respect of new ships they acquire. This sum is deducted from the profit of the concern in arriving at the total income of the year in which the plant or the machinery is being installed. It has been pointed out by commercial bodies that what is saved by a company is the amount of income-tax and super-tax on the amount of development rebate and not the full amount of the development rebate and, therefore, the setting aside to the reserve account should be confined to the amount of such tax saved and not the development rebate as such. It has also been pointed out that the profits of a company for the year to which the development rebate relates may not be sufficient to enable it to make the necessary provision. After all, a plant or a machinery newly installed may not start earning in that very year in which it becomes part of a company's assets. These considerations have naturally appealed to the Government. For instance, Mr. Desai said:

> "While the principle underlying the amendments proposed thus have received almost universal approval, there has been some criticisms regarding the manner in which the principle is being sought to be implemented by the proposals in the Bill. It has been argued that, if a manufacturing company which is helped to earn profits and has declared dividends therefrom wishes to take advantage of the development rebate by extending its activities, it may, in view of the provisions proposed, find itself in an embarrassing situation. If the development rebate is debited to the profit and loss account, even profits resulting from existing activities of the company will be wiped out or considerably reduced, with the result that the company may not be able to declare a reasonable amount of dividend. Such a situation will not be welcome to the shareholders. Managements, therefore, might hesitate to embark on programmes of expansion. For a similar reason, the incentive sought to be provided by the development rebate for starting new companies will become ineffective, if the companies are prevented from declaring dividends in order to qualify for the rebate."

The effect of the amendments, as Morarji Desai himself explained, will be twofold. In the first place, if the total income for any year before allowing development rebate falls short of the full amount of rebate, the rebate to be allowed for that year will be limited to such total income. The balance of the rebate will be allowed to be carried forward for being claimed in the succeeding year or years. The number of years for which it can be so carried forward will, of course, be restricted to eight, which is the number of years for which unabsorbed losses can be carried forward under the present law. Secondly, the amount to be taken to the reserve need not exceed 75 per cent. of the amount of the development rebate claimed.

Two notable pronouncements were made by Mr. Morarji Desai in the course of the debate on the demand for grants to the Finance Ministry. They referred to Government's policy in relation to separation of audit from accounts and economy in expenditure. Referring to the separation of audit from accounts, Mr. Desai revealed that the States of West Bengal and the erstwhile Saurashtra which had tried the system were switching back to the old arrangement. It would appear that the Comptroller and Auditor-General has come to the conclusion that this arrangement is not working in the best way and that it is not wise to extend it further, because it involves "other matters and more expenditure." We wish Mr. Desai had thrown more light on the way the experiments were conducted and also why they have failed. The separation of audit from accounts is certainly a healthy way of managing the finances of a State. The failure of the experiment will, therefore, be widely deplored.

In view of the steadily increasing trend in Governmental expenditure, Mr. Desai's determination to pursue economy in expenditure will naturally be widely welcomed. He said: "We are trying to find out whether we can effect retrenchment and economies in administration. I hope in course of time we shall be able to show some results. It is a collective matter for the Government. I can only say that I will contribute my part to see that unnecessary and wasteful expenditure is particularly removed. I have started with my own Ministry and shall see what results can be achieved." There is no doubt there is both need and scope for bringing down Governmental expenditure. It has grown at an alarmingly rapid rate. It is not as if all such expenditure has been incurred on development programmes. It looks as though an exaggerated version of what in England is now known as Parkinson's Law has been at work in this country. There has been a proliferation of Ministries and of bureaucratic machinery. It should be possible to cut down a great deal of non-developmental expenditure. As tax revenue increases, there is a tendency to spend more and more, the revenue-earning Ministries excusing their inordinately high expenditure on the ground that they contribute to the Government's revenue and the spending Ministries arguing that their expenditure is vital in the national interest. The economy drive will not yield results unless the axe is wielded with great determination and all departments are imbued with a sense of urgency about economy.

INCOME-TAX

THE fourth edition of what is now regarded as a classic on the subject, *The Law and Practice of Income Tax**, maintains and improves upon the traditions set by its illustrious predecessors. What makes the present edition particularly significant is that it deals with the novel, almost radical, changes which have been made in our tax laws. As the learned authors, Mr. Jamshedji B. Kanga and Mr. N. A. Palkhivala observe, the recent tax laws march with the hypotheses that the "citizen exists for the State and not the State for the citizen, and that man is made for the law and not the law for man." Those who have followed the recent changes in tax legislation and the new taxes on expenditure and gifts will not fail to appreciate the validity of this comment. The State, as the authors rightly point out, is too much with us. Earning or spending, saving or investing, the citizen cannot escape from tax. The fiscal net is now not only wider but more intricate. Lord Halsbury said: "The income-tax is not and cannot be, I suppose from the nature of things, cast upon absolutely logical lines." Whether by accident or by design, Indian tax laws are based essentially upon this doctrine. Only our tax laws are illogical with a vengeance; nay, they are sometimes even whimsical. Maybe, all this is part of the fiscal game.

Perhaps, if the burdens were less burdensome, the participants, rather the assessees, would be better inclined to appreciate its humour. As it is, the tax is heavy, its incidence not always predictable. The result is a veritable nightmare for the taxpayer. With a multiplicity of taxes on the Statute Book, there is a regular race between Government's new taxes and the citizens' ability to understand and pay them. Surely, it is an incongruous situation in which an Indian company has to pay more by way of taxes than it earns by way of profit or that an individual should pay as tax more than what he earns as income. It is not financial burden alone that causes so much heartburning. There is, as the learned authors point out, growing interference by the executives with individual freedom. Many of the powers by which the executives are enabled to interfere with individual liberty have been acquired with the best of intentions. But as Mr. Justice Brandeis, whom the authors have quoted, pertinently said: "Experience should teach us to be most on our guard to protect liberty when the Government's purposes are beneficent. Zealous men whose zeal for reform outturns a sense of justice may do irreparable damage to the democratic way of life." The trend of India's fiscal legislation exposes this country to this danger.

**The Law and Practice of Income Tax, Vols. I and II. By Mr. Jamshedji B. Kanga and Mr. N. A. Palkhivala. Published by N. M. Tripathi Private Ltd., Princess Street, Bombay 2. Price: Rs. 47.50. Vol. I (pages 987) and Vol. II (pages 524).*

SHARE MARKET IN BUOYANT MOOD

DEFICIT FINANCING—COTTON EXPORT QUOTA—GIFT-TAX RELIEF

THURSDAY, 5 P.M.

THE share market is in a buoyant mood and, barring textiles, equities have made further gains. The announcement of the concessions, albeit small, in respect of the development rebate and the amount that can be taken to the reserves have generally been welcomed by the market, despite the fact that they fall very much short of the demands made by industries. There are, however, two drags on the market. The first is the strike threat in the steel works at Jamshedpur and Burnpur. The strike, if it materialises, at a time when the two companies have embarked on a large expansion programme, will have far-reaching repercussions on our national economy, not to speak of the development plans as such. This no doubt brought some selling yesterday, but it was well absorbed, reflecting the inherent strength of the market. The second is the none too encouraging outlook for the cotton textile industry. Addressing the shareholders of the Bombay Dyeing and Manufacturing Company, Ltd., at their annual general meeting held last week, Mr. Neville N. Wadia, the Chairman, said that the fortunes of the industry in 1958 would be worse than those in 1957. The first six months of the year were, he said, likely to be the worst period for the industry since the war. Though he expressed the hope that the industry would be able to weather the storm, the picture he painted was far from inspiring.

MARKET GOSSIP

Though Mr. Morarji Desai has not gone all out to satisfy the entire demands of industries, particularly those which have embarked on huge expansion programmes, in respect of development rebate, the small concessions (the details of which are given on the next page) he has given are taken as yet another indication of the new Finance Minister's helpful attitude towards private industries. They also indicate that he is not bent upon raising revenues through taxation at any cost. As soon as he became Finance Minister, it will be recalled, he promised relief in export duty on common tea and said that a scheme was being worked out. He has now announced reliefs in respect of development rebate, super-tax on dividends in excess of 18 per cent. declared by Section 23A companies and tax on gifts. It is true that the latest reliefs mean no great loss to the Exchequer. Even so, they are welcome in that they indicate, in however small a measure, some consideration for those who contribute in no mean measure to the development of the nation.

* * * *

It is somewhat discomforting to be told by the Union Finance Minister, Mr. Morarji Desai, that there would be an upward revision in the limit for deficit financing for the second Five-year Plan which had been fixed at Rs. 900 crores by his predecessor, Mr. T. T. Krishnamachari. Replying to the debate on the Finance Bill, Mr. Desai said in the Lok Sabha this week that, since the total amount of deficit financing in the first two years of the Plan was of the order of Rs. 702 crores, as against Rs. 600 crores originally proposed, it was not possible to say that the Government would confine such financing to Rs. 900 crores. He did not state the total amount of deficit financing that would actually be resorted to; he merely said that "it will be our endeavour to see that we confine ourselves to that limit (Rs. 1,200 crores envisaged in the Plan)."

The aforesaid statement of the Finance Minister is one more indication of the helplessness in which the planners and the Government find themselves today. The situation regarding both internal and external resources continues to be tight. Instead of easing the situation through a proper revision of the present regressive fiscal policy, it is unfortunate that Mr. Desai should have acquiesced in a larger dose of deficit financing. He no doubt admits that whatever deficit financing the Government may resort to should not result in inflation. But how can this be avoided? To the extent investment is deficit-financed, the strain on the economy will be increased. Thanks to the deficit financing of Rs. 702 crores in the first two years of the second Plan, commodity prices have registered a sharp increase. The average general index of wholesale prices (Base: 1952-53=100) for the year ended March 1958 was 108.4, as against 92.5 in 1955-56, representing a rise of more than 17 per cent. over the two-year period. The following table gives the average wholesale price indices for the different group in the first two years of the second Plan (1956-57 and 1957-58) as compared with the last year of the first Plan (1955-56):

(Base: 1952-53=100)

	1957-58	1956-57	1955-56
General index	108.4	105.3	92.5
Food articles	106.4	102.3	86.6
Liquor and tobacco ..	94.0	84.3	81.0
Fuel, power, light and lubricants	113.6	104.2	95.2
Industrial raw materials ..	116.5	116.0	99.0
Manufactures	108.1	106.3	99.7

The upward trend in prices will definitely gather considerable momentum in the current financial year, what with the difficult food situation following droughts over wide areas in the country. The advance in prices will, by raising the cost of living, adversely affect the saving capacity of the urban middle class which accounts for a large part of the funds that flow into investment. Considering all this and in view of the acute foreign exchange position, the wiser course seems to be to avoid resorting to excessive deficit financing by pruning the Plan to a more manageable size.

* * * *

Strong hopes of an export quota for cotton of ¾" staple and below, which were raised by the recommendation of the Board of the East India Cotton Association, at its meeting held on the 11th inst., have yet to materialise. The expectation was considerably strengthened by the endorsement by the Cotton Advisory Board, at its meeting held last week, of the E.I.C.A.'s views. The Board recommended that a quota of 50,000 bales in respect of cotton of staple length ¾" and below should be released and suggested that an additional quota of 50,000 bales should be issued, on a review of the situation, after three months. The belief of the trade that, since these two authoritative bodies had lent their support to export of staple cotton, the Government would take a favourable view of the plea for a quota, was mainly responsible for temporarily arresting the declining trend of the cotton futures market. But, as noted earlier, no quota has so far been announced by the Government. The disappointment of the trade is reflected in the sharp fall in futures values during the last few days. The I.C.C. Moglai Jarilla May contract, which had improved to Rs. 662.50 on the 18th inst., immediately following the Cotton Advisory Board's meeting, declined to Rs. 640.50 yesterday while the August contract declined from Rs. 674.50 on the 18th inst. to Rs. 654.50 yesterday. The contracts did not show any improvement today also.

It is obvious that the Cotton Advisory Board's recommendation, as also the E.I.C.A.'s, was influenced by the hope that a quota would serve to impart a much-needed fillip to the market. Futures contracts are currently ruling round the season's lowest levels. Spot prices also are very low, as compared with those prevailing at the same period last season. It is feared that, if cotton prices continue to be low, next season's sowings will be adversely affected. It is this consideration which led the E.I.C.A. and the Cotton Advisory Board to recommend an export quota for staple cotton and urge an upward revision of the basic floor price of cotton.

> We are publishing a series of articles by Mr. F. R. Ginwala, analysing the Report of the Company Law Amendment Committee. The first article in the series will appear in our next issue, dated 3rd May 1958.—ED.

While there cannot be any difference of opinion about the need for providing sufficient incentives for growers in the form of reasonable prices, one wonders whether, even if a quota materialises, which remains to be seen, it will be anything more than a mere palliative. What is the current trend of cotton prices due to? It is certainly not because supplies are plentiful nor because mill consumption has fallen. The latest estimate places the crop at no more than 4.94 million bales which is hardly 300,000 bales more than last season's consumption of 4.66 million bales (Indian cotton). Consumption during the first six months of the current season was not much lower than the figure for the corresponding period of last season. It is estimated at 2,296,661 bales, as compared with 2,324,414 bales during the same period last season.

The basic reason for the slump in cotton prices seems to be that, owing to the large accumulation of cloth stocks with mills, they are not in a position to hold normal stocks of raw cotton. This has resulted in slack mill demand and the trade has been called upon to finance cotton. The downward trend in cotton prices reflects the growing difficulty of the trade to shoulder the burden, especially in view of the prevailing monetary conditions. In other words, the current fall in prices can be traced largely, if not entirely, to monetary causes. Any Governmental policy which does not take this aspect into consideration cannot solve the problem. Unless mills are enabled to liquidate their stocks, by providing further relief in excise duty, and purchase cotton, cotton prices are not likely to improve. A quota may no doubt give some temporary fillip to the market.

* * * *

The Union Finance Minister, Mr. Morarji Desai, is learning to practise the art of naivete. It is a difficult art, for, if it could be disarming, even charming, it could also turn out sometimes to be extremely exasperating. Moving the Gift-tax Bill for consideration by the Select Committee, Mr. Desai declared that he did not propose any further elaboration of the reasons for this measure—since they had already been explained by the Prime Minister—and added that he had found that, "by and large, the need for a measure of this nature is not disputed." Here is the rub. The fact is that the need for this Bill has been disputed and, what is more, it has been very ably disputed. It is a distorted version of what Prof. Kaldor himself recommended. Further, it is certainly not in tune with India's best traditions. A whole movement has been launched in this country in order to persuade owners to give away lands as gift and yet this is precisely a sort of transaction which will come within the purview of the Bill. It is a most uncharitable tax, for it is a tax on charity. Many other valid arguments could also be brought up against it. But Mr. Desai declares that the "need for a measure of this nature is not disputed." Surely, a criticism does not cease to exist merely because it is ignored.

It must, however, be said to the credit of Mr. Desai that he is not altogether oblivious of the very valid criticisms that have been made against the details of the Bill. Thus, he said that fears had been expressed that even genuine business transactions might be caught within the mischief of the Bill. He added: "I may assure the House that it was never the intention of the Government to subject to gift-tax *bona fide* business transactions and the Select Committee will no doubt consider whether any further clarification of these provisions is necessary to remove these fears." It is to be hoped that the Committee will go into this question. Mr. Desai, however, did not grant that the provision which restricted exemptions to gifts made only to charitable institutions or funds recognised under Section 15B of the Income-tax Act would prove much of a hardship. He argued that a person who had made up his mind to make a gift to a religious institution was not going to be deterred from doing so by the small amount of tax he had to pay. Mr. Desai has apparently missed the point in the criticism. The question is not whether a man would be deterred by the gift-tax from making a gift to a religious or communal institution. The question is whether it is right that such institutions should be made to suffer from the operation of the gift-tax. Mr. Desai, however, hastened to add: "In any cases, the matter would be further examined by the Select Committee." This is certainly a matter which does call for special consideration by the Committee.

Mr. Desai admitted that it should be clarified in the Bill itself that reasonable gifts made to one's children for their education should be exempted from tax. He also conceded that gifts by employers to employees or their dependents by way of bonus, gratuity or pension should be exempted. Referring to this aspect of the Bill, he said: "It was never the intention of Government that such gifts should be subjected to gift-tax and, in fact, it is doubtful whether gifts of this nature could at all be brought to tax under the provisions of the Bill as it stands. However, to remove any misgivings on this score, I intend proposing to the Select Committee that specific provision may be made in the Bill itself exempting these categories of gifts."

No convincing argument was adduced by Mr. Desai to justify the imposition of the tax on the donor, and not on the donee. All he said was that it was administratively more convenient to levy the tax on the donor. After all, administrative convenience is not the only factor that determines the validity of fiscal procedure. Mr. Desai also argued that a gift-tax, unless it was imposed on the donor, could not function as an effective step against avoidance of income-tax, wealth tax and other taxes in the higher income group. He reiterated this point in another part of his speech by suggesting that the tax was important not only by itself but also "in plugging loopholes in other tax statutes." This is a strange way of justifying a tax. A tax to plug a loophole in another tax and yet another tax to plug yet another loophole and so on *ad infinitum*. To impose new taxes in order to cover administrative shortcomings or to prevent tax evasion by a few dishonest assessees is to punish honest taxpayers. This is fiscal policy with a vengeance.

* * * *

The suggestion that Asian countries should form themselves into a common market with a common protective wall was put forward by Dr. Gunnar Myrdal, an economist of international repute, when he addressed an informal meeting of the members of Parliament at New Delhi on Tuesday last. The need and justification for the creation of such a market, Dr. Myrdal declared, was greater for Asia than for Europe. For the traditional exports from India and other countries in Asia to the economically advanced countries of the West would, in his opinion, tend to shrink progressively and the shrinkage so occurring would not be matched by a corresponding expansion in industrial exports to them. In this connection, he mentioned that countries like the Soviet Union, the economy and trade of which were completely State-owned, might still be able "to accommodate" countries of the Asian region. The learned economist, therefore, emphasised that, "by more assistance to enable India and other Asian countries to develop, the Western countries would be helping them more, if they were to adopt a reasonable attitude in their trade relations."

The suggestion for the establishment of a common Asian market is, indeed, quite an interesting one. But the question is whether the suggestion can be implemented successfully. For there are several basic differences in the political and economic ideologies among the countries of Asia, so that it is doubtful whether adequate and proper cooperation will be forthcoming from these countries. Again, it must be remembered that the erection of a common protective wall as advocated by Dr. Myrdal presupposes sacrifices on the part of all countries which will be more in the case of some countries and less in the case of others. There is, of course, the larger question whether the formation of regional economic blocks such as the Common Asian Market and the Common European Market is conducive to the setting up of a free and multilateral system of world trade and payments.

Be that as it may, in the course of his speech, Dr. Myrdal did well to lay the "greatest stress" on population control in India. "The entire medical service of the country," to quote him, "should be organised for the purpose, if need be, and a vigorous campaign launched." There is considerable force in these remarks. The population of India is growing at a very rapid rate of over 13,000 every day or 4.75 million every year. Unless this rate of

SHARE MARKET FIRM

TEXTILES, HOWEVER, LOWER

(From Our Own Correspondents)

BOMBAY, *24th April*

EQUITIES on the Stock Exchange made a further headway during the week under review, which was a short one on account of the two holidays on Monday and Tuesday. The gain in prices was, however, less marked than in the previous week. The main inspiring factor was the concessions granted by the Finance Minister to companies in respect of development rebate, the provisions regarding which were made more stringent in the last Budget. Initiating the discussion on the Finance Bill, Mr. Morarjee Desai announced on Friday last that the amount to be taken to the reserve need not exceed 75 per cent. of the development rebate claimed. The reserves so created would remain with the companies and could be used for all legitimate purposes, except for distribution of dividends. Secondly, if the total income for any year, before allowing development rebate, fell short of the full amount of the rebate, the rebate to be allowed for that year would be limited to such total income. The balance of the rebate would be allowed to be carried forward for being claimed in the succeeding year or years. The number of years for which it could be so carried forward would be restricted to eight which was the period for which unabsorbed loss could be carried forward under the present law. The two concessions were made with a view to encouraging the formation and development of enterprises. The Minister also announced a reduction in super-tax payable by Section 23(A) companies on their dividends. The rate of tax payable by these companies on dividends in excess of 18 per cent. on the paid-up capital would be reduced from 30 per cent. to 20 per cent. The Finance Minister felt it justifiable that a small relief should be given to these companies which were compelled by law to declare high dividends.

These reliefs were no doubt welcomed by the market, but if the prices had not staged a much sharper rise, it was because these concessions fell short of the demand made by industries. Another factor which prevented a sharp rise in prices was the fears about labour trouble in Jamshedpur and Burnpur. Yet another drag on the market was the uncertainty about the outlook for the cotton mill industry.

Tata Steel ordinaries jumped early in the week from Rs. 182.75 to Rs. 185 before reacting yesterday to Rs. 182.50. Today, however, they staged a recovery. The new shares gained over the week Rs. 1 to Rs. 180. Indian Irons moved up to Rs. 22 from Rs. 21.68 and, after a setback to Rs. 21.64, improved to Rs. 21.92 at the close.

Barring one or two scrips, textile shares disclosed moderate losses over the week, in view of the uncertain outlook for the industry. Bombay Dyeings retreated from Rs. 57.40 to Rs. 55.60 before closing at Rs. 56. Centurys dipped from Rs. 436 to Rs. 426.50, but gained ground to Rs. 433 at the close. Kohinoors were placed at Rs. 266 *ex-div.* (final dividend Rs. 12 per share), as against Rs. 278 *cum-div.* a week ago. Finlays lost Rs. 2 to Rs. 275, Gokaks Rs. 4 to Rs. 153 and Indu Ordinaries 24 nP to Rs. 9.44. Indore Malwas changed hands Rs. 2 lower at Rs. 110.50 and New Greats Rs. 4.50 lower at Rs. 195. Podars shed Rs. 4 to Rs. 141 and Shree Niwas Rs. 3 to Rs. 140. Simplex moved within a narrow range and closed at Rs. 153, as against Rs. 153.50. Standards provided an exception with a spurt of Rs. 10 to Rs. 460. Svadeshis were unchanged on balance at Rs. 173, while Swans were in the limelight and rose by Rs. 9 to Rs. 349. Tata Mills were a fraction lower at Rs. 37.75.

In the banking section, Barodas were prominent with a rise of Re. 1 to Rs. 114. Centrals were lower by 20 nP at Rs. 52.80, while their new shares put on 20 nP to Rs. 55.50. Bank of Indias were steady at Rs. 130 and their new shares at Rs. 134. United Commercials gained 20 nP to Rs. 60.

Activity in insurance shares was restricted. New Indias were done 50 nP lower at Rs 44. Indian Mercantiles lost a rupee to Rs. 47, while Jupiter Generals were done 20 nP higher at Rs. 7.76.

Electricity shares were featureless. Ahmedabad Electrics were steady, having been done at Rs. 95 *ex-div.*, as against Rs. 96.50 *cum-div.* a week ago. Bombay Suburbans were unchanged at Rs. 107 and Surat Electrics at Rs. 107.50. Tata Hydros were maintained at Rs. 118, while Tata Powers shed Rs. 5 to Rs. 1,180. Andhra Valleys were marked up by Rs. 2.50 to Rs. 1,155.

Sugar shares were dull. Belapurs dropped early in the week from Rs. 245 to Rs. 243 before gaining to Rs. 244.50. Phaltans lost over the week 50 nP to Rs. 136, while Walchandnagars put on Re. 1.25 to Rs. 283.75. Cement shares were buoyant. Associated Cements staged a spurt from Rs. 151 to Rs. 156.75, but closed a shade lower at Rs. 155.75. Their new shares picked up Rs. 3.25 over the week to Rs. 147.50. Digvijays improved by Rs. 4.25 to Rs. 146. In the engineering and mining group Alcocks were a firm feature with a rise of Rs. 12.50 to Rs. 290. Tata Locomotives crept down from Rs. 167 to Rs. 164.50, but rallied to close at Rs. 168. Premier Constructions were again in favour and rose by Rs. 6.95 to Rs. 195.75. Larsen and Toubros improved by 48 nP to Rs. 15.60 Mahindras changed hands 44 nP lower at Rs. 18.56. Indian Coppers were unchanged at Rs. 3.18 Shivrajpurs were steady at Rs. 93.20.

Scindias were erratic, moving between Rs. 17.72 and Rs. 17.48, but finished at Rs. 17.68, as against Rs. 17.60 a week ago. Great Easterns shed over the week 16 nP to Rs. 19.96. Among automobiles, Premier Autos advanced by Rs. 3 to Rs. 84.50, while Hindustan Motors were unchanged at Rs. 7.

The upward trend in Bombay Burmahs noted at the close of last week following the announcement of the bonus issue was maintained this week also with a further rise from Rs. 564.50 to Rs. 575. The partly paid-up shares put on Rs. 2 to Rs. 217. National Rayons were in favour and were taken from Rs. 219.50 to Rs. 224.25. Tata Chemicals gained 80 nP to Rs. 15.08, while Tata Oils were a shade lower at Rs. 38.75. Hindustan Levers were marked down by 44 nP to Rs. 21.44, while Voltas staged a sudden spurt from Rs. 113 to Rs. 120 on rumours that the shares would be placed on the forward list. Wimcos were done a rupee lower at Rs. 174.

Calcutta Stock Exchange

CALCUTTA, 23rd *April*

Although activity on the Calcutta Stock Exchange during the week under review was restricted mainly due to holidays, prices were well maintained. Sentiment was assisted by encouraging advices from Bombay, and by visible signs of growing industrial activity. That the new Finance Minister has been more realistic towards economic policies than his predecessor was amply indicated by the recent tax concessions which he announced, and which have since been a standing bull factor on the Exchange. Mr. Morarjee Desai's announcement during the week of two concessions to industrial undertakings in respect of development rebate was construed here as a further demonstration of the Government's realisation that genuine grievances of industry, if healed in time, would pay adequate dividends. However, market comment on the concessions announced was that Government could have gone further into the matter.

Earlier, the news of the threatened strike in Jamshedpur, which if materialised and continued over a period, would paralyse many an industry dependent on Tisco steel, was a bear factor retarding sentiment. However, from latest reports, it would appear that the strike call was not being supported by majority of the workers, although the situation was yet considered fluid. The smart rise in prices of jute goods and the healthy stock position revived sentiment for selected jute shares. Gains in this section would have been more widespread had it not been for the rise in prices of raw jute also and fears of delay in sowing. The news of issue of bonus shares by the Bombay Burmah Trading Corporation pleased market men much, in view of an earlier report that some of the Bombay concerns might withdraw their plans to issue bonus shares on account of heavy taxation in this regard. In the meantime, the rumour of an imminent bonus issue by Indian Iron and Steel Company, Ltd., was strong and continued to encourage buying.

Sentiment for coal shares was subdued, in view of the delay in announcing increased prices for the fuel. Burrakurs were unchanged at Rs. 22.75, while Western Bengals drifted to Rs. 5.75 from Rs. 5.78. Interest was evinced in Bengals at Rs. 519, as against Rs. 518 a week earlier, and New Beerbhooms were bought at Rs. 14.62, as against Rs. 14.50 previously.

Selected jute shares recorded impressive gains. Cheviots rose to quote as high as Rs. 140 from Rs. 131, and Anglo-Indias moved up to Rs. 151 from Rs. 147. Nationals hardened to Rs. 24 from Rs. 22.50. Nuddeas were accorded support at Rs. 33, as against Rs. 31 previously.

In the engineering section, Indian Irons rose to Rs. 21.96 from Rs. 21.56 before closing at Rs. 21.75. Burn & Cos. gained to Rs. 322 from Rs. 319.50. Texmacos were better at Rs. 18.35, as were Guest, Keen Williams at Rs. 31.31.

Teas were fairly steady. From Rs. 29.25, Duffiaghurs moved to Rs. 30, while Hattikhiras were unchanged at Rs. 9.87, and Tezpores moved down to Rs. 15 from Rs. 15.75.

Miscellaneous industrials recorded a few interesting features. Dunlop Rubbers were pushed up to Rs. 25.06 from Rs. 24.75. Indian Cables, after improving to Rs. 29.75, were fully steady. Orient Papers at Rs. 28.75 were better, as were Titaghur Papers at Rs. 36. Earlier, Indian Oxygens had moved down to Rs. 16.87, but recovered to Rs. 17.69.

• • • •

Madras Stock Exchange

MADRAS, *22nd April*

The Madras Stock Exchange ruled quietly steady during the week under review also. The volume of transactions put through was higher than that in the previous week. The concession in respect of development rebate to companies and the small relief in levy on dividends in respect of Section 23A companies, announced this week by the Union Finance Minister, were welcomed by operators. Plantation shares continued to be in the limelight with values generally moving further upward. Textiles, however, presented an easy trend, thanks to absence of any indication of the increased rebate on handloom goods reflecting favourably in offtake of handloom fabrics and, consequently, of yarn. Traders were awaiting the State Government's move to help clear accumulations of stocks with mills in the light of discussions at the recent meeting of the textile interests and labour convened by the Government. The statement of the Minister for Industries and Labour that the Union Government had permitted exports of yarn to overseas markets for three years did not enthuse the market, due to keen competition from other countries.

Tea shares in the planting section elicited good support. Kil Kotagiris advanced by 20 nP to Rs. 6.30. Twyfords and Chandramalais put on 5 nP each to Rs. 13.40 and Rs. 3.20, respectively. Periakaramalais gained 4 nP to Rs. 4.14. Devasholas were firm at Rs. 18.40, Nilgiris at Rs. 8.50, Chembras at Rs. 3.63 and Peermades at Rs. 22.25. Blue Mountains were, however, a shade quiet at Rs. 3.10. Among coffee shares, Consolidated Coffees were well favoured and spurted by 60 nP to Rs. 24. Anaparais were steady at Rs. 4.80. On the announcement of a bonus issue of three for every five shares held, Cowcoodys were marked up by 70 nP to Rs. 9.50. Among rubber shares, Woodlands rallied by 50 nP to Rs. 7.80. T. R. & Ts gained 10 nP to Rs. 7.10 and Highlands a like amount to Rs. 13.50. Thirumbadis were 9 nP better at Rs. 1.64. Cochin Malabars added 5 nP to Rs. 5.05. Nelliampathys were steady at Rs. 3.05. Travancore Rubbers turned quiet at Rs. 14 *cum-div.*, reflecting disappointment of operators over the cut in dividend from 20 per cent. to 15 per cent. for the year ended 31st December 1957. Rajagiris, on the other hand, eased by 13 nP to Rs. 14.87. Midlands lost 5 nP to Rs. 16.20.

In the textile section, Coimbatore Cottons dropped Rs. 3 to Rs. 147. Coimbatore Pioneers declined by Rs. 2 to Rs. 227. Balasubramanias and Janardanas lost a rupee each to Rs. 56 and Rs. 79.50, respectively. Ranga Vilas shed 50 nP to Rs. 64.50, as did Rajalakshmis to Rs. 71.50. Krishnarajendras receded by 25 nP to Rs. 79. Travancore Rayons eased by 10 nP to Rs. 13.30 and Loyals by a like amount to Rs. 36.40. But Virudhunagars climbed up by Rs. 2.50 to Rs. 29.50. Metturs hardened by Rs. 2 to Rs. 350.

Among miscellaneous industrials, Mysore Chemicals and Fertilisers added 22 nP to Rs. 7.12. Mettur Chemicals were steady at Rs. 9.50, F.A.C.T's at Rs. 5.30, Indian Steel Rollings at Rs. 11.50 and Singarenis at Rs. 11. Mysore Papers, however, shed 15 nP to Rs. 16.10. Spencers softened by 10 nP to Rs. 17.15.

NETHERLANDS TRADING SOCIETY

The Directors of the Nederlandsche Handel-Maatschappij, N.V. (Netherlands Trading Society, Bankers) have recommended a dividend of 10 per cent. on the ordinary shares of the Bank for the year ended 31st December 1957, the same as that paid for 1956.

NEWS IN BRIEF

THE Scindia Steam Navigation Company, Ltd., is expected to resume its India-U.S.A. service at the end of June next.

The Government of India has decided to issue actual users' licences on an *ad hoc* basis, for import of newsprint to publishers or printers of newspapers.

The stock of unsold cloth with cotton textile mills at the end of March 1958 was 344,800 bales, according to the Union Minister for Commerce and Industry.

The request of India to Burma not to raise the price of rice to be shipped to India, as originally intended owing to bad harvest in Burma, has been conceded by the Burmese Government.

The South-Eastern Railway is reported to have planned electric traction on 334 miles of the railway around Rourkela and Jamshedpur in order to cope with the heavy pressure of traffic.

The Union Government has set up a Corporation, called the Hindustan Salt Company (Private) Limited, to take over the Government salt works at Sambhar, Didwana and Kharaghoda which are at present departmentally managed.

The production of *baisakhi* lac crop in 1958 will be 596,000 maunds as against 650,000 maunds last year and the last ten-years' average 740,000 maunds, according to the preliminary forecast of the Indian Lac Cess Committee.

The Union Government will finance the U.P. Government's Rs. 16.38 lakh Ambar Charkha scheme. The scheme envisages production of 450,000 yards of Ambar and mixed khadi and provide employment to 6,000 families.

Import licences issued during the licensing period October 1957-March 1958 aggregated Rs. 299 crores, the number of licences being 80,964, as against Rs. 384 crores, the number of licences being 118,444 during the first six months of 1957.

With a view to encouraging research and raising production of oilseed crops, the Indian Oilseeds Committee has formulated a scheme for awarding annual prizes to breeders who evolve best strains of groundnut, castor, linseed, rapeseed, mustard and sesamum in the country.

The agreement between India and West Germany for the supply, on deferred payment basis, of heavy industrial equipment for the Rourkela steel plant, amounting to 660 million marks (about Rs. 70 crores), has been approved by the West German Parliament Budget Committee.

The Hindustan Machine Tools Factory, Bangalore is expected to undertake the manufacture of radial drills of different types under licence from a European firm. This will help further diversify the manufacturing programme. During the year 1957-58 the factory produced 402 diversified machine tools worth about Rs. 1.6 crores, as against the original target of 131 machines.

The total number of Janata life insurance policies issued by the Life Insurance Corporation of India from 26th May 1957 to 17th March 1958 was 24,411 and the value of such policies was Rs. 1,39,21,551. The question of extension of the scheme on a country-wide basis will be considered after evaluating experience gained and the data obtained from the working of the project in various centres in different zones.

The setting up of a Manganese Mines Labour Welfare Fund by imposing a welfare levy of Rs. 2 per ton, to begin with, on all exports of ores with more than 40 per cent. manganese content was approved by the Industrial Committee on Mines Other Than Coal, which concluded its two-day meeting at New Delhi on the 18th inst. It was made clear that exemption of low grade ores from the levy would not preclude workers employed in such mines from the benefits to be provided by the Welfare Fund.

The production of iron ore in India during 1957 aggregated 5,020,000 tons as against 4,858,000 tons in 1956, according to the Indian Bureau of Mines. The two major producing States—Bihar and Orissa —accounted for 1,935,000 and 2,042,000 tons respectively. Production in respect of these States in the previous year was 1,848,000 and 1,770,000 tons. Among the minor production States Andhra Pradesh accounted for 267,000, Mysore for 532,000 and Bombay for 119,000 tons in 1957. The production in these States in the preceding year was 402,000 tons, 541,000 tons and 127,000 tons respectively.

The Ship Repairs Committee, set up by the Government of India to enquire into the existing ship repair and dry dock facilities and to suggest measures for improvement, held its first meeting at Bombay on Wednesday, this week, Mr. O. V. Alagesan, Chairman of the Committee, presiding. The Committee decided to issue a questionnaire to all shipping companies, ship repairing firms, port authorities, etc., and set up a sub-committee to finalise the draft questionnaire. The Committee will later visit all the principal Indian ports and take oral evidence from interested parties.

A trade agreement was signed in New Delhi on the 18th inst. between the Government's of India and Ethiopia. Under the agreement, the Governments of the two countries have agreed to extend to each other the most-favoured-nation treatment in respect of customs duties, other taxes payable on imports and exports, and all customs regulations and formalities. Subject to the relevant regulations in force, the Governments will give the maximum possible facilities for import and export of commodities of interest to either party. For this purpose, lists of articles available for export from either country will be exchanged periodically. The agreement comes into force immediately and will be valid until the end of May 1959. It may continue in force for a further period of one year subject to any modification.

An agreement has been reached between Hindustan Antibiotics (Private) Ltd., Pimpri, Poona, and Merck & Co. Inc., one of the leading manufacturers of chemical and pharmaceutical products in the U.S., for the manufacture of streptomycin in India. The new plant will be constructed at a total cost of about Rs. 150 lakhs by Hindustan Antibiotics, adjacent to its penicillin plant. It is designed to have sufficient capacity to produce all of India's estimated need in the immediate future for streptomycin and dihydro-streptomycin in the treatment of tuberculosis. Under the present agreement, Merck & Co. will make available to the Indian firm its know-how and continuing technical assistance in the production of these antibiotics, as well as engineering assistance in the construction of the plant.

From Abroad

New Zealand's earnings of foreign exchange from tourist trade during 1957-58 touched a record of £3.47 million, or a rise of over £300,000 as compared with the previous year.

A proposal to create an international body to prevent sharp fluctuations in world copper prices has been made by Chile to the United Nations International Trade Commission.

Australian demand for Malayan tin is expected to rise substantially in the next few years on account of the expansion of the tinplate industry, according to the Australian trade delegation which is now in Singapore.

The index of industrial production in the U.S. declined in March to 128 (Base: 1947-49=100), the lowest since August 1954, when the index stood at 123, according to the Federal Reserve Board. The decline in March is the seventh consecutive monthly drop.

The Soviet railway engineers have proposed the construction of a tunnel through the Himalayas to establish a rail link with India. The scheme it is said, will form part of a comprehensive long-term programme to tie the transport network of Asian countries more closely to the Soviet traffic systems.

West Germany's laid-up shipping tonnage (gross registered) as on the 15th inst. was 240.000 (103 vessels), that is, about 6.6 per cent. of the total mercantile tonnage. This represents an increase of 175,000 g.r.t. since the beginning of the year. Eight ships with an aggregate 23,633 g.r.t. were scrapped during the first quarter of 1958.

A trade agreement covering the period up to 1965 has been concluded between Czechoslovakia and the Soviet Union. Under the agreement, Russia will supply iron and manganese ore, oil, cotton, grain, rolling mill, forge and press equipment and metallurgical machine tools, while Czechoslovakia will supply machines and equipment, including electric and diesel locomotives.

Output of steel ingots in Canada during the first three months of this year declined by 14 per cent. and that of pig iron by 18 per cent. The quantity of steel ingot and pig iron actually produced in the quarter was 1,150,272 tons and 761,285 tons, as compared with 1,333,766 tons and 931,347 tons, respectively, a year before.

In pursuance of the decision of the British Government to help the exporters of major capital goods through an increase in the volume of direct guarantees under the Export Credit Guarantee Scheme, the minimum qualifying sum for a guarantee is to be reduced from £250,000 to £100,000, with a corresponding increase in the cover from 85 per cent. to 90 per cent.

The U.S. Department of Agriculture has announced that more than 33 million pounds of flour from U.S. wheat reserves will be processed for export to Ceylon under a U.S. agreement with that country. Contracts have been awarded to process approximately 765,000 bushels of U.S. reserve wheat into 33,061,420 pounds of flour for export to Ceylon. Since 1st January approximately 2.9 million bushels of this reserve wheat have been scheduled for processing into 124,819,020 pounds of flour for export shipment under U.S. aid programmes.

The Pakistan Government has decided to conduct the first agricultural census in the country in 1960. An organisation known as the office of the Agricultural Census Commission has already been set up in Karachi. The first task before the Agricultural Census Commission is to finalise the census slip and a Census Advisory Committee has been constituted for this purpose. Since the census operation will cover a wide range of subjects such as land, cropping tenure system, livestock, irrigation system, agricultural labour, manure, etc., for which advice from experts is necessary, it has been decided to include experts in the Committee.

The member-nations of the General Agreement for Tariff and Trade now in session at Geneva appointed on the 16th inst. a working party under the chairmanship of Signor Cozzi (Italy) to examine the legal aspects of the import restrictions imposed by West Germany under its four agricultural marketing laws. The working party will look into the contention of West Germany that the restrictions do not come within the scope of G.A.T.T. A panel of conciliation was also constituted with Mr. Dana Wilgress (Canada) as Chairman to examine the contention of Australia that the French subsidies on wheat and flour adversely affect the trade of Australia in these commodities in the traditional markets.

PERSONAL

SIR Joseph Kay, K.B.E., Chairman and Managing Director of Messrs. W. H. Brady & Co., Ltd., left Bombay for the U.K. on Thursday, 24th inst., by R.M.S. *Strathmore*.

Mr. L. N. Birla, a well-known industrialist, left Calcutta on Monday on a three-month tour of Europe.

Mr. R. K. Nehru, until recently India's Ambassador to China and Mongolia, has been appointed Ambassador of India to the United Arab Republic.

Mr. B. V. Baliga, Chief Engineer, All India Radio, has been appointed Managing Director of Bharat Electronics Limited, Bangalore, in place of Mr. A. K. Ghosh.

Mr. Jagan Nath Jaini, Chairman, National Advertising Service Private Ltd., left for Tokyo to participate in the Asian Advertising Conference which commenced there on the 22nd inst.

Mr. Chandra Sekhar Jha, at present India's Ambassador to Japan, has been appointed India's Permanent Representative to the United Nations. He is expected to assume charge of his new assignment in June.

Lt.-Col. B. M. Chakravarti has been appointed head of the newly set up Electronics Research and Development Establishment at Bangalore. The establishment will stimulate research in electronics pertaining to defence.

Mr. Bharat Ram has been elected Chairman of the Board of Directors of the Delhi Cloth and General Mills Company, Ltd., *vice* Mr. Shri Ram who has retired. Mr. Shri Ram continues to be on the Board of Directors.

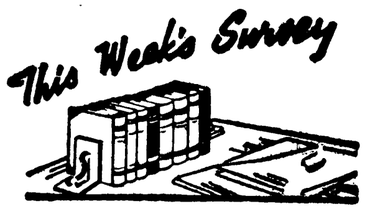
Mr. R. L. Gupta, Secretary to the Ministry of Transport, returned to Bombay from London on Thursday last. He had been to the United States for finalising loan arrangements with the World Bank for development of ports in India.

Mr. Vallabhdas V. Mariwala has been elected President and Mr. Manekchand M. Gandhi, Vice-President of the Pepper and Ginger Merchants' Association for the current year. Mr. Anandji B. Nagda is the Honorary Secretary of the Association.

Mr. C. Ramasubban, member, Tariff Commission, assumed charge as Chairman of the Commission on Wednesday this week, *vice* Mr. K. R. Damle who has been appointed Secretary to the Union Ministry of Food and Agriculture.

Mr. Triloki Nath Kaul, at present Chairman of the International Commission for Supervision and Control and leader of the Indian delegation in Viet Nam, has been appointed Ambassador of India to Iran. He will assume charge of his new assignment in August.

Mr. H. Bailey, who succeeds Mr. G. J. Macmahon, C.M.G., as Senior Trade Commissioner Macmahon, C.M.G., as Senior Trade Commissioner for the United Kingdom in India, arrived in Bombay on the 20th inst. He left for New Delhi on Wednesday this week. Mr. Macmahon will leave Bombay for the United Kingdom on 4th May on the completion of his term of duty.



FOODGRAINS TARGET

THE latest move of the Union Government to fix village-wise targets for grow-more-food campaign from this year onwards must be welcomed. The fixation of targets will be left to the villagers, every possible help being given in achieving the same. While fixing the targets for each State, the capacity of the State concerned to produce and its performance during the previous year will be taken into account. Whenever a target is fixed, it is done with the full hope that it will be fulfilled.

The adoption of the village-wise basis for grow-more-food campaign has come not a day too soon. When the second Five-year Plan was formulated, the Planning Commission had clearly emphasised that each district and, in particular, each national extension and community development project area, should have a carefully worked out agricultural plan, indicating for the villages the targets to be aimed at, the broad distribution of land among different uses and the programme of development. The village-wise fixation of foodgrains production targets will doubtless go some way towards arousing the enthusiasm or effect in the countryside. After all, it must be remembered that foodgrains production can be stepped up as much through incentives such as provision of irrigation, credit and marketing facilities, and supply of fertilisers as through intimate contact with the cultivator on the part of extension workers, especially the village-level workers.

Although more than two years have elapsed since the second Plan began, the progress actually made so far in the direction of fulfilling the foodgrains production target of 80.5 million tons is not quite encouraging. It is true that the output of foodgrains in the first year (that is. 1956-57), amounting to 68.7 million tons, was higher by 3.4 million tons as compared with the previous year. But, in the current year, there have been droughts over considerable areas and the supply position has turned out to be difficult. The actual production of foodgrains is expected to remain at the 1956-57 level. That the adoption of energetic steps to augment production of foodgrains is of the utmost importance is clearly brought out in the Government of India *Economic Survey* 1957-58 presented to Parliament two months ago. The *Survey* observes:

"The relative elasticity of food production over the last two or three years is also responsible for some of the difficulties that have arisen in the course of the implementation of the Plan. Food prices hold a key position in the Indian price structure. To the extent that food prices are higher, the saving capacity of the urban middle-class diminishes. Even a small rise in food prices is apt further to induce withholding of supplies. The task of limiting well in time and to the requisite degree the claims of consumption in a low-income economy presents difficulties. It is particularly important, therefore, that, in the adjustments being made in the Plan, there should be greater stress on increased food production."

As compared with the estimated output of 68.7 million tons in 1957-58, the total additional output that should be raised if the target of 80.5 million tons fixed for 1960-61 is to be realised, is nearly 12 million tons. The development programmes approved for 1958-59, it is stated, will increase the production by about 3.0 million tons, that is, to 71.7 million tons. According to a note reported to have been prepared by the Planning Commission which was placed before the meeting of the informal Parliamentary Consultative Committee on Planning held at New Delhi on Tuesday this week, the revised target of 80.5 million tons of food production by 1960-61 (an addition of 15.5 million tons, as against the original target of 10 million tons) will be realised thus: 2.66 million tons by major irrigation; 2.24 million tons by minor irrigation; 3.82 million tons by fertilisers and manures; 3.80 million tons by improved seeds; 1.01 million tons by land reclamation and development; and 1.97 million tons by improved agricultural practices.

The possibility of obtaining large increases in foodgrains production in the next three years seems greatest, according to the Foodgrains Enquiry Committee, from the schemes for fertilisers and manures, improved seeds, and minor irrigation. Viewed thus, it is gratifying that the Government of India has decided to reduce the prices of fertilisers supplied to farmers as soon as the country is able to get imports of fertilisers. Disclosing this, Mr. M. V. Krishnappa, Union Deputy Minister for Agriculture, declared in the Lok Sabha the other day that, as it was, fertilisers were being sold at reduced prices through subsidies. As regards irrigation, it is said that several State Governments have informed the Centre that they are not in a position to undertake major projects and have expressed a desire to start more minor schemes. Apropos this, the Planning Commission has recently set up a committee to go into the whole issue. It is to be hoped that the Committee will submit its recommendations at the earliest possible time and that the authorities will not waste much time in implementing the same. Meanwhile, a study of the non-utilisation of irrigation potential of major and medium irrigation works conducted by the Programme Adviser to the Commission reveals that, in most of the States, legislation needs to be enacted for making it obligatory on the part of cultivators to construct field channels. It is rightly stressed that cultivators must be made irrigation-minded through proper demonstration of intensive irrigation work. Incidentally, mention may be made of certain difficulties experienced in the way of the farmer utilising the full funds made available to him, because of the discrepancy existing between the financial year and the agricultural year. It is gratifying that the Agriculture Minister has already taken up this matter with the Finance Ministry and a satisfactory settlement is expected to be arrived at shortly.

FERRO-MANGANESE PLANT

What was two years ago a valley of paddy fields—Joda, in the Koonjhar District of Orissa State—has since throbbed into industrial life. In this valley is located the Rs. 1.75-crore ferro-manganese plant which was formally declared open by Dr. Hare Krishna Mehtab, Chief Minister of Orissa, on Sunday last. The plant which, incidentally, is the first Tata Industries enterprise in the State of Orissa, is part of the Tata Iron and Steel Company's Rs. 120-crore project for raising its steel output to two million tons. Foreign exchange outlay on the plant is roughly about Rs. 70 lakhs.

Ferro-manganese, it is common knowledge, is a vital requirement for steel-making. Manganese ore, the main raw material for the manufacture of ferro-manganese, is available in plenty in the vicinity, while limestone is obtained from Birmitrapur in Orissa and coke from the coke ovens at the T.I.S.Co., Jamshedpur. A sub-station of the Hirakud projects supplies the power required for working the furnaces. The plant at present has two 9,000 KVA electric furnaces. The annual installed capacity of the plant is put at 36,000 tons which will not only fully meet the T.I.S.Co.'s requirement but actually leave a small surplus. In due course, the capacity is proposed to be increased to 100,000 tons a year. It is noteworthy that, true to the best traditions of efficiency characteristic of the House of Tatas, the plant has been built eight months ahead of schedule. The achievement is creditable especially because work had to be carried out against heavy odds, such as lack of transport and communication facilities.

The Joda plant is one of the seven plants that are being erected in Orissa, Bombay, Andhra and Mysore. It will be recalled that the prospect of higher foreign exchange earnings from exports of ferro-manganese, instead of ore, and the anticipated enlarged requirements of the expanding steel industry led the Planning Commission to give special attention to the manufacture of ferro-manganese in the second Plan. The production target is fixed at 160,000 tons, of which about 100,000 tons are expected to be available for export, earning for the country approximately about Rs. 9 crores. India is the second biggest producer of manganese ore, next only to the Soviet Union. Exports of ore brings in annually foreign exchange earnings to the tune of Rs. 10 crores. Although there are large ore deposits, no serious attempt was made so far to smelt the ore and produce ferro-manganese. This was due to a number of factors. The Indian ore processed in blast furnace with indigenous coke, for instance, is comparatively low in manganese content and high in phosphorus. It is, therefore, not readily acceptable in foreign markets. Further, the use of electric process for smelting is not feasible, thanks to non-availability of cheap power supply. Consequently, the quantity of ferro-manganese actually manufactured in this country is very limited and even this quantity is utilised only by the indigenous steel industry. T.I.S.Co. first manufactured ferro-manganese in India 43 years ago, solely to meet its own needs.

The aforesaid handicaps have since been removed to a great extent. Several hydro-electric projects have materialised and electric power is now readily available for smelting manganese ore. The fourfold increase in steel production envisaged in the second Plan has necessitated a fourfold rise in internal consumption of ferro-manganese. There is, besides, the consideration that the country can enhance its export earnings by exporting ferro-manganese instead of ore.

While the manganese ore deposits in the country are considerable, the reserves of high-grade ore are rather limited. Mr. Jehangir Ghandy, a Director of T.I.S.Co., therefore, did well, to underline, in the course of his address at the opening ceremony, the need for conserving the limited resources of high grade ore. Mr. Ghandy said that there was some reason for anxiety with regard to supply in the long run; scarcity of high-grade deposits made it necessary to beneficiate low-grade ores. The experiments now in progress in the National Metallurgical Laboratory at Jamshedpur are expected to produce satisfactory methods of beneficiation which can be adopted on a wide scale. It was in the common interest of manufacturers of ferro-manganese and exporters of manganese ore, Mr. Ghandy pointed out, to find some use for low-grade ores, so that the economic life of the mines could be prolonged. He, of course, stressed that, until a suitable process of beneficiation was evolved, the ferro-manganese industry would have to rely on the limited high-grade deposits available in the country. Mr. Ghandy wanted restrictions on exports of such high-grade ores, particularly in Orissa where as much as 50 per cent. of the run of mine ore has a manganese content of 30 per cent. or less. Otherwise, the newly opened ferro-manganese plant will have to work, as Mr. Ghandy warned, with ores brought in from elsewhere, thereby adversely affecting the economics of production, not to speak of the diminishing benefits to the State generally.

AUTOMOBILE INDUSTRY

Some of the problems which impede the rapid development of the automobile industry in the country was highlighted by Mr. Lalchand Hirachand, President of the Automobile Manufacturers' Association, in his address to the annual general meeting of the Association, held in Calcutta on the 10th inst. Mr. Hirachand pointed out that the assistance given by the Government to the industry was fully justified by the steady progress achieved by it during the past few years. The industry is now manufacturing nearly all the vital assemblies normally expected to be manufactured by the automobile makers in respect of cars and trucks. It is expected that, by the end of 1958, nearly 70 per cent., of the components of cars and trucks will be produced in the country. The total annual assembling capacity in the industry at present on a single-shift basis is about 50,000 vehicles. Since 1953, the production of vehicles continued to increase, though it is still much below capacity. Total production of automobiles in 1957 was 30,604, as against 32,137 in 1956, 23,084 in 1955, 14,462 in 1954 and 13,926 in 1953. Sales were below annual production except during last year. Sales aggregated 31,543 in 1957, 31,485 in 1956, 23,065 in 1955, 13,813 in 1954 and 9,400 in 1953.

Mr. Hirachand referred to the industry's pressing problems. The major factor that inhibits the growth of the industry, according to him, is the low level of demand for automobiles which is evident from the sales figures each year which fall short of production. At the current rate of demand, which is met by six manufacturers, there is little scope for effecting any appreciable economies in manufacture. The Planning Commission has estimated that the demand for automobiles at the end of the second Plan will have risen to 57,000 vehicles, as against the Tariff Commission's estimate of 65,000 vehicles. The realisation of this target, as Mr. Hirachand emphasised, will depend to a large extent on the policies of the Government. Government's fiscal policies, which leave hardly any savings with the people, according to him, have been in a large measure responsible for the low demand for vehicles. Another reason is the heavy incidence of taxation on motor vehicles. While motor vehicle taxation in India is considered the highest in the world, the *per capita* consumption of vehicles is the lowest.

Anomalies in the sales tax legislation existing in the different States. Mr. Hirachand pointed out, were a source of considerable harassment. They also upset the comparative cost structure of the industries in the different States, disturbed the normal trade arrangements and thus proved a hindrance to increased offtake of vehicles.

Apart from paucity of demand, certain other aspects of Government policies have also adversely affected the progress of the automobile industry. It is regrettable that the Government has not accepted the Tariff Commission's recommendation for levy of higher duties on imported components so as to give sufficient incentive to the indigenous manufacturers of components. The result is that firms which have made considerable progress in the manufacture of components are faced with competition. The present rate of duty, as Mr. Hirachand pointed out, is hardly conducive to the development of the industry.

The restrictive import policy in respect of capital goods and raw materials has been a source of anxiety to the industry. A more liberal policy which will enable import of capital goods necessary for the manufacture of components is required. The Government should also consider the provision of liberal financial assistance to the industry, in view of the fact that motor transport has been assigned a very important role in the second Plan, especially as the capacity of the railways is certain to fall short of requirements.

PROTECTION FOR P.A.S. ACID

The claim of the para-aminosalicylic acid (P.A.S. acid) industry for protection is currently being examined by the Tariff Commission. A public enquiry into the question was held in Bombay recently, Mr. C. Ramasubban, Member, Tariff Commission, presiding. The industry has asked for protection in order to counteract the growing foreign competition and to ensure the rapid development, with a view to meeting in full the indigenous demand. P.A.S. and its salts are assessed to duty under item 28 of the First Schedule to the Indian Tariff Act 1934, the standard rate of duty being 40 per cent. *ad valorem*, while the preferential rate is 30 per cent. *ad valorem*. The item is also covered by the G.A.T.T., according to which the rate of duty leviable on these products is not bound, but the margin between the standard rate and the preferential rate applicable to the U.K. and British Colonies is restricted to 10 per cent. For the current licensing period April-September 1958, the quota for established importers remains the same, namely, 10 per cent. In addition, applications from actual users are considered on an *ad hoc* basis in consultation with the Development Wing.

There exists, it is said, considerable consumer prejudice for indigenous product, the prejudice which stems largely from the fact that the pharmaceutical firms and tablet makers, the principal consumers, have close and intimate connections with foreign firms. Attention is drawn here to the heavy dependence of the industry on imports of raw materials to the extent of as much as 90 per cent. Attention is also drawn to the incidence of freight rates and customs duties. These two factors, says the industry, account for the high cost of producing para-aminosalicylic acid.

The plea of the industry for tariff protection would appear to be quite justified. This is one of the newly-born industries of India. It has been endeavouring to maintain a high level of output. The total quantity of P.A.S. salts and acids now being produced is at an annual rate of 95,048 lbs. (on the basis of figures for the first quarter of the year), which compares very favourably with the actual production of 55,353 lbs. in 1957 and 8,933 lbs. in 1956. The production

TOTALITARIAN COMMUNIST PARTY TURNS DEMOCRATIC

REACTION IN CONGRESS CIRCLES

From A Special Correspondent

NEW DELHI, *22nd April*

FROM Avadi to Amritsar, much water has flowed under the bridge, and the current strategy and tactics of the Communist Party of India have acquired more than ordinary significance. And so a departure from the usual run of economic articles is made this time to a political subject. At Avadi, the democratic Congress Party transformed itself into a "socialist" party; at Amritsar, the totalitarian Communist Party has just transformed itself into a "democratic" party. The socialist metamorphosis of the Congress was not just "tactical"; it had its roots in the Karachi Congress resolution of the early thirties and has actually led to a substantial expansion of the public sector and to egalitarian measures of taxation. Even so, the democratic transformation of the Communist Party may not be just "tactical," for the objective conditions have been favourable to a partial qualitative change in that Party's basic strategy itself.

DELHI LETTER

The Communist Party's basic strategy was always one of violent class war as a means to the capture of State power. The "violence" part of this strategy has been rendered superfluous by two major sets of objective conditions. One of these is the existence of a constitution which has guaranteed adult franchise (in the context of mass poverty) and provided ample scope for peaceful "class conflict" and for a moderate socialist transformation of the economic order, if not for a total overthrow of the framework of private property relations. The other is the continuing incapacity of Congress Governments to tackle effectively the crucial problem of food as it affects the low-income groups. As long as the wobbling "middle third" of society is subjected to the more severe part of an inflationary impact, its continued allegiance to the Congress Party cannot be taken for granted.

Smug Reaction

In the context of adult franchise and of the political education or miseducation that has taken place in two successive General Elections, this can easily give a majority or near-majority to the Communist Party which, in a shrewd calculation of potentialities, has just decided to transform itself from a party of professional revolutionaries into a peaceful, though militant, mass party, throwing its doors open to wider membership. The smug reaction in Congress circles here that this change is good on the ground that, in a mass party, all our national weaknesses will get reflected and thus weaken the Communist Party, even as they weaken the Congress, is unwarranted. This is not likely to happen, because the mass recruits to the Communist Party will be composed of those elements of society whose homogeneity as have nots and impoverished lower middle classes will outweigh their heterogeneity. The ability and resourcefulness of the Communist leadership in keeping them together would have to be reasonably assumed, if the possible power of a "mass" Communist Party is not to be underestimated. The Communist bid for capture, by constitutional means, of political power in some States to begin with and at the Centre ultimately is potentially of grave import in the context also of what is happening in Kerala.

What is significant in Kerala is not the law and order situation as such or its deterioration but the determined Communist effort to exploit constitutional possibilities for presenting a better picture of performance to the people in other States and also for aggravating class conflicts in a more or less peaceful way. The Kerala Chief Minister's report to the Amritsar Congress on the first year's work of his Ministry is significant in this regard. The Kerala Ministry's attempt to change "class relations" in villages quickly and radically by a series of agrarian reform measures has, according to Mr. Sankaran Namboodiripad himself, "led to a certain amount of tension," but has also presented a picture of better and more energetic constitutional performance as compared to the "leisurely and tardy" process of land reform in other States.

Even more significant (and probably more mischievous) than the Kerala Chief Minister's report is the economic platform of the policy resolution adopted by the Amritsar Congress. Some of the planks in this platform would need to be examined closely. First, on the second Plan, the resolution says that all its targets must be realised, condemning in the same breath most of the methods for raising internal and external resources. The Communist Party knows that the Plan's original targets cannot be wholly realised, but that the Congress Party has throughout promised, in its mass propaganda, to realise those targets. To go on campaigning for the achievement of all the targets of the Plan, as the Communist Party intends to do, would be to discredit the Congress in public estimation by the time the next General Elections take place. What this will mean in terms of votes for the Communist Party may be guessed. At the same time, the Communist Party's attempt to exploit the unsavoury and unpopular consequences of a high level of inflationary deficit financing is expected to have its own reward in terms of more votes.

Agrarian Relations

Again, the planks regarding food and radical agrarian reforms are shrewdly designed to get for the Party the best of both worlds. To campaign ceaselessly for land reforms would be to keep alive a sense of fear and insecurity among substantial and even medium landowners who will continue to refrain from making any sizable re-investment in their lands, with the result that food production will not come in for maximisation. The consequent continuance of food scarcity would constitute an ideal situation for Communist political exploitation. The Communists know that food scarcity, especially rice scarcity, cannot be relieved without a short-term increase in production, but the fact remains that they have all along concentrated their activities in those rice-eating States—activities of a kind calculated to disrupt agrarian relations.

This examination of some economic planks is sufficient to convey that the Communist Party can conceivably hold with the hare and run with the hounds, and make a success of both the enterprises. It cannot be gainsaid that there is an undercurrent of deep concern in Congress circles here over the potentialities of the Amritsar reorientation in Communist strategy. There is, for obvious psychological reasons, no disposition on their part to admit this openly. Instead, like a lone man whistling to himself in the darkness—the comparison, of course, does not stand on all fours—the Congress President is just reported to have said in Madras that the abjuration by the Communist Party of its creed of violence is a triumph for the Congress!

This is, again, a complacent reaction which ignores the fact that the Communist Party has not ceased to be a "militant" party specialising in militant class struggles. Such struggles may conceivably, at some point or other, end up in violence. There is again doubt about whether the Communists, if ever they should capture power by peaceful means, that is, through the ballot-box, would rest content with the constitutional possibilities for a moderate socialist transformation of the economic order. It is ten to one that, in such a situation, they would confidently go further and destroy, as in Russia, the entire edifice of private property relations in agriculture, industry and trade. Such a root-and-branch revolution would necessarily involve the destruction of all democratic liberties and the suppression or forced assimilation of all opposition parties. Here is the rub.

A committee has been constituted by the Government of India, under the chairmanship of Mr. T. Prasad, Chief Director, Directorate of Sugar and *Vanaspati*, Ministry of Food and Agriculture, to advise the Vegetable Oil Products Controller for India on matters of technical nature regarding Government's control over the quality of *vanaspati* manufactured in India. The Technical Committee is expected to meet twice a year.

THE "DON'T KNOW" BUDGET

From Our Own Correspondent

LONDON, *18th April*

FOR all the length of Mr. Amory's survey of the past and future of the country's finances, the Chancellor was at a loss what to do and he as good as said so. He made his uncertainty sound impressive by giving the impression that he was like the captain of a ship steering his way through troubled waters in a thick fog. But, in fact, Mr. Amory and the Government are lost in the fog! The Government had already repudiated the previous Chancellor's tough policies of continued deflation, but they were afraid to give the relaxations which the budget surpluses indicated were possible, because it might lead to renewed inflation. They were not going to institute physical controls and every course before them seemed accordingly fraught with dangers. In the outcome, the Chancellor, Mr. Amory, took the advice of the cautious, remitted some taxes he thought would be popular and held his hand on the more exciting budget reliefs till somewhat nearer the next Election.

LONDON LETTER

Economic Health

The Chancellor's speech began by stressing the signs of improvement in the economic health of the country. Yet, in spite of that improvement, prices had gone on rising and so contributed towards the foreign exchange crisis of last year. The fear of a return of that crisis dominated all the rest of the Government's thinking.

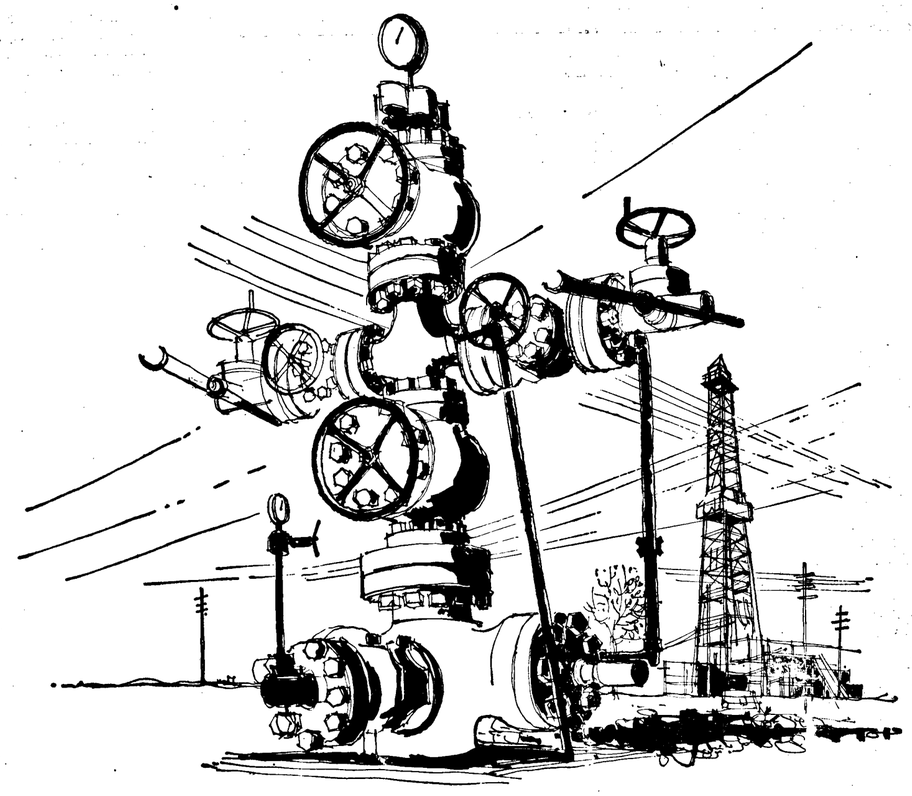
As far as the internal position showed, the budget was very healthy. Last year's revenue aggregated £5,343 million, which was £54 million above the estimate, and ordinary expenditure amounted to £4,920 million which was £93 million above the estimate. So there was a surplus of £423 million. On the other hand, the "below-the-line" expenditure, that is abnormal or mainly capital advances of the Government, totalled £635 million and simple arithmetic shows that the National purse lost £212 million over the year. The year ahead is expected to produce about £150 million more than last year and expenditure will be about the same amount more, thus the surplus is again expected to be rather better than £400 million, but, allowing for "below-the-line" advances of another £600 million, there will again be a deficit to be financed out of Government borrowing of rather less than £200 million.

Cautious Attitude

The Chancellor normally looks at his ordinary income and expenditure in deciding what tax changes are possible, but it is fashionable at this stage for the Chancellor to take a look-out over the external field and modify his proposals according to what he sees. And everything that Mr. Amory could see—the growing recession in the United States, the possible weakness in the export demand—made him cautious. He was determined to consolidate. He was not afraid of any growing recession in this country and he could point to a long list of public works that could be embarked upon should the danger of mass unemployment arise. But, for the time being, he would have to be cautious. In short, he did not know where he was going. So he felt he ought to stand still until the fog cleared. But as he could not stand quite still, he tried to shuffle his feet encouragingly by knocking off purchase tax from a number of items, giving improved tax reliefs for old people and lowering the duty on cinema seats and wines. Even the wine industry were taken aback by this last concession, for which, of course, they ask every year, but least of all expected to get this year.

Even the reliefs are not logical, since purchase tax has been increased on some items in a search for consistency. Nor are the industrial reliefs logical—on the one hand, a valuable encouragement to investment is given by increasing the allowances made on capital investments, but, on the other hand, the tax on distributed profits is brought down and that on ploughed back profits is pushed up. "It is a stodgy-looking box," said Mr. Amory, holding up the traditional despatch case on the steps of his house in Downing Street before proceeding to Parliament, and the consensus of opinion is that he spoke a true word!—*All Rights Reserved.*

The Story of Oil—8



Trees of steel

When a well strikes oil, the first consideration is to stop it gushing. Such an occurrence, though spectacular and common in the early days of drilling, is wasteful. To counteract the pressure, therefore, the mud used during drilling is pumped into the well. The drill is then replaced by narrow tubing which stretches from the bottom of the newly discovered deposits to the 'Christmas Tree' on the surface. The latter is a system of valves which control the flow of oil.

Crude oil, by itself, cannot move. It usually lies between natural gas (on top) and water, so that when the oil trap is pierced by the well, any gas present seeks to expand and pushes down on the oil, driving it upwards. Or gas may be dissolved in the oil itself, and as it expands it pushes the oil to the surface. If, however, a large quantity of water lies below the oil, it forces the oil out of the porous rock and into the well. Sometimes a combination of gas and water pressure drives the oil to the surface.

Normally this pressure is sufficient to keep a well flowing for some time. But as the porous rocks are drained, the pressure declines. Then one of several artificial methods can be used to keep the oil flowing. The 'Christmas Tree' can be replaced by a mechanical suction pump which draws the oil up to the surface. Or gas can be fed into the deposits (between the casing and the tubing) to mix with the oil and bring it to the surface. Or, as a last resort, gas or water can be pumped down a neighbouring well to recreate the original pressure.

Thirty or forty years ago, only a quarter of the oil discovered could be recovered. With today's production techniques a much larger recovery percentage is possible.

U.K. BUDGET AIMS AT ENDING INFLATION

INDUSTRIAL ACTIVITY TO BE STIMULATED

THE maiden Budget (for 1958-59) of Mr. Heathcoat Amory, after he became the British Chancellor of the Exchequer in January last, and the eighth one since the Conservatives came to power in 1950, is noted for its cautious approach aimed at consolidating the strength of the nation's economy. As Mr. Paul Bareau, the well-known columnist points out, "the general economic background against which this year's Budget had to be framed demand a 'safety first' approach." Having successfully retrieved sterling from the extremely weak position in which it was by the drastic action taken last autumn and restored the confidence in the pound, the British Chancellor has not found the time yet ripe for relaxing the country's efforts. Although the inflationary pressures have eased a little, there is every reason to think that the threat of further inflation persists and is inherent in the wage demand. Mr. Amory's effort was, therefore, diverted not to fight the recession but to check inflation. He, no doubt, announced a relaxation of credit squeeze restrictions, but this was confined only to areas of heavy unemployment, as he was convinced that the time had not come for a general relaxation of the credit policy. The Budget proposals were, in short, designed to consolidate the ground gained and poise the economy ready for a resumption of a steady rate of expansion as soon as it can be done.

The most important change made by Mr. Amory to give encouragement to industrial investment is the increase in initial allowances by one-quarter, so that they become 25 per cent. for plant and machinery and 12½ per cent. for industrial buildings. The new rate, which will apply on expenditure incurred after 15th April 1958, will cost the Treasury nothing this year, £16 million next year, and £23 million in a full year. The next important change made in respect of company taxation is the unification of the different rates of tax on company profits. Till now, two rates of tax were being levied on the distributed and undistributed profits, but this has been replaced by a single rate of 10 per cent. to be levied on the whole of a company's profits. The change is operative from 1st April this year, but generally speaking the tax will not be payable until next year. It will cost the Exchequer £10 million next year and £16 million in a full year. The reconstruction of profits tax will, however, increase the tax liability of firms which have been ploughing back a high proportion of their profits.

The purchase tax has been simplified by reducing the number of rates of tax from seven to four. This has been done by abolishing the 90 per cent., the 50 per cent., and the 10 per cent. rates. The resulting tax structure will be a standard rate of 30 per cent. on a wide range of goods, a rate of 60 per cent. on a few big revenue-yielding items (such as cars, radio and television sets, gramophone records and cosmetics), and lower rates of 15 per cent. and 5 per cent. on more essential personal and domestic articles.

The stamp duty on conveyances of land and buildings costing up to £3,500 has been abolished and on those costing between £3,500 and £6,000 has been reduced until the maximum rate, £2 per cent., is applicable on property valued at £6,000. The changes will come into effect only from 1st August 1958. The cost, with two other concessions, will be £3.75 million in the first year and £23 million in a full year.

The exemption limits for income-tax on people over 65 has been raised from £400 to £440 for a married couple and from £250 to £275 for a single individual. The income limit for the age relief has also been raised from £700 to £800, below which level the income, whether earned or not, will be treated as if it were earned.

These, along with a number of other detailed changes, will cost the Exchequer £50.5 million this year and £108 million in a full year. The estimated surplus "above the line" is £364 million and the estimated overall deficit £236 million.

The Chancellor said that there was clearly no room for large relaxations this year, but he was of the view that his proposals lightened some of the burdens on the taxpayer, improved the fiscal system, and left the economy balanced and ready to resume a steady rate of expansion as soon as price stability had been attained.

Reviewing the economy of the country, Mr. Heathcoat Amory said:

"Inflationary pressures are subsiding, and in some countries production has fallen off. The question is: Does this portend only a pause soon to be followed up by a renewal of an upward trend, or are we at the beginning of a more protracted downhill movement? Whatever the outcome, our policies must be guided by three dominant objectives: to maintain the value of our currency, to strengthen our external finances by increasing our reserves or reducing our liabilities, or both, to play a part consistent with our resources and our responsibilities in the expansion of world trade and the development of the Commonwealth. Our strategic aim must always be steady expansion, although the tactics may sometimes dictate a pause."

Although the growth of production in the U.K. was small in 1957, there were some satisfactory shifts in the use of resources. Thus, the lion's share of the increase of output went to investment. In 1957, the rate of fixed investment rose by 5 per cent. in real terms. Over the past five years, the proportion of the national product devoted to fixed investment had risen from 14 per cent. to 17 per cent. Giving the other side of the picture, Mr. Amory pointed out that this pressure of demand had perceptibly relaxed. Although the United Kingdom was fully employed, there was rather more unemployment than a year ago—2 per cent., as compared with 1.7 per cent. in March last year. On the other hand, costs and prices again proved to be an Achilles' heel. The price level of output as a whole was 3 per cent. higher and retail prices rose by 3½ per cent. The main cause was that wages and salaries went up faster than output—6 per cent. compared with 1½ per cent.

These figures explained the failure to halt inflation last year. Most economic worries stemmed from that. Nevertheless, Mr. Amory was glad that the retail price index had remained steady in recent months, and wholesale prices of manufactured goods had also been stable. There was now a golden opportunity at least to halt, and possibly to reverse, the trend of rising prices. It was important to make full use of this opportunity. He agreed that, after a long period of steady growth, exports had recently levelled off as a result of conditions in oversea markets caused by the check to growth in industrial expansion in the United States and elsewhere.

Referring to the success achieved by the drastic measures taken in September last to restore the confidence in the pound, the Chancellor observed:

"The decisive response we made was effective. Since then the figures have shown that confidence in the pound has been restored. Even apart from the special measures taken to reinforce the reserves, we have regained what we lost in the third quarter of last year. Today, the reserves stand higher than last year, excluding altogether the fresh borrowings and the postponement of the debt services. We reduced our sterling liabilities to oversea countries in the second half of last year by £227 million. In this same period we increased private oversea investment by over £100 million. So we have some solid progress to record."

Summing up the prospects for the year ahead, Mr. Amory said that there were two considerations for the future, namely, the need for succeeding in the struggle for stable prices and finding the right course to pursue in a world threatened by tendencies to recession. In spite of some uncertainties the prospects for home demand seemed reasonably satisfactory. Provided competitive power was retained, employment should remain at a high level. Government expenditure would be about the same as last year in terms of real resources. The level of expenditure would continue to be held at an absolute minimum. Proceeding, the Chancellor observed: "Foreign demand for our goods has kept up well. But we are seeing

JAIPUR BANK STEPS UP DIVIDEND AGAIN

PROFIT SLIGHTLY HIGHER

FOR the second year in succession the Directors of the Bank of Jaipur Ltd. (General Manager: Mr. S. L. Kothari, Jaipur) have stepped up the dividend, the latest year for which this has been done is the one ended 31st December 1957. Last year, the dividend was raised from 4 per cent. to 5 per cent. per annum and this year, this has been increased by another 1 per cent. to 6 per cent., the highest rate of distribution made by the Bank since its inception in 1943. The increase in dividend follows the further, albeit small, expansion in profit earned for the year under review.

The profit has gone up by Rs. 90,000 to Rs. 10.72 lakhs. This increase does not compare well with that of Rs. 3.62 lakhs recorded in the previous year, but, with this rise, the Bank's profit has established a fresh record in its history. Despite this small improvement in profit, the provision for taxation has been pruned from Rs. 4.50 lakhs to Rs. 4 lakhs, while the transfer to the reserve fund has been raised from Rs. 2 lakhs to Rs. 2.25 lakhs. In addition, a sum of Rs. 50,000 has been set aside to other reserves, which had not received anything in the previous year.

The salient features of the Bank's profit and loss account and balance-sheet relating to the last four years are compared in the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Interest and discount	45.13	37.70	31.87	28.05

Investments†	31.5	32.4	25.9	33.9
Cash	22.3	17.5	21.5	28.0

† After taking into account investments earmarked against borrowings from other banks.

The Bank's gross income for the year under review amounts to Rs. 58.54 lakhs, as against Rs. 51.35 lakhs for 1956. The rise in gross income is mainly accounted for by interest and discount, the receipts from which have gone up by Rs. 7.43 lakhs. Income from commission and exchange has declined by Rs. 39,000 to Rs. 12.42 lakhs, in distinct contrast to the rise of Rs. 4.12 lakhs noted in the previous year. The larger income from interest and discount has been almost offset by the rise of Rs. 2.80 lakhs in interest paid and of Rs. 3.41 lakhs in expenses.

Thanks to the steady allocations made to the reserves year after year, the Bank's reserves stand at 50 per cent. of the paid-up capital. The pace of increase in deposits has slowed down slightly during the year under review, consequent on the fall in current and contingency accounts from Rs. 4.27 crores to Rs. 3.74 crores. Fixed deposits are only a shade higher at Rs. 4.55 crores, as against Rs. 4.54 crores at the end of 1956. Savings bank deposits have risen from Rs. 1.01 crores to Rs. 1.08 crores. In contrast to the small expansion in deposits, advances have come down, as at the close of the year, by Rs. 64 lakhs. Loans, cash credits and overdrafts have dropped from Rs. 4.42 crores to Rs. 4.27 crores and bills purchased and discounted from Rs. 1.64 crores to Rs. 1.15 crores. The decline in advances reverses the upward trend noted in the preceding years. Investments too have declined by over Rs. 30 lakhs, but this has been more than made good by the rise of more than Rs. 37 lakhs in cash balances. The investments are shown at book value, the market value of which is Rs. 2.92 crores.

A welcome measure adopted by the Bank during the year to develop the banking habit in small towns was the introduction of a fully equipped mobile bank. Once a week the mobile bank visits the neighbouring towns around Jaipur City and transacts all banking business, inclusive of receiving deposits, making advances, issuing drafts and collection of bills. It is to be hoped that this commendable venture will be further extended by the Bank and followed by other banks in order to develop the banking habit in small towns and rural areas.

GRINDLAYS BANK'S GOOD RESULTS

PROFIT HIGHEST SINCE 1951

A SHARP jump from Rs. 3.82 lakhs to Rs. 10.38 lakhs in the profit is disclosed by the audited accounts of the Indian branches of Grindlays Bank Ltd. (Chief Manager: Mr. R. A. Bergl) for the year ended 31st December 1957. This has brought the Bank's profit in India to the highest level since 1951, when it aggregated Rs. 13.14 lakhs. It will be recalled that the profit had successively declined from that level to a low of Rs. 1.12 lakhs in 1954. Since then there has been a recovery, which gathered momentum in the year under review. To some extent the rise in profit is due to the change in the basis of accounting in respect of interest accrued on investments. Departing from the usual practice, the Bank has taken into account in the year under review, the interest accrued as at the end of the year and this has augmented the profit to the extent of Rs. 1.34 lakhs, being the interest less income-tax thereon. After making a provision of Rs. 65,000 (same as in the previous year) for taxation, the remittance to head office has been raised from Rs. 4 lakhs to Rs. 5.22 lakhs, leaving a surplus of Rs. 4.51 lakhs.

The Bank's gross income has gone up from Rs. 65.21 lakhs to Rs. 78.22 lakhs, following an increase of Rs. 13.58 lakhs in income from interest and discount to Rs. 47.86 lakhs. This is offset by a drop of Rs. 3.60 lakhs (to Rs. 30.30 lakhs) in commission and exchange, a rise of Rs. 2.20 lakhs in interest paid and of Rs. 1.08 lakhs in expenses.

The following comparative table shows the progress of the Bank in India since 1954:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Interest and discount	47.86	34.28	34.10	30.15
Commission and exchange	30.30	33.90	28.72	25.98
Interest paid	18.13	10.93	9.28	7.77
Expenses	54.31	53.23	51.78	47.23
Depreciation	0.40	0.23	0.13	0.06
Profit	10.38	3.82	1.66	1.12
Provision for taxation	0.65	0.65	..	..
Remittance to H. O.	5.22	4.00	1.62	4.83
Carry forward	4.51	..	0.83	0.80

	As on 31st December			
	1957	1956	1955	1954
Deposits	10,56.03	10,60.80	10,07.81	9,88.63
Borrowings from other banks	28.00	..	79.00	3.00
Bills for collection	1,78.05	1,90.13	1,13.21	78.58
Acceptances	87.80	2,47.65	1,86.93	1,83.33
Advances	5,88.85	7,09.97	6,03.71	4,66.70
Investments	1,97.74	1,99.14	2,08.01	3,56.46
Cash	3,13.42	2,47.45	3,08.24	1,85.94
Balance-sheet total	14,02.90	16,22.75	14,43.41	12,98.19
Ratio to deposits of—	%	%	%	%
Advances	55.8	66.9	60.0	47.2
Investments	18.7	18.7	20.4	39.1
Cash	29.6	23.4	30.5	19.8

In distinct contrast to the expansion noted in the previous three years, the Bank's deposits in this country have slightly declined. Contrary to the general trend, fixed deposits have declined from Rs. 2.06 crores to Rs. 1.92 crores and savings bank deposits from Rs. 2.58 crores to Rs. 2.57 crores, while current and other accounts have gone up from Rs. 5.97 crores to Rs. 6.07 crores. Advances, too, have fallen by Rs. 1.26 crores to Rs. 5.84 crores, and with them the credit ratio also has shrunk to 55.3 per cent., the lowest level in the last three years. Investments (shown at below market value) are a fraction lower, while cash balances have swelled by Rs. 66 lakhs. The Bank's bills business, which had steadily enlarged in the previous two years, have suffered a setback, as witness the drop of Rs. 12 lakhs in bills for collection. A similar trend is disclosed by acceptances, endorsements, etc., but the decline is more marked in this case.

ANDHRA BANK'S PROFIT DECLINES

EFFECT OF HIGH EXPENSES

THE audited accounts of the Andhra Bank Ltd. (General Manager: Mr. S. N. Sarma, Masulipatnam) for the year ended 31st December 1957 provide a typical instance of a bank in which the high interest rates and heavy expenses have affected the profit, despite an expansion in business. While many other banks in India have been able to make good the high costs and maintain their profit levels or increase them slightly, through a sizable increase in turnover, in the case of the Andhra Bank, the profit has actually declined, because the expansion in business is not large enough to meet the higher expenses. The profit for the year has shrunk to Rs. 7.05 lakhs from Rs. 8.46 lakhs, to which level it had gone up in 1956 from Rs. 4.28 lakhs earned in 1955.

Despite the setback in profit, the provision for taxation has had to be stepped up from Rs. 3.45 lakhs to Rs. 3.60 lakhs, representing more than 50 per cent. of the year's profit. The balance of profit available for appropriation has been supplemented by transferring a sum of Rs. 20,000 from the dividend equalisation fund. The Directors have added Rs. 1.47 lakhs to the statutory reserve fund, which had received Rs. 1.76 lakhs in the previous year. While a sum of Rs. 50,000 had been set aside to the investment reserve from the profit of 1956, no such allocation has been made from that of 1957. The dividend has been cut from 8 per cent. to 6 per cent., but the latest distribution is on a higher capital raised during the year by making fresh calls on the partly-paid shares. The dividend is made up of an interim distribution of 4 per cent., as against 3½ per cent. in the previous year, and a final one of 2 per cent., as against 4½ per cent. for 1956. In order to make the final distribution, the Directors had to draw Rs. 10,000 from the previous year's undistributed surplus.

The following comparative table shows the Bank's progress during the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Interest and discount	51.12	44.45	32.73	31.98
Commission and exchange	8.85	8.35	6.78	6.16
Interest paid	27.20	23.41	16.68	16.02
Expenses	26.04	21.25	17.25	16.33
Depreciation	0.67	0.62	0.39	0.27
Profit	7.05	8.46	4.28	5.37
Provision for taxation	3.60	3.45	1.40	2.37
Transfer from reserve	0.20	..	..	..
To reserves and funds	1.46	2.26	0.86	1.10
Dividend	2.29	2.75	2.06	1.87
	(6%)	(8%)	(6⅔%)	(7½%)
Carry forward	0.62	0.12	0.12	0.76

	As on 31st December			
	1957	1956	1955	1954
Capital	40.77	34.41	33.47	25.00
Reserves	18.04	16.63	14.37	13.51
Deposits	9,08.20	9,26.18	8,31.95	6,52.94
Borrowings from other banks	79.57	60.45	..	..
Advances	6,19.18	6,13.13	4,42.30	3,16.25
Investments	3,45.60	3,17.79	2,83.80	1,88.69
Cash	1,54.63	1,30.29	1,64.24	1,97.13
Balance-sheet total	12,61.23	11,84.13	10,09.72	8,17.55
Ratio to deposits of—	%	%	%	%
Advances	68.9	66.2	53.2	48.4
Investments	38.0†	27.6†	34.1	28.9
Cash	16.0	14.1	19.7	30.2

† After taking into account the investments earmarked against borrowings from other banks.

The most notable feature of the profit and loss account is the rise of Rs. 4.79 lakhs in expenses, which is much sharper than that noted in any of the previous years, thanks to the increase of Rs. 4.47 lakhs in salaries, allowances, etc. It is stated that a satisfactory settlement of the demand of the employees for revision of their emoluments and service conditions was made during the year, involving an increased expenditure of about Rs. 2.84 lakhs.

During the year, the Bank's paid-up capital was increased by making a call of Rs. 15 per share on the Rs. 70 paid-up shares, making them Rs. 85 paid-up per share. This brings the total paid-up capital (less calls unpaid) to Rs. 40.77 lakhs. The deposits as at the close of the year have further expanded by Rs. 42 lakhs, thanks to an increase of Rs. 59 lakhs to Rs. 4.93 crores in fixed deposits. Savings bank deposits have declined from Rs. 2.76 crores to Rs. 2.57 crores, while current and other accounts are only a shade higher at Rs. 2.17 crores.

The pace of increase in advances noted in the preceding years has slowed down during the year under review, reflecting presumably the effect of credit restriction enforced during the year. Loans, cash credits and overdrafts have actually declined, albeit by a small extent, from Rs. 5.46 crores to Rs. 5.39 crores, while bills purchased and discounted have risen from Rs. 67 lakhs to Rs. 80 lakhs. Consequent on the relatively slower pace of expansion in advances, as compared to that in deposits, the liquid assets stand straightened, investments by Rs. 28 lakhs and cash balances by Rs. 24 lakhs.

THE BANK OF JAIPUR, LIMITED

(INCORPORATED IN JAIPUR, LIABILITY OF MEMBERS BEING LIMITED)

DIRECTORS' REPORT TO SHAREHOLDERS

The Directors beg to submit the audited Balance Sheet and Profit and Loss Account of the Bank of Jaipur, Ltd., for the year ended 31st December 1957.

After providing for all expenses and making necessary provisions, the net profit of the Bank for the year amounted to Rs. 10,71,742.17 to which is to be added Rs. 23,733.56 brought forward from last year making a total of Rs. 10,95,475.73 available for distribution. The Directors recommend its appropriation as under :—

	Rs.
Reserve under Section 17 of the Banking Companies Act	2,25,000
Other Reserves	50,000
Dividend at 6 per cent. tax free	3,00,000
Provision for Taxes	4,00,000
Staff Gratuity Fund and Bonus	1,00,000

and the balance of Rs. 20,475.73 be carried forward to next year's account.

The working of the Bank during the year continued to be satisfactory.

Recently the Bank has put into service a fully equipped Mobile Bank named "Kuber" which will visit once a week the neighbouring towns of Amber, Bassi, Chatsu, Chomu and Sanganer. The "Kuber" transacts Banking Business of all description inclusive of receiving of deposits, making of advances, issuing of drafts, and collection of bills, etc. The Directors trust that the public of these towns will take full advantage of this new venture.

On his being invited to join the Central Board of Directors of the State Bank of India, Shri Ramnath A. Podar resigned from the Directorship and Chairmanship of this Bank in June 1957. He was one of the Founder-Directors of this Bank and he served the Bank as its Vice-Chairman from 1944-49 and as its Chairman from 1950-57. The Directors have pleasure in placing on record their appreciation of his valuable services and his great contribution towards the progress of this Bank since its inception in 1943. In the vacancy caused by him Shri Gajadhar Somani, M.P., has been elected Chairman of the Board of Directors.

During the year Shri Rajmal Surana of Jaipur was co-opted as Director on the Board. He offers himself for election as a Director at the forthcoming meeting of the Shareholders of the Bank.

The following Directors of the Bank retire under Article 114 of the Articles of Association and being eligible offer themselves for re-appointment.

(1) Rawal Madan Singhji. (2) Shri Ganeshnaraln R. Podar.

The Government of Rajasthan nominated as Director on the Board of the Bank Shri S. L. Kakar vice Shri M. U. Menon. Shri Goverdhandas Binani of Calcutta was also nominated by the Government of Rajasthan as additional Director on the Board.

The Directors wish to convey their thanks to the depositors for their valuable support and confidence and to the members of the staff of the Bank for their devoted services.

You are requested to appoint Auditors for the ensuing year and fix their remuneration.

For and on behalf of the Board,
G. D. SOMANI,
Chairman.

EXPORT OUTLOOK FOR WORLD COTTON

SUBSTANTIAL OVERALL REDUCTION IN SHIPMENTS INDICATED

THE overall export outlook for free world cotton during the current season (1957-58) is not as favourable as it was last season. According to the estimates of the International Cotton Advisory Committee, Washington, free world exports during the season will be 1.5 million bales lower at 12.7 million, as compared with 14.2 million bales in 1956-57. The reduction will have occurred mainly in the U.S. where shipments this season are expected to aggregate 5.5 million bales, as against 7.6 million bales in 1956-57. Countries outside the U.S., on the other hand, are expected to export about 7 million bales or probably more, which is 300,000 bales higher than last season's 6.7 million bales.

Lower consumption, reduced supplies of certain grades, balance of payments difficulties and more adequate stocks in net importing countries are, according to the Committee, the main factors responsible for the less favourable trade outlook. In the Committee's opinion, there will, in all probability, be a marked reduction in free world exports this season, but by exactly how much, it says, is difficult to forecast. Ignoring the question of export availability, which in the post-Korean period has not been a restrictive factor in total export trade, the other factors, such as the trend in consumption, stock policy in net importing countries and payments position, all seem to point to lower exports.

It is obvious from total sales to date and the current rate of shipment that exports from the U.S. will be relatively heavy this season but still lower than last season's 7.6 million bales by over 2 million bales.

Outside the U.S., according to the Committee, the overall trade situation is quite favourable, although there is likely to be some build-up in stocks in producing countries. Exports are expected to be fully equal to last season's 6.7 million bales and may possibly be higher. The total amount of cotton available for export from these countries shows an increase of about 700,000 bales over last season. The following table indicates the export availabilities in the free world outside the U.S.

(In 1,000 bales of 478 lbs.)

Country	1957-58	1956-57
Mexico	1,675	1,300
Central America	400	370
Pakistan	650	550
India	80	250
Syria	430	390
Turkey	80	280
Iran	210	200
Greece	160	150
Argentina	100	50
Brazil	250	400
Peru	350	400
Egypt	1,500	1,100
Sudan	750	700
Belgian Congo	185	200
Uganda	300	300
Tanganyika/Nigeria	330	260
Others	700	600
Total	8,150	7,500

Export availability, as is evident from the table, is markedly higher in two countries, Mexico and Egypt, whereas it declined sharply in Brazil and Turkey and, to a lesser extent, in Peru.

A substantial increase in exports is in prospect for Mexico and Egypt. Mexican exports have been favourably affected by the shortage of good grades in the United States and it is probable that virtually all the exportable surplus in that country will be moved this season. Shippers report very small unsold stocks. In Egypt, exports are currently running nearly 50 per cent. higher than a year ago. Exports of Karnak and Giza 30 are down significantly but there has been a marked increase in demand for the Menoufi and Ashmouni varieties. Exports from India are, as is well known, still below quota. Exports from Pakistan are running at little more than half last season's rate so that, despite increased availability, exports may decline this season. Port stocks in Karachi are the heaviest in the last six years, but export demand is said to have improved slightly of late.

Exports from the Sudan have dropped drastically this season, but trade prospects have improved recently as a result of successive adjustments in prices. Export outlook in other African countries is favourable in view of their close affiliation to consuming countries in Western Europe and certain foreign exchange advantages.

In Brazil, a very small crop in 1956-57 and again during the present season has seriously affected that country's capacity to export, and shipments are presently at their lowest level since the early 'thirties. Reduced availability in Peru could bring exports down to around their lowest level for the post-Korean period.

Last season, about 950,000 bales were exported to the Communist countries, as compared with slightly over a million bales in 1955-56. Half a million bales, out of this, were shipped to the U.S.S.R. and China, with Czechoslovakia and Poland accounting for most of the balance. Egypt exported about half a million bales and Syria shipped close to 200,000 bales. Pakistan exported about 50,000 bales to China and a small quantity to the U.S.S.R.

Heavy purchases are still being made by the Communist countries. In the first five months of the season, with greatly stepped up sales to the U.S.S.R., Egypt had already exported about 100,000 bales and exports from Syria have again been heavy. The U.S.S.R. also made substantial purchases of Sudan cotton.

Import requirements during the current season are likely to be less on account of the expected decline in consumption. Stock policy, too, as noted earlier, is likely to result in lower exports. In contrast to last season, when stocks in net importing countries increased by about 900,000 bales, stocks this season are likely to be reduced. This change in stock policy is expected to reduce import demand by about half a million bales. Import requirements are estimated by the Committee, as follows:

(In 1,000 bales of 478 lbs.)

Country	1957-58 (estimated)	1956-57 (actual imports)
North America	500	531
Western Europe	7,000	8,117
Japan	2,300	2,952
India	500	497
Other Asian countries	900	2870
South America	240	196
Africa	60	87
Total free world	11,500	13,250
Imports by Commonwealth countries from free world	1,200	950
Total	12,700	14,200

Available import statistics cover only the first three or four months. Nevertheless, they seem to substantiate the view that aggregate imports during the season will be lower than last season.

Imports into Canada are well down and, to a limited extent, there has been substitution of Mexican cotton for U.S. cotton. Imports from Mexico are already higher than that of the whole of last season. In W. Europe imports from the U.S. till the end of December were lower by about 400,000 bales and, although in some instances, this might have been offset to some extent by increased demand for other growths, imports in total are no doubt running under a year ago.

Imports into the United Kingdom till the end of November were slightly higher and the same is true of Germany. Influenced to a large extent by the difficult foreign exchange situation, French imports till the end of November were much lower than last season's rate. The reduction in imports from the U.S. is very marked. Elsewhere in Western Europe, imports are, in most instances, running significantly under a year ago. Imports into Japan during the first quarter of the season were substantially lower. Imports of U.S. cotton were higher but declined sharply towards the end of 1957. Imports of other growths were lower, particularly from Mexico, Brazil and Pakistan. With consumption still rising, imports into Hong Kong by the end of December showed a marked increase, as compared with the same period in 1956-57.

The lower rate of imports this season (or exports from the U.S.) is mainly the result of reduced demand for U.S. cotton. To some extent, according to the Committee, this may be attributed to supply factors such as the shortage of the more desirable qualities. Two restrictive influences are, however, apparent from the demand side. They are, first, foreign exchange difficulties experienced by many importing countries such as France, Japan, India and, second, the reduction in U.S. financing made available to foreign importers this season. Till the close of January last, total funds available to finance cotton exports amounted to $274 million, covering 1.8 million bales, as compared with $406 million for the full 1956-57 season, covering 2.7 million bales.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of 'The Bank of Jaipur Limited,' as at 31st December, 1957, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns of 9 branches audited by us, and the unaudited returns from 31 other branches not visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the proviso to sub-sections (1) and (2) of Section 211 and sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank ;

(c) In our opinion, proper books of account as required by law have been kept by the bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank ;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and returns ;

(e) In our opinion, and to the best of our information and according to the explanations given to us, the said accounts read along with the notes appearing thereon, give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1957, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

K. N. GUTGUTIA & CO.,
Chartered Accountants.

12th March, 1958.

G. D. SOMANI, Chairman.

MADAN SINGH,
GANGA SAHAI PUROHIT,
S. L. KAKAR,

} Directors.

S. L. KOTHARI,
General Manager.

A. R. SAVOOR,
Deputy General Manager.

THE BAREILLY CORPORATION (BANK), LIMITED

ESTABLISHED 1928

THIRTIETH ANNUAL REPORT OF THE BOARD OF DIRECTORS

The Directors beg to submit to the shareholders the audited Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December, 1957.

	Rs. nP
The Net Profit for the year including Rs. 113.26 brought forward from the previous year amounts to	1,00,320.97
The Directors recommend that the above amount be appropriated as under :—	
1. To provision for Income-tax	51,500.00
2. To transfer to Gratuity Fund	8,500.00
3. To pay dividends at—	
6 per cent. per annum (less income-tax) on Preference 'A' Shares	4,110.00
6 per cent. per annum (free of income-tax) on Preference 'B' Shares	6,000.00
7 per cent. per annum (free of income-tax) on Ordinary Shares	26,008.50
72 per cent. per annum (free of income-tax) on Deferred Shares	3,816.00
4. To carry forward to next year's account	386.47
Rs.	1,00,320.97

There has been steady advance in the business and activities of the Bank. The demand for bank credit rose during the first half of the year and our funds remained fully employed consistent with strictly sound banking principles.

The increased gross earnings of the Bank have been offset by an all round increase in interest paid on deposits, establishment expenses, overhead charges and in meeting the loss incurred on sale of Government Securities. The expenses under the head Salaries and Allowances have been rising from year to year. They have increased by Rs. 44,000 as compared to the year 1949 when the Adjudicator's award was enforced last time.

There is a depreciation of about Rs. 1,14,000 in the Bank's investments in Government Securities which shows an improvement of about Rs. 23,000 in the position as compared to 1951 when the Bank Rate was increased from 3 per cent. to 3½ per cent.

In view of the increased burden of taxation imposed on Companies in the last year's budget a larger provision therefor has become inevitable.

In accordance with Article 113 of the Articles of Association, two of your directors namely Shri Balram Sharma and Shri Nawal Kishore retire by rotation and being eligible, offer themselves for re-appointment.

Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

SRI RAM KHANNA, Chairman.
NAWAL KISHORE, BALRAM SHARMA, HARISH KUMAR, PREM CHANDRA CAPOOR, } Directors.
GIRISH KUMAR CAPOOR, Managing Director.

BAREILLY, 9th March, 1958.

FURTHER JOINT TALKS WITH INDIAN AND PAKISTAN MILL INTERESTS

WORLD TRADE IN TEXTILES RISES

From A Special Correspondent

MANCHESTER, 15*th April*

MANCHESTER LETTER

WITH this phrase on his lips, "a gleam of hope," Sir Frank Lee returned to Britain after his tour of the Far East on Lancashire's behalf. Future events will have to prove whether even this vaguely optimistic remark was justified. No time was lost in putting the industry in the picture through its leaders and prominent officials of the Board of Trade were also present to hear the latest developments in the imported cloth controversy. From reports that have seeped out, moreover, it appears that the first move is to be further joint talks in this country early next month with representatives of Indian and Pakistan mill interests.

Upon the outcome of these discussions will depend whether a basis for an agreement on any ceiling for imports can be negotiated with Hong Kong. The task which confronts the Lancashire team is, indeed, full of risks and dangers; it will need all their dexterity to avoid complicating the issue by antagonising one or other of the varying interests involved.

Conflicting advices from Eastern sources during Sir Frank's visit led to some difference of opinion as to the prospects of any settlement involving Hong Kong. The millowners there, especially the weavers, were at first said to be solidly opposed to negotiations of any kind, but later messages indicated a change of heart, although only to the extent of being prepared to discuss the matter further after a tentative agreement with India and Pakistan is drawn up.

In the meantime, the Government's spokesman may have strengthened his brief—on orders. Little else would have caused the traders in the Colony to relax their grip on a situation which they appeared to have well in hand. Political issues at home cannot be put aside, even at a distance of several thousand miles, and the Government is well aware of the feeling in Lancashire on this thorny problem, which has brought many a deputation knocking on a Minister's door in the past five years.

Handkerchief Shipments

Although U.K. exports of cotton handkerchiefs in 1957 slightly exceeded the 1956 level, shipments were much below the volume of earlier years. And figures for the first two months of this year show a further falling away in exports, the annual report of the Handkerchief Manufacturers' group of Manchester Chamber of Commerce said in its annual report. Exports last year aggregated 4,417,122 dozens valued at £1,637,000, as against 4,396,607 dozens worth £1,628,000 in 1956.

Australia was the best market with purchases at 812,000 dozens, showing a 10 per cent. increase on the preceding year. But the report said that, with the current quotas in force, immediate prospects did not appear bright in the Commonwealth. A welcome increase had taken place in trade with South Africa—from 496,000 dozens in 1956 to 685,000 dozens, worth respectively £220,000 and £280,000. New Zealand slightly increased her purchases of U.K. cotton handkerchiefs from 395,000 to 413,000 dozens. The volume of shipments to Canada suffered a 20 per cent. setback at 424,000 dozens, while exports to the Far Eastern markets varied little at 395,000 dozens.

Goods worth £250,000 are to be exchanged between Britain and Russia under a barter agreement negotiated by the Co-operative Wholesale Society, Manchester, and the Central Union of Co-operative Societies of the U.S.S.R. Details of the agreement, announced in Manchester, show that, in return for sending 5,000 tons of wheat to this country, the Russians will receive cotton and wool textiles made in Lancashire, Yorkshire and Devon, together with 12,000 pairs of men's shoes made at Northampton and Rushden. The agreement follows the visit of a C.W.S. mission to Moscow in February.

World Exports More in 1957

Lancashire's experience on the export front has been so discouraging in recent years that it is difficult for local traders to realise that certain other producers are apparently faring much better. Aggregate world exports of cotton goods in 1957 increased by about 11 per cent., while shipments of fabrics of man-made fibres were 13 per cent. higher than in 1956. It is not entirely without significance that the countries which expanded their overseas trade last year were also those which sent most goods to the United Kingdom—Japan, India and Hong Kong.

According to the latest summary of the situation drawn up by the Cotton Board, world trade in the final quarter of the year expanded in a seasonal manner, but was scarcely any higher than in the corresponding period of 1956. Subsequent developments, including curtailment of output in Japan, may result in a general decline in exporting activity.

The table below sets out the comparative export returns for the 12 main exporters of cotton and rayon fabrics:

(In million yards)

	1957			1956		
	Cotton	Rayon	Total	Cotton	Rayon	Total
U.K.	455.8	111.2	567.0	474.2	120.8	595.0
U.S.	555.6	207.7	763.3	518.9	220.4	739.3
Japan	1,468.4	1,370.0	2,838.4	1,262.0	1,142.1	2,404.1
India	889.1	3.0	885.5	743.7	3.2	746.9
Holland	250.1	48.8	298.9	255.9	45.7	301.6
France	315.5	139.3	454.8	315.4	127.8	443.2
Germany	216.9	226.8	443.7	206.6	219.8	426.4
Italy	104.6	123.5	228.1	95.9	115.4	211.3
Belgium	228.9	77.8	306.7	221.7	63.4	285.1
Hong Kong	196.3	38.9	235.2	140.5	75.8	216.3
Portugal	127.7	5.1	132.8	115.2	1.4	116.6
Switzerland	58.5	24.6	83.1	59.6	26.4	85.0

Sharp fluctuations have occurred from year to year in international trade in cotton goods since the boom conditions at the beginning of the decade. Shipments of cloth of man-made fibres, however, have expanded steadily since 1952, averaging an increase of 15 per cent. per annum. Joint exports reached post-war records last year, probably exceeding the 1936-38 average, but it is not possible as yet to decide whether this is more than a temporary interruption to the long-term downward trend in international trade in textiles.

Setback Analysed

The survey issued quarterly by the Cotton Board is confined to facts and makes no attempt to blunt the edge of current conditions. In Lancashire, yarn output in February had declined by 5 per cent. as compared with November, with a decrease of as much as 14 per cent. in production of Egyptian type yarns. "The reasons for this setback are fairly clear," the review continues. "Retail sales of clothing are no longer rising, while exports have fallen and are likely to continue to fall. There is as yet no sign of any diminution in the volume of imports. Available supplies of cotton cloth in 1957, comprising production plus imports, were greater than requirements and stocks inevitably increased."

Commenting on the depression in the United States cotton industry the survery points out that, in November, average cloth prices were at their lowest since August 1946. Mill margins in January were 13 per cent. lower than a year ago and cloth production last year was running at a level 5 per cent. below that of 1956.

Despite substantial export shipments, production in Japan still appears to be in excess of current offtake. Stocks of cotton goods in all hands at the end of 1957 were the equivalent of 218,000,000 lbs. of cotton yarn—a post-war record. In an effort to relieve the situation, Japanese spinners have decided to seal 30 per cent. of their spindles throughout the second quarter this year, raw cotton imports are to be cut, and the Government is considering including textile goods in reparation payments to Indonesia.

Output and Employment

Not surprisingly, in view of the uncertain state of trade in Lancashire during the early part of this year, production returns now issued by the Cotton Board show a distinct decline in output as compared with twelve months ago.

A further fall in the number of operatives on the books of employers occurred during February when those available in spinning and weaving declined to 239,180, as against 240,790 in the previous month and 245,740 in February 1957. Again, the reduction was apparent in all branches, although the major decline has taken place in weaving, which now offers employment to 113,310 operatives, as against 117,750 workers a year ago.

In this connection, it is noticeable that unemployment returns showed a substantial increase in February, there being 5,736 cotton operatives seeking work, a rise of 3,000 during the month. Unemployment figures in the cotton and rayon industry remained remarkably steady throughout 1957, ranging from 1,893 in November to 2,781 in June, but the current phase of inactivity in the mills has caused a sharp expansion in the number of jobless. Future returns will clearly reflect the deterioriating position.—*All Rights Reserved.*

AUDITORS' REPORT TO SHAREHOLDERS OF THE BANK.

We have audited the foregoing Balance Sheet of the Bareilly Corporation (Bank), Limited, Bareilly, as at 31st December, 1957, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date in which are incorporated certified returns of all the branches of which six branches have been visited by us and ten branches not visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with proviso to sub-sections (1) and (2) of Section 211 and sub-section (5) of Sections 211 and 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :—

(a) we have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit and have been found to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis, the said Balance Sheet gives a true and fair view of the state of affairs of the Bank as at 31st December, 1957, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date, subject to our note on the liabilities side of the Balance Sheet.

SUGARCANE DEVELOPMENT SCHEMES

ENTIRE AREA TO BE BROUGHT UNDER THESE BY 1960-61

HOW backward is sugarcane cultivation in India when compared to the other sugar-producing countries of the world was described in these columns only last week. Special mention was also made once again of the truism that sugar is made in the fields, not in factories. That this aspect has found full recognition, albeit belatedly, by those in charge of sugarcane cultivation is evident from the observations of Mr. T. C. Puri, I.C.S., President of the Indian Central Sugarcane Committee, at the twenty-fifth annual meeting of the Committee held at New Delhi on the 15th inst. The entire sugarcane crop, Mr. Puri said, would have been covered by the development schemes with Central subsidies at the end of the second Five-year Plan period, by which time the increase in acreage yield should be appreciable. At present, we are told, about 1,675,000 acres of land, or roughly 30 per cent. of the total area devoted to cane cultivation, are under development schemes; the schemes were initiated in 1948-49. Supplementing the schemes is the intensive manuring programme. Since the commencement of this programme, 1.54 million acres have been covered out of a target of 2.0 million acres for 1957-58. As a result, the per-acre yield of cane in these areas is claimed to have registered a rise, varying from 9 to 37 per cent.

Mr. Puri dilated at some length on some of the specific steps taken by the Sugarcane Committee. The Committee, for instance, has instituted cane crop competitions in order to encourage intensive cultivation and healthy competition among cane growers. In addition, a chain of cane research stations is functioning in the States where new and suitable varieties evolved at the Sugarcane Breeding Institute, Coimbatore, are tested under local conditions, and suitable cultural, manurial and irrigation schedules established. This programme includes maturity studies of varieties, their resistance to pests and diseases, and adoption of effective control measures. A team of experts has further toured the States and examined in detail the cane research and development work there.

Intensive Cultivation

The importance of bringing about an improvement in the sugarcane economy both quantitatively and qualitatively cannot be stressed too strongly. The major portion of the cost of manufacturing sugar is accounted for by cane, the principal raw material. Unless the cost of sugarcane is brought down, there is no hope of the consumer getting his requirements of sugar at a reasonable price. This reduction can be brought about only by augmenting the per-acre yield of cane with rich sucrose-content. Incidentally, such a course will release a large part of the fertile land for cultivation of foodgrains and other commercial crops. It may be noted here that the area under cane has gone up by 20 per cent. over the last three years. Certainly, this, as Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, pertinently stated while inaugurating the Sugarcane Committee's meeting, is not a healthy trend and the better method of raising cane production is to go in for greater intensive cultivation.

The potentialities of such intensive cultivation are, indeed, vast. The figures cited by Mr. Jain reveal that the quantity of cane now being derived from one acre of land is only 25 per cent. of what it should be. The average yield per acre can be increased through intensive methods of cultivation from the present low figure of 12-14 tons in the North to 60-65 tons and from 30-35 tons in the South to 130-135 tons. Even if the all-India average per-acre yield of cane is raised to just 50 tons, there will be a substantial release of land from cultivation of cane to other crops. On this basis, the total area required for getting the yield of 78 million tons (the target fixed in the second Plan) comes to about 1.56 million acres, as against the area of 6.0 million acres which would otherwise be needed. The present area devoted to cane is as much as 4.78 million acres (second estimate for 1957-58).

Mr. Jain rightly averred that, although India was ahead of many countries in breeding of better varieties of cane, extension services were inadequate. If extension work had kept pace with varietal evolution of better breeds, the sugarcane yields could have been enhanced, as he said, from 30 to 50 per cent. What is the use of research work if its results are not brought to the knowledge of the grower in the field? Mr. Jain did well to stress that the success of the work of the Sugarcane Committee and others engaged in the development of sugar industry would be judged by the benefits the farmers actually derived from it.

In the course of his speech, the Food and Agriculture Minister advocated an integrated approach to the problems of sugar industry. To quote him: "It is my deep conviction that this approach should be from the larger standpoint of not only sugar factories but also of *gur* and *khandsari* industry... It is possible to work out a rational and judicious system, whereby the cane growers, the industry and the people benefit simultaneously. Such a system will emerge after a study has been made by a committee charged with the work of examining the claims of various sub-sectors."

Schemes Sanctioned

At the end of the meeting, the Central Sugarcane Committee made a provision of about Rs. 50 lakhs for the current financial year (1958-59) for cane development schemes, including propagation of the results of research among cultivators. It was decided to intensify extension work such as measures for seed distribution and plant protection. Two schemes—one for holding all-India sugarcane crop competitions and the other for intensive manuring of cane crop—were also sanctioned. The Committee approved a proposal for setting up a sugarcane station in Mysore where the area under sugarcane had increased from about 85,000 acres in 1955 before the Reorganisation to 1,20,000 acres in 1956-57. A few sub-stations will also be established in various regions of the State. These will be in addition to 11 main research and 20 sub-stations already functioning in other States.

Several schemes were sanctioned for control of pests and diseases of seedlings and sugarcane crop. Under a special scheme, the Sugarcane Breeding Institute, Coimbatore, will investigate suitable control measures for pests of seedlings in pots. The distribution of improved and disease-resistant seed for sugarcane cultivation will be extended to cover a wider area. The Government of India was requested to increase the rate of subsidy for this purpose.

The Committee further recommended that a delegation of four sugarcane experts should be deputed to attend the tenth International Congress of Sugarcane Technologists, to be held in Hawaii in May 1959.

Twelve new schemes were approved, the total provision for 1958-59 being Rs. 8 lakhs. Of these, two relate to the evolving of a system of safe storage of *gur* under varying conditions in this country. First, large-scale experiments in bulk storage of *gur* will be conducted at the Indian Institute of Sugarcane Research, Lucknow. Secondly, four centres will be established in U.P., Bihar, Andhra Pradesh and Bombay to carry out a scientific study of the right degree of humidity, temperature and other conditions which should be maintained for the preservation of *gur* in storage.

SUGAR AND "KHANDSARI"

Apropos our remarks on the sugar industry's anxiety over competitions from the *khandsari* sector in these columns two weeks ago, Mr. J. S. Mehta, Secretary, Indian Sugar Mills Association, writes as follows:

"While agreeing with the industry's view that remedial steps should be taken if it is found that the *khandsari* industry is expanding at the cost of factory sugar industry, you do not seem to be sure that such a tendency is in evidence. You, therefore, favour 'impartial examination' of the position before any action to remedy the situation is taken. While we welcome such an examination of the position, we would however, point out that, already in West U.P. (the main *khandsari* producing centre), factories this year have started closing much earlier

Once upon a time, long long ago, there was in India a city of iron. Even its streets were made of iron. In a mighty war between the Devas and the Asuras this city of iron was completely destroyed. Thus runs a legend among the tribal iron-smelters of Madhya Pradesh. The story only points to the wide use of iron and steel in ancient India, long before the advent of modern industry. Iron and steel are the master metals of the modern age and all over India today are rising new structures in steel—power projects and factories, bridges and railway tracks, industrial townships and housing estates. To meet the growing needs of the nation's expanding economy, Texmaco fabricates a wide range of bridging and factory equipment, hydraulic gates, overhead electric cranes, transmission line towers, chimneys and other types of structurals. This is how Texmaco serves India's basic industries.

RUBBER OUTPUT IN INDIA FALLS

RUSSIAN BUYING KEEPS LONDON PRICE STEADY

PRODUCTION of raw rubber in India during February 1958, the latest month for which statistics are available, amounted to 951 tons, as against 2,639 tons in the previous month. Though usually February is a month of low production, the drop is much more than that noted in the corresponding month of 1957, when the output fell from 2,190 tons to 1,165 tons. Nevertheless, consequent on the high level of production in January this year, the total output in the first two months of this year, at 3,590 tons, is higher than that in the corresponding period of any of the previous years. The consumption of rubber by manufacturers during the month is also slightly lower at 2,747 tons, as against 2,877 tons in January this year. It is, however, higher than that (2,493 tons) in February 1957 and has brought the total consumption in the first two months to 5,624 tons, as against 5,172 tons and 4,887 tons in the corresponding periods of 1957 and 1956, respectively. Stocks with estates, dealers and manufacturers as at the end of February aggregate 10,573 tons, including synthetic rubber amounting to 1,063 tons, as against 8,312 tons (including synthetic 887 tons) a year before.

Despite the growing pace of consumption, the gap between production and consumption has narrowed down, thanks more to an increase in imports rather than to a rise in output. Indigenous production has no doubt gone up slightly, but the gap would have been wider but for larger imports. During the first two months of this year, imports have aggregated 1,589 tons, as against 962 tons and 180 tons in the corresponding periods of 1957 and 1956, respectively.

While it is not correct to draw any conclusions from the figures of two months only, the trend does not show any deviation from that in the preceding years. Between 1956 and 1957, while production went up by only a fraction, consumption increased by 2,769 tons and this higher consumption had to be met by raising imports by 3,214 tons. This trend of consumption is expected to gather momentum in the years to come, if the various manufacturing programmes which have been approved by the Government are to be implemented. As was pointed out by Mr. John Luckham, Chairman and Managing Director of the Dunlop Rubber Company (India) Ltd., in his address to the shareholders of the Company at the annual general meeting held last week, "the road transport industry has been undergoing tremendous changes and expansion, particularly long-distance goods transport." The road transport industry being a vital one, the rubber goods manufacturers have undertaken huge expansion plans to meet the essential needs of this industry. During the last six years, the output of automobile tyres and tubes has gone up from 1.38 million to 1.86 million. The bicycle industry also has been growing rapidly and to meet the increasing demand, the production of cycle tyres and tubes has been stepped up from 8.35 million in 1952 to 14.18 million. Despite this, the demand has been well in excess of supplies. The output of tractor tyres and tubes has expanded more than nine times from 9,336 to 89,150. This is another field which offers vast scope for expansion, in view of the increasing use of tractors and earthmovers in the country. Besides these major items of production, there are various other rubber goods and industrial rubber products, such as rubber footwear, transmission and conveyor beltings, V-belts, hoses, waterproof fabric, latex foam sponge, rubber components of railway fittings, etc., which have made vast strides, and hold promise of further expansion.

The main problem, therefore, is one of ensuring adequate raw rubber supplies to manufacturers, who have to rely on larger imports. Meanwhile, the price of raw rubber abroad does not show any sign of a decline. Despite the industrial recession in the U.S., the price of rubber in London has been ruling steady at about 23d. per lb. (the latest price being 23⅝d. per lb.), thanks to the Russian buying since September last. Russia has been buying on a fairly large scale number 1 grade, except when its price stands above 23d. per lb. Other grades have not been much in favour, because the tyre manufacturers and other consumers both in Europe and the U.S. have not been buying on a large-scale, so that the number 1 grade is quoting at a premium over the other grades. During the last few weeks, however, Russian buying has been diverted to a large extent from London to Singapore and Malaya. Recently, Russia was reported to have bought 11,000 tons from the East. Last week, it placed orders for a further quantity of 9,000 tons of Malayan rubber for shipment this month. In all, Russian purchase is said to be of the order of 15,000 tons per month. Consequent on these large purchases, there is a serious depletion of stocks and dealers are competing strongly to meet their commitments, with the result that the spot and near forward positions of the top grade command a premium over the distant positions. At the current price, natural rubber is competitive with the synthetic, the U.S. price of the latter being about 24½d. per lb. c.i.f. including an import duty in the U.K. of 10 per cent. The Canadian synthetic, which is duty-free, is 10 per cent. higher. No. 3 sheet natural rubber, which is normally regarded as a competitor with synthetic, is being quoted in London at 20½d. per lb. The present level of prices is expected more or less to be maintained, unless the demand from the U.S., induced by the competitive price of natural rubber, broadens. So far, the cheapness of natural rubber has not attracted American buying on any large scale.

(*Concluded from next column*)

yards less than that in the corresponding month of 1957. This brings the total consumption in the first nine months of 1957-58 to 622 million yards, representing a fall of 51 million yards over the year. The stocks at the end of March amounted to 242 million yards, an increase of 2 million yards over the month. Though these represent the highest level since July 1957, they are 20 million yards less than those at the end of March 1957. The low level of stocks gives hopes that the consumption in the U.S. may improve in the coming months, but much depends on how far the authorities are successful in arresting the recession.

JUTE GOODS OUTPUT MAINTAINED

U. S. CONSUMPTION SHADE BETTER

THE jute goods market has staged a sudden spurt in the last few days, with the quotations standing well above the minimum prices fixed by the I.J.M.A. recently. At the time of writing, ready hessian 40" 10 oz. is quoted at Rs. 41.45 per 100 yards, as against the I.J.M.A's minimum of Rs. 39.50, and B. twills at Rs. 103.60 per 100 bags, which is Rs. 3.60 more than the minimum. A week ago, they were Rs. 40.15 and Rs. 100.30, respectively. To a large extent, this improvement in gunny prices is attributed to speculation regarding new raw jute crops in India and Pakistan. Reports received so far indicate that the weather has been hot and dry, thus affecting the sowings. The trend of prices has also been influenced by the satisfactory satistical position of mills in respect of gunnies, particularly in hessian. The stocks of goods with mills at the end of March, as was shown in these columns last week, were a shade lower, thanks to an increase in despatches. It is stated that the mills were able to sell more than they produced.

The figures of production for the month of March indicate that the slight fall in stocks is due to larger despatches rather than to a decline in production. The output of mills for the past month is unchanged at 85,300 tons, to which level it had declined from 98,300 tons in January 1958. It is, however, surprising that production has not gone up, despite the longer working period in March than in February, the actual number of hours worked being 197.5, as against 192.0, which shows that the rate of output has slackened a bit. As compared with March 1957, the production in the month under review is higher by only 600 tons, though the number of hours worked has declined from 200.5.

The following comparative table shows the variety-wise production:

Jute Goods Production

	March, 1958	February, 1958	January, 1958	March, 1957
Hessian	30,400	30,100	34,400	36,000
Sacking	49,500	49,300	57,300	43,100
Others	5,400	5,900	6,600	5,600
Total ..	85,300	85,300	98,300	84,700

Hessian output shows a small increase of 300 tons over the month and a decline of 5,600 tons as compared with that in March 1957. The output of sacking also has gone up by 200 tons and, over the year, it represents an increase of 6,400 tons. The rise in hessian and sacking has been offset by the fall of 500 tons in "other manufactures." With this, the output of "other manufactures" has gone down by 1,200 tons in the last two months.

The aggregate production for the first nine months of 1957-58 thus comes to 790,900 tons as compared with 771,000 tons in the corresponding period of 1956-57.

Meanwhile, figures of U.S. consumption of hessian for March indicate that it has been well maintained, despite the deepening business recession. The consumption in March was actually 1 million yards, more (at 71 million yards) than in the previous month and was only 2 million

CHALLENGE FACING INDIAN RAILWAYS

WILL THEY BE ABLE TO MEET IT?

A DISTINCTIVE feature of railway operation in the post-independence period has been the emergence of acute shortage of resources such as rolling stock, machinery, plant and equipment in the wake of a phenomenal rise in both passenger and goods traffic. Strenuous efforts were made, and continue to be made, to counteract the crippling effects of this shortage by improving the operational efficiency. Much had, no doubt, been achieved. But much more remains to be done. By the end of the second Plan, the railways will be called upon to carry goods traffic of the order of 180 million tons, 56 million tons more than what was lifted in 1956-57. The problem is that this must be done without any large-scale modernisation and development of the existing equipment.

The shortage of resources, as Mr. M. N. Chakravarti, General Manager of the Central Railway, points out, is a challenge to the railways and all those in charge of its operation. During the course of an interesting article prepared in connection with the Railway Week, Mr. Chakravarti, observes that, with the present system and the present types of assets and equipment, Indian railways have just reached the point where the law of diminishing returns has begun to operate in certain spheres. With improvements effected year after year, the margin for further improvement has become less and less. Not much improvement in operational efficiency will be possible unless radical changes are brought about in traction methods, such as electrification, dieselisations, doubling of track, adoption of modern methods of signalling, etc. But with the inadequate provisions made in the second Plan much progress in this direction is not possible. There is, therefore, according to him, little that can be hoped for, except to place the accent on improved efficiency. Whether the railways will be able to measure up to the requirements in the matter of efficiency remains to be seen. But there is a limit beyond which efficiency by itself can do little to improve the service, in the absence of necessary equipment.

Passenger Traffic

There has been, Mr. Chakravarti points out, a phenomenal growth of passenger traffic since the beginning of World War II, an important reason for it being the change in travel habits. The pressure of passenger traffic borne by the railways can be assessed by the number of passengers travelling. Against some 500 million passengers who travelled in 1938-39 in undivided India, double the number travelled in 1947-48 in India alone, and a further 40 per cent. increase has taken place (to 1,360 million) since then. The present load of passenger traffic stands at more than two and a half times the pre-war figure. The increase in passenger coaches has not, however, been in step with the sharp increase in traffic. Against 15,500 passenger coaches on the broad and metre-gauges in 1938-39 in undivided India, the railways had, after partition, only about 11,000 which have now been increased to the pre-partition figure. In other words, with the same number of passenger coaches today as the railways had in 1938-39, it has been possible to carry two and a half times more traffic.

This naturally has led to congestion and even overcrowding. But, fortunately the railways' utilisation of carriages has advanced by nearly 25 per cent. from 137 miles per day on the broad-gauge to 170 miles and to this extent, overcrowding has been reduced. Besides, in 1938-39, the carriages were running much below full carrying capacity. The overcrowding is not, therefore, so great as it might otherwise have been.

Goods Traffic

A slightly different story unfolds itself from a study of the growth or goods traffic. In 1947-48, the first year of independence, the tonnage carried amounted to 69.8 million which increased to 91.4 million in 1950-51, just before the first Five-year Plan commenced. This figure moved up in the next three years by 7½ per cent. to 98.1 million tons in 1953-54, slightly higher than the anticipated rate of increase. Thereafter, the advance has been striking each year, and in 1956-57, the first year of the second Plan, the volume of goods lifted touched 124.1 million tons.

This phenomenal increase can be looked at from another angle. Out of the estimated 78 per cent. increase in goods traffic from 69.8 to 124.1 million tons during the first decade of independence, just about half (up to 98.1 million tons) came about during the first seven years while the other half was attained in the last three years. The remaining period of the second Plan holds the prospect of further increasing pressure of goods traffic on a bigger scale than anything experienced in the past. In 1960-61, the tonnage may reach 180 million tons, an increase of over 50 million tons in four years.

The substantial increase in goods traffic has been achieved without a commensurate increase in the resources of rolling stock. During the period from 1947-48 to 1956-57, when there was a 78 per cent. increase in the tonnage of traffic carried, the goods wagons and locomotives on the line rose by only 20 per cent. That is, the rolling stock assets improved by just about a quarter of the increased tonnage handled by the railways. The conclusion is obvious. Railways are getting substantially more work out of their rolling stock, turning over their wagons faster and putting a heavier load into every wagon.

Mobility of Wagons

The mobility of wagons, which is denoted by the composite figure of wagon miles per wagon day, was 34.3 in 1947-48 on the broad-gauge and reached 47.7 in 1956-57, a 40 per cent. advance. There is also the internationally recognised composite index of operational efficiency of wagon usage, expressed in terms of net ton miles per wagon day. This was 351 in 1947-48 and has gone up to 570 in 1956-57, a progress of 60 per cent. in 10 years. The figures up to August 1957 disclose a further advance to 632. On the metre-gauge, the corresponding figures were 162 in 1947-48 and 210 in 1956-57, an improvement of 30 per cent.

There has thus been a 40 per cent. improvement in the mobility of wagons during the last 10 years and a 60 per cent. improvement in the net ton miles moved per wagon per day. These are no mean achievements. These have enabled the railways to carry 78 per cent. more traffic with just 20 per cent. increase in wagons and locomotives resources.

Another important figure is the percentage of wagons lying immobilised under repairs. On the U.S. railroads and the Canadian National Railway, only 4 to 5 per cent. wagons remain sick—a good record indeed. On the Indian railways till 1953-54, the figures were 7.4 per cent. Since then a great deal of effort has been made and the figure now stands at about 4.3 per cent.—roughly at the same level as in Canada and U.S.A.

The original second Plan outlay for the railways was Rs. 1,480 crores. This has been pruned, with due regard to the ways and means position of India, to Rs. 1,125 crores, involving a foreign exchange component of nearly Rs. 425 crores. With the resources allocated for the railway plan, there is but little hope of any material improvement in the system and method as such, nor is there much chance of modernisation on any noteworthy scale going through. Any further large-scale improvement in the standard of operation is, therefore, just not feasible.

Plan Allocation

Of the planned expenditure of Rs. 1,125 crores for the railways, a considerable portion is for replacing or rehabilitating overage capital assets, for inescapable safety works which have no bearing on development and the like. Actual development works, plant and machinery, consume probably less than half of the total expenditure. The sizable cost of rehabilitation and replacement can be gauged from the fact that, on the Indian railways, there are 31 per cent. overage locos on the broad-gauge and 23 per cent. on the metre-gauge. More than 30 per cent. of the coaches and some 16 per cent. of the wagons, are also overaged.

Out of the Plan outlay, rolling stock consumes Rs. 380 crores, which is about one-third. Of this, Rs. 197 crores will be spent only on rehabilitation account. The whole of the Rs. 100 crores to be spent on track renewals is purely on rehabilitation account. Similarly, funds have been earmarked for machinery and plant rehabilitation, signalling improvements and other safety works. Staff welfare, staff quarters and their training arrangements are all investments which do not directly lead to development of capacity. Nevertheless, they are all essential. When a detailed tally is made, it adds up to a sumptuous total for such works, which have inescapably to go through, Plan or no Plan. The balance only can be deemed to be real development expenditure.

There is, therefore, little that can be hoped for except to place the accent on further improved efficiency. This will give an opportunity to railwaymen of all categories to show that, undeterred by physical shortages, they will have to bridge the gap between the demand and the available resources to the large extent possible, through better human efficiency and better management.

Efforts are being made to equip the railways to carry the additional traffic that is expected to emerge during the rest of the second Plan period. Railways are at present a vast beehive of engineering activity. Railway engineers—civil, mechanical, electrical, signal, and telecommunication—are already executing the numerous development schemes. For, reduced to essentials, the hard core of the Rs. 1,125-crore second Plan for Railways is, as Mr. Karnail Singh, Member, Engineering, Railway Board, observes, a vast network of engineering works which, for sheer extensiveness and magnitude, are unsurpassed in Indian railways history.

Work in Progress

Work is in progress on the construction of more than 700 miles of new lines, 1,200 miles of doublings and on the remodelling of 50 major yards all over India—12 of these costing between Rs. 1 crore and Rs. 3 crores each. In addition, nearly 200 new stations are being opened all over India, and traffic facilities are being provided at a cost of about Rs. 15 crores, at about 500 existing stations. Apart from over 6,000 bridges, which are being built on new constructions and doublings, major bridges like the 6,000-feet Ganga Bridge at Mokameh and the 2,000-feet Gandak Bridge at Sonepore are going ahead.

To carry the increased traffic at the end of the Plan period, the railways will make a net addition of 919 locomotives, 33,395 goods wagons and 5,128 passenger coaches to their existing fleet. To meet the demand for additional repair and maintenance facilities, six new workshops are being set up, 20 existing workshops expanded and 34 new loco sheds built. Special facilities are also being provided for diesel and electric locomotives. One way of coping with the rapidly increasing traffic is to run longer and heavier trains. This will necessitate a change-over to the centre buffer couplings and improvements in the braking system of rolling stock as well as the introduction of more bogie wagons with much higher pay-loads. An efficient signalling and telecommunication system is the key to safe and expeditious movement of traffic. Provision has, therefore, been made for interlocking about 300 non-interlocked stations and for improving signalling at nearly 800 existing stations.

NOTE.—The Bank has changed its basis of accounting in so far as accrued interest on investments as at the end of each year, which was not taken into account has been included in the accounts for the year ended 31st December 1957 thereby increasing the profit for that year to the extent of Rs. 1,34,438·92 being the interest less income-tax thereon accrued as at that date.

(Sd.) R. A. BERGL,
Chief Manager.

We have audited the foregoing Balance Sheet of the Indian Branches of Grindlays Bank Limited, as at the 31st Day of December, 1957, and also the foregoing Profit and Loss Account of the Indian Branches of the Bank for the year ended on that date, in which are incorporated the returns of Calcutta (Church Lane Branch) audited by other Auditors, and the unaudited returns of Calcutta (Brabourne Road), Madras, Delhi, New Delhi and Simla Branches not visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit;

(b) In our opinion, proper books of account as required by law have been kept by the Branches of the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank not visited by us;

(c) The Balance Sheet and Profit and Loss Account of the Indian Branches of the Bank dealt with by this report are in agreement with the books of account and the returns;

(d) In our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis and read with the notes appearing thereon, the said Balance Sheet gives a true and fair view of the state of the affairs of the Indian Branches of the Bank as at 31st December, 1957, and the Profit and Loss Account gives a true and fair view of the profit of the Indian Branches for the year ended upon that date.

(Sd.) A. F. FERGUSON & CO.,
Chartered Accountants.

BOMBAY, 25th March 1958.

THE ANDHRA BANK, LIMITED

(ESTABLISHED: 1923)

Head Office: **MASULIPATNAM**

Annual Report of the Directors for the year ended 31st December, 1957.

To be presented to the Shareholders at the 34th Annual General Meeting to be held at the Registered Office of the Bank, Cantonment Road, Masulipatnam, on Saturday the 26th April 1958 at 1-00 p.m.

The Directors have the pleasure to submit to the Shareholders the Balance Sheet of the Bank as at and Profit and Loss Account for the year ended 31st December, 1957. The Auditors' Report is also annexed.

The Bank's working for the year ended 31st December, 1957, resulted in a net profit of Rs. 7,05,029.50 nP. after payment of one month's pay as bonus to staff and after effecting revision in pay scales from 1st May, 1957, and after providing for contingencies. Adding to this a sum of Rs. 11,996.16 nP. brought forward from the previous year's account and the dividend equalisation fund of Rs. 20,000, the total comes to Rs. 7,37,025.66 nP. Appropriations made and proposed are given below.

	Rs.	nP
Appropriations made:		
Interim dividend for the half-year ended 30th June, 1957, at the rate of 8 per cent. per annum free of Income-tax	1,47,115	88
Transfer to Statutory Reserve under Section 17 of the Banking Companies Act, 1949	1,41,000	00
Transfer to Gratuity Fund	5,000	00
Provision for Taxes	3,60,000	00
Appropriations now proposed:		
To pay a final dividend for the half-year ended 31st December, 1957, at 4 per cent. per annum free of Income-tax, making a total of 8 per cent. per annum free of Income-tax for the whole year, which will absorb	82,000	00
To carry forward to the next account	1,909	78
Total .. Rs.	7,37,025	66

The Bank's business continued to be satisfactory during the year under review.

The demand of the employees for revision of their emoluments and service conditions was considered by your Directors and a satisfactory settlement has been reached involving an increased expenditure of about Rs. 2,84,000 which is reflected in the net working result of the Bank when compared to last year.

The official bank rate was raised from 3½ per cent. per annum to 4 per cent. per annum during the year.

New offices of the Bank were opened during the year at Guntakal (Anantapur District) and Macherla (Guntur District).

Sri E. Ramachendramurti, M.A., C.A.I.I.B., who was serving the Institution as General Manager since 1950, resigned during the year to join the Andhra Pradesh State Financial Corporation as its Managing Director. In the vacancy thus caused, Sri P. R. Bhagavat, B.A., B.L., Deputy General Manager, acted as the General Manager, for the period under review.

Sri Maddi Sudarsanam, Director, resigned during the period under review to join the State Bank of India as its Director and in his place Sri Maddi Ranganatha Sayi was co-opted as a Director.

Under Section 256 of the Companies Act, 1956, read with Article 94 of the Bank's Articles of Association, Messrs. Jaldu Manikyalarao, Majety Seshagirirao and G. Ramanadha Babu, Directors longest in office, retire by rotation and from the next longest in office Sri V. Venugopal has volunteered to retire. The retiring Directors are eligible for re-appointment.

You are requested to appoint Auditors, to hold office till the conclusion of the next Annual General Meeting, Messrs. Brahmayya & Co., and Messrs. Ch. V. Lakshmaiah & Co., the retiring Auditors are eligible for re-appointment.

By Order of the Board,
S. R. Y. SIVARAMA PRASAD BAHADUR,
Chairman.

MASULIPATNAM, 20th March, 1958.

NEW PUBLICATIONS

A History of Indian Shipping. By Radha Kumud Mookerji. Published by Orient Longmans Private Ltd., 17, Chittaranjan Avenue, Calcutta, 13. Pages: 206. Price: Rs. 20.

ALTHOUGH Indian shipping now forms less than 1 per cent. of world tonnage, it is noteworthy that India's maritime tradition goes back to very ancient times. It is a somewhat difficult task to bring together all the historical evidence relating to Indian shipping and present it as a coherent study of its progress. In this task, Prof. Radha Kumud Mookerji, the well-known Indian scholar, has eminently succeeded. Although the book—the book under review is the second edition—was first published 48 years ago, it has not lost any of its historical value. The second edition of the book has been presented mainly on the lines of the earlier edition. In an introductory note to the book, the late Dr. Brajendranath Seal whose wide scholarship, intellectual acumen, clarity of thought and expression were a source of great inspiration to at least three generations of students, says:

"Here for the first time, fragmentary and scattered records and evidence are collated and compared in a systematic survey of the entire field; and one broad historical generalisation stands out clearly and convincingly, of which all histories of world-culture will do well to take note, viz., the central position of India in the Orient world, for well-nigh two thousand years, not merely in a social, a moral, a spiritual, or an artistic reference, but also and equally in respect of colonising and maritime activity, and of commercial and manufacturing interests. A multitude of facts of special significance also come out vividly, and, in several cases, for the first time, in the author's presentation, e.g., the teeming ports and harbours of India, the harbour and other maritime regulations of the Mauryan epoch, the indigenous shipbuilding craft, the Indian classification of vessels and their build, the paramount part played by indigenous Indian shipping in the expansion of Indian commerce and colonisation from the shores of Africa and Madagascar to the farthest reaches of Malaysia and the Eastern Archipelago; the auxiliary character of the foreign intermediaries, whether Greek, Arabian, or Chinese; the sources of India's manufacturing supremacy for a thousand years in her advances in applied chemistry, etc. In establishing these positions, the author, besides availing himself of the archæological (including architectural and numismatic) as well as other historical evidence, has drawn upon hitherto unpublished manuscrips and other obscure sources. But the signal merit of the survey is that these facts of history are throughout accompanied by their political, social, or economic interpretation, so that the monograph is not a mere chronicle of facts, but a chapter of unwritten culture-history, conceived and executed in a philosophical spirit. The author's style combines lucidity with terseness, compresses a large mass of facts into a small compass, and is equal alike to the enumeration of details and the march and sweep of a rapid historical survey."

This is a well deserved tribute to Prof. Mookerji's book. We have no doubt that the book will be read with interest by those who are interested in India's cultural past, in general, and its shipping in particular.

Surveys of Indian Industries, Vol. I. By B. S. Rao. Published by Oxford University Press, Oxford House, Apollo Bunder, Bombay, 1. Pages: 358. Price: Rs. 15.

It is becoming somewhat difficult to write a book on Indian industries, considering how fast some of them are developing. Nevertheless, the basic pattern of each industry remains the same. Further, the historical background to each industry is also worthy of study. In the *Surveys of Indian Industries*, the author, Mr. B. S. Rao, the Industrial Correspondent of *The Statesman*, has endeavoured to summarise the history, the progress and the present position of 12 industries—coal, petroleum, electricity, pharmaceuticals, light electricals, non-ferrous metals, light mechanical, iron and steel, fertilisers, chemicals and diesels. In his preface, he admits he lays no claim to completeness but has tried to cover a vast and ever-widening field by a process of selection, elimination and condensation. In this attempt, there is no doubt he has succeeded very well.

The Central Sales Tax Act, 1956. By R. V. Patel. Published by Messrs. N. M. Tripathi Private Ltd., Princess Street, Bombay 2. Pages: 388. Price: Rs. 12.00.

No fiscal issue has been the subject of greater controversy than sales tax legislation. It has also had the unenviable distinction of having been a subject on which contradictory judicial pronouncements have been made. There is, however, no getting away from the fact that sales tax has come to stay. And so long as it stays in the Statute Book, it is necessary that those who are called upon to pay the tax as well as those who administer it must know the law and procedure thoroughly well. The author of the book under review, Mr. R. V. Patel, presents a very systematic study of the Central Sales Tax Act. There is a section by section analysis of the Act, supported by copious explanations and illustrations. In Part II of the book has been included the rules of interpretation on taxing statutes, Central legislations on sales tax, the next of the Central Sales Tax Act and the rules made by the Union and the States thereunder. The book is bound to be of great assistance both to the assessees and to the administrators of sales tax.

AUDITORS' REPORT TO THE SHAREHOLDERS OF THE ANDHRA BANK LIMITED.

We have audited the foregoing Balance Sheet of the Andhra Bank Limited as at 31st December, 1957 and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date in which are incorporated Returns of 18 Sub-Offices audited by other auditors and unaudited Returns from 20 Branches and 20 Sub-Offices not visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos of Sub-Sections (1) and (2) of Section 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) We have obtained all the information and the explanation which, to the best of our knowledge and belief were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by Law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Indian Companies Act, 1956, in the manner so required for Banking Companies and on such basis the said Balance Sheet gives a true and f view of the state of the affairs of the Bank as at 31st December, 1957, and the Profit and L Account gives a true and fair view of the Profit for the year ended on that date.

THE INDIAN SUGAR MILLS ASSOCIATION

MR. B. S. SAWHNEY'S ADDRESS AT THE TWENTY-FIFTH ANNUAL MEETING

TAX BURDEN ON SUGAR INDUSTRY MUST BE REDUCED

IN his presidential address at the Twenty-fifth Annual General Meeting of the Indian Sugar Mills' Association held at New Delhi on 3rd April last, Mr. Balmokand Shah Sawhney, reviewed the achievements of the sugar industry in the field of production and exports during last year. He also dealt with the various problems facing the industry such as growing competition from tax-free *khandsari*, high tax burden and low yield and quality of cane.

Following are extracts from Mr. Sawhney's speech:

"I am sure the sugar industry's performance last year would be viewed with satisfaction. With sugar production at 20.26 lakh tons, we have for the third successive year surpassed the previous records, as will be evident from the following figures:

Year	*Production* (Lakh tons)
1953-54	10.01
1954-55	15.90
1955-56	18.62
1956-57	20.26

"It will be seen that, over a short period of four years, sugar production in the country has doubled itself. I doubt if any other established industry has such a promising record to show. The achievement of the industry will be further appreciated if we take into account the fact that almost the entire increase in production has been achieved by the existing units, the new units contributing only 40,000 tons.

Exports

"A significant landmark in the history of the sugar industry's development is our emergence for the first time as an exporter of substantial quantities of sugar. The total quantity exported during the year has been about 153,000 tons, destination-wise details of which are:

Name of country	*Quantity exported* (Tons)
China	33,624
Malaya	20,837
Singapore	5,096
Burma	11,643
Ceylon	8,158
Aden	8,050
Iraq	13,085
Saudi Arabia	1,247
Other destinations in West Asia	5,045
Sudan	14,847
East Africa	29,454
U.K.	1,002
North Vietnam	823

"Considering our precarious foreign exchange position, the export of sugar has been a welcome development and is expected to contribute materially towards the success of the second Five-year Plan. This year, its earnings have been over Rs. 12 crores of foreign exchange which compares well with the earnings from the other commodities exported regularly, and perhaps would rank only after tea, jute and cotton manufactures.

Exports Handled by I.S.M.A.

"When Government agreed in December 1956 that sugar should be exported outside India, they entrusted this work to our Association. It was a unique case of an industrial association taking up actual business and that too on a non-profit basis.

"The Association had to start working almost from scratch in a sphere which was quite new to it. Indian sugar was an unknown commodity in the world markets and we had to contend against the natural hesitancy on the part of the foreign buyer. We lost no time in contacting the prospective markets through sending our representatives and otherwise, and, gradually, Indian sugar came to be accepted in competition with the world's finest sugars like British refined and Formosan. It is noteworthy that, though new in the export market, Indian sugar has so established itself that it is not grouped among the cheaper varieties like Brazilian or Argentine sugars which have been known to the markets for a long time.

"As our business started taking shape, the competition from the well-established exporters became formidable. In fact, there have been instances of organised competition from world's established sugars to oust Indian sugar and we had to sell in competition with them, and it should be a matter of satisfaction to the members that we were able to secure, in good many cases, business from international tenders. Indian sugar is now well known throughout the world export markets and, even though sales for export have been presently suspended, enquiries continue coming not only from our neighbouring markets but from such far-off countries as Germany and Finland. Internationally reputed brokers have also begun to look forward towards the supply of Indian sugar to the various markets. In some cases, they personally visited this country to gather firsthand knowledge of our quality and packing and arrangements for storage and shipments at ports. These visits proved to be very helpful in their gaining the necessary confidence in the Association's ability to effect shipments according to their requirements which resulted in increased business with them.

Outlook for Sugar Exports

"Undeniably, the efforts of the Association have enabled Indian sugar to find a permanent market in the neighbouring countries in East and West Asia as well as in Africa. That Indian sugar has now come to stay as a strong rival to other well-known sugars in the world export markets is amply borne out by the remarks of the Chairman of Tate and Lyle, London, at the annual general meeting of the Company, when he described the Indian sugar industry's achievements as 'a threat to wrest some of our business.' This is fairly indicative of the Association's achievement and of the future possibility of the export of Indian sugar.

"The world sugar market has, however, now come down appreciably mainly because of better crops in Europe and Cuba and exports are now possible only at a loss. This is not a phenomenon peculiar to India alone. Most of the sugar exporting countries subsidise their exports in one form or another. We will also have to find some way of meeting the loss on exports to be able to export sugar on a permanent basis.

"The country's growing needs for foreign exchange necessary for importing heavy machinery, etc., for rapid industrialisation makes it incumbent on us to explore all avenues of furthering exports to earn more foreign exchange. In fact, as the Prime Minister said in the course of his budget speech last February, 'we must try to produce more, export more and save more to find the resources for implementing the Plan.' Already, last year, we earned over Rs. 12 crores of foreign exchange by export of sugar.

"Apart from the undoubtedly urgent need of foreign exchange, export of sugar is also necessary for continued health and development of the industry and welfare of the cane growers. For the sugar industry, in common with all other industries based on agriculture and, therefore, on the vagaries of nature, cannot plan its production within narrow limits. A plan for exports will alone be able to insure against periodical plenty and scarcity.

"Fortunately, because of our geographical position, we have easy access to a number of sugar importing countries which are in our neighbourhood. Of the total world exports of about 12 million tons, 1.2 million tons are consumed in the neighbouring markets.

"That we have already sold substantial quantities to most of these markets can be seen from the figures given by me earlier. It is only reasonable to expect that, with the experience gained, this year it will be possible to step up our exports to them. This matter, I know, is as much in the minds of Government authorities as it is in ours, and I hope some scheme will be devised without any further delay to start export of sugar on a permanent basis.

Development of "Khandsari"

"I have referred to the achievements of the industry in the field of production and exports. And while these developments were expected to gather further momentum, a dark cloud has gathered on the horizon which may upset all our calculations and do incalculable harm to the sugar industry with serious repercussions on the national economy, growers' well-being and the Governmental revenues. I refer to the fast-growing *khandsari* industry which is developing under, what may be called, entirely artificial conditions created by the growing tax burden on factory sugar as compared to complete immunity of *khandsari* units from such burden. The sugar factories have to pay Rs. 10-11 per maund as excise duty, Rs. 2 as cane cess and about As. 8 as co-operative societies' commission, bringing the total tax burden to Rs. 13-3 per maund, which forms 38 per cent. of the total cost of production. This high tax burden has placed the factory sugar industry at a disadvantageous position *vis-a-vis* the *khandsari* units. With its production at under one lakh tons, *khandsari* has so far played only a minor role as a sweetening agent when compared to the vacuum pan sugar. The position has, however, lately been undergoing a change and, with indirect assistance resulting from Governmental measures, *khandsari* units are fast expanding, particularly, in U.P., the foremost sugar producing State in the country. Prior to March 1955, *khandsari* had a relative advantage of Rs. 5-3-6 per maund (Rs. 2-12 excise duty, Rs. 2 cane cess and As. 7-6 co-operative societies' commission). But, with successive increases in the excise duty, the relative tax advantage to *khandsari* has, as stated by me earlier, risen to Rs. 13-3 per maund.

"Apart from this, *khandsari* units have also the advantage of being free from any regulations on the minimum cane price and quota releases. the advantage of being free from any regulations further add to the indirect protection that this industry gets. The wide margin of the concessions and other advantages have given a spurt to *khandsari* and its production is expected to reach 3 lakh tons this year; and there are reports of large-scale diversion of cane from factories to *khandsari* which will adversely affect sugar production.

A Wasteful Process

"I am conscious that cottage industries have a definite place in our industrial set-up. But they are meant to supplement and not supplant the work done by the large-scale industries. Besides, I don't think it is the Government's policy to encourage an industry whose manufacturing process is a wasteful one and involves a national loss. But that is what the *khandsari* industry is. Its sugar recovery is 6 to 7 per cent., as against 10 per cent. of the sugar industry. This is equally true if we compare the yields between *khandsari* and *gur*. Therefore, any expansion in the *khandsari* industry, whether at the cost of the factory industry or the *gur* industry, would not be in the larger national interest. The Karve Committee on Village and Small-scale Industries also testified to its being based on a wasteful process and observed that, unless it is improved, it should not be encouraged at the cost of the sugar industry.

"The considerable waste involved in *khandsari* production will be appreciated when we realise that, in the additional production of 2 lakh tons of *khandsari*, we lose about 1.3 lakh tons of extra sugar which would be recovered if the cane were crushed by the sugar factories. That is, as against the expected production of 3.3 lakh tons in vacuum pan factories, the *khandsari* output is estimated at 2 lakh tons only for the same quantity of cane crushed. In terms of money value, this would mean a loss of over 12 crores of rupees. On the basis of production of 3.3 lakh tons, the loss to the State Exchequer would work out to Rs. 10 crores by way of central excise duty and Rs. 2 crores by way of cane cess. Surely, this is a considerable loss resulting from the inherently wasteful process of *khandsari* manufacture.

"There is another aspect of the matter also. The second Five-year Plan envisaged a bold programme of expansion for the sugar industry and for this purpose provided Rs. 50 crores for the expansion of capacity and another Rs. 2 crores for the expansion of sugar machinery plants. All this expansion of capacity and the expenditure on the same was based on the assumption of an increased level of sugar consumption resulting, among others, from shift from *gur* and *khandsari* consumption to sugar. With the expansion of *khandsari* now occurring, entirely against the Plan premises, the rate of consumption of sugar will not be as expected and, in fact, a contrary trend of shift from sugar to *khandsari* is likely to develop. As a result, it may not be possible effectively to utilise the increased capacity of the industry which we hope to build up at a great cost. I am sure no one will view a situation like this with equanimity.

"It should also be realised that, with increasing production of *khandsari*, the prospects of export of sugar would be considerably reduced. For, in any scheme of exports which the Government might adopt, the basic consideration would be that any loss on exports would be made up from the internal market. This, in turn, presupposes a steady demand for sugar within the country even at higher prices resulting from the passing on of loss on exports to the internal market. But this cannot be the case with continuous supplies of cheaper *khandsari* flooding the markets. Any attempt to increase exports to meet the situation would not succeed and we shall find ourselves in a vicious circle of higher prices and shrinking demand. I firmly believe that successful implementation of an export programme would depend, on the one hand, on increased production of sugar in the country and, on the other, on its effective demand. Increased production of *khandsari* will, however, affect adversely both production and consumption of factory sugar and thus also exports.

Urgent Need for Remedial Measures

"Keeping in view these various facts, I hope Government will appreciate the industry's anxiety. In fact, it had expected that Government would at the last budget time announce some steps in the form of suitable excise duty on *khandsari* sugar to curb the unplanned growth of this wasteful industry. But the absence of any such proposals in the budget has been a great disappointment. I would urge with all the emphasis at my command for speedy and effective action in this behalf, in any case, well in advance of the next crushing season.

"The sugar industry in East U.P. and Bihar has not made any headway despite the progress of the industry as a whole. It might interest the members to know that, in Bihar, which is the second important State in the matter of sugar production, sugar output last year amounted to 3.12 lakh tons which, though about the highest for the last several years, is lower than the production achieved during the year 1939-40. In the matter of sugar recovery also, the position, instead of showing any improvement, has deteriorated over the last several years. As against a recovery as high as 10.9 per cent. in 1942-43, the last three years' figures at 10.22 per cent., 9.76 per cent. and 9.36 per cent. show a steady decline. The position in East U.P. is also very serious, as the mills there are not able to get even an economic crush. The production of 3.28 lakh tons achieved by these mills during the last season exceeded, by only about 4,000 tons, their output of 3.24 lakh tons in the season 1936-37. From the point of view of market also, these mills are at a serious disadvantage in that there is no important market where they enjoy preference of any sort. Their production has to be sold in far-off places in competition with others more favourably situated.

Needs No Emphasis

"The important role that this industry plays in the economy of this region needs no emphasis. Here sugarcane is primarily grown for supply to sugar mills and, if they are allowed to stagnate, as has been the case, I venture to say that the development of the entire region will suffer. Perhaps there is no other part of the country where the dependence of agricultural economy on the sugar industry is so marked. I shall, therefore, urge the Government of India and the two State Governments concerned to pay special attention to the problems of the industry in this region.

"Speaking of the difficulties of East U.P. and Bihar factories in the matter of cane development, I am mindful of the fact that the position with regard to cane development in the country as a whole requires much more concentrated attention than has perhaps been given so far. The poor yield and quality of our cane is a malaise from which the industry as a whole suffers. This is the main problem facing the industry. Though the authorities themselves are conscious of the leeway to be made and have also undertaken some positive steps in the last few years, the problem is so big that all the efforts done so far have made little impression on the overall position.

A Truism

"It is a truism that sugar is grown in the fields and so long as we do not get from the fields what they are capable of yielding both in terms of yield and quality of cane, so long will our industry remain in an unenviable position.

"Our Association had suggested that, in order to give a stimulus to the working of the research institutes, it would be better to bring all the main institutes under an autonomous Sugar Research Board on which the industry and the growers would be represented. But somehow the Government have not seen their way to agree to this suggestion so far. It is true that the Indian Central Sugarcane Committee on which the industry and the growers are represented has as one of its functions the supervision of the sugarcane institutes. But, in view of its multifarious activities, it would be advisable if the research institutes are placed under an autonomous Board devoted exclusively to research work. This Board would also take over the National Sugar Institute, Kanpur, presently not under the Indian Central Sugarcane Committee, which would help better coordination between agricultural and technological research.

Land Ceilings

"While the need for improvement with regard to cane development is realised on all hands, the policy of some of the State Governments in regard to land holdings, I am constrained to say, is not proving at all helpful in this behalf. It is well known that, in the main cane producing countries, the efficiency of sugar industry is to a great extent determined by following what is known as plantation economy. In India, although this is not the rule, yet wherever sugar factories operate large-scale cane farms, these farms render a signal service as models and extension services for the cane growers in the neighbouring areas. The Planning Commission acknowledged the utility of these farms and recommended their exemption from ceilings. But some of the State Governments seem to follow a different policy. The U.P. Government have, for instance, by passing the U.P. Large Land Holdings Act and making it applicable to the sugar factory farms also, imposed a very high rate of tax on larger farms. Such a measure will in all likelihood lead to disintegration of the farms and loss of their valuable service to the industry and growers. In Mysore also, a committee, appointed some time back, has recommended application of ceilings to factory farms. If this position continues, other States may follow suit.

"Such a development will prove harmful not only to the sugar industry but to the economic development of the country as a whole. For any diversity in approach or policy between the Planning Commission and the State Governments will stand in the way of speedy and integrated development for which the country has sought to make planned efforts.

Licensing Policy

"The two Five-year Plans envisaged an increase of 10 lakh tons in the capacity of the sugar industry to bring the total capacity by the end of 1960-61 to 25 lakh tons. Necessary licences have already been issued for establishment of 56 new factories and substantial expansions in the capacity of 66 existing units. These cover the entire additional capacity targeted for. Of the new units licensed, four went into production in 1955-56 and five in 1956-57. Another 12 units were expected to start this year, but only nine have actually started working. Thirty existing factories have also expanded their capacity and others are expected to complete their expansion in due course. The total additional capacity thus brought into effect is 4 lakh tons. There has, however, been a setback in the installation of new factories, due to delayed shipments of machinery and payment difficulties.

"As members are aware, in the matter of licensing of additional capacity, we have been urging the Government first to meet the requirements of the existing units. For it would cost much less in terms of both money and time, if preference is given to the expansion of existing capacity wherever cane availability and other facilities permit the same. It may be pointed out that the expansion of existing units will largely be achieved with machinery manufactured within the country and will not require much foreign exchange. However, Government have not seen their way to agreeing to the same. The foreign exchange difficulty now further underlines the need of exploring avenues of expanding the capacity at as little cost as possible. I would, therefore, again appeal to Government authorities that, wherever the units already licensed have not come up according to programme, the capacity thus released should be redistributed among the existing factories depending on the scope of expansion of such units.

Sugar Prices

"Earlier, I have referred to the progressive increases in the sugar excise duty in recent years and their serious repercussions on the industry. These increases in the excise duty have tended to push up the price of sugar to an unduly high level now ruling when consumers' resistance is apparent. This, however, is not related in any way to the working of the sugar mills but is a direct result of high taxes levied by the Government. It, therefore, comes to us as a surprise when the current prices are misconstrued to imply high profits. It is not uncommon to observe in the Press or in the observations of persons occupying responsible positions in the country's life uninformed and unfounded criticism of the industry. I am not against criticism and would welcome it provided it is based on facts. Even a cursory glance at the cost structure of Indian sugar as adopted by the Government will at once convince anybody of the fact that neither is the sugar mill industry responsible for the present level of prices nor does it benefit from them.

Need for Tax Relief

"In recent years, the cost structure has undergone considerable variations. While the Government levies show a phenomenal increase of 344 per cent. the cost of cane has also gone up by 14 per cent. Similarly, other items of cost have also gone up, reflecting the higher prices of raw materials and increased labour charges. In sharp contrast to the increases on all these items, the single item which has shown a decline and that too by a fair percentage of 17 per cent. is in respect of overheads and the gross profit margin allowed to the industry. It is, therefore, not understood how, in the face of these facts, allegations against the industry of high prices or high profits can be sustained.

"Before I pass on to another matter, I would like to invite Government's particular attention to the sharp increase in the tax burden on the industry. Since 1946-47, the Central excise duty has been raised from Rs. 2-3 to Rs. 10-11 per maund. Of this increase, Rs. 2-7 account for replacement of sales tax by additional excise duty effected last December, which may normally not be taken as an additional burden. But the position with regard to sales tax was that it was paid by the trade and, in the final analysis, by the consumer. But the additional excise duty has to be shouldered initially by the industry with the prospects of its passing on to the consumer depending on market conditions. And with unfavourable market conditions, such prospects look rather dim.

"The State Governments of U.P. and Bihar have also raised the cane cess from one anna to three annas per maund. Along with this, the co-operative societies commission in these States also went up from three pies to nine pies per maund of cane. All these together amount to a high figure of Rs. 13-3 per maund of sugar.

"I would submit that such disproportionately high rate of taxation on this industry is bound to stifle its future development. Admit-

(*Continued on page 803*)

IMPACT OF U.S. RECESSION ON BACKWARD ECONOMIES

AGRICULTURE HELD KEY TO PROBLEMS OF UNDERDEVELOPED COUNTRIES

(In the context of the continuing recession in the U.S. and the concern it has evoked in India and other countries, the following extracts from the Statement by Mr. Philippe De Seynes, Under-Secretary for Economic and Social Affairs, at the opening of the 14th session of the U.N. Economic Commission for Asia and the Far East, which was held last month in Kuala Lumpur, will, we are sure, be read with interest by our readers.—Ed.)

THE fourteenth session of the Economic Commission for Asia and Far East is taking place in the midst of some apprehension regarding the effects and duration of the economic recession now under way in North America. Every recession has its own particular character and origins, and there are certain features of the present one which have no doubt contributed to the concern being voiced in many parts of the world, not least in Asia. This becomes clear if we compare the present recession with previous setbacks since the war. When the North American recession of 1949 occurred, the readjustment to peace-time conditions was in many countries not yet complete, and the recovery late in that year and early in 1950 demonstrated that underlying demand was still strong. Again, the mild slackening in the industrial tempo in Western Europe in 1952 was no more than a pause in a generally expansionist situation resulting from the rising claims of defence and of associated private investment. Finally, the recession of 1953-54 in North America was largely the result of the end of the Korean conflict and of the fall in Government expenditures which ensued. The buoyancy of private demand for fixed investment and consumption rapidly brought the reaction to an end and carried the economy to new high levels of activity.

In all these cases, final demand was strong, and the recession simply took the form of a realignment of inventories in certain sectors of the economy. While the trimming of inventories is also contributing to the present situation, the possibility of a deeper weakness cannot be ruled out. There seems to be some evidence that additions to capacity in recent years may have outrun the growth in demand, so that business is disinclined to continue investing at the same rate as hitherto. If true, this would mean that for the first time in the post-war period, final demand for fixed investment and consumption in the private sector has, at least for the time being, lost its upward momentum.

What is particularly important for underdeveloped countries, moreover, is the fact that in previous recessions the industrial countries were not all involved at any one time, so that the total demand of industrial countries for imports from the rest of the world was relatively well maintained or even increased. Thus the North American recessions of 1949 and 1953-54 were accompanied by sharply rising activity in Western Europe; while North America was in turn much less affected than Western Europe by the easing of demand in 1952.

Inventory Policies

At the beginning of 1958, on the other hand, there are important elements of similarity in the situation of most of the industrial countries of North America and Western Europe. That is not to say that the recession in North America has an exact parallel in Western Europe. But production and demand, which had already slowed down in 1956, advanced very slowly in Western Europe during 1957 and even the long boom in Western Germany seemed to have come to at least a temporary halt. While latest data do not as yet point to any significant drop in output, more cautious inventory policies have affected the demand for primary products. And the same basic phenomenon as in North America is present there too—namely, the levelling off in the demand for new productive capacity. Consequently, Western Europe does not seem to promise an expansion in 1958 which would offset any significant drop in demand on the North American continent.

Thus the present situation represents a more serious challenge to national and international economic statesmanship than any other economic downturn since the Second World War. It is a test both of the ability to diagnose the extent of the malady correctly and of the efficacy of measures which may be taken to deal with it. Some support for the economy is already being derived from higher public expenditures and from an easing, in some countries, of monetary restraints imposed previously. There are still substantial differences of opinion, however, as to how much of the slack these measures are likely to take up. There is no doubt that if these measures fell seriously short of what is required to maintain a high level of employment, Governments would intervene actively in the situation. Even here, however, there is much room for argument as to the stage at which such further intervention would be desirable, and how effective it might be in the short run.

While there are undoubtedly profound differences of view as to the seriousness of the present position and, therefore, as to the extent of governmental counter-measures required, there would not, I imagine, be any disagreement anywhere that a repetition of the 1930s can virtually be ruled out. The mere existence of a large and stable public sector sets a floor to the amount of decline that is likely in other sectors. As is well known, moreover, there are many built-in stabilisers in the economy in modern times which serve to slow down the rate of decline in economic activity in the event of a recession. The widely prevailing systems in industrial countries whereby compensation is provided to the unemployed and taxes decline more than in proportion to incomes constitute especially powerful influences in this direction.

Above all, there is the firm intention of Governments not to permit economic collapse in their countries. Our experience of conscious control of cyclical forces is still very limited, and the possibility of mistakes in the timing or amount of Government intervention required, or even in the choice of policies, cannot altogether be excluded. What cannot be doubted is that all Governments have every reason to shorten the duration of any recession as much as they can, and that, if the first steps taken prove insufficient, these will be soon followed by increasingly active measures until in one way or another the tide is turned.

Underdeveloped Countries

The impact of a recession upon the developed countries is not, however, to be compared with the damage that may be caused in underdeveloped countries by any decline in external demand of more than very brief duration. These countries simply do not have the reserves, either internal or external, to enable them to ride out the storm with a minimum of dislocation.

Prices of a number of commodities were already declining during 1957, even before the current recession began. In many cases, the chief cause was reduced investment in inventories in the industrial countries, but in several instances, the expansion of supplies from exporting countries was of equal or even greater importance. The slowdown in buying for inventory was no doubt prompted partly by the expectation of a change in business conditions and partly by the tightening of credit. Comparing the year 1957 as a whole with 1956, we find that rubber prices fell by about 6 per cent. in Malaya and 15 per cent. in Ceylon. The prices of copra and tin appear to have dropped 3 to 4 per cent., and the superior varieties of tea for export by 14 per cent. However, where supply declined, as in the cases of cotton and jute, or where consumption seems to have advanced more rapidly than production, as in the cases of abaca, rice and sugar, prices averaged somewhat higher in 1957 than in 1956. Commodity prices weakened more generally as the recession in North America developed during the second half of 1957, and it is too early to say whether the bulk of the price decline is behind us or not.

It must regrettably be conceded that we have not yet found the right formula for international stabilisers to compare with the built-in and other stabilisers available within each of the developed countries. More than eight years ago, a distinguished group of economists (under the chairmanship of the present Australian Ambassador to the United Nations in New York) made a pioneering effort in this field in a series of recommendations which came before the Economic and Social Council in 1950. A further investigation of the same subject by another group resulted in a second report toward the end of 1951. The conclusions of these studies remain a very controversial matter and we have yet to devise concrete procedures on which Governments could agree and which would appreciably mitigate the international hazards of cyclical fluctuations.

In these circumstances, it must be acknowledged that the freedom of action of underdeveloped countries is necessarily limited by the reserves which they themselves possess or can call upon with the framework of existing institutions. All the more urgent it is, therefore, to make the best use of whatever reserves do exist.

Exports

In principle, a further development of exports would be highly desirable under present conditions, and we must hope that no artificial curbs will be placed on imports from underdeveloped countries over and above those resulting from the decline in demand. Means of achieving such an increase in exports in the longer term have been explored by the Committee on Trade. But it is not easy to identify the source of any major advance in the demand for primary products in the immediate future. Whatever might have been said some years ago about a world shortage of raw materials, it is quite clear that the growth in production which has occurred in the meantime has significantly changed the balance between world supply and demand. It may, indeed, be argued that present conditions call for or justify a restrictive policy consisting in withholding part of the available supplies of primary products from the market. Such solutions are already under study in various countries acting separately or even collectively. It should, however, be borne in mind that the underlying assumptions for all such schemes impose some serious restraints on the range of commodities for which they may be effective. Among these preconditions are a presumption that the present recession is indeed the chief cause of the difficulties of any given commodity and that the difficulties will disappear with the recession; a presumption that total export earnings will rise by withholding supplies, a presumption that the withholding of supplies will not generate substitutes with a concomitant prolonged lowering of the demand for the product concerned, and a presumption that international co-operation will be effective.

What makes the balance of payments situation particularly troublesome for a number of countries in the region at the present time is the fact that while the demand for their exports has been declining, their own demand for imports has been advancing, often because of mounting inflationary pressures. Even if there were no inflationary forces in the region, the mere fact that incomes were rising here while they were levelling off or declining in the industrial countries would make for serious disequilibrium in balances of payment. But where inflationary conditions are present, the problem is naturally intensified. While inflation takes many forms, two main types seem to predominate in the region at the present time. The first arises from crop failures or a series of various other circumstances reducing the supply of essential consumer goods, thereby causing their prices to rise. As various groups in the community seek to escape the consequences of the decline in supplies by claiming a larger share of whatever is available, the upsurge in prices spreads throughout the economy and gains momentum. A second type of inflation results from growing claims upon resources imposed by rising investment, both public and private, for economic development. One of the primary difficulties here is the lack of elasticity in an underdeveloped economy, particularly in the agricultural sector. This means that even modest increases in investment designed to do no more than keep pace with rising population may nevertheless suffice to break through the inflation barrier.

It is worth emphasising again and again that agriculture holds the key to many of the problems, both internal and external, which beset underdeveloped countries attempting to accelerate the pace of economic progress. Developing countries need larger supplies of food in order to meet the demands resulting from rising incomes and growing populations. Unless such supplies can be provided from domestic cultivation, additional pressures upon already insufficient foreign exchange resources are bound to develop. It is also noticeable that increases in *per capita* incomes have, in several countries in this region, been accompanied by a shift in tastes toward wheat and higher quality foodstuffs, thus creating an additional source of demand for imports from industrial countries. In recent years, substantial supplies of foodstuffs have been obtained outside the region without heavy drain on foreign exchange resources, but this was only due to especially favourable circumstances created by the measures taken toward surplus disposal, measures which cannot be expected to be indefinitely renewed.

For these reasons, it is encouraging to see that this region is so well aware of the importance of agricultural development. The Working Party on Economic Development and Planning, sponsored jointly by the Economic Commission for Asia and the Far East and the Food and Agriculture Organisation of the United Nations, which held its third session at the E.C.A.F.E. Headquarters in September 1957, deserves to be congratulated for devoting its full attention to the agricultural sector. By taking up this particular sector of the economy, the Working Party has initiated a new and welcome phase of its activities. That does not mean that the wider aim of economic development has been neglected or made subservient. Indeed, as the Working Party itself has put it, "the problems and techniques of agricultural development planning and implementation were reviewed, not in isolation, but in their relation to economic development as a whole and, more particularly, to the dynamic factor of industrialisation," a task which the Working Party has executed admirably. It is to be hoped that the report of the Working Party, a most valuable document, and the recommendations it puts forward will be studied with great care.

INDIAN SUGAR MILLS ASSOCIATION

(*Concluded from page* 801)

tedly, if the industry has to fulfil the Plan targets and also maintain increased exports, it is necessary that a rising tempo of production and consumption of sugar within the country is maintained; these are like the two needles of a clock and should function in close harmony. But the present rate of taxation, as I have shown, is adversely affecting both production and consumption of factory sugar. There is thus an urgent need for granting an appropriate tax relief to this industry, and I appeal to the Government to give due consideration to our request.

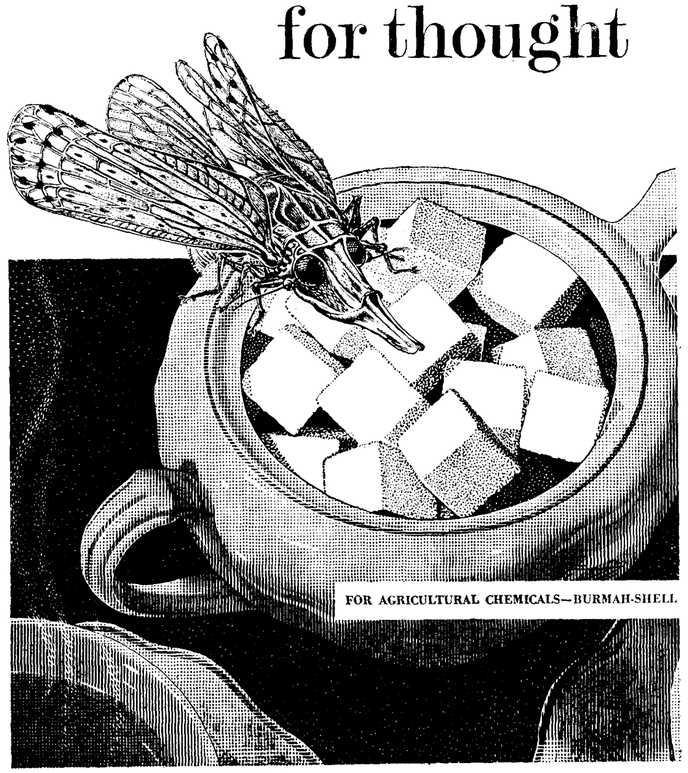
Rehabilitation and Modernisation

"While on this subject, I would also invite Government's attention to the financial requirements of the industry for rehabilitation and modernisation of the existing plants which have a close bearing on their efficiency and production. The Planning Commission has assessed its cost during the second Plan period at Rs. 50 crores. The profit margin now available to the sugar mills industry hardly permits of such heavy investments, specially with the prices of machinery parts ruling four to five times the pre-war level. The industry has already brought this fact to the notice of the Government and I hope that some solution will be found to enable the industry to proceed with rehabilitation and modernisation of the plants now overdue.

Cane Freight

"I would also take this occasion to draw Government's attention to the recommendations of the Railway Freight Structure Enquiry Committee which envisage a general rise in railway freights, particularly for short distances. The sugar factories, particularly in U.P. and Bihar, depend to a large extent on cane supplies from distant centres. In the absence of good roads in the factory areas, this cane has to be transported by railways and any increase in the railway freight will further add to the industry's cost structure, thus making it uneconomical to crush distant cane. This will adversely affect both sugar production and the interests of cane growers who may have to utilise their cane for less remunerative uses. I hope, while considering the Freight Committee's recommendations, the Railway Ministry will give due consideration to the peculiarities of this case and decide against any further increase in cane freight."

FOOD
for thought



FOR AGRICULTURAL CHEMICALS—BURMAH-SHELL

One lump?... or two?... Now you can have as many lumps as you like, thanks to the magnificent job done by sugar producers in this country.

Not only is there enough sugar to go round, but surplus production can now be exported to earn valuable foreign exchange for India. It has been estimated that exports can be increased to 300,000 tons a year: this means no less than *Rs. 15 crores* of foreign exchange.

The country is making steady progress in increasing sugar-cane production. Control of the sugar-cane termite would be an important step in this direction as it is estimated that the sugar-cane termite lowers sugar production by as much as 200,000 tons a year. This quantity of sugar could earn *Rs. 10 crores* of foreign exchange if this wastage could be stopped. *And it can be stopped.*

Consider the facts. A Shell chemical called aldrin applied at the rate of one pound per acre, eliminates soil termites and can increase sugar yields by 300 lbs. per acre. Endrin—another Shell chemical—gives effective, persistent control of the sugar-cane pyrilla and also shows great promise against sugar-cane borers. These petroleum chemicals can protect one of the most valuable cash crops grown in the country.

True—Shell chemicals have to be imported because they are not manufactured in India. Indigenous materials are however, used in their formulations. And for every rupee spent on importing aldrin, enough extra sugar can be produced to earn sixteen rupees of foreign exchange. This is a sensible expenditure whichever way you look at it: food for thought, in fact.

SHELL Chemicals can save crops
and Foreign Exchange too!

ROLE OF INDUSTRIAL ESTATES IN INDIA'S ECONOMY

ASSISTANCE TO SPEEDY DEVELOPMENT OF SMALL INDUSTRIES

WHAT is claimed to be the biggest of the 100 model Industrial Estates envisaged in the second Five-year Plan was formally inaugurated by the Prime Minister, Mr. Jawaharlal Nehru, at Okhla, a New Delhi suburb, on the 12th inst. The Estate now consists of 35 factories and a hundred more are expected to be set up in due course. The factories include, among others, those producing foundry products, radio components, cycle parts, safety blades and electric wires. The factories are provided with many facilities such as supply of water, electricity, drainage and conservancy. The Estate is planned spaciously with proper roads and other amenities.

The importance of Industrial Estates in an underdeveloped country like India cannot be overemphasised. There are several areas in this country where the pressure of population on land is very heavy, and the major problem all along has been one of reducing the disquieting effect of such pressure. The small-scale industries equipped with modern machines, as Mr. Nehru rightly declared, played a very important part not only in augmenting production but also in solving the problem of unemployment. The Industrial Estates are designed to provide conditions favourable to working efficiency through economic utilisation of equipment and materials and maintenance of uniform standards of production. The Estates seek to provide built-up factory accommodation for a number of small-scale industries. By virtue of their having formed into a beehive of economic pursuits, these industries are enabled to share the common services and other facilities such as supply of electricity, water, gas, steam, compressed air, railway sidings, and watch and ward. They have also the additional advantage that the conditions created in the Estates are conducive to healthy employer-employee relationship. The houses, schools and other social amenities for workers available in the Estates help improve efficiency of labour and at the same time avoid slums.

It may be recalled that the programme for the establishment of Industrial Estates was first approved by the Small-Scale Industries Board in January 1955. The implementation of this programme was estimated to involve an expenditure of about Rs. 10 crores. The necessary provision was accordingly made in the second Plan which was subsequently raised to Rs. 15 crores. The entire finance is given as loans to State Governments. A provision of Rs. 1 crore was made in the Union Budget for the year 1957-58. Sanction had been accorded up to December 1957 to the establishment of 34 Industrial Estates during the financial year 1957-58, with the total loans amounting to Rs. 1 crore.

In the Rajkot Industrial Estate, 10 blocks of four factory units each have been constructed, of which 14 blocks are already occupied by small *entrepreneurs*. In the Estates at Palghat and Quilon in Kerala State, 16 factory units are under construction. In the Guindy Estate in Madras, 30 factory units are nearing completion. The States of Uttar Pradesh, West Bengal, Mysore and others have already acquired lands for the setting up of these Estates and construction work is under way. All the Estates, except those of Okhla and Allahabad which are being erected by the National Small Industries Corporation, are being constructed by the respective State Governments. In the Allahabad Estate, 24 factories have been completed, while 10 more are receiving finishing touches.

The schemes for Industrial Estates, it is claimed, are becoming increasingly popular. In addition to the large Estates near big towns and cities, small Estates in Community Development Blocks and pilot project areas have also been sanctioned. Special agencies have been appointed in some States for undertaking construction of factories. It is expected that the tempo of expenditure in 1958-59 will increase further. The Budget for 1958-59 makes a provision of Rs. 1.5 crore (same as the revised estimate for 1957-58) for loans to State Governments for Industrial Estates. An additional provision of Rs. 10.82 lakhs has been made for the establishment of four small Industrial Estates in Community Development Blocks in Union Territories—one each in Delhi, Himachal Pradesh, Manipur and Tripura.

While the Industrial Estates go a long way towards assisting the speedy development of small-scale industries, there is no denying the fact that great attention must be paid to the installation of modern machinery and equipment and adoption of new techniques, in order to keep pace with the fast changing industrial age. Mr. Nehru did well to stress this aspect. He, however, said that the country could not go in for more and more machines at the cost of its man-power. Indeed, he declared that the automation in vogue in the advanced countries like the U.S.A. and the U.K. was wholly unsuitable to India, though he took care to add that it was not his intention to limit any kind of improvement in techniques of production. Discussing the relative role of small- and large-scale industries, the Prime Minister pointed out, and rightly so, that both were essentially complementary in character. He rightly stressed that, with the growth of industrial raw materials, there must be a corresponding increase in the number of ancillary industries to consume them.

Few will dispute the fact that the small-scale industries have an important place in the country's economic set-up. But they must be viewed, as the Planning Commission itself has recognised, not as a static part of the economy but as a progressive and efficient decentralised sector. The role of these industries should be restricted to providing supplementary pursuits to those in the rural sector who depend on agriculture for their livelihood, on the one hand, and to dovetail the production operations of large-scale industries, on the other. Viewed thus, one wonders whether the policies pursued by the powers-that-be during the last few years in curbing production of the more efficient sector and in imposing on them increasing burden of taxation will bear the expected fruit. Instead of giving palliatives, the Government should concentrate on developing small-scale industries as ancillary to the large-scale industries. It would be a grave mistake to think that small-scale industries perpetuate obsolete and outmoded technique of production. In fact, there is vast scope for introducing more and more technical changes which ensure efficiency in production.

It is gratifying to be told that the National Small-Scale Industries Corporation is endeavouring to give a new fillip to this unorganised sector. It has managed to secure the co-operation of several large industries in building up small units as ancillaries for the production of components and parts required by them. Further, through a network of depots and mobile vans, the Corporation has facilitated the process of marketing their products. What is more, it has secured substantial orders for the products of small units in foreign countries such as the Soviet Union, Poland and New Zealand. The hire-purchasing scheme evolved by the Corporation, we are told, has proved to be very useful to the small units in getting machinery on easy terms.

MEDITERRANEAN FISHERIES MEETING

The fifth meeting of the General Fisheries Council for the Mediterranean (G.F.C.M.) will take place at the Rome headquarters of the Food and Agriculture Organisation from 13th to 18th October 1958.

Many interesting technical papers dealing with fishery problems of the Mediterranean are expected to be read at the meeting. These will cover, broadly speaking, such subjects as fisheries biology, production, economics and statistics of Mediterranean fisheries, utilisation of the catch and problems concerned with the development of inland fisheries of the Mediterranean area. Among the interesting subjects to be discussed at the meeting will be the study of the trawling grounds of the Mediterranean. It is hoped that, eventually, the G.F.C.M. will be able to publish the results of this study, detailing the size and location of the trawling grounds, nature and extent of the catch, and other relevant data.

Economic Prosperity in
South East Asia
offers new markets for your goods

In South East Asia, as elsewhere, what you can sell depends on what the people need—*their ability to buy.* The Indian Overseas Bank with branches in several centres has made a special study of this important growing market and can help you solve your trading problems.

PROFITS OF BINNY MILLS DECLINE

DISTRIBUTION TO SHAREHOLDERS UNCHANGED

THE presence of high Central and State Government taxes resulting in higher consumer prices and the consequent fall in demand, aggravated further by a sharp rise in manufacturing and other expenses have cumulatively led to a decline in the profits of the Buckingham and Carnatic Company Ltd. and the Bangalore Woollen, Cotton and Silk Mills Company, Ltd., both under the management of Messrs. Binny & Co. (Madras) Ltd., for the year ended 31st December 1957. Despite this fall in earnings, the Directors of the Buckingham and Carnatic Company, Ltd., have decided to maintain the dividend on the ordinary shares of the Company at the same level as that paid for the previous year, namely, 10 per cent. This is the fifth year in succession for which the dividend of Buckingham's is being repeated after having been raised from 4 per cent. paid for 1952. Bangalore Woollen has proposed a dividend of 10 per cent., as against a dividend of 30 per cent. for the past three years in succession. It should, however, be noted that the year's dividend is on a higher capital of Rs. 121.50 lakhs, raised by the capitalisation of Rs. 81 lakhs out of the general reserve in March 1957, so that, in actual effect, it means that the dividend has been maintained on the old capital.

The dividends have been kept at the previous year's level, despite the fact, as stated at the outset, that the earnings of the two Companies have suffered a recession. Thus, the gross profit of Buckingham's at Rs. 1.24 crores shows a further drop from Rs. 1.35 crores in 1956 and Rs 1.43 crores in 1955, the highest earned by the Company since 1948. The gross profit of the Bangalore Woollen at Rs. 59.62 lakhs makes an unfavourable comparison with the record profit of Rs. 94.86 lakhs for the previous year.

In consonance with the fall in gross profits, the net profits, too, of both the Companies show a decline. Buckingham's profit receding from Rs. 69.82 lakhs to Rs. 63.12 lakhs. This is after raising the provision for taxation from Rs. 15 lakhs to Rs. 18.50 lakhs but lowering that for depreciation from Rs. 40.97 lakhs to Rs. 35.80 lakhs. Bangalore Woollen's profit has gone down from Rs. 39.86 lakhs to Rs. 31.44 lakhs at which level it is even less than the profit (of Rs. 36.10 lakhs) for 1955.

The following comparative table, presenting the salient features of the Buckingham and Carnatic's results for the past four years, gives an idea of the Company's progress in recent years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds	9,97.65	9,36.68	9,00.78	8,44.09
Other income	11.45	13.95	8.88	6.19
Stocks of process and finished goods	1,26.09	1,14.48	96.60	87.71
Raw materials and stores consumed	5,06.00	4,73.99	4,71.11	4,43.05
Expenses	3,90.62	3,59.31	2,93.07	2,91.30
Gross profit	1,24.03	1,35.21	1,43.55	1,19.12
Managing Agents' commission..	6.61	9.42	11.29	9.92
Provision for—				
Depreciation	35.80	40.97	30.60	19.90
Taxation	18.50	15.00	39.00	37.50
Net profit	63.12	69.82	62.66	51.79
Provisions no longer required written back	..	5.03	..	..
Profit on sale of machinery ..	0.57	1.82	..	..
Transfer from reserves ..	6.21	..	..	..
To reserves and other funds ..	28.70	36.00	23.00	19.07
bonus to employees ..	22.11	21.33	20.52	20.12
Dividends—				
7½% cum. preference ..	1.69	1.60	1.60	1.60
Ordinary	17.85 (10%)	17.85 (10%)	17.85 (10%)	17.85 (10%)
Carry forward	1.92	2.28	2.38	2.69

The benefit derived from a further increase in production as a result of the progress made in the rehabilitation programme is reflected in the substantial rise in sale proceeds from Rs. 9.37 crores to Rs. 9.98 crores. But this has been more than offset by steadily rising costs of raw materials, stores, machinery parts, wages and dearness allowance as indicated by the rise in expenses which has shot up from Rs. 3.59 crores to Rs. 3.91 crores. The Directors state that the incidence of high Central and State Government taxation on the textile industry in general has had the effect of forcing up prices for the consumer to such a level as has resulted in a considerable curtailment in the demand for cotton cloth. It has, therefore, not been possible to make adjustments in selling prices to cover the increased costs of production. In spite of these adverse factors, it is gratifying to note that the Company has been able to dispose of the whole of its increased output. Again, as a result of strenuous effects, the Company expanded its export sales by over Rs. 25 lakhs to approximately Rs. 2.17 crores for the year.

The Directors have transferred a sum of Rs. 3.71 lakhs from raw materials fluctuation reserve and another Rs. 2.50 lakhs from income-tax reserve, 1956. With this amount added to the net profit, they have made an allocation of Rs. 28.70 lakhs to the various reserves, as against Rs. 36 lakhs in the previous year.

An impressive financial position is disclosed by the balance-sheet as at 31st December 1957. Against a paid-up capital of Rs. 199.78 lakhs, the reserves and surplus aggregate Rs. 301.21 lakhs. Of these reserves, general reserve accounts for Rs. 70 lakhs, development rebate reserve for Rs. 68.24 lakhs, deferred taxation reserve for Rs. 59.96 lakhs and raw materials fluctuation reserve for Rs. 45 lakhs. The outstanding liability on debenture-stock is Rs. 70 lakhs. The general reserve has been credited with Rs. 8 lakhs, representing the value of debentures cancelled during the year. The development rebate reserve has been strengthened further by the transfer of Rs. 60.14 lakhs from the provision for increased replacement costs of buildings and machinery and this sum represents the rebate allowed up to 31st December 1956. A sum of Rs. 47.86 lakhs, being taxation deferred resulting from the allowance for initial and extra normal depreciation to 31st December 1956, has been transferred from provision for increased replacement costs of buildings and machinery to deferred taxation reserve. The current liabilities amount to Rs. 211.08 lakhs. The gross block of Rs. 693.68 lakhs has been written down to Rs. 273.70 lakhs. Capital works in progress amount to Rs. 57.92 lakhs. The current assets aggregate Rs. 450.46 lakhs and cover the current liabilities and provision for taxation by a very wide margin.

Bangalore Woollen

Commenting on the working of the Company during the period under review, the Directors, in their latest report, observe thus:

"The incidence of high Central and State Government taxation on the textile industry in general has had the effect of forcing prices to the consumer to such a level as has resulted in a considerable curtailment in demand. It has, therefore, not been possible to make adjustments in selling prices to cover the serious increases in costs of raw materials, stores, machinery parts and dearness allowance and consequently there has been a substantial fall in the profits of all departments. Silk manufacture has been adversely affected by the Government's import licensing policy for spun silk. This policy necessitates the use of larger quantities of indigenous material in order to maintain full employment of labour and plant. Experiments to promote the greater use of indigenous yarn met with little success but the Company persevered with its use, even though the quality of the resultant product was below that previously manufactured. As a result the Company was able to obtain only a very narrow margin of profit in disposing of its silk products. Towards the end of the year, the Company was informed that no further licences would be granted for the import of spun silk and, as the quantity of suitable indigenous spun silk is very limited, the Company has been compelled to shut down part of its silk plant. After the welcome improvement in the woollen section referred to in the Directors' report for 1956, it is disappointing to record that a loss was incurred in this section during the year. The recent reduction in excise duties, coupled with the replacement of sales tax by additional excise duty, has brought new hope to the cotton textile industry, but it is too early to assess whether these concessions will prove adequate and enable the industry to return to normal trading conditions."

The following comparative table provides an idea of the Bangalore Woollen's progress during the past three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds	5,42.44	5,33.80	4,81.94	4,72.25
Process and finished stocks ..	72.50	71.74	60.15	55.84
Expenses (including raw materials consumed)	4,87.43	4,54.02	4,04.66	3,86.72
Gross profit	59.62	94.86	80.78	94.25

† On the increased capital of Rs. 121.50 lakhs.

The Company is one which falls within the provisions of section 23A of the Income-Tax Act but the conditions of this section, it is stated, will be complied with by the declaration of the dividend recommended by the Directors since this will bring the total distribution to above 45 per cent. of the assessable income less the tax thereon.

A sound financial position is disclosed by the Company's balance-sheet as at 31st December 1957. The paid-up capital stands raised from Rs. 46.50 lakhs to Rs. 127.50 lakhs by the capitalisation of Rs. 81 lakhs as aforesaid. As against this, the reserves and surplus aggregate Rs. 150.65 lakhs. The current liabilities amount to Rs. 85.99 lakhs including a provision for taxation of Rs. 22.31 lakhs. Special liabilities account for Rs. 10.50 lakhs. Under the Finance Bill of 1958 which prescribes a tax on bonus share issue at the rate of 30 per cent., the Company's tax liability on account of the recent bonus issue amounts to Rs. 24.30 lakhs. To meet this liability, the Directors have transferred the sum of Rs. 20 lakhs standing to the credit of reserve for taxation to provision for taxation. In order to cover the balance of the liability arising out of the bonus issue and also to meet the additional burdens imposed by the 1957 Finance Acts which have retrospective effect to the 1956 accounts in regard to rate of taxation and wealth tax, they have transferred a further sum of Rs. 8 lakhs from the general reserve to the provision for taxation. A sum of Rs. 13.89 lakhs representing the development rebate allowed up-to December 1956 has been transferred from the reconstruction reserve to the development rebate reserve. Likewise, an amount of Rs. 22 lakhs, being taxation deferred as a result of the allowance for initial and extra normal depreciation up to the end of December 1956, has been transferred from reconstruction reserve to a deferred taxation reserve. The gross block of the value of Rs. 367.99 lakhs stands depreciated at Rs. 91.56 lakhs, the difference, namely, Rs. 276.43 lakhs being the total amount of depreciation provided. The current assets aggregate Rs. 273.04 lakhs and investments held against special liabilities Rs. 10.04 lakhs. Of the current assets, stock-in-trade alone amounting to Rs. 172.94 lakhs more than adequately cover the current liabilities and provision for taxation.

The Rs. 100 fully paid-up shares of Buckingham are being currently quoted at Rs. 171 *cum-div.* (final div. Rs. 6 per share) and those of Bangalore Woollen at Rs. 170 *cum-div.* (final div. Rs. 6 per share). On an *ex-div.* basis, the yields on the shares work out to 6.06 per cent. per annum and 6.09 per cent. per annum, free of income-tax, respectively.

SHIVRAJPUR SYNDICATE EARNS LESS

DIVIDEND, HOWEVER, MAINTAINED

THE working results of the Shivrajpur Syndicate Ltd. (Managing Agents: Messrs. Killick Industries Ltd., Bombay) for the year ended 30th November 1957 show that the Company's profit, despite an increase in output, has suffered a sizable setback. This comes in sharp contrast to the highly encouraging performance noted in the previous year. Thus, the gross profit at Rs. 37.22 lakhs has dropped by Rs. 13.30 lakhs from Rs. 50.52 lakhs for the previous year. At this level, it is only a shade better than Rs. 36.98 lakhs for 1954-55, while it is appreciably lower than Rs. 41.46 lakhs for 1953-54.

The net profit at Rs. 12.21 lakhs also does not compare well with Rs. 18.78 lakhs in the preceding year. While the provision for depreciation has been slightly raised from Rs. 4.50 lakhs to Rs. 5.89 lakhs, that for taxation has been lowered from Rs. 21.50 lakhs to Rs. 15.75 lakhs. The year's tax provision is inclusive of Rs. 26,472 for previous years and also of wealth tax amounting to Rs. 44,608 and Rs. 48,000 for the assessment years 1957-58 and 1958-59 respectively. Although the profit has receded, the dividend has been maintained at 80 per cent., made up of a dividend at the rate of Rs. 5 per share of Rs. 10 each and a bonus of Rs. 3 per share, free of income-tax. This is the fifth year in succession for which the distribution is being maintained at this level, after having been raised from 70 per cent. paid for 1951-52 by stepping up the bonus part of it from 20 per cent. to 30 per cent.

The allocation to the various reserves has been more than halved from Rs. 13.30 lakhs to Rs. 6.18 lakhs. Of these, the mine development and prospecting reserve gets Rs. 3.30 lakhs, having been reduced from Rs. 7 lakhs, while the transfer to the dividend equalisation reserve has been slightly raised from Rs. 1.50 lakhs to Rs. 2 lakhs. No allocation has been made to the general reserve which had received Rs. 1 lakh in the previous year.

The following comparative table gives an idea of the Company's progress in the last three years:

(In lakhs of rupees)

	For the year ended 30th November			
	1957	1956	1955	1954
Sale proceeds of ore	1,73.99	1,63.08	1,15.23	1,18.53

Carry forward	0.52	0.09	0.22	0.13

As already pointed out, the Company's output increased from 83,238 tons to 92,748 tons, largely as a result of the steady progress in mining operations at the Company's group of mines. The Directors expect that with the development scheme and expansion programme on hand, production will be maintained at about this level during the present year. Transport facilities continued to be satisfactory throughout the period. Shipments and sales effected during the year aggregated 114,337 tons, as compared with 117,482 tons in 1955-56. Commenting on the trading conditions during the year, the Directors, in their latest report, observe as follows:

"Owing to the restricted quota granted by the Government for exports of ore, it was not possible for the Company to meet all its old outstanding contracts. Consequently the total outstanding commitments (including the carry forward from sales to the State Trading Corporation of India (Private) Ltd. for delivery during July 1957-June 1958) amounted to 67,414 tons at the close of the year under review. The imposition of export duty on manganese ore, as reported last year, remained effective during the year under review. Mention was made last year that the Company had been granted a quota for export of manganese ore and for rail transport to the extent of 73,650 tons valid upto the end of June 1957. The Government had since decided to continue the system of quota licensing for the period July 1957 to June 1958, and the Syndicate had been granted a quota for only 59,130 tons for this period. Against this quota, the Company has already shipped 30,411 tons by the end of November 1957 thus leaving a balance of 28,719 tons to be shipped before 30th June 1958. The Government's policy for issue of export quotas for the next period commencing July 1959 is still awaited."

The financial position of the Company, as disclosed by its latest balance-sheet, is quite sound. Its paid-up capital amounts to only Rs. 7 lakhs, against which the reserves and surplus aggregate Rs. 62.32 lakhs, excluding workmen's compensation, staff welfare and retiring gratuity reserves amounting to Rs. 14.40 lakhs. The current liabilities stand at Rs. 63.43 lakhs including a provision for taxation at Rs. 34.82 lakhs. The gross block of Rs. 74.84 lakhs stands written down to Rs. 45.31 lakhs. Capital work in progress accounts for Rs. 4.74 lakhs. The current assets aggregate Rs. 97.11 lakhs, inclusive of cash balances to the tune of Rs. 23 lakhs. The current assets cover the current liabilities and provision for taxation by a substantial margin.

It will be recalled that the Directors had sought the permission of the Controller of Capital Issues to raise the capital to Rs. 21 lakhs, by capitalising a sum of Rs. 14 lakhs from the reserves. The Directors state that in view of the provisions of the Finance (No. 2) Act, 1957, which prescribes a tax on bonus issue at the rate of 30 per cent., it would not be in the best interests of shareholders to issue bonus shares at the present juncture.

With regard to the future prospects of the Company, the Directors state that for the current year they depend mainly on the trend of the market which, in recent days, has been showing a marked tendency to recede from the high levels of the past one or two years, especially in the case of low grade ore. They further observe that it is unlikely that the high profits of previous years will be maintained although market prices might tend to rise towards the end of the year.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 93.50 *cum-div.* On an *ex-div.* basis, the year's distribution provides a yield of 9.35 per cent. per annum, free of income-tax.

Points From The Chair

Road Transport Industry

"DURING the year production increased in nearly all lines, but even so, we were not able to meet the demand for all our products. The Government permitted limited imports to help relieve some of these shortages, but particularly in respect of cycle tyres and rims sufficient quantities have not been available to meet requirements. During the past year, the road transport industry has been undergoing tremendous changes and expansion, particularly long-distance goods transport. The modern truck now engaged in this work requires tyres capable of carrying heavy loads at high speeds over long distances. Such tyres must be built with the best available materials and using the latest manufacturing techniques. It is in this respect that your Company is particularly fortunate in having available to it the full resources of the Dunlop world-wide research, technical and engineering organisations. We have continued to retain our premier position in the car tyre market. The progress which the motor car industry has been making in recent years is in danger of slowing up owing to the difficult licensing situation of the imported components. The reasons for this are too well known to everyone and unfortunately these are likely to persist for some time. The bicycle industry has continued to grow very rapidly and the demand for our products has been well in excess of supply."

JOHN LUCKHAM,
Dunlop Rubber Co. (India) Ltd.

Meadows Engine for Chassis

"The progress of indigenous manufacture has been maintained according to the schedule submitted to the Government. All the necessary machine tools and tooling required for the first of the three phases of manufacture of the engine have been imported and are in operation. Import licences have also been obtained from the Government for completing the second and biggest phase of manufacture. I indicated in my report to you last year that one of the two chassis manufacturers obtained the approval of their associates in the U.S.A. to incorporate the Meadows engine as original equipment in their commercial vehicles. Unfortunately, this particular vehicle went out of production in India. Premier Automobiles Ltd., the other chassis manufacturer, carried out very extensive road tests with the Meadows engine on their chassis in India. Simultaneous tests were carried out by their associates in the U.S.A. I regret that these tests were not concluded within the period under review, which prevented us from making any real progress in this division. I have great pleasure to report to you that before the end of 1957 the tests were completed to the full satisfaction of the Indian Company and their American associates. We have now received their orders for their regular production requirements and our engines are now being fitted as original equipment to the Dodge and Fargo chassis. Important users of the Meadows engine, both amongst State Transport and private operators, continue to obtain most salutary results with this engine which is rapidly establishing itself as an engine of outstanding reliability."

M. A. CHIDAMBARAM,
Automobile Products of India Ltd.

COMPANY MEETINGS AND DIVIDENDS

TRICHINOPOLY MILLS LTD. Annual General Meeting, Tiruchirapalli, 30th April 1958. Dividend: Re. 0.90 per share. Transfer books remain closed from 16th to 30th April 1958, both days inclusive.

ALLIANCE JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 30th April 1958. Dividend: *Nil*. Transfer books remain closed from 16th to 30th April 1958, both days inclusive.

WAVERLEY JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 30th April 1958. Dividend: *Nil*. Transfer books remain closed from 16th to 30th April 1958, both days inclusive.

NATIONAL CO., LTD. Annual General Meeting, Calcutta, 2nd May 1958. Dividend: Re. 0.75 per share. Transfer books remain closed from 10th April to 2nd May 1958, both days inclusive.

ELGIN MILLS CO., LTD. Annual General Meeting, Kanpur, U.P. 6th May 1958. Dividend: Re. 1.00 per share. Transfer books remain closed from 19th April to 6th May 1958, both days inclusive

BELSUND SUGAR CO., LTD. Annual General Meeting, Calcutta, 6th May 1958. Dividend: Re. 1.00 per share, free of tax. Transfer books remain closed from 24th April to 6th May 1958, both days inclusive.

WESTERN INDIA MATCH CO., LTD. Annual General Meeting, Bombay, 7th May 1958. Dividend: Rs. 11.00 per share (includes bonus of Re. 1.00 per share). Transfer books remain closed from 23rd April to 10th May 1958, both days inclusive.

SOORAH JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 7th May 1958. Dividend: Re. 1.50 per share. free of tax. Transfer books remain closed from 24th April to 7th May 1958, both days inclusive.

MAHINDRA AND MAHINDRA LTD. Annual General Meeting, Bombay, 12th May 1958. Dividend: Re. 1.75 per share, payable on and after 19th May 1958. Transfer books will remain closed from 28th April to 12th May 1958, both days inclusive.

DURBHANGA SUGAR CO., LTD. Annual General Meeting, Lohat, District Darbhanga, 14th May 1958. Transfer books remain closed from 26th April to 14th May 1958, both days inclusive.

SVADESHI MILLS CO., LTD. Annual General Meeting, Bombay, 15th May 1958. Dividend: Rs. 9.00 per share, payable on and after 16th May 1958.

TATA MILLS LTD. Annual General Meeting, Bombay, 16th May 1958. Dividend: Rs. 2.00 per share, payable on and after 17th May 1958.

ASSAM MATCH CO., LTD. Annual General Meeting, Bombay, 19th May 1958. Dividend: Re. 1.25 (includes bonus of Re. 0.25 per share) per share, free of tax payable on and after 24th May 1958. Transfer books will remain closed from 8th to 21st May 1958, both days inclusive.

ATUL PRODUCTS LTD. Annual General Meeting, Ahmedabad, 3rd June 1958. Dividend; Rs. 8.00 per ordinary share. Transfer books remain closed from 16th April to 7th May 1958, both days inclusive.

KILLICK INDUSTRIES LTD. Ad-interim dividend of Rs. 4.00 per share, free of tax, for the period ended 31st December 1957, payable on and after 27th May 1958. Transfer books remain closed from 23rd April to 7th May 1958, both days inclusive.

GUEST, KEEN, WILLIAMS LTD. Final dividend of Re. 1.20 per share, for the 52 weeks ended 28th December 1957.

BENGAL COAL CO., LTD. Final dividend of Rs. 10.00 per ordinary share, for the year ended 31st October 1957.

NEW BEERBHOOM COAL CO., LTD. Final dividend of Re. 0.38 per ordinary share, for the year ended 31st October 1957.

BENGAL FLOUR MILLS CO., LTD. Final dividend of Re. 1.25 (12½ per cent.) per share, for the year ended 31st December 1957.

VASANTA MILLS LTD. Dividend of Rs. 12.00 per share, for the year ended 31st December 1957. Transfer books will remain closed from 1st to 14th May 1958, both days inclusive.

COORG TEA CO., LTD. Interim dividend of Re. 0.50 (10 per cent.) per share, for the year ended 31st March 1958. Transfer books remain closed from 17th to 24th April 1958, both days inclusive.

TRAVANCORE RUBBERS LTD. Dividend of Re. 1.50 (15 per cent.) per share, for the year ended 31st December 1957.

RADIO AND ELECTRICALS MFG. CO., LTD. Interim dividend of Re. 0.25 (5 per cent.) per share for the year 1957-58.

CAMBODIA MILLS LTD. Dividend of Re. 0.50 (5 per cent.) per share, for the year ended 31st December 1957.

SRI KANNAPIRAN MILLS LTD. Dividend of Re. 1.00 (10 per cent.) per share, for the year ended 31st December 1957.

PROFIT OF STANDARD MILLS LOWER

McLEOD GROUP JUTE MILLS SUFFER LOSS

Standard Mills Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Mafatlal Gagalbhai & Sons, Bombay) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts show that the profits for the year after deducting depreciation of Rs. 27,01,233 (Rs. 28,10,963), development rebate of Rs. 4,75,436 (Rs. 7,10,973), managing agents' commission of Rs. 6,78,341 (Rs. 10,18,977) and after providing Rs. 31,75,000 (Rs. 35,15,000) for taxation amount to Rs. 18,86,083 (Rs. 40,88,799). To this is added the amount brought forward from last year of Rs. 2,93,059 (Rs. 12,833) and the amount transferred from rehabilitation and development reserve of Rs. 6,00,000 (*nil*) making a total of Rs. 27,79,142 (Rs. 41,01,632). The directors have appropriated the amount of Rs. 6,00,000 transferred from the rehabilitation and development rebate reserve to the provision for taxation account in order to meet the additional liability in respect of the previous year. From the balance of Rs. 21,79,142 (Rs. 41,01,632) the directors recommend payment of a dividend of Rs. 4 per share, free of income-tax, on 6,000—4 per cent. cumulative redeemable 1st preference shares—Rs. 24,000 (Rs. 24,000), payment of a dividend of Rs. 4 per share, free of income-tax, on 6,000—4 per cent. cumulative redeemable 2nd preference shares Rs. 24,000 (Rs. 24,000), payment of a dividend of Rs. 20 (Rs. 20) per share, free of income-tax on 87,800 ordinary shares Rs. 17,56,000 (Rs. 17,56,000) and payment of proposed bonus of Rs. 2.50 (Rs. 2.50) per share, free of income-tax on 87,800 ordinary shares Rs. 2,19,500 (Rs. 2,19,500) leaving a balance to be carried forward to next year's account of Rs. 1,55,642 (Rs. 2,93,059).

The scheme of modernisation of the Mills has been continued during the year under report. A sum of Rs. 98,255 has been spent on construction of new buildings and a sum of Rs. 18,82,880 has been spent on installation of new machinery during the year. Machinery amounting to Rs. 18,52,172 is under installation. The machinery installed has been working satisfactorily.

A sum of Rs. 6,00,000 has been transferred from the rehabilitation and development reserve to the profit and loss account to meet the additional liability for the previous year in respect of income-tax and wealth tax, consequent upon the passing of the Wealth Tax and Amended Finance Act No. 2 of 1957.

Regarding the proposed Cement Project referred to in the report for the year 1956, the directors have to state that the same being found uneconomic was dropped.

The directors of the Company have for a long time been considering the desirability of increasing the Company's issued capital. They had applied to the Controller of Capital Issues last year to increase its authorised capital of Rs. 99,80,000 to Rs. 1,21,75,000 by the creation of 21,950 new ordinary bonus shares of Rs. 100 each ranking *pari passu* in all respects with the existing 87,800 ordinary shares of the Company. The Controller of Capital Issues by his letter No. R225-CCI/57.99 dated 28th January 1958 has given his consent to the issue of 21,950 ordinary shares of Rs. 100 each, to be issued as bonus shares by capitalisation of a like amount out of the share premium account.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	99,80,000	Block ...	1,08,17,434

Alliance Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the 11 months ended 31st May 1957.

The loss for the period after providing for depreciation Rs. 1,37,532, amounts to Rs. 5,76,813 from which must be deducted the credit balance brought forward from the previous half-year of Rs. 34,402 and amount overprovided in liability in respect of previous period written back Rs. 8,847. There remains a debit balance of Rs. 5,33,564. Adding to this the West Bengal sales tax paid relating to previous period of Rs. 12,537, forfeited dividends paid Rs. 129 and the amount shortprovided in liability in respect of previous period of Rs. 28,151 there is a total debit balance to be carried forward of Rs. 5,74,381.

Jute stocks are shown at cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 31st May 1957, have been valued at market price.

In order to run these mills on a more economical basis the directors considered it advantageous to close down the North Mill with effect from the 6th May, 1957, and the loom hours of this mill are being utilised by the South Mill which is now working 553 looms in double shift, i.e., 96 hours per week. This arrangement has shown substantial saving in labour costs as well as in other costs and in consequence better results are expected in future.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.

Rs.	1,10,68,162	Rs.	1,10,68,162

Waverley Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the 11 months ended 31st May 1957.

The loss for the period, after providing for depreciation Rs. 1,37,000 and taking into account Rs. 1,01,461 representing the amount of gratuity paid to the workers who have left, amounts to Rs. 4,25,950 from which must be deducted the credit balance brought forward from the previous half-year of Rs. 11,327. There remains a debit balance of Rs. 4,14,623 to which is added forfeited dividends paid amounting to Rs. 662, making a total debit balance to be carried forward of Rs. 4,15,285.

Jute stocks are shown at cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 31st May, 1957, have been valued at market rates.

The year under review has been a difficult one so far as trading conditions were concerned and raw jute prices remained high in relation to the price of manufactured goods, and it was difficult to transact business at a profit.

After a very careful examination of the position by the directors, it was decided to close the mill on 17th June, 1957. Under present conditions in the jute industry it was felt that this small unit which required complete modernisation of the spinning plant, would not have been an economical unit even after modernisation. The financial position of the Company did not allow for the purchase of modern machinery, and it would have been necessary to ask for a loan from the National Industrial Development Corporation and it is doubtful if this would have been granted due to the lack of adequate working capital available to run the mill. It was considered advisable therefore to sell the working loom hours of mill which would enable the Company to run at a profit. With the sale of these loom hours to other mills within the McLeod group, this Company has still a liability for various gratuity payments to the workers who were transferred to Alexandra Jute Mills, and payments amounting to Rs. 1,01,461 have been made for such dues to workers who have left their employment. This amount forms a portion of the liability. As a result of these measures the Company recently has been working at a reasonable profit.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs

National Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st October 1957.

The accounts, after charging all expenses and providing for sales tax, show a profit of Rs. 3,15,015 (Rs. 1,98,535) of which taxation requires Rs. 1,09,650 (Rs. 1,56,000) and short provision for taxation in the previous year requires Rs. 5,600 (*nil*) leaving a net profit of Rs. 1,99,765 (Rs. 42,535). The directors have transferred from dividend equalisation reserve Rs. 1,00,000 (Rs. 2,00,000) and the balance brought forward from last year was Rs. 17,339 (Rs. 70,554) making a total available for distribution of Rs. 3,17,104 (Rs. 3,13,089). The directors recommend that the following dividends be paid—on preference shares at Rs. 7.00 per share absorbing Rs. 35,000 (Rs. 35,000) and on ordinary shares at 75 (75) naye Paise per share absorbing Rs. 2,62,500 (Rs. 2,60,750) leaving a balance to be carried forward of Rs. 19,604 (Rs. 17,339).

Wealth tax in respect of the Company's years ended 31st October 1956, and 31st October, 1957, is estimated to amount to Rs. 78,000 and this has been provided for by transfer of this sum from investment realisation surplus.

With a view to having direct contacts with overseas markets, the Board together with the Boards of other Jute Mill Companies under the same group management resolved to form a company under the style of Budge Budge and Allied Jute Mills Exports (Private) Ltd. This company, having been registered, commenced business on 31st July, 1957. Each of the participating Jute Mill Companies have subscribed equally to the capital, and the Company's share is shown against "Investments" in the present balance sheet. Andrew Yule & Co., Ltd., have no interest in Budge Budge & Allied Jute Mills Exports (Private) Ltd., but have been appointed its secretaries on a fee of Rs 1,000 per annum.

In accordance with the working time agreement of the Indian Jute Mills' Association, the mill worked 48 hours per week with 12½ per cent. of the total looms sealed. Trading during the period continued to be difficult owing to the disparity between prices of raw jute and those of manufactured goods.

In anticipation of the extension of the Calcutta Electric Supply Company's power grid to the area in which the mill is situated, arrangements had been made to convert the mill from steam drive to electric drive at an estimated cost of nearly Rs. 10½ lakhs. This conversion was in process at the time of closing the accounts and has now been virtually completed.

During the period under review, orders were placed for the supply of modern slip-draft spinning machinery to provide for all the sacking yarn requirements of the factory at an estimated cost of Rs. 13¾ lakhs. Installation of this machinery is now almost complete.

The directors have now applied for import licences to enable orders to be placed for spinning machinery for hessian warp yarns. This is estimated to cost Rs. 61 lakhs and when installed the mill will be equipped to provide approximately 70 per cent. of the yarn requirements of its operating looms from modern spinning machinery.

To meet the cost of these steps to modernise the Company's mill, most of the holding in Government securities was sold before the end of the accounting year and of the balance of Rs. 17,34,521 on current account and on deposit as shown in the balance sheet, about Rs. 9½ lakhs has since been paid out on these capital commitments.

On 14th of February, 1958, the directors issued a circular letter to shareholders informing them that an approach for close association in the management had been made by certain parties claiming to own about half the ordinary share capital of the Company. The directors now wish to advise shareholders that no further proposals have since been made by these parties up to the present time.

Accounts in brief are as under:—

Gokak Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Forbes Forbes Campbell & Co. Private Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December 1957.

The results for the year show a profit of Rs. 12,31,069 (Rs. 19,13,685). After providing for depreciation Rs. 3,68,894 (Rs. 4,50,000) and taxation Rs. 1,99,262 (Rs. 5,70,000) the profit comes to Rs. 6,62,913 (Rs. 8,63,685 after providing Rs. 30,000 for staff gratuity). To this is added the amount brought forward from 1956 of Rs. 8,155 (Rs. 14,000) producing a total of Rs. 6,71,068 (Rs. 8,77,685). To this is added the amount transferred from dividend equalisation reserve of Rs. 1,00,000 (*nil*) and from general reserve of Rs. 3,00,000 (*nil*) producing a total of Rs. 10,71,068 (Rs. 8,77,685). The directors have transferred to development reserve a sum of Rs. 6,76,416 (Rs 1,10,000) leaving an available sum of Rs. 3,94,652 (Rs. 6,42,685 after transferring Rs. 1,25,000 to reserve account). From this amount the directors recommend payment of a dividend of Rs. 8 (Rs. 13) per share, without deduction of income-tax, which will absorb Rs. 3,90,480 (Rs. 6,34,530) leaving a balance to be carried forward of Rs. 4,172 (Rs. 8,155).

Reserves.—The following transfers have been made to the general reserve: From the machinery renewal reserve Rs 26,00,000 and from the development reserve Rs. 2,30,000.

Accounts in brief were as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	48,81,000	Block ...	58,92,060
Debentures	40,00,000	Machinery and buildings under erection	33,84,179
Reserves ...	43,55,161	Machinery in transit	3,65,810
Provision for taxation ...	8,14,813	Stock-in-trade	69,20,367
Liabilities ...	65,49,174	Stores, spare parts and loose tools	12,28,961
Profit and loss account ...	4,172	Debts, deposits and advances ...	25,62,853
		Investments	2,10,194
		Cash ...	39,796
Rs.	2,06,04,320	Rs.	2,06,04,320

Polson Ltd.

The directors of the above Company (Managing Agents: Messrs. Polson Agencies Private Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December 1957.

The net profits after providing for managing agents' commission and depreciation amount to Rs. 10,27,898 (Rs. 9,59,038) which with the sum brought forward from the preceding year's accounts of Rs. 45,762 (Rs. 30,914) make a total of Rs. 10,73,660 (Rs. 9,89,952). From this amount the directors have made the following appropriations: Transferred to rehabilitation reserve Rs. 1,99,693 (Rs. 62,126) to development reserve Rs. 73,137 (Rs. 2,62,064), to reserve for taxation Rs. 3,50,000 (Rs. 1,20,000) and to reserve fund Rs. 50,000 (Rs. 1,10,000) leaving a balance available for distribution of Rs. 4,00,830 (Rs. 4,35,762). From this amount the directors recommend payment of a dividend of Rs. 6.00 (Rs. 6.00) (subject to deduction of income-tax) per share on the preference shares absorbing Rs. 1,20,000 (Rs. 1,20,000) and a dividend of Rs. 10.00 (Rs. 12.50), per share, free of income-tax, on the ordinary shares absorbing Rs. 2,16,000 (Rs. 2,70,000) leaving a balance of Rs. 64,830 (Rs. 45,762) to be carried forward.

The sales during the year were Rs. 1,01,53,477 as compared to Rs. 95,84,598 of the previous year.

During the year under review the Company exported coffee worth Rs. 8,69,023 to Burma as against the previous year's exports of Rs. 18,30,447. This was due to the restrictions on the import licences by the Government of Burma.

The machineries at the Company's factories have been kept in good repair and their efficiency has been continuously maintained.

The authorised capital of the Company is Rs. 1,00,00,000 divided into 50,000 preference shares of Rs. 100 each and 50,000 ordinary shares of Rs. 100 each, out of which the subscribed and paid-up capital of the Company is Rs. 41,60,000 consisting of 20,000 preference shares of Rs. 100 each and 21,600 ordinary shares of Rs. 100 each.

Early in the year 1956, the directors thought fit to capitalise the accumulated profits of the Company and to issue bonus shares therefrom. These accumulated profits had been utilised by the directors in establishing a new Dairy on a big scale at Patna in the State of Bihar at a cost of approximately Rs. 20,00,000 and also towards purchase of additional machinery, trucks, etc. in respect of its coffee factory at Bombay and of its Dairy at Anand. Thus, the block account of capital assets of the Company having been increased considerably, the directors thought fit to bring up the capital of the Company to a reasonable extent commensurate with its block account.

The reserve fund of the Company as at 31st December 1955 stood at Rs. 13,40,000, its dividend equalisation fund at Rs. 2,00,000, its depreciation fund at Rs. 17,69,167, its reserves for taxation at Rs. 11,30,528 and its reserves for doubtful debts at Rs. 40,000. These reserves were impressive and were built up out of the accumulated profits of the Company. Accordingly, the directors thought fit to capitalise a sum of Rs. 10,80,000 oot of the said reserve fund of Rs. 13,40,000 and to distribute the same in the form of bonus shares by allotting one bonus share for every two of the existing 21,600 ordinary shares of Rs. 100 each to the then members of the Company. An application was made to the Central Government for its sanction to the issue of the above bonus shares as required by the Capital Issues (Control) Act, 1947. However, the Controller intimated to the Company that the Government were unable to give their consent to the proposed issue, as the Company was not under-capitalised and as the balance of reserves would not bear a reasonable proportion to the increased paid-up capital. This was in conformity with a certain formula that the Government had then laid down in that behalf. In the course of the correspondence which, however ensued between the Controller on the one hand and the managing agents of the Company on the other hand, the Government was satisfied that the Company could very well capitalise a sum of Rs. 5,40,000 out of its accumulated profits and issue therefrom 5,400 ordinary shares of Rs. 100 each to the holders of the ordinary shares of the Company. Accordingly, the Controller has recently intimated to the Company the consent of the Government of India to the issue of 5,400 ordinary shares of Rs. 100 each as bonus shares on capitalisation of the Company's reserves to a like extent. The directors have therefore thought fit to now take the necessary steps to capitalise the said sum of Rs. 5,40,000 and to have 5,400 ordinary shares of Rs. 100 each issued by the Company to the holders of the existing ordinary shares of the Company in the proportion of one new ordinary share of Rs. 100 each for every four of the existing ordinary shares of Rs. 100 each.

Accounts in brief were as under:—

LIABILITIES	Rs.		ASSETS	Rs.	
Capital ...	41,60,000		Block ...	49,97,240	
Reserves ...	29,18,738		Raw materials	13,20,576

N.B.—Figures within brackets relate to the corresponding period of the previous year.

QUESTION HOUR IN PARLIAMENT

Insurance Business

THE total amount of new life insurance business completed by the Life Insurance Corporation during 1957-58 was about Rs. 300 crores—a record so far. The amount of business completed in 1957 was Rs. 276.59 crores. The Southern zone comes first with Rs. 74.14 crores, the Eastern zone second with Rs. 68.05 crores, the Western zone third with Rs. 64.70 crores, the Central zone fourth with Rs. 35.71 crores and the Northern zone last with Rs. 33.90 crores. The reasons as to why some zones had done more business and others less are the size of a zone and the capacity of the people there to insure. As regards the question why during the first three months of 1958 the business completed was not much, usually during this period insurance business is not much. It gathers momentum during June and reaches its peak in December.

* * * *

Foreign Banks' Accounts

Notices are served on Indian nationals who are found to have unauthorised accounts in foreign banks when definite information comes into the possession of the Government. It is common knowledge that such illegal accounts exist, but, until the Government comes into possession of some definite information, it cannot ask the person concerned to furnish details. The foreign banks where the accounts are kept are not under the control of the Government of India and are not obliged to give information to the Government of India.

—*B. R. Bhagat*

Gold Smuggling

Most of the gold smuggled into the country comes from the Persian Gulf and the Mediterranean area. The Government is trying its level best, by amending the necessary legislation and strengthening the intelligence services, to see that smuggling is reduced. It is difficult to say which are the permanent dens or cells inside the country to receive such smuggled gold. Sometimes, they are discovered in the course of investigation.

—*Mrs. Tarakeshwari Sinha*

Steel Quota

The Madras Government's representation for enhancing the quota of steel allotted to the State has been considered. It is, however, found not possible to grant the request, in view of the limited availability of iron and steel from indigenous sources and restricted imports on account of foreign exchange difficulties.

—*Sardar Swaran Singh*

Railway Pension Scheme

Only 1,187 persons of a total of 1,150,000 railway servants eligible to exercise their option have so far opted for the railway pension scheme. This is due to lack of proper publicity given to the scheme.

—*Jagjivan Ram*

Wet Mica Plant

It is proposed to set up a wet mica grinding plant at Bhilwara at an estimated cost of about Rs. 10 lakhs.

* * * *

Raw Jute Purchase

The decision of the London Jute Association to deal henceforth directly with firms in Pakistan—and not via India as hitherto—for the purchase of raw jute will not affect the position of Calcutta as a traditional jute centre in the East.

* * * *

Cement Factory

One application from a private company has been received so far for setting up a cement factory in Orissa State. A licence was granted to a private firm in December 1953 to establish a cement factory at Dehra Dun with an annual capacity of two lakh tons. No effective steps have been taken by the firm so far, as limestone of suitable quality and requisite quantities is not found in the area.

* * * *

Manufacture of Scooters

The Government of India has plans to make the country self-sufficient in the matter of scooters, scooterettes and three-wheelers in the course of the next three years. The impression that the Lambretta scooter manufactured in Bombay is about thrice as costly as the one manufactured abroad is not correct. The difference in the costs will not be more than 20 to 25 per cent. Even this will correct itself as production increases and the volume of demand goes up, making the Bombay unit an economic one.

* * * *

Export of Iron Ore

The State Trading Corporation is discussing with the State Governments as to what they can do to provide better facilities for the export of iron ore.

—*Manubhai Shah*

Films Export

The question of establishing an export promotion council for Indian films is under consideration.

Notices

THE DURBHANGA SUGAR COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Forty-sixth Ordinary General Meeting, being the Annual General Meeting of The Durbhanga Sugar Company, Limited, will be held at the Registered Office of the Company at Lohat, on the 14th day of May, 1958, at 10.30 a.m., for the following purposes:—

(1) To receive and adopt the Directors' Report and Accounts for the year ended the 31st August, 1957, and Balance Sheet and Report of the Auditors thereon.

(2) To declare a Dividend.

(3) To elect a Director in place of the retiring Director.

(4) To appoint Auditors for the current year and to fix their remuneration.

As Special Business

(5) To consider the payment of extra remuneration to the Directors for the year ended the 31st August, 1957.

(6) To transact any other business which may be brought forward at the Meeting with the permission of the Chairman.

By Order of the Directors,

W. F. MALDEN,
Secretary.

LOHAT,
DISTRICT DARBHANGA,
22nd March, 1958.

Note—(1) A Member of the Company, who is entitled to attend and vote, is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member.

(2) The Share Transfer Books of the Company will be closed from the 26th April to the 14th May, 1958, both days inclusive.

(3) Dividend Warrants will be posted to those Shareholders whose names stand on the Register on the 14th May, 1958.

Explanatory Statement in Accordance with Section 173 of the Companies Act, 1956, with regard to Item No. 5 of the Agenda.

A Notice has been received from a Member of the Company of the intention to propose, as a Special Resolution, that the Directors be paid 1 per cent. of the net profit to be equally divided amongst them.

Under Section 309(4) (*a*) of the Companies Act 1956 and Article 93 of the Articles of Association of the Company, the Directors are entitled to extra remuneration not exceeding 1 per cent. of the net profit as computed in accordance with Sections 198, 349 and 350 of the Act.

Only the Directors are equally interested in this proposed Resolution.

THE MODERN MILLS, LIMITED

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Twenty-fourth Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 76, Forbes Street, Fort, Bombay, on Wednesday, the 21st day of May 1958, at 4-30 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st October 1957.
2. To declare a Dividend.
3. To appoint Directors in place of those who retire but are eligible for re-appointment.
4. To amend Articles 20, 35, 36, 37, 49 and 61 of the Company's Articles of Association.
5. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 25th day of April 1958 to the 15th day of May 1958, both days inclusive.

A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and a proxy need not be a Member.

Detailed Notice of the above Meeting is being published in the Press and is also being posted to the Shareholders individually.

By Order of the Board,

N. SIRUR & CO. PRIVATE LTD.,
Managing Agents,

V. N. CHANDAVARKAR,
Managing Director.

BOMBAY, *12th April* 1958.

N.B.—The dividend when declared will be made payable at the State Bank of India, Bombay, on and after Monday the 26th May 1958 to those Shareholders whose names stand on the Register of Members on the 25th April 1958, but only in respect of their holdings of shares allotted prior to 31st October, 1957, i.e., shares bearing Nos. 1 to 66376. The dividend warrants will be made negotiable at par at the State Bank of India, Bangalore. Shareholders are requested to intimate change of address, if any.

JESSOP AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Directors have sanctioned payment, on 1st May 1958, of the Dividend on 5 per cent. Cumulative Preference Shares of the Company for the half-year ending 30th April 1958, without any deduction in respect of Income-tax which is payable by the Company.

The Preference Share Transfer Register will be closed from 29th April to 30th April 1958, both days inclusive.

Dividends will be paid only to the Registered Shareholders or their Mandataries.

By Order of the Board,

D. D. MARKAN,
Secretary.

(*a*) The offers should reach the Director Railway Stores, Railway Board, Stat Entry Road, New Delhi, not later than 20th May 1958.

(*b*) The offers received will be opened on 21st May 1958 at 11 hours.

H. D. SINGH,
Director, Railway Stores Railway Board

Mr. Burrah Saheb and Airconditioning

Mr. Burrah Saheb is really not bothered about the money he spends for his personal comfort. He is only interested in getting the very best and when it came to airconditioners he just took the ACCAIRE.

What he wanted primarily was a cool, clean room with a minimum of disturbing noises... a place where he could work with quiet efficiency. He found the ACCAIRE whisper-quiet and efficient in operation and that satisfied him.

Now his ACCAIRE gives him all that and more. It is a handsome unit, it is low in power consumption and it never lets him down.

MONEY EASY

(From Our Own Correspondent)

BOMBAY, *23rd April*

Fairly easy conditions came to prevail during the week under review. Consequent on a further shrinkage in demand for credit and with the continued expansion on a sizable scale in bank deposits, banks had generally a surfeit of funds. There was, however, no change in money rates. Inter-bank call money among the Exchange banks and big Indian banks was quoted at 3 per cent. lenders over. The corresponding rate among the small banks was 3 to 3¼ per cent. House money at call was placed at 4¼ to 4⅜ per cent. With the traditional busy season almost at the end, banks appear to be more inclined to renew their borrowings of house money than to take any fresh money. Short-term deposits continued to fetch 4¼ to 4⅜ per cent. for one to six months.

After three weeks of successive expansion, notes in circulation have declined by Rs. 10.44 crores in the week ended 18th April 1958. Disclosing this, the Reserve Bank statement for that week shows an increase of Rs. 10.69 crores in notes held in the Banking Department. Foreign securities have gone up further by Rs. 1.32 crores, with a corresponding fall in rupee securities. The improvement in foreign securities has been more than offset by the decline of Rs. 9.33 crores in balances held abroad so that the net fall in foreign assets is Rs. 8.01 crores, bringing the aggregate decline in the last two weeks to Rs. 14.54 crores. Central Government's deposits are higher by Rs. 3.21 crores and bank deposits by Rs. 13.15 crores. Loans and advances to Governments have risen by Rs. 4.57 crores, while other loans and advances are lower by Rs. 1.16 crores, mainly due to the fall of Rs. 1.73 crores in advances to Scheduled banks against usance bills. Investments have risen by Rs. 14.20 crores, while Government Treasury bills purchased and discounted are down by Rs. 5.47 crores.

A rise of Rs. 5.46 crores in demand deposits and of Rs. 14.40 crores in time deposits is disclosed by the Scheduled banks' statement for the week ended 11th April 1958, thus bringing the total net deposits to a shade less than the Rs. 1,500-crore mark. With this sharp expansion in deposits, the borrowings from the Reserve Bank stand reduced by 15.78 crores and those from the State Bank by Rs. 2.54 crores. Advances, too, have declined by Rs. 3.98 crores and bills purchased and discounted by Rs. 3.23 crores. Cash balances have been enlarged by Rs. 9.01 crores, balances with other banks by Rs. 1.11 crores and money at call by Rs. 12.53 crores.

The Gilt-edged market continued to rule firm, thanks to a good demand for short and long-dated issues and scarcity of sellers. Prices, therefore, maintained their upward trend. With the money market getting easy day by day, it is expected that the terms of the Central Government's loan would be announced in the first week of May.

3 per cent. 1986 Conversion had buyers at Rs. 71.20. 3 per cent. 1970-75 was in request 10 nP higher at Rs. 86.40. 3 per cent. 1966-68 was in demand at Rs. 92.60, 3 per cent. 1964 at Rs. 94.95, 3 per cent. 1963-65 at Rs. 94.95 and 3 per cent. 1959-61 at Rs. 99.10, but the prices showed no improvement. 2½ per cent. 1962 was in request at Rs. 95.15, 2½ per cent. 1960 at Rs. 97.95 and 2½ per cent. 1961 at Rs. 95.25. 3½ per cent. 1961 had sellers at Rs. 99.65. 3½ per cent. 1964 was placed at Rs. 98.15 *ex*-voucher, as against Rs. 98.20 before payment of interest. 3½ per cent. 1965 gained 5 nP to Rs. 97.80 at which level it was on offer. 3½ per cent. 1967 showed no change at Rs. 97.65 and 3½ per cent. 1967 at Rs. 99.75. Among the State loans, 4 per cent. 1963 issues were in demand. Madras 1963 gathered 30 nP to Rs. 99.30 and U.P. 1963 50 nP to Rs. 99.

The slight weakness of sterling abroad had its effect on the rupee here, which lost some ground in terms of the U.S. dollar. Banks' selling rate of ready dollars rose from Rs. 475 to Rs. 475.25 per $100 and their buying rate from Rs. 471.75 to Rs. 472 per $100. In New York, spot sterling gave way from $2.81.13/16-2.81.15/16 to $2.81⅜-2.81⅜. Three months forward shed ¼c over the week to $2.78⅞-2.79. Transferable sterling was also marked down from 279.35-279.45 cents to 279.25-279.35 cents.

DEMAND FOR TEA WEAKENS

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *17th April*

Offerings comprised just over 2,200,000 pounds in Sale No. 9 which was held on Tuesday, 15th April. Quality showed a seasonal decline, but there was still a useful selection on offer. The sale opened to a limited demand from the exporters, this lessened considerably as the sale progressed. Low medium descriptions declined 15 to 20 nP with good medium and medium teas declining 20 to 30 nP. The best liquoring teas sold at rates up to one rupee per lb. lower than last. Whole leaf descriptions met with less competition and are quoted 15 to 20 nP easier on the previous week. Withdrawals were heavy and approximately 30 per cent. of the sale was withdrawn. The following are the quotations:—

	1958 Rs.
Plain B.P.	1.40
Low medium	1.45 to 1.70
Medium	1.70 to 1.95
Good Medium	2.00 to 2.50
Quality	2.50 to 4.30

London Market: Sale of 14th April 1958:—Firm. Better liquoring dearer.

Sale of 15th April 1958:—Active dearer.

Colombo Market: Sale of 15th April 1958:—Low growns slightly lower. Others strong demand. Mediums below best dearer. High growns irregular, following quality. All off grades strong firm to dearer.

Calcutta Market: Export:—Good, but irregular, demand. Common and medium B.Ps and fannings advanced 4 to 6 nP. Whole and ordinary C.T.C. declined about 10 nP. Tippy teas sold well.

Internal:—20,000 dust. Good general demand. 6 to 10 nP easier initially, but closed 2 to 4 nP easier. Powdery types strong. Best C.T.C. fully firm. Darjeelings weak. 4,800 internal leaf. Fairly strong demand. Generally dearer rates.

Export Quota:—There has been a fair amount of business transacted during the previous week. The present quotation is sellers 4½ nP buyers 4 nP.

Forthcoming Auctions:—Sale No. 10 will be held on Tuesday, 29th April.

As we go to press, Messrs. Forbes, Ewart and Figgis (*Private*) Ltd., wire:

"*Dust Sale* 1:—885,000 lbs. Useful demand at lower rates. Best liquoring 20 to 30 nP easier. Good medium 5 to 10 nP lower. All others 10 to 15 nP easier."

BULLION RETREATS

(From Our Own Correspondent)

BOMBAY, *23rd April*

The silver price suffered a shake-out during the week under review, after the sharp rise in the preceding two weeks. The unduly high level to which the white metal had been rigged up last week attracted heavy bull *liquidation on* fears that the Board of the Bullion Association, which held two meetings during the week (that is, on Saturday and Tuesday), would take further measures to check the bullish activity. On both days, the Board did not take any action and postponed further consideration of the steps to be taken to Friday this week, in view of the downward trend noted in the last few days. Expectations of a slackening in demand and reports of heavy arrivals of Tibetan coins sapped the morale of the bulls.

In spite of the decline in prices, the bulls did not loosen their grip on silver. On the contrary, they tightened it, as witness the widening of the *budla* charges to as high as Rs. 2-4 at the close today. As these charges stood over the stipulated level of Rs. 2 under by-law 33D, the bulls had to pay a margin of Rs. 500 per bar on all their outstanding purchases.

Gold was quietly steady in sympathy with silver. There was also a slight fall in offtake on account of the high prices.

Silver for forward delivery (May settlement) gave way from Rs. 199-9 to Rs. 196-4 before closing at Rs. 196-10. The June settlement was marked down from Rs. 197-14 to Rs. 194-1, but the closing was a shade higher at Rs. 196-7. The carry forward charges from May to June settlement widened from Re. 1-11 to Rs. 2-4 today. Business in July settlement began on Friday at Rs. 196-1 and it declined to Rs. 195-14 at the close today.

Ready silver moved up early in the week from Rs. 201-13 to Rs. 202-8, but retreated subsequently to a low of Rs. 198-4. The closing was done at Rs. 198-10. The floating stocks of silver are estimated at no more than 300 bars. The daily average arrivals were 20 bars, while the offtake was lower at 15 bars.

Gold for forward delivery (May settlement) declined from Rs. 112-14 to Rs. 111-13, due to fall in offtake and large arrivals, but it gained some strength towards the close on reports of an improvement in demand. The closing was, therefore, done higher at Rs. 112-3. The June settlement dropped from Rs. 112-5 to Rs. 110-8.

Ready gold was marked down from Rs. 113-15 to Rs. 113-3, but finished a fraction higher at Rs. 114-1. The floating stocks of gold are estimated at 25,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was lower at 2,500 tolas.

The New York price of silver was unchanged at 88⅜c., while in London, spot silver declined from 76¼d. to 76d. and forward from 75⅞d. to 75¾d. Gold, on the other hand, improved from 249*s.* to 249*s.* 2½d.

The following comparative table shows at a glance the trend of the market during the week under review:

	23-4-58	Highest	Lowest	16-4-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

HIDES STRONG

(From Our Own Correspondent)

KANPUR, *21st April*

During the week under review the hides and skins market ruled strong. New arrivals were not as considerable as those in the previous week. Paucity of upper grade buff was acutely felt. The main purchasers were the local tanners. The Madras dealers and the country tanners were lukewarm.

The latest available quotations are: Wet salted cow 1st grade Rs. 380, 2nd grade Rs. 340 and 3rd grade Rs. 240 per score; wet salted buff 1st grade 1 lb. 4 ozs. and 2nd grade 1 lb. 6 ozs. per rupee; Goat 1st grade Rs. 360 and 2nd grade Rs. 325 per 100 pieces; Sheep 1st grade Rs. 350 and 2nd grade Rs. 320 per 100 pieces.

COTTON FUTURES SLUMP AT CLOSE

(From Our Own Correspondent)

BOMBAY, *23rd April*

The cotton futures market ruled fully steady during the earlier part of the week under review, but turned easy on Saturday and the easiness gathered further momentum today. In fact, there was a slump in prices. The initial steadiness was influenced by renewed expectation of an immediate export quota announcement for staple cottons. The expectation was strengthened by the recommendation made by the Cotton Advisory Board at its *meeting held on Thursday that the Government* should release an export quota for ⅞" cotton and raise the basic floor price of cotton from Rs. 495 to Rs. 550 for the next season (1958-59) as an incentive for producers. It may be recalled that the Board of the East India Cotton Association also made similar recommendations last week. Traders thought that, with these two authorative bodies lending their support to the plea for a quota, the Government would consider it favourably. In fact, an announcement was considered imminent at any moment. Cotton futures, as a result, picked up much strength and values moved up. Subsequently, however, the sentiment of operators was adversely affected by the delay in the announcement of quota. On Saturday and today, those who had made purchases in anticipation of a quota sold heavily, with the result that there was a virtual *landslide* in values. Not only were the earlier gains completely erased but today's closing rates were substantially lower than those at the end of last week.

I.C.C. Moglai Jarilla (May 1958) opened the week at Rs. 656.00, as against the previous close of Rs. 654.25 and after improving to Rs. 662.50 the next day slumped to Rs. 653 on Saturday and further to Rs. 640.50 today. The closing was, however, a shade higher at Rs. 643. I.C.C. Moglai Jarilla (August 1958), after commencing the week Rs. 2 higher than the previous close at Rs. 668 moved upto Rs. 674.50 on Friday. Thereafter, it receded to touch Rs. 654.50 today before finishing higher at Rs. 655.25. The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	23-4-58	*High*	Low	16-4-58
I.C.C. Moglai Jarilla (May 1958)	643	662	640.50	654.25
I.C.C. Moglai Jarilla (August 1958) ...	655.25	674.50	654.50	666.00

The spot sections ruled depressed. Values showed a decline of about Rs. 10 per candy over the week. Mill demand was on a restricted scale, being mainly confined to quality cottons. Inquiries were noted for Laxmi, 0394, Khandesh, etc. Short-staples were neglected due to lack of demand reflecting the unhappy positions in respect of demand for coarse cloth.

The mills are not inclined to augment stocks in view of heavy accumulations of cloth stocks with them. It is said that the supply of raw cotton with mills is sufficient to cover only two months' requirements, as compared with the normal four months' stocks held by them. The trade has, therefore, been called upon to finance cotton and the downward trend in price reflects its inability to shoulder the burden for a *long* time.

In the export section, brisk demand was noted for Bengals and good business was also reported. The recommendation of the Cotton Advisory Board for the removal of the grade stipulation for export of Bengal *Deshi* was welcomed by the trade. In anticipation of a quota for staple varieties, export enquiries were noted for low grade Jaydhar, Kala and Wagad.

The foreign section was dull. Rules regarding the financial operations involved in the import of Egyptian cottons announced by the State Bank have not made importers happy. A memorandum issued by the State Bank of India in this connection calls on importers to contact shippers of jute and tea to negotiate the discount, if any, that can be applied to Egyptian cotton imports. Exporters will invoice tea and jute goods at a premium and will thus be able to sell Egyptian pounds to importers of cotton at a discount equivalent to the premium earned. The rate of exchange between the Egyptian export pound and Indian rupee will be mutually decided by exporters and importers. Although the State Bank will collect Egyptian pounds in the 'export account', the risk in regard to fluctuations in exchange rates will have to be borne by shippers themselves. Importers have found the system very complex. It is understood that they will urge the Government to simplify the procedure.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri; the figures in brackets being last week's closing rates:

Bengal *Deshi* 610 (620); Berar Jarilla 730 (740); Khandesh 775 (785); Oomra *Deshi* 660 (665); Vijay 885 (890); Hubli Laxmi 1,030 (1,040); Jaydhar 820 (830).

Delivery Contracts: Bengal 574 (583); Wagad 607; Kalagin 607.

Dull conditions prevailed in the Karachi cotton futures market during the week. Overseas demand was very slack and domestic spinner interest subdued. The recession in the U.S. and the textile crisis in Japan were the main features responsible for the poor demand from these countries. The protracted delay in the reduction of export duty on Pakistan cotton, as recommended by the Pakistan Central Cotton Committee, caused disappointment among traders.

The Alexandria cotton futures market continued to rule easy in the week under review also. The easiness was due to subdued export interest and higher final crop forecast for the season announced by the Ministry of Agriculture. The total production (less scarto) is placed at 8,827,000 cantars, as compared with the December estimate of

8,542,000 cantars and last season's actual crop of 7,061,000 cantars. Keen competitions from Sudan also affected the sentiment. Scattered liquidation and hedge selling in both long-staple Karnak and the medium-staple Ashmouni contracts met with only limited support. Consequently, values receded. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: May 77.50; July 78.65. *Ashmouni*: April 66.30 and June 67.45.

Cotton futures values in Liverpool registered handsome gains during the week under review. The fear of large shipment of C.C.C. cotton to the U.K. in the next three months was partly allayed. There were reports from New York that some stockists at least would pay the penalties for not exporting all the cotton purchased from the C.C.C. by the end of July next and sell their holdings to domestic mills. This led to fresh mill fixation and hedging by the trade, which pushed up the values. Sudan contracts were, however, neglected. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton 1" staple contract: May-June 25.06 ; July-August 25.40.
Sudan May-June 31.

An easy trend was in evidence in the New York cotton futures market during the week under review. Despite bullish weather news and reports of larger entry into Soil Bank Programme, values tended to look down. This was because of large-scale hedge setting and liquidation prior to the first May notice day, that is, 24th April.

The U.S. Administration is reported to have decided to replace next season the export sales programme on competitive bid basis by an export subsidy in kind. Other farm measures contemplated are the widening of the range within which price supports may be provided and the removal of the escalator formula which makes it mandatory for price supports to go up as supplies come down. These measures, however, would require Congressional approval.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	22-4-58	15-4-58	8-4-58
Spot	35.95	36.00	35.95
March	35.84	35.92	35.81
May	36.20	36.25	36.04
July	36.69	36.68	36.53

SUGAR FIRM

(From Our Own Correspondents)

BOMBAY, 23*rd April*

The sugar market ruled firm during the week under review. Stocks of sugar were poor. Arrivals were very low, being about 9,000 bags, as against 19,600 bags in the previous week. Consequently, sugar prices registered an improvement.

Large grains sugar advanced by a rupee to Rs. 110-Rs. 113 per bag. Medium grain rose by 50 nP to Rs. 107.50-Rs. 108. Small grain gained a like amount to Rs. 106.50.

* * * *

HAPUR, 21*st April*

Following reports that the Government was contemplating to increase the internal price of sugar with a view to subsidising exports, sugar prices recorded gains during the week. Good business was reported with most of factories on this side. Some more factories were said to have closed their crushing season, while the rest would continue to work up to the end of the month, as cane supplies to them was still adequate. The ex-mill delivery prices recorded a rise during the week.

Brisk buying enquiry from Punjab, Delhi, Gujerat, Rajasthan, Saurashtra and the South accounted for an advance of 6 nP to 25 nP per maund in ex-mill delivery prices of sugar in the Muzaffarnager market during the week. The final decision about the quantum of sugar which should be permitted for exports was keenly awaited and the present indications. A few factories near Muzaffarnager, it was said, were continuing crushing. The latest mill delivery prices were:—Iqbalpur (C29) Rs. 36.50; Rampur (A29) Rs. 37.50; Buland (B29) Rs. 36.75; Mansurpur (D29) Rs. 36.06; Daurala (B29) Rs. 37.25; Mowana (A29) Rs. 37.50; Modinagar (C29) Rs. 36.69; Amroha (D28) Rs. 35.31; Bijnore (E29) Rs. 35.25.

Reacting to steadiness in crystal sugar prices, *khandsari* prices also improved slightly. Demand, however, was normal and inferior grade was quoted between Rs. 28 and Rs. 30 and superior quality upto Rs. 33 per maund.

Ready *gur* ruled quiet with slack outside demand and decrease in daily arrivals to an average of 200 maunds. The local stock was unchanged at about 1.42 lakh maunds. Prevailing prices were Rs. 14.75 to Rs. 15.12 per maund.

Demand for *gur* was poor in the Muzaffarnager market also and prices declined by 50 nP to 75 nP per maund. *Shakker dara*, however, attracted good demand from Rajasthan side. Demand for *khandsari* was reported from nearly all the consuming centres and latest prices were:—*chakku minja* Rs. 17 to Rs. 17.75; *chakku kotha* mixed Rs. 16.50 to Rs. 17; *kotha* dry Rs. 17.25 to Rs. 17.50; *khurpa* rusket 9.50 to 11.25; *shakker dara* Rs. 17.50 to Rs. 19.25; *shakker masal* Rs. 20 to Rs. 22; *khandsari* Rs. 28 to Rs. 33.

A regular tussle between bulls and bears regarding *gur baisakh* delivery transactions is coming to a climax and both the parties are preparing for a showdown. Delivery begins from today.

Future prices moved narrowly. *Baisakh* was quoted today at Rs. 14.31 and *fagun* at Rs. 12.75, as against the week's opening of Rs. 14.22 and Rs. 12.62, respectively.

YARNS BEARISH

(From Our Own Correspondent)

BOMBAY, 23*rd April*

The bearish trend noted in the yarn market last week gathered further momentum during the week under review. Although the supply position in respect of rayon yarn continued to be difficult, enquiries from consuming centres were poor, as the handlooms and powerlooms considered the present prices too high. There were, besides, expectations of enlarged arrivals of imported yarn, following the statement of the Chief Controller of Imports and Exports that the Government of India was considering the possibility of granting import quotas for art silk yarn to established importers. There was, of course, the uncertainty as to whether the quota would be granted for the current licensing period or for the ensuing period. It was felt that, until this uncertainty was removed, the Bombay Yarn Merchants Association and Exchange Ltd. might not commence business in June delivery. Incidentally, the April contract, which has all along stood at the ceiling of Rs. 925, will terminate at the end of this month. In sympathy with rayon yarn and due to unsatisfactory reports of offtake from consuming centres staple fibre yarn also staged a retreat. There were rumours that some more South Indian mills had switched over to production of staple fibre yarns and many had actually made large offerings. Even at reduced prices, demands was stated to be at a low ebb. Cotton yarns continued to remain depressed. The offtake of yarn by weavers was very low. The recent increase in rebate on handloom cloth sales would appear to have had no significant effect so far. The stocks of cloth lying unsold with weavers and co-operative societies were still said to be very heavy.

Spot 120 Japan fell by 19 nP to Rs. 6.22. 150 Japan, 120 Italy and 150 Italy receded by 6 nP each to Rs. 6.41, Rs. 6.19 and Rs. 6.50, respectively. Indigenous yarns remained dull. National Rayons 150 bright cones first grade being done at Rs. 5.97 and 120 bright cones first grade at Rs. 5.75. Snia rayon yarns (120 dull cones) April delivery was nominally quoted at Rs. 925, as there were no transactions.

Staple fibre yarn (40 x 2) April delivery fell by Rs. 9 to Rs. 606. June delivery dropped Rs. 5 to Rs. 619. In the spot sections 40 x 2 Kohinoors and New Greats lost a naya paisa each to Rs. 3.30 and Rs. 3.20, respectively. Centurys and Citys were neglected, the former at Rs. 3.28 and the latter at Rs. 3.27. Foreign yarns, however, evoked support. Fujis were marked up by 28 nP to Rs. 7.44. Paramounts strengthened by 9 nP to Rs. 7.28.

In the cotton yarn section, ten counts Moderns and Podars declined by 25 nP each to Rs. 14 and Rs. 13.25, respectively. Among twenty counts, Moderns receded by 25 nP to Rs. 17. Indus were dull at Rs. 16.50. Forty counts Minaxis were neglected at Rs. 23.62 as also Moderns at Rs. 24.25 and Gokaks at Rs. 23.75. Sixty counts Raghuvamshis shed 13 nP to Rs. 50.62. Finlays were dull at Rs. 61. Among eighty counts, Mahendras changed hands at Rs. 69.50, same as last week. Moderns were on offer at Rs. 70.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	23-4-1958	16-4-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
126 dull Cones Snia April	925 00	925.00
120 Japan (per lb.)	6 22	6.41
150 Japan (per lb.)	6.41	6.47
120 Italy (per lb.)	6.19	6.25
150 Italy (per lb.)	6.50	6.56
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 April	606.00	615.00
44 x 2 June	619.00	624.00
40 x 2 New Great (per lb.)	3.20	3.21
40 x 2 City (per lb.)	3.27	3.27
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	13.25	13.50
20s Modern	17.00	17.25
30s Indu	..	20.00
40s Minaxi	23 62	23.62
60s Raghuvamshi	50.62	50.75
80s Modern	70.00	70.00

OILSEEDS REACT

(From Our Own Correspondent)

BOMBAY, 23*rd April*

The oilseeds market opened the week on a distinctly easy note and, after staging a smart recovery on the 18th inst., once again staged a relapse on Saturday which persisted today too. The easiness on the opening day was due largely to profit-taking operations. The firmness on the following day was aided by sustained buying in spot groundnuts by *vanaspati* producers and fresh purchases of castorseeds by speculative elements. Consequently, prices registered a handsome improvement. The market, however, put on a depressed appearance on Saturday and today. Linseed encountered selling, thanks to fears of heavy tenders against the maturing contract, in view of large floating stocks —estimated at 5,000 tons—in the city. Castorseeds also encountered selling induced by reports that there might not be any further reduction in export duty on castor oil. Fresh export business was lacklerised by large liquidation in spot and futures, while oils reacted to profit-taking by stockists. Over the week, cottonseed suffered a recession in prices, following weak advices from the cotton market, and *kardi* seed and *niger* seed were a shade easy.

Groundnut May contract advanced from Rs. 169.50 last week-end to Rs. 173.75 on Friday, but receded thereafter to touch Rs. 170 today. August delivery rose from Rs. 170.25 to Rs. 172.50 on the 18th inst. After declining to Rs. 171.25 on the following day, it increased to Rs. 172.50 today, but finished lower at Rs. 171.50. Ready Coromandal and Khandesh quality both dropped 50 nP to Rs. 35.50. Bold, after improving from Rs. 34.50 to Rs. 35.75, fell to Rs. 34.75.

Castorseeds May opened the week at Rs. 154.62 and spurted to Rs. 156.12 on Friday. Thereafter, it moved down gradually and stood at Rs. 151.12 at the close today. September contract hardened from Rs. 158.50 last week-end to Rs. 159.50 on the 18th inst. Under pressure of continuous selling, the contract fell to Rs. 155.12. Ready Madras dropped 82 nP to Rs. 30 and Kanpur quality 87 nP to Rs. 28.50. Castor oil commercial quality receded by 44 nP to Rs. 15.81. B.S.S. fell by 37 nP to Rs. 17.

Linseed May which stood at Rs. 30.81 last week-end declined to Rs. 29.62 before closing at Rs. 29.75. September contract shed 93 nP to Rs. 30.69. Bold ready fell by a rupee to Rs. 29.50. June-July was done today at Rs. 30.25, as against Rs. 31.37 last week. Linseed oil climbed down from Rs. 16.12 to Rs. 15.62.

Cottonseed May was well supported in the earlier sessions, the quotation rising from Rs. 106 to Rs. 108 on Friday. Subsequently, selling enhanced and the contract dropped to Rs. 104.50 today. September delivery strengthened from Rs. 108.25 to Rs. 110.50, but retreated to Rs. 105.25 today before finishing at Rs. 105.75.

Over the week, *kardi* seed bold ready lost 12 nP to Rs. 20. *Niger* seed Madras which had gone up on good buying support from Rs. 29 to Rs. 30.50 on Saturday came in for selling today, the closing rate being Rs. 28.75.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	23-4-1958	16-4-1958	9-4-1958
	Rs.	Rs.	Rs.
Groundnut—			
May 1958	170 00	169.50	163.62
August 1958	171.50	170.25	—
Bold ready (per cwt.	34.75	34.50	33.50
Linseed—			
May 1958	29.75	30.81	30.50
Sept. 1958	30.69	31.62	—
Bold ready (per cwt.)	29.50	30.50	30.00
Castorseed—

Commercial (per quarter) ..	15.81	16 25	15.50
Linseed oil †			
Ready	15.62	16.12	15.87

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

BLACK PEPPER MOVES DOWN

(Messrs. Parekh and Co.)

BOMBAY, 23*rd April*

Continuous absence of enquiries for Malabar black from New York made speculators in Cochin and Bombay soft sellers. They were willing to meet buyers. But no business worth noting was done, as exporters preferred to remain aloof unless there was buying from overseas. May delivery in Bombay came down to Rs. 575 under pressure of liquidation by stale bulls. May contract for garbled at Cochin in forward ring also gave way from Rs. 115 to Rs. 108 with tone uncertain. Most of the forward trading in pepper is emotional where operators, instead of following statistics or the law of supply and demand, look forward the chartists or astrologers. When prices fail to move according to their prediction, operators come out to sell in an unwilling market. As a result, prices are lowered indiscriminately, in spite of the steadiness at other origins like Sarawak and Singapore.

Singapore ruled steady during the week, with fluctuation of Str.$1 either way. Spot in New York improved to $0.27, but grinders were inactive, as they preferred to wait and were unwilling to pay higher.

Alleppey came down from Rs. 637½ to Rs. 612½, while ready garbled at Cochin was quoted at Rs. 105 from the highest of Rs. 111½ during the week. July delivery was quoted at Rs. 117½, the highest, and at Rs. 111½, the lowest, during the week.

In the A.S.T.A. section, April was done from $0.26¾ to $0.26 while May-June from $0.27 to $0.26½. At the time of writing, April and May-June are nominally quoted at $0.25½ and $0.26, respectively, without buyers.

In the delivery section, May delivery was quoted at Rs. 575-Rs. 585, without buyers with tone nervous.

Today's nominal quotations are: Ready Rs. 85 per Bengal maund ; May Rs. 575-Rs. 585 and June Rs. 585-Rs. 595 per candy of 5¼ cwts.

KIPS WEAK

(From Our Own Correspondent)

MADRAS, 21*st April*

Quiet pessimism prevails in the kip market. U.K. buying has been selective and small, with demand mostly for lower ends which are in short supply. Though stocks at origin are small, the U.K. importers do not seem to be anxious to buy for stock, but are following a hand-to-mouth policy because leather dressers are unable to obtain fresh orders. Shippers of F.A.Q. marks are offering kips at lower prices without bringing to book orders for

shipment, while small quantities in better marks, especially in light weights, have been sold at 2*d.* to 3*d.* below peak levels.

Arrivals of kips have been small and prices weak. Clearance is slow in all sections.

There is good call for tanned goat skins in light weights lower selection in superior tannages and all grades in 11/12 lbs. The market holds steady. Tanned sheep skins rule weak, as shipment business is poor. Arrivals of common tannages in both goat and sheep skins are small and demand poor.

In the May London tanned skins public sales, 450,000 tanned goat skins and 900,000 sheep skins will be offered for sale. It is believed that the market for goat will be unchanged and that for sheep deplorable, as the latter consists of old stocks and of poor descriptions.

WHEAT QUIET

(From Our Own Correspondent)

HAPUR, 21*st April*

Divergent trends prevailed in the foodgrain market during the week under review. Wheat ruled quiet, thanks to the presence of heavy quantity of imported wheat as Government reserve, while coarse grain recorded a hardening trend. Steadiness in prices at this time of the year, considered to be a period of plenty with the beginning of new crop arrivals, is rather unusual and must be attributed to two factors. First, the movement from threshing floors is still small due partly to the cultivators' anxiety to retain stocks for getting better returns soon and partly to untimely rains which have hampered threshing operations. Secondly *rabi* crops this year are reported to be below normal ; in U.P. alone, the overall *rabi* production is expected to be about 28 lakh tons, as compared with 29.6 lakh tons in the preceding season.

Wheat at Hapur ruled quiet. Inferior *dara* quality was quoted on Monday at Rs. 15.50 per maund and farm produce at Rs. 17. Daily arrivals from producing areas, which were at an average of 500 maunds, are now likely to go down for some days, due to rains received last night. Local wheat stock continues unchanged at one *khatti*. Reports from eastern districts of U.P. indicate that grain prices on the whole have risen there and crop conditions have been officially described as "below normal."

Rice continued to harden on reports of overall shortage, prices in some centres of the State having gone up by about Rs. 2 per maund in the last fortnight. Prevailing prices here were: Rice *basmati* Rs. 29 to Rs. 32 ; *mainpuri* Rs. 26 ; coarse quality Rs. 21.50.

Threshing reports from Punjab indicating poor gram crop there accounted for steady conditions in the gram section here during the week. Local arrivals continued to be scanty and stocks of old quality were unchanged at 12 *khatties*. Barley and *bejhar* improved fractionally during the week with the increasing seasonal demand in the face of poor new crop arrivals. *Jowar* and *guwar* ruled steady as being attracting good demand for seeds. The week-end prices (in rupees per maund) were: Gram 11.37 to 11.62; barley 10; *bejhar* 9.75; *jowar* 12 to 13; *guwar* white 15 to 15.25.

Arrivals of peas locally and from other centres of nearby eastern districts of U.P. continued to be heavy at an average of 2,500 maunds daily. As outside despatches during the week were small at about 10 wagons, local peas stock mounted to 125 *khatties*. Credit squeeze by banks, against grain stocks, however, accounted for a slight decline in prices of peas. *Arhar* arrivals were also fast mounting and averaged 500 maunds daily, but were likely to go down for some days due to rains. *Arhar* lost As. 4 per maund towards the week-end. *Moong* firmed up on firm advices from the producing areas of the South. The week-end prices (in rupees per maund) were: Peas *dara* 9.87 ; white farm upto 11.12; peas *dal* 11.25; *arhar* 12.06; *arhar dal* 15.75; *urd* 17.50 to 18.50 ; *moong* 22 to 23 ; *massoor* 16.25 per maund.

Future pulses recorded an easy trend and were now quoted near the worst level of the week due to continued bear pressure. Peas *jeth* was quoted at Rs. 10.06, *arhar jeth* at Rs. 12.50 and *urd biasakh* at Rs. 16.75 as against the week's opening of Rs 10.44, Rs. 12.95 and Rs. 17, respectively.

SUGAR

(Concluded from page 792)

than during many years in the past and the quantity of cane crushed has been lower than last year's. This is bound to affect sugar production during the current season which is not expected to exceed last years as was forecast earlier in the season when the expansion of *khandsari* was not so evident. What is more, the production of *khandsari* next year is expected to be double the production this year. If it comes anywhere near five to six lakh tons, it will surely affect the position of the sugar industry."

"It is also not possible to divide the *khandsari* and sugar consumers into watertight compartments. It has been seen in the past that, whenever *khandsari* was available at cheaper prices, a shift of consumption from sugar to *khandsari* did take place. If, therefore, timely action is not taken to regulate the growth of this industry and *khandsari* is available in abundance and at cheaper prices, it is bound to undermine the development of the sugar industry."

UTILISATION OF COTTONSEED IN INDIA

ITS ROLE IN COUNTRY'S ECONOMY

By M. J. John

THE greater part of India's cottonseed output is still used as fodder or fuel, due to the unsuitability of village mills for cottonseed crushing. Our second Five-year Plan has fixed a target of 30,000 tons for 1960-61, as against the present yearly production of about 10,000 tons, but, given suitable crushing capacity, a potential output of over 200,000 tons annually can easily be achieved. This important industry, besides making a sizable contribution to the country's overall needs of edible oils, can earn and save large sums of foreign exchange. This is evidently overlooked by the Planning Commission.

According to the latest statistical data available, world production of cottonseed is about 13.3 million tons, and about 355,000 tons of oil enter international trade by surplus shipments by producing countries. The largest exporter is the U.S.A., contributing 259,000 tons, the next being Sudan, shipping 22,000 tons yearly. India has an area of 20,230,000 acres under production with a very low yield of 1,399,000 tons, as against the largest production of 5,391,000 tons in the U.S.A. over an area of only 17,506,000 acres. However, the present efforts of the Government of India to grow better varieties of cotton is expected to produce good results before long.

Cottonseed utilisation is the preparation of the seed in such processes as delinting, dehulling, expression of oil, separation of the residue (cake), bleaching and refining of the oil, including deodorisation, neutralisation, separation of the sediment and the further processing before marketing the products and by-products for innumerable end-uses. The delinting process is important in that it has great potentialities of leading itself into a cellulose industry, as the cotton linters—the short fibrous material adhering to cottonseed after ginning—are the principal raw material in the making of cotton pulp.

Linters

Linters by type of cut are identified as "first-cut," "second-cut" and "mill-run." They are usually graded on the basis of grades 1 through 7. They are consumed in chemical uses in the form of linters pulp for the manufacture of rayon and acetate, fine writing paper and speciality papers. In the non-chemical uses, they are well known in making absorbent cotton, hospital bed pads, surgical sponges, sanitary napkins, automobile upholstery, apparel padding, felt industry and many others.

The main products which is the oil is marketed commercially in such grades as (1) crude: as pressed or extracted from the seed: (2) refined soap oil: not good enough for common edibles; (3) cotton edibles: oil completely neutralised by alkali but not deodorised; and (4) deodorised: the highest grade of tasteless oil.

Whole Oil

The whole oil is principally used as a salad oil for frying and also very largely in margarine. The oil also finds a large use for cooking and in cakes and biscuits. Cotton oil is one of the favourite oils for hydrogenating for edible purposes, particularly in America. "Foots" is used in the U.S.A. for a special kind of ice cream called "mellorine."

In removing the free fatty acids in the oil by means of alkali, an aqueous soapy emulsion is separated, and this emulsion carries with it much of a purple-black colour from the original oil. When this soapy residue (soap stock) is "broken down" with mineral acid a black oil is obtained, commercially known as black grease, being in fact the acid oil from cottonseed oil.

The oilcake obtained after pressing the seed forms one of the most popular cakes for cattle feeding. The decorticated cotton cake contains betwen 48-50 per cent. albuminoids and oil combined, while the undecorticated cake contains these two ingredients up to 33 per cent.

At the time of writing, the U.K. operators in oils quote for the Argentine semi-refined cottonseed oil for April-May delivery at £102 c.i.f. Rotterdam and for Indian cotton cake expellers 43 per cent. at £19 15*s.* c.i.f. U.K. ports. If the Indian production of cotton oil and cakes are stepped up and once abundant supplies were available, she could compete very well with any other origins in the international markets.

In the United States, cottonseed oil is the second most important edible oil, and the proportion of the crop crushed is very high, averaging 91 per cent. From a crop utilisation of about 5 million tons of seed, her export of oil earns a considerable amount of dollars and, besides, she produces about 2.2 million running bales of cotton linters of 500 lbs. each.

On the basis of quality alone, linters are the preferred source of cellulose in rayon and acetate and other chemical uses because of higher alpha content, better clarity, and better reaction to chemicals used in processing. It is estimated that a pound of linters yields about .750 pound of pulp, the much needed raw material for our paper and rayon industry.

For the utilisation of cottonseed, America supplies the most up-to-date machines and accessories. If a portion of the credit now available from the U.S.A. is allotted for the financing of such machines without any conditions regarding deferred payments and if proper encouragement is given to the private sector, a rapid development in this industry can be reasonably expected. The highly fluctuative nature of cottonseed, its oil and cakes, together with the speed with which transactions in these are concluded between the U.K. and India, makes it impossible for the public sector to venture in this industry.

SURVEY

(Concluded from page 783)

target fixed for 1960-61 is 249,760 lbs. Considering the current estimated annual demand of about 224,000 lbs., the leeway still to be made up is, indeed, considerable. Viewed thus, the need for providing incentives to the indigenous industry to maximise output so that it can cater to the entire domestic requirements can only be scarcely emphasised. The need is all the greater, considering that imports have gone up substantially in the past few years, over and above the estimated level of demand. The actual imports were 288,960 lbs. in 1956 and 320,320 lbs. in 1957. Surely to the extent domestic output is augmented, dependence on imports can be reduced, resulting in saving of much precious foreign exchange.

The quality of P.A.S. acid and P.A.S. calcium salt, we are told, conforms to the U.S. Pharmacopœia and B.P. specifications, respectively. Most of the T.B. clinics have informed the Tariff Commission that no striking difference can be noticed in the therapeutic effect of indigenous or imported products. There are, however, some instances, according to Mr. Ramasubban, of adverse criticism on the quality of the indigenous material, particularly in regard to colour and early deterioration in storage. The Drug Controller to the Government of India has reported that P.A.S. acid does not conform to U.S. Pharmacopœia test for clarity and colour of solution, besides failing to comply with the test for limit of meta-aminophenol. Similarly, P.A.S. calcium does not comply with the B.P. Codex test for the limit of nitrosalicylic acid.

According to Mr. Ramasubban, the principal raw materials required for the manufacture of P.A.S., such as meta-aminophenol, potassium carbonate, potassium hydroxide, activated carbon, methyl-isobutyl ketone, tertiary butanol and formic acid, are imported. The cost of imported raw materials accounts for 89.8 per cent. of the total cost of raw materials. Of the imported raw materials, meta-aminophenol alone constitutes about 60 per cent. of the total value of raw materials. In view of such heavy cost of this imported material, the plea for full remission of import duty on it put forward by Biosynth deserves to be sympathetically considered. Incidentally, it is said that the production of meta-aminophenol at the Government plant for the manufacture of intermediates under the National Industrial Development Corporation is contemplated.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (c) Clive Mills have paid dividend at Rs. 10‡ on bonus shares, for the year 1955. * Including bonus. (k) Investment.
† New Central Jute Mills—Dividend for 1956 is on shares of Rs. 10 each. The Albion and Lothian Jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
#—Part William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. F—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
After 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split in to shares of Rs. 100 each.

MARKET GOSSIP

(*Concluded from page 779*)

growth is checked in time, the progress of the schemes of economic, social and cultural advancement is bound to be retarded greatly.

Dr. Myrdal also did well to stress the need for India to plan not on the basis of national self-sufficiency but against the background of progress of Asia as a region. He was, however, not right when he dismissed as unreal the apprehensions expressed both in India and elsewhere at this country's decision to build a socialist structure of society. He is reported to have said: "It is my firm view that the pace is much slower in India than is warranted by the economic and political realities here. Not only the public sector is much less than in some of the north-west European countries but the amount of control exercised by the Government over the private sector is much less." Dr. Myrdal had evidently at the back of his mind his own country, that is, Sweden. It will not be quite correct to compare such a large and highly populated country as India with a relatively small country like Sweden. Nobody will, of course, object to a Welfare State through a mixed economy in which free enterprise would be given great scope, freedom and incentive for raising the economic strength of the nation. But what one objects to is that, in the name of socialism, the powers-that-be are legislating for confiscatory types of taxation and restrictive controls, the effect of both of which is to put the private sector in a strait jacket and in a distinctly disadvantageous position. If the present economic policy of the Government were to continue unchanged, bureaucracy would undoubtedly flourish and democracy would languish. Such a state of affairs, as we have ere now stated, will soon end in authoritarian rule and State capitalism which by no stretch of imagination can be called democracy.

BANKING

(*Concluded from page 786*)

today something we have not seen for many years: a halt in the upward trend of world economic activity.

PLANNING—A CONTINUOUS PROCESS

THERE is understandable relief in the country over the Prime Minister's decision to stay in office. He has borne the burden of his high office with courage and a determination which has rightly evoked much praise from all parts of the world. The years in which he has held office have witnessed many changes, both political and economic. With a supreme sense of conviction, born of his high idealism, he has fought revivalism in all its forms, steered the country through the fury of the communal storm and given the country a "secular" concept which does not ignore the higher values of life. Above all, he has at no time resiled from the democratic stand. He has stuck to the ideals for which the free world stands. It is true that instances may be quoted to show that the democratic content of the Constitution, which he helped so much to shape, has been whittled down by some of the more recent laws and amendments. But the Prime Minister has nowhere betrayed any impatience with democratic processes as such. In so far as the country sticks to these ideals, its progress in the social and economic spheres is bound to be certain as well as secure.

A notable feature of Mr. Nehru's more recent utterances is his insistence on self-reliance. At the annual meeting of the All-India Manufacturers' Organisation, he reiterated the point that the people should rely on themselves and work for their progress. He recalled once more his now well-known views on freedom of cooperatives from official interference. Clearly, the system of free enterprise too is based essentially on the principle of self-reliance. But those who are engaged in it have reasons to feel that the Government's economic policies do not always encourage them to give of their best in the cause of economic progress. To take only one instance. Is not a joint-stock company a practical expression of the ideal of self-reliance? And yet, does the Government encourage its formation and successful working? Does the Prime Minister's plea for self-reliance square with the official policies which have placed serious and intolerable burdens on the working of companies? Mr. S. N. Haji, Chairman of the All-India Manufacturers' Organisation, rightly urged that it was essential to encourage formation of more and more corporate enterprises in the industrial sector. He showed how it had already received a setback during the last year by drawing attention to the smaller number of public limited companies floated and the lesser issue of capital for which consent was given under the Capital Issues Control Order. Surely, irrespective of the validity or otherwise of a political philosophy designed to restrict personal wealth and personal income, there can be no justification for imposing the burden of high taxation on joint-stock enterprises.

For Mr. Nehru, economic reconstruction, far from being a mere catch-phrase for g

for deficit financing is maintained at Rs. 1,200 crores, the Government may resort to deficit financing to the extent of Rs. 283 crores in the last two years of the Plan. If resources do not come up to the Government's expectations, increased doses of deficit financing might become inescapable. That way, however, lies danger. For there is no denying the fact that deficit financing will lead inevitably to a further increase in the inflationary pressures. This could be avoided only through resort to flexible spending. This would imply that the authorities attach less importance to monetary expenditure than to physical achievement of important projects of national significance. Much waste and misdirection of official effort and resources could be prevented by allowing the private sector to play a more dominant role in the economic reconstruction of the country.

SALES TAX—II

A VITAL consideration in the imposition of sales tax is that it should not press too heavily on manufacturing costs. This is of particular importance to India, considering that many industries are already suffering from a high cost structure. A heavy sales tax fits ill into the present stage of industrialisation. In the West, sales tax came at the end of a long period of industrial progress, so that industrial units which had rationalised their production processes and brought down their manufacturing costs were better prepared for the tax. Appropriately enough, in its memorandum to the Sales Tax Enquiry Committee, the Committee of the Indian Merchants' Chamber, Bombay, has emphasised that, in any scheme of sales tax for the States, the Government must consider the effect of the tax on the State's many industries. Since Bombay is an industrial State, the scheme of sales tax cannot possibly ignore the effect of the tax on manufacturing costs. Again, so long as sales tax remains a State subject, it will be difficult to avoid variations in its incidence as between one State and another. It is for this reason that trade bodies have consistently pleaded for the centralisation of the levy. The Committee too has reiterated its view that, if the tax were centralised and its proceeds distributed among the States on the basis of collection or on some agreed formula, it would provide an effective solution to many problems with which the dealers in different States have been confronted. The scheme suggested in the Chamber's memorandum provides:

"(1) In respect of articles chargeable to Central excise, the levy of sales tax should take the form of an additional impost along with the excise to be recovered by the excise machinery; (2) alternatively, the excise machinery should be available and utilised for the collection of sales tax leviable in respect of the items in the Central excise list for and on behalf of the State Government; (3) in respect of the items not covered by the excise schedule, in the case of certain specified items most of which are products of organised industries, the sales tax should be levied at the first stage by the sales tax machinery of the State; (4) if, however, due to any reason, administrative or constitutional, the suggestions in (1) and (2) above are not found feasible, the sales tax on the articles in question should be collected at the first stage as in the case of articles mentioned in (3) above. (5) In respect of the remaining items, the levy should be single-point at the last stage."

The incidence of sales tax on manufacturing enterprises has not so far received the attention it deserves. To those who are interested in sales tax problems, the Report entitled *The Influence of Sales Taxes on Productivity*, published by the Organisation for European Economic Co-operation, is a document of great significance. The Report examines at great length the several systems of sales tax in European countries and also examines their impact on productivity. In discussing the several issues arising from the imposition of sales tax, the Report draws attention to various problems such as the integration of manufacturing concerns and the effect of the tax on the competitive ability of different enterprises, on capital goods and on the foreign trade of different countries. A system of general cumulative tax, it is pointed out, would encourage all-round industrial and commercial integration. This would be economically undesirable because specialisation offers many advantages.

A system of multiple selective tax is an alternative to a general cumulative tax; such a tax is imposed on separate products or categories of products. Selective taxes are imposed in the U.K. which operates the purchase tax system. As compared with a general cumulative tax, a single general tax has the advantage that it is borne uniformly by all products, whereas the incidence of a cumulative tax varies according to the product. Further, a single general tax does not initiate any movement towards integration; fair competition is ensured between different channels of production and distribution, between products and between firms. It is interesting to note that the Report rejects the view held by some French economists that a tax on energy should be the sole basis of all taxation. Maintaining that energy today is the source of all wealth, just as land was to the physiocrats in the eighteenth century, the reformers advocate that energy should be the basis of all taxation. The Report points out that, if this view were accepted, there would be a substantial increase in the price of energy and the prices of products in which energy is a very important factor (for example, iron and steel, cement and aluminium). Such a system would also involve solutions to intricate problems of the relative importance of different forms of energy. The Report warns that a system based on the taxation of energy would bring back into favour untaxed sources of energy and induce a return to "archaic methods such as the windmill, gas generators, animal traction and so on."

Two considerations are emphasised in the Report. One is that a system of sales tax, if it should not hamper the improvement of productivity, should consist of taxes which in principle could be shifted easily and in full. Further, the tax must not penalise the factors of production, namely, plant and machinery and energy, as compared with the other factor of production, namely, labour. It must apply uniformly to all factors of production and must not discriminate against either plant and machinery or energy. In this connection, it observes:

"First, taxes charged at the stage of raw materials or primary production undoubtedly penalise machine power compared with human labour, since the machines used in the manufacture of a product have borne tax, whereas the human labour which these machines are intended to replace has not. The price of a machine-made product, therefore, contains an additional proportion of the tax compared with the price of a hand-made product. In order to avoid this result, it would be necessary to exempt raw materials intended for the production of machines and of capital goods in general. Provisions of this kind would necessarily be very complicated, in view of the different possible uses of a given raw material and they might even prove to be unworkable.

"Assuming, however, that such provisions could be adopted, they would nevertheless have the effect of eliminating the basic advantage of a system of taxes charged at the beginning of the chain of production, namely, simplicity of application resulting, in particular, from the small number of persons subject to the tax, i.e., the producers of raw materials. Such provisions would in fact make it necessary to keep track of the use made of such raw materials in subsequent stages of production and distribution. Secondly, taxes charged at the retail stage are undoubtedly neutral in their effect on the mutual substitution of human labour and machine power.... Finally, it may be said that, if the tax is to maintain its neutrality between human labour and machine power, it must be either charged at the retail stage; or it must be a tax on added value."

It is noteworthy that the Report has examined at considerable length the systems of sales tax which are prevalent in nine European countries. It divides these systems into four groups. It calls the first group the general cumulative tax group, to which Germany belongs. The second group consists of the U.K. purchase tax. This can be called a scientific system of multiple selective tax. The third group is that of mixed empirical systems. To this group belongs Belgium and Italy. The fourth group consists of systems of single general tax. It includes the French added value tax and the Turkish tax on production. Some notable features of the different systems of taxation may be indicated here. In Germany, the general rate of tax is 4 per cent. Some food products are taxed at only 3 per cent. and some forestry products at only 1½ per cent., while wholesale transactions are taxed at 1 per cent. There is no luxury tax as such. The category of exemptions applies to wholesale trade in certain raw materials and semi-finished products such as cotton, coal, oil, cereals, potatoes, metal products, milk and wool. A surcharge of 3 per cent. is imposed on direct retail sales made by a producer; such sales by a producer to the ultimate consumer are, therefore, taxed at a rate of 7 per cent. The Report, in the course of its comments on the German system, remarks that it indiscriminately encourages vertical integration of manufacturing concerns. The British purchase tax, on the other hand, has no influence on the concentration or specialisation of undertakings. It does not also discriminate between one factor of production and another. The Report holds that, as a tax which can be used as an instrument of economic control, the purchase tax is an ideal tax on transactions. It presents no obstacle to improvement in productivity.

The French system includes an added value tax, a tax on services and a local tax. The added value tax applies generally to sales and imports of goods. It is a single general tax levied by means of fractional payments at each stage in the chain followed by a given product. Both producers and wholesale dealers pay the tax. Building contractors have also been brought within the scope of the tax. The basic feature of the tax is the system of deductions. When making their monthly return, taxpayers are entitled to deduct from the amount of tax assessed on their sales the tax borne by the goods and services purchased by them during the preceding month. This deduction is subject to certain conditions. Thus, the goods and services must have been acquired for the purposes of the undertaking and must correspond to its normal and genuine needs. They must have borne the added value tax (or the tax on services where appropriate), must be intended for the manufacture or sale of products subject to the added value tax, or for exports.

The added value tax applies to industrial and commercial transactions. It does not, therefore, apply to the liberal professions, to agriculture, or to salaried or wage-earning work. There are, moreover, four categories of products which are subject to single taxes and are outside the scope of the added value tax: meat, wines and cider, coffee and tea, and oil products.

After an elaborate examination of all the systems of taxation, the Report makes certain general suggestions. In the first place, the use of cumulative taxes, it is stated, should be strongly discouraged. As far as possible, the countries which now impose such taxes should replace them by non-cumulative taxes. Secondly, taxes charged at raw material stage should be eliminated; this is true of taxes on power. Thirdly, measures likely to prevent the tax being shifted in full should be avoided. Fourthly, whatever may be the purpose of a tax, whether it is for revenue purpose or for both revenue and economic purposes, it must not discriminate against one factor of production as compared with another. This result is achieved by the three types of taxes on transactions, namely, a single general tax on retail sales, a system of purchase tax which does not apply to land and equipment, and an added value tax covering channels of production and distribution at all their stages, or at least up to, and including, the wholesale stage.

Finally, the choice between these three types of taxes depends on the purpose which the tax is intended to achieve. If the intention is to exercise a direct influence on consumption, a system of purchase tax should be adopted. If the tax is intended to cause minimum disturbances to economic conditions, it is desirable to have a single general tax on retail sale or an added value tax. The choice will thus mainly depend on the special conditions prevailing in each country. The single general tax can be adopted when the number of retail distribution points is comparatively small. On the other hand, when the number of such distribution points is very large, the added value tax stopping at the wholesale stage is preferable.

In view of the great importance which sales tax has assumed in recent years and its effect on trade and industry in the country, we would strongly urge that the whole subject should be examined at an all-India level. We have no doubt had some important investigations in individual States. In Bombay, too, we look forward to expert investigation of the problem. Valuable as these enquiries are, they can never eliminate the need for a nation-wide survey of sales tax problems. Surely, if Europe which consists of different countries has found it necessary to get their systems of sales tax examined by an independent body of experts, the need for a similar examination is much greater in this country which consists of States which are both politically and economically welded into a single unit.

(*Concluded*)

FURTHER RELIEF IN EXCISE DUTY ON CLOTH UNLIKELY

GIFT TAX—SCHEMES FOR SUGAR EXPORT

THURSDAY, 5 P.M.

MARKET GOSSIP

THE share market, particularly the steel section, is in a mood to await the outcome of the threatened strikes at Jamshedpur and Burnpur and Kuiti Works. Despite the action taken by the Bihar and West Bengal Governments in declaring the strikes as illegal, the workers' unions are in no mood to come to terms. They have decided to go on strike. Whether it will remain a token one or will be extended, the market is not able to judge. Textile counters have been somewhat active and sizable gains have been recorded on a wide front, the main inspiring factor being the hope of a further relief in excise duty. Such a hope, in the context of the National Development Council's deliberations, which have revealed that the Centre and State Governments will have to raise Rs. 100 crores by way of additional taxation to fill a part of the gap in resources, appears to be wishful thinking. At a meeting of the informal consultative committee of Parliament held in New Delhi on Tuesday this week, the Government spokesmen were reported to have turned down the suggestion for a further cut in the duty on coarse and medium cloth, as well as the proposal for levying the excise duty on an *ad-valorem* basis. The official view would appear to be that the only way to place the cotton textile industry on a better footing lay in reducing the cost of production through reorganisation and modernisation. It is significant to note, in this connection, that the Commerce and Industry Minister had only recently stated that the Government would take "other measures" to help the industry. There is also another side to the picture. It may be true that the shortfall in resources has to be filled up somehow. But, having realised the seriousness of the situation in the main export industries and shown an inclination to give them some relief, it remains to be seen whether the Government would come forward with fresh tax measures which would seriously jeopardise the economy of the country. It is also not known what scope there is for further tax measures.

• • • •

It may be wrong to look the Select Committee's gift horse in the mouth. But those who feel that the Select Committee has given the case for the tax away will do well to study the Bill again. Some important concessions have no doubt been made. They do not, however, add up to the disappearance of the tax on gifts. The important concessions include absence of aggregation of gifts for a five-year period (as provided in the original Bill) and exemptions of gifts of movable property situated outside India—such gifts will be taxed only if the donor is a citizen of India and is also ordinarily resident in India —gifts made by religious and charitable institutions, reasonable gifts to children's education and to employees and dependents by way of bonus, gratuity and pension and to the *Bhoodan* and the *Sampattidan* movements. Further, the Select Committee has provided for a uniform exemption limit of Rs. 10,000 every year. Certain *bona fide* business transactions will also be exempt from the tax. All this, however, leaves open the larger question whether the principle of taxing gifts is correct. As Dr. Krishnaswamy points out in his minute of dissent, "the whole principle of taxing of gifts is most pernicious, since it makes no distinction between gifts which are used as instruments of avoidance of taxation and those which reflect the finer and nobler instincts of men." Again, as Mr. Masani said, "India has a fine tradition of compassion and charity." This will now receive a setback. Surely, the Government is laying itself open to the objection that, in order to gain a paltry Rs. 2 crores by way of revenue, it is importing into the sphere of gifts inspection, valuation and control as well as revenue and tax, all of which are so foreign to the spirit which makes gifts possible.

• • • •

Elsewhere in this issue (*vide* page 892), we have discussed the prospects for Indian sugar exports and posed the question as to whether any additional tax would be levied on domestic consumption in order to meet the heavy loss arising from exports. Subsequent to the preparation of the above article—on Monday, to be precise—the Union Deputy Minister for Food, Mr. A. M. Thomas, revealed in the Lok Sabha that the Government of India was considering the two suggestions put forward by the Indian Sugar Mills Association (I.S.M.A.). One suggestion is for the formation of a corporation, consisting of all the sugar factories, which will be entrusted with the task of exporting sugar, any loss arising therefrom being recovered from the members. The second suggestion is that the sugar factories must be allowed a quota and, if they fail to export the full quantity, penal assessment should be levied on them. Incidentally, Mr. Thomas declared that the Government had also examined the question of utilising the agency of the State Trading Corporation for sugar export, but, as the hands of the Commerce and Industry Ministry were at present full, the Corporation would not be in a position to undertake it.

While one has to await the details of the two schemes proposed by the I.S.M.A. and the final decision that will be taken by the Government, it must be said that neither of the two schemes is sound and justified. Any move designed to compel the sugar factories to become members of the Sugar Export Corporation will tantamount to encroachment on the freedom of trade and occupation. Apart from the solid grounds of principle on which monopoly trade in any form is objectionable, practical considerations rule out monopolistic methods for building up a sustained export trade in sugar. When the export trade in all other commodities is being carried out by individual manufacturers and shippers, there is no reason why sugar must be made an exception. The vesting of monopoly powers to export sugar in a special organisation will, we repeat, imply wasteful and costly effort. As the world trade in sugar is to remain highly competitive, monopoly is bound to fail, except at heavy sacrifices for domestic consumers and taxpayers. Further, there are misgivings about the practicability about the setting up of the proposed Sugar Export Corporation. The question of recovering the losses on exports from the sugar factories will give rise to many complications. It is not known whether the losses to be recovered from sugar factories will be on a *pro rata* basis or on the basis of the quantity of sugar made available by each factory or the financial position of the individual units concerned.

As regards the second suggestion, it is clearly wrong to subject the sugar factories which fail to export the full quantity to a penal assessment. Who can say at this stage as to what will be the conditions in export markets in the coming months and years? If the export markets slump and Indian sugar becomes totally unsaleable despite the best will in the world, is the Government justified in levying a penal assessment on the undisposable sugar meant originally for export? Surely, the international market in sugar is governed by so many uncertain factors over which the Indian factories have no control that it is futile to pin down factories to the condition of maintaining exports of sugar equivalent to the quota fixed, failing which they will be penalised to pay a penalty. In view of the severe competition in world sugar markets from countries which have considerable advantage in the shape of low production costs, what the industry at present needs, on account of its cost disability, is positive export incentives in the form of reduced taxes, lower cane prices, better transport facilities and a more helpful policy designed to enable the sugar factories to modernise their machinery and equipment.

Shareholders' approval is being sought by the Bombay Burmah Trading Corporation Ltd. for its proposal to capitalise, subject to the sanction of the Controller of Capital Issues, a sum of Rs. 26.75 lakhs and distribute scrip bonus to the existing shareholders. The terms of the bonus issue are slightly different from those indicated in these columns in the issue of 19th April 1958, in that the holders of fully paid-up shares of Rs. 2,500 each are also entitled to the bonus issue. According to the terms now announced, five shares of Rs. 125 each fully paid-up will be given for every fully paid shares of Rs. 2,500. The holders of Rs. 125 fully paid-up

(Continued on page 919)

U.K.'S BALANCE OF PAYMENTS

From Our Own Correspondent

LONDON, *1st May*

LONDON LETTER

THE Government's recent analysis of the U.K.'s balance of payments gives full details of the make-up of both the debit and credit items and brings out the significant fact that an active balance of payments for the country depends almost entirely on the invisibles. In 1955, the visible balance was adverse by £366 million, in 1956, it was adverse by only £61 million and in 1957, by £97 million. Both these latter figures are lower than in any previous year. It is remarkable, indeed, how near to a balance on visible account the country has now got, as the following table which takes the four last half-yearly periods shows:

(In £s millions)

	1956		1957	
	Jan.-June	July-Dec.	Jan.-June	July-Dec.
Imports (f.o.b.) ..	1,739	1,736	1,814	1,791
Exports and re-exports (f.o.b.)	1,706	1,708	1,776	1,732
Adverse balance ..	33	28	38	59

It must be noted that the goods which add up to these figures are valued at their costs at the point of shipment. These are not the same figures as the Board of Trade produces currently and which shows imports c.i.f.; they are goods without sea transport. In assessing the significance of services in the U.K. balance of payments, it is best to make the valuation of goods in this way since so many goods imported in the country come in British bottoms and the freight charge is not adverse to this country in a currency sense.

The next table shows the invisible items analysed as to whether they represent income or expenditure, and the net revenue gained from them.

Invisibles 1957

(In £s millions)

	Payments out	Receipts	Net gain or loss (—)
Shipping	430	545	115
Interest, profits and dividends ..	250	350	100
Travel	140	130	—10
Miscellaneous items	86	308	222
Government:			
Colonial grants	88		
Relief grants and international contributions (non-military)..	15		
Costs of diplomatic services including pensions	33		— 86
Military expenditure	162	21	—141
Miscellaneous Government receipts	..	84	84
	1,104	1,438	334

The credit item of £21 million which is shown against military expenditure is the net receipts of defence aid. Although military expenditure is a very big item, it has not increased much in the last three years; in 1955, the total without allowing for defence aid was £157 million, in 1956, it was £179 million (that was the year in which Suez had to be paid for) and in 1957, £162 million. At the same time, however, defence aid has gone down from £46 million in 1955 to £26 million in 1956 and £21 million in 1957 so that the net cost to the country of military expenditure which was £111 million in 1955 was £153 million in 1956 and is only a little less for this past year. But, against the country's net favourable balance of £237 million in 1957, an overseas military cost of £141 million looks substantial. Without that cost the country's favourable balance would have been £378 million. In 1956, it would have been about £420 million.

Now that the country's overseas visible trade has very largely struck a balance, the invisibles assume a special significance. It has seemed natural to stress the importance of increased exports and the increase of shipping income is often thought of as part of the country's export drive. Leaving these items aside, the other income flowing into the country is very largely the result of past investment and the principal offsetting expenditure is, of course, the military one.—*All Rights Reserved.*

SHARE MARKET STEADY

TEXTILES MARKED UP

(From Our Own Correspondents)

BOMBAY, *8th May*

EQUITIES ruled fairly steady on the Stock Exchange during the week under review. Textiles and a few other miscellaneous counters were active and scored sizable gains. The market no doubt heaved a sigh of relief on the Prime Minister's decision to stay on in office, but this did not have any bullish effect on the market. For this was followed by reports that there would be a shortfall of Rs. 240 crores in the outlay target of Rs. 4,500 crores voted by the National Development Council for the core projects and that a part of it, namely, Rs. 100 crores, would have to be met by additional taxation by the Centre as well as the States. The market was somewhat bewildered by this report, particularly when there was an all-round demand for a reduction in taxes. The absence of any settlement so far in regard to the threatened strikes in the Tata Iron and Steel Company and Indian Iron add Steel Company also caused hesitancy among the operators. The proposed strikes in the two companies have been declared illegal by the respective State Governments. Nevertheless, the workers' unions have decided to go on a token strike and workers have reserved the right to continue it, if deemed necessary.

Despite these two disquieting factors, the market maintained a steady tone under the leadership of textiles which received good speculative support on expectations of further relief in excise duty and scored impressive gains. Towards the close, there was profit-taking in textiles which affected other counters as well to some extent.

Tata Ordinaries receded from Rs. 181.25 to Rs. 178.50 before recovering to Rs. 181.75. The closing was done at Rs. 181.50. The new shares, however, gained over the week Re. 1 to Rs. 178. Indian Irons were marked down Rs. 21.84 to Rs. 21.48. After gaining ground to Rs. 21.80, they finished at Rs. 21.72.

In the textile section, Bombay Dyeings improved from Rs. 55.30 *cum-div.* to Rs. 54.40 *ex-div.* (final dividend Re. 1.75), but closed a shade lower at Rs. 54.20. Centurys rallied on active support from Rs. 431.50 *cum-div.* (final dividend Rs. 14) to Rs. 433.50 *ex-div.* Kohinoors firmed up from Rs. 263 to Rs. 268.50 and closed at Rs. 267.50. Finlays were done at Rs. 258 *ex-div.*, as against Rs. 278 *cum-div.* (dividend Rs. 20), while Indu Ordinaries dropped 16 nP to Rs. 9.16. Khataus were marked up by Rs. 3 to Rs. 158 and New Greats by Rs. 5 to Rs. 203. Mysore Spinnings gathered Rs. 5 to Rs. 95. Shree Niwas Cottons shed Re. 1 to Rs. 136, while Simplex gained over the week Rs. 2 to Rs. 154.50. Standards were done at Rs. 418 *ex-right*, as against Rs. 478.50 *cum-right* a week ago. Svadeshis scored a gain of Rs. 5.50 to Rs. 176.50 and Swans closed at Rs. 331 *ex-div.* (div. Rs. 25), which on a *cum-div.* basis showed a rise of Rs. 6. Tata Mills were steady at Rs. 37.50.

Bank shares were steady, but the movements were narrow. Barodas closed at Rs. 116 and Centrals were done 30 nP lower at Rs. 53, while their new shares gained 25 nP to Rs. 56.75. Bank of Indias were a shade better at Rs. 130. Punjab Nationals looked up to Rs. 52.50 *ex-div.* United Commercials gained 30 nP to Rs. 59.50.

Among electricity shares, Ahmedabad Electrics moved up by 20 nP to Rs. 94.70, while Bombay Suburbans dropped 75 nP to Rs. 105.75. Surat Electrics were unchanged at Rs. 107.75, but Tata Hydros picked up 50 nP to Rs. 118.25. Tata Powers advanced by Rs. 25 to Rs. 1,222.50, while Andhra Valleys showed no change at Rs. 1,155.

Sugar shares showed no definite trend. Belapurs moved irregularly between Rs. 247.50 and Rs. 244 before closing at Rs. 245.50. Phaltans were done Re. 1.75 higher at Rs. 141.25 and Walchandnagars changed hands at Rs. 263 *ex-div.* (dividend Rs. 21), as against Rs. 280 *cum-div.* Changdeo Sugars were, however, done Rs. 2.75 lower at Rs. 26. In the cement group, Associated Cements moved up from Rs. 153.50 to Rs. 155.25 before closing at Rs. 154. Their new shares gained over the week Re. 1 to Rs. 148. Digvijays were a shade quiet at Rs. 146 and Orissa Cements at Rs. 12.32. Among engineering and mining shares, Alcock Ashdowns suffered a setback from Rs. 250 to Rs. 247.50, following the cut in dividend from Rs. 15 to Rs. 12.50 for the year 1957. Tata Locomotives gave way from Rs. 167 to Rs. 163.25, but soon recovered to Rs. 167.50. The closing was, however, done lower at Rs. 166. Premier Constructions gathered Rs. 2.50 to Rs. 193.50 and Larsen and Toubros 8 nP to Rs. 15.80. Mahindras were done 12 nP higher at Rs. 18.68. Shivrajpurs scored a fractional gain to Rs. 92, while Indian Coppers were unchanged at Rs. 3.14.

Scindias were marked down from Rs. 17.64 to Rs. 17.36 and, after a revival to Rs. 17.64, closed at Rs. 17.52. Great Eastern Shippings dipped from Rs. 20.04 to Rs. 19.84. Hindustan Motors were dull at Rs. 6.84 and Premier Automobiles at Rs. 82.50.

In the miscellaneous group, Bombay Burmahs were erratic, moving between Rs. 561 and Rs. 539.50. The closing was done at Rs. 556, a gain of Rs. 2 over the week. National Rayons provided the feature of the week with a smart gain of Rs. 9.50 at Rs. 234.25 on strong support induced by the good outlook for the Company. Tata Chemicals were featureless at Rs. 15.04 and Tata Oils at Rs. 38. Hindustan Levers were a shade lower at Rs. 21.24. Amar Dyes came to prominence with a rise of Rs. 7.75 to Rs. 97.75. I.C.I.C. had business at Rs. 73. Killick Industries changed hands at Rs. 147.50 and Voltas at Rs. 123. West Coast Papers were done at Rs. 72. Wimcos improved by Re. 1.25 to Rs. 173.75.

Calcutta Stock Exchange

CALCUTTA, *7th May*

The fears about the labour situation in both Burnpur and Jamshedpur and weaker advices from Bombay affected sentiment in the speculative counters on the Calcutta Stock Exchange during the week under review. The announcement by the Asansol Iron and Steel Workers' Union of Burnpur of a settlement with the management was noted; but on account of Union rivalries the situation was believed as not altogether free from anxiety. Further, the Prime Minister's earlier announcement seeking retirement lulled sentiment in view of possible political implications. However, Mr. Nehru's subsequent decision to stay on in office was well received by the market, but no improvement in activity was noted. This was because other factors intervened to keep down sentiment.

The Central Government's loan announcement, the anxiety about the prospects of tea companies disclosing as satisfactory results as in the past year, in view of the decline in tea prices and the indication that the L.I.C.'s purchasing programme of shares would be limited for the immediate future were all factors which imparted a quiet trend. The National Development Council's disinclination against any reduction in the total plan outlay of Rs. 4,800 crores did not have any effect on the market.

Nevertheless, selected miscellaneous industrials and other counters were taken up at hardening rates on yield considerations. Other engineering shares were steady, and the rumour of an imminent increase in steel retention prices continued. Jute shares were better in view of the uptrend in jute goods and the possibility of the jute crop reaching mills in time.

Selected features were recorded in the coal section. Pench Valleys hardened to Rs. 19.94 from Rs. 19.50. Central Indias, after realising Rs. 7.90, reacted to Rs. 7.65. Bengals were pushed up to Rs. 230 from Rs. 224, while Burrakurs and Western Bengals were unchanged at Rs. 22 and Rs. 5.81, respectively.

The jute section also accounted for a few features. Nuddeas had risen to Rs. 37.50 from Rs. 36.50 before closing at Rs. 37.25. Belvederes were a few points higher at Rs. 79, as were Caledonians at Rs. 122. Nellimarlas realised Rs. 11.81, as against Rs. 11.37 a week ago. Alliances found buyers at Rs. 67, as against Rs. 64. Ganges were unchanged at Rs. 44.50. Howrahs sagged to Rs. 15 from Rs. 15.31, but subsequently rose to Rs. 15.37. Nationals were maintained at Rs. 24.

Among teas, Hantaparas rose to Rs. 113 *sd.* from Rs. 109 and Patrakolas to Rs. 131 from Rs. 127. Ranicherras had buyers at Rs. 15.37, as against Rs. 15.06 previously. Brooke Bonds were steady at Rs. 16.06. On the other hand, Choonabhuttis declined to Rs. 267.50 from Rs. 271 and Tezpores to Rs. 14.75 from Rs. 15.

In the engineering section, Burrakurs gave way to Rs. 331 from Rs. 335 and Jessop & Cos. were quiet at Rs. 20. After remaining unchanged at Rs. 9, Kumardhubis staged a late improvement to Rs. 9.06, while Texmacos were quoted at Rs. 18.20. Hooghly Dockings were lower at Rs. 107, but Braithwaites rose to Rs. 26.31 from Rs. 25.50. Indian Irons opened at Rs. 21.64 and after rising to Rs. 21.97, gave way to Rs. 21.51.

Miscellaneous industrials were steady. Alkali and Chemicals were favoured at Rs. 14.69. Dunlop Rubbers were fully steady at Rs. 25.44. Indian Oxygens improved to Rs. 18.25 from Rs. 18.12. Indian Aluminiums were taken at Rs. 13.12, as against Rs. 13 earlier.

Madras Stock Exchange

MADRAS, *6th May*

The steady trend noted on the Madras Stock Exchange last week abated during the week under review. In fact, the market ruled distinctly easy. Business put through was smaller, as compared with the previous week, and value registered a decline. Operators were apprehensive of fresh taxes being levied. The deliberations of the National Development Council revealed that the outlay on the second Five-year Plan had been pruned from Rs. 4,800 crores to Rs. 4,500 crores and that, even for meeting this reduced outlay, there would have to be additional taxation to the tune of Rs. 100 crores in the coming three years, the balance being met from borrowings and small savings. Advices from Bombay and Calcutta were also not encouraging. Plantation shares were affected adversely. There was disappointment among traders over the undue delay in the Government's announcement of relief in export duty on common teas. There was also some profit-taking and a tendency to reduce commitments. Textiles were subjected to selling, while adequate support was absent. Electrics were easy, as also sugars. Miscellaneous industrials followed the general trend.

Among tea shares in the planting section, Kil Kotagiris declined by 17 nP to Rs. 5.80. United Nilgiris retreated by 40 nP to Rs. 15.70. Nonsuch Teas receded by 10 nP to Rs. 21.50. Waterfalls shed 5 nP to Rs. 3.12. Blue Mountains eased by 3 nP to Rs. 3.03. Periakaramalais softened by 2 nP to Rs. 4.13. Peermades fell by 60 nP to Rs. 21.75 *cum-div.* reflecting disappointment of operators over the announcement of final dividend of 17½ per cent., making a total of 25 per cent. for the year ended 31st December 1957, as against 37½ per cent. in the previous year. Twyfords, however, elicited special enquiries and gathered 10 nP to Rs. 13.35. Among coffee shares, Savamalais declined by 12 nP to Rs. 4.30, Ouchterlonys by 15 nP to Rs. 4.80 and Consolidated Coffees by 5 nP to Rs. 24.80. Amalgamateds, on the other hand improved by 40 nP to Rs. 11.25 on investment support. Among rubber shares, Nenmenys dropped 75 nP to Rs. 15 *cum-div.* Tropicals fell by a like amount to Rs. 23.50 *cum-div.* T.R. & Ts declined by 22 nP to Rs. 7, Teekoys by 16 nP to Rs. 6.40 and Cochin Malabars by 12 nP to Rs. 4.85.

In the textile section, Coimbatore Murugans slumped by Rs. 5 to Rs. 115. Coimbatore Spinnings were marked down by Rs. 3.50 to Rs. 53.50. Metturs and Coimbatore Pioneers lost Rs. 2 each to Rs. 343 and Rs. 225, respectively. Radhakrishnas declined by Rs. 3 to Rs. 125. Vijayalakshmis dropped a rupee to Rs. 100. Trichinopolys receded by 90 nP to Rs. 11.70, Maduras by 40 nP to Rs. 33 and Kotharis by 25 nP to Rs. 10.25.

Among miscellaneous industrials, Travancore Chemical Manufacturings declined by 75 nP to Rs. 11.25. Aspinwalls receded by 40 nP to Rs. 7.50. F.A.C.Ts eased by 8 nP to Rs. 5.22. Aluminium Industries decreased by 10 nP to Rs. 13.25. Mysore Papers were done lower by 7 nP at Rs. 16.25 and Mysore Tobaccos by 5 nP at Rs. 12.55.

HINDUSTAN MERCANTILE BANK LTD.

A welcome improvement in the profit is disclosed by the audited accounts of the Hindustan Mercantile Bank Ltd. (General Manager: Mr. P. H. Kothari, Calcutta) for the year ended 31st December 1957. The profit has gone up from Rs. 4,631 to Rs. 1.80 lakh, but the bulk of the year's profit—Rs. 1.77 lakh, to be precise—has had to be utilised to write off loss on sale of investments, so that the profit available for appropriation is only Rs. 3,083. After bringing in Rs. 3,649, being the surplus of 1956, the Directors have transferred Rs. 2,500 to the reserve fund, same as in the previous year, and have carried forward Rs. 4,233 to the next year.

The Bank's income from interest and discount has gone up from Rs. 8.64 lakhs to Rs. 10.31 lakhs and that from commission and brokerage from Rs. 1.52 lakh to Rs. 1.71 lakh. Interest paid on deposits have risen from Rs. 3.84 lakhs to Rs. 4.19 lakhs, while expenses stand reduced from Rs. 6.09 lakhs to Rs. 5.91 lakhs.

The Bank's reserves stand at a low of Rs. 1.80 lakh, as against a paid-up capital of Rs. 50 lakhs. In consonance with the general trend, the Bank's deposits have enlarged by over Rs. 47 lakhs to Rs. 2.25 crores. The bulk of this rise is accounted for by current and contingency accounts which have gone up from Rs. 1.16 crore to Rs. 1.57 crore. Fixed deposits have risen from Rs. 54.51 lakhs to Rs. 60.78 lakhs. Savings bank deposits are up from Rs. 7.58 lakhs to Rs. 7.77 lakhs. Advances have not shown any rise at Rs. 1.48 crore, but, consequent on the rise in deposits, the credit ratio has declined from 83.1 per cent. to 65.7 per cent. Investments have been reduced from Rs. 91.40 lakhs to Rs. 69.35 lakhs, the market value of which is Rs. 66.02 lakhs. With an expansion in deposits without any rise in advances, the Bank has been able to reduce its borrowings from other banks from Rs. 32.40 lakhs to Rs. 4.55 lakhs and improve its cash balances from Rs. 18.35 lakhs to Rs. 62.34 lakhs, as much as Rs. 43.75 lakhs of which are kept in money at call and short notice. Consequent on the rise in cash balances, the cash ratio has gone up from 10.1 per cent. to 27.5 per cent.

NATIONAL RUBBER MANUFACTURERS LIMITED

The Board of Directors of the National Rubber Manufacturers Ltd., Calcutta, have recommended a dividend of 10 per cent. on the ordinary shares of the Company for the year ended 31st December 1957. Although the effects of fresh capital issued towards the end of 1957 are not reflected in the accounts for that year and extra production capacity arising out of the new plant and machinery required for the Company's expansion programme have not been utilised during the said year, working results, nevertheless, are said to be quite satisfactory and it has been possible for the Directors to recommend the dividend on the increased capital for the whole of 1957.

BRITISH BANK OF THE MIDDLE EAST

In reviewing the accounts of the British Bank of the Middle East for 1957, in our issue dated 19th April 1958, the Bank's profit of Rs. 11.17 lakhs was compared with that of Rs. 1.59 lakhs for 1956, Rs. 9.63 lakhs for 1955 and Rs. 2.12 lakhs for 1954. Such comparison is not correct. For, while the profit for 1957 is subject to taxation, those of the previous years were arrived at after providing for taxation.

NEWS IN BRIEF

THE time limit for submitting applications for the transfer of pre-partition post-office savings bank accounts and postal certificates from Pakistan has been extended by another six months, beginning from the 15th inst.

The all-India final estimate of maize for 1957-58 puts the current year's area and production of the crop at 9,762,000 acres and 3,064,000 tons, respectively, as against the partially revised estimate of 9,197,000 acres and 3,009,000 tons for 1956-57.

The appointment of a national seed committee for making recommendations on national seed improvement policy and encouraging the production and distribution of high quality seeds was approved at a meeting of the National F.A.O. Liaison Committee held in New Delhi last week.

Negotiations between the Kerala Government and Birlas for starting a rayon pulp factory in Kerala have almost been completed and an agreement will be reached shortly. The Rs. 9-crore factory which will be established near Beypore with a capacity of 100 tons of rayon pulp per day is expected to employ nearly 6,000 persons.

The Joint Chief Controller of Exports announced that shaftings, panel pins and cast iron castings will be allowed for export under open general licence. The Government of India has decided to licence freely, on an experimental measure, the export of sisal manufactures, other varieties on shipping bills to all permissible destinations up to the end of September this year.

The Indian Standards Institution has granted a licence to the Alkali and Chemical Corporation of India, Ltd., Calcutta, for the use of the ISI standard mark, in respect of BHC water dispersible powder concentrates conforming to IS : 562-1955. This standard mark appears either in stencilled form on the containers or is printed on the labels applied to the containers. The containers so marked convey an assurance to the purchaser that the material has been manufactured under controlled conditions and is of the quality as laid down in the Indian standard.

Important reserves of economically workable limestone and dolomite have been located by the Geological Survey of India in Gangpur area of Sundargarh district in Orissa State. Besides Birmitrapur, Panposh, Amghat and Hathibari deposits worked by two different companies, the Department has also traced a hitherto unrecorded deposit of cement-grade limestone occurring over an area of 2,400 feet by 150 feet at Ludhkutoli, 10 miles north of Garpos railway station. According to the Geological Survey of India, limestone and dolomite in the area are distributed along two main zones forming the northern and southern limbs of the Gangpur series of rocks.

The total iron ore reserves in Andhra State are estimated at about 430 million tons. The best quality of iron ore having 50 to 65 per cent. of iron content is found in Kurnool district which is said to have a reserve of 3.7 million tons. The quality of iron ore found in Hyderabad district with 37 to 43 per cent. of iron content is estimated at 37 million tons. The largest deposit has been traced in Guntur district—296 million tons—with an iron content of 33 to 37 per cent. Of the total reserves in the State, the poorest quality of iron ore with 25 per cent. iron content only is found in the district of Nellore which has 93 million tons of reserve.

Five hundred schemes for the development of small-scale industries in different States and Union Territories were sanctioned by the Government of India during the financial year 1957-58. The State Governments submitted 472 schemes during the year for which Central funds aggregating Rs. 49.20 crores were sanctioned. Besides, the Union Territory Administrations were authorised to incur a total expenditure of Rs. 87.91 lakhs in respect of their 28 schemes. This makes an appreciable progress on the previous year's record of 317 State Government schemes and 35 Union Territory schemes for which Central funds to the extent of Rs. 4.44 crores and Rs. 50.64 lakhs, respectively, were sanctioned.

The Government of India has appointed a Board of Directors for the Hindustan Salt Company (Private) Limited with Dr. G. P. Kane, Industrial Adviser (Chemicals), Ministry of Commerce and Industry, as Chairman and Mr. R. N. Vasudeva, Salt Commissioner, as Managing Director. The other members of the Board are: Mr. T. Vedantam, Under Secretary, Ministry of Finance; Dr. A. N. Kappanna, Central Salt Research Institute, Bhavnagar; Mr. P. N. Kathju, Council of Scientific and Industrial Research, Jaipur, and Messrs. G. D. Somani and N. C. Kaslival, Members of Parliament. The Company has been set up by the Government of India to take over the Government salt works at Sambhar and Didwana in Rajasthan and Kharaghoda in Bombay. Registered on 12th April 1958 under the Companies Act, the Company will, among other things, undertake the manufacture, utilisation and processing of salt and its by-products. The authorised capital of the Company is Rs. 1 crore.

The total gross sea, land and air customs revenue collected in the Indian Union during the month of December 1957 amounted to Rs. 13.99 crores, as compared with Rs. 15.31 crores in the corresponding month of the previous year. Of the total customs revenue collections, import duties accounted for Rs. 11.19 crores, as against Rs. 11.82 crores, export duties for Rs. 2.04 crores, as against Rs. 3.20 crores, land customs and miscellaneous for Rs. 65 lakhs, as against Rs. 29 lakhs and air customs for Rs. 11 lakhs. The total gross collection of Union excise duties amounted to Rs. 22.53 crores, as compared with Rs. 19.84 crores. During the nine months ended December 1957, the grand total of gross customs and Union excise revenue realised was Rs. 331.63 crores, as compared with Rs. 264.95 crores in the same period in 1956-57. Of this amount, import duties accounted for Rs. 116.54 crores, as against Rs. 102.26 crores, export duties for Rs. 18.22 crores, as against Rs. 21.87 crores, land customs and miscellaneous for Rs. 3.90 crores, as against Rs. 2.65 crores, air customs for Rs. 1.74 crores and Union excise duties for Rs. 191.23 crores, as against Rs. 138.17 crores.

• • • •

From Abroad

The output of the chemical industry in West Germany last year aggregated £1,464 million, showing an increase of 11.4 per cent. over 1956. Production of plastics was higher by 22 per cent. at 589,000 tons.

An order banning activities of Imperial Chemical Industries in the Syrian region for investing capital in Israeli companies has been signed by the Syrian Economy Minister. The ban is a sequel to the recommendation made by the Israel Boycott Office's Conference in the Lebanon last year.

New Zealand is expected to have more stringent import controls than those prevailing at present, according to Mr. Nordmeyer, Finance Minister. New Zealand's overseas income during 1958 is likely to be lower by at least £40 million, as compared with 1957, when the present import schedules were drawn up.

The U.S. Defence Department has removed the exemption in the Buy American Act in effect since 1954 of imports of petroleum products. Accordingly, the Department will buy foreign refined oil products only when no domestic offer is made or when domestic quotations are 6 per cent. or more above the lowest price at which the foreign products are offered.

PERSONAL

MR. C. S. Venkatachar, till recently Secretary to the President, has been appointed High Commissioner of India to Canada and will succeed Dr. M. A. Rauf.

Mr. M. K. Vellodi, Secretary to the Union Cabinet, has been appointed Ambassador to Switzerland and concurrently Minister to the Vatican, in place of Dr. M. S. Mehta.

Mr. Shishir Kumar Banerji, till recently Ambassador of India to Syria, has been appointed High Commissioner for India in Malaya and concurrently as Commissioner for the Government of India in Singapore. Mr. Banerji will take up his new post in July.

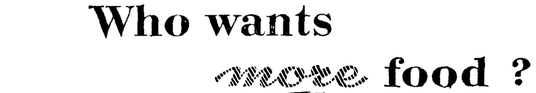
Mr. K. R. K. Menon, Chairman, Industrial Finance Corporation, left Delhi on Thursday last for Rome *en route* to Washington to participate in the World Bank seminar which is being held this week on matters of common concern to industrial and financing institutions all over the world.

Mr. H. V. R. Iengar, Governor of the Reserve Bank of India, arrived in Bombay from Cairo on Thursday last. Mr. Iengar along with Mr. L. K. Jha, Secretary to the Commerce Ministry, was in Germany for carrying on negotiations in connection with Germany's loan to India. He also visited London.

The U.S. Treasury Department has confirmed that it has unfrozen, with effect from the 1st inst., $26 million (about £9.2 million) worth of Egyptian assets in the United States which had been blocked since the Suez crisis. Meanwhile, the State Department has announced that $44 million (about £15.6 million) worth of assets belonging to the Suez Canal Company are being released to the Company and its shareholders.

The establishment of a United Nations Economic Commission for Africa with the task of taking concerted action for the economic development of the Continent was unanimously decided on by the Economic and Social Council at its meeting on 29th April 1958. Membership of the Commission will be open to Belgium, Ethiopia, France, Ghana, Italy, Liberia, Libya, Morocco, Portugal, Spain, the Sudan, Tunisia, the Union of South Africa, the United Arab Republic and the U.K. and any other State in the area which may hereafter become a member of the United Nations.

Who wants



My basic job is to assist in raising this country's food production from its present low level—so low that we have to buy abroad.

The extent to which I can help is very often not realised—it certainly is not realised enough.

Whether it is wheat or rice—gram or grass—sugar or groundnuts—whatever it is, only I can reliably and economically:

- Have the soil ready for the rains or water,
- Prepare the best tilth to suit the crop,
- Sow quickly and well on the right day,
- Give the crop attention whilst it grows,
- Harvest at the right time,
- Do, in time, all those never-ending duties such as agricultural haulage, soil conservation, water distribution and so on—

which mean the difference between shortage and enough.

MECHANISATION MEANS MORE MEALS

EXPORT PROMOTION

WHENEVER any Government spokesman addresses the representatives of trade, he invariably makes a call for greater sacrifice in domestic consumption in order to step up the country's exports and improve the balance of trade position. Mr. Nityanand Kanungo, Union Minister for Commerce, is no exception. Inaugurating the fifth annual meeting of the Indian Council of Foreign Trade, Mr. Kanungo declared that there was scope for reducing domestic consumption in certain items, thereby making available larger quantities for export. He urged the trade organisations in the country "to spare no effort in educating the common people about the need for such sacrifices and save as much as possible for export."

The need for correcting the serious balance of payments problem now confronting the country through stimulation of exports is no doubt quite imperative. But it would be wrong to stretch the conception of "sacrifice" in domestic consumption too far. The rising trend of purchasing power in the hands of the masses following the implementation of the series of development schemes and the continuously growing population are bound to accelerate the demand for goods and commodities, especially the more essential items. If, therefore, any attempt is made to boost exports at the cost of domestic consumption inflationary forces will receive a fresh impetus, which, in turn, will impose a severe strain on the economy of the country. Such a development will, sooner or later, adversely affect the export trade. Viewed thus, stress should be laid not so much on the need for reducing domestic consumption as on that for enabling the goods produced in India to compete more effectively in the overseas markets.

To take the example of the two important traditional export industries, namely, cotton textiles and jute textiles. These industries are suffering greatly from a rigid cost structure, thanks in particular to the various heavy burdens imposed on them under some pretext or other. This is certainly unfortunate, especially considering that, for a considerable time to come, the country's foreign exchange earnings will depend, as Mr. Kanungo himself rightly averred, on the traditional exports. If the export trade of India is to be set on a stable and sound footing, it is of the utmost importance that the powers-that-be should not only reduce the burden of taxation but also adopt a more helpful policy free of ideological considerations, designed to help the industries to renovate their plant and machinery and to rationalise methods of production. It is only through such measures that the indigenous industries will be in a position to augment production of quality goods at an economic cost. Surely, some of the suggestions put forward by the Indian Council of Foreign Trade in the course of a resolution adopted at the end of the meeting deserve to be sympathetically considered by the authorities. They are: adequate supply of industrial raw materials at reasonable prices; enhanced relief in excise and customs duties on raw materials for goods intended for export, and in income-tax on profits earned from exports; concessional freight on railways; high priority for transport of industrial raw materials; and arrangements for pre-export inspection of goods in co-operation with industry and trade so as to prevent sub-standard or non-standard goods from entering foreign markets.

While commending all these suggestions for acceptance by the Government, it must be emphasised that export promotion is not the task of Government alone. It is, as we pointed out on an earlier occasion, primarily the responsibility of manufacturers and exporters. They should make every effort to produce and export quality goods, maintain the old, and explore new markets. Mr. Kanungo did well to urge the trade organisations to exert their utmost in capturing new markets for Indian goods and improve their salesmanship abroad. Assuring Government's assistance wherever possible, he said: "A greater part of the endeavour to promote exports should be from trade organisations and shippers, because Government cannot enter the field wholesale . . . unless there is a greater display of salesmanship on the part of the trade in the highly competitive overseas markets. I think that no buyers will be forthcoming even for items like jute or those in which India once had a near monopoly and these will be displaced by substitutes."

Presiding over the meeting, Mr. Morarji J. Vaidya, President of the Council, pleaded for a system of aids and incentives to increase the volume of exports, particularly the non-traditional and manufactured items. He rightly pointed out that the procedure governing drawback and rebates of excise duties allowed at present was rather complicated and very often involved delays. It is, however, somewhat difficult to accept his view that a simpler and perhaps more effective form of incentive will be for the Government to grant "regular subsidies" on exports of special non-traditional items. The grant of "regular subsidies" has the danger of generating a sense of complacency among the manufacturers and many of them may not simply care to make efforts to lower the prices and improve the quality of their products. Further, there is no gainsaying the fact that more foreign exchange can be earned by fostering and nurturing the traditional export industries, as they have still profitable scope, than by trying to boost new industries which have yet to establish themselves firmly on their own soil.

PROGRESS IN AGRICULTURE

A distressing fact which has emerged from the deliberations of the National Development Council at its meeting held in New Delhi early this week is that the progress in the implementation of the development programme for agriculture has been none too satisfactory. In particular, the results achieved in the sphere of food production over the first two years of the second Plan are considerably poor, judging from the targets fixed. The aggregate production of foodgrains in 1957-58 is estimated at not more than 66.7 million tons which represents a rise of just 1.4 million tons as compared with the actual output of 65.3 million tons in 1955-56 (the last year of the first Plan). This figure falls short of the revised production target of 80.5 million tons fixed for 1960-61 by as much as 13.8 million tons. It is highly doubtful whether such a big leeway will be made up in the remaining three years of the Plan. For the initial outlay of Rs. 568 crores on agriculture and community development has now been pruned drastically to Rs. 510 crores, or a cut of 10.2 per cent. If account is taken of the rise in prices in the past two years, the cut in outlay (at present prices) will represent over 20 per cent. less of performance in physical terms as compared with the original target.

The Council's review of the achievements under agriculture and community development reveals that, as against the Plan target of 4,185 seed farms, the number actually established in the first two years is a bare 993 (385 in 1956-57 and 608 in 1957-58). In the field of irrigation also, the progress actually registered is halting. The total area of land benefited from additional irrigation facilities has so far been only 1,791,000 acres (680,000 acres in the first year and 1,110,000 acres in the second year) and the estimate for 1958-59 is 2.03 million acres. This is very much below the original target of area under additional irrigation from major and minor schemes proposed in the Plan, namely, 12 million acres and the revised target (subject to availability of requisite funds) of 10.4 million acres. What is worse, even the progress in the utilisation of the irrigation potential has not been satisfactory. This is due to the lack of sufficient attention paid to the construction of distributaries and field channels, along with the provision of storage capacity, and to such measures as setting up of demonstration farms, introduction of new crop patterns and assistance to cultivators. The slow pace of growth on the food front, in particular, and the agricultural front, in general, is certainly disquieting. Unless the pace is accelerated by the adoption of energetic and co-ordinated measures, there is bound to be a serious maladjustment in the country's economy. This aspect must be stressed forcefully especially because the inflationary forces are already at work and these will gather considerable momentum in the coming years, what with the deficit financing of a large magnitude. More than any other factor, it is the higher level of production of food and other agricultural commodities that will ease the rigour of inflation, stabilise the economy and prepare the way for a higher rate of development.

The need for stepping up production is all the greater in the present context of things when every pie of foreign exchange has to be conserved. To the extent food output lags behind consumption requirements, the country will be compelled to spend on imports much precious foreign exchange which can otherwise be utilised for purchasing the more essential items such as machinery and equipment for industries.

A great responsibility, indeed, rests on the State Governments. They should devise means of improving production of food and other agricultural commodities through greater concentration of resources in the area of irrigation facilities and assured rainfall where large increases are said to be possible. Due attention must be paid to the utilisation of the non-utilised portion of irrigation potential and renovation of irrigation works which have gone out of use.

BUDGET REFORM

The view that the existing system of budgeting and financial control in India is not appropriate in the context of a planned economy was expressed by the Public Accounts Committee in its eighth report submitted to the Lok Sabha this week. The Committee points out that experience of the provisioning and execution of the first and second Plans has disclosed certain weaknesses of the system. It has put forward a number of suggestions for reforming the budgetary procedures so as to make Parliament's financial control over outlays on development plans more effective.

The Committee, after a thorough examination of the civil accounts for 1953-54 and 1954-55, has come to the conclusion that the estimates of the various Ministries are just "guesstimates." It had on several previous occasions expressed concern about the delay in the execution of the projects and the large sums of money allotted to various projects remaining unspent every year. The accounts for 1953-54 and 1954-55 also reveal large lapses in grants relating to a number of Ministries.

The Committee points out that it had been maintained that the position was inescapable as long as the present system of budgeting continued. It may be noted that under the present system the overall expenditure, both revenue and capital, for the budget year is fixed by the Finance Ministry in consultation with the Planning Commission about six months in advance and the different Ministries are informed of their respective ceilings shortly thereafter. Each Ministry then frames its budget with reference to that ceiling. As it is not possible to get the necessary details of all the schemes, *ad hoc* lump provisions are made to aggregate to the total ceiling. It is clear from this that most of the provisions made in the various demands for grants are not based on a realistic appraisal of the schemes and their execution possibilities and of the amounts likely to be spent during the year. They are, in the Committee's opinion, just "guesstimates." Lapse of funds, it points out, is thus inherent in the existing practice.

The Committee does not accept the contention of the Ministry of Finance that, since all schemes are scrutinised before inclusion in the Plan, there is no question of the Government being vague in regard to the provisions to be made for them in the budget. It maintains that it will not be correct to hold that, simply because a scheme or project has been discussed and incorporated in the Plan, it has ceased to be new as far as the making of provision in the budget and getting Parliament's approval are concerned.

The Committee points out that, if Parliament is asked to sanction without scrutiny large sums for various schemes, Parliamentary control over appropriations becomes "unreal." It suggests that the present practice of asking for large appropriations on the basis of mere expectations of the Ministries should be discontinued.

It also recommends that in the case of a new project no provision should be included in the budget estimates placed before Parliament till detailed estimates of the project are ready and certain phases thereof have reached a stage ripe enough to justify its inclusion in the budget estimates. In other words, the Finance Ministry should be satisfied, on the basis of details available, that there is reasonable expectation of the expenditure materialising to the extent proposed before sums are provided in the budget estimates.

The Committee rightly suggests that when seeking Parliament's approval for a small provision in respect of a new scheme, an idea of the approximate aggregate outlay on the scheme should also be placed before Parliament. As and when details of the new scheme or a phase thereof are worked out, Parliament, if in session, should be approached for a supplementary grant; if it is not in session, funds sufficient to cover the immediate expenditure on the scheme may be advanced out of the Contingency Fund and a supplementary grant for the full amount obtained from Parliament at the earliest possible opportunity.

Such a system obviously, has several advantages. First, it would enable Parliament to have a "preview" of the current and prospective expenditure on projects well before commitments are made or liabilities incurred. Secondly, it would serve to pinpoint the performance of the Ministry concerned. Thirdly, the fact that full details have been worked out and the Finance Ministry has scrutinised the details would obviate detailed post-check and scrutiny by the Finance Ministry and thus save time-consuming and lengthy consultations.

These sensible suggestions of the Committee deserve serious consideration, especially because the lapse of grants seems to have become endemic and should be remedied if the Plan is to progress according to schedule.

PATTERN OF TAXATION

There is no doubt that the present pattern of taxation in India is based on unrealistic assumptions regarding the taxable capacity of people. The pattern has already done incalculable harm and would, if continued, prove more detrimental to the growth of the country's economy. This aspect was well brought out by both Mr. F. C. Badhwar, Chairman, Punjab and Delhi Chamber of Commerce, New Delhi, and Mr. B. P. Singh Roy, President, Indian Chamber of Commerce, Calcutta, while addressing the annual general meetings of the respective bodies held recently.

Mr. Badhwar indicated how severe had been the impact of taxes—direct and indirect—on companies and individuals. He showed that the direct taxes paid by the corporate bodies amounted to well over half of their income, after meeting normal commitments, and that many of them were subjected to other levies such as royalties, cesses, sales taxes and octroi duties not only on the materials they used but also on the goods they produced. Taking the example of a mining company, he pointed out that payments made as taxes to Central and State Governments would account for as much as 70 to 80 per cent. of its income. The tax policy of the authorities is so regressive that several companies are finding it difficult to incur the high cost of expansion and introduction of new production techniques. Naturally, the shareholders are unwilling to invest their hard-earned savings, especially in companies which are subjected to penal impositions. Surely, there is no exaggeration whatever in the statement of Mr. Badhwar that, judging from the total revenues actually realised from taxes in the past three years, the law of diminishing returns has come into play. To quote him: "The golden-egg-laying goose, a symbol of the taxpayer, may not be quite dead yet, but there is no doubt that it is in a bad way. To revive it to lay more and better eggs should be our main concern and, in a developing economy, this should be neither a too difficult nor a too long-drawn-out process."

A similar view was expressed by Mr. B. P. Singh Roy. He rightly stressed that a higher level of taxation, along with the dwindling purchasing power of money, was bound to reduce savings and create disincentives for investment. Analysing the impact of taxation, he quoted the Reserve Bank index number of variable dividends which had declined by as much as 25 points in one year and said that the stock market had continuously deteriorated, the number of new companies registered in 1956-57 being 848, as against 1,448 in 1955-56 and 1,203 in 1954-55. Mr. Singh Roy thus averred that not only the incentives for investment were reduced but even the availability of capital itself became difficult. He added:

"A high level of taxation and availability of funds for investment are incompatible. It is natural that more savings for investment cannot take place, if Government collect more revenues from taxes without letting the income of the people to grow. After all, a policy of collecting the maximum taxes from the people can add to Government revenues only once. If, on the other hand, the savings are left in the hands of the people for purposes of investment, they have a multiplier effect and enable Government to collect more taxes from growing revenues every year, instead of drying up the sources of revenue. This was done by West Germany which showed such remarkable results in building up a war-shattered economy in a short period of time."

These are, indeed, very pertinent observations. An unduly burdensome level of taxes, it must be remembered, ultimately discourages people from working more and saving more, with the result that the Government itself will find it increasingly difficult to augment its revenues. A net addition to wealth, as Mr. Singh Roy aptly remarked, is feasible only when the savings of the people are allowed to grow both for consumption and for increasing investment. This can be brought about by a proper revision of the present policy. The three notable suggestions made by Mr. Badhwar merit consideration. First, the total dues realised by Government from corporate bodies in the shape of taxes, royalties, cesses, octrois, etc., should be limited to about one-third of the sums left to them after meeting their legitimate commitments. Secondly, the taxation of individuals must be limited to half of their total earnings. Thirdly, a reasonable remission of income-tax must be granted to professional and self-employed individuals such as doctors, engineers, accountants, scientists, lawyers and artists "who have to struggle hard for many years to establish themselves and reach a living wage."

... must be broken-in and harnessed before their speed and strength become useful to man.

A UNIQUE EXPERIMENT IN VILLAGE RECONSTRUCTION

ITS SUCCESS, A FOREGONE CONCLUSION

From A Special Correspondent

NEW DELHI, *5th May*

TWO miles beyond the historic *Kutab Minar* in the village of Khanpur could be seen the modest beginnings of what may well be a golden age in India's economic history. What is in the making here is no less than a constructive economic revolution which, if reproduced in every village in the country in, say, a 15-year programme, will have exorcised the ghost of rural poverty for ever. This unique experiment in harmonious village reconstruction, begun in early March this year under the beneficent sponsorship of the Ford Foundation—an organisation dedicated to the cause of human betterment—stands in a class by itself. It is so realistically designed that its sucess is a foregone conclusion. And the simple yet novel ideas informing the three unassuming American engineers who are half-way through the experiment are so eminently practicable that they can find wide application throughout the Indian countryside.

DELHI LETTER

So much by way of introducing the subject of this despatch. And now what this correspondent saw and heard in the village under transformation is described here under five major heads, namely, well irrigation, kiln for burning bricks, electricity generation, small-scale industry, and brick-paved roads.

Well Irrigation

The cultivated lands in this village are predominantly unirrigated. Such limited irrigation as there is already is done by baling water from a few scattered small masonry wells with the help of bullock power. Under the Ford Foundation's experimental project, an already-existing small masonry well has been fitted up with a diesel pump set with a capacity of 1,500 gallons of water per hour and operated for the purpose of estimating the draw-down of water in the well in the course of pumping and for estimating the time taken for its replenishment. Of course, the pump is now being operated for five or six hours a day to irrigate, by turns, as much land as possible around the well.

Very near this masonry well, an open *kutcha* well (60 feet by 40 feet at the top) has been excavated by now to a depth of about 27 feet at which the sub-soil water flow is just touched. It is planned to go 15 or 20 feet further down, so that there could be ample inflow and storage of water for being drawn by a simple siphon contrivance into the small masonry well as the rapid draw-down of water in the smaller well brings its level below that of the water in the bigger well. The sides of the bigger well are to be ultimately riveted with bricks made in the village itself in the kiln under construction. A pump set with a special gear arrangement and having a capacity of 18,000 gallons of water per hour is to be fitted to the smaller well and this pump will be operated by a pair of bullocks. In one round made by the bullocks, the special gear arrangement will cause many hundreds of revolutions, enabling a rapid discharge of water at a rate of 18,000 gallons per hour.

With the expected discharge of water from this double-well system, it will be possible to irrigate, by turns, as much as 50 acres of hitherto dry lands. If the total cultivated land area of this village is taken as 500 acres, ten such well-systems will be able to irrigate all that area between themselves. If these ten well-systems are located at widely separated points in the cultivated area and, if their respective depths are suitably varied, there will be no risk of the water level in one well being greatly reduced by the heavy discharge of water from another well. In any case, in this village, there will be no risk of that kind, because sub-soil springs are copious even at a depth of 30 feet.

If it is assumed that 80 per cent. of the present cultivated area is under food crops and this proportion will continue to be maintained under irrigated conditions, 400 acres under food crops will be benefited by irrigation in this village. As irrigation by itself, other things remaining constant, will double acre-yields, an *additional* food output of 80 tons will come from these 400 acres. As well irrigation is generally most suitable for double-cropping of most lands and even for treble-cropping of some lands, the *additional* food output on this account alone can well be 40 tons. If there is proper soil management through green manuring and inorganic fertilisers, the *additional* food output on this account can also be 40 tons. It is, therefore, quite on the cards that there will then be a total output of up to 240 tons, as against the present 80 tons from 400 acres.

It is not possible to estimate exactly what capital investment will be involved in one well-system. However, this correspondent can figure out roughly that a total outlay of about Rs. 10,000 may be required for each well-system including the pump set. This would mean an aggregate outlay of Rs. 1 lakh on the ten well-systems. If these ten well-systems are worked by an irrigation co-operative covering all cultivating land-owners and tenants of the village, it should be possible to recover from them, in some suitable manner in a period of from five to ten years, the capital loan debited to the co-operative. This should not be difficult, because the value of additional annual output of food and commercial crops would be anything from Rs. 25,000 to Rs. 50,000 at a most conservative estimate based on a far lower level of prices than what prevails now.

Kiln for Burning Bricks

A masonry kiln in two sections, each section having a capacity for burning 1,500 clay bricks a day on alternate days, is in an advanced stage of construction in a safe corner of the village. This small-scale kiln is being built on economical and scientific lines, and the furnace walls are lined with firebricks. Firing of the kiln is to be done by burning coal, but the clay for making raw bricks with the help of simple, hand-operated presses will be locally dug out. The sample burnt bricks made of local clay according to the specifications laid down by the engineer in ceramics on duty are extremely hard. The bricks to come out of the kiln are meant to be so hard that they can be used for paving all the village roads with them. With an output of about 50,000 bricks a month, the requirements of the village for riveting the sides of bigger wells, for paving the roads and for improving existing houses or for building new ones could be met by this kiln. The cost of these bricks per thousand, it is stated, will be considerably less then the present market price.

It is not possible to estimate precisely at this stage what this kiln would involve by way of capital investment. It can, however, be roughly and provisionally estimated at Rs. 35,000.

Electricity Generation

The most interesting part of the experiment is the provision of a small specially designed generator for producing up to 10 kw.—just sufficient for lighting 100 houses besides the streets and for possibly operating the small woodworking factory under construction. This generator with its magnet and coil armature is connected to a special, indigenously fabricated gear arrangement. The whole generating set will be operated by a pair of bullocks. In one round made by the bullocks, the gear contrivance will enable the armature inside the magnetic field to make upto 1,000 revolutions, and electricity will be rapidly generated.

Here again, there are some simple and realistic ideas: (1) The village can produce its own power (which, after all, will be required on only a very modest scale) without waiting for or depending on thermal or hydro-power through a grid; (2) utilisation of bullock power (of which there is an ample idle surplus in every village) for operating the generating set; (3) provision of a simple gear arrangement to make the armature revolve at terrific speed inside the generator; and (4) indigenous fabrication of the generator with its special gear contrivance.

Although here, too, no precise estimate of the required capital investment is available, it is possible to figure out roughly that it may not be more than Rs. 5,000 on the generation side and Rs. 10,000 on the distribution side.

Small-scale Industry

A small woodworking factory is also under construction, and three or four machine tools like the lathe are already installed. Details regarding capital outlay, planned output, employment potential, etc., are not yet available. A rough estimate of capital outlay involved would be Rs. 50,000 on the small building and the small and medium tools.

Brick-paved Roads

The proposal to remake the village roads with the locally made bricks fitted into them is equally interesting. This will eliminate the slushy conditions that invariably set in on village roads in the rainy season. It is a notorious fact that automobiles and even bullock carts have to undergo an ordeal in movement on the village roads connected to a main road in most rural areas. When the road approaches to the village site become more accessible and inviting, there will come about an attractive urban atmosphere on that account alone. Although the bricks used for road-paving may be very hard and durable, any possible damage to them would be greatly minimised if bullock carts come to be increasingly fitted with rubber-tyred wheels.

This correspondent proposes to study further the various economic, industrial and financial implications, the likely beneficial results by way of more rapid urbanisation of villages and other related aspects of this scheme of village reconstruction on the assumption that it may be taken up for execution in collaboration with the Ford Foundation in India in a phased 15-year or 20-year programme to cover all the villages in the country with suitable modifications in accordance with varying local or regional conditions and needs for small industries. The results of this study, which will necessitate some interviews, will be covered in a subsequent despatch as early as possible.

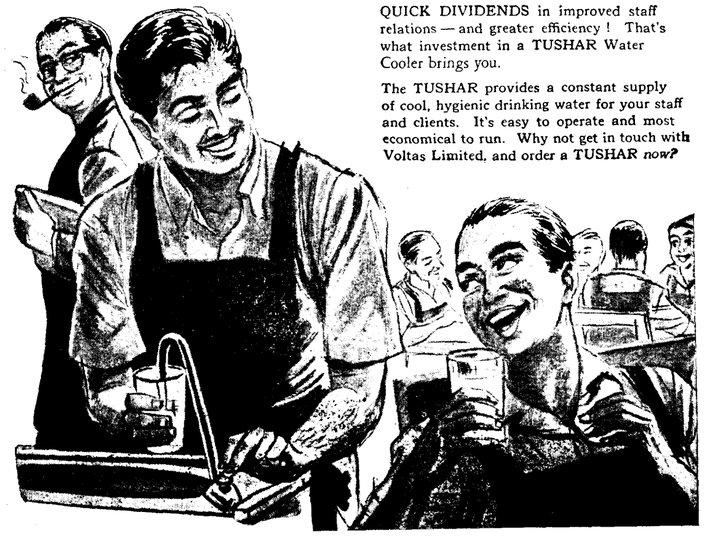
"...and a bonus of goodwill to the management —for installing the 'Tushar' WATER COOLER!"



QUICK DIVIDENDS in improved staff relations — and greater efficiency! That's what investment in a TUSHAR Water Cooler brings you.

The TUSHAR provides a constant supply of cool, hygienic drinking water for your staff and clients. It's easy to operate and most economical to run. Why not get in touch with Voltas Limited, and order a TUSHAR *now?*

With the TUSHAR you get
- A continuous supply of instantly-cooled water at the touch of a button — no unhygienic refilling or storing.
- A choice of two handsome models.
- Ease of installation.
- Economical to run.

'Tushar' WATER COOLERS

A modern must for factories, offices, schools, hotels, hospitals and colleges

STOCKS OF BULLION IN INDIA

VALUE EXCEEDS RS. 5,000 CRORES

INDIA is known from very early times for its craze for the two precious metals, gold and silver. Despite the change in traditions, the demand for bullion for use in ornaments and utensils has not slackened a bit and the price in India has always been much higher than the international price. The import of gold and silver has, however, remained banned from 1917 onwards, except during the inter-war years and for a few months in 1946-47. This has not, however, affected the demand for the two precious metals and has actually given an impetus to rise in prices. As the disparity in prices widened, large-scale smuggling of gold was resorted to. Thanks to the vigilance of the Customs authorities, the smuggling of gold has declined considerably during the last few years. The smuggling activity in silver is, however, negligible, because the disparity in prices is narrow and the cost of transport is very heavy. Imports of silver coins from Tibet have, however, been permitted from May 1956 in order to facilitate Indo-Tibetan trade.

Because of the ban on imports of bullion (except silver coins from Tibet) the internal demand for bullion is mainly met by smuggled gold, imports of silver coins from Tibet and internal production of both the metals, which is, however, negligible as compared to the demand. In the absence of free international trade in bullion, no official estimates of stocks of gold and silver in India are available. No reliable and up-to-date estimates of such stocks are also available, but various estimates have been made from time to time. These estimates have at times given rise to exaggerated notions regarding the magnitude of such stocks. The Division of Monetary Research of the Department of Research and Statistics has, however, made an attempt to bring together the available data on stocks of gold and silver in the country. The study is published in the April issue of the *Reserve Bank of India Bulletin* for public information and does not represent any official estimate. The methodology adopted is to add net imports and domestic output from year to year for the period for which fairly firm data are available and to add to these the estimated amount of stocks for the earlier periods, based on certain estimates relating to those periods already made. In the absence of any precise criterion for adjustment of the figures, consequent on the separation of Burma and the partition of India, the estimates given relate to the pre-partition period up to 1947-48 (inclusive of Burma) and are intended to indicate the approximate amount of precious metals in the sub-continent absorbed both on Government and private accounts from the earliest period for which data are available, rather than any precise magnitude of the stocks of gold and silver now existing in the Indian Union. The term stocks used in the study refers to gold and silver held in various forms, such as ornaments, jewellery, bullion, coin, etc.

According to the study, the total stocks of gold in the Indian sub-continent at the time of partition are estimated at about 130 million ounces. This figure is arrived at by adding the net import or export from 1850-51 onwards to the internal production. Till September 1931, India was generally a net importer of gold and the aggregate net imports between 1850-51 and 1930-31 are estimated at 126 million ounces. Net imports from 1850-51 to 1885-86 were roughly of the order of 30 million ounces and those for the period 1886-87 to 1930-31 aggregated roughly 96 million ounces. Thereafter, India became a net exporter of gold upto 1941-42, the total of such exports amounting to 43 million ounces. During the period 1942-43 to 1947-48, there were net imports of gold, but in view of the war-time and post-war restrictions these were small, being no more than 0.7 million ounces. Thus, taking the period from 1850-51 to 1947-48, for which fairly firm data are available, the aggregate net imports of gold in undivided India were of the order of 83.7 million ounces. These figures mainly relate to seaborne trade in gold. Land trade in gold was small.

Production of gold in India from 1882 to 1947 amounted to 21.8 million ounces. About 7.5 million ounces were sold in India on behalf of the Allied Governments during the period 1943-44 to 1945-46. These data, thus, indicate a net absorption of 113 million ounces of gold in India during the period 1850-51 to 1947-48. The quantum of gold imported between 1948-49 and 1956-57 has been negligible, while "supplies of smuggled gold since 1947 have been uneven, depending on the price disparities and the effectiveness of vigilance exercised by the Customs authorities in checking smuggling activity." No reliable estimates of smuggled gold are possible, while production during the period 1948 to 1956 amounted to 1.9 million ounces.

On the basis of the above data, the total stocks of gold in the Indian sub-continent at the time of partition are estimated at around 130 million ounces. If population alone is taken as the criterion, the share of Burma and Pakistan would amount to about 30 million ounces. Of the balance, 7 million ounces comprise the Reserve Bank's currency reserve. As stocks with other official agencies are negligible, private stocks would roughly amount to 93 million ounces at the end of 1947-48. Adding to these a few million ounces by way of domestic production and smuggling since 1948-49, the total private stocks would be around 105 million ounces which at the current high price of Rs. 289 per ounce (average for 1957-58) would be Rs. 3,035 crores and at the present international price of gold Rs. 1,750 crores.

The total stocks of silver at the end of 1947-48 are estimated at 5,400 million ounces. Of these, the absorption during 1493 to 1834 is placed roughly at 1,350 million ounces, that between 1835-36 and 1885-86 at 1,040 million ounces and that between 1886-87 and 1947-48 at 3,010 million ounces. The quantity absorbed in the period from 1886-87 to 1947-48 does not include the U.S. Lend-lease silver amounting to 226 million ounces, of which the share of India, amounting to 172 million ounces, has been returned. Official sale of silver made in India during the war period 1939-40 to 1945-46 amounted to 181 million ounces, part of which came from U.S. Lend-lease silver and partly from official stocks. A large part of the silver imported on Government account was for purposes of coinage. Mintage of silver coins was discontinued from 1947-48. Consumption of silver for coinage in India since 1900-01 to 1946-47 amounted to 1,422 million ounces. Figures of internal output are available only from 1909 and include production in Burma up to 1936. The total production (inclusive of Burma) from 1909 to 1947 aggregated 102 million ounces.

Of the total estimated stocks of 5,400 million ounces at the end of 1947-48, the share of Burma and Pakistan, on population basis, works out to about 1,200 million ounces, leaving the share of partitioned India at 4,200 million ounces. The net imports (other than Tibetan coins) from 1948-49 to 1956-57 amounted to 2.5 million ounces. Imports of Tibetan coins from

ANOTHER STEP FORWARD

31st December 1957
Deposits Exceed Rs. 124 Crores
Working Funds Exceed Rs. 151 Crores

The above figures are a positive indication of sustained public confidence in this pioneer national banking institution.

THE PUNJAB NATIONAL BANK LTD.
Established: 1895 Head Office: Delhi
Chairman S. P. Jain
General Manager A. M. Walker

UNITED BANK'S PROFIT HIGHEST SINCE 1952

DIVIDEND UNCHANGED

A SMALL rise in profit, that is, from Rs. 15.58 lakhs to Rs. 16.21 lakhs, is disclosed by the audited accounts of the United Bank of India Ltd. (Managing Director: Mr. B. K. Datta, Calcutta) for the year ended 31st December, 1957. With this rise, the upward trend in the Bank's profit has been maintained for the fourth year in succession, but the pace of increase has considerably slowed down during the year under review, in consonance with the general trend of bank earnings. Nevertheless, the profit for 1957 is the highest since 1952. There has no doubt been a sizable expansion of Rs. 4.45 crores in the Bank's deposits during the year and the improvement in resources has been well utilised to improve its earnings, as witness the rise of Rs. 3.38 crores in advances and of Rs. 26 lakhs in the income from interest and discount. But the increase of Rs. 11 lakhs in outgo by way of interest paid and of Rs. 13 lakhs in expenses has nearly offset the rise in income. This explains the fractional improvement in profit.

The dividend has, however, been maintained at the very modest level of 3 per cent. per annum for the eighth year in succession. This has been done after raising the provision for taxation from Rs. 4.40 lakhs to Rs. 4.92 lakhs and the allocation to the reserve fund from Rs. 3.15 lakhs to Rs. 3.25 lakhs.

The following comparative table, giving the salient features of the profit and loss account and balance-sheet relating to the last four years, provides an idea of the Bank's progress:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Interest and discount	1,45.22	1,19.46	1,02.44	94.88

Cash	15.3	12.6	12.9	17.1

* After taking into account the investments earmarked against borrowings from other banks.

With the rise of Rs 4.45 crores in 1957, the Bank's deposits have consistently shown an upward trend since 1952 and the pace of expansion has gathered momentum in the year under review. Unlike in the case of other banks, the bulk of the rise in deposits during 1957 is accounted for by current and other accounts, which have gone up by Rs. 3.05 crores to Rs. 17.35 crores, while fixed deposits and cash certificates have risen by only Rs. 82 lakhs. Staff security deposits are up by Rs. 46,000, at Rs. 9.27 lakhs and savings bank deposits by Rs. 57 lakhs at Rs. 14.25 crores. With the sizable expansion in deposit resources, the Bank has been able to reduce considerably in the last two years its outstanding borrowings from other banks, that is from Rs. 1.91 crores at the end of 1955 to no more than Rs. 85,000.

The upward trend in advances has been maintained in 1957 with a further rise of Rs. 3.38 crores, of which loans, cash credits and overdrafts account for Rs. 2.23 crores (at Rs. 19.29 crores) and bills purchased and discounted for Rs. 1.15 crores (at Rs. 4.26 crores). Investments, which are shown at or below market value, are lower by Rs. 1.66 crores, but cash balances (including money at call and short notice) have been correspondingly strengthened by Rs. 1.61 crores, with the result that the cash ratio has gone up from 12.6 per cent. to 15.3 per cent.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the annexed Balance Sheet of Hindusthan Mercantile Bank Limited as at 31st December, 1957, and also the annexed Profit and Loss Account of the Bank for the year ended on that date, in which are incorporated the returns of one branch audited by us and the unaudited returns from six other branches not visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of Section 211 and sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that subject to provision for the unadjusted balance of Income-tax payable for the accounting Years to 1956, aggregating Rs. 87,893.92:—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief were necessary for the purpose of our audit and have found them to be satisfactory;

(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) In our opinion, and to the best of our information and, according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1957, and the Profit and Loss Account gives a true and fair view of the profit for the year ended on that date.

PRODUCTION OF WOOLLEN TEXTILES

BOTH YARN AND FABRICS SHOW A RISE

IT is noteworthy that the wool textile industry is endeavouring to maintain a high level of output. The aggregate quantity of woollen-worsted yarn that actually came off the spindles of organised mills in the first two months of the current calendar year was 4.46 million lbs., as against 3.71 million lbs. in the corresponding months of 1957. Following the rise in yarn production, the output of fabrics (woollen and worsted) was higher at 2.92 million yards, which compares favourably with 2.18 million yards. It is too early to say whether this trend will be maintained in the coming months. As a rough estimate, however, it may be said that the production of yarn and fabrics in the whole of 1958 will be higher than that in 1957 when it amounted to 27.84 million lbs. and 18.49 million lbs., respectively.

A striking feature in the spinning sector of the woollen textile industry is the more marked rise in the production of woollen yarn *vis-a-vis* worsted yarn. Thus, the actual output of the former in 1957 as compared with 1956 was higher by 1.48 million lbs., while that of the latter was higher by 750,000 lbs. Out of the 27.84 million lbs. produced last year, woollen yarn accounted for 13.11 million lbs. and worsted yarn for 14.73 million lbs.; the corresponding figures for 1956 was 11.62 million lbs. and 13.97 million lbs. The production of woollen fabrics during 1957 was higher at 18.49 million yards, as against 16.34 million lbs. in 1956. The rise was shared by all varieties as the following table will show:

(In thousand yards)

	1956	1957
Suitings	5,420	6,300
Blankets and rugs	4,190	4,750
Lohis and shawls	1,890	2,100
Uniform cloth	970	1,260
Melton and shoddy	160	280
Other sorts	3,710	3,800
Total	16,340	18,490

The maintenance of a high level of production in the woollen textile industry is reflected in the continuously upward trend in the consumption of raw wool and wool tops. During 1957, the organised woollen mills consumed a total of 30.13 million lbs. of wool (including tops), as against 27.48 million lbs. in 1956 and 23.42 million lbs. in 1955. The bulk of the rise of 2.65 million lbs. in 1957 was accounted for by imported wool, the quantity actually consumed being 3.80 million lbs., as against 2.43 million lbs. The consumption of indigenous wool was higher by 270,000 lbs. at 7.09 million lbs., of imported wool tops by 360,000 lbs. at 14.74 million lbs., and reclaimed wool and waste by 650,000 lbs. at 4.50 million lbs.

An idea of the production pattern of the wool textile industry in the beginning of this year can be had from the following statement:

(In yards)

	January	February	Total
Woollen:			
Suitings	100,673	111,520	212,193
Uniform cloths	114,592	67,115	181,707
Lohis	11,024	8,772	19,796
Worsted:			
Suitings	358,008	276,733	634,741
Uniform cloths	27,841	37,707	65,548
Lohis	86,678	58,859	145,537
Mixing:			
Suitings	47,565	22,983	70,548
Uniform cloths	3,050	2,751	5,801
Lohis	33,555	46,261	79,816
Blankets and rugs	396,075	414,962	811,037
Total ..	1,179,061	1,047,663	2,226,724

The aggregate installed capacity of the wool textile industry in 1957 consisted of 60,979 woollen spindles, 117,359 worsted spindles and 4,042 powerlooms. The respective figures for the year 1955-56 are 61,032, 96,416 and 3,950. The industry had a total rated capacity (worked on average counts and qualities on the basis of single shift of eight hours) of 8.5 million lbs. of woollen yarn, 11.7 million lbs. of worsted yarn and 24.0 million yards of woollen-worsted fabrics. The Punjab State is the major centre of the wool textile industry. In February 1958, this State had 77 purely weaving mills, 9 purely spinning mills and 10 composite mills, out of a total of 78 units, 18 units and 26 units, respectively, in the seven States of Bombay, Madhya Pradesh, Mysore, Punjab, U.P., W. Bengal and Jammu and Kashmir.

TAX BURDEN ON COTTON INDUSTRY

A vigorous plea to the Government to reduce the tax burden on the cotton mill industry in order to restore it to its original healthy position was put forward by Mr. Shantilal Mangaldas, President of the Saurashtra Millowners' Association, when he addressed the sixteenth annual meeting of the Association held at Ahmedabad last week. The impact of excise duty, Mr. Mangaldas declared, had upset the entire economic structure of the textile industry. Elucidating this statement, he observed:

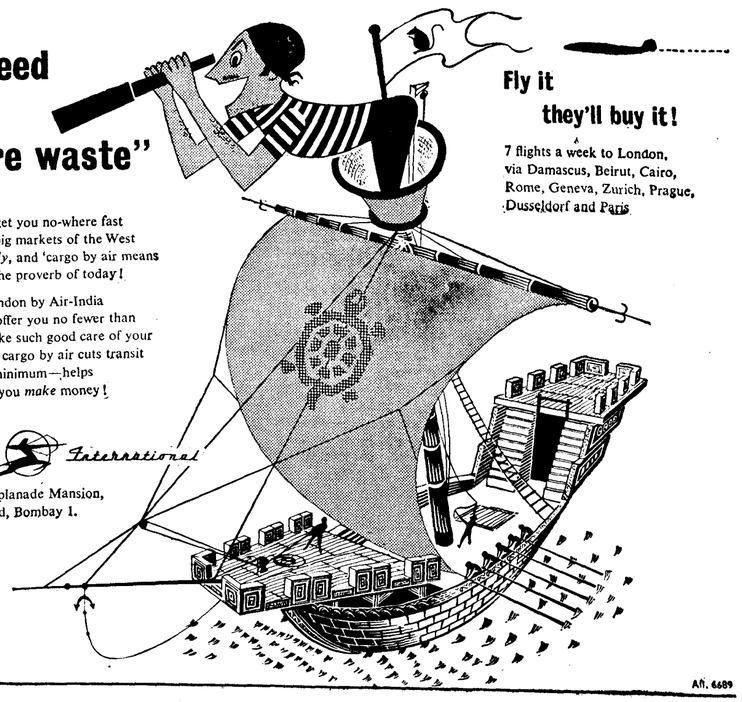
"Even though the cloth available to the people of the country, including the handloom production, is between 16 and 17 yards per head, the people are kept at bay from purchasing even this much cloth by artificially raising excise-including price and putting it beyond the reach of the consumers. This has created an impossible situation in the textile industry. On one side, the exports have not gone up as expected and, on the other side, the local consumption has fallen .... Some of the up-country mills as well as mills in Bombay have already started reducing production which has again resulted in reduction of employment of textile workers. The latest measure of reducing excise duty to a small extent has not given any appreciable relief and the situation remains as critical as it was during the whole year 1957. Some of the mills were compelled to make distress sales and financial position became very acute which has been reflected by the fact that borrowing of mills from the banks shot up to Rs. 107 crores in 1957, as against Rs. 73 crores in 1956. It appears that the Government unknowingly is shattering the very foundation of the textile industry which is the most important one in the country and which gives the largest employment to the workers in the private sector, while, at the same time, giving various incentives to the new industries to come up."

There is considerable force in these observations. If the cotton mill industry is to meet the expanding domestic demand for cloth and to cater to the needs of export markets, it is vitally necessary that the tax burden on the industry should be lowered. It is only such a reduction in burden, adoption of a more helpful official policy towards rationalisation and willing co-operation from labour that will enable the cotton mills to maximise production of quality cloth at an economic price. This aspect must be specially stressed considering the high men-machine ratio and increased wage bill. Mr. Shantilal Mangaldas showed how the men-machine ratio in the Saurashtra mills was the highest and that its wage bill was also *pro rata* the highest in the country. It is gratifying to be told by him that the Association's efforts to quicken and facilitate the implementation of the second part of the tripartite resolution adopted in December 1955 have borne some fruit. It is now expected that the technical expert appointed by the Government would assess the workloads in all the departments of the mills. It is also encouraging to note that almost all the mills in Saurashtra are trying to rehabilitate and renovate the plant and machinery according to their resources and capacity.

"PAKISTAN TEXTILE ANNUAL"

This *Annual* is edited by Mr. Ameen Tareen and is published by the Express Publishers, Ameen-art Press Building, McLeod Road, Karachi-1 (Price: Rs. 10). The *Annual* is devoted to the review of the trends in textile industry and trade not merely in Pakistan but in some other countries as well. The position of cotton, jute, wool, and other textile fibres is discussed at length in the course of special articles contained in it. The utility of the publication is enhanced by the inclusion of a section giving details of particular textile mills as to their spindleage, loomage, loom efficiency, etc., and a trade directory indicating the names and addresses of cotton, jute and wool exporters and textile importers in Pakistan. There are also detailed and comprehensive statistical tables relating to production, imports, exports, etc., of fibres and textiles.

Exports of Indian cotton textiles to Burma and Indonesia have not shown any downward trend, but there is some decline in the exports to Singapore, due to increased competition from Japan and China, according to the Union Minister for Commerce, Mr. Nityanand Kanungo. There has been no decline as a whole in the exports of Indian textiles to the countries in South-East Asia, except to Singapore, Malaya and Ceylon.



"Less speed —more waste"

Fly it they'll buy it!

7 flights a week to London, via Damascus, Beirut, Cairo, Rome, Geneva, Zurich, Prague, Dusseldorf and Paris.

SLOWCOACH methods get you no-where fast these days—the great big markets of the West want their goods *quickly*, and 'cargo by air means first on the market' is the proverb of today!

Send your goods to London by Air-India International—for we offer you no fewer than *seven* flights a week, take such good care of your cargo! And remember, cargo by air cuts transit costs and risks to the minimum—helps you *save* money while you *make* money!

IMPORT-EXPORT GAP IN TEXTILES

CONTINUITY OF FULL EMPLOYMENT IN COTTON INDUSTRY APPEARS DIM

From A Special Correspondent

MANCHESTER, 29*th April*

MANCHESTER LETTER

LANCASHIRE'S narrow import-export gap between shipments and arrivals of cotton cloth snapped shut last month. Perhaps the mood of importers had been governed by anticipations of restrictions on future purchases of foreign fabric, but there was no mistaking the very substantial rise in imports which took place; no less than 44,617,000 square yards of grey cloth reached British ports from overseas.

As a result, the quarter's figures show Lancashire for the first time as a net importer of cloth. Export trade in the first quarter of this year dropped by less than 4,000,000 yards, but imports were more than 13,000,000 yards up—a remarkable change of fortunes since the similar period in 1956, as the table below, relating to cotton goods only, shows:

	Exports		Imports Cloth
	Cloth (in sq. yds.)	Yarn (in lbs.)	(in sq. yds.)
1956			
1st quarter	120,194,000	9,969,000	74,892,000
2nd "	116,780,000	8,670,000	84,950,000
3rd "	111,510,000	7,500,000	74,190,000
4th "	125,660,000	9,650,000	72,320,000
1957			
1st quarter	120,185,000	10,050,000	103,084,000
2nd "	117,030,000	9,900,000	114,720,000
3rd "	109,530,000	9,200,000	93,510,000
4th "	109,020,000	8,430,000	105,000,000
1958			
1st quarter	116,250,000	8,045,000	116,541,000

During March, earnings from cotton goods showed an improvement on the previous month, amounting to £7,369,000, but this was more than £1,000,000 below the value of similar exports in March last year. Shipments of cotton cloth were 40,262,000 square yards, as against 41,945,000 square yards in the same month in 1957. Yarn exports of 2,780,485 lbs., as compared with 3,694,607 lbs. in March 1957.

Country-wise Exports

Rising shipments of cotton cloth to South Africa during March enabled the Union to outstrip Australia as the chief destination of Lancashire fabric. Over the quarter, South Africa took 19,456,000 square yards and Australia 18,534,000 square yards. Other leading customers included New Zealand with 8,852,000 square yards, Nigeria 8,669,000 square yards and Rhodesia and Nyasaland 6,114,000 square yards. Several European countries absorbed smaller quantities of cloth, but more goods were sent to the Belgian Congo and French West Africa. Australia remained by far the largest consumer of cotton yarn, taking 2,322,000 lbs., an increase of over 400,000 lbs. on the first quarter of 1957. In most other cases, shipments declined, chiefly to Canada, India, South Africa and several Continental sources.

China was mainly responsible for the big rise in imports during March, providing 18,537,000 yards of the record total of arrivals. Chinese grey cloth imports for the quarter were second only to Indian at 28,321,000 yards; Indian mills sent 36,772,000 yards, Hong Kong 23,672,000 yards and Japan 10,068,000 yards.

Unions On Imports

The question of imports of cotton cloth into Britain is to be raised as a matter of urgency at this week's conference of the United Textile Factory Workers' Association at Morecambe. Mr. Harold Bradley, the Secretary, said that an emergency resolution had been tabled by the largest union in the industry—the Weavers' Amalgamation—expressing grave concern about the worsening position in Lancashire and calling for positive action to end "this injustice."

Mr. Bradley added that the association had received new information about wage rates in Hong Kong from one of its leaders, Mr. Ernest Thornton, M.P., who recently returned from the Far East. "It is utterly impossible for anybody, however efficient they are, to compete with the slave standard rates of Hong Kong," he said. "With the refugee problem there is competition there for starvation wages."

Not All In Line

During the course of the long drawn-out discussions on the extent of future cloth imports into the United Kingdom, there have been occasions when all sections of the trade in Lancashire have been unanimous in their approach to the problem. Merchants, as well as producers in the spinning and weaving branches, have joined in representations to the Government.

The different viewpoint of the distributors, however, is brought out in the annual report of the Council of the Cotton and Rayon Merchants' Association, clearly indicating that some reservations must be made in relation to forthcoming talks. These apply not only to Far Eastern competition but also to the rivalry experienced from Continental makers.

The merchants, for example, find themselves out of step with the rest of the industry in opposing the plan to confine European textile trading to goods which have been spun, woven and finished inside Europe. They contend that they must have access to adequate supplies of yarn and cloth as raw material for the export trade, and infer that the shortage of labour and reduction of productive capacity in Lancashire makes it doubtful whether sufficient supplies will be available in the future from local sources.

On the entry of loom-state cloth into Britain, mainly from Far Eastern countries, the Council of the Association is in favour of securing a reasonable limitation on arrivals from the Commonwealth for retention in the home trade, but is opposed to "any extension of the restrictionist policy which would limit the operations of the textile exporter." It points out that only with the help of imports for processing and re-export has it been possible to maintain Lancashire's shipments even at their present reduced levels, and comments: "Restrictions on and interference with trade invariably results in loss of trade."

Further Comment

The Textile Officials' Association, in its annual report in Manchester, said that the employment position in the Lancashire cotton industry was the poorest for several years. The industry could not afford to lose any more skilled operatives. "In looking to the future the continuity of full employment appears dim," said the report. "The unrestricted importation of foreign textiles at an ever-increasing rate is harmful to our industry and the economy of the country," the report added. Unless they were checked, the effect would be disastrous.

Mounting Jobless Total

A sharp rise occurred in unemployment among British cotton and rayon workers in February which reflected the tendency towards contraction in order lists. The movement became more pronounced in the following month and, by mid-March, nearly 9,500 operatives were seeking work, according to the latest Ministry of Labour figures.

The deterioration in the situation during the first quarter of the current year as compared with the limited unemployment recorded in 1957 is illustrated in the table below:

	Spinning	Weaving	Finishing	Total cotton and rayon	Total N-W Region
1957					
March	1,103	776	378	2,257	53,294
June	940	920	921	2,781	42,149
September ..	954	775	289	2,018	43,465
December ..	1,119	656	302	2,077	48,678
1958					
January ..	1,513	871	320	2,704	58,657
February ..	3,281	1,883	572	5,736	64,130
March	6,407	2,258	789	9,454	71,142

The March total of jobless was the highest since September, 1955 when 13,392 operatives were without work. At that time, however, the number of unemployed in the North-West region as a whole was only 43,000 and the proportion of textile workers involved was very much higher than at present.

In 1952 when the post-war air of prosperity in the mill towns suddenly evaporated, nearly 80,000 cotton and rayon operatives were unemployed in the spinning and weaving sections alone. On the other hand, the next count of unemployed taken by the Ministry of Labour at mid-April will coincide with large-scale stoppages throughout the cotton belt and a further marked rise in the number of jobless will be disclosed

At least six months must elapse—and probably much longer—before any fundamental change can be anticipated in the price regulation arrangements sponsored by the Yarn Spinners' and Doublers' Associations. It has now been officially stated that these agreements will be second and third on the list to be considered by the Restrictive Practices Court, but that the hearing of the Yarn Spinners' agreement will not take place before the end of October.—*All Rights Reserved.*

SUPPLY POSITION OF RAW COTTON

MILL CONSUMPTION SLIGHTLY DOWN

IN the context of the current downward trend in raw cotton prices, which is causing particular anxiety to the cotton trade as well as the growers, attention has naturally tended to focus itself on the supply position of raw cotton in the country. It may be noted that for some time past there has been a "virtual tug-of-war between a tight supply created by marginal crops and increasing consumption, on the one hand, and an ever-increasing financial stringency brought about by credit restrictions and slow movement of cotton piecegoods, on the other." If the current slump in cotton prices is any indication, the latter factors would seem to be getting the better of the former.

Total visible supply of raw cotton (Indian and foreign) for the current season is estimated to be of the order of 7.41 million bales (of 400 lbs.). Stocks of Indian cotton with trade and mills at the beginning of the season were 1.12 million and 600,000 bales respectively. Total commercial crop during the season, according to the latest trade estimate, will be about 4.95 million bales. Thus, the supply of Indian cotton would be 6.67 million bales. Foreign cotton supplies are estimated to be of the order of 740,000 bales, comprising a carryover stock of 290,000 bales with the trade and mills at the beginning of the season and estimated imports of the order of about 450,000 bales. From the beginning of this season, on 1st September 1957, till the 19th of last month, imports of foreign cotton aggregated 236,093 bales. Arrivals during the rest of the season are expected to be about 213,907 bales. As compared with this season's total supply of 7.41 million bales, supply last season aggregated 7.87 million bales.

As regards distribution, mill consumption during the first six months of the season, that is from 1st September 1957 till 28th February 1958, were 2.58 million bales, comprising 2.29 million bales of Indian and 293,000 bales of foreign cotton, as compared with 2.61 million bales consumed in the same period last season, comprising 2.32 million bales of Indian and 292,297 bales of foreign cotton. Thus, while the consumption of Indian cotton showed a slight decline, that of foreign cotton registered an improvement. The following table indicates the trend of consumption of cotton during the first six months of the season:

Variety	1st September to 28th February 1957-58	1st September to 28th February 1956-57
Indian cotton	2,296,661	2,324,414
Foreign cotton	293,296	292,297
Of which:		
Egyptians	36,849	56,926
Sudans	38,110	49,385
East African	78,385	118,991
U.S.A.	131,915	56,549
Peruvian	4,340	5,642
Russian	110	177
Belgian Congo	821	1,208
Mexican	61	265
Others	2,695	3,154

Assuming that consumption during the rest of the season will be about equal to the first six months' figures, aggregate consumption during the season will work out to about Rs. 5.16 million bales. It may be noted here that, last season, consumption reached the record level of 5.23 million bales, of which 4.66 million bales were Indian and 0.57 million bales foreign cotton.

Exports so far during the current season have made a poor showing. Shipments from 1st September 1957 till the 19th of last month aggregated only 94,640 bales, as compared with 183,683 bales during the corresponding period of the previous season. The textile crisis in Japan, one of the principal buyers of Indian cotton, and foreign exchange difficulties of some of the traditional buyers were the main factors responsible for the slackness of export demand.

Total quantity of Indian cotton sanctioned for export so far in the season aggregates 200,000 bales. Representatives of cotton traders and growers have pleaded with the Government to release an export quota for ⅞" cotton in order to arrest the declining trend of raw cotton prices. The Cotton Advisory Board and the East India Cotton Association have both lent their support to the plea. Whether the Government will take a favourable consideration of the plea remains to be seen.

Assuming that the quota so far allowed will be fully absorbed and that no further quota will be forthcoming, total exports in the season would be of the order of 200,000 bales. This, together with the estimated consumption of 5.16 million bales, make for an aggregate disappearance of 5.36 million bales, leaving a surplus of 2.05 million bales to be carried into the new season.

TWO NEW COTTONS FOR PUNJAB

Thanks to the sustained efforts of the cotton breeders and growers, the production of long-staple cottons in India has been steadily on the increase in recent years and the country is at present self-sufficient in respect of cottons stapling upto 1-1/16". However, there is still need for superior long-staple cottons of 1-1/16" and above which are at present not produced in the country necessitating import at about Rs. 52 crores a year in foreign exchange. The bridging of this vital deficit has been engaging the attention of the Indian Central Cotton Committee for some years past and the Committee has sought to intensify research to evolve cottons of 1-1/16" staple and above in the States of Punjab, Bombay, Madras and Mysore which offer the proper agro-climatic conditions and necessary irrigation facilities for the large-scale cultivation of superior quality cottons. These attempts have proved fruitful to a certain extent with the release of Indo-American strains like 170-Co. 2 and 134-Co.2-M in Bombay and MCU-2 in Madras which possess a staple length of 1-1/16" and over. However, despite their superior length, these cottons still fall short of the imported types in spinning capacity due to their lack of intrinsic strength and fineness.

Further research was, therefore, in progress to evolve types possessing the desired standard in spinning capacity. In the Punjab, the work towards this objective was undertaken in the scheme for breeding extra long-staple cotton financed by the Committee since 1949. As a result of intensive research work conducted under the scheme, it has been found that two new strains, namely, LL 53 and LL 54, have been obtained which are not only long in staple with high spinning capacity but also combine other desirable economic characters like yield and ginning percentage. As compared to 320F cotton, which is the existing strain in the tract, these two strains possess decidedly superior fibre characters besides better yield level and ginning outturn. They were found to be superior to 320F in cash return per acre, the respective values being Rs. 608, Rs. 625 and Rs. 686 for 320F, LL 53 and LL 54.

A stage has now been reached when extensive trials have to be undertaken with these strains in cultivators' holdings in the tract, particularly in the areas that would shortly come under the Bhakra-Nangal Project with a view to demarcating the tract which would be most suitable for their cultivation.

It is estimated that about 350,000 acres would come under irrigated cotton in the districts of Jullundur, Ferozepur, Hissar, Karnal and Ludhiana on the completion of the Bhakra-Nangal Project and if these two strains could be fitted into these areas it would go a long way in enhancing the production of extra long-staple cottons in the country.

EMPIRE COTTON CROPS

Production in Commonwealth cotton fields has risen to almost 1,500,000 bales annually—more than double the figure ten years ago, Lord Derby, President of the British Cotton Growing Association, said at the annual meeting. It was only six years ago that the 1,000,000-bale mark was reached for the first time. While there were bound to be minor setbacks in production through weather conditions, there was every reason to believe that progress would continue and cotton crops would go on increasing, he said.

The Sudan production of 705,000 bales was an increase of one-third over the previous crop and was twice the quantity of an average good crop of ten years ago. American type cottons grown in Commonwealth countries also continued to increase; output at nearly 750,000 bales was double that of any year up to ten years ago. The other contributors to the present crop were the African countries—Uganda 372,400 bales, Tanganyika 167,600 bales and the Northern region of Nigeria with 141,200 bales. In Northern Nigeria, said Lord Derby, there were prospects that the 1958 crop would be near 240,000 bales, which would be well over 50,000 bales above the previous record.

The African farmer is being encouraged to plant earlier and improve his methods and new seed with better yield potential is being provided. At the same time, an expanding road programme and the possibility of a new railway line in the North-West may open up large new cotton growing areas.

In Uganda, the Department of Agriculture was redoubling its efforts in encouraging growers to plant early and improve cultivation. In the Federation of Rhodesia and Nyasaland, a team of entomologists was already investigating the damage caused by the various pests.

UNITED BANK OF INDIA LIMITED—*(Continued)*

Schedule of Particulars required under the Banking Companies Act, 1949, attached to and forming part of the Balance Sheet as at 31st December, 1957.

Previous Year Rs.	PARTICULARS OF ADVANCES	Rs. nP
18,00,74,168	(i) Debts considered good in respect of which the Banking Company is fully secured	21,34,54,326.72
1,65,36,241	(ii) Debts considered good for which the Banking Company holds no other security than the debtors' personal security	1,73,14,847.02
51,74,273	(iii) Debts considered good, secured by the personal liabilities of one or more parties in addition to the personal security of the debtors	48,04,914.16
Nil	(iv) Debts considered doubtful or bad not provided for	Nil
20,17,84,682		23,55,74,087.90

Previous Year Rs.	PARTICULARS OF ADVANCES	Rs. nP
Nil	(v) Debts due by Directors or Officers of the Banking Company or any of them either severally or jointly with any other persons	16,637.84
72,03,002	(vi) Debts due by Companies or Firms in which the Directors of the Banking Company are interested as Directors, Partners or Managing Agents or, in the case of Private Companies, as Members	1,00,73,196.12
31,538	(vii) Maximum total amount of advances including temporary advances made at any time during the year to Directors or Managers or Officers of the Banking Company or any of them either severally or jointly with any other persons	4,20,561.89
80,27,027	(viii) Maximum total amount of advances including temporary advances granted during the year to the Companies or Firms in which the Directors of the Banking Company are interested as Directors, Partners or Managing Agents or, in the case of Private Companies, as Members	1,36,77,171.14
2,08,082	(ix) Due from Banking Companies	2,66,704.63

AUDITORS' REPORT.

We have audited the annexed Balance Sheet of United Bank of India Ltd., as at 31st December, 1957, and also the annexed Profit and Loss Account of the Bank for the year ended upon that date in which are incorporated the Returns from the Branches audited by other Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the Provisions to sub-sections (1) and (2) of Section 211 and to sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank ;

(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank ;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(e) In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1957, and the Profit and Loss Account gives a true and fair view of the Profit for the year ended upon that date.

RAY & RAY,
Chartered Accountants.

CALCUTTA, 17th March, 1958.

PROSPECTS FOR INDIAN SUGAR EXPORTS

WILL ANY ADDITIONAL TAX BE LEVIED ON DOMESTIC CONSUMPTION?

ALTHOUGH more than six months have elapsed since the current sugar season (1957-58) began, the Government of India has still not announced the policy governing sugar exports. For quite a few weeks now, the Union Minister for Food and Agriculture has repeatedly told us that the question of enacting suitable legislation for exports of sugar is receiving the Government's consideration and a scheme for export will soon be finalised. The protracted delay in the announcement of sugar export policy would appear to be due to the inability of the Government to find how best the heavy loss arising from sugar exports can be met. Should an extra tax be levied on sugar used domestically? The Government seems to have almost decided to levy such a tax, as witness the remarks of Mr. A. M. Thomas, Union Deputy Minister for Food and Agriculture, made while replying to a question in the Rajya Sabha on Thursday last week, that, if the export of sugar was subsidised, naturally, there would be an increase in its internal price. Mr. Thomas added: "The sugar factories will have to bear the loss on account of exports and they are likely to pass it on to the consumer. No sugar has been sold for export since December last. There has been a substantial fall in world prices and sugar can now be exported only at a considerable loss. The matter is under examination. One of the reasons (for the high prices of Indian sugar *vis-a-vis* that produced in other countries) is the high prices paid to the sugarcane growers."

The scheme for subsidising sugar exports through enhanced internal prices will evoke the strongest protest from the consumer. For a period of 18 years, in the name of protection, the consumer was compelled to make a heavy sacrifice in order to nurse the sugar industry. Later, he was made to make further sacrifice by paying steeply increased excise duty in the name of implemnnting the Five-year Plans. And it is somewhat deplorable that he should now be asked to make still further sacrifice by paying higher prices for his requirements of sugar in the name of earning foreign exchange. Certainly, the consumer is justified when he asks: Is it not unfortunate that, far from receiving the benefit of reduced prices of sugar as a result of the development and expansion of the sugar industry, I shall be made to bear the impact of spiralling prices, especially in so far as such an essential item of consumption as sugar is concerned?

Heavy Loss

By posing this question, we are, of course, not in the least underrating the importance of maintaining export trade in sugar from the points of view of both the stability of the sugar industry and the need for earning much precious foreign exchange. But what we wish to emphasise is that the sacrifice involved in sugar exports far outweighs the foreign exchange earned. With the prevailing world prices of sugar, India can now export sugar only at a loss of as much as Rs. 267 (£20) per ton, even after allowing for a full remission of excise duty and cane cess. On this basis and taking the export target at 200,000 tons, the total loss on overseas sugar sales works out to Rs. 6.34 crores. This amount, together with the loss of Rs. 5.82 crores by way of Union excise duty remission and Rs. 1.02 crore by way of cane cess, will come to Rs. 13.18 crores, as against the foreign exchange amounting to about Rs. 8.80 crores earned by sugar exports, assuming an average export price of Rs. 440 per ton.

The loss on exports of sugar from this country may, in fact, be more than what is estimated at present, judging from the recent developments on the world sugar front. It looks as though even the currently ruling prices in the world market will not be held and there will actually be a further drop in prices. The abundance of sugar supplies continues to remain the overriding factor. The political situation in Cuba, the biggest producer of sugar in the world, is reported to be under control and the Oriente Mills have resumed grinding. It is said that Cuba may now be somewhat desperate to make sugar sales. Again, Brazil, another large producer of sugar, continues to be a cheap seller. Production in this country has risen rapidly over the past few years and is currently running at an annual rate of well over two million tons. Indeed, of the non-member countries of the World Sugar Agreement, Brazil constitutes the greatest threat to the price stability at which the Agreement aims. To quote a report:

"Just how important the Brazilians are in the sugar trade has been particularly apparent recently; it was they who led the downward trend in world prices which began around the middle of last year, and they are still cheap sellers. The only control the Sugar Council has over their actions is through the quota limitations which are imposed on members' imports from all non-member countries. And, judging by Brazil's pronouncements, the terms on which it would be prepared to join the agreement are well in excess of those which would be acceptable."

Viewed thus and considering that the present World Sugar Agreement has too narrow a basis, it is not surprising that the decisions of the International Sugar Council fail to have significant effect on the world sugar market. Thus, little of interest to the market has resulted from the recent meeting of the Council, held at London on 22nd and 23rd April. The meeting was attended by delegates from 24 countries and by observers from five other countries and from the U.N. Food and Agriculture Organisation. The Council noted that 22 countries had ratified the protocol amending the Agreement, including the Republic of Indonesia which had acceded to the Agreement as amended by the Protocol and had deposited its Instrument of Accession on 21st February last. It has a basic quota for 1958, the final year of the current agreement, of 350,000 tons with a special reserve quota of 50,000 tons. This overall entitlement of 400,000 tons is, of course, far in excess of its anticipated exports this year. The estimate of the free market requirement during the current year has been raised from 5,515,000 metric tons (raw value) to 5,610,000 tons. Export quotas remain without change. No estimate is included in the *communique* of the supplies to be expected from non-signatory countries nor is any reference made to recent sugar price levels. The *communique* also states that the Council considered the progress made in connection with the arrangement for the negotiation of a new International Sugar Agreement at a conference to be held under the auspices of the United Nations in September 1958.

No Effect on Prices

The foregoing account will reveal that the meeting of the Sugar Council was largely of a routine character and, naturally, its outcome will not have any effect on prices. It may be noted here that the world market price now stands at about 3.40 cents per lb. which is within the range (minimum of 3.25 cents and maximum of 4.00 cents) in which the initial quotas for the year automatically operate, so that no change in quotas was expected. But it is still true, as the *Financial Times*, London, rightly says, that the market generally pays little attention to the decisions of the Council. According to this paper, the reason is that the present Agreement has too narrow a basis to have much effect on prices. When the Indonesian quota is added, the total initial export quotas of the producing countries which belong to the Agreement amount to just over 5 million metric tons. In recent years, world net exports have averaged about 12 million metric tons and world production now exceeds 40 million metric tons. And it is not only the small exporting countries which are outside the Agreement. Neither Brazil nor Peru are members. Although there are limits on the tonnages which the member countries may import from non-member countries, selling by Brazil and Peru, which are both large exporters, can depress prices.

Against this background, much interest attaches to the forthcoming International Conference on Sugar to be held under the auspices of the United Nations in September next. The Conference will provide an opportunity for a thorough review of the working of the Sugar Agreement, which is due to expire at the end of the year, in the past six years. Such a review will show that the world price of sugar was often below the original floor price of 3.25 cents and that it rarely rose much above that level except in the first half of last year when it reached the high point of 6.85 cents a pound, that is, 2.85 cents above what was originally regarded as the maximum price. It is thus evident that the attempt to keep the sugar price within the desirable range of 3.25 cents to 4 cents a pound, as the *Financial Times* observes, has clearly not been successful; "nor will another agreement be more successful, unless the reluctant producers are argued into the scheme."

HIGHER ROYALTY ON COAL MINES

PRE-1949 LEASES EXEMPTED

THE Mines and Minerals (Regulation and Development) Amendment Bill passed in the Lok Sabha last week is an expression of the Union Government's sense of realism in relation to the difficulties of the coal industry and has alleviated, though not wholly, the genuine grievances of coal producers. The Amendment Bill seeks to exempt mining leases for coal granted before 25th October 1949 from the operation of certain provisions of the original Act which had fixed a uniform, but higher, rate of royalty on all mining leases. Section 9(1) of the original Act had fixed a royalty of 5 per cent. on the f.o.r. price, subject to a minimum of 50 nP per ton, on all coal removed by the holder of a mining lease from the leased area. Section 9(3) had conferred powers on the Government to enhance or reduce the rate of royalty, subject to a maximum of 20 per cent. of the sale price at the pithead. Further, under section 16(1) of the Act the Government had powers to bring all mining leases granted before 25th October 1949 into uniformity with the provisions of the Act. This meant that all leases granted before 25th October 1949, which were paying only a nominal rate of royalty, were subjected to a steep rise in the rate of royalty.

The coal industry had strongly protested against the steep rise in royalty on leases under section 9(1). The representatives of the industry submitted that any increase in the rate of royalties would mean an increased burden on the industry within the existing price structure. According to them, the rate of royalty on leases obtained prior to 1948 was on an average As. 4 to As. 6 per ton. The effect of the increase in royalty to 5 per cent. on the f.o.r. value of coal under the Mines and Minerals (Regulation and Development) Act would mean an increase in cost of production by another As. 10 to As. 12 per ton in the Bengal and Bihar coalfields. In the Madhya Pradesh coalfields, the rate hitherto was 5 per cent. of the pitmouth value of coal and when it is changed to 5 per cent. f.o.r. value, the colliery costs would rise by another As. 5 per ton. Any increase in royalty would, the colliery owners demanded, have to be compensated by a corresponding increase in the selling prices of coal.

The colliery owners also drew the attention of the Government to the inequity of fixing royalties as a percentage of the present selling price, because the increased royalty could not be met out of the already reduced profit margin and the situation could only be met by a very substantial increase in the selling price. If the selling price was increased, the royalty also would automatically be enhanced and a vicious circle would be set up. If, on the other hand, it was the intention that such increased royalties were to be met out of the existing profits, the colliery owners submitted, the already economic margin of profit could not absorb such increase in royalty rate, particularly in the Permanently Settled Areas of Bengal, Bihar and Orissa. The rate of royalty in these areas was very low. In some cases, a fixed rent was paid which worked out at a nominal amount of less than one anna per ton. If, as was provided under section 9(3), the royalty were to be raised to 20 per cent., it would mean an increase of Rs. 4 per ton, and such increase in costs, without any compensation, would be disastrous not only for the industry itself but for the whole programme of development under the second Plan.

Another Aspect

Another aspect of the matter to which the industry drew the attention of the Government was that section 9(1) of the Act provided for payment of royalties at a standard rate and ignored the fact that most mining lessees in the Permanently Settled Areas of Bengal and Bihar had sub-leased portions of their leasehold areas to others on terms which provided for the payment to them of a profit margin on royalties. The profit margin on royalties would be eliminated if a standard rate of royalty were to be paid on all grades of lessees and sub-lessees. If, however, the Government felt that some increase in the rates of royalty payable by coal mining lessees in the Permanently Settled Areas was desirable, the colliery owners submitted, no action should be taken to disturb the existing royalty structure within the coal industry. This suggestion meant that the increased royalty should be made applicable only to new leases.

The Government of India recognised the force of the industry's contention and decided to amend the Act suitably. Accordingly, an Amending Bill was introduced on 28th March 1958. In fact, in view of the importance of coal as a basic fuel and the position it occupied in the economy of the nation, coal had always been placed on a different footing from other minerals. It was in recognition of this that no rules had been framed so far under section 7 of the Mines and Minerals (Regulation and Development) Act, 1948, in regard to modification of the terms and conditions of mining leases for coal granted before the commencement of that Act, though other minerals had been covered. The Mines and Minerals (Regulation and Development) Act 1957, which replaced the 1948 Act, however, specifically extended the rate of royalty prescribed to mining leases granted before 25th October 1949, in respect of coal also and made it obligatory for the other terms and conditions of such leases to be brought into conformity with the provisions of the Act and the rules made under sections 13 and 18. The Government subsequently realised the numerous undesirable consequences of these changes. The areas covered by these leases are principally in West Bengal and Bihar and account for 80 per cent. of the total coal production of the country. A sudden and uniform increase of the royalties paid on this coal and a similar change in other terms and conditions, the Government feared, were likely to have an unsettling effect on the industry and might retard the programme of coal production under the second Plan. Although the Government has now exempted the mining leases for coal granted before 25th October 1949 from the provisions of section 9(1) and section 16(1), it retains the power to extend these provisions to such leases at a future date, subject to such exceptions and modifications as it may deem necessary.

The Bill was opposed by several members in the Lok Sabha on the following grounds: (1) The 1957 Act should have been given a fair trial before it was amended; (2) there was no point in raising the royalties on leases granted after October 1949, while the pre-1949 leases accounted for the bulk of the production; (3) the provisions of the Bill would enable the private sector to increase its profits; (4) the opinions of the State Governments, which were the beneficiaries of the royalties should prevail.

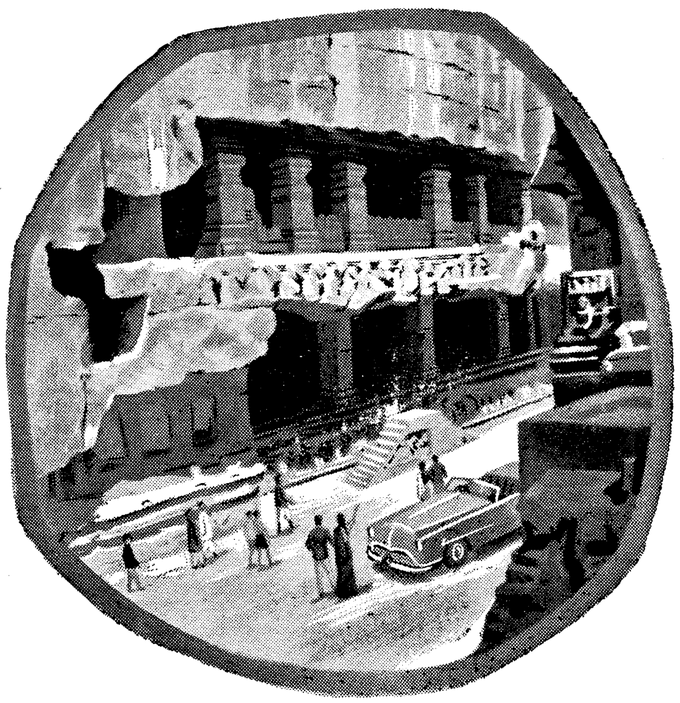
The Minister for Steel, Mines and Fuel, Sardar Swaran Singh, said that an automatic application of the relevant provisions of the parent Act would create hardships not only to the coal industry but to the consumers also. "There is no basic change in the principles (of the parent Act) involved, but instead of doing it (fixation of new royalty rates) in one push, the intention is to do it in a phased manner. This is necessary to ensure that there is no violent upsetting in the economy and the general price structure." The Minister's statement means that the grant of exemptions to pre-1949 leases is not a permanent one and that the royalties on these would be increased subsequently in stages.

SINGARENI COLLIERIES

No final decision has been taken on the quantum of the Central Government's participation in the share capital of the Singareni Collieries, as a condition for advancing funds to the latter for expansion, the negotiations in regard to which are proceeding with the Andhra State Government. This was disclosed by the Union Finance Minister, Mr. Morarji Desai, in the course of a statement he made in the Lok Sabha on the 1st inst., by way of correction to his earlier statement on the subject in the course of his reply to the debate on the Finance Ministry's demands for grants. He admitted that the Central Government was asking for a two-thirds share in the share capital of the collieries, and not one-third share as stated by him on 17th April.

Replying to the criticism of a member from Hyderabad that the Central Government was laying impossible conditions for helping the Singareni collieries, Mr. Desai had stated in the House on 17th April: "I do not know what has happened before. But I may say, as far as I know today, the position is that the Centre is asking only for one-third total share capital as a condition for advancing funds. When we are advancing much more than the share capital, if we ask for one-third share in it, I do not know what wrong is committed in this. I do not know why that should not be given. Therefore, if the Andhra Government wants funds, it should do so (agree to the Centre having one-third share) and then, there may not be much difficulty. That is the position today. But I am prepared to examine it again."

Correcting this statement, Mr. Desai said on the 1st inst.: "I should like to correct an inadvertent mistake in my speech in this House on 17th April. In the course of the speech, I mentioned that the Central Government were asking for only one-third of the share capital of the Singareni Collieries as a condition for advancing funds for their development. My attention has since been drawn to the fact that the discussions with the State Government are proceeding on the basis that the Central share of the share capital will be two-thirds and not one-third. These discussions have not yet been concluded and no final decision has been taken and it is only proper that the House should know the correct position."



International Panorama of Progress

More time for tradition

The world famous cave-temples of Ellora richly proclaim the glories of the great Hindu medieval renaissance times, when life moved at a more leisurely pace. This proud heritage lives side by side with swift, modern transportation that provides tourists with more time for tradition, businessmen with more time for commerce. Automobiles and trucks around half the world rely on Caltex service for the petroleum products that keep them operating at highest efficiency. Wherever they travel—to distant supply points or on short vacation trips—Caltex rides with them. Through the power of petroleum, Caltex fuels, oils and lubricants help bring mobility and prosperity to over 70 countries. Caltex—partner in progress in Europe, Africa, Asia, Australia and New Zealand.

RUBBER PRICE IN LONDON SLUMPS

LOWEST LEVEL IN 3½ YEARS

SINCE the middle of April, the rubber markets in London and Singapore have suffered a sudden reversal of the trend noted in the earlier half of the month. The first two weeks of April witnessed an upward trend which took the price in the London market to about 24d. per lb., the highest level since the end of 1957. As was pointed out in these columns two weeks back, the improvement in price was due to keen Russian buying in the Eastern markets, resulting in a squeeze in the spot and nearby forward positions. Consequently, these positions commanded a sizable premium over the distant positions. In fact, Russian buying has been the main influencing factor in the world market since September.

The upward trend in the first half of April was reversed in the subsequent weeks with a sharp fall in London to 21½d. per lb., the lowest level seen in the last three and a half years. In Singapore, the price for May delivery dipped to a low of 72 cents per lb. It now stands (at the time of writing) at 21½d. per lb. in London. The fall in prices since the middle of April is more than a correction to the technical rally in the preceding weeks for more than one reason. First, the shortage of spot rubber in Singapore, consequent on the fall in shipments from Indonesia has been relieved with fresh arrivals. The quantity of rubber held up in Sumatra was not large, but it was sufficient, in the context of the present demand, to be a threat to prices once it was released. During the last few days, 12,000 tons of rubber were reported to be on the way from Sumatra to Singapore and this led to heavy selling. Secondly, there has been no Russian demand during the last two weeks and, in the absence of this main influence, the weight of supplies is being keenly felt by the market. In the absence of any sizable buying from the U.S. and the U.K., the market had been relying rather heavily on the Russian support at levels below 22½d. per lb., but, in the last two weeks, even this influence has been absent, despite the fall in price well below 22½d. There has been no indication of the policy which governs Russian buying and the rubber trade is, therefore, greatly worried over the recent fall in prices, which has made natural rubber more competitive in relation to synthetic rubber.

Futures Contracts

Yet another factor, which has contributed to the fall in prices, is the judgment of the Singapore Court of Appeal in an appeal preferred by a motor car dealer against a High Court decision ordering him to pay £25,600 to a rubber broking firm. The Court of Appeal held that contracts for the purchase of rubber futures were "wagering contracts." The rubber traders have been greatly disturbed by this decision, because this would, in their view, undermine the basis on which a good deal of business is being done.

It remains to be seen whether the sharp fall in natural rubber price will induce large-scale buying from the U.S., because of its relative cheapness as compared with that of synthetic rubber which is quoted at 24½d. per lb. In February this year, the latest month for which figures are available, rubber consumption in the U.S. showed a decline of 6,000 tons at 36.700 tons, as compared with January. This was in distinct contrast to the rise of 9,000 tons to 26,750 tons in the estimated exports to Russia and China and the increase of 2,500 tons in the aggregate world consumption to 155,000 tons. With this, the total consumption in the first two months of 1958 comes to 307,500 tons, representing a fall of 2,500 tons from that in the corresponding period of 1957.

World Output

While world consumption as a whole was higher, the world output during the month recorded a sharp fall of 27,500 tons to 117,500 tons, part of which was attributed to the shorter working month. Of this, the drop in production in Malaya alone accounted for 7,000 tons to 51,600 tons. The February production does not also compare favourably with that at 125,000 tons, in the corresponding month of 1957. The Malayan output in February last year aggregated 49,000 tons, a fall of 14,000 tons from that in the previous month. Production during the first two months of the current year aggregates 262,500 tons, as against 280,000 tons in the corresponding period of 1957. It will thus be seen that the level of consumption this year is being kept at a much higher level than production and that the fall in consumption is relatively much smaller than that in output.

REBATE IN EXPORT DUTY ON TEA

The Government of India is actively considering whether relief should be given to the tea industry in the shape of rebate in export duty. Disclosing this in the Lok Sabha on the 2nd inst., Mr. Lal Bahadur Shastri, Minister of Commerce and Industry, said that an announcement in this connection would be made very soon. Replying to a question, the Minister said that, besides concentrating on increasing export of tea to the U.K. and the U.S., the Government wanted to cover new ground, and try to boost sales in other countries. For this purpose, a delegation will visit the U.S.S.R., East Germany, Poland, etc., before the end of next month.

Mr. Jinachandran asked what action the Government was taking to protect Indian interests in view of Ceylon's decision to give relief to the low-priced teas meant for export by granting rebate on tea duty on a grade scale. In his reply, the Deputy Minister of Commerce and Industry, Mr. Satish Chandra, said that the question of sustaining the inherent strength of Indian tea in the world market was being considered by the Government.

Asked to what extent the export trade had fallen in the last six months. Mr. Nityanand Kanungo, Minister of State for Commerce, admitted that there had been some reduction, but market conditions often showed fluctuations from month to month or year to year, and the total export figures could not be judged by taking a period of a few months into account.

In reply to a question whether since the termination of the Internaional Tea Agreement, Indian tea was facing severe competition, Mr. Kanungo said that it was not correct to say that the export of Indian tea had dropped after the end of the agreement. In fact, it had increased to a certain extent in some areas. The Government was now trying to come to an agreement with the main tea-producing countries for collaboration, but had not yet succeeded. Answering another question by Mr. Mahavir Tyagi, he said that a development department was being organised along with the Tea Board to look after the technical side for improvement of the condition of tea gardens.

BONUS FOR PLANTATION WORKERS

A conference of the representatives of employers and employees of the plantations in Madras State was held on the 1st inst., under the Chairmanship of Mr. R. Venkataraman, Minister for Industries and Labour, to consider the question of bonus for the year 1957. It was agreed at the conference that a committee including three representatives of the Association of planters and three representatives of labour under the chairmanship of Mr. V. Balasundaram, Commissioner of Labour, should be appointed to evolve an industry-wise formula for the payment of bonus to the workers in the plantations and that the Committee should submit its report within two months.

TEA CROP

The revised estimated tea output in North-East India for the year 1957 is 528.4 million lbs. as against 540.1 million lbs. for 1956. The output in South India aggregated 144.6 million lbs., as compared with 126.9 million lbs. in the previous year. The total crop of the five major tea-producing countries is 1.272.8 million lbs., representing an increase of 27.6 million lbs. over the year. The crop during the current year up to the end of February is 104.7 million lbs. a rise of 7 million lbs. over that in the corresponding period of 1957. These figures do not include the crop of North-East India which is yet to come and include the output of Indonesia for January only.

The Government of India has fixed the "world price" of tea for the purpose of determining the export duty for May 1958 at Rs. 3.24 per lb., as against Rs. 2.95 per lb. in force from 1st April. There is, however, no change in the rate of duty at 38 nP per lb. The export duty is unchanged from August 1957 onwards, when it was raised from 25 nP per lb., although the "world price" has fluctuated between Rs. 2.55 per lb. and Rs. 3.48 per lb.

The Government of India has made an interim release of 50 per cent. of the crop basis of tea estates for export out of the 1958-59 crop, pending final allotment for the year.

THE STEEL LINE

Quick and easy communications are essential for the fulfilment of India's targets for steel. The Indian Railways are accordingly devoting their allotment under the Second Five Year Plan to develop and improve their capacity

to handle traffic for the five steel plants. Thousands of labourers and hundreds of technicians and engineers are working round the clock on difficult terrain, levelling the earth, clearing thick forests, building embankments and bridges and laying over 700 miles of track over a vast area covering four major States.
The Indian Iron & Steel Co. Ltd. is also helping the Indian Railways by providing...150,000 tons of steel per annum for the Steel Line.

STEEL IS THE STARTING POINT

Use steel only when you must today, there will be more tomorrow.

ACC-1/58

WORKING OF INDIAN TELEPHONE INDUSTRIES

ESTIMATES COMMITTEE'S FINDINGS

THE realisation that the telephone, along with other means of communication, is an integral part of the economic and technological advancement of the country has led the Government of India and the Planning Commission to accord high priority to the telephone industry in the Plans. It has also been included in Schedule A of the Industrial Policy Resolution. The Indian Telephone Industries, the first industry to be started by the national Government, was established at Bangalore in 1948 to undertake the manufacture and assembly of telecommunication equipment. With a view to enabling the factory to be organised on commercial lines and in order to give it the necessary flexibility in administrative matters, it was decided to run the factory as a company. The Indian Telephone Industries Ltd. (I.T.I.) was formed accordingly in 1950, with an authorised capital of Rs. 2.50 crores which was later increased to Rs. 4 crores.

Despite the fact that the I.T.I. has been now in existence for about 10 years, its progress in respect of actual production of telephone equipment (excluding mere assembly of components), according to the Estimates Committee of the Lok Sabha (Chairman Mr. Balvantray G. Mehta), "cannot be considered entirely satisfactory." In its Eleventh (1957-58) Report on the Ministry of Transport and Communications (Department of Communications and Civil Aviation), Indian Telephone Industries (Private) Ltd., the Committee points out that, in the last three years, the value of components manufactured by the I.T.I. has been only 41 per cent. of the value of its aggregate output. The former during the three years 1955-56, 1956-57 and 1957-58, aggregated Rs. 4.25 crores, while the latter was of the order of Rs. 10.23 crores. The Committee has, therefore, recommended that efforts should be made by the I.T.I. to increase the proportion of indigenous content in the product. There have also been, according to the Committee, considerable delays, particularly in the manufacture of transmission equipment. Further, the installed capacity in the undertaking was not being put to full use and there was also scope for effecting considerable economies in working.

Examining the estimates of production and actual output in the I.T.I. during the last five years, the Committee notes that, in several cases, production did not reach the target fixed. The Committee has also pointed out that, on the transmission side, where there is extensive scope for production, the production schedules do not appear to have been framed realistically.

Principal Projects

The principal projects for purposes of production in the I.T.I. are at present two, namely, Main Automatic Exchange (MAX) and (b) transmission equipment. The present targets for supply of MAX equipment to the P. and T. Department on expansion as well as replacement account during the second Plan envisage the cut-over of about 165,000 lines of new auto-equipment. For this purpose, the supply of equipment has to be completed by about the end of the fourth year of the Plan. Of this target, approximately 36,000 lines of equipment had already been supplied before the second Plan commenced, leaving approximately 130,000 lines to be supplied in the first four years of the Plan. During the first two years, approximately 56,000 lines have been supplied so that the I.T.I. would have to supply the P. and T. Department approximately 37,000 lines of MAX equipment and about 45,000 telephone instruments per annum during the years 1958-60. By 1960, the target is to produce in all 320,000 telephones and 215,000 exchange lines.

The Committee points out that the targets and capacity of the I.T.I. are not adequate to meet the requirements of the P. and T. Department in respect of transmission equipment, particularly in regard to the 12-channel open wire system, 12-channel co-axial project, etc. It, therefore, feels that the manufacture of transmission equipment needs to be given greater attention in the I.T.I. than at present, especially considering its revenue-earning capacity as well as future demand. In the export field also there are, according to the Committee, greater chances of marketing transmission equipment than telephone exchange equipment. It, therefore, suggests that the programme of transmission equipment of the I.T.I. should be reviewed.

The Committee recommends that, in order to ensure the utilisation of surplus capacity available in certain shops of the I.T.I. and to minimise dependence on imports, the I.T.I. should undertake production of as many other items both in the telecommunication and non-telecommunication fields, as possible. For this purpose, the I.T.I. should first clearly determine what items can be manufactured by it after making a survey of the idle capacity as well as the capacity of the machinery to produce those items. Thereafter, the I.T.I. should conduct a market survey of the demand for all such items, keeping in view the capacity already available in the country. To enable such surveys to be made the Committee suggests the appointment by the Government of a Committee analogous to the Engineering Capacity Survey Committee which had been appointed sometime back. Finally, the I.T.I. should draw up necessary plans for starting manufacturing operations on the basis of the survey.

Cost of Production

As regards cost of production, it is heartening to note that there has been a downward trend in cost for items such as Auto Telephone, C.B. Telephone, Dial 24C, Transmitter, Meter. Their prices compare well with those of the corresponding products of the Automatic Telephone and Electric Company, Ltd., Liverpool, which provides the "know-how" and technical assistance to the I.T.I.

Nevertheless, the Committee feels that there are many directions in which there is scope for further reduction. For instance, while the percentage of direct materials in the total cost of production has gone down from 81.5 in 1954-55 to 77.4 in 1956-57, the position regarding overheads continues to be unsatisfactory. The percentage of overheads to the total cost during this period went up by 3.5 per cent. though, no doubt, as compared with direct labour, the position has improved slightly in that the overheads which were about 613 per cent. (of direct labour) in the year 1954-55 are now 554 per cent.

The Committee has made certain suggestions regarding the organisational set-up of the I.T.I. It had pointed out previously the impropriety, and the inherent anomalies and dangers of appointing the Secretary of the parent Ministry as the Chairman of the Board of Directors of a Government concern. The Committee recommends that early action should be taken to appoint a Chairman, with requisite qualifications and aptitude, who holds no post in the Secretariat or has severed his connection with the administration. It further suggests that persons with business experience who might have no interest in private undertakings and also persons of experience in financial matters and in telecommunication engineering, should be associated with the board. It suggests that they could also act as functional advisers in various matters and provide technical services in the fields of production, performance, measurement, etc.

It has also recommended an early examination of the system of accounting followed by the concern as well as of the high rate of overheads and expenditure trends, particularly on staff. The optimum utilisation of the production capacity with reference to the requirements of telephonic and allied equipment in the country, measures to increase indigenous production of imported telephone equipment, intensive research, etc., have also been urged. The Committee feels that besides the examination of these questions, a co-ordinated and comprehensive enquiry into the progress made by the I.T.I., particularly in regard to production and other technical matters, is necessary. Further, since the P. and T. Workshops also operate in the telecommunications field, it would be desirable to have similar enquiry made into the progress of these workshops with special reference to their reorganisation and co-ordination with I.T.I. in various matters including research and training. For this purpose, it would be desirable, it points out, to appoint a Technical Committee consisting of one or two telecommunication engineers and a chartered and/or cost accountant under the chairmanship of an experienced industrialist to review the working of the I.T.I. during the last decade. This Technical Committee may also look into the affairs of P. and T. Workshops. The committee recommends that this be done at an early date and its report made available to Parliament in due course so as to enable Parliament to make a correct assessment of the working of and the progress made by I.T.I. and P. and T. workshops.

SHIPPING BILL

The Government of India's shipping policy, as embodied in the Indian Merchant Shipping Bill, 1958, now under study by the Select Committee, has been hailed as a "dynamic" one, designed to develop Indian shipping as early as possible, by Mr. S. N. Haji, Chairman of the All-India Manufacturers' Association. Mr. Haji observed that the Bill was the first measure by which the Government was exercising its sovereign authority to create an Indian Register which would invest a ship with Indian nationality and thus govern its life at home and abroad. Under the Present Bill, the Government, he pointed out, was armed with powers not only to control the ship but also to issue directives about the routes, the ports and even the types of cargoes and passengers Indian ships would carry. As regards participation of foreign capital in the development of merchant shipping in India, Mr. Haji said that it should be more welcome now than ever, in view of the fact that the private sector was not in a position to put up the necessary finance to reach the target of the second Plan and that the shipping loan fund of the Government was very lean.

Referring to the fears entertained in certain quarters about foreign participation, Mr. Haji said that, even by keeping the door open as wide as possible, there was no possibility of foreign capital flowing into this industry in a manner that would denationalise Indian shipping, because it was the nationality of the ships, he pointed out, that mattered.

Another section of shipowners, however, is critical of the provisions in the Bill relating to the definition of "Indian ship." The Chairman of the Scindia Steam Navigation Company, Ltd. (Mr. Dharamsey Khatau) and of the Indian Steam Ship Company, Ltd. (Dr. A. Ramaswami Mudaliar) pointed out that, under the new definition of an Indian ship as one owned by a company as defined by the Indian Companies Act, 1956, any foreigner can register a company with cent per cent foreign capital and get a ship owned by such a foreign company registered as an Indian ship and be entitled to the same treatment and privileges as are accorded to Indian ships at present.

They point out Indian shipping was defined by the Policy Committee on Shipping as shipping owned, controlled and managed by Indian nationals. The Government of India, by its resolution dated 12th July 1947, agreed that this definition would be the ideal one and should be the ultimate objective. The Government, however, stated that "a rigid application of this definition would, however, exclude some of the most important shipping companies in India simply because an insignificant proportion of their shares is held by non-Indians." It, therefore, resolved that the criteria to be satisfied by companies to qualify them for treatment as "Indian shipping companies" should be (*a*) that at least 75 per cent. of the shares and debentures of the companies should be held by Indians in their own rights; (*b*) that all the directors should be Indians; (*c*) that the managing agents, if any, should be Indians. "While this resolution passed by the Government stands," the Chairmen point out, "it has come as a surprise to Indian shipping that all the conditions stated therein are sought to be ignored by the new definition."

They further add that the introduction of substantial foreign interests, in industry will necessarily lead to participation, and perhaps even to a dominating control, of the management of some of the units in the industry. It will also, according to them, be not conducive to the Indian shipping industry speaking with one voice in International Liners' Conferences and thus prejudice the interest of Indian shipping companies.

The Chairmen also doubt the validity of the contention that, once a company is formed under the Indian Companies Act and shipping tonnage registered in India, the Government of India will have full control over it whether its capital is predominantly owned by foreigners or whether it is entirely owned by foreigners. The assets of a shipping company, they aver, are literally floating assets in the form of ships which are cruising in the wide oceans. There are comparatively very little assets which are within the country. In this respect, there is no comparison, it is stated, between a shipping company and an industrial company established in the country; the power of control of Government over the latter and over its personnel is real and effective while the control over the former can, they point out in certain circumstances be only "illusory."

AMENDING COMPANIES ACT—II

SUGGESTIONS OF SASTRI COMMITTEE ANALYSED

By F. R. Ginwalla

IT is not surprising that a legislative measure of such magnitude should at times present difficulties of interpretation and correlation, when its diverse provisions on diverse topics are brought together and considered in juxtaposition. The Amendment Committee has carefully considered a large number of difficulties attendant on the working of this enactment in actual practice. In this article, we shall discuss the recommendations of the Amendment Committee in respect of the provisions falling under Parts II to V of the Act.

Part II of the Act contains provisions relating to incorporation of a company and matters incidental thereto; this part contains 44 Sections from Section 11 to Section 54, out of which 13 sections are proposed to be amended.

Section 13 lays down the requirements of the Act with respect to memorandum. The Report states that the requirement in Section 13 (1)(*c*) that in the case of non-trading corporations the only State to the territories of which the objects extend, should be specified in the memorandum, is open to objection which should be removed by deleting the words "State or" occurring in clause (*c*).

Section 17(4)

With regard to Section 17 (alteration of memorandum), it was urged before the Committee that, in England, sanction of the Court is not necessary in respect of an alteration of the memorandum of a company and, therefore, there was no reason why in this country any alteration, even if it is confined to the limited purposes specified in Section 17(1), should require confirmation by the Court before it could take effect. It was further urged that if there was any opposition to the proposed alteration, then, of course, intervention of the Court might be necessary. The Committee took the view that, having regard to the conditions in this country and to the fact that the present Act became law as recently as in 1956, it was not necessary to recommend any change in the law in this respect.

There is, however, a drafting change that has been suggested in Section 17(4). Instead of the words "notice of the alteration," the words "notice of the application to the Court for confirmation of the alteration" are proposed to be substituted in Section 17(4).

Sections 18 and 19

Under Section 17(2), an alteration of the memorandum for the purposes specified in sub-section (1) shall not take effect until and except in so far as it is confirmed by the Court on petition. Sections 18 and 19 provide for registration of the altered memorandum with the Registrar and for the consequences of a failure to register. Under Section 18(1), read with sub-section (4), a copy of the altered memorandum and a copy of the Court's order confirming the alteration have to be filed with the Registrar within three months of the date of the Order or such further time as may be granted by the Court. If the Company has done this, it has done all that is required of it. Section 19(2) provides that if the registration is not effected within three months after the date of the order of the Court confirming the alteration or within such further time as may be allowed by the Court for filing the documents under Section 18(4), such alteration and order of the Court confirming it shall become void.

It is, therefore, significant that there is no period prescribed within which after the order of the Court has been filed, the Registrar should register and certify the alteration. The Court has no power under Section 18(4) to extend time for registration. In order to bring out the foregoing points, the Report proposes amendments in Sections 18(1) and (4) and 19(2). The effect of the proposed amendments will be that the Registrar shall register and certify the alteration within one month of the date of filing the certified copy of the order of the Court or such further time as the Court may allow under Section 18(4). Section 19(2) is also proposed to be amended in the following terms:

"If the registration is not effected within the period allowed by Section 18(1) or within the period as extended under Section 18(4), such alteration and the order of the Court and all proceedings connected therewith, shall, at the expiry of such period, become void and inoperative." (Proviso remains as before.)

As regards drafts of amended Sections 18(1) and (4), attention is invited at page 26 of the Report.

Section 23

A change of name by a company may take place either under the provisions of Section 21 or 22. Section 23 is about the registration of a change of name in pursuance of Section 21 or 22. The Report proposes to add a new sub-section (4) to existing Section 23. The new sub-section is self-explanatory and runs as follows:

"Where a public company is converted into a private company or a private company is converted into a public company, the company shall change its name in accordance with the requirements of Section 13 (1)(*a*) and the Registrar shall make the necessary alterations in conformity with the requirements of Section 13 in the memorandum of association and the certificate of incorporation."

Licensed Companies

Section 25 relates to licensed companies. Associations formed for promoting commerce, art, science or religion or which run schools, art galleries or sports clubs, may be registered as companies with limited liability. Sub-section (6) of the foregoing section enumerates the privileges which such licensed companies enjoy. The Central Government has power to grant license to the companies for the purposes mentioned above and it has also power to revoke the same under sub-section (7). The Report states that a suggestion was made by the Department of the Company Law Administration that if a licensed company alters any of its objects in the memorandum, it should be permitted to do so only after obtaining the previous approval of the Central Government to the alteration. It appears to be the view of the Committee that since the Government has been given the power of revocation of license under sub-section (7), all that is necessary is that notice of the proposed alteration of the Company's objects should be given to the Government. The following amendment is, therefore, suggested in Section 25(8):

"Where a body, in respect of which a licence under this section is in force, proposes to alter the provisions of its memorandum with respect to its objects, it shall give the Central Government four weeks' notice of the proposed alteration, and the Central Government may revoke the licence if no such notice is given or if it does not approve of the alteration or may vary the licence by imposing conditions and regulations in lieu of or in addition to those to which the licence was formerly subject."

As the law stands, non-profit-making associations licensed under Section 25 have to comply with most of the statutory obligations placed on companies under the Act. It is surely a commendable suggestion on the part of the Committee to amend sub-section (6) so as to empower the Government to exempt associations or bodies to which a licence is granted under the section from the operation of other sections in addition to Section 303. The proposed amendment of sub-section (6) is as follows:

"It shall not be necessary for a body to which a licence is so granted to use the word "limited" or the words 'private limited' as any part of its name and, unless its articles otherwise provide and if the Central Government so directs and to the extent specified in the direction, such body shall be exempt from the operation of the following provisions of the Act, namely, Sections 147, 166, 171, 176, 177, 188, 190, 255, 256, 263, 280, 282 and 285.

Sections 28 and 29

Section 28 refers to adoption and application of Table A in the case of companies limited by shares. Section 29 prescribes the form of articles in case of other companies. The Report proposes to combine these two sections into one Section 28. As a result of this merger, Section 29 will have to be deleted. The new Section 28 will read thus:

"(1) The articles of association of a company limited by shares may adopt all or any of the regulations contained in Table A in Schedule I and the articles of association of any other company shall be in such one of the forms in Tables C, D and E in Schedule I, as may be applicable, or in a form as near thereto as circumstances admit.

(2) In the case of a company registered after the commencement of this Act, if articles are not registered or if they are registered, in so far as they do not exclude or modify the regulations contained in Table A or Tables C, D and E in Schedule I, the regulations in Table A shall so far as they may be applicable, be the regulations of the company, if the company is not a company limited by shares, in the same manner and to the same extent as if they were contained in duly registered articles."

It is relevant here to discuss the suggestion of the Amendment Committee in respect of Section 38 which is corresponding to Section 22 of the English Companies Act. The Bombay High Court, construing the words "or otherwise to pay money to the company" which occur at the end of the main part of Section 38, has held that a resolution of the company (Royal Western India Turf Club Ltd.)—suit No. 135 of 1957 under Section 90 of the Code of Civil Procedure—amending its articles so as to raise the rates of recurring subscriptions payable by members would not be binding on the dissentient members and they would be entitled to enjoy all the privileges of membership on payment of the rates of subscription current at the time when they became members. The foregoing view of the Bombay High Court is based on a plain grammatical analysis of Section 38. The Report suggests that, if by reason of the view of the Bombay High Court, Section 38 may be amended through modifying the proviso to the section so as to read: "Or where recurring subscriptions payable by the members of a club or other association are increased by an amendment of the articles pursuant to a special resolution of the company." The Bombay High Court has construed the words "otherwise to pay money to the company" in their widest sense in the context of a plain grammatical analysis of Section 38. But having regard to the general level of prices, it is obviously for the legislature to decide whether amendment of Section 38 as proposed in the Report is necessary. If there is need to amend this section, reasonable safeguards should be provided so as to eliminate the danger of such powers being abused.

Section 31

The Act does not prevent the conversion of a public company into a private company by amending its articles by a special resolution and otherwise complying with the requirements of the Act. Since the Act has placed restrictions on the management of public companies there has been a growing tendency to convert public companies into private companies. Such conversions are no doubt primarily matters for the shareholders and, in fact, the consent of the Court is not necessary. But having regard to the fact that a conversion of a public company into a private company can be effected merely by the adoption of a special resolution which may have commanded the positive support of only a minority of the shareholders, it is necessary that the influence of the general body of shareholders in any company should not be eliminated by a small controlling group. Since more vigilance is always better, some form of control over conversions is necessary to achieve the objects of the Act. At present, the Department is exercising some control over such conversions by resorting to Section 21 which states that "a company may, by special resolution and with the approval of the Central Government signified in writing, change its name."

The Report states that Section 21 cannot bear the strain the Department seeks to put upon it by regarding the addition of the word "private" (consequent upon such conversion) as a change in the name of the Company which, under the section, requires the approval of the Government. Realising the need for some form of control over the conversion of public com-

panies into private companies, the Report suggests that Section 31 should be amended by adding a proviso to its sub-section (1), namely, "provided that no resolution which has the affect of converting a public company into a private company, shall have effect unless the Central Government approves of the same." In this context, it may be noted that there is no need for the approval of the Government in the converse case of a private company being converted into a public company and thereby submitting itself to restrictions from which private companies are exempt under the Act. The existing sub-section (3) is proposed to be renumbered as sub-section (4) and a new subsection (3) is proposed to be inserted so as to provide for: "Where a company has so altered its articles, a printed copy of the articles as so altered, shall, within one month of the receipt of the sanction of the Central Government, be filed with the Registrar."

Membership of Companies

It was suggested that a specific provision should be made that minors cannot be members of a company. The Report rejects this suggestion as under the Law of Contracts a minor is incapable of contracting and membership involves contractual relationship between the company and the members as well as the members *inter se*. There was further suggestion to the Committee that the name of a minor who has inherited shares as heir or legatee should be entered in the register as holder of the shares. This suggestion has not been accepted. The Committee has, however, observed that there would be no objection to having the name of the certificated guardian of a minor who has inherited the shares or the executor of a probated will, under which a legacy of shares is given to a minor, being entered in the register and dividends being paid to him.

Section 153 states that no notice of any trust, express, implied or constructive, shall be entered in the register of members or debenture-holders or be receivable by the Registrar. Section 153 is peremptory in its terms. The corresponding Section 117 of the English Act is also to the same effect. They have common objects to secure absolute immunity to the company for any breaches of trust committed by a trustee. The Report, therefore, rightly rejects the suggestion that the name of a trust owning shares should be entered in the register in order to avoid the necessity for a transfer of shares by one trustee to a succeeding trustee. To accept the foregoing suggestion would be a contravention of Section 153.

As regards Section 41(2), the Report suggests an amendment because it was brought to the notice of the Committee that in some cases, on the verge of liquidation, entries were made in the register of members of the names of persons who never applied for shares, in order to fasten liability on these persons as contributories. To avoid this contingency an amendment is suggested in Section 41(2) so that it may read: "Every other person who agrees in writing to become a member of a company and whose name is entered in its register of members, shall be a member of the company."

Section 39

Section 39 provides for supply of copies of memorandum and articles and other documents to members on payment of a fee of one rupee per each document. The Report suggests that in order to discourage frivolous applications for copies of documents as mentioned in sub-section (1) the fee should be increased to Rs. 3 for each copy of the document applied for. Sub-section (2) provides penalty of fine upto Rs. 50 for default in furnishing copies. The interval of seven days allowed to a company in furnishing the required copies is insufficient particularly where holidays intervene. It is therefore proposed in the Report that Section 39(1) might be amended so as to allow the interval of 14 days from the date of deposit of the estimated charges for the supply of copies.

Investments of Companies

It was suggested to the Committee that in cases where investments could not be held in the name of the Company on account of the provisions of some other law or rule or regulation having the force of law, the company should be allowed to hold them in the name of other persons. This suggestion did not meet the approval of the Committee as it was likely to defeat a provision of law. It is, however, suggested in the Report that Section 49(1) may be amended by inserting the words "or by any other law for the time being in force" after the words "sub-sections (2) to (5)" occurring at the beginning of the sub-section.

It is the view of the Committee that trusts ought not to be entered in the register. In order to make sub-section (2) consistent with this view the Report proposes that the words "expressly described as a nominee of the company" occurring at the end of Section 49(2) should be deleted.

Section 49(5) (*a*) is proposed to be amended to meet the practical difficulties of companies. The proposed amendment is:

"(5) Nothing in this section shall be deemed to prevent a company, (*a*) from depositing with or transferring to or holding shares or securities in the name of the State Bank of India or a scheduled bank, being the bankers of the company, so as to facilitate the collection of dividends or interest or transfer of the shares and securities."

The advantages of the foregoing amendment are obvious. There will be easy collection of dividends and the speedy disposal of such shares and securities at a slightly higher price. Till the shares and securities are disposed of, the bankers of the company would be collecting interest and dividends and crediting them to the company's account. As a consequential amendment, the words "or the State Bank of India" are proposed to be added before the words "or with a scheduled bank," occurring in Section 49(6).

Part III

Now we come to Part III; this part contains 27 sections, Section 55 to Section 81; the sections proposed to be amended are five. We have already discussed the new definition of "prospectus" as suggested in the Report.

Section 60 enumerates the requirements for the registration of prospectus. There is no express or implied provision either in Section 60 or anywhere in the Act to empower the Registrar to refuse registration on the ground that the company is directly or indirectly contravening the policy of the Act or that its business is sought to be carried on in a manner contrary to law. There is also no provision in Section 60 or anywhere in the Act compelling the Registrar to register a Prospectus if the requirements [*vide* Section 60(3) (*a*) and (*b*)] for registration are fully satisfied. The Report therefore proposes to amend Section 60(3) as follows:

"The Registrar shall not register a prospectus unless the requirements of Sections 55, 56, 57 and 58 and sub-sections (1) and (2) of this section have been complied with and the prospectus is accompanied by the consent in writing of any persons named therein as the auditor, legal adviser, attorney, solicitor, banker or broker of the Company or proposed Company to act in that capacity."

As a result of the amendment of Section 60(3), it will be in order for the Registrar to point out the defects in the documents on scrutiny and refuse registration of the prospectus if the statuory requirements are not satisfied. But Section 60(3) as amended makes it clear that the Registrar is bound to register the prospectus if it satisfies the statutory requirements and that he has no powers to refuse registration on the ground that the Company is directly or indirectly contravening the policy of the Act or that its business is sought to be carried on in the manner contrary to law. The suggested amendment may be on the right lines, but more vigilance on the part of the Registrar is always better. He has to consider not merely prosecuting erring businessmen for violations of the Act but also to inculcate sound practices of companies.

It was pointed out to the Amendment Committee that the periods of three weeks and six weeks allowed by Section 73(1) are too short and should be increased to four weeks and seven weeks respectively. This suggestion made by a stock exchange has been accepted and the amendment of Section 73(1) is recommended accordingly.

Section 76

Section 76 relates to payment of commission in respect of shares. Sub-section (2) of this section has raised a controversial question as to whether any previous agreement between a company and a person entitled to receive any payment as commission in consideration of his subscribing or procuring subscription of shares of the Company is void to the extent it is repugnant to the provisions of Section 76. A learned Judge of the Bombay High Court—suit No. 376 of 1956—held that Section 76 had imposed a rigid restriction on the payment of commission to the promoters of a company and that the agreement in question became void and unenforceable after the present Act came into force on 1st April 1956. This view was confirmed by a Division Bench of the Bombay High Court—appeal No. 23 of 1957—Section 76(2), as it stands, prohibits the application of capital moneys but not of profits, in payment of any commission, though the obvious intention, as disclosed by Section 76(1) (ii) and (2), was to put a ceiling on the commission limited to 5 per cent. of the price at which the shares are issued. In order to remove any doubt, the Report recommends that the word "capital" should be deleted from Section 76(2).

Preference Shares

Subject to the conditions laid down in Section 80, a company limited by shares may, if so authorised by its articles, issue preference shares which are, or at the option of the company are to be liable, to be redeemed. The Report suggests an amendment of Section 80(1) (*d*) and (5) which refer to "capital redemption reserve fund." According to modern commercial and accountancy practice, the word "fund" is used in connection with reserves only when the funds constituting the reserves are invested outside the business. The Report proposes that the word "account" may be substituted for the word "fund" in sub-sections 1(*d*) and (5). As regards sub-section (4) of Section 80, the Report states that reference to Section 601 is an obvious error in the printed copy of the Act. The reference should be to Section 611 and the mistake should be rectified accordingly.

Section 81

This section corresponds to Section 105-C of the Act of 1913. Under the foregoing section of the old Act it was competent to the directors to increase the issued capital subject to the condition that the new shares were offered *pro rata* to all the shareholders of the company. Shares issued by the directors but not thus subscribed for could be allotted by the directors to anybody at any time and on any terms (above par) at their discretion. Thus, under the old Act there was a possibility of abuse of this power by the directors allotting these shares to themselves or their nominees or relatives on favourable terms or when the market became favourable. To avoid such abuses the old Section 105-C was re-enacted as Section 81 in the present Act but unfortunately is so worded as to make its interpretation difficult. As observed above, the object of Section 81 is to guard against the directors abusing their powers. At the same time, as the present section stands, it is not practicable or possible to compel directors to make a *pro rata* offer to the existing shareholders from time to time before making any allotments against applications received by them over a period of months. To avoid this difficulty the Report proposes to impose a time limit on the exercise of the power of directors to make allotments from time to time. The opening part of Section 81(1) is recommended to be amended as follows:

"Where at any time after the expiry of one year from the first allotment of shares in a company it is proposed by the directors to increase the subscribed capital of the company by the issue or allotment of further shares, then, subject to any directions to the contrary which may be given by the company in general meeting and subject only to those directions—(rest as in the section)."

Part IV of the Act contains provisions relating to share capital and debentures; this part contains 42 sections, 82 to 123; seven sections are proposed to be amended. The recommendations of the committee as regards the provisions falling under this part may now be briefly stated.

Section 84

This section states that a certificate, under the common seal of the company, specifying any shares held by any member, shall be *prima facie* evidence of the title of the member to such shares. With a view to preventing fraudulent dealings with duplicate shares, the Amendment Committee has proposed the addition of sub-section to Section 84:—"New scrips shall not be issued in the place of the old ones unless the latter are proved to have been lost or are defaced or surrendered."

Sections 88 and 89

The provisions of Sections 87 to 90 relate to adjustment of excessive voting rights. It may be noted that Section 89 aims at terminating existing disproportionately excessive voting rights which alone were considered to be objectionable and that Section 90 saves all other voting rights as well as rights to "dividend, capital or otherwise" which attached to shares attached before the Act. Section 88 applies only to issues of shares made after the Act.

Section 89(1) is suggested to be amended so as to cover not only cases of reduction of voting rights but also cases where voting rights have to be increased so as to bring them into conformity with the voting rights attached to

equity shares under Section 87(1). The proposed amendments are stated on page 45 of the Report.

Section 88 provides that fresh issues of equity shares after the Act should carry the same rights as regards voting, dividend, capital or otherwise as those attaching to other equity shares. Where holders of preference shares, issued before the Act, who have by virtue of Section 85(1) and (2) become equity shareholders, exist, their preferential rights to dividend, capital, etc., are saved by Section 90. Obviously, however, fresh issues of equity capital after 1st April 1956 cannot be placed on the same footing and therefore the Report suggests that it is necessary to exclude those cases by amendment of Section 88.

In Section 89(3), there is no provision empowering the Court to compel the company to equalise or adjust voting rights if, following the failure of the requisite proportion of any class of shareholders to agree to a scheme, the company itself does not apply to the Court for an order. There is only a provision for the payment of a fine extending upto Rs. 1,000 in case the provisions of this sub-section are not complied with. The Report, therefore, suggests that Section 89(3) might be amended so as to entitle any shareholder of the company to apply to the Court.

Section 106

The Report points out that Section 106 is inconsistent with Regulation 3(1) of Table "A" in Schedule I and recommends that the aforesaid regulation may be substituted for existing Section 106 with some amendments. As amended, Section 106 would run thus:

"If the share capital of a company is divided into different classes of shares, the rights attached to any class (unless otherwise provided by the terms of issue of the shares of that class) may, if so authorised by the memorandum or the articles, be varied with the consent in writing of the holders of three-fourths of the issued shares of that class, or with the sanction of a special resolution passed at a separate general meeting of the holders of the shares of that class."

Where a transfer deed relating to a share is lost, the Company may under the proviso to Section 108(1) register the transfer on such terms as to indemnity as the Board may think fit. The Report states that it was urged before the Committee that the small investors often lose their shares by reason of their inability to satisfy the stringent demands of the Board It is therefore suggested in the Report that some new provision might be made to relieve the shareholders from the indiscriminate demands which the Directors sometimes put forward while accepting an indemnity. According to the Report, an indemnity for a period of six years would be sufficient in ordinary cases to enable a transferee, whose transfer deed is lost, to get his transfer registered.

Section 111

Section 111 provides a new and speedy remedy to a shareholder by way of appeal to the Central Government against a refusal by a company to register a share transfer in his favour. Section 111 does not affect the remedy of applying to the Court for rectifying the register of members as provided for in Section 155. Section 155 is an enabling section giving an additional remedy and does not bar recourse to the Court. Section 111 does not also bar recourse to the Court by way of a suit. The Legislature while enacting this section appears to have lost sight of the danger of possible conflict of decisions given by the Central Government and the Court. This point was raised before the Amendment Committee. To avoid a possible conflict of decisions the Report states that the existing Sections (6) to (8) should be renumbered as (7) to (9) and a new sub-section should be added after sub-section (5). The new sub-section is: "(6) The order of the Central Government under this section shall be subject to the order, if any, of Court under Section 155 or in a suit."

Section 111 does not prejudice the power of a company under its article to refuse to register a transfer. Section 111(2) does not provide for cases when a company refuses to register a transfer even though its articles do not empower it to do so. The Report therefore suggests that in order to make such a provision Section 111(2) should be amended by the addition of the words "or otherwise" after the words "in pursuance of any such power."

A suggestion was made that a memorandum of appeal under Section 111 should be subject to payment of certain fee. The Report accepts this suggestion and recommends that Section 111(4) might be amended so as to provide that a memorandum of appeal shall be chargeable with such fee as may be prescribed by the Central Government not exceeding Rs. 25.

Since it is desirable that the orders passed by the Central Government, under Section 111(5) should be enforced without avoidable delay, it is proposed to amend sub-section 111(5) so as to require a company to give effect to the order of the Central Government within 10 days of its receipt. It is further suggested that a new sub-section (10) should be added so as to make the default on the part of the company to comply with the order as an offence punishable with fine upto Rs. 1,000 unless such compliance was prevented by an order of some competent Court.

In order to make the right of appeal effective there should be an express provision in Section 111 requiring a company to give reasons for refusing to register the transfer even in cases where the articles provide that the reasons for such refusal need not be given. The Report, therefore, suggests that Section 111 should be suitably amended.

Rules framed under Section 111 are proposed to be amended so as to provide that the reply of the company to the memorandum of appeal should be communicated to the appellant and that the appellant should be given an opportunity whether personally and/or by a representation in writing, as the appellate authority thinks fit, to rebut the reply of the company.

Whilst on this subject it may be pointed out that in order to bring Section 113 in line with Section 111, the words "within two months after the application for the registration" are proposed to be substituted for the words "within three months after the application for the registration" occurring in the opening part of Section 113(1).

Part V

We now come to Part V which contains provisions relating to registration of mortgages and charges. This part contains 22 sections from 124 to 145; five sections are proposed to be amended. As regards unsecured borrowings, no special requirements are laid down except that the borrowings should be within the company's statutory borrowing limits laid down by Section 293. The Act, however, prescribes certain formalities when moneys are desired to be borrowed on the security of company's property. Some of these formalities are laid down in Section 125. Under sub-section (1) an instrument creating a charge must be registered within a period of 21 days after the date of its creation. A suggestion was made to the Committee that this period should be extended to two months. In view of the importance of a charge and its effect on the rights of subsequent creditors, the Committee did not find it desirable to extend the period. Similar period was prescribed by the old Act. Even the English Act prescribes the same period. The Report however states that Section 125(1) may be amended so as to empower the Registrar to condone a delay of not more than seven days in filing the instrument creating the charge on being satisfied that delay was due to reasons beyond the control of the Company. The suggestion made by a chamber of commerce to the effect that the hypothecation of the company's stock-in-trade should be exempted from the operation of Section 125 was not accepted by the Committee.

Satisfaction

Under Section 138, a duty is cast on the company to give to the Registrar intimation of

EMPLOYMENT PLANNING IN COMMUNIST COUNTRIES

INCREASING RELIANCE ON INCENTIVES

CERTAIN recent developments in the employment situation in the centrally planned economies of Eastern Europe and the U.S.S.R. will serve to dispel certain illusions regarding the infallibility of totalitarian planning. The earlier condition of an ample supply of and demand for labour in most countries of the region has given way to a new pattern with surpluses of labour appearing in some countries and shortages in others. The appearance of scattered pools of unemployed, even though co-existing with some unsatisfied demand for labour has caused alarm among the planners. The belief in the impossibility of even limited unemployment in a planned economy would seem to have received a rude shock. Governments of these countries are becoming obliged to take a more careful account of the prospective level of employment when framing investment and output targets, to approach the consideration of policies regarding income levels and income distribution, bearing in mind the possible effects on the size and composition of the potential labour supply and, in some countries, to give priority to investments designed to improve geographical mobility or reduce peak demands for labour. In the new phase of development, the study of manpower and employment problems has become a matter of prime importance.

The experience of these countries has served to underline the need for long-term perspectives in employment planning and to highlight the essentially complex nature and inherent difficulties of employment planning and the organisation of labour markets. In spite of scrupulous central direction by planners in these countries it has given rise to several problems. Democratic countries, which have to depend to a large extent on the free market mechanism for implementing the plans, have to face far more formidable problems in this field. Some interesting information regarding employment planning and the administrative measures and systems of incentives employed by the Soviet Union and the East European countries for implementing the plans are found in the *Economic Survey of Europe in* 1957, published by the United Nations.

Main Objectives

Reviewing the manpower and employment situation in Eastern Europe and the Soviet Union, the *Survey* points out that employment policy in these countries had until recently been treated as essentially an instrument of production planning. The main objectives have been to assure enterprises of the labour needed to fulfil the plans for industrial output and for investment and, to this end, a combination of social pressures, administrative measures and incentives has been employed—the latter involving a centrally controlled use of market forces.

The *Survey* points out that despite the general framework of planning and purposive direction of manpower flows, certain uncontrolled market forces have helped to create or perpetuate some of the features of "labour markets" characteristic of non-planned economies. On the demand side, competition for labour among socialist enterprises has been possible and demand outside the State sector continued to offer marginal competition for temporary and seasonal labour. On the supply side, unforeseen variations in the proportion of the marginal labour force (women, old people, etc.) offering themselves for employment, or in the rate of movement of workers out of agriculture, can produce changing intensity of competition for jobs. The "market" features have become more pronounced in the recent past with the increasing reliance on incentives rather than administrative measures as means of implementing employment policy.

Output Plans

In every country of the region, all economic plans—from the Five-year Plans for the whole economy down to the detailed annual plans for individual enterprises—have included sections on manpower. But each employment plan has, in fact, been a resultant of the planned volume of output and an estimate of the possible, or desirable, level of output per man. Since the output plans have everywhere had an overwhelming priority, the authorities have in general been prepared to tolerate combinations of employment and output per man different from those planned, provided that at least the planned levels of output were achieved.

In fact, the plans for employment outside agriculture were overfulfilled in four out of the five Five-year Plans in the Soviet Union by a huge margin in two periods; and in Eastern Europe the employment targets of the long-term plans were everywhere considerably exceeded in the early years. The basic reason was a demand for labour by socialist enterprises exceeding the volume laid down in the plans. The main control over the level of employment in an enterprise was through the total wage bill, though over-spending was frequently tolerated. But in any case, fixing the total wage bill of an enterprise left the management free, within limits, to hire more or fewer workers and pay them accordingly; and the fact that the wage bill was linked with gross output also weakened its usefulness as a control over either employment or the relationship of earnings to genuine labour productivity. On the other side of the manpower balance, supplies of labour were, in general, sufficiently flexible to allow these demands to be met. Employment plans usually referred only to the number of wage-earners, thus excluding most of the agricultural sector, and little disquiet was felt, in any case, if the workers attracted out of agriculture exceeded the numbers expected to move. Moreover, special efforts to recruit additional workers could tap more of the reserves of potential labour in the cities, and, from time to time, deterioration or stagnation of real wages caused part of this reserve labour force spontaneously to seek work.

In Soviet Union

During the early part of the inter-war period in the Soviet Union, the rapidly growing demands of industry for labour could easily be met by drawing on the urban labour reserves and on the surplus labour in agriculture—large numbers of whom were forced by collectivisation to seek other employment. Little difficulty, therefore, arose in securing a level of and distribution of industrial employment adequate for the achievement of the output plans, while, in later phases of development, rapid industrial expansion provided ample employment possibilities. The primary need throughout the inter-war years and ever since then has been to raise the level of skills and to encourage the highest possible physical output per man with any given provision of equipment.

These circumstances have strongly influenced the development of the instruments of employment policy in the Soviet Union which were later introduced in varying degrees in the countries of Eastern Europe. Thus, the wage system

(*Continued on page* 919)

The beauty of village maidens in flaming red 'agunpat' sarees inspired many a poet of mediaeval Bengal. Woven on primitive looms out of yarn spun from 'Pat', as jute is known in Bengal, such sarees enjoyed immense popularity till even about 50 years ago. The English merchants carried this golden fibre from the sun-kissed fields of Bengal to mountain-ringed Dundee in Scotland, and a flourishing industry was born. The first jute mill in India was set up by George Auckland at Rishra on the banks of the Hooghly in 1855. With more than 100 mills in and around Calcutta, the jute industry is today the country's best foreign exchange earner. For machinery and spares, however, India had to depend till recently on imports. Today, with the best know-how of its technical collaborators of world repute, Texmaco is equipped to manufacture and supply the complete range of jute mill equipment, and also cotton and staple fibre spinning machinery. Helping the textile industry attain self-sufficiency, Texmaco serves India's basic industries.

LAC AS FOREIGN EXCHANGE EARNER

MEASURES FOR ENHANCING COMPETITIVE CAPACITY SUGGESTED

CONSIDERING that lac has all along been one of the principal earners of foreign exchange, it is, indeed, unfortunate that the conditions in the lac industry and trade continue to be unsatisfactory. Production has suffered a marked setback, the total actual output of *katki* and *aghani* (*kusmi*) lac in 1957 being not more than 222,500 maunds, as against 565,000 maunds in 1956. Despite the fall in output, prices have gone down markedly; spot lac (shell pure T.N.) is now quoted in Calcutta at Rs. 66.50 per maund, as against Rs. 105 a year before. What is worse, the foreign exchange earning capacity of the industry has dwindled greatly of late, thanks to keen competition from Thailand in world markets and fast developing synthetic substitutes. The total value of lac exported during the first ten months of 1957 was substantially lower at Rs. 5.97 crores, as against Rs. 7.72 crores in the corresponding period of 1956, although the quantity of exports was higher by 32,720 cwts. at 450,086 cwts. If the prosperity of the age-old lac industry is to be assured, it is of the utmost importance that efforts should be made to stabilise the prices of the industry's products and to expand the foreign markets for Indian lac and lac products.

Viewed thus, the National Council of Applied Economic Research, New Delhi (Director-General: Dr. P. S. Lokanathan) has done well to make an exhaustive study of the export markets for Indian lac and put forward valuable suggestions for protecting and improving India's position as a producer and exporter of lac. The results of the study have been brought out in a report published by the Asia Publishing House, Bombay (Price: Rs. 6). The study, it may be noted here, was undertaken by the Council in response to the request of the Union Ministry of Commerce and Industry.

The findings of the Council reveal that production of lac is mainly concentrated in Bihar and Madhya Pradesh. The two States account for 45 per cent. and 27 per cent., respectively, of the total production in India, followed by West Bengal with 18 per cent. and Bombay with 1 per cent. A major product of lac is shellac. There are two mechanised plants for producing shellac in Calcutta. Most of the other shellac manufacturing units adopt the cloth bag process and these are located in the sticklac producing areas. Exports of lac since the Second World War have averaged about 30,000 tons valued at about Rs. 10 crores. Thailand has become a major exporter of lac, especially seedlac, capturing nearly 30 per cent. of the world market for lac once monopolised by India. India, however, still holds the monopoly of shellac.

World Consumption

The world consumption of lac is increasing, albeit slowly, but exports from India are not. The market demand, especially in the United States, is shifting from shellac to seedlac. Thailand, which meets at present about 25 per cent. of world demand for lac, is obtaining a growing share, especially in seedlac. Synthetic substitutes are fast developing and threatening the world market for lac. The trend of world consumption can be gauged from the exports of India and Thailand which meet exclusively the demand in world markets. The following table gives the exports of lac from India and Thailand during 1956 as compared with the previous three years:

(In tons)

	1956	1955	1954	1953
Shellac and buttonlac—				
India	21,051	16,635	14,806	13,643
Thailand	20	59	244	108
Seedlac— Total	21,071	16,694	15,052	13,751
India	7,879	8,609	8,850	10,235
Thailand	11,149	13,591	9,594	8,814
Total	19,028	22,200	18,444	19,099
Sticklac—				
India	64	160	27	69
Thailand	2,901	3,466	4,864	2,947
Total	2,965	3,626	4,891	3,016
Other types—				
India	2,657	3,024	2,031	2,845
Thailand	N.A.	N.A.	N.A.	N.A.
Total for—				
India	31,651	28,428	26,616	26,841
Thailand	14,070	17,116	14,702	11,869
Grand Total	45,721	45,544	41,318	38,710

The figures relating to India are for financial years, while those relating to Thailand are for calendar years.
N.A.—Not available.

Lac exports from Thailand which were practically *nil* in 1946 aggregated over 12,000 tons in 1955 and 16,000 tons in 1956. It will be recalled that India had virtually 100 per cent. monopoly in world market for lac until 1947. In the last three years, India has had two-thirds of the world market and Thailand one-third. Indian shellac exports in 1956 amounted to 21,051 tons, almost reaching the pre-war level. In the case of seedlac, exports from Thailand have expanded rapidly since 1950 and have exceeded those of India in the last three years, the yearly average being about 11,500 tons, as compared with India's average of 8,500 tons. As regards sticklac, exports from Thailand touched 4,800 tons in 1954, while Indian exports were a bare 27 tons. Indian exports to the U.S. are in both shellac and seedlac. Shellac exports have declined since 1952, as the U.S. demand for shellac has declined. Since 1952, the U.S. imports of seedlac have remained fairly stable at 13,000-17,000 units. In 1952, India had 75 per cent. share in U.S. seedlac imports, while, in 1956, it had only about 40 per cent. The pattern of trade with the U.K. is similar but not as unfavourable as in the case of the U.S. market. Indian exports of shellac to the U.K. have declined. Its exports of seedlac to the U.K. in 1955 and 1956 have declined as compared with 1954, while Thailand's have grown. The case of West Germany is different. India's exports of shellac to that country are growing whereas those of seedlac and other lac are remaining steady. Thailand's exports to this market, however, have also been growing in both seedlac and sticklac.

Synthetic Substitutes

Apart from the efforts of Thailand to capture as much as of the world lac market as possible, a number of synthetic products developed as substitutes for lac in various uses are also offering competition to Indian lac. The most important is a synthetic from which gramophone records are made. Synthetics have virtually replaced shellac in the entire U.S. gramophone record manufacturing industry, have cut seriously into the record industry in Germany and will replace shellac almost entirely soon, and have taken half the record market in the U.K. and is expected to have most of the other half within the next five years. In the hat industry, synthetics are becoming prevalent and will probably be even more widely used in the future. In the U.S., floor polishes and floor finishes are now the main consumers of lac, but, in Germany, nitrocellulose has taken 95 per cent. of this market since 1939. Synthetics are also entering this market in the U.K. In the electrical uses, synthetics are now doing many of the jobs formerly done by shellac. The same is true in the printing and paper industries.

The survey conducted by the National Council shows that unstable prices of Indian lac are largely responsible for the shift to use of synthetics in the U.S. market. The lac users complain that wide fluctuations in prices upset their cost calculations and pricing policies of products made from lac. Though they are benefited when prices are low, they seem to prefer price stability which is guaranteed by synthetics. Further, high prices of lac *vis-a-vis* synthetics are also responsible for the growing use of synthetics. Fluctuations in lac prices are attributed to manipulations by speculation, hoarding or underquoting, variations in supply and demand, and inadequate market information.

Price Stability

The Council has emphasised the need for ensuring stability in prices of lac, with a view to promoting exports. It suggests that the Government may fix maximum-minimum prices for lac and create a statutory body—Price Fixation Board—to enforce price controls by devising suitable measures. In order to support a minimum price programme, stocks of lac offered for sale at the lowest prices will have to be purchased when market conditions make it necessary. Also, when supplies fall short of market demand at the maximum price level, exports will have to be controlled through a system of quotas. These quotas may be assigned by the statutory body to private trade and to the State Trading Corporation to the extent necessary. The financial implications should be carefully assessed, but it may be stated that, over a period of five years, there would be no loss to the Price Fixation Board.

In addition to the maintenance of price stability, the Council has urged the adoption of the following three important measures:

(1) Market information should be improved and expanded. New techniques for estimating production should be used. Quantities in stock must be determined by more reliable methods. The Indian Lac Cess Committee may entrust this work to a disinterested party. Data on supplies in foreign markets and trends in demand must be made widely available. This improvement in market information is of major importance. The Shellac Export Promotion Council may establish information cells abroad to collect, analyse and disseminate useful information about principal foreign markets.

(2) Research to aid users of lac and to find new uses should be continued. A close liaison with lac users in foreign countries in this respect must be maintained. Along with a research programme, technical service to lac users in foreign countries should be provided. Lac experts should be attached to the offices of the Government of India Trade Representatives in principal markets, to start with in the U.S.A.

(3) The present plans to construct air-conditioned godowns at Calcutta to provide storage accommodation for 25,000 tons of lac, expandable to 50,000 tons, should be expeditiously completed.

Other Suggestions

The Council has also put forward suggestions for solving some of the other important problems confronting the lac industry and trade. These are: provision of some additional refrigerated transportation for lac during the monsoon season; encouragement for the internal use of lac, so that the relatively excessive dependence on foreign markets will be reduced, at least over a long period; aid to producers in areas where sticklac quality is low to show them how to improve their quality and thus to improve the prices they can obtain; the possibility of developing co-operative oganisations to develop shellac plants, to provide power for the present home production centres, and to improve their marketing methods; planting and cultivation of *kusum* trees which give top-quality lac; and establishment of a pilot plant to produce bleached lac in India as rapidly as possible.

The aforesaid recommendations of the National Council are quite valuable. If implemented earnestly, they will surely go a long way towards enhancing the competitive capacity of Indian lac in world markets. Incidentally, it may be noted that production target for lac is fixed at 35,000 tons by 1960-61. Meanwhile, Thailand is reported to be making renewed efforts to raise exports of lac to 20,000 tons by 1961. The total available supply of lac in the world is thus expected to be of the order of 55,000 tons in 1961, a quantity which will be far above the estimated world consumption of 46,000 tons. It is obvious that prices of lac may tend to decline. The National Council has done well to draw special attention to this aspect. Nevertheless, it stresses that India will have to increase production of lac as envisaged in the Plan. Otherwise it warns, "Thailand will do so and take over the entire market demand which India can meet just as well." In order to ensure that increase in production does not result in a serious price decline, the Council suggests a proper phasing of the programme of expansion. By the way, the Council rightly lays emphasis on the importance of India stepping up exports of seedlac considerably from the present level of output of about 8,000 tons, which compares very unfavourably with 12,000 tons exported from Thailand.

With a view to familiarising their employees with the various development projects undertaken by the Government of India under the Five-year Plans, the Metal Box Company of India Limited has been sponsoring tours of these projects for their employees. Three such tours have been organised between November 1957 and March 1958, giving an opportunity to over a hundred employees to see for themselves the progress made by India since the launching of these projects. These trips are financed entirely by the Company, and selection is made on the basis of good attendance, good production, length of service, etc. Representatives of recognised unions and of the works committee are also included. Responsible officers of the Company accompany the employees on these tours. The trips take three days to complete, and the itinerary includes the Chittaranjan Locomotive Factory, the Sindri Fertiliser Project, Maithon Dam and Hydro-electric Project, Durgapur Barrage, and a coalfield in the Raniganje-Jharia belt.

The Government of India has published draft rules detailing the procedure for allowing rebate of customs or Central excise duty paid on imported or indigenously produced materials used in the manufacture of vegetable fatty acids subsequently exported. The rate of refund proposed is Rs. 141 per ton of the vegetable fatty acids exported.

ATUL PRODUCTS FORGE AHEAD

DIVIDEND ALSO HIGHER

ATUL Products Ltd. (Managing Agents: Messrs. Lalbhai Sons & Co., Ahmedabad) has reported one more year of record achievement in its working during the year ended 31st December 1957. The achievements are in regard to the substantial improvement in sales effected and profits made over the previous year. Indeed, the steady rise in the Company's sale proceeds and profits from year to year bear ample testimony to the growing popularity of the Company's products and no less to the fact that its future, as one of the leading chemical concerns in the country, is assured. Thus, the gross profit at Rs. 54.46 lakhs has jumped by Rs. 23.51 lakhs or as much as 75.9 per cent. from Rs. 30.95 lakhs for the previous year. It is again more than twice that of Rs. 20.61 lakhs for 1955, while as compared with Rs. 12.44 lakhs for 1954, it has more than quadrupled. Such progress within a span of only three years is, indeed, a remarkable achievement.

Out of the gross profit for the year under review, the Directors have provided Rs. 16.77 lakhs as normal depreciation for the year and Rs. 5.89 lakhs towards arrears of depreciation. The amount set aside in the previous year on this account were normal depreciation Rs. 12.68 lakhs and arrears of depreciation Rs. 6.92 lakhs. They have also made a provision of Rs. 1.50 lakhs for wealth tax for the years 1957 and 1956. The net profit, after making the above provisions, stands substantially higher at Rs. 27.12 lakhs, as compared with Rs. 11.35 lakhs in the previous year. The higher profit has enabled the Directors to set aside a sum of Rs. 11 lakhs to the reserves, as against *nil* in the previous years and also to recommend a further rise in the rate of dividend distribution. Accordingly, they have transferred Rs. 3.50 lakhs to development rebate reserve and Rs. 7.50 lakhs to depreciation reserve. A dividend of 8 per cent. has been proposed for the year under review, as against 6 per cent. in the previous year, to which level it had been modestly raised from 5¼ per cent. paid for 1955.

The following table brings out some of the salient features of the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sales	2,71.86	1,83.42	1,29.24	1,15.80*
Closing stock of finished goods and goods in process ..	32.47	25.13	41.59	34.24
Other income	8.37	4.16	3.19	1.84
Raw materials consumed ..	1,59.42	93.78	84.93	82.99
Expenses	73.69	46.38	34.23	22.20
Gross profit	54.46	30.95	29.61	12.44
Managing Agents' remuneration	3.18	..	..	..
Depreciation	22.66	19.60	12.00	13.59

Net profit (+) or loss (—) ..	+27.12	+11.35	+8.61	—1.15
Preliminary expenses written off	0.63	..	..	..
Transfer to reserves	11.00	..	..	..
To dividend	15.14 (8%)	11.36 (6%)	8.36 (5¼%)	..
Carry forward	0.59	0.24	0.25	..

* Net sales.
† Provision for wealth tax for the years 1957 and 1956.

It will be seen from the table above that the Company's sale proceeds of dyes, chemicals and pharmaceuticals have increased by as much as Rs. 88.44 lakhs to Rs. 2.72 crores over the year. This, the Director say, is due to the fact that the expanded sulphur black plant and the new naphthol, cibagenes, cibanogenes, vioform and coramine plants were able to make their contribution towards the production and sales of this year. They state further that the plants will settle down to stable conditions during the current year and hence are expected to make a larger contribution to both production and sales. Raw materials consumed have increased from Rs. 93.78 lakhs to Rs. 159.42 lakhs, as also expenses from Rs. 46.38 lakhs to Rs. 73.69 lakhs. Of the rise in expenses, purchases of finished goods have increased from Rs. 1.37 lakhs to Rs. 16.89 lakhs, stores and spares consumed from Rs. 4.03 lakhs to Rs. 7.38 lakhs and salaries, wages and bonus from Rs. 7.58 lakhs to Rs. 10.08 lakhs.

It may be remembered that, out of the loan of Rs. 3 crores from the Government of India, the Company had initially drawn a sum of Rs. 75 lakhs. It had also received a further sum of Rs. 57 lakhs in the year 1957. The Company has not drawn any further amount from the Government since then.

The Company's paid-up capital of Rs. 189.28 lakhs is all in ordinary shares of Rs. 100 each. In addition, there is a sum of Rs. 9.17 lakhs as share application money. Its reserves and surplus are very small and aggregate only Rs. 11.65 lakhs. Loans from the Government of India secured by mortgage of fixed assets and investments account for Rs. 132 lakhs and other current liabilities amount to Rs. 127.48 lakhs. The gross block of Rs. 296.61 lakhs, including additions during the year of Rs. 35.70 lakhs, has been written down to Rs. 223.76 lakhs. The current assets aggregate Rs. 240.82 lakhs and include, among other things, investments in national savings certificates and shares of companies Rs. 62.42 lakhs, stores, building materials and uninstalled machinery and spares Rs. 23.48 lakhs, stock-in-trade at cost Rs. 93.04 lakhs and debts, deposits and advances Rs. 49.38 lakhs.

The Rs. 100 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 207 *cum-div*. On an *ex-div*. basis, the latest dividend gives a yield of 4.02 per cent. per annum.

COMPANY REGISTRATIONS IN WESTERN REGION

Sixty-three companies with a total authorised capital of Rs. 12.57 crores were registered in the Western region (comprising Bombay and Madhya Pradesh) under the Companies Act 1956 during the quarter ended 31st March 1958. Of these, six were public companies with authorised capital of Rs. 9.05 crores and 57 private companies with authorised capital of Rs. 4.52 crores, as against three public companies with an aggregate authorised capital of Rs. 11 crores and 46 private companies with authorised capital of Rs. 2.57 crores and two guarantee companies registered in the last quarter ended 31st December 1957. The total number of companies registered as above includes two public and four private companies transferred from other States. During the same period, 30 companies went into liquidation in this region, as against 34 during the preceding quarter. Names of 65 companies have been struck off the register maintained by the Registrars of Companies of Bombay and Madhya Pradesh under section 560 of Companies Act 1956 and 21 companies have been finally dissolved. In addition, 22 prosecution cases were launched against companies and/or officers of companies for various offences committed under the provisions of the Companies Act, 1956. Of these, five cases were decided, resulting in conviction of either the companies and/or officers of the companies.

In the Bombay State, four public companies with a total authorised capital of Rs. 8 crores and 54 private companies with a total authorised capital of Rs. 3.42 crores were registered during the quarter ended March 1958. In addition to this, two public companies transferred their headquarters to Bombay State. Of the 54 private companies, 15 related to processing and manufacturing (metals and chemicals), 11 to commerce (trade and finance), 7 to processing and manufacturing (foodstuff, textiles, leather and products thereof), 7 to processing and manufacturing (general), 6 to personal and other services, 5 to construction and utilities, 2 to mining and quarrying and one to transport, communication and storage. Of the six public companies, three related to processing and manufacturing (metals and chemicals), two to processing and manufacturing (general) and one to personal and other services.

Fifteen public and 13 private companies went into liquidation, while 20 companies were finally dissolved. Names of 40 companies were removed from the Registrar's register under section 569 of the Companies Act, 1956.

Twenty-two cases were filed during the quarter against companies and/or directors and liquidators. Of these, four cases were decided by courts resulting in conviction. Affairs of one public limited company were under investigation by inspector appointed by the Central Government on the basis of the representations by shareholders and enquiry by the Registrar of Companies.

In Madhya Pradesh, three private companies with a total authorised capital of Rs. 1.10 crores were registered during the period under review. Two companies went into liquidation, while one company was finally dissolved. Names of 25 companies were removed from the register of the Registrar of Companies, Madhya Pradesh, under section 560 of the Companies Act, 1956. No prosecution was launched under the Companies Act, 1956 during the quarter under report.

GREAVES COTTON ISSUE

The recent offer of 35,000 equity shares made to the public by Messrs. Greaves Cotton & Co., Ltd., has had an encouraging response, the total number of shares applied for amounting to over 64,000. Of this number, it is learnt, more than 50 per cent. were from applicants for 5 and 10 shares. The Company has decided to make a proportionate scale of allotment with the sanction of the Stock Exchange authorities.

Accordingly, it is learnt, applicants for five shares will be allotted four and those who have applied for ten shares will be given six shares. Applicants for shares ranging from 15 and 100 will get an allotment of 40 per cent., while those who have applied for 150 to 500 shares will be allotted 20 per cent. A little over 16 per cent. will be given to applicants for still larger number of shares. Posting of allotment letters is expected to be completed before the end of this month. The balance of the amount payable on allotment is likely to be called for by 15th June.

RESULTS OF MODERN MILLS

LOWER PROFIT DUE TO DECLINE IN SALES

IN sharp contrast to the encouraging results noted in the previous year, the audited accounts of the Modern Mills Ltd. (Managing Agents: Messrs. N. Sirur & Co. Private Ltd., Bombay) for the year ended 31st October 1957 disclose a performance which is far from satisfactory. There has been a substantial reduction in the Company's sale proceeds leading to a drastic decline in its profit. Alluding to the Company's working during the year under review, the Directors state that due to deteriorating trading conditions, there was a progressive decline in the sales and clearances. This was aggravated further by the fact that the prices of Indian cotton ruled very high for the greater part of the year, thereby narrowing down the margin between the raw material and the finished product to a considerable extent. Hence the Company's results were adversely affected. Thus, the gross profit at Rs. 8.65 lakhs is even less than half of Rs. 18.54 lakhs for the previous year, to which level it had steadily risen from Rs. 3.30 lakhs earned in 1952-53. At this level, the year's gross profit is only slightly better than Rs. 7.53 lakhs for 1953-54.

The provision for depreciation has been lowered from Rs. 4.75 lakhs to Rs. 3.37 lakhs. A sum of Rs. 44,145 has been provided for wealth tax, as against Rs. 44,261 in the previous year. No provision has been made for taxation on the profit for the year and the report states that this is not considered necessary in view of the unabsorbed depreciation allowances of previous years. The net profit, after making the above provisions at Rs. 4.30 lakhs, is only one-third of Rs. 12.08 lakhs for the previous year. The Directors have written back Rs. 1 lakh being excess provision made for taxation in previous years, and have transferred an equivalent amount, that is, Rs. 1 lakh, to general reserve, as against *nil* in the previous year. But the machinery rehabilitation reserve which had been credited with Rs. 2 lakhs has not been provided with anything. A sum of Rs. 1.09 lakh has been taken to provision for gratuity, as against Rs. 6.30 lakhs made a year ago. The dividend to the shareholders has been lowered to 10 per cent. from 16 per cent. paid for the last two years, consisting of a dividend of 10 per cent. and a bonus of 6 per cent. It should, however, be noted that the year's dividend is on a higher capital of Rs. 33.19 lakhs, raised by the issue of 22,130 ordinary shares of Rs. 50 each at a premium of Rs. 10 per share during the year under review. The amount of dividend paid last year on 44,261 shares was Rs. 3.54 lakhs which on 66,376 shares this year works out to Rs. 5.33 per share, as against Rs. 5 per share proposed this year.

The following comparative table brings out clearly the progress of the Company during the past four years:

(In lakhs of rupees)

	For the year ended 31st October			
	1957	1956	1955	1954
Sales of yarn, cloth and waste..	1,62.81	1,86.81	1,85.80	1,71.51
Closing stocks of yarn, cloth and waste	65.29	52.37	55.24	63.84

* Provision for wealth tax.
† On the increased capital of Rs. 33.19 lakhs, raised by the issue of 22,130 shares of Rs. 50 each.

It can be seen from the table that the Company's proceeds from sales of yarn, cloth and waste have declined from Rs. 1.86 crore in 1955-56 to Rs. 1.63 crore. At the same time, closing stocks have increased from Rs. 52.37 lakhs to Rs. 65.29 lakhs. The above factors reflect the difficult conditions through which the textile industry is passing at present.

The paid-up capital of the Company as on 31st October 1957 stands raised from Rs. 22.13 lakhs in 1955-56 to Rs. 33.19 lakhs by the new issue of shares as aforesaid. These are in ordinary shares of Rs. 50 each. The reserves and surplus (including premium on shares) aggregate Rs. 46.71 lakhs. There is a 5 per cent. first mortgage debenture liability of Rs. 12 lakhs secured by the fixed assets of the Company. The current liabilities amount to Rs. 67.77 lakhs and include loans secured from bank against hypothecation of liquid assets for Rs. 36.41 lakhs. The gross block of Rs. 128.84 lakhs has been written down to Rs. 60.85 lakhs. The current assets aggregate Rs. 98.82 lakhs and more than adequately cover the current liabilities and provision for taxation.

The Directors observe that the Company which was a subsidiary of the Mysore Spinning and Manufacturing Company, Ltd., ceased to be a subsidiary from 29th March 1957, as the Mysore Spinning and Manufacturing Company, Ltd., reduced its holding in the Company's shares to below 50 per cent. of the capital of the Company.

The Rs. 50 fully paid-up shares of the Company are being nominally quoted at Rs. 70. On the basis of the latest dividend, the yield works out to 7.14 per cent. per annum.

Points From The Chair

Shift in Demand to Coarser Fabrics

"IT is easy to jump to the conclusion that there has been a sudden and very marked reduction in consumer demand and that the industry in achieving and surpassing the target set for it by the planners has sown the seeds of its current distress. I myself believe that actual retail consumption was substantially in excess of clearances from mills and that both would have been much higher had there not been a marked swing from the traditional balance of production within the industry towards the coarse end, and gross overproduction in particular sorts, such as coarse *dhotis* and *saris*. These two items are understood to form a large part of stocks lying with mills and their disposal will take time, even if all further production is discontinued for the time being. This go-coarser movement has undoubtedly been encouraged by the psychological effects of the disproportionately high rates of excise duty and sales tax levied on finer cloths and the rebate in excise duty offered towards the end of 1956 for increased yardage production."

E. J. M. LEIGH,
Buckingham and Carnatic Co., Ltd.

Statutory Control of Interest Rates

"We are of the view that 'deposit money in aggregate is possibly attracted better by adequate spread of banking service than by hawking higher rates of interest to shift or prevent a shift of deposits from one bank to another.' Apart from the steady rise in time deposits, a good portion of the rise in demand deposits consists of money obtained at about the Bank rate. I wonder whether there is really any convincing argument against the introduction of ceiling rates on bank deposits. In the nature of things, such ceiling cannot be voluntary. I would, therefore, suggest that the introduction of the statutory control of interest rates on deposits brooks no delay. We now have a situation wherein the producers and distributors not only try to pass on to the consumers the incidence of higher interest charges that they have to pay but become inclined to compete directly for funds by offering prohibitive rates of interest in preference or in addition to bank credit. Funds so diverted should normally flow to the banking system. I would, therefore, reiterate that the interest rate for a bank's deposits should be statutorily controlled in order that the highest return on deposits does not go beyond, say, two-thirds of the Bank rate in force for the time being. Of course, there should be a cushion allowed for the smaller regional banks, enabling them to pay a bit more."

DR. N. N. LAW,
United Bank of India, Ltd.

Foreign Exchange and Development

"We have three more years of the second Plan to go. Our ultimate objectives have to be realised. Also, as the Prime Minister stated in Parliament, our underdeveloped country has somehow to break the barrier and cross into a dynamic and self-progressing economy. We have, therefore, to go on with the scale of expenditure proposed if not on a larger scale. We have to realise that the development programme we seek to implement cannot be achieved without a substantial measure of foreign assistance. There is a feeling among certain sections in our country that by embarking upon a heavy development expenditure now with foreign assistance, we shall be mortgaging our third Plan. It was inherent in the Plan itself that we would take foreign assistance to complete our development programme, but, of course, the size of our requirement compared to estimates has considerably increased. Development is a continuous process. The creation of additional resources and increased credit-worthiness of the economy achieved through such development will enable us to meet our liabilities. There is nothing, inherently wrong in going ahead at a faster speed with our development programme with foreign assistance. If the foreign exchange obtained is used for development purposes, even with the admixture of created credit of Indian rupee, such development would itself be an anti-inflationary measure."

S. P. JAIN,
Punjab National Bank Ltd.

COMPANY MEETINGS AND DIVIDENDS

BUDGE-BUDGE JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 19th May 1958. Dividend: *Nil*. Transfer books remain closed from 5th to 19th May 1958, both days inclusive.

BUDGE-BUDGE JUTE PASSES OVER DIVIDEND

RESULTS OF NATIONAL IRON AND STEEL COMPANY

Budge-Budge Jute Mills Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st October 1957.

The accounts, after charging all expenses and providing for sales tax, show a loss of Rs. 81,355 (Rs. 7,08,432). The directors have transferred from dividend equalisation reserve Rs. 63,000 (Rs. 63,000) and from general reserve Rs. 80,000 (Rs. 5,65,000). The balance brought forward from last year was Rs. 4,154 (Rs. 2,271). After adjusting the above amounts against the loss there is a total available for distribution of Rs. 65,799 (Rs. 94,154 after taking into account the amount written back of Rs. 1,72,315 being provision against anticipated loss on raw jute stock, etc.). The directors recommend a dividend of Rs. 7.00 (Rs. 7.00) per share on the preference capital absorbing Rs. 63,000 (Rs. 63,000) leaving a balance to be carried forward of Rs. 2,799 (Rs. 4,154 after providing Rs. 27,000 for taxation).

Wealth tax for the year is estimated to amount to Rs. 30,000 and this has been provided for by transfer of this sum from investment realisation surplus. No depreciation has been provided on such plant as in the Board's opinion stands in the Company's books at or below its scrap value.

With a view to having direct contacts with overseas markets, the Board together with the Boards of other Jute Mill Companies under the same group management resolved to form a company under the style of Budge-Budge & Allied Jute Mills Exports (Private) Ltd. This Company having been registered, commenced business on 31st July 1957. Each of the participating Jute Mill Companies has subscribed equally to the capital, and the Company's share is shown against "Investments" in the balance-sheet. Andrew Yule & Co., Ltd., have no interest in Budge-Budge & Allied Jute Mills Exports (Private) Ltd., but have been appointed its secretaries on a fee of Rs. 1,000 per annum.

In accordance with the working time agreement of the Indian Jute Mills Association the mill worked 48 hours per week with 12½ per cent. of the total looms sealed. Trading during the period continued to be difficult owing to the disparity between prices of raw jute and those of manufactured goods.

Accounts in brief are as under:

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	45,00,000	Block ...	50,53,822

		Cash ...	3,509
Rs.	92,73,795	Rs.	92,73,795

National Iron and Steel Co., Ltd.

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the year ended 31st March 1957.

The net profit for the year amounts to Rs. 6,55,655 (Rs. 6,87,033) after providing Rs. 5,93,864 (Rs. 5,12,534) for depreciation, Rs. 1,37,081 (Rs. 1,32,337) for managing agents commission, Rs. 5,40,750 (Rs. 4,81,000) for income-tax for the year 1956-57 and Rs. 37,324 (*nil*) for wealth tax for the year 1956-57. The balance to the credit of the profit and loss appropriation account after making last year's adjustments, together with this year's profit is Rs. 11,40,460 (Rs. 8,40,940) which the directors recommend to be dealt with as under:—A sum of Rs. 3,12,250 (Rs. 3,12,250) in payment of a dividend at As. 10 (As. 10) per share, free of income-tax and leaving a balance of Rs. 8,28,210 (Rs. 5,28,690) be carried over to the next year.

The directors inform that the managing agents Messrs. Nursing & Co., Ltd. have tendered their resignation on and from 31st March 1958.

The directors take pleasure in informing that during the year under review One Electric Furnace of 6.5 ton capacity was installed, and considerable improvement was effected in the Steel Foundry Section of the Company. The Company would have achieved still better results for the year 1957-58 but for strikes in certain sections of the factory and shortage of raw materials.

The sum of Rs. 5,40,750 referred to above represents full provision for income-tax for the assessment year 1957-58 based on the profits for the year ended 31st March 1957. Most of the pending income-tax appeals have been settled by now and in the opinion of the directors full provision of liability for all pending income-tax matters have been made in these accounts.

Accounts in brief are as under:

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	49,96,000	Block ...	45,36,541
Debentures ...	4,00,000	Stock of finished goods ...	10,48,205
Reserves ...	6,07,922	Raw materials ...	9,34,690
Provision for taxation ...	20,91,732	Stores and spares ...	11,83,878
Provision for wealth tax	37,324	Goods-in-transit ...	2,57,789
Liabilities ...	46,10,025	Debts, deposits and advances ...	52,40,008
Profit and loss account ...	8,28,210	Investments	1,08,467
		Cash ...	2,61,635
Rs.	1,35,71,213	Rs.	1,35,71,213

Rayalaseema Mills Ltd.

The directors of the above Company (Managing Agents: The Rayalaseema Development Co., Adoni) submit the audited accounts of the Company for the year ended 31st December 1957.

Depreciation of Rs. 1,95,208 (Rs. 3,16,594) has been written off on buildings, plant and machinery. Considering the present condition of the plant and machinery and the normal commercial practice, the directors have written off depreciation for the year on the written down value of plant and machinery instead of on the original cost of plant and machinery as in previous years.

An additional provision of Rs. 51,140 is made towards tax for the year 1955 and Rs. 13,288 towards wealth tax. These provisions leave only Rs. 1,38,666 (Rs. 5,48,343) available for disposal out of the current year's profits. Hence the directors have found it necessary to transfer a sum of Rs. 90,000 (*nil*) out of the amount standing to the credit of dividend equalisation reserve to pay a dividend of 10 (10) per cent. to the shareholders. With this transfer and after payment of dividend of 10 per cent. to the shareholders a sum of Rs. 5,286 (Rs. 32,012) would be carried over to next year.

The cost of cotton was high during the year and the yarn market was for a major portion of the year a falling one and it has been with much difficulty that the profit position has been maintained. The export quota could not be used as there was no export demand. The erection of all the imported Japanese machinery was completed and production started on the same from November, 1957.

Relationship between labour and management has been quite good from the inception of the mills. Though the labour took their demands regarding basic wages, dearness allowance, etc., to the Industrial Tribunal at Hyderabad this year, yet the management settled the disputes with the labour before it came up for hearing.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	22,32,050	Block ...	30,57,084
Reserves ...	11,50,000	Stock-in-trade	4,18,721
Provision for taxation ...	3,33,288	Stock of raw materials	11,01,102
Liabilities ...	20,57,633	Stores and spare parts	2,44,423
Profit and loss account ...	5,286	Debts, deposits and advances ...	8,35,556
		Investments	98,120
		Cash ...	23,251
Rs.	57,78,257	Rs.	57,78,257

Monogram Mills Co., Ltd.

The directors of the above Company (Managing Agents: The Marsden Bakubhai & Sons Private Ltd., Ahmedabad) submitted the audited accounts of the Company for the year ended 31st December 1957.

During the year under review the Company has made a gross profit of Rs. 7,15,857 (Rs. 19,87,450). Out of this, the following amounts have been debited towards the revenue account as required by the Companies Act, 1956.

To managing agents' remuneration Rs. 47,916 (managing agents' commission Rs. 5,85,995), to depreciation Rs. 2,29,684 (Rs. 1,71,952), to development and rehabilitation Rs. 1,52,000 (*nil*) and to provision for taxation Rs. 80,000 (Rs. 4,50,000). There is a balance of Rs. 2,06,257 (Rs. 7,79,503). To this is added the balance of last year's profit and loss account of Rs. 11,620 (Rs. 19,131) making a total amount available for appropriation of Rs. 2,17,877 (Rs. 7,98,634). Out of this the directors recommend payment of a dividend at Rs. 12 (Rs. 14 per share including bonus of Rs. 2) per share on 13,001 ordinary shares absorbing Rs. 1,56,012 (Rs. 1,82,014), transfer to gratuity reserve account Rs. 50,000 (Rs. 50,000) and carry forward to next year's account Rs. 11,865 (Rs. 11,620 after transferring Rs. 5,00,000 to general reserve, Rs. 50,000 to development and rehabilitation fund and Rs. 5,000 to Uttejak fund).

During the year under review the textiles trade in general was facing a very critical time. Increase in excise duty, coupled with heavy incidence of taxation policy of the Government, and extremely critical money market position have affected the working of the Company very adversely. This Company chiefly produces cloths of medium counts and as such increase in excise duty of medium counts cloth has further affected the working of this Company in particular.

The mills have 26,228 ring spindles, 1,232 doubling spindles; 528 looms and complete dyeing, bleaching and mercerising plants.

Accounts in brief were as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	26,00,200	Block ...	25,28,075
Reserves ...	34,62,740	Stock-in-trade	75,69,932

A NEW INDUSTRY TAKES ROOT

The Tata Ferro-manganese Plant at Joda was designed, engineered and erected by DASTURCO
eight months ahead of schedule

Manufacture of ferromanganese is developing rapidly under the Second Five Year Plan with a target of 160,000 tons a year by 1961. The output of the plants, now complete or under construction in Orissa, Andhra, Mysore etc., will not only meet the needs of the country's growing steel industry but also leave a large surplus for export, earning over Rs. 10 crores of foreign exchange.
Dasturco is proud of its close association with this new industry. As an organisation of consulting engineers, it is responsible for over half of the total ferromanganese capacity being developed in the country.

Notices

THE PEERMADE TEA COMPANY LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THE Twentieth Annual General Meeting of the Shareholders will be held at the Registered Office of the Company at Pathirappally, at 10 a.m. on Saturday the 7th June 1958, to transact the following business:—

1. To receive and adopt the Audited Accounts and Balance Sheet for the year ended 31st December 1957 and the Reports of the Directors and Auditors.
2. To declare a dividend.
3. To elect Directors.
4. To appoint Auditors.
5. To consider and if thought fit to pass the following resolution which will be proposed as a Special Resolution:—

"Resolved that Article 23 of the Articles of Association of the Company reading as follows, namely:

"23. If any certificate be worn out or defaced then upon production thereof to the Directors they may order the same to be cancelled and may issue a new certificate in lieu thereof; and if any certificate is lost or destroyed then upon proof thereof to the satisfaction of the Directors, and on such indemnity as the Directors may deem adequate being given, a new certificate in lieu thereof shall be given to the person entitled to such lost or destroyed certificate. A sum of one rupee shall be payable for such new certificate."

be deleted and in its place the following be adopted as Article 23, namely:

"23. (*a*) If any Certificate becomes unfit for further circulation by being old, decrepit, worn out, torn or defaced, or by the Cages on the reverse for recording transfers being fully utilised, then upon production thereof to the Directors they shall order the same to be cancelled and issue free of charge a new Certificate in replacement thereof.

(*b*) If any Certificate is lost, or destroyed, then upon proof thereof to the satisfaction of the Directors and on such indemnity as the Directors may deem fit being given, a new Certificate in replacement thereof shall be given to the person entitled to such lost or destroyed Certificate on payment of a fee of Rupee One per each such Certificate or such smaller fee as the Directors may from time to time fix.

(*c*) Any such renewed Certificate may be marked as such."

(A copy of the Explanatory Statement under Section 173 of the Companies Act 1956 is available for inspection of the Shareholders at the Registered Office of the Company during Office hours of the Company on all working days till the date of the above Meeting.)

The Transfer Books of the Company will be closed from 25th May 1958 to 10th June 1958, both days inclusive.

Any shareholder unable to attend personally is entitled to appoint any person (whether a member or not) as his proxy to attend and vote instead of himself, subject to the provisions of Section 176 of the Companies Act 1956. Such proxy should reach the Registered Office of the Company at least 48 hours before the time fixed for the Meeting.

By Order of the Board,

THE PEERMADE TEA COMPANY LTD.,
Per Pro ASPINWALL & Co. (TRAVANCORE) LTD.,
V. C. THOMAS,
Secretaries.

PATHIRAPPALLY, 1st *May* 1958.

THE RAMNUGGER CANE & SUGAR COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twenty-first Ordinary General Meeting of the Shareholders of the Ramnugger Cane and Sugar Company, Ltd., will be held at the Registered Office of the Company, 7, Wellesley Place, Calcutta, *on Friday, the 30th May 1958*, at 12 noon, to transact the following business:—

1. To receive the Directors' Report and pass the Audited Accounts for the year ended 31st August 1957.
2. To declare a dividend on Preference Shares.
3. To declare a dividend on Ordinary Shares.
4. To elect Directors.
5. To appoint Auditors and fix their remuneration.
6. To transact any other business which may properly be brought before the Meeting.
7. To consider and, if thought fit, pass with or without modification, the following Resolution as a Special Resolution:

"In view of the limitation imposed by Section 309(4)(*a*) of the Companies Act, 1956, IT IS HEREBY RESOLVED that the total amount of commission due to the Directors of the Company with effect from the 1st September 1956 shall not exceed 1 per cent. of the nett profits of the Company, payable in such proportions as the Directors may decide, or failing decision, to be shared equally by them."

Explanatory Note:

Prior to 1st September 1956, the Directors were entitled to a commission of 2 per cent. on the nett yearly profits of the Company. Section 309(4)(*a*) of the Companies Act, 1956, provides, *inter alia*, that a Company having a Managing Agent, may, by special Resolution, authorise the payment to Directors of a commission not exceeding 1 per cent. of the nett profits of the Company. It is proposed to move the above Resolution so as to authorise payment of commission to Directors in accordance with the provisions of the above Act.

NOTICE is also given that the Share Transfer Registers will be closed from the 15th to 30th May 1958, both days inclusive.

A member of the Company who is entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

By Order of the Board,

ANDERSON WRIGHT LTD.,
Managing Agents.

CALCUTTA, 28*th April* 1958.

THE VELLORE ELECTRIC CORPORATION LIMITED

INTERIM DIVIDEND ANNOUNCEMENT

THE DIRECTORS, AT THEIR MEETING held on 25th April, 1958, have been pleased to declare Interim Dividend for the year 1957-58 as follows:

On Ordinary Shares:

5 per cent. or Re. 0.50 nP per share free of tax.

On Preference Shares:

3 per cent. or Re. 0.30 nP per share less tax.

The Share Transfer Books will remain closed from the 22nd May, 1958 to 29th May, 1958 (both days inclusive).

The Dividend warrants will be posted to those whose names stand on the Register of Members on 21st May, 1958, on or after 30th May, 1958.

By Order of the Board,

For CHANDRIE & Co. (PRIVATE) LTD.,
S. VENKATARAMAN,
Director,
Managing Agents.

SHREE KRISHNA GYANODAY SUGAR LIMITED

THE BOARD OF DIRECTORS OF SHREE Krishna Gyanoday Sugar Ltd. in their meeting held on the 26th April, 1958, have recommended to the forthcoming Annual General Meeting of the Company payment of dividends of Rs. 6 per share on 'A' Preference Shares, Rs. 5 per share on 'B' Preference Shares and Re. 1, i.e., 10 per cent. per Ordinary Share, without deduction of Income-tax, for the year ended 31st July, 1957.

By Order of the Board,

For SHREE KRISHNA GYANODAY SUGAR LTD.,
J. P. SAXENA,
Secretary.

CALCUTTA, 26*th April*, 1958.

THE MYSORE SUGAR COMPANY LIMITED, BANGALORE

NOTICE

NOTICE IS HEREBY GIVEN THAT THE twenty-fourth ORDINARY GENERAL MEETING of the Mysore Sugar Company, Limited, will be held at the Registered Office of the Company at Sri Jayachamaraja Wadiyar Road, Bangalore City, at 4 p.m. on Friday the 30th May 1958, to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 30th June 1957.
2. To ratify the Dividend declared by the Directors, as explained in para 3 of their Report.
3. To elect a Director in place of Sri L. Siddappa who retires by rotation and, being eligible, offers himself for re-election.
4. To elect a Director in place of Sri S. R. Aswath, who retires and, being eligible, offers himself for re-election.

Special Business:

(*a*) *By Ordinary Resolutions*:

5. To elect a Director to fill the vacancy caused by the resignation of Sri H. K. Veeranna Gowdh.
6. To elect a Director to fill the vacancy caused by the retirement of Sri S. M. Lingappa.

(*b*) *By Special Resolution*:

7. To consider and to pass the following resolution as a Special Resolution:

"RESOLVED that pursuant to Section 31 of the Companies Act, 1956, the Revised Articles of Association submitted to this meeting and for the purpose of identification subscribed by the Chairman thereof, be approved and adopted as the Articles of Association of the Company in substitution for and to the exclusion of all the existing Articles of Association thereof."

By Order of the Board,

H. MAHARUDRIAH,
Secretary.

BANGALORE, 1st *May* 1958.

Note.—(1) The relative explanatory statements pursuant to Section 173 of the Companies Act, 1956, in respect of the special business to be transacted at the meeting are being sent with the Notice to shareholders individually.

(2) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(3) The Share Transfer Register of the Company will be closed from the 24th May 1958 to the 30th May 1958 (both days inclusive).

MONEY EASY

(From Our Own Correspondent)

BOMBAY, 7*th May*

Distinctly easy conditions came to prevail in the short-term money market during the week under review, with a further fall in demand for bank credit and the expansion in deposits of banks. Consequently, banks had a surfeit of funds. With the busy season almost at an end, money was unlendable, but there was no tendency for interest rates to come down. Inter-bank call money continued to be quoted at 3 per cent. among the Exchange banks and big Indian banks and at 3-3¼ per cent. among the smaller Indian banks. House money at call is also unchanged at 4½ to 4⅝ per cent. and short-term deposits fetched 4½ to 4⅝ per cent.

The Reserve Bank of India statement for the week ended 2nd May 1958 discloses no notable variation in notes in circulation. Notes held in the Banking Department are, however, lower by Rs. 11.78 crores and the total notes issued by Rs. 11.28 crores. On the assets side, there has been a sharp fall of Rs. 24.09 crores in foreign securities, an increase of Rs. 14.09 crores in rupee securities and a contraction of Rs. 1.28 crores in rupee coin. The fall in foreign securities has, however, been offset to a large extent by the rise of Rs. 19.02 crores in balances held abroad in the Banking Department, so that the net fall in foreign assets is Rs. 5.07 crores. Deposits of the Central Government have declined by Rs. 3.40 crores, while those of banks have gone up further by Rs. 4.36 crores. Loans and advances to Governments have declined by Rs. 1.61 crores, while other loans and advances show an increase of Rs. 2.33 crores. Investments are lower by Rs. 2.69 crores and Government Treasury Bills by Rs. 3.21 crores.

A rise of Rs. 2.73 crores in demand deposits and of Rs. 5.94 crores in time deposits is disclosed by the Scheduled banks' statement for the week ended 25th April 1958. On the assets side, advances have further declined by Rs. 3.10 crores, while bills purchased and discounted have risen by Rs. 1.93 crores. There has been a further increase in investments to the tune of Rs. 1.74 crores and cash balances have swelled by Rs. 6.61 crores.

The Gilt-edged market greeted the announcement of the terms of the Central Government's new loans with a favourable reaction initially, consequent on the scarcity of stocks in the market. This was reflected in a sharp jump in prices of some of the issues. Lately, however, the market became dull with a predominance of sellers and prices reacted over a wide front. The short and long-dated issues nevertheless continued to be in demand. 3 per cent. 1986 Conversion Loan gained on bear covering from Rs. 71.20 to Rs. 71.30 before declining to Rs. 71.25. 3 per cent. 1970-75 rallied smartly on yield considerations from Rs. 86.50 to Rs. 86.80. 3 per cent. 1966-68 held its own at Rs. 92.65 and 3 per cent. 1964 at Rs. 95.20. 3 per cent. 1963-65 moved up by 10 nP to Rs. 95.25, while Rs. 99.10. 3 per cent. 1959-61 was marked down by 5 nP to 2¾ per cent. 1958 kept steady at Rs. 99.75. 2½ per cent. 1962 rose by 15 nP to Rs. 95.30, and 2½ per cent. 1961 by 10 nP to Rs. 95.35. 3½ per cent. 1962 shed 5 nP to Rs. 97.85 and 3½ per cent. 1961 suffered a similar fall to Rs. 99.60. 3½ per cent. 1964 and 3½ per cent. 1965 each declined by 5 nP to Rs. 98.15 and Rs. 97.80, respectively. 3½ per cent. 1967 was marked down by 10 nP to Rs. 97.55 and 3½ per cent. 1967 by 5 nP to Rs. 99.70. 3½ per cent. 1974 after improving by 5 nP to Rs. 98.25, reacted to Rs. 98.20. 4 per cent. 1960-70 dropped 5 nP to Rs. 100.45, while 4 per cent. 1972 gained 5 nP to Rs. 100.25.

In consonance with the trend of sterling abroad, the rupee also weakened slightly in terms of the U.S. dollar. Banks' selling rate of ready dollars rose from Rs. 475.25 to Rs. 475.75 per $100 and their buying rate from Rs. 472 to Rs. 472.50 per $100. In New York, spot sterling dropped from $2.81.11/16-2.81.13/16 to $2.81.3/16-2.81.5/16 and three months' forward from $2.79-2.79¼ to $2.78⅞-2.78¾. Transferable sterling receded from 279.50-279.60 cents to 279.20-279.30 cents.

TEA DEARER

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 1*st May*

Just over 1,900,000 lbs. were on offer in Sale No. 10 which was held on Tuesday, 29th April. Although quality showed a seasonal decline, there was still a useful selection on offer. The appearance of the teas were generally satisfactory, but there were some teas of rush production. The market opened to a strong general demand from all exporters. This demand was particularly noticeable for low medium and medium fannings which were irregularly 10 nP dearer. Low medium and medium brokens opened dearer and closed about steady. Good mediums met with good support at easier rates and are quoted 30 nP easier. High grown teas met an irregular demand and prices occasionally declined by as much as one rupee. Whole leaf met with good competition and were stronger and dearer. The following are the quotations:—

	1958 Rs.
Plain B.P.	1.45
Low medium	1.55 to 1.75
Medium	1.75 to 2.00
Good medium	1.95 to 2.40
Quality	2.40 to 4.40

London Market: *Sale of 28th April 1958*:—Plain teas 2 to 4d. dearer. Medium and best appreciably dearer.

Sale of 29th April 1958:—Strong but irregular for light liquoring.

BULLION RECEDES

(From Our Own Correspondent)

BOMBAY, 7*th May*

After last week's recovery, the bullion market suffered a setback again during the week under review. On fears that the demand for bullion would slacken in a few weeks, bears began to hammer the market. The extension of by-law 33(A) to the June and July contracts, under which a heavy penalty is payable by buyers on their outstanding purchases over a particular limit, and reports that import duty on 200,000 Tibetan coins had been paid also caused some unloading by bulls. The heavy penalty they have had to pay for carrying forward their commitments from the current contract to the next deterred the bears from hammering the market.

On Thursday last, the Board of the Bullion Association decided to apply by-law 33(A), subject to the approval of the Bombay Government, to *Jeth* and *Ashad* (June and July) contracts in silver and gold. Under this by-law, a margin of Rs. 500 per bar of silver will have to be paid on the outstanding purchases in excess of 40 bars and of Rs. 7 per tola on purchases of gold exceeding 2,000 tolas.

Forward silver (May settlement) declined from Rs. 197-15 to Rs. 195-3, but soon recovered to Rs. 196-8 before the settlement ran out on Monday at Rs. 195-14. The June settlement dipped from Rs. 195-4 to Rs. 192-11 and after a recovery to Rs. 193-12 gave way again to Rs. 192-12. At the close, it improved to Rs. 193-3. The July settlement moved down from Rs. 192-6 to Rs. 190-6, before closing at Rs. 191-3.

Ready silver gave way from Rs. 198-10 to Rs. 195-11 and after an improvement to Rs. 197-4 receded to Rs. 195-14 today. At the close, it was marked up to Rs. 196-3. The floating stocks of silver are estimated at 250 bars. The daily average arrivals were 25 bars per day, while the offtake was 15 bars per day on an average.

Gold forward (*May settlement*) declined from Rs. 112-11 to Rs. 111-11 before recovering to Rs. 113-7, at which rate the settlement ran out. The June settlement dropped from Rs. 111-4 to Rs. 110-2 and after an improvement to Rs. 110-12 gave way again to Rs. 109-15 at the close. The July settlement closed at Rs. 108-15, as against Rs. 110-9 a week ago.

Ready gold fell from Rs. 114 to Rs. 112-6 and after going up to Rs. 114-3 gave way to Rs. 112-15 at the close. The floating stocks of gold are estimated at 20,000 tolas. The daily average arrivals were 3,400 tolas, while the offtake was 3,000 tolas on an average.

The New York price of silver was unchanged at 88⅜c. In London, spot silver rose from 76*d.* to 76⅛*d.* and forward from 75⅜*d.* to 75⅝*d.* Gold spurted to 249*s.* 6*d.* after a decline from 249*s.* 3*d.* to 249*s.* 1*d.*

The following comparative table shows at a glance the trend of the market during the week under review:

	7-4-58	Highest	Lowest	30-4-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

HIDES ARRIVALS CONSIDERABLE

(From Our Own Correspondent)

KANPUR, 5*th May*

During the week under review, new arrivals of hides and skins were considerable, in contrast to lower expectations occasioned by the advent of summer. The main purchasers were the local tanners and the Madras dealers. Exporting parties were weak during the period.

The latest available quotations are: Wet salted cow 1st grade Rs. 380, 2nd grade Rs. 340 and 3rd grade Rs. 280 per score; Wet salted buff 1st grade 1 lb. 4 ozs. and 2nd grade 1 lb. 6 ozs. per rupee; Goat 1st grade Rs. 350 and 2nd grade Rs. 325 per 100 pieces; Sheep 1st grade Rs. 300 and 2nd grade Rs. 275 per 100 pieces.

Colombo Market:—Sale postponed, owing strike tea stores.

Calcutta Market: *Export*:—Good, but irregular, demand. Black and useful liquoring kinds 4 to 6 nP dearer. Plainer sorts slightly easier. C.T.C. teas firm.

Internal:—20,000 chests dust. Very strong demand for all orthodox types. Strongest feature clean leafy descriptions. Best firm. Medium C.T.C. improved demand.

Export Quota:—A fair amount of business has been transacted during the week and the quotation has remained steady with today's quotation sellers 3 buyers 2 nP. The Government have announced a release of quota for 1958-59 of 50 per cent. of the best crop basis. The quotation for new seasons quota is buyers 14 nP and sellers 16 nP.

Forthcoming Auctions:—Sale No. 11 will be held on Tuesday, 6th May 1958.

COTTON FUTURES RISE FURTHER

(From Our Own Correspondent)

BOMBAY, 7*th May*

After ruling distinctly easy during the first half of the week under review, the cotton futures market put on a cheerful appearance on Monday which gathered further momentum in the subsequent sessions. The earlier weakness was due to the large volume of tenders (1,100 bales) issued on Thursday, the first notice day. The lack of an export quota for staple cotton also adversely affected sentiment. Renewed selling pressure ensued as a consequence and values were depressed, the worst affected being the maturing May contract. The market, however, staged a smart recovery late on Monday. This was induced by the final decision of the East India Cotton Association to urge the Government to release an export quota for ¾" cotton, as well as to provide some incentives to mills spinning coarse and medium counts, so as to enable them to purchase cotton. A telegram conveying the decisions was sent to the Union Ministry of Commerce and Industry. Traders thought that the E.I.C.A's plea would be sympathetically considered by the Government. There were also expectations of some further relief in excise duty on cloth. The other helpful factors were small volume of tenders issued on Monday, the second notice day, and favourable survey results. All these factors led to active short-covering and replacement buying and prices rallied. Today's closing rates were higher than those at the end of last week.

I.C.C. Moglai Jarilla (May 1958) commenced the week a rupee lower at Rs. 647, and after dropping to Rs. 640.50 on Monday, recovered to Rs. 655.50 today, before closing fractionally lower at Rs. 655. Total tenders issued against the contract were 1,150 bales on the first notice day and 550 bales on the second notice day, making an aggregate of 1,700 bales issued to day. This quantity comprised 800 bales Laxmi, 400 bales Cambodia, 200 bales Madhya Pradesh, 150 bales Vijay, 100 bales Jayadhar B and 50 bales Gaorani.

I.C.C. Moglai Jarilla (August 1958) opened the week at Rs. 661.50, as against the previous close of Rs. 662.25 and after receding to Rs. 650.50 on Monday, improved to Rs. 666.75 today. The closing rate was a shade easy at Rs. 666.25. The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	7-5-58	*High*	*Low*	30-4-58
I.C.C. Moglai Jarilla (May 1958) ...	655	655.50	640.50	648
I.C.C. Moglai Jarilla (August 1958) ...	666.25	666.75	650.50	662.25

The spot section was listless early in the week. But, following the rise in futures, spot values also tended to improve. Turnover was, of course, small. Staple varieties attracted the attention of mills. Southern mills were particularly interested in Khandesh. Laxmi was well maintained, although prices receded slightly.

The export section was active, with shippers covering against sales abroad. There is strong feeling among leading exporters that participation in the export quotas should be limited by Government to those firms who are actually capable of moving the cotton abroad. This matter was stressed by the Cotton Advisory Board at its recent meeting. The allocation of quotas for export of cotton to those who have no experience and no contacts among foreign customers is said to be restricting sales. This is illustrated by the fact that while most of the export quota of 50,000 bales Bengal *Deshi*. Fine and below released in the middle of March on a "first-come-first-served" basis has been sold out, large quantities of earlier export quota releases are still unsold. In the future distribution of export quotas, Government would do well to bear this in mind.

Trading in the import section was limited. Some business was reported in Californians for July-August shipment and East African A.R. Jinja for September shipment.

The Government of India has decided to permit import of Pakistan cotton against the quota of 70,000 bales of East African cotton announced in February last. In order to be eligible for import, the cotton should be of staple length 1-1/16" and above and comparable to the East African cotton in quality and fineness. The importers point out that, since Pakistani varieties are mostly below the staple length stipulated, any large-scale imports are not possible.

The payments procedure for Egyptian cotton has been revised and simplified. The State Bank of India, in a memorandum, states that it has been advised by the National Bank of Egypt (Cairo) that all exports of tea and jute goods from India will be covered by advance deposits of Egyptian pounds in the State Bank's "Export Account" and that it should sell the pounds to Indian importers at the official rate of exchange less the specified discount, instead of the rates to be settled between the Indian exporters and importers. The official rate of exchange has been advised to the Bank as 7.3131 piastres for one rupee, on the basis of which the equivalent of one Egyptian pound works out at Rs. 13.674.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 585; Berar Jarilla 725; Khandesh 775; Oomra *Deshi* 650; Vijay 880; Hubli Laxmi 975; Jayadhar 785. *Delivery contracts*: Bengal 583; Wagad 605; Kalegin 594.

Despite the announcement by the Government of Pakistan that the export duty on *Deshi* cotton

would not be reduced, the Karachi cotton futures market ruled firm during the week. This was due to the emergence of fresh speculative support induced by expectations that large purchases would be made by China and Russia. There were reports that Pakistan would enter into barter trade agreements with these two countries and sell its cotton in exchange for capital goods. The Government of India's notification permitting import of Pakistan cotton of staple length 1-1/16" and having qualities and fineness comparable to that of equivalent East African cotton against the quota for East African cotton announced last February, also imparted some strength to the market. N.T.R.G. May contract improved from Rs. 73-2-6 last week end to Rs. 74-13-6. The July contract gained over the week As. 2 to Rs. 72-13-6. The spot section was also active and prices registered a rise. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 63; Punjab *Deshi* 62; 4F Punjab Roller 69-13; S.G. 78-5; L.S.S. Punjab Roller 74-13; S.G. 79-13; 289F Punjab Roller 84-13; S.G. 96-5.

The Alexandria cotton market presented fully steady conditions during the week under review, thanks to better foreign enquiries and strong spot advices. The scarcity of high grades of Karnak, Menoufi, and Giza-30 were increasingly felt and values tended to move up. The latest available quotations—in tallaris per lb.—from Alexandria are given below:

Karnak: May 78.00; July 79.00. *Ashmouni*: June 68.80; August 69.25.

A distinctly easy trend was depicted by the Liverpool cotton futures market during the week. The volume of business was small, with prices drifting lower. The announcement by the U.S. Department of Agriculture that a cotton export subsidy payable in kind from 1st August 1958 would opperate concurrently with the present system of C.C.C. sales on competitive bid basis was received with interest. In the absence of details regarding the subsidy programme, no idea could be formed as to how it affected the parity between New York and Liverpool prices. This tended to restrict business. Weak spot advices, following lower shipment offers by overseas sellers, also affected the sentiment of operators. Sudan cotton contracts were, however, steady on moderate buying.

The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: May-June 24.80; July-August 25.25; October-November 25.90; December-January 26.25. *American cotton mixed growth contract*: May-June 25.50; July-August 26.10; October-November 26.60; December-January 26.90. *Sudan*: May-June 31.00; July-August 31.20; September-October 31.85.

Cotton futures values scored modest gains in the New York market during the week. The higher mid-April parity price announced by the Department of Agriculture on the 1st inst., reports of adverse weather in cotton tracts and better advices from the textile markets set off a buying movement which lifted values.

The Department of Agriculture has announced that a cotton export sales programme similar to the current export programme on a competitive bid basis will come into effect for the next season. It will be supplemented by an export subsidy "payment-in-kind" programme. The report subsidy in kind is designed to move cotton from normal trade sources into foreign markets. Details of the programmes are awaited. The stocks held by the Commodity Credit Corporation are now reduced to less than 1.4 million bales from almost 8 million bales of owned cotton and 5.4 million bales loan stocks in December 1955, just before the first export sale programme was inaugurated. Besides the 1.4 million bales in the C.C.C. inventory, there are about 3.1 million bales in the loan.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	6-5-58	29-4-58	22-4-58
Spot	36.05	36.05	35.95
May	36.00	35.97	36.20
July	36.33	36.37	36.69
October	36.87	36.82	—

YARNS RECEDE

(From Our Own Correspondent)

BOMBAY, *7th May*

Distinctly easy conditions prevailed in the yarn market during the week under review. Transactions put through were small, as operators were hesitant to enlarge their commitments. Although stocks of rayon yarn were getting depleted, prices suffered a setback. For demand was markedly slack. The consuming interests were reported to feel that the current prices were uneconomic. The April delivery of Snia rayon yarn expired at Rs. 925 per case, the ceiling fixed by the Bombay Yarn Merchants' Association and Exchange Ltd. The Association has decided not to open futures transactions in rayon yarn until such time as the stock position shows signs of improvement. Staple fibre yarns also ruled easy. Demand from important consuming centres like Punjab, Surat, Bhagalpur and Tanda was no doubt quite good, but dealers were compelled to effect sales at lower prices, following the recent heavy arrivals from producing regions. Even reports that the indigenous manufacturers of staple fibre had raised prices by about 12 nP per lb. failed to impart strength to yarn. The tightness in the money market also imparted weakness to the staple fibre yarn section. Cotton yarns were listless. Although the commencement of the hosiery season is long overdue, it is stated that, due to the large carry-over stocks, the manufacturers of hosiery may not be eager to start their new season until their stocks were cleared.

Imports of art silk yarn into Bombay port during the month of April 1958 aggregated 1.99 million lbs., bringing the total for the first four months to 6.70 million lbs. Exports of cotton yarn from Bombay port during the month of April was 601,000 lbs.

Spot 120 Japan declined by 21 nP to Rs. 6.41. 150 Japan retreated by 16 nP to Rs. 6.34. 120 Italy shed 13 nP to Rs. 6.12. 150 Italy were neglected at Rs. 6.50. Among indigenous yarns, National Rayons 150 bright cones first grade receded by 13 nP to Rs. 6.12. 120 bright cones first grade fell by 19 nP to Rs. 5.75.

Staple fibre yarns (40x2) June delivery was subjected to heavy selling and slumped by Rs. 13 to Rs. 598. Business in the August delivery commenced on the 1st inst. No transactions have so far been put through in this contract. In the spot section, 40x2 Centurys eased by 10 nP to Rs. 3.16. New Greats lost 6 nP to Rs. 3.12, Citys 3 nP to Rs. 3.22. Kohinoors were a shade easy at Rs. 3.24. Among foreign yarns, Fujis shed 3 nP to Rs. 7.34. Paramounts were dull at Rs. 7.25.

In the cotton yarn section, ten counts Podars eased by 25 nP to Rs. 13. Moderns were stagnant at Rs. 14. Among twenty counts, Moderns shed 13 nP to Rs. 16.87. Indus were unchanged at Rs. 16.50 and Gokaks at Rs. 17. Forty counts Minaxis and Moderns lost 25 nP each to Rs. 23.25 and Rs. 24, respectively. Gokaks were done at Rs. 23.75. Among sixty counts, Raghuvamshis softened by 12 nP to Rs. 50.50. Finlays dropped 50 nP to Rs. 60. Moderns changed hands at Rs. 60, same as last week. Eighty counts Moderns eased by 25 nP to Rs. 69.75. Mahendras were on offer at Rs. 69.50.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	7-5-1958	30-4-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia April	—	925.00
120 Japan (per lb.)	6.41	6.62
150 Japan (per lb.)	6.34	6.50
120 Italy (per lb.)	6.12	6.25
150 Italy (per lb.)	6.50	6.50
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 April	—	603.00
40 x 2 June	598.00	611.00
40 x 2 New Great (per lb.)	3.12	3.18
40 x 2 City (per lb.)	3.22	3.25
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	13.00	13.25
20s Modern	16.87	17.00
32s Indu	—	—
40s Minaxi	23.25	23.50
50s Raghuvamshi	50.50	50.52
80s Modern	69.75	70.00

SUGAR BUOYANT

(From Our Own Correspondents)

BOMBAY, *7th May*

Buoyant conditions were in evidence in the sugar market during the week under review, notwithstanding the release on the 1st inst. of 166,000 tons of sugar for sale in the free market. Stocks of sugar were meagre, while spot demand was very encouraging, as is usual in pre-monsoon days. The ex-mill quotations jumped up by a rupee per bag on an average. The U.P. millers continued to sit tight on their released stocks of sugar and declined to part with the same except at higher prices. A similar tendency was noticeable in so far as the South Indian mills were concerned. Consequently, sugar prices registered a handsome improvement.

Large grain sugar rallied Rs. 2 to Rs. 112-Rs. 115 per bag. Medium grain advanced from Rs. 107.50-Rs. 109 to Rs. 109-Rs. 111. Small grain was done higher by Rs. 108.50, as against Rs. 107 last week.

Arrivals of sugar by rail into the market during the week aggregated 10,900 bags, those for the previous week being 14,500 bags.

* * * *

HAPUR, *5th May*

Sugar prices which were steady for most part of the week turned quiet, towards the week-end, following the release of a further quantity of 1.66 lakh tons for free sale from the 1957-58 production. During the current season, sugar production is expected to exceed domestic consumption, which is likely to remain at previous year's level. Pressure of supplies have accounted for a fall in sugar prices in the world markets and exports from India are not possible without a loss and, if exports were subsidised, there would naturally be an increase in internal prices. Influenced by such reports, the ex-mill delivery prices advanced by 25 nP per maund.

Following the release of a fresh quota for free sale, business in bulk quantity from Delhi parties was made in the Muzaffarnagar market in the week-end. Factories in west U.P. had stopped crushing for the 1957-58 season, except the Shamli sugar factory which was expected to run up to the 15th inst. The latest prevailing ex-mill delivery prices in the Muzaffarnagar market were: Mansurpur (B29) Rs. 38.56; (C29) Rs. 37.56; Rohana (B29) Rs. 38.25; Modinagar (C29) Rs. 37; Amroh (D29) Rs. 35.69; Bijnore (E29) Rs. 35.62; Meerut (D28) Rs. 36.44; Simbhauli (E29) Rs. 36.62; Saharanpur (D28) Rs. 35.81.

Khandsari prices continued to rule steady, due to good demand from consuming areas. Production was reported to be gradually coming to an end. The prevailing prices towards the week-end were Rs. 30 to Rs. 34 per maund according to quality.

Although *gur* manufacture had almost been stopped, arrivals out of stocks retained by the producers averaged 200 maunds daily. Prices ranged between Rs. 14.50 and Rs. 15.50 per maund. Outside demand was slack and local *gur* stock was put at 1.47 lakh maunds.

Demand for ready *gur* was poor during the week in the Muzaffarnagar market and prices of *Chakku* quality declined by Re. 1 per maund. *Shakker dara* continued to be in good demand from Rajasthan at unchanged prices of Rs. 18 to Rs. 19.50 per maund. There was good demand for *khandsari* due to seasonal marriage season and prices varied between Rs. 30 and Rs. 34 per maund. Daily arrivals of *gur* declined to 1,000 maunds and local stock was put at 2 lakh maunds. Booking position remained easier.

Gur baisakh delivery continued to rule steady and final delivery settlement rate was declared by the Chamber Executive on the 3rd inst. at Rs. 14.55. *Fagun* delivery ruled quiet and was now quoted at Rs. 12.60, as against the week's opening of Rs. 12.64. Trading in *gur* futures is now sparse.

METALS FEATURELESS

(From Our Own Correspondent)

CALCUTTA, *6th May*

Featureless conditions continued to prevail in the metal market during the week under review. Tin was throughout quoted at Rs. 508, and the steadier trend in the Singapore market was attributed to the announcement that the contributions to the special fund for buffer stock under the International Tin Agreement were completed. Virgin lead was unchanged at Rs. 62.50. Business was done in electrolytic zinc at Rs. 55 and the steady demand that followed raised the price to Rs. 56. There was no activity in the copper market. However, it was stated that Government issued permits to some consumers who had entered into purchasing commitments prior to the control.

OILSEEDS RECOVER AT CLOSE

(From Our Own Correspondent)

BOMBAY, *7th May*

The oilseeds market presented an easy trend during the major part of the week, but staged a recovery yesterday which persisted today also. The easiness in the earlier sessions was due to heavy offerings in groundnuts and groundnut oil in Saurashtra, scattered selling pressure in castorseeds, absence of any large demand for linseed and lack of fresh interest in cottonseed. Consequently, prices tended to look down. The market, however, picked up strength yesterday following profit-covering which led to a recovery in prices. Today, the market ruled fully steady. Groundnuts were well supported, although buying enquiries for oil were slow. The chief impetus would appear to have been provided by hopes of enlarged demand for groundnut oilcake in the near future. Linseed was better on reports of good enquiries for linseed oil and limited offerings. Since the carry-over charges in linseed were heavy, the bears were switching over to September contract, instead of issuing delivery orders in the maturing May contract. Cottonseed reacted favourably to encouraging advices from the cotton market.

The Forward Markets Commission has granted recognition to the reconstituted Punjab Company Ltd., Bhatinda for a period of three years with effect from the 3rd inst., to regulate futures trading in mustard seed at Bhatinda. This centre is the third futures market in rapeseed and mustard seed set up under the Forward Contracts (Regulation) Act, the other two being Agra and Delhi. The mustard seed futures contract, which will be traded under the auspices of the Company, is styled as the Ralli Hedge Contract and provides for three deliveries in a year, namely, *Jeth, Bhadon* and *Margsher* of the *Samvat* year. The basis of the contract is Ralli of average quality, containing 50 per cent. bold and 50 per cent. small seeds. Lotni variety is also made tenderable against the contract. The unit of trading is 100 maunds. Trading is subjected to a graded system of margin. The margin will be at the rate of Rs. 310 per unit of 100 maunds from longs when the closing prices on any day of the Ralli Hedge contracts is or exceeds Rs. 28 per maund and from shorts when the closing price on any day of the Ralli Hedge contracts is or is below Rs. 20 per maund.

Groundnut May contract encountered selling in the earlier sessions and dropped from Rs. 171.75 to Rs. 165.50 on Monday. Thereafter, it recovered to touch Rs. 168.75 today. August position fell from Rs. 169.75 to Rs. 164, but improved later to close at Rs. 167. Over the week, Bold ready advanced by 38 nP to Rs. 33.75. Coramandel and Khandesh quality, however, both declined by 75 nP to Rs. 34.25. Groundnut oil ex-mill shed 25 nP to Rs. 18.37 and railway receipt 31 nP to Rs. 18.25.

Castorseeds May delivery opened the week at Rs. 148.12 and, after improving to Rs. 150 on Saturday, retreated to Rs. 148.25 on the 5th inst. It, however, recovered subsequently, today's closing rate being Rs. 150.37. September contract opened at Rs. 152.87 and hardened to Rs. 155 on the 3rd inst. After receding to Rs. 152.75 on Monday, it recovered to Rs. 154.12 today. Ready Madras fluctuated between Rs. 29.37 and Rs. 29.69 before winding up the week at Rs. 28.37, same as last week. Kanpur quality was done higher at Rs. 28.37 today, as against Rs. 28.12 last week-end. Castor oil B.S.S. eased from Rs. 16.62 to Rs. 16.37 on Monday, but recovered to Rs. 16.62 today. Commercial quality which had gone down from Rs. 15.37 to Rs. 15.19 on Monday stood higher at Rs. 15.37 today.

Linseed May contract rose by 75 nP to Rs. 30.12 September delivery strengthened by 82 nP to Rs. 30.94. Bold ready hardened by 37 nP to Rs. 29.75. June-July gathered 13 nP to Rs. 30.25. Linseed oil was fully steady throughout the week at Rs. 15.62.

Cottonseed was quoted yesterday at Rs. 104.75, as against Rs. 104.50 last week-end. No transactions were reported to have been put through in this contract today. September position recorded a gain of Re. 1.25 to Rs. 108.25.

Kardiseed bold ready improved from Rs. 19.25 to Rs. 19-37 on Friday, but declined to Rs. 19.25 the following day. This rate was maintained till the close today. Nigerseed Madras fluctuated between Rs. 28.50 and Rs. 28.75 before finishing at Rs. 28.50.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	7-5-1958	30-4-1958	23-4-1958
	Rs.	Rs.	Rs.
Groundnut—			
May 1958	168.75	171.75	170.00

JUTE GOODS LOSE EARLIER GAINS

(From Our Own Correspondent)

CALCUTTA, *6th May*

Conditions in the jute goods market during the week under review were steady with turnover on a fair scale. The trend of prices was, however, two-sided. The reduction in gunny freights to U.S. Atlantic and Gulf ports, effective 1st May, was noted with considerable satisfaction. After this reduction, there had been a distinct increase in business and the month as a whole was expected to prove a satisfactory shipping month, adding further improvement to the statistical position of jute goods with mills. After 1st May, the freight is $24.50 per 40 cubic ft. or 16 cwts., as against $27.50 before 1st May. The notable feature of the week was the spurt in prices of heavy goods on good internal buying, both on commercial and Government accounts. The upward trend in B. twills set in early in the week, when there were strong rumours of a new Government tender. Up to Friday, the uptrend continued to hold sway, and hessian also rose in sympathy. On Friday, Government placed an order for 22,000 bales of B. twills.

Earlier, speculators lent their support and contributed their share to the uptrend. As soon as Government placed the above order, there was selling pressure, and weak holders began to take profit. In this process, much of the earlier gains was lost by Saturday in both hessian and heavy goods. Another feature of the week under review was the display of Russian interest for sacking, and this influenced the market. The Russians were believed to be wanting hessian also. Normal enquiries were continued to be received from the United Kingdom, the U.S.A. and other countries. Some Egyptian interest was also shown.

Trade circles hoped that the United Kingdom would sooner or later relax the present restrictions on jute yarn imports. For it was noted that some prominent carpet manufacturers in the U.K. stated that there had been deterioration in the quality of Dundee-made yarn. This was due, according to them, to the fact that the Dundee manufacturers faced little or no competition in view of the restrictions on yarn imports from India. In 1957, the U.K. imported only 1,500 tons of yarn, as against the carpet industry's consumption totalling 25,000 tons. In view of this state of affairs, the Federation of British Carpet Manufacturers has demanded more imports of yarn from India. Although the Dundee industry has modernised the plants, it is stated, it charges higher prices resulting from lack of competition. It remains to be seen as to what extent the British Board of Trade would accede to the request of the carpet manufacturers.

On Tuesday last, ready B. twills rose to Rs. 102.65 from Rs. 101.20. Earlier, some business had been done with Egyptian buyers. Rumours of a new Government order was strong and speculators were active. Covering demand was also a factor to push up the price. Ready hessian 40" 10 oz., in sympathy, advanced to Rs. 41.70 from Rs. 41.55. A Government tender for 22,000 bales of B. twills soon followed and speculators pushed up the price of B. twills to as high as Rs. 104.10. In sympathy, the price moved to Rs. 103.25 in the genuine buyers' market, and hessian 40" 10 oz. was steady, although unchanged at Rs. 41.70. Mills were naturally keen sellers. There was also profit-taking. These factors prevented a further rise in the quotation of B. twills, which remained at Rs. 103.25, while hessian 40" 10 oz. sagged to Rs. 41.65. At this stage, the Government order for 22,000 bales was placed. Since this had been already discounted earlier in the week when tenders were invited, it did not cause any particular effect in the market. The price of ready B. twills was marked down to Rs. 103.00 with hessian 40" 10 oz. dipping further to Rs. 41.30. In the week-end, quotations tumbled down to Rs. 101.40 and Rs. 40.65, respectively, for the above two representative constructions, and thus most of the speculative gains was lost, although the prices as quoted were still above the minimum rates of the I.J.M.A. The rumour of some uncertainty about Argentine buyers getting import licences from their Government to cover their purchases was also a factor for such a rapid fall in prices after the impressive rise. This rumour eventually turned out true, as the Argentine Government withheld issue of import licences. This affected yesterday's trend, with B. twills sagging to Rs. 101.00 and ready hessian 40" 10 oz. to Rs. 40.10.

There was further decline in prices of raw jute. Northern bottoms fell to Rs. 25.75 from Rs. 26.50, and daissee bottoms to Rs. 29.45 from Rs. 30. More rains fell, thereby encouraging the hope of the jute crop reaching mills in time. Mills also made purchases only sparingly. The latest quotations for May-June delivery are:

	Middles Rs.	*Bottoms* Rs.
Pakistan:		
District	33.00	30.00
Northern	33.00	30.00
Indian:		
Northern	28.75	25.75

Daissee mesta	27.25	24.25
Bimli f.a.q.	22.50	

Pucca bales 1st marks ... Rs. 165.00 ready per bale.

BLACK PEPPER RALLIES

(Messrs. Parekh and Co.)

BOMBAY, *7th May*

After touching the lowest at Rs. 540 for May delivery, Malabar black pepper rallied, following the news that the rebels in Indonesia bombarded from Celebes Island, the east coast of Borneo, and that there was unrest in South Sumatra which has until now remained loyal to the Central Government at Djakarta.

Alleppey improved to Rs. 606¼, while ready garbled at Cochin to Rs. 105½. May and June deliveries recovered to Rs. 109 and Rs. 112½, respectively. Calicut became scarce sellers at Rs. 630.

Singapore, after the rise of nearly Str.$4 in black and Str.$6 in white, remained steady with undertone healthy. In spite of the improvement at Singapore and India, Europe as well as the U.S.A. remained reserved buyers. The paucity of enquiries from the U.S.A. was reported, due to the absence of the bulk of traders from New York for attending the yearly convention of the American Spice Traders' Association.

Nothing was so far definitely known regarding the possible size of the New Crop Sarawak Pepper, as no official estimate was available. Arrivals of old crop Sarawak at Singapore were very poor. Most of the stock of Lampong remained in strong hands. Small replacement demand from New York and Europe was likely to push up the prices, as Sarawak sellers were likely to remain reserved, as long as there was tension in Indonesia. Indian growers were sure to exploit the situation by raising their asking price at every small sale. It appears that there is trial of strength between the growers at origin and the buyers overseas. It remains to be seen who wins.

In the A.S.T.A., May remained steady at $0.25½ and June at $0.26.

In the delivery section, June delivery became steady at Rs. 595 for want of selling pressure. The general opinion in the market is veering round the bull side.

Today's nominal quotations are: Ready Rs. 80 per Bengal maund, June Rs. 590-Rs. 600 and July Rs. 600-Rs. 610 per candy of 5½ cwts.

DUST TEAS IN GOOD DEMAND

(From Our Own Correspondent)

CALCUTTA, *6th May*

The firm conditions evidenced in the Mincing Lane auctions following further labour troubles in Ceylon completely paralysing tea movements there had a sympathetic effect on prices in last week's internal auctions here. Note was taken of the Government's announcement making an interim release of 50 per cent. of the crop basis of tea estates pending final allotment of exports of tea for 1958-59.

According to another notification, the price of tea for determining the export duty has been fixed at Rs. 3.24 per lb. for this month, as against Rs. 2.95 per lb. last month. There is, therefore, no change in the existing rate of duty of 38 nP per lb.

Mr. Nityananda Kanungo, Minister for Commerce, said while addressing the annual meeting of the Tea Association of India, that the duty on tea would be revised shortly, as the demand for revision was strong and up to a point justifiably so. Subsequently, his colleague, Mr. Lal Bahadur Shastri, repeated this statement in the Lok Sabha on Friday more or less on same terms. Mr. Kanungo's speech also called upon the industry to improve the quality of tea by selective plucking and adoption of up-to-date manufacturing processes, to cultivate the home market, and devise more efficient and economical machinery for internal distribution.

The President of the Tea Association of India, in his annual address, urged Government to accept the recommendations of the Plantation Enquiry Commission by abolishing the Assam carriage tax and the West Bengal entry of goods tax.

The need for reducing tax on the tea industry was also stressed by Mr. J. L. Llewellyn, Deputy Chairman of the I.T.A., here last week. He said that the growing increase in acreage in East Africa would before long be a problem to India and Ceylon, as transport of 1 lb. of tea from Africa to London would cost one rupee less than from either Ceylon or India. Wages could not be cut, and in his view tax relief was the only remedy to save the industry.

Dusts on offer during last week's sales for domestic consumption amounted to 19,594 chests. Demand was strong and prices gained. Dooars, commons and Assams of orthodox manufacture gained from 4 to 8 nP. However, an irregular trend was in evidence in C.T.C. Assams. For the best liquoring kinds were about firm, while the bright liquoring mediums advanced. The poor descriptions realised valuations. The quotations were: Best Assam C.T.C. Rs. 2.80 to Rs. 3.00, medium Assam C.T.C. Rs. 2.00 to Rs. 2.20, medium Assam grainy dust Re. 1.70 to Re. 1.74, and medium Dooars Re. 1.68 to Re. 1.70.

Leaf on offer amounted to 1,434 chests. Demand was steady.

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, *5th May*

Quietly steady conditions prevailed in the foodgrain market during the week. Wheat, after recording a further fall to Rs. 14.50 per maund for average quality and Rs. 15.50 for farm produce, improved in the latter part of the week. On Monday they were quoted at Rs. 15 and Rs. 16.25, respectively. The improvement was mainly attributed to a fall in daily arrivals now put at 400 maunds. Local wheat stock continued unchanged at one *khatti* only. Threshing reports indicated that wheat crop was poor in U.P. and would be about 5 per cent. less as compared with last year. In the Punjab, however, due to fairly good crop of wheat and creation of food-zone comprising Punjab, Delhi, Kashmir and Himachal Pradesh from which no exports are to be allowed, wheat recorded a further sagging tendency. The Punjab Government was reported to have decided to implement the price-support policy to check the downward trend in prices there.

Rice continued to rule steady during the week. *Basmati* recorded further gains. Quotations were: *Basmati* Rs. 31 to Rs. 35; *mainpuri* Rs. 26; and coarse quality Rs. 22.50 per maund.

Gram was steady, as advices from the Punjab indicated that gram was not very good there and, although local arrivals had not improved very much, some arrivals from outside accounted for an increase in loeal gram stock to 19 *khatties*. Induced by paucity of local arrivals and neagre stocks in the face of increasing demand from consumers, barley registered a further improvement in prices. Bejhar was steady, as also *jowar* and *guwar*. Quotations (in rupees per maund) were: Gram 10.87 to 11; barley 10.37; *bejhar* 9.87; *jowar* 12 to 13.25; *guwar* white 15.25.

Local peas arrivals declined to an average of 1,000 to 1,200 maunds daily and outside demand was slack. Most of the arrivals were being lifted by stockists and local peas stock mounted to 165 *khatties*, as against 150 *khatties* last week-end and about 30 *khatties* at this time last year. *Arhar* arrivals were also lower, the average being 800 maunds daily, and local stock was put at 86 *khatties*. Prices of peas and *arhar* were mostly unchanged during the week. *Urd* and *moong* continued to rule steady, due to poor local stocks. The week-end prices (in rupee per maund) were: Peas *dara* 9.69 to 9.87; farm white quality upto 10.50; *peas dal* 10.75; *arhar* 11.75; *arhar dal* 15.62; *urd* 17.50 to 18.50 *moong* 22 to 23; *massoor* 16.50.

GOAT SKINS STEADY

(From Our Own Correspondent)

MADRAS, *5th May*

Arrivals of E.I. tanned cow hides have been small and shippers are buying rather reservedly, trying to reduce the prices. As tanners are not able to buy raw stocks in line with the tanning parity, they are reported to be slowly restricting their output. The U.K. demand is poor and importers are offering lower prices every alternate day to the dismay of the tanners. Some tanners have started soaking raw skins, instead of hides, in order to keep the labour engaged.

Arrivals of tanned goat and sheep skins common tannages are small. Enquiries for shipment are at low prices and not workable for the shippers. Market rules steady for goat skins and weak for sheep skins. The results of the London public sales which commence today are awaited with interest.

Shipments during April were: 1,058 bales cow hides, 98 cow calf, 5 buffs, 333 buff calf, 537 goat and 263 sheep to the U.K; 12 cow, 8 cow calf, 7 buff calf, 636 goat and 228 sheep skins to the Continent; 5 cow, 65 buff hides, 99 buff calf and 40 goat skins to the U.S.A; one tanned goat and 157 sheep skins to Japan.

BANKING

(Concluded from page 886)

May 1956 up to April 1957 are roughly estimated by the Forward Markets Commission at 21 million ounces, while Messrs. Handy and Harman (New York) estimate the total imports from Tibet from May 1956 at more than 30 million ounces. Taking these also into account, the total stocks in the country are estimated at about 4,235 million ounces, "With the return of Lend-lease silver," the Reserve Bank's study points out, "the official stocks of silver (including silver coins) have been reduced to small proportions." Consequently, the study concludes that by far the entire amount of stocks may be said to be in private hands. At the current price of Rs. 4.9 per ounce (average for 1957-58), the value of these stocks would amount to about Rs. 2,075 crores.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVI. No. 2461 BOMBAY, 17th MAY 1958 PRICE: Re. 1.50

ALL NOT SO QUIET ON LABOUR FRONT

THE labour situation in the country is disquieting. It is true that no prolonged strike has taken place. But from all industrial centres come reports which stress that labour is on the war path. In Calcutta, not a day passes without the city witnessing some demonstration or hunger march. Men seeking employment as well as men recently unemployed are making angry exhibitions of their ill-will. India's iron and steel belt has just survived a deplorable strike. The steel city, Jamshedpur, saw the abstention from work of a large majority of its employees. Madras can boast of an averted strike by the non-gazetted officers of the State Government; this is becoming an annual feature. The stage is being set for a token strike in Bombay. Textile men are indignant over the unemployment in their ranks. Dock workers are determined to strike work. In Nagpur, men disengaged from the manganese mines, some of which have closed down, are making loud protests. There are many elements in the whole situation which form excellent cinder for the communist fire. Indeed, the spokesmen for the extremist political party have announced with ill-concealed glee that they soon expect another State to fall like a plum into their hands. It is against this background that the Union Government is convening a tripartite conference of employers, employees and the Government, scheduled to be held at Naini Tal next week. A grave responsibility lies on those who gather at the hill station. It will be their national task to retrieve the situation before it is too late.

It should be possible to distinguish two kinds of discontentment among labour ranks. In the first place, there is a demand for higher wages and better emoluments. Workers in the docks and the Tata Iron and Steel Company and the Indian Iron and Steel Company have made known their demands for better wages. Secondly, there is the agitation for the reinstatement of workers thrown out of their jobs by the closure of industrial establishments and for jobs for those who have just stepped into the employment market. Clearly, between these two groups of people, the second deserves greater sympathy and immediate attention. For it cannot be gainsaid that the restoration of their jobs to the people who have lost them and the provision of employment for men who need it deserve to have primary claim on the Government's attention.

The demand for higher wages, however justifiable, could be accorded only a lesser priority. The strike in the T.I.S.Co. was particularly deplorable because it brought to light a somewhat serious malady which afflicts the labour ranks. This is a tendency to demand a larger share in the cake even before the cake has been enlarged. In a message issued before the strike began, the Chairman, Mr. J. R. D. Tata, stated that he was surprised and distressed that, at a time when there was no dispute between the Company and its employees and a substantial increase in their emolument was in the offing, an illegal strike should have been called. He reminded the workers that the completion of the two-million ton programme would bring great benefits to the country as well as the workers. He revealed that a comprehensive revision of the wage structure was already under preparation and would soon come into force. But his appeal fell on deaf ears and the A.I.T.U.C.-affiliated Jamshedpur Mazdoor Union was determined to stage the strike. It is, however, gratifying to note that the strike has not affected adversely production in the steel plant. Incidentally, does this not show the existence of surplus labour in the factory? It is to be hoped that better counsel will prevail and the workers in Jamshedpur will maintain the high traditions of peaceful industrial relations in the factory.

Although textile men in Bombay gain nothing by their token strike—the unemployment in the ranks of textile workers is an all-India issue—there is no doubt that the workers have reasonable grounds for complaint. Some 26 mills have already closed down in India and 37 mills are partially closed. No reliable estimate is available of the total number of unemployed textile men. But so far as Bombay is concerned, it is known that the closure of one large mill in the city has thrown 4,296 workers out of their jobs, while the stoppage of the *budli* system and the discontinuance of the third shift in certain mills have led to the loss of employment for 6,900 workers and 5,000 workers, respectively; the total unemployed is thus over 16,000. Not all the closures could be attributed to mere mismanagement. Many mills have closed down, because the incidence of taxation proved too heavy a burden for profitable working. Thus, in the sphere of the textile industry, one sees the spectacle of taxation-induced unemployment. In recent years, the burden of taxation on the industry has mounted enormously. By way of excise duty alone, the 428 units in the industry paid Rs. 51.86 crores in 1956-57 and Rs. 67.8 crores in 1957-58; the Government is expected to realise Rs. 74 crores in 1958-59. This is too heavy a burden on the industry. Small wonder, then, that some mills have been compelled to close down. It is true that stocks with the mills have shown a certain tendency to fall. But this cannot be attributed to increased offtake, for it merely reflects the combined effect of a fall in production and distress sales to which some mills, compelled by financial stringency and the need to find the necessary working capital, have resorted. The Government's attention must be directed towards easing the burdens of taxation on the industry. An attempt should be made to reopen the mills which have closed down. If this implies some financial assistance, the Government should not shirk it.

Industrial relations is an eminently human problem. Every attempt must be made to redress the legitimate grievances of workers. At the same time, it is necessary to bear in mind that any hasty solution which imposes an unconscionable burden on industry is not in the interests of the workers themselves. Caught between the growing demands of labour and high taxation by the Government, the industry's financial capacity has been seriously crippled. The awards imposed by external authority have not always taken into account the industry's financial capacity. But so long as a sellers' market prevailed, most industrial establishments were not unwilling to take upon themselves the burden of high wages. It is now no longer possible for them to continue to pay the present level of wages, unless there is a corresponding increase in productivity. Further, it is time that the authorities did some re-thinking on compulsory adjudication. The system came prominently into vogue in India and elsewhere during the war years when the thing that mattered was production and not prices. But whereas in other countries the war-time insistence on external adjudication was given up after the end of the war, in India it has been continued and extended. Commenting on this system in 1953, Mr. V V Giri, ex-Minister of Labour, said:

"The spirit of self-confidence and self-reliance engendered by healthy bargaining has given place to the habit of importunity and litigation. That is bad enough, but what is worse is the deplorable effect that this dependence on a third party has brought about in the outlook and attitude of the parties towards each other. In a system of straightforward bargaining, there is no doubt a keen struggle during the period of negotiation, but, except in the few cases that lead to a strike or lock-out, the parties conclude their bargaining in a spirit of give and take—in an atmosphere of goodwill and understanding. Neither party entertains any sense of humiliation or feels the urge for retaliation and revenge. But that is not the case with compulsory arbitration. Where one party has lost and the other won, the victor and the vanquished get back to their work in a sullen and resentful mood towards each other; and neither can forget or forgive. The loser awaits the next opportunity to make good the loss, while the winner is carried away by a sense of victory which is not conducive to co-operation. Such an attitude of suppressed hostility in one party and of unconcealed satisfaction and triumph in the other may lead to transient truce but not lasting peace."

These words are as much true today as when they were first spoken. It is believed that the Naini Tal Conference has on its agenda the question of suspension of compulsory adjudication. We are aware there are inherent difficulties in breaking with the past. For instance, should the system be abandoned in any particular industry or groups of industries or should it be withdrawn in particular States or regions? In any case, a bold lead is clearly called for. It is an intolerable situation in which a helpless Government looks on, while the economically crippled managements fight in industrial courts a losing battle with a discontented labour force.

of its report. Economic prognostications, however, are always difficult. And when a body is charged with the task of planning in a democratic context, economic predictions are bound to pose particularly difficult problems. It remains to be seen whether the Commission will be proved correct by actual events.

The somewhat sombre background to recent trends has been neatly described by the report which, at the very outset, affirms that a "strain on resources both internal and external has been felt continuously since the commencement of the second Five-year Plan." It adds that these trends were symptomatic of the growing imbalance between the resources available and the demands on them. Naturally enough, the Commission's efforts have been directed towards correcting this imbalance. It is, however, difficult to escape the conclusion that, in performing this difficult exercise, it has shown a greater concern for the need for augmenting resources rather than for reducing the demand on them. Again, even though the Commission recognises that, over the first three years of the Plan, resources which were ostensibly meant for purposes of the Plan have been diverted to other uses, it makes no suggestions which would prevent a similar misdirection of effort in future. As the Commission itself has pointed out, the resources programme has been more than fulfilled. Thus, for the first three years of the Plan, the outlay on the Plan is estimated at Rs. 2,456 crores—Rs. 1,394 crores at the Centre, Rs. 1,032 crores in the States and Rs. 30 crores in Union Territories. This has been mainly financed from balance from current revenues (Rs. 439 crores), Railways' contribution (Rs. 129 crores), loans, small savings and other receipts (Rs. 533 crores), external assistance (Rs. 438 crores) and budgetary deficit (Rs. 917 crores).

A striking feature of the resources position over these years, according to the Commission, is that the balance available from current revenues for financing the Plan has remained more or less static around Rs. 140-150 crores. This is particularly deplorable, considering that the aggregate yield from the measures of additional taxation adopted so far by the Centre is placed at Rs. 725 crores over the five-year period. This is an improvement of as much of Rs. 500 crores over the tax target built originally into the Plan. For the first three years of the Plan, additonal taxation in the States. however, has been about Rs. 79 crores; the yield from these measures over the five-year period should be around Rs. 173 crores or Rs. 52 crores below the target set in the Plan. The five-year period of additional tax measures adopted by the Centre and the States in these three years thus work out to Rs. 900 crores which in themselves not only meet fully the target of Rs. 450 crores in the Plan but also cover the uncovered gap of Rs. 400 crores.

All this tax effort, however, has been of no avail to the country. A large part of the resources, raised at such considerable sacrifice on the part of the taxpayers, has been absorbed by defence, non-development expenditure and development expenditure outside the Plan. It may not be altogether correct to describe the situation as one of dissipation of valuable resources, for the inadequacy of the Centre's resources for the Plan could be explained by the fact that the Finance Commission's award implied a transfer of Rs. 160 crores to the States over the Plan period, while the increase in defence outlays absorbs Rs. 225 crores over the period. Thus, on balance, as the Commission points out, while a massive tax effort has been made in recent years, the original gap of Rs. 400 crores in resources still remains more or less uncovered. As regards the States, the additional tax effort, as already stated, is estimated to yield over the five-year period Rs. 173 crores or Rs. 52 crores less than the target. The Commission rightly observes that what matters, however, is not the amount of tax effort taken by itself but the contribution from revenues for financing the Plan. This, of course, applies as much to the Centre as to the States.

As regards external resources, the total drawing down of the Reserve Bank's foreign exchange assets since April 1956 to the end of March 1958 works out to Rs. 479 crores, despite the utilisation of the I.M.F. credit of Rs. 95 crores. External assistance authorised since the second Plan began and committed so far has been estimated at Rs. 679 crores. It is now stated that the second Plan might possibly end up with an aggregate deficit of Rs. 1,700 crores, as compared with the original estimate of Rs. 1,100 crores. The additional requirements of foreign exchange over and above the amount authorised but still to be utilised might approximate Rs. 500 crores.

The Commission has next taken a long look into the immediate future. For the last two years of the Plan, namely, 1959-60 and 1960-61, it places the total resources at Rs. 1,804 crores. This consists of balance from current revenues (Rs. 320 crores), Railways' contribution (Rs. 121 crores), loans and small savings (Rs. 450 crores), capital and other receipts (Rs. 40 crores), external assistance (Rs. 600 crores), and deficit financing (Rs. 283 crores). This, together with Rs. 2,456 crores which represent the likely actuals for the first three years of the Plan, makes in all Rs. 4,260 crores. Since the Commission feels that the financial outlay must be maintained at Rs. 4,500 crores, it is anxious that the gap between the contemplated outlay and the resources now in sight, namely, Rs. 240 crores, must be bridged.

When this effort has been made, that is, when additional resources to the tune of Rs. 240 crores have been obtained—the pattern of Plan resources (with the pattern assumed in the original Plan in brackets) will be: balance from current revenues Rs. 899 crores (Rs. 1,200 crores); Railways' contribution Rs. 250 crores (Rs. 150 crores); loans and small savings Rs. 1,044 crores (Rs. 1,200 crores); capital and other receipts Rs. 69 crores (Rs. 250 crores); external assistance Rs. 1,038 crores (Rs. 800 crores); deficit financing Rs. 1,200 crores (Rs. 1,200 crores)—Rs. 4,500 crores (Rs. 4,800 crores). What is now proposed is to redistribute the resources over the different segments of the Plan. The outlays now proposed as compared with the allocations originally made in the Plan (within brackets) are: agriculture and community development Rs. 510 crores (Rs. 568 crores), irrigation and power Rs. 820 crores (Rs. 913 crores), village and small industries Rs. 160 crores (Rs. 200 crores), industries and minerals Rs. 790 crores (Rs. 690 crores), transport and communications Rs. 1,340 crores (Rs. 1,385 crores), social services Rs. 810 crores (Rs. 945 crores); miscellaneous Rs. 70 crores (Rs. 99 crores)—Rs. 4,500 crores (Rs. 4,800 crores).

The main question is, of course, one of raising additional resources, namely, Rs. 240 crores. The Commission suggests additional taxation to the tune of Rs. 100 crores (Centre Rs. 40 crores and States Rs. 60 crores), additional receipts from loans and small savings Rs. 60 crores, and economies in expenditure and collection of arrears of taxation Rs. 80 crores. No particular tax measures have been suggested for the Centre. It is not clear what new sources of taxation are available for the Central Government in order to raise Rs. 40 crores in the next two years. It is true that, so far as the States are concerned, there may be some scope for raising additional resources. For, as the Commission's analysis shows, the yield over the five-year period from several sources of taxation in the States sphere is likely to fall much below the targets in the Plan. Thus, by means of land revenue and irrigation rates, the States were expected to raise Rs. 48 crores. Actually, their present effort will make available only Rs. 9.6 crores over the five-year period. Again, the betterment levy will bring in only Rs. 2.2 crores, as compared with Rs. 16.0 crores they were expected to raise under the Plan. General sales tax and tax on motor spirit and diesel oil will yield only Rs. 90 crores, whereas, under the original Plan, these sources were expected to yield Rs. 112 crores over the five-year period.

There is thus a *prima facie* case for expecting the States to raise additional revenues. But the question is whether they will be equal to the task. In the first place, as the Commission itself recognises, a substantial shortfall in the States' fiscal effort is partly attributable to the inadequacy of resources available. Further, the States have not yet solved the problem of upgrading the salaries of their employees. It should thus be difficult for the States to raise an additional Rs. 60 crores over the last two years of the Plan. The Commission has possibly ignored the writing on the fiscal wall which shows that tax yields have tended to fall. In many sectors of the economy, high taxation is slowly drying up the sources which contribute to the exchequer. Is it wisdom then to think in terms of additional taxation?

The least the Commission could have done was to cut the Plan to suit the size of the resources which it believes are in sight. In any case, the authorities will do well to realise that higher taxation will lead to further unemployment. Already, several industrial enterprises have had to close down because of high taxation and few enterprises find expansion a reasonably profitable proposition. The Commission is, however, on firmer ground when it advocates economy in expenditure. The scope for economy is vast. In view of the continuing stress on the country's resources, what is now indicated is not additional taxation but careful economies and better administration of tax measures which should enable the Government to give the economy the necessary spurt in the shape of adequate reliefs.

STATE TRADING

THE opposition to State trading is, as is only to be expected, growing in volume and intensity. As the State Trading Corporation (S.T.C.) continues its present policy of supplanting, rather than supplementing, the traditional fields of trade, such opposition is bound to become more and more bitter. There is no evidence to show that State trading has resulted in any marked gain for the country to compensate for the disruption of existing trade channels and growing volume of discontentment among traders. After all, the S.T.C.'s operations have not resulted in any expansion in export trade, while its operations in the domestic field have not brought any relief to the consumer. State trading in India is unfortunately wider than the sphere covered by the S.T.C. The Government itself chooses to buy its requirements from foreign sources, thereby circumventing the normal import channels. It is the contention of traders that the Government has not been remarkably successful in its direct contacts with foreign suppliers. At a convention on State trading, organised recently by the Forum of Free Enterprise in Bombay, Mr. D. B. Futnani, President of the Iron, Steel and Hardware Merchants' Chamber of India, deplored that thousands of tons of steel worth lakhs of rupees were purchased by the Government "at random and at high prices from East European countries" and that they had remained "unsold and unusable" even today. He averred that deals of steel billets had mulcted the Indian taxpayer to the tune of millions of rupees. These allegations may or may not be entirely correct. But experience in other countries warrants the conclusion that bureaucratic trading has never been much of an economic gain.

The S.T.C. has a virtual monopoly of export trade in iron ore and a substantial share in the export trade in manganese ore. A reference to this aspect of the S.T.C.'s activities was made by Mr. S. C. Bose, President of the Utkal Mining and Industrial Association, Calcutta, at the convention on State trading. Mr. Bose contended that 36 per cent. of the iron ore mines in India had stopped production because of the Government's State trading policies. He complained that the S.T.C. had failed in its dealings with foreign buyers; it had dishonoured 40 per cent. of its manganese contracts. Its whole policy implied in effect forced nationalisation without compensation in that it had resulted in a serious setback to the mining industry in which crores of rupees had been invested. Mr. Bose made the point that, if the private sector had got one-hundredth part of the facilities which the S.T.C. received from the State Bank, the railways, the port authorities and the Government, the former could have shown much better results.

A reference to the S.T.C.'s trade in manganese ore also figured in the speech of Mr. A. N. Haksar, Chairman of the Shivrajpur Syndicate Ltd., at the annual meeting of the Company. Mr. Haksar pointed out that, ever since the introduction of State trading in manganese ore towards the middle of 1956, the country's traditional buyers in foreign countries had been displaying a distinct tendency to procure their requirements from sources other than India. This, he said, was partly due to the impact of the State Trading Corporation's policy, which, instead of primarily exploring new avenues for export, had in fact merely displaced existing interests—a development which could not be said to have been to the benefit of the trade or the country at large. Added to this, the very concept of trading with a State-owned body like the S.T.C. was looked upon by the majority of buyers with disfavour. Mr. Haksar stressed that due note should be taken of the understandable preference on the part of overseas buyers to deal with parties which were directly connected with actual mining operations and had, besides, long experience of the trade. All this suggests that the Government should exercise great judgment in permitting any extension of the activities of the S.T.C. It is time the Government made an impartial investigation into the Corporation's achievements.

GOOD RESPONSE TO CENTRAL LOANS

INDO-U.K. TEXTILE TALKS—A.-I.C.C. SESSION—DISHOARDING GOLD

THURSDAY, 5 P.M.

THE share market is indecisive and lethargic in the absence of any helpful developments. Despite the fact that the T.I.S.Co. strike has proved to be a token affair and production has not been affected, steel shares lack inspiration. Textile shares are quiet on the eve of the proposed talks between the Union Minister for Commerce and Industry and the representatives of the cotton textile mills. It is generally expected that the question of giving further relief to the industry by way of reduction in excise duty will be a subject of discussion. Operators, however, do not seem to be as confident of any success in this direction as they were a few weeks ago. This is presumably because of the feeling whether the Government would be inclined to cut the excise duties, when the Planning Commission has suggested that additional taxation must be resorted to cover a part of the gap in resources. Nevertheless, the question of giving further relief to mills has assumed some importance now, as the relief recently granted does not seem to have been helpful in clearing the accumulated stocks to any great extent. Further, the production of mills is declining and the problem of unemployment is growing. A clearer picture of the outlook for mills is expected to emerge after the Commerce and Industry Minister's talks with the representatives of mills. The decision of the leftist trade unions and anti-unemployment *Samiti* to organise a token strike on the 19th inst. and the determination of the dock workers to stage an all-India strike on 19th June provide an indication of the general labour unrest in the country which, if not tackled promptly, may have wide repercussions. The implications of these developments naturally have made operators cautious.

MARKET GOSSIP

* * * *

As was generally expected, the Central Government's borrowing programme has proved a success, in that the bonds and loans have been oversubscribed and lists were closed at 12 noon yesterday. The total amount subscribed is Rs. 141.87 crores, distributed as follows:

	Rs. in crores
3½ per cent. Bonds 1963	58.06
3½ per cent. N.P. Bonds 1968	34.34
4 per cent. Loan 1973	49.47
Total ...	141.87

It will be recalled that the Central Government called for subscriptions for an aggregate amount of Rs. 135 crores, with a right to retain 10 per cent. in excess of the notified amount. In other words, the Government can accept up to Rs. 148.5 crores. As the actual subscriptions fall short of this amount, all subscribers will receive full allotment. From the break-up figures given above, the response to the short-dated bonds has been much more than that to the medium and long-dated ones, the subscriptions to the former being 40.9 per cent. of the total. This is only to be expected, in view of the recent keen demand for short-dated securities in the market. The long-dated loan comes next in the order of response, accounting as it does for 34.9 per cent. of the total. The subscriptions to the medium-dated form no more than 24.2 per cent. of the total.

A most interesting feature of the subscriptions is that as much as Rs. 132.40 crores were in the form of cash. Conversions aggregated no more than Rs. 9.47 crores, out of the total amount of Rs. 20.96 crores now outstanding in respect of the loans offered for conversion—3 per cent. 1958 and 4½ per cent. 1958-68. From the point of view of cash subscriptions, the response has been better than last year, when cash subscriptions aggregated no more than 61 per cent. This is not surprising in the context of the present easy conditions in the money market. There is, however, another section of opinion which holds that, in view of the present comfortable conditions, cash subscriptions should have been larger and that, from this point of view, the response to the loans could not be said to be a great success. An important factor in judging the success of the borrowing programme is the extent to which the Reserve Bank and the State Bank had to lend support to the loans. Some estimate of this support could be formed when the statements of the two institutions for the week ended 16th May become available. Be that as it may, the diversion of funds to the loans has had no notable effect on the money market, which continues to rule easy. The Gilt-edged market is steady, but the activity is, as is only to be expected immediately after the closure of the loan list, restricted.

* * * *

The position regarding exports of cotton goods from India and Pakistan to Britain will continue to remain unchanged, thanks to the failure of negotiations among the representatives of the textile millowners of the three countries, which concluded in London a few days ago. The statement issued on Monday this week by the U.K. Cotton Board at the end of negotiations states that the Indian and Pakistan delegations no doubt accepted the principle of import limitation, but attempts to draw up a formula for carrying out a scheme to restrict arrivals of foreign cloth into the U.K. were not successful. This failure is attributed entirely to the differences of opinion about ceilings "which may be embodied in an understanding." While the individual delegations put forward various proposals in an effort to find a solution, it was not possible to arrive at a basis which might lead to an all-round settlement. The deadlock in negotiations naturally precludes the possibility of further talks bringing in the Hong Kong millowners; the talks were expected to follow the recent discussions in London if a basis for further negotiations was agreed.

The representatives of the Indian cotton textile interests—Mr. Kasturbhai Lalbhai and Mr. Neville N. Wadia—have certainly done well in not agreeing to the fixation of a ceiling on cloth exports from India to Britain. For any such move will adversely affect India's interests. In the first place, the country is suffering from unemployment and underemployment. Secondly, it is badly in need of foreign exchange for implementing the second Five-year Plan and cotton textiles constitute one of the staple earners of exchange. As it is, India's export trade in cloth has suffered a setback, the quantity actually shipped in the first four months of the year being 216 million yards, as against 321 million yards in the same period last year.

It will be interesting to note here that shipments of cotton cloth from India to the U.K. have been moving downward lately, whereas those from Hong Kong have continued to rise. The total quantity of Indian cloth sent to Britain during the first quarter of the current calendar year was 36.77 million yards, a drop of 9.00 million yards as compared with the corresponding quarter of 1957. In contrast, shipments from Hong Kong to the U.K. were higher at 23.67 million yards, as against 14.10 million yards. The percentage ratio of Indian cotton goods to the total purchases of Britain declined from 44.37 in the first quarter of last year to 31.55 in the three months ended March 1958, while that of Hong Kong goods rose from 13.68 to 20.31.

* * * *

The deliberations of the All-India Congress Committee (A.I.C.C.), which met this week at New Delhi, have naturally enough aroused considerable public interest. The A.I.C.C. is an important limb of the party which holds the reins of office. This alone would lend much weight to its views. But there is a special circumstance which has invested the recent session with a new significance. This meeting, as is well known, was convened for purposes of a certain "introspection." It followed the recent criticism of the party by the Prime Minister, Mr. Nehru, who made no secret of the fact that he disliked the way some members of the party sought offices of power for themselves. Indeed, impartial observers also believe that many men are in the Congress for what they can get out of it. This certainly is a deplorable situation for a party to be in. Be that as it may, the A.I.C.C. session served a useful purpose in that there was a reaffirmation of the essentially non-ideological basis of the party's approach to socialism. To the extent that this may lead to an abandonment of the principles of textbook socialism which have crept into the party's economic thinking, it is to be welcomed. In any case, the party's aversion to doctrinaire socialist philosophy is all to the good, considering that it may help correct the many Congress men who tend to equate socialism with State capitalism, with a ceiling on incomes and with a host of ideological prejudices. Mr. Nehru did well to affirm that there were "many paths to socialism." Further, he reiterated his democratic faith. Contrasting Indian planning with planning in the totalitarian countries, he said that the authoritarian outlook of communism and the outlook of India's planners were "poles apart."

The dismal fact, however, remains that both the Congress and the Government are not always willing to translate into practice their faith in non-doctrinaire approach to economic problems. The demand for nationalisation of industries, which ignores all the recent trends in the socialist thought in the West, continues to find some eloquent champions. The Government's economic policy too is shaped less by the reality of economic facts in India than by socialist catch-phrases. A case in point is the hesitation betrayed by the Government in associating business men with State enterprises. When this question was raised last week in the Rajya Sabha, the Union Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, said that, soon after taking over his new portfolio, he had decided that all aspects of association of business men with public undertakings should be examined before Government took any decisions to associate these men with any particular undertaking. It is not clear why the Government has found it necessary to examine the question. Does it feel that such association is not helpful to the Government? It is, however, gratifying to note that Mr. Shastri averred that, if the advice or assistance of business men was necessary, it could be taken; he did not think their co-operation would mean either they would come in the way of the Government or they would take advantage of their position.

To revert to the A.I.C.C. session. The note submitted by the Congress President, Mr. Dhebar, excellent as it was in its own way, contained a wholly irrelevant discussion of capitalism and communism. He said that the difference between capitalism and communism was the difference largely in the allocation of power. "Under one system," he said, "there is insistence that it resides with industrialists by and large and in the other with the politicians." This statement does little justice to the economic and political philosophy of the countries which are wedded to free enterprise. Power does not reside with business men in these countries. They do, in fact, submit themselves to Governmental control in the interests of public good. But they enjoy a certain measure of freedom in taking decisions. Only this freedom has resulted in much good. The "free enterprise" countries have shown greater and more genuine solicitude for the welfare of their citizens than the countries which are loud in the protestations of their faith in welfare State. Mr. Dhebar, however, was on firmer ground when he condemned the acquisition of "power for the sake of power." But then, it is the socialist State which makes itself formidable to its citizens by the way it acquires and exercises both political and economic power. Power corrupts and absolute power corrupts absolutely. And when that power is both political and economic, a citizen's life could be rendered difficult to a degree.

There is some reason to think that the members of the Congress are beginning to be increasingly realistic in their economic outlook. It is true that, in the A.I.C.C. session, some impracticable proposals were made such as the compulsory acquisition of sugar at cost price from factories for export purposes. But, on broader issues, many members are reported to have been commendably responsible in their speeches. Appropriately enough, the growing unemployment attracted much discussion. Some members rightly stressed that, if unemployment became rampant, it would undermine the people's faith in the Plan. Again, a notable comment on planning came from Mr. Nehru who urged the need for national, rather than merely regional, perspective. It is a pity that so few in the country realise how greatly our economic future could be damaged by unimaginative regional loyalty and misplaced local patriotism.

* * * *

The problem of dishoarding the large quantity of gold held by the public and utilising it for productive purposes has again come to the fore and is being widely discussed. At the annual meeting of the All-India Manufacturers' Organisation held recently in New Delhi, in response to the suggestion made by the President to dishoard gold and issue gold bonds, Mr. Jawaharlal Nehru, the Prime Minister, was reported

EQUITIES LETHARGIC

TEXTILES QUIET

(From Our Own Correspondents)

BOMBAY, 15*th May*

THE share market was lethargic during the week under review and there was also a shading off in prices of most counters, particularly in textiles. Operators in textile shares were eagerly awaiting the outcome of the talks likely to be held tomorrow between Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, and the millowners in Bombay, in the course of which the problems affecting the industry are expected to be discussed, including the question of relief in excise duty. The market heaved a sigh of relief over the news that the strike in the T.I.S.Co. works at Jamshedpur passed off without any loss of production. Nevertheless, Tata Steels were dormant on reports that the books of the Company would be closed twice, once for payment of dividend and again for issue of bonus shares. Later on, it was learnt that there would be closure of books only once for both the purposes. The large diversion of funds to the Central loans, fears about the proposed general strike on the 19th inst. and the dock workers' strike next month were all factors which made operators cautious. The undertone was, therefore, quietly steady.

In the steel section, Tata Ordinaries reacted early in the week from Rs. 181.50 to Rs. 179, before gaining ground gradually to Rs. 183 yesterday. Today, however, they fell again to Rs. 181.25 at the close. The new shares shed over the week Rs. 3 to Rs. 175. After an early drop from Rs. 21.72 to Rs. 21.56, Indian Irons edged forward to Rs. 21.76, but again declined to Rs. 21.56.

Textiles were generally quiet and, barring a few exceptions, prices were lower. Bombay Dyeings lost over the week 40 nP to Rs. 53.80. Centurys declined by Rs. 5 to Rs. 427 and Kohinoors by Re. 1.50 to Rs. 266. Finlays shed a rupee to Rs. 257 and Gokaks Rs. 3 to Rs. 142. Indu Ordinaries were a shade lower at Rs. 9.12. Indore Malwas shed Re. 1.50 to Rs. 107. Khataus provided one of the exceptions with a rise of Rs. 2.50 to Rs. 160.50, as were Models at Rs. 167.50.

Bank shares were quiet. Barodas dropped Re. 1.25 to Rs. 114.75 and Centrals Rs. 2 to Rs. 51. Bank of India were dull at Rs. 129.50 and United Commercials shed 70 nP to Rs. 58.80. Among insurance shares, New Indias shot up by Rs. 2.75 to Rs. 47 and Vulcans were done 44 nP higher at Rs. 17.44.

Sugar shares were featureless. Belapurs moved between Rs. 246 and Rs. 244.50 before closing at Rs. 245. Phaltans gained over the week Re. 1 to Rs. 142.25, while Walchandnagars were unchanged at Rs. 263. Cement shares exhibited a slight reactionary trend, presumably due to the delay in announcing higher prices for cement. Associated Cements shed over the week Rs. 2.50 to Rs. 151.50 and the new shares Re. 1.50 to Rs. 146.50. Digvijays also lost Rs. 2.50 to Rs. 143.50. Orissa Cements were unchanged at Rs. 12.32, while Dalmia Cements were a shade quiet at Rs. 10.

In the engineering and mining group, Alcocks were unchanged at Rs. 143.50. Tata Locomotives advanced from Rs. 166 to Rs. 169, but reacted to close at Rs. 166.50. Premier Constructions lost over the week Re. 1.75 to Rs. 191.75, while Larsen and Toubros recorded a gain of 48 nP to Rs. 16.28. Mahindras also improved by 52 nP to Rs. 19.20. McKenzies came into the limelight with business being done today at Rs. 85. Shivrajpurs dropped Rs. 2 to Rs. 90 and Indian Coppers were done 4 nP lower at Rs. 3.10.

Scindias were marked down from Rs. 17.52 to Rs. 17.36, but regained to Rs. 17.52. Today, at the close, it again declined to Rs. 17.24. Great Easterns were fairly steady and closed at Rs. 19.92. Premier Automobiles were down by a rupee at Rs. 81.50, while Hindustan Motors were steady at Rs. 6.88.

Among miscellaneous industrials, Bombay Burmahs (old) reacted from Rs. 556 to Rs. 549. After recovering to Rs. 556, they gave way to Rs. 552 at the close. National Rayons were erratically lower and lost Rs. 2.50 over the week to Rs. 231.75. Tata Chemicals dropped 12 nP to Rs. 14.92 and Tata Oils 25 nP to Rs. 37.75. Wimcos staged a small recovery of Rs. 9.25 to Rs. 183. Bradys were done Re. 1.25 lower at Rs. 280 and Brady Engineerings recorded a gain of Rs. 5 to Rs. 49. Voltas were a shade dull at Rs. 122.50, while Hindustan Levers were steady at Rs. 21.28.

* * * *

Calcutta Stock Exchange

CALCUTTA, 14*th May*

A decline in the volume of transactions, recession in prices of speculative issues, and smart gains in selected jutes, coals and miscellaneous industrials were the main features of this week's trading on the Calcutta Stock Exchange. The decline in the volume of business was due to diversion of funds by institutional and other investors for the Government loans, which opened on Monday this week and are understood to be having satisfactory response, and the labour situation in Burnpur and Jamshedpur and the delay in announcing retention prices also cooled speculative enthusiasm early in the week. However, a recovery set in from Monday, when the token strike in T.I.S.C.O. works turned out to be a minor affair and did not reportedly affect steel production as such. The greater interest shown to miscellaneous industrials was due to improvement in the outlook for industries, as disclosed by the corporate results announced during the week. Jute shares attracted buyers following reports of the excellent condition of the fibre plants and Argentina's reported withdrawal of the earlier suspension of import licences.

In the coal section, while Burrakurs were unchanged at Rs. 22 and Western Bengals declined to Rs. 5.68 from Rs. 5.81, Central Indias were better at Rs. 7.87 and South Karanpuras and Karanpura Collieries hardened to Rs. 9.69 and Rs. 94.50 from Rs. 9.50 and Rs. 89.50, respectively, on interested buying.

Some features were recorded in the jute section for reasons already indicated. Megnas had buyers at Rs. 100.50, as against Rs. 93.00 previously. Birlas were a few nP higher at Rs. 15.25 and Belvederes at Rs. 83 added five points. Presidencies were fully firm at Rs. 4 and Alliances advanced to Rs. 76 from Rs. 70.

In engineerings, National Irons improved to Rs. 7.25 from Rs. 7.06. For the year ended March 1958, a dividend of 6¼ per cent. (same) has been declared by the Company. Guest Keen Williams provided another feature with their improvement to Rs. 30.69 from Rs. 30.19. This was, despite the cut in dividend for 1957 from 23 per cent. to 20 per cent., on account of a decline in profit.

Several features were recorded in the miscellaneous industrials section. National Insulated Cables were fully steady at Rs. 27. Dunlop Rubbers were in good demand at Rs. 25.81 as also Indian Cables at Rs. 30.56. Alkali & Chemicals continued to command attention and were higher at Rs. 14.87. Martin Burns hardened to Rs. 24.62 from Rs. 24.25 with Rohtas Industries impressively increasing to Rs 17.87 from Rs. 16.78 and Indian Aluminiums to Rs. 13.75 from Rs. 13.12. India Paper Pulps advanced to Rs. 20 from Rs. 19.31 while Indian Coppers plodded dull ground at Rs. 3.11.

* * * *

Madras Stock Exchange

MADRAS, 13*th May*

Easy conditions prevailed on the Madras Stock Exchange during the week under review also. Transactions put through were limited with values tending to decline. Tea and rubber shares generally declined. Operators were discouraged by the note of pessimism in regard to the future of the tea industry struck by chairmen of some of the planting companies in the course of their speeches at the annual meetings held during the week. Coffee shares, however, attracted good attention and moved up further. Textiles lacked support. Even reports of better sales of handloom goods and improvement in yarn offtake failed to have any effect. Sugar and miscellaneous industrials were quiet.

Among tea shares in the planting section, United Nilgiris and Haileyburias fell by 30 nP each to Rs. 15.40 and Rs. 18, respectively. Coorg Teas and Nilgiris receded by 25 nP each, the former to Rs. 10.75 and the latter to Rs. 8.50. Stanes Amalgamateds shed 20 nP to Rs. 14.10, Kil Kotagiris 25 nP to Rs. 5.55 and Neelamalais 12 nP to Rs. 4.73. Among rubber shares, Tropicals slumped by Rs. 2.25 to Rs. 21.25. Nenmenys were marked down by 90 nP to Rs. 14.10 T. R. & Ts. dropped 35 nP to Rs. 6.65 *cum-dir.*, reflecting the disappointment of operators over the cut in dividend to 4 per cent. for the year ended 31st December 1957, as against 7½ per cent. in the previous year. Cochin Malabars eased by 15 nP to Rs. 4.70 and Woodlands by 10 nP to Rs. 7.75. Kalpettas, on the other hand, evoked special enquiries and climbed up by a rupee to Rs. 25.25. Coffee shares, as already stated, proved an exception. Kumergodes rallied 50 nP to Rs. 9. Consolidated Coffees improved by 30 nP to Rs. 25.10. Coffee Lands gained 27 nP to Rs. 35.12.

Among textile shares, Lakshmis were pushed down by Rs. 10 to Rs. 99. Coimbatore Cottons receded by Rs. 5 to Rs. 141. Radhakrishnas and Janardanas dropped Rs. 3 each to Rs. 122 and Rs. 76.50 respectively. Rajalakshmis eased Rs. 2 to Rs. 70. Ranga Vilas lost a like amount Rs. 61. Vijayakumars were lower by Re. 1.50 Rs. 107.50.

Among miscellaneous industrials, Indian Steel Rollings shed 22 nP to Rs. 11.15. Travancore Cements eased by 20 nP to Rs. 8.80. F.A.C.Ts lo 10 nP to Rs. 5.12 and Orissa Cements a like amou to Rs. 12.25. Sen-Raleighs, however, improved b 25 nP to Rs. 12.50. Forest Industries gathered nP to Rs. 1.85. India Cements rose by a simil sum to Rs. 27.75.

In the sugar group, United Breweries gained rupee to Rs. 189. Kirlampudis gathered 25 nP Rs. 41. Travancores put on 5 nP to Rs. 9.90.

Cement Control relaxed in Bombay State

You can now buy 20 bags of ACC Cement WITHOUT PERMIT.

★

Permits for larger quantities also granted more freely.

NEWS IN BRIEF

THE Soil Conservation Board has decided to constitute a river valley authority, first of its kind in Madras State, for the catchment areas of Kundah and lower Bhavani basin.

India produced 1,574,000 tons of manganese ore during 1957. Orissa, Bombay, Madhya Pradesh, Mysore and Andhra accounted for 382,000 tons, 359,000 tons, 329,000 tons, 262,000 tons and 193,000 tons, respectively.

The Andhra Pradesh Government has decided to set up a laboratory near Hyderabad to manufacture different types of sera and enlarge the existing laboratories preparing small pox and cholera vaccines at a cost of Rs. 20 lakhs.

The export of Madras and Mysore silk waste will be licensed freely on shipping bills within a prescribed ceiling on principle of "first come first served" upto the end of June 1958 or till the ceiling is reached, from the ports of Madras, Nagapatnam, Tuticorin and Dhanuskodin.

The All-India Small-scale Industries Board concluded its eleventh session on the 9th inst. at Mussoorie, with an appeal to the Government of India to ensure allocation of adequate foreign exchange for the essential requirements of the industry both in the private and public sectors.

The 44-mile long Bhildi-Raniwara section of the Northern Railway, designed to provide an alternative and shorter route rail link between the recently developed port of Kandla and the State of Rajasthan and Punjab, was opened to passenger traffic on the 11th inst. It was opened to goods traffic in November last.

The five-man British shipbuilding mission appointed to advise the Union Government on the site and lay-out of India's second shipyard presented its report along with a model of the proposed establishment to Mr. T. Swaminathan, Minister in charge of Economic Affairs at the Indian High Commission, London, on the 9th inst.

The Government of India has extended up to 31st December 1958, the free licensing for shipment of all varieties of cotton piecegoods (mill-made and powerloom) and cotton manufactures including cotton waste blankets other than restricted varieties to all permissible destinations except Nepal, Tibet, Bhutan, Sikkim and the Portuguese possessions in India.

The Bihar State superphosphate factory at Sindhri, set up by the State Government, at a cost of Rs. 60 lakhs and which has an annual installed capacity of 60,000 tons, started its trial run to establish its initial production of 50 tons average per day, or 15,000 tons every year. The initial production of sulphuric acid, it is reported, will be of the order of 25 tons per day.

The Government of India has published draft rules detailing the procedure for refund of customs and Cenral excise duty paid on raw materials used in the manufacture of confectionery subsequently exported. The rate of refund per 100 pounds of boiled sweets unwrapped, boiled sweets soft centred and toffees has been fixed at Rs. 11.15, Rs. 13.30 and Rs. 18, respectively.

The Indian Standards Institution has granted, two more licences to Messrs. Devidayal Cable Industries (Private) Ltd., Bombay, for the use of I.S.I. Standard Mark in respect of enamelled high conductivity annealed copper wire (oleo-resinous enamel) and hard drawn copper solid and stranded circular conductors for overhead power transmission purpose.

The Government of India has decided to give loans to States for meeting expenditure on investigations for flood control schemes. This was disclosed by the Union Minister for Irrigation and Power at the seventh meeting of the Flood Control Board held at New Delhi on the 12th inst. The flood control programmes such as surveys for the collection of technical data, aerial photography and field levelling, it is said, have been completed.

The all-India final estimate of *jowar* for 1957-58, puts the current year's area and production of the crop at 41,411,000 acres and 8,056,000 tons, as against the partially revised estimate of 40,367,000 acres and 7,249,000 tons respectively, for 1956-57. This shows an increase of 1,044,000 acres or 2.6 per cent. increase in area and 807,000 tons or 11.1 per cent. increase in production of *jowar* during the current year as compared with the previous year.

As a result of the trade talks held recently between the representatives of the Governments of India and Ceylon, it is agreed that the Indian manufacturers who are at present permitted to import only copra, will be given the option to import 50 per cent. of their entitlements in the shape of coconut oil. It is further agreed that, if this fails to resolve the difficulties of Ceylon, the Government of India will consider import of coconut oil on a global basis.

The gross customs and Union excise revenue realised during the ten months ended January 1958 amounted to Rs. 374.85 crores, as compared with Rs. 300.15 crores in the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 126.76 crores, as against Rs. 116.22 crores, export duties for Rs. 20.63 crores, as against Rs. 25.15 crores, land customs and miscellaneous for Rs. 4.65 crores as against Rs. 2.97 crores, air customs for Rs. 1.85 crores and Union excise duties for Rs. 220.96 crores as against Rs. 155.81 crores.

A scheme to replenish the silk content of silk fabrics exported has been approved by the Directorate of Export Promotion in the Ministry of Commerce and Industry. For implementing the scheme, the Silk and Rayon Textiles Export Promotion Council is setting up inspection machinery at various centres in the country which produce silk fabrics such as Bombay, Calcutta, Banaras, Madras and Bangalore. After the inspection of the silk fabrics meant for export and assessment of their silk content, the quantity of imported raw silk to be supplied against the export of silk fabrics will be determined by the Council and supplied by the State Trading Corporation of India.

A provisional agreement has been reached between India and Burma regarding measures to be taken to promote trade between the two countries. The agreement followed the discussions held recently at New Delhi between the Burmese trade mission led by U Raschid, Burmese Minister for Mines, and the Indian delegation led by Mr. Nityanand Kanungo, Union Minister for Commerce. Under the five-year trade agreement entered into in September 1956, it will be recalled, India and Burma had agreed to take steps to achieve as near a balance in trade as might be possible. It was also agreed to consider each other's suggestions for the development and expansion of commerce and diversification and balancing of trade between the two countries. The trade agreement followed the five-year rice purchase agreement under which India has agreed to purchase two million tons of rice in the five-year period beginning from 1956.

From Abroad

The Moscow Radio has announced that there are nearly two million television sets and more than 40 stations in the Soviet Union.

The number of totally unemployed persons in Japan increased by 280,000 to 850,000 in March, which is the highest figure since March 1956.

New import duties on cheap cloth from India, Japan and Hongkong have been proposed by the Finance Minister of Uganda. It is stated that the duties will bring in over £1 million sterling a year and will protect Uganda's new textile industry at Jinja.

Plans to reconstruct the railway line from Townsville to Mount Isa in Australia will be investigated into by a mission from the World Bank which is expected to visit Australia next month. The reconstruction of the railway line is expected to facilitate shipment of production of lead, zinc and other metals from Mount Isa to the seaboard at Townsville.

The World Bank has approved a 20-year $5.5 million loan to Honduras at 5¾ per cent. to finance the foreign currency cost of road development programmes. The Bank of America and the National Bank of Washington are participating in the loan without the World Bank's guarantee to the extent of $299,000. The projects concerned are due for completion in about 2½ years. Contracts will be put out to international competitive bidding.

Forced by shortage of capital and low reserves, the Union of South Africa has decided to restrict credit for imports, according to the Finance Minister. The Government will apply stricter control on exchange transactions by South African residents with the sterling area. The concession which had permitted a South African resident to retain in another sterling area country a sum of £10,000 sterling has been withdrawn.

A proposal asking President Eisenhower to call for a one-year voluntary standstill agreement on wage and price increases has been made by the Business Advisory Council, which is an advisory body to the U.S. Commerce Department. The Council's Anti-Recession Committee has recommended against any general tax relief at this time, although it concedes that such action may be proper if general consumption continues to show a downward trend.

An application has been made by the Krupp concern of West Germany seeking a two-year extension of the five-year period (expiring in March 1959) for disposing of its coal and steel assets in accordance with the agreement signed in March 1953. The extension has to be granted by a committee of seven, of whom three are Germans, three are allied nationals and one neutral chairman. The Company expects that the extension will make the issue less urgent and leave more time for negotiations.

Industrial wages in Norway in the fourth quarter of 1957 amounted to an average of 5.49 kroner per hour for adult men workers and 3.68 kroner for adult women workers. In the third quarter, hourly wages were 5.34 and 3.59 kroner respectively. From 1956 to 1957 wages had risen by 6.4 per cent. for men and 6.1 per cent. for women. During the same period, the cost of living index rose by 2.7 per cent. Accordingly, real wages went up by 3.7 per cent. for men and 3.5 per cent. for women workers.

Boeing 707 jet airliners took one more step towards airline service on world air routes with the beginning of tests by the U.S. Government agency in charge of certifying aircraft for passenger carrying. The first three Boeing 707 jet Stratoliners produced will be used in the intensive certification programme which is expected to be completed in late summer. Boeing 707 Intercontinentals and other variations of the 600-miles-per-hour (965-kilometres-per-hour) Boeing jet airliners will also be presented for certification as they are completed.

PERSONAL

MR. Asoke Kumar Sen, Union Minister for Law, who has been a Minister of State, will henceforth be a Cabinet Minister.

Mr. E. L. Hechtermans, Consul General of the Netherlands in Bombay, left India on the 9th inst. Mr. J. J. Derksen, Vice-Consul, is now in charge of the Consulate.

Mr. M. K. Vellodi, Ambassador-designate of India to Switzerland and concurrently Minister-designate to the Vatican, has been concurrently appointed Minister of India to Austria.

Mr. Gopala Reddi, who was Minister of Economic Affairs in the Union Cabinet, has been designated Minister of Revenue and Civil Expenditure and Mrs. Tarkeshwari Sinha, who was Deputy Minister of Economic Affairs, has been designated Deputy Minister of Finance.

Mr. V. M. M. Nair, at present High Commissioner for India in Malaya and Commissioner for the Government of India in Singapore, has been appointed Ambassador of India to Cambodia, in succession to Mr. Kewal Singh Chowdhry. Mr. Nair is expected to take up his new post in July.

Dr. C. V. Raman, the Nobel Laureate for Physics, sailed for Europe on Friday last. During his three-month tour of Eastern Europe, Dr. Raman will visit the U.S.S.R. to receive the Lenin Peace Prize awarded to him in recognition of his services in the cause of world peace.

Viscount Simon, a Managing Director and Deputy Chairman of the Peninsular and Oriental Steam Navigation Company (P. & O.) and a Director of the British India Steam Navigation Company, Limited (B.I.), has retired from the Boards of both Companies consequent on his election as Chairman of the Port of London Authority.

"COMMERCE" 1933

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 20*th May*

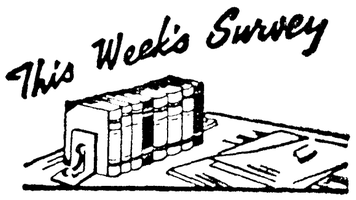
Grievances of Coal Trade

The letter which the Secretary of the Indian Mining Federation has addressed to the Secretary of the Railway Board has our entire sympathy. But, while adding our support to the demand for the abolition of the current surcharge of 15 per cent. on coal freight, we are inclined to question the correctness of the data produced in support of the argument of the Federation in favour of a revision of the basic Central Provinces coal rate in order to bring it on a level with the basic rate for Bengal. It is stated in the letter that Jherria coals have been "badly hit" in the markets of Western India by coal from the Central Provinces; but the assertion is unsupported by actual fact. The three chief coal consuming markets in Western India are Bombay, Ahmedabad and Indore. In Bombay, 99.9 per cent. of the total consumption of coal is not of the Central Provinces variety. Bombay has never taken to the use of Central Provinces coal, the market being shared by Bengal, South African and a small quantity of Welsh coal. In Indore, Central Provinces coal has been used since the Central Provinces collieries have been opened up, Indore being situated 340 miles only from Central Provinces, as against 915 miles from Bengal, in consequence of which Bengal coal has no claim to this market. In Ahmedabad which is the centre of the controversy, the consumption of Bengal coal has shown no appreciable drop in recent years.

Boeing 707 Intercontinental jet airliners have been ordered by Air India International for delivery in 1960.

In the next two months, Olympia (London) will be the venue of two exhibitions which will demonstrate the latest developments in two allied trades, namely, clothes manufacture and laundering. The International Clothing Trade Exhibition, from 2nd to 7th June, will be devoted to the interests of the manufacturers of every type of men's, women's and children's wear. Among the latest equipment on show will be machines that inspect, cut, and sew fabrics. At the Laundry, Dry Cleaning and Allied Exhibition, to be held from 17th to 26th July, leading manufacturers of laundry and dry cleaning plant and equipment will exhibit the best the world has to offer for these twin industries.

The B.O.A.C. has made arrangements with a British insurance company whereby nationals of many countries can indemnify themselves against the cost of possible emergency travel to visit sick relatives or business associates abroad. The scheme enables the policyholder to fly by B.O.A.C. to the bedside of a specified person who is seriously ill in any part of the world and then return home. His air fare in both directions will be paid by the insurance company. In addition, the insured person is covered for all incidental expenses, including surface transport, hotel accommodation and subsistence up to £4 a day for a maximum duration of 20 days. The policies also carry personal accident insurance for the person making the journey for a maximum of four weeks. Such policies are issued for one year or a shorter period and premiums vary according to the distance separating the insured person and his specified relative, but roughly they work out to less than 3 per cent. of the normal return air fare. Premiums are reduced if there are two or more specified persons. A relative or business associate is also permitted to visit the insured person if he should become ill.



KERALA BANKS IN CLUTCHES

A SELECT Committee's recommendations on the legislative measures referred to it are generally accepted by the legislative body. Even if the recommendations are further modified by the legislature, such modifications are more often in favour of those affected by the Bill. This is because the Select Committee is believed to have gone through the pros and cons of the provisions on the basis of the public demand as well as the discussions that have taken place in the legislature before the Bill is referred to it. It is, however, to be regretted if a Select Committee makes the provisions more stringent and the legislative body makes further adverse changes in the Bill. The Kerala Agriculturists Debt Relief Act, 1958, belongs to this class of measures. The Act, recently passed by the State Assembly, is mainly intended to give relief to the agriculturists from the clutches of the usurious moneylenders. But, by including banks in the group of usurious moneylenders and making the provisions of the Act applicable to banks, particularly at a time when banks are under the full control of the Reserve Bank of India, the State Government is certainly not helping the development of banking. On the contrary, it is feared that the provisions of the Act will not only affect banks but also the agriculturists, inasmuch as lending by banks will not be a profitable business, as will be shown below, and agriculturists will not have the much-needed credit facilities.

The Kerala Bankers' Association submitted a memorandum to the Select Committee setting forth the reasons for exempting banks completely from the provisions of the Bill. But unfortunately the Committee, instead of conceding the request of the banks, recommended that loans exceeding Rs. 2,500 borrowed under a single transaction from a bank be exempted from the provisions of the Bill. Later, the Assembly, when it discussed the Select Committee's recommendations, reduced the exemption limit on a single transaction to Rs. 1,500. Most of the banks in the Kerala State are small banks and the average size of their advances is also small. A high percentage of their advances is below Rs. 1,500. According to the findings of the Travancore Cochin Banking Enquiry Commission, the advances falling under Rs. 1,500 form not less 50 per cent. of the total advances of the small-sized banks. Accordingly, the exemption limit of Rs. 1,500 provided for in the Act is not helpful to small-sized banks to any substantial extent.

The banks in Kerala are not strictly "commercial banks," because they do not confine their credit facilities solely or exclusively to businessmen. They give loans and advances to agriculturists also. This is due to the peculiar economic conditions in the State. A large part of the credit requirements of agriculturists is now being met by banks. It is also a well-known fact that banks in Kerala generally conduct *chitties* or *kuries* which are in the nature of compulsory deposits. In the original Bill, any liability incurred or arising under any *chitty* or *kuri* had been exempted, but the Select Committee modified that provision and the exemption is now limited to liabilities arising out of *chitties* or *kuries* which had not terminated one year before the commencement of the Act. These modifications, it is feared, will create further difficulties for banks and the banks' plea for their complete exemption from the provisions of the Act is not unreasonable.

The Act provides that an agriculturist need repay his debts only in ten half-yearly instalments and the effect of this provision is that banks' funds are locked up for long periods. The bulk of the funds in a bank consists of the customers' deposits and the bulk of the assets is made up of loans and advances. Advances made by banks are always linked to their obligation to their depositors. The period of deposits is usually one year and never more than three years. It is for this reason that banks usually grant advances only on a short-term basis. If, therefore, banks' advances are locked up for long periods, as provided in the Act, it should be clear that the working of banks would be seriously affected.

Another disability under the Act is the ceiling placed on the rate of interest on both existing as well as future, advances at 5 per cent. per annum. Banks in Kerala usually receive deposits at a comparatively higher rate of interest than banks in other States. According to the Travancore-Cochin Banking Enquiry Commission, "the largest single category of deposits (37.7 per cent.) fall within the interest rate range of 4 to 5 per cent. followed by deposits carrying 5 to 6 per cent. forming 22.8 per cent. of the total deposits." Thus, banks in Kerala State pay 5 to 6 per cent. on a large proportion of their deposits and the fixation of the rate of interest on advances at a maximum of 5 per cent. would not only involve them in losses but also deter them from making available loans and advances to agriculturists even against first class securities. The agriculturists would naturally be deprived of the much needed credit facilities. It is understood that the Reserve Bank of India also fully appreciates the Kerala banks' case for complete exemption from all the provisions of the Act and has recommended to the State Government accordingly. There is, therefore, no reason for disregarding the Reserve Bank's advice. The Kerala Bankers' Association's latest move in submitting a memorandum to the Union Minister for Home Affairs and States, it is to be hoped, will be sympathetically considered and an exemption will be granted to banks from the provisions of the Act.

PAINT INDUSTRY

The paint industry is making strenuous efforts to meet the steadily increasing demand for paint materials following the marked expansion in the different consumer industries. The production of paints has gone up considerably in recent years. The quantity actually produced which was no more than 27,950 tons in 1950 went up to 41,602 tons in 1956 and further to 42,271 tons in 1957. As against the general purpose paint materials, the output of better quality products like nitrocellulose lacquers, stoving finishes, and industrial surface coatings based on synthetic and semi-synthetic resins has registered a rise. There has also been a significant increase in the production of phthalycyanine blue, alkyd resins and aluminium paste.

While the production of paints has thus improved, there is still a substantial underutilisation of capacity to the tune of 30-35 per cent.; the aggregate annual capacity of the paint industry is nearly 65,000 tons—calculated on the basis of two shifts and 300 working days—the number of major factories being 48. Two factors would appear to be responsible for the underutilisation of capacity, namely, impact of excise duty and difficulty in getting adequate quantities of raw materials at an economic price. These factors were dealt with in some detail by Mr. C. L. Jhunjhunwala, President of the Indian Paint Manufacturers' Association, in the course of his speech at the annual meeting of the Association held at Calcutta last week-end. Mr. Jhunjhunwala referred to the hardship caused by the present system of levying excise duty and urged the introduction of a slab system of duty in order to relieve the paint factories of the hardship. He also urged the adoption of effective steps to organise production of the raw materials required for the paint industry. Meanwhile, the industry should, he said, be provided with adequate facilities to import essential requirements and import policy must be changed to obviate the shortage of tinplates for the manufacture of containers.

The points raised by Mr. Jhunjhunwala deserve to be sympathetically considered by the authorities. The paint industry plays a vital role in the context of the development of railways, building operations and industries like the automobile, bicycle and electrical equipment, all of which require large quantities of paints, varnishes and enamels. There is also the rising demand for nitrocellulose lacquers following the development of furniture-making, sports goods and other nitrocellulose consuming industries. Besides, prospects for exports of paints and varnishes are quite good, provided the Indian products can compete in price and quality with similar products from other exporting countries. The value of paints and varnishes exported from India has risen from Rs. 24 lakhs in 1954-55 to Rs. 35 lakhs in 1956-57.

Considering that paints and varnishes have innumerable uses and that there are good prospects of earning foreign exchange through exports, the need for reducing the burden of taxation and ensuring the supply of adequate raw materials to the industry cannot be overemphasised. It is gratifying to note that Mr. Manubhai Shah, Union Minister for Industry, assured, while inaugurating the meeting, that the Government's policy was to allow imports of raw materials to fill the gap between the industry's requirements and indigenous production. Mr. Shah, however, pointed out that imports of raw materials cost Rs. 150 lakhs a year and that there was foreign exchange difficulty. He was right when he stressed the importance of utilising the indigenous material to the maximum possible extent and exploring the possibilities of using the reasonably good substitutes available locally. Mr. Shah did well also to commend to the attention of the paint manufacturers two suggestions —one for the formation of a central association of all producers big and small and the other for the establishment of a laboratory. Surely, inadequate laboratory facilities and lack of trained personnel well versed in the technology of surface coatings, as Mr. Shah pertinently remarked, are hindering the industry's progress. If these handicaps are removed and if the Government reduces the burden of excise duty, one may expect that the production target of 60,000 tons fixed for the paint industry in the second Plan will be fully achieved.

ROAD TRANSPORT

As the railways by themselves cannot cope with the cumulative increase in transport requirements, it is necessary to provide facilities to relieve the strain on them by diverting the additional traffic elsewhere. The national highways, which have both strategic and economic importance, can, if properly developed and equipped, carry a good part of the increased traffic. The fact that comparatively smaller investment of capital (with little foreign exchange content) on road development will give better results in the movement of goods than similar outlays on railways makes it more prudent to spend larger funds on roads. It has been estimated, for instance, that the 14,000 miles of national highways which the country has today are capable of carrying 70,000 to 75,000 trucks with a traffic capacity of 40 to 50 million tons per year, which is as much as the additional traffic the railways are expected to carry by 1960-61. The importance of road transport cannot, therefore, be overemphasised. In the development of roads, it is necessary to have, as the Planning Commission and the Government of India have realised, a national perspective. The setting up of an Inter-State Transport Commission to develop and co-ordinate inter-State transport is a reflection of the Government's awareness of the importance of road transport.

In order to promote the expansion of road transport, it is imperative that there should be suitable administrative machinery in the States to tackle the various problems of the industry and to foster its development. The existing administrative set-up in most of the States is concerned more with the regulation of motor transport than with its planned development. The Government of India deserves to be complimented on its decision to appoint an *ad hoc* committee to conduct a comprehensive enquiry into the transport administrative set-up in the States and to make recommendations for its reorganisation. The Chairman of the Committee will be Mr. M. R. Masani, M.P., a former President of the Indian Roads and Transport Development Association. The other members of the Committee are: Messrs. H. C. Mathur, M.P., C. R. Pattabhi Raman, M.P., M. P. Bhargava, M.P., C. M. Daid, M.L.A., Rajasthan, Govind Sahai, M.L.A. U.P., D. S. Rathor, Transport Commissioner, U.P., J. B. Bowman, Vice-Chairman, Bombay State Road Transport Corporation, T. S. Santhanam, Director of T. V. Sundaram Iyengar and Sons Ltd. and Kundan Lal, Secretary, All-India Motor Union Congress.

According to its terms of reference, the Committee is required to survey the existing machinery for the administration of motor transport in the States, with particular reference to the working of the Regional Transport Authorities and State Transport Authorities and their suitability to look after the development, coordination and regulation of road transport. It is also required to suggest a model administrative set-up which will ensure (*a*) the fair and speedy disposal of applications for permits, (*b*) the healthy growth of motor transport, providing efficient services and adequate amenities to the public, (*c*) elimination of inhibitory factors which stand in the way of the development of motor transport, (*d*) the adequate development of truck-trawler combinations, (*e*) the fullest use of available road facilities, (*f*) proper co-ordination of the activities and functions of the Inter-State Transport Commission. The report of the Committee, which is expected to be submitted in six months, will be awaited with interest.

The development of road transport obviously depends upon adequate production of motor vehicles. Discussing this problem in his speech at the annual meeting of Mahindra and Mahindra Ltd., Mr. K. C. Mahindra, Chairman, called attention to a number of factors which inhibited road haulage. These include: (1) the high level of taxation in this country on transport—perhaps the highest in the world, (2) inter-State controls on movement from one State to another, without any ostensible utility or benefit to anybody, (3) the threat of nationalisation of goods haulage services in various States. These restrictions also provide a disincentive to manufacturers of trucks. The second Five-year Plan, no doubt, has provided for the production of 136,000 vehicles between 1957 and 1961. This volume, even if achieved, together with the existing fleet of 130,000 vehicles less obsolescence, in Mr. Mahindra's opinion, is hardly adequate to meet even the minimum requirement under the Plan. Besides increasing the vehicles, Mr. Mahindra pointed out, some special effort was needed for improving the road system. If the planned economy was to be a success, Mr. Mahindra said, a solution must be found to the triple problem in road transport. The first problem is that of building the balance of 114 bridges as planned, of extending the mileage of national highways to a minimum of 15,000 and of a concerted and intelligent development of feeder roads and by-ways.

The second is that of assuring a quick supply of an adequate number of trucks with pay-loads ranging from one ton to 10 tons of truck-trailer and tractor-trailer combinations for service on the main routes. Mr. Mahindra reckoned that a minimum provision of 50,000 trucks per year and 5,000 tractor-trailer combinations must be made. But even here there are difficulties in the way of the manufacturers embarking on an expansion programme. First, they are not fully equipped to deliver the goods. To solve this problem, Mr. Mahindra suggested: "A concerted and co-ordinated programme as between the various manufacturers, a decision to speed up local manufactures and a direction to get the results at any cost is the desideratum of planning in this context." Secondly, there is the problem of finance. According to Mr. Mahindra, a sum of Rs. 10 crores will be needed. But this is not a large amount for ensuring production of 50,000 trucks and 5,000 tractor-trailer combinations a year. He, therefore, suggested that the establishment of the Refinance Corporation for Industry should be speeded up as a matter of priority for providing capital finance to the manufacturers.

The third problem is that of offtake of all these vehicles. Here also the problem of providing finance for purchase of 50,000 truck services and the cost of running them crops up. Mr. Mahindra suggested the setting up of a Truck Finance and Development Corporation, which would guarantee the manufacturers the purchase of all vehicles they produce and which would simultaneously offer the operators easy payment terms on instalment basis, on the lines of hire purchase system. He wanted the State to sponsor this Corporation with a capital fund of Rs. 50 crores—a small sum as compared to the huge outlay on the railway system. This Corporation could also provide finance to the manufacturers for production of vehicles, if the charter of the Refinance Corporation does not permit it.

Mr. Mahindra's suggestion for development of road transport is inspired by the fact that there are physical limitations to the rapid growth of railway transport. The advantages of the road haulage service flow from the fact that the limitations to its growth are minor and the capital expenditure is also not as colossal as in the case of railways. There is no doubt that the development of road transport organisation, as Mr. Mahindra himself recognised, will not only provide additional employment but also lay securely the foundations of a modern transport system. In fact, this is confirmed by the experience of other countries.

THE PROBLEM OF SUGAR EXPORTS

SCHEMES PUT FORWARD BY INDUSTRY ANALYSED

By V. R. Jhaveri

THE question as to what is the best channel through which exports of sugar should be effected by the country has been looming large over the industry for some time past. The problem is aggravated by the considerable divergence of opinion among the spokesmen of the industry on the method to be adopted for ensuing that exports of sugar are carried out in a smooth way and in a way which would help create the necessary atmosphere for establishing a permanent market for Indian sugar in the nearby countries such as Burma, Malaya, Ceylon, the Far East and Persian Gulf area. Heretofore, these markets have been accustomed to British refined, Formosan and Java sugars, and it is no exaggeration to say that we do face an uphill task in making Indian sugar popular abroad. The quality of sugar produced by a number of Indian factories no doubt compares favourably with that of Formosan or Java sugars, but that by itself is not enough. What is necessary is that the standard should be maintained and that grading and packing should be uniform.

There are at present two schemes for exports before the Government and the recent pronouncements by the official spokesmen in Parliament have made it clear that the Government has yet to make up its mind as to what is going to be its future policy regarding exports. In fact, the Minister for Food and Agriculture has more than once given the indication that the necessary legislation for the purpose is on the anvil. The disturbing factor which, however, emerges is that, while the Government admits that, due to the high manufacturing cost, sugar cannot be exported but at a loss (the loss is at present calculated at anything between £20 and £25 per ton, even after taking into account remission of all taxes such as excise duty and cane cess) and that the loss may have to be borne ultimately by the consumer only, it is also determined to go ahead with the implementation of the price linking formula whereby the Deccan factories, in particular, will have to pay more for sugarcane even over and above the higher price (which is fixed after mutual consultation with the State Government) which they pay today. Again, paradoxically enough, the Government admits that the high manufacturing cost is due to the fixed price paid to sugarcane growers.

There is, however, unanimity of opinion among all concerned that, at the present critical juncture of foreign exchange, it is absolutely necessary on the part of every industry to earn as much exchange as possible. Sugar is a commodity which by its very nature has a large import-export trade and, though world trade finds itself entangled in power politics in the form of the International Sugar Agreement and though the trend of world prices depends on the attitude of the large sugar-producing countries which are not signatories to the Agreement such as Brazil, there is no reason why with concerted efforts we should not be able to hold our own and have our legitimate share in the world sugar trade. We have a carry forward of about 4 to 5 lakh tons and, if the present consumption figures are any indication, production in the current season will be able to meet the home consumption. Looking to the present production trends, it will cause no undue hardship if 2 to 3 lakh tons are earmarked every year for export.

Another Consideration

The necessity for exports is also based on another consideration, namely, that, due to the expanded sugar production in the country, the entire production cannot be absorbed in the country at prices remunerative to manufacturers and sugarcane growers alike. The extent to which sugar exports may be made must be decided upon by taking into consideration, all the relevant factors, the most essential of them being the requirements of foreign exchange; the world market situation (care must be taken to see that the Cuban operators do not unduly depress the world market to keep us out of the picture), and the need for preventing the internal market from being unduly depressed.

The authorities would be treating the consumer very unfairly, if they were to call upon him to pay more than what he is paying today. Steps must be taken to see that the manufacturing cost of factories is reduced. There is no doubt that the Indian cultivator is getting an undeservedly higher price as compared to his average per-acre yield of 1.30 ton, as against 6.49 tons of his counterpart in Hawaii, 6.44 tons in Java, 5.08 tons in Peru and 2.10 tons in Cuba. The Government should refund a part of the huge taxes which it collects from the industry.

Let us now attempt to analyse the two schemes put forward by the sugar industry for the consideration of the Government. The first scheme envisages the setting up of a corporation, towards the capital of which all members will subscribe. The Government has been requested to pass suitable orders under the Industries (Development and Regulation) Act or the Essential Supplies Act or Sugar Control Order, directing that the entire output of every sugar factory should be sold through the said corporation which will be the sole selling agents for sugar produced by each factory, provided that each factory shall retain the right to make direct sales in India. On all such sales, the said corporation will receive full commission to which it is entitled. The scheme further envisages that the corporation will be entitled to charge a commission on all sales and to vary the quantum of each commission from time to time. The second scheme envisages that the Government of India should, in the first instance, find out whether there will remain any surplus at the end of the next season on the basis of experience of the past season. It should then declare what percentage of the next season's production will be released for internal consumption from time to time. The balance quantity will have to be carried forward to the next year. The factories which do not wish to carry over must be allowed to export the same if they so desire. In order to ensure that sugar is exported, a heavy deterrent should be imposed in the shape of additional excise duty. Each individual factory should be allowed to handle its own export quota and be given licences for the same. Such licences will be transferable, and the railways should, by pooling the freight rate on export of sugar, work out a flat rate of freight from mills irrespective of the distance at ports.

Advantages of Schemes

The sponsors of the first scheme claim that a central organisation has decided advantages, as it will be difficult for the individual factories to find markets for small parcels of sugar, in which the loss will be definitely heavier. Besides, a central organisation, it is said, can sell at discriminating prices to different markets at the same time, depending on the various exigencies of the situation. The protagonists of the second scheme, on the other hand, feel that a central organisation will have to face enormous difficulties as it will have to undertake a very big responsibility. Past experience has shown that the procedure of purchases through tenders left much to be desired. They claim that, left to themselves, the factories will naturally try their utmost to reduce their losses on export and much unnecessary expenditure which will have to be incurred in setting up a central organisation will be avoided.

The first scheme is, to say the least, very vague and complicated as far as legalities go. In fact, the scheme as it stands today is not practicable. The scheme envisages that the Government should pass orders under either the Industries (Development and Regulation) Act or the Essential Supplies Act or the Sugarcane Control Order directing that the entire output of every sugar factory should be sold through a separate corporation. It is very doubtful if the Government can take action as contemplated under the Industries (Development and Regulation) Act, as it can only act "if it appears to it to be necessary or expedient for securing equitable distribution and availability at fair prices of any article ... etc." The object of the Government will necessarily be to secure foreign exchange and maintain fair price, but it will be stretching the language too far to say that exports are

FORD FOUNDATION EXPERIMENT IN KHANPUR

ITS IMPLICATIONS REVIEWED

From A Special Correspondent

NEW DELHI, 13*th May*

DELHI LETTER

THE two obvious highlights of the last ten days were the discussions at the National Development Council's meeting here and the Planning Commission's appraisal of the second Plan's progress and prospects. These highlights, however important, again yield place in this despatch, as they did in the last week's, to the momentous Ford Foundation experiment in village reconstruction which is taking place in the Khanpur village near the Qutb Minar. This is something vastly more significant for the prosperity of rural India than any rural development programme currently in operation. Of course, everybody concerned—the politician, the planner, the administrator, the economist, the statistician, the rural sociologist, the industrialist and, above all, the villager—will wake up in due course to the far-reaching implications of the Khanpur experiment, the success of which is a foregone conclusion. The implications are manifold but they can be broadly described as involving a radical conceptual change in the familiar approach to irrigation, power generation and distribution, rural electrification, industrialisation and road transport and as spelling an equally radical reorientation of priorities in planning in the matter of major irrigation, power projects, large-scale industries, and so on.

A scheme with such implications cannot obviously find ready acceptance on all hands. There will, therefore, be much uninformed criticism and interested opposition. The happiest man will, however, be the villager whose patience is now strained to the utmost by having to wait for cheap irrigation water and power which would not otherwise come to his village in his lifetime. And the industrialist with vision will look forward to the vast rural market that will be opened up for pump sets and small generators with their gear fittings, for small and medium machine tools for small-scale industries, for electrical goods like small transformers, wires, bulbs, etc., for lorries to carry coal to village kilns and to clear surplus agricultural products, and so on.

That the Ford Foundation's scheme will find ready acceptance at the political level can be postulated with a fair degree of certainty. This will be more so because from the point of view of a Congress which has all along been trying, without much success, to marry modernism to Gandhism, the scheme represents a Western and modern variant of the Gandhian concept of decentralised production. What is even more, the American idea that the enormous potential of India's bullock power could be easily utilised to the greatest profit for operating small-capacity electrical generators and large-capacity irrigation pump sets is Gandhian in its simplicity, realism and originality. It is indeed extraordinary that the engineers of a country which leads the world in advanced technology and automation, have come to adopt consciously a Gandhian approach in their outstanding contribution, to date, to India's future economic development.

This economic development can now be more rapid in terms of time, less costly in terms of capital outlay, more productive in terms of annual output of goods and services and thus of national income and more beneficial, in terms of employment, living standards and modern amenities, to the rural four-fifths of India's population. That the Ford Foundation's scheme would involve a capital-output ratio of, at the most, 1.5:1 only, is its most significant feature. A ten-year master plan, involving an aggregate capital outlay of Rs. 8,000 crores at the rate of Rs. 2 lakhs per average village unit and covering large well-irrigation, rural electrification, small-scale industries (complementary and supplementary to existing large-scale industries), improved rural housing and brick-paved village roads, can be assumed, for the purpose of this article, to be within the realm of probability.

How a possible plan of the kind could be staggered over a period of ten years and financed, is broadly indicated in the following table. Here, of course, it is assumed that major irrigation and power projects and some large-scale industries will be assigned a newer and lower order of priorities so that adequate resources could be allocated to that master plan for rural India.

Year	Capital outlay on a new set of village units every year (Rs. crores)	Annual recovery of capital loans included in annual capital outlay (Rs. crores)	Net annual financial commitment to the State (Rs. crores)	Number of village units to be covered every year
1st ..	400	..	400	20,000
2nd ..	440	40	400	22,000
3rd ..	484	84	400	24,200
4th ..	632	132	500	31,600
5th ..	696	196	500	34,800
6th ..	765	265	500	38,250
7th ..	942	342	600	47,100
8th ..	1,036	436	600	51,800
9th ..	1,240	540	700	62,000
10th ..	1,365	665	700	68,250
Total for 10 years ..	8,000	2,700	5,300	400,000

How a net financial commitment of the order of Rs. 5,300 crores in 10 years could be met is the next logical question. It may be noted that, according to the present priorities in planning, the second Plan's proposed outlay on major irrigation and power projects and large industries in the public sector is of the order of Rs. 1,500 crores, as against Rs. 800 crores under the first Plan. As a number of major irrigation, power and industrial projects may be expected to be taken up only in the third and the fourth Plan periods if the present structure of priorities holds the field, an aggregate outlay of about Rs. 5,000 crores on them in 10 years can be reasonably assumed. With a possible reordering of priorities on the other hand, this possible outlay can be easily cut down by half so as to release resources to the tune of Rs. 2,500 crores for the aforesaid 10-year plan for rural India. The balance (Rs. 2,800 crores) of the financial commitment could be met, in whole or in part, by created money which, in this case, will be fully justified by a more or less immediate increase in production.

As very nearly half of the possible outlay of Rs. 8,000 crores will be on well irrigation by pump sets operated by bullocks, the technical feasibility of large open wells which are a necessary part of the Ford Foundation's project would need to be better known and the underground water resources would also have to be broadly estimated. The technical feasibility of large open *kutcha* wells going down to depths of about 100 feet has been for long an established fact in hard or rocky underground in some Tamil districts, for example. And the technical feasibility of similar *kutcha* wells (with a radius of 50 to 100 feet) sloping down to depths of 25 to 50 feet in comparatively loose soils of East India and having a flow of not less than a cusec, has also been established in the course of relief works carried out two years ago by Mr. M. I. T. Iyengar, I.C.S.

As regards underground water resources, it has been established in repeated experiments in the United States that the surface run-off of rain water on cultivated lands is as low as 1 per cent. in some areas and as high as 60 per cent. in some others and that, between these two extremes, the infiltration of rain water into the sub-soil of the major part of cultivated area is generally 66⅔ per cent. As it has also been established that with an annual rainfall of 24 inches an acre of land receives nearly 3,000 tons of rain water, a broad idea of the enormous amount of annual infiltration of rain water can be had. If to this is added the infiltration taking place from the river and tank systems every year, the vast untapped potential of sub-soil water can be seen as a well-nigh inexhaustible mine. This water mine and the mine represented by the present idle bullock power now await to be tapped in a practical and businesslike manner indicated by the Ford Foundation's historic Khanpur project. **The rest is a matter of planning and organisation to deliver the goods with expedition.**

THE MOUNTING STRIKE

From Our Own Correspondent

LONDON, 10*th May*

LONDON LETTER

ALL this week, the Metropolitis of London has been without a single bus. The inconvenience to the public is, of course, at its greatest when people are going to and from their work, but it is surprising how the London railway system has managed to absorb the greater part of the additional load.

But a transport strike, more than any other, is a matter of direct public interest, and the rights and wrongs of this strike have become a principal topic of debate. One must say "a principal topic," because there is allied to it the possibility of a railway strike. Should such a strike take place, that would remove all forms of public transport in the London area as well as, of course, affecting the greater part of the transport of goods through the country. The repercussions would be unlikely to stop there, for the Transport and General Workers' Union, which has called out the busmen, might, in the event of a railway strike, find it necessary to call out the lorry drivers, and the stage would be set for a general strike on the pattern of 30 years ago.

The immediate issue in the present labour dispute is that the unions had asked for a weekly increase of about 6½ per cent. for all busmen in the London area. The case went to arbitration and the arbitrators agreed to give 5 per cent., but only to the busmen in the central London area and nothing at all to the busmen in the outer areas. The transport Unions were thus put in a very difficult position that they could accept an award very favourable to some of their members at the expense of others. This is against all the principles of Trade Union bargaining. In an endeavour to avoid the strike, the Union offered to accept the total sum of money which the arbitrators award represented, provided they could divide it differently, that is, spread the award over all their members.

The employers, and as the employers are a public corporation they are acting with the sanction of the Minister of Labour, rejected this proposal on the grounds that the increase would seem to be inadequate to the central London men who would before long begin demanding a differential, thus a solution on these lines might have been only temporary.

However that may be, the Unions feel that they have been as conciliatory as possible and the whole of the Trade Union movement is behind the transport workers in this strike. In a sense, the transport workers have been outmanœuvred in the course of their negotiations by having come to the point of the strike in advance of knowing whether there would be a rail dispute or not. Of course, a rail dispute, with its removal of all forms of public transport, would have put the strikers in a far better position. However, the impartial observer can see that the negotiations over the railways are being handled by the Unions as something quite separate and that, in practice, they are not using the bus strike as an additional weapon to further their own claims. The Government, for its part, is fully aware of the danger of letting a railway strike proceed and, while it would not intervene in advance of the busmen's strike, it has already intervened in the rail negotiations on the grounds that it would in any case have to foot the bill.

Apart from the immediate cause of the dispute, the whole of the Trade Union movement is antagonistic to the findings of the busmen's arbitration tribunal. They consider that the tribunal was weighted against them at the outset by the Government pressure on a wage freeze, so that the arbitrators are no longer impartial. The labour movement is also convinced that the Government have chosen this particular battle, because they feel they are on strong ground and have, indeed, welcomed it as being in furtherance of their policy of disinflation. But the labour movement cannot expect that that policy should be pushed so far as to deny legitimate wage increases in the present state of the economy. The so-called demand inflation is no longer rampant and an increase in wages could be accepted without causing a renewed bout of inflation, but the Government are committed to their policy and the fight whether on the bus front or on those other fronts where industrial disputes have developed or are developing, is fundamentally a fight over economic policy.—*All Rights Reserved.*

BUSINESS RECESSION IN U.S. NEITHER WORSENS NOR IMPROVES

NEW LABOUR LAW IN THE OFFING

From Our Special Correspondent

NEW YORK, 6*th May*

THE business recession in the United States, judged by preliminary figures for April, has neither worsened nor improved materially. The number of persons receiving unemployment compensation has declined slightly. While factory employment is off further, there has been an increase in agricultural jobs which is a natural seasonal development.

The weather in many parts of the country, notably in the populous East, has been abominable and has been a business retarding factor. It is a very strange recession, indeed. Prices continue to creep up. Savings are rising as well but not the rate of savings. The 520 savings banks in the U.S. not counting savings deposits in 14,000 commercial banks and in the savings and loan associations from coast to coast, reported deposits in these institutions had reached a level in excess of $32,000 million.

Personal Income

Personal income of all kinds in the first three months of the year ran at an annual rate of $4,000 million higher than in the comparable 1957 period. Consumers increased their first quarter expenditures for goods and services by $4,300 million, as compared with the first quarter of 1957. Spending for services and non-durables was up, but for some inexplicable reason, the public showed little interest in durables, such as automobiles and homes, and what goes with them. None of these figures are indicators of a recession.

The rate of savings, while inconclusive, comes nearer to a recession barometer, however. Savings which ran at an annual rate of $19,500 million, or 6.6 per cent. of disposable income in the first quarter of 1957, are now at a rate of $18,300 million, or 6.1 per cent.

The spending for durable goods is significant. This area of consumer expenditures reached a new high of $35,900 million, at an annual rate, in the first quarter of last year. This rate is now off $4,400 million to $31,500 million. Why? Nobody quite knows. In my opinion, the automobile industry is to blame for its plight. Cars are getting larger and wider, thus more difficult to handle in congested areas. They are also getting lower so that it requires acrobatics to get in or out of them. Increased horsepower and automatic shifts have increased petrol consumption and repair and operating costs to a vast extent. By contrast, smaller foreign cars which operate far more economically without automatic gadgets are extending their sales to an appreciable extent every month.

Non-durables

The increase in spending for non-durables, such as gasoline, drugs, apparel and similar goods is related to the reduction in durables. Spending for services as pointed out above, also went up. This covers a multitude of areas, such as rents which continue to rise, as well as education, medical care, travel and so on. Despite the recession, this may turn out to be the biggest travel year for Americans. Agencies are swamped with requests for overseas transportation and hotel space. The Brussels World Fair seems to be one of the major attractions.

A better picture of the drop in economic activity may be obtained by comparing the first 1958 quarter with the last three months of 1957. On this basis, personal income is off $3,200 million, U.S. Treasury tax receipts are $400 million lower, disposable income is down $2,800 million, consumer expenditures on an overall basis, declined $1,400 million. However, spending for non-durables was up $700 million and spending for services rose $800 million.

So much for statistics. The business slump and lagging sales are major factors in the stormy negotiations now in progress between the United Auto Workers and the automotive industry. It may be noted that this is the first time since the end of the last war that the trade union is negotiating in a period when the threat of a strike means nothing to a depressed industry. In fact, the industry would benefit and the workers who are still at their benches would be the losers along with thousands of their colleagues who have been idle for some time. There are about 850,000 unsold new cars in the U.S. Stoppage of production might well clear showrooms of these unsold models and give a temporary economic breather to the business.

New Labour Law

The U.S. Congress, at the present time, is in the process of writing a new labour law. It is an uncomfortable task in a major election year. Labour leaders have declared for a long time that they can deliver the vote of their multi-million membership. The fact is they never could, but merely threatened. People vote in the privacy of a booth and are accountable to no one with a secret ballot. Basic political pressures will virtually compel some kind of Senate action to deal with the abuses which have been disclosed by the Senate Rackets Committee under the chairmanship of Senator John L. McClellan. There has developed a public awareness of the magnitude, power and possible abuses of union funds, and demands for corrective action have come from many quarters.

Legislation, however, is only as good as its general public acceptance. Any reforms in the labour movement, in effect, will really have to be initiated and supported by the rank and file membership of the unions. This is difficult since it requires leadership and there is hardly any reservoir of leaders on which labour can draw.

A significant psychological factor which encourages corrupt trade union officials and discourages their opponents, is the apparent success of Teamster Union President, Mr. James R. Hoffa, in retaining his power, although he has been the most accused of all union leaders investigated by the McClellan Committee. It is up to the membership, but nothing happens.

A parallel to inability to act may be observed in the Washington Government. A nationally syndicated columnist spoke of it the other day as "the staff horror." He referred to President Eisenhower's staff system which he built up on the basis of his army experience and background. A vast machine has been developed to relieve the President of the burden of inconsequential detail. In this respect, the system works to perfection. But there are far too many people involved in formulating a plan and in arriving at a unanimous decision. "Our positions have not yet been firmed up," is the official way of putting it.

Staff System

This is mentioned to overseas readers, specifically those in India, as an explanation for the repetitive failure of the U.S. Government to recapture the initiative in international negotiations. That is why Soviet Russia, seemingly, is acting with much greater despatch, perhaps to the detriment of the world. That is why the pre-summit talks are bogged down; that is why disarmament negotiations are getting nowhere. In fact, very little gets done under the staff system, except under pressure of events, or when and if one Cabinet member forges ahead on his own without consulting anybody.

Under such circumstances, statements have been made which had to be retracted by other members of the Cabinet. This, in turn, has produced general uncertainty just what Washington policies are, if any. In my opinion, the whole system is one of the greatest contributing factors to the present recession.—*All Rights Reserved.*

3 HANDY POCKET-SIZE BOOKS

that will help you to get the best out of CARBIDE TOOLING

These three books are packed full of useful information on all aspects of carbide tooling:—

APPLYING WIMET deals with the basic principles of carbide tool design—choice of angles—use of chip breakers, tool setting, etc.

RESERVICING WIMET discusses the simple technique necessary for efficient reservicing—selection of grinding and lapping wheels, etc.

WIMET AT WORK gives full details of a number of examples showing the current diverse nature of Wimet applications in a variety of industries

Write on your Company's letter heading, for copies of these helpful books.

APPRAISAL AND PROSPECTS OF SECOND FIVE-YEAR PLAN

SHORTFALL IN RESOURCES QUITE MARKED

SOON after we went to press last week, the Government of India released to the public the *Memorandum on the Appraisal and Prospects of the Second Five-year Plan* submitted by the Planning Commission to the National Development Council at the latter's meeting held in New Delhi on the 3rd and 4th inst. The publication of the *Memorandum* was long overdue. The imbalance between the resources available and the demands on them which set in at the very commencement of the Plan has tended to become so severe that the country's economy has been subjected to considerable stress and strain. Such stress and strain have almost resulted in a psychological setback, especially among the masses. Viewed thus, the Planning Commission must, indeed, be complimented for the realistic way in which it has examined the question of reappraising the Plan. The *Memorandum* is quite lucid and comprehensive in that it not merely reviews the progress made in the implementation of the Plan during the first two years (1956-57 and 1957-58) but also assesses, in the light of experience of these years and of the provisions contained in the Central and State budgets for the third year (1958-59), the prospects for the next two years (1959-60 and 1960-61), together with the efforts required for fulfilling the essential objectives of the Plan.

The Planning Commission has kept the outlay on the Plan unchanged at Rs. 4,800 crores, notwithstanding the increase in the cost estimates of the projects with the corresponding rise in the financial outlays required to meet the physical targets in the Plan. The acceptance of this ceiling means a lowering of the physical targets. The Commission frankly admits this fact, but emphasis that the problem at this stage is whether the balance of resources required to complete the financial outlay of Rs. 4,800 crores can be found.

No Easy Task

Out of the Rs. 4,800 crores, the expenditure incurred in the first two years is put at Rs. 1,496 crores. This, together with the estimated outlay of Rs. 960 crores in 1958-59, brings the total expenditure for the first three years to Rs. 2,456 crores—Rs. 1,394 crores at the Centre, Rs. 1,032 crores in the States and Rs. 30 crores in the Union Territories. The balance of resources required in the last two years of the Plan thus comes to Rs. 2,344 crores, which is just a little less than one-half of the five-year total. The question of raising this sum, the Commission says, is no easy task, especially as deficit financing in the first two years had been heavy (Rs. 702 crores) and has now to be kept down to the minimum. As against the balance of Rs. 2,344 crores, the resources expected to be available are placed at Rs. 1,804 crores, or a marked shortfall of Rs. 540 crores. This shortfall in resources, it is specifically pointed out, cannot be met by further deficit financing nor is it practical to rely on more external assistance, the gap has to be covered, to the extent possible, by further effort to raise resources through taxes, loans and small savings and through economies in non-Plan expenditure.

The Planning Commission says that the imperativeness of the fullest effort in these directions is self-evident. According to it, a pruning of the Plan to the level of the available resources, that is, Rs. 4,260 crores, is not only undesirable but it also presents very great practical difficulties. The decision to adhere to the financial ceiling of Rs. 4,800 crores in spite of the increased cost of the various projects in the Plan has necessitated some readjustment of allocations in favour of industries and minerals. If, in view of the resources position, the Plan outlay cannot be raised above Rs. 4,260 crores, the cut on social services will be larger. This would be undesirable from the point of view of maintaining a reasonable balance in the structure of Plan allocations. The Planning Commission is, therefore, of the view that, at a minimum, the level of outlays to be actually incurred must not be allowed to fall below Rs. 4,500 crores. The gap of Rs. 240 crores (Rs. 4,500 crores—Rs. 4,260 crores), it is suggested, should be covered thus: Additional taxation, Rs. 100 crores, (Rs. 40 crores at the Centre and Rs. 60 crores in the States); loans and savings, Rs. 60 crores; economies in expenditure and collection of arrears of taxation as well as of loans due, Rs. 80 crores.

It will be recalled that the resolution passed early this week by the National Development Council, while deciding to maintain the second Plan outlay at Rs. 4,800 crores, suggested that projects and programmes to be undertaken within this ceiling should be divided into two parts. Part (A) of the Plan involving a total outlay of Rs. 4,500 crores should include, besides projects and programmes directly related to increase in agricultural production, 'core projects' and projects which have reached an advanced stage and other inescapable schemes. The remaining schemes should be included in Part (B) of the Plan with a total outlay of Rs. 300 crores.

Resources Position

The following table indicates the likely availability of resources under various heads in the last two years of the Plan as against the estimated results for the first three years on the assumption of a continuance of more or less the present scale of effort:

(Rs. crores)

	Likely actuals				Estimates for 1959-60 and 1960-61	Total 1956-61
	1956-57	1957-58	1958-59	Total for 3 years		
Domestic Budgetary Resources—						
Balance from current revenues ..	139	150	150	439	320	759
Railways' contribution	34	45	50	129	121	250
Loans and small savings	200	127	217	544	440	984

The broad lines of endeavour to secure additional resources (Rs. 240 crores) as suggested by the planning commission may be mentioned here. The scope for additional taxation at the Centre is very limited. Nevertheless, the Centre should accept a target of Rs. 40 crores of further taxation in the next two years. The original taxation target for the States was Rs. 225 crores. The measures they have adopted so far add up to Rs. 173 crores. They are thus Rs. 52 crores short of the original target. It has been suggested to the States to agree to raise Rs. 60 crores by way of additional taxation in the next two years. If this target is accepted, the concrete measures to be adopted can be gone into. As regards public borrowings, very much depends upon the state of the market. The bulk of the additional Rs. 60 crores shown under loans and small savings has to be found by intensifying the small savings drive. Another Rs. 80 crores will have to be raised through economies in non-Plan expenditure and through speedier collection of overdues of taxation and loans. This requires close examination. It looks feasible, but it calls for determined effort both at the Centre and in the States. It is particularly important to ensure that the States will undertake this effort. The point to stress is that only if effort along these lines is possible can the Plan outlay be raised to Rs. 4,500 crores (as compared with the estimated resources of Rs. 4,260 crores). Such an effort must be made, if an imbalance as between the different sectors of the Plan is to be avoided. At the same time, no commitments beyond this level of outlay can now be undertaken without resources being in sight.

Economic stability internally and viability on external account—allowing for whatever resources from abroad are forthcoming—are of vital importance at this stage. The fact that foreign exchange reserves have fallen to a low level makes it particularly necessary to limit deficit financing and, therefore, the total level of Plan outlays in consonance with the resources position.

The Planning Commission has worked out a pattern of allocations by major heads of development on the basis that the necessary effort will be made to bring the resources at least up to Rs. 4,500 crores. The table on the next page sets forth the break-up of a total of Rs. 4,500 crores among the different sectors as compared with the revised allocations.

The Plan outlay of Rs. 2,456 crores for the first three years will, on present expectations, have been financed as follows:

(Rs. crores)

Balance from revenues	439
Railways' contribution	129
Loans from the public, small savings and other capital receipts	533
External assistance	438
Deficit financing	917
Total ..	2,456

The resources available for the Plan, says the *Memorandum*, have so far been below expectations. In 1957-58, the budgetary deficit was as high as Rs. 464 crores. For 1958-59, the budget estimates postulate a considerable improvement in loans and small savings. Deficit financing is to be reduced by Rs. 250 crores as compared with 1957-58. But this assumes a step-up in external assistance from about Rs. 100 crores in 1957-58 to Rs. 300 crores for the current year.

Taxation has been raised substantially since the Plan began. The five-year yield on the tax measures so far adopted by the Centre will be about Rs. 725 crores. The probable five-year yield of the measures of taxation adopted so far in the States is about Rs. 173 crores. Altogether additional taxation already adopted should thus bring in approximately Rs. 900 crores over the Plan period. A large part of this tax effort has, however, been absorbed by other demands: defence, non-development expenditure and development expenditure outside the Plan. Despite the large tax effort at the Centre the revenue resources available for financing the Centre's Plan outlays are expected to show an improvement of only Rs. 45 crores as compared to the Plan estimates. In other words, only a negligible contribution has been made towards covering the original gap of Rs. 400 crores in resources.

Taxes in States

The States have raised additional taxation which will bring in Rs. 173 crores over the Plan period. They will have gained Rs. 160 crores as a result of the Finance Commission's Award, plus certain amounts by way of a large share of Central taxation. In spite of this, the balance they are able to find from their revenues for financing the Plan is below the original expectations. Assuming that the States are able to reach their original tax target of Rs. 225 crores, their revenue contribution to the Plan will amount probably to Rs. 350 crores, as compared with the original expectation of Rs. 370 crores.

Altogether, over the first three years, the budgetary resources of the Centre and of the States will add up to Rs. 1,100 crores, as compared with the five-year estimate of Rs. 2,400 crores, which still left a gap of Rs. 400 crores. The lag in resources has necessitated resort to heavy deficit financing at an early stage in the Plan. At one time, the intention was to limit the total to Rs. 900 crores over the five-year period. Now it looks fairly certain that the original figure of Rs. 1,200 crores of deficit financing will have to be restored. In fact, it will be difficult to adhere even to this figure unless measures are taken to raise further resources and to limit Plan outlays along the lines suggested below.

A certain amount of latitude in the matter of programme formulation is permissible while the country has large foreign exchange reserves. But this is no longer so.

With regard to external resources, the *Memorandum* of the Planning Commission reveals that the original estimates of foreign exchange expenditure have turned out to be on the low side. For the foreign exchange cost of some of the projects in the Plan has gone up and there have been additional demands on the country's foreign exchange resources, as, for example, for larger food imports and defence. A major factor to be borne in mind in this connection is that several of the new industries started in recent years depend for maintaining their output levels on imported raw materials and components. The allowance made in the balance of payments estimates for such imports during the Plan period has proved inadequate.

The current account deficits in the balance of payments aggregated Rs. 591 crores over the period April 1956 to September 1957. The deficit for the half-year October 1957 to March 1958 has been of the order of Rs. 230 crores. The total drawing down of the Reserve Bank's foreign exchange assets since April 1956 to the end of March 1958 works out at Rs. 479 crores. In addition, the I.M.F. credit of Rs. 95 crores has been used up. External assistance authorised since the second Plan began and committed so far amounts to Rs. 679 crores. It is difficult to assess the future trend in the balance of payments and, therefore, the minimum gap in foreign exchange resources still to be filled. But, on broad calculations, the second Plan appears likely to end up with an aggregate deficit of about Rs. 1,700 crores as compared with the original estimate of Rs. 1,100 crores. The further requirements of foreign exchange—over and above the amounts authorised but still to be utilised—is expected to amount to approximately Rs. 500 crores.

Allocations of Foreign Exchange

In view of the difficult foreign exchange situation, the allocations of available foreign exchange resources are being made in terms of the core projects. As against the total foreign exchange cost of the core projects amounting to Rs. 962 crores, commitments of the order of Rs. 296 crores have yet to be made.

If commitments for the Plan have to be limited—as they have to be on the basis of the estimates of resources given above—to Rs. 4,500 crores, there will be a sizable cut on State Plans, especially in respect of social services. It is only if ways could be found to raise domestic resources beyond the levels postulated that these cuts could be reduced.

Behind the inadequacy of financial resources is the insufficiency of total production and savings. It is most important, in this connection, to utilise fully the facilities that have already been built up for increasing food production. Success on the physical targets of the Plan is not a question merely of increased allocations; it depends to a great extent on the steps taken at each stage to utilise the new facilities immediately and fully.

Employment opportunities do not appear to be expanding sufficiently to absorb the increases in the labour force. This is because the investment effort in the economy is still low relatively to needs. Steps are being taken to strengthen the employment potential of the Plan at particular points, as, for example, the scheme recently approved for appointment of 60,000 teachers. But, total investment and employment can be increased only to the extent that more savings are forthcoming. Referring to output and employment, the *Memorandum* says that, broadly speaking, it would appear that the industrial component of the Plan—and especially the 'core'—will, it is hoped, come through fairly well, as also the programmes in the field of transport and communications. In some respects, the development of social services will fall short of the initial expectations and there will be some slowing down on the new irrigation projects. The development of power will be inadequate relatively to the rapidly growing needs of the economy. As regards employment, it appears that the implementation of the Plan has resulted in the creation of about two million job opportunities outside agriculture in the first two years, and about one million of the labour force should find employment opportunities in the course of the current year. It will be recalled that the Plan envisaged additional employment for about 7.9 million outside agriculture and about 1.6 million being absorbed in agriculture itself. With the increase in the costs of various projects, it was estimated that the employment potential of an outlay of Rs. 4,800 crores in the public sector with private sector outlays more or less according to the Plan would come down to about 7 million jobs outside agriculture. The estimate of such employment opportunities corresponding to an outlay of Rs. 4,500 crores in the public sector is 6.5 million. These estimates are very rough, but they indicate that the investment effort in the economy is still not upto the mark for ensuring employment sufficient to absorb the annual additions to the labour force. But it is only through increased savings that investments can be financed, and the experience of the first two years shows that the savings effort in the country is not yet commensurate with the minimum needs of the economy in terms of employment opportunities.

Food Production

As regards the role of food production, the *Memorandum* refers to the various factors that lie behind the inadequacy of resources relatively to the needs of the Plan. The financing scheme accepted at the time the Plan was made had a gap of Rs. 400 crores, and there have been other demands on the resources of both the Centre and the States which have added to the strain that was, in any case, expected. The level of investment in the private sector was also high in the early phase of the Plan, and the acute stringency that developed in the money market reacted unfavourably on the loan operations of Government. But, behind the inadequacy of financial resources lies the major limiting factor to developmental effort, namely, food production. High domestic prices as well as large import requirements are related in part to the insufficient response of food production to the pressure of demand. It is to the extent that success in this regard can be secured that the rate of investment in the economy—and hence the expansion of employment opportunities—can be stepped up.

Considerable irrigation potential has been built up in the last few years, but the utilisation of this potential has lagged behind. Considerable resources devoted to the Plan are not yet bearing fruit. This cannot but limit further effort. The Planning Commission wishes to stress in this context the need for the fullest utilisation of the irrigation facilities that are already available. What is needed is a well-organised effort in all the directions indicated in the Plan to increase food production in the interest of both internal and external resources—and, over a period, of developmental effort itself.

	Allocations as originally made in the Plan	Per cent. of total	Revised allocations (to accommodate the higher cost of some projects within the ceiling of Rs. 4,800 crores)	Per cent. of total	Outlays now proposed to correspond with the resources position	Per cent. of total

Mr. Burrah Saheb
and Airconditioning ...

Mr. Burrah Saheb is really not bothered about the money he spends for his personal comfort. He is only interested in getting the very best and when it came to airconditioners he just took the ACCAIRE.

What he wanted primarily was a cool, clean room with a minimum of disturbing noises... a place where he could work with quiet efficiency. He found the ACCAIRE whisper-quiet and efficient in operation and that satisfied him.

Now his ACCAIRE gives him all that and more. It is a handsome unit, it is low in power consumption and it never lets him down.

TALKS WITH INDIAN AND PAKISTAN MILLOWNERS BEGIN

NO EASY TASK TO REACH SETTLEMENT

From A Special Correspondent

MANCHESTER, 6th *May*

MANCHESTER LETTER

STRIKING contrast between the attitude of Lancashire's cotton spinning and weaving operatives and leaders of the employers and unions who were trying to secure some agreement with the representatives of foreign textile industries was illustrated in discussions proceeding 250 miles apart in Britain this week. In London, the trade talks with the representatives of India and Pakistan began on the subject of imported cloth. In Morecambe, the annual conference of the United Textile Factory Workers' Association spent time considering the establishment of a 40-hour week and an increase in the annual paid holiday for cotton workers.

At the outset of the union conference, Mr. William Roberts, President of the Association and a member of the Lancashire team for the trade talks, warned the industry not to expect an early solution to the problem of imports. In his presidential speech, read for him in his absence, he said: "Now that Hong Kong has been persuaded to yield a little, the potentialities for agreement are better. But we have already experienced the disappointments of this procedure, and it would be extremely foolish for us to anticipate a total solution of our imports problem from the talks. It will need a most conciliatory attitude and spirit of goodwill to bring about any effective measures to benefit our industry."

No Easy Task

Mr. Roberts said that, while the Clegg mission from Lancashire was in Pakistan last year trying to secure an agreement with the employers there on the volume of cloth exports to the United Kingdom, the millowners of Hong Kong "withdrew all they had said, then closed and bolted the door against further talks." He told the conference: "Now that it has been opened again, everything possible must be done to persuade India and Pakistan to agree to a voluntary limitation in the talks about to take place in London. It will be no easy task to reach an understanding which will be satisfactory to all three parties." Since 1951, Mr. Roberts said, the labour force of the Lancashire cotton industry had dropped from 330,000 to 240,000. More than 250 mills had closed down.

Welcoming the recent decision of the British Government to impose quotas on cotton and rayon yarns and cloth from China entering the United Kingdom, he said:

"The continued increase of imports from the Eastern countries during the past year was a matter of deep concern because its continued rapid growth would have dealt further injury to our trade. The prompt action of the Government gave great satisfaction to all in the industry. We would like to feel that this move indicates a change of attitude which will soon be reflected in their replies to the representations which have been going on for three years regarding India and Hong Kong. These two countries may be in a different category to China, but at least the same spirit which prompted the Government to act so quickly could have been shown to encourage the other countries to offer a better response towards a voluntary agreement for the limitation of duty-free imports."

Shorter Hours

Among the resolutions dealt with at the conference was one urging the establishment of a 40-hour week. Mr. Harold Bradley, Secretary of the United Textile Factory Workers' Association, warned the delegates that they were living in a fool's paradise, if they believed that such a system could be adopted in current circumstances. The proposal was referred back to the Legislative Council of the Association. A suggestion that the annual paid holiday for cotton workers should be increased to four weeks was, however, approved by a large majority, against the advice of the Legislative Council.

On an emergency resolution dealing with the existing state of trade in Lancashire, the conference was unanimous. The Government should "take positive action" to protect the workpeople from the injustice of unlimited imports. No new method of obtaining relief from this adverse situation was put forward, but much depressing evidence was produced to emphasise the seriousness of the industry's plight.

The cotton unions have pinned their faith on the *Plan for Cotton* drawn up by Mr. Harold Wilson, M.P., which offers a comprehensive programme, based on Labour Party principles, for the advancement of the industry. On yarn and cloth imports, the establishment of a control board is proposed to regulate arrivals according to current conditions in Lancashire.

On raw cotton imports, a revival of the former bulk-buying Commission is advocated. Despite the virtual stagnation in Liverpool at present, the trade would be averse to such a move, mainly because it represented a return to the doctrinaire principles on which so many political creeds are based. Switching from pillar to post in this manner could only lead to renewed uncertainty over prospects every few years.

Plant Sales Drop

Textile machinery shipments from the United Kingdom, which maintained their impetus up to a couple of years ago compared with exports of finished textile products, are now apparently also on the slide. Returns for the first quarter of the current year show a marked drop as compared with 1957 by both volume and value. To the end of March, exports were 288,627 cwt., worth £10,231,490. The corresponding 1957 figures were 376,371 cwt. valued at £11,311,042, while, in the first quarter of 1956, shipments aggregated 476,048 cwt. earning £12,632,665.

Variations in the quantity of plant absorbed by the different countries have also been more marked in the case of textile machinery than in yarn and cloth. Much of the recent decline can be attributed to a sharp drop in takings by India which has only absorbed 41,575 cwt. so far this year, as against 90,283 cwt. twelve months ago and 115,572 cwt. in the first quarter of 1956. Australia, on the other hand, has stepped up imports, receiving 29,303 cwt. this year against 13,647 cwt.

Shipments to the Soviet Union which exceeded 42,000 cwt. in the first quarter of 1956 have now dropped to less than 9,000 cwt. and other countries which have taken smaller quantities of plant this year include France, the United States, Mexico and Pakistan. A marked increase, however, has occurred in shipments to Chile, rising to over 13,000 cwt., as against less than 1,000 cwt. last year.

The various types of machinery have all suffered setbacks in their exporting endeavours, the quantity of plant for preparatory processes shipped abroad falling from 41,239 cwt. to 27,877 cwt. Weaving machinery exported has amounted to 46,376 cwt., as against 59,278 cwt. and finishing plant comprised 16,853 cwt., as against 25,042 cwt.

Census of Opinion

Every year, a bulky volume arrives on the desks of textile executives, containing a thousand and one facts and figures relating to cotton's economy and reflecting the attitude of traders and officials in practically every country in the world. This is the *International Year Book* published by the *Cotton Trade Journal* of Memphis, whose world-wide coverage of everything relating to the fibre presents a remarkable cross-section of opinions within the industry.

As for some years past, the headlines pinpoint each nation's difficulties. The traditional centres of cotton growing and textile manufacture are increasingly on the defensive against their newer rivals, while even some of the latter are already describing what they regard as their uphill struggles to expand and export.

In many areas, notably the Middle East, cotton as a raw material has a vital role to play in national economies. So too have the mills which are steadily increasing in number as former agricultural lands become industrialised. Patterns must change with the years but there is as yet no real sign that consumption is sufficiently large to absorb the total output of cloth. Raising the individual use of textiles per head of the population in underdeveloped areas of the world is essential if the current phase of overproduction in many countries is to be halted.

Among the views attributed to Lancashire trade leaders in the *Year Book* are: "Our industry does not want any more in the way of control than what will ensure fair trade between countries of comparable standard of living, but there is a form of self-control we must all exercise, particularly in difficult times, in order not to try to seize temporary advantages at the expense of others. There is room for all of us and provided a cotton industry is efficient no Government would be wise either to neglect its development or allow circumstances to develop where it could suffer irremediable harm."

COTTON IN SOVIET RUSSIA

AVERAGE PER ACRE YIELD VERY HIGH

ALTHOUGH Soviet Russia is the second largest cotton producing country in the world, next only to the U.S., the free world outside Russia knows very little about its techniques of cotton growing and cotton pricing systems. Some useful information regarding cotton cultivation in that country, contained in a report prepared by Messrs. Edouard Senn and Jean Lhuillier on their mission to the U.S.S.R. and published in the *Coton et Fibres Tropicales*, of Paris, makes interesting reading. It may be noted here that, with a view to catching up with the U.S., and to meeting domestic requirements and supplying the demand from East European countries, the U.S.S.R. intends to raise production to about 11 million bales (of 478 lbs. each) by 1966, as compared with 6.86 million bales in 1956, and to 16 million bales by 1970.

In 1956, the report points out, cotton production in the U.S.S.R. reached 4.3 million tons of seed cotton, equivalent to 1,488,000 tons (6,860,000 bales) of raw cotton. Production of cotton fabrics was of the order of 5,452 million metres. Raw cotton output, as noted above, is expected to rise to 11 million bales by 1966 and 16 million bales by 1970. To achieve this result, the area sown to cotton will be expanded from the present two million hectares (1 hectare=2.471 acres) to more than four million hectares.

The Republic of Uzbekistan, the leading cotton-producing region of the U.S.S.R., accounts for 1.3 million hectares out of the total sown area of 2 million hectares. It already produces about 3 million tons of seed cotton and is scheduled to produce more than double the quantity under the expansion programmes envisaged. In the cotton-growing areas of Uzbekistan, according to the report, two things are particularly noticeable. First, the physical characteristics and fertility of the land are such as can be adapted fairly easily to irrigation. Secondly, there is no evidence of any serious parasites as there is in the U.S. Plant disease is limited to early attacks of mites and thrips. These two factors—favourable soil and absence of plant disease—are responsible for the high average yield obtaining in this region. Average yield per acre of lint cotton in Uzbekistan in 1956 was 679 lbs., as compared with 464 lbs. in 1940 and 378 lbs. in 1913. Production in this region also increased more than twofold during the period 1940-56 from 2.2 million bales in 1940 to 4.5 million bales in 1956.

Varieties Grown

The main long-staple cotton varieties grown in the U.S.S.R. are 2i3 and 54-76i having a staple length of 1⅜" and 1¼" to 1.9/16", respectively. But these are now being replaced by new varieties. The main medium-staple variety is 108F which has a staple length of 1¼". About 83 per cent. of the total cotton acreage in Uzbekistan and the entire Azerbaidjan and Kazakistan are planted with this variety. 108F comprises about 75 per cent. of the total cotton crop in the U.S.S.R.

Cotton production in the U.S.S.R. is regulated through the following organisations: (1) The Science Academy engaged in pure research and with problems not dealt with by the Uzbekistan Academy of Agricultural Science. (2) The Gosplan, chief of the Council of Ministers who plans and co-ordinates production activities—labour, raw materials, power and investment, etc. (3) The Council of Ministers of the Republic, a local political organisation. (4) The Gosplan and the Council of Ministers of the Supreme Soviet which co-ordinates, on a national scale, the programmes set up by the 15 Republics. (5) The Minister of Agriculture of Uzbekistan who is responsible for putting into effect the decisions taken. (6) The *Sovkhozes*, the *Kolkhozes* and the Tractor machine stations which are concerned with the actual carrying out of the production plans.

As regards the organisation of farms, there are two types of farms, the *Sovkhozes*, that is State farm enterprises, the scale of operation of which is large enough to justify a completely independent organisation under the control of the Minister of Agriculture and *Kolkhozes* which are collective farms of comparatively smaller area. There are about 100 *Sovkhozes* and 1,900 *Kolkhozes* in Uzbekistan. The latter are served by about 250 tractor stations. In 1956, 80 per cent. of the total earnings of the *Kolkhozes* in Uzbekistan came from cotton.

Price Fixing

The system of price fixing in Uzbekistan consists of two elements—the base price which relates to a theoretical yield for any given region and the other in the nature of a productivity premium. In the case of cotton, every quintal produced in excess of the "norm" benefits from a 50 per cent. premium above the base price. Normal production varies according to the region, being 15 quintals per hectare in less favourable areas, and rising to 20 quintals per hectare in Boukhara and 25 quintals per hectare in Tashkent. The prices for seed cotton of average staple length in 1957 were : 354 rubles, 266 rubles, 201 rubles and 150 rubles per quintals for first, second, third and fourth qualities respectively. For extra long staple, these prices are doubled.

In this method of price fixing, it is necessary, the report points out, to fix a base price which is sufficient to cover all legitimate costs incurred by the average producer and production premiums must be set at levels which can reasonably be attained by producers. The results of this price policy can be assessed from the fact that in 1956 only 270 of the 1,900 *Kolkhozes* in Uzbekistan produced less than 15 quintals per hectare as compared with 485 in 1955. The aim is to reduce the present 238 working days per hectare to 50 to 60 days by 1960, which would make more labour available for other work.

Irrigation plays an important part in Soviet cotton production. The Irrigation Institute for Central Asia was set up in 1925 to study the possibilities for controlling and distributing water supplies. Although irrigation potential is considerable, a limiting factor in the development of irrigation is the need to modernise the old irrigation system as well as to provide for planned extensions. At present about 60 per cent. of the old system of irrigation has been modernised.

The two biggest problems which the U.S.S.R. has to face in achieving its production targets, the report points out, are, on the one hand, land recovery and development and the elimination of salinity and, on the other, harvesting. Most of the good land is already being cultivated. Harvesting problems relate to the development of mechanical picking and the need for drying cotton. The Institute of Mechanisation for Central Asia, established in 1957, is primarily concerned with cotton mechanisation. At present only 12.7 per cent. of the total crop in Uzbekistan is harvested by machines. Apart from harvesting, machines are used for sowing, hoeing, thinning and defoliation.

COTTON IN THE PUNJAB

Replying to a question, Mr. A. P. Jain, Union Minister for Food and Agriculture, stated in the Lok Sabha that the cotton production schemes in the Punjab State during the second Five-year Plan, aimed at increasing production of cotton by various extensive and intensive methods of cultivation.

He added that, under the extensive methods, it was proposed to increase the area under cotton by extending the cultivation of the crop in the old and new areas, specially where additional irrigation facilities were being provided. In the latter case, increasing quantities of pure cotton seeds and fertilisers were being distributed every year. Fumigation of cotton seed to destroy pink boll-worm before its distribution to cultivators and adoption of pest control measures were also undertaken. The target of production was 12.5 lakh bales by the end of the second Plan period.

The Minister further observed that the entire expenditure on the scheme was borne by the Government of India except losses on cottonseed distribution among the cotton-growers, which were shared equally between the Central and State Governments. During the first two years of the second Plan, namely, 1956-57 and 1957-58, the State Government was given grants amounting to Rs. 82,164 and Rs. 64,265 respectively, as the Central share of assistance towards the scheme.

CONTROLLING COTTON ANTHRACNOSE

Disinfecting the cottonseed with an organic mercurial compound before sowing is being recommended as a method of controlling the anthracnose disease of cotton. The disease appears in the Khandesh area of Bombay State in a serious form in years of heavy rainfall. It causes seedling blight in the early stages and boll rot if the humidity is high at the time bolls are formed. As a result, yields go down and the quality of the *kapas* is also spoiled. The seed can be disinfected by dressing it with the organic mercurial compound in a revolving drum, or by besmearing the seed with mud paste to which the disinfectant has been added. Two ounces of the mercurial compound will have to be used for every 15 pounds of the seed. Thinning the crop at the time of the second interculture is considered a good practice in checking the disease. As a preventive against the disease, the crop in the boll-forming stage would also have to be sprayed with a copper compound twice or thrice in September.

It is also essential, it is pointed out, to prevent infection of the disease from one cotton crop to the next.

COMMITTEE TO REVIEW COTTON EXTENSION WORK

The Government of Bombay has appointed a State Committee consisting of both officials and non-officials, under the chairmanship of the Director of Agriculture, Poona, for reviewing from time to time, the cotton extension work done in the State. The non-official members of the Committee include a representative each of the East India Cotton Association and of the co-operative banks, three representatives of the cotton mill industry at Bombay, Ahmedabad and Nagpur and two representatives each of the growers from the Rajkot, Ahmedabad, Nagpur and Aurangabad divisions and one representative each of the growers from the Bombay and Poona divisions.

FURTHER PARTICULARS ON APPLICATION

EXPANSION OF SUGAR INDUSTRY

RATED CAPACITY EXPECTED TO BE BELOW TARGET BY 250,000 TONS

THE progress in the implementation of the expansion scheme drawn up for the sugar industry has considerably slackened. The aggregate rated capacity of the industry that will actually be reached by 1960-61 is expected to be not more than 2.25 million tons (calculated on the basis of an average working season of 120 days and sugar recovery of 10 per cent.), as against the target of 2.50 million tons originally fixed, according to the memorandum on the appraisal and prospects of the second Five-year Plan submitted by the Planning Commission to the National Development Council at its meeting held in New Delhi early this month. The shortfall in the fulfilment of the target thus comes to 250,000 tons or 10 per cent. The Planning Commission has, of course, emphasised that the entire rated capacity should be fully utilised, so that the production target of 2.25 million tons may be achieved.

The slackness in the progress of expansion scheme must be attributed largely to shortage of foreign exchange. Replying to a question in the Rajya Sabha recently, Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, revealed that, owing to foreign exchange difficulties, the applications for the establishment of 11 co-operative sugar factories and one new factory in the private sector had not yet been granted. The foreign exchange component required for a mill of 1,000 to 1,200 tons capacity is stated to be about Rs. 60-70 lakhs. The Planning Commission puts the total additional foreign exchange required for achieving the original target of 2.50 million tons at Rs. 10 crores.

The two Five-year Plans, it will be recalled, envisaged an increase of one million tons in the capacity of the sugar industry to bring the total capacity by the end of 1960-61 to 2.5 million tons. Licences have already been issued for the setting up of 55 new factories, including 38 co-operative units, and expansion in the capacity of 66 existing mills. Of the new units licensed, four went into production in 1955-56 and five in 1956-57. The total rated capacity at the end of 1957 stood at 2,010,000 tons. Another nine units have started working in the current season (1957-58). The slow pace of the installation of new factories has been due to delayed shipments of machinery and payment difficulties. Thirty existing factories have completed their expansion schemes and others are expected to complete their schemes in due course.

Additional Capacity

The total additional capacity brought into effect in the sugar industry during the first two years of the second Plan period is believed to be 270,000 tons. This, together with the capacity added in the first Plan, comes to 400,000 tons. Following the expansion in capacity, the production of sugar has registered a substantial improvement. The quantity that actually came off the crushing plants during the first year of the second Plan (1956-57) was markedly higher at 2,026,179 tons—an all-time record—as against 1,861,837 tons in 1955-56. The production in the current season is expected to exceed the previous season's figure. This expectation is likely to be fulfilled, considering that the total output of sugar up to 15th April 1958 amounted to 1,841,650 tons, which compares very favourably with 1,701,000 tons in the corresponding period of 1956-57.

The following table indicates the position in respect of production, despatches and closing stocks of sugar in the different States as on 15th April 1958:

(In tons)

State	Production	Despatches	Closing stocks
Northern India			
Uttar Pradesh	913,858	442,354	692,812
Bihar	208,151	116,908	208,151
West Bengal	4,345	3,521	4,345
Punjab	58,994	31,095	58,994
Rajasthan	9,234	8,037	9,324
Madhya Pradesh	24,781	20,566	24,781
Total Northern India	1,308,777	662,481	998,407
Southern India			
Orissa	3,873	2,022	3,089
Madras	42,540	24,721	32,491
Kerala	8,283	3,739	5,278
Bombay	276,387	133,887	201,768
Mysore	70,819	31,726	40,279
Andhra	130,971	70,777	99,648
Total Southern India	532,873	266,852	382,553
Grand total	1,841,650	889,333	1,380,960

The production of 1,841,650 tons upto 15th April and the carry-over stocks of 428,610 tons from the previous season together brought the total supply of sugar actually available during the first 5½ months of the season to over 2,270,260 tons. As against this quantity, despatches aggregated 889,300 tons, as against 944,000 tons in the same period last year. The closing stocks of sugar with the mills as on 15th April were 1,380,960 tons, as against 1,285,000 tons a year before. The major portion of the stocks lying unsold with mills as on 15th April 1958 is accounted for by the three States of Uttar Pradesh, Bihar and Bombay. They aggregated as much as 1,102,731 tons, representing nearly 80 per cent. of the total.

MECHANISED PLANTING OF SUGARCANE

A new device to mechanise planting of sugarcane has been evolved by the Indian Institute of Sugarcane Research, Lucknow. The device consists of a planter attachment capable of sowing three rows at a time and suitable for use with a Fordson Major Tractor.

The rear mounted tool bar fitted with three standard ridger bodies is used as the basic unit for the design. Three wooden seats are fitted above these ridger bodies and to the rear of these seats are fixed three chutes leading vertically down to the furrows made by the ridger bodies. Wooden boxes carrying the seits to be planted are provided between the seats. A fertiliser distributor divided into three compartments is also provided for applying fertiliser in the furrows. A wooden board attached behind the tool bar levels the ground immediately after the planting is done. The new device has several advantages. It reduces the labour required to be employed during the planting season and also speeds up the planting operations. Consequently, the cost of planting is appreciably reduced. With this attachment, it is possible to plant six acres in eight hours, maintaining a tractor speed of about two miles per hour. The attachment, although originally designed for the Fordson Major Tractor, can, with minor modifications in the dimensions, be made suitable for use with other tractors also.

The fabrication of these attachments is simple and does not involve the use of heavy machine tools. Only a hand-operated shearing machine, an electrically operated drill press, one small bench lathe and one oxy-acetylene welding set are required, and hence it is possible to manufacture these units even in a small workshop.

The aforesaid device is quite a valuable one. The planting operations in the cultivation of sugarcane generally carried on at present involve the use of considerable manual labour and is, therefore, very expensive. In the most advanced cane-producing countries of the world, planting is done with the use of machines. The new device, it is expected, will facilitate the mechanised planting of cane in India and thus save a lot of manual labour. Parties interested in undertaking the commercial development of the device are invited to write to the Secretary, National Research Development Corporation of India, Mandi House, Lyiton Road, New Delhi 1.

CALCUTTA STOCK EXCHANGE OFFICIAL YEAR BOOK 1958

MORE COMPREHENSIVE THAN OTHERS

The Press and the Public alike endorse the Calcutta Stock Exchange Official Year Book as the most indispensable work of reference on investment. The very fact that the Central and State Governments, the Reserve Bank of India, all Exchange and Scheduled Banks, Insurance and other financial institutions, and leading business houses use it is a proof positive of its superiority over any other publications of a similar nature.

Contains full particulars relating to the stocks, shares and debentures of all companies and Government Securities and Public Bodies' Loans quoted on the Stock Exchange. Also contains information of general interest to investors including rates of Income and Super-taxes, Wealth and Expenditure Taxes, Capital Gains Tax, Bonus Share Tax, Gifts Tax and Estate Duty. Price: Rs. 12.50 nP. Postage: Re. 1.87 nP. Add 50 Naye Paise to outstation cheques.

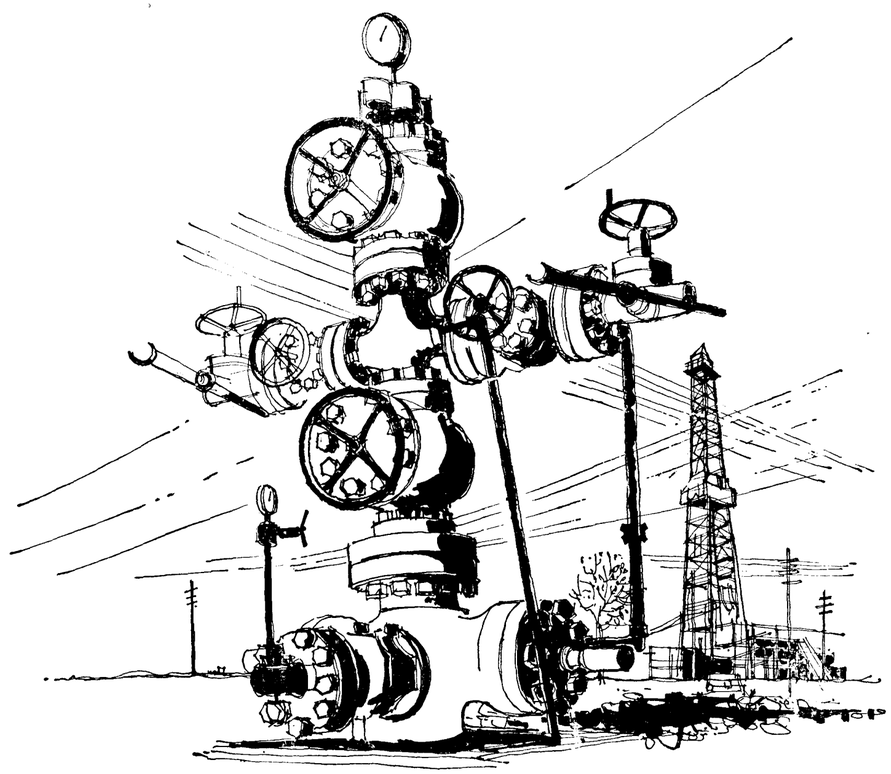
The Story of Oil—8



Trees of steel

When a well strikes oil, the first consideration is to stop it gushing. Such an occurrence, though spectacular and common in the early days of drilling, is wasteful. To counteract the pressure, therefore, the mud used during drilling is pumped into the well. The drill is then replaced by narrow tubing which stretches from the bottom of the newly discovered deposits to the 'Christmas Tree' on the surface. The latter is a system of valves which control the flow of oil.

Crude oil, by itself, cannot move. It usually lies between natural gas (on top) and water, so that when the oil trap is pierced by the well, any gas present seeks to expand and pushes down on the oil, driving it upwards. Or gas may be dissolved in the oil itself, and as it expands it pushes the oil to the surface. If, however, a large quantity of water lies below the oil, it forces the oil out of the porous rock and into the well. Sometimes a combination of gas and water pressure drives the oil to the surface.

Normally this pressure is sufficient to keep a well flowing for some time. But as the porous rocks are drained, the pressure declines. Then one of several artificial methods can be used to keep the oil flowing. The 'Christmas Tree' can be replaced by a mechanical suction pump which draws the oil up to the surface. Or gas can be fed into the deposits (between the casing and the tubing) to mix with the oil and bring it to the surface. Or, as a last resort, gas or water can be pumped down a neighbouring well to recreate the original pressure.

Thirty or forty years ago, only a quarter of the oil discovered could be recovered. With today's production techniques a much larger recovery percentage is possible.

JUTE INDUSTRY IN PAKISTAN

STATE GOVERNMENT'S SUGGESTION FOR OFFICIAL ENQUIRY

THE Indian jute industry has, during the last few years, been facing severe competition not only from substitutes but also from other jute goods producing countries, particularly from Pakistan. With an abundant supply of high quality raw jute and cheap labour and thanks to the installation of modern machinery, the jute industry in Pakistan has made such rapid progress that the Indian mills have had to struggle for their existence. The industry has been fighting the battle in two ways, namely, by increasing the domestic output of raw jute with a view to achieving self-sufficiency and doing away with its dependence on Pakistani jute and by modernising its machinery. The progress in both directions has not been up to expectations, though the position is better than it was two years ago. The increase in production of raw material during the last few years is largely accounted for by mesta. Any large admixture of mesta in jute goods production will affect the quality of the manufacture.

In fine, Pakistan's jute industry is in a more advantageous position than its confrere in India, despite the fact that the latter is much older. It is, therefore, understandable if, in the circumstances, India is envious of Pakistan in respect of the latter's jute industry. It is, however, surprising to find from the addresses of Mr. A. Jalil, Vice-President of the Pakistan Jute Mills' Association, and of Mr. Ataur Rahman, Chief Minister of East Pakistan, at the annual meeting of the Association, that all is not well with the Pakistani jute mills. The Chief Minister of East Pakistan disclosed that the State Government had proposed to the Central Government that a high-level official enquiry be carried out and remedial measures, both short-term and long-term, undertaken to ensure that the jute industry stayed on an even keel. The Government was aware, he said, of the difficulties and handicaps of the jute industry. He, however, felt that India's advantageous position in the industry should be a challenge to Pakistan's manufacturing industry to make itself more efficient and productive.

Heavy Loss in 1956-57

Mr. Jalil admitted that the jute industry in Pakistan had made steady progress and that the foreign exchange earnings were nearly up to expectations, but the industry was still struggling for stabilisation and consolidation. "In fact," he said, "it suffered a severe setback due to very disappointing results of working during 1956-57." According to Mr. Jalil, most mills suffered heavy losses, amounting approximately to 15 to 20 per cent. of the capital invested. In this connection, he disclosed that the capital cost of Pakistani mills amounted approximately to Rs. 27,000 per loom, as against Rs. 6,285 in India, taking into account both modernised and old mills. India had also another advantage, Mr. Jalil added, that is, lower overheads. By forcing less efficient units to close and transfer their production to modernised units in the same group, Indian mills had an advantage of Rs. 51 per ton in overheads alone over Pakistani mills. The depreciation of the Indian mills, according to Mr. Jalil, worked out to Rs. 21 per ton as against Rs. 108 per ton for Pakistani mills. Apart from the very low capital cost, depreciation and overheads, Indian mills, he said, had the advantage over Pakistani mills in batch price, better know-how and efficiency, disciplined labour, a very large number of shippers and dealers and the recently established futures market which shared the risk of adverse fluctuations in prices of both raw material and finished products.

One of the causes of the more favourable batch prices of Indian jute mills, Mr. Jalil explained, was the attainment of self-sufficiency in jute not only by increasing jute acreage but also by encouraging the cultivation of other fibres such as bimli and mesta, the price of which was about Rs. 4 to Rs. 5 per maund lower than jute. In this connection, Mr. Jalil said that the recent ban on cultivation of mesta in Pakistan should be removed. In respect of labour also, Pakistani mills would appear to be in a disadvantageous position. "As against the stable and machine-minded labour of Indian mills," Mr. Jalil went on, "Pakistani mills have to employ labour which has yet to appreciate its responsibilities. It is still largely migratory and goes back to the land for considerable periods in the year. At the same time, there have been numerous demands for higher wages and better amenities. Labour leadership in Pakistan is inexperienced and has not identified itself with the real and lasting interests of labour. Thus, Pakistan has to employ 3.5 workers per loom, as against three by modernised Indian mills, thus raising labour costs to Rs. 70 per ton more than in India."

Despite the establishment of modern machinery, Pakistan is said to have not been able to take even reasonable advantage of it. For the production so far has not been more than 15 tons per loom per year in a 50-50 hessian sacking mill against 18.21 tons in similar Indian mills. The cost of power supply is also very much higher in Pakistan. According to Mr. Jalil, it works out to Rs. 55 per ton, as against Rs. 15.5 per ton in India. Among other handicaps experienced by Pakistani mills, he mentioned excessive taxation and excise duties, inadequate transport facilities for movement of jute from the interior to the mills, high freight rates charged by coastal services and inadequate overseas shipping facilities.

India, as a manufacturer of jute goods, is not the only country facing the threat of competition from substitutes and other countries. Pakistan, too, despite its position as a leading supplier of jute to the world, is being challenged by new countries such as Thailand, Brazil, China and Burma, which have taken up cultivation of raw jute. In Mr. Jalil's opinion, this challenge can be met by immediate implementation of measures which would help reduce the price of raw jute. One of the methods of doing so is to extend the acreage under jute. The Government's policy is, however, one of getting high price on its raw jute exports by deliberate restriction of acreage under jute. Mr. Jalil clearly disagreed with this policy of restricting jute acreage to the potential demand for the fibre. While agreeing with the need for ensuring a fair return to the grower, he thought that this end could be achieved by increasing the yield per acre through supply of improved seeds and educating farmers in the use of fertilisers.

Pakistan's jute mill industry has now 12 mills with a loomage of 6,762 out of a target of 12,000, as against one mill working in 1951. It employs 50,000 skilled and unskilled labourers and has successfully fulfilled its functions of meeting in full the internal demand for jute goods, while being one of the principal foreign exchange earners.

STOCKS OF GUNNIES MOUNT UP

An increase of 2,900 tons in stocks of jute goods with mills at the end of April is disclosed by the latest statement of the I.J.M.A. They have gone up from 94,300 tons at the end of March to 97,200 tons, thus reversing the downward trend noted in the previous two months. With this increase, the stocks stand at the highest level since the end of July 1957. As compared to the position a year ago, the stocks represent a fall of 7,000 tons, as will be seen from the following table:

Jute Goods Stocks

(In tons)

	As on 30th Apr., 1958	As on 31st Mar., 1958	As on 28th Feb., 1958	As on 30th Apr., 1957
Hessian	24,500	27,200	29,700	29,800
Sacking	54,900	53,300	53,700	56,500
Others	15,000	14,400	13,200	11,400
Total ..	94,400	94,900	96,600	97,700

The rise in stocks at the end of last month is mainly due to the increase in sacking and "other manufactures," which have gone up by 5,200 tons and 1,800 tons, respectively. The stocks of sacking have risen for the second year in succession and are at their highest level since July last. Stocks of "other manufactures" constitute a fresh record. The stocks of hessian have, however, declined from 24,500 tons to 20,400 tons, thus maintaining the downward trend for the third month in succession and taking them to the lowest level since December 1956.

Can be brush, spray or dip applied, to give a full gloss protective coat that will stand repeated cleaning.

TRANSPORT UNDER THE SECOND PLAN

PROGRESS DURING FIRST TWO YEARS AND PROSPECTS FOR FUTURE

THE appraisal of the progress achieved by the second Plan for the development of transport during 1956-57 and 1957-58 and the review of the prospects for reaching the Plan target made by the Planning Commission in the memorandum submitted to the National Development Council is of more than ordinary importance because transport constitutes the hard core of the Plan and the degree of success achieved in its development determines to a large extent the success of the Plan. The memorandum, which gives an idea of the outlay incurred under the Plan during the two years, the budget provision for the current year, the estimated expenditure during the two years 1959-61 and the total for the five-year period, clearly indicates the extent of progress made so far and what remains to be done.

The total provision for railways in the second Plan is Rs. 1,125 crores, including Rs. 225 crores on account of depreciation. The foreign exchange element of the programme is estimated at Rs. 425 crores. Though it was estimated that the additional freight traffic by the last year of the second Plan would be about 61 million tons, bringing the total traffic to be carried to 181 million tons, the Plan provides for moving additional freight traffic of the order of 42 million tons, comprising 13 million tons coal, 18 million tons steel including raw materials, 4 million tons cement and 7 million tons miscellaneous traffic. The Plan also provides for an increase of 3 per cent. per annum in passenger traffic. It was not expected that this provision would help to relieve overcrowding.

Due to rise in prices, the programmes drawn up within the provision of Rs. 1,125 crores are now estimated to cost Rs. 1,225 crores, that is, Rs. 100 crores higher than the original estimates. It is now realised that it is not possible to raise the existing provision of Rs. 1,225 crores and some of the projects in the second Plan for railways may have to be postponed. The Railway Board has also agreed to put forward proposals for saving Rs. 48 crores in foreign exchange. These are awaited.

As regards the fulfilment of targets, it is expected that the railways will be able to carry 42 million tons of additional freight traffic by 1960-61. Whether this will be adequate, the memorandum adds, cannot be said with certainty. The slowing down in the tempo of development owing to foreign exchange and other difficulties may result in the additional traffic to be carried by the last year of the Plan being less than the original estimate of 61 million tons, but it may be more than 42 million tons. There is in any case likely to be some change in the composition of the traffic to be carried, as compared with what is envisaged in the Plan. For instance, the demand on the railways for the movement of coal may be somewhat less than provided for in the Plan and that for the movement of miscellaneous traffic may be greater. The target in respect of passenger traffic, namely, provision for an increase of 3 per cent. per annum, is also likely to be fulfilled. However, the percentage increase in passenger traffic in 1956-57 over 1955-56 was as much as 6.7. If such a trend continues, it is pointed out, the problem of overcrowding will get worse.

The total Plan provision for railways, the estimated outlay during the first three years and the estimate of expenditure in the last two years of the Plan are shown in the table given at the foot of the article.

Shipping

A provision of Rs. 45 crores was made for shipping in the second Plan including Rs. 8 crores to meet the orders placed during the first Plan period. The entire amount has already been committed and the tonnage likely to be acquired as a result of these commitments is only about 1,80,000 g.r.t., as against a Plan target of 3,90,000 g.r.t., including 90,000 g.r.t. for replacement of obsolete ships. To reach the target, an additional sum of about Rs. 43 crores would be required.

Recently, as is common knowledge, it has been agreed to set up a Shipping Development Fund for financing the acquisition of additional tonnage in the remaining Plan period. This Fund will be made up of (*a*) Rs. 7 crores which are expected to be available from the repayments of loans (including interest) already advanced to the shipping companies; and (*b*) annual contributions from general revenues to be determined from year to year. The amount of additional resources that will be available for shipping will depend upon the contributions to this Fund in the rest of the Plan period. It is uncertain, however, whether the contributions will be sufficient to enable the target laid down in the Plan to be reached.

The table below shows the Plan provision for shipping, the estimated outlay in the first three years of the Plan period and the likely expenditure in the last two years of the Plan.

Port Development

A provision of Rs. 43.5 crores was made in the second Plan for the development of the major ports of Calcutta, Bombay, Madras, Vizag, Cochin and Kandla, but the total cost of the port programmes approved for inclusion in the Plan was Rs. 79.9 crores as it was expected that some additional funds would be available from the ports' own resources. The ports' own contributions are now estimated at about Rs. 18 crores, but the estimated cost of the ports' programmes has been revised upwards and is reckoned at about Rs. 100 crores. Thus, there is a considerable gap between the resources available and the financial outlay required for the programmes envisaged.

The foreign exchange element in the programmes costing Rs. 100 crores is of the order of Rs. 35 crores. The financing of the programme is linked with expected loan assistance from the World Bank. Some assistance for the Vizag port may also become available from the U.S. President's Asian Development Fund. Even with this assistance, the memorandum avers, it will not be possible to carry out the original programmes in full. The various items have recently been reviewed with a view to determining priorities. Some of the long-term projects which may have to be retarded are the Minimum Scheme at Bombay, the Fulta-Hooghly River Training Works and the new Marshalling Yard at Calcutta, the Wet Dock Scheme at Madras and the equipping of new berths at Kandla.

The Plan envisaged raising the handling capacity of the ports from about 25 million tons to 33 million tons. It is considered that, despite the probable postponement of some long-term projects, the programmes already undertaken and those which are likely to be taken up will enable the tonnage capacity envisaged to be achieved.

The Plan provision for ports, the estimated outlay in the first three years and funds which, it is estimated, may be possible to make available in the last two years are indicated in the table at the foot of the article.

Roads

A sum of Rs. 246 crores has been earmarked for Road Development in the second Plan, in addition to Rs. 25 crores to be drawn from the Central Road Fund. Of this sum, Rs. 94.7 crores have been provided in the Plan of the Ministry of Transport for the Central road programme (including Union Territories) and Rs. 151.4 crores in the State Plans. The Plan provides for the construction of about 20,000 miles of surfaced roads, besides construction of major bridges, missing links, improvements, etc. The expenditure during 1956-57 on the entire road programme was Rs. 42.71 crores and the revised estimate for 1957-58 is Rs. 44.32 crores. The budget provision for 1958-59 is Rs. 42.23 crores. Thus the total estimated expenditure in the first three years of the Plan works out to Rs. 130.26 crores, leaving a balance of about Rs. 116 crores for the subsequent two years. It seems improbable, however, that in the last two years it will be possible to make budget allotments equal to this amount. Furthermore, shortage of steel is likely to retard the construction of bridges. Some shortfall in the total programme is, therefore, to be expected.

It became necessary, early in 1957, to define strict priorities among projects requiring foreign exchange so as to ensure the implementation of certain essential projects which could be regarded as constituting the 'core' of the Plan. The projects included in the 'core' are the steel plants and the coal and lignite programmes both in the public and private sectors, the programmes of the railways and major ports, and certain selected power projects over and above those already covered by foreign aid.

The total foreign exchange cost of all the core projects in both the public and private sectors is about Rs. 962 crores. Of this, expenditure incurred or committed as on 31st March 1958 aggregated Rs. 665.48 crores of which Rs. 258.00 crores were accounted by Railways including Rs. 6.62 crores of Post and Telegraph requirements in connection with railway electrification. Fresh commitments necessary for completing the programmes amount to Rs. 296.37 crores of which Rs. 173.63 crores alone will be accounted for by railways.

Programmes Reviewed

It will thus be seen that, of the further commitments still to be made, the requirements of the railways form by far the largest single item. The figures in respect of railways and the ports relate to the entire programmes included in the Plan. These were originally treated as part of the 'core' without any curtailment, as it was believed that assistance would be forthcoming from the World Bank to cover a substantial portion, if not the whole, of the foreign exchange required for them. It now seems that, the memorandum points out that, though the World Bank assistance is likely to be considerable, it will not be sufficient to meet in full the outstanding foreign exchange requirements on account of these programmes. Recently, therefore, they have been carefully reviewed in order to reduce the additional foreign exchange requirements to the minimum without seriously affecting the capacity of railways and ports to handle the additional traffic arising out of the Plan. As a result of this review, it is considered that a saving of about Rs. 30-40 crores of foreign exchange might be possible by postponing some of the less essential projects under the Railway Plan but without affecting the capacity of the railways to carry 42 million tons of additional traffic by 1960-61. Similarly in the case of the ports, some of the long-term projects may have to be retarded, but it is hoped that the programmes already undertaken and those which are likely to be taken up with World Bank assistance will enable the tonnage capacity of 33 million tons envisaged in the Plan to be achieved.

CONTROLLING COMMITTEE FOR RAILWAY ELECTRIFICATION

The Railway Board has set up a seven-member controlling committee for electrification projects on the Eastern and South Eastern Railways, to maintain a close watch on the progress of railway electrification in these regions and to provide proper direction and co-ordination of effort necessary for the achievement of the second Plan targets. The Committee is headed by Mr. Karnail Singh, Member, Engineering, Railway Board. Its other members are: Messrs. N. C. Deb, Additional Member (Finance), N. K. Roy, Additional Member (Works), L. N. Mathur, Director, Electrical Engineering, Kripal Singh, General Manager, Eastern Railway, G. P. Shahani, General Manager, South Eastern Railway, and P. N. Murti, Engineer-in-Chief, Electrification.

* Excludes Rs. 225 crores to be available from the Railway Depreciation Fund but includes Rs. 3.5 crores for Vizag Port.

† Excludes provision for sailing vessels industry, marine and nautical engineering colleges and Andaman shipping.

‡ Excludes the provision of Rs. 3.5 crores for Vizag Port which was originally included in the Railway Plan.

§ Includes anticipated outlay of Rs. 27.56 crores for 1958-59.

NEW PRODUCTS AND PROCESSES

Hydrofoil Ships

A 120-ton hydrofoil merchant vessel that would be able to transport 300 passengers at speeds of 60 to 70 miles an hour appears to be a distinct possibility, the U.S. Maritime Administration has announced after preliminary studies of the hydrofoil principle. The Commission also has announced the award of a $75,000 contract to an aircraft corporation to continue tests on the practicality of using hydrofoils in large ships. In the hydrofoil system, wing-like structures are fixed to struts below the hull. As speed is gained, the ship rises out of the water supported by the foils. With the hull riding above surface disturbances, resistance is lowered, speed increased, fuel consumption cut and comfort increased. According to Mr. C. G. Morse, Maritime Administrator, use of hydrofoils is not new, the Navy is currently experimenting with them on naval vessels, and if studies indicate feasibility of hydrofoils for large deep-sea merchant vessels, the Maritime Administration may build a prototype for operational testing. "A large hydrofoil," Mr. Morse believes, "should be unaffected or only slightly affected by even the heaviest of seas and not affected at all in a moderate seaway. The hydrofoil achieves equal speed with about half the power used for a displacement ship. The ratio of power per passenger, tonnage per passenger, and attendant labour per passenger for ocean crossing in hydrofoil craft should be very appreciably less than that required for large displacement passenger ships today."

Jet Fuel

The first American atomic plane may have been brought a step closer to reality as the result of Air Force-sponsored research, reported to the American Chemical Society, which indicates that a jet fuel resistant to high doses of gamma radioactive radiation can be made. According to the report, extensive experimental work has shown that jet fuels made from certain petroleum components exhibit excellent resistance to gamma radiation as severe as that from atomic reactors. The findings are significant because they may lead to a reduction in weight of the plane, by the elimination of the heavy radiation shielding of auxiliary fuel lines and tanks. The weight reduction would greatly aid designers already faced with the problem of providing heavy radiation shielding to protect flight crews. Saturates in general, and naphthenes in particular—both components in ample supply which can be extracted from petroleum by standard refinery methods—have been found to be the best choice as auxiliary fuels. They are reported to have maintained thermal stability under gamma radiations of up to 100 million roentgens, which is the order of magnitude that could be encountered on atomic planes.

Heat-Resistant Plastic

A heat-resistant plastic based on styrene which is said to have excellent machining properties and good electrical properties has been developed in the U.K. The material is also said to have good resistance to attack from chemical solvents, including a number of solvents which would completely disintegrate normal polystyrene. It will not develop mechanical faults when inserted into oils or petrol, it is claimed. The material, called "Lucentine" cast styrene—divinylbenzene copolymer—has a softening point in the range of 130 to 140 degrees centigrade. It can, it is stated, be twisted and shaped easily at temperatures of between 150 and 200 degrees centigrade and yet will retain its shape when it is cooled. It is being made available in the form of rods having a diameter of between ¼ inch and 3 inches, and from 9 inches to 15 inches long.

Portable Tape Recorder

A new portable tape recorder designed for the home, office, factory, school, and public service has been introduced. The machine is intended to meet all requirements, say the manufacturers. Its frequency response of 40 to 14,000 cycles per second puts it in the hi-fi class. Headphone and telephone attachments make it suitable for cine-synchronisation. It carries seven-inch reels, which means pre-recorded tapes can be played, and it has a twin-track facility—the track in two halves is like a typewriter ribbon. A special feature is the machine's superimposing arrangement, which allows a recording to be made over a previous one without obliteration. Monitoring facilities are also provided, and there is a pause control. A "safety" button to prevent accidental erasure can be used as a stop/start button, for office dictation and similar applications where recording is not made non-stop. The model can be used with external amplifier or loudspeaker.

Mechanical Arm and Hand

A general-purpose, power-operated manipulator developed to provide remote-handling facilities in any situation where it is impossible or undesirable for a human operator to be employed has been introduced by a United Kingdom firm. While the basic design was produced for use in the nuclear-energy field, where toxic and radioactive materials must frequently be handled, it is equally applicable in certain chemical plants where poisonous atmospheres or hazardous processes are involved. The manipulator is a mechanical arm and hand. It can carry heavy loads and can maintain a given position over long periods, the manufacturers claim. They have designed it to lift and accurately position objects weighing as much as 750 lb., handle delicate glassware without breakage, pour and stir liquids, and wield a large variety of hand and power-operated tools. The complete operation of the manipulator is controlled by one person from a small console which can be conveniently positioned according to the viewing arrangements.

ANNUAL MEETING OF MAHINDRA AND MAHINDRA LIMITED

MR. K. C. MAHINDRA'S REVIEW OF COMPANY'S PROGRESS

SOUND BEGINNING MADE IN DEVELOPMENTAL ACTIVITY

ADDRESSING the shareholders of Mahindra and Mahindra Ltd. at their Twelfth Annual General Meeting held in Bombay on 12th May 1958, Mr. K. C. Mahindra, Chairman of the Company, said that the design and development section of the Company was in an embryonic stage, but a sound beginning had been made and the basic thinking behind these developments was under proper guidance.

The following are extracts from Mr. Mahindra's speech:

"It is my privilege to welcome you to the twelfth annual general meeting of your Company today. The report that has been presented to the shareholders shows a year of very satisfactory operations with a bigger turnover and higher earnings.

"The Company is fortunate in having two new Directors on your Board. Sardar H. S. Malik has a long and meritorious record in the Government, serving the country as her representative overseas for many years, and finally retiring from service as our Ambassador to France. His varied experience and mature judgment will be available for directing the policies of your Company. At the last annual general meeting, I expressed our appreciation of the assistance received from our American associates, the Willys Overland Export Corporation, who helped the Company to overcome the difficulties caused by shortage of foreign exchange. As a measure of further confidence in the future of your Company and in their earnest desire to assist in its operational activity as an automobile manufacturer, their President has accepted the invitation extended by your Directors to join the Board. Mr. Stephen A. Girard is our new Director and his rich experience in the automotive field will assist the Company in the many intricate problems which arise day to day in processing the progressive manufacture of a complex and high precision engineering product.

"The turnover in jeeps and allied vehicles was about 33 per cent. higher than in the previous year. The Company's dealers and distributors have added additional facilities in order to meet the growing demand for after-sales service. Their co-operation has been forthcoming very readily, in spite of reduction in their gross remuneration made last year by the Tariff Commission.

Tractor Sales

"Tractor sales show a heavy decline, due principally to the severe restrictions imposed by Government on import quotas. Unfortunately for your Company, Government chose to base the licence quota on the imports for the year 1954-55 which was the first full year of our handling the David Brown franchise, and when our sales were comparatively small. Repeated representations to Government for additional *ad hoc* licences have not borne any fruit. To me it is surprising, indeed, that, with the continuous threat of foodgrains deficiency and the urgent need for substantial increase year by year in the quantum of our agricultural products, the very highest priority is not being given to such instruments of higher productivity as tractors and implements. Even our programme for the progressive manufacture of tractors in India, prepared in collaboration with David Brown, and submitted in November 1956 to Government, is still awaiting decision.

"The trailer division shows a turnover of about 35 per cent. over last year's figures. In order to meet the expanding need for trailers in the country, your Directors have decided to separate this activity in a new subsidiary company. Import licences have not been readily forthcoming for essential components which are not available locally. Arrangements have, therefore, been concluded with the well-known British firm of Rubery Owen & Co., Ltd., to provide the plant, tooling and designs required to commence the manufacture of these components. In return for the supply of these equipments, Rubery Owen will be allotted equivalent shares in the new company up to 49 per cent. of the total capital. The balance 51 per cent. will be held by your Company. This arrangement will not only ensure the production of complete trailers in the country but will enable the new company to enlarge the range, size and scope of trailers. The excellent research facilities and design improvements available with Rubery Owen in Britain will be at the disposal of the Indian company.

Steel Division

"The turnover of the steel division shows a phenomenal increase. As I reported to you last year, the margin of profit on this type of business is small, and large volume is necessary to show appreciable earnings. It has been possible to reach these high figures of sales, as the division maintained an active and detailed up-to-date study of the varying conditions effecting the world prices of steel and its availability. Your Company has been vigilant in keeping abreast of the changing circumstances and were able to negotiate successfully for large contracts. With the completion of Tata and Indian Iron and Steel expansions this year and the nearing completion of the three new steel works in 1959-61, the business in import of steel must decline. Currently and in the next two years, shortage of foreign exchange will restrict severely the steel incomings from abroad. The future of your Company's steel division would appear gloomy, but for the fact that, as approved controlled stockists, your Company hopes to participate in the internal distribution of the increasing amount of steel that would become available as expansions and new plants get into production. The volume passing through the stockists will perhaps decline as compared to the imports, but it is hoped that the margins per ton of steel so processed will increase as compared to the very low present margin in the import business. The large business in steel has led to the development of a very efficient and technically well equipped steel division in the Company, and new avenues for utilisation of this skill are being investigated.

"In accordance with the findings of the Tariff Commission that the demand in the country for jeeps would progressively increase to 5,000 units by 1961, a phased programme for increasing the production capacity of your Company was submitted to the Government. The progressive schedule to double the rate of production in order to cater for this growth in demand has now received approval. The details of the foreign exchange required for additional plant, machinery and tooling are with the Government and receiving their consideration. Indications are that sanction for this purpose will be forthcoming soon, particularly as plans relate to the manufacture of special utility vehicles.

Additional Capital to be Raised

"In planning manufacturing facilities to produce automotive vehicles in volumes of 5,000 units or more, the basic requirements for an economic operation change. On a small volume production even scattered facilities might suffice, but for larger volumes the economics of the scheme dictate the need for consolidated and integrated facilities. Systematic storekeeping and straight line flow of production, efficient handling of component manufactures and good housekeeping both in the factory and the warehouses become an economic essential. Need for flexibility for further expansions calls for meticulous planning in great detail. With this in view, the engineers of your Company have been making elaborate studies and, although a year or two ago it was not possible to contemplate a large building programme, the easing of construction materials in the market makes it now a practical proposition. Your Company already owns over 100 acres of land at Pimpri near Poona, and provided further facilities like water, power and railheads can be arranged, plans to build in that area may materialise. For the purpose of doubling our present targets for production of jeeps and for integrated development, substantial finance will be required. Recognising such a need, your Directors recommend as a first step that the authorised capital of the Company be increased and certain resolutions have been placed before you for consideration at today's meeting. The Company's application for issue of additional capital is under discussion with the Controller of Capital Issues and as soon as the details are finalised the shareholders will receive prompt intimation.

"In concluding this survey of the Company's operations and hopes for the future, may I say that despite stringent conditions of operations in an economy presaging a world-wide recession amidst inflationary potential, the results of the current half-year indicate that your Company's executives have been adapting themselves to meet these new and diverse circumstances and have maintained a high level of management efficiency. These are relative terms. In the ultimate analysis volume of sales, quality production, development outlook and profits are the criteria of your judgment. Of sales and profit, the balance-sheet is a good testimony; of the quality of the product made in India, Willys engineers have spoken highly. The design and development section of your Company is today in an embryonic stage, but a sound beginning has been made and the basic thinking behind these developments is under proper guidance. I place considerable emphasis on this aspect, as in my opinion with our present knowledge of automobile designs and with the scanty manufacturing facilities in the country, lot of useful effort is being wasted in attempting to do too much.

Two Essential Conditions

"Government deserves praise for initiating an aggressive programme for increasing industrial production, and a considerable measure of success has attended these efforts, but to sustain the increase and keep on a progressive rate of growth two essential conditions must be satisfied, namely, demand to keep pace with supply and raw materials to be made available in abundance and in time. To create temporary employment is not the answer to the four hundred million problem. A modern socialist planner asks us never to forget that the 'end of a rational economic activity is to make possible more production and more consumption and that expansion of employment has to allow the maximum expansion of production, but should not be made in a way as to be detrimental to the latter.' Yet, today industries in India face serious dislocation. In the engineering field non-availability of even the essential raw materials like pig iron and coke dictates a position of almost complete helplessness and warrants a justifiable criticism of inadequate instruments of Government planning. Planning postulates that correct emphasis is placed on the right industries and once included within the Plan no effort is spared to provide the means for that industry to reach maximum production desired and to ensure consumption of the products of industry.

Food Problem

"Take the problem of food which would need the first attention of planners in India for many decades to come. It is becoming apparent that the luxury of fractioning the landholdings may have to be abandoned in favour of a policy which will produce more food immediately; acreages need to be worked out to permit economic mechanical cultivation and steps taken to provide the cultivators with the means by which they can increase production per acre. As the food situation is tackled, serious examination is needed of the methods of transporting what the soil produces from the areas of cultivation to the regions of consumption. In an economy like ours the need to develop artefacts against the overpowering pressure of population is urgent, and it is slowly being recognised that a more than cursory study is required of the problems of distribution, which in simple words means distribution to the consumers at the right time, at the right price and in the cheapest manner.

"Transportation has been sometimes defined as the conveyer belt of industry. India has a widespread and complicated railway system originally established to cater for activities in port towns in so far as industrial economy was concerned. The overhaul and rehabilitation of the system has consumed vast sums of money. With the increased demands placed on this system by the contemplated growth in the economy it was correctly recognised that a major effort would be required in expanding the system and almost 25 per cent. of the second Plan outlay was devoted for this purpose. With the expenditure of over Rs. 1,000 crores on the system the railways are expected to be able to haul 162 million tons by 1960-61, an increase of about 47 million tons over 1955-56. When we consider that the steel industry expansion alone will require a movement of 36 million tons a year, the added increase in the carrying capacity of the railway system appears much too inadequate for the rest of the economy in India. When we consider that the eruption of high foodgrain prices in various corners of the country is principally due to maldistribution and to the failure to reach the foodgrains to the hot-spots within time, the matter becomes extremely urgent for an exhaustive re-examination of the transport position. It would appear that, despite the best efforts to rehabilitate track and extend the rolling stock it will still not be possible for the railways to service the distribution needs. A medium with greater flexibility and accessibility must be found. In considering the various alternatives there is but little choice. It is the use of trucks, truck-trailers and tractor-trailers alone which would ease the burden on the overloaded railways and on our meagre coastal services.

Goods Haulage Service

"There are a number of factors which act today as deterrent to the development of an extensive truck haulage service. The recent announcement of an Inter-State Transport Commission with comprehensive powers over development, co-ordination and regulation and of Transport Development Council at the ministerial level and of Road and Inland Water Transport Advisory Committee composed of official and non-official members is a welcome recognition of the importance of the distribution problem. It is acknowledged that the level of taxation in India so far as transport is concerned is perhaps the highest in the world; that inter-State controls on movement from one State to another are irrational and obstructive without yielding a single tangible benefit to any party; that threat of nationalisation of goods haulage services in various States is a positive disincentive to development. There are not sufficient trucks coming off the manufacturers' lines, nor are operators coming forward in sufficient numbers to take up the service. The Minister of Transport and Communication stated the other day that the Plan provides for the production of 136,000 vehicles between the years 1957 and 1961. This volume, even if achieved, *plus* the existing fleet, computed to be about 130,000 vehicles, less obsolescence, is hardly adequate for what is estimated as the minimum requirement for moving the products of the second Plan economy. Some special effort would be necessary as much for supply of more vehicles as for improving the road system, including the bridging of important rivers and provision of feeder roads from and to centres of production and consumption.

"We have the triple problem in road transport which must find a solution if the planned economy is to achieve even a modicum of success in operation. There is first the problem of building the balance of 114 bridges as planned; of extending the mileage of national highways to a minimum of 15,000 miles; of a concerted and intelligent development of feeder roads and by-ways. This problem, we are assured, is being energetically tackled by the Transport Ministry. The second problem is the quick supply within the next few years of an adequate number of trucks with pay-loads ranging from one ton to ten tons and of truck-trailer and tractor-trailer combinations for service on the main routes. I reckon that from now provision of a minimum of 50,000 trucks a year and, say, 5,000 tractor-trailer combinations should be made. The producers of trucks, tractors, trailers in India are not equipped today to furnish this quantity of vehicles. A concerted and co-ordinated programme as between the various manufacturers, a decision to speed up local manufactures and a direction to get the results at any cost is the desideratum of planning in this context. Finance is the mobiliser and I suggest that, while the Ministry and the Planning Commission engage themselves in devising methods of co-ordination and direction, the proposed Refinance Corporation for Industry Private Limited should take up, as a matter of priority, the requirements for capital finance of the various manufacturers for the speed up. I reckon that a matter of Rs. 10 crores will be needed and this is not a large amount for insuring the production of 50,000 trucks and 5,000 tractor-trailer combinations a year in the country.

Offtake of Vehicles

"Alongside such production there will be the question of offtake—who will buy these vehicles and who will operate? This is problem number three. The decision that the moratorium on the nationalisation of goods transport has been extended till the end of the third Five-year Plan period is good as far as it goes, but it is not enough. Apart from long-term inducements for people to engage themselves in this service with its high obsolescence mark, there is the vital question of finance. Money for financing the purchase every year of 50,000 truck services and for finding operating costs thereof is simply not there in the country. I suggest a Truck Finance and Development Corporation which would guarantee the manufacturers the purchase of all the vehicles they can produce and which would simultaneously offer the operators easy payment terms on an instalment basis. The Hire Purchase System has become a normal and essential part of the automotive trade in America and in Europe. Private agencies no doubt have flourished in India too, but their scale of operations is too small and their finances insufficient. The Truck Finance and Development Corporation, which I am asking the State to sponsor, should be able to meet the demands of the problem as posed by me with capital fund of, say, Rs. 50 crores—a small sum as compared to the huge outlay on the railways system. If the charter of the Refinance Corporation cannot be specially amended to render assistance in full scale to the present manufacturers for they may not come in the category of 'medium industries,' their capital finance will need to be provided by the Truck Finance and Development Corporation which I have proposed.

Rail Transport

"Railway transport in India quite correctly received priority, but there are physical limitations to its quick growth. For a road haulage service the limitations are minor and of not such colossal magnitude in capital expenditure as in the railways. Rupee for rupee, investment in a properly co-ordinated road transport organisation will yield much richer dividends than in the railways. I am convinced that what I have suggested in the matter of transport organisation will not only provide prominent additional employment but also lay securely the foundations of a modern transport system as has been the experience in other countries.

"With the result of operations over last year as presented to you today, you will join me, I am sure, in expressing our appreciation, as shareholders of the Company, of the very fine effort made by the staff and the workers, and I hope that they will continue to work with equal zeal and enthusiasm over the coming years."

Note.—This does not purport to be a record of the proceedings of the annual general meeting.

INTERNATIONAL TIN QUOTAS

The International Tin Council has decided to continue the 40 per cent. export cut for the July-September quarter. The present restrictions were due to expire at the end of June. The decision was taken at the meeting of the Council in London which ended on 1st May. Exports from member-countries during the third quarter of the year will thus be limited to 23,000 tons, equivalent to a 40 per cent. cut in the annual rate of production.

The Council, however, in reviewing the individual quotas of producing countries, has introduced some changes in these for the new period. Malaya's quota is to remain the same, at 37.50 per cent. Thailand and Nigeria are to benefit, their quotas being increased from 7.35 to 8.35 per cent. and from 5.34 to 5.90 per cent., respectively. On the other hand, Indonesia's percentage is being cut from 20.43 to 19.41, Belgian Congo's from 8.95 to 8.92, and Bolivia's from 20.43 to 19.92. The new quotas, which had been unanimously accepted, come into force on 1st July.

Many factors were taken into consideration in working out the quotas, and cognisance had been taken of a probable increase in tin exports from Russia and China. There had been a jump in Russian exports to Western Europe during the first two months of this year. Some small consignments had also been received from China, but that country had not yet registered its brand. As no figures were received from Communist countries in regard to their tin production and consumption, there could be no forecast as to their future trends.

It has now been revealed that the tonnage held in buffer stock on 31st December last year was 15,300 long tons. Statements as to stocks held as buffer would only be made three months after any calendar quarter. The authority previously granted to the buffer stock manager to operate within the middle price range in the agreement—namely, £780 to £830 per ton—was further extended to the end of the third control period.

The next meeting of the International Tin Council will take place in Paris on 17th June.

AMENDING COMPANIES ACT—III

SUGGESTIONS OF SASTRI COMMITTEE ANALYSED

By F. R. Ginwalla

SINCE the passing of the Companies Act of 1956, public interest in the Company Law and its proper enforcement has increased. At the same time, those who are engaged in the administration and management of private and public companies have voiced their feelings that the Act should be amended to overcome such practical difficulties as may have been encountered by them in the performance of their duties. Part VI of the Act is the longest one and lays down the law relating to management and administration; it contains 279 Sections from 146 to 424; three new sections are proposed to be added and 100 sections are proposed to be amended. This part, so important and vital to the corporate sector, may be conveniently discussed by arranging the proposals of the Amendment Committee in an appropriate order.

Advertisements

The requirement of Section 147(1) (c) that the name of the company shall be mentioned, *inter alia*, in all kinds of advertisements causes inconvenience to commercial houses among whom it is customary to push their sales under the trade names without mentioning the company's name, address, etc., in full. The Report states that no harm was likely to ensue from the deletion of the word "advertisements" occurring in Section 141(1) (c) because the words found in the section, namely, "notices and other official publications," are wide enough to include important business advertisements. It was further urged before the Committee that though it was desirable to mention the address of the registered office of the company in all business letters, bill heads, etc., under the first part of sub-section 147(1) (c), it was not necessary to do so in the documents, namely, bills of exchange, *hundis*, promissory notes, etc., mentioned in the latter part. To overcome the above difficulties Section 147(1) (c) is proposed to be amended as follows:

(1) Every company—

"(c) shall have its name and the address of its registered office mentioned in legible characters in all its business letters, in all its bill heads and letter paper, and in all its notices, advertisements and other official publications; and its name in all bills of exchange, *hundis*, promissory notes, endorsements, cheques, and orders for money or goods purporting to be signed by or on behalf of the company, and in all bills of parcels, invoices, receipts and letters of credit of the company."

Section 595 which is applicable to foreign companies provides for the publication of the name of the company. The Report proposes that Section 595(c) should be suitably amended on the lines of the amendments proposed in Section 147(1) (c) so as to enable the foreign companies to enjoy the same exemption in the case of their trade advertisements. It may be observed here that only this section of Part XI is proposed to be amended.

Under the scheme of the Present Act, companies other than those having a share capital are not required to obtain a certificate of commencement of business or to file a prospectus or a statement in lieu, except where they issue debentures to the public in which case under Section 56(3) they have to issue a prospectus. The Report points out that Section 149(8) as it stands is inconsistent with the scheme of the present Act. It has been reproduced from Section 103(6) of the Act of 1913 but in the context of the scheme of the present Act it is inappropriate and, therefore, it is proposed to be deleted.

Closing of Registers

Normally, books are closed by a company for a period antecedent to and ending with the date fixed for a general meeting but there is no binding rule to that effect. When the books are closed share transfers are not accepted for registration. Dividends are declared payable to those members whose names stand on the register as on a particular date. In order to prevent any *mala fide* action on the part of a company calculated to deprive transferees of shares of the dividends legitimately due to them by keeping the books closed after the declaration of dividend, it is proposed in the Report that a proviso should be added to Section 154 that a company should not close its books for a period of 15 days after the dividend becomes due. The Report also draws attention to Section 27 of the Securities Contracts (Regulation) Act, 1956, requiring a transferee to lodge the security and all other documents relating to the transfer which may be required by the company for being registered in his name within 15 days of the date on which the dividend becomes due. An amendment of Section 154 is desirable from this point.

Registers and Returns

(1) Section 155 which relates to the power of the Court to rectify register of members is proposed to be amended so as to extend the power of the Court to rectify the register of debentureholders also. The new sub-section (5), which is proposed to be added to Section 155 reads: "(5) The provisions of sub-sections (1) to (4) shall apply *mutatis mutandis* to the rectification of the register of debenture-holders as they apply to the rectification of the register of members."

(2) Section 156 states that in the case of a company required by the Act to file a list of its members with the Registrar, the Court when making an order for rectification of the register, shall by its order, direct notice of the rectification to be filed with the Registrar within 14 days from the date of making of the order. The section does not state who should file the notice with the Registrar. It is, therefore, proposed that the section should be amended so as to require the Company to file the notice of rectification with the Registrar. In view of the delay that occurs in the drawing up of the order of the Court, further amendment of Section 156 is suggested so as to provide that the notice of the rectification should be filed within 14 days from the date of the drawing up of the order.

(3) Section 159 relates to annual return to be made by a company having a share capital. This section contemplates the preparation and filing with the Registrar of an annual return within 42 days from the day on which the annual general meeting is held under Section 166. This provision has been sought to be interpreted as meaning that, if no annual general meeting is held, the failure to file the annual return cannot be penalised under the Act. To remedy this defect, it is proposed to add the words "or ought to have been held under Section 166" after the words "is held" in Section 159 (1).

As the Section 159 stands, every company having a share capital is required to file with the Registrar every year a formal return containing the numerous particulars enumerated in sub-section (1). The Report makes an important suggestion to reduce this burdensome, mechanical and clerical work of repetitive character and it should be acceptable to the corporate sector. The suggestion is that note (1) appearing under item 5 in Part II of Schedule V dealing with annual return should be made a proviso to Section 159 (1) as the note itself is not a part of the substantive law at present. The suggested amendment—for the proviso to Section 159(1) see page 56 of the Report—will reduce the bulk of the returns to be filed with the Registrar or maintained in the company's office, besides saving time and labour.

The amendment of Section 159(2) is proposed so as to require the company to state the reasons for not holding the annual general meeting in case the annual return is made without holding such a meeting. Section 159(2), when amended, will read: "The said return shall be in the form set out in Part II of schedule V or as near thereto as circumstances admit and in case the return is made without holding the annual general meeting, the company shall state the reasons why such meeting was not held." It may be noted that the existing proviso to Section 159(2) will remain the same.

(4) Some companies have a share transfer audit. Such a practice is commendable but the Report states that it cannot be made compulsory at this stage. The Report further states that some companies do not keep a proper record of their share transfers and sometimes, even issue certificates without reference to such transfers. The Report therefore suggests that a provision should be made in Section 161(2) requiring the management to certify, when making an annual return, that a proper record of such transfers has been maintained. A new clause (c) is proposed to be added to Section 161(2), which reads: "(c) that, since the date of the last annual return, the transfer of all shares or debentures and the issue of all further certificates have been properly recorded in the books maintained for the purpose."

While we are on Section 161, it may be pointed out that this section makes it obligatory on the managing director, if there is one, to sign the annual return and the accompanying certificate. It was urged before the Committee that compliance with this section may be difficult in cases where a sole managing director has gone abroad. The Report states that in such a case, anyone functioning as the managing director in his place could sign the annual return and the accompanying certificate.

(5) Section 301 prescribes the register of contracts, companies and firms in which directors are interested. The Report states that this section is not happily worded. It recommends that for sub-sections (1), (2) and (3) of Section 301, the following provision should be substituted:

"301. (1) Every company shall keep one or more registers in which shall be entered separately particulars of all contracts or arrangements to which Sections 297 and 299 apply, including the following particulars to the extent they are applicable in each case, namely: (a) the date of the contract or arrangement; (b) the names of the parties thereto; (c) the principal terms and conditions thereof; (d) in particular, in the case of a contract falling within Section 297 or 299(2), the date on which it was placed before the Board; and (e) the names of the directors voting for and against the contract or arrangement and the names of those remaining neutral.

"(2) Particulars of every such contract or arrangement falling within Section 297 or 299(2), shall be entered in the relevant register aforesaid within three days (exclusive of public holidays) of the meeting of the Board at which the contract or arrangement is approved or the date of the contract whichever is later; and the register shall be placed before the next meeting of the Board and shall then be signed by all the directors present at that meeting.

"(3) The register aforesaid shall also specify, in relation to each director of the company, the names of the bodies corporate and firms of which notice has been given by him under sub-section (3) of Section 299 and shall contain in respect of all contracts entered into by the Company with such bodies corporate and firms in which a director is interested, the particulars in clauses (a), (b), and (c) of sub-section (1), and, to the extent possible, the particulars in clauses (d) and (e) of that sub-section."

The rest of the provisions of Section 301 are not affected.

Managerial Personnel

(6) Section 303 relates to register of managerial personnel. Under this section read with Form 32 prescribed by the rules framed under the Act, particulars of the managerial personnel of a company have to be filed with the Registrar and whenever there is a change in the personnel of the managing agents, directors, etc., a return in Form 33 has to be filed with the Registrar by every company in which the person concerned is or becomes a managing agent, director, etc. In the case of a director holding directorships in several companies not only the company from which he resigns his directorship, or the other company of which he becomes a director in the future will have to file the prescribed Form 33, but every other company which has mentioned his directorships in column 5 of Form 32 will have to file Form 33 by reason of the alteration taking place in connection with the former or the new company. It is needless to insist that if a person is a director of 20 companies and resigns from one of them and becomes a director of another, each of the 20 companies must file with the Registrar notice of such a change. This requirement involves a vicious cycle with no benefit or utility. The recommendations contained in the Report may be stated as follows:

(a) A director (or any of the other managerial persons mentioned in the section), on his resigning or ceasing to hold the office or in the event of change occurring in the particulars relating to him, must communicate the change to all the companies in which he holds directorships or other managerial office.

(b) It must be further provided that the company whose managerial office he accepts or takes up or from which he resigns must fill in Form 33 and file it with the Registrar.

(c) The rest of the companies with which he is connected need only notify the alterations at the time of the filing of the annual return under Section 159 or Section 160 but they must effect the changes in their registers which must be kept upto date and open to inspection of members and non-members under Section 304.

(d) As regards the minor changes such as change in address, as distinct from changes in personnel effected by resignation, removal, appointment or otherwise, they must be intimated once a year when filing the annual return and not 28 days after each such change.

(e) Form 32 does not provide for a statement of the date on which partners became partners of the firm, though it is required by Section 303(1) (C). This omission must be rectified.

(f) The following proviso is proposed to be added to section 303(2).

"Provided that changes in any of the particulars contained in the register, other than changes in the personnel of managing agents, the Board of Directors, secretaries and treasurers, manager or secretary of the company shall be notified only once a year within 28 days from the end of the financial year."

(7) Section 307 relates to register of directors' share-holdings. The Report states that this section is intended to disclose dealings by directors in the shares of the company, particularly by reason of their inside knowledge, and these considerations are equally relevant in the case of managing agents, secretaries and treasurers and managers. The Report, therefore, suggests that a new sub-section should be added to Section 307 in the following terms:

"The provisions of this section and Section 308 shall apply to managing agents, secretaries and treasurers and managers in the same manner as they apply to directors."

The effect of this new sub-section will be that the registers maintained under Section 307 will disclose the holdings of managing agents, secretaries and treasurers and managers.

Custody and Inspection of Registers

Section 163 relates to custody and inspection of registers and returns. With a view to assisting the companies in their difficulties of obtaining storage space in the registered office of the company, Section 163 is proposed to be amended to enable the company to keep its registers, indexes and copies of returns in any place other than the registered office of the company but in the same city. Section 163 is proposed to be further amended to enable the company to appoint any person as its registrar for the purpose of maintaining the registers, indexes, and copies of returns and other documents. Section 110(2) of the English Act permits such a course to be adopted. The Report suggests that a proviso may be added to Section 163(1) in the following terms:

"Provided that the registers of members and debenture-holders and the indexes thereof may be kept at another office of the company or with some other person if the company has arranged with such person for the making up of the registers on behalf of the company in the same city, town or village where the registered office of the company is situated, and the company has given notice to the Registrar of such other office or person where or with whom the registers and indexes are kept."

Section 163(3) (b) provides that any copy of register, index, or any part thereof may be furnished on payment of As. 6 for every 100 words or part thereof. This rate of As. 6 is proposed to be increased to As. 12. The period of 10 days prescribed in Section 163(4) for furnishing copies is inadequate. This sub-section is proposed to be amended so as to increase the period to 14 days from the date of payment of the estimated charges for furnishing the required copies. The proposed period of 14 days is exclusive of holidays. The Report states that provision should be made in Section 163 to empower the company to demand payment in advance of the estimated charges. Section 209 relates to books of account to be kept by a company. Sub-section (1) of this section is proposed to be amended in order to enable a company to keep its books at a place other than the registered office for reasons of convenience.

The responsibility of the maintenance of books and papers of the company rests on the executives enumerated in Section 209 (5). The Report states that sometimes some cashier or accountant of the company is in charge of the company's books and others have no personal responsibility in the matter. Again, in some cases, the officer in charge of the books is discharged or induced to resign when there is a possibility of a probe into the affairs of the company and the excuse is then put forward that the books or documents are not with the present officers. In other cases, books and vouchers relating to earlier years are said to have been destroyed as being unnecessary according to the Report. To control this evil, a new sub-section (3-A) which provides that "all books referred to in sub-section (3) shall be preserved in good order for a period of not less than eight years immediately preceding the current year" is proposed to be introduced in Section 209.

The words "that he had reasonable ground to believe, and did believe" occurring in the proviso to Section 209(5) are proposed to be omitted. The person charged with an offence for contravening the provisions of Section 209 will now have to prove in his defence that a competent and reliable person was charged with the duty of seeing that the requirements of the section were complied with and was in the position to discharge that duty.

The persons who are required to take all reasonable steps to secure compliance by the company with the requirements of Section 209 are specified in sub-section (6). The foregoing sub-section (6) of Section 209 is proposed to be amended by the addition of a clause (d) in the following terms and by renumbering clause (d) as clause (e) with amendments, namely: "(d) where a company has a manager, such manager," and "(e) where the company has no managing agent or secretaries and treasurers or manager, every director of the company."

Annual and Extraordinary Meetings

The expression "annual general meeting" is often used but not clearly defined in the Act. The Act contemplates only one annual general meeting. Section 166 (1) is not appropriately worded and, therefore, the Report suggests an amendment of Section 166(1) so as to bring it in line with the English Act. The suggested amendment is: "Every company shall hold its first annual general meeting within 18 months of its incorporation, and thereafter shall, in each year, hold a general meeting as its annual general meeting, specified as such in the notice calling the meeting, in addition to any other meetings in that year, and not more than 15 months shall elapse between the date of one annual general meeting of a company and that of the next."

In some cases, the managing agents of the company have their offices in a big city where the accounts of the Company are kept and from where they manage all the affairs of the company, but the registered office is in a village or small township in another State where the factory is located. Shareholders find it difficult to travel all the way to go to the registered office and, what is worse, find it difficult to get accommodation. The Report suggests that these difficulties may be removed by empowering the Central Government to exempt any class of companies from the operation of Section 166(2) and also by providing that the company may by its articles or by resolution at its annual general meeting determine the time and venue of its annual general meetings. The Report states that as regards private companies provision should be made to enable them to hold general meetings at such times and places as may be unanimously agreed to by the shareholders. The Report gives the draft of the provisos proposed to be added to Section 166(2). The proposed provisos are on the lines as observed above.

Section 169 provides for calling of extraordinary general meeting on requisition. In order to bring Sections 169(4) and 188(2) (b) into conformity with each other, it is proposed to amend Section 169(4) by providing that the number of members entitled to requisition a meeting shall be either 100 or such number as hold paid-up share capital of not less than Rs. 1 lakh. In Section 170(1) the words and figures "Sections 171 to 175 and 177 to 186" are proposed to be substituted for Sections 171 to 186."

Notices for Calling Meetings

Under Section 171(1), a general meeting of a company may be called by giving not less than 21 days' notice in writing: Sections 225, 261, 281 and 284 provide for special notice to be given by shareholders for the matters therein specified and that requires 28 days' notice. In order to resolve this difficulty, the Report states that the notice for the meeting under Section 171(1) should be extended to 28 days and the period of special notice be reduced to 21 days, so that the shareholders may get reasonable time to give special notice, even after the receipt of the notice of the meeting as contemplated by Section 171(1). Sections 171(1) and 190 are proposed to be suitably amended.

Special Business

In order to save heavy costs of advertisement charges, the Report suggests an amendment in Section 172(2) which requires an explanatory statement setting out all relevant facts concerning any special business, to be annexed to the notice of a meeting. The companies have to incur heavy costs in advertising such notices in newspapers pursuant to Sections 172(2) and 53(3). To overcome this difficulty the Report states that a proviso to Section 171(2)(I) may be added in these terms:

"Provided, however, that when serving the notice of any meeting of the company by advertisement as provided by Section 53(3), the explanatory statement to be annexed to the notice under Section 173 need not be advertised or published, but the advertisement shall state that the explanatory statement has been forwarded to the members."

Voting at Meetings

Under Section 177 voting on a resolution in a general meeting can only be either on a show of hands or on a poll, if demanded. It was urged before the Committee that in the case of guarantee companies not limited by shares, such as clubs, chambers of commerce, etc., voting by ballot is a far more convenient mode of voting than the methods prescribed by Section 177 or 263. The Report while accepting this suggestion, states that voting by ballot is one of the modes at company meetings in England and that a similar method of voting by ballot should be introduced in India. This method of voting will surely induce a greater number of shareholders to participate in the election of directors. In order to give effect to this recommendation a new Section 263A is proposed to be introduced in the following terms:

"Nothing contained in Sections 177, 255, 256 and 263 shall affect any provision in the articles of association of a company for the election of all directors by ballot at the time of each annual general meeting of the company."

Proxies

Section 176 relates to proxies. Under the English Act, it is open to a member to appoint another person (whether a member or not) as his proxy to attend and vote instead of him, and a proxy appointed to attend and vote instead of

a member of a private company has the same right as the member to speak at a meeting (*vide* Section 136 of the English Companies Act.) Under the Indian law, a proxy is not entitled to vote except on a poll and is not entitled to speak. The Report does not suggest any amendment of Section 176 on the ground that the legislature had enacted this provision after considerable discussion.

The Report, however, suggests an amendment of Section 176(3) which merely states that the articles should not require a proxy to be lodged more than 48 hours before the meeting. The Report suggests that Section 176(3) should be suitably amended so as to provide that, when the articles of a company prescribe a longer period before a meeting for the deposit of the instrument appointing a proxy, a period of 48 hours shall be deemed to be prescribed instead.

As regards Section 391(2), the Report states that the expression "where proxies are allowed" occurring therein needs clarification. In order, however, to avoid any controversy, it is suggested in the Report that the foregoing expression should be deleted from Section 391(2) so as to empower the Court to allow voting by proxy when it orders meetings to be held in the course of liquidation proceedings.

Corporations

Section 187 relates to representation of Corporations at meetings of companies and creditors. This section is not clear as to who should sign the letter communicating the authorisation of the Board of the body corporate entitling a person to represent it. The Report suggests that this section should be amended so as to provide that the managing director or chairman of the board of directors or the person presiding at the meeting of the board at which a resolution authorising such representation is passed may sign the communication. In Section 187(2) the expression "if it were a member" is unhappy. The Report recommends that it should be replaced by the words "as a member."

Resolutions and Agreements

Section 192 relates to registration of certain agreements and resolutions. The Report states that "it would be difficult, needlessly expensive and also purposeless to attach copies of all agreements to every copy of the articles of association, especially when a number of agreements have to be executed by the Company in the course of its ordinary business." It adds: "It is enough if copies of those resolutions which have the effect of amending or altering any provisions in the articles or which relate to the capital structure, appointment of managing agents, secretaries and treasurers, etc., are attached." With this purpose in view, the Committee has suggested to amend Sections 192(1) and (2)

The Report has accepted the suggestion made by the Department that the resolutions of the Company or the board of directors under Sections 293(1) (*d*), and (*e*), 294, and 297(3) should be certified and filed with the Registrar in view of the importance of such resolutions and in order to enable the Registrar to see whether the financial arrangements purporting to be approved by resolutions are in the interest of the Company. In order to give effect to this suggestion, a new clause (G) is proposed to be added to Section 192(4). The new clause reads: "(G) resolutions of the company under Sections 293(1) (*d*) and (*e*), 294 and 297."

Statutory Report

Section 165(2) requires the board of directors to forward a copy of the statutory report to every member of the company at least 21 days before the date of the meeting. The Report states that the Committee is unable to accept the suggestion that the period of 21 days as prescribed by this section should be reduced. As regards Section 165(4), the Report suggests that the words "on capital account" occurring therein should be deleted.

Minutes of Meetings

Section 193 speaks about the minutes of proceedings of general meetings and of board and other meetings. Section 193(1) is proposed to be amended in the following terms:

"Every company shall cause minutes of all proceedings of general meetings, and of proceedings at meetings of its board of directors or of committees of the board to be kept by promptly making entries in books kept for the purpose, with their pages consecutively numbered, each page being signed and the last page of the record of the proceedings of each meeting being dated and signed by the chairman of the meeting or by the chairman of the next succeeding meeting."

Section 194 requires a consequential amendment which will provide that "minutes of meetings kept in accordance with the provisions of Section 193 shall be evidence of the proceedings recorded therein."

Inspection of Minutes

Section 196 relates to inspection of minute books and grant of copies. The Report proposes that the rates of the copying charges may be raised to 75 naye paise per hundred words and the time allowed for the grant of copies may be fixed as "fourteen days exclusive of holidays," instead of seven days at present. An amendment of Section 196(2) is proposed in the Report to this extent.

Proceedings of Meetings

The Report observes that the current practice of publishing only the speech of the chairman at the annual general meeting may possibly give an inaccurate impression of the proceedings or the state of the company's affairs. The Report states that this practice should not be allowed to continue. An amendment of Section 197(1) has been suggested on the following lines:

"No document forming a part of the proceedings of a general meeting of a company shall be circulated or advertised at the expense of the company unless the matters required by Section 193 to be contained in the minutes of the proceedings of such meeting are also circulated or advertised."

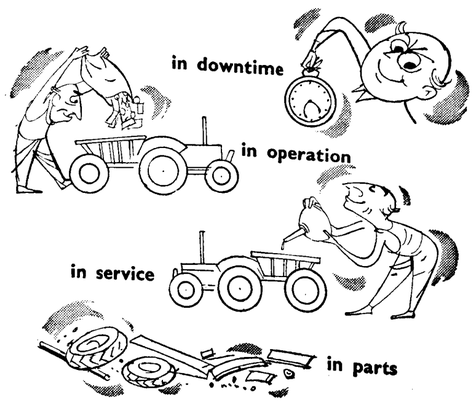
Board Meetings

Section 285 states that the meeting of the board of directors shall be held at least once in every three months. In the case of big or average-sized companies, this is a wholesome provision of law. But Section 285 causes hardship and unnecessary expense, particularly to small public or private companies, companies limited by guarantee and licensed companies. The Report observes that since it is difficult to lay down any general exemption from the section for companies which really suffer hardship, the Central Government should be empowered to exempt any class of companies from this section by means of a notification. In order to give effect to the above recommendation it is proposed to add a proviso to Section 285 on the above lines.

Section 287(2) prescribes the quorum for the meeting of the board of directors. This section gives rise to difficulty of interpretation as to the meaning of the words "remaining directors" occurring in its proviso. The Report observes that the intention apparently is to refer only to those directors present at the meeting as a quorum. To make this clear it is suggested in the Report that the words "present at the meeting not being less than two" should be added after the words "the directors who are not interested" in the proviso to Section 287(2).

What's the job going to cost!

Before you buy your earthmoving equipment find out the job-costs



It's the *total job cost* that should be considered and not *only the purchase price* of equipment. Get the best for your job—buy "Caterpillar" earthmoving machines. You will have less downtime, lower operating costs, better service and ready supply of parts.

Pushing, pulling or carrying, on tracks or rubber, "Caterpillar" will move more earth in less time at less cost per cubic yard than any other machine. The high efficiency of Caterpillar performance more than offsets the initial costs.

OLD AGE PENSIONS IN THE U.S.A.

FURTHER LIBERALISATION IN SOCIAL SECURITY LAWS

[With the transition from the concept of social insurance to that of social security, the cost of social security programmes and their economic repercussions have assumed much importance. For, the wide scope of the programmes and increased benefits provided involve huge financial transactions. Old age pensions form an important part of the social security programme of the U.S. If present indications are any guide, many changes in the programme are likely in this Congressional election year. The following article, taken from the May issue of the Monthly Bank Letter *of the First National City Bank of New York, brings out the economic consequences and financial implications of some of the proposed changes.—*EDITOR.]

LIBERALISING the Government's Social Security programme packs plenty of human—and political—appeal. Congress' voting record attests to this. It has liberalised Social Security laws every Congressional election year since 1948. Pressures now, building up indicate this election year may well continue the trend. More than 100 Bills to expand the programme in one way or another have been crammed into the legislative hopper. Some legislators want Social Security payments increased as part of the Government's anti-recession programme. Former President Truman, testifying before the House Banking and Currency Committee on 14th April called for increased Social Security benefits as "one of the most desirable methods of expanding purchasing power." Administration officials have conceded that, if pressures in Congress grow, they may be forced to recommend a moderate liberalisation "to head off far greater changes."

Changes proposed in the Bills range from the comparatively mild to the radically different. One, for example, would slightly liberalise benefits to widows and dependents of disabled workers. At the other extreme is a plan to launch the Social Security system into the health field by providing payments for retired workers' surgery and hospital bills. To cover the cost of this, of course, Social Security taxes would have to be sharply increased. The flood of proposed changes comes at a time when the present system is showing visible signs of financial strain. Social Security tax collections are running well below the amount of benefit payments, and the programme is expected to show a deficit this year—something that wasn't supposed to happen for many years.

In the light of these developments, and with the full impact of liberalisations over the past few years not yet evident, it is only common sense to weigh carefully all proposals that would widen the scope of the system even further. The Advisory Council on Social Security Financing, created by Congress in 1956 and made up of experts from industry, labour, and education, is due to report on the financial soundness of the present programme by next January. It would seem worthwhile to get the results of their study before passing new laws.

Workers' Stand

Organised labour's idea of how the Social Security programme should be broadened is embodied in a Bill introduced by Mr. Aime Forand of Rhode Island. Under this Bill, regular retirement benefits would be increased 10 per cent. In addition, it would give retired workers generous health benefits by having the Social Security fund take over the full cost of their surgical bills and pay for up to 120 days a year of hospital and nursing home care, providing no more than 60 days were in a hospital. To pay for these additional benefits, the Bill calls for an increase in the amount of wages and salary subject to Social Security taxes from the present $4,200 to $6,000. Moreover, tax rates, now at 2¼ per cent. each for employers and employees, would be increased to 2⅜ per cent. each for a total of 5½ per cent. The medical-surgical provisions of the Bill—strongly backed by the A.F.L.-C.I.O.—have been sharply criticised by the U.S. Chamber of Commerce. It calls these provisions "a new gateway for the old compulsory health insurance plan which the American medical profession fought and defeated for the very reason that such a plan would lead to Government control of medicine." On the other hand, Dr. Eveline M. Burns, President of the National Conference on Social Welfare, supports the proposal, charging that the medical profession in that country "takes a narrow and self-interested view of the social responsibilities of the profession."

A much milder liberalisation of the Social Security programme is contained in a Bill introduced by Mr. Robert Kean of New Jersey. The major provisions of the Kean Bill call for somewhat increased benefits for widows and families of deceased workers; payments for dependents of disabled workers; and increased benefits for people who continue to work after reaching age 65 and thus start their benefits late. The wage base would be raised to $4,800, but tax rates would not be increased.

These and other suggested liberalisations, if enacted, would be piled on top of a Social Security programme that has already attained a breadth of coverage and a scale of benefit payments far beyond what was originally provided under legislation passed by the Congress in 1935.

Spreading Umbrella

From modest beginnings, the Old Age and Survivors Insurance system (O.A.S.I.)—the official title of the Social Security programme—has broadened out so that nine out of ten workers come under the umbrella (federal employees, separately covered, and doctors are the major exceptions).

Nearly 11,000,000 persons—about one for every six members in the labour force—are now drawing benefits, exempt from tax, ranging from a minimum of $30 a month for a single retired worker to as much as $200 monthly for a family. It is doubtful whether many people receiving Social Security realise how much of a capital investment it would cost them to enjoy the equivalent of these benefits under private insurance plans. A life annuity of $100 per month, for instance, if purchased by a person aged 65 from an insurance company would cost him around $15,000. A joint annuity paying himself and his wife $150 monthly would run around $25,000.

But what of the cost of this financial security? Younger working people and their employers have had to shoulder a growing tax burden to provide it. The amount of earnings subject to Social Security taxes has increased from $3,000 in 1937 to the present $4,200. Moreover, tax rates have already more than doubled—and another near doubling is scheduled by law.

From 1 per cent. each for employees and employers in 1937, tax rates have moved up to the present 2¼ per cent. each. In 1960 these rates are scheduled to go up to 2⅜ per cent., in 1965 to 3¼ per cent., in 1970 to 3⅜ per cent. and in 1975 to 4¼ per cent. each. Thus, the maximum contribution by a worker—and by the employer for each of his workers—has increased from $30 to the present $94.50. By 1975 this maximum will rise to $178.50 each. Increases in benefits, of course, may require raising the tax rate schedules still higher.

O.A.S.I. tax collections in the year beginning 1st July, according to official estimates, will amount to $7.1 billion—nearly 3½ times the $2.1 billion collected in fiscal 1950. This rise reflects not only the increase in tax rates and in the maximum amount of taxable earnings but also the extension of coverage, the growth in the labour force, and the rising level of wages which has tended to raise average taxable earnings.

Income and Outgo

Cash outgo for benefit payments, however, has expanded much more rapidly than have tax collections. O.A.S.I. benefit payments in fiscal 1959, owing to previous programme expansions and liberalisations, will total an estimated $8.5 billion—nearly 12 times 1950 payments of $727 million. O.A.S.I. benefit payments exceeded tax collections last year—the first time this has happened. Extension of coverage in 1954 and liberalisation in 1956 were responsible.

In 1954, Congress made farmers eligible—on attractive terms—to come under the Social Security programme. It permitted farmers to pay taxes for just 18 months and then, if aged 65 or over, to retire on full benefits. Many old farmers promptly paid up their taxes and retired. In 1956, women were authorised to retire at 62 on reduced benefit payments. Re-

INDUSTRIAL DEVELOPMENT PROGRAMME

COMPLETION OF MANY PROJECTS IN PUBLIC SECTOR LIKELY TO BE DELAYED

AS readers are aware, the programme of industrial development has been accorded pride of place in the second Five-year Plan. Thus, out of a total outlay of Rs. 4,800 crores originally envisaged, as much as Rs. 617 crores were earmarked for industries, excluding the sum of Rs. 200 crores for small scale and village industries and Rs. 73 crores for mineral industries. When the programme was formulated, many were inclined to feel that the industrial projects included in the public sector were over-ambitious. It was pointed out that due attention had not been paid to the availability of resources as well as to the administrative and other technical problems involved. That there was no exaggeration whatever in these statements is borne out by the perusal of the review of the progress of industrial projects as contained in the memorandum on appraisal and prospects of the second Five-year Plan submitted by the Planning Commission to the National Development Council recently. The review will clearly reveal that the actual results in the first two years of the Plan have fallen far short of the targets assigned. The Planning Commission candidly confesses that the completion of a number of industrial projects are likely to be delayed and benefits from investments on these projects are not expected to materialise before the early years of the third Plan. Consequently, there will be shortfalls in targets of production in the case of industries like fertilisers, heavy castings and forgings.

The slowing down of some of these projects is attributed principally to the foreign exchange difficulties. Another unhelpful factor is that negotiation for obtaining machinery and equipment on deferred payment or for securing suitable credit facilities from abroad have led to delays in embarking on projects which could otherwise have been implemented more expeditiously. Despite these handicaps, some major projects in the public sector as, for example, steel plants and the Nangal Fertiliser Factory, are said to be going forward.

A sum of Rs. 524 crores had been earmarked for direct investment in industrial projects in the second Plan. In addition, a sum of about Rs. 60 to Rs. 65 crores was made in favour of the National Industrial Development Corporation. The provisions made in the Plan were inadequate and had subsequently to be revised upwards. The revised outlay on steel plants, for instance, is Rs. 510 crores as against Rs. 350 crores originally provided. Similarly, the foreign exchange required for the same has gone up from Rs. 229 crores to Rs. 302 crores.

During the first three years of the Plan, the total outlay on industrial projects in the public sector (including schemes relating to scientific and industrial research) is estimated at about Rs. 430 crores, of which schemes in the States account for about Rs. 9 crores. The expenditure incurred in the first two years of the Plan was Rs. 240 crores, as against the budget provision of Rs. 267 crores. By 1957-58, a number of industrial schemes begun during the first Plan had been completed. These included the DDT plant at Alwaye, expansion of the DDT plant at Delhi, expansion of Hindustan Antibiotics, the Porcelain Insulators scheme at the Government Porcelain Factory in Mysore, Government Soap Factory, Bangalore, the spun-pipe plant of the Mysore Iron and Steel Works, the Bihar Superphosphate Factory and the provision of balancing equipment in the NEPA plant. As a consequence of the completion of these schemes, the capacity for the manufacture of DDT rose by 2,100 tons, of penicillin by 19.2 million mega units and of superphosphate by 33,000 tons. The NEPA achieved its full capacity of 36,000 tons of newsprint per annum, and capacity for the manufacture of 2,500 tons of insulators was established. The total outlay on these schemes during the second Plan is about Rs. 3 crores.

Table I alongside gives the original and revised outlay on the industrial projects in the public sector, along with the revised foreign exchange requirement and the expenditure in the first three years of the Plan.

The industrial schemes expected to be completed in 1958-59 are: (1) expansion of Sindri Fertiliser Factory with an additional capacity of 47,000 tons of nitrogen; (2) blast-furnaces at Bhilai and Rourkela (700,000 tons per annum of pig iron forming the first phase); (3) Durgapur Cokeoven project of West Bengal (285,000 tons of hard coke); (4) Hindustan Machine Tools, stepping up of production of million machines and lathes (400 lathes, milling and drilling machines —ultimate capacity); (5) Hindustan Cables Co-axial Cables project (530 miles of cables and 300 miles of co-axial cables). These projects entail a total cost in the second Plan of about Rs. 21 crores and foreign exchange expenditure of over Rs. 12 crores, exclusive of investment on blast furnaces at Bhilai and Rourkela.

The projects expected to be fully implemented by the end of the second Plan at a total cost of about Rs. 558 crores and foreign exchange expenditure of about Rs. 328 crores are:

Project	*New or additional capacity*
Bhilai Rourkela and Durgapur Steel Works.	2.2 million tons finished steel. 600,000 tons pig iron.
Nangal Fertiliser Project	70,000 tons fixed nitrogen.
Mining part of the lignite project.	3.5 million tons lignite.
Streptomycin Project under expansion of Hindustan Antibiotics.	45,000 kg. streptomycin.
Ferro-silicon expansion under Mysore Iron and Steel Works.	15,000 tons ferro-silicon.
Porcelain Insulators Project of Bihar.	2,000 tons insulators.
Hindustan Shipyard	Expansion of capacity to build 8 to 12 ships per year.
U.P. Government Cement Factory —expansion.	281,000 tons cement.

The projects expected to be completed during the early years of the third Five-year Plan at an estimated cost of Rs. 169 crores and foreign exchange cost of Rs. 107 crores, include the foundry/forge project, heavy machinery project, mining machinery project, remaining part of expansion of Mysore Iron and Steel Works, steel-melting shop and finishing mills, etc., thermal power plant and fertiliser factory at Neiveli; fertiliser factory at Rourkela; optical glass project; first phase of the heavy electrical project; raw film project (N.I.D.C.), intermediates for dyestuffs and drugs (N.I.D.C.), Assam oil refinery; and alloy and tool steel plant.

In view of the shortage of foreign exchange and larger commitments of rupee expenditure for several other projects, a few schemes of relatively lesser importance involving an investment of Rs. 64 crores and a foreign exchange expenditure of about Rs. 40 crores, are likely to be deferred or substantially slowed down. They are:

Carbonised briquettes under the Lignite Project; Bank Note Project; Marine Diesel Engine Shipyard-Dry Dock; Newsprint from Bagasse (N.I.D.C.); Synthetic Rubber (N.I.D.C.); Structural, plate and vessel shop (N.I.D.C.); Heavy Machine, Machine Tools Project (N.I.D.C.); Tungsten Carbide (N.I.D.C.); Salem Aluminium Plant; and other projects of State Governments.

An investment of Rs. 685 crores—Rs. 535 crores for new investment and Rs. 150 crores for replacement—was envisaged in the second Plan for the private sector in industries, the total foreign exchange expenditure involved being Rs. 320 crores (Rs. 250 crores representing new investment). After the formulation of the Plan, targets in certain industries were raised upwards, notably for rayon, electrical equipment, and textile industry. The cost of construction and import prices of capital goods also increased. Consequently, the total investment required to fulfil the programmes approved for the private sector is estimated to have risen to about Rs. 685 crores and the foreign exchange cost to Rs. 120 crores.

In the first year of the Plan, the overall investment in the private sector was between Rs. 135 and Rs. 140 crores and will probably be of about the same order during the second year. There was no difficulty in finding the resources for this investment in 1956-57 as market conditions were favourable in 1955 and 1956 and a considerable increase in raisings from the market was achieved. Further, the Industrial Finance Corporation increased substantially the volume of loans disbursed (Rs. 10.4 crores in 1956-57 as against Rs. 2.2 crores in 1955-56) and substantial foreign capital/loans flowed in for the steel expansion programmes and the Caltex Refinery.

The aforesaid favourable situation has changed in recent months. The Planning Commission doubts whether, in the face of measures

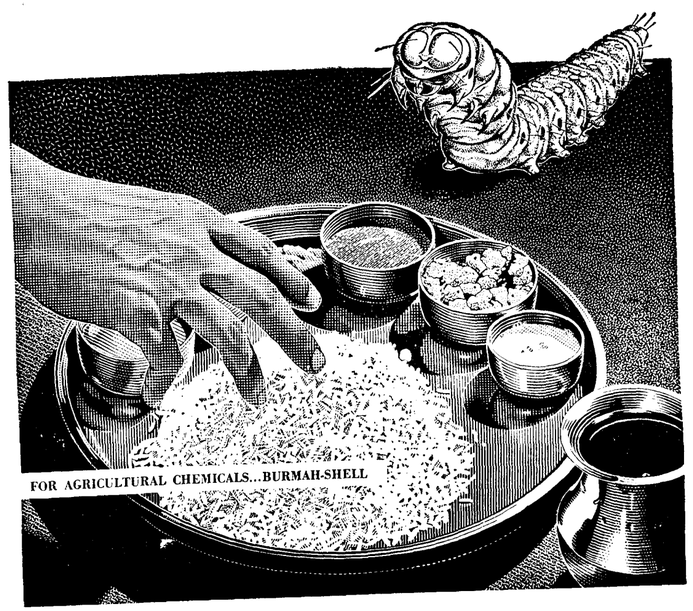
FOOD FOR THOUGHT

A handful of Rice



India has more acreage under rice than any other country in the world. Yet production is not large enough to meet the demand. During 1957 it was found necessary to import 7,00,000 tons of rice at an estimated cost of Rs. 30 crores.

The country has been making steady progress in increasing production by improved methods of cultivation. Among these, control of the paddy stem borer is of special importance as it has been estimated that this deadly insect pest costs the country over Rs. 30 crores a year. The States worst affected are those of Andhra, Kerala, Madras, Mysore and Orissa.

Shell endrin provides effective, persistent control of the paddy stem borer and can thus increase rice yields on affected fields by up to 50%.

True—Shell endrin has to be imported because it is not manufactured in India: indigenous materials are however used in its formulations. And for every rupee spent on importing Shell endrin, as much as ten rupees worth of rice can be protected—which is a sensible way of saving foreign exchange whichever way you look at it.

SHELL Chemicals can save crops

EXPANSION SCHEMES IN PROGRESS

THE Directors of the National Rayon Corporation Ltd. (*Managing Agents*: Messrs. Chinai and Company Private Ltd., Bombay) propose to maintain the dividend for the year ended 31st December 1957 at the same rate, namely, 14 per cent., as was paid for the previous year. There is, however, one difference, in that while the dividend a year ago was in the nature of a dividend of 12 per cent. and a cash bonus of 2 per cent., the distribution for the year under review is all in the form of dividend, the bonus part having been merged with the dividend. After the maiden dividend of 9 per cent. paid for 1953, the Company has stepped up the distribution year after year. Thus, it raised the dividend to 10 per cent. for 1954 and to 12 per cent. for 1955 and further to the level mentioned above. The merger of the bonus portion with the dividend would seem to suggest that the Directors are confident of maintaining the distribution at the rate in the years to come. But the performance of the Company during the year under review does not appear to give much credence to this hope, for the steep rise in the excise duty on indigenous rayon yarn has made great inroads into the Company's earnings and the profit has actually suffered a recession, as compared with the previous year. The full force of this levy was felt during the year as a sum of Rs. 37.73 lakhs had to be paid on this account, as against Rs. 80.221 paid for one month in the preceding year. The rise in excise duty has practically set at naught the benefits of expansion of the rayon plant. Indeed, as the Directors point out, if the expansion had not been completed in time, there is no doubt that this huge burden would have weighed heavily on the Company and its ability to provide for reasonable allocations as well as to maintain the previous year's rate of dividend would have been affected.

The gross profit at Rs. 150.48 lakhs has dropped Rs. 4.81 lakhs from Rs. 155.29 lakhs for 1956, to which level it had jumped from Rs. 115.26 lakhs for 1955. The provision for depreciation has been raised from Rs. 60 lakhs to Rs. 75 lakhs but that for taxation has been lowered from Rs. 26.61 lakhs to Rs. 12 lakhs, including Rs. 6.5 lakhs for 1956. Out of this sum, the Directors expect that the liability for payment of income-tax in respect of the year 1957 would be Rs. 2.50 lakhs and that for wealth tax Rs. 3 lakhs. After making the above provisions, the net profit at Rs. 52.59 lakhs also stands lower, as compared with Rs. 58.33 lakhs a year ago. The dividend on the preference shares is proposed to be paid after deducting tax at source.

In conformity with its policy, the Company has conserved a good part of its profit this year also. While the provision to the debenture redemption reserve has been maintained at Rs. 10 lakhs, that to the general reserve has been raised from Rs. 7 lakhs to Rs. 13.35 lakhs. The deferred taxation reserve which had been the recipient of Rs. 10 lakhs in the previous year has not been provided with anything.

The following comparative table presents the salient features of the Company's working results for the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds	5 37.48	4.22 38	3.42 50	2.96 37

Carry forward	1.24	5.52	5.12	5.72

* Less tax.

It will be clear from the table above that the Company's sale proceeds have sharply increased by Rs. 115.10 lakhs. This is even higher than that in the previous year when a rise of Rs. 79.88 lakhs was noted. The increase in production and the rising trend in turnover are reflected in the cost of raw materials consumed and other expenses both of which have gone up. As stated at the outset, the excise duty on indigenous rayon yarn has absorbed a substantial portion of the year's profits. It may be mentioned here that the Central Government imposed excise duty on indigenous rayon yarn at the rate of 25 nP per lb. on 120 and 150 deniers and 37 nP on 100 deniers with effect from 1st December 1956.

The tempo in the Company's various schemes of expansion is fully kept up. Referring to these, the Directors, in their latest report, observe as follows:

"The fourth stage of expansion of the rayon plant was completed in July last, thus achieving the duplication of the entire original project. The whole plant has since been working satisfactorily at its rated capacity of about 19 million lbs. in terms of 150 deniers. The electrolytic caustic soda chlorine plant of the Company having a daily capacity of 20 tons of caustic soda (rayon grade), 5 tons of liquid chlorine and 16 tons of commercial hydrochloric acid was put into operation by the end of last year. The trial runs of various sections thereof were taken and though, in the beginning, we experienced some teething trouble, the plant is operating at about 75 per cent. of its rated capacity. The quality obtained was tested and found to compare well with the imported rayon grade variety.

"As indicated in the last report, the Directors have decided to put up a tyre cord plant costing about Rs. 3 crores, nearly half of which would comprise dollar exchange to be incurred for importing machinery and for the 'know-how.' The other half is to cover the cost of buildings, customs duty, fabrication and purchase of other equipment in this country, installation of the entire machinery, interest, working capital, etc. It has been possible for the Company to secure credit from the Export-Import Bank of Washington to the extent of 1.8 million dollars, covering 60 per cent. of the contract price of the machinery for this tyre cord plant to be imported and another credit from the principal suppliers of the machinery in the United States to the extent of 20 per cent. These credits will take care of the requisite dollar exchange equivalent to about Rs. 1.20 crores."

The Directors further state that during the period of import and installation of the machinery, which would take about two years to complete, the Company should be able to find from its own resources a sum of Rs. 80 lakhs, including the balance of 20 per cent. of the dollar content for the equipment. This leaves a balance of about Rs. 1 crore, which has to be raised to complete the financial requirements of the entire plant. In order to meet the balance, the Directors decided to increase the capital of the Company by the issue of 80,500 new equity shares of Rs. 100 each at a premium of Rs. 25. The new shares will rank *pari passu* with the existing equity shares in all respects except the dividend. They will rank for dividend declared from the year beginning 1st January 1958, on the amounts for the time being called up or credited as paid up on the said shares.

The paid-up capital of the Company as at 31st December 1957 stands slightly reduced from Rs. 334.92 lakhs to Rs. 334.87 lakhs, due to the forfeiture, during the year, of 40 preference and 110 equity shares. The paid-up capital is supplemented by reserves and surplus aggregating Rs. 143.82 lakhs, of which the general reserve accounts for Rs. 46 lakhs, deferred taxation reserve for Rs. 60 lakhs and debenture redemption reserve for Rs. 30 lakhs. The Company's debenture liability, secured by 5½ per cent. mortgage debentures, amounts to Rs. 150 lakhs. The current liabilities stand at Rs. 562.79 lakhs and include loans from banks to the tune of Rs. 158.79 lakhs. There has been an addition of Rs. 224.04 lakhs to the gross block during the year, bringing its total value to Rs. 1,055.96 lakhs. This has been written down to a book value of Rs. 715.96 lakhs. The current assets aggregate Rs. 207.18 lakhs and fall short of the current liabilities and provision for taxation by as much as Rs. 355.61 lakhs.

The Rs. 100 fully paid-up shares are being currently quoted at Rs. 235 *cum-div.* On an *ex-div.* basis, the shares provide a yield of 6.33 per cent. per annum, free of income-tax.

CAMBODIA MILLS SUFFER LOSS

DIVIDEND, HOWEVER, MAINTAINED

DIFFICULT trading conditions, consequent on high prices of cotton, accompanied by uneconomic prices for the finished product, namely, yarn, have adversely affected the working of the Cambodia Mills Ltd. (Managing Agents: Messrs. Peirce Leslie & Co., Ltd., Coimbatore) during the year ended 31st December 1957. This disparity between cotton and yarn prices was so marked that despite a substantial rise in the Company's sale proceeds over the preceding year, the working results have actually shown a loss. Thus, a gross loss of Rs. 1.13 lakhs has been incurred, as against a gross profit of Rs. 3.41 lakhs in the previous year. After slightly raising the provision for depreciation from Rs. 2.18 lakhs to Rs. 2.41 lakhs and providing Rs. 16,983 as wealth tax for the year 1956 and Rs. 2,304 for income-tax paid for the year 1955 on income from other sources, there is a net loss of Rs. 4.08 lakhs, as against a net profit of Rs. 92,303 in the previous year.

In spite of the adverse results, the Directors propose to maintain the dividend on the ordinary shares at the rate of 5 per cent. paid for the previous two years. For this purpose, they have transferred Rs. 1 lakh from the general reserve. With the amount bought in as surplus from 1956, they have also paid the dividend on the 7 per cent. cumulative preference shares, leaving a loss of Rs. 3.62 lakhs to be carried forward which has been adjusted against the general reserves.

Results Compared

The following table will enable a comparative study of the Company's working during the past three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds	1,26.10	91.22	1,23.06	1,10.47
Closing stock of finished goods	7.45	4.15	N.A.	N.A.

* Income-tax paid for the year 1955 on income from other sources and wealth tax provision for 1956.
N.A. = Not available.

It will be seen from the above table that the sale proceeds have made a substantial rise of Rs. 34.88 lakhs to Rs. 1.26 crores during the year under review. This also reverses the downward trend noted in the previous year when the sales dropped by as much as Rs. 31.84 lakhs. The rise in the cost of raw materials consumed from Rs. 65.41 lakhs to Rs. 95.79 lakhs indicates the higher cost of cotton and, to some extent, the expansion in production. The difficult conditions in the yarn trading industry are reflected in the rise in the closing stocks from Rs. 4.15 lakhs to Rs. 7.45 lakhs. Other expenses have also increased from Rs. 26.22 lakhs to Rs. 35.10 lakhs. The expenses for the year include a sum of Rs. 85,120, representing 1½ months' basic wages given as an interim award to labour. The Directors say that this is now the subject of adjudication.

Finances

The Company's financial position, as disclosed by its balance-sheet as at 31st December 1957, is satisfactory. Its paid-up capital of Rs. 21 lakhs is made up of 1,000 seven per cent. cumulative preference shares of Rs. 100 each and 200,000 ordinary shares of Rs. 10 each. As against this, the reserves and surplus aggregate Rs. 15.38 lakhs. The current liabilities amount to no more than Rs. 9.69 lakhs and include loans from banks secured against stocks of the order of Rs. 4.71 lakhs. The gross block of Rs. 50.23 lakhs stands written down at Rs. 24.05 lakhs. Additions during the year were of the order of Rs. 8.12 lakhs. The current assets aggregate Rs. 22.02 lakhs and cover the current liabilities by a margin of Rs. 12.33 lakhs.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 8.50 *cum-div.* On an *ex-div.* basis, the dividend for the year works out a yield of 6.25 per cent. per annum, free of tax.

ANGLO-FRENCH TEXTILES

MODEST DIVIDEND DECLARED

IN spite of the deterioration which took place in the textile and yarn markets during the year 1957, it is gratifying to note that the Anglo-French Textiles Ltd. (Managing Agents: Messrs. Best & Co. (Pondicherry) Private Ltd., Pondicherry) has reported better results in its working during the year ended 31st December 1957, as compared with the previous year. Production and earnings have both substantially improved and a reasonable profit also made, in refreshing contrast to a loss suffered in the previous year. The better results are, no doubt, due to the improved relations which existed between the labour and management during the year under review. In this context, it is worth stating that during 1956 there were a number of strikes and production for that year amounted to only 7.217 million lbs. of yarn and 12.721 million yards of cloth. The output during the year under review improved to 9.377 million lbs. of yarn and 17.512 million yards of cloth.

The gross profit at Rs. 12.86 lakhs compares very favourably with a loss of Rs. 1.43 lakh in 1956 and a modest profit of Rs. 1.38 lakh made in 1955. After providing for Managing Agents' commission and setting aside Rs. 4.16 lakhs for depreciation, as against *nil* in the previous year, and another Rs. 1.26 lakh for taxation, as against Rs. 2,696, representing excess provision for income-tax for 1955, there is a net profit of Rs. 6.73 lakhs, as against a net loss of Rs. 1.46 lakh a year ago. This net loss has been reduced to Rs. 1.05 lakh by the small surplus carried over from the profit for 1955 and by a transfer of Rs. 30,000 from the general reserve. The Directors have allocated Rs. 1.57 lakh as provision for bonus. The net amount left over after making the above provision and wiping out the debit balance brought forward from the previous year has enabled the Directors to pay the arrears of the dividends on the preference shares for 1956 and the dividends on them for 1957 and also declare a dividend of 6 per cent. on the ordinary shares.

The table appended below will give some idea of the Company's progress during the last three years:

(In lakhs of rupees)

	For the year ended 31st December		
	1957	1956	1955
Sale proceeds	2.05.71	1,45.51	58.34
Closing stocks of cloth, yarn, waste and old materials	40.28	33.36	18.24
Cost of cotton consumed	1,19 30	86.39	31.30

Ordinary	1.80 (6%)	..	..
Carry forward	0.15	—1.46	0.12

* For the years 1956 and 1957.

It will be seen from the table that the Company's sale proceeds have made a substantial improvement of Rs. 60.20 lakhs over the year to Rs. 2.06 crores. Cost of cotton consumed and other expenses have also gone up.

The Company was formed in 1951 to take over the shares of the Anglo-French Textiles Company, Ltd., the owners of the Rodier Mill, as a going concern. It was, however, carrying on as a holding company and as acting and selling agents until 19th August 1956 when the Anglo-French Textile Company, Ltd. went into liquidation and the latter's business was transferred to the Anglo-French Textiles Ltd. It is stated that it has still not been possible to complete the liquidation of the Anglo-French Textile Company, Ltd. as the tax liabilities have not yet been finally determined. During the year, the Company received from the liquidator, the Anglo-French Textile Company, Ltd. (in voluntary liquidation), Rs. 6.60 lakhs as distribution of capital in winding-up, which amount falls to be credited to the block account.

In order to compete successfully in world markets, the management has drawn up a comprehensive scheme of modernisation of the Company's plant. Accordingly, an application has been submitted to the National Industrial Development Corporation for a loan of Rs. 40 lakhs for carrying out this programme.

The balance-sheet as at 31st December 1957 shows the Company's paid-up capital at Rs. 48 lakhs, of which 30,000 six per cent. cumulative preference shares of Rs. 100 each account for Rs. 18 lakhs and 18,000 ordinary shares of Rs. 100 each for the balance. It has no reserves except the year's small carry-over surplus of Rs. 15,213. The current liabilities amount to Rs. 73.82 lakhs and include a provision for taxation at Rs. 1.26 lakh. The gross block of Rs. 30.87 lakhs has been written down to Rs. 26.72 lakhs. Additions during the year accounted for Rs. 3.20 lakhs. The current assets aggregate Rs. 93.84 lakhs and miscellaneous expenditure and losses Rs. 1.41 lakh. The current assets cover the current liabilities and provision for taxation by a comfortable margin.

The Rs. 100 fully paid-up ordinary shares are being currently quoted at Rs. 89 *cum-div.* On an *ex-div.* basis, the yield is 7.23 per cent. per annum.

Points From The Chair

Industrial Output

"GOVERNMENT deserves praise for initiating an aggressive programme for increasing industrial production, and a considerable measure of success has attended these efforts, but to sustain the increase and keep on a progressive rate of growth two essential conditions must be satisfied, namely, demand to keep pace with supply and raw materials to be made available in abundance and in time. To create temporary employment is not the answer to the four hundred million problem. A modern socialist planner asks us never to forget that the 'end of a rational economic activity is to make possible more production and more consumption and that expansion of employment has to allow the maximum expansion of production, but should not be made in a way as to be detrimental to the latter.' Yet, today industries in India face serious dislocation. In the engineering field non-availability of even the essential raw materials like pig iron and coke dictates a position of almost complete helplessness and warrants a justifiable criticism of inadequate instruments of Government planning. Planning postulates that correct emphasis is placed on the right industries and once included within the Plan no effort is spared to provide the means for that industry to reach maximum production desired and to ensure consumption of the products of industry."

K. C. MAHINDRA,
Mahindra and Mahindra Ltd.

Second Plan

"Many learned discourses have appeared on the overbounding ambitions which governed the formulation of the second Plan—its lack of realities, its over-emphasis on heavy industries, insufficient care for agricultural advancement, haphazard and expensive social theories and a general poverty of resources. I do not propose to enter into a detailed argument on the merits or otherwise of planning. The past is a bucket of ashes. What should be recognised is that to stand still will be to stagnate. It is also to be recognised that the most prominent feature of Indian economy in the last 12 months has been the pulling up of socks in the most classic orthodox manner—inflationary prices, particularly in foodgrains, have been halted, bank advances and credits controlled and directed into worthier channels, and even tax adjustments, although minor, admitted into the new pattern. Despite the pedestrian budget, the keel of the ship of the realm has been righted and set on a straight, although austere course. I do not decry controversy and argument over past mistakes, but, quoting the British Prime Minister, why look up a train in last year's Bradshaw? The need of the moment is to find equilibrium in motion. 'History does not linger long in the twentieth century; the world alters as we walk in it.'"

K. C. MAHINDRA,
Indian Aluminium Company Ltd.

Manganese Ore Export Trade

"On the question of future prospects, I think it is well to remember that the fortunes of the Indian manganese ore export trade is largely dependent upon foreign buyers whose activities, in turn, are dictated solely by the demand of the steel industry, especially in the U.S.A. However, on account of the recession which the economy of that country has suffered recently, to which I have referred, and the fact that some other important steel producing countries are holding large stocks of this commodity, it is not expected that there will be any substantial demand for Indian manganese ore for some time to come, although it is generally felt that the demand might pick up towards the end of the year when the stocks held at present are running low. In this connection, I think it is worthwhile mentioning that recently the Government of India was negotiating a barter deal with the United States of America for the sale of low and middle grade manganese ores in exchange for American wheat. If and when this materialises, although it would seem that there are still some hurdles to be crossed, I am sure this will give a fillip to the Indian manganese ore industry and trade as a whole. It has even been ascribed in certain quarters that the relative stability of the ore market at the present depressed levels is due to the possibility of this barter deal materialising, although this seems conflicting with another report that in New York the feeling in the manganese trade is that any expansion of barter business is highly unlikely."

PEERMADE TEA CUTS DIVIDEND

WORKING OF UNITED FLOUR MILLS BETTER

Peermade Tea Co., Ltd.

THE directors of the above Company (Secretaries: Messrs. Aspinwall & Co. (Travancore) Ltd., Pathirapally, Kerala) submit the audited accounts of the Company for the year ended 31st December 1957.

The net profit for the year amounted to Rs. 2,05,727 as compared with Rs. 5,84,517 in 1956. The decline for 1957, in spite of a record crop, was mainly due to increased total expenditure and a drop in average sale price realised.

As usual, the necessary provisions for depreciation on buildings and machinery have been made. Provision for taxation includes cover for taxation on dividends in excess of 6 per cent. in respect of dividend payments during the year under review.

Crop.—An all time record crop of 22,54,940 (18,87,956) lbs. was harvested, which is 3,66,984 lbs. more than the 1956 crop and 3,15,406 lbs. in excess of the previous record made during 1954. This is mainly attributed to the very favourable weather conditions experienced throughout the year and to the build-up brought about by the cultivation policy. An improvement in respect of co-operation from labour is reported, and this factor has had a considerable influence on the harvesting of an increased crop.

The results of the last three years compare as under:

Year	Crop	Estate expenditure	All-in cost	Average sale price
		Cts. per lb.	Cts. per lb.	Cts. per lb.
1955 ..	18,54,907	128.06	162.52	185.03
1956 ..	18,87,956	137.41	174.49	202.28
1957 ..	22,54,940	128.40	158.46	165.16

The decreased average sale price compared with 1956 reflects the trend of the market during the year, when supply was in excess of demand. For 1958, the Manager has estimated for a crop of 19,00,000 lbs. a conservative figure, at an estate expenditure of 142.87 cents per lb.

General.—The crop secured for the year at 22,54,940 lbs. represents an overall yield of 1,448 lbs. per acre. The usual comparison statement of yields per acre is as follows:—

Estate	1954	1955	1956	1957
Pirmed	1,152	1,158	1,177	1,333
Lone Tree ..	1,339	1,225	1,246	1,563
Company	1,246	1,192	1,212	1,448

During the year the dispute regarding labour bonus for the years 1955 and 1956 was settled, and the outcome added considerably to the ever increasing total expenditure. A further interim increase in wages was granted on 1st November last and this approximates 8½ per cent.

A sum of Rs. 1,55,351 (Rs. 2,17,463) was carried forward in the profit and loss account in respect of 1956 working and to this figure is added the sum of Rs. 2,05,727 (Rs. 5,84,517) being profit for the year 1957. During the year under review, the directors have distributed Rs. 9,000 (Rs. 9,000) and Rs. 1,27,500 (Rs. 1,70,000) being dividend at the rate of 6 per cent. free of income-tax on preference shares and interim dividend at the rate of 7½ (10) per cent. free of income-tax on ordinary shares respectively. In view of the substantial fall in the profit for the Company during 1957, and having regard to the dividend equalisation reserve built up in the years of prosperity, the directors have considered it expedient to transfer a sum of Rs. 85,000 (*nil*) from that reserve to the profit and loss account, and recommend a final dividend of 17½ (27½) per cent. free of income-tax on the ordinary shares. This absorbs Rs. 2,97,500 (Rs. 4,67,500) leaving a sum of Rs. 1,02,542 (Rs. 1,55,351 after placing Rs. 2,900 to non-executive staff retirement fund) to be carried forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	18,50,000	Block ...	24,39,969
Reserves ...	8,81,944	Stock-in-trade	7,40,398

Liabilities ...	11,33,919	Debts, deposits and advances ...	1,79,182
Profit and loss account ...	1,02,542	Investments	7,18,885
		Cash ...	2,50,491
Rs.	45,23,268	Rs.	45,23,268

United Flour Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th November 1957.

The Company's profit for the year is Rs. 5,81,293 (Rs. 3,61,679) and after providing taxation on profits for the year of Rs. 4,03,640 (Rs. 2,34,044) there remains a balance of Rs. 1,77,653 (Rs. 1,27,635). To this amount is to be added provision for taxation no longer required Rs. 30,475 (*nil*) and the amount brought forward from the previous year of Rs. 17,273 (Rs. 25,632) making a total of Rs. 2,25,401 (Rs. 1,53,267). Out of this the directors have declared an interim dividend of 25 (30) per cent. already paid Rs. 1,25,000 (Rs. 75,000). They now recommend a dividend of 15 (15) per cent. payable without any deduction for income-tax paid by the Company absorbing Rs. 75,000 (Rs. 37,500). After deducting transfer to development reserve of Rs. 3,370 (nil) there is a credit balance to be carried forward of Rs. 22,031 (Rs. 17,273 after placing Rs. 23,494 to general reserve).

The dividend of 40 per cent. for the year is on a paid-up capital of Rs. 5,00,000. The dividend of 45 per cent. for the previous year 1956 is on a paid-up capital of Rs. 2,50,000.

Trading Conditions.—There was keen demand for the Company's products throughout the year. The ban on the use of indigenous wheat by Port Mills, enforced during the latter half of 1956, continued throughout 1957 and Calcutta Mills relied entirely upon wheat imported by the Government of India. Despite occasional difficulties over supplies, the mill was able to work to full capacity.

The production of the various types of wheat products was adjusted in accordance with demand and the extraction of *atta* which had been substantially increased, was maintained during 1957. In addition, the Company milled on behalf of the West Bengal Government a sizable quantity of *atta* for despatch to the districts. Production during the year was 5,52,344 maunds as compared with 4,95,420 maunds during the year ended 30th November, 1956.

Accounts in brief are as under:—

Liabilities	Rs	Assets	Rs.
Capital ...	5,00,000	Block ...	2,22,741
Reserves ...	5,99,627	Stock of wheat, flour, etc. ...	5,16,582
Provision for taxation ...	6,15,000	Stores ...	34,288
Liabilities ...	6,58,744	Capital expenditure in suspense	1,41,437
Profit and loss account ...	22,031	Debts, deposits and advances ...	8,60,237
		Investments	18,063
		Cash ...	6,02,054
Rs.	23,95,402	Rs.	23,95,402

Tropical Plantations, Ltd.

The directors of the above Company (Chairman: Mr. M. Lakshmana Rau, Kottayam, Kerala State) submit the audited accounts of the Company for the year ended 31st December 1957.

Crops and Prices.—Owing to various causes, such as the enhancement in wages awarded to labour and staff, the introduction of provident fund scheme for them and other amenities accorded. Inter-State sales tax, increased sales tax on tea and rubber and surcharge on Kerala sales tax, the cost of production of both tea and rubber has gone unprecedentally high.

Tea.—4,75,367 (4,56,869) pounds of tea [955 (917) lbs. per acre] was harvested during the year at an all-in-cost of Re. 1.41 (Re. 1.28) per lb. and the average price realised is only Re. 1.48 (Re. 1.72) per lb.

Rubber.—During the year under review, a labour strike with wilful obstruction and violence against those who were willing to work occurred in one of the Company's Rubber Estates in the best part of the tapping season which lasted for 34 days.

The total rubber crop secured during the year is only 5,74,196 (6,42,218) lbs. [336 (372) lbs. per acre]. The all-in-cost has mounted to Re. 1.10 (Re. 1) per lb. and the average price realised is Re. 1.50 (Re. 1.50) per lb.

The balance-sheet and profit and loss account for the year 1956 was prepared on the basis of the then existing rates of taxes. Since then, these were enhanced with retrospective effect resulting in an additional payment of Rs. 46,000. A similar contingency also arose in the matter of bonus to labour (1955-56) and increment of staff salaries from October 1956 for which Rs. 51,592 had also to be expended. These items of expenditure prior to 1957, debited to 1957 accounts, greatly dwindled the profits for the year under review.

After charging depreciation and after providing Rs. 84,000 (Rs. 1,95,924) for taxation, the net profit of the Company for the year amounts only to Rs. 95,880 (Rs. 2,78,360). This together with Rs. 66,287 (Rs. 27,927) brought forward from the previous year, aggregates to Rs. 1,62,167 (Rs. 3,06,287). Out of this, the directors have had to provide Rs. 46,000 (*nil*) for prior year's taxation and have transferred Rs. 36,000 (*nil*) to reserve for development for expansion of rubber area, leaving a balance of Rs. 80,167 (Rs. 3,06,287) available for distribution.

The directors recommend payment of a dividend of 4 (12) per cent. [Re. 1 (Rs. 3) per share]—free of income-tax and agricultural tax absorbing Rs. 80,000 (Rs. 2,40,000) and to carry forward the balance of Rs. 167 (Rs. 66,287) to 1958 accounts.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	22,40,542
Reserves ...	36,000	Stock-in-trade	1,87,808
Provision for taxation ...	2,37,670	Stores, loose tools, etc.	65,498
Liabilities ...	3,60,543	Nurseries ...	2,509
Profit and loss account ...	167	Debts, deposits and advances ...	15,079
		Cash ...	1,22,944
Rs.	26,34,380	Rs.	26,34,380

Kyang Tea Seed Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The Company's profit for the year is Rs. 10,816 (Rs. 22,200), and after providing for taxation Rs. 3,401 (Rs. 7,433) there remains Rs. 7,415 (Rs. 14,767). To this amount is to be added provisions no longer required Rs. 2,218 (Rs. 483) and amount brought forward from previous year of Rs. 869 (Rs. 828) making a total of Rs. 10,502 (Rs. 15,869 after providing Rs. 209 for provision for doubtful debts). Out of this the directors recommend payment of a dividend of 5 (7½) per cent. on the ordinary shares, without any deduction for income-tax paid by the Company absorbing Rs. 10,000 (Rs. 15,000) leaving to be carried forward Rs. 502 (Rs. 869).

The Company's holdings comprise 336 acres, and the planted area is 71 acres. The periodic leases on which the Company's land is held are due for renewal in 1960. Throughout the year the property was maintained in a good state of cultivation.

Crop and Sales.—A total crop of 300 (273) maunds of seed was harvested and of this amount 133 maunds good seed were sold in the year under review.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,00,000	Block ...	1,81,000
Reserves ...	35,000	Stores ...	4,338
Provision for taxation ...	10,200	Debts, deposits and advances ...	39,242
Liabilities ...	25,227	Investments	42,425
Profit and loss account ...	502	Cash ...	3,924
Rs.	2,70,929	Rs.	2,70,929

Maharashtra Sugar Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. M. L. Dahanukar & Co., Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th September 1957.

The Company has made a profit of Rs. 53,82,076 (Rs. 43,76,056) for the year. After providing Rs. 3,84,689 (Rs. 4,06,303) for depreciation of assets and Rs. 28,00,000 (Rs. 22,00,000) for taxation, the net profit for the year is Rs. 21,97,387 (Rs. 17,69,753), which together with Rs. 74,036 (Rs. 39,283) brought forward from previous year amounts to Rs. 22,71,423 (Rs. 18,09,036) and the directors recommend the following appropriations:

To dividend of Rs. 75 (Rs. 75) per share and a bonus of Rs. 25 (Rs. 25) per share, free of income-tax, on 18,000 ordinary shares (Nos. 1 to 18,000 both inclusive) for the year ended 30th September 1957 absorbing Rs. 18,00,000 (Rs. 15,00,000 on old capital), to dividend of Rs. 17.50 (Rs. 17.50) per share free of income-tax on 2,000 cumulative preference shares for the year ended 30th September 1957 absorbing Rs. 35,000 (Rs. 35,000) and to transfer to general reserves Rs. 4,00,000 (Rs. 2,00,000) leaving a balance to be carried forward to the next year of Rs. 36,423 (Rs. 74,036).

The directors have pleasure in announcing that the results achieved during the year under report have been the highest and all-time record of the Company. The working of the factory and the agricultural estate operations have been of a higher standard and efficiency than that of last year. There has been a marked improvement in the yield of sugarcane in the farms of the Company. There has been better recovery of sugar from the sugarcane grown in the Company's own plantations which has resulted in higher production of sugar. The quality of sugar produced has been in accordance with the Indian Sugar Standards and has been well received in the market. At the request of a few neighbouring cultivators, the Company has purchased sugarcane from them and the same has been crushed along with the sugarcane grown in the Company's own estate.

The sugar releases by the Government for free sale continued to be restricted on account of the Government's policy and this has resulted in heavy accumulation of sugar stocks at times in the Company's warehouses.

During the year under report the sugar industry has been further burdened with another increase in excise duty. It may be noted that the present excise duty aggregates to about Rs. 22.50 per bag as against Rs. 11.25 previously.

The Company's distillery worked during the season and the production of rectified spirit has been more than the previous year. The sales and delivery of molasses have been better.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	72,50,000	Block ...	64,60,596
Reserves ...	38,21,978	Stock-in-trade	70,38,375

NEW PUBLICATIONS

Principles of Mercantile Law. By R. H. Pandia. Published by N. M. Tripathi Private Ltd., Princess Street, Bombay-2. Pages : 607. Price : Rs. 14.00.

The book under review has already passed into the fifth edition which suggests how popular Mr. Pandia's *Mercantile Law* has been. In the present edition, the chief features of the earlier edition have been maintained. The edition has also been carefully revised and enlarged so as to include the case law up to June 1957. The laws which have been commented upon and elucidated include those relating to contract, partnership, negotiable instruments, insurance and companies. The *Companies Act* naturally takes up a large part of the book. Even so, the author has not sacrificed any of the features of the earlier editions.

Textile India Year Book—1958. Published by Technical Press Publications, '65, Mahatma Gandhi Road, Bombay. Pages : 100. Price : Rs. 5.00.

This *Year Book* is devoted to the study of the recent trends in the Indian cotton textile industry. The study includes not only a review of the position of the mill sector but also an analysis of raw cotton position and the textile machinery manufactures. There is also a special interesting article on the Development of Nylon in India by Mr. R. T. Thampy, and and Mr. N. R. Kuloor. Further, four appendices are incorporated in the *Year Book*. These relate to glossary of synthetic fibres, cotton textile mills in India, millstone merchants in India, and textile associations and their addresses.

An Introduction to Statistical Methods. By C. B. Gupta. Published by Ram Prasad and Sons, Agra. Pages: 597. Price: Rs. 12.00.

There is a paucity of good textbooks on statistics. Some textbooks are too mathematical to be of use to students whose mathematical knowledge is strictly limited, whereas some of the textbooks err on the side of non-mathematical treatment. Mr. C. B. Gupta has struck a good balance in his *Introduction to Statistical Methods*. Mathematical treatment is not altogether omitted, but it is not made forbiddingly complicated. The book covers collection, classification and representation of data as well as measures of central tendency and of dispersion. The normal curve, time series, index numbers, correlation, association of attributes and interpolation have also been dealt with. There is a good chapter on Indian statistics. A notable feature of the book is that, at the end of each chapter, a large number of exercises has been given, many of them having been drawn from the examination papers set for the B.A., M.A. and B.Com. degrees of various universities. We commend this book to the attention of all students of statistics.

Elements of Accountancy and Commerce. By B. Chengalvarayan. Published by Thilakam Publications, 71, Mulla Sahib Street, Madras-1. Pages: 285. Price: Rs. 4.50.

The book under review is an introduction to accountancy and commerce. The principles of accountancy have been explained in simple language. Nevertheless, it covers all the principal chapters in accountancy, such as trial balance, profit and loss account and balance-sheets. Part II of the book deals with the economic basis of commerce, business organisation, money, banking and foreign trade, as well as credit instruments and transport and communications. The questions set at the end of each chapter are bound to prove useful to a student preparing for commerce examinations. Numerous illustrative examples have been worked out. The author has done well to emphasise some of the points to be borne in mind in working out examples in accountancy by drawing attention to them by means of summary points given in italics. The book must appeal to all junior students in commerce.

The Central Sales Tax Act. By A. C. Roy. Published by Pahuja Brothers, Rajendrapath, Patna-3. Pages: 140. Price: Rs. 5.75.

The book under review gives the text of and the commentary on the Central Sales Tax Act as well as the Central and States' rules thereunder. It incorporates much relevant case law on the subject and explains the provisions of the Act by copious illustrations. It is a handy reference volume on the Act.

QUESTION HOUR IN PARLIAMENT

Economy Drive

THE Government of India saved Rs. 24.07 crores during the financial year 1957-58 as a result of the economy drive. Under the economy drive, certain projects are wholly or partly postponed or abandoned or reduced in scope, and certain posts are abolished or kept unfilled. This amount is smaller than the anticipated figure of savings given to the House on earlier occasions. The difference is due to the fact that, while the estimates of anticipated savings given earlier are necessarily tentative, the actual savings have been worked out on a strict scrutiny of the results of the economy drive and after excluding that part of the savings for which there is no provision in the budget or which cannot be directly attributed to deliberate economy measures but are rather occasioned by circumstances beyond the control of the Ministries concerned such as delay in finalising the details of a scheme or delay in securing supplies from abroad and similar other reasons. The railways have effected the maximum saving (Rs. 13.86 crores) by abandoning some projects wholly or partly and postponing or reducing some in scope. The Iron and Steel Ministry comes second with a saving of Rs. 1.4 crore. The Ministry of Community Development has saved the minimum, Rs. 10,000.

—*Jawaharlal Nehru*

Japanese Loan Scheme

Under the terms of the agreement for the export of iron ore to Japan, the Japanese Government is to provide a loan of $8 million in Japanese currency to the Indian Government. The entire scheme will cost about $60 to $70 million, out of which the foreign exchange component will be $32.5 million. The United States will provide $25 million for this purpose from the President's Asian Development Fund. The balance is to be met by Japan. The scheme will be worked by a Government Corporation in which the State Government may also participate. Private enterprise will not, however, be allowed to participate in the Corporation.

* * * *

Banking Study Abroad

A proposal to depute a few senior officers of the Reserve Bank of India, the State Bank and some other leading banks in the country to study banking practices in the United States and the techniques of financing small-scale industries in Japan is now under consideration of the Government. It is not, however, possible to indicate at this stage when the officers are likely to leave India for such training.

—*B. R. Bhagat*

Deferred Payment

Since January 1957, the Government has given consent to 125 cases of deferred payment agreement, involving a total amount of Rs. 74 crores. The payments are normally covered by the savings or earnings of foreign exchange expected to result from the implementation of the schemes. The sanctioning of deferred payment agreements has been restricted during the current year.

* * * *

Watch Manufacture

The Government will soon take steps to establish a watch factory in the public sector. Four or five other factories are expected to be established in the private sector also. The Government does not intend to restrict the manufacture of watches and clocks to the public sector. Nearly 2.2 million watches and clocks were imported during 1956 worth about Rs. 3.86 crores. These figures can be taken to represent the approximate demand in the country for watches and clocks. Since July 1957, owing to foreign exchange difficulties, there has been a complete ban on the import of watches, clocks and timepieces and it is not proposed at present to relax this ban.

* * * *

Machinery Needs

India's present annual needs of Rs. 135 crores worth of machinery are expected to rise to Rs. 250 crores by the end of the second Plan period. The country's production capacity of Rs. 35 crores worth of machinery is expected to increase to Rs. 100 crores by 1960-61. The Government is aware of the reported statement of the Japanese Ambassador that manufacturers of heavy machinery in his country will be interested in co-operating with Indians in setting up plants in India by providing capital or deferred payment facilities. No concrete proposals have, however, been received from the Japanese.

—*Manubhai Shah*

Sale of Penicillin

The total production of sterile bulk penicillin at the Hindustan Antibiotics (Private) Ltd. in the first three months of 1958 was 7.29 million mega units, as compared with 19.23 million mega units in the whole of 1957. The gross sales of penicillin in the first quarter of 1958 was valued at Rs. 74.61 lakhs, as against Rs. 127.75 lakhs for the whole of 1957.

—*Lal Bahadur Shastri*

Road Development

Due consideration will be paid to the recommendation made by the recent E.C.A.F.E. seminar on low cost roads that the revenue derived from various taxes on road transport, including taxes on petrol, diesel oil and other fuel oils and lubricants, should be pooled into a separate road fund for the development of roads. There was no such rule at present. It is estimated that, in India, such taxes will total about Rs. 71 crores. As against this, a total of Rs. 80 crores is being spent in the country by the various States and the Centre on road development and maintenance.

—*Raj Bahadur*

Railway Electrification

Plans for electrification of 1,062 route miles by the Plan period have been prepared and the total electric energy needed for this purpose is worked out at 177 million watts. Necessary power for electrification of the Asansol-Sini-Tatanagar-Rourkela and the Rajkharswan-Barajanda sections covering South-Eastern Railways coal and iron region will be available from D.V.C. and the Hirakud grid. The railways are assured by the Irrigation and Power Ministry that sufficient power will be made available for the electrification of these sections. Recently, some doubts have been expressed whether the D.V.C. will be able to meet the requirements and so the railways are taking up the matter with the Planning Commission. They may come to an amicable settlement.

* * * *

Freight Rates

The Government's decisions on the recommendations of the Committee for the revision of the railway freight rate structure will be announced shortly. The matter is before the Cabinet.

—*Shah Nawaz Khan*

Deferred Payment for Rourkela Plant

The agreement reached with the Government of the Federal Republic of Germany enables the Government of India, with the co-operation of the German firms and banks, to postpone by three years outstanding payments for the Rourkela steel plant upto a maximum of DM 660 million. Under the agreement, the Government of India has to deliver to the German firms concerned, in lieu of cash payments, promissory notes in Deutschemarks maturing three years after the date the payments fall due. The German firms will be entitled to negotiate the promissory notes in the Federal Republic of Germany. The Government of the Federal Republic of Germany will ensure that the firms are able to get paid by negotiation of the promissory notes. All suppliers of plant and machinery for the Rourkela steel plant have agreed to accept promissory notes.

—*Sardar Swaran Singh*

Sulphur Production

A Committee under Mr. Charat Ram, Director, Managing Agents, Delhi Cloth and General Mills Co., Ltd., has been appointed to explore the possibilities of producing sulphur on a commercial scale.

—*Humayun Kabir*

Labour Awards

A tripartite committee to examine cases of non-implementation or partial, defective or delayed implementations of labour enactments, agreements, awards, settlements, etc., will soon be set up. An Evaluation and Implementation Division has already been set up at the Centre and the State Governments have been circularised to set up such machinery at State and local levels.

—*Abid Ali*

Ukai Dam

No drastic reduction in power generation has been recommended by the Technical Committee for the Ukai Dam. Some reduction in the storage capacity of the reservoir has been recommended by the Committee, consequent on the lowering of the height of the Dam by 6 feet, that is, from FRL 351 to FRL 345. Nevertheless, irrigation potential will be unaffected, proposed irrigation remaining 391,650 acres as before. The Technical Committee's proposals envisage power generation of 90,000 kw. at 60 per cent. load factor, as against 110,000 kw. in the original project report. Gross capacity of the Ukai reservoir was originally kept at 7.85 M. acre-ft. and will be reduced to 6.93 M. acre-ft., according to the Technical Committee's report. The reduction in power generation and reservoir capacity are due to the lowering of the height of the dam by 6 ft.

* * * *

Bhakra Project Estimates

At the instance of the Planning Commission and the Ministry of Finance, the Ministry of Irrigation and Power appointed a team to examine the estimates of the Bhakra-Nangal Project prepared in 1955 amounting to Rs. 170.02 crores. The team recommended that the estimate should be reduced from Rs. 170.02 crores to Rs. 163.00 crores. The reductions suggested were: Bhakra Dam, Rs. 3.51 crores; Ganguwal and Kotla Power Houses, Rs. 1.43 crore; Transmission system, Rs. 1.08 crore; and Nangal dam Canal system, etc., Rs. 1.00 crore. The report of the team was considered by a subcommittee appointed by the Bhakra Control Board which came to the conclusion that the only reduction possible was in respect of the Ganguwal and Kotla Power Houses and transmission system amounting to Rs. 2.51 crores. Against this reduction, certain increases in the Bhakra Dam had also to be taken into account. These increases amounted to Rs. 2.46 crores. The whole matter was reviewed by the team which accepted the findings of the sub-committee and expressed the opinion that the project estimates should be sanctioned at Rs. 170 crores. The Planning Commission has also provisionally accepted this estimate. The estimate is now awaiting the approval of the Bhakra Control Board.

—*Jaisukhlal Hathi*

THE PROBLEM OF SUGAR EXPORTS

(*Concluded from page 927*)

necessary for securing equitable distribution and availability of sugar at fair prices.

In any case, if action is taken under the Industries (Development and Regulation) Act, if any person sells any article pursuant to any order, there shall be paid to him the price therefor, where the price can, consistently with the controlled price, if any, be fixed by agreement, the price so agreed upon and, where no such agreement can be reached, the price calculated with reference to the controlled price, if any, fixed. In case where neither of the two provisions apply, the price payable will be calculated at the market rate prevailing in the locality on the date of sale. Similarly, no order can be passed under the Sugar Control Order 1955, as the Government has power therein only to "regulate production and movement on sugar." No doubt the order envisages that the Government has power to allot quotas of sugar and to issue directions to any producer or dealer to supply sugar of such type or grade in such quantities to such areas or markets or to such persons or organisations and at such price as may be specified in the order. But, before the Government can exercise the above powers, it must fix the price of sugar, having due regard to the price of minimum price fixed for sugarcane, manufacturing cost, taxes, reasonable margin of profit for producer and/or trade and any incidental charges.

Beyond One's Reasoning

Assuming, for argument's sake, that the Government can take suitable action under any of the abovementioned Acts or Order, it is beyond one's reasoning as to how the said corporation can be appointed sole selling agents for each factory. The appointment of sole selling agents is regulated by Section 294 of the Companies Act, which provides that a company shall not appoint a sole selling agent except subject to the conditions that the appointment shall cease to be valid, if it is not approved by the company at the general meeting. At the time of placing the appointment of the said corporation as sole selling agents before its shareholders, each company will have to comply with the provisions of Section 173 of the Companies Act, which in terms requires that, in the notice convening such a meeting, "all material facts concerning the business to be transacted at the meeting must be stated." It is not understood how the said corporation can be authorised by each factory to charge a commission which will vary from time to time, unless they go each time to the shareholders to obtain their sanction. Again, the scheme is silent as to what is to happen to the existing sole agents. If the scheme can be implemented as it is, the existing sole selling agents will have to vacate their office as the word *sole* (selling) agents necessarily implies that a factory cannot have two sole (selling) agents for an area at one and the same time. If the sole selling agents give up their present office, compensation will also have to be paid to them.

The Government, it appears, is alive to the various difficulties enumerated above. And this may be the reason why it has so far desisted from taking action under the abovementioned Acts and Order and has given an indication of their intention to bring in suitable legislation. It will also be unconstitutional to pass any law giving a monopoly to any private corporation. Private business cannot be given any monopoly of trade, though the Government can vest itself with monopoly rights with suitable legislation. In such a case, however, the law must provide for compensation for the goods acquired and the manner in which the compensation is to be determined and given. Though Article 51(2) of the Constitution as amended by the Constitution (Fourth Amendment) Act, 1955 provides that no such law shall be called in question in any Court on the ground, that the compensation provided by that law is not adequate, it will be wrong to suppose that the jurisdiction of courts has been entirely taken away. Even after the amendment, the questions that still remain justiciable are: whether the legislation is for public purpose, whether the compulsory acquisition or requisition has taken place by the authority of law; and whether the legislature has failed to lay down any principles on which compensation is to be determined and given. If the legislature authorises the executive to acquire or requisition property on payment of any compensation, it chose to fix at its discretion, the Court would still be entitled to interfere.

It will be pertinent to note that, in the second scheme, there are no legal complications and it steers clear of constitutional hurdles. The question may, however, arise as to whether the provision for levying a deterrent additional excise duty will be *ultra vires*, Article 19 (*g*)—the right to carry on trade or business—and Article 14 which guarantees equality before law.

It cannot be denied that production of sugar has increased and is increasing and, if sugar is not exported, there may be a glut in the internal market. Further, the interests of the country require that there should be an increase in the acquisition of foreign exchange. The restriction, therefore, will be reasonable on the exercise of rights conferred by Article 19 (*g*), as such restriction will be in the interest of the public. As regards offending Article 14, the principle is that, though the said Article forbids class legislation, it does not forbid reasonable classification, if the classification fulfils two conditions. First, the classification must be founded on an intelligible *differentia*. Secondly, the *differentia* must have a rational elation to the object sought to be achieved by the statute in question.

The classification which the second scheme envisages, namely, that sugar producers who do not utilise or who do not fully utilise the quota for export, is founded on an intelligible *differentia* and the *differentia* does have a rational relation to the object sought to be achieved.

By and large, the second scheme appears to be the less objectionable. As the Government has decided to enact suitable legislation, one has now to wait and see what is in the offing. However, the Government will do well to clear the air at the earliest. It will be some time now before Parliament meets and, by that time, one hopes, rather piously, that the Government will make up its mind finally, taking into account all the relevant factors and the interests of the manufacturers, the sugarcane growers and last but not least of the poor consumer.

Notices

THE BELAPUR COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Belapur Company, Limited, will be held at the Registered Office of the Company at "Brady House," 12/14, Veer Nariman Road, Bombay, on Wednesday, the 18th day of June 1958, at 3.15 p.m. (S.T.), to consider and if thought fit to pass the following resolution as a Special Resolution:

"RESOLVED that the regulations contained in the document submitted to this meeting and for the purpose of identification signed by the Chairman thereof be and the same are hereby approved and adopted with such modifications, if any, as may be agreed to at this meeting, as the Articles of Association of the Company in substitution for and to the exclusion of all the existing Articles of Association thereof."

By Order of the Board,
W. H. BRADY & CO., LTD.,
Managing Agents.

BOMBAY, 19*th March* 1958

Note.—(1) A member entitled to attend and vote is entitled to appoint a proxy and where that is allowed one or more proxies to attend and vote instead of himself. A proxy need not be a member.

(2) A copy of the abovementioned document containing the draft of the proposed New Articles of Association and a copy of the existing Articles of Association of the Company may be inspected at the Registered Office of the Company at "Brady House," 12/14, Veer Nariman Road, Bombay 1, during business hours on any working day until the date of the Meeting.

To the Shareholders of the Belapur Company, Limited and in particular to:
Mr. William Abel & M/s. Rajabali Hasom Paroo & Sons, Ltd.

Explanatory Statement Pursuant to Section 173 of the Companies Act, 1956.

The existing Articles of Association of the Company were adopted on 30th March 1939.

The Companies Act, 1956 which came into force on 1st April 1956 has made considerable changes in the law and procedure relating to companies and has caused your Company's Articles to become obsolete.

As the alterations are numerous and the scheme of the sections in the Act has been substantially changed, it has been considered desirable to adopt a new set of Articles for the existing Articles of Association of the Company.

The present meeting, of which notice is given, has been convened for the purpose of passing the necessary Special Resolution for approving and adopting the new set of Articles with or without modifications.

Members may inspect the existing Articles and the proposed new Articles at the Registered Office of the Company.

A Note setting out more important changes has been posted to the Shareholders.

THE INDIAN CABLE COMPANY LIMITED

ISSUE OF 8,28,848 ORDINARY SHARES OF RS. 10 EACH AT PAR (THIS IS NOT AN OFFER)

NOTICE IS HEREBY GIVEN THAT THE Board of Directors have determined to issue 8,28,848 new Ordinary Shares of Rs. 10 each at par. The new Ordinary shares will be offered for subscription at par for cash to members whose names are registered in the Register of Members of the Company on 11th June 1958 in the proportion of one new Ordinary share for every two shares, Ordinary and/or Preference held by the member on that date (no fractional entitlement being given) with the right to renounce all or any of the shares so offered in favour of third parties.

The aforementioned members will also be entitled to apply for additional shares at par for cash, to be allotted to them subject to the conditions laid down by the Controller of Capital Issues and the Reserve Bank of India in the event of any Rights Shares not being taken up as aforesaid.

The Register of Members of the Company will remain closed from 28th May 1958 to 11th June 1958 (both days inclusive).

Persons holding shares on blank transfer deeds are advised in their own interests to lodge properly completed transfer deeds with the relative share certificates at the Company's Registered Office, 9, Hare Street, Calcutta, for registration of the shares in their names before 28th May 1958 in default of which no claims by such persons shall lie against the Company.

Circular Letters setting out the terms of the offer and detailing the procedure to be followed and Letters of Rights with forms of Renunciation, Acceptance and Request for additional shares will be issued to the aforementioned members on 11th June 1958 or as soon as practicable thereafter.

By Order of the Board,
THE INDIAN CABLE COMPANY LIMITED,
B. J. WOODLEY,
Chairman.

9, HARE STREET,
CALCUTTA, 8*th May* 1958.

THE MAHARASHTRA SUGAR MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE TWENTY-FOURTH ANNUAL GENERAL MEETING of THE MAHARASHTRA SUGAR MILLS LIMITED will be held on Monday the 9th day of June 1958 at 11-30 a.m. at the Registered Office of the Company, Industrial Assurance Building, opp. Churchgate Railway Station, Bombay, to transact the Ordinary and Special Business mentioned in the Notice.

The NOTICE of the Meeting and the Explanatory Statement along with the Balance Sheet, Profit and Loss Account, Report of the Board of Directors and the Auditors' Report for the year ended 30th September 1957, have already been sent to the Shareholders.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

The Share Transfer Books of the Company will be kept closed from 2nd day of June 1958 to 17th day of June 1958 (both days inclusive).

By Order of the Board,
M. L. DAHANUKAR & CO. PRIVATE LTD.,
D. M. DAHANUKAR,
Director,
Managing Agents.

BOMBAY, 8*th May* 1958.

LOANS FULLY SUBSCRIBED

(*From Our Own Correspondent*)

BOMBAY, 14*th May*

The withdrawal of funds with banks and other institutions for subscription to the Central Government's bonds and loans, the list for which opened on Monday this week and closed today, did not have any notable effect on the short-term money market during the week under review. Conditions were fairly easy and, except for one or two, banks did not come out as borrowers in the market. This was because banks had already a surfeit of funds and were lenders with no borrowers. There was no change in interest rates either. Inter-bank call money continued to be bid at 3 per cent. among the Exchange banks and big Indian banks and at 3-3¼ per cent. among the smaller banks. House money at call was also unchanged at 4½ to 4¾ per cent. and short-term deposits at 4½ to 4⅝ per cent. for one to six months.

A rise of Rs. 10.33 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 9th May 1958. Notes in circulation are lower by Rs. 11.80 crores, so that the total notes issued have declined by Rs. 1.47 crores and this fall is covered by a corresponding decline in rupee coin. Foreign securities have been marked down by Rs. 19.87 crores, while rupee securities are up by a similar extent. Deposits of the Central Government are higher by Rs. 3.64 crores and deposits of banks by Rs. 13.50 crores. Balances held abroad show a rise of Rs. 15.60 crores, so that there is actually a shrinkage in foreign assets to the tune of Rs. 4.27 crores. Loans and advances have gone up by Rs. 4.42 crores, while other loans and advances are lower by Rs. 1.07 crore, of which advances to Scheduled banks against usance bills account for Rs. 1.06 crore. There has been an increase of Rs. 20.38 crores in investments and a decline of Rs. 10.18 crores in Government Treasury Bills.

The Scheduled banks' statement for the week-ended 2nd May 1958 discloses a sharp fall of Rs. 23.70 crores in demand deposits, while time deposits have gone up by Rs. 21.11 crores to Rs. 775.07 crores, at which level they exceed the demand deposits by Rs. 17.63 crores. Inter-bank borrowings are also up by Rs. 2.67 crores, and borrowings from the Reserve Bank are up by Rs. 1.07 crore. Advances have gone up by Rs. 1.11 crore, while bills purchased and discounted are lower by Rs. 2 crores. Investments have declined by Rs. 94 lakhs and cash balances have enlarged by Rs. 6.57 crores.

In the Gilt-edged market, the subscription lists for the 3½ per cent. Bonds 1963, 3¾ per cent. National Plan Bonds 1968 and 4 per cent. 1973 were closed today at 12 noon as the notified amount was fully subscribed. The total amount sought for was Rs. 135 crores, but the actual amount subscribed is not known. The market ruled dull during the week with scanty business. Prices of most of the issues remained unchanged. 3 per cent. 1986 Conversion Loan were unchanged at Rs. 71-25. 3 per cent. 1970-75 maintained the upward trend with a further rise of 10 nP to Rs. 86.90. 3 per cent. 1966-68 held its ground at Rs. 92.65, as also 3 per cent. 1964. 3 per cent. 1963-65 picked up 5 nP to Rs. 95.30. 3 per cent. 1959-61 was unchanged at Rs. 99.10 and 3 per cent. 1958 at Rs. 99.75. 3½ per cent. 1961 was marked down by 5 nP to Rs. 99.55, while 3½ per cent. 1964 gained 5 nP to Rs. 98.20. 3½ per cent. 1965 and 3¾ per cent. 1967 were unchanged at Rs. 97.80 and Rs. 97.55, respectively. 3¾ per cent. 1967 was also stagnant at Rs. 99.70. Among the State Loans, 4 per cent. U.P. 1963 gained 10 nP to Rs. 99.30 and 4 per cent. 1964 20 nP to Rs. 99.

The recovery in sterling abroad infused strength to the rupee also and bankers' selling rate of U.S. dollar declined from Rs. 475.75 to Rs. 475.50 per $100, and their buying rate from Rs. 472.50 to Rs. 472. In New York, spot sterling moved up from $2.81.3/16-2.81.5/16 to $2.81.7/16-2.81.9/16. Three months' forward gained from $2.78⅞-2.78¾ to 2.79-2.79¼ and transferable sterling rose from 279.20-279.30 cents to 279.50-279.60 cents.

LINSEED WELL MAINTAINED

(*Messrs. A. Bradley and Co.*)

CALCUTTA, 12*th May*

Firm conditions in the linseed market continue. There has been no further rises, price levels are well maintained. Shortage of supplies are the main feature again, and there are virtually no offers of new crop seeds from upcountry centres. The price of oil has advanced slightly due more to scarce supplies than increased demand. Enquiries from shippers are negligible and fresh business is unworkable except from Bombay where cheaper charter freight is reported to be available. The latest quotations for Ready and May-June is Rs. 21-14-0 per maund.

HIDES DULL

(*From Our Own Correspondent*)

KANPUR, 12*th May*

Dull conditions prevailed in the hides and skins market during the week under review. There was no new factor to take note of. The supply position was slightly easy. Demand for upper grade cow and buff was particularly strong, the purchasers being the local tanners. The Madras dealers were lukewarm. Owing to advent of summer, the volume of new arrivals of goat and sheep skins were lower. The latest available quotations are: Wet salted cow, 1st grade Rs. 380, 2nd grade Rs. 330 and 3rd grade Rs. 250 per score; wet salted buff, 1st grade lb. 4 ozs., 2nd grade 1 lb. 6 ozs. and 3rd grade lb. 8 ozs. per rupee; goat, 1st grade Rs. 350 and 2nd grade Rs. 325 per 100 pieces; sheep, 1st grade Rs. 320 and 2nd grade Rs. 300 per 100 pieces.

READY SILVER DROPS

(*From Our Own Correspondent*)

BOMBAY, 14*th May*

The bullion market ruled dull and the trend of prices in the forward section was somewhat erratic. The undertone was, however, fairly steady in both silver and gold. The noteworthy development of the week was the narrowing of the premium which ready metals commanded over the forward. In silver, the premium of ready over the current settlement, which had at one time stood at Rs. 3-8, was completely wiped out in the course of this week and in gold, it declined from Rs. 3-8 to Rs. 2. This is consequent on the drop in demand due to the onset of the slack season. Though the scarcity of floating stocks continued, the sudden fall in demand affected the ready prices. This was more marked in silver.

Forward silver (June settlement) moved up from Rs. 193-3 to Rs. 194 on Saturday before reacting to Rs. 192-6 yesterday. Today, however, there was again a marked recovery to Rs. 193-6 at the close. The July settlement came up from Rs. 191-3 to Rs. 192-7. After a retreat to Rs. 190-9 it again improved to Rs. 191-4.

Ready silver showed some recovery early in the week from Rs. 196-3 to Rs. 196-14, but slumped to a low of Rs. 192-6 yesterday. Today, it improved to Rs. 193-6 at the close. The floating stocks of silver are estimated at 250 bars. The daily average arrivals were 20 bars, while the offtake was less than 10 bars.

Gold for forward delivery (June settlement) advanced from Rs. 109-15 to Rs. 111-9, but shaded off to Rs. 110-7 yesterday. Today, it improved to Rs. 111-5. The July settlement hardened from Rs. 108-15 to Rs. 110-3 before relapsing to Rs. 109-4. There was a rise again today to Rs. 109-15.

Ready gold closed at Rs. 113-5, as against Rs. 112-15, after touching a high of Rs. 114-9. The floating stocks of gold are 20,000 tolas. While the daily average arrivals were 3,000 tolas, the offtake was 2,500 tolas.

In New York, silver was unchanged at 88⅝c. The London prices were also maintained at 76½d. for spot and at 75½d. for forward. After improving from 249*s.* 6½*d.* to 249*s.* 9*d.*, gold fell to 249*s.* 5*d.*

The following comparative table shows at a glance the trend of the market during the week under review:

	14-5-58	Highest	Lowest	7-4-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint) ..	113 5	114 9	112 3	112 15

N.B.—Foreign bullion prices shown in the above table relate to the previous day.

TIN RECOVERS

(*From Our Own Correspondent*)

CALCUTTA, 13*th May*

Tin and electrolytic zinc recorded a small recovery in prices enouraged by demand, during the week under review. On the other hand, lead sagged and the copper market continued to be at a standstill. Government's clarification as to whether forward contracts entered into prior to the coming into force of control would be affected was still awaited. However, it was noted that the tendency to withdraw from such contracts, if it suited buyers, was noticeable. This would certainly affect India's reputation in foreign markets. Possibly, forward contracts would not be affected by the control; if this were so, it would be better for the authorities to make the position clear, so that buyers could proceed honouring commitments on sure grounds. Controlling the price of raw material without controlling the finished products or semis of the controlled raw material presents an anomalous situation, as a result of which small consumers of the finished products would feel the difficulty. As already pointed out in these columns, the shortage of copper has been a result of restricted imports. The trade has urged that now that world production of copper is far higher than demand, further cut-backs in production might follow. If only sufficient opportunity is afforded to the trade to import reasonable quantities and carry an adequate stock, not only the price of the raw material would decline, finished products would be used only to meet the genuine demand of such products. On the other hand, if the finished products of copper are also brought under control, the difficulties now experienced by the trade and industry would also be felt by all consumers of the finished products too.

From Rs. 508 tin advanced to Rs. 511, following good demand from upcountry. Locally, buying was confined to meeting day-to-day requirements only, as consumers were aware of the comfortable supply position. Electrolytic zinc closed at Rs. 57 after opening at Rs. 56.50. The rise was was attributed not to any unsatisfactory supply situation but to suspension of sales of the metal refined in Japan from Indian zinc concentrates. The Government desired to find out the cost details before further sales. On the other hand, lead declined to Rs. 62 from Rs. 62.50. Sales of indigenous lead have been suspended by Government for enquiring into production costs. It is expected that the enquiry would be completed soon.

COTTON FUTURES BUOYANT

(*From Our Own Correspondent*)

BOMBAY, 14*th May*

The firm trend witnessed in the cotton futures market towards the close of last week gathered momentum during the week under review. The market, in fact, ruled buoyant throughout the week. The buoyancy was due to a number of factors. The comparatively small volume of tenders issued on 8th and 12th inst., the third and fourth notice days (600 and 450 bales respectively, as compared with 1,150 bales issued on the first notice day), had a bullish effect on the market. Sentiment was also affected favourably by the hope that the Government of India would take a helpful attitude in tackling the present crisis facing the cotton mill industry. The forthcoming visit of Mr. Lal Bahadur Shastri, to the City, it was expected, would result in some relief to the industry. Strong upcountry advices, following reduced pressure of new crop movements and the consequent hardening of values, imparted further strength to the market. Although optimism regarding an export quota for ¾" cotton was receding, certain quarters were inclined to believe that the Government might perhaps come out with another quota for 23/32" cotton, if not for staple variety. There was also the expectation that spinner demand would soon revive. Many were inclined to think that mills could not delay for long their normal purchases, and that soon they would have to build up stocks in view of the approaching monsoon season. All these factors resulted in fresh bull support and upcountry buying with the result that cotton futures staged an impressive rally.

I.C.C. Moglai Jarilla (May 1958) opened the week at Rs. 654.50 and steadily advanced to Rs. 663.75 yesterday. Commencing today's session at Rs. 665, the contract improved to Rs. 668 and closed at that rate. The net gain over the week was Rs. 13. Total tenders against the contract to date aggregae 2,750 bales.

I.C.C. Moglai Jarilla (August 1958) commenced the week at Rs. 664. The contract improved, on persistent buying, to Rs. 678.50 today and closed at that rate. The net gain over the week was Rs. 12.25.

The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	14-5-58	*High*	*Low*	7-5-58
I.C.C. Moglai Jarilla (May 1958) ...	668	668	654	655
I.C.C. Moglai Jarilla (August 1958) ...	678.50	678.50	662.50	666.25

The spot section was firm. Scarcity of cotton spinning 20 counts and above continued to be felt. Sustained mill demand was noted for staple varieties and values advanced by 10 to 25 rupees per candy over the week. The pressure of new crop movement has already passed its peak. Over 75 per cent. of new crop has been marketed.

In the export section, there was good demand for Bengal *Deshi*. The fire in the Bombay Dock on the 11th inst. destroyed about 8,070 bales of Bengal *Deshi* meant for export. This news resulted in a spurt in prices of Bengal *Deshi*. Kalyan and Wagads also evoked the interest of shippers. It has been notified that the ceiling of 50,000 bales in respect of export quota of Bengal *Deshi* issued on the first-come-first-served basis was reached on the 7th inst.

In the foreign section, a sizable volume of business in Egyptian cotton was done by Bombay and Ahmedabad mills. The delay in the announcement of the import allocation for American cotton is a matter of serious concern to mills. It is pointed out that they are already working on a hand-to-mouth basis in respect of foreign cotton. Mill interests are reported to have suggested to the Government that, in order to enable them to plan their production in advance, import of an additional quantity of 100,000 bales of East African cotton should be allowed. The ruling prices of East African are lower than those of comparable American growths.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri, the figures in brackets being last week-end closings:

Bengal *Deshi* 610 (590); Berar Jarilla 735 (725); Khandesh 785 (775); Oomra *Deshi* 650 (650); Vijay 890 (880); Hubli Laxmi 1,000 (975); Jayadhar 825 (785).

The Karachi cotton futures market ruled firm during the week. There was heavy bull buying, induced mainly by tender considerations, in the maturing May contract and some speculative support for the distant July. The latter was inspired by anticipations of better foreign demand especially from the U.S.S.R. following reports of the likelihood of a barter deal between Pakistan and Soviet Russia, involving cotton. N.T.R.G. May, which had closed at Rs. 74-13-6 last week-end, improved to Rs. 76-9. July contract gathered As. 2-6 to Rs. 73. The spot section also showed some improvement. Prices of *Deshi* varieties crept up. Sind *Deshi* and Punjab *Deshi* were quoted at Rs. 63-8 and Rs. 62-8, as compared with Rs. 63 and Rs. 62, respectively, last week-end. The following are the latest available spot quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

4F Roller 69; S.G. 68; 4F Punjab Roller 74-8; S.G. 79; 289F Punjab Roller 85; S.G. 96-8.

A fully steady trend was in evidence in the Alexandria cotton futures market during the week under review also. Under the impetus of a fair volume of export demand from a number of foreign countries and better advices from the spot section, futures values tended to move up. The fixation of one tender date (20th May), instead of the normal three, also imparted strength to the market. Oper-

ators thought that this would result in a smaller volume of tenders against the maturing May contract. The spot section was cheerful. Premiums, particularly for Ashmouni, hardened.

The shipments of Egyptian cotton from 1st September 1957 till the close of April aggregated 486,685 bales (of 720 lbs.), as against 389,063 bales in the corresponding period of the previous season.

The following are the latest available quotations —in tallaris per lb.—from Alexandria, the figures in brackets being last week-end closings:

Karnak: May 79.05 (78.00); July 79.80 (79.00). *Ashmouni*: June 69.90 (68.80); August 69.95 (69.25).

Cotton values in the Liverpool market were more or less maintained at last week's levels. In view of the absence of details regarding the operation of the American export subsidy, no parity idea could be formed. Operators were inclined to await further details. The volume of business was, therefore, small and prices moved narrowly either way. The Sudan contracts were quiet with values remaining unchanged. The latest available quotations—in pence per lb.—from Liverpool are as under:

American cotton one inch staple contract: May-June 24.77; July-August 25.27; October-November 25.89; December-January 26.27. *American cotton mixed growth contract*: May-June 25.65; July-August 26.10; October-November 26.60 December-January 26.90.

Cheerful conditions prevailed in the New York cotton futures market during the week. Bullish weather news and fixation of higher mid-April parity price announced last week, 38.59 cents per lb. as compared with the mid-March parity of 38.33 cents induced heavy trade and Commission House buying. Values, as a consequence, hardened. Nothing more was known about the payment in kind export programme, which will run concurrently with a programme similar to the one at present in force.

However, the details of the export sales programme for next season have been published. They are similar in all respects to those of the programme for the current season. The first bids under the new programme were received on the 12th inst. The next will be received on the 26th inst. and thereafter offers will be opened every week on Monday. Under the export programme for the current season, the Commodity Credit Corporation sold a fortnight ago a further quantity of 73,139 bales. Total sold thus far under the programme aggregates 5,645,305 bales. The average price accepted for Middling one inch cotton at average location in the latest sale was 28.44 cents per pound—up 10 points from that of the previous sale.

The Department of Agriculture has fixed a support rate of not less than 34.60 cents per pound for Upland cotton for next season. To the basic support rate of 30.75 cents per pound announced previously for Middling $\frac{7}{8}$" cotton at average location has been added 3.85 cents per pound to arrive at the support for Middling one inch. It will be recalled that the loan rate this season for Middling one inch cotton at average location is 32.31 cents per lb.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	13-5-58	6-5-58	29-4-58
Spot	36.45	36.05	36.05
May	—	36.00	35.97
July	36.59	36.33	36.37
October	36.95	36.87	36.82

RAYON YARN EASY

(From Our Own Correspondent)

BOMBAY, 14*th May*

A mixed trend prevailed in the yarn market during the week under review. While the rayon yarn section ruled distinctly easy, the staple fibre yarn section was fully steady. Cotton yarns continued to remain depressed. The weakness in art silk yarns was due to the prevailing high prices and consequent reluctance on the part of actual users to make any significant purchases. Hence business put through was restricted and even the small transactions that were noted were reported to be of a speculative nature among the dealers themselves. Staple fibre yarns were steady. For, despite huge arrivals of stocks in consuming centres against purchases made earlier, offtake from important centres like Punjab, Calcutta, Bhagalpur, Surat, etc. was very satisfactory. Spinning mills were also not inclined to lower their prices of yarn as the raw material prices did not show any signs of recession. Cotton yarns were dull. Coarse counts showed a further decline in values while in medium counts prices were unchanged. Stocks with mills continued to remain high and export prospects were far from encouraging due to keen competition from China, Italy, Pakistan and other countries.

Spot 120 Japan declined by 10 nP to Rs. 6.31. 150 Japan retreated by 12 nP to Rs. 6.22. 120 Italy were marked down by 25 nP to Rs. 5.87. 150 Italy were neglected at Rs. 6.50. Among indigenous yarns, National Rayons 150 bright cones first grade fell by 46 nP to Rs. 5.66. 120 bright cones first grade eased by 13 nP to Rs. 5.62.

Staple fibre yarns (40×2) June delivery evoked some support and rallied by Rs. 4 to Rs. 602. No transactions have been put through in the August delivery this week also. In the spot section, 40×2 Centurys put on 3 nP to Rs. 3.19. New Greats gathered 2 nP to Rs. 3.14. Kohinoors and Citys were fully steady, the former at Rs. 3.24 and the latter at Rs. 3.22. Foreign yarns, however, lacked support. Paramounts shed 6 nP to Rs. 7.19. Fujis softened by 3 nP to Rs. 7.31.

In the cotton yarn section, ten counts were neglected, Podars at Rs. 13 and Moderns at Rs. 14. Among twenty counts, Gokaks and Indus receded by 13 nP each to Rs. 16.87 and Rs. 16.37 respectively. Moderns lost 12 nP to Rs. 16.75. Forty counts Moderns were stagnant at Rs. 24. Minaxis, however, gained 12 nP to Rs. 23.37. Among sixty counts, Raghuvamshis were steady at Rs. 50.50 and Moderns at Rs. 60. Finlays, on the other hand, added 50 nP to Rs. 60.50. Eighty counts Mahendras were unchanged at Rs. 69.50 as also Moderns at Rs. 69.75.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	14-5-1958	7-5-1958
	Rs.	Rs.
Art silk yarn **(per case of 200 lbs.)—**		
120 Japan (per lb.)	6.31	6.41
150 Japan (per lb.)	6.22	6.34
120 Italy (per lb.)	5.87	6.12
150 Italy (per lb.)	6.50	6.50
Staple fibre yarn **(per case of 200 lbs.)—**		
40 × 2 June	602 00	598 00
40 × 2 New Great (per lb.)	3.14	3.12
40 × 2 City (per lb.)	3.22	3.22
Cotton yarn **(per bundle of 10 lbs.)—**		
10s Podar	13.00	13.00
20s Modern	16.75	16.87
30s Indu	—	—
40s Minaxi	23.37	23.25
60s Raghuvamshi	50.50	50.50
80s Modern	69.75	69.75

SUGAR RISES FURTHER

(From Our Own Correspondents)

BOMBAY, 14*th May*

The sugar market continues to rule buoyant during the week under review and prices have improved to touch new high levels. The spot stocks of sugar in the market are extremely poor, being just 8,000 bags. Booking of sugar from the Bombay-Deccan area to Wadi Bunder has been closed temporarily. Arrivals of sugar into the market during the week are, of course, higher at 16,400 bags, as against 10,900 bags in the previous week.

Large grain sugar has rallied a rupee to Rs. 112-Rs. 116 per bag. Medium grain has gained 50 nP to Rs. 109.50-Rs. 111.50. Small grain has risen by a like amount to Rs. 108.50-Rs. 109.

Spot prices of sugar in the city have now fallen to parity with the ex-mill quotations obtaining in Northern India. Knowledgeable trade circles believe that, in the present context of circumstances, spot values and ex-mill quotations in the Bombay-Deccan areas have touched saturation point and the market must react to adjust itself to a more reasonable level of prices. It is felt that the Food Ministry is largely responsible for the confused state of affairs in the sugar market, owing to its failure to announce a clear-cut export policy, although, time and again since December last, Government spokesmen have been stating that the export policy will be shortly announced. Whatever may be the eventual decision of the Ministry in regard to sugar export, trade circles are still baffled as to how the consistent rise of Rs. 2 per maund in ex-mill quotations in the past eight weeks can be justified in the absence of any policy statement and in view of the fact that the movement of sugar from factories in the last six months certainly does not exceed that moved out in the corresponding period of the previous season.

* * * *

HAPUR, 12*th May*

Stimulated by buying interest from the South, sugar prices recorded further gains during the week. The continued rumours of a possible increase in the internal prices of sugar in order to encourage exports also acted as a bullish factor. The Government's decision regarding exports was awaited anxiously, but no concrete plans appeared to have been evolved as yet. Production and despatches of indigenous sugar during the current season (up to 30th April) amounted to 19.11 lakh tons and 9.91 lakh tons, as against 18.22 lakh tons and 10.35 lakh tons, respectively, in the corresponding period of last year. Stocks on this date were 13.49 lakh tons, as compared with 13.14 lakh tons a year before.

Steady to firm conditions prevailed in the sugar market at Muzaffarnagar in the past week and the ex-mill delivery prices advanced by 31 nP to 62 nP per maund. Substantial business was done for the Punjab and Delhi. Export prospects were the main bullish factor. The latest prevailing prices were: Meerut (D28) Rs. 37; Mansurpur (C29) Rs. 37.87; Daurala (B29) Rs. 38.12; Mawana (B29) Rs. 38; Shamli (B29) Rs. 38.25; Bijnore (E29) Rs. 36.

Sugar prices at Kanpur ruled steady, due to good buying support. Spot and ex-mill delivery prices (per bag and per maund) were:— (D29) Gola Rs. 101.50, Rs. 36.12; Walterganj, Lakhimpur and Hargaon Rs. 101, Rs. 35.94; (C29) Basti Rs. 104, Rs. 36.87.

Khandsari prices continued steady, due to good festive demand for marriage season and prices were quoted at Rs. 30 to Rs. 34 per maund according to quality.

The *gur* season has come to a close, but arrivals from producers' stocks averaged 200 maunds daily which were lifted upto Rs. 15.50 per maund. Demand from consuming centres has improved due to pre-monsoon buying and the week's offtake aggregated 14 wagonloads. The local stock is now put at 1.42 lakh maunds, as against 96,000 maunds at this time last year.

Despite poor demand, *gur* prices improved slightly in the Muzaffarnagar market, due to fall in daily arrivals. *Chaku gur* gained 50 nP per maund during the week. *Shakker dara* was in demand from Rajasthan side at unchanged prices. *Khandsari* prices continued steady at Rs. 30 to Rs. 34 per maund.

Future *gur* recorded a depressed trend. *Fagun* opened at Rs. 12.60 on Monday and, after touching the highest at Rs. 12.64 the same day and the lowest at Rs. 12.21, was quoted today at Rs. 12.44.

The standing cane is reported to be in fairly good condition.

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 14*th May*

Barring the linseed section which ruled fully steady, the oilseeds market depicted an easy trend during the week under review. Castorseeds were particularly depressed, thanks to nervous bull liquidation and bear offerings induced by weak U.K. advices for castor oil; the U.K. quotation for bulk commercial and B.S.S. quality was £110 and £117 per ton respectively. It was reported that Rumania had sold to the U.K. some portion of the castor oil purchased from India. China was also reported to be making a bid to offer surplus castor oil to the U.K. and the Continent at competitive rates. Enquiries from the U.S. were negligible, notwithstanding Brazil's reluctance to supply contracts at low price consequent on the damage to the castor crop. The castorseeds section was somewhat better today on emergence of buying support at low levels. Groundnut encountered selling due to easiness in spot groundnut oil and prices tended to move down. Today, however, there was a notable recovery in prices aided by absence of fresh speculative offerings in view of the limited inflow of groundnut and hopes of an early release of export quota for refined groundnut oil (salad oil). The initial losses were completely made up and, in fact, the closing rates were higher than those at the end of last week. Cottonseed failed to derive strength from firmness of raw cotton prices. Kardiseed and nigerseed were quiet, in the absence of any special support. Linseed, however, proved an exception in that it elicited good buying support in the wake of scarce offerings. Rumania and Australia were reported to be interested in buying Indian linseed oil. The U.K. quotation was nominally placed at £103-£104 per ton.

Groundnut May contract which stood at Rs. 168.75 last week-end receded to Rs. 167.25 on the 9th inst. and, after moving between this level and Rs. 168, wound up the week at Rs. 169.25. August contract dropped from Rs. 167 to Rs. 165.25 before finishing at Rs. 167.50. Over the week, bold ready rose by 12 nP to Rs. 33.87. Khandesh quality gained a like amount to Rs. 34.37. Coromandel improved from Rs. 34.25 to Rs. 34.37. Groundnut oil ex-mill dropped 25 nP to Rs. 18.12. Railway receipt shed 13 nP to Rs. 18.12.

Castorseeds May contract came in for persistent selling and moved down from Rs. 150.37 to Rs. 145.87 yesterday. Today, however, it advanced to Rs. 147.75 before closing lower at Rs. 147.25. September delivery fell from Rs. 154.12 to Rs. 149 yesterday, but recovered to Rs. 150.50. At the close, it was a shade easy at Rs. 150.25. Ready Madras declined by 37 nP to Rs. 29.25. Kanpur quality was done yesterday at Rs. 27.75, as against Rs. 28.37 last week-end. Castor oil B.S.S. gave way from Rs. 16.62 to Rs. 16.25. Commercial quality decreased by 37 nP to Rs. 15.

Linseed May contract elicited some support and rose from Rs. 30.12 to Rs. 30.44 today, although, towards the close, it was a shade easy at Rs. 30.37. September position fluctuated between Rs. 30.87 and Rs. 31 before finishing at Rs. 30.87. Bold ready spurted by 62 nP to Rs. 30.37. June-July hardened by 50 nP to Rs. 30.75. Linseed oil was firm at Rs. 15.69 today, as against Rs. 15.62 on Wednesday last.

Cottonseed May contract opened the week at Rs. 106.50 and improved to Rs. 108 on Monday. After declining to Rs. 107.75 yesterday, it recovered to Rs. 108 today. September contract moved narrowly and wound up the week at Rs. 108.50.

Kardiseed bold ready strengthened from Rs. 19.25 to Rs. 19.50 on the opening day, but eased in subsequent sessions, today's closing rate being Rs. 19.12. Nigerseed Madras quality which was steady at Rs. 28.50 throughout the week fell to Rs. 28.25 today for want of support.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	14-5-1958	7-5-1958	30-4-1958
	Rs.	Rs.	Rs.
Groundnut—			
May 1958	169.25	168.75	171.75
August 1958	167.50	167.00	169.75
Bold ready (per cwt.)	33.87	33.75	34.37
Linseed—

Linseed oil †			15.75
Ready	15.69	15.62	

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
‡ Rate as on 6th May.

JUTE GOODS DECLINE

(From Our Own Correspondent)

CALCUTTA, 13*th May*

Prices of jute goods gave way during the week under review, but it should be noted that even after the fall they were well above the I.J.M.A. minimum levels, indicating the inherent strength of the market. The week's fall only nullified the rather abrupt increase in the previous week. The main cause of the fall was the sudden withdrawal of import licences by the Government of Argentina for importing hessian from India following an appreciation of the difficult foreign exchange situation facing that country. The apprehension of the impending action by Argentina followed the withdrawal of a steamer scheduled to leave for that country after loading with hessian had commenced. However, clarification as to whether the withdrawal of the import licences already issued was for good or this was only a suspension for facilitating an assessment of the foreign exchange needs and rationed allotment of the available funds was not forthcoming. Traders here hoped that foreign trade ethics would demand of the Argentine to revalidate the licences at least to the extent of commitments already made by its buyers.

Argentina is a big consumer of Indian hessian, and cannot possibly do without it. Its purchasing policy during recent years has undergone a considerable change, inasmuch as it buys only for direct consumption. In view of this, stocks in the Argentine were believed here to be insignificant and, therefore, it was hoped that before long import licences already issued would be revalidated and that fresh licences would also be issued to enable buyers on behalf of Argentina to honour commitments already made prior to the import squeeze and in anticipation of licences. These hopes apart, the sudden cancellation of the licences shook market sentiment, and shippers who had purchased hessian at higher prices in expectation of shipping the same to Argentina are now faced with losses. Nevertheless, they would be able to ship the quantities already purchased to other countries, if they do not like to wait for revalidation of licences by Argentina. Here again, they would incur loss as prices have moved down.

Another factor which precipitated the downward movement was reports of further incidence of rains in most jute-growing districts and of the healthy condition of plants, all of which led to expectation of a higher and earlier crop. The speeches of the East Pakistani Chief Minister and the Vice-President of the Pakistani Jute Mills Association at the Association's annual meeting held recently in Dacca drew attention here. While the latter's forecast of Indian jute production amounting to 7 or 8 million bales by 1961 should be dismissed, it was felt by a section of the trade here that India's production of the inferior varieties of *mesta* and *bimli* was now not only sufficient to meet internal needs but would also leave a margin for export. Any idea of India being able to export the superior varieties was not entertained by jute circles.

On Tuesday last, the price of ready hessian 40" 10 oz. was at one time as low as Rs. 39.90 following the cancellation of import licences by Argentina. However, the price registered a small recovery to Rs. 40.20, as some covering business was subsequently done. In sympathy, ready B. twills sagged earlier in the day to Rs. 100.90 and unlike hessian did not recover. On the following day, hessian 40" 10 oz. made a further recovery to Rs. 40.35 as, according to figures released, stock of hessian with mills as at the end of April amounted to 20,400 tons representing a decline of 4,100 tons. On the other hand, sacking held by mills increased to 60,000 tons from 54,800 tons and miscellaneous constructions to 16,800 tons from 15,000 tons. So, overall the increase in stock as compared to the end of March was 2,900 tons. However, ready B. twills moved up to Rs. 101 in sympathy with hessian. On Thursday, hessian 40" 10 oz. was quoted at Rs. 40.60 following some business with the United States. Ready B. twills were at Rs. 101.35. At this stage, buyers restrained their activity, and on Friday the above representative constructions sagged to Rs. 40.50 and Rs. 100.80, respectively. At these rates, some covering business was reported. Over the week-end, hessian 40" 10 oz. registered a small advance to Rs. 40.80 following some speculative activity, but ready B. twills eased to Rs. 100.70. Yesterday, prices improved following rumours that Argentina was revalidating the import licences. There was also speculative activity in the futures markets. In consequence, 40" 10 oz. hessian improved impressively to Rs. 41.30. In sympathy, B. twills at Rs. 101.05 registered a gain.

Mills bought raw jute in small quantities only. Sellers were anxious for business following reports of further rains in jute growing districts. Mills discounted rates by 25 nP, but at the lower rates sellers were disinclined to operate. Thus, Assam northern bottoms were throughout quoted at Rs. 25.50 and local *daissee* bottoms at Rs. 29.25 May-June delivery. Another factor why prices did not fall, despite the fall in prices of jute goods, was the reduced arrivals from up-country and also the up-country prices being higher than those ruling here.

GOOD INTEREST IN DUST TEAS

(From Our Own Correspondent)

CALCUTTA, 13*th May*

In the internal sales held on Tuesday last, dusts on offer amounting 19,318 chests met with strong demand. Exporters evinced keen interest in orthodox and C.T.C. teas. The clean leafy orthodox teas met with good demand and prices were firm. Other teas in this category advanced, although at opening of the sales they were lower by 4 to 6 nP. C.T.C. Assams were taken at higher rates, with particular attention being shown to the grainy teas. The rates were: best Assam C.T.C. Rs. 2.80 to Rs. 3.00, medium Assam C.T.C. Rs. 2.10 to Rs. 2.30, medium Assam grainy dust Re. 1.70 to Re. 1.74, and medium Dooars Re. 1.68.

Leaf on offer amounted to 77 chests only.

Now that the new season was expected to begin shortly, the trade was taking stock of the situation in relation to supply and demand in order to arrive at prospects.

Export sales have been completed, and the 1957-58 season is ending on a healthy stock position. On an all-India basis, deducting exports, the balance from the crop has been estimated at 250 million lbs. Of this, internal demand is believed to have accounted for some 225 million lbs. which represents an increase over the past year. This shows that internal consumption is on the advance, with the improvement in people's standard of living.

The carry-over (South and North India combined) for the next season would thus amount to 25 million lbs. This quantity is considered insignificant, although a cautious tendency on the part of buyers would not be a surprise.

Regarding North India, the crop up to the end of July is not expected to be higher than in 1956-57. Prices for the good quality teas would, therefore, tend to be steady in foreign markets, but with East Africa increasing tea exports to Great Britain and other countries, competition in foreign markets would be stiffer.

In this connection, the report from London that Argentina has an exportable surplus of 1,000 tons of tea a year and that the first consignment has already reached London has not escaped the attention of traders. This goes to show that not only East Africa but other small producing countries are also entering the export field.

It is being growingly realised here that it would become more and more difficult for common teas to be sold at prices economic to gardens.

It is, however, to be hoped that internal consumption will increase; but even after taking it for granted that the increase in consumption is faster than the increase in the cost of living, it is not to be expected that all the excess would be absorbed internally. Tax relief, the trade points out, would stimulate exports as well as pave the way for an economic return to the producer. The need for maintaining the foreign exchange earnings from teas is important, in view of the country's need for funds in foreign currencies. So, any move by which export of common teas would tend to fall even at the cost of increasing internal consumption would be contrary to the country's interests.

COARSE GRAINS MOVE UP

(From Our Own Correspondent)

HAPUR, 12*th May*

Divergent trend prevailed in the foodgrains market during the week. While wheat after early gains due to poor local arrivals eased towards the week-end, fresh gains were recorded in the prices of coarse grains. Abnormally low new crop arrivals at this time of the year in the face of good consumer demand was the main stimulating factor. Wheat in the Punjab where crop was reported to be fairly good fell to the extent that the State Government announced its attention to give price support and to begin purchases if wheat prices tended to fall below Rs. 12 per maund.

Wheat at Hapur, after touching the highest in the early session upto Rs. 15.75 for average quality and upto Rs. 17.12 for farm produce, declined to Rs. 15.50 and Rs. 16.50 per maund, respectively. Daily arrivals in the market improved to about 1,000 maunds, but, as the entire arrivals were being lifted by consumers, stocks with the trade were reduced to one *khatti* only. Apart from continued threshing, and reports of poor yield in U.P., the producer was still also retaining his stocks, expecting better prices later.

Rice prices recorded some gains during the week on reports of an overall rice shortage in the country and insufficient imports. Prevailing prices were:—*Basmati* Rs. 32 to Rs. 35.50; *Mainpuri* Rs. 26.50; coarse Rs. 22 per maund.

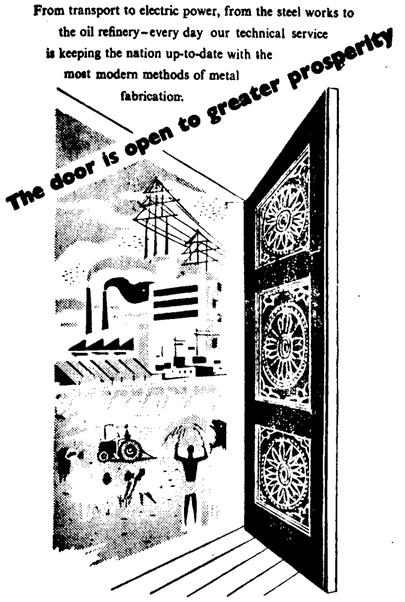
Gram was reaching here from Punjab and this accounted for an improvement in local stocks to 27 *khatties*, as against 20 *khatties* last week-end. Prices however, were steady, the local arrivals continuing to be meagre. Barley and *bejhar* improved fractionally, due to scanty local arrivals and poor stock position here. *Jowar* and *guwar* were attracting good demand at unchanged prices. The prevailing prices (in rupees per maund) on Monday were:—gram 11 to 11.25; barley 11; *bejhar* 10.25; *jowar* 12 to 13.25; *guwar* 15.50.

Pulses continued to rule steady and peas arrivals were at an average of 1,000 maunds and those of *arhar* at about 800 maunds daily. Some outside despatches were made of peas and *arhar dal*, most of which going to stocks. *Urd* and *moong* continued steady and week-end prevailing prices (in rupees per maund) were:—Peas *dara* 9.50 to 9.62; peas white upto 10.25; peas *dal* 11; arhar 11.75; *arhar dal* 15.75; *urd* 17.50 to 18.50; *moong* 22 to 23; *massoor* 14.50.

Pulses futures ruled quietly steady. The latest quotations on Monday were:—peas *jeth* Rs. 10.06; *bhadon* Rs. 10.51; *arhar jeth* Rs. 12.06; *urd baisakh* Rs. 16.

INDIAN OXYGEN is playing a vital role in building a more powerful and self-sufficient India in the Second Five-Year Plan.

From transport to electric power, from the steel works to the oil refinery—every day our technical service is keeping the nation up-to-date with the most modern methods of metal fabrication.



STRONG DEMAND FOR TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN. 8*th May*

There was 1,194,123 lbs. on offer in Sale No. 11 which was held on Tuesday, 6th May. Quality showed a further seasonal decline, but there was however, a fairly useful selection on offer. The market opened to a strong general demand which emanated from all export buyers, particularly for low medium and medium fannings which were 10 to 20 nP dearer. The equivalent B.O.Ps. were 5 to 10 nP dearer. Good mediums advanced slightly. High growns met less demand and were upto 50 nP below valuation. Whole leaf met with some support and were about steady. The following are the quotations:—

	Rs. 1958
Plain B.P.	1.45
Low medium	1.65 to 1.80
Medium	1.85 to 2.05
Good medium	2.10 to 2.50
Quality	2.40 to 3.50

The average price realised was Rs. 2.13 per lb., as against Rs. 2.12 per lb. in the previous sale and Re. 1.74 per lb. in the corresponding sale of 1957.

Dust Sale "J".—There was 935,000 lbs. on offer at dust Sale "J" which was held on Thursday, 8th May. The market opened to a strong general demand. Buyers showed particular interest in milled dusts and these types advanced 5 to 10 nP. The strong demand was also evident for all other descriptions and the prices for these teas were fully firm to dearer. The sole exception was for best high grown dusts which were generally easier.

London Market—Sale of 5th May 1958.—Better liquoring irregular. Others fully steady.

Sale of 6th May 1958.—Market fully firm.

Colombo Market.—No sale this week.

Calcutta Market.—No sale this week

Export Quota.—A sizable quantity of business has been transacted at 3½ nP. A small quantity of new seasons quota has been sold at 19 nP. Today's quotation is sellers 17 nP and buyers 16 nP.

Forthcoming Auctions.—Sale No. 12 will be held on Tuesday, 13th May and Dust Sale "K" will be held on Thursday, 22nd May 1958.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale* 12.—2,000,000 lbs. **Strong general demand, particularly for clean black leaf. Medium types which are irregularly 10 nP dearer. Low medium and medium brokens firm, but fannings dearer stalky kinds weak and sometimes neglected. Whole leaf firm to dearer.**"

SHEEP SKINS WEAK

(From Our Own Correspondent)

MADRAS, 12*th May*

In the Madras market, arrivals of E.I. tanned cow and buff hides were of the usual volume, and clearance was good at 5 to 6 nP lower than April levels. U.K. enquiries were patchy and mostly for lower ends. Better class tanners of cow hides were able to sell run, fourths and fifths in lightweights occasionally, while F.A.Q. marks were taken up if at low levels only. Inland demand for low grade cow hides continued at attractive prices. A small quantity of buff calf 2-2½ lbs. thirds was sold to the U.K. Importers in the U.S.A. were enquiring for buff calf at prices lower than U.K. levels and sellers were reserved. There was some call for lower ends in cow calf from the U.K., but stocks available were small.

In the May London auctions, prices of goat skins declined 3*d*. to 9*d*. below March average during the first three days and better sorts regained March levels towards the close. There was brisk trade at the lower prices due to a fair attendance of buyers. Sales of tanned sheep commence today.

In the Madras market, prices of goat skins ruled steady and of sheep weak; and stocks of common class sheep are accumulating.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. F.=Company has Preference shares. T.=Company has Debentures N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

N—Managed by the Board of Directors. † Less income-tax. (c) Clive Mills have paid dividend at As. 10/- on bonus shares for the year 1955. * Including bonus. (b) Investments.
‡ New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954. P—Bengal Coal Co. Dividend from 1954 to 1956 are on shares of Rs. 100 each.
K—Part William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. Also 1956 the dividend of Rs. 17-5 includes an interim dividend of Rs. 7-5 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

MARKET GOSSIP

(*Concluded from page 923*)

to have called for some concrete suggestions in this connection. The question was also raised at the recent meeting of the Informal Parliamentary Consultative Committee of the Finance Ministry. These give an indication that official circles are more favourably inclined to consider this question seriously, though the problem is by no means an easy one and its solution involves the setting up of complicated machinery. Discussing this problem, Mr. Shantilal Sonawala, a leading bullion broker of Bombay, in a note sent to us, points out that it is now high time that some efforts were made to see that this habit of gold hoarding is changed to a certain extent. "But no use of coercion or threat will be able to change this habit; on the contrary, it will be more harmful and will create fear in the minds of large and illiterate people and will shake the confidence of the people in the authorities. The only remedy is to take the people into confidence by creating an atmosphere which will prompt the public to return gold holdings to the Government Treasuries."

Mr. Sonawala attributes gold hoarding to two important factors. First, since bullion prices are continuously rising, there is always a gain in gold investment. Secondly investment in gold keeps the purchasing power of currency on a par with that of the commodities; the rupee has been depreciating in terms of goods since the last 20 years, while gold has continued to rise, so that it compensates for the fall in the price of the rupee. Naturally, investment in gold remains an attractive form of savings for a number of people. If, therefore, the dishoarding movement in gold is to be effected, it is necessary that the price of gold is lowered and that a substit

TEXTILE CRISIS

IT is now becoming increasingly clear that seldom in its recent history had the textile industry faced a worse crisis. The closure of an alarmingly large number of mills is only a symptom of a malady which has afflicted the industry for some time now. It was only two years ago that the industry itself pleaded for an upward revision in the target for the *per capita* consumption of cloth, viz., 18.5 yards, built into the second Plan. So swift has been the turn in the industry's fortunes that it now looks as though even this modest target will not be reached. Again, less than two years ago, the Government, without any fiscal qualms, imposed a heavy excise duty on the industry, justifying the measure by the argument that the industry was making enormously large profits. And yet, today a mill considers it fortunate if it maintains its profit and particularly favoured if it can avoid a loss. Unemployment in the industry is mounting. In many countries, textile employers make special efforts to retain the men they have. In India, textile men, who are an asset to the nation, go abegging for jobs. Clearly, the whole situation is depressing to a degree.

The accumulation of cloth stocks with mills which became apparent last year indicated the first signs of the approaching crisis. It is now beyond dispute that the industry's economic health has suffered a serious setback. Indeed, casualties in the industry have been many. Some 26 mills have completely closed down and another 37 mills have resorted to partial closure. Small wonder, then, that the Vice-Chairman of the Indian Cotton Mills' Federation, Mr. Krishnaraj M. D. Thackersey, devoted a large part of his speech at the recent meeting of the Committee of the Federation with the Union Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, to unravelling the textile crisis. If his treatment of the subject was somewhat elaborate, the occasion certainly needed such elaboration. In any case, the gravity of the problem demands responsible statements.

It is a tribute to the Federation that it has been able to marshal so impressive an array of statistical data. Mr. Thackersey called attention to the fact that 16 out of 29 mills in the U.P. area have closed down and several mills are working short shifts. In Saurashtra, two mills have closed down and a few others are on the verge of closure. Two mills in Baroda have closed down. The same fate awaits several mills in Nagpur and Madhya Pradesh. In Bombay, one large mill has completely closed down; 21 mills are working short shifts. The number of casualties—actual closure of mills—tells only half the story. For many mills are making serious losses. In Baroda, seven mills are making losses, the average loss being Re. 1-8 per loom per shift. The loss sustained by the 11 mills in Nagpur area works out to Rs. 2 to Rs. 5 per loom per shift. The average loss is Rs. 4 per loom per shift in Madhya Pradesh. All mills in Saurashtra and most mills in Madhya Pradesh, Rajasthan and West Bengal report heavy losses. Out of 42 mill companies in Bombay which have so far supplied information to the Federation, as many as 26 companies have made losses in 1957. In Ahmedabad, 10 mills are reported to be working at a loss. It is not known how many of the mills which have reported profit on paper have been able to provide full depreciation on the plant and machinery. Since no mill can continue to work unprofitably for a long time, it should be evident that the mills facing losses may all be in the queue for the official liquidator's assistance.

The closure of mills, coupled with short shift working and cutting down of the number of shifts, has naturally had its effect on production. In the first four months of 1958, mills produced 411 million yards per month, as against 459 million yards in the corresponding period of 1957. This indicates a drop of 48 million yards per month or 32,000 bales of 1,500 yards each. Mr. Thackersey admitted that stocks with the mills had declined from 660,000 bales at the end of December 1957 to 505,300 bales at the end of April 1958, a reduction of 154,700 bales. But, as he rightly pointed out, a large part of the decline in stocks is due to the reduction in production which alone accounts for 128,000 bales. The yarn position has also considerably deteriorated. Unsold stocks with mills which stood at 27,000 bales in January 1957 increased to 111,800 bales at the end of March 1958. As we pointed out last week, the decline in cloth stocks merely reflects the combined effect of a fall in production and distress sales to which some mills, compelled by financial stringency and the need to find the necessary working capital, have resorted. The inability of the industry to make much headway on the export front has, of course, added to its difficulties. During the period January-April 1958, India's cloth exports aggregated only 216 million yards, as against 321 million yards in the corresponding period of 1957.

What explains the sudden and virtually total reversal of the industry's fortunes? To this question Mr. Thackersey provided a convincing answer. It is difficult not to agree with his broad and general conclusion that it must be attributed, on the one hand, to the decline in the purchasing power of the people and, on the other, to high taxation. The steep increase in food prices has left the Indian consumer in very difficult circumstances. Experience in all underdeveloped countries makes it clear that high food prices inevitably mean reduced offtake of consumer goods. In India, the index number of food prices (Base: 1952-53=100) has increased from 86.6 in 1955-56 to 106.4 in 1957-58. The decline in agricultural production in certain regions has also meant reduced incomes for the rural population, whereas the urban classes have been hit hard by the rise in prices. The steep increase in excise duty which took place in September 1956 has raised the prices of cloth to a level at which consumer resistance has become inevitable; its recent reduction has not meant any substantial relief to him. There never was any justification for adding to the burden on the industry. Quoting from a survey of the finances of Indian joint-stock companies for the period 1950-55, made by the Reserve Bank of India, Mr. Thackersey pointed out that the gross profits of mill companies represented some 8 per cent. of the gross sales in 1955, as against 26.2 per cent. in the iron and steel industry, 30 per cent. in the coal industry and 21.4 per cent. in the engineering industry and 44 per cent. in plantations other than tea. In any case, there is no longer any justification for continuing the levy at its present rates, considering that many mills have been compelled to close down.

The diagnosis of the industry's malady suggests its own remedy. In the first place, efforts should be made to improve the real income of the people by increasing agricultural and industrial production. At the same time, efforts should be made to hold the price line. Obviously, this is a long-term policy. In the immediate future, the situation calls for measures which will help reduce production costs and also for substantial fiscal relief to the industry. Mr. Thackersey suggested the scaling down of the dearness allowance to workers, abandoning the proposal for increase in provident fund contribution by industry to its workers from 6¼ per cent. to 8⅓ per cent., and reducing the excise duty to its 1955-56 level and its rationalisation through a change in the basis of duties from specific to *ad valorem*.

It will be folly on the part of the Government to ignore the industry's cast-iron case for fiscal relief. Mr. Shastri emphasised that it was not the Government's intention to paint a rosy picture of the industry at a time when it was really in great difficulties. He announced that a committee would soon be appointed to study the problems confronting the textile industry and make suitable recommendations to the Government. The question of reduction in excise duty, he said, would have to be considered at the highest ministerial level. But he declared that there was no possibility of a reduction in the excise duty on cloth in the near future. This statement is particularly unfortunate, for it just means that the Government is unwilling to face the textile facts. Again, it is not clear whether the committee which Mr. Shastri promised is different from the one which was suggested at the Indian labour conference at Naini Tal; the conference, it may be mentioned here, suggested the appointment of an expert committee to examine individual units which had closed down. There must be little that a committee can do by way of unearthing facts which are not already known. What is required is prompt fiscal relief to the industry rather than a prolonged examination of the crisis in committee rooms.

MARKET REPORTS

LAND HOLDINGS

MUCH interesting light on the pattern of land ownership in rural India has been thrown by the First Report on Land Holdings, prepared by the Indian Statistical Institute, the full text of which has been published in the February issue of *Sankhya*, the Indian journal of statistics. The study gives the findings of the eighth round of the National Sample Survey, conducted in the period July 1954-March 1955. It is a first comprehensive enquiry of its kind undertaken on an all-India basis. It naturally ought to evoke considerable interest in the country. In conducting the survey, the authorities adopted the concepts, definitions and standards which were settled at a conference of Central and State statisticians, held in Calcutta in March 1954. Detailed discussions took place between the National Sample Survey, the Union Ministry of Food and Agriculture, the Planning Commission and the Central Statistical Organisation. The Indian Statistical Institute (Secretary: Professor P. C. Mahalanobis) was in charge of the design of the survey, the processing of the data and the preparation of the report.

The sample from which the data was drawn consisted of three groups of villages, one covering 1,424 villages for which the information was collected by the permanent whole-time field staff of the National Sample Survey; the information for two other groups, each covering about 1,500 villages, was collected by a field staff under the control of the respective State Governments. All these data have been collected and co-ordinated and have now been presented in a readable form. Briefly, the survey estimates that there are 65 million households in rural India which own about 310 million acres or 38 per cent. of the geographical area or 61 per cent. of the topographically usable area. For the whole of rural India, 84 per cent. of the total land owned is held under proprietory rights—71 per cent. by proprietors with right to transfer title and 13 per cent. by proprietors without such right. Only 2 per cent. of the land is held in the form of tenure. The percentage of land owned by occupancy tenants in the whole of rural India is 14. The average area owned is 4.72 acres. The percentage of households owning land below the average is 73. However, the percentage of area owned by households owning land below the average is only 16.

There is, of course, a large number of households with no land or less than one acre of land. They constitute 47 per cent. of the households; they, however, own only 1 per cent. of the total land. The proportion of landless households, including those who own less than 0.005 acre, varies from State to State. It is 7.99 per cent. in North India, 23.14 per cent. in East India, 28.13 per cent. in South India, 31.16 per cent. in West India, 22.45 per cent. in Central India and 22.75 per cent. in North-West India, the all-India average being 22.0 per cent. If the average were struck after excluding the landless households and also the households owning less than 0.005 acre, the average size of household ownership is 6.05 acres for the whole of rural India; the average (in acres) for North, East, South, West, Central and North-West India is respectively 3.93; 3.85; 4.75; 10.44; 10.57 and 9.28. Those who own 0-5 acres of land constitute 74 per cent. of the households which account for 17 per cent. of the total area. Another 13 per cent. of the households own between 5 and 10 acres of land and have 19 per cent. of the total land under their ownership. The remaining 13 per cent. of the households have ownership holdings of size larger than 10 acres; they account for 64 per cent. of the total land owned. The group with ownership of land in excess of 20 acres constitutes 5 per cent. of households and accounts for 41 per cent. of the total land; the share of 2½ per cent. of the households, each owning over 30 acres of land, amounts to 28 per cent. of the total land.

The general practice among rural households is to cultivate their land, though some of them lease out the land in their possession. Among rural households, there are 63.5 per cent. who do not lease out any land, 12 per cent. who lease out partly their own land and 2 per cent. who lease out all their land. The remaining 22 per cent. of the households are landless. It has been observed that, in the whole of rural India, 76 per cent. of operated land is owned and 24 per cent. taken on lease. The percentage of area leased in for management is only 13 in North India and it varies from 20 to 27 in East India, South India, West India and Central India. The report, however, warns that these zonal estimates are to be used with some caution, as they may not in all cases be sufficiently accurate.

In his foreword to the Report, Mr. Mahalanobis makes some notable observations. He rightly points out that all-India estimates of distribution of ownership can be used for studying the general implications of fixing ceilings and floors for such holdings. He calculates that, if the minimum is fixed at two acres for every household, both agricultural and non-agricultural, the total area of land required by those who do not have land or have less than two acres would be about 60 million acres. If the ceiling is fixed at 20 acres and all households holding more than 20 acres are required to hand over their excess holdings, the amount of land which would become available for distribution would be about 63 million acres. There would thus be available an excess of three million acres for distribution. With some slight adjustments, he estimates that a floor of two acres would be consistent with a ceiling of 20 acres. On the other hand, in a scheme of land redistribution which envisages the gift of land only to those whose main occupation is agriculture, it would be possible to raise the floor or the ceiling on land. This, of course, is an over-simplification of the problem, for, as Mr. Mahalanobis himself recognises, the distribution of land, its quality and the average size of the holdings differ from zone to zone and it would not be realistic to think in terms of uniform ceilings and floors on land holdings in different zones. He avers that, in actual practice, the details would have to be worked out for small homogeneous regions or even groups of villages.

We have consistently held the view that it is unwise to think in terms of ceilings on land in a country which already suffers from defects which flow directly from fragmentation of holdings. In any case, a scheme involving ceilings on land will assuage the land hunger of only the present generation. It would also leave the problem of agricultural production high and dry. Small-scale farming is bound to remain subsistence farming, involving scanty return for the farmer who is unwilling to improve the land because he has not the means for effecting such improvement. From this point of view, one wishes that the National Sample Survey had collected some statistics about agricultural productivity which would have served to indicate what constitutes an optimum size of holdings under Indian conditions. What India needs is legislation for prevention of excessive sub-division of land. So long as average holdings remain small and unrealistic land reform policies keep men with knowledge and capital out of rural areas, India must continue to face the problem of dismally low per-acre yields.

GENERAL INSURANCE

FROM many standards, the record of Indian general insurance is creditable. It has shown immense capacity for adjustment and ability to meet new situations. This is particularly commendable because it is more recent in origin than its counterpart, life insurance. General insurance owes its beginnings in this country to the pioneering efforts made by a few farsighted business men and industrialists in the early decades of this century. By and large, as Mr. B. K. Setalvad, President of the Indian Insurance Companies Association, pointed out in the course of his presidential address at the recent annual general meeting of the Association, held in Calcutta, the industry has given a "good account of itself." Nevertheless, time and again, one hears the plea for nationalisation of general insurance too. The Government, on its part, has in the past made it clear that it regards general insurance as part and parcel of private enterprise and that it is confident that business men know how best to safeguard their general insurance interests. All this has not apparently silenced its critics. It seems, therefore, necessary that general insurers should continue to educate public opinion, in general, and legislative opinion, in particular, in order to make them see how general insurance is playing an important part in building up trade and industry and also publicise its role as an earner of foreign exchange.

General insurance in India has kept pace with the country's industrial progress. Many large schemes and many new lines of general insurance have been explored by the insurers. Large risks, however, cannot be covered by insurers acting individually on their own. Reinsurance is vital to the very progress of general insurance. From this point of view, a notable development has been the setting up of the India Reinsurance Corporation Ltd. As Mr. Setalvad rightly stressed, it is desirable that the reinsurance facilities offered by the Corporation are exploited fully before any business is reinsured in the foreign markets. Nearer home, a somewhat intractable problem has been the existence of wasteful competition, excessive procuration cost and rebating which, according to Mr. Setalvad, are among the "major ailments" afflicting the business. The authorities have evolved a new code of conduct designed to suppress these evils. Explaining the importance of the new code, Mr. Setalvad said that, if the code were properly implemented, it should enable the companies to make sufficient underwriting profits, build up adequate reserves, and thus become strong and efficient units within the space of a few years. He added that, with the elimination of uneconomic competition and other undesirable features, it would also be possible to offer more attractive terms and more efficient service to the insuring public. We commend this counsel to the attention of general insurers. In some branches of general insurance, the loss ratio has been mounting steadily. This circumstance alone should make general insurers come together to devise ways and means of avoiding "wasteful competition" which only swells the loss ratios further.

Even in the immediate future, the prospects for general insurance are certainly bright. It cannot be too strongly emphasised that its progress is bound up with the implementation of the various programmes which form part of the second Five-year Plan. Progressive implementation of the schemes for the economic development of the country, as Mr. Setalvad pointed out, is bound to result in a gradual improvement in the general living standards of the people. This should give ample opportunities to insurance companies to add to their premium income by developing new lines of business as well as by improving further the lines in which they are already engaged. In this connection, he indicated that there was bound to be a growing demand in such new lines of general insurance as machinery erection and breakdown insurance, boiler insurance and contractor guarantee or performance bonds. The increasing tempo of the economic activity in the country, he said, would open up yet another profitable avenue of business for insurance companies in the form of "loss of profits" insurance. If people were made to appreciate the value of this form of insurance, it might mean a sizable increase in general insurance business in this country. Clearly, the vast potentialities for increase in business cannot be fully exploited, unless the base of general insurance is itself strengthened. This implies a well-organised and integrated market, composed of financially sound and healthy units. Although the number of general insurance companies is not very large for a country of India's continental size, the number is certainly large in relation to available business. A healthy merger movement deserves to be encouraged. We do not, of course, deprecate competition which must remain the watchword of general insurance.

There is, however, need for co-operation as well as for competition, both of which are necessary for the progress of general insurance. Insurance risks are becoming more and more complex. Not all of them can be faced singly by individual insurers. To take only one recent instance. It is now recognised that only through joint effort would insurers be able to meet the risks arising from the widening use of atomic energy. At a conference held in London in March last, 25 delegates representing the atomic insurance pools of several European countries reached agreement on the broad approach to the insurance of risks arising from the use of atomic energy reactor installations. The British Insurance Atomic Energy Committee, which organised the conference, itself represents British insurance companies and Lloyds Underwriters and is stated to be a means of marshalling the resources of British insurance market to form a single insurance pool to provide the underwriting capacity required to cope with the many millions of pounds involved in covering atomic energy risks. In addition, it also ensures maximum co-operation among individual insurers and facilitates the exchange of technical information. India too will do well to associate itself closely with efforts which are being made in the U.K. and the U.S. to cover atomic risks. There is thus great scope for profitable co-operation at both national and international levels. At the same time, general insurers cannot be oblivious of the fact that their business has widened their scope and varied their services only through competitive struggle. Without necessarily abandoning the essentially competitive nature of the insurance service, it should be possible for general insurers to evince a keen sense of co-operation in their mutual interest.

IMPLICATIONS OF T.I.S.CO. STRIKE

BEARS RAID BULLION—EXPORT QUOTA FOR COTTON—KILLICKS' NEW ISSUE

THURSDAY, 5 P.M.

THE Communist onslaught on India's steel town, Jamshedpur, has been in full swing for over a week now. The illegal sit-down and stay-in strike has continued unabated since the 15th inst., following the token strike on the 12th inst. Intimidation and violence, coupled with wanton vandalism directed against public and the Company's property, are part of the nefarious tactics the Communists have employed in order to terrorise loyal workers into submission to their behest. Sabotage of vital transportation from plant to plant of essential raw materials through threats against drivers has been reported. It would appear that, whereas in times of labour trouble in the past workers never attempted to interfere with the working of essential plants such as coke ovens and blast furnaces, the strike leaders have not spared such essential equipments this time. Surely, it is of the utmost importance to India's industrial future that the impression should not gain ground that workers can indulge in illegal strike and sabotage with impunity.

MARKET GOSSIP

Clearly, the whole aim of the extremist elements is to lay siege to India's coal and iron belt. Indeed, this has been evident for quite some time now. T.I.S.Co's Chairman, Mr. J. R. D. Tata, in his speech at the last annual meeting of the Company, pointed to the evidence of Communist infiltration into Jamshedpur. He said that, in the Communists' eyes, "success in achieving prosperity through a mixed economy and by democratic means would be a severe setback to their plans and must, therefore, be thwarted at all costs." He continued: "Progress and happiness must be achieved the Communist way or not at all and they cannot afford to let success in India disprove the necessity of the totalitarian methods used in some countries which they seem to love more than their own." He warned that there was evidence that the activities of these elements at Jamshedpur were part of a predetermined plan. He added: "Jamshedpur is one of their obvious and principal targets in the labour field, for control of the growing steel and heavy engineering industries there would provide them with a stronghold on one of the most vital and sensitive sectors of the economy." He indicated that the initial phase of the plan was marked by a series of localised incidents. Proceeding, he observed: "Agitation, coercion and intrigue, in the traditional pattern of Communist action, all play their part in this preliminary softening up process. If it succeeds, the pressure will be increased and extended to other units in the next stage until the present trade union movement and its leadership are destroyed. The last step would be to take over the whole labour movement at Jamshedpur and elsewhere." Recent incidents in the T.I.S.Co. town serve only to confirm Mr. Tata's dark predictions.

Sound industrial relations, like good health, seldom receive notice until they break down. Notwithstanding the recent unrest in Jamshedpur, it is noteworthy that the record of industrial relations in the city is the best of its kind in the country. The far-sighted management, conscious of its national responsibility as well as its responsibility to its workers, has been particularly solicitous of the interests of its employees. Apart from the fact that the T.I.S.Co. workers are provided with extensive facilities, including housing, medical care and education for children, on a scale not available to their counterpart elsewhere, they are now among the best paid industrial workers in the country. The average annual income per employee increased from Rs. 784 in 1939-40 to Rs. 2,337 in 1951-52 and still further to Rs. 2,437 in 1956-57. As a result of the steep increase in wages, the labour cost per ton of finished steel has also tended to move up. Thus, it was Rs. 27 in 1939-40, Rs. 93 in 1951-52 and Rs. 101 in 1956-57. Despite the increase in wages, the average output of finished steel per employee has actually declined. It was 28.9 tons in 1939-40 and only about 24.2 tons in 1956-57. The direct income of a worker in T.I.S.Co., besides provident fund and retiring gratuity, includes basic wage, production, maintenance or service bonus, incentive bonuses, dearness allowance, food rebate and emergency bonus, and annual profit-sharing bonus. The Company's profit-sharing bonus scheme, the first of its kind in the country, gives in its present form 30 per cent. of the Company's net profits to the employees. In 1956-57, the share of the workers in the total revenue of the Company aggregated 27.6 per cent., as against a mere 4.2 per cent. which was the share of the shareholders in the total revenue. It may be mentioned here that the number of individual shareholders, apart from institutional investors such as banks and insurance companies, is as large as 46,853, as against the direct employees of T.I.S.Co. of whom there are some 39,000 men in Jamshedpur. It should, therefore, be clear that the present labour unrest in T.I.S.Co. cannot possibly have any economic basis whatever.

Faced with an unpleasant task, the Bihar Government has been doing its duty in trying to maintain law and order under very difficult circumstances. After all, a Government has to govern or get out. It is to be hoped that the Central and State Governments are conscious of the issues involved in the recent events in Jamshedpur. If the extremist elements in the steel town are allowed to have their way, they are bound to engineer similar strikes all over the country, thereby bringing India's industrial machine to a halt and throwing the entire second Plan into a state of irreparable disrepair. It is best everybody knows what these elements are after.

* * * * *

The serious labour unrest in Jamshedpur coupled with the Commerce and Industry Minister's "no" to the cotton millowners' request for a further reduction in excise duty for some time to come, provided the main inspiration for the bears to dominate the share market after a lapse of several weeks. Today, however, there has been a sizable recovery which has taken equity values well above the week's lowest, but it is too early to conclude from this sudden jump in prices today that the worst is over. Any further depression has, however, been prevented by the healthy technical position of the market. What is disturbing to the investors is that the T.I.S.Co. strike has spread to the Tata Locomotive and Engineering Company, and other industries under Tata management in Jamshedpur. The seriousness of the situation can be judged from the fact that the management of T.I.S.Co. has had to close down all departments, except certain essential services and departments and the Government has had to impose a 24-hour curfew. Consequent on these developments in Jamshedpur, Tata Ordinaries touched yesterday a low of Rs. 175.75 and Indian Irons Rs. 21.04, as against Rs. 181.25 and Rs. 21.56, respectively, a week ago. These low levels compare with the peak of Rs. 185 and Rs. 22.20 touched in the closing week of April.

Investors in textile shares have been disappointed by the Commerce and Industry Minister's refusal for the time being to cut the excise duty on cloth. But surely, they have reason to think that it is not altogether unexpected, in the light of the Planning Commission's suggestion that the Central and State Governments should raise by way of fresh taxation another Rs. 100 crores. The Minister has, however, promised to appoint an expert committee to look into the problems of the industry. The operators' disappointment is reflected in the dip of Bombay Dyeings from Rs. 53.80 to a low of Rs. 53 yesterday, of Centurys from Rs. 427 to Rs. 418 and of Kohinoors from Rs. 266 to Rs. 261.

* * * * *

Another market in which "bears" have come to wield an upper hand is the bullion market, where the tables have turned suddenly within a span of a week against the bulls. This is particularly so in silver. Though the trend of prices has been somewhat irregularly lower since the middle of April, "bulls" continued to hold their grip till last week, thanks to scarcity of floating stocks of silver, sizable fall in arrivals and good demand for gold. The signs of loosening of the bull grip were evident towards the close of last week, as witness the narrowing of the carry-forward charges in their favour, but in the last few days the "bears" have gained the upper hand so rapidly that they have come to pay a penal margin of Rs. 500 per bar on their outstanding sales of silver in the July contract with effect from Tuesday. This has not, however, deterred them from hammering down the market, as the demand has already weakened considerably, with the result that ready silver has come to be done at the close today at Rs. 187-6, which represents a fall of Rs. 5-9 per 100 tolas over the week and of Rs. 15-2 from the peak of Rs. 202-8 touched on 17th April. Forward silver (current settlement) closed today at Rs. 187-14, as against Rs. 192-15 a week ago.

The slackness in demand for gold and the Bombay High Court's judgment invalidating Section 178A of the Sea Customs Act as *ultra vires* the Constitution, in so far as gold is concerned, have been the main bearish factors, with the result that ready gold has closed today at a low of Rs. 110-15, as against Rs. 113-4 a week ago and Rs. 114-15 a month ago. Forward gold has lost over the week Re. 1-9 per tola. Section 178A, which has now been held *ultra vires* the Constitution by Mr. Justice K. T. Desai, lays down that, where any goods seized under this Act in the reasonable belief that they are smuggled goods, the burden of proving that they are not smuggled goods shall be on the person in possession of the goods seized. The Judge has held that this section deprives a citizen to hold, acquire and dispose of gold or to carry on trade or business in gold, inasmuch as it is practically impossible for any person looking at gold to say whether it has been smuggled into India or whether duty has been paid on it or not.

* * * * *

The cloud of uncertainty and anxiety that has for some time been overshadowing the cotton market has at last been cleared. The Government of India announced late on Tuesday this week a fresh export quota for 50,000 bales of cotton, comprising 35,000 bales of cotton of all varieties not above 23/32" in staple and 15,000 bales of cotton not above ¾" in staple. Exports as per this quota will be allowed on a first-come-first-served basis, subject to an individual quantity ceiling of 10 per cent. of the quantity allowed in each group per shipper. The announcement has been generally welcomed by the trade. The inclusion of ¾" cotton in the quota has been a matter of satisfaction to the trade, particularly to those who had entered into export commitments in anticipation of a quota for this cotton. The only complaint has been that the quantity permitted of ¾" cotton is small. The first-come-first-served basis for exports has also been welcomed, as it is thought that it will expedite exports.

As a sequel to the announcement, the spot prices of exportable varieties like Kalyan, Wagad, and Kalagin have firmed up by 20-25 points. The reaction of the futures market has been true to type. Following the quota announcement, the market, after a brief spell of hesitancy yesterday induced by the feeling that the quota for ¾" cotton was too small, improved later on firm spot advices. The I.C.C. Moglai Jarilla August contract, which had declined to Rs. 664 on Tuesday, improved to Rs. 679 yesterday and further to Rs. 683 today, although the closing was a shade lower at Rs. 682.50.

The total quantity allowed for export so far in the season, including the present quota, aggregates 250,000 bales, comprising 150,000 bales of Bengal *Deshi*, 85,000 bales of cotton of all varieties of staple length 23/32" and below and 15,000 bales of cotton of stapling ¾" and below. As regards the utilisation, the quota of 50,000 bales of Bengal *Deshi* released in October 1957 and the one for a like amount released on 17th March on a first-come-first-served basis have been completely absorbed. Of the 50,000 bales of Bengal *Deshi* released for export in February last, more than 30,000 bales have been sold. About 30,000 bales out of the quota of 50,000 bales of cotton stapling 23/32" announced on 25th March have also been sold. As regards the present quota, the general opinion among exporters is that it will be absorbed within a month. Already, about 10,000 to 12,000 bales out of the 15,000 bales of cotton of stapling ¾" permitted for export are reported to have been sold.

Shipment of cotton to various overseas destinations so far in the season has been slightly higher than in the last season. From 1st September 1957 till the 10th of this month 236,834 bales have been shipped, as compared with 218,003 bales in the same period last season.

* * * * *

Details of the proposed "rights" issue by Killick Industries Ltd., an indication of which was given by the Company's Chairman at the last annual general meeting, are now available. The Company proposes to issue 25,000 shares of Rs. 100 each at a premium of Rs. 20 each and these will be offered in the first instance to the existing shareholders as on 7th May 1958 in the ratio of one share for every four shares held by them. The sum of Rs. 120 per share is payable thus: Rs. 20 on application (of which Rs. 10 is towards premium), Rs. 25 on allotment (of which Rs. 10 is on account of premium) and the balance of Rs. 75 in calls of not more than Rs. 25 per share at intervals of not less than two months.

The issue, for which the sanction of the Controller of Capital Issues has been obtained, is for the purpose of financing the Company's expansion programme. In view of the fact that the overdraft facilities which the Company had enjoyed so far to finance its expansion programme have reached their limit and the Company is undercapitalised, the Directors have decided to raise fresh capital.

The Company's present authorised capital is Rs. 1.50 crore, having been raised from Rs. 80 lakhs in 1951 through the creation of 70,000 shares of Rs. 100 each. Out of this, the Company issued 20,000 shares of Rs. 100 each at a premium of Rs. 20 per share in September 1951. It is out of the balance of 50,000 shares that the proposed issue is being made. The present issued and paid-up capital is Rs. 1 crore.

* * * * *

The foreign exchange assets of India continue to move downward, although the pace of decline is slower than that a year ago, thanks to drastic cuts in imports. Over the first seven weeks (ended 16th May 1958) of the current financial year, the total foreign securities and balances held abroad recorded a fall of Rs. 15.49 crores to Rs. 251.51 crores. The drop in the corresponding period of the previous year was as much as Rs. 49.24 crores; the assets stood at Rs. 477.59 crores as on 17th May 1957. Thus, over the year ended 16th May 1958, the net contraction in foreign assets was of the order of Rs. 226.08 crores.

It looks as though the pace of decline in foreign assets will be accelerated in the coming months, despite the restrictive import policy. As the Planning Commission itself has clearly pointed out, the foreign exchange cost of several projects has gone up and there have been additional demands on the country's external resources, as, for example, for larger food imports and defence. A part of the expenditure of foreign exchange can, of course, be adjusted to what the country can earn from exports, but exports continue to be at a low ebb. In fact, there has been a distinct setback of late. The aggregate value of exports, particularly to the United Kingdom, during the first quarter of 1958 was lower by nearly Rs. 31 crores as compared with the same period last year. The setback to exports must be attributed partly to the American recession which has resulted in reduced offtake of Indian goods not merely by the U.S. but also by the countries depending largely on earnings from exports to the U.S. Indeed, the effects of the American recession are global in character and, since the recession has still not shown any signs of abatement, the question arises as to how to counter the world effects of the U.S. recession.

Posing the aforesaid question from the point of view of Britain, Prof. F. W. Paish, of London University, made a few interesting observations in London recently. In the opinion of Prof. Paish, Britain has the choice of three methods of maintaining demand for its products and services—to take steps to enable foreign customers to buy U.K. exports, even though they cannot pay for them at the moment; to attempt to expand home investment; and to augment home consumption. He recalled how, by the end of 1957, a margin of re-

(*Continued on page* 1011)

SHARE MARKET TURNS BEARISH

T.I.S. CO. STRIKE AFFECTS SENTIMENT

(From Our Own Correspondents)

BOMBAY, 22*nd May*

THE share market struck a bearish note during the week under review and prices, under the leadership of steels, declined sizably. The absence of any helpful development out of the Conference of Millowners and the Union Minister for Commerce and Industry in Bombay last week-end, coupled with the news of stay-in strike by the members of the Jamshedpur *Mazdoor* Union in the T.I.S.Co. works from the 15th inst., which entered its eighth day today and took a violent turn during the last few days, resulting in firing by the police and imposition of 24-hour curfew from yesterday, induced selling pressure. The spread of the strike to other industries like Tata Locomotives, etc. also depressed sentiment. It is feared that the strike in Jamshedpur during the last eight days would affect production and any prolongation of the strike further would seriously affect the output of T.I.S.Co. and, indirectly, the other industries which depend on steel.

The Union Minister for Commerce and Industry told the representatives of the textile industry in Bombay on Friday last that there was no likelihood of any further reduction in the excise duty in the near future. He, however, announced that an expert committee would soon be appointed to study the problems of the cotton mills and to make recommendations to the Government before coming to a decision on giving relief to the industry. The delay in the announcement of increased price for cement also depressed the sentiment. Towards the close, however, there was an all-round improvement in equity values which made good a sizable part of the earlier losses.

Tata Ordinaries were marked down from Rs. 181.25 to a low of Rs. 175.75, at which level there was some replacement buying and bear covering, which lifted up the price to Rs. 178.50 at the close. The new shares shed, over the week, Rs. 2.75 to Rs. 176. Indian Irons declined from Rs. 21.56 to Rs. 21.04, but gained back to Rs. 21.32 at the close.

Textile shares were depressed before staging a recovery today. Bombay Dyeings dipped from Rs. 53.80 to Rs. 53, but improved to Rs. 53.70 at the close. Centurys finished at Rs. 426 after having been depressed from Rs. 427 to Rs. 417.50. Kohinoors lost over the week Rs. 2.50 at Rs. 263.50, the lowest level touched being Rs. 261. Central Indias shed Rs. 3 to Rs. 81, while Finlays gained over the week Rs. 4 to Rs. 261. Gokaks were marked down by Rs. 5 to Rs. 137. Indu Ordinaries were done 12 nP better at Rs. 9.24 and Models Rs. 2.50 higher at Rs. 170. New Greats shed a rupee to Rs. 202. Osmanshahis put on Rs. 2 to Rs. 44, while Shree Niwas Cottons were unchanged at Rs. 134. Simplex gave way from Rs. 154 to Rs. 152. Standards were done at Rs. 390 *ex-div.*, as against Rs. 422 *cum-div.* a week ago. Svadeshis lost Re. 1 to Rs. 172, while Swans were done Rs. 5 higher at Rs. 344 and Tata Mills were unchanged at Rs. 37. Ahmedabad Advances shed Rs. 2.50 to Rs. 152.50 and Colaba Lands Rs. 5 to Rs. 30. Sassoon Silks were done 76 nP lower at Rs. 9.24.

Bank shares were fairly steady. Barodas were a fraction better at Rs. 115. Central Banks gained 30 nP to Rs. 51.30, while the new shares lost Rs. 2.25 to Rs. 54.50. Bank of Indias were a shade higher at Rs. 130, while their new shares lost Re. 1 to Rs. 132. United Commercials changed hands 50 nP higher at Rs. 59.30.

Among insurance shares, New Indias were well favoured and rose sharply from Rs. 47 to Rs. 49.75 before closing at Rs. 48.50. British India Generals were done 24 nP higher at Rs. 14.

Electricity shares presented a mixed pattern. While Ahmedabad Electrics gathered 20 nP over the week to Rs. 94.50, Bombay Suburbans shed 25 nP to Rs. 104.50 and Surat Electrics 50 nP to Rs. 107.25. Tata Hydros lost 75 nP to Rs. 117.75. Tata Powers gained Rs. 2.50 to Rs 1,215, but Andhra Valleys were lower by Re. 1.25 at Rs. 1,150.

In the sugar group, Belapurs reacted from Rs. 245 to Rs. 243.50, while Phaltans disclosed a gain of Re. 1.75 to Rs. 144. Walchandnagars were a shade better at Rs. 263.50. Kesar Sugars had business 30 nP lower at Rs. 50 and Ravalgaons 75 nP lower at Rs. 123.25. The delay over the announcement of cement prices caused selling in cement shares. Associated Cements dipped from Rs. 151.50 to Rs. 147, but the closing was sizably higher at Rs. 148.25. The new shares lost over the week Rs. 3 to Rs. 143.50. Digvijays lost Re. 1.50 to Rs. 142, Orissa Cements 76 nP to Rs. 11.56, Dalmias 14 nP to Rs. 9.86 and Jaipur Udyogs 24 nP to Rs. 11.76.

In the engineering and mining group, Alcock Ashdowns were done Re. 1.25 lower at Rs. 246.25. Tata Locomotives, after an initial improvement from Rs. 166.50 to Rs. 167.75, gave way to Rs. 162 yesterday. Today, however, they spurted to Rs. 166.25. Premier Constructions were placed at Rs. 183.50 *ex-div.* as against Rs. 191.75 *cum-div.* a week ago. Larsen and Toubros were steady at Rs. 16.32 and Mahindras were done today at Rs. 18 *ex-div.*, as against Rs. 19.20 *cum-div.* a week ago. Brady Engineerings were picked up Rs. 2 higher at Rs. 51. Shivrajpurs declined by Re. 1.50 to Rs. 80.50 and Indian Coppers were quiet at Rs. 3.08.

Scindias receded from Rs. 17.24 to Rs. 16.96, but gained strength to close at Rs. 17.24. Great Eastern Shippings showed no change at Rs. 19.92. Hindustan Motors declined by 16 nP to Rs. 6.72 and Premier Automobiles by Re. 1.20 to Rs. 80.30.

In the miscellaneous group, Bombay Burmahs (old) suffered a precipitous fall from Rs. 552 to Rs. 536, but rallied towards the close to Rs. 547. The new shares closed Re. 1.25 lower at Rs. 205. National Rayons were marked down from Rs. 231.75 to Rs. 226, but the loss was more than made good when the shares recovered to Rs. 232.50 at the close. Tata Chemicals were 12 nP lower at Rs. 14.80, while Tata Oils were unchanged at Rs. 37.75. Wimcos were done at Rs. 170 *ex-div.*, as against Rs. 173 *cum-div.* a week ago. Hindustan Levers put on 68 nP to Rs. 21.96 and I.C.D.C. were done at Rs. 73.50. Voltas were Re. 1.50 lower at Rs. 121.

Calcutta Stock Exchange

CALCUTTA, 21*st May*

A reduction in the volume of transactions and a marking down in prices of speculative shares were the main features on the Calcutta Stock Exchange during the week under review. Reports of the deteriorating labour situation in both Jamshedpur and Burnpur kept the market anxious. These reports were followed by the news that the illegal strike in the T.I.S.Co. Works was palpably affecting production, resulting in the closing down of several departments. By strict import control, steel has become very short, and if indigenous production is affected as a result of labour troubles, this would cause untold hardship to the several industries dependent on Indian steel. The anxieties in this regard made buyers cautious, and the result was a lower volume of business. A tendency to reduce commitments was discernible. The settlement of the dispute in collieries over dearness allowance was noted with satisfaction, but the general trend of prices prevented coals from rising. On the other hand, jute shares were shown more attention, consequent on the decline in fibre prices and indications of a good crop. Textile shares were quiet in the face of reports of accumulating cloth stocks. The discussions of millowners with the Minister for Commerce and Industry in Bombay last week did not result in the much-hoped for relief in excise duty on cloth. Engineering shares were lethargic and there was a fall in prices. The anticipation that steel retention prices would be raised early failed to attract buying in view of the disquieting reports from the works.

Coals were generally dull. Burrakurs moved down to Rs. 21.62 from Rs. 21.75 and Central Indias to Rs. 7.69 from Rs. 7.81. East Indians were as low as Rs 20.25, as against Rs. 21.81 previously, while Bengals recovered to Rs. 241 from Rs. 230 and Karanpura Collieries to Rs. 94 from Rs. 93.50. Khatras Jherriahs at Rs. 55.50 were fractionally higher.

General Manager.
A. B. 13.

In cottons, Bowreahs declined to Rs. 103.50 from Rs. 104, while Elgin Mills were better at Rs. 12.50.

Jutes put on an improved appearance. Anglo-Indias hardened to Rs. 147 from Rs. 142 and Barnagores at Rs. 87 gained Rs. 4. Megnas spurted to Rs. 103 from Rs. 100.50 and Fort Glosters to Rs. 320 from Rs. 318. Belvederes realised Rs. 90, as against Rs. 83 previously. Gourepores at Rs. 254 added Rs. 13. Northbrooks were fractionally raised to Rs. 15. Kanknarrahs picked Rs. 4 at Rs. 50. Chitavalsahs were better at Rs. 13.75, as were Kamarhatties at Rs. 91, while Nationals were quiet at Rs. 23.

Engineering shares were featureless. Indian Irons were subjected to renewed offerings, as operators were disinclined to lessen commitments, in view of the uncertainty created by labour trouble. Consequently, they gave way to Rs. 21.11 from Rs. 21.75. Following the announcement that the Government of India was taking over its management and that the Government would extend financial assistance, Jessop & Cos. received attention and in the transactions that followed the rate improved to Rs. 19.81 from Rs. 19.25. Bhartia Electrics were fractionally lower at Rs. 14.94, but Kumardhubis firmed to Rs. 9.62 from Rs. 9.12. Texmacos eased to Rs. 17.55 from Rs. 18.25. Indian Standard Wagons eased to Rs. 98.50 from Rs. 99, while Guest Keen Williams at Rs. 31 were higher by 25 nP.

Miscellaneous industrials accounted for some selected features. Indian Cables rose to quote as high as Rs. 33.50, as against Rs. 30.37 earlier in the week. Alkali and Chemicals were fully firm at Rs. 15. Titaghur Papers rose to Rs. 37.25 from Rs. 36.50, while Sirpur Papers received considerable attention this week and gathered strength to Rs. 10.56 from Rs. 9.94. Indian Oxygens continued to realise Rs. 18.25, while Indian Aluminiums spurted to Rs. 15 from Rs. 13.81.

Madras Stock Exchange

MADRAS, 20*th May*

The Madras Stock Exchange continued to rule easy during the week under review also. With the diversion of funds from institutional and other investors to Central Government loans, buyers in the share market were somewhat scarce. Business was, therefore, restricted and prices tended to look down. Tea shares were generally subdued, despite the improvement in prices of medium and common teas. Rubber and coffee shares were also subdued. Select coffee shares, however, attracted some attention, although prices did not show any marked rise. Textile shares encountered selling, thanks to the categorical rejection by the Union Minister for Commerce and Industry of the plea for a further reduction in excise duty on cloth. the disappointment of operators over this statement was so much that even the Minister's assurance regarding the appointment of an expert committee to report on the present conditions of the textile industry failed to enthuse interest. Sugars were neglected. Miscellaneous industrials followed the general trend.

Among tea shares in the planting section, Peermades fell by Re. 1.25 to Rs. 20.25. Neelamalais were marked down by 38 nP to Rs. 4.35. Stanes Amalgamateds declined by 35 nP to Rs. 13.75. Kalasas receded by 25 nP to Rs. 15.40. Haileyburias retreated by 13 nP to Rs. 17.87. United Nilgiris and Kil Kotagiris eased by 10 nP each to Rs. 15.30 and Rs. 5.45, respectively. Blue Mountains shed 7 nP to Rs. 2.96, Periakaramalais 5 nP to Rs. 4.07 and Waterfalls 6 nP to Rs. 3.06. Alageswars, however, evoked some special support and hardened by 15 nP to Rs. 2.85. Among rubber shares, Tropicals dropped 55 nP to Rs. 20.70. Cochin Malabars receded by 30 nP to Rs. 4.40. Midlands lost a like amount to Rs. 16.10. Teekoys eased by 10 nP to Rs. 6.30. Woodlands and T.R. & T.'s softened by 5 nP each, the former to Rs. 7.70 and the latter to Rs. 6.60. Kalpettas, on the other hand, strengthened by 25 nP to Rs. 25.50, on special support. Among coffee shares, Consolidated Coffees encountered selling and dropped 55 nP to Rs. 24.55. Coffee Lands were lower by 27 nP at Rs. 34.85. Kumergodes, however, firmed up by 50 nP to Rs. 9.50. Savamalais hardened by 15 nP to Rs. 4.35. Sangameshwars gathered 3 nP to Rs. 3.03.

In the textile section, Lakshmis slumped by Rs. 5 to Rs. 94. Coimbatore Spinnings dropped a rupee to Rs. 49. Maduras shed 75 nP to Rs. 32. Buckinghams, Cannanores, Janardanas, and Ranga Vilas eased by 50 nP each to Rs. 165, Rs. 144.50, Rs. 76 and Rs. 60.50, respectively. Kotharis lost 10 nP to Rs. 10. Balasubramanias were quiet at Rs. 56, *cum-div.* reflecting the disappointment of operators over the cut in dividend to only 7½ per cent. for the year ended 31st December 1957, as against 15 per cent. in the previous year.

DUNLOP RUBBER CO., LTD.

The Dunlop Rubber Company, Ltd., London, has earned a higher net profit (after providing for taxation) of £3,016,600 for the year 1957, as against £1,943,591 in 1956. Consequently, the transfer to general reserve has been raised from £380,000 to £1,000,000. The dividend on the preference shares absorbs £451,447. The dividend on the ordinary shares has been stepped up from 10 per cent. in 1956 to 14 per cent., of which an interim of 3 per cent. was paid in November 1957, the corresponding distribution for 1956 being 2.5 per cent. A sum of £1,508,576 has been carried forward, as against £1,501,980 brought in.

NEWS IN BRIEF

THE Andhra Pradesh Government will shortly set up a small-scale industries board which will replace the existing advisory committee.

A six-man committee has been constituted under the Bombay State Family Planning Board to advise the Government on the question of sanctioning grants to family planning institutions for their publications.

The validity of the schedules attached to the Indian-Bulgarian Trade Agreement concluded in 1956 and revised in 1957 has been extended without any modification for a further period of one year, that is, upto 31st December 1958.

The new 53-mile branch line of the Bhilai-Dhalli-Rajhara section of the South-Eastern Railway was declared open on the 16th inst. The new branch line will lift every year approximately two million tons of iron ore from the Rajhara mines to the Bhilai steel plant.

The Bombay Government has relaxed the restrictions imposed on the distribution of cement for a period of three months. The free sale of cement earmarked for the non-agricultural public quota will be permitted in all areas of Bombay State, except the districts of Yeotmal, Buldhana, Chanda, Bhandara, Bhir and Osmanabad.

The Union Government has, in consultation with the Board of Trustees of the Employees' Provident Fund as well as the Trustees of the Coal Mines Provident Fund, decided to allow interest to the subscriptions of the Funds on their accumulations at the rate of 3½ per cent. during the year 1958-59, which was also the rate for the year 1957-58.

The Kerala Government has decided to constitute Managing Councils in all the State-owned industrial concerns, which will consist of the manager, one technician nominated by the manager and two representatives of the employees. The proposed Council will function as agencies for communications between managements and employees and will help evolve labour welfare measures, etc.

Exports of engineering goods showed a slight overall decrease in 1957, whereas those of diesel engines, electric fans, sewing machines, centrifugal pumps, agricultural implements and oil-mill machinery increased. The biggest customers of India were in the South-East Asian regions with purchases worth Rs. 1.3 crore out of total exports valued at Rs. 4.39 crores.

Training in scientific business management will be provided to another batch of small-scale industrialists at the Regional Small Industries Service Institute at New Delhi. Classes will be conducted in the evenings on three days in a week. The duration of the course is six months, on the completion of which a certificate is given to the trainees. No fees are charged for the training.

The total salt production in India by 164 factories during 1957 was 98.3 million maunds—an all-time record—as against 88.9 million maunds in 1956. This shows an increase of about 11 per cent. Export of salt in 1957 was about 11.929 million maunds which is 43 per cent. higher than in 1956 and represents the highest level of export so far reached since India became self-sufficient in salt in 1951-52.

An increase of 12 annas and one rupee in the prices of coal and hard and soft coke, respectively, has been made effective for a period of six months with effect from the 17th inst. The revision in prices is intended to enable the coal industry to pay the variable dearness allowance scheme for colliery wages as awarded by the Labour Appellate Tribunal last year.

The President has given assent to the Bombay Sales Tax (Validating Provisions) Bill, 1957. The Bombay Government has promoted the Bill to place on the Statute Book such amendments to the Bombay Sales Tax Act as were declared insufficient by the Bombay High Court for the purpose for which they were made. The amendments sought to validate Rule 6 of the Bombay Sales Tax Rules, 1952, which was declared *ultra vires* the rule-making power of the State Government. It also sought to change Rule 5 which was very similar and suffered from the same defects.

The temporary employees of the Central Government will, on discharge, receive a gratuity equal to one-third of a month's pay for every year of temporary service rendered by them. Persons who have attained quasi-permanent status which confers security of tenure as well as pensionary benefits analogous to those available to permanent employees are already entitled to half a month's pay for every year of service at the time of discharge. The temporary employees who have rendered approved service for three years and fulfil the age and educational qualifications prescribed for a particular grade can be declared quasi-permanent therein.

The all-India final estimates of *kharif* cereals (excluding small millets), namely, rice, *jowar*, *bajra*, maize and *ragi* for 1957-58 put the area and production at 163.55 million acres and 41.22 million tons, respectively, as against the partially revised estimate of 162.60 million acres and 43.14 million tons for 1956-57. The general decline in production is due to a substantial fall in production of rice from 28.28 million tons in 1956-57 to 24.82 million tons in 1957-58. The shortfall in rice production has been made up partially by the increase in production of *jowar* and *bajra* which has gone up from 7.25 million tons and 2.89 million tons to 8.06 million tons and 3.57 million tons, respectively. The increase in production of maize and *ragi*, however, was nominal. The estimated production of maize and *ragi* for 1957-58 is placed at 3.06 million tons and 1.71 million tons, respectively.

India had an adverse balance to the extent of Rs. 10.68 crores during the month of January 1958, according to the provisional figures of foreign trade by all routes—sea, air and land—on private and Government accounts, published by the Department of Commercial Intelligence and Statistics, Calcutta. Exports of merchandise (excluding transit trade of Pakistan and other overland foreign countries, namely, Nepal, Tibet, Sikkim and Bhutan) accounted for Rs. 53.25 crores, re-exports for Rs. 1.53 crores and imports for Rs. 65.48 crores. The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Exports (including re-exports) of currency notes amounted to Rs. 41 lakhs and of gold Rs. 5 lakhs, while those of current coins (excluding gold coins) were negligible. Imports of currency notes aggregated Rs. 4.21 crores and of gold Rs. 3 lakhs. There were no imports of current coins (excluding gold coins) during the month.

From Abroad

A total of 133 Norwegian vessels with an aggregate 616,048 gross tons was laid up early this month, as compared with 118 ships of 515,731 tons a month before.

It is learned that Japanese construction experts and a Government engineer are on their way to the United Arab Republic to investigate the possibility of Japan's participation in the Suez Canal dredging and development operations.

A delegation of two men and two women from the Soviet textile industry is on a two-week visit to Lancashire to study conditions in the British cotton industry. The delegation has the invitation of the Weavers' Amalgamation of a Lancashire Cotton Union, which sent a fact-finding mission to inspect mills in the Soviet Union two years ago.

Sales of new passenger cars in Canada in the first quarter of this year were lower at 88,671, as against 91,843 in the same period last year. While unit sales declined by 3.5 per cent., dollar sales were lower by only 1.6 per cent. because of higher car prices. Sales of British and foreign-made cars in the quarter were higher at 5,852 units, as against 4,257 a year before.

A new record of 1,180,000 tourists, including business visitors, visited the U.K. during the year 1957. This was 7 per cent. more than in 1956. The estimated expenditure of overseas visitors in the U.K., excluding fares to and from the U.K., amounted to £129 million, as against £121 million. Visitors from the dollar area spent £44 million as compared with £43 million.

All branches of wool trade, from wool growers to cloth merchants, will be represented at the five-day annual conference of the International Wool Textile Organisation which commenced at Vienna on the 19th inst. About 200 delegates from 18 countries, including Britain, are discussing the main theme of the conference, namely, the establishment of the European Common Market and its repercussion on the wool trade.

The War Risks Rating Committee of the Institute of London Underwriters has announced that war and strike, riot and civil commotion cargo insurance rates for voyages to, from or between ports in Jordan, Lebanon and Syria are now "held covered." This means that cargoes can be insured but there is now no fixed rate. The rate for these three countries previously was 9*d.* per £100 of cargo insured.

The immediate suspension of the levy of $M.21 per picul imposed on tin to repay Malaya's contributions to the buffer stock has been urged by the owners of 600 Chinese mines in the Federation of Malaya. A delegation of these owners met the Minister of Natural Resources in Kuala Lumpur recently and stated that they were not able to pay the levy until the price of tin showed improvement. The Government's decision on the plea is expected to be announced later this month.

A five-man World Bank Mission, headed by Mr. Neil Perry, has arrived in Karachi for a first-hand survey of Pakistan's economic situation. During his recent visit to Washington, the Finance Minister, Mr. Amjad Ali, had discussions with World Bank officials regarding an aid programme for certain projects which include a scheme to end waterlogging and salinity in West Pakistan and construction of power transmission lines. The mission will be in Pakistan for a month.

Direct and indirect taxation per head of population in Australia during 1956-57 was £127 5*s.* 3*d.* as compared with £118 5*s.* 9*d.* in the previous year, according to the figures released by the Commonwealth Statistician. The percentage proportions of the different taxes in 1956-57 were: Customs duties 5.65, excise duties 17.92, sales tax 10.36, land taxes 0.97, pay-roll tax 4.01, income-taxes 51.12, probate and succession duties 3.06, stamp duties 1.76, motor taxes 2.78, and all other taxes 2.37.

In the course of a joint memorandum, the British, Belgian, French, German, Dutch and Italian papermakers have urged their Governments to exclude the pulp, paper and board industry from the proposed European free trade area. They state that, if the industry were included in the area, their Scandinavian competitors might gain a virtual monopoly. If a free trade area for paper were unavoidable, the papermakers want the Governments concerned to discuss appropriate safeguards with the industry as a matter of urgency.

England's premier agricultural exhibition, the Royal Show, will be held this year at Bristol from 1st to 4th July. The show, which is organised each year by the Royal Agricultural Society of England, will cover over 150 acres. The livestock section at the show will feature about 20 breeds of cattle, some 30 of sheep and several types of horses. There will also be classes for goats, and a poultry and pigeon section. Thirty-seven acres will be devoted to stands exhibiting machinery.

PERSONAL

MR. Rustom P. Masani has been elected Chairman of the All-India Life Policyholders' Association, at its first general meeting held in Bombay during last week-end.

Dr. L. A. Bhatt is leaving for Europe today and will be present in Philadelphia at the Golden Jubilee celebrations of the American Institute of Chemical Engineers which are being held there from 22nd to 27th June.

Mr. Rajeshwar Dayal, at present Ambassador of India to Yugoslavia and Greece, has been appointed High Commissioner for India in Pakistan, in succession to Mr. C. C. Desai. Mr. Dayal will take up his new post shortly.

Mr. A. B. Chatterjee has taken over charge as Chairman of the Union Government's Tea Board in Calcutta with effect from Monday, *vice* Mr. U. K. Ghosal, who has joined the Damodar Valley Corporation as its Secretary.

Mr. R. G. Saraiya, Chairman of the Bombay State Road Transport Corporation, left for New York on Sunday. During his stay in the United States, Mr. Saraiya will take the opportunity to visit various transport and automobile organisations.

Mr. S. N. Chid, Director-General of Tourism and Joint Secretary to the Ministry of Transport and Communications, Government of India, left Bombay for Paris *en route* to Frankfurt on Thursday last to attend an International Conference on Tourism to be held there.

NEYVELI PAOJECT

THE inauguration of the experiment in the pilot briquetting and carbonising plant at Neyveli by Mr. Howard Houston, Head of the U.S. Technical Co-operation Mission in India, last week, marks an important step in providing smokeless domestic fuel of excellent quality. The tests conducted in well-known laboratories abroad are said to have shown that the Neyveli lignite is of a very good quality capable of being briquetted and carbonised to yield smokeless domestic fuel. Expert opinion suggested that pilot experiment should be conducted to determine the quality of domestic fuel. It is in pursuance of this suggestion that India had to seek the aid of the T.C.M. of the U.S. for supplying briquetting and carbonising equipment. The T.C.M. not only readily complied with the request but also erected the equipments in a record time of six weeks. The pilot experiment will play an important role in finalising the specification of the plant and machinery required for commercial purposes.

The Neyveli Project is a multi-purpose one, intended to harness the lignite reserves for providing the much-needed electricity for industrial development in the South, for manufacture of fertilisers for agricultural development and for production of briquettes for use as domestic and industrial fuel. The acute shortage of fuel in the South has been retarding the development of industries and agriculture. The development of the Madras State, as Mr. C. Subramaniam, Finance Minister, who switched the pilot plant into operation, put it, depended on the success of the Neyveli Project. Under this project, it is planned to establish a plant to produce 714,000 tons of lignite briquettes which will be carbonised to yield 380,000 tons of semi-coke. In view of the importance of this project, the mining part of the project has been included in the list of "core" projects under the second Plan. The total foreign exchange cost of the project (mining part only) provided in the second Plan period amounts to Rs. 10.50 crores, of which a sum of Rs. 6.70 crores has been incurred up to the end of March 1958. This leaves a fresh commitment of Rs. 3.80 crores necessary for the completion of the programme. It is significant to note that the first experiment in the pilot briquetting and carbonising plant was inaugurated last week, almost one year after the earth-moving operations of the first mine cut of lignite reserve at Neyveli was inaugurated by the Prime Minister.

OIL-BASED INDUSTRIES

One more Development Council—that covering the oil-based industries of soaps, paints and plastics—has been constituted by the Government of India; it is the thirteenth of its kind set up under the Industries (Development and Regulation) Act. This 21-member Council, which is presided over by Mr. P. A. Narielwala of Messrs. Tata Industries (Private) Ltd., was inaugurated at New Delhi the other day by Mr. Manubhai Shah, Union Minister for Industry. It is entrusted with the task of recommending to the Government targets of production, co-ordinating production programmes, and reviewing the progress of industries from time to time. It will also suggest the norms of efficiency, so that output is maximised, quality improved and cost reduced. Its other functions will be to promote standardisation of products manufactured by the soap, paints and plastics industries and put forward measures designed to raise productivity of labour and ensure general labour welfare. At its inaugural meeting, the Council decided to divide into three separate panels for the aforesaid industries in order to discuss their individual problems.

The constitution of the Development Council for the oil-based industries will be widely welcomed. These industries play a vital role in the economy of the country. With the improvement in the general standard of living of the people and with the expansion that is taking place in the different consuming industries, the demand for products like soaps, paints and plastics is bound to increase greatly. If this demand is to be met fully and at an economic price to the consumer, it is imperative that the pace of development of the oil-based industries should be speeded up and due attention paid to the need for avoiding any maladjustment in growth. Surely, the activities of the Development Council will be watched with much interest.

Inaugurating the Council, Mr. Manubhai Shah, Union Minister for Industry, did well to urge the soap industry to use non-edible oils to the maximum possible extent, to conserve oils like groundnut oil and coconut oil for edible purposes in the country, and to find out synthetic detergents which were not based on edible oils so that new chemical industries could spring up. Speaking on the problems of the paint industry, Mr. Shah rightly emphasised the importance of developing indigenous raw materials and increasing the production of pigments and nitrocellulose lacquers, as well as finishes based on synthetic resins. He also underlined the need for standardisation of quality of paints marketed and maintenance of standards. Given these, there is no doubt that a substantial export market for paint products can be built up. The Minister called upon the two groups in the paint industry to merge themselves into a central association of paint manufacturers which could pay attention to maintenance of standards and establishment of a central laboratory. Turning to the plastics industry, Mr. Shah commended the "enormous" progress made by the industry in the last few years; he said that the quality of the goods was satisfactory. He pointed out that there was vast scope for production and export of plastic goods. He revealed that a programme of expansion of raw materials and basic chemicals like styrene, formaldehyde and phenol had already been drawn up, and asked the Development Council to help implement it.

In conclusion, Mr. Shah assured the Council that the interests of all sectors of the industry—cottage, small, medium and big, foreign-owned or Indian-owned—would be safe in the hands of the Government and that there would be no discrimination between one segment and another. He also assured the Council that protection, if any, given to any sector would be based only on economic grounds. It is to be hoped that the steps taken by the Government for the development of the oil-based industries will be in conformity with the assurances given by Mr. Shah.

LABOUR CONFERENCE

In the course of his address to the sixteenth session of the Indian Labour Conference which began at Naini Tal on Monday, Mr. G. L. Nanda, Union Minister for Labour and Employment, touched upon some of the major labour problems facing the country. In view of the current disturbed condition of industrial relations in India, he did well to draw pointed attention to inter-union rivalry which was in no small measure responsible for much of the current industrial unrest. Inter-union rivalry, Mr. Nanda pointed out, was the bane of the Indian labour movement. Trade union conflicts have been undermining the strength and solidarity of the working classes. The only long-term remedy for this was to have a unified trade union structure which cannot materialise until trade unions were divorced from party politics or the bulk of labour found itself in a single party or the working class formed a party of their own. But none of these appear to be practicable in the present context. If multiplicity of unions was inevitable, was there not a way to arrange mutual relations between competing unions in the same field so that workers were saved from harm, the industry was not injured and the national interest did not suffer? Answering this poser, Mr. Nanda said that a code of conduct for trade unions, setting out the do's and dont's which they should observe, should be evolved. A trade union, which figured as such in the system of industrial relations, must satisfy and maintain certain minimum standards in respect of membership fees, their collection, union meetings, secret ballot for direct action and other essential features.

The problem of trade union recognition, he pointed out, was at the bottom of much of the friction between employers and employees. There were two aspects to this problem: which unions should be recognised?; should legal compulsion be provided? According to Mr. Nanda, if the labour organisations themselves arrived at an agreed basis for trade union recognition, regarding the choice of union as well as the minimum standards to which a union must conform, there would, in the present circumstances, be no resistance in the matter on the part of employers. It may be mentioned in this connection that the Labour Ministers' Conference which concluded its session on Monday recommended that no recognition should be given to a trade union unless it had been functioning for at least one year and had a membership of 15 per cent. of workers in the trade, occupation, or industry concerned. It was also suggested that the trade union should prescribe a membership fee and ensure proper collection of such fees. The Labour Ministers, however, held that these principles should be laid down on a voluntary basis and not through legislation.

Referring to the principal item on the agenda of the Conference, namely, industrial relations, Mr. Nanda said that the apparatus of industrial relations, as it was functioning today, was not giving complete satisfaction in some respects. He pointed out that there had been general reluctance on the part of labour to dispense with the machinery of compulsory adjudication. The consensus of opinion at the Labour Ministers' Conference was not in favour of even a limited suspension of the adjudication machinery. Mr. Nanda was, however, prepared for the adoption of such a course if the majority of workers preferred it. In any case, he emphasised, recourse to tribunals should be reduced to the minimum. Although it was not possible to evolve a rigid formula for all situations, it was possible, according to him, to frame norms and yardsticks which could be applied for voluntary settlement of disputes.

A partial suspension of compulsory adjudication in certain areas or industries for a specified period of time is not, in our view, the correct approach to the question. Those who are opposed to the abolition of compulsory adjudication will certainly do everything to discredit the policy, which though bristling with many practical difficulties in the current context in India, is sound in principle.

Finally, Mr. Nanda did well to touch upon a point of vital concern to the country when he observed, while referring to the frequent interruptions of work on account of strikes and lockouts: "the right to strike is not in question in terms of the law which govern industrial relations, but the exercise of that right has to be viewed in relation to the consequences of stoppages of work for the economy of the country, the progress of the Five-year Plan and the damage they cause to the workers' own interests." It is to be hoped that all those who swear by the interests of the country would ponder these words.

INCOME-TAX SUPER-TAX READY RECKONER 1958-59

With all the usual features for deduction of tax from salaries, Income-tax Super-tax tables upto Rs. 5,00,000 income, tax for registered firms, Finance Act, 1958, Grossing of dividends, typical steps to find the tax at a glance, Surcharges for earned and unearned income, tables and examples for Limited Companies, etc., etc. Also, rebates for **Provident Fund, Life Insurance Premium, etc., etc.**

TOGETHER WITH

Rates, Tables, Examples and Exemptions, etc., etc. for (1) **Wealth Tax,** (2) **Capital Gains Tax,** (3) **Expenditure Tax,** (4) **Estate Duty** and (5) **Gift-tax.**

Apply:

V. G. MEHTA

Court House, Dhobi Talao, BOMBAY-2

Price: Rs. 6.50 per copy. **Postage extra.**

TRAMP SHIPPING

The world tramp shipping industry is passing through a period of great stress and strain. The present freight rates, lowest as they are since 1952, coupled with mounting costs, have made operation of a tramp ship almost as uneconomic as during the early 1930s. It is not, therefore, surprising that the present tonnage of idle shipping has increased by over a million tons in less than a month to touch a high of seven million gross tons. It may be of interest to know that this represents about 6.4 per cent. of the world merchant fleet. Of this figure, that is 7 million gross tons, 3.78 million tons represent dry cargo vessels and in this 1.73 million tons or 277 ships are registered under tax-free flags. It is stated that the U.K. has 500,000 tons of dry cargo vessels laid up and Greek owners about 420,000 tons. Again, oil tankers account for 3.3 million gross tons of the world laid-up total.

The steady increase in laid-up tonnage is attributed to absence of any signs of recovery in tramp shipping freight rates in the foreseeable future. Hence, rather than keep the ships in commission against hopes of securing a new charter, shipowners have preferred to lay-up ships whenever their present charters expire. Against this background, the meeting convened by shipping representatives from 19 maritime countries assumes special significance. The Conference of the International Chamber of Shipping is scheduled to be held in London this week to discuss the "practicability or desirability" of international co-operation to control the amount of tramp shipping in the world sea trades. The meeting, it is stated, will consider the question of appointing a special committee to examine existing schemes for co-operation which may also be supplemented by some of its own suggestions. The committee thus constituted would take account of Greek proposals which advocate automatic laying-up of a ship if it cannot obtain a profitable freight rate and control over release of vessels from lay-up. The Tonnage Stabilisation Scheme formulated by the U.K. Chamber of Shipping several years ago will be yet another plan for consideration. It is recognised that, in the adoption of any such scheme, attention should be paid more to the controlled release of shipping from lay-up than to the actual process of laying-up, especially since there is a large volume of laid-up tonnage eager to re-enter the market once freight rates show a tendency to rise.

The proposal for international control of laid-up tonnage is, however, not likely to receive the support of a number of U.K. and Scandinavian owners. Again, there is a section of opinion which holds that the present depression might prove beneficial if it compels the retirement from service of pre-war and war-built ships. The only hope for a recovery in freight rates which will admit of an operating profit and some provision for depreciation lies in a world-wide expansion in trade. But when there is a recession in the U.S., such a revival does not appear to hold promise.

COMMUNITY DEVELOPMENT

In his message to the Community Development Conference held at Mount Abu on Tuesday this week, the Prime Minister, Mr. Nehru, very pertinently declared that community development had arrived at a crucial stage and that its future success would be measured not in vague impressions but in the actual production of foodgrains especially. The population of the country is continuously rising and the inflationary forces are gathering momentum. Unless the supply of food (and other agricultural commodities) is augmented, the pressure of inflationary forces is bound to increase enormously. As Mr. Nehru said, an increase in food output is of vital importance today; indeed, it is by far the most important problem that we have to face in the near future.

How valuable is the contribution which the Community Development programme would make from the point of view of the fulfilment of the second Five-year Plan, particularly of its agricultural production targets, was well brought out by Mr. V. T. Krishnamachari, Deputy Chairman of the Planning Commission, while addressing the Mount Abu Conference. The fundamental objective of the programmes for increased agricultural production embodied in the Plans, Mr. Krishnamachari said, was to raise substantially the level of rural life by the most efficient use of land resources, the application of modern scientific research and the evolution of a diversified economy. In this connection, he commended the following eight-point programme for enhanced agricultural production and community development:

(i) Multi-purpose, large and medium projects. Construction of the field channels needed to utilise the irrigation available and their maintenance in an efficient condition from day to day. In construction alone, there will be over 30,000-40,000 miles every year for 20 years over a large part of the country.

(ii) Minor irrigation works, including tube-wells. The responsibility for maintaining these works and for excavating and maintaining field channels is the responsibility of the village.

(iii) Contour-bunding, soil conservation and other programme for dry farming in the dry areas and construction and maintenance of bunds.

(iv) Scientific agriculture. Producing as a permanent arrangement in the village all the seeds and organic and green manure needed; arranging for the supply of these in kind to those who cannot pay for these in advance, recovering after harvest; arranging for the distribution of fertilisers received for the village and their supply to the smaller holders on credit in the first instance; promoting the use of Japanese method of cultivation in all areas suitable for it and other advanced techniques for wheat and other crops which are suggested by the technical departments, and in other ways, work for a diversified agricultural economy; and development of animal husbandry programme; dairy produce, fisheries, etc.

(v) Programmes for supplementary occupation. Cottage and small-scale industries, etc.

(vi) Consolidation of holdings. A programme of consolidation of holdings is essential, especially in areas which are irrigated or have assured rainfall for the effective implementation of the groups of programmes indicated above.

(vii) Works for the benefit of the community. Every family should devote a portion of its time to building up permanent assets of value to the community.

"I'll tell you something else about cotton"

Talking about cotton...very few people know that the country spends something like Rs. 50 crores a year importing superior cotton—from Egypt, U.S.A. and East Africa. This is indeed a serious drain on the country's foreign exchange resources, but a genuine effort is being made to increase indigenous production of superior cotton primarily by increasing the yield per acre.

How is this being done?

Improved seed and fertilizers, wider irrigation and the control of cotton pests and diseases—these are the main lines of attack. By far the most serious pest is the cotton bollworm, which causes a tremendous amount of damage each year. Control can be effectively achieved by using Shell endrin—a Shell petroleum chemical which, as field tests have shown, can increase cotton production by up to 40%.

And for every rupee spent on importing Shell endrin, as much as five rupees of foreign exchange can be saved through increased production of superior cotton. So it's money well spent—from everybody's point of view.

SHELL Chemicals can save crops

and Foreign Exchange too!

THREE RECENT OFFICIAL DOCUMENTS

SOME STRIKING FACTUAL FINDINGS HIGHLIGHTED

From A Special Correspondent

NEW DELHI, *20th May*

DELHI LETTER

THIS despatch highlights some striking factual findings of three recent official documents. The first of these documents is the *Economic Classification of the Central Government Budget for* 1958-59, issued later than the usual budget papers; the second is the Planning Commission's *Appraisal and Prospects of the Second Five-year Plan*, and the third is the Central Statistical Organisation's *Estimates of National Income*: 1948-49 *to* 1956-57.

It is seen from the economic classification of the Central Budget for 1958-59 that the wages and salaries component of consumption expenditure on current account of Government administration has increased from Rs. 170 crores in 1956-57 (Accounts) to Rs. 214 crores in 1958-59 (Budget), commodities and services component from Rs. 166 crores to Rs. 238 crores, grants to States from Rs. 66 crores to Rs. 125 crores, and subsidies from Rs. 1 crore to Rs. 27 crores. In spite of a net increase of Rs. 124 crores in revenue in 1958-59 over 1956-57, there is a deficit of Rs. 18 crores on current account in the former, as compared with a surplus of Rs. 98 crores in the latter year.

As for the current account of departmental commercial undertakings (including railways), wages and salaries (including those on repairs and maintenance) have increased from Rs. 182 crores in 1956-57 to Rs. 200 crores in 1958-59, commodities and services (including those in respect of repairs and maintenance) from Rs. 105 crores to Rs. 129 crores, and provision for depreciation from Rs. 47 crores to Rs. 48 crores. On the other hand, profits transferred to current account of Government administration have decreased from Rs. 13 crores in 1956-57 to Rs. 10 crores in 1958-59, while the retailed profits have increased from Rs. 29 crores to Rs. 43 crores. It is noteworthy that, whereas gross sale proceeds have increased by Rs. 65 crores (from Rs. 413 crores to Rs. 478 crores), gross profits (covering depreciation and retained and transferred profits) have also increased more or less proportionately from Rs. 89 crores to Rs. 100 crores.

Equally Revealing

The capital account of Government administration and departmental commercial undertakings together is equally revealing. On the receipts side, gross savings (covering saving on current account of Government administration and retained profits and depreciation provision of departmental commercial undertakings) have decreased from Rs. 174 crores in 1956-57 to Rs. 73 crores in 1958-59. On the disbursements side, however, gross fixed capital formation has increased from Rs. 234 crores to Rs. 324 crores. This capital formation in respect of buildings and other construction was Rs. 111 crores by way of new outlay in 1956-57, as against Rs. 158 crores in 1958-59, and Rs. 28 crores and Rs. 68 crores in the respective years by way of renewals and replacements. And the fixed capital formation in respect of machinery and equipment was Rs. 73 crores by way of new outlay in 1956-57, as against Rs. 71 crores in 1958-59, and Rs. 23 crores and Rs. 27 crores in the respective years by way of renewals and replacements. Again, grants for capital formation (to States, non-departmental commercial undertakings and others) have increased from Rs. 31 crores to Rs. 39 crores. And the capital account as a whole reveals, on the receipts side, a deficit of Rs. 285 crores in 1958-59, as against a deficit of Rs. 109 crores in 1956-57 on all transactions in commodities and services and transfers.

Without referring to the other types of deficits emerging from the operations of the Central Government, it may be pointed out that the Government's draft on real resources of the community for consumption and capital formation is Rs. 802 crores in 1958-59, as against Rs. 598 crores in 1956-57. And the Central Government's contribution to the generation of national income is Rs. 540 crores in the former as against Rs. 472 crores in the latter year. This contribution in the two respective years is composed of Rs. 214 crores and Rs. 170 crores by way of wages and salaries on current account of Government administration. Rs. 251 crores and Rs. 256 crores by way of net output of departmental commercial undertakings, and Rs. 75 crores and Rs. 46 crores by way of wages and salaries component of Government outlay on construction.

The Planning Commission's latest publication on the progress and prospects of the second Plan is particularly revealing where it states that the aggregate yield (Rs. 725 crores over the five-year period) from the measures of additional taxation so far adopted by the Centre represents an improvement of Rs. 500 crores over the target (Rs. 225 crores) for additional taxation suggested originally in the Plan. All this tax effort, according to the Planning Commission, however, has not provided resources for the Plan, because a *large* part of it has been absorbed by other demands like defence, non-development expenditures, and development expenditures outside the Plan. The balance from the Centre's current revenues utilised for the Plan is estimated at Rs. 305 crores over the first three years and Rs. 465 crores over the entire five-year period or an annual average of Rs. 93 crores. Here, the Planning Commission appears to have overlooked the fact that the balance at the 1955-56 level of revenue itself was about the same as the said annual average of Rs. 93 crores. If this fact is kept in mind, it will be seen that *almost* the entire *additional* tax revenue of Rs. 725 crores over the five-year priod will have been swallowed up in non-Plan expenditures. The Planning Commission's original estimate of an aggregate revenue balance of Rs. 252 crores in the entire five-year period at the 1955-56 rates of taxation was obviously an underestimate.

The Central Statistical Organisation's *Estimates of National Income* contains, among others, a table giving the current account of all public authorities: administration. It is seen from this table that the total tax revenue has increased from Rs. 770 crores in 1950-51 to Rs. 957 crores in 1955-56. At the same time, expenditure on civil administration and defence has increased from Rs. 524 crores to Rs. 661 crores. While national income (at 1948-49 prices) has increased by about 24 per cent. from Rs. 8,850 crores in 1950-51 to Rs. 11,010 crores in 1956-57, *per capita* income has increased by just 15 per cent. from Rs. 246 to Rs. 284. Another interesting fact is that agriculture, animal husbandry and ancillary activities accounted for 47.8 per cent. of national income (again at 1948-49 prices) in 1956-57, as against 49 per cent. in 1950-51, while the percentage contribution of mining, manufacturing and small enterprises remained the same in the two years. Land revenue (including agricultural income-tax), however, has increased by just Rs. 23 crores, from Rs. 52 crores in 1950-51 to Rs. 75 crores in 1955-56. This would mean that, as of 1955-56, land taxation is just 1.6 per cent. of the agricultural part of national income.

EFFECTS OF BUS STRIKE

From Our Own Correspondent

LONDON, *16th May*

LONDON LETTER

AT a cost of a 3 per cent. increase in wages, the Government and the British Transport undertaking have avoided a national rail strike and with that probably the danger of a general strike. But that does not mean that the London busmen stand alone. They have the sympathy of the whole trade union and labour movement and there is little doubt that if the leader of the Transport and General Workers' Union, whom the Government would like to see discredited, were to force the issue, he could bring out on strike the London railway workers who were indeed against accepting the overall railway settlement. But the Transport Workers Union has so far played its hand with great patience and they will no doubt continue to do this so long as there is any prospect of reaching a settlement between the London Transport undertaking and the busmen. Not that any settlement is going to be easy, for the Government is committed to showing the unions that they cannot hope to get their way against Government economic policy simply by going on strike. If both sides refuse to move then the danger of an extension of the bus strike to the London railways would rise again and the consequent cessation of all public transport would create an ugly situation.

Banking System

So far, the public have adapted themselves to busless movement about London, although one or two side effects are noticeable. For instance, far fewer people come into the Metropolis to shop so that less money is being spent, and along with this, the banking system is finding that the flow of cash through the branches has been diverted from its normal channels. After all, in an area of some ten million people with a daily expenditure on transport of the order of £1 million, the removal from the spending chain of a sizable part of this has a very noticeable effect on the receipts of banking branches. For instance, those that used to receive payments from the terminal garages of the London buses now get no payments at all, while those receiving payments from terminal points of the railway system receive very much larger sums—and they are taking a little while to sort out the flow of coin from one to the other. Many banks have, in fact, been unable to meet the normal demands put on them by their local public and traders for change.

The Parisian monetary troubles are much more serious than those afflicting the London banks as the result of a bus strike. The devaluation of the franc by 20 per cent. is accepted by everyone in France except the Government which still maintain the fiction of a franc rate of 980 with a discount of 20 per cent. for specified purposes. But, with the new crisis over Algeria, the franc has now weakened below 1,180 francs to the pound, and internally there is no confidence at all in the ability to hold this rate if France continues in its present disastrous divisions. Frenchmen are loth to part with real goods for francs and in the present uncertainties they are frequently loth to part with them at all for any currency. One could almost speak of a lack of confidence in money in France, at least in so far as the holders of goods which will bear stocking, such as wines, are concerned. Manufacturers must maintain a turnover to meet their outgoing costs but not so the wine shippers of Bordeaux who have already met their outgoings and held their wines. In an uncertain world, they feel that a cask in the cellar is worth more than money in the bank.

GOVERNMENT IN THE ECONOMIC SYSTEM

GUIDE TO POLICY SHOULD BE AS LITTLE INTERVENTION AS NECESSARY

By Gabriel Hauge

CONTROVERSY will continue to surround the question of government's proper place in the economy. This, of course, is not surprising for the issue in most countries is not one of "whether-or-not" but one of "more-or-less" government. The issue is posed in practical situations that are often difficult and imprecise. It is in resolving these specific day-to-day questions that basic principles can show the way. Economic history, philosophy and political experience help one identify basic values and economic truths. They show that personal freedom in the economic sphere supports political freedom and other individual and social goals. This view leads to a predisposition to favour freedom, as against government intervention, whenever a compelling justification for such intervention is lacking.

This philosophical bent in the United States in favour of freedom is reinforced by the market system's success in providing an increasing level of material well-being for the whole community. By directing production towards meeting millions of individual choices, the market system produces the largest total of satisfactions, because it produces the most of what people want most. And it does this not by coercion but through free incentives. This system naturally does result in an equal distribution of income, but, as Professor Boulding has put it, "we now see that in practice the abolition of poverty can only come from development"—or growth—"not from redistribution, not from taking from the rich to give to the poor, but in making everybody richer." This, too, the market economy has done. Competition spurs that productivity which has been well described as "the mentality of progress."

No one holds, of course, that the competitive market system is perfect and automatic. Imperfections there are, and to deal with them, government has a vital role to play. First, to strengthen the operation of free markets; second, to moderate the fluctuation of the economy between inflation and deflation; and third, to supplement the market system in those areas where it alone cannot as well provide certain essential needs. In this way, government reinforces rather than replaces the market system. Our guide to policy should be this: as much freedom as possible, as little intervention as necessary.

Price Mechanism

The importance of the price mechanism defines the first economic function of government—to strengthen the market system. This obviously requires not only law and general order but also an institutional framework conducive to private economic activity: contract enforcement, an effective monetary and credit system, the protection of commerce against the unscrupulous few. We seek, as President Luigi Einaudi of Italy has said, not the abolition of all regulations but the use of those regulations within which the citizen can act freely.

Since private monopolies can obstruct the market, government should, in general, limit undue concentrations of economic power in the hands of persons, businesses or other groups—"in general," because some barriers such as the patent monopoly seem desirable; "undue," as a reminder of the subtle difficulties of identifying harmful market power. Our relatively pragmatic anti-trust laws wisely require a judgment upon the degree and use of market power. The results are not always neat, because the judgments are often elusive. On the whole, however, vigorous and effective enforcement of sound anti-trust laws can help assure a dynamic and workably competitive condition for most markets.

In addition, government can and should take positive steps to promote enterprise. An enlightened commercial policy can encourage mutually profitable trade across national boundaries as well as within them. At home, government's procurement can aid competition and also benefit from it, by making it easier for small and new businesses to deal with government agencies. Sound statistical and information programmes can help these businesses. The President of the United States recently acted in this direction by calling the first National Conference on Technical Distribution Research for the Benefit of Small Business. Government can also help meet the special credit needs of small and new businesses that are not adequately met by existing arrangements. Tax policy, furthermore, should encourage the savings which they need. In these ways, government recognises the vital contribution of new enterprise to innovation and to the vigour of competition.

Dynamic competition, however, is change, and the new products and new methods of economic growth may require some painful readjustments. Restrictive proposals to protect settled interests, large and small, are always forthcoming. Proposals abound, too, for the promotion of private profit at public risks. Especially tempting to some is the idea that broad socialisation of risk can somehow be linked with a vigorous private enterprise system. All such approaches need to be scrutinised and generally resisted.

Intervention Schemes

Intervention schemes by government often go beyond cushioning change; some seem designed to defeat it at the expense of the whole community. Even the intended beneficiaries of such efforts come to know a subsidised existence as a second-class existence. Moreover, special privileges irresistibly generate demands by others for "equal" treatment. And although the privilege may be described as "experimental" or "temporary," experience demonstrates the practical difficulty, greater as the beneficiaries become more numerous, of withdrawing special privileges. Such unsound intervention in the market is ominous, for government cannot long yield to powerful pressure groups without risking ultimate surrender to the fallacy of the corporate State. For the government to go heavily into the business of building "competition-shelters" is scarcely the way to serve the cause of economic progress in a free society.

The irregularity of economic growth poses the second great responsibility for government: to seek to moderate the ups and downs of the business cycle. Success in these efforts can discourage the exchange of personal security. Moreover, such success can lessen the anxieties that prompt fearful groups to demand public intervention in the price system.

To stimulate recovery in a slump, experience indicates government efforts and easy money can help; but they will not help much if government spending merely substitutes for private spending, if tax policies discourage private activity or if public policies create a climate of distrust or uncertainty which dampens confidence in the system or in the future. Private confidence—among consumers, workers, business men and investors—has proved far more potent for both recovery and growth than public expenditure. But whatever remedial measures in a slump can do, preventive medicine is still the best approach to the ills of business ups and downs. The wisest anti-depression policy is proper anti-inflation policy. Therefore, we cannot accept the pessimistic notion that prosperity needs the steady stimulus of inflation.

There can be little doubt that a policy of creeping inflation, based on public spending and easy credit, inhibits optimum prosperity and growth. It can, for example, prevent the adjustments required by economic progress where people do the wrong things or work at the wrong methods. To seek the miraculous elimination of all maladjustments in the economy through creeping inflation can only weaken the national fibre and resolution to maintain efficient and vigorous production and competition. To mistake a shortage of men and materials for a shortage of money and to seek a remedy through undue credit expansion can only overload the economic circuits and lead to a burning out of the fuses.

Fiscal policy obviously is one tool available to the government when inflationary pressures mount. Revenues should, at the very least, balance the budget, lest deficit spending should add to the demand pressure on the economy. The level of expenditures, even in a balanced budget, should be held down, lest price pressure on some critical resources should grow out of the shift from private to public consumption and lest taxes to cover the expenditure should absorb funds that taxpayers otherwise would have saved and invested to expand production. Moreover, management of the public debt, in such a

(*Continued on page 998*)

BANK OF RAJASTHAN'S PROFIT DOUBLES

DIVIDEND RAISED AGAIN

THE audited accounts of the Bank of Rajasthan Ltd. (General Manager: Mr. D. L. Gupta, Udaipur) for the year ended 31st December 1957 make impressive reading. The total working funds at the end of the year show a rise of Rs. 53 lakhs, of which the expansion of deposit resources alone account for Rs. 41 lakhs. There has been a further increase of Rs. 59 lakhs in advances and the profit has more than doubled itself from Rs. 1.23 lakh to Rs. 2.75 lakhs. The total working funds, deposits, advances and profit are all new records in the history of the Bank.

The rise of Rs. 1.52 lakh in the profit of the Bank is on top of an increase of Rs. 23,000 recorded in 1956 and, at Rs. 2.75 lakhs, the profit has exceeded the previous high of Rs. 2.06 lakhs earned in 1951. Following the increase in profit, the provision for taxation has been stepped up from Rs. 0.40 lakh to Rs. 1.04 lakh, the allocation to the general reserve from Rs. 34,119 to Rs. 55,213 and the gratuity fund has been further strengthened by the addition of Rs. 7,500. The Directors have also added Rs. 25,000 to the investment reserve fund. They have further set aside Rs. 28,000 for payment of bonus to staff. The dividend has been stepped up for the second year in succession, the latest increase being to 6 per cent. from 4½ per cent., after having been raised to that level from 3½ per cent. the previous year.

The progress of the Bank during the last three years can be judged from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Interest and discount earned	14.27	10.95	7.90	6.81
Commission and exchange	5.32	3.62	2.81	2.75
Interest paid	8.29	6.73	4.72	3.46
Expenses	8.76	6.89	5.43	5.16
Depreciation	0.36	0.29	0.12	0.20
Profit	2.75	1.23	1.00	1.13
Provision for taxation	1.04	0.40	0.43	0.58
To reserves	0.88	0.42	0.25	0.24
Bonus to staff	0.28	..	..	..
Dividend	0.55 (6%)	0.41 (4½%)	0.32 (3½%)	0.32 (3½%)
Carry forward	0.01	0.01	0.01	0.01

	As on 31st December			
	1957	1956	1955	1954
Capital	9.23	9.23	9.23	9.23
Reserves	6.27	5.36	5.28	5.03
Deposits	3,81.14	3,39.99	2,69.82	2,05.79
Advances	1,81.49	1,22.77	1,09.54	58.37
Investments	1,02.62	1,06.61	1,05.89	79.46
Cash	1,35.28	1,42.45	1,13.06	87.00
Balance-sheet total	4,57.32	4,04.56	3,20.76	2,39.02
Ratio to deposits of—	%	%	%	%
Advances	47.6	36.1	40.6	28.3
Investments	26.9	31.3	39.2	38.6
Cash	35.5	41.9	41.9	42.3

The capital of the Bank is unchanged at Rs. 9.23 lakhs, while the reserves stand strengthened to Rs. 6.27 lakhs. As stated earlier, the Bank's deposits have gone up by Rs. 41 lakhs, the increase being shared by all classes of deposits. Thus, fixed deposits have risen from Rs. 170.52 lakhs to Rs. 187.74 lakhs, savings deposits from Rs. 70.53 lakhs to Rs. 78.70 lakhs and current and other accounts from Rs. 98.25 lakhs to Rs. 113.82 lakhs. There has been a sharp rise of Rs. 44.11 lakhs to Rs. 123.83 lakhs in loans, cash credits and overdrafts and of Rs. 14.61 lakhs to Rs. 57.66 lakhs in bills purchased and discounted. Consequent on the relatively larger rise in advances, the credit ratio has gone up from 36.1 per cent. to 47.6 per cent. Investments have consequently declined slightly by Rs. 4 lakhs and cash balances by over Rs. 7 lakhs. Nevertheless, the total liquidity ratio is very much higher than that of all Scheduled banks. The Bank's investments in Government securities at cost amount to Rs. 96.17 lakhs, the market value of the same being Rs. 94.85 lakhs. The difference is more than adequately covered by the investment reserve fund amounting to Rs. 1.65 lakh.

The Bank has obtained permission from the Reserve Bank for opening four branches in Rajasthan and is awaiting permission to open two more. All the proposed branches will be opened during the current year.

EXTRA LONG-STAPLE COTTON

SUPPLY HIGHER THAN LAST SEASON

DESPITE the sharp fall in the production of extra long-staple cotton, that is, cotton of staple length above 1⅜". in the Sudan, one of the leading producers, the free world supply of this type of cotton in the current season is a shade higher than last season. This is because of the higher carryover stock at the beginning of the season and the fact that the fall in production in the Sudan was offset, to a large extent, by the increase in output in Egypt. According to the estimates of the International Cotton Advisory Committee, Washington. total free world supply of extra long-staple cotton this season is of the order of 2.052,000 bales (of 478 lbs. each), comprising a crop of 1,330,000 bales and a carryover of 722,000 bales as compared with 1.802,000 bales last season which consisted of crop of 1.385,000 bales and a stock of 417,000 bales. It may be noted that although production in the Sudan was lower, opening stocks in that country was two and a half times that of last season, making aggregate supply in that country slightly higher than last year's. Thus, the major change in supply occurred mainly in Egypt where aggregate supply, estimated at 968.000 bales, was 254.000 bales higher than last season's 714.000 bales. The following table indicates the free world supply position of extra-long-staple cotton during the 1957-58 season:

(In 1,000 bales of 478 lbs.)

Country	Production	Opening stock	Supply
Egypt	808	160	968
Sudan	320	460	780
Peru	90	10	100
U.S.*	81	82†	163†
Others	31	10	41
Total ..	1,330	722	2,052

* Excludes imported cotton.
† Includes 50,000 released from stock pile.

Lower production in the Sudan was due mainly to the sharp drop in yield. Acreage planted to extra long staples for 1957-58 shows a decline of about 14 per cent. but was still the second highest on record. Yields, however, were abnormally low—under 300 pounds per acre—and production, estimated at 320,000 bales, is not much more than half last season's record 585,000 bales. Recent trade reports indicate that the outturn may be even lower than this. The much smaller crop in the Sudan offsets the marked increase in opening carryover so that supply is roughly equal to last season.

As a result of much larger acreage and higher yield of the Menoufi variety, Egyptian production, estimated at slightly over 800,000 bales, is well ahead of last season. The Karnak outturn is about 5 per cent. less than in 1956-57. The combination of increased carryover and higher production means that supply of extra long staples in this country is about a quarter of a million bales more than in 1956-57. A smaller crop and lower opening stocks have resulted in a noticeable reduction in the supply of extra long staples in Peru this season.

In the U.S., the carryover at the beginning of the present season was the lowest for several years so that, despite a much larger crop, the supply of American-Egyptian cotton would have shown a marked reduction, as compared with last season, were it not for the release of 50.000 bales from the stockpile. The total supply of extra long staples (including imported cotton) is about the same as in 1956-57—namely, 228,000 bales. An additional 169,000 bales remaining in the stockpile would be released for sale over the next four seasons if a proposed plan is approved by Congress.

Free world exports of extra long staples in 1956-57 aggregated slightly more than one million bales. This rate was apparently maintained during the first five months of the present season but there have been distributional changes. Exports from Egypt were higher by over 50 per cent. but shipments from the other countries were much lower than a year ago. Egyptian exports till mid-February were 328,000 bales, as compared with 197,000 bales in the like period of 1956-57. Exports to India, the United States, and some of the smaller European countries were noticeably higher, but the most striking increase so far this season has been in Eastern Europe where demand for Egyptian extra long staples has just about doubled. Exports to the U.S.S.R. are much lower but China has been much more active in this market lately.

Till the end of December Sudan expotts were well down. but demand has picked up following the adjustments in the reserve prices. The most marked decline has been in trade with the U.K. Exports to India were about in line with last season's rate and trade with France is actually ahead of a year ago.

Exports of extra long staples from Peru to all the main consuming markets, except the United States, show declines this season. Last season. exports from the U.S. reached a record of 58.000 bales. But exports from the United States have so far this season been insignificant. This is attributed to the fact that foreign growths are now lower priced than comparable U.S. qualities, whereas the reverse was true last season.

The decline in prices of extra long staples has been very marked this season and prices are, in most instances. at their lows for the season. The reason is that buyers have received discounts on purchases of Egyptian cotton varying according to the currency used in settlement. Recently. the Egyptian Government introduced a new currency system which amounts in fact to a devaluation of the Egyptian pound. The persistent bearish trend of extra long staples has caused the reserve level for Sudan Sakels to be lowered several times this season. Prices of Peruvian Pima have followed the general trend but the decline so far this season has not been as marked as in Egypt and the Sudan. American Egyptian prices have also declined only moderately.

SUDAN COTTON

Untimely rains, serious thrip attacks, jassids and red spider infestation, have adversely affected the Sudan cotton crop this season. The season's crop failure is described as a "major disaster" in the history of Sudan cotton. The 1957-58 cotton crop, including Nuba Mountains, is now estimated at only 246,500 bales comprising 77,000 bales (of 350 lbs.) of Nuba Mountains, 37,500 bales of Sakels and 132,000 bales of Lamberts, as compared with 720,200 bales in the previous season comprising 36,200 bales of Nuba Mountains, 195,200 bales of Sakels and 488,800 bales of Lamberts.

On 15th March 1958, according to the estimates of Rand E. Huri and Co., the balance of old crop cotton still unsold was of the order of 300,000 bales which together with the estimated crop (excluding Nuba Mountains) of 169,500 bales make an aggregate supply of 469,500 bales for the season. Of this about 60,000 bales have been sold, leaving a balance of about 400,000 bales to be disposed of.

About 70 per cent. of the carry-over is composed of grades 6 and below in both Sakel and Lambert varieties. These grades are offered at very attractive prices, as compared with Good Middling and Strict Middling 1⅛" California, El Paso, Mexican, Tanguis and similar growths. A large proportion of this year's Sudan cotton stocks is expected to attract consumers of American type.

As regards the quality of the new crop, it is expected that higher grades will be very scarce. The Sudan Gezira Board has estimated that their entire production of higher Sakels will amount to 109 bales of XG3S, 1,400 of G3S and 1,700 of XG4S. Arrivals of Lamberts have not exceeded grade 4, of which 4,300 bales are officially classified. Some rare lots of higher grade are found in Private Estates but there again the bulk of the crop consists of grades 6 and below. Sakel staples are in general said to be finer, but irregular and slightly less resistant than last season. Lamberts, on the other hand, appear to have better staple this year.

HOPES OF CEILING ON COTTON TEXTILE IMPORTS DISPELLED

LANCASHIRE MILLS GOING ON SHORT-TIME

From A Special Correspondent

MANCHESTER, *13th May*

MANCHESTER LETTER

A BRIEF statement issued by the Cotton Board in Manchester a few days after the end of the trade talks between Lancashire textile leaders and the representatives of the Indian and Pakistan industries effectively dispelled any lingering hopes which might have existed in this country that an effective ceiling could be enforced on the arrival of foreign goods into the United Kingdom. Unless there is a sharp and unforeseen change of view in Government circles, the situation will continue as at present with unrestricted imports of duty-free goods from Commonwealth countries. The *communique* said:

"Whereas there was acceptance by the Indian and Pakistan representatives of the principle of import limitation, no agreed formula has yet been arrived at whereby this could be carried out. This difficulty has been entirely due to differences of opinion about the ceilings which might be embodied in an understanding. Proposals have been made by the individual delegations in a genuine effort to find a solution, but, at the moment, it has not been possible to arrive at a basis that would be likely to lead to an all-round agreement, though consideration is still being given to various possibilities."

Some observers in Britain were optimistic enough to believe that the final sentence of the statement indicated a gleam of hope for Lancashire, but realists accepted the view that, if an arrangement could not be achieved with India and Pakistan, the likelihood of overcoming the well-known opposition to a ceiling by millowners in Hong Kong would prove an almost insuperable obstacle.

Meanwhile, from the mill centres in Lancashire almost daily reports are coming to hand of mills going on short-time or deciding to close down for an indefinite period. The Fine Spinners and Doublers group has shut 14 of its mills, including five belonging to one subsidiary operating in the Tyldesley area. Other firms in Nelson have put up the shutters and the general trend of production and employment is discouraging to a degree.

Lack of Animation

With the holiday season in the mill towns only a matter of weeks away, an inevitable reduction in output will occur and, from the viewpoint of producers generally, this development cannot take place too soon. Although it is rare to discover any substantial accumulation of stocks, the current phase of exceedingly dull trade in yarn and cloth has created the position where certain firms have been unable to avoid some build-up of supplies. The hopes that were entertained some months ago that a revival in demand would be encountered as the goods held by distributors were shifted have not been fulfilled. Merchants and wholesalers have managed to carry on with relatively small supplies on hand and so far there has been no sign of any embarrassment caused by the need for fresh stocks.

Commentators on trade affairs have on occasions been accused of describing current conditions in too depressing a manner, but anyone who mixes at all frequently with individuals connected with textiles must have been struck by the general mood of pessimism since the beginning of the current year. It is certainly true that adverse conditions have a cumulative effect, in that traders are inclined to depress the market by their own depressing views. A renewal of confidence in the future is the vital spark needed to bring animation back into an industry which has lately shrunk in upon itself to an even greater degree than in the recent past.

Inertia in one department too often leads to a lack of enthusiasm in others, and this has been singularly so in the case of raw cotton markets where virtual stagnation has existed for some little time. The numerous handicaps under which Liverpool has operated since its re-establishment four years ago are well known. Developments in the United States and the continued interference of the American Government in the agricultural projects affecting supplies and prices have been at the root of the problems encountered by futures markets both abroad and in this country.

Raw Cotton Stagnation

In the past week or two, the situation has, if possible, deteriorated and, on more than one occasion, no transactions at all have been recorded in Liverpool during the day's trading. Spinners, like their customers, are disinclined to secure more than modest supplies at the moment and are working on a hand-to-mouth basis in obtaining raw cotton. Hedging operations have been kept to a minimum and many of the leading mill groups are content to get their supplies direct and take the consequences, if prices react against them.

Relatively little change has taken place in the quantity of cotton in visible supply in this country since the beginning of the year. Available stocks reached a peak of 392,000 bales early in January and, by the end of last month, amounted to 338,000 bales, after falling to as low as 316,000 bales in March. The major part of these stocks consisted of United States cotton with moderate supplies of Sudan, Mexican and Central American also held.

With three-quarters of the present raw cotton season gone, the quantity of arrivals is somewhat below the corresponding imports 12 months ago. At the end of April, arrivals had aggregated 1,146,450 bales, as against 1,340,557 bales in 1957.

Russians' Visit

A delegation of four from the Soviet textile industry—including two women—are undertaking a two-week visit to the Lancashire textile industry as guest of the Weavers' Amalgamation, which two years ago sent a mission to the Soviet Union. Included in the Russians' programme was a visit to a C.W.S. mill at Radcliffe which is helping to produce textiles for export to the Soviet Union as part of a barter deal between the Co-operative Movements of Russia and Britain under which manufactured goods will be sent from this country in exchange for Russian wheat.

The other mills to be visited are in North-East Lancashire and at Stalybridge in Cheshire. The Russians will see modern textile research methods at Shirley Institute, Manchester, and tours of the Wythenshaw Housing Estate, Manchester College of Science and Technology and the cotton convalescent home at Poulton have been arranged.

Varied Reports

Textile companies are at present too close to the phase of restricted trading for the recession to have any vital effect on trading results now being announced. The more encouraging reports coming through at the beginning of the year, however, have been followed by some less favourable figures. Moreover, the possibility of lower returns in the future has been foreshadowed by a tendency to reduce interim payments.

The results announced by Crosses and Heatons, the Bolton spinning group, provided a shock, although recent adverse trading experience was expected to curb profit-earning. Over the year to the end of March, a net loss of £23,900 was incurred, as against a profit in the previous 12 months of £163,534. The dividend for the year was halved at 5 per cent.

As at almost any given period there are variations in the general trend, and certain firms have lately recorded useful profits which have been earned when order lists were much fuller than at present. Among these are the Sun Mill, the net profit of which exceeded £29,000, as against £19,000 in the previous year. The Bee Spinning Company, at Royton, was another to turn in higher earnings at nearly £56,000, as against £44,000, together with a higher dividend. The Slack Mills group, combining spinning and weaving, more than doubled its net profit at over £41,000 and raised the annual dividend from 5 to 10 per cent. Another spinning and weaving firm, Hartley Fabrics of Preston, made a net profit of £22,000, as against £7,000 and raised the dividend from 7½ per cent. to 10 per cent.

Lower Earnings

The other side of the picture contains the less promising aspect of the situation. The Eclipse Mill's profit has fallen from over £26,000 to £14,000 and the dividend is cut from 16⅔ to 12½ per cent. In the fine spinning section, Swan Lane Mills at Bolton made less than £20,000 during the half-year, as against nearly £26,000 in the previous half-year, while Bee Hive Spinning made £26,000, as against £39,000 during the year. H. F. Hartley Ltd., the Bingley textile group, reported profits halved at £92,296, as against £185,118.—*All Rights Reserved.*

SOME LABOUR PROBLEMS REVIEWED

EVALUATION AND IMPLEMENTATION OF AWARDS AND AGREEMENTS

IN spite of, or perhaps because of, the numerous labour laws written into the Statute Book, industrial relations in this country are none too happy. Many of the labour problems facing the country today have formed part of the agenda of the Indian Labour Conference which began its sixteenth session in Naini Tal, this week. Most of them have already been discussed at the States Labour Ministers' Conference which concluded its deliberations on the 17th inst. Among the problems which have engaged the attention of the authorities, mention may be made of the question of implementation of labour enactments, awards, settlements, agreements, etc. Another important problem is the closure of factories and the consequent unemployment in certain industries, particularly the textile industry. Certain amendments to the Industrial Disputes Act, 1947, are also under consideration. Already, some spade-work is understood to have been done in this respect.

Machinery for Evaluation

The evaluation and implementation of labour enactments, awards and settlements were considered by the Standing Labour Committee at its sixteenth session held in October 1957. The Government of India has set up, in pursuance of the recommendations of this Committee, and Evaluation and Implementation Division in the Ministry of Labour to assess the extent of non-implementation of labour laws and awards and to assess the results achieved by such measures. The State Governments have also been requested to set up similar machinery. The Government of West Bengal has already finalised proposals for setting up an Evaluation Committee in that State. A small Evaluation and Implementation Cell has also been set up to examine cases of non-implementation. The proposal is under consideration by other State Governments.

With a view to assessing the extent of non-implementation of awards, etc., and to have a full appraisal of the problem, the Evaluation and Implementation Division in the Ministry of Labour and Employment issued, in January 1958, circular letters to all State Governments and all-India organisations of employers and workers requesting them to furnish, in specified questionnaires, information regarding cases of non-implementation or partial, delayed or defective implementation of labour enactments, awards, etc. It is proposed to collect such information periodically from the aforesaid agencies so that any case of non-implementation or partial or delayed implementation of an award or an enactment is immediately brought to the notice of the authority concerned and necessary action taken. Members of Parliament have also been requested to offer their suggestions in this connection and to bring to the notice of the Evaluation and Implementation Division any case of non-implementation or infringement of labour laws.

An analysis of complaints regarding non-implementation of awards and settlements reveals that they are mostly of the following nature: (1) complaints about non-implementation of some labour laws such as Payment of Wages Act, Minimum Wages Act, Industrial Employment (Standing Orders) Act, Workmen's Compensation Act, (2) complaints against non-implementation of certain awards or agreements, (3) complaints by individual persons regarding non-implementation of an award in respect of them or some injustice caused to them by the employer concerned, (4) general complaints about difficulties experienced in the working of certain Acts.

These complaints are being examined by the Union Ministry of Labour in consultation with the State Governments. A senior officer of the Ministry, it is stated, will go round the States to discuss the cases of non-implementation with officers of the State Government concerned. In cases where a general complaint about the working of a particular measure is made, it is proposed to set up a small *ad hoc* Evaluation Team of Experts to examine and report on its working. One such team has already been constituted to examine the working of the multi-purpose institutes set up under the Coal Mines Welfare Fund Scheme. The working of the Employees' State Insurance Scheme may also be examined by a similar committee.

Retrenchment and Unemployment

As regards the question of closure of factories and the consequent unemployment, the Conference is expected to consider whether the existing arrangements are adequate to meet the present crisis and threat of unemployment or whether additional measures are necessary. The closure of units is mainly attributed to "organisational or financial difficulties, or mismanagement." Shortage of raw materials, as a result of foreign exchange difficulties or import restrictions, is also considered as contributory factors. The Government is aware of the problem and steps have already been taken to avert closure and retrenchment. They may be summed up as follows: (1) In the case of mismanagement, the Government takes action under the Industries (Development and Regulation) Act and investigations are conducted wherever necessary. Last year, for instance, investigation committees were appointed in the case of eight textile mills. (2) To overcome financial difficulties of concerns, loans are granted for modernisation and rehabilitation by the Government through the National Industrial Development Corporation or the Industrial Finance Corporation. (3) Spinning mills of uneconomic size are permitted to expand to the economic size of 12,000 spindles and composite mills having less than 12,000 spindles and 300 looms are given facilities to expand to that size. (4) Mills experiencing difficulties in getting raw materials and in the movement of finished products are helped in getting raw materials and movement priority. Further, for watching the interest of workers in particular, the Ministry of Labour and Employment has set up an inter-Ministerial Working Group to study and review periodically the question of closure and to suggest remedies for avoiding retrenchment. The Group is called upon to build up an effective intelligence for getting such information as would help in spotting out uneconomic and weak units sufficiently in advance. The Government already has legislative powers under the Industries (Development and Regulation) Act to avoid and/or ban closure of units. It, therefore, does not feel it necessary at present, as suggested in some quarters, to take any extreme steps. The measures already taken are expected to meet effectively the present crisis which, it is believed, is of a transitory nature. But the question is whether the aforesaid provisions are adequate to meet the situation.

Amendments to Industrial Disputes Act

Some amendments to the Industrial Disputes Act 1947 are engaging the attention of the authorities. One is amendment of Section 7A(3) of the Act by inserting a new sub-section permitting the appropriate Government to appoint retired permanent District Judges as presiding officers of tribunals. This has been found necessary because of the complaints of certain State Governments that they are finding it difficult to select presiding officers for industrial tribunals with the qualifications prescribed under the Industrial Disputes Act. The proposed amendment, while widening the scope of selection, will restrict it to mature and responsible persons who have held responsible judicial posts before retirement. The Government of West Bengal, it is stated, has proposed that hospitals, educational and charitable institutions, etc., should be excluded from the purview of the Industrial Disputes Act. It has suggested that the operation of the Industrial Disputes Act should be confined to those institutions only which are concerned with "industries," that is, institutions which are concerned with the production, distribution or consumption of goods. Since hospitals and educational and charitable institutions are not industries in that sense, this Act should not apply to such institutions. It is recommended that the Industrial Disputes Act

AUDITORS' REPORT TO SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Bank of Rajasthan Limited, Head Office, Udaipur as at 31st December, 1957, and also the annexed Profit and Loss Account of the Bank for the year ended on that date. In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of Section 211 and sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the sixth schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of audit and have found them to be satisfactory;

(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account;

(e) In our opinion, and to the best of our information and, according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking Companies, and on such basis the said Balance Sheet gives a true and fair view of the state of affairs of the Bank as at 31st December, 1957, and Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date;

(f) The returns received from Branches for the year ended 31st December, 1957, were duly audited by Chartered Accountants.

B. D. GARGIEYA & CO.,
Chartered Accountants.

JAIPUR, 14th March, 1958.

D. L. GUPTA,
Ex-Officio Director and General Manager.

AMAR SINGH,
G. S. PUROHIT,
} Directors.

The other Directors have not signed the Balance Sheet and Profit and Loss Account being absent.

SUGARCANE DEVELOPMENT IN MYSORE

A NEW COMPREHENSIVE SCHEME LAUNCHED

A UNIFIED comprehensive scheme for the development of sugarcane, covering the whole of Mysore, has been launched by the State Government. The scheme spreads over a period of three years commencing from 1st April 1958. It entails an estimated total expenditure of Rs. 5,31,976, of which the share of financial assistance sanctioned by the Indian Central Sugarcane Committee accounts for Rs. 1,92,900 (Rs. 64,750 for the current year), the entire balance being met by the Government of Mysore.

The scheme envisages the establishment of 10 Sugarcane Development Centres—two each in Belgaum and Mandya districts and one each in the districts of Gangavathi, Hospet, Bidar, Mangalore, Shimoga and Kolar. The proposed centres will conduct intensified research on the cultural, manurial, rotational and pathological aspects of sugarcane cultivation in the areas concerned. It is proposed to intensify activities relating to manuring campaign, distribution of improved seeds, demonstration and publicity, prize plots and subvention farms. Provision has been made for necessary technical staff and administrative set-up, as well as for the grant of subsidy to seed growers and compost makers and insecticides. There will be a sugarcane development officer in charge of the scheme, assisted by an assistant officer, two agricultural graduates and a number of fieldmen, to man the 10 centres.

Original Programme

The second Five-year Plan of Mysore originally covered three cane development schemes—a new cane improvement scheme (general), cane development in Bombay-Karnatak area, and cane development in South Canara. After the reorganisation of the State, the necessity for a unified comprehensive scheme was keenly felt. Accordingly, the Director of Agriculture in Mysore formulated a scheme which, after obtaining the approval of the State Government and the Central Sugarcane Committee, has since been launched.

Meanwhile, the project for the setting up of a major sugarcane research station as approved by the Sugarcane Committee is being given top priority. The station, it is stated, will be located at the Visvesvaraya Canal area, with two sub-stations, one at the Babbur Farm, and the other at the Hebbal Farm. The outlay on the station is put at Rs. 1,11,480. The Committee has agreed to share 50 per cent. of the pay and allowance paid to the staff. Under the scheme, it is proposed to have a sugarcane research officer, four gazetted assistants and four graduate assistants, besides agricultural assistants, fieldmen and other administrative staff.

Latest Position

The following table compares the position in respect of sugarcane area and production in the enlarged Mysore State with that obtaining before the Reorganisation:

	Before Re-organisation 1955-56	After Reorganisation 1956-57 (adjusted second estimate)	After Reorganisation 1957-58 (second estimate)
Area (thousand acres) ..	59	116	125
Production (thousand tons)			
Cane	1,482	2,889	3,133
Gur	148	289	313

Although sugarcane cultivation in Mysore is well established, there are good potentialities for further improvement. The area under cane is increasing with the completion of the several irrigation projects. There is also scope for augmenting the yields per acre though the per-acre yield in Mysore is above the all-India average. The total area devoted to sugarcane in the current season (1957-58—second estimate) amounts to 125,000 acres which represents about 2.6 per cent. in the aggregate area under cane for the whole of India. But its share in the production of cane is higher at 4.9 per cent., the output being 3,133,000 tons out of a total of 63,501,000 tons. In other words, the average per-acre yield of cane in Mysore is more than the all-India average, being over 25 tons, as against 13.5 tons. The quality of cane grown in the State is also superior to that produced in other States with the exception of Bombay. The average recovery per cent. of sugar in cane in 1957-58 (first estimate) is placed at 10.11, which compares favourably with the all-India average of 9.85.

Incidentally, it may be noted that the portion of sugarcane actually utilised for the manufacture of white sugar in Mysore State is just 23 per cent.; the entire balance is used for producing *gur* and *khandsari*. Out of the estimated cane output of 3,133,000 tons during 1957-58, the quantity crushed by sugar mills is expected to be 722,000 tons. The number of factories working in the current season is six, the anticipated total production of sugar being 73,000 tons. The average number of working days is 130.

SUGAR INDUSTRY IN EAST U.P.

Conditions in the sugar economy of East Uttar Pradesh continue to be none-too-satisfactory. At its meeting held at Gorakhpur recently, the Indian Sugar Mills Association (East U.P. branch) expressed grave concern over the steadily deteriorating position in the sugar industry in East U.P. and appealed to the State Government and the Centre to pay immediate attention to the development of sugarcane through improved facilities for irrigation and communications. The resolution adopted at the meeting contained the following points:

In east U.P., due to poor yield of cane crops, the duration of the season, the crush and the recovery are all much poorer than in other parts of the country. The industry is, therefore, getting crippled every year and the margin of profit decreasing, so much so that the sugar industry today is facing the same conditions which prevailed 15 years ago, during 1935-36. Although the Government has spent enormous money during all these years, the development of sugarcane has shown the least sign of improvement, mostly because of paper work, and most of the varieties of cane have become diseased. The contemplated merger of the Cane Development and Co-operative Departments is likely to worsen the situation, in view of the fact that the entire emphasis in that event will shift to supply and marketing of sugarcane and its development will be altogether neglected. The Government's policy of not allowing the sugar mill-owners to have any contact with the growers is also proving quiet unhelpful so far as development of cane is concerned.

The Association adopted another resolution in which it urged the Government to allow more despatches of sugar from east U.P. and to liberalise the policy of cess collection. It drew the attention of the authorities to the worsening financial condition of the industry and to the fact that, in view of the very slow disposal of sugar, the mills were not in a position to pay off the accumulated arrears of cess money. It suggested that the State Government should realise this in the same way as the realisation of excise duty by the Centre.

"INDIAN SUGAR—ANNUAL NUMBER"

This is the sixth *Annual* of *Indian Sugar* published by the Indian Sugar Mills Association, India Exchange, Calcutta 1 (Editor: Mr. J. S. Mehta. Price: Rs. 3). The *Annual*, like its predecessors, gives a brief resume of the proceedings of the Association's latest annual meeting and covers a wide range of subjects connected with the sugar industry in India and abroad. There are several interesting articles devoted to the study of the problems confronting the industry. The question of sugar exports has been discussed in three separate articles. The technical aspects of sugar and sugarcane have also been adequately dealt with. The utility of the publication is enhanced by the inclusion of a number of tables relating to the trend of sugar and cane production, recovery of sugar and duration of crushing season in the different States, comparative technological results of sugar factories in India and other countries, world sugar production and consumption, and international trade in sugar.

Production and despatches of sugar during the current season (up to 30th April 1958) amounted to 1,911,000 tons and 991,000 tons, as against 1,822,000 tons and 1,035,000 tons, respectively, in the corresponding period of last year. The total stocks with factories as on 30th April 1958 stood at 1,349,000 tons, as compared with 1,314,000 tons a year before.

(*Concluded from next column*)

coal washeries. The coal washing plant at Kargali is expected to be completed and brought into commission by about May 1958 and the remaining washeries are expected to be functioning before the end of the Plan period.

INCREASED D.A. TO COAL MINERS

The Joint Working Committee of the Indian Mining Association, Indian Mining Federation and Indian Colliery Owners' Association, have requested their member collieries to pay miners the additional dearness allowance of Rs. 4.87 for a full month's work. Payments at this rate will be made to weekly-paid workers on pay days which occur at the end of this week and for monthly paid staff at the end of May. Arrears of payments involving the industry in Rs. 70 lakhs, effective from 1st January 1958, will be made later. The decision of the Labour Appellate Tribunal laid down that, if the average of the monthly figures of the all-India average consumer price index numbers should rise by more than 10 points over 102, the dearness allowance for the succeeding half-year should be raised by a flat amount of Rs. 4.87 per month for each of such 10 points rise. As the all-India average consumer price index number during July-December 1957 rose by more than 10 points, collieries will pay the additional dearness allowance on the basis of Rs. 4.87 per month for a full month's work until the position is reviewed for the next half-year.

COAL IN SECOND PLAN

PLANNING COMMISSION'S APPRAISAL

THE view, expressed in these columns many times before, that the public sector would not be able to achieve its target of production under the second Five-year Plan, has now been confirmed by the Planning Commission in its memorandum on the Appraisal and Prospects of the Second Five-year Plan submitted by it to the National Development Council early this month. As is well known, the total coal production in 1955-56 amounted to 38 million tons and it was proposed to raise it by 22 million tons to 60 million tons by 1960-61. Of this expansion, the public sector was to contribute 12 million tons and the private sector 10 million tons. The programme in both the sectors is included in the core of the Plan.

Coal production in 1956-57 increased by about 1.84 million tons, of which the existing State collieries contributed 0.2 million tons. As against the target of additional production of about 3.2 million tons for 1957-58, the average monthly output during the first 11 months of the year is equivalent to an annual production of 43.3 million tons, which represents an increase of about 3 million tons over the level of production in 1956-57. On the basis of the present approved programmes, the Planning Commission's memorandum estimates that the public sector will contribute about 8.5 million tons of additional production in the last year of the Plan. Referring to the private sector's performance, the memorandum says that it seems likely to achieve its target of 10 million tons and is likely to exceed it, as it has been agreed that as a cushion against possible shortfalls elsewhere this sector should be permitted to raise an extra 1.4 million tons in the Central India coalfields. "Over the Plan period as a whole in terms of the existing programmes," the memorandum points out, "it appears that there may be a shortfall of 3 to 4 million tons in coal production against the target of 60 million tons."

It is clear from the above that the shortfall in target will only be in the public sector. If, therefore, the Planning Commission and the Government of India are anxious to reach the target of 60 million tons to meet the growing needs of the developing industries, the target of the private sector should be raised. The Planning Commission says that fairly good progress has been made in the programme for coal prospecting, but it adds that the progress in the programmes of the expansion of the Geological Survey of India and the Indian Bureau of Mines has been somewhat slow, with the result that surveys and investigations have not proceeded as rapidly as was expected.

The coal production programme and coal washeries are among the main projects in the second Five-year Plan for the development of mineral resources. The Plan provided Rs. 72.5 crores for these and related programmes. The total foreign exchange expenditure on account of the mineral development programme is of the order of Rs. 39.6 crores. Of this, the programme of coal production in the public sector was roughly estimated to involve an outlay of Rs. 60 crores, including Rs. 12 crores for housing, for which the Plan initially made a provision of Rs. 40 crores. The first two years of the Plan were taken up largely in work of a preparatory character, such as detailed prospecting of selected areas, preparation of project reports, acquisition of unworked areas of old coal leases, placing orders for equipment, etc. A total expenditure of about Rs. 12 crores, according to the Planning Commission, is expected to be incurred in the first three years of the Plan.

The total foreign exchange cost of all the "core" projects in both the public and private sectors is about Rs. 962 crores. Of this, coal accounts for Rs. 35.75 crores. The expenditure incurred or committed as on 31st March 1958 is Rs. 13.48 crores and fresh commitments necessary for completing the programme amount to Rs. 22.27 crores, as per details below:

(In crores of rupees)

Project	Total foreign exchange cost in the Plan	Expenditure incurred or committed as on 31-3-1958	Fresh commitments necessary for completing the programme
Public sector:			
1. N.C.D.C.	15.0	5.83	9.17
2. Singareni collieries..	3.25	1.85	1.40
Private sector	10.00	3.30	6.70
Washeries	7.50	2.50	5.00
Total ..	35.75	13.45	22.27

With a view to conserving metallurgical coal, the Plan provided for the setting up of four

A computer in my business?

Forward-looking concerns are now considering, 'What can a computer do — and at what cost?'

The computer is a tool of management. It provides data necessary for more effective control. It produces selective information earlier, more accurately and less expensively than any other method. Structure and direction visibly improve—management can be increasingly more dynamic.

With proper planning, your objectives can be met efficiently and economically by a comparatively small computer. Hec General-Purpose Computers are small compared with some, but they will do the things you expect from a computer. And they do not involve heavy capital and operating costs.

Investigation into their use for you will provide invaluable experience in computer techniques—experience equally valuable if, later on, the growth of your needs calls for other types of Hec computers. Hollerith freely assists in every phase of such investigation and in training and installation.

OUTLOOK FOR INDIAN TEA

DEPENDS ON QUALITY PRODUCTION AND RISING INTERNAL CONSUMPTION

THE world production of tea during 1957 showed a further increase and record crops were produced in more than one country. While the total output in India was a shade lower at 666 million lbs. (as against 667 million lbs. in 1956), South Indian production set up a fresh record high of 144.7 million lbs., an increase of 17.7 million lbs. over the previous year. Although this record output was absorbed, prices were generally well below those of 1956. This was because the quality for the greater part of the year was rather below the standard of the previous year. Considering the increase in crop, the quality on the whole was fairly good, but it was in no way outstanding. With the quantity of plain tea now being manufactured throughout the world continuously on the increase and buyers showing a keen preference for better quality teas, the prices fetched were naturally lower.

In the export auctions held at Cochin, the average price realised in 1957 was Re. 1.93 per lb., as against Rs. 2.23 per lb. It may be noted here that the price had successively declined from the peak of Rs. 2.83 per lb. earned in 1954 to Re. 1.93 per lb. in 1957. The average price realised for dust teas in Cochin was Re. 1.61 per lb., as compared with Re. 1.75 for 1956. It is stated that the decline in price of dusts was due partly to the lower rates paid for the black grainy dusts and partly to the marketing of unattractive fibrous residue grades. The experience of 1957 showed that the consumer preference for quality was not confined to leafy teas alone. Internal buyers were far more discriminating in their purchases and there is every indication that part of the internal consumption is being diverted to leaf grades.

It will be seen from the foregoing that there is a growing emphasis on quality of tea produced, but there does not seem to be any restraint on production of plain teas. Referring to this important aspect, on which the future of Indian tea depends, Messrs. Forbes, Ewart and Figgis (Private) Ltd., Cochin, observe in their annual *Tea Review* 1957, as follows:

"The quantity of plain tea now being manufactured throughout the world continues to increase and should supply overtake demand, the producer of the poorer qualities will be the first to suffer. More than one producing country has considered measures to alleviate the lot of the producer of common teas. In framing a scheme, the difficulty lies in knowing where to draw the line. It would seem that the days of international control on production are past and the remedy must now lie with individual producers. That some restraint is necessary is undoubted, but the 1957 crop figures indicate that this fact is not readily acknowledged amongst planting companies."

Explaining the difficulty which stands in the way of improving the quality of tea output, Messrs. Forbes, Ewart and Figgis say:

"During the months of the heaviest cropping it became obvious that quite a number of factories were not fully equipped to cope with the quantities of tea which they were producing. This factor must place very heavy limitations on the overall quality. Whilst it is appreciated that, in these days of rising costs, increased crops are economically necessary, there must be a corresponding increase and improvement in the factory facilities if the best possible teas are to be made."

No doubt, some estates, through a policy of finer plucking and careful manufacture, maintained a good standard of clean black leaf throughout the year. On the whole, good manufacture is closely linked with adequate factory facilities.

While the average price realised was less than that in the previous year, there was a further increase in shipments of tea from Cochin from 80.2 million lbs. in 1956 to 85.4 million lbs. Of this increase, shipments to other Indian ports accounted for over 4.5 million lbs., so that exports to overseas countries showed only a slight increase. The following are the country-wise shipments during the past four years:

(In million lbs.)

Country	1957	1956	1955	1954
U.K.	47.37	45.09	44.36	53.72
U.S.	7.03	6.71	6.78	8.61
Canada	6.22	7.02	5.47	6.36
Australia ...	6.55	6.87	2.65	1.15
Indian ports ...	11.17	7.11	11.66	5.26
Other countries	6.48	7.38	5.00	2.94
Total ...	85.36	80.18	75.93	78.04

World production of tea is steadily increasing and at the same time production costs are also mounting. There is also some evidence of an increase in world consumption, but Messrs. Forbes, Ewart and Figgis warn the tea trade against any complacency. For, as they rightly point out, "competition is now being provided by many countries and the tea-growing areas in Africa are constantly expanding." "If the trade in India is to flourish," they add, "producers must find the economic balance between higher yields and the production of well-made teas. This will ensure that the market provides to the housewife the type of tea which she requires at a price she is prepared to pay. During the past year, it has become even more obvious that the consumer demands the best possible tea and producers of these types will always find a ready buyer." Messrs. Forbes, Ewart and Figgis, therefore, stress that increased outturn from under-equipped factories will only lead to

(*Continued on page* 1011)

GUNNY OUTPUT RISES

SHIPMENTS DECLINE

AFTER a break of three months, the production of gunnies has again gone up in April 1958. The output, which had risen sharply from 92,800 tons in December 1957 to 98,300 tons in the following month, suffered a drastic fall to 85,300 tons in February this year and was maintained at that level in March. In April 1958, however, there has been an increase of 2,700 tons in the total production to 88,000 tons. As compared to April 1957, last month's production shows a rise of 1,200 tons. The increase in output must be mainly attributed to the larger working period, namely, 200.5 hours, as against 197.5 hours in the previous month. In April 1957, the number of hours worked was 209. It will thus be seen that over the year the production of mills has risen, despite the decline in working hours; this is presumably the effect of modernisation.

The following comparative table shows the variety-wise production:

(In tons)

	April, 1958	March, 1958	February, 1958	April, 1957
Hessian	30,900	30,400	30,100	36,200
Sacking	50,600	49,500	49,300	44,800
Others	6,500	5,400	5,900	5,800
Total ..	88,000	85,300	85,300	86,800

The rise in production during April 1958 is shared by all the three main varieties, but it is not so marked in hessian as in others. Hessian output has gone up by 500 tons, thus maintaining the upward trend for the second year in succession. As compared with April 1957, hessian production in April this year is lower by 5,300 tons. In other words, the proportion of hessian to the total production has declined over the year from 41.7 per cent. to 35.1 per cent. Sacking output has gone up by 1,100 tons over the month and by 5,800 tons over the year. At 50,600 tons, the production of sacking represents 57.5 per cent. of the total, as against 51.6 per cent., thus indicating the shift in production over the year from hessian to sacking. The production of "other manufactures" also has risen by 1,100 tons to 6,500 tons (the sharpest rise in any month in recent times), thus nearly making good the fall in output in the previous two months. As compared with the corresponding month of 1957, the output of "other manufactures" shows an increase of 700 tons.

The aggregate production of gunnies for the first ten months of 1957-58 thus comes to 878,900 tons, as against 857,800 tons in the corresponding period of 1956-57.

The figures of gross shipments during the month under review show a fall from 60,956 tons to 50,276 tons. Hessian shipments have fallen from 33,143 tons to 24,063 tons. The fall in sacking is less marked, from 27,813 tons to 26,213 tons.

Miss Career Girl and Airconditioning...

Miss Career Girl dresses elegantly and likes everything in her home or office to be elegant, too.

When she chose the ACCAIRE it was its ultra-modern, beautiful design that attracted her. The rest she took on trust.

Most of the sales talk didn't quite register in her mind. When the salesman said it was dependable and low in power consumption she just smiled and nodded. When he went on to say it was a full capacity 50 cycle unit, she looked a trifle bewildered but nodded pleasantly.

Now she congratulates herself on having made the right choice because her ACCAIRE gives her trouble-free service and is very economical to maintain.

A PORTRAIT OF *Perfection*

Human search for perfection is endless. Here you find the fruit of the combined efforts of many highly skilled people such as, designers, tool engineers and technicians whose minds and hands transform raw materials into the best possible components of an Orient fan. The fan that bears testimony to man's never-ending endeavour for perfection.

In Orient's factory much thought goes into planning and research—planning the kind of fan that will serve you most and the search for ways and means to make it. New methods are constantly being replaced by newer methods resulting in fans of remarkable performance and incomparable finish.

IRRIGATION AND POWER TEAM'S REPORT ON CHAMBAL PROJECT

SUGGESTIONS FOR RAISING EFFICIENCY IN UTILISATION OF RESOURCES

THE Irrigation and Power Team (Chairman: Mr. N. V. Gadgil) appointed by the Committee on Plan Projects, in its report on the Chambal Project, has made certain valuable suggestions for improving the administrative machinery of the Project, securing speedy utilisation of irrigation water and power, and effecting economy in expenditure on the Rs. 77-crore (original estimate) Project. The Team, which was set up in February last year, was entrusted with the task of conducting investigations on the Chambal and Lankavalli Projects with a view to securing economy and efficiency in the utilisation of financial and other resources. It points out that one of the most important factors contributing to the success of the Project, namely, the development of agriculture consequent upon the changes from dry to wet farming, has not been given due attention either by the State Governments or by the Control Board. In its opinion, the first prerequisite of a project of the size and nature of Chambal is to prepare a master schedule, interlocking the various facets, in order to derive the maximum benefit from it. Apart from the master schedule, each constituent element should also be planned to a degree of detail that can be foreseen at the time of starting construction. The utilisation aspect, the Team points out, has to be interlocked and timed with various other aspects.

The reason why a master schedule for Chambal was not prepared, according to the Team, was that the two States concerned, namely, Rajasthan and Madhya Pradesh, lacked the necessary institutional arrangements for undertaking a job of that nature. The need for the appointment of a development committee, as was done in Mysore State, consisting of engineering, agricultural, administrative and revenue experts, to work out the details of utilisation as the construction proceeded was felt from the very beginning. But, due to a variety of reasons and lack of experience in this type of work, considerable delay has occurred in initiating work on the utilisation aspect of the Project. The Team has, therefore, urged the appointment of a committee comprising the representatives of both the States and a representative from the Centre who is familiar with the problem of agriculture on changeover from dry to wet farming. The committee may not only have to work out the details of the proposals, schemes, or experiments but also ensure their implementation without delay, supervise and modify the schemes in their details from time to time and avoid duplication of work wherever possible.

Agricultural Aspect

The Team does not agree with the assumption in the Project Report that it would take nearly 10 years for the benefits of irrigation to be utilised fully. This leisurely pace, it points out, was perhaps justified in olden days. With the progress of agricultural science and the vast experience that this country possesses of irrigation practices, it should be possible to realise the benefits from canal irrigation in not more than four to five years. The State's Department of Agriculture has also concurred with this opinion. The Team points out that the expectations of the Project authorities, in regard to both food production and financial return, are not likely to be realised. On the other hand, it believes that the financial calculations made for the Project could not only be realised but even exceeded if the agricultural aspect of the project is not given due attention at the proper time which unfortunately has not been the case so far. The Team emphasises that special efforts are necessary to make good, at least partially, the lapse by staging a double march in such matters as lie within the control of human effort.

The Team discusses the agricultural aspects of the Project under three headings: (1) changes in agricultural pattern, (2) serious problem already existing, (3) steps to be taken for deriving the maximum benefit from canal irrigation. With the advent of canal irrigation, the present pattern of agriculture will undergo a revolutionary change and the future crop pattern would depend upon the extent to which the State Agricultural Department is able to solve the problems of agriculturists under the altered conditions.

The Team has taken note of the "inordinate delays" in the implementation by the States of decisions taken by the Control Board and in the preparation of detailed estimates and schedule of rates. To remedy this, it has made certain recommendations which would render the job of the Chairman of the Board a whole-time function. It is suggested that the State Finance Secretaries should be *ex-officio* members of the Board and that technical designs should be regularly subjected to check by an independent technical agency. An agricultural expert should be made a member of the Board or at least consulted regularly. The Board should set up a machinery for carrying out the main functions assigned to it.

In order to keep a check on the quality of work being done at the Project, the Team recommends the practice followed on the Bhakra Project, namely, the appointment of a special Inspection and Control Organisation under the Chief Engineers so as to make an objective analysis of factors influencing quality of work. The Team has also proposed dovetailing of Rana-Pratab Sagar Dam with that of Gandhi Sagar Dam, accelerating canal construction and lining canals with limecrete instead of cement concrete. These proposals are expected to result in economies amounting to a crore of rupees in construction.

"INDIAN MINING JOURNAL"

India's mineral resources have long been utilised with little upgrading or processing of the ores. In view of the big industrial expansion envisaged in the Five-year Plans, it is necessary that appropriate mineral beneficiation and extractive metallurgical techniques should be developed so that the ores could be processed and dressed up. The *Indian Mining Journal* deserves to be complimented on its bringing out a special number on Mineral Beneficiation and Extractive Metallurgical Technique (Mg. Editor: P. K. Menon, 6/2 Madan Street, Calcutta 13. Price Rs. 15; pages 355). The number contains the papers read and discussions held at a symposium on mineral beneficiation and extractive metallurgical technique organised by the National Metallurgical Laboratory, Jamshedpur, in February 1957. It carries 52 research papers contributed by eminent Indian and foreign scientists dealing with such topics as ore-dressing and mineral beneficiation of ferrous and non-ferrous ores, thermal beneficiation and hydro-metallurgical upgrading of ores, pyro-metallurgical and electro-metallurgical extractive techniques and also extractive techniques based on chemical metallurgical methods. This is a valuable addition to the scientific literature on mining and metallurgy.

Now is the time to trade with

South East Asia

Rising standards of living open new markets for Indian goods

In South East Asia, as elsewhere, what you can sell depends on what the people need—*their ability to buy*. The Indian Overseas Bank with branches in several strategic centres has made a special study of this important growing market and can help you solve your trading problems.

The INDIAN OVERSEAS BANK Limited, MADRAS

Branches at: Bombay, Calcutta, Madras, New Delhi, Hyderabad and throughout South India. *Overseas Branches:* Rangoon, Colombo, Ipoh, Kuala Lumpur, Penang, Singapore, Malacca, Bangkok, Hong Kong.

Agents and Correspondents all over the world

Chairman: M. Ct. MUTHIAH

General Manager: C. P. DORAIKANNU

BRITISH STEEL INDUSTRY

NO CASE FOR RE-NATIONALISATION

ANSWERING every one of the arguments advanced for the re-nationalisation of the British steel industry, as proposed by the Labour Party, Sir Andrew McCance, President of the British Iron and Steel Federation, has put in an earnest plea for a sensible approach to the issue. Addressing the annual general meeting of the Federation held recently in London, Sir Andrew detailed the solid achievements of the industry in the post-war period. These were, among others, a 75 per cent. rise in steel production, 40 per cent. improvement in productivity and the spending per week of £2 million on development activities. He pointed out that all the future plans of the industry, including the projected increase in the output of steel to 29 million tons by 1962, was overshadowed by the threat of re-nationalisation. The industry, Sir Andrew added, had been accused of inefficiency, but all standards of comparison, he said, proved the contrary. Answering the charge that the industry lacked proper check or supervision and that public ownership of the industry was necessary for the economic planning of the nation's affairs, the President said that for many years the industry had worked in the closest co-operation with the Government of the day and all targets in the post-war development plans had been discussed and agreed with the Government, irrespective of political persuasion. By virtue of the provisions of the Iron and Steel Act, 1953, the industry was under the constant and effective supervision of a strong and independent Iron and Steel Board appointed by the Government. The Board had the statutory duty of promoting the efficient, economic and adequate supply, under competitive conditions, of iron and steel products. Its members included steel consumers and the Board had strong powers in all the main fields of public concern, particularly in development and prices. These powers, with the reserve powers in the hands of the Government, Sir Andrew asserted, were amply adequate to secure that the industry fulfilled its national responsibilities.

Capacity Expands

Refuting the allegation that the industry's expansion was not adequate, Sir Andrew pointed out that it had consistently exceeded the production targets agreed with successive Governments. The industry's capacity had increased 75 per cent. since the end of the war and in the next five years, its rate of expansion was expected to be higher than ever before. It had raised its own exports to record levels and had enabled remarkable increase in the exports of metal-using industries to be sustained. The industry had provided for its own fleet of ore-carrying ships and had stakes in orefields abroad. "These are not," Sir Andrew asserted, "the signs of apathy and restrictionism."

Proceeding, Sir Andrew answered the argument that adequate finance could only be assured under nationalisation. Difficulties existing today, according to him, were caused primarily by the threat of nationalisation but the industry was proceeding with its plans confident that it would be able to finance them. It deserved credit for successfully financing expansion in the face of political uncertainty. "If the iron and steel industry has failed in its responsibilities," Sir Andrew declared, "it is entitled to be told wherein it has failed. That question has been asked; but there has been no reply. In fact, there is no case whatever for nationalisation of the iron and steel industry."

Sir Andrew drew attention to the fact that the threat of nationalisation was adding greatly to the industry's problems. It was raising, according to him, fresh doubts about the future of Britain's economy. The steel industry, he pointed out, was completely different from industries already nationalised. While the latter were services, the former was a manufacturing and trading industry whose products were the mainstay of the country's export balance. As the world moves towards sharper competition and freer trade, the need in British industry, he pointed out, would be for greater flexibility, greater enterprise. To quote his own words: "Nationalisation frustrates. The encouragement of individual responsibility is lost. Operating efficiency, overseas technical and commercial connections, internal harmony, all this will be impaired." The bad effects, he warned, could not be confined to the steel industry, the whole economy of the country would suffer.

The present system for steel in Britain, according to the President of the Federation, was suited to the conditions of the day. It was the fruit of many years' experience and which blended private enterprise with public supervision, individual initiative with central planning. If improvements were thought to be possible in the system, he suggested, let them be examined and discussed. This, he pointed out, was the traditional British approach which continued to be the only sensible approach to the issue.

EXPORT OF ENGINEERING GOODS

Exports of engineering goods from India recorded a slight increase in 1957, as compared with the previous year. Nearly 120 different items of engineering goods are exported from India to various countries. The exports of diesel engines, sewing machines, electric fans and centrifugal pumps, agricultural implements and oil mill machinery registered significant increases.

The value of diesel engine exports rose from Rs. 4.28 lakhs in 1956 to over Rs. 10 lakhs in 1957. Indian diesel engines were exported to 25 different countries, the principal buyers being Bahrein, Oman, Cyprus and Thailand. Sewing machines worth Rs. 5.6 lakhs were exported during the year, as compared with Rs. 4.3 lakhs in the previous year. These exports were made to 18 different countries; Australia, Ceylon and Kenya were the leading buyers. The export of electric fans amounted to slightly over Rs. 18 lakhs during 1957 as compared with Rs. 12.7 lakhs in the previous year. Thirty different countries bought Indian fans, the main buyers being Ceylon, Burma, Malaya, Singapore, Kuwait and Thailand. The value of centrifugal pumps exported was nearly Rs. 1.2 lakhs, as compared with Rs. 53,000 in 1956.

The exports of agricultural implements rose from Rs. 8.8 lakhs to Rs. 11.2 lakhs. The value of cutlery exports rose to nearly Rs. 8 lakhs, as compared with Rs. 4.8 lakhs in the previous year. Oil mill machinery worth Rs. 14.2 lakhs was exported in 1957, as compared with Rs. 8.6 lakhs in the previous year. The value of textile machinery exported rose to Rs. 2.2 lakhs from Rs. 1.5 lakhs and that of rice and flour mill machinery to Rs. 1.4 lakhs from Rs. 34,000. Shoe making machinery worth Rs. 3.85 lakhs was exported which was double the value of the export in the previous year.

Among other engineering goods which recorded rises were sugar mill machinery, bolts, nuts and rivets, galvanised iron products, cast iron products, water fittings and stainless steelware. The items which showed a downward trend in exports in 1957 were mainly hurricane lanterns, bicycle components and accessories, hardware, dry batteries and steel barrels and trunks.

Region-wise, South-East Asia is the biggest customer for Indian engineering goods. In 1957, out of the total exports worth nearly Rs. 4.39 crores, the exports to South-East Asia aggregated about Rs. 1.3 crores. West Asia took engineering goods worth nearly Rs. 1.28 crores and Africa about Rs. 76 lakhs. Exports to Australia were worth Rs. 5 lakhs and to New Zealand Rs. 2 lakhs. The exports to other parts of the world amounted to Rs. 98 lakhs.

MARITIME CONSULTATIVE ORGANISATION

The International Convention of the Inter-Governmental Maritime Consultative Organisation (I.M.C.O.) drawn up in 1948 for a United Nations specialised consultative agency in the field of shipping, came into force on 4th April, following the recent acceptance of the Convention by Japan bringing the total number of States which have accepted the Convention to 21, as required, and the clarification of certain administrative questions. One of the conditions for the coming into force of the Convention was its acceptance by 21 States of which seven have a tonnage of not less than 1,000,000 gross tons each. The 21 countries which have accepted the Convention are: *Countries owning 1,000,000 gross tons or more of shipping*: United States, United Kingdom, Netherlands, Japan, Italy, France, Canada and Argentina. *Others*: Australia, Belgium, Burma, Dominican Republic, Ecuador, Egypt, Haiti, Honduras, Iran, Ireland, Israel, Mexico and Switzerland.

The Inter-Governmental Maritime Consultative Organisation (I.M.C.O.) will be set up in London in the near future. A 12-member Preparatory Committee will meet in New York later this year to arrange for the first session of I.M.C.O.'s Assembly (or legislative body). I.M.C.O. will be the first inter-governmental body for maritime transport. It will be one of the 12 specialised agencies working with the United Nations in various economic and social fields.

The I.M.C.O. Convention was drafted at the U.N. Maritime Conference at Geneva in 1948, which was attended by 36 maritime countries including India. The proposed organisation is intended, among other things, to promote co-operation among Governments in the field of governmental regulation regarding shipping engaged in international trade and adoption of the highest practicable standards in maritime safety and efficiency of navigation; to encourage removal of discrimination by Governments in regard to shipping engaged in overseas trades (assistance and encouragement given by a Government for the development of national shipping and for purposes of security however not in itself constituting discrimination); and consideration of unfair practices by shipping concerns in international trade.

Last year, at the meeting of the Transport and Communications Commission of the United Nations in New York, attempts were made by some North European countries to modify the terms of the I.M.C.O. to restrict its activities to the technical aspects of shipping but the Commission considered it preferable to await the coming into force of the Convention.

NEW PRODUCTS AND PROCESSES

Waterproof Abrasive Papers

WITH technical help from their associated companies in the U.K. and U.S.A., Carborundum Universal Ltd., Madras, have commenced production of waterproof abrasive papers. Three different qualities of papers which are used as backings are specially treated to make them thoroughly waterproof. The abrasives are manufactured under the latest "electro coating" method wherein silicon carbide abrasive grains are coated in an upright position in a high voltage electrostatic field so as to make them absolutely uniform and very sharp. Waterproof paper is used for wet rubbing down of sealer, primer, under coat and finish coats of paints, lacquers, enamels, etc.

Photo Copying Machine

A Sydney firm has designed and developed a low-cost, portable photo copying machine. The equipment, manufactured by Photo Copying Equipment Co. Pty. Ltd., consists of a tubular plastic arrangement, lit internally by incandescent lamps for which power can be drawn from any normal supply. The only necessary ancillary is a compact plastic developing tank, fitted with squeegee rollers, which produces a copy of the desired material in less than a minute. The equipment uses photo-sensitive papers, which can be exposed in a room using normal lighting. The simplicity of the process makes it possible for office staff to do the work. Copies can be taken of sheets, pages in books or bound documents without detaching them. The developing unit consists of a small bath, containing developing solution and squeegee rollers mounted at the ends of the unit, through which papers are run. The unit is light and durable, simply designed and easy to clean. Additional advantage is the interchangeability of the parts. The Rolla-copy is designed to take all sizes up to brief 13"×13". The basic unit will take quarto and foolscap. A simple attachment, fitted in seconds, accommodates larger sizes. An additional feature of the Rolla-copy is that it is not limited by the size of a book if pages are to be copied. The equipment, it is claimed, will make copies from bound volumes of any thickness, even a 10 in. thick book like Webster's Dictionary. It operates with 110 volts, 220 volts or 240 volts power. Rolla-copy is, it is said, now being used in such places as libraries, universities, insurance companies, laboratories, hospitals, stores, factories, offices, Government and semi-Government organisations.

New Anæsthetic

A new type of rapid-acting anæsthetic has been developed by Parke-Davis. It has geen tried out on 70 patients at the Detroit Receiving Hospital, and is known as GP-121. It is said not to depress respiration or circulation, but induces a temporary amnesia in patients, leaving them insensible to pain. The compound, which is a form of phenylcyclohexyl piperidine monochloride, can be injected. It is said to open up new avenues in the use of drugs, other than barbiturates, as anæsthetics. It can be used either for superficial surgery, or in continuation with other drugs for major surgery.

New Use for Rubber

Exploration into the wider uses of natural rubber has led to the development of a revolutionary method of giving a rubber lining to flax canvas hose of the type used in fire-fighting. This method is now being used at the Aberdeen factory of a British firm, which reports that in little more than a day 6,000 ft. of hose can be treated. The rubber latex now being used comes from Malaya. The method of use is to pump the latex into tanks, from which it is then pumped through the hoses, which are suspended in units of 10 inside a brick tower 120 ft. high. By this means the hoses can be rubberised and dried within two hours. The process is repeated several times, depending on the thickness of rubber lining required. This method of rubber lining has permitted production to be considerably increased, and is claimed to have produced a hose ideally suited to its purpose, with the rubber latex giving the hose great flexibility as well as ensuring that it is completely watertight. The new process is part of a £750,000 development scheme being carried out by the firm, which has been making canvas hose since 1821. The joint manager of the company says that an outlet is being found for its hose in all parts of the world.

Improved Graphite Crucibles
